

FEDERAL REGISTER

Vol. 85

Monday,

No. 159

August 17, 2020

Pages 49941–50756

OFFICE OF THE FEDERAL REGISTER

The **FEDERAL REGISTER** (ISSN 0097-6326) is published daily, Monday through Friday, except official holidays, by the Office of the Federal Register, National Archives and Records Administration, under the Federal Register Act (44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). The Superintendent of Documents, U.S. Government Publishing Office, is the exclusive distributor of the official edition. Periodicals postage is paid at Washington, DC.

The **FEDERAL REGISTER** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders, Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress, and other Federal agency documents of public interest.

Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless the issuing agency requests earlier filing. For a list of documents currently on file for public inspection, see www.federalregister.gov.

The seal of the National Archives and Records Administration authenticates the **Federal Register** as the official serial publication established under the Federal Register Act. Under 44 U.S.C. 1507, the contents of the **Federal Register** shall be judicially noticed.

The **Federal Register** is published in paper and on 24x microfiche. It is also available online at no charge at www.govinfo.gov, a service of the U.S. Government Publishing Office.

The online edition of the **Federal Register** is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions (44 U.S.C. 4101 and 1 CFR 5.10). It is updated by 6:00 a.m. each day the **Federal Register** is published and includes both text and graphics from Volume 1, 1 (March 14, 1936) forward. For more information, contact the GPO Customer Contact Center, U.S. Government Publishing Office. Phone 202-512-1800 or 866-512-1800 (toll free). E-mail, gpocusthelp.com.

The annual subscription price for the **Federal Register** paper edition is \$860 plus postage, or \$929, for a combined **Federal Register**, **Federal Register** Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the **Federal Register** including the **Federal Register** Index and LSA is \$330, plus postage. Six month subscriptions are available for one-half the annual rate. The prevailing postal rates will be applied to orders according to the delivery method requested. The price of a single copy of the daily **Federal Register**, including postage, is based on the number of pages: \$11 for an issue containing less than 200 pages; \$22 for an issue containing 200 to 400 pages; and \$33 for an issue containing more than 400 pages. Single issues of the microfiche edition may be purchased for \$3 per copy, including postage. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard, American Express, or Discover. Mail to: U.S. Government Publishing Office—New Orders, P.O. Box 979050, St. Louis, MO 63197-9000; or call toll free 1-866-512-1800, DC area 202-512-1800; or go to the U.S. Government Online Bookstore site, see bookstore.gpo.gov.

There are no restrictions on the republication of material appearing in the **Federal Register**.

How To Cite This Publication: Use the volume number and the page number. Example: 85 FR 12345.

Postmaster: Send address changes to the Superintendent of Documents, Federal Register, U.S. Government Publishing Office, Washington, DC 20402, along with the entire mailing label from the last issue received.

Rules and Regulations

Federal Register

Vol. 85, No. 159

Monday, August 17, 2020

This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect, most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.

The Code of Federal Regulations is sold by the Superintendent of Documents.

[CIS No. 2627–18; DHS Docket No. USCIS–2019–0010]

RIN 1615–AC18

U.S. Citizenship and Immigration Services Fee Schedule and Changes to Certain Other Immigration Benefit Request Requirements

AGENCY: U.S. Citizenship and Immigration Services, DHS.

ACTION: Final rule; correction.

SUMMARY: On August 3, 2020, the Department of Homeland Security (DHS) published a final rule to amend DHS regulations to adjust certain immigration and naturalization benefit request fees charged by U.S. Citizenship and Immigration Services (USCIS) and make certain other changes. In this rule, we are correcting four technical errors.

DATES: Effective October 2, 2020.

FOR FURTHER INFORMATION CONTACT: Kika Scott, Chief Financial Officer, U.S. Citizenship and Immigration Services, Department of Homeland Security, 20 Massachusetts Avenue NW, Washington, DC 20529–2130, telephone (202) 272–8377.

SUPPLEMENTARY INFORMATION:

Need for Correction

On August 3, 2020, the Department of Homeland Security published a final rule in the **Federal Register** at 85 FR 46788 changing immigration and naturalization benefit request fees charged by U.S. Citizenship and Immigration Services (USCIS), fee exemptions and fee waiver requirements, premium processing time limits, and intercountry adoption processing (FR Doc. 2020–16389). First,

in footnote 41 on page 46813, column 1, although the rule was a final rule, it states, “However, DHS proposes changes to the policy in this final rule as explained later in this preamble.” Second, on page 46908, in Table 11, the final rule includes a line item for OMB control number 1615–0122. This control number is not affected by the rule and should be removed from that table. Third, DHS inadvertently, on page 46914, stated that it proposes to amend chapter I of title 8 of the Code of Federal Regulations, although the rule is a final rule. And fourth, in instruction 35, on page 46925, we removed a term from paragraph (k)(1) in 8 CFR 214.11 that does not exist in (k)(1), but exists in (k)(10).

Correction of Publication

Accordingly, the publication on August 3, 2020, at 85 FR 46788, the final rule that was the subject of FR Doc. 2020–16389 is corrected as follows:

1. On page 46813, column 1, in footnote 41, revise the second to last sentence to read, “However, DHS changes the policy in this final rule as explained later in this preamble.”

2. On page 46908, in Table 11, remove the row for OMB control number 1615–0122, Immigrant Fee, from the table.

■ 3. On page 46914, in the first column, the words of issuance, “Accordingly, DHS proposes to amend chapter I of title 8 of the Code of Federal Regulations as follows:” are corrected to read, “Accordingly, DHS amends chapter I of title 8 of the Code of Federal Regulations as follows:”

§ 214.11 [Corrected]

■ 4. On page 46925, in the second column, instruction 35 is corrected to read “Section 214.11 is amended in paragraphs (d)(2)(iii) and (k)(10) by removing “8 CFR 103.7(b)(1)” and adding in its place “8 CFR 106.2.”

Chad R. Mizelle,

Senior Official Performing the Duties of the General Counsel for the Department of Homeland Security.

RIN 2120–AA64

Airworthiness Directives; Bell Helicopter Textron Canada Limited Helicopters

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: The FAA is superseding Airworthiness Directive (AD) 2016–02–06 for Bell Helicopter Textron Canada Limited (Bell) Model 429 helicopters. AD 2016–02–06 required inspecting certain tail rotor (T/R) pitch link bearing bores for corrosion and pitting. AD 2016–02–06 also required a repetitive inspection of the sealant and repeating the inspections for corrosion and pitting if any sealant is missing. This new AD retains the requirements of AD 2016–02–06, expands the applicability, and adds a repetitive inspection. This AD was prompted by an FAA determination that additional part-numbered T/R pitch link assemblies (links) are affected by the same unsafe condition and that an additional repetitive inspection is necessary to address the unsafe condition. The actions of this AD are intended to address an unsafe condition on these products.

DATES: This AD is effective September 21, 2020.

The Director of the Federal Register approved the incorporation by reference of a certain publication listed in this AD as of February 2, 2016 (81 FR 5367, February 2, 2016).

ADDRESSES: For service information identified in this final rule, contact Bell Helicopter Textron Canada Limited, 12,800 Rue de l’Avenir, Mirabel, Quebec J7J1R4; telephone 450–437–2862 or 800–363–8023; fax 450–433–0272; or at <https://www.bellcustomer.com>. You may view this referenced service information at the FAA, Office of the Regional Counsel, Southwest Region, 10101 Hillwood Pkwy., Room 6N–321, Fort Worth, TX 76177. It is also available on the internet at <https://www.regulations.gov> by searching for

and locating Docket No. FAA–2019–0589.

Examining the AD Docket

You may examine the AD docket on the internet at <https://www.regulations.gov> in Docket No. FAA–2019–0589; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this AD, the Transport Canada AD, any service information that is incorporated by reference, any comments received, and other information. The street address for Docket Operations is U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.

FOR FURTHER INFORMATION CONTACT:

Scott Franke, Aviation Safety Engineer, International Validation Branch, Aviation and Rotorcraft Unit, FAA, 10101 Hillwood Pkwy., Fort Worth, TX 76177; telephone 817–222–5110; email scott.franke@faa.gov.

SUPPLEMENTARY INFORMATION:

Discussion

The FAA issued a notice of proposed rulemaking (NPRM) to amend 14 CFR part 39 to remove AD 2016–02–06, Amendment 39–18387 (81 FR 5367, February 2, 2016) (“AD 2016–02–06”) and add a new AD. AD 2016–02–06 applied to Bell Model 429 helicopters with a T/R link part number (P/N) 429–012–112–101, –101FM, –103, or –103FM installed. The NPRM published in the **Federal Register** on August 20, 2019 (84 FR 43085). Since the FAA issued AD 2016–02–06, improved T/R links P/N 429–012–112–111 and –113 were developed, but recurring inspections of the sealant of these T/R links are still necessary because they are subject to the same unsafe condition due to design similarity. Some T/R links P/N 429–012–112–101 and –103 have also been field modified and re-identified as T/R links P/N 429–012–112–111FM and –113FM, and continue to need recurring inspections of the sealant as they are also subject to the same unsafe condition due to design similarity.

The NPRM proposed to continue the requirements of AD 2016–02–06 and add P/Ns 429–012–112–111, –111FM, –113, and –113FM to the applicability. The NPRM also proposed to add use of 10X or higher power magnification to the visual inspection of each cleaned T/R link for pitting and a repetitive 12-month inspection with the corrosion preventative sealant removed.

Transport Canada, which is the aviation authority for Canada, issued AD No. CF–2016–01R2, dated April 12, 2017 (AD CF–2016–01R2) to clarify the applicable P/Ns, address spare parts, and address parts installed on-condition prior to December 7, 2015. AD CF–2016–01R2 also includes a terminating action for the repetitive inspections.

Comments

After the NPRM was published, the FAA received comments from one commenter.

Request

Bell Textron, Inc., commented that this AD omits Bell Helicopter Alert Service Bulletin (ASB) 429–15–16 Rev. B, dated June 15, 2016 (ASB 429–15–16 Rev. B), which was issued after Bell Helicopter ASB 429–15–26, dated December 7, 2015 (ASB 429–15–26). The FAA acknowledges that ASB 429–15–16 Rev. B and ASB 429–15–26 specify procedures for the same part-numbered T/R links. However, the two service information documents address different unsafe conditions, specifically ASB 429–15–16 Rev. B addresses wear and ASB 429–15–26 addresses corrosion. Accordingly, the two different unsafe conditions are addressed in two separate ADs. The unsafe condition of wear (ASB 429–15–16 Rev. B) is addressed in AD 2019–11–05, Amendment 39–19651 (84 FR 26546, June 7, 2019) (“AD 2019–11–05”). The unsafe condition of corrosion (ASB 429–15–26) is addressed in this AD. The FAA did not change this AD based on this comment.

Bell Textron, Inc., commented that this AD differs from ASB 429–15–16 Rev. B and ASB 429–15–26 by requiring removal of the sealant around the bearing every 12 months and an inspection of the chamfer with a 10X magnifying lens. Bell Textron, Inc., stated that since ASB 429–15–16 Rev. B “requires” a repetitive 50 flight hours inspection of the sealant for pin holes and voids, it does not feel the repetitive 12 month inspection with the sealant removed is necessary. The FAA disagrees. Procedures specified in related service information documents are not required unless mandated by an AD. And while AD 2019–11–05 mandates the repetitive inspection of the sealant condition for pin holes and voids specified in ASB 429–15–16 Rev. B, the FAA determined an inspection with the sealant removed at a longer-term repetitive interval is necessary. Since sealant could become damaged, not maintain seal, or become worn, this more in-depth inspection addresses corrosion and pitting that could build

up underneath the sealant. The FAA did not change this AD based on this comment.

Bell Textron, Inc., commented that not requiring part re-identification makes it more complicated to manage configurations. The FAA does not prohibit re-identifying the T/R links as specified in ASB 429–15–26; however, the FAA determined it unnecessary to require to address the unsafe condition since the repetitive inspections are required for all part-numbered links listed in the applicability. The FAA did not change this AD based on this comment.

FAA’s Determination

The FAA has reviewed the relevant information and determined that an unsafe condition exists and is likely to exist or develop on other helicopters of the same type design and that air safety and the public interest require adopting the AD requirements as proposed except for editorial changes. The website URL for Bell and the email address for requesting an alternative method of compliance have changed and have been updated in this final rule. Additionally, the paragraph cross-referencing formatting in the Required Actions paragraph has changed to meet current publication requirements, e.g., “(f)(3)(i) and (f)(3)(ii)” has changed to “(f)(3)(i) and (ii)” instead. These editorial changes are consistent with the intent of the proposals in the NPRM and will not increase the economic burden on any operator nor increase the scope of the AD.

Interim Action

The FAA considers this AD to be an interim action. The design approval holder is currently developing a modification that will address the unsafe condition identified in this AD. Once this modification is developed, approved, and available, the FAA might consider additional rulemaking.

Differences Between This AD and the Transport Canada AD

This AD applies to helicopters with certain link P/Ns installed, whereas the Transport Canada AD applies to helicopters with certain serial numbers instead. This AD requires inspecting the bearing bores for any pitting after cleaning the T/R link, while the Transport Canada AD requires inspecting for corrosion after cleaning the T/R link. This AD requires performing the inspections with 10X or higher magnification, while the Transport Canada AD does not specify any magnification. This AD does not require re-identifying the P/N of the

link, whereas the Transport Canada AD does. The Transport Canada AD also provides a terminating action to the repetitive sealant inspection, while this AD does not. This AD also requires a repetitive inspection with the corrosion preventative sealant removed and reapplied, whereas the Transport Canada AD does not.

Related Service Information Under 1 CFR Part 51

The FAA reviewed ASB 429-15-26, which advises of reports of corrosion on T/R links between the roll staked lip of bearing P/N 429-312-107-103 and the beveled edge of T/R link P/Ns 429-012-112-101/-103. ASB 429-15-26 specifies inspecting each T/R link bearing bore between the roll staked lip of the bearing outer race and the link bearing bore with 10X magnification for corrosion and if there is corrosion, replacing the link. If there is no corrosion, ASB 429-15-26 specifies cleaning the area and performing a second inspection with 10X magnification for corrosion. If there is corrosion, ASB 429-15-26 specifies replacing the link. If there is no corrosion, ASB 429-15-26 specifies removing the torque stripe, cleaning the area, and applying corrosion preventative sealant. ASB 429-15-26 also specifies re-identifying the P/Ns as 429-012-112-101FM/-103FM. Further, ASB 429-15-26 specifies a repetitive inspection of the sealant and reapplication if the sealant is damaged.

This service information is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the ADDRESSES section.

Costs of Compliance

The FAA estimates that this AD affects 93 helicopters of U.S. Registry. The FAA estimates that operators may incur the following costs in order to comply with this AD. Labor costs are estimated at \$85 per work-hour.

Inspecting the set of T/R links (eight bearings) for corrosion takes about one work-hour for an estimated cost of \$85 per helicopter and \$7,905 for the U.S. fleet per inspection cycle. Cleaning and inspecting the set of T/R links for pitting takes about one work-hour for an estimated cost of \$85 per helicopter. Replacing a T/R link requires no additional work-hours after the inspection and required parts cost \$2,739 for an estimated replacement cost of \$2,739 per T/R link. Removing the torque stripe, cleaning, and applying sealant to the set of T/R links takes about one work-hour with a negligible parts cost for an estimated cost of \$85

per helicopter. Inspecting the sealant on a set of T/R links takes about one work-hour for an estimated cost of \$85 per helicopter and \$7,905 for the U.S. fleet per inspection cycle.

According to Bell Helicopter's service information, some of the costs of this AD may be covered under warranty, thereby reducing the cost impact on affected individuals. The FAA does not control warranty coverage by Bell Helicopter. Accordingly, the FAA has included all costs in this cost estimate.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, Section 106, describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

The FAA has determined that this AD will not have federalism implications under Executive Order 13132. This AD will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify that this AD:

1. Is not a "significant regulatory action" under Executive Order 12866,
2. Will not affect intrastate aviation in Alaska, and
3. Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Amendment

Accordingly, under the authority delegated to me by the Administrator,

the FAA amends 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

- 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

- 2. The FAA amends § 39.13 by:
 - a. Removing Airworthiness Directive (AD) 2016-02-06, Amendment 39-18387 (81 FR 5367, February 2, 2016); and
 - b. Adding the following new AD:

2020-17-10 Bell Helicopter Textron Canada Limited: Amendment 39-21215; Docket No. FAA-2019-0589; Product Identifier 2017-SW-020-AD.

(a) Applicability

This AD applies to Bell Helicopter Textron Canada Limited Model 429 helicopters with a tail rotor (T/R) pitch link assembly (link) part number (P/N) 429-012-112-101, -101FM, -103, -103FM, -111, -111FM, -113, or -113FM installed, certificated in any category.

(b) Unsafe Condition

This AD defines the unsafe condition as failure of a T/R link. This condition could result in loss of T/R flight control and subsequent loss of control of the helicopter.

(c) Affected ADs

This AD replaces AD 2016-02-06, Amendment 39-18387 (81 FR 5367, February 2, 2016).

(d) Effective Date

This AD becomes effective September 21, 2020.

(e) Compliance

You are responsible for performing each action required by this AD within the specified compliance time unless it has already been accomplished prior to that time.

(f) Required Actions

(1) For T/R link P/N 429-012-112-101 and -103, within 10 hours time-in-service (TIS):

(i) Remove each T/R link. Prior to cleaning the T/R link bearing bores, using 10X or higher power magnification, inspect each T/R link bearing bore for aluminum oxide corrosion extruding from between the roll staked lip of the bearing outer race and the link bearing bore. Aluminum oxide corrosion appears as a white crystalline material in contrast with the black finish and any accumulated soot. An example of this corrosion is shown in Figure 1 of Bell Helicopter Alert Service Bulletin 429-15-26, dated December 7, 2015 (ASB 429-15-26).

(ii) If there is any aluminum oxide corrosion, replace the T/R link before further flight.

(iii) If there is no aluminum oxide corrosion, clean each T/R link bearing bore with isopropyl alcohol, and using 10X or higher power magnification, inspect each cleaned T/R link for pitting.

(A) If there is any pitting, replace the T/R link before further flight.

(B) If there is no pitting, apply corrosion preventative sealant by following the Accomplishment Instructions, paragraph 5. of Part I, of ASB 429-15-26.

(2) For all T/R link P/Ns listed in paragraph (a) of this AD, within 50 hours TIS, and thereafter at intervals not to exceed 50 hours TIS, using 10X or higher power magnification, inspect each T/R link bearing bore for missing corrosion preventative sealant. If any corrosion preventative sealant is missing, perform the actions in paragraphs (f)(3)(i) and (ii) of this AD before further flight.

(3) For all T/R link P/Ns listed in paragraph (a) of this AD, within 12 months since date of manufacture, except if paragraphs (f)(1)(i) through (iii) of this AD have already been done for T/R link P/N 429-012-112-101 or -103 within the last 12 months and except if paragraph (f)(3)(i) and (ii) of this AD have already been done for T/R link P/N 429-012-112-101FM, -103FM, -111, -111FM, -113, or -113FM within the last 12 months; and thereafter for all T/R link P/Ns listed in paragraph (a) of this AD at intervals not to exceed 12 months:

(i) Remove each T/R link; and

(ii) Remove all corrosion preventative sealant, and perform the actions in paragraphs (f)(1)(i) through (iii) of this AD.

(4) After the effective date of this AD:

(i) Do not install T/R link P/N 429-012-112-101 or -103 on any helicopter before complying with the actions in paragraphs (f)(1)(i) through (iii) of this AD.

(ii) Do not install T/R link P/N 429-012-112-101FM, 103FM, -111, 111FM, -113, or -113FM on any helicopter before complying with the actions in paragraph (f)(2) of this AD.

(g) Alternative Methods of Compliance (AMOCs)

(1) The Manager, International Validation Branch, FAA, may approve AMOCs for this AD. Send your proposal to: Scott Franke, Aviation Safety Engineer, International Validation Branch, Aviation and Rotorcraft Unit, FAA, 10101 Hillwood Pkwy., Fort Worth, TX 76177; telephone 817-222-5110; email scott.franke@faa.gov.

(2) For operations conducted under a 14 CFR part 119 operating certificate or under 14 CFR part 91, subpart K, the FAA suggests that you notify your principal inspector, or lacking a principal inspector, the manager of the local flight standards district office or certificate holding district office, before operating any aircraft complying with this AD through an AMOC.

(h) Additional Information

The subject of this AD is addressed in Transport Canada AD No. CF-2016-01R2, dated April 12, 2017. You may view the Transport Canada AD on the internet at <https://www.regulations.gov> in Docket No. FAA-2019-0589.

(i) Subject

Joint Aircraft Service Component (JASC) Code: 6400, Tail Rotor System.

(j) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference (IBR) of the service information listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this service information as applicable to do the actions required by this AD, unless the AD specifies otherwise.

(3) The following service information was approved for IBR on February 2, 2016 (81 FR 5367, February 2, 2016).

(i) Bell Helicopter Alert Service Bulletin 429-15-26, dated December 7, 2015.

(ii) [Reserved]

(4) For service information identified in this AD, contact Bell Helicopter Textron Canada Limited, 12,800 Rue de l'Avenir, Mirabel, Quebec J7J1R4; telephone 450-437-2862 or 800-363-8023; fax 450-433-0272; or at <https://www.bellcustomer.com>.

(5) You may view this service information at the FAA, Office of the Regional Counsel, Southwest Region, 10101 Hillwood Pkwy., Room 6N-321, Fort Worth, TX 76177. For information on the availability of this material at the FAA, call 817-222-5110.

(6) You may view this service information that is incorporated by reference at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, email fedreg.legal@nara.gov, or go to: <https://www.archives.gov/federal-register/cfr/ibr-locations.html>.

Issued on August 10, 2020.

Lance T. Gant,

Director, Compliance & Airworthiness Division, Aircraft Certification Service.

Federal Aviation Administration

14 CFR Part 39

[Docket No. FAA-2020-0723; Project Identifier AD-2020-00586-Q; Amendment 39-21192; AD 2020-16-08]

RIN 2120-AA64

Airworthiness Directives; Aspen Avionics, Inc.

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule; correction.

SUMMARY: The FAA is correcting an airworthiness directive (AD) that published in the **Federal Register**. The AD applies to certain Aspen Avionics, Inc., Evolution Flight Display (EFD) EFD1000 Emergency Backup Display, EFD1000 Multi-Function Display, and EFD1000 Primary Flight Display systems installed on various airplanes. As published, the docket number and product identifier in the Comments

Invited section of the preamble are incorrect. This document corrects that error. In all other respects, the original document remains the same; however, for clarity, the FAA is publishing the entire rule in the **Federal Register**.

DATES: This correction is effective August 17, 2020. The effective date of AD 2020-16-08 remains August 17, 2020.

ADDRESSES: You may send comments, using the procedures found in 14 CFR 11.43 and 11.45, by any of the following methods:

- *Federal eRulemaking Portal:* Go to <https://www.regulations.gov>. Follow the instructions for submitting comments.

- *Fax:* 202-493-2251.

- *Mail:* U.S. Department of Transportation, Docket Operations, M-30, West Building Ground Floor, Room W12-140, 1200 New Jersey Avenue SE, Washington, DC 20590.

- *Hand Delivery:* U.S. Department of Transportation, Docket Operations, M-30, West Building Ground Floor, Room W12-140, 1200 New Jersey Avenue SE, Washington, DC 20590, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

Examining the AD Docket

You may examine the AD docket on the internet at <https://www.regulations.gov> by searching for and locating Docket No. FAA-2020-0723; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this final rule, the regulatory evaluation, any comments received, and other information. The street address for the Docket Operations is listed above. Comments will be available in the AD docket shortly after receipt.

FOR FURTHER INFORMATION CONTACT:

Mahmood Shah, Aerospace Engineer, Fort Worth ACO Branch, FAA, 10101 Hillwood Pkwy., Fort Worth, TX 76177; phone: 817-222-5133; fax: 817-222-5960; email: mahmood.shah@faa.gov.

SUPPLEMENTARY INFORMATION:

As published, AD 2020-16-08, Amendment 39-21192 (85 FR 45990, July 31, 2020) ("AD 2020-16-08"), applies to certain Aspen Avionics, Inc., EFD1000 Emergency Backup Display, EFD1000 Multi-Function Display, and EFD1000 Primary Flight Display systems installed on various airplanes. AD 2020-16-08 imposes operating restrictions to flight under visual flight rules (VFR) and prohibits night operations to allow safe operation in the event of a loss of flight display functionality.

Need for the Correction

As published, the docket number and product identifier in the first paragraph of the Comments Invited section of the preamble are incorrect. The paragraph incorrectly references Docket Number “FAA–2020–0711” and Product Identifier “MCAI–2020–00719–A,” instead of Docket No. FAA–2020–0723 and Product Identifier AD–2020–00586–Q.

Although no other part of the preamble or regulatory information has been corrected, for clarity, the FAA is publishing the entire rule in the **Federal Register**.

The effective date of this AD remains August 17, 2020.

Related Service Information

The FAA reviewed Aspen Operator Advisory OA2020–01, dated March 3, 2020. This document advises operators of the automatic reset event and provides recommended operating limitations.

The FAA also reviewed Aspen Service Bulletin Number: SB2020–01, dated April 1, 2020. This document provides instructions for updating the EFD software to correct the automatic reset issue. This AD does not apply to airplanes that are compliant with this service information.

Good Cause for Adoption Without Prior Notice

Section 553(b)(3)(B) of the Administrative Procedure Act (APA) (5 U.S.C. 551 et seq.) authorizes agencies to dispense with notice and comment procedures for rules when the agency for “good cause” finds that those procedures are “impracticable, unnecessary, or contrary to the public interest.” Section 553(d)(3) of the APA requires that agencies publish a rule not less than 30 days before its effective date, except as otherwise provided by the agency for good cause found and published with the rule.

Since this action only corrects the docket number and product identifier in the preamble, the FAA finds that notice and public comment under 5 U.S.C. 553(b) is unnecessary. For the same reason, the FAA finds that good cause exists under 5 U.S.C. 553(d) for making this rule effective in less than 30 days.

Comments Invited

This AD is a final rule that involves requirements affecting flight safety and was not preceded by notice and an opportunity for public comment. However, we invite you to send any written data, views, or arguments about this final rule. Send your comments to an address listed under the **ADDRESSES**

section. Include the Docket Number FAA–2020–0723 and Product Identifier AD–2020–00586–Q at the beginning of your comments.

Except for Confidential Business Information (CBI) as described in the following paragraph, and other information as described in 14 CFR 11.35, the FAA will post all comments received, without change, to <https://www.regulations.gov>, including any personal information you provide. The FAA will also post a report summarizing each substantive verbal contact received about this final rule.

Confidential Business Information

CBI is commercial or financial information that is both customarily and actually treated as private by its owner. Under the Freedom of Information Act (FOIA) (5 U.S.C. 552), CBI is exempt from public disclosure. If your comments responsive to this AD contain commercial or financial information that is customarily treated as private, that you actually treat as private, and that is relevant or responsive to this AD, it is important that you clearly designate the submitted comments as CBI. Please mark each page of your submission containing CBI as “PROPIN.” The FAA will treat such marked submissions as confidential under the FOIA, and they will not be placed in the public docket of this AD. Submissions containing CBI should be sent to Mahmood Shah, Aerospace Engineer, Fort Worth ACO Branch, FAA, 10101 Hillwood Pkwy., Fort Worth, TX 76177. Any commentary that the FAA receives which is not specifically designated as CBI will be placed in the public docket for this rulemaking.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Correction

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration amends part 39 of the Federal Aviation Regulations (14 CFR part 39) as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Corrected]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive (AD):

2020–16–08 Aspen Avionics, Inc.:

Amendment 39–21192; Docket No. FAA–2020–0723; Project Identifier AD–2020–00586–Q.

(a) Effective Date

This AD is effective August 17, 2020.

(b) Affected ADs

None.

(c) Applicability

(1) This AD applies to Aspen Avionics, Inc., Evolution Flight Display (EFD) EFD1000 Primary Flight Display part number (P/N) 910–00001–011, EFD1000 Multi-Function Display P/N 910–00001–012, and EFD1000 Emergency Backup Display P/N 910–00001–017 units that meet both conditions in paragraphs (c)(1)(i) and (ii) of this AD.

(i) Software version 2.10 or 2.10.1 is installed;

(ii) Independent attitude, altitude, and airspeed back-up instruments are not installed.

(2) These flight display units may be installed on, but are not limited to, the following airplanes, certificated in any category:

(i) Aermacchi S.p.A. Model S.205–18/F, S.205–18/R, S.205–20/F, S.205–20/R, S.205–22/R, S.208, and S.208A airplanes;

(ii) Aeronautica Macchi S.p.A. Model AL 60 (previously designated as Model LASA 60), AL 60–B, AL 60–C5, and AL 60–F5 airplanes;

(iii) Aerostar Aircraft Corporation Model PA–60–600 (Aerostar 600), PA–60–601 (Aerostar 601), PA–60–601P (Aerostar 601P), and PA–60–602P (Aerostar 602P) airplanes;

(iv) Alexandria Aircraft, LLC (type certificate previously held by Bellanca, Inc.), Model 14–19, 14–19–2, 14–19–3, 14–19–3A, 17–30, 17–30A, 17–31, 17–31A, 17–31ATC, and 17–31TC airplanes;

(v) American Champion Aircraft Corp. Model 402, 7ECA, 7GCAA, 7GCBC, 7KCAB, 8GCBC, and 8KCAB airplanes;

(vi) CEAPR (type certificate previously held by APEX) Model CAP 10 B airplanes;

(vii) Cirrus Design Corporation Model SR20 and SR22 airplanes;

(viii) Commander Aircraft Corporation (type certificate previously held by CPAC, Inc.) Model 112, 112B, 112TC, 112TCA, 114, 114A, 114B, and 114TC airplanes;

(ix) Consolidated Vultee Aircraft Corporation, Stinson Division Model V–77 (Army AT–19) airplanes;

(x) Cougar Aircraft Corporation (type certificate previously held by SOCAT, S.A.) Model GA–7 airplanes;

(xi) Diamond Aircraft Industries Inc. Model DA20–A1 and DA20–C1 airplanes;

(xii) Diamond Aircraft Industries Inc. (type certificate previously held by Diamond Aircraft Industries GmbH) Model DA 40 and DA 40 F airplanes;

(xiii) Discovery Aviation, Inc. (type certificate previously held by Liberty Aerospace Incorporated), Model XL–2 airplanes;

(xiv) Dynac Aerospace Corporation Model Aero Commander 100, Aero Commander 100A, Aero Commander 100–180, Volaire 10, and Volaire 10A airplanes;

(xv) EADS-PZL "Warszawa-Okecie" S.A. (type certificate previously held by Panstwowe Zaklady Lotnicze) Model PZL-104 WILGA 80, PZL-104M WILGA 2000, PZL-104MA WILGA 2000, PZL-KOLIBER 150A, and PZL-KOLIBER 160A airplanes;

(xvi) Extra Flugzeugproduktions- und Vertriebs- GmbH (type certificate previously held by Extra Flugzeugbau GmbH) Model EA 300, EA 300/L, EA 300/S, EA 300/200, and EA 300/LC airplanes;

(xvii) Frakes Aviation Model G-44 (Army OA-14, Navy J4F-2), G-44A, and SCAN Type 30 airplanes;

(xviii) FS 2003 Corporation (type certificate previously held by The New Piper Aircraft, Inc.) Model PA-12 and PA-12S airplanes;

(xix) GROB Aircraft AG (type certificate previously held by GROB Aerospace GmbH i.l.) Model G115, G115A, G115B, G115C, G115C2, G115D, G115D2, G115EG, and G120A airplanes;

(xx) Helio Aircraft, LLC, Model H-250, H-295 (USAF U-10D), H-391 (USAF YL-24), H-391B, H-395 (USAF L-28A and U-10B), H-395A, H-700, H-800, HST-550, HST-550A (USAF AU-24A), and HT-295 airplanes;

(xxi) Interceptor Aviation Inc. (type certificate previously held by Interceptor Aircraft Corporation) Model 200, 200A, 200B, 200C, 200D, and 400 airplanes;

(xxii) Lockheed Martin Aeronautics Company Model 402-2 airplanes;

(xxiii) Maule Aerospace Technology, Inc. (type certificate previously held by Maule Aircraft Corporation), Model Bee Dee M-4, M-4, M-4C, M-4S, M-4T, M-4-180C, M-4-180S, M-4-180T, M-4-210, M-4-210C, M-4-210S, M-4-210T, M-4-220, M-4-220C, M-4-220S, M-4-220T, M-5-180C, M-5-200, M-5-210C, M-5-210TC, M-5-220C, M-5-235C, M-6-180, M-6-235, M-7-235, M-7-235A, M-7-235B, M-7-235C, M-7-260, M-7-260C, M-7-420A, M-7-420AC, M-8-235, MT-7-235, MT-7-260, MT-7-420, MX-7-160, MX-7-160C, MX-7-180, MX-7-180A, MX-7-180AC, MX-7-180B, MX-7-180C, MX-7-235, MX-7-420, MXT-7-160, MXT-7-180, and MXT-7-180A airplanes;

(xxxix) Textron Aviation Inc. (type certificate previously held by Cessna Aircraft Company) Model 120, 140, 140A, 150, 150A, 150B, 150C, 150D, 150E, 150F, 150G, 150H, 150J, 150K, 150L, 150M, 152, 170, 170A, 170B, 172, 172A, 172B, 172C, 172D, 172E, 172F (USAF T-41A), 172G, 172H (USAF T-41A), 172I, 172K, 172L, 172M, 172N, 172P, 172Q, 172R, 172RG, 172S, 175, 175A, 175B, 175C, 177, 177A, 177B, 177RG, 180, 180A, 180B, 180C, 180D, 180E, 180F, 180G, 180H, 180J, 180K, 182, 182A, 182B, 182C, 182D, 182E, 182F, 182G, 182H, 182J, 182K, 182L, 182M, 182N, 182P, 182Q, 182R, 182S, 182T,

185, 185A, 185B, 185C, 185D, 185E, 206, 206H, 207, 207A, 210, 210A, 210B, 210C, 210D, 210E, 210F, 210G, 210H, 210J, 210K, 210L, 210M, 210N, 210R, 210-5 (205), 210-5A (205A), 310, 310A (USAF U-3A), 310B, 310C, 310D, 310E (USAF U-3B), 310F, 310G, 310H, 310I, 310J, 310J-1, 310K, 310L, 310N, 310P, 310Q, 310R, 320, 320A, 320B, 320C, 320D, 320E, 320F, 320-1, 335, 336, 337, 337A, 337B, 340, 340A, A150K, A150L, A150M, A152, A185E, A185F, E310H, E310J, LC40-550FG, LC41-550FG, LC42-550FG, P172D, P206, P206A, P206B, P206C, P206D, P206E, P210N, P210R, R172E (USAF T-41B, USAF T-41C and D), R172F (USAF T-41D), R172G (USAF T-41C and D), R172H (USAF T-41D), R172J, R172K, R182, T182, T182T, T206H, T207, T207A, T210F, T210G, T210H, T210J, T210K, T210L, T210M, T210N, T210R, T303, T310P, T310Q, T310R, TP206A, TP206B, TP206C, TP206D, TP206E, TR182, TU206A, TU206B, TU206C, TU206D, TU206E, TU206F, TU206G, U206, U206A, U206B, U206C, U206D, U206E, U206F, and U206G airplanes;

(xl) Textron Aviation Inc. (type certificate previously held by Beechcraft Corporation), Model 19A, 23, 35, 35R, 35-33, 35-A33, 35-B33, 35-C33, 35-C33A, 36, 45 (YT-34), 50 (L-23A), 56TC, 58, 58A, 58P, 58PA, 58TC, 58TCA, 76, 95, 95-55, 95-A55, 95-B55, 95-B55A, 95-B55B (T-42), 95-C55, 95-C55A, A23, A23A, A23-19, A23-24, A24, A24R, A35, A36, A36TC, A45 (T-34A, B-45), A56TC, B19, B23, B24R, B35, B36TC, B50 (L-23B), B95, B95A, C23, C24R, C35, C50, D35, D45 (T-34B), D50 (L-23E), D50A, D50B, D50C, D50E, D50E-5990, D55, D55A, D95A, E33, E33A, E33C, E35, E50 (L-23D, RL-23D), E55, E55A, E95, F33, F33A, F33C, F35, F50, G33, G35, G50, H35, H50, J35, J50, K35, M19A, M35, N35, P35, S35, V35, V35A, and V35B airplanes;

(xli) The Boeing Company (type certificate previously held by Rockwell International) Model AT-6 (SNJ-2), AT-6A (SNJ-3), AT-6B, AT-6C (SNJ-4), AT-6D (SNJ-5), AT-6F (SNJ-6, SNJ-7), BC-1A, and T-6G airplanes;

(xlii) The King's Engineering Fellowship (TKEF) Model 44 airplanes;

(xliii) The Waco Aircraft Company Model YMF airplanes;

(xliv) Topcub Aircraft, Inc., Model CC18-180 and CC18-180A airplanes;

(xlv) True Flight Holdings LLC (type certificate previously held by Tiger Aircraft LLC) Model AA-1, AA-1A, AA-1B, AA-1C, AA-5, AA-5A, AA-5B, and AG-5B airplanes;

(xlvi) Twin Commander Aircraft LLC (type certificate previously held by Twin Commander Aircraft Corporation) Model 500, 520, 560, and 560A airplanes;

(xlvii) Univair Aircraft Corporation Model 108, 108-1, 108-2, 108-3, and 108-5 airplanes;

(xlviii) Viking Air Limited (type certificate previously held by Bombardier Inc. and deHavilland Inc.) Model DHC-2 Mk. I, DHC-2 Mk. II, and DHC-2 Mk. III airplanes;

(xlix) Vulcanair S.p.A. (type certificate previously held by Partenavia Costruzioni Aeronautiche S.p.A.) Model AP68TP-300 "Spartacus," AP68TP-600 "Viator," P.68, P.68 "Observer," P.68 "Observer 2," P.68B, P.68C, P.68C-TC, and P.68TC "Observer" airplanes;

(l) WSK PZL Mielec and OBR SK Mielec Model PZL M20 03 airplanes;

(li) W.Z.D. Enterprises Inc. (type certificate previously held by JGS Properties, LLC) Model 11A and 11E airplanes;

(lii) Zenair Ltd. Model CH2000 airplanes; and

(liii) Zlin Aircraft a.s. (type certificate previously held by Moravan a.s.) Model Z-143L and Z-242L airplanes.

(d) Subject

Joint Aircraft System Component (JASC)/ Air Transport Association (ATA) of America Code 3410, FLIGHT ENVIRONMENT DATA; 3420, ATTITUDE AND DIRECTION DATA SYSTEM.

(e) Unsafe Condition

This AD was prompted by an automatic reset occurring when the display internal monitor detects a potential fault causing intermittent loss of airspeed, attitude, and altitude information during flight. The FAA is issuing this AD to address the software interacting with a graphics processing chip defect. The unsafe condition, if not addressed, could result in intermittent loss of airspeed, attitude, and altitude information during flight with consequent loss of airplane control.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Required Actions

(1) Before further flight, revise the limitations section of the airplane flight manual (AFM) for your airplane by inserting a copy of this AD or by making a pen and ink change to add: "Operation under Instrument Flight Rules (IFR) or night Visual Flight Rules (VFR) is prohibited."

(2) The action required by paragraph (g)(1) of this AD may be performed by the owner/ operator (pilot) holding at least a private pilot certificate and must be entered into the aircraft records showing compliance with this AD in accordance with 14 CFR 43.9(a)(1) through (4) and 14 CFR 91.417(a)(2)(v). The record must be maintained as required by 14 CFR 91.417. This authority is not applicable to aircraft being operated under 14 CFR part 119.

(h) Special Flight Permit

Special flight permits are prohibited.

(i) Alternative Methods of Compliance (AMOCs)

(1) The Manager, Fort Worth ACO Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the manager of the certification office, send it to the attention of the person identified in paragraph (j).

(2) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/ certificate holding district office.

(j) Related Information

For more information about this AD, contact Mahmood Shah, Aerospace Engineer, Fort Worth ACO Branch, FAA, 10101 Hillwood Pkwy., Fort Worth, TX 76177; phone: 817-222-5133; fax: 817-222-5960; email: mahmood.shah@faa.gov.

Issued on August 11, 2020.

Lance T. Gant,

Director, Compliance & Airworthiness Division, Aircraft Certification Service.

RIN 2120-AA64

Airworthiness Directives; Pacific Aerospace Limited Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule; request for comments.

SUMMARY: The FAA is adopting a new airworthiness directive (AD) for Pacific Aerospace Limited Model 750XL airplanes. This AD results from mandatory continuing airworthiness information (MCAI) issued by the aviation authority of another country to identify and correct an unsafe condition on an aviation product. The MCAI describes the unsafe condition as inadvertent fuel shut-off to the engine during the operation of the flaps due to the fuel and flap control levers being located too closely together. The FAA is issuing this AD to address the unsafe condition on these products.

DATES: This AD is effective September 8, 2020.

The Director of the Federal Register approved the incorporation by reference of a certain publication listed in the AD as of September 8, 2020.

The FAA must receive comments on this AD by October 1, 2020.

ADDRESSES: You may send comments by any of the following methods:

- **Federal eRulemaking Portal:** Go to <https://www.regulations.gov>. Follow the instructions for submitting comments.

- **Fax:** (202) 493-2251.

- **Mail:** U.S. Department of Transportation, Docket Operations, M-30, West Building Ground Floor, Room W12-140, 1200 New Jersey Avenue SE, Washington, DC 20590.

- **Hand Delivery:** U.S. Department of Transportation, Docket Operations, M-30, West Building Ground Floor, Room W12-140, 1200 New Jersey Avenue SE, Washington, DC 20590, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

For service information identified in this AD, contact Pacific Aerospace Limited, Airport Road, Hamilton, Private Bag 3027, Hamilton 3240, New Zealand; telephone: +64 7 843 6144; facsimile: +64 7 843 6134; email: pacific@aerospace.co.nz; internet: <https://www.aerospace.co.nz>. You may view this referenced service information at the FAA, Airworthiness Products Section, Operational Safety Branch, 901 Locust, Kansas City, Missouri 64106. For information on the availability of this material at the FAA, call (816) 329-4148. It is also available on the internet at <https://www.regulations.gov> by searching for Docket No. FAA-2020-0717.

Examining the AD Docket

You may examine the AD docket on the internet at <https://www.regulations.gov> by searching for and locating Docket No. FAA-2020-0717; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this AD, the regulatory evaluation, any comments received, and other information. The street address for Docket Operations is listed above. Comments will be available in the AD docket shortly after receipt.

FOR FURTHER INFORMATION CONTACT: Mike Kiesov, Aerospace Engineer, FAA, General Aviation & Rotorcraft Section, International Validation Branch, 901 Locust, Room 301, Kansas City, Missouri 64106; telephone: (816) 329-4144; fax: (816) 329-4090; email: mike.kiesov@faa.gov.

SUPPLEMENTARY INFORMATION:

Discussion

The Civil Aviation Authority (CAA), which is the aviation authority for New Zealand, has issued AD DCA/750XL/39, dated September 5, 2019 (referred to after this as "the MCAI"), to correct an unsafe condition for Pacific Aerospace Limited Model 750XL airplanes. The MCAI states:

DCA/750XL/39 with effective date 5 September 2019 is prompted by the findings of an accident investigation. The report recommended that an effective lock mechanism should be introduced for the fuel condition lever in order to prevent inadvertent fuel shut-off to the engine during the operation of the flaps, as the fuel and flap control levers are closely located.

Pacific Aerospace Mandatory Service Bulletin (MSB) PACSB/XL/111 issue 1, dated 18 June 2019 introduces a fuel condition lever inspection and instructions to adjust the position of the fuel condition lever to ensure it rests against the left hand side of the control guide slot when selected to the ground idle position.

You may examine the MCAI on the internet at <https://www.regulations.gov> by searching for and locating Docket No. FAA-2020-0717.

Related Service Information Under 1 CFR Part 51

The FAA reviewed Pacific Aerospace Mandatory Service Bulletin PACSB/XL/111, Issue 1, dated June 18, 2019. The service information contains procedures for inspecting and adjusting the position of the fuel condition lever relative to the control guide, which assists in prevention of inadvertent movement of the power lever into the cutoff position if ground idle is selected. This service information is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section.

FAA's Determination and Requirements of the AD

This product has been approved by the aviation authority of another country, and is approved for operation in the United States. Pursuant to our bilateral agreement with this State of Design Authority, it has notified the FAA of the unsafe condition described in the MCAI and service information referenced above. The FAA is issuing this AD because it evaluated all information provided by the State of Design Authority and determined the unsafe condition exists and is likely to exist or develop on other products of the same type design.

FAA's Determination of the Effective Date

An unsafe condition exists that requires the immediate adoption of this AD. The FAA has found that the risk to the flying public justifies waiving notice and comment prior to adoption of this rule because of several reported engine failures on these airplanes due to inadvertent movement of the power lever into the cutoff position if ground idle is selected. Engine failure could result in loss of airplane control. The risk assessment received by the FAA, and reconfirmed in July of 2020, indicates that urgent action is required. Therefore, the FAA finds good cause that notice and opportunity for prior public comment are impracticable. In addition, for the reason stated above, the

FAA finds that good cause exists for making this amendment effective in less than 30 days.

Comments Invited

This AD is a final rule that involves requirements affecting flight safety and was not preceded by notice and an opportunity for public comment. However, the FAA invites you to send any written data, views, or arguments about this final rule. Send your comments to an address listed under the **ADDRESSES** section. Include the Docket Number FAA-2020-0717 and Product Identifier 2019-CE-038-AD at the beginning of your comments. The FAA will consider all comments received by the closing date and may amend this final rule because of those comments.

Except for Confidential Business Information (CBI) as described in the following paragraph, and other information as described in 14 CFR 11.35, the FAA will post all comments received, without change, to <https://www.regulations.gov>, including any personal information you provide. The FAA will also post a report summarizing each substantive verbal contact we receive about this final rule.

Confidential Business Information

CBI is commercial or financial information that is both customarily and actually treated as private by its owner. Under the Freedom of Information Act (FOIA) (5 U.S.C. 552), CBI is exempt from public disclosure. If your comments responsive to this AD contain commercial or financial information that is customarily treated as private, that you actually treat as private, and that is relevant or responsive to this AD, it is important that you clearly designate the submitted comments as CBI. Please mark each page of your submission containing CBI as "PROPIN." The FAA will treat such marked submissions as confidential under the FOIA, and they will not be placed in the public docket of this AD. Submissions containing CBI should be sent to Mike Kiesov, Aerospace Engineer, FAA, Small Airplane Standards Branch, 901 Locust, Room 301, Kansas City, Missouri 64106. Any commentary that the FAA receives which is not specifically designated as CBI will be placed in the public docket for this rulemaking.

Costs of Compliance

The FAA estimates that this AD will affect 22 products of U.S. registry. The FAA also estimates that it will take 1 work-hour per product to comply with the inspection requirement of this AD. The average labor rate is \$85 per work-hour.

Based on these figures, the FAA estimates the cost of this AD on U.S. operators to be \$1,870, or \$85 per product.

In addition, the FAA estimates that any necessary follow-on actions will take 4 work-hours and require parts costing \$20, for a cost of \$360 per product. The FAA has no way of determining the number of products that may need these actions.

According to the manufacturer, some of the costs of this AD may be covered under warranty, thereby reducing the cost impact on affected individuals. The FAA does not control warranty coverage for affected individuals. As a result, the FAA has included all costs in our cost estimate.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Flexibility Act

The requirements of the Regulatory Flexibility Act (RFA) do not apply when an agency finds good cause pursuant to 5 U.S.C. 553 to adopt a rule without prior notice and comment. Because FAA has determined that it has good cause to adopt this rule without notice and comment, RFA analysis is not required.

Regulatory Findings

The FAA determined that this AD will not have federalism implications under Executive Order 13132. This AD will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify that this AD:

(1) Is not a “significant regulatory action” under Executive Order 12866, and

(2) Will not affect intrastate aviation in Alaska.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA amends 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive:

2020–16–12 Pacific Aerospace Limited: Amendment 39–21196; Docket No. FAA–2020–0717; Product Identifier 2019–CE–038–AD.

(a) Effective Date

This airworthiness directive (AD) becomes effective September 8, 2020.

(b) Affected ADs

None.

(c) Applicability

This AD applies to Pacific Aerospace Limited Model 750XL airplanes, serial numbers 101 through 216, 220, 8001, and 8002, certificated in any category.

(d) Subject

Air Transport Association of America (ATA) Code 76: Engine Controls.

(e) Reason

This AD was prompted by inadvertent fuel shut-off to the engine during the operation of the flaps, due to the fuel and flap control levers being located too closely together. The FAA is issuing this AD to adjust the position of the fuel condition lever relative to the control guide, which will prevent inadvertent movement of the power lever into the cutoff position if ground idle is selected and result in engine failure and loss of airplane control.

(f) Actions and Compliance

Unless already done, within the next 30 days after September 8, 2020 (the effective date of this AD), inspect the position of the fuel condition lever by following the Accomplishment Instructions, paragraph 2(1), of Pacific Aerospace Mandatory Service Bulletin PACSB/XL/111, Issue 1, dated June 18, 2019 (MSB PACSB/XL/111). If the fuel condition lever is not positioned against the left side of the control guide slot in the ground idle position, before further flight,

adjust the fuel condition level position by following the Accomplishment Instructions, paragraph 2(3), of MSB PACSB/XL/111.

(g) Alternative Methods of Compliance (AMOCs)

The Manager, Small Airplane General Aviation & Rotorcraft Section, International Validation Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. Send information to ATTN: Mike Kiesov, Aerospace Engineer, FAA, General Aviation & Rotorcraft Section, International Validation Branch, 901 Locust, Room 301, Kansas City, Missouri 64106; telephone: (816) 329–4144; fax: (816) 329–4090; email: mike.kiesov@faa.gov. Before using any approved AMOC on any airplane to which the AMOC applies, notify your appropriate principal inspector (PI) in the FAA Flight Standards District Office (FSDO), or lacking a PI, your local FSDO.

(h) Related Information

Refer to mandatory continuing airworthiness information (MCAI) CAA AD No. DCA/750XL/39, dated September 5, 2019, for related information. You may examine the MCAI on the internet at <https://www.regulations.gov> by searching for and locating Docket No. FAA–2020–0717.

(i) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference of the service information listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this service information as applicable to do the actions required by this AD, unless the AD specifies otherwise.

(i) Pacific Aerospace Mandatory Service Bulletin PACSB/XL/111, Issue 1, dated June 18, 2019.

(ii) [Reserved]

(3) For Pacific Aerospace Limited service information identified in this AD, contact Pacific Aerospace Limited, Airport Road, Hamilton, Private Bag 3027, Hamilton 3240, New Zealand; phone: +64 7843 6144; fax: +64 7843 6134; email: pacific@aerospace.co.nz; internet: <https://www.aerospace.co.nz>.

(4) You may view this service information at the FAA, Airworthiness Products Section, Operational Safety Branch, 901 Locust, Kansas City, Missouri 64106. For information on the availability of this material at the FAA, call (816) 329–4148. It is also available on the internet at <https://www.regulations.gov> by searching for locating Docket No. FAA–2020–0717.

(5) You may view this service information that is incorporated by reference at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, email: fedreg.legal@nara.gov, or go to: <https://www.archives.gov/federal-register/cfr/ibr-locations.html>.

Issued on August 5, 2020.

Lance T. Gant,

Director, Compliance & Airworthiness Division, Aircraft Certification Service.

RIN 2120–AA64

Airworthiness Directives; Pacific Aerospace Limited Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule; request for comments.

SUMMARY: The FAA is adopting a new airworthiness directive (AD) for Pacific Aerospace Limited Model 750XL airplanes. This AD results from mandatory continuing airworthiness information (MCAI) issued by the aviation authority of another country to identify and correct an unsafe condition on an aviation product. The MCAI identifies the unsafe condition as nose landing gear (NLG) and main landing gear (MLG) attachment bolts without dual retaining devices. The FAA is issuing this AD to require actions to address the unsafe condition on these products.

DATES: This AD is effective September 8, 2020.

The Director of the Federal Register approved the incorporation by reference of a certain publication listed in the AD as of September 8, 2020.

The FAA must receive comments on this AD by October 1, 2020.

ADDRESSES: You may send comments by any of the following methods:

- **Federal eRulemaking Portal:** Go to <https://www.regulations.gov>. Follow the instructions for submitting comments.

- **Fax:** (202) 493–2251.

- **Mail:** U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.

- **Hand Delivery:** U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

For service information identified in this AD, contact Pacific Aerospace Limited, Airport Road, Hamilton, Private Bag 3027, Hamilton 3240, New Zealand; telephone: +64 7 843 6144; facsimile: +64 7 843 6134; email: pacific@aerospace.co.nz; internet: <https://www.aerospace.co.nz>. You may view this referenced service information at the FAA, Airworthiness Products Section, Operational Safety Branch, 901 Locust, Kansas City, Missouri 64106. For information on the availability of this material at the FAA, call (816) 329-4148. It is also available on the internet at <https://www.regulations.gov> by searching for Docket No. FAA-2020-0716.

Examining the AD Docket

You may examine the AD docket on the internet at <https://www.regulations.gov> by searching for and locating Docket No. FAA-2020-0716; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this AD, the regulatory evaluation, any comments received, and other information. The street address for Docket Operations is listed above. Comments will be available in the AD docket shortly after receipt.

FOR FURTHER INFORMATION CONTACT:

Mike Kiesov, Aerospace Engineer, FAA, Small Airplane Standards Branch, 901 Locust, Room 301, Kansas City, Missouri 64106; telephone: (816) 329-4144; fax: (816) 329-4090; email: mike.kiesov@faa.gov.

SUPPLEMENTARY INFORMATION:

Discussion

The Civil Aviation Authority (CAA), which is the aviation authority for New Zealand, has issued AD DCA/750XL/32B, dated February 7, 2019 (referred to after this as “the MCAI”), to correct an unsafe condition for Pacific Aerospace Limited Model 750XL airplanes. In its notification of the MCAI, the CAA states:

DCA/750XL/32B with effective date 7 February 2019 is prompted by several reports of finding loose nose landing gear attachment lock nuts and pal nuts. This [CAA] AD revised to mandate Pacific Aerospace Mandatory Service Bulletin (MSB) PACSB/XL/105 issue 4, dated 19 December 2018, which introduces alternate bolts for [part number] P/N NAS6606D63 and NAS6606D68.

The MCAI is part of an extensive evaluation and investigation by the New Zealand CAA on the Pacific Aerospace Model 750XL. The unsafe condition results from a production quality issue where the MLG and NLG attachment

bolts may not have the required dual retaining devices installed. Therefore, the MCAI requires an inspection of the MLG and the NLG. The NLG requires the installation of a castellated nyloc locking nut and a split pin. The MLG requires the inspection and installation of Palnuts on any attachment bolts that do not have a Palnut installed. This condition, if not detected and corrected, could lead to failure of the NLG and MLG.

You may examine the MCAI on the internet at <https://www.regulations.gov> by searching for and locating Docket No. FAA-2020-0716.

Differences Between the MCAI and This AD

The MCAI allows a licensed pilot rated for this airplane to do daily visual inspections of the nose landing gear lower bolts and clamp for security for up to 165 hours time-in-service until the terminating corrective action is performed. The FAA’s regulations do not allow pilots to perform maintenance, which includes inspections, on U.S.-certificated airplanes. Therefore, this AD does not include the daily inspection requirement and requires a shorter compliance time for the terminating corrective action to address the unsafe condition in a timely manner.

Related Service Information Under 1 CFR Part 51

The FAA reviewed Pacific Aerospace Mandatory Service Bulletin PACSB/XL/105, Issue 4, dated December 19, 2018. The service information contains procedures for inspecting the NLG lower bolts and clamp for security, replacing the NLG locking nut and Palnut with a castellated nyloc locking nut and split pin, and inspecting the MLG attachment bolts and installing Palnuts as necessary. This service information is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the ADDRESSES section.

Other Related Information

The FAA also reviewed Pacific Aerospace Drawing BOL6603 THRU 6620, dated December 19, 2018. This drawing contains additional information related to fabrication of the required part number bolts for the NLG.

FAA’s Determination and Requirements of the AD

This product has been approved by the aviation authority of another country, and is approved for operation in the United States. Pursuant to our

bilateral agreement with this State of Design Authority, they have notified us of the unsafe condition described in the MCAI and service information referenced above. The FAA is issuing this AD because it evaluated all information provided by the State of Design Authority and determined the unsafe condition exists and is likely to exist or develop on other products of the same type design.

FAA’s Determination of the Effective Date

An unsafe condition exists that requires the immediate adoption of this AD. The risk assessment received by the FAA, and reconfirmed in July of 2020, indicates that urgent action is required. The FAA has found that the risk to the flying public justifies waiving notice and comment prior to adoption of this rule because without the required dual retaining devices, the NLG and the MLG could fail and result in reduced control on the ground and lead to a runway excursion. Because this AD does not include the daily inspections, the FAA finds that compliance is necessary within 20 hours time-in-service or 30 days, whichever occurs first, to address the unsafe condition. Therefore, the FAA finds good cause that notice and opportunity for prior public comment are impracticable. In addition, for the reasons stated above, the FAA finds that good cause exists for making this amendment effective in less than 30 days.

Comments Invited

This AD is a final rule that involves requirements affecting flight safety and was not preceded by notice and an opportunity for public comment. However, the FAA invites you to send any written data, views, or arguments about this final rule. Send your comments to an address listed under the ADDRESSES section. Include the Docket Number FAA-2020-0716 and Product Identifier 2019-CE-009-AD at the beginning of your comments. The FAA will consider all comments received by the closing date and may amend this final rule because of those comments.

Except for Confidential Business Information (CBI) as described in the following paragraph, and other information as described in 14 CFR 11.35, the FAA will post all comments received, without change, to <https://www.regulations.gov>, including any personal information you provide. The FAA will also post a report summarizing each substantive verbal contact we receive about this final rule.

Confidential Business Information

CBI is commercial or financial information that is both customarily and actually treated as private by its owner. Under the Freedom of Information Act (FOIA) (5 U.S.C. 552), CBI is exempt from public disclosure. If your comments responsive to this AD contain commercial or financial information that is customarily treated as private, that you actually treat as private, and that is relevant or responsive to this AD, it is important that you clearly designate the submitted comments as CBI. Please mark each page of your submission containing CBI as "PROPIN." The FAA will treat such marked submissions as confidential under the FOIA, and they will not be placed in the public docket of this AD. Submissions containing CBI should be sent to Mike Kiesov, Aerospace Engineer, FAA, Small Airplane Standards Branch, 901 Locust, Room 301, Kansas City, Missouri 64106. Any commentary that the FAA receives which is not specifically designated as CBI will be placed in the public docket for this rulemaking.

Costs of Compliance

The FAA estimates that this AD will affect 22 products of U.S. registry. The FAA also estimates that it would take about 5 work-hours per product to comply with the basic requirements of this AD. The average labor rate is \$85 per work-hour. Required parts would cost about \$20 per product.

Based on these figures, the FAA estimates the cost of the AD on U.S. operators to be \$9,790, or \$445 per product.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Flexibility Act

The requirements of the Regulatory Flexibility Act (RFA) do not apply when an agency finds good cause pursuant to 5 U.S.C. 553 to adopt a rule without prior notice and comment. Because FAA has determined that it has good cause to adopt this rule without notice and comment, RFA analysis is not required.

Regulatory Findings

The FAA determined that this AD will not have federalism implications under Executive Order 13132. This AD will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify that this AD:

- (1) Is not a "significant regulatory action" under Executive Order 12866, and
- (2) Will not affect intrastate aviation in Alaska.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA amends 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

- 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

- 2. The FAA amends § 39.13 by adding the following new airworthiness directive:

2020-16-07 Pacific Aerospace Limited:
Amendment 39-21191; Docket No. FAA-2020-0716; Product Identifier 2019-CE-009-AD.

(a) Effective Date

This airworthiness directive (AD) becomes effective September 8, 2020.

(b) Affected ADs

None.

(c) Applicability

This AD applies to Pacific Aerospace Limited Model 750XL airplanes, serial numbers (S/Ns) up to and including 216, 220, 8001, and 8002, certificated in any category.

(d) Subject

Air Transport Association of America (ATA) Code 32: Landing Gear.

(e) Reason

This AD was prompted by mandatory continuing airworthiness information (MCAI) originated by an aviation authority of another country to identify and correct an unsafe condition on an aviation product. The MCAI identifies the unsafe condition as nose landing gear (NLG) and main landing gear (MLG) attachment bolts without dual retaining devices. The FAA is issuing this AD to prevent the NLG and MLG attachment bolts from detaching, which if not corrected could lead to failure of the landing gear.

(f) Actions and Compliance

Unless already done, comply with this AD within 20 hours time-in-service after September 8, 2020 (the effective date of this AD) or within 30 days after September 8, 2020 (the effective date of this AD), whichever occurs first.

(1) Replace each NLG upper and lower attachment lock nut and Palnut with castellated nyloc locking nuts and spring/split pins by following steps 6 and 8 in Part B-Accomplishment Instructions (Nose Landing Gear) of Pacific Aerospace Mandatory Service Bulletin PACSB/XL/105, Issue 4, dated December 19, 2018 (PACSB/XL/105, Issue 4).

(2) For airplanes with a S/N up to and including 185, except S/N 177 and except airplanes with modification PAC/XL/0448: inspect the upper and lower attachment bolts on both MLGs for the installation of Palnuts (four on each MLG) as depicted in figure 6 in Part C—Accomplishment Instructions (Main Landing Gear) of PACSB/XL/105, Issue 4.

(i) If Palnuts are installed in all eight locations (four on each MLG), no further action is required.

(ii) If a Palnut is not installed on an MLG attachment bolt, before further flight, check the torque of the attachment bolt and install a Palnut by following steps 5 through 7 in Part C-Accomplishment Instructions (Main Landing Gear) of PACSB/XL/105, Issue 4.

(g) Alternative Methods of Compliance (AMOCs)

The Manager, Small Airplane Standards Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. Send information to ATTN: Mike Kiesov, Aerospace Engineer, FAA, Small Airplane Standards Branch, 901 Locust, Room 301, Kansas City, Missouri 64106; telephone: (816) 329-4144; fax: (816) 329-4090; email: mike.kiesov@faa.gov. Before using any approved AMOC on any airplane to which the AMOC applies, notify your appropriate principal inspector (PI) in the FAA Flight Standards District Office (FSDO), or lacking a PI, your local FSDO.

(h) Related Information

Refer to MCAI Civil Aviation Authority AD No. DCA/750XL/32B, dated February 7, 2019, for related information. You may also refer to Pacific Aerospace Drawing BOL6603 THRU 6620, Issue A1, dated December 19, 2018, for additional information related to this AD. You may examine the MCAI on the internet at <https://www.regulations.gov> by searching for and locating Docket No. FAA-2020-0716.

(i) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference (IBR) of the service information listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this service information as applicable to do the actions required by this AD, unless the AD specifies otherwise.

(i) Pacific Aerospace Mandatory Service Bulletin PACSB/XL/105, Issue 4, dated December 19, 2018.

(ii) [Reserved]

(3) For Pacific Aerospace Limited service information identified in this AD, contact Pacific Aerospace Limited, Airport Road, Hamilton, Private Bag 3027, Hamilton 3240, New Zealand; phone: +64 7843 6144; fax: +64 7843 6134; email: pacific@aerospace.co.nz; internet: <https://www.aerospace.co.nz>.

(4) You may view this service information at the FAA, Airworthiness Products Section, Operational Safety Branch, 901 Locust, Kansas City, Missouri 64106. For information on the availability of this material at the FAA, call (816) 329-4148. It is also available on the internet at <https://www.regulations.gov> by searching for and locating Docket No. FAA-2020-0716.

(5) You may view this service information that is incorporated by reference at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, email: fedreg.legal@nara.gov, or go to: <https://www.archives.gov/federal-register/cfr/ibr-locations.html>.

Issued on July 29, 2020.

Gaetano A. Sciortino,

Deputy Director for Strategic Initiatives, Compliance & Airworthiness Division, Aircraft Certification Service.

Airworthiness Directives; Sikorsky Aircraft Corporation Helicopters

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: The FAA is adopting a new airworthiness directive (AD) for certain Sikorsky Aircraft Corporation (Sikorsky) Model S-92A helicopters. This AD was prompted by two incidents of erroneous low oil pressure caution cockpit indications and unintended actuation of the main gearbox (MGB) auto bypass

valve. This AD requires installing auxiliary circuit breaker modification (MOD) kits and inserting a Rotorcraft Flight Manual (RFM) Supplement into the existing RFM for your helicopter. The FAA is issuing this AD to address the unsafe condition on these products.

DATES: This AD is effective September 21, 2020.

The Director of the Federal Register approved the incorporation by reference of certain publications listed in this AD as of September 21, 2020.

ADDRESSES: For service information identified in this final rule, contact your local Sikorsky Field Representative or Sikorsky's Service Engineering Group at Sikorsky Aircraft Corporation, 124 Quarry Road, Trumbull, CT 06611; telephone 1-800-946-4337 (1-800-Winged-S); email wcs_cust_service_eng.gr-sik@lmco.com. Operators may also log on to the Sikorsky 360 website at <https://www.sikorsky360.com>. You may view this service information at the FAA, Office of the Regional Counsel, Southwest Region, 10101 Hillwood Pkwy., Room 6N-321, Fort Worth, TX 76177. For information on the availability of this material at the FAA, call 817-222-5110. It is also available on the internet at <https://www.regulations.gov> by searching for and locating Docket No. FAA-2019-1115.

Examining the AD Docket

You may examine the AD docket on the internet at <https://www.regulations.gov> by searching for and locating Docket No. FAA-2019-1115; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this final rule, any comments received, and other information. The address for Docket Operations is U.S. Department of Transportation, Docket Operations, M-30, West Building Ground Floor, Room W12-140, 1200 New Jersey Avenue SE, Washington, DC 20590.

FOR FURTHER INFORMATION CONTACT: Michael Schwetz, Aviation Safety Engineer, Boston ACO Branch, FAA, 1200 District Avenue, Burlington, MA 01803; telephone 781-238-7761; email michael.schwetz@faa.gov.

SUPPLEMENTARY INFORMATION:**Discussion**

The FAA issued a notice of proposed rulemaking (NPRM) to amend 14 CFR part 39 by adding an AD that would apply to Sikorsky Model S-92A helicopters, serial number (S/N) 920006 through 920304 inclusive and S/N 920311 through 920314 inclusive. The

NPRM published in the **Federal Register** on February 18, 2020 (85 FR 8771). The NPRM was prompted by two incidents of erroneous low oil pressure caution cockpit indications and unintended actuation of the MGB auto bypass valve caused by unintended popping of the M XMSN OIL WARN circuit breaker during flight. The root cause of this circuit breaker popping is unknown. When this circuit breaker trips, the following cautions will display "MGB PUMP 1 FAIL, MGB PUMP 2 FAIL, MGB OIL HOT, MGB MAN COOL, MGB OIL PRES." With the MGB auto bypass valve actuated, the MGB BYPASS caution will not annunciate. For the given conditions, the appropriate action for the crew is "land as soon as possible" in accordance with the RFM Emergency Procedures. The erroneous indications conflicting with correct gauge readings may overwhelm the flight crew, resulting in a forced landing of the helicopter.

To address this unsafe condition, Sikorsky developed MOD kits based on helicopter S/N to introduce a separate circuit breaker for the MGB last jet pressure switch. These MOD kits specify reworking the overhead panel to install new clips and brackets, circuit breaker wiring harnesses, wiring MODs, the auxiliary circuit breaker panel, and the M XMSN PRESS SWITCH circuit breaker. Accordingly, the NPRM proposed to require installing MOD kits and inserting an RFM Supplement into the existing RFM for your helicopter. The FAA is issuing this AD to address the unsafe condition on these products.

Comments

The FAA gave the public the opportunity to participate in developing this final rule. The FAA received comments from one commenter. The following presents the comments received on the NPRM and the FAA's response to the comments.

Request

The commenter expressed concern about the compliance time of 400 hours time-in-service (TIS), described it as a substantial amount of time, and suggested operators fix the problem immediately. The commenter did not provide a technical rationale for the FAA to review.

The FAA disagrees that a shorter compliance time is required to correct the unsafe condition. In determining that a compliance time of 400 hours TIS mitigates the risk to an acceptable level, the FAA considered factors including Sikorsky service information, the scope of the required actions in this AD, and

the scheduled maintenance for Sikorsky Model S-92A helicopters.

Conclusion

The FAA reviewed the relevant data, considered the comments received, and determined that air safety and the public interest require adopting this final rule as proposed.

Related Service Information Under 14 CFR Part 51

The FAA reviewed Sikorsky Special Service Instructions No. 92-121, dated October 26, 2017 (SSI 92-121). This service information describes procedures for installing an auxiliary circuit breaker panel MOD kit and M XMSN PRESS SWITCH circuit breaker MOD kit based on helicopter S/N.

The FAA also reviewed RFM Supplement No. 45, Revision No. 2, Sikorsky Model S-92A, Part 1, dated April 27, 2017 (S-92A RFMS 45, Part 1, Revision 2). This service information specifies operating limitations, preflight checks, normal and emergency procedures, and malfunction information for helicopters with Avionics Management System version 7.1 or 8.0 with the MGB OIL OUT warning activated, pump failure indicating system, MGB auto bypass, and M XMSN PRESS SWITCH circuit breaker installed.

This service information is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the ADDRESSES section.

Other Related Service Information

The FAA reviewed Sikorsky S-92 Helicopter Alert Service Bulletin 92-63-037, Revision A, dated March 1, 2018. This service information contains planning information pertaining to the auxiliary circuit breaker panel and M XMSN PRESS SWITCH circuit breaker MOD kits, accomplishing SSI 92-121, and inserting S-92A RFMS 45, Part 1, Revision 2 into the helicopter cockpit.

Costs of Compliance

The FAA estimates that this AD affects 36 helicopters of U.S. registry. Labor costs are estimated at \$85 per work-hour. Based on these numbers, the FAA estimates the following costs to comply with this AD.

Modifying helicopters S/N 920006 through 920296 inclusive will take about 48 work-hours and parts will cost about \$1,618 for an estimated cost of \$5,698 per helicopter and \$182,336 for the U.S. fleet size of 32 helicopters.

Modifying helicopters S/N 920297 through 920304 inclusive and S/N 920311 through 920314 inclusive will

take about 2 work-hours and parts will cost about \$65 for an estimated cost of \$235 per helicopter and \$940 for the U.S. fleet size of 4 helicopters.

Revising the RFM will take about 0.5 work-hour for an estimated cost of \$43 per helicopter and \$1,548 for the U.S. fleet.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

This AD will not have federalism implications under Executive Order 13132. This AD will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify that this AD:

- (1) Is not a "significant regulatory action" under Executive Order 12866,
- (2) Will not affect intrastate aviation in Alaska, and
- (3) Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA amends 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

- 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

- 2. The FAA amends § 39.13 by adding the following new airworthiness directive (AD):

2020-16-19 Sikorsky Aircraft Corporation:
Amendment 39-21203; Docket No. FAA-2019-1115; Project Identifier 2018-SW-065-AD.

(a) Effective Date

This AD is effective September 21, 2020.

(b) Affected ADs

None.

(c) Applicability

This AD applies to Sikorsky Aircraft Corporation Model S-92A helicopters, serial number (S/N) 920006 through 920304 inclusive and S/N 920311 through 920314 inclusive, certificated in any category.

(d) Subject

Joint Aircraft System Component (JASC) Code: 6340, Rotor Drive Indicating System.

(e) Unsafe Condition

This AD was prompted by two incidents of erroneous low oil pressure caution cockpit indications and unintended actuation of the main gearbox (MGB) auto bypass valve. The FAA is issuing this AD to prevent the M XMSM OIL WARN circuit breaker from presenting erroneous cautions when tripped. The unsafe condition, if not addressed, could result in erroneous low oil pressure caution cockpit indication, unintended actuation of the MGB auto bypass valve, increased oil temperature, conflicting indications, and forced landing of the helicopter.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Required Actions

Within 400 hours time-in-service:

(1) For helicopters S/N 920006 through 920296 inclusive:

(i) Install Modification (MOD) Kit Clips and Brackets part number (P/N) 92070-20115-015 by following the Instructions, paragraph B. of Sikorsky Special Service Instructions No. 92-121, dated October 26, 2017 (SSI 92-121).

(ii) Install the first portion of MOD Kit Auxiliary Circuit Breaker Panel P/N 92070-55075-011 by following the Instructions, paragraph C. of Sikorsky SSI 92-121.

(iii) Install MOD Kit Left Hand (LH) Cockpit Auxiliary Power Unit P/N 92070-55096-012 by following the Instructions, paragraph D. of Sikorsky SSI 92-121.

(iv) Install MOD Kit LH Cabin Auxiliary Power Unit P/N 92070-55096-013 by following the Instructions, paragraph E. of Sikorsky SSI 92-121.

(v) Install MOD Kit LH Top Deck FLD P/N 92070-55096-016 by following the Instructions, paragraph F. of Sikorsky SSI 92-121.

(vi) Install MOD Kit MGB XMSN P/N 92070-55096-017 by following the Instructions, paragraph G. of Sikorsky SSI 92-121.

(vii) Install the completion portion of MOD Kit Auxiliary Circuit Break Panel P/N 92070-55075-011 by following the Instructions, paragraph H. of Sikorsky SSI 92-121.

(viii) Install MOD Kit Auxiliary Cabin Panel Faceplate P/N 92070-55075-012 by following the Instructions, paragraph J. of Sikorsky SSI 92-121.

(2) For helicopters S/N 920297 through 920304 inclusive and S/N 920311 through 920314 inclusive:

(i) Modify the auxiliary circuit breaker panel and transmission harness by following the Instructions, paragraph I. of Sikorsky SSI 92-121.

(ii) Install MOD Kit Auxiliary Cabin Panel Faceplate P/N 92070-55075-012 by following the Instructions, paragraph J. of Sikorsky SSI 92-121.

(3) Insert a copy of the Rotorcraft Flight Manual (RFM) Supplement No. 45, Revision No. 2, Sikorsky Model S-92A, Part 1, dated April 27, 2017, into the existing RFM for your helicopter.

(h) Credit for Previous Actions

Completion of the Accomplishment Instructions of Sikorsky S-92 Helicopter Alert Service Bulletin 92-63-037, Revision A, dated March 1, 2018, before the effective date of this AD is considered acceptable for compliance with the actions required by paragraph (g) of this AD.

(i) Alternative Methods of Compliance (AMOCs)

(1) The Manager, Boston ACO Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the manager of the certification office, send it to the attention of the person identified in paragraph (j) of this AD.

(2) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/certificate holding district office.

(j) Related Information

For more information about this AD, contact Michael Schwetz, Aviation Safety Engineer, Boston ACO Branch, FAA, 1200 District Avenue, Burlington, MA 01803; telephone 781-238-7761; email michael.schwetz@faa.gov.

(k) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference (IBR) of the service information listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this service information as applicable to do the actions required by this AD, unless the AD specifies otherwise.

(i) Sikorsky Special Service Instructions No. 92-121, dated October 26, 2017.

(ii) Rotorcraft Flight Manual Supplement No. 45, Revision No. 2, Sikorsky Model S-92A, Part 1, dated April 27, 2017.

(3) For Sikorsky Aircraft Corporation service information identified in this AD, contact your local Sikorsky Field Representative or Sikorsky's Service Engineering Group at Sikorsky Aircraft Corporation, 124 Quarry Road, Trumbull, CT 06611; telephone 1-800-946-4337 (1-800-Winged-S); email wcs_cust_service_eng_gr-sik@lmco.com. Operators may also log on to the Sikorsky 360 website at <https://www.sikorsky360.com>.

(4) You may view this service information at the FAA, Office of the Regional Counsel, Southwest Region, 10101 Hillwood Pkwy., Room 6N-321, Fort Worth, TX 76177. For information on the availability of this material at the FAA, call 817-222-5110.

(5) You may view this service information that is incorporated by reference at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, email fedreg.legal@nara.gov, or go to: <https://www.archives.gov/federal-register/cfr/ibr-locations.html>.

Issued on July 30, 2020.

Lance T. Gant,

Director, Compliance & Airworthiness Division, Aircraft Certification Service.

Federal Aviation Administration

14 CFR Part 39

[Docket No. FAA-2020-0222; Project Identifier AD-2019-00116-E; Amendment 39-21195; AD 2020-16-11]

RIN 2120-AA64

Airworthiness Directives; Continental Aerospace Technologies, Inc. (Type Certificate Previously Held by Continental Motors, Inc.) Reciprocating Engines

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: The FAA is adopting a new airworthiness directive (AD) for all Continental Aerospace Technologies, Inc. model GTSIO-520-C, GTSIO-520-D, GTSIO-520-H, GTSIO-520-K, GTSIO-520-L, GTSIO-520-M, GTSIO-520-N, IO-550-G, IO-550-N, IO-550-P, IO-550-R, IOF-550-N, IOF-550-P, IOF-550-R, TSIO-520-BE, TSIO-550-A, TSIO-550-B, TSIO-550-C, TSIO-

550-E, TSIO-550-G, TSIO-550-K, TSIO-550-N, TSIOF-550-D, TSIOF-550-J, TSIOF-550-K, and TSIOF-550-P reciprocating aviation gasoline (AvGas) engines with a certain cross-flow cylinder assembly installed. This AD was prompted by reports of in-flight engine failures due to fractured cross-flow cylinder assemblies. This AD requires visual inspection and, depending on the results of the inspection, modification or replacement of the cross-flow cylinder assembly. The FAA is issuing this AD to address the unsafe condition on these products.

DATES: This AD is effective September 21, 2020.

The Director of the Federal Register approved the incorporation by reference of a certain publication listed in this AD as of September 21, 2020.

ADDRESSES: For service information identified in this final rule, contact Continental Aerospace Technologies, Inc., 2039 South Broad Street, Mobile, Alabama 36615; phone: 251-436-8299; website: <http://www.continentalmotors.aero>. You may view this service information at the FAA, Airworthiness Products Section, Operational Safety Branch, 1200 District Avenue, Burlington, MA 01803. For information on the availability of this material at the FAA, call 781-238-7759. It is also available on the internet at <https://www.regulations.gov> by searching for and locating Docket No. FAA-2020-0222.

Examining the AD Docket

You may examine the AD docket on the internet at <https://www.regulations.gov> by searching for and locating Docket No. FAA-2020-0222; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this final rule, any comments received, and other information. The address for Docket Operations is U.S. Department of Transportation, Docket Operations, M-30, West Building Ground Floor, Room W12-140, 1200 New Jersey Avenue SE, Washington, DC 20590.

FOR FURTHER INFORMATION CONTACT:

Boyce Jones, Aerospace Engineer, Atlanta ACO Branch, FAA, 1701 Columbia Avenue, College Park, Georgia 30337; phone: 404-474-5535; fax: 404-474-5606; email: boyce.jones@faa.gov.

SUPPLEMENTARY INFORMATION:

Discussion

The FAA issued a notice of proposed rulemaking (NPRM) to amend 14 CFR part 39 by adding an AD that would apply to all Continental Aerospace

Technologies, Inc. model GTSIO-520-C, GTSIO-520-D, GTSIO-520-H, GTSIO-520-K, GTSIO-520-L, GTSIO-520-M, GTSIO-520-N, IO-550-G, IO-550-N, IO-550-P, IO-550-R, IOF-550-N, IOF-550-P, IOF-550-R, TSIO-520-BE, TSIO-550-A, TSIO-550-B, TSIO-550-C, TSIO-550-E, TSIO-550-G, TSIO-550-K, TSIO-550-N, TSIOF-550-D, TSIOF-550-J, TSIOF-550-K, and TSIOF-550-P reciprocating AvGas engines with a certain cross-flow cylinder assembly installed. The NPRM published in the **Federal Register** on April 17, 2020 (85 FR 21336). The NPRM was prompted by reports of in-flight engine failures due to fractured cross-flow cylinder assemblies. The NPRM proposed to require visual inspection of the cross-flow cylinder assembly and, depending on the results of the inspection, modification or replacement of the cross-flow cylinder assembly. The FAA is issuing this AD to address the unsafe condition on these products.

Comments

The FAA gave the public the opportunity to participate in developing this final rule. The following presents the comment received on the NPRM and the FAA’s response to the comment.

Request To Revise Compliance

An individual commenter requested that the FAA revise the beginning of paragraph (g)(2), Required Actions, of this AD from “If the engine has 500 engine operating hours or greater on the effective date of this AD . . .” to “If the engine has 500 engine operating hours

or greater after the effective date of this AD . . .” The commenter reasoned that the AD, as written, could allow aircraft operated exclusively under 14 CFR part 91 with fewer than 500 engine operating hours on the effective date of the AD to fly for an unlimited number of engine operating hours until the next annual inspection, as the 100-hour inspection is not required for part 91 operations.

The FAA partially agrees. The FAA agrees that part 91 operators may fly their aircraft for an unlimited number of engine operating hours between annual inspections. Historically, the typical part 91 operator flies fewer than 100 engine operating hours per year, however. The FAA has reviewed the specific scenario outlined by the commenter and evaluated it against the associated risk assessment. The FAA disagrees with the commenter’s request to revise the language in paragraph (g)(2), Required Actions, of this AD. Any aircraft with an affected engine, regardless of how they are being operated, must comply within the compliance times contained in the Required Actions section of this AD. All affected engines with fewer than 500 engine operating hours on the effective date of this AD must perform the visual inspection of the cross-flow cylinder assembly at the next 100-hour inspection or the next annual inspection, depending on aircraft operation. All affected engines with 500 engine operating hours or greater on the effective date of this AD must perform the visual inspection of the cross-flow cylinder assembly at the next maintenance event, not to exceed 50

engine operating hours, after the effective date of the AD. The FAA did not change this AD.

Conclusion

The FAA reviewed the relevant data, considered the comment received, and determined that air safety and the public interest require adopting this final rule as proposed except for minor editorial changes. The FAA has determined that these minor changes:

- Are consistent with the intent that was proposed in the NPRM for addressing the unsafe condition; and
- Do not add any additional burden upon the public than was already proposed in the NPRM.

Related Service Information Under 1 CFR Part 51

The FAA reviewed Continental Aerospace Technologies, Inc. Mandatory Service Bulletin (MSB) 18-08, Revision B, dated January 13, 2020. The MSB describes procedures for inspection, modification, or replacement of the cross-flow cylinder assembly. This service information is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section.

Costs of Compliance

The FAA estimates that this AD affects 4,000 engines installed on airplanes of U.S. registry.

The FAA estimates the following costs to comply with this AD:

ESTIMATED COSTS

Action	Labor cost	Parts cost	Cost per product	Cost on U.S. operators
Visual inspection of the cross-flow cylinder assembly.	2 work-hours × \$85 per hour = \$170	\$0	\$170	\$680,000

The FAA estimates the following costs to do any necessary modification or replacement of the cross-flow

cylinder assembly that would be required based on the results of the visual inspection. The FAA has no way

of determining the number of cross-flow cylinder assemblies that might need this modification or replacement:

ON-CONDITION COSTS

Action	Labor cost	Parts cost	Cost per product
Modify the cross-flow cylinder assembly	1 work-hour × \$85 per hour = \$85	\$0	\$85
Replace the cross-flow cylinder assembly	11.5 work-hours × \$85 per hour = \$977.50	1,933.28	2,910.78

According to the manufacturer, some of the costs of this AD may be covered under warranty, thereby reducing the cost impact on affected individuals. The

FAA does not control warranty coverage for affected individuals. As a result, the FAA has included all costs in our cost estimate.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA’s authority to issue rules on aviation safety. Subtitle I,

section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: "General requirements." Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

This AD will not have federalism implications under Executive Order 13132. This AD will not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify that this AD:

- (1) Is not a "significant regulatory action" under Executive Order 12866,
- (2) Would not affect intrastate aviation in Alaska, and
- (3) Would not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA amends 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

- 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

- 2. The FAA amends § 39.13 by adding the following new airworthiness directive (AD):

2020–16–11 Continental Aerospace Technologies, Inc. (Type Certificate previously held by Continental Motors, Inc.): Amendment 39–21195; Docket No.

FAA–2020–0222; Project Identifier AD–2019–00116–E.

(a) Effective Date

This AD is effective September 21, 2020.

(b) Affected ADs

None.

(c) Applicability

This AD applies to Continental Aerospace Technologies, Inc. (Type Certificate previously held by Continental Motors, Inc.) model GTSIO–520–C, GTSIO–520–D, GTSIO–520–H, GTSIO–520–K, GTSIO–520–L, GTSIO–520–M, GTSIO–520–N, IO–550–G, IO–550–N, IO–550–P, IO–550–R, IOF–550–P, IOF–550–R, TSIO–520–BE, TSIO–550–A, TSIO–550–B, TSIO–550–C, TSIO–550–E, TSIO–550–G, TSIO–550–K, TSIO–550–N, TSIOF–550–D, TSIOF–550–J, TSIOF–550–K, and TSIOF–550–P reciprocating aviation gasoline (AvGas) engines, originally manufactured, rebuilt, or modified with a cross-flow cylinder assembly replacement, on or after November 1, 2014, and with a cross-flow cylinder assembly, part number (P/N) 658538, 658540, 658542, 658591, 658595, 658613, 658624, 658539, 658541, 658590, 658594, 658603, 658623, or 658630, installed.

(d) Subject

Joint Aircraft System Component (JASC) Code 8530, Reciprocating Cylinder Section.

(e) Unsafe Condition

This AD was prompted by reports of in-flight engine failures due to fractured cross-flow cylinder assemblies. The FAA is issuing this AD to prevent failure of the engine. The unsafe condition, if not addressed, could result in failure of the engine, in-flight shutdown, and forced landing.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Required Actions

(1) If the engine has fewer than 500 engine operating hours on the effective date of this AD, no later than the next scheduled 100-hour inspection or next scheduled annual inspection after the effective date of this AD, whichever is applicable based on the type of aircraft operation, perform a visual inspection of the cross-flow cylinder assembly using paragraphs III.1 through III.3, Action Required, of Continental Aerospace Technologies, Inc. Mandatory Service Bulletin (MSB) 18–08, Revision B, dated January 13, 2020 ("Continental Aerospace Technologies MSB18–08B").

(i) If the radius corner angle of the cross-flow cylinder assembly shows casting flash build-up or a sharp radius edge, modify the cross-flow cylinder assembly using paragraphs III.4 through III.8, Action Required, of Continental Aerospace Technologies MSB 18–08B; or

(ii) If a fissure, crack or physical damage is identified, remove the cross-flow cylinder assembly and replace with a part eligible for installation.

(2) If the engine has 500 engine operating hours or greater on the effective date of this

AD, at the next maintenance event after the effective date of this AD, not to exceed 50 engine operating hours after the effective date of this AD, perform a visual inspection of the cross-flow cylinder assembly using paragraphs III.1 through III.3, Action Required, of Continental Aerospace Technologies MSB18–08B.

(i) If the radius corner angle of the cross-flow cylinder assembly shows casting flash build-up or a sharp radius edge, modify the cross-flow cylinder assembly using paragraphs III.4 through III.8, Action Required, of Continental Aerospace Technologies MSB 18–08B; or

(ii) If a fissure, crack or physical damage is identified, remove the cross-flow cylinder assembly and replace with a part eligible for installation.

(h) Installation Prohibition

After the effective date of this AD, do not install any cross-flow cylinder assembly having a P/N identified in paragraph (c) of this AD on any affected engine unless the cross-flow cylinder assembly has been visually inspected and modified using paragraph III, Action Required, of Continental Aerospace Technologies MSB18–08B.

(i) No Reporting Requirement

The reporting requirement in paragraph III, Action Required, of Continental Aerospace Technologies MSB18–08B is not required by this AD.

(j) Definitions

(1) For the purpose of this AD, "the next maintenance event" is the next scheduled 100-hour/annual inspection, overhaul, or the next time the airplane enters maintenance for a non-engine issue, whichever occurs first.

(2) For the purpose of this AD, "modify the cross-flow cylinder assembly" is the removal of the casting material build-up by blending the cross-flow cylinder assembly radius corner.

(k) Credit for Previous Actions

You may take credit for the visual inspection and modification that is required by paragraph (g) of this AD, if the inspection or modification was performed before the effective date of this AD using Continental Motors Aircraft Engine Service Bulletin 18–08, Revision A, dated January 11, 2019.

(l) Alternative Methods of Compliance (AMOCs)

(1) The Manager, Atlanta ACO Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the manager of the certification office, send it to the attention of the person identified in paragraph (m) of this AD.

(2) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/certificate holding district office.

(m) Related Information

For more information about this AD, contact Boyce Jones, Aerospace Engineer, Atlanta ACO Branch, FAA, 1701 Columbia Avenue, College Park, Georgia 30337; phone: 404-474-5535; fax: 404-474-5606; email: boyce.jones@faa.gov.

(n) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference (IBR) of the service information listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this service information as applicable to do the actions required by this AD, unless the AD specifies otherwise.

(i) Continental Aerospace Technologies, Inc. Mandatory Service Bulletin 18-08, Revision B, dated January 13, 2020.

(ii) [Reserved]

(3) For Continental Aerospace Technologies, Inc. service information identified in this AD, contact Continental Aerospace Technologies, Inc., 2039 South Broad Street, Mobile, Alabama 36615; phone: 251-436-8299; website: <http://www.continentalmotors.aero>.

(4) You may view this service information at FAA, Airworthiness Products Section, Operational Safety Branch, 1200 District Avenue, Burlington, MA 01803. For information on the availability of this material at the FAA, call 781-238-7759.

(5) You may view this service information that is incorporated by reference at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, email: fedreg.legal@nara.gov, or go to: <https://www.archives.gov/federal-register/cfr/ibr-locations.html>.

Issued on August 4, 2020.

Lance T. Gant,

Director, Compliance & Airworthiness Division, Aircraft Certification Service.

BILLING CODE 4910-13-P

DEPARTMENT OF TRANSPORTATION**Federal Aviation Administration****14 CFR Part 39**

[Docket No. FAA-2019-0045; Product Identifier 2018-CE-027-AD; Amendment 39-21199; AD 2020-16-15]

RIN 2120-AA64

Airworthiness Directives; Viking Air Limited Airplanes

AGENCY: Federal Aviation Administration (FAA), Department of Transportation (DOT).

ACTION: Final rule.

SUMMARY: The FAA is adopting a new airworthiness directive (AD) for certain Viking Air Limited Models DHC-2 Mk. I and DHC-2 Mk. III airplanes. This AD

results from mandatory continuing airworthiness information (MCAI) issued by an aviation authority of another country to identify and correct an unsafe condition on an aviation product. The MCAI describes the unsafe condition as cracks reported on the forward and aft float strut wire pull fittings. The FAA is issuing this AD to address the unsafe condition on these products.

DATES: This AD is effective September 21, 2020.

The Director of the Federal Register approved the incorporation by reference of certain publications listed in the AD as of September 21, 2020.

ADDRESSES: You may examine the AD docket on the internet at <https://www.regulations.gov> by searching for and locating Docket No. FAA-2019-0045; or in person at Docket Operations, U.S. Department of Transportation, Docket Operations, M-30, West Building Ground Floor, Room W12-140, 1200 New Jersey Avenue SE, Washington, DC 20590.

For service information identified in this AD, contact Viking Air Limited Technical Support, 1959 De Havilland Way, Sidney, British Columbia, Canada, V8L 5V5; telephone: (North America) (800) 663-8444; fax: (250) 656-0673; email: technical.support@vikingair.com; internet: <https://www.vikingair.com/support/service-bulletins>. You may view this referenced service information at the FAA, Airworthiness Products Section, Operational Safety Branch, 901 Locust, Kansas City, Missouri 64106. For information on the availability of this material at the FAA, call (816) 329-4148. It is also available on the internet at <https://www.regulations.gov> by searching for Docket No. FAA-2019-0045.

Examining the AD Docket

You may examine the AD docket on the internet at <https://www.regulations.gov> by searching for and locating Docket No. FAA-2019-0045; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains the notice of proposed rulemaking (NPRM), the regulatory evaluation, any comments received, and other information. The street address for Docket Operations is listed above. Comments will be available in the AD docket shortly after receipt.

FOR FURTHER INFORMATION CONTACT: Aziz Ahmed, Aerospace Engineer, FAA, New York ACO Branch, 1600 Stewart Avenue, Suite 410, Westbury, New York 11590; telephone: (516) 287-7329; fax:

(516) 794-5531; email: aziz.ahmed@faa.gov.

SUPPLEMENTARY INFORMATION:**Discussion**

The FAA issued an NPRM to amend 14 CFR part 39 by adding an AD that would apply to Viking Air Limited Models DHC-2 Mk. I and DHC-2 Mk. III airplanes. The NPRM published in the **Federal Register** on February 11, 2019 (84 FR 3131). The NPRM proposed to correct an unsafe condition for the specified products and was based on AD Number CF-2018-10, dated April 18, 2018 (referred to after this as "the MCAI"), issued by Transport Canada, which is the aviation authority for Canada. The MCAI states:

Cracks have been reported on the Forward and Aft float strut wire pull fittings on DHC-2 Mk. I aeroplanes equipped with the 5600 lb gross weight increase kit installed in accordance with STC SA92-63 or SA00299NY and on DHC-2 Mk. III aeroplanes equipped with the 6000 lb gross weight increase kit installed in accordance with STC SA91-18 or SA945NE. An investigation found that the forward and aft wire pull fittings (P/N VALTBS1245-1/-2 and P/N VALTBS1244-1, respectively) are prone to stress corrosion cracking at low cycles/hours.

Failure of these wire pull fittings will reduce the strength of the float undercarriage below the required structural capability and could result in a failure of the undercarriage causing the aeroplane to tip over and be submerged.

Therefore this [Transport Canada] AD requires that the forward and aft wire pull fittings be replaced with P/N VALTBS1245-3/-4 and P/N VALTBS1244-3/-4 (LH/RH) fittings respectively. These fittings are geometrically similar to the legacy fittings and are made of a different aluminum alloy that is less susceptible to stress corrosion cracking.

In addition to replacing the fittings, it is necessary to implement a recurring visual inspection of the fittings to assure continuing airworthiness.

The MCAI can be found in the AD docket on the internet at: <https://www.regulations.gov/docket?D=FAA-2019-0045>.

Comments

The FAA gave the public the opportunity to participate in developing this AD. The following presents the comment received on the NPRM and the FAA's response.

Request To Remove the Repetitive Inspection

Christopher Campbell requested the FAA remove the 110-hour repetitive inspection requirement. The commenter stated the unsafe condition is eliminated by the requirement to

replace the affected part. Also, the commenter reasoned that because repetitive inspections are already required at each 100-hour and annual inspection by Appendix D to Part 43, Advisory Circular (AC) 43.13, AC 20-106, the manufacturer's maintenance manual, and the float manufacturer's inspection requirements, the repetitive inspections in the NPRM are unnecessary and burdensome. The commenter stated that if the replacement wire pulls are not strong enough to last 110 hours without cracking, then the FAA should address this at the manufacturing level and not in the field.

The FAA does not agree. Although 14 CFR 43.15 and Appendix D to Part 43 do require that 100-hour and annual inspections include an inspection of floats for insecure attachment and obvious defects, this AD requires a specific inspection of the wire pull fittings. Also, while an operator may incorporate into its maintenance program the inspections in the advisory circulars and manufacturer maintenance manuals referenced by the commenter, not all operators are required to do so. In order for these inspections to become mandatory, and to correct the unsafe conditions identified in the NPRM, the FAA must issue an AD. The compliance times as proposed should allow the inspections to be conducted concurrently with scheduled maintenance, thereby minimizing the costs on operators.

The FAA did not change this AD based on this comment.

Changes to the Final Rule

The FAA has revised the applicability of this AD to include airplanes with fitting part number VALTBS1244-3 or VALTBS1244-4, to clarify that replacing the fittings is not terminating action for the repetitive inspections in the AD. The FAA also made some minor editorial changes.

Conclusion

The FAA reviewed the relevant data, considered the comment received, and determined that air safety and the public interest require adopting the AD with the changes described previously. The FAA has determined that these minor changes:

- Are consistent with the proposal in the NPRM for correcting the unsafe condition; and
- Do not increase any burden upon the public than was already proposed in the NPRM.

Related Service Information Under 1 CFR Part 51

The FAA reviewed Viking DHC-2 Beaver Service Bulletin No. V2/003, Revision NC, dated November 28, 2012, for Model DCH-2 Mk. I airplanes; and Viking DHC-2T Beaver Service Bulletin No. V2/002, Revision A, dated September 12, 2011, for Model DCH-2 Mk. III airplanes. This service information contains procedures for replacing the forward and aft float strut wire pull fittings and specifies implementing repetitive visual inspections of the fittings. This service information is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the ADDRESSES section.

Differences Between This AD and the MCAI

The MCAI requires returning cracked fittings to Viking, and this AD does not. The MCAI also prohibits installing an affected wire pull fitting on any airplane, and this AD does not.

Costs of Compliance

The FAA estimates that this AD will affect 136 products of U.S. registry. The FAA also estimates that replacing the fittings will take about 12 work-hours at an average labor rate of \$85 per work-hour and required parts will cost about \$2,741. Based on these figures, the FAA estimates a cost of \$3,761 per airplane and \$511,496 for the U.S. operator fleet.

Inspecting the fittings will take about .5 work-hour for an estimated cost of \$42.50 per airplane and \$5,780 for the U.S. fleet, per inspection cycle.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

The FAA determined that this AD will not have federalism implications under Executive Order 13132. This AD will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify this AD:

- (1) Is not a "significant regulatory action" under Executive Order 12866,
- (2) Will not affect intrastate aviation in Alaska, and
- (3) Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA amends 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

- 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

- 2. The FAA amends § 39.13 by adding the following new airworthiness directive:

2020-16-15 Viking Air Limited:

Amendment 39-21199; Docket No. FAA-2019-0045; Product Identifier 2018-CE-027-AD.

(a) Effective Date

This airworthiness directive (AD) becomes effective September 21, 2020.

(b) Affected ADs

None.

(c) Applicability

This AD applies to the following Viking Air Limited airplanes, certificated in any category:

- (1) Model DHC-2 Mk. I airplanes altered by Supplemental Type Certificate (STC) SA92-63 or SA00299NY with a float strut wire pull fitting part number (P/N) VALTBS1245-1, P/N VALTBS1245-2, P/N VALTBS1244-1, P/N VALTBS1244-3, or P/N VALTBS1244-4; and
- (2) Model DHC-2 Mk. III airplanes altered by STC SA91-18 or SA945NE with a float strut wire pull fitting P/N VALTBS1245-1, P/N VALTBS1245-2, P/N VALTBS1244-1, P/N VALTBS1244-3, or P/N VALTBS1244-4.

(d) Subject

Air Transport Association of America (ATA) Code 53: Fuselage.

(e) Reason

This AD was prompted by mandatory continuing airworthiness information (MCAI) originated by an aviation authority of another country to identify and correct an unsafe condition on an aviation product. The MCAI describes the unsafe condition as cracks reported on the forward and aft float strut wire pull fittings. The FAA is issuing this AD to prevent failure of the wire pull fittings, which could reduce the strength of the float undercarriage below the required structural capability, resulting in a failure of the undercarriage causing the airplane to tip over and submerge.

(f) Actions and Compliance

Unless already done, do the following actions.

(1) Within 90 days after August 17, 2020 (the effective date of this AD):

(i) Replace each forward wire pull fitting P/N VALTBS1245-1 and P/N VALTBS1245-2 with P/N VALTBS1245-3 Left Hand (LH) or P/N VALTBS1245-4 Right Hand (RH) by following the Accomplishment Instructions, paragraphs A.1. through A.8., of Viking DHC-2 Beaver Service Bulletin No. V2/003, Revision NC, dated November 28, 2012 (Viking SB No. V2/003); or Viking DHC-2T Beaver Service Bulletin No. V2/002, Revision A, dated September 12, 2011 (Viking SB No. V2/002, Revision A), as applicable to your model airplane.

(ii) Within 110 hours time-in-service (TIS) after the replacement of the forward wire pull fittings and thereafter at intervals not to exceed 110 hours TIS, visually inspect each forward wire pull fitting for corrosion and cracks. If there is any corrosion or a crack, before further flight, replace the fitting with fitting P/N VALTBS1245-3 (LH) or P/N VALTBS1245-4 (RH).

(2) Within 180 days after August 17, 2020 (the effective date of this AD):

(i) Replace each aft wire pull fitting P/N VALTBS1244-1 with P/N VALTBS1244-3 (LH) or P/N VALTBS1244-4 (RH) by following the Accomplishment Instructions, paragraphs B.1. through B.8., of Viking SB No. V2/003 or Viking SB No. V2/002, Revision A, as applicable to your model airplane.

(ii) Within 110 hours TIS after the replacement of the aft wire pull fittings and thereafter at intervals not to exceed 110 hours TIS, visually inspect each aft wire pull fitting for corrosion and cracks. If there is any corrosion or a crack, before further flight, replace the fitting with fitting P/N VALTBS1244-3 (LH) or P/N VALTBS1244-4 (RH).

(g) Alternative Methods of Compliance (AMOCs)

The Manager, Small Airplane Standards Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. Send information to ATTN: Aziz Ahmed, Aerospace Engineer, FAA, New York ACO Branch, 1600 Stewart Avenue, Suite 410,

Westbury, New York 11590; telephone: (516) 287-7329; fax: (516) 794-5531; email: Before using any approved AMOC on any airplane to which the AMOC applies, notify your appropriate principal inspector (PI) in the FAA Flight Standards District Office (FSDO), or lacking a PI, your local FSDO.

(h) Related Information

Refer to MCAI Transport Canada AD Number CF-2018-10, dated April 18, 2018, for related information. The MCAI can be found in the AD docket on the internet at: <https://www.regulations.gov/docket?D=FAA-2019-0045>.

(i) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference (IBR) of the service information listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this service information as applicable to do the actions required by this AD, unless the AD specifies otherwise.

(i) Viking DHC-2 Beaver Service Bulletin No. V2/003, Revision NC, dated November 28, 2012.

(ii) Viking DHC-2T Beaver Service Bulletin No. V2/002, Revision A, dated September 12, 2011.

(3) For service information identified in this AD, contact Viking Air Limited Technical Support, 1959 De Havilland Way, Sidney, British Columbia, Canada, V8L 5V5; telephone: (North America) (800) 663-8444; fax: (250) 656-0673; email: technical.support@vikingair.com; internet: <https://www.vikingair.com/support/service-bulletins>.

(4) You may view this service information at the FAA, Airworthiness Products Section, Operational Safety Branch 901 Locust, Kansas City, Missouri 64106. For information on the availability of this material at the FAA, call (816) 329-4148. In addition, you can access this service information on the internet at <https://www.regulations.gov> by searching for and locating Docket No. FAA-2019-0045.

(5) You may view this service information that is incorporated by reference at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, email fedreg.legal@nara.gov, or go to: <https://www.archives.gov/federal-register/cfr/ibr-locations.html>.

Issued on August 4, 2020.

Lance T. Gant,

Director, Compliance & Airworthiness Division, Aircraft Certification Service.

[FR Doc. 2020-17900 Filed 8-14-20; 8:45 am]

BILLING CODE 4910-13-P

DEPARTMENT OF TRANSPORTATION**Federal Aviation Administration****14 CFR Part 39**

[Docket No. FAA-2020-0265; Project Identifier MCAI-2019-00131-E; Amendment 39-21201; AD 2020-16-17]

RIN 2120-AA64

Airworthiness Directives; Rolls-Royce Deutschland Ltd & Co KG (Type Certificate Previously Held by Rolls-Royce plc) Turbofan Engines

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: The FAA is adopting a new airworthiness directive (AD) for all Rolls-Royce Deutschland Ltd. & Co KG (RRD) Trent XWB-75, Trent XWB-79, Trent XWB-79B, and Trent XWB-84 model turbofan engines. This AD was prompted by reports of a lack of weld fusion on the resistance welding during manufacturing, which could result in air leakage through the low-pressure turbine (LPT) rear support seal panel assembly ("LPT seal panel"). This AD requires replacement of the LPT seal panel. The FAA is issuing this AD to address the unsafe condition on these products.

DATES: This AD is effective September 21, 2020.

The Director of the Federal Register approved the incorporation by reference of a certain publication listed in this AD as of September 21, 2020.

ADDRESSES: For service information identified in this final rule, contact Rolls-Royce Deutschland Ltd. & Co KG, Eschenweg 11, 15827 Blankenfelde-Mahlow, Germany; phone: +49 (0) 33 708 6 0; email: <https://www.rolls-royce.com/contact-us.aspx>. You may view this service information at the FAA, Airworthiness Products Section, Operational Safety Branch, 1200 District Avenue, Burlington, MA 01803. For information on the availability of this material at the FAA, call 781-238-7759. It is also available on the internet at <https://www.regulations.gov> by searching for and locating Docket No. FAA-2020-0265.

Examining the AD Docket

You may examine the AD docket on the internet at <https://www.regulations.gov> by searching for and locating Docket No. FAA-2020-0265; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this final rule,

the mandatory continuing airworthiness information (MCAI), any comments received, and other information. The address for Docket Operations is U.S. Department of Transportation, Docket Operations, M-30, West Building Ground Floor, Room W12-140, 1200 New Jersey Avenue SE, Washington, DC 20590.

FOR FURTHER INFORMATION CONTACT: Stephen Elwin, Aerospace Engineer, ECO Branch, FAA, 1200 District Avenue, Burlington, MA 01803; phone: 781-238-7236; fax: 781-238-7199; email: stephen.l.elwin@faa.gov.

SUPPLEMENTARY INFORMATION:

Discussion

The FAA issued a notice of proposed rulemaking (NPRM) to amend 14 CFR part 39 by adding an AD that would apply to all RRD Trent XWB-75, Trent XWB-79, Trent XWB-79B, and Trent XWB-84 model turbofan engines. The NPRM published in the **Federal Register** on March 30, 2020 (85 FR 17513). The NPRM was prompted by reports of a lack of weld fusion on the resistance welding during manufacturing, which could result in air leakage through the LPT seal panel. The NPRM proposed to require replacement of the LPT seal panel. The FAA is issuing this AD to address the unsafe condition on these products.

The European Union Aviation Safety Agency (EASA), which is the Technical Agent for the Member States of the European Community, has issued EASA AD 2019-0071, dated March 28, 2019 (referred to after this as “the MCAI”), to address the unsafe condition on these products. The MCAI states:

The affected parts, as defined in this [EASA] AD, are static parts, located behind the intermediate pressure (IP) turbine 2 disc, forming a seal between the IP and LP cavities through an interface with the rotating IP flying seal. It was recently determined that,

on certain affected parts, insufficient fusion was achieved on the resistance welding during manufacturing.

This condition, if not corrected, could lead to air leakage through the LP seal panel, affecting the service lives of the IP turbine 2 and LP turbine 1 discs, possibly resulting in premature disc failure and high energy uncontained debris release from the engine, with consequent damage to, and reduced control of, the aeroplane.

To address this potential unsafe condition, Rolls-Royce identified the affected parts and published the NMSB, providing instructions to replace these affected parts.

For the reason described above, this [EASA] AD requires replacement of affected parts during a qualified shop visit.

You may obtain further information by examining the MCAI in the AD docket on the internet at <https://www.regulations.gov> by searching for and locating Docket No. FAA-2020-0265.

Comments

The FAA gave the public the opportunity to participate in developing this final rule. The following presents the comments received on the NPRM and the FAA’s response to each comment.

Request To Revise Definition of Module 51

Delta Air Lines, Inc. (DAL) requested that the definition of “module 51” in paragraph (h) of this AD be revised to “intermediate pressure turbine module.” DAL reasoned that the RRD Trent XWB Engine Manual and Rolls-Royce plc (RR) Alert Non-Modification Service Bulletin (NMSB) Trent XWB 72-AJ994, Revision 2, dated August 29, 2019, both refer to module 51 as the intermediate-pressure turbine (IPT) module and refer to module 52 as the LPT module. Therefore, revising this definition would alleviate confusion.

The FAA agrees and revised the definition of module 51 to read, “For

the purpose of this AD, ‘module 51’ is the IPT module.”

Support for the AD

The Air Line Pilots Association, International, expressed support for the AD as written.

Conclusion

The FAA reviewed the relevant data, considered the comments received, and determined that air safety and the public interest require adopting this final rule with the change described previously and minor editorial changes. The FAA has determined that these minor changes:

- Are consistent with the intent that was proposed in the NPRM for addressing the unsafe condition; and
- Do not add any additional burden upon the public than was already proposed in the NPRM.

The FAA has also determined that these changes will not increase the economic burden on any operator or increase the scope of this final rule.

Service Information Incorporated by Reference Under 1 CFR Part 51

The FAA reviewed RR Alert NMSB Trent XWB 72-AJ994, Revision 2, dated August 29, 2019. The Alert NMSB describes procedures for removing and replacing the LPT seal panel. This service information is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section.

Costs of Compliance

The FAA estimates that this AD affects 26 engines installed on airplanes of U.S. registry.

The FAA estimates the following costs to comply with this AD:

ESTIMATED COSTS

Action	Labor cost	Parts cost	Cost per product	Cost on U.S. operators
Replace the LPT seal panel	1 work-hour × \$85 per hour = \$85	\$282,890	\$282,975	\$7,357,350

According to the manufacturer, all of the costs of this AD may be covered under warranty, thereby reducing the cost impact on affected individuals. The FAA does not control warranty coverage for affected individuals. As a result, the FAA has included all costs in our cost estimate.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA’s authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency’s authority.

The FAA is issuing this rulemaking under the authority described in

Subtitle VII, Part A, Subpart III, Section 44701: “General requirements.” Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or

develop on products identified in this rulemaking action.

Regulatory Findings

This AD will not have federalism implications under Executive Order 13132. This AD will not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify this AD:

(1) Is not a “significant regulatory action” under Executive Order 12866,

(2) Would not affect intrastate aviation in Alaska, and

(3) Would not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA amends 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive (AD):

2020–16–17 Rolls-Royce Deutschland Ltd & Co KG (Type Certificate previously held by Rolls-Royce plc): Amendment 39–21201; Docket No. FAA–2020–0265; Project Identifier MCAI–2019–00131–E.

(a) Effective Date

This AD is effective September 21, 2020.

(b) Affected ADs

None.

(c) Applicability

This AD applies to all Rolls-Royce Deutschland Ltd. & Co KG (Type Certificate previously held by Rolls-Royce plc) Trent XWB–75, Trent XWB–79, Trent XWB–79B, and Trent XWB–84 model turbofan engines.

(d) Subject

Joint Aircraft System Component (JASC) Code 7250, Turbine Section.

(e) Unsafe Condition

This AD was prompted by reports of a lack of weld fusion on the resistance welding during manufacturing, which could result in air leakage through the low-pressure turbine (LPT) rear support seal panel assembly (“LPT seal panel”) causing a life reduction to the intermediate-pressure turbine (IPT) 2 and LPT 1 disks. The FAA is issuing this AD to prevent failure of the IPT 2 and LPT 1 disks. The unsafe condition, if not addressed, could result in uncontained debris release, damage to the engine, and damage to the airplane.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Required Actions

During the next qualified shop visit after the effective date of this AD, or during the current shop visit, if, on the effective date of this AD, the engine or module 51 is in a qualified shop visit, remove the affected LPT seal panel from service and replace it with a part eligible for installation in accordance with the Accomplishment Instructions, paragraph 3.A., of Rolls-Royce plc Alert Non-Modification Service Bulletin (NMSB) Trent XWB 72–AJ994, Revision 2, dated August 29, 2019.

(h) Definitions

(1) For the purpose of this AD, a “qualified shop visit” is a Level 4 (Overhaul) or Level 3 (Refurbishment) shop visit of an affected engine with an affected LPT seal panel installed, or Level 2 shop visit (Check and Repair) of module 51 with an affected LPT seal panel installed.

(2) For the purpose of this AD, “module 51” is the IPT module.

(3) For the purpose of this AD, an “affected LPT seal panel” is LPT rear support seal panel assembly, identified as catalogue serial number (CSN) 72512301890, with a serial number (S/N) listed in Appendix 1 of RR Alert NMSB Trent XWB 72–AJ994, Revision 2, dated August 29, 2019. This appendix additionally lists the module 51 S/N and engine S/N in which these panels were originally installed.

(4) For the purpose of this AD, a “part eligible for installation” is a LPT seal panel, CSN 72512301890, with a S/N not listed in Appendix 1 of RR Alert NMSB Trent XWB 72–AJ994, Revision 2, dated August 29, 2019.

(i) Credit for Previous Actions

You may take credit for replacement of the LPT seal panel requirements of paragraph (g) of this AD if you performed the replacement before the effective date of this AD using RR Alert NMSB Trent XWB 72–AJ994, Revision 1, dated November 15, 2018, or Initial Issue, dated September 5, 2018.

(j) Alternative Methods of Compliance (AMOCs)

(1) The Manager, ECO Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as

appropriate. If sending information directly to the manager of the ECO Branch, send it to the attention of the person identified in paragraph (k)(1) of this AD. You may email your request to: ANE-AD-AMOC@faa.gov.

(2) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/certificate holding district office.

(k) Related Information

(1) For more information about this AD, contact Stephen Elwin, Aerospace Engineer, ECO Branch, FAA, 1200 District Avenue, Burlington, MA 01803; phone: 781–238–7236; fax: 781–238–7199; email: stephen.l.elwin@faa.gov.

(2) Refer to European Union Aviation Safety Agency AD 2019–0071, dated March 28, 2019, for more information. You may examine the EASA AD in the AD docket on the internet at <https://www.regulations.gov> by searching for and locating Docket No. FAA–2020–0265.

(l) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference (IBR) of the service information listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this service information as applicable to do the actions required by this AD, unless the AD specifies otherwise.

(i) Rolls-Royce plc (RR) Alert Non-Modification Service Bulletin Trent XWB 72–AJ994, Revision 2, dated August 29, 2019.

(ii) [Reserved]

(3) For RR service information identified in this AD, contact Rolls-Royce Deutschland Ltd & Co KG, Eschenweg 11, Blankenfelde-Mahlow, Germany; phone: 9 011 49 03370860.

(4) You may view this service information at FAA, Airworthiness Products Section, Operational Safety Branch, 1200 District Avenue, Burlington, MA 01803. For information on the availability of this material at the FAA, call 781–238–7759.

(5) You may view this service information that is incorporated by reference at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, email: fedreg.legal@nara.gov, or go to: <http://www.archives.gov/federal-register/cfr/ibr-locations.html>.

Issued on July 29, 2020.

Gaetano A. Sciortino,

Deputy Director for Strategic Initiatives, Compliance & Airworthiness Division, Aircraft Certification Service.

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION**Federal Aviation Administration****14 CFR Part 39**

[Docket No. FAA-2020-0715; Project Identifier AD-2020-00484-A; Amendment 39-21190; AD 2020-16-06]

RIN 2120-AA64

Airworthiness Directives; Aviat Aircraft Inc.

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule; request for comments.

SUMMARY: The FAA is adopting a new airworthiness directive (AD) for all Aviat Aircraft Inc. Models A-1, A-1A, A-1B, A-1C-180, and A-1C-200 airplanes.

This AD requires repetitive inspections of the forward horizontal stabilizer support assembly and the rear horizontal stabilizer support tube and reporting information to the FAA. This AD was prompted by field reports of complete failure of both the forward support assembly and the rear support tube due to fatigue. The FAA is issuing this AD to address the unsafe condition on these products.

DATES: This AD is effective September 1, 2020.

The Director of the Federal Register approved the incorporation by reference of a certain publication listed in this AD as of September 1, 2020.

The FAA must receive comments on this AD by October 1, 2020.

ADDRESSES: You may send comments, using the procedures found in 14 CFR 11.43 and 11.45, by any of the following methods:

Federal eRulemaking Portal: Go to <https://www.regulations.gov>. Follow the instructions for submitting comments.

- *Federal eRulemaking Portal:* Go to <https://www.regulations.gov>. Follow the instructions for submitting comments.

- *Fax:* 202-493-2251.

- *Mail:* U.S. Department of Transportation, Docket Operations, M-30, West Building Ground Floor, Room W12-140, 1200 New Jersey Avenue SE, Washington, DC 20590.

- *Hand Delivery:* U.S. Department of Transportation, Docket Operations, M-30, West Building Ground Floor, Room W12-140, 1200 New Jersey Avenue SE, Washington, DC 20590, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

For service information identified in this final rule, contact Aviat Aircraft Inc., Al Humbert, 672 South

Washington Street, Afton, WY, 83110, United States; phone: (307) 885-3151; email: dmir@aviataircraft.com; internet: <https://aviataircraft.com>. You may view this service information at the FAA, Airworthiness Products Section, Operational Safety Branch, 901 Locust, Kansas City, Missouri 64106. For information on the availability of this material at the FAA, call (816) 329-4148. It is also available on the internet at <https://www.regulations.gov> by searching for and locating Docket No. FAA-2020-0715.

Examining the AD Docket

You may examine the AD docket on the internet at <https://www.regulations.gov> by searching for and locating Docket No. FAA-2020-0715; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this final rule, any comments received, and other information. The street address for the Docket Operations is listed above. Comments will be available in the AD docket shortly after receipt.

FOR FURTHER INFORMATION CONTACT:

Mark Dalrymple, Aerospace Engineer, Denver ACO Branch, FAA, 26805 E. 68th Avenue, Denver, CO 80249; phone: (303) 342-1090; email: mark.dalrymple@faa.gov.

SUPPLEMENTARY INFORMATION:**Discussion**

The FAA received three field reports from Aviat Aircraft Inc. of complete failure of the rear horizontal stabilizer inboard support tube. The first incident, discovered during a scheduled inspection, occurred in 2005, and the second incident, discovered while the airplane was being re-skinned, occurred in 2009. The third incident was discovered during a pre-flight inspection in 2012 and included a complete failure of the forward horizontal stabilizer inboard support assembly. Failure analysis of both parts from the 2012 incident concluded they failed due to fatigue. In addition to these complete failures of the rear support tube, the FAA received two field reports from Aviat Aircraft Inc. of cracks in the rear support tube, discovered during inspections, in 2005 and 2013. Aviat Aircraft Inc. subsequently issued Service Bulletin No. 28, Revision A, dated April 2, 2015, which requires a one-time inspection of the rear stabilizer inboard support tube in response to the multiple reports of failures and cracks.

In addition to the 2012 incident, which involved a failure of both supports, the FAA received two other

field reports from Aviat Aircraft Inc. of complete failure of the forward horizontal stabilizer inboard support assembly, one in 2000 and one in 2019. In the first incident, the failure occurred during ground handling after flight. In the second incident the failure was discovered while the aircraft was being placed in a hanger.

Failure of either the forward or rear support transfers loads to the other support, increasing the likelihood that both could fail. This condition, if not addressed, could result in stabilizer departure and loss of airplane control.

Related Service Information Under 14 CFR Part 51

The FAA reviewed Aviat Aircraft Inc. Service Bulletin No. 28, Revision A, dated April 2, 2015 (Aviat SB No. 28, Revision A). This service information contains procedures for inspecting and repairing the rear stabilizer support tube. This service information is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section.

FAA's Determination

The FAA is issuing this AD because it evaluated all the relevant information and determined the unsafe condition described previously is likely to exist or develop in other products of the same type design.

AD Requirements

This AD requires inspection for cracks and replacement if necessary of the forward horizontal stabilizer support assembly. This AD also requires inspecting the rear horizontal stabilizer support tube for corrosion and damage and repair if necessary. This AD also requires reporting the inspection results to the FAA.

FAA's Justification and Determination of the Effective Date

An unsafe condition exists that requires the immediate adoption of this AD without providing an opportunity for public comments prior to adoption. The FAA has found that the risk to the flying public justifies waiving notice and comment prior to adoption of this rule because FAA risk assessment indicates there is an unacceptable short-term risk of developing fatigue cracks through 25 percent of the cross sectional area of the rear support tube on airplanes that have engaged in tow operations. In addition, further FAA risk assessment indicates there is an unacceptable short-term risk of developing fatigue cracks through 25

percent of the cross sectional area of the forward support assembly on all airplanes. In the majority of known incidents at either location, the support failed completely. Failure of either the forward or rear support transfers loads to the other support, increasing the likelihood that both could fail, which has occurred in one known incident. A combined failure of both the forward and rear supports could result in stabilizer departure and loss of airplane control. Therefore, the FAA finds good cause that notice and opportunity for prior public comment are impracticable. In addition, for the reasons stated above, the FAA finds that good cause exists for making this amendment effective in less than 30 days.

Comments Invited

This AD is a final rule that involves requirements affecting flight safety and was not preceded by notice and an opportunity for public comment. However, we invite you to send any written data, views, or arguments about this final rule. Send your comments to an address listed under the ADDRESSES section. Include "Docket No.FAA-2020-0715; Product Identifier AD-2020-00484-A" at the beginning of your comments. The FAA will consider all comments received by the closing date and may amend this proposed AD because of those comments.

Except for Confidential Business Information (CBI) as described in the following paragraph, and other information as described in 14 CFR 11.35, the FAA will post all comments received, without change, to <https://www.regulations.gov>, including any personal information you provide. The FAA will also post a report summarizing each substantive verbal contact we receive about this final rule.

Confidential Business Information

CBI is commercial or financial information that is both customarily and actually treated as private by its owner. Under the Freedom of Information Act (FOIA) (5 U.S.C. 552), CBI is exempt from public disclosure. If your comments responsive to this AD contain commercial or financial information that is customarily treated as private, that you actually treat as private, and that is relevant or responsive to this AD, it is important that you clearly designate the submitted comments as CBI. Please mark each page of your submission containing CBI as "PROPIN." The FAA will treat such marked submissions as confidential under the FOIA, and they will not be placed in the public docket of this AD. Submissions containing CBI should be sent to Mark Dalrymple, Aerospace Engineer, Denver ACO Branch, FAA, 26805 E. 68th Avenue, Denver, CO 80249. Any commentary

that the FAA receives which is not specifically designated as CBI will be placed in the public docket for this rulemaking.

The FAA will post all comments received, without change, to <https://www.regulations.gov>, including any personal information you provide. The FAA will also post a report summarizing each substantive verbal contact we receive about this AD.

Differences Between This AD and the Service Information

The service information only applies to certain serial numbers of the airplane models identified in this AD, while this AD applies to all serial numbers of Aviat Aircraft Inc. Model A-1, A-1A, A-1B, A-1C-180, and A-1C-200 airplanes. The service information only requires inspecting the rear stabilizer support tube, while this AD requires inspecting the forward stabilizer support assembly in addition to the rear stabilizer support tube. The service information only requires a one-time inspection, while this AD requires both initial and repetitive inspections.

Costs of Compliance

The FAA estimates that this AD affects 941 airplanes of U.S. registry.

The FAA estimates the following costs to comply with this AD:

ESTIMATED COSTS

Action	Labor cost	Parts cost	Cost per product	Cost on U.S. operators
Inspect forward horizontal stabilizer inboard support assembly for cracks.	1 work-hour × \$85.00 per hour = \$85.00.	\$25.00	\$110.00	\$103,510.00
Inspect rear horizontal stabilizer inboard support tube weld joints for corrosion and damage.	0.5 work-hour × \$85.00 per hour = \$42.50.	0.00	42.50	39,992.50

The FAA estimates the following costs to do any necessary repairs or replacements that would be required

based on the results of the inspection. The FAA has no way of determining the

number of airplanes that might need these replacements:

ON-CONDITION COSTS

Action	Labor cost	Parts cost	Cost per product
Replace forward horizontal stabilizer support tube	2 work-hours × \$85.00 per hour = \$170.00	\$296.00	\$466.00
Repair rear horizontal stabilizer support tube weld joints and install new support tube insert.	4.5 work-hours × \$85.00 per hour = \$382.50.	163.00	545.50
Report if cracks are found	0.5 work-hour × \$85.00 per hour = \$42.50	0.00	42.50

Paperwork Reduction Act

A federal agency may not conduct or sponsor, and a person is not required to respond to, nor shall a person be subject to a penalty for failure to comply with a collection of information subject to the

requirements of the Paperwork Reduction Act unless that collection of information displays a currently valid OMB Control Number. The OMB Control Number for this information collection is 2120-0056. Public reporting for this collection of

information is estimated to be approximately .5 hour per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, completing and reviewing the collection of information. All

responses to this collection of information are mandatory. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden to: Information Collection Clearance Officer, Federal Aviation Administration, 10101 Hillwood Parkway, Fort Worth, TX 76177-1524.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Flexibility Act

The requirements of the Regulatory Flexibility Act (RFA) do not apply when an agency finds good cause pursuant to 5 U.S.C. 553 to adopt a rule without prior notice and comment. Because FAA has determined that it has good cause to adopt this rule without notice and comment, RFA analysis is not required.

Regulatory Findings

This AD will not have federalism implications under Executive Order 13132. This AD will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify that this AD:

- (1) Is not a "significant regulatory action" under Executive Order 12866, and
- (2) Will not affect intrastate aviation in Alaska.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA amends 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

- 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

- 2. The FAA amends § 39.13 by adding the following new airworthiness directive (AD):

2020-16-06 Aviat Aircraft Inc.:

Amendment 39-21190; Docket No. FAA-2020-0715; Project Identifier AD-2020-00484-A.

(a) Effective Date

This AD is effective September 1, 2020.

(b) Affected ADs

None.

(c) Applicability

This AD applies to Aviat Aircraft Inc., Models A-1, A-1A, A-1B, A-1C-180, and A-1C-200 airplanes, all serial numbers, certificated in any category.

(d) Subject

Joint Aircraft System Component (JASC)/ Air Transport Association (ATA) of America Code 5510, Horizontal Stabilizer Structure.

(e) Unsafe Condition

This AD was prompted by reports of complete failure of the forward horizontal stabilizer support assembly due to fatigue in combination with complete failure of the rear horizontal stabilizer support tube due to fatigue. The FAA is issuing this AD to prevent cracking of the forward and rear inboard supports, which could result in failure of the stabilizer supports, detachment of the stabilizer, and loss of airplane control.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Inspection and Repair

For airplanes with 400 or more hours time-in-service (TIS), do the following inspection within 30 days after September 1, 2020 (the effective date of this AD) or within 20 hours TIS after September 1, 2020 (the effective date of this AD), whichever occurs first. For airplanes with less than 400 hours TIS, do the following inspections within 30 days after accumulating 400 hours TIS or within 20 hours TIS after accumulating 400 hours TIS, whichever occurs first. After the initial inspection, repeat the inspections at intervals not to exceed 12 months or 100 hours TIS, whichever occurs first.

(1) Below and just aft of the horizontal stabilizer leading edge, remove each inspection hole cover if installed, or cut out

the inside of each inspection ring if not cut out, on both sides of the fuselage. You do not need to remove the stabilizer support assembly. Locate the forward horizontal stabilizer support assembly. Using a light and a mirror or a borescope, inspect the stabilizer support assembly for cracks in the large tube portion of the assembly. Pay particular attention to the toe of the welded bushings where the stabilizer support assembly is bolted to the fuselage frame.

(i) If no cracks are found, install inspection hole cover, part number (P/N) 61659 and mounting screws, P/N 59146.

(ii) If any cracks are found, before further flight, replace the stabilizer support assembly with the same part-numbered part, either P/N 35086-501 or P/N 38086-501 as applicable. Replace both self-locking nuts with self-locking nuts that have zero hours TIS. Replacing the forward stabilizer support assembly requires removal and reinstallation of other horizontal stabilizer components. Replace all self-locking nuts with self-locking nuts that have zero hours TIS upon reinstallation of these components.

(2) Inspect the rear horizontal stabilizer support tube weld joints for corrosion and damage in accordance with the Instructions, steps 1.a. and 1.b., of Aviat Aircraft Inc. Service Bulletin No. 28, Revision A, dated April 2, 2015. If there is any corrosion or damage on a weld joint, before further flight, repair the weld joint and install a repair tube inside the stabilizer support tube as depicted in the figure on page 3 of Aviat Aircraft Inc.

Service Bulletin No. 28, Revision A, dated April 2, 2015. Repairing the rear horizontal stabilizer support tube requires removal and reinstallation of other horizontal stabilizer components. Replace all self-locking nuts with self-locking nuts that have zero hours TIS upon reinstallation of these components.

(h) Reporting Requirement

If a crack is found during any inspection required by paragraph (g) of this AD, within 10 days, report the following information to the FAA at the address listed in paragraph (l) of this AD:

- (1) Aircraft Make and Model
- (2) Aircraft N-number
- (3) Aircraft Serial Number
- (4) Total hours TIS
- (5) Total takeoff and landing cycles (if known)
- (6) Aircraft used for Tow operations? Yes or No
- (7) If the Aircraft is used for Tow operations, report heaviest Glider Max Gross takeoff weight or banner maximum weight.

(8) Describe the crack location(s) and report the length of the crack(s) in the forward horizontal stabilizer support assembly, rear horizontal stabilizer support tube, or both.

(i) Special Flight Permit

In accordance with 14 CFR 39.23, special flight permits are prohibited.

(j) Paperwork Reduction Act Burden Statement

A federal agency may not conduct or sponsor, and a person is not required to respond to, nor shall a person be subject to a penalty for failure to comply with a

collection of information subject to the requirements of the Paperwork Reduction Act unless that collection of information displays a currently valid OMB Control Number. The OMB Control Number for this information collection is 2120-0056. Public reporting for this collection of information is estimated to be approximately .5 hour per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, completing and reviewing the collection of information. All responses to this collection of information are mandatory. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden to: Information Collection Clearance Officer, Federal Aviation Administration, 10101 Hillwood Parkway, Fort Worth, TX 76177-1524.

(k) Alternative Methods of Compliance (AMOCs)

(1) The Manager, Denver ACO Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the manager of the certification office, send it to the attention of the person identified in paragraph (l) of this AD.

(2) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/certificate holding district office.

(l) Related Information

For more information about this AD, contact Mark Dalrymple, Aerospace Engineer, Denver ACO Branch, FAA, 26805 E. 68th Avenue, Denver, CO 80249; phone: (303) 342-1090; email: mark.dalrymple@faa.gov.

(m) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference of the service information listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this service information as applicable to do the actions required by this AD, unless the AD specifies otherwise.

(i) Aviat Aircraft Inc. Service Bulletin No. 28, Revision A, dated April 2, 2015.

(ii) [Reserved]

(3) For Aviat Aircraft Inc. service information identified in this AD, contact Aviat Aircraft Inc., Al Humbert, 672 South Washington Street, Afton, WY 83110, United States; phone: (307) 885-3151; email: dmir@aviataircraft.com; internet: <https://aviataircraft.com>.

(4) You may view this service information at FAA, Airworthiness Products Section, Operational Safety Branch, 901 Locust, Kansas City, Missouri 64106. For information on the availability of this material at the FAA, call 816-329-4148.

(5) You may view this service information that is incorporated by reference at the National Archives and Records

Administration (NARA). For information on the availability of this material at NARA, email: fedreg.legal@nara.gov, or go to: <https://www.archives.gov/federal-register/cfr/ibr-locations.html>.

Issued on July 28, 2020.

Lance T. Gant,

Director, Compliance & Airworthiness Division, Aircraft Certification Service.

[FR Doc. 2020-17904 Filed 8-14-20; 8:45 am]

BILLING CODE 4910-13-P

DEPARTMENT OF EDUCATION

34 CFR Part 75 and Chapter III

Final Waiver and Extension of the Project Periods for the American Indian Vocational Rehabilitation Services Program

AGENCY: Office of Special Education and Rehabilitative Services (OSERS), Department of Education.

ACTION: Final waiver and extension of project periods.

SUMMARY: The U.S. Department of Education (Department) waives the requirements in the Education Department General Administrative Regulations that generally prohibit project periods exceeding five years and project period extensions involving the obligation of additional Federal funds. The waiver and extension enable 29 American Indian Vocational Rehabilitation Services (AIVRS) projects under Catalog of Federal Domestic Assistance (CFDA) number 84.250K to receive funding for an additional period, not beyond September 30, 2021.

DATES: The waiver and extension of the project periods are effective August 17, 2020.

FOR FURTHER INFORMATION CONTACT: August Martin, U.S. Department of Education, 400 Maryland Avenue SW, Room 5064A, Potomac Center Plaza, Washington, DC 20202-1800. Telephone: 202-245-7410. Email: August.Martin@ed.gov.

If you use a telecommunications device for the deaf (TDD) or a text telephone (TTY), call the Federal Relay Service (FRS), toll free, at 1-800-877-8339.

SUPPLEMENTARY INFORMATION:

Background

Under section 121(a) of the Rehabilitation Act of 1973, as amended (the Act), the purpose of the AIVRS program is to provide grants to the governing bodies of Indian Tribes located on Federal and State reservations (and consortia of such governing bodies) to pay 90 percent of

the costs of vocational rehabilitation (VR) services, including culturally appropriate services, to American Indians with disabilities who reside on or near Federal or State reservations, consistent with each eligible individual's strengths, resources, priorities, concerns, abilities, capabilities, interests, and informed choice, so that each individual may prepare for, and engage in, high-quality employment that will increase opportunities for economic self-sufficiency.

In fiscal year (FY) 2015, the Department published in the **Federal Register** (80 FR 18606) a notice inviting applications (NIA) announcing the grant competition for the AIVRS program under CFDA 84.250K. The Department funded 29 applications for a 60-month period that will expire as of September 30, 2020. Any AIVRS grantee seeking a new five-year grant award would typically apply and compete in a new grant competition during their fifth and final year of funding.

On March 9, 2020, the Department published in the **Federal Register** (85 FR 13636) an NIA for the FY 2020 AIVRS competition, CFDA 84.250N (2020 NIA). Any new Tribes seeking an AIVRS grant along with the grantees whose grants are expiring on September 30, 2020 would need to submit an application in response to the FY 2020 NIA in order to receive an award that would start on October 1, 2020.

At roughly the same time as the Department published the FY 2020 NIA, in early spring 2020, the effects of the COVID-19 pandemic began to be felt in the United States. American Indian reservations experienced and continue to experience high rates of COVID-19 infections. Many of the entities eligible for AIVRS grants across the country took actions to limit the spread of COVID-19 by requiring their non-essential personnel to shelter at home. We have been informed that many AIVRS personnel who continue to shelter-in-place at home to avoid exposure to COVID-19 have limited access to the necessary technology to telework, such as personal computers, Wi-Fi, or internet availability to connect to workplace servers or workplace resources, and we assume that would also be true of personnel who do not currently receive a grant but would be eligible to apply. This limits their ability to access the information needed to prepare a quality application for the FY 2020 AIVRS competition. In addition, we have been notified that some of the programs attempting to develop grant applications have had difficulty acquiring the Tribal resolutions needed

to submit an application for Federal funding or working with the Tribes' administration, including the authorized representatives needed to approve, sign, and submit applications in *Grants.gov*.

On May 20, 2020, the Department published a notice in the **Federal Register** (85 FR 30690) extending the application deadline for the AIVRS program competition (84.250N) to June 26, 2020. However, given the ongoing and, for some Tribes, escalating cases of COVID-19 and the continuing challenges resulting from the pandemic, the situation for the Tribes has not improved, and the 30-day extension has not been sufficient to address these circumstances.

Therefore, in a notice published elsewhere in this issue of the **Federal Register**, the Department is withdrawing the FY 2020 NIA and cancelling the FY 2020 CFDA 84.250N competition. At the same time here, under its authority to make certain AIVRS grants effective for more than 60 months under section 121(b)(3) of the Act, the Department is waiving the requirements in 34 CFR 75.250, which prohibit project periods exceeding five years, and extending the project period, as well as waiving the requirements in 34 CFR 75.261(a) and (c)(2), which allow the extension of a project period only if the extension does

not involve the obligation of additional Federal funds. The waivers and extension will enable the Department to provide additional funds to 29 projects under CFDA 84.250K for an additional period, not beyond September 30, 2021.

This action allows the 29 AIVRS grantees to submit a request for continuation funding in FY 2020 based on their prior fiscal year's continuation award and certification from each grantee that they have the capacity to continue activities and wish to continue to receive additional funds. However, decisions regarding each grantee's annual continuation award will be based on the program narrative, budget, budget narrative, and prior program performance report submitted by each of these 29 AIVRS grantees and on the requirements of 34 CFR 75.253. Any activities to be carried out during the year of continuation award would have to be consistent with, or be a logical extension of, the scope, goals, and objectives of each grantee's application as approved following the 2015 AIVRS competition. The FY 2015 AIVRS NIA will continue to govern each grantee's project during the extension year. These current AIVRS grantees may contact their RSA project officer regarding their request for a continuation award in FY 2020 for a project period through FY 2021.

Final Waivers and Extensions

For these reasons, the Department does not believe that it is in the public interest to run a new competition for the AIVRS program, CFDA 84.250N, in FY 2020. Given the challenges in Indian country due to the COVID-19 pandemic, extending the end dates of the 29 AIVRS projects currently in their fifth year will allow for more efficient use of the funding and avoid any interruption in services that might result from waiting one year to hold a competition for new five-year AIVRS grant projects in FY 2021. Through that competition the Department intends to make funds available for all eligible applicants, including the 29 AIVRS grantees funded in FY 2015 and the 13 AIVRS grantees funded in FY 2016, whose grants will be expiring on September 30, 2021.

For these reasons, the Department waives the requirements in 34 CFR 75.250, which prohibit project periods exceeding five years, as well as the requirements in 34 CFR 75.261(a) and (c)(2), which allow the extension of a project period only if the extension does not involve the obligation of additional Federal funds. This waiver allows the Department to issue a one-time FY 2020 continuation award to each of the 29 AIVRS projects currently funded under CFDA 84.250K estimated as follows:

Grantee name	Amount
Confederated Tribes and Bands of the Yakama Nation	\$453,200
Lower Muskogee Creek Nation	405,200
The Cherokee Nation	605,000
Confederated Tribes of the Colville Reservation	464,144
Samish Indian Nation	310,206
Inupiat Community of the Arctic Slope	505,778
Confederated Tribes of the Umatilla Indian Reservation	392,956
Prairie Band of Potawatomi Nation	300,000
Hopi Tribe	484,469
Hannahville Indian Community	397,270
Kawerak, Inc	424,496
Saint Regis Mohawk Tribe	406,000
Confederated Salish and Kootenai Tribes	521,000
Chippewa Cree Tribe of the Rocky Boy Reservation	412,000
The Coeur D'alene Tribe	444,109
Confederated Tribes of Siletz Indians	384,442
Cook Inlet Tribal Council, Inc	628,858
Stillaguamish Tribe of Indians of Washington	575,947
Moapa Band Paiute	365,000
Association of Village Council Presidents, Inc	473,104
Cheyenne River Sioux Tribe	384,587
United Houma Nation, Inc	499,086
Laguna Department of Education	450,000
Northern Cheyenne Tribe	375,000
Eastern Shoshone Tribe	490,368
Tohono O'odham Nation	450,723
Standing Rock Sioux Tribe	521,823
Central Council of Tlingit and Haida Indian Tribes of Alaska	556,369
Lower Elwha Tribal Community	323,430

Waiver of Notice and Comment Rulemaking and Delayed Effective Date Under the Administrative Procedure Act

Under the Administrative Procedure Act (APA) (5 U.S.C. 553), the Department generally offers interested parties the opportunity to comment on proposed regulations. However, the APA provides that an agency is not required to conduct notice and comment rulemaking when the agency, for good cause, finds that notice and public comment thereon are impracticable, unnecessary, or contrary to the public interest (5 U.S.C. 553(b)(B)).

Generally, the “good cause” exception to notice and comment rulemaking under the APA, see 5 U.S.C. 553(b)(3)(B), is to be “narrowly construed and only reluctantly countenanced.” *Tennessee Gas Pipeline Co. v. FERC*, 969 F.2d 1141, 1144 (D.C. Cir. 1992) (quoting *New Jersey v. EPA*, 626 F.2d 1038, 1045 (D.C. Cir. 1980)). The exception excuses notice and comment in emergency situations, *Am. Fed’n of Gov’t Employees v. Block*, 655 F.2d 1153, 1156 (D.C. Cir. 1981), or where delay could result in serious harm. See *Hawaii Helicopter Operators Ass’n v. FAA*, 51 F.3d 212, 214 (9th Cir. 1995).

The COVID-19 pandemic struck during the second half of Federal FY 2020 and, as explained earlier, created a situation where the Tribes were dealing with such overwhelmingly trying circumstances that the Department determined that, with their resources and attention diverted to addressing concerns created by the pandemic, it would be too difficult for them to submit applications for the AIVRS grants scheduled to be awarded this year in a timely manner. For this reason, it became necessary for the Department to extend the grants awarded under CFDA 84.250K for an additional year. There is insufficient time left in FY 2020 to adopt these waivers and extensions of the project periods through notice and comment rulemaking and to make the continuation awards to the 29 expiring AIVRS grants. Failure to extend the existing AIVRS grants under CFDA 84.250K for an additional year would result in an interruption of essential services to the American Indians with disabilities who rely on them. In addition, the Department is unique among Federal agencies in that it must go through notice and comment rulemaking under the APA to make its grants. The exception in the APA exempting grants from notice and

comment generally does not apply to the Department. 5 U.S.C. 553(a)(2); 20 U.S.C. 1232(d). In short, in the unusual circumstances here, notice and comment rulemaking is both impracticable and not in the public interest.

The APA also requires that a substantive rule must be published at least 30 days before its effective date, except as otherwise provided for good cause (5 U.S.C. 553(d)(3)). Given that it is not possible to run an effective AIVRS competition this year, it is crucial that the funded grantees under CFDA 84.250K continue to provide services through all of FY 2021. A delayed effective date would be contrary to public interest by prolonging uncertainty about the continuation of VR services provided to American Indians with disabilities living on or near a reservation. Therefore, the Department waives the delayed effective date provision for good cause.

Regulatory Flexibility Act Certification

The Regulatory Flexibility Act does not apply to this rulemaking because there is good cause to waive notice and comment rulemaking under 5 U.S.C. 553.

Paperwork Reduction Act of 1995

This waiver and extension of the project periods does not contain any information collection requirements.

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[EPA-R05-OAR-2015-0700; FRL-10012-09-Region 5]

Air Plan Approval; Indiana; Attainment Plan for the Southwest Indiana Sulfur Dioxide Nonattainment Area

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: The Environmental Protection Agency (EPA) is approving as a State Implementation Plan (SIP) revision to the Southwest Indiana-related elements of an Indiana submission to EPA dated October 2, 2015, as supplemented on November 15, 2017 and September 18, 2019. EPA concludes that Indiana has appropriately demonstrated that the plan provides for attainment of the 2010 sulfur dioxide (SO₂) primary National Ambient Air Quality Standard (NAAQS) in the Southwest Indiana area by the applicable attainment date and that the plan meets the other applicable requirements under the Clean Air Act.

DATES: This final rule is effective on September 16, 2020.

ADDRESSES: EPA has established a docket for this action under Docket ID No. EPA-R05-OAR-2015-0700. All documents in the docket are listed on the www.regulations.gov website. Although listed in the index, some information is not publicly available, i.e., Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the internet and will be publicly available only in hard copy form. Publicly available docket materials are available through www.regulations.gov, or please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section for additional availability information.

SUPPLEMENTARY INFORMATION:

I. Summary of EPA's Notices of Proposed Rulemaking

Following the promulgation in 2010 of a 1-hour primary SO₂ NAAQS, on August 5, 2013, at 78 FR 47191, EPA designated an area in Southwest Indiana that included a township in each of Daviess and Pike Counties, Indiana as nonattainment for this NAAQS, in conjunction with designating three other areas in Indiana and multiple areas in other states as nonattainment. On October 2, 2015, the Indiana Department of Environmental Management ("Indiana") submitted plans addressing all four of its SO₂ nonattainment areas. EPA has taken separate action on Indiana's plans for its other nonattainment areas: EPA published final action on plans for the Indianapolis and Terre Haute areas on March 22, 2019, at 84 FR 10692, and published final action on the plan for the Morgan County area on September 23, 2019, at 84 FR 49659.

In addition to its October 2, 2015 submittal, Indiana made a supplemental submittal on November 15, 2017, providing clarifications on its inventory procedures and other elements of its four nonattainment plans. EPA published a proposed rule proposing to approve three of these plans (for the Southwest Indiana, Indianapolis, and Terre Haute areas) on August 15, 2018, at 83 FR 40487.

In response to that proposed rule, EPA received comments objecting to, among other things, the manner in which Indiana calculated an adjustment to the level of the 30-day average limit for Indianapolis Power and Light's Petersburg power plant (IP&L-Petersburg or "the facility"). These comments prompted Indiana to recalculate the adjustment factor used to determine the appropriate limits for this facility, resulting in the adoption of revised limits and submittal of these revised limits on September 18, 2019. Indiana also provided an email on November 19, 2019 clarifying the interrelationship between the commissioner's order containing the revised limits and the provisions in Indiana regulations, both of which Indiana requested be incorporated into the Indiana SIP.

On February 24, 2020, at 85 FR 10350, EPA published a supplementary proposed rule addressing Indiana's revised plan. This action evaluated Indiana's revised 30-day average limits

and the recalculated adjustment factor used to determine those limits. The original submittal relied on modeling to determine 1-hour emission limits that would provide for attainment (expressed in pounds per million British Thermal Units (MMBTU), known as critical emission rates), and imposed 30-day average limits determined by multiplying these 1-hour rates by 80 percent. Indiana's reevaluation concluded that a more appropriate adjustment factor was 68 percent. Indiana made no change to its modeling; its revised 30-day average limits reflect only this change in adjustment factor. Therefore, the supplemental proposed rule solicited comments only on this change to Indiana's plan.

II. Comments

In response to its proposed rule of August 15, 2018, EPA received relevant comments from Sierra Club addressing the reliance on 30-day average emission limits for Indianapolis Power and Light's Petersburg power plant (IP&L-Petersburg). EPA also received two anonymous comments that address subjects outside the scope of our proposed action, do not explain (or provide a legal basis for) how the proposed action should differ in any way, and make no specific mention of the substantive aspects of the proposed action. Consequently, these comments are not germane to this rulemaking and require no further response. EPA received no comments on its supplemental proposed rule of February 24, 2020.

As noted above, Sierra Club had numerous comments on the calculation of the adjustment factor used to determine the original 30-day average limits, which resulted in Indiana recalculating the adjustment factor and adopting revised limits, and which EPA then discussed in a supplemental notice of proposed rulemaking (NPRM). Consequently, some of Sierra Club's comments on the original Indiana submittal are either moot or have been subject to an additional solicitation of comments in light of the additional relevant available information. EPA received no comments on this supplemental NPRM. The following responses to Sierra Club's comments will identify the extent to which comments on specific aspects of Indiana's calculations of 30-day average limits for IP&L-Petersburg are still germane.

Comment: Sierra Club notes the health effects from exposure to SO₂ "in even very short time periods—such as five minutes." Sierra Club expresses concern that IP&L-Petersburg's 30-day

average limit will allow spikes in emissions that cause spikes in concentrations sufficient to yield violations of the 1-hour air quality standard.

Response: EPA believes that Indiana's establishment of a 30-day average limit at a lower level than the 1-hour limit indicated to be necessary by modeling will avoid some of the exceedances that would be expected with emissions constantly at the modeled level, such that the net effect of Indiana's lower, longer term average limit is to have similar air quality as would be expected with a 1-hour limit. Further discussion of this topic is provided below in response to more detailed comments. Sierra Club properly focuses on whether Indiana's plan provides for attainment of the 1-hour standard, and not on the shorter term (*e.g.*, five minutes) exposures that the standard is designed in part to address. Nevertheless, EPA notes that suitably adjusted long term limits can be expected to provide adequate mitigation of even the shorter (sub-hour) exposures to SO₂, for the same reasons that such limits suitably address the 1-hour standard.

Comment: Sierra Club observes that EPA's April 2014 guidance¹ acknowledges that EPA historically has required averaging times consistent with the averaging time of the standard, and specifically stated that EPA would not approve plans relying solely on 30-day average limits. Sierra Club cites other EPA statements that short term standards must be addressed with short term average limits. Sierra Club equates a 30-day average limit to a 720-hour average limit, and states that a 720-hour limit would not sufficiently limit hourly emissions to protect against violations of the air quality standard "unless it was shown through air dispersion modeling that the maximum uncontrolled hourly emissions from a source" would not result in violation of the standard. Sierra Club notes that Table 8-1 of EPA's modeling guideline "requires modeling for short term [standards] be based on the allowable emissions over the averaging time of the [standard]." Sierra Club asserts that "the maximum allowable hourly emission rate is difficult to predict from a 30-day average limit."

Response: The EPA statements that Sierra Club cites predate the 2014 guidance, and thus reflect a time when EPA had not yet conducted the analyses and completed evaluation of methods

¹ See "Guidance for 1-Hour SO₂ Nonattainment Area SIP Submissions," available at https://www.epa.gov/sites/production/files/2016-06/documents/20140423guidance_nonattainment_sip.pdf.

for formulating longer term average limits that would provide for attainment of a 1-hour air quality standard. Now that EPA has completed this work, the 2014 guidance, for purposes of implementing the 2010 SO₂ NAAQS, supersedes prior guidance on the topic.

Sierra Club cites the requirement in EPA's modeling guideline² to model the allowable emission rate based on a short term limitation, but does not address the guidance in appendix A of EPA's 2014 guidance (entitled "Modeling Guidance for Nonattainment Areas"), which states that notwithstanding the orientation of Table 8-1 toward short term emission limits, "current guidance . . . provides that after the state determines the 1-hour limit that would be necessary to provide for attainment, any longer term limit should be established at a level that is sufficiently lower to provide comparable stringency. Thus, in cases where a state wishes to apply a longer term average limit, the attainment analysis would be based not on the level of the longer term limit but rather on the level of the corresponding 1-hour emission limit." See page A-79 of EPA's 2014 guidance. This recommended approach avoids the unnecessary burden of defining an ensemble of variable emissions that may be considered to reflect allowable emissions and the burden of conducting a modeling analysis with such an inventory. Instead, EPA recommends relying on standard modeling approaches, as if a short-term limit were to be established. For reasons described in the guidance and described in more detail in the August 15, 2018 NPRM, EPA believes that a longer term limit that is determined to have comparable stringency to the corresponding 1-hour limit (generally, by applying an adjustment factor computed according to recommended methods) will yield comparable air quality (*i.e.*, comparable assurance that the standard will not be violated) as the 1-hour limit. For that reason, and for ease of implementation, EPA does not believe that an assessment of the range of emissions expected upon compliance with a long-term limit or an assessment of the associated air quality is warranted or necessary.

Comment: Sierra Club asserts that "ambient air quality conditions can be rendered unsafe by as few as four hours of elevated emissions over the course of a year."

Response: Indiana, by imposing a 30-day average limit on IP&L-Petersburg's emissions determined in accordance

with EPA's guidance, allows a small number of occasions to have emissions above the critical emissions value but requires most occasions to have emissions well below this level, indeed requiring emissions on average to be 32 percent below the critical emissions value. In modeling constant emissions, as in routine modeling to assess whether a particular set of 1-hour emissions limits would provide for attainment, one makes no assessment of the impact of emissions sometimes being higher and other times being lower than the constant emission level. Sierra Club addresses only the occasions with higher emissions, noting their potential to result in exceedances beyond those expected with emissions always at the critical emissions value, thereby yielding a violation of the standard. However, Sierra Club does not address the impact of emissions generally being well below the critical emissions value. Thus, Sierra Club does not consider the likelihood that the more numerous occasions of emissions well below the critical emissions value, mandated by the downward adjusted longer term average emissions limit, would result in avoiding some of the exceedances that would be expected with emissions always at the critical emissions value. EPA does not dispute Sierra Club's contention that occasions with emissions above the critical emissions value create added risk of exceedances of the air quality standard (if these occasions occur when the meteorology is conducive toward high concentrations at locations where violations might occur), but Sierra Club does not dispute or otherwise address EPA's contention that other occasions with emissions well below the critical emissions value, which the downward adjusted 30-day average limit requires to occur often, can be expected to yield a compensating reduction in the frequency of concentrations above the level of the standard. As explained in the NPRM, EPA believes that the net effect of a properly downward adjusted longer-term limit is comparable to the effect of a corresponding 1-hour emission limit and provides equally for attainment.

Comment: Sierra Club asserts that Indiana's modeling analysis, which does not directly assess emissions allowed by a long-term average emission limit, is contrary to the regulatory requirements in 40 CFR 51.112(a). Separately, Sierra Club objects to EPA's assertion that the plan need not provide "absolute certainty that attainment will in fact occur" and that the plan need only provide "an adequate level of

confidence of prospective [attainment of the standard]." Sierra Club quotes from Clean Air Act section 172(c)(1), that attainment plans "shall provide for attainment of the national primary ambient air quality standards." [Emphasis in comments.] Sierra Club concludes that "EPA has much more responsibility than just ensuring a plan provides 'an adequate level of confidence'" of attainment.

Response: The requirement in 40 CFR 51.112(a) is that "[e]ach plan must demonstrate that the measures, rules, and regulations contained in it are adequate to provide for the timely attainment and maintenance of the national standard that it implements." In this case, Indiana has conducted modeling to identify 1-hour emission limits that would provide for attainment. Indiana then provided an analysis of the degree of adjustment needed for 30-day average limits to be comparably stringent to those 1-hour limits, and Indiana adopted these 30-day average limits. Because Indiana has conducted a suitable analysis of appropriate 1-hour limits and suitably analyzed and adopted the 30-day average limits that are comparably stringent, EPA believes that Indiana has suitably demonstrated that the 30-day average limits in its plan are adequate to provide for timely attainment of the SO₂ standard, thereby satisfying the requirement of 40 CFR 51.112(a).

Sierra Club has accurately quoted the requirement in the Clean Air Act for attainment plans to provide for attainment. Evidently Sierra Club believes that this requirement would have been met with 1-hour limits, despite the possibility that future violations might occur if, for example, future meteorology differs in unforeseeable ways from the historic meteorology analyzed in planning. EPA believes that the 30-day average limits adopted by Indiana provide comparable assurance of attainment as would have been provided by the 1-hour limits that Indiana would otherwise have relied on, and thus equally as well satisfy the requirement that, in all reasonably foreseeable circumstances, the plan provides for attainment.

Comment: Sierra Club believes that the modeling analysis in appendix B of EPA's 2014 guidance does not suffice to demonstrate that 30-day average limits at IP&L-Petersburg or elsewhere can protect against violations of the SO₂ standard as well as 1-hour limits. Sierra Club believes that the appendix B analysis, by assuming a fixed distribution among stacks at the facility and assuming no changes in stack parameters pursuant to the addition of

²Title 40 Code of Federal Regulations part 51 appendix W, entitled "Guideline on Air Quality Models."

emission controls, does not properly address the multi-stack situation at IP&L-Petersburg. Sierra Club objects further that the analysis in appendix B, by using an inventory of how the source would actually emit under a 30-day average limit, is not comparable to an analysis using the maximum permissible emissions under a 1-hour emission limit.

Response: The differences between the plant modeled for appendix B (Canadys) and IP&L-Petersburg are not persuasive reasons to believe that the results found for Canadys would not also apply to IP&L-Petersburg. There is no question that modeling to identify suitable 1-hour emission limits must be done on a source-specific basis, considering the site-specific configurations of stacks, stack parameters (reflecting any influence of controls on those stack parameters), and other source-specific factors such as meteorology, terrain, and dimensions of nearby buildings. However, appendix B reflects a premise that a source-specific critical emission value (*i.e.*, a candidate value for a 1-hour emission limit) has been identified. Appendix B addresses instead whether a 30-day average limit that reflects an adjustment in accordance with appendix C of EPA's guidance can be expected to result in attainment as well as imposition of a 1-hour limit at the critical emission value. The two scenarios addressed in appendix B (with and without a scrubber) reflect adjustment factors of 68 percent and 69 percent, respectively. Thus, the issue being addressed by appendix B is whether a 30-day average limit reflecting such adjustments (determined based on a source-specific measure of variability) can be expected to ensure attainment as well as the corresponding 1-hour limit. EPA believes that this comparison between air quality with an adjusted 30-day average limit and air quality with the corresponding 1-hour limit applies to a broad range of circumstances. In particular, EPA believes that longer term limits established in accordance with EPA's guidance can provide for comparable air quality as the analogous 1-hour limits for a broad range of plants with various numbers of stacks, with various stack parameters, and with a broad range in the absolute magnitude of the 1-hour limits that are necessary to assure attainment.

Sierra Club is correct that the modeling described in appendix B for emissions in compliance with 30-day average limits is not directly comparable to the modeling that was done in establishing a suitable 1-hour limit. As Sierra Club notes, modeling for the 30-

day average limit scenarios reflected the expected distribution of emissions in compliance with such a limit, inherently reflecting a margin of compliance that sources routinely have at most times, whereas the modeling for the 1-hour limit scenarios reflected no such margin of compliance (*i.e.*, these runs reflected emissions always at the 1-hour limit).

To address this comment, EPA performed additional analyses designed to identify emission profiles with average emissions equal to the presumptive 30-day average limit and to estimate the air quality that would result. These analyses are described in detail in a document entitled "Supplemental Assessment of the Air Quality Consequences of Applying Adjusted Long Term Average Emission Limits," which is included in the docket for this action.

The emission profiles used in this supplemental assessment were generally based on the actual emissions variations found in the 30-day periods having 99th percentile level average emissions. Profiles were developed for two plants with limits established in recent attainment plans for 2010 SO₂ nonattainment areas: IP&L-Petersburg (Unit 3) and Cardinal (Unit 1), a comparably large power plant in Jefferson County, Ohio. In each case, the analyses used data for a suitable period (3 years for IP&L-Petersburg and 5 years for Cardinal) during which the sources were complying with the attainment-level emission limit adopted by the state. Calculations were performed in accordance with appendix C of the 2014 guidance to determine the 99th percentile 30-day average emission rates and to determine appropriate adjustment factors to be applied in determining 30-day average emission limits. These calculations were performed separately on a pound per hour basis and on a pound per MMBTU basis, supporting identification of two actual emission profiles for each plant, one reflecting emission variations in the 30-day period with approximately the 99th percentile pound per hour value and one reflecting emission variations in the 30-day period with approximately the 99th percentile pound per MMBTU value. Since the analysis used the modeling information for a separate plant (Canadys), the analyses used the critical emission value identified in that modeling. Allowable emissions (as a 30-day average) were calculated by multiplying this critical emission value by the applicable adjustment factor. Allowable emission profiles were then developed by scaling the actual emission profiles to the allowable level,

i.e., multiplying the emissions for each hour times the ratio of the allowable emissions against the average emissions in the actual profile, as well as by substituting the allowable emission value for any time the plant was not operating in the actual profile period. These allowable emission profiles were applied repeatedly, in the first 30 days and every successive 30 days, with the result that every 30-day period in the 5-year analysis had average emissions equal to the allowable emissions level.

One of these profiles, namely for the 99th percentile pound per MMBTU profile at IP&L-Petersburg, included a brief period with exceptionally high emissions, reflecting minimal if any flue gas desulfurization. Based on the uniqueness of these emissions during this timeframe, EPA does not believe that such a profile, recurring every 30 days, is a realistic representation of emission variations that routinely occur. The supplemental assessment document identified above provides further rationale for treating this as an unrepresentative profile, including evidence that such exceptional emissions are much more rare in practice, engineering reasons that such operation is prone to be damaging to the plant, and policy reasons that recurring occasions of exceptionally high emissions would be contrary to guidance to minimize the frequency and magnitude of occasions with emissions above the critical emissions value. Therefore, for this assessment, EPA replaced that profile with a profile based on emissions for the 30-day period with approximately the 98th percentile 30-day average pound per MMBTU value.

The results of this assessment are shown in Table 1. For each of the four profiles, the resulting air quality is somewhat below the air quality standard. Since these profiles reflect allowable emissions at all times, these results may be compared to the results of modeling allowable emissions under the corresponding 1-hour limit (*i.e.*, modeling emissions constantly at the critical emission value). Thus, this assessment supports a conclusion similar to the conclusion from appendix B, that establishment of a long term average emissions limit estimated to have comparable stringency to the corresponding 1-hour emission limit (calculated in accordance with the guidance in A C) can be expected to result in comparable air quality, and that such a limit provides comparable assurance of attainment.

TABLE 1—DESIGN VALUES ESTIMATED FOR EACH EMISSION PROFILE

Profile	Design value ($\mu\text{g}/\text{m}^3$ (ppb))
Cardinal #/hour	181.2 (69.2)
Cardinal #/MMBTU	190.6 (72.8)
Petersburg #/hour	156.3 (59.7)
Petersburg 98th %-ile #/MMBTU	190.5 (72.7)

Comment: Sierra Club asserts that “[n]either Indiana nor EPA evaluated the reasonably available control measures that could be utilized” at IP&L-Petersburg. Sierra Club highlights a consultant’s evaluation of such measures at this plant, as reported to the Indiana Utility Regulatory Commission. Sierra Club identifies several of the measures identified in this consultant’s evaluation, and states that “EPA cannot justify allowing a 30-day average limit . . . without considering all reasonably available control measures.”

Response: EPA guidance for implementing the SO₂ NAAQS advises that a plan that provides for attainment may be considered to have implemented all reasonably available control measures. EPA believes that the 30-day average limits in Indiana’s plan provide for attainment as well as would have been provided by 1-hour limits. Therefore, EPA believes that use of these 30-day average limits does not create a need for requirements for specific control measures (beyond the requirements inherent in the emission limit) that would not apply with the use of 1-hour limits. While the measures evaluated in the consultant’s report may be useful approaches for the company to comply with Indiana’s emission limits, EPA does not believe that approval of Indiana’s plan should be contingent on Indiana adopting requirements for any of these specific measures.

Comment: Sierra Club objects that Indiana “did not conduct a unit-specific analysis in determining emissions variability.” Sierra Club believes that Indiana is not justified in evaluating emissions variability only for the FGD stack³ for Unit 2, rather than examining variability of emissions for all four units at IP&L-Petersburg and including emissions from the bypass stacks (as applicable at Units 1 and 2). Sierra Club notes, in particular, that neither the 30-day average limits nor any other requirement will ensure that emissions from the bypass stacks will not occur. Sierra Club notes that the units differ significantly, as they use scrubbers of

different vintages and these scrubbers have been upgraded recently, so that Indiana may not assume that the variability of the FGD stack emissions at Unit 2 in the period from 2006 to 2010 is representative of either the variability of emissions of the other three units at that time or of the variability of emissions that can be expected for any of the four units once the units meet the proposed SIP limits. Sierra Club thus implies that the data Indiana used are not appropriate for determining the degree of adjustment warranted for all four units for an attainment plan for this area.

Response: In response to this comment, Indiana provided further explanation of its reliance on data from the Unit 2 FGD stack, namely that these data, by exclusively reflecting controlled emissions and reflecting more stable control equipment operation than Unit 1, provide the best data set for representing the distribution of emissions for all four units once Indiana’s limits take effect. An extensive discussion of Indiana’s rationale is provided in the February 24, 2020 supplemental NPRM, on which Sierra Club did not comment. Furthermore, additional analyses of variability at all four units at IP&L-Petersburg that were described in the supplemental NPRM provide additional support for EPA’s belief that the 2006 to 2010 data for the Unit 2 FGD stack provide an appropriate data base for anticipating the variability that has in fact occurred in the time after Indiana’s limits took effect. In absence of comments on this additional explanation, EPA maintains that Indiana’s adjustment factor, based on 2006 to 2010 data for the FGD stack at Unit 2, is appropriate.

Comment: Sierra Club notes that EPA’s guidance recommends that variability analyses be based on “an adequately robust data” with at least “3 to 5 years of stable data (without changes that significantly altered emissions variability).” Sierra Club believes that the data set for IP&L-Petersburg’s Unit 2 FGD stack does not meet these criteria. Sierra Club notes significant variability from year to year in the maximum 30-day average emissions (in pounds per hour) and emission rate (in pounds per MMBTU), which was permissible given the absence of a constraining emission limit. Sierra Club further notes that the emissions from the Unit 2 FGD stack were below Indiana’s proposed 30-day average proposed SIP limit for two of the five years included in Indiana’s analysis, yet even in those years those emissions (not including bypass stack emissions) exceeded the critical mass

emissions value in 82 and 99 hours (in 2007 and 2008, respectively).

Response: The February 24, 2020 supplemental NPRM addresses most of these comments. In particular, the supplemental action provided additional rationale for the use of historic data from the Unit 2 FGD stack for assessing the expected variability of emissions at all four units at IP&L-Petersburg, and the supplemental action described EPA’s analysis of more recent data that help confirm Indiana’s forecast of variability and that indicate that the three units that are complying with the revised limits are emitting above the critical emissions value less than one percent of the time. Because EPA received no comments on this supplemental action, EPA considers the supplemental information to address these comments on the initial NPRM.

The supplemental NPRM did not address the portion of this comment that argued that year-to-year variability in emissions, expressed in terms of year-to-year variations in the maximum 30-day average pound per hour and pound per MMBTU, is too great to consider the 2006 to 2010 period to be a period of stable operation with respect to emissions from the Unit 2 FGD stack. That portion of the comment is addressed here.

The purpose of the relevant portion of EPA’s guidance is to determine variability based on a data set that best reflects the degree of variability that can be expected once the facility complies with the limits in the plan. A data set with significant changes in control levels (e.g., two years of uncontrolled emissions and two years of well controlled emissions) would either (at the 99th percentile level) be dominated by the two years of uncontrolled emissions data or give a distorted picture of variability, thus giving results that are either insufficiently robust or misleading.

However, Sierra Club has made no argument that the control regime for the Unit 2 emissions that are vented through the FGD stack changed during the 2006 to 2010 period. Instead, Sierra Club is effectively arguing that routine operation of the control equipment during that period results in significant variations in emissions from year to year. EPA expects year-to-year differences in plant operations, and indeed EPA seeks to include that variability in its recommended approach to assessing the appropriate degree of adjustment of longer-term limits. Indeed, EPA’s analysis of post-control data described in the supplemental NPRM suggests that the multi-year variability of current

³ The “FGD stack” refers to the stack that vents emissions from the unit’s control device, and thus represents controlled emissions. The bypass stack vents the emissions from the unit when the control device is not controlling emissions properly.

emissions is similar to the multi-year variability of Unit 2 FGD stack emissions in 2006 to 2010. “Stable operation” cannot be defined as operation without year-to-year variations; such a definition would defeat the purpose of forecasting the variability in emissions that can be expected into the future once the SIP control strategy is implemented. If anything, Sierra Club’s comment highlights the importance of using the entirety of a multi-year data base (EPA recommends at least three to five years) for determining the relative stringency of a long term average limit as compared to a 1-hour limit, for a period with a stable control regime such as was the case here.

Comment: Sierra Club objects that Indiana did not evaluate whether limits with an intermediate averaging period (e.g., 24 hours) might be more appropriate or whether supplemental limitations on peak hourly emissions might be warranted. Sierra Club provided statistics for each of the four units on the number of days since the limits took effect (using data from January 1, 2017 to June 30, 2018) during which at least one hour exceeded the critical emission rate, despite the four units all complying with Indiana’s 30-day average emission limits. For Units 1 through 4 during that one and one half year period, Sierra Club noted 63 days, 138 days, 9 days, and 22 days, respectively, with at least one hour having more emissions than the unit’s critical emissions value, representing respectively 11.5 percent, 25.3 percent, 1.7 percent, and 4.0 percent of the days in that period. Sierra Club further notes eight hours during which total SO₂ emissions exceeded the sum of the four units’ critical emissions values (in approximate terms, a plant-wide critical emissions value). Sierra Club concludes that Indiana’s 30-day average limits cannot be considered comparably stringent to 1-hour limits at the critical emissions value, that modeling of the critical emissions value does not suffice to demonstrate that the 30-day average limits provide for attainment, and that supplemental limits must be imposed to assure that “actual occurrences of hourly emission rates above the critical emissions values will only occur on ‘rare’ occasions.”

Response: EPA’s initial NPRM concluded that Indiana’s 30-day average limits appeared to be sufficiently stringent to constrain hourly emissions to be only rarely above the critical emissions values, without the need for supplemental limits. The same logic would suggest that the use of limits with an intermediate averaging time such as

24 hours is also not necessary to assure that hours with emissions above the critical emissions value will be rare.

EPA’s initial NPRM reported the results of an examination of five years of data from Unit 2 from before Indiana’s limits took effect, noting that the unit exceeded the 30-day average limit for about seven percent of the averages and that the unit exceeded the critical emissions value for about six percent of the hours. Sierra Club uses a data set for 18 months starting when Indiana’s limits took effect, which is a data set that is more indicative of operation in accordance with the limits in Indiana’s plan. Sierra Club also examined data for all four units. Finally, EPA’s supplemental NPRM, on which Sierra Club did not comment, reviewed the data for a 30-month period starting when Indiana’s limits took effect. Specifically, for this 30-month period, Units 1, 3, and 4 complied with their revised 30-day average limits and had hourly emissions above the critical emissions value (i.e., the modeled mass emissions in pounds per hour) for 0.9 percent, 0.1 percent, and 0.4 percent of the hours, respectively. Unit 2 exceeded its revised limit 17 percent of the 30-day averages, while exceeding the critical emission value 3 percent of the time. This suggests that the necessary improvements in scrubber efficiency at Unit 2 would likely yield a percentage of hours with emissions above the critical emission value that is similar to the percentages found for the three units that are already complying with limits. In absence of comments on this information, EPA continues to believe that Indiana’s 30-day average limits are sufficient to constrain emissions to be only rarely above the critical emissions value, even without supplemental limits or limits set with a shorter averaging time.

Comment: Sierra Club noted that Indiana determined its 30-day average limits on emission levels (in pounds per hour) on the basis of an adjustment factor calculated to reflect variability of emission rates (in pounds per MMBTU), to which Sierra Club objected as being inappropriate and contrary to EPA guidance.

Response: EPA agrees that the variability of emission levels is prone to be different from the variability of emission rates, and Sierra Club is correct that EPA guidance recommends determining and applying separate adjustment factors for these two types of limits. Indiana’s amended plan, including revised emission rate limits, no longer includes 30-day average mass

emission level limits.⁴ EPA’s supplemental NPRM provided EPA’s review of this and other revisions Indiana made, and EPA received no comments on the revisions or on the review provided in its supplemental action. Thus, this comment is now moot.

III. EPA’s Final Action

EPA is approving Indiana’s SIP submission for the Southwest Indiana SO₂ nonattainment area, which Indiana submitted to EPA on October 2, 2015 and supplemented on June 7, 2017, November 15, 2017, and September 18, 2019, and clarified on November 19, 2019. This SO₂ nonattainment plan included Indiana’s attainment demonstration for this area. The nonattainment plan also addressed requirements for emission inventories, reasonably available control technology/reasonably available control measures, reasonable further progress, and contingency measures. Indiana has previously addressed requirements regarding nonattainment area new source review.⁵ EPA has determined that Indiana’s SO₂ nonattainment plan for Southwest Indiana meets the applicable requirements of Clean Air Act sections 110, 172, 191, and 192.

Underpinning Indiana’s attainment plan for Southwest Indiana are three rules and a Commissioner’s Order. The rule that is most pertinent to this action is Indiana Administrative Code, Title 326, Rule 7–4–15 (326 IAC 7–4–15), entitled “Pike County sulfur dioxide emission limitations”, effective January 1, 2017, which provides 1-hour emission limits for IP&L-Petersburg and the Frank E. Ratts facility and provide the terms under which IP&L may switch between being subject to the 1-hour limits in the rule and the 30-day average limits in the Commissioner’s order. Two other rules, namely 326 IAC 7–1.1–3 (“Compliance date”) and 326 IAC 7–2–1 (“Reporting requirements; methods to determine compliance”), are also pertinent to the Marion, Morgan, and Vigo County nonattainment plans and were approved in the context of action on the Marion and Vigo County action (See 84 FR 10692, published March 22, 2019.) As a result of this action, the SIP will include Pike County limits (in

⁴ Indiana has provided modeling demonstrating that attainment is assured by a limit corresponding to the “critical emission rate” (which may be defined as the pound per MMBTU rate that at maximum load suffices to provide for attainment), and so Indiana’s plan provides for attainment without need for an additional limit on pounds of emissions per hour.

⁵ As noted in the NPRM, EPA approved Indiana’s nonattainment new source review rules on October 7, 1994 (94 FR 24838).

addition to previously approved limits for Marion, Morgan and Vigo Counties) as well as the implementing provisions in 326 IAC 7-1.1-3 and 326 IAC 7-2-1, and no reapproval of these implementing provisions and indeed no SIP revision is needed for these implementing provisions to govern the implementation of the Pike County limits, as Indiana intended.⁶ In accordance with Indiana's request, EPA is approving paragraphs a, b, d, and e of 326 IAC 7-4-15. EPA is also approving Commissioner's Order Number 2019-2, issued on July 31, 2019 and effective on August 18, 2019. Indiana did not request approval of 326 IAC 7-4-15(c), because these 30-day average limits have been superseded by the 30-day average limits in Commissioner's Order. As discussed in the supplemental NPRM, EPA is following Indiana's interpretation that compliance with the limits in the Commissioner's Order substitute for and supersede the limits in 326 IAC 7-4-15(c), and accordingly that the provisions of 326 IAC 7-4-15(d) describe how 30-day average emission rates are to be calculated to determine compliance with the limits in the Commissioner's Order, and that the provisions of 326 IAC 7-4-15(e) set the terms under which IP&L may elect to switch whether they must meet the 1-hour emission limits in 326 IAC 7-4-15(a) or the 30-day average limits in the Commissioner's Order.

IV. Incorporation by Reference

In this rule, EPA is finalizing regulatory text that includes incorporation by reference. In accordance with requirements of 1 CFR 51.5, EPA is finalizing the incorporation by reference of an Indiana regulation described in the amendments to 40 CFR part 52 set forth below. EPA has made, and will continue to make, these documents generally available through www.regulations.gov, and at the EPA Region 5 Office (please contact the applicable person identified in the **FOR FURTHER INFORMATION CONTACT** section of this preamble for more information). Therefore, these materials have been approved by EPA for inclusion in the SIP, have been incorporated by reference by EPA into that plan, are fully federally enforceable under sections 110 and 113 of the Clean Air Act as of the effective date of the final rulemaking of EPA's approval, and will

⁶ To avoid any potential for confusion, EPA wishes to note that the compliance deadline for the limits in the commissioner's order is specified in the commissioner's order and not in 326 IAC 7-1.1-3.

be incorporated by reference in the next update to the SIP compilation.⁷

V. Statutory and Executive Order Reviews

Under the Clean Air Act, the Administrator is required to approve a SIP submission that complies with the provisions of the Clean Air Act and applicable Federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, EPA's role is to approve state choices, provided that they meet the criteria of the Clean Air Act. Accordingly, this action merely approves state law as meeting Federal requirements and does not impose additional requirements beyond those imposed by state law. For that reason, this action:

- Is not a significant regulatory action subject to review by the Office of Management and Budget under Executive Orders 12866 (58 FR 51735, October 4, 1993) and 13563 (76 FR 3821, January 21, 2011);
- Is not an Executive Order 13771 (82 FR 9339, February 2, 2017) regulatory action because SIP approvals are exempted under Executive Order 12866;
 - Does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
 - Is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);
 - Does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104-4);
 - Does not have federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
 - Is not an economically significant regulatory action based on health or safety risks subject to Executive Order 13045 (62 FR 19885, April 23, 1997);
 - Is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001);
 - Is not subject to requirements of Section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the Clean Air Act; and
 - Does not provide EPA with the discretionary authority to address, as appropriate, disproportionate human health or environmental effects, using practicable and legally permissible

⁷ 62 FR 27968 (May 22, 1997).

methods, under Executive Order 12898 (59 FR 7629, February 16, 1994).

In addition, the SIP is not approved to apply on any Indian reservation land or in any other area where EPA or an Indian tribe has demonstrated that a tribe has jurisdiction. In those areas of Indian country, the rule does not have tribal implications and will not impose substantial direct costs on tribal governments or preempt tribal law as specified by Executive Order 13175 (65 FR 67249, November 9, 2000).

The Congressional Review Act, 5 U.S.C. 801 *et seq.*, as added by the Small Business Regulatory Enforcement Fairness Act of 1996, generally provides that before a rule may take effect, the agency promulgating the rule must submit a rule report, which includes a copy of the rule, to each House of the Congress and to the Comptroller General of the United States. EPA will submit a report containing this action and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of the rule in the **Federal Register**. A major rule cannot take effect until 60 days after it is published in the **Federal Register**. This action is not a "major rule" as defined by 5 U.S.C. 804(2).

Under section 307(b)(1) of the Clean Air Act, petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit by October 16, 2020. Filing a petition for reconsideration by the Administrator of this final rule does not affect the finality of this action for the purposes of judicial review nor does it extend the time within which a petition for judicial review may be filed, and shall not postpone the effectiveness of such rule or action. This action may not be challenged later in proceedings to enforce its requirements. (See section 307(b)(2).)

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Incorporation by Reference, Reporting and recordkeeping requirements, Sulfur oxides.

Authority: 42 U.S.C. 7401 *et seq.*

Dated: July 16, 2020.

Kurt Thiede,

Regional Administrator, Region 5.

For the reasons stated in the preamble, the EPA amends 40 CFR part 52 as follows:

PART 52—APPROVAL AND PROMULGATION OF IMPLEMENTATION PLANS

■ 1. The authority citation for part 52 continues to read as follows:

Authority: 42 U.S.C. 7401 *et seq.*

■ 2. In § 52.770:

■ a. In paragraph (c) amend the table by adding an entry for “7–4–15” under

“Article 7. Sulfur Dioxide Rules,” “Rule 4. Emission Limitations and Requirements by County”;

■ b. In paragraph (d) amend the table by adding an entry at the end with a CO date of “7/31/2019” for “IP&L–Petersburg”; and

■ c. In paragraph (e) amend the table by adding an entry for “Southwest Indiana 2010 Sulfur Dioxide (SO₂) Attainment

Plan” after the entry for “Ozone (8-Hour, 1997): South Bend-Elkhart, IN (Elkhart and St. Joseph Counties)”.

The additions read as follows:

§ 52.770 Identification of plan.

DEPARTMENT OF COMMERCE**National Oceanic and Atmospheric Administration****50 CFR Parts 216 and 300**

[Docket No. 200728–0201]

RIN 0648–BJ23

International Fisheries; Pacific Tuna Fisheries; Fishing Restrictions for Silky Shark, Fish Aggregating Devices, and Observer Safety in the Eastern Pacific Ocean

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Final rule; date of effectiveness for collection-of-information requirements.

SUMMARY: NMFS announces approval by the Office of Management and Budget (OMB) of collection-of-information requirements contained in regulations published in a final rule on May 18, 2020. The final rule implements three resolutions adopted by the Members of the Inter-American Tropical Tuna Commission (IATTC) in 2018 and 2019: Resolution C–19–01 (*Amendment to Resolution C–18–05 on the Collection and Analyses of Data on Fish-Aggregating Devices*); Resolution C–19–05 (*Amendment to the Resolution C–16–06 Conservation Measures for Shark Species, with Special Emphasis on the Silky Shark (*Carcharhinus falciformis*), for the Years 2020 and 2021*); and Resolution C–18–07 (*Resolution on Improving Observer Safety at Sea: Emergency Action Plan*). The final rule also implements a resolution adopted by Parties to the Agreement on the International Dolphin Conservation Program (AIDCP): Resolution A–18–03 (*On Improving Observer Safety At Sea: Emergency Action Plan*). The intent of this final rule is to inform the public of the effectiveness of the collection-of-information requirements associated with silky shark reporting, fish aggregating device (FAD) reporting, and observer reporting included in the final rule.

DATES: This final rule is effective August 17, 2020. The amendments to §§ 216.24, 300.22(a)(3)(i), 300.24(ff), (gg), (hh), 300.27(f), and 300.29 published at 85 FR 29666 (May 18, 2020) are effective on August 17, 2020.

ADDRESSES: Copies of supporting documents are available via the Federal eRulemaking Portal: <http://www.regulations.gov>, docket NOAA–NMFS–2019–0149, or contact Rachael

Wadsworth, NMFS WCR SFD, 7600 Sand Point Way NE, Building 1, Seattle, WA 98115, or WCR.HMS@noaa.gov.

FOR FURTHER INFORMATION CONTACT: Rachael Wadsworth, NMFS at 562–980–4036.

SUPPLEMENTARY INFORMATION: NMFS implemented decisions of the IATTC and AIDCP in the eastern Pacific Ocean under the authority of the Tuna Conventions Act (16 U.S.C. 951 *et seq.*) and the Marine Mammal Protection Act (16 U.S.C. 1361 *et seq.*).

Background

NMFS issued a final rule to implement three IATTC Resolutions and one AIDCP Resolution on silky shark, data collection for FADs, and observer safety. The rule applies to U.S. commercial fishing vessels that fish for tuna or tuna-like species in the IATTC Convention Area. The IATTC Convention Area is defined as waters of the eastern Pacific Ocean within the area bounded by the west coast of the Americas and by 50° N latitude, 150° W longitude, and 50° S latitude.

The final rule was published in the **Federal Register** on May 18, 2020 (85 FR 29666), and associated regulations are found at 50 CFR parts 216 and 300. The requirements of that final rule related to the retention prohibition on silky shark caught on longline vessels became effective June 17, 2020, and the remaining amendments that included collection-of-information requirements were delayed. OMB approved the collection-of-information requirements for the remaining amendments contained in the final rule on June 12, 2020, under OMB Control Number 0648–0214 and 0648–0148. Accordingly, this final rule announces the approval and effective date of those remaining amendments related to FAD, silky shark, and observer safety collection-of-information requirements found in Subpart C of 50 CFR parts 216 and 300.

Classification*Administrative Procedure Act*

Pursuant to 5 U.S.C. 553(b)(B), there is good cause to waive prior notice and opportunity for public comment for this action because notice and comment would be unnecessary and contrary to the public interest. This action simply provides notice of OMB's approval of the reporting requirements at issue, which has already occurred, and renders those requirements effective. Thus, this action does not involve any further exercise of agency discretion by NMFS or OMB. Moreover, the public has had prior notice and the

opportunity to comment on the collection-of-information requirements. NMFS published the proposed rule in the **Federal Register** (85 FR 4250; January 24, 2020), with comments accepted until February 24, 2020. NMFS received one comment during the comment period. This comment was outside the scope of the action and is not relevant to this rule. The final rule was published on May 18, 2020 (85 FR 29666), and indicated that this final rule would be published announcing the effective date for the revised reporting requirements upon OMB approval.

There is good cause under 5 U.S.C. 553(d)(3) to waive the 30-day delay in effective date for the collection-of-information requirements. This final rule relieves some of the reporting requirements for captains of purse seine vessels, allows NMFS to collect data related to silky shark regulations, and implements reporting requirements intended to improve observer safety at sea. In addition, the final rule is necessary for the United States to satisfy its obligations as a member of the IATTC and Party to the AIDCP. Accordingly, waiver of the 30-day delay in effective date is necessary to improve compliance with the requirements of the IATTC and AIDCP, the failure of which would be contrary to the public interest.

Executive Order 12866

This final rule has been determined to be not significant for purposes of Executive Order 12866.

Paperwork Reduction Act

This final rule contains collection of-information requirements subject to the Paperwork Reduction Act (PRA) and which OMB approved under OMB Control Number 0648–0214 and 0648–0148 on June 12, 2020.

