The American Recovery and Reinvestment Act of 2009 (ARRA) (Pub. L. 111–5, enacted February 17, 2009) authorized incentive payments to eligible professionals, eligible hospitals and critical access hospitals (CAHs), and Medicare Advantage (MA) organizations to promote the adoption and meaningful use of Certified Electronic Health Record Technology (CEHRT). In 2010, the Office of the National Coordinator for Health Information Technology (ONC) launched the Health IT Certification Program (Certification Program) to provide for the certification of health IT. Requirements for certification are based on standards, implementation specifications, and certification criteria adopted by the Secretary. The Certification Program supports the use of certified health IT under the programs that we administer, including, but not limited to, the Promoting Interoperability Programs (previously known as the Medicare and Medicaid EHR Incentive Programs), the Quality Payment Program (QPP), and the Hospital Inpatient Quality Reporting (IQR) Program. While these programs continue to require the use of certified health IT, the use of certified health IT has expanded to other government and non-government programs. Since 2019, for the Promoting Interoperability Programs and QPP, we have required the use of CEHRT as defined at 42 CFR 495.4 and 414.1305, respectively, which generally consists of EHR technology (which could include multiple technologies) certified under the Certification Program that meets the 2015 Edition Base EHR definition (as defined at 45 CFR 170.102) and has been certified to certain other 2015 Edition health IT certification criteria as specified in the definition. Similarly, the Hospital IQR Program began requiring that hospitals use only 2015 Edition certification criteria for CEHRT with the CY 2019 reporting period/FY 2021 payment determination (83 FR 41607).

The 21st Century Cures Act final rule that appeared in the May 1, 2020 **Federal Register** (85 FR 25642 through 25961) finalized a number of updates to the 2015 Edition of health IT certification criteria (hereinafter referred to as the 2015 Edition Cures Update). We believe these updates to the 2015 Edition will enhance interoperability and patients' access to their electronic health information, consistent with

section 4006(a) of the 21st Century Cures Act. The 21st Century Cures Act final rule both revises and adds new certification criteria that establish the capabilities and related standards and implementation specifications for the certification of health IT, as well as removing certain criteria. In this proposed rule, we propose to require that technology used to meet the CEHRT definitions must be certified in accordance with the updated certification criteria in the 21st Century Cures Act final rule.

The 2015 Edition Cures Update represents a limited set of changes relative to the overall set of health IT certification criteria that we currently require for the Promoting Interoperability Programs and QPP. These changes incorporate certain technical standards, including an e-prescribing standard required for alignment with other CMS programs, and other technical updates to existing 2015 Edition functionality that is already being used by many healthcare providers. For instance, updates to 2015 Edition certification criteria that referenced the Common Clinical Data Set (CCDS) regulatory definition to reference instead the United States Core Data for Interoperability (USCDI) standard do not require extensive changes to user-facing aspects of health IT already certified to these criteria (85 FR 25665).

For 2019 and subsequent years, the CEHRT definitions for the Promoting Interoperability Programs at § 495.4, and for QPP at § 414.1305, require the use of EHR technology certified under the Certification Program that meets the 2015 Edition Base EHR definition at § 170.102, and has been certified to certain other 2015 Edition health IT certification criteria as specified in the definitions, including criteria necessary to be a meaningful EHR user under the Promoting Interoperability Programs, and criteria necessary to report on applicable objectives and measures specified for the MIPS advancing care information performance category (now known as the Promoting Interoperability performance category). These updates finalized by ONC in the 21st Century Cures Act final rule impact criteria in the different elements of the CEHRT definitions, including certification criteria included in the 2015 Edition Base EHR definition for the Promoting Interoperability Program and the Quality Payment Program, as well as certification criteria necessary to be a meaningful EHR user under the Promoting Interoperability Programs, and criteria necessary to report on applicable objectives and measures

specified for the MIPS Promoting Interoperability performance category.

The 21st Century Cures Act final rule specified a number of timelines and compliance dates for health IT developers related to the 2015 Edition Cures Update. The rule finalized the removal of several certification criteria from the 2015 Edition that were also included in the Base EHR definition, upon the effective date of the final rule (June 30, 2020). For other certification criteria, the final rule finalized a limited period during which ONC-Authorized Certification Bodies (ONC-ACBs) may continue to issue certificates for these criteria to health IT developers, after which certification will no longer be available.

Where the 21st Century Cures Act final rule finalized updates to existing 2015 Edition criteria, or introduced new 2015 Edition criteria, ONC generally finalized that health IT developers will have 24 months from the publication date of the rule (until May 2, 2022) to make technology available that is certified to the updated, or new criteria. During this period, health IT developers are expected to continue supporting technology certified to the prior version of the certification criteria for use by their customers prior to implementing updates, and healthcare providers participating in the Promoting Interoperability Programs and QPP may use such technology for the purposes of these programs while working with health IT developers to implement updates in a manner that best meets their needs.

On April 21, 2020, in response to the COVID-19 public health emergency, ONC announced additional flexibility for health IT developers subject to the policies in the 21st Century Cures Act final rule (https://www.healthit.gov/cures/sites/default/files/cures/2020-04/Enforcement_Discretion.pdf). Specifically, ONC announced that it will exercise enforcement discretion regarding new requirements in the 21st Century Cures Act final rule until three months after each initial compliance date or timeline. During this period of enforcement discretion, healthcare providers participating in the Promoting Interoperability Programs and QPP would continue to be able to use technology certified to the 2015 Edition criteria that has not been updated yet.

Below, we provide an overview of updates in the ONC 21st Century Cures Act final rule that impact certification criteria included in the CEHRT definitions, and discuss associated timelines finalized in the 21st Century Cures Act final rule.

The 21st Century Cures Act final rule finalized removing the following criteria from the 2015 Edition of certification criteria upon the effective date of the final rule (June 30, 2020), which included removing these criteria from the 2015 Edition Base EHR definition (85 FR 25657–25660):

- “Problem list” at § 170.315(a)(6);
- “medications” at § 170.315(a)(7);
- “medication allergies” at § 170.315(a)(8); and
- “smoking status” at § 170.315(a)(11).

The final rule noted that functionality associated with these criteria is now widespread among health IT products, and is expected to remain in products absent certification. Accordingly, ONC sought to reduce burden associated with the certification program by removing these criteria (85 FR 25657 through 25660).

The 21st Century Cures Act final rule also removed the “data export” criterion at § 170.315(b)(6) from the Base EHR definition upon the effective date of the final rule (June 30, 2020) (85 FR 25668). However, this criterion will continue to be available for certification for 36 months after the publication date of the final rule. The 21st Century Cures Act final rule established a new criterion “electronic health information export” at § 170.315(b)(10). This new criterion requires a certified health IT module to electronically export all electronic health information (EHI), as defined in § 171.102, that can be stored at the time of certification by the product of which the health IT module is a part. A health IT developer of a certified health IT products which, at the time presented for certification, electronically stores EHI must certify such products to this new criterion and make these products available to their customers within 36 months after the publication of the 21st Century Cures Act final rule (by May 2, 2023). However, the new EHI Export criterion is not included in the Base EHR definition (85 FR 25690), and it is not associated with any objectives or measures in the Promoting Interoperability Programs or MIPS.

In the 21st Century Cures Act proposed rule, ONC proposed to remove several additional certification criteria associated with measures under the Promoting Interoperability Programs and MIPS from the 2015 Edition:

- “Drug-formulary and preferred drug list checks” at § 170.315(a)(10);
 - “secure messaging” at § 170.315(e)(2); and
 - “patient-specific education resource” at § 170.315(a)(13).
- However, in order to allow participants in the Medicaid Promoting

Interoperability Program to continue to have access to technology meeting 2015 Edition certification criteria for CEHRT required to be able to meet the measures for that program, ONC stated in the 21st Century Cures Act final rule that ONC-ACBs may continue to issue certificates for these criteria until January 1, 2022 (85 FR 25660 through 25662).

Specifically, we note that the latter two criteria are necessary for participants to meet two of the measures in the Medicaid Promoting Interoperability Program. The “secure messaging” criterion at § 170.315(e)(2) is required to meet Objective 6 (Coordination of Care through Patient Engagement) and Measure 2 (Secure Messaging) (80 FR 62852). Similarly, the “patient-specific education resource” at § 170.315(a)(13) is necessary to fulfill the requirements of Objective 5 (Patient Electronic Access to Health Information) and Measure 2 (Patient-Specific Education) (80 FR 62846). We are not proposing any changes to these measures, as the final year of the Medicaid Promoting Interoperability Program is 2021. Based on the phased approach that ONC finalized, Medicaid EPs may keep CEHRT that has been certified to those two criteria in 2021, which will enable them to report on these measures for the 2021 Medicaid Promoting Interoperability Program EHR reporting period. Health IT developers are encouraged to maintain the certified functionality for those two criteria through 2021, even if they move forward with updates to other criteria. Furthermore, the Secure Messaging measure is one of three measures within Objective 6, and EPs need only meet two of the measures (42 CFR 495.24(d)(6)(i)(B)). Even without the secure messaging functionality, an EP could meet the other two measures and fulfill the objective. There is no similar option for the Patient-Specific Education measure, which is required to meet Objective 5.

The “drug-formulary and preferred drug list checks” criterion is also currently associated with measures under the e-prescribing objective for the Medicare Promoting Interoperability Program and MIPS (80 FR 62882 and 83 FR 59817). As discussed below, since ONC will retire this criterion after January 1, 2022, this criterion would no longer be required for reporting e-prescribing measures for the Medicare Promoting Interoperability Program and MIPS, beginning in CY 2021 (85 FR 25678).

The 21st Century Cures Act final rule also finalized updates to a number of certification criteria which are currently associated with objectives and measures

under the Promoting Interoperability Program, as well as criteria that are included in the 2015 Edition Base EHR definition. In general, ONC finalized that health IT developers have 24 months from the publication date of the final rule to make technology certified to these updated criteria available to their customers (until May 2, 2022). During this time, developers are expected to continue supporting technology certified to the prior version of certification criteria for use by their customers.

The 21st Century Cures Act final rule updated several criteria to include references to the USCDI standard instead of the existing CCDS definition (85 FR 25670), and implemented related technical updates (85 FR 25671). These include the following criteria that may be applicable for a healthcare provider's technology to satisfy the CEHRT definitions:

- “Transitions of care” at § 170.315(b)(1);
- “clinical information reconciliation and incorporation” at § 170.315(b)(2);
- “view, download, and transmit to 3rd party” at § 170.315(e)(1);
- “transmission to public health agencies—electronic case reporting” at § 170.315(f)(5); and
- “application access—all data request” at § 170.315(g)(9).

The USCDI standard establishes a set of data classes and constituent data elements required to support interoperability nationwide and is designed to be expanded in an iterative and predictable way over time.⁷⁰ In finalizing version 1 of the USCDI, the 21st Century Cures Act final rule added three new data classes, “allergies and intolerances,” “clinical notes,” and “provenance;” and added several additional elements to “patient demographics” that were not defined in the CCDS (85 FR 25912).

With respect to the use of secure, standards-based APIs, the 21st Century Cures Act final rule finalized a new standards-based API criterion at § 170.315(g)(10), “standardized API for patient and population services,” which requires the use of FHIR Release 4 and several implementation specifications (85 FR 25742). Developers must make technology certified to this criterion available 24 months after the publication of the final rule (by May 2, 2022). This criterion replaces the existing “application access—data category request” certification criterion at § 170.315(g)(8). However, ONC—ACBs

may continue to issue certificates for § 170.315(g)(8) for 24 months after the publication date of the final rule, permitting certification to both criteria during this transition period. The 21st Century Cures Act final rule also added the new API criterion at § 170.315(g)(10) to the 2015 Edition Base EHR definition.

The 21st Century Cures Act final rule also revised the “electronic prescribing” criterion at § 170.315(b)(3) to reference the NCPDP SCRIPT standard version 2017071 (85 FR 25678). As with the other updated criteria above, health IT developers have until 24 months after publication of the final rule (until May 2, 2022), to make technology certified to the updated criterion available to their customers. However, we note that ONC has discontinued certification of new products to the former electronic prescribing criterion using the NCPDP SCRIPT standard version 10.6, in order to align with CMS requirements for use of the updated NCPDP SCRIPT standard under Part D, adopted as of January 1, 2020 (85 FR 25679). Products that were previously certified may maintain certification status for up to 24 months as they are updating their products, and healthcare providers may continue to use these certified health IT modules for CMS program participation.

Finally, the 21st Century Cures Act final rule updated the certification criterion for clinical quality measures “Clinical Quality Measures (CQMs)—Report” at § 170.315(c)(3), which is included in the CEHRT definitions (85 FR 25686). These updates remove the HL7 QRDA standard requirements from the criterion, and instead require support for the CMS QRDA Implementation Guides, upon the effective date of the final rule (June 30, 2020).

For further discussion, we refer readers to the 21st Century Cures Act final rule at 85 FR 25642 through 25961.

As noted above, in general, health IT developers have up to 24 months from May 1, 2020 to make technology certified to the updated criteria available to their customers, plus the additional three-month period during which ONC will exercise enforcement discretion around compliance dates finalized in the 21st Century Cures Act final rule in response to the COVID-19 PHE. As a result, where the 21st Century Cures Act final rule requires health IT developers to make technology meeting new and updated certification criteria available by May 2, 2022, developers taking advantage of enforcement discretion would be permitted to delay making updated certified technology available until August 2, 2022. After this

date, technology that has not been updated in accordance with the 2015 Edition Cures Update will no longer be considered certified.

ONC expects that developers will introduce these updates into certified health IT products in the manner most appropriate for their customers, including through the course of normal maintenance, and developers are required to notify customers when technology certified to the updated criteria is available (85 FR 25642). As discussed in the 21st Century Cures Act final rule (85 FR 25666), healthcare providers may use the Certified Health IT Product List (CHPL) to identify the specific certification status of a product at any given time. The CHPL will distinguish existing 2015 Edition certification criteria from the new or revised criteria adopted in the 21st Century Cures Act final rule by referring to the new or revised criteria as the 2015 Edition Cures Update, allowing healthcare providers to identify if and when a specific Health IT Module has been updated. (<https://chpl.healthit.gov/>)

2. Updates to Certified Electronic Health Record Technology Requirements in the Promoting Interoperability Program, and Quality Payment Program Due to the 21st Century Cures Act Final Rule

In consideration of the updates made to the certification criteria as described in section III.N.1 of this proposed rule, we propose that the technology used by healthcare providers to satisfy the definitions of CEHRT at §§ 495.4 and 414.1305 must be certified under the Certification Program in accordance with the updated 2015 Edition of health IT certification criteria as finalized in the 21st Century Cures Act final rule (85 FR 25642). This would include technology used to meet the 2015 Edition Base EHR definition at § 170.102, technology certified to the criteria necessary to be a meaningful EHR user under the Promoting Interoperability Programs, and technology certified to the criteria necessary to report on applicable objectives and measures specified for the MIPS Promoting Interoperability performance category, as specified in the CEHRT definitions.

As discussed above, the 21st Century Cures Act final rule finalized certain compliance dates for health IT developers, as well as establishing which versions of certification criteria meet certification requirements under the Certification Program for healthcare providers, based on those compliance dates. In other words, the 21st Century Cures Act final rule established

⁷⁰For more information about the USCDI, see <https://www.healthit.gov/isa/united-states-core-data-interoperability-uscdi>.

timelines for (1) a transition period where technology certified to not-yet updated or updated versions of the same certification criteria would be considered certified, and (2) the date for which technology certified to only the updated version would be considered certified. A healthcare provider must use technology that is certified under the ONC Health IT Certification Program to meet the CEHRT definitions. Therefore, we propose that healthcare providers participating in the Promoting Interoperability Programs or QPP would be required to use only technology that is considered certified under the ONC Health IT Certification Program according to the timelines finalized in the Cures Act final rule.

For updated and new certification criteria included in the CEHRT definitions in §§ 495.4 and 414.1305, ONC has finalized that health IT may be certified to the current 2015 Edition certification criteria or the 2015 Edition Cures Update for a period of 24 months, as described in timelines finalized in the 21st Century Cures Act final rule (85 FR 25670). ONC then announced an additional 3 months during which ONC will exercise enforcement discretion in response to the COVID-19 PHE and continue to allow health IT certified to either version of the criteria to be considered certified. Therefore, under our proposal, during that same time period (up to 27 months from May 1, 2020, or until August 2, 2022), program participants may use technology certified to either version and that health IT will be considered certified under the ONC Health IT Certification Program.

While the 21st Century Cures Act final rule did not finalize a new Edition of certification criteria, this approach is similar to the prior policy for transition periods between Editions. For example, during the transition period in which the ONC Health IT Certification Program included both the 2014 Edition and the 2015 Edition, a health IT module certified to either Edition was considered certified and could be used by healthcare providers to meet the CEHRT definitions and demonstrate meaningful use (for instance, see 82 FR 38490 for a discussion of the CY 2018 transition between the 2014 and 2015 Editions for eligible hospitals and CAHs). After the end of the transition period, only health IT certified to the 2015 Edition could be used by healthcare providers to meet the CEHRT definitions and demonstrate meaningful use, and health IT modules certified to only the 2014 Edition were no longer considered certified under the ONC Health IT Certification Program.

In the same manner, after the current transition period ends in which health IT certified to either the existing 2015 Edition certification criteria or the 2015 Edition Cures Update criteria is considered certified, healthcare providers must use technology certified to only the updated version of the certification criteria finalized in the 21st Century Cures Act final rule to meet the CEHRT definitions and demonstrate meaningful use.

We provide the following discussion to support further understanding of how our proposals would impact healthcare providers with regard to the CEHRT definitions at §§ 495.4 and 414.1305 and demonstrating meaningful use. If our proposal is finalized, healthcare providers would only be able to use CEHRT that has been certified to the 2015 Edition Cures Update in order for a measure action to count in the numerator during a performance period after August 2, 2022 (reflecting the 24-month compliance deadlines finalized in the 21st Century Cures Act final rule, and the additional 3-month period of enforcement discretion described above). On or prior to August 2, 2022, healthcare providers participating in the Medicare Promoting Interoperability Program and QPP would be able to continue to use technology meeting existing 2015 Edition criteria to meet the CEHRT definition and to support program participation. During this period, healthcare providers could work with their health IT developers to plan for implementing CEHRT that meets the 2015 Edition Cures Update as soon as health IT developers make updated technology available. We believe this approach to updating the current 2015 Edition would allow healthcare providers and health IT developers adequate time to implement updates and plan for an effective transition, including planning ahead for reporting measure results to CMS for program participation.

For instance, during the CY2022 performance year, if a healthcare provider is implementing updates in a phased approach, they could plan to use a combination of updated and non-updated certified health IT for a 90-day reporting period prior to August 2, 2022, and then complete their first reporting period using only updated health IT modules in CY 2023. Similarly, if a healthcare provider planned to update all of their certified technology at one time and to engage in a more extensive testing and implementation period during CY 2022, they may also wish to complete a 90-day reporting period for CY 2022 prior to August 2 using non-updated health IT, and then complete

their first reporting period using only updated health IT modules in CY 2023. If a healthcare provider moved to updated certified health IT prior to August 2, including for a reporting period in CY 2020 or CY 2021, they would be able to use the updated technology for a 90-day reporting period at any point, and would not be required to wait until after August 2, 2022.

Healthcare providers should refer to certification criteria and Conditions and Maintenance of Certification requirements in 45 CFR part 170 for details about the updated certification criteria and timelines for health IT developers associated with the criteria. These ONC Health IT Certification Program regulations specify the requirements for what health IT developers must make available to customers and associated timelines.

In previous rulemaking, to assist readers in identifying the requirements of CEHRT for the Promoting Interoperability Program and the MIPS Promoting Interoperability performance category objectives and measures, we provided tables identifying the 2015 Edition certification criteria required to meet those objectives and measures (for instance, see 83 FR 59817 for the MIPS Promoting Interoperability performance category). We note two instances in which updates in the 21st Century Cures Act final rule will affect information we have provided in past rulemaking regarding the certification criteria which support specific Promoting Interoperability objectives and measures. First, we note that the 21st Century Cures Act final rule is retiring the “drug-formulary and preferred drug list checks” criterion at § 170.315(a)(10), which is currently identified as supporting measures under the e-prescribing objective (80 FR 62882 and 83 FR 59817). ONC has finalized that health IT may be certified to this criterion only until January 1, 2022. (85 FR 25667) We believe the removal of this criterion from the Certification Program will have negligible impact on healthcare providers. As discussed in prior rulemaking related to the use of these functionalities by participants in CMS programs, healthcare providers have noted that while formulary checks are a promising approach, the utility of the specific functionality that is certified is not necessarily consistently applicable for all prescriptions (80 FR 62833). In addition, as it does not remove the product from the market, any healthcare providers who are using the current functionality may continue to use the technology for their purposes. Accordingly, we note that this certification criterion would no longer

be associated with the measures under the e-prescribing objective for the Promoting Interoperability Programs and MIPS, beginning with the CY 2021 performance period.

Second, under the new API certification criterion, “standardized API for patient and population services” at § 170.315(g)(10), which requires the use of FHIR Release 4, health IT developers have 24 months from the publication date of the 21st Century Cures Act final rule to make technology available that is certified to this new criterion, which is part of the 2015 Edition Base EHR definition. After 24 months, ONC will retire the current “application access—data category request” at § 170.315(g)(8), which is currently identified as supporting the “Provide Patients Electronic Access to Their Health Information” measure (80 FR 62882 and 83 FR 59817). As discussed above, health IT meeting either criteria will be considered certified during the 24-month period.

Table 38 shows that either the existing criterion at § 170.315(g)(8), or the newly finalized criterion at § 170.315(g)(10), could be used by healthcare providers to complete the actions of the “Provide Patients Electronic Access to Their Health Information” measure for the Promoting Interoperability Programs and MIPS. Allowing healthcare providers the flexibility of using EHR technology that is certified to either criterion during this 2-year transition period would allow early adopters of the newly finalized criterion at § 170.315(g)(10), as well as those using technology meeting the existing certification criterion, to be able to meet the requirements of the Promoting Interoperability Programs and MIPS.

In light of the changes described above with respect to the “E-prescribing” and “Provide Patients Electronic Access to Their Health Information” measures and objectives for the Medicare Promoting Interoperability Program and the MIPS

Promoting Interoperability performance category, we are including Table 38, which provides details on the measures for the Promoting Interoperability Program for eligible hospitals and CAHs and the MIPS Promoting Interoperability performance category and the certification criteria that support each measure. We also include in Table 38 the certification criteria which support reporting of eQMs. We note that Table 38 is only applicable for the measures under the Medicare Promoting Interoperability Program and for the Promoting Interoperability performance category of MIPS, and that Table 38 does not include all of the updated certification criteria included in the CEHRT definition as discussed in this proposed rule. For further discussion of changes to criteria under the CEHRT definition, we refer readers to the 21st Century Cures Act final rule (85 FR 25667).

TABLE 38: Medicare Promoting Interoperability Objectives and Measures, and 2015 Edition Certification Criteria

Objective	Measure	2015 Edition
Electronic Prescribing	e-Prescribing	§ 170.315(b)(3) Electronic prescribing
	<i>Bonus:</i> Query of PDMP	§ 170.315(b)(3) Electronic prescribing
Health Information Exchange	Support electronic referral loops by sending health information	§ 170.315(b)(1) Transitions of care
	Support electronic referral loops by receiving and reconciling health information	§ 170.315(b)(1) Transitions of care § 170.315(b)(2) Clinical information reconciliation and incorporation
Provider to Patient Exchange	Provide patients electronic access to their health information	§ 170.315(e)(1) View, download, and transmit to 3rd party § 170.315(g)(7) Application access — patient selection § 170.315(g)(8) Application access — data category request § 170.315(g)(9) Application access — all data request § 170.315(g)(10) Application access — standardized API for patient and population services
Public Health and Clinical Data Exchange	Immunization registry reporting	§ 170.315(f)(1) Transmission to immunization registries
	Syndromic surveillance reporting	§ 170.315(f)(2) Transmission to public health agencies — syndromic surveillance
	Electronic case reporting	§ 170.315(f)(5) Transmission to public health agencies — electronic case reporting
	Public health registry reporting	§ 170.315(f)(4) ¹ Transmission to cancer registries § 170.315(f)(6) ² Transmission to public health agencies — antimicrobial use and resistance reporting § 170.315(f)(7) Transmission to public health agencies — health care surveys
	Clinical data registry reporting	No 2015 health IT certification criteria at this time.
	Electronic reportable laboratory result reporting ²	§ 170.315(f)(3) Transmission to public health agencies — reportable laboratory tests and values/results
Electronic Clinical Quality Measures (eCQMs)	eCQMs for eligible clinicians, and eligible hospitals and CAHs	§ 170.315(c)(1) § 170.315(c)(2) § 170.315(c)(3)(i) and (ii) § 170.315(c)(3) (optional)

¹ = Specific to Eligible Clinicians (MIPS Promoting Interoperability performance category)

² = Specific to Eligible Hospitals and CAHs (Promoting Interoperability Program)

Last, we are proposing to revise two definitions of under § 414.1305. First, under the definitions of CEHRT, we propose to replace the reference to the “Advancing Care Information” performance category with the “Promoting Interoperability” performance category, to reflect the performance category name change that we made previously (83 FR 59785). Second, under the definition of Meaningful EHR user for MIPS, we propose to replace the reference to the “Advancing Care Information” performance category with the “Promoting Interoperability” performance category, to reflect the performance category name change that we made previously (83 FR 59785).

We believe each of these proposals supports our focus on promoting interoperability and continued

alignment, and would reduce healthcare provider burden while providing flexibility to pursue innovative applications that improve care delivery. We are seeking public comment on all of the proposals discussed above.

3. Proposed Changes to Certification Requirements Under the Hospital IQR Program Due to the 21st Century Cures Act

a. Background and Previously Finalized Certification Requirements

To measure the quality of hospital inpatient services, we implemented the Hospital IQR Program, previously referred to as the Reporting Hospital Quality Data for Annual Payment Update (RHQDAPU) Program. We refer readers to the FY 2010 IPPS/LTCH PPS final rule (74 FR 43860 through 43861) and the FY 2011 IPPS/LTCH PPS final

rule (75 FR 50180 through 50181) for detailed discussions of the history of the Hospital IQR Program, including the statutory history, and to the FY 2015 IPPS/LTCH PPS final rule (79 FR 50217 through 50249), the FY 2016 IPPS/LTCH PPS final rule (80 FR 49660 through 49692), the FY 2017 IPPS/LTCH PPS final rule (81 FR 57148 through 57150), the FY 2018 IPPS/LTCH PPS final rule (82 FR 38326 through 38328 and 82 FR 38348), the FY 2019 IPPS/LTCH PPS final rule (83 FR 41538 through 41609), and the FY 2020 IPPS/LTCH PPS final rule (84 FR 42448 through 42509) for the measures we have previously adopted for the Hospital IQR Program measure set for the FY 2022 payment determination and subsequent years. We also refer readers to 42 CFR 412.140 for Hospital IQR Program regulations.

The Hospital IQR Program strives to put patients first by empowering patients to make decisions about their own healthcare along with their clinicians using information from data driven insights that are increasingly aligned with meaningful quality measures. We support technology that reduces burden and allows clinicians to focus on providing high quality healthcare for their patients. We also support innovative approaches to improve quality, accessibility, and affordability of care, while paying particular attention to improving clinicians' and beneficiaries' experiences when interacting with CMS programs. In combination with other efforts across the Department of Health and Human Services, we believe the Hospital IQR Program incentivizes hospitals to improve healthcare quality and value, while giving patients the tools and information needed to make the best decisions for themselves. The Hospital IQR Program measures assess clinical processes, patient safety and adverse events, patient experiences with care, care coordination, and clinical outcomes, as well as cost of care.

For each Hospital IQR Program payment determination, we require that hospitals submit data on each specified measure in accordance with the measure's specifications for a particular period. Hospital IQR Program file format requirements have progressed over time to support quality reporting based on data submitted from EHRs that use relevant, up-to-date, standards-based structured data capture. We updated our requirements with the adoption of new Editions of certified health IT, originally requiring hospitals submitting eCQM data to use the 2014 Edition certification criteria for CEHRT (79 FR 50252) and evolving to the current requirement that hospitals use 2015 Edition certification criteria for CEHRT for reporting eCQMs and hybrid measures (83 FR 41604 through 41607, and 84 FR 42507). In order to ease the transition between Editions of certified health IT, the Hospital IQR Program offered flexibility in file submission requirements, allowing the use of either the 2014 Edition or the 2015 Edition for multiple reporting periods (80 FR 49705 through 49708; 81 FR 57169 through 57170; 82 FR 38397 through 38391). As we stated in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57111), our goal is to align electronic quality measure requirements of the Hospital IQR Program with various other Medicare and Medicaid programs, including those authorized by the Health Information Technology for Economic and Clinical Health (HITECH)

Act, as much as feasible so that the reporting burden on healthcare providers will be reduced (82 FR 38392). In the past we noted that aligning the eCQM submission requirements of the Hospital IQR Program and the Promoting Interoperability Programs reduces burden for hospitals as they may report once and fulfill the requirements of both programs (84 FR 42599). We intend to continue to align the eCQM reporting requirements for the Hospital IQR Program and Promoting Interoperability Programs to reduce reporting burden (84 FR 42598 through 42601; 82 FR 38479).

b. Proposed Changes

Recently, through the 21st Century Cures Act final rule published on May 1 2020, ONC updated the 2015 Edition of health IT certification criteria ("2015 Edition Cures Update"). Specifically, the 21st Century Cures Act final rule finalized updates to existing 2015 Edition criteria and introduced new 2015 Edition criteria. As noted above in section III.N.1, in general, health IT developers have up to 24 months from May 1, 2020 to make technology certified to the updated and/or new criteria available to their customers. During this period, health IT developers are expected to continue supporting technology certified to the prior version of the certification criteria for use by their customers prior to updating their products (85 FR 25642 through 25961).

In April 2020, ONC announced its intention to exercise enforcement discretion as to the compliance dates finalized in the 21st Century Cures Act final rule.⁷¹ As a result, where the 21st Century Cures Act final rule requires health IT developers to make technology meeting new and updated certification criteria available by May 2, 2022, developers taking advantage of enforcement discretion may be permitted to delay making updated certified technology available until August 2, 2022. After that date, technology that has not been updated in accordance with the 2015 Edition Cures Update will no longer be considered certified.

Given the Hospital IQR Program's history of updating file submission requirements, we understand that transitioning to technology certified to a new Edition, or to an updated version of the same Edition of certification criteria, can be complex. Nevertheless, we believe that there are many benefits to using relevant, up-to-date, standards-based structured data capture with an

EHR to support electronic clinical quality measurement. In addition, we believe it is important to continue to align with the eCQM reporting requirements for the Promoting Interoperability Programs (82 FR 38479, 84 FR 42598).

In this proposed rule for the Hospital IQR Program beginning with the CY 2020 reporting period/FY 2023 payment determination and for subsequent years, we are proposing to expand flexibility to allow hospitals to use either: (1) Technology certified to the 2015 Edition criteria for CEHRT as was previously finalized in the FY 2019 IPPS/LTCH final rule (83 FR 41537–41608), or (2) technology certified to the 2015 Edition Cures Update standards as finalized in the 21st Century Cures Act final rule (85 FR 25642 through 25961). We also refer readers to sections III.N.1 and III.N.2 for background and more details about the 2015 Edition Cures Update. We are proposing to adopt this flexible approach in order to encourage hospitals to implement the most up-to-date, standards-based structured data capture while also maintaining alignment with the Promoting Interoperability Program proposal. This proposal would allow hospitals that are early adopters of health IT certified to the 2015 Edition Cures Update criteria for CEHRT to implement those changes while still meeting Hospital IQR Program requirements. As mentioned above, in the 21st Century Cures Act final rule, ONC finalized that health IT developers will have 24 months from the publication date of the rule (that is, until May 2, 2022) to make technology available that is certified to the updated, or new criteria. We will revisit this topic in future rulemaking as necessitated by additional changes by ONC (for example should ONC only allow certification under the 2015 Edition Cures Update). We are seeking public comment on our proposal.

We note that, among other changes and of particular relevance to hospitals that participate in the Hospital IQR Program, the ONC 21st Century Cures Act final rule revises the clinical quality measurement criterion at § 170.315(c)(3) to refer to CMS QRDA Implementation Guides and removes the Health Level 7 (HL7®) QRDA standard requirements (85 FR 25645). Under the Hospital IQR Program, we previously encouraged health IT developers to test any updates on an annual basis, including any updates to the eCQMs and eCQM reporting requirements for the Hospital IQR Program based on the CMS QRDA I Implementation Guide for Hospital Quality Reporting (CMS Implementation Guide for QRDA) (82 FR 38393). The

⁷¹ https://www.healthit.gov/cures/sites/default/files/cures/2020-04/Enforcement_Discretion.pdf.

CMS Implementation Guide for QRDA, program specific performance calculation guidance, and eCQM electronic specifications and guidance documents are available on the eCQI Resource Center website at <https://ecqi.healthit.gov/>. To be clear, the 21st Century Cures Act final rule removes the HL7® QRDA standards from the relevant health IT certification criteria, which now refers directly to the CMS Implementation Guides for QRDA standards bringing their requirements into closer alignment with what we encourage under the Hospital IQR Program. Based on our data, the majority of Hospital IQR Program participants already use the CMS QRDA I Implementation Guide for Hospital Quality Reporting for submission of eCQMs to the Hospital IQR Program. We believe this update results in health IT

developers no longer needing to maintain certification to the Health Level 7 (HL7®) QRDA base standards in addition to using the CMS QRDA I Implementation Guide for the Hospital IQR Reporting.

N. Proposal To Establish New Code Categories

1. Background

Currently, there are four existing HCPCS Level II codes for buprenorphine/naloxone products (J0572–J0575), which describe groupings of products by different strengths as indicated on their FDA labels. When many payers assign a single payment rate to a single code, they typically do so under the expectation that the products can be substituted for one another in most

clinical scenarios. We have received feedback from stakeholders that there is variability in bioequivalence between the products within the range of strengths listed in each code descriptor, meaning that products within a current code are not necessarily substitutes for one another, that is, they are not therapeutically equivalent. Therefore, to facilitate more accurate coding and more specific reporting of the variety of buprenorphine/naloxone products on the market, we are proposing an expanded series of codes to identify buprenorphine/naloxone products.

Specifically, we propose to establish 15 new code categories for use to report all currently marketed buprenorphine/naloxone products, based on strength as well as therapeutic equivalence reflected in Table 39.

TABLE 39: Proposed New Code Categories

HCPCS	Description
JXXX1	Buprenorphine Hydrochloride; Naloxone Hydrochloride film; buccal, sublingual 2mg; 0.5mg
JXXX2	Buprenorphine Hydrochloride; Naloxone Hydrochloride film; buccal, sublingual 4mg; 1mg
JXXX3	Buprenorphine Hydrochloride; Naloxone Hydrochloride film; buccal, sublingual 8mg; 2mg
JXXX4	Buprenorphine Hydrochloride; Naloxone Hydrochloride film; buccal, sublingual 12mg; 3mg
JXXX5	Buprenorphine Hydrochloride; Naloxone Hydrochloride film; buccal 2.1mg; 0.3mg (Bunavail)
JXXX6	Buprenorphine Hydrochloride; Naloxone Hydrochloride film; buccal 4.2mg; 0.7mg (Bunavail)
JXXX7	Buprenorphine Hydrochloride; Naloxone Hydrochloride film; buccal 6.3mg; 1.0mg (Bunavail)
JXXX8	Buprenorphine Hydrochloride; Naloxone Hydrochloride tablet; sublingual 2mg; 0.5mg
JXXX9	Buprenorphine Hydrochloride; Naloxone Hydrochloride; tablet; sublingual 8mg; 2mg
JXX10	Buprenorphine Hydrochloride; Naloxone Hydrochloride tablet; sublingual; 0.7mg; 0.18mg (Zubsolv)
JXX11	Buprenorphine Hydrochloride; Naloxone Hydrochloride tablet; sublingual; 1.4mg; 0.36mg (Zubsolv)
JXX12	Buprenorphine Hydrochloride; Naloxone Hydrochloride tablet; sublingual; 2.9mg; 0.71mg (Zubsolv)
JXX13	Buprenorphine Hydrochloride; Naloxone Hydrochloride tablet; sublingual; 5.7mg; 1.4mg (Zubsolv)
JXX14	Buprenorphine Hydrochloride; Naloxone Hydrochloride tablet; sublingual; 8.6mg; 2.1mg (Zubsolv)
JXX15	Buprenorphine Hydrochloride; Naloxone Hydrochloride tablet; sublingual; 11.4mg; 2.9mg (Zubsolv)

As the existing 4 codes would be replaced with more specific codes in the new code series, we also propose to

discontinue the existing codes in Table 40.

TABLE 40: Proposed Discontinued Codes

HCPCS	Description
J0572	Buprenorphine/naloxone, oral, less than or equal to 3 mg buprenorphine
J0573	Buprenorphine/naloxone, oral, greater than 3 mg, but less than or equal to 6 mg buprenorphine
J0574	Buprenorphine/naloxone, oral, greater than 6 mg, but less than or equal to 10 mg buprenorphine
J0575	Buprenorphine/naloxone, oral, greater than 10 mg buprenorphine

The new code series would permit physicians and clinics to accurately bill insurers for the drug and dose utilized. For example, state Medicaid agencies would be able to more easily identify the drug dispensed, which would facilitate more efficient and accurate rebate invoicing for the Medicaid Drug Rebate Program. The expanded code series would also facilitate more specific and meaningful tracking of utilization of buprenorphine/naloxone products within and across their respective health insurance programs. We note that these coding proposals do not change Medicare coverage or payment policies for oral or sublingual buprenorphine codes. The drug products described by these codes are not separately payable under Medicare Part B.

O. Medicare Diabetes Prevention Program (MDPP) Expanded Model Emergency Policy

We propose to amend our regulation at § 410.79(e) to create more flexible MDPP policies that will apply during certain emergencies (Emergency Policy). In addition, we propose to amend § 424.210 to modify the definition of “beneficiary engagement period” and to address beneficiary engagement incentives that are furnished to MDPP beneficiaries who are receiving MDPP services virtually pursuant to the Emergency Policy.

1. Proposed Changes to § 410.79(b)

Through this proposed rule, we are proposing to amend the Medicare Diabetes Prevention Program (MDPP) expanded model to revise certain MDPP policies adopted in the March 31st COVID–19 IFC (85 FR 19230) that would apply during the remainder of the COVID–19 Public Health Emergency (PHE) and/or any future emergency period, and in an emergency area, as such terms are defined in section 1135(g) of the Act, where the Secretary has authorized section 1135 waivers for such emergency area and period (hereinafter referred to as an “1135 waiver event”) where such 1135 waiver event may cause a disruption to in-person MDPP services (hereinafter referred to as an “applicable 1135 waiver event”). We propose that we would determine that a 1135 waiver event could disrupt in-person MDPP services if MDPP suppliers would likely be unable to conduct classes in-person, or MDPP beneficiaries would likely be unable to attend in-person classes, for reasons related to health, safety, or site availability or suitability. Health and safety reasons may include avoiding the transmission of contagious diseases, compliance with laws and regulations

during an 1135 waiver event, or the physical safety of MDPP beneficiaries or MDPP coaches as defined in § 424.205(a), during an 1135 waiver event. We propose that if we determine that an 1135 waiver event may disrupt in-person MDPP services, we would notify all impacted MDPP suppliers via email and other means as appropriate. Such notice would include the effective date when flexibilities described in § 410.79(e) would be available. We propose that the applicable 1135 waiver event would end on the earlier of the end of the emergency period (as defined in section 1135(g) of the Act) or the date we determine that the 1135 waiver event no longer disrupts in-person MDPP services under the proposed standard described above.

We temporarily amended the MDPP expanded model to revise certain MDPP policies in the March 31st COVID–19 IFC. These changes apply only during the COVID–19 PHE. The March 31st COVID–19 IFC permits certain beneficiaries to obtain the set of MDPP services more than once per lifetime, waives the 5 percent weight loss eligibility requirements, and allows certain MDPP suppliers to either pause the delivery of services or deliver virtual MDPP sessions on a temporary basis. We believe that establishing an Emergency Policy that applies more broadly will improve the current flexibilities for the remainder of the COVID–19 PHE and provide MDPP suppliers and MDPP beneficiaries with flexibilities to address any future applicable 1135 waiver events.

The proposed changes herein would preserve the March 31st COVID–19 IFC MDPP flexibilities and apply them to future 1135 waiver events, provide for additional flexibilities that would apply during the COVID–19 PHE and future 1135 waiver events, clarify certain policies adopted in the IFC, and end a flexibility that would become unnecessary in light of our other proposals. If finalized, the proposed flexibilities would supersede the flexibilities finalized in the March 31st COVID–19 IFC for the COVID–19 PHE, if the PHE is still in place when the CY 2021 PFS final rule becomes effective. If finalized, the proposed changes would be available to all future applicable 1135 waiver events, effective January 1, 2021.

We are proposing these changes to address MDPP supplier and MDPP beneficiary needs in response to the COVID–19 PHE and any future 1135 waiver events that result in an interruption to expanded model services delivered by MDPP suppliers and preventing MDPP beneficiaries from attending in-person sessions.

Throughout the original rulemaking for the MDPP expanded model, we sought to ensure that the set of MDPP services would be delivered in-person, in a classroom-based setting, within an established timeline. During that rulemaking, CMS prioritized establishing a structured service that, when delivered within the confines of the rule, would create the least risk of fraud and abuse, increase the likelihood of success for beneficiaries, and maintain the integrity of the data collected for evaluation purposes. Based on lessons learned during the COVID–19 PHE, we propose to allow temporary flexibilities that prioritize availability and continuity of services for MDPP suppliers and beneficiaries affected by extreme and uncontrollable circumstances that CMS determines may disrupt in-person MDPP services during an applicable 1135 waiver event using the standard articulated above. The overall intent of the proposed Emergency Policy is to minimize disruption of services for MDPP suppliers and beneficiaries.

The flexibilities proposed in this rule would be applicable to all MDPP beneficiaries and MDPP suppliers (as such terms are defined in § 410.79(b)). Although our Emergency Policy will permit MDPP services to be furnished entirely on a virtual basis, our Emergency Policy does not permit an MDPP supplier to furnish MDPP services virtually during the COVID–19 PHE or an applicable 1135 waiver event unless the MDPP supplier’s preliminary or full CDC DPRP recognition authorizes the supplier to furnish services in-person. The MDPP supplier requirements at § 424.205 set forth parameters for suppliers to enroll in Medicare, including having any preliminary recognition established by the CDC for the purposes of the DPRP or full CDC DPRP recognition. The DPRP refers to a program administered by the CDC that recognizes organizations that are able to furnish the National Diabetes Prevention Program (National DPP) services, follows a CDC-approved curriculum, and meets CDC’s performance standards and reporting requirements. The CDC assigns to each DPRP-recognized supplier an organizational code that specifies the service delivery mode (for example, in-person, online, distance learning, or combination). Because MDPP services are covered under Medicare only when they are furnished at least in part in-person, a supplier that does not have an organizational code authorizing in-person services (“virtual-only suppliers”) may not provide MDPP

services, either virtually or in-person. We do not believe it is appropriate to permit virtual-only suppliers to furnish MDPP services when the proposed Emergency Policy is in effect. This is because MDPP suppliers must remain prepared to resume delivery of MDPP services in-person when the proposed Emergency Policy is no longer in effect. Given the difficulty of predicting when the COVID-19 PHE or any applicable 1135 waiver event will end, virtual-only suppliers may not have sufficient time to obtain the CDC's authorization to furnish in-person services. Permitting virtual-only suppliers to furnish MDPP services during the COVID-19 PHE or an applicable 1135 waiver event could disrupt the provision of services to MDPP beneficiaries when services must resume on an in-person basis.

We are proposing to amend the MDPP regulations to provide for certain changes, including allowing MDPP suppliers to start new cohorts and allowing MDPP suppliers to either deliver MDPP services virtually or suspend in-person services and resume services at a later date during an applicable 1135 waiver event. In addition, these proposed changes permit certain MDPP beneficiaries to obtain the set of MDPP services more than once per lifetime, for the limited purposes of allowing a suspension in service due to an applicable 1135 waiver event and to provide the flexibilities that will allow MDPP beneficiaries to maintain eligibility for MDPP services despite a break in attendance.

In the March 31st COVID-19 IFC, we stated that we would allow MDPP suppliers to either deliver MDPP services virtually or suspend in-person services and resume services at a later date. In addition, we also provided in the March 31st COVID-19 IFC that the once per lifetime requirement waiver is only applicable to MDPP beneficiaries whose sessions were suspended or cancelled due to the PHE (that is, MDPP beneficiaries who were receiving the set of MDPP services as of March 1, 2020). However, we do not believe it is necessary to permit all MDPP beneficiaries to restart the set of MDPP services in all applicable 1135 waiver events, particularly if they elect to continue to receive services virtually. Therefore, we are proposing that MDPP beneficiaries who elect to receive MDPP services virtually in accordance with the MDPP Emergency Policy are not eligible to restart the set of MDPP services at a later date. This proposed policy would ensure that MDPP beneficiaries who continue to receive the set of MDPP services virtually during an applicable 1135 waiver event cannot

repeat the set of MDPP services at a later date, in accordance with the general once per lifetime limitation for the set of MDPP services established in § 410.79(c)(1)(i)(B).

We propose the following approach for permitting MDPP beneficiaries to resume or restart the set of MDPP services in the event in-person sessions are suspended, and the MDPP beneficiary does not elect to receive MDPP services virtually. MDPP beneficiaries who are in the first 12 months of the set of MDPP services as of the start of an applicable 1135 waiver event would be eligible to restart the set of MDPP services either at the beginning, or resume with the most recent attendance session of record, after the applicable 1135 waiver event has ended. MDPP beneficiaries who are in the second year of the set of MDPP services as of the start of the 1135 waiver event, would only be permitted to resume the set of MDPP services with the most recent attendance session of record. MDPP beneficiaries who are in the second year of the set of MDPP services would not be allowed to restart the set of MDPP services at the beginning.

We do not believe allowing MDPP beneficiaries who are already in the ongoing maintenance phase of MDPP to restart from the beginning aligns with the performance-based payment strategy upon which the expanded model relies to achieve savings. MDPP suppliers with beneficiaries who have successfully completed over half of the set of MDPP services have already benefited from the bulk of the permitted total performance-based payments. Allowing MDPP beneficiaries in the ongoing maintenance interval phase to restart the expanded model would result in an MDPP supplier being reimbursed for close to double the intended payment amount. Not only might this have a negative impact on the long term expanded model savings, this could result in beneficiaries being unfairly coerced into electing to start over instead of resuming the set of MDPP services where they left off. This proposal would apply prospectively only—that is, under the current MDPP regulations, as implemented in the IFC, we waived the once per lifetime requirement for MDPP beneficiaries who were receiving the set of MDPP services as of March 1, 2020 and whose sessions were suspended or canceled due to the COVID-19 PHE to obtain the set of MDPP services more than once per lifetime by electing to restart the set of MDPP services or resume with the most recent attendance session of record. We would retain that flexibility

for those MDPP beneficiaries who were receiving the set of MDPP services as of March 1, 2020, as specified in current § 410.79(e)(3)(iii), which we are proposing to revise and renumber as § 410.79(e)(vi)(A). Finally, we propose that beneficiaries who elect to suspend the set of MDPP services at the start of an 1135 waiver event and subsequently choose to restart the MDPP set of services at the beginning or to resume with the most recent attendance session of record, may only make such an election once per 1135 waiver event. This proposed policy intends to ensure that MDPP beneficiaries may not suspend and re-start the MDPP set of services multiple times during the same 1135 waiver event, which would be contrary to the overall goal of the MDPP Emergency Policy, and to the goals of the MDPP expanded model as a whole.

We are proposing that the limit placed on the number of virtual make-up sessions described at § 410.79 would not apply during the remainder of the COVID-19 PHE or during any future applicable 1135 waiver event, so long as the virtual services are furnished in a manner that is consistent with the CDC DPRP standards for virtual sessions, follow the CDC-approved National DPP curriculum requirements, and the supplier has an in-person DPRP organizational code. We propose to amend the regulations to clarify that all sessions, including the first core session, may be offered virtually, not as “virtual make-up sessions,” but as a virtual class consistent with the in-person class curriculum, during the remainder of the COVID-19 PHE and any future applicable 1135 waiver event. The MDPP supplier could still only furnish a maximum of one session on the same day as a regularly scheduled session and a maximum of one virtual make-up session per week to the MDPP beneficiary. We propose that virtual sessions may be furnished to achieve both attendance goals and achieve weight-loss goals in the event that a qualifying weight measurement was obtained by one of the methods described herein. We propose that an MDPP supplier may offer to an MDPP beneficiary: 16 virtual sessions offered weekly during the core session period; 6 virtual sessions offered monthly during the core maintenance session interval periods; and 12 virtual sessions offered monthly during the ongoing maintenance session interval periods. MDPP suppliers may only furnish a maximum of one regularly scheduled session virtually and a maximum of one virtual make-up session per week to an MDPP beneficiary. This proposed rule

would increase the number of allowable virtual core sessions from 15 to 16. This change is due to the added proposed flexibility to allow MDPP suppliers to obtain weight measurements remotely (as described below) and to deliver the first core session virtually.

Under these temporary flexibilities, we propose that the requirement for in-person attendance at the first core-session would not apply. We propose that during the remainder of the COVID-19 PHE and any future applicable 1135 waiver events, MDPP suppliers may obtain weight measurements from MDPP beneficiaries through the following methods: (1) In-person, when the weight measurement can be obtained safely and in compliance with all applicable laws and regulations; (2) via digital technology, such as scales that transmit weights securely via wireless or cellular transmission (commonly referred to as “Bluetooth™ enabled”); or (3) self-reported weight measurements from a participant’s own at-home digital scale. We propose that self-reported weights must be submitted via video, by the MDPP beneficiary to the MDPP supplier. The video must clearly document the weight of the MDPP beneficiary as it appears on his/her digital scale on the date associated with the billable MDPP session. Due to this additional flexibility, we propose that the waiver of the minimum weight loss requirements for beneficiary eligibility in the ongoing maintenance session intervals described in § 410.14(g)(3)(iv) of the March 31st COVID-19 IFC (85 FR 19230) be ended. Thus, effective January 1, 2021, all MDPP beneficiaries would be required to achieve and maintain the required 5 percent weight loss goal in order to be eligible for the ongoing maintenance sessions, even if the COVID-19 PHE remains in place as of that date.

We are proposing to amend our regulation at § 410.79(e). We seek comment on these proposals.

2. Proposed Changes to § 424.210

Under § 424.210(b), an MDPP supplier may furnish in-kind beneficiary engagement incentives to an MDPP beneficiary if certain requirements are satisfied. Among other requirements, the in-kind item or service must be furnished only during the “engagement incentive period.” The definition of “engagement incentive period” at § 424.210(a) states that the period begins when an MDPP supplier furnishes any MDPP service to an MDPP eligible beneficiary, and it ends on the earliest of the following: (1) When the MDPP services period ends as described in

§ 410.79(c)(3); (2) when the MDPP supplier knows the MDPP beneficiary will no longer be receiving MDPP services from the MDPP supplier; or (3) The MDPP supplier has not had direct contact, either in-person, by telephone, or via other telecommunications technology, with the MDPP beneficiary for more than 90 consecutive calendar days during the MDPP services period. We recognize that the disruption to MDPP services caused by an applicable 1135 waiver event may cause an MDPP supplier not to have contact with an MDPP beneficiary for more than 90 consecutive calendar days. Therefore, we propose to amend the definition of “engagement incentive period” to further qualify when the period ends in the case of the COVID-19 PHE or an applicable 1135 waiver event. Specifically, we propose to amend paragraph (iii) in the definition to state that the MDPP supplier has not had direct contact, either in person by telephone, or via other telecommunications technology, with the MDPP beneficiary for more than 90 consecutive calendar days during the MDPP services period, unless the lack of direct contact is due to the suspension or cancellation of MDPP services under § 410.79(e) and the MDPP services are eventually resumed or restarted in accordance with § 410.79(e).

We solicit comments on when the engagement incentive period should end if the MDPP services are not eventually resumed. We are considering whether we should deem the incentive engagement period to end if the applicable 1135 waiver event or COVID-19 PHE remains in effect for a certain period of time, such as one year. At that point, for purposes of beneficiary engagement incentives, it may be more appropriate to terminate the engagement incentive period and permit a new engagement incentive period to begin if services are resumed or restarted in accordance with § 410.79(e). Alternatively, we note that the engagement incentive period can also end when the MDPP supplier knows that the MDPP beneficiary will no longer be receiving services from the MDPP supplier. We solicit comments on whether that provision eliminates any need to further clarify in regulation text when the engagement incentive period ends if MDPP services are not eventually resumed or restarted.

We also propose to amend § 424.210(b) to add a requirement governing the provision of an in-kind item or service as a beneficiary engagement incentive during the COVID-19 PHE or during an applicable 1135 waiver event. Specifically, we

propose that if the item or service is furnished during the COVID-19 PHE or an 1135 waiver event that CMS has determined may disrupt in-person MDPP services, and the item or service is furnished to an MDPP beneficiary who is receiving MDPP services virtually, the MDPP beneficiary must be capable of using the item or service during the COVID-19 PHE or the 1135 waiver event, as applicable. We propose this requirement to deter abuse and to ensure that the incentives furnished during an 1135 waiver event will achieve their intended purpose and serve the goals of the MDPP expanded model. Some examples of usable beneficiary engagement incentives include vouchers for healthy food, wearable technology or “wearables” used to monitor an MDPP beneficiary’s health such as heart rate, calories burned, or steps walked; examples of unusable beneficiary engagement incentives during an 1135 waiver event include gym memberships during lockdowns and stay-at-home orders. We solicit comments on whether this additional requirement is necessary in light of other requirements set forth in § 424.210(b).

Finally, for purposes of the proposed requirement at § 424.210(b)(9), we propose to define “COVID-19 Public Health Emergency” to mean the emergency period and emergency area, as such terms are defined in section 1135(g) of the Act, related to the COVID-19 pandemic declared by the Secretary on January 27, 2020. Similarly, we propose to define “1135 waiver event” to mean an emergency period and emergency area, as such terms are defined in section 1135(g) of the Act, for which the Secretary has authorized waivers under section 1135 of the Act. These definitions are consistent with how we propose to define the terms for purposes of § 410.79(e).

IV. Quality Payment Program

A. CY 2021 Updates to the Quality Payment Program

1. Executive Summary

a. Overview

This section of the proposed rule sets forth proposed changes to the Quality Payment Program starting January 1, 2021, except as otherwise noted for specific provisions. The 2021 performance period/2023 payment year of the Quality Payment Program continues a transition as we build on the first few years of implementation of the Quality Payment Program to better focus our measurement efforts and to

reduce barriers to entry into Advanced APMs.

Participation in the Quality Payment Program rose in the second year. We saw 98 percent of eligible clinicians participate in MIPS in 2018 with 889,995 eligible clinicians receiving a payment adjustment, which exceeded our 2017 participation rates. In addition, 98 percent of eligible clinicians participating in MIPS received a positive payment adjustment for 2020 based on 2018 performance year results. Regarding performance in Advanced APMs, for the 2018 QP Performance Period, 183,306 eligible clinicians earned Qualifying APM Participant (QP) status while another 47 eligible clinicians earned partial QP status.⁷² We are still finalizing 2019 numbers given the extended time period for 2019 data submission, a flexibility provided due to the COVID-19 public health emergency, and will provide updates later this year. We plan to continue developing Quality Payment Program policies that more effectively reward high-quality treatment of patients and increase opportunities for Advanced APM participation. We are moving forward with MIPS Value Pathways (MVPs) policy development as MVPs allow for a more cohesive participation experience by connecting activities and measures from the 4 MIPS performance categories that are relevant to a specialty, medical condition, or a particular population being cared for. The MVPs use promoting interoperability as a foundational element and incorporate population health claims-based measures as feasible along with relevant measures and activities for the quality, cost, and improvement activities performance categories. We intended to begin transitioning to MVPs in the 2021 MIPS performance year; however, due to the 2019 Novel Coronavirus (COVID-19) pandemic public health emergency and resultant need for clinician focus on the response, our timeline has changed accordingly such that the proposal for initial MVPs will be delayed until at least the 2022 performance year. We support clinicians on the front lines by providing burden relief via extreme and uncontrollable circumstances policy exceptions for 2019 (85 FR 19277 through 19278) and 2020 (84 FR 62568). We are proposing to reduce the 2023 MIPS payment year performance threshold in section IV.A.3.e.(3) of this proposed rule, and are continuing to consider the extraordinary health

system stresses resulting from the COVID-19 PHE as we propose 2021 performance year/2023 payment year policies for the Quality Payment Program.

As we make long-term improvements, evolve MIPS policies, and plan to implement MVPs in the future, we are supporting our objectives within the Patients Over Paperwork initiative and the National Quality Roadmap.^{73 74} In carrying out these initiatives, we are removing regulatory obstacles that get in the way of health care clinicians spending time with patients. As we develop MVP policies, we look to reduce MIPS reporting burden and increase efficiencies.

On May 15, 2020 the National Quality Roadmap was published by the Department of Health and Human Services (<https://www.hhs.gov/sites/default/files/national-health-quality-roadmap.pdf>) as directed by Executive Order 13877, Improving Price and Quality Transparency in American Healthcare to Put Patients First. The purpose of the Roadmap is to improve patient outcomes through enhanced effectiveness and efficiency of the healthcare quality system. The Roadmap is a means to accelerate change and advance the Administration's goals of "improving transparency, reducing provider burden, allowing informed consumer decision-making, and ultimately improving the health of all Americans". The Roadmap, which provides a public-private partnership opportunity, describes a strategy for establishing, adopting, and publishing common quality measurements, aligning inpatient and outpatient measures, and eliminating low-value or counterproductive measures. Specific actions are identified to drive change through coordinated governance and oversight, modernized data collection and reporting, and aligned measures reformation in federal quality programs. One of the actions called for is a systematic review of federal quality reporting and value-based payment programs, to identify opportunities leading to recommendations to reduce burden, promote efficiency and effectiveness, and accelerate the shift to value. The Roadmap also calls for stakeholder engagement through public convening and a Request for Information. Actions will be undertaken with the underpinning of the following principles:

- Quality Information is Available and Meaningful
- Balance Administrative Burden with the Goal of Obtaining Meaningful Information
- Alignment of Measurement Priorities
- Cohesive Measurement Stewardship
- Reward Innovation and Improvement
- Leverage What Works and Reform the Rest

The planned implementation of MVPs is noted in the Roadmap and we look forward to recommendations resulting from other Roadmap activities for streamlining quality reporting and value-based purchasing programs that can inform the implementation of the MVPs and promote alignment of quality measures across Federal programs.

As we work within MIPS to reduce barriers to clinician participation in Advanced APMs and meet CMS pay for value objectives, we are aligned with the Health Care Payment Learning & Action Network goal to accelerate the percentage of health care payments tied to quality and value in each market segment through the adoption of two-sided risk APMs.⁷⁵ MVPs will link quality and cost performance measurement and help clinicians begin to assess their ability to take on risk as in APMs.

In the May 1, 2020 **Federal Register**, HHS published two transformative rules: The 21st Century Cures Act: Interoperability, Information Blocking, and the ONC Health IT Certification Program final rule (85 FR 25642 through 25961); and the Medicare and Medicaid Programs; Patient Protection and Affordable Care Act; Interoperability and Patient Access for Medicare Advantage Organization and Medicaid Managed Care Plans, State Medicaid Agencies, CHIP Agencies and CHIP Managed Care Entities, Issuers of Qualified Health Plans on the Federally-facilitated Exchanges, and Health Care Providers final rule (85 FR 25510 through 25640) that will give patients unprecedented safe, secure access to their health data. The two rules implement interoperability and patient access provisions of the bipartisan 21st Century Cures Act (Cures Act) and support the MyHealthEData initiative. MyHealthEData is designed to empower patients around a common aim, giving every patient access to their medical information so they can make better healthcare decisions. We expect that these rules, once implemented, will complement our future MVPs in providing more meaningful information to clinicians and patients.

b. Summary of Major Proposals

(1) Major MIPS Proposals

In the CY 2020 PFS final rule (84 FR 62948), we finalized a definition of a MIPS Value Pathway (MVP) as a subset of measures and activities established through rulemaking. The MIPS program aims to drive value through the collection, assessment, and public reporting of data that informs and rewards the delivery of high-value care. Within MIPS we intend to pay for health care services in a way that drives value by linking performance on cost, quality, and the patient's experience of care. We believe implementing the MVP framework will move MIPS along the "path to value," transforming the MIPS program by better informing and empowering patients to make decisions about their healthcare and helping clinicians to achieve better outcomes, and by promoting robust and accessible healthcare data, and interoperability. In the CY 2020 PFS proposed rule (84 FR 40732 through 40745), we offered our vision of an MVP framework for a new evolution of the MIPS program based on this concept.

We have built the MIPS program to provide broad flexibility for clinician choice of measures and activities, data collection and submission types, and individual or group level participation. While these flexibilities contributed to very high participation levels, we believe the flexibility has inadvertently resulted in a complex MIPS experience for clinicians that is not producing the level of robust clinician performance information we envision that would meet patient needs and support clinician care improvements. We have heard from clinicians that MIPS requirements are confusing, burdensome, and that it is difficult to choose measures from the several hundred MIPS and QCDR quality measures that are meaningful to their practices and have a direct benefit to patients. We have also heard concerns from stakeholders that MIPS does not allow for sufficient differentiation of performance across practices due to clinician quality measure selection bias. These aspects detract from the program's ability to effectively measure and compare performance, provide meaningful feedback, and incentivize quality. MVPs are intended to lead to a simplified MIPS clinician experience, improve value, reduce burden, and better inform patient choice in selecting clinicians. We noted that the MVP framework would connect measures and activities across the 4 MIPS performance categories, incorporate a set of administrative claims-based quality

measures that focus on population health, provide data and feedback to clinicians, and enhance information provided to patients. We posed a set of questions intended to help us to implement this vision as part of future rulemaking. We received extensive comments on these issues and are using those comments to guide the transition into this new framework. We intend to focus the future of MIPS on MVP implementation. We have limited our 2021 performance year proposals in light of the COVID-19 pandemic to promote program stability and lessen any distraction as clinicians focus on responding to this public health emergency. We are proposing policies in section IV.A.3. of this proposed rule related to:

- Developing MVPs
- Introducing the APM Performance Pathway (APP) for APM participant MIPS eligible clinicians to report to MIPS
- Updating the MIPS performance measures and activities; cost and quality category weights; and scoring policies
- Terminating the APM scoring standard

(a) MIPS Value Pathways and APM Performance Pathway

In this proposed rule, we propose updated MVP framework guiding principles in section IV.A.3.a.(1) of this proposed rule and MVP development criteria and processes in section IV.A.3.a.(2) of this proposed rule as we look towards the 2022 performance period to begin MVP implementation. We are also proposing in section IV.A.3.b. of this proposed rule an APP to start on January 1, 2021 that aligns with the MVP concept. The APP would be a voluntary pathway for reporting and scoring under MIPS that would allow APM participants to report a single quality measure set with broad applicability, receive an improvement activities credit, and have the cost performance category reweighted. We propose MIPS performance category weighting and scoring in the APP and a scoring hierarchy that recognizes the APP in section IV.A.3.e.(2) of this proposed rule. We are also proposing in section IV.A.3.c.(5)(a) of this proposed rule to eliminate the APM scoring standard for the 2021 performance year beginning January 1, 2021. This would allow APM participants to participate in MIPS as individuals, groups, Virtual Groups, or APM Entities, and they could report through any MIPS reporting and scoring pathway, see section IV.A.3.b.(3) of this proposed rule. We are also proposing in section IV.A.3.c.(5)(e) of

this proposed rule, an extreme and uncontrollable circumstances exception policy that would be applicable to APM Entities beginning with the 2022 MIPS payment year.

In response to our MVP RFI in the 2020 PFS proposed rule (84 FR 40732 through 40745), we received a number of comments about the opportunity to participate in the development of MVPs and concerns about the speed of a transition to a new MVP framework. We have taken these concerns into consideration in sections IV.A.3.a.(2) and IV.A.3.a.(3) of this proposed rule when developing the policies proposed in this proposed rule. We had stated our intent to begin the transition to MVPs in the 2021 performance year by introducing initial MVPs, however, due to the 2019 Novel Coronavirus (COVID-19) pandemic Public Health Emergency (PHE), our timeline has changed. As we move forward with the transformation of the MIPS program in a manner that does not take away from the nation's response to the COVID-19 pandemic, we have limited our MVP-related proposals in this year's rule to those necessary for the collaborative development of MVPs. In section IV.A.3.a.(1) of this proposed rule, we propose to update the MVP guiding principles to respond to RFI suggestions and to reflect the ongoing evolution of MVP policies and further definition of the MVP framework.

We propose in section IV.A.3.a.(2) of this proposed rule, a process for collaboration on the development of MVPs, building on our discussions with clinician experts to develop a proposed list of MVPs for future MIPS rulemaking. We believe that collaboration with clinician experts will build a more cohesive and comprehensive set of MVPs. We propose a process for MVP candidate submissions in section IV.A.3.a.(2)(a)(iii) of this rule.

We recognize that the transition to MVPs will take time and will continue to evaluate the readiness of clinicians in making this transition, while balancing our strong interest in improving measurement and making MIPS more focused on value. We seek comment on our MVP criteria and MVP development process policies that will be considered for the final rule. For instance, we seek comment in section IV.A.3.a.(2) of this proposed rule on the proposed MVP co-development criteria, patient involvement, and MVP QCDR measures inclusion parameters.

(b) Other MIPS and APM Proposals

Although we look to move MIPS towards the future with the MVP

framework, in this year's proposed rule we propose to make what we believe are necessary Web Interface and quality measure updates, in sections IV.A.3.c.(1)(c) and IV.A.3.c.(1)(d) of this proposed rule, respectively.

Additionally, we propose in section IV.A.3.d.(1)(b) of this proposed rule to maintain policies for scoring quality measures based on achievement as well as policies for measures that do not meet case minimum, data completeness requirements, or have a benchmark. For the Promoting Interoperability performance category, we are proposing a new optional measure. We are not proposing changes to scoring policies for the cost or improvement activities categories. We have heard repeatedly in response to each of our proposed rules that clinicians value stability in the program so as to not have to learn new program requirements each year and seek to limit the number of policy proposals for the 2021 MIPS performance year.

Additionally, we wish to highlight the following proposals for changes to MIPS beginning in the 2021 performance period.

- We propose in section IV.A.3.c.(1)(c) of this proposed rule to sunset the CMS Web Interface submission method under MIPS for groups and virtual groups in 2021 due to low MIPS participant utilization and the Medicare Shared Savings Program's discontinuation of Web Interface submission method.

- We propose in section IV.A.3.c.(1)(d) of this proposed rule to incorporate 2 new administrative claims outcome quality measures, address substantive changes to 112 existing MIPS quality measures, address changes to specialty sets, remove measures from specific specialty sets, and remove 14 quality measures from the MIPS program. We are proposing a total of 206 quality measures starting in the 2021 performance year.

- We propose in sections IV.A.3.c.(1)(e) and IV.A.3.c.(2)(b) of this proposed rule, inclusion of services provided via telehealth in quality and cost measurement, respectively, given the recent rise in volume of telehealth services.

- We propose in section IV.A.3.c.(2)(a) of this proposed rule, that the cost performance category will make up 20 percent of a MIPS eligible clinician's final score for the 2023 MIPS payment year and 30 percent for the 2024 MIPS payment year as required by section 1848(q)(5)(E)(i)(II)(aa) of the Act, and the quality performance category weight would be 40 percent and 30 percent for each of those years,

respectively (see section IV.A.3.c.(1)(b) of this proposed rule). For the 2023 MIPS payment year, we propose performance category redistribution policies in section IV.A.3.d.(2)(b)(iii) of this proposed rule similar to the redistribution policies as finalized for the 2022 MIPS payment year, with the modification that we will not redistribute more weight to the cost performance category in the final scoring calculation.

- We propose in section IV.A.3.c.(3)(b) of this proposed rule, beginning with the CY 2021 performance period and future years, we are proposing: (1) Changes to the Annual Call for Activities: An exception to the nomination period timeframe during a PHE; and a new criterion for nominating new improvement activities; (2) a process for HHS-nominated improvement activities; and (3) to modify two existing improvement activities.

- We propose in section IV.A.3.c.(4) of this proposed rule, to establish a performance period for the Promoting Interoperability performance category of a minimum of a continuous 90-day period within the calendar year that occurs 2 years prior to the applicable MIPS payment year, up to and including the full calendar year, for the 2024 MIPS payment year and each subsequent MIPS payment year; to update two Promoting Interoperability measures; and to continue reweighting the Promoting Interoperability performance category for non-physician MIPS eligible clinicians for the 2021 performance period. We propose at section IV.A.3.c.(4)(c)(ii) of this proposed rule a new Promoting Interoperability performance category Health Information Exchange (HIE) bi-directional exchange measure that would allow an eligible clinician to attest to participation in bi-directional exchange through an HIE using CEHRT functionality.

- We propose in section IV.A.3.d.(1)(b) of this proposed rule continuation of quality category scoring and bonus policies, adding flexibility for when measure specification or coding changes occur during the performance year, and continuing improvement scoring of the quality performance category comparing clinicians to a 30 percent baseline score if clinicians scored 30 percent or less. We propose in sections IV.A.3.d.(1)(b)(ii) and IV.A.3.d.(1)(b)(v) of this proposed rule benchmark and topped out scoring policy criteria options that are responsive to potential low reporting rates for the 2019 performance year due to the national

public health emergency for COVID-19. We propose in section IV.A.3.d.(1)(b)(iii) of this proposed rule, a provision for an exception to the 20-case minimum for all administrative claims-based measures to allow scoring of measures that meet the specified case minimum.

- We propose in section IV.A.3.d.(2)(a)(iii) of this proposed rule to increase the maximum number of points available for the complex patient bonus for the 2020 performance period/2022 MIPS payment year due to the anticipated increase in patient complexity resulting from the national public health emergency for COVID-19.

- We propose in section IV.A.3.e.(3) of this proposed rule to reduce the performance threshold for the 2021 MIPS performance period/2023 MIPS payment year from 60 points—finalized in the CY 2020 PFS rule (84 FR 63037)—to 50 points in recognition of the COVID-19 impact on clinicians.

- We propose in section IV.A.3.g. of this proposed rule to modify third party intermediary requirements and remedial action and termination.

- We propose in section IV.A.4.b. and IV.A.4.c. of this proposed rule to clarify the APM Incentive Payment amount calculation basis and propose a hierarchy for recipient TIN affiliation identification when making the APM Incentive Payment. We also propose policies in section IV.A.4.c. of this proposed rule for MIPS eligible clinician scoring and a process for requesting updated APM Incentive Payment information in situations where a payee TIN cannot be identified, and to address situations where the QP's APM Incentive Payment was determined based solely on supplemental services payments and no Medicare claims for covered professional services were submitted during the incentive payment base period.

- We propose in section IV.A.4.e. of this proposed rule a change to the methodology for addressing prospectively aligned beneficiaries for Threshold Score calculations and QP determinations and to establish a targeted review process for QP determinations.

(2) Terms and Definitions

In addition, in § 414.1305, we are proposing to update the definitions of the following terms:

- Attestation (revision)
- Certified Electronic Health Record Technology (CEHRT) (revision)
- Collection type (revision)
- Full TIN APM (deletion)
- Low volume threshold (revision)

- Meaningful EHR user for MIPS (revision)
- MIPS APM (revision)
- Physician Compare (addition)
- Primary Care Services (addition)
- Submission type (revision)

These terms and definitions are discussed in the relevant sections of this proposed rule.

3. MIPS Program Details

a. Transforming MIPS: MIPS Value Pathways

(1) Overview

In this proposed rule, we are proposing updates to the MIPS Value Pathways (MVP) guiding principles (here in section IV.A.3.a.(1) of this proposed rule) and MVP development criteria and process (section IV.A.3.a.(2) of this proposed rule) that would guide MVP implementation beginning with the 2022 MIPS performance period/2024 MIPS payment year. We finalized in the CY 2020 PFS final rule (84 FR 62946) the definition of an MVP at § 414.1305 as “a subset of measures and activities established through rulemaking” and requested comments in a request for information (RFI) on a wide-ranging set of issues related to the eventual implementation of this concept within the MIPS program. We received RFI comments on many components of the MVP framework including the guiding principles, how MVPs and measures/activities are developed, and the transition and timeline to MVPs. The RFI comments have helped shape the following proposals for MVP implementation.

In the CY 2020 PFS final rule, we stated our intent to apply the MVP framework in the 2021 performance year (84 FR 62946); however, due to the COVID-19 pandemic national public health emergency, our timeline has changed (see section IV.A.3.a.(3) of this proposed rule). We want to move forward with the transformation of the MIPS program in a manner that does not take away from the nation’s response to the COVID-19 pandemic, and so have limited our MVP related proposals in this rule to guidance necessary for the collaborative development of MVPs. We are deferring further MVP implementation to a future year. In particular, we now intend to propose an initial set of MVPs and implementation policies in our CY 2022 rulemaking cycle. We continue to envision a transformed MIPS program that increasingly makes MVPs available to clinicians with a burden reduction focus.

We intend to implement the MVPs while maintaining the MIPS

participation options established through rulemaking for MIPS performance years 1 through 5. For purposes of this discussion, we refer to the established MIPS participation options collectively as “traditional MIPS”.

As described in earlier rulemaking (84 FR 40732 through 40734), we are moving to MVPs to improve value, reduce burden, help patients compare clinician performance to inform patient choice in selecting clinicians, and reduce barriers to movement into APMs. We refer to “value” as a measurement of quality and patient experience of care as related to cost, and intend to promote value by paying for health care services in a manner that directly links performance on cost, quality, and the patient’s experience of care. The MVP framework will move MIPS forward on the path to value through connecting the MIPS performance categories and by better informing and empowering patients to make decisions about their healthcare and helping clinicians to achieve better outcomes using robust and accessible healthcare data and interoperability.

We believe that MVPs can help address previous feedback from clinicians that MIPS is too complex and burdensome. Feedback related to confusing MIPS requirements, inadequate alignment of the MIPS performance categories, need for better performance comparability across all clinicians and for more meaningful data for patients has informed development of the MVP framework. MVPs will make MIPS more meaningful by allowing a more cohesive participation experience by connecting activities and measures from the 4 MIPS performance categories that are relevant to a patient population, standardizing performance measurement of a specialty or a medical condition, and reducing the siloed nature of the traditional MIPS participation experience. We intend that MVPs help clinicians and practices prepare to take on and manage financial risk, as in Advanced APMs, as they build out their quality infrastructures that align with the MIPS performance categories and gain experience with cost measurement. Performance measure reporting for specific populations as in MVPs encourages practices to build an infrastructure with capabilities to compile and analyze population health data, a critical capability in assuming and managing risk. We believe that experience with MVPs, in which there is aligned measurement of quality (of care and of experience of care) and cost, continuous improvement/innovation within the practice, and efficient

management and transfers of information, will help remove barriers to APM participation.

See infographic at <https://qpp.cms.gov/mips/mips-value-pathways> that provides an overview of our vision for the MIPS path to value future state.

As shown in the infographic, MIPS is currently comprised of four siloed performance categories with many measure and activity choices (see left column of infographic), higher reporting burden and performance measurement that is not meaningfully aligned. An intermediate step (see middle column of infographic) is to move to value via building an MVP framework that is cohesive (connects the performance categories), lowers reporting burden, and focuses MIPS participation around MVPs that are meaningful to clinicians’ practices, specialty or public health priority. The MVP framework incorporates a foundational layer consisting of Promoting Interoperability and administrative claims-based quality measures focused on population health, provides data and feedback to clinicians, and enhances information provided to patients. When MVPs are fully implemented (see right column of infographic), we envision a MIPS that is simplified, increases the voice of the patient, and facilitates movement into APMs. Over time we intend to provide greater amounts of population health measurement data using administrative claims information while decreasing the amount of clinician reported measurement data used for MIPS. To help realize these objectives, we are engaging with clinician professional organizations and front-line clinicians to develop the MVPs and proposing MVP development criteria and process as described in section IV.A.3.a.(2) of this proposed rule.

We envision that MVPs will be optional for clinicians when the included measures and activities within the MVP are applicable and available to their practice. Over the course of future performance periods as we transition to MVPs, the traditional MIPS participation option will continue to be available. We believe MVP reporting will reduce selection burden associated with choosing MIPS quality measures and activities to report; reduce reporting burden associated with fewer MIPS quality measures, cost measures and/or improvement activities to report than the traditional MIPS participation method; and further align across performance categories the measures and activities identified by specialists and patients as being meaningful and relevant. We intend to build a robust inventory of MVPs which are

meaningful to clinicians and expect that in the future we may propose that all MIPS eligible clinicians would be required to participate in MIPS either through an MVP or an APM Performance Pathway (APP) as discussed in section IV.A.3.b. of this rule.

We listed MVP guiding principles in the CY2020 PFS proposed rule (84 FR 40734) to define MVPs. We are proposing updating the guiding principles from the CY 2020 PFS proposed rule (84 FR 40734) to incorporate RFI comments and the evolution of the MVP framework. In response to the RFI, a few commenters specifically voiced their support of the stated MVP guiding principles. A few commenters suggested we expand the guiding principles to include patient focused wording because they believed the guiding principles, as written, may be applicable only to clinicians. Other suggestions were to: Include a statement supporting physicians and other clinicians to be assessed on MVPs that reflect their specialty training, subspecialization and their individual or group priorities; remove “eliminating burden related to selection of measures” as a principle and instead allow some choice; consider the site of service in the comparative data; consider evidence-based guidelines as an MVP development resource; have comparable reporting burden in all MVPs; use social risk stratification and consider social determinants of health; supplement Principle 3 by stating explicitly “high priority areas of morbidity and mortality”; and add alignment with other payment programs. One commenter acknowledged the benefit of comparative data but opposed any system that would come at the expense of physicians having to pay to collect and submit data on measures they do not find meaningful.

We propose changes to the MVP guiding principles as shown below. We propose to modify the first guiding principle by adding wording to further emphasize that MVP measures and activities are linked collectively and they enhance each other to the degree possible by adding the words “connected, complementary” to describe the MVP “sets of measures and activities that are meaningful to clinicians.” In addition, we propose to change “simplify scoring” to “align scoring” in the first guiding principle to acknowledge that as we initially transition to MVPs, we will not simplify but rather align scoring policies as we continue to have traditional MIPS available. We continue to include scoring simplification as part of our

long-term vision and will consider ways to simplify as MVPs become widely available.

With regard to the commenter suggestion to add in clinician choice and to remove wording “eliminating burden related to selection of measures”, the degree of choice of measures and activities within MVPs will be limited as we strive for standardization; however, we are proposing removing from the first guiding principle the qualification for burden reduction, “related to selection of measures”, as we also intend to reduce reporting burden.

We have provided information about clinicians and groups on Physician Compare for a few years, beginning with the CY 2017 final rule (81 FR 77390 through 77398). Because so many clinicians participate in MIPS as groups, whereby the data received is for the overall performance of the group and not any specific individual clinicians, Medicare patients are not always able to learn information about their individual clinician, which we believe would be valuable in selecting a clinician for their care. In the CY 2020 PFS proposed rule we discussed our intent to put patients first and provide the information they need to be active decision-makers in their care and the resultant need for more comprehensive performance data at the individual clinician level (84 FR 40734). Whenever feasible, the MIPS program should provide meaningful information at the individual clinician level. We believe an appropriate step is the collection and assessment of more clinician or specific specialty information from multispecialty groups.

Therefore, we are proposing to update the second guiding principle to specify allowing the option of subgroup reporting for MVPs, which would permit subgroups of clinicians to select relevant MVP(s) to report measures and activities that are meaningful to their practices and to patients. As more MVPs become available, groups will be able to continue to participate in MIPS via subgroups to more fully reflect the breadth of services provided by the various clinician types within the group. Though we acknowledge that subgroup reporting is not currently an option for groups to use when reporting to MIPS, we believe that it is important to recognize and include multispecialty practices in guiding principle number 2 as we believe subgroup reporting will be crucial to MVP reporting in future years. Subgroup reporting would be a step towards individual reporting and would improve the meaning and robustness of the performance data used to incentivize high quality and cost-

effective care and better provide information that patients can use to select clinicians.

As MVPs are intended to promote value and help patients with choosing clinicians, we agree with commenters that additional wording around the patient focus of MVPs in the guiding principles would further the point that engaging patients in their care, beyond informed consent, is paramount in the MVP Framework. Therefore, we propose to update guiding principle 3 to say that MVP measures should be selected to include the patient voice wherever possible. MVPs should support proactive communication and partnered decision-making between healthcare providers and patients, families, and caregivers and reinforce a care relationship that is based on trust and inclusion of individual values and beliefs. Along the lines of providing better information for patients, as stated above we propose to add wording to the guiding principle number 2 to highlight the importance of more comprehensive multispecialty reporting from subgroups as a step in improving comparative performance data.

We recognize some of the comments are aimed at ensuring high quality measures are used in MVPs. As we agree with commenters regarding strengthening the caliber of MVP measures, we are proposing to add a reference at guiding principle 3 to the Meaningful Measures framework to inform MVP measure selection.

We propose to add a new fifth guiding principle pointing to an important Meaningful Measures element of our future vision for reducing MVP reporting burden; the use of digital performance measure data submission technologies to indicate our commitment to leveraging digital innovations that reduce MIPS related clinician burden. Digital Quality Measures (dQMs) originate from sources of health information that are captured and can be transmitted electronically and via interoperable systems. Examples of digital sources include electronic health records (EHR), health information exchanges (HIEs), clinical registries, case management systems, electronic administrative claims systems, electronically submitted assessment data, and wearable devices. Electronic clinical quality measures or eQMs (data derived from electronic medical records) are a subset of dQMs. The new proposed guiding principle reads, MVPs should support the transition to digital quality measures.

Regarding the MVP guiding principles commenter suggestion to add the idea that MVPs will allow clinicians to be

assessed according to their specialty and their individual or group priorities, we are not adding this wording as an MVP may focus on a condition or episode of care rather than a specialty; rather clinicians should be electing available MVPs that align with their priorities rather than us matching MVPs to individual practice priorities. The first guiding principle states MVPs should contain sets of measures and activities that are meaningful to clinicians (84 FR 40734). We believe this sufficiently addresses the commenter's suggestion. We did not include the commenter suggestion to add "morbidity and mortality" wording as we do not want to restrict what we mean by "high priority measures" to only morbidity and mortality measures. Regarding the equity comment, MVPs will provide comparative performance data that measures clinicians fairly and our policies at every level are developed and implemented to treat clinicians equitably. We are not adding new wording referring to alignment with other payment programs as we already refer to our intent that MVPs reduce barriers to APM participation in the guiding principles.

After review and consideration of RFI comments, we are retaining guiding principle 4 (84 FR 40734) and proposing to update guiding principles 1, 2, 3 and 5, as shown in italics, so that the guiding principles for MVPs reflect the following:

1. MVPs should consist of limited, *connected complementary* sets of measures and activities that are meaningful to clinicians, which will reduce clinician burden, *align* scoring, and lead to sufficient comparative data.

2. MVPs should include measures and activities that would result in providing comparative performance data that is valuable to patients and caregivers in evaluating clinician performance and making choices about their care; *MVPs will enhance this comparative performance data as they allow subgroup reporting that comprehensively reflects the services provided by multispecialty groups.*

3. MVPs should include measures *selected using the Meaningful Measures approach and, wherever possible, the patient voice must be included,* to encourage performance improvements in high priority areas.

4. MVPs should reduce barriers to APM participation by including measures that are part of APMs where feasible, and by linking cost and quality measurement.

5. *MVPs should support the transition to digital quality measures.*

In section IV.A.3.a.(2) of this proposed rule, we describe our proposed method of creating MVPs. We intend to grow the number of available MVPs using the processes described in that section, maximizing our opportunity for expert input on the most meaningful measures and activities.

We continue our efforts to improve the healthcare of Medicare patients by allowing clinicians to focus on providing care for their patients and the measures and activities that best reflect their care. We look forward to continuing to work with stakeholders to improve the program and implement the vision of MVPs.

(2) MVP Development

(a) Process of Developing MVPs

In the CY 2020 PFS final rule (84 FR 62948), we finalized at § 414.1305 the definition of a "MIPS Value Pathway" to mean a subset of measures and activities established through rulemaking. We also clarified our intention to develop MVPs, to the extent feasible, in collaboration with stakeholders (84 FR 62947).

Commenters urged us to work in tandem with clinicians and specialty societies to develop MVPs (84 FR 62948) and have supported the development of MVPs with robust stakeholder input and feedback opportunities. Stakeholders have also clearly emphasized the need for input during the design and implementation of MVPs. We believe it is important to emphasize that the transition to MVPs must occur gradually, without immediate elimination of the current MIPS program, as we continue to work collaboratively with stakeholders regarding MVP development. As MVPs are developed collaboratively with stakeholders, they must be created utilizing a consistent set of parameters and criteria, to ensure that MVPs are constructed and implemented in a uniform manner. In addition, we believe it is important to outline the methods in which collaboration and engagement may occur with stakeholders. Lastly, we intend on formulating a standardized process in which stakeholders can submit formal MVP candidates for CMS' consideration.

(i) MVP Development Criteria

In response to the RFI in the CY 2020 PFS final rule, we have received stakeholder comments that supported the move to MVPs with considerations to departing from the traditional reporting requirements of the existing MIPS program, such as reporting 6 quality measures for the Quality

performance category. We had also received stakeholder comments through the RFI that supported the use of electronically available measures such as eQMs and the use of QCDR measures to the extent feasible. Stakeholders also noted that it is important that the collection type of quality measures be considered as MVPs are designed. As a part of the MVP development process, consideration should be given to the four performance categories in MIPS, and whether the MVP has a clearly defined intent, offers value, and opportunity for improvement. We believe that as a part of MVP development, it is important to clearly identify linkages between the measures and activities within an MVP which will demonstrate the relevancy of measures and activities to the clinicians being captured within the MVP. Furthermore, as MVPs are developed it is important to factor in the appropriateness of the measures and activities being included and the comprehensibility of the MVP to clinicians and patients. Lastly, considerations must be given to existing criteria for measure and activity inclusion or removal, as established for each of the performance categories. For example, as described in the CY 2019 PFS final rule (83 FR 59763) for the quality performance category, quality measures that are identified as extremely topped out (reaching an average performance rate between 98 to 100 percent) will likely be removed from the program. We refer readers to the CY 2020 PFS final rule (84 FR 62949 through 63006) for discussion of previously finalized measure and activity requirements across the Quality, Cost, Improvement Activity, and Promoting Interoperability performance categories. In addition, we also refer readers to section IV.A.3.c. of this proposed rule for updates to the respective performance categories. Therefore, beginning with the 2022 MIPS performance period, we propose to develop and select MVPs using the following criteria:

- Utilization of Measures and Activities across Performance Categories:

(a) MVPs should include measures and activities from the Quality, Cost, and Improvement Activities performance categories.

(b) MVPs should include the entire set of Promoting Interoperability (PI) measures.

- Intent of Measurement:

(a) What is the intent of the MVP?

(b) Is the intent of the MVP the same at the individual clinician and group level?

(c) Are there opportunities to improve the quality of care and value in the area being measured?

(d) Why is the topic of measurement meaningful to clinicians?

(e) Does the MVP act as a vehicle to incrementally phase clinicians into APMs? How so?

(f) Is the MVP reportable by small and rural practices? Does the MVP consider reporting burden to those small and rural practices?

(g) Which Meaningful Measure Domain(s) does the MVP address?

- Measures and Activity Linkages with the MVP:

(a) How do the measures and activities within the proposed MVP link to one another? (For example, do the measures and activities assess different dimensions of care provided by the clinician?)

(b) Are the measures and activities related or a part of the care cycle or continuum of care offered by the clinicians?

(c) Why are the measures and activities most meaningful to the specialty?

- Appropriateness:

(a) Is the MVP reportable by multiple specialties? If so, has the MVP been developed collaboratively across specialties?

(b) Are the measures clinically appropriate for the clinicians being measured?

(c) Do the measures capture a clinically definable population of clinicians and patients?

(d) Do the measures capture the care settings of the clinicians being measured?

(e) Prior to incorporating a measure in an MVP, is the measure specification evaluated, to ensure that the measure is inclusive of the specialty or sub-specialty?

- Comprehensibility:

(a) Is the MVP comprehensive and understandable by the clinician or group?

(b) Is the MVP comprehensive and understandable by patients?

- Incorporation of the Patient Voice:

(a) Does the MVP take into consideration the patient voice? How?

(b) Does the MVP take into consideration patients in rural and underserved areas?

(c) How are patients involved in the MVP development process?

(d) To the extent feasible, does the MVP include patient-reported outcome measures, patient experience measures, and/or patient satisfaction measures?

- Measures and Improvement Activities Considerations: MIPS Quality Measures.

We are not prescriptive on the number of quality measures that are included in an MVP. In selecting quality measures, we do believe that consideration should be given to the following:

(a) Do the quality measures included in the MVP meet the existing quality measure inclusion criteria? (*For example, does the measure demonstrate a performance gap?*)

(b) Have the quality measure denominators been evaluated to ensure the eligible population is consistent across the measures and activities within the MVP?

(c) Have the quality measure numerators been assessed to ensure the measure is applicable to the MVP topic?

(d) To the extent feasible, does the MVP include outcome measures, or high priority measures in instances where outcome measures are not available or applicable? We encourage stakeholders to utilize our established pre-rulemaking processes, such as the Call for Measures, described in the CY 2020 PFS final rule (84 FR 62953 through 62955) to develop outcome measures relevant to their specialty if outcome measures currently do not exist and for eventual inclusion into an MVP.

(e) To the extent feasible, does the MVP include electronically specified clinical quality measures?

(f) To the extent feasible, does the MVP avoid including quality measures that are topped out?

(g) What collection types are the measures available through?

(h) What role does each quality measure play in driving quality care and improving value within the MVP? Provide a rationale as to why each quality measure was selected.

(i) How do the selected quality measures relate to other measures and activities in the other performance categories?

(j) To the extent feasible, specialty and sub-specialty specific quality measures are incorporated into the MVP. Broadly applicable (cross-cutting) quality measures may be incorporated if relevant to the clinicians being measured.