Specifically, captains of U.S. purse seine vessels are only required to collect FAD data (OMB Control No. 0648–0148) when an observer is not onboard, and captains are still required to provide the observer with the FAD identification number. The public reporting burden for these requirements is estimated to average 1 minute per form. The requirement to report silky shark surrendered or donated is also estimated to average 1 minute per form, and the reporting related to observer safety on purse seine vessels is estimated to average 5 minutes per reporting incident. Public reporting burden for amendments to the supporting

statement for the Pacific Islands Region Logbook Family of Forms (OMB Control No. 0648–0214) for reporting related to observer safety on longline vessels is estimated to average 5 minutes per reporting incident. These estimates include time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information.

Notwithstanding any other provision of the law, no person is required to respond to, and no person shall be subject to penalty for failure to comply with, a collection-of-information subject to the requirements of the PRA, unless that collection-of-information displays a currently valid OMB control number.

Authority: 16 U.S.C. 1361 *et seq.* and 16 U.S.C. 951 *et seq.*

Dated: July 28, 2020.

Samuel D. Rauch III,

Deputy Assistant Administrator for Regulatory Programs, National Marine Fisheries Service.

[FR Doc. 2020–16730 Filed 8–14–20; 8:45 am]

BILLING CODE 3510–22–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

50 CFR Part 679

[Docket No. 200227–0066; RTID 0648–XA383]

Fisheries of the Exclusive Economic Zone Off Alaska; Reallocation of Pacific Cod in the Bering Sea and Aleutian Islands Management Area

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Temporary rule; reallocation.

SUMMARY: NMFS is reallocating the projected unused amount of Pacific cod from vessels using jig gear and catcher vessels greater than or equal to 60 feet (18.3 meters (m)) length overall (LOA) using hook-and-line gear to catcher vessels less than 60 feet (18.3 m) length overall using hook-and-line or pot gear in the Bering Sea and Aleutian Islands (BSAI) management area. This action is necessary to allow the 2020 total allowable catch (TAC) of Pacific cod to be harvested.

DATES: Effective August 14, 2020, through 2400 hours, Alaska local time (A.l.t.), December 31, 2020.

FOR FURTHER INFORMATION CONTACT: Krista Milani, 907–581–2062.

SUPPLEMENTARY INFORMATION: NMFS manages the groundfish fishery in the BSAI according to the Fishery Management Plan for Groundfish of the Bering Sea and Aleutian Islands Management Area (FMP) prepared by the North Pacific Fishery Management Council under authority of the Magnuson-Stevens Fishery Conservation and Management Act. Regulations governing fishing by U.S. vessels in accordance with the FMP appear at subpart H of 50 CFR part 600 and 50 CFR part 679.

The 2020 Pacific cod TAC specified for vessels using jig gear in the BSAI is 1,278 metric tons (mt) as established by the final 2020 and 2021 harvest specifications for groundfish in the BSAI (85 FR 13553, March 9, 2020) and reallocation (85 FR 4601, January 27, 2020).

The 2020 Pacific cod TAC specified for catcher vessels greater than or equal to 60 feet (18.3 m) LOA using hook-and-line gear in the BSAI is 277 mt as established by the final 2020 and 2021 harvest specifications for groundfish in the BSAI (85 FR 13553, March 9, 2020).

The 2020 Pacific cod TAC allocated to catcher vessels less than 60 feet (18.3 m) LOA using hook-and-line or pot gear in the BSAI is 3,433 mt as established by final 2020 and 2021 harvest specifications for groundfish in the BSAI (85 FR 13553, March 9, 2020) and reallocation (85 FR 4601, January 27, 2020).

The Administrator, Alaska Region, NMFS, (Regional Administrator) has determined that jig vessels will not be able to harvest 1,100 mt of the 2020 Pacific cod TAC allocated to those vessels under § 679.20(a)(7)(ii)(A)(1) and catcher vessels greater than or equal to 60 feet (18.3 m) LOA using hook-and-line gear will not be able to harvest 274 mt of the 2020 Pacific cod TAC allocated to those vessels under § 679.20(a)(7)(ii)(A)(3).

Therefore, in accordance with § 679.20(a)(7)(iv)(C), NMFS apportions 1,100 mt of Pacific cod from the jig gear apportionment to the annual amount specified for catcher vessels less than 60 feet (18.3 m) LOA using hook-and-line or pot gear. Also, in accordance with § 679.20(a)(7)(iii)(A), NMFS reallocates 274 mt from the catcher vessels greater than or equal to 60 feet (18.3 m) LOA using hook-and-line gear apportionment to the annual amount specified for catcher vessels less than 60 feet (18.3 m) LOA using hook-and-line or pot gear.

The harvest specifications for 2020 Pacific cod included in final 2020 and 2021 harvest specifications for groundfish in the BSAI (85 FR 13553, March 9, 2020) and reallocation (85 FR

4601, January 27, 2020) are revised as follows: 178 mt to vessels using jig gear, 3 mt to catcher vessels greater than or equal to 60 feet (18.3 m) LOA using hook-and-line gear, and 4,807 mt to catcher vessels less than 60 feet (18.3 m) LOA using hook-and-line or pot gear.

Classification

NMFS issues this action pursuant to section 305(d) of the Magnuson-Stevens Act. This action is required by 50 CFR part 679, which was issued pursuant to section 304(b), and is exempt from review under Executive Order 12866.

Pursuant to 5 U.S.C. 553(b)(B), there is good cause to waive prior notice and an opportunity for public comment on this action, as notice and comment would be impracticable and contrary to the public interest. This requirement is impracticable and contrary to the public interest as it would prevent NMFS from responding to the most recent fisheries data in a timely fashion and would allow for harvests that exceed the originally specified apportionment of the Pacific cod TAC.

NMFS was unable to publish a notice providing time for public comment because the most recent, relevant data only became available as of August 7, 2020.

Authority: 16 U.S.C. 1801 *et seq.*

Dated: August 12, 2020.

Kelly Denit,

Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

National Oceanic and Atmospheric Administration

50 CFR Part 679

[Docket No. 200227–0066; RTID 0648–XA385]

Fisheries of the Exclusive Economic Zone Off Alaska; Several Groundfish Species in the Bering Sea and Aleutian Islands Management Area

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Temporary rule; apportionment of reserves; request for comments.

SUMMARY: NMFS apportions amounts of the non-specified reserve to the initial total allowable catch (ITAC) of Aleutian Islands (AI) Greenland turbot, AI trawl sablefish, Bering Sea (BS) trawl

sablefish, Bering Sea and Eastern Aleutian Islands (BS/EAI) blackspotted/rougheye rockfish, Bering Sea and Aleutian Islands (BSAI) Alaska plaice, BSAI Kamchatka flounder, BSAI octopuses, and BSAI "other flatfish". This action is necessary to allow the fisheries to continue operating. It is intended to promote the goals and objectives of the fishery management plan for the BSAI management area.

DATES: Effective August 14, 2020, through 2400 hrs, Alaska local time, December 31, 2020. Comments must be received at the following address no later than 4:30 p.m., Alaska local time, August 31, 2020.

ADDRESSES: Submit your comments, identified by docket number NOAA-NMFS-2019-0074, by either of the following methods:

- **Electronic Submission:** Submit all electronic public comments via the Federal e-Rulemaking Portal. Go to <https://www.regulations.gov/docket?D=NOAA-NMFS-2019-0074> click the "Comment Now!" icon, complete the required fields, and enter or attach your comments.

- **Mail:** Submit written comments to Glenn Merrill, Assistant Regional Administrator, Sustainable Fisheries Division, Alaska Region NMFS. Mail comments to P.O. Box 21668, Juneau, AK 99802-1668.

Instructions: NMFS may not consider comments if they are sent by any other method, to any other address or individual, or received after the comment period ends. All comments received are a part of the public record and NMFS will post the comments for public viewing on www.regulations.gov without change. All personal identifying information (e.g., name, address, etc.), confidential business information, or otherwise sensitive information submitted voluntarily by the sender is publicly accessible. NMFS will accept anonymous comments (enter "N/A" in the required fields if you wish to remain anonymous).

FOR FURTHER INFORMATION CONTACT: Steve Whitney, 907-586-7228.

SUPPLEMENTARY INFORMATION: NMFS manages the groundfish fishery in the BSAI exclusive economic zone according to the Fishery Management

Plan for Groundfish of the BSAI Management Area (FMP) prepared by the North Pacific Fishery Management Council under authority of the Magnuson-Stevens Fishery Conservation and Management Act. Regulations governing fishing by U.S. vessels in accordance with the FMP appear at subpart H of 50 CFR part 600 and 50 CFR part 679.

The 2020 ITAC of AI Greenland turbot was established as 149 metric tons (mt), the 2020 ITAC of AI trawl sablefish was established as 433 mt, the 2020 ITAC of BS trawl sablefish was established as 791 mt, the 2020 ITAC of BS/EAI blackspotted/rougheye rockfish was established as 72 mt, the 2020 ITAC of BSAI Alaska plaice was established as 14,450 mt, the 2020 ITAC of BSAI Kamchatka flounder was established as 5,780 mt, the 2020 ITAC of BSAI octopuses was established as 234, and the 2020 ITAC of BSAI "other flatfish" was established as 3,400 mt by the final 2020 and 2021 harvest specifications for groundfish of the BSAI (85 FR 13553, March 9, 2020). In accordance with § 679.20(a)(3) the Regional Administrator, Alaska Region, NMFS, has reviewed the most current available data and finds that the ITACs for AI Greenland turbot, AI trawl sablefish, BS trawl sablefish, BS/EAI blackspotted/rougheye rockfish, BSAI Alaska plaice, BSAI Kamchatka flounder, BSAI octopuses, and BSAI "other flatfish" need to be supplemented from the non-specified reserve to promote efficiency in the utilization of fishery resources in the BSAI and allow fishing operations to continue.

Therefore, in accordance with § 679.20(b)(3), NMFS apportions from the non-specified reserve of groundfish to ITACs in the BSAI management area as follows: 550 mt to AI Greenland turbot, 38 mt to AI trawl sablefish, 70 mt to BS trawl sablefish, 40 mt to BS/EAI blackspotted/rougheye rockfish, 3,000 mt to BSAI Alaska plaice, 800 mt to BSAI Kamchatka flounder, 450 mt to BSAI octopuses, and 200 mt to BSAI "other flatfish." These apportionments are consistent with § 679.20(b)(1)(i) and do not result in overfishing of any target species because the revised ITACs and total allowable catches (TACs) are equal

to or less than the specifications of the acceptable biological catch in the final 2020 and 2021 harvest specifications for groundfish in the BSAI (85 FR 13553, March 9, 2020).

The harvest specification for the 2020 ITACs and TACs included in the harvest specifications for groundfish in the BSAI are revised as follows: 699 mt for AI Greenland turbot, 471 mt for AI trawl sablefish, 861 mt for BS trawl sablefish, 112 mt for BS/EAI blackspotted/rougheye rockfish, 17,450 mt for BSAI Alaska plaice, 6,580 mt for BSAI Kamchatka flounder, 684 mt for BSAI octopuses, and 3,600 mt for BSAI "other flatfish."

Classification

NMFS issues this action pursuant to section 305(d) of the Magnuson-Stevens Act. This action is required by 50 CFR part 679, which was issued pursuant to section 304(b), and is exempt from review under Executive Order 12866.

Pursuant to 5 U.S.C. 553(b)(B), there is good cause to waive prior notice and an opportunity for public comment on this action, as notice and comment would be impracticable and contrary to the public interest, as it would prevent NMFS from responding to the most recent fisheries data in a timely fashion and would delay the apportionment of the non-specified reserves of groundfish to the AI Greenland turbot, AI trawl sablefish, BS trawl sablefish, BS/EAI blackspotted/rougheye rockfish, BSAI Alaska plaice, BSAI Kamchatka flounder, BSAI octopuses, and BSAI "other flatfish". NMFS was unable to publish a notice providing time for public comment because the most recent, relevant data only became available as of August 7, 2020.

Under § 679.20(b)(3)(iii), interested persons are invited to submit written comments on this action (see **ADDRESSES**) until August 31, 2020.

Authority: 16 U.S.C. 1801 *et seq.*

Dated: August 12, 2020.

Kelly Denit,

*Director, Office of Sustainable Fisheries,
National Marine Fisheries Service.*

BILLING CODE 3510-22-P

Proposed Rules

Federal Register

Vol. 85, No. 159

Monday, August 17, 2020

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. FAA-2020-0689; Product Identifier 2020-NM-060-AD]

RIN 2120-AA64

Airworthiness Directives; The Boeing Company Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: The FAA proposes to supersede Airworthiness Directive (AD) 2013-18-08, which applies to certain The Boeing Company Model 737-200, -200C, -300, -400, and -500 series airplanes. AD 2013-18-08 requires repetitive inspections for cracking of certain upper and lower skin panels of the fuselage, and of the fuselage skin along certain chem-milled lines, and corrective actions if necessary. AD 2013-18-08 also includes a terminating action for the repetitive inspections of certain modified or repaired areas only. Since the FAA issued AD 2013-18-08, there have been reports of additional cracking in certain horizontal and vertical chem-milled step locations outside of those identified in AD 2013-18-08. This proposed AD would continue to require repetitive inspections for cracking of the fuselage skin along certain chem-milled lines and applicable on-condition actions, and would expand the inspection area. This AD would continue to provide terminating action for repetitive inspections of certain modified or repaired areas. This proposed AD would also add airplanes to the applicability. The FAA is proposing this AD to address the unsafe condition on these products.

DATES: The FAA must receive comments on this proposed AD by October 1, 2020.

ADDRESSES: You may send comments, using the procedures found in 14 CFR

11.43 and 11.45, by any of the following methods:

- **Federal eRulemaking Portal:** Go to <https://www.regulations.gov>. Follow the instructions for submitting comments.

- **Fax:** 202-493-2251.

- **Mail:** U.S. Department of Transportation, Docket Operations, M-30, West Building Ground Floor, Room W12-140, 1200 New Jersey Avenue SE, Washington, DC 20590.

- **Hand Delivery:** Deliver to Mail address above between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

For service information identified in this NPRM, contact Boeing Commercial Airplanes, Attention: Contractual & Data Services (C&DS), 2600 Westminister Blvd., MC 110-SK57, Seal Beach, CA 90740-5600; telephone 562-797-1717; internet <https://www.myboeingfleet.com>. You may view this service information at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206-231-3195. It is also available on the internet at <https://www.regulations.gov> by searching for and locating Docket No. FAA-2020-0689.

Examining the AD Docket

You may examine the AD docket on the internet at <https://www.regulations.gov> by searching for and locating Docket No. FAA-2020-0689; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this NPRM, any comments received, and other information. The street address for Docket Operations is listed above. Comments will be available in the AD docket shortly after receipt.

FOR FURTHER INFORMATION CONTACT:

James Guo, Aerospace Engineer, Airframe Section, FAA, Los Angeles ACO Branch, 3960 Paramount Boulevard, Lakewood, CA 90712-4137; phone: 562-627-5357; fax: 562-627-5210; email: james.guo@faa.gov.

SUPPLEMENTARY INFORMATION:

Comments Invited

The FAA invites you to send any written relevant data, views, or arguments about this proposal. Send your comments to an address listed

under the **ADDRESSES** section. Include “Docket No. FAA-2020-0689; Product Identifier 2020-NM-060-AD” at the beginning of your comments. The most helpful comments reference a specific portion of the proposal, explain the reason for any recommended change, and include supporting data. The FAA will consider all comments received by the closing date and may amend this NPRM because of those comments.

Except for Confidential Business Information (CBI) as described in the following paragraph, and other information as described in 14 CFR 11.35, the FAA will post all comments received, without change, to <https://www.regulations.gov>, including any personal information you provide. The FAA will also post a report summarizing each substantive verbal contact received about this proposed AD.

Confidential Business Information

Confidential Business Information (CBI) is commercial or financial information that is both customarily and actually treated as private by its owner. Under the Freedom of Information Act (FOIA) (5 U.S.C. 552), CBI is exempt from public disclosure. If your comments responsive to this NPRM contain commercial or financial information that is customarily treated as private, that you actually treat as private, and that is relevant or responsive to this NPRM, it is important that you clearly designate the submitted comments as CBI. Please mark each page of your submission containing CBI as “PROPIN.” The FAA will treat such marked submissions as confidential under the FOIA, and they will not be placed in the public docket of this NPRM. Submissions containing CBI should be sent to the person identified in the **FOR FURTHER INFORMATION CONTACT** section. Any commentary that the FAA receives which is not specifically designated as CBI will be placed in the public docket for this rulemaking.

Discussion

Fatigue damage can occur locally, in small areas or structural design details, or globally, in widespread areas. Multiple-site damage is widespread damage that occurs in a large structural element such as a single rivet line of a lap splice joining two large skin panels. Widespread damage can also occur in

multiple elements such as adjacent frames or stringers. Multiple-site damage and multiple-element damage cracks are typically too small initially to be reliably detected with normal inspection methods. Without intervention, these cracks will grow, and eventually compromise the structural integrity of the airplane. This condition is known as widespread fatigue damage (WFD). It is associated with general degradation of large areas of structure with similar structural details and stress levels. As an airplane ages, WFD will likely occur, and will certainly occur if the airplane is operated long enough without any intervention.

The FAA's WFD final rule (75 FR 69746, November 15, 2010) became effective on January 14, 2011. The WFD rule requires certain actions to prevent structural failure due to WFD throughout the operational life of certain existing transport category airplanes and all of these airplanes that will be certificated in the future. For existing and future airplanes subject to the WFD rule, the rule requires that DAHs establish a limit of validity (LOV) of the engineering data that support the structural maintenance program. Operators affected by the WFD rule may not fly an airplane beyond its LOV, unless an extended LOV is approved.

The WFD rule (75 FR 69746, November 15, 2010) does not require identifying and developing maintenance actions if the DAHs can show that such actions are not necessary to prevent WFD before the airplane reaches the LOV. Many LOVs, however, do depend on accomplishment of future maintenance actions. As stated in the WFD rule, any maintenance actions necessary to reach the LOV will be mandated by ADs through separate rulemaking actions.

In the context of WFD, this action is necessary to enable DAHs to propose LOVs that allow operators the longest operational lives for their airplanes, and still ensure that WFD will not occur. This approach allows for an implementation strategy that provides flexibility to DAHs in determining the timing of service information development (with FAA approval),

while providing operators with certainty regarding the LOV applicable to their airplanes.

The FAA issued AD 2013-18-08, Amendment 39-17581 (78 FR 60660, October 2, 2013) ("AD 2013-18-08"), for certain The Boeing Company Model 737-200, -200C, -300, -400, and -500 series airplanes. AD 2013-18-08 requires repetitive inspections for cracking of certain upper and lower skin panels of the fuselage, and of the fuselage skin along certain chem-milled lines, and corrective actions if necessary. AD 2013-18-08 also includes a terminating action for the repetitive inspections of certain modified or repaired areas only. The FAA issued AD 2013-18-08 to address fatigue cracking of the skin panels, which could result in sudden fracture and failure of the skin panels of the fuselage, and consequent rapid decompression of the airplane.

Actions Since AD 2013-18-08 Was Issued

Since the FAA issued AD 2013-18-08, there have been reports of additional cracking in the horizontal and vertical chem-milled step locations outside of those identified in AD 2013-18-08. The cracking was caused by fatigue from hoop stress and higher than expected bending stresses across the chem-milled steps. The FAA has determined that the repetitive inspections must be expanded to include these areas and that additional airplanes are subject to the unsafe condition.

Related Service Information Under 1 CFR Part 51

The FAA reviewed Boeing Alert Service Bulletin 737-53A1346, dated March 27, 2020. This service information describes procedures for repetitive detailed and non-destructive tests (NDTs) (including external medium frequency eddy current (MFEC), external magneto optical imaging (MOI), external c-scan, external sliding probe, external high frequency eddy current (HFEC), external low frequency eddy current (LFEC), internal ultrasonic phased array (UTPA), or internal ultrasonic); inspections for cracking of the fuselage skin along all horizontal and vertical chem-milled

locations with a history of cracking between stations (STAs) 259.5 and 1016; and applicable on-condition actions. On-condition actions include repair; LFEC inspections of certain repairs for cracking; detailed inspections of certain repairs for cracking and loose, missing, or damaged fasteners; replacement of loose, missing, or damaged fasteners; and preventative modifications. This service information is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the ADDRESSES section.

FAA's Determination

The FAA is proposing this AD because the agency evaluated all the relevant information and determined the unsafe condition described previously is likely to exist or develop in other products of the same type design.

Proposed AD Requirements

Although this proposed AD does not explicitly restate the requirements of AD 2013-18-08, this proposed AD would retain certain requirements of AD 2013-18-08. Those requirements are referenced in the service information identified previously, which, in turn, is referenced in paragraph (g) of this proposed AD. This proposed AD would expand the area for the existing inspections for cracking of the fuselage skin along all horizontal and vertical chem-milled locations and add airplanes to the applicability. This proposed AD would also require accomplishment of the actions identified as "RC" (required for compliance) in the Accomplishment Instructions of Boeing Alert Service Bulletin 737-53A1346, dated March 27, 2020, described previously. For information on the procedures, see this service information at <https://www.regulations.gov> by searching for and locating Docket No. FAA-2020-0689.

Costs of Compliance

The FAA estimates that this proposed AD affects 141 airplanes of U.S. registry. The FAA estimates the following costs to comply with this proposed AD:

ESTIMATED COSTS FOR REQUIRED ACTIONS

Action	Labor cost	Parts cost	Cost per product
Inspections	Up to 165 work-hours × \$85 per hour = \$14,025 per inspection cycle.	\$0	Up to \$1,977,525 per inspection cycle.

The FAA estimates the following costs to do any necessary corrective actions that would be required based on

the results of the proposed inspections. The FAA has no way of determining the

number of aircraft that might need these corrective actions:

ESTIMATED COSTS OF ON-CONDITION ACTIONS

Labor cost	Parts cost	Cost per product
Up to 185 work-hours × \$85 per hour = \$15,725	\$ *	Up to \$15,725.

* The FAA has received no definitive data that would enable providing parts costs for the on-condition actions specified in this proposed AD.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA’s authority to issue rules on aviation safety. Subtitle I, Section 106, describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the Agency’s authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701, “General requirements.” Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

The FAA has determined that this proposed AD would not have federalism implications under Executive Order 13132. This proposed AD would not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify that the proposed regulation:

- (1) Is not a “significant regulatory action” under Executive Order 12866,
- (2) Will not affect intrastate aviation in Alaska, and
- (3) Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Proposed Amendment

Accordingly, under the authority delegated to me by the Administrator,

the FAA proposes to amend 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by removing Airworthiness Directive (AD) 2013–18–08, Amendment 39–17581 (78 FR 60660, October 2, 2013), and adding the following new AD:

The Boeing Company: Docket No. FAA–2020–0689; Product Identifier 2020–NM–060–AD.

(a) Comments Due Date

The FAA must receive comments on this AD action by October 1, 2020.

(b) Affected ADs

This AD replaces AD 2013–18–08, Amendment 39–17581 (78 FR 60660, October 2, 2013) (“AD 2013–18–08”).

(c) Applicability

This AD applies to The Boeing Company Model 737–100, –200, –200C, –300, –400, and –500 series airplanes, certificated in any category, as identified in Boeing Alert Service Bulletin 737–53A1346, dated March 27, 2020.

(d) Subject

Air Transport Association (ATA) of America Code 53, Fuselage.

(e) Unsafe Condition

This AD was prompted by reports of additional cracking in the horizontal and vertical chem-milled step locations outside of those identified in AD 2013–18–08. The FAA is issuing this AD to address fatigue cracking of the skin panels, which could result in sudden fracture and failure of the skin panels of the fuselage, and consequent rapid decompression of the airplane.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Required Actions for Group 1 Through 25 Airplanes

For airplanes identified as Group 1 through 25 in Boeing Alert Service Bulletin 737–53A1346, dated March 27, 2020, except as

specified in paragraph (h) of this AD: At the applicable times specified in paragraph 1.E., “Compliance,” of Boeing Alert Service Bulletin 737–53A1346, dated March 27, 2020, do all applicable actions identified as “RC” (required for compliance) in, and in accordance with, the Accomplishment Instructions of Boeing Alert Service Bulletin 737–53A1346, dated March 27, 2020. Actions identified as terminating action in Boeing Alert Service Bulletin 737–53A1346, dated March 27, 2020, terminate the applicable required actions of this AD, provided the terminating action is done in accordance with the Accomplishment Instructions of Boeing Alert Service Bulletin 737–53A1346, dated March 27, 2020.

(h) Exceptions to Service Information Specifications

(1) Where Boeing Alert Service Bulletin 737–53A1346, dated March 27, 2020, uses the phrase “the original issue date of this service bulletin,” this AD requires using “the effective date of this AD.”

(2) Where Boeing Alert Service Bulletin 737–53A1346, dated March 27, 2020, specifies contacting Boeing for repair instructions, this AD requires doing the repair before further flight using a method approved in accordance with the procedures specified in paragraph (j) of this AD.

(i) Required Actions for Group 26 Airplanes

For airplanes identified as Group 26 in Alert Service Bulletin 737–53A1346, dated March 27, 2020: Within 120 days after the effective date of this AD, inspect the fuselage skin along certain chem-milled lines for cracks, using a method approved in accordance with the procedures specified in paragraph (j) of this AD.

(j) Alternative Methods of Compliance (AMOCs)

(1) The Manager, Los Angeles ACO Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the manager of the certification office, send it to the attention of the person identified in paragraph (k)(1) of this AD. Information may be emailed to: 9-ANM-LAACO-AMOC-Requests@faa.gov.

(2) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/ certificate holding district office.

(3) An AMOC that provides an acceptable level of safety may be used for any repair,

modification, or alteration required by this AD if it is approved by The Boeing Company Organization Designation Authorization (ODA) that has been authorized by the Manager, Los Angeles ACO Branch, FAA, to make those findings. To be approved, the repair method, modification deviation, or alteration deviation must meet the certification basis of the airplane, and the approval must specifically refer to this AD.

(4) AMOCs approved previously for AD 2013-18-08 are approved as AMOCs for the corresponding provisions of Boeing Alert Service Bulletin 737-53A1346, dated March 27, 2020, that are required by paragraph (g) of this AD.

(5) For service information that contains steps that are labeled as Required for Compliance (RC), the provisions of paragraphs (j)(5)(i) and (ii) of this AD apply.

(i) The steps labeled as RC, including substeps under an RC step and any figures identified in an RC step, must be done to comply with the AD. If a step or substep is labeled "RC Exempt," then the RC requirement is removed from that step or substep. An AMOC is required for any deviations to RC steps, including substeps and identified figures.

(ii) Steps not labeled as RC may be deviated from using accepted methods in accordance with the operator's maintenance or inspection program without obtaining approval of an AMOC, provided the RC steps, including substeps and identified figures, can still be done as specified, and the airplane can be put back in an airworthy condition.

(k) Related Information

(1) For more information about this AD, contact James Guo, Aerospace Engineer, Airframe Section, FAA, Los Angeles ACO Branch, 3960 Paramount Boulevard, Lakewood, CA 90712-4137; phone: 562-627-5357; fax: 562-627-5210; email: james.guo@faa.gov.

(2) For service information identified in this AD, contact Boeing Commercial Airplanes, Attention: Contractual & Data Services (C&DS), 2600 Westminister Blvd., MC 110-SK57, Seal Beach, CA 90740-5600; telephone 562-797-1717; internet <https://www.myboeingfleet.com>. You may view this referenced service information at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206-231-3195.

Issued on August 6, 2020.

Lance T. Gant,

Director, Compliance & Airworthiness Division, Aircraft Certification Service.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. FAA-2020-0692; Project Identifier MCAI-2019-00140-E]

RIN 2120-AA64

Airworthiness Directives; Pratt & Whitney Canada Corp. Turboprop Engines

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: The FAA proposes to adopt a new airworthiness directive (AD) for all Pratt & Whitney Canada Corp. PT6A-34, -34B, -34AG, -114, and -114A model turboprop engines. This proposed AD was prompted by several reports of low-time fractures of compressor turbine (CT) blades resulting in loss of power or in-flight shutdown of the engine. This proposed AD would require replacement of certain CT vanes. This proposed AD would also require removal from service of certain CT blades when these blades have been operated with certain CT vanes. The FAA is proposing this AD to address the unsafe condition on these products.

DATES: The FAA must receive comments on this proposed AD by October 1, 2020.

ADDRESSES: You may send comments, using the procedures found in 14 CFR 11.43 and 11.45, by any of the following methods:

- *Federal eRulemaking Portal:* Go to <https://www.regulations.gov>. Follow the instructions for submitting comments.

- *Fax:* 202-493-2251.

- *Mail:* U.S. Department of Transportation, Docket Operations, M-30, West Building Ground Floor, Room W12 140, 1200 New Jersey Avenue SE, Washington, DC 20590.

- *Hand Delivery:* Deliver to Mail address above between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

Examining the AD Docket

You may examine the AD docket on the internet at <https://www.regulations.gov> by searching for and locating Docket No. FAA-2020-0692; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this NPRM, the mandatory continuing airworthiness information (MCAI), any comments received, and other information. The street address for Docket Operations is

listed above. Comments will be available in the AD docket shortly after receipt.

FOR FURTHER INFORMATION CONTACT:

Barbara Caufield, Aerospace Engineer, ECO Branch, FAA, 1200 District Avenue, Burlington, MA 01803; phone: 781-238-7146; fax: 781-238-7199; email: barbara.caufield@faa.gov.

SUPPLEMENTARY INFORMATION:

Comments Invited

The FAA invites you to send any written relevant data, views, or arguments about this proposal. Send your comments to an address listed under the **ADDRESSES** section. Include "Docket No. FAA-2020-0692; Project Identifier MCAI-2019-00140-E" at the beginning of your comments. The most helpful comments reference a specific portion of the proposal, explain the reason for any recommended change, and include supporting data. The FAA will consider all comments received by the closing date and may amend this NPRM because of those comments.

Except for Confidential Business Information (CBI) as described in the following paragraph, and other information as described in 14 CFR 11.35, the FAA will post all comments received, without change, to <https://www.regulations.gov>, including any personal information you provide. The agency will also post a report summarizing each substantive verbal contact we received about this proposal.

Confidential Business Information

Confidential Business Information (CBI) is commercial or financial information that is both customarily and actually treated as private by its owner. Under the Freedom of Information Act (FOIA) (5 U.S.C. 552), CBI is exempt from public disclosure. If your comments responsive to this NPRM contain commercial or financial information that is customarily treated as private, that you actually treat as private, and that is relevant or responsive to this NPRM, it is important that you clearly designate the submitted comments as CBI. Please mark each page of your submission containing CBI as "PROPIN." The FAA will treat such marked submissions as confidential under the FOIA, and they will not be placed in the public docket of this NPRM. Submissions containing CBI should be sent to Barbara Caufield, Aerospace Engineer, ECO Branch, FAA, 1200 District Avenue, Burlington, MA 01803. Any commentary that the FAA receives which is not specifically designated as CBI will be placed in the public docket for this rulemaking.

Background

Transport Canada, which is the aviation authority for Canada, has issued Canada AD CF 2019–30R1, dated December 17, 2019 (referred to after this as “the MCAI”), to address the unsafe condition on these products. The MCAI states:

There have been several reported events of low time CT blade fractures resulting in power loss/In-flight shutdown (IFSD) on post P&WC Service Bulletin (SB) 1669 configured PT6A–114 engines, featuring new CMSX–6 CT blades. In addition, relatively low time failures of Non-P&WC CT blades have also been reported on PT6A–34 and –114 series engines.

In service data shows that these low time failures were reported on engines that had CT vanes installed that were repaired in accordance with repair specification number STI 72–50–254 held by Southwest Turbine Inc. (STI). Most of the affected engines are installed on single-engine powered aeroplanes and some events have resulted in the loss of the aeroplane and fatalities.

Dimensional checks and operational testing of the subject STI repaired CT vane removed from an incident engine, revealed that it did not conform to the engine manufacturer’s CT vane type design criteria. The noted variations and features in the STI

repaired CT vane can cause airflow distortion and subsequent aerofoil excitation of the CT blades resulting in High Cycle Fatigue (HCF) failure of the CT blades. Test data indicates that the stress levels induced in CT blades by the adverse effect of subject airflow distortion exceeds the design requirements for CMSX–6 CT blades.

An IFSD or loss of power on a single-engine powered aeroplane under certain conditions can lead to an unsafe condition as seen in some past events. AD CF–2019–30 was issued on 19 August 2019 to address the potential hazard of power loss/IFSD as a result of CT blade failures on engines with CT vanes installed that were repaired in accordance with repair specification number STI 72–50–254.

This AD revision, CF–2019–30R1, is issued to update the background information and to clarify the affected P&WC CT blade Part Numbers (P/Ns).

You may obtain further information by examining the MCAI in the AD docket on the internet at <https://www.regulations.gov> by searching for and locating Docket No. FAA–2020–0692.

FAA’s Determination

This product has been approved by the aviation authority of Canada and is

approved for operation in the United States. Pursuant to our bilateral agreement with Canada, they have notified us of the unsafe condition described in the MCAI and service information referenced above. The FAA is issuing this NPRM because we evaluated all the relevant information provided by Transport Canada and determined the unsafe condition described previously is likely to exist or develop in other products of the same type design.

Proposed AD Requirements

This proposed AD would require replacement of certain CT vanes. This proposed AD would also require removal from service of certain CT blades when these blades have been operated with certain CT vanes.

Costs of Compliance

The FAA estimates that this proposed AD affects 907 engines installed on airplanes of U.S. registry. The FAA estimates that 63 engines will need to replace the CT vanes and CT blades.

The FAA estimates the following costs to comply with this proposed AD:

ESTIMATED COSTS

Action	Labor cost	Parts cost	Cost per product	Cost on U.S. operators
Remove and replace certain CT vanes	16 work-hours × \$85 per hour = \$1,360	\$115,789	\$117,149	\$7,380,387
Remove and replace CMSX–6 CT blade set	16 work-hours × \$85 per hour = \$1,360	90,271	91,631	5,772,753

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA’s authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency’s authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

The FAA determined that this proposed AD would not have federalism

implications under Executive Order 13132. This proposed AD would not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify this proposed regulation:

- (1) Is not a “significant regulatory action” under Executive Order 12866,
- (2) Will not affect intrastate aviation in Alaska, and
- (3) Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Proposed Amendment

Accordingly, under the authority delegated to me by the Administrator,

the FAA proposes to amend 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

- 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

- 2. The FAA amends § 39.13 by adding the following new airworthiness directive (AD):

Pratt & Whitney Canada Corp.: Docket No. FAA–2020–0692; Project Identifier MCAI–2019–00140–E.

(a) Comments Due Date

The FAA must receive comments by October 1, 2020.

(b) Affected ADs

None.

(c) Applicability

This AD applies to all Pratt & Whitney Canada Corp. PT6A–34, –34B, –34AG, –114, and –114A model turboprop engines.

(d) Subject

Joint Aircraft System Component (JASC) Code 7250, Turbine Section.

(e) Unsafe Condition

This AD was prompted by several reports of low-time fractures of compressor turbine (CT) blades resulting in loss of power or in-flight shutdown of the engine. The FAA is issuing this AD to prevent failure of the CT blade. The unsafe condition, if not addressed, could result in failure of the engine, in-flight shutdown, and loss of the airplane.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Required Actions

(1) Within 250 flight hours (FHs) or 270 days after the effective date of this AD, whichever occurs first:

(i) Remove from service any CT vane repaired in accordance with Southwest Turbine Inc. (STI) repair specification STI-72-50-254 and replace with a non-STI-repaired CT vane.

(ii) Remove from service any CMSX-6 CT blade that has been operated on an affected engine with a CT vane repaired in accordance with STI repair specification STI-72-50-254.

(2) [Reserved]

(h) Installation Prohibition

After the effective date of this AD, do not install on any engine a CT vane that was repaired in accordance with repair specification STI-72-50-254.

(i) Alternative Methods of Compliance (AMOCs)

(1) The Manager, ECO Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the manager of the ECO Branch, send it to the attention of the person identified in paragraph (j)(1) of this AD. You may email your request to: ANE-AD-AMOC@faa.gov.

(2) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/certificate holding district office.

(j) Related Information

(1) For more information about this AD, contact Barbara Caufield, Aerospace Engineer, ECO Branch, FAA, 1200 District Avenue, Burlington, MA 01803; phone: 781-238-7146; fax: 781-238-7199; email: barbara.caufield@faa.gov.

(2) Refer to Transport Canada AD CF 2019-30R1, dated December 17, 2019, for more information. You may examine the Transport Canada AD in the AD docket on the internet at <https://www.regulations.gov> by searching for and locating it in Docket No. FAA-2020-0692.

Issued on August 10, 2020.

Lance T. Gant,

Director, Compliance & Airworthiness Division, Aircraft Certification Service.

[Docket No. FAA-2020-0741; Airspace Docket No. 19-AWP-79]

RIN 2120-AA66

Proposed Amendment of Class D and E Airspace; Fallon, NV

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: This action proposes to modify Class E airspace at Fallon NAS (Voorhis Field) Airport, by revoking the Class E airspace designated as an extension to a Class D or Class E surface area. This action also proposes to modify the Class E airspace extending upward from 700 feet above the surface. Further, this action proposes to modify the Class E airspace extending upward from 1,200 feet above the surface. Lastly, this action proposes numerous administrative amendments to the airspaces' legal descriptions. This action would ensure the safety and management of instrument flight rules (IFR) operations at the airport.

DATES: Comments must be received on or before October 1, 2020.

ADDRESSES: Send comments on this proposal to the U.S. Department of Transportation, Docket Operations, 1200 New Jersey Avenue SE, West Building Ground Floor, Room W12-140, Washington, DC 20590; telephone: 1-800-647-5527, or (202) 366-9826. You must identify FAA Docket No. FAA-2020-0741; Airspace Docket No. 19-AWP-79, at the beginning of your comments. You may also submit comments through the internet at <https://www.regulations.gov>.

FAA Order 7400.11D, Airspace Designations and Reporting Points, and subsequent amendments can be viewed online at https://www.faa.gov/air_traffic/publications/. For further information, you can contact the Airspace Policy Group, Federal Aviation Administration, 800 Independence Avenue SW, Washington, DC 20591; telephone: (202) 267-8783. The Order is also available for inspection at the

National Archives and Records Administration (NARA). For information on the availability of FAA Order 7400.11D at NARA, email fedreg.legal@nara.gov or go to <https://www.archives.gov/federal-register/cfr/ibr-locations.html>.

FOR FURTHER INFORMATION CONTACT: Matthew Van Der Wal, Federal Aviation Administration, Western Service Center, Operations Support Group, 2200 S 216th Street, Des Moines, WA 98198; telephone (206) 231-3695.

SUPPLEMENTARY INFORMATION:**Authority for This Rulemaking**

The FAA's authority to issue rules regarding aviation safety is found in Title 49 of the United States Code. Subtitle I, Section 106 describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the agency's authority. This rulemaking is promulgated under the authority described in Subtitle VII, Part A, Subpart I, Section 40103. Under that section, the FAA is charged with prescribing regulations to assign the use of airspace necessary to ensure the safety of aircraft and the efficient use of airspace. This regulation is within the scope of that authority, as it would amend the Class D and Class E airspace at Fallon NAS (Voorhis Field) Airport, Fallon, NV, to support IFR operations at the airport.

Comments Invited

Interested parties are invited to participate in this proposed rulemaking by submitting such written data, views, or arguments, as they may desire. Comments that provide the factual basis supporting the views and suggestions presented are particularly helpful in developing reasoned regulatory decisions on the proposal. Comments are specifically invited on the overall regulatory, aeronautical, economic, environmental, and energy-related aspects of the proposal. Communications should identify both docket numbers and be submitted in triplicate to the address listed above. Persons wishing the FAA to acknowledge receipt of their comments on this notice must submit with those comments a self-addressed, stamped postcard on which the following statement is made: "Comments to Docket No. FAA-2020-0741; Airspace Docket No. 19-AWP-79". The postcard will be date/time stamped and returned to the commenter.

All communications received before the specified closing date for comments will be considered before taking action

on the proposed rule. The proposal contained in this notice may be changed in light of the comments received. A report summarizing each substantive public contact with FAA personnel concerned with this rulemaking will be filed in the docket.

Availability of NPRMs

An electronic copy of this document may be downloaded through the internet at <https://www.regulations.gov>. Recently published rulemaking documents can also be accessed through the FAA's web page at https://www.faa.gov/air_traffic/publications/airspace_amendments/.

You may review the public docket containing the proposal, any comments received, and any final disposition in person in the Dockets Office (see the **ADDRESSES** section for the address and phone number) between 9:00 a.m. and 5:00 p.m., Monday through Friday, except federal holidays. An informal docket may also be examined during normal business hours at the Northwest Mountain Regional Office of the Federal Aviation Administration, Air Traffic Organization, Western Service Center, Operations Support Group, 2200 S 216th Street, Des Moines, WA 98198.

Availability and Summary of Documents for Incorporation by Reference

This document proposes to amend FAA Order 7400.11D, Airspace Designations and Reporting Points, dated August 8, 2019, and effective September 15, 2019. FAA Order 7400.11D is publicly available as listed in the **ADDRESSES** section of this document. FAA Order 7400.11D lists Class A, B, C, D, and E airspace areas, air traffic service routes, and reporting points.

The Proposal

The FAA is proposing an amendment to Title 14 Code of Federal Regulations (14 CFR) Part 71 by modifying Class E airspace designated as an extension to a Class D or Class E surface area. This airspace is not required and should be revoked.

This action also proposes to modify Class E airspace extending upward from 700 feet above the surface. This area is designed to contain IFR departures to 1,200 feet above the surface and IFR arrivals descending below 1,500 feet above the surface. This airspace area would be described as follows: That airspace extending upward from 700 feet above the surface within an 8-mile radius of the airport, and within 2.5 miles each side of the 143° bearing from the airport, extending from the 8-mile

radius to 11.5 miles southeast of the airport, and within 2.5 miles each side of the 270° bearing from the airport, extending from the 8-mile radius to 11.5 miles west of the airport, and within 2.5 miles each side of the 327° bearing from the airport, extending from the 8-mile radius to 11.5 miles northwest of Fallon NAS (Voorhis Field) Airport.

Further, this action proposes to modify Class E airspace extending upward from 1,200 feet above the surface. This area is designed to contain IFR aircraft transitioning to/from the terminal and en route environments. This airspace area would be described as follows: That airspace extending upward from 1,200 feet above the surface within a 30-mile radius of the Fallon NAS (Van Voorhis Field) Airport.

Lastly, this action proposes numerous administrative amendments to the airspaces' legal descriptions. To match the FAA database, the geographic coordinates in the Class D and Class E2 text headers for Fallon NAS (Voorhis Field) Airport and Fallon Municipal Airport should be updated. For Fallon NAS (Voorhis Field) Airport the coordinates should be lat. 39°25'04" N, long. 118°41'55" W. For Fallon Municipal Airport the coordinates should be lat. 39°29'57" N, long. 118°44'56" W. The last two sentences in the Class D and Class E surface area legal descriptions contain incorrect verbiage, the sentences should be updated to "This Class D (or E, as appropriate) airspace area is effective during the specific dates and times established, in advance, by a Notice to Airmen. The effective date and time will thereafter be continuously published in the Chart Supplement." For the Class E airspace areas extending upward from 700 feet or more above the surface, the Fallon Navy TACAN and Mustang VORTAC are not required to define these airspace areas. The TACAN, VORTAC, all radials, and distances from the navigational aids should be removed from the airspace descriptions.

Class D, E2, E4, and E5 airspace designations are published in paragraphs 5000, 6002, 6004, and 6005, respectively, of FAA Order 7400.11D, dated August 8, 2019, and effective September 15, 2019, which is incorporated by reference in 14 CFR 71.1. The Class E airspace designations listed in this document will be published subsequently in the Order.

FAA Order 7400.11, Airspace Designations and Reporting Points, is published yearly and effective on September 15.

Regulatory Notices and Analyses

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current, is non-controversial, and unlikely to result in adverse or negative comments. It, therefore: (1) Is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this rule, when promulgated, would not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

Environmental Review

This proposal will be subject to an environmental analysis in accordance with FAA Order 1050.1F, "Environmental Impacts: Policies and Procedures" prior to any FAA final regulatory action.

List of Subjects in 14 CFR Part 71

Airspace, Incorporation by reference, Navigation (air).

The Proposed Amendment

Accordingly, pursuant to the authority delegated to me, the Federal Aviation Administration proposes to amend 14 CFR part 71 as follows:

PART 71—DESIGNATION OF CLASS A, B, C, D, AND E AIRSPACE AREAS; AIR TRAFFIC SERVICE ROUTES; AND REPORTING POINTS

- 1. The authority citation for 14 CFR part 71 continues to read as follows:

Authority: 49 U.S.C. 106(f), 106(g), 40103, 40113, 40120; E.O. 10854, 24 FR 9565, 3 CFR, 1959–1963 Comp., p. 389.

§ 71.1 [Amended]

- 2. The incorporation by reference in 14 CFR 71.1 of FAA Order 7400.11D, Airspace Designations and Reporting Points, dated August 8, 2019, and effective September 15, 2019, is amended as follows:

Paragraph 5000 Class D Airspace.

* * * * *

AWP NV D Fallon, NV [Amended]

Fallon NAS (Van Voorhis Field) Airport, NV
(Lat. 39°25'04" N, long. 118°41'55" W)
Fallon Municipal Airport, NV

(Lat. 39°29'57" N, long. 118°44'56" W)

That airspace extending upward from the surface to and including 6,400 feet MSL within a 5.5-mile radius of Fallon NAS (Van Voorhis Field) Airport, excluding that airspace within a 1-mile radius of Fallon Municipal Airport. This Class D airspace area is effective during the specific dates and times established in advance by a Notice to Airmen. The effective date and time will thereafter be continuously published in the Chart Supplement.

Paragraph 6002 Class E Airspace Areas Designated as a Surface Area.

* * * * *

AWP NV E2 Fallon, NV [Amended]

Fallon NAS (Van Voorhis Field) Airport, NV
(Lat. 39°25'04" N, long. 118°41'55" W)
Fallon Municipal Airport, NV
(Lat. 39°29'57" N, long. 118°44'56" W)

That airspace extending upward from the surface within a 5.5-mile radius of Fallon NAS (Van Voorhis Field) Airport, excluding that airspace within a 1-mile radius of Fallon Municipal Airport. This Class E airspace area is effective during the specific dates and times established in advance by a Notice to Airmen. The effective date and time will thereafter be continuously published in the Chart Supplement.

Paragraph 6004 Class E Airspace Areas Designated as an Extension to a Class D or Class E Surface Area.

* * * * *

AWP NV E4 Fallon NAS, NV [Revoked]

Fallon NAS (Van Voorhis Field), NV
(Lat. 39°25'00" N, long. 118°42'04" W)
Fallon Navy TACAN
(Lat. 39°25'01" N, long. 118°42'18" W)

Paragraph 6005 Class E Airspace Areas Extending Upward From 700 Feet or More Above the Surface of the Earth.

* * * * *

AWP NV E5 Fallon, NV [Amended]

Fallon NAS (Van Voorhis Field) Airport, NV
(Lat. 39°25'04" N, long. 118°41'55" W)

That airspace extending upward from 700 feet above the surface within an 8-mile radius of the airport, and within 2.5 miles each side of the 143° bearing from the airport, extending from the 8-mile radius to 11.5 miles southeast of the airport, and within 2.5 miles each side of the 270° bearing from the airport, extending from the 8-mile radius to 11.5 miles west of the airport, and within 2.5 miles each side of the 327° bearing from the airport, extending from the 8-mile radius to 11.5 miles northwest of the airport; and that airspace extending upward from 1,200 feet above the surface within a 30-mile radius of the Fallon NAS (Van Voorhis Field) Airport.

Issued in Seattle, Washington, on August 11, 2020.

B.G. Chew,

Acting Group Manager, Operations Support Group, Western Service Center.

SUPPLEMENTARY INFORMATION:

Authority for This Rulemaking

The FAA's authority to issue rules regarding aviation safety is found in

Title 49 of the United States Code, Subtitle I, Section 106 describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the agency's authority. This rulemaking is promulgated under the authority described in Subtitle VII, Part A, Subpart I, Section 40103. Under that section, the FAA is charged with prescribing regulations to assign the use of airspace necessary to ensure the safety of aircraft and the efficient use of airspace. This regulation is within the scope of that authority, as it would establish Class E airspace at Benton Field Airport, Redding, CA, to support instrument flight rules (IFR) operations at the airport.

Comments Invited

Interested parties are invited to participate in this proposed rulemaking by submitting such written data, views, or arguments, as they may desire. Comments that provide the factual basis supporting the views and suggestions presented are particularly helpful in developing reasoned regulatory decisions on the proposal. Comments are specifically invited on the overall regulatory, aeronautical, economic, environmental, and energy-related aspects of the proposal. Communications should identify both docket numbers and be submitted in triplicate to the address listed above. Persons wishing the FAA to acknowledge receipt of their comments on this notice must submit with those comments a self-addressed, stamped postcard on which the following statement is made: "Comments to Docket No. FAA-2020-0707; Airspace Docket No. 18-AWP-28". The postcard will be date/time stamped and returned to the commenter.

All communications received before the specified closing date for comments will be considered before taking action on the proposed rule. The proposal contained in this notice may be changed in light of the comments received. A report summarizing each substantive public contact with FAA personnel concerned with this rulemaking will be filed in the docket.

Availability of NPRMs

An electronic copy of this document may be downloaded through the internet at <https://www.regulations.gov>. Recently published rulemaking documents can also be accessed through the FAA's web page at https://www.faa.gov/air_traffic/publications/airspace_amendments/.

You may review the public docket containing the proposal, any comments

received, and any final disposition in person in the Dockets Office (see the **ADDRESSES** section for the address and phone number) between 9:00 a.m. and 5:00 p.m., Monday through Friday, except federal holidays. An informal docket may also be examined during normal business hours at the Northwest Mountain Regional Office of the Federal Aviation Administration, Air Traffic Organization, Western Service Center, Operations Support Group, 2200 S 216th Street, Des Moines, WA 98198.

Availability and Summary of Documents for Incorporation by Reference

This document proposes to amend FAA Order 7400.11D, Airspace Designations and Reporting Points, dated August 8, 2019, and effective September 15, 2019. FAA Order 7400.11D is publicly available as listed in the **ADDRESSES** section of this document. FAA Order 7400.11D lists Class A, B, C, D, and E airspace areas, air traffic service routes, and reporting points.

The Proposal

The FAA is proposing an amendment to Title 14 Code of Federal Regulations (14 CFR) Part 71 by establishing Class E airspace, extending upward from 700 feet above the surface, at Benton Field Airport. This area is designed to contain IFR departures to 1,200 feet above the surface and IFR arrivals descending below 1,500 feet above the surface. This airspace area would be described as follows: That airspace extending upward from 700 feet above the surface within a 3.3-mile radius of the airport, and within 4 miles east and 2.3 miles west of the 002° bearing from the airport, extending from 2.5 miles north of the airport to 12.4 miles north of the airport, and within 2.7 miles each side of the 176° bearing from the airport, extending from the 3.3-mile radius to 10.8 miles south of Benton Field Airport.

Class E5 airspace designations are published in paragraph 6005 of FAA Order 7400.11D, dated August 8, 2019, and effective September 15, 2019, which is incorporated by reference in 14 CFR 71.1. The Class E airspace designations listed in this document will be published subsequently in the Order.

FAA Order 7400.11, Airspace Designations and Reporting Points, is published yearly and effective on September 15.

Regulatory Notices and Analyses

The FAA has determined that this regulation only involves an established body of technical regulations for which

frequent and routine amendments are necessary to keep them operationally current, is non-controversial, and unlikely to result in adverse or negative comments. It, therefore: (1) Is not a “significant regulatory action” under Executive Order 12866; (2) is not a “significant rule” under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this rule, when promulgated, would not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

Environmental Review

This proposal will be subject to an environmental analysis in accordance with FAA Order 1050.1F, “Environmental Impacts: Policies and Procedures” prior to any FAA final regulatory action.

List of Subjects in 14 CFR Part 71

Airspace, Incorporation by reference, Navigation (air).

The Proposed Amendment

Accordingly, pursuant to the authority delegated to me, the Federal Aviation Administration proposes to amend 14 CFR part 71 as follows:

PART 71—DESIGNATION OF CLASS A, B, C, D, AND E AIRSPACE AREAS; AIR TRAFFIC SERVICE ROUTES; AND REPORTING POINTS

- 1. The authority citation for 14 CFR part 71 continues to read as follows:

Authority: 49 U.S.C. 106(f), 106(g), 40103, 40113, 40120; E.O. 10854, 24 FR 9565, 3 CFR, 1959–1963 Comp., p. 389.

§ 71.1 [Amended]

- 2. The incorporation by reference in 14 CFR 71.1 of FAA Order 7400.11D, Airspace Designations and Reporting Points, dated August 8, 2019, and effective September 15, 2019, is amended as follows:

Paragraph 6005 Class E Airspace Areas Extending Upward From 700 Feet or More Above the Surface of the Earth.

* * * * *

AWP CA E5 Redding, CA

Benton Field Airport, CA
(Lat. 40°34'25" N, long. 122°24'26" W)

That airspace extending upward from 700 feet above the surface within a 3.3-mile radius of the airport, and within 4 miles east

and 2.3 miles west of the 002° bearing from the airport, extending from 2.5 miles north of the airport to 12.4 miles north of the airport, and within 2.7 miles each side of the 176° bearing from the airport, extending from the 3.3-mile radius to 10.8 miles south of Benton Field Airport.

BILLING CODE 4910–13–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

21 CFR Part 890

[Docket No. FDA–2020–N–1053]

Physical Medicine Devices; Reclassification of Non-Invasive Bone Growth Stimulators

AGENCY: Food and Drug Administration, Health and Human Services (HHS).

ACTION: Proposed amendment; proposed order; request for comments.

SUMMARY: The Food and Drug Administration (FDA) is proposing to reclassify non-invasive bone growth stimulators, postamendments class III devices (product codes LOF and LPQ), into class II (special controls), subject to premarket notification. FDA is also proposing a new device classification with the name “non-invasive bone growth stimulators” along with the proposed special controls that the Agency believes are necessary to provide a reasonable assurance of safety and effectiveness of these devices. FDA is proposing this reclassification on its own initiative. If finalized, this order will reclassify these devices from class III (premarket approval) to class II (special controls) and reduce the regulatory burdens associated with these devices, as these devices will no longer be required to submit a premarket approval application (PMA), but are subject to premarket notification (510(k)) requirements and general and special controls.

DATES: Submit either electronic or written comments on the proposed order by October 16, 2020. Please see section XII of this document for the proposed effective date when the new requirements apply and for the proposed effective date of a final order based on this proposed order.

ADDRESSES: You may submit comments as follows. Please note that late,

untimely filed comments will not be considered. Electronic comments must be submitted on or before October 16, 2020. The <https://www.regulations.gov> electronic filing system will accept comments until 11:59 p.m. Eastern Time at the end of October 16, 2020.

Comments received by mail/hand delivery/courier (for written/paper submissions) will be considered timely if they are postmarked or the delivery service acceptance receipt is on or before that date.

Electronic Submissions

Submit electronic comments in the following way:

- **Federal Rulemaking Portal:** <https://www.regulations.gov>. Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to <https://www.regulations.gov> will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on <https://www.regulations.gov>.

- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see "Written/Paper Submissions" and "Instructions").

Written/Paper Submissions

Submit written/paper submissions as follows:

- **Mail/Hand Delivery/Courier (for written/paper submissions):** Dockets Management Staff (HFA-305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

- For written/paper comments submitted to the Dockets Management Staff, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in "Instructions."

Instructions: All submissions received must include the Docket No. FDA-2020-N-1053 for "Physical Medicine Devices; Reclassification of Non-Invasive Bone Growth Stimulators." Received comments, those filed in a timely manner (see **ADDRESSES**), will be placed in the docket and, except for

those submitted as "Confidential Submissions," publicly viewable at <https://www.regulations.gov> or at the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday.

- **Confidential Submissions—**To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states "THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION." The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on <https://www.regulations.gov>. Submit both copies to the Dockets Management Staff. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as "confidential." Any information marked as "confidential" will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: <https://www.govinfo.gov/content/pkg/FR-2015-09-18/pdf/2015-23389.pdf>.

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to <https://www.regulations.gov> and insert the docket number, found in brackets in the heading of this document, into the "Search" box and follow the prompts and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

SUPPLEMENTARY INFORMATION:

I. Background—Regulatory Authorities

The Federal Food, Drug, and Cosmetic Act (FD&C Act), as amended, establishes a comprehensive system for the regulation of medical devices intended for human use. Section 513 of the FD&C

Act (21 U.S.C. 360c) established three categories (classes) of devices, reflecting the regulatory controls needed to provide reasonable assurance of their safety and effectiveness. The three categories of devices are class I (general controls), class II (general controls and special controls), and class III (general controls and premarket approval).

Devices that were not in commercial distribution prior to May 28, 1976 (generally referred to as postamendments devices) are automatically classified by section 513(f)(1) of the FD&C Act into class III without any FDA rulemaking process. Those devices remain in class III and require premarket approval unless, and until: (1) FDA reclassifies the device into class I or II or (2) FDA issues an order finding the device to be substantially equivalent, in accordance with section 513(i) of the FD&C Act, to a predicate device that does not require premarket approval. FDA determines whether new devices are substantially equivalent to predicate devices by means of premarket notification procedures in section 510(k) of the FD&C Act (21 U.S.C. 360(k)) and part 807 (21 CFR part 807), subpart E, of the regulations.

A postamendments device that has been initially classified in class III under section 513(f)(1) of the FD&C Act may be reclassified into class I or class II under section 513(f)(3) of the FD&C Act. Section 513(f)(3) of the FD&C Act provides that FDA acting by administrative order, can reclassify the device into class I or class II on its own initiative, or in response to a petition from the manufacturer or importer of the device. To change the classification of the device, the proposed new class must have sufficient regulatory controls to provide reasonable assurance of the safety and effectiveness of the device for its intended use.

Reevaluation of the data previously presented before the Agency is an appropriate basis for subsequent action, where the reevaluation is made in light of newly available regulatory authority (see *Bell v. Goddard*, 366 F.2d 177, 181 (7th Cir. 1966); *Ethicon, Inc. v. FDA*, 762 F. Supp. 382, 388-391 (D.D.C. 1991)) or in light of changes in "medical science" (*Upjohn v. Finch*, 422 F.2d 944, 951 (6th Cir. 1970)). Whether data before the Agency are old or new, the "new information" to support reclassification under 513(f)(3) must be "valid scientific evidence", as defined in section 513(a)(3) of the FD&C Act and § 860.7(c)(2) (21 CFR 860.7(c)(2)). (See, e.g., *General Medical Co. v. FDA*, 770 F.2d 214 (D.C. Cir. 1985); *Contact Lens Assoc. v. FDA*, 766 F.2d 592 (D.C. Cir.

1985), cert. denied, 474 U.S. 1062 (1986).)

FDA relies upon “valid scientific evidence,” as defined in section 513(a)(3) of the FD&C Act and § 860.7(c)(2), in the classification process to determine the level of regulation for devices. To be considered in the reclassification process, the “valid scientific evidence” upon which the Agency relies must be publicly available. Publicly available information excludes trade secret and/or confidential commercial information, *e.g.*, the contents of a pending PMA (see section 520(c) of the FD&C Act (21 U.S.C. 360j(c)). Section 520(h)(4) of the FD&C Act provides that FDA may use, for reclassification of a device, certain information in a PMA 6 years after the application has been approved (Ref. 1). This includes information from clinical and preclinical tests or studies that demonstrate the safety or effectiveness of the device, but does not include descriptions of methods of manufacture or product composition and other trade secrets.

In accordance with section 513(f)(3) of the FD&C Act, FDA is issuing this proposed order to reclassify non-invasive bone growth stimulator devices, postamendments class III devices, into class II (special controls), subject to premarket notification because FDA believes the standard in section 513(a)(1)(B) of the FD&C Act is met as there is sufficient information to establish special controls, which in addition to general controls, will provide reasonable assurance of the safety and effectiveness of the device.¹

Section 510(m) of the FD&C Act provides that a class II device may be exempted from the premarket notification requirements under section 510(k) of the FD&C Act, if the Agency determines that premarket notification is not necessary to reasonably assure the safety and effectiveness of the device. FDA has determined that premarket notification is necessary to reasonably assure the safety and effectiveness of non-invasive bone growth stimulator devices. Therefore, the Agency does not intend to exempt these proposed class II devices from premarket notification (510(k)) submission as provided under section 510(m) of the FD&C Act.

¹ In December 2019, FDA began adding the term “Proposed amendment” to the “ACTION” caption for these documents, typically styled “Proposed order”, to indicate that they “propose to amend” the Code of Federal Regulations. This editorial change was made in accordance with the Office of Federal Register’s (OFR) interpretations of the Federal Register Act (44 U.S.C. chapter 15), its implementing regulations (1 CFR 5.9 and parts 21 and 22), and the Document Drafting Handbook.

II. Regulatory History of Non-Invasive Bone Growth Stimulator Devices

In accordance with section 513(f)(1) of the FD&C Act, non-invasive bone growth stimulator devices were automatically classified into class III because they were not introduced or delivered for introduction into interstate commerce for commercial distribution before May 28, 1976, and have not been found substantially equivalent to a device placed in commercial distribution after May 28, 1976, which was subsequently classified or reclassified into class II or class I. Therefore, the device is subject to PMA requirements under section 515 of the FD&C Act (21 U.S.C. 360e).

Accordingly, on November 6, 1979, FDA approved a PMA for the Bio Osteogen System 204 (P790002) (Ref. 2). Since that time, five additional original PMAs have been approved for non-invasive bone growth stimulators (P850007, P850022, P900009, P910066, and P030034). On February 9, 2005, FDA received a reclassification petition dated February 7, 2005, submitted by RS Medical Corporation, requesting that FDA reclassify certain non-invasive bone growth stimulators from class III to class II (Ref. 3). As stated in the Notice of Panel Recommendation discussed further below, “the petition was submitted under section 513(e) of the act but FDA . . . review[ed] the petition under section 513(f)(3) of the act because that section contain[ed] the appropriate procedures for reclassification of postamendments devices” (72 FR 1951 at 1952, January 17, 2007). FDA requested additional information and the petitioner amended the petition on November 30, 2005 (“amended petition”). In accordance with the FD&C Act and regulations, FDA referred the petition, as amended, to the FDA Advisory Committee, specifically the Orthopaedic and Rehabilitation Devices Panel (“the 2006 Panel”) for its recommendations on the requested reclassification.

On June 2, 2006, the 2006 Panel deliberated on the information in RS Medical’s petition; the presentations made by RS Medical, FDA, and members of the public; and their own experience with certain non-invasive bone growth stimulators (Ref. 4).

The 2006 Panel identified the following risks to health associated with non-invasive bone growth stimulators: Electric shock; burn; skin irritation and/or allergic reaction; inconsistent or ineffective treatment; adverse interaction with electrical implants; adverse interactions with internal/external fixation devices; and biological

risks. The 2006 Panel did not specifically address risks associated with ultrasound-based devices, as these were outside the scope of RS Medical’s petition; however, as discussed below, based upon FDA’s review of information since the Panel meeting, the risks identified with ultrasound-based devices, along with their reported benefits, are comparable to those of non-invasive bone growth stimulators incorporating other modalities.

The majority of the 2006 Panel recommended that non-invasive bone growth stimulators should be retained in class III because there was insufficient information in the petition by RS Medical to establish that special controls in conjunction with general controls would provide a reasonable assurance of the safety and effectiveness of the device. Specifically, the Panel recommended that the proposed special controls by RS Medical were sufficient to control for the risk of electric shock, burn, skin irritation, and/or allergic reaction; adverse interaction with electrical implants; adverse interactions with internal/external fixation devices; and biological risks. However, the Panel believed that there was insufficient evidence presented by RS Medical to control for the risk of inconsistent or ineffective treatment because there is a lack of knowledge about how waveform characteristics (*e.g.*, pulse duration, amplitude, power, frequency), including potential modifications to the device, affect the clinical response to treatment. The Panel requested additional clinical data and/or special controls, which was not adequately devised by the petitioner, to control for the risk of inconsistent or ineffective treatment.

FDA concurred with the 2006 Panel’s recommendation, and similarly believed that RS Medical’s petition was inadequate in that FDA had concerns about the petitioner’s proposed special controls to control the risk of inconsistent or ineffective treatment. In the **Federal Register** of January 17, 2007 (72 FR 1951), FDA published a Notice of Panel Recommendations (“the 2007 Notice”), as referenced above.

In a letter dated April 2, 2007, RS Medical requested that its petition be withdrawn (Ref. 5). On July 10, 2007, FDA granted RS Medical’s request for withdrawal of the petition and did not take any further action on the petition (Ref. 6). FDA has not received any subsequent petition requesting reclassification of these devices.

Subsequently, as part of the Center for Devices and Radiological Health’s 2014–2015 strategic priority, “Strike the Right Balance Between Premarket and Postmarket Data Collection,” a

retrospective review of all PMA product codes with active PMAs approved prior to 2010 was conducted to determine whether, based on our current understanding of the technology, certain devices could be reclassified (down-classified). On April 29, 2015, FDA published a document in the **Federal Register** identifying certain product codes as potential candidates for reclassification (80 FR 23798), including non-invasive bone growth stimulators under product codes LOF and LPQ, from class III to class II (Ref. 7). One comment was received in response to this proposal for reclassification of LOF and LPQ; this comment did not support FDA's intention to reclassify these devices, citing the concerns discussed during the 2006 Panel. This comment was considered in development of this proposed order. Note that invasive bone growth stimulators, designated under product code LOE, are outside the scope of this proposed reclassification. As noted in the 2006 Panel, invasive bone growth stimulator devices have added risks compared to non-invasive bone growth stimulators, and therefore would require a separate classification discussion. Furthermore, invasive bone growth stimulators were also considered as a part of the aforementioned PMA retrospective review and FDA determined that these devices should remain as class III (Ref. 8). Therefore, FDA will continue to regulate invasive bone growth stimulators as a class III device, subject to PMA requirements.

While RS Medical's petition inadequately addressed all of the risks associated with non-invasive bone growth stimulators for reclassification, FDA is, on its own initiative, proposing to reclassify these devices from class III to class II, and believes that sufficient information exists to establish special controls, as identified in this proposed order, that, together with general controls, can provide a reasonable assurance of safety and effectiveness for this device type. Additionally, RS Medical in its petition excluded use of these devices as an adjunct to cervical fusion surgery in patients at high risk for nonfusion, as well as for use in congenital pseudarthrosis. Based upon the review of the evidence and FDA's ability to establish special controls, FDA believes these indications that have been approved for currently marketed non-invasive bone growth stimulator devices should be included in this proposed reclassification.

III. Device Description

Non-invasive bone growth stimulators, currently designated under product codes LOF and LPQ, are typically

composed of a waveform generator and transducer (e.g., coils, electrodes, and/or ultrasound transducers). Patient-contacting surfaces include the transducers, lead wires, and the device outer casing.

Non-invasive bone growth stimulators utilize an electrical component to produce an output electrical, magnetic, or ultrasonic waveform that is delivered to a treatment site via a non-invasively applied transducer (e.g., electromagnetic coil or ultrasound transducer) or electrodes (e.g., capacitor plates). The device also incorporates an internal means to monitor the output waveform and delivery of treatment, and to provide visual and/or audible alarms to alert the user of improper device function. The induced electrical and/or magnetic fields are generated using one of the following modalities:

- Capacitive coupling (CC), in which a pair of electrodes are placed on the skin such that a current can be driven across the target site;
- pulsed electromagnetic fields (PEMF), in which a modulated electromagnetic field is generated near the treatment site through an external coil; or
- combined magnetic fields (CMF), in which a coil generates a combination of a static and pulsed magnetic field near the treatment site.

The ultrasonic waveform is generated using:

- Low intensity pulsed ultrasound (LIPUS), in which pulsed ultrasonic signals are generated using ultrasonic transducers.

The non-invasive nature of the device obviates the need for sterile components; however, patient-contacting surfaces should be capable of being cleaned as needed and biocompatibility must be ensured.

Non-invasive bone growth stimulators are generally intended to promote osteogenesis as adjunct to primary treatments for fracture fixation or spinal fusion. The indications for use for this device type depend on the specific device characteristics, but have included:

- Treatment of an established non-union secondary to trauma of the appendicular system,
- treatment of congenital pseudarthrosis,
- treatment of failed fusions of the appendicular system,
- early treatment of certain fresh fractures, and
- as an adjunct to lumbar or cervical spinal fusion.

In addition, non-invasive bone growth stimulators are currently prescription

use only devices under § 801.109 (21 CFR 801.109).

IV. Proposed Reclassification

In accordance with section 513(f)(3) of the FD&C Act and 21 CFR part 860, subpart C, FDA is proposing to reclassify non-invasive bone growth stimulator devices under product codes LOF and LPQ from class III into class II. This includes devices that generate electrical or magnetic fields using CC, PEMF, and CMF, and ultrasonic signals.

FDA believes that there is sufficient information available by way of FDA's accumulated experience with these devices from review of premarket submissions, peer-reviewed literature, medical device reports (MDRs), and recalls to understand the risks associated with these devices to establish special controls that effectively mitigate the risks to health identified in section V. In this proposed order, the Agency has identified the special controls under section 513(a)(1)(B) of the FD&C Act that, together with general controls, would provide a reasonable assurance of the safety and effectiveness for non-invasive bone growth stimulators to be in class II. Absent the special controls identified in this proposed order, general controls applicable to this device type are insufficient to provide reasonable assurance of safety and effectiveness of the device.

FDA is proposing to create a classification regulation for non-invasive bone growth stimulators, which would include devices designated under product codes LOF and LPQ. Under this proposed order, if finalized, a non-invasive bone growth stimulator will be identified as a prescription device. As such, the prescription device must satisfy prescription labeling requirements (see § 801.109, *Prescription devices*). Prescription devices are exempt from the requirement for adequate directions for use for the layperson under section 502(f)(1) of the FD&C Act (21 U.S.C. 352(f)(1)) and 21 CFR 801.5, as long as the conditions of § 801.109 are met. In this proposed order, if finalized, the Agency has identified the special controls under section 513(a)(1)(B) of the FD&C Act that, together with general controls, will provide a reasonable assurance of the safety and effectiveness for non-invasive bone growth stimulator devices.

Section 510(m) of the FD&C Act provides that FDA may exempt a class II device from the premarket notification requirements under section 510(k) of the FD&C Act if FDA determines that premarket notification is not necessary

to provide reasonable assurance of the safety and effectiveness of the device. For non-invasive bone growth stimulators, FDA has determined that premarket notification is necessary to provide reasonable assurance of the safety and effectiveness of the device. Therefore, FDA does not propose to exempt these proposed class II devices from 510(k) requirements. If this order is finalized, persons who intend to market this type of device would need to submit to FDA a 510(k) and receive clearance prior to marketing the device.

V. Risks to Health

Based on available information for non-invasive bone growth stimulators, including the 2005 reclassification petition request from RS Medical Corp, input from the 2006 Panel, data in PMA applications P030034, P850022/S009, and P910066/S011 available to FDA under section 520(h)(4) of the FD&C Act, published literature, and postmarket experience associated with use of these devices, FDA identifies the following risks to health associated with non-invasive bone growth stimulators:

a. *Failure or delay of osteogenesis*—A patient could receive ineffective treatment, contributing to failure or delay of osteogenesis that may lead to clinical symptoms (e.g., pain) and the need for surgical interventions. Ineffective treatment could be a result of various circumstances (e.g., inadequate therapeutic signal output or device malfunction or misuse).

b. *Burn*—A patient or health care professional could be burned from the use and operation of the device. This could be a result of various circumstances including device malfunction (e.g., electrical fault) or misuse of the device (e.g., use while sleeping).

c. *Electrical shock*—A patient or health care professional could be shocked from the use and operation of the device. This could be a result of various circumstances including device malfunction (e.g., electrical fault) or misuse of the device (e.g., use of alternating current source during treatment).

d. *Electromagnetic interference (EMI)*—A patient with electrically powered implants (such as cardiac pacemakers, cardiac defibrillators, and neurostimulators) could experience an adverse interaction with the implanted electrical device via EMI or radiofrequency interference.

e. *Adverse tissue reaction*—A patient could experience skin irritation and/or allergic reaction associated with the use and operation of the device via the use of non-biocompatible device materials.

f. *Adverse interaction with internal/external fixation devices*—The signal output could be impacted by certain metallic internal or external fixation devices leading to inadequate treatment signals, device malfunction, or tissue damage.

g. *Adverse biologic effects*—A patient may experience adverse biologic effects resulting from prolonged exposure to the treatment signal via biologic interaction with the treatment signal at a cellular level. Excessive energy transmission could cause tissue damage or aberrant tissue behavior if signal output parameters exceed established safety thresholds.

The risks to health identified within this proposed order are consistent with those identified in the 2005 reclassification petition, as amended. The 2006 Panel agreed with these identified risks; however, in some cases the risk or accompanying description was reworded for clarity in this proposed order (e.g., “inconsistent treatment or ineffective treatment” is described in terms of risk to health, which may entail “failure or delay in osteogenesis”). Also, the risk of adverse biologic effects previously specified risks of carcinogenicity, genotoxicity, mutagenicity, and teratological effects. The petitioner notes in the amended petition that “. . . the evidence points to lack of genotoxic, carcinogenic, and teratologic potential of the subject waveforms,” which is corroborated by the lack of such reports identified in the literature. Although FDA similarly has found a lack of such reports, it considers this risk more generally as potential deleterious effects at the tissue or cellular level due to signal output parameters that exceed established safety thresholds.

VI. Summary of Reasons for Reclassification

FDA believes that non-invasive bone growth stimulator devices, which are intended to promote osteogenesis as an adjunct to primary treatments for fracture fixation or spinal fusion, should be reclassified from class III to class II and that there is sufficient information to establish special controls for the risks identified in section V which, in addition to general controls, can provide reasonable assurance of safety and effectiveness.

Specifically, FDA proposes to require clinical performance data as a special control to address the risk of failure or delay of osteogenesis. FDA review of the literature suggests a high variability of treatment efficacy, depending on therapeutic signal and anatomic location. This would also address the

main concern cited by the 2006 Panel and FDA with RS Medical’s proposal, which led to the recommendation to retain non-invasive bone growth stimulators in class III, and various comments received in response to the 2007 Notice.

FDA’s proposal would require that clinical performance of any non-invasive bone growth stimulator device be evaluated in support of the intended use. Rather than prescribe specific study requirements, FDA’s proposal would allow for flexibility in study design and the level of clinical evidence needed by taking into consideration certain parameters, e.g., the intended use, treatment population, and technological characteristics of the device, including any similarities between the device and legally marketed predicate device, as appropriate.

VII. Summary of Data Upon Which the Reclassification Is Based

The available evidence demonstrates that there are probable health benefits derived from the use of these devices, and that the nature and incidence of risks are well known so that special controls can be established to adequately mitigate the risks to health. FDA is proposing a single device class for non-invasive bone growth stimulators, considering that FDA did not identify any unique risks associated with the different modalities included in this proposed order. FDA has considered and analyzed the following: Data in PMA applications P030034, P850022/S009, and P910066/S011 available to FDA under section 520(h)(4) of the FD&C Act; information presented at the 2006 Panel concerning RS Medical’s petition to down-classify certain non-invasive bone growth stimulators (Ref. 3) and the 2007 Notice; peer-reviewed articles that discussed the use of, as well as the probable benefits and risks of these devices; reported adverse events identified through a search of FDA’s Medical Device Reporting (MDR) system; and a review of any recalls associated with these devices through a search of FDA’s Medical Device Recall database.

In accordance with the “6-year rule” described in section 520(h)(4) of the FD&C Act, FDA considered data contained in three original PMAs or supplements, P030034, P850022/S009, and P910066/S011, approved for non-invasive bone growth stimulators (Refs. 9 to 11). These PMAs/supplements include three different device modalities: A PEMF device (P030034), a CC device (P850022/S009), and a CMF device (P910066/S011). In review of the reported clinical data in the summary of

safety and effectiveness data documents (SSEDs), the studies conducted in support of these devices include a total study size of 831 enrolled subjects. The adverse event profile for the devices in each study were similar to the control group, with a similar distribution of event types. With regards to benefit, the clinical data reported in the SSEDs demonstrate an improved rate of bone fusion compared to placebo controls, with an 83.6 percent vs. 68.6 percent fusion rate at 6 months in P030034 (cervical spine), an 85 percent vs. 75 percent clinical success shown in P850022/S009 (lumbar spine), and a 67 percent vs. 43 percent fusion rate at 9 months in P910066/S011 (lumbar spine).

Further, FDA performed a literature review to evaluate data related to non-invasive bone growth stimulator devices, including studies up to the date of the 2006 Panel, as well as any new clinical information published since the 2006 Panel.

Literature published at the time of the 2006 Panel includes a 1953 seminal paper on the use of electrical signals to stimulate bone formation by Yasuda, that reported bone formation in rabbits exposed to direct current (DC) stimulation (Ref. 12). In the following decades, other researchers expanded on this finding in animal and clinical models. In a canine study, a DC stimulation was shown to cause complete ossification of the femoral medullary canal (Ref. 13). The first clinical case report demonstrated that electrical stimulation could treat a non-union fracture (Ref. 14). An early publication regarding the effects of DC stimulation on spinal fusion was published by Dwyer (Ref. 15). Another early clinical study published by Becker, et al. showed successful fracture fusion with a success rate of 77 percent (Ref. 16).

In the 1990s and early 2000s, several literature articles were identified assessing the effects of non-invasive bone growth stimulators on various anatomic locations. These studies generally included various therapeutic modalities (magnitude, frequency, duration, etc.) and demonstrated varying results regarding the efficacy of these treatments. In two studies of PEMF devices, Basset and Schink-Ascani (Ref. 17) found a 72 percent fusion rate in patients with congenital pseudarthrosis of the tibia, and in a study of non-unions of the scaphoid, Adams, et al. (Ref. 18) reported a fusion rate of 69 percent, as a followup to an earlier study that found a fusion rate of 80 percent. When looking at the rate of compliance of PEMF devices as a factor

of effectiveness, Garland, et al. (Ref. 19) found that fusion rates ranged from 35.7 percent to 80 percent, depending on how often the devices were used. In studies of CC devices, fusion rates in long bones varied from 60 percent (Ref. 20), 68.8 percent (Ref. 21), and 72.7 percent (Ref. 22), to no difference between treatment and a placebo-treated group in a study by Fourie and Bowerbank (Ref. 23). While there was a large range of observed efficacies, there was no reporting of treatment-related adverse events. These reported variabilities in efficacy and low adverse event rates were consistent with the findings by the 2006 Panel.

FDA performed a systematic review of published literature to identify any new clinical findings since the 2006 Panel. FDA identified 14 papers that included a combination of retrospective and prospective studies. For studies that assessed medical or insurance claims databases, radiographs were not always available to determine actual fusion. Instead, results were presented in terms of *healing rate* based on patient records or reported outcomes. When radiographs were available and analyzed to assess union, results were reported as *fusion rate*.

Phillips, et al. (Ref. 24) looked at registry data of 2,370 subjects who were treated with OL1000 (DJO), a CMF device, at various fracture sites and reported an average healing rate of 75.1 percent (ranging from 57.2 percent in the humerus to 89.7 percent in the finger phalanx). DeVries, et al. (Ref. 25) also evaluated the OL1000 device in a retrospective analysis of 144 subjects, finding a fusion rate of 57.1 percent in tibiototalcalcaneal fusions of the ankle.

With respect to LIPUS, Zura, et al. (Refs. 26 and 27) published two papers evaluating subjects in the Exogen (Bioventus) Post Market Registry. One of the studies assessed how various patient risk factors affected healing rate in 4,190 subjects. The study demonstrated an overall healing rate of 95.7 percent, and in another single arm study of 767 subjects, showed a healing rate varying from 81.8 percent to 87.9 percent depending on fracture site. Nolte, et al. (Ref. 28) evaluated the Exogen registry in conjunction with a medical claims database to examine metatarsal fractures and reported a healing rate of 97.4 percent overall, while Elvey, et al. (Ref. 29) evaluated 26 cases with use of Exogen in hand and wrist non-unions, and found a fusion rate of 54 percent to 58 percent. In two smaller studies of the Exogen device, Majeed, et al. (Ref. 30) and Mizra, et al. (Ref. 31) both evaluated foot and ankle fractures and found 78.7 percent and 67 percent fusion rate in a

47 and 18 patient study, respectively. Biglari (Ref. 32) also performed an observational study using the Exogen device and found a much lower fusion rate of 32.8 percent in 60 subjects having existing non-unions of various long bones.

For PEMF devices, a retrospective study by Coric, et al. (Ref. 33) on the effects of the CervicalStim (Orthofix) device on 593 subjects showed a 73.2 percent fusion rate in the cervical spine at 6 months. In a single arm prospective study by Assiotis, et al. (Ref. 34), a 77.3 percent fusion rate in the tibia was demonstrated with use of the Physiostim (Orthofix). Murray and Pethica (Ref. 35) performed a 1,382-subject retrospective study of use of the EBI device (Zimmer Biomet) for non-unions of the scaphoid, tibia, and fibula, and while an assessment of healing rates was not performed, the data showed reduction in time to healing between 35 percent and 40 percent when the device was used as prescribed.

In addition, two randomized control studies on PEMF devices were conducted by Foley, et al. (Ref. 36) and by Streit, et al. (Ref. 37). Foley evaluated 323 subjects using the Orthofix CervicalStim device in cervical fusion and found an 83.6 percent fusion rate in the treatment group compared to a 68.6 percent fusion rate in the control group, with no difference in pain scores or adverse events between groups. Streit, et al. performed a small, eight subject clinical study using the EBI device to treat non-unions of the fifth metatarsal and found the time to fusion was reduced on average from 14.7 weeks to 8.9 weeks with the use of the device.

In summary, FDA's literature review resulted in findings that are consistent with available clinical data from PMA submissions. These studies suggest that there are probable benefits to the use of these devices; however, differences in methodology, including differences in devices used, treatment waveform and frequency, patient populations, as well as anatomic location, could have had significant effects on reported device effectiveness, which ranged from 32.8 percent to 97.4 percent. Regarding safety, the findings from these studies demonstrate that the devices are relatively safe as the adverse event profile associated with these devices using various modalities was similar to controls. Overall, the studies involved 10,566 subjects (including control subjects), with only a single report of a serious adverse event (Biglari, Ref. 32); however, a direct link to the use of the device could not be established for this event.

Further, a search of FDA’s MDR database was conducted to identify all adverse events submitted to FDA up to October 31, 2019, for devices approved under product codes LOF and LPQ. The results of the identified reports are consistent with the risk profiles identified in both PMA applications and literature that were reviewed. FDA’s search yielded a total of 270 unique MDRs. The most frequently reported events were categorized as “skin reaction/issue” (n = 187) followed by “pain” (n = 59) and “device functional issue” (n = 21). A review of the adverse events regarding skin reactions found that a majority were due to irritation from the electrode adhesive or ultrasound gel used. There was no apparent difference in risk profile across the various device modalities, though the risk of skin irritation was primarily

observed in the skin-contacting devices (due to the electrodes in the CC device and the gel in the LIPUS device). For cases where followup was described, patients recovered when treatment was discontinued. In addition, 11 reports of “mass/tumor” were identified; however, the nature of the relationship between the mass/tumor to the device was unrelated or unclear. Based upon FDA’s assessment of other systematic reviews of these devices, no other reports of mass/tumors have been identified (Refs. 38 to 42).

Finally, a search of FDA’s Medical Device Recall database was conducted. No recalls were found when searching the database for devices under product code LOF. Two class 2 recalls were reported for devices under product code LPQ; specifically, there was a recall for the Exogen Express Bone Healing

System and a recall for the Exogen 4000+ Ultrasound Bone Healing System. Both were posted on August 4, 2009, and initiated by the manufacturer because of problems with the transducer, which may have resulted in a reduced ultrasound output. These recalls were terminated on November 18, 2010. These recall events reflect the risks to health identified in section V, and FDA believes the special controls proposed, in addition to general controls, can effectively mitigate the risks identified.

VIII. Proposed Special Controls

Table 1 outlines the risks to health identified in section V and the corresponding mitigation measures proposed to reasonably assure safety and effectiveness, which are discussed in more detail below.

TABLE 1—RISKS TO HEALTH AND MITIGATION MEASURES FOR NON-INVASIVE BONE GROWTH STIMULATORS

Identified risk to health	Mitigation measures
Failure or delay of osteogenesis	Clinical performance data. Non-clinical performance testing. Software verification, validation, and hazard analysis. Labeling.
Burn	Non-clinical performance testing. Electrical safety testing. Labeling.
Electrical shock	Electrical safety testing. Labeling.
Electromagnetic interference	Electromagnetic compatibility (EMC) testing. Labeling.
Adverse tissue reaction	Biocompatibility evaluation. Labeling.
Adverse interaction with internal/external fixation devices	Labeling.
Adverse biological effects	Non-clinical performance testing. Software verification, validation, and hazard analysis.

The risk of failure or delay of osteogenesis is clinically significant. To mitigate this risk, FDA proposes that manufacturers provide clinical performance data to demonstrate that the device yields positive outcomes (e.g., fusion of the non-union) in accordance with its intended use. Further, FDA proposes non-clinical performance testing to demonstrate that the device performs as intended under anticipated conditions of use to achieve the identified successful clinical performance characteristics. This would include verification and validation of critical performance characteristics, including characterization of the designed outputs of the device as well as the outputs that are delivered to the patient, thermal safety and reliability testing, reliability testing consistent with the expected device use-life, and validation that signal characteristics are within safe physiologic limits. Also, FDA proposes appropriate software

verification, validation, and hazard analysis to ensure that any device software performs as intended. Lastly, FDA proposes labeling to provide appropriate instructions (e.g., duration, frequency of use) to the end user.

To mitigate the risk of skin burns, FDA proposes non-clinical performance testing of the device to verify and validate critical performance characteristics, demonstrate thermal safety and reliability, validate that signal characteristics are within safe physiologic limits, and demonstrate reliability of the device consistent with its expected use-life. FDA also proposes electrical safety testing to minimize the risk of thermal burns to the patient, and specific instructions regarding proper usage and specific warnings associated with the risk of burns.

To mitigate electrical shocks, FDA proposes electrical safety testing to minimize the risk of shock to the patient. Furthermore, FDA proposes

labeling provisions, including instructions on appropriate usage and maintenance, and specific warnings regarding electrical shock.

To mitigate electromagnetic interference, FDA proposes electromagnetic compatibility testing and labeling to minimize the risk of adverse interaction with other electronic devices such as implanted electronic devices.

To mitigate the risk of adverse tissue reactions, FDA proposes a biocompatibility evaluation to ensure that the materials used in patient-contacting components of the device are safe for skin contact and labeling that includes warnings against use on compromised skin or when there are known sensitivities, as well as instructions on appropriate cleaning of any reusable components.

To mitigate the risk of adverse interaction with internal/external fixation devices, FDA proposes labeling,

specifically inclusion of appropriate warnings for patients with implanted internal/external devices.

To mitigate the risk of adverse biologic effects, FDA proposes non-clinical performance testing to verify and validate critical performance characteristics of the device, demonstrate thermal safety and reliability, validate safety of the signal by reference to known biological safety limits, and demonstrate reliability of the device over the expected use-life. Furthermore, FDA proposes software verification, validation, and hazard analysis.

If this reclassification is finalized, non-invasive bone growth stimulators will be reclassified into class II and would be subject to premarket notification (510(k)) requirements under § 807.81. As discussed below, the intent is for the reclassification to be codified in 21 CFR 890.5870. Firms submitting a 510(k) for non-invasive bone growth stimulators will be required to comply with the particular mitigation measures set forth in the special controls. Adherence to the special controls, in addition to the general controls, is necessary to provide a reasonable assurance of the safety and effectiveness of these devices.

IX. Analysis of Environmental Impact

The Agency has determined under 21 CFR 25.34(b) that this action is of a type that does not individually or cumulatively have a significant effect on the human environment. Therefore, neither an environmental assessment nor an environmental impact statement is required.

X. Paperwork Reduction Act of 1995

FDA tentatively concludes that this proposed order contains no new collections of information. Therefore, clearance by the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501–3521) is not required. This proposed order refers to previously approved FDA collections of information. These collections of information are subject to review by OMB under the PRA. The collections of information in part 807, subpart E have been approved under OMB control number 0910–0120; the collections of information in 21 CFR part 814, subparts A through E, have been approved under OMB control number 0910–0231; and the collections of information under 21 CFR part 801 have been approved under OMB control number 0910–0485.

XI. Codification of Orders

Under section 513(f)(3) of the FD&C Act, FDA may issue final orders to reclassify devices. FDA will continue to codify classifications and reclassifications in the Code of Federal Regulations (CFR). Changes resulting from final orders will appear in the CFR as newly codified orders. Therefore, under section 513(f)(3), in the proposed order, we are proposing to codify non-invasive bone growth stimulators in the new 21 CFR 890.5870, under which non-invasive bone growth stimulators would be reclassified from class III to class II.

XII. Proposed Effective Date

FDA proposes that any final order based on this proposal become effective 30 days after the date of its publication in the **Federal Register**.

List of Subjects in 21 CFR Part 890

Medical devices.

Therefore, under the Federal Food, Drug, and Cosmetic Act and under authority delegated to the Commissioner of Food and Drugs, it is proposed that 21 CFR part 890 be amended as follows:

PART 890—PHYSICAL MEDICINE DEVICES

■ 1. The authority citation for part 890 continues to read as follows:

Authority: 21 U.S.C. 351, 360, 360c, 360e, 360j, 360l, 371.

■ 2. Add § 890.5870 to subpart F to read as follows:

§ 890.5870 Non-invasive bone growth stimulator.

(a) *Identification.* A non-invasive bone growth stimulator provides stimulation through electrical, magnetic, or ultrasonic fields. The device is for prescription use and is intended to be used externally to promote osteogenesis as an adjunct to primary treatments for fracture fixation or spinal fusion.

(b) *Classification.* Class II (special controls). The special controls for this device are:

(1) Clinical performance data must support the intended use of the device.

(2) Non-clinical performance testing must demonstrate that the device performs as intended under anticipated conditions of use. The following must be provided:

(i) Verification and validation of critical performance characteristics of the device, including characterization of the designed outputs of the device as well as the outputs that are delivered to the patient.

(ii) Thermal safety and thermal reliability testing.

(iii) Validation that signal characteristics are within safe physiologic limits.

(iv) Reliability testing consistent with the expected use-life of the device.

(3) Patient-contacting components of the device must be demonstrated to be biocompatible.

(4) Performance data must demonstrate the electrical safety and electromagnetic compatibility of the device.

(5) Appropriate software verification, validation, and hazard analysis must be performed.

(6) Labeling for the device must include the following:

(i) Warning against use on compromised skin or when there are known sensitivities;

(ii) Appropriate warnings for patients with implanted medical devices;

(iii) A detailed summary of the clinical testing, which includes the clinical outcomes associated with the use of the device, and a summary of adverse events and complications that occurred with the device;

(iv) A clear description of the device;

(v) Instructions on appropriate usage, duration, and frequency of use;

(vi) Instructions for maintenance and safe disposal;

(vii) Instructions for appropriate cleaning of any reusable components;

(viii) Specific warnings regarding user burns, electrical shock, and skin irritation; and

(ix) The risks and benefits associated with use of the device.

Dated: August 4, 2020.

Lauren K. Roth,
Associate Commissioner for Policy.

[FR Doc. 2020–17543 Filed 8–14–20; 8:45 am]

BILLING CODE 4164–01–P

DEPARTMENT OF THE INTERIOR**Bureau of Land Management****43 CFR Part 8365**[LLAZP00000.L122000000.
DF0000.LXSSA3610000]**Notice of Proposed Supplementary Rules for Selected Public Lands in Gila, Maricopa, Pima, Pinal and Yavapai Counties, AZ****AGENCY:** Bureau of Land Management, Interior.**ACTION:** Notice of proposed supplementary rules.

SUMMARY: The Bureau of Land Management (BLM) is proposing supplementary rules on selected public lands administered by the Hassayampa and Lower Sonoran Field Offices. These rules are needed in order to protect public health and safety and to reduce user conflicts within developed recreation areas (or sites), including recreational shooting sports sites. In compliance with the John D. Dingell, Jr. Conservation, Management, and Recreation Act (Dingell Act), notice is hereby given that for public safety, one of the proposed supplementary rules would close public lands within the designated Hazardous Exclusion Area at each recreational shooting sports site to public entry, including entry for hunting, fishing, and recreational shooting activities. These proposed closures are necessary to ensure public safety adjacent to shooting facilities.

DATES: Interested parties may submit written comments regarding the proposed supplementary rules no later than October 16, 2020.

ADDRESSES: You may submit comments by any of the following methods:

- BLM National Environmental Policy Act website: <https://go.usa.gov/xmfVv>.
- Mail: BLM, Phoenix District Office, Attention: Tyler Lindsey, 21605 North 7th Avenue, Phoenix, AZ 85027.

FOR FURTHER INFORMATION CONTACT: John (Jake) Szympruch, District Chief Law Enforcement Ranger at email: jszympru@blm.gov; Lane Cowger, Hassayampa Field Office Manager at email: lcowger@blm.gov; or Edward J. Kender, Lower Sonoran Field Office Manager at email: ekender@blm.gov; or at 623-580-5500. Persons who use a telecommunications device for the deaf (TDD) may call the Federal Relay Service (FRS) at 1-800-877-8339 to contact one of the above individuals. The FRS is available 24 hours a day, 7 days a week, to leave a message or question. You will receive a reply during normal business hours.

SUPPLEMENTARY INFORMATION:**I. Public Comment Procedures***General Notice Comments on Proposed Supplementary Rules*

You may mail comments to Tyler Lindsey, or comment directly online at the addresses listed above (See **ADDRESSES**). Written comments on the proposed supplementary rules should be specific, confined to issues pertinent to the proposed rules, and should explain the reason for any recommended change. Where possible, comments should reference the specific section or paragraph of the proposal that the commenter is addressing. The BLM is not obligated to consider, or include in the Administrative Record for the final supplementary rules, comments delivered to an address other than those listed above (See **ADDRESSES**) or comments that the BLM receives after the close of the comment period (See **DATES**), unless they are postmarked or electronically dated before the deadline.

Comments on Proposed Closure

Under the Dingell Act (16 U.S.C. 7913 (b)(2)(A)), and in compliance with 43 CFR 8364.1, the BLM is required to consider public comments when closures are proposed and would affect hunting, fishing, and recreational shooting on public lands. Within developed recreation areas where the primary purpose is recreational shooting, a designated Hazardous Exclusion Area where errant/ricochet projectiles could potentially land has been delineated based on geospatial review of topographic features and in coordination with the Arizona Game and Fish Department. Each Hazardous Exclusion Area proposed for closure is the smallest area required for public safety adjacent to shooting facilities and would remain closed for as long as the recreational shooting sports site is available for public use. Proposed supplementary rule 13 would prohibit entry into the Hazardous Exclusion Areas.

This notice announces the beginning of the 60-day comment period for the proposed closure of public lands within Hazardous Exclusion Areas to all entry, whereby comments on impacts to hunting, fishing, and recreational shooting are being accepted by the BLM. Following the public comment period, the BLM will respond in a reasonable manner to the comments received, will explain how significant issues were resolved, and will issue a final decision on the proposed closure made available online at: <https://go.usa.gov/xmfVv>.

Comments, including names, street addresses, and other contact information for respondents, will be available for public review at the Phoenix District Office, 21605 North 7th Avenue, Phoenix, AZ 85027, listed in **ADDRESSES**, during regular business hours (8 a.m. to 4:30 p.m., Monday through Friday, except Federal holidays). Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

II. Background

These proposed supplementary rules are necessary for the protection of public lands and resources and for the protection, well-being, and health and safety of those using public lands. Proposed supplementary rules 1 through 4 would apply to existing developed recreation areas throughout the Phoenix District Office, and to future developed recreation areas. The rest of the proposed supplementary rules would apply only to the recreational shooting sports sites and any future recreational shooting sports sites within the district.

In January 2020, the BLM Phoenix District Office approved the construction of five recreational shooting sports sites (Baldy Mountain, Box Canyon, Church Camp Road, Narramore Road, and Saddleback Mountain) in the Recreational Shooting Sports Project Final Environmental Assessment (EA). The EA was in conformance with the two applicable land use plans, the Bradshaw-Harquahala Approved Resource Management Plan and Record of Decision (Bradshaw-Harquahala RMP (BLM 2010)) and the Lower Sonoran Approved Resource Management Plan and Record of Decision (Lower Sonoran RMP (BLM 2012)). As a result of improvements, each site would meet the “developed recreation site and area” definition found in 43 Code of Federal Regulations (CFR) 8360.0-5. Existing rules associated with developed recreation sites and areas (43 CFR 8365) would apply in addition to these proposed supplementary rules.

To promote safe use and operation of each site, supplementary rules of conduct would be needed to manage behavior. Within developed recreation areas established for recreational

shooting sports, the discharge of firearms would be allowed where authorized (see 43 CFR 8365.2–5). Each recreation area would be posted with appropriate signage at access points. Immediately adjacent to shooting facilities (facility area) would be a designated Hazardous Exclusion Area. Each Hazardous Exclusion Area is required for public safety and would be enclosed within a perimeter fence. Given the complexity of the terrain and uncertainties about where the actual fence line will be constructed, the BLM estimates 539 acres of public lands would be closed to public entry, as depicted on maps found at <https://go.usa.gov/xmfVv>. The combination of the shooting facility area and the Hazardous Exclusion Area defines the boundary of the recreational shooting sports site. Appropriate warning signage would be installed and maintained.

III. Discussion of Proposed Supplementary Rules

Proposed supplementary rules 1 through 4 would apply to all developed recreation areas and sites within the Phoenix District boundary. In addition to supplementary rules 1 through 4, supplementary rules 5 through 16 would apply within recreational shooting sports sites.

Supplementary Rule 1 would prevent activities that would impede access to or through areas (or sites). The proposed rule is similar to an existing rule for National Forest System roads and trails found at 36 CFR 261.12(d)).

Supplementary Rule 2 would prevent improper disposal of pet waste, in a manner consistent with Pima County Code 7.29.030, which requires responsible storage and disposal of solid waste, and provides for hygiene, health, and safety for users.

Supplementary Rule 3 would address user conduct in a manner consistent with Arizona Revised Statute (ARS) 13–2904 describing “Disorderly conduct.”

Supplementary Rule 4 would combine existing regulations to protect wildlife, livestock, and vegetation from recreational shooting within developed recreation areas and sites.

Supplementary Rule 5 would limit the potential for personal property to be left behind by the public, unless authorized. The existing rule for developed recreation sites or areas found at 43 CFR 8365.2–3 limits leaving personal property to 24 hours or less in developed picnic day-use areas or 72 hours or less in developed camping areas. The proposed rule would be more restrictive and is needed to address recreational shooting sports sites specifically.

Supplementary Rule 6 would prohibit firearm discharge while any individual is in front of the designated firing line to protect public, contractor, volunteer, and BLM employee safety.

Supplementary Rule 7 would address drug and/or alcohol related concerns within recreational shooting sports sites for the purpose of public health and safety. Existing supplementary rules only address underage drinking and open containers of alcohol while operating or riding on/in motor vehicles.

Supplementary Rule 8 would establish hours of operation for recreational shooting sports sites in the operating plans. Site hours would be posted at the site and on the agency’s website and would depend on time of year and type of use. Flexibility in operating times are needed to appropriately enforce times of use.

Supplementary Rule 9 would prohibit climbing on buildings or structures, unless authorized, to protect public safety.

Supplementary Rule 10 would limit the use of targets, as established through the operating plan and as posted at each site, for the purpose of managing shooting related waste.

Supplementary Rule 11 would restrict the public from impeding recreational target shooting and provide the ability to manage sites for their intended use.

Supplementary Rule 12 would limit the use of ammunition as established through the operating plan, and as posted at each site and on the agency’s website, for the purpose of promoting safe shooting practices and managing shooting related waste.

Supplementary Rule 13 would prohibit access into the Hazardous Exclusion Areas to avoid projectile or ricochet concerns and promote public safety. The Hazardous Exclusion Areas will be posted with appropriate signage.

Supplementary Rule 14 would restrict the direction of firearm discharge into appropriate backstops to reduce resource damage and to protect public, contractor, volunteer, and BLM employee safety.

Supplementary Rule 15 would establish site capacity user limits through the operating plan and as posted. The limiting of the number of users would provide for user safety.

Supplementary Rule 16 would align with a local shooting range policy by stating that children under the age of 16 must be accompanied by a responsible adult within the recreational shooting sports site for the purpose of promoting safety.

IV. Procedural Matters

Executive Orders 12866 and 13563, Regulatory Planning and Review

These proposed supplementary rules are not a significant regulatory action and are not subject to review by the Office of Management and Budget under Executive Order 12866. These proposed supplementary rules would not have an effect of \$100 million or more on the economy.

These proposed supplementary rules would establish rules for recreational shooting sports sites to protect public health and safety and avoid user conflicts. These proposed supplementary rules would not adversely affect, in a material way, the economy; productivity; competition; jobs; the environment; public health or safety; or state, local, or tribal governments or communities. These proposed supplementary rules would not create a serious inconsistency or otherwise interfere with an action taken or planned by another agency. These proposed supplementary rules do not alter the budgetary effects of entitlements, grants, user fees, or loan programs or the right or obligations of their recipients, nor do these rules raise novel legal or policy issues. These proposed supplementary rules protect resources and human health and safety, and enable BLM law enforcement personnel to efficiently enforce, where appropriate, regulations pertaining to unlawful usage of a recreation area (or site) in a manner consistent with state and local laws, ordinances, regulations, or orders on public lands.

Clarity of the Supplementary Rules

Executive Order 12866 requires each agency to write regulations that are simple and easy to understand. The BLM invites your comments on how to make these proposed supplementary rules easier to understand, including answers to questions such as the following:

- (1) Are the requirements in the proposed supplementary rules clearly stated?
- (2) Do the proposed supplementary rules contain technical language or jargon that interferes with their clarity?
- (3) Does the format of the proposed supplementary rules (grouping and order of sections, use of headings, paragraphing, etc.) aid or reduce their clarity?
- (4) Would the proposed supplementary rules be easier to understand if they were divided into more (but shorter) sections?
- (5) Is the description of the proposed supplementary rules in the

SUPPLEMENTARY INFORMATION section of this preamble helpful to your understanding of the proposed supplementary rules? How could this description be more helpful in making the proposed supplementary rules easier to understand?

Please send any comments you have on the clarity of the proposed supplementary rules to an address specified in the **ADDRESSES** section.

National Environmental Policy Act (NEPA)

The BLM prepared an EA and found that these proposed supplementary rules do not constitute a major Federal action significantly affecting the quality of the human environment under Section 102(2)(C) of the National Environmental Policy Act of 1969 (NEPA), 42 U.S.C. 4332(2)(C). The BLM completed a 30-day scoping period and a 15-day public review of the draft EA in 2019.

The BLM completed the EA to analyze the construction and operation of the recreational shooting sports sites which included the proposed supplementary rules. The Decision Record for this EA was signed in January 2020. The BLM has placed the EA and associated documents in the administrative record at the addresses specified in the **ADDRESSES** section.

Regulatory Flexibility Act

Congress enacted the Regulatory Flexibility Act of 1980 (RFA), as amended, 5 U.S.C. 601, *et seq.*, to ensure that Government regulations do not unnecessarily or disproportionately burden small entities. The RFA requires a regulatory flexibility analysis if a rule has a significant economic impact, either detrimental or beneficial, on a substantial number of small entities. These proposed supplementary rules do not pertain specifically to commercial or governmental entities of any size but contain rules to protect the health and safety of the public and reduce user conflicts on public lands within the Hassayampa and Lower Sonoran Field Office areas. Therefore, the BLM has determined, under the RFA, that these proposed supplementary rules do not have a significant economic impact on a substantial number of small entities.

Small Business Regulatory Enforcement Fairness Act

These proposed supplementary rules do not constitute “major rules” as defined at 5 U.S.C. 804(2). These proposed supplementary rules are intended to manage behavior and establish rules of conduct in developed recreation areas (or sites) within the

Hassayampa and Lower Sonoran Field Office areas. These proposed supplementary rules would have no effect on business, commercial, or industrial use of the public lands.

Unfunded Mandates Reform Act

These proposed supplementary rules do not impose an unfunded mandate on state, local, or tribal governments or the private sector of more than \$100 million per year, nor do the proposed supplementary rules have a significant or unique effect on state, local, or tribal governments or the private sector. The proposed supplementary rules do not require anything of state, local, or tribal governments. Therefore, the BLM is not required to prepare a statement containing the information required by the Unfunded Mandates Reform Act (2 U.S.C. 1531, *et seq.*).

Executive Order 12630, Governmental Actions and Interference With Constitutionally Protected Property Rights (Takings)

These proposed supplementary rules do not represent a government action capable of interfering with constitutionally protected property rights. These proposed supplementary rules do not address property rights in any form and do not cause the impairment of anyone’s property rights. Therefore, the BLM has determined that these proposed supplementary rules do not cause a taking of private property or require further discussion of takings implications under this executive order.

Executive Order 13132, Federalism

These proposed supplementary rules would not have a substantial, direct effect on the states, on the relationship between the Federal government and the states, or on the distribution of power and responsibilities among the various levels of government. These proposed supplementary rules apply in only one state, Arizona, and do not address jurisdictional issues involving the Arizona State government. Therefore, in accordance with Executive Order 13132, the BLM has determined that these proposed supplementary rules do not have sufficient federalism implications to warrant preparation of a Federalism Assessment.

Executive Order 12988, Civil Justice Reform

Under Executive Order 12988, the BLM has determined that these proposed supplementary rules would not unduly burden the judicial system and that the rules meet the requirements of sections 3(a) and 3(b)(2) of Executive Order 12988.

Executive Order 13175, Consultation and Coordination With Indian Tribal Governments

In accordance with Executive Order 13175, the BLM has found that these proposed supplementary rules do not include policies that have tribal implications and would have no bearing on trust lands or on lands for which title is held in fee status by Indian tribes or U.S. Government-owned lands managed by the Bureau of Indian Affairs. Since these proposed supplementary rules do not change BLM policy and do not involve Indian reservation lands or resources, we have determined that the government-to-government relationships remain unaffected. These proposed supplementary rules affect developed recreation areas (or sites), including recreational shooting sports sites on public lands managed by the BLM Hassayampa and Lower Sonoran Field Offices.

Executive Order 13352, Facilitation of Cooperative Conservation

Under Executive Order 13352, the BLM has determined that these proposed supplementary rules would not impede the facilitation of cooperative conservation. These proposed supplementary rules would take appropriate account of, and consider the interests of, persons with ownership or other legally recognized interests in land or other natural resources; properly accommodate local participation in the Federal decision-making process; and provide that the programs, projects, and activities are consistent with protecting public health and safety.

Information Quality Act

In developing these proposed supplementary rules, the BLM did not conduct or use a study, experiment, or survey requiring peer review under the Information Quality Act (Section 515 of Pub. L. 106–554).

Executive Order 13211, Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use

The proposed supplementary rules do not constitute a significant energy action since they have no impact on energy supplies, production, or consumption, and have no connection with energy policy.

Paperwork Reduction Act

These proposed supplementary rules do not contain information collection requirements that the Office of Management and Budget must approve

under the Paperwork Reduction Act, 44 U.S.C. 3501, *et seq.*

Proposed Supplementary Rules

Author

The principal author of these proposed supplementary rules is Tyler Lindsey, Project Manager, Phoenix District Office, Bureau of Land Management.

For the reasons stated in the preamble, and under the authority for supplementary rules at 43 U.S.C. 1740 and 43 CFR 8365.1–6, the Arizona State Director, BLM, proposes to establish the following supplementary rules for all BLM developed recreation sites and areas, in addition to supplementary rules specific to recreational shooting sports sites, within the Phoenix District boundary, Arizona, to read as follows:

Definitions

Developed recreation sites and areas, as defined by 43 CFR 8360.0–5(c), means sites and areas that contain structures of capital improvements primarily used by the public for recreation purposes.

Hazardous Exclusion Area means a designated area within a recreational shooting sports site where errant/ ricochet projectiles could potentially land.

Recreational shooting sports site means a developed recreation site or area meeting the definition found at 43 CFR 8360.0–5(c) and where the primary purpose is recreational shooting.

Rules and Prohibited Acts Within Developed Recreation Sites and Areas

(1) You must not block, restrict, place signs, create a hazardous condition, or otherwise interfere with the use of a road, gate, or other legal access to and/ or through a developed recreation site or area boundary.

(2) You must pick up and properly dispose of pet excrement.

(3) You must not engage in disorderly conduct as described in Arizona Revised Statute 13–2904.

(4) You must not shoot at wildlife, livestock, or vegetation.

Rules and Prohibited Acts Within Recreational Shooting Sports Sites

In addition to the preceding supplementary rules, the following rules would apply within a recreational shooting sports site:

(5) You must not leave any personal property unattended within a site.

(6) You must not discharge a firearm while an individual is past the designated firing line.

(7) You must not use, possess, consume, or be under the influence of alcohol or controlled substances.

(8) You must not use a site during the restricted times outlined in the operating plan, posted at each site, and listed on the agency's website.

(9) You must not climb on any buildings or structures, occupied or unoccupied.

(10) You must only use authorized targets as outlined in the operating plan and as posted at each site.

(11) You must not enter a site for any purpose other than activities associated with recreational shooting.

(12) You must only use authorized ammunition as outlined in the operating plan, posted at each site, and listed on the agency's website.

(13) You must not enter the Hazardous Exclusion Areas.

(14) You must discharge a firearm only from a designated firing line and into developed backstops and berms.

(15) You must not exceed the maximum occupancy posted at each site.

(16) Children under 16 must be accompanied by a responsible adult while in a site.

Exemptions

The following persons would be exempt from the proposed supplementary rules: Any Federal, state, local, and/or military employee acting within the scope of their duties; members of any organized rescue or fire-fighting force performing an official duty; and persons, agencies, municipalities, or companies holding an existing special-use permit or written authorization from an authorized officer and operating within the scope of their permit or authorization.

Penalties

On public lands under section 303(a) of the Federal Land Policy and Management Act of 1976 (43 U.S.C. 1733(a) and 43 CFR 8360.0–7), any person who violates any of these supplementary rules may be tried before a United States Magistrate and fined no more than \$1,000, imprisoned for no more than 12 months, or both. Such violations may also be subject to enhanced fines provided for by 18 U.S.C. 3571.

Raymond Suazo,

Bureau of Land Management, State Director, Arizona.

BILLING CODE 4310–32–P

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Part 20

[GN Docket No. 13–111, DA 20–791, FRS 16977]

Promoting Technological Solutions To Combat Contraband Wireless Device Use in Correctional Facilities

AGENCY: Federal Communications Commission.

ACTION: Proposed rule.

SUMMARY: In this document, the Wireless Telecommunications Bureau (Bureau) seeks to refresh the record on the proposals and questions raised in the Further Notice of Proposed Rulemaking (*Further Notice*) in GN Docket No. 13–111, FCC 17–25, released on March 24, 2017, and invite additional comment on the successes and ongoing challenges of currently employed solutions and those under further review and development.

DATES: Interested parties may file comments on or before September 16, 2020; and reply comments on or before October 1, 2020.

ADDRESSES: You may submit comments, identified by GN Docket No. 13–111, by any of the following methods:

- *Electronic Filers:* Comments may be filed electronically using the internet by accessing the ECFS: <http://www.fcc.gov/ecfs/>.

- *Paper Filers:* Parties who choose to file by paper must file an original and one copy of each filing. If more than one docket or rulemaking number appears in the caption of this proceeding, filers must submit two additional copies for each additional docket or rulemaking number.

Filings can be sent by commercial overnight courier, or by first-class or overnight U.S. Postal Service mail. All filings must be addressed to the Commission's Secretary, Office of the Secretary, Federal Communications Commission.

- Commercial overnight mail (other than U.S. Postal Service Express Mail and Priority Mail) must be sent to 9050 Junction Drive, Annapolis Junction, MD 20701.

- U.S. Postal Service first-class, Express, and Priority mail must be addressed to 445 12th Street SW, Washington, DC 20554.

- Effective March 19, 2020, and until further notice, the Commission no longer accepts any hand or messenger delivered filings. This is a temporary measure taken to help protect the health and safety of individuals, and to mitigate the transmission of COVID–19.

See FCC Announces Closure of FCC Headquarters Open Window and Change in Hand-Delivery Policy, Public Notice, DA 20–304 (March 19, 2020), <https://www.fcc.gov/document/fcc-closes-headquarters-open-window-and-changes-hand-delivery-policy>.

People with Disabilities. To request materials in accessible formats for people with disabilities (Braille, large print, electronic files, audio format), send an email to fcc504@fcc.gov or call the Consumer and Governmental Affairs Bureau at 202–418–0530 (voice), 202–418–0432 (tty).

FOR FURTHER INFORMATION CONTACT: Melissa Conway, Melissa.Conway@fcc.gov, of the Wireless Telecommunications Bureau, Mobility Division, (202) 418–2887.

SUPPLEMENTARY INFORMATION: This is a summary of the Bureau’s Public Notice in Docket No. 13–111, DA 20–791, released July 28, 2020. The complete text of the document is available for viewing via the Commission’s ECFS website by entering the docket number, GN Docket No. 13–111.

Ex Parte Rules

This proceeding shall be treated as a “permit-but-disclose” proceeding in accordance with the Commission’s *ex parte* rules. Persons making *ex parte* presentations must file a copy of any written presentation or a memorandum summarizing any oral presentation within two business days after the presentation (unless a different deadline applicable to the Sunshine period applies). Persons making oral *ex parte* presentations are reminded that memoranda summarizing the presentation must: (1) List all persons attending or otherwise participating in the meeting at which the *ex parte* presentation was made; and (2) summarize all data presented and arguments made during the presentation.

If the presentation consisted in whole or in part of the presentation of data or arguments already reflected in the presenter’s written comments, memoranda, or other filings in the proceeding, the presenter may provide citations to such data or arguments in his or her prior comments, memoranda, or other filings (specifying the relevant page and/or paragraph numbers where such data or arguments can be found) in lieu of summarizing them in the memorandum. Documents shown or given to Commission staff during *ex parte* meetings are deemed to be written *ex parte* presentations and must be filed consistent with section 1.1206(b) of the Commission’s rules. In proceedings

governed by section 1.49(f) of the rules or for which the Commission has made available a method of electronic filing, written *ex parte* presentations and memoranda summarizing oral *ex parte* presentations, and all attachments thereto, must be filed through the electronic comment filing system available for that proceeding, and must be filed in their native format (e.g., .doc, .xml, .ppt, searchable .pdf). Participants in this proceeding should familiarize themselves with the Commission’s *ex parte* rules.

In the document, the Bureau seeks to refresh the record in this proceeding that addresses the serious threat of contraband wireless device use by inmates in correctional facilities. Developing a more comprehensive and current record will facilitate an evaluation of potential next steps necessary to eliminate this challenging public safety problem. Through its March 2017 *Further Notice* (82 FR 22780) and Report and Order (*R&O*), the Commission streamlined the authorization process for contraband wireless device interdiction systems in correctional facilities by eliminating certain filing requirements and providing for immediate approval of lease applications filed to operate these systems. In the *Further Notice*, the Commission sought further comment on a process for wireless providers to disable wireless devices identified as contraband, on whether to require advanced notice of wireless provider network changes to solutions providers to maintain system effectiveness, and on the viability of other technological solutions.

Since the release of the *R&O* and *Further Notice*, the Commission has conducted substantial outreach and encouraged stakeholder cooperation in deploying effective technologies. Evolving wireless technologies and wireless provider networks have necessitated adjustments in the deployment and maintenance of contraband interdiction systems. Stakeholders, including wireless providers, contraband device interdiction solutions providers, and corrections officials, have gained meaningful experience using various tools to combat contraband wireless devices. The Bureau’s goal is to leverage these experiences to better facilitate the nationwide deployment of legal and cost-effective contraband interdiction systems. The Bureau encourages commenters to be as specific as possible when addressing the below issues.

First, the Bureau seeks to refresh the record on all aspects of the proposed Commission process that would require

the disabling of contraband wireless devices by wireless providers following identification. As contraband wireless device use in correctional facilities continues to be a threat to public safety, despite continued voluntary efforts to mitigate the problem, would adoption of a rule-based disabling approach be a more effective, wide-scale solution? The Bureau seeks additional comment on the specifics of the proposed disabling rules. CTIA, the Wireless Association (CTIA), recently reported to the Commission that it has been working successfully, along with its members companies, on processes in various states using a model court order, and that wireless providers are in fact ceasing service to contraband devices pursuant to court orders they have obtained. Therefore, the Bureau also seeks additional comment on specific successes and failures associated with obtaining and executing court orders in the various states where this approach has been pursued. How many contraband devices have been disabled pursuant to court orders, and in what jurisdictions? Has the process been overly burdensome or costly and are there jurisdictions where court orders cannot be obtained and why not? CTIA also claims that the approach of disabling contraband devices added to the Stolen Phone Database is working. The Bureau invites comment from all stakeholders on the effectiveness of using this database to disable contraband wireless devices and render them unusable across multiple wireless provider networks. The Bureau would welcome comment on specific advantages or disadvantages associated with this approach.

Second, the Bureau seeks to refresh the record on requiring notification to solutions providers of wireless provider system technical changes, recognizing that lack of timely notice of wireless provider system upgrades can render contraband interdiction systems ineffective. What is the current state of communications between wireless providers seeking to upgrade networks and solutions providers that must react to network changes? Have increased coordination efforts substantially improved the ability of solutions providers to ensure effective contraband interdiction system deployments, or is Commission action appropriate to facilitate enhanced communications? CTIA indicates it has developed a Managed Access System Stakeholder Checklist that emphasizes the need for vendors, corrections officials, and wireless providers to establish points of contact to enhance stakeholder

communication and coordination on the deployment of future spectrum bands. Are stakeholders using the Checklist and taking into consideration, in particular, the technical recommendations? If not, why not? Are financial considerations a factor? Are there additional issues that should be added to the Checklist, and is there any action the Commission could take to facilitate its implementation? Would further standardization of best practices involving notification of network changes be beneficial? If so, what type of notice, and what additional best practices should be included? Relatedly, the Bureau also seeks comment on the ability of wireless providers to configure their networks and make system changes to avoid the need for major contraband interdiction system upgrades. If these network configurations are achievable, the Bureau seeks comment on whether wireless providers would, as a matter of best practices, implement them in areas proximate to correctional facilities or, alternatively, compensate solutions providers to make contraband interdiction systems upgrades required to adjust to wireless provider network technical changes that significantly impact contraband interdiction system effectiveness. The Bureau understands that this approach has been adopted internationally and seeks specific comment on whether it has been successful.

Third, the Bureau invites further comment on other technological solutions addressed in the *Further Notice*, including quiet zones, network-based solutions, and beacon technology. The Bureau seeks to refresh the record on any developments for these and any other technological solutions, and the regulatory steps the Commission should take to facilitate the development and deployment of these new technologies. The Bureau requests focused comment on the state of carrier network solutions, or the concept of “geofencing” in the contraband wireless device context. The Bureau seeks to update the record on whether there have been technical developments making such an approach a feasible solution to identifying the location of, and ultimately terminating, contraband wireless devices. The Bureau seeks comment on whether the Commission should require wireless providers to not exceed a specific signal strength in the proximity of a correctional facility, or to minimize or remove service-quality signals entirely in the proximity of a facility. For example, should the Commission require a wireless provider to treat the

walls of a correctional facility (or some subset of such facilities) the same as the edge of the license areas? The Bureau also seeks to refresh the record on what network modifications, if any, would be required to track and identify contraband devices on carrier networks to a sufficient degree of location accuracy, and at what cost. Should the Commission require wireless carriers to use existing and future network capabilities to accomplish detection and disabling of contraband devices? What advances in location technology could enable carriers to accurately locate contraband devices in correctional facilities for disabling? Are there technical, privacy, legal, or other considerations that are relevant to this approach?

Fourth, the Bureau notes that the evolution of wireless technology from 2G to widespread 3G/4G and ultimately 5G deployments requires continued managed access system upgrades to maintain long-term effectiveness. The Bureau understands that many managed access system solutions depend largely on forcing contraband devices from 3G/4G to 2G services, which carriers are rapidly phasing out, and current network security issues can prevent these systems from capturing calls made from 5G phones. In April 2019, CTIA and the Association of State Correctional Administrators submitted a Task Force Status Report that described next generation managed access system solutions as “MAS Evolved.” The report recommended that wireless providers establish roaming agreements with solutions providers for network security reasons to enable newer generation services on managed access system networks. The Bureau understands that a key feature of a MAS Evolved solution involves use of roaming agreements allowing a MAS Evolved system to block calls by preventing authentication on the network, and enabling newer generation services on managed access system networks where calls are captured without forcing the devices down to 2G.

The Bureau seeks comment on how this approach can be more effective, less complex, easier to manage, and less costly to implement when compared to a more traditional managed access system deployment. If full roaming partners, can solutions providers leverage their small cell deployments to create a virtual fence and enhance the ability to identify and block contraband phones? Would this approach lead to a greater diversity in types and areas of contraband interdiction system deployments? What steps can the Commission take to facilitate the

widespread implementation of MAS Evolved as a solution? The Bureau seeks comment on how the wireless providers are working with vendors to promote MAS Evolved and how the Commission can support these efforts. Would a standardized template roaming agreement improve the effectiveness of MAS deployments and encourage expansion? The Bureau seeks focused comment on the status of the development and execution of roaming agreements in order to promote MAS Evolved solutions. The Bureau requests that commenters be specific regarding how many states and how many correctional facilities have been involved in testing or deploying MAS Evolved solutions. In addition to the execution of roaming agreements, are there other approaches that could be developed by the wireless providers and/or the vendors to add features or services and help defray the cost of MAS deployments and operations? Are there specific approaches or other examples of which the Commission should be aware? How can the Commission further support these efforts? Are there specific steps the Commission can take to help coordinate stakeholder efforts? Are there other voluntary actions that stakeholders have taken in order to promote MAS Evolved?

Fifth, given the development of newer technologies and applications for addressing contraband device use, the Bureau seeks comment on whether the leasing rules adopted in 2017 remain effective in facilitating spectrum use agreements between wireless providers and solutions providers. Should the Commission revise these rules or implement further streamlining initiatives in its secondary markets processes? The Bureau recognizes that, for budgetary reasons, some correctional facilities are seeking more mobile solutions with less reliance on permanent fixed deployments. Should the Commission amend its rules or update its licensing policies/databases to better accommodate these newer solutions and if so, how?

Sixth, the Bureau notes that the Commission has not pursued regulatory action on jamming technologies by state or local entities given the prohibition against willful or malicious interference in section 333 of the Communications Act, as amended. The Bureau recognizes that limited testing of jamming technologies has occurred with federal oversight, consistent with the statute, and the Commission continues to support efforts to obtain more data on this type of solution when tested in authorized environments. As a

substantial number of corrections officials continue to seek a “jamming” solution or its equivalent, the Bureau does seek comment, however, on the potential for wireless providers to voluntarily deploy base stations in the vicinity of a correctional facility that would, in effect, result in the blocking of their own signals in all or part of a correctional facility, thereby not resulting in a violation of section 333.

Would such a solution be feasible in certain areas of the country and at what cost? Wireless providers presumably have all relevant information about the radiofrequency signal environment surrounding a correctional facility they serve. Accordingly, would this type of wireless provider-driven approach alleviate concerns regarding difficulties in coordinating communications with third party solutions providers and the

associated need for contraband interdiction system upgrades?

Federal Communications Commission.

Amy Brett,

Chief of Staff, Competition and Infrastructure Policy Division, Wireless Telecommunications Bureau.

DEPARTMENT OF AGRICULTURE

Forest Service

Forest Service Handbook 5309.11, Chapter 30 Law Enforcement: Public Notice and Comment for Closures of National Forest System Lands to Hunting, Fishing, or Recreational Shooting

AGENCY: Forest Service, Agriculture (USDA).

ACTION: Notice of availability for public comment.

SUMMARY: The Department of Agriculture (USDA), United States Forest Service (Forest Service), is issuing directives implementing the public notice and comment requirements for issuance of orders that temporarily or permanently close National Forest System lands to hunting, fishing, or recreational shooting, except in an emergency.

DATES: Comments must be received in writing by September 16, 2020.

ADDRESSES: The proposed directive may be reviewed at and comments may be submitted electronically to <https://cara.ecosystem-management.org/Public/CommentInput?project=ORMS-2312>. Written comments may be mailed to Jamie Schwartz, National Program Manager, Shooting Sports, Recreation, Heritage, and Volunteer Resources, 201 14th Street SW, Washington, DC 20024. All timely received comments, including names and addresses, will be placed in the record and will be available for public inspection at <https://cara.ecosystem-management.org/Public/ReadingRoom?project=ORMS-2312>.

FOR FURTHER INFORMATION CONTACT: Jamie Schwartz, National Program Manager, Shooting Sports, 202–205–1589 or james.schwartz@usda.gov. Individuals using telecommunication devices for the deaf may call the Federal Information Relay Service at 800–877–

8339 between 8 a.m. and 8 p.m. Eastern Time, Monday through Friday.

SUPPLEMENTARY INFORMATION: The Forest Service has determined that the definition of emergency contained in this proposed directive formulates a standard, criteria, or guideline applicable to Forest Service programs and is therefore subject to public notice and comment under 36 CFR 216. Newly enacted section 4103 of the John D. Dingell, Jr., Conservation, Management, and Recreation Act, Public Law 116–9, Title IV (section 4103), requires the Forest Service to provide advance notice of an opportunity for public comment as well as an opportunity for public comment before permanently or temporarily closing any National Forest Service lands to hunting, fishing, or recreational shooting, except in an emergency. The Forest Service is issuing directives in Law Enforcement and Investigations Handbook 5309.11, Chapter 30, that re-designate existing section 34 as section 35 and add a new section 34 to implement section 4103. New section 34 defines the term “emergency” for purposes of section 4103. The Forest Service has determined that the definition of “emergency” contained in the directives formulates a standard, criterion, or guideline applicable to a Forest Service program and is therefore publishing that definition for public comment under 36 CFR part 216. The Forest Service is seeking public comment only on the definition of “emergency”. The Forest Service has determined that the remaining provisions in the directive do not formulate standards, criteria, or guidelines applicable to a Forest Service program and therefore are not subject to the notice and comment requirements under 36 CFR 216.

After the public comment period closes, the Forest Service will consider timely comments that are within the scope of the proposed definition of emergency in the development of the final directive. A notice of the final directive, including a response to timely comments, will be posted on the Forest Service’s web page at <https://www.fs.fed.us/about-agency/>

regulations-policies/comment-on-directives.

Tina Johnna Terrell,

Associate Deputy Chief, National Forest System.

BILLING CODE 3411–15–P

COMMISSION ON CIVIL RIGHTS

Notice of Public Meeting of the Massachusetts Advisory Committee

AGENCY: Commission on Civil Rights.

ACTION: Announcement of meeting.

SUMMARY: Notice is hereby given, pursuant to the provisions of the rules and regulations of the U.S. Commission on Civil Rights (Commission), and the Federal Advisory Committee Act (FACA), that a meeting of the Massachusetts Advisory Committee to the Commission will convene by conference call on Wednesday, August 26, 2020 at 12:30 p.m. (EDT). The purpose of the meeting is to continue its work on water accessibility in Massachusetts.

DATES: Wednesday, August 26, 2020 at 12:30 p.m. (EDT).

Public Call-In Information: 1–800–353–6461; conference ID: 4756247.

FOR FURTHER INFORMATION CONTACT: Evelyn Bohor at ero@uscrr.gov or by phone at 202–376–7533.

SUPPLEMENTARY INFORMATION: Interested members of the public may listen to the discussion by calling the following toll-free conference call-in numbers: 1–800–353–6461; conference ID: 4756247. Please be advised that before placing them into the conference call, the conference call operator will ask callers to provide their names, their organizational affiliations (if any), and email addresses (so that callers may be notified of future meetings). Callers can expect to incur charges for calls they initiate over wireless lines, and the Commission will not refund any incurred charges. Callers will incur no charge for calls they initiate over land-line connections to the toll-free conference call-in number.

Persons with hearing impairments may also follow the discussion by first calling the Federal Relay Service at 1–800–877–8339 and providing the operator with the toll-free conference

call-in numbers: 1-800-353-6461; conference ID: 4756247.

Members of the public are invited to make statements during the open comment period of the meeting or submit written comments. The comments must be received in the regional office approximately 30 days after each scheduled meeting. Written comments may be emailed to Evelyn Bohor at ero@usccr.gov. Persons who desire additional information may contact the Eastern Regional Office at (202) 376-7533.

Records and documents discussed during the meeting will be available for public viewing as they become available at this FACA link, click the "Meeting Details" and "Documents" links. Records generated from this meeting may also be inspected and reproduced at the Eastern Regional Office, as they become available, both before and after the meetings. Persons interested in the work of this advisory committee are advised to go to the Commission's website, www.usccr.gov, or to contact the Eastern Regional Office at the above phone numbers, email or street address.

Agenda: Wednesday, August 26, 2020 at 12:30 p.m. (EDT)

1. Welcome and Open
2. Web Briefing on Water Project
3. Open Comment
4. Next Steps
5. Adjourn

Dated: August 11, 2020.

David Mussatt,

Supervisory Chief, Regional Programs Unit.

BILLING CODE P

COMMISSION ON CIVIL RIGHTS

Notice of Public Meeting of the Missouri Advisory Committee To Discuss the Pending Briefings on the State's Response to the Pandemic Caused by the Novel Corona Virus Known as COVID-19

AGENCY: U.S. Commission on Civil Rights.

ACTION: Announcement of meeting.

SUMMARY: Notice is hereby given, pursuant to the provisions of the rules and regulations of the U.S. Commission on Civil Rights (Commission) and the Federal Advisory Committee Act that the Missouri Advisory Committee (Committee) will hold a meeting on Thursday, August 27, 2020 at 12:00 p.m. (Central) for the purpose of discussing the proposal for the study on Covid-19 and voting.

DATES: The meeting will be held on Thursday, August 27, 2020 at 12:00 p.m. (Central).

Public Call Information: Dial: (800) 353-6461, Conference ID: 5004921.

FOR FURTHER INFORMATION CONTACT: David Barreras, DFO, at dbarreras@usccr.gov or 312-353-8311.

SUPPLEMENTARY INFORMATION: Members of the public can listen to the discussion. This meeting is available to the public through the following call-in number: 800-353-6461, conference ID: 7139252. Any interested member of the public may call this number and listen to the meeting. An open comment period will be provided to allow members of the public to make a statement as time allows. The conference call operator will ask callers to identify themselves, the organization they are affiliated with (if any), and an email address prior to placing callers into the conference room. Callers can expect to incur regular charges for calls they initiate over wireless lines, according to their wireless plan. The Commission will not refund any incurred charges. Callers will incur no charge for calls they initiate over land-line connections to the toll-free telephone number. Persons with hearing impairments may also follow the proceedings by first calling the Federal Relay Service at 1-800-977-8339 and providing the Service with the conference call number and conference ID number.

Members of the public are also entitled to submit written comments; the comments must be received in the regional office within 30 days following the meeting. Written comments may be mailed to the Midwestern Regional Office, U.S. Commission on Civil Rights, 230 S Dearborn Street, Suite 2120, Chicago, IL 60604. They may also be faxed to the Commission at (312) 353-8324 or emailed to David Barreras at dbarreras@usccr.gov. Persons who desire additional information may contact the Midwestern Regional Office at (312) 353-8311.

Records generated from this meeting may be inspected and reproduced at the Midwestern Regional Office, as they become available, both before and after the meeting. Records of the meeting will be available via www.facadatabase.gov under the Commission on Civil Rights, Missouri Advisory Committee link (<https://facadatabase.gov/committee/committee.aspx?cid=258&aid=17>). Persons interested in the work of this Committee are directed to the Commission's website, <http://www.usccr.gov>, or may contact the

Midwestern Regional Office at the above email or street address.

BILLING CODE P

CIVIL RIGHTS COMMISSION

Sunshine Act Meeting Notice

AGENCY: United States Commission on Civil Rights.

ACTION: Notice of Commission public business meeting.

DATES: Friday August 21, 2020, 12 p.m. ET.

FOR FURTHER INFORMATION CONTACT:

Zakee Martin: 202-376-7700;
publicaffairs@usccr.gov.

ADDRESSES: Meeting to take place by telephone and open to the public by telephone: 1-877-238-4695, Conference ID 873-1601. Computer assisted real-time transcription (CART) will be provided. The web link to access CART (in English) on Friday August 21, 2020, is <https://www.streamtext.net/player?event=USCCR>. Please note that CART is text-only translation that occurs in real time during the meeting and is not an exact transcript.

Meeting Agenda

- I. Approval of Agenda
- II. Closed Session

A closed session may occur during this business meeting for an unlimited duration.

Entering Closed Session: The telephone line will remain open while the Commissioners meet in closed session. If you enter the Commission meeting during the closed session, the telephone operator will inform you of the Commission meeting status. Announcements will be made by the telephone operator periodically every 5 to 7 minutes. An announcement will be made at the end of the closed session announcing the reconvening of the Commission meeting and providing the time the meeting will resume.

- III. Business Meeting

- A. Presentation by Diane Citrino, Chair of Ohio Advisory Committee on the Committee's report, *Education Funding and Civil Rights*

in Ohio

- B. Presentation by Alvina Earnhart, Chair of Colorado Advisory Committee on the Committee's report, *Citizenship Delayed: Civil Rights and Voting Rights Implications of the Backlog in Citizenship and Naturalization Applications*
- C. Discussion and vote on Commission Advisory Committees
- Vermont Advisory Committee
 - Idaho Advisory Committee
 - Kansas Advisory Committee
- D. Discussion and vote on the Commission's report, *Navigating Voting During the COVID-19 Pandemic: Considerations in Access for Minority Voters*
- E. Discussion and vote on amendment to Administrative Instruction 5-9, Advisory Committee Member Conduct Policy
- F. Discussion and vote on Commission project planning for Fiscal Years 2021 and 2022
- G. Discussion and vote on Commission statement on the passing of C.T. Vivian
- H. Management and Operations
- Staff Director's Report
- III. Adjourn Meeting.

Dated: August 13, 2020.

BILLING CODE P

DEPARTMENT OF COMMERCE

Bureau of Industry and Security

Agency Information Collection Activities; Submission to the Office of Management and Budget (OMB) for Review and Approval; Comment Request; Additional Protocol to the U.S.—International Atomic Energy Agency Safeguards

AGENCY: Bureau of Industry and Security, Commerce.

ACTION: Notice of Information Collection, request for comment.

SUMMARY: The Department of Commerce, in accordance with the Paperwork Reduction Act of 1995 (PRA), invites the general public and other Federal agencies to comment on proposed, and continuing information collections, which helps us assess the impact of our information collection requirements and minimize the public's reporting burden. The purpose of this notice is to allow for 60 days of public comment preceding submission of the collection to OMB.

DATES: To ensure consideration, comments regarding this proposed information collection must be received on or before October 16, 2020.

ADDRESSES: Interested persons are invited to submit comments by email to Mark Crace, IC Liaison, Bureau of Industry and Security, at mark.crace@bis.doc.gov or to PRAcomments@doc.gov. Please reference OMB Control Number 0694-0135 in the subject line of your comments. Do not submit Confidential Business Information or otherwise sensitive or protected information.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or specific questions related to collection activities should be directed to Mark Crace, IC Liaison, Bureau of Industry and Security, phone 202-482-8093 or by email at mark.crace@bis.doc.gov.

SUPPLEMENTARY INFORMATION:

I. Abstract

The Additional Protocol requires the United States to submit declaration forms to the International Atomic Energy Agency (IAEA) on a number of commercial nuclear and nuclear-related items, materials, and activities that may be used for peaceful nuclear purposes, but also would be necessary elements for a nuclear weapons program. These forms provides the IAEA with information about additional aspects of the U.S. commercial nuclear fuel cycle, including: Mining and milling of nuclear materials; buildings on sites of facilities selected by the IAEA from the U.S. Eligible Facilities List; nuclear-related equipment manufacturing, assembly, or construction; import and export of nuclear and nuclear-related items and materials; and research and development. The Protocol also expands IAEA access to locations where these activities occur in order to verify the form data.

II. Method of Collection

Submitted electronically or in paper form.

III. Data

OMB Control Number: 0694-0135.
Form Number(s): AP-1 through AP-17, and AP-A through AP-Q.

Type of Review: Regular submission, extension of a current information collection.

Affected Public: Business or other for-profit organizations.

Estimated Number of Respondents: 500.

Estimated Time per Response: 23 minutes to 6 hours.

Estimated Total Annual Burden Hours: 920.

Estimated Total Annual Cost to Public: 5,400.

Respondent's Obligation: Mandatory.
Legal Authority: Additional Protocol Implementation Act (Title II of Pub. L. 109-401), Executive Order (E.O.) 13458.

IV. Request for Comments

We are soliciting public comments to permit the Department/Bureau to: (a) Evaluate whether the proposed information collection is necessary for the proper functions of the Department, including whether the information will have practical utility; (b) Evaluate the accuracy of our estimate of the time and cost burden for this proposed collection, including the validity of the methodology and assumptions used; (c) Evaluate ways to enhance the quality, utility, and clarity of the information to be collected; and (d) Minimize the reporting burden on those who are to respond, including the use of automated collection techniques or other forms of information technology.

Comments that you submit in response to this notice are a matter of public record. We will include or summarize each comment in our request to OMB to approve this ICR. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you may ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Sheleen Dumas,

Department PRA Clearance Officer, Office of the Chief Information Officer, Commerce Department.

BILLING CODE 3510-33-P

DEPARTMENT OF COMMERCE

International Trade Administration

Notice of Request for Applicants for Appointment to the United States-Mexico Energy Business Council

June 24, 2020.

AGENCY: International Trade Administration, Department of Commerce.

ACTION: Notice.

SUMMARY: In 2016, agencies of the Governments of the United States and Mexico established the U.S.-Mexico Energy Business Council (the

“Council”). This notice announces 10 membership opportunities for appointment as U.S. representatives to the U.S. Section of the Council for a term beginning in October 2020 and ending in October 2022.

DATES: All applications must be received by the Office of North America by 5:00 p.m. Eastern Standard Time (EST) on September 16, 2020.

Applications received after that date will be considered only if vacancies have not already been filled.

ADDRESSES: Please submit applications to David Olsen, International Trade Specialist, Office of North America, U.S. Department of Commerce by email only at David.Olsen@trade.gov.

FOR FURTHER INFORMATION CONTACT: David Olsen, Office of North America, U.S. Department of Commerce, telephone: (202) 809-7233, email: David.Olsen@trade.gov.

SUPPLEMENTARY INFORMATION:

Background

The U.S. Department of Commerce, the U.S. Department of Energy, the Ministry of Economy of the United Mexican States, and the Ministry of Energy of the United Mexican States established the Council in March 2016. The objective of the Council is to bring together representatives of the respective energy industries of the United States and Mexico to discuss issues of mutual interest, particularly ways to strengthen the economic and commercial ties between energy industries in the two countries, and communicate actionable, non-binding recommendations to the U.S. and Mexican Governments. Since 2016, Council members have participated in public-private sector dialogue to highlight the importance of the United States-Mexico energy relationship, share priorities for the energy sector, and identify opportunities for collaboration. As part of this dialogue, Council members have drafted binational recommendations on topics of mutual interest, including energy security, cross-border energy projects, power planning and integration, workforce development, and the U.S.-Mexico-Canada Agreement (USMCA). For more information, please consult the Terms of Reference of the Council (copy and paste link into browser): [https://legacy.trade.gov/hled/documents/Signed%20US-MEX%20Energy%20Business%20Council%20Terms%20\(May%202016%20-%20English\).pdf](https://legacy.trade.gov/hled/documents/Signed%20US-MEX%20Energy%20Business%20Council%20Terms%20(May%202016%20-%20English).pdf).

Participation Requirements

The Department of Commerce is seeking applicants for membership on

the U.S. Section of the Council. Each applicant must be a senior representative (e.g., Chief Executive Officer, Vice President, Regional Manager, Senior Director, or holder of a similar position) of a U.S.-owned or controlled individual company, trade association, or private sector organization that is incorporated in and has its main headquarters in the United States and whose activities include a focus on the manufacture, production, commercialization, and/or trade in goods and services for the energy industry in Mexico. Each applicant must also be a U.S. citizen, or otherwise legally authorized to work in the United States and be able to travel to Mexico or locations in the United States to attend Council meetings, as well as U.S. Section and Committee meetings. In addition, the applicant may not be a registered foreign agent under the Foreign Agents Registration Act of 1938, as amended. Applications for membership in the U.S. Section by eligible individuals, including applications by current U.S. Section members for reappointment, will be evaluated on the following criteria:

- A demonstrated strong interest in Mexico and its economic development, including as applicable either through exports or investment.
- The ability to offer to the work of the Council a broad perspective and business experience specific to the energy industry.
- The ability to address cross-cutting issues that affect the entity’s entire energy industry sub-sector, including the oil and gas, renewable energy, electricity, nuclear energy, and energy efficiency.
- The ability to dedicate organizational resources to initiate and be responsible for activities in which the Council will be active.

U.S. Section members will also be selected on the basis of who is best qualified to carry out the objectives of the Council to:

- Promote increased two-way investment in the energy industry;
- Promote two-way trade in goods and services produced by and used in the energy industry;
- Promote the development of binational value chains in the production of goods and services in the energy sector;
- Promote the development of modern energy infrastructure and bolster energy efficiency and security;
- Foster an enabling environment for the rapid development, deployment, and integration of new energy industry technologies—including

- clean renewable energy technologies—into the marketplace;
- Improve competitiveness through innovation and entrepreneurship in the energy industry, to include the promotion of technology exchanges and research partnerships; and
- Partner in skills development to create solutions in training and education to address evolving energy industry workforce needs.

In selecting members of the U.S. Section, the U.S. Government selection committee, composed of representatives from the Department of Commerce and the Department of Energy, will attempt to ensure that the Section represents a cross-section of small, medium-sized, and large firms.

Fees and Expenses

U.S. Section members will receive no compensation for their participation in Council-related activities. They shall not be considered as special government employees. Individual U.S. Section members will be responsible for all travel and related expenses associated with their participation in the Council, including attendance at Committee and Section meetings. Only appointed U.S. Section members may participate in Council meetings; substitutes and alternates may not be designated. U.S. Section members are expected to serve for two-year terms but may be reappointed.

Timeframe for Recruitment and Application

To apply for membership in the U.S. Section, please submit the following information to David Olsen, International Trade Specialist, by email at David.Olsen@trade.gov by September 16, 2020:

- Name(s) and title(s) of the applicant;
- Name and address of the headquarters of the entity that employs the applicant;
- Location of incorporation or establishment;
- Size of the represented entity, in terms of annual sales and number of employees;
- As applicable, the size of the entity’s export trade, investment, and nature of operations or interest in Mexico; and
- A brief statement of why the applicant should be considered, including information about the applicant’s ability to initiate and be responsible for activities in which the Council will be active.

All applicants will be notified of whether they have been selected once the application window closes and

selection of U.S. Section members has been made. Applications received after September 16, 2020 will be considered only if vacancies have not already been filled.

Authority: The Act of February 14, 1903, as amended (15 U.S.C. 1512 *et seq.*; 15 U.S.C. 171 *et seq.*), to foster, promote, and develop the foreign and domestic commerce of the United States. Section 2 of Reorganization Plan no. 3 of 1979, which assigns to the Secretary of Commerce responsibility for major nonagricultural international trade functions of the United States, including export development.

Dated: August 4, 2020.

David Olsen,

International Trade Specialist, Office of North America.

BILLING CODE 3510-HE-P

DEPARTMENT OF COMMERCE

International Trade Administration

[C-570-011]

Crystalline Silicon Photovoltaic Products From the People's Republic of China: Notice of Court Decision Not in Harmony With Final Results of Countervailing Duty Administrative Review and Notice of Amended Final Results of Review

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: On August 4, 2020, the United States Court of International Trade (the Court) entered final judgment sustaining the final results of remand redetermination pursuant to court order by the Department of Commerce (Commerce) pertaining to the 2014–2015 countervailing duty (CVD) administrative review of the order on crystalline silicon photovoltaic products (solar products) from the People's Republic of China (China). Commerce is notifying the public that the final judgment in this case is not in harmony with Commerce's final results in the 2014–2015 administrative review of solar products from China, and that Commerce is amending the final results.

DATES: Applicable August 14, 2020.

FOR FURTHER INFORMATION CONTACT: Caitlin Monks, AD/CVD Operations, Office VII, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue

NW, Washington, DC 20230; telephone: (202) 482-2670.

SUPPLEMENTARY INFORMATION:

Background

On September 12, 2017, Commerce published its final results of the 2014–2015 administrative review of solar products.¹ Commerce reached affirmative determinations for mandatory respondent Changzhou Trina Solar Energy Co., Ltd. and its cross-owned affiliates (collectively, Trina Solar), as well as numerous other producers and exporters not selected for individual review. On November 30, 2018, the Court remanded aspects of the *Final Results* to Commerce for further consideration.² The Court remanded Commerce's determinations as regards to the Export Buyer's Credit Program and inclusion of Comtrade data in calculating the world market price for aluminum extrusions and solar glass.³ In its first remand redetermination, issued in April 2019,⁴ Commerce provided additional explanation and evidence for its determinations, but the Court continued to find them unsupported by substantial evidence and remanded them a second time.⁵

In its second remand redetermination, issued in February 2020,⁶ Commerce explained that, although it continues to believe that it is not possible to verify whether respondents used the Export Buyer's Credit Program without the cooperation of the Government of China (GOC), it found the program not used, under protest, to comply with the Court's order.⁷ Commerce also solicited additional information for the solar glass benchmark, and selected data from

PV Insights consistent with Commerce's preference for product-specific monthly data.⁸ For aluminum extrusions, Commerce used the more product-specific annual data from IHS exclusively rather than averaging them with less specific monthly Comtrade data, consistent with the Court's order.⁹

The Court sustained Commerce's second remand in full.¹⁰ Specifically, the Court found that Commerce's determinations regarding the Export Buyer's Credit Program, as well as the aluminum extrusions and solar glass benchmarks, complied with the options the Court provided in its remand opinion.¹¹

Timken Notice

In its decision in *Timken*,¹² as clarified by *Diamond Sawblades*,¹³ the Court of Appeals for the Federal Circuit held that, pursuant to section 516A(c) of the Tariff Act of 1930, as amended (the Act), Commerce must publish a notice of court decision that is not “in harmony” with a Commerce determination and must suspend liquidation of entries pending a “conclusive” court decision. The Court's August 4, 2020, judgment constitutes a final decision of that court that is not in harmony with Commerce's *Final Results*. This notice is published in fulfillment of the publication requirements of *Timken*. Accordingly, Commerce will continue suspension of liquidation of subject merchandise pending expiration of the period of appeal or, if appealed, pending a final and conclusive court decision.

Amended Final Results

Because there is now a final court decision, Commerce is amending the 2017 *Final Results* with respect to Trina Solar and all other producers and exporters subject to this review. The revised total subsidy rates for these companies for the period June 10, 2014 through December 31, 2015 are as follows:¹⁴

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: On August 4, 2020, the United States Court of International Trade (the Court) entered final judgment sustaining the final results of remand redetermination pursuant to court order by the Department of Commerce (Commerce) pertaining to the 2014

¹⁵ See *Final Results*, 82 FR at 42793. Cross-owned affiliates are: Trina Solar Limited; Trina Solar (Changzhou) Science & Technology Co., Ltd.; Yancheng Trina Solar Energy Technology Co., Ltd.; Changzhou Trina Solar Yabang Energy Co., Ltd.; Hubei Trina Solar Energy Co., Ltd.; Turpan Trina Solar Energy Co., Ltd.; and Changzhou Trina PV Ribbon Materials Co., Ltd.

countervailing duty (CVD) administrative review of the order on crystalline silicon photovoltaic cells, whether or not assembled into modules (solar cells), from the People's Republic of China (China). Commerce is notifying the public that the final judgment in this case is not in harmony with Commerce's final results in the 2014 administrative review of solar cells from China, and that Commerce is amending the final results.

DATES: Applicable August 14, 2020.

FOR FURTHER INFORMATION CONTACT: Caitlin Monks, AD/CVD Operations, Office VII, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482-2670.

SUPPLEMENTARY INFORMATION:

Background

On July 17, 2017, Commerce published its final results of the 2014 administrative review of solar cells.¹ Commerce reached affirmative determinations for mandatory respondents Canadian Solar Manufacturing (Changshu) Inc. and its cross-owned affiliates (collectively, Canadian Solar) and Changzhou Trina Solar Energy Co., Ltd. and its cross-owned affiliates (collectively, Trina Solar), as well as numerous other producers and exporters not selected for individual review. On November 30, 2018, the Court remanded aspects of the *Final Results* to Commerce for further consideration.² The Court remanded

² See *Changzhou Trina Solar Energy Co., Ltd. et al. v. United States*, Slip Op. 18-166 (November 30, 2018).

Commerce's determinations as regards to the Export Buyer's Credit Program, the inclusion of Comtrade data in calculating the world market price for aluminum extrusions and solar glass, Commerce's decision to revert to a tier-two benchmark in determining the price for polysilicon without considering a respondent's proffered evidence, and the finding that the provision of electricity constitutes a specific and thus countervailable subsidy.³ In its first remand redetermination, issued in April 2019,⁴ Commerce provided additional explanation and evidence for its determinations, but the Court continued to find them unsupported by substantial evidence and remanded them a second time.⁵

In its second remand redetermination, issued in February 2020,⁶ Commerce explained that, although it continues to believe that it is not possible to verify whether respondents used the Export Buyer's Credit Program without the cooperation of the Government of China (GOC), it found the program not used, under protest, to comply with the Court's order.⁷ Commerce also solicited additional information for the solar glass benchmark, and selected data from PV Insights consistent with Commerce's preference for product specific monthly data.⁸ For aluminum extrusions, Commerce used the more product-specific annual data from IHS exclusively rather than averaging them with less specific monthly Comtrade data, consistent with the Court's order.⁹

⁹ *Id.* at 12-13.

For polysilicon, Commerce placed additional information on the record that supported its finding that the solar grade polysilicon market in China is distorted by government involvement.¹⁰ Finally, Commerce found, based on adverse facts available, that the provision of electricity for less-than-adequate remuneration is a regionally specific subsidy program, based on the GOC's failure to explain the variation in electricity prices between provinces.¹¹

The Court sustained Commerce's second remand redetermination in full.¹² Specifically, the Court found that Commerce's determinations regarding the Export Buyer's Credit Program, as well as the aluminum extrusions and solar glass benchmarks, complied with the options the Court provided in the *Second Remand Order*.¹³ For polysilicon, the Court explained that Commerce reasonably identified further evidence supporting its finding of market distortion.¹⁴ Finally, the Court found that Commerce appropriately identified the missing information and facts that, when combined with an adverse inference, supported finding that the provision of electricity is regionally specific.¹⁵

Timken Notice

In its decision in *Timken*,¹⁶ as clarified by *Diamond Sawblades*,¹⁷ the Court of Appeals for the Federal Circuit held that, pursuant to section 516A(c) of the Tariff Act of 1930, as amended (the Act), Commerce must publish a notice of court decision that is not "in harmony" with a Commerce determination and must suspend liquidation of entries pending a "conclusive" court decision. The Court's August 4, 2020, judgment constitutes a final decision of that court that is not in harmony with Commerce's *Final Results* and *Amended Final Results*. This notice is published in fulfillment of the publication requirements of *Timken*. Accordingly, Commerce will continue suspension of liquidation of subject merchandise pending expiration of the period of appeal or, if appealed, pending a final and conclusive court decision.

Amended Final Results

Because there is now a final court decision, Commerce is amending the *Amended Final Results* with respect to Canadian Solar, Trina Solar, and all other producers and exporters subject to this review. The revised total subsidy rates for Canadian Solar and Trina Solar for the period January 1, 2014 through December 31, 2014 are as follows:¹⁸

Exporter or producer	Subsidy rate (percent <i>ad valorem</i>)
Canadian Solar Manufacturing (Changshu) Inc. and its Cross-Owned Affiliates ¹⁹	7.36
Changzhou Trina Solar Energy Co., Ltd. and its Cross-Owned Affiliates ²⁰	5.97

BILLING CODE 3510–DS–P

DEPARTMENT OF COMMERCE

International Trade Administration

[A–351–842]

Certain Uncoated Paper From Brazil: Partial Rescission of Antidumping Duty Administrative Review; 2019–2020

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The Department of Commerce (Commerce) is partially rescinding the administrative review of the antidumping duty order on certain uncoated paper (uncoated paper) from Brazil for the period of review (POR) March 1, 2019 through February 29, 2020.

DATES: Applicable August 17, 2020.

FOR FURTHER INFORMATION CONTACT: Jerry Huang, AD/CVD Operations, Office V, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482–4047.

SUPPLEMENTARY INFORMATION:

Background

On March 2, 2020, Commerce published a notice of opportunity to request an administrative review of the antidumping duty order on uncoated paper from Brazil.¹ Pursuant to requests from interested parties, Commerce initiated an administrative review with respect to three companies, in accordance with section 751(a) of the Tariff Act of 1930, as amended (the Act).² Subsequent to the initiation of the administrative review, the petitioners³ timely withdrew their request for an administrative review of two companies, as discussed below. No

¹ See *Antidumping or Countervailing Duty Order, Finding, or Suspended Investigation: Opportunity to Request Administrative Review*, 85 FR 12267 (March 2, 2020).

² See *Initiation of Antidumping and Countervailing Duty Administrative Reviews*, 85 FR 26931 (May 6, 2020) (Initiation Notice).

³ Collectively, the petitioners are: Domtar Corporation, P.H. Glatfelter Company, Packaging Corporation of America, and the United Steel, Paper and Forestry, Rubber, Manufacturing, Energy, Allied Industrial and Service Workers International Union, AFL–CIO, CLC.

other party requested an administrative review of these companies.

Partial Rescission of Administrative Review

Pursuant to 19 CFR 351.213(d)(1), Commerce will rescind an administrative review, in whole or in part, if the party that requested a review withdraws its request within 90 days of the date of publication of the notice of initiation. The request for an administrative review of the following companies was withdrawn within 90 days of the date of publication of the *Initiation Notice*: International Paper do Brasil Ltda. and International Paper Exportadora Ltda.⁴ As a result, Commerce is rescinding this review with respect to these two companies, in accordance with 19 CFR 351.213(d)(1). The review will continue with respect to Suzano S.A.⁵

Assessment

Commerce will instruct U.S. Customs and Border Protection (CBP) to assess antidumping duties on all appropriate entries. For the companies for which this review is rescinded, antidumping duties shall be assessed at rates equal to the cash deposit of estimated antidumping duties required at the time of entry, or withdrawal from warehouse for consumption, in accordance with 19 CFR 351.212(c)(1)(i). Commerce intends to issue appropriate assessment instructions to CBP 15 days after publication of this notice.

Notification to Importers

This notice serves as a final reminder to importers of their responsibility under 19 CFR 351.402(f)(2) to file a certificate regarding the reimbursement of antidumping duties prior to liquidation of the relevant entries during this review period. Failure to comply with this requirement could result in the presumption that reimbursement of antidumping duties occurred and the subsequent assessment of doubled antidumping duties.

Notification Regarding Administrative Protective Orders

This notice also serves as a reminder to parties subject to administrative protective order (APO) of their responsibility concerning the return or destruction of proprietary information disclosed under APO in accordance with 19 CFR 351.305, which continues to govern business proprietary

information in this segment of the proceeding. Timely written notification of the return or destruction of APO materials or conversion to judicial protective order is hereby requested. Failure to comply with the regulations and terms of an APO is a violation which is subject to sanction.

Notification to Interested Parties

This notice is issued and published in accordance with sections 751(a)(1) and 777(i)(1) of the Act, and 19 CFR 351.213(d)(4).

Dated: August 12, 2020.

James Maeder,

Deputy Assistant Secretary for Antidumping and Countervailing Duty Operations.

International Trade Administration

[A-570-937]

Citric Acid and Certain Citrate Salts From the People's Republic of China: Final Results of Second Expedited Sunset Review of Antidumping Duty Order

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: As a result of this sunset review, the Department of Commerce (Commerce) finds that revocation of the antidumping duty (AD) order on citric acid and certain citrate salts from the People's Republic of China (China) would be likely to lead to a continuation or recurrence of dumping, at the levels identified in the "Final Results of Sunset Review" section of this notice.

DATES: Applicable August 17, 2020.

FOR FURTHER INFORMATION CONTACT: Thomas Martin or Zachary Shaykin, AD/CVD Operations, Office IV, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482-3936 or (202) 482-2638, respectively.

SUPPLEMENTARY INFORMATION:

Background

On May 29, 2009, Commerce published in the **Federal Register** a notice of the AD order on citric acid and certain citrate salts from China.¹ On

May 1, 2020, Commerce published its initiation of the second sunset review of the *Order*, pursuant to section 751(c) of the Tariff Act of 1930, as amended (the Act).² On May 18, 2020, Commerce received a timely and complete notice of intent to participate in the sunset review in relation to the order on subject merchandise from China from domestic interested parties³ within the deadline specified in 19 CFR 351.218(d)(1)(i).⁴ The domestic interested parties claimed interested party status pursuant to section 771(9)(C) of the Act as manufacturers in the United States of the domestic like product.⁵

On June 1, 2020, the domestic interested parties filed a timely and adequate substantive response within the deadline specified in 19 CFR 351.218(d)(3)(i).⁶ Commerce did not receive substantive responses from any respondent interested party with respect to the *Order* covered by this sunset review. As a result, pursuant to section 751(c)(3)(B) of the Act and 19 CFR 351.218(e)(1)(ii)(C)(2), Commerce conducted an expedited (120-day) sunset review of the *Order*.

Scope of the Order

The scope of the order includes all grades and granulation sizes of citric acid, sodium citrate, and potassium citrate in their unblended forms, whether dry or in solution, and regardless of packaging type. The scope also includes blends of citric acid, sodium citrate, and potassium citrate; as well as blends with other ingredients, such as sugar, where the unblended form(s) of citric acid, sodium citrate, and potassium citrate constitute 40 percent or more, by weight, of the blend. The scope of the order also includes all forms of crude calcium citrate, including dicalcium citrate monohydrate, and tricalcium citrate tetrahydrate, which are intermediate products in the production of citric acid, sodium citrate, and potassium citrate. The scope of the order does not include calcium citrate that satisfies the

² See *Initiation of Five-Year (Sunset) Reviews*, 85 FR 25386 (May 1, 2020).

³ The domestic interested parties are Archer Daniels Midland Company; Cargill, Incorporated; and Tate & Lyle Ingredients Americas LLC (collectively, domestic interested parties).

⁴ See Domestic Interested Parties' Letter, "Second Five-Year ('Sunset') Review Of Antidumping And Countervailing Duty Orders On Citric Acid And Certain Citrate Salts from the People's Republic of China: Domestic Industry's Notice Of Intent To Participate," dated May 18, 2020.

⁵ *Id.* at 2.

⁶ See Domestic Interested Parties' Letter, "Second Five-Year ('Sunset') Review Of Antidumping Duty Order On Citric Acid And Certain Citrate Salts from the People's Republic of China: Domestic Industry's Substantive Response," dated June 1, 2020.

⁴ See Petitioners' Letter, "Uncoated Paper From Brazil/Partial Withdrawal Of Request For Administrative Review Of The Antidumping Order," dated July 28, 2020.

⁵ See *Initiation Notice*, 85 FR at 26933.

¹ See *Citric Acid and Certain Citrate Salts from Canada and the People's Republic of China: Antidumping Duty Orders*, 74 FR 25703 (May 29, 2009) (*Order*).

standards set forth in the United States Pharmacopeia and has been mixed with a functional excipient, such as dextrose or starch, where the excipient constitutes at least 2 percent, by weight, of the product. The scope of the order includes the hydrous and anhydrous forms of citric acid, the dihydrate and anhydrous forms of sodium citrate, otherwise known as citric acid sodium salt, and the monohydrate and monopotassium forms of potassium citrate. Sodium citrate also includes both trisodium citrate and monosodium citrate, which are also known as citric acid trisodium salt and citric acid monosodium salt, respectively. Citric acid and sodium citrate are classifiable under 2918.14.0000 and 2918.15.1000 of the Harmonized Tariff Schedule of the United States (HTSUS), respectively. Potassium citrate and crude calcium citrate are classifiable under 2918.15.5000 and 3824.90.9290 of the HTSUS, respectively. Blends that include citric acid, sodium citrate, and potassium citrate are classifiable under 3824.90.9290 of the HTSUS. Although the HTSUS subheadings are provided for convenience and customs purposes, our written description of the scope is dispositive.

Analysis of Comments Received

A complete discussion of all issues raised in this sunset review, including the likelihood of continuation or recurrence of dumping in the event of revocation of the *Order* and the magnitude of the margins likely to prevail if the *Order* were to be revoked, is provided in the Issues and Decision Memorandum. A list of the topics discussed in the Issues and Decision Memorandum is attached as an appendix to this notice. The Issues and Decision Memorandum is a public document and is on file electronically via Enforcement and Compliance's Antidumping and Countervailing Duty Centralized Electronic Service System (ACCESS). ACCESS is available to registered users at <https://access.trade.gov>. In addition, a complete version of the Issues and Decision Memorandum can be accessed directly at <https://enforcement.trade.gov/frn/>. The signed and electronic versions of the Issues and Decision Memorandum are identical in content.

Final Results of Sunset Review

Pursuant to sections 751(c)(1) and 752(c)(1) and (3) of the Act, Commerce determines that revocation of the *Order* on citric acid and certain citrate salts from China would be likely to lead to a continuation or recurrence of dumping, and that the magnitude of the

dumping margins likely to prevail is up to 156.87 percent.

Notification Regarding Administrative Protective Orders

This notice also serves as the only reminder to parties subject to administrative protective order (APO) of their responsibility concerning the return or destruction of proprietary information disclosed under an APO in accordance with 19 CFR 351.305. Timely notification of the return or destruction of APO materials, or conversion to judicial protective orders, is hereby requested. Failure to comply with the regulations and terms of an APO is a violation which is subject to sanction.

Notification to Interested Parties

We are issuing and publishing these final results and notice in accordance with sections 751(c), 752(c), and 777(i)(1) of the Act, and 19 CFR 351.218(f)(3).

Dated: August 11, 2020.

Jeffrey I. Kessler,

Assistant Secretary for Enforcement and Compliance.

BILLING CODE 3510-DS-P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

[RTID 0648-XA298]

Taking and Importing of Marine Mammals

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice; 5-year affirmative findings for Ecuador, Guatemala, Mexico, and Spain.

SUMMARY: The NMFS Assistant Administrator (Assistant Administrator) has issued new 5-year affirmative

findings for the Governments of Ecuador, Guatemala, Mexico, and Spain (referred to hereafter as "The Nations") under the Marine Mammal Protection Act (MMPA). This affirmative finding will allow importation into the United States of yellowfin tuna and yellowfin tuna products harvested in the eastern tropical Pacific Ocean (ETP) in compliance with the Agreement on the International Dolphin Conservation Program (AIDCP) by purse seine vessels operating under The Nations' jurisdiction or exported from The Nations. NMFS bases the affirmative finding determination on reviews of documentary evidence submitted by the Government of The Nations and of information obtained from the Inter-American Tropical Tuna Commission (IATTC).

DATES: These affirmative findings are effective for the 5-year period of April 1, 2020, through March 31, 2025.

FOR FURTHER INFORMATION CONTACT:

Justin Greenman, West Coast Region, National Marine Fisheries Service, 501 W Ocean Blvd., Suite 4200, Long Beach, CA 90802. Phone: 562-980-3264. Email: justin.greenman@noaa.gov.

SUPPLEMENTARY INFORMATION: The MMPA, 16 U.S.C. 1361 *et seq.*, allows for importation into the United States of yellowfin tuna harvested by purse seine vessels in the ETP from a nation with jurisdiction over purse seine vessels with carrying capacity greater than 400 short tons that harvest tuna in the ETP only if the nation has an "affirmative finding" issued by the NMFS Assistant Administrator. *See* section 101(a)(2)(B) of the MMPA, 16 U.S.C. 1371(a)(2)(B); *see also* 50 CFR 216.24(f)(6)(i). If requested by the government of such a nation, the Assistant Administrator will determine whether to make an affirmative finding based upon documentary evidence provided by the government, the IATTC, or the Department of State.

The affirmative finding process requires that the harvesting nation is meeting its obligations under the AIDCP and its obligations of membership in the IATTC. Every 5 years, the government of the harvesting nation must request a new affirmative finding and submit the required documentary evidence directly to the Assistant Administrator. On an annual basis, NMFS reviews the affirmative finding and determines whether the harvesting nation continues to meet the requirements. A nation may provide information related to compliance with AIDCP and IATTC measures directly to NMFS on an annual basis or may authorize the IATTC to release the information to

NMFS to annually renew an affirmative finding determination without an application from the harvesting nation.

An affirmative finding will be terminated, in consultation with the Secretary of State, if the Assistant Administrator determines that the requirements of 50 CFR 216.24(f) are no longer being met or that a nation is consistently failing to take enforcement actions on violations, thereby diminishing the effectiveness of the AIDCP.

As a part of the affirmative finding process set forth in 50 CFR 216.24(f)(8), the Assistant Administrator considered documentary evidence submitted by the Governments of The Nations and obtained from the IATTC and has determined that The Nations have met the MMPA's requirements to receive an affirmative finding.

After consultation with the Department of State, the Assistant Administrator issued a 5-year affirmative finding to The Nations, allowing the importation into the United States of yellowfin tuna and products derived from yellowfin tuna harvested in the ETP by purse seine vessels operating under The Nations' jurisdiction or exported from The Nations. Issuance of an affirmative finding for The Nations does not affect implementation of an intermediary nation embargo under 50 CFR 216.24(f)(9), which applies to exports from a nation that exports to the United States yellowfin tuna or yellowfin tuna products that was subject to a ban on importation into the United States under section 101(a)(2)(B) of the MMPA, 16 U.S.C. 1371(a)(2)(B). Ecuador, Guatemala, Mexico, and Spain's affirmative findings are effective for the 5-year period of April 1, 2020, through March 31, 2025, subject to subsequent annual reviews by NMFS.

Dated: August 12, 2020.

Chris Oliver,

*Assistant Administrator for Fisheries,
National Marine Fisheries Service.*

BILLING CODE 3510-22-P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

[RTID 0648-XA299]

Taking and Importing of Marine Mammals

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice; affirmative finding annual renewals for Colombia, El Salvador, and Peru.

SUMMARY: The NMFS Assistant Administrator (Assistant Administrator) has completed an affirmative finding annual renewal for the Governments of Colombia, El Salvador, and Peru (referred to hereafter as "The Nations") under the Marine Mammal Protection Act (MMPA). These affirmative findings will continue to allow the importation into the United States of yellowfin tuna and yellowfin tuna products harvested in the eastern tropical Pacific Ocean (ETP) for 1 year in compliance with the Agreement on the International Dolphin Conservation Program (AIDCP) by purse seine vessels operating under The Nations' jurisdiction or exported from The Nations. NMFS bases the affirmative finding annual renewals on reviews of documentary evidence submitted by the Governments of The Nations and of information obtained from the Inter-American Tropical Tuna Commission (IATTC).

DATES: These affirmative finding annual renewals are effective for the 1-year period of April 1, 2020, through March 31, 2021.

FOR FURTHER INFORMATION CONTACT:

Justin Greenman, West Coast Region, National Marine Fisheries Service, 501 W. Ocean Blvd., Suite 4200, Long Beach, CA 90802. Phone: 562-980-3264. Email: justin.greenman@noaa.gov.

SUPPLEMENTARY INFORMATION: The MMPA, 16 U.S.C. 1361 *et seq.*, allows for importation into the United States of yellowfin tuna harvested by purse seine vessels in the ETP from a nation with jurisdiction over purse seine vessels with carrying capacity greater than 400 short tons that harvest tuna in the ETP only if the nation has an "affirmative finding" issued by the NMFS Assistant Administrator. *See* Section 101(a)(2)(B) of the MMPA, 16 U.S.C. 1371(a)(2)(B); *see also* 50 CFR 216.24(f)(6)(i). If requested by the government of such a nation, the Assistant Administrator will determine whether to make an affirmative finding based upon documentary evidence provided by the government, the IATTC, or the Department of State.

The affirmative finding process requires that the harvesting nation is meeting its obligations under the AIDCP and its obligations of membership in the IATTC. Every 5 years, the government of the harvesting nation must request a new affirmative finding and submit the required documentary evidence directly to the Assistant Administrator. On an annual basis, NMFS must determine

whether the harvesting nation continues to meet the requirements of their 5-year affirmative finding. NMFS does this by reviewing the documentary evidence from the last year. A nation may provide information related to compliance with AIDCP and IATTC measures directly to NMFS on an annual basis or may authorize the IATTC to release the information to NMFS to annually renew an affirmative finding determination without an application from the harvesting nation.

An affirmative finding will be terminated, in consultation with the Secretary of State, if the Assistant Administrator determines that the requirements of 50 CFR 216.24(f) are no longer being met or that a nation is consistently failing to take enforcement actions on violations, thereby diminishing the effectiveness of the AIDCP.

As a part of the affirmative finding process set forth in 50 CFR 216.24(f)(8), for this annual renewal, the Assistant Administrator considered documentary evidence submitted by the Governments of The Nations and obtained from the IATTC and has determined that The Nations have met the MMPA's requirements to receive affirmative finding annual renewals.

After consultation with the Department of State, the Assistant Administrator issued affirmative finding annual renewals to The Nations, allowing the continued importation into the United States of yellowfin tuna and products derived from yellowfin tuna harvested in the ETP by purse seine vessels operating under The Nations' jurisdiction or exported from The Nations. Issuance of affirmative finding annual renewals for The Nations does not affect implementation of an intermediary nation embargo under 50 CFR 216.24(f)(9), which applies to exports from a nation that exports to the United States yellowfin tuna or yellowfin tuna products that was subject to a ban on importation into the United States under section 101(a)(2)(B) of the MMPA, 16 U.S.C. 1371(a)(2)(B).

These affirmative finding annual renewals for The Nations are for the 1-year period of April 1, 2020, through March 31, 2021. The Nations' individual 5-year affirmative findings, which have varying start and end dates, remain valid. Colombia's 5-year affirmative finding will remain valid through March 31, 2024, El Salvador's 5-year affirmative finding will remain valid through March 31, 2023, and Peru's 5-year affirmative finding will remain valid through March 31, 2022, subject to subsequent annual reviews by NMFS.

Dated: August 12, 2020.

Chris Oliver,

*Assistant Administrator for Fisheries,
National Marine Fisheries Service.*

BILLING CODE 3510-22-P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

Evaluation of State Coastal Management Program; Meeting

AGENCY: Office for Coastal Management (OCM), National Ocean Service (NOS), National Oceanic and Atmospheric Administration (NOAA), Department of Commerce (DOC).

ACTION: Notice of public meeting and opportunity to comment.

SUMMARY: The National Oceanic and Atmospheric Administration (NOAA), Office for Coastal Management will hold a public meeting to solicit comments on the performance evaluation of the Florida Coastal Management Program.

DATES: NOAA will consider all written comments received by October 2, 2020. The virtual public meeting will be held on Wednesday September 23, 2020 at 12:00 p.m. EDT.

ADDRESSES: You may submit comments on the coastal management program NOAA intends to evaluate by emailing Susie Holst Rice, Evaluator, NOAA Office for Coastal Management, at Susie.Holst@noaa.gov. Comments that the Office for Coastal Management receives are considered part of the public record and may be publicly accessible. Any personal identifying information (*e.g.*, name, address) submitted voluntarily by the sender may also be publicly accessible. NOAA will accept anonymous comments.

To participate in the public meeting Wednesday, September 23, 2020 at 12:00 p.m. EDT, registration is required two hours in advance by 10:00 a.m. EDT.

Registration: http://noaacsc.adobeconnect.com/floridacmppublicmeeting/event/event_info.html. You may participate online or by phone. If you would like to provide comment during the public meeting, please select "yes" during the online registration. The line-up of speakers will be based on the date and time of registration.

FOR FURTHER INFORMATION CONTACT: Susie Holst Rice, Evaluator, NOAA Office for Coastal Management by email at Susie.Holst@noaa.gov or by phone at (240) 533-0730. Copies of the previous evaluation findings, coastal

management program's 2016-2020 Assessment and Strategy and reserve's management plan and site profile may be viewed and downloaded on the internet at <http://coast.noaa.gov/czm/evaluations>. A copy of the evaluation notification letter and most recent progress reports may be obtained upon request by contacting Susie Holst Rice.

SUPPLEMENTARY INFORMATION: Section 312 of the Coastal Zone Management Act (CZMA) requires NOAA to conduct periodic evaluations of federally approved state coastal programs. The process includes one or more public meetings, consideration of written public comments, and consultations with interested Federal, state, and local agencies and members of the public. For the evaluation of the Florida Coastal Management Program, NOAA will consider the extent to which the state has met the national objectives, adhered to the management program approved by the Secretary of Commerce, and adhered to the terms of financial assistance under the CZMA. When the evaluation is completed, NOAA's Office for Coastal Management will place a notice in the **Federal Register** announcing the availability of the Final Evaluation Findings.

Keelin Kuipers,

Deputy Director, Office for Coastal Management, National Ocean Service, National Oceanic and Atmospheric Administration.

BILLING CODE 3510-JE-P

COMMODITY FUTURES TRADING COMMISSION

Agency Information Collection Activities: Notice of Intent To Renew Collection; 3038-0097, Process for Review of Swaps for Mandatory Clearing

AGENCY: Commodity Futures Trading Commission.

ACTION: Notice.

SUMMARY: The Commodity Futures Trading Commission ("Commission" or "CFTC") is announcing an opportunity for public comment on the proposed renewal of a collection of certain information by the agency. Under the Paperwork Reduction Act ("PRA"), Federal agencies are required to publish notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension of an existing collection of information, and to allow 60 days for public comment. This notice solicits

comments on reporting and recordkeeping requirements relating to information management requirements for derivatives clearing organizations.

DATES: Comments must be submitted on or before October 16, 2020.

ADDRESSES: You may submit comments, identified by OMB Control No. 3038-0097 by any of the following methods:

- The Agency's website, at <http://comments.cftc.gov/>. Follow the instructions for submitting comments through the website.

- *Mail:* Christopher Kirkpatrick, Secretary of the Commission, Commodity Futures Trading Commission, Three Lafayette Centre, 1155 21st Street NW, Washington, DC 20581.

- *Hand Delivery/Courier:* Same as Mail above.

Please submit your comments using only one method and identify that it is for the renewal of Collection Number 3038-0097. All comments must be submitted in English, or if not, accompanied by an English translation. Comments will be posted as received to <http://www.cftc.gov>.

FOR FURTHER INFORMATION CONTACT:

Megan Wallace, Senior Special Counsel, Division of Clearing and Risk, Commodity Futures Trading Commission, (202) 418-5150; email: mwallace@cftc.gov.

SUPPLEMENTARY INFORMATION: Under the PRA, 44 U.S.C. 3501 *et seq.*, Federal agencies must obtain approval from the Office of Management and Budget ("OMB") for each collection of information they conduct or sponsor. "Collection of Information" is defined in 44 U.S.C. 3502(3) and 5 CFR 1320.3 and includes agency requests or requirements that members of the public submit reports, keep records, or provide information to a third party. Section 3506(c)(2)(A) of the PRA, 44 U.S.C. 3506(c)(2)(A), requires Federal agencies to provide a 60-day notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension of an existing collection of information, before submitting the collection to OMB for approval. To comply with this requirement, the Commission is publishing notice of the proposed extension of the collection of information listed below. An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number.

Title: Part 39, Process for Review of Swaps for Mandatory Clearing (OMB Control No. 3038-0097). This is a

request for extension and revision of a currently approved information collection.

Abstract: The Commodity Exchange Act and Commission regulations require a derivatives clearing organization (“DCO”) that wishes to accept a swap for clearing to be eligible to clear the swap and to submit the swap to the Commission for a determination as to whether the swap is required to be cleared. Commission Regulation 39.5 sets forth the process for these submissions. The Commission will use the information in this collection to determine whether a DCO that wishes to accept a swap for clearing is eligible to clear the swap and whether the swap should be required to be cleared.

With respect to the collection of information, the CFTC invites comments on:

- Whether the proposed collection of information is necessary for the proper performance of the functions of the Commission, including whether the information will have a practical use;
- The accuracy of the Commission’s estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
- Ways to enhance the quality, usefulness, and clarity of the information to be collected; and
- Ways to minimize the burden of collection of information on those who are to respond, including through the use of appropriate automated electronic, mechanical, or other technological collection techniques or other forms of information technology; *e.g.*, permitting electronic submission of responses.

You should submit only information that you wish to make available publicly. If you wish the Commission to consider information that you believe is exempt from disclosure under the Freedom of Information Act, a petition for confidential treatment of the exempt information may be submitted according to the procedures established in section 145.9 of the Commission’s regulations.¹

The Commission reserves the right, but shall have no obligation, to review, pre-screen, filter, redact, refuse or remove any or all of your submission from <http://www.cftc.gov> that it may deem to be inappropriate for publication, such as obscene language. All submissions that have been redacted or removed that contain comments on the merits of the Information Collection Request will be retained in the public comment file and will be considered as required under the Administrative Procedure Act and other applicable

laws, and may be accessible under the Freedom of Information Act.

Burden Statement: The respondent burden for this collection is estimated to be as follows:

Respondents/Affected Entities: Derivatives clearing organizations.

Estimated Number of Respondents: 15.

Annual Submission by Each Respondent: 1.

Total Annual Responses: 15.

Estimated Average Burden Hours per Respondent: 40.

Estimated Total Annual Burden Hours: 600.

There is no capital cost associated with this collection.

Authority: 44 U.S.C. 3501 *et seq.*

Dated: August 11, 2020.

Robert Sidman,

Deputy Secretary of the Commission.

[FR Doc. 2020–17892 Filed 8–14–20; 8:45 am]

BILLING CODE P

COMMODITY FUTURES TRADING COMMISSION

Agency Information Collection Activities: Notice of Intent To Renew Collection 3038–0092, Customer Clearing Documentation and Timing of Acceptance for Clearing

AGENCY: Commodity Futures Trading Commission.

ACTION: Notice.

SUMMARY: The Commodity Futures Trading Commission (“Commission” or “CFTC”) is announcing an opportunity for public comment on the extension of the collection of certain information by the agency. Under the Paperwork Reduction Act (“PRA”), Federal agencies are required to publish notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension of an existing collection of information, and to allow 60 days for public comment. This notice solicits comments on the obligation to maintain records related to clearing documentation between the customer and the customer’s clearing member.

DATES: Comments must be submitted on or before October 16, 2020.

ADDRESSES: You may submit comments, identified by OMB Control No. 3038–0092 by any of the following methods:

Megan Wallace, Senior Special Counsel, Division of Clearing and Risk, Commodity Futures Trading Commission, (202) 418–5150; email: mwallace@cftc.gov.

SUPPLEMENTARY INFORMATION: Under the PRA, 44 U.S.C. 3501 *et seq.*, Federal agencies must obtain approval from the Office of Management and Budget (“OMB”) for each collection of information they conduct or sponsor. “Collection of Information” is defined in 44 U.S.C. 3502(3) and 5 CFR 1320.3 and includes agency requests or requirements that members of the public submit reports, keep records, or provide information to a third party. Section 3506(c)(2)(A) of the PRA, 44 U.S.C. 3506(c)(2)(A), requires Federal agencies to provide a 60-day notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension of an existing collection of information, before submitting the collection to OMB for approval. To comply with this requirement, the Commission is publishing notice of the proposed extension of the collection of information listed below. An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number.

Title: Customer Clearing Documentation and Timing of Acceptance for Clearing (OMB Control No. 3038–0092). This is a request for extension and revision of a currently approved information collection.

Abstract: Section 4d(c) of the Commodity Exchange Act (“CEA”), as amended by the Dodd-Frank Wall Street Reform and Consumer Protection Act (“Dodd-Frank Act”), directs the Commission to require futures commission merchants (“FCMs”) to implement conflict of interest procedures that address such issues the Commission determines to be appropriate. Similarly, section 4s(j)(5) of the CEA, as added by the Dodd-Frank Act, requires swap dealers (“SDs”) and major swap participants (“MSPs”) to

¹ 17 CFR 145.9.

implement conflict of interest procedures that address such issues the Commission determines to be appropriate. Section 4s(j)(5) also requires SDs and MSPs to ensure that any persons providing clearing activities or making determinations as to accepting clearing customers are separated by appropriate informational partitions from persons whose involvement in pricing, trading, or clearing activities might bias their judgment or contravene the core principle of open access. Section 4s(j)(6) of the CEA prohibits a SD or MSP from adopting any process or taking any action that results in any unreasonable restraint on trade or imposes any material anticompetitive burden on trading or clearing, unless necessary or appropriate to achieve the purposes of the Act. Section 2(h)(1)(B)(ii) of the CEA requires that derivatives clearing organization ("DCOs") rules provide for the nondiscriminatory clearing of swaps executed bilaterally or through an unaffiliated designated contract market or swap execution facility.

To address these provisions, the Commission promulgated regulations that prohibit arrangements involving FCMs, SDs, MSPs, and DCOs that would (a) disclose to an FCM, SD, or MSP the identity of a customer's original executing counterparty (§§ 1.72(a), 23.608(a), and 39.12(a)(1)(vi)); (b) limit the number of counterparties with whom a customer may enter into a trade (§§ 1.72(b), 23.608(b), and 39.12(a)(1)(vi)); (c) restrict the size of the position a customer may take with any individual counterparty, apart from an overall credit limit for all positions held by the customer at the FCM (§§ 1.72(c), 23.608(c), and 39.12(a)(1)(vi)); (d) impair a customer's access to execution of a trade on terms that have a reasonable relationship to the best terms available (§§ 1.72(d), 23.608(d), and 39.12(a)(1)(vi)); or (e) prevent compliance with specified time frames for acceptance of trades into clearing set forth in 1.74(b), 23.610(b), or 39.12(b)(7) (§§ 1.72(e), 23.608(e), and 39.12(a)(1)(vi)). Additionally, the Commission requires, through regulation 39.12(b)(7)(i)(B), DCOs to coordinate with clearing members to establish prompt processing of trades. Regulations 1.74(a) and 23.610(a) require reciprocal coordination by FCMs, SDs, and MSPs that are clearing members.

Under the above regulations, SDs, MSPs, FCMs, and DCOs are required to develop and maintain written customer clearing documentation and trade processing procedures. Maintenance of contracts, policies, and procedures is

prudent business practice. All SDs, MSPs, FCMs, and DCOs maintain documentation consistent with these regulations. The regulations are crucial both for effective risk management and for the efficient operation of trading venues among SDs, MSPs, FCMs, and DCOs. Each of these entities has a general recordkeeping obligation for these requirements under the Commission's regulations (§ 39.20 for DCOs; § 23.606 for SDs and MSPs; and § 1.73 for FCMs).