- Measures and Improvement Activities Considerations: Cost Measures:

(a) What role does the cost measure(s) play in driving quality care and improving value within the MVP? Provide a rationale as to why each cost measure was selected.

(b) How does the selected cost measure(s) relate to other measures and activities in other performance categories?

(c) If there are not relevant cost measures for specific types of care being provided (for example, conditions or procedures), does the MVP include broadly applicable cost measures (that are applicable to the type of clinician)?

(d) What additional cost measures should be prioritized for future development and inclusion in the MVP?

- Measures and Improvement Activities Considerations: Improvement Activities:

(a) What role does the improvement activity play in driving quality care and improving value within the MVP? Provide a rationale as to why each improvement activity was included.

(b) Describe how the improvement activity can be used to improve the quality of performance in clinical practices for those clinicians who would report this MVP.

(c) Does the improvement activity complement and/or supplement the quality action of the measures in the MVP, rather than duplicate it?

(d) To the extent feasible, does the MVP include improvement activities that can be conducted using CEHRT functions? The use of improvement activities that specify the use of technologies will help to further align with the CEHRT requirement under the Promoting Interoperability performance category.

(e) If there are not relevant specialty or sub-specialty specific improvement activities, does the MVP include broadly applicable improvement activities (that is applicable to the clinician type) are used?

- Measures and Improvement Activities Considerations: Promoting Interoperability (PI) Measures:

(a) Must include the full set of PI measures.

The MVP development criteria was developed primarily with consideration with the MVP guiding principles, discussed above. In addition, we considered the spectrum of measures and activities available for MVP development, and the criteria used to include measures and activities within each of the respective performance categories. Through the collaborative process of co-developing MVPs with stakeholders, we have realized how crucial it is to establish a set of MVP development criteria that would standardize what is expected of MVPs and provide our evaluation criteria in a transparent manner. We believe that the aforementioned criteria will lead to the development of MVPs in a manner that is consistent and reliable. We seek comment on the MVP development criteria.

(ii) Capturing the Patient Voice

As a part of the MVP development process, we believe that it is important to develop MVPs in a manner that takes into consideration the patient's experience, satisfaction, and outcomes. We believe that MVPs should be constructed in a manner that should not only be understood by clinicians, but by patients who may use the ascertained information to make informed decisions regarding their health care providers. Therefore, beginning with the 2022 performance period, we propose that stakeholders that are developing MVPs to submit to CMS as candidate MVPs should include patients as a part of the MVP development process. Stakeholders should incorporate patients and/or patient representatives through means that may include, but are not limited to technical expert panels or an advisory committee as they work to construct their candidate MVPs prior to reaching out to CMS with a candidate submission. The process of involving patients as a part of the stakeholder's MVP development would be considered a pre-requisite for CMS to consider the candidate MVP for the upcoming performance period. By including patients and/or patient representatives in the MVP development process, we believe that patients will be able to voice how to make the outcomes of measurement meaningful to them. In addition to including patients as a part of the MVP development process, we encourage stakeholders to utilize several approaches to incorporate the patient perspective, such as using focus groups, in-depth interviews with patients, and informal listening sessions, to the extent feasible, for a comprehensive patient perspective. We seek comments on this proposal.

(iii) Candidate MVP Co-Development, Solicitation Process, and Evaluation

Through the Request for Information (RFI) on transforming MIPS in the CY 2020 PFS final rule we have learned of stakeholders interests in participating in the MVP development process. In summer 2019, we held numerous focus groups with front-line clinicians, specialty societies, advocacy groups, QCDRs, registries, and health IT vendors to listen to what stakeholders were looking for in regards to program simplification, burden reduction, and the intent of MVPs. In response to the CY 2020 PFS final rule, we received several requests from stakeholders who wanted to discuss their perspectives on MVPs and in some cases, walk us through potential MVP candidates from their specialty. Based on continuous

stakeholder interest, we believe that a process must be implemented to ensure that stakeholder engagement and collaboration in the development of MVPs is consistent from an overall perspective.

To consider MVP candidates developed by stakeholders, we believe it is important to implement a streamlined approach to receive and evaluate potential MVPs. Therefore, beginning with the 2022 performance period, we propose that stakeholders should formally submit their MVP candidates formally utilizing a standardized template, which will be published in the QPP resource library for our consideration for future implementation. Stakeholders should submit all information including a description of how their MVP abides by the MVP development criteria as described in section IV.A.3.a.(2)(a)(i) of this proposed rule, and provide rationales as to why specific measures and activities were chosen to construct the MVP. We believe the utilization of a standardized template would help stakeholders understand what information is needed to evaluate the feasibility of the candidate MVP.

On an annual basis, we intend on hosting a public facing MVP development webinar, to remind stakeholders of MVP development criteria, the timeline, and process in which to submit a candidate MVP. While we believe that engagement with stakeholders regarding MVP candidates may occur on a rolling basis throughout the year, at CMS' discretion we will determine if an MVP is ready for inclusion in the upcoming performance period. As MVP candidates are received, they will be reviewed, vetted, and evaluated by CMS and our contractors. We intend on utilizing the MVP development criteria (discussed above) to determine if the candidate MVP is feasible. In addition to the MVP development criteria listed above, we will also vet the quality and cost measures from a technical perspective to validate that the coding in the quality measures and cost measure(s) include the clinician type being measured, and whether all potential specialty specific quality measures or cost measures were considered, with the most appropriate included. We may reach out to the stakeholder on an as-needed basis, should questions arise as we review. In addition, in continuing collaborative efforts, once we complete our internal evaluation, we will reach out to select stakeholders whose candidate MVP may be feasible for the upcoming performance period, to schedule a feedback loop meeting to discuss our

feedback, and next steps that may include recommended modifications to the MVP candidate. Since MVPs must be established through rulemaking, as described at § 414.1305, CMS will not communicate to the stakeholder whether an MVP candidate has been approved, disapproved, or is being considered for a future year, prior to the publication of the proposed rule. We seek comment on the proposed process to solicit MVP candidates. In addition, we seek comment on how we could make this process more transparent in future years, for stakeholders that collaborate to develop MVP candidates and other MIPS stakeholders, should we consider the utilization of an advisory committee or technical expert panel to review MVP candidates, or the review of MVP candidates by an interdisciplinary committee, similar to what is used for the MIPS quality measures under the Call for Measures or a public process such as the NQF convened Pre-rulemaking process? We believe that integrating these steps into the process could provide greater transparency, however we are concerned that integrating these steps could further delay the incorporation of MVPs into the MIPS program. We seek feedback on the issue of furthering transparency into the MVP development process vs. timeliness of introducing MVPs into the MIPS program. Are stakeholders concerned with the possibility of delayed MVP implementation if these additional methods of review are implemented? If so, what are some strategies CMS should consider if we decide to implement additional methods of allowing public commentary on potential MVP candidates?

(b) Implementing Meaningful Measures in MVPs

(i) Incorporating Population Health Measures Into MVPs

In the CY 2020 PFS proposed rule (84 FR 40742 through 40743), we expressed our interest in incorporating population health measures calculated from administrative claims-based data as a part of the foundational layer within MVPs, in an effort to improve patient outcomes, reduce reporting burden and costs, better align clinician quality improvement efforts, and increase alignment with APMs and other payer performance measurement. Through the RFI, stakeholders expressed concerns with including population health measures due to concerns with reliability, validity, attribution, unintended consequences and/or risk adjustment of claims-based population health measures. We understand

stakeholder concerns around the population health measures that were previously considered, and are looking into ways to address and mitigate those concerns. We also received some support from stakeholders who agreed that population health measures will reduce administrative burden with the belief that these measures are not any less relevant to specialists. In MIPS, we currently have one administrative-claims based measure, the All-cause Hospital Readmission measure, which is calculated and scored for groups with 16 or more clinicians that meet a 200-patient case minimum, as described in the CY 2017 Quality Payment Program final rule (81 FR 77300). As described in Appendix 1 of this proposed rule, we are proposing to replace the All-cause Hospital Readmission measure with a Hospital-Wide, 30-day, All-Cause Unplanned Readmission (HWR) Rate for the Merit-Based Incentive Payment System Program (MIPS) Eligible Clinician Groups because the re-specified measure promotes a system level approach by clinicians, with a focus on high risk conditions such as COPD and heart failure. We refer readers to Appendix 1 of this proposed rule for detailed discussion of the newly proposed measure.

(ii) Incorporating QCDR Measures Into MVPs

In the CY 2020 PFS final rule, we sought comments from stakeholders as to whether QCDR measures should be considered for integration within MVPs. Stakeholders were generally supportive of including QCDR measures within MVPs, but others expressed concern that including QCDR measures within MVPs would require clinicians to use certain third party intermediaries which may cause additional burden for clinicians who may need to change their current reporting method and undertake additional costs associated with reporting through QCDRs. Under the existing MIPS program and as described at § 414.1330(a)(2), for a MIPS payment year, we can use approved QCDR measures as described under § 414.1400 to assess performance in the quality performance category. We continue to believe that the development of QCDR measures by QCDRs is important as it provides measures that are relevant, applicable, and meaningful to clinicians, and addresses gaps that are not addressed by measures available through the MIPS quality measure inventory. In envisioning MVP development for the 2022 performance period and future years, we believe it is important to consider the opportunity to include QCDR measures within MVPs.

Prior to consideration of including the QCDR measure within a candidate MVP, QCDR measures must meet all existing criteria under § 414.1400(b)(3) and the criteria described at § 414.1400(b)(3)(v)(C)(4) that QCDR measures should be fully tested at the clinician level prior to the QCDR measure being included in an MVP. We refer readers to section IV.A.3.g.(2)(b)(iv) of this proposed rule for additional discussion of this requirement.

With regards to the timeline to which MVPs and QCDR measures may be established, we have identified differences with the timelines that each of these processes follow. As described in the CY 2020 PFS final rule (84 FR 62948), we finalized the definition of an MVP at § 414.1305 to mean a MIPS Value Pathway is a subset of measures and activities established through rulemaking. Furthermore, as described in the CY 2019 PFS final rule (83 FR 59900) and at § 414.1400(b)(1), entities that wish to self-nominate as a QCDR and submit QCDR measures for CMS consideration must do so within the 60-day self-nomination period that begins on July 1 of the calendar year prior to the applicable performance period and ending on September 1 of the same year. QCDR measures are typically reviewed and approved in the preceding months after the close of the self-nomination period. Therefore, we propose that beginning with the with the 2022 performance period, only QCDR measures that were approved in the previous year may be considered for inclusion within a candidate MVP. Furthermore, we propose that the QCDR measures included within a candidate MVP must meet the existing criteria that are currently established at § 414.1400(b)(3). In the traditional MIPS program, entities that meet the QCDR definition can develop QCDR measures to fulfill the quality performance category reporting requirements. We believe that QCDR measures can continue to fulfill the reporting requirements of the quality performance category within MVPs. Candidate MVPs should be submitted utilizing the process as described in section IV.A.3.a.(2)(a) of this proposed rule. Candidate MVPs that are approved for inclusion in the upcoming performance period must be proposed and finalized through notice-and-comment rulemaking. Candidate MVPs that include QCDR measures will also need to be proposed and finalized through notice-and-comment rulemaking in order to be available for reporting in the upcoming performance period.

Therefore, in instances where MVPs are finalized through notice-and-comment rulemaking with QCDR measures, those QCDR measures would be eligible for 2-year QCDR measure approval as described at § 414.1400(b)(3)(vi).

In the CY 2018 PFS final rule (82 FR 53813), we finalized that beginning with the 2018 performance period and for future program years, that QCDRs may seek permission from another QCDR to use an existing QCDR measure that is owned by another QCDR.

(e) Reporting of MVPs Through Third Party Intermediaries

Through the MIPS program, QCDRs, qualified registries, and Health IT vendors support the reporting of the Quality, Promoting Interoperability, and Improvement Activity performance categories, as proposed and codified at § 414.1400(a)(2). We believe that third party intermediaries who support the aforementioned performance categories are able to support MVPs, since they will be comprised of measures and activities from these performance categories, as well as cost measures that are calculated by CMS (thereby requiring no additional effort by third party intermediaries). We believe allowing third party intermediaries to support MVPs will offer eligible clinicians and groups additional methods to report an MVP. We refer readers to section IV.A.3.g. of this proposed rule for additional discussion of these proposals.

Since QCDR and qualified registry applicants would be submitting their self-nomination application prior to the publication of the final rule, we will work to establish a process to allow QCDRs and qualified registries to identify and select which MVPs they can support following the publication of the final rule, if we finalize this policy. We seek comments on this proposal.

(6) Transition to MVPs

(a) Timeline for MVP Implementation

In response to the RFI in the CY 2020 PFS final rule, we have received comments from stakeholders that indicated a gradual implementation of MVPs. Through the MVP development process, we seek to collaborate with stakeholders in the development of MVPs that are meaningful and applicable to clinicians and groups. Therefore, we understand the need for an incremental approach as we transition eligible clinicians and groups to MVP reporting as they are implemented. In light of the COVID-19 pandemic, we have decided to delay the implementation of MVPs, and revisit

potential MVP implementation through future rulemaking, possibly beginning with the 2022 performance period. Although we believe in the importance of transforming the MIPS program to create greater meaning for clinicians, we understand that there are clinicians who are on the frontlines taking care of COVID-19 patients that should not be burdened with having to learn a new method of reporting for the MIPS program at this time. Overall, our goal is to gradually implement MVPs for all MIPS eligible clinicians and groups overtime, to ensure that MVPs are designed and available in a manner relevant to clinicians. We intend to continue to work closely with stakeholders to develop MVPs that are relevant to various specialties, and understand that a level of flexibility is needed to allow for meaningful reporting.

b. APM Performance Pathway

(1) Overview

In the CY 2020 PFS final rule (84 FR 62568), we finalized the MIPS Value Pathway framework as a means of reducing reporting burden, increasing meaningful measurement, and continuing to encourage movement through MIPS away from fee-for-service (FFS) payments and towards APMs. Burden reduction and meaningful measurement are important goals in relation to all eligible clinicians, and we recognize that the best means for achieving these goals may be different for MIPS eligible clinicians not yet joined an APM than for those MIPS eligible clinicians who already are participating in APMs and therefore have different reporting obligations. This is particularly true for eligible clinicians in Advanced APMs who are subject to MIPS either because they are Partial QPs for a year and elect to participate in MIPS or because they fall below the applicable Partial QP threshold for a performance year.

We are proposing at § 414.1367 to establish an APM Performance Pathway (APP) under MIPS beginning in the 2021 MIPS performance year, designed to provide a predictable and consistent MIPS reporting standard to reduce reporting burden and encourage continued APM participation.

(2) Applicability

We propose that the APP will be in effect beginning January 1, 2021, and

would be an optional MIPS reporting and scoring pathway for MIPS eligible clinicians identified on the Participation List or Affiliated Practitioner List of any APM Entity participating in any MIPS APM on any of the four snapshot dates (March 31, June 30, August 31, and December 31) during a performance period, beginning in the 2021 MIPS performance period.

(a) Reporting Through the APM Performance Pathway

Individual MIPS eligible clinicians who are participants in MIPS APMs may report through the APP at the individual level. Groups and APM Entities may report through the APP on behalf of their constituent MIPS eligible clinicians; however, the final score earned by the group through the APP would be applied only to those MIPS eligible clinicians who appear on a MIPS APM's Participation List or Affiliated Practitioner List on one or more snapshot dates. The final score applied to each individual MIPS eligible clinician would be the highest available final score for that clinician (TIN/NPI), or a Virtual Group score, if applicable, as discussed at IV.A.3.e. of this proposed rule.

As described further in section III.G.1. of this proposed rule, ACOs participating in the Medicare Shared Savings Program would be required to report through the APP for purposes of assessing their quality performance for that program, but MIPS eligible clinicians participating in these ACOs also would have the option of reporting outside the APP, or within it at an individual or group level, for purposes of being scored under MIPS, like all other MIPS APM participants. As the APP would be optional for purposes of MIPS scoring, under the proposal MIPS APM participants would be able to report through the APP or through any other available MIPS reporting mechanism they chose.

We refer readers to section IV.A.3.e. of this proposed rule for information concerning our proposed changes to the hierarchy that will apply when more than one final score is associated with a TIN/NPI.

We seek comment on this proposal.

(b) MIPS APMs

We propose to amend our definition of MIPS APM at § 414.1305 as an APM that meets the criteria in § 414.1367(b). We also propose to codify the following

MIPS APM criteria at the new § 414.1367(b). We are proposing to maintain two criteria for MIPS APMs that currently are included at §§ 414.1370(b)(1) and (3) respectively, namely that: (1) An APM Entity participates in the APM under an agreement with CMS or through a law or regulation; and (2) the APM bases payment on quality measures and cost/ utilization. However, under the proposed policy, for purposes of the MIPS performance period we would not depend on the availability of quality measure data reported directly to the APM, and we are not proposing to continue requiring that MIPS APMs be in operation and therefore collecting quality data for the entirety of the performance period. We also note that currently, to be a MIPS APM, § 414.1370(b)(2) requires that an APM must be designed such that its APM Entities include at least one MIPS eligible clinician on a Participation List, and does not include APMs that use only Affiliated Practitioner Lists. However, we believe that because we are not proposing to require reporting through the APP be done exclusively at the APM Entity level, it is not necessary to limit use of the APP to APM Entities alone. Therefore, we are proposing to expand the definition of MIPS APM to include those APMs in which there is only an Affiliated Practitioner List and that otherwise meet these proposed MIPS APM criteria.

We seek comment on this proposal.

(3) MIPS Performance Category Scoring in the APM Performance Pathway

In general, MIPS reporting and scoring requirements are applicable to all MIPS eligible clinicians, including those reporting through the proposed APP. However, the following reporting and scoring rules would apply only to those MIPS eligible clinicians, groups, or APM entities reporting through the APP.

(a) Quality Performance Category

We are proposing that, beginning in the 2021 performance period, MIPS eligible clinicians scored under the APP would be scored on the quality measure set finalized for such MIPS performance period.

For PY 2021, we are proposing the measures listed in Table 41 to be used for purposes of quality performance category scoring for the APP.

TABLE 41: APM Performance Pathway Quality Measure Set

Measure #	Measure Title	Collection Type	Submitter Type	Meaningful Measure Area
Quality ID: 321	CAHPS for MIPS	CAHPS for MIPS Survey	Third Party Intermediary	Patient's Experience
Quality ID:001	Diabetes: Hemoglobin A1c (HbA1c) Poor Control	eCQM/MIPS CQM	APM Entity/Third Party Intermediary	Mgt. of Chronic Conditions
Quality ID: 134	Preventive Care and Screening: Screening for Depression and Follow-up Plan	eCQM/MIPS CQM	APM Entity/Third Party Intermediary	Treatment of Mental Health
Quality ID: 236	Controlling High Blood Pressure	eCQM/MIPS CQM	APM Entity/Third Party Intermediary	Mgt. of Chronic Conditions
Measure # TBD	Hospital-Wide, 30-day, All-Cause Unplanned Readmission (HWR) Rate for MIPS Eligible Clinician Groups	Administrative Claims	N/A	Admissions & Readmissions
Measure # TBD	Risk Standardized, All-Cause Unplanned Admissions for Multiple Chronic Conditions for ACOs	Administrative Claims	N/A	Admissions & Readmissions

For those MIPS eligible clinicians, groups, or APM Entities for whom a given measure is unavailable due to the size of the available patient population or who are otherwise unable to meet the minimum case threshold for a measure, we are proposing to remove such measure from the quality performance category score for such MIPS eligible clinician, group, or APM Entity.

For MIPS eligible clinicians, groups, or APM Entities reporting through the APP, we are proposing to not apply the quality measure scoring cap at § 414.1380(b)(1)(iv) in the event that a measure in the APP measure set is determined to be topped out. Because the measure set is fixed, we do not believe it is appropriate to limit the maximum quality performance category available to them. Should an APP measure be determined to be topped out, we would at that time consider amending the APP quality measure set through future rulemaking, if appropriate.

We seek comment on this proposal.

In the CY 2020 PFS proposed rule, we sought comment on aligning the Shared Savings Program version of the Multiple Chronic Conditions (MCC) measure (that is, the ACO MCC) with the MIPS version of the MCC measure (see 84 FR 40711 and 40712). We noted that the MIPS MCC claims-based measure is similar to the ACO MCC currently used to assess ACO quality under the Shared Savings Program. The MIPS MCC and ACO MCC measures are similar because they both target patients with multiple chronic conditions, but the cohort, outcome, and risk model for the MIPS MCC measure varies from the ACO MCC

measure. The cohort for the ACO MCC measure includes eight conditions whereas the MIPS MCC measure includes nine conditions, with the additional condition being diabetes. The ACO MCC measure does not adjust for social risk factors whereas the MIPS MCC measure adjusts for two area-level social risk factors: (1) AHRQ socioeconomic status (SES) index; and (2) specialist density.

In 2019, we added a revised MCC measure to the 2019 Measure under Consideration list for the Shared Savings Program for consideration by the Measure Applications Partnership (MAP) Clinician Workgroup. The revised MCC measure specifications aligned with the MIPS MCC measure by: (1) Adding a diabetes cohort; (2) excluding any admissions within 10 days of discharge from a hospital, skilled nursing facility, or acute rehabilitation facility; and (3) adjusting for the AHRQ SES index and specialist density social risk factors. The only remaining difference between the MIPS and Shared Savings Program versions of the measure would be attribution, which is program-specific. Attribution for Shared Savings Program ACOs uses the Shared Savings Program beneficiary assignment methodology, which emphasizes primary care. During the MAP discussion it was noted that the original ACO MCC measure has been in use in the Shared Savings Program since 2015, and the MAP expressed no concerns with respect to feasibility and implementation of the revised MCC measure. A measure has high reliability if it produces consistent results from multiple measurements, in other words,

it reflects a signal, rather than random error associated with measurement. Reliability values range between zero (all error, little signal) to 1.0 (no error, all signal).⁷⁶ The median signal-to-noise reliability for all Shared Savings Program ACOs in 2018 was 0.96 ranging from 0.12 to 1.00 (IQR: 0.94–0.98), indicating an overall excellent reliability of the measure.⁷⁷

The MAP final recommendation for this measure was “conditional support for rulemaking.”⁷⁸ We intend to take the revised measure through the National Quality Forum (NQF) endorsement process in 2020. Because the revisions would make the ACO MCC measure more aligned with the MIPS version and given the support received from the MAP, we propose to include the revised All-Cause Unplanned Admissions for Patients with Multiple Chronic Conditions measure in the APP measure set to be reported on by any Medicare ACO.

(b) Cost

In the CY 2017 Quality Payment Program final rule (81 FR 77256, 77265), we finalized at § 414.1370(g)(2) to waive the cost performance category under waiver authority at section 1115A(d)(1) of the Act for CMS Innovation Center

⁷⁶ Adams, John L., Ateev Mehrotra, and Elizabeth A. McGlynn, Estimating Reliability and Misclassification in Physician Profiling. Santa Monica, CA: RAND Corporation, 2010. https://www.rand.org/pubs/technical_reports/TR863.html.

⁷⁷ CMS used the 2018 Shared Savings Program ACO beneficiary assignment data to test the revised MCC measure. Here, reliability refers to measure score reliability of the revised MCC measure.

⁷⁸ <https://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdIdentifier=id&ItemID=91911>.

APMs, and at section 1899(f) of the Act for the Medicare Shared Savings Program. We are proposing to continue to waive the cost performance category under the same authorities because: (1) APM entities in MIPS APMs already are subject to cost performance assessment under their APMs, as the MIPS APM criteria would continue to include the assessment of participants based on cost; (2) MIPS APMs may measure cost performance in different ways than MIPS, for example, by basing cost on total cost of care, which measures a broader scope of cost or resource use than would necessarily be reflected in the narrower claims-based accountability standard under MIPS; and (3) MIPS APMs may attribute beneficiaries differently from MIPS for purposes of measuring cost, leading to an unpredictable degree of overlap between the sets of beneficiaries for whom the MIPS eligible clinicians would be responsible under their APM and under MIPS. We believe that with an APM Entity's finite resources for engaging in efforts to improve quality and lower costs for a specified beneficiary population under the APM, it is necessary to give the APM Entity the ability to identify a single beneficiary population to prioritize in its cost-saving efforts so that the goals and evaluation associated with the APM are as clear and free of confounding factors as possible. With this flexibility, MIPS eligible clinicians who are attempting to strategically transform their respective practices would not jeopardize their ability to succeed in either MIPS or under the terms of their APM. Therefore, by participating through the APP, the APM participant may indicate their intent to focus their resources on the beneficiary population and services identified by the terms of the APM rather than the population and services they would have been responsible for under the MIPS cost performance category. We seek comment on this proposal.

(c) Improvement Activities

We are proposing to assign a score for the Improvement Activities performance category for each MIPS APM, and that score will be applied to participant MIPS eligible clinicians reporting through the APP. In an effort to further reduce reporting burden for MIPS eligible clinicians in MIPS APMs and to better recognize improvement activities work performed through participation in MIPS APMs, we are proposing to assign a baseline score for each MIPS APM based on the improvement activity requirements of the particular MIPS APM. CMS would review the MIPS

APM's requirements in relationship to activities specified under the generally applicable MIPS improvement activities performance category and assign for each MIPS APM an improvement activities performance category score that is applicable to all MIPS eligible clinicians reporting through the APP who are participants in the MIPS APM. To develop the improvement activities score for MIPS APMs, we would compare requirements of the APM with the list of Improvement Activities, described in § 414.1355(a), for the applicable year, and score those improvement activities as they would otherwise be scored according to § 414.1380(b)(3). Thus, points assigned to an APM participant MIPS eligible clinician participating in MIPS through the APP would be based, at least in part, on the documented terms and requirements of participation in the MIPS APM, such as under a participation agreement or regulation. In the event a MIPS APM participant does not actually perform an activity for which Improvement Activities credit would otherwise be assigned under this proposal, the MIPS APM participant would not receive credit for the associated Improvement Activity.

We would publish the assigned improvement activities scores for each MIPS APM on the CMS website prior to the beginning of the MIPS performance period. In the event that the assigned score for a MIPS APM does not represent the maximum improvement activities score, we propose that MIPS eligible clinicians reporting through the APP would have the opportunity to report additional improvement activities that then would be applied towards their scores.

We note that under section 1848(q)(5)(c)(ii) of the Act, a MIPS eligible clinician in an APM for a performance period automatically earns a minimum score of one half of the highest potential score for the improvement activities category for their participation in an APM for the performance period. Additionally, under section 1848(q)(5)(c)(i) of the Act, MIPS eligible clinicians participating in a patient-centered medical home model or comparable specialty practice, as determined by the Secretary for a performance period, automatically earn the highest potential score for the improvement activities category. These baseline scores would be automatically applied for all MIPS eligible clinicians who participate in an APM in accordance with § 414.1380(b)(3)(i) and (ii), respectively.

We seek comment on this proposal.

(d) Promoting Interoperability

We propose that the Promoting Interoperability performance category score would be reported and calculated in the same manner described at § 414.1375. We seek comment on this proposal.

(4) APP Performance Category Weights

We are proposing to continue to waive the requirement to weight each MIPS performance category as described in section 1848(q)(5)(E) of the Act using the waiver authority in sections 1115A(d)(1) and 1899(f) of the Act for CMS Innovation Center APMs and the Medicare Shared Savings Program, respectively. For reasons described in section IV.B.3.ii. of this proposed rule, we believe it is necessary to waive the cost performance category for MIPS eligible clinicians reporting to MIPS through the APP. As a result, it also would be necessary to waive the requirement to weight each MIPS performance category as described in section 1848(q)(5)(E) of the Act and to redistribute the cost performance category weight to the remaining performance categories to be scored for APM participants reporting through the APP.

We are proposing to reweight the performance categories for APM participants reporting through the APP to:

- Quality: 50 percent.
- Cost: 0 percent.
- Promoting Interoperability: 30 percent.
- Improvement Activities: 20 percent.

We believe these weights are appropriate as they generally align with the relative performance category weights under MIPS and MVPs in circumstances where the cost performance category has been reweighted to zero percent of the final score, and the cost performance category weight has been distributed proportionately among the remaining performance categories.

We propose to codify this proposal at § 414.1367(d)(1). We seek comment on these proposals.

(a) Reweighting a Performance Category

We recognize that there are certain circumstances when a MIPS eligible clinician, group, or APM Entity may be unable to complete reporting to MIPS due to, for example, extreme and uncontrollable circumstances, hardship, or the unavailability or inapplicability of measures due to practice size or other data limitations. Therefore, under the authority provided in section 1848(q)(5)(F) of the Act, it may become

necessary to reweight one or more performance categories.

In a case where the Promoting Interoperability performance category is reweighted to zero percent, we are proposing to reweight the quality performance category to 75 percent and the Improvement Activities performance category to 25 percent.

In a situation where the quality performance category is reweighted to zero percent, we are proposing to reweight the Promoting interoperability performance category to 75 percent and the improvement activities performance category to 25 percent.

We believe that these distributions appropriately value performance categories that require reporting on measures and measuring improvement, without disproportionately emphasizing one performance category over another. Furthermore, these performance category weights will contribute to a unified performance category reweighting policy throughout MIPS in the event of an Extreme and uncontrollable circumstance that requires the reweighting of cost and any other MIPS performance category.

We propose to codify this policy at § 414.1367(d)(2). We seek comment on these proposals.

(5) Scoring for APM Participants Reporting Through the APP

We propose that final scoring for APM participants reporting to MIPS through the APP would follow the same methodology as established for MIPS generally at § 414.1380. Specifically, we would continue to score each performance category and multiply each performance category score by the applicable performance category weight, and then calculate the sum of each weighted performance category score and apply any applicable adjustments.

We propose to codify this policy at § 414.1367(e).

(6) Performance Feedback for APM Participants Reporting Through the APP

We propose to make performance feedback available to MIPS eligible clinicians reporting through the APP according to the methods applicable to all MIPS eligible clinicians, as described in the 2017 QPP final rule (81 FR 77347).

c. MIPS Performance Category Measures and Activities

(1) Quality Performance Category (a) Background

We refer readers to §§ 414.1330 through 414.1340 and the CY 2018 Quality Payment Program final rule (82 FR 53626 through 53641) for our

previously established policies regarding the quality performance category.

In the CY 2021 PFS proposed rule, we propose to:

- Weigh the quality performance category at 40 percent for the 2023 MIPS payment year and 30 percent for the 2024 MIPS payment year, at § 414.1330(b)(4) and (5), respectively.
- Sunset the CMS Web Interface measures as a collection type for groups and virtual groups with 25 or more eligible clinicians starting with the 2021 performance period.
- Make changes to the MIPS quality measure set as described in Appendix 1 of this proposed rule, including addition of new measures, updates to specialty sets, removal of existing measures, and substantive changes to existing measures.
- Establish separate performance periods specific to administrative claims measures at § 414.1320(d)(1).
- Make changes to the CAHPS for MIPS survey to address the increased use of telehealth care.
- Expand telehealth codes used in beneficiary assignment for the CAHPS for MIPS beginning with the 2021 survey.

(b) Weight in the Final Score

Section 1848(q)(5)(E)(i)(I) of the Act, provides that 30 percent of the final score shall be based on performance for the quality performance category, in which the percentage points attributed to the final score for the quality and cost performance categories will both be equivalent at 30 percent, totaling 60 percent of the final score. The percentage points attributed to both the quality and cost performance categories are in tandem. For each year within the first five years of the MIPS program, the quality performance category performance percentage can be increased to more than 30 percent of the final score. The percentage increase of the quality performance category is equivalent to the decrease of the cost performance category.

As discussed in section IV.A.2.c.(2)(a) of this proposed rule, we propose to weight the cost performance category at 20 percent for the 2023 MIPS payment year and 30 percent for the 2024 MIPS payment year and each subsequent MIPS payment year. Accordingly, we are proposing to establish the weight of the quality performance category for the 2023 and 2024 MIPS payment years. At § 414.1330(b)(4), the percentage points attributed to performance in the quality performance category would comprise 40 percent of a MIPS eligible clinician's final score for the 2023 MIPS payment

year and at § 414.1330(b)(5), the percentage points attributed to performance in the quality performance category would comprise 30 percent of a MIPS eligible clinician's final score for the 2024 MIPS payment year and future years.

We believe that being transparent in how both the quality and cost performance category weights would be modified over the next two years of the program will allow stakeholders to better plan and anticipate how the performance category scores would be calculated in future for MIPS eligible clinicians, groups, and virtual groups as we incrementally adjust the final score weights for the quality and cost performance categories. We solicit public comment on our proposals to incrementally reduce the weight of the quality performance category as we incrementally increase the weight of the cost performance category. Particularly, our proposal to adjust the percentage points attributed to the final score in the quality performance category to be comprised of 40 percent for the 2023 MIPS payment year and 30 percent for the 2024 MIPS payment year and future years.

(c) Groups and Virtual Groups Reporting via the CMS Web Interface

At § 414.1335(a)(2), the CMS Web Interface measures is a collection type in which groups and virtual groups with 25 or more eligible clinicians are able to report data on a set of pre-determined quality measures. For the 2020 performance periods, the total number of CMS Web Interface measures required to complete reporting on is 10 CMS Web Interface measures (83 FR 59713 through 79715 and 59756). Each CMS Web Interface measure must have complete reporting (no partial reporting) on all 10 measures while quality measures in other collection types require the reporting of fewer measures. The reporting requirements for the CMS Web Interface measures are more stringent than other collection types for the quality performance category, which include reporting on a larger set of measures and a higher data completeness rate. At § 414.1335(a)(1)(i), it is established that groups and virtual groups reporting quality measures using non-CMS Web Interface measures collection types (such as Qualified Registries, Qualified Clinical Data Registries (QCDRs), electronic health records (EHRs), and Medicare Part B claims) are required to report on a minimum of 6 quality measures, including at least one outcome measure. The data completeness criteria for reporting

quality measures for Qualified Registry measures, QCDR measures, EHR measures, and Medicare Part B claims measures has a lower threshold compared to the CMS Web Interface measures. The data completeness criteria for the CMS Web Interface measures requires groups and virtual groups to report on the first 248 consecutively ranked beneficiaries in the sample for each measure (and if the sample of eligible assigned beneficiaries is less than 248, then the group or virtual group must report on 100 percent of assigned beneficiaries), and at least one measure for which there is Medicare patient data (at §§ 414.1335(a)(2) and 414.1340(c)). For the 2020 performance period, the data completeness criteria threshold for Qualified Registry measures, QCDR measures, EHR measures, and Medicare Part B claims measures is 70 percent of the MIPS eligible clinician, group, or virtual group's patients (and applicable Medicare Part B patients for Medicare Part B claims measures) that meet the measure's denominator criteria (at §§ 414.1340(a)(3) and 414.1340(b)(3)). Thus, groups and virtual groups submitting quality data through the CMS Web Interface measures report on a significantly larger number of patients compared to other collection types and such patients are identified in a sample by us (at § 414.1340(c)).

In section III.G.1.c. of this proposed rule, we discuss our proposal to revise the Medicare Shared Savings Program quality performance standard and align with the APP framework. With the proposed modifications to the Medicare Shared Savings Program quality performance standard, which include a proposal to transition to an APP for ACOs starting with the 2021 performance period as outlined in section III.G.1.b.(1) of this proposed rule, we conducted an assessment of the utilization of the CMS Web Interface measures as a collection type for groups and virtual groups participating in MIPS. As noted above, we recognize that the CMS Web Interface reporting requirements, which include the reporting on a larger set of measures and a higher data completeness rate, are more stringent than other collection types available under MIPS. Similar to the Medicare Shared Savings Program, for purposes of MIPS, we strive to align CMS Web Interface requirements across programs, where appropriate and applicable; reduce burden to MIPS eligible clinicians; create robust and meaningful quality measure sets that promote outcome based measures; and offer quality measures that are able to

adequately and effectively assess performance such as ensuring that topped out measures are removed.

In assessing the utilization of the CMS Web Interface by groups and virtual groups, there has been a substantial decrease in participation each year since the inception of MIPS in the 2017 performance year. From the 2017 to 2019 performance years, the number of groups eligible to report quality measures via the CMS Web Interface (groups registered to utilize the CMS Web Interface) decreased by approximately 45 percent. Similarly, the number of groups utilizing the CMS Web Interface as a collection type has decreased by approximately 40 percent from the 2017 to 2019 performance years. It is not clear as to why groups and virtual groups are not seeking to participate in MIPS by submitting quality data for CMS Web Interface Measures. There could be various reasons explaining the decrease in CMS Web Interface participation such as MIPS offering several collection types that can be utilized by any individual MIPS eligible clinician, group, or virtual group to meet program requirements; the CMS Web Interface measure reporting requirements may be burdensome compared to other collection types/submission types; the measure set is limited to primary care; groups and virtual groups may have a preference to select their own measures to have performance assessed instead of a pre-determined measure set; or as a result of the CMS Web Interface measures being topped out, it may deter groups and virtual groups from participating because they would not fiscally benefit to be compared and assessed when there is little or no data variation in performance across ACOs, groups, and virtual groups.

Given the above factors, we considered the following two options in our assessment: Continue the utilization of the CMS Web Interface measures solely for groups and virtual groups while ACOs transition to APP participation; or sunset the utilization for the CMS Web Interface measures as a collection type for groups and virtual groups. Groups and virtual groups account for less than 20 percent of organizations utilizing the CMS Web Interface measures while ACOs participating in the Medicare Shared Savings Program or Next Generation ACO Model account for more than 80 percent. With an expected 80 percent reduction if our proposed revisions to the quality performance standard under the Shared Savings Program are finalized and a continued decrease in groups and virtual groups seeking to

report quality data on CMS Web Interface measures, it is not fiscally viable, feasible, or sustainable for MIPS to continue to make available the CMS Web Interface measures as a collection type/submission type. A reduction in the number of organizations submitting quality data on CMS Web Interface measures does not equate to the reduction in direct costs associated with operating and maintaining the CMS Web Interface measures. To operate and maintain the CMS Web Interface measures solely for groups and virtual groups, there would be an increase in cost and needed resources under MIPS associated with the items such as the establishment and maintenance of CMS Web Interface benchmarks, assignment and sampling, technical support, and education and outreach; thus, there would be proportionally higher costs associated with the operationalization and maintenance of the CMS Web Interface with a significantly smaller number of groups and virtual groups utilizing the CMS Web Interface measures as a collection type/submission type.

In assessing the second option to sunset the CMS Web Interface measures as a collection type starting with the 2021 performance year, we would be aligning with the Medicare Shared Savings Program proposal to no longer utilize the CMS Web Interface as a means for assessing and scoring ACOs, groups, and virtual groups under the CMS Web Interface measures. We recognize that the sunset of the CMS Web Interface for groups and virtual groups may be burdensome to current groups and virtual groups submitting quality data on CMS Web Interface measures. Such groups and virtual groups would need to select a different collection type/submission type and redesign their systems to be able to interact with the new collection type/submission type. The timeframe for groups and virtual groups to select a new collection type/submission type and redesign their systems may be perceived as burdensome.

We believe that groups and virtual groups would be able to select a different collection type/submission type, including at least 6 quality measures that are similar to previously established CMS Web Interface measures and reflect their specialty, and prepare for the 2021 reporting period in advance of the reporting period starting in January of 2022. While there may be an initial increase in burden for current groups and virtual groups utilizing the CMS Web Interface measures having to transition to the utilization of a different collection type/submission type, we

recognize that we would also be reducing reporting requirements by no longer requiring groups and virtual groups to have to completely report on all pre-determined 10 CMS Web Interface measures; groups and virtual groups would be able to select their own measures to report, would be reporting data on at least 6 measures, and data completeness threshold would be 70 percent for each measure, which is a reduction in program requirements compared to completed reporting required for all CMS Web Interface measures. We believe that groups and virtual groups would be able to transition to the utilization of an available alternative collection type for the 2021 performance period. The type of data collected by groups and virtual groups for the 2020 performance period would be able to be captured by one of the available collection types such as an eCQM or MIPS CQM for the 2021 performance period. The 10 CMS Web Interface measures that are required for reporting under the 2020 performance period have an eCQM and MIPS CQM equivalent measure. For the 2021 performance period, there are 10 eCQMs and 9 CQMs that are equivalent to the 10 CMS Web Interface measures. We believe that groups and virtual groups would be able to identify at least 6 equivalent eCQMs or MIPS CQMs (or a combination) that capture the same type of data collected for the measures used in the CMS Web Interface. Also, such transition for groups and virtual groups could potentially be more beneficial. For example, if a measure from a different collection type (for example, MIPS CQMs) meets data completeness but may not meet case minimum, the measure would receive a score of 3; whereas, under the CMS Web Interface, any measure that did not meet reporting requirements would receive a score of 0.

The sunset of the CMS Web Interface measures would reduce burden on groups and virtual groups while aligning program requirements and scoring policies for MIPS and the Medicare Shared Savings Program, and removing CMS Web Interface measures that do not provide a meaningful means of assessing performance across groups, virtual groups, and ACOs. With the CMS Web Interface measures being topped out as noted above, we strive to remove measures that are topped out

and establish a set of robust and meaningful measure sets that are available under the other collection types. We believe that the benefits groups and virtual groups would reap from transitioning to the utilization of other collection types starting with the 2021 performance year outweigh the initial disruption that would be experienced when the CMS Web Interface measures would be sunset. Based on our assessment, we are proposing at § 414.1325(c)(1) *et seq.* to sunset the CMS Web Interface measures as a collection type/submission type starting with the 2021 performance period. Specifically, at § 414.1305, we are proposing to modify the definition of the terms collection type and submission type to remove the CMS Web Interface measures as an available option starting with the 2023 payment year. We propose to modify the definition of collection type to mean a set of quality measures with comparable specifications and data completeness criteria, as applicable, including, but not limited to: Electronic clinical quality measures (eCQMs); MIPS Clinical Quality Measures (MIPS CQMs); QCDR measures; Medicare Part B claims measures and for the 2019 through 2022 MIPS payment years, CMS Web Interface measures; the CAHPS for MIPS survey; and administrative claims measures. We propose to revise the definition of “submission type” to mean the mechanism by which the submitter type submits data to CMS, including, but not limited to: Direct; log in and upload; log in and attest; Medicare Part B claims; and for the 2019 through 2022 MIPS payment years, the CMS Web Interface. We solicit comment on this proposal.

(d) Selection of MIPS Quality Measures

Previously finalized MIPS quality measures can be found in the CY 2020 PFS final rule (84 FR 63205 through 63513); CY 2019 PFS final rule (83 FR 60097 through 60285); CY 2018 Quality Payment Program final rule (82 FR 53966 through 54174); and in the CY 2017 Quality Payment Program final rule (81 FR 77558 through 77816). Proposed changes to the MIPS quality measure set as described in Appendix 1 of this proposed rule, include the following: Addition of new measures; updates to specialty sets; removal of

existing measures, and substantive changes to existing measures. For the 2021 performance period, we are proposing a measure set of 206 MIPS quality measures.

The new MIPS quality measures proposed for inclusion in MIPS for the 2021 performance period and future years are found in Table Group A of Appendix 1 of this proposed rule. For the 2021 performance year, we are proposing 2 new administrative claims outcome measures. In addition to the establishment of new individual MIPS quality measures, we also develop and maintain specialty measure sets to assist MIPS eligible clinicians with selecting quality measures that are most relevant to their scope of practice. Our proposals for modifications to existing specialty sets and new specialty sets are outlined in Table Group B of Appendix 1 of this proposed rule. Specialty sets may include: New measures, previously finalized measures with modifications, previously finalized measures with no modifications, the removal of certain previously finalized quality measures, or the addition of existing MIPS quality measures. Please note that the specialty and subspecialty sets are not inclusive of every specialty or subspecialty.

On January 6, 2020,⁷⁹ we announced that we would be accepting recommendations for potential new specialty measure sets or revisions to existing specialty measure sets for year 5 of MIPS under the Quality Payment Program. These recommendations were based on the MIPS quality measures finalized in the CY 2019 PFS final rule, the 2019 Measures Under Consideration list, and provides recommendations to add or remove the current MIPS quality measures from existing specialty sets, or provides recommendations for the creation of new specialty sets. All specialty set recommendations submitted for consideration were assessed and vetted, and as a result, the recommendations that we agree with are being proposed in this proposed rule.

⁷⁹ Listserv messaging was distributed through the Quality Payment Program listserv on January 6, 2020, titled: “CMS is Soliciting Stakeholder Recommendations for Potential Consideration of New Specialty Measure and/or Revisions to the Existing Specialty Measure Sets for the 2021 Program Year of Merit-based Incentive Payment System (MIPS).”

In addition to establishing new individual MIPS quality measures and modifying existing specialty sets and new specialty sets as outlined in Tables Group A and Group B of Appendix 1 of this proposed rule, we refer readers to Table Group C of Appendix 1 of this proposed rule for a list of quality measures and rationales for removal. For the 2021 performance period, we are proposing to remove 14 MIPS quality measures: 2 MIPS quality measures that are extremely topped out; 1 MIPS quality measure that is duplicative to another current quality measure; 1 MIPS quality measure that is duplicative to one of the new proposed MIPS quality measures; 2 MIPS quality measures that do not align with the Meaningful Measures Initiative; 5 MIPS quality measures that are no longer stewarded or maintained; 1 MIPS quality measure that does not meet current clinical guidelines; and 2 MIPS quality measures that are under the topped out lifecycle. We have continuously communicated to stakeholders our desire to reduce the number of process measures within the MIPS quality measure set. We believe our proposal to remove the quality measures outlined in Table Group C will lead to a more parsimonious inventory of meaningful, robust measures in the program, and that our approach to remove measures should occur through an iterative process that will include an annual review of the quality measures to determine whether they meet our removal criteria.

Lastly, MIPS quality measures with proposed substantive changes can be found in Table Group D of Appendix 1 of this proposed rule. We are proposing substantive changes to 112 MIPS quality measures. On an annual basis, we review the established MIPS quality measure inventory to consider updates to the measures. Possible updates to measures may be minor or substantive. Section 1848(q)(2)(D)(i)(II)(cc) of the Act requires all substantive measure changes to be proposed and identified through notice-and-comment rulemaking. In the CY 2017 Quality Payment Program final rule (81 FR 77137), we determined that substantive changes to measures (that is, measure specifications, measure title, and domain modifications) would be identified during the rulemaking process while maintenance changes that do not substantively change the intent of the measure (that is, updated diagnosis and procedure codes, definitions, and changes to patient population exclusions) would not be included in the rulemaking process.

We note that changes to measure Q134, Prevention Care and Screening: Screening for Depression and Follow-Up Plan (eCQM Specifications and CMS Web Interface Measure Specifications collection types), specifically the removal of SNOMED codes, were published in the eCQI Resource Center and the Value Set Authority Center (in May of 2018 for the eCQM Specifications) and on the CMS website (in December of 2018 for the CMS Web Interface Measure Specifications). While the current cycle of measure updates to MIPS quality measures is separate from the eCQM annual update process, we inadvertently recognized such update allowed MIPS eligible clinicians to meet performance of a follow-up plan by rescreening the patient who has a positive depression screen with an additional standardized depression screening tool. The change to the measure was continued for CY 2020. As a result, such changes were not identified during the CY 2019 PFS or CY 2020 PFS rulemaking cycles. The changes to measure Q134 (eCQM Specifications and CMS Web Interface Measure Specifications collection types) impact performance periods starting with 2019. For the 2019 and 2020 performance periods, measure Q134 applicable to the eCQM Specifications and CMS Web Interface Measures Specifications will be suppressed from scoring. To adequately capture the substantive changes to measure Q134 (eCQM Specifications and CMS Web Interface Measure Specifications collection types) through rulemaking for the 2021 performance period, we are identifying the substantive changes for this MIPS quality measure as outlined in Table Group D of Appendix 1 of this proposed rule.

(e) MIPS Performance Period

(i) Establishing Separate Performance Periods for Administrative Claims Measures Under the Quality Performance Category Beginning With the 2023 MIPS Payment Year

In the CY 2019 PFS final rule (83 FR 59745), we established at § 414.1320(d)(1) that beginning with the 2022 MIPS payment year, the performance period for the quality and cost performance categories is the full calendar year (January 1 through December 31) that occurs 2 years prior to the applicable MIPS payment year. We noted that we established a one year performance period for measures in the quality performance category because a 1-year performance period would provide statistically larger sample sizes and more accurate and actionable

information. As discussed in Table Group A of Appendix 1 of this proposed rule, we propose to add a new administrative claims measure of risk-standardized complication rate following elective primary total hip arthroplasty and/or total knee arthroplasty. This measure was developed and tested using a performance period that was longer than a full calendar year in order to provide larger sample sizes, and more accurate and actionable information. Beginning with the 2021 performance year, this measure would have a 3-year performance period (consecutive 36-month timeframe) that would start on October 1 of the calendar year 3 years prior to the applicable performance year and conclude on September 30 of the calendar year of the applicable performance year, and proceeding with a 3-month numerator assessment period (capturing complication outcomes) followed by a 2-month claims run-out period. For example, the 3-year (36 consecutive months) performance period for this measure would span from October 1, 2018 to September 30, 2021 with a 90-day numerator assessment period followed by a 60-day claims run-out period.

To account for this measure and other future administrative claims measures that may have a performance period differing from 1 full calendar year, we propose to modify the definition of the performance period for the quality and cost performance categories at § 414.1320(d)(1) to be as follows: Beginning with the 2023 MIPS payment year, the performance period for the quality and cost performance categories is the full calendar year (January 1 through December 31) that occurs 2 years prior to the applicable MIPS payment year, except as otherwise specified for administrative claims-based measures in the MIPS final list of quality measures described in § 414.1330(a)(1). We note that while we have established a single performance period for measures and activities within each performance category in the MIPS program, we have established measure-specific performance periods in other programs, such as in the hospital value-based purchasing program, which includes measures of various performance periods (84 FR 42394 through 42395). We continue to believe that establishing a single performance period for measures requiring the submission of data optimizes operational efficiency for MIPS eligible clinicians, groups, and virtual groups that submit data on such measures. However, administrative

claims measures (proposal to add 2 new administrative claims measures found in Table Group A of Appendix 1 of this proposed rule: Hospital-Wide, 30-Day, All-Cause Unplanned Readmission (HWR) Rate, and Risk-standardized Complication Rate (RSCR) Following Elective Primary Total Hip Arthroplasty (THA) and/or Total Knee Arthroplasty (TKA)); and proposal to remove the All-Cause Readmission measure found in Table Group C of Appendix 1 (was the only administrative claims-based measure) do not require the submission of data and are calculated by CMS based on administrative data. Thus, we believe that a different performance period should be considered on a measure-by-measure level for administrative claims measures. We seek public comment on our proposal to modify the definition of performance period for the quality and cost performance categories that would establish a separate performance period for administrative claims measures under the quality performance category.

(f) Quality Data Submission Criteria

(i) Performance Criteria for Quality Measures for Groups Electing To Report Consumer Assessment of Healthcare Providers and Systems (CAHPS) for MIPS Survey

We refer readers to the CY 2018 Quality Payment Program final rule (82 FR 53629 through 53632) for previous finalized policies for the CAHPS for MIPS survey, specifically regarding the Summary Survey Measures (SSMs).

To address the PHE for the COVID-19 pandemic and the increased use of telehealth care, we propose the following changes to our policies related to the CAHPS for MIPS Survey:

- We propose to integrate one telehealth item into the CAHPS for MIPS Survey. Specifically, we propose to add a survey-based measure on telehealth that assesses patient-reported usage of telehealth services (for example, phone or video visit) to the performance year 2021 CAHPS for MIPS Survey.

- We also propose revisions to the CAHPS for MIPS Survey cover page to include a reference to care received in telehealth settings. This may help to ensure that patients who respond to the survey are reflecting on experiences of the care they received via telehealth in their responses. We are considering such changes for the performance year 2021 CAHPS for MIPS Survey administration.

To clarify the instructions in the CAHPS for MIPS Survey, we propose revisions to the instructions in the “Your Care From Specialists in the Last

6 Months” section of the CAHPS for MIPS Survey to clarify the inclusion of the provider named in Question 1 of the survey. We are considering such changes for the performance year 2021 CAHPS for MIPS Survey administration.

We refer readers to the Collection of Information Requirements section VI. of this rule for additional information.

(ii) CAHPS for MIPS Patient Assignment

Section 1834(m) of the Act specifies the payment amounts and circumstances under which Medicare makes payment for a discrete set of services, all of which must ordinarily be furnished in-person, when they are instead furnished using interactive, real-time telecommunication technology. When furnished under the telehealth rules, these specified Medicare telehealth services are reported using the same codes used for the “face-to-face” services, but are furnished using audio/video, real-time, interactive communications technology instead of in person. As such, the majority of the codes for primary care services included in the additional telehealth services added in the March 31st COVID-19 IFC for purposes of the PHE for COVID-19 pandemic are already included in the definition of primary care services for purposes of the MIPS assignment methodology for the CAHPS for MIPS survey (82 FR 77168 through 77169; and 82 FR 53646 through 53647). At § 414.1305, we are proposing to codify the definition of primary care services for purposes of MIPS assignment methodology for the CAHPS for MIPS survey as follows:

- CPT codes:
 - ++ 99201 through 99215 (codes for office or other outpatient visit for the evaluation and management of a patient); 99304 through 99318 (codes for professional services furnished in a nursing facility, excluding professional services furnished in a SNF for claims identified by place of service (POS) modifier 31); 99319 through 99340 (codes for patient domiciliary, rest home, or custodial care visit); 99341 through 99350 (codes for evaluation and management services furnished in a patient’s home for claims identified by POS modifier 12); 99487, 99489, and 99490 (codes for chronic care management); and 99495 and 99496 (codes for transitional care management services); and

- ++ Beginning with the 2023 MIPS payment year, 99421, 99422, and 99423 (codes for online digital evaluation and management services (e-visit)); 99441, 99442, and 99443 (codes for telephone evaluation and management services); and 96160 and 96161 (codes for

Administration of Health Risk Assessment).

- HCPCS codes:
 - ++ G0402 (code for the Welcome to Medicare visit); and G0438 and G0439 (codes for the annual wellness visits); and

- ++ Beginning with the 2023 MIPS payment year, G2010 (code for remote evaluation of patient video/images); and G2012 (code for virtual check-in).

In the March 31st COVID-19 IFC, we also established flexibilities and separate payment for certain services that are furnished virtually using communication technologies, but that are not considered Medicare telehealth services such as virtual check-ins and e-visits. We also established separate payment for telephone E/M services codes during the PHE. The communications technology-based services (CTBS) and the telephone E/M services are not currently included in the MIPS assignment methodology for the CAHPS for MIPS survey.

We believe it is critical to include codes for CTBS and telephone E/M services, as identified and discussed later in this section, in the definition of primary care services to ensure these services are included in our determination of where beneficiaries receive the plurality of their primary care for purposes of beneficiary assignment. Such inclusion ensures that the assignment methodology appropriately reflects the expanded use of technology that is helping people who need routine care during the PHE for the COVID-19 pandemic and allowing vulnerable beneficiaries and beneficiaries with mild symptoms to remain in their homes, while maintaining access to the care they need. By including services provided virtually, either through telehealth or other uses of communications technology, we would ensure that this care is appropriately reflected in our consideration of the plurality of care used to assign beneficiaries to groups and virtual groups.

We have added new services to the separately billable CTBS under the Physician Fee Schedule over the past several years and a result of the PHE, we expect that the utilization of communications technology-based services will substantially increase during the PHE for the COVID-19 pandemic and thereafter. We believe that clinicians are increasingly using such services as a key component of their ongoing primary care. In an effort to address the PHE and use of telehealth, and to maintain alignment with the Shared Savings Program, we propose to integrate the same telehealth

CPT and HCPCS codes that are used for purposes of assigning beneficiaries to Shared Savings Program ACOs into the set of primary care service codes that are used for patient assignment to MIPS groups. We are proposing to revise the definition of primary care services used in the MIPS assignment methodology for the 2021 CAHPS for MIPS survey, and for any subsequent performance year, to include the following additions: (1) CPT codes: 99421, 99422, and 99423 (codes for online digital E/M services (e-visits)); 99441, 99442, and 99443 (codes for telephone E/M services); and 96160 and 96161 (codes for administration of health risk assessment); and (2) HCPCS codes: G2010 (code for remote evaluation of patient video/images) and G2012 (code for virtual check-in). It should be noted that the proposed inclusion of such codes in the MIPS assignment methodology for the CAHPS for MIPS survey aligns with the definition of primary care services used for purposes of beneficiary assignment under the Medicare Shared Savings Program, which was amended in the May 8th COVID IFC to ensure these codes would be included in determining beneficiary assignment for performance year 2020 and any subsequent performance year that starts during the PHE for the COVID-19 pandemic (85 FR 27583). We refer readers to the May 8th COVID-19 IFC (85 FR 27582 through 27586) for a detailed description of the codes that were added to the definition of primary care services under the Medicare Shared Savings Program. We also refer readers to the 2018 PFS final rule (82 FR 53007 through 53011) for a detailed description of the primary care services codes for Administration of Health Risk Assessment.

The services represented by the codes listed above are being used in place of similar E/M services, the codes for which are already included in the list of codes used for assignment. As a result, we believe these services are an important component of primary care and it is appropriate to include these codes in the definition of primary care services used for assignment for the CAHPS for MIPS survey. It should be noted that the remote evaluation of patient video/images and virtual check-in codes, and the online digital E/M service (e-visit) codes are not separately billable by a clinician if they are related to a visit within the past 7 days or lead to a visit within the following 24 hours or next available appointment. The only codes that are newly billable during the PHE for the COVID-19 pandemic pertain to the telephone E/M services.

We believe that clinicians are increasingly using communications

technology-based services as a key component of their ongoing primary care. We expect that the utilization of such services will substantially increase not only during the PHE for the COVID-19 pandemic, but also thereafter. Accordingly, we propose to include virtual primary care visits and telehealth visits to determine patient assignment to groups for purposes of the CAHPS for MIPS Survey for 2021 and subsequent performance years.

(2) Cost Performance Category

We refer readers to the CY 2017 and CY 2018 Quality Payment Program final rules, and the CY 2019 and CY 2020 PFS final rules (81 FR 77162 through 77177, 82 FR 53641 through 53648, 83 FR 59765 through 59776, and 84 FR 62959 through 62968, respectively) for a description of the statutory basis and existing policies pertaining to the cost performance category.

In this proposed rule, we are proposing to weight the cost performance category at 20 percent for MIPS payment year 2023 and 30 percent for MIPS payment year 2024 and all subsequent MIPS payment years.

(a) Weight in the Final Score

Under section 1848(q)(5)(E)(i)(II)(aa) of the Act, in general, 30 percent of the MIPS final score shall be based on the cost performance category. However, section 1848(q)(5)(E)(i)(II)(bb) of the Act gives the Secretary discretion with respect to the weight of the cost performance category for the first 5 years of MIPS. Specifically, under that section, for the first year for which the MIPS applies to payments (the 2019 MIPS payment year), not more than 10 percent of the MIPS final score shall be based on the cost performance category; and for each of the second, third, fourth, and fifth years for which the MIPS applies to payments (the 2020, 2021, 2022, and 2023 MIPS payment years, respectively), not less than 10 percent and not more than 30 percent of the MIPS final score shall be based on the cost performance category. Additionally, section 1848(q)(5)(E)(i)(II)(bb) of the Act states that it shall not be construed as preventing the Secretary from adopting a 30 percent weight for the second, third, fourth, or fifth year if the Secretary determines, based on information posted under section 1848(r)(2)(I) of the Act, that sufficient cost measures are ready for adoption for use under the cost performance category for the relevant performance period. The weights adopted in prior rulemaking for the cost performance category are codified under § 414.1350(d).

In the CY 2020 PFS proposed rule (84 FR 40752), we proposed to incrementally increase the weight of the cost performance category from the existing weight of 15 percent for the 2021 MIPS payment year to 30 percent beginning with the 2024 MIPS payment year as required by section 1848(q)(5)(E)(i)(II)(aa) of the Act. We proposed to incrementally increase the weight of the cost performance category by 5 standard increments each year through the 2024 MIPS payment year, reflecting a weight of 20 percent for the 2022 MIPS payment year, 25 percent for the 2023 MIPS payment year, and 30 percent for the 2024 MIPS payment year and each subsequent MIPS payment year (84 FR 40752 through 40753).

As cost measures are still being developed, we recognized that clinicians may not have the same level of familiarity or understanding of cost measures as they do with the comparable quality measures. To implement a gradual and predictable approach of increasing the weight of the cost performance category each year would provide clinicians with adequate time to prepare for a 30 percent weight and enable clinicians to gain experience with the cost measures while they represent a smaller portion of the MIPS final score. We recognized that there may be greater understanding of the measures in the cost performance category as clinicians obtain more experience with the measures (84 FR 62959).

After considering the comments we received, we did not finalize our proposals, and instead established at § 414.1350(d)(3) that the weight of the cost performance category will remain at 15 percent of the MIPS final score for MIPS payment years 2021 and 2022 (84 FR 62961). We stated that we expected to propose a weight for the cost performance category for the 2023 MIPS payment year in the CY 2021 PFS proposed rule.

In developing this proposed rule, we considered a range of numerical options for the weight of the cost performance category for the 2023 MIPS payment year, with the intention of reaching a weight of 30 percent no later than the 2024 MIPS payment year as required by the statute. The first option we considered was to maintain the cost performance category weight at the status quo for an additional year, in which it would remain at 15 percent for the 2023 MIPS payment year and then increase to 30 percent beginning with the 2024 MIPS payment year, which would be a 15 percent increase in the weight from 2023 to 2024. We considered such option as a result of the

COVID–19 public health emergency in order to not increase the weight of the cost performance category during an unprecedented time. However, by maintaining the weight at 15 percent for the 2023 MIPS payment year, the weight would increase two-fold to 30 percent beginning with the 2024 MIPS payment year, which we believe would pose a significant burden to stakeholders and would eliminate any transition of an incremental increase in the cost performance category weight. We believe that the first option would be more burdensome than beneficial to clinicians as they continue to gain more experience with the cost measures and mitigate through the COVID–19 public health emergency.

The second option we considered was to increase the weight from 15 percent for MIPS payment years 2021 and 2022 to 20 percent for the 2023 MIPS payment year in order to provide a minimal transition that would enable clinicians to continue to become familiar with the cost measures and be prepared for the final increase in the weight of the cost performance category from 20 percent to 30 percent beginning with the 2024 MIPS payment year. We believe that such approach would allow us to reach the statutorily required weight of 30 percent by the 2024 MIPS payment year while providing clinicians with an eased incremental transition starting with the 2023 MIPS payment year and accounting for the consequential impact of the increased clinical costs associated with the COVID–19 public health emergency. For the 2023 MIPS payment year, we sought to identify a smaller increase in weight while enabling clinicians to gain more experience and familiarity with the cost measures amidst the mitigation of the COVID–19 public health emergency.

After considering these options, we are proposing to establish at § 414.1350(d)(4) the weight of the cost performance category to be 20 percent of the MIPS final score for the 2023 MIPS payment year and at § 414.1350(d)(5) the weight of the cost performance category to be 30 percent for the 2024 MIPS payment year and each subsequent MIPS payment year.

We solicit public comment on our proposal, the other options we considered, and any additional options for the weight of the cost performance category that commenters believe we should consider, such as a 22.5 percent weight for the 2023 MIPS payment year and a 30 percent weight beginning with the 2024 MIPS payment year (a 7.5 percent increase for each year). In general, we prefer to consider whole numbers for performance category

weights, but are interested in obtaining feedback from commenters on the weighing of the cost performance category to have an increase of 7.5 percent for 2 consecutive years for the 2023 and 2024 MIPS payment years.

(b) Addition of Telehealth Services to Previously Established Measures for the Cost Performance Category Beginning With the 2021 Performance Period

For the 2021 performance period and future performance periods, we propose to add costs associated with telehealth services to the previously established cost measures. For each cost measure, the telehealth services we propose to add are directly relevant to the intent of the measure. We refer readers to Table 47 in the CY 2020 PFS final rule (84 FR 62979) for a summary list of the cost measures that have been established for the 2021 performance period and future performance periods, as well as the related discussions in the CY 2019 PFS final rule (83 FR 59767 through 83 FR 59774) and the CY 2020 PFS final rule (84 FR 62962 through 62979). Many services included on the Medicare telehealth service list are billed as telehealth services through the use of a modifier appended to the same code that is used when the service is furnished in person. These codes are already included in the cost measures; however, the additional codes we propose to add are not currently included for a few reasons. First, some codes we propose to add to the cost measures were newly included on the Medicare telehealth services list through the March 31st COVID–19 IFC (85 FR 19230) and subsequent sub-regulatory processes as established in the May 8th COVID–19 IFC (85 FR 27550). Second, some codes we propose to add were not previously considered for inclusion because they were not billed widely enough to be found in empirical claims-based data. This is because our approach for determining clinically related services to include in cost measures, which we established in the CY 2019 PFS final rule (83 PFS 59767 through 59771), relies on empirical data to examine existing practice patterns, in addition to clinical expertise. Having observed an increase in the use of these codes, including those that existed before the public health emergency, we are proposing to add them to adapt the measures to this change in practice patterns. The codes we propose to add represent service categories already captured in the measures (*e.g.*, E/M, follow up consultation following hospital discharge); thus, we do not consider their addition to alter the intent of the measures or capture a new

category of costs. Updated measure specifications with the added telehealth codes are available on the CMS website at <http://www.cms.gov/Medicare/Quality-Payment-Program/Quality-Payment-Program/Give-Feedback>.

We solicit public comment on this proposal.

(3) Improvement Activities Performance Category

(a) Background

For previous discussions on the background of the improvement activities performance category, we refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77177 through 77178), the CY 2018 Quality Payment Program final rule (82 FR 53648 through 53661), the CY 2019 PFS final rule (83 FR 59776 through 59777), and the CY 2020 PFS final rule (84 FR 62980 through 62990). We also refer readers to § 414.1305 for the definition of improvement activities and attestation, § 414.1320(b)(2) for the performance period, § 414.1325 for the data submission requirements, § 414.1355 for the inventory and final score, § 414.1360 for the data submission criteria, § 414.1365 for the subcategories, § 414.1380 for the scoring, § 414.1380(b)(3)(i) through (iii) for weighting, § 414.1380(b)(3)(iv) and § 414.1380(b)(3)(x) for patient-centered medical home, § 414.1380(b)(3)(vii) for exceptions, and § 414.1380(b)(3)(ix) for APM.

In this proposed rule, beginning with the CY 2021 performance period and future years, we are proposing: (1) Changes to the Annual Call for Activities: An exception to the nomination period timeframe during a PHE; and a new criterion for nominating new improvement activities; (2) a process for HHS-nominated improvement activities; and (3) to modify two existing improvement activities. These proposals are discussed in more detail in this proposed rule.

(b) Improvement Activities Inventory

(i) Annual Call for Activities

In the CY 2017 Quality Payment Program final rule (81 FR 77190), for the transition year of MIPS, we implemented the initial improvement activities Inventory and took several steps to ensure it was inclusive of activities in line with statutory and program requirements. For Year 2, we provided an informal process for submitting new improvement activities or modifications for potential inclusion in the comprehensive improvement activities Inventory for the Quality Payment Program Year 2 and future

years through subregulatory guidance (https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/MMS/Downloads/Annual-Call-for-Measures-and-Activities-for-MIPS_Overview-Factsheet.pdf). In the CY 2018 Quality Payment Program final rule (82 FR 53656 through 53659), for Year 3 and future years, we finalized a formal Annual Call for Activities process for adding possible new activities or providing modifications to the current activities in the improvement activities Inventory, including information required to submit a nomination form similar to the one we utilized for Year 2 (82 FR 53656 through 53659). It is important to note that in order to submit a request for a new activity or a modification to an existing improvement activity the stakeholder must submit a nomination form available at www.qpp.cms.gov during the Annual Call for Activities.

(A) Timeframe for the Annual Call for Activities

(aa) Currently Adopted Timeframe

In the CY 2017 Quality Payment Program final rule (81 FR 77190), for the transition year of MIPS, we implemented the initial improvement activities Inventory and took several steps to ensure it was inclusive of activities in line with statutory and program requirements. For Year 2, we provided an informal process for submitting new improvement activities or modifications for potential inclusion in the comprehensive improvement activities Inventory for the Quality Payment Program Year 2 and future years through subregulatory guidance (https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/MMS/Downloads/Annual-Call-for-Measures-and-Activities-for-MIPS_Overview-Factsheet.pdf). In the CY 2018 Quality Payment Program final rule (82 FR 53656 through 53659), for Year 3 and future years, we finalized a formal Annual Call for Activities process for adding possible new activities or providing modifications to the current activities in the improvement activities Inventory, including information required to submit a nomination form similar to the one we utilized for Year 2 (82 FR 53656 through 53659). It is important to note that in order to submit a request for a new activity or a modification to an existing improvement activity the stakeholder must submit a nomination form available at www.qpp.cms.gov during the Annual Call for Activities.

In the CY 2019 PFS final rule (83 FR 59781 through 59782), we finalized to

change the performance year for which nominations of prospective new and modified improvement activities would apply, such that beginning with the CY 2019 performance period and for future years, improvement activities nominations received in a particular year will be vetted and considered for the next year's rulemaking cycle for possible implementation in a future year. In addition, we finalized to change the submission timeframe for the Annual Call for Activities from February 1st through March 1st to February 1st through June 30th, providing approximately 4 additional months for stakeholders to submit nominations beginning with the CY 2019 performance period.

(bb) Proposed Exception During Public Health Emergencies

The COVID-19 pandemic was deemed a public health emergency (PHE) by the Secretary of the Department of Health and Human Services. Information regarding the PHE for the COVID-19 pandemic is available at <https://www.phe.gov/emergency/news/healthactions/phe/Pages/default.aspx>. This unprecedented PHE has brought to our attention the necessity of having the flexibility to consider nominations of new improvement activities to the Inventory outside the established Annual Call for Activities nomination period. We believe having the flexibility to consider nominations during a PHE is important because of the nature of a PHE; we want the ability to consider relevant improvement activities while the emergency is ongoing. We refer readers to the CY 2019 PFS final rule (83 FR 59779) for a complete definition of PHE and its application to inclusion criteria for new improvement activities.

Therefore, beginning with the CY 2021 performance period, we are proposing to make an exception to the established timeframe, such that during a PHE, stakeholders can nominate improvement activities outside of the established Annual Call for Activities timeframe. Instead of only accepting nominations and modifications submitted February 1st through June 30th each year, we would accept nominations for the duration of the PHE as long as the improvement activity is still relevant. No other aspects of the Annual Call for Activities process would be affected (for example, criteria for nominating improvement activities, considerations for selection of improvement activities, or weighting policies would all still apply). We continue to believe it is important for stakeholders to be able to comment on

improvement activities. Therefore, any improvement activity considered for inclusion in the Inventory would still be finalized through a future rulemaking. We invite public comments on our proposal.

(B) Criteria for Nominating New Improvement Activities

In the CY 2019 PFS final rule (83 FR 59778 through 59779), we adopted one new criterion and removed a criterion from the improvement activities nomination criteria. We also clarified our considerations in selecting improvement activities.

(aa) Currently Adopted Criteria

In the CY 2017 Quality Payment Program final rule (81 FR 77190 through 77195), we discussed guidelines for the selection of improvement activities. In the CY 2018 Quality Payment Program final rule, we formalized the Annual Call for Activities process for Year 3 and future years and added additional criteria; stakeholders should apply one or more of the below criteria when submitting nominations for improvement activities (82 FR 53660). In addition, in the CY 2019 PFS final rule (83 FR 59779) we finalized to add a "public health emergency as determined by the Secretary" to the criterion below.

- Relevance to an existing improvement activities subcategory (or a proposed new subcategory);
- Importance of an activity toward achieving improved beneficiary health outcomes;
- Importance of an activity that could lead to improvement in practice to reduce health care disparities;
- Aligned with patient-centered medical homes;
- Focus on meaningful actions from the person and family's point of view;
- Support the patient's family or personal caregiver;
- Representative of activities that multiple individual MIPS eligible clinicians or groups could perform (for example, primary care, specialty care);
- Feasible to implement, recognizing importance in minimizing burden, especially for small practices, practices in rural areas, or in areas designated as geographic HPSAs by HRSA;
- Evidence supports that an activity has a high probability of contributing to improved beneficiary health outcomes;
- Include a public health emergency as determined by the Secretary; or
- CMS is able to validate the activity.

(bb) Proposed New Criteria

In addition to the aforementioned considerations, when considering

improvement activities for possible inclusion in MIPS, we propose that beginning with the 2021 Call for Activities, MIPS improvement activities submitted should be linked to existing and related quality and cost measures, as applicable and feasible. Stakeholders that select this particular criteria would be required to provide a rationale describing how they believe their improvement activity correlates to other performance category measures as a part of the Call for Activities. We believe that when possible, it is important to establish a strong linkage between quality, cost, and improvement activities.

Therefore, we are proposing to adopt an additional criterion entitled “Include activities which can be linked to existing and related MIPS quality and cost measures, as applicable and feasible” to the criteria for nominating new improvement activities beginning with the CY 2021 performance period and future years. If our proposal to add one criterion is adopted as proposed, stakeholders should apply one or more of the below criteria when submitting nominations for improvement activities beginning with the CY 2021 performance period and future years:

- Relevance to an existing improvement activities subcategory (or a proposed new subcategory);
 - Importance of an activity toward achieving improved beneficiary health outcomes;
 - Importance of an activity that could lead to improvement in practice to reduce health care disparities;
 - Aligned with patient-centered medical homes;
 - Focus on meaningful actions from the person and family’s point of view;
 - Support the patient’s family or personal caregiver;
 - Representative of activities that multiple individual MIPS eligible clinicians or groups could perform (for example, primary care, specialty care);
 - Feasible to implement, recognizing importance in minimizing burden, especially for small practices, practices in rural areas, or in areas designated as geographic HPSAs by HRSA;
 - Evidence supports that an activity has a high probability of contributing to improved beneficiary health outcomes;
 - Include a public health emergency as determined by the Secretary;
 - Include activities which can be linked to existing and related MIPS quality and cost measures, as applicable and feasible; or
 - CMS is able to validate the activity.
- We invite public comment on our proposal.

(ii) HHS-Nominated Improvement Activities

(A) Background

As stated above in section IV.A.3.c.(3)(b)(i)(A)(bb) of this proposed rule titled “Proposed Exception During Public Health Emergencies,” this unprecedented PHE has brought to our attention the necessity of having the flexibility to consider nominations of new improvement activities to the Inventory outside the Annual Call for Activities nomination period and process.” We also believe that we should have the flexibility to nominate activities from within HHS. The federal government is uniquely positioned to quickly address administration goals versus the public sector in pertinent areas that may have national impact to improve the health care system. For example, CMS has established the CMS Strategic Initiatives which provides 16 distinct focus areas including Patients over Paperwork. The CMS Strategic Initiatives focus areas aim to empower patients and unleash innovation while transforming the health care system. We believe that goals such as the CMS Strategic Initiatives deliver better value and results for patients through competition and innovation. To accomplish goals included in agency-wide plans, such as the CMS Strategic Initiatives, there are instances when it is necessary to accept HHS-nominated improvement activities outside of the Call to advance these type of goals in an expedited manner. We refer readers to <https://www.cms.gov/About-CMS/Story-Page/our-16-strategic-initiatives> for more information about CMS strategic initiatives and to <https://www.cms.gov/About-CMS/story-page/patients-over-paperwork> for more information about Patients over Paperwork.

(B) Proposed HHS-Nominated Improvement Activities Process

Beginning with the CY 2021 performance period and future years, we propose that we would consider HHS-nominated improvement activities all year long in order to address HHS initiatives in an expedited manner. These HHS-nominated improvement activities would be subject to the same criteria for nominating new improvement activities as discussed above in section IV.A.3.c.(3)(b)(i)(B) of this proposed rule titled “Criteria for Nominating New Improvement Activities.” In addition, the HHS-nominated activity would need to apply the criteria of: “aligned with at least one of the HHS goals, when feasible and appropriate” to the nominated activity. Further, the HHS-nominated

improvement activity would be assessed for the most appropriate subcategory; we refer readers to § 414.1355(c).

We continue to believe it is important for stakeholders to be able to comment on these HHS-nominated improvement activities. Thus, we would propose any HHS-nominated improvement activities through rulemaking. In such proposal, we would specifically request comment on whether stakeholders agree the activities improve clinical practice or care delivery. We invite public comments on our proposal.

(iii) Proposed Changes to the Improvement Activities Inventory

In the CY 2018 Quality Payment Program final rule (82 FR 53660), we finalized that we would establish improvement activities through notice-and-comment rulemaking. We refer readers to Table H in the Appendix of the CY 2017 Quality Payment Program final rule (81 FR 77177 through 77199), Tables F and G in the Appendix of the CY 2018 Quality Payment Program final rule (82 FR 54175 through 54229), Tables X and G in the Appendix 2 of the CY 2019 PFS final rule (83 FR 60286 through 60303), and Tables A, B, and C in the Appendix 2 of the CY 2020 PFS final rule (84 FR 63514 through 63538) for our previously finalized improvement activities Inventory. We also refer readers to the Quality Payment Program website at <https://qpp.cms.gov/> for a complete list of the most current list of improvement activities. In this proposed rule, we are proposing to modify two existing improvement activities for the CY 2021 performance period and future years. We refer readers to Appendix 2 of this proposed rule for further details. We are not proposing to remove any previously adopted improvement activities. We invite public comments on our proposals.

(4) Promoting Interoperability

(a) Background

Section 1848(q)(2)(A) of the Act includes the meaningful use of certified electronic health record technology (CEHRT) as a performance category under the MIPS. As required by sections 1848(q)(2) and (5) of the Act, the four performance categories of the MIPS shall be used in determining the MIPS final score for each MIPS eligible clinician. In general, MIPS eligible clinicians will be evaluated under all four of the MIPS performance categories, including the Promoting Interoperability performance category.

(b) Promoting Interoperability Performance Category Performance Period

As finalized in the CY 2020 PFS final rule at § 414.1320(f)(1) (84 FR 62992), for purposes of the 2023 MIPS payment year, the performance period for the Promoting Interoperability performance category is a minimum of a continuous 90-day period within the calendar year that occurs 2 years prior to the applicable MIPS payment year, up to and including the full calendar year. Thus, for the 2023 MIPS payment year, the performance period for the Promoting Interoperability performance category is a minimum of a continuous 90-day period within CY 2021, up to and including the full CY 2021 (January 1, 2021 through December 31, 2021).

For the 2024 MIPS payment year and each subsequent MIPS payment year, we are proposing to add § 414.1320(g)(1), which would establish a performance period for the Promoting Interoperability performance category of a minimum of a continuous 90-day period within the calendar year that occurs 2 years prior to the applicable MIPS payment year, up to and including the full calendar year. This proposal aligns with the proposed EHR reporting period in CY 2022 for the Medicare Promoting Interoperability Program for eligible hospitals and CAHs (85 FR 32853). We believe this would be an appropriate performance period because it would offer stability and consistency for eligible clinicians reporting for the Promoting Interoperability performance category.

We are requesting comments on this proposal.

(c) Promoting Interoperability Performance Category Measures for MIPS Eligible Clinicians

(i) Proposed Changes to the Query of Prescription Drug Monitoring Program (PDMP) Measure Under the Electronic Prescribing Objective

In the CY 2020 PFS final rule (84 FR 62992 through 62994), we finalized that the Query of PDMP measure under the Electronic Prescribing objective is optional and eligible for 5 bonus points in CY 2020. However, we have continued to receive substantial feedback from health IT developers and clinicians that the flexibility currently included in the measure presents unintended challenges such as significant burden associated with IT system design and additional development needed to accommodate the measure and any future changes to it. Since publication of the CY 2020 PFS final rule, stakeholders have continued

to express concern that it is still too premature to require the Query of PDMP measure and score it based on performance in CY 2021.

We agree with stakeholders that PDMPs are still maturing in their development and use. PDMPs vary among the states and are not linked at this time to one another or to a larger national system.⁸⁰

Stakeholders also mentioned the challenge posed by the current lack of integration of PDMPs into the EHR workflow. Historically, health care providers have had to go outside of the EHR workflow in order to separately log in to and access the state PDMP. In addition, stakeholders noted the wide variation in whether PDMP data can be stored in the EHR. By integrating PDMP data into the health record, health care providers can improve clinical decision making by utilizing this information to identify potential opioid use disorders, inform the development of care plans, and develop effective interventions.

ONC recently engaged in an assessment to better understand the current state of policy and technical factors impacting PDMP integration across states. This assessment explored factors like PDMP data integration, standards, and hubs used to facilitate interstate PDMP data exchange, access permissions, and laws and regulations governing PDMP data storage. The assessment revealed ambiguous or non-existent policies regarding PDMP placement in health IT systems, interpretation of PDMP data, and PDMP access roles. In addition, variability in standards and hubs used to facilitate interstate PDMP data exchange, as well as to store and report PDMP data, contribute to the complexity of PDMPs.

The SUPPORT for Patients and Communities Act, enacted in 2018, is an important investment in combating the opioid epidemic. Several of the provisions of the SUPPORT for Patients and Communities Act address opioid use disorder prevention, recovery, and treatment including increased access to evidence-based treatment and follow-up care, through legislative changes specific to the Medicare and Medicaid programs. Specifically, with respect to PDMPs, the SUPPORT for Patients and Communities Act included new requirements and federal funding for PDMP enhancement, integration, and interoperability, and established mandatory use of PDMPs by certain Medicaid providers, in an effort to help reduce opioid misuse and

overprescribing, and in an effort to help promote the overall effective prevention and treatment of opioid use disorder.

Section 5042(a) of the SUPPORT Act added section 1944 to the Act, titled “Requirements relating to qualified prescription drug monitoring programs and prescribing certain controlled substances.” Subsection (f) of section 1944 of the Act increased Medicaid FFP rates during FY 2019 and FY 2020 for certain state expenditures to design, develop, or implement a qualified PDMP (and to make subsequent connections to such program). As a condition of this enhanced FFP, states must meet the conditions described in paragraph (f)(2) regarding agreements with contiguous states. There are currently a number of states that have used or are seeking to use, this enhanced FFP.

Under section 1944(b)(1) of the Act, to be a qualified PDMP, a PDMP must facilitate access by a covered provider to the following information (at a minimum) about a covered individual, in as close to real-time as possible: Information regarding the prescription drug history of a covered individual with respect to controlled substances; the number and type of controlled substances prescribed to and filled for the covered individual during at least the most recent 12-month period; and the name, location, and contact information of each covered provider who prescribed a controlled substance to the covered individual during at the least the most recent 12-month period. Under section 1944(b)(2) of the Act, a qualified PDMP must also facilitate the integration of the information described in section 1944(b)(1) of the Act into the workflow of a covered provider, which may include the electronic system used by the covered provider for prescribing controlled substances. CMS issued additional guidance to states about the enhanced FFP authorized by the SUPPORT for Patients and Communities Act, which is available at <https://www.medicaid.gov/sites/default/files/Federal-Policy-Guidance/Downloads/faq051519.pdf>.

Additionally, we note that section 7162 of the SUPPORT for Patients and Communities Act supports PDMP integration as part of the CDC’s grant programs aimed at efficiency and enhancement by states, including improvement in the intrastate and interstate interoperability of PDMPs.

In support of efforts to expand the use of PDMPs, there are currently a number of federally supported activities underway aimed at developing a more robust and standardized approach to EHR–PDMP integration. Partners

⁸⁰ <https://namsdl.org/topics/pdmp/> and <https://www.pdmpassist.org/content/pdmp-maps-and-tables>.

including CMS, CDC, ONC, and private sector stakeholders are focused on developing and refining standard-based approaches to enable effective integration into clinical workflows, exploring emerging technical solutions to enhance access and use of PDMP data, and providing technical resources to a variety of stakeholders to advance and scale the interoperability of health IT systems and PDMPs. For instance, stakeholders are working to map the NCPDP SCRIPT standard version 2017071 and the 2015 ASAP Prescription Monitoring Program Web Service standard version 2.1A to the HL7® FHIR® standard version R4.⁸¹ These mapping efforts are currently targeting completion by the summer of 2020 after which the standard would be balloted. Moreover, a number of enhancements to PDMPs are occurring across the country, including enhancements to RxCheck which is a federally supported interstate exchange hub for PDMP data.⁸² In addition, the ONC Interoperability Standards Advisory (ISA)⁸³ includes monitoring of current and emerging standards related to PDMP and opioid use disorder (OUD) data capture and exchange that would allow a health care provider to request a patient's medication history from a state PMDP.⁸⁴ We believe these standards and technical approaches are likely to rapidly reach maturity and support adoption across health care system stakeholders.

In addition to monitoring activities which can provide a stronger technical foundation for a measure focused on PDMP use, we also requested comments in the 2020 PFS proposed rule on alternative measures designed to advance clinical goals related to the opioid crisis (84 FR 40767 through 40769). Specifically, we sought public comment on the development of potential measures for consideration for the Promoting Interoperability performance category that are based on existing efforts to measure clinical and process improvements specifically related to the opioid epidemic, including opioid quality measures endorsed by the National Quality Forum (NQF) and CDC Quality Improvement (QI) opioid measures based on CDC guidelines around prescribing practices. The latter of these includes the use of electronically specific CDS to support

OUD prevention and treatment best practices and the integration of a PDMP query as a part of specific clinical workflows. We stated that these measures relate to a range of activities that hold promise in combatting the opioid epidemic as part of OUD prevention and treatment best practices, that they can be supported using CEHRT, and that they may include the use of PDMP queries as a tool within the broader clinical workflows. We continue to evaluate the comments received in response to this request, and will explore how measures such as those discussed may help participants to better understand the relationship between the measure description and the use of health IT to support the actions of the measures related to opioid use.

We understand that there is wide variation across the country in how health care providers are implementing and integrating PDMP queries into health IT and clinical workflows, and that it could be burdensome for health care providers if we were to narrow the measure to specify a single approach to EHR–PDMP integration at this time. At the same time, we have heard extensive feedback from EHR developers that incorporating the ability to count the number of PDMP queries in CEHRT would require more robust certification specifications and standards. These stakeholders state that health IT developers may face significant cost burdens under the current flexibility allowed for health care providers if they either fully develop numerator and denominator calculations for all the potential use cases and are required to change the specification at a later date. Stakeholders have noted that the costs of additional development will likely be passed on to health care providers without additional benefit as this development would be solely for the purpose of calculating the measure rather than furthering the clinical goal of the measure.

Given current efforts to improve the technical foundation for EHR–PDMP integration, the continued implementation of the SUPPORT for Patients and Communities Act (in particular, its provisions specific to Medicaid providers and qualified PDMPs), our ongoing review of alternative measure approaches, and stakeholder concerns as previously discussed about the current readiness across states for implementation of the existing measure, we believe that additional time is needed prior to requiring a Query of PDMP measure for performance-based scoring. While we appreciate the concerns that

stakeholders have shared, we believe that this measure can play an important role in helping to address the opioid crisis. Maintaining it as an optional measure eligible for bonus points signals to the clinician and developer community that this is an important measure which addresses a current gap that can help to spur development and innovation to reduce the barriers and challenges reported to CMS.

Therefore, we are proposing for the performance period in CY 2021 to maintain the Electronic Prescribing objective's Query of PDMP measure as optional. Continuing to include the measure as optional for the performance period in CY 2021 would allow time for further progress around EHR–PDMP integration efforts minimizing the burden on MIPS eligible clinicians while still providing an opportunity for capable implementers to report on and earn bonus points for fulfilling the optional measure.

We are also proposing for the performance period in CY 2021 to increase the amount of the bonus points for the Query of PDMP measure from 5 points to 10 points to reflect the importance of this measure and to further incentivize clinicians to perform queries of PDMPs. We believe that this increase would support the President's National Drug Control Strategy⁸⁵ that is trying to increase data sharing and integration. As stated in the strategy, a PDMP is a proven means to increase accountability in opioid prescribing practices by providing information that allows for the coordination of multiple medications, as well as to prevent adverse drug interactions. PDMPs increase patient safety by assisting prescribers in the identification of patients who have multiple prescriptions for controlled substances or may be misusing or overusing them. Expanding the use of PDMPs is a fundamental element of this strategy to stop opioid abuse, and ensure the safe, legal, and responsible prescribing of opioids for those who need them. We believe that improving prescribing practices by use of PDMPs will help reduce hospitalizations, Emergency Department visits, and family crises associated with the opioid epidemic. The proposed increase in bonus points for the Query of PDMP measure reflects our desire to increase the use of PDMPs.

We invite comments of these proposals.

2. Health Information Exchange Objective

a. Support Electronic Referral Loops by Receiving and Incorporating Health Information Measure

In the CY 2019 PFS final rule (83 FR 59807 through 59812), we established a new Support Electronic Referral Loops by Receiving and Incorporating Health Information measure by combining the Request/Accept Summary of Care measure and the Clinical Information Reconciliation measure. In establishing the new measure, we did not change the specifications or actions associated with the two combined measures, which address receiving an electronic summary of care record and conducting reconciliation of the summary of care record. However, the name of the measure includes the word “incorporating” which is not always required to increment the numerator of the measure. Instead, clinical information reconciliation must be completed using CEHRT for the following three clinical information sets: (1) Medication; (2) Medication Allergy; and (3) Current Problem List. Thus, to better reflect specific actions required by the measure’s numerator and denominator, we are proposing to replace the word “incorporating” with the word “reconciling” in the name of the measure. The new name would read: Support Electronic Referral Loops by Receiving and Reconciling Health Information measure.

We invite comment on this proposal.

b. Engagement in Bi-Directional Exchange Through Health Information Exchange (HIE)

In the CY 2020 PFS proposed rule (84 FR 40781), we discussed the concept of MIPS eligible clinicians earning credit in the Promoting Interoperability performance category by attesting to health IT or interoperability activities in lieu of reporting on specific measures. In this proposed rule, we are seeking to build on the feedback received in prior rulemaking by proposing an alternative measure for bidirectional exchange through a HIE under the Health Information Exchange objective.

HIEs allow for the sharing of health information among clinicians, hospitals, care coordinators, labs, radiology centers, and other health care providers through secure, electronic means so that healthcare providers can have the benefit of the most recent information available from other health care providers. HIEs allow for broader interoperability beyond one health system or point-to-point connections

among payers, patients, and health care providers. By enabling bi-directional exchange of information between health care providers and aggregating data across providers with disparate systems, HIEs can bring together the information needed to create a true longitudinal care record and support improved care coordination by facilitating timely access to robust health information across care settings. Bi-directional exchange means that the clinician’s EHR is enabled to allow for querying and sharing data by sending, receiving, and incorporating data via an HIE for every patient. Healthcare quality and public health outcomes have been shown in multiple studies to experience a beneficial effect from health information exchanges with improved medication reconciliation, improved immunization and health record completeness, and improved population level immunization rates.⁸⁶ Another study has shown that if every clinician who submits claims under Medicare Part B⁸⁷ were connected to an HIE, Medicare would have saved \$63 million annually for each therapeutic procedure performed at a physician’s office due to the reduction in duplicate procedures,⁸⁸ while other research has shown a decrease in emergency department utilization and improved care process when using an HIE.⁸⁹

HIE services are available from many organizations today, which may be referred to as HIEs or health information organizations (HIOs). State and regional HIEs have a long history of connecting health care providers caring for a common patient population across a specified geographic area. These HIEs represent a significant public investment, with \$564 million in federal funding provided as part of the 2009 HITECH Act, ongoing state funding and support from CMS under both 42 CFR 495.322 and 42 CFR part 433 subpart C.⁹⁰

These state and regional HIEs typically obtain not just EHR-generated data, but a broader array of ADT (admit, discharge, transfer) feeds and lab feeds as they build on local relationships and have similar but not identical capabilities with several models of data storage and a variety of business models. In addition to these initiatives, many EHR vendors are participating in the development of national-level networks designed to ensure their customers can share information with customers of other vendors. Geographically-based exchanges have also begun to address national-level exchange, with efforts designed to link state and regional networks so that health care providers can obtain information on individual patients wherever they receive care throughout the United States.

Recent data indicate that there is wide availability of HIEs across the nation, yet gaps remain. Forthcoming analysis of a recent survey of HIEs found that 45 states, including DC, were covered by one or more operational HIOs that reported a statewide catchment area. Moreover, 81 percent (or 2,770) of health service areas (HSAs) in the United States were in the catchment area of at least one operational HIE effort and 32 percent of HSAs had more than one operational HIE effort.⁹¹ Despite the widespread availability of HIE services; however, HIE participation data suggests there are still significant opportunities to increase health care provider engagement with HIEs. For instance, in a 2018 survey, 73 percent of hospitals reported participating in either a state, regional, or local HIE. When national HIE networks as well as state, regional, and local networks, 15 percent of hospitals reported not participating in any type of HIE.⁹² While it is more difficult to assess individual clinicians’ current participation in HIEs, data from the forthcoming survey noted above found that, among the HIEs surveyed, 76 percent reported that independent physician practices or practice groups contributed data to the HIE, while 89 percent reported that providers viewed data in the HIE, suggesting additional incentives may help to spur greater engagement with available HIEs.

We believe that incentivizing participation in HIEs that support bi-directional exchange will contribute to a longitudinal care record for the patient and facilitate enhanced care coordination across settings. The use of an HIE means that essential health information is available for care team members even in the case of referrals the clinician may not be aware of, or for instances where the clinician is contributing to the patient's record, but may not be the health care provider making the referral. In these instances, such transitions may or may not be able to be automatically identified by an EHR for inclusion in the denominators of the two existing measures associated with the HIE objective for the Promoting Interoperability performance category. For example, consider a patient who has a hospital emergency room visit in January 2020 and receives a prescription, then goes to her primary care physician appointment in March 2020 without notifying the primary care physician of the hospital visit or the new medication. The primary care physician refers the patient to a specialist and the specialist receives and reconciles the patient's data from her primary care physician records. In this scenario, the hospital may not have had access to the patient's health record from the primary care physician, and the primary care physician and the specialist may not have access to the data from the hospital including essential information like an update to current medications. We note that there was a Conditions of Participation (CoP) policy related to patient event notifications finalized in the Patient Access and Interoperability rule (85 FR 25584 through 25603). However, the new CoP would not require the hospitals to share the clinically relevant information specified in this example. The CoP requirement only specifies a minimal set of information for inclusion in a notification (patient's name, treating practitioner name, and sending institution name) and does not include the standardized clinical data that hospitals must share electronically using CEHRT in order to participate in the Promoting Interoperability program. For instance, the clinical data specified in the "transitions of care" criterion at 45 CFR 170.315(b)(1), which is currently the United States Core Data for Interoperability (USCDI) or Common Clinical Data Set (CCDS) (see 85 FR 25670). Moreover, if the patient were to have another emergent issue and require emergency room care, the situation becomes further compounded. For this scenario, if the hospital, primary care

physician, and specialist participated in a bi-directional exchange with a health information network, each health care provider from the hospital to the specialist would have access to all of the patient's records that may be critical for patient care and safety. Under the existing measures for the HIE objective, only the known transition of care from primary care physician to specialist would be included in the denominator. However, under the proposed alternative measure for bi-directional exchange through a HIE, we would incentivize the clinician to engage in health information exchange for care coordination that includes these additional transitions and referrals as well as other potential scenarios: Where the recipient of the transition of care may be unknown; Where the eligible clinician may not be the referring health care provider; where the transition of care may happen outside the scope of the performance period; or where the patient was not seen by the eligible clinician during the performance period. In this way, the eligible clinician or group's action to engage in bi-directional exchange through an HIE would allow each health care provider to contribute to the longitudinal care record in a manner that supports a wide range of transitions and referrals beyond those currently reflected in the measure denominators. This engagement supports robust health information exchange without placing burden on the clinician or the patient to be individually accountable to facilitate exchange via multiple (and potentially unknown) point-to-point connections.

The current COVID-19 PHE has further highlighted the need to encourage interoperable HIE infrastructure and bi-directional exchange across the country that can ensure patients, health care providers, and public health authorities have the data they need to support quality care. In addition to supporting general care coordination, HIEs can specifically support the PHE response by: Enabling enhanced use of telehealth and telemedicine for obtaining and aggregating patient information including when the patient's health care provider(s) may not be known.

In response to the PHE, CMS has taken steps to significantly expand access to services via telehealth, by increasing flexibility around the use of telehealth. HIEs can support patient care by ensuring health care providers are able to access patient data in support of a telehealth encounter or subsequent in-person visit with either an established or new health care provider. Particularly for visits with a new health care

provider, the HIE may provide an option for health care providers to access critical health information. In addition, HIEs can support telehealth visits for screening, evaluation, and event notification for care team members for patients that have been exposed, tested, quarantined etc. HIEs, can ensure information about testing results is available to support the immediate and longer term health and clinical needs of an individual. HIEs offer a rich source of health data to support these interactions and can be utilized by health care providers who may not have direct exchange capabilities, but operate as part of the same care team. HIEs also support these use cases in ways that direct exchange cannot, by facilitating aggregation of data from multiple sources where 'point to point' exchange may be infeasible.

- *Proposed New Measure:* In order to incentivize MIPS eligible clinicians to engage in bi-directional exchange through an HIE, we are proposing to add the following new measure under the HIE objective beginning with the performance period in 2021: Health Information Exchange (HIE) Bi-Directional Exchange measure. We propose to add this new HIE Bi-Directional Exchange measure to the HIE objective as an optional alternative to the two existing measures: The Support Electronic Referral Loops by Sending Health Information measure and the Support Electronic Referral Loops by Receiving and Incorporating Health Information measure. We are proposing that clinicians either may report the two existing measures and associated exclusions OR may choose to report the new measure. We propose that the HIE Bi-Directional Exchange measure would be worth 40 points. In no case could more than 40 points be earned for the HIE objective. We are proposing the HIE Bi-Directional Exchange measure would be reported by attestation and would require a yes/no response. As we believe that fulfillment of this measure is an extremely high value action, a "yes" response would enable the clinician to earn the 40 points allotted to the HIE objective. We propose that clinicians would attest to the following:

++ I participate in an HIE in order to enable secure, bi-directional exchange to occur for every patient encounter, transition or referral, and record stored or maintained in the EHR during the performance period.

++ The HIE that I participate in is capable of exchanging information across a broad network of unaffiliated exchange partners including those using disparate EHRs, and does not engage in

exclusionary behavior when determining exchange partners.

++ I use the functions of CEHRT for this measure, which may include technology certified to criteria at 45 CFR 170.315(b)(1), (b)(2), (g)(8), or (g)(10).

We believe it is appropriate for the new optional measure to serve as an alternative measure of performance on health information exchange since, in order to successfully meet the measure, an eligible clinician would be required to meet an overall standard of performance on health information exchange that is broader than the denominators and numerators of the current measures. To successfully attest to the new measure the eligible clinician or group must establish the technical capacity and workflows to engage in bi-directional exchange via an HIE for all patients seen by the eligible clinician and for any patient record stored or maintained in their EHR. This includes querying for or receiving health information for all new and existing patients seen by the eligible clinician, as well as sending or sharing information for all new and existing patients seen by the eligible clinician regardless of known referral or transition status, or the timing of any potential transition or referral. The proposed requirement to query for or receive health information for all new and existing patients is broader than the current Support Electronic Referral Loops by Receiving and Incorporating Health Information measure, which includes only new patients and known transitions or referrals received that occur during the performance period. Similarly, the proposed requirement to send or share information for all new and existing patients represents a broader scope than the current Support Electronic Referral Loops by Sending Health Information measure which includes only known transitions of care or referrals made that occur during the performance period. In addition, such bi-directional engagement would facilitate exchange of information for patient records stored or maintained in the clinician's EHR, even when the patient does not have an encounter or is not seen by the eligible clinician during the performance period, and for which the clinician has no active transition or referral during the performance period. This proposed requirement is likewise more expansive than the denominators of either measure.

Relative to the numerators for the current measures, the new optional measure would require that bi-directional engagement occurs for all patients and for all patient records without exclusion, exception, or

allowances made for partial credit. This is similar to achieving a score of 100 percent on both the Support Electronic Referral Loops by Sending Health Information measure and the Support Electronic Referral Loops by Receiving and Incorporating Health Information measure, while additionally completing required actions for additional exchange cases not included in the existing denominators. Finally, while we believe this optional measure would establish a high performance standard with respect to information sharing, we also believe that availability of this optional measure would reduce current reporting burden associated with the program, as eligible clinicians choosing to report on the measure would not be required to report on the two existing numerator/denominator measures.

While we believe there are a significant number of HIEs across the country that would meet the standards described in the attestation statements, some HIE arrangements may not have the capacity to enable bi-directional exchange for every patient transition or referral made by a clinician, and thus would not meet the standard described in the attestation statements required to fulfill the measure. For instance, we would exclude exchange networks that only support information exchange between affiliated entities, such as health care providers that are part of a single health system, or networks that only facilitate sharing between health care providers that use the same EHR vendor.

To successfully attest to this measure, the eligible clinician must use the capabilities defined for CEHRT to engage in bi-directional exchange via the HIE, which includes exchanging the clinical data within the CCDS or USCDI. This is consistent with both of the existing measures under the Health Information Exchange objective, which require the use of CEHRT to create a C-CDA document, which includes the clinical data within the CCDS or the USCDI. We believe there are numerous certified health IT capabilities which can support bi-directional exchange with a qualifying HIE. For instance, participants may interact with an HIE by using technology certified to the criterion at § 170.315(b)(1) to transmit C-CDAs to the HIE. Participants could also utilize API technology certified to either the criterion at §§ 170.315(g)(8) or (g)(10) as recently finalized in the 21st Century Cures Act final rule (85 FR 25742), to enable an HIE to obtain data in the CCDS or USCDI from a participant's EHR. As noted in section III.M of this proposed rule, the 21st Century Cures Act final rule states that

these criteria may refer to either the CCDS or USCDI for a period of 24 months following the publication of the Cures Act final rule (85 FR 25669). After this time, only technology certified to criteria referencing the USCDI would be considered certified under the ONC Certification Program. We recognize that HIEs are currently interacting with health care providers using certified health IT in a variety of ways, and believe that we should allow for substantial flexibility in how health care providers use certified health IT to exchange data using HIE.

We note that none of the actions required to attest to this measure are intended to conflict with a patient's rights or covered entities (for example, health care provider's) requirements/responsibilities under the HIPAA Privacy Rule, as set out at 45 CFR parts 160 and 164. The HIPAA Privacy Rule permits but does not require covered health care entities to get patient consent before using or disclosing PHI for treatment, payment, and health care operations. Although HIPAA does not require the health care entities offer patients a choice about the sharing of their PHI, many entities and states have adopted policies or laws that require patient consent. HIPAA is designed to work in tandem with more privacy protective policies. Moreover, we understand that different HIEs that enable exchange in the manner described may have different policies related to confidentiality of patient information based on local circumstances and requirements. Nothing in the attestation statements for this measure are intended to conflict with individual HIE policies that may exist in these areas, or prevent eligible clinicians from complying with these policies as a condition of their participation in the HIE.

We are not proposing an exclusion for this new measure as this measure would be an optional alternative measure to be reported instead of the Support Electronic Referral Loops by Sending Health Information measure and the Support Electronic Referral Loops by Receiving and Incorporating Health Information measure. The exclusions would still be available for the Support Electronic Referral Loops by Sending Health Information measure and the Support Electronic Referral Loops by Receiving and Incorporating Health Information measure.

We invite comments on these proposals, and whether commenters believe such an optional measure would incentivize eligible clinicians to participate in HIEs while establishing a high performance standard for sharing

information with other clinicians. We are also seeking comment on the proposed attestation statements for the optional measure. For instance:

- Do these statements reflect appropriate expectations about information exchange capabilities for eligible clinicians that engage with HIEs capable of facilitating widespread exchange with other health care providers?
- How should CMS effectively identify those HIEs that can support the widespread exchange with other health care providers?

- How are eligible clinicians currently using CEHRT to exchange information with HIEs, and do the proposed attestation statements allow for different ways health care providers are connecting with HIEs utilizing certified health IT capabilities?

(d) Scoring Methodology

(1) Changes to the Scoring Methodology for the 2021 Performance Period

Table 42 reflects the Promoting Interoperability performance category objectives and measures for CY 2021 if

the proposed changes discussed earlier in this section are adopted as final, including the proposed name change to the Support Electronic Referral Loops by Receiving and Incorporating Health Information measure and the continuation of the optional Query of PDMP measure for CY 2021.

TABLE 42: Scoring Methodology for the Performance Period in CY 2021

Objective	Measure	Maximum Points
Electronic Prescribing	e-Prescribing	10 points
	<i>Bonus:</i> Query of PDMP	10 points (<i>bonus</i>)
Health Information Exchange OR	Support Electronic Referral Loops by Sending Health Information	20 points
	Support Electronic Referral Loops by Receiving and Reconciling Health Information *	20 points
Health Information Exchange (alternative)	HIE Bi-Directional Exchange	40 points
Provider to Patient Exchange	Provide Patients Electronic Access to Their Health Information	40 points
Public Health and Clinical Data Exchange	Report to two different public health agencies or clinical data registries for any of the following: <ul style="list-style-type: none"> • Syndromic Surveillance Reporting • Immunization Registry Reporting • Electronic Case Reporting • Public Health Registry Reporting • Clinical Data Registry Reporting 	10 Points

Notes: The Security Risk Analysis measure is required, but will not be scored.

*Measure with a proposed name change in this proposed rule.

(e) Additional Considerations

(1) Nurse Practitioners, Physician Assistants, Clinical Nurse Specialists, and Certified Registered Nurse Anesthetists

In 2018 rulemaking (83 FR 59818 through 59819), we discussed our belief that certain types of MIPS eligible clinicians (NPs, PAs, CNSs, and CRNAs) may lack experience with the adoption and use of CEHRT. Because many of these non-physician clinicians were or are not eligible to participate in the Medicare or Medicaid EHR Incentive Program (now known as the Promoting Interoperability Program), we stated that we have little evidence as to whether there are sufficient measures applicable and available to these types of MIPS eligible clinicians under the advancing care information (now known as Promoting Interoperability) performance category. We established a policy at § 414.1380(c)(2)(i)(A)(5) for the

performance periods in 2017 through 2020 under section 1848(q)(5)(F) of the Act to assign a weight of zero to the Promoting Interoperability performance category in the MIPS final score if there are not sufficient measures applicable and available to NPs, PAs, CRNAs, and CNSs. We will assign a weight of zero only in the event that an NP, PA, CRNA, or CNS does not submit any data for any of the measures specified for the Promoting Interoperability performance category, but if they choose to report, they will be scored on the Promoting Interoperability performance category like all other MIPS eligible clinicians and the performance category will be given the weighting prescribed by section 1848(q)(5)(E) of the Act.

As in past years, we intend to use data from prior performance periods to further evaluate the participation of NPs, PAs, CRNAs, and CNSs in the Promoting Interoperability performance category and consider for subsequent

years whether the measures specified for this category are applicable and available to these MIPS eligible clinicians. We have analyzed the data submitted for the 2017 performance period for the Promoting Interoperability performance category and have discovered that the vast majority of MIPS eligible clinicians submitted data as part of a group. Although we are pleased that MIPS eligible clinicians utilized the option to submit data as a group, it does limit our ability to analyze data at the individual NPI level. For the 2017 performance period, approximately 4 percent of MIPS eligible clinicians who are NPs, PAs, CRNAs, or CNSs submitted data individually for MIPS, and more than two-thirds of them did not submit data for the Promoting Interoperability performance category. For the 2018 performance period, approximately 34 percent of MIPS eligible clinicians who are NPs, PAs, CRNAs, or CNSs

submitted data individually for the Promoting Interoperability performance category. In addition, the majority of MIPS eligible clinicians reported data for the Promoting Interoperability performance category for the 2017 and 2018 performance periods using the transition measure set. This set is unavailable for the 2019 performance period, which may result in fewer MIPS eligible clinicians reporting data for Promoting Interoperability performance category. Further, due to the 2019 Novel Coronavirus (COVID-19), we anticipate that many MIPS eligible clinicians may not report data for the 2019 performance period, although we do not expect to know the full impact on reporting for the Promoting Interoperability performance category until fall 2020.

Since 2017 we have included a solicitation for new measures for the Promoting Interoperability performance category in the annual Call for Measures. We have received many suggestions for new measures. We have not received any suggestions for new measures for NPs, PAs, CRNAs, CNSs or any other non-physician practitioners, which may continue to limit their ability to successfully report for the Promoting Interoperability performance category.

For these reasons, we are proposing to continue the existing policy of reweighting the Promoting Interoperability performance category for NPs, PAs, CRNAs, and CNSs for the performance period in 2021, and to revise § 414.1380(c)(2)(i)(A)(5) to reflect this proposal. We are requesting public comments on this proposal.

(2) Physical Therapists, Occupational Therapists, Qualified Speech-Language Pathologists, Qualified Audiologists, Clinical Psychologists, and Registered Dietitians or Nutrition Professionals

In the CY 2020 PFS final rule (84 FR 63003 through 63004), we adopted a policy at § 414.1380(c)(2)(i)(A)(4) to apply the same policy we adopted for NPs, PAs, CNSs, and CRNAs to other types of MIPS eligible clinicians who are non-physician practitioners (physical therapists, occupational therapists, qualified speech-language pathologist, qualified audiologists, clinical psychologists, and registered dietitians or nutrition professionals) for the performance period in 2020. We stated that because many of these clinician types were or are not eligible to participate in the Medicare or Medicaid Promoting Interoperability Program, we have little evidence as to whether there are sufficient measures applicable and available to them under

the Promoting Interoperability performance category.

For the reasons discussed in section IV.A.2.c.4.(b) of this proposed rule, for the performance period in 2021, we are proposing to continue the existing policy of reweighting the Promoting Interoperability performance category for physical therapists, occupational therapists, qualified speech-language pathologist, qualified audiologists, clinical psychologists, and registered dietitians or nutrition professionals, and to revise § 414.1380(c)(2)(i)(A)(4) to reflect this proposal. We invite comments on this proposal.

(f) Future Direction of the Promoting Interoperability Performance Category

In future years of the Promoting Interoperability performance category, we will continue to consider changes which support a variety of HHS goals as previously stated (84 FR 62991 through 62992), including: Reducing administrative burden; supporting alignment with the Medicare Promoting Interoperability Program; supporting alignment with the 21st Century Cures Act; advancing interoperability and the exchange of health information; and promoting innovative uses of health IT. More specifically under the 21st Century Cures Act, we will look at and take under consideration potential areas of overlap as we continue to align, pending implementation of the statute. This may include, but is not limited to, Information Blocking, future growth of PDMP, the use of USCDI, FHIR, and updates to 2015 Edition health IT certification criteria and the ONC Health IT Certification Program. We believe maintaining our focus on promoting interoperability, alignment, and simplification will reduce health care provider burden while allowing flexibility to pursue innovative applications that improve care delivery. For more detailed information, refer to the [21st Century Cures Act final rule (85 FR 25642 through 25961)] and Interoperability and Patient Access final rule (85FR 25510 through 25640). We also refer readers to section III.M. of this proposed rule for discussion of our proposal to modify the CEHRT definition as defined for the Quality Payment Program under § 414.1305.

(5) APM Entity Groups and APM Scoring Standard for MIPS Eligible Clinicians Participating in MIPS APMs

(a) Overview

The APM scoring standard, codified at § 414.1370, is the MIPS scoring methodology applicable for MIPS eligible clinicians participating in a

MIPS APM for the applicable MIPS performance period. As discussed in the CY 2017 Quality Payment Program final rule (81 FR 77246), the APM scoring standard was designed to reduce reporting burden for participants in MIPS APMs by eliminating the need for such MIPS eligible clinicians to submit data for both MIPS and their respective APMs, and to ensure that these eligible clinicians were not assessed in multiple ways on the same performance activities. We also believed that the APM scoring standard would encourage APM participation and support the goal of encouraging APM participants to better manage care for patients within their respective APM Entities by tying their MIPS performance scores together.

As we have gained experience in implementing the APM scoring standard, we have learned that it is infeasible to fully implement it as it was originally designed, as was discussed in the CY 2020 PFS final rule (84 FR 63007). Public comments on the CY 2020 revised APM scoring standard finalized in the CY 2020 PFS final rule (84 FR 63010), and most comments in response to the request for comments on APM scoring beyond 2020, made clear that the complexity of the APM scoring standard and its inflexibility in adapting to changes in APM participation and design have resulted in confusion and unintended additional burden for APM Entities and their participant MIPS eligible clinicians.

With this insight in mind, and with the goal of better aligning MIPS reporting rules for all MIPS eligible clinicians, including those in MIPS APMs, we are proposing to terminate the APM scoring standard as described at § 414.1370, effective January 1 of the 2021 performance year, by amending that regulation accordingly.

We further propose in section III.C.3. of this proposed rule, effective January 1, 2021, to establish a MIPS APM Performance Pathway and scoring rules that would be available for MIPS reporting for MIPS eligible clinicians in MIPS APMs.

We seek comment on this proposal.

(b) APM Entity Groups

We are proposing to terminate the APM scoring standard effective January 1, 2021, however, beginning with the 2021 performance period, we propose to retain certain APM Entity group reporting policies that were established and finalized for reporting and scoring under MIPS beginning with the 2021 performance period. Therefore, we are proposing to redesignate in part the regulation that describes APM Entity group determinations, from

§ 414.1370(e) to § 414.1317, and to title that section “APM Entity Groups.”

In addition, because we are proposing to no longer rely on quality measures reported to an APM, as is required under the existing APM scoring standard, we no longer believe that there is substantial risk of the MIPS final scores being inappropriately influenced by MIPS eligible clinicians moving into or out of APM Entities late in the performance year, which was the impetus for the full-TIN APM policy. Therefore, we are proposing to end the full-TIN APM policy currently codified at § 414.1370(e)(1), which allows for an APM Entity group to include eligible clinicians on the Participation List in a full-TIN APM on December 31 of the MIPS Performance Period only if the APM is a full-TIN APM as defined at § 414.1305. We also propose that MIPS eligible clinicians identified on the Participation List or Affiliated Practitioner List of any APM Entity participating in any MIPS APM on any of the three snapshot dates (March 31, June 30, August 31), as well as December 31 during a performance period, beginning in the 2021 MIPS performance period, would be considered participants in an APM Entity group. As these proposals would eliminate the need for the term “full TIN APM,” we also propose to delete the defined term “full TIN APM” from § 414.1305.

We seek comment on this proposal.

(c) APM Entity Group Eligibility

In the absence of the APM scoring standard and mandatory reporting to MIPS through the APM Entity group, it would no longer be necessary to conduct low-volume threshold determinations at the APM Entity group level. Therefore, along with the termination of the APM scoring standard under § 414.1370, we also propose to terminate, effective January 1, 2021, the use of APM Entity level low-volume threshold determinations and remove the term APM Entity group from the definition of the low-volume threshold at § 414.1305, with corresponding changes to applicability at § 414.1310(b)(1).

Going forward, we would apply the same rules for MIPS eligibility to APM participants as to other MIPS eligible clinicians. For example, if an eligible clinician who is a participant in a MIPS APM is below the low-volume threshold he or she would not be required to report to MIPS as an individual; however, if the group TIN of which that eligible clinician is a part is MIPS eligible and does report to MIPS, that eligible clinician would be treated as a

MIPS eligible clinician for purposes of MIPS scoring and payment adjustments, and would receive the higher of the group score and any available APM Entity group score. APM Entity reporting, in and of itself, would not confer MIPS eligibility to an eligible clinician who would otherwise be excluded from MIPS.

(d) APM Entity Group Scoring

Consistent with our past approach under APM scoring standard at § 414.1370(f), we are proposing at § 414.1317(b) that the MIPS final score calculated for the APM Entity would be applied to each MIPS eligible clinician in the APM Entity group. The MIPS payment adjustment would be applied at the TIN/NPI level for each of the MIPS eligible clinicians in the APM Entity group.

Similar to our past approach under the APM scoring standard at § 414.1370(g)(4)(ii) and (iii), as originally discussed and finalized in the CY 2017 Quality Payment Program final rule (81 FR 77268), we are proposing at § 414.1317(b)(1) that in all cases where an APM Entity reports to MIPS, but a performance category's data submission cannot be made at the APM Entity level, each MIPS eligible clinician in the APM Entity group would be assigned the highest available score for that performance category (either the individual or TIN-level score), and the scores for all MIPS eligible clinicians in the APM Entity group would be averaged in order to calculate the APM Entity level performance category score. In the event that a MIPS eligible clinician in an APM Entity receives an exception from the reporting requirements, such eligible clinician would be assigned a null score when CMS calculates the APM Entity's performance category score.

Similar to our past approach under the APM scoring standard at § 414.1370(g)(1)(iv), we are proposing at § 414.1317(b)(2) that for an APM Entity for which CMS calculated a total performance category score for one or more participants in the APM Entity for the preceding MIPS performance period, CMS would calculate an improvement score for each performance category for which a previous year's total performance category score is available as specified in § 414.1380(b). Note that unlike § 414.1370(g)(1)(iv), proposed § 414.1317(b)(2) would not be limited to the quality performance category, but would apply to any performance category.

We seek comment on these proposals.

(e) Reweighting Based on Extreme and Uncontrollable Circumstances for APM Entity Groups

Section 414.1380(c)(2)(i) allows for the submission of an application to CMS to request reweighting of one or more MIPS performance categories due to extreme and uncontrollable circumstances. We are proposing that an APM Entity may submit such an application beginning with the 2020 performance period/2022 MIPS payment year, at § 414.1317(b)(3). The request for reweighting in the application would apply for all four MIPS performance categories and all MIPS eligible clinicians in the APM Entity group. If the request for reweighting is approved by CMS, this would result in MIPS eligible clinicians participating in the APM Entity being excepted from MIPS reporting requirements for the applicable performance period, and the APM Entity would receive a final score equal to the performance threshold. Such request for reweighting would be approved or denied in its entirety.

We considered allowing an APM Entity to submit an application to request reweighting for individual performance categories, but rejected this approach. We believe the amount of complexity at the intersection of the various performance category submission and scoring requirements, submitter types, and exception applications for MIPS eligible clinicians could place a burden on these clinicians and their representatives to continually invest in understanding their shifting obligations under such an approach. Furthermore, operationalizing a policy where an APM Entity would have the ability to request and receive reweighting for one or more, but not all, performance categories would be prone to error. In addition, such a piecemeal approach to addressing extreme and uncontrollable circumstances likely would cause scoring delays that could result in CMS being unable to timely provide performance feedback and payment adjustment information to all MIPS eligible clinicians.

We also are proposing at § 414.1317(b)(3)(i) that an APM Entity must demonstrate in its application to CMS that greater than 75 percent of its participant MIPS eligible clinicians would be eligible for reweighting the Promoting Interoperability performance category for the applicable performance period.

Due to the unique and complex relationship between an APM Entity and its individual participant MIPS eligible clinicians, we believe it is

appropriate to offer an APM Entity the opportunity to apply for reweighting based on extreme and uncontrollable circumstances for all performance categories, including the Promoting Interoperability performance category, rather than collecting Promoting Interoperability hardship exception applications from each MIPS eligible clinician in the APM Entity group as is currently required. However, we believe that setting a 75 percent threshold for the Promoting Interoperability performance category is appropriate as a means of assuring that the request for reweighting is only granted in cases where absent the reweighting, it would be impossible to calculate a score for that performance category that is truly representative of the APM Entity group's performance. We are proposing a 75 percent threshold because such threshold is consistent with the Promoting Interoperability performance category reweighting policy for groups of hospital-based MIPS eligible clinicians and non-patient facing MIPS eligible clinicians, which similarly could face an administrative burden in attempting to secure approvals for individual reweighting requests for each MIPS eligible clinician in such groups. We recognize that as a result of the variety of participation requirements of different APMs, APM Entity groups may be composed of a wide range of health care provider types and sites of service. We believe that scoring an entire APM Entity as the result of a single MIPS eligible clinician's submission of data for the Promoting Interoperability performance category could place an extreme administrative burden on APM Entity groups, and could potentially create unintended consequences for APM participation decisions among MIPS eligible clinicians.

In addition, we propose at § 414.1317(b)(3)(ii) that if CMS approves the request for reweighting based on an APM Entity's application, and if MIPS data are submitted for the APM Entity for the applicable performance period, all four of the MIPS performance categories still would be reweighted for the APM Entity group notwithstanding the data submission. The data submission would not effectively void the request for reweighting and its approval. We are proposing this policy because we do not believe it would be appropriate or desirable for an individual MIPS eligible clinician or for a group TIN with no direct affiliation with an APM Entity to accidentally override an APM Entity's application. This could happen if the MIPS eligible clinician or group TIN reports to MIPS

either out of an abundance of caution or on behalf of a MIPS eligible clinician who is not in the APM Entity, but happens to share a billing TIN with an eligible clinician who is in the APM Entity. We also recognize that there may be circumstances where an APM may require some form of quality reporting for purposes of the APM itself, such as is required for Shared Savings Program ACOs as described in section II.G. of this proposed rule, but that in complying with such requirement an APM Entity may also be submitting quality performance category data that would result in scoring for purposes of MIPS when that APM Entity group would otherwise have been excepted from MIPS reporting.

We note that under this proposal and the proposed changes to the MIPS scoring hierarchy, described in section IV.A.3.e. of this proposed rule, reporting done by a MIPS eligible clinician or group would result in a MIPS final score for only that MIPS eligible clinician or group, which may be used to determine a MIPS eligible clinician's payment adjustment.

Finally, to the extent that these proposed policies would constitute a change to the MIPS scoring or payment methodology for the 2022 MIPS payment adjustment after the start of the 2020 performance period, we believe that, consistent with section 1871(e)(1)(A)(ii) of the Act, it would be contrary to the public interest not to establish these policies because of the COVID-19 PHE. We believe that the intersection of the 2020 APM scoring standard rules and the extreme and uncontrollable circumstances policies being put in place by APMs themselves in response to the COVID-19 PHE, such as the changes being proposed for participants in the Shared Savings Program in section III.I.1. of this proposed rule, would make obtaining reweighting under MIPS based on extreme and uncontrollable circumstances unusually burdensome absent these proposed changes. For instance, the Shared Savings Program will continue to require the submission of quality performance data by participating ACOs, and that data would be eligible to be used for MIPS quality scoring absent this proposal, which would have the result of not allowing Shared Savings Participants the option to take advantage of extreme and uncontrollable circumstances policies that are available to other MIPS eligible clinicians. This policy change is necessary to give participants in the Shared Savings Program the opportunity to request reweighting of the MIPS performance categories in the event that

they believe the data reported for purposes of the Shared Savings Program do not adequately reflect the performance of the ACO Entity for purposes of MIPS quality performance category scoring.

We seek comment on our proposals discussed above.

d. MIPS Final Score Methodology

(1) Performance Category Scores

(a) Background

For the 2023 MIPS payment year, we intend to continue to build on the scoring methodology we finalized for prior years. The scoring methodology allows for accountability and alignment across the performance categories and minimizes burden on MIPS eligible clinicians. We are maintaining many of our scoring policies, focusing on only making proposals to maintain stability. Specifically, we are proposing the following:

- To implement scoring flexibility for quality measures with specification or coding changes during the performance year.
- To implement benchmark and topped out scoring policies that are responsive to potential low reporting rates for the 2019 performance year due to the national public health emergency (PHE) for the COVID-19 pandemic.
- To implement scoring for all administrative claims-based measures.
- To continue policies for scoring quality measures based on achievement as well as policies for measures that do not meet case minimum, data completeness requirements, or have a benchmark.
- To continue bonuses in the quality performance category.
- To continue improvement scoring of the quality performance category comparing clinicians to a 30 percent baseline score if clinicians scored 30 percent or less.

We are not proposing changes to scoring policies for the cost, improvement activities and Promoting Interoperability performance categories.

We have maintained our approach that MIPS eligible clinicians are scored against performance standards for each performance category and receive a final score, comprised of their performance category scores, and calculated according to the final score methodology. We refer readers to § 414.1380 for general policies on scoring. We refer readers to section IV.A.3.c.(5)(a) of this proposed rule for the discussion of our proposal to remove the APM scoring standard and section IV.A.3.b of this proposed rule

for information on the APM Performance Pathway scoring.

(b) Scoring the Quality Performance Category for the Following Collection Types: Medicare Part B Claims Measures, eCQMs, MIPS CQMs, QCDR Measures, CMS Web Interface Measures, the CAHPS for MIPS Survey Measure and Administrative Claims Measures

We refer readers to § 414.1380(b)(1) for our policies regarding quality measure benchmarks, calculating total measure achievement and measure bonus points, calculating the quality performance category percent score, including achievement and improvement points, and the small practice bonus (81 FR 77276 through 77308, 82 FR 53716 through 53748, 83 FR 59841 through 59855, and 84 FR 63011 through 63018). We are proposing to maintain many policies finalized in prior years to retain stable scoring in MIPS with minimal new proposals as we transition to MVPs.

Please refer to section IV.A.3.c.(1)(b) of this proposed rule for more information about our proposal to sunset the CMS Web Interface measures as a collection type for groups and virtual groups with 25 or more eligible clinicians starting with the 2021 performance period. If the proposal is finalized, scoring policies proposed for the 2021 performance period will not be applicable to CMS Web Interface as a collection type.

(i) Scoring Flexibility for Changes That Impact Quality Measures During the Performance Period

We are proposing to expand the list of reasons that a quality measure may be impacted during the performance period in addition to revising when we would allow scoring of the measure with a performance period truncation (to 9 months) or the complete suppression of the measure if 9 months of data are not available. We have previously established policies to provide scoring flexibilities in instances in which changes to measures during the performance period have impacted clinicians' ability to submit the quality measures for the entire 12-month performance period because of an ICD-10 coding change or when there are clinical guideline changes that could result in patient harm, or otherwise provide misleading results and render the measure no longer comparable to the historic benchmark. Specifically, in the CY 2018 Quality Payment Program Final rule (82 FR 53714 through 53716), we finalized that, beginning with the 2018 MIPS performance period, we will assess performance on measures

considered significantly impacted by ICD-10 coding changes during the performance period based only on the first 9 months of the 12-month performance period. We believe that 9 months of data is sufficient to assess performance when 12 months of data is not available. We finalized that we would publish a list of measures requiring a 9-month assessment period on the CMS website by October 1st of the performance period if technically feasible, but no later than the beginning of the data submission period (for example, January 2, 2021 for the 2020 performance period). We refer readers to § 414.1380(b)(1)(viii) for more on our policy for scoring flexibility for ICD-10 changes.

In the CY 2019 Quality Payment final rule (83 FR 59845 through 59847), we finalized policies beginning with the 2021 MIPS payment year to reduce the total available measure achievement points from the quality performance category by 10 points for MIPS eligible clinicians for each measure submitted that is significantly impacted by clinical guideline changes or other changes when we believe adherence to the guidelines in the existing measures could result in patient harm or otherwise no longer be comparable to a historic benchmark. We refer readers to § 414.1380(b)(1)(vii)(A) for more information on the scoring flexibility policy.

We propose beginning with the 2021 performance period, a policy to truncate the performance period or suppress a quality measure if CMS determines that revised clinical guidelines, measure specifications or codes impact clinician's ability to submit information on the measure or may lead to potentially misleading results. Based on the timing of the changes to clinical guidelines, measure specifications or codes, we would assess the measure on 9 months of data, and if 9 consecutive months of data are not available, we would suppress the measure by reducing the total available measure achievement points from the quality performance category by 10 points for each measure submitted that is impacted.

In addition to ICD-10 and clinical guideline changes, we believe that there may be instances when there are changes after the final approval of quality measures including changes to the measure specification, or updates to coding that may lead to misleading results. If there are no concerns with potential patient harm, we would like the ability to assess performance on the quality measure (not including the change) if we have sufficient data.

Depending on the timing of the change during the performance period we would like to assess performance on the quality measure; we believe we can assess performance if we have 9 months of data and should suppress the measure if we have less than 9 months of data.

We will examine quality measures that are impacted by changes during the performance period to determine how the change may impact our ability to assess performance on the measure. Potential changes that may impact quality measures during the performance period include updates to clinical guidelines or measure specifications, such as revisions to medication lists, codes and clinical actions. For example, the introduction of a new drug class after the performance period began, would not be captured as numerator compliant by an existing measure specification but may meet the intent of the measure and its associated clinical actions. Assessment of clinician's performance on the measure would be hampered by the fact that the measure specification would not be able to be updated to collect information and assess performance related to use of the medication from the new drug class. As reflected at sections 1848(q)(2)(D)(1) and 1848(q)(2)(D)(1)(II)(cc) of the Act, quality measures adopted under MIPS, including substantive updates must be made through notice and comment rulemaking.

Additionally, we may examine a quality measure to determine if the change impacts the ability of clinicians to submit the measure, including the number of encounters a clinician may be able to submit, the number of clinicians who may be able to submit the measure, and the proportion of clinicians from a specialty who may be able to submit the measure. We would also assess if the change to a code would potentially lead to misleading results. For example, changes that impact the clinicians' ability to report a measure include changes to Common Procedural Technology (CPT) codes and the Healthcare Common Procedure Coding System (HCPCS) codes during the performance period, which may potentially produce misleading results. We believe that code changes that impact a clinician's ability to report a measure will be rare events, however, mid-year changes to CPT and HCPCS codes can be unanticipated when a clinician selects a quality measure and may introduce an additional burden if the clinician is unable to submit the quality measure.

When possible, we want an approach that allows us to score a quality measure even when there has been a change to the measure outside of the clinician's control during the performance period. We have finalized a policy that allows scoring on the first 9 months of data for a 12-month performance period data when there are ICD-10 code changes (82 FR 53714 through 53716). We assess performance on the first 9 months of performance data in the case of ICD-10 changes, which happen predictably in October on an annual basis, allowing us to truncate and remove the last quarter of the performance period from our assessment. However, we cannot anticipate when there will be a change to clinical guidelines, measure specifications, an inadvertent deletion, or revision of a code. These types of changes do not occur on an annual basis, and do not follow a predictable, consistent timeline. We become aware of changes to measures from feedback from clinicians, third parties and measure stewards. Updates to codes, which may not happen at a predictable time, may significantly impact how many cases a clinician can report and how a clinician performs on a measure. We want to account for instances such as coding changes during the performance period, in which scoring should be applied to the first 9 months of data from the performance period. If 9 consecutive months of data from the performance period is not available, we would have the ability to suppress the measure by reducing the total available measure achievement points from the quality performance category by 10 points for MIPS eligible clinicians for each measure submitted that is significantly impacted.

Therefore, we propose beginning with the 2021 performance period, a policy to truncate the performance period or suppress a quality measure if CMS determines revised clinical guidelines, measure specifications or codes impact the clinician's ability to submit the measure or may lead to potentially misleading results. Under this proposal we would maintain the flexibility to assess the measure on 9 months of data when available. Under the proposal we would suppress the measure if 9 consecutive months of data are not available. We propose that we would publish a list of measures requiring a 9-month assessment period on the CMS website as soon as technically feasible, but no later than the beginning of the data submission period (for example, January 2, 2021 for the 2020 performance period).

Accordingly, we propose to consolidate § 414.1380(b)(1)(vii)(A) and

(b)(1)(viii) at § 414.1380(b)(1)(vii)(A). The consolidated paragraph would provide that for each submitted measure that is impacted by significant changes that CMS determines may result in patient harm or misleading results, performance on the measure is assessed based on data for 9 consecutive months of the applicable CY performance period. If such data are not available, the total available measure achievement points are reduced by 10 points. For purposes of this paragraph § 414.1380(b)(1)(vii)(A), "significant changes" means changes to codes (including ICD-10, CPT, and HCPCS), clinical guidelines, or measure specifications. We will publish a list of all measures scored under this paragraph § 414.1380(b)(1)(vii)(A) on the CMS website as soon as technically feasible, but by no later than the beginning of the data submission period at § 414.1325(e)(1).

(ii) Quality Measure Benchmarks

We refer readers to the CY 2017, CY 2018, CY 2019, and CY 2020 Quality Payment Program final rules (81 FR 77277 through 77282, 82 FR 53699 through 53718, 83 FR 59841 through 59842, and 84 FR 63014 through 63016, respectively) for our previously established benchmarking policies.

In the CY 2017 QPP final rule (81 FR 77277 through 77282), we finalized that we would use performance in the baseline period to set benchmarks for the quality performance category, with the exception of new quality measures, quality measures that lack historical data, or where we do not have comparable data from the baseline period, for which we would set the benchmarks using performance in the performance period. We defined the baseline period to be the 12-month CY that is 2 years prior to the performance period for the MIPS payment year. For example, for CY 2021 performance period, the baseline period would be CY 2019 which is 2 years prior to the CY 2021 performance period (81 FR 77277). Additionally, we further clarified that CMS can establish benchmarks either by the applicable baseline or performance period in the CY 2019 final rule (83 FR 59842), where we finalized the terminology change amending § 414.1380(b)(1)(ii) to remove the mention of each individual benchmark and instead state that benchmarks will be based on collection type, from all available sources, including MIPS eligible clinicians and APMs, to the extent feasible, during the applicable baseline or performance period.

Because of the flexibility provided to MIPS eligible clinicians to allow for no

data submission for the 2019 performance period (see 85 FR 19277 through 19278), we may not have as representative of a sample of data as we would have had without the national PHE for COVID-19. Therefore, we want to revisit our benchmarking policy for the 2021 performance period. We anticipate that we may have a gap in our data due to potentially receiving fewer submissions for CY 2019 which could skew the benchmarking results, as the triggering of this policy no longer requires clinicians to submit data. We believe this gap in data could result in different distributions of scores from what we normally see, thus skewing the benchmarks when using CY 2019 baseline period for the CY 2021 performance period. As a result, we considered two benchmarking options for CY 2021 performance period.

We intend to use performance period benchmarks for the CY 2021 performance period in accordance with § 414.1380(b)(1)(ii). This would mean that benchmarks for the CY 2021 performance period are based on the actual data submitted during the CY 2021 performance period. We believe that using performance period benchmarks for the year where we are facing gaps in baseline data will allow us to ensure that we continue to have reliable and accurate data. We recognize that this methodology would not allow clinicians to know the benchmarks ahead of the performance period, but we believe that using the most current information has the potential to provide more accurate results for benchmarking purposes for CY 2021 performance period and could capture any changes in care that have occurred as a result of the national PHE for COVID-19.

We are seeking feedback on the criteria for using data from the 2019 MIPS performance period to calculate CY 2021 benchmarks. We also, as an alternative to performance period benchmarks, considered, and request stakeholder comments and feedback on, utilizing the historic benchmarks from the 2020 MIPS performance period (which are based on submissions for CY 2018 MIPS performance period) for the CY 2021 performance period. We believe that this option would allow clinicians to continue to receive advance notice for quality performance category measures so that MIPS eligible clinicians can set a clear performance goal for these measures for CY 2021 performance period. However, we remain concerned that utilizing outdated data could also potentially result in distributions of scores used for benchmarks that no longer reflect the standard of care.

(iii) Minimum Case Requirements

In the CY 2017 Quality Payment program final rule (81 FR 77287 to 77289) we finalized that we will use 20 cases as the case minimum for all quality measures, with the exception of the all-cause hospital readmission measure which has a minimum of 200 cases. As proposed in Table Group A within Appendix 1, the hospital-wide readmission measure is replacing the all-cause readmission measure and an additional administrative claims-based measure for hip/knee complications is being added to the program. In the case of the hospital-wide readmission measure, the case minimum will remain the same at 200 cases and will only apply to groups. For the new hip/knee complication measure, a case minimum of 25 is proposed and is applicable for individuals and groups. We propose to amend § 414.1380(b)(1)(i) to clarify how administrative claims measures are scored. We propose to amend § 414.1380(b)(1)(iii) to reflect that, except for administrative claims measures, the minimum case requirement is 20 cases. For each administrative claims-based measure, the minimum case requirement is specified in the annual list of MIPS measures.

(iv) Assigning Quality Measure Achievement Points

We refer readers to § 414.1380(b)(1)(i) for more details on our policies for scoring performance on quality measures (81 FR 77276 through 77307, 82 FR 53694 through 53701, 83 FR 59841 through 59856, and 84 FR 63011 through 63019).

(A) Scoring Measures Based on Achievement

We previously established at § 414.1380(b)(1)(i) a global 3-point floor for each scored quality measure, as well as for the hospital readmission measure (if applicable) for the 2019 through 2022 MIPS payment years. MIPS eligible clinicians receive between 3 and 10 measure achievement points for each submitted measure that can be reliably scored against a benchmark, which requires meeting the case minimum and

data completeness requirements. In the CY 2017 Quality Payment Program final rule (81 FR 77282), we established that measures with a benchmark based on the performance period (rather than on the baseline period) would continue to receive between 3 and 10 measure achievement points for performance periods after the first transition year. For measures with benchmarks based on the baseline period, we stated that we would revisit the 3-point floor in future years.

For the 2023 MIPS payment year, we propose to again apply a 3-point floor for each measure that can be reliably scored against the benchmark. As we move towards the MVP framework discussed in section IV.A.3.a.(1) of this proposed rule, we anticipate we will be able to score quality measures from 1 to 10 for measures in MVPs and as such will revisit and possibly remove the 3-point floor for traditional MIPS in future years. As a result, we will wait until there is further policy development under the MVP framework before proposing to remove the 3-point floor. Accordingly, we propose to revise § 414.1380(b)(1)(i) to remove the years 2019 through 2022 and adding in its place the years 2019 through 2023 to provide that for the 2019 through 2023 MIPS payment years, MIPS eligible clinicians receive between 3 and 10 measure achievement points (including partial points) for each measure required under § 414.1335 on which data is submitted in accordance with § 414.1325 that has a benchmark at paragraph (b)(1)(ii) of this section, meets the case minimum requirement at paragraph (b)(1)(iii) of this section, and meets the data completeness requirement at § 414.1340.

(B) Scoring Measures That Do Not Meet Case Minimum, Data Completeness, and Benchmark Requirements

We refer readers to § 414.1380(b)(1)(i)(A) and (B) for more on our scoring policies for a measure that is submitted but is unable to be scored because it does not meet the required case minimum, does not have a benchmark, or does not meet the data

completeness requirement (84 FR 63012).

In the 2017 QPP final rule (81 FR 77288) and the 2018 QPP final rule (82 FR 53727), we identified “classes of measures” which were intended to characterize measures for the ease of discussion. Class 1 measures are measures that can be scored based on performance because they have a benchmark, meet the case minimum and data completeness requirements. Class 2 measures are measures that cannot be scored based on performance because they do not have a benchmark or do not meet the case minimum which is generally 20 cases. Class 3 measures are measures that do not meet the data completeness requirement. We also noted that policies for Class 2 and Class 3 measures would not apply to measures submitted with the CMS Web Interface or administrative claims-based measures.

We are not proposing to modify how we score these measures within MIPS, as we consider policies for transitioning to MVPs described in section IV.A.3.a.(3) of this proposed rule. For class 2 measures, for the 2023 MIPS payment year, we propose to again apply the special scoring policies for measures that meet the data completeness requirement but do not have a benchmark, due to fewer than 20 individual clinicians or groups adequately reporting the measure, or meet the case minimum requirement. Accordingly, we propose to revise § 414.1380(b)(1)(i)(A)(1) to remove the years 2019 through 2022 and add in its place the years 2019 through 2023 to provide that except as provided in paragraph (b)(1)(i)(A)(2) (which relates to CMS Web Interface measures and administrative claims-based measures), for the 2019 through 2023 MIPS payment years, MIPS eligible clinicians would receive 3 measure achievement points for each submitted measure that meets the data completeness requirement, but does not have a benchmark or meet the case minimum requirement.

A summary of the proposed policies for the CY 2021 MIPS performance period is provided in Table 43.

TABLE 43: Quality Performance Category: Proposed Scoring Policies for the CY 2021 MIPS Performance Period*

Measure type	Description	Scoring rule for Traditional MIPS
Class 1	Measures that can be scored based on performance. Measures that are submitted or calculated that meet all the following criteria: (1) Has a benchmark; (2) Meets case minimum; and (3) Meets the data completeness standard (generally 70 percent for 2021.)**	For the 2021 MIPS performance period: 3 to 10 measure achievement points based on performance compared to the benchmark.
Class 2	For the 2020 MIPS performance period: Measures that are submitted and meet data completeness, but do not have either of the following: (1) A benchmark; and (2) Meets case minimum.	For the 2021 MIPS performance period: 3 measure achievement points.
Class 3	Measures that are submitted, but do not meet data completeness threshold, even if they have a measure benchmark and/or meet the case minimum.	Beginning with the 2020 MIPS performance period: MIPS eligible clinicians other than small practices will receive zero points for this measure. Small practices will continue to receive 3 points.

*The Class 2 and 3 measure scoring policies are not applicable to CMS Web Interface measures or administrative claims-based measures.

**We refer readers to § 414.1335(a)(3) for our policy on data completeness.

(v) Assigning Measure Achievement Points for Topped Out Measures

We refer readers to § 414.1380(b)(1)(iv) for our previously finalized policies regarding the identification of topped out measures and § 414.1380(b)(1)(iv)(B) for our finalized policies regarding the scoring of topped out measures. Under § 414.1380(b)(1)(iv), we will identify topped out measures in the benchmarks published for each Quality Payment Program year. Under § 414.1380(b)(1)(iv)(B), beginning with the 2021 MIPS payment year, measure benchmarks (except for measures in the CMS Web Interface) that are identified as topped out for 2 or more consecutive years will receive a maximum of 7 measure achievement points beginning in the second year the measure is identified as topped out (82 FR 53726 through 53727).

As noted in section IV.A.3.d.(1)(b)(ii) of this proposed rule, we are using performance period benchmarks for the 2021 MIPS performance period, which will mean we would not be able to publish measures that are topped out prior to the 2021 MIPS performance period. That also means we would not be able to identify those that have been topped-out for 2 or more consecutive years for purposes of the topped out

scoring of 7 measure achievement points. We believe it is still important to retain a topped out scoring cap of 7 measure achievement points so that clinicians have incentives to pick alternate measures that are not topped out. We also appreciate that a measure may not always be topped out and we believe that if a measure is not topped out in the 2021 performance period benchmark, then it should have the ability to achieve up to 10 measure achievement points.

Therefore, for the 2021 MIPS performance period, as an exception from the general rule at § 414.1380(b)(1)(iv)(B) we propose at § 414.1380(b)(1)(iv)(B)(1) to apply the 7 measures achievement point cap to measures that meet the following two criteria. The first criterion would be that the measures have been topped out for 2 or more periods based on the published 2020 MIPS performance period historic benchmarks (which are based on submissions for the 2018 MIPS performance period). The second criterion would be the measures remain topped out after the 2021 MIPS performance period benchmarks have been calculated. We believe these two criteria collectively would provide clinicians the information to know prior to the 2021 MIPS performance period which measures would have the topped-

out scoring applied but would also account for the scenario where a measure is no longer topped out. We would not limit the number of measure achievement points for measures that have not been topped out for at least two years as published in the 2020 MIPS performance period historic benchmarks.

(vi) Incentives To Report High-Priority Measures

We refer readers to § 414.1380(b)(1)(v)(A) for our previously finalized policies regarding incentives to report high priority measures. In the CY 2017 Quality Payment Program final rule (81 FR 77293), we established the scoring policies for high priority measure bonus points to encourage the selection of additional high-priority and outcome measures that impact beneficiaries and were closely aligned to our measurement goals. In the CY 2019 PFS final rule (83 FR 59850), we discontinued awarding measure bonus points to CMS Web Interface reporters for reporting high priority measures since CMS Web Interface reporters have no choice in measures.

We stated in the CY 2019 PFS proposed and final rules (83 FR 35950, 59851) that as part of our move towards fully implementing high value measures, we believe that bonus points

for high priority measures for all collection types may no longer be needed, and as a result, we intended to consider in future rulemaking whether to modify our scoring policy to no longer offer high priority bonus points after the 2021 MIPS payment year. We noted in the CY 2019 PFS final rule (83 FR 59851) that measure bonus points were created as transition policies which were not meant to continue through the life of the program. We believe with the finalized framework for transforming MIPS through MVPs (84 FR 62948), we will find ways in the future to emphasize high priority measures without needing to incentivize with bonus points. As a result, we will wait until there is further policy development under the MVP framework before proposing to remove our policy of assigning bonus points for high priority measures.

In this proposed rule, we propose to maintain the cap on measure points for reporting high priority measures for the 2023 MIPS payment year. Accordingly, we propose to revise § 414.1380(b)(1)(v)(A)(1)(ii) to remove the years 2019 through 2022 and adding in its place the years 2019 through 2023 to provide that through the 2023 MIPS payment year, the total measure bonus points for high priority measures cannot exceed 10 percent of the total available measure achievement points.

(vii) Incentives To Use CEHRT To Support Quality Performance Category Submissions

Section 1848(q)(5)(B)(ii) of the Act requires the Secretary to encourage MIPS eligible clinicians to report on applicable quality measures through the use of CEHRT. In the CY 2017 Quality Payment Program final rule (81 FR 77297), we established the measure bonus point and bonus cap for using CEHRT for end-to-end reporting. We refer readers to § 414.1380(b)(1)(v)(B) for our previously finalized policies regarding measure bonus points for end-to-end electronic reporting. We believe with the framework for transforming MIPS through MVPs discussed in the CY 2020 PFS proposed rule (84 FR 40739) and in section IV.A.3.a.(1) of this proposed rule, we will find ways to incorporate digital measures without needing to incentivize end-to-end reporting with bonus points. In the CY 2018 Quality Payment Program final rule (82 FR 53636), we encouraged stakeholders to consider electronically specifying their quality measures as eCQMs, to encourage clinicians and groups to move towards the utilization of electronic reporting. As noted in the CY 2019 PFS final rule (83 FR 59851),

bonus points were created as transition policies which were not meant to continue through the life of the program. As a result, we will wait until there is further policy development under the finalized MVP framework (84 FR 62948) before proposing to remove our policy of assigning bonus points for end-to-end electronic reporting.

In this proposed rule, we propose to continue to assign and maintain the cap on measure bonus points for end-to-end electronic reporting for the 2023 MIPS payment year. Accordingly, we propose to revise § 414.1380(b)(1)(v)(B)(1)(i) to remove the years 2019 through 2022 and add in its place the years 2019 through 2023 to provide that for the 2019 through 2023 MIPS payment years, the total measure bonus points for measures submitted with end-to-end electronic reporting cannot exceed 10 percent of the total available measure achievement points.

(viii) Improvement Scoring for the MIPS Quality Performance Category Percent Score

We refer readers to § 414.1380(b)(1)(vi)(C)(4) for more on our policy stating that for the 2020 through 2022 payment years, for the purpose of improvement scoring, we will assume a quality performance category achievement percent score of 30 percent in the previous year if a MIPS eligible clinician earned a quality performance category score less than or equal to 30 percent in the previous year.

In this proposed rule, we propose to continue our previously established policy for improvement scoring for the 2023 MIPS payment years and to revise § 414.1380(b)(1)(vi)(C)(4) to remove the phrase “2020 through 2022 MIPS payment year” and adding in its place the phrase “2020 through 2023 MIPS payment years” to indicate that for each MIPS payment year through 2023, we will assume a quality performance category achievement percent score of 30 percent in the previous year if a MIPS eligible clinician earned a quality performance category score less than or equal to 30 percent in the previous year. Specifically, for the 2023 MIPS payment year, we would compare the MIPS eligible clinician’s quality performance category achievement percent score for the 2021 MIPS performance period to an assumed quality performance category achievement percent score of 30 percent if the MIPS eligible clinician earned a quality performance score less than or equal to 30 percent for the 2020 MIPS performance period.

(2) Calculating the Final Score

For a description of the statutory basis and our policies for calculating the final score for MIPS eligible clinicians, we refer readers to § 414.1380(c) and the discussion in the CY 2017 and CY 2018 Quality Payment Program final rules, and the CY 2019 and CY 2020 PFS final rules (81 FR 77319 through 77329, 82 FR 53769 through 53785, 83 FR 59868 through 59878, 84 FR 63020 through 63031, respectively). In this rule, we propose to continue the complex patient bonus for the 2023 MIPS payment year, and we also propose to modify the complex patient bonus for the 2022 MIPS payment year as established in prior rulemaking due to the national public health emergency for COVID-19. In addition, we propose performance category redistribution policies for the 2023, 2024, and future MIPS payment years. These proposals are discussed in more detail in this section of the proposed rule.

(a) Complex Patient Bonus

(i) Background

Section 1848(q)(1)(G) of the Act requires us to consider risk factors in our MIPS scoring methodology. Specifically, it provides that the Secretary, on an ongoing basis, shall, as the Secretary determines appropriate and based on an individual’s health status and other risk factors, assess appropriate adjustments to quality measures, cost measures, and other measures used under MIPS; and assess and implement appropriate adjustments to payment adjustments, final scores, scores for performance categories, or scores for measures or activities under MIPS. In doing so, the Secretary is required to take into account the relevant studies conducted under section 2(d) of the Improving Medicare Post-Acute Care Transformation Act of 2014 (IMPACT Act) (Pub. L. 113–185, enacted on October 6, 2014) and, as appropriate, other information, including information collected before completion of such studies and recommendations. In the CY 2018 Quality Payment Program final rule, under the authority in section 1848(q)(1)(G) of the Act, we established at § 414.1380(c)(3) a complex patient bonus of up to 5 points to be added to the final score for the 2020 MIPS payment year (82 FR 53771 through 53776). In subsequent rulemaking, we continued the complex patient bonus at § 414.1380(c)(3) for the 2021 and 2022 MIPS payment years (83 FR 59870 and 84 FR 63023). We refer readers to these final rules for additional details on the background, statutory authority, policy

rationale, and calculation of the complex patient bonus.

We intended for this bonus to serve as a short-term strategy to address the impact patient complexity may have on MIPS scoring while we continue to work with stakeholders on methods to account for patient risk factors. The overall goal, when considering a bonus for complex patients, is two-fold: (1) To protect access to care for complex patients and provide them with excellent care; and (2) to avoid placing MIPS eligible clinicians who care for complex patients at a potential disadvantage while we review the completed studies and research to address the underlying issues. We used the term “patient complexity” to take into account a multitude of factors that describe and have an impact on patient health outcomes; such factors include the health status and medical conditions of patients, as well as social risk factors. We believe that as the number and intensity of these factors increase for a single patient, the patient may require more services, more clinician focus, and more resources in order to achieve health outcomes that are similar to those who have fewer factors. In developing the policy for the complex patient bonus, we assessed whether there was a MIPS performance discrepancy by patient complexity using two well-established indicators in the Medicare program: Medical complexity as measured through Hierarchical Condition Category (HCC) risk scores, and social risk as measured through the proportion of patients with dual eligible status (82 FR 53771 through 53776).

(ii) Complex Patient Bonus for the 2023 MIPS Payment Year

We intended the complex patient bonus as a short-term solution to address the impact patient complexity may have on MIPS scoring. However, we currently do not believe we have sufficient information available to develop a long-term solution to account for patient risk factors in MIPS that we could include in this proposed rule for the 2023 MIPS payment year. In the CY 2020 PFS proposed and final rules, we considered whether newly available data from the Quality Payment Program still supported the complex patient bonus at the final score level. More specifically, within the data analysis, we did not observe a consistent linear relationship for any reporting type or complexity measure, HCC risk score or dual eligible status (84 FR 40793 through 40795 and 84 FR 63021 through 63023). However, we only have a few years of data and believe that more recent data may bring different results

than the findings we explained in detail in the CY 2020 PFS final rule. We refer readers to the CY 2020 PFS final rule for further details on the methodology and findings (84 FR 63021 through 63023).

As stated previously in this proposed rule, section 1848(q)(1)(G) of the Act requires us to take into account the relevant studies conducted under section 2(d) of the IMPACT Act and, as appropriate, other information, including information collected before completion of such studies and recommendations. ASPE completed its first report in December 2016, which examined the effect of individuals’ socioeconomic status on quality, resource use, and other measures under the Medicare program, and included analyses of the effects of Medicare’s current value-based payment programs on providers serving socially at-risk beneficiaries and simulations of potential policy options to address these issues. We also noted, in the CY 2020 PFS final rule, that a second ASPE report on social risk factors within CMS value-based purchasing programs was expected. This second report was publicly released in June 2020 which builds on the analyses included in the initial report and provides additional insight for addressing risk factors in MIPS and other value-based payment programs. As we continue to review the analyses and findings of the report, we intend to consider its recommendations, along with any updated data that would become available, for future rulemaking. Hence, based on our data analysis from the CY 2020 PFS final rule (84 FR 63022) and the lack of currently available additional data sources, for the 2021 MIPS performance period/2023 MIPS payment year, we propose to continue the complex patient bonus as finalized for the 2020 MIPS performance period/2022 MIPS payment year and to revise § 414.1380(c)(3) accordingly. We plan to continue working with ASPE, the public, and other key stakeholders on this important issue to identify longer term policy solutions that achieve the goals of attaining health equity for all beneficiaries, minimizing unintended consequences, and will propose modifications to the complex patient bonus in future rulemaking as appropriate.

(iii) Complex Patient Bonus for the 2022 MIPS Payment Year

In this section of the proposed rule, we discuss our proposal to modify the complex patient bonus for the 2022 MIPS payment year in response to the national public health emergency for COVID–19. In the CY 2020 PFS final rule, we continued the complex patient

bonus for the 2020 performance period/2022 MIPS payment year (84 FR 63021 through 63023). More specifically, we continued to utilize our two established complexity indicators, HCC risk scores and dual eligible status, because we believed that they continued to account for the multitude of factors that describe and have an impact on patient health outcomes. Further, risk scores are based on a beneficiary’s age and sex; whether the beneficiary is eligible for Medicaid, first qualified for Medicare on the basis of disability, or lives in an institution (usually a nursing home); and the beneficiary’s diagnoses from the previous year.⁹³ Additionally, the HCC model also accounts for the number of conditions a beneficiary has, making an adjustment as the number of diseases or conditions increases, and includes additional diagnosis codes related to mental health and substance use disorders, and chronic kidney disease.⁹⁴ However, due to the national public health emergency for COVID–19 during performance period 2020, we believe we need to re-evaluate the previously established policy for the complex patient bonus for the 2022 MIPS payment year. We acknowledge that there are direct effects of COVID–19 for those patients who have the disease and indirect effects of COVID–19 for other patients, including increased complexity and barriers such as postponing care, accessing care in a different way (for example, via telecommunications), and disruptions to lab results and medications, which are not accounted for in our existing final score calculations using these complexity indicators. We realize that the first year of the novel virus may add complexity that we have not already captured via the complex patient bonus. This complexity includes patients who have gotten sick, as well as patients who may now have complications or other factors because of delayed care or disruptions to lab services or medications due to COVID–19. Government guidelines, such as the Center for Disease Control and Prevention guidance on “Groups at Higher Risk for Severe Illness”, indicate that COVID–19 patients who are already

⁹³ CMS, Medicare Fee-For-Service Provider Utilization & Payment Data Physician and Other Supplier Public Use File: A Methodological Overview”: <https://www.cms.gov/Research-Statistics-Data-and-Systems/Statistics-Trends-and-Reports/Medicare-Provider-Charge-Data/Downloads/Medicare-Physician-and-Other-Supplier-PUF-Methodology.pdf>.

⁹⁴ CMS, “Report to Congress: Risk Adjustment in Medicare Advantage”: <https://www.cms.gov/Medicare/Health-Plans/MedicareAdvgtgSpecRateStats/Downloads/RTC-Dec2018.pdf>.

high-risk due to pre-existing medical conditions are at further risks of increased COVID-19 related hospitalizations and mortality.⁹⁵ Further, literature also indicates that those patients who are already high-risk due to social factors are also at further risk of serious illness related to COVID-19.⁹⁶

Further, during this time, hospitals reported that medical systems delayed and canceled care, resulting in reduced utilization of healthcare services and a changing care delivery system.⁹⁷ Although access to Medicare telehealth services was expanded so that beneficiaries could receive a wider range of services from clinicians without having to travel to a healthcare facility,⁹⁸ this only partially filled the gap in services from the reduction in delivery of care, as not all specialties can utilize telehealth. We recognize the increased challenges of providing care to complex patients in the context of the national public health emergency for COVID-19. Patients with comorbidities (as measured by HCC risk score) and social risk (measured by dual eligible status) are disproportionately likely to be severely affected by COVID-19.⁹⁹ More specifically, findings from our recently released data reinforces previous findings by the Centers for Disease Control and Prevention that older Americans and

those with chronic health conditions are at the highest risk for COVID-19. The data also show that COVID-19 has disproportionately impacted lower income adults, further confirming longstanding healthcare disparities in dual eligible populations.¹⁰² Additionally, in light of the care delivery changes, we believe clinicians may see patients in 2020, with medical or social risk factors, whose health conditions may have been exacerbated due to delayed care. Patients with comorbidities and social risk are likely to suffer adverse outcomes due to delaying or not receiving care.¹⁰³ ¹⁰⁴ ¹⁰⁵ Given that the limited available literature and data on COVID-19 suggests that patients with social risk factors or underlying conditions have increased complexity, we believe that our existing complexity indicators, HCC risk score and dual eligibility, could serve as a proxy for capturing increased complexity due to the pandemic.

Currently, the complex patient bonus is worth up to 5 points. However, given the anticipated increase in complexity due to the national public health emergency for COVID-19, we propose at § 414.1380(c)(3)(iv) that for the CY 2020 performance period/2022 MIPS payment year, the complex patient bonus would be calculated pursuant to the existing formulas in §§ 414.1380(c)(3)(i) and (ii), and the resulting numerical value would then be multiplied by 2, but the complex patient bonus cannot exceed 10. The doubled numerical value (subject to the 10-point cap) would be added to the final score. Additionally, we propose to revise § 414.1380(c)(3)(iii) to state that the complex patient bonus cannot exceed 5.0 except as provided in § 414.1380(c)(3)(iv). Under this proposal, clinicians could receive up to 10 complex patient bonus points added to their final score. For example, if a MIPS eligible clinician were to receive 4 complex patient bonus points under the existing formulas, the MIPS eligible clinician would receive 8 complex patient bonus points (doubling the

bonus points) under our proposal for the CY 2020 performance period/2022 MIPS payment year. In instances where clinicians would have received the maximum of 5 complex patient bonus points, they would receive the maximum of 10 complex patient bonus points under our proposal for the CY 2020 performance period/2022 MIPS payment year. To the extent that this proposed change constitutes a change to the MIPS scoring or payment methodology for the 2022 MIPS payment adjustment after the start of the 2020 performance period, we believe that, consistent with section 1871(e)(1)(A)(ii) of the Act, it would be contrary to the public interest not to account for increased patient complexity due to the national public health emergency for COVID-19. We believe it would be contrary to the public interest if MIPS scores do not adequately recognize this increased patient complexity that could not have been accounted for during the CY 2020 rulemaking. More specifically, currently we are unable to measure the magnitude of the direct and indirect effects of the COVID-19 pandemic on MIPS scores, and we remain concerned about potentially misidentifying poor performance with regard to the care delivered in CY 2020 due to the national PHE. Hence, we believe this approach of doubling the complex patient bonus recognizes the difficulty of managing complex patients during the pandemic and lowers the risk of inaccurately identifying a clinician as a “poor performer” when the underlying issue is caring for increasingly complex patients due to both direct and indirect effects of COVID-19.

Due to limited data available related to the pandemic, it is difficult to gauge whether our proposal would be artificially increasing MIPS final scores or not providing enough flexibility to clinicians to account for increased patient complexity during the CY 2020 performance period. Given the challenges we assume clinicians may be facing, we believe doubling the complex patient bonus would be a reasonable and operationally feasible approach. In developing our proposal, we considered several alternatives, including maintaining the complex patient bonus as it currently is (up to 5 points) as well as whether it would be appropriate to triple (up to 15 points) the complex patient bonus. However, due to the limited data available, we decided not to propose those options as we were concerned that an approach of tripling the bonus could artificially increase final scores and maintaining the current

bonus (up to 5 points) may not be sufficient to account for the increased patient complexity during the CY 2020 performance period. Additionally, we believe that by doubling the complex patient bonus, clinicians whose MIPS performance may be negatively affected by the challenges of caring for a complex patient population during a pandemic will be less likely to have the maximum negative adjustment due to circumstance beyond their control.

We also considered whether we should add a new indicator of patient complexity, such as establishing a threshold for the percentage of patients with COVID-19. We were concerned about this alternative approach for two reasons. First, we do not believe the effects of COVID-19 are limited to those patients who are experiencing the illness. Second, we are uncertain of the consistency of diagnosis coding for both patients who are experiencing the illness or who are being treated for the sequelae of the illness.

We request comments on our proposal, the alternatives we considered, and any other approaches to account for patient complexity during the public health emergency that commenters believe we should consider, as well as alternative data sources for patient complexity.

(b) Final Score Performance Category Weights

(i) General Weights

Section 1848(q)(5)(E)(i) of the Act specifies weights for the performance categories included in the MIPS final score: In general, 30 percent for the quality performance category; 30 percent for the cost performance category; 25 percent for the Promoting Interoperability performance category; and 15 percent for the improvement activities performance category. For more of the statutory background and descriptions of our current policies, we refer readers to the CY 2017 through CY

2018 Quality Payment Program final rules, and CY 2019 through CY 2020 PFS final rules (81 FR 77320 through 77329, 82 FR 53779 through 53785, 83 FR 59870 through 59878, and 84 FR 62950 through 84 FR 62959, respectively). In section IV.A.3.c.(2)(a) of this proposed rule, we propose that the cost performance category would make up 20 percent of a MIPS eligible clinician's final score for the 2023 MIPS payment year and 30 percent for the 2024 MIPS payment year and each subsequent MIPS payment year. In section IV.A.3.c.(1) of this proposed rule, we propose the quality performance category would thus make up 40 percent of a MIPS eligible clinician's final score for the 2023 MIPS payment year and 30 percent for the 2024 MIPS payment year and each subsequent MIPS payment year. Table 44 summarizes the proposed weights for each performance category.

TABLE 44: Weights by MIPS Performance Category for the 2023, 2024, and Future MIPS Payment Years

Performance Category	2023 MIPS Payment Year (Proposed)	2024 and Future MIPS Payment Years (Proposed)
Quality	40%	30%
Cost	20%	30%
Improvement Activities	15%	15%
Promoting Interoperability	25%	25%

(ii) Flexibility for Weighting Performance Categories

Under section 1848(q)(5)(F) of the Act, if there are not sufficient measures and activities applicable and available to each type of MIPS eligible clinician involved, the Secretary shall assign different scoring weights (including a weight of zero) for each performance category based on the extent to which the category is applicable to the type of MIPS eligible clinician involved and for each measure and activity with respect to each performance category based on the extent to which the measure or activity is applicable and available to the type of MIPS eligible clinician involved. Under section 1848(q)(5)(B)(i) of the Act, in the case of a MIPS eligible clinician who fails to report on an applicable measure or activity that is required to be reported by the clinician, the clinician must be treated as achieving the lowest potential score applicable to such measure or activity. In this scenario of failing to report, the MIPS eligible clinician generally would receive a score of zero for the measure

or activity, which would contribute to the final score for that MIPS eligible clinician. Under certain circumstances, however, a MIPS eligible clinician who fails to report could be eligible for an assigned scoring weight of zero percent and a redistribution of the performance category weights. For a description of our existing policies for reweighting performance categories, please refer to § 414.1380(c)(2) and the CY 2020 PFS final rule (84 FR 63023 through 63027).

(iii) Redistributing Performance Category Weights

In the CY 2017 through CY 2018 Quality Payment Program final rules, and CY 2019 through CY 2020 PFS final rules (81 FR 77325 through 77329, 82 FR 53783 through 53785, 83 FR 59876 through 59878, and 84 FR 63027 through 63031), and at § 414.1380(c)(2)(ii), we established policies for redistributing the weights of performance categories in the event that a scoring weight different from the generally applicable weight is assigned to a category or categories. Under these

policies, we generally redistribute the weight of a performance category or categories to the quality performance category because of the experience MIPS eligible clinicians have had reporting on quality measures under other CMS programs. For the 2020 MIPS performance period and 2022 MIPS payment year, we did not redistribute performance category weights to improvement activities, except for the scenario where the only two performance categories being scored are improvement activities and cost (84 FR 63028). Also for that year in scenarios when the cost performance category weight is redistributed while the Promoting Interoperability performance category weight is not, we redistributed a portion of the cost performance category weight to the Promoting Interoperability performance category, as well as to the quality performance category (84 FR 63027). As stated in CY 2020 PFS final rule, we continue to believe this redistribution policy is appropriate given our focus on working with the Office of the National

Coordinator for Health IT (ONC) on implementation of the interoperability provisions of the 21st Century Cures Act (the Cures Act) (Pub. L. 115–233, enacted on December 13, 2016) to ensure seamless but secure exchange of health information for clinicians and patients and emphasize the importance of interoperability without overwhelming the contribution of the quality performance category to the final score (84 FR 63027).

In section IV.A.3.c.(2)(a) of this proposed rule, we are proposing a weight for the cost performance category

of 20 percent for the 2023 MIPS payment year. For the 2023 MIPS payment year, we propose similar redistribution policies as finalized for the 2022 MIPS payment year, with minor modifications to account for the cost performance category being 20 percent. Under this proposal, we would once again only redistribute weight to the cost performance category in cases when the cost and improvement activities performance categories are the only categories scored (each of these performance categories would be 50 percent in this scenario). We do not

believe it is appropriate to redistribute more weight to the cost performance category, because cost would not yet be at the maximum weight specified by the statute (30 percent), and because clinicians still have relatively limited experience being scored on and receiving feedback on cost measures compared with quality measures. Our proposed redistribution policies for the 2023 MIPS payment year, which we propose to codify at § 414.1380(c)(2)(ii)(E), are included in Table 45.

TABLE 45: Performance Category Redistribution Policies Proposed for the 2023 MIPS Payment Year

Reweighting Scenario	Quality	Cost	Improvement Activities	Promoting Interoperability
No Reweighting Needed				
- Scores for all four performance categories	40%	20%	15%	25%
Reweight One Performance Category				
-No Cost	55%	0%	15%	30%
-No Promoting Interoperability	65%	20%	15%	0%
-No Quality	0%	20%	15%	65%
-No Improvement Activities	55%	20%	0%	25%
Reweight Two Performance Categories				
-No Cost and no Promoting Interoperability	85%	0%	15%	0%
-No Cost and no Quality	0%	0%	15%	85%
-No Cost and no Improvement Activities	70%	0%	0%	30%
-No Promoting Interoperability and no Quality	0%	50%	50%	0%
-No Promoting Interoperability and no Improvement Activities	80%	20%	0%	0%
-No Quality and no Improvement Activities	0%	20%	0%	80%

In section IV.A.3.c.(2)(a) of this proposed rule, we are proposing to weight the cost performance category at 30 percent for the 2024 MIPS payment year and each subsequent MIPS payment year, as required by section 1848(q)(5)(E)(i)(II)(aa) of the Act. Given that 2024 would be the first year that cost would be set at the maximum weight prescribed by the statute, we do not believe it would be prudent to begin redistributing more weight to cost for the 2024 MIPS payment year, except in cases when only the cost and improvement activities performance categories are scored. For the improvement activities performance category, we are only assessing whether a MIPS eligible clinician completed certain activities (83 FR 59876 through

59878). Because MIPS eligible clinicians will have had several years of experience reporting under MIPS, we continue to believe that it is important to prioritize performance on measures that show a variation in performance, rather than the activities under the improvement activities performance category, which are based on attestation of completion. We believe this helps to reduce incentives to not report measures for the quality performance category in circumstances when a clinician may be able to report but chooses not to do so. For example, when a clinician may be able to report on quality measures, but chooses not to report because they are located in an area affected by extreme and uncontrollable circumstances as identified by CMS and qualify for

reweighting under § 414.1380(c)(2)(i)(A)(8). Therefore, we continue to believe that weighting the cost and improvement activities performance categories each at 50 percent would be an appropriate balance (84 FR 63027). As for the other reweighting scenarios, we plan to revisit our redistribution policies in future rulemaking and may consider redistributing more weight to the cost performance category after clinicians have more experience with cost being weighted at 30 percent. Our proposed redistribution policies for the 2024 MIPS payment year, which we propose to codify at § 414.1380(c)(2)(ii)(F), are included in Table 46.

TABLE 46: Performance Category Redistribution Policies Proposed for the 2024 MIPS Payment Year

Reweighting Scenario	Quality	Cost	Improvement Activities	Promoting Interoperability
No Reweighting Needed				
- Scores for all four performance categories	30%	30%	15%	25%
Reweight One Performance Category				
-No Cost	55%	0%	15%	30%
-No Promoting Interoperability	55%	30%	15%	0%
-No Quality	0%	30%	15%	55%
-No Improvement Activities	45%	30%	0%	25%
Reweight Two Performance Categories				
-No Cost and no Promoting Interoperability	85%	0%	15%	0%
-No Cost and no Quality	0%	0%	15%	85%
-No Cost and no Improvement Activities	70%	0%	0%	30%
-No Promoting Interoperability and no Quality	0%	50%	50%	0%
-No Promoting Interoperability and no Improvement Activities	70%	30%	0%	0%
-No Quality and no Improvement Activities	0%	30%	0%	70%

e. MIPS Payment Adjustments

(1) Background

For our previously established policies regarding the final score hierarchy used to determine MIPS payment adjustments, we refer readers to the CY 2020 PFS final rule (84 FR 63031 through 63045), CY 2019 PFS final rule (83 FR 59878 through 59894), CY 2018 Quality Payment Program final rule (82 FR 53785 through 53799) and CY 2017 Quality Payment Program final rule (81 FR 77329 through 77343). We

are proposing to modify these policies: (1) To reflect the discontinuation of the APM scoring standard and the addition of the APM Performance Pathway (APP), both as proposed in section IV.A.2.b.(5) of this proposed rule; (2) to set the performance threshold at 50 points for the 2023 MIPS payment year, instead of 60 points as previously finalized; and (3) to potentially revisit and revise the prior estimate of the performance threshold for the 2024 MIPS payment year.

(2) Final Score Hierarchy Used in Payment Adjustment Calculation

In some cases, a TIN/NPI could have more than one final score associated with it from a performance period, if the MIPS eligible clinician submitted multiple data sets. In the CY 2018 Quality Payment Program final rule (82 FR 53785 through 53787), we established the following final score hierarchy that applies as displayed in Table 47 when more than one final score is associated with a TIN/NPI.

TABLE 47: Hierarchy for Final Score When More than One Final Score Is Associated with a TIN/NPI

Example	Final Score Used to Determine Payment Adjustments
TIN/NPI has more than one APM Entity final score.	The highest of the APM Entity final scores.
TIN/NPI has an APM Entity final score and also has an individual score.	APM Entity final score.
TIN/NPI has an APM Entity final score that is not a virtual group score and also has a group final score.	APM Entity final score.
TIN/NPI has an APM Entity final score and also has a virtual group score.	APM Entity final score.
TIN/NPI has a virtual group score and an individual final score.	Virtual group score.
TIN/NPI has a group final score and an individual final score, but no APM Entity final score and is not in a virtual group.	The highest of the group or individual final score.

With the proposed discontinuation of the APM scoring standard and addition of the APP in section IV.A.2.b.(5) of this proposed rule, we are proposing to modify the existing final score hierarchy beginning with the 2021 performance

period/2023 MIPS payment year. In the CY 2018 Quality Payment Program final rule (82 FR 53785 through 53787), we finalized prioritizing the APM Entity final score over any other score for a TIN/NPI by using the waiver authority

for Innovation Center models under section 1115A(d)(1) of the Act and the Shared Savings Program waiver authority under section 1899(f) of the Act to waive section 1848(q)(5)(I)(i)(I) and (II) of the Act so that we could use

the APM Entity final score instead of the virtual group final score for a TIN/NPI. This hierarchy was intended to incentivize APM participation; however, we are proposing to terminate the APM scoring standard in section IV.A.2.b.(5) of this proposed rule, and while we believe it is important to still encourage movement to APMs, we do not believe that prioritizing an APM Entity score over other reported MIPS data would necessarily further our goal of increasing APM participation. The proposed modifications to the final score hierarchy would include MIPS eligible clinicians who are reporting through the APP, which is designed to provide a predictable and consistent MIPS reporting standard to reduce reporting burden and encourage continued APM participation. MIPS eligible clinicians who are already participating in APMs, and therefore,

have different reporting obligations than MIPS eligible clinicians who have not already taken that step, can opt to report through the APP and receive an APP final score that may be used in the MIPS payment adjustment calculation. Beginning with the 2021 performance period/2023 MIPS payment year, if a TIN/NPI has a virtual group final score associated with it, we propose to use the virtual group final score to determine the MIPS payment adjustment. If a TIN/NPI does not have a virtual group final score associated with it, we propose to use the highest available final score associated with the TIN/NPI to determine the MIPS payment adjustment. This proposal is consistent with section 1848(q)(5)(I)(i) of the Act, which requires us to prioritize a virtual group final score over other final scores such as individual and group scores (82 FR 53786). We believe that using the

highest final score available regardless of how the clinician chose to submit data to MIPS would benefit all MIPS eligible clinicians. For example, we have noticed some instances where prioritizing the APM Entity final score over other final scores has resulted in some clinicians not receiving the highest final score associated with their TIN/NPI, which may have the unintended consequence of moving clinicians away from APM participation. As we seek to move more clinicians into APMs, we believe using their highest score regardless of participation method would benefit all MIPS eligible clinicians. With the establishment of MVPs, we intend to revisit policies regarding the final score hierarchy used for payment adjustment determinations in future rulemaking. Table 48 illustrates the proposed modified final score hierarchy.

TABLE 48: Hierarchy for Final Score When More than One Final Score Is Associated with a TIN/NPI

Scenario	Final Score Used to Determine Payment Adjustments
TIN/NPI has a virtual group final score, an APM Entity final score, an APP final score, a group final score, and/or an individual final score.	Virtual group final score.
TIN/NPI has an APM Entity final score, an APP final score, a group final score, and/or an individual final score, but is not in a virtual group.	The highest of the available final scores.

(3) Establishing the Performance Threshold

Under section 1848(q)(6)(D)(i) of the Act, for each year of MIPS, the Secretary shall compute a performance threshold with respect to which the final scores of MIPS eligible clinicians are compared for purposes of determining the MIPS payment adjustment factors under section 1848(q)(6)(A) of the Act for a year. The performance threshold for a year must be either the mean or median (as selected by the Secretary, and which may be reassessed every 3 years) of the final scores for all MIPS eligible clinicians for a prior period specified by the Secretary.

Section 1848(q)(6)(D)(iii) of the Act includes a special rule for the initial 2 years of MIPS, which requires the Secretary, prior to the performance period for such years, to establish a performance threshold for purposes of determining the MIPS payment adjustment factors under section 1848(q)(6)(A) of the Act and an additional performance threshold for purposes of determining the additional MIPS payment adjustment factors under

section 1848(q)(6)(C) of the Act, each of which shall be based on a period prior to the performance period and take into account data available for performance on measures and activities that may be used under the performance categories and other factors determined appropriate by the Secretary. Section 51003(a)(1)(D) of the Bipartisan Budget Act of 2018 amended section 1848(q)(6)(D)(iii) of the Act to extend the special rule to apply for the initial 5 years of MIPS instead of only the initial 2 years of MIPS.

In addition, section 51003(a)(1)(D) of the Bipartisan Budget Act of 2018 added a new clause (iv) to section 1848(q)(6)(D) of the Act, which includes an additional special rule for the third, fourth, and fifth years of MIPS (the 2021 through 2023 MIPS payment years). This additional special rule provides, for purposes of determining the MIPS payment adjustment factors under section 1848(q)(6)(A) of the Act, in addition to the requirements specified in section 1848(q)(6)(D)(iii) of the Act, the Secretary shall increase the performance threshold for each of the

third, fourth, and fifth years to ensure a gradual and incremental transition to the performance threshold described in section 1848(q)(6)(D)(i) of the Act (as estimated by the Secretary) with respect to the sixth year (the 2024 MIPS payment year) to which the MIPS applies.

In the CY 2020 PFS final rule (84 FR 63031 through 63037) at § 414.1405(b)(7) and § 414.1405(b)(8), we finalized the performance thresholds for the 2022 and 2023 MIPS payment years at 45 and 60 points, respectively, an increase of 15 points each year until the 2024 MIPS payment year, where we estimated the performance threshold would be 74.01 points (based on actual year 1 performance data and estimates for the third and fourth years) as depicted in Table 49. However, we also stated that we may revisit the performance threshold for the 2023 MIPS payment year in future rulemaking, if we receive additional data that changes our estimate of the performance threshold for the 2024 MIPS payment year.

TABLE 49: Performance Thresholds for the 2019 MIPS Payment Year through 2024 MIPS Payment Year

	2019 MIPS Payment Year	2020 MIPS Payment Year	2021 MIPS Payment Year	2022 MIPS Payment Year	2023 MIPS Payment Year	*Estimated 2024 MIPS Payment Year
	Year 1	Year 2	Year 3	Year 4	Year 5	*Year 6
Performance Threshold	3 points	15 points	30 points	45 points	60 points	*74.01 points
Difference in PT (year n minus (year n-1))	N/A	12 points	15 points	15 points	15 points	*14.01 points

* Prior estimate for the 2024 MIPS payment year (84 FR 63031-63037). This is the estimated performance threshold for year 6 based on modeling projections and is not the finalized performance threshold for year 6.

We believe that we should reexamine the performance threshold for year 5 (2021 performance period/2023 MIPS payment year) due to the disruptions caused by the COVID-19 Public Health Emergency (PHE). We anticipate some clinicians not having sufficient measures and activities available to participate for the fourth year (2020 performance period/2022 MIPS payment year) and opting to use flexibilities provided for MIPS participation through the extreme and uncontrollable circumstances and hardship exception policies. Furthermore, in considering the effect of the PHE on clinicians, we believe that this is enough of a disruption to revisit the performance threshold for year 5, especially for clinicians who are unable to participate in year 4 due to the PHE.

Clinicians who are unable to participate in the fourth year of MIPS due to the COVID-19 PHE, would face an abrupt and large increase in the performance threshold if they return to full participation in the fifth year, lacking the opportunity to work to improve performance. We considered a range of performance threshold values for the fifth year, from 50 to 60 points, and believe that a performance threshold above 50 could be challenging for clinicians affected by the PHE,

especially those with small practices. Preliminary analysis has shown that when applying a performance threshold of 50 points to the data we received from the 2021 regulatory impact analysis described in section VIII.F.16. of this proposed rule, around 31,376 TIN/NPIs (or 5.6 percent of MIPS eligible clinicians) would have payments adjustments that go from negative to positive with a performance threshold of 50 points compared to 60 points. For example, analysis shows with the previously finalized performance threshold of 60 points, 24.4 percent of engaged small practices would receive a negative payment adjustment, whereas with a performance threshold of 50 points, 18.8 percent of engaged small practices would receive a negative payment adjustment. In analyzing the range of performance threshold values and the impact on high performers (analysis detailed in section VIII.F.16.b. of this proposed rule), we saw that in setting the performance threshold at 50 points, the maximum payment adjustment is 6.89 percent whereas when setting the performance threshold at 60 points, the maximum payment adjustment is 7.36 percent, a decrease in percentage by 0.47. To continue to incentivize high performers,

we are not revisiting the additional performance threshold, which is set at 85 points for year 5. We are proposing to set the performance threshold at 50 points for the 2023 MIPS payment year, instead of 60 points as previously finalized at § 414.1405(b)(8). The performance threshold would remain at 30 points in the third year, increase to 45 points in the fourth year, and increase to 50 points in the fifth year. The increase between the third and fifth year would total 20 points. Additionally, and as discussed in more detail below in our discussion of revising the prior estimate of the performance threshold for the 2024 MIPS payment year, we are open to considering alternatives for the performance threshold for the 2023 MIPS payment year. We request comments on the proposed performance threshold of 50 points, the range of values we considered, and any alternatives that commenters believe we should consider for the performance threshold for the 2023 MIPS payment year.

Table 50 depicts the performance threshold for the 2019 MIPS payment year through 2024 MIPS payment year, including the potential change to the performance threshold for the fifth year.

TABLE 50: Performance Thresholds for the 2019 MIPS Payment Year through 2024 MIPS Payment Year

	2019 MIPS Payment Year	2020 MIPS Payment Year	2021 MIPS Payment Year	*2022 MIPS Payment Year	**2023 MIPS Payment Year	2024 MIPS Payment Year
	Year 1	Year 2	Year 3	*Year 4	**Year 5	Year 6
Performance Threshold	3 points	15 points	30 points	*45 points *N/A for those who do not participate in year 4	**50 points	74.01 points
Difference in PT (year n minus (year n-1))	N/A	12 points	15 points	*15 points *N/A for those who do not participate in year 4	**5 points for those who participate in year 4 **20 points for those who do not participate in year 4	24.01 points

*Assumed affected payment year due to PHE resulting in measures not being available for reporting for MIPS participants.