As discussed further below, the information collection burden arising from the regulations primarily is restricted to the costs associated with the affected registrants' obligation to maintain records related to clearing documentation between the customer and the customer's clearing member, and trade processing procedures between DCOs and FCMs, SDs, and MSPs. The information collection obligations are necessary to implement certain provisions of the CEA, including ensuring that registrants exercise effective risk management and for the efficient operation of trading venues among swap dealers, major swap participants, futures commission merchants, and derivatives clearing organizations.

With respect to the collection of information, the CFTC invites comments on:

- Whether the proposed collection of information is necessary for the proper performance of the functions of the Commission, including whether the information will have a practical use;
- The accuracy of the Commission's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
 - Ways to enhance the quality, usefulness, and clarity of the information to be collected; and
 - Ways to minimize the burden of collection of information on those who are to respond, including through the use of appropriate automated electronic, mechanical, or other technological collection techniques or other forms of information technology; e.g., permitting electronic submission of responses.

You should submit only information that you wish to make available publicly. If you wish the Commission to consider information that you believe is exempt from disclosure under the Freedom of Information Act, a petition for confidential treatment of the exempt information may be submitted according to the procedures established in section 145.9 of the Commission's regulations.¹

¹ 17 CFR 145.9.

The Commission reserves the right, but shall have no obligation, to review, pre-screen, filter, redact, refuse or remove any or all of your submission from <http://www.cftc.gov> that it may deem to be inappropriate for publication, such as obscene language. All submissions that have been redacted or removed that contain comments on the merits of the Information Collection Request will be retained in the public comment file and will be considered as required under the Administrative Procedure Act and other applicable laws, and may be accessible under the Freedom of Information Act.

Burden Statement: The Commission is revising its estimate of the burden for this collection, which include 107 Swap Dealers, Major Swap Participants, 61 Futures Commission Merchants, and 15 Derivatives Clearing Organizations. The respondent burden for this collection is estimated to be as follows:

Respondents/Affected Entities: 183.
Estimated Average Burden Hours per Respondent: 40.
Estimated Total Annual Burden Hours: 7,320.

Frequency of collection: Daily, annual, and as needed.

There are no capital costs or operating and maintenance costs associated with this collection.

Authority: 44 U.S.C. 3501 *et seq.*

Dated: August 11, 2020.

Robert Sidman,

Deputy Secretary of the Commission.

BILLING CODE 6351-01-P

DEPARTMENT OF DEFENSE

Office of the Secretary

Reserve Forces Policy Board; Notice of Federal Advisory Committee Meeting

AGENCY: Under Secretary of Defense for Personnel and Readiness, Department of Defense (DoD).

ACTION: Notice of Federal Advisory Committee meeting.

SUMMARY: The DoD is publishing this notice to announce that the following Federal Advisory Committee meeting of the Reserve Forces Policy (RFPB) will take place.

DATES: The RFPB will hold an open meeting to the public on Wednesday, September 9, 2020 from 8:55 a.m. to 12:55 p.m.

ADDRESSES: The RFPB meeting will be online using Microsoft Teams CVR and Teleconference line. To participate in

the meeting, see the Meeting Accessibility section for instructions.

FOR FURTHER INFORMATION CONTACT: Alexander Sabol, (703) 681-0577 (Voice), 703-681-0002 (Facsimile), Alexander.J.Sabol.Civ@Mail.Mil (Email). Mailing address is Reserve Forces Policy Board, 5113 Leesburg Pike, Suite 601, Falls Church, VA 22041. Website: <http://rfpb.defense.gov/>. The most up-to-date changes to the meeting agenda can be found on the website and the **Federal Register**.

SUPPLEMENTARY INFORMATION: This meeting is being held under the provisions of the Federal Advisory Committee Act (FACA) of 1972 (5 U.S.C., Appendix, as amended), the Government in the Sunshine Act of 1976 (5 U.S.C. 552b, as amended), and 41 CFR 102-3.140 and 102-3.150.

Purpose of the Meeting: The purpose of the meeting is to obtain, review, and evaluate information related to strategies, policies, and practices designed to improve and enhance the capabilities, efficiency, and effectiveness of the Reserve Components (RC).

Agenda: The RFPB will hold an open online meeting to the public on Wednesday, September 9, 2020 from 8:55 a.m. to 12:55 p.m. The meeting will consist of remarks to the RFPB from the following invited speakers: The Under Secretary of Defense for Personnel and Readiness will discuss the Total Force mix in a time of flat budgets, the Total Force integration policy, and current issues with the Services' recruiting; the National, and Public Service National Commission on Military, National, and Public Service will discuss the findings of facts and recommendations presented in the commission's final report to the President; the Secretary of the U.S. Air Force will discuss RC access and equipment interoperability demands to fulfill the National Defense Strategy, challenges in accounting for fully burdened Active and Reserve manpower costs in force structure decisions, and ensuring the Space Force's ability to expand in wartime with a RC structure; the Director of the Army National Guard will provide an update on the Army National Guard's readiness and vision for the future; the Commanding General, District of Columbia National Guard will discuss the DC National Guard's role in supporting Civil Authorities within the District; the Acting Assistant Secretary of Defense for Manpower and Reserve Affairs will discuss the FY 2021 National Defense Authorization Act legislations; and the Chief of National Guard Bureau will discuss the state of

the National Guard and recent National Guard missions.

Meeting Accessibility: Pursuant to 5 U.S.C. 552b, as amended and 41 CFR 102-3.140 through 102-3.165, and subject to the availability of space, the meeting is open online to the public from 8:55 a.m. to 12:55 p.m. Persons desiring to participate in the meeting online or by phone are required to submit their name, organization, email and telephone contact information to COL Robert D'Alto at robert.r.dalto@mail.mil not later than Friday, September 4, 2020. Specific instructions, both for online or teleconference participation in the meeting, will be provided by reply email. The meeting agenda will be available prior to the meeting on the Board's website at: <http://rfpb.defense.gov/>.

Written Statements: Pursuant to section 10(a)(3) of the FACA and 41 CFR 102-3.105(j) and 102-3.140, interested persons may submit written statements to the RFPB about its approved agenda or at any time on the RFPB's mission. Written statements should be submitted to the RFPB's Designated Federal Officer (DFO) at the address, email, or facsimile number listed in the **FOR FURTHER INFORMATION CONTACT** section. If statements pertain to a specific topic being discussed at the planned meeting, then these statements must be submitted no later than five (5) business days prior to the meeting in question. Written statements received after this date may not be provided to or considered by the RFPB until its next meeting. The DFO will review all timely submitted written statements and provide copies to all the RFPB members before the meeting that is the subject of this notice. Please note that since the RFPB operates in accordance with the provisions of the FACA, all submitted comments and public presentations will be treated as public documents and will be made available for public inspection, including, but not limited to, being posted on the RFPB's website.

Dated: August 11, 2020.

Aaron T. Siegel,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

DEPARTMENT OF DEFENSE

Office of the Secretary

Defense Advisory Committee on Women in the Services; Notice of Federal Advisory Committee Meeting

AGENCY: Under Secretary of Defense for Personnel and Readiness, Department of Defense (DoD).

ACTION: Notice of Federal Advisory Committee meeting.

SUMMARY: The DoD is publishing this notice to announce that the following Federal Advisory Committee meeting of the Defense Advisory Committee on Women in the Services (DACOWITS) will take place.

DATES: Day 1—Open to the public Tuesday, September 1, 2020 from 9:00 a.m. to 12:00 p.m. Day 2—Open to the public Wednesday, September 2, 2020 from 9:00 a.m. to 12:30 p.m.

ADDRESSES: The meeting will be held by videoconference. Participant access information will be provided after registering. (Pre-meeting registration is required. See guidance in **SUPPLEMENTARY INFORMATION**, "Meeting Accessibility").

FOR FURTHER INFORMATION CONTACT: COL Elaine Freeman, (571) 447-8151 (Voice), roelene.e.freeman@mail.mil (Email). Website: <https://dacowits.defense.gov/>. The most up-to-date changes to the meeting agenda can be found on the website.

SUPPLEMENTARY INFORMATION: This meeting is being held under the provisions of the Federal Advisory Committee Act (FACA) of 1972 (5 U.S.C., Appendix, as amended), the Government in the Sunshine Act of 1976 (5 U.S.C. 552b, as amended), and 41 CFR 102-3.140 and 102-3.150.

Availability of Materials for the Meeting: Additional information, including the agenda or any updates to the agenda, is available at the DACOWITS website, <https://dacowits.defense.gov/>. Materials presented in the meeting may also be obtained on the DACOWITS website. **Purpose of the Meeting:** The purpose of the meeting is for the DACOWITS to receive written information and briefings on topics related to the recruitment, retention, employment, integration, well-being, and treatment of women in the Armed Forces of the United States. **Agenda:** Tuesday, September 1, 2020, from 9:00 a.m. to 12:00 p.m.—Welcome, Introductions, and Announcements; Request for Information Status Update; and Briefings and DACOWITS discussion.

Wednesday, September 2, 2020, from 9:00 a.m. to 12:30 p.m.—Welcome, Introductions and Announcements; Awards Ceremony; and Committee Voting Session on 2020 Recommendations.

Meeting Accessibility: Pursuant to 5 U.S.C. 552b and 41 CFR 102–3.140 through 102–3.165, this meeting is open to the public from 9:00 a.m. to 12:00 p.m. on September 1, 2020 and 9:00 a.m. to 12:30 p.m. on September 2, 2020. The meeting will be held by videoconference. The number of participants is limited and is on a first-come basis. All members of the public who wish to participate must register by contacting DACOWITS at osd.pentagon.ousd-p-r.mbx.dacowits@mail.mil or by contacting Mr. Robert Bowling at (703) 380–0116 no later than Monday, August 24, 2020. Once registered, the web address and/or audio number will be provided.

Special Accommodations: Individuals requiring special accommodations to access the public meeting should contact Mr. Robert Bowling at (703) 380–0116 no later than Monday, August 24, 2020 so that appropriate arrangements can be made. **Written Statements:** Pursuant to 41 CFR 102–3.140, and section 10(a)(3) of the FACA, interested persons may submit a written statement to the DACOWITS. Individuals submitting a written statement must submit their statement no later than 5:00 p.m., Monday, August 24, 2020 to Mr. Robert Bowling (703) 380–0116 (Voice) or to osd.pentagon.ousd-p-r.mbx.dacowits@mail.mil (Email). If a statement is not received by Monday, August 24, 2020, prior to the meeting, which is the subject of this notice, then it may not be provided to or considered by the Committee during this quarterly business meeting. The DFO will review all timely submissions with the DACOWITS Chair and ensure they are provided to the members of the Committee.

Dated: August 11, 2020.

BILLING CODE 5001–06–P

DEPARTMENT OF EDUCATION

Withdrawal of Notice Inviting Applications and Cancellation of the Competition for the American Indian Vocational Rehabilitation Services Program

AGENCY: Office of Special Education and Rehabilitative Services (OSERS), Department of Education.

ACTION: Notice.

SUMMARY: The U.S. Department of Education (Department) withdraws the notice inviting applications (NIA) and cancels the competition for the fiscal year (FY) 2020 American Indian Vocational Rehabilitation Services (AIVRS) program under Catalog of Federal Domestic Assistance (CFDA) number 84.250N. The Department intends to announce a new competition in FY 2021.

DATES: The withdrawal and cancellation of the document published on March 9, 2020 (85 FR 13636) is effective August 17, 2020.

FOR FURTHER INFORMATION CONTACT: August Martin, U.S. Department of Education, 400 Maryland Avenue SW, Room 5064A, Potomac Center Plaza, Washington, DC 20202–1800. Telephone: 202–245–7410. Email: August.Martin@ed.gov.

If you use a telecommunications device for the deaf (TDD) or a text telephone (TTY), call the Federal Relay Service (FRS), toll free, at 1–800–877–8339.

SUPPLEMENTARY INFORMATION:

Background

Under section 121(a) of the Rehabilitation Act of 1973, as amended (the Act), the purpose of the AIVRS program is to provide grants to the governing bodies of Indian Tribes located on Federal and State reservations (and consortia of such governing bodies) to pay 90 percent of the costs of vocational rehabilitation (VR) services, including culturally appropriate services, to American Indians with disabilities who reside on or near Federal or State reservations, consistent with each eligible individual's strengths, resources, priorities, concerns, abilities, capabilities, interests, and informed choice, so that each individual may prepare for, and engage in, high-quality employment that will increase opportunities for economic self-sufficiency.

On March 9, 2020, the Department published in the **Federal Register** (85 FR 13636) an NIA for the FY 2020 AIVRS competition, CFDA 84.250N,

Grants.gov opportunity number ED–GRANTS–030920–001.

At roughly the same time, the COVID–19 pandemic began to affect the United States. American Indian reservations experienced and continue to experience a high rate of COVID–19 infections. Many of the entities eligible for AIVRS grants across the country took actions to limit the spread of COVID–19 by requiring their non-essential personnel to shelter at home. We have been informed that many AIVRS personnel who continue to shelter-in-place at home to avoid exposure to COVID–19 have limited access to the necessary technology to telework, such as personal computers, Wi-Fi, or internet availability to connect to workplace servers or workplace resources, and we assume that would also be true of personnel who do not currently receive a grant but would be eligible to apply. This limits their ability to access the information needed to prepare a quality application for the FY 2020 AIVRS competition.

In addition, we have been notified that some of the programs attempting to develop grant applications have had difficulty acquiring the Tribal resolutions needed to submit an application for Federal funding or working with the Tribes' administration, including the authorized representatives needed to approve, sign, and submit applications in *Grants.gov*.

On May 20, 2020, the Department published a notice in the **Federal Register** (85 FR 30690) extending the deadline for the transmittal of applications for the AIVRS program competition (84.250N) to June 26, 2020. However, given the ongoing and, for some Tribes, escalating cases of COVID–19 and the continuing challenges resulting from the pandemic, the 30-day extension has not been sufficient to address these circumstances. Therefore, the Department is withdrawing the NIA and cancelling the FY 2020 AIVRS CFDA 84.250N grant competition.

In order to allow for continuity of services for the AIVRS program, the Department is, through a document published elsewhere in this issue of the **Federal Register**, extending the project period and waiving the requirements in 34 CFR 75.250, which prohibit project periods exceeding five years, as well as waiving the requirements in 34 CFR 75.261(a) and (c)(2), which allow the extension of a project period only if the extension does not involve the obligation of additional Federal funds. The extension and waivers will enable the Department to provide additional funds to the current 29 projects under CFDA 84.250K, which were awarded in

FY 2015 and will expire as of September 30, 2020. With the additional funds, the Department will also be able to extend those grants to September 30, 2021.

The Department intends to announce a new AIVRS grant competition for five-year grants in FY 2021. Through that competition the Department intends to make funds available for all eligible applicants, including the 29 AIVRS grantees funded in FY 2015 and the 13 AIVRS grantees funded in FY 2016, whose grants will be expiring on September 30, 2021.

BILLING CODE 4000-01-P

DEPARTMENT OF ENERGY

Advanced Scientific Computing Advisory Committee

AGENCY: Office of Science, Department of Energy.

ACTION: Notice of open meeting.

SUMMARY: This notice announces a meeting of the Advanced Scientific

Computing Advisory Committee (ASCAC). Federal Advisory Committee Act requires that public notice of these meetings be announced in the **Federal Register**.

DATES: Thursday, September 24, 2020; 11:00 a.m. to 3:00 p.m. EDT, and Friday, September 25, 2020; 11:00 a.m. to 3:00 p.m. EDT.

ADDRESSES: Teleconference: Remote attendance of the Advanced Scientific Computing Advisory Committee meeting will be possible via Zoom. Instructions will be posted on the Advanced Scientific Computing Advisory Committee website at: <https://science.energy.gov/ascr/ascac/>, prior to the meeting and can also be obtained by contacting Christine Chalk by email at christine.chalk@science.doe.gov, or by phone at (301) 903-7486.

FOR FURTHER INFORMATION CONTACT: Christine Chalk, Office of Advanced Scientific Computing Research; SC-31/ Germantown Building; U.S. Department of Energy; 1000 Independence Avenue SW; Washington, DC 20585-1290; Telephone (301) 903-7486; christine.chalk@science.doe.gov.

SUPPLEMENTARY INFORMATION:

Purpose of the Committee: The purpose of the committee is to provide advice and guidance on a continuing basis to the Office of Science and to the Department of Energy on scientific priorities within the field of advanced scientific computing research.

Purpose of the Meeting: This meeting is the semi-annual meeting of the Committee.

Tentative Agenda:

- View from Washington
- View from Germantown
- Update on Exascale project activities
- Report from Subcommittee on 40 years of investments by the Department of Energy in advanced computing and networking
- Report from AI Subcommittee
- Technical presentations
- Public Comment (10-minute rule)

The meeting agenda includes an update on the budget, accomplishments and planned activities of the Advanced Scientific Computing Research program and the exascale computing project; an update from the Office of Science; technical presentations from funded researchers; updates from subcommittees and there will be an opportunity for comments from the public. The meeting will conclude at 3:00 p.m. EDT on September 25, 2020. Agenda updates and presentations will be posted on the ASCAC website prior to the meeting: <https://science.osti.gov/ascr/ascac>.

Public Participation: The meeting is open to the public. Individuals and representatives of organizations who would like to offer comments and suggestions may do so during the meeting. Approximately 30 minutes will be reserved for public comments. Time allotted per speaker will depend on the number who wish to speak but will not exceed 10 minutes. The Designated Federal Officer is empowered to conduct the meeting in a fashion that will facilitate the orderly conduct of business. Those wishing to speak should submit your request at least five days before the meeting. Those not able to attend the meeting or who have insufficient time to address the committee are invited to send a written statement to Christine Chalk, U.S. Department of Energy, 1000 Independence Avenue SW, Washington, DC 20585, email to Christine.Chalk@science.doe.gov.

Minutes: The minutes of this meeting will be available within 90 days on the Advanced Scientific Computing website at: <https://science.osti.gov/ascr/ascac>.

Signed in Washington, DC, on August 12, 2020.

LaTanya Butler,

Deputy Committee Management Officer.

BILLING CODE 6450-01-P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Project No. 3409-032]

Boyne USA, Inc.; Notice Soliciting Scoping Comments

Take notice that the following hydroelectric application has been filed with the Commission and is available for public inspection.

a. **Type of Application:** Subsequent License.

b. **Project No.:** P-3409-032.

c. **Date filed:** January 31, 2020.

d. **Applicant:** Boyne USA, Inc.

e. **Name of Project:** Boyne River Hydroelectric Project (Boyne River Project).

f. **Location:** The existing project is located on the Boyne River in Boyne Valley Township, Charlevoix County, Michigan.

g. **Filed Pursuant to:** Federal Power Act 16 U.S.C. 791(a)-825(r).

h. **Applicant Contact:** Randall Sutton, Boyne Mountain Resort Area Manager, Boyne USA, Inc. P.O. Box 19 Boyne Falls, MI 49713; (231) 549-6076; rsutton@boynemountain.com.

i. *FERC Contact*: Patrick Ely at patrick.ely@ferc.gov or (202) 502-8570.

j. *Deadline for filing scoping comments*: September 10, 2020.

The Commission strongly encourages electronic filing. Please file scoping comments using the Commission's eFiling system at <https://ferconline.ferc.gov/FERCOOnline.aspx>. Commenters can submit brief comments up to 6,000 characters, without prior registration, using the eComment system at <https://ferconline.ferc.gov/QuickComment.aspx>. You must include your name and contact information at the end of your comments. For assistance, please contact FERC Online Support at FERCOOnlineSupport@ferc.gov, (866) 208-3676 (toll free), or (202) 502-8659 (TTY). In lieu of electronic filing, you may submit a paper copy. Submissions sent via the U.S. Postal Service must be addressed to: Kimberly D. Bose, Secretary, Federal Energy Regulatory Commission, 888 First Street NE, Room 1A, Washington, DC 20426. Submissions sent via any other carrier must be addressed to: Kimberly D. Bose, Secretary, Federal Energy Regulatory Commission, 12225 Wilkins Avenue, Rockville, Maryland 20852. The first page of any filing should include docket number P-3409-032.

The Commission's Rules of Practice require all intervenors filing documents with the Commission to serve a copy of that document on each person on the official service list for the project. Further, if an intervenor files comments or documents with the Commission relating to the merits of an issue that may affect the responsibilities of a particular resource agency, they must also serve a copy of the document on that resource agency.

k. This application is not ready for environmental analysis at this time.

l. *Project Description*: The Boyne River Project consists of a reservoir with a gross storage capacity of 356 acre-feet and a surface area of 68 acres at a pool elevation of 636.8 feet National Geodetic Vertical Datum 1988. The project includes: (a) An existing 610-foot-long by 30-foot-high (left) earth-fill dam embankment and a 180-foot-long by 18-foot-high (right) earth-fill dam embankment; (b) a 132-foot-long by 50 to 72-foot-wide by 12-foot-deep concrete lined headrace channel; (c) a 35-foot-long concrete fixed crest spillway that discharges to a transverse collection gallery, and a 77-foot-long by 5-foot-diameter concrete discharge pipe that carries flow from the collection gallery to a stilling basin; (d) a 20-foot-long by 8.3-foot-wide to 16-foot-wide by 4-foot-deep stilling basin; (e) 6-foot wide by 7-

foot 9-inches high sluice gate spillway; (f) a 72-foot-long by 5-foot-diameter concrete pipe that carries the flow from the sluice gate spillway to the stilling basin; (g) a 74-foot-long steel penstock consisting of two 5-foot-diameter and one 7-foot-diameter sections; (h) a 75-foot-long by 18-inch-diameter steel pipes that make up the auxiliary spillway; (i) a 715-foot long by 100-foot-wide emergency overflow spillway area; and (j) a 24-foot-long by 24-foot-wide concrete powerhouse with a single 250-kilowatt propeller turbine. The project also consists of a 100-foot-long, 2400-volt underground transmission line connected to a pole-mounted transformer and a 2.34-mile-long, 7.2/12.5-kilovolt overhead transmission line from the pole-mounted transformer to the Boyne Mountain Resort side of the Consumers Energy utility primary metering cabinet. The last 1,300 feet +/- at the Boyne Mountain Resort end is also buried. The project generates about 661 megawatt-hours annually.

m. In addition to publishing the full text of this notice in the **Federal Register**, the Commission provides all interested persons an opportunity to view and/or print the contents of this notice, as well as other documents in the proceeding (e.g., scoping document) via the internet through the Commission's Home Page (<http://www.ferc.gov>) using the eLibrary link. Enter the docket number excluding the last three digits in the docket number field to access the document (P-3409). At this time, the Commission has suspended access to the Commission's Public Reference Room due to the proclamation declaring a National Emergency concerning the Novel Coronavirus Disease (COVID-19) issued by the President on March 13, 2020. For assistance, contact FERC at FERCOOnlineSupport@ferc.gov or call toll-free, (866) 208-3673 or (202) 502-8659 (TTY).

n. You may also register online at <https://ferconline.ferc.gov/FERCOOnline.aspx> to be notified via email of new filings and issuances related to this or other pending projects. For assistance, contact FERC Online Support.

o. **Scoping Process.**

The Commission staff intends to prepare a single Environmental Assessment (EA) for the project in accordance with the National Environmental Policy Act. The EA will consider both site-specific and cumulative environmental impacts and reasonable alternatives to the proposed action.

At this time, we do not anticipate holding on-site public or agency scoping

meetings. Instead, we are soliciting your comments and suggestions on the preliminary list of issues and alternatives to be addressed in the EA, as described in scoping document 1 (SD1), issued August 11, 2020.

Copies of the SD1 outlining the subject areas to be addressed in the EA were distributed to the parties on the Commission's mailing list and the applicant's distribution list. Copies of SD1 may be viewed on the web at <http://www.ferc.gov> using the eLibrary link. Enter the docket number excluding the last three digits in the docket number field to access the document. For assistance, call 1-866-208-3676 or for TTY, (202) 502-8659.

Dated: August 11, 2020.

Kimberly D. Bose,
Secretary.

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. EL19-58-003]

PJM Interconnection, LLC; Notice of Filing

Take notice that on August 5, 2020, PJM Interconnection, LLC submitted a filing in compliance with the Federal Energy Regulatory Commission's (Commission) Order on Proposed Tariff Revisions and Operating Agreement Revisions, in the above captioned proceeding, on May 21, 2020.¹

Any person desiring to intervene or to protest this filing must file in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211, 385.214). Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a notice of intervention or motion to intervene, as appropriate. Such notices, motions, or protests must be filed on or before the comment date. On or before the comment date, it is not necessary to serve motions to intervene or protests on persons other than the Applicant.

The Commission encourages electronic submission of protests and interventions in lieu of paper using the eFiling link at <http://www.ferc.gov>. Persons unable to file electronically

¹ *PJM Interconnection, L.L.C.*, 171 FERC 61,153 (2020) (May 21 Order).

should submit an original and 5 copies of the protest or intervention to the Federal Energy Regulatory Commission, 888 First Street NE, Washington, DC 20426.

In addition to publishing the full text of this document in the **Federal Register**, the Commission provides all interested persons an opportunity to view and/or print the contents of this document via the internet through the Commission's Home Page (<http://www.ferc.gov>) using the eLibrary link. Enter the docket number excluding the last three digits in the docket number field to access the document. At this time, the Commission has suspended access to Commission's Public Reference Room, due to the proclamation declaring a National Emergency concerning the Novel Coronavirus Disease (COVID-19), issued by the President on March 13, 2020. For assistance, contact FERC at FERCOnlineSupport@ferc.gov or call toll-free, (886) 208-3676 or TTY, (202) 502-8659.

Comment Date: 5:00 p.m. Eastern Time on August 26, 2020.

Dated: August 11, 2020.

BILLING CODE 6717-01-P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. CP20-479-000]

Northern Natural Gas Company; Notice of Schedule for Environmental Review of The 2021 Auburn A-Line Abandonment and Capacity Replacement Project

On June 11, 2020, Northern Natural Gas Company (Northern) filed an application in Docket No. CP20-479-000 requesting abandonment authorization and a Certificate of Public Convenience and Necessity pursuant to Section 7(b) and 7(c) of the Natural Gas Act to abandon, construct, and operate certain natural gas pipeline facilities in Lancaster, Otoe, Johnson, and Nemaha counties, Nebraska. The proposed project is known as the 2021 Auburn A-Line Abandonment and Capacity Replacement Project (Project), and Northern states it would modernize Northern's pipeline system, improve reliability, and enable safer long-term operation of the system.

On June 25, 2020, the Federal Energy Regulatory Commission (Commission or

FERC) issued its Notice of Application for the Project. Among other things, that notice alerted agencies issuing federal authorizations of the requirement to complete all necessary reviews and to reach a final decision on a request for a federal authorization within 90 days of the date of issuance of the Commission staff's Environmental Assessment (EA) for the Project. This instant notice identifies the FERC staff's planned schedule for the completion of the EA for the Project.

Schedule for Environmental Review

Issuance of EA December 11, 2020
90-day Federal Authorization Decision
Deadline March 11, 2021

If a schedule change becomes necessary, additional notice will be provided so that the relevant agencies are kept informed of the Project's progress.

Project Description

Northern proposes to abandon in-place 31.7 miles of 4- to 6-inch-diameter A-line in Lancaster, Otoe, Johnson, and Nemaha counties, Nebraska. In addition, Northern proposes to construct and operate about 4.4 miles of new 8-inch-diameter pipeline and install a launcher and a regulation station in Lancaster and Otoe counties, Nebraska.

Background

On July 24, 2020, the Commission issued a *Notice of Intent to Prepare an Environmental Assessment for the Proposed 2021 Auburn A-Line Abandonment and Capacity Replacement Project and Request for Comments on Environmental Issues* (NOI). The NOI was sent to affected landowners; federal, state, and local government agencies; elected officials; environmental and public interest groups; Native American tribes; other interested parties; and local libraries and newspapers. All substantive comments will be addressed in the EA.

Additional Information

In order to receive notification of the issuance of the EA and to keep track of all formal issuances and submittals in specific dockets, the Commission offers a free service called eSubscription. This can reduce the amount of time you spend researching proceedings by automatically providing you with notification of these filings, document summaries, and direct links to the documents. Go to <https://www.ferc.gov/ferc-online/overview> to register for eSubscription.

Additional information about the Project is available from the Commission's Office of External Affairs

at (866) 208-FERC or on the FERC website (www.ferc.gov). Using the eLibrary link, select General Search from the eLibrary menu, enter the selected date range and Docket Number excluding the last three digits (*i.e.*, CP20-479), and follow the instructions. For assistance with access to eLibrary, the helpline can be reached at (866) 208-3676, TTY (202) 502-8659, or at FERCOnlineSupport@ferc.gov. The eLibrary link on the FERC website also provides access to the texts of formal documents issued by the Commission, such as orders, notices, and rule makings.

Dated: August 11, 2020.

Kimberly D. Bose,
Secretary.

[FR Doc. 2020-17917 Filed 8-14-20; 8:45 am]

BILLING CODE 6717-01-P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Project No. 2829-012]

City of Loveland; Notice of Application Accepted for Filing, Soliciting Comments, Motions To Intervene, and Protests

Take notice that the following hydroelectric application has been filed with the Federal Energy Regulatory Commission and is available for public inspection:

a. *Application Type:* License Amendment.

b. *Project No:* 2829-012.

c. *Date Filed:* July 29, 2020.

d. *Applicant:* City of Loveland, Colorado.

e. *Name of Project:* Loveland Hydroelectric Project.

f. *Location:* Big Thompson River, in Larimer County, Colorado.

g. *Filed Pursuant to:* Federal Power Act, 16 U.S.C. 791a-825r.

h. *Applicant Contact:* Christine Schraeder, City of Loveland, Colorado, 200 North Wilson Avenue, Loveland, CO 80537; phone (970) 962-3587.

i. *FERC Contact:* David Rudisail at (202) 502-6376, or david.rudisail@ferc.gov.

j. *Deadline for filing comments, motions to intervene, and protests:* September 11, 2020.

The Commission strongly encourages electronic filing. Please file motions to intervene, protests, and comments using the Commission's eFiling system at <http://www.ferc.gov/docs-filing/efiling.asp>. Commenters can submit brief comments up to 6,000 characters,

without prior registration, using the eComment system at <http://www.ferc.gov/docs-filing/ecomment.asp>. You must include your name and contact information at the end of your comments. For assistance, please contact FERC Online Support at FERCOnlineSupport@ferc.gov, (866) 208-3676 (toll free), or (202) 502-8659 (TTY). In lieu of electronic filing, you may submit a paper copy. Submissions sent via the U.S. Postal Service must be addressed to: Kimberly D. Bose, Secretary, Federal Energy Regulatory Commission, 888 First Street NE, Room 1A, Washington, DC 20426. Submissions sent via any other carrier must be addressed to: Kimberly D. Bose, Secretary, Federal Energy Regulatory Commission, 12225 Wilkins Avenue, Rockville, Maryland 20852. The first page of any filing should include docket number P-2829-012. Comments emailed to Commission staff are not considered part of the Commission record.

The Commission's Rules of Practice and Procedure require all intervenors filing documents with the Commission to serve a copy of that document on each person whose name appears on the official service list for the project. Further, if an intervenor files comments or documents with the Commission relating to the merits of an issue that may affect the responsibilities of a particular resource agency, they must also serve a copy of the document on that resource agency.

k. *Description of Request:* The City of Loveland has requested to amend its license to allow the following activities: restoration of the river channel and floodplain in the area formerly impacted by Idylwilde Dam and reservoir and; reconstruction of the parking lot along the Big Thompson River, formerly known as Idylwilde Recreation Area.

l. *Locations of the Application:* This filing may also be viewed on the Commission's website at <http://www.ferc.gov> using the eLibrary link. Enter the docket number excluding the last three digits in the docket number field to access the document. You may also register online at <http://www.ferc.gov/docs-filing/esubscription.asp> to be notified via email of new filings and issuances related to this or other pending projects. For assistance, call 1-866-208-3676 or email FERCOnlineSupport@ferc.gov, for TTY, call (202) 502-8659. Agencies may obtain copies of the application directly from the applicant.

m. Individuals desiring to be included on the Commission's mailing list should so indicate by writing to the Secretary of the Commission.

n. *Comments, Protests, or Motions to Intervene:* Anyone may submit comments, a protest, or a motion to intervene in accordance with the requirements of Rules of Practice and Procedure, 18 CFR 385.210, .211, .214, respectively. In determining the appropriate action to take, the Commission will consider all protests or other comments filed, but only those who file a motion to intervene in accordance with the Commission's Rules may become a party to the proceeding. Any comments, protests, or motions to intervene must be received on or before the specified comment date for the particular application.

o. *Filing and Service of Documents:* Any filing must (1) bear in all capital letters the title COMMENTS, PROTEST, or MOTION TO INTERVENE as applicable; (2) set forth in the heading the name of the applicant and the project number of the application to which the filing responds; (3) furnish the name, address, and telephone number of the person commenting, protesting or intervening; and (4) otherwise comply with the requirements of 18 CFR 385.2001 through 385.2005. All comments, motions to intervene, or protests must set forth their evidentiary basis. Any filing made by an intervenor must be accompanied by proof of service on all persons listed in the service list prepared by the Commission in this proceeding, in accordance with 18 CFR 385.2010.

Dated: August 11, 2020.

Kimberly D. Bose,
Secretary.

BILLING CODE 6717-01-P

ENVIRONMENTAL PROTECTION AGENCY

[EPA-HQ-OPPT-2020-0135; FRL-10013-62]

TSCA Science Advisory Committee on Chemicals; Request for Nominations; Extension of Nomination and Public Comment Periods

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice; extension of nomination and public comment periods.

SUMMARY: On March 20, 2020, the Environmental Protection Agency (EPA) invited the public to nominate scientific experts from a diverse range of disciplines to be considered for appointment to the Toxic Substances Control Act (TSCA), Science Advisory Committee on Chemicals (SACC). On

April 15, 2020, a federal district court vacated the grants policy articulated in EPA's 2017 federal advisory committee membership directive. In light of that intervening decision, EPA is extending the nomination and public comment periods to receive additional nominees and input on prospective candidates for the SACC. Please note that all prior nominations and comments will be considered by EPA and do not need to be resubmitted.

DATES:

Nominations: To be considered for appointment to the SACC nominations must be received on or before September 1, 2020. Late nominations will not be considered.

Comments: Public comments on prospective candidates for membership on the SACC must be received within 30 days of EPA posting of an updated List of Candidates. The availability of the list and the due date for public comments will be announced through the Office of Chemical Safety and Pollution Prevention (OCSP)P's listservs.

ADDRESSES:

Nominations: Submit your nominations, identified by docket identification (ID) number EPA-HQ-OPPT-2020-0135, by email to knott.steven@epa.gov.

Comments: Submit your comments, identified by docket identification (ID) number EPA-HQ-OPPT-2020-0135, to the Federal eRulemaking Portal: <https://www.regulations.gov>. Follow the online instructions for submitting comments. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute.

Additional instructions on commenting or visiting the docket, along with more information about dockets generally, is available at <http://www.epa.gov/dockets>.

FOR FURTHER INFORMATION CONTACT:

Steven M. Knott, MS, Designated Federal Officer (DFO), Office of Science Coordination and Policy (7201M), Environmental Protection Agency, 1200 Pennsylvania Avenue NW, Washington, DC 20460; telephone number: (202) 564-0103; email address: knott.steven@epa.gov.

SUPPLEMENTARY INFORMATION:

I. General Information

EPA is extending the nomination and public comment periods to receive additional nominees and input on prospective candidates to be considered for appointment to the SACC. The purpose of the SACC is to provide independent advice and expert

consultation, at the request of the EPA Administrator, with respect to the scientific and technical aspects of issues relating to implementation of TSCA. EPA anticipates appointing multiple SACC members over the next year. Sources in addition to this solicitation may be utilized to solicit nominations and identify candidates. Current members of the SACC are eligible for reappointment during this period. Therefore, the appointments completed over the next year may include a mix of newly appointed and reappointed members. As additional background, the biographies of current SACC members are available on the TSCA SACC website at <https://www.epa.gov/tsc-peer-review/members-science-advisory-committee-chemicals>.

EPA previously solicited nominations for the SACC in the **Federal Register** of March 20, 2020 (85 FR 16095; FRL-10006-50), requesting such nominations be submitted such that they were received on or before April 20, 2020. On April 15, 2020, the U.S. District Court for the Southern District of New York (SDNY) vacated Section 1 of EPA's 2017 federal advisory committee membership directive (2017 Directive), which announced "a requirement that no member of an EPA federal advisory committee be currently in receipt of EPA grants." As a result of the vacatur, Section 1 is no longer in effect and EPA is following the relevant policies as they existed before the 2017 Directive. However, because EPA was still seeking nominations when the SDNY vacated Section 1, EPA is reopening the SACC's membership solicitations and accepting further nominations and public comments.

II. Background

The SACC is a federal advisory committee, established in December 2016 pursuant to TSCA section 2625(o), and chartered under the Federal Advisory Committee Act (FACA), 5 U.S.C. Appendix 2. EPA established the SACC to provide independent advice and recommendations to the EPA Administrator on the scientific basis for risk assessments, methodologies, and approaches relating to implementation of TSCA. The SACC members serve as Special Government Employees (SGEs) or Regular Government Employees (RGEs). The SACC expects to meet approximately 4 to 6 times per year, or as needed and approved by the DFO. Meetings may be virtual (*e.g.*, held via telephone and webcast) or they may be held in the Washington, DC, metropolitan area.

In January 2017, the EPA Administrator appointed 18 members to

the SACC. After further consideration of the objectives and scope of SACC activities, EPA decided to increase the membership of the SACC, and in March 2018, completed additional appointments resulting in a total of 26 members. Subsequently, some SACC members either resigned or declined to serve extended appointments. Currently, there are 19 SACC members, all with membership terms that will expire over the next year.

To date, SACC members and ad hoc reviewers have provided their expertise and knowledge on the first draft chemical risk evaluations. These individuals have dedicated an incredible amount of time to provide EPA with thoughtful and important recommendations for improving the risk evaluations. At times, SACC members were working on multiple chemical evaluations while also preparing for and participating in peer review meetings and writing reports. EPA greatly appreciates the dedication and commitment to service of the SACC members.

Given the foundation provided by the SACC recommendations from peer reviews of the first 10 chemical risk evaluations, EPA is exploring different ways to use the SACC's expertise for providing independent advice and expert consultation. The Agency is considering requesting that the SACC review significant, cross-cutting science issues on exposure, risk, and modeling, similar to how the Agency uses the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA), Scientific Advisory Panel (SAP) for health and safety issues related to pesticides. Therefore, EPA may not ask the SACC to peer review every single draft risk evaluation for the next 20 high priority chemicals. With this prospective change in the scope of SACC activities, EPA anticipates appointing approximately 15 members to the SACC by March 2021.

III. Nominations

EPA values and welcomes diversity and encourages nominations of women and men of all racial and ethnic groups. Any interested person or organization may nominate qualified persons to be considered for appointment to this advisory committee. Individuals also may self-nominate. Nominations should be submitted in accordance with the instructions under **ADDRESSES**.

Nominations should include candidates who have demonstrated high levels of competence, knowledge, and expertise in scientific/technical fields relevant to chemical safety and risk assessment. In particular, the nominees should include representation of the

following disciplines, including, but not limited to: Human health and ecological risk assessment, biostatistics, epidemiology, pediatrics, physiologically-based pharmacokinetics (PBPK), toxicology and pathology (including neurotoxicology, developmental/reproductive toxicology, and carcinogenesis), and the relationship of chemical exposures to women, children, and other potentially exposed or susceptible subpopulations.

EPA requests that nominations include the following information: Current contact information for the nominee (including the nominee's name, organization, current business address, email address, and daytime telephone number); the disciplinary and specific areas of expertise of the nominee; the nominee's curriculum vitae; and a biographical sketch of the nominee developed using the template available at <https://www.epa.gov/tsc-peer-review/science-advisory-committee-chemicals-basic-information>. Persons having questions about the nomination process should contact the DFO listed under **FOR FURTHER INFORMATION CONTACT**.

The names and biographical sketches of all interested and available candidates will be added to an updated List of Candidates that will be posted in the docket at <http://www.regulations.gov> and a link to this document will be provided on the SACC website at <http://www.epa.gov/tsc-peer-review>. Please note that no interested and available candidates will be excluded from the list based on prescreening using the selection criteria described in the next section. The availability of the list will be announced through the Office of Chemical Safety and Pollution Prevention (OCSPP)'s listservs. You may subscribe to these listservs at the following website: https://public.govdelivery.com/accounts/USAEPAOPPT/subscriber/new?topic_id=USAEPAOPPT_101. Public comments on the List of Candidates will be accepted for 30 days from the date the updated list is posted. Public comments should be submitted in accordance with the instructions under **ADDRESSES**. The public will be requested to provide relevant information or other documentation on nominees that the EPA should consider in evaluating candidates.

IV. Selection Criteria

In addition to scientific expertise, in selecting members, EPA will consider the differing perspectives and the breadth of collective experience needed to address EPA's charge to the SACC, as well as the following:

- Background and experiences that would contribute to the diversity of scientific viewpoints on the committee, including professional experiences in government, labor, public health, public interest, animal protection, industry, and other groups, as the EPA Administrator determines to be advisable (*e.g.*, geographical location; social and cultural backgrounds; and professional affiliations);

- Skills and experience working on committees and advisory panels including demonstrated ability to work constructively and effectively in a committee setting;

- Absence of financial conflicts of interest or the appearance of a loss of impartiality;

- Willingness to commit adequate time for the thorough review of materials provided to the committee; and

- Availability to participate in committee meetings.

Authority: 15 U.S.C. 2625 *et seq.*; 5 U.S.C. Appendix 2 *et seq.*

Dated: August 10, 2020.

Hayley Hughes,

Director, Office of Science Coordination and Policy.

BILLING CODE 6560-50-P

ENVIRONMENTAL PROTECTION AGENCY

[EPA-HQ-OPP-2017-0628, EPA-HQ-OPP-2015-0715, EPA-HQ-OPP-2017-0440, EPA-HQ-OPP-2017-0687, EPA-HQ-OPP-2017-0619, EPA-HQ-OPP-2016-0108, and EPA-HQ-OPP-2016-0630; FRL-10010-29]

Agency Information Collection Activities; Proposed Renewal of Seven Existing Information Collection Requests (ICRs) Undergoing Consolidation; Comment Request

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: In compliance with the Paperwork Reduction Act (PRA), this document announces that EPA is planning to submit renewal requests for seven currently approved Information Collection Requests (ICRs) to the Office of Management and Budget (OMB). The seven renewal ICRs, which are identified in Unit IV, by their corresponding titles, EPA ICR numbers, OMB Control numbers, and related docket identification (ID) numbers, are being consolidated under a separate but parallel effort. To ensure continuity of the approved collection activities, EPA did not make any changes to the

currently approved ICRs for the purpose of these renewals. As required by the PRA, before submitting these ICRs to OMB for review and approval, EPA is soliciting comments on specific aspects of the information collection activities that are summarized in this document. The ICRs and accompanying material are available for public review and comment in the relevant dockets identified in this document for each ICR.

DATES: Comments must be received on or before October 16, 2020.

ADDRESSES: Submit your comments, identified by the docket identification (ID) number for the corresponding ICR as identified in Unit IV, of this document, using the following method:

- *Federal eRulemaking Portal:* <http://www.regulations.gov>. Follow the online instructions for submitting comments. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute.

Due to the public health concerns related to COVID-19, the EPA Docket Center (EPA/DC) and Reading Room is closed to visitors with limited exceptions. The staff continues to provide remote customer service via email, phone, and webform. For the latest status information on EPA/DC services and docket access, visit <https://www.epa.gov/dockets>.

FOR FURTHER INFORMATION CONTACT: Carolyn Siu, Field and External Affairs Division, 7650P, Office of Pesticide Programs, Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460-0001; telephone number: (703) 347-0159; email address: siu.carolyn@epa.gov.

SUPPLEMENTARY INFORMATION:

I. What information is EPA particularly interested in?

Pursuant to PRA section 3506(c)(2)(A) (44 U.S.C. 3506(c)(2)(A)), EPA specifically solicits comments and information to enable it to:

1. Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the Agency, including whether the information will have practical utility.

2. Evaluate the accuracy of the Agency's estimates of the burden of the proposed collection of information, including the validity of the methodology and assumptions used.

3. Enhance the quality, utility, and clarity of the information to be collected.

4. Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.*, permitting electronic submission of responses. In particular, EPA is requesting comments from very small businesses (those that employ less than 25) on examples of specific additional efforts that EPA could make to reduce the paperwork burden for very small businesses affected by this collection.

II. What should I consider when I prepare my comments for EPA?

You may find the following suggestions helpful for preparing your comments:

1. Explain your views as clearly as possible and provide specific examples.
2. Describe any assumptions that you used.

3. Provide copies of any technical information and/or data you used that support your views.

4. If you estimate potential burden or costs, explain how you arrived at the estimate that you provide.

5. Submit your comments by the deadline identified under **DATES**.

6. In the subject line on the first page of your response, identify the docket ID number that is assigned to the ICR action. You may also provide the ICR title and related EPA and OMB numbers. For the ICRs that are the subject of this notice, please refer to the information in Unit IV.

III. What do I need to know about the PRA?

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information subject to PRA approval unless it displays a currently valid OMB control number. The OMB control numbers for the EPA regulations in title 40 of the Code of Federal Regulations (CFR), after appearing in the preamble of the final rule, are further displayed either by publication in the **Federal Register** or by other appropriate means, such as on the related collection instruments or form, if applicable. The display of OMB control numbers for certain EPA regulations is consolidated in a list at 40 CFR 9.1.

As used in the PRA context, burden is defined in 5 CFR 1320.3(b).

IV. Which ICRs are being renewed?

EPA is planning to submit the seven ICR renewal requests to OMB for review and approval under PRA that are identified in this unit, which provides

the ICR titles and corresponding ICR, OMB and docket ID numbers. This unit also provides a brief summary of the information collection activity and the Agency's estimated burden and costs. The Supporting Statement for each ICR, a copy of which is available in the corresponding docket, provides a more detailed explanation of the collection activities and the Agency's estimates.

Please note that EPA intends to request the renewal of the ICRs without any substantive changes to what is currently approved because these seven ICRs are being consolidated in a separate effort. Ensuring the continuity of the existing approvals during the consolidation these ICRs is an administrative action that is intended to focus EPA and the public on the consolidation. EPA will announce and seek comment on the consolidated ICR later this summer.

A. Docket ID Number EPA-HQ-OPP-2017-0628

Title: Experimental Use Permits (EUPs) for Pesticides.

ICR number: EPA ICR No. 0276.17.

OMB control number: OMB Control No. 2070-0040.

ICR status: The approval for this ICR is scheduled to expire on February 28, 2021.

Abstract: The information collection provides EPA with the data necessary to determine whether to issue an experimental use permit (EUP) under section 5 of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA). FIFRA requires that before a pesticide product may be distributed or sold in the U.S., it must be registered by EPA. However, FIFRA section 5 authorizes EPA to issue an EUP to allow pesticide companies to temporarily ship pesticide products for experimental use for the purpose of gathering data necessary to support the application for registration of a pesticide product. In general, EUPs are issued either for a pesticide not registered with the Agency or for a new use of a registered pesticide.

Burden statement: The annual public reporting and recordkeeping burden for this collection of information is estimated to range between 32.8–147 hours per response. The ICR, a copy of which is available in the docket, provides a detailed explanation of this estimate, which is only briefly summarized here:

Respondents/Affected entities:

Entities potentially affected by this ICR include Pesticide and other Agricultural Chemical Manufacturing.

Estimated total number of potential respondents: 31.

Frequency of response: On occasion.
Estimated total annual burden hours: 567 hours.

Estimated total annual costs: \$37,497. This includes an estimated burden cost of \$37,497 and an estimated cost of \$0 for non-burden hour paperwork costs, e.g., investment or maintenance and operational costs.

Changes in the estimates from the last approval: There are no changes in the estimates.

B. Docket ID Number EPA-HQ-OPP-2015-0715

Title: Tolerance Petitions for Pesticides on Food or Feed Crops and New Food Use Inert Ingredients.

ICR number: EPA ICR No. 0597.13.

OMB control number: OMB Control No. 2070-0024.

ICR status: The approval for this ICR is scheduled to expire on April 30, 2022.

Abstract: The use of pesticides to increase crop production often results in pesticide residues in or on the crop. To protect public health from unsafe pesticide residues, EPA sets limits on the nature and level of residues permitted pursuant to section 408 of the Federal Food, Drug and Cosmetic Act (FFDCA). A pesticide may not be used on food or feed crops unless the Agency has established a tolerance (maximum residue limit) for the pesticide residues on that crop or established an exemption from the requirement to have a tolerance.

Burden statement: The annual public reporting and recordkeeping burden for this collection of information is estimated to range between 1,726–1,739 hours per response. The ICR, a copy of which is available in the docket, provides a detailed explanation of this estimate, which is only briefly summarized here:

Respondents/Affected entities:

Entities potentially affected by this ICR include individuals or entities engaged in activities related to the registration of a pesticide product and establishments primarily engaged in administrative management and general management consulting services.

Estimated total number of potential respondents: 165.

Frequency of response: On occasion.

Estimated total annual burden hours: 285,128 hours.

Estimated total annual costs: \$27,475,223. This includes an estimated burden cost of \$27,475,223 and an estimated cost of \$0 for non-burden hour paperwork costs, e.g., investment or maintenance and operational costs.

Changes in the estimates from the last approval: There are no changes in the estimates.

C. Docket ID Number EPA-HQ-OPP-2017-0440

Title: Plant-Incorporated Protectants; CBI Substantiation and Adverse Effects Reporting.

ICR number: EPA ICR No. 1693.10.

OMB control number: OMB Control No. 2070-0142.

ICR status: The approval for this ICR is scheduled to expire on February 28, 2021.

Abstract: EPA is responsible for the regulation of pesticides as authorized by FIFRA. Prior to EPA granting a registration, the manufacturer of the pesticide must demonstrate to the Agency that the use of the pesticide product will not result in any unreasonable adverse effects to humans or the environment. EPA is also responsible under FFDCA for establishing a tolerance or exemption from the requirement of a tolerance for pesticide residues on food or feed.

Burden statement: The annual public reporting and recordkeeping burden for this collection of information is estimated to average 7.0–21.5 hours per response. The ICR, a copy of which is available in the docket, provides a detailed explanation of this estimate, which is only briefly summarized here:

Respondents/Affected entities:

Entities potentially affected by this ICR include pesticides and other agricultural chemical manufacturing, research and development in the physical, engineering, and life sciences, biological products (except diagnostic) manufacturing, colleges, universities, and professional schools, farm supplies wholesalers, flower, nursery stock, and florists' supplies (wholesalers).

Estimated total number of potential respondents: 25.

Frequency of response: On occasion.

Estimated total annual burden hours: 518 hours.

Estimated total annual costs: \$41,892. This includes an estimated burden cost of \$41,892 and an estimated cost of \$0 for non-burden hour paperwork costs, e.g., investment or maintenance and operational costs.

Changes in the estimates from the last approval: There are no changes in the estimates.

D. Docket ID Number EPA-HQ-OPP-2017-0687

Title: Submission of Unreasonable Adverse Effects Information under FIFRA Section 6(a)(2).

ICR number: EPA ICR No. 1204.14.

OMB control number: OMB Control No. 2070-0039.

ICR status: The approval for this ICR is scheduled to expire on February 28, 2021.

Abstract: FIFRA section 6(a)(2) requires pesticide registrants to submit information to the Agency which may be relevant to the balancing of the risks and benefits of a pesticide product. The statute requires the registrant to submit any factual information that it acquires regarding adverse effects associated with its pesticidal products, and it is up to the Agency to determine whether or not that factual information constitutes an unreasonable adverse effect. In order to limit the amount of less meaningful information that might be submitted to the Agency, the EPA has limited the scope of factual information that the registrant must submit. The Agency's regulations at 40 CFR part 159 provide a detailed description of the reporting obligations of registrants under FIFRA section 6(a)(2).

Burden statement: The annual public reporting and recordkeeping burden for this collection of information is estimated to average 2.37–3.00 hours per response. The ICR, a copy of which is available in the docket, provides a detailed explanation of this estimate, which is only briefly summarized here:

Respondents/Affected entities: Entities potentially affected by this ICR include those in pesticide and other agricultural chemical manufacturing.

Estimated total number of potential respondents: 1,452.

Frequency of response: On occasion.

Estimated total annual burden hours: 301,118 hours.

Estimated total annual costs: \$ 19,999,815. This includes an estimated burden cost of \$19,999,815 and an estimated cost of \$0 for non-burden hour paperwork costs, e.g., investment or maintenance and operational costs.

Changes in the estimates from the last approval: There are no changes in the estimates.

E. Docket ID Number EPA-HQ-OPP-2017-0619

Title: Pesticide Program Public Sector Collections (FIFRA Sections 18 & 24(c)).

ICR number: EPA ICR No. 2311.04.

OMB control number: OMB Control No. 2070-0182.

ICR status: The approval for this ICR is scheduled to expire on February 28, 2021.

Abstract: This ICR covers the paperwork burden under the PRA that is associated with two types of pesticide registration requests made by States, U.S. Territories, or Federal agencies. Specifically, this ICR covers emergency exemption requests, which allow for an unregistered use of a pesticide, and State registrations of a pesticide use to meet a special local need (SLN). FIFRA section 18 authorizes EPA to grant

emergency exemptions to States, U.S. Territories, and Federal agencies to allow an unregistered use of a pesticide for a limited time if EPA determines that emergency conditions exist. FIFRA Section 18 requests include unregistered pesticide use exemptions for specific agricultural, public health, quarantine and crisis purposes. FIFRA Section 24(c) authorizes any particular State to register additional uses of a federally registered pesticide for distribution and use within that state to meet a SLN.

Burden statement: The annual public reporting and recordkeeping burden for this collection of information is estimated to average 39–99 hours per response. The ICR, a copy of which is available in the docket, provides a detailed explanation of this estimate, which is only briefly summarized here:

Respondents/Affected entities: Entities potentially affected by this ICR include States and Federal government agencies and pesticide, fertilizer, and other agricultural chemical manufacturing.

Estimated total number of potential respondents: 283.

Frequency of response: On occasion.

Estimated total annual burden hours: 25,753 hours.

Estimated total annual costs: \$1,829,103. This includes an estimated burden cost of \$1,829,103 and an estimated cost of \$0 for non-burden hour paperwork costs, e.g., investment or maintenance and operational costs.

Changes in the estimates from the last approval: There are no changes in the estimates.

F. Docket ID Number EPA-HQ-OPP-2016-0108

Title: Notice of Supplemental Distribution of a Registered Pesticide Product.

ICR number: EPA ICR No. 0278.13.

OMB control number: OMB Control No. 2070-0044.

ICR status: The approval for this ICR is scheduled to expire on October 31, 2021.

Abstract: This information collection activity notifies the EPA of supplemental distribution of registered pesticide products. As mandated by FIFRA, as amended, EPA is responsible for the regulation of pesticides. FIFRA section 3(e) (7 U.S.C. 136a(e)) allows pesticide products with the same formulation, label claims, and manufacturer as a registered product to be distributed under the same registration as the basic product. Pesticide registrants may distribute or sell registered pesticides under a different product name in addition to the registered name, or under a different

entity's name and address. Such distribution and sale is termed "supplemental distribution" and the product is termed a "distributor product." EPA requires pesticide registrants who enter into supplemental distribution agreements with other companies to submit EPA Form 8570-5, Notice of Supplemental Distribution of a Registered Pesticide Product. Supplemental registrations are only an extension of a currently federally registered pesticide product.

Burden statement: The annual public reporting and recordkeeping burden for this collection of information is estimated to average 0.32 hours per response. The ICR, a copy of which is available in the docket, provides a detailed explanation of this estimate, which is only briefly summarized here:

Respondents/Affected entities: Entities potentially affected by this ICR include those in pesticide and other agricultural chemical manufacturing.

Estimated total number of potential respondents: 1,885.

Frequency of response: On occasion.

Estimated total annual burden hours: 603 hours.

Estimated total annual costs: \$54,463. This includes an estimated burden cost of \$54,463 and an estimated cost of \$0 for non-burden hour paperwork costs, e.g., investment or maintenance and operational costs.

Changes in the estimates from the last approval: There are no changes in the estimates.

G. Docket ID Number EPA-HQ-OPP-2016-0630

Title: Compliance Requirement for Child-Resistant Packaging.

ICR number: EPA ICR No. 0616.13.

OMB control number: OMB Control No. 2070-0052.

ICR status: The approval for this ICR is scheduled to expire on November 30, 2021.

Abstract: This information collection program is designed to provide EPA with assurances that the packaging of pesticide products sold and distributed to the general public in the United States meets standards set forth by the Agency pursuant to FIFRA. Registrants must certify to the Agency that the pesticide packaging or device regulated by this Act meets these standards.

Burden statement: The annual public reporting and recordkeeping burden for this collection of information is estimated to average 3,535 hours per response. The ICR, a copy of which is available in the docket, provides a detailed explanation of this estimate, which is only briefly summarized here:

Respondents/Affected entities: Entities potentially affected by this ICR include pesticide and other agricultural chemical manufacturing, other chemical and allied products merchant wholesalers, exterminating and pest control services.

Estimated total number of potential respondents: 31.

Frequency of response: On occasion.

Estimated total annual burden hours: 3,535 hours.

Estimated total annual costs: \$249,292. This includes an estimated burden cost of \$249,292 and an estimated cost of \$0 for non-burden hour paperwork costs, e.g., investment or maintenance and operational costs.

Changes in the estimates from the last approval: There are no changes in the estimates.

V. What is the next step in the process for these ICRs?

EPA will consider the comments received and amend the individual ICRs as appropriate before submitting the final ICR packages to OMB for review and approval pursuant to 5 CFR 1320.12. EPA will issue another **Federal Register** document pursuant to 5 CFR 1320.5(a)(1)(iv) to announce the submission of these ICRs to OMB and the opportunity for the public to submit additional comments for OMB consideration. If you have any questions about any of these ICRs or the approval process in general, please contact the person listed under **FOR FURTHER INFORMATION CONTACT**.

Authority: 44 U.S.C. 3501 *et seq.*

Dated: July 31, 2020.

Alexandra Dapolito Dunn,

Assistant Administrator, Office of Chemical Safety and Pollution Prevention.

BILLING CODE 6560-50-P

ENVIRONMENTAL PROTECTION AGENCY

[FRL-10013-58-OMS]

Cross-Media Electronic Reporting: Authorized Program Revision Approval, State of Kansas

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: This notice announces the Environmental Protection Agency's (EPA) approval of the State of Kansas's request to revise/modify certain of its EPA-authorized programs to allow electronic reporting.

DATES: EPA approves the authorized program revisions/modifications as of August 17, 2020.

FOR FURTHER INFORMATION CONTACT: Shirley M. Miller, U.S. Environmental Protection Agency, Office of Information Management, Mail Stop 2824T, 1200 Pennsylvania Avenue NW, Washington, DC 20460, (202) 566-2908, miller.shirley@epa.gov.

SUPPLEMENTARY INFORMATION: On October 13, 2005, the final Cross-Media Electronic Reporting Rule (CROMERR) was published in the **Federal Register** (70 FR 59848) and codified as part 3 of title 40 of the CFR. CROMERR establishes electronic reporting as an acceptable regulatory alternative to paper reporting and establishes requirements to assure that electronic documents are as legally dependable as their paper counterparts. Subpart D of CROMERR requires that state, tribal or local government agencies that receive, or wish to begin receiving, electronic reports under their EPA-authorized programs must apply to EPA for a revision or modification of those programs and obtain EPA approval. Subpart D provides standards for such approvals based on consideration of the electronic document receiving systems that the state, tribe, or local government will use to implement the electronic reporting. Additionally, § 3.1000(b) through (e) of 40 CFR part 3, subpart D provides special procedures for program revisions and modifications to allow electronic reporting, to be used at the option of the state, tribe or local government in place of procedures available under existing program-specific authorization regulations. An application submitted under the subpart D procedures must show that the state, tribe or local government has sufficient legal authority to implement the electronic reporting components of the programs covered by the application and will use electronic document receiving systems that meet the applicable subpart D requirements.

On December 3, 2019, the Kansas Department of Health and Environment (KDHE) submitted an application titled KEIMS (Kansas Environmental Information Management System) for revisions/modifications to its EPA-approved programs under title 40 CFR to allow new electronic reporting. EPA reviewed KDHE's request to revise/modify its EPA-authorized programs and, based on this review, EPA determined that the application met the standards for approval of authorized program revisions/modifications set out in 40 CFR part 3, subpart D. In accordance with 40 CFR 3.1000(d), this

notice of EPA's decision to approve Kansas's request to revise/modify its following EPA-authorized programs to allow electronic reporting under 40 CFR parts 122, 125, 240-249, 260-270, 272-279, 280, and EPCRA Sections 302-304, 311-313 is being published in the **Federal Register**:

Part 123: EPA-Administered Permit Programs: the National Pollutant Discharge Elimination System (NPDES) Reporting under CFR 122 & 125

Part 239: Requirements for State Permit Program Determination of Adequacy (RCRA Subtitle C) Reporting under CFR 240-259

Part 271: Requirements for Authorization of State Hazardous Waste Programs (RCRA Subtitle C) Reporting under CFR 260-270, 272-279

Part 281: Technical Standards and Corrective Action Requirements for Owners and Operators of Underground Storage Tanks (UST) Reporting under CFR 280

Emergency Planning and Community Right-to-Know Act (SARA Title 111/ CRTK) Reporting under EPCRA Sections 302-304, 311-313

KDHE was notified of EPA's determination to approve its application with respect to the authorized programs listed above.

Dated: August 10, 2020.

Jennifer Campbell,

Acting Director, Office of Information Management.

[FR Doc. 2020-17818 Filed 8-14-20; 8:45 am]

BILLING CODE 6560-50-P

GENERAL SERVICES ADMINISTRATION

[Notice-MA-2020-10; Docket No. 2020-0002; Sequence No. 27]

Maximum Per Diem Reimbursement Rates for the Continental United States

AGENCY: Office of Government-wide Policy (OGP), General Services Administration (GSA).

ACTION: Notice of GSA Per Diem Bulletin FTR 21-01, Fiscal Year (FY) 2021 CONUS per diem reimbursement rates.

SUMMARY: The GSA FY 2021 per diem reimbursement rates review has resulted in lodging and meal allowance changes for certain locations within CONUS to provide for reimbursement of Federal employees' subsistence expenses while on official travel.

DATES: *Applicability Date:* This notice applies to travel performed on or after

October 1, 2020, through September 30, 2021.

FOR FURTHER INFORMATION CONTACT: For clarification of content, contact Ms. Jill Denning, Program Analyst, Office of Government-wide Policy, Office of Asset and Transportation Management, at 202-208-7642, or by email at travelpolicy@gsa.gov. Please cite Notice of GSA Per Diem Bulletin FTR 21-01.

SUPPLEMENTARY INFORMATION:

Background

The CONUS per diem reimbursement rates prescribed in Bulletin 21-01 may be found at <https://www.gsa.gov/perdiem>. GSA bases the maximum lodging allowance rates on the average daily rate that the lodging industry reports to an independent organization. If a maximum lodging allowance rate and/or a meals and incidental expenses (M&IE) per diem reimbursement rate is insufficient to meet necessary expenses in any given location, Federal executive agencies can request that GSA review that location. Please review questions six and seven of GSA's per diem Frequently Asked Questions page at <https://www.gsa.gov/perdiem> for more information on the special review process. In addition, the Federal Travel Regulation (FTR) allows for actual expense reimbursement as provided in §§ 301-11.300 through 301-11.306.

For FY 2021, one new non-standard area (NSA) location was added for Albuquerque, New Mexico (Bernalillo County). The standard CONUS lodging rate will remain unchanged at \$96. The M&IE reimbursement rate tiers were also unchanged for FY 2021. The standard CONUS M&IE rate remains at \$55, and the M&IE NSA tiers remain at \$56-\$76.

Notices published periodically in the **Federal Register** now constitute the only notification of revisions in CONUS per diem reimbursement rates to agencies, other than the changes posted on the GSA website.

Jessica Salmoiraghi,

Associate Administrator, Office of Government-wide Policy.

DEPARTMENT OF DEFENSE

GENERAL SERVICES ADMINISTRATION

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

[OMB Control No. 9000-0201; Docket No. 2020-0053; Sequence No. 6]

Information Collection; Prohibition on Contracting With Entities Using Certain Telecommunications and Video Surveillance Services or Equipment (FAR Case 2019-009)

AGENCY: Department of Defense (DOD), General Services Administration (GSA), and National Aeronautics and Space Administration (NASA).

ACTION: Notice and request for comments.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, and the Office of Management and Budget (OMB) regulations, DoD, GSA, and NASA invite the public to comment on an extension of information collection 9000-0201 concerning representations and reporting associated with implementation of Federal Acquisition Regulation (FAR) rule 2019-009, Prohibition on Contracting with Entities Using Certain Telecommunications and Video Surveillance Services or Equipment. OMB authorized information collection 9000-0201 as an emergency collection. DoD, GSA, and NASA propose that OMB extend its approval for use for three additional years beyond the current expiration date.

DATES: DoD, GSA, and NASA will consider all comments received by October 16, 2020.

ADDRESSES: DoD, GSA, and NASA invite interested persons to submit comments on this collection through <http://www.regulations.gov> and follow the instructions on the site. This website provides the ability to type short comments directly into the comment field or attach a file for lengthier comments. If there are difficulties submitting comments, contact the GSA Regulatory Secretariat Division at 202-501-4755 or GSARegSec@gsa.gov.

Instructions: All items submitted must cite Information Collection 9000-0201, Prohibition on Contracting with Entities Using Certain Telecommunications and Video Surveillance Services or Equipment (FAR Case 2019-009). Comments received generally will be posted without change to [regulations.gov](https://www.regulations.gov), including any personal and/or business

confidential information provided. To confirm receipt of your comment(s), please check [regulations.gov](https://www.regulations.gov), approximately two-to-three days after submission to verify posting.

FOR FURTHER INFORMATION CONTACT: FAR Policy at telephone 202-969-4075, or farpolicy@gsa.gov.

SUPPLEMENTARY INFORMATION:

A. OMB Control Number, Title, and Any Associated Form(s)

9000-0201, Prohibition on Contracting with Entities Using Certain Telecommunications and Video Surveillance Services or Equipment (FAR Case 2019-009).

B. Need and Uses

This information collection supports implementation of subparagraph (a)(1)(B) of Section 889 of the John S. McCain National Defense Authorization Act (NDAA) for Fiscal Year 2019 (Pub. L. 115-232). DoD, GSA, and NASA published an interim rule (FAR Case 2019-009) at 85 FR 42665 on July 14, 2020 to implement section 889(a)(1)(B) of the NDAA. This section prohibits executive agencies from entering into, or extending or renewing, a contract with an entity that uses any equipment, system, or service that uses covered telecommunications equipment or services as a substantial or essential component of any system, or as critical technology as part of any system, on or after August 13, 2020, unless an exception applies or a waiver has been granted.

This requirement is implemented in the Federal Acquisition Regulation (FAR) through the provision at FAR 52.204-24, Representation Regarding Certain Telecommunications and Video Surveillance Services or Equipment and the clause at FAR 52.204-25, Prohibition on Contracting for Certain Telecommunications and Video Surveillance Services or Equipment.

Information collected under the provision at 52.204-24 will be used to identify if an offeror uses any equipment, system, or service that uses covered telecommunications equipment or services as a substantial or essential component of any system, or as critical technology as part of any system, and their intended use in order to determine whether the prohibition applies.

Information collected under the clause at FAR 52.204-25 will consist of reports from contractors who have identified, post-award, the use of any equipment, system, or service that uses covered telecommunications equipment or services as a substantial or essential component of any system, or as critical

technology as part of any system, and requires a disclosure that will be used by agency personnel to identify and consult with legal counsel and the program office on next steps regarding the prohibited equipment or services.

If the Government seeks a waiver from the prohibition, the offeror will be required to provide a full and complete laydown of the presences of covered telecommunications or video surveillance equipment or services in the entity's supply chain, a phase-out plan to eliminate such covered telecommunications equipment or services from the offeror's systems, and any other information necessary for the agency to process the waiver.

C. Annual Burden

The annual public reporting burden for this collection of information is estimated as follows:

Agency: DoD, GSA, and NASA.

Type of Information Collection: New Collection.

Title of Collection: Representation Regarding Certain Telecommunications and Video Surveillance Services or Equipment.

FAR Clause: 52.204–24.

Affected Public: Private Sector—Business.

Total Estimated Number of Respondents: 102,792.

Average Responses per Respondents: 378.

Total Estimated Number of Responses: 38,854,291.

Average Time (for both positive and negative representations) per Response: 3 hours.

Total Annual Time Burden: 116,562,873.

Agency: DoD, GSA, and NASA.

Type of Information Collection: New Collection.

Title of Collection: Prohibition on Contracting for Certain Telecommunications and Video Surveillance Services or Equipment.

FAR Clause: 52.204–25.

Affected Public: Private Sector—Business.

Total Estimated Number of Respondents: 5,140.

Average Responses per Respondents: 5.

Total Estimated Number of Responses: 25,700.

Average Time per Response: 3 hours.

Total Annual Time Burden: 77,100.

Agency: DoD, GSA, and NASA.

Type of Information Collection: New Collection.

Title of Collection: Waiver from Prohibition on Contracting for Certain Telecommunications and Video Surveillance Services or Equipment.

FAR Clause: 52.204–25.

Affected Public: Private Sector—Business.

Total Estimated Number of Respondents: 20,000.

Average Responses per Respondents: 1.

Total Estimated Number of Responses: 20,000.

Average Time per Response: 160 hours.

Total Annual Time Burden: 3,200,000.

The public reporting burden for this collection of information consists of a representation to identify whether an offeror uses covered telecommunications equipment or services for each offer as required by 52.204–24 and reports of identified use of covered telecommunications equipment or services as required by 52.204–25. The representation at 52.204–24 is estimated to average 3 hours per response to review the prohibitions, research the source of the product or service, and complete the additional detailed disclosure, if applicable. Reports required by 52.204–25 are estimated to average 3 hours per response, including the time for reviewing definitions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the report.

If the Government seeks a waiver from the prohibition, the offeror will be required to provide a full and complete laydown of the presences of covered telecommunications or video surveillance equipment or services in the entity's supply chain and a phase-out plan to eliminate such covered telecommunications equipment or services from the offeror's systems. There is no way to estimate the total number of waivers at this time. For the purposes of complying with the PRA analysis, the FAR Council estimates 20,000 waivers; however there is no data for the basis of this estimate. This estimate may be higher or lower once the rule is in effect.

D. Public Comments

DoD, GSA, and NASA invite comments on: whether the proposed collection of information is necessary for the proper performance of the functions of Federal Government acquisitions, including whether the information will have practical utility; the accuracy of the estimate of the burden of the proposed information collection; ways to enhance the quality, utility, and clarity of the information to be collected; and ways to minimize the burden of the information collection on respondents, including the use of

automated collection techniques or other forms of information technology.

Obtaining Copies: Requesters may obtain a copy of the information collection documents from the GSA Regulatory Secretariat Division by calling 202–501–4755 or emailing GSARegSec@gsa.gov. Please cite OMB Control No. 9000–0201, Prohibition on Contracting for Certain Telecommunications and Video Surveillance Services or Equipment (FAR Case 2019–009).

William Clark,

Director, Office of Governmentwide Acquisition Policy, Office of Acquisition Policy, Office of Governmentwide Policy.

[FR Doc. 2020–17695 Filed 8–14–20; 8:45 am]

BILLING CODE 6820–EP–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Medicare & Medicaid Services

[Document Identifier CMS–10751]

Emergency Clearance: Public Information Collection Requirements Submitted to the Office of Management and Budget (OMB)

AGENCY: Centers for Medicare & Medicaid Services, HHS

ACTION: Notice.

SUMMARY: The Centers for Medicare and Medicaid Services (CMS) is requesting that a new information collection request (ICR) associated with the Temporary Policy on 2020 Premium Credits Associated with the COVID–19 Public Health Emergency be processed under the emergency clearance process. Due to agencies inability to update CMS systems for IRS reporting purposes in time for tax season if the normal non-emergency clearance procedures are followed, an emergency clearance is requested. Once the emergency information collection request is approved, CMS plans to seek public comments during the required 60-day and 30-day notice and comment periods associated with obtaining a standard (non-emergency) OMB approval. The use of normal clearance procedures will not allow CMS to update its enrollment data timely and is therefore is reasonably likely to prevent accurate and timely distribution of 1095–A tax forms to affected consumers. Health Insurance Exchanges furnish Form 1095–A to individuals to allow them to reconcile the credit on their returns with advance payments of the premium

tax credit (APTC) and file an accurate tax return.

DATES: Comments must be received by August 24, 2020.

ADDRESSES: When commenting, please reference the document identifier or OMB control number. To be assured consideration, comments and recommendations must be submitted within 10 days in any one of the following ways:

1. *Electronically.* You may send your comments electronically to <http://www.regulations.gov>. Follow the instructions for “Comment or Submission” or “More Search Options” to find the information collection document(s) that are accepting comments.

2. *By regular mail.* You may mail written comments to the following address: CMS, Office of Strategic Operations and Regulatory Affairs, Division of Regulations Development, Attention: Document Identifier/OMB Control Number _____, Room C4-26-05, 7500 Security Boulevard, Baltimore, Maryland 21244-1850.

To obtain copies of a supporting statement and any related forms for the proposed collection(s) summarized in this notice, you may make your request using one of following:

1. Access CMS’ website address at <https://www.cms.gov/Regulations-and-Guidance/Legislation/PaperworkReductionActof1995/PRA-Listing>.

FOR FURTHER INFORMATION CONTACT: William Parham at (410) 786-4669.

SUPPLEMENTARY INFORMATION: Under the PRA, Federal agencies are required to publish notice in the **Federal Register** concerning each proposed ICR. Interested persons are invited to send comments regarding our burden estimates or any other aspect of this ICR including the necessity and utility of the proposed ICR for the proper performance of the agency’s functions, the accuracy of the estimated burden, ways to enhance the quality, utility, and clarity of the information to be collected and the use of automated collection techniques or other forms of information technology to minimize the information collection burden.

Contents

This notice sets out a summary of the use and burden associated with the following ICR. More detailed information can be found in the collection’s supporting statement and associated materials (see **ADDRESSES**).

CMS-10751 Collection of Premium Credit Data Related to COVID-19 Emergency

Under the PRA (44 U.S.C. 3501-3520), Federal agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. The term “collection of information” is defined in 44 U.S.C. 3502(3) and 5 CFR 1320.3(c) and includes agency requests or requirements that members of the public: Submit reports, keep records, or provide information to a third party. To comply with this requirement, CMS is publishing this notice that summarizes the following proposed collection(s) of information for public comment.

Information Collection

1. *Type of Information Collection Request:* New collection (Request for a new OMB control number); *Title of Information Collection:* Collection of Premium Credit Data Related to COVID-19 Emergency; *Use:* The reporting requirements and data collection in the implementing regulations for the Exchanges and QHP issuers, 45 CFR parts 155 and 156, address the minimum requirements that Qualified Health Plan (QHP) issuers must meet in order to comply with provisions in the Affordable Care Act with respect to participation in the Federally-facilitated Exchange (FFE) or a State-based Exchange (SBE). CMS currently has authority under CMS-10592/OMB Control Number: 0938-1341 to collect enrollment reconciliation data from QHP issuers. However, in light of the urgent need to help individuals and small employers experiencing economic hardship to maintain continuous coverage through the COVID-19 public health emergency, CMS is adopting a policy of relaxed enforcement with respect to 45 CFR 156.80(d), 45 CFR 156.210(a), and 155.400(e) and (g) to allow QHP issuers, on a temporary basis, to offer premium credits for 2020 coverage. Internal Revenue Service (IRS) regulations require that Exchanges accurately report enrollee premiums to the IRS and to enrollees on the annual 1095-A tax form.

To comply with existing reporting requirements, QHP issuers in states with a FFE or State-based Exchange on the Federal Platform (SBE-FP) that offer these premium credits must notify CMS of the parameters of these credits using the attached template. QHP issuers offering premium credits in a state with an SBE that relies on its own eligibility and enrollment system will follow any requirements established by the SBE for reporting planned temporary premium

credits. QHP issuers must submit the attached template to notify CMS of all planned temporary premium credits for FFE or SBE-FP plans no later than October 1, 2020, regardless of the month(s) to which the credit will be applied. To ensure proper allocation of Advance Payments of the Premium Tax Credit (APTC) to the portion of premium that covers essential health benefits, CMS will adjust premium and APTC amounts in its enrollment data. CMS will also report to the IRS the premium and APTC changes in the issuer-submitted template for purposes of reconciliation to premium tax credits. In accordance with the implementing regulations of the PRA at 5 CFR 1320.13, CMS is requesting emergency processing for this ICR because it cannot reasonably comply with normal clearance procedures. Upon OMB approval of this emergency clearance request, CMS will follow the normal clearance procedures.

Form Number: CMS-10751 (OMB control number: 0938-NEW); *Frequency:* One-time collection; *Affected Public:* Business or other for-profits and Not-for-profit institutions; *Number of Respondents:* 175; *Total Annual Responses:* 1; *Total Annual Hours:* 175. (For policy questions regarding this collection contact Anne Pesto at 410-786-3492.)

Dated: August 11, 2020.

William N. Parham, III,
Director, Paperwork Reduction Staff, Office of Strategic Operations and Regulatory Affairs.

BILLING CODE 4120-01-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA-2018-D-0787]

Civil Money Penalties Relating to the ClinicalTrials.gov Data Bank; Guidance for Responsible Parties, Submitters of Certain Applications and Submissions to the Food and Drug Administration, and Food and Drug Administration Staff; Availability

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice of availability.

SUMMARY: The Food and Drug Administration (FDA or Agency) is announcing the availability of a final guidance for industry and other responsible parties entitled “Civil Money Penalties Relating to the *ClinicalTrials.gov* Data Bank; Guidance

for Responsible Parties, Submitters of Certain Applications and Submissions to FDA, and FDA Staff.” The guidance provides the current thinking of FDA’s medical product Centers—the Center for Drug Evaluation and Research, the Center for Biologics Evaluation and Research, and the Center for Devices and Radiological Health—regarding civil money penalties that may be assessed under the Federal Food, Drug, and Cosmetic Act (FD&C Act) for violations of the requirements to submit clinical trial registration and results information to the *ClinicalTrials.gov* data bank and certain certifications to FDA.

DATES: The announcement of the guidance is published in the **Federal Register** on August 17, 2020.

ADDRESSES: You may submit either electronic or written comments on Agency guidances at any time as follows:

Electronic Submissions

Submit electronic comments in the following way:

- **Federal eRulemaking Portal:** <https://www.regulations.gov>. Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to <https://www.regulations.gov> will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else’s Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on <https://www.regulations.gov>.

- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see “Written/Paper Submissions” and “Instructions”).

Written/Paper Submissions

Submit written/paper submissions as follows:

- **Mail/Hand Delivery/Courier (for written/paper submissions):** Dockets Management Staff (HFA-305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.
- For written/paper comments submitted to the Dockets Management Staff, FDA will post your comment, as

well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in “Instructions.”

Instructions: All submissions received must include the Docket No. FDA-2018-D-0787 for “Civil Money Penalties Relating to the *ClinicalTrials.gov* Data Bank; Guidance for Responsible Parties, Submitters of Certain Applications and Submissions to FDA, and FDA Staff.” Received comments will be placed in the docket and, except for those submitted as “Confidential Submissions,” publicly viewable at <https://www.regulations.gov> or at the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday.

- **Confidential Submissions**—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states “THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.” The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on <https://www.regulations.gov>. Submit both copies to the Dockets Management Staff. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as “confidential.” Any information marked as “confidential” will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA’s posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: <https://www.govinfo.gov/content/pkg/FR-2015-09-18/pdf/2015-23389.pdf>.

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to <https://www.regulations.gov> and insert the docket number, found in brackets in the heading of this document, into the “Search” box and follow the prompts and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

You may submit comments on any guidance at any time (see 21 CFR 10.115(g)(5)).

Submit written requests for single copies of the guidance to the Office of Good Clinical Practice (OGCP), Office of Clinical Policy and Programs, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 32, Rm. 5103, Silver Spring, MD 20993. Send one self-addressed adhesive label to assist that office in processing your requests. See the **SUPPLEMENTARY INFORMATION** section for electronic access to the guidance document.

FOR FURTHER INFORMATION CONTACT:

Patrick McNeilly, Office of Good Clinical Practice, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 32, Rm. 5172, Silver Spring, MD 20993-0002, 301-796-2941.

SUPPLEMENTARY INFORMATION:

I. Background

FDA is announcing the availability of a guidance for industry and other responsible parties entitled “Civil Money Penalties Relating to the *ClinicalTrials.gov* Data Bank; Guidance for Responsible Parties, Submitters of Certain Applications and Submissions to FDA, and FDA Staff.” The guidance provides the current thinking of FDA’s Center for Drug Evaluation and Research, Center for Biologics Evaluation and Research, and Center for Devices and Radiological Health (Center, or collectively Centers), regarding civil money penalties for responsible parties and/or submitters of certain applications and submissions to FDA regarding drug products, biological products, and device products (submitters) who violate applicable FD&C Act (21 U.S.C. 301 *et seq.*) prohibitions relating to requirements under section 402(j) of the Public Health Service Act (PHS Act) (42 U.S.C. 282(j)), including its implementing regulations in 42 CFR part 11, to submit clinical trial registration and results information to the *ClinicalTrials.gov* data bank and certain certifications to FDA.

The guidance is intended to address several questions. First, the guidance addresses how the Centers may identify whether responsible parties have failed to submit required clinical trial registration and/or results information to the *ClinicalTrials.gov* data bank or submitted false or misleading information to the data bank, and whether submitters have failed to submit the certification required by section 402(j)(5)(B) of the PHS Act to FDA or knowingly submitted a false certification to FDA. Second, the guidance addresses the circumstances under which a Center may decide to seek civil money penalties against a responsible party or submitter. Third,

the guidance addresses the procedures that apply when a Center seeks civil money penalties; and fourth, the guidance addresses the civil money penalty amounts that may be assessed for: (1) Failing to submit required clinical trial registration and/or results information to the *ClinicalTrials.gov* data bank, (2) knowingly submitting false or misleading clinical trial information to the data bank, (3) failing to submit the required certification to FDA, or (4) knowingly submitting a false certification to FDA.

In the **Federal Register** of September 21, 2018 (83 FR 47926), FDA announced the availability of the draft guidance. FDA received comments on the draft guidance and considered all comments in finalizing this guidance. FDA revised the guidance to clarify that FDA does not intend to include on its Lists of Inspectional Observations, Forms FDA 483, any inspectional observations regarding potential violations relating to the *ClinicalTrials.gov* data bank; however, information that is collected by an investigator regarding potential violations of such requirements will be included in an Establishment Inspection Report and provided to the relevant Center for further evaluation. The guidance has also been revised to make clear that, in determining whether to seek civil money penalties, FDA intends to take into consideration any corrective action taken by a responsible party or submitter after receiving a Notice of Noncompliance. The guidance further explains that FDA intends to post Notices of Noncompliance on its website and to transmit the Notices of Noncompliance to the National Institutes of Health (NIH), so NIH can include the notice regarding noncompliance required under section 402(j)(5)(E) of the PHS Act in the *ClinicalTrials.gov* data bank. The guidance also provides some limited examples of applicable clinical trials of products that potentially may pose a higher risk to human subjects or applicable clinical trials of products intended to address significant public health need. In addition, editorial changes were made to the guidance to improve clarity. The guidance announced in this notice finalizes the draft guidance dated September 21, 2018.

This guidance is being issued consistent with FDA's good guidance practices regulation (21 CFR 10.115). The guidance represents the current thinking of FDA on civil money penalties relating to the *ClinicalTrials.gov* data bank. It does not establish any rights for any person and is not binding on FDA or the public.

You can use an alternative approach if it satisfies the requirements of the applicable statutes and regulations.

II. Paperwork Reduction Act of 1995

This guidance contains no collection of information. Therefore, clearance by the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501–3521) is not required.

However, this guidance refers to previously approved collections of information. This collection of information is subject to review by OMB under the PRA. The collection of information referenced in this guidance is related to information required under section 402(j)(5)(B) of the PHS Act and has been approved under OMB control number 0910–0616.

III. Electronic Access

Persons with access to the internet may obtain the guidance at either <https://www.fda.gov/Drugs/GuidanceComplianceRegulatoryInformation/Guidances/default.htm> or <https://www.regulations.gov>.

Dated: August 11, 2020.

Lowell J. Schiller,

Principal Associate Commissioner for Policy.

[FR Doc. 2020–17909 Filed 8–14–20; 8:45 am]

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2020–N–0257]

Agency Information Collection Activities; Submission for Office of Management and Budget Review; Comment Request; Food and Drug Administration Rapid Response Surveys

AGENCY: Food and Drug Administration, Health and Human Services (HHS).

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is announcing that a proposed collection of information has been submitted to the Office of Management and Budget (OMB) for review and clearance under the Paperwork Reduction Act of 1995.

DATES: Submit written comments (including recommendations) on the collection of information by September 16, 2020.

ADDRESSES: To ensure that comments on the information collection are received, OMB recommends that written comments be submitted to <https://>

www.reginfo.gov/public/do/PRAMain. Find this particular information collection by selecting “Currently under Review—Open for Public Comments” or by using the search function. The OMB control number for this information collection is 0910–0500. Also include the FDA docket number found in brackets in the heading of this document.

FOR FURTHER INFORMATION CONTACT: Ila S. Mizrahi, Office of Operations, Food and Drug Administration, Three White Flint North, 10A–12M, 11601 Landsdown St., North Bethesda, MD 20852, 301–796–7726, PRAStaff@fda.hhs.gov.

SUPPLEMENTARY INFORMATION: In compliance with 44 U.S.C. 3507, FDA has submitted the following proposed collection of information to OMB for review and clearance.

Food and Drug Administration Rapid Response Surveys

OMB Control Number 0910–0500—Extension

Section 505 of the Federal Food, Drug, and Cosmetic Act (FD&C Act) (21 U.S.C. 355) requires that important safety information relating to all human prescription drug products be made available to FDA so that the Agency can take appropriate action to protect the public health when necessary. Section 702 of the FD&C Act (21 U.S.C. 372) authorizes investigational powers to FDA for enforcement of the FD&C Act. Under section 519 of the FD&C Act (21 U.S.C. 360i), FDA is authorized to require manufacturers to report medical device-related deaths, serious injuries, and malfunctions to FDA; to require user facilities to report device-related deaths directly to FDA and to manufacturers; and to report serious injuries to the manufacturer. Section 522 of the FD&C Act (21 U.S.C. 360l) authorizes FDA to require manufacturers to conduct postmarket surveillance of medical devices. Section 705(b) of the FD&C Act (21 U.S.C. 375(b)) authorizes FDA to collect and disseminate information regarding medical products or cosmetics in situations involving imminent danger to health or gross deception of the consumer. Section 1003(d)(2) of the FD&C Act (21 U.S.C. 393(d)(2)) authorizes the Commissioner of Food and Drugs to implement general powers (including conducting research) to carry out effectively the mission of FDA.

These sections of the FD&C Act enable FDA to enhance consumer protection from risks associated with medical products usage that are not

foreseen or apparent during the premarket notification and review process. FDA's regulations governing application for Agency approval to market a new drug (21 CFR part 314) and regulations governing biological products (21 CFR part 600) implement these statutory provisions. FDA's regulations governing Agency oversight of Foods, Cosmetics, Dietary Supplements, and Animal Food and Feed (21 CFR parts 70 through 199) also implement these statutory provisions. Currently, FDA monitors medical product related postmarket adverse events via both the mandatory and voluntary MedWatch reporting systems using Forms FDA 3500 and 3500A (OMB control number 0910-0291), electronic Safety Reporting Portal (OMB control number 0910-0645), and the vaccine adverse event reporting system.

FDA is seeking extension of OMB approval to collect vital information via a series of rapid response surveys. Participation in these surveys will be voluntary. This request covers rapid response surveys for community-based

healthcare professionals, general type medical facilities, specialized medical facilities (those known for cardiac surgery, obstetrics/gynecology services, pediatric services, etc.), other healthcare professionals, patients, consumers, and risk managers working in facilities containing products related to or regulated by FDA. FDA will use the information gathered from these surveys to quickly obtain vital information about medical product risks and interventions to reduce risks so the Agency may take appropriate public health or regulatory action including dissemination of this information as necessary and appropriate.

FDA projects six emergency risk related surveys per year with a sample of between 50 and 10,000 respondents per survey. FDA also projects a response time of 0.5 hours per response. These estimates are based on the maximum sample size per questionnaire that FDA may be able to obtain by working with healthcare professional organizations. The annual number of surveys was determined by the maximum past

number of surveys per year FDA has conducted under this collection.

Respondents to this collection of information will be identified when additional surveillance data will address a potential public health hazard. For example, respondents could include facilities or professionals that have the most experience in the use of certain FDA-regulated products, foods, cosmetics, dietary supplements, animal food and feed, drugs, tobacco products, etc. Once FDA identifies the need for additional surveillance data to address a potential public health hazard, the appropriate respondents will be identified either through FDA's lists or through the appropriate professional organizations.

In the **Federal Register** of February 5, 2020 (85 FR 6559), we published a 60-day notice requesting public comment on the proposed collection of information. No comments were received.

FDA estimates the burden of this collection of information as follows:

TABLE 1—ESTIMATED ANNUAL REPORTING BURDEN ¹

Activity	Numbers of respondents	Numbers of responses per respondent	Total annual responses	Average burden per response	Total hours
FDA Rapid Response Survey	10,000	6	60,000	0.5 (30 minutes)	30,000

¹ There are no capital costs or operating and maintenance costs associated with this collection of information.

Based on a review of the information collection since our last request for OMB approval, we have made no adjustments to our burden estimate.

Dated: August 12, 2020.

Lowell J. Schiller,

Principal Associate Commissioner for Policy.

BILLING CODE 4164-01-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Health Resources and Services Administration

National Vaccine Injury Compensation Program; List of Petitions Received

AGENCY: Health Resources and Services Administration (HRSA), Department of Health and Human Services (HHS).

ACTION: Notice.

SUMMARY: HRSA is publishing this notice of petitions received under the National Vaccine Injury Compensation Program (the Program), as required by Section 2112(b)(2) of the Public Health Service (PHS) Act, as amended. While

the Secretary of HHS is named as the respondent in all proceedings brought by the filing of petitions for compensation under the Program, the United States Court of Federal Claims is charged by statute with responsibility for considering and acting upon the petitions.

FOR FURTHER INFORMATION CONTACT: For information about requirements for filing petitions, and the Program in general, contact Lisa L. Reyes, Clerk of Court, United States Court of Federal Claims, 717 Madison Place NW, Washington, DC 20005, (202) 357-6400. For information on HRSA's role in the Program, contact the Director, National Vaccine Injury Compensation Program, 5600 Fishers Lane, Room 08N146B, Rockville, Maryland 20857; (301) 443-6593, or visit our website at: <http://www.hrsa.gov/vaccinecompensation/index.html>.

SUPPLEMENTARY INFORMATION: The Program provides a system of no-fault compensation for certain individuals who have been injured by specified childhood vaccines. Subtitle 2 of Title XXI of the PHS Act, 42 U.S.C. 300aa-

10 *et seq.*, provides that those seeking compensation are to file a petition with the United States Court of Federal Claims and to serve a copy of the petition to the Secretary of HHS, who is named as the respondent in each proceeding. The Secretary has delegated this responsibility under the Program to HRSA. The Court is directed by statute to appoint special masters who take evidence, conduct hearings as appropriate, and make initial decisions as to eligibility for, and amount of, compensation.

A petition may be filed with respect to injuries, disabilities, illnesses, conditions, and deaths resulting from vaccines described in the Vaccine Injury Table (the Table) set forth at 42 CFR 100.3. This Table lists for each covered childhood vaccine the conditions that may lead to compensation and, for each condition, the time period for occurrence of the first symptom or manifestation of onset or of significant aggravation after vaccine administration. Compensation may also be awarded for conditions not listed in the Table and for conditions that are manifested outside the time periods

specified in the Table, but only if the petitioner shows that the condition was caused by one of the listed vaccines.

Section 2112(b)(2) of the PHS Act, 42 U.S.C. 300aa-12(b)(2), requires that “[w]ithin 30 days after the Secretary receives service of any petition filed under section 2111 the Secretary shall publish notice of such petition in the **Federal Register**.” Set forth below is a list of petitions received by HRSA on July 1, 2020, through July 31, 2020. This list provides the name of petitioner, city and state of vaccination (if unknown then city and state of person or attorney filing claim), and case number. In cases where the Court has redacted the name of a petitioner and/or the case number, the list reflects such redaction.

Section 2112(b)(2) also provides that the special master “shall afford all interested persons an opportunity to submit relevant, written information” relating to the following:

1. The existence of evidence “that there is not a preponderance of the evidence that the illness, disability, injury, condition, or death described in the petition is due to factors unrelated to the administration of the vaccine described in the petition,” and

2. Any allegation in a petition that the petitioner either:

a. “[S]ustained, or had significantly aggravated, any illness, disability, injury, or condition not set forth in the Vaccine Injury Table but which was caused by” one of the vaccines referred to in the Table, or

b. “[S]ustained, or had significantly aggravated, any illness, disability, injury, or condition set forth in the Vaccine Injury Table the first symptom or manifestation of the onset or significant aggravation of which did not occur within the time period set forth in the Table but which was caused by a vaccine” referred to in the Table.

In accordance with Section 2112(b)(2), all interested persons may submit written information relevant to the issues described above in the case of the petitions listed below. Any person choosing to do so should file an original and three (3) copies of the information with the Clerk of the United States Court of Federal Claims at the address listed above (under the heading **FOR FURTHER INFORMATION CONTACT**), with a copy to HRSA addressed to Director, Division of Injury Compensation Programs, Healthcare Systems Bureau, 5600 Fishers Lane, 08N146B, Rockville, Maryland 20857.

The Court’s caption (Petitioner’s Name v. Secretary of HHS) and the docket number assigned to the petition should be used as the caption for the written submission. Chapter 35 of title

44, United States Code, related to paperwork reduction, does not apply to information required for purposes of carrying out the Program.

Thomas J. Engels,
Administrator.

List of Petitions Filed

1. Kevin Reilley, Bedford, New Hampshire, Court of Federal Claims No: 20-0798V
2. Patrick John Coleman, North Bend, Washington, Court of Federal Claims No: 20-0799V

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

National Cancer Institute; Notice of Meeting

Pursuant to section 10(d) of the Federal Advisory Committee Act, as amended, notice is hereby given of a meeting of the National Cancer Advisory Board.

The meeting will be held as a virtual meeting and is open to the public as

indicated below. Individuals who plan to view the virtual meeting and need special assistance or other reasonable accommodations to view the meeting should notify the Contact Person listed below in advance of the meeting. The meeting will be videocast and can be accessed from the NIH Videocasting and Podcasting website (<http://videocast.nih.gov/>).

A portion of the National Cancer Advisory Board meeting will be closed to the public in accordance with the provisions set forth in sections 552b(c)(4) and 552b(c)(6), Title 5 U.S.C., as amended. The grant applications and the discussions could disclose confidential trade secrets or commercial property such as patentable material, and personal information concerning individuals associated with the grant applications, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

Name of Committee: National Cancer Advisory Board.

Date: September 1, 2020.

Open: 1:00 p.m. to 5:45 p.m.

Agenda: NCAB Subcommittee Meetings—Subcommittee on Planning and Budget; *Ad Hoc* Subcommittee on Experimental Therapeutics; *Ad Hoc* Subcommittee on Population Science, Epidemiology and Disparities; and *Ad Hoc* Subcommittee on Global Cancer Research.

Place: National Cancer Institute—Shady Grove, 9609 Medical Center Drive, Rockville, MD 20850 (Virtual Meetings).

Instructions regarding access to the virtual Subcommittee Meetings will be posted at: <https://deainfo.nci.nih.gov/advisory/ncab/ncabmeetings.htm>.

Name of Committee: National Cancer Advisory Board.

Date: September 2, 2020.

Open: 1:00 p.m. to 3:15 p.m.

Agenda: Director's and Program reports and presentations; business of the Board.

Closed: 3:30 p.m. to 4:30 p.m.

Agenda: To review and evaluate grant applications.

Place: National Cancer Institute—Shady Grove, 9609 Medical Center Drive, Rockville, MD 20850 (Virtual Meeting).

Contact Person: Paulette S. Gray, Ph.D., Executive Secretary Division of Extramural Activities, National Cancer Institute—Shady Grove, National Institutes of Health, 9609 Medical Center Drive, 7th Floor, Room 7W444 Bethesda, MD 20892, 240–276–6340, grayp@mail.nih.gov.

Any interested person may file written comments with the committee by forwarding the statement to the Contact Person listed on this notice. The statement should include the name, address, telephone number and when applicable, the business or professional affiliation of the interested person.

Information is also available on the Institute's/Center's home page: NCAB: <https://deainfo.nci.nih.gov/advisory/ncab/ncabmeetings.htm>, where an agenda,

instructions for accessing the virtual NCAB meetings, and any additional information for the meetings will be posted when available.

DEPARTMENT OF HOMELAND SECURITY

Federal Emergency Management Agency

[Docket ID FEMA-2020-0016]

Voluntary Agreement Under Section 708 of the Defense Production Act; Manufacture and Distribution of Critical Healthcare Resources Necessary To Respond to a Pandemic

AGENCY: Federal Emergency Management Agency, Homeland Security (DHS).

ACTION: Notice.

SUMMARY: The Federal Emergency Management Agency (FEMA) announces the formation of a voluntary agreement under Section 708 of the Defense Production Act for the Manufacture and Distribution of Critical Healthcare Resources Necessary to Respond to a Pandemic. This Notice contains the text of the Voluntary Agreement.

FOR FURTHER INFORMATION CONTACT:

Harold Lucie, Joint DPA Office, Federal Emergency Management Agency, 500 C Street SW, Washington, DC 20472-3184, telephone (202) 212-2900, and email FEMA-DPA@fema.dhs.gov.

SUPPLEMENTARY INFORMATION:

Authority

Section 708 of the Defense Production Act (DPA), 50 U.S.C. 4558, allows the President to provide for the formation of voluntary agreements by the private sector to help provide for the national defense. This authority was delegated to the Secretary of Homeland Security generally in section 401 of Executive Order 13603,¹ “National Defense Resources Preparedness,” and specifically for response to COVID-19 in section 3 of Executive Order 13911,² “Delegating Additional Authority Under the Defense Production Act With Respect to Health and Medical Resources To Respond to the Spread of COVID-19.” The Secretary of Homeland Security has delegated these authorities to the FEMA Administrator in Department of Homeland Security (DHS) Delegation 09052 Rev. 00, “Delegation of Defense Production Act Authority to the Administrator of the Federal Emergency Management Agency,” (Jan. 3, 2017), and DHS Delegation 09052 Rev. 00.1, “Delegation of Defense Production Act Authority to the Administrator of the Federal Emergency Management Agency” (Apr. 1, 2020), respectively.

Background

FEMA sought and received approval from the Attorney General, after consultation with the Federal Trade Commission (FTC), to begin consultation with the private sector, as required by Section 708(c)(2). Pursuant to that approval, on May 12, 2020, FEMA posted an announcement of a public meeting and request for comments to develop a Voluntary Agreement in the **Federal Register** (85 FR 28031). FEMA held a public meeting on May 21, 2020, and accepted public comments until June 5, 2020.³ FEMA received 34 public comments and considered these comments when preparing the Voluntary Agreement.⁴

The Attorney General, in consultation with the Chairman of the Federal Trade Commission, made the required finding that the purpose of the voluntary agreement may not reasonably be achieved through an agreement having less anticompetitive effect or without any voluntary agreement. Pursuant to Sec. 708(f)(1)(B) of the Defense Production Act, the Department of

¹ 77 FR 16651 (Mar. 22, 2012).

² 85 FR 18403 (Apr. 1, 2020).

³ The original comment period was extended to allow commentators additional time to respond. FEMA posted notices of extension to www.regulations.gov under the Docket ID for this notice, FEMA-2020-0016.

⁴ Available on www.regulations.gov under Docket ID for this notice.

Justice is separately publishing this finding in this issue of the **Federal Register** as a notice. The FEMA Administrator, as the Sponsor of the agreement, has certified in writing that the agreement is necessary to help provide for the national defense.

Voluntary Agreement, Manufacture and Distribution of Critical Healthcare Resources Necessary To Respond to a Pandemic

Preface

Pursuant to section 708 of the Defense Production Act of 1950 (DPA), as amended (50 U.S.C. 4558), the Federal Emergency Management Agency (FEMA) Administrator (Administrator), after consultation with the Secretary of the Department of Health and Human Services (HHS), the Attorney General of the United States (Attorney General), and the Chairman of the Federal Trade Commission (FTC), has developed this Voluntary Agreement (Agreement). This Agreement is intended to maximize the effectiveness of the manufacture and distribution of Critical Healthcare Resources nationwide to respond to a pandemic by establishing unity of effort between the Participants and the Federal Government for integrated coordination, planning, information sharing with FEMA, and allocation and distribution of Critical Healthcare Resources. The activities contemplated by this Agreement are limited to those necessary to respond to a Pandemic, at the sole determination of FEMA. This Agreement affords Participants defenses

to civil and criminal actions brought for violations of antitrust laws when carrying out this Agreement and an appropriate Plan of Action. This Agreement is intended to foster a close working relationship among FEMA, HHS, and the Participants to address national defense needs through cooperative action under the direction and supervision of FEMA. This Agreement, when implemented through a Plan of Action, affords Participants a safe harbor to exchange information, collaborate and adjust commercial operations as to particular products and services, when FEMA determines it necessary for the national defense, and only to the extent necessary for the national defense.

I. Purpose

A pandemic may present conditions that pose a direct threat to the national defense of the United States or its preparedness programs such that, pursuant to DPA section 708(c)(1), an agreement to collectively coordinate, plan and collaborate for the manufacture and distribution of personal protective equipment (PPE), Pharmaceuticals and other Critical Healthcare Resources is necessary for the national defense. This Agreement will maximize the effectiveness of the manufacture and distribution of Critical Healthcare Resources nationwide to respond to a pandemic by establishing unity of effort between the Participants and the Federal Government for integrated coordination, planning, information sharing with FEMA, allocation and distribution of Critical Healthcare Resources. The activities included in this Agreement are limited to those necessary to respond to a Pandemic, at the sole determination, direction, and supervision of FEMA and implemented through Plans of Action.

II. Authorities

Section 708, Defense Production Act (50 U.S.C. 4558); sections 402(2) & 501(b), Robert T. Stafford Disaster Relief and Emergency Assistance Act (42 U.S.C. 5121–5207); sections 503(b)(2)(B) & 504(a)(10) & (16) of the Homeland Security Act of 2002 (6 U.S.C. 313(b)(2)(B), 314(a)(10) & (16)); sections 201, 301, National Emergencies Act (50 U.S.C. 1601 *et seq.*); section 319, Public Health Service Act (42 U.S.C. 247d); Executive Order (E.O.) 13911, 85 FR 18403 (Mar. 27, 2020); Prioritization and Allocation of Certain Scarce or Threatened Health and Medical Resources for Domestic Use, 85 FR 20195 (Apr. 10, 2020). Pursuant to DPA section 708(f)(1)(A), the Administrator

certifies that this Agreement is necessary for the national defense.

III. General Provisions

A. Definitions

Administrator

The FEMA Administrator who, as a Presidentially appointed and Senate confirmed official, is the Sponsor of this Agreement. Pursuant to a delegation or redelegation of the functions given to the President by DPA section 708, the Administrator proposes and provides for the development and carrying out of this Agreement. The Administrator is responsible for carrying out all duties and responsibilities required by 50 U.S.C. 4558 and 44 CFR part 332 and for appointing one or more Chairpersons to manage and administer the Committee and any Sub-Committee formed to carry out this Agreement.

Agreement

The Voluntary Agreement. Participants who have been invited to join and agreed to the terms of this Agreement as described in Section VII below may join the “Committee for the Distribution of Healthcare Resources Necessary to Respond to a Pandemic.”

Attendees

Subject matter experts, invited by the Chairperson to attend meetings authorized under this Agreement, to provide technical advice or to represent other Government agencies or interested parties. Attendees are not Members of the Committee.

Chairperson

FEMA senior executive, appointed by the Administrator, to chair the “Committee for the Distribution of Healthcare Resources Necessary to Respond to a Pandemic.” The Chairperson shall be responsible for the overall management and administration of the Committee, this Agreement, and Plans of Action developed under this Agreement while remaining under the supervision of the Administrator; may create one or more Sub-Committees, as approved by the Administrator; shall initiate, or approve in advance, each meeting held to discuss problems, determine policies, recommend actions, and make decisions necessary to carry out this Agreement; and otherwise shall carry out all duties and responsibilities assigned to him. The Administrator may appoint one or more co-Chairpersons to chair the Committee and Sub-Committees, as appropriate.

Committee

Committee for the Distribution of Healthcare Resources Necessary to Respond to a Pandemic established under this Agreement. Provides Committee Members a forum to maximize the effectiveness of the manufacture and distribution of Critical Healthcare Resources nationwide to respond to a Pandemic through integrated coordination, planning, and identification and development of Plans of Action needed to respond to a pandemic, including making recommendations on the creation of a Plan of Action.

Critical Healthcare Resources

All categories of health and medical resources for which production and distribution capacity is necessary to respond to a pandemic, including, but not limited to, PPE, Pharmaceuticals, respiratory devices, vaccines, raw materials, supplies, and medical devices.

Documents

Any information, on paper or in electronic format, including written, recorded, and graphic materials of every kind, in the possession, custody, or control of the Participant.

Members

Collectively the Chairperson, Representatives, and Participants of the Committee. Jointly responsible for developing all decisions necessary to carry out this Agreement and to develop and execute Plans of Action under this Agreement.

Pandemic

A Pandemic is defined as an epidemic that has spread to human populations across a large geographic area that is subject to one or more declarations under the National Emergencies Act, the Public Health Service Act, or the Robert T. Stafford Disaster Relief and Emergency Assistance Act, or if the Administrator determines that one or more declarations is likely to occur and the epidemic poses a direct threat to the national defense or its preparedness programs. For example, Coronavirus Disease 2019 (COVID–19).

Participant

An individual, partnership, corporation, association, or private organization, other than a Federal agency, that has substantive capabilities, resources or expertise to carry out the purpose of this Agreement, that has been specifically invited to participate in this Agreement by the Chairperson, and that has applied and agreed to the

terms of this Agreement in Section VII below. "Participant" includes a corporate or non-corporate entity entering into this Agreement and all subsidiaries and affiliates of that entity in which that entity has 50 percent or more control either by stock ownership, board majority, or otherwise. The Administrator may invite Participants to join this Agreement at any time during its effective period.

Personal Protective Equipment

Objects that provide measures of safety protection for healthcare workers, first responders, critical infrastructure personnel and/or the general public for the response to the Pandemic. These PPE items may include, but are not limited to, face coverings, filtering facepiece respirators, face shields, isolation and surgical gowns, examination and surgical gloves, suits, and foot coverings.

Pharmaceuticals

All drugs defined under the Food, Drug, and Cosmetic Act, 21 U.S.C. 321(g), including biological products defined under the Public Health Service Act, 42 U.S.C. 262(i).

Plan of Action

A documented method, pursuant to 50 U.S.C. 4558(b)(2), proposed by FEMA and adopted by invited Participants, to implement this Agreement, through a Sub-Committee focused on a particular Critical Healthcare Resource, or pandemic response workstream or functional area necessary for the national defense.

Plan of Action Agreement

A separate commitment made by Participants upon invitation and agreement to participate in a Plan of Action. Completing the Plan of Action Agreement confers responsibilities on the Participant consistent with those articulated in the Plan of Action and affords Participants antitrust protections for actions taken consistent with that Plan of Action as described in Section IV below.

Point of Care

All categories of medical service providers necessary to respond to a pandemic, as determined by the Chairperson after consultation with the Members of the Committee. This may include, but is not limited to, Acute Care, First Responders, Nursing Homes, Private Hospitals, Public Hospitals, Veterans Administration Hospitals, Physician Offices, Dental Offices, Ambulatory Clinics, Pharmacies, Community Health Clinics,

Laboratories, and other acute and non-acute care facilities responsible for healthcare.

Representatives

The representatives the Administrator identifies and invites to the Committee from FEMA, HHS, and other Federal agencies with equities in this Agreement, and empowered to speak on behalf of their agencies' interests. The Attorney General and the Chairman of the FTC, or their delegates, may also attend any meeting as a Representative.

Sub-Committee

A body formed by the Administrator from select Participants to implement a Plan of Action.

B. Committee Participation

The Committee established under this Agreement will consist of the (1) Chairperson, (2) Representatives from FEMA, HHS, DOJ, and other Federal agencies with equities in this Agreement, and (3) Participants that have substantive capabilities, resources or expertise to carry out the purpose of this Agreement. Other Attendees—invited by the Chairperson as subject matter experts to provide technical advice or to represent the interests of other Government agencies or interested parties—may also participate in Committee meetings. Collectively, the Chairperson, Representatives and Participants will serve as the Members of the Committee. Public notice will be provided as each Participant joins or withdraws from this Agreement. The list of Participants will be published annually in the **Federal Register**.

C. Effective Date and Duration of Participation

This Agreement is effective immediately upon the signature of the Participant or their authorized designees. This Agreement shall remain in effect until terminated in accordance with 44 CFR 332.4, or in any case, it shall be effective no more than five (5) years from the date the requirements of DPA section 708(f)(1) are satisfied as to the initial Voluntary Agreement regarding the manufacture and distribution of critical healthcare resources necessary to respond to a Pandemic, unless otherwise terminated pursuant to DPA section 708(h)(9) and 44 CFR 332.4 or extended as set forth in DPA section 708(f)(2). No action may take place under this Agreement until it is activated, as described in Section III(E.), below.

D. Withdrawal

Participants may withdraw from this Agreement at any point, subject to the fulfillment of obligations incurred under this Agreement prior to the date this agreement is terminated with regard to such Participant, by giving written notice to the Administrator at least fifteen (15) calendar days prior to the effective date of that Participant's withdrawal. Following receipt of such notice, the Administrator will inform the other Participants of the date of the withdrawal.

Upon the effective date of the withdrawal, the Participant must cease all activities under this Agreement.

E. Plan of Action Activation and Deactivation

Upon occurrence of a Pandemic, the Administrator may authorize a Plan of Action and Sub-Committee for one or more specific Pandemic response workstreams, functional areas, or Critical Healthcare Resource national defense needs, e.g., a pharmaceuticals plan of action, or a PPE distribution plan of action, or a vaccine plan of action. The Administrator will invite a select group of Participants who are representative of the segment of the industry for which the Plan of Action is intended to participate on the Sub-Committee. The Plan of Action will be activated for each invited Participant when the Participant executes a Plan of Action Agreement. Actions taken by Participants to develop a Plan of Action and actions taken after executing a Plan of Action Agreement to collectively coordinate, plan and collaborate, pursuant to that Plan of Action and as directed and supervised by FEMA, will constitute action taken to develop and carry out this Agreement pursuant to 50 U.S.C. 4558(j).

Sub-Committees will meet only for the purposes specified in this Agreement and as provided for in writing by the Chairperson. They will report directly to the Committee regarding all actions taken by them, and any Plan of Action adopted by a Sub-Committee must be approved first by the Chairperson. A Plan of Action may not become effective unless and until the Attorney General (after consultation with the Chairman of the Federal Trade Commission) finds, in writing, that such purpose(s) of the Plan of Action may not reasonably be achieved through a Plan of Action having less anticompetitive effects or without any Plan of Action and publishes such finding in the **Federal Register**. The Chairperson may appoint a Sub-Committee Chairperson to preside over each Sub-Committee as

a delegate of the Chairperson; however, the Chairperson retains responsibility for all Sub-Committees and for administrative and record keeping requirements of any meetings held by such Sub-Committees, including providing public notice as required of any meetings.

When recommended by the Sub-Committee Chairperson, the Administrator will provide notice of a Plan of Action Deactivation. Any actions taken by Participants after the Deactivation date are outside the scope of Plan of Action Agreement and the Section IV antitrust defense is not available.

F. Rules and Regulations

Participants acknowledge and agree to comply with all provisions of DPA section 708, as amended, and regulations related thereto which are promulgated by FEMA, the Department of Homeland Security, HHS, the Attorney General, and the FTC. FEMA has promulgated standards and procedures pertaining to voluntary agreements in 44 CFR part 332. The Administrator shall inform Participants of new rules and regulations as they are issued.

G. Modification and Amendment

The Administrator, after consultation with the Attorney General and the Chairman of the FTC, may terminate or modify, in writing, this Agreement or a Plan of Action at any time, and may remove Participants from this Agreement or a Plan of Action at any time. Participants may propose modifications or amendments to this Agreement at any time. The Administrator shall inform Participants of modifications or amendments to this Agreement as they are issued. If a Participant indicates an intent to withdraw from the Agreement due to a modification or amendment of the Agreement, the Participant will not be required to perform actions directed by that modification or amendment.

The Attorney General, after consultation with the Chairman of the FTC and the Administrator, may terminate or modify, in writing, this Agreement or a Plan of Action at any time, and may remove Participants from this Agreement or a Plan of Action at any time. If the Attorney General decides to use this authority, the Attorney General will notify the Chairperson as soon as possible, who will in turn notify Participants.

H. Expenses

Participation in this Agreement does not confer funds to Participants, nor

does it limit or prohibit any pre-existing source of funds. Unless otherwise specified, all expenses, administrative or otherwise, incurred by Participants associated with participation in this Agreement shall be borne exclusively by the Participants.

I. Record Keeping

The Chairperson shall have primary responsibility for maintaining records in accordance with 44 CFR part 332, and shall be the official custodian of records related to carrying out this Agreement. Each Participant shall maintain for 5 years all minutes of meetings, transcripts, records, documents, and other data, including any communications with other Participants or with any other member of the Committee, including drafts, related to the carrying out of this Agreement or any Plan of Action or incorporating data or information received in the course of carrying out this Agreement or any Plan of Action. Each Participant agrees to produce to the Administrator, the Attorney General, and the Chairman of the FTC upon request any item that this section requires the Participant to maintain. Any record maintained in accordance with 44 CFR part 332 shall be available for public inspection and copying, unless exempted on the grounds specified in 5 U.S.C. 552(b)(1), (3) or (4) or identified as privileged and confidential information in accordance with DPA section 705(d), and 44 CFR 332.5.

IV. Antitrust Defense

Under the provisions of DPA subsection 708(j), each Participant in this Agreement shall have available as a defense to any civil or criminal action brought for violation of the antitrust laws (or any similar law of any State) with respect to any action to develop or carry out this Agreement or a Plan of Action, that such action was taken by the Participant in the course of developing or carrying out this Agreement or a Plan of Action, that the Participant complied with the provisions of DPA section 708 and the rules promulgated thereunder, and that the Participant acted in accordance with the terms of this Agreement and any relevant Plan of Action. Except in the case of actions taken to develop this Agreement or a Plan of Action, this defense shall be available only to the extent the Participant asserting the defense demonstrates that the action was specified in, or was within the scope of, this Agreement or a Plan of Action.

This defense shall not apply to any action occurring after the termination of

this Agreement or a Plan of Action. Immediately upon modification of this Agreement or a Plan of Action, no antitrust immunity shall apply to any subsequent action that is beyond the scope of the modified Agreement or Plan of Action. The Participant asserting the defense bears the burden of proof to establish the elements of the defense. The defense shall not be available if the person against whom the defense is asserted shows that the action was taken for the purpose of violating the antitrust laws.

V. Terms and Conditions

Each Participant agrees to voluntarily collaborate with all Committee Members to recommend Plans of Action and Sub-Committees that will, at the direction of and under the supervision of FEMA, maximize the effectiveness of the manufacture and distribution of Critical Healthcare Resources nationwide to respond to a pandemic by establishing unity of effort between the Participants and the Federal Government for integrated coordination, planning, information sharing with FEMA, and allocation and distribution of Critical Healthcare Resources. These efforts aim to promote efficiency and timeliness to mitigate shortages of Critical Healthcare Resources to respond to a Pandemic and to meet the overall demands of the healthcare and other selected critical infrastructure sectors, along with those demands necessary to continue all-level-of-government mission-essential functions.

As the sponsoring agency, FEMA will maintain oversight over Committee and Sub-Committee activities and direct and supervise actions taken to carry out this Agreement and subsequent Plans of Action, including by retaining decision-making authority over actions taken pursuant to this Agreement and subsequent Plans of Action to ensure such actions are necessary to address a direct threat to the national defense. The Department of Justice (DOJ) and the Chairman of the FTC will monitor activities of the Committee and Sub-Committees to ensure they execute their responsibilities in a manner consistent with this Agreement having the least anticompetitive effects possible.

A. Plan of Action Execution

Specific Member obligations and actions to be undertaken will only be provided for in individual Plans of Action, not in the Agreement. Activities taken to develop a Plan of Action or to implement a Plan of Action that has been activated pursuant to section III.E. above will provide Participants the antitrust defense described in section

IV. Each Plan of Action will endeavor to clearly identify the conduct that Participants will undertake in carrying out the Plan of Action and that would be subject to the defense described in Section IV.

Each Plan of Action will describe what information Members will share, as directed by FEMA and under FEMA's supervision. Information will be used to create a common operating picture in furtherance of the Plan of Action's purpose and/or to promote overall situational awareness of Critical Healthcare Resource manufacturing and distribution activities.

Each Plan of Action, and information gathered pursuant to that plan, will be used to support one or more of the following objectives:

(1) Facilitate maximum availability of Critical Healthcare Resources to end-users by deconflicting overlapping requirements for the collective Participant customer base;

(2) Facilitate maximum availability of Critical Healthcare Resources to Members by deconflicting overlapping supply chain demands of Members;

(3) Facilitate efficient distribution of Critical Healthcare Resources by deconflicting overlapping distribution chain activities of Members;

(4) Inform where expansion of the manufacture of Critical Healthcare resources is necessary;

(5) Identify and prioritize Critical Healthcare Resource requirements;

(6) Validate Critical Healthcare Resource requirements;

(7) Project future demand for Critical Healthcare Resource requirements.

(8) Execute a collaborative manufacturing strategy to more efficiently make use of limited resources for key manufacturing lines of effort for Critical Healthcare Resources;

(9) Collaborate in the voluntary Participant allocation of Critical Healthcare Resources nationwide;

(10) Cooperate to the fullest extent possible to distribute Critical Healthcare Resources to locations most in need, as identified by FEMA;

(11) Explore strategies for increased manufacturing of Critical Health Resources in or near the United States;

(12) Carry out any other activities as determined and directed by FEMA necessary to address the Pandemic's direct threat to the national defense.

B. Information Management and Responsibilities

FEMA will request only that data and information from Participants that is necessary to meet the objectives of a Plan of Action. Upon signing a Plan of Action Agreement, participants should

endeavor to cooperate to the greatest extent possible to share data and information necessary to meet the objectives of the Plan of Action.

The specific data requested, procedures for sharing that data, and data management and disposition will be tailored for each specific Plan of Action. Where feasible and to the greatest extent possible, FEMA will incorporate the following principles regarding data sharing into each Plan of Action:

- In general, Participants will not be asked to share competitively sensitive information directly with other Participants. Direct sharing of information among Participants will be requested only when necessary and will be closely supervised by FEMA, including requiring appropriate safeguards regarding participant use and dissemination of other participants' data.

- If FEMA needs to share information with parties outside the Sub-Committee, FEMA will limit the amount and type of information shared to the greatest extent feasible and permitted by law, while still furthering the objectives of the Plan of Action.

- Prior to distribution within or outside the Sub-Committee, FEMA will aggregate and anonymize data in such a way that will maximize the effectiveness of the Plan of Action without compromising competitively sensitive information.

- Pursuant to 5 U.S.C. 552(b)(4) and 44 CFR 332.5, FEMA will withhold from disclosure under the Freedom of Information Act Participant trade secrets and commercial or financial information and will restrict Sub-Committee meeting attendance where necessary to protect trade secrets and commercial or financial information.

- Any party receiving competitively sensitive information through a Plan of Action shall use such information solely for the purposes outlined in the Plan of Action and take steps, such as imposing firewalls or tracking usage, to ensure such information is not used for any other purpose. Disclosure and use of competitively sensitive information will be limited to the greatest extent possible.

- At the conclusion of a Participant's involvement in a Plan of Action—due to the deactivation of the Plan of Action or due to the Participant's withdrawal or removal—each Participant will be requested to sequester any and all competitively sensitive information received through participation in the Plan of Action. This sequestration will include the deletion of all competitively sensitive information unless required to

be kept pursuant to the Record Keeping requirements as described *supra*, Section I, 44 CFR part 332, or any other provision of law.

C. Oversight

The Chairperson is responsible for ensuring the Attorney General, or suitable delegate(s) from DOJ, and the FTC Chairman, or suitable delegate(s) from the FTC, have awareness of activities under this Agreement, including Plan of Action activation, deactivation, and scheduling of meetings. The Attorney General, the FTC Chairman, or their delegates may attend Committee and Sub-Committee meetings and request to be apprised of any activities taken in accordance with activities under this Agreement or a Plan of Action. DOJ or FTC Representatives may request and review any proposed action by the Committee, Sub-Committee or Participants undertaken pursuant to this Agreement or Plan of Action, including the provision of data. If any DOJ or FTC Representative believes any actions proposed or taken are not consistent with relevant antitrust protections provided by the DPA, he or she shall provide warning and guidance to the Committee as soon as the potential issue is identified. If questions arise about the antitrust protections applicable to any particular action, FEMA may request DOJ, in consultation with the FTC, provide an opinion on the legality of the action under relevant DPA antitrust protections.

VI. Establishment of the Committee

There is established a Committee for the Manufacture and Distribution of Healthcare Resources Necessary to Respond to a Pandemic (Committee) to provide the Federal Government and the Participants a forum to maximize the effectiveness of the manufacture and distribution of Critical Healthcare Resources nationwide to respond to a Pandemic through integrated coordination, planning, and information sharing with FEMA. A Chairperson designated by the FEMA Administrator will convene and preside over the Committee. The Committee will not be used for widespread or collective exchange of information among members. These activities, if required, shall be done within individual Sub-Committees, and in accordance with an established Plan of Action. The Committee will not be used for contract negotiations or contract discussions between the Participants and the Federal Government; such negotiations or discussions will be in accordance with applicable Federal contracting

policies and procedures. However, this shall not limit any discussion within a Sub-Committee about the operational utilization of existing and potential contracts between the Participants and Representatives when seeking to align their use with overall manufacturing and distribution efforts consistent with this Agreement and a Plan of Action.

The Committee will consist of designated Representatives from FEMA, HHS, other Federal agencies with equities in this Agreement, and each Participant. The Attorney General and Chairman of the FTC, or their delegates, may also join the Committee and attend meetings at their discretion. Attendees may also be invited at the discretion of the Chairperson as subject matter experts, to provide technical advice, or to represent other Government agencies, but will not be considered part of the Committee.

To the extent necessary to respond to the Pandemic and at the explicit direction of the Chairperson, the Committee Members will provide technical advice to each other as needed, share information collectively, identify and validate places and resources of the greatest need, project future manufacturing and distribution demands, collectively identify and resolve the allocation of scarce resources amongst all necessary public and private sector domestic needs, and as necessary, share vendor, manufacturer and distribution information, and take any other necessary actions to maximize the timely manufacture and distribution of Critical Healthcare Resources as determined necessary by FEMA to respond to the Pandemic. The Chairperson or his or her designee, at the Chairperson's sole discretion, will make decisions on these issues in order to ensure the maximum coordination, efficiency, and effectiveness in the use of Member's resources and will create and execute Plans of Action as needed. All Participants will be invited to open Committee meetings. For selected Committee meetings, attendance may be limited to designated Participants to meet specific operational requirements.

The Committee Chairperson shall notify the Attorney General, the Chairman of the FTC, Representatives, and Participants of the time, place, and nature of each meeting and of the proposed agenda of each meeting to be held to carry out this Agreement. Additionally, the Chairperson shall provide for publication in the **Federal Register** of a notice of the time, place, and nature of each meeting. If a meeting is open, a **Federal Register** notice will be published reasonably in advance of

the meeting. The Chairman may restrict attendance at meetings only on the grounds outlined by 44 CFR 332.5(c)(1)–(3). If a meeting is closed, a **Federal Register** notice will be published within 10 days of the meeting and will include the reasons why the meeting is closed pursuant to 44 CFR 332.3(c)(2).

The Chairperson shall establish the agenda for each meeting, be responsible for adherence to the agenda, and provide for a written summary or other record of each meeting and provide copies of transcripts or other records to FEMA, the Attorney General, the Chairman of the FTC, and all Participants. The Chair shall take necessary actions to protect from public disclosure any data discussed with or obtained from Participants which a Participant has identified as a trade secret or as privileged and confidential in accordance with DPA sections 708(h)(3) and 705(d), or which qualifies for withholding under 44 CFR 332.5.

The Administrator, in his or her sole discretion and after consultation with the Committee Members, will create Plans of Action and Sub-Committees for specific workstreams or functional areas requiring collective coordination, planning, and collaboration. These Sub-Committees shall be subject to the same rules, regulations and requirements of the Committee and any other rules or requirements deemed necessary by the Chairperson, the Administrator, or the Attorney General, after consultation with the Chairman of the FTC.

VII. Application and Agreement

The Participant identified below hereby agrees to join in the Federal Emergency Management Agency sponsored Voluntary Agreement entitled Committee for the Manufacture and Distribution of Healthcare Resources Necessary to Respond to a Pandemic (Agreement) and to become a Participant in this Committee. This Agreement will be published in the **Federal Register**. This Agreement is authorized under section 708 of the Defense Production Act of 1950, as amended. Regulations governing this Agreement appear at 44 CFR part 332. The applicant, as Participant, agrees to comply with the provisions of section 708 of the Defense Production Act of 1950, as amended, the regulations at 44 CFR part 332, and the terms of this Agreement.

VIII. Assignment

No Participant may assign or transfer this Agreement, in whole or in part, or any protections, rights or obligations hereunder without the prior written consent of the Chairperson. When

requested, the Chairperson will respond to written requests for consent within 10 business days of receipt.

BILLING CODE 9111–19–P

DEPARTMENT OF HOMELAND SECURITY

[Docket No. CISA–2020–0011]

Notice of the President's National Infrastructure Advisory Council Meeting

AGENCY: Cybersecurity and Infrastructure Security Agency (CISA), Department of Homeland Security (DHS).

ACTION: Notice of Federal Advisory Committee Act (FACA) meeting; request for comments.

SUMMARY: The President's National Infrastructure Advisory Council (NIAC) will meet remotely via conference call on Thursday, September 17, 2020. This meeting will be open to the public.

DATES:

Meeting Registration: Individual registration to attend the meeting by phone is required and must be received no later than 5:00 p.m. EST on September 14, 2020.

Speaker Registration: Individuals may register to speak during the meeting's public comment period. Registration must be received no later than 5:00 p.m. EST on September 14, 2020.

Written Comments: To facilitate public participation, CISA invites public comments on the agenda items and any associated briefing materials to be considered by the council at the meeting. Written comments must be received no later than 5:00 p.m. EST on September 7, 2020.

NIAC Meeting: The meeting will be held on Thursday, September 17, 2020 from 1:00 p.m.–5:00 p.m. EST. The meeting may close early if the council has completed its business.

ADDRESSES: The meeting will be held remotely via conference call. For access to the conference call bridge, information on services for individuals with disabilities, or to request special assistance to participate, please email NIAC@cisa.dhs.gov by 5:00 p.m. EST on September 14, 2020.

Comments: Written comments may be submitted on the issues to be considered by the NIAC as described in the **SUPPLEMENTARY INFORMATION** section below and any briefing materials for the meeting. Any briefing materials that will be presented at the meeting will be made publicly available *before the meeting* at the following website: <https://www.cisa.gov/niac>.

Comments identified by docket number “CISA-2020-0011” may be submitted by any of the following methods:

- *Federal eRulemaking Portal:* www.regulations.gov. Follow the instructions for submitting written comments.
- *Email:* NIAC@cisa.dhs.gov. Include docket number CISA-2020-0011 in the subject line of the message.

- *Mail:* Rachel Liang, Designated Federal Officer, National Infrastructure Advisory Council, Cybersecurity and Infrastructure Security Agency, Department of Homeland Security, 245 Murray Lane, Mail Stop 0612, Arlington, VA 20598-0612.

Instructions: All submissions received must include the agency name and docket number for this notice. All written comments received will be posted without alteration at www.regulations.gov, including any personal information provided. For detailed instructions on sending comments and additional information on participating in the upcoming NIAC meeting, see the “PUBLIC PARTICIPATION” heading of the **SUPPLEMENTARY INFORMATION** section of this document.

Docket: For access to the docket and comments received by the NIAC, go to www.regulations.gov.

A public comment period is scheduled to be held during the meeting from 2:45 p.m.–2:50 p.m. ET. Speakers who wish to participate in the public comment period must register by emailing NIAC@cisa.dhs.gov. Speakers are requested to limit their comments to three minutes and will speak in order of registration. Please note that the public comment period may end before the time indicated, following the last request for comments.

FOR FURTHER INFORMATION CONTACT: NIAC@cisa.dhs.gov.

SUPPLEMENTARY INFORMATION: The NIAC is established under Section 10 of

Executive Order 13231 issued on October 16, 2001. Notice of this meeting is given under the Federal Advisory Committee Act (FACA), 5 U.S.C. Appendix (Pub. L. 92–463). The NIAC shall provide the President, through the Secretary of Homeland Security, with advice on the security and resilience of the Nation’s critical infrastructure sectors. The NIAC will meet to discuss issues relevant to critical infrastructure security and resilience, as directed by the President.

The NIAC will meet in an open meeting on September 17, 2020, to discuss the following agenda items.

Agenda

- I. Call to Order
- II. Opening Remarks
- III. Workforce and Talent Management Study Update
- IV. COVID–19 Panel Discussion
- V. Critical Infrastructure Command Center Follow-on Analysis Update
- VI. Public Comment
- VII. Closing Remarks
- VIII. Adjournment

Public Participation

Meeting Registration Information

Requests to attend via conference call will be accepted and processed in the order in which they are received. Individuals may register to attend the NIAC meeting by phone by sending an email to NIAC@cisa.dhs.gov.

Public Comment

A public comment period will be held during the meeting from approximately 2:45 p.m.–2:50 p.m. EST. Speakers who wish to comment must register in advance and can do so by emailing NIAC@cisa.dhs.gov no later than Monday, September 14, 2020, at 5:00 p.m. EST. Speakers are requested to limit their comments to three minutes. Please note that the public comment period may end before the time indicated, following the last call for comments.

Information on Services for Individuals With Disabilities

For information on facilities or services for individuals with disabilities or to request special assistance at the meeting, please contact NIAC@cisa.dhs.gov by 5:00 p.m. EST on September 14, 2020.

Rachel Liang,

Designated Federal Officer, National Infrastructure Advisory Council, Cybersecurity and Infrastructure Security Agency, Department of Homeland Security.

BILLING CODE 9110–9P–P

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

[Docket No. FR–6226–N–01]

Waivers, Alternative Requirements and Extensions for Community Development Block Grant Disaster Recovery Grantees

AGENCY: Office of the Assistant Secretary for Community Planning and Development, Housing and Urban Development (HUD).

ACTION: Notice.

SUMMARY: This notice governs Community Development Block Grant disaster recovery (CDBG–DR) funds awarded under several appropriations. Specifically, this notice provides waivers and establishes alternative requirements and extensions for grants provided pursuant to Public Laws 114–113, 114–223, 114–254, 115–31, 115–56, 115–123, 115–254, and 116–20 in connection with HUD’s obligation or use by the recipient of these funds. This notice provides additional flexibility to CDBG–DR grantees as they continue their disaster recovery efforts while also responding to the Coronavirus Disease 2019 (COVID–19) pandemic.

DATES: Applicability Date: August 24, 2020.

FOR FURTHER INFORMATION CONTACT:

Jessie Handforth Kome, Director, Office of Block Grant Assistance, U.S. Department of Housing and Urban Development, 451 7th Street SW, Room 7282, Washington, DC 20410, telephone number 202–708–3587. Persons with hearing or speech impairments may access this number via TTY by calling the Federal Relay Service at 800–877–8339. Facsimile inquiries may be sent to Ms. Kome at 202–708–0033. (Except for the “800” number, these telephone numbers are not toll-free.) Email inquiries may be sent to disaster_recovery@hud.gov.

I. Public Laws 114–113, 114–223, 114–254, 115–31, 115–56, and 115–123 Extensions

The Department has awarded CDBG–DR funds for multiple disasters occurring in 2015, 2016, and 2017 under Public Laws 114–113, 114–223, 114–254, 115–31, 115–56, and 115–123. Those Public Laws authorize the

Secretary to waive or specify alternative requirements for any provision of any statute or regulation that the Secretary administers in connection with HUD's obligation or use by the recipient of these funds (except for requirements related to fair housing, nondiscrimination, labor standards, and the environment). Regulatory waiver authority is also provided by 24 CFR 5.110, 91.600, and 570.5. As required by Public Laws 114–113, 114–223, 114–254, 115–31, 115–56 or 115–123, the waiver and alternative requirement provided herein is based upon a determination by the Secretary that good cause exists and that the waiver and alternative requirement is not inconsistent with the overall purposes of title I of the Housing and Community Development Act of 1974 (HCDA).

HUD has determined that the rapidly emerging needs of states and local governments in responding to the COVID–19 pandemic provides good cause to allow extensions of the CDBG–DR expenditure deadlines established in **Federal Register** notices published on June 17, 2016 (paragraph VI.A.24, 81 FR 39687); November 21, 2016 (section II. and paragraph VI.A.24., 81 FR 83254); January 18, 2017 (section II., 82 FR 5591); August 7, 2017 (sections I.E. and III.B., 82 FR 36812); February 9, 2018 (paragraph VI.A.28. and section VII., 83 FR 5844); and August 14, 2018 (section V., 83 FR 40314) (the “Prior Notices”). HUD shall presume the start of the COVID–19 crisis to be January 21, 2020, the date the Centers for Disease Control and Prevention (CDC) confirmed the first case in the United States, unless HUD receives conclusive evidence to the contrary.

These Prior Notices establish an administrative deadline for the timely distribution of funds, requiring each grantee to expend 100 percent of its allocation of CDBG–DR funds on eligible activities within six years. In response to the COVID–19 pandemic, HUD is providing a one-year extension of the previously established expenditure deadline for all grantees that received CDBG–DR funds under Public Laws 114–113, 114–223, 114–254, 115–31, 115–56 or 115–123 for a 2015, 2016, or 2017 disaster. If a grantee determines that an extension is required beyond the one-year extension provided by HUD in this notice, within 90 days of the applicability date of this notice, a grantee must submit a written request to HUD to further extend the expenditure deadline for one additional year (for a maximum total extension of two years).

Grantees are reminded that the Prior Notices require the grantee to update the

projections of expenditures for each grant based on the status of current programs or projects and to reflect any new expenditure deadlines.

To request the additional one-year extension referenced above, the grantee shall: (a) Indicate how the COVID–19 pandemic has affected the grantee's ability to expend CDBG–DR funds in a timely manner and to meet its original deadline; (b) describe the specific CDBG–DR funded recovery programs, activities, or projects that have slowed as a result of the COVID–19 pandemic and; (c) submit an updated version of its “CDBG–DR Grantee Projections of Expenditures and Outcomes” that provides for the full expenditure of the grant within the expenditure period requested (a maximum total two-year extension is allowed). In its request, the grantee shall also indicate if it previously was identified by HUD as a “slow spender” as of October 2019 or later in the Department's Monthly CDBG–DR Grant Financial Reports for the grant under consideration. If the grantee was identified as a slow spender for the grant under consideration as of October 2019 or later, the grantee must also include an explanation of the causes of its slow expenditures prior to the COVID–19 pandemic and the actions that have been implemented to address those causes. Grantees that have been identified as a slow spender during the above period must also include a description of the concrete steps that it will implement to ensure that its CDBG–DR expenditures will be “on pace” as soon as practicable, and must update its “CDBG–DR Grantee Projections of Expenditures and Outcomes” that was previously submitted to HUD with its action plan. The Department shall establish, as appropriate, a grant condition to require each grantee receiving the additional one-year extension (for a maximum total extension of two years) to comply with expenditure milestones as provided in the revised projections, consistent with the provisions at 2 CFR part 200. The Department may, if warranted, restrict the availability of funds until such time as this or any grant condition is met by individual grantees.

Grantees are reminded that HUD may, at any time, establish or revise grant conditions based on performance or lack thereof or may pursue remedies based on performance consistent with subpart O of the CDBG regulations (including corrective and remedial actions in 24 CFR 570.910, 570.911, and 570.913) or under subpart I of the CDBG regulations at 24 CFR part 570. Grantees are advised to work with the assigned CPD representative in the development of

expenditure extension requests. The Department will periodically publish all revised expenditure deadlines established pursuant to this notice on the HUD website.

II. Public Laws 115–254 and 116–20 Extensions

The Department has awarded CDBG–DR funds for multiple disasters occurring in 2017, 2018, and 2019 under the Public Laws 115–254 and 116–20. The COVID–19 pandemic, which the President declared as a national emergency on March 13, 2020, disrupted normal government operations that are likely to impede grantees' ability to meet previously established submission deadlines. Therefore, as described below, HUD is exercising its waiver authority to waive and modify submission deadlines published in **Federal Register** notices that contain grant requirements for these CDBG–DR funds. Public Laws 115–254 and 116–20 authorize the Secretary to waive or specify alternative requirements for any provision of any statute or regulation that the Secretary administers in connection with HUD's obligation or use by the recipient of these funds (except for requirements related to fair housing, nondiscrimination, labor standards, and the environment).

Waivers and alternative requirements are based upon a determination by the Secretary that good cause exists, and that the waiver or alternative requirement is not inconsistent with the overall purposes of title I of the HCDA. Regulatory waiver authority is also provided by 24 CFR 5.110, 91.600, and 570.5. For the waiver and alternative requirement described herein, the Secretary has determined that good cause exists and that the waiver and alternative requirement is not inconsistent with the overall purposes of title I of the HCDA.

Section III of the Department's January 27, 2020 **Federal Register** notice (85 FR 4681) included deadlines for the submission of the initial CDBG–DR action plan, the Financial Management and Grant Compliance certification submission, and the Pre-Award Implementation Plan. The January 27, 2020 notice requires grantees receiving funds for 2018 and 2019 disasters to submit their Pre-Award Implementation Plan and Financial Management and Grant Compliance certification documentation within 60 days of the applicability date of that notice (or together with the submission of the action plan, if earlier) and to submit their initial action plans within 120 days after the applicability date of that

notice. Section III.A. of the same notice required grantees that received an allocation for unmet infrastructure needs for 2017 disasters to submit a substantial amendment to their current action plan no later than 90 days after the applicability date of that notice.

On March 20, 2020, HUD issued a notification to these grantees that extended the above deadlines for an additional 90 days to provide flexibility to CDBG–DR grantees as they also respond to the impacts of the COVID–19 pandemic. On July 24, 2020, HUD amended that notification for only those grantees that received an allocation for unmet infrastructure needs for 2017 disasters, to extend their deadline for submission by an additional 30 days. In order to provide CDBG–DR grantees with additional flexibility in complying with submission deadlines, HUD is amending the January 27, 2020 notice to allow individual grantees to request further extensions, if necessary.

Accordingly, HUD is amending section III of the January 27, 2020 notice by replacing the third paragraph of section III in its entirety with the following:

“To begin expending CDBG–DR funds, the grantee must follow the process outlined in the February 9, 2018 notice (83 FR 5846), unless otherwise amended below:

- HUD will accept an action plan no later than 210 days after the applicability date of this notice, unless the grantee has requested, and HUD has approved an extension of the submission deadlines below.

- Within 150 days of the applicability date of this notice (or when the grantee submits its action plan, whichever is earlier), submit documentation for the certification of financial controls and procurement processes and adequate procedures for grant management, as amended in section IV.B.1 of this notice. A grantee that received a certification of its financial controls and procurement processes pursuant to a 2016 or 2017 disaster may request that HUD rely on that certification for purposes of this allocation, provided, however, that grantees shall be required to provide updates to reflect any material changes in the submissions.

- Within 150 days of the applicability date of this notice (or when the grantee submits its action plan, whichever is earlier), submit documentation for the implementation plan and capacity assessment.

- Additionally, all funds must be expended within 6 years of the date of obligation as described in section V of this notice.”

HUD is also amending section III.A. of the January 27, 2020 notice, and will

replace that section in its entirety with the following:

Each grantee that received an allocation pursuant to Public Law 115–56 or Public Law 115–123 for 2017 disasters and an additional allocation in this notice for unmet infrastructure needs is required to submit a substantial amendment to its current action plan required by the Prior Notices. The substantial amendment must be submitted no later than 210 days after the applicability date of this notice, unless the grantee has requested, and HUD has approved an extension of its submission deadline. The substantial amendment must include the additional allocation of funds and address the requirements of the Prior Notices, as amended by this notice. Each grantee must follow the applicable substantial amendment process pursuant to section III.B of the August 14, 2018 notice (83 FR 40316). Based on the 2019 Appropriations Act, HUD will condition the availability of these funds for grantees that have entered into alternative procedures under section 428 of the Stafford Act as of the date of enactment of the 2019 Appropriations Act until such grantees have reached a final agreement on all fixed cost estimates within the timeline provided by FEMA.

III. Citizenship Requirements

Please note that the U.S. Department of Homeland Security, U.S. Citizenship and Immigration Services provides that Immigration Reform and Control Act, 8 U.S.C. 1324a *et seq.* prohibits employers from hiring and employing an individual for employment in the U.S. knowing that the individual is not authorized with respect to such employment. This generally applicable law also applies to CDBG grantees and their subrecipients and/or contractors/subcontractors (including relating to employees recruited under Section 3). For more information, please see <https://www.uscis.gov/i-9-central/form-i-9-resources/handbook-for-employers-m-274/10-why-employers-must-verify-employment-authorization-and-identity-of-new-employees> and <https://www.uscis.gov/i-9-central/legal-requirements-and-enforcement>.

IV. Environmental Review

This Notice provides operating instructions and procedures in connection with activities under **Federal Register** documents that have previously been subject to required environmental reviews. Accordingly, under 24 CFR 50.19(c)(4), this Notice is categorically excluded from environmental review under the National Environmental Policy Act (42 U.S.C. 4321, *et seq.*).

Dated: August 11, 2020.

John Gibbs,

Acting Assistant Secretary for Community Planning and Development.

BILLING CODE 4210–67–P

DEPARTMENT OF THE INTERIOR

Fish and Wildlife Service

[Docket No. FWS–R6–ES–2020–0014; FF06E220000–201–FXES11140600000]

Habitat Conservation Plan and Draft Environmental Assessment, Keystone XL Pipeline; Incidental Take Permit Application for American Burying Beetle; Tripp County, South Dakota, and Antelope, Boyd, Brown, Cherry, Holt, and Keya Paha Counties, Nebraska

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice of availability; request for public comments.

SUMMARY: We, the Fish and Wildlife Service (Service), announce the availability of documents related to an incidental take permit (ITP) application under the Endangered Species Act of 1973, as amended (ESA). We have received an application from TransCanada Keystone Pipeline, L.P. (Keystone) for a 50-year ITP for take of the federally endangered American burying beetle incidental to otherwise lawful activities associated with its Keystone XL pipeline project in parts of South Dakota and Nebraska. Pursuant to the ESA and the National Environmental Policy Act (NEPA), we announce the availability of Keystone’s ITP application, including Keystone’s Draft Keystone XL Pipeline American Burying Beetle Habitat Conservation Plan (HCP), and the Service’s draft environmental assessment for public review and comment. We provide this notice to seek comments from the public and Federal, Tribal, State, and local governments.

DATES: We will accept comments received or postmarked on or before September 16, 2020. Comments submitted electronically using the Federal eRulemaking Portal (see **ADDRESSES**) must be received by 11:59 p.m. Eastern Standard Time on the closing date. For more information, see *Public Availability of Comments*.

ADDRESSES:

Obtaining documents: You may obtain the documents at <http://www.regulations.gov> in Docket Number FWS–R6–ES–2020–0014.

Comment submission: You may submit written comments by one of the following methods:

- *Internet:* <http://www.regulations.gov>. Search for and submit comments on Docket No. FWS-R6-ES-2020-0014.

- *U.S. mail:* Public Comments Processing, Attn: Docket No. FWS-R6-ES-2020-0014; U.S. Fish and Wildlife Service Headquarters, MS: PRB/3W, 5275 Leesburg Pike, Falls Church, VA 22041-3803.

FOR FURTHER INFORMATION CONTACT:

Drue DeBerry, 303-236-4774 (telephone). Individuals who are hearing or speech impaired may call the Federal Relay Service at 1-800-877-8339 for TTY assistance.

SUPPLEMENTARY INFORMATION: We, the Fish and Wildlife Service (Service), announce the availability of documents related to an incidental take permit (ITP) application under the Endangered Species Act of 1973, as amended (ESA 16 U.S.C. 1531 *et seq.*). We have received an application from TransCanada Keystone Pipeline, L.P. (Keystone) for a 50-year ITP for take of the federally endangered American burying beetle (*Nicrophorus americanus*) incidental to otherwise lawful activities associated with construction, operation, and maintenance of its Keystone XL pipeline project, in Tripp County, South Dakota, and Antelope, Boyd, Brown, Cherry, Holt, Keya Paha Counties, Nebraska. Keystone has proposed a conservation program to minimize and mitigate for the impacts of the incidental take as described in its Draft Keystone XL Pipeline American Burying Beetle Habitat Conservation Plan (HCP). Pursuant to the ESA and the National Environmental Policy Act (NEPA; 42 U.S.C. 4321 *et seq.*), we announce the availability of Keystone's ITP application, including its HCP, and the Service's draft environmental assessment, for public review and comment. We provide this notice to seek comments from the public and Federal, Tribal, State, and local governments.

Background

Section 9 of the ESA (16 U.S.C. 1531 *et seq.*) and its implementing regulations prohibit the "take" of animal species listed as endangered or threatened. Take is defined under the ESA as to "harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect listed animal species, or to attempt to engage in such conduct" (16 U.S.C. 1538). However, under section 10(a) of the ESA, we may issue permits

to authorize incidental take of listed species. "Incidental take" is defined by the ESA as take that is incidental to, and not the purpose of, carrying out an otherwise lawful activity.

Applicant's Proposed Project

Keystone is seeking a permit for the incidental take of the federally endangered American burying beetle for a term of 50 years. Incidental take of this species may occur due to construction, operation, and maintenance of the pipeline and associated electric infrastructure. The proposed conservation strategy in the applicant's proposed HCP is designed to avoid, minimize, and mitigate the impacts of the covered activity on the covered species. The biological goals and objectives are to avoid or minimize potential take of American burying beetle and to provide permanent habitat conservation mitigation measures for American burying beetles to offset any unavoidable impacts during construction, operation, and maintenance of the project.

The HCP provides avoidance and minimization measures, which include measures to minimize impacts prior to construction and restoration of habitat after impacts. The estimated level of American burying beetle take from the project is 551 American burying beetles over the 50-year project duration, which would occur in Tripp County, South Dakota, and Antelope, Boyd, Holt, and Keya Paha Counties, Nebraska. To offset unavoidable impacts to the American burying beetle, Keystone will acquire, protect, and manage a minimum of 1,035 acres of American burying beetle habitat in perpetuity. These mitigation lands are expected to be acquired in Brown and/or Cherry Counties, Nebraska.

National Environmental Policy Act

The issuance of an ITP triggers the need for compliance with NEPA. We have prepared a draft EA that analyzes the environmental impacts on the human environment resulting from two alternatives: A no-action alternative and the proposed action, and also addresses alternatives that were considered but that were dismissed from further consideration.

Next Steps

We will evaluate the HCP and comments we receive to determine whether the permit application meets the requirements of section 10(a) of the ESA. We will also evaluate whether issuance of a section 10(a)(1)(B) permit would appreciably reduce the likelihood of survival and recovery of

the species in the wild by conducting an intra-Service section 7 consultation. We will use the results of our intra-Service consultation, in combination with the above findings, in our final analysis to determine whether to issue a permit. If the requirements are met, we will issue the permit to the applicant.

Public Availability of Comments

We will post all public comments and information received electronically or via hardcopy at <http://regulations.gov>. All comments received, including names and addresses, will become part of the administrative record and will be available to the public. Before including your address, phone number, electronic mail address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—will be publicly available. If you submit a hardcopy comment that includes personal identifying information, you may request at the top of your document that we withhold this information from public review. However, we cannot guarantee that we will be able to do so. All submissions from organizations or businesses, and from individuals identifying themselves as representatives or officials of organizations or businesses, will be made available for public disclosure in their entirety.

Authority

This notice is provided pursuant to section 10(c) of the ESA (16 U.S.C. 1531 *et seq.*) and its implementing regulations (50 CFR 17.22 and 17.32), and the National Environmental Policy Act (42 U.S.C. 4321 *et seq.*) and its implementing regulations (40 CFR 1506.6 and 43 CFR 46.305).

Nicole Alt,

Acting Assistant Regional Director, Ecological Services, Mountain-Prairie Region.

DEPARTMENT OF THE INTERIOR

Fish and Wildlife Service

[Docket No. FWS-R4-ES-2020-0090; FXES11140400000-178-FF04EF2000]

Receipt of Incidental Take Permit Application and Proposed Habitat Conservation Plan for the Sand Skink and Blue-Tailed Mole Skink, Polk County, FL; Categorical Exclusion

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice of availability; request for comments and information.

SUMMARY: We, the Fish and Wildlife Service (Service), announce receipt of an application from Tampa Electric Company (applicant) for an incidental take permit (ITP) under the Endangered Species Act. The applicant requests the ITP to take the federally listed sand skink and blue-tailed mole skink incidental to the construction of an electrical power substation in Polk County, Florida. We request public comment on the application, which includes the applicant's proposed habitat conservation plan (HCP), and the Service's preliminary determination that this HCP qualifies as "low-effect," categorically excluded, under the National Environmental Policy Act. To make this determination, we used our environmental action statement and low-effect screening form, both of which are also available for public review.

DATES: We must receive your written comments on or before September 16, 2020.

ADDRESSES:

Obtaining Documents: You may obtain copies of the documents online in Docket No. FWS-R4-ES-2020-0090 at <http://www.regulations.gov>.

Submitting Comments: If you wish to submit comments on any of the documents, you may do so in writing by any of the following methods:

- **Online:** <http://www.regulations.gov>. Follow the instructions for submitting comments on Docket No. FWS-R4-ES-2020-0090.

- **U.S. mail:** Public Comments Processing, Attn: Docket No. FWS-R4-ES-2020-0090; U.S. Fish and Wildlife Service, MS: PRB/3W, 5275 Leesburg Pike, Falls Church, VA 22041-3803.

FOR FURTHER INFORMATION CONTACT: Lindsay Nester, by telephone at 772-469-4226 or via email at lindsay_nester@fws.gov. Individuals who are hearing or speech impaired may call the Federal Relay Service at 1-800-877-8339 for TTY assistance.

SUPPLEMENTARY INFORMATION: We, the Fish and Wildlife Service, announce receipt of an application from Tampa Electric Company (applicant) for an incidental take permit (ITP) under the Endangered Species Act of 1973, as amended (ESA; 16 U.S.C. 1531 *et seq.*). The applicant requests the ITP to take the federally listed sand skink (*Neoseps reynoldsi*) and blue-tailed mole skink (*Eumeces egregius lividus*) (skinks) incidental to the construction of an electrical power substation in Polk County, Florida. We request public comment on the application, which

includes the applicant's proposed habitat conservation plan (HCP), and on the Service's preliminary determination that this HCP qualifies as "low-effect," categorically excluded, under the National Environmental Policy Act (NEPA; 42 U.S.C. 4321 *et seq.*). To make this determination, we used our environmental action statement and low-effect screening form, which are also available for public review.

Project

Tampa Electric Company requests a 10-year ITP to take skinks through the conversion of approximately 0.233 acres of occupied skink foraging and sheltering habitat incidental to the construction of an electrical power substation located on a 3.13-acre parcel in Section 17, Township 27 South, Range 25 East in Polk County, Florida. The applicant proposes to mitigate for take of the skinks by purchasing credits equivalent to 0.47 acres of skink-occupied habitat from a Service-approved conservation bank in Polk County. The Service would require the applicant to purchase the credits prior to engaging in any phase of the project.

Public Availability of Comments

Before including your address, phone number, email address, or other personal identifying information in your comment, be aware that your entire comment, including your personal identifying information, may be made available to the public. While you may request that we withhold your personal identifying information, we cannot guarantee that we will be able to do so.

Our Preliminary Determination

The Service has made a preliminary determination that the applicant's project, including land clearing, construction of an electrical substation, and the proposed mitigation measure, would individually and cumulatively have a minor or negligible effect on the skinks and the environment. Therefore, we have preliminarily concluded that the ITP for this project would qualify for categorical exclusion, and the HCP would be low effect under our NEPA regulations at 43 CFR 46.205 and 46.210. A low-effect HCP is one that would result in (1) minor or negligible effects on federally listed, proposed, and candidate species and their habitats; (2) minor or negligible effects on other environmental values or resources; and (3) impacts that, when considered together with the impacts of other past, present, and reasonable foreseeable similarly situated projects, would not result in significant cumulative effects

to environmental values or resources over time.

Next Steps

The Service will evaluate the application and the comments to determine whether to issue the requested permit. We will also conduct an intra-Service consultation pursuant to section 7 of the ESA to evaluate the effects of the proposed take. After considering the preceding matters, we will determine whether the permit issuance criteria of section 10(a)(1)(B) of the ESA have been met. If met, the Service will issue ITP number TE77447D-0 to Tampa Electric Company.

Authority

The Service provides this notice under section 10(c) (16 U.S.C. 1539(c)) of the ESA and NEPA regulation 40 CFR 1506.6.

Roxanna Hinzman,

Field Supervisor, South Florida Ecological Services Office.

[FR Doc. 2020-17885 Filed 8-14-20; 8:45 am]

BILLING CODE 4333-15-P

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

[20X.LLWO220000.L1020000.PK0000; OMB Control Number 1004-0041]

Agency Information Collection Activities; Authorizing Grazing Use

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of information collection; request for comment.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, we, the Bureau of Land Management (BLM) are proposing to renew an information collection.

DATES: Interested persons are invited to submit comments on or before October 16, 2020.

ADDRESSES: Send your comments on this information collection request (ICR) by mail to Chandra Little, U.S. Department of the Interior, Bureau of Land Management, 1849 C Street NW, Room 2134LM, Washington, DC 20240; or by email to cclittle@blm.gov. Please reference Office of Management and Budget (OMB) Control Number 1004-0041 in the subject line of your comments.

FOR FURTHER INFORMATION CONTACT: To request additional information about this ICR, contact Brian Thrift by email at bthrift@blm.gov, or by telephone at

208–373–3869. Individuals who are hearing or speech impaired may call the Federal Relay Service at 1–800–877–8339 for TTY assistance.

SUPPLEMENTARY INFORMATION: In accordance with the PRA and its implementing regulations at 5 CFR 1320.8(d)(1), all information collections require approval under the PRA. We may not conduct or sponsor and you are not required to respond to a collection of information unless it displays a currently valid OMB control number.

As part of our continuing effort to reduce paperwork and respondent burdens, we invite the public and other Federal agencies to comment on new, proposed, revised, and continuing collections of information. This helps us assess the impact of our information collection requirements and minimize the public's reporting burden. It also helps the public understand our information collection requirements and provide the requested data in the desired format.

We are especially interested in public comment addressing the following:

(1) Whether or not the collection of information is necessary for the proper performance of the functions of the agency, including whether or not the information will have practical utility;

(2) The accuracy of our estimate of the burden for this collection of information, including the validity of the methodology and assumptions used;

(3) Ways to enhance the quality, utility, and clarity of the information to be collected; and

(4) How might the agency minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.*, permitting electronic submission of response.

Comments that you submit in response to this notice are a matter of public record. We will include or summarize each comment in our request to OMB to approve this ICR. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Abstract: The BLM is required by the Taylor Grazing Act (43 U.S.C. 315–315r)

and Subchapter IV of the Federal Land Policy and Management Act (43 U.S.C. 1751–1753) to manage domestic livestock grazing on public lands consistent with land use plans, principles of multiple use and sustained yield, and other relevant factors. Compliance with these statutory provisions necessitates collection of information on matters such as permittee and lessee qualifications for a grazing permit or lease, base property used in conjunction with public lands, and the actual use of public lands for domestic livestock grazing. Most permits and leases are in effect for 10 years and are renewable if the BLM determines that the terms and conditions of the expiring permit or lease are being met.

Title of Collection: Authorizing Grazing Use (43 CFR subparts 4110 and 4130).

OMB Control Number: 1004–0041.

Form Number: 4130–1, 4130–1a, 4130–1b, 4130–3a, 4130–4, and 4130–5.

Type of Review: Extension of a currently approved collection.

Respondents/Affected Public: Any U.S. citizen or validly licensed business may apply for a BLM grazing permit or lease. The BLM administers nearly 18,000 permits and leases for grazing domestic livestock, at least part of the year on public lands.

Total Estimated Number of Annual Respondents: 18,010.

Total Estimated Number of Annual Responses: 33,810.

Estimated Completion Time per Response: Varies from 10 to 35 minutes, depending on activity.

Total Estimated Number of Annual Burden Hours: 7,811.

Respondent's Obligation: Required to obtain or retain a benefit.

Frequency of Collection: The BLM collects the information on Forms 4130–1, 4130–1a, 4130–1b, and 4130–4 on occasion. The BLM collects the information on Forms 4130–3a and 4130–5 annually.

Total Estimated Annual Nonhour Burden Cost: \$30,000.

An agency may not conduct or sponsor and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number.

The authority for this action is the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*).

Chandra Little,
Regulatory Analyst.

BILLING CODE 4310–84–P

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

[LLWO260000.L10600000.
PC0000.LXSIADVSBDO0.20X]

Virtual Wild Horse and Burro Advisory Board Meeting

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of meeting.

SUMMARY: In accordance with the Federal Land Policy and Management Act of 1976 and the Federal Advisory Committee Act of 1972, the U.S. Department of the Interior, Bureau of Land Management (BLM) Wild Horse and Burro Advisory Board (Advisory Board) will hold a virtual public meeting due to public health restrictions.

DATES: The Advisory Board will hold a virtual public meeting on Wednesday and Thursday September 23–24, 2020, from 8:00 a.m. to 4:00 p.m. Mountain Time (MT).

ADDRESSES: The virtual meeting will be held via the Zoom Webinar Platform.

Written comments pertaining to the meeting and written statements that will be presented to the Advisory Board may be filed in advance of the meeting through the Advisory Board email address at www.whbadvisoryboard@blm.gov. Please include “Advisory Board Comment” in the subject line of the email.

FOR FURTHER INFORMATION CONTACT: Dorothea Boothe, Acting Wild Horse and Burro Program Coordinator: telephone: (602) 906–5543, email: dboothe@blm.gov. Individuals that use a telecommunications device for the deaf (TDD) may call the Federal Relay Service (FRS) at (800) 877–8339 to contact Ms. Boothe during normal business hours. The FRS is available 24 hours a day, 7 days a week. All responses will be during normal business hours.

SUPPLEMENTARY INFORMATION: The Advisory Board advises the Secretary of the Interior, the BLM Director, the Secretary of Agriculture, and the Chief of the U.S. Forest Service on matters pertaining to the management and protection of wild, free-roaming horses and burros on the nation's public lands. The Advisory Board operates under the authority of 43 CFR 1784.

Advisory Board Public Meeting Agenda

Wednesday, September 23 (8:00 a.m.–4:00 p.m.)

Advisory Board Administrative Items (8:00 a.m.–10:00 a.m.)

Advisory Board Discussion on the Wild Horse and Burro Report to Congress (10:15 a.m.–12:15 p.m.)

Public Comment Period (12:45 p.m.–2:45 p.m.)

Advisory Board Discussion on Fertility Control (3:00 p.m.–4:00 p.m.)

Thursday, September 24 (8:00 a.m.–4:00 p.m.)

Advisory Board Discussion on Range Conditions and Improvements (8:00 a.m.–10:00 a.m.)

Public Comment Period (10:30 a.m.–11:30 a.m.)

Advisory Board Discussion on Burro Management and Draft Recommendations (11:30 a.m.–1:00 p.m.)

Public Comment Period (1:30 p.m.–2:30 p.m.)

Advisory Board Discussion and Finalize Recommendations (Board Vote) (2:30 p.m.–4:00 p.m.)

Agenda may be subject to change.

Advisory Board meetings are open to the public in their entirety and will be live streamed at www.blm.gov/live and through the Zoom Webinar Platform.

The BLM will post the final agenda 2 weeks prior to the meeting online at www.blm.gov/programs/wild-horse-and-burro/get-involved/advisory-board. The public will have an opportunity to provide verbal comments to the Board during the designated times.

Beyond live captioning, any person(s) with special needs, such as an auxiliary aid, interpreting service, assistive listening device, or materials in an alternate format, must notify Ms. Boothe 2 weeks before the scheduled meeting date. It is important to adhere to the 2-week notice to allow enough time to arrange for the auxiliary aid or special service. Live captioning will be available throughout the event on both the Zoom Webinar Platform and the livestream page at www.blm.gov/live.

Public Comment Procedures

The BLM welcomes comments from all interested parties. Members of the public will have three opportunities to make statements (audio only) to the Board regarding the Wild Horse and Burro Program on both Wednesday, September 23, from 12:45 p.m. to 2:45 p.m. MT, and on Thursday, September 24, from 10:30 a.m. to 11:30 a.m. MT and from 1:30 p.m. to 2:30 p.m. MT. In order to accommodate all individuals interested in providing comments, please register with BLM 3 days in advance of the meetings. Individuals that have not registered in advance but would like to offer extemporaneous comments will be permitted if time allows. Information on how to register,

login, and participate in the virtual meeting will be announced at least 15 days in advance of the meeting on the BLM website at <https://www.blm.gov>. Participants using desktops, laptops, smartphones, and other personal digital devices will be able to participate via audio only. Those with phone only access will also be able to participate via a provided phone number and meeting ID. The Advisory Board may limit the length of comments, depending on the number of participants who register in advance. Written comments emailed 3 days prior to the meeting will be provided to the Advisory Board for consideration during the meeting. Please see the **ADDRESSES** section earlier for the BLM email address and include “Advisory Board Comment” in the subject line of your email. The BLM will record the entire meeting, including the allotted comment time. Comments should be specific and explain the reason for the recommendation(s). Comments supported by quantitative information, studies, or those that include citations and analysis of applicable laws and regulations are most beneficial and more useful, and likely to assist the decision-making process for the management and protection of wild horses and burros.

Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, the BLM cannot guarantee that it will be able to do so.

(Authority: 43 CFR 1784.4–2)

Brian St. George,

Deputy Assistant Director, Resources and Planning.

BILLING CODE 4310–84–P

INTERNATIONAL TRADE COMMISSION

[Investigation No. 337–TA–1213]

Certain Light-Emitting Diode Products, Fixtures, and Components Thereof Institution of Investigation

AGENCY: International Trade Commission.

ACTION: Notice.

SUMMARY: Notice is hereby given that a complaint was filed with the U.S. International Trade Commission on July

15, 2020, under section 337 of the Tariff Act of 1930, as amended, on behalf of IDEAL INDUSTRIES LIGHTING LLC d/b/a Cree Lighting of Durham, North Carolina. A supplement to the complaint was filed on July 20, 2020. The complaint, as supplemented, alleges violations of section 337 based upon the importation into the United States, the sale for importation, and the sale within the United States after importation of certain light-emitting diode products, fixtures, and components thereof by reason of infringement of certain claims of U.S. Patent No. 8,403,531 (“the ‘531 patent”); U.S. Patent No. 8,596,819 (“the ‘819 patent”); U.S. Patent No. 8,777,449 (“the ‘449 patent”); U.S. Patent No. 9,261,270 (“the ‘270 patent”); and U.S. Patent No. 9,476,570 (“the ‘570 patent”). The complaint further alleges that an industry in the United States exists as required by the applicable Federal Statute. The complainant requests that the Commission institute an investigation and, after the investigation, issue a limited exclusion order and a cease and desist order.

ADDRESSES: The complaint, except for any confidential information contained therein, may be viewed on the Commission’s electronic docket (EDIS) at <https://edis.usitc.gov>. For help accessing EDIS, please email EDIS3Help@usitc.gov. Hearing impaired individuals are advised that information on this matter can be obtained by contacting the Commission’s TDD terminal on (202) 205–1810. Persons with mobility impairments who will need special assistance in gaining access to the Commission should contact the Office of the Secretary at (202) 205–2000. General information concerning the Commission may also be obtained by accessing its internet server at <https://www.usitc.gov>.

FOR FURTHER INFORMATION CONTACT: Katherine Hiner, Office of Docket Services, U.S. International Trade Commission, telephone (202) 205–1802.

SUPPLEMENTARY INFORMATION:

Authority: The authority for institution of this investigation is contained in section 337 of the Tariff Act of 1930, as amended, 19 U.S.C. 1337, and in section 210.10 of the Commission’s Rules of Practice and Procedure, 19 CFR 210.10 (2020).

Scope of Investigation: Having considered the complaint, the U.S. International Trade Commission, on August 11, 2020, ordered that—

(1) Pursuant to subsection (b) of section 337 of the Tariff Act of 1930, as amended, an investigation be instituted to determine whether there is a

violation of subsection (a)(1)(B) of section 337 in the importation into the United States, the sale for importation, or the sale within the United States after importation of certain products identified in paragraph (2) by reason of infringement of one or more of claims 1, 10, 12, 17, 21, and 24–26 of the '531 patent; claims 1, 24–27, 29, 48–50, 52, 57–60, and 65–67 of the '819 patent; claims 1–14 of the '449 patent; claims 1–12 of the '270 patent; and claims 1–24 of the '570 patent; and whether an industry in the United States exists as required by subsection (a)(2) of section 337;

(2) Pursuant to section 210.10(b)(1) of the Commission's Rules of Practice and Procedure, 19 CFR 210.10(b)(1), the plain language description of the accused products or category of accused products, which defines the scope of the investigation, is "LED fixtures for indoor or outdoor applications, and components of such products";

(3) For the purpose of the investigation so instituted, the following are hereby named as parties upon which this notice of investigation shall be served: (a) The complainant is: Ideal Industries Lighting LLC, d/b/a Cree Lighting, 4401 Silicon Drive, Durham, North Carolina 27703.

(4) The respondent is the following entity alleged to be in violation of section 337, and is the party upon which the complaint is to be served: RAB Lighting Inc., 170 Ludlow Avenue, Northvale, NJ 07647.

(4) For the investigation so instituted, the Chief Administrative Law Judge, U.S. International Trade Commission, shall designate the presiding Administrative Law Judge.

The Office of Unfair Import Investigations will not participate as a party in this investigation.

Responses to the complaint and the notice of investigation must be submitted by the named respondent in accordance with section 210.13 of the Commission's Rules of Practice and Procedure, 19 CFR 210.13. Pursuant to 19 CFR 201.16€ and 210.13(a), as amended in 85 FR 15798 (March 19, 2020), such responses will be considered by the Commission if received not later than 20 days after the date of service by the complainant of the complaint and the notice of investigation. Extensions of time for submitting responses to the complaint and the notice of investigation will not be granted unless good cause therefor is shown.

Failure of the respondent to file a timely response to each allegation in the complaint and in this notice may be deemed to constitute a waiver of the

right to appear and contest the allegations of the complaint and this notice, and to authorize the administrative law judge and the Commission, without further notice to the respondent, to find the facts to be as alleged in the complaint and this notice and to enter an initial determination and a final determination containing such findings, and may result in the issuance of an exclusion order or a cease and desist order or both directed against the respondent.

By order of the Commission.

Issued: August 12, 2020.

Lisa Barton,

Secretary to the Commission.

BILLING CODE 7020–02–P

INTERNATIONAL TRADE COMMISSION

[Investigation No. 337–TA–1212]

Certain Electronic Candle Products and Components Thereof; Institution of Investigation

AGENCY: International Trade Commission.

ACTION: Notice.

SUMMARY: Notice is hereby given that a complaint was filed with the U.S. International Trade Commission on July 15, 2020, under section 337 of the Tariff Act of 1930, as amended, on behalf of The Sterno Group Companies, LLC of Corona, California and Sterno Home Inc. of Canada. Supplements were filed on July 27 and August 5, 2020. The complaint alleges violations of section 337 based upon the importation into the United States, the sale for importation, and the sale within the United States after importation of certain electronic candle products and components thereof by reason of infringement of certain claims of U.S. Patent No. 9,068,706 ("the '706 patent"), U.S. Patent No. 10,024,507 ("the '507 patent"), U.S. Patent No. 10,352,517 ("the '517 patent"), and U.S. Patent No. 10,578,264 ("the '264 patent"). The complaint further alleges that an industry in the United States exists as required by the applicable Federal Statute. The complainants request that the Commission institute an investigation and, after the investigation, issue a limited exclusion order and cease and desist orders.

ADDRESSES: The complaint, except for any confidential information contained therein, may be viewed on the Commission's electronic docket (EDIS) at <https://edis.usitc.gov>. For help

accessing EDIS, please email EDIS3Help@usitc.gov. Hearing impaired individuals are advised that information on this matter can be obtained by contacting the Commission's TDD terminal on (202) 205–1810. Persons with mobility impairments who will need special assistance in gaining access to the Commission should contact the Office of the Secretary at (202) 205–2000. General information concerning the Commission may also be obtained by accessing its internet server at <https://www.usitc.gov>.

FOR FURTHER INFORMATION CONTACT:

Pathenia M. Proctor, The Office of Unfair Import Investigations, U.S. International Trade Commission, telephone (202) 205–2560.

SUPPLEMENTARY INFORMATION:

Authority: The authority for institution of this investigation is contained in section 337 of the Tariff Act of 1930, as amended, 19 U.S.C. 1337, and in section 210.10 of the Commission's Rules of Practice and Procedure, 19 CFR 210.10 (2020).

Scope of Investigation: Having considered the complaint, the U.S. International Trade Commission, on August 11, 2020, *ordered that—*

(4) Pursuant to subsection (b) of section 337 of the Tariff Act of 1930, as amended, an investigation be instituted to determine whether there is a violation of subsection (a)(1)(B) of section 337 in the importation into the United States, the sale for importation, or the sale within the United States after importation of certain products identified in paragraph (2) by reason of infringement of one or more of claims 1, 2, 4, 5, 7, and 11–14 of the '706 patent; claims 1, 2, 4, 5, 7, 11–14, and 16 of the '507 patent; claims 1, 3–7, and 9–12 of the '517 patent; and claims 1, 3–6, 14, 16, and 17 of the '264 patent, and whether an industry in the United States exists as required by subsection (a)(2) of section 337;

(2) Pursuant to section 210.10(b)(1) of the Commission's Rules of Practice and Procedure, 19 CFR 210.10(b)(1), the plain language description of the accused products or category of accused products, which defines the scope of the investigation, is "artificial flameless candles that simulate a realistic flame effect using LEDs and electronic components";

(3) For the purpose of the investigation so instituted, the following are hereby named as parties upon which this notice of investigation shall be served:

(a) The complainants are:

The Sterno Group Companies, LLC,
1880 Compton Avenue, Suite 101,
Corona, California 92881

Sterno Home Inc., 1 Burbidge Street,
Suite 101, Coquitlam, BC V3K 7B2,
Canada

(4) The respondents are the following entities alleged to be in violation of section 337, and are the parties upon which the complaint is to be served:

Shenzhen Liown Electronics Co. Ltd.,
No. 7, Gongye 3rd Road, Shekou,
Nanshan District, Shenzhen,
Guangdong, 518067, China

Luminara Worldwide, LLC, 10911
Valley View Road, Eden Prairie, MN

L & L Candle Company, LLC, 621 Lunar
Avenue, Brea, California 92821

€ The Office of Unfair Import
Investigations, U.S. International Trade
Commission, 500 E Street SW, Suite
401, Washington, DC 20436; and

(4) For the investigation so instituted, the Chief Administrative Law Judge, U.S. International Trade Commission, shall designate the presiding Administrative Law Judge.

Responses to the complaint and the notice of investigation must be submitted by the named respondents in accordance with section 210.13 of the Commission's Rules of Practice and Procedure, 19 CFR 210.13. Pursuant to 19 CFR 201.16(e) and 210.13(a), as amended in 85 FR 15798 (March 19, 2020), such responses will be considered by the Commission if received not later than 20 days after the date of service by the complainant of the complaint and the notice of investigation. Extensions of time for submitting responses to the complaint and the notice of investigation will not be granted unless good cause therefor is shown.

Failure of a respondent to file a timely response to each allegation in the complaint and in this notice may be deemed to constitute a waiver of the right to appear and contest the allegations of the complaint and this notice, and to authorize the administrative law judge and the Commission, without further notice to the respondent, to find the facts to be as alleged in the complaint and this notice and to enter an initial determination and a final determination containing such findings, and may result in the issuance of an exclusion order or a cease and desist order or both directed against the respondent.

By order of the Commission.

Issued: August 12, 2020.

BILLING CODE 7020-02-P

DEPARTMENT OF JUSTICE

Antitrust Division

Notice Pursuant to the Defense Production Act of 1950

AGENCY: Antitrust Division, U.S. Department of Justice.

ACTION: Notice of review of voluntary agreement.

SUMMARY: Notice is hereby given pursuant to section 708 of the Defense Production Act of 1950 ("DPA"), that the Attorney General finds, with respect to the Voluntary Agreement for the Manufacture and Distribution of Critical Healthcare Resources Necessary to Respond to a Pandemic ("Voluntary Agreement") proposed by the Federal Emergency Management Agency ("FEMA"), that the purposes of section 708(c)(1) of the DPA may not reasonably be achieved through a voluntary agreement having less anticompetitive effects or without any voluntary agreement. Given this finding, the proposed Voluntary Agreement may become effective following the publication of this notice. FEMA is publishing the text of the proposed Voluntary Agreement elsewhere in this issue of the **Federal Register**.

SUPPLEMENTARY INFORMATION: Under the DPA, FEMA may enter into agreements with representatives of private industry for the purpose of improving the efficiency with which private firms contribute to the national defense when conditions exist that may pose a direct threat to the national defense or its preparedness. Such arrangements are generally known as "voluntary agreements." A defense to actions brought under the antitrust laws is available to each participant acting within the scope of a voluntary agreement that has come into force under the DPA.

The DPA requires that each proposed voluntary agreement be reviewed by the Attorney General prior to becoming effective. If, after consulting with the Chairman of the Federal Trade Commission, the Attorney General finds that the purposes of the DPA's voluntary-agreements provision "may not reasonably be achieved through a voluntary agreement . . . having less anticompetitive effects or without any voluntary agreement," the agreement

may become effective. 50 U.S.C. 4558(f)(1)(B).

The purpose of the proposed Voluntary Agreement is to support Department of Homeland Security, Department of Health and Human Services ("HHS"), and FEMA contingency requirements to provide medical resources during times of pandemic through procedures agreed upon in advance. The proposed Voluntary Agreement establishes the terms, conditions and procedures under which participants agree voluntarily to contribute and facilitate medical resources production and distribution capacity as requested by FEMA, HHS, and other Federal Government entities. FEMA has certified that the proposed Voluntary Agreement is necessary to provide for the national defense in the event of a pandemic.

FEMA requested that the Attorney General issue a finding that the proposed Voluntary Agreement satisfies the statutory criteria set forth in 50 U.S.C. 4558(f)(1)(B). The Antitrust Division reviewed the proposed agreement, attended an open meeting of interested persons pursuant to the requirements of 44 CFR 332.2, and consulted with the Chairman of the Federal Trade Commission as to the competitive effect of the proposed agreement. On July 31, 2020, by letter to Peter Gaynor, FEMA Administrator, William P. Barr, Attorney General, issued a finding, pursuant to 50 U.S.C. 4558(f)(1)(B), that the purposes of the DPA's voluntary-agreements provision "may not reasonably be achieved through a voluntary agreement . . . having less anticompetitive effects or without any voluntary agreement."

David G.B. Lawrence,

Chief, Competition Policy & Advocacy Section.

BILLING CODE 4410-11-P

DEPARTMENT OF JUSTICE

Notice of Lodging of Proposed Consent Decree Under the Clean Water Act

On August 5, 2020, the Department of Justice lodged a proposed Consent Decree with the United States District Court for the District of Colorado in the lawsuit entitled *United States v. Groendyke Transport Inc.*, Civil Action No. 1:20-cv-02311.

This civil action asserts claims for penalties against Groendyke Transport Inc. Groendyke, as the legal successor to Manweiler Transport Company (Transport), for violations of Section

311(b)(3) of the Clean Water Act (CWA), 33 U.S.C. 1321(b)(3), for the unpermitted discharge on August 26, 2016, of petroleum product into or upon navigable waters of the United States and their adjoining shorelines. The Consent Decree requires the defendant to pay a civil penalty of \$225,000 to settle the claims against it. In return, the United States will grant Groendyke Transport Inc. a covenant not to sue or take administrative action pursuant to the Clean Water Act for the civil violations alleged in the Complaint, filed simultaneously with the Consent Decree.

The publication of this notice opens a period for public comment on the Consent Decree. Comments should be addressed to the Assistant Attorney General, Environment and Natural Resources Division, and should refer to *United States v. Groendyke Transport Inc.*, D.J. Ref. No. 90–5–1–1–12121. All comments must be submitted no later than thirty (30) days after the publication date of this notice. Comments may be submitted either by email or by mail:

<i>To submit comments:</i>	<i>Send them to:</i>
By email	<i>pubcomment-ees.enrd@usdoj.gov.</i>
By mail	Assistant Attorney General, U.S. DOJ—ENRD, P.O. Box 7611, Washington, DC 20044–7611.

During the public comment period, the Consent Decree may be examined and downloaded at this Justice Department website: <https://www.justice.gov/enrd/consent-decrees>. We will provide a paper copy of the Consent Decree upon written request and payment of reproduction costs. Please mail your request and payment to: Consent Decree Library, U.S. DOJ—ENRD, P.O. Box 7611, Washington, DC 20044–7611.

Please enclose a check or money order for \$3.75 (25 cents per page reproduction cost) payable to the United States Treasury.

Jeffrey Sands,

Assistant Section Chief, Environmental Enforcement Section, Environment and Natural Resources Division.

BILLING CODE 4410–15–P

DEPARTMENT OF JUSTICE

Office of Justice Programs

[OJP (OJP) Docket No. 1784]

Meeting of the Global Justice Information Sharing Initiative Federal Advisory Committee

AGENCY: Office of Justice Programs (OJP), Justice.

ACTION: Notice of meeting.

SUMMARY: This is an announcement of a meeting of the Global Justice Information Sharing Initiative (Global) Federal Advisory Committee (GAC) to discuss the Global Initiative, as described at www.it.ojp.gov/global. This meeting will provide an update on existing projects as well as the status of priorities for the FY20 Fiscal Year.

DATES: The meeting will take place on Thursday, September 17, 2020, from 9:00 a.m. ET to 4:30 p.m. ET.

ADDRESSES: The meeting will take place via video conference. See

SUPPLEMENTARY INFORMATION for registration and access information.

FOR FURTHER INFORMATION CONTACT: Tracey Trautman, Global Designated Federal Official (DFO), Bureau of Justice Assistance, Office of Justice Programs, 810 7th Street, Washington, DC 20531; Phone (202) 305–1491 [note: this is not a toll-free number]; Email: tracey.trautman@ojp.usdoj.gov.

SUPPLEMENTARY INFORMATION: This meeting is open to the public via Zoom for Government, but prior registration is required. Members of the public who wish to attend this meeting must register with Ms. Tracey Trautman at the above address at least (7) days in advance of the meeting. Registrations will be accepted on a space available basis. Access to the meeting will not be allowed without registration.

Anyone requiring special accommodations should notify Ms. Trautman at least seven (7) days in advance of the meeting.

Purpose: The GAC will act as the focal point for justice information systems integration activities in order to facilitate the coordination of technical, funding, and legislative strategies in support of the Administration's justice priorities.

The GAC will guide and monitor the development of the Global information sharing concept. It will advise the Acting Director of the Bureau of Justice Assistance; the Principal Deputy Assistant Attorney General, OJP; the Attorney General; the President (through the Attorney General); and local, state, tribal, and federal

policymakers in the executive, legislative, and judicial branches. The GAC will also advocate for strategies for accomplishing a Global information sharing capability.

Interested persons whose registrations have been accepted may be permitted to participate in the discussions at the discretion of the meeting chairman and with approval of the DFO.

Tracey Trautman,

Global DFO, Principal Deputy Director, Bureau of Justice Assistance, Office of Justice Programs, U.S. Department of Justice.

BILLING CODE 4410–18–P

NATIONAL CREDIT UNION ADMINISTRATION

Submission for OMB Review; Comment Request

AGENCY: National Credit Union Administration (NCUA).

ACTION: Notice.

SUMMARY: The National Credit Union Administration (NCUA), as part of a continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to comment on the following extension of a currently approved collection, as required by the Paperwork Reduction Act of 1995.

DATES: Written comments should be received on or before September 16, 2020 to be assured of consideration.

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to www.reginfo.gov/public/do/PRAMain. Find this particular information collection by selecting “Currently under 30-day Review—Open for Public Comments” or by using the search function.

FOR FURTHER INFORMATION CONTACT: Copies of the submission may be obtained by contacting Mackie Malaka at (703) 548–2704, emailing PRAComments@ncua.gov, or viewing the entire information collection request at www.reginfo.gov.

SUPPLEMENTARY INFORMATION:

OMB Number: 3133–0117.
Title: Designation of Low Income Status, 12 CFR part 701.34(a).

Type of Review: Extension of a currently approved collection.

Abstract: The Federal Credit Union Act (12 U.S.C. 1752(5)) authorizes the NCUA Board to define low-income members so that credit unions with a membership serving predominantly

low-income members can benefit from certain statutory relief and receive assistance from the Community Development Revolving Loan Fund. To utilize this authority, a credit union must receive a low-income designation from NCUA as defined in NCUA's regulations at 12 CFR 701.34. NCUA uses the information from credit unions to determine whether they meet the criteria for the low-income designation.

This is an extension of an emergency revision that incorporated a procedural change for credit unions, in qualifying for low-income designation status, to include military personnel in the low-income designation calculation.

Affected Public: Not-for-profit institutions.

Estimated Total Annual Burden Hours: 443.

By Gerard Poliquin, Secretary of the Board, the National Credit Union Administration, on August 11, 2020.

Dated: August 11, 2020.

Mackie I. Malaka,

NCUA PRA Clearance Officer.

the entire information collection request at www.reginfo.gov.

SUPPLEMENTARY INFORMATION:

OMB Number: 3133-0154.

Title: Prompt Corrective Action, 12 CFR 702 (Subparts A–D).

Abstract: Section 216 of the Federal Credit Union Act (12 U.S.C. 1790d) mandates prompt corrective action (PCA) requirements for federally insured credit unions (FICUs) that become less than well capitalized. Section 216 requires the NCUA Board to (1) adopt, by regulation, a system of prompt corrective action to restore the net worth of inadequately capitalized FICUs; and (2) develop an alternative system of prompt corrective action for new credit unions that carries out the purpose of PCA while allowing an FICU reasonable time to build its net worth to an adequately capitalized level. The purpose of PCA is to resolve the problems of FICUs at the least possible long-term loss to the National Credit Union Share Insurance Fund (NCUSIF).