** Proposed new performance threshold for the fifth year.

At the time of publication of this proposed rule, we do not have actual performance scores and other data for year 3 (2019 performance period/2021 MIPS payment year). In the event this information becomes available with sufficient time to inform our policy decisions for the final rule, we propose to revisit and potentially revise in the final rule our prior estimate of 74.01 points for the performance threshold for the 2024 MIPS payment year. We anticipate that the actual performance scores for the 2019 performance period/2021 MIPS payment year may be different than the estimates that we published in our regulatory impact analysis estimate (84 FR 63033) because the COVID-19 PHE occurred during the data submission period. We also expect that the 2019 performance period data may be unusual due to the PHE occurring during the submission period. We request comments on our proposal to revisit and potentially revise our prior estimate of the performance threshold for year 6. In particular, we seek comment on what indicators (for example, if the distribution of scores is skewed due to the PHE), if any, should be used to evaluate whether or not the 2019 performance period data are appropriate to use to revise our prior estimate.

Lastly, in the event that we decide to revise our prior estimate of the performance threshold for the 2024 MIPS payment year (either higher or lower) in the final rule, we propose to consider the revised estimate when we decide on an appropriate numerical value for the performance threshold for

the 2023 MIPS payment year. As an example, if we believe that the estimate for the 2024 MIPS payment year performance threshold should be higher than 74.01 (say 80 or 85 points), then we anticipate the performance threshold for the 2023 MIPS payment year would be higher than 50 (likely 55 points, 60 points) to reflect the change in the estimate. We seek to ensure a gradual and incremental transition to the estimated performance threshold for the 2024 MIPS payment year, and thus, we believe that we should take into account the revised estimate when determining the performance threshold for the 2023 MIPS payment year. We request comments on our proposal to consider the revised estimate for the 2024 MIPS payment year when we select a performance threshold for the 2023 MIPS payment year.

(4) Example of Adjustment Factors

Figure A provides an illustrative example of how various final scores would be converted to a MIPS payment adjustment factor and potentially an additional MIPS payment adjustment factor, using the statutory formula and based on our proposed policies for the 2023 MIPS payment year. In Figure A, the performance threshold is set at 50 points. The applicable percentage is 9 percent for the 2023 MIPS payment year. The MIPS payment adjustment factor is determined on a linear sliding scale from zero to 100, with zero being the lowest possible score which receives the negative applicable percentage (negative 9 percent for the 2023 MIPS payment year) and resulting in the

lowest payment adjustment, and 100 being the highest possible score which receives the highest positive applicable percentage and resulting in the highest payment adjustment. However, there are two modifications to this linear sliding scale. First there is an exception for a final score between zero and one-fourth of the performance threshold (zero and 12.5 points based on the proposed performance threshold of 50 points for the 2023 MIPS payment year). All MIPS eligible clinicians with a final score in this range would receive the lowest negative applicable percentage (negative 9 percent for the 2023 MIPS payment year). Second, the linear sliding scale line for the positive MIPS payment adjustment factor is adjusted by the scaling factor, which cannot be higher than 3.0.

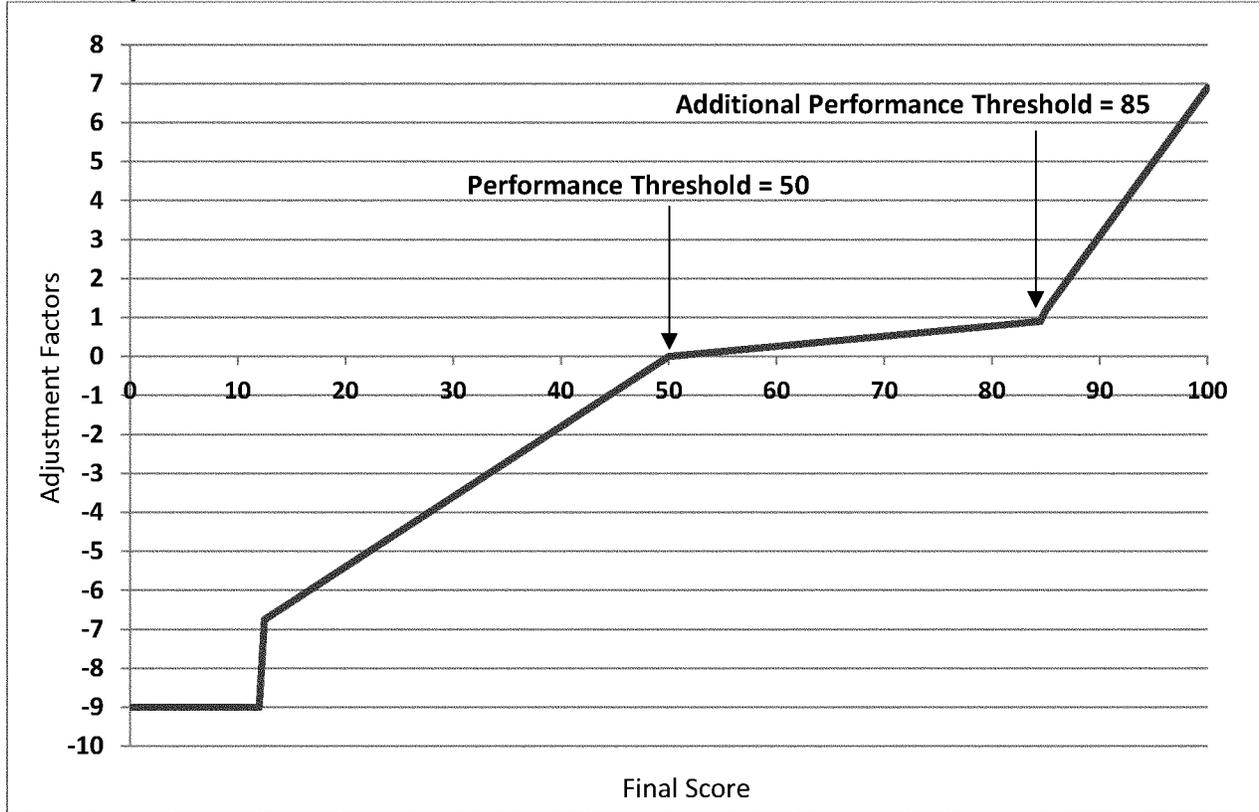

If the scaling factor is greater than zero and less than or equal to 1.0, then the MIPS payment adjustment factor for a final score of 100 would be less than or equal to 9 percent. If the scaling factor is above 1.0 but is less than or equal to 3.0, then the MIPS payment adjustment factor for a final score of 100 would be greater than 9 percent.

Only those MIPS eligible clinicians with a final score equal to 50 points (which is the proposed performance threshold) would receive a neutral MIPS payment adjustment. Because the performance threshold is 50 points, we anticipate that more clinicians will receive a positive adjustment than a negative adjustment and that the scaling factor would be less than 1 and the MIPS payment adjustment factor for each MIPS eligible clinician with a final

score of 100 points would be less than 9 percent.

BILLING CODE 4120-01-P

Figure A: Illustrative Example of MIPS Payment Adjustment Factors Based on Final Scores and Performance Threshold and Additional Performance Threshold for the 2023 MIPS Payment Year

Note: The adjustment factor for final score values above the performance threshold is illustrative. For MIPS eligible clinicians with a final score of 100, the adjustment factor would be 9 percent times a scaling factor greater than zero and less than or equal to 3.0. The scaling factor is intended to ensure budget neutrality, but cannot be higher than 3.0. MIPS eligible clinicians with a final score of at least 85 points would also receive an additional adjustment factor for exceptional performance. The additional adjustment factor starts at 0.5 percent, cannot exceed 10 percent, and is also multiplied by a scaling factor that is greater than zero and less than or equal to 1. MIPS eligible clinicians at or above the additional performance threshold will receive the amount of the adjustment factor plus the additional adjustment factor. This example is illustrative as the actual payment adjustments may vary based on the distribution of final scores for MIPS eligible clinicians.

Table 51 illustrates the changes in payment adjustment based on the final policies from the CY 2020 PFS final rule (84 FR 63031 through 63045) for the

2022 and 2023 MIPS payment year and the changes potentially modifying the performance threshold for the 2023 MIPS payment year discussed in this

proposed rule, as well as the applicable percent required by section 1848(q)(6)(B) of the Act.

TABLE 51: Illustration of Point System and Associated Adjustments Comparison between the Finalized 2022 MIPS Payment Year, the finalized 2023 MIPS Payment Year, and the Proposed Policies for the 2023 MIPS Payment Year

2022 MIPS Payment Year		Previously Finalized 2023 MIPS Payment Year		New Proposed 2023 MIPS Payment Year	
Final Score Points	MIPS Adjustment	Final Score Points	MIPS Adjustment	Final Score Points	MIPS Adjustment
0.0-11.25	Negative 9%	0.0-15.0	Negative 9%	0.0-12.5	Negative 9%
11.26-44.99	Negative MIPS payment adjustment greater than negative 9% and less than 0% on a linear sliding scale	15.01-59.99	Negative MIPS payment adjustment greater than negative 9% and less than 0% on a linear sliding scale	12.51-49.99	Negative MIPS payment adjustment greater than negative 9% and less than 0% on a linear sliding scale
45.0	0% adjustment	60.0	0% adjustment	50.0	0% adjustment
45.01-84.99	Positive MIPS payment adjustment greater than 0% on a linear sliding scale. The linear sliding scale ranges from 0 to 9% for scores from 45.00 to 100.00. This sliding scale is multiplied by a scaling factor greater than zero but not exceeding 3.0 to preserve budget neutrality	60.01-84.99	Positive MIPS payment adjustment greater than 0% on a linear sliding scale. The linear sliding scale ranges from 0 to 9% for scores from 60.00 to 100.00. This sliding scale is multiplied by a scaling factor greater than zero but not exceeding 3.0 to preserve budget neutrality	50.01-84.99	Positive MIPS payment adjustment greater than 0% on a linear sliding scale. The linear sliding scale ranges from 0 to 9% for scores from 50.00 to 100.00. This sliding scale is multiplied by a scaling factor greater than zero but not exceeding 3.0 to preserve budget neutrality
85.0-100	Positive MIPS payment adjustment greater than 0% on a linear sliding scale. The linear sliding scale ranges from 0 to 9% for final scores from 45.00 to 100.00. This sliding scale is multiplied by a scaling factor greater than zero but not exceeding 3.0 to preserve budget neutrality. PLUS	85.0-100	Positive MIPS payment adjustment greater than 0% on a linear sliding scale. The linear sliding scale ranges from 0 to 9% for final scores from 60.00 to 100.00. This sliding scale is multiplied by a scaling factor greater than zero but not exceeding 3.0 to preserve budget neutrality. PLUS An additional MIPS payment adjustment for	85.0-100	Positive MIPS payment adjustment greater than 0% on a linear sliding scale. The linear sliding scale ranges from 0 to 9% for final scores from 50.00 to 100.00. This sliding scale is multiplied by a scaling factor greater than zero but not exceeding 3.0 to preserve budget neutrality. PLUS An additional MIPS payment adjustment for exceptional performance. The additional MIPS payment adjustment starts at 0.5% and increases on

2022 MIPS Payment Year		Previously Finalized 2023 MIPS Payment Year		New Proposed 2023 MIPS Payment Year	
Final Score Points	MIPS Adjustment	Final Score Points	MIPS Adjustment	Final Score Points	MIPS Adjustment
	An additional MIPS payment adjustment for exceptional performance. The additional MIPS payment adjustment starts at 0.5% and increases on a linear sliding scale. The linear sliding scale ranges from 0.5 to 10% for scores from 85.00 to 100.00. This sliding scale is multiplied by a scaling factor not greater than 1.0 in order to proportionately distribute the available funds for exceptional performance.		exceptional performance. The additional MIPS payment adjustment starts at 0.5% and increases on a linear sliding scale. The linear sliding scale ranges from 0.5 to 10% for scores from 85.00 to 100.00. This sliding scale is multiplied by a scaling factor not greater than 1.0 in order to proportionately distribute the available funds for exceptional performance

BILLING CODE 4120-01-C

f. Review and Correction of MIPS Final Score

(1) Feedback and Information To Improve Performance

Under section 1848(q)(12)(A)(i) of the Act, we are at a minimum required to provide MIPS eligible clinicians with timely (such as quarterly) confidential feedback on their performance under the quality and cost performance categories beginning July 1, 2017, and we have discretion to provide such feedback regarding the improvement activities and Promoting Interoperability performance categories. In the CY 2018 Quality Payment Program final rule (82 FR 53799 through 53801), we finalized that on an annual basis, beginning July 1, 2018, performance feedback will be provided to MIPS eligible clinicians and groups for the quality and cost performance categories, and if technically feasible, for the improvement activities and advancing care information (now called the Promoting Interoperability) performance categories.

On July 1, 2018, we provided the first performance feedback for the Quality Payment Program. The second performance feedback was provided on July 1, 2019. However, for this year due to the Public Health Emergency (PHE)

and COVID-19, we wish to inform stakeholders that we may provide performance feedback after July 1, 2020 (that is, performance feedback based on data submitted for the performance period in 2019). Although we aim to provide performance feedback on or around July 1 of each year, it is possible that the release date could be later than July 1 depending on the circumstances. At this time, we estimate that we will provide performance feedback in late July or early August, although this timeframe may be subject to change. Please refer to qpp.cms.gov for more information.

g. Third Party Intermediaries

We refer readers to §§ 414.1305 and 414.1400, the CY 2017 Quality Payment Program final rule (81 FR 77362 through 77390), the CY 2018 Quality Payment Program final rule (82 FR 53806 through 53819), the CY 2019 PFS final rule (83 FR 59894 through 59910), the CY 2020 PFS final rule (84 FR 63049 through 63080), and the May 8th COVID-19 IFC-2 (85 FR 27594 through 27595) for our previously established policies regarding third party intermediaries.

In this proposed rule, we propose to make several changes to requirements for (1) third party intermediaries generally, (2) QCDRs, (3) qualified registries, and (4) remedial action.

(1) Generally

(a) Requirements for MIPS Performance Categories That Must Be Supported by Third Party Intermediaries

We refer readers to § 414.1400(a)(2) and the CY 2017 Quality Payment Program final rule (81 FR 77363 through 77364) and as further revised in the CY 2019 PFS final rule (83 FR 60088) and CY 2020 PFS final rule (84 FR 63049 through 63052) at § 414.1400(a)(2) for our current policy regarding the types of MIPS data third party intermediaries may submit. Through this proposed rule, we intend on clarifying our requirements of QCDRs, qualified registries, and health IT vendors with regards to submitting data for purposes of the MIPS program through revisions to our regulation codified at § 414.1400(a)(2), particularly for those third party intermediaries who are interested in supporting MVPs in the future. Therefore we propose to revise § 414.1400(a)(2) as follows:

- Except as provided under § 414.1400(a)(2)(ii), QCDRs, qualified registries, and health IT vendors must be able to submit data for all of the following MIPS performance categories:
 - Quality, except:
 - ++ The CAHPS for MIPS survey; and
 - ++ For qualified registries and health IT vendors, QCDR measures;

- Improvement activities; and
- Promoting Interoperability, if the eligible clinician, group, or virtual group is using CEHRT; however, a third party intermediary may be exempted from this requirement if its MIPS eligible clinicians, groups or virtual groups fall under the reweighting policies at § 414.1380(c)(2)(i)(A)(4) or (5) or § 414.1380(c)(2)(i)(C)(1) through (7) or § 414.1380(c)(2)(i)(C)(9).

Health IT vendors that do not support MVPs, must be able to submit data for at least one of the MIPS performance categories described above. We request comments on these proposals.

(i) Reporting MVPs Through Third Party Intermediaries

We refer readers to section IV.A.3.a. of this proposed rule where we discuss reporting MVPs through third party intermediaries and our proposal that QCDRs, qualified registries, and health IT vendors who support the Quality, Promoting Interoperability, and Improvement Activities performance categories may also support the reporting of MVPs.

(ii) Reporting APM Performance Pathway (APP) Through Third Party Intermediaries

We refer readers to section IV.A.3.b. of this proposed rule where we discuss beginning with the CY MIPS 2023 payment year, MIPS eligible clinicians scored under the APP would be scored on the quality measure set finalized for that MIPS performance period. Three quality measures (Quality ID# 001: Diabetes: Hemoglobin A1c (HbA1c) Poor Control (≤9%), Quality ID#: 134: Preventive Care and Screening; Screening for Depression and Follow-Up Plan, and Quality ID# 236: Controlling High Blood Pressure) are proposed to be reported using the MIPS CQM and eCQM collection types.

(b) Approval Criteria for Third Party Intermediaries

(i) Background

We refer readers to § 414.1400(a)(4), the CY 2019 PFS final rule (83 FR 59894 through 59895, 60088), the CY 2020 PFS final rule (84 FR 63052 through 63053), and the May 8th COVID-19 IFC-2 (85 FR 27594 through 27595) for previously finalized policies related to the approval criteria for third party intermediaries.

(ii) Proposed New Approval Considerations—Past Performance and Conduct

During past years of the MIPS program we have encountered third party intermediaries failing to meet

program requirements and engaging in other conduct that could harm the integrity of the MIPS program. Some examples of third party intermediaries failing to meet program requirements include, but are not limited to: Failing to meet requirements to submit data for a performance category; failing to provide services throughout the entire performance period and applicable data submission period; and providing data that is not true, accurate, or complete. Additionally, we have also encountered third party intermediaries who have provided inaccurate information to the clinicians and groups they support regarding the obligation to submit data to CMS that are true, accurate and complete. For example, we are aware of third party intermediaries offering services and tools to eligible clinicians that encourage the selection of misrepresentative data, commonly referred to as “cherry-picking,” to maximize scores.

In preparation for future years of the program, we believe it is important to disapprove third party intermediaries that have demonstrated their failure to comply with program requirements or have provided inaccurate information regarding MIPS program requirements to clinicians. We are concerned with the potential adverse program effect of this conduct, such as delayed and erratic reporting if third party intermediaries fail to support MIPS reporting for the entire performance period and reporting period, and the possibility of inaccurate data submissions. As a result, we believe it is important to consider these factors when making determination regarding whether to approve a third party intermediary for future participation in the MIPS program.

Therefore, we are proposing to amend the current § 414.1400(a)(4) to propose a new paragraph at § 414.1400(a)(4)(ii):

The determination of whether to approve an entity as a third party intermediary for a MIPS performance period may take into account: (1) Whether the entity failed to comply with the requirements of this section for any prior MIPS payment year for which it was approved as third party intermediary; and (2) whether the entity provided inaccurate information regarding the requirements of this subpart to any eligible clinician. We intend on utilizing all available information to make these approval determinations, including without limitation, information collected through compliance audits under our existing audit authority as described in § 414.1400(g). Third party intermediaries may be selected during the performance period to be audited for

a given requirement. As a part of our outreach to a selected third party intermediary, we intend on providing additional direction with regards to the timeline and information needed for the audit. The results of the audit will be reviewed to inform future approval of a third party intermediary, and if remedial action is warranted, we will utilize our existing authority as described in § 414.1400(f). We believe use of this information in approval determinations will help reduce the risk of third party intermediaries that are unreliable, thereby avoiding a possible increase in burden to clinicians who may inadvertently select an unreliable third party intermediary for purposes of reporting for the MIPS program. We request comments on our proposals; specifically, we request comments on whether there are other factors that should inform our considerations when approving third party intermediaries.

(iii) Third Party Intermediary Training and Support

In the CY 2017 Quality Payment Program final rule (81 FR 77367 through 77374) and (81 FR 77384 through 77386), we established our expectation that QCDRs and qualified registries perform certain functions related to data submission. One of those expectations is participation in ongoing support conference calls hosted by CMS (approximately one call per month) and an in-person kick-off meeting (if held) at our headquarters in Baltimore, MD. (81 FR 77368) and (81 FR 77384). The purpose of these meetings is to provide approved QCDRs program updates from subject matter experts who work across the Quality Payment Program. At these meetings, CMS subject matter experts and our contractors provide approved QCDRs and qualified registries with updates, answer questions, and provide technological demonstrations. In light of the PHE for the COVID-19 pandemic and consistent with the goal of infection control, we have reevaluated our expectations and have decided to adopt a policy allowing for flexibility moving forward. With the health and safety of our stakeholders in mind, we believe virtual meetings would be sufficient when in-person meetings are not possible.

In the CY 2017 Quality Payment Program final rule (81 FR 77377 through 77382), we stated our expectations for health IT vendors that serve as third party intermediaries by obtaining data from the CEHRT of a MIPS eligible clinician and submitting such data to CMS for participation in MIPS. For further discussion of CEHRT we refer readers to sections III.M.3 and

IV.A.3.g.(1)(iv) of this proposed rule. Because the submission requirements and policies that may be added or modified from year to year have the potential to alter expectations for all third party intermediaries, we believe that mandatory meetings and training calls would also be appropriate for health IT vendors that will serve as third party intermediaries. Hosting training calls for health IT vendors would give us an opportunity to provide a review of requirements, answer questions, and explain updates to the annual submission process and other policies as applicable. Thus, we are proposing for the requirement that third party intermediaries participate in an annual meeting and training calls as deemed necessary by CMS include those third party intermediaries that are health IT vendors. We are soliciting comments on the best method to reach health IT vendors so that we can invite them to required meetings and share additional information. We are considering listserv communications through the QPP listserv but would welcome suggestions for other communication mechanisms.

We previously finalized the CMS-approved survey vendor approval criteria in § 414.1400(e) as discussed in the CY 2018 PFS final rule (83 FR 59907 through 59908). Among the approval criteria, § 414.1400(e)(3) established the requirement that the entity has successfully completed, and has required its subcontractors to successfully complete, vendor training(s) administered by CMS or its contractors. We continue to believe these previously finalized requirements are of importance to CMS-approved survey vendors, such as CAHPS for MIPS vendors. In addition, because the submission requirements and policies that may be added or modified from year to year have the potential to alter expectations for all third party intermediaries, we believe that the proposed requirement that third parties intermediaries participate in an annual meeting and training calls as deemed necessary by CMS should also be applicable to CMS-approved survey vendors.

In summary, we believe making support calls and trainings mandatory for all third-party intermediaries will provide an abundance of value to all approved third party intermediaries themselves, as well as to the MIPS program and the clinicians who rely on third party intermediaries to make complete, accurate, usable and timely data on their behalf. We believe uniformly codifying this language is appropriate to hold all third party

intermediaries accountable for the training and support. Therefore, we propose to codify at § 414.1400(a)(4)(iii) that beginning with the 2023 MIPS payment year, third party intermediaries must attend and complete training and support sessions in the form and manner, and at the times, specified by CMS. We affirm that, in addition to the obligations under this proposal, CMS-approved survey vendors must also continue to meet the requirements at § 414.1400(e)(3).

(iv) Future Safeguards for All Third Party Intermediaries

We understand our obligation to ensure the integrity of the MIPS program and we continue to assess opportunities to strengthen program safeguards. Certain safeguards apply to all third party intermediaries, including those described in § 414.1400(a), (f), and (g). As discussed in this proposed rule, we are proposing additional program safeguards in regard to data validation audit and targeted audit requirements that would apply specifically to QCDRs and qualified registries, respectively found in section IV.A.3.g.(2)(a) and section IV.A.3.g.(3) of this proposed rule. These proposals would require QCDRs and qualified registries to conduct validation on data prior to the data being submitted to CMS for purposes of the MIPS program. We have limited these proposals to QCDRs and qualified registries at this time, but as described further below we solicit feedback on expanding these requirements to all third party intermediaries through future rulemaking.

The Office of the National Coordinator for Health Information Technology's (ONC) Health IT Certification Program provides for the certification of certain health IT. The requirements for ONC certification are based on standards, implementation specifications, and certification criteria adopted by the Secretary. The Quality Payment Program has adopted a definition of certified electronic health record technology (CEHRT) at § 414.1305.

For discussion of proposed revisions to the CEHRT definition adopted for the Quality Payment Program we refer readers to section III.M. of this proposed rule.

It is important to note that a health IT vendor which acts as a third party intermediary for purposes of the MIPS program may or may not be the same entity as a health IT developer which certifies health IT products as part of the certification program. While health IT developers may act as third party

intermediaries for their customers, other service providers who do not develop health IT products may also assist MIPS eligible clinicians by submitting data obtained from CEHRT on their behalf and thereby function as a health IT vendor for purposes of the MIPS program. Furthermore, the entities that are not health IT developers must only submit data on behalf of eligible clinicians that has already been captured and calculated using the functions of CEHRT. Unlike QCDRs and Qualified Registries, third party intermediaries that are health IT vendors may or may not also possess expertise related to quality improvement and analysis/validation of clinical quality data, and we do not currently require these organizations to attest that they possess these capabilities.

We are increasingly aware of data integrity issues that have impacted data submitted by health IT vendors that obtain data from MIPS eligible clinician's CEHRT and serve as a third party intermediaries to submit this data on behalf of MIPS eligible clinicians. We are aware of instances in which health IT vendors have submitted data that are inaccurate and unusable. These data issues may result in improper payments or otherwise undercut the integrity of the MIPS program. In some instances, data issues caused by health IT vendors may have downstream negative impacts to the clinicians whose data the health IT vendor is submitting, such as negative payment adjustments and inaccurate data publically posted on the Physician Compare internet website of the Centers for Medicare & Medicaid Services (or a successor website).

Although we are not proposing to add data validation requirements for health IT vendors at this time, we are considering ways to impose such requirements in the future. We are soliciting comment on whether we should impose data validation requirements on health IT vendors as part of the third party intermediary approval process and if so, how the data validation requirements for health IT vendors should differ, if at all, from those proposed for QCDRs and Qualified Registries. We believe that potentially requiring health IT vendors to validate the data they submit to us for purposes of the MIPS program will lead to the submission of data that can be considered more reliable and accurate. Therefore, we seek comment on the future application of such requirements on health IT vendors and if there are factors unique to health IT vendors that should be considered when developing

such a policy. For instance, we are seeking to further understand where data quality issues may arise in data submitted by health IT vendors on behalf of MIPS eligible clinicians. We are also seeking comment on whether health IT vendors currently submitting data on behalf of MIPS eligible clinicians possess the capabilities to engage in the data validation processes we are proposing for QCDRs and Qualified Registries. We are also seeking comment regarding the burden on health IT vendors of adopting the data validation requirements as proposed for QCDRs and qualified registries and whether the imposition of these requirements on health IT vendors would discourage health IT vendors from serving as third party intermediaries. We also would welcome input as to whether alternative requirements for health IT vendors would impose a less burden on these third parties' intermediaries while still ensuring that the data submitted is accurate and complete. Finally, we are interested in how any future data validation processes should impact certification under the ONC Health IT Certification Program for health IT developers who also serve as a health IT vendor third party intermediary for the purposes of MIPS.

For CMS-approved survey vendors, such as CAHPS for MIPS vendors, we are also not proposing any new data validation requirements at this time. In the CY 2018 PFS final rule (83 FR 59907 through 59908) we previously finalized requirements at § 414.1400(e) that address the validity of data submitted to CMS for CMS-approved survey vendors. Specifically, we previously finalized at § 414.1400(e)(4) that as a condition of approval the entity must have submitted a quality assurance plan and other materials relevant to survey administration, as determined by CMS, including cover letters, questionnaires and telephone scripts. We believe this previously finalized requirement at § 414.1400(e) is sufficient to address potential concerns about the accuracy of data submitted by survey vendors; however, we solicit feedback on whether the audit requirements in this proposal should be expanded to include survey vendors.

(2) Qualified Clinical Data Registries (QCDRs)

We generally refer readers to section 1848(m)(3)(E) of the Act, as added by section 601(b)(1)(B) of the American Taxpayer Relief Act of 2012 (ATRA) (Pub. L. 112–240, enacted January 2, 2013), which requires the Secretary to establish requirements for an entity to

be considered a Qualified Clinical Data Registry (QCDR) and a process to determine whether or not an entity meets such requirements. We refer readers to section 1848(m)(3)(E)(i)(v) of the Act, the CY 2019 PFS final rule (83 FR 60088), the CY 2020 PFS final rule (84 FR 63053 through 63058), May 8th COVID–19 IFC–2 (85 FR 27594 through 27595) and § 414.1400(a)(4) through (b) for previously finalized policies about third party intermediaries generally and QCDRs specifically. In this proposed rule, we propose a technical update to § 414.1400(b) title to rename it from “QCDR approval criteria” to “QCDRs”, to better align the title with the content of the regulation. In addition, we are proposing policies related to QCDR: (1) Data validation audits and targeted audits; and (2) measure requirements. These are discussed in detail below.

(a) Data Validation Audit and Targeted Audit Requirements

In the CY 2017 Quality Payment Program final rule, we discussed our expectation that QCDRs and qualified registries would conduct validation on the data they intend on submitting for the MIPS performance period (81 FR 77366 through 77367) and provide the results of the data validation to CMS in the form of a data validation execution report by May 31st of the year following the performance period. Our intention was to establish our expectation that QCDRs would establish a process to assess whether the data are true, accurate, and complete prior to submitting them to CMS for purposes of the MIPS program. We believe it is important to establish a requirement that QCDRs conduct data validation to ensure they are actively monitoring the data they submit to CMS for purposes of a pay-for-performance program. In instances where a QCDR discovers data are inaccurate or incomplete, the entity must correct the issue prior to submitting the data to CMS in order to provide accurate certification in accordance with § 414.1400(a)(5). A QCDR that submits a false certification submits data that is inaccurate, unusable or otherwise compromised to CMS for purposes of the MIPS program may be subject to remedial action or termination under § 414.1400(f). We believe requiring QCDRs to validate the accuracy of the data they are submitting is an important safeguard to promote accurate payments under the MIPS program. Therefore, in this proposed rule, we propose to codify at § 414.1400(b)(2)(iv) and (v) requirements beginning with the 2023 MIPS payment year as condition of approval each QCDR must conduct

annual data validation audits and if one or more deficiencies or data errors are identified the QCDR must also conduct targeted audits. We also propose specific obligations for those audits as discussed below.

- We propose to codify at § 414.1400(b)(2)(iv)(A), that the QCDR must conduct data validation for the payment year prior to submitting any data for that payment year to CMS for purposes of the MIPS program. We believe it is important for QCDRs to conduct validation audits to identify and fix concerns regarding data accuracy prior to submitting data to us, including potential issues related to data aggregation and calculation. Conducting the data validation prior to data submission will lead to data being more reliable and promote compliance with the requirement of data being true, accurate, and complete. In the CY 2017 Quality Payment Program final rule, we described this auditing using the term randomized audit (81 FR 77366). In this proposed rule, we are proposing instead to refer to this audit as the data validation audit in an effort to be abundantly clear regarding our expectations that the QCDR will purposefully construct a sample and conduct an audit that complies with specific regulatory requirements and also to distinguish these audits from the targeted audits discussed below and proposed at § 414.1400(b)(2)(v).

- We propose to codify at § 414.1400(b)(2)(iv)(B), the QCDR must conduct data validation on data for each performance category for which it will submit data, including if applicable the Quality, Improvement Activities, and Promoting Interoperability performance categories. We believe that it is important that data validation be done across all performance categories for which the QCDR submits data since QCDRs must attest that data submitted to CMS is true, accurate, and complete and data for each of these performance categories can influence score calculation and payment adjustments.

- We propose to codify at § 414.1400(b)(2)(iv)(C), that the QCDR must conduct data validation on data for each submitter type for which it will submit data, including if applicable MIPS eligible clinicians, groups, virtual groups, voluntary participants, and opt-in participants. We believe it is important for the data submitted to CMS be accurate for all clinicians and groups for which the QCDR intends on submitting data to the MIPS program, regardless of whether they are required to participate, have opted in, or have chosen to voluntarily participate. Therefore, we propose to require that

the data validation audits should account for all types of submitters that are utilizing the QCDR to submit data to CMS for purposes of the MIPS program. We note the importance of validating data for all submitter types regardless of its use for payment or public reporting. Even clinicians who voluntarily report to MIPS and whose data are not used for payment purposes could have their data publically posted on the Physician Compare website. We believe all data the QCDR submits, regardless of its use for payment or public reporting, should be true, accurate, and complete.

- We propose to codify at § 414.1400(b)(2)(iv)(D) that the QCDR must use clinical documentation (provided by the clinicians they are submitting data for) to validate that the action or outcome measured actually occurred or was performed. If the data a QCDR intends to submit to CMS for purposes with the MIPS program are to demonstrate that a clinician did a particular clinical activity or achieved a particular clinical outcome, we believe meaningful validation of such data requires the QCDR to use clinical documentation to confirm that the activity occurred or was performed.

- We propose to codify at § 414.1400(b)(2)(iv)(E) that the QCDR shall conduct each data validation audit using a sampling methodology that meets the following requirements:

- ++ Uses a sample size of at least 3 percent of the TIN/NPIs for which the QCDR will submit data to CMS, except that if a 3 percent sample size would result in fewer than 10 TIN/NPIs, the QCDR must use a sample size of at least 10 TIN/NPIs, and if a 3 percent sample size would result in more than 50 TIN/NPIs, the QCDR may use a sample size of 50 TIN/NPIs.

- ++ Uses a sample that includes at least 25 percent of the patients of each TIN/NPI in the sample, except that the sample for each TIN/NPI must include a minimum of 5 patients and does not need to include more than 50 patients.

We believe the aforementioned sampling methodology is appropriate for multiple reasons. First, the sampling methodology criteria are consistent with the methodology established under the legacy Physician Quality Reporting System (PQRS) program and as described in the CY 2017 Quality Payment Program final rule (81 FR 77366 through 77367). As this methodology has been used for many years under the legacy program, we believe stakeholders are well versed in executing data validation audits using this sampling methodology. Second, the proposed methodology accounts for QCDRs and qualified registries of

varying sizes. Data validation requires a level of effort on the part of the QCDR to execute a data validation plan, identify a sample, and collect information for purposes of chart review; therefore, we are cognizant that requiring a larger sample size would create additional burden on QCDRs and clinicians to account for a larger volume in TIN/NPIs and medical records for review.

- We propose to codify at § 414.1400(b)(2)(iv)(F) that each QCDR data validation audit must include the following:

- ++ Verification of the eligibility status of each eligible clinician, group, virtual group, opt-in participant, and voluntary participant. We believe that it is important for the QCDR to track the eligibility status of each clinician and group that wishes to use a third party intermediary to report, because accurate information regarding eligibility is important to ensuring payment adjustments are properly applied. Furthermore, verification of eligibility status is consistent with the requirement for QCDRs to track opt-in participants, as described at § 414.1400(a)(4)(iv) and in the context of clinicians who voluntarily report to MIPS helps ensure the accuracy of data publically posted on the Physician Compare internet website of the Centers for Medicare & Medicaid Services (or a successor website).

- ++ Verification of the accuracy of Tax Identification Numbers (TINs) or National Provider Identifiers (NPIs). Correct TINs and NPIs are critical to ensure data submitted by the QCDR are attributed to the correct clinicians and groups. Inaccurate NPIs or TINs may lead to inadvertent downstream impacts to the way clinicians and groups are scored, and assigned a payment adjustment.

- ++ Calculation of reporting and performance rates (for example, formulas included in the quality measure specifications). QCDRs must follow the measure specifications when calculating reporting and performance rates. Calculations that deviate the formulas included in the quality measure specifications undercut efforts to ensure data are consistent, reliable, and have been calculated in a uniform manner.

- ++ Verification that only MIPS quality measures and QCDR measures that are relevant to the performance period will be utilized for MIPS submission. Measure specifications for the MIPS quality measures and QCDR measures go through maintenance on an annual basis. Use of outdated measure specifications would likely result in the

QCDR submitting inaccurate or compromised data for the clinicians and groups they support. While not all measures go through substantive changes on an annual basis, there are changes to codes that do occur annually that should be accounted for when programming measures. Therefore, we believe it is important that QCDRs are utilizing the most current version of the measure specification, relevant to the performance period in which they are participating.

- We propose to codify at § 414.1400(b)(2)(iv)(G), that in a form and manner and by a deadline specified by CMS, the QCDR must report the results of each data validation audit, including the overall deficiency or data error rate, the types of deficiencies or data errors discovered, the percentage of clinicians impacted by any deficiency or data error, and how and when each deficiency or data error type was corrected. We believe it is important that the results of the data validation be shared with us in order for us to understand the types of issues the QCDRs have encountered and what resolutions were executed to fix the issues. The information provided will help us track frequently occurring issues which may be identified as an area to provide further education. It is our belief that the report will be largely comprised of issues that were identified and resolved. However, if an issue has been identified and could not be resolved, we would want to understand what the issue is and why it could not be resolved. We emphasize that all data submitted to CMS by a QCDR on behalf of a MIPS eligible clinician, group or virtual group must be certified by the third party intermediary as true, accurate, and complete to the best of its knowledge as described in § 414.1400(a)(5). If a QCDR submits a false certification or data that are data that are inaccurate, unusable, or otherwise compromised, the QCDR may be subject to remedial action or termination as described at § 414.1400(f).

- We propose to codify at § 414.1400(b)(2)(v)(A), that if a data validation audit under § 414.1400(b)(2)(iv) identifies one or more deficiency or data error, the QCDR must conduct a targeted audit into the impact and root cause of each such deficiency or data error for that MIPS payment year. We believe targeted audits are important to further evaluate the impact of deficiencies or data errors to the cohort of clinicians and groups that the QCDR intends to submit data for, and for QCDRs to determine the

reason the deficiency or data error occurred.

- We propose to codify at § 414.1400(b)(2)(v)(B), that the QCDR must conduct any required targeted audits for the MIPS payment year and correct any deficiencies or data errors identified through such audit prior to the submission of data for that MIPS payment year. To promote the accuracy of the data submitted to the MIPS program for the payment year and to reduce the risk that the agency initiates payment calculations in reliance on inaccurate data, it is important for the QCDR to conduct required targeted audits and correct any deficiencies and data errors identified through those audits prior to submitting the data to CMS.

- We propose to codify at § 414.1400(b)(2)(v)(C), the QCDR must conduct the targeted audit using the sampling methodology that meets the requirements described in paragraph (b)(2)(iv)(E). The sample for the targeted audit must not include data from the sample used for the data validation audit in which the deficiency or data error was identified.

We believe the sampling methodology we are proposing for data validation audits is equally appropriate for the conduct of targeted audits. We believe that adopting the same methodology for both audit types would be less burdensome on QCDRs than requiring these entities to apply a separate sampling methodology for their targeted audits. Provided that data in the sample for the targeted audit does not overlap with the data that was reviewed in the data validation audit, we believe the targeted audit would provide the QCDR with a reasonable perspective into impact and root cause of deficiencies and data errors across the data to be submitted without imposing the burden that would result from maintaining a separate sampling methodology for targeted audits.

- We propose to codify at § 414.1400(b)(2)(v)(D), in a form and manner and by a deadline specified by CMS, the QCDR must report the results of each targeted audit, including the overall deficiency or data error rate, the types of deficiencies or data errors discovered, the percentage of clinicians impacted by each deficiency or data error, and how and when each deficiency or data error type was corrected. As is the case with the results of data validation audits, we believe it is important that the results of the targeted audits be shared with us in order for us to understand the types of issues the QCDRs have encountered and what resolutions were executed to fix

the issues. The information provided will help us track frequently occurring issues which may be identified as an area to provide further education.

We request comments on the aforementioned proposals, including whether stakeholders are concerned with implementing these policies for the 2023 MIPS payment year, and if so, what barriers do they believe they would face in implementing these requirements.

(b) QCDR Measures

We refer readers to § 414.1400(b), the CY 2017 Quality Payment Program final rule (81 FR 77374 through 77375), the CY 2018 Quality Payment Program final rule (82 FR 53813 through 53814), the CY 2019 PFS final rule (83 FR 59900 through 59906), the CY 2020 PFS final rule (84 FR 63058 through 63074), and the May 8th COVID-19 IFC-2 (85 FR 27594 through 27595) for where we previously finalized standards and criteria for QCDR measures. In this proposed rule, we are proposing modifications to previously finalized QCDR measure requirements. While we understand the level of time and work needed to meet these requirements, we would not be grandfathering in previously approved QCDR measures.

(i) QCDR Measure Considerations and Requirements for Approval or Rejection

We refer readers to § 414.1400(b)(3), the CY 2020 PFS final rule (84 FR 63059 through 63073) for our previously finalized policies related to the QCDR measure considerations and requirements for approval or rejection. Through education and outreach, we have heard stakeholders' concerns about the complexity of reporting when there is a large inventory of QCDR measures to choose from, and believe our proposals in this proposed rule will help to refocus measures to those most meaningful to a clinician's scope of practice.

In this proposed rule, we are proposing to modify a few QCDR measure requirements: Measures in MVPs; measure testing; duplicative QCDR measures; and collection of data. These proposals are discussed in detail below.

(A) QCDR Measures in MVPs

We refer readers to section IV.A.3.a. of this proposed rule, where we discuss the inclusion of QCDR measures in MVPs, at CMS discretion, beginning with the 2024 MIPS payment year. While we acknowledge and appreciate the level of innovation that QCDRs have put forward as they have developed and implemented QCDR measures, we note

the differences between the QCDR measures utilized in the existing MIPS reporting method versus that of MVP reporting. In the current MIPS program, clinicians and groups may select to report on measures from a large library of what is available through the MIPS quality measure inventory and that of the QCDR measures available, if they choose to report through a QCDR. In our gradual transition to MVPs, we move to subsets of measures and activities, where clinicians may have a more focused selection of items to report on.

For that reason, it is important that the measures included in an MVP are reliable, feasible, and valid as to not inadvertently cause a clinician or group an issue with submission, calculation, and scoring of a given measure. We refer readers to our discussion below about measure testing requirements for QCDR measures in MVPs.

(B) Measure Testing Requirements

In the CMS Blueprint,¹⁰⁶ measure testing enables a measure developer to assess the suitability of the quality measure's technical specifications and acquire empirical evidence to help assess the strengths and weaknesses of a measure with respect to the NQF Measure Evaluation Criteria and Guidance for Evaluating Measures for Endorsement. Information gathered through measure testing is part of full measure development, and this information can be used in conjunction with expert judgment to evaluate a measure. For Blueprint purposes, measure testing refers to testing quality measures, including the components of the quality measures, such as the data elements, the instruments, and the performance score.

We refer readers to the CY 2019 PFS final rule, where we gave notice to the public that we were considering proposing to require reliability and feasibility testing as an added criterion for a QCDR measure to be considered for MIPS in future rulemaking (83 FR 59901 through 59902). After consideration of the previous public comments received, and our priority to ensure that all measures available in MIPS are reliable and valid thereby reducing reporting burden on eligible clinicians and groups, we finalized a requirement to require all QCDR measures to be fully developed and tested, with complete testing results at the clinician level, beginning with the CY 2023 payment year in the CY 2020 PFS final rule (84 FR 40816). Subsequently, due to the

¹⁰⁶ <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/MMS/Downloads/Blueprint.pdf>.

PHE for the COVID-19 pandemic, we delayed this requirement by 1 year in the May 8th COVID-19 IFC-2 (85 FR 27594 through 27595). In the May 8th COVID-19 IFC-2 (85 FR 27594 through 27595), we finalized at § 414.1400(b)(3)(v)(C) beginning with the CY 2024 MIPS payment year, all QCDR measures must be fully developed and tested, with complete testing results at the clinician level, prior to submitting the QCDR measure at the time of self-nomination. However, based on subsequent stakeholder feedback on the level of burden, the limited amount of time, and costs associated with measure testing after the CY 2020 PFS final rule published, we are proposing to both further modify our QCDR measure testing policy generally and add testing policies for QCDR measures that are being considered for inclusion in MVPs.

We continue to believe that reliable, valid measures with robust testing with empirical data should be used in quality evaluation and payment programs. However, we want to balance those interests with stakeholders' concerns. Therefore, we propose a gradual approach to have fully tested QCDR measures within the MIPS program. We want to emphasize that we still believe that all QCDR measures should be fully tested, particularly as we rely on the data from these measures to score clinicians which impact their final score and associated MIPS payment adjustments, and as we seek to utilize QCDR measures in MVPs, as described in section IV.A.3.a and below of this proposed rule. We propose at § 414.1400(b)(3)(v)(C)(1) that, generally, to be approved for the 2024 MIPS payment year, a QCDR measure must be face valid. To be approved for the 2025 MIPS payment year and future years, a QCDR measure must be face valid for the initial MIPS payment year for which it is approved and fully tested for any subsequent MIPS payment year for which it is approved. Therefore, we propose to revise § 414.1400(b)(3)(v)(C) to account for an incremental approach to require fully tested QCDR measures. We discuss requirements for QCDR measures considered for inclusion in an MVP separately. This is discussed in more detail below.

(i) Proposed Requirements for Existing Measures

We propose that QCDR measures that were previously approved for the CY 2022 MIPS payment year, would be required to, at a minimum, be face valid prior to being self-nominated for the CY 2024 MIPS payment year. Face validity is defined in the CMS Measures

Blueprint¹⁰⁷ as the following: The extent to which a test appears to cover the concept it purports to measure “at face value.” It is a subjective assessment by experts of whether the measure reflects the quality of care (for example, the utilization of a current clinical guideline to frame the measure, such as using the blood pressure guideline of <140/90 is a marker of quality).

In addition, we propose that these measures, which were approved for the preceding MIPS performance year with face validity (that is, CY 2024 MIPS payment year), would be required to be fully tested prior to being self-nominated for any subsequent performance periods (that is, CY 2025 MIPS payment year and beyond) in order to be considered for inclusion in the MIPS program.

In the CY 2019 PFS final rule, we referred readers to the CMS Blueprint for the CMS Measures Management System (available at <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/MMS/Downloads/Blueprint.pdf>) for a definition of “fully developed with completed testing results at the clinician level” (84 FR 40817). Our Blueprint discusses both alpha and beta testing (Blueprint 15.0 September 2019 Page 207–208). To avoid any potential confusion, we are clarifying in this proposed rule that for purposes of QCDR measures, we would expect QCDR measures to complete beta testing to be considered fully tested. Beta testing is defined in the CMS Measures Blueprint¹⁰⁸ as the following: Beta testing (that is, field testing) generally occurs after initial technical specifications have been developed and is usually larger in scope than alpha testing. In addition to gathering further information about feasibility, beta tests serve as the primary means to assess scientific acceptability and usability of a measure. For example, beta testing allows for an enhanced evaluation of a measure's importance, including evaluation of performance thresholds, disparities analysis, and outcome variation. It helps in looking for opportunities for improvement in the population, which aids in measuring the QCDR measure's importance for reasons that include evidence collection to measure variability among comparison groups, to demonstrate the measure is not topped-out where most groups achieve similarly high performance

levels approaching the measure's maximum possible value. We refer readers to the CMS Blueprint for the CMS Measures Management System at <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/MMS/Downloads/Blueprint.pdf> for additional details regarding beta testing.

(ii) Proposed Requirements for New QCDR Measures

We propose that for a new QCDR measure to be approved for the 2024 MIPS payment year, a QCDR measure must be face valid; to be approved for the 2025 MIPS payment year and future years, a QCDR measure must be face valid for the initial MIPS payment year for which it is approved and fully tested for any subsequent MIPS payment year for which it is approved.

For example, for the CY 2026 MIPS payment year (the 2024 performance period), the self-nomination application period would open on July 1, 2023 and close on September 1, 2023. A QCDR that self-nominates a new QCDR measure by September 1, 2023 would need to complete face validity measure testing prior to submission in order for the measure to be considered for the CY 2026 MIPS payment year. If that new QCDR measure is approved for the CY 2026 MIPS payment year, it would need to be fully tested by the next self-nomination date for the CY 2027 MIPS payment year (by no later than September 1, 2024 for the 2025 performance period). QCDR measures that are not fully tested by the second year of the measure's life in MIPS (that is, second self-nomination date), would not be considered for approval for the second year.

We recognize that not all QCDR measures currently approved would continue in the program due to business decisions by each QCDR. We acknowledge that there is a cost involved with full testing of quality measures (see 84 FR 63173); however, we believe it is important that all measures used within the MIPS program are fully tested and reliable. We believe this incremental approach in testing would allow QCDRs time to plan appropriately to complete measure testing in a timely, efficient, and effective manner. However, we do encourage QCDRs to submit fully-tested QCDR measures to the extent possible, as we have a strong preference for QCDR measures that are fully tested versus those that have only completed face validity testing.

¹⁰⁷ <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/MMS/Downloads/Blueprint.pdf>.

¹⁰⁸ <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/MMS/Downloads/Blueprint.pdf>.

(iii) Proposed Requirements for QCDR Measures Considered for MVP

As an additional layer, we are also proposing § 414.1400(b)(3)(v)(c)(2) that in order for a QCDR measure to be considered for inclusion in an MVP for the 2024 MIPS payment year and future years, a QCDR measure must be fully tested. We believe it is imperative to ensure that QCDR measures are fully tested before being included in an MVP. Unlike traditional MIPS, where clinicians and groups may choose from a large inventory of measures to report on for purposes of the quality performance category, the MVPs seek to create a focused selection of measures and activities relevant to a specific clinical topic. Since clinicians and groups who choose to report on MVPs will be reporting on a subset of measures and activities, there will be heavy reliance on the QCDR measures being reliable, valid, and feasible for reporting purposes.

We request comments on our proposals.

(C) Duplicative QCDR Measures

Throughout previous rulemaking cycles, we have communicated our desire to eliminate duplicative QCDR measures in the MIPS program, as it is counterintuitive to the Meaningful Measure Initiative (84 FR 63068). One of the methods we previously suggested to address duplicative measures is measure harmonization, as discussed in the CY 2020 PFS final rule (84 FR 63068 through 63070). We have received comments and questions from stakeholders, requesting clarification for us to define what we mean by measure harmonization.

In this rule, we intend on clarifying that to mean measures for which previously identified areas of duplication with other approved QCDR measures or MIPS quality measures have been addressed. To be clear with our intent, we are proposing to revise previously codified policies that refer to measure harmonization with this updated terminology.

Therefore, we propose to revise § 414.1400(b)(3)(v)(E), to state, beginning with the 2022 MIPS payment year, CMS may provisionally approve the individual QCDR measures for 1 year with the condition that QCDRs address certain areas of duplication with other approved QCDR measures or MIPS quality measures in order to be considered for the program in subsequent years. If such areas of duplication are not addressed, CMS may reject the duplicative QCDR measure.

In addition, we propose to revise § 414.1400(b)(3)(vi) to state, beginning

with the 2023 MIPS payment year, QCDR measures may be approved for 2 years, at CMS discretion by attaining approval status by meeting QCDR measure considerations and requirements. Upon annual review, CMS may revoke a QCDR measure's second year approval, if the QCDR measure is found to be: Topped out; duplicative of a more robust measure; reflects an outdated clinical guideline; or if the QCDR self-nominating the QCDR measure is no longer in good standing.

Furthermore, we propose to remove two previously codified policies that we have identified as areas of redundancy. We propose to remove § 414.1400(b)(3)(vii)(H), which states whether the previously identified areas of duplication have been addressed as requested, and to remove § 414.1400(b)(3)(vii)(L), which states whether the existing approved QCDR measure is no longer considered robust, in instances where new QCDR measures are considered to have a more vigorous quality actions, where CMS preference is to include the new QCDR measure rather than requesting QCDR measure harmonization. We believe the previously finalized regulatory text under § 414.1400(b)(3)(vii)(A), which states QCDR measures that are duplicative, or identical to other QCDR measures or MIPS quality measures currently in the program will address instances where areas of duplication amongst QCDR measures are not addressed or where a QCDR measure approved for a previous year is duplicative with a QCDR measure approved for the current year.

As a result of the proposed removals of two previously codified policies, as stated in the above paragraph, we are proposing technical updates to renumber the regulation text to reflect these removals. Therefore, in § 414.1400(b)(3)(vii), we propose to redesignate paragraphs (I), (J), (K), (M), and (N) as paragraphs (H), (I), (J), (K) and (L), respectively.

(D) Collection of Data on QCDR Measure

In the CY 2020 PFS final rule (84 FR 63067 through 63068), we finalized at § 414.1400(b)(3)(v)(D) that beginning with the 2021 performance period, QCDRs are required to collect data on a QCDR measure, appropriate to the measure type, prior to submitting the QCDR measure for CMS consideration during the self-nomination period. For reasons discussed in the May 8th COVID-19 IFC-2 (85 FR 27594 through 27595), we delayed implementation of this policy by 1 year, as described at § 414.1400(b)(3)(v)(D), beginning with

the CY 2022 performance period, QCDRs are required to collect data on a QCDR measure, appropriate to the measure type, prior to submitting the QCDR measure for CMS consideration during the self-nomination period. We are not proposing any changes in this proposed rule.

(3) Qualified Registries

We refer readers to §§ 414.1305 and 414.1400, the CY 2018 Quality Payment Program final rule (82 FR 53815 through 53818), CY 2019 PFS final rule proposed rule (83 FR 59906), and the CY 2020 PFS final rule (84 FR 40819 through 40820) for our previously finalized policies regarding qualified registries. In this proposed rule, we propose a technical update to the title at § 414.1400(c) to rename it from "qualified registry approval criteria" to "qualified registries", to better align the title with the content of the regulation. In addition, in this proposed rule, we propose requirements related to data validation audits and targeted audits.

In the CY 2017 Quality Payment Program final rule, we discussed our expectation related to QCDRs and qualified registries would conduct validation on the data they intend on submitting for the MIPS performance period (81 FR 77384 through 77386) and provide the results of the data validation to CMS in the form of a data validation execution report by May 31st of the year following the performance period. Our intention was to establish our expectation that qualified registries would establish a process to assess whether the data are true, accurate, and complete prior to submitting them to CMS for purposes of the MIPS program. We believe it is important to establish a requirement that qualified registries conduct data validation to ensure they are actively monitoring the data they submit to CMS for purposes of a pay-for-performance program. In instances where a qualified registry discovers data are inaccurate or incomplete, the entity must correct the issue prior to submitting the data to CMS in order to provide accurate certification in accordance with § 414.1400(a)(5). A qualified registry that submits a false certification submits data that is inaccurate, unusable or otherwise compromised to CMS for purposes of the MIPS program may be subject to remedial action or termination under § 414.1400(f). We believe requiring qualified registries to validate the accuracy of the data they are submitting is an important safeguard to promote accurate payments under the MIPS program. Therefore, in this proposed rule, we propose at § 414.1400(c)(2)(iii)

and (iv) requirements beginning with the 2023 MIPS payment year as condition of approval each qualified registry must conduct annual data validation audits and if one or more deficiencies or data errors are identified the qualified registry must also conduct targeted audits. We also propose specific obligations for those audits as discussed below.

- We propose to codify at § 414.1400(c)(2)(iii)(A), the qualified registry must conduct their data validation audits prior to submitting any data to CMS for purposes of the MIPS program. We believe it is important for qualified registries to conduct validation audits to identify and fix concerns regarding data accuracy prior to submitting data to us, including potential issues related to data aggregation and calculation. Conducting the data validation prior to data submission will lead to data being more reliable and promote compliance with the requirement of data being true, accurate, and complete. In the CY 2017 Quality Payment Program final rule, we described this auditing using the term randomized audit (81 FR 77384). In this proposed rule, we are proposing instead to refer to this audit as the data validation audit in an effort to be abundantly clear regarding our expectations that the qualified registry will purposefully construct a sample and conduct an audit that complies with specific regulatory requirements and also to distinguish these audits from the targeted audits discussed below and proposed at § 414.1400(c)(2)(v).

- We propose to codify at § 414.1400(c)(2)(iii)(B), the qualified registry must conduct data validation on data for each performance category for which it will submit data, including if applicable the Quality, Improvement Activities, and Promoting Interoperability performance categories. We believe that it is important that data validation be done across all performance categories for which the qualified registry submits data since qualified registries must attest that data submitted to CMS is true, accurate, and complete and data for each of these performance categories can influence score calculation and payment adjustments.

- We propose to codify at § 414.1400(c)(2)(iii)(C), that the qualified registry must conduct data validation on data for each submitter type for which it will submit data, including if applicable MIPS eligible clinicians, groups, virtual groups, voluntary participants, and opt-in participants. We believe it is important for the data submitted to CMS be

accurate for all clinicians and groups for which the qualified registry intends on submitting data to the MIPS program, regardless of whether they are required to participate, have opted in, or have chosen to voluntarily participate. Therefore, we propose to require that the data validation audits should account for all types of submitters that are utilizing the qualified registry to submit data to CMS for purposes of the MIPS program. We note the importance of validating data for all submitter types regardless of its use for payment or public reporting. Even clinicians who voluntarily report to MIPS and whose data are not used for payment purposes could have their data publically posted on the Physician Compare website. We believe all data the qualified registry submits, regardless of its use for payment or public reporting, should be true, accurate, and complete.

- We propose to codify at § 414.1400(c)(2)(iii)(D) that the qualified registry must use clinical documentation (provided by the clinicians they are submitting data for) to validate that the action or outcome measured actually occurred or was performed. If the data a qualified registry intends to submit to CMS for purposes with the MIPS program are to demonstrate that a clinician did a particular clinical activity or achieved a particular clinical outcome, we believe meaningful validation of such data requires the qualified registry to use clinical documentation to confirm that the activity occurred or was performed.

- We propose to codify at § 414.1400(c)(2)(iii)(E), the qualified registry shall conduct each data validation audit using a sampling methodology that meets the following requirements:

- ++ Uses a sample size of at least 3 percent of the TIN/NPIs for which the qualified registry will submit data to CMS, except that if a 3 percent sample size would result in fewer than 10 TIN/NPIs, the qualified registry must use a sample size of at least 10 TIN/NPIs, and if a 3 percent sample size would result in more than 50 TIN/NPIs, the qualified registry may use a sample size of 50 TIN/NPIs.

- ++ Uses a sample that includes at least 25 percent of the patients of each TIN/NPI in the sample, except that the sample for each TIN/NPI must include a minimum of 5 patients and does not need to include more than 50 patients.

We believe the aforementioned sampling methodology is appropriate for multiple reasons. First, the sampling methodology criteria are consistent with the methodology established under the legacy Physician Quality Reporting

System (PQRS) program and as described in the CY 2017 Quality Payment Program final rule (81 FR 77366 through 77367). As this methodology has been used for many years under the legacy program, we believe stakeholders are well versed in executing data validation audits using this sampling methodology. Second, the proposed methodology accounts for QCDRs and qualified registries of varying sizes. Data validation requires a level of effort on the part of the qualified registry to execute a data validation plan, identify a sample, and collect information for purposes of chart review; therefore, we are cognizant that requiring a larger sample size would create additional burden on qualified registries and clinicians to account for a larger volume in TIN/NPIs and medical records for review.

- We propose to codify at § 414.1400(c)(2)(iii)(F) that each qualified registry data validation audit must include the following:

- ++ Verification of the eligibility status of each eligible clinician, group, virtual group, opt-in participant, and voluntary participant. We believe that it is important for the qualified registry to track the eligibility status of each clinician and group that wishes to use a third party intermediary to report, because accurate information regarding eligibility is important to ensuring payment adjustments are properly applied. Furthermore, verification of eligibility status is consistent with the requirement for qualified registries to track opt-in participants, as described at § 414.1400(a)(4)(iv) and in the context of clinicians who voluntarily report to MIPS helps ensure the accuracy of data publically posted on the Physician Compare website (or a successor website) of the CMS website.

- ++ Verification of the accuracy of Tax Identification Numbers (TINs) or National Provider Identifiers (NPIs). Correct TINs and NPIs are critical to ensure data submitted by the qualified registry are attributed to the correct clinicians and groups. Inaccurate NPIs or TINs may lead to inadvertent downstream impacts to the way clinicians and groups are scored, and assigned a payment adjustment.

- ++ Calculation of reporting and performance rates (for example, formulas included in the quality measure specifications). Qualified registries must follow the measure specifications when calculating reporting and performance rates. Calculations that deviate the formulas included in the quality measure specifications undercut efforts to ensure

data are consistent, reliable, and have been calculated in a uniform manner.

++ Verification that only MIPS quality measures and qualified registry measures that are relevant to the performance period will be utilized for MIPS submission. Measure specifications for the MIPS quality measures and qualified registry measures go through maintenance on an annual basis. Use of outdated measure specifications would likely result in the qualified registry submitting inaccurate or compromised data for the clinicians and groups they support. While not all measures go through substantive changes on an annual basis, there are changes to codes that do occur annually that should be accounted for when programming measures. Therefore, we believe it is important that qualified registries are utilizing the most current version of the measure specification, relevant to the performance period in which they are participating.

- We propose to codify at § 414.1400(c)(2)(iii)(G), that in a form and manner and by a deadline specified by CMS, the qualified registry must report data validation results, including the overall deficiency or data error rate, the types of deficiencies or data errors discovered, the percentage of clinicians impacted by any deficiency or data error, and how and when each deficiency or data error type was corrected. We believe it is important that the results of the data validation be shared with us in order for us to understand the types of issues the qualified registries have encountered and what resolutions were executed to fix the issues. The information provided will help us track frequently occurring issues which may be identified as an area to provide further education. It is our belief that the report will be largely comprised of issues that were identified and resolved. However, if an issue has been identified and could not be resolved, we would want to understand what the issue is and why it could not be resolved. We emphasize that all data submitted to CMS by a qualified registry on behalf of a MIPS eligible clinician, group or virtual group must be certified by the third party intermediary as true, accurate, and complete to the best of its knowledge as described in § 414.1400(a)(5). If a qualified registry submits a false certification or data that are data that are inaccurate, unusable, or otherwise compromised, the qualified registry may be subject to remedial action or termination as described at § 414.1400(f).

- We propose to codify at § 414.1400(c)(2)(iv)(A) that if a data validation audit under

§ 414.1400(c)(2)(iii) identifies one or more deficiency or data error, the qualified registry must conduct a targeted audit into the impact and root cause of each such deficiency or data error for that MIPS payment year. We believe targeted audits are important to further evaluate the impact of deficiencies or data errors to the cohort of clinicians and groups that the qualified registry intends to submit data for, and for qualified registries to determine the reason the deficiency or data error occurred.

- We propose to codify at § 414.1400(c)(2)(iv)(B), that the qualified registry must conduct any required targeted audits for the MIPS payment year and correct any deficiencies or data errors identified through such audit prior to the submission of data for that MIPS payment year. To promote the accuracy of the data submitted to the MIPS program for the payment year and to reduce the risk that the agency initiates payment calculations in reliance on inaccurate data, it is important for the qualified registry to conduct required targeted audits and correct any deficiencies and data errors identified through those audits prior to submitting the data to CMS.

- We propose to codify at § 414.1400(c)(2)(iv)(C), the qualified registry must conduct the targeted audit using the sampling methodology that meets the requirements described in paragraph (c)(2)(iii)(E). The sample for the targeted audit must not include data from the sample used for the data validation audit in which the deficiency or data error was identified. We believe the sampling methodology we are proposing for data validation audits is equally appropriate for the conduct of targeted audits. We believe that adopting the same methodology for both audit types would be less burdensome on qualified registries than requiring these entities to apply a separate sampling methodology for their targeted audits. Provided that data in the sample for the targeted audit does not overlap with the data that was reviewed in the data validation audit, we believe the targeted audit would provide the qualified registry with a reasonable perspective into impact and root cause of deficiencies and data errors across the data to be submitted without imposing the burden that would result from maintaining a separate sampling methodology for targeted audits.

- We propose to codify at § 414.1400(c)(2)(iv)(D), in a form and manner and by a deadline specified by CMS, the qualified registry must report the results of each targeted audit, including the overall deficiency or data

error rate, the types of deficiencies or data errors discovered, the percentage of clinicians impacted by each deficiency or data error, and how and when each error type was corrected. As is the case with the results of data validation audits, we believe it is important that the results of the targeted audits be shared with us in order for us to understand the types of issues the qualified registries have encountered and what resolutions were executed to fix the issues. The information provided will help us track frequently occurring issues which may be identified as an area to provide further education.

We request comments on the aforementioned proposals, including whether stakeholders are concerned with implementing these policies for the 2023 MIPS payment year, and if so, what barriers do they believe they would face in implementing these requirements.

(4) Remedial Action and Termination of Third Party Intermediaries

We refer readers to § 414.1400(f), the CY 2017 Quality Payment Program final rule (81 FR 77548), CY 2019 PFS final rule (83 FR 59908 through 59910), and the CY 2020 PFS final rule (84 FR 63077 through 63080) for previously finalized policies for remedial action and termination of third party intermediaries.

As described in § 414.1400(f)(1)(i), the remedial actions CMS may take against a third party intermediary including requiring the third party intermediary to submit to CMS by a date specified by the agency a corrective action plan (CAP) to address the identified deficiencies or data issue, including that actions it will take to prevent the deficiencies or data issues from recurring. To clarify expectations and create consistency in the content of the CAPs provide by third party intermediaries, we are proposing to revise and elaborate on the obligations for a CAP. Specifically, we propose to modify § 414.1400(f)(1)(i) such that, unless different or additional information is specified by CMS, the CAP submitted by the third party intermediary must address four issues: (1) The issues that contributed to the non-compliance; (2) the impact to individual clinicians, groups, or virtual groups, regardless of whether they are participating in the program because they are MIPS eligible, voluntary participating, or opting in to participating in the MIPS program; (3) the corrective actions to be implemented by the third party intermediary to ensure that the non-compliance has been resolved will not

recur in the future and (4) the detailed timeline for achieving compliance with the applicable requirements.

We believe these four elements are generally warranted in each instance in which a CAP is required. First, any meaningful efforts at corrective action necessitate an understanding of what needs to be corrected. Therefore, we propose at § 414.1400(f)(1)(i)(A) to require that each third party intermediary be required to articulate the issues that contributed to the non-compliance. The third party intermediary must articulate what factors cause it to fail in its obligation to meet program requirements. For example, a survey vendor subject to remedial action for not completing vendor trainings would be required to explain what factors lead to its failure to complete training. We believe this analysis will allow third party intermediary to improve their processes to better meet existing requirements and will allow CMS to better understand what operational and other challenges third party intermediaries face in meeting program requirements. Second, depending on the circumstances, non-compliance by a third party intermediary may affect an uncertain number of clinicians and groups and has the potential to implicate substantial program dollars. Accordingly, we propose at § 414.1400(f)(1)(i)(B) to require that a third party intermediary subject to a CAP disclose to CMS the impact to individual clinicians, groups, or virtual groups, regardless of whether they are participating in the program because they are MIPS eligible, voluntary participating, or opting in to participating in the MIPS program. We believe this information regarding the scope of harms is necessary for the agency to assess the full program impact of the non-compliance. Furthermore, we believe it is important for the CAP to include this impact information regardless of the clinician's participation status, because non-compliance may have programmatic implications even if it does not affect payment, such as for data posted on the Physician Compare website. Third, meaningful remedial action requires the identification of specific action steps both to address prior harm but to protect against future harms. Therefore, we propose at § 414.1400(f)(1)(i)(C) that a third party intermediary subject to a CAP must address the corrective actions to be implemented by the third party intermediary to ensure that the non-compliance has been resolved and will not recur in the future. The third party

intermediary will be expected to follow through with the implementation of the corrective actions and to see that the issue has been corrected permanently. It is important for us to understand in detail what actions the third party intermediary will take to resolve the issue and to evaluate the effectiveness of the proposed solution for long-term sustainability. Fourth, non-compliance must be resolved methodically and timely. Therefore, we propose at § 414.1400(f)(1)(i)(D) that each CAP must include the detailed timeline for achieving compliance with the applicable requirements. We invite public comments on these proposed revisions to our requirements for correction action plans.

h. Public Reporting on Physician Compare

For previous discussions on the background of Physician Compare, we refer readers to the CY 2016 PFS final rule (80 FR 71116 through 71123), the CY 2017 Quality Payment Program final rule (81 FR 77390 through 77399), the CY 2018 Quality Payment Program final rule (82 FR 53819 through 53832), the CY 2019 PFS final rule (83 FR 59910 through 59915), the CY 2020 PFS final rule (84 FR 63080 through 63083), and the Physician Compare Initiative website at <https://www.cms.gov/medicare/quality-initiatives-patient-assessment-instruments/physician-compare-initiative/>.

(1) Definitions & Proposed Regulation Text Changes

Physician Compare (<http://www.medicare.gov/physiciancompare>) draws its operating authority from section 10331(a)(1) of the Affordable Care Act, which defines the term “Physician Compare” to mean the internet website developed under this section of the statute. Physician Compare has continued to pursue a phased approach to public reporting under the Medicare Access and CHIP Reauthorization Act (MACRA) of 2015. Section 104(f)(2) of the MACRA defines the term “Physician Compare” to mean the Physician Compare internet website on the CMS (or a successor) website. To more completely and accurately reference the website for which CMS will post information available for public reporting, in accordance with section 104(f)(2) of the MACRA, we propose to define Physician Compare at § 414.1305 to mean the Physician Compare internet website of the Centers for Medicare & Medicaid Services (or a successor website). We seek comment on this proposal. For ease of reference,

we will use the term “Physician Compare” in this proposed rule.

4. APM Incentive Payment

(a) Overview

Under the Quality Payment Program, Qualifying APM Participants (QPs) receive a 5 percent APM Incentive Payment in payment years 2019 through 2024. In the CY 2017 Quality Payment Program final rule (81 FR 77480 through 77489), we finalized at § 414.1450(d) that this payment is made based on the clinician's QP status in the QP Performance Period that is 2 years prior (for example, the 2021 payment will correspond to the 2019 performance year), and at § 414.1450(b)(1) that the payment is equal to 2 percent of the estimated aggregate amount of payments for covered professional services in the base period (the year between the QP performance and payment years). We finalized at § 414.1450(c)(1) that the APM Incentive Payment amount is made to the TIN associated with the Advanced APM Entity through which an eligible clinician becomes a QP during the QP Performance Period. Under § 414.1450(c)(3), if an eligible clinician becomes a QP through participation in multiple Advanced APMs, CMS divides the APM Incentive Payment proportionally between the TINs associated with the QP's participation in each Advanced APM based on payments for covered professional services during the QP Performance Period. In addition, under § 414.1450(c)(2), we finalized that if the QP is no longer affiliated with the TIN associated with the QP's participation in the APM Entity, the APM Incentive Payment is made to the TIN listed on the NPI's CMS-588 Electronic Funds Transfer (EFT).

In our first year making the APM Incentive Payment, we experienced operational limitations that made it difficult in certain cases to distribute the payment to a current billing organization associated with the QP according to the current regulations. In particular, we encountered challenges when QPs are no longer affiliated with the TIN associated with the QP's participation in the APM Entity through which they attained QP status, and when we were unable to make the APM Incentive Payment to the TIN listed on the eligible clinician's CMS-588 EFT Application form. In certain circumstances, it has been challenging to locate accurate billing organizations for some QPs 2 years after they earned QP status. For example, we have encountered situations such as inaccurate or missing billing

associations for the QP because the QP has changed their primary billing TIN between the performance and the payment year, or the billing TIN through which the QP attained QP status is not the TIN through which CMS payments are processed, and so it is not possible for CMS to know that the two are in fact connected.

(b) APM Incentive Payment Amount

In the first Quality Payment Program final rule (81 FR 77480), we finalized at § 414.1450(b)(1) through (3) how we calculate the amount of the APM Incentive Payment. Specifically, we finalized that: (1) The amount of the APM Incentive Payment is equal to 5 percent of the estimated aggregate payments for covered professional services as defined in section 1848(k)(3)(A) of the Act furnished during the incentive payment base period (that is, the calendar year immediately preceding the payment year); (2) the estimated aggregate payment amount for covered professional services includes all such payments to the QP (NPI) via any and all of their TIN/NPI combinations; and (3) in calculating the estimated aggregate payment for a QP, CMS uses claims submitted for covered professional services with dates of service from January 1 through December 31 of the incentive payment base period.

In this proposed rule, we are clarifying that the APM Incentive Payment amount is calculated based on the paid amount of the applicable claims for covered professional services that are subsequently aggregated to calculate the estimated aggregate payments. We are proposing to amend our regulation at § 414.1450(b)(1) to reflect that clarification.

Section 1833(z)(1)(A) of the Act specifies that the APM Incentive Payment is equal to 5 percent of the estimated aggregate payments for covered professional services as defined in section 1848(k)(3) of the Act. Because the APM Incentive Payment is a percentage of the estimated aggregate payments made, it would not be appropriate to calculate the APM Incentive Payment based on amounts that were allowed, but not actually paid by Medicare, for such covered professional services.

We also note that, as provided in § 414.1450(b)(4) and (5), we exclude certain payments and adjustments, including the MIPS payment adjustments, when calculating the APM Incentive Payment amount.

We seek comment on this proposal.

(c) APM Incentive Payment Recipient

Under our current policy as finalized at § 414.1450(c), CMS first seeks to disburse the APM Incentive Payment to the TIN associated with the QP's participation with the APM Entity in the Advanced APM through which they earned QP status. If the QP is no longer affiliated with that TIN, we seek to disburse the APM Incentive Payment to the TIN listed on the eligible clinician's CMS-588 EFT form on the date that we make the payment. And if the eligible clinician becomes a QP through participation in multiple Advanced APMs, we seek to divide the APM Incentive Payment proportionally, based on payments for covered professional services during the QP Performance Period, and to make proportional payment to each of the TINs associated with the QP's participation with the APM Entity or APM Entities in the Advanced APMs.

It is still our intention to reward achievement of QP status through participation in Advanced APMs by seeking to disburse APM Incentive Payments to TINs that are affiliated with an APM Entity through which the QP has achieved QP status, as is described in the CY 2017 Quality Payment Program final rule (81 FR 77847). However, after our first year of making APM Incentive Payments, we have learned that the amount of time between when an eligible clinician earns QP status and when APM Incentive Payments are made makes it difficult to ensure that payments can be made for these QPs in a routine and efficient manner. For example, in the space of 2 years between making QP determinations and APM Incentive Payments, eligible clinicians may change TINs, join new TINs, join new APM Entities, remain in the same APM Entity under a new billing TIN, leave Medicare altogether, or make other potential changes impacting their relationship with the Medicare program. CMS receives updated records of these changes when APM participants update their payment information through the internet based Provider Enrollment, Chain and Ownership system (PECOS) or a CMS-588 EFT Application, and subsequent updates to APM Participation Lists and Affiliated Practitioner Lists, although we note that such updates are not consistently and timely made across APM participants, as we originally believed, and therefore such lists have variable reliability. Further, on our own end, if we limit our initial search for the party or parties to which we should make the APM Incentive Payment to only the TIN or

TINs through which the eligible clinician earned QP status, as is specified in our regulations at § 414.1450(c)(1) and (3), when the QP has made changes to their TIN affiliations, we might limit our opportunities to make the APM Incentive Payment to a more current TIN with which the QP is affiliated at the time we make the APM Incentive Payment. If we limit the TINs to which we will make the APM Incentive Payment to only those through which a QP was billing at the time they achieved QP status, we might be unable to identify any TIN to which we would make a payment for that QP during the payment year, or payments may be significantly delayed as a result, even in cases where a current payee TIN is available.

Therefore, we are proposing to establish in our regulation at § 414.1450(c) a revised approach to identifying the TIN(s) to which we make the APM Incentive Payment. This approach would involve looking at a QP's relationship with their TIN(s) over time, as well as considering the relationship the TIN(s) have with the APM Entity or Entities through which the eligible clinician earned QP status, or other APM Entities the QP may have joined in the interim. We believe that this revised approach will enable CMS to more accurately identify TINs with which QPs are currently receiving other Medicare payments, and through which they would likely anticipate receiving their APM Incentive Payment. This approach would also prioritize, when the QP is no longer affiliated with the original TIN through which they achieved QP status, identifying and paying TINs with which QPs are affiliated at the time the APM Incentive Payment is made, thereby reducing the potential burden on payee TINs to find QPs no longer affiliated with them in order to disburse the APM Incentive Payment amount, as well as reducing uncertainty and delays for the QPs themselves as they anticipate their APM Incentive Payment.

We are also proposing to introduce a cutoff date of November 1 of each payment year, or 60 days from the day on which we make the initial round of APM Incentive Payments, whichever is later, as a point in time after which CMS will no longer accept new helpdesk requests from QPs or their representatives who have not received their payments. There may be scenarios where we are unable to identify any appropriate TIN to which the APM Incentive Payment should be made, such as when the QP is no longer participating in Medicare, the QP has

recently reassigned his or her billing rights, or where a payment TIN may be undergoing business transformations such that payment information changes during the payment year. In these cases, it is our goal to make correct payments for the relevant QPs as soon as feasible. In order to do so, it is necessary to establish a date after which we will not consider additional inquiries or additional information from QPs or their representatives for purposes of disbursing remaining APM Incentive Payments for the payment year.

In order to improve and expand the ways we identify the TIN(s) to which we would make the APM Incentive Payment for a QP in a more timely and efficient manner, we propose to sequentially apply the hierarchy in the following paragraph and to amend § 414.1450(c) of our regulations to reflect such hierarchy. We propose to begin at the first step in the hierarchy, and if we are unable to identify one or more TINs with which the QP has a current affiliation at this step, we move to the next and successive steps of the hierarchy until we do identify one or more TINs with which the QP is currently affiliated at the time we are distributing APM Incentive Payments. When we identify one or more TINs with which the QP is affiliated at a step, we would make the APM Incentive Payment to those TINs. We further propose that if we identify more than one TIN at the applicable step in the hierarchy, we will divide the APM Incentive Payment proportionally between such TINs based on the relative paid amount for Part B covered professional services that are billed through each such TINs. We propose the hierarchy to be:

(1) Any TIN associated with the QP that, during the QP Performance Period, is associated with an APM Entity through which the eligible clinician achieved QP status;

(2) Any TIN associated with the QP that, during the APM Incentive Payment base period, is associated with an APM Entity through which the eligible clinician achieved QP status;

(3) Any TIN associated with the QP that, during the APM Incentive Payment base period, is associated with an APM Entity participating in an Advanced APM through which the eligible clinician had achieved QP status;

(4) Any TIN associated with the QP that, during the APM Incentive Payment base period, participated in an APM Entity in an Advanced APM;

(5) Any TIN associated with the QP that, during the APM Incentive Payment base period, participated with an APM Entity in any track of the APM through

which the eligible clinician achieved QP status;

(6) Any TIN associated with the QP that, during the APM Incentive Payment base period, participated with an APM Entity in an APM other than an Advanced APM;

(7) Any TIN associated with the QP that submitted a claim for covered professional services furnished by the QP during the APM Incentive Payment base period, even if such TIN has no relationship to any APM Entity or APM; then

(8) If we have not identified any TIN associated with the QP to which we can make the APM Incentive Payment, we will attempt to contact the QP via a public notice to request their Medicare payment information. The QPs identified in the public notice, or any other eligible clinicians who believe that they are entitled to an APM Incentive Payment must then notify CMS of their claim as directed in the public notice by November 1 of the payment year, or 60 days after CMS announces that initial payments for the year have been made, whichever is later. After that time, any claims by a QP to an APM Incentive Payment will be forfeited for such payment year.

We seek comment on these proposals.

(d) Eligible Clinicians With No Covered Professional Services in the Incentive Payment Base Period

In our experience calculating the APM Incentive Payments, it has come to our attention that there is a cohort of eligible clinicians who have been determined to be QPs for a year, and for whom an APM Incentive Payment has been calculated and in some cases paid, despite the fact that these eligible clinicians did not bill for any Part B covered professional services during the incentive payment base period. This situation arises in cases where an APM Entity is paid under the terms of the APM for supplemental services on behalf of an eligible clinician who is on their Participation List. This can occur because, for purposes of calculating the APM Incentive Payment, such supplemental service payments as described in § 414.1450(b)(7) of our regulations are considered covered professional services for purposes of calculating the APM Incentive Payment.

This scenario creates difficulty when CMS attempts to make the APM Incentive Payment for the QP because there are no relevant claims in our database indicating a TIN to which we should make the APM Incentive Payment. We believe this situation is largely the result of clerical errors or delays, either in updates to the APM's

Participation List that is submitted to CMS by APM participants, or through more general processes used to update an eligible clinician's Medicare enrollment information. We remind our enrolled physicians, practitioners, group practices and other suppliers that it is their responsibility, in accordance with their APM participation and their Medicare enrollment agreement, to routinely update their APM participation lists that they submit directly to their APMs, as well as their lists of enrolled providers assigned to their organization and associated TINs, either through the internet-based PECOS or using a CMS-855F Form. Any payments resulting from a failure to make such updates may be considered fraud, waste, or abuse.

However, in the event that a QP's APM Incentive Payment was calculated based solely on supplemental services payments and no Medicare claims for covered professional services furnished by the QP were submitted during the incentive payment base period, we would categorically assign these QPs to the list of QPs that will be given public notice requesting updated payment information within 90 days, as described in the proposed regulation at § 414.1450(c)(8). We believe that in many if not most of these cases, such individuals have retired or otherwise ceased participation in Medicare; however, we recognize that there may be scenarios under which such individuals remain active, and our proposal is meant to provide an opportunity for such clinicians to identify their current billing affiliation(s) or otherwise identify a TIN to which the APM Incentive Payment should be made.

We seek comment on this proposal.

d. Qualifying APM Participant (QP) and Partial QP Determinations

(1) Overview

In the CY 2017 Quality Payment Program final rule (81 FR 77433 through 77450), we finalized policies relating to QP and Partial QP determinations. In the CY 2019 PFS final rule (83 FR 59923 through 59925), we finalized additional policies relating to QP determinations and the Partial QP election to report to MIPS.

In this proposed rule, we are proposing to:

- Update the methodology for addressing prospectively aligned beneficiaries for Threshold Score calculations and QP determinations.
- Establish a Targeted Review process for QP Determinations.

Additionally, we are clarifying our policies on Advanced APM

determinations and QP determinations in light of questions that may arise based on the effects of the COVID-19 PHE.

Finally, we are soliciting comment on whether to allow an APM Entity to make the Partial QP election on behalf of all of the APM Entity's participating eligible clinicians.

(2) Background

In the CY 2017 Quality Payment Program final rule (81 FR 77439 through 77440), we finalized that QP determinations would first be made at the APM Entity level, after which we would make further QP determinations at the individual level for eligible clinicians who are either: (1) Participating in multiple Advanced APM Entities, none of which meet the QP threshold as a group; or (2) on an Affiliated Practitioner List that is the list used for the QP determination when there are no eligible clinicians on a Participation List for the APM Entity (81 FR 77439 through 77443). As such, the QP determination at the APM Entity level generally applies to all the individual eligible clinicians who are on a Participation List of the Advanced APM. The QP determination Threshold Score calculations are aggregated using data for all eligible clinicians participating in the APM Entity on each snapshot date (March 31, June 30, August 31) during the QP Performance Period. If the APM Entity's Threshold Score meets the relevant QP threshold, all individual eligible clinicians in that APM Entity would receive the same QP determination, applied at the NPI level, for the relevant performance year (PY).

(3) Attribution of Prospectively Attributed Beneficiaries in QP Threshold Score Calculations

When making QP determinations, we include information for all attribution-eligible beneficiaries in the denominator of the patient count and payment amount methods used to calculate QP Threshold Scores as set forth in § 414.1435. "Attribution-eligible beneficiary" is a term defined in our regulation at § 414.1305, and the definition is generally based on the attribution methodology and rules for the particular Advanced APM. We have specified at § 414.1435(b)(3) that a beneficiary may be counted only once in the numerator and denominator for a single APM Entity group, and at § 414.1435(b)(4) that a beneficiary may be counted multiple times in the numerator and denominator for multiple different APM Entity groups.

When making QP determinations, at the APM Entity or individual eligible

clinician level, we begin by calculating Threshold Scores which are the ratio of the payment amounts or patient counts for "attributed beneficiaries" to the payment amounts or patient counts for "attribution eligible beneficiaries." If this ratio (the Threshold Score) for the eligible clinician or APM Entity level, as applicable, meets or exceeds the relevant QP thresholds described at § 414.1430(a), the relevant eligible clinicians will have attained QP status for a year. It has come to our attention that under our current methodology for calculating Threshold Scores, we include attribution-eligible beneficiaries in the denominator of the calculation for some APM Entities for whom those same beneficiaries could never be included in the numerator. This may happen in a scenario where a beneficiary is prospectively attributed to an APM Entity and as a result is precluded by the applicable rules for one or more APMs from attribution to other APM Entities in certain other APMs.

For example, the Shared Savings Program offers the option for ACOs to select prospective beneficiary assignment, and prospective beneficiary alignment is also used in the Direct Contracting Model and Next Generation ACO Model. When beneficiaries are prospectively attributed to an ACO in one of these APMs, under the rules of precedence within the APMs themselves, those beneficiaries are generally not available for attribution to participants in some other APMs, including other ACOs with retrospective attribution methodologies. However, the population of attribution-eligible beneficiaries for APM Entities in these other APMs still includes those prospectively aligned beneficiaries. This could have the effect of disadvantaging the APM Entities to which the beneficiaries may never be attributed, because their ratio of attributed beneficiaries to attribution-eligible beneficiaries will be lower, for reasons entirely outside the control of the relevant eligible clinicians and APM Entities.

Therefore, we propose to amend § 414.1435(c)(1) of our regulations and add a new paragraph § 414.1435(c)(1)(i) to specify that beneficiaries who have been prospectively attributed to an APM Entity for a QP Performance Period will be excluded from the attribution-eligible beneficiary count for any other APM Entity that is participating in an APM where that beneficiary would be ineligible to be added to the APM Entity's attributed beneficiary list. The effect of this proposed policy would be to remove such prospectively attributed

beneficiaries from the denominators when calculating Threshold Scores for APM Entities or individual eligible clinicians in Advanced APMs that align beneficiaries retrospectively, thereby preventing dilution of the Threshold Score for the APM Entity or individual eligible clinician in an Advanced APM that uses retrospective attribution.

We seek comment on these proposals.

(3) Targeted Review of QP Determinations

(i) Overview

We are proposing at § 414.1455(b) to establish a targeted review process for limited circumstances surrounding QP determinations. This targeted review process would provide a systematic opportunity for eligible clinicians to bring to our attention potential clerical errors we may have made, and for us to review and make corrections if warranted. We also propose that, after the conclusion of the time period for targeted review, there would be no further review of our QP determination with respect to an eligible clinician for the QP Performance Period.

We note that, consistent with section 1833(z)(4) of the Act and under § 414.1455(a) of our regulations, there is no administrative or judicial review under sections 1869 or 1878 of the Act or otherwise, of the determination that an eligible clinician is a QP or Partial QP under § 414.1425, that an APM Entity is an Advanced APM Entity under § 414.1410, or of the determination of the amount of the APM Incentive Payment under § 414.1450.

(ii) Scope of Targeted Review

We propose at § 414.1455(b)(1) that an eligible clinician or APM Entity may request targeted review of a QP or Partial QP determination only if they believe in good faith that, due to a CMS clerical error, an eligible clinician was omitted from a Participation List used for purposes of QP determinations. If we determine that we made such a clerical error, we believe that it would be appropriate, and we are proposing to assign to the erroneously omitted eligible clinician the most favorable QP status that was determined at the APM Entity level on any snapshot dates for the relevant QP Performance Period on which the eligible clinician participated in the APM Entity. We believe that this policy is appropriate in these circumstances because, as a result of a CMS clerical error, the eligible clinician was not provided the opportunity to become a QP based on the level of payment amounts or patient counts

through an Advanced APM for an APM Entity with which they were associated.

Alternatively, if we were to instead recalculate an APM Entity's Threshold Scores for one or more of the snapshot dates in the relevant QP Performance Period, and the Threshold Scores no longer met the applicable QP threshold(s), that outcome could affect all of the eligible clinicians in the APM Entity group, removing their QP status. However, the affected eligible clinicians in the APM Entity group are likely to have acted in accordance with our CMS's notification of their prior QP determination, and not have prepared for or reported to MIPS. In correcting our own clerical error with respect to some eligible clinicians, we do not believe it would be appropriate to revisit our prior QP determinations for a broader set of eligible clinicians, thereby potentially disadvantaging those eligible clinicians in MIPS scoring through no fault of their own.

We are proposing to not conduct targeted review of potential omissions from Affiliated Practitioner Lists, as QP determinations for eligible clinicians on an Affiliated Practitioner List are made at the individual eligible clinician level for each of the QP Performance Period snapshots. As such, we would not have completed a QP determination for the QP Performance Period in question for the individual eligible clinician who has been identified prior to the targeted review if that eligible clinician was indeed omitted due to CMS clerical error. We recognize that this circumstance may occur, however, we believe this to be an infrequent occurrence. Additionally, such calculations would not be operationally feasible in order to make the APM Incentive Payment in a timely manner.

We note that we are not proposing to accept targeted review requests to correct omissions from Participation Lists of Other Payer Advanced APMs, as those lists are provided to us directly by eligible clinicians and Other Payer Advanced APMs. As such, any clerical error would not be the fault of CMS.

(iii) Targeted Review Process

In general, we propose to align this targeted review process with the MIPS targeted review process as codified at § 414.1385. We believe that this general alignment is appropriate and will reduce the likelihood of confusion and burden on eligible clinicians and APM Entities. We propose to revise § 414.1455 of our regulations by redesignating the current preclusion of administrative or judicial review under § 414.1455(a) and (b) to § 414.1455(a)(1)

and (2) and to codify our targeted review policy at § 414.1455(b).

We propose to specify at § 414.1455(b) that either an eligible clinician or APM Entity may submit a request for targeted review. We also propose that all requests for targeted review must be submitted during the targeted review request submission period, which is a 60-day period that begins on the day CMS makes available the MIPS payment adjustment factors for the MIPS payment year as described at § 414.1385(a)(2) of our regulations. The targeted review request submission period may be extended as specified by CMS. We also propose that all requests for targeted review must be submitted in accordance with the form and manner specified by CMS.

We propose that a request for targeted review may be denied if the request is duplicative of another request for a targeted review; the request for targeted review is not submitted during the targeted review request submission period; or the request is outside the scope of the targeted review, as specified in § 414.1455(b)(1). If the targeted review request is denied, there will be no change to either the QP or Partial QP determination. If the targeted review request is approved, we would assign the most favorable Threshold Score and corresponding QP status of the APM Entity in which such eligible clinician participates.

We propose that we will respond to each request for targeted review timely submitted and determine whether a targeted review is warranted.

We propose that a request for targeted review may include additional information in support of the request at the time it is submitted. If CMS requests additional information from requests additional information from the eligible clinician or the APM Entity group that is the subject of a request for targeted review, it must be provided and received by CMS within 30 days of CMS's request. Non-responsiveness to CMS' request for additional information may result in a final decision based on the information available, although another non-duplicative request for a targeted review may be submitted before the end of the targeted review request submission period.

We propose that if targeted review requests reveal a pattern of CMS error with impacts that extend beyond the eligible clinician or clinicians who submitted such targeted review requests, we would correct any additional errors that we identify regardless of whether a targeted review was submitted for the other eligible clinicians affected.

We propose that decisions based on the targeted review are final, and there is no further administrative review or appeal or judicial review.

We seek comment on these proposals.

(4) COVID–19 Public Health Emergency (PHE) Advanced APM determination and QP Determinations

(i) Advanced APM Determinations

We anticipate that the COVID–19 PHE, as defined in 42 CFR 400.200, may result in CMS making changes to aspects of some APMs. For example, CMS may publish regulations or amend APM Participation Agreements to address issues that arise as a result of the COVID–19 PHE.

Due to the COVID–19 PHE and the urgent need to address changes to certain APMs during CY 2020 to respond to the extreme shifts in the healthcare delivery system, CMS is exercising its enforcement discretion in connection with Advanced APM determinations. Specifically, CMS will not reconsider the Advanced APM determinations of APMs which have already been evaluated and determined to meet the Advanced APM criteria for CY 2020, even in the event that the APMs make changes to their governing documents or operations in such a way that, if there were a redetermination, they would no longer meet the criteria to be an Advanced APM. Furthermore, we will evaluate all APMs in future years with the understanding that any provisions of the Participation Agreement or governing regulation designed in response to the COVID–19 PHE will not be considered to the extent they would prevent the APM from meeting the Advanced APM criteria for a year.

We note that the following APMs are considered Advanced APMs for 2020:

- Bundled Payments for Care Improvement Advanced Model;
- Comprehensive Care for Joint Replacement Payment Model (CEHRT Track);
- Comprehensive Primary Care Plus Model;
- Comprehensive ESRD Care Model (LDO arrangement and Non LDO Two Sided Risk Arrangement);
- Maryland Total Cost of Care Model (Care Redesign Program; Maryland Primary Care Program);
- Medicare Shared Savings Program (Track 2, Track 3, Basic Track Level E, and the ENHANCED Track);
- Medicare Accountable Care Organization (ACO) Track 1+ Model;
- Next Generation ACO Model;
- Oncology Care Model (Two-Sided Risk Arrangements);

- Vermont All-Payer ACO Model (Vermont Medicare ACO Initiative).

(ii) QP Determinations

We also understand that the COVID-19 PHE may lead the adoption of an earlier end date for certain APMs based on amendments to the APM's governing documentation, such as a Participation Agreement. For example, an Advanced APM governed by a Participation Agreement was originally scheduled to end on December 31, 2020, and the amended Participation Agreement may revise the ending date to July 1, 2020. In the event that such changes are made to a Participation Agreement to modify the end date of an Advanced APM in response to the COVID-19 PHE, we would not consider this to be a termination from an Advanced APM under § 414.1425(c)(5) or (6) of our regulations. As such, we would not revoke the QP status of eligible clinician participants in the Advanced APM on that basis.

We are aware that circumstances resulting from the COVID-19 PHE could affect the results of QP and Partial QP determinations for the 2020 QP Performance Period, as compared to what those determinations would otherwise be in absence of the COVID-19 PHE.

However, after considering whether changes in our methodology to address the PHE were warranted, we determined that any change to the QP determination methodology could have unintended negative consequences for Advanced APM participants as practice patterns have shifted even in areas with a low volume of COVID-19 cases. We note that with the duration, scope, and severity of the PHE being unknown, it is impossible to predict the potential impact both in terms of scale and which providers may be most likely to be affected. As such, we are concerned that making changes to the QP determination methodology would be more likely to inadvertently pick winners (those who would benefit from the change in methodology by achieving higher scores) and losers (those who would score better under our normal methodology than under a changed one) than it would be to generate relief from the PHE across the board. We also anticipate that there would be significant challenges resulting from modifying QP calculations with so many unknown variables at play, and are concerned that any changes to our methodology could result in delays in the timing of our announcing QP status.

We also believe Advanced APM participants benefit from timely and predictable QP determinations. With all

of these considerations in mind, we are clarifying that, apart from the exercise of enforcement discretion explained above, we will continue to perform QP determinations as established in our regulations at §§ 414.1305, 414.1425, 414.1430, 414.1435, and 414.1440 for the 2020 QP Performance Period, without modifications to address the COVID-19 PHE.

(5) Partial QP Election To Report MIPS

We anticipate there may be an increase in the number of eligible clinicians who are determined to be Partial QPs in the 2021 QP Performance Period in comparison to the 2020 QP Performance Period, due to the increase in the QP thresholds. Beginning in the CY 2021 QP Performance Period, as provided at § 414.1430(a) of our regulations for the Medicare option, the QP payment amount threshold increases from 50 percent to 75 percent, while the QP patient count threshold increases from 35 percent to 50 percent. While the Partial QP thresholds for the Medicare option also increase, based on historical performance we expect a greater number of Partial QPs based on performance in the CY 2021 QP Performance Period than for the prior QP Performance Period. As provided in § 414.1310(b)(2), Partial QPs who do not elect to participate in MIPS as a MIPS eligible clinician are excluded from MIPS, and thus, not subject to the MIPS reporting requirements or payment adjustments. To date our method of contacting Partial QPs has been to send a letter to the APM Entity's contact listed with the APM. As such, we are considering options to make the Partial QP election process less burdensome.

We are requesting comment on whether to allow an APM Entity to make the Partial QP election on behalf of all of the individual eligible clinicians associated with such APM Entity. We believe that allowing an APM Entity to make a single election on behalf of all of its eligible clinicians may help to simplify such elections, particularly for those eligible clinicians who will be Partial QPs for the first time because of the increasing QP thresholds in 2021. We also believe that allowing an APM Entity to make the Partial QP election for its eligible clinicians could reduce burden for individual eligible clinicians and allow APM Entities to have a centralized source of feedback as to the statuses of their individual eligible clinician participants.

However, we acknowledge that allowing APM Entities to make elections on behalf of eligible clinicians would create the possibility that we could receive conflicting election responses

from different parties. Specifically, we are interested in receiving comments, feedback, and recommendations for how to address: (1) Conflicting responses either from an APM Entity and an individual or from two or more different APM Entities (eligible clinicians often participate with more than one APM Entity); and (2) situations where the eligible clinician is participating in more than one APM Entity and we do not receive elections from all parties.

In the case where an APM Entity election conflicts with that of an individual eligible clinician, we believe it would be most appropriate to follow the individual eligible clinician's election, as that election would apply at the NPI level across all of their TIN/NPI combinations, and in recognition that the eligible clinician has taken the opportunity to express their preference. Similarly, if we were to receive an election for an eligible clinician from one APM Entity in which the eligible clinician participates but not all such APM Entities, and the individual clinician does not make an election, we believe it would be appropriate to apply the election we received for the eligible clinician across all their TIN/NPI combinations. However, if multiple APM Entities make elections that are not in agreement, and the individual eligible clinician does not make an election, there is no clearly appropriate course of action as to which election to follow, and therefore we solicit comments detailing how we might go about applying conflicting Partial QP elections for an eligible clinician made by more than one APM Entity.

We seek public comment on whether to allow Partial QP elections to be made by APM Entities on behalf of all eligible clinicians within the APM Entity, and how to handle potentially conflicting elections.

V. Planned 30-Day Delayed Effective Date for the Final Rule

We are committed to ensuring that we fulfill our statutory obligation to update the PFS as required by law and are working diligently in that regard. We ordinarily provide a 60-day delay in the effective date of final rules after the date they are issued in accord with the Congressional Review Act (CRA) (5 U.S.C. 801(a)(3)). However, 5 U.S.C. 808(2) provides that, if an agency finds good cause that notice and public procedure are impracticable, unnecessary, or contrary to the public interest, the rule shall take effect at such time as the agency determines.

The United States is responding to an outbreak of respiratory disease caused by a novel (new) coronavirus that has

now been detected in more than 190 locations internationally, including in all 50 States and the District of Columbia. The virus has been named “SARS CoV 2” and the disease it causes has been named “coronavirus disease 2019” (abbreviated “COVID 19”).

On January 30, 2020, the International Health Regulations Emergency Committee of the World Health Organization (WHO) declared the outbreak a “Public Health Emergency of International Concern” (PHEIC). On January 31, 2020, Health and Human Services Secretary, Alex M. Azar II, declared a PHE for the United States to aid the nation’s healthcare community in responding to COVID–19. On March 11, 2020, the WHO publicly characterized COVID–19 as a pandemic. On March 13, 2020 the President of the United States declared the COVID–19 outbreak a national emergency.

Due to CMS prioritizing efforts in support of containing and combatting the COVID–19 PHE, and devoting significant resources to that end, the work needed on the PFS payment rule will not be completed in accordance with our usual schedule for this rulemaking, which aims for a publication date of at least 60 days before the start of the fiscal year to which it applies. Up to an additional 30 days may be needed to complete the work needed on this payment rule. The PFS payment rule is necessary to annually review and update the

payment systems, and it is critical to ensure that the payment policies for these systems are effective on the first day of the fiscal year to which they are intended to apply.

Therefore, due to CMS prioritizing efforts in support of containing and combatting the COVID–19 PHE, and devoting significant resources to that end, we expect that we will determine, pursuant to 5 U.S.C. 808(2), that the PFS final rule will be effective 30 days after publication; it would be impracticable and contrary to the public interest for CMS to do otherwise. Accordingly, we also do expect to provide a 30-day delay in the effective date of the final rule in accordance with the Administrative Procedure Act (5 U.S.C. 553(d)), which ordinarily requires a 30-day delay in the effective date of a final rule from the date of its public availability in the **Federal Register**, and section 1871(e)(1)(B)(i) of the Act, which generally prohibits a substantive rule from taking effect before the end of the 30-day period beginning on the date of its public availability.

VI. Collection of Information Requirements

Under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501 *et seq.*), we are required to publish a 60-day notice in the **Federal Register** and solicit public comment before a “collection of information” requirement is submitted to the Office of Management and Budget (OMB) for

review and approval. For the purposes of the PRA and this section of the preamble, collection of information is defined under 5 CFR 1320.3(c) of OMB’s implementing regulations.

To fairly evaluate whether an information collection should be approved by OMB, PRA section 3506(c)(2)(A) requires that we solicit comment on the following issues:

- The need for the information collection and its usefulness in carrying out the proper functions of our agency.
- The accuracy of our burden estimates.
- The quality, utility, and clarity of the information to be collected.
- Our effort to minimize the information collection burden on the affected public, including the use of automated collection techniques.

We are soliciting public comment on each of the required issues under section 3506(c)(2)(A) of the PRA for the following information collection requirements.

A. Wage Estimates

To derive average costs, we used data from the U.S. Bureau of Labor Statistics’ May 2019 National Occupational Employment and Wage Estimates for all salary estimates (http://www.bls.gov/oes/current/oes_nat.htm). In this regard, Table 52 presents the mean hourly wage, the cost of fringe benefits and overhead (calculated at 100 percent of salary), and the adjusted hourly wage.

TABLE 52: National Occupational Employment and Wage Estimates

Occupation title	Occupation code	Mean hourly wage (\$/hr)	Fringe benefits and overhead (\$/hr)	Adjusted hourly wage (\$/hr)
Anesthesiologists	29-1211	125.83	125.83	251.66
Billing and Posting Clerks	43-3021	19.53	19.53	39.06
Computer Systems Analyst	15-1211	46.23	46.23	92.46
Family Medicine Physicians	29-1215	102.53	102.53	205.06
General Internal Medicine Physicians	29-1216	96.85	96.85	193.70
Health Diagnosing and Treating Practitioners	29-1000	49.26	49.26	98.52
Licensed Practical Nurse (LPN)	29-2061	23.32	23.32	46.64
Medical and Health Services Managers	11-9111	55.37	55.37	110.74
Medical Secretary	43-6013	18.31	18.31	36.62
Obstetricians and Gynecologists	29-1218	112.31	112.31	224.62
Pediatricians, General	29-1221	88.66	88.66	177.32
Physicians, All Other; and Ophthalmologists, Except Pediatric	29-1228	97.81	97.81	195.62
Psychiatrists	29-1223	105.98	105.98	211.96
Surgeons, Except Ophthalmologists	29-1248	121.17	121.17	242.34

As indicated, we adjusted our employee hourly wage estimates by a factor of 100 percent. This is necessarily a rough adjustment, both because fringe benefits and overhead costs vary significantly from employer to employer, and because methods of estimating these costs vary widely from study to study. Nonetheless, we believe that doubling the hourly wage to estimate total cost is a reasonably accurate estimation method.

For the CY 2019 and CY 2020 PFS final rules, we used the BLS wage rate for “Physicians and Surgeons” (occupation code 29–1060) to estimate the burden for Physicians. In BLS’ most recent set of occupational wage rates dated May 2019, they have discontinued this occupation in their wage data. As a result, in order to estimate the burden for Physicians, we are using a rate of \$212.78/hr which is the average of the mean wage rates for Anesthesiologists; Family Medicine Physicians; General Internal Medicine Physicians; Obstetricians and Gynecologists; Pediatricians, General; Physicians, All Other; and Ophthalmologists, Except Pediatric; Psychiatrists; and Surgeons, Except Ophthalmologists [(\$251.66/hr + \$205.06/hr + \$193.70/hr + \$224.62/hr + \$177.32/hr + \$195.62/hr + \$211.96/hr + \$242.34/hr) ÷ 8].

B. Proposed Information Collection Requirements (ICRs)

1. ICRs Regarding Modifications to OTP Enrollment Process (§ 424.67)

The following proposed requirement and burden changes will be submitted to OMB for approval under control numbers 0938–0685 and 0938–1377 (respectively, CMS–855A and CMS–855B).

a. Form CMS–855B Completion—Estimates in November 15, 2019 Final Rule

In the aforementioned November 15, 2019 final rule (84 FR 62568), we prepared estimates of the hour and cost burdens to OTPs in completing the Form CMS–855B (Medicare Enrollment Application Clinics/Group Practices and Certain Other Suppliers). We are restating them in the current proposed rule to help stakeholders better understand the burdens associated with our proposed changes to § 424.67.

Based on SAMHSA statistics and our internal data, we estimated in the November 15, 2019 final rule, that: (1) About 1,700 certified and accredited OTPs were eligible for Medicare enrollment; and (2) 200 OTPs would become certified by SAMHSA in the next 3 years (or roughly 67 per year). This brought the total number of OTPs eligible to enroll during this 3-year period to approximately 1,900.

We projected that it would take each OTP an average of 3 hours to obtain and furnish the required information on the Form CMS–855B and a new supplement thereto designed to capture data unique to OTPs. Per our experience, we believed that the OTP’s medical secretary would secure and report the data on the Form CMS–855B and supplement. We estimated that this task would take approximately 2.5 hours, of which about 30 minutes would involve completion of the supplement. In addition, a health diagnosing and treating practitioner of the OTP would review and sign the form, a process we estimated would take 30 minutes.

Using BLS’ May 2018 wage estimates, we consequently projected a first-year burden of 5,301 hours (1,767 entities × 3 hr) at a cost of \$244,146 [1,767 entities ((2.5 hr × \$35.66/hr) + (0.5 hr × \$98.04/hr))]; a second-year burden of 201 hours (67 entities × 3 hr) at a cost of \$9,257 [67 entities × ((2.5 hr × \$35.66/hr) + (0.5 hr × \$98.04/hr))]; and a third-year burden of 198 hours [66 entities × 3 hr) at a cost of \$9,119 (66 entities × ((2.5 hr × \$35.66/hr) + (0.5 hr × \$98.04/hr))]. In aggregate, we estimated a total 3-year burden of 5,700 hours (5,301 hr + 201 hr + 198 hr) at a cost of \$262,522 (\$244,146 + \$9,257 + \$9,119). When averaged over the typical 3-year OMB approval period, we estimated an annual burden of 1,900 hours (5,700 hr/3) at a cost of \$87,507 (\$262,522/3).

b. Proposed Revisions to § 424.67

(1) Completion of Form CMS–855A

We foresee three main implications associated with our proposed changes to § 424.67. First, newly enrolling OTPs would be able to complete and submit a Form CMS–855A (Medicare Enrollment Application—Institutional Providers) instead of a Form CMS–855B. Second, we anticipate that numerous OTPs that are currently enrolled via the Form CMS–855B would terminate the latter enrollments and complete/submit a Form CMS–855A application in order to bill for OTP services via the 837I. (As stated in proposed/revised § 424.67(c), an OTP cannot be enrolled via both the Form CMS–855A and Form CMS–855B; it must choose one of these two enrollment mechanisms.) Third, it is possible that some OTPs that enroll using the Form CMS–855A (pursuant to revised § 424.67(b)) would later change their enrollment to a Form CMS–855B.

In preparing the following OTP enrollment estimates, we: (1) Reviewed internal PECOS and billing data concerning existing OTP Form CMS–855 enrollments and claim submissions; and (2) considered feedback recently received from the OTP community regarding potential billing and enrollment options. Based on this, we project that over the first 3 years of our proposed changes to § 424.67:

- Roughly one-half (or 33) of the previously estimated 67 annually enrolling OTPs (that is, in Years 2 and 3 and beyond) would elect to complete a Form CMS–855A rather than a Form CMS–855B.

- Approximately 300 currently enrolled OTPs would change their enrollment from a Form CMS–855B to a Form CMS–855A.

- About 10 OTPs that enroll using the Form CMS–855A would later change their enrollment to a Form CMS–855B.

(a) New OTPs Enrolling via the Form CMS–855A

We estimate that it would take each OTP approximately 4 hours to secure and provide the relevant data on the Form CMS–855A and the new supplement thereto (which would capture OTP-specific information). Consistent with our experience, the OTP's medical secretary would obtain and report information on the Form CMS–855A and supplement, a task that would take roughly 3.5 hours (about 30 minutes of which would involve completion of the supplement). A health diagnosing and treating practitioner of the OTP would spend 30 minutes reviewing and signing the form.

Given the preceding data, we project an annual burden for new OTPs seeking to complete a Form CMS–855A of 132 hours (4 hr × 33 OTPs) at a cost of \$5,855 (33 OTPs × ((3.5 hr × \$36.62/hr) + (0.5 hr × \$98.52/hr)). Since these OTPs would not be completing the Form CMS–855B as originally anticipated in the November 15, 2019 final rule and approved by OMB in that rule's collection of information request, we must revise the Form CMS–855B estimates identified therein. Using the hour and wage burdens from that rule, we project a Form CMS–855B annual burden reduction of 99 hours (33 OTPs × 3 hr) at a cost of \$4,560 (33 OTPs × (2.5 hr × \$35.66/hr) + (0.5 hr × \$98.04/hr)).

(b) Enrolled OTPs Transitioning to Form CMS–855A or Form CMS–855B Enrollment

As already mentioned, we believe that roughly:

- ++ 300 currently enrolled OTPs would change their enrollment from a Form CMS–855B to a Form CMS–855A.

- ++ 10 OTPs that enroll using the Form CMS–855A would later change their enrollment to a Form CMS–855B.

This would involve the OTP's: (1) Completion of a Form CMS–855A or Form CMS–855B application as a new enrollment; and (2) reporting the voluntary termination of its existing Form CMS–855 enrollment via the latter form (*i.e.*, if the OTP is ceasing its Form CMS–855B enrollment, it would report this via a Form CMS–855B voluntary termination submission).

(i) Transition to Form CMS–855A Enrollment

Under our previously mentioned Form CMS–855A hour and wage estimates, we project a total burden for new Form CMS–855A enrollments pursuant to revised § 424.67(b) of 1,200 hours (300 OTPs × 4 hr) at a cost of \$53,229 (300 OTPs × ((3.5 hr × \$36.62/hr) + (0.5 hr × \$98.52/hr)). Regarding voluntary terminations (and consistent with previous ICR estimates for reporting this type of Form CMS–855B transaction), the typical burden is 15 minutes. Of this time period, a medical secretary spends 12 minutes completing the relevant sections of the Form CMS–855 while a health diagnosing and treating practitioner takes 3 minutes to review and sign the form. This would result in a total burden of 75 hours (300 OTPs × 0.25 hr) at a cost of \$3,675 (300 OTPs × ((0.2 hr × \$36.62/hr) + (0.05 hr × \$98.52/hr)).

We believe that the burden described in the previous paragraph would be incurred exclusively in the first year

following our proposed changes; it is very likely these OTPs would wish to pursue Form CMS–855A enrollment as soon as possible in order to bill via the 837I. Accordingly, the average annual burden in the first 3 years would be as follows:

- Form CMS–855A—400 hours (1,200 hr/3) at a cost of \$17,743 (\$53,229/3).
- Form CMS–855B—25 hours (75 hr/3) at a cost of \$1,225 (\$3,675/3).

(ii) Transition to Form CMS–855B Enrollment

In line with our hour and wage estimates previously referenced in this section IV.B.1, we project a total burden for new Form CMS–855B enrollments under § 424.67(c)(2) of 30 hours (10 OTPs × 3 hr) at a cost of \$1,480 (10 OTPs × ((2.5 hr × \$36.62/hr) + (0.5 hr × \$98.52/hr)). Concerning Form CMS–855A voluntary terminations (and using the time burdens identified earlier), we estimate a total burden of 2.5 hours (10 OTPs × 0.25 hr) at a cost of \$123 (10 OTPs × ((0.2 hr × \$36.62/hr) + (0.05 hr × \$98.52/hr)).

We anticipate that changes to a Form CMS–855B would occur in the second and third years following the effective date of our revisions. This is because Year 1 would mostly involve these new OTPs enrolling for the first time via the Form–855A; only in the succeeding two years would they switch to a Form CMS–855B enrollment. We thus project that the average annual burden in the first 3 years would be as follows:

- Form CMS–855B—10 hours (30 hr/3) at a cost of \$469 (\$1,408/3).
- Form CMS–855A—0.8 hours (2.5 hr/3) at a cost of \$41 (\$123/3).

(2) Total Annual Burden

In light of foregoing estimates, and when averaged over the typical 3-year OMB approval period, we estimate the following:

- Form CMS–855A—The total annual increased burden would be 533 hours (132 hr + 400 hr + 0.8 hr) at a cost of \$23,639 (\$5,855 + \$17,743 + \$41).
- Form CMS–855B—We project a reduction in annual burden of –64 hours (–99 hr – 25 hr – 10 hr) and \$2,866 (–\$4,560 – \$1,225 – \$469).

(3) Application Fee

Under § 424.67(b)(2), an enrolling OTP must comply with the application fee requirements in § 424.514. This means, in short, that an OTP must pay the required application fee as part of the enrollment process. The application fee does not meet the definition of a “collection of information” and, as such, is not subject to the requirements of the PRA. Although we did not set out such burden under this section of the

preamble, the cost is included under the Regulatory Impact Analysis section.

(4) Fingerprinting

We discussed in section III.B. of this proposed rule that certain OTPs are subject to the high-risk level of categorical screening under § 424.518. Said screening includes the submission of a set of fingerprints (via FBI Applicant Fingerprint Card FD-258) for a national background check from all individuals who maintain a 5 percent or greater direct or indirect ownership interest in the provider or supplier. In the November 15, 2019 final rule, we calculated the hour and cost burden associated with this activity, basing our estimates on an anticipated 1,900 total OTP enrollees over the 3-year period following publication of that rule.

We do not believe our proposed revisions to § 424.67 would involve any additional or reduced fingerprinting burden for two reasons. First, we are proposing in revised § 424.67(b)(3)(ii) that, in effect, Form CMS-855B-enrolled OTPs that are changing to a Form CMS-855A enrollment need only undergo the limited level of categorical screening (§ 424.518) if they have (as part of their Form CMS-855 enrollment) already successfully completed the moderate or high level of categorical screening under that same regulatory section. Since completion of moderate or high level screening (as applicable) would have been required for Form CMS-855B OTP enrollment, these OTPs (previously estimated at 300 total) would not have to again undergo fingerprinting as part of their Form CMS-855A enrollment. Second, and with the exception of the 300 new enrollments mentioned in the previous sentence, we do not foresee additional enrolling OTPs beyond: (1) The 1,900 which we estimated in the November 15, 2019 final rule; and (2) the roughly 67 newly enrolling OTPs in Year 2 and Year 3 and annually thereafter. In other words, the only change we project would be in the type of Form CMS-855 application these OTPs may complete, not the number of anticipated enrollees. As such, the total fingerprinting burden would not change.

2. ICRs Regarding the Medicare Shared Savings Program (42 CFR Part 425)

Section 1899(e) of the Act provides that chapter 35 of title 44 of the U.S.C., which includes such provisions as the PRA, shall not apply to the Shared Savings Program. Accordingly, we are not setting out burden under the authority of the PRA. Please refer to sections VIII.H.7. and VIII.H.8. of this proposed rule for a discussion of the

impacts associated with this rule's proposed changes to the Shared Savings Program's quality reporting requirements.

3. ICRs Regarding the Requirement for Electronic Prescribing for Controlled Substances for a Covered Part D Drug Under a Prescription Drug Plan or an MA-PD Plan § 423.160(a)

The following requirements and burden will be submitted to OMB for approval under control number 0938-0763 (CMS-R-262).

We are proposing to implement section 2003 of the SUPPORT for Patients and Communities Act, which requires that the prescribing of a Schedule II, III, IV, or V controlled substance under Medicare Part D be done electronically in accordance with an electronic prescription drug program beginning January 1, 2021, subject to any exceptions, which HHS may specify. We are proposing that prescribers be required to use the NCPDP SCRIPT 2017071 standard for Electronic Prescription for Controlled Substances (EPCS) prescription transmissions.

Based on internal 2019 CMS data, the transaction costs for the current process is approximately \$2,855,390.85 [560,430 authorizations * 0.5 (accounting for one transaction since manual authorization takes 2 transactions) * \$10.19 per manual authorization] per year. Should we finalize this requirement after reviewing comments received in response to this proposed rule and the Request for Information entitled "Medicare Program: Electronic Prescribing for Controlled Substances; Request for Information," the total annual cost for conducting the process electronically using the standard that we propose is \$526,804.20 (\$1.88 * 0.5 * 560,430 authorizations). This amounts to an annual savings of \$2,328,586.65 (\$2,855,390.85 - \$526,804.20).

In the first year of implementation, we expect that prescribers would have to revise their policies and procedures and-train staff on this new requirement. Based on our conversations with the industry, we understand that because electronic prescribing is so widespread and vendors train the staff directly and set-up their systems, we estimate that this transition could be completed with a one-time burden of 5 hours at \$36.62/hr by an Administrative Assistant or Medical Secretary. However, we seek comment on this assumption.

Based on internal CMS data, there are 425,000 Part D prescribing practices. Based on the increasing rate of doctors conducting e-prescribing thus far and the benefits of e-prescribing, in light of

the current social distancing guidelines, we estimate that by January 1 2022, 65 percent of Part D prescribers will have electronic prescribing capabilities absent the requirement. Therefore, the one-time burden to implement this provision is 743,750 hours (148,750 prescribers * 5 hr) at a cost of \$27,236,125 (743,750 hr * \$36.62/hr). Based on the modeling that we have seen, we have found that EHR companies provide the initial set-up of e-prescribing software free of charge, provided the prescribers pay the per transaction cost of \$1.88 mentioned previously. However, we seek comment on this assumption and all other assumption in this burden estimate.

Therefore, the total costs of the existing ePA activity is \$2,855,390.85 per year as compared to \$526,804.20 for using the standard. This amounts to an annual savings of \$2,328,586.65 in prescriber expenses with the first year resulting in an added cost of \$24,907,538.35 (\$27,236,125 - \$2,328,586.65)

4. ICRs Regarding the Medicare Diabetes Prevention Program (MDPP) Expanded Model

In section III.P. of this proposed rule, we propose policies necessary to allow certain flexibilities for Medicare enrolled MDPP suppliers and eligible beneficiaries in the MDPP Expanded Model during a public health emergency. Section 1115A(d)(3) of the Act exempts Innovation Center model tests and expansions, which include the MDPP expanded model, from the provisions of the PRA.

5. The Quality Payment Program (42 CFR Part 414 and Section IV. of this Proposed Rule)

The following QPP-specific ICRs reflect this rule's proposed policy changes and policies that have been finalized in our CY 2017 and 2018 Quality Payment Program final rules (81 FR 77008 and 82 FR 53568, respectively), and our CY 2019 and CY 2020 PFS final rules (83 FR 59452 and 84 FR 62568, respectively).

a. Background

(1) ICRs Associated With MIPS and Advanced APMs

The Quality Payment Program is comprised of a series of ICRs associated with MIPS and Advanced APMs. The MIPS ICRs consist of: Registration for virtual groups (see section VI.B.5.b of this proposed rule); QCDR self-nomination applications and other requirements (see section VI.B.5.c.(2) of this proposed rule); qualified registry self-nomination applications and other

requirements (see section VI.B.5.c.(3) of this proposed rule); CAHPS survey vendor applications (see section VI.B.5.c.(4) of this proposed rule); Open Authorization credentialing and token request process (see section VI.B.5.d of this proposed rule); Quality Payment Program Identity Management Application Process (see section VI.B.5.e.(3) of this proposed rule); quality performance category data submission by Medicare Part B claims collection type (see section VI.B.5.e.(4) of this proposed rule), QCDR and MIPS CQM collection type (see section VI.B.5.e.(5) of this proposed rule), and eCQM collection type (see section VI.B.5.e.(6) of this proposed rule); CAHPS for MIPS survey beneficiary participation (see section VI.B.5.e.(7) of this proposed rule); group registration for CAHPS for MIPS survey (see section VI.B.5.e.(8) of this proposed rule); call for quality measures (see section VI.B.5.f of this proposed rule); reweighting applications for Promoting Interoperability and other performance categories (see section VI.B.5.g.(2) of this proposed rule); Promoting Interoperability performance category data submission (see section VI.B.5.g.(3) of this proposed rule); call for Promoting Interoperability measures (see section VI.B.5.h of this proposed rule); improvement activities performance category data submission (see section VI.B.5.i of this proposed rule); nomination of improvement activities (see section VI.B.5.j of this proposed rule); nomination of MVPs (see section VI.B.5.k of this proposed rule); and opt-out of Physician Compare for voluntary participants (see section VI.B.5.o of this proposed rule).

The ICRs for Advanced APMs consist of: Partial Qualifying APM Participant (QP) election (section VI.B.5.m of this proposed rule); Other Payer Advanced APM identification: Payer Initiated and Eligible Clinician Initiated Processes (sections VI.B.5.n.(1) and (2) of this proposed rule); and submission of data for QP determinations under the All-Payer Combination Option (section VI.B.5.n.(3) of this proposed rule).

(2) Summary of Quality Payment Program Changes: MIPS

Two of our currently approved MIPS ICRs [(1) quality performance category data submission by CMS Web Interface collection type and (2) group registration for the CMS Web Interface] are being removed while five MIPS ICRs [(1) quality performance category data submission by QCDR and MIPS CQM collection type, (2) quality performance category data submission by eCQM collection type, (3) CAHPS for MIPS

survey beneficiary participation, (4) nomination of improvement activities, and (5) reweighting applications for Promoting Interoperability and other performance categories] show changes in burden due to proposed policies. In aggregate, we estimate the proposed policies will result in a net decrease in burden of – 5,488 hours and – \$488,115. The proposal discussed in section IV.A.3.c.(1)(c) of this proposed rule to sunset the CMS Web Interface measures as a collection type/ submission type starting with the 2021 performance period will result in removal of the quality performance category data submission by CMS Web Interface collection type and group registration for the CMS Web Interface ICRs. The same proposal will increase the number of respondents for both the MIPS CQM and QCDR and eCQM collection types for the quality performance category as we assume respondents who previously submitted via the CMS Web Interface collection type will alternatively utilize one of these collection types to submit quality data. The proposal discussed in section IV.A.3.c.(1)(e)(i) of this proposed rule to add a survey-based measure on telehealth that assesses patient-reported usage of telehealth services to the CAHPS for MIPS Survey will increase the time required for beneficiaries to respond to the survey by 0.2 minutes (0.0033 hours) per beneficiary. The proposal discussed in section IV.A.3.c.(3)(b)(i)(B)(bb) of this proposed rule to require nominated improvement activities to be linked to existing and related quality and cost measures, as applicable and feasible will increase the time by 1 hour per improvement activity nominated. Finally, the proposal discussed in section IV.A.3.c.(5)(e) of this proposed rule to allow APM Entities the ability to submit an extreme and uncontrollable circumstances exception application will increase our estimated number of respondents by 7 APM Entities. The remaining changes to our currently approved burden estimates are adjustments due to the use of updated data sources available at the time of publication of this proposed rule.

We have also added two new ICRs (Open Authorization (OAuth) Credentialing and Token Request Process (see section VI.B.5.d, below) and the Nomination of MVPs (see section VI.B.5.k, below). The Open Authorization (OAuth) Credentialing and Token Request Process ICR reflects the burden associated with the availability of a new process for all submitter types to request approval to

submit data via direct upload to CMS. The Nomination of MVPs reflects the burden associated with a new process available for all stakeholders to nominate MVPs for inclusion in the Quality Payment Program.

We are not making any changes or adjustments to the following ICRs: Registration for virtual groups, CAHPS survey vendor applications, Quality Payment Program Identity Management Application Process, group registration for CAHPS for MIPS survey; call for MIPS quality measures; and call for Promoting Interoperability measures. See section VI.B.5. of this proposed rule for a summary of the ICRs, the overall burden estimates, and a summary of the assumption and data changes affecting each ICR.

The accuracy of our estimates of the total burden for data submission under the quality, Promoting Interoperability, and improvement activities performance categories may be impacted due to two primary reasons. First, we are unable to predict with 100 percent certainty who will be a QP. New eligible clinician participants in Advanced APMs who become QPs would be excluded from MIPS reporting requirements and payment adjustments, and as such, unlikely to report under MIPS; while some current Advanced APM participants may end participation such that the APM Entity's eligible clinicians would not be QPs for a year based on § 414.1425(c)(5), and thus be required to report under MIPS. Second, it is difficult to predict what Partial QPs, who can elect whether to report to MIPS, will do in the 2021 MIPS performance period compared to the 2018 MIPS performance period, and therefore, the actual number of Advanced APM participants and how they elect to submit data may be different than our estimates. However, we believe our estimates are the most appropriate given the available data.

(3) Summary of Quality Payment Program Changes: Advanced APMs

For these ICRs (identified above under, "ICRs Associated with MIPS and Advanced APMs"), the changes to currently approved burden estimates are adjustments based on updated projections for the 2021 MIPS performance period. We are not making any changes to the Other Payer Advanced APM identification: Eligible Clinician Initiated Process and submission of Data for QP determinations under the All-Payer Combination Option ICRs.

(4) Framework for Understanding the Burden of MIPS Data Submission

Because of the wide range of information collection requirements under MIPS, Table 53 presents a framework for understanding how the organizations permitted or required to submit data on behalf of clinicians vary across the types of data, and whether the clinician is a MIPS eligible clinician or other eligible clinician voluntarily submitting data, MIPS APM participant, or an Advanced APM participant. As shown in the first row of Table 53, MIPS eligible clinicians that are not in MIPS APMs and other clinicians voluntarily submitting data will submit data either as individuals, groups, or virtual groups for the quality, Promoting Interoperability, and improvement activities performance categories. Note that virtual groups are subject to the same data submission requirements as groups, and therefore, we will refer only to groups for the remainder of this section unless otherwise noted. Because MIPS eligible clinicians are not required to submit any additional information for assessment under the cost performance

category, the administrative claims data used for the cost performance category is not represented in Table 53.

For MIPS eligible clinicians participating in MIPS APMs, the organizations submitting data on behalf of MIPS eligible clinicians will vary between performance categories and, in some instances, between MIPS APMs. As discussed in section IV.A.3.b. of this proposed rule, for clinicians in APM Entities, the APM Performance Pathway is available for both ACO and non-ACOs to submit quality data. Due to data limitations and our inability to determine who would use the APM Performance Pathway versus the traditional MIPS submission mechanism for the 2021 MIPS performance period, we assume ACO APM Entities will submit data through the APM Performance Pathway and non-ACO APM Entities would participate through traditional MIPS, thereby submitting as an individual or group rather than as an entity.

For the Promoting Interoperability performance category, group TINs may submit data on behalf of eligible clinicians in MIPS APMs, or eligible

clinicians in MIPS APMs may submit data individually. For the improvement activities performance category, we will assume no reporting burden for MIPS APM participants. In the CY 2017 Quality Payment Program final rule, we described that for MIPS APMs, we compare the requirements of the specific MIPS APM with the list of activities in the Improvement Activities Inventory and score those activities in the same manner that they are otherwise scored for MIPS eligible clinicians (81 FR 77185). Although the policy allows for the submission of additional improvement activities if a MIPS APM receives less than the maximum improvement activities performance category score, to date all MIPS APM have qualified for the maximum improvement activities score. Therefore, we assume that no additional submission will be needed.

Eligible clinicians who attain Partial QP status may incur additional burden if they elect to participate in MIPS, which is discussed in more detail in the CY 2018 Quality Payment Program final rule (82 FR 53841 through 53844).

BILLING CODE 4120-01-P

TABLE 53: Clinicians or Organizations Submitting MIPS Data on Behalf of Clinicians, by Type of Data and Category of Clinician*

Category of Clinician	Type of Data Submitted			
	Quality Performance Category	Promoting Interoperability Performance Category	Improvement Activities Performance Category	Other Data Submitted on Behalf of MIPS Eligible Clinicians
MIPS Eligible Clinicians and Other Eligible Clinicians Voluntarily Submitting MIPS Data, Participating in Shared Savings Program, and other MIPS APMs that use the APM Performance Pathway for model measures	As virtual group, group, individual clinicians, or APM Entity. ^a	As virtual group, group, individual clinicians, or APM Entity. Certain MIPS eligible clinicians are automatically eligible for a zero percent weighting for the Promoting Interoperability performance category (please refer to the CY 2020 PFS final rule for a summary of the finalized criteria (84 FR 63111)). Clinicians who submit an application and are approved for significant hardship or other exceptions are also eligible for a zero percent weighting. Each MIPS eligible clinician in the APM Entity reports data for the Promoting Interoperability performance category through either group TIN or individual reporting. [The burden estimates for this proposed rule assume group TIN-level reporting]. ^b	As virtual group, group, or individual clinicians. MIPS APMs do not submit information. CMS will assign the same improvement activities performance category score to each APM Entity based on the activities involved in participation in the MIPS APM. ^c	Groups electing to use a CMS-approved survey vendor to administer CAHPS must register. MIPS APMs electing the APM Performance Pathway. APM Entities will make Partial QP election for participating eligible clinicians. Virtual groups must register via email. ^d

* Because the cost performance category relies on administrative claims data, MIPS eligible clinicians are not required to provide any additional information, and therefore, the cost performance category is not represented in this table.

^a Submissions by the ACO are not included in burden estimates for this proposed rule because quality data submission to fulfill requirements of the Shared Savings Program and for purposes of testing and evaluating the Next Generation ACO Model are not subject to the PRA. Sections 1899 and 1115A of the Act (42 U.S.C. 1395jij and 42 U.S.C. 1315a, respectively) state that the Shared Savings Program and the testing, evaluation, and expansion of Innovation Center models are not subject to the PRA.

^b Both group TIN and individual clinician Promoting Interoperability data will be accepted. If both group TIN and individual scores are available for the same APM Entity, CMS will use the higher score for each TIN/NPI. The TIN/NPI scores are then aggregated for purposes of calculating the APM Entity score.

^c The burden estimates for this proposed rule assume no improvement activities performance category reporting burden for APM participants because we assume the MIPS APM model provides a maximum improvement activity score. APM Entities participating in MIPS APMs receive an improvement activities performance category score of at least 50 percent (42 CFR 414.1380) and do not need to submit improvement activities data unless the CMS-assigned improvement activities scores are below the maximum improvement activities score.

^d Virtual group participation is limited to MIPS eligible clinicians, specifically, solo practitioners and groups consisting of 10 eligible clinicians or fewer.

The policies finalized in the CY 2017 and CY 2018 Quality Payment Program final rules, the CY 2019 and CY 2020 PFS final rules, and continued in this proposed rule create some additional data collection requirements not listed in Table 53. These additional data collections, some of which are currently approved by OMB under the control numbers 0938–1314 (Quality Payment Program, CMS–10621) and 0938–1222 (CAHPS for MIPS, CMS–10450), are as follows:

Additional ICRs Related to MIPS Third-Party Intermediaries (See Section VI.B.5.c)

- Self-nomination of new and returning QCDRs (81 FR 77507 through 77508, 82 FR 53906 through 53908, and 83 FR 59998 through 60000) (OMB 0938–1314).
- Self-nomination of new and returning registries (81 FR 77507 through 77508, 82 FR 53906 through 53908, and 83 FR 59997 through 59998) (OMB 0938–1314).
- Open Authorization Credentialing and Token Request Process (New) (OMB 0938–1314) (see section VI.B.5.d).

Additional ICRs Related to the Data Submission and the Quality Performance Category (See Section VI.B.5.e)

- CAHPS for MIPS survey completion by beneficiaries (81 FR 77509, 82 FR 53916 through 53917, and 83 FR 60008 through 60009) (OMB 0938–1222).
- Quality Payment Program Identity Management Application Process (82 FR 53914 and 83 FR 60003 through 60004) (OMB 0938–1314).

Additional ICRs Related to the Promoting Interoperability Performance Category (See Section VI.B.5.g)

- Reweighting Applications for Promoting Interoperability and other performance categories (82 FR 53918 and 83 FR 60011 through 60012) (OMB 0938–1314).

Additional ICRs Related To Call for New MIPS Measures and Activities (See Sections VI.B.5.f, VI.B.5.h, VI.B.5.j, and VI.B.5.k)

- Nomination of improvement activities (82 FR 53922 and 83 FR 60017 through 60018) (OMB 0938–1314).
- Call for new Promoting Interoperability measures (83 FR 60014 through 60015) (OMB 0938–1314).
- Call for MIPS quality measures (83 FR 60010 through 60011) (OMB 0938–1314).
- Nomination of MVPs (OMB 0938–1314)

Additional ICRs Related to MIPS (See Section VI.B.5.o)

- Opt out of performance data display on Physician Compare for voluntary reporters under MIPS (82 FR 53924 through 53925 and 83 FR 60022) (OMB 0938–1314).

Additional ICRs Related to APMs (See Sections VI.B.5.m and VI.B.5.n)

- Partial QP Election (81 FR 77512 through 77513, 82 FR 53922 through 53923, and 83 FR 60018 through 60019) (OMB 0938–1314).
- Other Payer Advanced APM determinations: Payer Initiated Process (82 FR 53923 through 53924 and 83 FR 60019 through 60020) (OMB 0938–1314).
- Other Payer Advanced APM determinations: Eligible Clinician Initiated Process (82 FR 53924 and 83 FR 60020) (OMB 0938–1314).
- Submission of Data for All-Payer QP Determinations (83 FR 60021) (OMB 0938–1314).

b. ICRs Regarding the Virtual Group Election (§ 414.1315)

This rule is not proposing any new or revised collection of information requirements or burden related to the virtual group election. The virtual group election requirements and burden are currently approved by OMB under control number 0938–1343 (CMS–10652). Consequently, we are not making any virtual group election changes under that control number.

c. ICRs Regarding Third-Party Intermediaries (§ 414.1400)

In section IV.A.3.g. of this rule, we proposed multiple changes to the third party intermediary regulations at § 414.1400. Specifically, we are proposing to: (1) Amend current requirements for approval of third party intermediaries to take into account past performance and provision of inaccurate information regarding MIPS program requirements to eligible clinicians; (2) require attendance by all third party intermediaries for training and support sessions; (3) require that QCDRs and qualified registries must conduct an annual data validation audit and if one or more deficiencies or data errors are identified also conduct targeted audits; (4) incrementally increase requirements for QCDR measure testing and clarify what is meant by full testing; and (5) require third party intermediaries to submit a CAP to address identified deficiencies and data issues as well as actions to prevent recurrence. The collection of information burdens associated with each of these topics are

discussed separately below for qualified registries, QCDRs, and survey vendors.

(1) Background

Under MIPS, the quality, Promoting Interoperability, and improvement activities performance category data may be submitted via relevant third-party intermediaries, such as qualified registries, QCDRs, and health IT vendors. Data on the CAHPS for MIPS survey, which counts as either one quality performance category measure, or towards an improvement activity, can be submitted via CMS-approved survey vendors. Entities seeking approval to submit data on behalf of clinicians as a qualified registry, QCDR, or survey vendor must complete a self-nominate process annually.¹⁰⁹ The processes for self-nomination for entities seeking approval as qualified registries and QCDRs are similar with the exception that QCDRs have the option to nominate QCDR measures for approval for the reporting of quality performance category data. Therefore, differences between QCDRs and qualified registry self-nomination are associated with the preparation of QCDR measures for approval.

(2) QCDR Self-Nomination Applications

This rule is not proposing any new or revised collection of information requirements or burden related solely to QCDRs. For simplicity and due to limitations in data available, the changes in burden associated with QCDRs due to this rule's proposals have been incorporated into the discussion of burden for qualified registries. We assume no additional changes in burden due to other proposals discussed in this section. The requirements and burden for QCDRs are currently approved by OMB under control number 0938–1314 (CMS–10652). Consequently, we are not making any changes under that control number other than those discussed in the context of qualified registries.

(a) Self-Nomination Process and Other Requirements

We refer readers to § 414.1400(a)(4) which states that QCDRs interested in submitting MIPS data to us on behalf of a MIPS eligible clinician, group, or virtual group will need to complete a self-nomination process to be considered for approval to do so. We also refer readers to § 414.1400(b) and the CY 2017 Quality Payment Program final rule (81 FR 77507 through 77508), CY 2018 Quality Payment Program final

¹⁰⁹ As stated in the CY 2019 PFS final rule (83 FR 53998), health IT vendors are not included in the burden estimates for MIPS.

rule (82 FR 53906 through 53908), CY 2019 PFS final rule (83 FR 59998 through 60000), and the CY 2020 PFS final rule (84 FR 63116 through 63121) for our previously finalized requirements and burden for self-nomination of QCDRs and nomination of QCDR measures. In sections VI.A.3.g.(2)(a) of this rule, we are proposing to codify that beginning with the 2023 payment year as a condition of approval each QCDR must conduct an annual data validation audit that conforms to the requirements in § 414.1400(b)(2)(iv), including specific obligations discussed in detail in those sections, and if one or more deficiencies or data errors are identified the QCDR must also conduct targeted audits that conform to the § 414.1400(b)(2)(v) including specific obligations discussed in detail in those sections. In particular, we propose to codify at § 414.1400(b)(2)(iv)(G), that in a form and manner and by a deadline specified by CMS, the QCDR must report the results of each data validation audit, including the overall deficiency or data error rate, the types of deficiencies or data errors discovered, the percentage of clinicians impacted by any deficiency or data error, and how and when each deficiency or data error type was corrected. In addition, we propose to codify at § 414.1400(b)(2)(v)(D), that in a form and manner and by a deadline specified by CMS, the QCDR must report the results of each targeted audit, including the overall deficiency or data error rate, the types of deficiencies or data errors discovered, the percentage of clinicians impacted by each deficiency or data error, and how and when each deficiency or data error type was corrected. We are not revising our burden estimates as a result of the proposal to codify that QCDRs must conduct particular data validation audits and report data validation results because we believe the burdens of the proposed data validation requirements are not greater than existing expectations for which we have already accounted the associated burden as stated in the CY 2017 Quality Payment Program final rule (81 FR 77383 through 77384) and the CY 2019 PFS final rule (83 FR 59998 through 59999) and previously submitted to OMB for approval under control number 0938–1314 (CMS–10621). With regard to the proposal to require QCDRs to conduct targeted audits if one or more data errors are identified during data validation audits, we are unable to estimate the number of targeted audits which may occur or the time and costs associated with submitting results which could

vary substantially depending on the nature of the data error and the amount of data to be audited. We seek comment on the burdens associated with the proposed requirements for data validation audits and targeted audits, including expected frequency of targeted audits and the anticipated scope of effort related to submitting results to assist in estimating the burden associated with this proposal. We also discuss additional impacts of this proposal in section VIII.F.16.d.(4)(d) of the Regulatory Impact Analysis.

In sections VI.A.3.g.(1)(b)(iii) of this rule, we are proposing to codify that beginning with the 2023 MIPS payment year, third party intermediaries must attend and complete training and support sessions in the form and manner and at the times specified by CMS. Due to the nature of the information provided during these calls and because the proposed training requirements as applied to qualified registries and QDCRs are similar to existing expectations for these entities, we are not revising our burden estimates as a result of these proposals. However, we refer readers to section VIII.F.16.d.(4)(d) of this proposed rule for discussion of our estimates of overall impact.

In section VI.A.3.g.(1)(b)(ii) of this rule, we are proposing that the determination of whether to approve as entity as a third party intermediary for a MIPS performance period may take into account: (1) Whether the entity failed to comply with requirements of third party intermediaries for any prior MIPS payment year for which it was approved as third party intermediary; and (2) whether the entity provided inaccurate information regarding the requirements of this subpart to any eligible clinician. Because this proposal does not require any additional effort for affected entities but instead allows CMS to utilize already available information to make approval decisions, collection of information burden is unaffected for all entities. In addition, we do not anticipate this proposal will result in any QCDRs electing not to self-nominate during the 2021 MIPS performance period, but believe it is possible this may occur. However, we have neither any data nor knowledge of intent from previously approved QCDRs with which to support making any changes to our burden estimates as a result of this proposal. We are soliciting public feedback to help us determine if there are any burden implications.

(b) QCDR Measure Requirements

Previously, we finalized a requirement to require all QCDR

measures to be fully developed and tested, with complete testing results at the clinician level, beginning with the CY 2021 performance period in the CY 2020 PFS final rule (84 FR 40816). In the May 8th COVID–19 IFC–2 (85 FR 27594 through 27595), we delayed this requirement such that beginning with the CY 2022 performance period, all QCDR measures must be fully developed and tested, with complete testing results at the clinician level, prior to submitting the QCDR measure at the time of self-nomination. In section VI.A.3.g.(2)(b)(i)(A)(aa) of this rule, we are proposing an incremental approach to require fully tested QCDR measures. Specifically, we propose at § 414.1400(b)(3)(v)(C)(1) that, generally, QCDR measures that were previously approved for the CY 2020 performance period, would be required to, at a minimum, be face valid prior to being self-nominated for the CY 2022 performance period/CY 2024 payment year. To be approved for the 2025 MIPS payment year and future years, a QCDR measure must be face valid for the initial MIPS payment year for which it is approved and fully tested for any subsequent MIPS payment year for which it is approved. In order for the QCDR measure to be considered for approval, testing must be completed at the clinician level by the time the measure is self-nominated. However, to be included in an MVP for the 2024 MIPS payment year and future years, a QCDR measure must be fully tested. QCDR measures that were previously approved for the 2020 performance period, will be required to, at a minimum, be face valid prior to being self-nominated for the CY 2022 performance period, and would be required to be fully tested prior to being self-nominated for any subsequent performance periods in order to be considered for inclusion in the MIPS program. Because these proposals are not modifying the final testing requirements for QCDR measures but are instead proposing modifications to the phasing and timeline for implementation of previously finalized requirements for QCDR measures other than those which will be included in an MVP, we are not making any changes to our currently approved burden estimates; however, we refer readers to section VIII.F.16.d.(4)(d) of this proposed rule for discussion of impacts associated with this proposal. Such burden estimates and requirements are currently approved by OMB under control number 0938–1314 (CMS–10621). We seek comment on our burden estimates and assumptions

associated with these proposals regarding the testing of QCDR measures including those which will be included in an MVP.

(3) Qualified Registry Self-Nomination Process and Other Requirements

The requirements and burden associated with this rule's proposed data submission changes related to qualified registries and QCDRs will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

We refer readers to § 414.1400(a)(4) which states that qualified registries interested in submitting MIPS data to us on behalf of MIPS eligible clinicians, groups, or virtual groups need to complete a self-nomination process to be considered for approval to do so. We also refer readers to § 414.1400 (c) and the CY 2017 Quality Payment Program final rule (81 FR 77507 through 77508), CY 2018 Quality Payment Program final rule (82 FR 53906 through 53908), CY 2019 PFS final rule (83 FR 59997 through 59998), and the CY 2020 PFS final rule (84 FR 63114 through 63116) for our previously finalized requirements and burden for self-nomination of qualified registries.

In sections IV.A.3.g.(3)(a) of this rule, we are proposing to codify that beginning with the 2023 payment year as a condition of approval each qualified registry must conduct an annual data validation audit that conforms to the requirements in § 414.1400(b)(2)(iv), including specific obligations discussed in detail in those sections and if one or more deficiencies or data errors are identified the qualified registry must also conduct targeted audits that conform to the § 414.1400(b)(2)(v) including specific obligations discussed in detail in those sections. In particular, we propose to codify at § 414.1400(c)(2)(iii)(G), that in a form and manner and by a deadline specified by CMS, the qualified registry must report data validation results, including the overall deficiency or data error rate, the types of deficiencies or data errors discovered, the percentage of clinicians impacted by any deficiency or data error, and how and when each deficiency or data error type was corrected. In addition, we propose to codify at § 414.1400(c)(2)(iv)(D), in a form and manner and by a deadline specified by CMS, the qualified registry must report the results of each targeted audit, including the overall deficiency or data error rate, the types of deficiencies or data errors discovered, the percentage of clinicians impacted by each deficiency or data error, and how and when each error type was corrected.

We are not revising our burden estimates as a result of the proposal to codify that qualified registries must conduct particular data validation audits and report data validation results because we believe the burdens of the proposed data validation requirements are not greater than existing expectations for which we have already accounted for the associated burden as stated in the CY 2017 Quality Payment Program final rule (81 FR 77383 through 77384) and the CY 2019 PFS final rule (83 FR 59998 through 59999) and previously submitted to OMB for approval under control number 0938–1314 (CMS–10621). With regard to the proposal to require qualified registries conduct targeted audits if one or more data errors are identified during data validation audits, we are unable to estimate the number of targeted audits which may occur or the time and costs associated with submitting results which could vary substantially depending on the nature of the data error and the amount of data to be audited. We seek comment on the burdens associated with the proposed requirements for data validation audits and targeted audits, including expected frequency of targeted audits and the anticipated scope of effort related to submitting results to assist in estimating the burden associated with this proposal. We also discuss additional impacts of this proposal in section VIII.F.16.d.(4)(d) of the Regulatory Impact Analysis.

In sections VI.A.3.g.(1)(b)(iii) of this rule, we are proposing to codify that beginning with the 2023 MIPS payment year, third party intermediaries must attend and complete training and support sessions in the form and manner and at the times specified by CMS. Due to the nature of the information provided during these calls and because the proposed training requirements as applied to qualified registries and QDCRs are similar to existing expectations for these entities, we are not revising our burden estimates as a result of these proposals. However, we do refer readers to section VIII.F.16.d.(4)(d) of this proposed rule for discussion of our estimates of the overall impact of this proposal for all third party intermediaries.

In section VI.A.3.g.(1)(b)(ii) of this rule, we are proposing that the determination of whether to approve an entity as a third party intermediary for a MIPS performance period may take into account: (1) Whether the entity failed to comply with requirements of third party intermediaries for any prior MIPS payment year for which it was approved as third party intermediary;

and (2) whether the entity provided inaccurate information regarding the requirements of the subpart to any eligible clinician. Because this proposal does not require any additional effort for affected entities but instead allows CMS to utilize already available information to make approval decisions, collection of information burden is unaffected for all entities. We also do not anticipate this proposal will result in any qualified registries or other third party intermediaries electing not to self-nominate during the 2021 MIPS performance period, but believe it is possible this may occur. However, we have neither any data nor knowledge of intent from previously approved qualified registries or other third party intermediaries with which to support making any changes to our burden estimates as a result of this proposal. We are soliciting public feedback to help us determine if there are any burden implications.

In section VI.A.3.g.(4) of this proposed rule, we are proposing to modify the existing requirement at § 1400(f)(1)(i) requiring third party intermediaries to submit to CMS by a date specified by the agency a Corrective Action Plan (CAP) to address the identified deficiencies or data issue, including the actions it will take to prevent the deficiencies or data issues from recurring. While the requirement for third party intermediaries to submit a CAP was finalized in our CY 2017 Quality Payment Program final rule (81 FR 77389), we did not specify the information that must be included to be included in the CAP and neglected to identify the burden associated with the required information. We are correcting that oversight in this proposed rule. In addition, to clarify expectations and create consistency in the content of the CAPs provide by third party intermediaries, we are proposing to revise and elaborate on the obligations for a CAP in this proposed rule. Specifically, we propose to modify § 414.1400(f)(1)(i) such that, unless different or additional information is specified by CMS, the CAP submitted by the third party intermediary must address four issues: (1) The issues that contributed to the non-compliance; (2) the impact to individual clinicians, groups, or virtual groups, regardless of whether they are participating in the program because they are MIPS eligible, voluntary participating, or opting in to participating in the MIPS program; (3) the corrective actions to be implemented by the third party intermediary to ensure that the non-compliance has been resolved will not

recur in the future and (4) the detailed timeline for achieving compliance with the applicable requirements. Specifically, we propose at § 414.1400(f)(1)(i)(A) to require that each third party intermediary be required to articulate the issues that contributed to the non-compliance. The third party intermediary must articulate what factors cause it to fail in its obligation to meet program requirements. We also propose at § 414.1400(f)(1)(i)(B) to require that a third party intermediary subject to a CAP disclose to CMS the impact to individual clinicians, groups, or virtual groups, regardless of whether they are participating in the program because they are MIPS eligible, voluntary participating, or opting in to participating in the MIPS program. In addition, we propose at § 414.1400(f)(1)(i)(C) that a third party intermediary subject to a CAP must address the corrective actions to be implemented by the third party intermediary to ensure that the non-compliance has been resolved and will not recur in the future. Furthermore, we propose at § 414.1400(f)(1)(i)(D) that each CAP must include the detailed timeline for achieving compliance with the applicable requirements. We have historically received a total of 34 CAPs over the 3-year period of CY 2017–2019 (an average of 11.3 per year). As third party intermediaries become increasingly effective at identifying data issues and discrepancies prior to submitting data to CMS and accounting for the estimated decrease in number of QCDRs and qualified registries self-nominating in the 2020 MIPS performance period compared to the 2019 MIPS performance period (from 350 to 229), we anticipate the annual number of CAPs received to decrease to fewer than 10 per year (83 FR 59997 through 60000 and 84 FR 63114 through 63121). The effort involved in developing a CAP including the detail specified in this proposed rule and submitting it to CMS is likely to be no more than 3 hours for a computer systems analyst at a rate of \$92.46/hr. In aggregate we estimate an annual burden of no more than 30 hours (3 hr × 10 CAPs) at a cost of \$2,774 (30 hr × \$92.46/hr) for third party intermediaries to develop and submit a CAP.

In the CY 2020 PFS final rule, we estimated 153 qualified registries would self-nominate (84 FR 63116). Using updated wage rates, the currently approved burden associated with these qualified registries is 459 hours (153 respondents × 3 hr/respondent) at a cost of \$42,439 (459 hr × \$92.46/hr). Because

we are unable to predict how many of the estimated 10 third party intermediaries submitting CAPs will be qualified registries, QCDRs, survey vendors, or health IT vendors; for simplicity we are adding the burden to the currently approved burden for qualified registries for a total of 489 hours (459 hr + 30 hr) at a cost of \$45,213 (\$42,439 + \$2,774).

(4) Survey Vendor Requirements

This rule is not proposing any new or revised collection of information requirements or burden related to CMS-approved CAHPS for MIPS survey vendors. The requirements and burden are currently approved by OMB under control number 0938–1222 (CMS–10450). Consequently, we are not making any MIPS survey vendor changes under that control number.

(5) Health IT Vendors

This rule is not proposing any new or revised collection of information requirements or burden related to health IT vendors and we do not anticipate any changes to the GEHRT process as a result of proposals promulgated in this proposed rule. Consequently, we are not setting out burden or making any changes under the 0938–1314 (CMS–10621) control number.

d. Open Authorization (OAuth) Credentialing and Token Request Process

In the CY 2017 Quality Payment Program final rule (81 FR 77035), we finalized the initial MIPS data submission terminology at § 414.1305 and requirements at § 414.1325, as well as the associated burden estimates. As discussed in the CY 2019 PFS final rule (83 FR 59747 through 59748), it subsequently came to our attention that the way we had previously described data submission did not precisely reflect the experience users have when submitting data to us. To ensure clarity and precision for all users, we amended the terminology at § 414.1305 to more precisely reflect this experience and made conforming amendments to § 414.1325 and other MIPS regulations. Among the newly defined terms was “submission type”, which we defined at § 414.1305 as the mechanism by which a submitter type submits data to CMS, including, as applicable: Direct, log in and upload, log in and attest, Medicare Part B claims and the CMS Web Interface. We stated in the CY 2019 PFS final rule that the direct submission type allows users to transmit data through a computer-to-computer interaction, such as an Application Programming Interface (API).

Beginning in the 2021 MIPS performance period, CMS will offer the Open Authorization (OAuth) Credentialing and Token Request Process. This process utilizes an API to allow users to transmit data through a computer-to-computer interaction. As such, it is an alternate means of operationalizing the previously established direct submission type. The process first requires software developers to apply for production OAuth credentials to the submissions API by registering their application so that it can interact with the system providing OAuth capabilities. Next, the developer must request a meeting with the Quality Payment Program development team. During this meeting, the requesting organization will demonstrate their application’s use of OAuth to successfully submit data in the Submissions API test environment. The requesting organization will also provide documentation about their terms of service, privacy policy, and related information for review by the Quality Payment Program team. If further clarification is required about any of the documentation or application, the Quality Payment Program team will follow up with the requesting organization. Once approved, the Quality Payment Program development team will issue production OAuth credentials to the requesting organization’s point of contact. Detailed instructions for the authentication process and application for organizations to request OAuth credentials are available at <https://cms.gov.github.io/qpp-submissions-docs/>.

The following burden estimates are associated with the first year of data collection for the OAuth Credentialing and Token Request Process. This process is available to all submitter types to be approved to submit data via the direct submission type. However, we assume the only parties that will elect to undergo the process will be health IT vendors or other third party intermediaries, as we believe these are the most likely parties to be developing applications. The burden associated with this ICR belongs only to the application developer; QPP participants will not be required to do anything additional to submit their data. For third party intermediaries, OAuth Credentialing will allow QPP participants to use their own QPP credentials to login through the third party intermediary’s application to submit their data and view performance feedback from QPP. The proposed burden associated with the OAuth

Credentialing and Token Request Process will be submitted to OMB for approval under control number 0938–1314 (CMS–10621). We refer readers to § 414.1400(a)(2) and the CY 2017 Quality Payment Program final rule (81 FR 77363 through 77364) and as further revised in the CY 2019 and CY 2020 PFS final rules at § 414.1400(a)(2) (83 FR 60088 and 84 FR 63052) for our current policy regarding the types of MIPS data third party intermediaries may submit.

As stated in the CY 2020 PFS final rule (84 FR 63049) we are aware of stakeholders’ desire to have a more cohesive participation experience across all performance categories under MIPS. We are offering this process in support of our current requirements for QCDRs and qualified registries to be able to submit data for all MIPS performance categories and health IT vendors to be

able to submit data for at least one MIPS performance category (84 FR 63052 and 84 FR 63076) as well as our desire to further reduce administrative burden for clinicians to participate in MIPS. As we discuss in sections VI.B.5.e.(5), VI.B.5.e.(6), VI.B.5.g, and VI.B.5.i of this proposed rule individual clinicians or groups may submit their quality measures using the direct submission type via the MIPS CQM and QCDR or eCQM collection types as well as their Promoting Interoperability measures and improvement activities through the same direct submission type. Entities that receive approval for their applications through this process will be able to provide QPP participants a more comprehensive and less administratively burdensome experience using the direct submission type.

We estimate it would take approximately 1 hour at \$92.46/hr for a computer systems analyst (or their equivalent) to provide documentation and any follow-up communication via email. We estimate that for during the 2021 MIPS performance period, 15 submitter types, consisting of third party intermediaries will complete this process to be approved for the CY 2022 submission period. We expect health IT vendors to adopt this method initially, with limited further adoption by QCDRs and Qualified Registries in future years. As shown in Table 54, we estimate it would take 1 hour at \$92.46/hr for a computer systems analyst (or their equivalent) to complete the process. We estimate an annual burden of 15 hours (15 vendors × 1 hr) at a cost of \$1,387 (15 hr × \$92.46/hr) or \$92.46 per organization (\$1,387/15 vendors).

TABLE 54: Estimated Burden for the OAuth Credentialing and Token Request Process

	Burden Estimate
# of Organizations (a)	15
Total Annual Hours Per Organization to Submit (b)	1
Total Annual Hours (c) = (a)*(b)	15
Cost Per Organization (@ computer systems analyst’s labor rate of \$92.46/hr.) (d)	\$92.46/hr
Total Annual Cost (e) = (a)*(d)	\$1,387

e. ICRs Regarding Quality Data Submission (§§ 414.1325 and 414.1335)

(1) Background

We refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77502 through 77503), CY 2018 Quality Payment Program final rule (82 FR 53908 through 53912), CY 2019 PFS final rule (83 FR 60000 through 60003), and the CY 2020 PFS final rule (84 FR 63121 through 63124) for our previously finalized requirements for data submission for the quality performance category.

Under our current policies, two groups of clinicians must submit quality data under MIPS: Those who submit as MIPS eligible clinicians and those who opt to submit data voluntarily but are not subject to MIPS payment adjustments. Clinicians are ineligible for MIPS payment adjustments if they are newly enrolled to Medicare; are QPs; are partial QPs who elect to not participate in MIPS; are not one of the clinician types included in the definition for MIPS eligible clinician; or do not exceed the low-volume threshold as an individual or as a group.

(2) Changes and Adjustments to Quality Performance Category Respondents

To determine which QPs should be excluded from MIPS, we used the QP List for the 2019 third snapshot that contains participation in Advanced APMs as of August 31, 2019, that could be connected into our respondent data and are the best estimate of future expected QPs. From this data, we calculated the QP determinations as described in the Qualifying APM Participant (QP) definition at § 414.1305 for the 2021 QP Performance Period. We assumed that all Partial QPs will participate in MIPS data collections. Due to data limitations, we could not identify specific clinicians who have not yet enrolled in APMs, but who may become QPs in the future 2021 QP Performance Period (and therefore will no longer need to submit data to MIPS); hence, our model may underestimate or overestimate the number of respondents.

In the CY 2019 PFS final rule, we finalized limiting the Medicare Part B claims collection type to small practices beginning with the 2021 MIPS payment year and allowing clinicians in small

practices to report Medicare Part B claims as a group or as individuals (83 FR 59752). In the CY 2020 PFS final rule, we provided a set of assumptions and an approach to account for the clinicians not in small practices for whom the Medicare Part B claims collection type will no longer be available as an option for collecting and reporting quality data (84 FR 63121 through 63122). As in the CY 2020 PFS final rule, we are using 2018 MIPS performance period data to estimate the number of respondents, so we use the same methodology for this proposed rule; however, because of changes in the number of QPs and APM participation, the application of this methodology results in a slightly different adjustment to our estimates of respondents. In the CY 2020 PFS final rule, this approach resulted in a 103,103 decrease in the estimated number of clinicians who will submit quality data via Medicare Part B claims and a 12,931 increase in the number of clinicians who will submit via the QCDR/MIPS CQM collection type (84 FR 63122). For this rule, our assumptions result in a 101,390 decrease (from 195,977 to 94,587 in the estimated number of clinicians who will

submit quality data via Medicare Part B claims and a 12,496 increase (from 92,340 to 104,836 in the number of clinicians who will submit via the MIPS CQM and QCDR collection type).

In section IV.A.3.c.(1)(c) of this rule, we are proposing to sunset the CMS Web Interface measures as a collection type/submission type starting with the 2021 performance period. If this proposal is finalized, it will result in groups of 25 or more clinicians that previously submitted quality performance data via the CMS Web Interface being required to use an alternate collection type, which will have to be either the MIPS CQM and QCDR or eCQM collection type. While we know that 111 groups submitted quality performance data via the CMS Web Interface in the 2019 MIPS performance period, we are not able to ascertain what alternative collection type(s) the groups would elect. In order to estimate the number of groups that will select each of these collection types, we first clustered the number of groups which submitted data via the CMS Web Interface collection type during the 2018 MIPS performance period by practice size (between 25 and 49 clinicians, between 50 and 99 clinicians, etc.). Then, for each cluster, we allocated these groups to each of the MIPS CQM and QCDR and eCQM collection types based on the percent of TINs that submitted MIPS data via these two collection types. For example, of the 1,335 TINs with a practice size of 25 to 49 clinicians which submitted data for the 2018 MIPS performance period, 974 (73 percent) submitted data via the MIPS CQM and QCDR collection type and 361 (27 percent) submitted data via the eCQM collection type. We applied these percentages to the 11 TINs with a practice size of 25 to 49 clinicians which submitted data via the CMS Web Interface collection type for the 2018 MIPS performance period to estimate that 8 (11 TINs \times 0.73) would elect to submit data via the MIPS CQM and QCDR collection type and the remaining 3 (11 TINs \times 0.27) would elect to submit data via the eCQM collection type. In total, we estimate that 50 of the 111 groups that submitted data via the CMS Web Interface collection type for the 2018 MIPS performance period will now submit quality data via the MIPS CQM and QCDR collection type and 61 groups will now submit quality data via the eCQM collection type. Note that the 111 groups is an increase of 7 from our currently approved estimate of 104 groups due to updated data (84 FR 63123) (111 groups – 104 groups). We also performed this analysis to

determine the number of clinicians that would be affected and would need to submit quality data via an alternate collection type. In total, of the estimated 39,318 individual clinicians affected by this proposal, we estimate that 11,448 would submit quality data as part of a group via the MIPS CQM and QCDR collection type and 27,870 would submit quality data as part of a group via the eCQM collection type. These estimates are reflected in Tables 55 and 57 and the associated changes in burden are reflected in Tables 61, 63, and 85. In aggregate, as discussed in sections VI.B.5.e.(5), (6), and (9) of this proposed rule, we estimate the proposal to sunset the CMS Web Interface measures as a collection type/submission type will result in a net decrease in quality performance data reporting burden while acknowledging the additional financial impacts on clinicians as discussed in section VIII.F.16.d.(4)(b)(i) of the Regulatory Impact Analysis. We assume that 100 percent of ACO APM Entities will submit quality data to CMS as required under their models. While we do not believe there is additional reporting for ACO APM entities, consistent with assumptions used in the CY 2019 and CY 2020 PFS final rules (83 FR 60000 through 60001 and 84 FR 63122), we include all quality data voluntarily submitted by MIPS APM participants made at the individual or TIN-level in our respondent estimates. As stated in section VI.4.a.(4) of this proposed rule, we assume non-ACO APM Entities will participate through traditional MIPS and submit as an individual or group rather than as an entity. To estimate who will be a MIPS APM participant in the 2021 MIPS performance period, we used the latest QP List for the third snapshot data of the 2019 QP performance period and supplemented with clinicians who are in an APM in 2018 but not in the 2019 snapshot. This file was selected to better reflect the expected increase in the number of MIPS APMs in future years compared to previous APM eligibility files. If a MIPS eligible clinician is determined to not be scored as a MIPS APM, then their reporting assumption is based on their reporting for the CY 2018 MIPS performance period.

Our burden estimates for the quality performance category do not include the burden for the quality data that APM Entities submit to fulfill the requirements of their APMs. The burden is excluded as sections 1899(e) and 1115A(d)(3) of the Act (42 U.S.C. 1395jjj(e) and 1315a(d)(3), respectively) state that the Shared Savings Program and the testing, evaluation, and

expansion of Innovation Center models tested under section 1115A of the Act (or section 3021 of the Affordable Care Act) are not subject to the PRA.¹¹⁰ Tables 55, 56 and 57 explain our revised estimates of the number of organizations (including groups, virtual groups, and individual MIPS eligible clinicians) submitting data on behalf of clinicians segregated by collection type.

Table 55 provides our estimated counts of clinicians that will submit quality performance category data as MIPS individual clinicians or groups in the 2021 MIPS performance period based on data from the 2018 MIPS performance period.

For the 2021 MIPS performance period, respondents will have the option to submit quality performance category data via Medicare Part B claims, direct, and log in and upload submission types. We estimate the burden for collecting data via collection type: Claims, QCDR and MIPS CQMs, and eCQMs. We believe that, while estimating burden by submission type may be better aligned with the way clinicians participate with the Quality Payment Program, it is more important to reduce confusion and enable greater transparency by maintain consistency with previous rulemaking.

As shown in Table 55, using participation data from the 2018 MIPS performance period combined with the estimate of QPs for the 2021 performance period, we estimate a total of 792,061 clinicians will submit quality data as individuals or groups in the 2021 MIPS performance period, an increase of 11,456 clinicians when compared to our estimate of 780,605 clinicians in the CY 2020 PFS final rule (84 FR 63122). We estimate 94,587 clinicians will submit data as individuals for the Medicare Part B claims collection type; 410,518 clinicians will submit data as individuals or as part of groups for the MIPS CQM and QCDR collection type; and 286,956 clinicians will submit data as individuals or as part of groups via eCQM collection types.

Table 55 provides estimates of the number of clinicians to collect quality measures data via each collection type, regardless of whether they decide to submit as individual clinicians or as part of groups. Because our burden estimates for quality data submission assume that burden is reduced when clinicians elect to submit as part of a group, we also separately estimate the

¹¹⁰ Our estimates do not reflect the burden on MIPS APM participants of submitting Promoting Interoperability performance category data, which is outside the requirements of their APMs.

expected number of clinicians to submit as individuals or part of groups.

TABLE 55: Estimated Number of Clinicians Submitting Quality Performance Category Data by Collection Type (as Individual Clinicians or as Part of Groups)

	Medicare Part B Claims	QCDR/ MIPS CQM	eCQM	CMS Web Interface	Total
2021 MIPS performance period (excludes QPs) (a)	94,587	410,518	286,956	0	792,061
* 2020 MIPS performance period (excludes QPs) (b)	94,846	391,430	247,856	46,473	780,605
Difference (c)=(a)-(b)	-259	+19,088	+39,100	-46,473	+11,456

*Currently approved by OMB under control number 0938-1314 (CMS-10621).

In the CY 2018 Quality Payment Program final rule (82 FR 53625 through 53626), beginning with the 2019 MIPS performance period, we allowed MIPS eligible clinicians to submit data for multiple collection types for a single performance category. Therefore, with the exception of clinicians not in small practices who previously submitted quality data via Medicare Part B claims, we captured the burden of any eligible clinician that may have historically collected via multiple collection types, as we assume they will continue to collect via multiple collection types and

that our MIPS scoring methodology will take the highest score where the same measure is submitted via multiple collection types. Hence, the estimated numbers of individual clinicians and groups to collect via the various collection types are not mutually exclusive and reflect the occurrence of individual clinicians or groups that collected data via multiple collection types during the 2018 MIPS performance period.

Table 56 uses methods similar to those described to estimate the number of clinicians that will submit data as

individual clinicians via each collection type in the 2021 MIPS performance period. We estimate that approximately 94,587 clinicians will submit data as individuals using the Medicare Part B claims collection type; approximately 104,836 clinicians will submit data as individuals using MIPS CQM and QCDR collection type; and approximately 41,477 clinicians will submit data as individuals using eCQMs collection type.

TABLE 56: Estimated Number of Clinicians Submitting Quality Performance Category Data as Individuals by Collection Type

	Medicare Part B Claims	QCDR/ MIPS CQM	eCQM	CMS Web Interface	Total
2021 MIPS Performance Period (excludes QPs) (a)	94,587	104,836	41,477	0	240,900
* 2020 MIPS Performance Period (excludes QPs) (b)	94,846	100,269	38,935	0	234,050
Difference (c)=(a)-(b)	-259	+4,567	+2,542	0	+6,850

*Currently approved by OMB under control number 0938-1314 (CMS-10621).

Consistent with the policy finalized in the CY 2018 Quality Payment Program final rule that for MIPS eligible clinicians who collect measures via Medicare Part B claims, MIPS CQM, eCQM, or QCDR collection types and submit more than the required number of measures (82 FR 53735 through 54736), we will score the clinician on the required measures with the highest assigned measure achievement points and thus, the same clinician may be counted as a respondent for more than one collection type. Therefore, our columns in Table 56 are not mutually exclusive.

Table 57 provides our estimated counts of groups or virtual groups that will submit quality data on behalf of clinicians for each collection type in the 2021 MIPS performance period. We assume that groups that submitted quality data as groups in the 2018 MIPS performance period will continue to submit quality data either as groups or virtual groups for the same collection types as they did as a group or TIN within a virtual group for the 2021 MIPS performance period. Specifically, we estimate that 11,071 groups and virtual groups will submit data for the MIPS CQM and QCDR collection type on behalf of 305,682 clinicians; and 4,474

groups and virtual groups will submit for eCQM collection types on behalf of 245,479 eligible clinicians. In section IV.A.3.(b) of this rule, we are proposing the APM Performance Pathway for clinicians in APM Entities. The APM Performance Pathway is available for both ACO and non-ACOs. However, due to data limitations and our inability to determine who would use the APM Performance Pathway versus the traditional MIPS submission mechanism, we assume non-ACO APM Entities would participate through traditional MIPS and base our estimates on submissions received in the 2018 MIPS performance period.

TABLE 57: Estimated Number of Groups and Virtual Groups Submitting Quality Performance Category Data by Collection Type on Behalf of Clinicians

Difference (c)=(a)-(b)	0	+122	+76	-104	+94

*Currently approved by OMB under control number 0938-1314 (CMS-10621).

The burden associated with the submission of quality performance category data have some limitations. We believe it is difficult to quantify the burden accurately because clinicians and groups may have different processes for integrating quality data submission into their practices' workflows.

Moreover, the time needed for a clinician to review quality measures and other information, select measures applicable to their patients and the services they furnish, and incorporate the use of quality measures into the practice workflows is expected to vary along with the number of measures that are potentially applicable to a given clinician's practice and by the collection type. For example, clinicians submitting

data via the Medicare Part B claims collection type need to integrate the capture of quality data codes for each encounter whereas clinicians submitting via the eCQM collection types may have quality measures automated as part of their EHR implementation.

We believe the burden associated with submitting quality measures data will vary depending on the collection type selected by the clinician, group, or third-party. As such, we separately estimated the burden for clinicians, groups, and third parties to submit quality measures data by the collection type used. For the purposes of our burden estimates for the Medicare Part B claims, MIPS CQM and QCDR, and eCQM collection types, we also assume

that, on average, each clinician or group will submit 6 quality measures. In terms of the quality measures available for clinicians and groups to report for the 2021 MIPS performance period, the total number of quality measures will be 206. The new MIPS quality measures proposed for inclusion in MIPS for the 2021 MIPS performance period and future years are found in Table Group A of Appendix 1; MIPS quality measures with proposed substantive changes can be found in Table Group D of Appendix 1; and MIPS quality measures proposed for removal can be found in Table Group C of Appendix 1. These measures are stratified by collection type in Table 58 as well as counts of new, removed, and substantively changed measures.

TABLE 58: Summary of Quality Measures for the 2021 MIPS Performance Period

Collection Type	# Measures Proposed as New	# Measures Proposed for Removal	# Measures Proposed with a Substantive Change	# Measures Remaining for CY 2021*
Medicare Part B Claims Specifications	0	-10	23	45
MIPS CQMs Specifications	0	-14	81	182
eCQM Specifications	0	0	35	47
Survey – CSV	0	0	0	1
CMS Web Interface Measure Specifications	0	-10	0	0
Administrative Claims	+2	-1	0	2
Total	+2	-14	92	206

*A measure may be specified under multiple collection types but will only be counted once in the total.

For the 2021 MIPS performance period, there is a net reduction of 12 quality measures across all collection types compared to the 218 measures finalized for the 2020 MIPS performance period (84 FR 63124). Specifically, as discussed in section IV.A.3.c.(1)(d), we are proposing to add 2 new administrative claims outcome measures, remove 14 quality measures, and make substantive updates to 92 quality measures where the changes will require the removal of an existing benchmark. We do not anticipate that removing these measures will increase

or decrease the reporting burden on clinicians and groups as respondents are still required to submit quality data for 6 measures.

(3) Quality Payment Program Identity Management Application Process

This rule is not proposing any new or revised collection of information requirements or burden related to the identity management application process. The requirements and burden are currently approved by OMB under control number 0938-1314 (CMS-10621). Consequently, we are not

making any identity management application process changes under that control number.

(4) Quality Data Submission by Clinicians: Medicare Part B Claims-Based Collection Type

This rule is not proposing any new or revised collection of information requirements related to the submission of Medicare Part B claims data for the quality performance category. However, we are adjusting our currently approved burden estimates based on more recent data. The following proposed burden

will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

We refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77501 through 77504), CY 2018 Quality Payment Program final rule (82 FR 53912), CY 2019 PFS final rule (83 FR 60004 through 60005), and the CY 2020 PFS final rule (84 FR 63124 through 63126) for our previously finalized requirements and burden for quality data submission via the Medicare Part B claims collection type.

As noted in Table 55, based on 2018 MIPS performance period data, we assume that 94,587 individual clinicians will collect and submit quality data via the Medicare Part B claims collection type. This rule is proposing to adjust the number of Medicare Part B claims respondents from 94,846 to 94,587 (a decrease of 259) based on more recent data and our methodology of accounting only for clinicians in small practices who submitted such claims data in the 2018 MIPS performance period rather

than all clinicians who submitted quality data codes to us for the Medicare Part B claims collection type.

As shown in Table 59, consistent with our currently approved per response time figures, we estimate that the burden of quality data submission using Medicare Part B claims will range from 0.15 hours (9 minutes) at a cost of \$13.87 (0.15 hr × \$92.46/hr) to 7.2 hours at a cost of \$665.71 (7.2 hr × \$92.46/hr). The burden will involve becoming familiar with MIPS quality measure specifications. We believe that the start-up cost for a clinician's practice to review measure specifications is 7 hours, consisting of 3 hours at \$110.74/hr for a medical and health services manager, 1 hour at \$212.78/hr for a physician, 1 hour at \$46.64/hr for an LPN, 1 hour at \$92.46/hr for a computer systems analyst, and 1 hour at \$39.06/hr for a billing and posting clerk. We are not revising our currently approved per response time estimates.

Considering both data submission and start-up requirements, the estimated

time (per clinician) ranges from a minimum of 7.15 hours (0.15 hr + 7 hr) to a maximum of 14.2 hours (7.2 hr + 7 hr). In this regard the total annual time ranges from 676,297 hours (7.15 hr × 94,587 clinicians) to 1,343,135 hours (14.2 hr × 94,587 clinicians). The estimated annual cost (per clinician) ranges from \$737.03 [(0.15 hr × \$92.46/hr) + (3 hr × \$110.74/hr) + (1 hr × \$92.46/hr) + (1 hr × \$46.64/hr) + (1 hr × \$39.06/hr) + (1 hr × \$212.78/hr)] to a maximum of \$1,388.87 [(7.2 hr × \$92.46/hr) + (3 hr × \$110.74/hr) + (1 hr × \$92.46/hr) + (1 hr × \$46.64/hr) + (1 hr × \$39.06/hr) + (1 hr × \$212.78/hr)]. The total annual cost ranges from a minimum of \$69,713,362 (94,587 clinicians × \$737.03) to a maximum of \$131,369,236 (94,587 clinicians × \$1,388.87).

Table 59 summarizes the range of total annual burden associated with clinicians submitting quality data via Medicare Part B claims.

TABLE 59: Estimated Burden for Quality Performance Category: Clinicians Using the Medicare Part B Claims Collection Type

	Minimum Burden	Median Burden	Maximum Burden
# of Clinicians (a)	94,587	94,587	94,587
Hours Per Clinician to Submit Quality Data (b)	0.15	1.05	7.2
# of Hours Medical and Health Services Manager Review Measure Specifications (c)	3	3	3
# of Hours Computer Systems Analyst Review Measure Specifications (d)	1	1	1
# of Hours LPN Review Measure Specifications (e)	1	1	1
# of Hours Billing Clerk Review Measure Specifications (f)	1	1	1
# of Hours Physician Review Measure Specifications (g)	1	1	1
Annual Hours per Clinician (h) = (b)+(c)+(d)+(e)+(f)+(g)	7.15	8.05	14.2
Total Annual Hours (i) = (a)*(h)	676,297	761,425	1,343,135
Cost to Submit Quality Data (@ computer systems analyst's labor rate of \$92.46/hr @ varying times) (j)	\$13.87	\$97.08	\$665.71
Cost to Review Measure Specifications (@ medical and health services manager's labor rate of \$110.74/hr @ 3 hr) (k)	\$332.22	\$332.22	\$332.22
Cost to Review Measure Specifications (@ computer systems analyst's labor rate of \$92.46/hr @ 1 hr) (l)	\$92.46	\$92.46	\$92.46
Cost to Review Measure Specifications (@ LPN's labor rate of \$46.64/hr @ 1 hr) (m)	\$46.64	\$46.64	\$46.64
Cost to Review Measure Specifications (@ billing clerk's labor rate of \$39.06/hr @ 1 hr) (n)	\$39.06	\$39.06	\$39.06
Cost to Review Measure Specifications (@ physician's labor rate of \$212.78/hr @ 1 hr) (o)	\$212.78	\$212.78	\$212.78
Total Annual Cost Per Clinician (p) = (j)+(k)+(l)+(m)+(n)+(o)	\$737.03	\$820.24	\$1,388.87
Total Annual Cost (q) = (a)*(p)	\$69,713,362	\$77,584,325	\$131,369,236

*Due to burden for certain activities being estimated in fractions of hours, totals may not reflect the sum of individual rows due to rounding.

As shown in Table 60, using the unchanged currently approved per respondent burden estimates which range from \$737.03 to \$1,388.87, the decrease in number of respondents from 94,846 to 94,587 results in a total

adjustment of between -1,852 hours (-259 respondents × 7.15 hr/respondent) at a cost of -\$190,891 (-259 respondents × \$737.03/respondent) and -3,678 hours (-259 respondents × 14.2 hr/respondent) at a

cost of -\$359,718 (-259 respondents × \$1,388.87/respondent). For purposes of calculating total burden associated with the proposed rule as shown in Table 60, only the maximum burden is used.

TABLE 60: Adjusted Burden for Quality Performance Category: Clinicians Using the Medicare Part B Claims Collection Type

	Minimum Burden	Median Burden	Maximum Burden
Total Annual Hours for Respondents in CY 2020 Final Rule (a)	678,149	763,510	1,346,813

Total Annual Cost for Respondents in CY 2021 Proposed Rule (e)	\$69,713,362	\$77,584,325	\$131,369,236
Difference (f) = (e)-(d)	-\$190,891	-\$212,443	-\$359,718

(5) Quality Data Submission by Individuals and Groups Using MIPS CQM and QCDR Collection Types

The following proposed requirement and burden will be submitted to OMB for approval under control number 0938-1314 (CMS-10621).

We refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77504 through 77505), CY 2018 Quality Payment Program final rule (82 FR 53912 through 53914), CY 2019 PFS final rule (83 FR 60005 through 60006), and the CY 2020 PFS final rule (84 FR 63127 through 63128) for our previously finalized requirements and burden for quality data submission via the MIPS CQM and QCDR collection types.

As discussed in section IV.A.3.c.(1)(c) of this rule, we are proposing to sunset the CMS Web Interface measures as a collection type and submission type starting with the 2021 performance period. Using the methodology discussed in section VI.B.5.e.(1) of this proposed rule, we estimate 50 groups which previously submitted quality data via the CMS Web Interface collection type will now submit quality data via the MIPS CQM and QCDR collection type.

As noted in Tables 55, 56, and 57, and based on 2018 MIPS performance period data, we assume that 410,518 clinicians will submit quality data as individuals or groups using MIPS CQM or QCDR collection types; 104,836 clinicians will submit as individuals and the remaining

305,682 clinicians will submit as members of 11,071 groups and virtual groups. Given that the number of measures required is the same for clinicians and groups, we expect the burden to be the same for each respondent collecting data via MIPS CQM or QCDR, whether the clinician is participating in MIPS as an individual or group.

Under the MIPS CQM and QCDR collection types, the individual clinician or group may either submit the quality measures data directly to us, log in and upload a file, or utilize a third-party intermediary to submit the data to us on the clinician's or group's behalf.

We estimate that the burden associated with the QCDR collection type is similar to the burden associated with the MIPS CQM collection type; therefore, we discuss the burden for both together below. For MIPS CQM and QCDR collection types, we estimate an additional time for respondents (individual clinicians and groups) to become familiar with MIPS quality measure specifications and, in some cases, specialty measure sets and QCDR measures. Therefore, we believe that the burden for an individual clinician or group to review measure specifications and submit quality data total 9.083 hours at \$891.13. This consists of 3 hours at \$92.46/hr for a computer systems analyst (or their equivalent) to submit quality data along with 2 hours at \$110.74/hr for a medical and health

services manager, 1 hour at \$92.46/hr for a computer systems analyst, 1 hour at \$46.64/hr for a LPN, 1 hour at \$39.06/hr for a billing clerk, and 1 hour at \$212.78/hr for a physician to review measure specifications. Additionally, clinicians and groups who do not submit data directly will need to authorize or instruct the qualified registry or QCDR to submit quality measures' results and numerator and denominator data on quality measures to us on their behalf. We estimate that the time and effort associated with authorizing or instructing the quality registry or QCDR to submit this data will be approximately 5 minutes (0.083 hours) at \$92.46/hr for a computer systems analyst at a cost of \$7.70 (0.083 hr × \$92.46/hr). Overall we estimate a cost of \$897.47/response [(3 hr × \$92.46/hr) + (2 hr × \$110.74/hr) + (1 hr × \$212.78/hr) + (1 hr × \$92.46/hr) + (1 hr × \$46.64/hr) + (1 hr × \$39.06/hr) + (0.083 hr × \$92.46/hr)].