This is an extension of emergency revisions to the PCA that provide regulatory relief in response to COVID-19. The waiver requirement for each quarterly transfer made from undivided earning to its regular reserve account until well capitalized was temporary suspended for adequately capitalized credit unions and a FICU that becomes undercapitalized may submit a significantly simpler Net Worth Restoration Plan to NCUA.

Type of Review: Extension of a currently approved collection.

Affected Public: Private Sector: Not-for-profit institutions.

Estimated Total Annual Burden Hours: 569.

By Gerard Poliquin, Secretary of the Board, the National Credit Union Administration, on August 11, 2020.

Dated: August 11, 2020.

Dawn D. Wolfgang,

NCUA PRA Clearance Officer.

BILLING CODE 7535-01-P

NATIONAL FOUNDATION ON THE ARTS AND THE HUMANITIES

National Endowment for the Humanities

Meeting of Humanities Panel

AGENCY: National Endowment for the Humanities; National Foundation on the Arts and the Humanities.

ACTION: Notice of Meeting.

SUMMARY: The National Endowment for the Humanities (NEH) will hold

nineteen meetings, by videoconference, of the Humanities Panel, a federal advisory committee, during September 2020. The purpose of the meetings is for panel review, discussion, evaluation, and recommendation of applications for financial assistance under the National Foundation on the Arts and the Humanities Act of 1965.

DATES: See **SUPPLEMENTARY INFORMATION** for meeting dates. The meetings will open at 8:30 a.m. and will adjourn by 5 p.m. on the dates specified below.

FOR FURTHER INFORMATION CONTACT:

Elizabeth Voyatzis, Committee Management Officer, 400 7th Street SW, Room 4060, Washington, DC 20506; (202) 606-8322; evoyatzis@neh.gov.

SUPPLEMENTARY INFORMATION: Pursuant to section 10(a)(2) of the Federal Advisory Committee Act (5 U.S.C. App.), notice is hereby given of the following meetings:

1. *Date:* September 1, 2020

This video meeting will discuss applications on the topic of History, for the Digital Projects for the Public: Discovery Grants program, submitted to the Division of Public Programs.

2. *Date:* September 1, 2020

This video meeting will discuss applications on the topic of Computational Analysis, for the Digital Humanities Advancement Grants program, submitted to the Office of Digital Humanities.

3. *Date:* September 1, 2020

This video meeting—the first of two on this date—will discuss applications for the Humanities Initiatives at Colleges and Universities grant program, submitted to the Division of Education Programs.

4. *Date:* September 1, 2020

This video meeting—the second of two on this date—will discuss applications for the Humanities Initiatives at Colleges and Universities grant program, submitted to the Division of Education Programs.

5. *Date:* September 2, 2020

This video meeting will discuss applications on the topics of Games and VR, for the Digital Projects for the Public: Production Grants program, submitted to the Division of Public Programs.

6. *Date:* September 2, 2020

This video meeting will discuss applications on the topics of Arts and Media Studies, for the Digital Humanities Advancement Grants program, submitted to the Office of Digital Humanities.

7. *Date:* September 2, 2020

This video meeting will discuss applications for the Humanities Initiatives at Colleges and Universities grant program, submitted to the Division of Education Programs.

8. *Date:* September 3, 2020

This video meeting will discuss applications for the Humanities Initiatives at Tribal Colleges and Universities grant program, submitted to the Division of Education Programs.

9. *Date:* September 3, 2020

This video meeting will discuss applications on the topics of Pedagogy and Community Engagement, for the Digital Humanities Advancement Grants program, submitted to the Office of Digital Humanities.

10. *Date:* September 3, 2020

This video meeting will discuss applications on the topic of U.S. History, for the Digital Projects for the Public: Production Grants program, submitted to the Division of Public Programs.

11. *Date:* September 4, 2020

This video meeting will discuss applications on the topic of Scholarly Communications, for the Digital Humanities Advancement Grants program, submitted to the Office of Digital Humanities.

12. *Date:* September 8, 2020

This video meeting will discuss applications on the topic of Historic Sites, for the Digital Projects for the Public: Discovery Grants program, submitted to the Division of Public Programs.

13. *Date:* September 8, 2020

This video meeting—the first of two on this date—will discuss applications for the Humanities Initiatives at Hispanic-Serving Institutions grant program, submitted to the Division of Education Programs.

14. *Date:* September 8, 2020

This video meeting—the second of two on this date—will discuss applications for the Humanities Initiatives at Hispanic-Serving Institutions grant program, submitted to the Division of Education Programs.

15. *Date:* September 9, 2020

This video meeting will discuss applications on the topics of Arts and Culture, for the Digital Projects for the Public: Discovery Grants program, submitted to the Division of Public Programs.

16. *Date:* September 9, 2020

This video meeting—the first of two on this date—will discuss applications for the Humanities Initiatives at Hispanic-Serving Institutions grant

program, submitted to the Division of Education Programs.

17. *Date:* September 9, 2020

This video meeting—the second of two on this date—will discuss applications for the Humanities Initiatives at Hispanic-Serving Institutions grant program, submitted to the Division of Education Programs.

18. *Date:* September 10, 2020

This video meeting will discuss applications on the topic of Urban History, for the Digital Projects for the Public: Production Grants program, submitted to the Division of Public Programs.

19. *Date:* September 11, 2020

This video meeting will discuss applications on the topics of Arts and Culture, for the Digital Projects for the Public: Production Grants program, submitted to the Division of Public Programs.

Because these meetings will include review of personal and/or proprietary financial and commercial information given in confidence to the agency by grant applicants, the meetings will be closed to the public pursuant to sections 552b(c)(4) and 552b(c)(6) of Title 5, U.S.C., as amended. I have made this determination pursuant to the authority granted me by the Chairman's Delegation of Authority to Close Advisory Committee Meetings dated April 15, 2016.

Dated: August 11, 2020.

Caitlin Cater,

Attorney-Advisor, National Endowment for the Humanities.

NATIONAL SCIENCE FOUNDATION

Sunshine Act Meeting; National Science Board

SUMMARY: The National Science Board's Committee on National Science and Engineering Policy (SEP), pursuant to NSF regulations, the National Science Foundation Act, as amended, and the Government in the Sunshine Act, hereby gives notice of the scheduling of a teleconference for the transaction of National Science Board business.

DATES: Friday, August 21, 2020 at 3:30–4:30 p.m. EDT.

PLACE: This meeting will be held by videoconference through the National Science Foundation. An audio link will be available for the public. Contact the Board Office 24 hours before the teleconference to request the public

audio link at nationalsciencebrd@nsf.gov.

STATUS: Open.

MATTERS TO BE CONSIDERED: Chair's opening remarks; discussion and recommendation of the narrative outlines for the SEI 2022 thematic reports on academic research & development, and K–12 education.

CONTACT PERSON FOR MORE INFORMATION:

Point of contact for this meeting is: Chris Blair, cblair@nsf.gov, 703-292-7000. To listen to this teleconference, members of the public must send an email to nationalsciencebrd@nsf.gov at least 24 hours prior to the teleconference. The National Science Board Office will send requesters a link to the audio. Meeting information and updates (time, place, subject matter or status of meeting) may be found at <http://www.nsf.gov/nsb/meetings/notices.jsp#sunshine>. Please refer to the National Science Board website www.nsf.gov/nsb for additional information.

Chris Blair,

Executive Assistant to the National Science Board Office.

BILLING CODE 7555-01-P

NUCLEAR REGULATORY COMMISSION

678th Meeting of the Advisory Committee on Reactor Safeguards (ACRS)

In accordance with the purposes of Sections 29 and 182b of the Atomic Energy Act (42 U.S.C. 2039, 2232b), the Advisory Committee on Reactor Safeguards (ACRS) will hold meetings on September 10–12, 2020. As part of the coordinated government response to combat the COVID-19 public health emergency, the Committee will conduct virtual meetings. The public will be able to participate in any open sessions via 1-866-822-3032, pass code 8272423#.

Thursday, September 10, 2020

9:30 a.m.–9:35 a.m.: Opening Remarks by the ACRS Chairman (Open)—The ACRS Chairman will make opening remarks regarding the conduct of the meeting.

9:35 a.m.–11:00 a.m.: Staff White Paper on 10 CFR part 53 Advanced Notice of Proposed Rulemaking (Open)—The Committee will have presentations and discussion with the U.S. Nuclear Regulatory Commission (NRC) staff regarding the subject topic.

11:15 a.m.–1:30 p.m.: GEH Topical Report NEDC-3391P, "BWRX-300

Reactor Vessel and Overpressure Protection" (Open/Closed)—The Committee will have presentations and discussion with GEH and the NRC staff regarding the subject topic. [Note: Pursuant to 5 U.S.C 552b(c)(4), a portion of this session may be closed in order to discuss and protect information designated as proprietary.]

2:30 p.m.–4:00 p.m.: *Topical Report ANP-10337, Supplement 1, "Deformer Spacer Grid Element"* (Open/Closed)—The Committee will have presentations and discussion with the NRC staff regarding the subject topic. [Note: Pursuant to 5 U.S.C 552b(c)(4), a portion of this session may be closed in order to discuss and protect information designated as proprietary.]

4:15 p.m.–6:15 p.m.: *Preparation of ACRS Reports* (Open/Closed)—The Committee will continue its discussion of proposed ACRS reports. [Note: Pursuant to 5 U.S.C 552b(c)(4), a portion of this session may be closed in order to discuss and protect information designated as proprietary.]

Friday, September 11, 2020

9:30 a.m.–10:30 a.m.: *Future ACRS Activities/Report of the Planning and Procedures Subcommittee and Reconciliation of ACRS Comments and Recommendations/Preparation of Reports* (Open/Closed)—The Committee will hear discussion of the recommendations of the Planning and Procedures Subcommittee regarding items proposed for consideration by the Full Committee during future ACRS meetings, and/or proceed to preparation of reports as determined by the Chairman. [Note: Pursuant to 5 U.S.C. 552b(c)(2) and (6), a portion of this meeting may be closed to discuss organizational and personnel matters that relate solely to internal personnel rules and practices of the ACRS, and information the release of which would constitute a clearly unwarranted invasion of personal privacy.] [Note: Pursuant to 5 U.S.C 552b(c)(4), a portion of this session may be closed in order to discuss and protect information designated as proprietary.]

10:30 a.m.–12:30 p.m.: *Future Focused Research Projects* (Open)—The Committee will have presentations and discussion with the NRC staff regarding the subject topic.

1:30 p.m.–6:00 p.m.: *Preparation of ACRS Reports* (Open/Closed)—The Committee will continue its discussion of proposed ACRS reports. [Note: Pursuant to 5 U.S.C 552b(c)(4), a portion of this session may be closed in order to discuss and protect information designated as proprietary.]

Saturday, September 12, 2020

9:30 a.m.–2:00 p.m.: *Preparation of ACRS Reports* (Open/Closed)—The Committee will continue its discussion of proposed ACRS reports. [Note: Pursuant to 5 U.S.C 552b(c)(4), a portion of this session may be closed in order to discuss and protect information designated as proprietary.]

[Note: Pursuant to 5 U.S.C. 552b(c)(2) and (6), portions of this meeting may be closed to discuss organizational and personnel matters that relate solely to internal personnel rules and practices of the ACRS, and information the release of which would constitute a clearly unwarranted invasion of personal privacy.]

Procedures for the conduct of and participation in ACRS meetings were published in the **Federal Register** on June 13, 2019 (84 FR 27662). In accordance with those procedures, oral or written views may be presented by members of the public, including representatives of the nuclear industry. Persons desiring to make oral statements should notify Quynh Nguyen, Cognizant ACRS Staff and the Designated Federal Official (Telephone: 301-415-5844, Email: Quynh.Nguyen@nrc.gov), 5 days before the meeting, if possible, so that appropriate arrangements can be made to allow necessary time during the meeting for such statements. In view of the possibility that the schedule for ACRS meetings may be adjusted by the Chairman as necessary to facilitate the conduct of the meeting, persons planning to attend should check with the Cognizant ACRS staff if such rescheduling would result in major inconvenience.

An electronic copy of each presentation should be emailed to the Cognizant ACRS Staff at least one day before meeting.

In accordance with Subsection 10(d) of Public Law 92-463 and 5 U.S.C. 552b(c), certain portions of this meeting may be closed, as specifically noted above. Use of still, motion picture, and television cameras during the meeting may be limited to selected portions of the meeting as determined by the Chairman. Electronic recordings will be permitted only during the open portions of the meeting.

ACRS meeting agendas, meeting transcripts, and letter reports are available through the NRC Public Document Room (PDR) at pdr.resource@nrc.gov, or by calling the PDR at 1-800-397-4209, or from the Publicly Available Records System component of NRC's Agencywide Documents Access and Management System (ADAMS) which is accessible from the NRC

website at <https://www.nrc.gov/reading-rm/adams.html> or <https://www.nrc.gov/reading-rm/doc-collections/#ACRS/>

Video teleconferencing service is available for observing open sessions of ACRS meetings. Those wishing to use this service should contact Thomas Dashiell, ACRS Audio Visual Technician (301-415-7907), between 7:30 a.m. and 3:45 p.m. (Eastern Time), at least 10 days before the meeting to ensure the availability of this service. Individuals or organizations requesting this service will be responsible for telephone line charges and for providing the equipment and facilities that they use to establish the video teleconferencing link. The availability of video teleconferencing services is not guaranteed.

Dated: August 12, 2020.

Russell E. Chazell,

Federal Advisory Committee Management Officer, Office of the Secretary.

BILLING CODE 7590-01-P

NUCLEAR REGULATORY COMMISSION

[NRC-2019-0239]

Information Collection: NRC CUI Program Challenge Request Process

AGENCY: Nuclear Regulatory Commission.

ACTION: Notice of submission to the Office of Management and Budget; request for comment.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC) has recently submitted a proposed collection of information to the Office of Management and Budget (OMB) for review. The information collection is entitled, "NRC CUI Program Challenge Request Process."

DATES: Submit comments by September 16, 2020. Comments received after this date will be considered if it is practical to do so, but the Commission is able to ensure consideration only for comments received on or before this date.

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to <https://www.reginfo.gov/public/do/PRAMain>. Find this particular information collection by selecting "Currently under Review—Open for Public Comments" or by using the search function.

FOR FURTHER INFORMATION CONTACT: David Cullison, NRC Clearance Officer,

U.S. Nuclear Regulatory Commission, Washington, DC 20555-0001; telephone: 301-415-2084; email: INFOCOLLECTS.Resource@nrc.gov.

SUPPLEMENTARY INFORMATION:

I. Obtaining Information and Submitting Comments

A. Obtaining Information

Please refer to Docket ID NRC-2019-0239 when contacting the NRC about the availability of information for this action. You may obtain publicly-available information related to this action by any of the following methods:

- *Federal Rulemaking Website:* Go to <https://www.regulations.gov> and search for Docket ID NRC-2019-0239. A copy of the collection of information and related instructions may be obtained without charge by accessing Docket ID NRC-2019-0239 on this website.
- *NRC's Agencywide Documents Access and Management System (ADAMS):* You may obtain publicly-available documents online in the ADAMS Public Documents collection at <https://www.nrc.gov/reading-rm/adams.html>. To begin the search, select "Begin Web-based ADAMS Search." For problems with ADAMS, please contact the NRC's Public Document Room reference staff at 1-800-397-4209, 301-415-4737, or by email to pdr.resource@nrc.gov. A copy of the collection of information and related instructions may be obtained without charge by accessing ADAMS Accession No. ML19317D847. The supporting statement and NRC Controlled Unclassified Information (CUI) Program Challenge Request Form is available in ADAMS under Accession No. ML20118D025.

- *NRC's Clearance Officer:* A copy of the collection of information and related instructions may be obtained without charge by contacting the NRC's Clearance Officer, David Cullison, Office of the Chief Information Officer, U.S. Nuclear Regulatory Commission, Washington, DC 20555-0001; telephone: 301-415-2084; email: INFOCOLLECTS.Resource@NRC.GOV.

B. Submitting Comments

The NRC cautions you not to include identifying or contact information in comment submissions that you do not want to be publicly disclosed in your comment submission. All comment submissions are posted at <https://www.regulations.gov> and entered into ADAMS. Comment submissions are not routinely edited to remove identifying or contact information.

If you are requesting or aggregating comments from other persons for

submission to the OMB, then you should inform those persons not to include identifying or contact information that they do not want to be publicly disclosed in their comment submission. Your request should state that comment submissions are not routinely edited to remove such information before making the comment submissions available to the public or entering the comment into ADAMS.

II. Background

Under the provisions of the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35), the NRC recently submitted a proposed collection of information to OMB for review entitled, "NRC CUI Program Challenge Request." The NRC hereby informs potential respondents that an agency may not conduct or sponsor, and that a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number.

The NRC published a **Federal Register** notice with a 60-day comment period on this information collection on April 17, 2020, 85 FR 21475.

1. *The title of the information collection:* NRC CUI Program Challenge Request.

2. *OMB approval number:* 3150-XXXX.

3. *Type of submission:* New.

4. *The form number if applicable:* N/A.

5. *How often the collection is required or requested:* On occasion.

6. *Who will be required or asked to respond:* Authorized holders, including any individual or organization who has been provided with CUI and has a lawful government purpose to possess CUI.

7. *The estimated number of annual responses:* 12.

8. *The estimated number of annual respondents:* 12.

9. *An estimate of the total number of hours needed annually to comply with the information collection requirement or request:* 18.

10. *Abstract:* The NRC CUI Program Challenge Request Process, also referred to as the "CUI Challenge Request Process" in this document, provides the process used for NRC CUI authorized holders to challenge the designation of information that has been marked as CUI as improperly or incorrectly designated. "Authorized holder" includes any individual or organization who has been provided with CUI and has a lawful government purpose to possess the information. Any authorized holder who believes that the designation of specific information as CUI is improper or incorrect, or who believes

they have received unmarked CUI, may use this process to formally notify the NRC CUI Senior Agency Official (SAO). The process also allows for the NRC CUI SAO and CUI Program Manager to process such requests and to issue a Final Decision from the CUI SAO.

11. The CUI Challenge Request Process is not intended to be used to address all disagreements regarding the proper designation of CUI. Authorized holders are encouraged to seek or utilize less formal means when resolving internal good faith disputes over the proper designation of information as CUI, such as discussion with the creator or designator of the information in dispute. Where resolution cannot be achieved through less formal means, the CUI challenge request process is available.

The CUI Challenge Request Process does not supersede any obligations under law or NRC policy to report information spills.

Dated: August 12, 2020.

For the Nuclear Regulatory Commission.

David C. Cullison,

NRC Clearance Officer, Office of the Chief Information Officer.

[FR Doc. 2020-17932 Filed 8-14-20; 8:45 am]

BILLING CODE 7590-01-P

POSTAL REGULATORY COMMISSION

[Docket Nos. MC2020-216 and CP2020-244; Docket Nos. MC2020-217 and CP2020-245]

New Postal Products

AGENCY: Postal Regulatory Commission.

ACTION: Notice.

SUMMARY: The Commission is noticing a recent Postal Service filing for the Commission's consideration concerning a negotiated service agreement. This notice informs the public of the filing, invites public comment, and takes other administrative steps.

DATES: *Comments are due:* August 19, 2020.

ADDRESSES: Submit comments electronically via the Commission's Filing Online system at <http://www.prc.gov>. Those who cannot submit comments electronically should contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section by telephone for advice on filing alternatives.

FOR FURTHER INFORMATION CONTACT: David A. Trissell, General Counsel, at 202-789-6820.

SUPPLEMENTARY INFORMATION:

Table of Contents

- I. Introduction
- II. Docketed Proceeding(s)

I. Introduction

The Commission gives notice that the Postal Service filed request(s) for the Commission to consider matters related to negotiated service agreement(s). The request(s) may propose the addition or removal of a negotiated service agreement from the market dominant or the competitive product list, or the modification of an existing product currently appearing on the market dominant or the competitive product list.

Section II identifies the docket number(s) associated with each Postal Service request, the title of each Postal Service request, the request's acceptance date, and the authority cited by the Postal Service for each request. For each request, the Commission appoints an officer of the Commission to represent the interests of the general public in the proceeding, pursuant to 39 U.S.C. 505 (Public Representative). Section II also establishes comment deadline(s) pertaining to each request.

The public portions of the Postal Service's request(s) can be accessed via the Commission's website (<http://www.prc.gov>). Non-public portions of the Postal Service's request(s), if any, can be accessed through compliance with the requirements of 39 CFR 3011.301.¹

The Commission invites comments on whether the Postal Service's request(s) in the captioned docket(s) are consistent with the policies of title 39. For request(s) that the Postal Service states concern market dominant product(s), applicable statutory and regulatory requirements include 39 U.S.C. 3622, 39 U.S.C. 3642, 39 CFR part 3030, and 39 CFR part 3040, subpart B. For request(s) that the Postal Service states concern competitive product(s), applicable statutory and regulatory requirements include 39 U.S.C. 3632, 39 U.S.C. 3633, 39 U.S.C. 3642, 39 CFR part 3035, and 39 CFR part 3040, subpart B. Comment deadline(s) for each request appear in section II.

II. Docketed Proceeding(s)

1. *Docket No(s)*.: MC2020–216 and CP2020–244; *Filing Title*: USPS Request to Add Priority Mail Express Contract 81 to Competitive Product List and Notice of Filing Materials Under Seal; *Filing Acceptance Date*: August 11,

2020; *Filing Authority*: 39 U.S.C. 3642, 39 CFR 3040.130 through 3040.135, and 39 CFR 3035.105; *Public Representative*: Kenneth R. Moeller; *Comments Due*: August 19, 2020.

2. *Docket No(s)*.: MC2020–217 and CP2020–245; *Filing Title*: USPS Request to Add Priority Mail Contract 649 to Competitive Product List and Notice of Filing Materials Under Seal; *Filing Acceptance Date*: August 11, 2020; *Filing Authority*: 39 U.S.C. 3642, 39 CFR 3040.130 through 3040.135, and 39 CFR 3035.105; *Public Representative*: Kenneth R. Moeller; *Comments Due*: August 19, 2020.

This Notice will be published in the **Federal Register**.

Erica A. Barker,
Secretary.

BILLING CODE 7710–FW–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–89525; File No. SR–CboeBZX–2020–065]

Self-Regulatory Organizations; Cboe BZX Exchange, Inc.; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change Relating To Amend Its Fees Schedule

August 11, 2020.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (the “Act”),¹ and Rule 19b–4 thereunder,² notice is hereby given that on August 4, 2020, Cboe BZX Exchange, Inc. (the “Exchange” or “BZX”) filed with the Securities and Exchange Commission (the “Commission”) the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

Cboe BZX Exchange, Inc. (the “Exchange” or “BZX”) is filing with the Securities and Exchange Commission (“Commission”) a proposed rule change to amend its Fee Schedule. The text of the proposed rule change is provided in Exhibit 5.

The text of the proposed rule change is also available on the Exchange's website (http://markets.cboe.com/us/equities/regulation/rule_filings/bzx/), at

the Exchange's Office of the Secretary, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend its fee schedule for its equity options platform (“BZX Options”).³

The Exchange first notes that it operates in a highly competitive market in which market participants can readily direct order flow to competing venues if they deem fee levels at a particular venue to be excessive or incentives to be insufficient. More specifically, the Exchange is only one of 16 options venues to which market participants may direct their order flow. Based on publicly available information, no single options exchange has more than 17% of the market share and currently the Exchange represents only approximately 8% of the market share.⁴ Thus, in such a low-concentrated and highly competitive market, no single options exchange, including the Exchange, possesses significant pricing power in the execution of option order flow. The Exchange believes that the ever-shifting market share among the exchanges from month to month demonstrates that market participants can shift order flow, or discontinue to reduce use of certain categories of products, in response to fee changes. Accordingly, competitive forces constrain the Exchange's transaction fees, and market participants can readily trade on competing venues if they deem pricing levels at those other venues to

³ The Exchange initially filed the proposed fee changes on July 31, 2020 (SR–CboeBZX–2020–062). On August 4, 2020, the Exchange withdrew that filing and submitted this filing.

⁴ See Cboe Global Markets U.S. Options Market Month-to-Date Volume Summary (July 27, 2020), available at https://markets.cboe.com/us/options/market_statistics/.

¹ See Docket No. RM2018–3, Order Adopting Final Rules Relating to Non-Public Information, June 27, 2018, Attachment A at 19–22 (Order No. 4679).

¹ 15 U.S.C. 78s(b)(1).

² 17 CFR 240.19b–4.

be more favorable. The Exchange's fee schedule sets forth standard rebates and rates applied per contract, which varies depending on the Member's Capacity (Customer, Firm, Market Maker, etc.), whether the order adds or removes liquidity, and whether the order is in Penny or Non-Penny Pilot Securities. Additionally, in response to the competitive environment, the Exchange also offers tiered pricing which provides Members opportunities to qualify for higher rebates or reduced fees where certain volume criteria and thresholds are met. Tiered pricing provides an incremental incentive for Members to strive for higher tier levels, which provides increasingly higher benefits or discounts for satisfying increasingly more stringent criteria.

For example, the Exchange currently offers five NBBO Setter Tiers under footnote 7 of the Fee Schedule which provide additional rebates between \$0.01 and \$0.05 per contract for qualifying orders which establish a new NBBO and yield fee code PM or PN,⁵ where a Member meets certain liquidity thresholds. Under the current NBBO Setter Tiers, a Member may receive an additional rebate where the Member has an ADAV⁶ in Non-Customer orders, or Firm/Market Maker/Away MM orders greater or equal to a specified percentage of OCV.⁷ The Exchange now proposes to amend the criteria in NBBO Setter Tiers 2 through 5 by increasing, in each, a percentage of ADV into average OCV within existing criteria and also adding to Tier 5 a new, additional criteria that that a Member must meet to receive the existing additional rebate. The Exchange notes that the proposed changes do not alter the current rebates provided under NBBO Setter Tiers 2 through 5.

Specifically, Tier 2 currently provides an additional rebate of \$0.02 for a Member's qualifying orders (*i.e.*, that yield fee code PM or PN and establish a new NBBO) for Members that have (1) an ADAV in Non-Customer orders greater than or equal to 0.40% of average OCV, and (2) an ADAV in Firm/

Market Maker/Away Market Maker (MM) orders that establish a new NBBO greater than or equal to 0.05% of average OCV. Tier 3 currently provides an additional rebate of \$0.03 for qualifying orders for Members that have (1) an ADAV in Non-Customer orders greater than or equal to 0.75% of average OCV, and (2) an ADAV in Firm/Market Maker/Away MM orders that establish a new NBBO greater than or equal to 0.05% of average OCV. Tier 4 currently provides an additional rebate of \$0.04 for qualifying orders for Members that have (1) an ADAV in Non-Customer orders greater than or equal to 1.80% of average OCV, (2) an ADAV in Non-Customer Non-Penny orders greater than or equal to 0.20% of average OCV, and (3) an ADAV in Firm/Market Maker/Away MM orders that establish a new NBBO greater than or equal to 0.05% of average OCV. Tier 5 currently provides an additional rebate of \$0.05 for qualifying orders for Member that have (1) an ADAV in Non-Customer orders greater than or equal to 3.00% of average OCV, and (2) Member has an ADAV in Firm/Market Maker/Away MM orders that establish a new NBBO greater than or equal to 0.05% of average OCV. The Exchange notes that prong 2 of Tiers 2, 3, and 5 and prong 3 of Tier 4 (as well as prong 2 of Tier 1 which is not being amended) provide the same criteria. The proposed change updates these criteria in each tier to instead become incrementally more difficult. The proposed criteria in Tier 2 requires that a Member have an ADAV in Firm/Market Maker/Away MM orders that establish a new NBBO greater than or equal to 0.15% of average OCV, in Tier 3 requires a threshold greater than or equal to 0.30% of average OCV, in Tier 4 requires a threshold of greater than or equal to 0.50% of average OCV, and in Tier 5 requires a threshold of 0.80% of average OCV. In addition to this, the proposed change amends the criteria in prong 1 of Tier 5 to decrease the threshold of Non-Customer orders over average OCV from 3.00% to 2.55% and adopts an additional criteria in Tier 5, a new prong 2 (current prong 2 will become prong 3), which requires an ADAV in Non-Customer Non-Penny orders greater than or equal to 0.25% of average OCV. The proposed increases in Firm/Market Maker/Away MM order ADAV that establish a new NBBO as a percentage of average OCV in Tiers 2 through 5 are intended to incrementally increase the level of difficulty in achieving each of these tiers, thus, incentivizing Members to increase their overall order flow to the Exchange by encouraging those

Members to strive for the different, incrementally more difficult tier criteria under the proposed tiers to receive the additional rebates. The proposed additional prong of criteria in Tier 5 is also designed to incrementally increase the level of difficulty in achieving Tier 5, while the proposed decrease in the threshold of ADAV over average OCV in prong 1 is designed to balance the entirety of Tier 5's difficulty in light of the proposed additional criteria, incentivizing Members to continue to submit Non-Customer orders to the Exchange's Order Book.

The Exchange believes that the proposed fee changes are overall designed to incentivize more Firm, Market Maker, and Away Market Maker add volume order flow to establish a new NBBO as well as overall Non-Customer add volume order flow to the Exchange. Increased add volume order flow, particularly by liquidity providers, contributes to a deeper, more liquid market, which, in turn, provides for increased execution opportunities and thus overall enhanced price discovery and price improvement opportunities on the Exchange. As such, this benefits all Members by contributing towards a robust and well-balanced market ecosystem, offering additional flexibility for all investors to enjoy cost savings, supporting the quality of price discovery, promoting market transparency and improving investor protection.

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with the objectives of Section 6 of the Act,⁸ in general, and furthers the objectives of Section 6(b)(4),⁹ in particular, as it is designed to provide for the equitable allocation of reasonable dues, fees and other charges among its Members and issuers and other persons using its facilities. The Exchange also believes that the proposed rule change is consistent with the objectives of Section 6(b)(5)¹⁰ requirements that the rules of an exchange be designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect

⁵ Orders yielding fee code PM are Market Maker orders that add liquidity in Penny Pilot Securities and are offered a rebate of \$0.29, and orders yielding fee code PN are Away Market Maker orders that add liquidity in Penny Pilot Securities and are offered a rebate of \$0.26.

⁶ "ADAV" means average daily added volume calculated as the number of contracts added, per day.

⁷ "OCC Customer Volume" or "OCV" means the total equity and ETF options volume that clears in the Customer range at the Options Clearing Corporation ("OCC") for the month for which the fees apply, excluding volume on any day that the Exchange experiences an Exchange System Disruption and on any day with a scheduled early market close.

⁸ 15 U.S.C. 78f.

¹⁰ 15 U.S.C. 78f.(b)(5).

investors and the public interest, and, particularly, is not designed to permit unfair discrimination between customers, issuers, brokers, or dealers.

As described above, the Exchange operates in a highly competitive market in which market participants can readily direct order flow to competing venues if they deem fee levels at a particular venue to be excessive or incentives to be insufficient. The proposed rule change reflects a competitive pricing structure designed to incentivize market participants to direct their order flow to the Exchange, which the Exchange believes would enhance market quality to the benefit of all Members.

In particular, the Exchange believes the proposed tiers are reasonable because they amend existing opportunities in a manner that incentivizes increased Non-Customer (which would include, where applicable, Firm, Market Maker, and Away MM specifically) order flow via incrementally more challenging criteria in order to receive the same additional rebates on a Member's qualifying orders. The Exchange notes that volume-based incentives and discounts have been widely adopted by exchanges,¹¹ including the Exchange,¹² and are reasonable, equitable and non-discriminatory because they are open to all Members on an equal basis and provide additional benefits or discounts that are reasonably related to (i) the value to an exchange's market quality and (ii) associated higher levels of market activity, such as higher levels of liquidity provision and/or growth patterns. Additionally, as noted above, the Exchange operates in a highly competitive market. The Exchange is only one of several options venues to which market participants may direct their order flow, and it represents a small percentage of the overall market. Competing options exchanges offer similar tiered pricing structures to that of the Exchange, including schedules of rebates and fees that apply based upon Members achieving certain volume and/or growth thresholds.

Moreover, the Exchange believes the amended NBBO Setter Tiers are a reasonable means to encourage Members to increase their liquidity on the Exchange, specifically their Non-Customer add volume order flow. The Exchange believes that modifying existing criteria in Tiers 2 through 5 to

be incrementally more difficult to achieve, as opposed to the current fixed criteria pursuant to the same prong in each tier, and adopting an additional prong of criteria in Tier 5 are reasonable modifications of existing criteria because they are designed to incrementally increase the difficulty in achieving these tiers, thereby incentivizing Members to increase their overall add volume order flow, and particularly, to strive to establish new NBBOs. This benefits all market participants by incentivizing continuous display of and opportunity to execute at the best prices, and by incentivizing overall additional liquidity, which signals other market participants to take the additional execution opportunities provided by such liquidity. This overall increase in activity deepens the Exchange's liquidity pool, offers additional cost savings, supports the quality of price discovery, promotes market transparency and improves market quality, for all investors. The Exchange also notes that it is reasonable to decrease the threshold of ADAV as a percentage average OCV in prong 1 of Tier 5 in order to balance the ultimate level of difficult in achieving the tier with the added proposed prong of criteria that a Member must meet to achieve the current rebate.

Further, the Exchange believes that the proposed rule changes are reasonable as they represent proportional increases in difficulty per adjacent tiers and the criteria thresholds appropriately reflect the incremental difficulty to achieve the existing rebates that increase with each ascending tier. For example, the Exchange proposes to simultaneously increase the ADAV thresholds of Firm/Market Maker/Away MM orders that establish a new NBBO in each of Tier 2, 3, 4, and 5 in a manner that poses a step up in difficulty per each ascending tier to achieve the current ascending rebates per each tier. The Exchange also believes that the proposed change to Tier 5 in adding another prong of criteria, as well as tempering the difficulty posed by the added prong by decreasing the threshold of ADAV over average OCV in an existing prong, appropriately balances the step up in difficulty from Tier 4 to Tier 5. The Exchange again notes that the proposed rule changes do not alter the amount of any of the current rebates in place.

The Exchange believes that the proposal represents an equitable allocation of fees and is not unfairly discriminatory because all Members will be eligible for the proposed tier and the corresponding additional rebate will apply uniformly to all Members that

reach the proposed tier criteria. That is, the proposed tiers are designed as an incentive to any and all Members interested in meeting the tier criteria to submit additional order flow to the Exchange and each will receive the proposed additional rebate if the tier criteria is met.

The Exchange believes that the proposal represents an equitable allocation of rebates and is not unfairly discriminatory because all Members will continue to be eligible for NBBO Setter Tiers 2 through 5, as amended. The proposed changes to the tiers' criteria are designed as an incentive to any and all Members interested in meeting the tier criteria to submit additional Non-Customer orders (with opportunities to achieve such tiers via criteria for Firm/Market Maker/Away MM orders) to the Exchange. Each will have the opportunity to submit the requisite order flow and will receive the applicable existing rebate if the tier criteria are met. Without having a view of activity on other markets and off-exchange venues, the Exchange has no way of knowing whether this proposed rule change would definitely result in any Members qualifying for the proposed tiers. While the Exchange has no way of predicting with certainty how the proposed tiers will impact Member activity, the Exchange anticipates that approximately at least three Members will be able to compete for and achieve the amended criteria in each of Tier 2 and Tier 3, and at least one Member will be able to compete for and achieve the amended criteria in each of Tier 4 and Tier 5. The Exchange anticipates that the tiers will particularly include liquidity providers, such as traditional Market Makers, and wholesale or consolidator firms that mainly make markets for retail orders, each providing distinct types of order flow to the Exchange to the benefit of all market participants. The Exchange also notes that the proposed tiers will not adversely impact any Member's pricing or their ability to qualify for other rebate tiers. Rather, should a Member not meet the proposed criteria for a tier, the Member will merely not receive the corresponding additional rebate. Furthermore, the existing rebate and fees will continue to uniformly apply to all Members that meet the required criteria, as amended, per each respective tier.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on intramarket or intermarket competition that is not

¹¹ See e.g., NYSE Arca Options Fee Schedule, Firm and Broker Dealer Penny Posting Credit Tiers, and Non-Customer Non-Penny Posting Credit Tiers.

¹² See e.g., The Exchange's Fee Schedule, Footnote 4, NBBO Setter Tiers.

necessary or appropriate in furtherance of the purposes of the Act. Rather, as discussed above, the Exchange believes that the proposed change would encourage the submission of additional liquidity to a public exchange, thereby promoting market depth, price discovery and transparency and enhancing order execution opportunities for all Members. As a result, the Exchange believes that the proposed change furthers the Commission's goal in adopting Regulation NMS of fostering competition among orders, which promotes "more efficient pricing of individual stocks for all types of orders, large and small."¹³

The Exchange believes the proposed rule change does not impose any burden on intramarket competition that is not necessary or appropriate in furtherance of the purposes of the Act. Particularly, the proposed change applies to all Members equally in that all Members are eligible to achieve the tiers' proposed criteria, have a reasonable opportunity to meet the tiers' proposed criteria and will all receive the existing rebates if such criteria is met. Overall, the proposed change is designed to attract additional Non-Customer (including, where applicable, specifically Firm/Market Maker/Away MM) order flow to the Exchange. The Exchange believes that the modified tier criteria would incentivize market participants to strive to increase such order flow to the Exchange to meet the proposed criteria and, as a result, provide for deeper levels of liquidity, increasing trading opportunities for other market participants, thus signaling further trading activity, ultimately incentivizing more overall order flow and improving price transparency on the Exchange. Greater overall order flow and pricing transparency benefits all market participants on the Exchange by generally providing continuous trading opportunities, enhancing market quality, and continuing to encourage Members to send orders, thereby contributing towards a robust and well-balanced market ecosystem, which benefits all market participants.

Next, the Exchange believes the proposed rule change does not impose any burden on intermarket competition that is not necessary or appropriate in furtherance of the purposes of the Act. As previously discussed, the Exchange operates in a highly competitive market. Members have numerous alternative venues that they may participate on and

director their order flow, including 15 other options exchanges and off-exchange venues. Additionally, the Exchange represents a small percentage of the overall market. Based on publicly available information, no single options exchange has more than 17% of the market share.¹⁴ Therefore, no exchange possesses significant pricing power in the execution of option order flow. Indeed, participants can readily choose to send their orders to other exchange and off-exchange venues if they deem fee levels at those other venues to be more favorable. Moreover, the Commission has repeatedly expressed its preference for competition over regulatory intervention in determining prices, products, and services in the securities markets. Specifically, in Regulation NMS, the Commission highlighted the importance of market forces in determining prices and SRO revenues and, also, recognized that current regulation of the market system "has been remarkably successful in promoting market competition in its broader forms that are most important to investors and listed companies."¹⁵ The fact that this market is competitive has also long been recognized by the courts. In *NetCoalition v. Securities and Exchange Commission*, the D.C. Circuit stated as follows: "[n]o one disputes that competition for order flow is 'fierce.' . . . As the SEC explained, '[i]n the U.S. national market system, buyers and sellers of securities, and the broker-dealers that act as their order-routing agents, have a wide range of choices of where to route orders for execution'; [and] 'no exchange can afford to take its market share percentages for granted' because 'no exchange possesses a monopoly, regulatory or otherwise, in the execution of order flow from broker dealers'. . . ."¹⁶ Accordingly, the Exchange does not believe its proposed fee change imposes any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

The Exchange neither solicited nor received comments on the proposed rule change.

¹⁴ See *supra* note 3.

¹⁵ See Securities Exchange Act Release No. 51808 (June 9, 2005), 70 FR 37496, 37499 (June 29, 2005).

¹⁶ *NetCoalition v. SEC*, 615 F.3d 525, 539 (D.C. Cir. 2010) (quoting Securities Exchange Act Release No. 59039 (December 2, 2008), 73 FR 74770, 74782–83 (December 9, 2008) (SR–NYSEArca–2006–21)).

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A) of the Act¹⁷ and paragraph (f) of Rule 19b–4¹⁸ thereunder. At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission will institute proceedings to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File Number SR–CboeBZX–2020–065 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to File Number SR–CboeBZX–2020–065. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public

BILLING CODE 8011-01-P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-89520; File No. SR-BOX-2020-33]

Self-Regulatory Organizations; BOX Exchange LLC; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Amend the Rule 16000 Series, the Exchange's Compliance Rule Regarding the National Market System Plan Governing the Consolidated Audit Trail To Be Consistent With an Amendment to the CAT NMS Plan Recently Approved by the Commission

August 11, 2020.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act"),¹ and Rule 19b-4 thereunder,² notice is hereby given that on August 5, 2020, BOX Exchange LLC (the "Exchange") filed with the Securities and Exchange Commission ("Commission") the proposed rule change as described in Items I and II below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend the Rule 16000 Series, the Exchange's

compliance rule ("Compliance Rule") regarding the National Market System Plan Governing the Consolidated Audit Trail (the "CAT NMS Plan" or "Plan")³ to be consistent with an amendment to the CAT NMS Plan recently approved by the Commission. The text of the proposed rule change is available from the principal office of the Exchange, at the Commission's Public Reference Room and also on the Exchange's internet website at <http://boxoptions.com>.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The self-regulatory organization has prepared summaries, set forth in Sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The purpose of this proposed rule change is to amend the Rule 16000 Series, the Compliance Rule regarding the CAT NMS Plan, to be consistent with an amendment to the CAT NMS Plan recently approved by the Commission.⁴ The Commission approved an amendment to the CAT NMS Plan to amend the requirements for Firm Designated IDs in four ways: (1) To prohibit the use of account numbers as Firm Designated IDs for trading accounts that are not proprietary accounts; (2) to require that the Firm Designated ID for a trading account be persistent over time for each Industry Member so that a single account may be tracked across time within a single Industry Member; (3) to permit the use of relationship identifiers as Firm Designated IDs in certain circumstances; and (4) to permit the use of entity identifiers as Firm Designated IDs in certain circumstances (the "FDID Amendment"). As a result, the Exchange proposes to amend the definition of "Firm Designated ID" in

Rule 16010 to reflect the changes to the CAT NMS Plan regarding the requirements for Firm Designated IDs.

Rule 16010(r) defines the term "Firm Designated ID" to mean "a unique identifier for each trading account designated by Industry Members for purposes of providing data to the Central Repository, where each such identifier is unique among all identifiers from any given Industry Member for each business date."

(1) Prohibit Use of Account Numbers

The Exchange proposes to amend the definition of "Firm Designated ID" in Rule 16010(r) to provide that Industry Members may not use account numbers as the Firm Designated ID for trading accounts that are not proprietary accounts. Specifically, the Exchange proposes to add the following to the definition of a Firm Designated ID: "provided, however, such identifier may not be the account number for such trading account if the trading account is not a proprietary account."

(2) Persistent Firm Designated ID

The Exchange also proposes to amend the definition of "Firm Designated ID" in Rule 16010(r) to require a Firm Designated ID assigned by an Industry Member to a trading account to be persistent over time, not for each business day.⁵ To effect this change, the Exchange proposes to amend the definition of "Firm Designated ID" in Rule 16010(r) to add "and persistent" after "unique" and delete "for each business date" so that the definition of "Firm Designated ID" would read, in relevant part, as follows:

a unique and persistent identifier for each trading account designated by Industry Members for purposes of providing data to the Central Repository . . . where each such identifier is unique among all identifiers from any given Industry Member.

(3) Relationship Identifiers

The FDID Amendment also permits an Industry Member to provide a relationship identifier as the Firm

⁵ If an Industry Member assigns a new account number or entity identifier to a client or customer due to a merger, acquisition or some other corporate action, then the Industry Member should create a new Firm Designated ID to identify the new account identifier/relationship identifier/entity identifier in use at the Industry Member for the entity. In addition, if a previously assigned Firm Designated ID is no longer in use by an Industry Member (e.g., if the trading account associated with the Firm Designated ID has been closed), then an Industry Member may reuse the Firm Designated ID for another trading account. The Plan Processor will maintain a history of the use of each Firm Designated ID, including, for example, the effective dates of the Firm Designated ID with respect to each associated trading account.

¹⁹ 17 CFR 200.30-3(a)(12).

¹ 15 U.S.C. 78s(b)(1).

² 17 CFR 240.19b-4.

³ Unless otherwise specified, capitalized terms used in this rule filing are defined as set forth in the Compliance Rule.

⁴ Securities Exchange Act Release No. 89397 (July 24, 2020) (**Federal Register** pending).

Designated ID, rather than an identifier that represents a trading account, in certain scenarios in which an Industry Member does not have an account number available to its order handling and/or execution system at the time of order receipt (e.g., certain institutional accounts, managed accounts, accounts for individuals). In such scenarios, the trading account structure may not be available when a new order is first received from a client and, instead, only an identifier representing the client's trading relationship is available. In these limited instances, the Industry Member may provide an identifier used by the Industry Member to represent the client's trading relationship with the Industry Member instead of an account number.

When a trading relationship is established at a broker-dealer for clients, the broker-dealer typically creates a parent account, under which additional subaccounts are created. However, in some cases, the broker-dealer establishes the parent relationship for a client using a relationship identifier as opposed to an actual parent account. The relationship identifier could be any of a variety of identifiers, such as a short name for a relevant individual or institution. This relationship identifier is established prior to any trading for the client. If a relationship identifier has been established rather than a parent account, and an order is placed on behalf of the client, any executed trades will be kept in a firm account (e.g., a facilitation or average price account) until they are allocated to the proper subaccount(s), i.e., the accounts associated with the parent relationship identifier connecting them to the client.

Relationship identifiers are used in circumstances in which the account structure is not available to the trading system at the time of order placement. The clients have established accounts prior to the trade that satisfy relevant regulatory obligations for opening accounts, such as Know Your Customer and other customer obligations. However, the order receipt workflows operate using relationship identifiers, not accounts.

For Firm Designated ID purposes, as with an identifier for a trading account, the relationship identifier must be persistent over time. The relationship identifier also must be unique among all identifiers from any given Industry Member. With these requirements, a single relationship could be tracked across time within a single Industry Member using the Firm Designated ID. In addition, the relationship identifier must be masked as the relationship identifier could be a name or otherwise

provide an indication as to the identity of the relationship. The masking requirement would avoid potentially revealing the identity of the relationship.

An example of the use of a relationship identifier as a Firm Designated ID would be as follows: Suppose that Big Fund Manager is known in Industry Member A's systems as "BFM1." When an order is placed by Big Fund Manager, the order is tagged to BFM1. Industry Member A could use a masked version of BFM1 in place of the Firm Designated ID representing a trading account when reporting a new order from Big Fund Manager instead of the account numbers to which executed shares/contracts will be allocated at a later time via a booking or other system. Similarly, another example of the use of a relationship identifier as a Firm Designated ID would involve an individual in place of the Big Fund Manager in the above example.

In accordance with the FDID Amendment, the Exchange proposes to amend the definition of a "Firm Designated ID" in Rule 16010(r) to permit Industry Members to provide a relationship identifier as the Firm Designated ID as described above. Specifically, the Exchange proposes to amend the definition of "Firm Designated ID" in Rule 16010(r) to state that a Firm Designated ID means, in relevant part, "a unique and persistent relationship identifier when an Industry Member does not have an account number available to its order handling and/or execution system at the time of order receipt, provided, however, such identifier must be masked."

(4) Entity Identifiers

The FDID Amendment also permits Industry Members to provide an entity identifier, rather than an identifier that represents a trading account, when an employee of the Industry Member is exercising discretion over multiple client accounts and creates an aggregated order for which a trading account number of the Industry Member is not available at the time of order origination. An entity identifier is an identifier of the Industry Member that represents the firm discretionary relationship with the client rather than a firm trading account.

The scenarios in which a firm uses an entity identifier are comparable to when a firm uses a relationship identifier (as described above) except the entity identifier represents the Industry Member rather than a client. As with relationship identifiers, entity identifiers are used in circumstances in which the account structure is not

available to the trading system at the time of order placement. In this workflow, the Industry Member's order handling and/or execution system does not have an account number at the time of order origination. The relevant clients that will receive an allocation of the execution have established accounts prior to the trade that satisfy relevant regulatory obligations for opening accounts, such as Know Your Customer and other customer obligations. However, the order origination workflows operate using entity identifiers, not accounts.

For Firm Designated ID purposes, as with the identifier for a trading account or a relationship, the entity identifier must be persistent over time. The entity identifier also must be unique among all identifiers from any given Industry Member. Each Industry Member must make its own risk determination as to whether it believes it is necessary to mask the entity identifier when using an entity identifier to report the Firm Designated ID to CAT.

An example of the use of an entity identifier as a Firm Designated ID would be when Industry Member 1 has an employee that is a registered representative that has discretion over several client accounts held at Industry Member 1. The registered representative places an order that he will later allocate to individual client accounts. At the time the order is placed, the trading system only knows it involves a representative of Industry Member 1 and it does not have a specific trading account that could be used for Firm Designated ID reporting. Therefore, Industry Member 1 could report IM1, its entity identifier, as the FDID with the new order.

In accordance with the FDID Amendment, the Exchange proposes to amend the definition of "Firm Designated ID" in Rule 16010(r) to permit the use of an entity identifier as a Firm Designated ID as described above. Specifically, the Exchange proposes to amend the definition of a "Firm Designated ID" in Rule 16010(r) to state that a Firm Designated ID means, in relevant part, "a unique and persistent entity identifier when an employee of an Industry Member is exercising discretion over multiple client accounts and creates an aggregated order for which a trading account number of the Industry Member is not available at the time of order origination."

2. Statutory Basis

The Exchange believes that the proposal is consistent with the

requirements of Section 6(b) of the Act,⁶ in general, and Section 6(b)(5) of the Act,⁷ which require, among other things, that the Exchange's rules must be designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, and, in general, to protect investors and the public interest, and Section 15A(b)(9) of the Act,⁸ Section 6(b)(8) of the Act,⁹ which requires that the Exchange's rules not impose any burden on competition that is not necessary or appropriate.

The Exchange believes that this proposal is consistent with the Act because it is consistent with, and implements, a recent amendment to the CAT NMS Plan, and is designed to assist the Exchange and its Industry Members in meeting regulatory obligations pursuant to the Plan. In approving the Plan, the SEC noted that the Plan "is necessary and appropriate in the public interest, for the protection of investors and the maintenance of fair and orderly markets, to remove impediments to, and perfect the mechanism of a national market system, or is otherwise in furtherance of the purposes of the Act."¹⁰ To the extent that this proposal implements the Plan, and applies specific requirements to Industry Members, the Exchange believes that this proposal furthers the objectives of the Plan, as identified by the SEC, and is therefore consistent with the Act.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will result in any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The Exchange notes that the proposed rule changes are consistent with a recent amendment to the CAT NMS Plan, and are designed to assist the Exchange in meeting its regulatory obligations pursuant to the Plan. The Exchange also notes that the FDID Amendment will apply equally to all Industry Members that trade NMS Securities and OTC Equity Securities. In addition, all national securities exchanges and FINRA are proposing this amendment to their Compliance Rules. Therefore, this is not a competitive rule filing, and, therefore, it does not impose a burden on competition.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

The Exchange has neither solicited nor received comments on the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The Exchange has filed the proposed rule change pursuant to Section 19(b)(3)(A)(iii) of the Act¹¹ and Rule 19b-4(f)(6) thereunder.¹² Because the proposed rule change does not: (i) Significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative prior to 30 days from the date on which it was filed, or such shorter time as the Commission may designate, if consistent with the protection of investors and the public interest, the proposed rule change has become effective pursuant to Section 19(b)(3)(A) of the Act¹³ and Rule 19b-4(f)(6)(iii) thereunder.¹⁴

A proposed rule change filed under Rule 19b-4(f)(6)¹⁵ normally does not become operative prior to 30 days after the date of the filing. However, pursuant to Rule 19b-4(f)(6)(iii),¹⁶ the Commission may designate a shorter time if such action is consistent with the protection of investors and the public interest. The Exchange has asked the Commission to waive the 30-day operative delay so that the proposal may become operative upon filing. The Commission believes that waiver of the 30-day operative delay is consistent with the protection of investors and the public interest because it implements an amendment to the CAT NMS Plan approved by the Commission.¹⁷ Accordingly, the Commission hereby waives the 30-day operative delay and designates the proposal operative upon filing.¹⁸

¹¹ 15 U.S.C. 78s(b)(3)(A)(iii).

¹² 17 CFR 240.19b-4(f)(6).

¹³ 15 U.S.C. 78s(b)(3)(A).

¹⁴ 17 CFR 240.19b-4(f)(6). In addition, Rule 19b-4(f)(6)(iii) requires the Exchange to give the Commission written notice of the Exchange's intent to file the proposed rule change, along with a brief description and text of the proposed rule change, at least five business days prior to the date of filing of the proposed rule change, or such shorter time as designated by the Commission. The Exchange has satisfied this requirement.

¹⁵ 17 CFR 240.19b-4(f)(6).

¹⁶ 17 CFR 240.19b-4(f)(6)(iii).

¹⁷ See Securities Exchange Act Release No. 89397 (July 24, 2020) (**Federal Register** publication pending).

¹⁸ For purposes only of waiving the 30-day operative delay, the Commission has considered the

proposed rule's impact on efficiency, competition, and capital formation. See 15 U.S.C. 78c(f).

At any time within 60 days of the filing of this proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission will institute proceedings to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File Number SR-BOX-2020-33 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549-1090.

All submissions should refer to File Number SR-BOX-2020-33. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal

proposed rule's impact on efficiency, competition, and capital formation. See 15 U.S.C. 78c(f).

⁶ 15 U.S.C. 78f(b).

⁷ 15 U.S.C. 78f(b)(5).

⁸ 15 U.S.C. 78o-3(b)(9) [sic].

⁹ 15 U.S.C. 78f(b)(8).

¹⁰ See Securities Exchange Act Release No. 79318 (November 15, 2016), 81 FR 84696, 84697 (November 23, 2016).

office of the Exchange. All comments received will be posted without change. Persons submitting comments are cautioned that we do not redact or edit personal identifying information from comment submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR-BOX-2020-33, and should be submitted on or before September 8, 2020.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.¹⁹

J. Matthew DeLesDernier,
Assistant Secretary.

SMALL BUSINESS ADMINISTRATION

RIN 3245-AH31

Small Business Innovation Research Program and Small Business Technology Transfer Program Policy Directive

AGENCY: Small Business Administration.

ACTION: Notice of technical amendment; request for comment request for comments.

SUMMARY: The Small Business Administration is amending the Small Business Innovation Research (SBIR) and Small Business Technology Transfer (STTR) programs Policy Directive to clarify that successor-in-interest entities are eligible to receive phase III awards.

DATES: These revisions to the SBIR/STTR Policy Directive take effect on October 1, 2020, without further action, unless significant adverse comment is received by September 16, 2020. If significant adverse comment is received, SBA will publish a timely withdrawal of the notice in the **Federal Register**.

ADDRESSES: You may submit comments, identified by number SBA-2020-XXXX through the Federal eRulemaking Portal: <http://www.regulations.gov>. Follow the instructions for submitting comments.

SBA will post all comments on www.regulations.gov. Please do not submit confidential business information (CBI) as defined in the User Notice at www.regulations.gov.

FOR FURTHER INFORMATION CONTACT: Jennifer Shieh at (202) 205-6817 or Jennifer.shieh@sba.gov.

SUPPLEMENTARY INFORMATION:

I. Executive Summary

The mission of the Small Business Innovation Research (SBIR) and Small Business Technology Transfer (STTR) programs is to engage small business concerns (SBCs) to support scientific excellence and technological innovation through the investment of Federal research and research and development (R/R&D) funding in critical American priorities to build a strong national economy. Both programs follow a three-phase process throughout the Federal Government to solicit proposals and award funding agreements for R/R&D: Phase I, Phase II, and Phase III.

The Small Business Act (the Act) requires that the Small Business Administration (SBA) issue a policy directive setting forth guidance to the Federal Agencies participating in the SBIR and STTR programs (Participating Agencies). The SBIR and STTR (SBIR/STTR) Policy Directive outlines how agencies must generally conduct their programs. Each Participating Agency, however, may tailor its program to meet the needs of the individual Agency, as long as the general principles of the program set forth in the Act and directive are followed. Therefore, when incorporating SBIR/STTR policy into agency-specific regulations and procedures, Participating Agencies may develop and apply processes needed to implement the policy effectively; however, no Participating Agency may develop and apply policies, directives, or clauses, that contradict, weaken, or conflict with the policy as stated in the directive.

SBA reviews its Policy Directive regularly to determine areas that need updating and further clarification. It has come to SBA's attention that the language in section 6(a)(5) requires clarification to confirm for Participating Agencies and applicants that successor-in-interest entities are eligible to receive phase III SBIR/STTR awards. Section 6(a) of the Policy Directive addresses eligibility to receive SBIR/STTR awards. Paragraph (5) of this section specifically relates to the eligibility of entities that have received a novated award, a similarly-revised award, or are successor-in-interest entities. SBA is clarifying this paragraph in order to confirm the Agency's long-standing interpretation that permits successor-in-interest entities to receive phase III SBIR/STTR awards.

II. Amendment

Section 6—Eligibility and Application (Proposal) Requirements

The Small Business Act describes the three-phase nature of the programs. The

first phase (phase I) award generally does not exceed \$150,000 and is intended to fund the determination of the technical and scientific merit, and feasibility of ideas that appear to have commercial potential. *See* 15 U.S.C. 638(e)(4)(A). The second phase (phase II) award generally does not exceed \$1,000,000 and is intended to further develop proposals with commercial potential. *See id.* at § 638(e)(4)(B). The final third phase award (phase III) is defined, as follows:

(C) where appropriate, a third phase for work that *derives from, extends, or completes efforts made under prior funding agreements under the SBIR program—*

(i) in which commercial applications of SBIR-funded research or research and development are funded by non-Federal sources of capital or, for products or services intended for use by the Federal Government, by follow-on non-SBIR Federal funding awards; or

(ii) for which awards from non-SBIR Federal funding sources are used for the continuation of research or research and development that has been competitively selected using peer review or merit-based selection procedures;

15 U.S.C. 638(e)(4)(C) (emphasis added). One way that an SBC has achieved commercialization is through a phase III award.

A major feature of the SBIR/STTR programs, and incentive for SBC participation, is that the Government receives a limited rights license in data developed under an SBIR/STTR award, which fosters a competitive advantage for the SBC, as opposed to potential larger competitors, to achieve commercialization. The Government's limited rights license in SBIR/STTR data, combined with the statutory requirement for Participating Agencies to pursue phase III awards on a non-competitive basis with the SBC that performed prior SBIR/STTR awards, is a central aspect of the program.

The SBIR/STTR programs are intended to economically assist SBCs performing R/R&D work by creating an advantage for those firms to receive Government funding at the early often riskiest stage, from an investment perspective, through commercialization. This intention may be hindered if the SBC's rights and interests in SBIR/STTR data cannot be assigned through a merger or sale with another business concern, along with the attendant phase III incentives for non-competitive phase III awards. Such a policy interpretation would create inefficiencies in the marketplace and discourage valuations and transactions among businesses that may otherwise allow for greater investment in new ideas and products.

¹⁹ 17 CFR 200.30-3(a)(12).

Consistent with the statutory purposes and policy goals of the program, a firm may be considered a successor-in-interest and receive a subsequent SBIR/STTR award. An entity may be considered a successor-in-interest, if it has secured the transfer of: (1) All the small business concern's assets; or (2) the entire portion of the assets involved in performing the award. Examples of such transactions include, but are not limited to: (1) Sale of these assets with a provision for assuming liabilities; (2) transfer of these assets incident to a merger or corporate consolidation; and (3) incorporation of a proprietorship or partnership, or formation of a partnership. Further, to be considered a successor-in-interest, the firm must meet any applicable eligibility requirements. If performance of the funding agreement is complete prior to the transfer of assets, an entity may be considered a successor-in-interest without a novation. If the transfer of assets occurs during performance of the funding agreement, the awardee should verify with the awarding agency whether a novation is necessary.

Section 6(a)(5) of the Policy Directive provides, only as an example, that a phase III award can be made when the previous SBIR/STTR awardee has received a phase I or phase II award, or been novated one of those awards. This was never intended to be an exclusive list of all scenarios where an SBIR/STTR award could be made to a firm other than the recipient of a prior phase I or phase II award.

SBA amends the second sentence of section 6(a) of the Policy Directive to clarify SBA's long-standing intent regarding the eligibility of successor-in-interest entities to receive phase III awards. Currently, the first two sentences of this paragraph read as follows: "An SBIR/STTR Awardee may include, and SBIR/STTR work may be performed by, those identified via a 'novated' or 'successor in interest' or similarly-revised Funding Agreement. For example, in order to receive a Phase III award, the Awardee must have either received a prior Phase I or Phase II award or been novated a Phase I or Phase II award (or received a revised Phase I or Phase II award if a grant or cooperative grant)." SBA changes "must" to "may" in the second sentence and adds "successor-in-interest" to the list of possible eligible entities at the end of the sentence. This would not be a change in policy, but rather, a clarification of existing policy.

This clarification is necessary to provide confidence to Participating Agencies and applicants that entities

that acquire access to the relevant SBIR/STTR data developed pursuant to prior SBIR/STTR awards, may be eligible to receive a phase III award as a successor-in-interest without novation if the performance of the prior SBIR/STTR award is complete.

Notice of Clarification of Phase III Eligibility in the Policy Directive for the Small Business Innovation Research (SBIR) and Small Business Technology Transfer Research (STTR) Programs

To: The SBIR and STTR Program Managers

Subject: SBIR/STTR Policy Directive

1. *Purpose.* The Small Business Administration (SBA) is updating its Small Business Innovation Research and Small Business Technology Transfer Research (SBIR/STTR) Policy Directives to clarify SBA's current policy that successor-in-interest entities are eligible to receive phase III SBIR/STTR awards.

2. *Authority.* The Small Business Act (15 U.S.C. 638(j) and (p)) requires the SBA Administrator to issue an SBIR and STTR program Policy Directive for the general conduct of the programs.

3. *Procurement Regulations.* There are no procurement regulations created by this proposed clarification.

4. *Personnel Concerned.* This SBIR/STTR Policy Directive serves as guidance for all Federal Government personnel who are involved in the administration of the SBIR and STTR programs, issuance and management of funding agreements or contracts pursuant to the programs, and/or the establishment of goals for small business concerns in research or research and development acquisition or grants.

5. *Originator.* SBA's Office of Investment and Innovation.

This amendment to the SBIR/STTR Policy Directive will be effective on the date shown in the **DATES** section unless SBA receives any significant adverse comments on or before the deadline for comments set forth in the **DATES** section. Significant adverse comments are comments that provide strong justifications why the clarifying amendment to the PD should not be adopted as written or should be changed further. SBA does not expect to receive any significant adverse comments because the amendment does not change SBA's or Participating Agencies' interpretation of existing policy, and continues to confer the intended incentive for SBIR/STTR awardee successor-in-interest entities. Implementation of this change will benefit the public by ensuring that the plain language interpretation of the

SBIR/STTR Policy Directive is consistent with SBA's policy intent. If SBA receives any significant adverse comments, SBA will publish a notice in the **Federal Register** withdrawing this notice before the effective date.

6. *Date.* Public comments on the proposed amendments to the Policy Directive must be submitted within 30 days following publication in the **Federal Register**.

Authorized By:
Jovita Carranza,
Administrator.

SBA revises section 6(a)(5) of the SBIR/STTR Policy Directive as follows:

6. Eligibility and Application (Proposal) Requirements

(a) Eligibility Requirements

(1) * * *

* * * * *

(5) *Novated/Successor in Interested/ Revised Funding Agreements.* An SBIR/STTR Awardee may include, and SBIR/STTR work may be performed by, those identified via a "novated" or "successor in interest" or similarly-revised Funding Agreement. For example, a phase III Awardee may have either received a prior Phase I or Phase II award or been novated a Phase I or Phase II award (or received a revised Phase I or Phase II award if a grant or cooperative grant) or be a successor-in-interest entity. * * *

BILLING CODE 8026-03-P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

Commercial Space Transportation Advisory Committee: Notice of Public Meeting

AGENCY: Federal Aviation Administration, Department of Transportation.

ACTION: Notice of public meeting.

SUMMARY: This notice announces a meeting of the Commercial Space Transportation Advisory Committee for September 14, 2020.

DATES: The September 14, 2020 meeting will be held from 8:45 a.m. to 3:30 p.m. Requests to attend the meeting must be received by September 4, 2020. Requests for accommodations to a disability must be received by September 4, 2020. Requests to speak during the meeting must be submitted by September 4, 2020 to DOT and include a written copy of their remarks. Requests to submit

written materials to be reviewed during the meeting must be received by DOT no later than September 4, 2020.

ADDRESSES: The September 14, 2020 meeting will be an internet-only meeting. No physical meeting is planned. Instructions on how to attend the meeting, copies of meeting minutes and a detailed agenda will be posted on the COMSTAC website at: https://www.faa.gov/space/additional_information/comstac/.

FOR FURTHER INFORMATION CONTACT: James Hatt, Designated Federal Officer, U.S. Department of Transportation, at james.a.hatt@faa.gov. Any committee related request should be sent to the person listed in this section.

SUPPLEMENTARY INFORMATION:

I. Background

The Commercial Space Transportation Advisory Committee was created under the Federal Advisory Committee Act (FACA), in accordance with Public Law 92-463. Since its inception, industry-led COMSTAC has provided information, advice, and recommendations to the U.S. Department of Transportation through FAA regarding technology, business, and policy issues relevant to oversight of the U.S. commercial space transportation sector.

II. Proposed Agenda

- A. Review of Taskers Assigned at the Previous Meeting
- B. Assignment of New Taskers to COMSTAC
- C. Public Comment

III. Public Participation

The meeting listed in this notice will be open to the public. The US Department of Transportation is committed to providing equal access to this meeting for all participants. If you need alternative formats or services because of a disability, such as sign language, interpretation, or other ancillary aids, please contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section.

There will be at least thirty minutes allotted for oral comments from members of the public joining a COMSTAC meeting. To accommodate as many speakers as possible, the time for each commenter may be limited. Individuals wishing to reserve speaking time during the meeting must submit a request at the time of registration, as well as the name, address, and organizational affiliation of the proposed speaker. If the number of registrants requesting to make statements is greater than can be

reasonably accommodated during the meeting, the FAA Office of Commercial Space Transportation may conduct a lottery to determine the speakers. Speakers are requested to submit a written copy of their prepared remarks for inclusion in the meeting records and for circulation to COMSTAC members. All prepared remarks submitted on time will be accepted and considered as part of the record. Any member of the public may present a written statement to the committee at any time.

Issued in Washington, DC, this 17th day of August 2020.

James A. Hatt,
Designated Federal Officer, Commercial Space Transportation Advisory Committee, Federal Aviation Administration, Department of Transportation.

BILLING CODE 4910-13-P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

Notice of Opportunity for Public Comment Equal Land Swap of .64 Acres at Tweed-New Haven Airport, New Haven, CT Withdrawal

AGENCY: Federal Aviation Administration (FAA), Transportation (DOT).

ACTION: Withdrawal of notice.

SUMMARY: Notice is being given that the FAA is withdrawing a Notice of Opportunity for Public Comment for the City of New Haven, CT to exchange a .64 acre parcel of land with an adjacent land owner of equal size and value at Tweed-New Haven Regional Airport. The exchange of land will provide the airport with the necessary land to build an extension of a parallel taxiway and vehicle service road that will serve the end of Runway 20. A **Federal Register** notice is not required for this specific action. The Notice, Document Number: 2020-17150, 85 FR 47838, Page 47838, was published in the **Federal Register** on August 6, 2020 and is currently on public inspection.

DATES: Comments must be received on or before September 3, 2020.

ADDRESSES: You may send comments using any of the following methods:

- *Federal eRulemaking Portal:* Go to <http://www.regulations.gov>, and follow the instructions on providing comments.
- *Fax:* 202-493-2251.
- *Mail:* U.S. Department of Transportation, Docket Operations, M-30, West Building Ground Floor, Room

W 12-140, 1200 New Jersey Avenue SE, Washington, DC 20590.

- *Hand Delivery:* Deliver to mail address above between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

Interested persons may inspect the request and supporting documents by contacting the FAA at the address listed under **FOR FURTHER INFORMATION CONTACT**.

FOR FURTHER INFORMATION CONTACT: Mr. Jorge E. Panteli, Compliance and Land Use Specialist, Federal Aviation Administration New England Region Airports Division, 1200 District Avenue, Burlington, Massachusetts 01803. Telephone: 781-238-7618.

Issued in Burlington, Massachusetts, on August 12, 2020.

Julie Seltsam-Wilps,
Deputy Director, ANE-600.

DEPARTMENT OF TRANSPORTATION

Federal Motor Carrier Safety Administration

[Docket No. FMCSA-2013-0444; FMCSA-2014-0212; FMCSA-2015-0321; FMCSA-2018-0051; FMCSA-2018-0052; FMCSA-2018-0053]

Qualification of Drivers; Exemption Applications; Epilepsy and Seizure Disorders

AGENCY: Federal Motor Carrier Safety Administration (FMCSA), DOT.

ACTION: Notice of renewal of exemptions; request for comments.

SUMMARY: FMCSA announces its decision to renew exemptions for nine individuals from the requirement in the Federal Motor Carrier Safety Regulations (FMCSRs) that interstate commercial motor vehicle (CMV) drivers have "no established medical history or clinical diagnosis of epilepsy or any other condition which is likely to cause loss of consciousness or any loss of ability to control a CMV." The exemptions enable these individuals who have had one or more seizures and are taking anti-seizure medication to continue to operate CMVs in interstate commerce.

DATES: Each group of renewed exemptions were applicable on the dates stated in the discussions below and will expire on the dates stated in the discussions below. Comments must be received on or before September 16, 2020.

ADDRESSES: You may submit comments identified by the Federal Docket Management System (FDMS) Docket No. FMCSA–2013–0444, Docket No. FMCSA–2014–0212, Docket No. FMCSA–2015–0321, Docket No. FMCSA–2018–0051, Docket No. FMCSA–2018–0052, or Docket No. FMCSA–2018–0052 using any of the following methods:

- *Federal eRulemaking Portal:* Go to <http://www.regulations.gov>. Follow the online instructions for submitting comments.

- *Mail:* Docket Operations; U.S. Department of Transportation, 1200 New Jersey Avenue SE, West Building Ground Floor, Room W12–140, Washington, DC 20590–0001.

- *Hand Delivery:* West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC, between 9 a.m. and 5 p.m., ET, Monday through Friday, except Federal Holidays.

- *Fax:* (202) 493–2251.

To avoid duplication, please use only one of these four methods. See the “Public Participation” portion of the **SUPPLEMENTARY INFORMATION** section for instructions on submitting comments.

FOR FURTHER INFORMATION CONTACT: Ms. Christine A. Hydock, Chief, Medical Programs Division, 202–366–4001, fmcsamedical@dot.gov, FMCSA, Department of Transportation, 1200 New Jersey Avenue SE, Room W64–224, Washington, DC 20590–0001. Office hours are from 8:30 a.m. to 5 p.m., ET, Monday through Friday, except Federal holidays. If you have questions regarding viewing or submitting material to the docket, contact Docket Operations, (202) 366–9826.

SUPPLEMENTARY INFORMATION:

I. Public Participation

A. Submitting Comments

If you submit a comment, please include the docket number for this notice (Docket No. FMCSA–2013–0444, FMCSA–2014–0212, FMCSA–2015–0321, FMCSA–2018–0051, FMCSA–2018–0052, or FMCSA–2018–0052), indicate the specific section of this document to which each comment applies, and provide a reason for each suggestion or recommendation. You may submit your comments and material online or by fax, mail, or hand delivery, but please use only one of these means. FMCSA recommends that you include your name and a mailing address, an email address, or a phone number in the body of your document so that FMCSA can contact you if there are questions regarding your submission.

To submit your comment online, go to <http://www.regulations.gov>, put the docket number, FMCSA–2013–0444, FMCSA–2014–0212, FMCSA–2015–0321, FMCSA–2018–0051, FMCSA–2018–0052, or FMCSA–2018–0052, in the keyword box, and click “Search.” When the new screen appears, click on the “Comment Now!” button and type your comment into the text box on the following screen. Choose whether you are submitting your comment as an individual or on behalf of a third party and then submit.

If you submit your comments by mail or hand delivery, submit them in an unbound format, no larger than 8½ by 11 inches, suitable for copying and electronic filing. If you submit comments by mail and would like to know that they reached the facility, please enclose a stamped, self-addressed postcard or envelope.

FMCSA will consider all comments and material received during the comment period.

B. Viewing Documents and Comments

To view comments, as well as any documents mentioned in this notice as being available in the docket, go to <http://www.regulations.gov>. Insert the docket number, FMCSA–2013–0444, FMCSA–2014–0212, FMCSA–2015–0321, FMCSA–2018–0051, FMCSA–2018–0052, or FMCSA–2018–0052, in the keyword box, and click “Search.” Next, click the “Open Docket Folder” button and choose the document to review. If you do not have access to the internet, you may view the docket online by visiting Docket Operations in Room W12–140 on the ground floor of the DOT West Building, 1200 New Jersey Avenue SE, Washington, DC 20590, between 9 a.m. and 5 p.m., ET, Monday through Friday, except Federal holidays. To be sure someone is there to help you, please call (202) 366–9317 or (202) 366–9826 before visiting Docket Operations.

C. Privacy Act

In accordance with 5 U.S.C. 553(c), DOT solicits comments from the public to better inform its rulemaking process. DOT posts these comments, without edit, including any personal information the commenter provides, to www.regulations.gov, as described in the system of records notice (DOT/ALL–14 FDMS), which can be reviewed at www.transportation.gov/privacy.

II. Background

Under 49 U.S.C. 31136(e) and 31315(b), FMCSA may grant an exemption from the FMCSRs for no longer than a 5-year period if it finds

such exemption would likely achieve a level of safety that is equivalent to, or greater than, the level that would be achieved absent such exemption. The statute also allows the Agency to renew exemptions at the end of the 5-year period. FMCSA grants medical exemptions from the FMCSRs for a 2-year period to align with the maximum duration of a driver’s medical certification.

The physical qualification standard for drivers regarding epilepsy found in 49 CFR 391.41(b)(8) states that a person is physically qualified to drive a CMV if that person has no established medical history or clinical diagnosis of epilepsy or any other condition which is likely to cause the loss of consciousness or any loss of ability to control a CMV.

In addition to the regulations, FMCSA has published advisory criteria¹ to assist medical examiners (MEs) in determining whether drivers with certain medical conditions are qualified to operate a CMV in interstate commerce.

The nine individuals listed in this notice have requested renewal of their exemptions from the epilepsy and seizure disorders prohibition in § 391.41(b)(8), in accordance with FMCSA procedures. Accordingly, FMCSA has evaluated these applications for renewal on their merits and decided to extend each exemption for a renewable 2-year period.

III. Request for Comments

Interested parties or organizations possessing information that would otherwise show that any, or all, of these drivers are not currently achieving the statutory level of safety should immediately notify FMCSA. The Agency will evaluate any adverse evidence submitted and, if safety is being compromised or if continuation of the exemption would not be consistent with the goals and objectives of 49 U.S.C. 31136(e) and 31315(b), FMCSA will take immediate steps to revoke the exemption of a driver.

IV. Basis for Renewing Exemptions

In accordance with 49 U.S.C. 31136(e) and 31315(b), each of the nine applicants has satisfied the renewal conditions for obtaining an exemption from the epilepsy and seizure disorders prohibition. The nine drivers in this notice remain in good standing with the

¹ These criteria may be found in APPENDIX A TO PART 391—MEDICAL ADVISORY CRITERIA, section H. *Epilepsy*: § 391.41(b)(8), paragraphs 3, 4, and 5, which is available on the internet at <https://www.gpo.gov/fdsys/pkg/CFR-2015-title49-vol5/pdf/CFR-2015-title49-vol5-part391-appA.pdf>.

Agency, have maintained their medical monitoring and have not exhibited any medical issues that would compromise their ability to safely operate a CMV during the previous 2-year exemption period. In addition, for Commercial Driver's License (CDL) holders, the Commercial Driver's License Information System and the Motor Carrier Management Information System are searched for crash and violation data. For non-CDL holders, the Agency reviews the driving records from the State Driver's Licensing Agency. These factors provide an adequate basis for predicting each driver's ability to continue to safely operate a CMV in interstate commerce. Therefore, FMCSA concludes that extending the exemption for each renewal applicant for a period of 2 years is likely to achieve a level of safety equal to that existing without the exemption.

In accordance with 49 U.S.C. 31136(e) and 31315(b), the following groups of drivers received renewed exemptions in the month of August and are discussed below. As of August 1, 2020, and in accordance with 49 U.S.C. 31136(e) and 31315(b), the following eight individuals have satisfied the renewal conditions for obtaining an exemption from the epilepsy and seizure disorders prohibition in the FMCSRs for interstate CMV drivers:

Brian Checkley (NJ)
Steven Ford (WI)
Paul Gomez (CA)
Thomas Ork (NY)
Milton Tatham (NV)
Phillip Moore (CT)
Joshua Thomas (MN)
Troy Nichols (TX)

The drivers were included in docket number FMCSA–2013–0444, FMCSA–2015–0321, FMCSA–2018–0051, FMCSA–2018–0052, and FMCSA–2018–0052. Their exemptions are applicable as of August 1, 2020, and will expire on August 1, 2022.

As of August 28, 2020, and in accordance with 49 U.S.C. 31136(e) and 31315(b), the following individual has satisfied the renewal conditions for obtaining an exemption from the epilepsy and seizure disorders prohibition in the FMCSRs for interstate CMV drivers:

Terry Hamby (NC)

This driver was included in docket number FMCSA–2014–0212. The exemption is applicable as of August 28, 2020, and will expire on August 28, 2022.

V. Conditions and Requirements

The exemptions are extended subject to the following conditions: (1) Each

driver must remain seizure-free and maintain a stable treatment during the 2-year exemption period; (2) each driver must submit annual reports from their treating physicians attesting to the stability of treatment and that the driver has remained seizure-free; (3) each driver must undergo an annual medical examination by a certified ME, as defined by § 390.5; and (4) each driver must provide a copy of the annual medical certification to the employer for retention in the driver's qualification file, or keep a copy of his/her driver's qualification file if he/she is self-employed. The driver must also have a copy of the exemption when driving, for presentation to a duly authorized Federal, State, or local enforcement official. The exemption will be rescinded if: (1) The person fails to comply with the terms and conditions of the exemption; (2) the exemption has resulted in a lower level of safety than was maintained before it was granted; or (3) continuation of the exemption would not be consistent with the goals and objectives of 49 U.S.C. 31136(e) and 31315(b).

VI. Preemption

During the period the exemption is in effect, no State shall enforce any law or regulation that conflicts with this exemption with respect to a person operating under the exemption.

VII. Conclusion

Based on its evaluation of the nine exemption applications, FMCSA renews the exemptions of the aforementioned drivers from the epilepsy and seizure disorders prohibition in § 391.41(b)(8). In accordance with 49 U.S.C. 31136(e) and 31315(b), each exemption will be valid for 2 years unless revoked earlier by FMCSA.

Larry W. Minor,

Associate Administrator for Policy.

DEPARTMENT OF TRANSPORTATION

National Highway Traffic Safety Administration

[Docket No. NHTSA–2020–0034; Notice 1]

Yamaha Motor Corporation, U.S.A., Receipt of Petition for Decision of Inconsequential Noncompliance

AGENCY: National Highway Traffic Safety Administration (NHTSA), Department of Transportation (DOT).

ACTION: Receipt of petition.

SUMMARY: Yamaha Motor Corporation, U.S.A., (Yamaha) has determined that certain model year (MY) 2019 Yamaha NIKEN motorcycles do not fully comply with Federal Motor Vehicle Safety Standard (FMVSS) No. 122, *Motorcycle Brake Systems*. Yamaha filed a noncompliance report dated February 26, 2020. Yamaha subsequently petitioned NHTSA on May 28, 2020, for a decision that the subject noncompliance is inconsequential as it relates to motor vehicle safety. This notice announces receipt of Yamaha's petition.

DATES: Send comments on or before September 16, 2020.

ADDRESSES: Interested persons are invited to submit written data, views, and arguments on this petition. Comments must refer to the docket and notice number cited in the title of this notice and submitted by any of the following methods:

- *Mail:* Send comments by mail addressed to the U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.

- *Hand Delivery:* Deliver comments by hand to the U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590. The Docket Section is open on weekdays from 10 a.m. to 5 p.m. except for Federal holidays.

- *Electronically:* Submit comments electronically by logging onto the Federal Docket Management System (FDMS) website at <https://www.regulations.gov>. Follow the online instructions for submitting comments.

- Comments may also be faxed to (202) 493–2251.

Comments must be written in the English language, and be no greater than 15 pages in length, although there is no limit to the length of necessary attachments to the comments. If comments are submitted in hard copy form, please ensure that two copies are provided. If you wish to receive confirmation that comments you have submitted by mail were received, please enclose a stamped, self-addressed postcard with the comments. Note that all comments received will be posted without change to <https://www.regulations.gov>, including any personal information provided.

All comments and supporting materials received before the close of business on the closing date indicated above will be filed in the docket and will be considered. All comments and

supporting materials received after the closing date will also be filed and will be considered to the fullest extent possible.

When the petition is granted or denied, notice of the decision will also be published in the **Federal Register** pursuant to the authority indicated at the end of this notice.

All comments, background documentation, and supporting materials submitted to the docket may be viewed by anyone at the address and times given above. The documents may also be viewed on the internet at <https://www.regulations.gov> by following the online instructions for accessing the docket. The docket ID number for this petition is shown in the heading of this notice.

DOT's complete Privacy Act Statement is available for review in a **Federal Register** notice published on April 11, 2000 (65 FR 19477-78).

SUPPLEMENTARY INFORMATION:

I. Overview: Yamaha has determined that certain MY 2019 Yamaha NIKEN motorcycles do not fully comply with the requirements of paragraph S5.1.7 of FMVSS No. 122, *Motorcycle Brake Systems* (49 CFR 571.122). Yamaha filed a noncompliance report dated February 26, 2020, pursuant to 49 CFR part 573, *Defect and Noncompliance Responsibility and Reports*. Yamaha subsequently petitioned NHTSA on May 28, 2020, for an exemption from the notification and remedy requirements of 49 U.S.C. Chapter 301 on the basis that this noncompliance is inconsequential as it relates to motor vehicle safety, pursuant to 49 U.S.C. 30118(d) and 30120(h) and 49 CFR part 556, *Exemption for Inconsequential Defect or Noncompliance*.

This notice of receipt of Yamaha's petition is published under 49 U.S.C. 30118 and 30120 and does not represent any Agency decision or other exercise of

judgment concerning the merits of the petition.

II. Motorcycles Involved:

Approximately 278 MY 2019 Yamaha NIKEN motorcycles manufactured between August 1, 2018, and July 31, 2019, are potentially involved.

III. Noncompliance: Yamaha explains that the noncompliance is that the subject motorcycles do not comply with the requirement for class 3-5 motorcycle braking systems, as specified in paragraph S5.1.7 in FMVSS No. 122. Specifically, due to the motorcycles being classified as a category 3-5 motorcycle rather than a 3-3 motorcycle, the motorcycles lack the required trike parking brake and integrated rear brake system.

IV. Rule Requirements: Paragraph S5.1.7 of FMVSS No. 122 includes the requirements relevant to this petition. Each category 3-5 motorcycle shall be equipped with: (a) A parking brake system; and (b) a foot actuated service brake system which operates the brakes on all wheels by way of either (1) a split service brake system; or (2) a combined brake system (CBS) and a secondary brake system, which may be the parking brake system.

V. Background: NHTSA contacted Yamaha on February 16, 2020 and informed the company that the agency's position is that the subject motorcycles did not meet the definition of a traditional two-wheeled motorcycle. While Yamaha maintained that the proximity of the two front wheels to each other indicated that the NIKEN was a two wheeled motorcycle, NHTSA classifies the product as a three wheeled trike, and as such, the NIKEN does not possess the required trike parking brake and integrated rear brake system.

VI. Summary of Yamaha's Petition: The following views and arguments presented in this section, VI. Summary of Yamaha's Petition, are the views and arguments provided by Yamaha. They

have not been evaluated by the Agency and do not reflect the views of the Agency. Yamaha described the subject noncompliance and stated their belief that the noncompliance is inconsequential as it relates to motor vehicle safety.

In support of its petition, Yamaha submitted the following reasoning:

1. NHTSA stated that their contract test laboratory was unable to complete compliance testing because the NIKEN lacked two "requirements": (1) Parking brake and (2) foot brake actuating on all wheels. Yamaha independently conducted the relevant compliance testing and the test results demonstrate that the NIKEN substantially satisfies the "requirements" detailed below:

a. *Parking Brake:* Requirements for a parking brake are presumably in place to keep a vehicle from unwanted movement while in a parked condition, such as on a slope. However, traditional two-wheeled and narrow-twin-front-wheeled motorcycles cannot stand unsupported; they simply fall over. Should a traditional motorcycle be parked on a slope (up-hill or down) on the side stand, it is a customary for the rider to park in-gear, locking the vehicle against movement. Likewise, by adapting this standard practice, the NIKEN can be parked on a slope (up-hill or down) on the side-stand just as a rider of a traditional two wheeled motorcycle would be. In an effort to emulate the test environment, the brake system was conditioned, and the engine was disconnected (placed in neutral) in accordance with paragraph S6.8; the NIKEN was placed on the test surface on the vehicle's main stand. According to requirements in FMVSS No. 122, the Laden vehicle shall be held stationary for 5 minutes, both in an up-hill and down-hill configuration at the required 18% (10.2°) gradient for 5 minutes. The NIKEN, exceeds this requirement.

	Standard 18% (10.2°)	Up-hill	Down-hill
NIKEN on Main Stand		12.0°	11.8° ^o

It should be noted that approximately 70% of NIKENs currently in use have main stands, the balance have only side stands. Yamaha genuine accessory Main Stands could be added to those without quite easily.

b. *Foot brake actuating on all wheels:* Likewise, NHTSA testing staff was unable to complete the testing of braking performance of the "split or CBS" system, as the NIKEN utilizes the

conventional separate (independently controlled) front and rear braking system found on most similar sport-performance type motorcycles. When Yamaha tested the NIKEN's all-wheel, anti-lock brake system, Yamaha found that the brake system, in a laden condition, met NHTSA's single actuated brake control test. The NIKEN, in a laden condition, met the requirements with the rear brake alone and, likewise,

when tested with the front brake alone, the NIKEN exceeded the standard test requirements and stopping distances. In the lightly loaded condition, the NIKEN exceeded the braking target by a mere 30 cm. However, when the user-induced front brake is combined with the NIKEN's rear brake system, typical of motorcycle rider brake application, this vehicle exceeds NHTSA requirements by considerable margin.

		Mass (kg)			Target (m)	Result (m)
		Front	Rear	Total		
Rear	Lightly loaded	170.7	181.9	352.6	33.7	34.0
	Laden	171.1	289.8	460.9	33.7	31.0
Front	Laden	171.1	289.8	460.9	61.4	25.8

Results show that the NIKEN substantially meets the performance criteria for brake performance without the Split or CBS braking system, while providing riders the more active control and better brake feel they expect from a performance sport machine.

2. It is the belief of Yamaha that the information described above satisfies the intent of 49 CFR part 573 and that the operator can safely operate the vehicle. The NIKEN was designed to perform and react similarly to a traditional two-wheeled motorcycle primarily for experienced, enthusiast riders, and provides the safety features and performance that these riders expect from a motorcycle.

Yamaha concluded by expressing the belief that the subject noncompliance is inconsequential as it relates to motor vehicle safety, and that its petition to be exempted from providing notification of the noncompliance, as required by 49 U.S.C. 30118, and a remedy for the noncompliance, as required by 49 U.S.C. 30120, should be granted.

NHTSA notes that the statutory provisions (49 U.S.C. 30118(d) and 30120(h)) that permit manufacturers to file petitions for a determination of inconsequentiality allow NHTSA to exempt manufacturers only from the duties found in sections 30118 and 30120, respectively, to notify owners, purchasers, and dealers of a defect or noncompliance and to remedy the defect or noncompliance. Therefore, any decision on this petition only applies to the subject motorcycles that Yamaha no longer controlled at the time it determined that the noncompliance existed. However, any decision on this petition does not relieve vehicle distributors and dealers of the prohibitions on the sale, offer for sale, or introduction or delivery for introduction into interstate commerce of the noncompliant motorcycles under their control after Yamaha notified them that the subject noncompliance existed. (Authority: 49 U.S.C. 30118, 30120; Delegations of authority at 49 CFR 1.95 and 501.8)

Otto G. Matheke III,
 Director, Office of Vehicle Safety Compliance.

UNIFIED CARRIER REGISTRATION PLAN

Sunshine Act Meeting Notice; Unified Carrier Registration Plan Board Subcommittee Meeting

DATES: August 20, 2020, from Noon to 2 p.m., Eastern time.

PLACE: This meeting will be accessible via conference call and via Zoom Meeting and Screenshare. Any interested person may call (i) 1-929-205-6099 (U.S. Toll) or 1-669-900-6833 (U.S. Toll) or (ii) 1-877-853-5247 (U.S. Toll Free) or 1-888-788-0099 (U.S. Toll Free), Meeting ID: 978 5932 8076, to listen and participate in this meeting. The website to participate via Zoom Meeting and Screenshare is <https://kellen.zoom.us/j/97859328076>.

STATUS: This meeting will be open to the public.

MATTERS TO BE CONSIDERED: The Unified Carrier Registration Plan Education and Training Subcommittee (the "Subcommittee") will continue its work in developing and implementing the Unified Carrier Registration Plan and Agreement. The subject matter of this meeting will include:

Proposed Agenda

I. Call to Order—Subcommittee Chair

The Subcommittee Chair will welcome attendees, call the meeting to order, call roll for the Subcommittee, confirm whether a quorum is present, and facilitate self-introductions.

II. Verification of Publication of Meeting Notice—UCR Executive Director

The UCR Executive Director will verify the publication of the meeting notice on the UCR website and distribution to the UCR contact list via email followed by the subsequent publication of the notice in the **Federal Register**.

III. Review and Approval of Subcommittee Agenda and Setting of Ground Rules—Subcommittee Chair

For Discussion and Possible Subcommittee Action

The Subcommittee Agenda will be reviewed and the Subcommittee will consider adoption.

Ground Rules

Subcommittee action only to be taken in designated areas on agenda.

IV. Approval of Minutes From May 14, 2020 Meeting—Subcommittee Chair

For Discussion and Possible Subcommittee Action

Draft minutes from the May 14, 2020 Education and Training Subcommittee meeting via teleconference will be reviewed. The Subcommittee will consider action to approve.

V. Discuss Needed Future Training Modules—Subcommittee Chair

The Subcommittee will discuss and provide comments on needed future education and training modules.

VI. Discuss Priority of Training Modules To Be Developed—Subcommittee Chair

The Subcommittee will discuss and rank by development priority needed future education and training modules.

VII. Other Items—Subcommittee Chair

The Subcommittee Chair will call for any other items the committee members would like to discuss.

VIII. Adjournment—Subcommittee Chair

The Subcommittee Chair will adjourn the meeting.

The agenda will be available no later than 5 p.m. Eastern time, August 11, 2020 at: <https://plan.ucr.gov>.

CONTACT PERSON FOR MORE INFORMATION: Elizabeth Leaman, Chair, Unified Carrier Registration Plan Board of Directors, (617) 305-3783, eleaman@board.ucr.gov.

Alex B. Leath,
 Chief Legal Officer, Unified Carrier Registration Plan.

BILLING CODE 4910-YL-P

DEPARTMENT OF VETERANS AFFAIRS

Advisory Committee on Women Veterans, Notice of Meeting

The Department of Veterans Affairs (VA) gives notice under the Federal

Advisory Committee Act that the Advisory Committee on Women Veterans will conduct a virtual site visit on September 21–24, 2020, with the

Veterans Integrated Service Network (VISN) 22: Desert Pacific Healthcare Network and the Southern Arizona VA Health Care System (SAVAHCS) in

Tucson, AZ. The meetings will begin and end as follows:

Date	Time	Location
September 21, 2020	8:30 a.m.–3:45 p.m. Pacific Standard Time (PST).	See WebEx link and call-in information below.
September 22, 2020	8:30 a.m.–2 p.m. (PST)	See WebEx link and call-in information below.
September 23, 2020	8 a.m.–3:30 p.m. (PST)	See WebEx link and call-in information below.
September 24, 2020	8:30 a.m.–9:30 a.m. (PST)	See WebEx link and call-in information below.

The purpose of the Committee is to advise the Secretary of Veterans Affairs regarding the needs of women Veterans with respect to health care, rehabilitation, compensation, outreach and other programs and activities administered by VA designed to meet such needs. The Committee makes recommendations to the Secretary regarding such programs and activities.

On Monday, September 21, the agenda includes briefings on: VISN 22 facilities/programs/demographics; women Veterans services; SAVAHCS and its strategic partnerships; SAVAHCS’s women Health program; the breast and cervical cancer screening program; SAVAHCS’s Native American Veterans Program and Indian Health Services sharing Agreements; LGBT and transgender programs; SAVAHCS’s health care training programs; primary care community based outpatient clinics; and the THRIVE program.

On Tuesday, September 22, the agenda includes briefings on: The Arizona Department of Veteran Services and how it collaborates with VA; mental health services; the Transition Care Management program; the Office of Tribal and Government Relations; health care for homeless Veterans; gynecology service and reproductive health programs. From 2:30–4:00 p.m., the Committee will observe a women Veterans town hall meeting for women Veterans in Arizona, hosted by the SAVAHCS.

On Wednesday, September 23, the agenda includes briefings on: SAVAHCS’s Comprehensive Compensation and Pension program; readjustment counseling; prosthetic services; inpatient services; telehealth; research and medical affiliations; the Phoenix Regional Office; rural health; and the National Cemetery Phoenix National Cemetery of Arizona. On Thursday, September 24, the committee will conduct an out-briefing with leadership from SAVAHCS, Phoenix Regional Office and the National Cemetery Phoenix National Cemetery of Arizona. The meeting sessions and town hall meeting are open to the public.

The agenda will include overview briefings on programs and services for Arizona’s women Veterans from VISN 22, SAVAHCS, the Phoenix Regional Office, National Cemetery of Arizona, the Office of Tribal Government Relations, and the Arizona Department of Veterans Services.

No time will be allocated at this meeting for receiving oral presentations from the public. Interested parties should provide written comments for review by the Committee to Ms. Shannon L. Middleton at 00W@mail.va.gov. Any member of the public who wishes to participate in the virtual site visit may use the following WebEx link (for September 21–23 only): <https://veteransaffairs.WebEx.com/webappng/sites/veteransaffairs/meeting/download/236670d5436a47bc95047e1bb8f45ae5?siteurl=veteransaffairs&MTID=mafac92e107678c58f9c9abdb003b0d5a>. Meeting number (access code): 199 257 9839; meeting password: CZyZrUe*633. To join by phone: 1–404–397–1596; access code: 1992579839##.

For September 24 (only), please use the following information below: <https://veteransaffairs.WebEx.com/webappng/sites/veteransaffairs/meeting/download/244e7a4df0ce4c1ea406615b409796f7?siteurl=veteransaffairs&MTID=m8df485138357baa5bcde9e6e8fab356>. Meeting number (access code): 199 156 9644; meeting password: wU3DhjRV\$77. To join by phone: 1–404–397–1596; access code: 1991569644##.

Dated: August 11, 2020.

Jelessa M. Burney,
Federal Advisory Committee Management Officer.

BILLING CODE 8320–01–P

DEPARTMENT OF VETERANS AFFAIRS

Privacy Act of 1974; System of Records

AGENCY: Department of Veterans Affairs (VA).

ACTION: Notice of a new matching program.

SUMMARY: The Department of Veterans Affairs (VA) provides notice that the VA intends to renew a computer matching agreement with the Social Security Administration (SSA). This disclosure provides VA with data to update the master records of VA applicants and beneficiaries, including Veterans and survivors, and their eligible dependent(s) who are receiving income-dependent benefits. This disclosure also provides VA with data to determine the continued eligibility of those receiving income-dependent benefits and those beneficiaries who are receiving disability compensation at the 100 percent rate because of unemployability, and allow VA to adjust or discontinue benefits accordingly.

DATES: Comments on this matching program must be received no later than September 16, 2020. If no public comment is received during the period allowed for comment or unless otherwise published in the **Federal Register** by VA, the new matching program will become effective September 16, 2020. This matching program will begin on September 15, 2020, and end on March 14, 2022 with the option to renew an additional twelve months to March 14, 2023.

ADDRESSES: Written comments may be submitted through www.Regulations.gov; by mail or hand-delivery to Director, Regulation Policy and Management (00REG), Department of Veterans Affairs, 810 Vermont Ave. NW, Room 1064, Washington, DC 20420; or by fax to (202) 273–9026 (not a toll-free number). Comments should indicate that they are submitted in response to “COMPUTER MATCHING AGREEMENT (CMA) BETWEEN THE DEPARTMENT VETERANS AFFAIRS (VA) AND THE SOCIAL SECURITY ADMINISTRATION #1050 (SSA).” Copies of comments received will be available for public inspection in the Office of Regulation Policy and Management, Room 1063B, between the hours of 8:00 a.m. and 4:30 p.m.,

Monday through Friday (except holidays). Please call (202) 461-4902 for an appointment. (This is not a toll-free number.) In addition, comments may be viewed online at www.Regulations.gov.

FOR FURTHER INFORMATION CONTACT:

Bryant Coleman, Program Analyst, Pension and Fiduciary Service (21P), Department of Veterans Affairs, 810 Vermont Ave NW, Washington, DC 20420, (202) 461-8394.

SUPPLEMENTARY INFORMATION: This disclosure will provide VA with data to update the master records of VA applicants and beneficiaries, including Veterans and survivors, and their eligible dependent(s) who are receiving income-dependent benefits. This disclosure will also provide VA with data to determine the continued eligibility of those receiving income-dependent benefits and those beneficiaries who are receiving disability compensation at the 100 percent rate because of unemployability, and allow VA to adjust or discontinue benefits accordingly.

Legal authority for the disclosures under this agreement is 38 U.S.C. 5106, which requires Federal agencies to furnish VA with information the VA Secretary may request for determining eligibility for or the amount of VA benefits.

SSA will disclose to VA the necessary tax return information from the MEF, last fully published at 71 FR 1819 (January 11, 2006), and amended at 78 FR 40542. SSA will disclose to VA data from Master Files of Social Security Number (SSN) Holders and SSN Applications (the Enumeration System), 60-0058, last fully published at 75 FR 82121 (December 29, 2010), and amended at 78 FR 40542 (July 5, 2013) and 79 FR 8780 (February 13, 2014).

In accordance with the Privacy Act, 5 U.S.C. 552a(o)(2) and (r), copies of the agreement are being sent to both Houses of Congress and to the Office of Management and Budget. This notice is provided in accordance with the provisions of Privacy Act of 1974 as amended by Public Law 100-503.

Participating Agencies: The Social Security Administration (SSA).

Authority for Conducting the Matching Program: The Privacy Act, 5 U.S.C 552a, and 38 U.S.C 5106

authorize VA to enter into this CMA with SSA.

Purpose(s): This disclosure will provide VA with data to update the master records of VA applicants and beneficiaries, including Veterans and survivors, and their eligible dependent(s) who are receiving income-dependent benefits. This disclosure will also provide VA with data to determine the continued eligibility of those receiving income-dependent benefits and those beneficiaries who are receiving disability compensation at the 100 percent rate because of unemployability, and allow VA to adjust or discontinue benefits accordingly.

Categories of Individuals: Veterans and beneficiaries who apply for VA income benefits.

Categories of Records: VA will provide SSA with an electronic file in a format defined by SSA that contains the SSN, name, date of birth, and report year for each applicant, beneficiary, and eligible dependent(s) for whom tax return information is being requested. SSA will verify the SSNs furnished by VA using the Enumeration System. If the SSN of the VA applicant, beneficiary, or dependent(s) submitted to SSA verifies, SSA will return a response to VA that includes earnings data (employer identification and addresses, wage amounts from Form W-2, and earnings amounts from self-employment), SSN verification code, verified SSN, death indicator, annual total wages, and earnings report type on the record subject. If the SSN of the VA applicant, beneficiary, or dependent(s) submitted to SSA fails to verify, SSA will return a response to VA indicating that the SSN did not verify.

System(s) of Records: SSA will disclose to VA the necessary tax return information from the MEF, last fully published at 71 FR 1819 (January 11, 2006), and amended at 78 FR 40542. SSA will disclose to VA data from Master Files of Social Security Number (SSN) Holders and SSN Applications (the Enumeration System), 60-0058, last fully published at 75 FR 82121 (December 29, 2010), and amended at 78 FR 40542 (July 5, 2013) and 79 FR 8780 (February 13, 2014). VA will match the SSA data with data in its system of records (SOR) entitled "Compensation,

Pension, Education, and Vocational Rehabilitation and Employment Records-VA (58VA21/22/28)," republished with updated name at 74 FR 14865 (April 1, 2009) and last amended at 77 FR 42593 (July 19, 2012).

Signing Authority

The Senior Agency Official for Privacy, or designee, approved this document and authorized the undersigned to sign and submit the document to the Office of the Federal Register for publication electronically as an official document of the Department of Veterans Affairs. Joseph S. Stenaka, Department of Veterans Affairs Chief Privacy Officer, approved this document on July 21, 2020 for publication.

Dated: August 12, 2020.

Amy L. Rose,

Program Analyst, VA Privacy Service, Office of Information Security, Office of Information and Technology, Department of Veterans Affairs.

BILLING CODE 8320-01-P

DEPARTMENT OF VETERANS AFFAIRS

Advisory Committee on Structural Safety of Department of Veterans Affairs Facilities, Notice of Meeting

The Department of Veterans Affairs (VA) gives notice that a virtual meeting of the Advisory Committee on Structural Safety of Department of Veterans Affairs Facilities will be held on September 10, 2020. The meeting is open to the public.

The purpose of the Committee is to advise the Secretary of Veterans Affairs on matters of structural safety in the construction and remodeling of VA facilities and to recommend standards for use by VA in the construction and alteration of its facilities.

On September 10, the Committee will receive appropriate briefings and presentations on current seismic, natural hazards, and fire safety issues that are particularly relevant to facilities owned and leased by the Department. The Committee will also discuss appropriate structural and fire safety recommendations for inclusion in VA's construction standards.

No time will be allocated for receiving oral presentations from the public. However, the Committee will accept written comments. Comments should be emailed to Donald Myers, Director, Facilities Standards Service, Office of Construction & Facilities Management (003C2B), Department of Veterans Affairs, at *Donald.Myers@va.gov*. In the communication, writers must identify themselves and state the organization,

association, or person(s) they represent. For any members of the public that wish to attend virtually, they may use the WebEx link: *https://veteransaffairs.webex.com/veteransaffairs/j.php?MTID=mbd9d601e89be75c8061a0292096e9128*, password: VAStrucSaf\$ep10, or join via phone at: 404-397-1596, access code: 199 507 0680.

Those seeking additional information or wishing to attend should contact Mr. Myers at the email address noted above or phone at 202-632-5388.

Dated: August 11, 2020.

Jelessa M. Burney,

Federal Advisory Committee Management Officer.

Medicare Program; CY 2021 Payment Policies Under the Physician Fee Schedule and Other Changes to Part B Payment Policies; Medicare Shared Savings Program Requirements; Medicaid Promoting Interoperability Program Requirements for Eligible Professionals; Quality Payment Program; Coverage of Opioid Use Disorder Services Furnished by Opioid Treatment Programs; Medicare Enrollment of Opioid Treatment Programs; Electronic Prescribing for Controlled Substances for a Covered Part D Drug Under a Prescription Drug Plan or an MA-PD Plan; Payment for Office/Outpatient Evaluation and Management Services; Hospital IQR Program; Establish New Code Categories; and Medicare Diabetes Prevention Program (MDPP) Expanded Model Emergency Policy

AGENCY: Centers for Medicare & Medicaid Services (CMS), HHS.

ACTION: Proposed rule.

SUMMARY: This major proposed rule addresses: Changes to the physician fee schedule (PFS); other changes to Medicare Part B payment policies to ensure that payment systems are updated to reflect changes in medical practice, relative value of services, and changes in the statute; Medicare Shared Savings Program requirements; Medicaid Promoting Interoperability Program requirements for Eligible Professionals; updates to the Quality Payment Program; Medicare coverage of opioid use disorder services furnished by opioid treatment programs; Medicare enrollment of Opioid Treatment Programs; payment for office/outpatient evaluation and management services; Requirement for Electronic Prescribing for Controlled Substances for a Covered Part D drug under a prescription drug plan or an MA-PD plan and Medicare Diabetes Prevention Program (MDPP) expanded model Emergency Policy.

DATES: To be assured consideration, comments must be received at one of the addresses provided below, no later than 5 p.m. on October 5, 2020. (See the **SUPPLEMENTARY INFORMATION** section of

this proposed rule for a list of provisions open for comment.)

ADDRESSES: In commenting, please refer to file code CMS-1734-P.

Comments, including mass comment submissions, must be submitted in one of the following three ways (please choose only one of the ways listed).

1. *Electronically.* You may submit electronic comments on this regulation to <http://www.regulations.gov>. Follow the "Submit a comment" instructions.

2. *By regular mail.* You may mail written comments to the following address ONLY: Centers for Medicare & Medicaid Services, Department of Health and Human Services, Attention: CMS-1734-P, P.O. Box 8016, Baltimore, MD 21244-8016.

Please allow sufficient time for mailed comments to be received before the close of the comment period.

3. *By express or overnight mail.* You may send written comments to the following address ONLY: Centers for Medicare & Medicaid Services, Department of Health and Human Services, Attention: CMS-1734-P, Mail Stop C4-26-05, 7500 Security Boulevard, Baltimore, MD 21244-1850.

FOR FURTHER INFORMATION CONTACT:

Jamie Hermansen, (410) 786-2064, for any issues not identified below.

Michael Soracoe, (410) 786-6312, for issues related to practice expense, work RVUs, conversion factor, and specialty-specific impacts of PFS proposals.

Larry Chan, (410) 786-6864, for issues related to potentially misvalued services under the PFS.

Emily Yoder, (410) 786-1804, Donta Henson, (410) 786-1947, and Patrick Sartini, (410) 786-9252, for issues related to telehealth and other services involving communications technology.

Liane Grayson, (410) 786-6583, for issues related to care management services and remote physiologic monitoring services.

Emily Yoder, (410) 786-1804, Christiane LaBonte, (410) 786-7237, Ann Marshall, (410) 786-3059, and Patrick Sartini, (410) 786-9252, for issues related to payment for office/outpatient evaluation and management visits.

Christiane LaBonte, (410) 786-7237, for issues related to teaching physician services.

Roberta Epps, (410) 786-4503, and Regina Walker-Wren, (410) 786-9160, for issues related to supervision of diagnostic tests.

Ann Marshall, (410) 786-3059, for issues related to incident to pharmacist services.

Pamela West, (410) 786-2302, for issues related to therapy services.

Sarah Leipnik, (410) 786-3933, for issues related to medical record documentation.

Lindsey Baldwin, (410) 786-1694 and Terry Simananda, (410) 786-8144, for issues related to Medicare coverage of opioid use disorder treatment services furnished by opioid treatment programs.

Laura Ashbaugh, (410) 786-1113, for issues related to Clinical Laboratory Fee Schedule: Revised Data Reporting Period and Phase-in of Payment Reductions.

Joseph Schultz, (410) 786-2656, for issues related to opioid treatment program provider enrollment regulation updates for institutional claim submissions.

Lisa Parker, (410) 786-4949, for issues related to RHCs and FQHCs, primary care management services, and the FQHC market basket.

Rachel Katonak, (410) 786-8564, for issues related to comprehensive screenings for seniors: Section 2002 of the Substance Use-Disorder Prevention that Promote Opioid Recovery and Treatment for Patients and Communities Act (SUPPORT Act).

David Koppel, (303) 844-2883, or Elizabeth LeBreton, (202) 615-3816, for issues related to the Medicaid Promoting Interoperability Program.

Fiona Larbi, (410) 786-7224, for issues related to the Medicare Shared Savings Program (Shared Savings Program) Quality performance standard and quality reporting requirements.

Janae James, (410) 786-0801, or Elizabeth November, (410) 786-4518, or SharedSavingsProgram@cms.hhs.gov, for issues related to Shared Savings Program beneficiary assignment and repayment mechanism requirements.

Cheryl Gilbreath, (410) 786-5919, for issues related to home infusion therapy benefit.

Heather Hostetler, (410) 786-4515, for issues related to removal of selected national coverage determinations.

Joella Roland, (410) 786-7638, for issues related to requirement for electronic prescribing for controlled substances for a covered Part D drug under a prescription drug plan or an MA-PD plan.

Edmund Kasaitis, (410) 786-0477, for issues related to Part B drug payment and Food Drug & Cosmetic Act section 505(b)(2) drug products.

Elizabeth Holland, (410) 786-1309, for issues related to updates to certified electronic health record technology due to the 21st Century Cures Act.

Julia Venanzi, (410) 786-1471, for issues related to the Hospital Inpatient Quality Reporting (IQR) Program

Irina Akelaitis, (410) 786-4602, for issues related to HCPCS Level II codes.

Amanda Rhee, (410) 786–3888, for the Medicare Diabetes Prevention Program (MDPP) expanded model emergency policy.

Molly MacHarris, (410) 786–4461, for inquiries related to Merit-based Incentive Payment System (MIPS).

Brittany LaCouture, (410) 786–0481, for inquiries related to Alternative Payment Models (APMs).

SUPPLEMENTARY INFORMATION:

Inspection of Public Comments: All comments received before the close of the comment period are available for viewing by the public, including any personally identifiable or confidential business information that is included in a comment. We post all comments received before the close of the comment period on the following website as soon as possible after they have been received: <http://regulations.gov>. Follow the search instructions on that website to view public comments.

Addenda Available Only Through the Internet on the CMS Website: The PFS Addenda along with other supporting documents and tables referenced in this proposed rule are available on the CMS website at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/index.html>. Click on the link on the left side of the screen titled, “PFS Federal Regulations Notices” for a chronological list of PFS **Federal Register** and other related documents. For the CY 2021 PFS proposed rule, refer to item CMS–1734–P. Readers with questions related to accessing any of the Addenda or other supporting documents referenced in this proposed rule and posted on the CMS website identified above should contact Jamie Hermansen at (410) 786–2064.

I. Executive Summary

A. Purpose

This major proposed rule proposes to revise payment policies under the Medicare PFS and makes other policy changes, including proposals to implement certain provisions of the Bipartisan Budget Act of 2018 (BBA of 2018) (Pub. L. 115–123, February 9,

2018) and the Substance Use-Disorder Prevention that Promotes Opioid Recovery and Treatment (SUPPORT) for Patients and Communities Act (the SUPPORT Act) (Pub. L. 115–271, October 24, 2018), related to Medicare Part B payment. In addition, this proposed rule includes provisions related to other payment policy changes that are addressed in section III. of this proposed rule.

1. Summary of the Major Provisions

The statute requires us to establish payments under the PFS based on national uniform relative value units (RVUs) that account for the relative resources used in furnishing a service. The statute requires that RVUs be established for three categories of resources: Work; practice expense (PE); and malpractice (MP) expense. In addition, the statute requires that we establish by regulation each year’s payment amounts for all physicians’ services paid under the PFS, incorporating geographic adjustments to reflect the variations in the costs of furnishing services in different geographic areas.

In this major proposed rule, we are proposing to establish RVUs for CY 2021 for the PFS to ensure that our payment systems are updated to reflect changes in medical practice and the relative value of services, as well as changes in the statute. This proposed rule also includes discussions and provisions regarding several other Medicare Part B payment policies.

Specifically, this proposed rule addresses:

- Practice Expense RVUs (section II.B.)
- Potentially Misvalued Services Under the PFS (section II.C.)
- Telehealth and Other Services Involving Communications Technology (section II.D.)
- Care Management Services and Remote Physiologic Monitoring Services (section II.E.)
- Refinements to Values for Certain Services to Reflect Revisions to Payment for Office/Outpatient Evaluation and Management (E/M) Visits and Promote Payment Stability during the COVID–19 Pandemic (section II.F.)
- Scopes of Practice and Related Issues (section II.G.)
- Valuation of Specific Codes (section II.H.)
- Modifications related to Medicare Coverage for Opioid Use Disorder (OUD) Services Furnished by Opioid Treatment Programs (OTPs) (section II.I.)
- Clinical Laboratory Fee Schedule: Revised Data Reporting Period and

Phase-in of Payment Reductions, and a Comment Solicitation on Payment for Specimen Collection for Covid-19 Tests (section III.A.)

- Opioid Treatment Program Provider Enrollment Regulation Updates for Institutional Claim Submissions (section III.B.)
- Payment for Primary Care Management Services in RHCs and FQHCs (section III.C.)
- Changes to the Federally Qualified Health Center Prospective Payment System (FQHC PPS) for CY 2021: Proposed Rebasing and Revising of the FQHC Market Basket (section III.D.)
- Comprehensive Screenings for Seniors: Section 2002 of the Substance Use-Disorder Prevention that Promote Opioid Recovery and Treatment for Patients and Communities Act (SUPPORT Act) (section III.E.)
- Medicaid Promoting Interoperability Program Requirements for Eligible Professionals (EPs) (section III.F.)
- Medicare Shared Savings Program (section III.G.)
- Notification of Infusion Therapy Options Available Prior to Furnishing Home Infusion Therapy Services (section III.H.)
- Modifications to Quality Reporting Requirements and Comment Solicitation on Modifications to the Extreme and Uncontrollable Circumstances Policy for Performance Year 2020 (section III.I.)
- Proposal to Remove Selected National Coverage Determinations (section III.J.)
- Requirement for Electronic Prescribing for Controlled Substances for a Covered Part D drug under a prescription drug plan or an MA–PD plan (section III.K.)
- Medicare Part B Drug Payment for Drugs Approved Through the Pathway Established Under Section 505(b)(2) of the Food, Drug, and Cosmetic Act (section III.L.)
- Updates to Certified Electronic Health Record Technology due to the 21st Century Cures Act Final Rule (section III.M.)
- Proposal to Establish New Code Categories (section III.N.)
- Medicare Diabetes Prevention Program (MDPP) expanded model Emergency Policy (section III.O.)
- CY 2021 Updates to the Quality Payment Program (section IV.)
- Planned 30-day Delayed Effective Date for the Final Rule (section V.)
- Collection of Information Requirements (section VI.)
- Response to Comments (section VII.)
- Regulatory Impact Analysis (section VIII.)

2. Summary of Costs and Benefits

We have determined that this proposed rule is economically significant. For a detailed discussion of the economic impacts, *see* section VIII. of this proposed rule.

3. Waiver of the 60-Day Delayed Effective Date for the Final Rule

The United States is responding to an outbreak of respiratory disease caused by a novel (new) coronavirus that has now been detected in more than 190 locations internationally, including in all 50 States and the District of Columbia. The virus has been named “SARS CoV 2” and the disease it causes has been named “Coronavirus disease 2019” (abbreviated “COVID–19”).

Due to the significant devotion of resources to the COVID–19 response, as discussed in section V. of the preamble of this proposed rule, we are hereby waiving the 60-day delay in the effective date of the final rule, and replacing it with a 30-day delay in the effective date of the final rule.

II. Provisions of the Proposed Rule for the PFS

A. Background

Since January 1, 1992, Medicare has paid for physicians’ services under section 1848 of the Act, “Payment for Physicians’ Services.” The PFS relies on national relative values that are established for work, practice expense (PE), and malpractice (MP), which are adjusted for geographic cost variations. These values are multiplied by a conversion factor (CF) to convert the relative value units (RVUs) into payment rates. The concepts and methodology underlying the PFS were enacted as part of the Omnibus Budget Reconciliation Act of 1989 (Pub. L. 101–239, enacted on December 19, 1989) (OBRA ’89), and the Omnibus Budget Reconciliation Act of 1990 (Pub. L. 101–508, enacted on November 5, 1990) (OBRA ’90). The final rule published in the November 25, 1991 **Federal Register** (56 FR 59502) set forth the first fee schedule used for payment for physicians’ services.

We note that throughout this proposed rule, unless otherwise noted, the term “practitioner” is used to describe both physicians and nonphysician practitioners (NPPs) who are permitted to bill Medicare under the PFS for the services they furnish to Medicare beneficiaries.

1. Development of the RVUs

a. Work RVUs

The work RVUs established for the initial fee schedule, which was

implemented on January 1, 1992, were developed with extensive input from the physician community. A research team at the Harvard School of Public Health developed the original work RVUs for most codes under a cooperative agreement with the Department of Health and Human Services (HHS). In constructing the code-specific vignettes used in determining the original physician work RVUs, Harvard worked with panels of experts, both inside and outside the federal government, and obtained input from numerous physician specialty groups.

As specified in section 1848(c)(1)(A) of the Act, the work component of physicians’ services means the portion of the resources used in furnishing the service that reflects physician time and intensity. We establish work RVUs for new, revised and potentially misvalued codes based on our review of information that generally includes, but is not limited to, recommendations received from the American Medical Association/Specialty Society Relative Value Scale Update Committee (RUC), the Health Care Professionals Advisory Committee (HCPAC), the Medicare Payment Advisory Commission (MedPAC), and other public commenters; medical literature and comparative databases; as well as a comparison of the work for other codes within the Medicare PFS, and consultation with other physicians and health care professionals within CMS and the federal government. We also assess the methodology and data used to develop the recommendations submitted to us by the RUC and other public commenters, and the rationale for their recommendations. In the CY 2011 PFS final rule with comment period (75 FR 73328 through 73329), we discussed a variety of methodologies and approaches used to develop work RVUs, including survey data, building blocks, crosswalk to key reference or similar codes, and magnitude estimation. More information on these issues is available in that rule.

b. Practice Expense RVUs

Initially, only the work RVUs were resource-based, and the PE and MP RVUs were based on average allowable charges. Section 121 of the Social Security Act Amendments of 1994 (Pub. L. 103–432, enacted on October 31, 1994), amended by section 1848(c)(2)(C)(ii) of the Act and required us to develop resource-based PE RVUs for each physicians’ service beginning in 1998. We were required to consider general categories of expenses (such as office rent and wages of personnel, but

excluding MP expenses) comprising PEs. The PE RVUs continue to represent the portion of these resources involved in furnishing PFS services.

Originally, the resource-based method was to be used beginning in 1998, but section 4505(a) of the Balanced Budget Act of 1997 (Pub. L. 105–33, enacted on August 5, 1997) (BBA ’97) delayed implementation of the resource-based PE RVU system until January 1, 1999. In addition, section 4505(b) of the BBA ’97 provided for a 4-year transition period from the charge-based PE RVUs to the resource-based PE RVUs.

We established the resource-based PE RVUs for each physicians’ service in the November 2, 1998 final rule (63 FR 58814), effective for services furnished in CY 1999. Based on the requirement to transition to a resource-based system for PE over a 4-year period, payment rates were not fully based upon resource-based PE RVUs until CY 2002. This resource-based system was based on two significant sources of actual PE data: The Clinical Practice Expert Panel (CPEP) data; and the AMA’s Socioeconomic Monitoring System (SMS) data. These data sources are described in greater detail in the CY 2012 PFS final rule with comment period (76 FR 73033).

Separate PE RVUs are established for services furnished in facility settings, such as a hospital outpatient department (HOPD) or an ambulatory surgical center (ASC), and in nonfacility settings, such as a physician’s office. The nonfacility RVUs reflect all of the direct and indirect PEs involved in furnishing a service described by a particular HCPCS code. The difference, if any, in these PE RVUs generally results in a higher payment in the nonfacility setting because in the facility settings some resource costs are borne by the facility. Medicare’s payment to the facility (such as the outpatient prospective payment system (OPPS) payment to the HOPD) would reflect costs typically incurred by the facility. Thus, payment associated with those specific facility resource costs is not made under the PFS.

Section 212 of the Balanced Budget Refinement Act of 1999 (Pub. L. 106–113, enacted on November 29, 1999) (BBRA) directed the Secretary of Health and Human Services (the Secretary) to establish a process under which we accept and use, to the maximum extent practicable and consistent with sound data practices, data collected or developed by entities and organizations to supplement the data we normally collect in determining the PE component. On May 3, 2000, we published the interim final rule (65 FR

25664) that set forth the criteria for the submission of these supplemental PE survey data. The criteria were modified in response to comments received, and published in the **Federal Register** (65 FR 65376) as part of a November 1, 2000 final rule. The PFS final rules published in 2001 and 2003, respectively, (66 FR 55246 and 68 FR 63196) extended the period during which we would accept these supplemental data through March 1, 2005.

In the CY 2007 PFS final rule with comment period (71 FR 69624), we revised the methodology for calculating direct PE RVUs from the top-down to the bottom-up methodology beginning in CY 2007. We adopted a 4-year transition to the new PE RVUs. This transition was completed for CY 2010. In the CY 2010 PFS final rule with comment period, we updated the practice expense per hour (PE/HR) data that are used in the calculation of PE RVUs for most specialties (74 FR 61749). In CY 2010, we began a 4-year transition to the new PE RVUs using the updated PE/HR data, which was completed for CY 2013.

c. Malpractice RVUs

Section 4505(f) of the BBA '97 amended section 1848(c) of the Act to require that we implement resource-based MP RVUs for services furnished on or after CY 2000. The resource-based MP RVUs were implemented in the PFS final rule with comment period published November 2, 1999 (64 FR 59380). The MP RVUs are based on commercial and physician-owned insurers' MP insurance premium data from all the states, the District of Columbia, and Puerto Rico.

d. Refinements to the RVUs

Section 1848(c)(2)(B)(i) of the Act requires that we review RVUs no less often than every 5 years. Prior to CY 2013, we conducted periodic reviews of work RVUs and PE RVUs independently. We completed 5-year reviews of work RVUs that were effective for calendar years 1997, 2002, 2007, and 2012.

Although refinements to the direct PE inputs initially relied heavily on input from the RUC Practice Expense Advisory Committee (PEAC), the shifts to the bottom-up PE methodology in CY 2007 and to the use of the updated PE/HR data in CY 2010 have resulted in significant refinements to the PE RVUs in recent years.

In the CY 2012 PFS final rule with comment period (76 FR 73057), we finalized a proposal to consolidate reviews of work and PE RVUs under section 1848(c)(2)(B) of the Act and

reviews of potentially misvalued codes under section 1848(c)(2)(K) of the Act into one annual process.

In addition to the 5-year reviews, beginning for CY 2009, CMS and the RUC identified and reviewed a number of potentially misvalued codes on an annual basis based on various identification screens. This annual review of work and PE RVUs for potentially misvalued codes was supplemented by the amendments to section 1848 of the Act, as enacted by section 3134 of the Affordable Care Act, that require the agency to periodically identify, review and adjust values for potentially misvalued codes.

e. Application of Budget Neutrality to Adjustments of RVUs

As described in section VII. of this proposed rule, the Regulatory Impact Analysis, in accordance with section 1848(c)(2)(B)(ii)(II) of the Act, if revisions to the RVUs cause expenditures for the year to change by more than \$20 million, we make adjustments to ensure that expenditures do not increase or decrease by more than \$20 million.

2. Calculation of Payments Based on RVUs

To calculate the payment for each service, the components of the fee schedule (work, PE, and MP RVUs) are adjusted by geographic practice cost indices (GPCIs) to reflect the variations in the costs of furnishing the services. The GPCIs reflect the relative costs of work, PE, and MP in an area compared to the national average costs for each component. Please refer to the CY 2020 PFS final rule for a discussion of the last GPCI update (84 FR 62615 through 62623).

RVUs are converted to dollar amounts through the application of a CF, which is calculated based on a statutory formula by CMS' Office of the Actuary (OACT). The formula for calculating the Medicare PFS payment amount for a given service and fee schedule area can be expressed as:

$$\text{Payment} = [(\text{RVU work} \times \text{GPCI work}) + (\text{RVU PE} \times \text{GPCI PE}) + (\text{RVU MP} \times \text{GPCI MP})] \times \text{CF}$$

3. Separate Fee Schedule Methodology for Anesthesia Services

Section 1848(b)(2)(B) of the Act specifies that the fee schedule amounts for anesthesia services are to be based on a uniform relative value guide, with appropriate adjustment of an anesthesia CF, in a manner to ensure that fee schedule amounts for anesthesia services are consistent with those for other services of comparable value.

Therefore, there is a separate fee schedule methodology for anesthesia services. Specifically, we establish a separate CF for anesthesia services and we utilize the uniform relative value guide, or base units, as well as time units, to calculate the fee schedule amounts for anesthesia services. Since anesthesia services are not valued using RVUs, a separate methodology for locality adjustments is also necessary. This involves an adjustment to the national anesthesia CF for each payment locality.

B. Determination of PE RVUs

1. Overview

Practice expense (PE) is the portion of the resources used in furnishing a service that reflects the general categories of physician and practitioner expenses, such as office rent and personnel wages, but excluding MP expenses, as specified in section 1848(c)(1)(B) of the Act. As required by section 1848(c)(2)(C)(ii) of the Act, we use a resource-based system for determining PE RVUs for each physicians' service. We develop PE RVUs by considering the direct and indirect practice resources involved in furnishing each service. Direct expense categories include clinical labor, medical supplies, and medical equipment. Indirect expenses include administrative labor, office expense, and all other expenses. The sections that follow provide more detailed information about the methodology for translating the resources involved in furnishing each service into service-specific PE RVUs. We refer readers to the CY 2010 PFS final rule with comment period (74 FR 61743 through 61748) for a more detailed explanation of the PE methodology.

2. Practice Expense Methodology

a. Direct Practice Expense

We determine the direct PE for a specific service by adding the costs of the direct resources (that is, the clinical staff, medical supplies, and medical equipment) typically involved with furnishing that service. The costs of the resources are calculated using the refined direct PE inputs assigned to each CPT code in our PE database, which are generally based on our review of recommendations received from the RUC and those provided in response to public comment periods. For a detailed explanation of the direct PE methodology, including examples, we refer readers to the 5-year review of work relative value units under the PFS and proposed changes to the PE methodology CY 2007 PFS proposed

notice (71 FR 37242) and the CY 2007 PFS final rule with comment period (71 FR 69629).

b. Indirect Practice Expense per Hour Data

We use survey data on indirect PEs incurred per hour worked, in developing the indirect portion of the PE RVUs. Prior to CY 2010, we primarily used the PE/HR by specialty that was obtained from the AMA's SMS. The AMA administered a new survey in CY 2007 and CY 2008, the Physician Practice Expense Information Survey (PPIS). The PPIS is a multispecialty, nationally representative, PE survey of both physicians and NPPs paid under the PFS using a survey instrument and methods highly consistent with those used for the SMS and the supplemental surveys. The PPIS gathered information from 3,656 respondents across 51 physician specialty and health care professional groups. We believe the PPIS is the most comprehensive source of PE survey information available. We used the PPIS data to update the PE/HR data for the CY 2010 PFS for almost all of the Medicare-recognized specialties that participated in the survey.

When we began using the PPIS data in CY 2010, we did not change the PE RVU methodology itself or the manner in which the PE/HR data are used in that methodology. We only updated the PE/HR data based on the new survey. Furthermore, as we explained in the CY 2010 PFS final rule with comment period (74 FR 61751), because of the magnitude of payment reductions for some specialties resulting from the use of the PPIS data, we transitioned its use over a 4-year period from the previous PE RVUs to the PE RVUs developed using the new PPIS data. As provided in the CY 2010 PFS final rule with comment period (74 FR 61751), the transition to the PPIS data was complete for CY 2013. Therefore, PE RVUs from CY 2013 forward are developed based entirely on the PPIS data, except as noted in this section.

Section 1848(c)(2)(H)(i) of the Act requires us to use the medical oncology supplemental survey data submitted in 2003 for oncology drug administration services. Therefore, the PE/HR for medical oncology, hematology, and hematology/oncology reflects the continued use of these supplemental survey data.

Supplemental survey data on independent labs from the College of American Pathologists were implemented for payments beginning in CY 2005. Supplemental survey data from the National Coalition of Quality Diagnostic Imaging Services (NCQDIS),

representing independent diagnostic testing facilities (IDTFs), were blended with supplementary survey data from the American College of Radiology (ACR) and implemented for payments beginning in CY 2007. Neither IDTFs, nor independent labs, participated in the PPIS. Therefore, we continue to use the PE/HR that was developed from their supplemental survey data.

Consistent with our past practice, the previous indirect PE/HR values from the supplemental surveys for these specialties were updated to CY 2006 using the Medicare Economic Index (MEI) to put them on a comparable basis with the PPIS data.

We also do not use the PPIS data for reproductive endocrinology and spine surgery since these specialties currently are not separately recognized by Medicare, nor do we have a method to blend the PPIS data with Medicare-recognized specialty data.

Previously, we established PE/HR values for various specialties without SMS or supplemental survey data by crosswalking them to other similar specialties to estimate a proxy PE/HR. For specialties that were part of the PPIS for which we previously used a crosswalked PE/HR, we instead used the PPIS-based PE/HR. We use crosswalks for specialties that did not participate in the PPIS. These crosswalks have been generally established through notice and comment rulemaking and are available in the file titled "CY 2021 PFS Proposed Rule PE/HR" on the CMS website under downloads for the CY 2021 PFS proposed rule at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html>.

As noted above, we have established PE/HR values for various specialties without SMS or PPIS survey data by crosswalking them to other similar specialties to estimate a proxy PE/HR. On this note, stakeholders have raised concerns regarding the appropriate specialty crosswalk used for home PT/INR monitoring services. These services are currently classified under the independent diagnostic testing facilities specialty for PE/HR purposes, due to a lack of survey data for these services, and stakeholders have suggested to CMS that this specialty does not reflect the indirect costs associated with furnishing these services. Stakeholders have raised concerns that the practice pattern of PT/INR monitoring services are markedly different from that of the dominant parent specialty as most of the services are furnished remotely and require long-term relationship with beneficiaries similar to chronic therapy. Stakeholders also stated that this is a unique request

due to the lack of home PT/INR monitoring supplier involvement in the last PPIS, and that payments for these services are derived from previously used supplemental survey data from the Association for Quality Imaging (AQI), blended with supplementary survey data from the American College of Radiology (ACR)—neither of which reflect indirect cost inputs for home PT/INR monitoring.

Therefore, we are soliciting comment from the public regarding the most accurate specialty crosswalk to use for indirect PE when it comes to home PT/INR monitoring services. We are seeking information on any additional costs associated with these services that are not reflected in our currently assigned PE/HR for independent diagnostic testing facilities, as well as which specialties would best capture these costs through the use of a crosswalk.

c. Allocation of PE to Services

To establish PE RVUs for specific services, it is necessary to establish the direct and indirect PE associated with each service.

(1) Direct Costs

The relative relationship between the direct cost portions of the PE RVUs for any two services is determined by the relative relationship between the sum of the direct cost resources (that is, the clinical staff, medical supplies, and medical equipment) typically involved with furnishing each of the services. The costs of these resources are calculated from the refined direct PE inputs in our PE database. For example, if one service has a direct cost sum of \$400 from our PE database and another service has a direct cost sum of \$200, the direct portion of the PE RVUs of the first service would be twice as much as the direct portion of the PE RVUs for the second service.

(2) Indirect Costs

We allocate the indirect costs at the code level on the basis of the direct costs specifically associated with a code and the greater of either the clinical labor costs or the work RVUs. We also incorporate the survey data described earlier in the PE/HR discussion. The general approach to developing the indirect portion of the PE RVUs is as follows:

- For a given service, we use the direct portion of the PE RVUs calculated as previously described and the average percentage that direct costs represent of total costs (based on survey data) across the specialties that furnish the service to determine an initial indirect allocator. That is, the initial indirect allocator is

calculated so that the direct costs equal the average percentage of direct costs of those specialties furnishing the service. For example, if the direct portion of the PE RVUs for a given service is 2.00 and direct costs, on average, represent 25 percent of total costs for the specialties that furnish the service, the initial indirect allocator would be calculated so that it equals 75 percent of the total PE RVUs. Thus, in this example, the initial indirect allocator would equal 6.00, resulting in a total PE RVU of 8.00 (2.00 is 25 percent of 8.00 and 6.00 is 75 percent of 8.00).

- Next, we add the greater of the work RVUs or clinical labor portion of the direct portion of the PE RVUs to this initial indirect allocator. In our example, if this service had a work RVU of 4.00 and the clinical labor portion of the direct PE RVU was 1.50, we would add 4.00 (since the 4.00 work RVUs are greater than the 1.50 clinical labor portion) to the initial indirect allocator of 6.00 to get an indirect allocator of 10.00. In the absence of any further use of the survey data, the relative relationship between the indirect cost portions of the PE RVUs for any two services would be determined by the relative relationship between these indirect cost allocators. For example, if one service had an indirect cost allocator of 10.00 and another service had an indirect cost allocator of 5.00, the indirect portion of the PE RVUs of the first service would be twice as great as the indirect portion of the PE RVUs for the second service.

- Then, we incorporate the specialty-specific indirect PE/HR data into the calculation. In our example, if, based on the survey data, the average indirect cost of the specialties furnishing the first service with an allocator of 10.00 was half of the average indirect cost of the specialties furnishing the second service with an indirect allocator of 5.00, the indirect portion of the PE RVUs of the first service would be equal to that of the second service.

(3) Facility and Nonfacility Costs

For procedures that can be furnished in a physician's office, as well as in a facility setting, where Medicare makes a separate payment to the facility for its costs in furnishing a service, we establish two PE RVUs: Facility and nonfacility. The methodology for calculating PE RVUs is the same for both the facility and nonfacility RVUs, but is applied independently to yield two separate PE RVUs. In calculating the PE RVUs for services furnished in a facility, we do not include resources that would generally not be provided by physicians when furnishing the service.

For this reason, the facility PE RVUs are generally lower than the nonfacility PE RVUs.

(4) Services With Technical Components and Professional Components

Diagnostic services are generally comprised of two components: A professional component (PC); and a technical component (TC). The PC and TC may be furnished independently or by different providers, or they may be furnished together as a global service. When services have separately billable PC and TC components, the payment for the global service equals the sum of the payment for the TC and PC. To achieve this, we use a weighted average of the ratio of indirect to direct costs across all the specialties that furnish the global service, TCs, and PCs; that is, we apply the same weighted average indirect percentage factor to allocate indirect expenses to the global service, PCs, and TCs for a service. (The direct PE RVUs for the TC and PC sum to the global.)

(5) PE RVU Methodology

For a more detailed description of the PE RVU methodology, we refer readers to the CY 2010 PFS final rule with comment period (74 FR 61745 through 61746). We also direct readers to the file titled "Calculation of PE RVUs under Methodology for Selected Codes" which is available on our website under downloads for the CY 2021 PFS proposed rule at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html>. This file contains a table that illustrates the calculation of PE RVUs as described in this proposed rule for individual codes.

(a) Setup File

First, we create a setup file for the PE methodology. The setup file contains the direct cost inputs, the utilization for each procedure code at the specialty and facility/nonfacility place of service level, and the specialty-specific PE/HR data calculated from the surveys.

(b) Calculate the Direct Cost PE RVUs

Sum the costs of each direct input.

Step 1: Sum the direct costs of the inputs for each service.

Step 2: Calculate the aggregate pool of direct PE costs for the current year. We set the aggregate pool of PE costs equal to the product of the ratio of the current aggregate PE RVUs to current aggregate work RVUs and the projected aggregate work RVUs.

Step 3: Calculate the aggregate pool of direct PE costs for use in ratesetting. This is the product of the aggregate

direct costs for all services from Step 1 and the utilization data for that service.

Step 4: Using the results of Step 2 and Step 3, use the CF to calculate a direct PE scaling adjustment to ensure that the aggregate pool of direct PE costs calculated in Step 3 does not vary from the aggregate pool of direct PE costs for the current year. Apply the scaling adjustment to the direct costs for each service (as calculated in Step 1).

Step 5: Convert the results of Step 4 to a RVU scale for each service. To do this, divide the results of Step 4 by the CF. Note that the actual value of the CF used in this calculation does not influence the final direct cost PE RVUs as long as the same CF is used in Step 4 and Step 5. Different CFs would result in different direct PE scaling adjustments, but this has no effect on the final direct cost PE RVUs since changes in the CFs and changes in the associated direct scaling adjustments offset one another.

(c) Create the Indirect Cost PE RVUs

Create indirect allocators.

Step 6: Based on the survey data, calculate direct and indirect PE percentages for each physician specialty.

Step 7: Calculate direct and indirect PE percentages at the service level by taking a weighted average of the results of Step 6 for the specialties that furnish the service. Note that for services with TCs and PCs, the direct and indirect percentages for a given service do not vary by the PC, TC, and global service.

We generally use an average of the 3 most recent years of available Medicare claims data to determine the specialty mix assigned to each code. Codes with low Medicare service volume require special attention since billing or enrollment irregularities for a given year can result in significant changes in specialty mix assignment. We finalized a policy in the CY 2018 PFS final rule (82 FR 52982 through 52983) to use the most recent year of claims data to determine which codes are low volume for the coming year (those that have fewer than 100 allowed services in the Medicare claims data). For codes that fall into this category, instead of assigning specialty mix based on the specialties of the practitioners reporting the services in the claims data, we instead use the expected specialty that we identify on a list developed based on medical review and input from expert stakeholders. We display this list of expected specialty assignments as part of the annual set of data files we make available as part of notice and comment rulemaking and consider recommendations from the RUC and

other stakeholders on changes to this list on an annual basis. Services for which the specialty is automatically assigned based on previously finalized policies under our established methodology (for example, “always therapy” services) are unaffected by the list of expected specialty assignments. We also finalized in the CY 2018 PFS final rule (82 FR 52982 through 59283) a policy to apply these service-level overrides for both PE and MP, rather than one or the other category.

Step 8: Calculate the service level allocators for the indirect PEs based on the percentages calculated in Step 7. The indirect PEs are allocated based on the three components: The direct PE RVUs; the clinical labor PE RVUs; and the work RVUs.

For most services the indirect allocator is: Indirect PE percentage * (direct PE RVUs/direct percentage) + work RVUs.

There are two situations where this formula is modified:

- If the service is a global service (that is, a service with global, professional, and technical components), then the indirect PE allocator is: Indirect percentage (direct PE RVUs/direct percentage) + clinical labor PE RVUs + work RVUs.

- If the clinical labor PE RVUs exceed the work RVUs (and the service is not a global service), then the indirect allocator is: Indirect PE percentage (direct PE RVUs/direct percentage) + clinical labor PE RVUs.

(*Note:* For global services, the indirect PE allocator is based on both the work RVUs and the clinical labor PE RVUs. We do this to recognize that, for the PC service, indirect PEs would be allocated using the work RVUs, and for the TC service, indirect PEs would be allocated using the direct PE RVUs and the clinical labor PE RVUs. This also allows the global component RVUs to equal the sum of the PC and TC RVUs.)

For presentation purposes, in the examples in the download file titled “Calculation of PE RVUs under Methodology for Selected Codes”, the formulas were divided into two parts for each service.

- The first part does not vary by service and is the indirect percentage (direct PE RVUs/direct percentage).
- The second part is either the work RVU, clinical labor PE RVU, or both depending on whether the service is a global service and whether the clinical PE RVUs exceed the work RVUs (as described earlier in this step).

Apply a scaling adjustment to the indirect allocators.

Step 9: Calculate the current aggregate pool of indirect PE RVUs by multiplying the result of step 8 by the average indirect PE percentage from the survey data.

Step 10: Calculate an aggregate pool of indirect PE RVUs for all PFS services by adding the product of the indirect PE allocators for a service from Step 8 and the utilization data for that service.

Step 11: Using the results of Step 9 and Step 10, calculate an indirect PE adjustment so that the aggregate indirect allocation does not exceed the available aggregate indirect PE RVUs and apply it to indirect allocators calculated in Step 8.

Calculate the indirect practice cost index.

Step 12: Using the results of Step 11, calculate aggregate pools of specialty-specific adjusted indirect PE allocators for all PFS services for a specialty by adding the product of the adjusted indirect PE allocator for each service and the utilization data for that service.

Step 13: Using the specialty-specific indirect PE/HR data, calculate specialty-specific aggregate pools of indirect PE for all PFS services for that specialty by adding the product of the indirect PE/HR for the specialty, the work time for the service, and the specialty’s utilization for the service across all services furnished by the specialty.

Step 14: Using the results of Step 12 and Step 13, calculate the specialty-specific indirect PE scaling factors.

Step 15: Using the results of Step 14, calculate an indirect practice cost index at the specialty level by dividing each specialty-specific indirect scaling factor by the average indirect scaling factor for the entire PFS.

Step 16: Calculate the indirect practice cost index at the service level to ensure the capture of all indirect costs. Calculate a weighted average of the practice cost index values for the specialties that furnish the service.

(*Note:* For services with TCs and PCs, we calculate the indirect practice cost index across the global service, PCs, and TCs. Under this method, the indirect practice cost index for a given service (for example, echocardiogram) does not vary by the PC, TC, and global service.)

Step 17: Apply the service level indirect practice cost index calculated in Step 16 to the service level adjusted indirect allocators calculated in Step 11 to get the indirect PE RVUs.

(d) Calculate the Final PE RVUs

Step 18: Add the direct PE RVUs from Step 5 to the indirect PE RVUs from

Step 17 and apply the final PE budget neutrality (BN) adjustment. The final PE BN adjustment is calculated by comparing the sum of steps 5 and 17 to the proposed aggregate work RVUs scaled by the ratio of current aggregate PE and work RVUs. This adjustment ensures that all PE RVUs in the PFS account for the fact that certain specialties are excluded from the calculation of PE RVUs but included in maintaining overall PFS budget neutrality. (See “Specialties excluded from ratesetting calculation” later in this proposed rule.)

Step 19: Apply the phase-in of significant RVU reductions and its associated adjustment. Section 1848(c)(7) of the Act specifies that for services that are not new or revised codes, if the total RVUs for a service for a year would otherwise be decreased by an estimated 20 percent or more as compared to the total RVUs for the previous year, the applicable adjustments in work, PE, and MP RVUs shall be phased in over a 2-year period. In implementing the phase-in, we consider a 19 percent reduction for any service not described by a new or revised code. This approach limits the year one reduction for the service to the maximum allowed amount (that is, 19 percent), and then phases in the remainder of the reduction. To comply with section 1848(c)(7) of the Act, we adjust the PE RVUs to ensure that the total RVUs for all services that are not new or revised codes decrease by no more than 19 percent, and then apply a relativity adjustment to ensure that the total pool of aggregate PE RVUs remains relative to the pool of work and MP RVUs. For a more detailed description of the methodology for the phase-in of significant RVU changes, we refer readers to the CY 2016 PFS final rule with comment period (80 FR 70927 through 70931).

(e) Setup File Information

- *Specialties excluded from ratesetting calculation:* For the purposes of calculating the PE and MP RVUs, we exclude certain specialties, such as certain NPPs paid at a percentage of the PFS and low-volume specialties, from the calculation. These specialties are included for the purposes of calculating the BN adjustment. They are displayed in Table 1.

BILLING CODE 4120-01-P

TABLE 1: Specialties Excluded from Ratesetting Calculation

Specialty Code	Specialty Description
49	Ambulatory surgical center
50	Nurse practitioner
51	Medical supply company with certified orthotist
52	Medical supply company with certified prosthetist
53	Medical supply company with certified prosthetist-orthotist
54	Medical supply company not included in 51, 52, or 53.
55	Individual certified orthotist
56	Individual certified prosthetist
57	Individual certified prosthetist-orthotist
58	Medical supply company with registered pharmacist
59	Ambulance service supplier, e.g., private ambulance companies, funeral homes, etc.
60	Public health or welfare agencies
61	Voluntary health or charitable agencies
73	Mass immunization roster biller
74	Radiation therapy centers
87	All other suppliers (e.g., drug and department stores)
88	Unknown supplier/provider specialty
89	Certified clinical nurse specialist
96	Optician
97	Physician assistant
A0	Hospital
A1	SNF
A2	Intermediate care nursing facility
A3	Nursing facility, other
A4	HHA
A5	Pharmacy
A6	Medical supply company with respiratory therapist
A7	Department store
A8	Grocery store
B1	Supplier of oxygen and/or oxygen related equipment (eff. 10/2/2007)
B2	Pedorthic personnel
B3	Medical supply company with pedorthic personnel
B4	Rehabilitation Agency
B5	Ocularist
C1	Centralized Flu
C2	Indirect Payment Procedure
C5	Dentistry

BILLING CODE 4120-01-C

- *Crosswalk certain low volume physician specialties:* Crosswalk the utilization of certain specialties with relatively low PFS utilization to the associated specialties.
- *Physical therapy utilization:* Crosswalk the utilization associated with all physical therapy services to the specialty of physical therapy.
- *Identify professional and technical services not identified under the usual TC and 26 modifiers:* Flag the services that are PC and TC services but do not use TC and 26 modifiers (for example, electrocardiograms). This flag associates the PC and TC with the associated global code for use in creating the

indirect PE RVUs. For example, the professional service, CPT code 93010 (Electrocardiogram, routine ECG with at least 12 leads; interpretation and report only), is associated with the global service, CPT code 93000 (Electrocardiogram, routine ECG with at least 12 leads; with interpretation and report).

- *Payment modifiers:* Payment modifiers are accounted for in the creation of the file consistent with current payment policy as implemented in claims processing. For example, services billed with the assistant at surgery modifier are paid 16 percent of the PFS amount for that service; therefore, the utilization file is modified

to only account for 16 percent of any service that contains the assistant at surgery modifier. Similarly, for those services to which volume adjustments are made to account for the payment modifiers, time adjustments are applied as well. For time adjustments to surgical services, the intraoperative portion in the work time file is used; where it is not present, the intraoperative percentage from the payment files used by contractors to process Medicare claims is used instead. Where neither is available, we use the payment adjustment ratio to adjust the time accordingly. Table 2 details the manner in which the modifiers are applied.

TABLE 2: Application of Payment Modifiers to Utilization Files

Modifier	Description	Volume Adjustment	Time Adjustment
80,81,82	Assistant at Surgery	16%	Intraoperative portion
AS	Assistant at Surgery – Physician Assistant	14% (85% * 16%)	Intraoperative portion
50 or LT and RT	Bilateral Surgery	150%	150% of work time
51	Multiple Procedure	50%	Intraoperative portion
52	Reduced Services	50%	50%
53	Discontinued Procedure	50%	50%
54	Intraoperative Care only	Preoperative + Intraoperative Percentages on the payment files used by Medicare contractors to process Medicare claims	Preoperative + Intraoperative portion
55	Postoperative Care only	Postoperative Percentage on the payment files used by Medicare contractors to process Medicare claims	Postoperative portion
62	Co-surgeons	62.5%	50%
66	Team Surgeons	33%	33%

We also make adjustments to volume and time that correspond to other payment rules, including special multiple procedure endoscopy rules and multiple procedure payment reductions (MPPRs). We note that section 1848(c)(2)(B)(v) of the Act exempts certain reduced payments for multiple imaging procedures and multiple therapy services from the BN calculation under section 1848(c)(2)(B)(ii)(II) of the Act. These MPPRs are not included in the development of the RVUs.

For anesthesia services, we do not apply adjustments to volume since we use the average allowed charge when simulating RVUs; therefore, the RVUs as calculated already reflect the payments as adjusted by modifiers, and no volume adjustments are necessary. However, a time adjustment of 33 percent is made only for medical direction of two to four cases since that is the only situation where a single practitioner is involved with multiple beneficiaries concurrently, so that counting each service without regard to the overlap with other services would overstate the amount of time spent by the practitioner furnishing these services.

- **Work RVUs:** The setup file contains the work RVUs from this proposed rule.

(6) Equipment Cost per Minute

The equipment cost per minute is calculated as:

$$(1/(\text{minutes per year} * \text{usage})) * \text{price} * ((\text{interest rate}/(1-(1/((1 + \text{interest rate})^{\wedge} \text{life of equipment})))) + \text{maintenance})$$

Where:

minutes per year = maximum minutes per year if usage were continuous (that is, usage = 1); generally 150,000 minutes.
usage = variable, *see* discussion below in this proposed rule.

price = price of the particular piece of equipment.

life of equipment = useful life of the particular piece of equipment.

maintenance = factor for maintenance; 0.05.

interest rate = variable, *see* discussion below in this proposed rule.

Usage: We currently use an equipment utilization rate assumption of 50 percent for most equipment, with the exception of expensive diagnostic imaging equipment, for which we use a 90 percent assumption as required by section 1848(b)(4)(C) of the Act.

Useful Life: In the CY 2005 PFS final rule we stated that we updated the useful life for equipment items primarily based on the AHA's "Estimated Useful Lives of Depreciable Hospital Assets" guidelines (69 FR

66246). The most recent edition of these guidelines was published in 2018. This reference material provides an estimated useful life for hundreds of different types of equipment, the vast majority of which fall in the range of 5 to 10 years, and none of which are lower than 2 years in duration. We believe that the updated editions of this reference material remain the most accurate source for estimating the useful life of depreciable medical equipment.

We note that stakeholders including the RUC, specialty societies, and other commenters suggested a useful life of less than 1 year for several of the new equipment items for CY 2021, and as low as three months in one case. We have rarely, if ever, received requests for equipment useful life of less than one year in duration and note that these very short useful life durations are significantly lower than anything in our current equipment database, and if finalized would represent major outliers when compared to the rest of the equipment. Table 3 details the distribution of useful life durations of the equipment currently in our database:

TABLE 3: Equipment Life Durations

Useful Life Duration	Number of Equipment Codes	Percentage of Total
15 years or greater	37	5%
10-14 years	159	20%
6-9 years	210	27%
5 years	313	40%
3-4 years	54	7%
1-2 years	4	1%

As Table 3 demonstrates, the vast majority of equipment items have a useful life duration of 5 to 10 years, and only 4 out of the 777 equipment codes have a useful life duration of less than 3 years. We also note that due to the formula used to calculate the equipment cost per minute, decreasing the useful life of any equipment item from 5 years to 3 months has the same effect as increasing the price of the equipment 20 times over. In other words, decreasing the useful life from 5 years to 0.25 years has the same multiplicative effect as increasing the price of the equipment from \$5,000 to 100,000 due to the formula listed above. Since we currently do not have any equipment items in our database with a useful life of less than one year, we are proposing a clarification on how to address these cases.

We disagree that assigning a useful life at these very short durations would be typical for new equipment, especially in light of the data provided by the AHA's "Estimated Useful Lives of Depreciable Hospital Assets" reference. The equipment life durations listed in Table 3 were finalized over the last 15 years through the use of this reference material. We have concerns that assigning very low useful life durations to equipment items would fail to maintain relativity with other equipment on the PFS, effectively assigning a much higher price than other equipment items with more typical useful life durations. We believe that equipment items with very low useful life durations represent outlier cases that are not handled appropriately by the current equipment methodology and which we seek to clarify through this rulemaking. We also note that the equipment cost per minute formula was designed under the assumption that each equipment item would remain in use for a period of several years and depreciate over that span of time. Our current equipment formula is not designed to address cases in which

equipment is replaced multiple times per year, and we believe that applying a multi-year depreciation in these situations would not be reflective of market pricing. We do not believe that items which are replaced on a monthly basis can be accurately priced using a formula which assumes they will be in use for years at a time, and that the use of such a formula would distort relativity with the overwhelming majority of equipment items which are in use for 5–10 years.

Therefore, we proposing to treat equipment life durations of less than 1 year as having a duration of 1 year for the purpose of our equipment price per minute formula. We believe that this is the most accurate way to incorporate these short equipment life durations within the framework of our current methodology. In the rare cases where items are replaced every few months, we believe that it is more accurate to treat these items as disposable supplies with a fractional supply quantity as opposed to equipment items with very short equipment life durations. For example, we are proposing to establish the EECF compression equipment package (SD341) and the EECF electrical equipment package (SD342) as disposable supplies instead of equipment items as described in the Valuation of Specific Codes (section II.H. of this proposed rule) portion of the preamble. We expect these situations to occur only rarely, and we will evaluate them on an individual case-by-case basis. Our criteria will be based on whether or not the item in question could be more accurately classified as a disposable supply while maintaining overall relativity within our PE methodology. We welcome additional comments from stakeholders regarding the subject of useful life durations for new equipment items with unique useful life durations as described above and any additional suggestions on alternative ways to incorporate these items into our

methodology or potential wider changes to the equipment cost per minute formula more broadly.

- *Maintenance*: This factor for maintenance was finalized in the CY 1998 PFS final rule with comment period (62 FR 33164). As we previously stated in the CY 2016 PFS final rule with comment period (80 FR 70897), we do not believe the annual maintenance factor for all equipment is precisely 5 percent, and we concur that the current rate likely understates the true cost of maintaining some equipment. We also believe it likely overstates the maintenance costs for other equipment. When we solicited comments regarding sources of data containing equipment maintenance rates, commenters were unable to identify an auditable, robust data source that could be used by CMS on a wide scale. We do not believe that voluntary submissions regarding the maintenance costs of individual equipment items would be an appropriate methodology for determining costs. As a result, in the absence of publicly available datasets regarding equipment maintenance costs or another systematic data collection methodology for determining a different maintenance factor, we are not proposing a variable maintenance factor for equipment cost per minute pricing as we do not believe that we have sufficient information at present. We continue to investigate potential avenues for determining equipment maintenance costs across a broad range of equipment items.

- *Interest Rate*: In the CY 2013 PFS final rule with comment period (77 FR 68902), we updated the interest rates used in developing an equipment cost per minute calculation (*see* 77 FR 68902 for a thorough discussion of this issue). The interest rate was based on the Small Business Administration (SBA) maximum interest rates for different categories of loan size (equipment cost) and maturity (useful life). The Interest rates are listed in Table 4.

TABLE 4: SBA Maximum Interest Rates

Price	Useful Life	Interest Rate
<\$25K	<7 Years	7.50%
\$25K to \$50K	<7 Years	6.50%
>\$50K	<7 Years	5.50%
<\$25K	7+ Years	8.00%
\$25K to \$50K	7+ Years	7.00%
>\$50K	7+ Years	6.00%

We are not proposing any changes to the equipment interest rates for CY 2021.

3. Changes to Direct PE Inputs for Specific Services

This section focuses on specific PE inputs. The direct PE inputs are included in the CY 2020 direct PE input public use files, which are available on the CMS website under downloads for the CY 2020 PFS final rule at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html>.

a. Standardization of Clinical Labor Tasks

As we noted in the CY 2015 PFS final rule with comment period (79 FR 67640 through 67641), we continue to make improvements to the direct PE input database to provide the number of clinical labor minutes assigned for each task for every code in the database instead of only including the number of clinical labor minutes for the preservice, service, and post service periods for each code. In addition to increasing the transparency of the information used to set PE RVUs, this level of detail would allow us to compare clinical labor times for activities associated with services across the PFS, which we believe is important to maintaining the relativity of the direct PE inputs. This information would facilitate the identification of the usual numbers of minutes for clinical labor tasks and the identification of exceptions to the usual values. It would also allow for greater transparency and consistency in the assignment of equipment minutes based on clinical labor times. Finally, we believe that the detailed information can be useful in maintaining standard times for particular clinical labor tasks that can be applied consistently to many codes as they are valued over several years, similar in principle to the use of physician preservice time packages. We believe that setting and maintaining such standards would provide greater consistency among codes that share the same clinical labor tasks and could

improve relativity of values among codes. For example, as medical practice and technologies change over time, changes in the standards could be updated simultaneously for all codes with the applicable clinical labor tasks, instead of waiting for individual codes to be reviewed.

In the CY 2016 PFS final rule with comment period (80 FR 70901), we solicited comments on the appropriate standard minutes for the clinical labor tasks associated with services that use digital technology. After consideration of comments received, we finalized standard times for clinical labor tasks associated with digital imaging at 2 minutes for “Availability of prior images confirmed”, 2 minutes for “Patient clinical information and questionnaire reviewed by technologist, order from physician confirmed and exam protocolled by radiologist”, 2 minutes for “Review examination with interpreting MD”, and 1 minute for “Exam documents scanned into PACS” and “Exam completed in RIS system to generate billing process and to populate images into Radiologist work queue.” In the CY 2017 PFS final rule (81 FR 80184 through 80186), we finalized a policy to establish a range of appropriate standard minutes for the clinical labor activity, “Technologist QCs images in PACS, checking for all images, reformat, and dose page.” These standard minutes will be applied to new and revised codes that make use of this clinical labor activity when they are reviewed by us for valuation. We finalized a policy to establish 2 minutes as the standard for the simple case, 3 minutes as the standard for the intermediate case, 4 minutes as the standard for the complex case, and 5 minutes as the standard for the highly complex case. These values were based upon a review of the existing minutes assigned for this clinical labor activity; we determined that 2 minutes is the duration for most services and a small number of codes with more complex forms of digital imaging have higher values. We also finalized standard times for a series of clinical labor tasks associated with pathology services in the CY 2016 PFS

final rule with comment period (80 FR 70902). We do not believe these activities would be dependent on number of blocks or batch size, and we believe that the finalized standard values accurately reflect the typical time it takes to perform these clinical labor tasks.

In reviewing the RUC-recommended direct PE inputs for CY 2019, we noticed that the 3 minutes of clinical labor time traditionally assigned to the “Prepare room, equipment and supplies” (CA013) clinical labor activity were split into 2 minutes for the “Prepare room, equipment and supplies” activity and 1 minute for the “Confirm order, protocol exam” (CA014) activity. We proposed to maintain the 3 minutes of clinical labor time for the “Prepare room, equipment and supplies” activity and remove the clinical labor time for the “Confirm order, protocol exam” activity wherever we observed this pattern in the RUC-recommended direct PE inputs. Commenters explained in response that when the new version of the PE worksheet introduced the activity codes for clinical labor, there was a need to translate old clinical labor tasks into the new activity codes, and that a prior clinical labor task was split into two of the new clinical labor activity codes: CA007 (“Review patient clinical extant information and questionnaire”) in the preservice period, and CA014 (“Confirm order, protocol exam”) in the service period. Commenters stated that the same clinical labor from the old PE worksheet was now divided into the CA007 and CA014 activity codes, with a standard of 1 minute for each activity. We agreed with commenters that we would finalize the RUC-recommended 2 minutes of clinical labor time for the CA007 activity code and 1 minute for the CA014 activity code in situations where this was the case. However, when reviewing the clinical labor for the reviewed codes affected by this issue, we found that several of the codes did not include this old clinical labor task, and we also noted that several of the reviewed codes that contained the CA014 clinical labor activity code did

not contain any clinical labor for the CA007 activity. In these situations, we continue to believe that in these cases the 3 total minutes of clinical staff time would be more accurately described by the CA013 “Prepare room, equipment and supplies” activity code, and we finalized these clinical labor refinements. For additional details, we direct readers to the discussion in the CY 2019 PFS final rule (83 FR 59463 and 59464).

Following the publication of the CY 2020 PFS proposed rule, a commenter expressed concern with the published list of common refinements to equipment time. The commenter stated that these refinements were the formulaic result of the applying refinements to the clinical labor time and did not constitute separate refinements; the commenter requested that CMS no longer include these refinements in the table published each year. In the CY 2020 PFS final rule, we agreed with the commenter that that these equipment time refinements did not reflect errors in the equipment recommendations or policy discrepancies with the RUC’s equipment time recommendations. However, we believed that it was important to publish the specific equipment times that we were proposing (or finalizing in the case of the final rule) when they differed from the recommended values due to the effect that these changes can have on the direct costs associated with equipment time. Therefore, we finalized the separation of the equipment time refinements associated with changes in clinical labor into a separate table of refinements. For additional details, we direct readers to the discussion in the CY 2020 PFS final rule (84 FR 62584).

Historically, the RUC has submitted a “PE worksheet” that details the recommended direct PE inputs for our use in developing PE RVUs. The format of the PE worksheet has varied over time and among the medical specialties developing the recommendations. These variations have made it difficult for both the RUC’s development and our review of code values for individual codes. Beginning with its recommendations for CY 2019, the RUC has mandated the use of a new PE worksheet for purposes of their recommendation development process that standardizes the clinical labor tasks and assigns them a clinical labor activity code. We believe the RUC’s use of the new PE worksheet in developing and submitting recommendations will help us to simplify and standardize the hundreds of different clinical labor tasks currently listed in our direct PE database. As we

did in previous calendar years, to facilitate rulemaking for CY 2021, we are continuing to display two versions of the Labor Task Detail public use file: One version with the old listing of clinical labor tasks, and one with the same tasks crosswalked to the new listing of clinical labor activity codes. These lists are available on the CMS website under downloads for the CY 2021 PFS proposed rule at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html>.

b. Equipment Recommendations for Scope Systems

During our routine reviews of direct PE input recommendations, we have regularly found unexplained inconsistencies involving the use of scopes and the video systems associated with them. Some of the scopes include video systems bundled into the equipment item, some of them include scope accessories as part of their price, and some of them are standalone scopes with no other equipment included. It is not always clear which equipment items related to scopes fall into which of these categories. We have also frequently found anomalies in the equipment recommendations, with equipment items that consist of a scope and video system bundle recommended, along with a separate scope video system. Based on our review, the variations do not appear to be consistent with the different code descriptions.

To promote appropriate relativity among the services and facilitate the transparency of our review process, during the review of the recommended direct PE inputs for the CY 2017 PFS proposed rule, we developed a structure that separates the scope, the associated video system, and any scope accessories that might be typical as distinct equipment items for each code. Under this approach, we proposed standalone prices for each scope, and separate prices for the video systems and accessories that are used with scopes.

(1) Scope Equipment

Beginning in the CY 2017 PFS proposed rule (81 FR 46176 through 46177), we proposed standardizing refinements to the way scopes have been defined in the direct PE input database. We believe that there are four general types of scopes: Non-video scopes; flexible scopes; semi-rigid scopes, and rigid scopes. Flexible scopes, semi-rigid scopes, and rigid scopes would typically be paired with one of the scope video systems, while the non-video scopes would not. The

flexible scopes can be further divided into diagnostic (or non-channeled) and therapeutic (or channeled) scopes. We proposed to identify for each anatomical application: (1) A rigid scope; (2) a semi-rigid scope; (3) a non-video flexible scope; (4) a non-channeled flexible video scope; and (5) a channeled flexible video scope. We proposed to classify the existing scopes in our direct PE database under this classification system, to improve the transparency of our review process and improve appropriate relativity among the services. We planned to propose input prices for these equipment items through future rulemaking.

We proposed these changes only for the reviewed codes for CY 2017 that made use of scopes, along with updated prices for the equipment items related to scopes utilized by these services. We did not propose to apply these policies to codes with inputs reviewed prior to CY 2017. We also solicited comment on this separate pricing structure for scopes, scope video systems, and scope accessories, which we noted we could consider proposing to apply to other codes in future rulemaking. We did not finalize price increases for a series of other scopes and scope accessories, as the invoices submitted for these components indicated that they are different forms of equipment with different product IDs and different prices. We did not receive any data to indicate that the equipment on the newly submitted invoices was more typical in its use than the equipment that we were currently using for pricing.

We did not make further changes to existing scope equipment in CY 2017 to allow the RUC’s PE Subcommittee the opportunity to provide feedback. However, we believed there was some miscommunication on this point, as the RUC’s PE Subcommittee workgroup that was created to address scope systems stated that no further action was required following the finalization of our proposal. Therefore, we made further proposals in the CY 2018 PFS proposed rule (82 FR 33961 through 33962) to continue clarifying scope equipment inputs, and sought comments regarding the new set of scope proposals. We considered creating a single scope equipment code for each of the five categories detailed in this rule: (1) A rigid scope; (2) a semi-rigid scope; (3) a non-video flexible scope; (4) a non-channeled flexible video scope; and (5) a channeled flexible video scope. Under the current classification system, there are many different scopes in each category depending on the medical specialty furnishing the service and the part of the body affected. We

stated our belief that the variation between these scopes was not significant enough to warrant maintaining these distinctions, and we believed that creating and pricing a single scope equipment code for each category would help provide additional clarity. We sought public comment on the merits of this potential scope organization, as well as any pricing information regarding these five new scope categories.

After considering the comments on the CY 2018 PFS proposed rule, we did not finalize our proposal to create and price a single scope equipment code for each of the five categories previously identified. Instead, we supported the recommendation from the commenters to create scope equipment codes on a per-specialty basis for six categories of scopes as applicable, including the addition of a new sixth category of multi-channelled flexible video scopes. Our goal was to create an administratively simple scheme that would be easier to maintain and help to reduce administrative burden. In 2018, the RUC convened a Scope Equipment Reorganization Workgroup to incorporate feedback from expert stakeholders with the intention of making recommendations to us on scope organization and scope pricing. Since the workgroup was not convened in time to submit recommendations for the CY 2019 PFS rulemaking cycle, we delayed proposals for any further changes to scope equipment until CY 2020 in order to incorporate the feedback from the aforementioned workgroup.

(2) Scope Video System

We proposed in the CY 2017 PFS proposed rule (81 FR 46176 through 46177) to define the scope video system as including: (1) A monitor; (2) a processor; (3) a form of digital capture; (4) a cart; and (5) a printer. We believe that these equipment components represent the typical case for a scope video system. Our model for this system was the “video system, endoscopy (processor, digital capture, monitor, printer, cart)” equipment item (ES031), which we proposed to re-price as part

of this separate pricing approach. We obtained current pricing invoices for the endoscopy video system as part of our investigation of these issues involving scopes, which we proposed to use for this re-pricing. In response to comments, we finalized the addition of a digital capture device to the endoscopy video system (ES031) in the CY 2017 PFS final rule (81 FR 80188). We finalized our proposal to price the system at \$33,391, based on component prices of \$9,000 for the processor, \$18,346 for the digital capture device, \$2,000 for the monitor, \$2,295 for the printer, and \$1,750 for the cart. In the CY 2018 PFS final rule (82 FR 52991 through 52993), we outlined, but did not finalize, a proposal to add an LED light source into the cost of the scope video system (ES031), which would remove the need for a separate light source in these procedures. We also described a proposal to increase the price of the scope video system by \$1,000 to cover the expense of miscellaneous small equipment associated with the system that falls below the threshold of individual equipment pricing as scope accessories (such as cables, microphones, foot pedals, etc.). With the addition of the LED light (equipment code EQ382 at a price of \$1,915), the updated total price of the scope video system would be set at \$36,306.

We did not finalize this updated pricing to the scope video system in CY 2018, but we did propose and finalize the updated pricing for CY 2019 to \$36,306 along with changing the name of the ES031 equipment item to “scope video system (monitor, processor, digital capture, cart, printer, LED light)” to reflect the fact that the use of the ES031 scope video system is not limited to endoscopy procedures.

(3) Scope Accessories

We understand that there may be other accessories associated with the use of scopes. We finalized a proposal in the CY 2017 PFS final rule (81 FR 80188) to separately price any scope accessories outside the use of the scope video system, and individually evaluate their inclusion or exclusion as direct PE

inputs for particular codes as usual under our current policy based on whether they are typically used in furnishing the services described by the particular codes.

(4) Scope Proposals for CY 2020

The Scope Equipment Reorganization Workgroup organized by the RUC submitted detailed recommendations to CMS for consideration in the CY 2020 rule cycle, describing 23 different types of scope equipment, the HCPCS codes associated with each scope type, and a series of invoices for scope pricing. Based on the recommendations from the workgroup, we proposed to establish 23 new scope equipment codes. For the eight new scope equipment items where we received submitted invoices for pricing, we proposed to replace the existing scopes with the new scope equipment at the same amount of equipment time. This scope replacement involved approximately 100 HCPCS codes in total and was detailed in a table published in the CY 2020 proposed rule (84 FR 40495 through 40498). We noted that we did not receive pricing information along with the workgroup recommendations for the other 15 new scope equipment items. Therefore, although we proposed to establish new equipment codes for these scopes, we did not propose to replace existing scope equipment with the new equipment items as we did for the other eight new scope equipment items for CY 2020.

Following the publication of the CY 2020 PFS proposed rule, commenters provided additional information regarding pricing for the new scope equipment and their associated HCPCS codes. Based on this information provided by the commenters, we finalized a price for eight additional new scope equipment items and finalized the replacement of the existing scopes with the new scope equipment at the same amount of equipment time for approximately two dozen additional HCPCS codes (84 FR 62593 through 62595). Table 5 lists the CY 2020 finalized price for the new scope equipment codes:

TABLE 5: New Scope Equipment Codes

CMS Code	Scope Equipment Description	Finalized Price
ES070	rigid scope, cystoscopy	
ES071	rigid scope, channeled, hysteroscopy	\$6,795.00
ES072	rigid scope, otoscopy	\$2,333.98
ES073	rigid scope, nasal/sinus endoscopy	\$3,004.75
ES074	rigid scope, proctosigmoidoscopy	
ES075	rigid scope, laryngoscopy	\$3,966.08
ES076	rigid scope, colposcopy	\$14,500.00
ES077	non-channeled flexible digital scope, hysteroscopy	
ES078	non-channeled flexible digital scope, nasopharyngoscopy	\$21,923.43
ES079	non-channeled flexible digital scope, bronchoscopy	
ES080	non-channeled flexible digital scope, laryngoscopy	\$21,485.51
ES081	channeled flexible digital scope, cystoscopy	
ES082	channeled flexible digital scope, hysteroscopy	
ES083	channeled flexible digital scope, bronchoscopy	
ES084	channeled flexible digital scope, laryngoscopy	\$18,694.39
ES085	multi-channeled flexible digital scope, flexible sigmoidoscopy	\$17,360.00
ES086	multi-channeled flexible digital scope, colonoscopy	\$38,058.81
ES087	multi-channeled flexible digital scope, esophagoscopy gastroscopy duodenoscopy (EGD)	\$34,585.35
ES088	multi-channeled flexible digital scope, esophagoscopy	\$34,585.35
ES089	multi-channeled flexible digital scope, ileoscopy	\$34,585.35
ES090	multi-channeled flexible digital scope, pouchoscopy	\$17,360.00
ES091	ultrasound digital scope, endoscopic ultrasound	\$0.00
ES092	non-video flexible scope, laryngoscopy	\$5,105.97

We noted that although we updated the scope equipment pricing for CY 2020 such that the ES087 and ES089 scopes shared the same price with the ES088 scope, and the ES090 scope shared the same price with the ES085 scope, we did not mean to suggest that these scopes that shared pricing were identical with one another. We assigned the same price to these scopes because they replaced the same current scope equipment codes, and because we did not have individual pricing information for them. We remain open to the submission of additional invoices to establish individual pricing for these scopes, and we continue to welcome more data to help identify pricing for the remaining seven scope equipment codes that still lack invoices.

(5) Scope Proposals for CY 2021

We did not receive further recommendations from the Scope Equipment Reorganization Workgroup organized by the RUC following the publication of the CY 2020 final rule. However, we did receive invoices associated with the pricing of the scope video system (monitor, processor, digital capture, cart, printer, LED light) (ES031) equipment item as part of the review of the Esophagogastroduodenoscopy (EGD) with Biopsy and the Colonoscopy code

families. We previously finalized a price of \$36,306 for the ES031 equipment based on the sum of component prices of \$9,000 for the processor, \$18,346 for the digital capture device, \$2,000 for the monitor, \$2,295 for the printer, \$1,750 for the cart, \$1,915 for the LED light, and \$1,000 to cover the expense of miscellaneous small equipment associated with the system that falls below the threshold of individual equipment pricing as scope accessories (such as cables, microphones, foot pedals, etc.) We received 37 invoices associated with the components of the ES031 scope video system, which averaged out to prices of \$21,988.89 for the processor, \$16,175.87 for the digital capture device, \$6,987.56 for the monitor, \$7,922.80 for the printer, \$4,945.45 for the cart, and \$12,652.82 for the LED light. Based on the sum of these component prices, we are proposing to update the price the ES031 scope video system equipment to \$70,673.38. We are not proposing to include an additional \$1,000 to cover the expense of miscellaneous small equipment as the products listed on the component invoices indicated that cost of cables were already included in this significantly higher equipment pricing. We are soliciting additional comments from stakeholders regarding the pricing

of the full ES031 scope equipment system as well as its components.

As part of our market-based supply and equipment pricing transition, we finalized a policy in CY 2019 to phase in any updated pricing established during the 4-year transition period for very commonly used supplies and equipment that are included in 100 or more codes, even if invoices are provided as part of the formal review of a code family (83 FR 59473 through 59475). Because the ES031 scope equipment system is utilized by more than 250 HCPCS codes, we are proposing to transition this pricing increase over the remaining two years of the pricing update, such that the CY 2021 equipment price will be \$53,489.69 before moving to its destination price of \$70,673.38 in CY 2022. We note that this transition policy also applies to the price of the suction machine (Gomco) (EQ235) equipment, which, although it is not a scope, is utilized by approximately 360 HCPCS codes, and therefore, is another example of this pricing transition policy. We are proposing to transition the EQ235 pricing increase over the remaining 2 years of the pricing update, such that the CY 2021 equipment price will be \$1,981.66 before moving to its destination price of \$3,195.85 in CY 2022. As we stated previously, this

policy is intended to minimize any potential disruptive effects during the pricing transition period due to the high number of services that make use of these very common supply and equipment items included in 100 or more HCPCS codes.

We also received invoices for the colonoscopy videoscope (ES033) and gastroscopy videoscopes (ES034) as part of the review of the Esophagogastroduodenoscopy (EGD) with Biopsy and the Colonoscopy code families. We finalized the replacement of both of these scope equipment items in the CY 2020 final rule (84 FR 62588 through 62590), replacing the colonoscopy videoscope (ES033) with the multi-channeled flexible digital scope, colonoscopy (ES086) equipment item and the gastroscopy videoscopes (ES034) with the multi-channeled flexible digital scope, esophagoscopy gastroscopy duodenoscopy (EGD) (ES087) equipment item. In both cases, the submitted invoices were nearly identical to the finalized prices for the ES086 (\$38,058.81) and ES087 (\$34,585.35) equipment. We believe that these invoices reinforce the prices finalized through rulemaking last year, and therefore, we are not proposing to further update the prices of these scopes.

We remain open to further comments regarding the pricing of the remaining seven scope equipment codes that still lack invoices, as well as additional data regarding the pricing of the scope equipment codes that currently share the same price.

c. Technical Corrections to Direct PE Input Database and Supporting Files

For CY 2021, we are proposing to address the following inconsistencies:

- Following the publication of the CY 2020 PFS final rule, stakeholders contacted CMS and clarified that CPT code 0466T (Insertion of chest wall respiratory sensor electrode or electrode array, including connection to pulse generator) is always performed on an add-on basis and would never be used as a standalone code. Therefore, we are proposing to update the global period for CPT code 0466T to add-on status (ZZZ) to more accurately reflect the way in which this service is performed.

d. Updates to Prices for Existing Direct PE Inputs

In the CY 2011 PFS final rule with comment period (75 FR 73205), we finalized a process to act on public requests to update equipment and supply price and equipment useful life inputs through annual rulemaking, beginning with the CY 2012 PFS

proposed rule. For CY 2021, we are proposing to update the price of one supply and four equipment items in response to the public submission of invoices. As these pricing updates were each part of the formal review for a code family, we are proposing that the new pricing take effect for CY 2021 for these items instead of being phased in over 4 years. These supply and equipment items with updated prices associated with the formal review of a code family are listed in the valuation of specific codes section of the preamble under Table 27: CY 2021 Invoices Received for Existing Direct PE Inputs.

(1) Market-Based Supply and Equipment Pricing Update

Section 220(a) of the Protecting Access to Medicare Act of 2014 (PAMA) (Pub. L. 113–93, enacted April 1, 2014) provides that the Secretary may collect or obtain information from any eligible professional or any other source on the resources directly or indirectly related to furnishing services for which payment is made under the PFS, and that such information may be used in the determination of relative values for services under the PFS. Such information may include the time involved in furnishing services; the amounts, types and prices of PE inputs; overhead and accounting information for practices of physicians and other suppliers, and any other elements that would improve the valuation of services under the PFS.

As part of our authority under section 1848(c)(2)(M) of the Act, we initiated a market research contract with StrategyGen to conduct an in-depth and robust market research study to update the PFS direct PE inputs (DPEI) for supply and equipment pricing for CY 2019. These supply and equipment prices were last systematically developed in 2004–2005. StrategyGen submitted a report with updated pricing recommendations for approximately 1300 supplies and 750 equipment items currently used as direct PE inputs. This report is available as a public use file displayed on the CMS website under downloads for the CY 2019 PFS final rule at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html>.

The StrategyGen team of researchers, attorneys, physicians, and health policy experts conducted a market research study of the supply and equipment items currently used in the PFS direct PE input database. Resources and methodologies included field surveys, aggregate databases, vendor resources, market scans, market analysis,

physician substantiation, and statistical analysis to estimate and validate current prices for medical equipment and medical supplies. StrategyGen conducted secondary market research on each of the 2,072 DPEI medical equipment and supply items that CMS identified from the current DPEI. The primary and secondary resources StrategyGen used to gather price data and other information were:

- Telephone surveys with vendors for top priority items (Vendor Survey).
- Physician panel validation of market research results, prioritized by total spending (Physician Panel).
- The General Services Administration system (GSA).
- An aggregate health system buyers database with discounted prices (Buyers).
- Publicly available vendor resources, that is, Amazon Business, Cardinal Health (Vendors).

- The **Federal Register**, current DPEI data, historical proposed and final rules prior to CY 2018, and other resources; that is, AMA RUC reports (References).

StrategyGen prioritized the equipment and supply research based on current share of PE RVUs attributable by item provided by CMS. StrategyGen developed the preliminary Recommended Price (RP) methodology based on the following rules in hierarchical order considering both data representativeness and reliability.

(1) If the market share, as well as the sample size, for the top three commercial products were available, the weighted average price (weighted by percent market share) was the reported RP. Commercial price, as a weighted average of market share, represents a more robust estimate for each piece of equipment and a more precise reference for the RP.

(2) If no data were available for commercial products, the current CMS prices were used as the RP.

GSA prices were not used to calculate the StrategyGen recommended prices, due to our concern that the GSA system curtails the number and type of suppliers whose products may be accessed on the GSA Advantage website, and that the GSA prices may often be lower than prices that are available to non-governmental purchasers. After reviewing the StrategyGen report, we proposed to adopt the updated direct PE input prices for supplies and equipment as recommended by StrategyGen.

StrategyGen found that despite technological advancements, the average commercial price for medical equipment and supplies has remained relatively consistent with the current

CMS price. Specifically, preliminary data indicated that there was no statistically significant difference between the estimated commercial prices and the current CMS prices for both equipment and supplies. This cumulative stable pricing for medical equipment and supplies appears similar to the pricing impacts of non-medical technology advancements where some historically high-priced equipment (that is, desktop PCs) has been increasingly substituted with current technology (that is, laptops and tablets) at similar or lower price points. However, while there were no statistically significant differences in pricing at the aggregate level, medical specialties would experience increases or decreases in their Medicare payments if we were to adopt the pricing updates recommended by StrategyGen. At the service level, there may be large shifts in PE RVUs for individual codes that happened to contain supplies and/or equipment with major changes in pricing, although we note that codes with a sizable PE RVU decrease would be limited by the requirement to phase in significant

reductions in RVUs, as required by section 1848(c)(7) of the Act. The phase-in requirement limits the maximum RVU reduction for codes that are not new or revised to 19 percent in any individual calendar year.

We believe that it is important to make use of the most current information available for supply and equipment pricing instead of continuing to rely on pricing information that is more than a decade old. Given the potentially significant changes in payment that would occur, both for specific services and more broadly at the specialty level, in the CY 2019 PFS proposed rule we proposed to phase in our use of the new direct PE input pricing over a 4-year period using a 25/75 percent (CY 2019), 50/50 percent (CY 2020), 75/25 percent (CY 2021), and 100/0 percent (CY 2022) split between new and old pricing. This approach is consistent with how we have previously incorporated significant new data into the calculation of PE RVUs, such as the 4-year transition period finalized in CY 2007 PFS final rule with comment period when changing to the “bottom-

up” PE methodology (71 FR 69641). This transition period will not only ease the shift to the updated supply and equipment pricing, but will also allow interested parties an opportunity to review and respond to the new pricing information associated with their services.

We proposed to implement this phase-in over 4 years so that supply and equipment values transition smoothly from the prices we currently include to the final updated prices in CY 2022. We proposed to implement this pricing transition such that one quarter of the difference between the current price and the fully phased-in price is implemented for CY 2019, one third of the difference between the CY 2019 price and the final price is implemented for CY 2020, and one half of the difference between the CY 2020 price and the final price is implemented for CY 2021, with the new direct PE prices fully implemented for CY 2022. An example of the transition from the current to the fully-implemented new pricing is provided in Table 6.

TABLE 6: Example of Direct PE Pricing Transition

Current Price	\$100	
Final Price	\$200	
Year 1 (CY 2019) Price	\$125	1/4 difference between \$100 and \$200
Year 2 (CY 2020) Price	\$150	1/3 difference between \$125 and \$200
Year 3 (CY 2021) Price	\$175	1/2 difference between \$150 and \$200
Final (CY 2022) Price	\$200	

For new supply and equipment codes for which we establish prices during the transition years (CYs 2019, 2020 and 2021) based on the public submission of invoices, we proposed to fully implement those prices with no transition since there are no current prices for these supply and equipment items. These new supply and equipment codes would immediately be priced at their newly established values. We also proposed that, for existing supply and equipment codes, when we establish prices based on invoices that are submitted as part of a revaluation or comprehensive review of a code or code family, they will be fully implemented for the year they are adopted without being phased in over the 4-year pricing transition. The formal review process for a HCPCS code includes a review of pricing of the supplies and equipment included in the code. When we find that the price on the submitted invoice is typical for the item in question, we believe it would be appropriate to finalize the new pricing immediately

along with any other revisions we adopt for the code valuation.

For existing supply and equipment codes that are not part of a comprehensive review and valuation of a code family and for which we establish prices based on invoices submitted by the public, we proposed to implement the established invoice price as the updated price and to phase in the new price over the remaining years of the proposed 4-year pricing transition. During the proposed transition period, where price changes for supplies and equipment are adopted without a formal review of the HCPCS codes that include them (as is the case for the many updated prices we proposed to phase in over the 4-year transition period), we believe it is important to include them in the remaining transition toward the updated price. We also proposed to phase in any updated pricing we establish during the 4-year transition period for very commonly used supplies and equipment that are included in 100 or more codes, such as sterile gloves

(SB024) or exam tables (EF023), even if invoices are provided as part of the formal review of a code family. We would implement the new prices for any such supplies and equipment over the remaining years of the proposed 4-year transition period. Our proposal was intended to minimize any potential disruptive effects during the proposed transition period that could be caused by other sudden shifts in RVUs due to the high number of services that make use of these very common supply and equipment items (meaning that these items are included in 100 or more codes).

We believed that implementing the proposed updated prices with a 4-year phase-in would improve payment accuracy, while maintaining stability and allowing stakeholders the opportunity to address potential concerns about changes in payment for particular items. Updating the pricing of direct PE inputs for supplies and equipment over a longer timeframe will allow more opportunities for public

comment and submission of additional, applicable data. We welcomed feedback from stakeholders on the proposed updated supply and equipment pricing, including the submission of additional invoices for consideration.

We received many comments regarding the market-based supply and equipment pricing proposal following the publication of the CY 2019 PFS proposed rule. For a full discussion of these comments, we direct readers to the CY 2019 PFS final rule (83 FR 59475 through 59480). In each instance in which a commenter raised questions about the accuracy of a supply or equipment code's recommended price, the StrategyGen contractor conducted further research on the item and its price with special attention to ensuring that the recommended price was based on the correct item in question and the clarified unit of measure. Based on the commenters' requests, the StrategyGen contractor conducted an extensive examination of the pricing of any supply or equipment items that any commenter identified as requiring additional review. Invoices submitted by multiple commenters were greatly appreciated and ensured that medical equipment and supplies were re-examined and clarified. Multiple researchers reviewed these specified supply and equipment codes for accuracy and proper pricing. In most cases, the contractor also reached out to a team of nurses and their physician panel to further validate the accuracy of the data and pricing information. In

some cases, the pricing for individual items needed further clarification due to a lack of information or due to significant variation in packaged items. After consideration of the comments and this additional price research, we updated the recommended prices for approximately 70 supply and equipment codes identified by the commenters. Table 9 in the CY 2019 PFS final rule lists the supply and equipment codes with price changes based on feedback from the commenters and the resulting additional research into pricing (83 FR 59479 through 59480).

After consideration of the public comments, we finalized our proposals associated with the market research study to update the PFS direct PE inputs for supply and equipment pricing. We continue to believe that implementing the proposed updated prices with a 4-year phase-in will improve payment accuracy, while maintaining stability and allowing stakeholders the opportunity to address potential concerns about changes in payment for particular items. We continue to welcome feedback from stakeholders on the proposed updated supply and equipment pricing, including the submission of additional invoices for consideration.

For CY 2021, we received invoice submissions for approximately a dozen supply and equipment codes from stakeholders as part of the third year of the market-based supply and equipment pricing update. The submitted invoices were used in many cases to supplement

the pricing originally proposed for the CY 2019 PFS rule cycle. We reviewed the invoices as well as prior data for the relevant supply/equipment codes to make sure the item in the invoice was representative of the supply/equipment item in question and aligned with past research. Based on this research, we are proposing to update the prices of the supply and equipment items listed in Table 7 of the CY 2021 PFS proposed rule.

We finalized a policy in CY 2019 to phase in the new supply and equipment pricing over 4 years so that supply and equipment values transition smoothly from their current prices to the final updated prices in CY 2022. We finalized our proposal to implement this pricing transition such that one quarter of the difference between the current price and the fully phased in price was implemented for CY 2019, one third of the difference between the CY 2019 price and the final price is implemented for CY 2020, and one half of the difference between the CY 2020 price and the final price is implemented for CY 2021, with the new direct PE prices fully implemented for CY 2022. An example of the transition from the current to the fully-implemented new pricing is provided in Table 6. For CY 2021, one half of the difference between the CY 2020 price and the final price will be implemented as per the previously finalized policy. Table 7 contains the list of proposed CY 2021 market-based supply and equipment pricing updates:

TABLE 7: Proposed CY 2021 Market-Based Supply and Equipment Pricing Updates

CMS CODE	Description	CMS 2020 Price	Prior CMS 2022 Price	Prior CMS 2021 Price	Updated CMS 2022 Price	Updated CMS 2021 Price
SA105	UroVysion test kit	\$153.040	\$129.280	\$141.160	\$187.490	\$170.265
SD089	guidewire, hydrophilic	\$39.435	\$43.370	\$41.403	\$13.350	\$26.393
SD136	vascular sheath	\$36.650	\$52.800	\$44.725	\$24.444	\$30.547
SD155	catheter, RF endovenous occlusion	\$637.500	\$550.000	\$593.750	\$382.500	\$510.000
EQ041	Vmax 22d and 62j (PFT equip, autobox, computer system)	\$47,930.000	\$47,930.000	\$47,930.000	\$47,406.540	\$47,668.270
ER044	nuclide rod source set	\$1,783.167	\$2,171.333	\$1,977.250	\$2,081.167	\$1,932.167

The proposed prices for the supply and equipment items listed in Table 7 were calculated based on averaging together the prices on the submitted invoices. In the case of the vascular

sheath (SD136) and RF endovenous occlusion catheter (SD155) supplies, the proposed price was determined by removing the sheath or catheter from the eight submitted kit invoices and then

averaging the resulting price together with the single standalone sheath/catheter invoice.

In addition to submitting invoices with information updating the price of

the “Vmax 22d and 62j (PFT equip, autobox, computer system)” (EQ041) equipment, stakeholders also clarified that the “Vmax 229 (spirometry testing equip, computer system)” (EQ040) and “Vmax 29s (spirometry testing equip, computer system)” (EQ043) equipment items have become obsolete and are no longer typically used in any HCPCS codes. Based on the information supplied by the stakeholders, we are proposing to remove the EQ040 and EQ043 equipment items, replacing them with the EQ041 equipment at the same number of minutes in the six HCPCS codes where they are utilized.

We are not proposing to update the price of additional supply and equipment items for which invoices were submitted following the publication of the CY 2020 PFS final rule. We are not proposing to update the price for the “pipette, transfer 23ml” (SL109), “slide specimen mailer (1–5 microscope slides)” (SL121), “stain, hematoxylin” (SL135), “stain, eosin” (SL201), and “stain, PAP OG–6” (SL491) supplies. In each case we received a single invoice for these five supplies detailing price increases ranging from 82 percent to 160 percent above the current pricing. These supplies are commonly used in cytopathology procedures and we disagree that the typical price for these supplies has more than doubled since being reviewed by the StrategyGen contractor two years ago for CY 2019.

We are also not proposing to update the price for the “embedding mold” (SL060) supply or the “microscope, compound” (EP060) equipment based on the same rationale. The submitted invoices represent pricing increases of 339 percent for the compound microscope and 7800 percent for the embedding mold and, based on the recent review of the pricing of these items by our contractor, we do not believe that the submitted invoices reflect typical market-based pricing. The same stakeholder also submitted an invoice to update the price of the surgical mask (SB033) supply by 617 percent over the current price. However, the invoice in question contains the price for a surgical mask with face shield, which is described by the SB034 supply code, not the SB033 supply code. Therefore, we are not proposing to update the price of the surgical mask (SB033) supply based on this invoice. Finally, we received an invoice for a ClosureFast Procedure Pack (CFP) but it was unclear what supply or equipment item this invoice was intended to update. As a result, we were unable to use this invoice to make a pricing proposal.

(2) Invoice Submission

The full list of updated supply and equipment pricing as it will be implemented over the 4-year transition period will be made available as a public use file displayed on the CMS website under downloads for the CY 2021 PFS proposed rule at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html>.

We routinely accept public submission of invoices as part of our process for developing payment rates for new, revised, and potentially misvalued codes. Often these invoices are submitted in conjunction with the RUC-recommended values for the codes. To be included in a given year’s proposed rule, we generally need to receive invoices by the same February 10th deadline we noted for consideration of RUC recommendations. However, we will consider invoices submitted as public comments during the comment period following the publication of the PFS proposed rule, and would consider any invoices received after February 10th or outside of the public comment process as part of our established annual process for requests to update supply and equipment prices. Stakeholders are encouraged to submit invoices as part of their public comments or, if outside the public comment process, via email at PE_Price_Input_Update@cms.hhs.gov.

(3) Updated Supply Pricing for Venous and Arterial Stenting Services

Following the publication of the CY 2020 PFS final rule, stakeholders contacted CMS and presented additional information regarding supply pricing for certain venous and arterial stenting services. These stakeholders stated that the use of the “stent, vascular, deployment system, Cordis SMART” (SA103) supply was no longer typical in CPT codes 37238 (Transcatheter placement of an intravascular stent(s), open or percutaneous, including radiological supervision and interpretation and including angioplasty within the same vessel, when performed; initial vein) and 37239 (Transcatheter placement of an intravascular stent(s), open or percutaneous, including radiological supervision and interpretation and including angioplasty within the same vessel, when performed; each additional vein). The stakeholders stated that a new venous stent system had become the typical standard of care for these services, and they supplied ten invoices for use in pricing this supply.

The stakeholders also requested additional information regarding the nature of the “stent, balloon, implantable” (SD299) supply included in CPT codes 37236 (Transcatheter placement of an intravascular stent(s) (except lower extremity artery(s) for occlusive disease, cervical carotid, extracranial vertebral or intrathoracic carotid, intracranial, or coronary), open or percutaneous, including radiological supervision and interpretation and including all angioplasty within the same vessel, when performed; initial artery) and 37237 (Transcatheter placement of an intravascular stent(s) (except lower extremity artery(s) for occlusive disease, cervical carotid, extracranial vertebral or intrathoracic carotid, intracranial, or coronary), open or percutaneous, including radiological supervision and interpretation and including all angioplasty within the same vessel, when performed; each additional artery). The stakeholders specifically were unclear what the implantable stent balloon represented and sought guidance on whether pricing involved a stent, a balloon, or a combination of both.

In response to the additional information provided by the stakeholders, we are proposing to remove the SA103 supply item from CPT codes 37238 and 37239. We are proposing to replace it with a newly created “venous stent system” (SD340) supply at the same supply quantity. We are proposing a price of \$1,750.00 for the venous stent system based on the median price of the ten invoices supplied by the stakeholders. We are proposing the use of the median price due to the presence of several invoices that appear to be outliers which are not reflective of market pricing for the venous stent system. With regards to the request for additional information regarding the nature of the “stent, balloon, implantable” (SD299) supply, the original invoice used to price this supply during the CY 2015 rule cycle listed an item named “Renal and Biliary Stent System 7.0 mm x 15 mm x 135 cm”. We welcome additional information from stakeholders regarding the nature and pricing of this supply item.

(4) Myocardial PET Equipment Inputs

Following the publication of the CY 2020 PFS final rule, stakeholders contacted CMS and presented additional information regarding the direct PE inputs for several codes associated with Myocardial PET services. The stakeholders stated that the nuclide rod source set (ER044) equipment was inadvertently excluded

from the direct PE recommendations for CPT codes 78432 (Myocardial imaging, positron emission tomography (PET), combined perfusion with metabolic evaluation study (including ventricular wall motion[s] and/or ejection fraction[s], when performed), dual radiotracer (e.g., myocardial viability);), 78459 (Myocardial imaging, positron emission tomography (PET), metabolic evaluation study (including ventricular wall motion[s] and/or ejection fraction[s], when performed), single study;), 78491 (Myocardial imaging, positron emission tomography (PET), perfusion study (including ventricular wall motion[s] and/or ejection fraction[s], when performed); single study, at rest or stress (exercise or pharmacologic)), and 78492 (Myocardial imaging, positron emission tomography (PET), perfusion study (including ventricular wall motion[s] and/or ejection fraction[s], when performed); multiple studies at rest and stress (exercise or pharmacologic)), and requested that CMS add this equipment to the direct inputs for this group of CPT codes. The stakeholders also stated that the current useful life of 5 years for the ER044 equipment was incorrect as these sources are replaced every 9 months to 1 year. The stakeholders requested that CMS update the useful life of ER044 to 0.75 years. Finally, the stakeholders stated that the costs for the purchase of the Rubidium PET Generator (ER114) equipment are captured elsewhere through the billing of HCPCS supply code A9555, and the stakeholders recommended that we remove equipment item ER114 to avoid incorrect billing duplication.

We appreciate the additional information submitted by the stakeholders regarding the direct PE inputs for these Myocardial PET services. In response to this new information, we are proposing to update the price for the nuclide rod source set (ER044) equipment to \$2,081.17 based on averaging together the price of the three submitted invoices after removing the shipping and delivery costs according to our standard pricing methodology. We are also proposing to add the ER044 equipment to CPT codes 78432, 78459, 78491, and 78492 as requested, assigning the same equipment time utilized by the “PET Refurbished Imaging Cardiac Configuration” (ER110) equipment in each service. We are proposing to update the useful life of the ER044 equipment to one year in accordance with our proposed policy to treat equipment useful life durations of less than 1 year as having a duration of one

year. As we stated previously in section II.B we have concerns that assigning very low useful life durations of less than 1 year would fail to maintain relativity with other equipment on the PFS, and the equipment cost per minute formula was designed under the assumption that each equipment item would remain in use for a period of several years and depreciate over that span of time. We direct readers to the previous discussion regarding equipment cost per minute methodology earlier in section II.B. of this proposed rule. Finally, we are removing the “PET Generator (Rubidium)” (ER114) equipment from our database as requested by the stakeholders. We note that since the technical components for CPT codes 78432, 78459, 78491, and 78492 are all contractor-priced, there will be no change to the national pricing of these codes.

(5) Adjustment to Allocation of Indirect PE for Some Office-Based Services

In the CY 2018 PFS final rule (82 FR 52999 through 53000), we established criteria for identifying the services most affected by the indirect PE allocation anomaly that does not allow for a site of service differential that accurately reflects the relative indirect costs involved in furnishing services in nonfacility settings. We also finalized a modification in the PE methodology for allocating indirect PE RVUs to better reflect the relative indirect PE resources involved in furnishing these services. The methodology, as described, is based on the difference between the ratio of indirect PE to work RVUs for each of the codes meeting eligibility criteria and the ratio of indirect PE to work RVU for the most commonly reported visit code. We refer readers to the CY 2018 PFS final rule (82 FR 52999 through 53000) for a discussion of our process for selecting services subject to the revised methodology, as well as a description of the methodology, which we began implementing for CY 2018 as the first year of a 4-year transition.

For CY 2021, we are proposing to continue with the fourth and final year of the transition of this adjustment to the standard process for allocating indirect PE.

e. Update on Technical Expert Panel Related to Practice Expense

The RAND Corporation is currently studying potential improvements to CMS’ PE allocation methodology and the data that underlie it. As we noted earlier in this section, our current system for setting PE RVUs relies in part on data collected in the Physician Practice Information Survey (PPIS),

which was administered by the AMA in CY 2007 and 2008.

RAND, in its first phase of research, available at https://www.rand.org/pubs/research_reports/RR2166.html, found that the PPIS data are outdated and may no longer reflect the resource allocation, staffing arrangements, and cost structures that describe practitioners’ resource requirements in furnishing services to Medicare beneficiaries, and consequently may not accurately capture the indirect PE resources required to furnish services to Medicare FFS beneficiaries. For example, the PPIS preceded the widespread adoption of electronic health records, quality reporting programs, billing codes that promote team-based care, and hospital acquisition of physician practices. Notably, RAND found that practice ownership was strongly associated with indirect PE, with physician-owned practices requiring 190% higher indirect PE compared to facility-owned practices, suggesting a need to potentially update demographic information. Additionally, RAND found that aggregating Medicare provider specialties into broader categories resulted in small specialty-level impacts relative to the current system, suggesting that specialty-specific inputs may not be required to accurately reflect resource costs.

To follow up on these and other issues raised in the first phase of RAND’s research, in the CY 2020 PFS, we announced that RAND was convening a technical expert panel (TEP) to obtain input from stakeholders including physicians, practice and health system managers, health care accountants, and health policy experts. The TEP occurred on January 10, 2020 and its report is available at https://www.rand.org/pubs/working_papers/WR1334.html. Topics discussed included identifying issues with the current system; changes in medicine that have affected PE; how PE inputs could be updated, including through a potential new survey instrument; how best to aggregate PE categories if there were to be new survey instrument; ways to maximize response rates in a potential new survey; and using existing data to inform PFS PE rates. In addition, RAND has issued the results of its subsequent phase of research, available at www.rand.org/t/RR3248. This report is also available as a public use file displayed on the CMS website under downloads for the CY 2021 PFS proposed rule at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html>.

Based on the results of the TEP and RAND's other ongoing research, we are interested in potentially refining the PE methodology and updating the data used to make payments under the PFS. We believe that potential refinements could improve payment accuracy and strengthen Medicare. Our goals are to balance obtaining the data as soon as practicable and in a way that would allow stakeholders and CMS to collectively examine many of the issues the TEP and RAND's research identified. We are thinking through several questions, including how to best incorporate market-based information, which could be similar to the market research that we recently conducted to update supply and equipment pricing used to determine direct PE inputs under the PFS payment methodology. For example, stakeholders have expressed an interest in updating the clinical labor data that we use for direct PE inputs based on current salaries and compensation for the health care workforce. We are soliciting comment regarding how we might update the clinical labor data. Historically, we have used data from the Bureau of Labor Statistics and are seeking comment to determine if this is the best data source or if there is an alternative. We are also interested in hosting a Town Hall meeting at a date to be determined to provide an open forum for discussion with stakeholders on our ongoing research to potentially update the PE methodology and the underlying inputs. Finally, we welcome feedback from all interested parties regarding RAND's report and we are not making any proposals based on this report at this time. Stakeholders are encouraged to submit feedback as part of their public comments or, if outside the public comment process, via email at PE_Price_Input_Update@cms.hhs.gov.

C. Potentially Misvalued Services Under the PFS

1. Background

Section 1848(c)(2)(B) of the Act directs the Secretary to conduct a periodic review, not less often than every 5 years, of the RVUs established under the PFS. Section 1848(c)(2)(K) of the Act requires the Secretary to periodically identify potentially misvalued services using certain criteria and to review and make appropriate adjustments to the relative values for those services. Section 1848(c)(2)(L) of the Act also requires the Secretary to develop a process to validate the RVUs of certain potentially misvalued codes under the PFS, using the same criteria used to identify potentially misvalued

codes, and to make appropriate adjustments.

As discussed in section II.H. of this proposed rule, Valuation of Specific Codes, each year we develop appropriate adjustments to the RVUs taking into account recommendations provided by the American Medical Association Resource-Based Relative Value Scale (RVS) Update Committee (RUC), Medicare Payment Advisory Commission (MedPAC), and other stakeholders. For many years, the RUC has provided us with recommendations on the appropriate relative values for new, revised, and potentially misvalued PFS services. We review these recommendations on a code-by-code basis and consider these recommendations in conjunction with analyses of other data, such as claims data, to inform the decision-making process as authorized by law. We may also consider analyses of work time, work RVUs, or direct PE inputs using other data sources, such as Department of Veteran Affairs (VA), National Surgical Quality Improvement Program (NSQIP), the Society for Thoracic Surgeons (STS), and the Merit-based Incentive Payment System (MIPS) data. In addition to considering the most recently available data, we assess the results of physician surveys and specialty recommendations submitted to us by the RUC for our review. We also consider information provided by other stakeholders. We conduct a review to assess the appropriate RVUs in the context of contemporary medical practice. We note that section 1848(c)(2)(A)(ii) of the Act authorizes the use of extrapolation and other techniques to determine the RVUs for physicians' services for which specific data are not available and requires us to take into account the results of consultations with organizations representing physicians who provide the services. In accordance with section 1848(c) of the Act, we determine and make appropriate adjustments to the RVUs.

In its March 2006 Report to the Congress (http://www.medpac.gov/docs/default-source/reports/Mar06_Ch03.pdf?sfvrsn=0), MedPAC discussed the importance of appropriately valuing physicians' services, noting that misvalued services can distort the market for physicians' services, as well as for other health care services that physicians order, such as hospital services. In that same report, MedPAC postulated that physicians' services under the PFS can become misvalued over time. MedPAC stated, "When a new service is added to the physician fee schedule, it may be assigned a

relatively high value because of the time, technical skill, and psychological stress that are often required to furnish that service. Over time, the work required for certain services would be expected to decline as physicians become more familiar with the service and more efficient in furnishing it." We believe services can also become overvalued when PE costs decline. This can happen when the costs of equipment and supplies fall, or when equipment is used more frequently than is estimated in the PE methodology, reducing its cost per use. Likewise, services can become undervalued when physician work increases or PE costs rises.

As MedPAC noted in its March 2009 Report to Congress (<http://www.medpac.gov/docs/default-source/reports/march-2009-report-to-congress-medicare-payment-policy.pdf>), in the intervening years since MedPAC made the initial recommendations, CMS and the RUC have taken several steps to improve the review process. Also, section 1848(c)(2)(K)(ii) of the Act augments our efforts by directing the Secretary to specifically examine, as determined appropriate, potentially misvalued services in the following categories:

- Codes that have experienced the fastest growth.
- Codes that have experienced substantial changes in PE.
- Codes that describe new technologies or services within an appropriate time period (such as 3 years) after the relative values are initially established for such codes.
- Codes which are multiple codes that are frequently billed in conjunction with furnishing a single service.
- Codes with low relative values, particularly those that are often billed multiple times for a single treatment.
- Codes that have not been subject to review since implementation of the fee schedule.
- Codes that account for the majority of spending under the PFS.
- Codes for services that have experienced a substantial change in the hospital length of stay or procedure time.
- Codes for which there may be a change in the typical site of service since the code was last valued.
- Codes for which there is a significant difference in payment for the same service between different sites of service.
- Codes for which there may be anomalies in relative values within a family of codes.
- Codes for services where there may be efficiencies when a service is

furnished at the same time as other services.

- Codes with high intraservice work per unit of time.
- Codes with high PE RVUs.
- Codes with high cost supplies.
- Codes as determined appropriate by the Secretary.

Section 1848(c)(2)(K)(iii) of the Act also specifies that the Secretary may use existing processes to receive recommendations on the review and appropriate adjustment of potentially misvalued services. In addition, the Secretary may conduct surveys, other data collection activities, studies, or other analyses, as the Secretary determines to be appropriate, to facilitate the review and appropriate adjustment of potentially misvalued services. This section also authorizes the use of analytic contractors to identify and analyze potentially misvalued codes, conduct surveys or collect data, and make recommendations on the review and appropriate adjustment of potentially misvalued services. Additionally, this section provides that the Secretary may coordinate the review and adjustment of any RVU with the periodic review described in section 1848(c)(2)(B) of the Act. Section 1848(c)(2)(K)(iii)(V) of the Act specifies that the Secretary may make appropriate coding revisions (including using existing processes for consideration of coding changes) that may include consolidation of individual services into bundled codes for payment under the PFS.

2. Progress in Identifying and Reviewing Potentially Misvalued Codes

To fulfill our statutory mandate, we have identified and reviewed numerous potentially misvalued codes as specified in section 1848(c)(2)(K)(ii) of the Act, and we intend to continue our work examining potentially misvalued codes in these areas over the upcoming years. As part of our current process, we identify potentially misvalued codes for review, and request recommendations from the RUC and other public commenters on revised work RVUs and direct PE inputs for those codes. The RUC, through its own processes, also identifies potentially misvalued codes for review. Through our public nomination process for potentially misvalued codes established in the CY 2012 PFS final rule with comment period, other individuals and stakeholder groups submit nominations for review of potentially misvalued codes as well. Individuals and stakeholder groups may submit codes for review under the potentially misvalued codes initiative to CMS in

one of two ways. Nominations may be submitted to CMS via email or through postal mail. Email submissions should be sent to the CMS mailbox *MedicarePhysicianFeeSchedule@cms.hhs.gov*, with the phrase “Potentially Misvalued Codes” and the referencing CPT code number(s) and/or the CPT descriptor(s) in the subject line. Physical letters for nominations should be sent via the U.S. Postal Service to the Centers for Medicare & Medicaid Services, Mail Stop: C4–01–26, 7500 Security Blvd., Baltimore, Maryland 21244. Envelopes containing the nomination letters must be labeled “Attention: Division of Practitioner Services, Potentially Misvalued Codes”. Nominations for consideration in our next annual rule cycle should be received by our February 10th deadline. Since CY 2009, as a part of the annual potentially misvalued code review and Five-Year Review process, we have reviewed over 1,700 potentially misvalued codes to refine work RVUs and direct PE inputs. We have assigned appropriate work RVUs and direct PE inputs for these services as a result of these reviews. A more detailed discussion of the extensive prior reviews of potentially misvalued codes is included in the Medicare Program; Payment Policies Under the Physician Fee Schedule, Five-Year Review of Work Relative Value Units, Clinical Laboratory Fee Schedule: Signature on Requisition, and Other Revisions to Part B for CY 2012; final rule (76 FR 73052 through 73055) (hereinafter referred to as the “CY 2012 PFS final rule with comment period”). In the CY 2012 PFS final rule with comment period (76 FR 73055 through 73958), we finalized our policy to consolidate the review of physician work and PE at the same time, and established a process for the annual public nomination of potentially misvalued services.

In the Medicare Program; Revisions to Payment Policies Under the Physician Fee Schedule, DME Face-to-Face Encounters, Elimination of the Requirement for Termination of Non-Random Prepayment Complex Medical Review and Other Revisions to Part B for CY 2013 (77 FR 68892) (hereinafter referred to as the “CY 2013 PFS final rule with comment period”), we built upon the work we began in CY 2009 to review potentially misvalued codes that have not been reviewed since the implementation of the PFS (so-called “Harvard-valued codes”). In the Medicare Program; Revisions to Payment Policies Under the Physician Fee Schedule and Other Revisions to Part B for CY 2009; and Revisions to the

Amendment of the E-Prescribing Exemption for Computer Generated Facsimile Transmissions; Proposed Rule (73 FR 38589) (hereinafter referred to as the “CY 2009 PFS proposed rule”), we requested recommendations from the RUC to aid in our review of Harvard-valued codes that had not yet been reviewed, focusing first on high-volume, low intensity codes. In the fourth Five-Year Review (76 FR 32410), we requested recommendations from the RUC to aid in our review of Harvard-valued codes with annual utilization of greater than 30,000 services. In the CY 2013 PFS final rule with comment period, we identified specific Harvard-valued services with annual allowed charges that total at least \$10,000,000 as potentially misvalued. In addition to the Harvard-valued codes, in the CY 2013 PFS final rule with comment period we finalized for review a list of potentially misvalued codes that have stand-alone PE (codes with physician work and no listed work time and codes with no physician work that have listed work time). We have continued each year to consider and finalize a list of potentially misvalued codes that have or will be reviewed and revised as appropriate in future rulemaking.

3. CY 2021 Identification and Review of Potentially Misvalued Services

In the CY 2012 PFS final rule with comment period (76 FR 73058), we finalized a process for the public to nominate potentially misvalued codes. In the CY 2015 PFS final rule with comment period (79 FR 67606 through 67608), we modified this process whereby the public and stakeholders may nominate potentially misvalued codes for review by submitting the code with supporting documentation by February 10th of each year. Supporting documentation for codes nominated for the annual review of potentially misvalued codes may include the following:

- Documentation in peer reviewed medical literature or other reliable data that demonstrate changes in physician work due to one or more of the following: Technique, knowledge and technology, patient population, site-of-service, length of hospital stay, and work time.
- An anomalous relationship between the code being proposed for review and other codes.
- Evidence that technology has changed physician work.
- Analysis of other data on time and effort measures, such as operating room logs or national and other representative databases.

- Evidence that incorrect assumptions were made in the previous valuation of the service, such as a misleading vignette, survey, or flawed crosswalk assumptions in a previous evaluation.

- Prices for certain high cost supplies or other direct PE inputs that are used to determine PE RVUs are inaccurate and do not reflect current information.

- Analyses of work time, work RVU, or direct PE inputs using other data sources (for example, VA, NSQIP, the STS National Database, and the MIPS data).

- National surveys of work time and intensity from professional and management societies and organizations, such as hospital associations.

We evaluate the supporting documentation submitted with the nominated codes and assess whether the nominated codes appear to be potentially misvalued codes appropriate for review under the annual process. In the following year's PFS proposed rule, we publish the list of nominated codes and indicate for each nominated code whether we agree with its inclusion as a potentially misvalued code. The public has the opportunity to comment on these and all other proposed potentially misvalued codes. In that year's final rule, we finalize our list of potentially misvalued codes.

a. Public Nominations

We received submissions nominating codes for review under the potentially misvalued code initiative, and several requests for review of practice expense related inputs prior to our February 10, 2020 deadline. We refer readers to section II.B. of this proposed rule, Determination of Practice Expense RVUs, for further discussion on the PE-related submissions. Our summary of the submissions reviewed under the potentially misvalued code initiative is discussed below.

We received multiple submissions requesting that CMS consider CPT code 22867 (*Insertion of interlaminar/ interspinous process stabilization/ distraction device, without fusion, including image guidance when performed, with open decompression, lumbar; single level*) for nomination as potentially misvalued. In their request, the submitters suggested that the physician work assigned to this code significantly undervalues the procedure relative to the value of CPT code 63047 (*Laminectomy, facetectomy and foraminotomy (unilateral or bilateral with decompression of spinal cord, cauda equina and/or nerve root[s], [eg, spinal or lateral recess stenosis]), single*

vertebral segment; lumbar). The submitters stated that the work performed during the surgical steps to perform a laminectomy for both procedures is generally similar except for the additional intensity and complexity involved in CPT code 22867 to implant the interspinous stabilization device. The submitters also requested that the malpractice RVUs assigned to this code be increased to better align with similar spine procedures, in terms of specialty level and service level risk factors, in addition to the intensity and complexity of the procedure. After considering the information provided by the submitter, which suggests that the current valuation for the service may not reflect the level of intensity inherent in furnishing the service relative to other similar services with inputs that exceed those for the nominated service we are proposing to nominate CPT code 22867 as potentially misvalued and welcome public comment on this code.

D. Telehealth and Other Services Involving Communications Technology

1. Payment for Medicare Telehealth Services Under Section 1834(m) of the Act

As discussed in this proposed rule and in prior rulemaking, several conditions must be met for Medicare to make payment for telehealth services under the PFS. For further details, see the full discussion of the scope of Medicare telehealth services in the CY 2018 PFS final rule (82 FR 53006) and in 42 CFR 410.78 and 414.65.

a. Adding Services to the Medicare Telehealth Services List

In the CY 2003 PFS final rule with comment period (67 FR 79988), we established a process for adding services to or deleting services from the Medicare telehealth services list in accordance with section 1834(m)(4)(F)(ii) of the Act. This process provides the public with an ongoing opportunity to submit requests for adding services, which are then reviewed by us. Under this process, we assign any submitted request to add to the Medicare telehealth services list to one of the following two categories:

- *Category 1:* Services that are similar to professional consultations, office visits, and office psychiatry services that are currently on Medicare telehealth services list. In reviewing these requests, we look for similarities between the requested and existing telehealth services for the roles of, and interactions among, the beneficiary, the physician (or other practitioner) at the distant site and, if necessary, the

telepresenter, a practitioner who is present with the beneficiary in the originating site. We also look for similarities in the telecommunications system used to deliver the service; for example, the use of interactive audio and video equipment.

- *Category 2:* Services that are not similar to those on the current Medicare telehealth services list. Our review of these requests includes an assessment of whether the service is accurately described by the corresponding code when furnished via telehealth and whether the use of a telecommunications system to furnish the service produces demonstrated clinical benefit to the patient. Submitted evidence should include both a description of relevant clinical studies that demonstrate the service furnished by telehealth to a Medicare beneficiary improves the diagnosis or treatment of an illness or injury or improves the functioning of a malformed body part, including dates and findings, and a list and copies of published peer reviewed articles relevant to the service when furnished via telehealth. Our evidentiary standard of clinical benefit does not include minor or incidental benefits.

Some examples of clinical benefit include the following:

- Ability to diagnose a medical condition in a patient population without access to clinically appropriate in-person diagnostic services.
- Treatment option for a patient population without access to clinically appropriate in-person treatment options.
- Reduced rate of complications.
- Decreased rate of subsequent diagnostic or therapeutic interventions (for example, due to reduced rate of recurrence of the disease process).
- Decreased number of future hospitalizations or physician visits.
- More rapid beneficial resolution of the disease process treatment.
- Decreased pain, bleeding, or other quantifiable symptom.
- Reduced recovery time.

The Medicare telehealth services list, including the additions described later in this section, is available on the CMS website at <https://www.cms.gov/Medicare/Medicare-General-Information/Telehealth/index.html>.

For CY 2021, requests to add services to the Medicare telehealth services list must have been submitted and received by February 10, 2020. Each request to add a service to the Medicare telehealth services list must include any supporting documentation the requester wishes us to consider as we review the request. Because we use the annual PFS rulemaking process as the vehicle to

make changes to the Medicare telehealth services list, requesters should be advised that any information submitted as part of a request is subject to public disclosure for this purpose. For more information on submitting a request to add services to the Medicare telehealth services list, including where to mail these requests, see our website at <https://www.cms.gov/Medicare/Medicare-General-Information/Telehealth/index.html>.

b. Requests To Add Services to the Medicare Telehealth Services List for CY 2021

Under our current policy, we add services to the Medicare telehealth services list on a Category 1 basis when we determine that they are similar to services on the existing Medicare telehealth services list for the roles of, and interactions among, the beneficiary, physician (or other practitioner) at the distant site and, if necessary, the telepresenter. As we stated in the CY 2012 PFS final rule with comment period (76 FR 73098), we believe that the Category 1 criteria not only streamline our review process for publicly requested services that fall into this category, but also expedite our ability to identify codes for the Medicare telehealth services list that resemble those services already on the Medicare telehealth services list. We received several requests to add various services as Medicare telehealth services effective for CY 2021. We also conducted an internal review of potential services to add to the Medicare telehealth services list.

In response to the PHE for the COVID-19 pandemic, CMS undertook emergency rulemaking to add a number of services to the Medicare telehealth services list on an interim final basis. In the “Medicare and Medicaid Programs; Policy and Regulatory Revisions in Response to the COVID-19 Public Health Emergency” interim final rule with comment period (IFC), (85 FR 19230, 19234 through 19241, March 31, 2020) (hereinafter referred to as the “March 31st COVID-19 IFC”), on an interim final basis for the duration of the PHE for the COVID-19 pandemic, we also finalized the addition of a number of services to the Medicare telehealth services list on a Category 2 basis. The following is a list of those services:

- Emergency Department (ED) Visits, Levels 1–5 (CPT codes 99281–99285).
- Initial and Subsequent Observation and Observation Discharge Day Management (CPT codes 99217–99220; CPT codes 99224–99226; CPT codes 99234–99236).

- Initial hospital care and hospital discharge day management (CPT codes 99221–99223; CPT codes 99238–99239).

- Initial nursing facility visits, All levels (Low, Moderate, and High Complexity) and nursing facility discharge day management (CPT codes 99304–99306; CPT codes 99315–99316).

- Critical Care Services (CPT codes 99291–99292).

- Domiciliary, Rest Home, or Custodial Care services, New and Established patients (CPT codes 99327–99328; CPT codes 99334–99337).

- Home Visits, New and Established Patient, All levels (CPT codes 99341–99345; CPT codes 99347–99350).

- Inpatient Neonatal and Pediatric Critical Care, Initial and Subsequent (CPT codes 99468–99473; CPT codes 99475–99476).

- Initial and Continuing Intensive Care Services (CPT code 99477–994780).

- Assessment and Care Planning for Patients with Cognitive Impairment (CPT code 99483).

- Group Psychotherapy (CPT code 90853).

- End-Stage Renal Disease (ESRD) Services (CPT codes 90952, 90953, 90959, and 90962).

- Psychological and Neuropsychological Testing (CPT codes 96130–96133; CPT codes 96136–96139).

- Therapy Services, Physical and Occupational Therapy, All levels (CPT codes 97161–97168; CPT codes 97110, 97112, 97116, 97535, 97750, 97755, 97760, 97761, 92521–92524, 92507).

- Radiation Treatment Management Services (CPT codes 77427).

When we previously considered adding these services to the Medicare telehealth services list, either through a public request or through our own internal review, we considered whether these services met the Category 1 or Category 2 criteria. In many cases, we reviewed requests to add these services on a Category 1 basis, but did not receive or identify information that allowed us to review the services on a Category 2 basis. While we stated in the March 31st COVID-19 IFC that we did not believe the context of the PHE for the COVID-19 pandemic changes the assessment of these services as Category 1, we did reassess all of these services on a Category 2 basis in the context of the widespread presence of COVID-19 in the community. Given the exposure risks for beneficiaries, the health care work force, and the community at large, we stated that in-person interaction between professionals and patients poses an immediate potential risk that would not have been present when we previously reviewed these services. We

were concerned that this new risk created a unique circumstance where health care professionals might have to choose between the best means to mitigate exposure risk for themselves and for their patients or seeking Medicare payment for the service. For example, certain persons, especially older adults who are particularly vulnerable to complications from this specific viral infection; those considered at risk because of underlying health conditions; and those known to be recently exposed or diagnosed, and therefore, likely to spread the virus to others, were often being directed by local public health officials to self-isolate as much as possible. At the same time, we noted that the risk to medical professionals treating patients is high and we considered it likely that medical professionals would try to treat patients as effectively as possible without exposing themselves or their patients unnecessarily. We explained that, in some cases, the use of telecommunication technology could mitigate the exposure risk; and in such cases, there is a clear clinical benefit of using such technology in furnishing the service. In other words, patients who should not be seen by a professional in-person due to the exposure risk were highly likely to be without access to clinically appropriate treatment or diagnostic options unless they have access to services furnished through interactive communication technology. Therefore, in the context of the PHE for the COVID-19 pandemic, we believed that all of the services we added met the Category 2 criteria to be added to the Medicare telehealth services list on the basis that there was a patient population that would otherwise not have access to clinically appropriate treatment. We noted that, as with other services on the Medicare telehealth services list, it may not be clinically appropriate or possible to use telecommunications technology to furnish these particular services to every person or in every circumstance. However, in the context of the PHE for the COVID-19 pandemic with specific regard to the exposure risks noted above, we recognized the clinical benefit of access to medically reasonable and necessary services furnished using telecommunications technology as opposed to the potential lack of access that could occur to mitigate the risk of disease exposure.

In addition to considering public requests and services identified through internal review for additions to the Medicare telehealth services list, we have also considered which of the services added to the Medicare

telehealth services list on an interim basis should remain on the Medicare telehealth services list permanently or on an interim basis after the end of the PHE. The following presents a discussion of these services and related proposals.

After reviewing the requests we received, the services we identified, and the services we added to the Medicare telehealth services list on an interim basis for the duration of the PHE, we identified the services we have listed in Table 8 as being sufficiently similar to

services currently on the Medicare telehealth services list to be added on a Category 1 basis. Therefore, we are proposing to add the services in Table 8 to the Medicare telehealth services list on a Category 1 basis for CY 2021.

BILLING CODE 4120-01-P

TABLE 8: CY 2021 Proposed Additions to the Medicare Telehealth Services List on a Category 1 Basis

HCPCS Code	Long Descriptor
GPC1X	Visit complexity inherent to evaluation and management associated with primary medical care services that serve as the continuing focal point for all needed health care services (Add-on code, list separately in addition to an evaluation and management visit)
90853	Group psychotherapy (other than of a multiple-family group)
96121	Neurobehavioral status exam (clinical assessment of thinking, reasoning and judgment, [eg, acquired knowledge, attention, language, memory, planning and problem solving, and visual spatial abilities]), by physician or other qualified health care professional, both face-to-face time with the patient and time interpreting test results and preparing the report; each additional hour (List separately in addition to code for primary procedure)
99XXX	Prolonged office or other outpatient evaluation and management service(s) (beyond the total time of the primary procedure which has been selected using total time), requiring total time with or without direct patient contact beyond the usual service, on the date of the primary service; each 15 minutes (List separately in addition to codes 99205, 99215 for office or other outpatient Evaluation and Management services)
99483	Assessment of and care planning for a patient with cognitive impairment, requiring an independent historian, in the office or other outpatient, home or domiciliary or rest home, with all of the following required elements: Cognition-focused evaluation including a pertinent history and examination; Medical decision making of moderate or high complexity; Functional assessment (eg, basic and instrumental activities of daily living), including decision-making capacity; Use of standardized instruments for staging of dementia (eg, functional assessment staging test [FAST], clinical dementia rating [CDR]); Medication reconciliation and review for high-risk medications; Evaluation for neuropsychiatric and behavioral symptoms, including depression, including use of standardized screening instrument(s); Evaluation of safety (eg, home), including motor vehicle operation; Identification of caregiver(s), caregiver knowledge, caregiver needs, social supports, and the willingness of caregiver to take on caregiving tasks; Development, updating or revision, or review of an Advance Care Plan; Creation of a written care plan, including initial plans to address any neuropsychiatric symptoms, neuro-cognitive symptoms, functional limitations, and referral to community resources as needed (eg, rehabilitation services, adult day programs, support groups) shared with the patient and/or caregiver with initial education and support. Typically, 50 minutes are spent face-to-face with the patient and/or family or caregiver.
99334	Domiciliary or rest home visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A problem focused interval history; A problem focused examination; Straightforward medical decision making. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are self-limited or minor. Typically, 15 minutes are spent with the patient and/or family or caregiver.
99335	Domiciliary or rest home visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: An expanded problem focused interval history; An expanded problem focused examination; Medical decision making of low complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of low to moderate severity. Typically, 25 minutes are spent with the patient and/or family or caregiver.
99347	Home visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A problem focused interval history; A problem focused examination; Straightforward medical decision making. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are self limited or minor. Typically, 15 minutes are spent face-to-face with the patient and/or family.
99348	Home visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: An expanded problem focused interval history; An expanded problem focused examination; Medical decision making of low complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of low to moderate severity. Typically, 25 minutes are spent face-to-face with the patient and/or family.

We believe the services described by the HCPCS codes in Table 8 are similar to services currently on the Medicare telehealth services list. The add-on codes to the office/outpatient E/M services are, by definition, part of the office/outpatient E/M services since they cannot be billed with any other codes. The Assessment of and Care Planning for Patients with Cognitive Impairment was defined as a service meant to be billed in specific clinical scenarios in lieu of a level 5 office/outpatient E/M visit. As such, these services fall within the Category 1 criteria because they are similar to the office visits that are already on the Medicare telehealth services list. As it describes group therapy, CPT code 90853 is similar to the other group therapy services currently on the Medicare telehealth services list.

While the patient’s home cannot serve as an originating site (where the patient is located) for purposes of most Medicare telehealth services, the SUPPORT for Patients and Communities Act amended section 1834(m)(4)(C) of the Act and added a new paragraph at section 1834(m)(7) of the Act to remove geographic limitations and authorize the patient’s home to serve as a telehealth originating site for purposes of treatment of a substance use disorder or a co-occurring mental health disorder, furnished on or after July 1, 2019, to an

individual with a substance use disorder diagnosis. These domiciliary/home visits contain the same elements and similar descriptors to the office/outpatient E/M visits, and therefore, we believe there is sufficient justification to add them to the Medicare telehealth services list on a Category 1 basis. Additionally, we believe that, due to the vulnerability of this particular patient population, who are receiving treatment for a diagnosed substance use disorder or co-occurring mental health disorder, we should maximize the availability of telehealth services for the treatment of substance use disorders and co-occurring mental health disorders. We note that, because the home is not generally a permissible telehealth originating site, these services could be billed when furnished as telehealth services only for treatment of a substance use disorder or co-occurring mental health disorder.

Finally, we received a request to add CPT code 96121 (*Neurobehavioral status exam (clinical assessment of thinking, reasoning and judgment, [e.g., acquired knowledge, attention, language, memory, planning and problem solving, and visual spatial abilities])*), by physician or other qualified health care professional, both face-to-face time with the patient and time interpreting test results and preparing the report; each additional

hour (List separately in addition to code for primary procedure)) on the basis that this is an add-on code to CPT code 96116 (*Neurobehavioral status exam (clinical assessment of thinking, reasoning and judgment, [e.g., acquired knowledge, attention, language, memory, planning and problem solving, and visual spatial abilities])*), by physician or other qualified health care professional, both face-to-face time with the patient and time interpreting test results and preparing the report; first hour) which is currently on the Medicare telehealth services list. In the past we have added services to the Medicare telehealth services list that are add-on codes that describe a continuation or additional elements of services currently on the Medicare telehealth services list since the services would only be considered telehealth services when billed as an add-on to codes already on the Medicare telehealth services list (82 FR 53008). Therefore, we are proposing to add CPT code 96121 to the Medicare telehealth services list.

We also received a request to add services to the Medicare telehealth services list that do not meet our criteria for addition to the Medicare telehealth services list, as explained below. We are not proposing to add the services listed in Table 9 to the Medicare telehealth services list.

TABLE 9: Services Requested for Addition to the Medicare Telehealth Services List Not Proposed for Addition

Service Type	HCPCS	Long Descriptor
Medical Genetics	96040	Medical genetics and genetic counseling services, each 30 minutes face-to-face with patient/family
	S0265	Genetic counseling, under physician supervision, each 15 minutes

We received a request to add Medical Genetics services to the Medicare telehealth services list. We note that CPT code 96040 is considered bundled into office/outpatient E/M visits, which are already on the Medicare telehealth services list. Therefore, we do not believe it is necessary to add CPT code 96040. As we stated in the CY 2012 PFS final rule with comment period (76 FR 73096 through 73097), physicians and nonphysician practitioners who may independently bill Medicare for their services and who are counseling individuals would generally report office or other outpatient evaluation and management (E/M) CPT codes for office visits that involve significant counseling, including genetic

counseling, and these office visit CPT codes are already on the Medicare telehealth services list. CPT code 96040 would only be reported by genetic counselors for genetic counseling services. Genetic counselors are not among the practitioners who can bill Medicare directly for their professional services, and they are also not practitioners who can furnish telehealth services as specified in section 1834(m)(4)(E) of the Act. As such, we do not believe that it would be necessary or appropriate to add CPT code 96040 to the Medicare telehealth services list.

HCPCS code S0265 is a Medication, Supplies, and Services code; and there is no separate payment under the PFS for this category of codes. Therefore, we

are not proposing to add this service to the Medicare telehealth services list.

c. Proposed Temporary Addition of a Category 3 Basis for Adding to or Deleting Services From the Medicare Telehealth Services List

Recently enacted legislation to address the COVID–19 pandemic provided the Secretary with new authorities under section 1135(b)(8) of the Act, as added by section 102 of the Coronavirus Preparedness and Response Supplemental Appropriations Act, 2020 (Pub. L. 116–123, March 6, 2020) and subsequently amended by section 6010 of the Families First Coronavirus Response Act (Pub. L. 116–127, March 18, 2020) and section 3703 of the

Coronavirus Aid, Relief, and Economic Security Act (CARES Act) (Pub. L. 116–136, March 27, 2020)), to waive or modify Medicare telehealth payment requirements during the PHE for the COVID–19 pandemic. Due to the circumstances of the COVID–19 pandemic, particularly the need to maintain physical distance to avoid exposure to the virus, we anticipate that health care practitioners are developing new approaches to providing care using various forms of technology when they are not physically present with the patient. We have established several flexibilities to accommodate these changes in the delivery of care. Through waiver authority under section 1135(b)(8) of the Act, in response to the PHE for the COVID–19 pandemic, we have removed the geographic and site of service originating site restrictions in section 1834(m)(4)(C) of the Act, as well as the restrictions in section 1834(m)(4)(E) of the Act on the types of practitioners who may furnish telehealth services, for the duration of the PHE for the COVID–19 pandemic. We also used waiver authority to allow certain telehealth services to be furnished via audio-only communication technology. In the March 31st COVID–19 IFC, we added to the Medicare telehealth services list on an interim basis the services identified at the beginning of this section. Through the May 1st COVID–19 IFC, on an interim basis, we removed the requirement that we undertake rulemaking to add or delete services on the Medicare telehealth services list so that we could consider the addition of services on a subregulatory basis as they were recommended by the public or identified internally. On a subregulatory basis, we simultaneously added several more additional services to the Medicare telehealth services list when we issued the May 1st COVID–19 IFC. At the conclusion of the PHE, these waivers and interim policies will expire, payment for Medicare telehealth services will once again be limited by the requirements of section 1834(m) of the Act, and we will return to the policies established through the regular notice and comment rulemaking process, including the previously established Medicare telehealth services list. We believe that the experiences of clinicians who are furnishing telehealth services during the PHE will be useful to inform decisions about which of the services we added temporarily to the Medicare telehealth services list might be appropriate to add on a permanent basis. However, we also recognize that the annual PFS rulemaking schedule

may not align perfectly with the expiration of the PHE, and that the clinicians providing services via telehealth during the PHE may not have the opportunity to conduct the kinds of review or develop the kind of evidence we usually consider when adding services to the Medicare telehealth services list on a permanent basis. In the event that the PHE ends prior to the end of calendar year 2021, stakeholders might not have the opportunity to use our current consideration process for telehealth services to request permanent additions to the Medicare telehealth services list prior to those services being removed from the Medicare telehealth services list. This is especially true for those services that might need to be considered on a Category 2 basis, which involves providing supporting documentation to illustrate the clinical benefit of such services. Recognizing the extent to which practice patterns are shifting as a result of the PHE from a model of care based on in-person services to one that relies on a combination of in-person services and virtual care, we believe that it would be disruptive to both clinical practice and beneficiary access to abruptly eliminate Medicare payment for these services when furnished via telehealth as soon as the PHE ends without first providing an opportunity to use information developed during the PHE to support requests for permanent changes to the Medicare telehealth services list.

As previously noted, in response to the PHE for the COVID–19 pandemic, we have added a broad range of services to the Medicare telehealth services list. Before eliminating the full range of these services from the Medicare telehealth services list and potentially jeopardizing beneficiary access to those services that have been clinically beneficial, based primarily on the timing of annual rulemaking, we believe it would be prudent to collect information from the public regarding which, where and how various telehealth services have been in use in various communities during the COVID–19 response. Feedback from patients and clinicians is essential to help CMS understand how the use of telehealth services may have contributed positively to, or negatively affected, the quality of care provided to beneficiaries during the PHE for the COVID–19 pandemic so that we can understand which services should be retained on the Medicare telehealth services list until we can give them full consideration under our established rulemaking process.

Therefore, we are proposing to create a third category of criteria for adding

services to the Medicare telehealth services list on a temporary basis. This new category would describe services that would be included on the Medicare telehealth services list on a temporary basis. We would include in this category the services that were added during the PHE for which there is likely to be clinical benefit when furnished via telehealth, but for which there is not yet sufficient evidence available to consider the services as permanent additions under Category 1 or Category 2 criteria. Recognizing that the services we would add on a temporary basis under Category 3 would ultimately need to meet the criteria under categories 1 or 2 in order to be permanently added to the Medicare telehealth services list, and the potential for evidence development that could continue through the Category 3 temporary addition period, we considered each of the services we added on an interim final basis during the PHE. In developing the proposal to add specific services on a Category 3 basis, we conducted a clinical assessment to identify those services for which we could foresee a reasonable potential likelihood of clinical benefit when furnished via telehealth outside the circumstances of the PHE and that we anticipate would be able to demonstrate that clinical benefit in such a way as to meet our Category 2 criteria in full. Any service added under the proposed Category 3 would remain on the Medicare telehealth services list through the calendar year in which the PHE ends. When assessing whether there was a potential likelihood of clinical benefit for a service such that it should be added to the Medicare telehealth services list on a Category 3 basis, we considered the following factors:

- Whether, outside of the circumstances of the PHE, there are increased concerns for patient safety if the service is furnished as a telehealth service.
- Whether, outside of the circumstances of the PHE, there are concerns about whether the provision of the service via telehealth is likely to jeopardize quality of care.
- Whether all elements of the service could fully and effectively be performed by a remotely located clinician using two-way, audio/video telecommunications technology.

We recognize that the circumstances of the PHE have provided clinicians with the opportunity to use telecommunications technology in health care delivery in a scope and manner far surpassing the telehealth services described under section 1834(m) of the Act, particularly as a

result of the removal of geographic and site of service restrictions, and the addition of many services to the Medicare telehealth services list. When adding services to the Medicare telehealth services list on an interim basis during the PHE, we reassessed services on a Category 2 basis in the context of the widespread presence of COVID-19 in the community. We recognized that healthcare access issues could arise due to the immediate potential exposure risks to patients and healthcare workers, and that the use of telecommunication technology could mitigate risk and facilitate clinically appropriate treatment. In the context of the PHE for the COVID-19 pandemic, we found that the added services met the Category 2 criteria on the basis that there is a patient population that would otherwise not have access to clinically appropriate care (85 FR 19234). While the interim addition of a broad swath of services to the Medicare telehealth services list is responsive to critical needs during the COVID-19 PHE, the impact of adding these services to the Medicare telehealth services list on a permanent basis is currently unknown. Specifically, although it is possible to assess the uptake among health care practitioners of the added telehealth services, the extent to which service delivery via telehealth demonstrates clinical benefit outside the conditions of the PHE is not known at this time. Adding services to the Medicare telehealth services list on a Category 3 basis will give the public the opportunity to gather data and generate requests to add certain services to the Medicare telehealth services list permanently, which would be adjudicated on a Category 1 or Category 2 basis during future PFS annual rulemaking, while maintaining access to telehealth services with potential likelihood of clinical benefit. We are also proposing that the Category 3 criteria and basis for considering additions to the Medicare telehealth services list would be temporary, to expire at the end of the calendar year in which the PHE expires.

We have identified a number of services that we believe, based on our clinical assessment, fit the Category 3 criteria enumerated above in that we did not identify significant concerns over patient safety, quality of care, or the ability of clinicians to provide all elements of the service remotely if these services were to remain on the Medicare telehealth services list for an additional period beyond the PHE. Therefore we are proposing to continue including these services on the Medicare

telehealth services list through the calendar year in which the PHE ends. These services are listed in Table 10. We invite public comment on the services we identified for temporary addition to the Medicare telehealth services list through the Category 3 criteria—including whether some should not be considered as Category 3 temporary additions to the Medicare telehealth services list, or whether services currently not proposed as Category 3 additions to the Medicare telehealth services list should be considered as such. While our clinical assessment indicated that the services in Table 10 demonstrate potential likelihood of clinical benefit when furnished as telehealth services and, as such, the potential to meet the Category 1 or Category 2 criteria for permanent addition to the Medicare telehealth services list with the development of additional evidence, we are seeking information from the public that would supplement our clinical assessment and assist us in consideration of our proposals regarding the Category 3 addition of services, even though we recognize that formal analyses may not yet be available. The following are examples of the kinds of information we are seeking from the public to help inform our decisions about proposed additions under Category 3:

- By whom and for whom are the services being delivered via telehealth during the PHE;
- What practical safeguards are being employed to maintain safety and clinical effectiveness of services delivered via telehealth; and how are practices quickly and efficiently transitioning patients from telehealth to in-person care as needed;
- What specific health outcomes data are being or are capable of being gathered to demonstrate clinical benefit;
- How is technology being used to facilitate the acquisition of clinical information that would otherwise be obtained by a hands-on physical examination if the service was furnished in person. Certain services on the Medicare telehealth services list prior to the PHE, specifically the office/outpatient E/M code set, involve a physical exam. With the telehealth expansions during the PHE, clinicians may have had valuable experience providing other telehealth services to patients in higher acuity settings of care, such as an emergency department, that involve a hands-on physical examination when furnished in person.
- Whether patient outcomes are improved by the addition of one or more services to the Medicare telehealth services list, including whether

inclusion on the Medicare telehealth services list increases access, safety, patient satisfaction, and overall quality of care;

- Whether furnishing this service or services via telecommunication technology promotes prudent use of resources;
- Whether the permanent addition of specific, individual services or categories of services to the Medicare telehealth services list supports quick responses to the spread of infectious disease or other emergent circumstances that may require widespread use of telehealth; and
- What is the impact on the health care workforce of the inclusion of one or more services or categories of services on the Medicare telehealth services list (for example, whether the health care workforce and its capabilities to provide care are expanded).

In addition, we note that CMS is committed to the following broad goals, and these weigh heavily in our decision-making around the addition, whether temporary or permanent, of a service or services to the Medicare telehealth services list. We request that commenters consider these goals in conjunction with their comments on our proposals for the treatment of the telehealth services we added on an interim basis during the PHE for the COVID-19 pandemic:

- Maintaining the capacity to enable rapid assessment of patterns of care, safety, and outcomes in the Medicare, Medicaid, CHIP and Marketplace populations;
- Establishing system safeguards to detect and avert unintended patient harms that result from policy adjustments;
- Ensuring high quality care is maintained;
- Demonstrating ongoing quality improvement efforts by Medicare participating providers, while maintaining access to necessary care;
- Establishing protections for vulnerable beneficiary populations (those with multiple chronic conditions, functional limitations, heart failure, COPD, diabetes, dementia), and sites of heightened vulnerability (such as nursing homes, rural communities) with high risk of adverse outcomes;
- Ensuring appropriate resource utilization and supporting cost efficiency;
- Supporting emergency preparedness and maintaining capacity to surge for potential coronavirus resurgence or other healthcare issues; and
- Considering timing and pace of policy corrections in light of local and

regional variations in systems of care and the impact of the COVID-19 pandemic.
BILLING CODE 4120-01-P

TABLE 10: Services Proposed for Temporary Addition to the Medicare Telehealth Services List

Service Type	HCPCS	Long Descriptor
Domiciliary, Rest Home, or Custodial Care services, Established patients	99336	Domiciliary or rest home visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A detailed interval history; A detailed examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 40 minutes are spent with the patient and/or family or caregiver.
	99337	Domiciliary or rest home visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A comprehensive interval history; A comprehensive examination; Medical decision making of moderate to high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. The patient may be unstable or may have developed a significant new problem requiring immediate physician attention. Typically, 60 minutes are spent with the patient and/or family or caregiver.
Home Visits, Established Patient	99349	Home visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A detailed interval history; A detailed examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are moderate to high severity. Typically, 40 minutes are spent face-to-face with the patient and/or family.
	99350	Home visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A comprehensive interval history; A comprehensive examination; Medical decision making of moderate to high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. The patient may be unstable or may have developed a significant new problem requiring immediate physician attention. Typically, 60 minutes are spent face-to-face with the patient and/or family.
Emergency Department Visits	99281	Emergency department visit for the evaluation and management of a patient, which requires these 3 key components: A problem focused history; A problem focused examination; and Straightforward medical decision making. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are self limited or minor.
	99282	Emergency department visit for the evaluation and management of a patient, which requires these 3 key components: An expanded problem focused history; An expanded problem focused examination; and Medical decision making of low complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of low to moderate severity.
	99283	Emergency department visit for the evaluation and management of a patient, which requires these 3 key components: An expanded problem focused history; An expanded problem focused examination; and Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate

Service Type	HCPCS	Long Descriptor
		severity.
Nursing facilities discharge day management	99315	Nursing facility discharge day management; 30 minutes or less
	99316	Nursing facility discharge day management; more than 30 minutes
Psychological and Neuropsychological Testing	96130	Psychological testing evaluation services by physician or other qualified health care professional, including integration of patient data, interpretation of standardized test results and clinical data, clinical decision making, treatment planning and report, and interactive feedback to the patient, family member(s) or caregiver(s), when performed; first hour
	96131	Psychological testing evaluation services by physician or other qualified health care professional, including integration of patient data, interpretation of standardized test results and clinical data, clinical decision making, treatment planning and report, and interactive feedback to the patient, family member(s) or caregiver(s), when performed; each additional hour (List separately in addition to code for primary procedure)
	96132	Neuropsychological testing evaluation services by physician or other qualified health care professional, including integration of patient data, interpretation of standardized test results and clinical data, clinical decision making, treatment planning and report, and interactive feedback to the patient, family member(s) or caregiver(s), when performed; first hour
	96133	Neuropsychological testing evaluation services by physician or other qualified health care professional, including integration of patient data, interpretation of standardized test results and clinical data, clinical decision making, treatment planning and report, and interactive feedback to the patient, family member(s) or caregiver(s), when performed; each additional hour (List separately in addition to code for primary procedure)

BILLING CODE 4120-01-C

d. Comment Solicitation on Medicare Telehealth Services Added on an Interim Basis During the PHE for the COVID-19 Pandemic That CMS Is Not Proposing To Retain After the PHE Ends

In the March 31st COVID-19 IFC and the May 1st COVID-19 IFC, we finalized on an interim basis during the PHE for the COVID-19 pandemic the addition of a number of services to the Medicare telehealth services list. While a number of these services were previously requested and reviewed for addition by external stakeholders as part of our standard process for updating the Medicare telehealth services list, a few were identified through internal review. As discussed above, we conducted a clinical assessment of each of the services added to the Medicare telehealth services list to identify those for which we could foresee a reasonable potential likelihood of clinical benefit when furnished via telehealth outside the circumstances of the PHE. In our clinical review of these services, we did not identify sufficient information to suggest there is a potential likelihood of clinical benefit for these services such that they could meet the Category 1 or Category 2 criteria outside the circumstances of the PHE. We specifically considered the potential for these services to be furnished, outside the circumstances of the PHE, without

increased concerns for patient safety or jeopardizing quality of care; and furnished fully and effectively, including all elements of the service, by a remotely located clinician via two-way, audio/video telecommunications technology. Due to these concerns, we did not find a potential likelihood that the services could meet Category 2 criteria even with development of additional evidence. However, we are inviting public comment on whether any service added to the Medicare telehealth services list for the duration of the PHE for the COVID-19 pandemic should be added to the Medicare telehealth services list on a temporary, Category 3 basis, based on the criteria outlined above. We welcome additional information from commenters about these services, as outlined in our request for comment for services we are proposing to add to the Medicare telehealth services list on a Category 3 basis.

We are also seeking specific comment on the following considerations associated with particular services. Comments on these specific concerns will also inform our final decisions on whether these services should be added to the Medicare telehealth services list on a temporary, Category 3 basis:

- *Initial and final/discharge interactions (CPT codes 99234-99236 and 99238-99239):* We believe that the potential acuity of the patient described

by these codes would require an in-person physical exam in order to fulfill the requirements of the service. We have concerns that without an in-person physical examination the need for the physician or health care provider to fully understand the health status of the person with whom they are establishing a clinical and therapeutic relationship would be compromised. We believe that the need for an in-person interaction would rise beyond any specific diagnosis, and serves as the foundation upon which any and all clinical decisions are based for these services. We are concerned that, without an in-person interaction, care planning that includes risk-benefit considerations and clinical decision-making will be less well-informed and create risk of patient harm.

- *Higher level emergency department visits (CPT codes 99284-99285):* We are concerned that the full scope of service elements of these codes cannot be met via two-way, audio/video telecommunications technology as higher levels are indicated by patient characteristics, clinical complexity, urgency for care, and require complex decision-making. We also believe, due to the acuity of the patient described by these codes, that an in-person physical examination is necessary to fulfill the service requirements.

- *Hospital, Intensive Care Unit, Emergency care, Observation stays (CPT*

codes CPT 99217–99220; 99221–99226; 99484–99485, 99468–99472, 99475–99476, and 99477–99480): These codes describe visits that are furnished to patients who are ill enough to require hospital evaluation and care. We believe that the codes describe an evaluation for these potentially high acuity patients that is comprehensive and includes an in-person physical examination. Our

view that in-person care is necessary to fulfill the requirements of the code is driven by the need for the physician or health provider to fully understand the health status of the person with whom they are establishing a clinical and therapeutic relationship. We believe that the need for an in-person interaction would rise above any specific diagnosis, and serves as the

foundation upon which any and all clinical decisions are based for these services. We are concerned that, without an in-person interaction, care planning that includes risk-benefit considerations and clinical decision-making will be less well-informed and create risk of patient harm.

BILLING CODE 4120-01-P

TABLE 11: Telehealth Services for the PHE That Are Not CY 2021 Medicare Telehealth Proposals

Service Type	HCPCS	Long Descriptor
Radiation Treatment Management Services	77427	Radiation treatment management, 5 treatments
End-Stage Renal Disease (ESRD) Services	90952	End-stage renal disease (ESRD) related services monthly, for patients younger than 2 years of age to include monitoring for the adequacy of nutrition, assessment of growth and development, and counseling of parents; with 2-3 face-to-face visits by a physician or other qualified health care professional per month
	90953	End-stage renal disease (ESRD) related services monthly, for patients younger than 2 years of age to include monitoring for the adequacy of nutrition, assessment of growth and development, and counseling of parents; with 1 face-to-face visit by a physician or other qualified health care professional per month
	90959	End-stage renal disease (ESRD) related services monthly, for patients 12-19 years of age to include monitoring for the adequacy of nutrition, assessment of growth and development, and counseling of parents; with 1 face-to-face visit by a physician or other qualified health care professional per month
	90962	End-stage renal disease (ESRD) related services monthly, for patients 20 years of age and older; with 1 face-to-face visit by a physician or other qualified health care professional per month
Psychological and Neuropsychological Testing	96136	Psychological or neuropsychological test administration and scoring by physician or other qualified health care professional, two or more tests, any method; first 30 minutes
	96137	Psychological or neuropsychological test administration and scoring by physician or other qualified health care professional, two or more tests, any method; each additional 30 minutes (List separately in addition to code for primary procedure)
	96138	Psychological or neuropsychological test administration and scoring by technician, two or more tests, any method; first 30 minutes
	96139	Psychological or neuropsychological test administration and scoring by technician, two or more tests, any method; each additional 30 minutes (List separately in addition to code for primary procedure)
Therapy Services, Physical and Occupational Therapy, All levels	92521	Evaluation of speech fluency (eg, stuttering, cluttering)
	92522	Evaluation of speech sound production (eg, articulation, phonological process, apraxia, dysarthria);
	92523	Evaluation of speech sound production (eg, articulation, phonological process, apraxia, dysarthria); with evaluation of language comprehension and expression (eg, receptive and expressive language)
	92524	Behavioral and qualitative analysis of voice and resonance
	92507	Treatment of speech, language, voice, communication, and/or auditory processing disorder; individual
	97161	Physical therapy evaluation: low complexity, requiring these components: A history with no personal factors and/or comorbidities that impact the plan of care; An examination of body system(s) using standardized tests and measures addressing 1-2 elements from any of the following: body structures and functions, activity limitations, and/or participation restrictions; A clinical presentation with stable and/or uncomplicated characteristics; and Clinical decision making of low complexity using standardized patient assessment instrument and/or measurable assessment of functional outcome. Typically, 20 minutes are spent face-to-face with the patient and/or family.
	97162	Physical therapy evaluation: moderate complexity, requiring these components: A history of present problem with 1-2 personal factors and/or comorbidities that impact the plan of care; An examination of body systems using standardized tests and measures in addressing a total of 3 or more elements from any of the following: body structures and functions, activity limitations, and/or participation restrictions; An evolving clinical presentation with changing characteristics; and Clinical decision making of moderate

Service Type	HCPCS	Long Descriptor
		complexity using standardized patient assessment instrument and/or measurable assessment of functional outcome. Typically, 30 minutes are spent face-to-face with the patient and/or family.
	97163	Physical therapy evaluation: high complexity, requiring these components: A history of present problem with 3 or more personal factors and/or comorbidities that impact the plan of care; An examination of body systems using standardized tests and measures addressing a total of 4 or more elements from any of the following: body structures and functions, activity limitations, and/or participation restrictions; A clinical presentation with unstable and unpredictable characteristics; and Clinical decision making of high complexity using standardized patient assessment instrument and/or measurable assessment of functional outcome. Typically, 45 minutes are spent face-to-face with the patient and/or family.
	97164	Re-evaluation of physical therapy established plan of care, requiring these components: An examination including a review of history and use of standardized tests and measures is required; and Revised plan of care using a standardized patient assessment instrument and/or measurable assessment of functional outcome Typically, 20 minutes are spent face-to-face with the patient and/or family.
	97165	Occupational therapy evaluation, low complexity, requiring these components: An occupational profile and medical and therapy history, which includes a brief history including review of medical and/or therapy records relating to the presenting problem; An assessment(s) that identifies 1-3 performance deficits (ie, relating to physical, cognitive, or psychosocial skills) that result in activity limitations and/or participation restrictions; and Clinical decision making of low complexity, which includes an analysis of the occupational profile, analysis of data from problem-focused assessment(s), and consideration of a limited number of treatment options. Patient presents with no comorbidities that affect occupational performance. Modification of tasks or assistance (eg, physical or verbal) with assessment(s) is not necessary to enable completion of evaluation component. Typically, 30 minutes are spent face-to-face with the patient and/or family.
	97166	Occupational therapy evaluation, moderate complexity, requiring these components: An occupational profile and medical and therapy history, which includes an expanded review of medical and/or therapy records and additional review of physical, cognitive, or psychosocial history related to current functional performance; An assessment(s) that identifies 3-5 performance deficits (ie, relating to physical, cognitive, or psychosocial skills) that result in activity limitations and/or participation restrictions; and Clinical decision making of moderate analytic complexity, which includes an analysis of the occupational profile, analysis of data from detailed assessment(s), and consideration of several treatment options. Patient may present with comorbidities that affect occupational performance. Minimal to moderate modification of tasks or assistance (eg, physical or verbal) with assessment(s) is necessary to enable patient to complete evaluation component. Typically, 45 minutes are spent face-to-face with the patient and/or family.
	97167	Occupational therapy evaluation, high complexity, requiring these components: An occupational profile and medical and therapy history, which includes review of medical and/or therapy records and extensive additional review of physical, cognitive, or psychosocial history related to current functional performance; An assessment(s) that identifies 5 or more performance deficits (ie, relating to physical, cognitive, or psychosocial skills) that result in activity limitations and/or participation restrictions; and Clinical decision making of high analytic complexity, which includes an analysis of the patient profile, analysis of data from comprehensive assessment(s), and consideration of multiple treatment options. Patient presents with comorbidities that affect occupational performance. Significant modification of tasks or assistance (eg, physical or verbal) with assessment(s) is necessary to enable patient to complete evaluation component. Typically, 60 minutes are spent face-to-face with the patient

Service Type	HCPCS	Long Descriptor
		and/or family.
	97168	Re-evaluation of occupational therapy established plan of care, requiring these components: An assessment of changes in patient functional or medical status with revised plan of care; An update to the initial occupational profile to reflect changes in condition or environment that affect future interventions and/or goals; and A revised plan of care. A formal reevaluation is performed when there is a documented change in functional status or a significant change to the plan of care is required. Typically, 30 minutes are spent face-to-face with the patient and/or family.
	97110	Therapeutic procedure, 1 or more areas, each 15 minutes; therapeutic exercises to develop strength and endurance, range of motion and flexibility
	97112	Therapeutic procedure, 1 or more areas, each 15 minutes; neuromuscular reeducation of movement, balance, coordination, kinesthetic sense, posture, and/or proprioception for sitting and/or standing activities
	97116	Therapeutic procedure, 1 or more areas, each 15 minutes; gait training (includes stair climbing)
	97535	Self-care/home management training (eg, activities of daily living (ADL) and compensatory training, meal preparation, safety procedures, and instructions in use of assistive technology devices/adaptive equipment) direct one-on-one contact, each 15 minutes
	97750	Physical performance test or measurement (eg, musculoskeletal, functional capacity), with written report, each 15 minutes
	97755	Assistive technology assessment (eg, to restore, augment or compensate for existing function, optimize functional tasks and/or maximize environmental accessibility), direct one-on-one contact, with written report, each 15 minutes
	97760	Orthotic(s) management and training (including assessment and fitting when not otherwise reported), upper extremity(ies), lower extremity(ies) and/or trunk, initial orthotic(s) encounter, each 15 minutes
	97761	Prosthetic(s) training, upper and/or lower extremity(ies), initial prosthetic(s) encounter, each 15 minutes
Hospital, ICU, Emergency care, Observation stays	99217	Observation care discharge day management (This code is to be utilized to report all services provided to a patient on discharge from outpatient hospital "observation status" if the discharge is on other than the initial date of "observation status." To report services to a patient designated as "observation status" or "inpatient status" and discharged on the same date, use the codes for Observation or Inpatient Care Services [including Admission and Discharge Services, 99234-99236 as appropriate.]
	99218	Initial observation care, per day, for the evaluation and management of a patient which requires these 3 key components: A detailed or comprehensive history; A detailed or comprehensive examination; and Medical decision making that is straightforward or of low complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the problem(s) requiring admission to outpatient hospital "observation status" are of low severity. Typically, 30 minutes are spent at the bedside and on the patient's hospital floor or unit.
	99219	Initial observation care, per day, for the evaluation and management of a patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; and Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the problem(s) requiring admission to outpatient hospital "observation status" are of moderate severity. Typically, 50 minutes are spent at the bedside and on the patient's hospital floor or unit.
	99220	Initial observation care, per day, for the evaluation and management of a patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; and Medical decision making of high complexity. Counseling and/or

Service Type	HCPCS	Long Descriptor
		coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the problem(s) requiring admission to outpatient hospital "observation status" are of high severity. Typically, 70 minutes are spent at the bedside and on the patient's hospital floor or unit.
	99221	Initial hospital care, per day, for the evaluation and management of a patient, which requires these 3 key components: A detailed or comprehensive history; A detailed or comprehensive examination; and Medical decision making that is straightforward or of low complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the problem(s) requiring admission are of low severity. Typically, 30 minutes are spent at the bedside and on the patient's hospital floor or unit.
	99222	Initial hospital care, per day, for the evaluation and management of a patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; and Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the problem(s) requiring admission are of moderate severity. Typically, 50 minutes are spent at the bedside and on the patient's hospital floor or unit.
	99223	Initial hospital care, per day, for the evaluation and management of a patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; and Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the problem(s) requiring admission are of high severity. Typically, 70 minutes are spent at the bedside and on the patient's hospital floor or unit.
	99224	Subsequent observation care, per day, for the evaluation and management of a patient, which requires at least 2 of these 3 key components: Problem focused interval history; Problem focused examination; Medical decision making that is straightforward or of low complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the patient is stable, recovering, or improving. Typically, 15 minutes are spent at the bedside and on the patient's hospital floor or unit.
	99225	Subsequent observation care, per day, for the evaluation and management of a patient, which requires at least 2 of these 3 key components: An expanded problem focused interval history; An expanded problem focused examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the patient is responding inadequately to therapy or has developed a minor complication. Typically, 25 minutes are spent at the bedside and on the patient's hospital floor or unit.
	99226	Subsequent observation care, per day, for the evaluation and management of a patient, which requires at least 2 of these 3 key components: A detailed interval history; A detailed examination; Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the patient is unstable or has developed a significant complication or a significant new problem. Typically, 35 minutes are spent at the bedside and on the patient's hospital floor or unit.
Higher Level Emergency	99284	Emergency department visit for the evaluation and management of a patient, which requires these 3 key components: A detailed history; A detailed examination; and

Service Type	HCPCS	Long Descriptor
Department Visits		Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of high severity, and require urgent evaluation by the physician, or other qualified health care professionals but do not pose an immediate significant threat to life or physiologic function.
	99285	Emergency department visit for the evaluation and management of a patient, which requires these 3 key components within the constraints imposed by the urgency of the patient's clinical condition and/or mental status: A comprehensive history; A comprehensive examination; and Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of high severity and pose an immediate significant threat to life or physiologic function.
Initial and final observation and discharge day management visits	99234	Observation or inpatient hospital care, for the evaluation and management of a patient including admission and discharge on the same date, which requires these 3 key components: A detailed or comprehensive history; A detailed or comprehensive examination; and Medical decision making that is straightforward or of low complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually the presenting problem(s) requiring admission are of low severity. Typically, 40 minutes are spent at the bedside and on the patient's hospital floor or unit.
	99235	Observation or inpatient hospital care, for the evaluation and management of a patient including admission and discharge on the same date, which requires these 3 key components: A comprehensive history; A comprehensive examination; and Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually the presenting problem(s) requiring admission are of moderate severity. Typically, 50 minutes are spent at the bedside and on the patient's hospital floor or unit.
	99236	Observation or inpatient hospital care, for the evaluation and management of a patient including admission and discharge on the same date, which requires these 3 key components: A comprehensive history; A comprehensive examination; and Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually the presenting problem(s) requiring admission are of high severity. Typically, 55 minutes are spent at the bedside and on the patient's hospital floor or unit.
	99238	Hospital discharge day management; 30 minutes or less
	99239	Hospital discharge day management; more than 30 minutes
	Inpatient Neonatal and Pediatric Critical Care	99468
99469		Subsequent inpatient neonatal critical care, per day, for the evaluation and management of a critically ill neonate, 28 days of age or younger
99471		Initial inpatient pediatric critical care, per day, for the evaluation and management of a critically ill infant or young child, 29 days through 24 months of age
99472		Subsequent inpatient pediatric critical care, per day, for the evaluation and management of a critically ill infant or young child, 29 days through 24 months of age
99473		Self-measured blood pressure using a device validated for clinical accuracy; patient education/training and device calibration
99475		Initial inpatient pediatric critical care, per day, for the evaluation and management of a critically ill infant or young child, 2 through 5 years of age

Service Type	HCPCS	Long Descriptor
	99476	Subsequent inpatient pediatric critical care, per day, for the evaluation and management of a critically ill infant or young child, 2 through 5 years of age
Initial and Continuing Intensive Care Services	99477	Initial hospital care, per day, for the evaluation and management of the neonate, 28 days of age or younger, who requires intensive observation, frequent interventions, and other intensive care services
	99478	Subsequent intensive care, per day, for the evaluation and management of the recovering very low birth weight infant (present body weight less than 1500 grams)
	99479	Subsequent intensive care, per day, for the evaluation and management of the recovering low birth weight infant (present body weight of 1500-2500 grams)
	99480	Subsequent intensive care, per day, for the evaluation and management of the recovering infant (present body weight of 2501-5000 grams)
Critical Care Services	99291	Critical care, evaluation and management of the critically ill or critically injured patient; first 30-74 minutes
	99292	Critical care, evaluation and management of the critically ill or critically injured patient; each additional 30 minutes (List separately in addition to code for primary service)

BILLING CODE 4120-01-C

With regard to the physical therapy, occupational therapy, and speech-language pathology services in Table Creceived a number of requests that we add therapy services to the Medicare telehealth services list. In the CY 2018 PFS final rule, we noted that section 1834(m)(4)(E) of the Act specifies the types of practitioners who may furnish and bill for Medicare telehealth services as those practitioners under section 1842(b)(18)(C) of the Act. Physical therapists (PTs), occupational therapists (OTs) and speech-language pathologists (SLPs) are not among the practitioners identified in section 1842(b)(18)(C) of the Act. We stated in the CY 2017 PFS final rule (81 FR 80198) that because these services are predominantly furnished by PTs, OTs, and SLPs, we did not believe it would be appropriate to add them to the Medicare telehealth services list at this time. In a subsequent request to consider adding these services for 2018, the original requester suggested that we might propose these services to be added to the Medicare telehealth services list so that payment can be made for them when furnished via telehealth by physicians or practitioners who can serve as distant site practitioners. We stated that since the majority of the codes are furnished over 90 percent of the time by therapy professionals who are not included on the statutory list of eligible distant site practitioners, we believed that adding therapy services to the Medicare telehealth services list could result in confusion about who is authorized to furnish and bill for these services when furnished via telehealth. While we continue to believe this is generally the case, and we are not proposing to add

these services permanently to the Medicare telehealth services list, we are seeking comment on whether these services should be added to the Medicare telehealth services list so that, in instances when a practitioner who is eligible to bill for telehealth services furnishes these services via telehealth, they could bill and receive payment for them. We are also seeking comment on whether all aspects of these services can be fully and effectively furnished via two-way, audio/video telecommunications technology. We also note that given our clarification regarding telehealth services furnished incident to the professional services of a physician or practitioner (85 FR 27562), if these services were added to the Medicare telehealth services list, they could be furnished by a therapist and billed by a physician or practitioner who can furnish and bill for telehealth services provided that all of the "incident to" requirements are met.

With regard to the critical care services listed in Table 11, we have received a number of requests in prior years to add these services to the Medicare telehealth services list. In response to one such request, we finalized creation of two HCPCS G codes, G0508 (*Telehealth consultation, critical care, initial, physicians typically spend 60 minutes communicating with the patient and providers via telehealth*) and G0509 (*Telehealth consultation, critical care, subsequent, physicians typically spend 50 minutes communicating with the patient and providers via telehealth*), to describe the work associated with furnishing consultation services via Medicare telehealth to critically ill patients in the CY 2017 PFS final rule. We stated that

CPT guidance makes clear that a variety of other services are bundled into the payment rates for critical care, including gastric intubations and vascular access procedures, among others. While we continue to believe that the full range of care for critically ill patients cannot be performed via two-way, audio/video telecommunications technology for the reasons articulated above, we are seeking comment on whether current coding (either through the CPT codes describing in-person critical care or the HCPCS G codes describing critical care consults furnished via telehealth) does not reflect additional models of critical care delivery, specifically, models of care delivery that utilize a combination of remote monitoring and clinical staff at the location of the beneficiary to allow, when an onsite practitioner is not available, for a practitioner at a distant site to monitor vital signs and direct in-person care as needed.

We are seeking comment on the definition, potential coding and valuation for this kind of remote service. We are also seeking comment on the following concerns:

- How to distinguish the technical component of the remote monitoring portion of the service from the diagnosis-related group (DRG) payment already being provided to the hospital.
- How to provide payment only for monitoring and interventions furnished to Medicare beneficiaries when the remote intensivist is monitoring multiple patients, some of which may not be Medicare beneficiaries.
- How this service intersects with both the critical care consult G codes and the in-person critical care services.

BILLING CODE 4120-01-P

TABLE 12: Summary of CY 2021 Proposals for Addition of Services to the Medicare Telehealth Services List

Type of Service	Specific Services and CPT Codes
1. Services we are proposing for permanent addition to the Medicare telehealth services list	<ul style="list-style-type: none"> • Group Psychotherapy (CPT code 90853) • Domiciliary, Rest Home, or Custodial Care services, Established patients (CPT codes 99334-99335) • Home Visits, Established Patient (CPT codes 99347- 99348) • Cognitive Assessment and Care Planning Services (CPT code 99483) • Visit Complexity Inherent to Certain Office/Outpatient E/Ms (HCPCS code GPC1X) • Prolonged Services (CPT code 99XXX) • Psychological and Neuropsychological Testing (CPT code 96121)
2. Services we are proposing as Category 3, temporary additions to the Medicare telehealth services list.	<ul style="list-style-type: none"> • Domiciliary, Rest Home, or Custodial Care services, Established patients (CPT codes 99336-99337) • Home Visits, Established Patient (CPT codes 99349-99350) • Emergency Department Visits, Levels 1-3 (CPT codes 99281-99283) • Nursing facilities discharge day management (CPT codes 99315-99316) • Psychological and Neuropsychological Testing (CPT codes 96130- 96133)
3. Services we are not proposing to add to the Medicare telehealth services list but are seeking comment on whether they should be added on either a Category 3 basis or permanently.	<ul style="list-style-type: none"> • Initial nursing facility visits, all levels (Low, Moderate, and High Complexity) (CPT 99304-99306) • Psychological and Neuropsychological Testing (CPT codes 96136-96139) • Therapy Services, Physical and Occupational Therapy, All levels (CPT 97161- 97168; CPT 97110, 97112, 97116, 97535, 97750, 97755, 97760, 97761, 92521- 92524, 92507) • Initial hospital care and hospital discharge day management (CPT 99221- 99223; CPT 99238- 99239) • Inpatient Neonatal and Pediatric Critical Care, Initial and Subsequent (CPT 99468- 99472; CPT 99475- 99476) • Initial and Continuing Neonatal Intensive Care Services (CPT 99477- 99480) • Critical Care Services (CPT 99291-99292) • End-Stage Renal Disease Monthly Capitation Payment codes (CPT 90952, 90953, 90956, 90959, and 90962) • Radiation Treatment Management Services (CPT 77427) • Emergency Department Visits, Levels 4-5 (CPT 99284-99285) • Domiciliary, Rest Home, or Custodial Care services, New (CPT 99324- 99328) • Home Visits, New Patient, all levels (CPT 99341- 99345) • Initial and Subsequent Observation and Observation Discharge Day Management (CPT 99217- 99220; CPT 99224- 99226; CPT 99234- 99236)

BILLING CODE 4120-01-C

2. Technical Refinement to the Medicare Telehealth Services List To Reflect Current Coding

For CY 2020, the CPT Editorial Panel deleted the six existing Health and Behavior Assessment and Intervention procedure CPT codes and replaced them with nine new CPT codes. The six deleted CPT codes include CPT code 96150 (*Health and behavior assessment (e.g., health-focused clinical interview, behavioral observations, psychophysiological monitoring, health oriented questionnaires), each 15*

minutes face-to-face with the patient; initial assessment), CPT code 96151 (*Health and behavior assessment (e.g., health-focused clinical interview, behavioral observations, psychophysiological monitoring, health oriented questionnaires), each 15 minutes face-to-face with the patient; reassessment*), CPT code 96152 (*Health and behavior intervention, each 15 minutes, face-to-face; individual*), CPT code 96153 (*Health and behavior intervention, each 15 minutes, face-to-face; group (2 or more patients)*), CPT code 96154 (*Health and behavior intervention, each 15 minutes, face-to-*

face; family (with the patient present)), and CPT code 96155 (*Health and behavior intervention, each 15 minutes, face-to-face; family (without the patient present)*). However, we inadvertently neglected to make the corresponding update to reflect these coding changes on the Medicare telehealth services list in CY 2020 PFS rulemaking. Therefore, we are proposing to delete CPT codes 96150–96155 from the Medicare telehealth services list and replace them with the following successor codes: CPT code 96156 (*Health behavior assessment, including reassessment (i.e., health-focused clinical interview,*

behavioral observations, clinical decision making)); CPT code 96158 (Health behavior intervention, individual, face-to-face; initial 30 minutes); CPT code 96159 (Health behavior intervention, individual, face-to-face; each additional 15 minutes (list separately in addition to code for primary service)); CPT code 96164 (Health behavior intervention, group (2 or more patients), face-to-face; initial 30 minutes); CPT code 96165 (Health behavior intervention, group (2 or more patients), face-to-face; each additional 15 minutes (list separately in addition to code for primary service)); CPT code 96167 (Health behavior intervention, family (with the patient present), face-to-face; initial 30 minutes); CPT code 96168 (Health behavior intervention, family (with the patient present), face-to-face each additional 15 minutes (list separately in addition to code for primary service)); CPT code 96170 (Health behavior intervention, family (without the patient present), face-to-face; initial 30 minutes); and CPT code 96171 (Health behavior intervention, family (without the patient present), face-to-face; each additional 15 minutes (list separately in addition to code for primary service)).

We are also proposing to amend our regulations to stipulate that when new codes are issued to replace codes that describe the same clinical services that are currently on the Medicare telehealth services list, we will consider those new codes to be successor codes to those that are on the Medicare telehealth services list, and will update the Medicare telehealth services list accordingly. At § 410.78(f), we are proposing to revise the final sentence of the paragraph to read: CMS maintains on the CMS website the Medicare telehealth services list under this section, including the current HCPCS codes that describe the services.

3. Furnishing Telehealth Visits in Inpatient and Nursing Facility Settings, and Critical Care Consultations

The long term care facility regulations at § 483.30(c) require that residents of SNFs receive an initial visit from a physician, and periodic personal visits subsequently by either a physician or other nonphysician practitioner (NPP). In the CY 2010 PFS final rule with comment period (74 FR 61762) we stated that these regulations ensure that at least a minimal degree of personal contact between a physician or a qualified NPP and a resident is maintained, both at the point of admission to the facility and periodically during the course of the resident's stay. In that rule we stated

that we believe that these federally-mandated visits should be conducted in-person, and not as Medicare telehealth services. We therefore revised § 410.78 to restrict physicians and practitioners from using telehealth to furnish the physician visits required under § 483.30(c).

During the PHE for the COVID-19 pandemic, we waived the requirement in 42 CFR 483.30 for physicians and nonphysician practitioners to personally perform required visits for nursing home residents, and allowed visits to be conducted via telehealth (<https://www.cms.gov/files/document/summary-covid-19-emergency-declaration-waivers.pdf>).

We are seeking public comment on whether it would be appropriate to maintain this flexibility on a permanent basis outside of the PHE for the COVID-19 pandemic. We invite public comment on whether the in-person visit requirement is necessary, or whether two-way, audio/video telecommunications technology would be sufficient in instances when, due to continued exposure risk, workforce capacity, or other factors, the clinician determines an in-person visit is not necessary.

We have also received requests to revise our frequency limitations for telehealth subsequent inpatient and nursing facility visits. Currently, we limit the provision of subsequent inpatient visits via Medicare telehealth to once every 3 days and subsequent nursing facility visits to once every 30 days. We received a request to remove the frequency limitation on the subsequent inpatient services and a separate request to revise the subsequent nursing facility visits to once every 3 days, rather than 30 days.

As we stated in the CY 2019 PFS final rule, we believed the potential acuity of illness of hospital inpatients is greater than that of patients who are likely to receive services that were on the Medicare telehealth services list at that time. We also stated that it would be appropriate to permit some subsequent hospital care services to be furnished through telehealth to ensure that hospitalized patients have frequent encounters with their admitting practitioner. In addition, we expressed our belief that the majority of these visits should be furnished in person to facilitate the comprehensive, coordinated, and personal care that medically volatile, acutely ill patients require on an ongoing basis. Because of our concerns regarding the potential acuity of illness of hospital inpatients, we finalized the addition of CPT codes 99231–99233 to the Medicare telehealth

services list, but limited the provision of these subsequent hospital care services through telehealth to once every 3 days. We continue to believe that admitting practitioners should continue to make appropriate in-person visits to all patients who need such care during their hospitalization. Our concerns with, and position on, the provision of subsequent hospital care services via telehealth have not changed (83 FR 59493). Therefore, we are not proposing to modify our current policy.

In the CY 2018 PFS final rule, we reiterated that we believed it would be appropriate to permit some subsequent nursing facility (NF) care services to be furnished through telehealth to ensure that complex nursing facility patients have frequent encounters with their admitting practitioner, but because of our concerns regarding the potential acuity and complexity of NF inpatients, we limited the provision of subsequent NF care services furnished through telehealth to once every 30 days. We also stated that we continued to have concerns regarding more routine use of telehealth given the potential acuity and complexity of NF inpatients, and therefore, we were not proposing to remove the frequency limitation for subsequent NF care services (83 FR 59494). We have received comments from stakeholders who stated that the once every 30-day frequency limitation for subsequent NF visits furnished via Medicare telehealth limits access to care for Medicare beneficiaries in the NF setting. Stakeholders stated that the use of Medicare telehealth is crucial to maintaining a continuum of care in this setting and that CMS should leave it up to clinicians to decide how frequently a visit may be furnished as a Medicare telehealth service rather than in person depending on the needs of specific patients. We are persuaded by the comments from these stakeholders, and therefore, are proposing to revise the frequency limitation from one visit every 30 days to one visit every 3 days. We believe this interval strikes the right balance between requiring in-person visits and allowing flexibility to furnish services via telehealth when clinically appropriate to do so. We are also seeking comment on whether frequency limitations broadly are burdensome and limit access to necessary care when services are available only through telehealth, and how best to ensure that patients are receiving necessary in-person care.

4. Proposed Technical Amendment To Remove References to Specific Technology

The final sentence of our regulation at § 410.78(a)(3) prohibits the use of telephones, facsimile machines, and electronic mail systems for purposes of furnishing Medicare telehealth services. In the March 31st COVID-19 IFC, we added a new § 410.78(a)(3)(i) (and reserved § 410.78(a)(3)(ii) for later use) to provide for an exception that removes application of that sentence during the PHE for the COVID-19 pandemic. We added the new section on an interim final basis because we believe that the first sentence of § 410.78(a)(3) adequately describes the technology requirements for an interactive telecommunication system that may be used to furnish a Medicare telehealth service. That sentence defines interactive telecommunication system as “multimedia communications equipment that includes, at a minimum, audio and video equipment permitting two-way, real-time interactive communication.” We were also concerned that the reference to “telephones” in the second sentence of the regulation as impermissible technology could cause confusion in instances where an otherwise eligible device, such as a smart phone, may also be used as a telephone. Because these concerns are not situation- or time-limited to the PHE for COVID-19, we are proposing to remove the second sentence of the regulation at § 410.78(a)(3) which specifies that “[t]elephones, facsimile machines, and electronic mail systems do not meet the definition of an interactive telecommunications system.” As we are proposing to adopt this change on a permanent basis, we are also proposing to delete the subparagraphs at § 410.78(a)(3)(i) and 410.78(a)(3)(ii). We believe these amendments to our regulations would remove outdated references to specific types of technology and provide a clearer statement of our policy.

5. Communication Technology-Based Services (CTBS)

In the CY 2019 PFS final rule, we finalized separate payment for a number of services that could be furnished via telecommunications technology, but that are not considered Medicare telehealth services. Specifically, we finalized HCPCS code G2010 (*Remote evaluation of recorded video and/or images submitted by an established patient (e.g., store and forward), including interpretation with follow-up with the patient within 24 business*

hours, not originating from a related E/M service provided within the previous 7 days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment), and HCPCS code G2012 (*Brief communication technology-based service, e.g. virtual check-in, by a physician or other qualified health care professional who can report evaluation and management services, provided to an established patient, not originating from a related E/M service provided within the previous 7 days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment; 5–10 minutes of medical discussion*). We finalized maintenance of these codes as part of the set of codes that is only reportable by those practitioners that can furnish E/M services. We stated that we believed this was appropriate since the service describes a check-in directly with the billing practitioner to assess whether an office visit is needed. However, we did note that similar check-ins provided by nurses and other clinical staff can be important aspects of coordinated patient care (83 FR 59486).

In the CY 2020 PFS final rule, we finalized separate payment for HCPCS codes G2061 (*Qualified nonphysician healthcare professional online assessment and management, for an established patient, for up to seven days, cumulative time during the 7 days; 5–10 minutes*), G2062 (*Qualified nonphysician healthcare professional online assessment and management service, for an established patient, for up to seven days, cumulative time during the 7 days; 11–20 minutes*), and G2063 (*Qualified nonphysician qualified healthcare professional assessment and management service, for an established patient, for up to seven days, cumulative time during the 7 days; 21 or more minutes*). In that rule, we stated that these codes may be billed by nonphysician practitioners (NPPs) consistent with the definition of their respective benefit category, although we did not provide specific examples (84 FR 62796).

We have received a number of questions regarding which benefit categories HCPCS codes G2061 through G2063 fall under. In the March 31st COVID-19 IFC (85 FR 19244–19245) we established on an interim basis for the duration of the PHE for the COVID-19 pandemic that these services could be billed for example, by licensed clinical social workers and clinical psychologists, as well as PTs, OTs, and SLPs who bill Medicare directly for their services when the service furnished falls within the scope of these

practitioner’s benefit categories. We are proposing to adopt that policy on a permanent basis. We note that this is not an exhaustive list and we are seeking comment on other benefit categories into which these services fall.

We are also proposing to allow billing of other CTBS by certain nonphysician practitioners, consistent with the scope of these practitioners’ benefit categories through the creation of two additional HCPCS G codes that can be billed by practitioners who cannot independently bill for E/M services:

- G20X0 (*Remote assessment of recorded video and/or images submitted by an established patient (e.g., store and forward), including interpretation with follow-up with the patient within 24 business hours, not originating from a related service provided within the previous 7 days nor leading to a service or procedure within the next 24 hours or soonest available appointment.*)
- G20X2 (*Brief communication technology-based service, e.g. virtual check-in, by a qualified health care professional who cannot report evaluation and management services, provided to an established patient, not originating from a related e/m service provided within the previous 7 days nor leading to a service or procedure within the next 24 hours or soonest available appointment; 5–10 minutes of medical discussion*).

We are proposing to value these services identically to HCPCS codes G2010 and G2012, respectively. We acknowledge that it has been agency policy, in general, to differentially value similar services that are performed by practitioners who can and cannot, respectively, bill independently for E/M services, with higher values for the service performed by practitioners who can independently bill E/M services. However, given the relatively low values for HCPCS codes G2010 and G2012, we do not think that there is a significant differential in resource costs to warrant different values, but are seeking comment on whether we should value these services differentially, including potentially increasing the valuation of HCPCS codes G2010 and G2012.

Further, to facilitate billing of the CTBS by therapists, we are proposing to designate HCPCS codes G20X0, G20X2, G2061, G2062, and G2063 as “sometimes therapy” services. When billed by a private practice PT, OT, or SLP, the codes would need to include the corresponding GO, GP, or GN therapy modifier to signify that the CTB are furnished as therapy services furnished under an OT, PT, or SLP plan of care.

We also note that in section II.K. of this proposed rule we are proposing for CY 2021 to replace the eVisit G codes with corresponding CPT codes, and that this policy would also apply to those codes.

For all of these CTBS, we are also making clear that the consent from the patient to receive these services can be documented by auxiliary staff under general supervision, as well as by the billing practitioner. While we continue to believe that beneficiary consent is necessary so that the beneficiary is notified of cost sharing when receiving these services, we do not believe that the timing or manner in which beneficiary consent is acquired should interfere with the provision of one of these services. We are retaining the requirement that, in instances when the brief communication technology-based service originates from a related E/M service (including one furnished as a telehealth service) provided within the previous 7 days by the same physician or other qualified health care professional, this service would be considered bundled into that previous E/M service and would not be separately billable.

6. Comment Solicitation on Continuation of Payment for Audio-Only Visits

In the March 31st COVID-19 IFC, we established separate payment for audio-only telephone evaluation and management (E/M) services (85 FR 19264 through 19266). The telephone E/M services are CPT codes 99441 (*Telephone evaluation and management service by a physician or other qualified health care professional who may report evaluation and management services provided to an established patient, parent, or guardian not originating from a related E/M service provided within the previous 7 days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment; 5–10 minutes of medical discussion*); 99442 (*Telephone evaluation and management service by a physician or other qualified health care professional who may report evaluation and management services provided to an established patient, parent, or guardian not originating from a related E/M service provided within the previous 7 days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment; 11–20 minutes of medical discussion*); and 99443 (*Telephone evaluation and management service by a physician or other qualified health care professional who may report evaluation and management services*

provided to an established patient, parent, or guardian not originating from a related E/M service provided within the previous 7 days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment; 21–30 minutes of medical discussion). We noted that, although these services were previously considered non-covered under the PFS, in the context of the PHE and with the goal of reducing exposure risks associated with the COVID-19 pandemic, especially in the case that two-way, audio and video technology is not available to furnish a Medicare telehealth service, we believed there are circumstances where prolonged, audio-only communication between the practitioner and the patient could be clinically appropriate, yet not fully replace a face-to-face visit. For example, an established patient who was experiencing an exacerbation of their condition could have a 25-minute phone conversation with their physician during which the physician determines that an adjustment to the patient's medication would alleviate their symptoms. The use of CPT code 99443 in this situation prevents a similar in-person service as the evaluation of the patient's symptoms and determination to adjust medication could be conducted without patient and the practitioner being in the same location. We stated our belief that these telephone E/M codes, with their established description and valuation, were the best way to recognize the relative resource costs of these kinds of services and make payment for them under the PFS. For these codes, we initially finalized on an interim basis during the PHE for the COVID-19 pandemic, work relative value units (RVUs) as recommended by the American Medical Association (AMA) Relative Value Scale Update Committee (RUC), as discussed in the CY 2008 PFS final rule with comment period (72 FR 66371), of 0.25 for CPT code 99441, 0.50 for CPT code 99442, and 0.75 for CPT code 99443. We also finalized the RUC-recommended direct practice expense (PE) inputs which consist of 3 minutes of post-service Registered Nurse/Licensed Practical Nurse/Medical Technical Assistant clinical labor time for each code.

In the May 1st COVID-19 IFC, we noted that in the time since we established these payment amounts, stakeholders had informed us that use of audio-only services was more prevalent than we had previously considered, especially because many beneficiaries were not utilizing video-enabled

communication technology from their homes. In other words, there were many cases where practitioners would under ordinary circumstances utilize telehealth or in-person visits to evaluate and manage patients' medical concerns, but were instead using audio-only interactions to manage more complex care (85 FR 27589 through 27590). While we had previously acknowledged the likelihood that, under the circumstances of the PHE, more time would be spent interacting with the patient via audio-only technology, we stated that the intensity of furnishing an audio-only visit to a beneficiary during the unique circumstances of the COVID-19 pandemic was not accurately captured by the valuation of these services we established in the March 31st COVID-19 IFC. This would be particularly true to the extent that these audio-only services are actually serving as a substitute for office/outpatient Medicare telehealth visits for beneficiaries not using video-enabled telecommunications technology contrary to the situation we anticipated when establishing payment for them in the March 31st COVID-19 IFC. We stated that, given our understanding that these audio-only services were being furnished primarily as a replacement for care that would otherwise be reported as an in-person or telehealth visit using the office/outpatient E/M codes, we established new RVUs for the telephone E/M services based on crosswalks to the most analogous office/outpatient E/M codes, based on the time requirements for the telephone codes and the times assumed for valuation for purposes of the office/outpatient E/M codes. Specifically, we crosswalked CPT codes 99212, 99213, and 99214 to CPT codes 99441, 99442, and 99443, respectively. We therefore finalized, on an interim basis and for the duration of the COVID-19 PHE, the following work RVUs: 0.48 for CPT code 99441; 0.97 for CPT code 99442; and 1.50 for CPT code 99443. We also finalized the direct PE inputs associated with CPT code 99212 for CPT code 99441, the direct PE inputs associated with CPT code 99213 for CPT code 99442, and the direct PE inputs associated with CPT code 99214 for CPT code 99443. We did not finalize increased payment rates for CPT codes 98966–98968 as these codes describe services furnished by practitioners who cannot independently bill for E/M services and so these telephone assessment and management services, by definition, are not being furnished in lieu of an office/outpatient E/M service. We noted that to the extent that these extended phone services are taking

place instead of office/outpatient E/M visits (either in-person or via telehealth), the direct crosswalk of RVUs also better maintains overall budget neutrality and relativity under the PFS. We stated that we believed that the resources required to furnish these services during the PHE for the COVID-19 pandemic are better captured by the RVUs associated with the level 2–4 established patient office/outpatient E/M visits. Additionally, we stated that, given our understanding that these audio-only services were being furnished as substitutes for office/outpatient E/M services, we recognized that they should be considered as telehealth services, and added them to the Medicare telehealth services list for the duration of the PHE. For these audio-only E/M services, we separately issued a waiver under section 1135(b)(8) of the Act, as amended by section 3703 of the CARES Act, of the requirements under section 1834(m) of the Act and our regulation at § 410.78 that Medicare telehealth services must be furnished using video technology.

We are not proposing to continue to recognize these codes for payment under the PFS after conclusion of the PHE for the COVID-19 pandemic because, outside of the circumstances of the PHE, we are not able to waive the requirement that telehealth services be furnished using an interactive telecommunications system that includes two-way, audio/video communication technology. However, we recognize that the need for audio-only interaction could remain as beneficiaries continue to try to avoid sources of potential infection, such as a doctor's office; and in that circumstance, a longer phone conversation may be needed to determine if an in-person visit is necessary than what is described by the virtual check-in. We are seeking comment on whether CMS should develop coding and payment for a service similar to the virtual check-in but for a longer unit of time and with an accordingly higher value. We are seeking input from the public on the appropriate duration interval for such services and the resources in both work and PE that would be associated with furnishing them. We are also seeking comment on whether separate payment for such telephone-only services should be a provisional policy to remain in effect until a year or some other period after the end of the PHE or if it should be PFS payment policy permanently.

7. Comment Solicitation on Coding and Payment for Virtual Services

The health care community uses the term “telehealth” broadly to refer to medical services furnished via communications technology. Under current PFS payment rules, Medicare routinely pays for many of these kinds of services. This includes some kinds of remote patient monitoring (either as separate services or as parts of bundled services), interpretations of diagnostic tests when furnished remotely and, under conditions specified in section 1834(m) of the Act, services that would otherwise be furnished in person but are instead furnished via real-time, interactive communication technology. Over the past several years, we have also established several PFS policies to make separate payment for non-face-to-face services included as part of ongoing care management. Although all of the kinds of services stated above might be called “telehealth” by patients, other payers and health care providers, we have generally used the term “Medicare telehealth services” to refer to the subset of services defined in section 1834(m) of the Act. Section 1834(m) of the Act defines Medicare telehealth services and specifies the payment amounts and circumstances under which Medicare makes payment for a discrete set of services, all of which must ordinarily be furnished in-person, when they are instead furnished using interactive, real time telecommunication technology.

We believe that the provisions in section 1834(m) of the Act apply particularly to the kinds of professional services explicitly enumerated in the statutory provisions, like professional consultations, office visits, and office psychiatry services. Generally, the services we have added to the Medicare telehealth services list are similar to these kinds of services. As has long been the case, certain other kinds of services that are furnished remotely using communications technology are not considered “Medicare telehealth services” and are not subject to the restrictions articulated in section 1834(m) of the Act. This is true for services that were routinely paid separately prior to the enactment of the provisions in section 1834(m) of the Act and do not usually include patient interaction (such as remote interpretation of diagnostic imaging tests), and for services that were not discretely defined or separately paid for at the time of enactment and that do include patient interaction (such as chronic care management services).

In recent years, we have begun making separate payment for a number

of services that use telecommunications technology but are not considered Medicare telehealth services. These CTB services include, for example, certain kinds of remote patient monitoring (either as separate services or as parts of bundled services), a virtual check-in, and a remote asynchronous service. These services are different than the kinds of services specified in section 1834(m) of the Act, in that they are not the kind of services that are ordinarily furnished in person but are routinely furnished using a telecommunications system.

In the past, we have received requests to add certain services, such as chronic care management or remote physiologic monitoring to the Medicare telehealth services list. However, as these services fall outside the scope of services addressed, and the enumerated list of services included in section 1834(m) of the Act, they are not considered telehealth services and, therefore, are not subject to the same restrictions. We are seeking comment on whether there are additional services that fall outside the scope of telehealth services under section 1834(m) of the Act where it would be helpful for us to clarify that the services are inherently non-face-to-face, so do not need to be on the Medicare telehealth services list in order to be billed and paid when furnished using telecommunications technology rather than in person with the patient present. We are also seeking comment on physicians' services that use evolving technologies to improve patient care that may not be fully recognized by current PFS coding and payment, including, for example, additional or more specific coding for care management services. Finally, we are broadly seeking comment on any impediments that contribute to healthcare provider burden and that may result in practitioners being reluctant to bill for CTBS. We appreciate the ongoing engagement and additional information from stakeholders as we work to improve coding and payment for these services that utilize telecommunications technology.

8. Proposed Clarification of Existing PFS Policies for Telehealth Services

In response to the waiver of statutory requirements and the relaxation of regulatory requirements for telehealth during the PHE for the COVID-19 pandemic, we received a number of requests to clarify existing PFS policy for telehealth. For example, we received questions as to whether Medicare allows incident-to billing for telehealth services, particularly for practitioners such as counselors who are supervised

by a physician in private practice. We note that there are no Medicare regulations that explicitly prohibit eligible distant site practitioners from billing for telehealth services provided incident to their services. However, we also note that our existing definition of direct supervision requires on-site presence of the billing clinician when the service is provided. That requirement could make it difficult for a billing clinician to provide the direct supervision of services provided via telehealth incident to their professional services by auxiliary personnel. Under our proposed amendment to the definition of direct supervision to permit virtual presence, we acknowledge that billing practitioners could more easily meet the direct supervision requirements for telehealth services provided incident to their services. Consequently, we believe that services provided incident to the professional services of an eligible distant site physician or practitioner could be reported when they meet direct supervision requirements at both the originating and distant site through the virtual presence of the billing physician or practitioner. Therefore, we are proposing to clarify that services that may be billed incident-to may be provided via telehealth incident to a physicians' service and under the direct supervision of the billing professional. This is consistent with a policy clarification that we made through the May 1st COVID-19 IFC (85 FR 27562).

We have also received questions as to whether services should be reported as telehealth services when the individual physician or practitioner furnishing the service is in the same location as the beneficiary; for example, if the physician or practitioner furnishing the service is in the same institutional setting but is utilizing telecommunications technology to furnish the service due to exposure risks. We are clarifying, as we did in the May 1st COVID-19 IFC (85 FR 27562) that if audio/video technology is used in furnishing a service when the beneficiary and the practitioner are in the same institutional or office setting, then the practitioner should bill for the service furnished as if it was furnished in person, and the service would not be subject to any of the telehealth requirements under section 1834(m) of the Act or § 410.78 of our regulations.

9. Direct Supervision by Interactive Telecommunications Technology

Many services for which payment is made under the PFS can be furnished under a level of physician or NPP supervision rather than being performed

directly by the billing practitioner. In many cases, the supervision requirements necessitate the presence of the physician or NPP in a particular location, usually in the same location as the beneficiary when the service is provided. For example, as described at § 410.26, services furnished by auxiliary personnel incident to a physician's or NPP's professional service usually require the direct supervision of the physician or NPP. In addition to these "incident to" services, there are a number of diagnostic services under the PFS that also must be furnished under direct supervision. As currently defined in §§ 410.26 and 410.32(b)(3)(ii), direct supervision means that the physician or NPP must be present in the office suite and immediately available to furnish assistance and direction throughout the performance of the procedure. Direct supervision does not require the physician or NPP to be present in the room when the service or procedure is performed.

For the duration of the PHE for the COVID-19 pandemic, for purposes of limiting exposure to COVID-19, we adopted an interim final policy revising the definition of direct supervision to include virtual presence of the supervising physician or practitioner using interactive audio/video real-time communications technology (85 FR 19245). We recognized that in some cases, the physical proximity of the physician or practitioner might present additional infection exposure risk to the patient and/or practitioner. In the context of the PHE for the COVID-19 pandemic, given the risks of exposure, the immediate risk of foregone medical care, the increased demand for healthcare professionals, and the widespread use of telecommunications technology, we believed that individual practitioners were in the best position to make decisions about how to meet the requirement to provide appropriate direct supervision based on their clinical judgment in particular circumstances.

We are proposing to extend this policy until the later of the end of the calendar year in which the PHE ends or December 31, 2021, to recognize the different and unique circumstances faced by individual communities that may continue after the PHE ends, and provide time to solicit public input on circumstances where the flexibility to use interactive audio/video real-time communications technology to provide virtual direct supervision could still be needed and appropriate. The extension of this flexibility would allow time for clinicians to make adjustments and for us to obtain public input on services

and circumstances for which this policy might be appropriate on a permanent basis. We note that if we finalize this proposal and the PHE ends before the CY 2021 PFS final rule takes effect, the interim policy adopted during the PHE to allow direct supervision using real-time, interactive audio and video technology would no longer be in effect during the period between expiration of the PHE and the date the final policy takes effect.

Given our continued interaction with practitioners during the PHE and our growing understanding of how services may be furnished remotely and safely, we now have a better understanding of how, in some cases, depending upon the unique circumstances of individual patients and billing practitioners or physicians, telecommunications technology could safely allow the practitioner or physician's immediate availability to furnish assistance and direction without necessarily requiring the supervising practitioner's or physician's physical presence in the location where the service is being furnished. In such cases, the use of real-time, audio and video telecommunications technology may allow the supervising practitioner or physician to observe the beneficiary and the auxiliary staff performing the service or be engaged (Direct supervision does not require the physician or NPP to be present in the room when the service or procedure is performed) to provide assistance and direction of the service through virtual means, and without the supervising practitioner or physician being physically present.

Consequently, we are proposing to revise § 410.32(b)(3)(ii) to allow direct supervision to be provided using real-time, interactive audio and video technology through the later of the end of the calendar year in which the PHE ends or December 31, 2021. Specifically, we propose to continue our current rule that "Direct supervision" in the office setting means the physician (or other supervising practitioner) must be present in the office suite and immediately available to furnish assistance and direction throughout the performance of the procedure. It does not mean that the physician (or other supervising practitioner) must be present in the room when the procedure is performed. We propose to add that, until the later of the end of the calendar year in which the PHE ends or December 31, 2021, the presence of the physician (or other practitioner) may include virtual presence through audio/video real-time communications technology (excluding audio-only) subject to the clinical judgement of the

supervising physician or (other supervising practitioner). In response to questions received since we issued our interim policy for the PHE, we are clarifying that, to the extent our policy allows direct supervision through virtual presence using audio/video real-time communications technology, the requirement could be met by the supervising physician (or other practitioner) being immediately available to engage via audio/video technology (excluding audio-only), and would not require real-time presence or observation of the service via interactive audio and video technology throughout the performance of the procedure.

While flexibility to provide direct supervision through audio/video real-time communications technology was adopted to be responsive to critical needs during the PHE to ensure beneficiary access to care, reduce exposure risk and to increase the capacity of practitioners and physicians to respond to COVID-19, we are concerned that direct supervision through virtual presence may not be sufficient to support PFS payment on a permanent basis, beyond the PHE, due to issues of patient safety. For instance, in complex, high-risk, surgical, interventional, or endoscopic procedures, or anesthesia procedures, a patient's clinical status can quickly change and we believe it is necessary for such services to be furnished or supervised in person to allow for rapid on-site decision-making in the event of an adverse clinical situation. For example, there could be a case in which a practitioner or physician uses audio/video interactive communications to virtually supervise a nurse performing a post-op evaluation following surgery for hip fracture, and the nurse might note that the patient is uncooperative. In this scenario, had a full exam been performed directly by the practitioner or physician, or under the in-person supervision of a practitioner or physician who was physically or immediately available in the clinic to provide the necessary direction, the physician or practitioner would have recognized that the patient exhibited signs of crystal-mediated acute arthritis, and that the patient's lack of cooperation was likely due to hypoactive delirium. Instead, the supervising practitioner or physician may not have been able to identify this clinical issue as a result of being available only via audio/video interactive communications technology. In this case, the presence of the supervising practitioner or physician through audio/video interactive

communications technology would have been insufficient. There also may be certain patient populations that require greater clinical attentiveness and skill than the supervising practitioner or physician could provide via audio/video interactive communications technology. For example, patients with cognitive impairment or dementia, or patients with communication disabilities, may require the experience and skill of a physically present supervising practitioner or physician to recognize needs such as the need for specialized testing. It may not be possible for a supervising practitioner or physician to recognize or meet these clinical needs while being present for the service only through audio/video interactive communications technology. Moreover, the virtual connection between the individual performing the service and the supervising practitioner or physician could be disrupted, making it challenging for the supervising practitioner or physician to remain immediately available to provide assistance and direction to the physically present clinical staff or auxiliary personnel to furnish appropriate care to the patient.

We are seeking information from commenters as to whether there should be any additional "guardrails" or limitations to ensure patient safety/clinical appropriateness, beyond typical clinical standards, as well as restrictions to prevent fraud or inappropriate use if we were to finalize a policy to permit direct supervision through audio/video interactive communications technology, with consideration of relevant patient safety, clinical appropriateness criteria or other restrictions, on a temporary basis through the later of the end of the calendar year in which the PHE ends or December 31, 2021, or consider it beyond the time specified. We are also seeking information on what risks this policy might introduce to beneficiaries as they receive care from practitioners that would supervise care virtually in this way. Further we are seeking comment on potential concerns around induced utilization and fraud, waste, and abuse and how those concerns might be addressed. We also invite commenters to provide data and information about their implementation experience with direct supervision using virtual presence during the PHE, and are interested in comments on the degree of aging and disability competency training that is required for effective use of audio/video real-time communications technology.

10. Comment Solicitation on PFS Payment for Specimen Collection for COVID-19 Tests

When physicians and other practitioners collect specimens for clinical diagnostic laboratory tests as part of their professional services, Medicare generally makes payment for the services under the PFS, though often that payment is bundled into the payment rate for other services, including office and outpatient visits. Typically, collection of a specimen via nasal swab or other method during the provision of a service might be reported as part of (bundled with) an office/outpatient E/M visit (CPT codes 99201 through 99205, 99211 through 99215). In visits where a patient has a face-to-face interaction with a billing professional with whom they have an established relationship, these services are generally reported with a level 2 through a level 5 visit (CPT codes 99212 through 99215). In cases where the specimen is collected during a visit where the face-to-face interaction only involves clinical staff of the billing professional with whom the patient has an established relationship, these services are generally reported using CPT code 99211.

In the May 1st COVID-19 IFC (85 FR 27604-27605), we finalized on an interim basis that physicians and NPPs may use CPT code 99211 to bill for services furnished incident to their professional services, for both new and established patients, when clinical staff assess symptoms and collect specimens for purposes of COVID-19 testing, if the billing practitioner does not also furnish a higher level E/M service to the patient on the same day. We are considering whether to extend or make permanent the policy to allow physicians and NPPs to use CPT code 99211 to bill for services furnished incident to their professional services, for both new and established patients, when clinical staff assess symptoms and collect specimens for purposes of COVID-19 testing, and are soliciting public comments on whether we should continue this policy for a period of time, or permanently, after the COVID-19 PHE ends.

E. Care Management Services and Remote Physiologic Monitoring Services

1. Background

In recent years, we have updated PFS policies to improve payment for care management and coordination. Working with the CPT Editorial Panel and other clinicians, we have expanded the suite of codes describing these services. New CPT codes were created that describe services that involve direct patient

contact (for some services, in-person) or do not involve direct patient contact; represent a single encounter, monthly service, or both; are timed services; address specific conditions; and represent the work of the billing

practitioner, auxiliary personnel (specifically, clinical staff), or both (*see* Table 13). In this proposed rule for CY 2021, we continue our work to improve payment for care management services through proposed code refinements

related to remote physiologic monitoring (RPM), transitional care management (TCM), and psychiatric collaborative care model (CoCM) services.

TABLE 13: Summary of Care Management Codes

Service	Summary
Care Plan Oversight (CPO) (also referred to as Home Health Supervision, Hospice Supervision) (HCPCS codes G0181, G0182)	Supervision of home health, hospice, per month
ESRD Monthly Services (CPT codes 90951-70)	ESRD management, with and without face-to-face visits, by age, per month
Transitional Care Management (TCM) (adopted in 2013) (CPT codes 99495, 99496)	Management of transition from acute care or certain outpatient stays to a community setting, with face-to-face visit, once per patient within 30 days post-discharge
Chronic Care Management (CCM) (adopted in 2015, 2017, 2019, 2020, 2021) (CPT codes 99487, 99489, 99490, 99491, HCPCS code G2058 (99XXX proposed 2021 replacement))	Management of all care for patients with two or more serious chronic conditions, timed, per month
Advance Care Planning (ACP) (adopted in 2016) (CPT codes 99497, 99498)	Counseling/discussing advance directives, face-to-face, timed
Behavioral Health Integration (BHI) (adopted in 2017) (CPT codes 99484, 99492, 99493, 99494, HCPCS code GCOL1 proposed for 2021)	Management of behavioral health condition(s), timed, per month
Cognitive Impairment Assessment and Care Planning (adopted in 2017) (CPT code 99483)	Assessment and care planning of cognitive impairment, face-to-face visit
Prolonged Evaluation & Management (E/M) Without Direct Patient Contact (adopted in 2017) (CPT codes 99358, 99359)	Prolonged non-face-to-face E/M work related to a face-to-face visit (other than office/outpatient visits beginning in 2021), timed
Prolonged Office/Outpatient E/M Visit (adopted for 2021) (CPT code 99XXX)	Prolonged face-to-face and/or non-face to face E/M work related to an office/outpatient E/M visit, timed
Remote Physiologic Monitoring Treatment Management Services (RPM) (adopted in 2020) (CPT codes 99457, 99458)	Development and management of a plan of treatment based upon patient physiologic data
Interprofessional Consultation (adopted in 2019) (CPT codes 99446, 99447, 99448, 99449, 99451, 99452)	Inter-practitioner consultation
Principal Care Management (adopted in 2020) (HCPCS codes G2064, G2065)	Management of a single, high risk disease

2. Digitally Stored Data Services/Remote Physiologic Monitoring/Treatment Management Services (RPM)

RPM involves the collection and analysis of patient physiologic data that are used to develop and manage a treatment plan related to a chronic and/or acute health illness or condition. In recent years, we have finalized payment for seven CPT codes in the RPM code family. Five of the seven codes have been the focus of frequent questions from stakeholders.

In response to proposals in the CY 2019 PFS proposed rule (83 FR 35771) and the CY 2020 PFS proposed rule (84 FR 40555 through 40556), stakeholders

requested that we clarify how we interpret aspects of the RPM code descriptors for CPT codes 99453, 99454, 99091, and 99457. Commenters asked us, for example, to identify who can furnish RPM services, what kinds of medical devices can be used to collect data, how data should be collected, and how “interactive communication” is defined. We stated in the CY 2020 PFS final rule (84 FR 62697) that we would provide guidance in the future about the codes. For CY 2021, we are clarifying how we read CPT code descriptors and instructions associated with CPT codes 99453, 99454, 99091, and 99457 (and the add-on code, CPT code 99458) and

their use to describe remote monitoring of physiologic parameters of a patient’s health.

The RPM process begins with two practice expense (PE) only codes, CPT codes 99453 and 99454, finalized in the CY 2019 PFS final rule (83 FR 39574 through 39576). As PE only codes they are valued to include clinical staff time, supplies, and equipment, including the medical device for the typical case of remote monitoring. CPT code 99453 (*Remote monitoring of physiologic parameter(s) (e.g., weight, blood pressure, pulse oximetry, respiratory flow rate), initial; set-up and patient education on use of equipment*) is

valued to reflect clinical staff time that includes instructing a patient and/or caregiver about using one or more medical devices. CPT code 99454 (*Remote monitoring of physiologic parameter(s) (e.g., weight, blood pressure, pulse oximetry, respiratory flow rate), initial; device(s) supply with daily recording(s) or programmed alert(s) transmission, each 30 days*) is valued to include the medical device or devices supplied to the patient and the programming of the medical device for repeated monitoring. We reviewed the PE inputs for CPT code 99454 for purposes of this proposal, and are clarifying that the medical device or devices that are supplied to the patient and used to collect physiologic data are considered equipment and as such are direct PE inputs for the code.

Review of CPT prefatory language (CPT® 2020 Professional Codebook (hereafter, CPT Codebook), p. 42) provides additional information about the two PE only codes. For example, the CPT prefatory language indicates that monitoring must occur over at least 16 days of a 30-day period in order for CPT codes 99453 and 99454 to be billed. Additionally, these two codes are not to be reported for a patient more than once during a 30-day period. This language suggests that even when multiple medical devices are provided to a patient, the services associated with all the medical devices can be billed only once per patient per 30-day period and only when at least 16 days of data have been collected. We also note that CPT 99453 can be billed only once per episode of care where an episode of care is defined as “beginning when the remote physiologic monitoring service is initiated and ends with attainment of targeted treatment goals” (CPT Codebook, p. 42).

Other stakeholder inquiries about CPT codes 99453 and 99454 focus upon the kinds of medical devices that can be used to collect the patient’s physiologic data. Prefatory language in the CPT Codebook states that “the device must be a medical device as defined by the FDA.” CPT simply specifies that the device must meet the FDA’s definition of a medical device as described in section 201(h) of the Federal Food, Drug and Cosmetic Act (FFDCA). We have found no language in the CPT Codebook indicating that a medical device must be FDA cleared as some stakeholders have suggested although such clearance may be appropriate. Nor have we found information that suggests a medical device must be prescribed by a physician, although this could be possible depending upon the medical device. Beyond acknowledging the CPT

specification that the medical device supplied for CPT code 99454 must meet the FDA definition of a medical device, we are clarifying that the medical device should digitally (that is, automatically) upload patient physiologic data (that is, data are not patient self-recorded and/or self-reported). We note also that use of the medical device or devices that digitally collect and transmit a patient’s physiologic data must, as usual for most Medicare covered services, be reasonable and necessary for the diagnosis or treatment of the patient’s illness or injury or to improve the functioning of a malformed body member. Further, the device must be used to collect and transmit reliable and valid physiologic data that allow understanding of a patient’s health status to develop and manage a plan of treatment.

The CPT Codebook lists the RPM codes under the main heading Evaluation and Management (E/M). We are clarifying that as E/M codes, CPT codes 99453, 99454, 99091, 99457, and 99458, can be ordered and billed only by physicians or nonphysician practitioners (NPPs) who are eligible to bill Medicare for E/M services.

Although we initially described RPM services in the CY 2019 PFS final rule (83 FR 35771) as services furnished to patients with chronic conditions, we are also clarifying that practitioners may furnish these services to remotely collect and analyze physiologic data from patients with acute conditions, as well as from patients with chronic conditions.

After the 30-day data collection period for CPT codes 99453 and 99454, the physiologic data that are collected and transmitted are analyzed and interpreted by the physician or practitioner as described by CPT code 99091, a code that includes only professional work, that is, there are no direct PE inputs. We finalized payment for CPT code 99091 (*Collection and interpretation of physiologic data digitally stored and/or transmitted by the patient and/or caregiver to the physician or other qualified health care professional, qualified by education, training, licensure/regulation requiring a minimum of 30 minutes of time, each 30 days*) in the CY 2018 PFS final rule (82 FR 59473). The valuation for CPT code 99091 includes a total time of 40 minutes of physician or nonphysician practitioner work broken down as follows: 5 minutes of preservice work (for example, chart review); 30 minutes of intra-service work (for example, data analysis and interpretation, report based upon the physiologic data, as well as a possible phone call to the patient); and

5 minutes of post-service work (that is, chart documentation). We note that stakeholders have expressed confusion about the specification in the code descriptor for CPT code 99091 that the service is furnished by a “physician or other qualified health care professional, qualified by education, training, licensure/regulation.” The phrase “physician or other qualified healthcare professional” is defined by CPT as, “an individual who is qualified by education, training, licensure/regulation (when applicable) and facility privileging (when applicable) who performs a professional service within his/her scope of practice and independently reports that professional service. These professionals are distinct from “clinical staff . . . [which refers to] a person who works under the supervision of a physician or other qualified healthcare professional and who is allowed by law, regulation, and facility policy to perform or assist in the performance of a specified professional service but does not individually report that professional service.”¹

Accordingly, when referring to a particular service described by a CPT code for Medicare purposes, a physician or other qualified healthcare professional is an individual whose scope of practice and Medicare benefit category includes the service and who is authorized to independently bill Medicare for the service. See our previous discussion of this in the CY 2016 PFS final rule at 80 FR 70957. Medicare also covers and makes payment for certain services performed by auxiliary personnel (which includes clinical staff) “incident to” the professional services of the billing practitioner. Our regulation at § 410.26(a) defines auxiliary personnel (a term that includes clinical staff) and delineates the conditions for payment for “incident to” services.

After analyzing and interpreting a patient’s remotely collected physiologic data, the next step in the process of RPM is the development of a treatment plan that is informed by the analysis and interpretation of the patient’s data. It is at this point that the physician or nonphysician practitioner develops a treatment plan with the patient and/or caregiver (that is, patient-centered care) and then manages the plan until the targeted goals of the treatment plan are attained, which signals the end of the episode of care. CPT code 99457 (*Remote physiologic monitoring treatment management services, clinical staff/physician/other qualified health care professional time in a calendar*

¹ CPT Codebook, p.xiii.

month requiring interactive communication with the patient/caregiver during the month; first 20 minutes) and its add-on code, CPT code 99458 (*Remote physiologic monitoring treatment management services, clinical staff/physician/other qualified health care professional time in a calendar month requiring interactive communication with the patient/caregiver during the month; each additional 20 minutes*) describe the treatment and management services associated with RPM. Medicare stakeholders have requested that we clarify aspects of these two codes. The two most frequently asked questions include, “Who can furnish the services described by CPT codes 99457 and 99458?” and “What does it mean to have an ‘interactive communication’ with a patient?”

We addressed who can furnish CPT codes 99457 and 99458 in the CY 2020 PFS final rule (84 FR 62697 through 62698) when we designated both codes as care management services. We explained that, like other care management services, CPT codes 99457 and 99458 can be furnished by clinical staff under the general supervision of the physician or NPP. We note that RPM services are not considered to be diagnostic tests; that is, they cannot be furnished and billed by an Independent Diagnostic Testing Facility on the order of a physician or NPP.

The services described by CPT codes 99457 and 99458 are services that are typically furnished remotely using communications technologies that allow “interactive communication,” which we read as real-time interaction, between a patient and the physician, nonphysician practitioner, or clinical staff who provide the services. Stakeholders have requested that we define “interactive communication” as used in the code descriptors for CPT codes 99457 and 99458. We see this remote, non-face-to-face exchange as being similar to the exchange that occurs in providing services described by HCPCS code G2012, *Brief Communication Technology Based Service*, which we finalized in the CY 2019 final rule (83 FR 59483 through 59486). Thus, we are clarifying that “interactive communication” for purposes of CPT codes 99457 and 99458 involves, at a minimum, a real-time synchronous, two-way audio interaction that is capable of being enhanced with video or other kinds of data transmission. As indicated in the code descriptor for CPT code 99457, the interactive communication must total at least 20 minutes of interactive time with the patient over the course of a calendar

month for CPT code 99457 to be reported. Each additional 20 minutes of interactive communication between the patient and the physician/nonphysician practitioner/clinical staff is reported using CPT code 99458. The CPT Codebook states that unless there are code- or code-range specific instructions, parenthetical instructions, or code descriptors to the contrary, time is considered to be the “face-to-face” time with the patient or patient’s caregiver/medical decision-maker. See the CPT Codebook, page xvii, as well as pages 10, 13, and 16 for more information about measuring time. Where, as here, the services are not typically furnished in person with the patient, we interpret time in the code descriptor to mean the time spent in direct, real-time interactive communication with the patient.

Lastly, we are proposing to establish as permanent policy two of the changes we made on an interim basis to the requirements for furnishing RPM services in response to the PHE for the COVID–19 pandemic. (See 85 FR 19264 and 85 FR 27605 through 27606 for the interim modifications and clarifications to RPM services in response to the PHE for the COVID–19 pandemic).

Our goals during the PHE for the COVID–19 pandemic have been to reduce exposure risks to the Novel Coronavirus for practitioners and patients while also increasing access to health care services. We eliminated as many obstacles as possible to allow timely delivery of reasonable and necessary health care. We wanted patients to be able to access services quickly and without barriers. With the goals of reducing exposure and increasing access to services, we finalized that RPM services could be furnished to new patients, as well as established patients. We also finalized on an interim basis for the duration of the PHE for the COVID–19 pandemic policies to allow consent to be obtained at the time services are furnished, and by individuals providing RPM services under contract with the billing physician or practitioner; and to allow RPM codes to be billed for a minimum of 2 days of data collection over a 30-day period, rather than the required 16 days of data collection over a 30-day period as provided in the CPT code descriptors.

For CY 2021, we are proposing on a permanent basis to allow consent to be obtained at the time that RPM services are furnished. Because the CPT code descriptors do not specify that clinical staff must perform RPM services, we are also proposing to allow auxiliary personnel (which includes other

individuals who are not clinical staff but are employees, or leased or contracted employees) to furnish services described by CPT codes 99453 and 99454 under the general supervision of the billing physician or practitioner.

When the PHE for the COVID–19 pandemic ends, we again will require that RPM services must be furnished only to an established patient. We believe that a physician or practitioner who has an established relationship with a patient would likely have had an opportunity to provide a new patient E/M service. During the new patient E/M service, the physician or practitioner would have collected relevant patient history and conducted a physical exam, as appropriate. As a result, the physician or practitioner would possess information needed to understand the current medical status and needs of the patient prior to ordering RPM services to collect and analyze the patient’s physiologic data and to develop a treatment plan. Additionally, and in keeping with the CPT prefatory language for CPT codes 99453 and 99454, when the PHE for the COVID–19 pandemic ends, we will once again require that 16 days of data be collected within 30 days to meet the requirements to bill CPT codes 99453 and 99454.

Finally, in response to the May 19, 2020 Executive Order 13924, “Regulatory Relief To Support Economic Recovery,” (85 FR 31353 through 31356), we are seeking comment from the medical community and other members of the public on whether the current RPM coding accurately and adequately describes the full range of clinical scenarios where RPM services may be of benefit to patients. For example, CPT codes 99453 and 99454 currently require use of a medical device (as defined by the FDA) that digitally collects and transmits 16 or more days of data every 30 days in order for the codes to be billed. However, some patients may not require remote monitoring for 16 or more days in a 30-day period. For some patients, continuous short-term monitoring might be more appropriate. For example, a post-surgical patient who is recovering at home might benefit from remote monitoring of his or her body temperature as a means of assessing infection and managing medications or dosage. In some situations, monitoring several times throughout a day, over a period of 10 days, may be reasonable and necessary. Sixteen or more days might be unnecessary. We are asking for information that would help us to understand whether it would be beneficial to consider establishing

coding and payment rules that would allow practitioners to bill and be paid for RPM services with shorter monitoring periods. Specifically, we are interested in understanding whether one or more codes that describe a shorter duration, for example, 8 or more days of remote monitoring within 30 days, might be useful. We welcome comments including any additional information that the medical community and other members of the public believe may provide further clarification on how RPM services are used in clinical practice, and how they might be coded, billed and valued under the Medicare PFS.

3. Transitional Care Management (TCM)

Payment for TCM CPT codes 99495 (*Transitional Care Management services with the following required elements: Communication (direct contact, telephone, electronic) with the patient and/or caregiver within two business days of discharge; medical decision making of at least moderate complexity during the service period; face-to-face visit within 14 calendar days of discharge*) and 99496 (*Transitional Care Management services with the following*

required elements: Communication (direct contact, telephone, electronic) with the patient and/or caregiver within two business days of discharge; medical decision making of at least high complexity during the service period; face-to-face visit within 7 calendar days of discharge) was finalized in the CY 2013 PFS final rule (77 FR 68979 through 68993). At that time, we identified a list of 57 HCPCS codes (see 77 FR 68990 for the original guidance) that we stated could not be billed concurrently with TCM services because of potential duplication of services.

For CY 2020, recognizing that use of TCM services was low when compared to the number of Medicare beneficiaries with eligible discharges and that increased utilization of medically necessary TCM services could improve patient outcomes, one of our proposals included modifying our prior rule that prohibited the billing of TCM services with many other services that we had viewed as duplicative (77 FR 68990). In the CY 2020 PFS final rule (84 FR 40549 through 40550), we finalized a policy to allow concurrent billing of TCM services, when reasonable and

necessary, with 16 actively priced (that is, not bundled or non-covered) codes during the 30-day period covered by TCM services. We stated at the time that we would continue to refine our billing policies for TCM through future notice and comment rulemaking.

We are proposing now for CY 2021 to remove 14 additional actively priced (not bundled or non-covered) HCPCS codes from the list of remaining HCPCS codes that cannot be billed concurrently with TCM. We believe that no overlap exists that would warrant preventing concurrent reporting between TCM and the services of these 14 codes. We are also proposing to allow the new Chronic Care Management code HCPCS code G2058 to be billed concurrently with TCM when reasonable and necessary. We note that the minutes counted for TCM services cannot also be counted towards other services. See Table 14 for the list of 15 codes that we are proposing could be billed concurrently with TCM services when reasonable and necessary. We welcome comment on our proposal to allow these additional services to be billed concurrently with the TCM service.

TABLE 14: 15 Additional Codes That Could Be Billed Concurrently with TCM

Code Family	CPT Code	Descriptor
End Stage Renal Disease Services (for ages less than 2 months through 20+ years)	90951	ESRD related services with 4 or more face-to-face visits per month; for patients <2 months of age
	90954	ESRD related services with 4 or more face-to-face visits per month; for patients 2-11 years
	90955	ESRD related services with 2-3 face-to-face visits per month; for patients 2-11 years
	90956	ESRD related services with 1 face-to-face visit per month; for patients 2-11 years
	90957	ESRD related services with 4 or more face-to-face visits per month; for patients 12-19 years
	90958	ESRD related services with 2-3 face-to-face visits per month; for patients 12-19 years
	90959	ESRD related services with 1 face-to-face visit per month; for patients 12-19 years
	90963	ESRD related services for home dialysis per full month; for patients <2 years of age
	90964	ESRD related services for home dialysis per full month; for patients 2-11 years
	90965	ESRD related services for home dialysis per full month; for patients 12-19 years
	90966	ESRD related services for home dialysis per full month; for patients 20 years and older
	90967	ESRD related services for dialysis less than a full month of service; per day; for patients <2 years of age
	90968	ESRD related services for dialysis less than a full month of service; per day; for patients 2-11 years
90969	ESRD related services for dialysis less than a full month of service; per day; for patients 12-19 years	
Complex Chronic Care Management Services	G2058	Chronic care management services, each additional 20 minutes of clinical staff time directed by a physician or other qualified healthcare professional, per calendar month

4. Psychiatric Collaborative Care Model (CoCM) Services (HCPCS Code GCOL1)

In the CY 2017 PFS final rule (81 FR 80230), we established G-codes used to bill for monthly services furnished using the Psychiatric Collaborative Care Model (CoCM), an evidence-based approach to behavioral health integration that enhances “usual” primary care by adding care management support and regular psychiatric inter-specialty consultation. These G-codes were replaced by CPT codes 99492–99494, which we established for payment under the PFS in the CY 2018 PFS final rule (82 FR 53077).

Stakeholders have requested additional coding to capture shorter increments of time spent, for example, when a patient is seen for services, but is then hospitalized or referred for specialized care, and the number of minutes required to bill for services using the current coding is not met. To accurately account for these resources costs, we are proposing to establish a G-code to describe 30 minutes of behavioral health care manager time. Since this code would describe one half of the time described by the existing code that describes subsequent months of CoCM services, we are proposing to price this code based on one half the work and direct PE inputs for CPT code 99493 (Subsequent psychiatric collaborative care management, first 60 minutes in a subsequent month of behavioral health care manager activities, in consultation with a psychiatric consultant, and directed by the treating physician or other qualified health care professional, with the following required elements:

- Tracking patient follow-up and progress using the registry, with appropriate documentation; participation in weekly caseload consultation with the psychiatric consultant;
- Ongoing collaboration with and coordination of the patient’s mental health care with the treating physician or other qualified health care professional and any other treating mental health practitioners;
- Additional review of progress and recommendations for changes in treatment, as indicated, including medications, based on recommendations provided by the psychiatric consultant;
- Provision of brief interventions using evidence-based techniques such as behavioral activation, motivational interviewing, and other focused treatment strategies;

- Monitoring of patient outcomes using validated rating scales; and
- Relapse prevention planning with patients as they achieve remission of symptoms and/or other treatment goals and are prepared for discharge from active treatment.), which is assigned a work RVU of 1.53.

Therefore, the proposed work RVU for the new proposed code is 0.77. We are proposing that this code could be used for either the initial month or subsequent months. We note that the existing CPT time rules for the CoCM services would apply. The proposed code is:

- GCOL1: Initial or subsequent psychiatric collaborative care management, first 30 minutes in a month of behavioral health care manager activities, in consultation with a psychiatric consultant, and directed by the treating physician or other qualified health care professional.

We are proposing that the required elements listed for CPT code 99493 would also be required elements for billing HCPCS cod GCOL1. Additionally, we propose that CPT time rules would apply, consistent with the guidance in the CPT codebook for CPT codes 99492–99494.

In the CY 2017 PFS final rule (81 FR 80235), we finalized that CCM and BHI services could be billed during the same month for the same beneficiary if all the requirements to bill each service are separately met. We are also proposing that HCPCS code GCOL1 could be billed during the same month as CCM and TCM services, provided that all requirements to report each service are met and time and effort are not counted more than once. We note that the patient consent requirement would apply to each service independently.

In the CY 2017 PFS final rule (81 FR 80235), we finalized that the psychiatric CoCM services may be furnished under general supervision because we do not believe it is clinically necessary that the professionals on the team who provide services other than the treating practitioner (namely, the behavioral health care manager and the psychiatric consultant) must have the billing practitioner immediately available to them at all times, as would be required under a higher level of supervision. Therefore, consistent with the other codes in this code family (CPT codes 99492–99494), we propose to add HCPCS code GCOL1 to the list of designated care management services for which we allow general supervision.

We welcome comments on the proposal to create this new code, as well as the proposed valuation.

F. Refinements to Values for Certain Services To Reflect Revisions to Payment for Office/Outpatient Evaluation and Management (E/M) Visits and Promote Payment Stability During the COVID–19 Pandemic

1. Background

a. Evaluation and Management (E/M) Visits Overview

Physicians and other practitioners who are paid under the PFS bill for common office visits for evaluation and management (E/M) visits using a relatively generic set of CPT codes (Level I HCPCS codes) that distinguish visits based on the level of complexity, site of service, and whether the patient is new or established. These CPT codes are broadly referred to as E/M visit codes and historically have included three key components within their code descriptors: History of present illness (history), physical examination (exam), and medical decision-making (MDM).²

Currently, there are five levels of office/outpatient E/M visits. There are five codes representing each level for new patients (CPT codes 99201 through 99205), and five codes representing each level for established patients (CPT codes 99211 through 99215). CPT code 99211 (Level 1 established patient) is the only code in the office/outpatient E/M visit code set that describes a visit that may be performed by the billing practitioner or by clinical staff under supervision, and that has no specified history, exam or MDM (see Table 15).

In total, E/M visits billed using these CPT codes comprise approximately 40 percent of allowed charges for PFS services; and office/outpatient E/M visits, in particular, comprise approximately 20 percent of allowed charges for PFS services. Within the E/M visits represented in these percentages, there is wide variation in the volume and level of E/M visits billed by different specialties. According to Medicare claims data, E/M visits are furnished by nearly all specialties, but represent a greater share of total allowed charges for physicians and other practitioners who do not routinely furnish procedural interventions or diagnostic tests. Generally, these practitioners include primary care practitioners and certain other specialists such as neurologists, endocrinologists and rheumatologists. Certain specialties, such as podiatry, tend to furnish lower level E/M visits more often than higher level E/M visits. Some specialties, such as dermatology,

² 2019 CPT Codebook, Evaluation and Management, pages 6 through 13.

tend to bill more E/M visits on the same day as they bill minor procedures.

b. Overview of Policies Finalized in CY 2020 for CY 2021

In the CY 2020 PFS final rule (84 FR 62844 through 62860), for the office/outpatient E/M visit code set (CPT codes 99201 through 99215), we finalized a policy to generally adopt the new coding, prefatory language, and interpretive guidance framework that has been issued by the AMA’s CPT Editorial Panel (see <https://www.ama-assn.org/practice-management/cpt/cpt->

evaluation-and-management) and will be effective January 1, 2021. Under this new CPT coding framework, history and exam will no longer be used to select the level of code for office/outpatient E/M visits. Instead, an office/outpatient E/M visit will include a medically appropriate history and exam, when performed. The clinically outdated system for number of body systems/ areas reviewed and examined under history and exam will no longer apply, and the history and exam components will only be performed when, and to the

extent, reasonable and necessary, and clinically appropriate.

As indicated in Table 15, the changes will include deletion of CPT code 99201 (*Level 1 office/outpatient visit, new patient*), which the CPT Editorial Panel decided to eliminate because CPT codes 99201 and 99202 are both straightforward MDM and currently largely differentiated by history and exam elements. Table 15 provides an overview of how the level 1 and level 2 office/outpatient E/M visits are currently structured, demonstrating this current overlap.

TABLE 15: Overview of Levels 1 and 2 Office/Outpatient E/M Visits, CY 2020

CPT Code	Service Overview
CPT code 99201 (level 1 new patient)	<ul style="list-style-type: none"> • Problem-focused history and exam • Straightforward medical decision-making • Typically 10 minutes face-to-face, presenting problem(s) usually self-limited or minor
CPT code 99202 (level 2 new patient)	<ul style="list-style-type: none"> • Expanded problem-focused history and exam • Straightforward medical decision-making • Typically 20 minutes face-to-face, presenting problem(s) usually of low to moderate severity
CPT code 99211 (level 1 established patient)	<ul style="list-style-type: none"> • Evaluation and management that may not require the presence of a physician or other qualified healthcare professional • Typically 5 minutes are spent performing or supervising these services, presenting problem(s) usually minimal
CPT code 99212 (level 2 established patient)	<ul style="list-style-type: none"> • Problem-focused history and exam • Straightforward medical decision-making • Typically 10 minutes face-to-face, presenting problem(s) usually self-limited or minor

For levels 2 through 5 office/outpatient E/M visits, selection of the code level to report will be based on either the level of MDM (as redefined in the new AMA/CPT guidance framework, also available on the AMA website at <https://www.ama-assn.org/practice-management/cpt/cpt-evaluation-and-management> or the total time personally spent by the reporting practitioner on the day of the visit (including face-to-face and non-face-to-face time). We continue to believe these policies will further our ongoing effort to reduce administrative burden, improve payment accuracy, and update the office/outpatient E/M visit code set to better reflect the current practice of medicine.

Regarding prolonged visits, we finalized separate payment for a new

prolonged visit add-on CPT code (CPT code 99XXX), and discontinued the use of CPT codes 99358 and 99359 (*prolonged E/M visit without direct patient contact*) to report prolonged time associated with office/outpatient E/M visits. We refer readers to the CY 2020 PFS final rule for a detailed discussion of this policy (84 FR 62849 through 62850).

Also we finalized separate payment for HCPCS code GPC1X, to provide payment for visit complexity inherent to evaluation and management associated with medical care services that serve as the continuing focal point for all needed health care services and/or with medical care services that are part of ongoing care related to a patient’s single, serious, or complex chronic condition.

The AMA RUC resurveyed and revalued the revised office/outpatient E/M visit code set, concurrent with the CPT Editorial Panel redefining the services and associated interpretive guidance, and provided us with its recommendations. In the CY 2020 PFS final rule, we also addressed and responded to the AMA RUC recommendations. We finalized new values for CPT codes 99202 through 99215, and assigned RVUs to the new office/outpatient E/M prolonged visit CPT code 99XXX, as well as the new HCPCS code GPC1X. These valuations were finalized with an effective date of January 1, 2021. In Table 16, we provide a summary of the codes and work RVUs finalized in the CY 2020 PFS final rule for CY 2021.

TABLE 16: Summary of Codes and Work RVUs Finalized in the CY 2020 PFS Final Rule for CY 2021

HCPCS Code	Current Total Time (mins)	Current Work RVU	CY 2021 Total Time (mins)	CY 2021 Work RVU
99201	17	0.48	N/A	N/A
99202	22	0.93	22	0.93
99203	29	1.42	40	1.6
99204	45	2.43	60	2.6
99205	67	3.17	85	3.5
99211	7	0.18	7	0.18
99212	16	0.48	18	0.7
99213	23	0.97	30	1.3
99214	40	1.5	49	1.92
99215	55	2.11	70	2.8
99XXX	N/A	N/A	15	0.61
GPC1X	N/A	N/A	11	0.33

c. Continuing Stakeholder Feedback

Since issuing the CY 2020 PFS final rule, we have continued to engage with the stakeholder community on the issues addressed in this section of our proposed rule. In the CY 2020 PFS final rule (84 FR 62859 through 62860), we discussed public comments we received in response to our request for comment about whether it would be appropriate to revalue certain services, other than the global surgical codes which we addressed separately, for which the values are closely tied to the values of the office/outpatient E/M visit codes in order to improve payment accuracy and maintain relativity within the PFS. We responded that we would consider the commenters' recommendations for future rulemaking. Since publication of the CY 2020 PFS final rule, we have received additional feedback from stakeholders, in the form of written requests and in-person meetings, indicating that certain other services on which we did not seek comment in the CY 2020 PFS proposed rule, but which are similar to the office/outpatient E/M visits, have values that were established relative to values for the office/outpatient E/M visits or contain office/outpatient E/M visits as constituent parts of the bundled services included

in the code for the service. We address many of these requests in the following section, and are seeking comment on whether there are additional, similarly situated services for which we should consider similar adjustment or revaluation through future rulemaking. We have also received questions about the definition and utilization assumptions for the HCPCS add on code GPC1X.

2. Proposals for CY 2021

a. Time Values for Levels 2–5 Office/Outpatient E/M Visit Codes

In the CY 2020 PFS proposed rule (84 FR 62568), we sought comment on the times associated with the office/outpatient E/M visits as recommended by the AMA RUC. When surveying these services for purposes of valuation, the AMA RUC requested that survey respondents consider the total time spent on the day of the visit, as well as any pre- and post-service time occurring within a timeframe of 3 days prior to the visit and 7 days after, respectively. In developing its recommendations to us, the AMA RUC then separately averaged the survey results for pre-service, day of service, and post-service times, and the survey results for total time, with the result that, for some of the codes, the sum of the times associated with the

three service periods does not match the RUC-recommended total time. The approach used by the AMA RUC to develop recommendations sometimes resulted in two conflicting sets of times: The component times as surveyed and the total time as surveyed. In the CY 2020 PFS final rule, we finalized adoption of the RUC-recommended times as explained below, but stated that we would continue to consider whether this issue has implications for the PFS broadly. When we establish pre-, intra-, and post-service times for a service under the PFS, these times always sum to the total time. We believe it would be illogical for component times not to sum to the total, and this idea is reflected in our ratesetting system which requires component times to sum to the total time. Commenters on the CY 2020 PFS proposed rule (84 FR 62849) stated that we should adopt the times as recommended by the RUC, and did not provide any additional details on the times they believed we should use when the total time is not the sum of the component times. Table 17 illustrates the AMA RUC surveyed times for each service period and the surveyed total time. It also shows the actual total time calculated as the sum of the component times.

TABLE 17: RUC-Recommended Pre-, Intra-, Post-Service Times, RUC-Recommended Total Times for CPT codes 99202-99215 and Actual Total Time

HCPCS	Pre-Service Time	Intra-Service Time	Immediate Post-Service Time	Actual Total Time	RUC-recommended Total Time
99202	2	15	3	20	22
99203	5	25	5	35	40
99204	10	40	10	60	60
99205	14	59	15	88	85
99211		5	2	7	7
99212	2	11	3	16	18
99213	5	20	5	30	30
99214	7	30	10	47	49
99215	10	45	15	70	70

Given the lack of clarity provided by commenters on the CY 2020 PFS proposed rule about why the sum of minutes in the components would differ from the total minutes, and our view and systems requirement that total time must equal the mathematical total of component times, we are proposing beginning for CY 2021 to adopt the actual total times (defined as the sum of the component times) rather than the total times recommended by the RUC for CPT codes 99202 through 99215.

b. Revaluing Services That Are Analogous to Office/Outpatient E/M Visits

In the CY 2020 PFS proposed rule, we recognized that there are services other than the global surgical codes for which the values are closely tied to the values of the office/outpatient E/M visit codes. We specifically identified transitional care management (TCM) services (CPT codes 99495, 99496); cognitive impairment assessment and care planning (CPT code 99483); certain end-stage renal disease (ESRD) services (CPT codes 90951 through 90970); and the annual wellness visit (AWV) and initial preventive physical exam (IPPE) (HCPCS codes G0402, G0438, G0439). Many of these services were valued via a building block methodology and have office/outpatient E/M visits explicitly built into their definition or valuation. We stated that we may consider adjusting the RVUs for these services in future rulemaking, and we sought public input on such a policy. We noted that, unlike the global surgical codes, some of these services always include an office/outpatient E/M visit(s) furnished by the reporting practitioner as part of the service, and therefore, it may be appropriate to adjust their valuations commensurate with any changes made to the values for office/outpatient E/M visits. Some of these services do not actually include an E/M visit, but we valued them using a direct

crosswalk to the RVUs assigned to an office/outpatient E/M visit(s), and for this reason they are closely tied to values for office/outpatient E/M visits. Overall, we believe that the magnitude of the changes to the values of the office/outpatient E/M visit codes and the associated redefinitions of the codes themselves are significant enough to warrant an assessment of the accuracy of the values of services containing, or closely analogous to, office/outpatient E/M visits. These proposals take into account input from the public and our own internal review.

We received public comments in support of revaluing certain services relative to the new office/outpatient E/M visit values. There was particular support for revaluing the ESRD monthly capitation payment (MCP) services, TCM services, cognitive impairment assessment and care planning services, and the emergency department (ED) visits. Based on input provided since publication of the CY 2020 PFS final rule by the American College of Obstetricians and Gynecologists (ACOG), we have also considered the maternity surgical packages which, unlike other global surgery services, were valued using a methodology, described in more detail below, that allowed the valuation of the composite parts of the package to sum to the total value. Additionally, unlike the 10- and 90-day global surgical services codes (referred to in this section as 10- and 90-day globals), we have never expressed concerns as to the accuracy of the values of the maternity packages, and these services were not part of the policy we adopted to transition all 10- and 90-day globals to 0-day globals (79 FR 67591), though that policy was overridden by statutory amendments before it took effect.

(1) End-Stage Renal Disease Monthly Capitation Payment Services

In the CY 2004 PFS final rule with comment period (68 FR 63216), we established new Level II HCPCS G codes for ESRD services and established MCP rates for them as specified under section 1881(b)(3)(A)(ii) of the Act. For ESRD center-based patients, payment for the G codes varied based on the age of the beneficiary and the number of face-to-face visits furnished each month (for example, 1 visit, 2–3 visits and 4 or more visits). We believed that many physicians would provide 4 or more visits to center-based ESRD patients, and a small proportion would provide 2–3 visits or only one visit per month. Under the MCP methodology, to receive the highest payment, a physician would have to furnish at least 4 ESRD-related visits per month. In contrast, payment for home dialysis MCP services only varied by the age of beneficiary. Although we did not initially specify a frequency of required visits for home dialysis MCP services, we stated that we expect physicians to provide clinically appropriate care to manage the home dialysis patient.

The CPT Editorial Panel created new CPT codes to replace the G codes for monthly ESRD-related services, and we finalized the new codes for use under the PFS in CY 2009 (73 FR 69898). The codes created were CPT codes 90951 through 90962 for monthly ESRD-related services with a specified number of visits; CPT codes 90963 through 90966 for monthly ESRD-related services for home dialysis patients; and CPT codes 90967 through 90970 for home dialysis patients with less than a full month of services. The latter set of codes are billed per encounter and valued to be 1/30 of the value of CPT codes 90965 and 90966.

In response to our comment solicitation in the CY 2020 PFS final rule and interim final rule regarding

whether to adjust the values of the ESRD MCP codes to reflect the increased values of the office/outpatient E/M visit codes, we received a number of supportive comments, particularly from specialty societies representing nephrologists. These commenters pointed out that the MCP bundled payments for all ESRD-related care for a

month were constructed using a building block methodology and a number of office/outpatient E/M visits were component parts of those bundles; and that the specified number of visits in the code descriptor must be furnished in order to bill for the service. Commenters also noted that although the values of office/outpatient E/M visit

codes have been increased once since the creation of the MCP G codes and once after adoption of the MCP CPT codes, the valuation of the ESRD MCP codes was never adjusted to account for increases to the office/outpatient E/M visit codes. In Table 18, we provide a summary of the visits bundled into each ESRD MCP service.

TABLE 18: Number and Level of Office/Outpatient E/M Visits Bundled into the ESRD MCP Services

HCPCS	Short Descriptor	Bundled Office/Outpatient visit(s)
90951	Esrd serv 4 visits p mo <2yr	13x 99214
90954	Esrd serv 4 vsts p mo 2-11	Crosswalked to CPT code 99471
90955	Esrd srv 2-3 vsts p mo 2-11	1x 99215
		2x 99214
90956	Esrd srv 1 visit p mo 2-11	1x 99215
90957	Esrd srv 4 vsts p mo 12-19	1x 99215
		3x 99214
		3x 99213
90958	Esrd srv 2-3 vsts p mo 12-19	1x 99215
		2x 99214
90959	Esrd serv 1 vst p mo 12-19	1x 99215
90960	Esrd srv 4 visits p mo 20+	1x 99213
		3x 99214
90961	Esrd srv 2-3 vsts p mo 20+	3x 99214
90962	Esrd serv 1 visit p mo 20+	1x 99214
90963	Esrd home pt serv p mo <2yrs	1x 99215
		2x 99214
90964	Esrd home pt serv p mo 2-11	1x 99215
		1x 99214
90965	Esrd home pt serv p mo 12-19	1x 99215
		1x 99214
90966	Esrd home pt serv p mo 20+	3x 99214
90968	Esrd svc pr day pt 2-11	RVU of 90964/30
90969	Esrd svc pr day pt 12-19	RVU of 90965/30
90970	Esrd svc pr day pt 20+	RVU of 90966/30

In the past, we have not updated the valuation of this code set to reflect updates to the valuation of the office/outpatient E/M visit code set and so over time, the values of the ESRD MCP codes have become out of step with valuation of their constituent visits. We believe there is sufficient reason to revalue these services to take into account the changes in valuation for the office/outpatient E/M visits. These services were initially valued using a building block methodology which summed the value of the individual service from its components, and for some of the codes in this code set, a specified number of visits must be furnished in order to bill for the respective ESRD MCP code because they are included in the code descriptor.

Therefore, we believe that the ESRD MCP codes should be updated to more accurately account for the associated office/outpatient E/M visits. We are proposing to increase the work, physician time, and PE inputs in the form of clinical staff time of the ESRD MCP codes based on the marginal difference between the 2020 and 2021 office/outpatient E/M visit work, physician time, and PE inputs built into each code, as summarized in Tables 19 and 20. By improving payment accuracy for the ESRD MCP codes, we would also be supporting broader efforts at advancing kidney health.³ We believe

³ HHS Launches President Trump's 'Advancing American Kidney Health' Initiative: <https://www.hhs.gov/about/news/2019/07/10/hhs-launches-president-trump-advancing-american-kidney-health-initiative.html>.

the majority of the visits included in the ESRD MCP bundles are being furnished, but are seeking comment on whether there are instances where the number and level of visits being furnished are not consistent with the number and level of visits built into the valuation of the code.

3. TCM Services (CPT Codes 99495 and 99496)

The goal of TCM services is to improve the health outcomes of patients recently discharged from inpatient and certain outpatient facility stays. We began making separate payment for TCM services in CY 2013. At that time, CPT code 99495 (*Transitional Care Management Services with the following required elements: Communication (direct contact, telephone, electronic)*)

with the patient and/or caregiver with 2 business days of discharge; medical decision making of at least moderate complexity during the service period; face-to-face visit within 14 calendar days of discharge) was valued to include one, level 4 established patient office/outpatient visit, while CPT code 99496 (*Transitional Care Management Services with the following required elements: Communication (direct contact, telephone, electronic) with the patient and/or caregiver with 2 business days of discharge; medical decision making of at least high complexity during the service period; face-to-face visit within 7 calendar days of discharge*) was valued to include one, level 5 established patient office/outpatient visit (77 FR 68991). In the CY 2020 PFS final rule (84 FR 62687), we finalized the RUC-recommended work and direct PE inputs for the TCM codes which resulted in small RVU increases for both codes.

Because both TCM codes include a required face-to-face E/M visit (either a level 4 or 5 office/outpatient E/M visit), we are proposing to increase the work RVUs associated with the TCM codes commensurate with the new valuations for the level 4 (CPT code 99214) and level 5 (CPT code 99215) office/outpatient E/M visits for established patients. Please see Tables 19 and 20 for long descriptors, as well as current and proposed work RVUs, physician time, and clinical staff time, for the TCM codes.

4. Maternity Services

In the CY 2002 PFS final rule with comment period (66 FR 55393), we finalized separate payment for maternity care services. The maternity packages are unlike other services for which payment is made under the PFS in that they are the only global codes that provide a single payment for almost 12 months of services, including visits, surgical services, and imaging (among other services); and were valued using a building-block methodology as opposed to the magnitude estimation method that is commonly used to value the 10- and 90-day global services. There are 17 CPT codes that are used for billing delivery, antepartum, and postpartum maternity care services, and these codes are all designated with a unique global period indicator “MMM.”

For CY 2021, the AMA RUC made a recommendation to revalue these services, along with their recommendations to revalue the 10- and 90-day global surgical packages, to account for increases in the values of office/outpatient E/M visits. In the CY 2020 PFS final rule, we decided not to

make changes to the valuation of 10- and 90-day global surgical packages to reflect changes made to values for the office/outpatient E/M visit codes while we continue to collect and analyze the data on the number and level of office/outpatient E/M visits that are actually being performed as part of these services.

The 10- and 90-day global surgical packages are commonly valued using a methodology known as magnitude estimation. Magnitude estimation refers to a methodology for valuing work that identifies the appropriate work RVU for a service by gauging the total amount of work for that service relative to the work for a similar service across the PFS, without explicitly valuing the components of that work. Since its inception, the AMA RUC has worked under the prevailing assumption that magnitude estimation is the standard for valuation of all physicians' services, including those with global surgical packages. Consequently, the work values associated with expected typical E/M visits within a code's global period are not necessarily added to the physician work value for the code to determine the final work RVU. The postoperative visits in the 10- or 90-day global surgical code periods are often valued with reference to RVUs for separately-billed E/M visits, but the bundled post-operative visit RVUs do not directly contribute a certain number of RVUs to the valuation of the procedures. However, the MMM codes are unique in both the length of the global period and the methodology under which they were valued. When CMS established values for the maternity packages, we based them on RUC recommendations developed by the relevant specialty societies using the building block methodology. When it is used for a CPT code representing a bundle of services, the building block methodology components are the CPT codes that make up the bundled code and the inputs associated with those codes. Therefore, when the maternity packages were valued, the work (and other inputs) associated with the office/outpatient E/M visits in each package were explicitly accounted for.

In addition, unlike the global surgical codes, we have reason to believe the visits included in the maternity codes are actually furnished given the evidence-based standards and professional guidelines for obstetrical care. For example, The *Guidelines for Perinatal Care* state that “a woman with an uncomplicated first pregnancy is examined every 4 weeks for the first 28 weeks of gestation, every 2 weeks until 36 weeks of gestation, and weekly

thereafter.”⁴ For this reason, we excluded the maternity codes from our recent global surgery data collection.

Given the valuation methodology and expectations for office/outpatient E/M visits in the maternity package codes, and the revaluation recommendation developed by the AMA RUC, we believe that the maternity packages should be updated to more accurately reflect the values of the office/outpatient E/M visits included in the packages. We believe that, due to the use of the building block valuation methodology rather than magnitude estimation, and the likelihood that the bundled visits are actually being furnished, the valuations recommended to us by the AMA RUC more accurately reflect the resource costs associated with furnishing these services. In the past, the work, physician time, and PE for these services have not been revalued to reflect changes to the office/outpatient E/M visits that are included as part of the package and therefore, the valuation of the MMM surgical packages have become misaligned with the valuation of their constituent office visits.

When revaluing the maternity packages, the AMA RUC used a methodology similar to what we used when revaluing the ESRD MCP codes and TCM by adding in the marginal differences in work, physician time, and practice expense (PE) in the form of clinical staff time between the current and 2021 E/M values. We believe that this method accurately accounts for the increase in valuation relative to the office/outpatient E/M visits, and therefore, we are proposing to increase the work RVUs, physician time, and PE inputs in the form of clinical staff time associated with the maternity packages by accepting the revaluation recommendation from the AMA RUC as detailed in Tables 19 and 20.

We would also note that, in addition to appropriately reflecting changes to values of the office and outpatient E/M visits, increases made to the valuation of the maternity package codes would be consistent with our broader focus on improving maternal health and birth outcomes. The proposed changes would account for additional resources involved with additional work that is needed on the part of practitioners to improve care for this patient population, such as risk identification and ensuring appropriate interventions and referrals.⁵

5. Assessment and Care Planning for Patients With Cognitive Impairment (CPT Code 99483)

In CY 2017, we established payment for HCPCS code G0505 (*Assessment and care planning for patients with cognitive impairment*) to provide payment for cognitive impairment assessment and care planning, believing that the CPT Editorial Panel was developing new coding for that service. In response to the CY 2017 PFS proposed rule, the AMA RUC submitted recommended values for this code, which we adopted in the CY 2017 PFS final rule. In CY 2018, the CPT Editorial Panel created CPT code 99483 for reporting of this service and in CY 2018, CMS adopted CPT code 99483 (deleting HCPCS code G0505) without changing the service valuation. Based on input from commenters and the AMA RUC, the valuation of this service reflected the complexity involved in assessment and care planning for patients with cognitive impairment by including resource costs that are greater than the highest valued office/outpatient E/M visit (CPT code 99205, new patient level 5 visit) (81 FR 80352). Specifically, the service includes a cognition-focused evaluation

Information/OMH/equity-initiatives/rural-health/21-Maternal-Health-Forum-Improving-Maternal-Health-for-Our-Communities.pdf; https://innovation.cms.gov/innovation-models/maternal-opioid-misuse-model.

including a pertinent history and examination, and medical decision making of moderate or high complexity, in addition to many functional and other assessments specific to cognitive status. With the revaluation we finalized in the CY 2020 PFS final rule for CPT code 99205 effective beginning in CY 2021, the current work RVU for CPT code 99483 would have a lower work RVU than a new patient level 5 office/outpatient E/M visit, which would create a rank order anomaly between the two codes that, given the way the code was valued, we do not believe would be appropriate. Rather, because CPT code 99483 was valued in relation to a level 5 office/outpatient E/M visit, we believe that an adjustment to the work, physician time, and PE for this service to reflect the marginal difference between the value of the level 5 new patient office/outpatient E/M visit in CY 2020 and CY 2021 would be appropriate to maintain payment accuracy. Therefore, we are proposing to adjust the work, time, and PE in the form of clinical staff time for CPT code 99483 as shown in Tables 19 and 20.

6. Initial Preventive Physical Examination (IPPE) and Initial and Subsequent Annual Wellness (AWV) Visits

In the CY 2011 PFS final rule with comment period, we finalized separate

payment for HCPCS codes G0438 (*Annual wellness visit; includes a personalized prevention plan of service (pps), initial visit*) and G0439 (*Annual wellness visit; includes a personalized prevention plan of service (pps), subsequent visit*). These services were valued via a direct crosswalk to the work, time, and direct PE inputs associated with CPT codes 99204 and 99214, respectively. In that same rule, we stated that the HCPCS code G0402 (*Initial preventive physical examination; face-to-face visit, services limited to new beneficiary during the first 12 months of Medicare enrollment*) was also valued based on a direct crosswalk to the work, time, and direct PE inputs for CPT code 99204 (75 FR 73408–73411).

Because these codes are valued using direct crosswalks to office/outpatient E/M visits, and based on the principles articulated above, we believe that to maintain payment accuracy for the IPPE and the AWV, their values should be adjusted to reflect the changes in value for CPT codes 99204 and 99214. Therefore, we are proposing to revise the work, physician time, and direct PE inputs for these codes as shown in Tables 19 and 20.

BILLING CODE 4120-01-P

TABLE 19: CY 2020 Work RVUs and CY 2021 Proposed Work RVUs

HCPCS Code	Long Descriptor	CY 2020 Work RVUs	Proposed CY 2021 Work RVUs
59400	Routine obstetric care including antepartum care, vaginal delivery (with or without episiotomy, and/or forceps) and postpartum care	32.16	36.58
59410	Vaginal delivery only (with or without episiotomy and/or forceps); including postpartum care	18.01	18.34
59425	Antepartum care only; 4-6 visits	6.31	7.80
59426	Antepartum care only; 7 or more visits	11.16	14.3
59430	Postpartum care only (separate procedure)	2.47	3.22
59510	Routine obstetric care including antepartum care, cesarean delivery, and postpartum care	35.64	40.39
59515	Cesarean delivery only; including postpartum care	21.47	22.13
59610	Routine obstetric care including antepartum care, vaginal delivery (with or without episiotomy, and/or forceps) and postpartum care, after previous cesarean delivery	33.87	38.29
59614	Vaginal delivery only, after previous cesarean delivery (with or without episiotomy and/or forceps); including postpartum care	19.73	20.06
59618	Routine obstetric care including antepartum care, cesarean delivery, and postpartum care, following attempted vaginal delivery after previous cesarean delivery	36.16	40.91
59622	Cesarean delivery only, following attempted vaginal delivery after previous cesarean delivery; including postpartum care	22.00	22.66
90951	End-stage renal disease (ESRD) related services monthly, for patients younger than 2 years of age to include monitoring for the adequacy of nutrition, assessment of growth and development, and counseling of parents; with 4 or more face-to-face visits by a physician or other qualified health care professional per month	18.46	23.92
90954	End-stage renal disease (ESRD) related services monthly, for patients 2-11 years of age to include monitoring for the adequacy of nutrition, assessment of growth and development, and counseling of parents; with 4 or more face-to-face visits by a physician or other qualified health care professional per month	15.98	21.44
90955	End-stage renal disease (ESRD) related services monthly, for patients 2-11 years of age to include monitoring for the adequacy of nutrition, assessment of growth and development, and counseling of parents; with 2-3 face-to-face visits by a physician or other qualified health care professional per month	8.79	10.32
90956	End-stage renal disease (ESRD) related services monthly, for patients 2-11 years of age to include monitoring for the adequacy of nutrition, assessment of growth and development, and counseling of parents; with 1 face-to-face visit by a physician or other qualified health care professional per month	5.95	6.64
90957	End-stage renal disease (ESRD) related services monthly, for patients 12-19 years of age to include monitoring for the adequacy of nutrition, assessment of growth and development, and counseling of parents; with 4 or more face-to-face visits by a physician or other qualified health care professional per month	12.52	15.46
90958	End-stage renal disease (ESRD) related services monthly, for patients 12-19 years of age to include monitoring for the adequacy of nutrition, assessment of growth and development, and counseling of parents; with 2-3 face-to-face visits by a physician or other qualified	8.34	9.87

HCPCS Code	Long Descriptor	CY 2020 Work RVUs	Proposed CY 2021 Work RVUs
	health care professional per month		
90959	End-stage renal disease (ESRD) related services monthly, for patients 12-19 years of age to include monitoring for the adequacy of nutrition, assessment of growth and development, and counseling of parents; with 1 face-to-face visit by a physician or other qualified health care professional per month	5.50	6.19
90960	End-stage renal disease (ESRD) related services monthly, for patients 20 years of age and older; with 4 or more face-to-face visits by a physician or other qualified health care professional per month	5.18	6.77
90961	End-stage renal disease (ESRD) related services monthly, for patients 20 years of age and older; with 2-3 face-to-face visits by a physician or other qualified health care professional per month	4.26	5.52
90962	End-stage renal disease (ESRD) related services monthly, for patients 20 years of age and older; with 1 face-to-face visit by a physician or other qualified health care professional per month	3.15	3.57
90963	End-stage renal disease (ESRD) related services for home dialysis per full month, for patients younger than 2 years of age to include monitoring for the adequacy of nutrition, assessment of growth and development, and counseling of parents	10.56	12.09
90964	End-stage renal disease (ESRD) related services for home dialysis per full month, for patients 2-11 years of age to include monitoring for the adequacy of nutrition, assessment of growth and development, and counseling of parents	9.14	10.25
90965	End-stage renal disease (ESRD) related services for home dialysis per full month, for patients 12-19 years of age to include monitoring for the adequacy of nutrition, assessment of growth and development, and counseling of parents	8.69	9.80
90966	End-stage renal disease (ESRD) related services for home dialysis per full month, for patients 20 years of age and older	4.26	8.04
90968	End-stage renal disease (ESRD) related services for dialysis less than a full month of service, per day; for patients 2-11 years of age	0.30	0.34
90969	End-stage renal disease (ESRD) related services for dialysis less than a full month of service, per day; for patients 12-19 years of age	0.29	0.33
90970	End-stage renal disease (ESRD) related services for dialysis less than a full month of service, per day; for patients 20 years of age and older	0.14	0.27
99483	Assessment of and care planning for a patient with cognitive impairment, requiring an independent historian, in the office or other outpatient, home or domiciliary or rest home, with all of the following required elements: Cognition-focused evaluation including a pertinent history and examination; Medical decision making of moderate or high complexity; Functional assessment (eg, basic and instrumental activities of daily living), including decision-making capacity; Use of standardized instruments for staging of dementia (eg, functional assessment staging test [FAST], clinical dementia rating [CDR]); Medication reconciliation and review for high-risk medications; Evaluation for neuropsychiatric and behavioral symptoms, including depression, including use of standardized screening instrument(s); Evaluation of safety (eg, home), including motor vehicle operation; Identification of caregiver(s), caregiver knowledge, caregiver needs, social supports, and the willingness of caregiver to take on caregiving tasks; Development, updating or	3.44	3.80

HCPCS Code	Long Descriptor	CY 2020 Work RVUs	Proposed CY 2021 Work RVUs
	revision, or review of an Advance Care Plan; Creation of a written care plan, including initial plans to address any neuropsychiatric symptoms, neuro-cognitive symptoms, functional limitations, and referral to community resources as needed (eg, rehabilitation services, adult day programs, support groups) shared with the patient and/or caregiver with initial education and support. Typically, 50 minutes are spent face-to-face with the patient and/or family or caregiver.		
99492	Initial psychiatric collaborative care management, first 70 minutes in the first calendar month of behavioral health care manager activities, in consultation with a psychiatric consultant, and directed by the treating physician or other qualified health care professional, with the following required elements: outreach to and engagement in treatment of a patient directed by the treating physician or other qualified health care professional; initial assessment of the patient, including administration of validated rating scales, with the development of an individualized treatment plan; review by the psychiatric consultant with modifications of the plan if recommended; entering patient in a registry and tracking patient follow-up and progress using the registry, with appropriate documentation, and participation in weekly caseload consultation with the psychiatric consultant; and provision of brief interventions using evidence-based techniques such as behavioral activation, motivational interviewing, and other focused treatment strategies.	1.70	1.88
99493	Subsequent psychiatric collaborative care management, first 60 minutes in a subsequent month of behavioral health care manager activities, in consultation with a psychiatric consultant, and directed by the treating physician or other qualified health care professional, with the following required elements: tracking patient follow-up and progress using the registry, with appropriate documentation; participation in weekly caseload consultation with the psychiatric consultant; ongoing collaboration with and coordination of the patient's mental health care with the treating physician or other qualified health care professional and any other treating mental health providers; additional review of progress and recommendations for changes in treatment, as indicated, including medications, based on recommendations provided by the psychiatric consultant; provision of brief interventions using evidence-based techniques such as behavioral activation, motivational interviewing, and other focused treatment strategies; monitoring of patient outcomes using validated rating scales; and relapse prevention planning with patients as they achieve remission of symptoms and/or other treatment goals and are prepared for discharge from active treatment.	1.53	2.05
99495	Transitional Care Management services with the following required elements: Communication (direct contact, telephone, electronic) with the patient and/or caregiver within 2 business days of discharge; medical decision making of at least moderate complexity during the service period; face-to-face visit within 14 calendar days of discharge	2.36	
99496	Transitional Care Management services with the following required elements: Communication (direct contact, telephone, electronic) with the patient and/or caregiver within 2 business days of discharge; medical decision making of high complexity during the service	3.10	3.74

HCPCS Code	Long Descriptor	CY 2020 Work RVUs	Proposed CY 2021 Work RVUs
	period; face-to-face visit within 7 calendar days of discharge		
G0402	Initial preventive physical examination; face-to-face visit, services limited to new beneficiary during the first 12 months of Medicare enrollment	2.43	2.60
G0438	Annual wellness visit; includes a personalized prevention plan of service (pps), initial visit	2.43	2.60
G0439	Annual wellness visit, includes a personalized prevention plan of service (pps), subsequent visit	1.50	1.92

BILLING CODE 4120-01-C

7. Emergency Department Visits

The ED visit codes have been revalued under the PFS three times- in 1997, 2007, and most recently in 2018 as part of the misvalued code initiative for CY 2020 rulemaking. Each subsequent revaluation was done in part to maintain relativity with the office/outpatient E/M visit codes. Specifically, when these services were revalued in prior rulemaking, the principle was that levels 1 through 3 of the ED visits should have the same value as the level 1 through 3 new patient office/outpatient E/M visits and that the levels 4 and 5 ED visits should be valued higher than the levels 4 and 5 new patient office/outpatient E/M visits to reflect higher typical intensity in the ED setting. In the CY 2018 PFS final rule, we finalized a proposal to nominate the level 1 through level 5 ED visit codes (CPT codes 99281–99285, see Table 21 for long descriptors) as potentially misvalued based on information suggesting that the work RVUs for ED visits may not appropriately reflect the full resources involved in furnishing these services. Specifically, stakeholders expressed concerns that the work RVUs for these services have been undervalued given the increased acuity of the patient population and the heterogeneity of the sites, such as

freestanding and off-campus EDs, where ED visits are furnished (82 FR 53018). The AMA RUC surveyed and reviewed five of these codes for the April 2018 RUC meeting and provided a recommendation to CMS for consideration in CY 2020 rulemaking. In the CY 2020 PFS final rule, we finalized the RUC-recommended work RVUs of 0.48 for CPT code 99281, a work RVU of 0.93 for CPT code 99282, a work RVU of 1.42 for 99283, a work RVU of 2.60 for 99284, and a work RVU of 3.80 for CPT code 99285. The RUC did not recommend, and we did not finalize, any direct PE inputs for the codes in this family. The AMA RUC submitted these recommended values to CMS prior to the submission of the RUC-recommended revaluation of the office/outpatient E/M visit code family.

In response to our comment solicitation in CY 2020 PFS rulemaking regarding whether certain services should be revalued to maintain relativity with office/outpatient E/M visits, the American College of Emergency Physicians submitted a public comment stating that relativity between the ED visits and office/outpatient E/M visits should be maintained, and provided CMS with a specific recommendation for CPT codes 99283–99285. The association believed we should continue to preserve the

same relationship between the ED and office/outpatient E/M visit code sets that was established in prior years and would have likely been maintained had the office/outpatient E/M visits been revalued prior to the ED visits. They have also submitted a subsequent letter to this effect. We agree with the society, particularly since the justification provided by the AMA RUC recommendations we accepted for the CY 2020 revaluation was, in part, to maintain relativity with the office/outpatient E/M visits, and that relativity would be disrupted if they were to remain unadjusted. The proposed values are consistent with the principle that the levels 1–3 ED visits should remain the same as the levels 1–3 new patient office visits but the levels 4–5 ED visits should have a higher value than the corresponding office visits, due to the complexity of the patients requiring that level of emergency care. Therefore, we are proposing the values recommended by ACEP as shown in Table 21.

8. Therapy Evaluations

There are a number of services paid under the PFS that are similar in many respects to the office/outpatient E/M visit code set, but do not specifically include, were not valued to include, and were not necessarily valued relative to,

office/outpatient E/M visits. These codes inherently include work associated with assessment and work associated with management, similar to the work included in the office/outpatient E/M visits, which involve time spent face-to-face assessing and treating the patient. These services include therapy evaluation services and psychiatric diagnostic evaluation services. The practitioners who furnish these services are prohibited by CMS from billing E/M services due to the limitations of their Medicare benefit categories. As such, the CPT Editorial Panel has created specific coding to describe the services furnished by these practitioners. Although these services are billed using specific, distinct codes relating to therapy evaluations and psychiatric diagnostic evaluations, we believe that a significant portion of the overall work in the codes is for assessment and management of patients, as it is for the office/outpatient E/M visit codes.

Therefore, we are proposing to adjust the work RVUs for these services based on a broad-based estimate of the overall change in the work associated with assessment and management to mirror the overall increase in the work of the office/outpatient E/M visits. We calculated this adjustment based on a volume-weighted average of the increases to the office/outpatient E/M visit work RVUs from CY 2020 to CY 2021. Details on this calculation are available as a public use file on the CMS website at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices>. We are proposing to apply that percentage increase, which we estimate to be approximately 28 percent, to the work RVUs for the therapy evaluation and psychiatric diagnostic evaluation services codes. We believe that it is important to the relativity of the PFS to revalue these services to reflect the overall increase in value associated with spending time assessing and managing

patients, as reflected in the changes to work values for the office/outpatient E/M visits, particularly in recognition of the value of the clinicians' time which is spent treating a growing number of patients with greater needs and multiple medical conditions. We recognize that this is not the methodology typically used to value services under the PFS and are seeking comment on potential alternative methodologies or specific values for these services, particularly about whether commenters believe it would be better to develop values using comparator codes from the office/outpatient E/M visit code set, and if so, why.

9. Behavioral Healthcare Services

The psychotherapy code set is divided into psychotherapy that can be furnished as a standalone service and psychotherapy furnished in conjunction with an office/outpatient E/M visit. The standalone psychotherapy services are CPT codes 90832, 90834, and 90837 (See Table 21 for long descriptors). The CPT codes describing psychotherapy furnished in conjunction with an office/outpatient E/M visit are CPT codes 90833 (*Psychotherapy, 30 minutes with patient when performed with an evaluation and management service (List separately in addition to the code for primary procedure)*), 90836 (*Psychotherapy, 45 minutes with patient when performed with an evaluation and management service (List separately in addition to the code for primary procedure)*) and 90838 (*Psychotherapy, 60 minutes with patient when performed with an evaluation and management service (List separately in addition to the code for primary procedure)*). As the values for the office/outpatient E/M visits are increasing, there will necessarily be an increase in the overall value for psychotherapy furnished in conjunction with office/outpatient E/M visits. We believe that it is important, both in terms of supporting access to behavioral health services through appropriate payment and maintaining relativity within this

code family, to increase the values for the standalone psychotherapy services to reflect changes to the value of the office/outpatient E/M visits which are most commonly furnished with the add-on psychotherapy services with equivalent times. For example, under the finalized revaluation of the office/outpatient E/M visits, the proportional work value of the standalone psychotherapy CPT code 90834 (*Psytx w pt 45 minutes*) would decrease relative to the combined work RVUs for CPT code 99214 (*Level 4 Office/outpatient visit est*) when billed with CPT code 90836 (*Psytx w pt w e/m 45 min*). The current combined work RVU for CPT code 99214 when reported with CPT code 90836 is 3.40 (1.90 + 1.50) and the current work RVU for CPT code 90834 is 2.0. With the revaluation of the office/outpatient E/M visits beginning for CY 2021, the combined work RVU for CPT codes 99214 and 90836 would be 3.82 (1.90 + 1.92), while the current work RVU for 90834 would remain at 2.0, resulting in a change to relativity between these services.

To maintain the current relativity, which we believe to be appropriate based on the proportionate difference between these services, we are proposing to increase the work RVU for CPT code 90834 from 2.00 to 2.25 based on the marginal increase in work value for CPT code 99214 from CY 2020 to CY 2021. Similarly, for CPT code 90832, which describes 30 minutes of psychotherapy, we are proposing to increase its work RVU based on the increase to CPT code 99213, which is most commonly billed with the 30 minutes of psychotherapy add-on, CPT code 90833. For CPT code 90837, which describes 60 minutes of psychotherapy, we propose to increase the work RVU based on the proportional increase to CPT codes 99214 and 90838, which is the office/outpatient E/M visit code most frequently billed with the 60 minutes of psychotherapy add-on. Table 21 provides a summary of the current and proposed RVUs for these services.