In aggregate, we estimate an annual burden of 1,052,783 hours [9.083 hr/response × (104,836 clinicians submitting as individuals + 11,071 groups submitting via QCDR or MIPS CQM on behalf of individual clinicians or 115,907 responses)] at a cost of \$104,023,540 (115,907 responses × \$897.47/response). Based on these assumptions, we have estimated in Table 61 the burden for these submissions.

TABLE 61: Estimated Burden for Quality Performance Category: Clinicians (Participating Individually or as Part of a Group) Using the MIPS CQM and QCDR Collection Type

	Burden Estimate
# of clinicians submitting as individuals (a)	104,836
# of groups submitting via QCDR or MIPS CQM on behalf of individual clinicians (b)	11,071
# of Respondents (groups plus clinicians submitting as individuals) (c)=(a)+(b)	115,907
Hours Per Respondent to Report Quality Data (d)	3
# of Hours Medical and Health Services Manager Review Measure Specifications (e)	2
# of Hours Computer Systems Analyst Review Measure Specifications (f)	1
# of Hours LPN Review Measure Specifications (g)	1
# of Hours Billing Clerk Review Measure Specifications (h)	1
# of Hours Physician Review Measure Specifications (i)	1
# of Hours Per Respondent to Authorize Qualified Registry to Report on Respondent's Behalf (j)	0.083
Annual Hours Per Respondent (k)= (d)+(e)+(f)+(g)+(h)+(i)+(j)	9.083
Total Annual Hours (l) = (c)*(k)	1,052,783
Cost Per Respondent to Submit Quality Data (@ computer systems analyst's labor rate of \$92.46/hr) (m)	\$277.38
Cost to Review Measure Specifications (@ medical and health services manager's labor rate of \$110.74/hr) (n)	\$221.48
Cost Computer System's Analyst Review Measure Specifications (@ computer systems analyst's labor rate of \$92.46/hr) (o)	\$92.46
Cost LPN Review Measure Specifications (@ LPN's labor rate of \$46.64/hr) (p)	\$46.64
Cost Billing Clerk Review Measure Specifications (@ clerk's labor rate of \$39.06/hr) (q)	\$39.06
Cost Physician Review Measure Specifications (@ physician's labor rate of \$212.78/hr) (r)	\$212.78
Cost for Respondent to Authorize Qualified Registry/QCDR to Report on Respondent's Behalf (@ computer systems analyst's labor rate of \$92.46/hr) (s)	\$7.70
Total Annual Cost Per Respondent (t) = (m)+(n)+(o)+(p)+(q)+(r)+(s)	\$897.47
Total Annual Cost (u) = (c)*(t)	\$104,023,540

*Due to burden for certain activities being estimated in fractions of hours, totals may not reflect the sum of individual rows due to rounding.

As shown in Table 62, using the unchanged currently approved per respondent burden estimate, the

increase of 4,689 respondents from 111,218 to 115,907 results in an increase of 42,590 hours (4,689 respondents ×

9.083 hr/respondent) and \$4,208,256 (4,689 respondents × \$897.47/respondent).

TABLE 62: Change in Estimated Burden for Quality Performance Category: Clinicians (Participating Individually or as Part of a Group) Using the MIPS CQM and QCDR Collection Type

	Burden Estimate
Total Annual Hours for Respondents in CY 2020 Final Rule (a)	1,010,193
Total Annual Hours for Respondents in CY 2021 Proposed Rule (b)	1,052,783
Difference (c) = (b)-(a)	+42,590

Total Annual Cost for Respondents in CY 2021 Proposed Rule (e)	\$104,023,540
Difference (f) = (e)-(d)	+\$4,208,256

(6) Quality Data Submission by Clinicians and Groups: eCQM Collection Type

The following proposed requirement and burden will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

We refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77505 through 77506), CY 2018 Quality Payment Program final rule (82 FR 53914 through 53915), CY 2019 PFS final rule (83 FR 60006 through 60007), and the CY 2020 PFS final rule (84 FR 63128 through 63130) for our previously finalized requirements and burden for quality data submission via the eCQM collection types.

In section IV.A.3.c.(1)(c) of this rule, we are proposing to sunset the CMS Web Interface measures as a collection type and submission type starting with the 2021 performance period. Using the methodology discussed in section VI.B.5.e.(1) of this proposed rule, we estimate 61 groups which previously submitted quality data via the CMS Web Interface collection type will now submit quality data via the eCQM collection type.

Based on 2018 MIPS performance period data, we assume that 286,956 clinicians will elect to use the eCQM collection type; 41,477 clinicians are expected to submit eCQMs as individuals; and 4,474 groups and virtual groups are expected to submit

eCQMs on behalf of the remaining 245,479 clinicians. We expect the burden to be the same for each respondent using the eCQM collection type, whether the clinician is participating in MIPS as an individual or group. For this collection of information request, we estimate 45,951 respondents (41,477 clinicians who are expected to submit eCQMs as individuals + 4,474 groups and virtual groups who are expected to submit eCQMs) an increase of 2,618 respondents (45,951 proposed respondents – 43,333 active respondents).

Under the eCQM collection type, the individual clinician or group may either submit the quality measures data directly to us from their eCQM, log in and upload a file, or utilize a third-party intermediary to derive data from their CEHRT and submit it to us on the clinician's or group's behalf.

To prepare for the eCQM collection type, the clinician or group must review the quality measures on which we will be accepting MIPS data extracted from eCQMs, select the appropriate quality measures, extract the necessary clinical data from their CEHRT, and submit the necessary data to a QCDR/qualified registry or use a health IT vendor to submit the data on behalf of the clinician or group. We assume the burden for collecting quality measures data via eCQM is similar for clinicians

and groups who submit their data directly to us from their CEHRT and clinicians and groups who use a health IT vendor to submit the data on their behalf. This includes extracting the necessary clinical data from their CEHRT and submitting the necessary data to a QCDR/qualified registry.

We estimate that it will take no more than 2 hours at \$92.46/hr for a computer systems analyst to submit the actual data file. The burden will also involve becoming familiar with MIPS quality measure specifications. In this regard, we estimate it will take 6 hours for a clinician or group to review measure specifications. Of that time, we estimate 2 hours at \$110.74/hr for a medical and health services manager, 1 hour at \$212.78/hr for a physician, 1 hour at \$92.46/hr for a computer systems analyst, 1 hour at \$46.64/hr for an LPN, and 1 hour at \$39.06/hr for a billing clerk. Overall we estimate a cost of \$797.34/response [(2 hr × \$92.46/hr) + (2 hr × \$110.74/hr) + (1 hr × \$212.78/hr) + (1 hr × \$92.46/hr) + (1 hr × \$46.64/hr) + (1 hr × \$39.06/hr)].

In aggregate we estimate an annual burden of 367,608 hours (8 hr × 45,951 groups and clinicians submitting as individuals) at a cost of \$36,638,570 (45,951 responses × \$797.34/response). Based on these assumptions, we have estimated in Table 63 the burden for these submissions.

TABLE 63: Estimated Burden for Quality Performance Category: Clinicians (Submitting Individually or as Part of a Group) Using the eCQM Collection Type

	Burden estimate
# of clinicians submitting as individuals (a)	41,477
# of Groups submitting via EHR on behalf of individual clinicians (b)	4,474
# of Respondents (groups and clinicians submitting as individuals) (c)=(a)+(b)	45,951
Hours Per Respondent to Submit MIPS Quality Data File to CMS (d)	2
# of Hours Medical and Health Services Manager Review Measure Specifications (e)	2
# of Hours Computer Systems Analyst Review Measure Specifications (f)	1
# of Hours LPN Review Measure Specifications (g)	1
# of Hours Billing Clerk Review Measure Specifications (h)	1
# of Hours Physicians Review Measure Specifications (i)	1
Annual Hours Per Respondent (j)=(d)+(e)+(f)+(g)+(h)+(i)	8
Total Annual Hours (k)=(c)*(j)	367,608
Cost Per Respondent to Submit Quality Data (@ computer systems analyst's labor rate of \$92.46/hr) (l)	\$184.92
Cost to Review Measure Specifications (@ medical and health services manager's labor rate of \$110.74/hr) (m)	\$221.48
Cost to Review Measure Specifications (@ computer systems analyst's labor rate of \$92.46/hr) (n)	\$92.46
Cost to Review Measure Specifications (@ LPN's labor rate of \$46.64/hr) (o)	\$46.64
Cost to Review Measure Specifications (@ clerk's labor rate of \$39.06/hr) (p)	\$39.06
Cost to D21Review Measure Specifications (@ physician's labor rate of \$212.78/hr) (q)	\$212.78
Total Cost Per Respondent (r)=(l)+(m)+(n)+(o)+(p)+(q)	\$797.34
Total Annual Cost (s) = (c)*(r)	\$36,638,570

As shown in Table 64, using the unchanged currently approved per respondent burden estimate, the

increase of 2,618 respondents from 43,333 to 45,951 results in a total difference of 20,944 hours (2,618

respondents × 8 hr/respondent) at a cost of \$2,087,436 (2,618 respondents × \$797.34/respondent).

TABLE 64: Change in Estimated Burden for Quality Performance Category: Clinicians (Participating Individually or as Part of a Group) Using the eCQM Collection Type

	Burden Estimate
Total Annual Hours for Respondents in CY 2020 Final Rule (a)	346,664
Total Annual Hours for Respondents in CY 2021 Proposed Rule (b)	367,608
Difference (c) = (b)-(a)	+20,944
Total Annual Cost for Respondents in CY 2020 Final Rule (d)	\$34,551,134
Total Annual Cost for Respondents in CY 2021 Proposed Rule (e)	\$36,638,570
Difference (f) = (e)-(d)	+\$2,087,436

(7) Beneficiary Responses to CAHPS for MIPS Survey

In this proposed rule, we are proposing changes to requirements for the CAHPS for MIPS survey which, if finalized, will result in updates to the CAHPS for MIPS survey instrument which is currently approved by OMB under control number 0938-1222

(CMS-10450). The survey instrument is not ready at this time, therefore we will make the updated survey instrument and burden available for public review through a stand-alone non-rule **Federal Register** notice that is expected to publish in early CY 2021.

We refer readers to the CY 2017 Quality Payment Program final rule (81

FR 77509), CY 2018 Quality Payment Program final rule (82 FR 53916 through 53917), and CY 2019 PFS final rule (83 FR 60009 through 60010) for our previously finalized requirements and burden for beneficiary responses to the CAHPS for MIPS survey.

In section IV.A.3.c.(1)(e)(ii), we are proposing to (1) revise and codify at

§ 414.1305 the definition of primary care services used in the MIPS assignment methodology to include virtual primary care visits and telehealth visits to determine patient assignment to groups starting in the 2021 CAHPS for MIPS survey; and (2) revise the CAHPS for MIPS Survey cover page to include a reference to care received in telehealth settings. We do not believe any of these proposals will impact the number of groups electing to have the CAHPS for MIPS survey administered on their behalf, the number of beneficiaries who complete the survey, or the time required for a beneficiary to complete the survey. In the future, if additional data becomes

available, we may revise our assumptions at that time.

Additionally, we are also proposing in IV.A.2.c.(1)(e)(i) to add a survey-based measure on telehealth that assesses patient-reported usage of telehealth services to the performance year 2021 CAHPS for MIPS Survey. Currently, the CAHPS for MIPS survey instrument contains 58 questions and we estimate it requires a beneficiary 12.9 minutes on average to complete it, or approximately 0.2 minutes per question. We assume this proposal will result in 1 additional question being added to the survey which would result in the total time to complete the survey increasing from 12.9 minutes (0.215 hr) to 13.1 minutes (0.2183 hr) per beneficiary, or an increase of 0.2 minutes (0.0033 hr).

Based on the number of beneficiaries who completely or partially responded to the survey in the 2019 MIPS performance period, we assume that 29,915 beneficiaries will respond to the survey during the 2021 MIPS performance period. This is a decrease of 9,124 from our currently approved estimate of 39,039 beneficiaries. Using this updated number of respondents and our revised estimate of burden per respondent, we estimate an annual burden of 6,531 hours (29,915 respondents × 0.2183 hr/respondent) at a cost of \$167,989 (6,531 hr × \$25.72/hr). Table 66 shows the estimated annual burden for beneficiaries to participate in the CAHPS for MIPS Survey.

TABLE 65: Estimated Burden for Beneficiary Responses to CAHPS for MIPS Survey

	Burden Estimate
Number of beneficiaries who will respond to the survey (a)	29,915
Number of hours per beneficiary respondent (b)	0.2183
Total Annual Hours (c) = (a)*(b)	6,531
Labor rate for a beneficiary (d)	\$25.72/hr
Total Annual Cost (e) = (a)*(d)	\$167,989

*Due to burden being estimated in fractions of minutes and hours, totals may reflect impact of rounding.

Independent of the change in burden per respondent, the decrease of -9,124 respondents from 39,039 to 29,915 results in a difference of -1,962 hours (-9,124 respondents × 0.215 hr/respondent) at a cost of -\$50,454

(-9,124 hrs × \$25.72/hr). Accounting for the change in number of respondents, the increase in burden per respondent from 0.215 hours to 0.2183 hours results in a difference of 100 hours (29,915 respondents × 0.0033 hr/

respondent) at a cost of \$2,565 (100 hrs × \$25.72/hr). As shown in Table 66, the aggregate change in burden is -1,862 hours (100 hours - 1,962 hours) at a cost of -\$47,889 (\$2,565 - \$50,454).

TABLE 66: Change in Estimated Burden for Beneficiary Responses to CAHPS for MIPS Survey

	Burden Estimate
Total Annual Hours for Respondents in CY 2020 Final Rule (a)	8,393
Total Annual Hours for Respondents in CY 2021 Proposed Rule (b)	6,531
Difference (c) = (b)-(a)	-1,862
Total Annual Cost for Respondents in CY 2020 Final Rule (d)	\$215,878
Total Annual Cost for Respondents in CY 2021 Proposed Rule (e)	\$167,989
Difference (f) = (e)-(d)	-\$47,889

The revised survey and burden will be released to the public via the standard non-rule PRA process which includes the publication of 60- and 30-day **Federal Register** notices.

(8) Group Registration for CAHPS for MIPS Survey

This rule is not proposing any new or revised collection of information

requirements or burden related to the group registration for the CAHPS for MIPS Survey. The CAHPS for MIPS survey requirements and burden are currently approved by OMB under control number 0938-1222 (CMS-10450). Consequently, we are not making any changes to burden for CAHPS for MIPS survey group registration under that control number.

(9) Removal of Quality Data Submission by Clinicians and Groups: CMS Web Interface Collection Type and Group Registration for CMS Web Interface ICRs

The following proposed changes will be submitted to OMB for approval under control number 0938-1314 (CMS-10621).

As discussed in section IV.A.3.c.(1)(c) we are proposing to sunset the CMS Web Interface measures as a collection type/submission type starting with the 2021 performance period. If this proposal is finalized, it will result in removal of the CMS Web Interface collection type and group registration for CMS Web Interface ICRs as they will no longer be necessary. In the CY 2020 PFS final rule, we estimated the time associated with quality data submissions via the CMS Web Interface to be 6,414 hours (104 responses × 61.67 hr per response) (84 FR 63130). Using more recent BLS wage estimates, we estimate a cost of \$593,038 (6,414 hr × \$92.46/hr). We had also estimated the time associated with group registration for the CMS Web Interface to be 17.25 hours (69 responses × 0.25 hr per response) (84 FR 63131). Using more recent BLS wage estimates, we estimate a cost of \$1,595 (17.25 hr × \$92.46/hr). In this regard, this rule proposes a reduction of 6,431 hours (6,414 hr + 17.25 hr) and \$594,633 (\$593,038 + \$1,595) (see Table 85).

f. ICRs Regarding the Call for MIPS Quality Measures

This rule is not proposing any new or revised collection of information requirements or burden related to the call for MIPS quality measures. The requirements and burden are currently approved by OMB under control number 0938–1314 (CMS–10621). Consequently, we are not making any call for MIPS quality measure changes under that control number.

g. ICRs Regarding Promoting Interoperability Data (§§ 414.1375 and 414.1380)

(1) Background

For the 2021 MIPS performance period, clinicians and groups can submit Promoting Interoperability data through direct, log in and upload, or log in and attest submission types. With the exception of submitters who elect to use the log in and attest submission type for the Promoting Interoperability performance category, which is not available for the quality performance category, we anticipate that individuals and groups will use the same data submission type for the both of these performance categories and that the clinicians, practice managers, and computer systems analysts involved in supporting the quality data submission will also support the Promoting Interoperability data submission process. The following burden estimates show only incremental hours required above and beyond the time already

accounted for in the quality data submission process. Although this analysis assesses burden by performance category and submission type, we emphasize that MIPS is a consolidated program and submission analysis and decisions are expected to be made for the program as a whole.

(2) Reweighting Applications for Promoting Interoperability and Other Performance Categories

The requirements and burden associated with this rule's proposed data submission will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

We refer readers to the CY 2018 Quality Payment Program final rule (82 FR 53918 through 53919), CY 2019 PFS final rule (83 FR 60011 through 60012), and the CY 2020 PFS final rule (84 FR 63134 through 63135) for our previously finalized requirements and burden for reweighting applications for Promoting Interoperability and other performance categories.

As established in the CY 2017 and CY 2018 Quality Payment Program final rules, MIPS eligible clinicians who meet the criteria for a significant hardship or other type of exception may submit an application requesting a zero percent weighting for the Promoting Interoperability, quality, cost, and/or improvement activities performance categories under specific circumstances (81 FR 77240 through 77243, 82 FR 53680 through 53686, and 82 FR 53783 through 53785). Respondents who apply for a reweighting for the quality, cost, and/or improvement activities performance categories have the option of applying for reweighting for the Promoting Interoperability performance category on the same online form. We assume that respondents applying for a reweighting of the Promoting Interoperability performance category due to extreme and uncontrollable circumstances will also request a reweighting of at least one of the other performance categories simultaneously and not submit multiple reweighting applications.

Table 67 summarizes the burden for clinicians to apply for reweighting the Promoting Interoperability performance category to zero percent due to a significant hardship exception (including a significant hardship exception for small practices) or as a result of a decertification of an EHR. Based on the number of reweighting applications received by December 31, 2019 for the 2019 MIPS performance period, we assume 51,098 respondents (eligible clinicians or groups) will submit a request to reweight the

Promoting Interoperability performance category to zero percent due to a significant hardship (including clinicians in small practices) or EHR decertification and an additional 994 respondents will submit a request to reweight one or more of the quality, cost, Promoting Interoperability, or improvement activity performance categories due to an extreme or uncontrollable circumstance, for a total of 52,092 reweighting applications submitted. This is an increase of 21,472 respondents compared to our currently approved estimate of 30,620 respondents (84 FR 63134). Similar to the data used to estimate the number of respondents in the CY 2020 PFS final rule, our respondent estimate includes a significant number of applications submitted as a result of a data issue CMS was made aware of and is specific to a single third-party intermediary. While we do not anticipate similar data issues to occur in each performance period, we do believe future similar incidents may occur and are electing to use this data without adjustment to reflect this belief. Our respondent estimate is also based on data that does not include applications submitted during the extended period ending April 30, 2020 due to the 2019 Coronavirus Disease (COVID–19) pandemic, as we do not believe it would be an accurate basis for future estimates of application submissions. Of our total respondent estimate of 52,092, we estimate that 35,986 respondents (eligible clinicians or groups) will submit a request for reweighting the Promoting Interoperability performance category to zero percent due to extreme and uncontrollable circumstances, insufficient internet connectivity, lack of control over the availability of CEHRT, or as a result of a decertification of an EHR. An additional 16,106 respondents will submit a request for reweighting the Promoting Interoperability performance category to zero percent as a small practice experiencing a significant hardship.

In section IV.A.3.c.(5)(e), we are proposing that, beginning with the 2022 MIPS payment year (2020 performance year), APM Entities may submit an extreme and uncontrollable circumstances exception application for all four performance categories and applicable to all MIPS eligible clinicians in the APM Entity group. As previously discussed in section VI.B.5.a.(4), due to data limitations and our inability to determine who would use the APM Performance Pathway versus the traditional MIPS submission mechanism for the 2021 MIPS performance period,

we assume ACO APM Entities will submit data through the APM Performance Pathway and non-ACO APM Entities would participate through traditional MIPS, thereby submitting as an individual or group rather than as an entity. Therefore, we limited our analysis to ACOs that were eligible for an exception due to extreme and uncontrollable circumstances during the 2019 MIPS performance period and elected not to report quality data. Based on this data, we estimate 7 APM Entities will submit an extreme and uncontrollable circumstances exception application for the 2021 MIPS performance period. Combined with our

forementioned estimate of 52,092 eligible clinicians and groups, the total estimated number of respondents for the 2021 MIPS performance period is 52,099.

The application to request a reweighting to zero percent only for the Promoting Interoperability performance category is a short online form that requires identifying the type of hardship experienced or whether decertification of an EHR has occurred and a description of how the circumstances impair the clinician or group's ability to submit Promoting Interoperability data, as well as some proof of circumstances beyond the clinician's control. The

application for reweighting of the quality, cost, Promoting Interoperability, and/or improvement activities performance categories due to extreme and uncontrollable circumstances requires the same information with the exception of there being only one option for the type of hardship experienced. We continue to estimate it will take 0.25 hours at \$92.46/hr for a computer system analyst to complete and submit the application. As shown in Table 67, we estimate an annual burden of 13,025 hours (52,099 applications \times 0.25 hr/application) and \$1,204,268 (13,025 hr \times \$92.46/hr).

TABLE 67: Estimated Burden for Reweighting Applications for Promoting Interoperability and Other Performance Categories

	Burden estimate
# of Eligible Clinicians or Groups Applying Due to Significant Hardship and Other Exceptions or Extreme and Uncontrollable Circumstances (a)	35,986
# of Eligible Clinicians or Groups Applying Due to Significant Hardship for Small Practice (b)	16,106
# APM Entities requesting Extreme and Uncontrollable Circumstances exception	7
Total Applications Submitted (c)	52,099
Hours Per Applicant per Application Submission (d)	0.25
Total Annual Hours (e)=(a)*(c)	13,025
Labor Rate for a computer systems analyst (f)	\$92.46/hr
Total Annual Cost (g)=(e)*(f)	\$1,204,268

As shown in Table 68, using our unchanged currently approved per respondent burden estimate, the

increased number of respondents results in a total adjustment of 5,370 hours (21,479 respondents \times 0.25 hr/

respondent) and \$496,487 (5,370 hr \times \$92.46/hr).

TABLE 68: Adjusted Burden for Reweighting Applications for Promoting Interoperability and Other Performance Categories

	Burden Estimate
Total Annual Hours for Respondents in CY 2020 Final Rule (a)	7,655
Total Annual Hours for Respondents in CY 2021 Proposed Rule (b)	13,025
Difference (c) = (b)-(a)	+5,370
Total Annual Cost for Respondents in CY 2020 Final Rule (d)	\$707,781
Total Annual Cost for Respondents in CY 2021 Proposed Rule (e)	\$1,204,268
Difference (f) = (e)-(d)	+\$496,487

(3) Submitting Promoting Interoperability Data

This rule is not proposing any new or revised collection of information requirements related to the submission of data for the Promoting Interoperability performance category. However, we are adjusting our currently approved burden estimates based on

more recent data. The proposed burden will be submitted to OMB for approval under control number 0938-1314 (CMS-10621).

We refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77509 through 77511), CY 2018 Quality Payment Program final rule (82 FR 53919 through 53920), CY 2019 PFS

final rule (83 FR 60013 through 60014), and the CY 2020 PFS final rule (84 FR 63135 through 63137) for our previously finalized requirements and burden for submission of data for the Promoting Interoperability performance category.

In this proposed rule, we are not proposing any changes to our current criteria for automatic reweighting of the

Promoting Interoperability performance category for certain MIPS eligible clinicians or MIPS eligible clinicians who have experienced a significant hardship or decertification of an EHR.

In section IV.A.3.c.(4)(b) of this rule, we are proposing to add § 414.1320(g)(1), which would establish a performance period for the Promoting Interoperability performance category of a minimum of a continuous 90-day period within the calendar year that occurs 2 years prior to the applicable MIPS payment year, up to and including the full calendar year. Because this does not change the number of required Promoting Interoperability measures that must be reported, we are not making any changes to our burden assumptions.

In section IV.3.c.(4)(c)(2)(b) we are proposing to add the HIE bi-directional exchange measure for the 2021 performance period and subsequent years as an optional alternative to the two existing measures: The Support Electronic Referral Loops by Sending Health Information measure and the Support Electronic Referral Loops by Receiving and Incorporating Health Information measure. This proposal provides clinicians the option of either reporting the new measure or the two existing measures. Because the new HIE measure is an optional alternative instead of a new requirement and the proposal does not change the number of required Promoting Interoperability measures that must be reported, we are

not making any changes to our burden assumptions.

A variety of organizations will submit Promoting Interoperability data on behalf of clinicians. Clinicians not participating in a MIPS APM may submit data as individuals or as part of a group. In the CY 2017 Quality Payment Program final rule (81 FR 77258 through 77260, 77262 through 77264) and CY 2019 PFS final rule (83 FR 59822–59823), we established that eligible clinicians in MIPS APMs (including the Shared Savings Program) may report for the Promoting Interoperability performance category as an APM Entity group, individuals, or a group. Because we are not making changes at § 414.1375 to the scoring for APM entities as a result of our proposal in section IV.A.3.(b) of this proposed rule to establish an APM Performance Pathway, our reporting assumptions for clinician in MIPS APMs remains unchanged.

As shown in Table 69, based on data from the 2018 MIPS performance period, we estimate that a total of 77,499 respondents consisting of 62,746 individual MIPS eligible clinicians and 14,753 groups and virtual groups will submit Promoting Interoperability data. Since our CY 2020 final rule estimated 74,281 respondents, this represents an increase of 3,218 respondents (77,499 proposed respondents – 74,281 active respondents).

We assume that MIPS eligible clinicians previously scored under the

APM scoring standard, as described in the CY 2020 PFS final rule, will continue to submit Promoting Interoperability data (84 FR 63006) in a similar way through the APM Performance Pathway. As a result, we do not anticipate any change in burden. Each MIPS eligible clinician in an APM Entity reports data for the Promoting Interoperability performance category through either their group TIN or individual reporting. Sections 1899 and 1115A of the Act (42 U.S.C. 1395jjj and 42 U.S.C. 1315a, respectively) state that the Shared Savings Program and the testing, evaluation, and expansion of Innovation Center models are not subject to the PRA. However, in the CY 2019 PFS final rule, we established that MIPS eligible clinicians who participate in the Shared Savings Program are no longer limited to reporting for the Promoting Interoperability performance category through their ACO participant TIN (83 FR 59822 through 59823). Burden estimates for this proposed rule assume group TIN-level reporting as we believe this is the most reasonable assumption for the Shared Savings Program, which requires that ACOs include full TINs as ACO participants. As we receive updated information which reflects the actual number of Promoting Interoperability data submissions submitted by Shared Savings Program ACO participants, we will update our burden estimates accordingly.

TABLE 69: Estimated Number of Respondents to Submit Promoting Interoperability Performance Data on Behalf of Clinicians

	# of Respondents
Number of individual clinicians to submit Promoting Interoperability (a)	62,746
Number of groups to submit Promoting Interoperability (b)	14,753
Total Respondents in 2021 MIPS performance period (CY 2021 Proposed Rule) (c) = (a) + (b)	77,499
*Total Respondents in 2020 MIPS performance period (CY 2020 Final Rule) (d)	74,281
Difference (e) = (c) – (d)	+3,218

We continue to estimate the time required for an individual or group to submit Promoting Interoperability data to be 2.67 hours. As shown in Table 70, the total burden estimate for submitting

data on the specified Promoting Interoperability objectives and measures is estimated to be 206,664 hours (77,499 respondents × 2.67 incremental hours for a computer analyst's time above and

beyond the physician, medical and health services manager, and computer system's analyst time required to submit quality data) and \$19,108,153 (206,664 hr × \$92.46/hr).

TABLE 70: Estimated Burden for Promoting Interoperability Performance Category Data Submission

	Burden Estimate
Number of individual clinicians to submit Promoting Interoperability (a)	62,746
Number of groups to submit Promoting Interoperability (b)	14,753
Total (c) = (a) + (b)	77,499
Total Annual Hours Per Respondent (b)	2.67
Total Annual Hours (c) = (a)*(b)	206,664
Labor rate for a computer systems analyst to submit Promoting Interoperability data (d)	\$92.46/hr
Total Annual Cost (e) = (a)*(d)	\$19,108,153

*Due to burden being estimated in fractions of hours, totals may reflect impact of rounding.

As shown in Table 71, using our unchanged currently approved per respondent burden estimate, the

decrease in number of respondents results in a total adjustment of +8,581 hours (3,218 respondents × 2.67 hr/

respondent) at a cost of +\$793,430 (8,581 hr × \$92.46/hr).

TABLE 71: Adjusted Burden for Promoting Interoperability Performance Category Data Submission

	Burden Estimate
Total Annual Hours for Respondents in CY 2020 Final Rule (a)	198,083
Total Annual Hours for Respondents in CY 2021 Proposed Rule (b)	206,664
Difference (c) = (b)-(a)	+8,581
Total Annual Cost for Respondents in CY 2020 Final Rule (d)	\$18,314,723
Total Annual Cost for Respondents in CY 2021 Proposed Rule (e)	\$19,108,153
Difference (f) = (e)-(d)	+\$793,430

h. ICRs Regarding the Nomination of Promoting Interoperability (PI) Measures

This rule is not proposing any new or revised collection of information requirements or burden related to the nomination of Promoting Interoperability measures. The requirements and burden are currently approved by OMB under control number 0938–1314 (CMS–10621). Consequently, we are not making any changes under that control number.

i. ICRs Regarding Improvement Activities Submission (§§ 414.1305, 414.1355, 414.1360, and 414.1365)

We are adjusting our currently approved burden estimates based on more recent data. The proposed adjusted burden will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

We refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77511 through 77512), CY 2018 Quality Payment Program final rule (82 FR 53920 through 53922), CY 2019 PFS final rule (83 FR 60015 through 60017),

and the CY 2020 PFS final rule (84 FR 63138 through 63140) for our previously finalized requirements and burden for submission of data for the Improvement Activities performance category.

In this proposed rule, we are not proposing any changes to our requirements associated with criteria for attesting to specific improvement activities.

As discussed in section IV.A.3.c.(3)(b)(iii) of this rule, we are proposing for the CY 2021 performance period and future years to modify 2 existing improvement activities. We refer readers to Appendix 2 of this proposed rule for further details. Because MIPS eligible clinicians are still required to submit the same number of activities and the per response time for each activity is uniform, we do not expect these proposals to affect our currently approved information collection burden estimates.

In section IV.A.3.(b).(3)(c) of this rule, we propose how we would assign a score for the Improvement Activities performance category for MIPS APMs. We would assign Improvement

Activities scores to APM participants in the APP based on the requirements of participation in APMs. To develop the Improvement Activities score for MIPS APMs, we would compare requirements of the APM with the list of Improvement Activities measures for the applicable year, and score those measures as they would otherwise be scored according to § 414.1355. In the event a MIPS APM participant does not actually perform an activity for which Improvement Activities credit would otherwise be assigned under this proposal, the MIPS APM participant would not receive credit for the associated Improvement Activity. In the event that the assigned score does not represent the maximum improvement activities score, we propose that MIPS eligible clinicians reporting through the APP would have the opportunity to report additional improvement activities that then would be applied towards their scores. Our burden estimates assume there will be no improvement activities burden for MIPS APM participants electing the APP. We will assign the improvement

activities performance category score at the APM Entity level.

A variety of organizations and in some cases, individual clinicians, will submit improvement activity performance category data. As finalized in the CY 2017 Quality Payment Program final rule (81 FR 77264), APM Entities only need to report improvement activities data if the CMS-assigned improvement activities score is below the maximum improvement activities score. Similar to our assumption in the CY 2018 Quality Payment Program final rule, our burden estimates assume that the MIPS APM models for the 2021 MIPS performance period will qualify for the maximum

improvement activities performance category score and, as such, APM Entities will not submit any additional improvement activities. (82 FR 53921 through 53922).

As represented in Table 72, based on 2018 MIPS performance period data, we estimate that a total of 102,474 respondents consisting of 85,760 individual clinicians and 16,714 groups will submit improvement activities during the 2021 MIPS performance period. Since our currently approved burden sets out 103,813 respondents, this represents a decrease of -1,339 respondents (102,474 proposed respondents - 103,813 active respondents).

As discussed in sections VI.B.5.e.(2) and VI.B.5.g.(3) of this proposed rule regarding our estimate of clinicians and groups submitting data for the quality and Promoting Interoperability performance categories, we have updated our estimates for the number of clinicians and groups that will submit improvement activities data based on projections of the number of eligible clinicians that were not QPs or members of an ACO in the 2018 MIPS performance period but will be in the 2021 MIPS performance period, and will therefore not be required to submit improvement activities data.

TABLE 72: Estimated Number of Organizations Submitting Improvement Activities Performance Category Data on Behalf of Clinicians

	Count
# of clinicians to participate in improvement activities data submission as individuals during the 2021 MIPS performance period (a)	85,760
# of Groups to submit improvement activities on behalf of clinicians during the 2021 MIPS performance period (b)	16,714
Total # of Respondents (Groups, Virtual Groups, and Individual Clinicians) to submit improvement activities data on behalf of clinicians during the 2020 MIPS performance period (CY 2021 Proposed Rule) (c) = (a) + (b)	102,474
*Total # of Respondents (Groups, Virtual Groups, and Individual Clinicians) to submit improvement activities data on behalf of clinicians during the 2019 MIPS performance period (CY 2020 Final Rule) (d)	103,813
Difference (c)=(c)-(d)	-1,339

*Currently approved by OMB under control number 0938-1314 (CMS-10621).

Consistent with the CY 2020 PFS final rule, we continue to estimate that the per response time required per individual or group is 5 minutes for a computer system analyst to submit by

logging in and manually attesting that certain activities were performed in the form and manner specified by CMS with a set of authenticated credentials (84 FR 63140).

As shown in Table 73, we estimate an annual burden of 8,540 hours (102,474 responses \times 5 minutes/60) and \$789,562 (8,540 hr \times \$92.46/hr).

TABLE 73: Estimated Burden for Improvement Activities Submission

	Burden Estimate
Total # of Respondents (Groups, Virtual Groups, and Individual Clinicians) to submit improvement activities data on behalf of clinicians during the 2019 MIPS performance period (a)	102,474
Total Annual Hours Per Respondent (b)	5 minutes
Total Annual Hours (c) = (a)*(b)	8,540
Labor rate for a computer systems analyst to submit improvement activities (d)	\$92.46/hr
Total Annual Cost (e) = (c)*(d)	\$789,562

*Due to burden being estimated in fractions of hours, totals may reflect impact of rounding.

As shown in Table 74, using our unchanged currently approved per respondent burden estimate, the

decrease in the number of respondents results in an adjustment of -111 hours

(-1,339 responses \times 5 minutes/60) at a cost of -\$10,317 (-111 hr \times \$92.46/hr).

TABLE 74: Adjusted Burden for Improvement Activities Submission

	Burden Estimate
Total Annual Hours for Respondents in CY 2020 Final Rule (a)	8,651
Total Annual Hours for Respondents in CY 2021 Proposed Rule (b)	8,540
Difference (c) = (b)-(a)	-111
Total Annual Cost for Respondents in CY 2020 Final Rule (d)	\$799,879
Total Annual Cost for Respondents in CY 2021 Proposed Rule (e)	\$789,562
Difference (f) = (e)-(d)	-\$10,317

j. ICRs Regarding the Nomination of Improvement Activities (§ 414.1360)

The requirements and burden associated with this rule's proposed data submission will be submitted to OMB for approval under control number 0938-1314 (CMS-10621).

We refer readers to the CY 2018 Quality Payment Program final rule (82 FR 53922), CY 2019 PFS final rule (83 FR 60017 through 60018), and the CY 2020 PFS final rule (84 FR 63141) for our previously finalized requirements and information collection burden for the nomination of improvement activities.

In the CY 2018 Quality Payment Program final rule, for the 2018 and future MIPS performance periods, stakeholders were provided an opportunity to propose new activities formally via the Annual Call for Activities nomination form that was posted on the CMS website (82 FR 53657). In section IV.A.3.c.(3)(b)(i)(B)(bb) of this rule, we are proposing to require nominated improvement activities to be linked to existing and related quality and cost measures, as applicable and feasible. Similar to the burden assumptions finalized in the CY 2020 PFS final rule for the nomination of quality measures, we believe this will require approximately 0.6 hours at \$110.74/hr for a medical and health services manager and 0.4 hours at \$212.78/hr for

a physician to research existing measures and provide a rationale for the linkage (84 FR 63132). We previously estimated it would require 1.2 hours for a medical and health services manager or equivalent and 0.8 hours for a physician to nominate an improvement activity (84 FR 63141). Combined with our currently approved burden estimate, we now estimate 1.8 hours at \$110.74/hr for a medical and health services manager or equivalent and 1.2 hours at \$212.78/hr for a physician to nominate an improvement activity. This represents a change of +0.6 hours (1.8 hr – 1.2 hr) for a medical and health services manager or equivalent and +0.4 hours (1.2 hr – 0.8 hr) for a physician and an overall increase of 1 hour.

In section IV.A.3.c.(3)(b)(i)(A)(bb), we are proposing to make an exception to the established timeframe for nomination of improvement activities, such that during a PHE, stakeholders can nominate improvement activities outside of the established Annual Call for Activities timeframe. Instead of only accepting nominations and modifications submitted February 1st through June 30th each year, we would accept nominations for the duration of the PHE as long as the improvement activity is still relevant. No other aspects of the Annual Call for Activities process would be affected (for example, criteria for nominating improvement activities, considerations for selection of

improvement activities, or weighting policies would all still apply). While we expect additional nominations may be received as a result of this proposal, we do not have any data with which to estimate what the additional number may be. As a result, our burden estimate remains unchanged due to this proposal. Additionally, in section IV.A.3.c.(3)(b)(ii)(B), we are proposing, beginning with the CY 2021 performance period and future years, to consider agency-nominated improvement activities. Because these nominations would be submitted by federal agencies, the associated time is exempt from the PRA and therefore not included in our estimates. We also refer readers to section VIII.F.16.d.(4)(c) where we discuss our impact analysis.

The 2020 Annual Call for Activities will end on July 1, 2020. Therefore, we continue to use our currently approved assumption that we will receive 31 nominations of new or modified activities which will be evaluated for the Improvement Activities Under Consideration (IAUC) list for possible inclusion in the CY 2022 Improvement Activities Inventory.

As shown in Table 75, we estimate an annual information collection burden of 93 hours (31 nominations × 3 hr/nomination) at a cost of \$14,095 (31 × [(1.8 hr × \$110.74/hr) + (1.2 hr × \$212.78/hr)]).

TABLE 75: Estimated Burden for Nomination of Improvement Activities

	Burden Estimate
# of Nominations of New Improvement Activities (a)	31
# of Hours Per Medical and Health Services Manager to Identify and Propose Activity (b)	1.8
# of Hours Per Physician to Identify Activity (c)	1.2
Annual Hours Per Respondent (d)= (b) + (c)	3.0
Total Annual Hours (e) = (a)*(d)	93
Cost to Identify and Submit Activity (@ medical and health services manager's labor rate of \$110.74/hr) (f)	\$199.33
Cost to Identify Improvement Activity (@ physician's labor rate of \$212.78/hr) (g)	\$255.34
Total Annual Cost Per Respondent (h)=(f)+(g)	\$454.67
Total Annual Cost (i)=(a)*(h)	\$14,095

As shown in Table 76, using our unchanged estimate of the number of activities nominated, the increase in the

burden per nomination results in a change of 31 hours (31 nominations \times 1 hr/nomination) at a cost of \$4,698 (31

activities \times [(0.6 hr \times \$110.74/hr) + (0.4 hr \times \$212.78/hr)]).

TABLE 76: Change in Estimated Burden for Nomination of Improvement Activities

	Burden Estimate
Total Annual Hours for Respondents in CY 2020 Final Rule (a)	62
Total Annual Hours for Respondents in CY 2021 Proposed Rule (b)	93
Difference (c) = (b)-(a)	+31
Total Annual Cost for Respondents in CY 2020 Final Rule (d)	\$9,396
Total Annual Cost for Respondents in CY 2021 Proposed Rule (e)	\$14,095
Difference (f) = (e)-(d)	+\$4,698

k. Nomination of MVPs

The following reflects the burden associated with the first year of data collection associated with a new process available for all clinicians/third party intermediaries to nominate MVPs for inclusion in the Quality Payment Program. The proposed requirements and burden associated with the Nomination of MVPs will be submitted to OMB for approval under control number 0938-1314 (CMS-10621).

Beginning with the 2022 performance period, we are proposing that stakeholders should formally submit their MVP candidates utilizing a standardized template, which will be published in the QPP resource library for our consideration for future

implementation. Stakeholders should submit all information including a description of how their MVP abides by the MVP development criteria as described in section IV.A.3.a.(2)(a)(i) of this proposed rule, and provide rationales as to why specific measures and activities were chosen to construct the MVP. As MVP candidates are received, they will be reviewed, vetted, and evaluated by CMS and our contractors to determine if the MVP is feasible and ready for inclusion in the upcoming performance period. For the 2021 MIPS performance period, we assume 25 MVP nominations will be received and the estimated time required to submit all required information is 12 hours per nomination.

We seek comment on our estimate of the time required to nominate an MVP.

Similar to the call for quality measures, nomination of Promoting Interoperability measures, and the nomination of improvement activities, we assume MVP nomination will be performed by both practice administration staff or their equivalents and clinicians. We estimate 7.2 hours at \$110.74/hr for a medical and health services manager or equivalent and 4.8 hours at \$212.78/hr for a physician to nominate an MVP. As shown in Table 77, we estimate an annual burden of 300 hours (25 nominations \times 12 hr/nomination) at a cost of \$45,467 (25 \times [(7.2 hr \times \$110.74/hr) + (4.8 hr \times \$212.78/hr)]).

TABLE 77: Estimated Burden for Nomination of MVPs

	Burden Estimate
# of Nominations of New Improvement Activities (a)	25
# of Hours Per Medical and Health Services Manager (b)	7.2
# of Hours Per Physician (c)	4.8
Annual Hours Per Respondent (d)= (b) + (c)	12
Total Annual Hours (e) = (a)*(d)	300
Cost to Nominate an MVP (@ medical and health services manager's labor rate of \$110.74/hr) (f)	\$797.33
Cost to Nominate an MVP (@ physician's labor rate of \$212.78/hr) (g)	\$1,021.34
Total Annual Cost Per Respondent (h)=(f)+(g)	\$1,818.67
Total Annual Cost (i)=(a)*(h)	\$45,467

I. ICRs Regarding the Cost Performance Category (§ 414.1350)

The cost performance category relies on administrative claims data. The Medicare Parts A and B claims submission process (OMB control number 0938–1197; CMS–1500 and CMS–1490S) is used to collect data on cost measures from MIPS eligible clinicians. MIPS eligible clinicians are not required to provide any documentation by CD or hardcopy. Moreover, the provisions of this proposed rule do not result in the need to add or revise or delete any claims data fields. Consequently, we are not setting out burden or making any

changes under the 0938–1197 control number.

m. ICRs Regarding Partial QP Elections (§§ 414.1310(b)(ii) and 414.1430)

This rule is not proposing any new or revised collection of information requirements related to the Partial QP Elections to participate in MIPS as a MIPS eligible clinician. However, we are adjusting our currently approved burden estimates based on updated projections for the 2021 MIPS performance period. The proposed burden will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

As shown in Table 78, based on our predictive QP analysis for the 2021 QP

performance period, which accounts for historical response rates in performance year 2019, we estimate that 100 APM Entities and 200 eligible clinicians (representing approximately 2,500 Partial QPs) will make the election to participate as a Partial QP in MIPS, a total of 300 elections which is a decrease of 1,722 from the 2,022 elections that are currently approved by OMB under the aforementioned control number. We continue to estimate it will take the APM Entity representative or eligible clinician 15 minutes (0.25 hr) to make this election. In aggregate, we estimate an annual burden of 75 hours (300 respondents × 0.25 hr/election) and \$6,935 (75 hr × \$92.46/hr).

TABLE 78: Estimated Burden for Partial QP Election

	Burden Estimate
# of respondents making Partial QP election (100 APM Entities, 200 eligible clinicians) (a)	300
Total Hours Per Respondent to Elect to Participate as Partial QP (b)	0.25
Total Annual Hours (c) = (a)*(b)	75
Labor rate for computer systems analyst (d)	\$92.46/hr
Total Annual Cost (e) = (c)*(d)	\$6,935

As shown in Table 79, using our unchanged currently approved per respondent burden estimate, the

decrease in the number of Partial QP elections results in an adjustment of –430.5 hours (–1,722 elections × 0.25

hr) from our currently approved burden of 505.5 hours at a cost of –\$39,804 (–430.5 hr × \$92.46/hr) (84 FR 63142).

TABLE 79: Adjusted Burden for Partial QP Election

	Burden Estimate
Total Annual Hours for Respondents in CY 2020 Final Rule (a)	505.5
Total Annual Hours for Respondents in CY 2021 Proposed Rule (b)	75
Difference (c) = (b)-(a)	-430.5
Total Annual Cost for Respondents in CY 2020 Final Rule (d)	\$46,739
Total Annual Cost for Respondents in CY 2021 Proposed Rule (e)	\$6,935
Difference (f) = (e)-(d)	-\$39,804

n. ICRs Regarding Other Payer Advanced APM Determinations: Payer-Initiated Process (§ 414.1445) and Eligible Clinician Initiated Process (§ 414.1445)

The following proposed burden will be submitted to OMB for approval under control number 0938-1314 (CMS-10621).

(1) Payer Initiated Process (§ 414.1445)

This rule is not proposing any new or revised collection of information

requirements related to the Payer-Initiated Process. However, we are adjusting our currently approved burden estimates based on updated projections for the 2021 MIPS performance period. As mentioned above, the adjusted burden will be submitted to OMB for approval.

As shown in Table 80, based on the actual number of requests received in the 2019 QP performance period, we estimate that in CY 2021 for the 2022 QP performance period 80 payer-initiated requests for Other Payer

Advanced APM determinations will be submitted (10 Medicaid payers, 50 Medicare Advantage Organizations, and 20 remaining other payers), a decrease of 30 from the 110 total requests currently approved by OMB under the aforementioned control number. We continue to estimate it will take 10 hours for a computer system analyst per arrangement submission. We estimate an annual burden of 800 hours (80 submissions × 10 hr/submission) and \$73,968 (800 hr × \$92.46/hr).

TABLE 80: Estimated Burden for Other Payer Advanced APM Identification Determinations: Payer-Initiated Process

	Burden Estimate
# of other payer payment arrangements (10 Medicaid, 50 Medicare Advantage Organizations, 20 remaining other payers) (a)	80
Total Annual Hours Per other payer payment arrangement (b)	10
Total Annual Hours (c) = (a)*(b)	800
Labor rate for a computer systems analyst (d)	\$92.46/hr
Total Annual Cost (e) = (c)*(d)	\$73,968

As shown in Table 81, using our unchanged currently approved per respondent burden estimate, the decrease in the number of payer-

initiated requests from 110 to 80 results in an adjustment of -300 hours (-30 requests × 10 hr) from our currently approved burden of 1,100 hours at a

cost of -\$27,738 (-300 hr × \$92.46/hr) (84 FR 63143).

TABLE 81: Adjusted Burden for Other Payer Advanced APM Identification Determinations: Payer-Initiated Process

	Burden Estimate
Total Annual Hours for Respondents in CY 2020 Final Rule (a)	1,100
Total Annual Hours for Respondents in CY 2021 Proposed Rule (b)	800
Difference (c) = (b)-(a)	-300
Total Annual Cost for Respondents in CY 2020 Final Rule (d)	\$101,706
Total Annual Cost for Respondents in CY 2021 Proposed Rule (e)	\$73,968
Difference (f) = (e)-(d)	-\$27,738

(2) Eligible Clinician Initiated Process (§ 414.1445)

This rule is not proposing any new or revised collection of information requirements or burden related to the Eligible-Clinician Initiated Process. The requirements and burden are currently approved by OMB under control number 0938–1314 (CMS–10621). Consequently, we are not making any changes to the eligible clinician initiated process under that control number.

(3) Submission of Data for QP Determinations Under the All-Payer Combination Option (§ 414.1440)

This rule is not proposing any new or revised collection of information requirements related to the Submission of Data for QP Determinations under the All-Payer Combination Option. The requirements and burden are currently approved by OMB under control number 0938–1314 (CMS–10621). Consequently, we are not making any changes to the QP Determinations under the All-Payer Combination Option under that control number.

o. ICRs Regarding Voluntary Participants Election To Opt-Out of Performance Data Display on Physician Compare (§ 414.1395)

This rule is not proposing any new or revised collection of information requirements related to the election by voluntary participants to opt-out of public reporting on Physician Compare. However, we are adjusting our currently approved burden estimates based on data from the 2018 MIPS performance period. The proposed burden will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

We refer readers to the CY 2018 Quality Payment Program final rule (82 FR 53924 through 53925), CY 2019 PFS final rule (83 FR 60022), and the CY 2020 PFS final rule (84 FR 63145 through 63146) for our previously finalized requirements and burden for voluntary participants to opt-out of public reporting on Physician Compare.

We estimate that 10 percent of the total clinicians and groups who will voluntarily participate in MIPS will also elect not to participate in public

reporting. This results in a total of 9,904 (0.10 × 99,042 voluntary MIPS participants) clinicians and groups, a decrease of 138 from the currently approved estimate of 10,042. Voluntary MIPS participants are clinicians that are not QPs and are expected to be excluded from MIPS after applying the eligibility requirements set out in the CY 2019 PFS final rule but have elected to submit data to MIPS. As discussed in the RIA section of the CY 2019 PFS final rule, we estimate that 33 percent of clinicians that exceed one (1) of the low-volume criteria, but not all three (3), will elect to opt-in to MIPS, become MIPS eligible, and no longer be considered a voluntary reporter (83 FR 60050).

Table 82 shows that for these voluntary participants, we continue to estimate it will take 0.25 hours for a computer system analyst to submit a request to opt-out. In aggregate, we estimate an annual burden of 2,476 hours (9,904 requests × 0.25 hr/request) and \$228,931 (2,476 hr × \$92.46/hr).

TABLE 82: Estimated Burden for Voluntary Participants to Elect Opt Out of Performance Data Display on Physician Compare

	Burden Estimate
# of Voluntary Participants Opting Out of Physician Compare (a)	9,904
Total Annual Hours Per Opt-out Requester (b)	0.25
Total Annual Hours (c) = (a)*(b)	2,476
Labor rate for a computer systems analyst (d)	\$92.46/hr
Total Annual Cost (e) = (a)*(d)	\$228,931

As shown in Table 83, using our unchanged currently approved per respondent burden estimate, the decrease of – 138 opt outs by voluntary

participants results in an adjustment of – 34.5 hours (– 138 requests × 0.25 hr) from our currently approved burden of

2,510.5 hours at a cost of – \$3,190 (– 34.5 hr × \$92.46/hr) (84 FR 63145).

TABLE 83: Adjusted Burden for Voluntary Participants to Elect Opt Out of Performance Data Display on Physician Compare

	Burden Estimate
Total Annual Hours for Respondents in CY 2020 Final Rule (a)	2,510.5
Total Annual Hours for Respondents in CY 2021 Proposed Rule (b)	2,476
Difference (c) = (b)-(a)	-34.5
Total Annual Cost for Respondents in CY 2020 Final Rule (d)	\$232,121
Total Annual Cost for Respondents in CY 2021 Proposed Rule (e)	\$228,931
Difference (f) = (e)-(d)	-\$3,190

p. Summary of Annual Quality Payment Program Burden Estimates

Table 85 summarizes this proposed rule's burden estimates for the Quality Payment Program. In the CY 2020 PFS final rule, the total estimated burden was 2,932,649 hours at a cost of \$279,550,490 (\$279,573,747 – \$23,257) (84 FR 63146). Accounting for updated wage rates and the subset of all Quality Payment Program ICRs discussed in this rule compared to the CY 2020 PFS final rule, the total estimated burden of continuing policies and information set forth in the CY 2020 PFS final rule into the 2021 MIPS performance period is 2,937,520 hours at a cost of \$287,160,638; an increase of 4,871 hours and \$7,610,148. To understand the burden implications of the policies proposed in this rule, we provide an estimate of the total burden associated with continuing the policies and information collections set forth in the

CY 2020 PFS final rule into the 2021 MIPS performance period. This burden estimate of 3,008,022 hours at a cost of \$293,717,313 reflects the availability of more accurate data to account for all potential respondents and submissions across all the performance categories and more accurately reflect the exclusion of QPs from all MIPS performance categories, a difference of 70,502 hours and \$7,044,791. This burden estimate is higher than the burden approved for information collection related to the CY 2020 PFS final rule due to updated data and assumptions as well as the addition of the Open Authorization Credentialing and Token Request Process information collection, which is not a result of any new or revised policies proposed in this rule or finalized in any previous final rule, but rather an operational improvement. The difference of – 5,488 hours (70,502 hours – 66,876 hours + 1,862 hours) and – \$488,115

(\$7,044,791 – \$6,604,565 + \$47,889) between this estimate and the total burden shown in Table 87 is the reduction in burden associated with impacts of the proposed policy to sunset the CMS Web Interface measures as a collection type/submission type; partially offset by an increase in burden due to a new information collection for nomination of MVPs, the proposed policy to add a survey-based measure on telehealth that assesses patient-reported usage of telehealth services to the CAHPS for MIPS Survey, the proposal to allow APM Entities to submit an extreme and uncontrollable circumstances exception application, and the proposed policy to require nominated improvement activities to be linked to existing and related quality and cost measures, as applicable and feasible. We have included Table 84 to assist in understanding these differences.

BILLING CODE 4120-01-P

TABLE 84: Summary of Changes in Burden from CY 2020 PFS Final Rule

Burden Estimate Description	Burden Hours	Burden Cost

Table 86 provides the reasons for changes in the estimated burden for information collections in the Quality Payment Program segment of this

proposed rule. We have divided the reasons for our change in burden into those related to new policies and those related to adjustments in burden from

continued Quality Payment Program Year 4 policies that reflect updated data and revised methods.

**TABLE 86: Reasons for Change in Burden Compared to the Currently Approved
CY 2020 Information Collection Burden**

Quality Payment Program Table	Changes in burden due to CY 2021 Proposed Rule policies	Adjustments in burden from continued CY 2020 Final Rule policies due to revised methods or updated data
Section VI.B.5.c.(3): Qualified Registry Self-Nomination and other Requirements	Increase in number of responses (+10) and burden (+ 3 hrs per response) due to current policies not previously having a burden estimate as well as proposal to require additional information in Corrective Action Plans.	None.
Section VI.B.5.d: Open Authorization Credentialing and Token Request Process	New information collection request.	Not applicable.
Section VI.B.5.e.(4): Quality Performance Category Medicare Part B Claims Collection Type	None.	Decrease in number of respondents due to use of updated data from the 2018 MIPS performance period and updated QP projections for the 2021 MIPS performance period.
Section VI.B.5.e.(5): Quality Performance Category QCDR/ MIPS CQM Collection Type	Increase in number of respondents (+7) due to proposal to sunset the CMS Web Interface measures as a collection type/submission type.	Increase in number of respondents due to increased number of data submissions received by APM participants and updated QP projections for the 2021 MIPS performance period reflecting updated QP threshold. This is offset by decrease in number of non-APM respondents in updated 2018 MIPS performance period data.
Section VI.B.5.e.(6): Quality Performance Category eCQM Collection Type	Increase in number of respondents due to proposal to sunset the CMS Web Interface measures as a collection type/submission type.	Increase in number of respondents due to increased number of data submissions received by APM participants and updated QP projections for the 2021 MIPS performance period reflecting updated QP threshold. This is offset by decrease in number of non-APM respondents in updated 2018 MIPS performance period data.
Section VI.B.5.e.(7): Beneficiary Responses to CAHPS for MIPS Survey	Increase in per response burden (+ 0.2 hrs) due to proposal to add a survey-based measure on telehealth.	Decrease in number of respondents due to updated data from 2019 MIPS performance period.
Section VI.B.5.c.(9): Quality Performance Category CMS Web Interface Collection Type	Removal of information collection due to proposal to sunset the CMS Web Interface measures as a collection type/submission type.	None.
Section VI.B.5.e.(9): Registration for CMS Web Interface	Removal of information collection due to proposal to sunset the CMS Web Interface measures as a collection type/submission type.	None.
Section VI.B.5.g.(2): Reweighting Applications for Promoting Interoperability and Other Performance Categories	Increase in number of respondents due to proposal to allow APM Entities to submit an extreme and uncontrollable circumstances exception application.	Increase in number of applications submitted due to updated data from the 2019 MIPS performance period.
Section VI.B.5.g.(3): Promoting Interoperability Performance Category Data Submission	None.	Increase in number of non-APM individual respondents and number of data submissions received by APM participants offset by decrease in number of non-APM group submissions due to use of updated data from the 2018 MIPS performance period.
Section VI.B.5.i: Improvement Activities Submission	None.	Decrease in number of respondents due to use of updated data from the 2018 MIPS performance period.

Quality Payment Program Table	Changes in burden due to CY 2021 Proposed Rule policies	Adjustments in burden from continued CY 2020 Final Rule policies due to revised methods or updated data
Section VI.B.5.j: Nomination of Improvement Activities	Increase in per response burden (+1 hour) due to proposal to require nominated improvement activities to be linked to existing and related quality and cost measures, as applicable and feasible.	None.
Section VI.B.5.k: Nomination of MVPs	New information collection request.	Not applicable.
Section VI.B.5.m: Partial QP Election	None	Decrease in number of respondents due to updated projections for the 2021 MIPS performance period.
Section VI.B.5.n.(1): Other Payer Advanced APM Identification: Other Payer Initiated Process	None.	Decrease in number of respondents due to updated projections for the 2021 MIPS performance period.
Section VI.B.5.o: Voluntary Participants to Elect to Opt Out of Performance Data Display on Physician Compare	None.	Decrease in the number of respondents due to use of updated data from the 2018 MIPS performance period.

C. Summary of Annual Burden
Estimates for Proposed Requirements

TABLE 87: Annual Requirements and Burden

Regulation Section(s) Under Title 42 of the CFR	OMB Control Number	Respondents	Total Annual Responses	Burden per Response (hours)	Total Annual Time (hours)	Labor Cost (\$/hr)	Total Cost (\$)
§ 424.67 (Conditions for Payment, Form CMS-855A)	0938-0685	136	136	varies	533	varies	23,639

BILLING CODE 4120-01-C

D. Submission of Comments

We have submitted a copy of this rule to OMB for its review of the rule's proposed information collection requirements and burden. The requirements are not effective until they have been approved by OMB.

To obtain copies of the supporting statement and any related forms for the proposed collections previously discussed, please visit CMS's website at <https://www.cms.gov/Regulations-andGuidance/Legislation/>

PaperworkReductionActof1995/PRAListing.html, or call the Reports Clearance Office at (410) 786-1326.

We invite public comments on the proposed information collection requirements and burden. If you wish to comment, please submit your comments electronically as specified in the **DATES** and **ADDRESSES** sections of this proposed rule and identify the rule (CMS-1734-P) and where applicable the ICR's CFR citation, CMS ID number, and OMB control number.

VII. Response to Comments

Because of the large number of public comments we normally receive on **Federal Register** documents, we are not able to acknowledge or respond to them individually. We will consider all comments we receive by the date and time specified in the **DATES** section of this preamble, and, when we proceed with a subsequent document, we will respond to the comments in the preamble to that document.

VIII. Regulatory Impact Analysis

A. Statement of Need

This proposed rule would make payment and policy changes under the Medicare PFS and implements required statutory changes under the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA), the Achieving a Better Life Experience Act (ABLE), the Protecting Access to Medicare Act of 2014 (PAMA), section 603 of the Bipartisan Budget Act of 2015, the Consolidated Appropriations Act of 2016, the Bipartisan Budget Act of 2018, and sections 2005 6063, and 6111 of the SUPPORT for Patients and Communities Act of 2018. This proposed rule would also make changes to payment policy and other related policies for Medicare Part B.

This proposed rule is necessary to make policy changes under Medicare fee-for-service. Therefore, we included a detailed Regulatory Impact Analysis (RIA) to assess all costs and benefits of available regulatory alternatives and explained the selection of these regulatory approaches that we believe adhere to statutory requirements and, to the extent feasible, maximize net benefits.

B. Overall Impact

We examined the impact of this rule as required by Executive Order 12866 on Regulatory Planning and Review (September 30, 1993), Executive Order 13563 on Improving Regulation and Regulatory Review (February 2, 2013), the Regulatory Flexibility Act (RFA) (September 19, 1980, Pub. L. 96–354), section 1102(b) of the Social Security Act, section 202 of the Unfunded Mandates Reform Act of 1995 (March 22, 1995; Pub. L. 104–4), Executive Order 13132 on Federalism (August 4, 1999), the Congressional Review Act (5 U.S.C. 804(2)), and Executive Order 13771 on Reducing Regulation and Controlling Regulatory Costs (January 30, 2017).

Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). An RIA must be prepared for major rules with economically significant effects (\$100 million or more in any 1 year). We estimated, as discussed in this section, that the PFS provisions included in this proposed rule would redistribute more than \$100 million in 1 year. Therefore, we estimate

that this rulemaking is “economically significant” as measured by the \$100 million threshold, and hence also a major rule under the Congressional Review Act. Accordingly, we prepared an RIA that, to the best of our ability, presents the costs and benefits of the rulemaking. The RFA requires agencies to analyze options for regulatory relief of small entities. For purposes of the RFA, small entities include small businesses, nonprofit organizations, and small governmental jurisdictions. Most hospitals, practitioners and most other providers and suppliers are small entities, either by nonprofit status or by having annual revenues that qualify for small business status under the Small Business Administration standards. (For details, see the SBA’s website at <http://www.sba.gov/content/table-small-business-size-standards> (refer to the 620000 series)). Individuals and states are not included in the definition of a small entity.

The RFA requires that we analyze regulatory options for small businesses and other entities. We prepare a regulatory flexibility analysis unless we certify that a rule would not have a significant economic impact on a substantial number of small entities. The analysis must include a justification concerning the reason action is being taken, the kinds and number of small entities the rule affects, and an explanation of any meaningful options that achieve the objectives with less significant adverse economic impact on the small entities.

Approximately 95 percent of practitioners, other providers, and suppliers are considered to be small entities, based upon the SBA standards. There are over 1 million physicians, other practitioners, and medical suppliers that receive Medicare payment under the PFS. Because many of the affected entities are small entities, the analysis and discussion provided in this section, as well as elsewhere in this proposed rule is intended to comply with the RFA requirements regarding significant impact on a substantial number of small entities.

In addition, section 1102(b) of the Act requires us to prepare an RIA if a rule may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 603 of the RFA. For purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of a Metropolitan Statistical Area for Medicare payment regulations and has fewer than 100 beds. The PFS does not reimburse for services provided by rural hospitals; the

PFS pays for physicians’ services, which can be furnished by physicians and nonphysician practitioners (NPPs) in a variety of settings, including rural hospitals. We did not prepare an analysis for section 1102(b) of the Act because we determined, and the Secretary certified, that this proposed rule will not have a significant impact on the operations of a substantial number of small rural hospitals.

Section 202 of the Unfunded Mandates Reform Act of 1995 also requires that agencies assess anticipated costs and benefits on state, local, or tribal governments or on the private sector before issuing any rule whose mandates require spending in any 1 year of \$100 million in 1995 dollars, updated annually for inflation. In 2020, that threshold is approximately \$156 million. This proposed rule will impose no mandates on state, local, or tribal governments or on the private sector.

Executive Order 13132 establishes certain requirements that an agency must meet when it issues a proposed rule (and subsequent final rule) that imposes substantial direct requirement costs on state and local governments, preempts state law, or otherwise has Federalism implications. Since this regulation does not impose any costs on state or local governments, the requirements of Executive Order 13132 are not applicable.

Executive Order 13771, entitled “Reducing Regulation and Controlling Regulatory Costs,” was issued on January 30, 2017. This proposed rule, if finalized, is expected to be an E.O. 13771 regulatory action. We estimate the rule generates \$1.34 million in annualized costs in 2016 dollars, discounted at 7 percent relative to year 2016 over a perpetual time horizon. Details on the estimated costs of this rule can be found in the preceding and subsequent analyses.

We prepared the following analysis, which together with the information provided in the rest of this preamble, meets all assessment requirements. The analysis explains the rationale for and purposes of this proposed rule; details the costs and benefits of the rule; analyzes alternatives; and presents the measures we would use to minimize the burden on small entities. As indicated elsewhere in this proposed rule, we proposed a variety of changes to our regulations, payments, or payment policies to ensure that our payment systems reflect changes in medical practice and the relative value of services, and implementing statutory provisions. We provide information for each of the policy changes in the relevant sections of this proposed rule.

We are unaware of any relevant federal rules that duplicate, overlap, or conflict with this proposed rule. The relevant sections of this proposed rule contain a description of significant alternatives if applicable.

C. Changes in Relative Value Unit (RVU) Impacts

1. Resource-Based Work, PE, and MP RVUs

Section 1848(c)(2)(B)(ii)(II) of the Act requires that increases or decreases in RVUs may not cause the amount of expenditures for the year to differ by more than \$20 million from what expenditures would have been in the absence of these changes. If this threshold is exceeded, we make adjustments to preserve budget neutrality.

Our estimates of changes in Medicare expenditures for PFS services compared payment rates for CY 2020 with payment rates for CY 2021 using CY 2019 Medicare utilization. The payment impacts in this proposed rule reflect

averages by specialty based on Medicare utilization. The payment impact for an individual practitioner could vary from the average and would depend on the mix of services he or she furnishes. The average percentage change in total revenues will be less than the impact displayed here because practitioners and other entities generally furnish services to both Medicare and non-Medicare patients. In addition, practitioners and other entities may receive substantial Medicare revenues for services under other Medicare payment systems. For instance, independent laboratories receive approximately 83 percent of their Medicare revenues from clinical laboratory services that are paid under the Clinical Laboratory Fee Schedule (CLFS).

The annual update to the PFS conversion factor (CF) was previously calculated based on a statutory formula; for details about this formula, we refer readers to the CY 2015 PFS final rule with comment period (79 FR 67741

through 67742). Section 101(a) of the MACRA repealed the previous statutory update formula and amended section 1848(d) of the Act to specify the update adjustment factors for CY 2015 and beyond. The update adjustment factor for CY 2021, as required by section 1848(d)(19) of the Act, is 0.00 percent before applying other adjustments.

To calculate the CY 2021 CF, we multiplied the product of the current year CF and the update adjustment factor by the budget neutrality adjustment described in the preceding paragraphs. We estimate the CY 2021 PFS CF to be 32.2605 which reflects the budget neutrality adjustment under section 1848(c)(2)(B)(ii)(II) of the Act and the 0.00 percent update adjustment factor specified under section 1848(d)(19) of the Act. We estimate the CY 2021 anesthesia CF to be 19.9631 which reflects the same overall PFS adjustments with the addition of anesthesia-specific PE and MP adjustments.

TABLE 88: Calculation of the CY 2021 PFS Conversion Factor

CY 2021 Conversion Factor		36.0896
Statutory Update Factor	0.00 percent (1.0000)	
CY 2021 RVU Budget Neutrality Adjustment	-10.61 percent (0.8939)	
CY 2021 Conversion Factor		32.2605

TABLE 89: Calculation of the CY 2021 Anesthesia Conversion Factor

CY 2021 National Average Anesthesia Conversion Factor		22.2016
Statutory Update Factor	0.00 percent (1.0000)	
CY 2021 RVU Budget Neutrality Adjustment	-10.61 percent (0.8939)	
CY 2021 Anesthesia Fee Schedule Practice Expense and Malpractice Adjustment	0.59 percent (1.0059)	
CY 2021 Conversion Factor		19.9631

Table 90 shows the payment impact on PFS services of the policies contained proposed rule. To the extent that there are year-to-year changes in the volume and mix of services provided by practitioners, the actual impact on total Medicare revenues will be different from those shown in Table 90 (CY 2021 PFS Estimated Impact on Total Allowed Charges by Specialty). The following is an explanation of the information represented in Table 90.

- *Column A (Specialty):* Identifies the specialty for which data are shown.

- *Column B (Allowed Charges):* The aggregate estimated PFS allowed charges for the specialty based on CY 2019 utilization and CY 2020 rates. That is, allowed charges are the PFS amounts for covered services and include coinsurance and deductibles (which are the financial responsibility of the beneficiary). These amounts have been summed across all services furnished by physicians, practitioners, and suppliers within a specialty to arrive at the total allowed charges for the specialty.

- *Column C (Impact of Work RVU Changes):* This column shows the estimated CY 2021 impact on total allowed charges of the changes in the work RVUs, including the impact of changes due to potentially misvalued codes.

- *Column D (Impact of PE RVU Changes):* This column shows the estimated CY 2021 impact on total allowed charges of the changes in the PE RVUs.

- *Column E (Impact of MP RVU Changes):* This column shows the

estimated CY 2021 impact on total allowed charges of the changes in the MP RVUs.

- *Column F (Combined Impact):* This column shows the estimated CY 2021 combined impact on total allowed charges of all the changes in the

previous columns. Column F may not equal the sum of columns C, D, and E due to rounding.

BILLING CODE 4120-01-C

2. CY 2021 PFS Impact Discussion

a. Changes in RVUs

The most widespread specialty impacts of the RVU changes are generally related to the changes to RVUs for specific services resulting from the misvalued code initiative, including RVUs for new and revised codes. The estimated impacts for some specialties, including endocrinology, rheumatology, family practice, and hematology/oncology reflect increases relative to other physician specialties. These increases can largely be attributed to previously finalized policies for increases in valuation for office/outpatient E/M visits which constitute nearly 20 percent of total spending under the PFS. These increases are also due to proposed increases in value for particular services following the recommendations from the American Medical Association (AMA)'s Relative Value Scale Update Committee (RUC) and CMS review, increased payments as a result of finalized updates to supply and equipment pricing, and the continuing implementation of the adjustment to indirect PE allocation for some office-based services. For nephrologists, our proposal to increase the valuations of the ESRD monthly capitation payments that have office/outpatient E/M visits explicitly included in their valuations result in estimated impacts of +5 percent. For clinical social workers and clinical psychologists, our proposals to increase the valuations for certain behavioral health services that are analogous to office/outpatient E/M visits result in estimated impacts of 0 percent.

The estimated impacts for several specialties, including radiology, nurse anesthetists, pathology, and cardiac surgery reflect decreases in payments relative to payment to other physician specialties which are largely the result of the redistributive effects of previously finalized changes to the office/

outpatient E/M visits taking effect in 2021. These decreases are also due to the revaluation of individual procedures reviewed by the AMA's RUC and CMS, as well as decreased payments as a result of continuing implementation of the previously finalized updates to supply and equipment pricing. The estimated impacts also reflect decreased payments due to continued implementation of previously finalized code-level reductions that are being phased in over several years. For the physical/occupational therapy specialty, estimated impacts of -8 percent reflect proposed increased valuations for therapy evaluation services that are analogous to office/outpatient E/M visits. However, therapy evaluation services do not account for a large portion of allowed charges for these specialties.

For emergency medicine practitioners, estimated impacts of -6 percent reflect a 3 percent gain as a result of proposed increased valuations to emergency department visits using specialty society recommendations to maintain relativity with office/outpatient E/M visits. However, the magnitude of the office/outpatient E/M visit valuations are dampening the effect of increased valuations for the emergency department visits. For independent laboratories, it is important to note that these entities receive approximately 83 percent of their Medicare revenues from services that are paid under the CLFS. As a result, the estimated 5 percent decrease for CY 2021 is only applicable to approximately 17 percent of the Medicare payment to these entities.

We often receive comments regarding the changes in RVUs displayed on the specialty impact table (Table 90), including comments received in response to the proposed rates. We remind stakeholders that although the estimated impacts are displayed at the specialty level, typically the changes are driven by the valuation of a relatively

small number of new and/or potentially misvalued codes. The percentages in Table 90 are based upon aggregate estimated PFS allowed charges summed across all services furnished by physicians, practitioners, and suppliers within a specialty to arrive at the total allowed charges for the specialty, and compared to the same summed total from the previous calendar year. Therefore, they are averages, and may not necessarily be representative of what is happening to the particular services furnished by a single practitioner within any given specialty.

b. Impact

Column F of Table 90 displays the estimated CY 2021 impact on total allowed charges, by specialty, of all the RVU changes. A table showing the estimated impact of all of the changes on total payments for selected high volume procedures is available under "downloads" on the CY 2021 PFS proposed rule website at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/>. We selected these procedures for sake of illustration from among the procedures most commonly furnished by a broad spectrum of specialties. The change in both facility rates and the nonfacility rates are shown. For an explanation of facility and nonfacility PE, we refer readers to Addendum A on the CMS website at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/>.

D. Effect of Changes Related to Telehealth Services

As discussed in section II.F. of this proposed rule, we are proposing to add eight new codes, HCPCS code GPC1X and CPT codes 99XXX, 96121, 99483, 99334, 99335, 99347, and 99348, to the list of Medicare telehealth services list for CY 2021. We are also proposing to add the following services provisionally on a category 3 basis: CPT codes 96130,

96131, 96132, 96133, 96136, 96137, 96138, 96139, 99281, 99282, 99283, 99315, 99316, 99336, 99337, 99349, and 99350. Although we expect these changes to have the potential to increase access to care in rural areas, based on recent telehealth utilization of services already on the list, including services similar to the additions, we estimate there will only be a negligible impact on PFS expenditures from these additions. For example, services already on the list are furnished via telehealth, on average, less than 0.1 percent of the time they are reported overall. The restrictions placed on Medicare telehealth services by section 1834(m) of the statute limit increases in utilization; however, we believe there is value in allowing physicians to furnish these additional services via Medicare Telehealth, and for patients to receive broader access to this care through telehealth. Additionally, for services added to the Medicare telehealth list on a Category 3 basis, outside of the circumstances of the PHE, all of the statutory restrictions will also apply to these services. Even with the addition of the category 3 services for an additional year, we would not anticipate any significant uptick in utilization.

E. Effect of Proposed Changes Related to Scopes of Practice

As discussed in section II.G. Scopes of Practice for PFS Services, of this proposed rule, we proposed to allow certain nonphysician practitioners to supervise diagnostic tests, which would authorize NPs, CNSs, PAs, and CNMs to provide the appropriate level of supervision assigned to diagnostic tests, to the extent authorized under State law and scope of practice. As for all services they furnish, in accordance with statute, the NP, CNS or PA necessarily would be working either under physician supervision or in collaboration with a physician. This flexibility may increase the capacity and availability of practitioners who can supervise diagnostic tests, which would alleviate some of the demand on physicians as the only source to perform this particular function. However, we have not located information indicating the degree to which NPP scope of practice includes supervision of auxiliary staff, especially for the subset of services that are diagnostic tests. There is a wide range of diagnostic tests, from a simple strep throat swab to more sophisticated and/or invasive tests such as X-rays and cardiology procedures. We would need to understand the scope of practice for many types of auxiliary staff (some of whom are not licensed) who could potentially provide these tests under the

supervision of an NPP, including RNs, LPNs, medical assistants, radiologic technicians, and many others. To the extent practice patterns change, there could be induced utilization that would increase costs, but this might be offset by reduced payment rates because direct payment to NPPs is at a lower rate than payment to physicians.

An alternative in the case of this proposal concerning supervision of diagnostic tests is to maintain the status quo. That is, we could maintain the basic rule under § 410.32(b)(1) that allows only physicians as defined under Medicare law to supervise the performance of diagnostic tests. In that case, the pool of practitioners who could supervise diagnostic tests would remain at current levels and certain NPPs would be limited under Medicare from practicing to the full extent allowed by their state license and scope of practice.

Also, we are proposing to allow a physical therapist (PT) or occupational therapist (OT)—whether they are an enrolled private practice PT or OT or a therapist working for an institutional provider—who establishes a therapy maintenance program to assign the duties to a PTA or OTA, as clinically appropriate, to perform maintenance therapy services. We added this as a flexibility under the May 8th COVID-19 IFC for the duration of the PHE based on respondents feedback on scope of practice following the President's Executive Order 13890. Our current requirements for maintenance therapy services restrict a PT's/OT's ability to delegate the performance of maintenance therapy services to PTAs and OTAs which is counter to the therapist's ability to use PTAs/OTAs in furnishing rehabilitative outpatient physical or occupational therapy services. Our proposal would allow PTs/OTs to oversee and delegate to a PTA or OTA the performance of physical and occupational therapy services in the same way, whether the therapy services are part of a plan of care geared toward rehabilitative or maintenance therapy. While therapy services furnished by PTs/OTs and their PTAs/OTAs are separately payable when they occur in different time slots (that is, if the PT/PTA or OT/OTA work together at the same time in furnishing a service to the patient, only one service is payable), we do not believe that there would be an increase in utilization since it is of no consequence whether the PTA/OTA is furnishing the service as rehabilitative or maintenance therapy. Additionally, we note that beginning January 1, 2022, payment for services furnished in whole or in part by a PTA/

OTA (when the part by the PTA/OTA separate from the part of furnished by the PT/OT exceeds 10 percent of the service) will be paid at a lower rate (85 percent of the PFS fee schedule amount) which could offset any nominal increase in service volume. The alternative option—maintaining the status quo to require the PT/OT to personally furnish all maintenance therapy services, would not address the mandates established in Executive Order 13890. Currently, in SNF and home health settings when payment for therapy is made under Part A, maintenance therapy can be furnished by a PT/OT or delegated to be performed by a PTA/OTA, and our proposal would permit this to occur in all settings when therapy is paid under Part B.

In summary, we expect that these proposed policies regarding scope of practice would result in increased administrative and clinical flexibility for the specified professionals, but we cannot determine the specific impact our proposed policies would have on practice business plans and demand for certain types of clinicians. This is especially true due to the wide variation in diagnostic tests as well as variation in state law and facility policies.

F. Effect of Proposed Changes to Bundled Payments Under the PFS for Substance Use Disorders (HCPCS Codes G2086, G2087, and G2088)

As discussed in section II.H. Valuation of Specific Codes, of this proposed rule, we are proposing to expand the bundled payments described by HCPCS codes G2086, G2087, and G2088, finalized in the CY 2020 PFS final rule (84 FR 62673) to be inclusive of all SUDs. As noted in the CY 2020 PFS final rule (84 FR 62673), if a patient's treatment involves MAT, this bundled payment would not include payment for the medication itself. Billing and payment for medications under Medicare Part B or Part D would remain unchanged. We note that payment for the proposed codes would be budget neutral under the PFS and therefore have no cost impact on PFS spending; however, this policy may have impacts on billing practices and services provided.

Currently, the codes most frequently used when billing for treatment of SUD include the E/M visit codes, psychotherapy codes, SBIRT codes, and potentially the Behavioral Health Integration codes. HCPCS codes G2086–G2088 offer a bundled payment that would allow a more streamlined approach to billing in cases where all of the services described in the code descriptors are furnished. In our

previous response, we sought to clarify that these codes provide an option for billing, but are not required; therefore, in cases where only select services are being furnished, practitioners may continue to bill for the code that most accurately describes the service that was furnished, which could be, for example, just an E/M visit code.

G. Effect of Proposed Modifications to Medicare Coverage for Opioid Use Disorder (OUD) Treatment Services Furnished by Opioid Treatment Programs (OTPs)

Section 2005 of the Substance Use-Disorder Prevention That Promotes Opioid Recovery and Treatment for Patients and Communities (SUPPORT) Act established a new Medicare Part B benefit for OUD treatment services furnished by OTPs on or after January 1, 2020. As part of CY 2020 PFS rulemaking, we implemented coverage requirements, created new coding to describe bundled episodes of care for the treatment of OUD, and established payment methodologies to determine the payment amounts for the drug and non-drug components of an episode of care.

For CY 2021, we are proposing to create two new add-on codes, one add-on code for nasal naloxone and another add-on code for auto-injector naloxone. We are proposing to price nasal naloxone based upon the methodology set forth in section 1847A of the Act, except that the payment amount shall be ASP + 0. We are proposing to price the auto-injector using the lowest pricing available (the lower of ASP + 0, WAC + 0, or NADAC). Under this methodology, the proposed price for nasal naloxone would be \$89.63 per 2-pack and the proposed price for the naloxone auto-injector would be \$178 per 2-pack. We are proposing to limit Medicare payment to OTPs for naloxone to one add-on code (HCPCS code G0TP1 or G0TP2) every 30 days to the extent that it is medically reasonable and necessary.

We estimate the cost impact of the recommended naloxone add-on codes will be approximately \$2.28 million in CY 2021. This estimate is based on a maximum impact of approximately \$23 million, scaled down using the percentage of beneficiaries on MAT who received naloxone under Medicare Part D in 2018 (9.91 percent). The maximum total annual cost was calculated using the proposed payment rate for the more expensive of the two codes, and we assumed every Medicare beneficiary receiving treatment at an OTP would receive the maximum allowed number of doses (\$178 × 12 months) under the

proposed frequency limit. However, we note that some patients would receive the less expensive nasal formulation and we believe that many patients would not require doses each month, if no need arises for opioid overdose reversal. This estimate uses the assumption from CY 2020 rulemaking that roughly 10,600 beneficiaries would utilize the OTP benefit in the first year. This estimate also assumes that there is no beneficiary cost-sharing and makes no assumptions for ramp-up.

We believe that the benefits associated with establishing payment for naloxone in the OTP setting justify the cost of this proposal. As noted in section II.I. of this proposed rule, Modifications Related to Medicare Coverage for Opioid Use Disorder (OUD) Treatment Services Furnished by Opioid Treatment Programs (OTPs), U.S. Surgeon General Jerome M. Adams, M.D., M.P.H. has released a public health advisory stating that, “Research shows that when naloxone and overdose education are available to community members, overdose deaths decrease in those communities. Therefore, increasing the availability and targeted distribution of naloxone is a critical component of our efforts to reduce opioid-related overdose deaths and, when combined with the availability of effective treatment, to ending the opioid epidemic.”¹¹¹ We are proposing to add naloxone to the definition of OUD treatment services in order to increase access to this important emergency treatment and to allow OTPs to be paid under Medicare for dispensing naloxone to Medicare beneficiaries who are receiving other OUD treatment services from the OTP. Under this proposal, beneficiaries receiving OUD treatment services from the OTP would be able to receive two doses of naloxone from the OTP every 30 days under the OUD treatment services benefit, to the extent it is medically reasonable and necessary as part of their OUD treatment. We believe allowing beneficiaries to access this important emergency treatment at the OTP may help decrease barriers to access because there are no copayments for services furnished by OTPs and beneficiaries would not need to visit a separate provider to access naloxone.

H. Other Provisions of the Regulation

1. Clinical Laboratory Fee Schedule: Revised Data Reporting Period and Phase-In of Payment Reductions

In section III.A. of this proposed rule, we discuss statutory revisions to the

data reporting period and phase-in of payment reductions. In accordance with section 105(a) of the FCAA and section 3718 of the CARES Act, we are proposing to make certain conforming changes to the data reporting and payment requirements in our regulations at 42 CFR part 414, subpart G. Specifically, for clinical diagnostic laboratory tests (CDLTs) that are not advanced diagnostic laboratory tests (ADLTs), we are revising § 414.504(a)(1) to indicate that initially, data reporting begins January 1, 2017 and is required every 3 years beginning January 2022. This revision delays the next data reporting period under the CLFS by 2 years, that is, it will require the next data reporting during the period of January 1, 2022 through March 31, 2022. Subsequently, the next private payor rate-based CLFS update will be effective January 1, 2023 instead of January 1, 2021. In addition, we are proposing to make conforming changes to our requirements for the phase-in of payment reductions to reflect the CARES Act amendments. Specifically, we are proposing to revise § 414.507(d) to indicate that for CY 2021, payment may not be reduced by more than 0.0 percent as compared to the amount established for CY 2020, and for CYs 2022 through 2024, payment may not be reduced by more than 15 percent as compared to the amount established for the preceding year.

We recognize that private payor rates for CDLTs paid on the CLFS and the volumes paid at each rate for each test, which are used to determine the weighted medians of private payor rates, have changed since the first data collection period (January 1, 2016 through June 30, 2016) and data reporting period (January 1, 2017 through March 31, 2017). In addition, as discussed in section III.A. of this proposed rule, in the CY 2019 PFS final rule (83 FR 59671 through 59676), we amended the definition of applicable laboratory to include hospital outreach laboratories that bill Medicare Part B using the CMS-1450 14x Type of Bill. As such, the conforming regulatory changes to the data reporting period would delay using updated private payor rate data and data reported by hospital outreach laboratories to set revised CLFS payment rates.

Due to the unforeseen changes in private payor rates, inclusion of hospital outreach laboratory data, and unpredictable nature of test volumes and their impact on calculating updated weighted medians private payor rates, we are uncertain as to whether the delay in data reporting would result in a measurable budgetary impact. In other

¹¹¹ <https://www.hhs.gov/surgeongeneral/priorities/opioids-and-addiction/naloxone-advisory/index.html>.

words, in order to comprehend the impact of delayed reporting and subsequent implementation of updated CLFS rates, we would need to calculate weighted medians of private payor rates based on new data and compare the revised rates to the current rates. As such, we believe that we will only know the impact of the delay in data reporting after collecting actual updated applicable information from applicable laboratories, including the collection of private payor rate data from applicable hospital outreach laboratories, and calculate the updated weighted medians of private payor rates.

With regard to the conforming changes to our requirements for the phase-in of payment reductions, we note that this revision shifts the 15 percent limitation on payment reductions from CYs 2021 through 2023, to CYs 2022 through 2024. Therefore, we believe this conforming regulatory amendment to the phase-in of payment reductions in § 414.507(d) is budget neutral for scoring purposes.

2. OTP Provider Enrollment Regulation Updates for Institutional Claim Submissions

We stated in section III.B. of this proposed rule that:

- Section 424.67(b)(2) requires newly enrolling OTPs to pay an application fee at the time of enrollment under § 424.514.

- 300 currently enrolled OTPs would change their enrollment from a Form CMS-855B to a Form CMS-855A.

- 10 OTPs that enroll using the Form CMS-855A would later change their enrollment to a Form CMS-855B.

These 310 OTPs would be required to pay an application fee because said change to a Form CMS-855A enrollment would constitute a new/initial enrollment.

The application fees for each of the past 3 calendar years (CY) were or are \$569 (CY 2018), \$586, (CY 2019), and \$595 (CY 2020). Consistent with § 424.514, the differing fee amounts are predicated on changes/increases in the Consumer Price Index (CPI) for all urban consumers (all items; United State city average, CPI-U) for the 12-month period ending on June 30 of the previous year. Although we cannot predict future changes to the CPI, the fee amounts between 2018 and 2020 increased by an average of \$13 per year. We believe this is a reasonable barometer with which to estimate (strictly for purposes of this proposed rule) the fee amount in CY 2021, the year in which we believe all of the above-referenced 310 OTPs would change their enrollments. Accordingly, we project a fee amount of \$608 in 2021,

resulting in a total application fee cost of \$188,480 (310 × \$608).

3. Payment for Principal Care Management (PCM) Services in Rural Health Centers (RHCs) and Federally Qualified Health Centers (FQHCs)

After reviewing the PFS, FQHC, and RHC historical spending, including the first quarter of calendar year 2020 spending for the new principal care management codes under the PFS, we estimate the addition of these codes (G2064 and G2065) to G0511 would have a negligible impact on Medicare spending.

4. Changes to the Federally Qualified Health Center Prospective Payment System (FQHC PPS) for CY 2021: Proposed Rebasing and Revising of the FQHC Market Basket

Since the proposed FQHC market basket and multi-factor productivity adjustment are the same under the current 2013-based market basket and the proposed 2017-based market basket (1.9 percent), we estimate no economic impact from rebasing and revising of the FQHC market basket for CY 2021.

5. Comprehensive Screenings for Seniors: Section 2002 of the Substance Use-Disorder Prevention That Promote Opioid Recovery and Treatment for Patients and Communities Act (SUPPORT Act)

We are proposing to implement section 2002 of the Support Act by adding regulatory language to the existing Initial Preventive Physical Examination (IPPE) and Annual Wellness Visit (AWV) regulations to explicitly include elements regarding screening for potential substance use disorders and a review of current opioid prescriptions. We expect the new regulatory elements to add minimal burden since review of medical and social history, risk factor identification, education, counseling, and referrals are already fundamental parts of the IPPE and AWV. Standard documentation in the medical record that these services were furnished would not change based on these new requirements. We note that in section VIII.C.2.a. of this RIA, we discuss the increase in payment for E/M visits in general. Accordingly, the increase in payment for E/M visits applies to the IPPE and AWV and the impact to 2021 expenditures is included in section VIII.C.2.a. of this RIA.

6. Medicaid Promoting Interoperability Program Requirements for Eligible Professionals (EPs)

In the Medicaid Promoting Interoperability Program, to keep

electronic clinical quality measure (eCQM) specifications current and minimize complexity, we propose to align the eCQMs available for Medicaid EPs in 2021 with those available for MIPS eligible clinicians for the CY 2021 performance period. We anticipate that this alignment would reduce burden for Medicaid EPs by aligning the requirements for multiple reporting programs, and that the system changes required for EPs to implement this change would not be significant, as many EPs are expected to report eCQMs to meet the quality performance category of MIPS and therefore should be prepared to report on those eCQMs for 2021. Not implementing this alignment could lead to increased burden because EPs might have to report on different eCQMs for the Medicaid Promoting Interoperability Program, if they opt to report on newly added eCQMs for MIPS. We expect that this proposed policy would have only a minimal impact on states, by requiring minor adjustments to state systems for 2021 to maintain current eCQM lists and specifications. Based on a sampling of funding requests, each state typically spends, on average, approximately \$670,000 per year to operate its Medicaid Promoting Interoperability Program attestation system for EPs. Only a small fraction of those costs is typically attributable to updating eCQM specifications. We estimate that the costs for updating eCQM specifications under this proposal would be approximately \$100,000 per state. State expenditures to make any systems changes that would be required as a result of this proposal would most likely be eligible for 90 percent Federal financial participation.