TABLE 21: Current and Proposed Work RVUS for ED Visits, Therapy, and Psychotherapy Services

HCPCS Code	Long Descriptor	Current Work RVU	Proposed Work RVU
99283	Emergency department visit for the evaluation and management of a patient, which requires these 3 key components: An expanded problem focused history; An expanded problem focused examination; and Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate severity.	1.42	1.60
99284	Emergency department visit for the evaluation and management of a patient, which requires these 3 key components: A detailed history; A detailed examination; and Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of high severity, and require urgent evaluation by the physician, or other qualified health care professionals but do not pose an immediate significant threat to life or physiologic function.	2.60	2.74
99285	Emergency department visit for the evaluation and management of a patient, which requires these 3 key components within the constraints imposed by the urgency of the patient's clinical condition and/or mental status: A comprehensive history; A comprehensive examination; and Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of high severity and pose an immediate significant threat to life or physiologic function.	3.80	4.00
90791	Psychiatric diagnostic evaluation	3.00	3.84
90792	Psychiatric diagnostic evaluation with medical services	3.25	4.16
90832	Psychotherapy, 30 minutes with patient	1.50	1.70
90834	Psychotherapy, 45 minutes with patient	2.00	2.24
90837	Psychotherapy, 60 minutes with patient	3.00	3.31
97161	Physical therapy evaluation: low complexity, requiring these components: A history with no personal factors and/or comorbidities that impact the plan of care; An examination of body system(s) using standardized tests and measures addressing 1-2 elements from any of the following: body structures and functions, activity limitations, and/or participation restrictions; A clinical presentation with stable and/or uncomplicated characteristics; and Clinical decision making of low complexity using standardized patient assessment instrument and/or measurable assessment of functional outcome. Typically, 20 minutes are spent face-to-face with the patient and/or family.	1.2	1.54
97162	Physical therapy evaluation: moderate complexity, requiring these components: A history of present problem with 1-2 personal factors and/or comorbidities that impact the plan of care; An examination of body systems using standardized tests and measures in addressing a total of 3 or more elements from any of the following: body structures and functions, activity limitations, and/or participation restrictions; An evolving clinical presentation with changing characteristics; and Clinical decision making of moderate complexity using standardized patient assessment instrument and/or measurable assessment of functional outcome. Typically, 30 minutes are spent face-to-face with the patient and/or family.	1.2	1.54
97163	Physical therapy evaluation: high complexity, requiring these components: A	1.2	1.54

HCPCS Code	Long Descriptor	Current Work RVU	Proposed Work RVU
	history of present problem with 3 or more personal factors and/or comorbidities that impact the plan of care; An examination of body systems using standardized tests and measures addressing a total of 4 or more elements from any of the following: body structures and functions, activity limitations, and/or participation restrictions; A clinical presentation with unstable and unpredictable characteristics; and Clinical decision making of high complexity using standardized patient assessment instrument and/or measurable assessment of functional outcome. Typically, 45 minutes are spent face-to-face with the patient and/or family.		
97164	Re-evaluation of physical therapy established plan of care, requiring these components: An examination including a review of history and use of standardized tests and measures is required; and Revised plan of care using a standardized patient assessment instrument and/or measurable assessment of functional outcome Typically, 20 minutes are spent face-to-face with the patient and/or family.	0.75	0.96
97165	Occupational therapy evaluation, low complexity, requiring these components: An occupational profile and medical and therapy history, which includes a brief history including review of medical and/or therapy records relating to the presenting problem; An assessment(s) that identifies 1-3 performance deficits (ie, relating to physical, cognitive, or psychosocial skills) that result in activity limitations and/or participation restrictions; and Clinical decision making of low complexity, which includes an analysis of the occupational profile, analysis of data from problem-focused assessment(s), and consideration of a limited number of treatment options. Patient presents with no comorbidities that affect occupational performance. Modification of tasks or assistance (eg, physical or verbal) with assessment(s) is not necessary to enable completion of evaluation component. Typically, 30 minutes are spent face-to-face with the patient and/or family.	1.2	1.54
97166	Occupational therapy evaluation, moderate complexity, requiring these components: An occupational profile and medical and therapy history, which includes an expanded review of medical and/or therapy records and additional review of physical, cognitive, or psychosocial history related to current functional performance; An assessment(s) that identifies 3-5 performance deficits (ie, relating to physical, cognitive, or psychosocial skills) that result in activity limitations and/or participation restrictions; and Clinical decision making of moderate analytic complexity, which includes an analysis of the occupational profile, analysis of data from detailed assessment(s), and consideration of several treatment options. Patient may present with comorbidities that affect occupational performance. Minimal to moderate modification of tasks or assistance (eg, physical or verbal) with assessment(s) is necessary to enable patient to complete evaluation component. Typically, 45 minutes are spent face-to-face with the patient and/or family.	1.2	1.54
97167	Occupational therapy evaluation, high complexity, requiring these components: An occupational profile and medical and therapy history, which includes review of medical and/or therapy records and extensive additional review of physical, cognitive, or psychosocial history related to current functional performance; An assessment(s) that identifies 5 or more performance deficits (ie, relating to physical, cognitive, or psychosocial skills) that result in activity limitations and/or participation restrictions; and Clinical decision making of high analytic complexity, which includes an analysis of the patient profile, analysis of data from comprehensive assessment(s), and consideration of multiple treatment options. Patient presents with comorbidities that affect occupational performance. Significant modification	1.2	1.54

HCPCS Code	Long Descriptor	Current Work RVU	Proposed Work RVU
	of tasks or assistance (eg, physical or verbal) with assessment(s) is necessary to enable patient to complete evaluation component. Typically, 60 minutes are spent face-to-face with the patient and/or family.		
97168	Re-evaluation of occupational therapy established plan of care, requiring these components: An assessment of changes in patient functional or medical status with revised plan of care; An update to the initial occupational profile to reflect changes in condition or environment that affect future interventions and/or goals; and A revised plan of care. A formal reevaluation is performed when there is a documented change in functional status or a significant change to the plan of care is required. Typically, 30 minutes are spent face-to-face with the patient and/or family.	0.75	0.96
92521	Evaluation of speech fluency (eg, stuttering, cluttering)	1.75	2.24
92522	Evaluation of speech sound production (eg, articulation, phonological process, apraxia, dysarthria);	1.5	1.92
92523	Evaluation of speech sound production (eg, articulation, phonological process, apraxia, dysarthria); with evaluation of language comprehension and expression (eg, receptive and expressive language)	3	3.84
92524	Behavioral and qualitative analysis of voice and resonance	1.5	1.92

10. Ophthalmological Services

We received a request to revalue the following ophthalmological services which we are not proposing to revalue:

- CPT code 92002: *Ophthalmological services: medical examination and evaluation with initiation of diagnostic and treatment program; intermediate, new patient.*
- CPT code 92004: *Ophthalmological services: medical examination and evaluation with initiation of diagnostic and treatment program; comprehensive, new patient, 1 or more visits.*
- CPT code 92012: *Ophthalmological services: medical examination and evaluation, with initiation or continuation of diagnostic and treatment program; intermediate, established patient.*
- CPT code 92014: *Ophthalmological services: medical examination and evaluation, with initiation or continuation of diagnostic and treatment program; comprehensive, established patient, 1 or more visits.*

We are not proposing to revalue these services because they are not sufficiently analogous or connected to the office/outpatient E/M visit codes. While these ophthalmological services have historically been valued relative to office/outpatient E/M visits, they have not been reviewed by the RUC since 2007. Two of these ophthalmological services can include more than one visit, and the number of visits included in the package is uncertain and therefore are not so closely tied to office and outpatient E/M services which describe a single visit. In addition, starting in 2021, the office/outpatient E/

M visit codes will be substantially redefined to allow time or medical decision-making for code level selection, concepts that do not apply in these ophthalmological visits which rely on criteria specific to evaluation, examination, specified technical procedures, and treatment of ocular conditions for purposes of level selection.⁶ The number of levels within the two code sets differs, and the number of levels has changed for office/outpatient E/M visits. Given the revised code set and framework for level selection for office/outpatient E/M visits, the level of office/outpatient E/M visits to which the ophthalmological visits might be analogous is no longer clear. We are also aware that ophthalmologists report office/outpatient E/M visits as well these ophthalmologic-specific evaluation codes. The relationship between the two separate code sets and the reason for relying on both of them is unclear.

In addition, the four ophthalmological evaluation codes are reported with modifier -25 (significant, separately identifiable E/M service by the same physician on the same day of the procedure or other service) approximately 4 to 14 percent of the time (depending on the code in question). Similarly, ED visits are reported with modifier -25 approximately 4 to 12 percent of the time (depending on the code in question). In contrast, the office/outpatient E/M visit codes are reported with modifier -25 approximately 18 to

35 percent of the time (depending on the code in question). We are in the process of analyzing these data further to assess how often the accompanying service is a minor procedure rather than a visit. We believe that visit/evaluation codes furnished the same day as a minor procedure are not closely analogous to stand-alone office/outpatient E/M visits, and therefore should not be revalued commensurate with the increase to stand-alone office/outpatient E/M visits for 2021. As we discussed in prior PFS rules, we continue to believe that separately identifiable visits occurring on the same day as minor procedures (such as zero-day global procedures) have resources that are sufficiently distinct from the costs associated with furnishing office/outpatient E/M visits to warrant different payment (see, for example, the CY 2019 PFS final rule, 83 FR 59639). As we continue our analysis, we are seeking public comment on whether visits/evaluations that are furnished frequently with same-day procedures should be revalued commensurate with increases to the office/outpatient E/M visits, or whether they are substantially different enough to warrant independent valuation. We note that the stand-alone psychotherapy services would be revalued to maintain relativity with the psychotherapy services that can be performed in conjunction with an E/M visit. Standalone psychotherapy services cannot be billed with office/outpatient E/M visits while ophthalmological visits can, as well as with a separate procedure.

⁶CPT Codebook pp. 656–7.

c. Comment Solicitation on the Definition of HCPCS Code GPC1X

Although we believe that the RUC-recommended values for the revised office/outpatient E/M visit codes will more accurately reflect the resources involved in furnishing a typical office/outpatient E/M visit, we continue to believe that the typical visit described by the revised and revalued office/outpatient E/M visit code set still does not adequately describe or reflect the resources associated with primary care and certain types of specialty visits. Therefore, in the CY 2020 PFS final rule (84 FR 62856), we finalized the HCPCS add-on code GPC1X which describes the “visit complexity inherent to evaluation and management associated with medical care services that serve as the continuing focal point for all needed health care services and/or with medical care services that are part of ongoing care related to a patient’s single, serious, or complex condition.” We stated that we were not restricting billing based on specialty, but that we did assume that certain specialties furnished these types of visits more than others.

Since the publication of the CY 2020 PFS final rule, some specialty societies have stated that our definition of this service, as articulated in the code descriptor and the associated preamble discussion, is unclear. For example, some stakeholders have suggested that HCPCS add-on code GPC1X, as currently described, could be applicable for every office/outpatient E/M visit. They have also expressed concerns regarding our utilization assumptions, since we assumed that specialties that predominantly furnish the kind of care described by the code would bill it with every visit. Therefore, we are soliciting from the public comments providing additional, more specific information regarding what aspects of the definition of HCPCS add-on code GPC1X are unclear, how we might address those concerns, and how we might refine our utilization assumptions for the code.

We continue to believe that the time, intensity, and PE involved in furnishing services to patients on an ongoing basis that result in a comprehensive, longitudinal, and continuous relationship with the patient and involves delivery of team-based care that is accessible, coordinated with other practitioners and providers, and integrated with the broader health care landscape, are not adequately described by the revised office/outpatient E/M visit code set. We believe the inclusion of HCPCS add-on code GPC1X appropriately recognizes the resources involved when practitioners furnish

services that are best-suited to patients’ ongoing care needs and potentially evolving illness. We also believe the work reflected in HCPCS add-on code GPC1X is inherently distinct from existing coding that describes preventive and care management services. For example, the AWW describes and pays for a static annual health assessment rather than the time, intensity, and PE involved in furnishing services to patients on an ongoing basis. Similarly, TCM service codes are focused on care management for 30 days following a discharge rather than the time, intensity, and PE involved in furnishing services to patients on an ongoing basis. Chronic care management and principal care management service codes are limited to patients with chronic condition(s). Under chronic care management codes, patients have two or more chronic conditions that place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline, whereas principal care management services are for patients who have a single high-risk disease of sufficient severity to place the patient at risk of hospitalization or have been the cause of recent hospitalization. In contrast, we believe HCPCS add-on code GPC1X reflects the time, intensity, and PE when practitioners furnish services that enable them to build longitudinal relationships with all patients (that is, not only those patients who have a chronic condition or single-high risk disease) and to address the majority of patients’ health care needs with consistency and continuity over longer periods of time. For example, in the context of primary care, HCPCS add-on code GPC1X could recognize the resources inherent in holistic, patient-centered care that integrates the treatment of illness or injury, management of acute and chronic health conditions, and coordination of specialty care in a collaborative relationship with the clinical care team. In the context of specialty care, HCPCS add-on code GPC1X could recognize the resources inherent in engaging the patient in a continuous and active collaborative plan of care related to an identified health condition the management of which requires the direction of a clinician with specialized clinical knowledge, skill and experience. Such collaborative care includes patient education, expectations and responsibilities, shared decision-making around therapeutic goals, and shared commitments to achieve those goals. In both examples, HCPCS add-on code GPC1X reflects the time, intensity,

and PE associated with providing services that result in care that is personalized to the patient. Finally, we believe that the HCPCS add-on code GPC1X could bolster the efforts of practitioners in rural communities, including NPPs, to deliver the comprehensive and longitudinal care that HCPCS add-on code GPC1X describes.

d. Prolonged Office/Outpatient E/M Visits (CPT Code 99XXX)

We reviewed our final policy for 2021 regarding the reporting of prolonged office/outpatient E/M visits finalized in the CY 2020 PFS final rule (84 FR 62848 through 62850). To report these visits beginning in 2021, we finalized CPT code 99XXX (*Prolonged office or other outpatient evaluation and management service(s) (beyond the total time of the primary procedure which has been selected using total time), requiring total time with or without direct patient contact beyond the usual service, on the date of the primary service; each additional 15 minutes (List separately in addition to CPT codes 99205, 99215 for office or other outpatient evaluation and management services)*). CPT code 99XXX is only reported when time is used to select the visit level, and only time of the physician or qualified healthcare professional is counted. In the CY 2020 PFS final rule, we stated that our interpretation of revised CPT prefatory language and reporting instructions would mean that CPT code 99XXX could be reported when the physician’s (or NPP’s) time is used for code level selection and the time for a level 5 office/outpatient E/M visit (the floor of the level 5 time range) is exceeded by 15 minutes or more on the date of service (84 FR 62848 through 62849). The intent of the CPT Editorial Panel was unclear because of the use of the terms “total time” and “usual service” in the CPT code descriptor (“*requiring total time with or without direct patient contact beyond the usual service.*”) The term “total time” is unclear because office/outpatient E/M visits now represent a range of time, and “total” time could be interpreted as including prolonged time. Further, the term, “usual service” is undefined. There is no longer a typical time in the code descriptor that could be used as point of reference for when the “usual time” is exceeded for all practitioners, and there would be variation (as well as potential double counting of time) if applied at the individual practitioner level.

Having reviewed the policy we finalized last year, we believe that allowing reporting of CPT code 99XXX

after the minimum time for the level 5 visit is exceeded by at least 15 minutes would result in double counting time. As a specific example, the time range for CPT code 99215 is 40–54 minutes. If the reporting practitioner spent 55 minutes of time, 14 of those minutes are included in the services described by

CPT code 99215. Therefore, only 1 minute should be counted towards the additional 15 minutes needed to report CPT code 99XXX and prolonged services should not be reportable as we finalized last year (see Table 33 of the CY 2020 PFS final rule (84 FR 62849)). Therefore, we are proposing that when

the time of the reporting physician or NPP is used to select office/outpatient E/M visit level, CPT code 99XXX could be reported when the maximum time for the level 5 office/outpatient E/M visit is exceeded by at least 15 minutes on the date of service. In Tables 22 and 23, we provide examples.

TABLE 22: Proposed Prolonged Office/Outpatient E/M Visit Reporting - New Patient

CPT Code(s)	Total Time Required for Reporting*
99205	60-74 minutes
99205 x 1 and 99XXX x 1	89-103 minutes
99205 x 1 and 99XXX x 2	104-118 minutes
99205 x 1 and 99XXX x 3 or more for each additional 15 minutes.	119 or more

*Total time is the sum of all time, including prolonged time, spent by the reporting practitioner on the date of service of the visit.

TABLE 23: Proposed Prolonged Office/Outpatient E/M Visit Reporting – Established Patient

CPT Code(s)	Total Time Required for Reporting*
99215	40-54 minutes
99215 x 1 and 99XXX x 1	69-83 minutes
99215 x 1 and 99XXX x 2	84- 98 minutes
99215 x 1 and 99XXX x 3 or more for each additional 15 minutes.	99 or more

*Total time is the sum of all time, including prolonged time, spent by the reporting practitioner on the date of service of the visit.

G. Scope of Practice and Related Issues

We are proposing several policies consistent with the President's Executive Order 13890 on "Protecting and Improving Medicare for Our Nation's Seniors" to modify supervision and other requirements of the Medicare program that limit healthcare professionals from practicing at the top of their license (84 FR 53573, October 8, 2019, Executive Order #13890). In December 2019, we requested feedback in response to part of this Executive Order seeking the public's help in identifying additional Medicare regulations which contain more restrictive supervision requirements than existing state scope of practice laws, or which limit health professionals from practicing at the top of their license (the request for feedback is available at <https://www.cms.gov/files/document/request-information-reducing-scope-practice-burden.pdf>). Through review of the feedback we received, we identified the policies in this section to address in the PFS proposed rule. We believe that physicians, NPPs, and other professionals should be able to furnish

services to Medicare beneficiaries in accordance with their scope of practice and state licensure, including education and training, to the extent permitted under the Medicare statute, as long as it is not likely to result in fraud, waste or abuse. These proposed policies may also help ensure an adequate number of clinicians, in addition to physicians are able to furnish critical services including primary care services in areas where there is a shortage of physicians.⁷ Some of the proposals may also help alleviate the opioid crisis.

We note that the responses to our request for feedback on the topics in this section did not indicate the number of states that have more flexible scope of practice rules than our federal regulations, or whether facilities (such as hospitals or nursing facilities) have relevant policies that limit the ability of the impacted professionals to perform certain services. For example, if Medicare payment policy provided for

payment of diagnostic tests supervised by NPPs, there may still be facility- or state-specific policies in place that limit NPPs' ability to supervise some or all diagnostic tests, and those limitations would inform the potential impact of changing our policy. While our proposed flexibility may increase the capacity and availability of practitioners who can supervise diagnostic tests, which would alleviate some of the demand on physicians as the only source to perform this particular function, we have not located information indicating the degree to which NPP scope of practice includes supervision of auxiliary staff, especially for the subset of services that are diagnostic tests. There is a wide range of diagnostic tests, from a simple strep throat swab to more sophisticated and/or invasive tests such as x-rays and cardiology procedures. We would need to understand the scope of practice for many types of auxiliary staff (some of whom are not licensed) who could potentially provide these tests under the supervision of an NPP, including RNs, LPNs, medical assistants, radiologic technicians, and many others. To the extent practice patterns change, there

⁷ Zhang et al. Physician workforce in the United States of America: forecasting nationwide shortages. *Human Resources for Health* (2020); 18:8. Published online February 6, 2020 and available online at <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC7006215/>.

could be induced utilization that would increase costs, but this might be offset by reduced payment rates because direct payment to NPPs is at a lower rate than payment to physicians. Therefore, in this proposed rule, we are also seeking information about the number and names of states that have licensure or scope of practice laws in place, as well as any facility-specific policies, that would impact the ability of clinicians to exercise the flexibilities we are proposing, to help us assess the potential impact of, or challenges for, our proposed changes. Information about specific services (service-level information) would be especially helpful. We are seeking public comment on whether applicable state laws, scope of practice, and facility policies would permit practitioners to exercise the proposed flexibilities if CMS were to adopt the policies proposed in this section, and to what extent practitioners would be permitted to exercise these proposed flexibilities, such as for all diagnostic tests or only a subset.

1. Teaching Physician and Resident Moonlighting Policies

a. Background

In the March 31st COVID–19 IFC (85 FR 19258 through 19261) and the May 1st COVID–19 IFC (85 FR 27550 through 27629), we implemented several policies on an interim final basis related to PFS payment for the services of teaching physicians involving residents and resident moonlighting regulations. The comment periods for both the March 31st COVID–19 IFC (85 FR 19230) and the May 1st COVID–19 IFC (85 FR 27550) have closed. Therefore, we plan to address the IFC comments for issues in which we have proposals in this proposed rule when we publish the PFS final rule. We are considering whether these policies should be extended on a temporary basis (that is, if the PHE ends in 2021, these policies could be extended to December 31, 2021 to allow for a transition period before reverting to status quo policy) or be made permanent, and are soliciting public comments on whether these policies should continue once the PHE ends. We believe public comment will assist us in identifying appropriate policy continuation decisions that we would consider finalizing in the CY 2021 PFS final rule.

For teaching physicians, section 1842(b)(7)(A)(i)(I) of the Act specifies that in the case of physicians' services furnished to a patient in a hospital with a teaching program, the Secretary shall not provide payment for such services unless the physician renders sufficient

personal and identifiable physicians' services to the patient to exercise full, personal control over the management of the portion of the case for which payment is sought.

Regulations regarding PFS payment for teaching physician services and services of moonlighting residents are codified in 42 CFR part 415. In general, under § 415.170, payment is made under the PFS for services furnished in a teaching hospital setting if the services are personally furnished by a physician who is not a resident, or the services are furnished by a resident in the presence of a teaching physician, with exceptions as specified in subsequent regulatory provisions in part 415. Under § 415.172, if a resident participates in a service furnished in a teaching setting, PFS payment is made only if the teaching physician is present during the key portion of any service or procedure for which payment is sought. The regulation at § 415.180 states that, for the interpretation of diagnostic radiology and other diagnostic tests, PFS payment is made if the interpretation is performed or reviewed by a physician other than a resident. Under § 415.184, PFS payment is made for psychiatric services furnished under an approved graduate medical education (GME) program if the requirements of §§ 415.170 and 415.172 are met, except that the requirement for the presence of the teaching physician during psychiatric services in which a resident is involved may be met by observation of the service by use of a one-way mirror, video equipment, or similar device.

b. Supervision of Residents in Teaching Settings Through Audio/Video Real-Time Communications Technology

In both the March 31st COVID–19 IFC (85 FR 19258 through 19261) and the May 1st COVID–19 IFC (85 FR 27550 through 27629), we adopted a policy on an interim basis during the COVID–19 PHE that, under § 415.172, the requirement for the presence of a teaching physician during the key portion of the service furnished with the involvement of a resident can be met using audio/video real-time communications technology. In other words, the teaching physician must be present, either in person or virtually through audio/video real-time communications technology, during the key portion of the service. This policy generally requires real-time observation (not mere availability) by the teaching physician through audio and video technology, and does not include audio-only technology (for example, telephone without video). For the primary care

exception under § 415.174(c), we adopted a policy on an interim final basis for the duration of the COVID–19 PHE to allow the teaching physician to direct the care furnished by the resident, and to review the services furnished by the resident during or immediately after the visit, remotely using audio/video real-time communications technology.

Under § 415.180, we adopted a policy on an interim basis for the duration of the COVID–19 PHE to allow PFS payment to be made for the interpretation of diagnostic radiology and other diagnostic tests if the interpretation is performed by a resident when the teaching physician is present through audio/video real-time communications technology. A physician other than the resident must still review the resident's interpretation. Under § 415.184, we adopted a policy on an interim basis during the COVID–19 PHE that the requirement for the presence of the teaching physician during the psychiatric service in which a resident is involved may be met by the teaching physician's direct supervision using audio/video real-time communications technology.

We are considering whether the flexibilities described above that we implemented on an interim basis during PHE under §§ 415.172, 415.174, 415.180, and 415.184 should be extended on a temporary basis (that is, if the PHE ends in 2021, these policies could be extended to December 31, 2021 to allow for a transition period before reverting to status quo policy) or be made permanent, and are soliciting public comments on whether these policies should continue once the PHE ends. We believe public comment will assist us in identifying appropriate policy continuation decisions that we would consider finalizing in the CY 2021 PFS final rule. In addition, we are proposing to make a technical edit to the regulation text at § 415.184 to eliminate the term "direct supervision" to conform with the language in sections §§ 415.172, 415.174, and 415.180 regarding the presence of the teaching physician via audio/video real-time communications technology.

While we believe it was appropriate to permit teaching physicians to be involved in services furnished with residents through audio/video real-time communications technology to respond to critical needs during the PHE to reduce exposure risk and to increase the capacity of teaching settings to respond to COVID–19, we are concerned that continuing to permit teaching physicians to be involved through their virtual presence may not be sufficient to warrant PFS payment to the teaching

physician on a temporary or permanent basis. Absent the circumstances of the PHE, the physical, in-person presence of the teaching physician may be necessary to provide oversight to ensure that care furnished to Medicare beneficiaries is medically reasonable and necessary, and to ensure that the teaching physician renders sufficient personal services to exercise full, personal control of the key portion of the case.

We also have some concerns about patient safety when the teaching physician is only virtually present. For example, in the March 31st COVID-19 IFC, we excluded the surgical, high risk, interventional, endoscopic, or other complex procedures identified under § 415.172(a)(1), and anesthesia services under § 415.178 from the policy to allow the teaching physician to be present using audio-video real-time communications technology because we believe the requirement for the physical, in-person presence of the teaching physician for either the entire procedure or the key portion of the service with immediate availability throughout the procedure, as applicable, is necessary for patient safety given the risks associated with these services. In complex, high-risk, surgical, interventional, or endoscopic procedures, or anesthesia procedures, a patient's clinical status can quickly change. To permit payment under the PFS for these teaching physician services, we believe the services must be furnished with a certain level of personal oversight and involvement of the teaching physician who has the experience and judgment that is necessary for rapid on-site decision-making during these procedures.

There may be circumstances in which virtual presence of the teaching physician, considered in light of the potential risks to patient safety and absent exposure risk concerns due to COVID-19, does not demonstrate sufficient personal involvement in the service to the patient to warrant payment to the teaching physician under the PFS. For example, a resident could evaluate a patient for change in mental status following surgery for hip fracture, perform a physical exam and report it as unrevealing, and note that the patient is uncooperative with a full exam. If a full exam had been performed by the teaching physician or with the physical presence of the teaching physician (or with the teaching physician immediately available in the clinic to provide the necessary direction, under the primary care exception) to render personal and identifiable physicians' services to the patient, the exam would likely have

revealed crystal-mediated acute arthritis, and that the patient's lack of cooperation was due to hypoactive delirium. However, the teaching physician may not have been able to identify this concern through the use of audio/video interactive communications technology. In this case, the presence of the teaching physician through audio/video interactive communications technology might have been insufficient to allow the teaching physician to render personal and identifiable physicians' services to exercise full, personal control over the key portion of the encounter.

There also may be certain patient populations that require greater clinical attentiveness and skill than the teaching physician could provide via audio/video interactive communications technology. For example, patients with cognitive impairment or dementia may require the experience and skill to recognize a need for specialized testing, and patients with communication disabilities may require more experience and skill to recognize specialized needs. It may not be possible for the teaching physician to meet these clinical needs and exercise full, personal control while being present for the key portion of the service through audio/video interactive communications technology. Moreover, the virtual connection between the teaching physician and the resident who is with the patient could be disrupted (as with any virtual supervision scenario), rendering it impossible for the teaching physician to provide necessary direction for the resident to furnish appropriate care to the patient, thus foreclosing the ability of the teaching physician to exercise full, personal control over the key portion of the services, and potentially putting the patient's safety at risk.

While we have significant concerns about extending our interim policy to permit virtual presence of the teaching physician, whether on a temporary or permanent basis, we believe public comment would be helpful as we further consider the status of this policy. For example, because COVID-19 may continue to persist in some communities after the expiration of the PHE, we are considering extending our policy to permit the teaching physician to be present through audio/video interactive communications technology on a temporary basis until the end of the calendar year in which the PHE ends. The presence of COVID-19 may result in a need for some teaching settings to continue to limit exposure risks, especially for high risk patients isolated for their own protection or in cases

where the teaching physician has been exposed to the virus and must be under quarantine. If the teaching physician is under quarantine, termination of the policy to permit virtual presence of the teaching physician could unintentionally limit the number of licensed practitioners available to furnish services to Medicare patients in some communities, and could have the unintended consequence of limiting access to services for Medicare patients. Some communities may experience a resurgence of COVID-19, and extending our policy until the end of the calendar year in which the PHE ends to permit PFS payment when the teaching physician is present through audio/video real-time communications technology could temporarily help teaching settings remain prepared with surge capacity.

Based on the clinical experience gained during the PHE, we might identify circumstances or procedures for which the teaching physician can routinely render sufficient personal and identifiable services to the patient to exercise full, personal control over the management of the key portion of the case when the services are furnished by a resident with the teaching physician present through audio/video real-time communications technology. For example, under ordinary circumstances for the primary care exception at § 415.174, we permit PFS payment to the teaching physician when a resident furnishes office/outpatient evaluation and management (E/M) visit codes of lower and mid-level complexity and annual wellness visits without the presence of a teaching physician (these codes are discussed in section II.F. of this proposed rule). Additionally, the teaching physician may be able to provide sufficient involvement for simple procedures such as CPT code 36410 (*Venipuncture, age 3 years or older, necessitating the skill of a physician or other qualified health care professional (separate procedure), for diagnostic or therapeutic purposes (not to be used for routine venipuncture)*) or CPT code 51701 (*Insertion of non-indwelling bladder catheter (e.g., straight catheterization for residual urine)*). For such circumstances and procedures, it may be appropriate to continue the virtual presence policy on a temporary or permanent basis.

We note that having the virtual presence policy in place temporarily or permanently would not preclude teaching physicians from providing a greater degree of involvement in services furnished with residents, and teaching physicians would still have discretion to determine whether, and if

so, when it is appropriate to be present virtually rather than in person depending on the services being furnished and the experience of the particular residents involved. We seek comment to help us understand how the option to provide for teaching physician presence using audio/video real-time communications technology would support patient safety for all patients and particularly for at-risk patients (for example, patients who are aged and/or who have a disability); ensure burden reduction without creating risks to patient care or increasing fraud; avoid duplicative payment between the PFS and the IPPS for GME programs; and support emergency preparedness. We also invite commenters to provide data and other information on their experiences implementing this policy during the PHE.

c. Virtual Teaching Physician Presence During Medicare Telehealth Services

In the March 31st COVID-19 IFC (85 FR 19260), we adopted a policy on an interim basis to allow Medicare to make payment under the PFS for teaching physician services when a resident furnishes Medicare telehealth services to beneficiaries while a teaching physician is present using audio/video real-time communications technology. We are considering whether this policy should be extended on a temporary basis (that is, if the PHE ends in 2021, this policy could be extended to December 31, 2021 to allow for a transition period before reverting to status quo policy) or be made permanent, and are soliciting public comments on whether this policy should continue once the PHE ends. We believe public comment will assist us in identifying appropriate policy continuation decisions that we would consider finalizing in the CY 2021 PFS final rule. Outside the circumstances of the PHE, under the requirements at section 1834(m) of the Act that discuss payment for telehealth services, the patient would be located at a telehealth originating site, and the teaching physician would be furnishing the service as the distant site practitioner with the involvement of the resident.

While teaching physician presence through audio/video real-time communications technology when a resident furnishes Medicare telehealth services was responsive to critical needs during the PHE to reduce exposure risk and to increase the capacity of teaching settings to respond to COVID-19, we are concerned that the policy to permit virtual presence of the teaching physician may not allow for sufficient personal and identifiable physicians'

services to exercise full, personal control over the services such that PFS payment to the teaching physician would be appropriate outside the circumstances of the PHE on a temporary or permanent basis. We are concerned that if the resident was furnishing the service at the distant site and the teaching physician was at a third site and present with the resident through audio/video real-time communications technology, the teaching physician may not be able to render sufficient personal and identifiable physicians' services to the patient to exercise full, personal control over the service to warrant separate payment on the PFS.

Absent the need to reduce exposure risk to COVID-19 during the PHE, we also have some concerns about patient safety when the teaching physician is present only virtually during a telehealth service furnished by a resident. For example, the virtual connection between the teaching physician and the resident who is with the patient could be disrupted (as with any virtual supervision scenario), rendering it impossible for the teaching physician to provide necessary direction for the resident to furnish appropriate care to the patient, thus foreclosing the ability of the teaching physician to exercise full, personal control over the key portion of the service, and potentially putting the patient's safety at risk.

However, because COVID-19 may continue to persist in some communities and some communities may experience a resurgence of COVID-19 after the expiration of the PHE, we are seeking comment about whether it would be appropriate to extend this policy on a temporary basis until the end of the calendar year in which the PHE ends. The presence of COVID-19 may result in a need to continue to limit exposure risks. In cases where the teaching physician has been exposed to the virus and is under quarantine, termination of the policy to permit virtual presence of the teaching physician could unintentionally limit the number of licensed practitioners available to furnish services to Medicare patients in some communities, and could have the unintended consequence of limiting access for Medicare patients. Finally, based on experience gained during the PHE, we might identify circumstances for which the teaching physician can routinely render sufficient personal and identifiable services to the patient to exercise full, personal control over the management of the key portion of the case while providing virtual presence during

Medicare telehealth services furnished by a resident on a permanent basis. For example, under ordinary circumstances for the primary care exception at § 415.174, we permit PFS payment to the teaching physician when a resident furnishes office/outpatient E/M visit codes of lower and mid-level complexity and annual wellness visits without the presence of a teaching physician (these codes are discussed in section II.F. of this proposed rule). For such services, it may be appropriate to continue the virtual presence policy on a temporary or permanent basis. We seek comment to help us understand how the option to allow teaching physician presence using audio/video real-time communications technology could support patient safety for all patients and particularly for at-risk patients (for example, patients who are aged and/or who have a disability), ensure burden reduction without creating risks to patient care or increasing fraud, avoid duplicative payment between the PFS and the IPPS for GME programs, and support emergency preparedness. We also invite commenters to provide data and other information on their experiences implementing this policy during the PHE.

d. Resident Moonlighting in the Inpatient Setting

Under certain conditions, the services of a licensed resident physician who is "moonlighting" are considered to be furnished by the individual in their capacity as a physician, rather than as a resident in an approved GME program. As specified in the regulation at § 415.208, except during the PHE, as defined in the regulation at § 400.200, the services of residents to inpatients of hospitals in which the residents have their approved GME program are not considered separately billable as physicians' services and instead are payable under §§ 413.75 through 413.83 regarding direct GME payments, whether or not the services are related to the approved GME training program. When a resident furnishes services that are not related to their approved GME programs in an outpatient department or emergency department of a hospital in which they have their training program, those services can be billed separately as physicians' services and payable under the PFS if they meet the criteria described in our regulation at § 415.208(b)(2) (i) through (iii). In addition, under § 415.208(c), services of a licensed resident furnished outside the scope of an approved GME program when moonlighting in a hospital or other setting that does not participate in

the approved GME program are payable under the PFS when the resident is fully licensed to practice in the state where the services are furnished, and the resident's time spent in patient care activities in that setting is not counted for the purpose of Medicare direct GME payments.

In the March 31st COVID-19 IFC, we amended our regulation at § 415.208 to state that, during the PHE for COVID-19, the services of residents that are not related to their approved GME programs and are furnished to inpatients of a hospital in which they have their training program are separately billable physicians' services for which payment can be made under the PFS provided that the services are identifiable physicians' services and meet the conditions for payment of physicians' services to beneficiaries in providers in § 415.102(a), the resident is fully licensed to practice medicine, osteopathy, dentistry, or podiatry by the state in which the services are performed, and the services can be separately identified from those services that are required as part of the approved GME program.

We are considering whether this flexibility that we implemented on an interim basis should be extended on a temporary basis (that is, if the PHE ends in 2021, these policies could be extended to December 31, 2021 to allow for a transition period before reverting to status quo policy) or be made permanent, and are soliciting public comments on whether this policy should continue once the PHE ends. We are concerned that there may be risks to program integrity in allowing residents to furnish separately billable physicians' services to inpatients in the teaching hospitals where they are training when the services are outside the scope of their approved GME program. For example, there could be a risk of duplicate Medicare payment for the resident's services under the IPPS for GME and the PFS if the physicians' services furnished by residents were not adequately separately identified from those services that are required as part of the GME program. However, because COVID-19 may continue to persist in some communities or some communities may experience a resurgence of COVID-19 after the expiration of the PHE, it may be appropriate for us to extend this policy on a temporary basis to meet the needs of teaching hospitals to ensure that there are as many qualified practitioners available as possible. We believe public comment will assist us in identifying appropriate policy continuation decisions that we would consider

finalizing in the CY 2021 PFS final rule. We also invite commenters to provide data and other information on their experiences implementing this policy during the PHE.

e. Primary Care Exception Policies

The regulation at § 415.174 sets forth an exception to the conditions for PFS payment for services furnished in teaching settings in the case of certain E/M services furnished in certain centers. Under the so-called "primary care exception," Medicare makes PFS payment in certain teaching hospital primary care centers for certain services of lower and mid-level complexity furnished by a resident without the physical presence of a teaching physician. Section 415.174(a)(3) requires that the teaching physician must not direct the care of more than four residents at a time, and must direct the care from such proximity as to constitute immediate availability (that is, provide direct supervision) and must review with each resident during or immediately after each visit, the beneficiary's medical history, physical examination, diagnosis, and record of tests and therapies. Section 415.174(a)(3) also requires that the teaching physician must have no other responsibilities at the time, assume management responsibility for the beneficiaries seen by the residents, and ensure that the services furnished are appropriate.

As provided in the regulation at § 415.174(a), the codes of lower and mid-level complexity that can be furnished under the primary care exception are specified in section 100 of chapter 12 of the Medicare Claims Processing Manual (<https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Downloads/clm104c12.pdf>). They are the following:

- CPT code 99201 (*Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A problem focused history; A problem focused examination; Straightforward medical decision making. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are self-limited or minor. Typically, 10 minutes are spent face-to-face with the patient and/or family;*)
- CPT code 99202 (*Office or other outpatient visit for the evaluation and management of a new patient, which*

expanded problem focused history; An expanded problem focused examination; Straightforward medical decision making. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of low to moderate severity. Typically, 20 minutes are spent face-to-face with the patient and/or family;)

- CPT code 99203 (*Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A detailed history; A detailed examination; Medical decision making of low complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate severity. Typically, 30 minutes are spent face-to-face with the patient and/or family;*)
- CPT code 99211 (*Office or other outpatient visit for the evaluation and management of an established patient, that may not require the presence of a physician or other qualified health care professional. Usually, the presenting problem(s) are minimal. Typically, 5 minutes are spent performing or supervising these services;*)
- CPT code 99212 (*Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A problem focused history; A problem focused examination; Straightforward medical decision making. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are self-limited or minor. Typically, 10 minutes are spent face-to-face with the patient and/or family;*)
- CPT code 99213 (*Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: An expanded problem focused history; An expanded problem focused examination; Medical decision making of low complexity. Counseling and coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or*

family's needs. Usually, the presenting problem(s) are of low to moderate severity. Typically, 15 minutes are spent face-to-face with the patient and/or family);

- HCPCS code G0402 (*Initial preventive physical examination; face-to-face visit, services limited to new beneficiary during the first 12 months of Medicare enrollment*);

- HCPCS code G0438 (*Annual wellness visit; includes a personalized prevention plan of service (PPS), initial visit*); and

- HCPCS code G0439 (*Annual wellness visit, includes a personalized prevention plan of service (PPS), subsequent visit*).

In the March 31st COVID-19 IFC, we amended § 415.174 of our regulations to allow, during the PHE for COVID-19, all levels of office/outpatient E/M visits to be furnished by the resident and billed by the teaching physician under the primary care exception. In the May 1st COVID-19 IFC (85 FR 27550 through 27629), we further expanded the list of services included in the primary care exception during the PHE for COVID-19. We also allowed PFS payment to the teaching physician for services furnished by residents via telehealth under the primary care exception if the services were also on the list of Medicare telehealth services.

We are considering whether these policies should be extended on a temporary basis (that is, if the PHE ends in 2021, these policies could be extended to December 31, 2021 to allow for a transition period before reverting to status quo policy) or be made permanent, and are soliciting public comments on whether these policies should continue once the PHE ends. We believe public comment will assist us in identifying appropriate policy continuation decisions that we would consider finalizing in the CY 2021 PFS final rule. We are also considering whether specific services added under the primary care exception should be extended temporarily or made permanent and are soliciting public comment on whether these services should continue as part of the primary care exception once the PHE ends. These services are the following:

- CPT code 99204 (*Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided*

consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 45 minutes are spent face-to-face with the patient and/or family);

- CPT code 99205 (*Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 60 minutes are spent face-to-face with the patient and/or family*);

- CPT code 99214 (*Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A detailed history; A detailed examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 25 minutes are spent face-to-face with the patient and/or family*);

- CPT code 99215 (*Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 40 minutes are spent face-to-face with the patient and/or family*);

- CPT code 99495 (*Transitional Care Management services with the following required elements: Communication (direct contact, telephone, electronic) with the patient and/or caregiver within two business days of discharge; medical decision making of at least moderate complexity during the service period; face-to-face visit within 14 calendar days of discharge*);

- CPT code 99496 (*Transitional Care Management services with the following required elements: Communication (direct contact, telephone, electronic) with the patient and/or caregiver within two business days of discharge; medical decision making of at least high complexity during the service period; face-to-face visit within 7 calendar days of discharge*);

- CPT code 99421 (*Online digital evaluation and management service, for an established patient, for up to 7 days, cumulative time during the 7 days; 5–10 minutes*);

- CPT code 99422 (*Online digital evaluation and management service, for an established patient, for up to 7 days, cumulative time during the 7 days; 11–20 minutes*);

- CPT code 99423 (*Online digital evaluation and management service, for an established patient, for up to 7 days, cumulative time during the 7 days; 21 or more minutes*);

- CPT code 99452 (*Interprofessional telephone/internet/electronic health record referral service(s) provided by a treating/requesting physician or qualified health care professional, 30 minutes*);

- CPT code G2012 (*Brief communication technology-based service, e.g. virtual check-in, by a physician or other qualified health care professional who can report evaluation and management services, provided to an established patient, not originating from a related E/M service provided within the previous 7 days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment; 5–10 minutes of medical discussion*); and

- HCPCS code G2010 (*Remote evaluation of recorded video and/or images submitted by an established patient (e.g., store and forward), including interpretation with follow-up with the patient within 24 business hours, not originating from a related E/M service provided within the previous 7 days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment*).

Expanding the array of services for which Medicare may make PFS payment to the teaching physician when furnished by a resident under the primary care exception was responsive to critical needs during the PHE for patients who may be quarantined at home or who may need to be isolated for purposes of minimizing exposure risk based on presumed or confirmed COVID-19 infection. Because COVID-19 may continue to persist in some communities or some communities may experience a resurgence of COVID-19

after the expiration of the PHE, it may be appropriate for us to extend all of these services on a temporary basis (that is, until the end of the calendar year in which the PHE ends).

However, we are concerned that it may be inappropriate to extend all of these services on a temporary basis or add them to the primary care exception permanently. The intent of the primary care exception as described in § 415.174 is that E/M visits of lower and mid-level complexity furnished by residents are simple enough for a teaching physician to be able to direct and manage the care of up to four residents at any given time and direct the care from such proximity as to constitute immediate availability. While CPT code 99421 and HCPCS code G2012 may be simple services, others such as levels 4 and 5 office/outpatient E/M visits (CPT codes 99204 through 99205 and CPT codes 99214 through 99215) and transitional care management codes (CPT codes 99495 through 99496) require medical decision making that is of at least moderate complexity. We are concerned that the teaching physician may not be able to maintain sufficient personal involvement in all of the care to warrant PFS payment for the services being furnished by up to four residents when some or all of the residents might be furnishing services that are more than lower and mid-level complexity. We are also concerned that when the teaching physician is directing the care of a patient that requires moderate or higher medical decision making, the ability to be immediately available to other residents could be compromised, potentially putting patients at risk. Thus, we are considering whether, upon expiration of the PHE, we should extend on a temporary basis some or all of the services we added to the primary care exception list during the PHE and are soliciting public comments on whether these services should continue as part of the primary care exception after the PHE ends. We also invite commenters to provide data and other information on their experiences implementing this policy during the PHE.

We are also considering whether our interim final policy that PFS payment could be made to the teaching physician when residents furnish telehealth services under the primary care exception should be extended on a temporary basis or be made permanent, and are soliciting public comments on whether this policy should continue once the PHE ends. In these cases, outside the circumstances of the PHE, the patient would be at the originating site and the resident furnishing the care, along with the teaching physician

billing for it, would be located at the primary care center as the distant site practitioner. If we were to temporarily extend or add permanently to the primary care exception services such as e-visits or communication technology-based services, it may also make sense to permit PFS payment to the teaching physician when the resident furnishes an office/outpatient E/M visit via telehealth, on the basis that the patient is not physically in the clinic and that these services all involve the use of virtual technology (for example, patient portals for e-visits, telecommunications technology for the office/outpatient E/M visit) to facilitate care delivery. If we were to remove the services that we added to the primary care exception on an interim basis, we could separately consider continuing to permit PFS payment to the teaching physician when the resident furnishes an office/outpatient E/M visit via telehealth because the teaching physician would be immediately available in the distant site clinic with the resident to direct and manage the care.

f. Conclusion

In summary, we remind stakeholders that during the PHE we implemented these policies on an interim basis to support our goals of ensuring beneficiary access to necessary services and maintenance of sufficient workforce capacity through flexibilities afforded to providers to safely furnish services to patients. While we anticipate reverting to our previous teaching physician policy that was in place prior to the PHE for the reasons discussed above, we are considering whether the teaching physician and resident moonlighting policies that we implemented on an interim basis should be extended on a temporary basis (that is, if the PHE ends in 2021, these policies could be extended to December 31, 2021 to allow for a transition period before reverting to status quo policy) or be made permanent policy for CY 2021. We are soliciting public comments on whether these policies should be continued, and if so, whether they should be made permanent, or temporarily extended and the appropriate scope of the extension. As discussed above, we are concerned that the teaching physician may not be able to maintain sufficient personal involvement in all of the care to warrant PFS payment for the services being furnished by up to four residents when some or all of the residents might be furnishing services that are more than lower and mid-level complexity. We are also concerned that when the teaching physician is directing the care of a patient that requires moderate or higher

medical decision making, the ability to be immediately available to other residents could be compromised, potentially putting patients at risk. We will also consider under which scenarios our policies for moonlighting or virtual presence as discussed above, should apply, if any. As discussed for our moonlighting policy, we are concerned that there may be risks to program integrity in allowing residents to furnish separately billable physicians' services to inpatients in the teaching hospitals where they are training when the services are outside the scope of their approved GME program. For example, there could be a risk of duplicate Medicare payment for the resident's services under the IPPS for GME and the PFS if the physicians' services furnished by residents were not adequately separately identified from those services that are required as part of the GME program. Under our discussion of virtual presence, we highlighted concerns about how continuing to permit teaching physicians to be involved through their virtual presence may not be sufficient to warrant PFS payment to the teaching physician on a temporary or permanent basis. Absent the circumstances of the PHE, the physical, in-person presence of the teaching physician may be necessary to provide oversight to ensure that care furnished to Medicare beneficiaries is medically reasonable and necessary, and to ensure that the teaching physician renders sufficient personal services to exercise full, personal control of the key portion of the case. We also discussed concerns about patient safety when the teaching physician is only virtually present.

We believe public comment, especially those that focus on the variables we identify above regarding the specific services included on the primary exception list, clinical scenarios under which residents could moonlight or furnish certain types of services under the supervision of a teaching physician via virtual presence, will assist us in identifying the appropriate policy continuation decisions after the end of the PHE, which we will consider finalizing in the CY 2021 PFS final rule. As part of our review of public comments, we will weigh and make decisions based on the potential benefits and risks associated with the potential temporary or permanent continuation, in whole or in part, of these policies. The benefits of continuation may include limiting COVID-19 exposure risk for practitioners and patients, increasing workforce capacity of teaching settings

to respond to continuing effects following the PHE as practitioners may be asked to assist with the response, and increasing access so that we do not unintentionally limit the number of licensed practitioners available to furnish services to Medicare beneficiaries, which could have the unintended consequence of limiting access to services paid under the PFS. The risks may include the potential for duplicative payment with Medicare Part A reimbursement for graduate medical education training programs, the potential for increases to cost-sharing for Medicare beneficiaries that could result from additional Part B claims for services furnished by the teaching physician with the involvement of residents, and potential risks to patient safety.

2. Supervision of Diagnostic Tests by Certain NPPs

In response to Executive Order #13890 discussed above, we sought assistance from stakeholders in identifying Medicare regulations that contain more restrictive supervision requirements than existing state scope of practice laws, or that limit health professionals from practicing at the top of their license. In response to our request for feedback discussed above, physician assistants (PAs) and nurse practitioners (NPs) recommended regulatory changes that would allow them to supervise the performance of diagnostic tests because they are currently authorized to do so under their state scope of practice rules in many states. In the May 1st COVID-19 IFC (85 FR 27550 through 27629), we established on an interim basis during the COVID-19 PHE, a policy to permit these and certain other NPPs to supervise diagnostic tests. We now propose to make those changes permanent by making modifications to the regulations at § 410.32. We are planning to address comments we receive on our proposals included in this proposed rule and comments received on the May 1st COVID-19 IFC (85 FR 27550 through 27629) simultaneously in the final rule since the comment period for the May 1, 2020 COVID-19 IFC (85 FR 27550 through 27629) recently closed on July 7, 2020.

Prior to the COVID-19 PHE, under § 410.32(a)(2), physicians, NPs, CNSs, PAs, certified nurse-midwives (CNMs), clinical psychologists (CPs), and clinical social workers (CSWs) who are treating a beneficiary for a specific medical problem may order diagnostic tests when they use the results of the tests in the management of the beneficiary's specific medical problem. However,

generally only physicians were permitted to supervise diagnostic tests. The regulation at § 410.32(b)(1) provided as a basic general rule that all diagnostic tests paid under the PFS must be furnished under an appropriate level of supervision by a physician as defined in section 1861(r) of the Act. Section 410.32(b)(2) then provided for certain exceptions to which this basic rule did not apply. For instance, under § 410.32(b)(2)(v), the requirement that diagnostic tests must be furnished under the appropriate level of supervision by a physician did not apply for tests performed by an NP or CNS authorized under applicable state law to furnish the test. (We note that, as for all services furnished by a NP or CNS, they would have to be furnished working in collaboration with a physician as provided in regulations at §§ 410.75 and 410.76, respectively). Similarly, under the regulation at § 410.32(b)(2)(vii), the requirement that diagnostic tests must be furnished under the appropriate level of supervision by a physician did not apply for tests performed by a CNM authorized under applicable state law to furnish the test. This exception is in place because the Medicare statute does not include any physician supervision requirement for CNM services. Thus, while NPs, CNSs, PAs, and CNMs were permitted to furnish diagnostic tests to the extent they were authorized under state law and their scope of practice to do so, the regulations at § 410.32 did not address whether these practitioners could supervise others who furnished diagnostic tests.

In light of stakeholder feedback to CMS on identifying additional Medicare regulations that contain more restrictive supervision requirements than existing state scope of practice laws, or that limit health professionals from practicing at the top of their license, effective January 1, 2021, we are proposing to amend the basic rule under the regulation at § 410.32(b)(1) to allow NPs, CNSs, PAs or CNMs to supervise diagnostic tests on a permanent basis as allowed by state law and scope of practice. These NPPs have separately enumerated benefit categories under Medicare law that permit them to furnish services that would be physician's services if furnished by a physician, and are authorized to receive payment under Medicare Part B for the professional services they furnish either directly or "incident to" their own professional services, to the extent authorized under state law and scope of practice.

We are proposing to amend the regulation at § 410.32(b)(2)(iii)(B) on a permanent basis to specify that supervision of diagnostic psychological

and neuropsychological testing services can be done by NPs, CNS's, PAs or CNMs to the extent that they are authorized to perform the tests under applicable State law and scope of practice, in addition to physicians and CPs who are currently authorized to supervise these tests. We are also proposing to amend on a permanent basis, the regulation at § 410.32 to add paragraph (b)(2)(ix) to specify that diagnostic tests performed by a PA in accordance with their scope of practice and State law do not require the specified level of supervision assigned to individual tests, because the relationship of PAs with physicians under § 410.74 would continue to apply. We are also proposing to make permanent the removal of the parenthetical, previously made as part of the May 1, 2020 COVID-19 IFC (85 FR 27550 through 27629), at § 410.32(b)(3) that required a general level of physician supervision for diagnostic tests performed by a PA.

3. Pharmacists Providing Services Incident to Physicians' Services

Stakeholders have asked us to clarify that pharmacists can provide services incident to the professional services of a physician or other NPP just as other clinical staff may do. These stakeholders have asked us, in particular, about pharmacists who provide medication management services. Medication management is covered under both Medicare Part B and Part D. We are reiterating the clarification we provided in the May 1st COVID-19 IFC (85 FR 27550 through 27629), that pharmacists fall within the regulatory definition of auxiliary personnel under our regulations at § 410.26. As such, pharmacists may provide services incident to the services, and under the appropriate level of supervision, of the billing physician or NPP, if payment for the services is not made under the Medicare Part D benefit. This includes providing the services incident to the services of the billing physician or NPP and in accordance with the pharmacist's state scope of practice and applicable state law.

We note that when a pharmacist provides services that are paid under the Part D benefit, the services are not also reportable or paid for under Part B. In addition to circumstances where medication management is offered as part of the Part D benefit, Part B payment is also not available for services included in the Medicare Part D dispensing fees, such as a pharmacist's time in checking the computer for information about an individual's coverage, measurement or

mixing of the covered Part D drug, filling the container, physically providing or delivering the completed prescription to the Part D enrollee. Similarly, performing required quality assurance activities consistent with § 423.153(c)(2), such as screening for potential drug therapy problems due to therapeutic duplication, age/gender-related contraindications, potential over-utilization and under-utilization, drug-drug interactions, incorrect drug dosage or duration of drug therapy, drug-allergy contraindications, and clinical abuse/misuse are considered part of dispensing fees under Part D and are not separately reportable services under Part B. Additionally, services and supplies paid under the incident to benefit must be an integral, though incidental, part of the service of a physician (or other practitioner) in the course of diagnosis or treatment of an injury or illness (§ 410.26). We also note that our manual provisions specify that “incident to” services must be of a type that are medically appropriate to provide in the office setting; and that where a physician supervises auxiliary personnel to assist him or her in rendering services to patients and includes the charges for their services in his or her own bills, the services of such personnel are considered incident to the physicians’ service if there is a physicians’ service rendered to which the services of such personnel are an incidental part and there is direct supervision by the physician (section 60.1 of chapter 15 of the Medicare Benefit Policy Manual (Pub. 100–02) available on the CMS website at <https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Downloads/bp102c15.pdf>).

Although it is fully consistent with current CMS policy for pharmacists to provide services incident to the services of the billing physician or NPP, we believe this clarification may encourage pharmacists to work with physicians and NPPs in new ways where pharmacists are working at the top of their training, licensure and scope of practice. It may free up the time of physicians and NPPs for other work and increase access to medication management services, for individuals with chronic conditions and other conditions. As an example, we found that this clarification was helpful in recently addressing in the May 1st COVID–19 IFC (85 FR 27550 through 27629), the ability of pharmacies to enroll as laboratories and work with physicians in the assessment of clinical information, specimen collection and

reporting results of COVID–19 clinical diagnostic laboratory tests.

4. Provision of Maintenance Therapy by Therapy Assistants

In response to our request for feedback on scope of practice (noted above), consistent with Executive Order #13890, respondents requested that we allow physical therapist assistants (PTAs) and occupational therapy assistants (OTAs) to furnish maintenance therapy services associated with a maintenance program. The respondents said that our Part B therapy policy is not consistent with policies for these services when provided to patients in the skilled nursing facility (SNF) and home health (HH) settings paid under Part A. Other respondents told us that because the therapist is responsible for a patient’s care over an episode, that this should include assigning responsibilities for maintenance therapy to an assistant when it is clinically appropriate. Some respondents stated that permitting PTAs and OTAs to furnish maintenance therapy services would give Medicare patients greater access to care and permit therapists and therapy providers more flexibility for resource utilization.

After considering respondents’ concerns about the incongruity between our Part B and Part A maintenance therapy policy, and to provide flexibility to increase the availability of needed health care services during the COVID–19 PHE, we amended our policy on an interim final basis in the May 1st COVID–19 IFC (85 FR 27550 through 27629) to allow the physical therapist (PT) or occupational therapist (OT) who established the maintenance program to assign the duties to a PTA or OTA, as clinically appropriate, to perform maintenance therapy services.

We explained that making this change could free-up the PT or OT to furnish other services, particularly those related to the COVID–19 PHE that require a therapist’s assessment and evaluation skills, and including the CTBS, that is, e-visits, virtual visits, remote evaluations, and phone evaluations—that were added as “sometimes therapy” services in the March 31st COVID–19 IFC for PTs, OTs and speech-language pathologists (SLPs). We stated explicitly that the maintenance therapy services furnished by therapist-supervised OTAs and PTAs will be paid in the same manner as those we already pay for as rehabilitative therapy services, and referred the reader to regulatory payment conditions for Part B outpatient occupational and physical therapy services (§§ 410.59 and 410.60, respectively) that require, as a basic

rule, that the services be provided by an individual meeting qualifications in 42 CFR part 484 for an OT or PT, or an appropriately supervised OTA or PTA.

In this proposed rule, we are proposing to make permanent our Part B policy for maintenance therapy services effective January 1, 2021 in order to create greater conformity in payment policy for maintenance therapy services that are furnished and paid under Part B with those in SNF and HH settings under Part A. If adopted, our policy would dovetail with our amended policy set forth in the May 1st COVID–19 IFC (85 FR 27550 through 27629) that grants PTs and OTs the discretion to delegate maintenance therapy services to the PTAs and OTAs, as clinically appropriate, for the duration of the PHE. If the PHE is ended prior to January 1, 2021, the therapist would need to personally furnish the maintenance therapy services until the proposed policy change takes effect. We plan to address comments from the May 1st COVID–19 IFC in conjunction with the comments from this proposed rule in the final rule, given the comment period has only just closed on that IFC.

Our policy for maintenance therapy services is explained in section 220.2 of chapter 15 of the Medicare Benefit Policy Manual (see <https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Downloads/bp102c15.pdf>) in cases where rehabilitative services, requiring the improvement in the patient’s functional status, are no longer or were not previously covered. This manual section explains that skilled therapy services related to a reasonable and necessary maintenance program are available for the establishment or design of the maintenance program and the delivery of the maintenance program, that is, maintenance therapy, when it needs to be carried out as maintenance therapy services. Maintenance programs that can be carried out by the patient alone or with the assistance of caregivers, are not covered. Sections 230.1 and 230.2 of chapter 15 of the Medicare Benefit Policy Manual specify that a PTA or OTA may not provide skilled maintenance program services.

In considering our proposal, we reviewed regulatory requirements for conditions of payment for outpatient occupational therapy, physical therapy, and speech-language pathology services at §§ 410.59, 410.60 and 410.62; the regulation for therapy treatment plans at § 410.61, and the regulations specifying treatment plan certification and recertification requirements at § 424.24 for Part B occupational therapy, physical therapy, and speech-language

pathology services, in addition to the above mentioned manual provisions.

Given that we already make payment for rehabilitative services requiring improvement in the patient's functional status when they are furnished by PTAs and OTAs at the discretion of the supervising therapist treating the patient in accordance with the therapist-established plan of care, we believe that it would be appropriate for the therapist to use that same judgement in deciding whether to delegate to the PTA or OTA the performance of maintenance therapy services under the associated plan of care. We believe that there is little difference between the rehabilitative therapy services furnished to improve a patient's functional status and those for maintenance therapy services other than the goals set by the therapist in the therapy plan that are aimed to maintain, slow or prevent further decline of a patient's condition. We do not believe that the therapist-only maintenance therapy requirement is needed in the case of outpatient physical or occupational therapy services, and instead believe that it would be appropriate for an OT or PT to be permitted to use their professional judgement to assign the performance of maintenance therapy services to an OTA or PTA when it is clinically appropriate to do so.

As such, we propose to allow, on a permanent basis, therapists to delegate performance of maintenance therapy services to an OTA or PTA for outpatient occupational and physical therapy services in Part B settings beginning January 1, 2021. This proposal would better align our Part B policy with that in SNFs and HH paid under Part A where maintenance therapy services may be performed by a therapist or a therapy assistant. Since our regulations at §§ 410.59, 410.60, 410.61, 410.62 and 424.24, do not now distinguish between rehabilitative and maintenance therapy services, we are not proposing to amend them. Instead, we propose to revise sections 220.2, 230.1 and 230.2 of chapter 15 of the Medicare Benefit Policy Manual to clarify that PTs and OTs no longer need to personally perform maintenance therapy services and to specifically remove the prohibitions on PTAs and OTAs from furnishing such services. Therefore, we believe our proposal to allow PTs and OTs to delegate maintenance therapy services to their supervised assistants is in keeping with Executive Order #13890 and appeals by respondents to our request for feedback on scope of practice that followed, rather than the alternative option of maintaining the pre-COVID-19 policy of

requiring PTs and OTs to personally furnish them, after the COVID-19 PHE is ended.

We note that therapists and therapy providers should consult the CQ and CO modifier policies to consider whether these modifiers should be applied to claims for services furnished in whole or in part by PTAs and OTAs which will, beginning January 1, 2022, be paid at 85 percent of the amount that would otherwise apply for the service, as required by section 1834(v) of the Act which was added by section 53107 of the Bipartisan Budget Act of 2018. See the CY 2020 PFS rulemaking for policies related to the application of CQ and CO modifiers and the associated regulatory requirements (84 FR 40558 through 40564 (proposed rule) and 84 FR 62702 through 60708 (final rule)).

5. Medical Record Documentation

As we established in the CY 2020 PFS final rule (84 FR 62681 through 62684), and similarly expressed in the May 1st COVID-19 IFC (85 FR 27556 through 27557), any individual who is authorized under Medicare law to furnish and bill for their professional services, whether or not they are acting in a teaching role, may review and verify (sign and date) the medical record for the services they bill, rather than re-document, notes in the medical record made by physicians, residents, nurses, and students (including students in therapy or other clinical disciplines), or other members of the medical team. We note that although there are currently no documentation requirements that would impact payment for PTs, OTs, or SLPs when documentation is added to the medical record by persons other than the therapist, we are responding in this proposed rule to stakeholder requests for clarification. Specifically, we are clarifying that the broad policy principle that allows billing clinicians to review and verify documentation added to the medical record for their services by other members of the medical team also applies to therapists. This will help ensure that therapists are able to spend more time furnishing therapy services, including pain management therapies to patients that may minimize the use of opioids and other medications, rather than spending time documenting in the medical record. We emphasize that, while any member of the medical team may enter information into the medical record, only the reporting clinician may review and verify notes made in the record by others for the services the reporting clinician furnishes and bills. We also emphasize that information entered into the medical record should document

that the furnished services are reasonable and necessary.

H. Valuation of Specific Codes

1. Background: Process for Valuing New, Revised, and Potentially Misvalued Codes

Establishing valuations for newly created and revised CPT codes is a routine part of maintaining the PFS. Since the inception of the PFS, it has also been a priority to revalue services regularly to make sure that the payment rates reflect the changing trends in the practice of medicine and current prices for inputs used in the PE calculations. Initially, this was accomplished primarily through the 5-year review process, which resulted in revised work RVUs for CY 1997, CY 2002, CY 2007, and CY 2012, and revised PE RVUs in CY 2001, CY 2006, and CY 2011, and revised MP RVUs in CY 2010 and CY 2015. Under the 5-year review process, revisions in RVUs were proposed and finalized via rulemaking. In addition to the 5-year reviews, beginning with CY 2009, CMS and the RUC identified a number of potentially misvalued codes each year using various identification screens, as discussed in section II.C. of this proposed rule, Potentially Misvalued Services under the PFS. Historically, when we received RUC recommendations, our process had been to establish interim final RVUs for the potentially misvalued codes, new codes, and any other codes for which there were coding changes in the final rule with comment period for a year. Then, during the 60-day period following the publication of the final rule with comment period, we accepted public comment about those valuations. For services furnished during the calendar year following the publication of interim final rates, we paid for services based upon the interim final values established in the final rule. In the final rule with comment period for the subsequent year, we considered and responded to public comments received on the interim final values, and typically made any appropriate adjustments and finalized those values.

In the CY 2015 PFS final rule with comment period (79 FR 67547), we finalized a new process for establishing values for new, revised and potentially misvalued codes. Under the new process, we include proposed values for these services in the proposed rule, rather than establishing them as interim final in the final rule with comment period. Beginning with the CY 2017 PFS proposed rule (81 FR 46162), the new process was applicable to all codes, except for new codes that describe truly

new services. For CY 2017, we proposed new values in the CY 2017 PFS proposed rule for the vast majority of new, revised, and potentially misvalued codes for which we received complete RUC recommendations by February 10, 2016. To complete the transition to this new process, for codes for which we established interim final values in the CY 2016 PFS final rule with comment period (81 FR 80170), we reviewed the comments received during the 60-day public comment period following release of the CY 2016 PFS final rule with comment period (80 FR 70886), and re-proposed values for those codes in the CY 2017 PFS proposed rule.

We considered public comments received during the 60-day public comment period for the proposed rule before establishing final values in the CY 2017 PFS final rule. As part of our established process, we will adopt interim final values only in the case of wholly new services for which there are no predecessor codes or values and for which we do not receive recommendations in time to propose values.

As part of our obligation to establish RVUs for the PFS, we thoroughly review and consider available information including recommendations and supporting information from the RUC, the Health Care Professionals Advisory Committee (HCPAC), public commenters, medical literature, Medicare claims data, comparative databases, comparison with other codes within the PFS, as well as consultation with other physicians and healthcare professionals within CMS and the federal government as part of our process for establishing valuations. Where we concur that the RUC's recommendations, or recommendations from other commenters, are reasonable and appropriate and are consistent with the time and intensity paradigm of physician work, we proposed those values as recommended. Additionally, we continually engage with stakeholders, including the RUC, with regard to our approach for accurately valuing codes, and as we prioritize our obligation to value new, revised, and potentially misvalued codes. We continue to welcome feedback from all interested parties regarding valuation of services for consideration through our rulemaking process.

2. Methodology for Establishing Work RVUs

For each code identified in this section, we conduct a review that includes the current work RVU (if any), RUC-recommended work RVU, intensity, time to furnish the preservice,

intraservice, and postservice activities, as well as other components of the service that contribute to the value. Our reviews of recommended work RVUs and time inputs generally include, but have not been limited to, a review of information provided by the RUC, the HCPAC, and other public commenters, medical literature, and comparative databases, as well as a comparison with other codes within the PFS, consultation with other physicians and health care professionals within CMS and the federal government, as well as Medicare claims data. We also assess the methodology and data used to develop the recommendations submitted to us by the RUC and other public commenters and the rationale for the recommendations. In the CY 2011 PFS final rule with comment period (75 FR 73328 through 73329), we discussed a variety of methodologies and approaches used to develop work RVUs, including survey data, building blocks, crosswalks to key reference or similar codes, and magnitude estimation (see the CY 2011 PFS final rule with comment period (75 FR 73328 through 73329) for more information). When referring to a survey, unless otherwise noted, we mean the surveys conducted by specialty societies as part of the formal RUC process.

Components that we use in the building block approach may include preservice, intraservice, or postservice time and post-procedure visits. When referring to a bundled CPT code, the building block components could include the CPT codes that make up the bundled code and the inputs associated with those codes. We use the building block methodology to construct, or deconstruct, the work RVU for a CPT code based on component pieces of the code. Magnitude estimation refers to a methodology for valuing work that determines the appropriate work RVU for a service by gauging the total amount of work for that service relative to the work for a similar service across the PFS without explicitly valuing the components of that work. In addition to these methodologies, we frequently utilize an incremental methodology in which we value a code based upon its incremental difference between another code and another family of codes. The statute specifically defines the work component as the resources in time and intensity required in furnishing the service. Also, the published literature on valuing work has recognized the key role of time in overall work. For particular codes, we refine the work RVUs in direct proportion to the changes in the best information

regarding the time resources involved in furnishing particular services, either considering the total time or the intraservice time.

Several years ago, to aid in the development of preservice time recommendations for new and revised CPT codes, the RUC created standardized preservice time packages. The packages include preservice evaluation time, preservice positioning time, and preservice scrub, dress and wait time. Currently, there are preservice time packages for services typically furnished in the facility setting (for example, preservice time packages reflecting the different combinations of straightforward or difficult procedure, and straightforward or difficult patient). Currently, there are three preservice time packages for services typically furnished in the nonfacility setting.

We developed several standard building block methodologies to value services appropriately when they have common billing patterns. In cases where a service is typically furnished to a beneficiary on the same day as an evaluation and management (E/M) service, we believe that there is overlap between the two services in some of the activities furnished during the preservice evaluation and postservice time. Our longstanding adjustments have reflected a broad assumption that at least one-third of the work time in both the preservice evaluation and postservice period is duplicative of work furnished during the E/M visit.

Accordingly, in cases where we believe that the RUC has not adequately accounted for the overlapping activities in the recommended work RVU and/or times, we adjust the work RVU and/or times to account for the overlap. The work RVU for a service is the product of the time involved in furnishing the service multiplied by the intensity of the work. Preservice evaluation time and postservice time both have a long-established intensity of work per unit of time (IWPUT) of 0.0224, which means that 1 minute of preservice evaluation or postservice time equates to 0.0224 of a work RVU.

Therefore, in many cases when we remove 2 minutes of preservice time and 2 minutes of postservice time from a procedure to account for the overlap with the same day E/M service, we also remove a work RVU of 0.09 (4 minutes \times 0.0224 IWPUT) if we do not believe the overlap in time had already been accounted for in the work RVU. The RUC has recognized this valuation policy and, in many cases, now addresses the overlap in time and work when a service is typically furnished on the same day as an E/M service.

The following paragraphs contain a general discussion of our approach to reviewing RUC recommendations and developing proposed values for specific codes. When they exist we also include a summary of stakeholder reactions to our approach. We note that many commenters and stakeholders have expressed concerns over the years with our ongoing adjustment of work RVUs based on changes in the best information we had regarding the time resources involved in furnishing individual services. We have been particularly concerned with the RUC's and various specialty societies' objections to our approach given the significance of their recommendations to our process for valuing services and since much of the information we used to make the adjustments is derived from their survey process. We are obligated under the statute to consider both time and intensity in establishing work RVUs for PFS services. As explained in the CY 2016 PFS final rule with comment period (80 FR 70933), we recognize that adjusting work RVUs for changes in time is not always a straightforward process, so we have applied various methodologies to identify several potential work values for individual codes.

We have observed that for many codes reviewed by the RUC, recommended work RVUs have appeared to be incongruous with recommended assumptions regarding the resource costs in time. This has been the case for a significant portion of codes for which we recently established or proposed work RVUs that are based on refinements to the RUC-recommended values. When we have adjusted work RVUs to account for significant changes in time, we have started by looking at the change in the time in the context of the RUC-recommended work RVU. When the recommended work RVUs do not appear to account for significant changes in time, we have employed the different approaches to identify potential values that reconcile the recommended work RVUs with the recommended time values. Many of these methodologies, such as survey data, building block, crosswalks to key reference or similar codes, and magnitude estimation have long been used in developing work RVUs under the PFS. In addition to these, we sometimes use the relationship between the old time values and the new time values for particular services to identify alternative work RVUs based on changes in time components.

In so doing, rather than ignoring the RUC-recommended value, we have used the recommended values as a starting

reference and then applied one of these several methodologies to account for the reductions in time that we believe were not otherwise reflected in the RUC-recommended value. If we believe that such changes in time are already accounted for in the RUC's recommendation, then we do not make such adjustments. Likewise, we do not arbitrarily apply time ratios to current work RVUs to calculate proposed work RVUs. We use the ratios to identify potential work RVUs and consider these work RVUs as potential options relative to the values developed through other options.

We do not imply that the decrease in time as reflected in survey values should always equate to a one-to-one or linear decrease in newly valued work RVUs. Instead, we believe that, since the two components of work are time and intensity, absent an obvious or explicitly stated rationale for why the relative intensity of a given procedure has increased, significant decreases in time should be reflected in decreases to work RVUs. If the RUC's recommendation has appeared to disregard or dismiss the changes in time, without a persuasive explanation of why such a change should not be accounted for in the overall work of the service, then we have generally used one of the aforementioned methodologies to identify potential work RVUs, including the methodologies intended to account for the changes in the resources involved in furnishing the procedure.

Several stakeholders, including the RUC, have expressed general objections to our use of these methodologies and deemed our actions in adjusting the recommended work RVUs as inappropriate; other stakeholders have also expressed general concerns with CMS refinements to RUC-recommended values in general. In the CY 2017 PFS final rule (81 FR 80272 through 80277), we responded in detail to several comments that we received regarding this issue. In the CY 2017 PFS proposed rule (81 FR 46162), we requested comments regarding potential alternatives to making adjustments that would recognize overall estimates of work in the context of changes in the resource of time for particular services; however, we did not receive any specific potential alternatives. As described earlier in this section, crosswalks to key reference or similar codes are one of the many methodological approaches we have employed to identify potential values that reconcile the RUC-recommended work RVUs with the recommended time values when the RUC-recommended

work RVUs did not appear to account for significant changes in time.

We look forward to continuing to engage with stakeholders and commenters, including the RUC, as we prioritize our obligation to value new, revised, and potentially misvalued codes; and will continue to welcome feedback from all interested parties regarding valuation of services for consideration through our rulemaking process. We refer readers to the detailed discussion in this section of the valuation considered for specific codes. Table 24 contains a list of codes and descriptors for which we are proposing work RVUs; this includes all codes for which we received RUC recommendations by February 10, 2020. The proposed work RVUs, work time and other payment information for all CY 2021 payable codes are available on the CMS website under downloads for the CY 2021 PFS proposed rule at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/index.html>.

3. Methodology for the Direct PE Inputs To Develop PE RVUs

a. Background

On an annual basis, the RUC provides us with recommendations regarding PE inputs for new, revised, and potentially misvalued codes. We review the RUC-recommended direct PE inputs on a code by code basis. Like our review of recommended work RVUs, our review of recommended direct PE inputs generally includes, but is not limited to, a review of information provided by the RUC, HCPAC, and other public commenters, medical literature, and comparative databases, as well as a comparison with other codes within the PFS, and consultation with physicians and health care professionals within CMS and the federal government, as well as Medicare claims data. We also assess the methodology and data used to develop the recommendations submitted to us by the RUC and other public commenters and the rationale for the recommendations. When we determine that the RUC's recommendations appropriately estimate the direct PE inputs (clinical labor, disposable supplies, and medical equipment) required for the typical service, are consistent with the principles of relativity, and reflect our payment policies, we use those direct PE inputs to value a service. If not, we refine the recommended PE inputs to better reflect our estimate of the PE resources required for the service. We also confirm whether CPT codes should have facility and/or nonfacility direct

PE inputs and refine the inputs accordingly.

Our review and refinement of the RUC-recommended direct PE inputs includes many refinements that are common across codes, as well as refinements that are specific to particular services. Table 25 details our refinements of the RUC's direct PE recommendations at the code-specific level. In section II.B. of this proposed rule, Determination of Practice Expense Relative Value Units (PE RVUs), we address certain refinements that would be common across codes. Refinements to particular codes are addressed in the portions of this section that are dedicated to particular codes. We note that for each refinement, we indicate the impact on direct costs for that service. We note that, on average, in any case where the impact on the direct cost for a particular refinement is \$0.35 or less, the refinement has no impact on the PE RVUs. This calculation considers both the impact on the direct portion of the PE RVU, as well as the impact on the indirect allocator for the average service. We also note that approximately half of the refinements listed in Table 25 result in changes under the \$0.35 threshold and are unlikely to result in a change to the RVUs.

We also note that the direct PE inputs for CY 2021 are displayed in the CY 2021 direct PE input files, available on the CMS website under the downloads for the CY 2021 PFS proposed rule at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html>. The inputs displayed there have been used in developing the CY 2021 PE RVUs as displayed in Addendum B.

b. Common Refinements

(1) Changes in Work Time

Some direct PE inputs are directly affected by revisions in work time. Specifically, changes in the intraservice portions of the work time and changes in the number or level of postoperative visits associated with the global periods result in corresponding changes to direct PE inputs. The direct PE input recommendations generally correspond to the work time values associated with services. We believe that inadvertent discrepancies between work time values and direct PE inputs should be refined or adjusted in the establishment of proposed direct PE inputs to resolve the discrepancies.

(2) Equipment Time

Prior to CY 2010, the RUC did not generally provide CMS with

recommendations regarding equipment time inputs. In CY 2010, in the interest of ensuring the greatest possible degree of accuracy in allocating equipment minutes, we requested that the RUC provide equipment times along with the other direct PE recommendations, and we provided the RUC with general guidelines regarding appropriate equipment time inputs. We appreciate the RUC's willingness to provide us with these additional inputs as part of its PE recommendations.

In general, the equipment time inputs correspond to the service period portion of the clinical labor times. We clarified this principle over several years of rulemaking, indicating that we consider equipment time as the time within the intraservice period when a clinician is using the piece of equipment plus any additional time that the piece of equipment is not available for use for another patient due to its use during the designated procedure. For those services for which we allocate cleaning time to portable equipment items, because the portable equipment does not need to be cleaned in the room where the service is furnished, we do not include that cleaning time for the remaining equipment items, as those items and the room are both available for use for other patients during that time. In addition, when a piece of equipment is typically used during follow-up postoperative visits included in the global period for a service, the equipment time would also reflect that use.

We believe that certain highly technical pieces of equipment and equipment rooms are less likely to be used during all of the preservice or postservice tasks performed by clinical labor staff on the day of the procedure (the clinical labor service period) and are typically available for other patients even when one member of the clinical staff may be occupied with a preservice or postservice task related to the procedure. We also note that we believe these same assumptions would apply to inexpensive equipment items that are used in conjunction with and located in a room with non-portable highly technical equipment items since any items in the room in question would be available if the room is not being occupied by a particular patient. For additional information, we refer readers to our discussion of these issues in the CY 2012 PFS final rule with comment period (76 FR 73182) and the CY 2015 PFS final rule with comment period (79 FR 67639).

(3) Standard Tasks and Minutes for Clinical Labor Tasks

In general, the preservice, intraservice, and postservice clinical labor minutes associated with clinical labor inputs in the direct PE input database reflect the sum of particular tasks described in the information that accompanies the RUC-recommended direct PE inputs, commonly called the "PE worksheets." For most of these described tasks, there is a standardized number of minutes, depending on the type of procedure, its typical setting, its global period, and the other procedures with which it is typically reported. The RUC sometimes recommends a number of minutes either greater than or less than the time typically allotted for certain tasks. In those cases, we review the deviations from the standards and any rationale provided for the deviations. When we do not accept the RUC-recommended exceptions, we refine the proposed direct PE inputs to conform to the standard times for those tasks. In addition, in cases when a service is typically billed with an E/M service, we remove the preservice clinical labor tasks to avoid duplicative inputs and to reflect the resource costs of furnishing the typical service.

We refer readers to section II.B. of this proposed rule, Determination of Practice Expense Relative Value Units (PE RVUs), for more information regarding the collaborative work of CMS and the RUC in improvements in standardizing clinical labor tasks.

(4) Recommended Items That Are Not Direct PE Inputs

In some cases, the PE worksheets included with the RUC's recommendations include items that are not clinical labor, disposable supplies, or medical equipment or that cannot be allocated to individual services or patients. We addressed these kinds of recommendations in previous rulemaking (78 FR 74242), and we do not use items included in these recommendations as direct PE inputs in the calculation of PE RVUs.

(5) New Supply and Equipment Items

The RUC generally recommends the use of supply and equipment items that already exist in the direct PE input database for new, revised, and potentially misvalued codes. However, some recommendations include supply or equipment items that are not currently in the direct PE input database. In these cases, the RUC has historically recommended that a new item be created and has facilitated our pricing of that item by working with the

specialty societies to provide us copies of sales invoices. For CY 2021 we received invoices for several new supply and equipment items. Tables 27 and 28 detail the invoices received for new and existing items in the direct PE database. As discussed in section II.B. of this proposed rule, Determination of Practice Expense Relative Value Units, we encouraged stakeholders to review the prices associated with these new and existing items to determine whether these prices appear to be accurate. Where prices appear inaccurate, we encouraged stakeholders to submit invoices or other information to improve the accuracy of pricing for these items in the direct PE database by February 10th of the following year for consideration in future rulemaking, similar to our process for consideration of RUC recommendations.

We remind stakeholders that due to the relativity inherent in the development of RVUs, reductions in existing prices for any items in the direct PE database increase the pool of direct PE RVUs available to all other PFS services. Tables 27 and 28 also include the number of invoices received and the number of nonfacility allowed services for procedures that use these equipment items. We provide the nonfacility allowed services so that stakeholders will note the impact the particular price might have on PE relativity, as well as to identify items that are used frequently, since we believe that stakeholders are more likely to have better pricing information for items used more frequently. A single invoice may not be reflective of typical costs and we encourage stakeholders to provide additional invoices so that we might identify and use accurate prices in the development of PE RVUs.

In some cases, we do not use the price listed on the invoice that accompanies the recommendation because we identify publicly available alternative prices or information that suggests a different price is more accurate. In these cases, we include this in the discussion of these codes. In other cases, we cannot adequately price a newly recommended item due to inadequate information. Sometimes, no supporting information regarding the price of the item has been included in the recommendation. In other cases, the supporting information does not demonstrate that the item has been purchased at the listed price (for example, vendor price quotes instead of paid invoices). In cases where the information provided on the item allows us to identify clinically appropriate proxy items, we might use existing items as proxies for the newly recommended items. In other cases, we

included the item in the direct PE input database without any associated price. Although including the item without an associated price means that the item does not contribute to the calculation of the final PE RVU for particular services, it facilitates our ability to incorporate a price once we obtain information and are able to do so.

(6) Service Period Clinical Labor Time in the Facility Setting

Generally speaking, our direct PE inputs do not include clinical labor minutes assigned to the service period because the cost of clinical labor during the service period for a procedure in the facility setting is not considered a resource cost to the practitioner since Medicare makes separate payment to the facility for these costs. We address code-specific refinements to clinical labor in the individual code sections.

(7) Procedures Subject to the Multiple Procedure Payment Reduction (MPPR) and the OPPS Cap

We note that the public use files for the PFS proposed and final rules for each year display the services subject to the MPPR for diagnostic cardiovascular services, diagnostic imaging services, diagnostic ophthalmology services, and therapy services. We also include a list of procedures that meet the definition of imaging under section 1848(b)(4)(B) of the Act, and therefore, are subject to the OPPS cap for the upcoming calendar year. The public use files for CY 2021 are available on the CMS website under downloads for the CY 2021 PFS proposed rule at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html>. For more information regarding the history of the MPPR policy, we refer readers to the CY 2014 PFS final rule with comment period (78 FR 74261 through 74263). For more information regarding the history of the OPPS cap, we refer readers to the CY 2007 PFS final rule with comment period (71 FR 69659 through 69662).

4. Proposed Valuation of Specific Codes for CY 2021

(1) Fine Needle Aspiration (CPT Codes 10021, 10004, 10005, 10006, 10007, 10008, 10009, 10010, 10011, and 10012)

In June 2017, the CPT Editorial Panel deleted CPT code 10022, revised CPT code 10021, and created nine new codes to describe fine needle aspiration procedures with and without imaging guidance. These ten codes were surveyed and reviewed for the October 2017 and January 2018 RUC meetings. In the CY 2019 final rule, we finalized

the RUC-recommended work RVU for seven of the ten codes in the family, while finalizing a lower work RVU for CPT codes 10005 (*Fine needle aspiration biopsy, including ultrasound guidance; first lesion*), 10009 (*Fine needle aspiration biopsy, including CT guidance; first lesion*), and 10021 (*Fine needle aspiration biopsy, without imaging guidance; first lesion*). For a full discussion of this review, we refer readers to the CY 2019 PFS final rule (83 FR 59517 through 59521).

Following the publication of the CY 2019 final rule, RUC staff stated that CMS erroneously double-counted the utilization for new codes that had image guidance bundled. We disagreed that this constituted a technical error and communicated to the RUC in conversations following the publication of the rule that the surveying specialties could instead nominate the affected codes from these families as being potentially misvalued. At the January 2020 RUC meeting, the RUC reaffirmed its CY 2019 recommendations for physician work and direct practice expense (PE) for the ten codes in the Fine Needle Aspiration code family.

In discussing this group of codes, we would like to clarify again that we disagree with the RUC and do not believe that utilization was erroneously double-counted for this code family. We publish our proposed utilization crosswalk each year as a public use file available on the CMS website; the current such file is available under downloads for the CY 2021 PFS proposed rule at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html>. During the CY 2019 rule cycle, we proposed the utilization crosswalk for the Fine Needle Aspiration family as it was recommended to CMS by the RUC, and we did not receive any comments on this subject until after the valuation of these codes had been finalized. We proposed and finalized the utilization crosswalk for this code family as recommended by the RUC without receiving any comments from the RUC or other stakeholders. If the RUC or other stakeholders believed that what CMS had proposed was incorrect or misunderstood what the RUC had recommended, there was an opportunity to comment during the 60 days following the publication of the proposed rule. We disagree that the utilization crosswalk was erroneous, and we did not make a technical correction following the publication of the CY 2019 final rule for this reason.

We also disagree with the RUC that the utilization crosswalk was “the

principle reason CMS rejected the RUC recommendations” for the codes in the Fine Needle Aspiration family, as stated in the RUC’s CY 2021 recommendations for this code family. As we stated in the CY 2019 proposed rule and restated in the CY 2019 final rule, our refinements to the work RVUs of CPT codes 10021, 10005, and 10009 were primarily based on changes in surveyed work time and the relationship between the codes in the family. For example, this was our rationale for refining the work RVU of CPT code 10021 from the RUC-recommended value of 1.20 to the finalized value of 1.03: In reviewing CPT code 10021, we noted that the recommended intraservice time is decreasing from 17 minutes to 15 minutes (12 percent reduction), and the recommended total time is decreasing from 48 minutes to 33 minutes (32 percent reduction); however, the RUC-recommended work RVU is only decreasing from 1.27 to 1.20, which is a reduction of just over 5 percent. In the case of CPT code 10021, we believed that it was more accurate to propose a work RVU of 1.03 based on a crosswalk to CPT code 36440 to account for these decreases in the surveyed work time (83 FR 59518). We note that this primary rationale for refining the work RVU did not mention the utilization crosswalk at all.

When we communicated to the RUC following the publication of the CY 2019 final rule that the codes in the Fine Needle Aspiration family could be nominated as potentially misvalued, we indicated that we were open to receiving new information about the valuation of these codes. In reaffirming its recommendations from CY 2019, however, the RUC has not provided any new information that was not already presented for the previous CMS review of these codes. Therefore, we are not proposing any changes to the codes in the Fine Needle Aspiration family, as the reaffirmed CY 2021 RUC recommendations are identical to the CY 2019 RUC recommendations that already went through notice and comment rulemaking. We welcome the submission of new information regarding these services that was not part of the previous CY 2019 review of the code family.

(2) Tissue Expander Other Than Breast (CPT Code 11960)

This service was included in a larger group of similarly related codes that were recommended for review for the October 2019 RUC meeting. The RUC recommended to re-review this code at a more granular level for the January 2020 RUC meeting.

We disagree with the RUC-recommended work RVU of 12.40 for CPT code 11960 (tissue expander other than breast). We are proposing to maintain the current work RVU of 11.49 supported by a reference code, CPT code 45560 (repair of rectocele (separate procedure)), which has a work RVU of 11.50. CPT code 45560 shares the same intraservice time of 90 minutes with CPT code 11960 and has a slightly higher total time of 367 minutes. The recommended total time for CPT code 11960 decreased from 444 minutes to 357 minutes, with a slight increase in intraservice time of 78 minutes to 90 minutes. We believe the similar work RVU of the reference CPT code 45560, as well as the reduction in total time, supports maintaining the current work RVU of 11.49 for CPT code 11960. We are proposing the RUC-recommended direct PE inputs for CPT code 11960 without refinements.

(3) Breast Implant-Expander Placement (CPT Codes 11970, 19325, 19340, 19342, and 19357)

These services were included in a larger group of 22 breast reconstruction and similarly related codes that were recommended for survey for the October 2019 RUC meeting. At the October 2019 RUC meeting, these codes were recommended for a more granular review for the January 2020 RUC meeting.

We disagree with the RUC-recommended work RVU of 8.01 for CPT code 11970 (*replacement of tissue expander with permanent implant*). We are proposing a work RVU of 7.49 supported by a reference code CPT code 35701 (*exploration not followed by surgical repair, artery; neck (e.g., carotid, subclavian)*), which has a work RVU of 7.50. CPT code 35701 shares the same intraservice time of 60 minutes with CPT code 11970 and has a slightly higher total time of 229 minutes as compared to 216 minutes. In addition, during our review of CPT code 11970, we noted that the recommended intraservice time is decreasing from 78 minutes to 60 minutes and the recommended total time of 231 minutes is decreasing to 216 minutes. We also note that our proposed work RVU of 7.49 for CPT code 11970 is equal to the total time ratio amount, which is the current total time compared to the RUC-recommended total time. We are proposing the RUC-recommended direct PE inputs for CPT code 11970.

We disagree with the RUC-recommended work RVU of 8.64 for CPT code 19325 (breast augmentation with implant). Although we disagree with the RUC-recommended work RVU,

we concur that the relative difference in work between CPT codes 11970 and 19325 is equivalent to the RUC-recommended interval of 0.63 RVUs. Therefore, we are proposing a work RVU of 8.12 for CPT code 19325, based on the recommended interval of 0.63 additional RVUs above our proposed work RVU of 7.49 for CPT code 11970. We believe the use of an incremental difference between these CPT codes is a valid methodology for setting values, especially in valuing services within a family of revised codes where it is important to maintain appropriate intra-family relativity. We are also supporting our proposed work RVU of 8.12 based on a reference code, CPT code 25652 (open treatment of ulnar styloid fracture). CPT code 25652 shares the same intraservice time of 60 minutes and the same total time of 225 minutes with a lower work RVU of 8.06. In addition, during our review of CPT code 19325, we noted that the total time has decreased from 244 minutes to 225 minutes and the intraservice time has decreased from 90 minutes to 60 minutes. We are proposing the RUC-recommended direct PE inputs for CPT code 19325.

We disagree with the RUC-recommended work RVU of 11.00 for CPT code 19340 (*insertion of breast implant on same day of mastectomy (i.e. immediate)*). Although we disagree with the RUC-recommended work RVU, we concur that the relative difference in work between CPT codes 19325 and 19340 is equivalent to the RUC-recommended interval of 2.36 RVUs. Therefore, we are proposing a work RVU of 10.48 for CPT code 19340, based on the recommended interval of 2.36 additional RVUs above our proposed work RVU of 8.12 for CPT code 19325. We are also supporting our proposed work RVU of 10.48 based on a reference code, CPT code 47562 (*laparoscopy, surgical; cholecystectomy*). CPT code 47562 shares the same intraservice time of 80 minutes and only a slightly lower total time of 251 minutes with a similar work RVU of 10.47. In addition, during our review of CPT code 19340, we noted that the total time has decreased from 366 minutes to 261 minutes and the intraservice time has decreased from 120 minutes to 80 minutes. We are proposing the RUC-recommended direct PE inputs for CPT code 19340.

We disagree with the RUC-recommended work RVU of 11.00 for CPT code 19342 (*insertion or replacement of breast implant on different day from mastectomy*). Although we disagree with the RUC-recommended work RVU, we concur that the relative difference in work

between CPT codes 19325 and 19342 is equivalent to the RUC-recommended interval of 2.36 RVUs. Therefore, we are proposing a work RVU of 10.48 for CPT code 19342, based on the recommended interval of 2.36 additional RVUs above our proposed work RVU of 8.12 for CPT code 19325. We also note that the RUC-recommended work RVU of 11.00 is equal to the RUC-recommended work RVU for CPT code 19340 because they have stated that both services involve an identical amount of physician work and similar times. We are also supporting our proposed work RVU of 10.48 based on a reference code, CPT code 47562 (*laparoscopy, surgical; cholecystectomy*). CPT code 47562 shares the same intraservice time of 80 minutes and only a slightly lower total time of 251 minutes with a similar work RVU of 10.47. The total time for CPT code 19342 has decreased from 320 minutes to 252 minutes and the intraservice time has decreased from 115 minutes to 80 minutes. We are proposing the RUC-recommended direct PE inputs for CPT code 19342.

We disagree with the RUC-recommended work RVU of 15.36 for CPT code 19357 (*tissue expander placement in breast reconstruction, including subsequent expansion*). Although we disagree with the RUC-recommended work RVU, we concur that the relative difference in work between CPT codes 11970 and 19357 is equivalent to the RUC-recommended interval of 7.35 RVUs. Therefore, we are proposing a work RVU of 14.84 for CPT code 19357, based on the recommended interval of 7.35 additional RVUs above our proposed work RVU of 7.49 for CPT code 11970. We are also supporting our proposed work RVU of 14.84 based on a reference code, CPT code 37605 (*ligation; internal or common carotid artery*). CPT code 37605 shares the same intraservice time of 90 minutes and only a slightly lower total time of 342 minutes with a lower work RVU of 14.28. In addition, during our review of CPT code 19357, we noted that the total time has decreased from 468 minutes to 344 minutes and the intraservice time has decreased from 110 minutes to 90 minutes. We are proposing the RUC-recommended direct PE inputs for CPT code 19357.

(4) Breast Implant-Expander Removal (CPT Codes 11971, 19328, and 19330)

These services were included in a group of codes that were recommended for survey for the October 2019 RUC meeting as part of a large group of 22 breast reconstruction and similarly related services. At the October 2019 RUC meeting, they agreed that a 22 code

family was too expansive. They recommended these codes be re-reviewed as part of a smaller and more granular code family for the January 2020 RUC meeting.

We disagree with the RUC-recommended work RVU of 7.02 for CPT code 11971 (*removal of tissue expander w/out insertion of implant*). Although we disagree with the RUC-recommended work RVU, we concur that the relative difference in work between CPT codes 11970 and 11971 is equivalent to the RUC recommended interval of 0.99 RVUs. Therefore, we are proposing a work RVU of 6.50 for CPT code 11971, based on the recommended interval of 0.99 RVUs below our proposed work RVU of 7.49 for CPT code 11970. We note that as stated previously, we believe the use of an incremental difference between these CPT codes is a valid methodology for setting values, especially in valuing services within families of similarly revised codes. We are also supporting our proposed work RVU of 6.50 based on a reference code, CPT code 25671 (*percutaneous skeletal fixation of distal radioulnar dislocation*). CPT code 25671 shares the same intraservice time of 45 minutes and a slightly less total time of 210 minutes with a very similar work RVU of 6.46. In addition, during our review of CPT code 11971, we noted that the total time has decreased from 303 minutes to 215 minutes and the intraservice time has decreased from 90 to 45 minutes. We are proposing the RUC-recommended direct PE inputs for CPT code 11971.

We disagree with the RUC-recommended work RVU of 7.44 for CPT code 19328 (*removal of intact breast implant*). Although we disagree with the RUC-recommended work RVU, we propose increasing the current work RVU from 6.48 to 6.92 to account for the increases in total and intraservice time. We also concur that the relative difference in work between CPT codes 11971 and 19328 is equivalent to the RUC recommended interval of 0.42 RVUs. Therefore, we are proposing a work RVU of 6.92 for CPT code 19328, based on the recommended interval of 0.42 additional RVUs above our proposed work RVU of 6.50 for CPT code 11970. We are also supporting our proposed work RVU of 6.92 based on a reference code, CPT code 28289 (*Hallux rigidus correction with cheilectomy, debridement and capsular release of the first metatarsophalangeal joint; without implant*). CPT code 28289 shares the same intraservice time of 45 minutes and a slightly higher total time of 210 minutes with a very similar work RVU of 6.90. The total time for CPT code

19328 has increased from 173 minutes to 199 minutes and the intraservice time has increased from 38 to 45 minutes. We are proposing the RUC-recommended direct PE inputs for CPT code 19328.

We are proposing the RUC-recommended work RVU of 9.00 for CPT code 19330 (*removal of ruptured breast implant, including implant contents*). The survey total time for CPT code 19330 has increased from 218 minutes to 229 minutes and the intraservice time has increased from 62 minutes to 75 minutes. We are also proposing the RUC-recommended direct PE inputs for this code without refinements.

(5) Modified Radical Mastectomy (CPT Code 19307)

The RUC recommended that CPT code 19307 (*Mastectomy, modified radical, including axillary lymph nodes, with or without pectoralis minor muscle, but excluding pectoralis major muscle*) be surveyed for the January 2020 RUC meeting for site of service anomaly. The Relativity Assessment Workgroup identified services performed less than 50 percent of the time in the inpatient setting yet included inpatient hospital E/M services within the global period and with 2018 Medicare utilization over 5,000. The RUC recommended lowering the work RVU to 17.99 which is the survey 25th percentile.

We are proposing the RUC-recommended work RVUs of 17.99 for CPT code 19307. We are also proposing the RUC-recommended direct PE inputs for this code.

(6) Breast Lift-Reduction (CPT Codes 19316 and 19318)

These services were included in a larger code group of similarly related services that were recommended for review for the October 2019 RUC meeting. CPT code 19316 (*mastopexy*) and CPT code 19318 (*Breast reduction*) were then recommended for a more granular review for the January 2020 RUC meeting.

We are proposing the RUC-recommended work RVU of 11.09 for CPT code 19316 (*mastopexy*) and 16.03 for CPT code 19318 (*Breast reduction*). We are proposing the RUC-recommended direct PE inputs for this code family without refinements.

(7) Secondary Breast Mound Procedure (CPT Codes 19370, 19371, and 19380)

These services were included in a large group of breast reconstruction codes that were recommended to be surveyed for the October 2019 RUC meeting. At the October 2019 RUC meeting, the RUC concurred with the

more granular code families but recommended these codes be resurveyed for the January 2020 RUC meeting.

We disagree with the RUC-recommended work RVU of 10.0 for CPT code 19370 (*Revision of peri-implant capsule, breast, including capsulorrhaphy, and/or partial capsulectomy*). We are proposing to maintain the current work RVU of 9.17 based on a supporting reference code, CPT code 28299 (*Correction, hallux valgus (bunionectomy)*), with sesamoidectomy, when performed; with double osteotomy, any method), which has a work RVU of 9.29. CPT code 28299 shares a similar intraservice time of 75 minutes with CPT code 19370 and has a slightly higher total time of 256 minutes. In addition, we noted during our review of CPT code 19370 that the recommended total time has increased minimally from 253 minutes to 255 minutes, with a slight decrease in intraservice time of 82 minutes to 78 minutes. We believe the similar work RVU of the supporting CPT code 28299, as well as the minimal changes in physician work time for CPT code 19370, supports maintaining the current work RVU of 9.17. We are proposing the RUC-recommended direct PE inputs for CPT code 19370 without refinements.

We disagree with the RUC-recommended work RVU of 10.81 for CPT code 19371 (*Peri-implant capsulectomy, breast, complete, including removal of all intra-capsular contents*). Although we disagree with the RUC-recommended work RVU, we concur that the relative difference in work between CPT codes 19370 and 19371 is equivalent to the RUC recommended interval of 0.81 RVUs. Therefore, we are proposing a work RVU of 9.98 for CPT code 19371, based on the recommended interval of 0.81 additional RVUs above our proposed work RVU of 9.17 for CPT code 19370. We note that as stated previously, we believe the use of an incremental difference between these CPT codes is a valid methodology for setting values, especially in valuing services within a family of revised codes where it is important to maintain appropriate intra-family relativity. We are also supporting our proposed work RVU of 9.98 based on a reference code, CPT code 25628 (*Open treatment of carpal scaphoid (navicular) fracture, includes internal fixation, when performed*). CPT code 25628 shares the same intraservice time of 90 minutes and a slightly higher total time of 277 minutes with a work RVU of 9.67. In addition, during our review of CPT code 19371, we noted that the total time for CPT code 19371 has

decreased from 306 minutes to 261 minutes and the intraservice time has decreased from 117 to 90 minutes. We are proposing the RUC-recommended direct PE inputs for CPT code 19371.

We disagree with the RUC-recommended work RVU of 12.00 for CPT code 19380 (*Revision of reconstructed breast (eg, significant removal of tissue, re-advancement and/or re-inset of flaps in autologous reconstruction or significant capsular revision combined with soft tissue excision in implant-based reconstruction*). Although we disagree with the RUC-recommended work RVU, we concur that the relative difference in work between CPT codes 19371 and 19380 is equivalent to the RUC recommended interval of 1.19 RVUs. Therefore, we are proposing a work RVU of 11.17 for CPT code 19380, based on the recommended interval of 1.19 additional RVUs above our proposed work RVU of 9.98 for CPT code 19371. We are also supporting our proposed work RVU of 11.17 based on a reference code, CPT code 64569 (*Revision or replacement of cranial nerve (eg, vagus nerve) neurostimulator electrode array, including connection to existing pulse generator*). CPT code 64569 shares the same intraservice time of 120 minutes and only a slightly higher total time of 312 minutes with a work RVU of 11.0. The total time increased from 277 minutes to 307 minutes and the intraservice time has increased from 89 minutes to 120 minutes. We are proposing the RUC-recommended direct PE inputs for CPT code 19380.

(8) Hip-Knee Arthroplasty (CPT Codes 27130 and 27447)

CPT codes 27130 (*Arthroplasty, acetabular and proximal femoral prosthetic replacement (total hip arthroplasty), with or without autograft or allograft*) and 27447 (*Arthroplasty, knee, condyle and plateau; medial AND lateral compartments with or without patella resurfacing (total knee arthroplasty)*) were identified as potentially misvalued codes under the CMS high expenditure procedural code screen in the CY 2014 final rule with comment period (78 FR 74334). These codes were reviewed by the AMA RUC who provided recommendations for work RVUs and physician time for these services for CY 2014. We agreed with the RUC recommendation to value CPT code 27130 and CPT code 27447 equally and thus established the same CY 2014 interim final work RVUs for these two procedures (78 FR 74334). This change resulted in a 1.12 work RVU increase for the visits in the global period. We added the additional work to the AMA RUC-

recommended work RVU of 19.60 for CPT codes 27130 and 27447, resulting in an interim final work RVU of 20.72 for both services.

In the CY 2015 final rule with comment period (79 FR 67632), we discussed how in the CY 2014 final rule with comment period, we sought public comment regarding the appropriate work RVUs for these services and the most appropriate reconciliation for the conflicting information regarding time values for these services as presented to us by the physician community. We did not find the rationales provided for modifying the interim final work values established in CY 2014 compelling, and thus we finalized the CY 2014 interim final values for these procedures based upon the best data we had available and to preserve appropriate relativity with other codes.

In the CY 2019 final rule (83 FR 59500 through 595303), CPT code 27130 and CPT code 27447 were added to the list of potentially misvalued codes. A stakeholder submitted information requesting that CMS nominate these codes as potentially misvalued. The stakeholder stated that there were substantial overestimates in pre-service and post-service time including follow-up inpatient and outpatient visits that do not take place included in the valuation of the service. As a result the codes were resurveyed for the October 2019 RUC meeting.

We are proposing the RUC-recommended work RVU of 19.60 for CPT code 27130 and the RUC-recommended work RVU of 19.60 for CPT code 27447. We are also proposing the RUC-recommended direct PE inputs for both codes. Additionally, we are seeking comment from the medical community on how to consider and/or include pre-optimization time (pre-service work and/or activities to improve surgical outcomes) going forward. We are also interested in stakeholders' thoughts on what codes could be used to capture these pre-optimization activities that could be billed in conjunction with the services discussed previously. Overall, we are interested in continuing our ongoing dialog with stakeholders about how CMS might pay more accurately for improved clinical outcomes that may result from increased efficiency in furnishing care through activities, such as pre-optimization and are appreciative of information provided by the medical community. We invite the medical community to continue to engage with CMS on this and other topics.

(9) Toe Amputation (CPT Codes 28820 and 28825)

These services were identified by the RUC Relativity Assessment Workgroup through a site of service anomaly screen based on the review of 3 years of data (2015, 2016 and 2017) for services with utilization over 10,000 in which a service is typically performed in the inpatient hospital setting, yet only a half discharge day management identified by CPT code 99238 is included. Prior to conducting the RUC survey, the specialty societies recommended that it would be appropriate for these services to have their global period changed from 090-day to 000-day so the site of service is less of a contributing factor to the codes' valuation. These codes were surveyed as a 000-day global service, and we are proposing them as 000-day global services.

We disagree with the RUC-recommended work RVU of 4.10 for CPT code 28820 (*Amputation, toe; metatarsophalangeal joint*). We believe that it would be more accurate to propose a work RVU of 3.51, and we are supporting this value with a crosswalk to CPT code 33958 (*Extracorporeal membrane oxygenation (ECMO)/ extracorporeal life support (ECLS) provided by physician; reposition peripheral (arterial and/or venous) cannula(e), percutaneous, 6 years and older (includes fluoroscopic guidance, when performed)*), which has a work RVU of 3.51, to account for the decrease in the surveyed work time. We do not believe the RUC-recommended reduction in work RVU from the current value of 5.82 is commensurate with the RUC-recommended 102-minute reduction in total time. We believe that a further reduction in work RVUs is warranted given the significant reduction in RUC-recommended physician time.

We disagree with the RUC-recommended work RVU of 4.00 for CPT code 28825 (*Amputation, toe; interphalangeal joint*). We are proposing a work RVU of 3.41 based on the RUC-recommended increment relationship between this code and CPT 28820 (a difference of -0.10), which we apply to our proposed value for the latter code. We do not believe the RUC-recommended reduction in work RVU from the current value of 5.37 is commensurate with the RUC-recommended 97-minute reduction in total time. We believe that a further reduction in work RVUs is warranted given the significance of RUC-recommended reduction in physician time.

For the direct PE inputs, we are proposing to refine the pre-service clinical labor times to conform to the 000-day global period standards for both codes in the family for CPT codes 28820 and 28825. We are also proposing to refine the clinical labor times for the "Provide education/obtain consent" (CA011) and the "Prepare room, equipment and supplies" (CA013) activities to conform to our established standard time of 2 minutes each in the non-facility setting for CPT codes 28820 and 28825. We are also proposing to refine the equipment time to conform to these changes in the clinical labor time for both codes.

(10) Shoulder Debridement (CPT Codes 29822 and 29823)

In September 2019, the CPT Editorial Panel approved revision of CPT code 29822 (*Arthroscopy, shoulder, surgical; debridement, limited, 1 or 2 discrete structures (eg, humeral bone, humeral articular cartilage, glenoid bone, glenoid articular cartilage, biceps tendon, biceps anchor complex, labrum, articular capsule, articular side of the rotator cuff, bursal side of the rotator cuff, subacromial bursa, foreign body[ies])*) and CPT code 29823 (*Arthroscopy, shoulder, surgical; debridement, extensive, 3 or more discrete structures (eg, humeral bone, humeral articular cartilage, glenoid bone, glenoid articular cartilage, biceps tendon, biceps anchor complex, labrum, articular capsule, articular side of the rotator cuff, bursal side of the rotator cuff, subacromial bursa, foreign body[ies])*) to clarify limited and extensive debridement by specifying the number of discrete structures debrided and providing examples of the structures.

We are proposing the RUC-recommended work RVU of 7.03 for CPT code 29822 and 7.98 for CPT code 29823 without refinement.

For the direct PE inputs, we are proposing the RUC recommendations CPT codes 29822 and 29823 without refinement.

(11) Absorbable Nasal Implant Repair (CPT Codes 30XX0)

In September 2019, the CPT Editorial Panel approved the addition of CPT code 30XX0 (*Repair of nasal valve collapse with subcutaneous/submucosal lateral wall implant(s) to report repair of nasal valve collapse with subcutaneous/submucosal lateral wall implant(s)*).

We are proposing the RUC-recommended value of 2.80 work RVUs without refinement for CPT code 30XX0.

For the direct PE inputs, were also proposing the RUC-recommended values without refinement.

(12) Lung Biopsy-CT Guidance Bundle (CPT Code 324X0)

CPT codes 32405 (*Biopsy, lung or mediastinum, percutaneous needle*) and 77012 (*Computed tomography guidance for needle placement (eg, biopsy, aspiration, injection, localization device), radiological supervision and interpretation*) were identified by the AMA through a screen of code pairs that are reported on the same day, same patient and same NPI number at or more than 75 percent of the time. The CPT Editorial Panel deleted CPT code 32405 and replaced it with 324X0 (*Core needle biopsy, lung or mediastinum, percutaneous, including imaging guidance, when performed*).

We are not proposing the RUC-recommended work RVU of 4.00, which is the survey median, because we believe this value somewhat overstates the increase in intensity. Although we do not imply that the decrease in time, when considering the aggregate time values for CPT codes 32405 and 77012, as reflected in survey values must equate to a one-to-one or linear decrease in the valuation of work RVUs, we believe that since the two components of work are time and intensity, significant decreases in time should be appropriately reflected in the work RVU. Intraservice and total time ratios using the aggregate time values of current CPT codes 32405 and 77012 suggest a significantly lower work RVU; however, we do not believe a decrease from the current aggregate value of 32405 and 77012 is warranted. We believe there is some overlap in physician work and time for the two current services, and that the recommended increase to 4.00 does not appropriately recognize this overlap. Therefore, we are proposing a work RVU of 3.18, which is the sum of the work RVUs of the two base codes.

We are proposing the RUC-recommended direct PE inputs without refinement.

(13) Atrial Septostomy (CPT Codes 33XX0, 33XX1, 33XX2)

Septostomy procedures are performed on extremely small newborns and neonates with severe forms of congenital heart disease and are lifesaving/temporizing procedures that do not provide definitive therapy to these critically ill patients. These procedures are not typical of the Medicare population and are of low volume. CPT code 92992 (*Atrial septectomy or septostomy; transvenous*

method, balloon (eg, Rashkind type) (includes cardiac catheterization)) and CPT code 92993 (Atrial septectomy or septostomy; blade method (Park septostomy) (includes cardiac catheterization)), are carrier-priced codes. These services were not formally designated as potentially misvalued in the CY 2019 PFS final rule (83 FR 59500), but we did make mention that the RUC had signaled their intention to review these two codes. Both services were referred to the CPT Editorial Panel by the specialty societies who indicated that CPT code 92992 may not have included related imaging guidance, and also commented that CPT code 92993 was antiquated and rarely performed, so both CPT codes were deleted and are now being replaced with the following proposed CPT codes.

CPT code 33XX0 (*Transcatheter atrial septostomy (TAS) for congenital cardiac anomalies to create effective atrial flow, including all imaging guidance by the proceduralist, when performed, any method (eg, Rashkind, Sang-Park, balloon, cutting balloon, blade)*), is one of three codes intending to replace the two deleted Septostomy codes. For CPT code 33XX0, the RUC recommends an RVU only crosswalk to CPT code 33340 (*Percutaneous transcatheter closure of the left atrial appendage with endocardial implant, including fluoroscopy, transseptal puncture, catheter placement(s), left atrial angiography, left atrial appendage angiography, when performed, and radiological supervision and interpretation*), which has a work RVU of 14.00. The RUC recommends 20 minutes of preservice evaluation time, 15 minutes of preservice positioning time, 15 minutes preservice scrub/dress/wait time, 55 minutes intraservice time and 45 minutes immediate postservice time, for 150 minutes total time. We are proposing the RUC recommended work RVU of 14.00 and physician times without refinement.

CPT code 33XX1 (*Transcatheter intracardiac shunt (TIS) creation by stent placement for congenital cardiac anomalies to establish effective intracardiac flow, all imaging guidance by the proceduralist when performed, left and right heart diagnostic cardiac catheterization for congenital cardiac anomalies, and target zone angioplasty, when performed (eg, atrial septum, Fontan fenestration, right ventricular outflow tract, Mustard/Senning/Warden baffles); initial intracardiac shunt*) is another proposed new procedure currently performed on neonate infants to children with severe forms of congenital heart disease, by having a stent implanted inside of an infant's

beating heart (and not within a blood vessel). This stent replaces the methods in the old atrial septostomy codes utilizing the balloon and blade method. The RUC recommends 25 minutes preservice evaluation time, 15 minutes preservice positioning time, 15 minutes preservice scrub/dress/wait time, 92 minutes intraservice time and 60 minutes immediate postservice time, for 207 minutes total time. The RUC recommends 20.00 work RVUs for CPT code 33XX1. We are proposing the RUC recommended work RVUs and their recommended physician times.

CPT code 33XX2, (*Transcatheter intracardiac shunt (TIS) creation by stent placement for congenital cardiac anomalies to establish effective intracardiac flow, all imaging guidance by the proceduralist when performed, left and right heart diagnostic cardiac catheterization for congenital cardiac anomalies, and target zone angioplasty, when performed (eg, atrial septum, Fontan fenestration, right ventricular outflow tract, Mustard/Senning/Warden baffles); each additional intracardiac shunt location (List separately in addition to code for primary procedure)*), is the add-on code to the proposed new procedure CPT code 33XX1, for 60 minutes of physician intraservice time. The RUC recommends a work RVU of 10.50 for CPT code 33XX2. This value for the add-on code, in comparison to the recommended work value of 20.00 RVUs with 92 minutes/intraservice time and 207 minutes of total time for CPT code 33XX1 appears to be unsupportable given the 60 minutes of additional physician intraservice time. We are instead proposing a work RVU of 8.00 for add-on CPT code 33XX2, which is the 25th percentile value from the survey and of similar valuation from reference CPT code 93592 (*Percutaneous transcatheter closure of paravalvular leak; each additional occlusion device (List separately in addition to code for primary procedure)*).

This family of CPT codes are facility-only services and have no direct PE inputs.

(14) Percutaneous Ventricular Assist Device Insertion (CPT Codes 339X1, 33990, 33991, 33992, 339X2, and 33993)

In May 2019, the CPT Editorial Panel approved the revision of four codes to clarify the insertion and removal of right and left heart percutaneous ventricular assist devices (PVAD), and the addition of two codes to report insertion of PVAD venous access and removal of right heart PVAD. These codes were surveyed with

000-day global periods and reviewed at the October 2019 RUC meeting.

We are proposing the RUC-recommended work RVUs for all six codes in the family. We are proposing a work RVU of 6.75 for CPT code 33990 (*Insertion of ventricular assist device, percutaneous, including radiological supervision and interpretation; left heart, arterial access only*), a work RVU of 6.75 for CPT code 339X1 (*Insertion of ventricular assist device, percutaneous, including radiological supervision and interpretation; right heart, venous access only*), a work RVU of 8.84 for CPT code 33991 (*Insertion of ventricular assist device, percutaneous, including radiological supervision and interpretation; left heart, both arterial and venous access, with transeptal puncture*), a work RVU of 3.55 for CPT code 33992 (*Removal of percutaneous left heart ventricular assist device, arterial or arterial and venous cannula(s), separate and distinct session from insertion*), and a work RVU of 3.10 for CPT code 33993 (*Repositioning of percutaneous right or left heart ventricular assist device, with imaging guidance, at separate and distinct session from insertion*).

Stakeholders contacted CMS regarding the valuation of the codes in this family following the arrival of the RUC recommendations. They stated that the RUC recommendations did not accurately reflect the work time of these procedures, which they stated to be increasing due to the adoption of new technology. The stakeholders requested that CMS propose to maintain the current work RVUs for the codes in this family and to crosswalk the work RVU of the new codes to existing codes.

We disagree with the stakeholders and are proposing the RUC-recommended work RVUs for each code in this family as noted previously. We note that in this case where the surveyed work times for the existing codes are decreasing and the utilization of CPT code 33990 is increasing significantly (quadrupling in the last 5 years), we have reason to believe that practitioners are becoming more efficient at performing the procedure, which, under the resource-based nature of the RVU system, lends support for proposing the RUC's recommended work RVUs. Although the incorporation of new technology can sometimes make services more complex and difficult to perform, it can also have the opposite effect by making services less reliant on manual skill and technique. We disagree

with the stakeholders that the incorporation of this new technology would necessarily be grounds for maintaining the current work RVU, as improvements in technology are commonplace across many different services and are not specific to this procedure. As detailed earlier, we also have reason to believe that the improved technology has led to greater efficiencies in the procedure which, under the resource-based nature of the RVU system, lends further support for proposing a lower work RVU for the existing CPT codes.

The RUC did not recommend and we are not proposing any direct PE inputs for this facility only code family. We are proposing a 000-day global period for all six codes as surveyed by the RUC.

(15) Esophagogastroduodenoscopy (EGD) With Biopsy (CPT Code 43239)

In the CY 2019 PFS final rule (83 FR 59500), CPT code 43239 (*Esophagogastroduodenoscopy, flexible, transoral; with biopsy, single or multiple*) was publicly nominated for review under the potentially misvalued code initiative. As requested, the specialty societies conducted a survey for the April 2019 RUC meeting. The RUC survey results showed that the current work RVU of 2.39, which is below the survey 25th percentile work RVU of 2.50, accurately reflects the physician work for CPT code 43239.

We are proposing to maintain the current work RVU of 2.39 as recommended by the RUC. We are proposing the RUC-recommended direct PE inputs for CPT code 43239 without refinement.

(16) Colonoscopy (CPT Code 45385)

In the CY 2019 final rule (83 FR 59500), CPT code 45385 (*Colonoscopy, flexible; with removal of tumor(s), polyp(s), or other lesion(s) by snare technique*) was publicly nominated for review under the potentially misvalued code initiative. As requested, the specialty societies conducted a survey for the April 2019 RUC meeting. The RUC survey results showed that the current work RVU of 4.57, which is slightly above the survey 25th percentile work RVU of 4.50, accurately reflects the physician work for CPT code 45385.

We are proposing to maintain the current work RVU of 4.57 as recommended by the RUC. We are proposing the RUC-recommended direct PE inputs for CPT code 45385 without refinement.

(17) Transrectal High Intensity Focused US Prostate Ablation (CPT Codes 558XX)

In May 2019, the CPT Editorial Panel established a new code to report ablation of malignant prostate tissue with high intensity focused ultrasound (HIFU), including ultrasound guidance. For CPT code 558XX, we are not proposing the RUC recommendation to use the survey median work RVU of 20.00 to value this service because we believe total time ratios to the two key reference codes, CPT codes 55840 (*Prostatectomy, retropubic radical, with or without nerve sparing*) and 55873 (*Cryosurgical ablation of the prostate (includes ultrasonic guidance and monitoring)*) indicate that this value is somewhat overstated and does not accurately reflect the physician time, and because an analysis of all 090-global period codes with similar time values indicates that this service is overvalued. We are proposing a work RVU of 17.73 based on a crosswalk to CPT code 69930 (*Cochlear device implantation, with or without mastoidectomy*) which has similar total time and identical intraservice time values and is more consistent with other codes of similar time. We are proposing the RUC-recommended PE inputs without refinement.

(18) Computer-Aided Mapping of Cervix Uteri (CPT Code 57XX0)

In September 2019, the addition of CPT code 57XX0 (*Computer-aided mapping of cervix uteri during colposcopy, including optical dynamic spectral imaging and algorithmic quantification of the acetowhitening effect (List separately in addition to code for primary procedure)*) was approved by the CPT Editorial Panel to report computer-aided mapping of cervix uteri during colposcopy. The RUC recommended the survey median work RVU of 0.81 for this service. We are proposing the RUC-recommended value of 0.81 for CPT code 57XX0. We are also proposing the RUC-recommended direct PE inputs for this code.

We are seeking comment on a new medical supply indicated on the PE spreadsheet submitted by the RUC. A “computer aided spectral imaging system (colposcopy) disposal speculum” was noted in the RUC PE meeting materials. This name suggests it is digital. However, on the actual invoice submitted, the supply item in question was listed as a “disposable medium speculum” with no mention of a spectral imaging system or a digital component. We researched this

speculum and could not find any evidence that it has a digital component. Therefore, we are proposing to change the name of this new supply item to “disposable speculum, medium” (SD337) to reflect the actual product on the invoice submitted. We are seeking clarification as to what aspect of the speculum is digital or if a cheaper, non-digital speculum would suffice. We note for example that the vaginal specula (SD118) supply has a CY 2021 price of \$1.12 and we were able to find disposable medium specula readily available online for a price of roughly \$1.00. We are proposing the new SD337 supply at the \$5.80 price as listed on the invoice submitted in the RUC materials and are seeking comment as to why other disposable speculums at a lower price would not be typical for this procedure.

(19) Colpopexy (CPT Codes 57282 and 57283)

The CPT codes 57282 (*Colpopexy, vaginal; extra-peritoneal approach (sacrospinous, iliococcygeus)*) and 57283 (*Colpopexy, vaginal; intra-peritoneal approach (uterosacral, levator myorrhaphy)*) were identified by the RUC Relativity Assessment Workgroup as services performed less than 50 percent of the time in the inpatient setting yet include inpatient hospital E/M services within the global period and the 2018 Medicare utilization is over 5,000. This code family was surveyed and reviewed for the January 2020 RUC meeting. For CY 2021, the RUC recommended a work RVU of 13.48 for CPT code 57282, and a work RVU of 13.51 for CPT code 57283.

We disagree with the RUC-recommended work RVUs for the CPT code family of 57282 and 57283. We are proposing a work RVU of 11.63 for CPT code 57282, and are also proposing to maintain the current work RVU of 11.66 for CPT code 57283. For CPT code 57283, we based our disagreement on the total time ratio between the current time of 349 minutes and the recommended time established by the survey of 231 minutes. This ratio equals 66 percent, and 66 percent of the current work RVU of 11.66 for CPT code 57283 equals a work RVU of 7.70. When we reviewed CPT code 57283, we found that the recommended work RVU was higher than other codes with similar time values. This is supported by the reference CPT codes we compared to CPT code 57283 with 90 minutes of intraservice time; reference CPT code 19350 (*Nipple/areola reconstruction*) has a work RVU of 9.11 with 229 minutes of total time, and reference CPT

code 47563 (*Laparoscopy, surgical; cholecystectomy with cholangiography*) which has a work RVU of 11.47 with 238 minutes of total time. Although we do not imply that the decrease in time as reflected in survey values must equate to a one-to-one or linear decrease in the valuation of work RVUs, we believe that since the two components of work are time and intensity, significant decreases in time should be reflected in decreases to work RVUs. The recommendation from the RUC acknowledged that the time had decreased for CPT code 57283, and also noted that there has been an increase in intensity due to a change in technique and knowledge necessary to perform the service. In the case of CPT code 57283, we believe it would be more accurate to propose maintaining the current work RVU of 11.66 instead of the RUC-recommended work RVU of 13.51 to account for these decreases in the surveyed work time while still accounting for the increase in intensity. We also note that the intensity of CPT code 57283 would nearly double by maintaining the proposed work RVU of 11.66, due to the significant decreases in surveyed work time, which we believe supports the RUC's contention that the intensity of this code has increased over time.

For CPT code 57282, we disagree with the RUC-recommended RVU of 13.48. We note that the significant decrease in total time for code 57282 suggests an RVU lower than 13.48. Although we disagree with the RUC-recommended work RVU, we concur that the relative difference in work between CPT codes 57282 and 57283 is equivalent to the RUC-recommended interval of 0.03 RVUs. We believe the use of an incremental difference between these CPT codes is a valid methodology for setting values, especially in valuing services within a family of revised codes where it is important to maintain appropriate intra-family relativity. Therefore, we are proposing a work RVU of 11.63 for CPT code 57282, based on the RUC recommended interval of 0.03 RVUs below our proposed work RVU of 11.66 for CPT code 57283.

We are proposing the RUC-recommended direct PE inputs for the CPT code family of 57282 and 57283 without refinement.

(20) Laparoscopic Colpopexy (CPT Code 57425)

The CPT code 57425 (*Laparoscopy, surgical, colpopexy (suspension of vaginal apex)*) was identified by the RUC Relativity Assessment Workgroup as a service performed less than 50 percent of the time in the inpatient

setting yet includes inpatient hospital E/M services within the global period and the 2018 Medicare utilization is over 5,000. This service was surveyed and reviewed for the January 2020 RUC meeting.

We disagree with the RUC-recommended work RVU of 18.02 for CPT code 57425 and propose to maintain the current RVU of 17.03 based on the total time ratio between the current time of 404 minutes and the recommended time established by the survey of 351 minutes. This is supported by the reference CPT codes we compared to CPT code 57425 with the same intraservice time; reference CPT code 26587 (*Reconstruction of polydactylous digit, soft tissue and bone*) which has a work RVU of 14.50, and reference CPT code 20696 (*Application of multiplane (pins or wires in more than 1 plane), unilateral, external fixation with stereotactic computer-assisted adjustment (e.g., spatial frame), including imaging; initial and subsequent alignment(s), assessment(s), and computation(s) of adjustment schedule(s)*) which has a work RVU of 17.56. Both CPT codes 26587 and 20696 have 180 minutes of intraservice time, which is equal to the 180 minutes of intraservice time in the RUC recommendation for CPT code 57425, and over 400 minutes of total time. The total time for CPT code 57425 decreased from 404 to 351 minutes and the RUC did not appear to take this into account. Therefore, we are proposing to maintain the current work RVU of 17.03.

We are proposing the RUC-recommended direct PE inputs for CPT code 57425 without refinement.

(21) Intravitreal Injection (CPT Code 67028)

CPT code 67028 (*Intravitreal injection of a pharmacologic agent*) was identified via the RUC's Relativity Assessment Workgroup as a code where the original valuation was based on a crosswalk code that had since been revalued. The RUC recommended that CPT code 67028 should be surveyed for the April 2019 RUC meeting. We are proposing the RUC-recommended work RVU of 1.44 for CPT code 67028.

For the direct PE inputs, we are proposing to refine the clinical labor time for the "Clean room/equipment by clinical staff" (CA024) activity from the RUC-recommended 5 minutes to 3 minutes for CPT code 67028, because 3 minutes is the standard time for this clinical labor activity code, and we disagree that there would typically be a need for 2 additional minutes for cleaning, sterilizing, and re-packaging a

reusable eyelid speculum in a sterile package to prepare for its next case. Additionally, 3 minutes is the standard time for cleaning the room and cleaning the equipment; although we agree that these cleaning tasks would take place, we do not believe that the removal of the same day E/M visit would result in the need for 2 additional minutes of cleaning time. We note that we are proposing to maintain the current time for this clinical labor activity, which was previously finalized in the CY 2011 PFS final rule at the standard value of 3 minutes (75 FR 73353). We are also proposing to refine the equipment times to match the change in clinical labor time.

(22) Dilation of Eustachian Tube (CPT Codes 697XX and 697X1)

In September 2019, the CPT Editorial Panel created two new codes CPT code 697XX (*Nasopharyngoscopy, surgical, with dilation of eustachian tube (ie, balloon dilation); unilateral*) and CPT code 697X1 (*Nasopharyngoscopy, surgical, with dilation of eustachian tube (ie, balloon dilation); bilateral*) to describe the dilation of the eustachian tube via surgical nasopharyngoscopy, unilateral and bilateral. We are proposing the RUC-recommended work RVUs of 3.00 and 4.27 for CPT codes 697XX and 697X1, respectively. For the direct PE inputs, we are proposing the RUC-recommended values without refinement.

(23) X-Ray of Eye (CPT Code 70030)

CPT code 70030 (*Radiologic examination, eye, for detection of foreign body*) was identified through an updated screen of CMS/Other source codes with Medicare utilization over 20,000. We are proposing the RUC-recommended work RVU of 0.18 for this service. We are proposing the RUC-recommended direct PE inputs without refinement.

(24) CT Head-Brain (CPT Codes 70450, 70460, and 70470)

In the CY 2019 PFS final rule (83 FR 59500 through 59503), a stakeholder nominated CPT code 70450 (*Computed tomography, head or brain; without contrast material*) as potentially misvalued, citing GAO and MedPAC reports that suggest that work RVUs are overstated for procedures such as these, and the specialty society surveyed family codes 70460 (*Computed tomography, head or brain; with contrast material(s)*) and 70470 (*Computed tomography, head or brain; without contrast material, followed by contrast material(s) and further sections*). We are proposing the RUC

recommendation to maintain the current work RVUs of 0.85, 1.13, and 1.27 for CPT codes 70450, 70460, and 70470, respectively. For CPT code 70450, we note that the surveyed times are nearly identical to the current times for these services, and we believe that the RUC's reference to CPT code 70486 (*Computed tomography, maxillofacial area; without contrast material*), which has similar physician time and the same work RVU, is appropriate. For CPT code 70460, we note that the surveyed times are nearly identical to the current times for these services, and we believe that the RUC's reference to CPT code 70487 (*Computed tomography, maxillofacial area; with contrast material(s)*), which has similar physician time and the same work RVU is appropriate. Similarly, for CPT code 70470, we note that the surveyed times are nearly identical to the current times for these services, and we believe that the RUC's reference to CPT code 70488 (*Computed tomography, maxillofacial area; without contrast material, followed by contrast material(s) and further sections*), which has similar physician time and the same work RVU, is appropriate. We also note that these codes are relatively consistently valued compared to other codes with similar time values and a global period of XXX. We are proposing the RUC-recommended direct PE inputs without refinement.

(25) Screening CT of Thorax (CPT Codes 71250, 71260, 71270, and 712X0)

In October 2018, AMA staff identified the CMS/Other Source codes with 2017 Medicare utilization over 30,000. HCPCS code G0297 (*Low dose ct scan (ldct) for lung cancer screening*) was identified. In January 2019, the RUC recommended to refer to CPT Editorial Panel to establish a permanent code for this procedure. In May 2019, the CPT Editorial Panel revised three codes and added one code to distinguish diagnostic computed tomography, thorax from computed tomography, thorax, low dose for lung cancer screening.

For CPT code 71250 (*Computed tomography, thorax; without contrast material*), we are not proposing the RUC recommendation to maintain the current work RVU of 1.16 as we believe this does not accurately reflect the reduction in physician work time, and because an analysis of all XXX-global period codes with similar time values indicates that this service is overvalued. We are instead recommending to propose a work RVU of 1.08 based on the ratio of current to RUC-recommended intraservice time. As support for this value, we note that it falls slightly below

CPT code 76391 (*Magnetic resonance (eg, vibration) elastography*), which has a work RVU of 1.10 and also has higher physician time values.

Similarly, for CPT code 71260 (*Computed tomography, thorax; with contrast material(s)*), we are not proposing the RUC recommendation to maintain the current work RVU of 1.24 as we believe this does not accurately reflect the reduction in physician time, and we are instead proposing a work RVU of 1.16 based the ratio of current to RUC-recommended intraservice time. Although we disagree with the RUC-recommended work RVU, we concur that the relative difference between CPT codes 71250 and 71260 is equivalent to the RUC-recommended interval of 0.08 RVUs. As stated previously, we believe the use of an incremental difference between these CPT codes is a valid methodology for setting values, especially in valuing services within a family of revised codes where it is important to maintain appropriate intra-family relativity. We note that that the proposed work RVU of 1.16 maintains the RUC-recommended interval of 0.08 additional RVUs above our proposed work RVU of 1.08 for CPT code 71250.

For CPT code 71270 (*Computed tomography, thorax; without contrast material, followed by contrast material(s) and further sections*), we are not proposing the RUC recommendation to maintain the current work RVU of 1.38 as we believe this does not accurately reflect the reduction in physician time, and we are instead proposing a work RVU of 1.25 with a crosswalk to CPT code 93284 (*Programming device evaluation (in person) with iterative adjustment of the implantable device to test the function of the device and select optimal permanent programmed values with analysis, review and report by a physician or other qualified health care professional; multiple lead transvenous implantable defibrillator system*) and we support this value by noting that it is slightly higher than values suggested by the ratio of current to RUC-recommended intraservice time For CPT code 712X0 (*Computed tomography, thorax, low dose for lung cancer screening, without contrast material(s)*), we are not proposing the RUC-recommended work RVU of 1.16, and we are instead proposing a work RVU of 1.08 so that the value of this code is consistent with that of CPT code 71250 as current code G0297 is valued based on the value of CPT code 71250, and to maintain the relative relationship among these codes. In the CY 2016 PFS final rule (80 FR 70974) we finalized

that CPT code G0297 should be identically valued to CPT code 71250.

We are proposing the RUC-recommended direct PE inputs without refinement for CPT codes 71250, 71260, and 71270. For the direct PE inputs for CPT code 712X0, we are proposing 2 minutes for the clinical labor activity CA011: "Provide education/obtain consent" rather than the RUC-recommended 3 minutes to be consistent with other non-contrast screening codes, and we are proposing 4 minutes for the clinical labor activity CA038 "Coordinate post-procedure services" rather than the RUC-recommended 6 minutes to be consistent with other screening services, and because we do not see any compelling evidence that this service has changed significantly since G0297 was implemented for CY 2015 to warrant the recommended 2 additional minutes.

(26) X-Ray Bile Ducts (CPT Codes 74300, 74328, 74329, and 74330)

CPT codes 74300 (*Cholangiography and/or pancreatography; intraoperative, radiological supervision and interpretation*) and 74328 (*Endoscopic catheterization of the biliary ductal system, radiological supervision and interpretation*) were identified through a screen of CMS/Other Source codes with 2017 Medicare utilization over 30,000. CPT codes 74329 (*Endoscopic catheterization of the pancreatic ductal system, radiological supervision and interpretation*) and 74330 (*Combined endoscopic catheterization of the biliary and pancreatic ductal systems, radiological supervision and interpretation*) were included as part of the same code family and the family was surveyed. The codes describe x-rays of the liver, pancreas, and bile ducts. They are performed in facilities and have no direct PE inputs.

We disagree with the RUC-recommended work RVU of 0.32 for CPT code 74300. We are proposing a work RVU of 0.27 based on a crosswalk to CPT code 74021 (*Radiologic examination, abdomen; 3 or more views*), one of the reference services from the RUC survey and that has an intraservice time of 4 minutes, nearly identical to the RUC's recommendation of 5 minutes of intraservice time for CPT code 74300. Our proposal is supported by CPT code 93922 (*Limited bilateral noninvasive physiologic studies of upper or lower extremity arteries*) with a work RVU of 0.25 and an intraservice time of 5 minutes and a total time of 10 minutes. These times are nearly identical to the RUC's recommended

intraservice of 5 minutes and total time of 10 minutes for CPT code 74300.

We are proposing the RUC-recommended work RVU of 0.47 for CPT code 74328 (*Endoscopic catheterization of the biliary ductal system, radiological supervision and interpretation*), with an intraservice time of 10 minutes and a total time of 20 minutes.

We disagree with the RUC's recommended work RVU of 0.50 for CPT code 74329 (*Endoscopic catheterization of the pancreatic ductal system, radiological supervision and interpretation*). We are proposing a crosswalk to CPT code 74328 at a work RVU of 0.47 because the intraservice and total times for both codes are identical and we believe the work involved in the biliary ductal and pancreatic ductal systems is similar.

We disagree with the RUC's recommended work RVU of 0.70 for CPT code 74330 (*Combined endoscopic catheterization of the biliary and pancreatic ductal systems, radiological supervision and interpretation*) and we are proposing a work RVU of 0.56 based on our proposal of the RUC's recommendation for CPT code 74328 to create internal consistency within the code family, based on our time ratio methodology and further supported by a reference to CPT code 93228 (*External mobile cardiovascular telemetry with electrocardiographic recording, concurrent computerized real time data analysis and greater than 24 hours of accessible ECG data storage (retrievable with query) with ECG triggered and patient selected events transmitted to a remote attended surveillance center for up to 30 days; review and interpretation with report by a physician or other qualified health care professional*) with nearly identical and total time values to CPT code 74330.

The RUC did not recommend and we are not proposing any direct PE inputs for these codes.

(27) Venography (CPT Codes 75820 and 75822)

The review of CPT code 75820 (*Venography, extremity, unilateral, radiological supervision and interpretation*) was prompted by the Relativity Assessment Workgroup Medicare utilization screen of over 20,000 claims in a year. CPT code 75820 currently has a work RVU of 0.70 with 14 minutes of total time. This service involves the supervision and interpretation of a contrast injection and imaging of either the upper or lower extremity. For CPT code 75820, the RUC recommends 12 minutes preservice time, 20 minutes intraservice time, 10

minutes postservice time and 42 minutes of total time. The specialty societies' survey at the 25th percentile yielded a 1.05 work RVU, and it is the RUC's recommended work value. We are proposing the RUC recommended value for CPT code 75820.

CPT code 75822 (*Venography, extremity, bilateral, radiological supervision and interpretation*) is reviewed as part of the family of codes included with CPT code 75820. CPT code 75822 has a current 1.06 work RVU and 21 minutes of total time. The RUC recommends 15 minutes preservice time, 30 minutes intraservice time, 12 minutes postservice time and 57 minutes of total time, and the survey's 25th percentile work RVU of 1.48. The service is similar to CPT 75820, except that this CPT code is bilateral, involving the supervision and interpretation of a contrast injection and imaging of both of either the upper or lower extremities. The RUC recommends 1.48 work RVU and 57 minutes of total time for CPT code 75822. We are proposing these RUC recommended values for CPT code 75822.

(28) Introduction of Catheter or Stent (CPT Code 75984)

The RUC recommended reviewing CPT code 75984 (*Change of percutaneous tube or drainage catheter with contrast monitoring (e.g., genitourinary system, abscess) radiological supervision and interpretation*) after more utilization data was available, which resulted in this service being surveyed and reviewed for the April 2019 RUC meeting. We are proposing the work RVU of 0.83 as recommended by the RUC. We are proposing the RUC-recommended direct PE inputs for CPT code 75984 without refinement.

(29) Medical Physics Dose Evaluation (CPT Code 7615X)

The CPT Editorial Panel created CPT code 7615X (*Medical physics dose evaluation for radiation exposure that exceeds institutional review threshold, including report*), which is a new PE-only code. Because of the high amount of clinical staff time and the fact that there are not analogous services, the PE Subcommittee requested that the specialty societies conduct a PE survey. In addition, they stated that the service is stand-alone, meaning that the medical physicist works independently from a physician and there are no elements of the PE that are informed by time from a physician work survey. Following the meeting, the specialty societies developed a PE survey which was reviewed and approved by the Research

Subcommittee. We are proposing the RUC-recommended direct PE inputs for CPT code 7615X without refinement.

(30) Ophthalmic Ultrasound Anterior Segment (CPT Code 76513)

CPT code 76513 (*Ophthalmic ultrasound, diagnostic; anterior segment ultrasound, immersion (water bath) B-scan or high resolution biomicroscopy*) was identified by the RUC due to volume growth, attributed to improved equipment. The CPT Editorial Panel has since revised this code to clarify that it is either unilateral or bilateral (it was previously unilateral). It was then surveyed. The code describes a test for glaucoma and is performed on the same day as an office/outpatient evaluation and management (O/O E/M) visit. The CPT and RUC removed CPT code 76513 from its former code family, creating a family of 1 service.

In reviewing this code, we noted that the recommended total time is decreasing from 19 minutes to 15 minutes (21 percent) while the RUC-recommended work RVU is decreasing from 0.66 to 0.60 (9 percent). We do not believe the RUC-recommended work RVU appropriately accounts for the substantial reductions in the surveyed work times for the procedure. Although we do not imply that the decrease in time as reflected in survey values must equate to a one-to-one or linear decrease in the valuation of work RVUs, we believe that since the two components of work are time and intensity, significant decreases in time should be appropriately reflected in decreases to work RVUs. In the case of CPT code 76513, we believe that it would be more accurate to propose a work RVU of 0.53 based on a crosswalk to CPT code 74230 (*Radiologic examination, swallowing function, with cineradiography/videoradiography, including scout neck radiograph(s) and delayed image(s), when performed, contrast (eg, barium) study*) with identical intraservice and total times.

For the direct PE inputs, we are proposing to make two refinements to the clinical labor times of CPT code 76513. We are proposing a reduction of 1 minute for the clinical labor task CA009: "Greet patient, provide gowning, ensure appropriate medical records are available" because the EHR information should already be linked from the preceding O/O E/M visit and the entry of information would be redundant and paid under indirect PE. We are also proposing a reduction of 1 minute for the clinical labor task CA011: "Provide education/obtain consent" to be consistent with the time for this

clinical labor task for the services in CPT code 76513's former code family.

(31) Radiation Treatment Delivery (CPT Code 77401)

CPT code 77401 (*Radiation treatment delivery, superficial and/or ortho voltage, per day*) was identified by the RUC Relativity Assessment Workgroup through a screen of high-volume growth, for services with 2017 Medicare utilization of 10,000 or more that has increased by at least 100 percent from 2012 through 2017. In January 2019, the RUC recommended to refer to this service to the CPT Editorial Panel to better define the set of services associated with delivery of superficial radiation therapy (SRT).

We are proposing the following direct PE refinements: A reduction of 2 minutes for the clinical labor task CA024: "Clean room/equipment by clinical staff," to the standard 3 minutes, and we are not proposing to include the new equipment item ER119 "Lead Room," as we do not have enough information on what this equipment item contains, and we are requesting more information to allow us to determine if it is more accurately priced as direct or indirect PE. CPT code 77401 is a PE only code and we are proposing to maintain the current work RVU of 0.00.

(32) Proton Beam Treatment Delivery (CPT Codes 77520, 77522, 77523, and 77525)

In April 2018, the RUC's Relativity Assessment Workgroup (RAW) identified CPT code 77522 (*Proton treatment delivery; simple, with compensation*) and CPT code 77523 (*Proton treatment delivery; intermediate*) as contractor-priced Category I CPT codes with 2017 estimated Medicare utilization over 10,000 services. Although the RAW agreed with the specialty society that this family of codes should remain contractor priced, the RUC determined that these services should be surveyed for PE. CPT codes 77520 (*Proton treatment delivery; simple, without compensation*) and 77525 (*Proton treatment delivery; complex*) were added to the family and the group was surveyed for PE for the April 2019 RUC meeting.

We encountered significant difficulties in reviewing the recommended direct PE inputs for the codes in the Proton Beam Treatment Delivery family. These difficulties were largely associated with determining a price for the two new equipment items in the code family, the Proton Treatment Vault (ER115) and the Proton Treatment

Delivery System (ER116). These equipment items had extraordinarily high prices of \$19,001,914 and \$30,400,000 respectively on the invoices submitted with the code family. By way of comparison, the highest equipment price currently existing in our database for CY 2021 is the "SRS system, Linac" (ER082) equipment item at \$4,233,825. We have concerns that establishing equipment pricing for the proton treatment vault and delivery system at a rate that is so much higher than anything else in our equipment database could distort relativity.

We also have concerns about the information provided on the submitted invoices used for the pricing of these two new equipment items. The invoices for both the Proton Treatment Vault and the Proton Treatment Delivery System contained building construction costs such as asphalt paving, masonry and carpentry expenses, drywall packaging, and the installation of electrical systems. We understand that these proton treatment equipment items are extremely capital-intensive and require the construction of custom-built offices to house the equipment. However, the expenses associated with constructing new office facilities fall outside of our direct PE methodology, and would be more accurately classified as a form of building maintenance or office rent under indirect PE. We do not agree that construction costs should be included as a form of direct PE because they are not individually allocable to a particular patient for a particular service.

Although we agree that the provider does need to bear the costs associated with the storage of this equipment, this is a form of indirect PE under our methodology. We do not believe that it would serve the interests of relativity to include these building construction costs for the proton treatment equipment as a type of direct PE expense.

As a result, we are proposing to maintain contractor pricing for CPT codes 77520, 77522, 77523, and 77525 instead of proposing active pricing for these services. We believe that maintaining contractor pricing will allow the limited providers of these very expensive services to adapt more quickly to shifts in the market-based costs associated with the proton treatment equipment. The RUC similarly expressed concern in its recommendations about the extremely high cost of this equipment, agreed that these services were extremely hard to value, and noted the difficulties that had taken place in surveying the family of codes. The recommendations from the RUC also noted that proton

treatment is a rapidly changing technology and the change in the treatment equipment often requires extensive modification to the vault. We believe that these frequent changes can be more accurately captured through contractor pricing as opposed to the need to update the pricing of the proton treatment equipment on an annual basis.

If we were to propose active pricing for the codes in this family, we believe that we would need to remove the building construction costs from the Proton Treatment Vault and the Proton Treatment Delivery System as forms of indirect PE, which would substantially lower their overall equipment prices. We would also refine the equipment times to the standard formula for highly technical equipment, which would result in 3 minutes less time for each equipment item (such as 14 minutes for all three equipment items in CPT code 77522).

(33) Immunization Administration (CPT Codes 90460, 90461, 90471, 90472, 90473, and 90474 and HCPCS codes G0008, G0009, and G0010)

Especially in the context of the current Public Health Emergency (PHE) related to the COVID-19 pandemic, it is evident that consistent beneficiary access to vaccinations is vital to public health. Many stakeholders have raised concerns regarding the reductions in payment rates for vaccine administration services over the past several years. The codes that describe these services have generally been valued based on a direct crosswalk to CPT code 96372 (*Therapeutic, prophylactic, or diagnostic injection (specify substance or drug); subcutaneous or intramuscular*). Because we proposed and finalized reductions in valuation for that code for CY 2018 and because the reductions in overall valuation have been subject to the multi-year phase-in of significant reductions in RVUs, the payment rate for the vaccine administration codes has been concurrently reduced.

In the CY 2020 PFS final rule, we acknowledged that it is in the public interest to ensure appropriate resource cost are reflected in the valuation of the immunization administration services that are used to deliver vaccines and noted that we planned to review the valuations for these services in future rulemaking. For CY 2020, we maintained the CY 2019 national payment amount for immunization administration services described by HCPCS codes G0008 (*Administration of influenza virus vaccine*), G0009 (*Administration of pneumococcal*

vaccine), and G0010 (*Administration of hepatitis b vaccine*) in the interim.

The RUC has recently re-submitted recommendations from 2009 regarding the appropriate valuation for the broader range of vaccine administration services, including CPT codes 90460 (*Immunization administration through 18 years of age via any route of administration, with counseling by physician or other qualified health care professional; first or only component of each vaccine or toxoid administered*), 90471 (*Immunization administration (includes percutaneous, intradermal, subcutaneous, or intramuscular injections); 1 vaccine (single or combination vaccine/toxoid)*), and 90473 (*Immunization administration by intranasal or oral route; 1 vaccine (single or combination vaccine/toxoid)*). In its recommendation, the RUC noted that the current RVUs assigned are directly crosswalked from CPT code 96372 (like the vaccine administration G-codes had been) and the resulting payment rates are substantially lower than current Centers for Disease Control and Prevention (CDC) regional maximum charges. The RUC also pointed out that that appropriate payment for immunization administration that reflects resource cost is critical in maintaining high immunization rates in the United States, as well as having the capacity to respond quickly to vaccinate against preventable disease outbreaks.

We agree with the RUC's assertions regarding the importance of appropriate resource based valuations for vaccine administration services. We also recognize that the importance of these services is increased in the context of the current PHE related to the COVID-19 pandemic, especially should there be a vaccine for this particular disease.

We reviewed and considered the 2009 RUC-recommended direct PE inputs for CPT codes 90460–90474 (as well as the related G-codes) in place of the existing policy based on a crosswalk to CPT code 96372. However, the RUC-recommended direct PE inputs from 2009 would result in significant decreases in valuation for these 6 CPT codes even compared to the current crosswalk. At this time, we do not believe that either the existing crosswalk or the RUC recommendations from over a decade ago reflect the relative resource costs associated with these services. Without updated information to use in developing rates specific to these codes based on direct PE inputs, and in consideration of the import of these services for Medicare beneficiaries, as well as the public health concerns raised by commenters,

we believe that it would be most appropriate to value these services using a crosswalk methodology that better reflects the relative resources involved in furnishing all of these services.

Therefore, we are proposing to crosswalk the valuation of CPT codes 90460, 90471, and 90473 and HCPCS codes G0008, G0009, and G0010 to CPT code 36000 (*Introduction of needle or intracatheter, vein*). CPT code 36000 is a service with a nearly identical work RVU (0.18 as compared to 0.17 for CPT codes 90460, 90471, and 90473) and a similar clinical vignette. We believe that the additional clinical labor, supply, and equipment resources associated with the furnishing of CPT code 36000 more accurately capture the costs associated with these immunization codes. We also note that this crosswalk will result in payment rates for vaccine administration services at approximately the same CY 2017 rates that were paid prior to the revaluation of CPT code 96372, which had previously served as the basis of the crosswalk. We believe that the proposed crosswalk is the most accurate valuation of these services and will also serve to ensure the appropriate relative resources involved in furnishing all of these services is reflected in the payment for these critical immunization and vaccination services in the context of the health needs of Medicare beneficiaries.

Regarding the add-on codes associated with these services, CPT codes 90461 (*Immunization administration through 18 years of age via any route of administration, with counseling by physician or other qualified health care professional; each additional vaccine or toxoid component administered*), 90472 (*Immunization administration (includes percutaneous, intradermal, subcutaneous, or intramuscular injections); each additional vaccine (single or combination vaccine/toxoid)*), and 90474 (*Immunization administration by intranasal or oral route; each additional vaccine (single or combination vaccine/toxoid)*), we note that the previous valuation methodology set their RVUs at approximately half of the valuation for the associated base codes, described above. Absent additional information, we are proposing to maintain that approach by valuing the three add-on codes at half of the RVUs of the aforementioned crosswalk to CPT code 36000.

Finally, we are proposing this valuation to apply to all of these existing vaccine administration codes, using the valuation of CPT code 90471 for base codes and CPT code 90472 for

add-on codes. Should a vaccine for COVID-19 or other infectious disease become available during CY 2021, we would anticipate applying the same approach to valuing the administration of such vaccines, regardless of whether separate coding for such services would need to be introduced.

(34) Liver Elastography (CPT Code 91200)

CPT code 91200 (*Liver elastography, mechanically induced shear wave (eg, vibration), without imaging, with interpretation and report*) was targeted for review through the RUC's new technology/new services screen. The RUC reviewed 3 years of available Medicare claims data (2016, 2017 and 2018) and surveyed the code for the January 2020 meeting.

We are proposing the RUC-recommended work RVU of 0.21. We are also proposing the RUC-recommended direct PE inputs for CPT code 91200 without refinement.

(35) Remote Retinal Imaging (CPT Codes 92227, 92228, and 9225X)

The AMA CPT Editorial Panel revised CPT code 92227 (*Imaging of retina for detection or monitoring of disease; with remote clinical staff review and report, unilateral or bilateral*) and CPT code 92228 (*Imaging of retina for detection or monitoring of disease; with remote physician or qualified health professional review and report, unilateral or bilateral*) that are reported for the treatment of diabetic retinopathy. Two practice sites are involved in these services: The acquiring site (for example, a primary care practice) and the reading site (for example, the ophthalmology practice). Both codes can be used to report diagnostic and monitoring services and the distinction is in whom provides the service: Physician (CPT code 92228) or clinical staff only (CPT code 92227). Thus, only CPT code 92228 includes work, accounting for the physician at the reading site. For both CPT codes 92227 and 92228, direct PE pays for the clinical staff at both sites.

The AMA CPT Editorial Panel also created CPT code 9225X (*Imaging of retina for detection or monitoring of disease; with point-of-care automated analysis with diagnostic report; unilateral or bilateral*) for point-of-care automated analysis that uses innovative artificial intelligence technology to perform the interpretation of the eye exam, without requiring that an ophthalmologist interpret the results. CPT code 9225X can be used at a primary care practice site and the artificial intelligence technology

interprets the test instead of a remotely located ophthalmologist. Because no physician is involved, this service is PE only. We are considering CPT code 9225X to be a diagnostic service under the PFS and are creating separate payment for it.

For CPT code 92228, we are proposing the RUC's recommended work RVU of 0.32. CPT codes 92227 and 9225X are PE only codes, and we are proposing a work RVU of 0.00 for both codes.

For both CPT codes 92227 and 92228, we are proposing the AMA RUC's recommended direct PE inputs. We are proposing two refinements to the direct PE inputs for CPT code 9225X. We are proposing a reduction of 1 minute for the clinical labor task CA009, "Greet patient, provide gowning, ensure appropriate medical records are available," to be consistent with the amount of clinical labor for this task in CPT codes 92228 and 92227. We are also not proposing the RUC's recommendation of a \$25 analysis fee for remote imaging because we consider this a service fee that constitutes a form of indirect PE and that this cost is appropriately captured via the indirect PE methodology as opposed to being included as a separate direct PE input. We do not believe that the analysis fee would be allocated to the use of an individual patient for an individual service, and can be better understood as an indirect cost similar to other administrative expenses.

(36) Auditory Evoked Potentials (CPT Codes 92584, 92X51, 92X52, 92X53, and 92X54)

CPT codes 92585 (*Auditory evoked potentials for evoked response audiometry and/or testing of the central nervous system; comprehensive*) and 92586 (*Auditory evoked potentials for evoked response audiometry and/or testing of the central nervous system; limited*) were identified through a RAW requested screen of CMS/Other Source codes with 2017 Medicare utilization over 30,000. Since these codes were last valued, audiologists, the primary reporter of these services, can now report Medicare services independently. As a result, the audiologist work for these services is moving from PE to work.

To better describe tests of auditory function, the CPT created CPT code 92584 (*Electrocochleography*) and replaced CPT codes 92585 and 92586 with four new services. We are proposing the RUC-recommended work RVUs of 1.00 for CPT code 92584, 1.00 for CPT code 92X52 (*Auditory evoked potentials; for hearing status*

determination, broadband stimuli, with interpretation and report), 1.50 for CPT code 92X53 (*Auditory evoked potentials; for threshold estimation at multiple frequencies, with interpretation and report*), and 1.05 for CPT code 92X54 (*Auditory evoked potentials; neurodiagnostic, with interpretation and report*). CPT code 92X51 (*Auditory evoked potentials; screening of auditory potential with broadband stimuli, automated analysis*) is a screening service and is not payable by Medicare. Therefore, we are not proposing a valuation for this code; however, we will display the RUC-recommended work RVU of 0.25.

We are proposing the RUC-recommended direct PE inputs for this code family without refinement.

(37) Vestibular Evoked Myogenic Potential Testing (CPT Codes 925X1, 925X2, and 925X3)

In response to a 2017 RAW request, AMA staff compiled a list of CMS/Other codes with Medicare Utilization of 30,000 or more. CPT code 92585 (*Auditory evoked potentials for evoked response audiometry and/or testing of the central nervous system; comprehensive*) was identified as one of the codes. In 2018, the AMA/RUC referred CPT code 92585 and its family member CPT code 92586 (*Auditory evoked potentials for evoked response audiometry and/or testing of the central nervous system; limited*) to the February 2019 CPT Editorial Panel meeting to clarify code descriptors and define the terms "limited" and "comprehensive" auditory evoked potentials.

During the discussion of CPT codes 92585 and 92586 at the February 2019 CPT Editorial Panel meeting, specialty societies introduced a new procedure, Vestibular Evoked Myogenic Potential (VEMP), and suggested new coding. As a result, the CPT Editorial Panel created 3 new codes: CPT code 925X1 (*Vestibular evoked myogenic potential testing, with interpretation and report; cervical (cVEMP)*); CPT code 925X2 (*Vestibular evoked myogenic potential testing, with interpretation and report; ocular (oVEMP)*); and CPT code 925X3 (*Vestibular evoked myogenic potential testing, with interpretation and report; cervical and ocular*). The RUC reviewed the three codes at its April 2019 meeting.

We are proposing the RUC-recommended work RVU of 0.80 for CPT codes 925X1 and 925X2. For CPT code 925X3, we are proposing the RUC-recommended work RVU of 1.20. We also are proposing the RUC-recommended direct PE inputs without refinement for these three VEMP codes.

(38) Complete Electrocardiogram (CPT Codes 93000, 93005, and 93010)

In the CY 2019 PFS final rule (83 FR 59452), CPT code 93000 was nominated for review under the potentially misvalued code initiative. The RUC reviewed these services at the April 2019 meeting where the specialty societies explained that the family of electrocardiogram (ECG) codes were relatively unique in that CPT code 93000 (*Electrocardiogram, routine ECG with at least 12 leads; with interpretation and report*) is the global service which is billed in the hospital setting, CPT 93005 (*Electrocardiogram, routine ECG with at least 12 leads; tracing only, without interpretation and report*) is the technical component and CPT 93010 is the professional component.

We are proposing the RUC-recommended work RVU of 0.17, which is the current value for both codes, for CPT codes 93000 and 93010. CPT code 93005 is a PE only technical component code, and we are proposing to maintain the current work RVU of 0.00.

For the direct PE inputs, we are also proposing the RUC-recommended values without refinement.

(39) External Extended ECG Monitoring (CPT Codes 93224, 93225, 93226, 93227, 93XX0, 93XX1, 93XX2, 93XX3, 93XX4, 93XX5, 93XX6, and 93XX7)

In September 2019, the CPT Editorial Panel replaced four Category III codes with 8 new Category I codes to report external electrocardiographic (ECG) recording by continuous rhythm recording and storage for periods longer than 48 hours. The existing Holter monitor codes (CPT codes 93224 through 93227) that include up to 48 hours of continuous recording were also reviewed as part of this family of services at the January 2020 RUC meeting.

We are proposing the RUC-recommended work RVU for all 12 codes in the family. We are proposing a work RVU of 0.39 for CPT codes 93224 (*External electrocardiographic recording up to 48 hours by continuous rhythm recording and storage; includes recording, scanning analysis with report, review and interpretation by a physician or other qualified health care professional*) and 93227 (*External electrocardiographic recording up to 48 hours by continuous rhythm recording and storage; review and interpretation by a physician or other qualified health care professional*); a work RVU of 0.50 for CPT codes 93XX0 (*External electrocardiographic recording for more than 48 hours up to 7 days by*

continuous rhythm recording and storage; includes recording, scanning analysis with report, review and interpretation) and 93XX3 (*External electrocardiographic recording for more than 48 hours up to 7 days by continuous rhythm recording and storage; review and interpretation*); and a work RVU of 0.55 for CPT codes 93XX4 (*External electrocardiographic recording for more than 7 days up to 15 days by continuous rhythm recording and storage; includes recording, scanning analysis with report, review and interpretation*) and 93XX7 (*External electrocardiographic recording for more than 7 days up to 15 days by continuous rhythm recording and storage; review and interpretation*).

The other six codes in the family are technical component codes that do not have a work RVU; we are proposing a work RVU of 0.00 for CPT codes 93225 (*External electrocardiographic recording up to 48 hours by continuous rhythm recording and storage; recording (includes connection, recording, and disconnection)*), 93226 (*External electrocardiographic recording up to 48 hours by continuous rhythm recording and storage; scanning analysis with report*), 93XX1 (*External electrocardiographic recording for more than 48 hours up to 7 days by continuous rhythm recording and storage; recording (includes connection and initial recording)*), 93XX2 (*External electrocardiographic recording for more than 48 hours up to 7 days by continuous rhythm recording and storage; scanning analysis with report*), 93XX5 (*External electrocardiographic recording for more than 7 days up to 15 days by continuous rhythm recording and storage; recording (includes connection and initial recording)*), and 93XX6 (*External electrocardiographic recording for more than 7 days up to 15 days by continuous rhythm recording and storage; scanning analysis with report*).

For the direct PE inputs, we are proposing to refine the clinical labor time for the “Perform procedure/service—NOT directly related to physician work time” (CA021) activity for CPT codes 93XX0, 93XX2, 93XX4, and 93XX6. We are proposing to reduce the clinical labor time by 5 minutes for each code as the description of the tasks taking place in the recommended materials includes activities that are considered to be indirect PE under our methodology. The recommended materials stated that “incoming patch deliveries are sorted and distributed to work queues. The return box is opened, diary book removed, top housing is removed using a custom tool to expose

USB connection, and device is plugged in to extract serial number and diagnostic logs.” These unboxing and filing activities are classified as administrative expenses under our PE methodology, and therefore, do not constitute clinical labor as a direct expense. We are proposing to remove 5 minutes from the clinical labor to reflect these activities which are indirect as opposed to direct costs. We are also proposing to refine the equipment time for the desktop computer (ED021) to reflect these changes in the clinical labor time.

We noted an inconsistency in the RUC-recommended direct PE inputs for CPT codes 93XX0 and 93XX4. Both of these codes are the “global component” for their respective group of codes, such that the direct costs for CPT codes 93XX1–93XX3 must sum up to the direct cost of CPT code 93XX0 and the direct costs for CPT codes 93XX5 through 93XX7 must sum up to the direct cost of CPT code 93XX4. However, CPT codes 93XX0 and 93XX4 each contained 2 pairs of non-sterile gloves (SB022) whereas their constituent technical component codes (93XX1 and 93XX5 respectively) only contained a single pair of non-sterile gloves. Therefore, we are proposing to refine the quantity of the non-sterile gloves down to 1 pair for CPT codes 93XX0 and 93XX4 to correct this inconsistency. We also considered increasing the quantity of the gloves to 2 as in CPT codes 93224 through 93227. However, we believe that only 1 pair of gloves would typically be needed to attach the ECGs, as the patient does not return to have the ECGs removed in CPT codes 93XX0 through 93XX7 as opposed to CPT codes 93224 through 93227 where the patient does return for ECG removal.

We are proposing the RUC-recommended equipment time of 1474 minutes for the Holter monitor (EQ127) equipment included in CPT codes 93224 and 93226, based on an equipment time of 34 minutes during the procedure along with 1440 minutes (24 hours) of equipment time thereafter. We note that an external stakeholder wrote to request that the number of minutes of equipment time for the Holter monitor be increased from 1440 minutes (24 hours) to 2160 minutes (36 hours) to reflect the average length of equipment time. The stakeholder wrote that the 24-hour and 48-hour test were each performed approximately 50 percent of the time and stated that the most accurate number of equipment minutes would be the average time. The RUC disagreed with the stakeholder’s request in its review because it

concluded that there was insufficient evidence to warrant a change from the current 24 hours of equipment time; the RUC-recommended equipment time for the Holter monitor was based on the typical rather than the average service. We are proposing the RUC-recommended equipment time of 1474 minutes because our PE methodology is indeed based on the typical case, specifically what would be typical and reasonable and necessary for the procedure in question. Although we appreciate the feedback from the stakeholder, our previously finalized PE methodology establishes pricing based on the typical case. For a detailed explanation of the direct PE methodology, including examples, we refer readers to the 5-year review of work RVUs under the PFS and proposed changes to the PE methodology CY 2007 PFS proposed notice (71 FR 37242) and the CY 2007 PFS final rule with comment period (71 FR 69629).

The recommendations for this family of codes contain one new supply item, the “extended external ECG patch, medical magnetic tape recorder” (SD339). We did not receive a traditional invoice to establish a price for this supply item, instead receiving pricing information from two sources: A weighted median of claims data with the cost of the other direct PE inputs removed, and a top-down approach calculating the cost of the supply per service based on summing the total costs of the provider and dividing by the total number of tests furnished. The former methodology yielded a supply price of approximately \$440 while the latter methodology produced an estimated supply price of \$416.85. Stakeholders also submitted a series of invoices from the clinical study marketplace with a price of \$595. Although we are appreciative of the data provided by the stakeholder, we require an invoice representative of commercial market pricing to establish a national price for a new supply or equipment item. Although we are aware of the unusual circumstances surrounding the “extended external ECG patch, medical magnetic tape recorder” in terms of how it uploads data to the provider, we cannot establish supply pricing based on an analysis of claims data and in absence of a representative invoice.

Therefore, we are proposing to employ a crosswalk to an existing supply for use as a proxy price until we have an invoice to use for the “extended external ECG patch, medical magnetic tape recorder” item. We are proposing to use the “kit, percutaneous neuro test stimulation” (SA022) supply as our proxy item at a price of \$413.24.

Although this kit is not clinically similar to the extended external ECG patch, we believe that it is the closest match from a pricing perspective to employ as a proxy until we are able to arrive at an invoice that is representative of commercial market pricing. We welcome the submission of invoices or other additional information for use in pricing the “extended external ECG patch, medical magnetic tape recorder” supply.

(40) Complete Transthoracic Echocardiography (TTE) With Doppler (CPT Code 93306)

In the CY 2019 PFS final rule (83 FR 59500), a submitter nominated CPT code 93306 (*Echocardiography, transthoracic, real-time with image documentation (2D), includes M-mode recording, when performed, complete, with spectral Doppler echocardiography, and with color flow Doppler echocardiography*) as potentially misvalued, citing GAO, MedPAC, and Urban Institute reports that suggest the work RVUs are overstated. Although the code was most recently surveyed in 2016, the specialty societies and the RUC stated that there has been a change in the technique and technology used to perform the procedure, so they resurveyed the code. The RUC recommended decreasing the work RVU from 1.50 to 1.46 and we are proposing this value.

Although we are proposing the RUC’s recommended direct PE inputs without refinement we note that the RUC’s recommendation included both 25 mL and 50 mL of ultrasound transmission gel. We are proposing a supply quantity of 25 mL and seeking clarification on the correct amount.

(41) Pacing Heart Stimulation (CPT Code 93623)

Review of CPT code 93623 (*Programmed stimulation and pacing after intravenous drug infusion (List separately in addition to code for primary procedure)*), was prompted by the Relativity Assessment Workgroup Medicare utilization screen of over 30,000 claims in a year. This service is to create an arrhythmia by an intravenous drug infusion and it is an add-on code with 60 minutes of total time and a current work RVU of 2.85.

The RUC recommends the 25th percentile survey value of 2.04 work RVUs and 20 minutes of intraservice time.

The revision of CPT code 93623 physician’s time adjusting from the current 60 minutes to 20 minutes is a significant change. We do not believe the RUC-recommended work RVU

appropriately accounts for the substantial reductions in the surveyed work times for the procedure. Although we do not imply that the decrease in time as reflected in survey values must equate to a one-to-one or linear decrease in the valuation of work RVUs, we believe that since the two components of work are time and intensity, significant decreases in time should be appropriately reflected in decreases to work RVUs. In the case of CPT code 93623, we believe that it would be more accurate to propose a work RVU of 0.98 based on CPT code 76810 (*Ultrasound, pregnant uterus, real time with image documentation, fetal and maternal evaluation, after first trimester (> or = 14 weeks 0 days), transabdominal approach; each additional gestation (list separately in addition to code for primary procedure)*) with 20 minutes of intraservice time. We are proposing a work RVU of 0.98 with 20 minutes of intraservice time for CPT code 93623.

This CPT code is a facility-only service and has no direct PE inputs.

(42) Intracardiac Echocardiography (ECG) (CPT Code 93662)

The review of CPT code 93662 (*Intracardiac echocardiography during therapeutic/diagnostic intervention, including imaging supervision and interpretation (List separately in addition to code for primary procedure)*), was prompted by the Relativity Assessment Workgroup Medicare utilization screen of over 10,000 claims in a year that had an increase in volume by 100 percent between the 2012 to 2017. This procedure has since changed from its last review, in its reduced use of fluoroscopy, now replaced with ultrasound that create arrhythmia mapping systems with intracardiac echo images processed to produce 3-dimensional electroanatomical maps. The physician can now visualize better and have more accurate details for more effective catheter ablation for a wide range of arrhythmias. CPT code 93662 currently has a work RVU of 2.80 with 5 minutes of preservice evaluation time, 55 minutes of intraservice time, 10 minutes of immediate postservice time, and 70 minutes of total time.

The survey resulted in a median intraservice time of 25 minutes, a significant shift from the current intraservice time of 55 minutes. The RUC recommends a work RVU of 2.53 and 25 minutes of intraservice time for add-on CPT code 93662. We do not believe the RUC-recommended work RVU appropriately accounts for the substantial reductions in the surveyed work times for the procedure. Although we do not imply that the decrease in

time as reflected in survey values must equate to a one-to-one or linear decrease in the valuation of work RVUs, we believe that since the two components of work are time and intensity, significant decreases in time should be appropriately reflected in decreases to work RVUs. CPT code 92979 (*Endoluminal imaging of coronary vessel or graft using intravascular ultrasound (ivus) or optical coherence tomography (oct) during diagnostic evaluation and/or therapeutic intervention including imaging supervision, interpretation and report; each additional vessel (list separately in addition to code for primary procedure)*), with 1.44 work RVUs and 25 minutes of intraservice time, is a good equivalent comparator code in light of the significant physician time reduction from 55 minutes. A similarly proportioned reduction of physician intraservice time from the current 55 minutes to the surveyed 25 minutes, if applied to the current work RVU would result in a value much lower than our reference CPT code 92979’s work RVU, so we are proposing a work RVU of 1.44 and 25 minutes of intraservice time for add-on CPT code 93662.

This CPT code is a facility only service and has no direct PE inputs.

(43) Ventricular Assist Device (VAD) Interrogation (CPT Code 93750)

The review of CPT code 93750, (*Interrogation of ventricular assist device (VAD), in person, with physician or other qualified health care professional analysis of device parameters (eg, drivelines, alarms, power surges), review of device function (eg, flow and volume status, septum status, recovery), with programming, if performed, and report*) was prompted by the Relativity Assessment Workgroup Medicare utilization screen of over 10,000 claims in a year and had had an increased in volume by 100 percent between the 2012 to 2017. CPT code 93750 currently has a work RVU of 0.92 with 30 minutes of intraservice time.

For physician times, the societies’ survey for CPT code 93750 yielded 6 minutes preservice time, 10 minutes intraservice time, 7 minutes immediate post-service time, and 23 minutes of total time. The 25th percentile surveyed work RVU was 0.96. The RUC compared the survey code to CPT code 78598 (*Quantitative differential pulmonary perfusion and ventilation (eg, aerosol or gas), including imaging when performed*) (0.85 work RVU and 5 minutes of preservice time, 10 minutes of intraservice time, 9 minutes of immediate postservice time, and total time of 24 minutes). The RUC

recommends crosswalking the work RVU of 0.85 from CPT code 78598 to 93750.

CPT code 93289 (*Interrogation device evaluation (in person) with analysis, review and report by a physician or other qualified health care professional, includes connection, recording and disconnection per patient encounter; single, dual, or multiple lead transvenous implantable defibrillator system, including analysis of heart rhythm derived data elements*), with 0.75 work RVUs and 5 minutes of preservice time, 10 minutes of intraservice time, 8.5 minutes of immediate postservice time, and total time of 23.5 minutes, we believe is a more precise comparator code. CPT code 93289's intraservice times, pre and post times, and total times are almost identical to CPT code 93750's survey times, so we are proposing a work RVU of 0.75 and 23 minutes of total time for CPT code 93750.

The PE Subcommittee corrected the equipment times based on the formulas as provided by CMS. In addition, the PE Subcommittee changed the clinical staff type for direct labor item ID CA013 Prepare Room, Equipment and Supplies, from an RN to the RN/LPN/MTA blend and the direct equipment item ID EQ168 light, exam was removed from CPT code 93750. We are proposing to accept the RUC-recommended direct PE inputs.

(44) Spirometry (CPT Codes 94010 and 94060)

CPT code 94010 (*spirometry, including graphic record, total and timed vital capacity, expiratory flow rate measurement(s), with or without maximal voluntary ventilation*) and CPT code 94060 (*Bronchodilation responsiveness, spirometry as in 94010, pre- and post-bronchodilator administration*) were identified as part of a Relativity Assessment Workgroup (RAW) review of action plans on the status of services that were RUC referrals to develop CPT Assistant articles. These codes were recommended to be surveyed.

We are proposing the RUC-recommended work RVU of 0.17 for CPT code 94010 (*spirometry, including graphic record, total and timed vital capacity, expiratory flow rate measurement(s), with or without maximal voluntary ventilation*) and the RUC-recommended work RVU of 0.22 for CPT code 94060 (*Bronchodilation responsiveness, spirometry as in 94010, pre- and post-bronchodilator administration*). We are proposing the RUC-recommended direct PE inputs for this code family without refinements.

(45) Exercise Test for Bronchospasm (CPT Codes 946X0, 94617, 94618, and 94621)

In 2018, the CPT Editorial Panel created CPT code 94617 (*Exercise test for bronchospasm, including pre- and post-spirometry, electrocardiographic recording(s), and pulse oximetry*), and CPT code 94618 (*Pulmonary stress testing (eg, 6-minute walk test), including measurement of heart rate, oximetry, and oxygen titration, when performed*) from the now deleted CPT code 94620 (*Pulmonary stress testing; simple (eg, 6-minute walk test), prolonged exercise test for bronchospasm with pre- and post-spirometry and oximetry*), and revised CPT code 94621 (*Cardiopulmonary exercise testing, including measurements of minute ventilation, co2 production, o2 uptake, and electrocardiographic recordings*) to better describe the specialty's pulmonary exercise test. Shortly after the creation and revision of these codes, the specialty society became aware of some providers performing CPT code 94617 without ECG monitoring, so to more accurately account for this work without the ECG monitoring, The CPT Editorial Panel proposed to establish CPT code 946X0 with the descriptor, (*Exercise test for bronchospasm, including pre- and post-spirometry and pulse oximetry; without electrocardiographic recording(s)*). For the October 2019 RUC meeting, the specialty societies surveyed CPT code 946X0, and included a request to reaffirm the values of the rest of the codes in the code family.

For CPT code 946X0, the surveyed physician time yielded 5 minutes of preservice time, 9 minutes of intraservice time, followed by 10 minutes of immediate post-service time, for a total time of 24 minutes. This distribution of physician times is of course very similar to the times for CPT code 94617, total time of 26 minutes, except without the task of including an electrocardiographic recording. The RUC recommends the survey's median work RVU of 0.49 for CPT code 946X0.

We are proposing the RUC's recommendation of a work RVU of 0.49 and a total physician time of 24 minutes for CPT code 946X0.

This CPT family of codes that includes CPT code 946X0, are CPT codes 94617, 94618, and 94621 and there are no changes to their physician service times, no change to their descriptors, nor their work RVUs, and remain as they currently are. The specialty societies reaffirmed these

current valuations and we propose to accept them without change.

We are proposing the RUC-recommended PE changes without refinement.

(46) Evaluation of Wheezing (CPT Codes 94640, 94667, 94668, and 94669)

At the April 2019 RUC meeting, four PE only CPT codes from the Evaluation of Wheezing code family were reviewed. The codes included CPT codes 94640 (*Pressurized or nonpressurized inhalation treatment for acute airway obstruction for therapeutic purposes and/or for diagnostic purposes such as sputum induction with an aerosol generator, nebulizer, metered dose inhaler or intermittent positive pressure breathing (IPPB) device*), 94667 (*Manipulation chest wall, such as cupping, percussing, and vibration to facilitate lung function; initial demonstration and/or evaluation*), 94668 (*Manipulation chest wall, such as cupping, percussing, and vibration to facilitate lung function; subsequent*), and 94669 (*Mechanical chest wall oscillation to facilitate lung function, per session*).

We are proposing the RUC-recommended direct PE inputs for the four PE only codes. The RUC did not recommend work RVUs and we are proposing to maintain the current work RVU of 0.00 for all four codes.

(47) Exhaled Nitric Oxide Measurement (CPT Code 95012)

In January 2019, the RAW reviewed services with 2017 Medicare utilization of 10,000 or more that had increased by at least 100 percent from 2012 through 2017. The RUC recommended that CPT code 95012 (*Nitric oxide expired gas determination*) be surveyed for the April 2019 meeting. We are proposing the direct PE inputs for CPT code 95012 without refinement. CPT code 95012 is a PE-only code with no work RVU, and we are proposing to maintain the current work RVU of 0.00.

(48) Acupuncture Services (CPT Codes 97810, 97811, 97813, and 97814)

The CPT Editorial Panel created two new codes and two new add-on codes in 2004 to describe the appropriate time or additional time and levels of service that can be performed using acupuncture and electroacupuncture, acupuncture therapy with electrical stimulation. These codes were designated as noncovered services since Medicare did not reimburse for acupuncture services at the time. In January 2020, we issued a decision memo stating that Medicare will cover acupuncture for chronic low back pain

under section 1862(a)(1)(A) of the Act (CAG-00452N). This was reflected in the April 2020 PFS Quarterly Update which changed CPT codes 97810 through 97814 to active payment status (CMS Change Request 11661). Because we had never conducted a review of these four acupuncture codes, the CY 2020 payment rate consisted of the work RVUs recommended by the RUC in 2004.

For CY 2021, we are proposing to establish work RVUs for these four acupuncture codes based on a pair of crosswalks to two recently reviewed codes in the Dry Needling family. We are proposing a work RVU of 0.48 for CPT codes 97810 (*Acupuncture, 1 or more needles; without electrical stimulation, initial 15 minutes of personal one-on-one contact with the patient*) and 97813 (*Acupuncture, 1 or more needles; with electrical stimulation, initial 15 minutes of personal one-on-one contact with the patient*) based on a crosswalk to CPT code 20561 (*Needle insertion(s) without injection(s); 3 or more muscles*). We are proposing a work RVU of 0.32 for CPT codes 97811 (*Acupuncture, 1 or more needles; without electrical stimulation, each additional 15 minutes of personal one-on-one contact with the patient, with re-insertion of needle(s)*) and 97814 (*Acupuncture, 1 or more needles; with electrical stimulation, each additional 15 minutes of personal one-on-one contact with the patient, with re-insertion of needle(s)*) based on a crosswalk to CPT code 20560 (*Needle insertion(s) without injection(s); 1 or 2 muscle(s)*).

CPT codes 20560 and 20561 are clinically similar services associated with dry needling that were reviewed last year for CY 2020. We finalized work RVUs of 0.32 and 0.48 respectively for these two codes following our review of their associated RUC recommendations, while noting that dry needling services were non-covered by Medicare unless otherwise specified through a national coverage determination (NCD) (84 FR 62722 through 62724). Like the acupuncture codes, CPT codes 20560 and 20561 were updated to active payment status in the April 2020 PFS Quarterly Update to reflect the Medicare coverage of acupuncture for chronic low back pain. We note that CPT codes 97810 and 97813 share the identical work time values with CPT code 20561, and that CPT codes 97811 and 97814 differ from CPT code 20560 by only 1 minute of work time, 15 minutes as compared to 16 minutes. Although we do not imply that codes with similar work times must equate to a one-to-one or linear relationship in the valuation of

work RVUs, we believe that, since the two components of work are time and intensity, clinically related services with similar intensities and work times should, generally speaking, be valued similarly. Due to the similar clinical nature of these services and their nearly identical work times, we believe that it is more accurate to propose crosswalking CPT codes 97810 through 97814 to the work RVUs of the Dry Needling codes, which were finalized last year, as opposed to proposing work RVUs from 2004, which were never reviewed by CMS.

The RUC did not make any recommendations and we are not proposing any changes to the direct PE inputs for CPT codes 97810 through 97814.

(49) Chronic Care Management Services (CPT Code 994XX and HCPCS Code G2058)

We established payment for HCPCS code G2058 (*Chronic care management services, each additional 20 minutes of clinical staff time directed by a physician or other qualified healthcare professional, per calendar month*) in the CY 2020 PFS final rule (84 FR 62690). At the January 2020 RUC meeting, specialty societies requested a temporary crosswalk through CY 2021 between the value established by CMS for HCPCS code G2058 and the value of new CPT code 994XX (with a descriptor identical to G2058). The Chronic Care Management code family will be resurveyed during CY 2020 and is expected to be presented for review as part of the 2022 RUC review process.

For CY 2021, we are proposing the RUC-recommended work RVU of 0.54 and the RUC-recommended direct PE inputs for CPT code 994XX.

(50) External Counterpulsation (HCPCS Code G0166)

In the CY 2020 PFS proposed rule (84 FR 40516), an external stakeholder nominated HCPCS code G0166 as potentially misvalued due to concerns that the PE RVUs for this code did not fully reflect the total resources required to deliver the service and CMS proposed G0166 as potentially misvalued. The RUC reviewed the direct PE inputs for HCPCS code G0166 at the October 2019 RUC meeting.

We are proposing the RUC-recommended preservice period, service period and postservice period with refinements. We propose to replace CA010 (obtain vital signs) during the postservice of service period with CA023 (monitor patient following procedure/service, no multitasking).

For the equipment items, we are proposing to update the price of the “EECP, external counterpulsation system” (EQ012) equipment to \$101,247.50 based on an average of the five invoices submitted along with the recommendations. We note that the EQ012 equipment is the only current equipment item in our direct PE database with an equipment utilization rate of 25 percent and the only equipment item with a utilization rate under 50 percent. Although we are not proposing to change the equipment utilization rate, we are soliciting feedback from commenters regarding the utilization rate for the EQ012 equipment to help us understand why it should differ from all other medical equipment.

We also received invoices for a series of additional equipment items: An EECP service contract, an EECP compression equipment package, and an EECP electrical equipment package. We are not proposing to establish a price for the EECP service contract, as service contracts are considered to be an administrative expense and a form of indirect PE under our methodology. As for the two equipment packages, there were a number of unusual factors involving these items that created difficulties for our equipment methodology. Both equipment packages had a suggested utilization rate of 25 percent, half of our typical utilization rate of 50 percent, and both had a suggested useful life duration of only 3 months. As we stated in section II.B. of this proposed rule, Determination of Practice Expense RVUs, we have concerns that assigning very low useful life durations to this type of equipment would fail to maintain relativity with other equipment on the PFS. We also noted that the equipment cost per minute formula was designed under the assumption that each equipment item would remain in use for a period of several years and depreciate over that span of time. Our current equipment formula is not designed to address cases in which equipment is replaced multiple times per year, and we believe that applying a multi-year depreciation in these situations would not be reflective of market pricing. Although we agree that these costs should be reflected in the pricing of HCPCS code G0166, we believe that the very frequent replacement of the items in the two equipment packages makes them a poor fit under our equipment methodology.

Therefore, we are proposing to treat the two EECP equipment packages as supplies instead of treating them as equipment. We are proposing to establish the EECP compression

equipment package (SD341) as a supply with a cost of \$645 based on an average of the submitted invoices, and proposing to establish the EECPE electrical equipment package (SD342) as a supply with a cost of \$500 again based on an average of the submitted invoices. Based on information provided by stakeholders, we are proposing a supply quantity of 1/325 for these two items (0.00308) based on the supply being used on average five times per day and replaced every 3 months (5 uses * 5 days * 13 weeks = 325). We believe that assigning these two items as supplies rather than equipment more accurately captures the unusual circumstances associated with providing this service.

(51) Molecular Pathology Interpretation (HCPCS Code G0452)

At the October 2018 RUC meeting, the Relativity Assessment Workgroup (RAW) identified HCPCS code G0452 (*Molecular pathology procedure; physician interpretation and report*) as potentially misvalued on a CMS/Other screen. The RUC had never reviewed HCPCS code G0452 and assumptions regarding work and time were based upon a 1995 vignette. In addition, the specialty society noted that the technology available for furnishing the service, as well as the patient population receiving the service, had changed since the code was valued by CMS.

The RUC requested a physician work survey be completed for the October 2019 RUC meeting. It was during the October meeting that the work and PE values for HCPCS code G0452 were reviewed and recommended.

For CY 2021, we are proposing the RUC-recommended work RVU of 0.93 and the RUC-recommended direct PE inputs for HCPCS code G0452.

(52) Evaluation and Management, Observation and Provision of Self-Administered Esketamine (HCPCS Codes G2082 and G2083)

In the CY 2020 PFS final rule (84 FR 63102 through 63104), we issued an interim final rule with comment period (IFC) to establish coding and payment for E/M, observation, and the provision of self-administered Esketamine to facilitate beneficiary access to care for treatment-resistant depression as efficiently as possible. We created two new HCPCS G codes, G2082 and G2083, effective January 1, 2020 on an interim final basis. For CY 2020, we established RVUs for these services that reflect the relative resource costs associated with the E/M, observation and provision of the self-administered esketamine product. The HCPCS G-codes are

described as follows: HCPCS code G2082 (*Office or other outpatient visit for the evaluation and management of an established patient that requires the supervision of a physician or other qualified health care professional and provision of up to 56 mg of esketamine nasal self-administration, includes 2 hours post-administration observation*) and HCPCS code G2083 (*Office or other outpatient visit for the evaluation and management of an established patient that requires the supervision of a physician or other qualified health care professional and provision of greater than 56 mg esketamine nasal self-administration, includes 2 hours post-administration observation*).

In developing the interim final values for these codes, we used a building block methodology that sums the values associated with several codes. For the overall E/M and observation elements of the services, we incorporated the work RVUs, work time and direct PE inputs associated with a level two office/outpatient visit for an established patient, CPT code 99212 (*Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A problem focused history; A problem focused examination; Straightforward medical decision making. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are self limited or minor. Typically, 10 minutes are spent face-to-face with the patient and/or family*), which has a work RVU of 0.48 and a total work time of 16 minutes, which is based on a pre-service evaluation time of 2 minutes, an intraservice time of 10 minutes, and a postservice time of 4 minutes.

We also incorporated CPT codes 99415 (*Prolonged clinical staff service (the service beyond the typical service time) during an evaluation and management service in the office or outpatient setting, direct patient contact with physician supervision; first hour (List separately in addition to code for outpatient Evaluation and Management service)*) and 99416 (*Prolonged clinical staff service (the service beyond the typical service time) during an evaluation and management service in the office or outpatient setting, direct patient contact with physician supervision; each additional 30 minutes (List separately in addition to code for prolonged service)*) in which neither code has a work RVU, but includes

direct PE inputs reflecting the prolonged time for clinical staff under the direct supervision of the billing practitioner.