For 2021, we propose to require that Medicaid EPs report on any six eCQMs that are relevant to the EP's scope of practice, including at least one outcome measure, or if no applicable outcome measure is available or relevant, at least one high priority measure, regardless of whether they report via attestation or electronically. This proposal would generally align with the MIPS data submission requirement for eligible clinicians using the eCQM collection type for the quality performance category, which is established in § 414.1335(a)(1). If no outcome or high priority measure is relevant to a Medicaid EP's scope of practice, he or she could report on any six eCQMs that are relevant. This proposal would be a continuation of our policy for 2020 and we believe it will not create new burden for EPs or states.

7. Medicare Shared Savings Program

In section III.G.1.c. of this proposed rule, we propose changes to the Shared Savings Program quality performance standard. The quality performance standard is the minimum performance level ACOs must achieve in order to share in any savings earned, avoid maximum losses under certain payment tracks, and avoid quality-related compliance actions. We are proposing to increase the quality performance standard for all ACOs to achievement of a quality performance score equivalent to the 40th percentile or above across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring. Please refer to section III.G.1.c. of this proposed rule for a detailed discussion of the data simulation used to inform the impacts for the proposed change to the quality performance standard.

Our analysis of quality performance data reported by ACOs for performance year 2018 indicates that the proposed methodological changes in ACO quality scoring will reduce the mean ACO quality score by roughly 10 to 15 percentage points relative to recent historical performance years where ACO quality performance scores have averaged 90 percent or more. Despite an expectation for a decreasing score for most ACOs and an increase in the fraction of ACOs failing to achieve the minimum threshold for qualifying for potential shared savings, the proposal is estimated to marginally increase overall shared savings payments to ACOs because under the proposed approach we would no longer prorate the savings sharing rate for ACOs that do meet or exceed the threshold. Our best estimate is that shared savings payments to ACOs would increase by \$38 million for the 2021 performance year because of these proposed changes, representing an increase in shared savings payments of only about 2 percent of projected total gross measured savings for ACOs earning shared savings that year. We also recognize that this impact could differ if the 40th percentile across all MIPS Quality performance category scores improves relative to ACOs' quality performance scores, or alternatively if ACOs, particularly ACOs at risk of failing, respond to the methodology change by boosting their performance. Taking into account such possibilities indicates the impact of the proposed changes to the quality performance standard could range from \$15 million in lower total shared savings payments to ACOs to \$154 million in additional shared savings payments to ACOs (reflecting the

respective extreme scenarios assumed above). However, it is important to note that under all scenarios, the program continues to achieve significant net savings after sharing savings with ACOs.

We do not anticipate a material aggregate impact for the other proposed changes related to the Shared Savings Program, specifically the changes related to repayment mechanism requirements (section III.G.3. of this proposed rule) and the assignment methodology (section III.G.2. of this proposed rule); however, the latter proposal may have differing effects on a subset of participating ACOs, for example by changing which competing ACO ultimately achieves the assignment for a small subset of beneficiaries.

8. Modifications to Medicare Shared Savings Program Quality Reporting Requirements for Performance Year 2020

We are proposing to waive the CAHPS for ACOs reporting requirement for performance year 2020 and will assign automatic full credit to all ACOs for the CAHPS for ACOs survey measures. Based on recent ACO performance on CAHPS measures, we estimate moving to a 100 percent score for the CAHPS measures would increase the final quality score for the group of all non-new ACOs by roughly 2 percentage points. This would translate to an estimated increase in total shared savings payments to ACOs of approximately \$20 million.

9. Proposal To Remove Selected National Coverage Determinations

We are proposing to remove nine older NCDs that no longer contain clinically pertinent and current information or that involve items or services that are used infrequently by beneficiaries. Generally, proactively removing obsolete or unnecessary NCDs removes barriers to innovation and reduces burden for stakeholders and CMS. The nine NCDs fall into two impact categories. First, eliminating an NCD for items and services that were previously covered means that the item or service will no longer be automatically covered by Medicare. Instead, the coverage determinations for those items and services will be made by Medicare Administrative Contractors (MACs). Second, if the previous national coverage determination barred coverage for an item or service under title XVIII, MACs would now be able to cover the item or service if the MAC determines that such action is appropriate under the statute. We believe that allowing local contractor flexibility in these cases better serves

the needs of the Medicare program and its beneficiaries since we believe the future utilization for items and services within these policies will be limited, each affecting less than one percent of the Medicare FFS population.

For the six NCDs where we are proposing to go from limited coverage to MAC discretion, claims data from 2019 show that less than one percent of the Medicare population are affected. Specifically, CMS provides limited coverage for specific conditions under NCD 20.5, Extracorporeal Immunoabsorption (ECI) using Protein A Columns, where CMS paid 1,918 Medicare FFS claims for 118 beneficiaries for a total expenditure of \$3,757,178.36. Under NCD 100.9, Implantation of Gastroesophageal Reflux Device, CMS received no claims in 2019. For NCD 110.14, Apheresis (Therapeutic Pheresis), CMS paid 84,539 Medicare FFS claims for 10,641 beneficiaries for a total expenditure of \$77,486,916.37. CMS provides coverage for FDA approved labeled indications under NCD 110.19, Abarelix, and no claims were submitted in 2019 because the device is no longer marketed. Under NCD 190.1, Histocompatibility Testing, CMS paid 4,986 Medicare FFS claims for 2,525 beneficiaries for a total expenditure of \$206,085.04. For NCD 190.3, Cytogenetic Studies, CMS paid 163,522 Medicare FFS claims for 145,212 beneficiaries for a total expenditure of \$18,997,807.17. If under MAC discretion, these items and services continue to be covered, we estimate there will be de minimis change to 2021 expenditures, compared to 2019. However, we note that MAC discretion may result in the MACs determining that in particular instances of these items and services, a noncoverage decision may be appropriate for the patient, which could result in a decrease in 2021 expenditures, compared to 2019.

For the three non-covered NCDs proposed to be eliminated, we would not expect to find historical claims data. CMS broadly noncovers both Electrosleep Therapy (NCD 30.4) and Magnetic Resonance Imaging (NCD 220.2.1) for all indications. CMS noncovers FDG PET (NCD 220.6.16) for three specific conditions. The FDG PET NCD as written is silent on covered conditions, thereby allowing MACs to determine coverage for all other conditions not specifically noncovered. Because these NCDs provide for noncoverage, we do not have accurate claims data to estimate total impact. However, based on the diagnoses and services, we expect future claims to affect less than one percent of Medicare

FFS beneficiaries. Furthermore, removing a national noncoverage NCD may reduce burden for stakeholders and CMS. It may also remove barriers to innovations and increase patient access to technologies that may now be beneficial for some uses.

10. Requirement for Electronic Prescribing for Controlled Substances for a Covered Part D Drug Under a Prescription Drug Plan or an MA–PD Plan

This provision does not have any cost to stakeholders other than what is reflected in the Collection of Information section of this proposed rule, including cost to Medicare.

11. Medicare Part B Drug Payment for Drugs Approved Through the Pathway Established Under Section 505(b)(2) of the Food, Drug, and Cosmetic Act

We believe that if finalized, our proposal to continue assigning certain section 505(b)(2) drug products to existing multiple source drug codes, as described in section III.L. of this proposed rule, would result in continued savings by preventing excessive payments for some drug products that are labeled and used in a manner that is similar to generic versions of existing products that are paid under multiple source drug codes. Finalizing this proposal would result in the continuation of what we have characterized as longstanding policy. We believe that savings would continue based on differences in Medicare payment allowances between codes that contain only section 505(b)(2) drug products (with labeling and uses that are similar to multiple source drug codes) and multiple source drug codes that include generic drugs with the same active ingredient(s). In these cases, recent payment limits determined under section 1847A of the Act for the 505(b)(2) drugs were roughly 10 times higher than the payments for multiple source drug codes that included the generic drug products. The multiple source drug code payment limits used in the comparisons consisted of a weighted average of generic and branded drug products.

We are not able to provide a detailed estimate of the potential continued savings for the following reasons. First, we cannot estimate how many section 505(b)(2) drug products will be approved over the next few years. Second, we cannot estimate how many of these drug products will be paid under Part B. Third, we cannot estimate what share of Part B drug claims relative to similar (and potentially lower priced) multiple source drug codes the section

505(b)(2) drug products will capture. Fourth, we cannot estimate the price or payment difference between the yet to be approved section 505(b)(2) drug products and items priced in multiple source drug codes. We also note that the proposed approach will not prevent the separate payment of all section 505(b)(2) drug products. If an approved section 505(b)(2) drug product does not meet the definition of a multiple source drug as discussed in section III.L. of this proposed rule and is separately payable under Part B, that section 505(b)(2) drug product would be paid separately, for example it would be assigned to a single source drug code.

However, we can provide a very rough estimate of the effect on spending that this policy has. Based on 2018 data on the Part B Drug Spending Dashboard (<https://www.cms.gov/Research-Statistics-Data-and-Systems/Statistics-Trends-and-Reports/Information-on-Prescription-Drugs/MedicarePartB>), a 50 percent uptake of two recently approved section 505(b)(2) drug products relative to the corresponding multiple source drug code, and payment allowance estimates derived from the July 2020 ASP Drug Pricing files (or WAC from pricing compendia if ASP was not yet available), we estimate that payment under separate single source drug codes could result in \$15 million to \$33 million more spending per code each year for each section 505(b)(2) drug product that is assigned to a separate code. Even if a small number of section 505(b)(2) drug products were paid under separate codes, for example 5 to 10 each year, this could result in \$75 million to \$330 million in additional spending per year (just for each year's 5 to 10 new section 505(b)(2) drug products). Over 10 years, the combined total for paying for 5 to 10 more additional section 505(b)(2) drug products each year using separate codes could result in over \$1 billion in additional Part B spending if this proposal is not finalized and these section 505(b)(2) drug products are treated as single source drugs.

We also note that as discussed in section III.L. of this rule, the proposed approach will not prevent the separate payment of all section 505(b)(2) drug products.

12. Updates To Certified Electronic Health Record Technology Due to the 21st Century Cures Act

In section III.M. of this proposed rule, we propose to update the definitions of CEHRT for the Promoting Interoperability Programs and for MIPS. Under this proposal, the technology must be certified under the Certification Program to the current 2015 Edition

certification criteria or the certification criteria in the 2015 Edition Cures Update, for the period of 24 months, as described in timelines finalized in the 21st Century Cures Act final rule (85 FR 25670). After that time, when ONC only allows certification under the 2015 Edition Cures Update, the technology must be certified to the 2015 Edition Cures Update. We also propose flexibility such that participants in the Hospital IQR Program may use either the 2015 Edition certification criteria or the 2015 Edition Cures update for CEHRT beginning in the CY 2020 reporting period.

If these proposals are finalized, eligible hospitals and clinicians would be required to update their EHR technology to meet the CEHRT definition under the 2015 Edition Cures Update. It is important to note that the regulatory impacts of the ONC 21st Century Cures Act final rule accounts for the quantified and unquantified costs and benefits to hospitals and clinicians associated with acquiring technology certified to the 2015 Edition Cures Update (85 FR 25905 through 25938). Specifically, ONC based their analysis regarding the number of hospitals and health care providers that would be impacted by their regulatory action on the number of hospitals and health care providers that have historically participated in the CMS EHR Incentive Programs (now Promoting Interoperability (PI) Programs (85 FR 25908). Because we expect that the eligibility criteria proposed under this rule will be a subset of those who participated in the EHR Incentive Programs (for example the MIPS program has eligibility criteria for low-volume that the EHR Incentive program did not have), this regulatory impact analysis assumes that the cost to program participants to acquire the upgraded technology has been accounted for under the ONC 21st Century Cures Act. However, we acknowledge ambiguity in attributing impacts across that earlier rule and this proposal, and request comment that would help with identification of effects that are dependent on these new regulatory provisions. (We further note that if the ambiguity is ultimately resolved such that all the costs are attributed to the ONC 21st Century Cure Rule, leaving no costs associated with this proposed rule's certified EHR provisions, then these provisions would also yield no benefits.)

13. Proposal To Establish New Code Categories

In section III.N. of this proposed rule, we are proposing to create 15 new Level

II HCPCS codes to identify the current array of buprenorphine/naloxone products available on the U.S. market. This code series is intended to replace and more specifically identify the series of four existing codes (J0572 through and including J0575). Even though this would result in a greater number of codes than previously available, the net result of this modification is simply a more complete set of codes, updated to reflect the current market, available for health care providers and coders to identify and report on claims. Therefore these changes place no additional burden on coders, health care providers.

14. Medicare Diabetes Prevention Program Expanded Model Emergency Policy

a. Effects on Beneficiaries

In section III.O. of this proposed rule, we are proposing certain Medicare Diabetes Prevention Program (MDPP) expanded model policies to allow CMS to remove the once per life time benefit for some MDPP beneficiaries, increase the number of virtual sessions, allow MDPP suppliers to start new cohorts, and allow certain MDPP suppliers to deliver time-limited virtual MDPP sessions in the event of extreme and uncontrollable circumstances that would adversely affect access to MDPP services. These proposed changes would apply during the COVID-19 Public Health Emergency (PHE) and any future PHE, in the emergency area during the emergency period, as defined under section 1135 (g) of the Act, when the Secretary has authorized waivers under section 1135 for such emergency area and period.

Throughout the rulemaking for the MDPP expanded model, we sought to ensure that the set of MDPP services would be delivered in-person, in a classroom-based setting, within an established interval timeline. At the time, the priority was placed on establishing a structured service that, when delivered within the confines of the rule, would create the least risk of fraud and abuse, increase the likelihood of success, and maintain the integrity of the data collected for evaluation purposes. However, circumstances such as the COVID-19 PHE have led CMS to make changes to the MDPP expanded model, and now to propose an Emergency Policy for MDPP that allows for temporary flexibilities and that prioritizes availability and continuity of services for MDPP suppliers and MDPP beneficiaries impacted by 1135 waiver events.

In the March 31st COVID-19 IFC, we sought to ensure that the set of MDPP

services that had already started when the COVID-19 PHE began could continue given the guidance from CDC that Medicare age beneficiaries stay home. The priority was to allow for temporary flexibilities that prioritize availability and continuity of services for MDPP suppliers and MDPP beneficiaries impacted by the COVID-19 PHE. Given the extended duration of the COVID-19 PHE, we are proposing to finalize the regulations in the March 31st COVID-19 IFC, amend the MDPP expanded model to revise certain MDPP policies during the COVID-19 PHE and any future 1135 waiver event where such 1135 waiver event may cause a disruption to in-person MDPP services. These proposed temporary flexibilities allow beneficiaries to either continue to have access to set of MDPP services through virtual sessions, pause in-person set of MDPP services and resume with the most recent attendance session of record, or restart MDPP from the beginning in accordance with the March 31st COVID-19 IFC (85 FR 19230). Under the current MDPP regulations, as implemented in the IFC, and for future 1135 events, should MDPP suppliers deliver set of MDPP services virtually and beneficiaries opt to continue with the set of MDPP services virtually during the 1135 waiver event, those beneficiaries are not eligible to restart the set of MDPP services at a later date.

Beneficiaries who are eligible to restart the set of MDPP services, as proposed in § 410.79(e)(4)(vi), would be currently enrolled in the first 12 months of the set of MDPP services, as demonstrated by the effective date of the first core session.

b. Effects on the Market

At this point, we cannot make clear estimates of the true costs of the MDPP Emergency Policy costs given the current Medicare enrollment. For an example, as part of the COVID-19 flexibilities, we are using authority under section 1135 of the Act to waive the supplier enrollment application fee for any applications submitted on or after March 1, 2020 in response to COVID-19. This, along with CDC's promotion of the temporary application fee waiver to its DPRP registered organizations, have led to an increase in MDPP supplier enrollment applications and approved suppliers. Currently, more than 250 organizations nationally are enrolled as MDPP suppliers, representing 938 locations across the US and its territories.

For the current COVID-19 PHE, we anticipated in the March 31st COVID-19 IFC that of the 1,818 beneficiaries identified through our monitoring data

and the CDC's Diabetes Prevention Recognition Program (DPRP) data, 1,358 beneficiaries may be impacted by allowing both the once-per-lifetime benefit and the minimum weight loss requirement to be waived for those beneficiaries in the first 12 months of MDPP. Of those, we assumed that roughly half of the beneficiaries will want to restart their set of MDPP services after the PHE ends, with a \$279,748 cost impact of our waiving the once-per-lifetime benefit as part of the COVID-19 flexibilities, assuming that the estimated cost of year 1 of MDPP is \$412.

For this MDPP Emergency Policy, we propose to update our assumptions, based on subsequent data from the CDC regarding DPRP organizations' plans for managing their existing cohorts during the PHE, which include either continuing with their cohorts virtually, pausing set of MDPP services and restarting them virtually, or restarting at a later date after the emergency event ends. Based on these data, we assume that 20 percent of MDPP suppliers and 20 percent of beneficiaries will want to restart the set of MDPP services at the first core session after the emergency event ends, taking advantage of the once-per-lifetime requirement removal. We assume that future emergencies will be more geographic-specific, resulting from a natural disaster versus the national-level COVID-19 PHE. For future emergencies, we assume that 2,500 beneficiaries will be enrolled in MDPP in the impacted geographic region. We note that this number is currently an overestimate, and over time, it will likely be an underestimate. We also note that these assumptions are incorrect in cases where a geographic region suffers widespread damage, including to electrical and/or telecommunications systems. In this scenario, we assume there would be no virtual or physical access to set of MDPP services for some time, and the supplier will need to either pause or restart classes altogether until such infrastructure systems are back in place. We also assume that beneficiaries who opt to continue with the set of MDPP services virtually are within the first 12 months of the MDPP core service period, and will not be eligible to take advantage of the waived once-per-lifetime limit; and beneficiaries who are in year 2 of the set of MDPP services, as demonstrated by the effective date of the first core session, are not eligible to restart MDPP at the beginning. The cost per impacted geographic area of the removal of the once-per-lifetime limit is estimated to be \$209,000. This assumes

that MDPP suppliers are paid an estimated \$418 due to beneficiaries reaching the following performance

milestones: Beneficiary attended 9 sessions, and reached the 5 percent weight loss during interval 2 of the core

maintenance session, and attended the required core maintenance sessions.

TABLE 91: Cost of MDPP Emergency Policy per Geographic Area Impacted by the Emergency

Recommended Waivers	Cost impact
Adjust the limit to the # Virtual sessions	\$ 0
Remove the once per lifetime requirement	\$ 209
Remove the MDPP services time periods and intervals	\$ 0
Average Y1 MDPP Payments (Y1) with no action	\$ 0
Total cost of MDPP Emergency Policy per PHE	\$ 209

Units of Measurement in thousands

Assumptions: Estimated MDPP payments in Year 1: \$418, assuming that beneficiaries attended 9 sessions, and reached the 5 percent weight loss during interval 2 of the core maintenance session. For future emergencies we assume that 2,500 beneficiaries in any geographic area will be impacted by a public health emergency, or 500 beneficiaries per geographic area.

15. Changes Due to Updates to the Quality Payment Program

In section IV.A. of this proposed rule, we included our policies for the Quality Payment Program. In this section of the proposed rule, we present the overall and incremental impacts to the number of expected QPs and associated APM Incentive Payments. In MIPS, we estimate the total MIPS eligible population and the payment impacts by practice size for the 2021 MIPS performance period based on various proposed policies to modify the MIPS final score and the performance threshold proposed in section IV.A.3.e.(3) of this rule and additional performance threshold finalized in the CY 2020 PFS final rule (84 FR 63040).

The measure submissions for the 2019 MIPS performance period were not available in time to incorporate into this CY 2021 PFS proposed rule regulatory impact analysis. As a result, this analysis uses the 2018 MIPS performance period submissions that were used for the CY 2020 PFS final rule (84 FR 63164), with some updates of supplementary 2019 datasets used to better reflect trends in APM participation and QP status since the 2018 MIPS performance period. Furthermore, due to the application of the extreme and uncontrollable circumstances policy for the 2019 MIPS performance period, not all clinicians submitted measure data for the 2019 performance period. We will evaluate for the final rule as to whether it will be appropriate to use the 2019 performance period data.

a. Estimated APM Incentive Payments to QPs in Advanced APMs and Other Payer Advanced APMs

From 2019 through 2024, through the Medicare Option, eligible clinicians receiving a sufficient portion of Medicare Part B payments for covered professional services or seeing a sufficient number of Medicare patients through Advanced APMs as required to become QPs, for the applicable performance period, will receive a lump-sum APM Incentive Payment equal to 5 percent of their estimated aggregate payment amounts for Medicare covered professional services furnished during the calendar year immediately preceding the payment year. Beginning in payment year 2021, in addition to the Medicare Option, eligible clinicians may become QPs through the All-Payer Combination Option. The All-Payer Combination Option allows eligible clinicians to become QPs by meeting the QP payment amount or patient count threshold through a pair of calculations that assess a combination of both Medicare Part B covered professional services furnished through Advanced APMs and services furnished through Other Payer Advanced APMs.

The APM Incentive Payment is separate from and in addition to the payments for covered professional services furnished by an eligible clinician during that year. Eligible clinicians who become QPs for a year are not subject to MIPS reporting requirements and payment adjustments. Eligible clinicians who do not become QPs, but meet a lower threshold to become Partial QPs for the year, may elect to report to MIPS and, if they elect to report, would then be scored under

MIPS and receive a MIPS payment adjustment. Partial QPs are not eligible to receive the APM Incentive Payment. For the 2021 QP Performance Period, as set forth in § 414.1430(a)(2), Partial QPs are eligible clinicians in Advanced APMs who have at least 50 percent, but less than 75 percent, of their payments for Part B covered professional services through an APM Entity, or furnish Part B covered professional services to at least 35 percent, but less than 50 percent, of their Medicare beneficiaries through an APM Entity. This MIPS payment adjustment may be positive, negative, or neutral. If an eligible clinician does not attain either QP or Partial QP status, and does not meet any other exemption category, the eligible clinician would be subject to MIPS, would report to MIPS, and would receive the corresponding MIPS payment adjustment.

Beginning in payment year 2026, the Conversion Factor (CF) used to calculate payment rates for services furnished by clinicians who achieve QP status for a year would be increased each year by 0.75 percent for the year, while the CF used to calculate payment rates for services furnished by clinicians who do not achieve QP status for the year would be increased by 0.25 percent. In addition, MIPS eligible clinicians would receive positive, neutral, or negative MIPS payment adjustments to payment for their Part B PFS services in a payment year based on performance during a prior performance period. Although the statute establishes overall payment rate and procedure parameters until 2026 and beyond, this impact analysis covers only the fifth payment year (2023 payment year) of the Quality Payment Program.

Overall, we estimate that for the 2021 QP Performance Period between 196,000 and 252,000 eligible clinicians will become QPs, therefore be excluded from MIPS, and qualify for the lump sum APM incentive payment in Payment Year 2023 based on 5 percent of their Part B paid amounts for covered professional services in the preceding year. These paid amounts for QPs are estimated to be between approximately \$14,012 million and \$18,015 million in total for the 2021 performance year. The analysis for this proposed rule used the 2019 third snapshot participation file. We based APM Incentive Payment Amounts on paid amounts with service states of January 1, through September 30, 2019. We multiplied the calculated amounts by 1.5 to approximate payment amounts for the full calendar year. We estimate that the total lump sum APM Incentive Payments will be approximately \$700–900 million for the 2023 Quality Payment Program payment year.

In section IV.F.10.b. of this proposed rule, we projected the number of eligible clinicians that will be QPs, and thus excluded from MIPS, using several sources of information. First, the projections are anchored in the most recently available public information on Advanced APMs. The projections reflect Advanced APMs that will be operating during the 2021 QP Performance Period, as well as some Advanced APMs anticipated to be operational during the 2021 QP Performance Period. The projections also reflect an estimated number of eligible clinicians that would attain QP status through the All-Payer Combination Option. We note that the Next Generation ACO Model, previously scheduled to conclude December 2020, the Comprehensive Care for Joint Replacement Payment Model (CEHRT Track), currently scheduled to conclude March 31, 2021, and the Radiation Oncology Model as proposed, have been included in our analysis as we anticipate that they will be Advanced APMs in 2021. The following APMs are expected to be Advanced APMs for the 2021 QP Performance Period:

- Bundled Payments for Care Improvement Advanced Model;
- Comprehensive Care for Joint Replacement Payment Model (CEHRT Track), if extended;
- Comprehensive Primary Care Plus (CPC+) Model;
- Direct Contracting Model;
- Kidney Care Choices Model;
- Maryland Total Cost of Care Model (Care Redesign Program; Maryland Primary Care Program);

- Medicare Shared Savings Program (Track 2, Track 3, Basic Track Level E, and the ENHANCED Track);

- Medicare ACO Track 1+ Model;
- Next Generation ACO Model, if extended;
- Oncology Care Model (Two-Sided Risk Arrangements);
- Primary Care First (PCF) Model;
- Radiation Oncology Model (RO), if finalized; and
- Vermont All-Payer ACO Model (Vermont Medicare ACO Initiative).

We used the Participation Lists and Affiliated Practitioner Lists, as applicable, (*see* 81 FR 77444 through 77445 for information on the APM Participant Lists and QP determinations) for the Predictive QP determination file for 2019 to estimate the number of QPs, total Part B paid amounts for covered professional services, and the aggregate total of APM Incentive Payments for the 2021 QP Performance Period. We examined the extent to which Advanced APM participants would meet the QP Thresholds of having at least 75 percent of their Part B covered professional services or at least 50 percent of their Medicare beneficiaries furnished Part B covered professional services through the APM Entity.

b. Impact for the 2022 MIPS Payment Year

In section IV.A.3.d.(2)(a) of this proposed rule, we proposed to double the total points available for the complex patient bonus to up to 10 points. If this proposal is finalized, we expect the median bonus to increase by 3 points, thus increasing MIPS final scores at the median by 3 points. We do not know the effects of the COVID-19 PHE and its effect on MIPS performance in 2020, so we did not recreate the analysis and payment distributions with the updated bonus for the 2020 MIPS performance period. We expect the higher MIPS final scores would result in smaller payment adjustments for two reasons. First, we expect reductions to the budget neutral pool due to the higher scores. Second, for clinicians above the performance threshold or additional performance threshold, an increased score would mean more clinicians sharing the budget neutral pool and additional \$500 million for exceptional performance and potentially lowering the scaling factor that is applied to the MIPS payment adjustment and additional payment adjustment.

c. Estimated Number of Clinicians Eligible for MIPS Eligibility for the 2023 MIPS Payment Year

(1) Methodology To Assess MIPS Eligibility

(a) Clinicians Included in the Model Prior To Applying the Low-Volume Threshold Exclusion

To estimate the number of MIPS eligible clinicians for the 2021 MIPS performance period in this proposed rule, our scoring model used a combination of the first determination period from the 2019 MIPS performance period (from October 1, 2017 to September 30, 2018) and data from the end of calendar year 2018 (from October 1, 2018 to December 31, 2018). The first determination period from the 2019 MIPS performance period eligibility file was selected as it includes the several eligibility file changes that affect the Quality Payment Program moving forward. The rationale for including the data from the end of CY 2018 was to create a 15-month window for assigning MIPS eligible clinicians, as finalized in the CY 2019 PFS final rule (83 FR 59727 through 59730). We included 1.6 million clinicians (*see* Table 92) who had PFS claims from October 1, 2017 to December 31, 2018. We excluded from our analysis individual clinicians who were affected by the automatic extreme and uncontrollable policy finalized for the 2018 MIPS performance period/2020 MIPS payment year in the CY 2019 PFS final rule (83 FR 59876) as we are unable to predict how these clinicians would perform in a year where there was no extreme and uncontrollable event. We also excluded from our analysis submissions from clinicians that are CPC+ practitioners due to data limitations and an inability to model their behavior within the APM Performance Pathway. Finally, submitters with one or more categories identified as being suppressed as a result of bad data were also excluded.

Clinicians are ineligible for MIPS (and are excluded from MIPS payment adjustment) if they are newly enrolled to Medicare; are QPs; are partial QPs who elect to not participate in MIPS; are not one of the clinician types included in the definition for MIPS eligible clinician; or do not exceed the low-volume threshold as an individual or as a group. Therefore, we excluded these clinicians when calculating the estimate of clinicians eligible for MIPS.

For the estimated MIPS eligible population for the 2023 MIPS payment year, we restricted our analysis to clinicians who are a physician (as defined in section 1861(r) of the Act), a

physician assistant, nurse practitioner, and clinical nurse specialist (as such terms are defined in section 1861(aa)(5) of the Act); a certified registered nurse anesthetist (as defined in section 1861(bb)(2) of the Act); a physical therapist, occupational therapist, speech-language pathologist, audiologist, clinical psychologist, and registered dietitian or nutrition professional as finalized in the CY 2019 PFS final rule (83 FR 60076).

As noted previously, we excluded QPs from our scoring model since these clinicians are not MIPS eligible clinicians. To determine which clinicians in the initial population of 1.6 million should be excluded as QPs, we used Advanced APM payment and patient percentages from the APM Participant List for the final snapshot date for the 2019 QP performance period, supplemented by the most recent 2018 performance period APM participation data for those clinicians not on the 2019 first snapshot list. From this data, we calculated the QP determinations as described in the Qualifying APM Participant definition at § 414.1305 for the 2021 QP performance period. We assumed that all Partial QPs would elect to participate in MIPS and included them in our scoring model and eligibility counts. The projected number of QPs excluded from our model is 115,936. Due to data limitations, we could not identify specific clinicians who may become QPs in the 2021 Medicare QP Performance Period; hence, our model may underestimate or overestimate the fraction of clinicians and allowed charges for covered professional services that will remain subject to MIPS after the exclusions.

We also excluded newly enrolled Medicare clinicians from our model. To identify newly enrolled Medicare clinicians, we used the enrollment date from the 2018 Quality Payment Program performance period data.

(b) Assumptions Related To Applying the Low-Volume Threshold Exclusion

The low-volume threshold policy may be applied at the individual (that is, TIN/NPI) or group (that is, TIN) levels based on how data are submitted or at the APM Entity level if the clinician is part of an APM Entity in a MIPS APM (hereafter, a MIPS APM Entity) that elects to submit to MIPS. A clinician or

group that exceeds at least one but not all three low-volume threshold criteria may become MIPS eligible by electing to opt-in and subsequently submitting data to MIPS, thereby getting measured on performance and receiving a MIPS payment adjustment. Our method of modeling opt-in participation is described later in this section.

Table 92 presents the estimated MIPS eligibility status and the associated PFS allowed charges of clinicians in the initial population of 1.6 million clinicians in the analysis of the 2021 MIPS performance period after using 2018 MIPS performance period data and applying the proposed policies for the 2021 MIPS performance period.

To apply the low-volume threshold, we need to understand whether clinicians participate as a group, virtual group, APM entity, or as individuals. For the purposes of this regulatory impact analysis, we made assumptions as to which clinicians would elect group reporting, virtual group or APM Entity reporting. One extreme and unlikely assumption is that no practices elect group reporting, virtual group reporting, or participate in an APM Entity that elects MIPS reporting and the low-volume threshold is applied at the individual level. Although we believe a scenario in which clinicians would only participate as individuals is unlikely, this assumption is important because it quantifies the minimum number of MIPS eligible clinicians. For this proposed rule model, we estimate approximately 230,000 clinicians¹¹² would be MIPS eligible because they exceed the low volume threshold as individuals and are not otherwise excluded. In Table 92, we identify these clinicians as having “required eligibility.”

For this RIA, we assume the following participation requirements for virtual groups and MIPS APM Entities that elect to participate in MIPS. We assume that TINs that registered as a virtual group for the CY 2018 MIPS performance period will continue to do so for the CY 2021 MIPS performance period. Due to data limitations and our inability to determine who would use the APM Performance Pathway versus the traditional MIPS submission mechanism for the 2021 MIPS performance period, our model assumes ACO APM Entities would elect to submit data to MIPS through the APM

Performance Pathway and that participants in non-ACO APM Entities would participate in MIPS as an individual or group rather than as an APM Entity. We included those who are in MIPS APM ACOs in the 2018 performance period as well as the additional clinicians in the final snapshot date of the 2019 QP performance period.

Finally, we assume that groups that submitted to MIPS as a group will continue to do so for the CY 2021 MIPS performance period. Using CY 2018 MIPS performance period data, we can identify group reporting through the submission of improvement activities, Promoting Interoperability, or quality performance category data. Using these assumptions, we identified 680,253 MIPS eligible clinicians who are eligible because they had the low-volume threshold applied to an identified group, APM entity, or virtual groups. In Table 92, we identify these clinicians who do not meet the low-volume threshold individually but are assumed to submit to MIPS as a group, virtual group or MIPS APM as having “group eligibility.”

To model the opt-in policy finalized in the CY 2019 PFS final rule (83 FR 59735), we assumed that 33 percent of the clinicians who exceed at least one but not all low-volume threshold criteria and submitted data to CY 2018 MIPS performance period would elect to opt-in to MIPS. We selected a random sample of 33 percent of clinicians without accounting for performance. We believe this 33 percent opt-in participation assumption is reasonable because some clinicians may choose not to submit data due to performance, practice size, or resources or alternatively, some may submit data, but elect to be a voluntary reporter and not be subject to a MIPS payment adjustment based on their performance. This 33 percent participation assumption is identified in Table 92 as “Opt-In eligibility”. In this proposed rule analysis, we estimate an additional 20,059 clinicians would be eligible through this “opt-in” policy for a total MIPS eligible clinician population of approximately 930,000. The leads to an associated \$72 billion allowed PFS charges estimated to be included in the 2021 MIPS performance period.

BILLING CODE 4120-01-P

¹¹² The count of 230,738 MIPS eligible clinicians for required eligibility includes those who

participated in MIPS (212,973 MIPS eligible

clinicians), as well as those who did not participate (17,765 MIPS eligible clinicians).

TABLE 92: Description of MIPS Eligibility Status for CY 2023 MIPS Payment Year Using the CY 2021 PFS Proposed Rule Assumptions**

Eligibility Status	Predicted Participation Status in MIPS Among Clinicians*	CY 2021 PFS Proposed Rule estimates	
		Number of Clinicians	PFS allowed charges (\$ in mil)***
Required eligibility (always subject to a MIPS payment adjustment because individual clinicians exceed the low-volume threshold in all 3 criteria)	Participate in MIPS	212,973	\$50,561
	Do not participate in MIPS	17,765	\$3,948
Group eligibility (only subject to payment adjustment because clinicians' groups exceed low-volume threshold in all 3 criteria and submit as a group)	Submit data as a group	680,253	\$16,606
Opt-In eligibility assumptions (only subject to a positive, neutral, or negative adjustment because the individual or group exceeds the low-volume threshold in at least 1 criterion but not all 3, and they elect to opt-in to MIPS and submit data)	Elect to opt-in and submit data	20,059	\$992
Total Number of MIPS Eligible Clinicians and the associated PFS allowed charges		931,050*	72,106
Not MIPS Eligible			
Potentially MIPS Eligible (not subject to payment adjustment for non-participation; could be eligible for one of two reasons: (1) meet group eligibility; or (2) opt-in eligibility criteria)	Do not opt-in; or Do not submit as a group	368,961	\$8,903
Below the low-volume threshold (never subject to payment adjustment; both individual and group is below all 3 low-volume threshold criteria)	Not applicable	80,454	\$437
Excluded for other reasons (Non-eligible clinician type, newly enrolled, QP)	Not applicable	220,305	\$7,623
Total Number of Clinicians Not MIPS Eligible		669,720	16,964
Total Number of Clinicians (MIPS and Not MIPS Eligible)		1,600,770	89,070

* Estimated MIPS Eligible Clinician Population

** Table 92 does not include clinicians impacted by the automatic extreme and uncontrollable policy (approximately 20,000 clinicians and \$1,643 million in PFS allowed charges). It also does not include excluded eligible clinicians in CPC+ APMs who otherwise would have been MIPS eligible and submitters with one or more categories identified as being suppressed as a result of bad data

*** Allowed charges estimated using 2017 and 2018 dollars. Low-volume threshold is calculated using allowed charges. MIPS payment adjustments are applied to the paid amount.

BILLING CODE 4120-01-C

There are an estimated 368,961 clinicians who are not MIPS eligible, but could be if their practice decides to participate or they elect to opt-in. We describe this group as "Potentially MIPS eligible". These clinicians would be included as MIPS eligible in the unlikely scenario in which all group practices elect to submit data as a group and all clinicians that could elect to opt-

into MIPS do elect to opt-in. This assumption is important because it quantifies the maximum number of MIPS eligible clinicians. When this unlikely scenario is modeled, we estimate the MIPS eligible clinician population could be as high as 1.3 million clinicians.

Finally, there are some clinicians who would not be MIPS eligible either because they and their group are below

the low-volume threshold on all three criteria (approximately 80,000) or because they are excluded for other reasons (approximately 220,000).

Since eligibility among many clinicians is contingent on submission to MIPS as a group, virtual group, APM participation in a MIPS APM Entity that elects to report to MIPS, or election to opt-in, we will not know the number of MIPS eligible clinicians until the

submission period for the 2021 MIPS performance period is closed. For this impact analysis, we used the estimated population of 931,050 MIPS eligible clinicians described above.

d. Estimated Impacts on Payments to MIPS Eligible Clinicians for the 2023 MIPS Payment Year

(1) Summary of Approach

In sections IV.A.3.c., IV.A.3.d. and IV.A.3.e. of this proposed rule, we present several provisions which impact the measures and activities that impact the performance category scores, final score calculation, and the MIPS payment adjustment. We discuss these changes in more detail in section VIII.H.15.c.(2) of this RIA as we describe our methodology to estimate MIPS payments for the 2023 MIPS payment year. We note that some of the MIPS policies in the CY 2020 PFS final rule were only defined for the 2020 MIPS performance period and 2022 MIPS payment year and did not continue to future years, such as the quality and cost performance category weights. Because we did not have category weights for the 2021 MIPS performance period, we could not calculate a final score for the 2021 MIPS performance period and 2023 MIPS payment year. Therefore, we could not create a baseline for the 2021 performance period that would allow us to fully distinguish between the impact of the previously finalized policies for the 2021 performance period and the proposed policies for the 2021 performance period. Our impact analysis looks at the total effect of the previously finalized and newly proposed MIPS policies on the MIPS final score and payment adjustment for the CY 2021 MIPS performance period/ CY 2023 MIPS payment year.

The payment impact for a MIPS eligible clinician is based on the clinician's final score, which is a value determined by their performance (as an individual, group, virtual group, or APM Entity) in the four MIPS performance categories: Quality, cost, improvement activities, and Promoting Interoperability. As discussed in section VIII.H.15.c.(2) of this proposed rule, we generally used the most recently available data from the Quality Payment Program which is data submitted for the 2018 MIPS performance period.

The estimated payment impacts presented in this proposed rule reflect averages by practice size based on Medicare utilization. The payment impact for a MIPS eligible clinician could vary from the average and would depend on the combination of services

that the MIPS eligible clinician furnishes. The average percentage change in total revenues that clinicians earn would be less than the impact displayed here because MIPS eligible clinicians generally furnish services to both Medicare and non-Medicare patients; this program does not impact payment from non-Medicare patients. In addition, MIPS eligible clinicians may receive Medicare revenues for services under other Medicare payment systems, such as the Medicare Federally Qualified Health Center Prospective Payment System, that would not be affected by MIPS payment adjustment factors.

(2) Methodology To Assess Impact

To estimate participation in MIPS for the CY 2021 Quality Payment Program for this proposed rule, we generally used 2018 MIPS performance period data. Our scoring model included the 931,050 estimated MIPS eligible clinicians as described in section VIII.H.15.b.(1)(b) of this RIA.

To estimate the impact of MIPS policies on MIPS eligible clinicians, we generally used the 2018 MIPS performance period data, including data submitted for the quality, improvement activities, and Promoting Interoperability performance categories, CAHPS for MIPS and CAHPS for ACOs, the total per capita cost measure, Medicare Spending Per Beneficiary (MSPB) clinician measure and other data sets.¹¹³ We calculated a hypothetical final score for the 2021 MIPS performance period/2023 MIPS payment year for each MIPS eligible clinician using score estimates described in this section for quality, cost, Promoting Interoperability, and improvement activities performance categories.

(a) Methodology To Estimate the Quality Performance Category Score

We estimated the quality performance category score using a similar methodology described in the CY 2020 PFS final rule (84 FR 63168 through 63169) with the following modifications that reflect the newly proposed policies for the 2021 MIPS performance period. As discussed in section IV.A.3.c.(1)(c) of this proposed rule, we proposed to replace the All-Cause Readmission measure with the Hospital Wide Readmission measure and add the hip-knee complications measure for those

for whom it is applicable. We used testing data for these new administrative claims measures.

As discussed in section IV.A.3.d.(1)(b) of this proposed rule, we proposed to use a performance period benchmark as opposed to a historical benchmark. Because the performance data for this analysis came primarily from the 2018 MIPS performance period, we elected to continue using the 2018 MIPS performance period benchmarks. We did not believe using performance period benchmarks for 2018 performance period submissions would appropriately simulate the data issues that might occur with historic benchmarks for the 2019 MIPS performance period. The one exception to using the 2018 MIPS performance benchmarks is we identified measures subject to the topped out scoring cap that was finalized (82 FR 53721 through 53727) using the 2020 MIPS performance period benchmark file.

As discussed in section IV.A.3.c.(1)(b) of this proposed rule, we proposed the removal of Web Interface as a collection type for the 2021 MIPS performance period. As discussed in section IV.A.3.c.(1) of this proposed rule, we proposed a quality performance category weight of 40 percent for the 2021 MIPS performance period.

To estimate a quality performance category score for clinicians in groups who previously used Web Interface as a collection type in 2018, we assumed these groups would use the other two other collection types (MIPS CQMs and eCQMs) available in the 2021 MIPS performance period. To estimate the effect of this change, we used the measures submitted through Web Interface in 2018 and estimated a 2021 quality performance category score by multiplying their computed 2021 quality performance category score using Web Interface by an adjustment factor. The assumption is that the adjustment factor would reflect how clinicians who previously used Web Interface in the 2018 MIPS performance period would perform in the 2021 MIPS performance period in the absence of Web Interface when using the other two collection types available in the 2021 MIPS performance period. The computed adjustment factor accounts for the distribution of clinicians using MIPS CQMs and eCQMs in 2018 and the associated average quality performance category score by practice size categories (25–49 clinicians, 50–99 clinicians, 100–199 clinicians, 200–499 clinicians, 500–999 clinicians, and 1000 or more clinicians). The adjustment factor was calculated in two steps within each practice size category: In

¹¹³ Data submitted to MIPS for the 2017 MIPS performance period data was used for the improvement score for the quality performance category. We also incorporated some additional data sources when available to represent more current data.

step one, the average quality performance category score for each collection type was weighted by the proportion of MIPS eligible clinicians using each collection type. In step two, the weighted average quality performance category score for the other collection types was divided by the average quality performance score for Web Interface, which yields the adjustment factor for each practice size category.

Finally, our model applied the APM Performance Pathway policies proposed in section IV.A.3.b. of this proposed rule for clinicians in APM Entities. The APM Performance Pathway is available for both ACO and non ACOs. However, due to data limitations, our analysis only applied the APM Performance Pathway scoring policies to ACO APM Entities. For ACOs, quality performance under the proposed APM performance pathway was modeled using data from the 2018 Shared Savings Program and Next Generation ACO Model public use files.¹¹⁴ We simulated scores for the Hospital Wide Readmission measure proposed in section IV.A.3.c.(1)(c). Data does not exist for APM performance pathway or MIPS quality measures for non-ACO APM Entities, so we assumed these non-ACO APM entities would not participate in the APP. For the purposes of modeling, we assumed that their participating clinicians (or their groups) would participate in regular MIPS, and scored those clinicians using the available MIPS submissions of the clinician or its group. Therefore, because of data limitations our results may overestimate or underestimate the number of APM Entities that elect to participate in MIPS as an APM Entity and how they elect to participate.

(b) Methodology To Estimate the Cost Performance Category Score

In section IV.A.3.c.(2) of this proposed rule, we proposed a cost performance category weight of 20 percent for the 2021 MIPS performance period. We estimated the cost performance category score using the methodology described in the CY 2020 PFS final rule (84 FR 63169)

(c) Methodology To Estimate the Facility-Based Measurement Scoring

As finalized in the CY2019 PFS final rule (83 FR 59856), we determine the eligible clinician's MIPS cost and quality performance category score in facility-based measurement based on

Hospital VBP Program Total Performance Score for eligible clinicians or groups who meet the eligibility criteria, which we designed to identify those who primarily furnish services within a hospital. We estimated the facility-based score using the scoring policies finalized in the CY2018 Quality Payment Program final rule (82 FR 53763) and the methodology described in the CY 2020 PFS final rule (84 FR 63169).

(d) Methodology To Estimate the Promoting Interoperability Performance Category Score

We estimated the Promoting Interoperability performance category score using the methodology described in the CY 2020 PFS final rule (84 FR 63169 through 84 FR 63170)).

In section IV.2.c.(4)(c)(ii)(B) we are proposing to add the HIE bi-directional exchange measure for the 2021 performance period and subsequent years as an optional alternative to the two existing measures: The Support Electronic Referral Loops by Sending Health Information measure and the Support Electronic Referral Loops by Receiving and Incorporating Health Information measure. This proposal provides clinicians the option of either reporting the new measure or the two existing measures. Because we lack data on who would adopt these new measures and how they would score, we have used past reporting on existing measures to estimate future PI performance, and do not otherwise model the impact of these HIE measures.

In our model, for the APM participants that we modeled as participating in APP (that is, those in ACO entities), we simulated MIPS APM Entity scores by using submitted Promoting Interoperability data by groups or individuals that we identified as being in a MIPS APM to calculate an APM Entity score.

(e) Methodology To Estimate the Improvement Activities Performance Category Score

We modeled the improvement activities performance category score based on CY 2018 MIPS performance period data and APM participation identified in section VIII.H.15.b.(1)(b) of this proposed rule. We continued to apply the methodology described in the CY 2020 PFS final rule (84 FR 63170) to assign an improvement activities performance category score. For the APM participants identified in section IV.A.3.b.(2) of this proposed rule, as there was no APM performance pathway score in the previous final rule,

we assigned an improvement activity performance category score of 100 percent.

(f) Methodology To Estimate the Complex Patient Bonus

In section IV.A.3.d.(2)(a) of this proposed rule, we proposed to continue the complex patient bonus for the 2021 MIPS performance period. Consistent with the policy to define complex patients as those with high medical risk or with dual eligibility, our scoring model used the complex patient bonus information calculated for the 2018 performance period data.

(g) Methodology To Estimate the Final Score

As discussed in sections IV.A.3.c.(1)(b), IV.A.3.c.(2)(a), and summarized in section IV.A.3.d.(2)(b) of this proposed rule, our model assigned a final score for each TIN/NPI by multiplying each performance category score by the corresponding performance category weight, adding the products together, multiplying the sum by 100 points, and adding the complex patient bonus. After adding any applicable bonus for complex patients, we reset any final scores that exceeded 100 points equal to 100 points. For MIPS eligible clinicians who were assigned a weight of zero percent for any performance category, we redistributed the weights according to section IV.A.3.d.(2)(b)(iii) of this proposed rule.

(h) Methodology To Estimate the MIPS Payment Adjustment

As described in section IV.A.3.e.(2) of this proposed rule we applied the proposed hierarchy to determine which final score should be used for the payment adjustment for each MIPS eligible clinician when more than one final score is available.

We then calculated the parameters of an exchange function in accordance with the statutory requirements related to the linear sliding scale, budget neutrality, minimum and maximum adjustment percentages and additional payment adjustment for exceptional performance (as finalized under § 414.1405), using the performance threshold of 50 points which was proposed in section IV.A.3.e.(3) of this rule and the previously finalized additional performance threshold of 85 points (84 FR 63039 through 63040). In the alternatives considered discussed in section VIII.I.2. of this rule, we include the key statistics if the performance threshold was 60 as finalized in the CY 2020 PFS final rule (84 FR 63037). We used these resulting parameters to estimate the positive or negative MIPS

¹¹⁴ The public use files for the 2018 Medicare Shared Savings Program can be accessed here: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/sharedsavingsprogram/program-data>.

payment adjustment based on the estimated final score and the paid amount for covered professional services furnished by the MIPS eligible clinician.

(3) Impact of Payments by Practice Size

Using the assumptions provided above, our model estimates that \$442 million would be redistributed through budget neutrality and that \$500 million would be distributed to MIPS eligible clinicians that meet or exceed the additional performance threshold. The mean final score is 76.75 and the median is 81.32.

The model further estimates that the maximum positive payment adjustments are 6.9 percent after considering the MIPS payment adjustment and the additional MIPS payment adjustment for exceptional performance. In the alternatives considered discussed in section VIII.I.2. of this rule, we include the details of the model in which the performance threshold was set to 60, which had been finalized in the 2020 PFS final rule. In this alternate model, \$520 million would be redistributed through budget neutrality and the maximum positive

payment adjustments would be 7.4 percent.

Table 93 shows the impact of the payment adjustments by practice size and based on whether clinicians are expected to submit data to MIPS. We estimate that a smaller proportion of clinicians in small practices (1–15 clinicians) who participate in MIPS will receive a positive or neutral payment adjustment compared to larger sized practices. Table 93 also shows that 90.7 percent of MIPS eligible clinicians that participate in MIPS are expected to receive positive or neutral payment adjustments. We want to highlight that we are using 2018 MIPS performance period submissions data to simulate a 2021 MIPS performance period final score, and it is likely that there will be changes that we cannot account for at this time, including services and payments disrupted by the PHE or clinicians changing behavior because of the performance thresholds increased for the 2021 MIPS performance period to avoid a negative payment adjustment.

The combined impact of negative and positive adjustments and the additional positive adjustments for exceptional performance as a percent of paid

amount among those that do not submit data to MIPS was not the maximum negative payment adjustment of 9 percent possible because some MIPS eligible clinicians that do not submit data to MIPS receive a non-zero score for the cost performance category, which utilizes administrative claims data and does not require separate data submission to MIPS. Among those who we estimate would not submit data to MIPS, 89 percent are in small practices (15,748 out of 17,780 clinicians who do not submit data). To address participation concerns, we have policies targeted towards small practices including technical assistance and special scoring policies to minimize burden and facilitate small practice participation in MIPS or APMs. We also note this participation data is generally based off participation for the 2018 performance period, which is associated with the 2020 MIPS payment year and had a performance threshold of 15 points, and that participation may change for the 2021 performance period when the performance threshold is proposed at 50 points.

*Practice size is the total number of TIN/NPIs in a TIN.

** 2018 data used to estimate 2021 performance period payment adjustments. Payments estimated using 2018 dollars trended to 2023. The percentage represents the total adjustments after taking all the positive adjustments and subtracting the negative adjustments for all MIPS eligible clinicians in the same respective practice size.

***Includes facility-based clinicians whose quality data is submitted through hospital programs.

(4) Additional Impacts From Outside Payment Adjustments

(a) Burden Overall

In addition to the payment adjustments, we propose several

policies that have an impact on burden. In section VI.B.4 of this proposed rule, we outline the costs of data collection that includes both policy updates and adjustments due to the use of updated data sources. For each proposal

included in this regulation which impacts our estimate of collection burden, the incremental burden for each is summarized in Table 94. We also provide additional burden discussions that we are not able to quantify.

TABLE 94: Incremental Burden from Associated Proposals

Burden Description and associated proposal	Burden Hours	Burden Dollars
Total burden associated with continuing the policies and ICRs set forth in the CY 2020 PFS final rule into the 2021 MIPS performance period (as discussed in section VI.B.4.o)	3,008,022	\$ 294,205,428
Burden change due to proposal to sunset of the CMS Web Interface measures as a collection type/submission type*	-5,920	-\$ 541,006
Burden change due to new ICR for Nomination of MVPs	300	\$ 45,467
Burden change due to proposal to add a survey-based measure on telehealth to the CAHPS for MIPS Survey	100	\$ 2,565
Burden change due to proposal to require nominated improvement activities to be linked to existing and related quality and cost measures, as applicable and feasible	31	\$ 4,698
Total change in burden due to policy	-5,488	-\$ 488,115
Total burden set forth in the CY 2021 PFS proposed rule	3,002,534	\$ 293,717,313

* The total change in burden due to this policy includes a decrease in burden due to elimination of the “Quality Data Submission: CMS Web Interface collection type” and “Group Registration for CMS Web Interface” ICRs and an increase in burden for the “Quality Data Submission: MIPS CQM and QCDR collection type” and “Quality Data Submission: eCQM collection type” ICRs associated with respondents who previously submitted via the CMS Web Interface submitting data via an alternate collection type.” See section VI.B.4.

(b) Additional Impacts to Clinicians

(i) Web Interface

As discussed in section IV.A.3.c.(1)(b) of this proposed rule, we are proposing to sunset the CMS Web Interface measures as a collection type for groups and virtual groups with 25 or more eligible clinicians starting with the 2021 performance period. We recognize that the sunset of the CMS Web Interface for groups and virtual groups may be burdensome to current groups and virtual groups submitting quality data on CMS Web Interface measures. Such groups and virtual groups would need to select a different collection type/submission type and redesign their systems to be able to interact with the new collection type/submission type. Given that the Medicare Part B claims collection type is limited to small practices, the alternatives for these groups and virtual groups would be either the MIPS CQM, QCDR or eCQM collection types. Given the size of the affected groups and virtual groups, we believe the majority are likely to already be using a QCDR, qualified registry, or EHR as part of their practice workflow. Of the 2,932 TINs comprised of 25 or more clinicians who submitted MIPS data via a collection type other than the CMS Web Interface, 62 percent reported

via the MIPS CQM and QCDR collection type and 38 percent reported via the eCQM collection type. For groups converting from Web Interface, there will be some non-recurring costs associated with modifying clinical and MIPS data reporting workflows to utilize an alternate collection type. For any remaining groups and virtual groups there will also be registry fees paid to a QCDR or qualified registry or the financial expense of purchasing/licensing and deploying an EHR system. Because we are unable to assess either the existing workflows of each individual group and virtual group or the decisions each group and virtual group will make in response to this proposal, we cannot quantify the resulting economic impact. While there may be an initial increase in burden for current groups and virtual groups utilizing the CMS Web Interface measures having to transition to the utilization of a different collection type/submission type, we recognize that we would also be reducing reporting requirements. Groups and virtual groups would no longer have to completely report on all pre-determined CMS Web Interface measures and would be able to select their own measures (at least 6) to report.

Groups and virtual groups account for less than 20 percent of organizations utilizing the CMS Web Interface measures while ACOs participating in the Medicare Shared Savings Program and Next Generation ACO Model account for more than 80 percent. With an 80 percent reduction and a continued decrease interest of groups and virtual groups seeking to report quality data on CMS Web Interface measures, it is not fiscally viable, feasible, or sustainable for MIPS to continue to make available the CMS Web Interface measures as a collection type/submission type. There would be proportionally higher costs associated with the operationalization and maintenance of the CMS Web Interface with a significantly smaller number of groups and virtual groups utilizing the CMS Web Interface. In assessing the utilization of the CMS Web Interface by groups and virtual groups, there has been a substantial decrease in participation each year since the inception of MIPS in the 2017 performance period. From 2017 to 2019, the number of groups eligible to report quality measures via the CMS Web Interface (groups registered to utilize the CMS Web Interface) decreased by approximately 45 percent. Similarly, the number of groups utilizing the CMS

Web Interface as a collection type decreased by approximately 40 percent from 2017 to 2019. In our cost analysis, operating and maintaining the CMS Web Interface for significantly smaller number of groups and virtual groups would not be cost-effective. To operate and maintain the CMS Web Interface solely for groups and virtual groups, there would be an increase in cost and needed resources under MIPS associated with the items such as the establishment and maintenance of CMS Web Interface benchmarks, assignment and sampling, technical support, and education and outreach; thus, there would be proportionally higher costs associated with the operationalization and maintenance of the CMS Web Interface with a significantly smaller number of groups and virtual groups utilizing the CMS Web Interface measures as a collection type/ submission type.

(ii) Administrative Claims Measure

As discussed in section IV.A.3.c.(1)(c), we are proposing to add two new administrative claims measures beginning in the 2021 MIPS performance period and for future performance periods. We acknowledge there are administrative burdens and related financial costs associated with each administrative claims measure that clinicians, groups, and organizations may choose to monitor. However, because these costs can vary significantly due to organizational size, number of administrative claims measures being reported, volume of clinicians reporting each measure, and the specific methods employed to improve performance, we are unable to provide an estimate of the financial impact each clinician, group, or organization may experience. In summary, we are acknowledging that while there is no data submission requirements per § 414.1325(a)(2)(i) for administrative claim measures, there may be associated costs for clinicians and group practices to monitor new administrative claim measures; however, we are unable to quantify that impact.

(iii) Modifications to the Improvement Activities Inventory

As discussed in section IV.A.3.c.(3)(b)(ii) of this rule, we are proposing for the CY 2021 performance period and future years to modify two existing improvement activities. We refer readers to Appendix 2 of this proposed rule for further details. We do not believe these proposals would impact time or financial burden on stakeholders because MIPS eligible

clinicians are still required to submit the same number of activities and the per response time for each activity is uniform. We do not expect this proposal to affect our currently approved information collection burden estimates in terms of neither the number of estimated respondents nor the burden per response. We anticipate that the vast majority of clinicians performing improvement activities, to comply with existing MIPS policies, would continue to perform the same activities under the policies established in this proposed rule because previously finalized improvement activities continue to apply for the current and future years unless otherwise modified per rulemaking (82 FR 54175). Most of the improvement activities in the Inventory remain unchanged for the 2020 MIPS performance period.

(c) Stakeholders Nominating Improvement Activities

In section IV.A.3.c.(3)(b)(i)(A)(aa) of this rule, we are proposing to make an exception to the established timeframe for nomination of improvement activities, such that during a PHE, stakeholders can nominate improvement activities outside of the established Annual Call for Activities timeframe. While we expect additional nominations may be received as a result of this proposal, we do not have any data with which to estimate what the additional number may be but we assume the additional costs associated with nominating new improvement activities are unchanged. Additionally, in section IV.A.2.c.(3)(b)(ii)(B) of this rule, we are proposing, beginning with the CY 2021 performance period and future years, to consider agency-nominated improvement activities. We are unable to estimate the number of improvement activity nominations we will receive, but similar to the per respondent estimate we have provided in section VI.B.5.i. of this proposed rule, we assume it will require 3 hours at \$55.75/hr for a GS-13 Step 5 to nominate an improvement activity for a total cost of \$167.25 (3 hrs × \$55.75/hr) per activity.

(d) Impact on Third Party Intermediaries

In section IV.A.3.g. of this rule, we proposed multiple changes to the third party intermediary regulations at § 414.1400. Specifically, we are proposing to: (1) Amend current requirements for approval of third party intermediaries to take into account past performance and provision of inaccurate information regarding MIPS program requirements to eligible clinicians; (2) require attendance by all third party

intermediaries for training and support sessions; (3) require that QCDRs and qualified registries must conduct an annual data validation audit and if one or more deficiencies or data errors are identified also conduct targeted audits; (4) incrementally increase requirements for QCDR measure testing and clarify what is meant by full testing; and (5) require third party intermediaries to submit a CAP to address identified deficiencies and data issues as well as actions to prevent recurrence.

With regard to the proposal to amend current requirements for approval of third party intermediaries, we do not anticipate this to require any additional effort for affected entities as the proposal is to allow CMS to utilize already available information to make approval decisions.

The proposed requirement for attendance at training and support sessions and the associated burdens on third parties closely aligns to expectations previously established in the CY 2017 Quality Payment Program final rule (81 FR 77367 through 77374) and (81 FR 77384 through 77386). With regard to survey vendors, we previously finalized the CMS-approved survey vendor approval criteria in § 414.1400(e) as discussed in the CY 2018 PFS final rule (83 FR 59907 through 59908). Among the approval criteria, § 414.1400(e)(3) established the requirement that the entity has successfully completed, and has required its subcontractors to successfully complete, vendor training(s) administered by CMS or its contractors. Therefore, we assume no additional impact for survey vendors as a result of this proposal. We do not have data on the number of health IT vendors that missed training and support sessions, but the most recent data cites 684 health IT developers through program year 2016 of the Medicare EHR Incentive Program.¹¹⁵ In CY 2019, 16 total training and support sessions were missed by 14 QCDRs and 33 total sessions were missed by 27 qualified registries. Based on historical frequency and duration, we expect future training and support sessions to continue occurring monthly for approximately 2 hours each. For QCDRs and qualified registries, we estimate an impact of 98 hours [(16 sessions by QCDRs + 33 sessions by qualified registries) × 2 hours]. We lack insight into the exact occupation of session attendees, but for estimating purposes we assume a Physician labor rate of \$212.78/hr and

¹¹⁵ <https://dashboard.healthit.gov/quickstats/pages/FIG-Vendors-of-EHRs-to-Participating-Professionals.php>.

estimate a total burden of \$20,852 (\$212.78/hr × 98 hours).

We do not anticipate a significant impact to QCDRs and qualified registries resulting from proposal to require QCDRs and qualified registries to conduct an annual data validation audit and if one or more deficiencies or data errors are identified also conduct targeted audits. First, we are not revising our burden estimates because the proposed data validation requirements are similar to existing expectations which we have already accounted for the associated burden as stated in the CY 2017 Quality Payment Program final rule (81 FR 77383 through 77384) and the CY 2019 PFS final rule (83 FR 59998 through 59999). Second, we believe that the proposed requirements for conduct of the data validation audits are aligned with methods and procedures which stakeholders currently utilize.

With regard to the proposal to require QCDRs and qualified registries to conduct targeted audits if one or more data errors are identified during data validation audits, we are unable to estimate the number of audits which may occur or the time and costs associated with their conduct which could vary substantially depending on the nature of the data error and the amount of data to be audited. We seek comment on the expected frequency of targeted audits and the anticipated scope of effort.

Because the proposal to incrementally increase requirements for QCDR measure testing is not changing the requirements for fully testing measures, but is instead proposing an incremental approach to achieve previously finalized requirements, we do not anticipate any additional impact as a result of the proposal.

As discussed in section VI.B.5.c.(2) of this rule, we estimate the total burden impact associated with the proposal to require CAPs to be 30 hours (10 respondents × 3 hr/respondent) at a cost of \$2,774 for all respondents (10 respondents × \$277.38/respondent).

f. Assumptions & Limitations

We note several limitations to our estimates of clinicians' MIPS eligibility and participation, negative MIPS payment adjustments, and positive payment adjustments for the 2023 MIPS payment year. Due to the PHE, we are aware that there may be changes in health care delivery and billing patterns that will impact results for the 2023 MIPS payment year that we were not able to model with our historic data sources. We based our analyses on the data prepared to support the 2019

performance period initial determination of clinician and special status eligibility (available via the NPI lookup on qpp.cms.gov),¹¹⁶ APM Participant List for the final snapshot date for the 2019 QP performance period, CY 2018 Quality Payment Program Year 2 data, 2018 ACO Public Use File for MSSP and Next Gen and CAHPS for ACOs. The scoring model results presented in this proposed rule assume that CY 2018 Quality Payment Program data submissions and performance are representative of CY 2021 Quality Payment Program data submissions and performance. The estimated performance for CY 2021 MIPS performance period using CY 2018 Quality Payment Program data may be underestimated because the performance threshold to avoid a negative payment adjustment for the 2018 MIPS performance period/2020 MIPS payment year was significantly lower (15 out of 100 points) than the performance threshold for the 2021 MIPS performance period/2023 MIPS payment year (60 out of 100). We anticipate clinicians may submit more performance categories to meet the higher performance threshold to avoid a negative payment adjustment.

In our MIPS eligible clinician assumptions, we assumed that 33 percent of the opt-in eligible clinicians that participated in the CY 2018 Quality Payment Program would elect to opt-in to the MIPS program. It is difficult to predict whether clinicians will elect to opt-in to participate in MIPS with the proposed policies.

There are additional limitations to our estimates: (1) To the extent that there are year-to-year changes in the data submission, volume and mix of services provided by MIPS eligible clinicians, the actual impact on total Medicare revenues will be different from those shown in Table 93; and (2) our cost data does not overlap with CY 2018 so we may not be capturing performance for all clinicians. Due to the limitations described, there is considerable uncertainty around our estimates that is difficult to quantify.

I. Alternatives Considered

This proposed rule contains a range of policies, including some provisions related to specific statutory provisions. The preceding preamble provides descriptions of the statutory provisions that are addressed, identifies those policies when discretion has been

exercised, presents rationale for our policies and, where relevant, alternatives that were considered. For purposes of the payment impact on PFS services of the policies contained in this proposed rule, we presented the estimated impact on total allowed charges by specialty.

1. Alternatives Considered for the MDPP Expanded Model Emergency Policy

For the MDPP Expanded Model Emergency Policy, no alternatives were considered. If we do not take action it will have an extremely negative impact to MDPP supplier and beneficiaries; which would threaten the success of the entire expanded model; as beneficiaries would become ineligible and not be able to finish the program, MDPP suppliers would not be paid for services rendered, and no new cohorts of set of MDPP services could be started, effectively ending the expanded model test.

2. Alternatives Considered for the Quality Payment Program

For purposes of the payment impact on the Quality Payment Program, we view the performance threshold as a critical factor affecting the distribution of payment adjustments. We ran a separate model with a performance threshold of 60 which was previously finalized in the CY 2020 final rule (84 FR 63037) as an alternative to the proposed performance threshold of 50. For reference, our model of proposed policies has a mean final score of 76.75 and median final score of 81.32. The model with a performance threshold of 60, has a mean final score of 76.75 and a median final score of 81.32. We estimate that \$520 million would be redistributed through budget neutrality. There would be a maximum payment adjustment of 7.36 percent after considering the MIPS payment adjustment and the additional MIPS payment adjustment for exceptional performance. In addition, 10.4 percent of MIPS eligible clinicians would receive a negative payment adjustment among those that submit data.

In addition, we view the cost performance category weight as a critical factor affecting final scores. We ran two separate models with cost performance category weights of 15 and 30, with corresponding quality performance category weights of 45 and 30, respectively (as an alternative to the proposed cost performance category weight of 20 and quality performance category weight of 40) to estimate the impact of keeping the weights consistent with the CY 2020 PFS final rule and a more aggressive increase in the cost performance category weight.

¹¹⁶The time period for this eligibility file (September 1, 2017 to August 31, 2018) maximizes the overlap with the performance data in our model.

The model with a cost performance category weight of 15 has a mean score of 82.14 and a median score of 77.31. The model with a cost performance category weight of 30 has a mean score of 75.85 and a median score 80.06. We refer readers to section IV.A.2.c.(2)(a) for additional rationale on the selection of the cost performance category weight.

3. Alternatives Considered for Changes Related to Scopes of Practice

With regard to the proposal concerning supervision of diagnostic tests by certain NPPs, an alternative would be to maintain the status quo. That is, we could maintain the basic rule under § 410.32(b)(1) that allows only physicians as defined under Medicare law to supervise the performance of diagnostic tests. In that case, the pool of practitioners who could supervise diagnostic tests would remain at current levels and certain NPPs would be limited under Medicare from practicing to the full extent allowed by their state license and scope of practice. However, this alternative would fail to address the mandates established in E.O. 13890.

With regard to the proposal to allow a PTA/OTA to furnish maintenance therapy services, an alternative would be maintaining the status quo to require the PT/OT to personally furnish all maintenance therapy services. However, this alternative would not address the mandates established in E.O. 13890. It would also be inconsistent with our policy in SNF and home health settings when payment for therapy is made under Part A, maintenance therapy can be furnished by a PT/OT or delegated to be performed by a PTA/OTA.

J. Impact on Beneficiaries

We do not believe our proposals will have a negative impact on beneficiaries given overall PFS budget neutrality.

1. Medicare Diabetes Prevention Program Expanded Model Emergency Policy

This change would have a positive impact on affected MDPP beneficiaries, as it would allow them to maintain

eligibility for the program, and request virtual sessions if needed for successful completion of attendance and weight loss milestones. It would also allow them to start set of MDPP services virtually, allowing remote digital technology to capture body weight measurement or self-reported weight measurements from a participant's personal home digital scale. Finally, if continuing with set of MDPP services is not an option for beneficiaries during the PHE, the proposed Emergency Policy allows beneficiaries to restart their set of MDPP services, maximizing beneficiary options and access to MDPP both during the PHE and after it ends.

2. Quality Payment Program

There are several changes in this rule that would have an effect on beneficiaries. In general, we believe that many of these changes, including those intended to improve accuracy in payment through regular updates to the inputs used to calculate payments under the PFS, would have a positive impact and improve the quality and value of care provided to Medicare beneficiaries. For example, several of the new measures include patient-reported outcomes, which may be used to help patients make more informed decisions about treatment options. Patient-reported outcome measures provide information on a patient's health status from the patient's point of view and may also provide valuable insights on factors such as quality of life, functional status, and overall disease experience, which may not otherwise be available through routine clinical data collection. Patient-reported outcomes are factors frequently of interest to patients when making decisions about treatment.

K. Estimating Regulatory Familiarization Costs

If regulations impose administrative costs on private entities, such as the time needed to read and interpret this rule, we should estimate the cost associated with regulatory review. Due to the uncertainty involved with accurately quantifying the number of entities that will review the rule, we

assume that the total number of unique commenters on this year's proposed rule will be the number of reviewers of this rule. We acknowledge that this assumption may understate or overstate the costs of reviewing this rule. It is possible that not all commenters reviewed last year's rule in detail, and it is also possible that some reviewers chose not to comment on the rule. For these reasons we thought that the number of past commenters would be a fair estimate of the number of reviewers of this rule. We welcomed any comments on the approach in estimating the number of entities which will review this rule.

We also recognize that different types of entities are in many cases affected by mutually exclusive sections of this rule, and therefore for the purposes of our estimate we assume that each reviewer reads approximately 50 percent of the rule. We sought comments on this assumption.

Using the wage information from the BLS for medical and health service managers (Code 11-9111), we estimate that the cost of reviewing this rule is \$110.74 per hour, including overhead and fringe benefits https://www.bls.gov/oes/current/oes_nat.htm. Assuming an average reading speed, we estimate that it would take approximately 8.0 hours for the staff to review half of this rule. For each facility that reviews the rule, the estimated cost is \$885.92 (8.0 hours × \$110.74). Therefore, we estimated that the total cost of reviewing this regulation is \$38,477,277.44 (\$885.92 × 43,432 reviewers on last year's proposed rule).

L. Accounting Statement

As required by OMB Circular A-4 (available at <http://www.whitehouse.gov/omb/circulars/a004/a-4.pdf>), in Tables 95 and 96 (Accounting Statements), we have prepared an accounting statement. This estimate includes growth in incurred benefits from CY 2020 to CY 2021 based on the FY 2021 President's Budget baseline.

TABLE 95: Accounting Statement: Classification of Estimated Expenditures

CATEGORY	TRANSFERS
CY 2021 Annualized Monetized Transfers	Estimated increase in expenditures of \$0.0 billion for PFS CF update.
From Whom To Whom?	Federal Government to physicians, other practitioners and providers and suppliers who receive payment under Medicare.

TABLE 96: Accounting Statement: Classification of Estimated Costs, Transfer, and Savings

CATEGORY	TRANSFER
CY 2021 Annualized Monetized Transfers of beneficiary cost coinsurance.	\$0.0 billion
From Whom to Whom?	Beneficiaries to Federal Government.

M. Conclusion

The analysis in the previous sections, together with the remainder of this preamble, provided an initial Regulatory Flexibility Analysis. The previous analysis, together with the preceding portion of this preamble, provides an RIA. In accordance with the provisions of Executive Order 12866, this regulation was reviewed by the Office of Management and Budget.

Health facilities, Health professions, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 423

Administrative practice and procedure, Emergency medical services, Health facilities, Health maintenance organizations (HMO), Health professionals, Medicare, Penalties, Privacy, Reporting and recordkeeping requirements.

42 CFR Part 424

Emergency medical services, Health facilities, Health professions, Medicare,

Reporting and recordkeeping requirements.

42 CFR Part 425

Administrative practice and procedure, Health facilities, Health professions, Medicare, Reporting and recordkeeping requirements.

For the reasons set forth in the preamble, the Centers for Medicare & Medicaid Services proposes to amend 42 CFR chapter IV as set forth below:

PART 410—SUPPLEMENTARY MEDICAL INSURANCE (SMI) BENEFITS

■ 1. The authority citation for part 410 continues to read as follows:

Authority: 42 U.S.C. 1302, 1395m, 1395hh, 1395rr, and 1395ddd.

■ 2. Section 410.15 is amended in paragraph (a)—

■ a. By adding a definition for “A review of any current opioid prescriptions” in alphabetical order;

■ b. In the definition of “First annual wellness visit providing personalized prevention plan services” by revising paragraph (xi) and adding paragraphs (xii) and (xiii);

■ c. In the definition of “Subsequent annual wellness visit providing personalized prevention plan services” by revising paragraph (ix) and adding paragraphs (x) and (xi).

The additions and revisions read as follows:

§ 410.15 Annual wellness visits providing Personalized Prevention Plan Services: Conditions for and limitations on coverage.

(a) * * *

A review of any current opioid prescriptions means, with respect to the individual determined to have a current prescription for opioids, all of the following:

- (i) A review of the potential risk factors to the individual for opioid use disorder;
- (ii) An evaluation of the individual’s severity of pain and current treatment plan;
- (iii) The provision of information on non-opioid treatment options; and
- (iv) A referral to a specialist, as appropriate.

* * * * *

First annual wellness visit providing personalized prevention plan services

(xi) Furnishing of a review of any current opioid prescriptions as that term is defined in this section.

(xii) Screening for potential substance use disorders including a review of the individual’s potential risk factors for substance use disorder and referral for treatment as appropriate.

(xiii) Any other element determined appropriate through the national coverage determination process.

* * * * *

Subsequent annual wellness visit providing personalized prevention plan services * * *

(ix) Furnishing of a review of any current opioid prescriptions as that term is defined in this section.

(x) Screening for potential substance use disorders including a review of the individual’s potential risk factors for substance use disorder and referral for treatment as appropriate.

(xi) Any other element determined appropriate through the national coverage determination process.

* * * * *

■ 2. Section 410.16 is amended in paragraph (a)—

- a. By adding the definition for “A review of any current opioid prescriptions” in alphabetical order;
- b. In the definition of “Initial preventive physical examination” by revising paragraphs (6) and (7) and adding paragraphs (8) and (9).

The addition and revisions read as follows:

§ 410.16 Initial preventive physical examination: Conditions for and limitations on coverage.

(a) * * *

A review of any current opioid prescriptions means, with respect to the individual determined to have a current prescription for opioids, all of the following:

- (i) A review of the potential risk factors to the individual for opioid use disorder;
- (ii) An evaluation of the individual’s severity of pain and current treatment plan;
- (iii) The provision of information on non-opioid treatment options; and
- (iv) A referral to a specialist, as appropriate.

* * * * *

Initial preventive physical examination * * *

(6) A review of any current opioid prescriptions as defined in this section.

(7) Screening for potential substance use disorders to include a review of the individual’s potential risk factors for substance use disorder and referral for treatment as appropriate.

(8) Education, counseling, and referral, as deemed appropriate by the physician or qualified nonphysician practitioner, based on the results of the review and evaluation services described in this section.

(9) Education, counseling, and referral, including a brief written plan such as a checklist provided to the individual for obtaining an electrocardiogram, as appropriate, and the appropriate screening and other preventive services that are covered as separate Medicare Part B benefits as described in sections 1861(s)(10), (jj), (nn), (oo), (pp), (qq)(1), (rr), (uu), (vv), (xx)(1), (yy), (bbb), and (ddd) of the Act.

* * * * *

■ 3. Section 410.32 is amended by—

- a. Revising paragraphs (b)(1) and (b)(2)(iii)(B),
- b. Adding paragraph (b)(2)(ix), and
- c. Revising paragraph (b)(3)(ii).

The revisions and addition read as follows:

§ 410.32 Diagnostic x-ray tests, diagnostic laboratory tests, and other diagnostic tests: Conditions.

* * * * *

(b) * * *

(1) *Basic rule.* Except as indicated in paragraph (b)(2) of this section, all diagnostic x-ray and other diagnostic tests covered under section 1861(s)(3) of the Act and payable under the physician fee schedule must be furnished under the appropriate level of supervision by a physician as defined in section 1861(r) of the Act or, to the extent that they are authorized to do so under their scope of practice and applicable State law, by a nurse practitioner, clinical nurse specialist, physician assistant or a certified nurse-midwife. Services furnished without the required level of supervision are not reasonable and necessary (see § 411.15(k)(1) of this chapter).

(2) * * *

(iii) * * *

(B) Furnished under the general supervision of a physician or clinical psychologist; or under the general supervision of a nurse practitioner, clinical nurse specialist, physician assistant, or certified nurse-midwife, to the extent they are authorized to perform the tests under their scope of practice and applicable State laws.

* * * * *

(ix) Diagnostic tests performed by a physician assistant authorized to perform the tests under their scope of practice and applicable State laws.

(3) * * *

(ii) *Direct supervision* in the office setting means the physician (or other supervising practitioner) must be present in the office suite and immediately available to furnish assistance and direction throughout the performance of the procedure. It does not mean that the physician (or other supervising practitioner) must be present in the room when the procedure is performed. Until the later of the end of the calendar year in which the PHE as defined in § 400.200 of this chapter ends or, December 31, 2021, the presence of the physician (or other practitioner) includes virtual presence through audio/video real-time communications technology (excluding audio-only).

* * * * *

■ 4. Section 410.33 is amended by adding paragraph (j) to read as follows:

§ 410.33 Independent diagnostic testing facility.

* * * * *

(j) *Exception for IDTFs with no beneficiary interaction.* An IDTF supplier that has no beneficiary interaction, treatment, or testing at its practice location must not be subject to the requirements at:

(1) Paragraph (c) of this section.

(2) Paragraph (e)(1)(i) of this section.

(i) The requirement that the IDTF maintain documentation that its technicians are licensed and certified in each of the States in which the IDTF operates does not apply to IDTFs that are excepted in this paragraph (j). The requirement that the IDTF maintain documentation that its supervising physicians are licensed and certified in each of the States in which the IDTF operates does apply to IDTFs that are excepted in this paragraph.

(ii) [Reserved]

(3) Paragraph (e)(1)(ii) of this section.

(4) Paragraph (g)(1) of this section.

(5) Paragraph (g)(6) of this section.

(6) Paragraph (g)(8) of this section.

(7) Paragraph (g)(9) of this section.

(8) Paragraph (g)(11) of this section.

(9) Paragraph (g)(12) of this section.

* * * * *

■ 5. Section 410.67 is amended—

■ a. By revising paragraph (7) and adding paragraph (8) in the definition of “Opioid use disorder treatment service”;

■ b. By revising paragraph (d)(2)(i)(A); and

■ c. By adding paragraph (d)(4)(i)(E).

The additions and revision read as follows:

§ 410.67 Medicare coverage and payment of Opioid use disorder treatment services furnished by Opioid treatment programs.

* * * * *

(b) * * *

Opioid use disorder treatment service * * *

(7) Periodic assessment services required under § 8.12(f)(4) of this title, that are furnished during a face-to-face encounter, including services furnished via two-way interactive audio-video communication technology, as clinically appropriate, and in compliance with all applicable requirements. During the Public Health Emergency, as defined in § 400.200 of this chapter, in cases where a beneficiary does not have access to two-way audio-video communications technology, periodic assessments can be furnished using audio-only telephone calls if all other applicable requirements are met.

(8) Opioid antagonist medications that are approved by the Food and Drug Administration under section 505 of the Federal Food, Drug, and Cosmetic Act for the emergency treatment of known or suspected opioid overdose.

* * * * *

- (d) * * *
- (2) * * *
- (i) * * *

(A) For implantable and injectable medications, the payment is determined using the methodology set forth in section 1847A of the Act, except that the payment amount must be 100 percent of the ASP, if ASP is used; and the payment must be 100 percent of the wholesale acquisition cost (WAC), if WAC is used.

* * * * *

- (4) * * *
- (i) * * *

(E) Take-home supply of opioid antagonist medications that are approved by the Food and Drug Administration under section 505 of the Federal, Food, Drug and Cosmetic Act for the emergency treatment of known or suspected opioid overdose an adjustment will be made when these medications are dispensed. This adjustment will be limited to once every 30 days to the extent that it is medically reasonable and necessary. The amount of the adjustment will be determined using the methodology in paragraph (d)(2)(i) of this section, except the payment for auto-injector naloxone will be determined using the lowest pricing available (the lower of 100 percent of the ASP, 100 percent of WAC, or the National Average Drug Acquisition Cost).

* * * * *

■ 6. Section 410.78 is amended by revising paragraph (a)(3) and (f) to read as follows:

§ 410.78 Telehealth services.

- (a) * * *

(3) *Interactive telecommunications system* means multimedia communications equipment that includes, at a minimum, audio and video equipment permitting two-way, real-time interactive communication between the patient and distant site physician or practitioner.

* * * * *

(f) *Process for adding or deleting services.* Except as otherwise provided in this paragraph (f), changes to the list of Medicare telehealth services are made through the annual physician fee schedule rulemaking process. During the Public Health Emergency, as defined in § 400.200 of this chapter, we will use a subregulatory process to modify the services included on the Medicare telehealth list during the Public Health Emergency taking into consideration infection control, patient safety, and other public health concerns resulting from the emergency. CMS maintains the list of services that are Medicare

telehealth services under this section, including the current HCPCS codes that describe the services on the CMS website.

■ 7. Section 410.79 is amended by revising paragraphs (c)(3)(i) and (ii) and (e) to read as follows:

§ 410.79 Medicare Diabetes Prevention Program expanded model: Conditions of coverage.

* * * * *

- (c) * * *
- (3) * * *

(i) Except as set forth in paragraph (c)(3)(ii) of this section—

(A) The MDPP services period ends upon completion of the core services period described in paragraph (c)(2)(i) of this section, unless the MDPP beneficiary qualifies for the first ongoing maintenance session interval, in accordance with paragraph (c)(1)(ii) of this section.

(B) If the MDPP beneficiary qualifies for the first ongoing maintenance session interval as described in paragraph (c)(1)(ii) of this section, the MDPP services period ends upon completion of that maintenance session interval, unless the MDPP beneficiary qualifies for a subsequent ongoing maintenance session interval, in accordance with paragraph (c)(1)(iii) of this section, in which case the MDPP service period ends upon completion of the last ongoing maintenance session interval for which the beneficiary qualified.

(ii) In the case of an applicable 1135 waiver event as defined in paragraph (e) of this section, the MDPP services period may be suspended and resumed or restarted in accordance with paragraph (e) of this section.

* * * * *

(e) *MDPP expanded model Emergency Policy.* (1) Notwithstanding paragraphs (a) through (d) of this section, the policies described in this paragraph (e) apply during the Public Health Emergency (PHE) as defined in § 400.200 of this chapter and during any future 1135 waiver event that CMS determines may disrupts in-person MDPP services (an “applicable 1135 waiver event”). For purposes of this paragraph (e), “1135 waiver event” means an emergency period and emergency area, as such terms are defined in section 1135(g) of the Act, for which the Secretary has authorized one of more waivers under section 1135 of the Act.

(2)(i) CMS determines that an 1135 waiver event may disrupt in-person MDPP services if MDPP suppliers would likely be unable to conduct classes in-person, or MDPP beneficiaries

would likely be unable to attend in-person classes, for reasons related to health, safety, or site availability or suitability. Health and safety reasons may include, but are not limited to, the avoidance of transmission of contagious diseases, compliance with laws and regulations during an 1135 waiver event, or the physical safety of MDPP beneficiaries and MDPP coaches, as defined in § 424.205(a), during an 1135 waiver event.

(ii) If CMS determines that an 1135 event may disrupt in-person MDPP services, CMS will communicate such determination for policies described in this paragraph (e), to all impacted MDPP suppliers.

(3) The following changes apply under this paragraph (e), when CMS has determined that an 1135 waiver event may disrupt in-person MDPP services:

(i) The in-person attendance requirements of paragraphs (c)(1)(ii)(A) and (c)(1)(iii)(A) of this section do not apply.

(ii) MDPP suppliers may start new cohorts during the PHE as defined in § 400.200 of this chapter or an applicable 1135 waiver event only if a baseline weight measurement can be obtained as described in paragraph (e)(4)(iii) of this section.

(iii) MDPP suppliers can obtain weight measurements for MDPP beneficiaries for the baseline weight and any weight loss based performance achievement goals in the following manner:

(A) In-person, when the weight measurement can be obtained safely and in compliance with all applicable laws and regulations;

(B) Via digital technology, such as scales that transmit weights securely via wireless or cellular transmission; or

(C) Self-reported weight measurements from the at-home digital scale of the MDPP beneficiary. Self-reported weights must be submitted via video, by the MDPP beneficiary to the MDPP supplier. The video must clearly document the weight of the MDPP beneficiary as it appears on his/her digital scale on the date associated with the billable MDPP session.

(iv) The virtual session limits described in paragraphs (d)(2), (d)(3)(i) and (ii) of this section do not apply, and MDPP suppliers may provide all MDPP sessions virtually during the PHE as defined in § 400.200 of this chapter or applicable 1135 waiver event so long as the provision of virtual services complies with all of the following requirements:

(A) The curriculum furnished during the virtual session must address the

same CDC-approved DPP curriculum topic as the regularly scheduled session;

(B) The MDPP supplier furnishes to the MDPP beneficiary a maximum of one virtual make-up session on the same day as a regularly scheduled session;

(C) The MDPP supplier furnishes to the MDPP beneficiary a maximum of one virtual make-up session per week;

(D) Virtual sessions must be furnished in a manner consistent with the DPRP standards for virtual sessions;

(E) An MDPP supplier can offer virtual sessions only upon an individual MDPP beneficiary's request or agreement to receive services virtually;

(F) An MDPP supplier can offer to an MDPP beneficiary:

(1) No more than 16 virtual sessions offered weekly during the core session period, months 1 through 6 of the MDPP services period;

(2) No more than 6 virtual sessions offered monthly during the core maintenance session interval periods, months 7 through 12 of the MDPP services period; and

(3) No more than 12 virtual sessions offered monthly during the ongoing maintenance session intervals, months 13 through 24.

(v) MDPP suppliers may suspend the in-person delivery of the set of MDPP services, when necessary due to the 1135 waiver event, and subsequently resume services either upon the effective end date of the 1135 waiver event or upon an effective date specified by CMS. Upon resumption of the set of MDPP services, the MDPP services must be furnished in compliance with the requirements in accordance with the following paragraphs (the once per lifetime requirement as described in paragraph (c)(1)(i)(B) of this section does not apply):

(A) Beneficiaries who were receiving MDPP services as of March 1, 2020 may elect to restart the set of MDPP services at the beginning or resume with the most recent attendance session of record.

(B) Beneficiaries who begin the set of MDPP services on or after January 1, 2021 and who are in the first 12 months of the set of MDPP services as of the start of an applicable 1135 waiver event, and whose sessions are suspended due to the applicable 1135 waiver event, may elect to restart the set of MDPP services at the beginning, or may resume with the most recent attendance session of record.

(C) Beneficiaries who began the set of MDPP services on or after January 1, 2021 and who are in the second year of the set of MDPP services as of the start of an applicable 1135 waiver event are eligible to restart the ongoing

maintenance session interval in which they were participating at the start of the applicable 1135 waiver event or may resume with the most recent attendance session of record;

(D) Beneficiaries who elected to continue with MDPP services virtually, as described in paragraph (c)(iii) of this section, are not eligible to restart or resume the set of MDPP services at a later date.

(E) Beneficiaries who elect to suspend the set of MDPP services at the start of an applicable 1135 waiver event may choose to restart the set of MDPP services at the beginning, or may resume with the most recent attendance session of record, only one time per 1135 waiver event.

PART 414—PAYMENT FOR PART B MEDICAL AND OTHER HEALTH SERVICES

■ 8. The authority citation for part 414 continues to read as follows:

Authority: 42 U.S.C. 1302, 1395hh, and 1395rr(b)(l).

■ 9. Section 414.502 is amended by revising the definitions of “Data collection period” and “Data reporting period” to read as follows:

§ 414.502 Definitions.

Data collection period is the 6 months from January 1 through June 30 during which applicable information is collected and that precedes the data reporting period, except that for the data reporting period of January 1, 2022 through March 31, 2022, the data collection period is January 1, 2019 through June 30, 2019.

Data reporting period is the 3-month period, January 1 through March 31, during which a reporting entity reports applicable information to CMS and that follows the preceding data collection period, except that for the data collection period of January 1, 2019 through June 30, 2019, the data reporting period is January 1, 2022 through March 31, 2022.

■ 10. Section 414.504 is amended by revising paragraph (a)(1) to read as follows:

§ 414.504 Data reporting requirements.

(a) * * *
(1) For CDLTs that are not ADLTs, initially January 1, 2017 and every 3 years beginning January 1, 2022.

■ 11. Section 414.507 is amended by revising paragraphs (d) introductory text and (d)(4) and adding paragraph (d)(7) to read as follows:

§ 414.507 Payment for clinical diagnostic laboratory tests.

(d) *Phase-in of payment reductions.* For years 2018 through 2024, the payment rates established under this section for each CDLT that is not a new ADLT or new CDLT, may not be reduced by more than the following amounts for—

(4) 2021—0.0 percent of the payment rate established in 2020.

(7) 2024—15 percent of the payment rate established in 2023.

■ 12. Section 414.902 is amended by revising the definition of “Multiple source drug” to read as follows:

§ 414.902 Definitions.

Multiple source drug means a drug described by section 1847A(c)(6)(C) of the Act, including drug products approved through the pathway established under section 505(b)(2) of the Federal Food, Drug, and Cosmetic Act that are described in § 414.904(k).

■ 13. Section 414.904 is amended by adding paragraph (k) to read as follows:

§ 414.904 Average sales price as the basis for payment.

(k) *Assigning drug products approved through the pathway established under section 505(b)(2) of the Federal Food, Drug, and Cosmetic Act to a multiple source drug code.* (1) Drug products approved through the pathway established under section 505(b)(2) of the Federal Food, Drug, and Cosmetic Act are assigned to multiple source drug billing and payment codes based on—

(i) The existence of a multiple source drug billing code described by section 1847A(c)(6)(C) of the Act.