Additionally, to account for the cost of the provision of the self-administered esketamine as a direct PE input, we incorporated the wholesale acquisition cost (WAC) data from the most recent available quarter. For HCPCS code G2082, we are using a price of \$590.02 for the supply input that describes 56 mg (supply code SH109) and for HCPCS code G2083, we are using a price of \$885.02 for the supply input describing 84 mg of esketamine (supply code SH110).

We sought comment on the interim final values we established for HCPCS codes G2082 and G2083, including the assigned work RVUs, work times, and direct PE inputs. We received public comments on this policy. The following is a summary of the comments we received and our responses.

Comment: Overall, commenters were supportive of CMS establishing coding and payment for E/M, observation and the provision of self-administered esketamine. However, a few commenters were not in support of the proposal, noting that IV ketamine is cheaper and has been proven to be more effective than esketamine.

Response: We appreciate the support for our interim final rule with comment period. We continue to believe that it is in the public interest to ensure beneficiaries have access to new, potentially life-saving treatment for treatment-resistant depression (TRD) using esketamine. Therefore, we are proposing to maintain HCPCS codes G2082 and G2083 that describe E/M, observation and the provision of self-administered esketamine.

Comment: Several commenters suggested including psychotherapy, CPT codes 90833 and 90836, in the valuation of HCPCS codes G2083 and G2083.

Response: We disagree that psychotherapy should be included in the valuation of HCPCS codes G2082 and G2083. HCPCS codes G2082 and G2083 were created to establish coding and payment for E/M, observation and the provision of self-administered esketamine to facilitate beneficiary access to care for treatment-resistant depression as efficiently as possible. However, practitioners who furnish other allowable, billable services, including psychotherapy, on the same day as an E/M, observation and provision of self-administered esketamine service can bill separately for those services using other codes.

Comment: Some commenters recommended that esketamine should

have its own J code in addition to the G codes.

Response: HCPCS codes G2082 and G2083 are bundled services that include, as discussed previously, the E/M, observation and the provision of self-administered esketamine. The self-administered esketamine is considered a supply item for this bundled service. Therefore, esketamine cannot be billed separately along with HCPCS codes G2082 and G2033 under the PFS.

Comment: Several commenters disagreed with the use of 99212 to establish codes G2082 and G2083. Commenters suggested using 99213, 99214, and/or 99215 instead of 99212. Some commenters indicated that the intraservice work time of 10 minutes is insufficient, and one commenter stated a minimum of 20 minutes would be more appropriate. Another commenter suggested unbundling the code and, in part, indicated that face-to-face visits with the psychiatrist are not required at each visit.

Response: We appreciate the feedback received from the commenters regarding the E/M elements of the service. We have considered the wide range of recommendations that were received from commenters regarding the E/M elements of the service. One commenter indicated that there is variability in performance and level of E/M services associated with the service (in which self-administered esketamine is provided and observed). Another commenter noted that a face-to-face visit with the psychiatrist is not required at each visit, while other commenters recommended using E/M CPT codes up to 99215. We continue to believe that the building block methodology we used incorporating CPT code 99212 is appropriate for valuing this service. Therefore, we are not proposing to change the E/M element of the service by incorporating the work RVUs, work time and direct PE input associated with a level two office/outpatient visit for an established patient, CPT code 99212.

Comment: Many commenters urged CMS to ensure PFS payment rates are sufficient to capture the complexity and time for the provision of esketamine.

A commenter recommended unbundling all the services. The commenter stated that the way the bundled payments are currently constructed fails to recognize the possible variability of E/M services that may be required, the time and effort required of clinical staff to monitor the patient during the lengthy observation period, and the amount of pre- and post-service work required. The commenter also stated that bundling the physician E/M services and the observation

services performed by clinical staff is problematic and including the medication in the bundle is problematic because in many instances the psychiatrist may not be incurring the cost of the medication. The commenter stated that clinical staff time and effort comprise a significant and separate service, including not only the time spent observing and actively monitoring the patient's condition for possible adverse side-effects (that is, nausea, vomiting, escalation in blood pressure), but also extensive pre- and post-service preparation that does not appear to have been included as part of the bundled payment and is not described by existing CPT codes.

The commenter recommended increasing the proposed valuation of clinical staff time to more appropriately account for the clinical staff time and the effort required for pre-, intra-, and post- service work. This includes acquisition of the drug, delivery of the medication to the patient, and the observation of the self-administration, followed by active monitoring of the patient's condition (vitals, etc.) for a minimum of 2 hours, the commenter suggested that the more appropriate comparison for the clinical staff time related to the 2-hour observation period is 95076, *Ingestion challenge test (sequential and incremental ingestion of test items, e.g., food, drug or other substance); initial 120 minutes of testing (110 minutes intra service time; PE RVU 1.81)*. Both services, the G2082 and G2083 codes and the 95076, require a lengthy observation time (minimum of 2 hours) with clinical staff monitoring for adverse side-effects. The total PE RVU of the 95076 is 1.81 RVUs versus 0.51 RVUs (99415×1 , 99416×2 or $0.27 + (0.12 \times 2) = 0.51$ RVUs) of the combined 99415 and 99416. The associated add-on code for 95076 is 95079, *Ingestion challenge test (sequential and incremental ingestion of test items, e.g., food, drug or other substance); each additional 60 minutes of testing (List separately in addition to code for primary procedure)* (40 minutes intra-service time; PE RVU 0.99), which would account for additional time for this service when required. Procedurally these services are similar in staff time, staff type and effort, and both are reported separately from the E/M service. The commenter requested that we use the PE RVUs for the 95076 and the 95079 in lieu of the 99415 and 99416 in calculating the values for the clinical staff component, to more accurately reflect the time and effort of the clinical staff in the observation of the patient.

Response: After consideration of comments requesting that we reconsider aspects of our current valuation for these services, including at least 2 hours of post-administration observation, we believe some of the refinements discussed by stakeholders may be appropriate to improve payment accuracy and help ensure that beneficiaries who need esketamine for treatment have access to it. Based on our review of the Spravato Prescribing Information, Medication Guide and REMS requirements, the FDA-approved conditions/requirements indicate that the drug is only available as an integral component of a physician's service.^{8 9 10} Spravato is only dispensed and administered to patients in a medically supervised healthcare setting that monitors these patients.¹¹ Therefore, we continue to believe this treatment should be paid for as a bundled service. In consideration of the comment urging us to account for clinical staff time spent observing and actively monitoring the patient for possible side-effects, along with pre- and post-service preparation, we are proposing to refine the direct PE inputs of HCPCS codes G2082 and G2083, in part, by using the clinical labor time for CPT codes 95076 and the 95079 in lieu of the clinical labor time of CPT codes 99415 and 99416. We are specifically proposing 150 minutes of observation time for HCPCS codes G2082 and G2083 based on the sum of the clinical labor for CPT code 95076 (110 minutes) and CPT code 95079 (40 minutes). This would replace our previous interim final valuation of 30 minutes of observation time based on the sum of the clinical labor for CPT code 99415 (15 minutes) and two billings of CPT code 99416 (8 minutes). We are seeking comment on this proposal. Additionally, under circumstances where the health care professional supervising the self-administration and observation does not also provide the esketamine product, the physician or practitioner cannot report HCPCS codes G2082 or G2083. Rather, the visit and the extended observation (by either the billing professional or clinical staff) could be reported using the existing E/M codes that describe the visit and the prolonged

¹¹ <https://www.accessdata.fda.gov/scripts/cder/remis/index.cfm?event=IndvRemsDetails.page&REMS=386>.

service of the professional or the clinical staff.

Comment: One commenter urged CMS to align the HCPCS codes G2082 and G2083 for a visit for the provision of esketamine with prescribing recommendations from the drug manufacturer that include at least 2 hours of post-administration observation until a patient is safe to leave the facility. Another commenter questioned whether the codes should be valued using CPT codes 99213, 99214 and even 99215, with 99354 (Prolonged evaluation and management or psychotherapy service(s) (beyond the typical service time of the primary procedure) in the office or other outpatient setting requiring direct patient contact beyond the usual service; first hour (List separately in addition to code for office or other outpatient Evaluation and Management or psychotherapy service)) and 99355 (Prolonged evaluation and management or psychotherapy service(s) (beyond the typical service time of the primary procedure) in the office or other outpatient setting requiring direct patient contact beyond the usual service; each additional 30 minutes (List separately in addition to code for prolonged service)).

Response: As previously stated, we are proposing to continue valuing HCPCS codes G2082 and G2083, in part, on the basis of a level 2 established patient office/outpatient E/M visit. However, as previously stated, after considering comments regarding the esketamine post-administration observation time, we are proposing to refine the direct PE inputs of HCPCS codes G2082 and G2083, in part, by using the clinical labor time for CPT codes 95076 and the 95079, specifically proposing 150 minutes of observation time. We are seeking comment on this proposal.

Comment: Some commenters indicated that the proposed PE inputs do not reflect the costs of, and overall drug cycle management needed to safely administer, esketamine. One commenter indicated that, after conducting an analysis associated with each patient encounter to include: Physician time and technician time, reception time, rent, furniture, monitoring, electronic health record (EHR), supplies, waste management, etc., their direct overhead cost is \$1000 per patient per encounter, not including direct cost and management of the drug. Therefore, the commenter recommends we revise payment by adding 20 percent to the direct expense and mandatory overhead costs of \$1000 per patient encounter. Some commenters indicated that the

proposed PE inputs do not reflect the costs of initial capital requirements for ongoing resources, maintaining the Risk Evaluation and Mitigation Strategy (REMS) standards with the FDA and overall drug cycle management needed to safely administer esketamine. Specifically, one commenter indicated that Spravato will need to be delivered in the community setting. A typical community psychiatry practice does not have a large enough physical plant to accommodate a 2 hour monitoring period, requiring a lease or purchase of additional space. In addition, Spravato requires administrative support for medication procurement, appropriate storage equipment (for example, Pyxis machine or similar) to mitigate abuse and diversion potential, medically appropriate staffing (for the required observation of self-administration, multiple vital signs checks, completion of REMS monitoring forms and other administrative requirements of the REMS, and discharge assessment), and equipment and services including a chair that can recline and controlled substance waste removal compliance. One commenter indicated that the pricing methodology used for esketamine, whether WAC, ASP or compendia pricing, does not take into account the costs associated with full-management of the drug cycle including ordering, storage, inventory tracking, billing, etc. Therefore, the commenter recommends valuing the bundled esketamine by adding 20 percent to ASP.

Response: Under our PE methodology, the costs identified by the commenter for reception time, rent, furniture, electronic health records (EHRs), and waste management are all types of indirect costs. This means that they are not individually allocable to a particular patient for a particular service, and therefore they are not summed up as separate itemized direct costs for codes such as HCPCS codes G2082 and G2083. CMS is still paying practitioners for these costs through our indirect PE methodology; we note that for a typical HCPCS code, indirect costs make up roughly 75 percent of the total PE. If we were to itemize administrative costs such as rent and furniture as direct costs, we would be double counting them in violation of our standard PE methodology. As previously discussed, we are proposing to refine the direct PE inputs of HCPCS codes G2082 and G2083, in part, by using the clinical labor time for CPT codes 95076 and 95079, in lieu of the clinical labor time of CPT codes 99415 and 99416 to account for the clinical staff time, such

that the proposed refinements would increase the clinical labor time from 30 minutes to 150 minutes. We believe this refinement would account for the clinical staff time and efforts including the acquisition and delivery of the medication to the patient as required by the REMS.

Comment: One commenter requested clarification on whether payment is fixed for 2020 or whether the payment will be adjusted to reflect 2020 changes in WAC, for example updated data made available from the most recent quarter. The commenter also questioned whether regulatory changes made under the PFS to values of the component services would also be applied to the G codes, for example, whether changes to values of the E/M codes would also be incorporated into the RVU inputs for G codes. For instance the outpatient E/M values are set to increase in 2021, and the commenter asked whether that increase would automatically be included in the valuation of the bundle, and whether the payment currently ascribed to the bundle for the cost of the medication be updated if the input prices for the services change over time.

Response: Historically, supply input prices are updated on a code-by-code basis and periodically through annual notice and comment rulemaking. The prices, including for a variety of pharmaceutical products, are not routinely updated like Part B drugs paid under the ASP methodologies. For the supply inputs for the esketamine product used in developing rates for HCPCS codes G2082 and G2083, we used the most recent available quarter of WAC data for 2020 pricing, but we anticipate using either data reported for purposes of determining payments under section 1847A of the Act (such as ASP) or compendia pricing information (such as WAC) in future years. Since we reviewed and are proposing refinements to HCPCS codes G2082 and G2083 for the CY 2021 rulemaking cycle, we propose to update the payment to reflect the most recent available quarter of WAC data for CY 2021 pricing, and propose to update the payment to reflect the E/M values (CPT code 99212) for CY 2021. Therefore, to account for the cost of the provision of the self-administered esketamine as a direct PE input, we incorporated the wholesale acquisition cost (WAC) data from the most recent available quarter. For HCPCS code G2082, we propose to update the supply input that describes 56 mg (supply code SH109) from a price of \$590.02 to \$616.93 and for HCPCS code G2083, we propose to update the price from \$885.02 to \$928.38 for the supply input

describing 84 mg of esketamine (supply code SH110).

Comment: One commenter indicated that the CMS approach to the E/M component of the interim G codes includes inputs associated with an established patient for the first visit or any subsequent treatment, and requested clarification that, if reasonable and necessary, the health care provider could complete an E/M service that is distinct from the E/M services necessary for esketamine administration, and in such an event, separate E/M service would be eligible to be paid separately with E/M codes.

Response: Given that HCPCS codes G2082 and G2083 already take into account E/M services in their valuations, it would be duplicative to bill for a separate E/M code along with HCPCS codes G2082 and G2083. However, other reasonable and necessary E/M services may be furnished and billed for a patient on dates before and after HCPCS code G2082 or G2083, for example, when the services are furnished in the course of treating and diagnosing treatment-resistant depression.

After considering the comments we received, we are proposing to refine the values for HCPCS codes G2082 and G2083 using a building block methodology that sums the values associated with several codes. For the overall E/M and observation elements of the services, we are incorporating the work RVUs, work time and direct PE inputs associated with a level two office/outpatient visit for an established patient, CPT code 99212. We are also proposing to include the clinical labor for CPT 95076 and 95079 (in lieu of CPT codes 99415 and 99416 as detailed earlier); and to account for the cost of the provision of the self-administered esketamine as a direct PE input, we are proposing to incorporate the wholesale acquisition cost (WAC) data from the most recent available quarter. We are seeking comment on this updated payment proposal and valuation of HCPCS code G2082 and G2083.

(53) Bundled Payments Under the PFS for Substance Use Disorders (HCPCS Codes G2086, G2087, and G2088)

In the CY 2020 PFS final rule (84 FR 62673), we finalized the creation of new coding and payment describing a bundled episode of care for the treatment of Opioid Use Disorder (OUD). The codes and descriptors we finalized for CY 2020 were:

- HCPCS code G2086: *Office-based treatment for opioid use disorder, including development of the treatment plan, care coordination, individual*

therapy and group therapy and counseling; at least 70 minutes in the first calendar month.

- HCPCS code G2087: *Office-based treatment for opioid use disorder, including care coordination, individual therapy and group therapy and counseling; at least 60 minutes in a subsequent calendar month.*

- HCPCS code G2088: *Office-based treatment for opioid use disorder, including care coordination, individual therapy and group therapy and counseling; each additional 30 minutes beyond the first 120 minutes (List separately in addition to code for primary procedure).*

As noted in the CY 2020 PFS final rule (84 FR 62673), if a patient's treatment involves MAT, this bundled payment would not include payment for the medication itself. Billing and payment for medications under Medicare Part B or Part D would remain unchanged.

We have received requests to expand these bundled payments to be inclusive of other SUDs, not just OUD. We agree that doing so could expand access to needed care. We are proposing to expand these bundled payments to be inclusive of all SUDs. To accomplish this, we are proposing to revise the code descriptors for HCPCS codes G2086, G2087, and G2088 by replacing "opioid use disorder" with "a substance use disorder." The payment and billing rules would otherwise remain unchanged. We note that HCPCS codes G2086, G2087, and G2088 were added to the Medicare Telehealth list in the CY 2020 PFS final rule (84 FR 62628). The proposed revised code descriptors are:

- HCPCS code G2086: *Office-based treatment for a substance use disorder, including development of the treatment plan, care coordination, individual therapy and group therapy and counseling; at least 70 minutes in the first calendar month.*

- HCPCS code G2087: *Office-based treatment for a substance use disorder, including care coordination, individual therapy and group therapy and counseling; at least 60 minutes in a subsequent calendar month.*
- HCPCS code G2088: *Office-based treatment for a substance use disorder, including care coordination, individual therapy and group therapy and counseling; each additional 30 minutes beyond the first 120 minutes (List separately in addition to code for primary procedure).*

Additionally, in the CY 2020 PFS final rule we stated that we anticipate that the services described by HCPCS codes G2086, G2087, and G2088 would often be billed by addiction specialty

practitioners, but note that these codes are not limited to any particular physician or nonphysician practitioner (NPP) specialty. We also noted that consultation was not a required condition of payment for these codes, but that consultation with a specialist could be counted toward the minutes required for billing HCPCS codes G2086, G2087, and G2088 (84 FR 62674). Although it is not a requirement for billing the code, we encourage that practitioners consult with specialists in cases where it is warranted and refer the patient to specialty care as needed.

We note that while these codes describe treatment for any SUD, information about which specific SUDs are being treated would provide valuable information that can help assess local, state, and national trends and needs. We believe it is important that the diagnosis codes listed on the claim form reflect all SUDs being treated, however, we also do not wish to add any additional burden on practitioners related to claims submission, therefore, we are seeking information on whether there are sources of data we could explore in order to provide this information. We are also seeking information on whether there are differences in the resource costs associated with furnishing services for the various SUDs, and accordingly whether there is a need for more stratified coding to describe these services. We note that in some instances, the CPT Editorial Panel has created CPT codes to replace G codes created by CMS, and that we would welcome such input on these services. We look forward to receiving public comments on this proposal in order to help evaluate whether more granular coding is needed.

(54) Initiation of Medication Assisted Treatment (MAT) in the Emergency Department (HCPCS Code GMAT1)

In the CY 2020 PFS proposed rule (84 FR 40545), we sought comment on the use of medication assisted treatment (MAT) in the emergency department (ED) setting, including initiation of MAT and the potential for either referral or follow-up care, to better understand typical practice patterns to help inform whether we should consider making separate payment for such services in future rulemaking. We note that the term MAT generally refers to treatment of OUD that includes both an FDA-approved medication for the treatment of OUD and behavioral/psychosocial treatment, but that care provided in the ED typically would include medication for the treatment of OUD and referral or linkage to primary care or a hospital-

based bridge clinic for continuation of medication and potentially other services, including counseling and other psychosocial services.

The public comments received in response to the comment solicitation were supportive of us making a proposal, several citing research that indicates improved outcomes for patients who initiate medications for the treatment of OUD in the ED. One commenter noted that by implementing this treatment regimen, practitioners can address a patient's immediate withdrawal symptoms, which allows time to coordinate care and provide a referral to substance use disorder specialists and other community resources who can appropriately carry out long-term treatment. Another commenter cited that the national rate of overdose-related visits seen in EDs nearly doubled between 2005 and 2014 and noted that hospital-based care represents a critical opportunity to initiate treatment and connect patients with OUD to care, noting that patients who receive information about drug treatment in the hospital post-overdose are more likely to seek treatment.¹² The commenter also cited a randomized clinical trial that showed that more patients were engaged in treatment 30 days after buprenorphine was initiated in the ED and coupled with a referral, compared to interventions that did not include buprenorphine.¹³ Another study found that ED induction of buprenorphine was more cost-effective than either brief intervention or referral upon discharge.¹⁴ One commenter suggested that CMS institute a G-code to address this coding gap in the short term, while a more permanent solution is pursued to address this site-of-service specification.

We are persuaded by the comments received in response to our comment solicitation that this work is not currently accounted for in the existing code set. To account for the resource costs involved with initiation of medication for the treatment of opioid use disorder in the ED and referral for follow-up care, we are proposing to

create one add-on G-code to be billed with E/M visit codes used in the ED setting. This code would include payment for assessment, referral to ongoing care, follow-up after treatment begins, and arranging access to supportive services, but we note that the drug itself would be paid separately. The proposed code is:

- HCPCS code GMAT1: *Initiation of medication for the treatment of opioid use disorder in the emergency department setting, including assessment, referral to ongoing care, and arranging access to supportive services (List separately in addition to code for primary procedure).*

To price this service, we are proposing to use a direct crosswalk to the work and direct PE inputs for HCPCS code G0397 (*Alcohol/subs interv >30 min*), which is assigned a work RVU of 1.30. We believe that the work and PE described by this crosswalk code is similar in nature and magnitude to the services described in HCPCS code GMAT1. We note that unlike the requirements for reference code, we are not proposing a required number of minutes to bill HCPCS code GMAT1. We welcome comment on this proposal and whether we should consider a different valuation to account for the resource costs involved with these services.

(55) Percutaneous Creation of an Arteriovenous Fistula (AVF) (HCPCS Code G2170 and G2171)

We received a comment in response to the CY 2020 PFS proposed rule (84 FR 40481), as well as inquiries from stakeholders, requesting that we establish new coding for the percutaneous creation of an arteriovenous fistula (AVF) used for dialysis access.

For CY 2019, based on two new technology applications for arteriovenous fistula creation, we established two new HCPCS codes to describe the two modalities of this service. Specifically, we established HCPCS code C9754 (*Creation of arteriovenous fistula, percutaneous; direct, any site, including all imaging and radiologic supervision and interpretation, when performed and secondary procedures to redirect blood flow (e.g., transluminal balloon angioplasty, coil embolization, when performed)*) and HCPCS code C9755 (*Creation of arteriovenous fistula, percutaneous using magnetic-guided arterial and venous catheters and radiofrequency energy, including flow-directing procedures (e.g., vascular coil embolization with radiologic supervision and interpretation, when*

performed) and fistulogram(s), angiography, venography, and/or ultrasound, with radiologic supervision and interpretation, when performed). The HCPCS codes were created for institutional payment systems, and thus do not allow for payment for the physician's work portion of the service. Stakeholders have stated that the lack of proper coding to report the physician work associated with these procedures is problematic, as physicians are either billing an unlisted procedure code, or are billing other CPT codes that do not appropriately reflect the resource cost associated with the physician work portion of the service. Stakeholders stated that separate coding for physician payment will allow billing when the procedures are furnished in either a physician office or an institutional setting, and be paid under the respective payment systems, as appropriate. We have recognized that the lack of appropriate coding for this critical physician's service has become an even greater burden given the PHE that was declared effective January 27, 2020 for the COVID-19 epidemic. In order to mitigate potential health risks to beneficiaries, physicians and practitioners as a result of having this procedure performed in an institutional setting, we have created two HCPCS G codes for percutaneous creation of an arteriovenous fistula (AVF). The codes are contractor priced and effective July 1, 2020. This will allow for more accurate billing and coding of a crucial physician service that could then be performed in both institutional and office settings, thus mitigating unnecessary risk to beneficiaries, physicians and practitioners caused by disease transmission. The HCPCS G codes are described as follows:

- HCPCS G code G2170 (*Percutaneous arteriovenous fistula creation (AVF), direct, any site, by tissue approximation using thermal resistance energy, and secondary procedures to redirect blood flow (e.g., transluminal balloon angioplasty, coil embolization) when performed, and includes all imaging and radiologic guidance, supervision and interpretation, when performed.*)

- HCPCS G code G2171 (*Percutaneous arteriovenous fistula creation (AVF), direct, any site, using magnetic-guided arterial and venous catheters and radiofrequency energy, including flow-directing procedures (e.g., vascular coil embolization with radiologic supervision and interpretation, when performed) and fistulogram(s), angiography, venography, and/or ultrasound, with*

radiologic supervision and interpretation, when performed.)

We are proposing to maintain contractor pricing for these HCPCS codes for CY 2021, however, we are also seeking information from stakeholders on the resource costs involved in furnishing the services described by HCPCS codes G2170 and G2171 to ensure proper payment for these physician's services, for consideration in future rulemaking. We note that under the Outpatient Prospective Payment System (OPPS) these services are assigned to APC 5193, which for CY 2020 has an assigned payment rate of \$15,938.20.

(56) Insertion, Removal, and Removal and Insertion of Implantable Interstitial Glucose Sensor System (Category III CPT Codes 0446T, 0447T, and 0448T)

Category III CPT codes 0446T, 0447T, and 0448T describe the services related to the insertion, removal, and removal and insertion of an implantable interstitial glucose sensor from subcutaneous pocket, in a subcutaneous pocket via incision. The implantable interstitial glucose sensors are part of systems that can allow real-time glucose monitoring, provides glucose trend information, and signal alerts for detection and prediction of episodes of low blood glucose (hypoglycemia) and high blood glucose (hyperglycemia). The codes that describe the implantation, removal, and removal and implantation of implantable interstitial glucose sensors are currently contractor-priced.

- Category III CPT code 0446T (Creation of subcutaneous pocket with insertion of implantable interstitial

glucose sensor, including system activation and patient training);

- Category III CPT code 0447T (Removal of implantable interstitial glucose sensor from subcutaneous pocket via incision); and
- Category III CPT code 0448T (*Removal of implantable interstitial glucose sensor with creation of subcutaneous pocket at different anatomic site and insertion of new implantable sensor, including system activation*).

In the CY 2020 PFS final rule (84 FR 62627), we requested information from stakeholders to ensure proper payment for this important physician's service and welcomed recommendations on appropriate valuation for these services to be considered in future rulemaking.

We are proposing to establish national payment amounts for the codes describing the insertion, removal, and removal and insertion of an implantable interstitial glucose sensor, effective January 1, 2021. We are proposing a work RVU of 1.14 for Category III CPT code 0446T, a work RVU of 1.34 for Category III CPT code 0447T, and work RVU of 1.91 for Category III CPT code 0448T based on a crosswalk to the work RVUs, work time, and direct PE inputs of CPT codes 11981 (*Insertion, non-biodegradable drug delivery implant*), 11982 (*Removal, non-biodegradable drug delivery implant*), and 11983 (*Removal with reinsertion, non-biodegradable drug delivery implant*), respectively, due to the similar clinical nature of these procedures.

We are also proposing to include one supply and one equipment item to the direct PE inputs crosswalked from CPT codes 11981–11983. We are adding a new “implantable interstitial glucose sensor” (supply code SD334) for

Category III CPT codes 0446T and 0448T to include the supply costs of the “implantable interstitial glucose sensor” (supply code SD334) included in these procedures, which we propose to price at \$1,500.00, based on information we received from stakeholders. We are also proposing to include the smart transmitter associated with the use of this implantable interstitial glucose sensor. We propose to price the smart transmitter involved in furnishing this service by using a similar equipment item finalized in the CY 2019 PFS final rule (83 FR 59624) as a proxy, the “heart failure patient physiologic monitoring equipment package” (EQ392); the EQ392 has a price of \$1,000.00, and is similarly used for long term remote monitoring of patients. We are proposing to use the EQ392 equipment as a proxy for the valuation of the smart transmitter associated with the implantable interstitial glucose sensor, to which we are assigning a time of 25,920 minutes for EQ392 in Category III CPT codes 0446T and 0448T. This time is derived from 60 minutes per hour times 24 hours per day times 90 days per billing quarter, divided by 1 minute of equipment use out of every 5 minutes of time. We are not including either the implantable interstitial glucose sensor or the EQ392 equipment proxy for Category III CPT code 0447T, as it describes only a removal procedure.

We are seeking comment on the proposed values for these Category III CPT codes (0446T, 0447T, and 0448T), and we are seeking comment on the appropriateness and accuracy of the proposed work RVUs, work times, and direct PE inputs.

BILLING CODE 4120-01-P

TABLE 24: Proposed CY 2021 Work RVUs for New, Revised, and Potentially Misvalued Codes

HCPCS	Descriptor	Current work RVU	RUC work RVU	CMS work RVU	CMS time refinement
0446T	Creation of subcutaneous pocket with insertion of implantable interstitial glucose sensor, including system activation and patient training	0.00	-	1.14	Yes
0447T	Removal of implantable interstitial glucose sensor from subcutaneous pocket via incision	0.00	-	1.34	Yes
0448T	Removal of implantable interstitial glucose sensor with creation of subcutaneous pocket at different anatomic site and insertion of new implantable sensor, including system activation	0.00	-	1.91	Yes
10004	Fine needle aspiration biopsy, without imaging guidance; each additional	0.80	0.80	0.80	No
10005	Fine needle aspiration biopsy, including ultrasound guidance; first lesion	1.46	1.63	1.46	No
10006	Fine needle aspiration biopsy, including ultrasound guidance; each additional lesion	1.00	1.00	1.00	No
10007	Fine needle aspiration biopsy, including fluoroscopic guidance; first lesion	1.81	1.81	1.81	No
10008	Fine needle aspiration biopsy, including fluoroscopic guidance; each additional lesion	1.18	1.18	1.18	No
10009	Fine needle aspiration biopsy, including CT guidance; first lesion	2.26	2.43	2.26	No
10010	Fine needle aspiration biopsy, including CT guidance; each additional lesion	1.65	1.65	1.65	No
10011	Fine needle aspiration biopsy, including MR guidance; first lesion	C	C	C	No
10012	Fine needle aspiration biopsy, including MR guidance; each additional lesion	C	C	C	No
10021	Fine needle aspiration biopsy, without imaging guidance; first lesion	1.03	1.20	1.03	No
11960	Insertion of tissue expander(s) for other than breast, including subsequent expansion	11.49	12.40	11.49	No
11970	Replacement of tissue expander with permanent implant	8.01	8.01	7.49	No
11971	Removal of tissue expander without insertion of implant	3.41	7.02	6.50	No
19307	Mastectomy, modified radical, including axillary lymph nodes, with or without pectoralis minor muscle, but excluding pectoralis major muscle	18.23	17.99	17.99	No
19316	Mastopexy	11.09	11.09	11.09	No
19318	Breast reduction	16.03	16.03	16.03	No
19325	Breast augmentation with implant	8.64	8.64	8.12	No
19328	Removal of intact breast implant	6.48	7.44	6.92	No
19330	Removal of ruptured breast implant, including implant contents (eg, saline, silicone gel)	8.54	9.00	9.00	No
19340	Insertion of breast implant on same day of mastectomy (ie, immediate)	13.99	11.00	10.48	No
19342	Insertion or replacement of implant on separate day from mastectomy	12.63	11.00	10.48	No

HCPCS	Descriptor	Current work RVU	RUC work RVU	CMS work RVU	CMS time refinement
19357	Tissue expander placement in breast reconstruction, including subsequent expansion(s)	18.50	15.36	14.84	No
19370	Revision of peri-implant capsule, breast, including capsulotomy, capsulorrhaphy, and/or partial capsulectomy	9.17	10.00	9.17	No
19371	Peri-implant capsulectomy, breast, complete, including removal of all intra-capsular contents	10.62	10.81	9.98	No
19380	Revision of reconstructed breast (eg, significant removal of tissue, re-advancement and/or re-inset of flaps in autologous reconstruction or significant capsular revision combined with soft tissue excision in implant-based reconstruction)	10.41	12.00	11.17	No
27130	Arthroplasty, acetabular and proximal femoral prosthetic replacement (total hip arthroplasty), with or without autograft or allograft	20.72	19.60	19.60	No
27447	Arthroplasty, knee, condyle and plateau; medial AND lateral compartments with or without patella resurfacing (total knee arthroplasty)	20.72	19.60	19.60	No
28820	Amputation, toe; metatarsophalangeal joint	5.82	4.10	3.51	No
28825	Amputation, toe; interphalangeal joint	5.37	4.00	3.41	No
29822	Arthroscopy, shoulder, surgical; debridement, limited, 1 or 2 discrete structures (eg, humeral bone, humeral articular cartilage, glenoid bone, glenoid articular cartilage, biceps tendon, biceps anchor complex, labrum, articular capsule, articular side of the rotator cuff, bursal side of the rotator cuff, subacromial bursa, foreign body[ies])	7.60	7.03	7.03	No
29823	Arthroscopy, shoulder, surgical; debridement, extensive, 3 or more discrete structures (eg, humeral bone, humeral articular cartilage, glenoid bone, glenoid articular cartilage, biceps tendon, biceps anchor complex, labrum, articular capsule, articular side of the rotator cuff, bursal side of the rotator cuff, subacromial bursa, foreign body[ies])	8.36	7.98	7.98	No
30XX0	Repair of nasal valve collapse with subcutaneous/submucosal lateral wall implant(s)	NEW	2.80	2.80	No
324X0	Core needle biopsy, lung or mediastinum, percutaneous, including imaging guidance, when performed	NEW	4.00	3.18	No
33990	Insertion of ventricular assist device, percutaneous, including radiological supervision and interpretation; left heart, arterial access only	7.90	6.75	6.75	No
33991	Insertion of ventricular assist device, percutaneous, including radiological supervision and interpretation; left heart, both arterial and venous access, with transseptal	11.63	8.84	8.84	No

HCPCS	Descriptor	Current work RVU	RUC work RVU	CMS work RVU	CMS time refinement
	puncture				
33992	Removal of percutaneous left heart ventricular assist device, arterial or arterial and venous cannula(s), separate and distinct session from insertion	3.75	3.55	3.55	No
33993	Repositioning of percutaneous right or left heart ventricular assist device, with imaging guidance, at separate and distinct session from insertion	3.26	3.10	3.10	No
339X1	Insertion of ventricular assist device, percutaneous, including radiological supervision and interpretation; right heart, venous access only	NEW	6.75	6.75	No
339X2	Removal of percutaneous right heart ventricular assist device, venous cannula, separate and distinct session from insertion	NEW	3.00	3.00	No
33XX0	Transcatheter atrial septostomy (TAS) for congenital cardiac anomalies to create effective atrial flow, including all imaging guidance by the proceduralist, when performed, any method (eg, Rashkind, Sang-Park, balloon, cutting balloon, blade)	NEW	14.00	14.00	No
33XX1	Transcatheter intracardiac shunt (TIS) creation by stent placement for congenital cardiac anomalies to establish effective intracardiac flow, all imaging guidance by the proceduralist when performed, left and right heart diagnostic cardiac catheterization for congenital cardiac anomalies, and target zone angioplasty, when performed (eg, atrial septum, Fontan fenestration, right ventricular outflow tract, Mustard/Senning/Warden baffles); initial intracardiac shunt	NEW	20.00	20.00	No
33XX2	Transcatheter intracardiac shunt (TIS) creation by stent placement for congenital cardiac anomalies to establish effective intracardiac flow, all imaging guidance by the proceduralist when performed, left and right heart diagnostic cardiac catheterization for congenital cardiac anomalies, and target zone angioplasty, when performed (eg, atrial septum, Fontan fenestration, right ventricular outflow tract, Mustard/Senning/Warden baffles); each additional intracardiac shunt location	NEW	10.50	8.00	No
43239	Esophagogastroduodenoscopy, flexible, transoral; with biopsy, single or multiple	2.39	2.39	2.39	No
45385	Colonoscopy, flexible; with removal of tumor(s), polyp(s), or other lesion(s) by snare technique	4.57	4.57	4.57	No

BILLING CODE 4120-01-C

I. Modifications Related to Medicare Coverage for Opioid Use Disorder (OUD) Treatment Services Furnished by Opioid Treatment Programs (OTPs)

1. Background

Section 2005 of the Substance Use-Disorder Prevention that Promotes Opioid Recovery and Treatment for Patients and Communities (SUPPORT) Act established a new Medicare Part B benefit category for OUD treatment services furnished by OTPs during an episode of care beginning on or after January 1, 2020. In the CY 2020 PFS final rule (84 FR 62630 through 62677),

we implemented coverage requirements and established new codes describing the bundled payments for episodes of care for the treatment of OUD furnished by OTPs. We established new codes for and finalized bundled payments for weekly episodes of care that include methadone, oral buprenorphine, implantable buprenorphine, injectable buprenorphine or naltrexone, and non-drug episodes of care, as well as add-on codes for intake and periodic assessments, take-home dosages for methadone and oral buprenorphine, and additional counseling. We are monitoring Medicare enrollment by OTPs and utilization of the new benefit

to ensure that Medicare beneficiaries have appropriate access to care. For CY 2021, we are proposing several refinements and seek to provide clarification on certain issues that stakeholders have brought to our attention.

2. Definition of OUD Treatment Services

In the CY 2020 PFS final rule (84 FR 62631 through 62635), we finalized a definition of “OUD treatment services” that reflects the statutory definition in section 1861(jjj)(1)(A) of the Act, which defines covered OUD treatment services to include oral, injected, and implanted opioid agonist and antagonist treatment

medications approved by the Food and Drug Administration (FDA) under section 505 of the FFDCA for use in the treatment of OUD. There are three drugs currently approved by FDA for the treatment of opioid dependence: Buprenorphine; methadone; and naltrexone. In the CY 2020 PFS final rule, we noted that we had received comments supporting the proposed definition of OUD treatment services but also requesting that CMS include naloxone to treat opioid overdose in that definition as a medication used in treatment of OUD. Although we did not finalize including naloxone in the definition of OUD treatment services in that final rule, we indicated that as we continue to work on refining this new Medicare benefit, we would consider including additional drugs in the definition of OUD treatment services under our discretionary authority in section 1861(jjj)(1)(F) of the Act to include other items and services the Secretary determines are appropriate. After further consideration, we have determined that it is appropriate to propose to extend the definition of OUD treatment services to include opioid antagonist medications, such as naloxone, that are approved by FDA under section 505 of the FFDCA for emergency treatment of opioid overdose.

Naloxone is an opioid antagonist indicated for the emergency treatment of known or suspected opioid overdose, as manifested by respiratory and/or central nervous system depression.^{15 16} Naloxone should be given to a person who shows signs of an opioid overdose or when an overdose is suspected. FDA-approved naloxone products for overdose reversal are effective in reversing opioid overdose, including fentanyl-involved opioid overdoses, although overdoses involving potent (for example, fentanyl) or large quantities of opioids may require higher-than-normal doses of naloxone or repeated administration to reverse overdose.¹⁷

Naloxone attaches to opioid receptors and reverses and blocks the effects of other opioids.¹⁸ FDA has approved injectable naloxone, intranasal naloxone, and naloxone auto-injector as emergency treatments for opioid overdose. The nasal spray is a prefilled, needle-free device that requires no assembly and can deliver a single dose

into each nostril with two sprays. The auto-injector is injected into the outer thigh to deliver naloxone to the muscle (intramuscular). These forms of naloxone can easily be administered by persons who do not have medical training and they may be prescribed to a patient who is receiving medication-assisted treatment (MAT) for OUD, especially if the patient is considered to be at risk for opioid overdose.¹⁹ Both the nasal spray and naloxone auto-injector are packaged in a carton containing two doses to allow for repeat dosing if needed.^{20 21}

The U.S. Surgeon General Jerome M. Adams, M.D., M.P.H. has released a public health advisory stating that, “Research shows that when naloxone and overdose education are available to community members, overdose deaths decrease in those communities. Therefore, increasing the availability and targeted distribution of naloxone is a critical component of our efforts to reduce opioid-related overdose deaths and, when combined with the availability of effective treatment, to ending the opioid epidemic.”²²

We are proposing to add naloxone to the definition of OUD treatment services in order to increase access to this important emergency treatment and to allow OTPs to be paid under Medicare for dispensing naloxone to Medicare beneficiaries who are receiving other OUD treatment services from the OTP. Under this proposal, beneficiaries receiving OUD treatment services from the OTP would be able to receive naloxone from the OTP under the OUD treatment services benefit, to the extent it is medically reasonable and necessary as part of their OUD treatment. We note that naloxone is already covered under Medicare Part D. In 2017, 72.5 percent of all Medicare beneficiaries were enrolled in Medicare Part D plans.²³ However, we believe allowing beneficiaries to access this important emergency treatment at the OTP may help decrease barriers to access because there currently are no copayments for services furnished by OTPs and beneficiaries would not need to visit a separate provider to access naloxone.

Accordingly, to align with efforts to end the opioid epidemic, under the

discretionary authority in section 1861(jjj)(1)(F) of the Act, we propose to amend the definition of OUD treatment services at § 410.67(b) by adding § 410.67(b)(8) to include opioid antagonist medications that are approved by FDA under section 505 of the FFDCA for the emergency treatment of known or suspected opioid overdose. We are proposing to amend the definition of OUD treatment services under the discretionary authority in section 1861(jjj)(1)(F) of the Act rather than the authority under section 1861(jjj)(1)(A) of the Act because section 1861(jjj)(1)(A) of the Act pertains to opioid agonist and antagonist treatment medications (including oral, injected, or implanted versions) that are approved by FDA under section 505 of the FFDCA for use in the treatment of opioid use disorder. Naloxone is not one of the three drugs currently approved by FDA for the treatment of opioid dependence (buprenorphine, methadone, and naltrexone); and, as a result, we do not believe naloxone fits the criteria of section 1861(jjj)(1)(A) of the Act. We seek comment on our proposal to expand the definition of OUD treatment services.

Additionally, we agree with the public health advisory quoted previously that community education related to overdose prevention is needed to address the opioid crisis. We believe that prevention and community education efforts would increase awareness of treatment options and could play a role in decreasing opioid overdose deaths. We welcome comments on whether the definition of OUD treatment services should be further revised to include overdose education. Additionally, we welcome comments on whether payment for providing overdose education to the beneficiary and/or the beneficiary’s family or partner should be considered to be included in the current weekly bundled payments for episodes of care or whether we should consider establishing an add-on payment for education related to overdose prevention when such services are furnished by OTPs. We are specifically seeking information related to what inputs we might consider in developing the payment rate for such a service, such as payment amounts for similar services under the PFS, if we were to include this type of education as part of the proposed new add-on codes for naloxone discussed later in this section (HCPCS codes GOTP1 and GOTP2). For example, in order to establish a payment rate for education related to overdose prevention for the beneficiary and/or

beneficiary's family or partner, we could consider a crosswalk to the Medicare payment rate for CPT code 96161 (*Administration of caregiver-focused health risk assessment instrument (e.g., depression inventory) for the benefit of the patient, with scoring and documentation, per standardized instrument*). The current non-facility payment rate under the PFS for CPT code 96161 is \$2.53.

a. Proposed Adjustment Made to the Bundled Payments for OUD Treatment Services

Consistent with our proposal to expand the definition of OUD treatment services to include opioid antagonist medications indicated for the emergency treatment of known or suspected opioid overdose, we believe it is appropriate to propose changes to the payment rates for the bundled payments to reflect the costs of these medications. Therefore, we propose to adjust the bundled payment rates through the use of add-on codes to account for instances in which OTPs provide Medicare beneficiaries with naloxone. We believe that beneficiaries receiving naloxone will need a supply at the start of treatment and would only require refills later if the supply is used in an emergency. As a result, we would not expect naloxone to be provided weekly to all patients, but only on an as-needed basis. Accordingly, we believe that making payment for naloxone through the use of an add-on code is the most accurate approach to pricing rather than including the costs of these medications as part of the bundled payment rates for all episodes of care.

We propose to adopt the following add-on G codes:

- *HCPCS code GOTP1*: Take-home supply of nasal naloxone (provision of the services by a Medicare-enrolled Opioid Treatment Program); List separately in addition to code for primary procedure.
- *HCPCS code GOTP2*: Take-home supply of auto-injector naloxone (provision of the services by a Medicare-enrolled Opioid Treatment Program); List separately in addition to code for primary procedure.

We are proposing to adopt an approach similar to the pricing

methodology that was used to price the drug component of the bundled payments in the CY 2020 PFS final rule to determine the payment rate for these proposed new add-on codes for naloxone. In the CY 2020 PFS proposed rule (84 FR 40530), we explained that payment structures that are closely tailored to the provider's actual acquisition cost reduce the likelihood that a drug will be chosen primarily for a reason that is unrelated to the clinical care of the patient, such as the drug's profit margin for a provider. Therefore, we believe it is appropriate to use a similar methodology to determine the payment rates for the add-on codes for naloxone as we adopted in the CY 2020 PFS final rule for purposes of determining the payment rate for the drug component of the bundled payments because it provides our best estimate of an OTP's cost in dispensing naloxone.

In the CY 2020 PFS final rule, we adopted a policy under which we apply the methodology set forth in section 1847A of the Act to determine the payment amount for the drug component of the bundled payment for an episode of care that includes implantable or injectable medications, except that the payment amount shall be 100 percent of the average sales price (ASP), if ASP is used. For oral medications, the payment for the drug component is based on 100 percent of ASP, if ASP data are available. However, if ASP is not available, the payment amount for methadone will be based on the TRICARE rate and the payment amount for oral buprenorphine is calculated using the national average drug acquisition cost (NADAC).

Drug Pricing for Nasal Naloxone

Consistent with the approach that we adopted for pricing the drug component of the weekly bundled payments, we are proposing to price the add-on code describing the take home supply of nasal naloxone, HCPCS code GOTP1, using the same methodology we previously adopted for pricing the drug component of an episode of care that include implantable or injectable medications. Accordingly, the payment methodology would be based upon the methodology set forth in section 1847A

of the Act, except that payment amounts determined based on ASP and wholesale acquisition cost (WAC) would not include any add-on percentages. We recognize that nasal naloxone is not an oral, implantable or injectable medication; however, ASP data are available. As noted in the CY 2020 PFS final rule (84 FR 62653), we believe using ASP provides a transparent and public benchmark for manufacturers' pricing as it reflects the manufacturers' actual sales prices to all purchasers (with limited exceptions as noted in section 1847A(c)(2) of the Act) and is the only pricing methodology that includes off-invoice rebates and discounts as described in section 1847A(c)(3) of the Act. Therefore, we believe ASP to be the most market-based approach to set drug prices. We seek public comment on our proposal to use ASP+0 to price the add-on payment for nasal naloxone and other potential sources of pricing data for nasal naloxone either generally or specifically with respect to acquisition by OTPs.

Drug Pricing for Auto-Injector Naloxone

We are proposing to price the add-on code describing the take-home supply of auto-injector naloxone, HCPCS code GOTP2, using the lowest pricing available (the lower of ASP + 0, WAC + 0, or NADAC). Currently, there is no ASP or NADAC reported or calculated for auto-injector naloxone. Accordingly, we propose to use WAC + 0 to determine the pricing for the add-on payment for auto-injector naloxone. We believe 100 percent of WAC is a closer estimate of the actual acquisition cost for OTPs compared to WAC with an add-on percentage because, as defined in section 1847A(c)(6)(B) of the Act, WAC does not include prompt pay discounts, rebates or reductions in price. Thus, there should be no need to pay an add-on percentage to ensure OTPs are reimbursed for their acquisition costs for auto-injector naloxone. However, in the future, we believe using the lowest pricing available for auto-injector naloxone may be most appropriate, because if ASP and/or NADAC pricing were to become available for auto-injector naloxone, they would be more reflective of actual costs than a list price.

We note that auto-injector naloxone is available in both a generic and brand name version. We considered comparing the Medicare Part D utilization for each formulation to determine the frequency with which the generic and brand name versions might be dispensed by OTPs. However, because the generic auto-injector naloxone is rather new to the marketplace,²⁴ there are limited utilization data available for the generic product. Based on historical information reflecting a trend of increased generic utilization uptake,²⁵ we believe that in most cases where the auto-injector naloxone is prescribed and dispensed by OTPs to beneficiaries, it will be the generic formulation of the product. Therefore, we believe using the price for the generic formulation is a reasonable approach to pricing the proposed add-on code for auto-injector naloxone and will ensure that beneficiaries who need this drug as part of their treatment for OUD have access to it and that OTPs receive a reasonable payment for dispensing the drug. Accordingly, we are proposing to use the price of the generic formulation, determined as WAC + 0, to pay for auto-injector naloxone when the drug is provided by an OTP as part of an episode of care. We seek comment on our proposed pricing methodology to pay for auto-injector naloxone and other potential sources of pricing data for auto-injector naloxone either generally or specifically with respect to acquisition by OTPs.

Frequency Limit

We note that Medicare Part D allows prescription drug plans to place quantity limits (QL) on most drugs, including on naloxone. While most Part D plans do not limit the amount of naloxone a beneficiary is able to receive in a given month, when they do, they most frequently allow a plan enrollee a maximum of 4 units per 30 days (2 boxes of 2 units). In the current contract year (2020) only 22 percent of Medicare Part D formularies apply a QL to naloxone (115/535 formularies), while for the 2021 contract year only 19 percent of Part D formularies plan to apply a QL to this product (106/564

formularies). However, a review of Part D claims data shows that beneficiaries who use naloxone most frequently use only one box (2 units) within a 30-day period even though nearly all plans would have permitted additional doses. Under TRICARE, auto-injector naloxone is covered for a maximum quantity of one carton at retail network pharmacies for up to a 30-day supply.²⁶ We believe it would be appropriate to apply a similar limit on the frequency of the add-on payment for naloxone dispensed by OTPs. We believe that applying a frequency limit would assist in enhancing patient safety and discourage misuse, waste and abuse. Furthermore, we believe such a limitation is reasonable because there are other services that OTPs should already be performing, and which are already included in the weekly bundled payments for episodes of care, such as counseling and individual and group therapy, that should limit the need for this emergency treatment. However, we do not want to limit access to naloxone when it is a medically reasonable and necessary part of the treatment for OUD. Therefore, we propose to limit Medicare payment to OTPs for naloxone to one add-on code (HCPCS code G0TP1 or G0TP2) every 30 days to the extent that it is medically reasonable and necessary. We seek comment on whether this proposed limit is reasonable and whether special circumstances may arise under which more frequent payment is medically reasonable and necessary and the types of circumstances that should qualify for more frequent payment. However, we note that we also expect OTPs and their treating practitioners will use their clinical judgment as to whether there may be cases in which a referral to a higher level of care may be needed for

some beneficiaries in order to reduce the risk of overdose and the need for more frequent emergency treatment. We propose to add § 410.67(d)(4)(i)(E) to describe payment for a take-home supply of opioid antagonist medications that are approved by FDA under section 505 of the FDCA for the emergency treatment of known or suspected opioid overdose.

We invite public comments on the proposed pricing for nasal naloxone and auto-injector naloxone. We also seek comment on our proposal to limit payment for the proposed add-on codes for take-home supplies of these medications to once every 30 days to the extent that it is medically reasonable and necessary.

Additionally, we seek comment on whether we should consider creating a code and establishing an add-on payment for injectable naloxone. We note that all three forms of naloxone (injectable, auto-injector, and nasal spray) are FDA-approved and may be considered as options for community distribution and use by individuals with or without medical training to stop or reverse the effects of an opioid overdose.²⁷ If we were to establish an add-on payment for injectable naloxone, we would consider using the same methodology we adopted for pricing the drug component of an episode of care that includes implantable or injectable medications, as described in § 410.67(d)(2)(i)(A).

Table 30 details the proposed coding and summarizes the proposed payment amounts for nasal naloxone and auto-injector naloxone.

²⁴ <https://kaleo.com/in-the-news/authorized-generic-for-evzio-naloxone-hcl-injection-to-be-available-at-a-reduced-list-price-of-178/>.

²⁵ In 2015, approximately 87 percent of prescriptions filled under Part D were for generic drugs, compared with 61 percent in 2007. http://www.medpac.gov/docs/default-source/reports/mar18_medpac_ch14_sec.pdf.

²⁶ <https://www.express-scripts.com/static/formularySearch/2.9.6/#/formularySearch/drugSearch>.

²⁷ <https://www.fda.gov/news-events/press-announcements/statement-continued-efforts-increase-availability-all-forms-naloxone-help-reduce-opioid-overdose>.

TABLE 30: OTP Code Descriptors and Proposed Approximate Payment Amounts*

HCPCS	Descriptor	Total Payment
GOTP1	Take-home supply of nasal naloxone (provision of the services by a Medicare-enrolled Opioid Treatment Program); List separately in addition to code for primary procedure.	\$89.63
GOTP2	Take-home supply of auto-injector naloxone (provision of the services by a Medicare-enrolled Opioid Treatment Program); List separately in addition to code for primary procedure.	\$178

* Drug pricing subject to change pending additional data. Nasal naloxone drug costs are calculated using ASP data, auto injector naloxone drug costs are calculated using the lowest pricing available (the lower of ASP + 0, WAC + 0, or NADAC), the proposed price used is the WAC + 0 for the generic auto-injector naloxone. The estimated payment amounts in Table 30 are based on data files posted at the time of the drafting of this proposed rule. We will develop the final pricing for CY 2021 using the most recent data files available at the drafting of the CY 2021 PFS final rule.

Duplicative Payment

Section 1834(w)(1) of the Act, added by section 2005(c) of the SUPPORT Act, requires the Secretary to ensure, as determined appropriate by the Secretary, that no duplicative payments are made under Part B or Part D for items and services furnished by an OTP. We note that under our proposal, OTPs would be able to provide naloxone to Medicare beneficiaries and bill for it as an add-on to the bundled payment. Consistent with § 410.67(e), the beneficiary's copayment amount would remain zero. We also realize that naloxone may also be appropriately available to beneficiaries through other Medicare benefits, including, for example, Medicare Part D, under which the beneficiary would be responsible for the applicable cost sharing. As discussed in the CY 2020 PFS final rule (84 FR 62664) and codified at § 410.67(d)(5), we define duplicative payment to involve only those circumstances where medications that are delivered, administered or dispensed to a beneficiary are paid as part of the OTP bundled payment, and where the delivery, administration or dispensing of the same medication (that is, same drug, dosage and formulation) is also separately paid under Medicare Part B or Part D for the same beneficiary on the same date of service. Because we are proposing to pay for naloxone as an add-on to the weekly bundled payment, any payment to an OTP for naloxone would be duplicative if the same medication is separately paid under Medicare Part B or Part D for the same beneficiary on the same date of service. Consistent with § 410.67(d)(5), CMS would recoup any duplicative payment made to an OTP for naloxone.

Additionally, we understand that some OTPs negotiate arrangements whereby community pharmacies supply

MAT-related medications to OTPs. However, as we stated in the CY 2020 PFS final rule, if the OTP provides reasonable and necessary MAT-related medications as part of an episode of care, we would expect the OTP to take measures to ensure that there is no claim for payment for these drugs other than as part of the OTP bundled payment. Thus, naloxone billed by an OTP as an add-on to the bundled payment should not be reported to or paid under a Part D plan. We expect that OTPs will take reasonable steps to prevent duplicative payment for naloxone furnished under their care by ensuring it is not reported or billed under a different Medicare benefit. We intend to monitor for duplicative payments, and would take appropriate action as needed when and if such duplicative payments are identified.

3. WAC Pricing

Section 1834(w) of the Act gives the Secretary significant discretion to establish bundled payment rates for OUD treatment services. In the CY 2020 PFS final rule, we finalized a payment methodology for the drug component of the bundled payment rates for OUD treatment services, under which we use the payment methodology set forth in section 1847A of the Act (which bases most payment on ASP) to set the payment rates for implantable and injectable drugs and limited the payment amount for these drugs to 100 percent of the volume-weighted ASP for a drug category or code, if ASP is used. We codified this payment methodology at § 410.67(d)(2)(i)(A).

Section 1847A of the Act provides for the use of other payment methodologies when ASP is not available, including WAC and average manufacturer price (AMP). In the CY 2020 PFS final rule, we limited payments to OTPs for injectable and implantable drugs to 100

percent of ASP, but did not otherwise diverge from the payment methodology that would apply under section 1847A of the Act. In this proposed rule, we believe that it is necessary to amend the OTP drug pricing methodology in order to limit WAC-based payments to 100 percent of WAC. As discussed previously, we are proposing to use WAC pricing to determine the payment rate for the add-on code for the auto-injector naloxone. Although none of the drugs that are currently included in the drug component of an episode of care is currently paid based on WAC, we believe it is possible that we may use WAC to determine the payment for the drug component of an episode of care in the future, and want to establish, in advance, the methodology that would apply for purposes of determining the payment rate.

As authorized under section 1847A of the Act, some Part B drugs are paid based on WAC. For example, for single source drugs, payment is 106 percent of the lesser of WAC or ASP (section 1847A(b)(4) of the Act), and in cases where ASP is unavailable during the first quarter of sales (section 1847A(c)(4) of the Act), 103 percent of WAC is used. Additionally, there are some instances where drugs lack ASP data for reasons other than being new, for example, in cases where the manufacturer had no sales in a reporting quarter. In those situations, the Medicare payment method varies, but in some cases, the payment may be 106 percent of the WAC.²⁸ As we stated in the CY 2020 PFS final rule (84 FR 62651), payment structures that are closely tailored to the provider's actual acquisition cost reduce the likelihood that a drug will be chosen primarily for a reason that is unrelated

²⁸ <http://www.medpac.gov/blog/requiring-reporting-of-sales-price-data/2019/06/14/payment-for-part-b-drugs>.

to the clinical care of the patient, such as the drug's profit margin for a provider. The WAC is defined in section 1847A(c)(6)(B) as the manufacturer's list price for a drug to wholesalers or direct purchasers in the United States, not including prompt pay or other discounts, rebates, or reductions in price. A drug's WAC is ultimately controlled by the manufacturer. Unlike ASP, a drug's WAC does not incorporate prompt-pay or other discounts. If discounts are available on drugs reimbursed by Medicare at 106 percent of WAC, then Medicare is paying more for drugs than it otherwise would under the ASP-based formula.²⁹ Therefore, consistent with our existing policy to set the payment amount at 100 percent of the ASP, if ASP is used to determine the payment for the drug component of an episode of care, we are proposing that when WAC-based pricing is used, the payment amount shall be WAC + 0. We are proposing to amend the provision at § 410.67(d)(2)(i)(A) to reflect this limitation.

We welcome comments on this proposed alternative pricing methodology when the payment for an implantable or injectable medication included in the drug component of an episode of care is determined using the methodology set forth in section 1847A of the Act, and ASP pricing data are not available.

4. Billing and Payment Policies

a. Institutional Claim Forms

We have received several requests to allow OTPs to bill on an institutional claim form. We were informed by representatives from the state of New York that all OTPs in New York state bill on institutional claim forms, not just those that are part of a hospital system. Given the public health need related to the opioid epidemic, we are exploring claims processing flexibilities requested by some OTPs that would allow them to bill services on institutional claims. See also section III.B. of this proposed rule, OTP Provider Enrollment Regulation Updates for Institutional Claim Submissions, for a discussion related to OTP enrollment as it relates to institutional claims. There would be no differences in coverage or payment between services billed on the institutional claim form versus the professional claim form. We note that the National Uniform Billing Committee (NUBC) approved a new Type Of Bill (087x) for Freestanding Non-residential Opioid Treatment Program provider billing, as well as a new condition code

(89) for Opioid Treatment Program/ Indicates claim for opioid treatment program services, to be used on hospital based OTP claims (TOB 013x and 085x). We are seeking information on the reasons this flexibility is necessary for OTPs, and will address any changes to provider billing policies in subsequent claims processing instructions.

b. Periodic Assessments

In the CY 2020 PFS final rule (84 FR 62634), we stated that we understood that intake activities and periodic assessments are integral services for the establishment and maintenance of OUD treatment for a beneficiary at an OTP, and therefore, we believed it was reasonable to include these services in the definition of OUD treatment services. Accordingly, we finalized a definition of OUD treatment services in § 410.67(b) that reflected the required intake activities and periodic assessments. We stated it was our understanding that these services are furnished much less frequently than the other services included in the weekly bundled payments; therefore, we created add-on G codes to describe these services, which would allow us to make more targeted payments for these services. We noted that the add-on code describing intake activities should only be billed for new patients (that is, patients starting treatment at the OTP). We agreed with the commenters that the level 4 office/outpatient E/M visits for new and established patients are a good approximation of the services provided at intake and during periodic assessments at OTPs based on the expected acuity of patients with OUD receiving services at OTPs, who are likely to have multiple co-morbidities and present with problems that are of moderate to high severity and require medical decision making of moderate complexity. The finalized add-on codes are HCPCS code G2076 (*Intake activities; including initial medical examination that is a complete, fully documented physical evaluation and initial assessment conducted by a program physician or a primary care physician, or an authorized health care professional under the supervision of a program physician or qualified personnel that includes preparation of a treatment plan that includes the patient's short-term goals and the tasks the patient must perform to complete the short-term goals; the patient's requirements for education, vocational rehabilitation, and employment; and the medical, psycho-social, economic, legal, or other supportive services that a patient needs, conducted by qualified personnel*) and HCPCS code G2077

(*Periodic assessment; assessing periodically by qualified personnel to determine the most appropriate combination of services and treatment*). The medical services described by these add-on codes can be furnished by a program physician, a primary care physician or an authorized healthcare professional under the supervision of a program physician or qualified personnel such as nurse practitioners (NPs) and physician assistants (PAs). The other assessments, including psychosocial assessments can be furnished by practitioners who are eligible to do so under state law and their scope of licensure. We noted that to bill for the add-on code, the services need to be medically reasonable and necessary and that OTPs should document the rationale for billing the add-on code in the patient's medical record (84 FR 62647).

We have received inquiries from stakeholders related to what activities would qualify to bill the add-on code for periodic assessments, HCPCS code G2077. In the CY 2020 PFS final rule (84 FR 62647), we noted that the add-on code describing periodic assessments can be billed for each periodic assessment performed for patients that require multiple assessments during an episode of care, such as patients who are pregnant or postpartum. We noted that in order to bill for the add-on code, the services would need to be medically reasonable and necessary and that OTPs should document the rationale for billing the add-on code in the patient's medical record. Based on our understanding of the typical resources costs involved in furnishing periodic assessments, we priced HCPCS code G2077 based on a crosswalk to a level 4 office/outpatient E/M visit. Consistent with our understanding of the expected acuity of patients with OUD receiving services at OTPs, including the likelihood of the patient having multiple co-morbidities and presenting with problems that are of moderate to high severity and requiring medical decision making of moderate complexity, as well as the associated payment rate assigned to this code, we believe it is important for the clinician to be able to visually assess the patient as part of any periodic assessment. Therefore, for CY 2021, we are proposing that in order to bill for HCPCS code G2077, a face-to-face medical exam or biopsychosocial assessment would need to have been performed. Accordingly, we are proposing to amend the definition of periodic assessment in § 410.67(b)(7) to

²⁹ http://medpac.gov/docs/default-source/reports/jun17_ch2.pdf.

provide that the definition is limited to a face-to-face encounter.

Additionally, we note that in the May 8th COVID-19 IFC, CMS revised § 410.67(b)(7) on an interim final basis to allow periodic assessments to be furnished during the PHE for the COVID-19 pandemic via two-way interactive audio-video communication technology and, in cases where beneficiaries do not have access to two-way audio-video communication technology, to permit the periodic assessments to be furnished using audio-only telephone calls rather than via two-way interactive audio-video communication technology, provided all other applicable requirements are met. We believe that allowing periodic assessments to be furnished via two-way interactive audio-video communication technology beyond the conclusion of the PHE for the COVID-19 pandemic would help to expand access to care for patients who may have a difficult time getting to the OTP in person. Therefore, in this proposed rule, we are proposing to revise § 410.67(b)(7) to allow periodic assessments to be furnished via two-way interactive audio-video communication technology, provided all other applicable requirements are met. We note that we are currently permitting the use of audio-only telephone calls to furnish these services during the PHE for the COVID-19 pandemic, because we believe it is important to maintain access to these services while the public is following infection control guidelines to stay at home and practice social distancing, and not all beneficiaries receiving OUD treatment services from OTPs may have access to interactive audio-video communication technology. However, we do not believe this flexibility will be needed in order to ensure access after the PHE ends. Therefore, under this proposal, the flexibility to use audio-only telephone services to furnish periodic assessments would not be permitted once the PHE for the COVID-19 pandemic has ended. We note that we would consider payment for any periodic assessment-related services furnished via audio-only telephone calls to be included in the bundled payment, but that audio-only telephone services would not qualify for billing HCPCS code G2077 after the end of the PHE for the COVID-19 pandemic. We are seeking input from the public on whether we should consider continuing to make add-on payments for audio-only periodic assessments furnished by OTPs after the conclusion of the PHE for the COVID-19 pandemic, and if so, whether the payment rate for audio-only services

should reflect any differences in resource costs.

c. Date of Service

In the CY 2020 PFS final rule (84 FR 62641), we defined an episode of care as a 1-week (contiguous 7-day) period at § 410.67(b). We have received inquiries related to the date of service used on claims for the weekly bundles and add-on codes, particularly related to an approach that many providers informed us they use, which is to establish a “standard billing cycle” in which episodes of care for all patients at that OTP begin on the same day of the week. We do not believe that the definition of an episode of care that was finalized for CY 2020 precludes the use of a “standard billing cycle.” Therefore, OTPs may choose to apply a standard billing cycle by setting a particular day of the week to begin all episodes of care. In this case, the date of service would be the first day of the OTP’s billing cycle. If a beneficiary starts treatment at the OTP on a day that is in the middle of the OTP’s standard weekly billing cycle, the OTP may still bill the applicable code for that episode of care provided that the threshold to bill for the code has been met. Alternatively, OTPs may choose to adopt weekly billing cycles that vary across patients. Under this approach, the initial date of service will depend upon the day of the week when the patient was first admitted to the program or when Medicare billing began. Therefore, under this approach of adopting weekly billing cycles that vary across patients, when a patient is beginning treatment or re-starting treatment after a break in treatment, the date of service would reflect the first day the patient was seen and the date of service for subsequent consecutive episodes of care would be the first day after the previous 7-day period ends. For the codes describing add-on services (HCPCS codes G2076–G2080), the date of service should reflect the date that service was furnished; however, if the OTP has chosen to apply a standard weekly billing cycle, the date of service for codes describing add-on services may be the same as the first day in the weekly billing cycle.

We note that this approach is consistent with earlier guidance that was issued in the OTP Billing and Payment Fact sheet that is posted on the CMS OTP web page (<https://www.cms.gov/files/document/otp-billing-and-payment-fact-sheet.pdf>).

d. Coding

We recognize the importance of allowing OTPs to become accustomed to

billing Medicare using the coding that was established in the CY 2020 PFS final rule; however, we remain interested in refining the code set through future rulemaking, including stratifying the coding and associated payment amounts to account for significant differences in resource costs among patients, especially in relation to amounts of expected counseling. In the CY 2020 PFS final rule (84 FR 62645), we finalized an add-on code to describe an adjustment to the bundled payment when additional counseling or therapy services are furnished, HCPCS code G2080. This add-on code may be billed when counseling or therapy services are furnished that substantially exceed the amount specified in the patient’s individualized treatment plan. We have received feedback from stakeholders noting a range of OTP attendance patterns that represent a continuum of care and service intensity, noting significant differences in services received during the induction phase versus the maintenance phase. We also understand that patients’ needs for service may fluctuate over time, depending on a variety of factors and circumstances. We welcome comments on how we might better account for differences in resource costs among patients over the course of treatment. We will consider the comments received in developing any proposed refinements to our coding policies in future rulemaking.

5. Annual Updates

In the CY 2020 PFS final rule (84 FR 62667 through 62669), we finalized a policy under which the payment for the drug component of episodes of care will be determined using the most recent data available at the time of ratesetting for the applicable calendar year. The payment for the non-drug component of the bundled payment for OUD treatment services will be updated annually based upon the Medicare Economic Index. The list of the payment rates for OUD treatment services furnished by OTPs, with the annual update applied for CY 2021, is available in the file called CY 2021 OTP Proposed Payment Rates on the CMS website under downloads for the CY 2021 PFS proposed rule at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFSFederal-Regulation-Notices.html>. Additionally, we note that the current rates, as finalized in the CY 2020 PFS final rule, both with and without locality adjustments, can be found on the CMS OTP web page under Billing and Payment at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service->

Payment/Opioid-Treatment-Program/billing-payment.

III. Other Provisions of the Proposed Rule

A. Clinical Laboratory Fee Schedule: Revised Data Reporting Period and Phase-in of Payment Reductions, and a Comment Solicitation on Payment for Specimen Collection for Covid-19 Tests

1. Background on the Clinical Laboratory Fee Schedule

Prior to January 1, 2018, Medicare paid for clinical diagnostic laboratory tests (CDLTs) on the Clinical Laboratory Fee Schedule (CLFS), with certain exceptions, under section 1833(a), (b), and (h) of the Act. Under the previous payment system, CDLTs were paid based on the lesser of: (1) The amount billed; (2) the local fee schedule amount established by the Medicare Administrative Contractor (MAC); or (3) a national limitation amount (NLA), which is a percentage of the median of all the local fee schedule amounts (or 100 percent of the median for new tests furnished on or after January 1, 2001). In practice, most tests were paid at the NLA. Under the previous payment system, the CLFS amounts were updated for inflation based on the percentage change in the Consumer Price Index for All Urban Consumers (CPI-U), and reduced by a multi-factor productivity adjustment and other statutory adjustments, but were not otherwise updated or changed. Coinsurance and deductibles generally do not apply to CDLTs paid under the CLFS.

Section 1834A of the Act, as established by section 216(a) of the Protecting Access to Medicare Act of 2014 (PAMA), required significant changes to how Medicare pays for CDLTs under the CLFS. In the June 23, 2016 **Federal Register** (81 FR 41036), we published a final rule entitled Medicare Clinical Diagnostic Laboratory Tests Payment System (CLFS final rule), that implemented section 1834A of the Act at 42 CFR part 414, subpart G.

Under the CLFS final rule, “reporting entities” must report to CMS during a “data reporting period” “applicable information” collected during a “data collection period” for their component “applicable laboratories.” The first data collection period occurred from January 1, 2016 through June 30, 2016. The first data reporting period occurred from January 1, 2017 through March 31, 2017. On March 30, 2017, we announced a 60-day period of enforcement discretion for the application of the Secretary’s potential assessment of Civil Monetary Penalties (CMPs) for failure to report

applicable information with respect to the initial data reporting period. This announcement is available on the CMS website at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/ClinicalLabFeeSched/Downloads/2017-March-Announcement.pdf>.

In the CY 2018 PFS proposed rule (82 FR 34089 through 34090), we solicited public comments from applicable laboratories and reporting entities to better understand the applicable laboratories’ experiences with data reporting, data collection, and other compliance requirements for the first data collection and reporting periods. We discussed these comments in the CY 2018 PFS final rule (82 FR 53181 through 53182) and stated that we would consider the comments for potential future rulemaking or guidance.

As part of the CY 2019 Medicare PFS rulemaking, we finalized two changes to the definition of “applicable laboratory” at § 414.502 (see 83 FR 59667 through 59681, 60074; 83 FR 35849 through 35850; 83 FR 35855 through 35862). First, we excluded Medicare Advantage (MA) plan payments under Part C from the denominator of the Medicare revenues threshold calculation, in an effort to broaden the types of laboratories qualifying as an applicable laboratory. Specifically, excluding MA plan payments could allow additional laboratories of all types serving a significant population of beneficiaries enrolled in Medicare Part C to meet the majority of Medicare revenues threshold and potentially qualify as an applicable laboratory (if they also meet the low expenditure threshold) and report data to CMS during the data reporting period. Because MA plan payments are now excluded from the total Medicare revenues calculation, the denominator amount (total Medicare revenues) would decrease. If the denominator amount decreases, the likelihood increases that a laboratory would qualify as an applicable laboratory. This is because the laboratory’s PFS and CLFS revenues are being compared to a lower total Medicare payment amount (than what they would have been compared to if MA plan payments remained in the denominator). Second, consistent with our goal of obtaining a broader representation of laboratories that could potentially qualify as an applicable laboratory and report data we also amended the definition of applicable laboratory to include hospital outreach laboratories that bill Medicare Part B using the CMS-1450 14x Type of Bill.

2. Payment Requirements for Clinical Diagnostic Laboratory Tests

In general, under section 1834A of the Act, the payment amount for each CDLT on the CLFS furnished beginning January 1, 2018, is based on the applicable information collected during the data collection period and reported to CMS during the data reporting period, and is equal to the weighted median of the private payor rates for the test. The weighted median is calculated by arraying the distribution of all private payor rates, weighted by the volume for each payor and each laboratory. The payment amounts established under the CLFS are not subject to any other adjustment, such as geographic, budget neutrality, or annual update, as required by section 1834A(b)(4)(B) of the Act. Additionally, section 1834A(b)(3) of the Act, implemented at § 414.507(d), provides for a phase-in of payment reductions, limiting the amounts the CLFS rates for each CDLT (that is not a new advanced diagnostic laboratory test (ADLT) or new CDLT) can be reduced as compared to the payment rates for the preceding year. Under the provisions enacted by section 216(a) of PAMA, for the first 3 years after implementation (CY 2018 through CY 2020), the reduction cannot be more than 10 percent per year, and for the next 3 years (CY 2021 through CY 2023), the reduction cannot be more than 15 percent per year. Under section 1834A(a)(1) and (b) of the Act, as enacted by PAMA, for CDLTs that are not ADLTs, the data collection period, data reporting period, and payment rate update occur every 3 years. As such, the second data collection period for CDLTs that are not ADLTs occurred from January 1, 2019 through June 30, 2019, and the next data reporting period was scheduled to take place from January 1, 2020 through March 31, 2020, with the next update to the Medicare payment rates for these tests based on that reported applicable information scheduled to take effect as of January 1, 2021.

Section 216(a) of PAMA established a new subcategory of CDLTs known as ADLTs, with separate reporting and payment requirements under section 1834A of the Act. As defined in § 414.502, an ADLT is a CDLT covered under Medicare Part B that is offered and furnished only by a single laboratory, and cannot be sold for use by a laboratory other than the single laboratory that designed the test or a successor owner. Also, an ADLT must meet either Criterion (A), which implements section 1834A(d)(5)(A) of the Act, or Criterion (B), which

implements section 1834A(d)(5)(B) of the Act, as follows:

- *Criterion (A)*: The test is an analysis of multiple biomarkers of deoxyribonucleic acid (DNA), ribonucleic acid (RNA), or proteins; when combined with an empirically derived algorithm, yields a result that predicts the probability a specific individual patient will develop a certain condition(s) or respond to a particular therapy(ies); provides new clinical diagnostic information that cannot be obtained from any other test or combination of tests; and may include other assays; or:

- *Criterion (B)*: The test is cleared or approved by FDA.

Generally, under section 1834A(d) of the Act, the Medicare payment rate for a new ADLT is equal to its actual list charge during an initial period of 3 calendar quarters. After the new ADLT initial period, ADLTs are paid using the same methodology based on the weighted median of private payor rates as other CDLTs. However, under section 1834A(d)(3) of the Act, updates to the Medicare payment rates for ADLTs occur annually instead of every 3 years.

Additional information on the private payor rate-based CLFS is detailed in the CLFS final rule (81 FR 41036 through 41101) and is available on the CMS website at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/ClinicalLabFeeSched/PAMA-regulations.html>.

3. Statutory Revisions to the Data Reporting Period and Phase-In of Payment Reductions

Section 105(a) of the Further Consolidated Appropriations Act, 2020 (FCAA) (Pub. L. 116–94, enacted on December 20, 2019), and section 3718 of the Coronavirus Aid, Relief, and Economic Security Act, 2020 (CARES Act) (Pub. L. 116–136, enacted on March 27, 2020), made revisions to the CLFS requirements for the next data reporting period for CDLTs that are not ADLTs under section 1834A of the Act. Additionally, the CARES Act made revisions to the phase-in of payment reductions under section 1834A of the Act. Specifically, section 105(a)(1) of the FCAA amended the data reporting requirements in section 1834A(a) of the Act to delay the next data reporting period for CDLTs that are not ADLTs by 1 year, so that data reporting would be required during the period of January 1, 2021 through March 31, 2021; the 3-year data reporting cycle for CDLTs that are not ADLTs would resume after that data reporting period. Section 105(a)(1) of the FCAA also specified that the data collection period that applies to the data

reporting period of January 1, 2021 through March 30, 2021 would be the period of January 1, 2019 through June 30, 2019, which is the same data collection period that would have applied absent the amendments. In addition, section 105(a)(2) of the FCAA amended section 1834A(b)(3) of the Act regarding the phase-in of payment reductions to provide that payments may not be reduced by more than 10 percent as compared to the amount established for the preceding year through CY 2020, and for CYs 2021 through 2023, payment may not be reduced by more than 15 percent as compared to the amount established for the preceding year. These statutory changes were consistent with our regulations implementing the private payor rate-based CLFS (81 FR 41036; § 414.507(d)).

Subsequently, section 3718 of the CARES Act further amended the data reporting requirements for CDLTs that are not ADLTs and the phase-in of payment reductions under the CLFS. Specifically, section 3718(a) of the CARES Act amended section 1834A(a)(1)(B) of the Act to delay the next data reporting period for CDLTs that are not ADLTs by one additional year, to require data reporting during the period of January 1, 2022 through March 31, 2022. As amended by the CARES Act, section 1834A(a)(1)(B) of the Act now provides that in the case of reporting with respect to CDLTs that are not ADLTs, the Secretary shall revise the reporting period under subparagraph (A) such that—(i) no reporting is required during the period beginning January 1, 2020, and ending December 31, 2021; (ii) reporting is required during the period beginning January 1, 2022, and ending March 31, 2022; and (iii) reporting is required every 3 years after the period described in clause (ii).

The CARES Act does not modify the data collection period that applies to the next data reporting period for these tests. Thus, under section 1834A(a)(4)(B) of the Act, as amended by section 105(a)(1) of the FCAA, the next data reporting period for CDLTs that are not ADLTs (January 1, 2022 through March 31, 2022) will be based on the data collection period of January 1, 2019 through June 30, 2019. In § 414.502, the current definition of data collection period is defined as the 6 months from January 1 through June 30 during which applicable information is collected and that precedes the data reporting period. Additionally, in § 414.502 the data reporting period is defined as the 3-month period, January 1 through March 31, during which a

reporting entity reports applicable information to CMS and that follows the preceding data collection period. Unless we revise our current definitions of data collection period and data reporting period, the definitions will be incorrect with regard to the data collection period that applies to the next data reporting period. Therefore, in section III.A.4. of this proposed rule, “Proposed Conforming Regulatory Changes,” we are proposing to revise the definitions of data collection period and data reporting period in § 414.502 to reflect that the data collection period will be January 1, 2019 through June 30, 2019 for the data reporting period of January 1, 2022 through March 31, 2022.

Section 3718(b) of the CARES Act further amends the provisions in section 1834A(b)(3) of the Act regarding the phase-in of payment reductions under the CLFS. First, it extends the statutory phase-in of payment reductions resulting from private payor rate implementation by an additional year, that is, through CY 2024. It further amends section 1834A(b)(3)(B)(ii) of the Act to specify that the applicable percent for CY 2021 is 0 percent, meaning that the payment amount determined for a CDLT for CY 2021 shall not result in any reduction in payment as compared to the payment amount for that test for CY 2020. Section 3718(b) of the CARES Act further amends section 1834A(b)(3)(B)(iii) of the Act to state that the applicable percent of 15 percent will apply for CYs 2022 through 2024, instead of CYs 2021 through 2023.

4. Proposed Conforming Regulatory Changes

In accordance with section 105(a) of the FCAA and section 3718 of the CARES Act, we are proposing to make certain conforming changes to the data reporting and payment requirements at 42 CFR part 414, subpart G. Specifically, we are proposing to revise § 414.502 to update the definitions of both the data collection period and data reporting period, specifying that for the data reporting period of January 1, 2022 through March 31, 2022, the data collection period is January 1, 2019 through June 30, 2019. We are also proposing to revise § 414.504(a)(1) to indicate that initially, data reporting begins January 1, 2017 and is required every 3 years beginning January 2022. In addition, we are proposing to make conforming changes to our requirements for the phase-in of payment reductions to reflect the CARES Act amendments. Specifically, we are proposing to revise § 414.507(d) to indicate that for CY 2021, payment may not be reduced by

more than 0.0 percent as compared to the amount established for CY 2020, and for CYs 2022 through 2024, payment may not be reduced by more than 15 percent as compared to the amount established for the preceding year.

5. Comment Solicitation on Payment for Specimen Collection for COVID-19 Clinical Diagnostic Tests

In the “Medicare and Medicaid Programs; Policy and Regulatory Revisions in Response to the COVID-19 Public Health Emergency” interim final with comment period (IFC) (85 FR 19256 through 19258), which published in the April 6, 2020 **Federal Register**, we established that Medicare will pay a nominal specimen collection fee and associated travel allowance to independent laboratories for the collection of specimens for COVID-19 clinical diagnostic laboratory testing for homebound and non-hospital inpatients. This policy provides independent laboratories with additional resources to provide COVID-19 testing and helps with efforts to limit patients’ exposure to the general population and alleviate patients’ unease with leaving the home. To identify specimen collection for COVID-19 testing specifically, we established two new level II HCPCS codes, Code G2023 (*specimen collection for severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (Coronavirus disease [COVID-19]), any specimen source*); and G2024 (*specimen collection for severe acute respiratory syndrome coronavirus 2 (SARS-Cov-2) (Coronavirus disease [COVID-19]), from an individual in a SNF or by a laboratory on behalf of a HHA, any specimen source*), for independent laboratories to use when billing Medicare for the nominal specimen collection fee for COVID-19 testing for the duration of the COVID-19 PHE.

We indicated in the April 6, 2020 IFC that this specimen collection fee policy was established for the duration of the COVID-19 pandemic (85 FR 19256). We are requesting comments on whether we should delete HCPCS Codes G2023 and G2024 once the COVID-19 PHE ends. Comments received may inform a future proposal. Specifically, we are seeking public input on why these codes, and their corresponding payment amounts, which are higher than the nominal fees for specimen collection for other conditions, would be necessary or useful outside of the context of the PHE. We are particularly interested in why separate, increased payment for specimen collection specifically for COVID-19 tests, in contrast to other

tests, might be needed following the end of the PHE.

B. OTP Provider Enrollment Regulation Updates for Institutional Claim Submissions

1. Modifications to OTP Enrollment Process

a. Background

Under 42 CFR 424.510, a provider or supplier must complete, sign, and submit to its assigned Medicare Administrative Contractor (MAC) the Form CMS-855 (OMB Control No. 0938-0685) application to enroll in the Medicare program and obtain Medicare billing privileges. The Form CMS-855, which can be submitted via paper or electronically through the internet-based Provider Enrollment, Chain, and Ownership System (PECOS) process (SORN: 09-70-0532, Provider Enrollment, Chain, and Ownership System), captures information about the provider or supplier that CMS or its MACs reviews and verifies to determine whether the provider or supplier meets all Medicare requirements. (The specific Form CMS-855 application (of which there are several variations) to be completed will depend upon the type of provider or supplier submitting said application.) This process of enrollment helps ensure that: (1) All prospective providers and suppliers are carefully screened and vetted; and (2) unqualified providers and suppliers are kept out of the Medicare program, which helps protect the Trust Funds and Medicare beneficiaries. Indeed, without this process, billions of taxpayer dollars might be paid to fraudulent or otherwise non-compliant parties.

b. Completion of Form CMS-855

Existing § 424.67 outlines a number of enrollment requirements for OTPs. One requirement, addressed in § 424.67(b)(1), is that OTPs must complete the Form CMS-855B application (Medicare Enrollment Application: Clinics/Group Practices and Certain Other Suppliers; OMB #0938-0685) to enroll in Medicare. The reference to the Form CMS-855B in § 424.67(b)(1) was predicated in part on the assumption that OTPs would generally submit the CMS-1500 claim form (Health Insurance Claim Form; OMB Control No.: 0938-1197) to receive payment for their services. However, as mentioned previously in section II.I.4. of this proposed rule, we have received requests to allow OTPs to bill for services on an institutional claim form (specifically, the 837I). To do so, these OTPs would have to enroll in Medicare via the Form CMS-855A (Medicare

Enrollment Application for Institutional Providers (OMB #0938-0685)). To account for circumstances where an OTP wishes to pursue Form CMS-855A enrollment for the reason stated above, we propose the following revisions to § 424.67:

- Current § 424.67(b)(1) states that a newly enrolling OTP must fully complete and submit the Form CMS-855B application (or its successor application). We propose to revise this paragraph to state that the newly enrolling OTP must fully complete and submit, as applicable, the Form CMS-855A or Form CMS-855B application (or their successor applications).

- Existing § 424.67(b)(1)(ii) requires the OTP to certify compliance with the requirements and standards described in paragraphs § 424.67(b) and (d) via the Form CMS-855B and/or the applicable supplement or attachment thereto. We propose to revise this paragraph such that the OTP must certify compliance with the above-referenced requirements and standards via the Form CMS-855A or Form CMS-855B (as applicable) and/or the applicable supplement or attachment thereto.

- Existing § 424.67(b)(5) requires the OTP to report on the Form CMS-855B and/or any applicable supplement all OTP staff who meet the definition of “managing employee” in § 424.502. We propose to change this to state that the OTP must report on the Form CMS-855A or Form CMS-855B (as applicable) and/or any applicable supplement all OTP staff who meet the said definition.

We believe these revisions would accomplish two objectives. First, they would permit OTPs to submit a Form CMS-855A in lieu of a Form CMS-855B based on their preferred method of billing. Second, they would confirm that the requirements of § 424.67 apply to all OTPs regardless of whether they complete the Form CMS-855A or the Form CMS-855B.

c. Screening Activities Associated With Risk Designation

Section 424.518 outlines provider enrollment screening categories and requirements based on our assessment of the degree of risk of fraud, waste, and abuse posed by a particular category of provider or supplier. In general, the higher the level of risk that a certain provider or supplier type presents, the greater the degree of scrutiny with which we will screen and review enrollment applications submitted by providers or suppliers within that category. There are three levels of screening addressed in § 424.518: Limited; moderate; and high.

Irrespective of which level a provider or supplier type falls within, the MAC performs certain minimum screening functions upon receipt of an initial enrollment application, a revalidation application, or an application to add a new practice location. These include:

- Verification that the provider or supplier meets all applicable federal regulations and state requirements for their provider or supplier type.
- State license verifications.
- Database reviews on a pre- and post-enrollment basis to ensure that providers and suppliers continue to meet the enrollment criteria for their provider or supplier type.

Providers and suppliers at the moderate and high categorical risk levels must also undergo a site visit. Moreover, for those in the high categorical risk level, the MAC performs two additional functions under § 424.518(c)(2). First, the MAC requires the submission of a set of fingerprints for a national background check from all individuals who maintain a 5 percent or greater direct or indirect ownership interest in the provider or supplier. Second, it conducts a fingerprint-based criminal history record check of the Federal Bureau of Investigation's (FBI) Integrated Automated Fingerprint Identification System on all individuals who maintain a 5 percent or greater direct or indirect ownership interest in the provider or supplier. These additional verification activities are intended to correspond to the heightened risk involved with such provider or supplier types.

For newly enrolling OTPs, those that have been fully and continuously certified by the Substance Abuse and Mental Health Services Administration (SAMHSA) since October 23, 2018 fall within the moderate level of categorical screening. OTPs that have not been so certified since the aforementioned date are subject to the high screening level. We recognize that certain providers and suppliers have already enrolled as OTPs via the Form CMS-855B—and, accordingly, undergone a site visit and, if applicable, fingerprinting—but would seek to newly enroll via the Form CMS-855A should our proposals be finalized. (Said enrollment would be considered “new” for purposes of enrollment because the OTP would be enrolling via a different variation of the Form CMS-855.) While not seeking to minimize the importance of the enhanced screening activities associated with the moderate and high categorical levels, we do not wish to unduly burden currently enrolled OTPs that would pursue Form CMS-855A enrollment as an OTP. More specifically, we do not believe such

OTPs should have to undergo another site visit and, if applicable, fingerprinting when they previously did so as an OTP via their original Form CMS-855B enrollment. This, in our view, would constitute an unnecessary expenditure of CMS, MAC, and OTP resources. We add that the same would hold true if, in the future, an OTP that is enrolled via the Form CMS-855A under revised § 424.67(b) decides to change to a Form CMS-855B enrollment. In both cases, we believe a duplication of effort should be avoided to the extent consistent with safeguarding the integrity of the Medicare program.

Existing § 424.67(b)(3) states that an enrolling OTP must successfully complete the assigned categorical risk level screening required under, as applicable, § 424.518(b) and (c) (which outline the screening requirements for newly enrolling parties in, respectively, the moderate and high categorical levels). Given the foregoing discussion, we propose several changes to § 424.67(b)(3). First, we would re-designate existing § 424.67(b)(3) as new § 424.67(b)(3)(i), though with an exception to its requirements. Second, new paragraph (b)(3)(ii) (which would address this exception) would state that currently enrolled OTPs that are changing their OTP enrollment from a Form CMS-855B to a Form CMS-855A, or vice versa, must successfully complete the limited level of categorical screening under § 424.518(a) if the OTP has already completed, as applicable, the moderate or high level of categorical screening under § 424.518(b) or (c), respectively. Third, we propose to redesignate existing § 424.518(a)(1)(xii) through (xvii) as § 424.518(a)(1)(xiii) through (xviii). Fourth, new § 424.518(a)(1)(xii) would add OTPs that fall within the purview of new paragraph (b)(3)(ii) to the provider and supplier types subject to limited risk categorical screening.

d. Additional OTP Enrollment Clarifications Regarding the Form CMS-855A

We propose three additional clarifications related to our previously mentioned OTP enrollment provisions. To incorporate these into § 424.67, we would redesignate existing paragraphs (c), (d), (e), and (f) as paragraphs (d), (e), (f), and (g), respectively. The three clarifications would be included in new paragraph (c).

With the redesignation of existing paragraph (d) as paragraph (e), we also propose to change the reference to:

- Paragraph (d) in existing paragraph (b)(1)(ii) to paragraph (e).

- Paragraph (d)(1) in existing paragraph (d)(2)(i) to paragraph (e)(1) in redesignated paragraph (e)(2)(i).

(1) Single Enrollment

We propose in new § 424.67(c)(1) that an OTP may only be enrolled as such via the Form CMS-855A or the Form CMS-855B but not both. The OTP, in other words, must opt for either Form CMS-855A enrollment or Form CMS-855B enrollment. This is to help ensure that the OTP does not bill twice for the same service via separate claim vehicles (specifically, the CMS-1500 and the 837I).

(2) Effective Date of Billing

Section 424.520(d) outlines the effective date of billing privileges for newly enrolling OTPs (and certain other provider and supplier types). This date is the later of: (1) The date of the OTP's filing of a Medicare enrollment application that was subsequently approved by a Medicare contractor; or (2) the date that the OTP first began furnishing services at a new practice location. In a similar vein, § 424.521(a) states that OTPs (and certain other provider and supplier types) may retrospectively bill for services when the OTP has met all program requirements (including state licensure requirements), and services were provided at the enrolled practice location for up to—

- 30 days prior to their effective date if circumstances precluded enrollment in advance of providing services to Medicare beneficiaries; or
- 90 days prior to their effective date if a Presidentially-declared disaster under the Robert T. Stafford Disaster Relief and Emergency Assistance Act, 42 U.S.C. 5121 through 5206 (Stafford Act) precluded enrollment in advance of providing services to Medicare beneficiaries.

In light of proposed § 424.67(c)(1) (and as further explained in the collection of information section of this proposed rule), we anticipate that a number of OTPs would end their existing enrollment and apply as a new OTP via, as applicable, the Form CMS-855A or Form CMS-855B. Given this, we believe it is important to clarify for stakeholders the new enrollment's effective date of billing. Accordingly, at § 424.67, we propose in new paragraph (c)(2) that if a Form CMS-855B-enrolled OTP changes to a Form CMS-855A enrollment, or vice versa, the effective date of billing that was established for the OTP's prior enrollment under §§ 424.520(d) and 424.521(a) would be applied to the OTP's new enrollment. This would allow OTPs that have been

unable to bill for furnished services via their preferred claim form (and have consequently chosen to delay the submission of these claims for services) to do so retroactive to the effective billing date of its prior enrollment. To illustrate, suppose an OTP initially enrolled via the Form CMS–855B in 2020. The effective date of billing was April 1, 2020. Wishing to submit an 837I claim form for the services it has provided since April 1, 2020 the OTP elects to end its Form CMS–855B enrollment and enroll via the Form CMS–855A pursuant to revised § 424.67. It successfully does the latter in March 2021. Under § 424.67(c)(2), the billing effective date of the Form CMS–855A enrollment would be retroactive to April 1, 2020. We note, however, that the time limits for filing claims found in § 424.44 would continue to apply. Specifically, all Medicare Part A and Part B claims must be filed within 1 calendar year after the date of service unless one of a very limited number of exceptions applies. Switching from a Form CMS–855B enrollment to a Form CMS–855A enrollment, or vice versa, is not grounds for an exception.

We recognize, of course, that not every OTP that seeks to change its enrollment will have chosen to withhold submission of all of its claims under its prior enrollment. (Using our example in the previous paragraph, the OTP may have submitted some claims via the CMS–1500 while planning to eventually submit the remaining ones via the 837I.) Irrespective of this, CMS has long had operational safeguards in place to prevent double-billing for the same service. Said protections would be used in the scenario described in proposed § 424.67(c)(2) so that claims submitted under the prior enrollment could not be resubmitted under the new one.

(3) Application Fee

As stated in § 424.514, prospective and revalidating institutional providers that are submitting a Medicare enrollment application generally must pay the applicable application fee in accordance with § 424.514. (For CY 2020, the fee amount is \$595.) We define the term “institutional provider” in § 424.502 as any provider or supplier that submits a paper Medicare enrollment application using the Form CMS–855A, Form CMS–855B (not including physician and non-physician practitioner organizations, which are exempt from the fee requirement if they are enrolling as a physician or non-physician practitioner organization), Form CMS–855S, Form CMS–20134, or

an associated internet-based PECOS enrollment application.

We have already noted that OTPs currently complete the Form CMS–855B to enroll in Medicare. They are considered “institutional providers” (as defined in § 424.502) and must pay an application fee, a requirement addressed in existing § 424.67(b)(2). Since the existing OTPs referenced in new paragraph (c)(2) would, as stated previously, be enrolling as new providers via the Form CMS–855A or Form CMS–855B (as applicable), we believe they would fall within the scope of both (1) the aforementioned definition of “institutional provider” and (2) § 424.514(a)(1); as described therein, § 424.514(a)(1) applies to prospective institutional providers that are submitting an initial application. To clarify this issue for the OTP community, we propose to add language to § 424.67(b)(2) stating that compliance with the application fee requirements in § 424.514 would also apply to those OTPs enrolling under the circumstances described in § 424.67(c)(2).

We emphasize that the flexibilities described in this section III.B. are complementary to those in section II.I. (“Medicare Coverage for Opioid Use Disorder (OUD) Treatment Services Furnished by Opioid Treatment Programs (OTPs)”) regarding OTP billing via the 837I. Our OTP enrollment revisions are intended to facilitate greater flexibility for OTPs should the proposals in section II.I. be finalized.

C. Payment for Principal Care Management (PCM) Services in Rural Health Centers (RHCs) and Federally Qualified Health Centers (FQHCs)

1. Background

a. RHC and FQHC Payment Methodologies

RHC and FQHC visits generally are face-to-face encounters between a patient and one or more RHC or FQHC practitioners during which time one or more RHC or FQHC qualifying services are furnished. RHC and FQHC practitioners are physicians, nurse practitioners (NPs), physician assistants (PA), certified nurse midwives (CNMs), clinical psychologists (CPs), and clinical social workers, and under certain conditions, a registered nurse or licensed practical nurse furnishing care to a homebound RHC or FQHC patient. A Transitional Care Management (TCM) service can also be an RHC or FQHC visit. In addition, a Diabetes Self-Management Training (DSMT) service or a Medical Nutrition Therapy (MNT) service furnished by a certified DSMT or MNT program may also count as an

FQHC visit. Only medically necessary medical, mental health, or qualified preventive health services that require the skill level of an RHC or FQHC practitioner are RHC or FQHC billable visits. Services furnished by auxiliary personnel (for example, nurses, medical assistants, or other clinical personnel acting under the supervision of the RHC or FQHC practitioner) are considered incident to the visit and are included in the per visit payment.

RHCs are paid an all-inclusive rate (AIR) for all medically necessary medical and mental health services and qualified preventive health services furnished on the same day (with some exceptions). In general, the A/B Medicare Administrative Contractor (MAC) calculates the AIR for the year for each RHC by dividing total allowable costs by the total number of visits for all patients. Productivity, payment limits, and other factors are also considered in the calculation. Allowable costs must be reasonable and necessary and may include practitioner compensation, overhead, equipment, space, supplies, personnel, and other costs incident to the delivery of RHC services. The AIR is subject to a payment limit, except for certain provider-based RHCs that have an exception to the payment limit.

FQHCs were paid under the same AIR methodology until October 1, 2014, when, in accordance with section 1834(o) of the Act (as added by section 10501(i)(3) of the Affordable Care Act), they began to transition to an FQHC PPS system in which they are paid based on the lesser of the FQHC PPS rate or their actual charges. The FQHC PPS rate is adjusted for geographic differences in the cost of services by the FQHC PPS geographic adjustment factor (GAF).

b. Care Management Services in RHCs and FQHCs

In the CY 2018 final rule with comment period (83 FR 59683), we finalized revisions to the payment methodology for Chronic Care Management (CCM) services furnished by RHCs and FQHCs and established requirements for general Behavioral Health Integration (BHI) and psychiatric Collaborative Care Management (CoCM) services furnished in RHCs and FQHCs, beginning on January 1, 2019. Specifically, we revised § 405.2464(c) to permit RHCs and FQHCs to bill for care management services (HCPCS codes G0511 and G0512).

HCPCS code, G0511, is a General Care Management code for use by RHCs or FQHCs when at least 20 minutes of qualified CCM or general BHI services are furnished to a patient in a calendar month.

The payment amount for HCPCS code G0511 is set at the average of the 3 national non-facility PFS payment rates for the CCM and general BHI codes and updated annually based on the PFS amounts. The 3 codes are CPT 99490 (*20 minutes or more of CCM services*), CPT 99487 (*60 minutes or more of complex CCM services*), and CPT 99484 (*20 minutes or more of BHI services*).

In the CY 2019 final rule with comment period, we added CPT code 99491 (*30 minutes or more of CCM furnished by a physician or other qualified health care professional*) as a general care management service and included it in the calculation of HCPCS code G0511. Beginning January 1, 2019, the payment for HCPCS code G0511 is set at the average of the national non-facility PFS payment rates for CPT codes 99490, 99487, 99484, and 99491 and is updated annually based on the PFS amounts. Additional information on CCM requirements is available on the CMS Care Management web page at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/Care-Management.html>, and on the CMS RHC and FQHC web pages at <https://www.cms.gov/Center/Provider-Type/Rural-Health-Clinics-Center.html> and <https://www.cms.gov/Center/Provider-Type/Federally-Qualified-Health-Centers-FQHC-Center.html>.

2. Proposed Requirements for PCM Services in RHCs and FQHCs

In the CY 2020 PFS final rule with comment (84 FR 62692), we established a separate payment for PCM services. PCM services include comprehensive care management services for a single high-risk disease or complex condition, typically expected to last at least 3 months and may have led to a recent hospitalization, and/or placed the patient at significant risk of death. Beginning January 1, 2020, practitioners billing under the PFS can bill for PCM services using HCPCS codes G2064 or G2065.

HCPCS code G2064 is for at least 30 minutes of PCM services furnished by physicians or non-physicians during a calendar month with the following elements: One complex chronic condition lasting at least 3 months, which is the focus of the care plan, the condition is of sufficient severity to place patient at risk of hospitalization or have been the cause of a recent hospitalization, the condition requires development or revision of disease-specific care plan, the condition requires frequent adjustments in the medication regimen, and/or the management of the condition is

unusually complex due to comorbidities.

HCPCS code G2065 is for at least 30 minutes of PCM services furnished by clinical staff under the direct supervision of a physician or non-physician practitioner with the following elements: One complex chronic condition lasting at least 3 months, which is the focus of the care plan, the condition is of sufficient severity to place patient at risk of hospitalization or have been cause of a recent hospitalization, the condition requires development or revision of disease-specific care plan, the condition requires frequent adjustments in the medication regimen, and/or the management of the condition is unusually complex due to comorbidities.

A national stakeholder organization representing rural health clinics has requested that RHCs be allowed to furnish and bill for PCM services. We agree that there can be significant resources involved in care management for a single high risk disease or complex chronic condition, and that the requirements for the new PCM codes are similar to the requirements for the care management services described by HCPCS code G0511. These are services that do not currently meet the requirements for an RHC or FQHC billable visit, and they provide an array of care management services that are not generally included in the RHC AIR or the FQHC PPS. Therefore, we are proposing to add HCPCS codes G2064 and G2065 to G0511 as a comprehensive care management service for RHCs and FQHCs starting January 1, 2021. The payment rate for HCPCS G0511 is the average of the national non-facility PFS payment rate for the RHC and FQHC care management and general behavioral health codes (CPT codes 99490, 99487, 99484, and 99491), and we propose that these 2 new codes be added to the calculation of the G0511 payment rate.

3. Other Options Considered

We also considered creating a separate G code for PCM services. We did not choose this approach because PCM and CCM are similar services and grouping them together is consistent with an integrated approach to care with reduced reporting requirements. As we stated in the CY 2018 PFS final rule, if a new care management code is proposed and subsequently finalized for practitioners billing under the PFS, we would review the new code to determine if it should be included in the calculation of the RHC and FQHC General Care Management Code. The

determination of whether a new care management code should be added to the codes used to determine the payment rate is based on the applicability of the service in RHCs and FQHCs, and may result in either an increase or decrease in the payment amount for HCPCS code G0511.

4. Implementation

If this proposal is finalized as proposed, RHCs and FQHCs that furnish qualified PCM services would also be able to bill the services using HCPCS code G0511, either alone or with other payable services on an RHC or FQHC claim for dates of service on or after January 1, 2021. The payment rate for HCPCS code G0511 would continue to be the average of the national non-facility PFS payment rates for the RHC/FQHC care management and general behavioral health codes (CPT codes 99484, 99487, 99490, and 99491). HCPCS G2064 and G2065 would be added to G0511 to calculate a new average for the national non-facility PFS payment rate. The payment rate for HCPCS code G0511 would be updated annually based on the PFS amounts for these codes.

D. Changes to the Federally Qualified Health Center Prospective Payment System (FQHC PPS) for CY 2021: Proposed Rebasing and Revising of the FQHC Market Basket

1. Background

Section 10501(i)(3)(A) of the Affordable Care Act added section 1834(o) of the Act to establish a payment system for the costs of FQHC services under Medicare Part B based on prospectively set rates. In the Prospective Payment System (PPS) for FQHC final rule published in the May 2, 2014 **Federal Register** (79 FR 25436), we implemented a methodology and payment rates for the FQHC PPS. Beginning on October 1, 2014, FQHCs began to transition to the FQHC PPS based on their cost reporting periods, and as of January 1, 2016, all FQHCs are paid under the FQHC PPS.

Section 1834(o)(2)(B)(ii) of the Act requires that the payment for the first year after the implementation year be increased by the percentage increase in the Medicare Economic Index (MEI). Therefore, in CY 2016, the FQHC PPS base payment rate was increased by the MEI. The MEI is based on 2006 data from the American Medical Association (AMA) for self-employed physicians and was used in the PFS sustainable growth rate (SGR) formula to determine the conversion factor for physician service payments. (See the CY 2014 PFS

final rule (78 FR 74264) for a complete discussion of the 2006-based MEI). Section 1834(o)(2)(B)(ii) of the Act also requires that beginning in CY 2017, the FQHC PPS base payment rate will be increased by the percentage increase in a market basket of FQHC goods and services, or if such an index is not available, by the percentage increase in the MEI.

Beginning with CY 2017, FQHC PPS payments were updated using a 2013-based market basket reflecting the operating and capital cost structures for freestanding FQHC facilities (hereafter referred to as the FQHC market basket). A complete discussion of the 2013-based FQHC market basket can be found in the CY 2017 PFS final rule (81 FR 80393 through 80403).

For this CY 2021 PFS/FQHC proposed rule, we propose to rebase and revise the 2013-based FQHC market basket to reflect a 2017 base year. The proposed 2017-based FQHC market basket is primarily based on Medicare cost report data for FQHCs for 2017, which are for cost reporting periods beginning on and after October 1, 2016, and prior to September 30, 2017. We propose to use data from cost reports beginning in FY 2017 because these data are the latest available complete data for purposes of calculating cost weights for the market basket at the time of rulemaking.

In the following discussion, we provide an overview of the proposed FQHC market basket, describe the proposed methodologies for developing the operating and capital portions of the 2017-based FQHC market basket, and provide information on the proposed price proxies. We then present the CY 2021 market basket update based on the proposed 2017-based FQHC market basket.

2. Overview of the 2017-Based FQHC Market Basket

Similar to the 2013-based FQHC market basket, the proposed 2017-based FQHC market basket is a fixed-weight, Laspeyres-type price index. A Laspeyres price index measures the change in price, over time, of the same mix of goods and services purchased in the base period. Any changes in the quantity or mix (that is, intensity) of goods and services purchased over time are not measured. The index itself is constructed using three steps. First, a base period is selected (in this proposed rule, we propose to use 2017 as the base period) and total base period expenditures are estimated for a set of mutually exclusive and exhaustive spending categories, with the proportion of total costs that each category represents being calculated. These

proportions are called “cost weights” or “expenditure weights.” Second, each expenditure category is matched to an appropriate price or wage variable, referred to as a “price proxy.” In almost every instance, these price proxies are derived from publicly available statistical series that are published on a consistent schedule (preferably at least on a quarterly basis). Finally, the expenditure weight for each cost category is multiplied by the level of its respective price proxy. The sum of these products (that is, the expenditure weights multiplied by their price levels) for all cost categories yields the composite index level of the market basket in a given period. Repeating this step for other periods produces a series of market basket levels over time. Dividing an index level for a given period by an index level for an earlier period produces a rate of growth in the input price index over that timeframe. As noted above, the market basket is described as a fixed-weight index because it represents the change in price over time of a constant mix (quantity and intensity) of goods and services needed to furnish FQHC services. The effects on total expenditures resulting from changes in the mix of goods and services purchased subsequent to the base period are not measured. For example, a FQHC hiring more nurse practitioners to accommodate the needs of patients would increase the volume of goods and services purchased by the FQHC, but would not be factored into the price change measured by a fixed-weight FQHC market basket. Only when the index is rebased would changes in the quantity and intensity be captured, with those changes being reflected in the cost weights. Therefore, we rebase the market basket periodically so that the cost weights reflect a recent mix of goods and services that FQHCs purchase (FQHC inputs) to furnish inpatient care.

3. Development of the 2017-Based FQHC Market Basket Cost Categories and Weights

We are inviting public comments on our proposed methodology, discussed below, for deriving the proposed 2017-based FQHC market basket.

a. Use of Medicare Cost Report Data

We are proposing a 2017-based FQHC market basket that consists of eleven major cost categories and a residual derived from the 2017 Medicare cost reports (CMS Form 224–14, OMB Control Number 0938–1298) for FQHCs, hereafter referred to as the 2014 Medicare Cost Report form. The eleven cost categories are FQHC Practitioner Wages and Salaries, FQHC Practitioner

Employee Benefits, FQHC Practitioner Contract Labor, Clinical Staff Wages and Salaries, Clinical Staff Employee Benefits, Clinical Staff Contract Labor, Non-Health Staff Compensation, Medical Supplies, Pharmaceuticals, Fixed Capital and Moveable Capital. The residual category reflects all remaining costs not captured in the 11 cost categories such as non-medical supplies and utilities for example. We note that for the 2013-based FQHC market basket, we estimated six cost categories from the Medicare cost reports (CMS Form 222–92, OMB Control Number 0938–0107), hereafter referred to as the 1992 Medicare cost report form: FQHC Practitioner Compensation, Clinical Staff Compensation, Non-Health Staff Compensation, Pharmaceuticals, Fixed Capital and Moveable Capital.

The resulting 2017-based FQHC market basket cost weights reflect Medicare allowable costs. We define Medicare allowable costs for freestanding FQHC facilities as the total expenses reported on: Worksheet A, Columns 1 and 2, lines 1 through 7 and lines 9 through 12; Worksheet A, Column 1, lines 23 through 36; and Worksheet S3 Part II, Columns 1 and 2, lines 2 through 14. We note that we continue to exclude Professional Liability Insurance (PLI) costs from the total Medicare allowable costs because FQHCs that receive section 330 grant funds also are eligible to apply for medical malpractice coverage under Federally Supported Health Centers Assistance Act (FSHCAA) of 1992 (Pub. L. 102–501) and FSHCAA of 1995 (Pub. L. 104–73 amending section 224 of the Public Health Service Act).

Below, we summarize how we derive the eleven major cost category weights. Prior to estimating any costs, we remove any providers that did not report any total gross patient revenues as reported on the FQHC cost report Worksheet F–1, line 1, column 4.

(1) FQHC Practitioner Wages and Salaries Costs

A FQHC practitioner is defined as one of the following occupations: Physicians; nurse practitioners (NPs); physician assistants (PAs); certified-nurse midwife (CNMs); clinical psychologist (CPs); and clinical social workers (CSWs). We propose to derive FQHC Practitioner Wages and Salaries costs as the sum of direct care costs salaries as reported on Worksheet A, column 1, lines 23, 25, 26, 29, 30, and 31. These lines represent the wages and salaries costs for physicians, PAs, NPs, CNMs, CPs, and CSWs. For the 2013-based FQHC market basket, we

estimated FQHC Practitioner Total Compensation costs based on a similar methodology using cost data reported on Worksheet A of the 1992 Medicare cost report form (81 FR 80394) for specific details on the prior methodology.

(2) FQHC Practitioner Employee Benefits Costs

Effective with the implementation of the 2014 Medicare cost report form, we began collecting Employee Benefits and Contract Labor data on Worksheet S-3, part II and propose to derive FQHC Practitioner Employee Benefits costs using data obtained from that worksheet. Approximately 66 percent of FQHCs included in the sample of FQHCs reporting Salary costs also reported data on Worksheet S-3, part II for 2017. We continue to encourage all providers to report these data on the Medicare cost report. Therefore, we propose to calculate FQHC Practitioner Employee Benefits costs using Worksheet S-3, part II data. Specifically, we propose to use data from Worksheet S-3, part II, column 2, lines 2, 3, 4, 7, 8, and 9 to derive FQHC Practitioner Employee Benefits costs. These lines represent the employee benefits costs for physicians, PAs, NPs, CNMs, CPs, and CSWs. Our analysis of the Worksheet S-3, part II data submitted by these FQHCs indicates that we had a large enough sample to enable us to produce a reasonable Employee Benefits cost weight.

For the 2013-based FQHC market basket, we did not have data at the level of detail to separately estimate FQHC Practitioner Employee Benefits costs, and instead computed FQHC Practitioner Total Compensation costs, which reflected costs for wages and salaries, employee benefits, and contract labor together. Anytime direct costs can be obtained for a cost category directly from the Medicare Cost Reports we consider that to be a technical improvement to the market basket weight methodology as it allows the index to reflect the relative shares specific to the provider type. Therefore, we believe this proposed method of separately estimating FQHC Practitioner Employee Benefits is a technical improvement over the 2013-based FQHC market basket.

(3) FQHC Practitioner Contract Labor Costs

FQHC Practitioner Contract labor costs are primarily associated with direct patient care services. Contract labor costs for services such as accounting, billing, and legal are estimated using other government data

sources as described below. Approximately 60 percent of FQHCs reported contract labor costs on Worksheet S-3, part II, which we believe is an adequate sample size to enable us to produce a reasonable FQHC Practitioner Contract Labor cost weight. Therefore, we propose to derive the FQHC Practitioner Contract Labor costs for the proposed 2017-based FQHC market basket from data reported on Worksheet S-3, part II, column 1, lines 2, 3, 4, 7, 8, and 9. These lines represent the contract labor costs for physicians, PAs, NPs, CNMs, CPs, and CSWs. We also add in the costs for physician services under agreement as reported on Worksheet A, column 2, line 24 to derive the total FQHC Practitioner Contract Labor cost weight in the proposed 2017-based FQHC market basket.

For the 2013-based FQHC market basket, we did not have data at the level of detail to separately estimate FQHC Practitioner Contract Labor costs and instead computed FQHC Practitioner Total Compensation costs, which reflected costs for wages and salaries, employee benefits, and contract labor together. As noted previously, anytime direct costs can be obtained for a cost category directly from the Medicare Cost Reports we consider that to be a technical improvement to the market basket weight methodology as it allows the index to reflect the relative shares specific to the provider type. Therefore, we believe this proposed method of separately estimating FQHC Practitioner Contract Labor is a technical improvement over the 2013-based FQHC market basket.

(4) Clinical Staff Wages and Salaries Costs

Clinical Compensation includes any health-related clinical staff who does not fall under the definition of a FQHC Practitioner described in paragraph. We propose to derive Clinical Staff Wages and Salaries costs as the sum of direct care costs salaries as reported on Worksheet A, column 1, lines 27, 28, 32, 33, 34, 35, and 36. These lines represent the wages and salaries costs for visiting registered nurses (RNs), visiting licensed practical nurses (LPNs), laboratory technicians, registered dietician/Certified DSMT/MNT educators, physical therapists (PTs), occupational therapists (OTs), and other allied health personnel.

- For the 2013-based FQHC market basket, we estimated a clinical staff total compensation cost based on a similar methodology using cost data reported on Worksheet A of Medicare Cost Report form CMS-222-92, (see 81 FR

80394 for specific details on the prior methodology).

(5) Clinical Staff Employee Benefits Costs

Effective with the implementation of the 2014 Medicare cost report form, we began collecting employee benefits and contract labor data on Worksheet S-3, part II and propose to derive clinical staff employee benefits costs using data obtained from that worksheet. Approximately 64 percent of FQHCs included in the sample of FQHCs reporting salary expenses also reported data on Worksheet S-3, part II for 2017. We continue to encourage all providers to report these data on the Medicare cost report. Therefore, we propose to calculate clinical staff employee benefits costs using Worksheet S-3, part II, column 2, lines 5, 6, 10, 11, 12, 13, and 14. These lines represent the employee benefits costs for visiting RNs, visiting LPNs, laboratory technicians, registered dietician/Certified DSMT/MNT educators, PTs, OTs, and other allied health personnel.

- For the 2013-based FQHC market basket, we did not have data at the level of detail to separately estimate clinical staff employee benefits costs and instead computed clinical staff total compensation costs, which reflected costs for wages and salaries, employee benefits, and contract labor together. We believe this proposed method of separately estimating clinical staff employee benefits is a technical improvement over the 2013-based FQHC market basket.

(6) Clinical Staff Contract Labor Costs

We propose to derive the clinical staff contract labor costs for the proposed 2017-based FQHC market basket from data reported on Worksheet S-3, part II, column 1, lines 5, 6, 10, 11, 12, 13, and 14 to derive clinical staff contract labor costs. These lines represent the contract labor costs for visiting RNs, visiting LPNs, laboratory technicians, registered dietician/Certified DSMT/MNT educators, PTs, OTs, and other allied health personnel.

For the 2013-based FQHC market basket, we did not have data at the level of detail to separately estimate clinical staff contract labor costs and instead computed clinical staff total compensation costs, which reflected costs for wages and salaries, employee benefits, and contract labor together. We believe this proposed method of separately estimating FQHC clinical staff contract labor is a technical improvement over the 2013-based FQHC market basket.

(7) Non-Health Staff Compensation Costs

Non-Health Staff Compensation includes wage and salary costs for personnel in general service cost centers including: Employee Benefits department; Administrative & General; Plant Operation & Maintenance; Janitorial; Medical Records; Pharmacy; Transportation; and Other General Services. Specifically, non-health staff compensation costs are derived as the sum of compensation costs as reported on Worksheet A, column 1 for lines 3, 4, 5, 6, 7, 9, 10, 11, and 12. Additionally, we add a portion of employee benefit costs reported on Worksheet A, line 3, column 2 accounting for the non-health staff. We estimate the ratio of non-health staff related wages and salaries as a percentage of total wages and salaries. We then apply the percentage of non-health staff related wages and salary costs to the total employee benefits costs (Worksheet A, line 3, column 2) for each FQHC. We believe this is a reasonable estimate of non-health staff employee benefits. We propose to only use the costs from column 1 for most of the general service cost centers other than employee benefits since we believe that there are noncompensation costs reported in column 2 (such as maintenance and janitorial supplies). The remaining other costs for the general service categories are reflected in the remaining proposed cost categories as explained in more detail below.

(8) Pharmaceuticals Costs

We propose to calculate pharmaceuticals costs using the non-salary costs for the pharmacy cost center reported on Worksheet A, column 2, line 9. We propose to exclude the costs for drugs charged to patients as reported on Worksheet A, line 67 since these drugs are not included in the Medicare allowable costs for the FQHC PPS and are separately reimbursed. For the 2013-based FQHC market basket we were not

able to exclude non-reimbursable drug costs (such as drugs charged to patient costs) from the pharmacy cost weight as the 1992 Medicare cost report form did not capture these costs separately. We believe our proposed methodology is a technical improvement as it is more consistent with the FQHC PPS reimbursement.

(9) Medical Supplies

We propose to calculate medical supplies costs using the non-salary costs for the medical supplies cost center reported on Worksheet A, column 2, line 10. The medical supplies cost weight for the 2013-based FQHC market basket was derived based on the relative share of the medical supply costs in the MEI since these costs were not separately reported on the 1992 Medicare cost report form (81 FR 80395 through 80396). Since these costs are now directly reported by FQHC providers we believe the proposed method is a technical improvement to the method used in the 2013-based FQHC market basket.

(10) Fixed Capital

We propose that fixed capital costs be equal to costs reported on Worksheet A, line 1, column 2 of the Medicare Cost Report. A similar methodology was used for the 2013-based FQHC market basket.

(11) Moveable Capital Costs

We propose that moveable capital costs be equal to the capital costs as reported on Worksheet A, line 2, column 2. A similar methodology was used for the 2013-based FQHC market basket.

b. Proposed Major Cost Category Computation

After we derive costs for the major cost categories for each provider using the Medicare cost report data as previously described, we propose to trim the data for outliers. For each of the eleven major cost categories, we first are proposing to divide the calculated costs

for the category by total Medicare allowable costs calculated for the provider to obtain cost weights for the universe of FQHC providers. For the 2017-based FQHC market basket (similar to the 2013-based FQHC market basket), we propose that total Medicare allowable costs would be equal to the total costs as reported on Worksheet A, Columns 1 and 2, lines 1 through 7 and lines 9 through 12; Worksheet A, Column 1, lines 23 through 36; and Worksheet S3 Part II, Columns 1 and 2, lines 2 through 14.

For the FQHC Practitioner Wages and Salaries, FQHC Practitioner Employee Benefits, FQHC Practitioner Contract Labor, Clinical Staff Wages and Salaries, Clinical Staff Employee Benefits, Clinical Staff Contract Labor, Non-Health Staff Compensation, Pharmaceuticals, Medical Supplies, Fixed Capital, and Moveable Capital cost weights, after excluding cost weights that are less than or equal to zero, we propose to then remove those providers whose derived cost weights fall in the top and bottom 5 percent of provider-specific derived cost weights to ensure the exclusion of outliers. A 5 percent trim is the standard trim applied to the mean cost weights in all CMS market baskets and is consistent with the trimming used in the 2013-based FQHC market basket. After the outliers have been excluded, we sum the costs for each category across all remaining providers. We then are proposing to divide this by the sum of total Medicare allowable costs across all remaining providers to obtain a cost weight for the 2017-based FQHC market basket for the given category. This trimming process is done for each cost weight separately.

Finally, we propose to calculate the residual "All Other" cost weight that reflects all remaining costs that are not captured in the eleven major cost categories listed. We refer readers to Table 31 for the resulting proposed cost weights for these major cost categories.

TABLE 31: Major Cost Categories as Derived from Medicare Cost Reports

Major Cost Categories	Proposed 2017-Based FQHC Cost Report Weights (Percent)	2013-Based FQHC Market Basket (Percent)
FQHC Practitioner Compensation*	30.0	31.7
FQHC Practitioner Wages & Salaries	20.5	-
FQHC Practitioner Employee Benefits	4.5	-
FQHC Practitioner Contract Labor	4.9	-
Clinical Compensation*	16.2	9.5
Clinical Wages & Salaries	12.4	-
Clinical Employee Benefits	3.0	-
Clinical Contract Labor	0.8	-
Non-Health Staff Compensation*	25.4	27.4
Pharmaceuticals	3.9	5.1
Medical Supplies	2.4	-
Fixed Capital	4.7	4.5
Moveable Capital	1.9	1.7
All Other (Residual)	15.5	20.1

*Employee Benefits weight from the 2013-based FQHC Market Basket (10.7 percent), which was derived from the Medicare Cost Reports (81 FR 80395) and distributed across the three compensation categories: FQHC Practitioner, Clinical Staff, and Non-Health Staff based on the relative shares of each category.

Note: Totals may not sum to 100.0 due to rounding

The total compensation cost weight of 71.6 percent (sum of FQHC Practitioner Compensation, Clinical Compensation, Non-health Staff Compensation) calculated from the Medicare cost reports for the proposed 2017-based FQHC market basket is approximately 3.0 percentage point higher than the total compensation cost weight for the 2013-based FQHC market basket (68.6 percent). The 2017-based cost weight for FQHC Practitioners and Non-Health Staff are each about 2 percentage points lower compared to the 2013-based FQHC market basket, while the clinical staff compensation cost weight is about 7 percentage points higher. Part of the reason for the shift in the weights between compensation categories may be due to the change to the FQHC Medicare cost report form. On the 1992 Medicare cost report form (used for the 2013-based FQHC market basket), there were four open ended “fill-in” categories for healthcare staff costs and costs under agreement. Since we were unable to determine what specific category the “other health care staff” costs should be allocated to (that is, either FQHC practitioner, or clinical staff) we used a methodology where we applied the expenses for the “other

health care staff costs” between the categories for FQHC practitioner and clinical staff, based on the relative shares of expenses for both categories, excluding the open-ended fill in lines of Worksheet A, lines 9–11 and line 15. This may have resulted in an over allocation of some of the 2013 expenses to the FQHC Practitioner category relative to the clinical staff. On the 2014 Medicare cost report form, there is no longer an ambiguous category for other direct patient care staff costs.

The proposed 2017-based Pharmaceuticals cost weight is roughly 1.2 percentage points lower than the cost weight in the 2013-based FQHC market basket. The pharmaceutical costs included in the weight for 2017-based FQHC market basket includes only non-salary costs reported in Pharmacy (under general services) (Worksheet A, line 9, column 2 on the 2014 Medicare cost report form). We believe the cost share is lower with the new data because there is more specificity on where to report reimbursable and non-reimbursable drugs.

As we did for the 2013-based FQHC market basket, we propose to allocate the contract labor cost weight to the Wages and Salaries and Employee

Benefits cost weights based on their relative proportions under the assumption that contract labor costs comprise both Wages and Salaries and Employee Benefits for both FQHC Practitioners and Clinical Staff. The contract labor allocation proportion for Wages and Salaries is equal to the Wages and Salaries cost weight as a percent of the sum of the Wages and Salaries cost weight and the Employee Benefits cost weight. This rounded percentage is 82 percent for FQHC Practitioners and 80 percent for clinical staff. Therefore, we propose to allocate 82 percent of the FQHC Practitioner Contract Labor cost weight to the FQHC Practitioner Wages and Salaries cost weight and 18 percent to the FQHC Practitioner Employee Benefits cost weight. Similarly, we propose to allocate 80 percent of the clinical staff contract labor cost weight to the Clinical Staff Wages and Salaries cost weight and 20 percent to the clinical staff employee benefits cost weight. We refer readers to Table 32 that shows the proposed Wages and Salaries and Employee Benefits cost weights after Contract Labor cost weight allocation for the proposed 2017-based FQHC market basket.

TABLE 32: Wages and Salaries and Employee Benefits Cost Weights After Contract Labor Allocation

Major Cost Categories	Proposed 2017-Based FQHC Practitioner	Proposed 2017-Based Clinical Staff
Wages and Salaries	24.6	13.0
Employee Benefits	5.4	3.2
Compensation	30.0	16.2

*Totals may not sum due to rounding

c. Derivation of the Detailed Operating Cost Weights

To further divide the “All Other” residual cost weight of 15.5 percent estimated from the 2017 Medicare cost report data into more detailed cost categories, we propose to use the 2012 Benchmark Input-Output (I-O) “Use Tables/Before Redefinitions/Purchaser Value” for NAICS 621100, Offices of Physicians, published by the Bureau of Economic Analysis (BEA). We note that the BEA benchmark I-O data is used to further disaggregate residual expenses in other CMS market baskets. Therefore, we believe the data from this industry are the most technically appropriate for disaggregation of the residual expenses since both physician offices and FQHCs provide similar types of care. These data are publicly available at <https://www.bea.gov/industry/input-output-accounts-data>. For the 2013-based FQHC market basket, we used the relative shares of certain categories from the 2006-based MEI (81 FR 80396).

The BEA Benchmark I-O data are scheduled for publication every 5 years with the most recent data available for 2012. The 2012 Benchmark I-O data are derived from the 2012 Economic Census and are the building blocks for BEA’s economic accounts. Therefore, they represent the most comprehensive and

complete set of data on the economic processes or mechanisms by which output is produced and distributed.³⁰ BEA also produces Annual I-O estimates. However, while based on a similar methodology, these estimates reflect less comprehensive and less detailed data sources and are subject to revision when benchmark data becomes available. Instead of using the less detailed Annual I-O data, we propose to inflate the 2012 Benchmark I-O data forward to 2017 by applying the annual price changes from the respective price proxies to the appropriate market basket cost categories that are obtained from the 2012 Benchmark I-O data. We repeated this practice for each year. We then calculated the cost shares that each cost category represents of the 2012 data inflated to 2017. These resulting 2017 cost shares were applied to the “All Other” residual cost weight to obtain the detailed cost weights for the proposed 2017-based FQHC market basket. For example, the cost for Medical Equipment represents 7.2 percent of the sum of the “All Other” 2012 Benchmark I-O Offices of Physicians Expenditures inflated to 2017. Therefore, the Medical Equipment cost weight represents 7.2 percent of the proposed 2017-based FQHC market basket’s “All Other” cost category (15.5

percent), yielding a Medical Equipment cost weight of 1.1 percent in the proposed 2017-based FQHC market basket (0.072×15.5 percent = 1.1 percent).

Using this methodology, we propose to derive six detailed FQHC market basket cost category weights from the proposed 2017-based FQHC market basket residual cost weight (15.5 percent). These categories are: (1) Utilities; (2) Medical Equipment; (3) Miscellaneous Products; (4) Professional, Scientific, and Technical Services; (5) Administrative Support and Waste Management Services; (6) All Other Services. We note that for the 2013-based FQHC market basket, we had Telephone and Postage cost weights. For the proposed 2017-based FQHC market basket, we propose to include Telephone and Postage costs in the Miscellaneous Products cost weight due to the small amount of costs in this category (each were less than .05 percent).

d. Proposed 2017-Based FQHC Market Basket Cost Categories and Weights

Table 33 shows the proposed cost categories and weights for the proposed 2017-based FQHC market basket compared to the 2013-based FQHC market basket.

³⁰ http://www.bea.gov/papers/pdf/IOmanual_092906.pdf.

TABLE 33: Proposed 2017-Based FQHC Market Basket Cost Weights Compared to 2013-Based FQHC Market Basket Cost Weights

Cost Category	Proposed 2017-based FQHC Market Basket Cost Weight	2013-based FQHC Market Basket Cost Weight
Total	100.0	100.0
Compensation	71.6	68.7
FQHC Practitioner Compensation	30.0	31.7
FQHC Practitioner Wages and Salaries	24.6	-
FQHC Practitioner Employee Benefits	5.4	-
Clinical Staff Compensation	16.2	9.5
Clinical Staff Wages and Salaries	13.0	-
Clinical Staff Employee Benefits	3.2	-
Non-Health Staff Compensation	25.4	27.4
All Other Products	10.0	16.1
Pharmaceuticals	3.9	5.1
Utilities	0.5	1.4
Telephone	-	1.7

Note: Totals may not sum due to rounding.

4. Selection of Price Proxies

After developing the cost weights for the proposed 2017-based FQHC market basket, we selected the most appropriate wage and price proxies currently available to represent the rate of price change for each expenditure category. For the majority of the cost weights, we base the price proxies on U.S. Bureau of Labor Statistics (BLS) data, as they produce indexes that best meet the criteria of reliability, timeliness, availability, and relevance, and group them into one of the following BLS categories:

- *Employment Cost Indexes.* Employment Cost Indexes (ECIs) measure the rate of change in employment wage rates and employer costs for employee benefits per hour worked. These indexes are fixed-weight indexes and strictly measure the change in wage rates and employee benefits per hour. ECIs are superior to Average Hourly Earnings (AHE) as price proxies for input price indexes because they are not affected by shifts in occupation or industry mix, and because they measure pure price change and are available by

both occupational group and by industry. The industry ECIs are based on the North American Industry Classification System (NAICS) and the occupational ECIs are based on the Standard Occupational Classification System (SOC).

- *Producer Price Indexes.* Producer Price Indexes (PPIs) measure the average change over time in the selling prices received by domestic producers for their output. The prices included in the PPI are from the first commercial transaction for many products and some services (<https://www.bls.gov/ppi/>).

- *Consumer Price Indexes.* Consumer Price Indexes (CPIs) measure the average change over time in the prices paid by urban consumers for a market basket of consumer goods and services (<https://www.bls.gov/cpi/>). CPIs are only used when the purchases are similar to those of retail consumers rather than purchases at the producer level, or if no appropriate PPIs are available.

We evaluate the price proxies using the criteria of reliability, timeliness, availability, and relevance:

- *Reliability.* Reliability indicates that the index is based on valid statistical methods and has low sampling variability. Widely accepted statistical methods ensure that the data were collected and aggregated in a way that can be replicated. Low sampling variability is desirable because it indicates that the sample reflects the typical members of the population. (Sampling variability is variation that occurs by chance because only a sample was surveyed rather than the entire population.)

- *Timeliness.* Timeliness implies that the proxy is published regularly, preferably at least once a quarter. The market baskets are updated quarterly, and therefore, it is important for the underlying price proxies to be up-to-date, reflecting the most recent data available. We believe that using proxies that are published regularly (at least quarterly, whenever possible) helps to ensure that we are using the most recent data available to update the market basket. We strive to use publications that are disseminated frequently, because we believe that this is an

optimal way to stay abreast of the most current data available.

- *Availability.* Availability means that the proxy is publicly available. We prefer that our proxies are publicly available because this will help ensure that our market basket updates are as transparent to the public as possible. In addition, this enables the public to be able to obtain the price proxy data on a regular basis.

- *Relevance.* Relevance means that the proxy is applicable and representative of the cost category weight to which it is applied.

The CPIs, PPIs, and ECIs that we have selected meet these criteria. Therefore, we believe that they continue to be the best measure of price changes for the cost categories to which they would be applied.

Table 34 lists all price proxies that used in the proposed 2017-based FQHC market basket. Below is a detailed explanation of the price proxies we are proposing for each cost category weight, many of which are the same as those used for the 2013-based FQHC market basket.

a. Price Proxies for the Proposed 2017-Based FQHC Market Basket

(1) FQHC Practitioner Wages and Salaries

We propose to use the ECI for Wages and Salaries for Private Industry Workers in Professional and Related (BLS series code CIU2010000120000I) to measure price growth of this category. There is no specific ECI for physicians or FQHC Practitioners and, therefore, we propose to use an index that is based on professionals that receive advanced training similar to those performing at the FQHC Practitioner level of care. This index is consistent with the price proxy used to measure wages and salaries inflation pressure for physicians over time in the Medicare Economic Index (MEI) and is based on the MEI technical panel recommendation from 2012 (78 FR 74266 through 74271). Additionally, this price proxy is consistent with the proxy used for FQHC practitioner compensation in the 2013-based FQHC market basket (81 FR 80397). We note that the 2013-based FQHC market basket has a single cost category for Total Compensation reflecting both wages and salaries and employee benefits costs for FQHC Practitioners and this single compensation category uses the similar price proxy, the ECI Total Compensation for Private Industry Workers in Professional and Related, reflecting both types of compensation costs together rather than separately (81 FR 80397).

(2) FQHC Practitioner Employee Benefits

We propose to use the ECI for Total Benefits for Private Industry Workers in Professional and Related to measure price growth of this category. This ECI is calculated using the ECI for Total Compensation for Private Industry Workers in Professional and Related (BLS series code CIU1016220000000I) and the relative importance of wages and salaries within total compensation. The 2013-based FQHC market basket did not include a separate category for FQHC Practitioner employee benefit costs.

(3) Clinical Staff Wages and Salaries

We propose to use the ECI for Wages and Salaries for all Civilian Workers in Health Care and Social Assistance (BLS series code CIU1026200000000I) to measure the price growth of this cost category. This cost category consists of wage and salary costs for Nurses, Laboratory Technicians, and all other healthcare staff not included in the FQHC Practitioner compensation categories. Based on the clinical staff composition of these workers, we believe that the ECI for health-related workers is an appropriate proxy to measure wage and salary price pressures for these workers. We note that the 2013-based FQHC market basket has a single cost category for Total Compensation reflecting both wages and salaries and employee benefits costs for Clinical Staff and this single compensation category uses the similar price proxy, the ECI Total Compensation for all Civilian Workers in Health Care and Social Assistance, reflecting both types of compensation costs together rather than separately (81 FR 80398).

(4) Clinical Staff Employee Benefits

We propose to use the ECI for Total Benefits for all Civilian Workers in Health Care and Social Assistance to measure price growth of this category. This ECI is calculated using the ECI for Total Compensation for all Civilian Workers in Health Care and Social Assistance (BLS series code CIU1016220000000I) and the relative importance of wages and salaries within total compensation. The 2013-based FQHC market basket did not include a separate category for Clinical Staff employee benefit costs.

(5) Non-Health Staff Compensation

We propose to continue to use the ECI for Total Compensation for Private Industry Workers in Office and Administrative Support (BLS series code CIU2010000220000I) to measure

the price growth of this cost category.

The Non-health Staff Compensation cost weight is predominately attributable to administrative and facility type occupations, as reported in the data from the Medicare cost reports. This is the same price proxy used in the 2013-based FQHC market basket (81 FR 80398).

(6) Pharmaceuticals

We propose to continue to use the PPI Commodities for Pharmaceuticals for Human Use, Prescription (BLS series code WPUSI07003) to measure the price growth of this cost category. This price proxy is used to measure prices of Pharmaceuticals in other CMS market baskets, such as 2014-based Inpatient Prospective Payment System and 2014-based Skilled Nursing Facility market baskets. This is the same proxy used in the 2013-based FQHC market basket (81 FR 80398).

(7) Utilities

We propose to continue to use the CPI for Fuel and Utilities (BLS series code CUUR0000SAH2) to measure the price growth of this cost category. This is the same proxy used in the 2013-based FQHC market basket (81 FR 80398).

(8) Medical Equipment

We propose to continue to use the PPI Commodities for Surgical and Medical Instruments (BLS series code WPU1562) as the price proxy for this category. This is the same proxy used in the 2013-based FQHC market basket (81 FR 80398).

(9) Medical Supplies

We propose to continue to use a 50/50 blended index that comprises the PPI Commodities for Medical and Surgical Appliances and Supplies (BLS series code WPU156301) and the CPI-U for Medical Equipment and Supplies (BLS series code CUUR0000SEMG). The 50/50 blend is used in all market baskets where we do not have an accurate split available. We believe FQHCs purchase the types of supplies contained within these proxies, including such items as bandages, dressings, catheters, intravenous equipment, syringes, and other general disposable medical supplies, via wholesale purchase, as well as at the retail level. Consequently, we propose to combine the two aforementioned indexes to reflect those modes of purchase. This is the same blended price proxy used in the 2013-based FQHC market basket (81 FR 80398).

(10) Miscellaneous Products

We propose to use the CPI for All Items Less Food and Energy (BLS series code CUUR0000SA0L1E) to measure the price growth of this cost category. We believe that using the CPI for All Items Less Food and Energy is appropriate as it reflects a general level of inflation. This is the same proxy used in the 2013-based FQHC market basket (81 FR 80398).

(11) Professional, Scientific, and Technical Services

We propose to continue to use the ECI for Total Compensation for Private Industry Workers in Professional, Scientific, and Technical Services (BLS series code CIU201540000000I) to measure the price growth of this cost category. This is the same proxy used in the 2013-based FQHC market basket (81 FR 80398).

(12) Administrative and Facilities Support Services

We propose to continue to use the ECI Total Compensation for Private Industry

Workers in Office and Administrative Support (BLS series code CIU2010000220000I) to measure the price growth of this cost category. This is the same proxy used in the 2013-based FQHC market basket (81 FR 80398).

(13) All Other Services

We propose to continue to use the ECI for Total Compensation for Private Industry Workers in Service Occupations (BLS series code CIU2010000300000I) to measure the price growth of this cost category. This is the same proxy used in the 2013-based FQHC market basket (81 FR 80398).

(14) Fixed Capital

We propose to continue to use the PPI Industry for Lessors of Nonresidential Buildings (BLS series code PCU531120531120) to measure the price growth of this cost category (81 FR 80398). This is the same price proxy used in the 2013-based FQHC market basket. We believe this continues to be

the most appropriate price proxy since fixed capital expenses in FQHCs should reflect inflation for the rental and purchase of business office space.

(15) Moveable Capital

We propose to continue to use the PPI Commodities for Machinery and Equipment (BLS series code WPU11) to measure the price growth of this cost category as this cost category represents nonmedical moveable equipment. This is the same proxy used in the 2013-based FQHC market basket (81 FR 80398).

c. Summary of Price Proxies of the Proposed 2017-Based FQHC Market Basket

Table 34 shows the cost categories and associated price proxies for the proposed 2017-based FQHC market basket.

TABLE 34: Cost Categories and Price Proxies for the Proposed 2017-Based FQHC Market Basket

Cost Description	Price Proxies
FQHC Practitioner Wages and Salaries	ECI for Wages and Salaries for Private Industry Workers in Professional and Related
FQHC Practitioner Employee Benefits	ECI for Total Benefits for Private Industry Workers in Professional and Related
Clinical Staff Wages and Salaries	ECI for Wages and Salaries for All Civilian Workers in Health care and Social Assistance
Clinical Staff Employee Benefits	ECI for Total Benefits for All Civilian Workers in Health Care and Social Assistance
Non-Health Staff Compensation	ECI for Total Compensation for Private Industry Workers in Office and Administrative Support
Pharmaceuticals	PPI Special Index for Pharmaceuticals for Human Use, Prescription
Utilities	CPI-U for Fuels and Utilities
Medical Equipment	PPI Commodity Index for Surgical and Medical Instruments
Medical Supplies	Composite: PPI Commodity Index for Medical and Surgical Appliances and Supplies (50%) and CPI for Medical Equipment and Supplies (50%)
Miscellaneous Products	CPI-U for All items less food and energy
Professional, Scientific, and Technical Services	ECI for Total compensation for Private industry workers in Professional, Scientific, and Technical Services
Administrative and Facilities Support Services	ECI for Total Compensation for Private Industry Workers in Office and Administrative Support
All Other Services	ECI for Total Compensation for Private Industry Workers in Service Occupations
Fixed Capital	PPI Industry Index for Lessors of Nonresidential Buildings
Movable Capital	PPI Commodity Index for Machinery and Equipment

5. Proposed CY 2021 Productivity Adjusted Market Basket Update for FQHCs

For CY 2021 (that is, January 1, 2021 through December 31, 2021), we are proposing to use the proposed 2017-based FQHC market basket increase factor to update the PPS payments to FQHCs. Consistent with CMS practice, we estimated the market basket update for the FQHC PPS based on the most recent forecast from IGI. IGI is a nationally recognized economic and financial forecasting firm with which we contract to forecast the components of the market baskets and multifactor productivity (MFP). We are proposing to use the update based on the most recent

historical data available at the time of publication of the final rule. For example, the final CY 2021 FQHC update would be based on the four-quarter moving-average percent change of the 2017-based FQHC market basket through the second quarter of 2020 (based on the final rule's statutory publication schedule). For the proposed rule, we do not have the second quarter of 2020 historical data and, therefore, we will use the most recent projection available.

Based on IGI's first quarter 2020 forecast with historical data through the fourth quarter of 2019, the projected proposed 2017-based FQHC market basket increase factor for CY 2021 would be 2.5 percent. For comparison,

the 2013-based FQHC market basket update is also projected to be 2.5 percent in CY 2021; this estimate is based on IGI's first quarter 2020 forecast (with historical data through the fourth quarter of 2019). The proposed 2017-based FQHC market basket and the 2013-based FQHC market basket are both projected to grow at the same rate for CY 2021, the difference in the average update factor over the last five historical years (2016–2020) is 0.0 percent.

Table 35 compares the proposed 2017-based FQHC market basket updates and the 2013-based FQHC market basket updates for CY 2016 through CY 2023.

TABLE 35: Proposed 2017-Based FQHC Market Basket and 2013-Based FQHC Market Basket Percent Changes, CY 2016 through CY 2023

	Calendar Year (CY)	Proposed 2017-Based FQHC Market Basket Index Percent Change	2013-Based FQHC Market Basket Index Percent Change
Historical data	CY 2016	2.2	2.2
	CY 2017	2.1	2.2
	CY 2018	2.3	2.3
	CY 2019	2.4	2.4
	CY 2020	2.8	2.7
	Average 2016-2020	2.4	2.4
Forecast	CY 2021	2.5	2.5
	CY 2022	2.9	2.8
	CY 2023	3.0	3.0
	Average 2020-2023	2.8	2.8

Note that these market basket percent changes do not include any further adjustments as may be statutorily required.

Source: IHS Global Inc. 1st quarter 2020 forecast.

Section 1834(o)(2)(B)(ii) of the Act describes the methods for determining updates to FQHC PPS payment. We have included a productivity adjustment to the FQHC PPS annual payment update since implementation of the FQHC PPS (81 FR 80393) and we propose to continue to include a productivity adjustment to the proposed 2017-based FQHC market basket. We propose to use the most recent estimate of the 10-year moving average of changes in annual private nonfarm business (economy-wide) multifactor productivity (MFP), which is the same measure of MFP applied to other CMS Market Basket updates including the MEI. The BLS publishes the official measure of private nonfarm business MFP. (See <http://www.bls.gov/mfp> for the published BLS historical MFP data). For the final FQHC market basket update, we propose to use the most recent historical estimate of annual MFP as published by the BLS. Generally, the

most recent historical MFP estimate is lagged two years from the payment year.

Therefore, we propose to use the 2019 MFP as published by BLS in the CY 2021 FQHC market basket update. We note that MFP is derived by subtracting the contribution of labor and capital input growth from output growth. Since at the time of development of the proposed rule the 2019 MFP was not yet published by BLS, we are proposing to use IGI's first quarter 2020 forecast of MFP. A complete description of the MFP projection methodology is available at <http://www.cms.gov/Research-Statistics-Dataand-Systems/Statistics-Trends-andReports/MedicareProgramRatesStats/MarketBasketResearch.html>.

Using IGI's first quarter 2020 forecast, the productivity adjustment for CY 2021 (the 10-year moving average of MFP for the period ending CY 2019) is projected to be 0.6 percent. Therefore, the proposed CY 2021 productivity-adjusted

FQHC Market basket update is 1.9 percent, based on IGI's first quarter 2020 forecast with historical data through the fourth quarter of 2019. This reflects a 2.5-percent increase in the proposed 2017-based FQHC market basket and a 0.6-percent adjustment for productivity. For comparison, if we continue to use the 2013-based FQHC market basket, then the CY 2021 productivity-adjusted FQHC market basket update would also be 1.9 percent (2.5 percent FQHC market basket update less 0.6 percent MFP adjustment). Finally, we are proposing that if more recent data subsequently become available, we would use such data, if appropriate, to determine the CY 2021 market basket update and the MFP adjustment for the final rule.

E. Comprehensive Screenings for Seniors: Section 2002 of the Substance Use-Disorder Prevention That Promote Opioid Recovery and Treatment for Patients and Communities Act (SUPPORT Act)

Opioid overdose deaths continue to impact communities across the United States. In 2018, about 47,000 Americans died as a result of an opioid overdose, where 32 percent of these deaths involved a prescription opioid.³¹ In addition to the risk of death from overdose, opioids carry a number of other health risks, including respiratory depression, drowsiness, confusion, nausea, increased drug tolerance, and physical dependence. An estimated 1.7 million people in the United States have substance use disorders involving prescription opioid pain relievers.³²

CMS has a vital role in addressing opioid use disorder prevention, treatment and recovery. The intent of the SUPPORT Act (Pub. L. 115–271, enacted on October 24, 2018) is to provide for opioid use disorder prevention, treatment and recovery. In section 2002 of the SUPPORT Act, Comprehensive Screening for Seniors, the Congress required the Initial Preventive Physical Examination (IPPE) and Annual Wellness Visit (AWV) to include screening for potential substance use disorders (SUDs) and a review of any current opioid prescriptions. We believe that these provisions are complementary to the existing components of the IPPE and AWV. We are proposing to add these new elements to the IPPE and AWV regulations, to draw attention to their importance and fulfil the section 2002 SUPPORT Act requirements. In this proposed rule, we provide background on the IPPE and AWV, discuss how the requirements of the SUPPORT Act are related to the IPPE and AWV, and make proposals to implement these provisions.

Retrieved from <https://www.samhsa.gov/data/sites/default/files/cbhsq-reports/NSDUHNationalFindingsReport2018/NSDUHNationalFindingsReport2018.pdf>.

1. Background: IPPE and AWV

a. IPPE Required Elements

The IPPE is defined in section 1861(wv) of the Act and codified in regulations at § 410.16. The IPPE must be performed within 1 year after the effective date of a beneficiary's first Medicare Part B coverage period as stated in section 1861(hhh)(4)(G) of the Act. The IPPE includes all of the following services furnished to an eligible beneficiary by a physician or other qualified nonphysician practitioner (NPP) with the goal of health promotion and disease detection:

- Review of the beneficiary's medical and social history with attention to modifiable risk factors for disease, as those terms are defined in § 410.16.
- Review of the beneficiary's potential (risk factors) for depression, including current or past experiences with depression or other mood disorders, based on the use of an appropriate screening instrument for persons without a current diagnosis of depression, which the physician or other qualified NPP may select from various available standardized screening tests designed for this purpose and recognized by national professional medical organizations.
- Review of the beneficiary's functional ability, and level of safety as those terms are defined in § 410.16 based on the use of appropriate screening questions or a screening questionnaire, which the physician or other qualified NPP may select from various available screening questions or standardized questionnaires designed for this purpose and recognized by national professional medical organizations.
- An examination to include measurement of the beneficiary's height, weight, body mass index, blood pressure, a visual acuity screen, and other factors as deemed appropriate, based on the beneficiary's medical and social history, and current clinical standards.
- End-of-life planning upon agreement with the individual.
- Education, counseling, and referral, as deemed appropriate by the physician or qualified NPP, based on the results of the review and evaluation services described in § 410.16.
- Education, counseling, and referral, including a brief written plan such as a checklist provided to the individual for obtaining an electrocardiogram, as appropriate, and the appropriate screening and other preventive services that are covered as separate Medicare Part B benefits.

b. AWV Required Elements

Section 1861(hhh) of the Act expanded Medicare coverage under Part B to include an AWV effective for services furnished on or after January 1, 2011. We codified the AWV at § 410.15.

The AWV is a wellness visit that focuses on identification of certain risk factors, personalized health advice, and referral for additional preventive services and lifestyle interventions (which may or may not be covered by Medicare). The elements included in the AWV differ from comprehensive physical examination protocols with which some providers may be familiar since it is a visit that is specifically designed to provide personalized prevention plan services as defined in the Act. The AWV includes a health risk assessment (HRA) and the AWV takes into account the results of the HRA.

The AWV may be performed when the beneficiary is no longer within 12 months after the effective date of his or her first Medicare Part B coverage period and when the beneficiary has not received either an IPPE or AWV within the past 12 months. The AWV may be performed by a physician, NPP (physician assistant, nurse practitioner, or clinical nurse specialist), medical professional (including a health educator, a registered dietitian, or nutrition professional, or other licensed practitioner) or a team of such medical professionals, working under the direct supervision of a physician. In summary, the first AWV includes the following:

- Review (and administration if needed) of a health risk assessment (as defined in § 410.15).
- Establishment of an individual's medical and family history.
- Establishment of a list of current providers and suppliers that are regularly involved in providing medical care to the individual.
- Measurement of an individual's height, weight, body-mass index (or waist circumference, if appropriate), blood pressure, and other routine measurements as deemed appropriate, based on the beneficiary's medical and family history.
- Detection of any cognitive impairment that the individual may have, as that term is defined in § 410.15.
- Review of the individual's potential (risk factors) for depression, including current or past experiences with depression or other mood disorders, based on the use of an appropriate screening instrument for persons without a current diagnosis of depression, which the health professional may select from various available standardized screening tests

designed for this purpose and recognized by national medical professional organizations.

- Review of the individual's functional ability and level of safety, based on direct observation or the use of appropriate screening questions or a screening questionnaire, which the health professional as defined in § 410.15 may select from various available screening questions or standardized questionnaires designed for this purpose and recognized by national professional medical organizations.

- Establishment of the following:

- ++ A written screening schedule for the individual such as a checklist for the next 5 to 10 years, as appropriate, based on recommendations of the United States Preventive Services Task Force (USPSTF) and the Advisory Committee on Immunization Practices, and the individual's health risk assessment (as that term is defined in § 410.15), health status, screening history, and age-appropriate preventive services covered by Medicare.

- ++ A list of risk factors and conditions for which primary, secondary or tertiary interventions are recommended or are underway for the individual, including any mental health conditions or any such risk factors or conditions that have been identified through an initial preventive physical examination (as described under § 410.16), and a list of treatment options and their associated risks and benefits.

- ++ Furnishing of personalized health advice to the individual and a referral, as appropriate, to health education or preventive counseling services or programs aimed at reducing identified risk factors and improving self-management, or community-based lifestyle interventions to reduce health risks and promote self-management and wellness, including weight loss, physical activity, smoking cessation, fall prevention, and nutrition.

- ++ At the discretion of the beneficiary, furnish advance care planning services to include discussion about future care decisions that may need to be made, how the beneficiary can let others know about care preferences, and explanation of advance directives which may involve the completion of standard forms.

- ++ Any other element determined appropriate through the national coverage determination process.

In summary, subsequent AWWs include the following:

- Review (and administration, if needed) of an updated health risk assessment (as defined in § 410.15).

- An update of the individual's medical and family history.

- An update of the list of current providers and suppliers that are regularly involved in providing medical care to the individual as that list was developed for the first AWW providing personalized prevention plan services or the previous subsequent AWW providing personalized prevention plan services.

- Measurement of an individual's weight (or waist circumference), blood pressure and other routine measurements as deemed appropriate, based on the individual's medical and family history.

- Detection of any cognitive impairment that the individual may have, as that term is defined in § 410.15.

- An update to the following:

- ++ The written screening schedule for the individual as that schedule is defined in paragraph (a) of § 410.15 for the first AWW providing personalized prevention plan services.

- ++ The list of risk factors and conditions for which primary, secondary or tertiary interventions are recommended or are underway for the individual as that list was developed at the first AWW providing personalized prevention plan services or the previous subsequent AWW providing personalized prevention plan services.

- ++ Furnishing of personalized health advice to the individual and a referral, as appropriate, to health education or preventive counseling services or programs as that advice and related services are defined in paragraph (a) of § 410.15.

- ++ At the discretion of the beneficiary, furnish advance care planning services to include discussion about future care decisions that may need to be made, how the beneficiary can let others know about care preferences, and explanation of advance directives which may involve the completion of standard forms.

- ++ Any other element determined appropriate through the national coverage determination process.

2. Section 2002 of the SUPPORT Act Requirement

In section 2002 of the SUPPORT Act, sections 1861(ww) and 1861(hhh)(2) of the Act were amended to include a review of any current opioid prescriptions and screening for potential substance use disorders (SUD) as elements of the IPPE and AWW, effective January 1, 2020.

3. Proposal on Section 2002 of the SUPPORT Act Requirements

We are proposing to add the requirements of section 2002 of the SUPPORT Act to our regulations at § 410.15 and 410.16 for the AWW and IPPE, respectively.

Section 2002 of the SUPPORT Act, requires a review of any current opioid prescriptions as part of the IPPE and AWW. Such review includes a review of the potential risk factors to the individual for opioid use disorder, an evaluation of the individual's severity of pain and current treatment plan, educational information on non-opioid treatment options, and a referral to a specialist, as appropriate. Section 2002 of the SUPPORT Act also requires adding an element to the IPPE and AWW to include screening for potential SUDs. Along with the screening for SUD, a referral for treatment, as appropriate, was added to the AWW.

The definitions and conditions for and limitations on coverage of the IPPE outlined in § 410.16 includes a review of the beneficiary's medical and social history. The medical history is defined to include a review of current medications, which would include a review of current opioid prescriptions. Furthermore, social history is defined to include, at a minimum, a history of alcohol, tobacco, and illicit drug use. Illicit drug use may include the non-medical use of prescription drugs. The physician or other qualified health professional may then provide education, counseling, and referral, as deemed appropriate, based on the results of the review and evaluation services provided during the IPPE.

The definitions and conditions for and limitations on coverage of the AWW in § 410.15 includes a health risk assessment, which entails an evaluation of psychosocial risks, including but not limited to, depression/life satisfaction, stress, anger, loneliness/social isolation, pain, and fatigue. The patient's substance use, if applicable, could be reviewed as part of the health risk assessment. The AWW also covers establishment of, or an update to the individual's medical and family history. The medical history includes medication use, and may have included a review of any opioid prescriptions. The health professional may also establish or update a list of risk factors and conditions for which primary, secondary or tertiary interventions are recommended or are underway for the individual, including any mental health conditions or any such risk factors or conditions that have been identified through the initial or subsequent AWW

or IPPE, and a list of treatment options and their associated risks and benefits. If the clinician detected, through the above methods for screening, that a patient was at high-risk for substance use disorder in the course of the visit, it would have been appropriate to note in the patient's IPPE written plan or the AWV personalized prevention plan and to have referred the patient for further assessment and treatment.

Awareness of a patient's use of substances, including nonmedical use of prescription drugs and illicit drug use, is an important aspect of the IPPE and AWV. In general, screening for potential SUDs may include screening questions, the use of a specific tool, screening for licit and/or illicit drugs (for example, alcohol, non-medical use of prescription opioids, methamphetamine, heroin, cocaine, and other substances), review of the beneficiary's medical and social history and medical records, or prescription drug monitoring program query when clinically indicated. Given the existing elements of the IPPE and AWV, we do not expect the new regulatory elements to add significant burdens on physicians and practitioners who furnish these services because review of medical and social history, risk factor identification, education, counseling, and referrals are already fundamental parts of the IPPE and AWV. The new regulatory elements elevate the importance of physicians' and other qualified health professionals' vigilance in identifying and addressing opioid risks and SUDs in Medicare beneficiaries.

4. Proposed Regulatory Text Changes

We are proposing to add elements to our regulations to reflect the provisions of section 2002 of the SUPPORT Act. Consistent with sections 1861(wv) and 1861(hhh)(2) of the Act, we propose to amend 42 CFR 410.15 and 410.16 by: (1) Adding the term "screening for potential substance use disorders"; (2) Adding the term "a review of any current opioid prescriptions" and its definition; and (3) revising the "Initial Preventive Physical Examination," "first annual wellness visit providing personalized prevention plan services," and "subsequent annual wellness visit providing personalized prevention plan services".

(1) "Screening for Potential Substance Use Disorders"

We propose to revise §§ 410.15 and 410.16 by adding the element "Screening for Potential Substance Use Disorders" and describing the proposed requirement as a review of the individual's potential risk factors for

substance use disorder and referral for treatment as appropriate.

(2) Definition of "A Review of Any Current Opioid Prescriptions"

We propose to revise §§ 410.15 and 410.16 by adding the element "a review of any current opioid prescriptions" and defining such term, consistent with section 1861(wv)(4) of the Act, as a review of any current opioid prescriptions, including a review of the potential risk factors to the individual for opioid use disorder, an evaluation of the individuals' severity of pain and current treatment plan, the provision of information on non-opioid treatment options, and a referral to a specialist, as appropriate.

(3) Proposed Changes to the "Initial Preventive Physical Examination," "First Annual Wellness Visit" and "Subsequent Annual Wellness Visit"

In §§ 410.15 and 410.16, we adopted the components of the IPPE and AWV, consistent with the statutory elements described in sections 1861(wv) and 1861(hhh)(2) of the Act. The initial preventive physical examination, first and subsequent annual wellness visits are meant to represent a beneficiary visit focused on prevention. Among other things, the IPPE and AWV encourages beneficiaries to obtain the preventive services covered by Medicare that are appropriate for them. First and subsequent AWVs also include elements that focus on the furnishing of personalized health advice and referral, as appropriate, to health education, preventive counseling services, or programs aimed at reducing identified risk factors and improving self-management, or community-based lifestyle interventions.

We are proposing to revise "initial preventive physical examination," "first annual wellness visit providing personalized prevention plan services," and "subsequent annual wellness visit providing personalized prevention plan services" by adding:

- In § 410.15(a):

- ++ A revised paragraph (xi) to the definition of the term "First annual wellness visit providing personalized prevention plan services," and a revised paragraph (ix) to the definition of the term "Subsequent annual wellness visit" that would add furnishing of a review of any current opioid prescriptions as that term is defined in this section.

- ++ A new paragraph (xii) to the definition of "First annual wellness visit providing personalized prevention plan services," and a new paragraph (x) to the definition of "Subsequent annual

wellness visit" that would add screening for potential substance use disorders including a review of the individual's potential risk factors for substance use disorder and referral for treatment as appropriate.

- ++ A new paragraph (xiii) to the definition of "First annual wellness visit providing personalized prevention plan services," and a new paragraph (xi) to the definition of "Subsequent annual wellness visit" that would add any other element determined appropriate through the national coverage determination process.

- In § 410.16:

- ++ A revised paragraph (a)(6) to the definition of "Initial preventive physical examination" that would include a review of any current opioid prescriptions as that term is defined in this section.

- ++ A revised paragraph (a)(7) to the definition of "Initial preventive physical examination" that would add screening for potential substance use disorders to include a review of the individual's potential risk factors for substance use disorder and referral for treatment as appropriate.

- ++ A new paragraph (a)(8) to the definition of "Initial preventive physical examination" that would add, education, counseling, and referral, as deemed appropriate by the physician or qualified nonphysician practitioner, based on the results of the review and evaluation services described in this section.

- ++ A new paragraph (a)(9) to the definition of "Initial preventive physical examination" that would include, education, counseling, and referral, including a brief written plan such as a checklist provided to the individual for obtaining an electrocardiogram, as appropriate, and the appropriate screening and other preventive services that are covered as separate Medicare Part B benefits as described in sections 1861(s)(10), (jj), (nn), (oo), (pp), (qq)(1), (rr), (uu), (vv), (xx)(1), (yy), (bbb), and (ddd) of the Act.

5. Summary

The initial preventive physical examination, first and subsequent annual wellness visits are designed to help prevent disease and disability based on the beneficiary's current health and risk factors. Increased payment values for the IPPE and AWV in alignment with increases to E/M services are being proposed in section II.F. of this proposed rule. Our proposals seek to incorporate the new AWV and IPPE requirements of section 2002 of the SUPPORT Act in a manner that is flexible for clinicians to provide

the care that is most appropriate for their patients. We look forward to receiving public comment on these proposals.

F. Medicaid Promoting Interoperability Program Requirements for Eligible Professionals (EPs)

1. Background

Sections 1903(a)(3)(F) and 1903(t) of the Act provide the statutory basis for incentive payments made to Medicaid EPs and eligible hospitals for the adoption, implementation, upgrade, and meaningful use of Certified EHR Technology (CEHRT). We have implemented these statutory provisions in prior rulemakings to establish the Medicaid Promoting Interoperability Program.

Under sections 1848(o)(2)(A)(iii) and 1903(t)(6)(C)(i)(II) of the Act, and the definition of “meaningful EHR user” in regulations at § 495.4, one of the requirements of being a meaningful EHR user is to successfully report the clinical quality measures selected by CMS to CMS or a state, as applicable, in the form and manner specified by CMS or the state, as applicable. Section 1848(o)(2)(B)(iii) of the Act requires that in selecting electronic clinical quality measures (eCQMs) for EPs to report under the Promoting Interoperability Program, and in establishing the form and manner of reporting, the Secretary shall seek to avoid redundant or duplicative reporting otherwise required. We have taken steps to align various quality reporting and payment programs that include the submission of eCQMs.

In the CY 2020 PFS final rule (84 FR 62568, 62900), we established for 2020 that Medicaid EPs are required to report on any six eCQMs that are relevant to the EP’s scope of practice, regardless of whether they report via attestation or electronically. We also adopted the Merit-based Incentive Payment System (MIPS) requirement that EPs report on at least one outcome measure (or, if an applicable outcome measure is not available or relevant, one other high priority measure). We explained that if no outcome or high priority measure is relevant to a Medicaid EP’s scope of practice, the EP may report on any six eCQMs that are relevant.

2. eCQM Reporting Requirements for EPs Under the Medicaid Promoting Interoperability Program for 2020

We annually review and revise the list of eCQMs for each MIPS performance year to reflect updated clinical standards and guidelines. In Appendix 1 of this proposed rule, we propose to

amend the list of available eCQMs for the CY 2021 performance period. To keep eCQM specifications current and minimize complexity, we propose to align the eCQMs available for Medicaid EPs in 2021 with those available for MIPS eligible clinicians for the CY 2021 performance period. Specifically, we propose that the eCQMs available for Medicaid EPs in 2021 would consist of the list of quality measures available under the eCQM collection type on the final list of quality measures established for the MIPS CY 2021 performance period.

In previous years, CMS proposals to align the list of eCQMs for MIPS and the Medicaid Promoting Interoperability Program for EPs received positive comments that indicated that alignment between these two programs would help reduce health care provider reporting burden (84 FR 62900; see also 83 FR 59452, 59702). These comments thus suggest that aligning the eCQM lists might encourage EP participation in the Medicaid Promoting Interoperability Program by giving Medicaid EPs that are also MIPS eligible clinicians the ability to report the same eCQMs for both programs. Not aligning the eCQM lists could lead to increased burden, because EPs might have to report on different eCQMs for the Medicaid Promoting Interoperability Program if they opt to report on newly added eCQMs for MIPS. In addition, we believe that aligning the eCQMs available in each program would help to ensure the most uniform application of up-to-date clinical standards and guidelines possible.

We anticipate that this proposal would reduce burden for Medicaid EPs by aligning the requirements for multiple reporting programs, and that the system changes required for EPs to implement this change would not be significant, particularly in light of our belief that many EPs would report eCQMs to meet the quality performance category of MIPS and therefore should be prepared to report on the available eCQMs for 2021. We expect that this proposal would have only a minimal impact on states, by requiring minor adjustments to state systems for 2021 to maintain current eCQM lists and specifications.

For 2021, we propose to again require (as we did for 2020) that Medicaid EPs report on any six eCQMs that are relevant to their scope of practice, regardless of whether they report via attestation or electronically. This policy of allowing Medicaid EPs to report on any six measures relevant to their scope of practice would generally align with the MIPS data submission requirement for eligible clinicians using the eCQM

collection type for the quality performance category, which is established at § 414.1335(a)(1). MIPS eligible clinicians who elect to submit eCQMs must generally submit data on at least six quality measures, including at least one outcome measure (or, if an applicable outcome measure is not available, one other high priority measure). We refer readers to § 414.1335(a) for the data submission criteria that apply to individual MIPS eligible clinicians and groups that elect to submit data with other collection types.

In addition, as we did for 2020, we propose that for 2021, EPs in the Medicaid Promoting Interoperability Program would be required to report on at least one outcome measure (or, if an outcome measure is not available or relevant, one other high priority measure). This policy would improve alignment with the MIPS quality performance category requirements for eligible clinicians using the eCQM collection type. We also propose that if no outcome or high priority measures are relevant to a Medicaid EP’s scope of practice, the clinician may report on any six eCQMs that are relevant, as was the policy in 2020.

In the CY 2020 PFS final rule (84 FR 62899–62900), we established the following three methods to identify which of the available measures are high priority measures for EPs participating in the Medicaid Promoting Interoperability Program. We propose to use the same three methods for identifying high priority eCQMs for the Medicaid Promoting Interoperability Program for 2021:

- The same set of measures that are identified as high priority measures for reporting on the quality performance category for eligible clinicians participating in MIPS.
- All e-specified measures from the previous year’s core set of quality measures for Medicaid and the Children’s Health Insurance Program (CHIP) (Child Core Set) or the core set of health care quality measures for adults enrolled in Medicaid (Adult Core Set) (hereinafter together referred to as “Core Sets”) that are also included on the MIPS list of eCQMs.

Sections 1139A and 1139B of the Act require the Secretary to identify and publish core sets of health care quality measures for child Medicaid and CHIP beneficiaries and adult Medicaid beneficiaries. These measure sets are required by statute to be updated annually and are voluntarily reported by states to CMS. These Core Sets are composed of measures that specifically focus on populations served by the

Medicaid and CHIP programs and are of particular importance to their care. The MIPS eCQM list includes several, but not all, of the measures in the Core Sets. Because the Core Sets are released at the beginning of each year, it is not possible to update the list of high-priority eCQMs with those added to the current year's Core Sets.

The eCQMs that would be available for Medicaid EPs to report in 2021, that are both part of the Core Sets and on the MIPS list of eCQMs, and that would be considered high priority measures under our proposal are: CMS2, "Preventive Care and Screening; Screening for Depression and Follow-Up Plan"; CMS122, "Diabetes: Hemoglobin A1c (HbA1c) Poor Control (>9%)"; CMS125, "Breast Cancer Screening"; CMS128, "Anti-depressant Medication Management"; CMS136, "Follow-Up Care for Children Prescribed ADHD Medication (ADD)"; CMS137, "Initiation and Engagement of Alcohol and Other Drug Dependence Treatment"; CMS153, "Chlamydia Screening for Women"; CMS155, "Weight Assessment and Counseling for Nutrition and Physical Activity for Children and Adolescents"; and CMS165, "Controlling High Blood Pressure."

- Through an amendment to § 495.332(f), we gave each state the flexibility to identify which of the eCQMs available for reporting in the Medicaid Promoting Interoperability Program are high priority measures for Medicaid EPs in that state, with review and approval by CMS, through the State Medicaid HIT Plan (SMHP). States are thus able to identify high priority measures that align with their state health goals or other programs within the state.

All eCQMs identified via any of these three methods are high priority measures for EPs participating in the Medicaid Promoting Interoperability Program for 2020. As noted above, we propose to use the same three methods for identifying high priority eCQMs for the Medicaid Promoting Interoperability Program for 2021. We invite comments as to whether any of these methods should be altered or removed, or whether any additional methods should be considered for 2021.

Finally, we note that the eCQM reporting period in 2021 for EPs in the Medicaid Promoting Interoperability Program is a minimum of any continuous 90-day period within CY 2021, provided that the end date for this period falls before October 31, 2021, or falls before a state-specific alternative date prior to October 31, 2021 that is specified in the SMHP, as described in

§ 495.332(f)(4). This 2021 eCQM reporting period will help ensure that states can issue all Medicaid Promoting Interoperability Program payments on or before December 31, 2021. (See 83 FR 59452, 59704 through 59706).

G. Medicare Shared Savings Program

On March 23, 2010, the Patient Protection and Affordable Care Act (Pub. L. 111–148) was enacted, followed by enactment of the Health Care and Education Reconciliation Act of 2010 (Pub. L. 111–152) on March 30, 2010, which amended certain provisions of the Patient Protection and Affordable Care Act (hereinafter collectively referred to as "the Affordable Care Act"). Section 3022 of the Affordable Care Act amended Title XVIII of the Act (42 U.S.C. 1395 *et seq.*) by adding section 1899 to the Act to establish the Medicare Shared Savings Program (Shared Savings Program) to facilitate coordination and cooperation among health care providers to improve the quality of care for Medicare fee-for-service (FFS) beneficiaries and reduce the rate of growth in expenditures under Medicare Parts A and B. (See 42 U.S.C. 1395jjj.) Eligible groups of providers and suppliers, including physicians, hospitals, and other health care providers, may participate in the Shared Savings Program by forming or participating in an Accountable Care Organization (ACO). Under the Shared Savings Program, providers of services and suppliers that participate in an ACO continue to receive traditional Medicare FFS payments under Parts A and B, but the ACO may be eligible to receive a shared savings payment if it meets specified quality and savings requirements.

Section 1899 of the Act has been amended through subsequent legislation. The requirements for assignment of Medicare FFS beneficiaries to ACOs participating under the program were amended by the 21st Century Cures Act (Pub. L. 114–255). The Bipartisan Budget Act of 2018 (Pub. L. 115–123, enacted on February 9, 2018), further amended section 1899 of the Act to provide for the following: Expanded use of telehealth services by physicians or practitioners participating in an applicable ACO to furnish services to prospectively assigned beneficiaries, greater flexibility in the assignment of Medicare FFS beneficiaries to ACOs by allowing ACOs in tracks under retrospective beneficiary assignment a choice of prospective assignment for the agreement period; permitting Medicare FFS beneficiaries to voluntarily identify an ACO professional as their primary care provider and requiring that such

beneficiaries be notified of the ability to make and change such identification, and mandating that any such voluntary identification will supersede claims-based assignment; and allowing ACOs under certain two-sided models to establish CMS-approved beneficiary incentive programs.

The Shared Savings Program regulations are codified at 42 CFR part 425. The final rule establishing the Shared Savings Program appeared in the November 2, 2011 **Federal Register** (Medicare Program; Medicare Shared Savings Program: Accountable Care Organizations; final rule (76 FR 67802) (hereinafter referred to as the "November 2011 final rule")). A subsequent major update to the program rules appeared in the June 9, 2015 **Federal Register** (Medicare Program; Medicare Shared Savings Program: Accountable Care Organizations; final rule (80 FR 32692) (hereinafter referred to as the "June 2015 final rule")). The final rule entitled, "Medicare Program; Medicare Shared Savings Program; Accountable Care Organizations—Revised Benchmark Rebasing Methodology, Facilitating Transition to Performance-Based Risk, and Administrative Finality of Financial Calculations," which addressed changes related to the program's financial benchmark methodology, appeared in the June 10, 2016 **Federal Register** (81 FR 37950) (hereinafter referred to as the "June 2016 final rule")). A final rule, "Medicare Program; Revisions to Payment Policies Under the Physician Fee Schedule and Other Revisions to Part B for CY 2019; Medicare Shared Savings Program Requirements; Quality Payment Program; Medicaid Promoting Interoperability Program; Quality Payment Program—Extreme and Uncontrollable Circumstance Policy for the 2019 MIPS Payment Year; Provisions From the Medicare Shared Savings Program—Accountable Care Organizations—Pathways to Success; and Expanding the Use of Telehealth Services for the Treatment of Opioid Use Disorder Under the Substance Use-Disorder Prevention That Promotes Opioid Recovery and Treatment (SUPPORT) for Patients and Communities Act", appeared in the November 23, 2018 **Federal Register** (83 FR 59452) (herein referred to as the "November 2018 final rule" or the "CY 2019 PFS final rule"). In the November 2018 final rule, we finalized a voluntary 6-month extension for existing ACOs whose participation agreements would otherwise expire on December 31, 2018; allowed beneficiaries greater flexibility in designating their primary care

provider and in the use of that designation for purposes of assigning the beneficiary to an ACO if the clinician they align with is participating in an ACO; revised the definition of primary care services used in beneficiary assignment; provided relief for ACOs and their clinicians impacted by extreme and uncontrollable circumstances in performance year 2018 and subsequent years; established a new Certified Electronic Health Record Technology (CEHRT) use threshold requirement; and reduced the Shared Savings Program quality measure set from 31 to 23 measures (83 FR 59940 through 59990 and 59707 through 59715).

A final rule redesigning the Shared Savings Program appeared in the December 31, 2018 **Federal Register** (Medicare Program: Medicare Shared Savings Program; Accountable Care Organizations-Pathways to Success and Uncontrollable Circumstances Policies for Performance Year 2017; final rule) (83 FR 67816) (hereinafter referred to as the “December 2018 final rule”). In the December 2018 final rule, we finalized a number of policies for the Shared Savings Program, including a redesign of the participation options available under the program to encourage ACOs to transition to two-sided models; new tools to support coordination of care across settings and strengthen beneficiary engagement; and revisions to ensure rigorous benchmarking.

In the interim final rule with comment period (IFC) entitled “Medicare and Medicaid Programs; Policy and Regulatory Revisions in Response to the COVID–19 Public Health Emergency”, which appeared in the April 6, 2020 **Federal Register** (85 FR 19230) (hereinafter referred to as the “March 31st COVID–19 IFC”), we removed the restriction which prevented the application of the Shared Savings Program extreme and uncontrollable circumstances policy for disasters that occur during the quality reporting period if the reporting period is extended, to offer relief under the Shared Savings Program to all ACOs that may be unable to completely and accurately report quality data for 2019 due to the public health emergency (PHE) for the COVID–19 pandemic (85 FR 19267 and 19268). In the IFC entitled “Medicare and Medicaid Programs; Basic Health Program, and Exchanges; Additional Policy and Regulatory Revisions in Response to the COVID–19 Public Health Emergency and Delay of Certain Reporting Requirements for the Skilled Nursing Facility Quality Reporting Program” which appeared in the May 8, 2020 **Federal Register** (85 FR

27573 through 27587) (hereinafter referred to as the “May 8th COVID–19 IFC”), we modified Shared Savings Program policies to: (1) Allow ACOs whose current agreement periods expire on December 31, 2020, the option to extend their existing agreement period by 1-year, and allow ACOs in the BASIC track’s glide path the option to elect to maintain their current level of participation for performance year 2021; (2) adjust program calculations to remove payment amounts for episodes of care for treatment of COVID–19; and (3) expand the definition of primary care services for purposes of determining beneficiary assignment to include telehealth codes for virtual check-ins, e-visits, and telephonic communication. We also clarified the applicability of the program’s extreme and uncontrollable circumstances policy to mitigate shared losses for the period of the COVID–19 PHE starting in January 2020.

We have also made use of the annual CY PFS rules to address quality reporting for the Shared Savings Program and certain other issues. Refer to the CY 2020 PFS proposed rule for a summary of policies finalized in prior rules (84 FR 40705).

Policies applicable to Shared Savings Program ACOs for purposes of reporting for other programs have also continued to evolve based on changes in the law. The Medicare Access and CHIP Reauthorization Act of 2015 (MACRA) established the Quality Payment Program (Pub. L. 114–10). In the CY 2017 Quality Payment Program final rule with comment period (81 FR 77008), we established regulations for the Merit-Based Incentive Payment System (MIPS) and Advanced Alternative Payment Models (APMs) and related policies applicable to eligible clinicians who participate in the Shared Savings Program. These policies included requirements for Shared Savings Program ACOs regarding reporting for the MIPS Quality performance category and a policy that gives ACOs full credit for the MIPS Improvement Activities performance category based on their participation in the Shared Savings Program. We believe that the proposed changes would reduce ACO burden by establishing a smaller measure set, out of which ACO would only be required to actively report 3 measures. This would represent a significant reduction in reporting requirements from the 10 measures on which ACOs are currently required to actively report. Reporting for these measures would begin in January 2022, for the 2021 performance year. We believe this timeline would allow

organizations sufficient time to prepare to report on the new measure set. In addition, the reporting options for the three ACO-reported measures would leverage existing MIPS collection types and more closely align existing CEHRT and registries used by ACOs and their clinicians, including use of APIs to submit data.

As a general summary, in this proposed rule, we are proposing to:

- Modify the approach to measuring ACO quality performance under the Shared Savings Program which includes:

- ++ Applying the Alternative Payment Model (APM) Performance Pathway (APP) to Shared Savings Program ACOs.

- ++ Revising the Shared Savings Program Quality Performance Standard.

- ++ Changing the methodology for determining shared savings and shared losses based on ACO quality performance.

- ++ Revising the approach to monitoring ACO quality performance and addressing ACOs that fail to meet the Quality Performance Standard.

- ++ Updating the process used to validate ACO Quality Data Reporting.

- ++ Updating the extreme and uncontrollable circumstances policy as it relates to quality performance.

- Update the definition of primary care services used in beneficiary assignment, and codify in regulations the adjustment that is made to an ACO’s historical benchmark to reflect any changes to the beneficiary assignment methodology specified in 42 CFR part 425, subpart E, during an ACO’s agreement period, including revisions to the definition of primary care services at § 425.402(c).

- Revise the policy for determining the amount of repayment mechanism arrangements for certain ACOs renewing to continue their participation under a two-sided model.

1. Quality and Other Reporting Requirements

a. Background

Section 1899(b)(3)(C) of the Act states that the Secretary shall establish quality performance standards to assess the quality of care furnished by ACOs and seek to improve the quality of care furnished by ACOs over time by specifying higher standards, new measures, or both. In the November 2011 final rule establishing the Shared Savings Program, we adopted a quality measure set spanning four domains: Patient experience of care, care coordination/patient safety, preventative health, and at-risk population (76 FR 67872 through

67891). Since then, we have updated the measures that comprise the quality performance measure set for the Shared Savings Program through rulemaking in the CY 2015, 2016, 2017, and 2019 PFS final rules (79 FR 67907 through 67920, 80 FR 71263 through 71268, 81 FR 80484 through 80489, and 83 FR 59707 through 59715 respectively).

As we stated in the November 2011 final rule (76 FR 67872), our principal goal in selecting quality measures for ACOs has been to identify measures of success in the delivery of high-quality health care at the individual and population levels, with a focus on outcomes. In the CY 2019 PFS final rule, we finalized that for performance years (or a performance period) starting in 2019 and subsequent years, 23 quality measures would be used to determine ACO quality performance (83 FR 59707 through 59715). The information used to determine ACO performance on these quality measures is submitted by the ACO through the CMS Web Interface, calculated by us from administrative claims data, and collected via a patient experience of care survey referred to as the Consumer Assessment of Healthcare Provider and Systems (CAHPS) for ACOs Survey.

Eligible clinicians who are participating in an ACO and who are subject to MIPS (MIPS eligible clinicians) are currently scored under the APM scoring standard under MIPS (81 FR 77260). These MIPS eligible clinicians include any eligible clinicians who are participating in an ACO in a track, or payment model within a track (Track 1 and Levels A through D of the BASIC track) of the Shared Savings Program that is not an Advanced APM, as well as those MIPS eligible clinicians participating in an ACO in a track, or payment model within a track (Track 2, Level E of the BASIC track, and the ENHANCED track, or the Medicare ACO Track 1+ Model (Track 1+ Model)) that is an Advanced APM, but who do not become Qualifying APM Participants (QPs) as specified in § 414.1425, and are not otherwise excluded from MIPS.

b. Applying the Alternative Payment Model (APM) Performance Pathway (APP) to Shared Savings Program ACOs

As provided in section 1899(d)(2) of the Act and § 425.502(a) of the Shared Savings Program regulations, ACOs must meet a quality performance standard to qualify to share in savings. In the CY 2017 PFS final rule, we finalized revisions to § 425.502 related to the quality performance standard and minimum attainment, including clarifying that the quality performance standard is the overall standard the

ACO must meet to qualify to share in savings; defining the minimum attainment level for pay for performance measures at the 30th percent or 30th percentile of the quality performance benchmark and for pay for reporting measures at the level of complete and accurate reporting; specifying that only pay for performance measures are assessed on a sliding scale while pay for reporting measures earn the maximum number of points for a measure when the minimum attainment level is met (81 FR 80492 through 80494).

Currently, the quality performance standard is based on an ACO's experience in the program rather than its financial track. The quality performance standard is currently defined at the level of full and complete reporting (pay-for-reporting (P4R)) for the first performance year of an ACO's first agreement period under the Shared Savings Program. In the second or subsequent years of the ACO's first agreement period and all years of subsequent agreement periods, quality measures are scored as pay-for-performance (P4P) according to the phase-in schedule for the specific measure and the ACO's performance year in the Shared Savings Program:

- For all performance years, ACOs must completely and accurately report all quality data used to calculate and assess their quality performance.
- CMS designates a performance benchmark and minimum attainment level for each P4P measure and establishes a point scale for the measure. An ACO's quality performance for a measure is evaluated using the appropriate point scale, and these measure-specific scores are used to calculate the final quality score for the ACO.

- ACOs must meet minimum attainment (defined as 30 percent or the 30th percentile of the performance benchmark for P4P measures) on at least one measure in each domain to be eligible to share in any savings generated (§ 425.502(d)(2)(iii)(A)).

In the CY 2020 PFS proposed rule (84 FR 40709 through 40713), we sought comment on how we might align the Shared Savings Program quality reporting requirements and scoring methodology more closely with the MIPS quality reporting and scoring methodology. We discussed utilizing the MIPS Quality performance category score to adjust shared savings and shared losses under the Shared Savings Program, as applicable. We also sought comment on a possible new approach to determining the threshold for minimum attainment. Under this potential policy, minimum attainment would continue to

be defined as complete and accurate reporting for ACOs in their first performance year of their first agreement period, while a MIPS Quality performance category score at or above the 4th decile across all MIPS Quality performance category scores would be required for ACOs in all other performance years under the Shared Savings Program. ACOs with MIPS Quality performance category scores below the 4th decile of all MIPS Quality performance category scores would not meet the quality performance standard for the Shared Savings Program, and thus, would not be eligible to share in savings or would owe the maximum shared losses, if applicable. In addition, we sought comment on a potential policy under which ACOs with quality scores below the 4th decile of all MIPS Quality performance category scores would be subject to compliance actions and possible termination.

The majority of feedback received in response to our comment solicitation did not support this approach as it would hold ACOs to a higher standard to be eligible to share in savings, if earned. In addition, commenters that opposed aligning the Shared Savings Program quality score with the MIPS Quality performance category score, stated that significant restructuring of the Shared Savings Program quality performance requirements would introduce more confusion for ACOs that are also transitioning into new tracks under the December 2018 final rule. Commenters also expressed concern regarding the uncertainty associated with such an approach, as we had also proposed extensive revisions to MIPS as the program transitions to MIPS Value Pathways. Furthermore, commenters noted that ACOs are unique in that they are responsible for the total cost of care of their beneficiaries and should not be compared to clinicians in MIPS who are not participating in total cost of care programs.

Although we acknowledge the commenters' concerns, we note that section 1899(b)(3)(C) of the Act not only gives us discretion to establish quality performance standards for the Shared Savings Program, but also indicates that we should seek to improve the quality of care furnished by ACOs over time by specifying higher standards, new measures, or both for purposes of assessing quality of care. The Shared Savings Program is now in its eighth performance year, and 85 percent of ACOs participating in the program are considered PY3 ACOs for purposes of quality reporting, with 65 percent of those ACOs participating in a second or subsequent agreement period. In light of

the maturity of the program and consistent with section 1899(b)(3)(C) of the Act, we believe that it is appropriate to require a higher standard of care in order for ACOs to continue to share in any savings they achieve. In addition, holding ACOs to a higher standard is in line with CMS' goals of incentivizing value-based care and driving the Medicare system to greater value and quality. However, after taking into consideration the stakeholder feedback, we also considered ways to reduce reporting burden, offer more flexibility in the way quality data can be reported and submitted, and create a more meaningful measure set that would focus on population health measures and be more outcome-oriented, while also including patient experience of care metrics.

The Alternative Payment Model Performance Pathway (APP) was designed for all MIPS APMs; but, it is also responsive to the concerns raised by commenters in their responses to our solicitation in the CY 2020 PFS proposed rule, while still taking into consideration the maturity of the Shared Savings Program, ACOs' quality performance over time, and the intent of section 1899(b)(3)(C) of the Act. The APP contains a narrower measure set than has previously been used for Shared Savings Program quality measurement, 6 measures versus the current 23 scored measures, and is specifically intended for use in APMs and population health. The design of the APP aligns with stakeholder interests expressed through comments on our solicitation about aligning the Shared Savings Program with MIPS in the CY 2020 PFS proposed rule. These comments suggested adopting a smaller, more focused measure set in recognition of the fact that APM Entities are incentivized through the terms of the respective APMs to improve value. The measure set proposed for the APP aligns with the Meaningful Measures framework by identifying measures that address the highest priorities for quality measurement and improvement, while also reducing reporting burden, promoting alignment of measures and consolidation of reporting requirements across CMS programs moving payment toward value, and identifying for consumers' key quality performance metrics. The measures proposed for inclusion in this set encompass the meaningful measure domains of patient voice, wellness and prevention, seamless communication, chronic disease management, and behavioral health. For these reasons, we believe that the proposed APP, along with the

narrower measure set, which comprises it, would be appropriate to assess the quality performance of Shared Savings Program ACOs.

The construction of the proposed APP and the proposed measures within it are described in more detail later in this section. A detailed discussion of the proposal for use of the APP for MIPS APMs more generally is found at section III.C.3.b. of this proposed rule.

(1) APM Performance Pathway for Shared Savings Program ACOs

In response to stakeholder feedback and in order to improve alignment and integration with the Quality Payment Program policies and operations, align with CMS' Meaningful Measure Framework, increase participation in APMs and Advanced APMs by reducing reporting burden, and raise the quality performance standard under the Shared Savings Program, we are proposing to revise the Shared Savings Program quality performance standard effective for performance year 2021 and subsequent performance years. This proposed revision would align the Shared Savings Program quality performance standard with the proposed APP under the Quality Payment Program as participants in the Shared Savings Program would be required to report quality for purposes of the Shared Savings Program via the APP, which is described in more detail in section III.C.3.b. of this proposed rule. At a high level, the APP would replace the current Shared Savings Program quality measure set to streamline reporting requirements for Shared Savings Program ACOs and would be a complementary path to the MIPS Value Pathways. The APP is designed to reduce reporting burden, create new scoring opportunities for participants in MIPS APMs, and encourage participation in APMs.

Under this new approach, ACOs would only need to report one set of quality metrics that would satisfy the reporting requirements under both MIPS and the Shared Savings Program. There would not be separate quality reporting requirements under the Shared Savings Program, as under this proposed new approach the quality measures reported for purposes of the APP would be used to determine the quality performance of the ACO for purposes of the Shared Savings Program, which is used for purposes of calculating shared savings and also shared losses, where applicable. We believe this approach of streamlining the quality reporting requirements under the Shared Savings Program while maintaining alignment with the Quality Payment Program will

help ACOs and their participating providers and suppliers dedicate their finite resources to engaging in efforts to improve quality and reduce costs for their assigned beneficiary population. In addition, we believe that using a single methodology to measure quality performance under both the Shared Savings Program and MIPS would allow ACOs to better focus on increasing the value of healthcare, improving care, and engaging patients. It would also reduce burden as ACOs would be able to track to a smaller set of measures under a unified scoring methodology.

Under the APP proposed in section III.C.3.b. of this proposed rule, eligible clinicians in Shared Savings Program ACOs would continue to receive full credit for the improvement activities performance category in 2021 based on their performance of activities required under § 425.112 of the Shared Savings Program regulations, as they do under current MIPS scoring policy. Eligible clinicians participating in the Shared Savings Program are not currently assessed on the MIPS Cost performance category as these eligible clinicians are already subject to cost and utilization performance assessments as part of the Shared Savings Program. Therefore, the cost performance category would continue to be weighted at zero percent. The four categories in the proposed APP framework would be weighted as follows: Quality: 50 percent; PI: 30 percent; IA: 20 percent; and Cost: 0 percent.

Under the APP proposed in section III.C.3.b. of this proposed rule, the MIPS Quality performance category score would be calculated for ACOs based on MIPS benchmarks, which are used for other non-ACO group and individual reporters and reflect the method of data submission (for example, eCQM measures have benchmarks calculated using EHR data). ACOs would be scored on the measures they report and would receive zero points for those measures they do not report. For example, if an ACO reported all three measures it is actively required to report but did not field a CAHPS for MIPS survey measure, the ACO would receive zero points for the CAHPS for MIPS survey measure, and that zero would be included in its MIPS Quality performance category score, along with its performance rates on the three measures it did actively report as well as the two claims-based measures included in the APP measure set. This approach aligns with scoring under MIPS, rather than the current Shared Savings Program quality performance scoring methodology, which uses quality benchmarks established specifically for the Shared

Savings Program and awards zero points for quality for ACOs that report some but not all of the required measures. We believe that this approach would be less punitive for ACOs than the current quality performance standard, under which ACOs that fail to completely report all quality measures receive a zero score for quality. We also believe that alignment with the MIPS scoring methodology would reduce the burden on ACOs of tracking to two different scoring methodologies. However, if an ACO does not report any of the three APP measures it is required to actively report and does not field a CAHPS for MIPS survey the ACO would not meet the quality performance standard for purposes of the Shared Savings Program and would not be able to share in savings and would owe maximum losses, if applicable. If an ACO does not report any of the three measures it is required to actively report and does not field a CAHPS for MIPS survey, we do not believe that the remaining two claims-based measures in the APP core measure set would be sufficient to assess the quality of care provided by an ACO to its assigned beneficiaries and would likely not allow the ACO to achieve a MIPS Quality performance category score at or above the 40th percentile. Under this proposal, there would be no quality “phase in.” All ACOs, regardless of performance year and agreement period, would be scored on all the measures in the APP for purposes of the Shared Savings Program quality performance standard.

For MIPS scoring purposes, an ACO that fails to report via the APP would receive a zero in the Quality performance category under MIPS. If an ACO fails to report via the APP on behalf of its ACO participants then the ACO participants could report outside the ACO, on behalf of the MIPS eligible clinicians who bill through the TIN of the ACO participant and receive a MIPS Quality performance category score calculated at the ACO participant level. If ACO participants report outside the ACO via the APP, they would continue to get full credit for IA based on ACO participation. If ACO participants choose to report outside the ACO via a different MIPS reporting option, then regular MIPS scoring rules would apply (that is, automatic full credit for I.A. and zero cost category weight would not be applied).

Under this proposal, for performance year 2021 and subsequent performance years, ACOs would be assessed on a smaller measure set. The measures ACOs would be scored on would decrease from 23 measures to 6 measures and the number of measures on which ACOs would be required to actively report would be reduced from 10 to 3.

ACOs would report under the APP on the following 3 measures:

- Quality ID#: 001: Diabetes: Hemoglobin A1c (HbA1c) Poor Control (>9%);
- Quality ID#: 134 Preventive Care and Screening: Screening for Depression and Follow-Up Plan; and

- Quality ID#: 236 Controlling High Blood Pressure.

ACOs would report these measures via a submission method of their choice that aligns with the MIPS data submission types for groups at § 414.1325(c) (direct, login and upload, or a third-party intermediary, described at § 414.1400, submitting on behalf of the ACO). As discussed in section IV.A.3.c.(1) of this proposed rule, we are proposing to remove the CMS Web Interface from the MIPS data submission types for groups beginning with the 2021 MIPS performance year. Medicare Part B claims is not an available submission type for ACOs as it is limited to TINs consisting of 15 or fewer eligible clinicians. ACOs would receive a score of between 3 to 10 points for each measure that meets the data completeness and case minimum requirements, which would be determined by comparing measure performance to established benchmarks. In addition, ACOs would need to field a CAHPS for MIPS survey and would be measured on two claims-based measures: The Hospital-Wide, 30-day, All-Cause Unplanned Readmission (HWR) Rate for the Merit-Based Incentive Payment Program (MIPS) Eligible Clinician Groups; and the All-Cause Unplanned Admissions for Patients with Multiple Chronic Conditions (MCC). Please see Table 36 and section III.C.3.b. of this proposed rule for full details on the measures proposed under the APP framework.

TABLE 36: Measures included in the Proposed APM Performance Pathway Measure Set

Measure #	Measure Title	Collection Type	Submitter Type	Meaningful Measure Area
Quality ID#: 321	CAHPS for MIPS	CAHPS for MIPS Survey	Third Party Intermediary	Patient's Experience
Quality ID#: 001	Diabetes: Hemoglobin A1c (HbA1c) Poor Control	eCQM/MIPS CQM	APM Entity/Third Party Intermediary	Mgt. of Chronic Conditions
Quality ID#: 134	Preventive Care and Screening: Screening for Depression and Follow-up Plan	eCQM/MIPS CQM	APM Entity/Third Party Intermediary	Treatment of Mental Health
Quality ID#:236	Controlling High Blood Pressure	eCQM/MIPS CQM	APM Entity/Third Party Intermediary	Mgt. of Chronic Conditions
Measure # TBD	Hospital-Wide, 30-day, All-Cause Unplanned Readmission (HWR) Rate for MIPS Eligible Clinician Groups	Administrative Claims	N/A	Admissions & Readmissions
Measure # TBD	Risk Standardized, All-Cause Unplanned Admissions for Multiple Chronic Conditions for ACOs	Administrative Claims	N/A	Admissions & Readmissions

As noted above, the measures proposed for inclusion in the measure set for the APP align with the Meaningful Measures framework by identifying the highest priorities for quality measurement and improvement with the goals of reducing burden, promoting alignment, moving payment toward value, and identifying key quality performance metrics for consumers. The proposed measures encompass the meaningful measure domains of patient voice, wellness and prevention, seamless communication, chronic disease management, and behavioral health. We also believe that the measures included in the APP are appropriate to assess the quality performance of Shared Savings Program ACOs as they focus on the management of chronic health conditions that are high priority and have high prevalence among the population of Medicare beneficiaries assigned to ACOs. We also believe that the measure set chosen for inclusion within the APP would move the quality measure set used in the Shared Savings Program toward a more outcome based, primary care focused measure set. In addition to creating a pathway that would reduce reporting burden for ACOs and allow their participating MIPS eligible clinicians to meet requirements under MIPS through a smaller measure set, requiring ACOs to report through the APP would also

eliminate differences in the way ACOs are scored under the Shared Savings Program, as compared to the way their MIPS eligible clinicians are scored under MIPS.

We note that under the current Shared Savings Program quality scoring methodology, the CAHPS for ACOs survey is counted as ten separate measures, while under the APP, the CAHPS for MIPS survey would be counted as one. We continue to value the patient voice and believe it should play a significant role in quality scoring. Using the CAHPS for MIPS survey would achieve that goal while further aligning the way in which the quality performance of ACOs and their MIPS eligible clinicians is scored under the Shared Savings Program and under MIPS, respectively. Under the current Shared Savings quality scoring methodology, the 10 CAHPS for ACOs survey measures are scored as one domain, which makes up 25 percent of the Shared Savings Program quality score. In contrast, under our proposed approach, the CAHPS for MIPS survey would be counted as one measure out of the 6 measures that would be included in the calculation of the ACO's quality score under the APP. Both of these approaches have a similar weighting, which maintains the relevance of patient voice. We believe that the proposed approach under the APP of

combining the CAHPS survey measures into a single measure for quality scoring purposes would allow Shared Savings Program ACOs to effectively target resources toward improving their assigned beneficiaries' experience of care in the areas for improvement on which they choose to focus, rather than having to track to ten separate survey measures, as is currently required by the CAHPS for ACOs used under the Shared Savings Program. We believe this approach strikes the right balance in reducing burden on ACOs and their participating providers and suppliers while preserving the patient's voice.

Shared Savings Program ACOs are currently required to report on a set of ten measures via the CMS Web Interface. While these measures were appropriate for use in the program in the past because they are primary care focused, we now recognize that the majority of the measures have highly clustered performance. This means that they cannot meaningfully distinguish quality performance across groups or ACOs. We recognize the value in the use of primary care-focused measures and in developing the proposed measure set for use under the APP, we have sought to preserve the measures we believe most reflect high priority quality measurement areas while also placing more emphasis on outcome-based claims measures, which minimize

reporting burden and reflect greater opportunity for improvement.

In addition to the measures listed in Table 36, based on recommendations from MedPAC in its 2015 Report to Congress: Medicare and the Health Care Delivery System,³³ we are considering adding a “Days at Home” measure that is currently under development, to the APP core measure set in future years, once it has been through the MAP pre-rulemaking process. Any future additions to the measure set, including to add a “Days at Home” measure would be proposed and finalized through notice and comment rulemaking.

We welcome public comment on our proposal to apply the APP framework to determine the quality performance of Shared Savings Program ACOs.

In addition, we note that we have received feedback from a few ACOs, including ACOs that have a significant number of beneficiaries in long-term care facilities or who are chronically ill or high-risk home bound patients, that the measures ACOs are required to report are not always applicable to their patient population. Although we are proposing to require ACOs to report via the APP, we are also seeking comment on an alternative approach that could be used in the event the three measures ACOs are required to actively report on are not applicable to their beneficiary population and there are more appropriate measure available under MIPS. Under this alternate approach, ACOs could opt out of the APP and report to MIPS as an APM entity. If the ACO decides to report as an APM entity to MIPS outside of the APP, CAHPS for MIPS would become optional; however, the ACO would be required to report PI and IA and would also be subject to cost under MIPS. In the event an ACO decides to report as an APM entity to MIPS outside the APP, we would use the ACO’s MIPS Quality performance category score to determine if the ACO met the Shared Savings Program quality performance standard.

We seek comment on this alternative reporting approach for ACOs in the event the three measures ACOs are required to actively report are not applicable to their beneficiary population.

c. Shared Savings Program Quality Performance Standard

The quality performance standard is the minimum performance level ACOs must achieve in order to share in any

savings earned, avoid maximum losses under certain payment tracks, and avoid quality-related compliance actions. We are proposing to increase the level of quality performance that would be required for all ACOs to meet the Shared Savings Program quality performance standard. We believe the proposed changes would simplify the Shared Savings Program quality performance standard and are also consistent with the statutory requirement that we seek to improve the quality of care furnished by ACOs over time by specifying higher standards, new measures or both (section 1899(b)(3)(C) of the Act). We are proposing to increase the quality performance standard for all ACOs to achievement of a quality performance score equivalent to the 40th percentile or above across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring. We are excluding entities/providers eligible for facility-based scoring from the overall MIPS quality score because facility-based scoring is determined using the Hospital Value Based Purchasing (HVBP) Total Performance Score (TPS) which includes quality and cost.

Given that the statute requires that we seek to increase the quality performance standard over time, we believe changing the quality performance standard from the 30th percentile on one measure in each domain to a requirement that ACOs achieve a quality performance score equivalent to the 40th percentile or above across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring, is the next incremental step in increasing the quality performance standard. Under the current Shared Savings Program quality measurement methodology, 99.6 percent or 546 ACOs participating in the program in 2018 met the quality performance standard of complete and accurate reporting for ACOs in the first year of their first agreement period or the 30th percentile on one measure in each domain, for ACOs in their second or subsequent years of participation in the program. Of these ACOs, 425 were ACOs in second or subsequent years of participation in the program for which most quality measures were scored as pay-for-performance (P4P). We analyzed quality measure data from 2018 to simulate how many ACOs would achieve a quality performance score that was at or above the 40th percentile of MIPS Quality performance category scores. Based on our analysis using 2018 data to simulate 2021 MIPS Quality

performance category scores, we estimate 95 percent of ACOs would achieve a quality performance score at or above the 40th percentile across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scores. We recognize that this impact could change if the 40th percentile across all MIPS Quality performance category scores improves relative to ACOs’ quality performance scores, or alternatively if ACOs, particularly ACOs at risk of failing, respond to the methodology change by boosting their performance. The impact could range from 98 percent of ACOs achieving a quality performance score at or above the 40th percentile to 92 percent of ACOs reflecting the respective extreme scenarios assumed in the previous sentence.

Eligible clinicians participating in Shared Savings Program ACOs who obtain QP status would continue to be exempt from MIPS, and therefore, would not be subject to APP scoring under MIPS. For eligible clinicians in an ACO that is participating in a track (or payment model within a track) that is an Advanced APM who do not meet the threshold to earn QP status but do meet the lower payment and patient count threshold to achieve Partial QP status, the ACO can elect to report on behalf of the Partial QPs, and the Partial QPs would be subject to a MIPS payment adjustment under the APP framework. Conversely, if an ACO does not elect to report for the Partial QPs, they would not receive a MIPS score or payment adjustment and would have no reporting responsibilities for MIPS. Utilizing the MIPS Quality performance category scoring methodology to assess the quality performance for purposes of the Shared Savings Program of ACOs participating in tracks (or payment models within a track) that qualify as an Advanced APM would not change whether the eligible clinicians participating in the ACO obtain QP status and are excluded from MIPS, nor would it change the ACO participant TINs’ eligibility to receive Advanced APM incentive payments.

We propose to specify in a new section of the Shared Savings Program regulations at § 425.510, policies on the application of the APP to Shared Savings Program ACOs for performance years beginning on or after January 1, 2021. This new section would include a general provision specifying that CMS establishes quality performance measures to assess the quality of care furnished by the ACO. If the ACO demonstrates to CMS that it has satisfied the quality performance

³³ <http://medpac.gov/docs/default-source/reports/june-2015-report-to-the-congress-medicare-and-the-health-care-delivery-system.pdf>.

requirements, and meets all other applicable requirements, the ACO is eligible to receive shared savings. This general provision also indicates that CMS seeks to improve the quality of care furnished by ACOs over time by specifying higher standards, new measures, or both. This new section of the regulations would also specify the requirement that ACOs must report quality data via the APP established under § 414.1367 according to the method of submission established by CMS. In addition, this new section of the regulation would also specify that CMS retains the right to audit and validate quality data reported by an ACO according to § 414.1390 of this chapter.

We also propose to specify in a new section of the Shared Savings Program regulations at § 425.512 provisions for determining the ACO quality performance standard for performance years beginning on or after January 1, 2021. We propose to specify that the quality performance standard is the overall standard the ACO must meet in order to be eligible to receive shared savings for a performance year. Further, we propose to specify that for all ACOs, CMS designates the quality performance standard as the ACO reporting quality data via the APP established under § 414.1367, according to the method of submission established by CMS and achievement of a quality performance score equivalent to the 40th percentile or above across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring. In addition, we propose to specify that if an ACO does not report any of the three of the measures ACOs are actively required to report and does not field a CAHPS survey, the ACO would not meet the quality performance standard.

In addition, we propose to modify the existing Shared Savings Program regulation at § 425.508, on incorporating quality reporting requirements related to the Quality Payment Program. We propose to add a provision applicable to 2021 and subsequent performance years, which specifies that ACOs must submit quality data via the APP established under § 414.1367 to satisfactorily report on behalf of the eligible clinicians who bill under the TIN of an ACO participant for purposes of the MIPS Quality performance category. We also propose related technical and conforming modifications to § 425.508.

We seek comment on our proposal to revise the Shared Savings Program quality performance standard.

d. Use of ACO Quality Performance in Determining Shared Savings and Shared Losses

Section 1899(d)(1)(A) of the Act specifies an ACO is eligible to receive a shared savings payment for a portion of the savings generated for Medicare, provided that the ACO meets both the quality performance standards established by the Secretary and achieves the required level of savings against its historical benchmark. Section 1899(d)(2) of the Act provides the authority for the actual payments for shared savings under the Shared Savings Program. Specifically, if an ACO meets the quality performance standards established by the Secretary (according to section 1899(b)(3) of the Act), and meets the savings requirements, a percent (as determined appropriate by the Secretary) of the difference between the estimated average per capita Medicare expenditures in the year, adjusted for beneficiary characteristics, and the benchmark for the ACO, may be paid to the ACO as shared savings and the remainder of the difference shall be retained by the Medicare program. The Secretary is required to establish limits on the total amount of shared savings paid to an ACO. We have also incorporated performance-based risk in the form of shared losses into certain financial models using the authority under section 1899(i)(3) of the Act to use other payment models.

The Shared Savings Program's one-sided shared savings only models, and two-sided shared savings and shared losses models are specified in subpart G of the Shared Savings Program regulations. For agreement periods beginning on July 1, 2019, and in subsequent years, eligible ACOs may participate under either: (1) The BASIC track, which includes a glide path consisting of five levels (Levels A through E) that allows eligible ACOs to begin under a one-sided model (Level A or Level B) and incrementally phases-in higher levels of risk and potential reward (Levels C, D, or E) (§ 425.605); or (2) the ENHANCED track, a two-sided model with the highest level of risk and potential reward (§ 425.610). Further, according to the May 8th COVID-19 IFC (85 FR 27574 and 27575), ACOs that entered a first or second agreement period with a start date of January 1, 2018, whose participation agreements expire December 31, 2020, may elect to extend their agreement period for an optional fourth performance year, spanning January 1, 2021, to December 31, 2021. This includes ACOs that entered agreement periods under Track

1 (a one-sided model), Track 2 (a two-sided model), and the ENHANCED track. Further, this option to elect a 12-month extension of the agreement period also applies to ACOs participating in the Track 1+ Model whose participation agreements expire December 31, 2020.

Under the Shared Savings Program regulations, for both one-sided models and two-sided models, CMS uses the ACO's quality performance to determine the ACO's eligibility to receive shared savings, and the rate at which ACOs share in these savings. We base the final shared savings rate on the ACO's quality performance. For ACOs meeting the quality performance standard, the final shared savings rate is equal to the product of the ACO's quality score and the maximum sharing rate. The maximum sharing rate is specific to the ACO's track/level of participation as follows: 50 percent for ACOs participating in Track 1;³⁴ 60 percent for ACOs participating in Track 2;³⁵ 40 percent for ACOs participating in Level A or Level B of the BASIC track;³⁶ and 50 percent for ACOs participating in Levels C, D, or E of the BASIC track;³⁷ and 75 percent for ACOs participating in the ENHANCED track.³⁸ The upside of the Track 1+ Model is based on Shared Savings Program Track 1; therefore, a maximum sharing rate of 50 percent applies to Track 1+ Model ACOs.³⁹

Depending on the track, the ACO's quality performance may also be used to determine the amount of the ACO's shared losses, for ACOs under two-sided models. ACOs participating in the Track 1+ Model, and Level C, D, or E of the BASIC track are subject to a fixed shared loss rate (also referred to as the loss sharing rate) of 30 percent regardless of quality performance.⁴⁰ Under Track 2 and the ENHANCED track, the shared loss rate is calculated as one minus the ACO's final shared savings rate based on quality performance, up to a maximum of 60 percent or 75 percent, respectively, and the shared loss rate

³⁴ Refer to § 425.604(d).

³⁵ Refer to § 425.606(d).

³⁶ Refer to § 425.605(d)(1)(i)(A), (d)(1)(ii)(A).

³⁷ Refer to § 425.605(d)(1)(iii)(A), (d)(1)(iv)(A), (d)(1)(v)(A).

³⁸ Refer to § 425.610(d).

³⁹ Refer to the Track 1+ Model Participation Agreement, available at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/sharedsavingsprogram/Downloads/track-1plus-model-par-agreement.pdf>.

⁴⁰ Provisions specifying the shared loss rate for two-sided models of the BASIC track are specified in § 425.605(d)(1)(iii)(C), (d)(1)(iv)(C), (d)(1)(v)(C). The shared loss rate applicable to Track 1+ Model ACOs is specified in the Track 1+ Model Participation Agreement.

may not be less than 40 percent for both tracks.⁴¹ For ENHANCED track ACOs, this 40 percent minimum shared loss rate is expressly stated in the current regulations, whereas for Track 2 ACOs, it is the implicit minimum shared loss rate as calculated based on the inverse of the maximum final shared savings rate for the track. Track 2 and ENHANCED track ACOs that do not meet the quality performance standard for the performance year will be accountable for shared losses based on the highest shared loss rate for their track.

In light of the proposed changes to the Shared Savings Program's quality performance standard addressed elsewhere in section III.G.1. of this proposed rule, we also propose modifications to the regulations that specify the circumstances under which an ACO will qualify for a shared savings payment based on its quality performance and the determination of the rate at which the ACO will share in savings based on its quality performance.

For all tracks, we propose to specify, in revisions to the regulations, the requirements that must be met for an ACO to qualify for a shared savings payment for performance years beginning on or after January 1, 2021. We propose that to qualify for shared savings, an ACO must meet the minimum savings rate requirements established for the track/level, meet the proposed quality performance standard described in section III.G.1.c. of this proposed rule, and otherwise maintain its eligibility to participate in the Shared Savings Program under part 425. We propose to revise §§ 425.604(c) (Track 1), 425.605(c) (BASIC track), 425.606(c) (Track 2), and 425.610(c) (ENHANCED track) to reflect these requirements.

We also propose revisions to the provisions establishing the final sharing rate for all tracks. We propose that for performance years beginning on or after January 1, 2021, if an ACO that is otherwise eligible to share in savings meets the proposed quality performance standard as described in section III.G.1.c. of this proposed rule, the ACO will share in savings at the maximum sharing rate according to the applicable financial model, up to the performance payment limit. We propose that if the ACO fails to meet the proposed quality performance standard, the ACO would be ineligible to share in savings. We propose to specify these policies in revisions to the provisions governing Track 1 (§ 425.604(d)), the BASIC track (§ 425.605(d)(1)(i)(A) (Level A),

(d)(1)(ii)(A) (Level B), (d)(1)(iii)(A) (Level C), (d)(1)(iv)(A) (Level D), (d)(1)(v)(A) (Level E)), Track 2 (§ 425.606(d)), and the ENHANCED track (§ 425.610(d)).

We also propose modifications to the methodology for determining shared losses under Track 2 and the ENHANCED track, for performance years beginning on or after January 1, 2021, to account for the proposed revisions to the quality performance standard. If the ACO meets the quality performance standard as proposed (see section III.G.1.c. of this proposed rule), we would determine the shared loss rate as follows:

- *Step 1:* Calculate the quotient of the MIPS quality performance category points earned divided by the total MIPS quality performance category points available.

- *Step 2:* Calculate the product of the quotient described in step 1 and the sharing rate for the relevant track, either 60 percent for Track 2 or 75 percent for the ENHANCED track.

- *Step 3:* Calculate the shared loss rate as 1 minus the product determined in step 2. Consistent with the existing structure of the financial models: Under Track 2, the shared loss rate may not exceed 60 percent, and may not be less than 40 percent; under the ENHANCED track, the shared loss rate may not exceed 75 percent, and may not be less than 40 percent.

Under this proposed approach, for an ACO that meets the quality performance standard we would take into consideration the ACO's quality score when determining the ACO's share of losses. An ACO with a higher quality score would owe a lower amount of losses compared to an ACO with an equivalent amount of losses but a lower quality score, so long as the ACO's quality score results in a shared loss rate within the range between the minimum shared loss rate (40 percent) and the maximum shared loss rate (60 percent under Track 2, or 75 percent under the ENHANCED track). To the extent the ACO's quality score results in a shared loss rate outside these limits, the shared loss rate is set to the minimum or maximum rate (as applicable). We also propose to revise the regulation at § 425.606(f) to expressly state both the minimum and maximum shared loss rates for Track 2.

We propose that if the ACO fails to meet the quality performance standard as proposed (see section III.G.1.c. of this proposed rule), the shared loss rate would be 60 percent under Track 2 or 75 percent under the ENHANCED track. We believe this approach would maintain symmetry with the proposed

approach to determining shared savings under Track 2 and the ENHANCED track based on quality performance. Thus, an ACO that fails to meet the quality performance standard would be ineligible to share in savings and would owe the maximum amount of shared losses.

We propose to specify these provisions for determining the shared loss rate under Track 2 and the ENHANCED track, for performance years beginning on or after January 1, 2021, through modifications to the regulations at §§ 425.606(f) and 425.610(f). We also propose technical and conforming changes to these provisions for clarity, and to specify that the current policy would continue to apply for purposes of determining the shared loss rate for Track 2 ACOs and ENHANCED track ACOs for performance years (or a performance period) beginning on or before January 1, 2020.

e. Compliance With the Quality Performance Standard

(1) Background

As discussed in more detail in section III.G.1.c. of this proposed rule, the quality performance standard is the minimum performance level ACOs must achieve in order to share in any savings earned, avoid maximum losses under certain payment tracks, and avoid quality-related compliance actions. Section 1899(d)(4) of the Act authorizes the Secretary to terminate an agreement with an ACO that does not meet the established quality performance standards. Through earlier rulemaking we established an approach to enforce ACO compliance with the quality performance standards, as specified in the Shared Savings Program regulations at § 425.316 (see 76 FR 67951, 80 FR 32818 and 32819, 81 FR 80492 through 80494).

To identify ACOs that do not meet the established quality performance standards, we review the ACO's quality data submission. Under our current policies, as specified in § 425.316(c), if an ACO does not meet quality performance standards or fails to report on one or more quality measures, in addition to actions set forth at §§ 425.216 and 425.218, we will take the following actions:

- The ACO may be given a warning for the first time it fails to meet the minimum attainment level on at least 70 percent of the measures, as determined under § 425.502, in one or more domains and may be subject to a corrective action plan (CAP). CMS may forgo the issuance of the warning letter

⁴¹ Refer to §§ 425.606(f), 425.610(f).

depending on the nature and severity of the noncompliance and instead subject the ACO to actions set forth at § 425.216 or immediately terminate the ACO's participation agreement under § 425.218.

- The ACO's compliance with the quality performance standards will be re-evaluated the following year. If the ACO continues to fail to meet the quality performance standards in the following year, the agreement will be terminated.

- An ACO will not qualify to share in savings in any year it fails to report accurately, completely, and timely on the quality performance measures.

Further, according to § 425.224(b), in evaluating the eligibility of a renewing ACO or re-entering ACO to enter a new participation agreement with CMS for participation in the Shared Savings Program, we consider the ACO's history of noncompliance with the program's quality performance standard. For evaluating ACOs that entered into a participation agreement for a 3-year period, we consider whether the ACO failed to meet the quality performance standard during 1 of the first 2 performance years of the previous agreement period. For evaluating ACOs that entered into a participation agreement for a period longer than 3 years, we consider whether the ACO failed to meet the quality performance standard for 2 consecutive performance years and was terminated as specified in § 425.316(c)(2), or whether the ACO failed to meet the quality performance standard for 2 or more performance years of the previous agreement period, regardless of whether the years were consecutive.

The terms "renewing ACO" and "re-entering ACO" are defined in the regulations at § 425.20. We define renewing ACO to mean an ACO that continues its participation in the program for a consecutive agreement period, without a break in participation, because it is either: (1) An ACO whose participation agreement expired and that immediately enters a new agreement period to continue its participation in the program; or (2) an ACO that terminated its current participation agreement under § 425.220 and immediately enters a new agreement period to continue its participation in the program. We define re-entering ACO to mean an ACO that does not meet the definition of a renewing ACO and meets either of the following conditions: (1) Is the same legal entity as an ACO that previously participated in the program and is applying to participate in the program after a break in participation, because

the ACO's participation agreement expired without having been renewed, or the ACO's participation agreement was terminated under § 425.218 or § 425.220; or (2) is a new legal entity that has never participated in the Shared Savings Program and is applying to participate in the program and more than 50 percent of its ACO participants were included on the ACO participant list under § 425.118, of the same ACO in any of the 5 most recent performance years prior to the agreement start date.

(2) Proposed Revisions

We have revisited the provisions of § 425.316(c) on monitoring compliance with quality reporting and performance requirements in light of our proposed modifications to the quality performance standard. We propose to modify the introductory text at § 425.316(c) to state that we will review an ACO's submission of quality measurement data to identify ACOs that are not meeting the applicable quality performance standard under §§ 425.500 or 425.512. Under the provision, as revised, we would retain the discretion to request additional documentation from an ACO, ACO participants, or ACO providers/suppliers. Further, we believe that in conjunction with our proposed changes to the quality performance standard, it is appropriate to strengthen our policies for compliance with the quality performance standard by broadening the conditions under which CMS may terminate an ACO's participation agreement when the ACO demonstrates a pattern of failure to meet the quality performance standard.

As currently structured, the regulation at § 425.316 does not specify what actions CMS will take when an ACO fails to meet the quality performance standard for multiple, nonconsecutive performance years, or 2 consecutive performance years that span 2 agreement periods (that is, the last performance year of an agreement period and the first performance year of the subsequent agreement period). Accordingly, we are proposing a new approach that CMS would follow to monitor for and address an ACO's continued noncompliance with the applicable quality performance standard for performance years beginning on or after January 1, 2021. Noncompliance with the quality performance standard during earlier performance years would continue to be subject to the rules currently set forth at § 425.316(c)(1) through (3), which we propose would be consolidated at § 425.316(c)(1). For performance years beginning on or after January 1, 2021, we propose that when CMS determines an ACO fails to meet

the quality performance standard (as described in section III.G.1.c. of this proposed rule), CMS may take the actions prior to termination set forth at § 425.216, and may terminate the ACO's participation agreement according to § 425.218. In addition to the actions set forth at §§ 425.216 and 425.218, we propose to adopt a specific approach that CMS would follow to monitor for and address an ACO's continued noncompliance with the quality performance standard.

We propose that ACOs exhibiting a pattern of failure to meet the quality performance standard will be terminated from the program. Specifically, we propose to terminate an ACO's participation agreement when the ACO fails to meet the quality performance standard for 2 consecutive performance years within an agreement period or fails to meet the quality performance standard for any 3 performance years within an agreement period, regardless of whether the years are in consecutive order. We also propose that we will terminate the participation agreement of a renewing ACO or a re-entering ACO if the ACO fails to meet the quality performance standard for 2 consecutive performance years across 2 agreement periods, specifically the last performance year of the ACO's previous agreement period and the first performance year of the ACO's new agreement period. In addition, we propose that we will terminate the participation agreement of a renewing ACO or a re-entering ACO if the ACO fails to meet the quality performance standard for the last performance year of the ACO's previous agreement period and this occurrence was either the second consecutive performance year of failed quality performance or the third nonconsecutive performance year of failed quality performance during the previous agreement period. We propose to amend § 425.316(c)(2) to reflect this new approach.

Our proposal to terminate an ACO if it fails to meet the quality performance standard for 2 consecutive performance years within an agreement period is consistent with our current approach. However, we also propose to terminate an ACO's participation agreement if the ACO fails to meet the quality performance standard for any 3 performance years within an agreement period, regardless of whether these years are in consecutive order. In the December 2018 final rule (83 FR 67831), we extended participation agreements from 3-years to 5-years. ACOs participating under a 5-year agreement period may show a pattern of failure to

meet the quality performance standard in performance years that are not consecutive. Therefore, we believe it is important to continue to monitor ACOs throughout their 5-year agreement period and if an ACO fails to meet the quality performance standard for 3 nonconsecutive performance years we propose to terminate their participation agreement.

Additionally, we are concerned that a renewing ACO's quality performance results for the last performance year of the current agreement period will not be available for us to consider in reviewing the ACO's application to renew its agreement, as currently provided in § 425.224(b)(1)(ii)(A). We have a similar concern with respect to some re-entering ACOs (particularly, an ACO that notifies CMS of its decision to terminate its participation agreement and subsequently submits an application to re-enter the program for the next start date following the effective date of its termination). To prevent these ACOs from remaining in the program, despite a pattern of noncompliance with the quality performance standard, we propose that if we determine that the last performance year of the ACO's previous agreement period was either the second consecutive performance year of failed quality performance or the third nonconsecutive performance year of failed quality performance during the prior agreement period, CMS would terminate the ACO's new participation agreement. For example, if an ACO failed to meet the quality performance standard in the first, third and fifth performance years of a 5-year agreement period, or failed to meet the quality performance standard in the fourth and fifth performance years of a 5-year agreement period, results for the fifth performance year would not be available until after the ACO has renewed and entered a new agreement period. In both examples, we would anticipate determining during the first performance year of the ACO's new agreement period that the ACO had failed to meet the quality performance standard for the last performance year of its previous agreement period. Therefore, CMS would terminate the ACO's new participation agreement during the first performance year of that agreement period.

Furthermore, we are concerned an ACO could have a pattern of failing to meet the quality performance standard for consecutive years spanning 2 agreement periods. Therefore, if a renewing or re-entering ACO fails to meet the quality performance standard for 2 consecutive performance years

across 2 agreement periods (the last performance year of the ACO's previous agreement period and the first performance year of the ACO's new agreement period), we propose to terminate the ACO's participation agreement. We would anticipate that quality performance results for the ACO's first performance year of its new agreement period would be available during the second performance year of the ACO's new agreement period. Therefore, CMS would terminate the ACO's new participation agreement during the second performance year of the new agreement period.

We recognize there is additional complexity in the application of these policies to a new ACO that is identified as a re-entering ACO because of its ACO participants' prior participation in another Shared Savings Program ACO. Under the proposed approach, we would apply to the re-entering ACO the other ACO's quality performance for previous years (prior to the start of the re-entering ACO's agreement period) and would terminate the re-entering ACO if the other ACO is determined to have failed to meet the quality performance standard in 2 consecutive performance years within an agreement period, or if the other ACO is determined to have failed to meet the quality performance standard for 3 performance years (in nonconsecutive order) within an agreement period. Consistent with the proposed approach, this could occur in circumstances when the other ACO's most recent performance year of failed quality performance is determined after the start of the new, re-entering ACO's agreement period. Further, under the proposed approach, we would also consider whether the other ACO failed to meet the quality performance standard in the most recent performance year prior to the start of the new, re-entering ACO's agreement period, and whether the new, re-entering ACO also fails to meet the quality performance standard for its first performance year. Because these 2 performance years of failed quality performance would be consecutive, we would terminate the participation of the new, re-entering ACO.

Because a significant percentage of the ACO participants in the new, re-entering ACO were previously participating in this other ACO, we believe it is appropriate to hold the new, re-entering ACO accountable for the quality performance of the other ACO. According to the definition of re-entering ACO, more than 50 percent of the entity's ACO participants must have participated together in the same ACO

within a 5-performance year lookback period. As a result, over half of the new, re-entering ACO's ACO participants can be considered to have contributed to the failed quality performance of this other ACO. If we were to disregard the recent failed quality performance of this other ACO, these ACO participants would be allowed to continue participation in the Shared Savings Program as part of the new, re-entering ACO, and potentially take advantage of program flexibilities, despite a pattern of noncompliance with the quality performance standard.

We propose implementing these policies starting with performance year 2021 and subsequent years. We acknowledge that an ACO currently participating under a performance agreement spanning 5-years could fail the quality performance standard for a performance year starting in 2019 under § 425.502. The same ACO could then again fail the quality performance standard under the proposed § 425.512 in performance years 2021 and 2023. In this scenario, the ACO will have failed the quality performance standards for 3 nonconsecutive years under the same agreement period, but the ACO would not be terminated in this scenario because the proposed policies would apply starting with performance year 2021. However, if the ACO decides to apply as a renewing or re-entering ACO, we would review its history of noncompliance with the requirements of the Shared Savings Program as provided under § 425.224(b)(1) when determining whether to approve its application.

Under the current regulation at § 425.316(c)(3), an ACO will not qualify to share in savings in any year in which it fails to report accurately, completely, and timely on the quality performance measures. Consistent with the proposed revisions to the quality performance standard under the Shared Savings Program discussed in section III.G.1.c. of this proposed rule, we propose to specify in the proposed new provision at § 425.512 that, for performance years beginning on or after January 1, 2021, an ACO will not qualify to share in savings in any year it fails to meet the quality performance standard.

The termination of an ACO's participation agreement for failure to meet the quality performance standard under the proposed approach described in this section of the proposed rule, would also make the ACO subject to the payment consequences of early termination as specified in § 425.221(b). Under § 425.221(b)(1)(ii), if the participation agreement is terminated at any time by CMS under § 425.218, the ACO is not eligible to receive shared

savings for the performance year during which the termination becomes effective. Under § 425.221(b)(2)(ii)(B), an ACO participating under a two-sided model whose participation agreement is terminated by CMS under § 425.218 is liable for a pro-rated share of any shared losses determined for the performance year during which the termination becomes effective. These policies would apply whenever an ACO is terminated for non-compliance with the quality performance standard in accordance with § 425.316(c).

We propose to revise § 425.316(c) to incorporate this proposed approach for monitoring ACO compliance with the quality performance standard for performance years beginning on or after January 1, 2021. We also propose to make other technical and conforming changes to the regulations at § 425.316(c). In particular, we propose to amend the existing provisions for monitoring ACO compliance with the quality performance standards to specify that those provisions are applicable to performance years (or a performance period) beginning on or before January 1, 2020.

We also continue to believe in the importance of considering an ACO's history of noncompliance with the quality performance standard in evaluating the eligibility of a renewing ACO or a re-entering ACO to enter a new agreement period under the Shared Savings Program. In light of our proposed changes to § 425.316(c), we propose to make conforming changes to § 425.224(b)(1)(ii)(A), which authorizes CMS to approve or deny a renewing ACO's or re-entering ACO's application to participate in the Shared Savings Program based on an evaluation of the ACO's history of non-compliance with the quality performance standard. Specifically, we propose to revise § 425.224(b)(1)(ii)(A) to state that as part of its evaluation of a renewing or re-entering ACO's history of noncompliance with the requirements of the Shared Savings Program, we will evaluate whether the ACO demonstrated a pattern of failure to meet the quality performance standards or met any of the criteria for termination under §§ 425.316(c)(1)(ii) or 425.316(c)(2)(ii).

f. Updating the Process Used To Validate ACO Quality Data Reporting

In the CY 2017 PFS final rule, we finalized modifications to the quality measures validation audit process. These modifications changed the overall audit process from a 3-phased medical record review to an audit conducted in a single phase. Under our current process, if selected for an audit, an ACO

must provide beneficiary medical records data to substantiate the quality data reported by the ACO. As part of the audit, CMS calculates an overall audit match rate, which is derived by dividing the total number of audited records that match the information reported in the CMS Web Interface by the total number of the medical records audited. For example: (1) If the ACO has an audit match rate of 90 percent or above it will pass the audit; (2) if the ACO has an audit match rate of less than 90 percent, but greater than 80 percent, the ACO may be required to submit a CAP under § 425.216 for CMS approval; (3) if the ACO has an audit match rate of less than 80 percent, absent unusual circumstances, we will adjust the ACO's overall quality score proportional to the ACO's audit match rate, which may have implications for the ACO's financial reconciliation.

Under our proposal to align the quality reporting requirements under the Shared Savings Program with quality reporting under the APP framework, we believe it would be appropriate to also align with the MIPS Data Validation and Audit (DVA) process (§ 414.1390). Rather than continuing to validate ACO quality data reporting under the Shared Savings Program, we believe that it would be more appropriate for MIPS to validate the data submitted by ACOs for the three measures in the APP framework, as ACOs will be able to select the submission method for these measures and the MIPS DVA is based on submission method. We believe streamlining the approach to data validation and audit would minimize administrative burden associated with the audit for ACOs as they would only need to track to one validation process, and for ACOs in a track (or payment model within a track) that does not meet the definition of an Advanced APM, the results of the audit would be applicable for purposes of both the Shared Savings Program and MIPS.

We propose to address the audit and validation of data used to determine the ACO's quality performance in a new provision we are proposing to add to the Shared Savings Program regulations at § 425.510(c). Specifically, we propose that CMS would retain the right to audit and validate the quality data reported by an ACO under § 425.510(b) according to § 414.1390.

g. Changes to the Extreme and Uncontrollable Circumstances Policy for Performance Year 2021

As discussed in section III.G.1.c. of this proposed rule, we are proposing to make changes to the quality

performance standard for the Shared Savings Program for the performance year beginning on January 1, 2021, and subsequent performance years. However, we continue to believe it is appropriate to adjust the quality performance scores for ACOs affected by extreme and uncontrollable circumstances. Accordingly, we propose to update the extreme and uncontrollable circumstances policy under the Shared Savings Program consistent with our proposal to align the quality reporting requirements for the Shared Savings Program with the proposed APP. Specifically, for performance year 2021 and subsequent performance years, we would set the minimum quality performance score for an ACO affected by an extreme and uncontrollable circumstance during the performance year, including the applicable quality data reporting period for the performance year, to equal the 40th percentile MIPS Quality performance category score. If the ACO is able to report quality data and meet the MIPS data completeness and case minimum requirements, we would use the higher of the ACO's MIPS Quality performance category score or the 40th percentile MIPS Quality performance category score. If an ACO is unable to report quality data and meet the MIPS Quality data completeness and case minimum requirements due to an extreme and uncontrollable circumstance, we would apply the 40th percentile MIPS Quality performance category score. We believe this approach is appropriate as it aligns with the threshold for meeting the quality performance standard allowing impacted ACOs to share in savings at their maximum sharing rate. We acknowledge that using the 40th percentile may not offer the same level of protection for ACOs incurring losses that would receive the higher of their ACO quality score or the mean ACO score under the current policy. Our simulation of the 2018 MIPS quality data shows that the mean MIPS quality performance category score is between the 45th and 46th percentile, which is lower than the ACO quality mean score under the current scoring methodology. However, for ACOs in Track 2 and the ENHANCED track under which shared losses are determined based in part on an ACO's quality performance, ACOs are also afforded relief from shared losses through the application of the extreme and uncontrollable circumstances policy under which shared losses are reduced based on the percentage of the year and percentage of assigned beneficiaries impacted by an

extreme and uncontrollable circumstance.

Under the proposed revisions to the quality reporting requirements, we will no longer generate a CMS Web Interface quality reporting sample for ACOs because ACOs will no longer be reporting measures via the Web Interface; therefore, we propose to determine the percentage of the ACO's performance year assigned beneficiary population that was affected by an extreme and uncontrollable circumstances based on the quarter four list of assigned beneficiaries, rather than the list of assigned beneficiaries used to generate the Web Interface quality reporting sample, which is currently used. We believe that using the quarter four list of assigned beneficiaries is an appropriate alternative because the file is generated after the end of the fourth quarter and would offer a more complete representation of the population of assigned beneficiaries that reside in an area that is impacted by an extreme and uncontrollable circumstance during the performance year. We seek comment on these proposed revisions to the extreme and uncontrollable circumstances policy for performance year 2021 and subsequent performance years.

In addition, we are soliciting comment on a potential alternative extreme and uncontrollable circumstances policy for performance year 2022 and subsequent years that would continue to incentivize reporting but also acknowledge the challenges presented by extreme and uncontrollable circumstances. We are considering creating an extreme and uncontrollable circumstances methodology that would adjust the amount of shared savings determined for affected ACOs that complete quality reporting but do not meet the quality performance standard or that are unable to complete quality reporting. This methodology would be similar to the methodology currently used to adjust for extreme and uncontrollable circumstances when calculating the amount of shared losses for impacted ACOs. Under this alternative approach, instead of determining that ACOs are affected by an extreme and uncontrollable circumstances if 20 percent of their beneficiaries or their legal entity are located in an area impacted by an extreme and uncontrollable circumstance and determining shared savings using the higher of the ACO's own quality score and the mean ACO quality score, we would determine shared savings for an affected ACO by multiplying the maximum possible shared savings the

ACO would be eligible to receive based on its financial performance and track (or payment model within a track) by the percentage of the total months in the performance year affected by an extreme and uncontrollable circumstance, and the percentage of the ACO's assigned beneficiaries who reside in an area affected by an extreme and uncontrollable circumstance. To illustrate this potential approach, we provide an example of a hypothetical ACO, ACO A, which in this example was impacted by an extreme and uncontrollable circumstance that lasted for six months of the year and during that time, 50 percent of its assigned beneficiaries resided in the impacted area. For this example, we assume that ACO A did not quality report and would have earned \$100,000 in shared savings if it had met the quality performance standard. In this example, we would multiply the percentage of the total months in the performance year impacted by the extreme and uncontrollable circumstance by the percentage of the ACO's assigned beneficiaries who resided in the impacted area by the amount of shared savings if the ACO had met the quality performance standard; $0.50 * 0.50 * \$100,000 = \$25,000$. Under this alternative, ACO A's shared savings would be \$25,000.

As another example, if ACO B were impacted by an extreme and uncontrollable circumstance for nine months of the year, had 50 percent of its assigned beneficiaries residing in the impacted area, and did report quality data but did not meet the quality performance standard of a score equivalent to a MIPS Quality performance category score at the 40th percentile, and ACO B would have earned \$100,000 in shared savings if it had met the quality performance standard; $0.75 * 0.50 * \$100,000 = \$37,500$. Under this alternative, ACO B's shared savings would be \$37,500.

As illustrated by the above examples, under this potential future approach, the amount of shared savings that an ACO impacted by an extreme and uncontrollable circumstance would be eligible to receive would be greater than the amount an ACO that was not disaster impacted would be eligible to receive if it did not report quality or did report quality but did not obtain a score equivalent to a MIPS Quality performance category score at or above the 40th percentile. An ACO that was not disaster impacted and that either did not report quality or did report quality but did not obtain a quality performance category score equivalent to or higher than a MIPS Quality

performance category score at or above the 40th percentile would not meet the quality performance standard and would not be eligible to receive any shared savings. In contrast, an ACO impacted by an extreme and uncontrollable circumstance would be eligible to receive an adjusted amount of shared savings, even if it did not quality report or did report quality but had a quality performance score that was lower than the 40th percentile of MIPS Quality performance category scores. The final amount of shared savings would be dependent on the degree to which the ACO's assigned beneficiaries were disaster impacted during the relevant performance year.

If an ACO impacted by an extreme and uncontrollable circumstance does not report quality or does not meet the quality performance standard of a quality performance score equivalent to a MIPS Quality performance category score at or above the 40th percentile and owes shared losses, then the existing extreme and uncontrollable circumstances methodology that applies when calculating the amount of shared losses would help to mitigate those losses. We note that historically the majority of disaster-impacted ACOs report quality. For example, for performance years (or a performance period) starting in 2019, when all ACOs were determined to be impacted by the PHE for COVID-19, which was declared during the quality reporting period, 98.7 percent of ACOs completely reported via the CMS Web interface. Given the historically high rates of quality reporting by ACOs impacted by extreme and uncontrollable circumstances and the fact that, under our proposed revisions to the quality performance standard, ACOs would share in the maximum level of savings available under their track (or payment model within a track) if they meet the quality performance standard, we believe it is important to consider an extreme and uncontrollable circumstances policy that looks at the actual impact of an extreme and uncontrollable circumstance on a disaster-impacted ACO, and provides for an adjusted amount of shared savings if the ACO does not report or does not meet the quality performance standard.

We seek comment on this potential alternative extreme and uncontrollable circumstances policy for future years.

We propose to specify our proposed policies for addressing the effect of extreme and uncontrollable circumstances on ACO quality performance for performance year 2021 and subsequent performance years in the proposed new provision at

§ 425.512. In addition, we propose to include policies that parallel the existing policies, as specified in § 425.502(f), for determining when an extreme and uncontrollable circumstance has occurred and identifying affected ACOs. In particular, we propose to include a provision, similar to the current provision at § 425.502(f)(1), to establish our policies for determining whether an ACO has been affected by an extreme and uncontrollable circumstance. We also propose to include a provision, similar to the provision at § 425.502(f)(2), to establish the policies that would apply for calculating an affected ACO's quality performance score. Similar to the existing provision at § 425.502(f)(3), we propose to specify that we would apply determinations made under the Quality Payment Program with respect to whether an extreme and uncontrollable circumstance has occurred, and the affected areas. Consistent with the existing policy under § 425.502(f)(4), this new provision would also specify that we have sole discretion to determine the time period during which an extreme and uncontrollable circumstance occurred, the percentage of the ACO's assigned beneficiaries residing in the affected areas, and the location of the ACO legal entity.

h. Proposed Technical Changes To Incorporate References to Revised Quality Performance Standard

We propose to make certain technical, conforming changes to the following provisions to reflect our proposal to add new sections of the regulations at § 425.510 on the application of the APP to Shared Savings Program ACOs for performance years beginning on or after January 1, 2021, and § 425.512 on determining the ACO quality performance standard for performance years beginning on or after January 1, 2021.

- Under subpart A, which specifies general provisions governing the Shared Savings Program:

- ++ In § 425.100(b), the general description of ACOs that are eligible to receive payments for shared savings under the program would be revised for clarity and to add a reference to § 425.512. In the description of the quality performance standard that must be met for the ACO to be receive payment for shared savings, we propose to specify that the quality performance standards established under § 425.500 are applicable for performance years (or a performance period) beginning on or before January 1, 2020, and that the proposed quality performance standard under § 425.512 is applicable for

performance years beginning on or after January 1, 2021.

- ++ In § 425.112(b)(2)(i), the provision specifying the ACO must have processes to promote patient engagement including to address compliance with patient experience of care survey requirements, would be revised to add a reference to § 425.510.

- Under subpart C, which governs application procedures and the participation agreement, we would add a reference to § 425.510 in the provision at § 425.200(d) specifying that ACOs must submit measures in the form and manner required by CMS.

- Under subpart D, which specifies program requirements and beneficiary protections, we would add a reference to § 425.510 in § 425.302(a)(1) specifying requirements for data submission and certification.

- Under subpart G, which specifies the program's financial models for determining shared savings and shared losses (as applicable), we propose to revise the description of program requirements that phase-in over multiple agreement periods in § 425.600(f)(4). Under the proposed revisions to the quality performance standard, measurement of an ACO's quality performance would no longer phase-in over the course of the ACO's first agreement period from pay-for-reporting in the first performance year to pay-for-performance in all subsequent performance years; rather, all ACOs, regardless of performance year and agreement period, would be scored on all the measures in the APP. Therefore, we propose to revise § 425.600(f)(4)(i) to specify that the reference to the quality performance standard as described in § 425.502(a) is applicable for performance years (or a performance period) beginning on or before January 1, 2020.

- Under subpart I, which governs the reconsideration review process, we would add references to § 425.510, § 425.512, or both to § 425.800(a)(1), (a)(2) and (a)(6).

2. Revisions to the Definition of Primary Care Services Used in Shared Savings Program Beneficiary Assignment

a. Healthcare Common Procedure Coding System (HCPCS) and Current Procedural Terminology (CPT) Codes Used in Assignment

(1) Background

Section 1899(c)(1) of the Act, as amended by the 21st Century Cures Act and the Bipartisan Budget Act of 2018, provides that for performance years beginning on or after January 1, 2019, the Secretary shall assign beneficiaries

to an ACO based on their utilization of primary care services provided by a physician who is an ACO professional and all services furnished by Rural Health Clinics (RHCs) and Federally Qualified Health Centers (FQHCs). However, the statute does not specify which kinds of services may be considered primary care services for purposes of beneficiary assignment.

In the November 2011 final rule (76 FR 67853), we established the initial list of services, identified by CPT and HCPCS codes, that we considered to be primary care services. In that final rule, we indicated that we intended to monitor CPT and HCPCS codes and would consider making changes to the definition of primary care services to add or delete codes used to identify primary care services, if there were sufficient evidence that revisions were warranted. We have updated the list of primary care service codes in subsequent rulemaking to reflect additions or modifications to the codes that have been recognized for payment under the Medicare PFS and to incorporate other changes to the definition of primary care services for purposes of the Shared Savings Program.

In the June 2015 final rule (80 FR 32746 through 32748), we expanded the definition of primary care services to include two transitional care management (TCM) codes (CPT codes 99495 and 99496), and one chronic care management (CCM) code (CPT 99490). As discussed in the final rule, the TCM codes were established to pay a patient's physician or practitioner to coordinate the patient's care in the 30 days following a hospital or SNF stay. Including these codes in the definition of primary care services reflects our belief that the work of community physicians and practitioners in managing a patient's care following discharge from a hospital or nursing facility (NF) to ensure better continuity of care for these patients and help reduce avoidable readmissions is a key aspect of primary care.

In the CY 2016 PFS final rule (80 FR 71270 through 71273), we revised the definition of primary care services to exclude services billed under CPT codes 99304 through 99318, containing the place of service 31 modifier specifying that the service was furnished in a SNF. We also revised the definition of primary care services to include claims submitted by Electing Teaching Amendment (ETA) hospitals.

In the CY 2018 PFS final rule, we revised the definition of primary care services to include three additional CCM service codes, 99487, 99489, and

G0506, and four behavioral health integration (BHI) service codes, G0502, G0503, G0504 and G0507 (82 FR 53212 and 53213). We further revised the definition of primary care services in the November 2018 final rule. In the November 2018 final rule, we added new codes to the definition of primary care services (CPT codes 99497, 99498, 96160, 96161, 99354, and 99355, and HCPCS codes G0444, G0442, and G0443), and revised how we determine whether services identified by CPT codes 99304 through 99318 were furnished in a SNF (83 FR 59964 through 59968).

For performance years beginning on January 1, 2019, and subsequent performance years, we defined primary care services in § 425.400(c)(1)(iv) for purposes of assigning beneficiaries to ACOs under § 425.402 as the set of services identified by the following HCPCS/CPT codes:

CPT codes:

- (1) 99201 through 99215 (codes for office or other outpatient visit for the evaluation and management of a patient).
 - (2) 99304 through 99318 (codes for professional services furnished in a NF; services identified by these codes furnished in a SNF are excluded).
 - (3) 99319 through 99340 (codes for patient domiciliary, rest home, or custodial care visit).
 - (4) 99341 through 99350 (codes for evaluation and management services furnished in a patients' home for claims identified by place of service modifier 12).
 - (5) 99487, 99489 and 99490 (codes for chronic care management).
 - (6) 99495 and 99496 (codes for transitional care management services).
 - (7) 99497 and 99498 (codes for advance care planning).
 - (8) 96160 and 96161 (codes for administration of health risk assessment).
 - (9) 99354 and 99355 (add-on codes, for prolonged evaluation and management or psychotherapy services beyond the typical service time of the primary procedure; when the base code is also a primary care service code).
 - (10) 99484, 99492, 99493 and 99494 (codes for behavioral health integration services).
- HCPCS codes:*
- (1) G0402 (the code for the Welcome to Medicare visit).
 - (2) G0438 and G0439 (codes for the annual wellness visits).
 - (3) G0463 for services furnished in ETA hospitals.
 - (4) G0506 (code for chronic care management).
 - (5) G0444 (codes for annual depression screening service).

(6) G0442 (code for alcohol misuse screening service).

(7) G0443 (code for alcohol misuse counseling service).

In the May 8th COVID–19 IFC (85 FR 27582 through 27586), we revised the regulations to add § 425.400(c)(2), specifying the definition of primary care services for purposes of beneficiary assignment for the performance year starting on January 1, 2020, and for any subsequent performance year that starts during the COVID–19 PHE defined in § 400.200, to include the foregoing codes specified in § 425.400(c)(1)(iv), as well as specified codes for remote evaluations, virtual check-ins, e-visits, and telephone evaluation and management services.

(2) Proposed Revisions

Based on feedback from ACOs and our further review of the HCPCS and CPT codes currently recognized for payment under the PFS, we believe it would be appropriate to amend the definition of primary care services used in the Shared Savings Program assignment methodology to include certain additional codes and make other technical changes to the definition of primary care services, for use in determining beneficiary assignment for the performance year starting on January 1, 2021, and subsequent performance years.

We propose to revise the definition of primary care services in the Shared Savings Program regulations to include the following additions: (1) Online digital evaluation and management CPT codes 99421, 99422, and 99423; (2) assessment of and care planning for patients with cognitive impairment CPT code 99483; (3) chronic care management code CPT code 99491; (4) non-complex chronic care management HCPCS code G2058 and its proposed replacement CPT code, if finalized through the CY 2021 PFS rulemaking; (5) principal care management HCPCS codes G2064 and G2065; and (6) psychiatric collaborative care model HCPCS code GCOL1, if finalized through the CY 2021 PFS rulemaking.

The following provides additional information about the CPT and HCPCS codes that we are proposing to add to the definition of primary care services used in assignment:

- *Online Digital Evaluation and Management Services (CPT codes 99421, 99422, and 99423):* In the CY 2020 PFS final rule (84 FR 62797), we finalized payment for new online digital assessment services, also referred to as “E-Visits,” beginning in CY 2020 for practitioners billing under the PFS. These services are non-face-to-face,

patient-initiated communications using online patient portals. These digital assessment services are for established patients who require a clinical decision that otherwise typically would have been provided in the office.

Practitioners who may independently bill Medicare for evaluation and management (E/M) services (for instance, physicians and NPs) can bill the following codes:

++ 99421 (*Online digital evaluation and management service, for an established patient, for up to 7 days, cumulative time during the 7 days; 5–10 minutes.*)

++ 99422 (*Online digital evaluation and management service, for an established patient, for up to 7 days cumulative time during the 7 days; 11–20 minutes.*)

++ 99423 (*Online digital evaluation and management service, for an established patient, for up to 7 days, cumulative time during the 7 days; 21 or more minutes.*)

In the May 8th COVID–19 IFC (85 FR 27583), we stated that we believe it is appropriate to include these CPT and HCPCS codes in the definition of primary care services used for assignment for PY 2020 and any subsequent performance year that starts during the COVID–19 PHE because the services represented by these codes are being used in place of similar E/M services, the codes for which are already included in the list of codes used for assignment. We also explained our belief that it is important to include these services in our assignment methodology because we determine assignment to ACOs based upon where beneficiaries receive the plurality of their primary care services or whether they have designated an ACO professional as their primary clinician, responsible for their overall care, and hold ACOs accountable for the resulting assigned beneficiary population. Subsequent to the publication of the May 8th COVID–19 IFC, we have determined, based on the justification above, that these codes should be included in the definition of primary care services under § 425.400(c) permanently for purposes of determining beneficiary assignment for the performance year starting on January 1, 2021, and subsequent performance years, and should not be linked to the duration of the COVID–19 PHE.

- *Assessment of and care planning for patients with cognitive impairment (CPT code 99483):* In the CY 2017 PFS final rule (81 FR 80252–54), we finalized a G-code that would provide separate payment to recognize the work of a physician (or other appropriate

billing practitioner) in assessing and creating a care plan for beneficiaries with cognitive impairment, such as from Alzheimer's disease or dementia, at any stage of impairment, G0505 (*Cognition and functional assessment using standardized instruments with development of recorded care plan for the patient with cognitive impairment, history obtained from patient and/or caregiver, in office or other outpatient setting or home or domiciliary or rest home*). In the CY 2018 PFS final rule (82 FR 53077), we deleted the interim HCPCS code G0505 and replaced it with CPT code 99483 (*Assessment of and care planning for a patient with cognitive impairment, requiring an independent historian, in the office or other outpatient, home or domiciliary or rest home, with all of the following required elements: Cognition-focused evaluation including a pertinent history and examination; Medical decision making of moderate or high complexity; Functional assessment (e.g., Basic and Instrumental Activities of Daily Living), including decision-making capacity; Use of standardized instruments for staging of dementia (e.g., Functional Assessment Staging Test [FAST], Clinical Dementia Rating [CDR]); Medication reconciliation and review for high-risk medications; Evaluation for neuropsychiatric and behavioral symptoms, including depression, including use of standardized screening instrument(s); Evaluation of safety (e.g., home), including motor vehicle operation; Identification of caregiver(s), caregiver knowledge, caregiver needs, social supports, and the willingness of caregiver to take on caregiving tasks; Development, updating or revision, or review of an Advance Care Plan; Creation of a written care plan, including initial plans to address any neuropsychiatric symptoms, neuro-cognitive symptoms, functional limitations, and referral to community resources as needed (e.g., rehabilitation services, adult day programs, support groups) shared with the patient and/or caregiver with initial education and support. Typically, 50 minutes are spent face-to-face with the patient and/or family caregiver*).

CPT code 99483 includes the same elements included in the Level 5 E/M service CPT code 99215, such as, a comprehensive history, comprehensive exam, and high complexity medical decision-making. CPT code 99215 is included in the definition of primary care services used for assignment. Accordingly, we believe it would be appropriate to also include CPT code 99483 in the definition of primary care

services used for assignment under § 425.400(c) for the performance year starting on January 1, 2021, and subsequent performance years.

- *Chronic Care Management (CPT code 99491)*: In the CY 2019 PFS final rule (83 FR 59577), we finalized CPT code 99491 (*Chronic care management services, provided personally by a physician or other qualified healthcare professional, at least 30 minutes of physician or other qualified health care professional time, per calendar month, with the following required elements: Multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient, chronic conditions place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline; comprehensive care plan established, implemented, revised, or monitored*). This code requires two or more chronic conditions that place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline, and that a comprehensive care plan has been established, implemented, revised or monitored by the billing practitioner for such patient. In earlier rulemaking, we finalized the inclusion of CCM CPT codes 99487, 99489, and 99490 (codes for chronic care management) in the definition of primary care services for the Shared Savings Program. Refer to the June 2015 final rule (80 FR 32746 through 32748), and CY 2018 PFS final rule (82 FR 53212 through 53213). “Non-complex” CCM services (CPT codes 99490 and 99491), and “complex” CCM services (CPT codes 99487 and 99489) share a common set of service elements, including the following: (1) Initiating visit, (2) structured recording of patient information using certified electronic health record technology (EHR), (3) 24/7 access to physicians or other qualified health care professionals or clinical staff and continuity of care, (4) comprehensive care management including systematic assessment of the patient's medical, functional, and psychosocial needs, (5) comprehensive care plan including a comprehensive care plan for all health issues with particular focus on the chronic conditions being managed, and (6) management of care transitions. They differ in the amount of clinical staff service time provided, the involvement and work of the billing practitioner, and the extent of care planning performed.⁴²

⁴² Refer to CMS Medicare Learning Network, MLN Booklet “Chronic Care Management Services” (ICN MLN909188, July 2019); available at: <https://www.cms.gov/Outreach-and-Education/Medicare-Learning-Network-MLN/MLNProducts/Downloads/ChronicCareManagement.pdf>.

CPT code 99491 includes only time that is spent personally by the billing practitioner. Clinical staff time is not counted towards the required time threshold for reporting this code, whereas CPT codes 99487, 99489, and 99490 include time spent directly by the billing practitioner and by other clinical staff that counts toward the threshold clinical staff time required to be spent during a given month. Accordingly, CPT code 99491 cannot be reported for a beneficiary by a billing practitioner in the same month as CCM codes 99487, 99489, or 99490. Therefore, we believe it would be appropriate to propose to include CCM CPT code 99491 in the definition of primary care services under § 425.400(c) for the performance year starting on January 1, 2021, and subsequent performance years, in order to capture these CCM services when attributing beneficiaries to an ACO.

- *Non-Complex CCM (HCPCS code G2058 and its proposed replacement CPT code)*: In the CY 2020 PFS final rule (84 FR 62690), we finalized the creation of HCPCS code G2058 (*Chronic care management services, each additional 20 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month (List separately in addition to code for primary procedure)*). (*Do not report G2058 for care management services of less than 20 minutes additional to the first 20 minutes of chronic care management services during a calendar month*). (*Use G2058 in conjunction with 99490*). (*Do not report 99490, G2058 in the same calendar month as 99487, 99489, 99491*) for additional time spent beyond the initial 20 minutes included in the current coding for CCM services. As described elsewhere in this proposed rule, we are proposing the adoption of the permanent CPT code to replace HCPCS code G2058. As described in previous rulemaking, practitioners who choose to use G2058 can report the initial 20 minutes of non-complex CCM under CPT code 99490 and receive increased payment for their work under HCPCS code G2058 (84 FR 62690). Since CPT code 99490 is currently included in the Shared Savings Program's definition of primary care services under § 425.400(c)(1)(iv), we are proposing to add G2058 to the definition, effective for performance years starting on or after January 1, 2021, because the services furnished during the additional time billed under HCPCS code G2058, would be expected to be substantially similar to the services furnished under CPT code 99490, and thus should also be

considered for purposes of assignment under § 425.400 for the performance year starting on January 1, 2021, and subsequent performance years. If the proposal to adopt the permanent CPT code to replace HCPCS code G2058 is finalized, we would instead include that CPT code in the definition of primary care services used for purposes of assignment under § 425.400(c) for the performance year starting on January 1, 2021, and subsequent performance years.

- *Principal Care Management (HCPCS codes G2064 and G2065):* The CY 2020 PFS final rule (84 FR 62692 through 62697) introduced two new HCPCS codes (G2064 and G2065) for Principal Care Management (PCM) services. G2064 (*Comprehensive care management services for a single high-risk disease, e.g., principal care management, at least 30 minutes of physician or other qualified health care professional time per calendar month with the following elements: One complex chronic condition lasting at least 3 months, which is the focus of the care plan, the condition is of sufficient severity to place patient at risk of hospitalization or have been the cause of a recent hospitalization, the condition requires development or revision of disease-specific care plan, the condition requires frequent adjustments in the medication regimen, and/or the management of the condition is unusually complex due to comorbidities*), for use by physicians and non-physician practitioners (NPPs), and G2065 (*Comprehensive care management for a single high-risk disease services, e.g. principal care management, at least 30 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month with the following elements: One complex chronic condition lasting at least 3 months, which is the focus of the care plan, the condition is of sufficient severity to place patient at risk of hospitalization or have been cause of a recent hospitalization, the condition requires development or revision of disease-specific care plan, the condition requires frequent adjustments in the medication regimen, and/or the management of the condition is unusually complex due to comorbidities*), for use by clinical staff.

We expect that most services billed under these codes will be billed by specialists who are focused on managing patients with a single complex chronic condition requiring substantial care management. HCPCS code G2064 would be reported when, during the calendar month, at least 30

minutes of physician or other qualified health care professional time is spent on comprehensive care management for a single high-risk disease or complex chronic condition. HCPCS code G2065 would be reported when, during the calendar month, at least 30 minutes of clinical staff time is spent on comprehensive management for a single high-risk disease or complex chronic condition. Comprehensive care management codes require patients to have two or more chronic conditions and are primarily billed by practitioners who are managing a patient's total care over a month, including primary care practitioners and some specialists, such as cardiologists or nephrologists. By contrast, PCM services involve care management services for one serious chronic condition, typically expected to last between 3 months and a year, or until the death of the patient, that may have led to a recent hospitalization, and/or places the patient at significant risk of death, acute exacerbation/decompensation, or functional decline. Specifically, we stated in the CY 2020 PFS final rule (84 FR 62693 through 62697) that we agree that the relativity between CCM CPT codes 99490 and 99491 should be preserved in PCM HCPCS codes G2064 and G2065 and crosswalked the relative value units for G2064 and G2065 to 99491 and 99490, respectively. Due to the similarity between the description of the PCM and CCM services, both of which involve non-face-to-face care management services, we finalized that the full CCM scope of service requirements apply to PCM, including documenting the patient's verbal consent in the medical record. CCM services billed under code 99490 are currently included in the Shared Savings Program's definition of primary care services under § 425.400(c)(1)(iv), and as discussed previously, we are proposing to include CCM services billed under code 99491 for performance years starting on or after January 1, 2021; therefore, for the foregoing reasons, we also propose to add G2064 and G2065 to the definition of primary care services for the performance year starting on January 1, 2021, and subsequent performance years.

- *Psychiatric collaborative care model HCPCS code GCOL1:* In the CY 2017 PFS final rule (81 FR 80230–36), we established G-codes used to bill for monthly services furnished using the Psychiatric Collaborative Care Model (CoCM), an evidence-based approach to behavioral health integration that enhances “usual” primary care by adding care management support and

regular psychiatric inter-specialty consultation. These G-codes were replaced by CPT codes 99484, 99492, 99493, and 99494, which we established for payment under the PFS in the CY 2018 PFS final rule (82 FR 53077 and 53078).

Elsewhere in this proposed rule, we are proposing to add a new HCPCS code GCOL1 (*Initial or subsequent psychiatric collaborative care management, first 30 minutes in a month of behavioral health care manager activities, in consultation with a psychiatric consultant, and directed by the treating physician or other qualified health care professional*) in response to stakeholders who have requested additional coding to capture shorter increments of time spent, for example, when a patient is seen for services, but is then hospitalized or referred for specialized care, and the number of minutes required to bill for services using the current coding is not met. Specifically, we are proposing to establish a G-code to describe 30 minutes of behavioral health care manager time. This code would describe one-half of the time described by the existing code that describes subsequent months of CoCM services, CPT code 99493 (*Subsequent psychiatric collaborative care management, first 60 minutes in a subsequent month of behavioral health care manager activities, in consultation with a psychiatric consultant, and directed by the treating physician or other qualified health care professional, with the following required elements:*

- *Tracking patient follow-up and progress using the registry, with appropriate documentation; participation in weekly caseload consultation with the psychiatric consultant;*
- *Ongoing collaboration with and coordination of the patient's mental health care with the treating physician or other qualified health care professional and any other treating mental health providers;*
- *Additional review of progress and recommendations for changes in treatment, as indicated, including medications, based on recommendations provided by the psychiatric consultant;*
- *Provision of brief interventions using evidence-based techniques such as behavioral activation, motivational interviewing, and other focused treatment strategies;*
- *Monitoring of patient outcomes using validated rating scales; and*
- *Relapse prevention planning with patients as they achieve remission of symptoms and/or other treatment goals*

and are prepared for discharge from active treatment).

Because CPT code 99493 is currently included in the Shared Savings Program's definition of primary care services under § 425.400(c)(iv), we believe it is appropriate to add GCOL1 to the definition since the services furnished under this proposed new code would be expected to be substantially similar to the services furnished under CPT code 99493. Accordingly, contingent upon its finalization, we propose to add HCPCS code GCOL1 to the definition of primary care services for purposes of assignment under § 425.400 for the performance year starting on January 1, 2021, and subsequent performance years.

In the May 8th COVID-19 IFC (85 FR 27583), we revised the definition of primary care services used in the Shared Savings Program assignment methodology for the performance year starting on January 1, 2020, and for any subsequent performance year that starts during the PHE for the COVID-19 pandemic, as defined in § 400.200, to include the following additions: (1) HCPCS code G2010 (*remote evaluation of patient video/images*); (2) HCPCS code G2012 (*virtual check-in*); and (3) CPT codes 99441, 99442, and 99443 (*telephone evaluation and management services*).

We considered adding HCPCS codes G2010 (*Remote evaluation of recorded video and/or images submitted by an established patient (e.g., store and forward), including interpretation with follow-up with the patient within 24 business hours, not originating from a related E/M service provided within the previous 7 days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment*) and G2012 (*Brief communication technology-based service, e.g. virtual check-in, by a physician or other qualified health care professional who can report E/M services, provided to an established patient, not originating from a related E/M service provided within the previous 7 days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment; 5–10 minutes of medical discussion*) to the definition of primary care services for purposes of assignment under § 425.400 for the performance year starting on January 1, 2021, and subsequent performance years; however, while we recognize the importance of the flexibility these HCPCS codes provide during the PHE, we do not believe they should be added to definition of primary care services for purposes of assignment under § 425.400 on a permanent basis. In the context of

the PHE for the COVID-19 pandemic, when brief communications with practitioners and other non-face-to-face services could mitigate the need for an in-person visit that could represent an exposure risk for vulnerable patients, health care providers, and individuals in the community, we concluded that it was appropriate to include HCPCS codes G2010 and G2012 in the definition of primary care services used in assignment. However, outside the context of the PHE for the COVID-19 pandemic, we expect that these monitoring/check-in services for established patients will no longer replace primary care services because these separately billable brief communication-technology based services describe a check-in directly with the billing practitioner to assess whether an office visit is needed. When the PHE for the COVID-19 pandemic ends, these services would likely be replaced by an in-person primary care visit on which assignment would be based.

We seek comment on this issue and on the alternative approach of permanently including HCPCS codes G2010 and G2012 in the definition of primary care services used in assignment. We will consider the comments received in developing our policies for the final rule.

We note that we did not consider including CPT codes 99441, 99442, and 99443 in the definition of primary care services at § 425.400(c) on a permanent basis. Telephone evaluation and management services CPT codes 99441 (*Telephone evaluation and management service by a physician or other qualified health care professional who may report evaluation and management services provided to an established patient, parent, or guardian not originating from a related E/M service provided within the previous 7 days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment; 5–10 minutes of medical discussion.*); 99442 (*Telephone evaluation and management service by a physician or other qualified health care professional who may report evaluation and management services provided to an established patient, parent, or guardian not originating from a related E/M service provided within the previous 7 days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment; 11–20 minutes of medical discussion.*); and 99443 (*Telephone evaluation and management service by a physician or other qualified health care professional who may report evaluation and management services*

provided to an established patient, parent, or guardian not originating from a related E/M service provided within the previous 7 days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment; 21–30 minutes of medical discussion.) are non-covered services when not provided during the PHE for the COVID-19 pandemic, as defined in § 400.200, and so could not be included in the definition of primary care services for purposes of assignment outside the context of the PHE.

We also propose to modify the definition of primary care services for purposes of assignment in the Shared Savings Program regulations to exclude advance care planning CPT code 99497 and the add-on code 99498 when billed in an inpatient care setting, for use in determining beneficiary assignment for the performance year starting on January 1, 2021, and subsequent performance years. In the November 2018 final rule (83 FR 59964 through 59968), we finalized the inclusion of CPT code 99497 and the add-on code 99498 in the definition of primary care services. We did not propose any exceptions to place of service or provider type because there are no facility setting limitations or provider specialty limitations on these codes.⁴³ We have since received feedback from an ACO that, by not restricting place of service when using advance care planning codes in assignment, our methodology may inappropriately assign beneficiaries. Specifically, we are concerned that the inclusion of these CPT codes when the services are provided in an inpatient care setting may result in beneficiaries being assigned based on inpatient care rather than based on primary care by their regular health care providers. Based on an initial analysis using calendar year 2019 claims data, we observed the following frequencies for occurrence of place of service code 21, which identifies the place of service as an inpatient hospital, with CPT codes 99497 and 99498 in Part B claims: Over 13 percent of approximately 1.6 million Part B claims for CPT code 99497 had place of service code 21; over 48 percent of approximately 43,000 Part B claims for CPT code 99498 had place of service code 21. Operationally, we would exclude advanced care planning services claims billed under CPT codes 99497 and 99498 from use in the assignment methodology when there is

⁴³ Refer to CMS, Medicare Learning Network, "Advance Care Planning" (ICN MLN909289, August 2019); available at <https://www.cms.gov/Outreach-and-Education/Medicare-Learning-Network-MLN/MLNProducts/Downloads/AdvanceCarePlanning.pdf>.

an inpatient facility claim in our claims files with dates of service that overlap with the date of service for the professional service billed under CPT code 99497 or add-on code 99498. A similar operational approach is currently used to exclude certain codes for professional services furnished in a SNF pursuant to § 425.400(c)(1)(iv)(A)(2), as described elsewhere in this section of this proposed rule.

We are also seeking comment on an alternative method for determining operationally whether advance care planning services are provided in an inpatient care setting. Specifically, we seek comment on whether to exclude advance care planning services identified by CPT code 99497 or add-on code 99498, or both, reported on claims with place of service code 21, which identifies the place of service as an inpatient hospital.⁴⁴ Based on initial analysis, we determined that this alternative approach would capture slightly fewer claims for advance care planning, compared to the proposed approach. We will consider any comments received on this alternative approach in developing our policies for the final rule.

We propose to specify a revised definition of primary care services in a new provision of the Shared Savings Program regulations at § 425.400(c)(1)(v) to include the list of HCPCS and CPT codes specified in § 425.400(c)(1)(iv) with the proposed additional CPT and HCPCS codes, and reflecting the proposal to exclude advance care planning codes when provided in an inpatient setting in the new provision at § 425.400(c)(1)(v)(A)(12). We also propose that the new provision in § 425.400(c)(1)(v) would reflect technical modifications to the previously finalized descriptions of the CPT and HCPCS codes for consistency and clarity, including grammatical updates and ordering the codes sequentially. We propose the new provision at § 425.400(c)(1)(v) would be applicable for use in determining beneficiary assignment for the performance year starting on January 1, 2021, and subsequent performance years. Further, we propose technical modifications to the introductory text in § 425.400(c)(1)(iv) to specify the applicability of this provision for determining beneficiary assignment for performance years (or a performance

period) during 2019 and performance year 2020.

We seek comment on these proposed changes to the definition of primary care services used for assigning beneficiaries to Shared Savings Program ACOs for the performance year starting on January 1, 2021, and subsequent performance years. We also welcome comments on any other existing HCPCS or CPT codes, and new HCPCS or CPT codes proposed elsewhere in this proposed rule, that we should consider adding to the definition of primary care services for purposes of assignment in future rulemaking.

We note that, under § 425.212, an ACO is subject to all regulatory changes that become effective during the agreement period, with the exception of the following program areas, unless otherwise required by statute: (1) Eligibility requirements concerning the structure and governance of ACOs; and (2) calculation of sharing rate. As we have explained in earlier rulemaking, consistent with our authority under section 1899(d)(1)(B)(ii) of the Act to adjust the benchmark for beneficiary characteristics and other factors as the Secretary determines appropriate, CMS adjusts an ACO's historical benchmark to account for any regulatory changes affecting assignment during the agreement period (80 FR 32730 through 32732). Accordingly, if we finalize any of the proposed changes to the definition of primary care services discussed in section III.G.2. of this proposed rule for purposes of beneficiary assignment applicable for the performance year starting on January 1, 2021, and subsequent performance years, we will adjust ACOs' historical benchmarks to account for these changes. Although it has been our historical practice to make these adjustments, the regulations establishing our benchmarking methodology do not explicitly describe these adjustments. We believe it is timely to propose conforming revisions to the regulations in §§ 425.601(a)(9), 425.602(a)(8), and 425.603(c)(8), to specify that CMS will adjust the ACO's historical benchmark to reflect any changes to the beneficiary assignment methodology specified in 42 CFR part 425, subpart E during an ACO's agreement period including revisions to the definition of primary care services in § 425.400(c). Further, in light of these proposed changes, we propose to make certain other technical changes to §§ 425.601, 425.602, and 425.603 for clarity and internal consistency.

b. Exclusion From Assignment of Certain Services Reported by FQHCs or RHCs When Furnished in Skilled Nursing Facilities (SNFs)

(1) Background

As we described in section III.G.2.a.(1) of this proposed rule, under the Shared Savings Program, we define primary care services in § 425.400(c)(1) and § 425.400(c)(2) for purposes of assigning beneficiaries to ACOs under § 425.402 as the set of services identified by the specified HCPCS and CPT codes. In the November 2018 final rule (83 FR 59965 through 59968), we finalized a policy, specified in the regulation at § 425.400(c)(1)(iv)(A)(2) and effective for performance years starting on January 1, 2019, and subsequent performance years, to exclude services billed under CPT codes 99304 through 99318 when such services are furnished in a SNF. As described in the earlier rulemaking, CPT codes 99304 through 99318 are used for reporting E/M services furnished by physicians and other practitioners in a SNF or NF (83 FR 59964).

In the November 2018 final rule, we explained our operational approach to excluding CPT codes 99304 through 99318 from use in the assignment methodology when such services are furnished in a SNF. We explained that we would exclude professional services claims billed under CPT codes 99304 through 99318 from use in the assignment methodology when there is a SNF facility claim in our claims files with dates of service that overlap with the date of service for the professional service (83 FR 59967). This exclusion methodology replaced the prior approach, established through earlier rulemaking (80 FR 71271 and 71272), which excluded from the definition of primary care services claims billed under CPT codes 99304 through 99318 when the claim included the place of service code 31 modifier, specifying that the service was furnished in a SNF.

In earlier rulemaking (see for example, 83 FR 59964 and 59965), we have explained our belief that excluding from assignment certain services rendered to beneficiaries during a SNF stay is appropriate because it helps to ensure that beneficiaries who receive care in a SNF are assigned to ACOs based on care received from primary care professionals in the community (including nursing facilities), who are typically responsible for providing care to meet the primary care needs of these beneficiaries. We previously explained that SNF patients are shorter stay patients who are generally receiving continued acute medical care and

⁴⁴ See for example, CMS.gov, Place of Service Code Set (updated October 2019); available at https://www.cms.gov/Medicare/Coding/place-of-service-codes/Place_of_Service_Code_Set.

rehabilitative services. Although their care may be coordinated during their time in the SNF, they are then transitioned back into the community to the primary care professionals who are typically responsible for providing care to meet their primary care needs.

Section 1899(c)(1) of the Act, as amended by the 21st Century Cures Act and the Bipartisan Budget Act of 2018, requires the Secretary to assign beneficiaries to ACOs participating in the Shared Savings Program based not only on their utilization of primary care services furnished by ACO professionals who are physicians but also on their utilization of services furnished by FQHCs and RHCs, effective for performance years beginning on or after January 1, 2019. The statute provides the Secretary with broad discretion to determine how to incorporate services provided by FQHCs and RHCs into the Shared Savings Program beneficiary assignment methodology.

In earlier rulemaking, we established and modified special assignment conditions for FQHCs and RHCs (see for example, 82 FR 53210 through 53212). According to § 425.404(b), for performance years starting on January 1, 2019, and subsequent performance years, under the assignment methodology in § 425.402, CMS treats a service reported on an FQHC or RHC claim as a primary care service performed by a primary care physician. Therefore, according to the Shared Savings Program's step-wise claims-based assignment methodology, as specified in § 425.402(b), all services furnished by an FQHC or RHC to a beneficiary eligible for assignment to an ACO are considered in the first step of the assignment methodology. As specified in § 425.402(b)(3), under this first step, a beneficiary eligible for assignment is assigned to an ACO if the allowed charges for primary care services furnished to the beneficiary by primary care physicians who are ACO professionals and non-physician ACO professionals in the ACO are greater than the allowed charges for primary care services furnished by primary care physicians, nurse practitioners, physician assistants, and clinical nurse specialists who are ACO professionals in any other ACO, or not affiliated with any ACO and identified by a Medicare-enrolled billing TIN.

Currently, the exclusion from beneficiary assignment of professional services claims with CPT codes 99304 through 99318, when there is an overlapping SNF stay, does not apply to services billed through FQHCs/RHCs. Because FQHC/RHC claims are submitted to CMS using institutional

claim forms, we currently do not exclude these FQHC/RHC claims from assignment when a service billed under CPT codes 99304 through 99318 is provided concurrently with a SNF stay, as when claims for services billed under these codes are submitted by physicians and other practitioners. Rather, consistent with the requirement in § 425.404(b), we consider all FQHC/RHC claims for purposes of beneficiary assignment.

(2) Proposal

An ACO has raised concerns that our methodology for excluding primary care services billed under CPT codes 99304 through 99318 from use in beneficiary assignment when provided during a beneficiary's stay in a SNF does not apply to these services when billed by FQHCs. The ACO described a circumstance where ACO professionals, billing through ACO participant FQHCs, submitted claims using CPT codes 99304 through 99318 for services provided to patients in SNFs. Specifically, the ACO participant FQHCs' physicians provided services billed under these codes to beneficiaries in community SNFs. Following discharge from the SNF, these beneficiaries returned to receiving care from their regular primary care physicians (outside the ACO). However, because the SNF exclusion for services billed under CPT codes 99304 through 99318 does not apply to services furnished by FQHCs/RHCs, these beneficiaries were assigned to the ACO in which the FQHC was an ACO participant based on the services rendered in the SNF. We believe this result is contrary to the original intention of our policy of excluding claims billed under CPT codes 99304 through 99318 for professional services furnished during a SNF stay from consideration in the assignment methodology, as described in the background for this section.

Section 1899(c)(1) of the Act provides discretion for the Secretary to determine the appropriate method to utilize services provided by FQHCs and RHCs in conducting assignment for performance years beginning on or after January 1, 2019. We believe it is important to exclude claims for FQHC and RHC services that include CPT codes 99304 through 99318 from use in assignment when there is a SNF facility claim in our claims files with a date of service that overlaps with the date of FQHC or RHC services. Consistent with the previously established exclusion for claims billed under these codes when the services are provided to beneficiaries with an overlapping SNF

stay, we believe it is important to exclude the same services from use in assignment when they are furnished by physicians and NPPs billing through an FQHC or RHC to beneficiaries in a SNF. This approach would better recognize that beneficiaries who receive care from physicians and NPPs billing through an FQHC or RHC during a SNF stay are expected to return to receiving primary care from the health care professionals typically responsible for meeting their primary care needs when they transition back into the community.

Therefore, we propose to revise the existing exclusion for professional services billed under CPT codes 99304 through 99318 that are furnished in a SNF to include services reported on an FQHC or RHC claim that includes CPT codes 99304 through 99318, when those services are furnished in a SNF. Operationally, the exclusion would occur when the following conditions are met:

(1) Either a professional service is billed under CPT codes 99304 through 99318, or an FQHC/RHC submits a claim including a qualifier CPT code 99304 through 99318; and

(2) A SNF facility claim is in our claims files with dates of service that overlap with the date of service for the professional service or FQHC/RHC service.

As discussed in section III.G.2.a.(2) of this proposed rule, we are proposing to incorporate the revised definition of primary care services in a new provision of the Shared Savings Program regulations at § 425.400(c)(1)(v), applicable for use in determining beneficiary assignment for the performance year starting on January 1, 2021, and subsequent performance years. As part of this revised definition, we propose to incorporate the proposed revisions to the exclusion for CPT codes 99304 through 99318 when services are furnished in a SNF at § 425.400(c)(1)(v)(A)(3) to extend the exclusion to services identified by these codes reported on an FQHC or RHC claim when furnished in a SNF. This revision would also be applicable to determining assignment for the performance year starting on January 1, 2021, and subsequent performance years.

As we explained in section III.G.2.a.(2) of this proposed rule, we adjust the ACO's historical benchmark for changes in the program's assignment methodology occurring during the ACO's agreement period. If we finalize the proposed exclusion from beneficiary assignment of services reported by FQHCs or RHCs on claims that include CPT codes 99304 through 99318, when

furnished in a SNF, we will adjust ACOs' historical benchmarks to account for these changes.

Further, we believe the existing process is appropriately excluding from assignment professional services billed under CPT codes 99304 through 99318 when these services are provided to beneficiaries receiving SNF services in swing beds in Critical Access Hospitals (CAHs) or Electing Teaching Amendment (ETA) hospitals. Based on our operational experience:

- We exclude professional services billed under CPT codes 99304 through 99318 when such services are furnished for care of a beneficiary in a CAH swing bed; however, relatively few claims are identified for exclusion on this basis.

- We do not believe that ETA hospitals are billing for services furnished to beneficiaries in a SNF or swing bed setting by physicians and other practitioners that have reassigned their billing rights to ETA hospitals.

However, we solicit comment on whether additional exceptions are needed to ensure that all claims for services that include CPT codes 99304 through 99318 are excluded from assignment when those services are furnished to a beneficiary receiving SNF care, including when these professional services are billed by a Method II CAH or ETA hospital.

3. Reducing the Amount of Repayment Mechanisms for Eligible ACOs

a. Background

An ACO that will participate in a two-sided model must demonstrate that it has established an adequate repayment mechanism to provide CMS assurance of its ability to repay shared losses for which the ACO may be liable upon reconciliation for each performance year. The requirements for an ACO to establish and maintain an adequate repayment mechanism are described in § 425.204(f), and we have provided additional program guidance on repayment mechanism arrangements.⁴⁵ We established the repayment mechanism requirements through earlier rulemaking,⁴⁶ and most recently modified the repayment mechanism

⁴⁵ Medicare Shared Savings Program, Repayment Mechanism Arrangements, Guidance Document, available at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/sharedsavingsprogram/Downloads/Repayment-Mechanism-Guidance.pdf> (herein Repayment Mechanism Arrangements Guidance).

⁴⁶ See 76 FR 67937 through 67940 (establishing the requirement for Track 2 ACOs). See 80 FR 32781 through 32785 (adopting the same general requirements for Track 3 ACOs with respect to the repayment mechanism and discussing modifications to reduce burden of the repayment requirements on ACOs).

requirements in the December 2018 final rule (83 FR 67928 through 67938).

According to § 425.204(f)(4)(iv), in the case of an ACO that has submitted a request to renew its participation agreement and wishes to use its existing repayment mechanism to establish its ability to repay any shared losses incurred for performance years in the new agreement period, the amount of the repayment mechanism must be equal to the greater of the following: (1) The amount calculated by CMS in accordance with § 425.204(f)(4)(ii) at the time of renewal application; or (2) the repayment mechanism amount that the ACO was required to maintain during the last performance year of the participation agreement it seeks to renew. This approach ensures that a renewing ACO would remain capable of repaying losses incurred under its old agreement period (83 FR 67931). Based on our operational experience with implementing these policies, of 55 renewing two-sided model ACOs for a July 1, 2019, or January 1, 2020 start date, 43 ACOs (or 78.2 percent) elected to continue use of their existing repayment mechanism, and 22 (or 51.2 percent) of these ACOs had a higher existing repayment mechanism amount compared to the amount calculated for the new agreement period (determined at the time of renewal application).

Alternatively, to meet the requirements of § 425.204(f), a renewing ACO could establish a new repayment mechanism arrangement to support its participation in its new agreement period, in addition to maintaining its existing repayment mechanism. This option allows an ACO to establish a repayment mechanism to support its new agreement period at a potentially different amount (determined according to § 425.204(f)(4)(ii)) than the amount of the existing arrangement. However, under this approach there is a period of time during which the ACO must maintain multiple repayment mechanisms. The ACO must maintain the repayment mechanism established to support the ACO's previous agreement period until the term of the repayment mechanism arrangement expires, or conditions arise to allow for termination of the repayment mechanism according to § 425.204(f)(6)(iv) (see 83 FR 67933 through 67936). Once the repayment mechanism for the previous agreement period is closed, the ACO would only be required to maintain the repayment mechanism arrangement applicable to its current agreement period. An ACO could use this option to establish a repayment mechanism at a relatively lower amount (if applicable) for its

current agreement period, while maintaining and eventually closing-out a repayment mechanism at a relatively higher amount needed for its previous agreement period.

As specified under § 425.204(f)(4)(iii), for agreement periods beginning on or after July 1, 2019, CMS recalculates the ACO's repayment mechanism amount before the second and each subsequent performance year in the agreement period based on the certified ACO participant list for the relevant performance year. We require an increase in the repayment mechanism amount if the recalculated repayment mechanism amount exceeds the existing repayment mechanism amount by at least 50 percent or \$1,000,000, whichever is the lesser value. Under § 425.204(f)(4)(iii), an ACO cannot decrease the amount of its repayment mechanism during its agreement period as a result of changes in its composition.

In implementing the revised repayment mechanism rules, we have discovered some unintended consequences. Specifically, under § 425.204(f)(4), a renewing ACO that chooses to retain its higher repayment mechanism for a new agreement period might never be able to reduce its repayment mechanism even after the ACO has paid any shared losses incurred for performance years in the previous agreement period. Moreover, the ACO would have to maintain the higher repayment mechanism amount in future agreement periods unless the ACO opts to establish a new repayment mechanism. We did not intend this result.

More generally, based on our operational experience, many ACOs fully repay shared losses without use of their repayment mechanism arrangement. For example, of the eleven ACOs that owed shared losses for performance year 2018, CMS used the repayment mechanism for one ACO to support recoupment. Considering this experience, which suggests there may be low risk to the Shared Savings Program by allowing lower repayment mechanism amounts, and the potential reduction in burden on ACOs by lower repayment mechanism amounts, we believe it is appropriate to revisit the policies requiring renewing ACOs to retain higher repayment amounts when these amounts may no longer be needed to support their continued participation.

b. Proposed Revisions

We propose to establish two policies that would allow certain ACOs to benefit from a lower repayment mechanism amount than would otherwise be required under the current

regulations. The first policy would apply prospectively to any renewing ACO that uses an existing repayment mechanism to establish its ability to repay any shared losses incurred for performance years in its new agreement period. The second policy would permit certain ACOs whose agreement periods began July 1, 2019 or January 1, 2020 to elect to reduce the amount of their repayment mechanisms.

For a renewing ACO that wishes to use its existing repayment mechanism to establish its ability to repay any shared losses incurred for performance years in the new agreement period, we propose to discontinue the policy specified under § 425.204(f)(4)(iv), which requires such an ACO to maintain its existing repayment mechanism amount if it is higher than the repayment mechanism amount calculated for the new agreement period in accordance with § 425.204(f)(4)(ii). We propose to revise the regulations to specify that we will determine the repayment mechanism amount for an ACO applying to renew its participation for an agreement period only according to the methodology currently specified in § 425.204(f)(4)(ii). Under this proposed approach, a renewing ACO that wishes to use its existing repayment mechanism to establish its ability to repay any shared losses incurred for performance years in the new agreement period would be required to have a repayment mechanism amount equal to the lesser of the following: (1) 1 percent of the total per capita Medicare Parts A and B FFS expenditures for the ACO's assigned beneficiaries, based on expenditures for the most recent calendar year for which 12 months of data are available; or (2) 2 percent of the total Medicare Parts A and B FFS revenue of its ACO participants, based on revenue for the most recent calendar year for which 12 months of data are available.

As specified in the May 8th COVID-19 IFC (85 FR 27574 and 27575), we are forgoing the application cycle for the January 1, 2021 start date. Therefore, if finalized, this proposed policy for determining the repayment mechanism amount for renewing ACOs would apply with the application cycle for an agreement period starting on January 1, 2022, and in subsequent years.

A renewing ACO could still choose to establish a new repayment mechanism arrangement for the amount calculated at the time of the renewal application to support its participation in its new agreement period and maintain its existing repayment mechanism at the previously required amount. Once the conditions arise for termination of the

repayment mechanism arrangement supporting the ACO's previous agreement period, according to § 425.204(f)(6)(iv), only the arrangement supporting the ACO's current agreement period would remain.

We believe this proposed approach would reduce burden by allowing renewing ACOs that wish to continue use of their existing repayment mechanism to decrease their repayment mechanism amount if a higher amount is not needed to support their new agreement period. This proposal would prevent a higher repayment mechanism amount from following the ACO from one agreement period to the next, as is the case with the current approach. Further, an ACO would no longer need to establish another repayment mechanism for the ACO's new agreement period to ultimately get relief from the higher amount of its existing repayment mechanism arrangement, which the ACO would need to maintain until the conditions arise allowing for termination.

We recognize this proposal would reduce the amount available to support repayment of shared losses. The typical timing of issuance to ACOs of financial reconciliation, which includes performance results and written notification from CMS of the amount of shared losses owed (if any), is in the summer following the conclusion of the performance year. Renewing ACOs permitted to reduce the amount of their existing repayment mechanism may be notified of shared losses owed for their most recent prior performance year during the application review period and would be in the process of paying shared losses within 90 days of written notification from CMS of the amount owed (according to §§ 425.605(e)(3), 425.606(h)(3), 425.610(h)(3)). Further, at the time of renewal application, the ACO would be completing the last performance year of its existing agreement period, and financial reconciliation results for this performance year would likely be available during the summer of the ACO's first performance year of its new agreement period.

However, we believe this risk to CMS noted above is mitigated for a number of reasons. The Shared Savings Program's existing policies require ACOs to pay shared losses, in full, within 90 days of written notification from CMS of the amount owed (according to §§ 425.605(e)(3), 425.606(h)(3), 425.610(h)(3)). ACOs have an interest in fully paying the amount of shared losses owed within the 90-day payment window to remain in compliance with the Shared Savings

Program's requirements and avoid compliance actions including involuntary termination from the program. CMS may terminate an ACO's participation agreement for reasons including, but not limited to, non-compliance with requirements in 42 CFR part 425 (§ 425.218(b)(1)), such as failure to repay shared losses owed according to the program's regulations and may take pre-termination actions as described in § 425.216. Under § 425.221(b)(2)(ii)(B), an ACO under a two-sided model whose participation agreement is terminated by CMS under § 425.218 is liable for a pro-rated share of any shared losses determined for the performance year during which the termination becomes effective. ACOs must also repay shared losses owed to avoid accruing interest on any amount that remains unpaid after the 90-day payment window, and referral of an unpaid debt to the Department of Treasury for collection. Based on our operational experience, nearly all ACOs fully repay shared losses without use of their repayment mechanism arrangement.

Nevertheless, we are considering finalizing a policy that would require a renewing ACO to maintain its existing, higher repayment mechanism amount until the ACO has fully repaid the amount of shared losses determined to be owed for the most recent performance year for which financial reconciliation results are available. Under this approach, for instance, § 425.204(f)(4)(iv) would remain unchanged, and we would amend § 425.204(f)(4)(iii) to add a provision permitting a renewing ACO to reduce the amount of its repayment mechanism if, upon renewal of its participation agreement, it chose to use its existing repayment mechanism to demonstrate its ability to pay shared losses in the new agreement period, and was required under § 425.204(f)(4)(iv) to maintain its existing repayment mechanism at the amount applicable to the last performance year of the previous agreement period instead of the lower amount calculated for the new agreement period.

The Shared Savings Program regulations do not address the opportunity for a re-entering ACO, defined according to § 425.20, to use a repayment mechanism arrangement established to support its participation in an earlier agreement period to also support its participation in a new agreement period. We are considering finalizing provisions in the Shared Savings Program regulations specifying the conditions under which a re-entering ACO may use an existing

repayment mechanism arrangement to support its participation in a subsequent agreement period in the Shared Savings Program. Specifically, we are considering specifying a re-entering ACO identified as the same legal entity as an ACO that previously participated in the program may use its existing repayment mechanism to support its participation in a new agreement period in the Shared Savings Program. Since an individual ACO, identified as a legal entity, enters into a repayment mechanism arrangement with a financial institution, we do not believe this option for continued use of an existing repayment mechanism would be feasible for (and therefore would not be applicable to) a new legal entity identified as a re-entering ACO because more than 50 percent of its ACO participants were included on the ACO participant list under § 425.118, of the same ACO in any of the 5 most recent performance years prior to the agreement start date. Further, we are considering specifying the same requirements would apply to both a renewing ACO, and a re-entering ACO identified as the same legal entity that previously participated in the Shared Savings Program (either an ACO whose participation agreement expired without having been renewed, or an ACO whose participation agreement was terminated under § 425.218 or § 425.220), for permitting use of an existing repayment mechanism arrangement to support the ACO's participation in a new agreement period in the Shared Savings Program.

We also propose to establish a policy that allows certain ACOs a one-time opportunity to decrease the amount of their repayment mechanisms. Under this proposal, an ACO that renewed its agreement period beginning on July 1, 2019, or January 1, 2020, may elect to decrease the amount of its repayment mechanism if (1) upon renewal, it elected to use an existing repayment mechanism to establish its ability to repay any shared losses incurred in its new agreement period and the amount of that repayment mechanism was greater than the repayment mechanism amount estimated for the ACO's new agreement period; and (2) the recalculated repayment mechanism amount for performance year 2021 is less than the existing repayment mechanism amount. We note that this proposal would not need to be finalized if we finalize our alternate proposal to modify § 425.204(f)(4)(iii) as described above. The purpose of this new opportunity is to let any ACO that renewed for an agreement period beginning on July 1, 2019, or beginning

on January 1, 2020, decrease its repayment mechanism amount before it seeks to renew its agreement under the new proposed policy, which if finalized, would be the first opportunity for the ACO to reduce its repayment mechanism amount.

To determine if an ACO that renewed for an agreement period beginning on July 1, 2019, or beginning on January 1, 2020, is eligible for the one-time opportunity to lower its repayment mechanism amount we propose to compare the recalculated amount of the ACO's repayment mechanism based on its certified ACO participant list for performance year 2021, calculated according to § 425.204(f)(4)(iii), to the ACO's existing repayment mechanism amount. If the recalculated repayment mechanism amount for performance year 2021 is less than the existing repayment mechanism amount, the ACO would be eligible to decrease the amount of its repayment mechanism to the recalculated amount. Under this approach, we would permit a decrease in the repayment mechanism amount even for relatively small differences in dollar amounts. An ACO may wish to maintain the existing amount of its repayment mechanism arrangement, particularly if the cost to the ACO of amending the arrangement outweighs the potential benefit of a nominal decrease in the amount of the repayment mechanism.

We propose that CMS would notify the ACO in writing that the ACO may elect to decrease the amount of its repayment mechanism. If our proposal is finalized, to allow a one-time opportunity for a repayment mechanism decrease by eligible ACOs that renewed for an agreement period beginning on July 1, 2019, or beginning on January 1, 2020, we anticipate we would notify an ACO of its opportunity to reduce its repayment mechanism amount after the start of performance year 2021. We also propose that an ACO must submit such election, together with revised repayment mechanism documentation, in a form and manner and by a deadline specified by CMS. CMS would review the revised repayment mechanism documentation and may reject the election if the repayment mechanism documentation does not comply with the requirements of § 425.204(f).

Regarding the timeframe for an ACO to elect to decrease the amount of its repayment mechanism, we may require (for example) that an ACO submit its election, together with revised repayment mechanism documentation, within 30 days from the date of the written notice from CMS, particularly if prompt election is needed to ensure

compliance with other program requirements. For instance, CMS may notify the ACO of its opportunity to decrease the amount of its repayment mechanism after using the ACO's existing repayment mechanism to support repayment of shared losses. In this case, prompt notification by the ACO of its election to decrease the amount of its repayment mechanism may be necessary if the ACO seeks to replenish the amount of its repayment mechanism to the permitted lower amount within the 90-day replenishment period according to § 425.204(f)(5), as discussed elsewhere in this section of this proposed rule. However, we recognize that there may be circumstances that necessitate a longer timeframe.

We propose to amend § 425.204(f)(4)(iv) to specify in paragraph (f)(4)(iv)(A) the proposed, revised methodology for determining the repayment mechanism amount for renewing ACOs that seek to use their existing repayment mechanism to support their continued participation in their new agreement period. We propose to add provisions in § 425.204(f)(4)(iv)(B) establishing policies that would allow eligible ACOs with July 1, 2019, or January 1, 2020 start dates to elect to lower the amount of their repayment mechanism arrangements.

We propose to amend § 425.204(f)(5), requiring an ACO to replenish the amount of funds available through the repayment mechanism within 90 days of use of the arrangement to repay any portion of shared losses, to specify that the resulting amount available through the repayment mechanism must be at least the amount specified by CMS in accordance with § 425.204(f)(4). For example, these revisions would allow an eligible ACO, that renewed its agreement period beginning on July 1, 2019, or January 1, 2020, to replenish the repayment mechanism to the lower amount determined by CMS, according to the proposed approach described in this section of this proposed rule. This proposed revision may also be relevant to a renewing ACO that is seeking to use its existing repayment mechanism to support its participation in its new agreement period. Specifically, if the renewing ACO's existing repayment mechanism is used to support payment of shared losses, based on financial reconciliation results available at the time of renewal application, CMS may permit the renewing ACO to replenish the amount of its existing repayment mechanism to the lower amount determined to be applicable for the ACO's new agreement period.

We also propose technical changes to § 425.204(f)(3)(iv) for clarity. This provision specifies that an ACO that has submitted a request to renew its participation agreement must submit as part of the renewal request documentation demonstrating the adequacy of the repayment mechanism that could be used to repay any shared losses incurred for performance years in the next agreement period, and describes the conditions under which an ACO may use its current repayment mechanism to apply to the new agreement period. For clarity, we propose to specify under this provision that the duration of the existing repayment mechanism must be revised to comply with § 425.204(f)(6)(ii), and the amount of the repayment mechanism must comply with § 425.204(f)(4).

Further, we propose that an ACO must demonstrate the adequacy of its repayment mechanism prior to any change in the terms and type of the repayment mechanism. Based on our operational experience, ACOs periodically request to close-out their existing repayment mechanisms and establish new repayment mechanisms to support their continued participation under a two-sided model. We have typically permitted these requests, under the following circumstances: We first ensure the ACO's new repayment mechanism meets the program's requirements and is fully executed; and then we permit cancellation of the repayment mechanism arrangement(s) being replaced. Further, when reviewing requested modifications to repayment mechanism documentation it is our practice to ensure that all the terms of the repayment mechanism are compliant with the program's policies. Therefore, we propose to revise the regulations in § 425.204(f)(3)(i) through (iii) to further specify that an ACO must demonstrate the adequacy of its repayment mechanism prior to any change in the terms and type of the repayment mechanism.

4. Applicability of Policies to Track 1+ Model ACOs

The Track 1+ Model was established under the Innovation Center's authority at section 1115A of the Act, to test innovative payment and service delivery models to reduce program expenditures while preserving or enhancing the quality of care for Medicare, Medicaid, and Children's Health Insurance Program beneficiaries. The Track 1+ Model, which is a time-limited model that began on January 1, 2018, is based on Shared Savings Program Track 1, but tests a payment

design that incorporates more limited downside risk, as compared to Track 2 and the ENHANCED track. We discontinued all future application cycles for the Track 1+ Model, as explained in earlier rulemaking (83 FR 68032 and 68033). As of January 1, 2020, there were 20 Track 1+ Model ACOs participating in performance year 3 of a 3-year agreement under the model. In the May 8th COVID-19 IFC (85 FR 27574 and 27575), we explained that we are forgoing the application cycle for a January 1, 2021 start date. To avoid a gap in participation for ACOs whose agreement period would otherwise end on December 31, 2020, we revised § 425.200(b)(3)(ii) to allow these ACOs to elect to extend their agreement period for an optional fourth performance year. Therefore, Track 1+ Model ACOs, among other ACOs whose agreement periods expire December 31, 2020, are eligible to voluntarily elect a 1-year extension of their agreement period for a fourth performance year from January 1, 2021, to December 31, 2021.

ACOs approved to participate in the Track 1+ Model are required to agree to the terms and conditions of the model by executing a Track 1+ Model Participation Agreement. See <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/sharedsavingsprogram/Downloads/track-1plus-model-par-agreement.pdf>. Track 1+ Model ACOs are also required to have been approved to participate in the Shared Savings Program (Track 1) and to have executed a Shared Savings Program Participation Agreement. As indicated in the Track 1+ Model Participation Agreement, in accordance with our authority under section 1115A(d)(1) of the Act, we have waived certain requirements of the Shared Savings Program that otherwise would be applicable to ACOs participating in Track 1 of the Shared Savings Program, as necessary for purposes of testing the Track 1+ Model, and established alternative requirements for the ACOs participating in the Track 1+ Model. Unless stated otherwise in the Track 1+ Model Participation Agreement, the requirements of the Shared Savings Program under 42 CFR part 425 continue to apply. Consistent with § 425.212, Track 1+ Model ACOs generally are subject to all applicable regulatory changes, including but not limited to changes to the regulatory provisions referenced within the Track 1+ Model Participation Agreement that become effective during the term of the ACO's Shared Savings Program Participation Agreement and Track 1+

Model Participation Agreement, unless otherwise specified through rulemaking or amendment to the Track 1+ Model Participation Agreement. We note that the terms of the Track 1+ Model Participation Agreement also permit the parties (CMS and the ACO) to amend the agreement at any time by mutual written agreement.

Therefore, unless specified otherwise, the proposed changes to the Shared Savings Program regulations in this proposed rule that are applicable to Shared Savings Program ACOs within a current agreement period would apply to ACOs in the Track 1+ Model in the same way that they apply to ACOs in Track 1, so long as the applicable regulation has not been waived under the Track 1+ Model. Similarly, to the extent that certain requirements of the regulations that apply to ACOs under Track 2 or the ENHANCED track have been incorporated for ACOs in the Track 1+ Model under the terms of the Track 1+ Model Participation Agreement, any proposed changes to those regulations discussed in this proposed rule would also apply to ACOs in the Track 1+ Model in the same way that they apply to ACOs in Track 2 or the ENHANCED track. For example, the following proposed policies would apply to Track 1+ Model ACOs, if finalized:

- The application of the APP framework to determine the quality performance of Shared Savings Program ACOs (section III.G.1.c. of this proposed rule).
- The revisions to the Shared Savings Program quality performance standard. Specifically, under the proposed approach, the quality performance standard for Track 1+ Model ACOs would be set at a quality score that is equivalent to or higher than the 40th percentile across all MIPS Quality performance category scores (section III.G.1.c. of this proposed rule).
- The modifications to the regulations under § 425.604(c) specifying the circumstances under which a Track 1 ACO will qualify to receive a shared savings payment (section III.G.1.d. of this proposed rule).
- The modifications to the regulations under § 425.604(d) governing the determination of the final sharing rate for Track 1 ACOs (section III.G.1.d. of this proposed rule).
- The modifications to § 425.316 to allow CMS to identify ACOs that are not meeting the proposed, revised quality performance standard, and to require these ACOs to take actions to address their poor quality performance or face termination of their Shared Savings Program participation agreement (section III.G.1.e. of this proposed rule).

- The modifications to the policies governing the audit and validation of data used to determine the ACO's quality performance. Specifically, under the proposed new provision of the regulations at § 425.510(c), CMS would retain the right to audit and validate the quality data reported by an ACO according to § 414.1390 (section III.G.1.f. of this proposed rule).
- The proposed new provision of the regulations at § 425.512(b) to address the effect of extreme and uncontrollable circumstances on ACOs' quality performance (section III.G.1.g. of this proposed rule).
- The revisions to the definition of primary care services used in beneficiary assignment. If finalized, the revised definition would be applicable to Track 1+ Model ACOs for the performance year starting on January 1, 2021, and we would adjust the Track 1+ ACO's historical benchmark to reflect these policies (section III.G.2 of this proposed rule).
- The proposed changes to the CAHPS for ACOs reporting requirements for performance year 2020 (section III.I.1 of this proposed rule).

H. Notification of Infusion Therapy Options Available Prior to Furnishing Home Infusion Therapy Services

Section 5012 of the 21st Century Cures Act (Cures Act) (Pub. L. 114–255; enacted December 13, 2016) created a separate Medicare Part B benefit under section 1861(s)(2)(GG) and section 1861(iii) of the Act to cover home infusion therapy-associated professional services for certain drugs and biologicals administered intravenously or subcutaneously through a pump that is an item of durable medical equipment, effective for January 1, 2021. Section 5012 of the Cures Act also added section 1834(u) to the Act, which establishes the payment and related requirements for home infusion therapy under this benefit. Section 1834(u)(6) of the Act requires that, prior to the furnishing of home infusion therapy to an individual, the physician who establishes the plan of care described in section 1861(iii)(1) of the Act shall provide notification (in a form, manner, and frequency determined appropriate by the Secretary) of the options available (such as home, physician's office, hospital outpatient department) for the furnishing of infusion therapy under this part.

We recognize there are several possible forms, manners, and frequencies that physicians may use to notify patients of their infusion therapy treatment options. We solicited comments in the CY 2020 PFS proposed

rule (84 FR 40716) and the CY 2020 HH PPS proposed rule (84 FR 34694), regarding the appropriate form, manner, and frequency that any physician must use to provide notification of the treatment options available to their patient for the furnishing of infusion therapy (home or otherwise) under Medicare Part B. We also invited comments on any additional interpretations of this notification requirement. We summarized the comments received in the CY 2020 PFS final rule (84 FR 62568) and the CY 2020 HH PPS final rule (84 FR 60478), and we stated we would take these comments into consideration as we continue developing future policy through notice-and-comment rulemaking.

Many commenters stated that physicians already routinely discuss the infusion therapy options with their patients and annotate these discussions in their patients' medical records. For home infusion therapy services effective beginning CY 2021, physicians are to continue with the current practice of discussing options available for furnishing infusion therapy under Part B and annotating these discussions in their patients' medical records prior to establishing a home infusion therapy plan of care. We are not proposing to create a mandatory form nor are we otherwise proposing to require a specific manner or frequency of notification of options available for infusion therapy under Part B prior to establishing a home infusion therapy plan of care, as we believe that current practice provides appropriate notification. However, if current practice is later found to be insufficient in providing appropriate notification to patients of the available infusion options under Part B, we may consider additional requirements regarding this notification in future rulemaking. We are referring stakeholders to the CY 2020 HH PPS final rule (84 FR 60478) for further information regarding the policies on home infusion therapy services beginning CY 2021 and for subsequent years.

I. Modifications to Quality Reporting Requirements and Comment Solicitation on Modifications to the Extreme and Uncontrollable Circumstances Policy for Performance Year 2020

Following the hurricanes and wildfires during 2017, we issued an IFC, entitled "Medicare Shared Savings Program: Extreme and Uncontrollable Circumstances Policies for Performance Year 2017," which appeared in the December 26, 2017 **Federal Register** (82

FR 60912) (hereinafter referred to as the "December 2017 IFC"). The December 2017 IFC established a policy for determining quality performance scores for ACOs, when the ACO or its participating providers and suppliers were impacted by extreme and uncontrollable circumstances such as hurricanes, wildfires, or other triggering events, in performance year 2017, including the applicable quality reporting period for the performance year if the quality reporting period was not extended. In the CY 2019 PFS final rule, we extended the policies finalized in 2017 to performance year 2018 and subsequent performance years. In the March 31st COVID–19 IFC (85 FR 19267 and 19268), we updated the extreme and uncontrollable circumstances policy to eliminate the restriction that the policy applies only if the quality reporting period is not extended.

We determine whether an ACO has been impacted by an extreme and uncontrollable circumstance using the following criteria:

- 20 Percent or more of the ACO's assigned beneficiaries reside in an area identified under the Quality Payment Program as being affected by an extreme and uncontrollable circumstance (§ 425.502(f)(1)(i)).
- The ACO's legal entity is physically located in an area identified as being affected by an extreme and uncontrollable circumstance under the Quality Payment Program (§ 425.502(f)(1)(ii)).

Under the current regulation at § 425.502(f)(2), ACOs that meet one or both of the above criteria will have their quality performance score set equal to the mean quality performance score for all Shared Savings Program ACOs for the relevant performance year. However, if the ACO completely and accurately reports all quality measures, we use the higher of the ACO's quality performance score or the mean quality performance score for all Shared Savings Program ACOs to calculate the ACO's quality performance score.

The Public Health Emergency (PHE) for the COVID–19 pandemic applies to all counties in the United States, therefore for performance year 2020 all ACOs are considered to be affected by an extreme and uncontrollable circumstance.

1. Proposed Changes to the CAHPS for ACOs Reporting Requirements for Performance Year 2020

In the March 31st COVID–19 IFC, we made updates to the Part C and Part D Star Rating Systems for 2021 and 2022 based on concerns that the COVID–19 pandemic would pose significant

challenges and safety concerns in successfully completing the CAHPS survey. It was noted that many of the survey administration protocols could not be completed remotely, requiring staff to work in mail facilities and call centers where telephone interviewers assemble in close quarters to perform the telephone administration of the survey. Accordingly, to be in compliance with social distancing, travel bans, quarantine, and promoting health and safety of all involved in CAHPS data collection, we amended regulations in parts 417, 422, and 423 to eliminate requirements for collection of CAHPS data in 2020 (85 FR 19271 and 19272).

The Shared Savings Program quality measure set for performance year 2020 includes 10 measures that are collected through the CAHPS for ACOs survey. The timeline for the CAHPS for ACOs survey includes: (1) Vendor training in late spring, (2) ACO vendor selection in early summer, and (3) data collection beginning in late fall. The PHE may affect both the PY 2020 CAHPS for ACOs sample frame and the administration of the PY 2020 survey. The CAHPS for ACO sample frame can include beneficiaries who are assigned to an ACO based on having received the plurality of their primary care visits from ACO professionals in that ACO or voluntary alignment to the ACO. Under our current process, the PY 2020 CAHPS for ACOs survey sample frame will be constructed based on primary care visits of assigned beneficiaries from July 2019 through June 2020.

We are concerned that the mix of beneficiaries included in the PY 2020 sample frame may be impacted by the COVID-19 pandemic because the time period used to identify eligible beneficiaries based on primary care visits overlaps with the PHE for the COVID-19 pandemic. Beneficiaries may be assigned to an ACO based on both in person office and telehealth primary care visits; however, during the pandemic, many beneficiaries may defer or skip primary care visits. As a result, the pandemic could reduce the pool of beneficiaries available for assignment to the ACO and eligible for the survey sample. The sampling methodology requires a beneficiary to have at least two primary care service visits, as well as meet other sampling criteria such as a visit with a primary care clinician or a specialist that provides primary care services used in assignment who delivered the plurality of primary care services (that is, the beneficiary's focal provider). In addition, the survey is typically administered in late fall of the performance year and beneficiaries are

asked if they received health care from their focal provider in the last 6 months, if they answer no they skip over the survey questions evaluating the provider and office staff. Given our concerns regarding the decrease in primary care services in 2020, many beneficiaries could potentially have no office visits with their focal provider during this 6-month period and would be unable to fully complete the survey. A recent Commonwealth Health Study⁴⁷ showed that the number of primary care (in person or telehealth) visits were down by about 31 percent in the 2nd quarter of 2020 despite an upward trend in telehealth visits. Some ACOs have noted a significant decline in primary care service visits in the months used to produce the sample. This is supported by preliminary claims data that shows primary care services furnished by ACO professionals in Shared Savings Program ACOs were down by 26 percent from January-May 2020 and shows a greater decrease in visits from January-April, 2020. The decrease was observed even following the addition of codes for certain telehealth and virtual services to the ACO assignment specifications in the May 8th COVID-19 IFC (85 FR 27583 through 27586). We continue to monitor the impact that the changing mix of in person and telehealth visits has on assignment of beneficiaries to ACOs and any subsequent impact on sampling both in terms of the impact on the number of beneficiaries and composition of the beneficiary population assigned to an ACO.

Additionally, the atypical pattern of primary care utilization in past months potentially introduces non-random differences in the patient pool used to assess ACOs in 2020 compared to prior years. The current survey instrument may not accurately measure the shifts in care caused by the pandemic, such as increased use of telehealth creating the potential for under-reporting of experience. Patient experience for an atypical period of care may result in patient reports of experiences substantially different from previous years making it difficult to determine if observed differences are due to changes in the quality of care or due to pandemic-related changes in utilization or care delivery, compromising the use of the data to measure performance improvement over time. For example, 2020 patient reports and ratings of care may be more affected by general shortages of personnel and capacity

rather than by the quality of care delivered by physicians and other staff.

Furthermore, even though the administration of the CAHPS for ACOs survey does not occur until late fall of PY 2020, we do not know how long the COVID-19 PHE will be in place or the long-term impacts of the PHE on the CAHPS for ACOs survey administration. The pandemic may negatively impact survey administration procedures and response rates. Vendor-specific revisions to the survey protocol may be warranted, such as allowing mail-only surveys, which could introduce a lack of standardization in survey administration, affecting the comparability of data collected by different vendors and could lead to decreased response rates affecting performance scores.

Taken together, the potential negative impacts of the COVID-19 pandemic detailed above could affect the size and generalizability of the survey sample, standardization of survey administration, and the utility of the data for purposes of measuring patient experience and performance improvement, thus leading to challenges in benchmarking and computing quality improvement scores for 2020.

We note that absent this proposal, all ACOs would be required to administer the CAHPS for ACOs survey and pay to contract with a CAHPS vendor, regardless of the impact of the PHE. The change in the number of visits and the resulting sampling impact will vary for ACOs based on their location. If ACOs have sample sizes less than the target sample size of 860 beneficiaries, all eligible beneficiaries would be included in the survey sample; therefore, ACOs could potentially be paying for a vendor and receiving CAHPS for ACOs scores that do not reflect the care provided by ACO providers/suppliers. In contrast, the CAHPS for MIPS survey is voluntary and MIPS groups and virtual groups may still choose to register to field a MIPS for CAHPS survey. MIPS groups that register for the CAHPS for MIPS survey and do not meet minimum sample requirements are not eligible to administer the survey.

Accordingly, in an effort to maintain consistency with public safety determinations made for the CAHPS survey that is used in Part C and Part D Star Ratings Systems in the March 31st COVID-19 IFC and address concerns about the negative impacts of COVID-19 on sample size and performance scores, we are proposing to modify our regulations to remove the requirement that ACOs field a CAHPS for ACOs survey for performance year 2020. Instead, we propose that ACOs

⁴⁷ <https://www.commonwealthfund.org/publications/2020/jun/impact-covid-19-pandemic-outpatient-visits-practices-adapting-new-normal>.

would automatically receive full points for each of the CAHPS survey measures within the patient/caregiver experience domain for performance year 2020. We acknowledge that this proposal is retroactive for performance year 2020. However, section 1871(e)(1)(A) of the Act allows for retroactive application of a substantive change when the failure to apply the change retroactively would be contrary to the public interest. Based on the concerns described above, we believe it is in the public interest not to require ACOs to field the CAHPS for ACOs survey. Accordingly, we propose to amend § 425.500(d) to add language stating that for performance year 2020 we waive the CAHPS for ACOs reporting requirement and will give all ACOs automatic credit for the CAHPS for ACOs survey measures.

We seek comment on our proposal to waive the CAHPS for ACOs reporting requirement and to give ACOs automatic credit for the CAHPS for ACOs survey measures for performance year 2020. For instance, we would be interested in hearing from ACOs and beneficiaries if there are other ways to conduct the survey that would mitigate the concerns listed above.

2. Comment Solicitation on Modifications to the Extreme and Uncontrollable Circumstances Policy for Performance Year 2020

Multiple stakeholders have expressed concerns about the potential adverse impacts of the PHE for COVID-19 on ACOs, suggesting that we not use performance year 2020 data to assess the quality performance of ACOs, consider holding clinicians harmless from quality assessment and reporting, suspend quality data submission, or make the 2020 performance year a pay-for-reporting year to allow for an ongoing focus on quality while recognizing the unusual circumstances presented this year.

We understand stakeholders' concerns, but we believe that ACOs should be in a position to report CMS Web Interface measures for PY 2020 beginning in January 2021. All ACOs were determined to be impacted by the PHE for COVID-19, which was declared during the quality reporting period for performance years starting in 2019. However, 98.7 percent of ACOs completely reported CMS Web interface measures for 2019, including all 65 ACOs that were also impacted by a natural disaster during 2019 or the quality reporting period. We want to encourage reporting for performance year 2020 while still being cognizant of the impacts that the PHE for COVID-19 could have on quality reporting and

quality performance. Accordingly, we believe the proposal described above that would give ACOs automatic full credit for the CAHPS for ACOs survey measures, in addition to our current extreme and uncontrollable circumstances policy, offers relief to ACOs for performance year 2020. All 10 CAHPS for ACOs survey measures are in one of the four domains used to calculate an ACO's quality performance score. This means 25 percent of an ACO's quality performance score for performance year 2020 would come from receiving full credit on the CAHPS for ACOs survey measures. In addition, each of the other three domains has at least one or more measures that is pay-for-reporting in performance year 2020, resulting in over 50 percent of the measures (14 out of 23) being assigned full points if the ACO completely and accurately reports quality data. Furthermore, for ACOs in their second or subsequent performance year, there is at least one measure in each domain that ACOs could receive full points for, providing they completely report quality data, ensuring they would achieve the minimum attainment level on at least one measure in each domain as required under § 425.502(d)(2)(iii) to be eligible to share in any savings. We believe this may address some of the concerns expressed by stakeholders about 2020 quality performance, as noted above. We believe it is in the public interest that we strongly encourage ACOs to report quality data because ACOs could otherwise share in any savings earned without being held accountable for the quality of care that they provide to the more than 11 million beneficiaries who receive care through Shared Savings Program ACOs. In addition to incentivizing the reporting of quality of care measures, we believe that it is critical to incorporate ACO performance on those measures into quality performance scoring for performance year 2020 in a meaningful way that also considers the impact of the current PHE.

However, we are also seeking comment on a potential alternative approach to scoring ACOs under the extreme and uncontrollable circumstances policy for performance year 2020 that we considered proposing. The intent of the Shared Savings Program extreme and uncontrollable circumstances policy is to mitigate any negative impact of an extreme and uncontrollable circumstance on an ACO's quality performance or ability to report quality data to CMS and the resultant effect on financial reconciliation due to emergency

circumstances outside of the ACO's control. Changes in healthcare utilization during 2020 may impact sampling and ACO performance on the quality measures for reasons that include: (1) Increased healthcare utilization due to COVID-19; (2) reduced or delayed non-COVID-19 care due to advice to patients to delay routine and/or elective care; and (3) changes in non-COVID-19 inpatient utilization due to crowd-out. For the reasons enumerated above, we believe that the PHE for COVID-19 creates uncertainty regarding performance rates on the ACO quality measures for performance year 2020. Due to the changes in the healthcare landscape and the increased burden they present in providing care for all patients during the PHE for COVID-19, we recognize that the mean ACO performance rate in 2020 could be lower than it was in previous performance years. We therefore considered whether assigning the higher of an ACO's own 2020 quality score or the 2020 ACO mean to those ACOs that do not completely report quality and those whose quality score falls below the mean in 2020, consistent with our current extreme and uncontrollable circumstances policy, may disadvantage ACOs. Accordingly, below we are seeking comment on a potential change to the existing extreme and uncontrollable circumstances policy that we considered proposing.

The potential alternative modification we considered would be similar to the current policy, but would use the higher of an ACO's 2020 quality performance score or its 2019 quality performance score for ACOs that completely report quality data for 2020. For new ACOs that completely report quality data, we would continue to score them as pay-for-reporting and assign a quality score of 100 percent. ACOs that do not complete quality reporting would receive the 2020 ACO mean quality score as provided in § 425.502(f)(2). We believe that the potential change to use the higher of an ACO's 2020 quality performance score or its 2019 quality performance score, for ACOs that do completely report quality data for performance year 2020, could help to mitigate the impact of the PHE for COVID-19 on ACOs that report, but are not able to perform well during 2020. We also believe that assigning the 2020 ACO quality mean to ACOs that do not complete quality reporting would incentivize reporting by new ACOs that would receive 100 percent if they complete reporting, as well as by ACOs in their second or subsequent performance years that would have an

opportunity to receive a score that could be higher than the 2020 mean if they complete quality reporting.

As mentioned above, 98.7 percent of ACOs reported quality data for performance year 2019 despite being impacted by the PHE for COVID-19 during the 2019 CMS Web Interface data submission period. We note that preliminary data indicate that the 2019 mean ACO quality score will be 92 percent, which is comparable to the mean ACO quality scores from prior years. For example, the 2018 mean ACO Quality Score was 93 percent. As a result, we expect that for some ACOs in their second or subsequent performance year with consistently above average quality scores, assigning their 2019 quality performance score would result in a higher quality performance score for 2020 than the 2020 ACO mean quality score. However, as noted in section VIII.H.8. of this proposed rule, the proposed full credit for the CAHPS for ACOs measures that is described above would advantage all ACOs relative to applying only our current extreme and uncontrollable circumstances policy to mitigate the impact of the PHE for COVID-19.

We are soliciting comments on the following potential modifications to the extreme and uncontrollable circumstances policy for performance year 2020:

(1) If an ACO in a second or subsequent performance year completely and accurately reports the CMS Web Interface measures for performance year 2020, the ACO will receive the higher of its performance year 2020 ACO quality performance score that would include automatic full credit for the CAHPS for ACOs survey measures, as proposed in this section, or the score used in 2019 for purposes of financial reconciliation. For re-entering ACOs that terminated in their second or subsequent agreement period, the ACO will receive the higher of its most recent prior ACO quality performance score or its 2020 quality performance score.

(2) If an ACO in a second or subsequent performance year or a re-entering ACO that terminated in its second or subsequent agreement period does not completely and accurately report the CMS Web Interface measures for performance year 2020, the ACO will receive the 2020 ACO mean quality performance score.

(3) If an ACO in its first performance year in the program or a re-entering ACO that terminated in its first agreement period and is now in its first performance year of a new agreement period completely and accurately reports the CMS Web Interface

measures, it will receive a quality performance score of 100 percent that reflects automatic full credit for the CAHPS for ACO survey measures, as proposed in this section.

(4) If an ACO in its first performance year or a re-entering ACO that terminated in its first agreement period and is now in its first performance year of a new agreement period, does not completely and accurately report the CMS Web Interface measures for performance year 2020, it will receive the 2020 mean ACO quality performance score.

We believe this potential alternative of modifying the extreme and uncontrollable circumstances policy to the higher of an ACO's 2020 quality performance score or its 2019 quality performance score would encourage all ACOs to report quality for performance year 2020, while also offering additional protections for ACOs in the event that quality performance scores for 2020 are adversely affected by the PHE for COVID-19. We believe this approach could help to address concerns about the potential for lower quality performance during performance year 2020 by continuing to benefit ACOs that perform well during 2020, and mitigating the impact for those that do not. ACOs that do not completely report quality would receive the 2020 mean ACO quality score, as provided under the current extreme and uncontrollable circumstances policy in § 425.502(f). As noted earlier, more than half of the measures in the Shared Savings Program quality measure set are pay-for-reporting for all ACOs for performance year 2020, which is higher than in previous years, and we believe this should also help to mitigate concerns regarding quality performance. Nevertheless, we recognize that the mean ACO quality performance rate in 2020 could be lower than it was in previous performance years. As a result, we believe this alternative could provide an incentive to encourage ACOs to completely and accurately report quality because they would be eligible to receive a score that may be higher than the 2020 ACO mean quality score. Accordingly, we seek comment on the potential modification to the extreme and uncontrollable circumstances policy for performance year 2020, as described above.

J. Proposal To Remove Selected National Coverage Determinations

In the August 7, 2013 **Federal Register** notice (78 FR 48164), we established the current procedures for requesting a National Coverage Determination (NCD) or reconsideration of an existing NCD. We described how

the public may participate in the NCD process during the indicated comment period(s). We also established an expedited administrative process, using specific criteria, to remove NCDs older than 10 years, thereby allowing the local Medicare Administrative Contractors (MAC) to determine coverage.

We are now proposing to use the rulemaking process to continue to use the criterion established in 2013 to regularly identify and remove NCDs that no longer contain clinically pertinent and current information, in other words those items and services that no longer reflect current medical practice, or that involve items or services that are used infrequently by beneficiaries. We are proposing this change of vehicle because removing a NCD changes a substantive legal standard related to Medicare coverage and payment for items and services under section 1871(a)(2) of the Act. Eliminating an NCD for items and services that were previously covered means that the item or service will no longer be automatically covered by Medicare (42 CFR 405.1060). Instead, the coverage determinations for those items and services will be made by MACs. On the other hand, if the previous NCD barred coverage for an item or service under title XVIII (that is, national noncoverage NCD), a MAC would now be able to cover the item or service if the MAC determined that such action was appropriate under the statute. Removing a national non-coverage NCD may permit access to technologies that may now be beneficial for some uses. As the scientific community continues to conduct research which produces new evidence, the evidence base we previously reviewed may have evolved to support other policy conclusions.

Per the guidance issued in the 2013 notice, we may consider an older NCD for removal if, among other things, any of the following circumstances apply:

- We believe that allowing local contractor discretion to make a coverage decision better serves the needs of the Medicare program and its beneficiaries.
- The technology is generally acknowledged to be obsolete and is no longer marketed.
- In the case of a noncoverage NCD based on the experimental status of an item or service, the item or service in the NCD is no longer considered experimental.
- The NCD has been superseded by subsequent Medicare policy.
- The national policy does not meet the definition of an "NCD" as defined in sections 1862(l) or 1869(f) of the Act.

• The benefit category determination is no longer consistent with a category in the Act.

We are interested in public comments that may identify other reasons for proposing to remove NCDs. We are also interested in whether the time-based threshold of “older” which was designated as 10 years in the 2013 notice continues to be appropriate or whether stakeholders believe a shorter period of time or some other threshold criterion unrelated to time is more appropriate.

The process of removal does not result in an NCD as that term is defined in sections 1869(f) and 1862(l) of the Act because there would be no uniform national decision about whether or not the particular item or service would be covered under Title XVIII of the Act. Rather, the initial coverage decision which is normally made for a specific beneficiary who has already received an item or service and has submitted a Medicare claim would be made by local contractors. For the reasons outlined above, we believe that allowing local contractor flexibility in these cases better serves the needs of the Medicare program and its beneficiaries.

Since the 2013 notice, we have removed NCDs on two occasions. First, in November 2013, we proposed 10 NCDs for expedited removal. After reviewing the comments, we issued a final decision memorandum in December 2014, removing 7 NCDs and retaining three. We last proposed removal of NCDs in March of 2015, proposing to remove 2 NCDs. Based on the comments, we removed one NCD and retained one. The proposals and final decisions related to these removals are located in the Medicare Coverage Database, available at <https://www.cms.gov/medicare-coverage-database/indexes/medicare-coverage-documents-index.aspx?MCDIndexType=7&mcdtype=Expedited+Process+to+Remove+National+Coverage+Determinations&bc=AgAAAAA%3d%3d&>.

It has been 5 years since we last evaluated older NCDs for removal. We continue to recognize the need to periodically review our policies and processes to ensure that we remain effective and efficient as well as open and transparent. We are aware that clinical science and technology evolve and that items and services that were

once considered state-of-the-art or cutting edge may be replaced by more beneficial technologies or clinical paradigms. Additionally, proactively removing obsolete broad non-coverage NCDs removes barriers to innovation and reduces burden for stakeholders and CMS. In light of the Supreme Court’s decision in *Azara v. Allina Health Services*, 587 U.S. ___, 139 S. Ct. 1804 (2019)), we have determined it would be appropriate to use the notice and comment rulemaking procedures described in section 1871(a)(2) of the Act to remove outdated or unnecessary NCDs.

In Table 37, we list the NCDs that we propose to remove. In addition to conducting an internal review to identify appropriate NCDs for removal, we received removal requests from a variety of external stakeholders, such as medical specialty societies, device manufacturers, beneficiaries, physicians and providers, and other interested individuals. Additionally, some of these topics were brought to our attention by the MAC medical directors. We solicit comment on the nine NCDs discussed in Table 37, as well as comments recommending other NCDs for CMS to consider for future removal.

TABLE 37: Proposed NCDs for Removal

NCD Manual Citation	Name of NCD
20.5	Extracorporeal Immunoabsorption (ECI) using Protein A Columns (01/01/2001)
30.4	Electrosleep Therapy
100.9	Implantation of Gastroesophageal Reflux Device (06/22/1987)
110.14	Apheresis (Therapeutic Pheresis) (7/30/1992)
110.19	Abarelix for the Treatment of Prostate Cancer (3/15/2005)
190.1	Histocompatibility Testing
190.3	Cytogenetic Studies (7/16/1998)
220.2.1	Magnetic Resonance Spectroscopy (09/10/2004)
220.6.16	FDG PET for Inflammation and Infection (03/19/2008)

The following outlines each NCD and provides a summary of the rationale for removal. Each of the current NCDs below may be found in the Medicare National Coverage Determinations Manual located at <https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Internet-Only-Manuals-IOMs-Items/CMS014961>.

1. NCD #20.5 Extracorporeal Immunoabsorption (ECI) Using Protein A Columns (01/01/2001)

• *Circumstances/criterion:* We believe that allowing local contractor discretion to make a coverage decision

better serves the needs of the Medicare program and its beneficiaries.

• *Rationale:* Extracorporeal immunoabsorption (ECI), using Protein A columns, has been developed for the purpose of selectively removing circulating immune complexes (CIC) and immunoglobulins (IgG) from patients in whom these substances are associated with their diseases. The technique involves pumping the patient’s anticoagulated venous blood through a cell separator from which 1–3 liters of plasma are collected and perfused over adsorbent columns, after which the plasma rejoins the separated, unprocessed cells and is re-transfused to

the patient. ECI has been used to treat some diseases of inflammatory and autoimmune etiology. External stakeholders suggested this NCD may be outdated, with the therapeutic use of ECI constrained by the parameters of the NCD as the evidentiary base has continued to evolve. Also, the service is a specific type of therapeutic apheresis for the treatment of rheumatoid arthritis under certain conditions. The stakeholders recommended that this NCD should be removed in conjunction with removing NCD #110.14 Apheresis, which is discussed below. Removing the outdated CMS NCD for ECI and leaving

it to contractor discretion would provide flexibility for coverage considerations that are more responsive to the evolving evidentiary base improving appropriate access for Medicare beneficiaries.

2. NCD #30.4 Electrosleep Therapy

- *Circumstances/criterion:* The technology is generally acknowledged to be obsolete and is no longer marketed.

- *Rationale:* External stakeholders suggested this NCD may be outdated. This NCD predates the current NCD public notice standards and has no decision memorandum, no evidence review, and no bibliography. Additionally, the term “Electrosleep therapy” appears to be outdated, superseded by “cranial electrotherapy stimulators (CES).” In addition to a change in nomenclature, FDA’s class level assigned to CES has also changed over time for indications of anxiety and/or insomnia, although not for depression. Given that the therapeutic area has progressed and “Electrosleep Therapy” does not have the same applicability, we propose to remove this NCD allowing local contractor discretion to consider coverage of newer technologies.

3. NCD #100.9 Implantation of Gastroesophageal Reflux Device (06/22/1987)

- *Circumstances/criterion:* We believe that allowing local contractor discretion to make a coverage decision better serves the needs of the Medicare program and its beneficiaries.

- *Rationale:* External stakeholders suggested this NCD may be outdated. The 1987 Noncoverage NCD was determined based on a different device, the Angelchik device, which was a device implanted around the esophagus (under the diaphragm and above the stomach) that was secured by a circumferential tie strap. Implantable treatment for GERD initiated with Angelchik prosthetic rings came under scrutiny for high dysphagia rates and migration of the implant. It was removed from the market in 1990. New FDA market authorized devices for the indication of GERD have emerged since that time. However, some devices have a limited evidence base with respect to improving long-term patient outcomes. Nonetheless, there may be a role for implantable devices in the treatment of reflux. We believe that local contractor discretion provides an immediate avenue to potential coverage in appropriate candidates. Therefore, we believe that allowing local contractor discretion to make a coverage decision

better serves the needs of the Medicare program and its beneficiaries.

4. NCD #110.14 Apheresis (Therapeutic Pheresis) (7/30/1992)

- *Circumstances/criterion:* We believe that allowing local contractor discretion to make a coverage decision better serves the needs of the Medicare program and its beneficiaries.

- *Rationale:* Apheresis (also known as pheresis or therapeutic pheresis) is a medical procedure utilizing specialized equipment to remove selected blood constituents (plasma, leukocytes, platelets, or cells) from whole blood. The remainder is re-transfused into the person from whom the blood was taken. The apheresis NCD predates the current NCD public notice standards. No evidence review was published for this NCD to justify the specific list of conditions covered. Since the NCD is silent on non-coverage, the NCD is vague and open to interpretation and may not be applied uniformly. Furthermore, the scope of indications for apheresis has continued to develop since the origin of the NCD. Removing the outdated CMS NCD for apheresis and leaving it to contractor discretion will provide flexibility for coverage considerations that are more responsive to the evolving evidentiary base improving appropriate access for Medicare beneficiaries.

5. NCD #110.19 Abarelix for the Treatment of Prostate Cancer (3/15/2005)

- *Circumstances/criterion:* The technology is generally acknowledged to be obsolete and is no longer marketed.

- *Rationale:* Abarelix was approved in the United States in 2003 for restricted use as palliative treatment in men with advanced symptomatic prostate cancer and experiencing select complications (described in the FDA labeling). However, in response to reports of systemic allergic reactions, the GnRH antagonist, Abarelix, was voluntarily withdrawn from the U.S. market in 2005. Because Abarelix is no longer marketed in the U.S., the NCD no longer contains clinically pertinent and current information and should be removed.

6. NCD #190.1 Histocompatibility Testing (08/01/1978)

- *Circumstances/criterion:* We believe that allowing local contractor discretion to make a coverage decision better serves the needs of the Medicare program and its beneficiaries.

- *Rationale:* Histocompatibility testing involves matching or typing of the human leucocyte antigen (HLA)

proteins. External stakeholders suggested that the texts within this NCD are now less frequently utilized and raised concerns of reducing provider burden as adjudication of the claims for certain diagnoses requires submission of medical records for each person tested. The techniques have evolved from conventional HLA cross-matching to include a range of techniques with different levels of matching, including HLA genotyping assays (polymerase chain reaction sequence-specific primer [PCR-SSP], sequence-specific oligonucleotide probe (SSOP), and sequence-based techniques [SBT] including next generation sequencing). Therefore, clinicians need to make sophisticated assessments related to the indication, their access to histocompatibility testing approaches, and appropriate avenues for billing. We propose removing this NCD which originated around conventional HLA cross-matching. This would allow local contractors discretion to accommodate clinical flexibility to better serve the needs of the Medicare program and its beneficiaries while streamlining and simplifying the billing and claims processing.

7. NCD #190.3 Cytogenetic Studies (7/16/1998)

- *Circumstances/criterion:* The NCD has been superseded by subsequent Medicare policy.

- *Rationale:* Cytogenetics involves examining stained chromosomes, and distinct chromosomal bands, to help identify structural abnormalities in chromosomes that might correspond to poor health outcomes. However, direct DNA analyses through DNA sequencing, such as Next Generation Sequencing (NGS) (<https://www.cms.gov/medicare-coverage-database/details/ncl-details.aspx?NCDId=372>), allows providers to read the exact order of nucleotide molecules that comprise DNA, enhancing the sensitivity and specificity in identifying abnormalities in the genetic sequence. As a result, the focus of NCDs has generally shifted from cytogenetic studies to genetic sequencing when detailed genetic information is of interest.

8. NCD #220.2.1 Magnetic Resonance Spectroscopy (09/10/2004)

- *Circumstances/criterion:* We believe that allowing local contractor discretion to make a coverage decision better serves the needs of the Medicare program and its beneficiaries.

- *Rationale:* MRS can determine the relative concentrations and physical properties of a variety of biochemicals and has the potential to probe a wide

range of metabolic pathways in different human tissue. Although MRS is mostly used in assessing brain tissue, it also offers potential applicability to breast, prostate, hepatic, and other cancers. External stakeholders suggested this NCD may be outdated, noting the 2004 broad noncoverage determination for all indications was based on evidentiary review for one limited indication, the diagnosis of brain tumors. As the scientific evidence evolves and the clinical utility develops across various indications, the restrictive scope of the 2004 NCD may prohibit appropriate local coverage determinations.

9. NCD #220.6.16 FDG PET for Inflammation and Infection (03/19/2008)

- *Circumstances/criterion:* We believe that allowing local contractor discretion to make a coverage decision better serves the needs of the Medicare program and its beneficiaries.

- *Rationale:* The decision to use FDG PET for inflammation and infection is multifactorial and depends on: Whether conventional diagnostics have been unsuccessful, the stage of the underlying pathophysiological condition in the affected tissues, and the sensitivity and specificity of FDG PET to inform the differential diagnosis or course of disease, among other factors. For some inflammatory and infectious conditions, there is no overall agreement in the current literature about the added value of FDG PET for this indication. Conversely, leaving such determinations to local contractor discretion builds in flexibility to tailor coverage decisions to the pertinent facts of a patient's case and considering any added benefit of FDG PET in establishing a diagnosis and treatment plan that might link the PET imaging to an improved patient outcome.

In summary, we solicit comment on the proposal to remove each of the nine NCDs, as well as comments recommending other NCDs for CMS to consider for future removal. Additionally, we solicit public comments that may identify other reasons for proposing to remove NCDs. We solicit comments on whether the time-based threshold of "older" which was designated as 10 years in the 2013 notice continues to be appropriate or whether stakeholders believe a shorter period of time or some other threshold criterion unrelated to time is more appropriate. We request commenters include a rationale to support their comments. We will use the public comments to help inform our decision to take one of three actions on the nine NCDs proposed for removal:

- Remove the NCD, as proposed, allowing for coverage to be determined by the MACs.
- Retain the current policy as an NCD.
- Reconsider the NCD. Comments suggesting that the NCD should be revised, rather than eliminated, should include previously unreviewed evidence in order to support a change in national coverage.

K. Requirement for Electronic Prescribing for Controlled Substances for a Covered Part D Drug Under a Prescription Drug Plan or an MA-PD Plan

1. Background

Since Part D was signed into law in 2003, electronic prescribing (e-prescribing or e-Rx) has been optional for physicians and pharmacies for prescriptions made for covered Part D drugs. However, Part D sponsors offering drug plans have been required to have the electronic capabilities to support electronic prescribing. We understand that issuing this regulation would uniquely affect physicians, although it may impact other prescribers under Part D. Given the majority of affected parties are physicians, we seek to use the CY 2020 PFS rulemaking to gain the insight and perspective of providers.

We track the volume of electronic prescriptions for controlled and non-controlled substances through our prescription drug event (PDE) processing system for Part D program claims. We have collected data on controlled substances and non-controlled substances since the United States' Drug Enforcement Administration (DEA) permitted the practice in 2010.⁴⁸

However, while electronic prescribing has increased, the health care system faces a new threat. The United States is currently responding to an outbreak of respiratory disease caused by a novel (new) coronavirus now detected in 50 States and the District of Columbia. This virus has been named "severe acute respiratory syndrome coronavirus 2" ("SARS-CoV-2"), and the disease it causes has been named "coronavirus disease 2019" ("COVID-19"). In January 2020, the Secretary determined that a Public Health Emergency (PHE) exists for the United States to aid the nation's health care community in responding to COVID-19 (hereafter referred to as the PHE for the COVID-19 pandemic) and on April 21, 2020, the Secretary renewed, effective April 26, 2020, the

⁴⁸ See 75 FR 16284, including revisions adopted to 21 CFR 1304.04.

determination that a PHE exists. In March, 2020, President Trump declared the COVID-19 pandemic a national emergency. Certain individuals, including older adults and persons with chronic conditions, who comprise a predominance of the Medicare beneficiary population, are at elevated risk of more severe illness and potential death from COVID-19. As a result of the PHE for the COVID-19 pandemic, and as the nation reopens, some individuals, such as those who are at high risk, may continue to practice self-isolation and social distancing.

We have implemented many regulatory and policy actions to swiftly aid the nation's healthcare system to effectively address the COVID-19 pandemic. These actions include new flexibilities for telehealth and other electronic technologies⁴⁹ to ease the burden on providers and assure appropriate care in a range of settings for beneficiaries. Also, the DEA has adopted certain new temporary flexibilities to allow DEA-registered practitioners to prescribe controlled substances without having to interact in person with patients, effective for the duration of the PHE for the COVID-19 pandemic.⁵⁰ For example, during the PHE for the COVID-19 pandemic, DEA permits DEA registered prescribers to issue controlled substance prescriptions to telemedicine patients who they have not seen in person under certain conditions, permits early refills of controlled substances permissible under state law, and allows prescribers to issue multiple prescriptions authorizing the patient to receive a total of up to a 90-day supply of a Schedule II controlled substance. DEA's COVID-19 information page is available at <https://www.deadiversion.usdoj.gov/coronavirus.html>. The DEA has acknowledged the prevalence of paper prescribing and attempted to address some of the hardships it poses for prescribers and patients during the PHE for the COVID-19 pandemic.

We believe that social distancing is, in part, responsible for the increase in electronic prescribing for controlled substances (EPCS) during this PHE for the COVID-19 pandemic. In 2020, EPCS has increased to 50 percent of all PDEs being prescribed as compared to 38 percent in 2019.⁵¹ With the use of electronic prescribing, a patient and provider can conduct a visit via

⁴⁹ See <https://www.cms.gov/files/document/covid-19-physicians-and-practitioners.pdf>.

⁵⁰ See [https://www.deadiversion.usdoj.gov/GDP/\(DEA-DC-023\)\(DEA075\)Decision_Tree_\(Final\)_33120_2007.pdf](https://www.deadiversion.usdoj.gov/GDP/(DEA-DC-023)(DEA075)Decision_Tree_(Final)_33120_2007.pdf).

⁵¹ Based on Prescription Drug Event data processed through April 30, 2020.

telehealth and then have the prescription electronically transmitted to the pharmacy without having to see each other in-person and risk transmitting COVID-19. Some insurers, including Part D plans, may be permitting medication refills, including for controlled substances, earlier than usual or for a more extended period of time than was previously allowed. Pharmacies that were not previously doing so may deliver medications, or deliver at no charge, and communities and individuals have worked together to design ways for vulnerable persons to continue to receive access to prescribed medications in tandem with these new government and private sector flexibilities.

The DEA is also involved in regulating EPCS. In 2010, the DEA issued the “Electronic Prescriptions for Controlled Substances” interim final rule with request for comment (75 FR 16236) (hereinafter referred to as the “2010 DEA EPCS interim final rule”) that provided practitioners with the option of writing prescriptions for controlled substances electronically. The rule also permitted pharmacies to receive, dispense, and archive these electronic prescriptions. Any electronic controlled substance prescription issued by a practitioner must meet the requirements in the 2010 DEA EPCS interim final rule. We note that not all electronic prescribing systems currently meet the DEA’s requirements.

Since the issuance of the 2010 DEA EPCS interim final rule, we have seen a steady increase in the volume of controlled substance prescriptions submitted electronically. States have instituted electronic prescribing requirements; some include penalties for not using e-prescribing for controlled substances. As of 2020, all states in the U.S., and Washington DC allow electronic prescribing of controlled substances for schedules II through V.⁵²

EPCS provides multiple advantages over the traditional processing of paper prescriptions.^{53 54 55 56 57 58} In addition to

improving workflow efficiencies, electronic prescribing of controlled substances can deter and help detect prescription fraud and irregularities by requiring an extra layer of identity proofing, two-factor authentication and digital signature processes. It can also provide more timely and accurate data than paper prescriptions by avoiding data entry errors and pharmacy calls to a prescriber to clarify written instructions. By allowing for the direct transmission of EPCSs between providers and pharmacies or facilities, EPCS may also reduce the burden on prescribers who need to coordinate and manage paper prescriptions between staff, patients, facilities, other care sites, and pharmacies. In addition, EPCS (dispensed medication) data is transmitted to Prescription Drug Monitoring Programs (PDMPs), which can help inform providers of patients’ medication history and can aid in clinical decision making at the time of prescribing and/or before the medication is dispensed by a pharmacy. It is also important to continue the assurance of privacy and security in the prescribing process, such as by controlling prescriber access through improved identity controls and authentication protocols. EPCS can also assure prescribers’ identity more easily and may permit a single workflow for prescribing both controlled and non-

controlled drugs, improving the overall prescribing process.⁵⁹

From the patient standpoint, EPCS may reduce the logistical burden on patients who may otherwise be required to make multiple trips between providers and pharmacies to transport paper prescriptions when filling time-sensitive prescriptions while in pain or otherwise in need of medical treatment with controlled substances. EPCS can lessen the time needed to obtain prescriptions by minimizing trips to the physician to pick up paper prescriptions for refills and minimize transportation costs to and from the provider’s office. EPCS identity and security requirement also assure prescribers, patients, and pharmacies that prescriptions are processed as intended. In addition to helping with the reduction in fraud previously described, EPCS minimizes the likelihood that prescriptions have been tampered with, since electronic prescriptions are securely transmitted directly to the pharmacy from health information technology, which minimizes the likelihood of exposure to patients or other third parties.

2. The Current EPCS Environment

Based on a published report of 2019 data reflecting the majority of prescribing activities across the country,⁶⁰ 97 percent of U.S. pharmacies were capable of processing EPCSs, yet only 49 percent of prescribers were capable of electronically prescribing controlled substances. The same report showed that 38 percent of controlled substance prescriptions were electronically prescribed, while 85 percent of non-controlled substances were electronically prescribed. Pain management specialists appear to be using electronic prescribing more often for opioids than other prescribers, and family practitioners are using electronic prescribing for opioids less often. Electronic prescribing also varies across practice size and ownership and among physicians who practice in groups owned by a health plan, health maintenance organizations (HMOs), hospital, or other healthcare entity. Use of the technology does not vary

significantly between rural and urban areas, but it does vary between states.⁶¹ Based on our analysis of the issue and conversations with the industry, we believe that this is associated with differences in regulations, penalties, waivers, populations, and culture.

The reasons for this disparity between capability and practice are varied. There may be challenges associated with clinicians' ability to electronically prescribe controlled substances within their normal workflow, reluctance to alter workflow habits, or reluctance to use new technology, but at this point, as mentioned earlier, most pharmacies are capable of processing EPCS. Some prescribers may rely on health care groups, clinics, and hospital systems to implement the necessary technology. There are also costs associated with the adoption of technology, which can disproportionately impact small or rural practices or pharmacies. Though EPCS uptake continues to grow in physicians and pharmacies,^{62 63 64} clear gaps remain between capacity and adoption of electronic prescribing of controlled substances.

Substantial adoption of EPCS has occurred in the thirteen states that require it.⁶⁵ Some states have chosen to use penalties to increase prescribers' compliance with EPCS requirements. For example, New York mandated EPCS with a penalty for non-compliance and subsequently experienced an EPCS adoption rate for controlled substances of nearly 99 percent for pharmacies and 82 percent for prescribers in 2019.⁶⁶ We

do not currently impose penalties for providers prescribing controlled substances under the Part D program who do not use e-prescribing. Rather, Part D plans may reject improper transactions or transactions that did not adhere to the CMS transaction standards.

3. E-Prescribing Standards

CMS adopted the first set of standards for e-prescribing for Part D, the National Council for Prescription Drug Programs (NCPDP) SCRIPT Standard, Version 5, Release 0 in the Medicare Program; E-Prescribing and the Prescription Drug Program, Final Rule, in 2005.⁶⁷ Since then CMS has continued to adopt updated e-prescribing standards⁶⁸ with the most recent standard described in a final rule published April 16, 2018 where we finalized an update of the Part D standards to NCPDP SCRIPT standard version 2017071 for e-Rx and medication history, effective January 1, 2020 (83 FR 16440).

We currently require that Part D plans support the NCPDP SCRIPT standard version 2017071 for certain defined e-prescribing transactions as finalized in the "Medicare Program; Contract Year 2019 Policy and Technical Changes to the Medicare Advantage, Medicare Cost Plan, Medicare Fee-for-Service, the Medicare Prescription Drug Benefit Programs, and the PACE Program" final rule (83 FR 16440). This requirement became effective on January 1, 2020. Under CMS regulations, prescribers are required to use this standard when conducting e-prescribing for covered Part D drugs for Part D eligible individuals.

4. SUPPORT Act Requirements

Section 2003 of the SUPPORT Act generally mandates that the prescribing of a Schedule II, III, IV, or V controlled substance under Medicare Part D be done electronically in accordance with an electronic prescription drug program beginning January 1, 2021, subject to any exceptions, which HHS may specify. Section 2003 of the SUPPORT Act requires that the Secretary use rulemaking to specify circumstances and processes by which the Secretary may waive the EPCS requirement and provides the Secretary with authority to enforce and specify appropriate penalties for non-compliance with EPCS. The SUPPORT Act specifies some

circumstances under which the Secretary may waive the electronic prescribing requirement with respect to controlled substances that are covered Part D drugs and also permits HHS to develop other appropriate exceptions. The circumstances that are listed in the statute under which the Secretary may waive the EPCS requirement are at section 1860D-4(e)(7) of the Act, as added by section 2003 of the SUPPORT Act, and include:

- A prescription issued when the practitioner and dispensing pharmacy are the same entity;
- A prescription issued that cannot be transmitted electronically under the most recently implemented version of the National Council for Prescription Drug Programs SCRIPT Standard;
- A prescription issued by a practitioner who received a waiver or a renewal thereof for a period of time as determined by the Secretary, not to exceed one year, from the requirement to use electronic prescribing due to demonstrated economic hardship, technological limitations that are not reasonably within the control of the practitioner, or other exceptional circumstance demonstrated by the practitioner;
- A prescription issued by a practitioner under circumstances in which, notwithstanding the practitioner's ability to submit a prescription electronically as required by this subsection, such practitioner reasonably determines that it would be impractical for the individual involved to obtain substances prescribed by electronic prescription in a timely manner, and such delay would adversely impact the individual's medical condition involved;
- A prescription issued by a practitioner prescribing a drug under a research protocol;
- A prescription issued by a practitioner for a drug for which FDA requires a prescription to contain elements that are not able to be included in electronic prescribing, such as a drug with risk evaluation and mitigation strategies that include elements to assure safe use;
- A prescription issued by a practitioner—
 - ++ For an individual who receives hospice care under this title; and
 - ++ That is not covered under the hospice benefit under this title; and
 - A prescription issued by a practitioner for an individual who is—
 - ++ A resident of a nursing facility (as defined in section 1919(a)); and
 - ++ Dually eligible for benefits under this title and title XIX.

⁶⁸ CMS regulations adopting updated versions of the NCPDP SCRIPT standard: 73 FR 18918 (NCPDP SCRIPT version 8.1); and 77 FR 688892 (NCPDP SCRIPT version 10.6).

In the Medicare Program: Electronic Prescribing for Controlled Substances; Request for Information, we are requesting feedback on the appropriate waivers and whether CMS should impose penalties for noncompliance with the EPCS mandate in its rulemaking, and what should be the penalties. We plan on using the important public feedback we receive from the Request for Information in future standalone rulemaking.

5. Proposed Timeframe for EPCS Adoption

Section 2003 of the SUPPORT Act mandates that EPCS begin on January 1, 2021. Due to this statutory mandate coupled with the aforementioned advantages provided by EPCS, we encourage all prescribers to conduct EPCS as soon as is feasible for them.

We believe that although EPCS is ultimately more efficient, implementing EPCS does take additional time and resources. Prescribers must follow all the DEA guidance established by the DEA and summarized at https://deadiversion.usdoj.gov/ecomm/e_rx/. The requirements for individual practitioners and those enrolled in group practices vary but in general, a prescriber will need to make sure that their current ePrescribing software can support EPCS and is accredited by the DEA accordingly. In addition, before providers are approved for EPCS, their identity must be validated, including that they are authorized to prescribe controlled substances, and that their DEA number and license are in good standing. This step is required even if they are already prescribing controlled substances on paper. They must also get two-factor authentication in place which can be accomplished through include a combination of passwords, tokens, mobile phones, smart cards, and/or fingerprint biometrics. The providers must often have approved software configured to process EPCS which may require another set of permissions. Once that's completed, providers can process electronic prescriptions of controlled substances using the agreed upon two-factor authentication for each transaction. There are software and workflow training involved at each step of the process. When writing prescriptions, they must talk to their patients about e-prescribing, so their patients are aware of the general mechanics of how it is conducted.

We also recognize that the current PHE for the COVID-19 pandemic presents additional EPCS challenges for some prescribers. We have seen that those prescribers who had already

implemented EPCS capabilities have been able to increase the number of prescriptions electronically prescribed during the PHE. However, other provider groups have indicated that they do not anticipate being able to reschedule the EHR upgrades necessary to implement EPCS for at least three to four months, at which point practice resource limitations could make it difficult to deploy the necessary upgrades in a compressed timeframe. Other physician practices have indicated that complying with established EPCS identify proofing processes may be difficult because key personnel are unavailable or working offsite. We are sympathetic to the unique challenges faced by prescribers during this PHE for the COVID-19 pandemic. We also recognize the importance of EPCS and the statutory mandate. We believe that requiring EPCS by January 1, 2022 strikes the balance between not providing too large of a burden on providers and helping ensure that the benefits of EPCS are leveraged expeditiously. Furthermore, requiring EPCS by January 1, 2022 would allow time to solicit and consider important feedback from the previously discussed Request for Information that is necessary for implementation of the EPCS requirements for waivers from the requirements and penalties. This includes soliciting feedback from prescribers that we do not directly regulate under MA, and/or Part D, and who are not enrolled in Medicare or Medicaid. Section 1860D-4(e)(2)(E) of the Act requires the Secretary to adopt electronic standards for mandatory use by Part D plans. However, prior to the SUPPORT Act, which modified ePrescribing requirements with respect to schedules II through V controlled substances, all ePrescribing has been optional for physicians. As stated above, the statute provides the Secretary with the authority to develop any exceptions to EPCS that might be warranted, and to enforce and specify appropriate penalties for non-compliance with the requirement. We do not have an existing process for imposing penalties on non-compliant prescribers with respect to EPCS. In developing an entirely new penalty process we must make sure that it enforces the new EPCS requirement, allows for exceptions only when needed, but does not reduce beneficiary's access to needed drugs. Separate from this rule, we intend to conduct future standalone rulemaking that would address these topics.

Based on these considerations, we are proposing to amend § 423.160(a) by adding the requirement that all

prescribers conduct electronic prescribing of Schedule II, III, IV, and V controlled substances using the NCPDP SCRIPT 2017071 standard by January 1, 2022, except in circumstances in which the Secretary waives the requirement. We are proposing that prescribers must use the NCPDP SCRIPT 2017071 standard because they are already required to use this standard when conducting e-prescribing for covered Part D drugs for Part D eligible individuals, and we believe that prescribers should use the same standard for their electronic prescribing of controlled substances.

We understand that the proposal to require electronic prescribing for controlled substances for covered Part D drugs under a prescription drug plan or MA-PD plan would uniquely affect physicians. As a result, we seek to gain the insight and perspective of prescribers and others. We welcome comments on this proposal, including the feasibility for prescribers to meet the proposed January 1, 2022 deadline. We are also soliciting comments regarding the impact of this proposal on overall interoperability and the impact on medical record systems. Finally, we are interested in receiving comments on whether the proposed change would be significant enough for a January 1 implementation date, which is required for all significant changes affecting Part D plans.

L. Medicare Part B Drug Payment for Drugs Approved Through the Pathway Established Under Section 505(b)(2) of the Food, Drug, and Cosmetic Act

1. Background

Medicare Part B covers drugs under a limited drug benefit that includes drugs and biologicals defined in section 1861(t) of the Act. Medicare Part B drugs and biologicals fall into three general categories: Drugs and biologicals furnished incident to a physician's services, drugs and biologicals administered via a covered item of durable medical equipment (DME), and other drugs and biologicals specified by statute. Payment amounts for most separately payable Medicare Part B drugs and biologicals are determined using the methodology in section 1847A of the Act, and in many cases, payment is based on the Average Sales Price (ASP) plus a statutorily mandated 6 percent add-on.

Drugs (not including biologicals or biosimilar biological products, as defined in section 1847A of the Act) paid using the methodology in section 1847A of the Act fall into two broad and mutually exclusive categories: Multiple

source drugs and single source drugs. These terms are defined in statute and are further discussed in this section and the next section. In most cases the distinction between the multiple source drugs and single source drugs is fairly straightforward and is made as outlined in program instruction published in 2007 (https://www.cms.gov/Medicare/Coding/MedHCPCSGenInfo/Downloads/051807_coding_announcement.pdf): The payment limit under section 1847A of the Act for that biological product or single source drug is based on the pricing information for products produced or distributed under the applicable FDA approval. However, for a subset of drug products approved through the pathway established under section 505(b)(2) of the FFDCa, the distinction is less straightforward.

The drug approval pathway established under section 505(b)(2) of the FFDCa has existed since 1984, before the ASP payment methodology was established. The section 505(b)(2) pathway is provided for applications that contain full reports of investigations of safety and effectiveness, where at least some of the information for an approval comes from studies not conducted by or for the applicant and for which the applicant has not obtained a right of reference. An application submitted pursuant to section 505(b)(2) (which we refer to as a “section 505(b)(2) application”) may rely on FDA’s finding of safety and/or effectiveness for a listed drug (an approved drug product) or published literature provided that such reliance is scientifically justified and the section 505(b)(2) applicant complies with the applicable statutory and regulatory requirements, including patent certification if appropriate. Unlike an ANDA for a generic drug, a 505(b)(2) application is not required to have the same labeling as the listed (approved) drug(s) that the application relied upon. However, some drugs approved through the pathway established under section 505(b)(2) of the FFDCa (which we refer to as “section 505(b)(2) drug products”) share significant portions of the FDA-approved labeling with the listed (approved) drug(s) that the application submitted through section 505(b)(2) relied upon, for example prescribing information on safety, efficacy, and pharmacokinetics. In some cases, the section 505(b)(2) drug product shares significant portions of labeling with generic drugs that are paid as multiple source drugs under section 1847A of the Act. Examples of situations where a section 505(b)(2) drug product shares similar labeling to listed (approved)

products include a sterile injectable drug product that had been sold as a lyophilized powder in a vial and was then approved for sale as a concentrated liquid in a vial, as well as a ready-to-use IV bag.

The number of drugs approved through the pathway established under section 505(b)(2) has been growing, from about 40 per year from 2011 to 2016, to about 60 in 2017, and 70 in 2018. Some of these approvals include drugs paid under Part B. Although we have assigned some section 505(b)(2) drug products to separate single source billing and payment codes, our payment approach for newly marketed section 505(b)(2) drug products, where an existing multiple source code descriptor describes the section 505(b)(2) drug product accurately, and where the active ingredient(s), the drug name, and portions of the prescribing information correspond to existing products that are assigned to and paid under a multiple source drug code, has been to assign the section 505(b)(2) drug products to the existing multiple source code. We believe that this approach, as described in more detail below, is consistent with statutory language in section 1847A of the Act. The definition of multiple source drug at section 1847A(c)(6)(C) of the Act states in part that for a multiple source drug, there are two or more drug products which are rated as therapeutically equivalent (under the FDA’s most recent publication of “Approved Drug Products with Therapeutic Equivalence Evaluations”). For purposes of Part B drug payment under section 1847A of the Act, we interpret this to mean that if there is an existing HCPCS billing code that includes two or more drug products which are rated therapeutically equivalent and meets the remaining conditions of the definition of a multiple source drug, that billing and payment code is a multiple source drug code, and the section 505(b)(2) drug product meets the definition of a multiple source drug in section 1847A(c)(6)(C) of the Act. The statutory language in sections 1847A(b)(3) and (6) of the Act provides discretion for CMS to assign additional drug products to a multiple source drug code. In other words, if a multiple source drug code exists, CMS is permitted to assign other multiple source drug products to that code for the purpose of payment as a multiple source drug under section 1847A of the Act. We note that if the drug product is described by a multiple source code, it meets the definition of multiple source drug at section 1847A(c)(6)(C) of the Act, and it does

not meet the definition of a single source drug at section 1847A(c)(6)(D) of the Act, because the definition of a single source drug expressly excludes a multiple source drug in section 1847A(c)(6)(D)(ii) of the Act.

CMS has assigned section 505(b)(2) drug products to existing multiple source drug codes for Part B payment under section 1847A of the Act in limited situations, that is, where an existing multiple source code descriptor describes the section 505(b)(2) drug product, the active ingredient(s) correspond to one another, the section 505(b)(2) drug product’s labeling, particularly the prescribing information, includes information (such as the drug description, dosage and administration, pharmacokinetics, and indications) from other drug products that are paid under the multiple source drug code, and the section 505(b)(2) drug product can be used and prescribed in a manner similar to other products in the multiple source drug code. This information is used to determine whether the section 505(b)(2) drug product can be billed and paid using the existing multiple source drug code. The determination is based on the discussion in the previous paragraph, that is, if there is an existing HCPCS billing code that includes two or more drug products which are rated therapeutically equivalent and meet the remaining conditions of the definition of a multiple source drug, that billing and payment code is a multiple source drug code. Consistent with the statutory language in sections 1847A(b)(3) and (6) of the Act, which provides discretion for CMS to assign additional drug products to a multiple source drug code, a section 505(b)(2) drug product can be assigned to the multiple source drug code. The section 505(b)(2) product assigned to the multiple source drug code meets the definition of a multiple source drug in section 1847A(c)(6)(C) of the Act. Thus, for the purpose of payment under Medicare Part B, the section 505(b)(2) drug product can be billed and paid under that existing multiple source code. However, in situations where there is no existing multiple source drug code that describes a section 505(b)(2) drug product, the section 505(b)(2) drug product is typically assigned to its own single source code.

2. Multiple Source Drug and Single Source Drug Codes

Section 1847A of the Act uses the terms drug and drug product. Consistent with the statutory definitions discussed at section 1847A(c)(6)(C) and (D) of the Act and program instruction published in 2007 (<https://www.cms.gov/Medicare/Coding/MedHCPCSGenInfo/>

Downloads/051807_coding_announcement.pdf), we have applied the terms multiple source drug and single source drug at the billing and payment code level, meaning that “drug” corresponds to a HCPCS or other applicable billing code and its descriptor, which typically includes the active ingredient(s) of the drug. The term “drug product” corresponds to individual packages of the drug as identified by the National Drug Code or other applicable alternative identifier.

The terms multiple source drug and single source drug are defined, respectively, in section 1847A(c)(6)(C) and (D) of the Act. Section 1847A(c)(6)(C) of the Act states that multiple source drug means, for a calendar quarter, a drug for which there are two or more drug products which are rated as therapeutically equivalent (under FDA’s most recent publication of “Approved Drug Products with Therapeutic Equivalence Evaluations”); are pharmaceutically equivalent and bioequivalent, as determined by the FDA; and are sold or marketed in the United States during the quarter. Sections 1847A(c)(6)(E) and (F) of the Act establish conditions under which pharmaceutical equivalence and bioequivalence are met. The definition of multiple source drug in section 1847A of the Act can be interpreted to mean that once a multiple source drug code exists—that is, once there are two or more drug products that are therapeutically equivalent, pharmaceutically equivalent and bioequivalent, and CMS has assigned them to a multiple source drug code—then a subsequent product of the same drug—that is, a product that corresponds to the multiple source drug code’s descriptor—can be assigned to such code even if the subsequent drug product is not, itself, therapeutically equivalent, bioequivalent or pharmaceutically equivalent. This is because in this case, the drug is multiple source, meaning that there are two or more products which are rated as therapeutically equivalent of that drug, as evidenced by the fact that the existing products are already assigned to the multiple source drug code. Once a drug product is assigned to a multiple source drug code, the product would not be assigned to a single source drug code because the definition of single source drug at section 1847A(c)(6)(D)(ii) of the Act states, in part, that a single source drug is a drug which is not a multiple source drug. Thus, when assigning drug products to multiple source and single source drug codes for the purpose of payment under section 1847A of the

Act, we consider whether the product is described by an existing multiple source drug code first, and if the product is assigned to an existing multiple source drug code, its payment allowance will be determined based on the volume-weighted average ASPs of all drug products assigned to the code, rather than based solely on its own ASP (for example under a new single source code).

Sections 1847A(b)(3) and (6) of the Act provide that payment for multiple source drugs is determined for all drug products included within the same multiple source drug billing and payment code. For multiple source drugs, we calculate a volume weighted average sales price across all drug products assigned to a billing and payment code. This typically means that the ASP-based payment amount for a multiple source drug code includes generic and branded drug products within an individual code.

Consistent with sections 1847A(b)(3) and (6) of the Act and our interpretation of the definition of multiple source drug in section 1847A(c)(6) of the Act, we assign certain section 505(b)(2) drug products to existing multiple source drug codes. We determine whether to assign section 505(b)(2) drug products to multiple source or single source drug codes by comparing information about the section 505(b)(2) drug product to the descriptors for existing multiple source codes to which the drug products may be assigned for the purposes of payment amount determinations under section 1847A of the Act, as well as information about products already assigned to that descriptor. This information includes the products’ active ingredients and labeling, particularly the prescribing information and, if necessary, additional sources such as the FDA’s Approval Summary Review, which is a part of the FDA’s application review files and is available at <https://www.accessdata.fda.gov/scripts/cder/daf/>, and drug compendia. The FDA’s Approval Summary review can provide additional details about information that is found in the drug’s labeling and prescribing information and other compendia can supplement the information that is found in labeling and provide information about off label use of a drug.

Our case by case determination about the assignment of certain section 505(b)(2) drug products to existing multiple source drug codes is based on the factors described in further detail in the bullet points below: First, the products’ active ingredient(s), drug name and description; second, the products’ labeling information; third,

how they are ordered (prescribed) and used clinically. These factors are assessed as a whole, using the information (for example, active ingredient, labeling, compendia, and FDA Approval summary), to determine whether an existing multiple source drug code describes a section 505(b)(2) drug product and whether the product can be assigned to an existing multiple source drug code for the purpose of payment under section 1847A of the Act. The determination is based on the following:

- The active ingredient and drug name of the section 505(b)(2) drug product and other drug products in an existing multiple source drug code.

- The drug description and indications, particularly whether differences such as the salt form, additional ingredients, or uses exist.

The two bullet points above identify the section 505(b)(2) drug product and multiple source drug code and establish what is being compared so that the determination can proceed, if necessary. For example, if the active ingredients and drug names do not correspond, there would not be a reason to assign the section 505(b)(2) drug product to the multiple source drug code or to proceed further. We also note that the active ingredient of a drug is often included in the HCPCS code descriptor that is used to bill a drug product and to pay for it under section 1847A of the Act. The drug description is used, if necessary, to clarify what the actual active ingredient(s) are, whether there are minor differences, such as salt forms and other inactive ingredients that may affect how the product is used. This information may be helpful when considered with the information in the next two groups of bullet points as we consider labeling and uses of the drug products.

- The labeling information (and if necessary other material from sources such as the FDA’s Application Review Files, including the FDA’s Approval Summary Review and drug compendia), particularly pharmacokinetics, indications, adverse reactions, drug interactions, contraindications, warnings, precautions and clinical studies.

The bullet point above allows us to determine whether the same information, for example the same studies, were used to support the approval of the section 505(b)(2) drug product and to gauge how much of the labeling information from existing multiple source drug products appears in the section 505(b)(2) drug product’s labeling. This information also supports the determination in the next bullet

point. The more labeling information that a section 505(b)(2) drug product has in common with drug products in an existing multiple source drug code, the more likely it is that the existing code describes the section 505(b)(2) drug product, such that CMS will assign it to that multiple source drug code for the purpose of payment under section 1847A of the Act.

- The dosage and administration, pharmacokinetics, indications, contraindications, warnings, drug interactions, and adverse reactions.

The bullet point above allows us to determine whether the section 505(b)(2) drug product is ordered and used in patient care in the same way as products assigned to a multiple source drug billing code. The dosage and administration, pharmacokinetics, and indications are particularly important because we consider whether a prescriber writes a prescription for the section 505(b)(2) drug product in the same way as drug products assigned to a multiple source drug code and whether the products could be used for the same uses. Typically, a prescription includes the following information: The drug, dose, route, and frequency. The quantity of a drug (or duration of therapy) and refills are also a part of a prescription, but are less of a factor for Part B where most drugs are used incident to a physician's services. Typically, drugs used incident to a physician's services are administered and billed as a very limited number of doses, often just one, are administered during a service, and the drug is not dispensed for the patient for use over an extended time period beyond an office visit or outpatient hospital visit. The elements in the bullet point reflect how a drug is used and administered in the care of patients and in turn determine how billing for the drug is accomplished; that is, whether an existing code descriptor describes a section 505(b)(2) drug product and can be used to bill for it.

As a simple example of our approach, if the active ingredient, dose, route and frequency of the section 505(b)(2) drug product are the same as those for drug products in a multiple source drug code, then it is likely that an existing code descriptor describes a section 505(b)(2) drug product and can be used to bill for it. The information does not have to be an exact match, for example different uses of a drug product may require different doses, routes or frequencies. However, if the section 505(b)(2) drug product and the multiple source drug products in the existing multiple source drug code could both be used for the same indication (potentially by way of

off-label use), then billing for both with the existing HCPCS code would still be feasible. In such situations, similarities between labeling information such as whether the same studies were used to establish pharmacokinetic parameters may factor into the assessment. In summary, the information is used as a whole to determine whether the existing multiple source drug HCPCS code descriptor describes the section 505(b)(2) drug product or if a new HCPCS code would be needed describe the product for payment under Part B.

The information described in the bullet points above is usually sufficient for our determinations, but from time to time we may reach out to the drug manufacturer, seek post marketing data, or literature sources for additional information to assist us with understanding the information in the bullet points above and to assist with determinations in complicated situations, for example where indications vary, but it appears that the section 505(b)(2) drug product could still be used, administered and billed in the same manner as drug products assigned to an existing multiple source drug code.

We are aware that some section 505(b)(2) drug products are very different from previously approved products that may be used to support their approval. We do not assign all section 505(b)(2) drug products to existing multiple source drug codes. In circumstances where an existing code does not describe the section 505(b)(2) drug product and use of the existing code would not be suitable for billing and payment of the section 505(b)(2) product under Part B based on the assessment described above, the section 505(b)(2) drug product would not be assigned to the existing multiple source drug code. The following examples illustrate how we distinguish section 505(b)(2) drug products that are assigned to an existing multiple source drug code from those that are not. If a section 505(b)(2) drug product has the same active ingredient, same dose and dosing interval, and prescribing information and includes the same clinical studies (for example, the same patient number, same response rates and same adverse reaction frequencies) as drug products assigned to an existing multiple source drug code, the section 505(b)(2) drug product would be assigned to the multiple source code. However, if the section 505(b)(2) drug product has different pharmacokinetics, for example if it is a sustained release version of a drug that permits less frequent dosing compared to drug products in an existing multiple source

drug code, or if the section 505(b)(2) drug product has additional active ingredients not found in the drug products in an existing multiple source drug code, the section 505(b)(2) drug product would not be described by the existing multiple source drug code. As a result, it would not be considered a multiple source drug under section 1847A(c)(6)(C) because there would not be at least two drug products for that drug that are therapeutically equivalent, pharmaceutically equivalent and bioequivalent; thus, the section 505(b)(2) drug product would be considered a single source drug and typically assigned to a single source drug code.

3. Proposal To Codify Existing Policy for Section 505(b)(2) Drug Products

Our approach (described in section 2) for the payment of section 505(b)(2) drug products has been in place for at least 12 years, and it is also consistent with the concept of paying similar amounts for similar services. It is based on the definitions of multiple source drug and single source drug in sections 1847A(c)(6)(C) and (D) of the Act and authority to assign drug products to billing and payment codes in sections 1847A(b)(3) and (6) of the Act as discussed in the sections above. A number of section 505(b)(2) drug products that are described by an existing multiple source drug code are priced significantly higher than comparable products. Two recently introduced section 505(b)(2) drug products that appear to be comparable to drug products in existing multiple source drug codes (using the approach described in the section earlier) have Medicare payment allowances that are approximately 10 times higher than that of the existing multiple source code. We believe that assigning section 505(b)(2) drug products that are described by existing multiple source drug HCPCS codes to those existing HCPCS codes is consistent with efforts to curb drug prices while limiting opportunities to "game the regulatory process and the patent system in order to unfairly maintain monopolies."⁶⁹ Our approach also encourages competition among products that are competitors—that is, when they are described by one billing code and share similar labeling.

We are concerned about high payments for section 505(b)(2) drug products if they are assigned to unique separate HCPCS codes despite being described by existing multiple source

⁶⁹ <https://www.whitehouse.gov/briefings-statements/president-donald-j-trumps-blueprint-lower-drug-prices/>.

drug codes. We are also concerned about the effect of high payment amounts on individual beneficiaries' cost sharing payments for these products.

We propose to continue assigning certain section 505(b)(2) drug products to existing multiple source drug codes if the section 505(b)(2) products are described by existing multiple source drug codes consistent with our interpretation of the definition of multiple source drug in section 1847A(c)(6)(C) of the Act and the approach described above. As discussed in the previous section, where a section 505(b)(2) product is not itself therapeutically equivalent, pharmaceutically equivalent, or bioequivalent, as determined by FDA, to another drug product, we would nonetheless consider it to meet the definition of multiple source drug if, based on an assessment of its active ingredient, labeling, compendia, and other information, the product is described by the code descriptor for an existing multiple source drug code. That is, we would assess the section 505(b)(2) drug product's active ingredient(s), drug name, and description, whether the section 505(b)(2) drug product's labeling, particularly the prescribing information, includes information from other drug products that are paid under the multiple source drug code, and whether the section 505(b)(2) drug product is used and prescribed in a manner similar to other products in the multiple source drug code, in order to determine whether the section 505(b)(2) drug product is described by an existing multiple source drug code. We would not assign all section 505(b)(2) drug products to multiple source codes and would not assign section 505(b)(2) drug products to a single source drug code exclusively made up of single source drug products. We would also reevaluate and potentially revise previous payment (and coding) decisions to maintain consistency with our proposed approach, if finalized. Consistent with these proposals, we propose to revise the definition of multiple source drug in regulation text at 42 CFR 414.902 by amending the regulation text to state that multiple source drugs may include drug products described under section 505(b)(2) of the FFDCa and adding § 414.904(k) that describes the framework for our determination as discussed in this section of the preamble. We welcome comments on our proposals.

M. Updates to Certified Electronic Health Record Technology Due to the 21st Century Cures Act Final Rule

1. Background