(ii) A determination of whether an existing multiple source drug code's descriptor describes the drug product approved through the pathway established under section 505(b)(2) of the Federal Food, Drug, and Cosmetic Act based on factors including—

- (A) The active ingredient(s), drug name, and the drug description.
- (B) Information in drug labeling.
- (C) Prescribing and clinical use of the drug.
- (2) [Reserved]

■ 14. Section 414.1305 is amended—

- a. By revising the definition of “Attestation”;
- b. In the definition of “Certified Electronic Health Record Technology

- (CEHRT)” by revising paragraphs (1)(ii)(D) and (2)(ii) introductory text;
- c. By revising the definition of “Collection type”;
- d. By removing the definition of “Full TIN APM”;
- e. By revising the definitions of “Low volume threshold”, “Meaningful EHR user for MIPS”, and “MIPS APM”;
- f. By adding definitions for “Physician Compare” and “Primary care services” in alphabetical order; and
- g. By revising the definitions of “Submission type” and “Submitter type”.

The revisions and addition read as follows:

§ 414.1305 Definitions.

* * * * *

Attestation means a secure mechanism, specified by CMS, with respect to a particular performance period, whereby a MIPS eligible clinician or group may submit the required data for the Promoting Interoperability or the improvement activities performance categories of MIPS in a manner specified by CMS.

* * * * *

Certified Electronic Health Record Technology (CEHRT) * * *

(1) * * *

(ii) * * *

(D) The certification criteria that are necessary to report on applicable objectives and measures specified for the MIPS Promoting Interoperability performance category, including the applicable measure calculation certification criterion at 45 CFR 170.314(g)(1) or (2) or 45 CFR 170.315(g)(1) or (2) for all certification criteria that support an objective with a percentage-based measure.

* * * * *

(2) * * *

(ii) Necessary to report on applicable objectives and measures specified for the MIPS Promoting Interoperability performance category including the following:

* * * * *

Collection type means a set of quality measures with comparable specifications and data completeness criteria, as applicable, including, but not limited to: electronic clinical quality measures (eCQMs); MIPS Clinical Quality Measures (MIPS CQMs); QCDR measures; Medicare Part B claims measures; for the 2019 through 2022 MIPS payment years, CMS Web Interface measures; the CAHPS for MIPS survey; and administrative claims measures.

* * * * *

Low-volume threshold means:

(1) For the 2019 MIPS payment year, the low-volume threshold that applies to an individual eligible clinician, group, or APM Entity group that, during the low-volume threshold determination period described in paragraph (4) of this definition, has Medicare Part B allowed charges less than or equal to \$30,000 or provides care for 100 or fewer Medicare Part B-enrolled individuals.

(2) For the 2020 MIPS payment year, the low-volume threshold that applies to an individual eligible clinician, group, or APM Entity group that, during the low-volume threshold determination period described in paragraph (4) of this definition, has allowed charges for covered professional services less than or equal to \$90,000 or furnishes covered professional services to 200 or fewer Medicare Part B-enrolled individuals.

(3) For the 2021 and 2022 MIPS payment years, the low-volume threshold that applies to an individual eligible clinician, group, or APM Entity group that, during the MIPS determination period, has allowed charges for covered professional services less than or equal to \$90,000, furnishes covered professional services to 200 or fewer Medicare Part B-enrolled individuals, or furnishes 200 or fewer covered professional services to Medicare Part B-enrolled individuals.

(4) For the 2019 and 2020 MIPS payment years, the low-volume threshold determination period is a 24-month assessment period consisting of:

(i) An initial 12-month segment that spans from the last 4 months of the calendar year 2 years prior to the performance period through the first 8 months of the calendar year preceding to the performance period; and

(ii) A second 12-month segment that spans from the last 4 months of the calendar year 1 year prior to the performance period through the first 8 months of the calendar year performance period. An individual eligible clinician, group, or APM Entity group that is identified as not exceeding the low-volume threshold during the initial 12-month segment will continue to be excluded under § 414.1310(b)(1)(iii) for the applicable year regardless of the results of the second 12-month segment analysis. For the 2019 MIPS payment year, each segment of the low-volume threshold determination period includes a 60-day claims run out. For the 2020 MIPS payment year, each segment of the low-volume threshold determination period includes a 30-day claims run out.

(5) Beginning with the 2023 MIPS payment year, the low-volume threshold that applies to an individual eligible clinician, or group that, during the MIPS

determination period, has allowed charges for covered professional services less than or equal to \$90,000, furnishes covered professional services to 200 or fewer Medicare Part B-enrolled individuals, or furnishes 200 or fewer covered professional services to Medicare Part B-enrolled individuals.

Meaningful EHR user for MIPS means a MIPS eligible clinician who possesses CEHRT, uses the functionality of CEHRT, and reports on applicable objectives and measures specified for the Promoting Interoperability performance category for a performance period in the form and manner specified by CMS, supports information exchange and the prevention of health information blocking, and engages in activities related to supporting providers with the performance of CEHRT.

* * * * *

MIPS APM means:

(1) For the 2019 through 2022 MIPS payment years, an APM that meets the criteria specified under § 414.1370(b).

(2) Beginning with the 2023 MIPS payment year, an APM that meets the criteria as set forth in § 414.1367(b).

* * * * *

Physician Compare means the Physician Compare internet website of the Centers for Medicare & Medicaid Services (or a successor website).

Primary care services for purposes of CAHPS for MIPS survey beneficiary assignment means the set of services identified by the following:

(1) CPT codes:

(i) 99201 through 99215 (codes for office or other outpatient visit for the evaluation and management of a patient); 99304 through 99318 (codes for professional services furnished in a nursing facility, excluding professional services furnished in a SNF for claims identified by place of service (POS) modifier 31); 99319 through 99340 (codes for patient domiciliary, rest home, or custodial care visit); 99341 through 99350 (codes for evaluation and management services furnished in a patient’s home for claims identified by POS modifier 12); 99487, 99489, and 99490 (codes for chronic care management); and 99495 and 99496 (codes for transitional care management services); and

(ii) Beginning with the 2023 MIPS payment year, 99421, 99422, and 99423 (codes for online digital evaluation and management services (e-visit)); 99441, 99442, and 99443 (codes for telephone evaluation and management services); and 96160 and 96161 (codes for administration of health risk assessment).

(2) HCPCS codes:
 (i) G0402 (code for the Welcome to Medicare visit); and G0438 and G0439 (codes for the annual wellness visits); and
 (ii) Beginning with the 2023 MIPS payment year, G2010 (code for remote evaluation of patient video/images); and G2012 (code for virtual check-in).

Submission type means the mechanism by which the submitter type submits data to CMS, including, but not limited to:

- (1) Direct;
- (2) Log in and upload;
- (3) Log in and attest;
- (4) Medicare Part B claims; and
- (5) For the 2019 through 2022 MIPS payment years, the CMS Web Interface.

Submitter type means the MIPS eligible clinician, group, Virtual Group, APM Entity, or third party intermediary acting on behalf of a MIPS eligible clinician, group, Virtual Group, or APM Entity, as applicable, that submits data on measures and activities under MIPS.

■ 15. Section 414.1310 is amended by revising paragraphs (b)(1)(iii) and (e)(1) to read as follows:

§ 414.1310 Applicability.

- (b) * * *
- (1) * * *
- (iii) Does not exceed the low volume threshold.

(A) Beginning with the 2021 MIPS payment year, if an individual eligible clinician or group exceeds at least one, but not all, of the low-volume threshold criteria and elects to participate in MIPS as a MIPS eligible clinician, the individual eligible clinician or group is treated as a MIPS eligible clinician for the applicable MIPS payment year. For such solo practitioners and groups that elect to participate in MIPS as a virtual group (except for APM Entity groups in MIPS APMs), the virtual group election under § 414.1315 constitutes an election under this paragraph and results in the solo practitioners and groups being treated as MIPS eligible clinicians for the applicable MIPS payment year.

(B) For the 2021 and 2022 MIPS payment years, if an APM Entity group in a MIPS APM exceeds at least one, but not all, of the low-volume threshold criteria and elects to participate in MIPS as a MIPS eligible clinician, the APM Entity group is treated as a MIPS eligible clinician for the applicable MIPS payment year. For such APM Entity groups in MIPS APMs, only the APM Entity group election can result in the APM Entity group being treated as MIPS

eligible clinicians for the applicable MIPS payment year.

* * * * *

(e) * * *
 (1) Except as provided under §§ 414.1317(b) and 414.1370(f)(2), each MIPS eligible clinician in the group will receive a MIPS payment adjustment factor (or additional MIPS payment adjustment factor) based on the group's combined performance assessment.

* * * * *

■ 16. Section 414.1317 is added to read as follows:

§ 414.1317 APM Entity groups.

(a) *APM entity group determination.* The APM Entity group will be determined according to the requirements set forth in § 414.1425(b)(1).

(1) In addition to the dates set forth in § 414.1425(b)(1), for purposes of MIPS, the APM Entity group includes an eligible clinician who is on a Participation List on December 31 of the MIPS performance period.

(2) For purposes of MIPS scoring, the APM Entity group will be comprised only of those eligible clinicians within the APM Entity group who are determined to be MIPS eligible at the individual or group level.

(3) For purposes of calculating the APM Entity group score, MIPS scores submitted by virtual groups will not be included.

(b) *APM Entity group scoring.* The MIPS final score calculated for the APM Entity is applied to each MIPS eligible clinician in the APM Entity group. The MIPS payment adjustment is applied at the TIN/NPI level for each of the MIPS eligible clinicians in the APM Entity group.

(1) *Determination of performance category score for each MIPS eligible clinician in an APM Entity.* For APM Entities, where a performance category is not reported by the APM Entity, CMS uses one score for each MIPS eligible clinician in an APM Entity group to derive a single average APM Entity score for the performance category. The applicable score for each MIPS eligible clinician is the higher of either:

(i) A group score based on the measure data for the performance category reported by a TIN for the MIPS eligible clinician according to MIPS submission and reporting requirements for groups.

(ii) An individual score based on the measure data for the performance category reported by the MIPS eligible clinician according to MIPS submission and reporting requirements for individuals.

(iii) In the event that a MIPS eligible clinician in an APM Entity receives an exception from the reporting requirements, such eligible clinician will be assigned a null score when CMS calculates the APM Entity's performance category score.

(2) *Improvement scoring for APM Entity groups.* For an APM Entity for which CMS calculated a total performance category score for one or more participants in the APM Entity for the preceding MIPS performance period, CMS calculates an improvement score for each performance category for which a previous year's total performance category score is available as specified in § 414.1380(b).

(3) *Extreme and uncontrollable circumstances.* Beginning with the 2022 MIPS payment year, an APM Entity may submit to CMS an application described at § 414.1380(c)(2)(i)(A)(6) and § 414.1380(c)(2)(i)(C)(2) requesting reweighting of all four MIPS performance categories and for all MIPS eligible clinicians in the APM Entity group, based on extreme and uncontrollable circumstances.

(i) An APM Entity must demonstrate in its application to CMS that greater than 75 percent of its participant MIPS eligible clinicians would be eligible for reweighting the Promoting Interoperability performance category for the applicable performance period.

(ii) If CMS approves the request for reweighting based on an APM Entity's application, and if MIPS data are submitted for the APM Entity for the applicable performance period, all four of the MIPS performance categories will be reweighted for the APM Entity group notwithstanding the data submission.

■ 17. Section 414.1320 is amended by revising paragraphs (d) introductory text and (d)(1) and adding paragraph (g) to read as follows:

§ 414.1320 MIPS performance period.

* * * * *

(d) Beginning with the 2023 MIPS payment year, the performance period for:

(1) The quality and cost performance categories is the full calendar year (January 1 through December 31) that occurs 2 years prior to the applicable MIPS payment year, except as otherwise specified for administrative claims-based measures in the MIPS final list of quality measures described in § 414.1330(a)(1).

* * * * *

(g) For purposes of the 2024 MIPS payment year and each subsequent MIPS payment year, the performance period for:

(1) The Promoting Interoperability performance category is a minimum of a continuous 90-day period within the calendar year that occurs 2 years prior to the applicable MIPS payment year, up to and including the full calendar year.

(2) [Reserved]

■ 18. Section 414.1325 is amended by revising paragraph (c)(1) to read as follows:

§ 414.1325 Data submission requirements.

* * * * *

(c) * * *

(1) For the quality performance category, the direct; login and upload; Medicare Part B claims (beginning with the 2021 MIPS payment year, for small practices only); and for the 2019 through 2022 MIPS payment years, CMS Web Interface (for groups consisting of 25 or more eligible clinicians or a third party intermediary submitting on behalf of a group) submission types.

* * * * *

■ 19. Section 414.1330 is amended by adding paragraphs (b)(4) and (5) to read as follows:

§ 414.1330 Quality performance category.

* * * * *

(b) * * *

(4) 40 percent of a MIPS eligible clinician's final score for the MIPS payment year 2023.

(5) 30 percent of a MIPS eligible clinician's final score for the MIPS payment year 2024 and future years.

■ 20. Section 414.1350 is amended by adding paragraphs (d)(4) and (5) to read as follows:

§ 414.1350 Cost performance category.

* * * * *

(d) * * *

(4) 20 percent of the MIPS final score for MIPS payment year 2023.

(5) 30 percent of the MIPS final score for MIPS payment year 2024 and each subsequent MIPS payment year.

■ 21. Section 414.1367 is added to read as follows:

§ 414.1367 APM performance pathway.

(a) *General.* Beginning with the 2023 MIPS payment year, the APM Performance Pathway is a MIPS scoring methodology available to MIPS eligible clinicians identified on the Participation List or Affiliated Practitioner List of an APM Entity participating in a MIPS APM.

(b) *Criteria for MIPS APMs.* MIPS APMs are those in which:

(1) APM Entities participate in the APM under an agreement with CMS or through a law or regulation; and

(2) The APM bases payment on quality measures and cost/utilization.

(c) *MIPS performance category scoring in the APM Performance Pathway.*

(1) *Quality.* Except as provided in paragraphs (c)(1)(i) and (ii) of this section, the quality performance category score is calculated for a MIPS eligible clinician, group, or APM Entity group in accordance with § 414.1380(b)(1) based on the APM Performance Pathway quality measure set established by CMS through rulemaking for a MIPS payment year.

(i) Each submitted measure that does not have a benchmark or meet the case minimum requirement is excluded from the MIPS eligible clinician, group, or APM Entity group's total measure achievement points and total available measure achievement points.

(ii) Any measure that is identified as topped out is not subject to the scoring cap described at § 414.1380(b)(1)(iv).

(2) *Cost.* The cost performance category weight is zero percent for MIPS eligible clinicians who are scored through the APM Performance Pathway.

(3) *Improvement activities.* The improvement activities performance category score is calculated for a MIPS eligible clinician, group, or APM Entity group in accordance with § 414.1380(b)(3) based on the activities required by the MIPS APM that are included in the MIPS final inventory of improvement activities described in § 414.1355(a) (excluding any such activities that the MIPS eligible clinician, group, or APM Entity group does not perform. MIPS eligible clinicians, groups, or APM Entities may report additional improvement activities in accordance with § 414.1360.

(4) *Promoting interoperability.* The promoting interoperability performance category will be scored for the MIPS eligible clinician, group, or APM Entity as described in § 414.1375.

(d) *APM Performance Pathway performance category weights—(1) Performance category weights.* Subject to paragraph (d)(2) of this section, the performance category weights used to calculate the final score for a MIPS eligible clinician, group, or APM Entity reporting through the APM performance Pathway are:

(i) Quality: 50 percent.

(ii) Cost: 0 percent.

(iii) Improvement Activities: 20 percent.

(iv) Promoting Interoperability: 30 percent.

(2) *Reweighting MIPS performance categories.* If CMS determines, in accordance with § 414.1380(c)(2), that a different scoring weight should be assigned to the quality or promoting interoperability performance category,

CMS will redistribute the performance category weights as follows:

(i) If CMS reweights the quality performance category to 0 percent: Promoting Interoperability performance category is reweighted to 75 percent, and Improvement Activities performance category is reweighted to 25 percent.

(ii) If CMS reweights the Promoting Interoperability performance category to 0 percent: Quality performance category is reweighted to 75 percent, and Improvement Activities performance category is reweighted to 25 percent.

(e) *Final score.* The final score is calculated for a MIPS eligible clinician, group, or APM Entity in accordance with § 414.1380(c).

■ 22. Section 414.1370 is amended by revising paragraph (a) to read as follows:

§ 414.1370 APM scoring standard under MIPS.

(a) *General.* For the 2019 through 2022 MIPS payment years, the APM scoring standard is the MIPS scoring methodology applicable for MIPS eligible clinicians identified on the Participation List for the performance period of an APM Entity participating in a MIPS APM.

* * * * *

■ 23. Section 414.1380 is amended—

■ a. By revising paragraph (b)(1)(i) introductory text;

■ b. In paragraph (b)(1)(i)(A)(1) by removing “for the 2019 through 2022 MIPS payment years” and adding in its place “for the 2019 through 2023 MIPS payment years”;

■ c. By revising paragraphs (b)(1)(iii) and (b)(1)(iv)(B);

■ d. In paragraph (b)(1)(v)(A)(1)(ii) by removing “For the 2019 through 2022 MIPS payment years” and adding in its place “For the 2019 through 2023 MIPS payments years”;

■ e. In paragraph (b)(1)(v)(B)(1)(i) by removing “For the 2019 through 2022 MIPS payment years” and adding in its place “For the 2019 through 2023 MIPS payment years”;

■ f. In paragraph (b)(1)(vi)(C)(4) by removing “For the 2020 through 2022 MIPS payment years” and adding in its place “For the 2020 through 2023 MIPS payment years”;

■ g. By revising paragraph (b)(1)(vii)(A);

■ h. By removing paragraph (b)(1)(viii);

■ i. By revising paragraphs (c)(2)(i)(A)(4) and (5);

■ j. By adding paragraphs (c)(2)(ii)(E) and (F);

■ k. By revising paragraph (c)(3) introductory text and (c)(3)(iii); and

■ l. By adding paragraph (c)(3)(iv).

The revisions and additions read as follows:

§ 414.1380 Scoring.

* * * * *

(b) * * *

(1) * * *

(i) Measure achievement points. For the 2019 through 2023 MIPS payment years, MIPS eligible clinicians receive between 3 and 10 measure achievement points (including partial points) for each measure required under § 414.1335 on which data is submitted in accordance with § 414.1325 that has a benchmark at paragraph (b)(1)(ii) of this section, meets the case minimum requirement at paragraph (b)(1)(iii) of this section, and meets the data completeness requirement at § 414.1340 and for each administrative claims-based measure that has a benchmark at paragraph (b)(1)(ii) of this section and meets the case minimum requirement at paragraph (b)(1)(iii) of this section. The number of measure achievement points received for each such measure is determined based on the applicable benchmark decile category and the percentile distribution. MIPS eligible clinicians receive zero measure achievement points for each measure required under § 414.1335 on which no data is submitted in accordance with § 414.1325. MIPS eligible clinicians that submit data in accordance with § 414.1325 on a greater number of measures than required under § 414.1335 are scored only on the required measures with the greatest number of measure achievement points. Beginning with the 2021 MIPS payment year, MIPS eligible clinicians that submit data in accordance with § 414.1325 on a single measure via multiple collection types are scored only on the data submission with the

greatest number of measure achievement points.

* * * * *

(iii) *Minimum case requirements.*

Except as otherwise specified for administrative claims-based measures in the MIPS final list of quality measures described in § 414.1330(a)(1), the minimum case requirement is 20 cases.

(iv) * * *

(B) Except as provided in paragraph (b)(1)(iv)(B)(1) of this section, beginning with the 2021 MIPS payment year, each measure (except for measures in the CMS Web Interface) for which the benchmark for the applicable collection type is identified as topped out for 2 or more consecutive years receives no more than 7 measure achievement points in the second consecutive year it is identified as topped out, and beyond.

(1) For the 2023 MIPS payment year, a measure is topped out if it is identified as such in the baseline period benchmarks for the 2020 MIPS performance period and in the performance period benchmarks for the 2021 MIPS performance period.

(2) [Reserved]

* * * * *

(vii) * * *

(A) For each submitted measure that is impacted by significant changes that CMS determines may result in patient harm or misleading results, performance is based on data for 9 consecutive months of the applicable CY performance period. If such data are not available, the measure is excluded from a MIPS eligible clinician's total measure achievement points and total available measure achievement points. For purposes of this paragraph (b)(1)(vii)(A), "significant changes" means changes to codes (including, but not limited to, ICD-10, CPT, and HCPCS codes),

clinical guidelines, or measure specifications. CMS will publish on the CMS website a list of all measures scored under this paragraph (b)(1)(vii)(A) as soon as technically feasible, but by no later than the beginning of the data submission period at § 414.1325(e)(1).

* * * * *

(c) * * *

(2) * * *

(i) * * *

(A) * * *

(4) For the Promoting Interoperability performance category for the 2021, 2022 and 2023 MIPS payment years, the MIPS eligible clinician is a physical therapist, occupational therapist, clinical psychologist, qualified audiologist, qualified speech-language pathologist, or a registered dietitian or nutrition professional. In the event that a MIPS eligible clinician submits data for the Promoting Interoperability performance category, the scoring weight specified in paragraph (c)(1) of this section will be applied and its weight will not be redistributed.

(5) For the Promoting Interoperability performance category for the 2019, 2020, 2021, 2022, and 2023 MIPS payment years, the MIPS eligible clinician is a nurse practitioner, physician assistant, clinical nurse specialist, or certified registered nurse anesthetist. In the event that a MIPS eligible clinician submits data for the Promoting Interoperability performance category, the scoring weight specified in paragraph (c)(1) of this section will be applied and its weight will not be redistributed.

* * * * *

(ii) * * *

(E) For the 2023 MIPS payment year:

Reweighting scenario	Quality (%)	Cost (%)	Improvement Activities (%)	Promoting Interoperability (%)
No Reweighting Needed:				
Scores for all four performance categories	40%	20%	15%	25%
No Cost	55%	0%	15%	30%
No Promoting Interoperability	65%	20%	15%	0%
No Quality	0%	20%	15%	65%
No Improvement Activities	55%	20%	0%	25%
No Cost and no Promoting Interoperability	85%	0%	15%	0%
No Cost and no Quality	0%	0%	15%	85%
No Cost and no Improvement Activities	70%	0%	0%	30%
No Promoting Interoperability and no Quality	0%	50%	50%	0%
No Promoting Interoperability and no Improvement Activities	80%	20%	0%	0%
No Quality and no Improvement Activities	0%	20%	0%	80%

(F) For the 2024 MIPS payment year:

Reweighting scenario	Quality (%)	Cost (%)	Improvement Activities (%)	Promoting Interoperability (%)
No Reweighting Needed:				
Scores for all four performance categories	30%	30%	15%	25%
No Cost	55%	0%	15%	30%
No Promoting Interoperability	55%	30%	15%	0%
No Quality	0%	30%	15%	55%
No Improvement Activities	45%	30%	0%	25%
No Cost and no Promoting Interoperability	85%	0%	15%	0%
No Cost and no Quality	0%	0%	15%	85%
No Cost and no Improvement Activities	70%	0%	0%	30%
No Promoting Interoperability and no Quality	0%	50%	50%	0%
No Promoting Interoperability and no Improvement Activities	70%	30%	0%	0%
No Quality and no Improvement Activities	0%	30%	0%	70%

* * * * *

(3) *Complex patient bonus.* For the 2020, 2021, 2022, and 2023 MIPS payment years, provided that a MIPS eligible clinician, group, virtual group or APM entity submits data for at least one MIPS performance category for the applicable performance period for the MIPS payment year, a complex patient bonus will be added to the final score for the MIPS payment year, as follows:

* * * * *

(iii) The complex patient bonus cannot exceed 5.0 except as provided in paragraph (c)(3)(iv) of this section.

(iv) For the 2022 MIPS payment year, the complex patient bonus is calculated pursuant to paragraphs (c)(3)(i) and (ii), and the resulting numerical value is then multiplied by 2.0. The complex patient bonus cannot exceed 10.0.

* * * * *

■ 24. Section 414.1400 is amended—

- a. By revising paragraphs (a)(2)(i) and (ii) and (a)(4);
- b. By revising the paragraph (b) subject heading and paragraph (b)(2) introductory text;
- c. By adding paragraphs (b)(2)(iv) and (v);

- d. By adding paragraphs (b)(3)(v)(C)(1) and (2);
 - e. By revising paragraphs (b)(3)(v)(E) and (b)(3)(vi);
 - f. By removing paragraphs (b)(3)(vii)(H) and (L);
 - g. By redesignating paragraphs (b)(3)(vii)(I), (J), (K), (M), and (N) as paragraphs (b)(3)(vii)(H), (I), (J), (K), and (L), respectively;
 - h. By revising the paragraph (c) subject heading;
 - i. By adding paragraphs (c)(2)(iii) and (iv); and
 - j. By revising paragraph (f)(1)(i).
- The additions and revisions read as follows:

§ 414.1400 Third party intermediaries.

(a) * * *

(2) * * *

(i) Except as provided under paragraph (a)(2)(ii) of this section, QCDRs, qualified registries, and Health IT vendors must be able to submit data for all of the following MIPS performance categories:

(A) Quality, except:

(1) The CAHPS for MIPS survey; and

(2) For qualified registries and Health IT vendors, QCDR measures;

(B) Improvement activities; and

(C) Promoting Interoperability, if the eligible clinician, group, or virtual group is using CEHRT; however, a third party intermediary may be excepted from this requirement if its MIPS eligible clinicians, groups or virtual groups fall under the reweighting policies at § 414.1380(c)(2)(i)(A)(4) or (5) or § 414.1380(c)(2)(i)(C)(1) through (7) or § 414.1380(c)(2)(i)(C)(9).

(ii) Health IT vendors that do not support MIPS Value Pathways must be able to submit data for at least one of the MIPS performance categories described in paragraphs (a)(2)(i)(A) through (C) of this section.

* * * * *

(4) Third party intermediary approval criteria—

(i) To be approved as a third party intermediary, an entity must agree to meet the applicable requirements of this section, including, but not limited to, the following:

(A) A third party intermediary's principle place of business and retention of any data must be based in the U.S.

(B) If the data is derived from CEHRT, a QCDR, qualified registry, or health IT vendor must be able to indicate its data source.

(C) All data must be submitted in the form and manner specified by CMS.

(D) If the clinician chooses to opt-in in accordance with § 414.1310, the third party intermediary must be able to transmit that decision to CMS.

(E) The third party intermediary must provide services throughout the entire performance period and applicable data submission period.

(F) Prior to discontinuing services to any MIPS eligible clinician, group, or virtual group during a performance period, the third party intermediary must support the transition of such MIPS eligible clinician, group, or virtual group to an alternate third party intermediary, submitter type, or, for any measure on which data has been collected, collection type according to a CMS approved a transition plan.

(ii) The determination of whether to approve an entity as a third party

intermediary for a MIPS payment year may take into account:

(A) Whether the entity failed to comply with the requirements of this section for any prior MIPS payment year for which it was approved as third party intermediary; and

(B) Whether the entity provided inaccurate information regarding the requirements of this subpart to any eligible clinician.

(iii) Beginning with the 2023 MIPS payment year, third party intermediaries must attend and complete training and support sessions in the form and manner, and at the times, specified by CMS.

* * * * *

(b) *QCDRs.*

* * * * *

(2) *QCDR conditions for approval.* In addition to the other requirements in this section, the criteria for an entity to be approved as a QCDR include the following:

* * * * *

(iv) Beginning with the 2023 payment year, the QCDR must conduct annual data validation audits in accordance with this paragraph (b)(2)(iv).

(A) The QCDR must conduct data validation for the payment year prior to submitting any data for that payment year to CMS for purposes of the MIPS program.

(B) The QCDR must conduct data validation on data for each performance category for which it will submit data, including if applicable the Quality, Improvement Activities, and Promoting Interoperability performance categories.

(C) The QCDR must conduct data validation on data for each submitter type for which it will submit data, including if applicable MIPS eligible clinicians, groups, virtual groups, voluntary participants, and opt-in participants.

(D) The QCDR must use clinical documentation (provided by the clinicians they are submitting data for) to validate that the action or outcome measured actually occurred or was performed.

(E) The QCDR shall conduct each data validation audit using a sampling methodology that meets the following requirements:

(1) Uses a sample size of at least 3 percent of the TIN/NPIs for which the QCDR will submit data to CMS, except that if a 3 percent sample size would result in fewer than 10 TIN/NPIs, the QCDR must use a sample size of at least 10 TIN/NPIs, and if a 3 percent sample size would result in more than 50 TIN/NPIs, the QCDR may use a sample size of 50 TIN/NPIs.

(2) Uses a sample that includes at least 25 percent of the patients of each TIN/NPI in the sample, except that the sample for each TIN/NPI must include a minimum of 5 patients and does not need to include more than 50 patients.

(F) Each QCDR data validation audit must include the following:

(1) Verification of the eligibility status of each eligible clinician, group, virtual group, opt-in participant, and voluntary participant.

(2) Verification of the accuracy of TINs and NPIs.

(3) Calculation of reporting and performance rates.

(4) Verification that only the MIPS quality measures and QCDR measures, as applicable, that are relevant to the performance period will be used for MIPS submission.

(G) In a form and manner and by a deadline specified by CMS, the QCDR must report the results of each data validation audit, including the overall data deficiencies or data error rate, the types of deficiencies or data errors discovered, the percentage of clinicians impacted by any deficiency or error, and, how and when each deficiency or data error type was corrected.

(v) Beginning with the 2023 MIPS payment year, the QCDR must conduct targeted audits in accordance with this paragraph (b)(2)(v).

(A) If a data validation audit under § 414.1400(b)(2)(iv) identifies one or more deficiency or data error, the QCDR must conduct a targeted audit into the impact and root cause of each such deficiency or data error for that MIPS payment year.

(B) The QCDR must conduct any required targeted audits for the MIPS payment year and correct any deficiencies or data errors identified through such audit prior to the submission of data for that MIPS payment year.

(C) The QCDR must conduct the targeted audit using the sampling methodology that meets the requirements described in paragraph (b)(2)(iv)(E) of this section. The sample for the targeted audit must not include data from the sample used for the data validation audit in which the deficiency or data error was identified.

(D) In a form and manner and by a deadline specified by CMS, the QCDR must report the results of each targeted audit, including the overall deficiency or data error rate, the types of deficiencies or data errors discovered, the percentage of clinicians impacted by each deficiency or data error, and how and when each deficiency or data error type was corrected.

(3) * * *

(v) * * *
(C) * * *

(1) To be approved for the 2024 MIPS payment year, a QCDR measure must be face valid. To be approved for the 2025 MIPS payment year and future years, a QCDR measure must be face valid for the initial MIPS payment year for which it is approved and fully tested for any subsequent MIPS payment year for which it is approved.

(2) To be included in an MIPS Value Pathway for the 2024 MIPS payment year and future years, a QCDR measure must be fully tested.

* * * * *

(E) Beginning with the 2022 MIPS payment year, CMS may provisionally approve the individual QCDR measures for 1 year with the condition that QCDRs address certain areas of duplication with other approved QCDR measures or MIPS quality measures in order to be considered for the program in subsequent years. If such areas of duplication are not addressed, CMS may reject the duplicative QCDR measure.

(vi) Beginning with the 2023 MIPS payment year, QCDR measures may be approved for 2 years, at CMS discretion by attaining approval status by meeting QCDR measure considerations and requirements. Upon annual review, CMS may revoke a QCDR measure's second year approval, if the QCDR measure is found to be: Topped out; duplicative of a more robust measure; reflects an outdated clinical guideline; or if the QCDR self-nominating the QCDR measure is no longer in good standing.

* * * * *

(c) *Qualified registries.*

(2) * * *

(iii) Beginning with the 2023 payment year, the qualified registry must conduct annual data validation audits in accordance with this paragraph (c)(2)(iii).

(A) The qualified registry must conduct their data validation audits prior to submitting any data to CMS for purposes of the MIPS program.

(B) The qualified registry must conduct data validation on data for each performance category for which it will submit data, including if applicable the Quality, Improvement Activities, and Promoting Interoperability performance categories.

(C) The qualified registry must conduct data validation on data for each submitter type for which it will submit data, including if applicable MIPS eligible clinicians, groups, virtual groups, voluntary participants, and opt-in participants.

(D) The qualified registry must use clinical documentation (provided by the

clinicians they are submitting data for) to validate that the action or outcome measured actually occurred or was performed.

(E) The qualified registry shall conduct each data validation audit using a sampling methodology that meets the following:

(1) Uses a sample size of at least 3 percent of the TIN/NPIs for which the qualified registry will submit data to CMS, except that if a 3 percent sample size would result in fewer than 10 TIN/NPIs, the qualified registry must use a sample size of at least 10 TIN/NPIs, and if a 3 percent sample size would result in more than 50 TIN/NPIs, the qualified registry may use a sample size of 50 TIN/NPIs.

(2) Uses a sample that includes at least 25 percent of the patients of each TIN/NPI in the sample, except that the sample for each TIN/NPI must include a minimum of 5 patients and does not need to include more than 50 patients.

(F) Each qualified registry data validation audit must include the following:

(1) Verification of the eligibility status of each eligible clinician, group, virtual group, opt-in participant, and voluntary participant.

(2) Verification of the accuracy of TINs and NPIs.

(3) Calculation of reporting and performance rates.

(4) Verification that only MIPS quality measures and qualified registry measures that are relevant to the performance period will be utilized for MIPS submission.

(G) In a form and manner and by a deadline specified by CMS, the qualified registry must report data validation results, including the overall deficiency or data error rate, the types of deficiencies or data errors discovered, the percentage of clinicians impacted by any deficiency or data error, how and when each deficiency or data error type was corrected.

(iv) Beginning with the 2023 MIPS payment year, the qualified registry must conduct targeted audits in accordance with this paragraph (c)(2)(iv).

(A) If a data validation audit under § 414.1400(c)(2)(iii) identifies one or more deficiency or data error, the qualified registry must conduct a targeted audit into the impact and root cause of each such deficiency or data error for that MIPS payment year.

(B) The qualified registry must conduct any required targeted audits for the MIPS payment year and correct any deficiencies or data errors identified through such audit prior to the

submission of data for that MIPS payment year.

(C) The qualified registry must conduct the targeted audit using the sampling methodology that meets the requirements described in paragraph (c)(2)(iii)(E)(1) and (2) of this section. The sample for the targeted audit must not include data from the sample used for the data validation audit in which the deficiency or data error was identified.

(D) In a form and manner and by a deadline specified by CMS, the qualified registry must report the results of each targeted audit, including the overall deficiency or data error rate, the types of deficiencies or data errors discovered, the percentage of clinicians impacted by each deficiency or data error, how and when each deficiency or data error type was corrected.

* * * * *

(f) * * *

(1) * * *

(i) Require the third party intermediary to submit a corrective action plan (CAP) by a date specified by CMS. The CAP must address the following issues, unless different or additional information is specified by CMS:

(A) The issues that contributed to the non-compliance.

(B) The impact to individual clinicians, groups, or virtual groups, regardless of whether they are participating in the program because they are MIPS eligible, voluntary participating, or opting in to participating in the MIPS program.

(C) The corrective actions to be implemented by the third party intermediary to ensure that the non-compliance has been resolved and will not recur in the future.

(D) The detailed timeline for achieving compliance with the applicable requirements.

* * * * *

■ 25. Section 414.1405 is amended by revising paragraph (b)(8) to read as follows:

§ 414.1405 Payment.

* * * * *

(b) * * *

(8) The performance threshold for the 2023 MIPS payment year is 50 points.

* * * * *

■ 26. Section 414.1435 is amended by revising paragraph (c)(1) to read as follows:

§ 414.1435 Qualifying APM Participant determination: Medicare option.

* * * * *

(c) * * *

(1) Attributed beneficiaries are determined from each Advanced APM Entity's attributed beneficiary lists generated by each Advanced APM's specific attribution methodology except as set forth below.

(i) Beneficiaries who have been prospectively attributed to an APM Entity for a QP Performance Period will be excluded from the attribution-eligible beneficiary count for any other APM Entity that is participating in an APM where that beneficiary would be ineligible to be added to the APM Entity's attributed beneficiary list.

(ii) [Reserved]

* * * * *

■ 27. Section 414.1450 is amended by revising paragraphs (b)(1) and (c) to read as follows:

§ 414.1450 APM incentive payment.

* * * * *

(b) * * *

(1) The amount of the APM Incentive Payment is equal to 5 percent of the estimated aggregate payments for covered professional services as defined in section 1848(k)(3)(A) of the Act furnished during the calendar year immediately preceding the payment year. CMS uses the paid amounts on claims for covered professional services to calculate the estimated aggregate payments on which CMS will calculate the APM Incentive Payment.

* * * * *

(c) *APM Incentive Payment recipient.* CMS will pay the APM Incentive Payment amount for a payment year to the TIN or TINs associated with the QP identified at a specific step in the following hierarchy. If no TIN or TINs with which the QP has an association can be identified at a step, CMS will move to the next and successive steps listed below until CMS identifies a TIN or TINs with which the QP is associated, and to which CMS will make the APM Incentive Payment.

(1) Any TIN associated with the QP that, during the QP Performance Period, is associated with an APM Entity through which the eligible clinician achieved QP status;

(2) Any TIN associated with the QP that, during the APM Incentive Payment base period, is associated with an APM Entity through which the eligible clinician achieved QP status;

(3) Any TIN associated with the QP that, during the APM Incentive Payment base period, is associated with an APM Entity participating in an Advanced APM through which the eligible clinician had achieved QP status;

(4) Any TIN associated with the QP that, during the APM Incentive Payment

base period, participated in an APM Entity in an Advanced APM;

(5) Any TIN associated with the QP that, during the APM Incentive Payment base period, participated with an APM Entity in any track of the APM through which the eligible clinician achieved QP status;

(6) Any TIN associated with the QP that, during the APM Incentive Payment base period, participated with an APM Entity in an APM other than an Advanced APM;

(7) Any TIN associated with the QP that submitted a claim for covered professional services furnished by the QP during the APM Incentive Payment base period, even if such TIN has no relationship to any APM Entity or APM; then

(8) If we have not identified any TIN associated with the QP to which we can make the APM Incentive Payment, we will attempt to contact the QP via a public notice to request their Medicare payment information. The QPs identified in the public notice, or any other eligible clinicians who believe that they are entitled to an APM Incentive Payment must then notify CMS of their claim as directed in the public notice by November 1 of the payment year, or 60 days after CMS announces that initial payments for the year have been made, whichever is later. After that time, any claims by a QP to an APM Incentive Payment will be forfeited for such payment year.

* * * * *

■ 28. Section 414.1455 is revised to read as follows:

§ 414.1455 Limitation on review.

(a) There is no right to administrative or judicial review under sections 1869, 1878, or otherwise, of the Act of the following:

(1) The determination that an eligible clinician is a QP or Partial QP under § 414.1425.

(2) The determination of the amount of the APM Incentive Payment under § 414.1450, including any estimation as part of such determination.

(b) *Targeted review.* (1) An eligible clinician or APM Entity may request targeted review of a QP or Partial QP determination only if they believe in good faith that, due to a CMS clerical error, an eligible clinician was omitted from a Participation List.

(2) If CMS determines that there was such a clerical error, if the QP determination for the eligible clinician would have been made at the APM Entity level under § 414.1425(b)(1), CMS will assign to the eligible clinician the most favorable QP status that was determined at the APM Entity level on

any snapshot dates for the relevant QP Performance Period on which the eligible clinician participated in the APM Entity.

(3) The process for targeted review is as follows:

(i) An eligible clinician or APM Entity may submit a request for targeted review.

(ii) All requests for targeted review must be submitted during the targeted review request submission period, which is a 60-day period that begins with the publication of MIPS performance feedback as described at § 414.1385(a)(2). The targeted review request submission period may be extended as specified by CMS.

(iii) All requests for targeted review must be submitted in accordance with the form and manner specified by CMS.

(iv) A request for targeted review may be denied if the request is duplicative of another request for a targeted review; the request is not submitted during the targeted review request submission period; or the request is outside the scope of targeted review specified in this section. If the targeted review request is denied, CMS will make no changes to the QP status of the eligible clinician for whom targeted review was requested.

(iv) CMS will respond to each timely submitted request for targeted review.

(v) A request for targeted review may include additional information in support of the request at the time it is submitted. CMS may also request additional information from the requestor. If CMS requests additional information relating to the eligible clinician or the APM Entity group that is the subject of a request for targeted review, responsive information must be provided and received by CMS within 30 days of the request. If CMS does not receive a timely response to a request for additional information, CMS may make a final decision on the targeted review request based on the information available.

(vi) If targeted review requests reveal a pattern of CMS error with impacts that extend beyond the scope of eligible clinicians or APM Entities that submitted such targeted review requests, CMS may adjust the QP status of other affected eligible clinicians as provided in paragraph (b)(2) of this section.

(vi) Decisions on a targeted review request are final, and not subject to any further administrative or judicial review in accordance with paragraph (a) of this section.

PART 415—SERVICES FURNISHED BY PHYSICIANS IN PROVIDERS, SUPERVISING PHYSICIANS IN TEACHING SETTINGS, AND RESIDENTS IN CERTAIN SETTINGS

■ 29. The authority citation for part 415 continues to read as follows:

Authority: 42 U.S.C. 1302 and 1395hh.

■ 30. Section 415.184 is revised to read as follows:

§ 415.184 Psychiatric services.

Physician fee schedule payment is made for psychiatric services furnished under an approved GME program if the requirements of §§ 415.170 and 415.172 are met, including documentation, except that the requirement for the presence of the teaching physician during the service in which a resident is involved may be met by observation of the service by use of a one-way mirror, video equipment, or similar device. During the Public Health Emergency, as defined in § 400.200 of this chapter, for the COVID-19 pandemic, the requirement for the presence of the teaching physician during the service in which a resident is involved may be met by audio/video real-time communications technology.

PART 423—VOLUNTARY MEDICARE PRESCRIPTION DRUG BENEFIT

■ 31. The authority citation for part 423 continues to read as follows:

Authority: 42 U.S.C. 1302, 1395w-01 through 1395w-152, and 1395hh.

■ 32. Section 423.160 is amended by adding paragraph (a)(5) to read as follows:

§ 423.160 Standards for electronic prescribing.

(a) * * *

(5) On or after January 1, 2022, prescribers must, except in circumstances in which the Secretary waives the requirement, conduct all prescribing for all Schedule II, III, IV, and V controlled substances electronically using the applicable standards in paragraph (b) of this section.

* * * * *

PART 424—CONDITIONS FOR MEDICARE PAYMENT

■ 33. The authority citation for part 424 continues to read as follows:

Authority: 42 U.S.C. 1302 and 1395hh.

■ 34. Section 424.67 is amended by—

■ a. Revising paragraphs (b)(1) introductory text, (b)(1)(ii), (b)(2) and (3), and (b)(5) introductory text;

■ b. Redesignating paragraphs (c) through (f) as paragraphs (d) through (g), respectively;

■ c. Adding new paragraph (c); and

■ d. Revising newly redesignated paragraph (e)(2)(i).

The revisions and additions read as follows:

§ 424.67 Enrollment requirements for opioid treatment programs (OTP).

* * * * *

(b) * * *

(1) Fully complete and submit, as applicable, the Form CMS-855A or Form CMS-855B application (or their successor applications) and any applicable supplement or attachment thereto to its applicable Medicare contractor. This includes, but is not limited to, the following:

* * * * *

(ii) Certifying via the Form CMS-855A or Form CMS-855B (as applicable) and/or the applicable supplement or attachment thereto that the OTP meets and will continue to meet the specific requirements and standards for enrollment described in paragraphs (b) and (e) of this section.

(2) Comply with the application fee requirements in § 424.514. (This includes OTPs enrolling under the circumstances described in paragraph (c)(2) of this section.)

(3)(i) Except as stated in paragraph (b)(3)(ii) of this section, successfully complete the assigned categorical risk level screening required under, as applicable, § 424.518(b) and (c).

(ii) For currently enrolled OTPs that are changing their OTP enrollment from a Form CMS-855B enrollment to a Form CMS-855A enrollment, or vice versa, successfully complete the limited level of categorical screening under § 424.518(a) if the OTP has already completed, as applicable, the moderate or high level of categorical screening under § 424.518(b) or (c), respectively.

* * * * *

(5) Report on the Form CMS-855A or Form CMS-855B (as applicable) and/or any applicable supplement all OTP staff who meet the definition of “managing employee” in § 424.502. Such individuals include, but are not limited to, the following:

* * * * *

(c) Clarification of required enrollment forms. (1) An OTP may only be enrolled as an OTP via the Form CMS-855A or Form CMS-855B but not both.

(2) If a currently enrolled OTP is changing its OTP enrollment from a Form CMS-855B enrollment to a Form CMS-855A enrollment, or vice versa,

the effective date of billing that was established for the OTP’s prior enrollment under §§ 424.520(d) and 424.521(a) of this chapter is applied to the OTP’s new enrollment.

* * * * *

(e) * * *

(2) * * *

(i) The provider does not have a current, valid certification by SAMHSA as required under paragraph (b)(4)(i) of this section or fails to meet any other applicable requirement or standard in this section, including, but not limited to, the OTP standards in paragraphs (b)(6) and (e)(1) of this section.

* * * * *

■ 35. Section 424.210 is amended by revising paragraph (a) and adding paragraph (b)(9) to read as follows:

§ 424.210 Beneficiary engagement incentives under the Medicare Diabetes Prevention Program expanded model.

(a) Definitions. In addition to the definitions specified at § 410.79(b) and § 424.205(a) of this chapter, the following definitions apply to this section:

1135 waiver event means an emergency period and emergency area, as such terms are defined in section 1135(g) of the Act, for which the Secretary has authorized waivers under section 1135 of the Act.

COVID-19 Public Health Emergency means the emergency period and emergency area, as such terms are defined in section 1135(g) of the Social Security Act, related to the COVID-19 pandemic and declared by the Secretary on January 27, 2020.

Engagement incentive period means the period of time during which an MDPP supplier may furnish in-kind beneficiary engagement incentives to a given MDPP beneficiary to whom the MDPP supplier is furnishing MDPP services. This period begins when an MDPP supplier furnishes any MDPP service to an MDPP eligible beneficiary, and ends when one of the following occurs, whichever occurs first:

(i) The MDPP beneficiary’s MDPP services period ends as described in § 410.79(c)(3) of this chapter.

(ii) The MDPP supplier knows that the MDPP beneficiary will no longer be receiving MDPP services from the MDPP supplier.

(iii) The MDPP supplier has not had direct contact, either in person by telephone, or via other telecommunications technology, with the MDPP beneficiary for more than 90 consecutive calendar days during the MDPP services period, unless the lack of direct contact is due to the suspension or cancellation of MDPP services under

§ 410.79(e) of this chapter and the MDPP services are eventually resumed or restarted in accordance with § 410.79(e) of this chapter.

(b) * * *

(9) If the item or service is furnished during the COVID-19 Public Health Emergency or an 1135 waiver event that CMS has determined may disrupt in-person MDPP services, and the item or service is furnished to an MDPP beneficiary who is receiving MDPP services virtually, the MDPP beneficiary must be capable of using the item or service during the COVID-19 Public Health Emergency or the section 1135 waiver event, as applicable.

* * * * *

■ 36. Section 424.518 is amended by redesignating paragraphs (a)(1)(xii) through (xvi) as paragraphs (a)(1)(xiii) through (xvii) and adding a new paragraph (a)(1)(xii) to read as follows:

§ 424.518 Screening levels for Medicare providers and suppliers.

* * * * *

(a) * * *

(1) * * *

(xii) Opioid treatment programs (if § 424.67(b)(3)(ii) applies).

* * * * *

PART 425—MEDICARE SHARED SAVINGS PROGRAM

■ 37. The authority citation for part 425 continues to read as follows:

Authority: 42 U.S.C. 1302, 1306, 1395hh, and 1395jjj.

■ 38. Section 425.100 is amended by revising paragraph (b) to read as follows:

§ 425.100 General.

* * * * *

(b) An ACO is eligible to receive payments for shared savings under subpart G of this part if all of the following conditions are met:

(1) The ACO meets or exceeds the applicable minimum savings rate established under § 425.604, § 425.605, § 425.606, § 425.609 or § 425.610.

(2) The ACO meets the minimum quality performance standards established under § 425.500 (for performance years or a performance period beginning on or before January 1, 2020), or under the quality performance standard established under § 425.512 (for performance years beginning on or after January 1, 2021).

(3) The ACO otherwise maintains its eligibility to participate in the Shared Savings Program under this part.

* * * * *

§ 425.112 [Amended]

■ 39. Section 425.112 is amended in paragraph (b)(2)(i) by removing the reference “§ 425.500” and adding in its place the references “§§ 425.500 or 425.510, as applicable”.

§ 425.200 [Amended]

■ 40. Section 425.200 is amended in paragraph (d) by removing the reference “§ 425.500(c)” and adding in its place the references “§§ 425.500(c) or 425.510, as applicable”.

■ 41. Section 425.204 is amended by revising paragraphs (f)(3)(i) through (iv), (f)(4)(iv), and (f)(5) to read as follows:

§ 425.204 Content of the application.

* * * * *

(f) * * *

(3) * * *

(i) An ACO participating in Track 2 must demonstrate the adequacy of its repayment mechanism prior to any change in the terms and type of the repayment mechanism, and at such other times as requested by CMS.

(ii) An ACO entering an agreement period in Levels C, D, or E of the BASIC track or the ENHANCED track must demonstrate the adequacy of its repayment mechanism prior to the start of its agreement period, prior to any change in the terms and type of the repayment mechanism, and at such other times as requested by CMS.

(iii) An ACO entering an agreement period in Level A or Level B of the BASIC track must demonstrate the adequacy of its repayment mechanism prior to the start of any performance year in which it either elects to participate in, or is automatically transitioned to a two-sided model, Level C, Level D, or Level E, of the BASIC track, prior to any change in the terms and type of the repayment mechanism, and at such other times as requested by CMS.

(iv) An ACO that has submitted a request to renew its participation agreement must submit as part of the renewal request documentation demonstrating the adequacy of the repayment mechanism that could be used to repay any shared losses incurred for performance years in the next agreement period. The repayment mechanism applicable to the new agreement period may be the same repayment mechanism currently used by the ACO, provided that the ACO submits documentation establishing that the duration of the existing repayment mechanism has been revised to comply with paragraph (f)(6)(ii) of this section and the amount of the repayment mechanism complies with paragraph (f)(4) of this section.

(4) * * *

(iv)(A) In the case of an ACO that has submitted a request to renew its participation agreement for an agreement period starting on or after January 1, 2022 and that wishes to use its existing repayment mechanism to establish its ability to repay any shared losses incurred for performance years in the new agreement period, the amount of the repayment mechanism must be equal to at least the amount calculated by CMS in accordance with paragraph (f)(4)(ii) of this section.

(B) Under the following circumstances, an ACO that renewed its participation agreement for an agreement period beginning on July 1, 2019, or January 1, 2020, may elect to decrease the amount of its repayment mechanism.

(1) The ACO elected to continue to use its existing repayment mechanism for the agreement period beginning on July 1, 2019, or January 1, 2020, and the amount of that repayment mechanism was greater than the repayment mechanism amount estimated at the time of renewal application according to paragraph (f)(4)(ii) of this section.

(2) The repayment mechanism amount for performance year 2021, as recalculated pursuant to paragraph (f)(4)(iii) of this section, is less than the existing repayment mechanism amount.

(3) CMS will notify the ACO in writing if the ACO may elect to decrease the amount of its repayment mechanism pursuant to this paragraph (f)(4)(iv)(B). The ACO must submit such election, together with revised repayment mechanism documentation, in a form and manner and by a deadline specified by CMS. CMS will review the revised repayment mechanism documentation and may reject the election if the repayment mechanism documentation does not comply with the requirements of this paragraph (f).

(5) After the repayment mechanism has been used to repay any portion of shared losses owed to CMS, the ACO must replenish the amount of funds available through the repayment mechanism within 90 days. The resulting amount available through the repayment mechanism must be at least the amount specified by CMS in accordance with paragraph (f)(4) of this section.

* * * * *

■ 42. Section 425.224 is amended by revising paragraph (b)(1)(ii)(A) to read as follows:

§ 425.224 Application procedures for renewing ACOs and re-entering ACOs.

* * * * *

(b) * * *

(1) * * *
(ii) * * *

(A) Whether the ACO demonstrated a pattern of failure to meet the quality performance standards or met any of the criteria for termination under §§ 425.316(c)(1)(ii) or 425.316(c)(2)(ii).

* * * * *

§ 425.302 [Amended]

■ 43. Section 425.302 is amended in paragraph (a)(1) by removing the reference “§ 425.500” and adding in its place the references “§§ 425.500 or 425.510, as applicable”.

■ 44. Section 425.316 is amended by revising paragraph (c) to read as follows:

§ 425.316 Monitoring of ACOs.

* * * * *

(c) *Monitoring ACO compliance with quality performance standards.* To identify ACOs that are not meeting the quality performance standards, CMS will review an ACO’s submission of quality measurement data under §§ 425.500 or 425.512. CMS may request additional documentation from an ACO, ACO participants, or ACO providers/suppliers, as appropriate. If an ACO does not meet quality performance standards or fails to report on one or more quality measures, CMS will take the following actions:

(1) *For performance years (or a performance period) beginning on or before January 1, 2020.* (i) The ACO may be given a warning for the first time it fails to meet the minimum attainment level on at least 70 percent of the measures, as determined under § 425.502, in one or more domains and may be subject to a CAP. CMS may forgo the issuance of the warning letter depending on the nature and severity of the noncompliance and instead subject the ACO to actions set forth at § 425.216 or immediately terminate the ACO’s participation agreement under § 425.218.

(ii) The ACO’s compliance with the quality performance standards will be re-evaluated the following year. If the ACO continues to fail to meet quality performance standard in the following year, the agreement will be terminated.

(iii) An ACO will not qualify to share in savings in any year it fails to report accurately, completely, and timely on the quality performance measures.

(2) *For performance years beginning on or after January 1, 2021.* (i) If the ACO fails to meet the quality performance standard, CMS may take one or more of the actions prior to termination specified in § 425.216. Depending on the nature and severity of the noncompliance, CMS may forgo pre-termination actions and may

immediately terminate the ACO’s participation agreement under § 425.218.

(ii) CMS will terminate an ACO’s participation agreement under any of the following circumstances:

(A) The ACO fails to meet the quality performance standard for 2 consecutive performance years within an agreement period.

(B) The ACO fails to meet the quality performance standard for any 3 performance years within an agreement period, regardless of whether the years are in consecutive order.

(C) A renewing ACO or re-entering ACO fails to meet the quality performance standard for the last performance year of the ACO’s previous agreement period and this occurrence was either the second consecutive performance year of failed quality performance or the third nonconsecutive performance year of failed quality performance during the previous agreement period.

(D) A renewing ACO or re-entering ACO fails to meet the quality performance standard for 2 consecutive performance years across 2 agreement periods, specifically the last performance year of the ACO’s previous agreement period and the first performance year of the ACO’s new agreement period.

* * * * *

■ 45. Section 425.400 is amended by revising paragraph (c)(1)(iv) introductory text and adding paragraph (c)(1)(v) to read as follows:

§ 425.400 General.

* * * * *

(c) * * *

(1) * * *

(iv) For performance years (or a performance period) during 2019, and performance year 2020 as follows:

* * * * *

(v) For the performance year starting on January 1, 2021, and subsequent performance years as follows:

(A) CPT codes:

(1) 96160 and 96161 (codes for administration of health risk assessment).

(2) 99201 through 99215 (codes for office or other outpatient visit for the evaluation and management of a patient).

(3) 99304 through 99318 (codes for professional services furnished in a nursing facility; professional services or services reported on an FQHC or RHC claim identified by these codes are excluded when furnished in a SNF).

(4) 99319 through 99340 (codes for patient domiciliary, rest home, or custodial care visit).

(5) 99341 through 99350 (codes for evaluation and management services furnished in a patient’s home for claims identified by place of service modifier 12).

(6) 99354 and 99355 (add-on codes, for prolonged evaluation and management or psychotherapy services beyond the typical service time of the primary procedure; when the base code is also a primary care service code under this paragraph (c)(1)(v)).

(7) 99421, 99422, and 99423 (codes for online digital evaluation and management).

(8) 99483 (code for assessment of and care planning for patients with cognitive impairment).

(9) 99484, 99492, 99493 and 99494 (codes for behavioral health integration services).

(10) 99487, 99489, 99490 and 99491 (codes for chronic care management).

(11) 99495 and 99496 (codes for transitional care management services).

(12) 99497 and 99498 (codes for advance care planning; services identified by these codes furnished in an inpatient setting are excluded).

(B) HCPCS codes:

(1) G0402 (code for the Welcome to Medicare visit).

(2) G0438 and G0439 (codes for the annual wellness visits).

(3) G0442 (code for alcohol misuse screening service).

(4) G0443 (code for alcohol misuse counseling service).

(5) G0444 (code for annual depression screening service).

(6) G0463 (code for services furnished in ETA hospitals).

(7) G0506 (code for chronic care management).

(8) G2058 (code for non-complex chronic care management).

(9) G2064 and G2065 (codes for principal care management services).

(10) GCOL1 (code for psychiatric collaborative care model).

* * * * *

■ 46. Section 425.500 is amended by revising the section heading and paragraph (d) to read as follows:

§ 425.500 Measures to assess the quality of care furnished by an ACO for performance years (or a performance period) beginning on or before January 1, 2020.

* * * * *

(d) *Patient experience of care survey.*

(1) For performance years (or a performance period) beginning in 2014 through 2019, ACOs must select a CMS-certified vendor to administer the survey and report the results accordingly.

(2) For performance year 2020, CMS waives the CAHPS for ACOs reporting

requirement and will assign all ACOs automatic credit for the CAHPS for ACOs survey measures.

* * * * *

■ 47. Section 425.502 is amended by revising the section heading to read as follows:

§ 425.502 Calculating the ACO quality performance score for performance years (or a performance period) beginning on or before January 1, 2020.

* * * * *

■ 48. Section 425.508 is amended by revising the paragraph (a) subject heading and adding paragraph (b) to read as follows:

§ 425.508 Incorporating quality reporting requirements related to the Quality Payment Program.

(a) *For performance years (or a performance period) beginning in 2017–2020.* * * *

(b) *For performance years beginning on or after January 1, 2021.* ACOs must submit the quality data via the Alternative Payment Model Performance Pathway (APP) established under § 414.1367 of this chapter, to satisfactorily report on behalf of the eligible clinicians who bill under the TIN of an ACO participant for purposes of the MIPS Quality performance category of the Quality Payment Program.

■ 49. Section 425.510 is added to subpart F to read as follows:

§ 425.510 Application of the Alternative Payment Model Performance Pathway (APP) to Shared Savings Program ACOs for performance years beginning on or after January 1, 2021.

(a) *General.* (1) CMS establishes quality performance measures to assess the quality of care furnished by the ACO. If the ACO demonstrates to CMS that it has satisfied the quality performance requirements in this subpart, and the ACO meets all other applicable requirements, the ACO is eligible to receive shared savings.

(2) CMS seeks to improve the quality of care furnished by ACOs over time by specifying higher standards, new measures, or both.

(b) *Quality reporting.* ACOs must report quality data via the APP established under § 414.1367 of this chapter, according to the method of submission established by CMS.

(c) *Audit and validation of data.* CMS retains the right to audit and validate quality data reported by an ACO under paragraph (b) of this section according to § 414.1390 of this chapter.

■ 50. Section 425.512 is added to subpart F to read as follows:

§ 425.512 Determining the ACO quality performance standard for performance years beginning on or after January 1, 2021.

(a) *Establishing a quality performance standard.* (1) The quality performance standard is the overall standard the ACO must meet in order to be eligible to receive shared savings for a performance year. An ACO will not qualify to share in savings in any year it fails to meet the quality performance standard.

(2) For all ACOs, CMS designates the quality performance standard as the ACO reporting quality data via the APP established under § 414.1367 of this chapter, according to the method of submission established by CMS and achieving a quality performance score that is equivalent to or higher than the 40th percentile across all MIPS Quality performance category scores.

(3) If an ACO does not report any of the three measures it is actively required to report and does not field a CAHPS for MIPS survey via the APP the ACO would not meet the quality performance standard.

(b) *Extreme and uncontrollable circumstances.* For performance year 2021 and subsequent performance years, including the applicable quality data reporting period for the performance year, CMS uses an alternative approach to calculating the quality score for ACOs affected by extreme and uncontrollable circumstances instead of the methodology specified in paragraph (a) of this section as follows:

(1) CMS determines the ACO was affected by an extreme and uncontrollable circumstance based on either of the following:

(i) Twenty percent or more of the ACO's assigned beneficiaries reside in an area identified under the Quality Payment Program as being affected by an extreme and uncontrollable circumstance.

(A) Assignment is determined under subpart E of this part.

(B) In making this determination, CMS uses the quarter four list of assigned beneficiaries.

(ii) The ACO's legal entity is located in an area identified under the Quality Payment Program as being affected by an extreme and uncontrollable circumstance. An ACO's legal entity location is based on the address on file for the ACO in CMS' ACO application and management system.

(2) If CMS determines the ACO meets the requirements of paragraph (b)(1) of this section, CMS calculates the ACO's quality score as follows:

(i) The ACO's minimum quality performance score is set to the equivalent of the 40th percentile MIPS

Quality performance category score for the relevant performance year.

(ii) If the ACO reports quality data via the APP framework and meets data completeness and case minimum requirements, CMS will use the higher of the ACO's quality performance score or the equivalent of the 40th percentile MIPS Quality performance category score.

(3) CMS applies determinations made under the Quality Payment Program with respect to—

(i) Whether an extreme and uncontrollable circumstance has occurred; and

(ii) The affected areas.

(4) CMS has sole discretion to determine the time period during which an extreme and uncontrollable circumstance occurred, the percentage of the ACO's assigned beneficiaries residing in the affected areas, and the location of the ACO legal entity.

■ 51. Section 425.600 is amended by revising paragraph (f)(4)(i) to read as follows:

§ 425.600 Selection of risk model.

* * * * *

(f) * * *

(4) * * *

(i) The quality performance standard as described in § 425.502(a), for performance years (or a performance period) beginning on or before January 1, 2020.

* * * * *

■ 52. Section 425.601 is amended by revising paragraphs (a)(9) and (f)(5)(iv) to read as follows:

§ 425.601 Establishing, adjusting, and updating the benchmark for agreement periods beginning on July 1, 2019, and in subsequent years.

(a) * * *

(9) For the second and each subsequent performance year during the term of the agreement period, the ACO's benchmark is adjusted for the following, as applicable: for the addition and removal of ACO participants or ACO providers/suppliers in accordance with § 425.118(b), for a change to the ACO's beneficiary assignment methodology selection under § 425.226(a)(1), and for a change to the beneficiary assignment methodology specified in subpart E of this part. To adjust the benchmark, CMS does the following:

(i) Takes into account the expenditures of beneficiaries who would have been assigned to the ACO in any of the 3 most recent years prior to the start of the agreement period.

(ii) Redetermines the regional adjustment amount under paragraph

(a)(8) of this section, according to the ACO's assigned beneficiaries for BY3.

* * * * *

(f) * * *

(5) * * *

(iv) If during the term of the agreement period CMS adjusts the ACO's benchmark, as specified in paragraph (a)(9) of this section, CMS redetermines whether the ACO is considered to have lower spending or higher spending compared to the ACO's regional service area for purposes of determining the percentage in paragraphs (f)(1) and (2) of this section used in calculating the adjustment under either paragraph (a)(8) or (e) of this section.

* * * * *

■ 53. Section 425.602 is amended by revising paragraph (a)(8) to read as follows:

§ 425.602 Establishing, adjusting, and updating the benchmark for an ACO's first agreement period beginning on or before January 1, 2018.

(a) * * *

(8) The ACO's benchmark is adjusted for the addition and removal of ACO participants or ACO providers/suppliers in accordance with § 425.118(b) and for a change to the beneficiary assignment methodology specified in subpart E of this part, as applicable, to take into account the expenditures for beneficiaries who would have been assigned to the ACO in any of the 3 most recent years prior to the start of the agreement period.

* * * * *

■ 54. Section 425.603 is amended by revising paragraphs (c)(8) and (c)(9)(ii)(B)(4)(iv) to read as follows:

§ 425.603 Resetting, adjusting, and updating the benchmark for a subsequent agreement period beginning on or before January 1, 2019.

* * * * *

(c) * * *

(8) The ACO's benchmark is adjusted for the following, as applicable: For the addition and removal of ACO participants or ACO providers/suppliers in accordance with § 425.118(b), and for a change to the beneficiary assignment methodology specified in subpart E of this part. To adjust the benchmark, CMS does the following:

(i) Takes into account the expenditures for beneficiaries who would have been assigned to the ACO in any of the 3 most recent years prior to the start of the agreement period.

(ii) Redetermines the regional adjustment amount under paragraph (c)(9) of this section, according to the ACO's assigned beneficiaries for BY3.

(9) * * *

(ii) * * *

(B) * * *

(4) * * *

(iv) If CMS adjusts the ACO's

benchmark, as specified in paragraph (c)(8) of this section, CMS redetermines whether the ACO is considered to have lower spending or higher spending compared to the ACO's regional service area for purposes of determining the percentage used in calculating the adjustment in paragraphs (c)(9)(ii)(B)(1) and (2) of this section.

* * * * *

■ 55. Section 425.604 is amended by revising paragraphs (c) and (d) to read as follows:

§ 425.604 Calculation of savings under the one-sided model.

* * * * *

(c) *Qualification for shared savings payment.* (1) For performance years (or a performance period) beginning on or before January 1, 2020. In order to qualify for shared savings, an ACO must meet or exceed its minimum savings rate determined under paragraph (b) of this section, meet the minimum quality performance standards established under § 425.502, and otherwise maintain its eligibility to participate in the Shared Savings Program under this part.

(2) For the performance year beginning on January 1, 2021. To qualify for shared savings, an ACO must meet or exceed its minimum savings rate determined under paragraph (b) of this section, meet the quality performance standard established under § 425.512, and otherwise maintain its eligibility to participate in the Shared Savings Program under this part.

(d) *Final sharing rate.* (1) For performance years (or a performance period) beginning on or before January 1, 2020. An ACO that meets all the requirements for receiving shared savings payments under the one-sided model will receive a shared savings payment of up to 50 percent of all savings under the updated benchmark, as determined on the basis of its quality performance under § 425.502 (up to the performance payment limit described in paragraph (e)(2) of this section).

(2) For the performance year beginning on January 1, 2021. An ACO that meets all the requirements for receiving shared savings payments under Track 1 will receive a shared savings payment of 50 percent of all the savings under the updated benchmark (up to the performance payment limit described in paragraph (e)(2) of this section).

* * * * *

■ 56. Section 425.605 is amended by revising paragraphs (c), (d)(1)(i)(A), (d)(1)(ii)(A), (d)(1)(iii)(A), (d)(1)(iv)(A), and (d)(1)(v)(A) to read as follows:

§ 425.605 Calculation of shared savings and losses under the BASIC track.

* * * * *

(c) *Qualification for shared savings payment.* (1) For performance years beginning on or before January 1, 2020. To qualify for shared savings, an ACO must meet the minimum savings rate requirement established under paragraph (b) of this section, meet the minimum quality performance standards established under § 425.502, and otherwise maintain its eligibility to participate in the Shared Savings Program under this part.

(2) For performance years beginning on or after January 1, 2021. To qualify for shared savings, an ACO must meet the minimum savings rate requirement established under paragraph (b) of this section, meet the quality performance standard established under § 425.512, and otherwise maintain its eligibility to participate in the Shared Savings Program under this part.

(d) * * *

(1) * * *

(i) * * *

(A) *Final sharing rate.* (1) For performance years beginning on or before January 1, 2020. An ACO that meets all the requirements for receiving shared savings payments under the BASIC track, Level A, receives a shared savings payment of up to 40 percent of all the savings under the updated benchmark, as determined on the basis of its quality performance under § 425.502 (up to the performance payment limit described in paragraph (d)(1)(i)(B) of this section).

(2) For performance years beginning on or after January 1, 2021. An ACO that meets all the requirements for receiving shared savings payments under the BASIC track, Level A, receives a shared savings payment of 40 percent of all the savings under the updated benchmark (up to the performance payment limit described in paragraph (d)(1)(i)(B) of this section).

* * * * *

(ii) * * *

(A) *Final sharing rate.* (1) For performance years beginning on or before January 1, 2020. An ACO that meets all the requirements for receiving shared savings payments under the BASIC track, Level B, receives a shared savings payment of up to 40 percent of all the savings under the updated benchmark, as determined on the basis of its quality performance under § 425.502 (up to the performance

payment limit described in paragraph (d)(1)(ii)(B) of this section).

(2) For performance years beginning on or after January 1, 2021. An ACO that meets all the requirements for receiving shared savings payments under the BASIC track, Level B, receives a shared savings payment of 40 percent of all the savings under the updated benchmark (up to the performance payment limit described in paragraph (d)(1)(ii)(B) of this section).

* * * * *

(iii) * * *

(A) *Final sharing rate.* (1) For performance years beginning on or before January 1, 2020. An ACO that meets all the requirements for receiving shared savings payments under the BASIC track, Level C, receives a shared savings payment of up to 50 percent of all the savings under the updated benchmark, as determined on the basis of its quality performance under § 425.502 (up to the performance payment limit described in paragraph (d)(1)(iii)(B) of this section).

(2) For performance years beginning on or after January 1, 2021. An ACO that meets all the requirements for receiving shared savings payments under the BASIC track, Level C, receives a shared savings payment of 50 percent of all the savings under the updated benchmark (up to the performance payment limit described in paragraph (d)(1)(iii)(B) of this section).

* * * * *

(iv) * * *

(A) *Final sharing rate.* (1) For performance years beginning on or before January 1, 2020. An ACO that meets all the requirements for receiving shared savings payments under the BASIC track, Level D, receives a shared savings payment of up to 50 percent of all the savings under the updated benchmark, as determined on the basis of its quality performance under § 425.502 (up to the performance payment limit described in paragraph (d)(1)(iv)(B) of this section).

(2) For performance years beginning on or after January 1, 2021. An ACO that meets all the requirements for receiving shared savings payments under the BASIC track, Level D, receives a shared savings payment of 50 percent of all the savings under the updated benchmark (up to the performance payment limit described in paragraph (d)(1)(iv)(B) of this section).

* * * * *

(v) * * *

(A) *Final sharing rate.* (1) For performance years beginning on or before January 1, 2020. An ACO that meets all the requirements for receiving

shared savings payments under the BASIC track, Level E, receives a shared savings payment of up to 50 percent of all the savings under the updated benchmark, as determined on the basis of its quality performance under § 425.502 (up to the performance payment limit described in paragraph (d)(1)(v)(B) of this section).

(2) For performance years beginning on or after January 1, 2021. An ACO that meets all the requirements for receiving shared savings payments under the BASIC track, Level E, receives a shared savings payment of 50 percent of all the savings under the updated benchmark (up to the performance payment limit described in paragraph (d)(1)(v)(B) of this section).

* * * * *

■ 57. Section 425.606 is amended by revising paragraphs (c), (d), and (f) to read as follows:

§ 425.606 Calculation of shared savings and losses under Track 2.

* * * * *

(c) *Qualification for shared savings payment.* (1) For performance years (or a performance period) beginning on or before January 1, 2020. To qualify for shared savings, an ACO must meet the minimum savings rate requirement established under paragraph (b) of this section, meet the minimum quality performance standards established under § 425.502, and otherwise maintain its eligibility to participate in the Shared Savings Program under this part.

(2) For the performance year beginning on January 1, 2021. To qualify for shared savings, an ACO must meet the minimum savings rate requirement established under paragraph (b) of this section, meet the quality performance standard established under § 425.512, and otherwise maintain its eligibility to participate in the Shared Savings Program under this part.

(d) *Final sharing rate.* (1) For performance years (or a performance period) beginning on or before January 1, 2020. An ACO that meets all the requirements for receiving shared savings payments under Track 2 will receive a shared savings payment of up to 60 percent of all the savings under the updated benchmark, as determined on the basis of its quality performance under § 425.502 (up to the performance payment limit described in paragraph (e)(2) of this section).

(2) For the performance year beginning on January 1, 2021. An ACO that meets all the requirements for receiving shared savings payments under Track 2 will receive a shared savings payment of 60 percent of all the

savings under the updated benchmark (up to the performance payment limit described in paragraph (e)(2) of this section).

* * * * *

(f) *Shared loss rate.* (1) For performance years (or a performance period) beginning on or before January 1, 2020. For an ACO that is required to share losses with the Medicare program for expenditures over the updated benchmark, the amount of shared losses is determined based on the inverse of its final sharing rate described in paragraph (d)(1) of this section (that is, 1 minus the final shared savings rate determined under paragraph (d)(1) of this section). The shared loss rate—

- (i) May not exceed 60 percent; and
- (ii) May not be less than 40 percent.

(2) For the performance year beginning on January 1, 2021. For an ACO that is required to share losses with the Medicare program for expenditures over the updated benchmark, the amount of shared losses is determined as follows:

(i) If the ACO meets the quality performance standard established in § 425.512, CMS determines the shared loss rate as follows:

(A) Calculate the quotient of the MIPS quality performance category points earned divided by the total MIPS quality performance category points available.

(B) Calculate the product of the quotient determined in paragraph (f)(2)(i)(A) of this section and 60 percent.

(C) Calculate the shared loss rate as 1 minus the product determined in paragraph (f)(2)(i)(B) of this section. The shared loss rate—

- (1) May not exceed 60 percent; and
- (2) May not be less than 40 percent.

(ii) If the ACO fails to meet the quality performance standard established in § 425.512, the shared loss rate is 60 percent.

* * * * *

■ 58. Section 425.610 is amended by revising paragraphs (c), (d), and (f) to read as follows:

§ 425.610 Calculation of shared savings and losses under the ENHANCED track.

* * * * *

(c) *Qualification for shared savings payment.* (1) For performance years (or a performance period) beginning on or before January 1, 2020. To qualify for shared savings, an ACO must meet the minimum savings rate requirement established under paragraph (b) of this section, meet the minimum quality performance standards established under § 425.502, and otherwise maintain its eligibility to participate in

the Shared Savings Program under this part.

(2) For performance years beginning on or after January 1, 2021. To qualify for shared savings, an ACO must meet the minimum savings rate requirement established under paragraph (b) of this section, meet the quality performance standard established under § 425.512, and otherwise maintain its eligibility to participate in the Shared Savings Program under this part.

(d) *Final sharing rate.* (1) For performance years (or a performance period) beginning on or before January 1, 2020. An ACO that meets all the requirements for receiving shared savings payments under the ENHANCED track will receive a shared savings payment of up to 75 percent of all the savings under the updated benchmark, as determined on the basis of its quality performance under § 425.502 (up to the performance payment limit described in paragraph (e)(2) of this section).

(2) For performance years beginning on or after January 1, 2021. An ACO that meets all the requirements for receiving shared savings payments under the ENHANCED track will receive a shared savings payment of 75 percent of all the savings under the updated benchmark (up to the performance payment limit described in paragraph (e)(2) of this section).

* * * * *

(f) *Shared loss rate.* (1) For performance years (or a performance period) beginning on or before January

1, 2020. For an ACO that is required to share losses with the Medicare program for expenditures over the updated benchmark, the amount of shared losses is determined based on the inverse of its final sharing rate described in paragraph (d)(1) of this section (that is, 1 minus the final shared savings rate determined under paragraph (d)(1) of this section).

The shared loss rate—

- (i) May not exceed 75 percent; and
(ii) May not be less than 40 percent.

(2) For performance years beginning on or after January 1, 2021. For an ACO that is required to share losses with the Medicare program for expenditures over the updated benchmark, the amount of shared losses is determined as follows:

(i) If the ACO meets the quality performance standard established in § 425.512, CMS determines the shared loss rate as follows:

(A) Calculate the quotient of the MIPS quality performance category points earned divided by the total MIPS quality performance category points available.

(B) Calculate the product of the quotient determined in paragraph (f)(2)(i)(A) of this section, and 75 percent.

(C) Calculate the shared loss rate as 1 minus the product determined in paragraph (f)(2)(i)(B) of this section. The shared loss rate—

- (1) May not exceed 75 percent; and
(2) May not be less than 40 percent.

(ii) If the ACO fails to meet the quality performance standard established in § 425.512, the shared loss rate is 75 percent.

* * * * *

§ 425.800 [Amended]

■ 59. Section 425.800 is amended—

■ a. In paragraph (a)(1) by removing the references “§ 425.500 and § 425.502” and adding in its place the references “§§ 425.500, 425.502, 425.510 and 425.512”;

■ b. In paragraph (a)(2) by removing the reference “§ 425.502” and adding in its place the references “§§ 425.502 or 425.512, as applicable”; and

■ c. In paragraph (a)(6) by removing the reference “§ 425.502” and adding in its place the references “§§ 425.502 or 425.512, as applicable”.

Dated: July 16, 2020.

Seema Verma

Administrator, Centers for Medicare & Medicaid Services.

Dated: July 31, 2020.

Alex M. Azar II,

Secretary, Department of Health and Human Services.

Note: The following appendices will not appear in the Code of Federal Regulations.

Appendix 1: MIPS Quality Measures

NOTE: Except as otherwise noted in this proposed rule, previously finalized measures and specialty measure sets will continue to apply for the 2023 MIPS payment year and future years. In addition, electronic Clinical Quality Measures (eCQMs) that are National Quality Forum (NQF) endorsed are shown in Table A as follows: NQF #/eCQM NQF #.

BILLING CODE 4120-01-P

TABLE Group A: New Quality Measures Proposed for the 2023 MIPS Payment Year and Future Years

A.1. Hospital-Wide, 30-Day, All-Cause Unplanned Readmission (HWR) Rate for the Merit-Based Incentive Payment System (MIPS) Groups

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality #:	TBD
Description:	This measure is a re-specified version of the measure, “Risk-adjusted readmission rate (RARR) of unplanned readmission within 30 days of hospital discharge for any condition” (NQF 1789), which was developed for patients 65 years and older using Medicare claims. This re-specified measure attributes outcomes to MIPS participating clinician groups and assesses each group’s readmission rate. The measure comprises a single summary score, derived from the results of five models, one for each of the following specialty cohorts (groups of discharge condition categories or procedure categories): medicine, surgery/gynecology, cardio-respiratory, cardiovascular, and neurology.
Measure Steward:	Centers for Medicare & Medicaid Services
Numerator:	The outcome for this measure is unplanned all-cause 30-day readmission. Readmission is defined as a subsequent inpatient admission to any acute care facility which occurs within 30 days of the discharge date of an eligible index admission. Any readmission is eligible to be counted as an outcome, except those that are considered planned. To align with data years used, the planned readmission algorithm version 4.0 was used to classify readmissions as planned or unplanned.
Denominator:	Patients eligible for inclusion in the measure have an index admission hospitalization to which the readmission outcome is attributed and includes admissions for patients: Enrolled in Medicare Fee-For-Service (FFS) Part A for the 12 months prior to the date of admission; Aged 65 or over; Discharged alive from a non-federal short-term acute care hospital; and, Not transferred to another acute care facility.
Exclusions:	1. Patients discharged against medical advice (AMA) are excluded. 2. Admissions for patients to a PPS-exempt cancer hospital are excluded. 3. Admissions primarily for medical treatment of cancer are excluded. 4. Admissions primarily for psychiatric disease are excluded. 5. Admissions for “rehabilitation care; fitting of prostheses and adjustment devices” (CCS 254) are excluded. 6. Admissions where patient cannot be attributed to a clinician group.
Measure Type:	Outcome
Measure Domain:	Communication and Care Coordination (section 1848(s)(1)(B)(iii) of the Act)
High Priority Measure:	Yes (Outcome)
Collection Type:	Administrative Claims
Measure Implementation:	MIPS eligible groups with at least 16 clinicians / 200 case minimum / 1 year performance period (January 1 st – December 31 st)
Rationale:	<p>We are proposing this risk-adjusted administrative claims measure to address unplanned readmissions at the physician group level of Medicare aged > 65 patients. This measure is a re-specified version of the hospital-level measure, “Hospital-Wide All-Cause, Unplanned Readmission Measure” (NQF #1789), which has been in the MIPS program since 2017. In the event we do not finalize this measure, we would maintain the current measure Q458: All-Cause Hospital Readmission. The re-specification of this measure promotes a systems-level approach by clinicians and focus on high-risk conditions, such as COPD and heart failure. The measure was evaluated by the MAP and was conditionally supported pending NQF endorsement. While we agree with the MAP that NQF endorsement of measures is preferred, NQF endorsement is not a requirement for measures to be considered for MIPS if the measure has an evidence-based focus as required in section 1848(q)(2)(D)(v) of the Act. A risk-adjusted readmission rate of 15.3 percent at the physician group level was provided by the measure developer. The readmission rate indicates a substantial need to reduce the expected rate and variation of rates across eligible physician groups. Physician groups have the capability to influence unplanned readmission outcomes by appropriate medication reconciliation at discharge, reduction of infection risk, and ensuring proper outpatient follow-up. As an administrative claims measure, there is no separate reporting burden. To maintain continuity with the existing measure Q458: All-Cause Hospital Readmission, the case minimum will remain at 200 cases for consistency in implementation. For 2023 payment determination, the performance period will include administrative claims from January 1, 2021 to December 31, 2021. For further information regarding the proposed implementation of this measure, please see IV.A.3.c.(1)(e)(i) of this proposed rule.</p> <p>Note: Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=91911.</p>

A.2. Risk-standardized complication rate (RSCR) following elective primary total hip arthroplasty (THA) and/or total knee arthroplasty (TKA) for Merit-based Incentive Payment System (MIPS)

Category	Description
NQF #: / eCQM NQF #:	3493 / N/A
Quality #:	TBD
Description:	This measure is a re-specified version of the measure, "Hospital-level Risk-standardized Complication rate (RSCR) following Elective Primary Total Hip Arthroplasty (THA) and/or Total Knee Arthroplasty (TKA)" (National Quality Forum 1550), which was developed for patients 65 years and older using Medicare claims. This re-specified measure attributes outcomes to Merit-based Incentive Payment System participating clinicians and/or clinician groups ("provider") and assesses each provider's complication rate, defined as any one of the specified complications occurring from the date of index admission to up to 90 days post date of the index procedure.
Measure Steward:	Centers for Medicare & Medicaid Services
Numerator:	The outcome for this measure is complication defined as acute myocardial infarction (AMI), pneumonia, and sepsis/septicemia/shock complications within seven days from the index admission date; death, surgical site bleeding, and pulmonary embolism within 30 days from the index admission; mechanical complications and periprosthetic joint infection/wound infection within 90 days of the index admission. The complication outcome is a dichotomous (yes/no) outcome. If a patient experiences one or more of these complications in the applicable time period, the complication outcome for that patient is counted in the measure as a "yes".
Denominator:	Patients eligible for inclusion in the measure are those age 65 years and older admitted to non-federal acute care hospitals. An index admission is the hospitalization during which an elective Total Hip Arthroplasty (THA) and/or Total Knee Arthroplasty (TKA) procedure was performed and to which the complication outcome is attributed. Eligible index admissions are identified using International Classification of Diseases-Tenth Revision-Procedure Coding System (ICD-10-PCS) procedure codes in Medicare inpatient claims data. For risk adjustment and outcome assessment, patients must have continuous enrollment in Medicare fee-for-service (FFS) for 12 months prior to the procedure and 90 days after it. The measure cohort is fully harmonized with the existing hospital-level measure.
Exclusions:	This measure excludes from the denominator admissions for patients: 1. With a femur, hip or pelvic fracture coded in the principal discharge diagnosis field for the index admission. 2. Undergoing partial hip arthroplasty (PHA) procedures (with a concurrent Total Hip Arthroplasty or Total Knee Arthroplasty [THA/TKA]). 3. Undergoing revision procedures (with a concurrent THA/TKA). 4. Undergoing resurfacing procedures (with a concurrent THA/TKA). 5. With a mechanical complication coded in the principal discharge diagnosis field for the index admission. 6. With a malignant neoplasm of the pelvis, sacrum, coccyx, lower limbs, or bone/bone marrow or a disseminated malignant neoplasm coded in the principal discharge diagnosis field for the index admission. 7. With a procedure code for removal of implanted devices/prostheses. After excluding the above admissions to identify elective primary THA/TKA procedures, the measure also excludes admissions for patients: 8. Who were transferred to the index hospital. 9. Who leave the hospital against medical advice (AMA). 10. With more than two THA/TKA procedure codes during the index hospitalization. Note: The measure does not count complications that occur in the outpatient setting and do not require a readmission.
Measure Type:	Outcome
Measure Domain:	Patient Safety (section 1848(s)(1)(B)(ii) of the Act)
High Priority Measure:	Yes (Outcome)
Collection Type:	Administrative Claims
Measure Implementation:	MIPS eligible clinicians and groups / 25 case minimum / 3 year performance period (October 1 st – September 30 th)
Rationale:	<p>We are proposing this risk-standardized complication rate administrative claims measure to incentivize improved coordination of care, thereby reducing the number of hospitalizations and days hospitalized for patients, reducing rates of complications, and promoting cost savings resulting from fewer hospitalizations. This measure can improve the quality of surgical care delivery and follow-up care for a common and costly surgical procedure performed for Medicare patients. This measure is a re-specified version of an existing, publicly reported hospital measure, NQF #1550, located at https://innovation.cms.gov/files/fact-sheet/bpciadvanced-fs-nqf1550.pdf. Additionally, as an administrative claims measure, there is no separate reporting burden. The measure was evaluated by the MAP and is supported for rulemaking and is NQF endorsed (NQF #3493). The measure steward indicated variability among providers and groups with the risk standardized complication rates (RSCR) ranging from 1.2 percent to 7.2 percent across the groups. In adapting the measure for MIPS eligible clinicians, it will assess the same cohort of patients as the hospital measure, but attribute complications to a larger number of entities with a typically lower volume. Thus, we anticipate that the MIPS THA/TKA complication measure will reflect meaningful variation across MIPS eligible clinicians. The median RSCR for MIPS eligible clinicians with more than 25 cases was 2.7 percent with a minimum interquartile range (IQR) of 2.4 percent - 3.2 percent. The median RSCR for MIPS eligible clinician groups with more than 25 cases was 2.8 percent, with a minimum IQR of 2.4 percent - 3.1 percent. This indicates that 50 percent of clinicians have a complication rate of 2.7 percent or more after adjusting for patient age and comorbidities. The best performing clinicians (1.2 percent) are performing 55.6 percent better than an average performer, while the worst performing clinicians (7.2 percent) are performing 166.7 percent worse than an average performer. The best performing clinician groups (1.4 percent) are performing 50 percent better than an average performer, while the worst performing clinicians (5.7 percent) are performing 103.6 percent worse than an average performer. The measure steward believes these results support meaningful variation in rates across clinician and clinician groups with room for improvement.</p> <p>This measure is a re-specification of the existing, publicly reported hospital-level total hip/knee arthroplasty (THA/TKA) 90-day complication measure and has been designed to align with the cohort and methods of that measure. This measure uses 36 months of administrative claims data to calculate risk-standardized complication rates (RSCRs) for MIPS eligible clinicians and MIPS eligible clinician groups with 25 or more cases within the 3-year performance period. This approach balances measure reliability with maximizing the number of clinicians or clinician groups measured. For 2023 payment determination, the performance period will include administrative claims from October 1, 2018 to September 30, 2021. The measure's numerator assesses the occurrence of complications in the 90 days following the index admission date; therefore, ending the 3-year performance period on September 30th of the calendar year will allow time for numerator assessment.</p> <p>Based on the information provided by the measures steward, we believe this measure is evidence-based and represents an important clinical outcome. For further information regarding the proposed implementation of this measure, please see IV.A.3.c.(1)(e)(i) of this proposed rule.</p> <p>Note: Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=91911.</p>

TABLE Group B: New Specialty Measures Sets and Modifications to Previously Finalized Specialty Measure Sets Finalized for the 2023 MIPS Payment Year and Future Years

We are proposing to modify the previously finalized specialty measures sets below based upon review of updates made to existing quality measure specifications, proposed the addition of new measures for inclusion in MIPS, and considered the feedback provided by specialty societies. There may be instances where the quality measures within a specialty set remain static, but the individual measures have proposed substantive changes in Table Group D. In the first column, existing measures with substantive changes described in Table Group D are noted with an asterisk (*), core measures that align with Core Quality Measure Collaborative (CQMC) core measure set(s) are noted with the symbol (§), and high priority measures are noted with an exclamation point (!). In addition, the Indicator column includes a “high priority type” in parentheses after each high priority indicator (!) to represent fully the regulatory definition of high priority measures. In addition, electronic Clinical Quality Measures (eCQMs) that are National Quality Forum (NQF) endorsed are shown in Table B as follows: NQF # / eCQM NQF #.

The following specialty measure set was excluded from this group because we are not proposing any changes to this specialty measure set: Anesthesiology.

B.1. Allergy/Immunology

In addition to the considerations discussed in the introductory language of Table B of the appendix of this proposed rule, the Allergy/Immunology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Allergy/Immunology specialty set.

MEASURES PROPOSED FOR ADDITION TO THE CARDIOLOGY SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
*	0041 / 0041e	110	CMS147 v10	Medicare Part B Claims Measure Specifications, eCQM Specifications, CMS Web Interface Measure Specifications, MIPS CQMs Specifications	Process	Community/Population Health	Preventive Care and Screening: Influenza Immunization: Percentage of patients aged 6 months and older seen for a visit between October 1 and March 31 who received an influenza immunization OR who reported previous receipt of an influenza immunization	Physician Consortium for Performance Improvement Foundation (PCPI®)	We propose to include this measure in the Cardiology specialty set as it is clinically relevant to this clinician type.
	N/A / N/A	111	CMS127 v9	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Community/Population Health	Pneumococcal Vaccination Status for Older Adults: Percentage of patients 65 years of age and older who have ever received a pneumococcal vaccine	National Committee for Quality Assurance	We propose to include this measure in the Cardiology specialty set as it is clinically relevant to this clinician type.

B.3b. Electrophysiology Cardiac Specialist

In addition to the considerations discussed in the introductory language of Table B of the appendix of this proposed rule, the Electrophysiology Cardiac Specialist specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Electrophysiology Cardiac Specialist specialty set.

B.3b. Electrophysiology Cardiac Specialist

PREVIOUSLY FINALIZED MEASURES IN THE ELECTROPHYSIOLOGY CARDIAC SPECIALIST SET								
Indicator	NQF #/ eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward
! (Outcome)	2474 / N/A	392	N/A	MIPS CQMs Specifications	Outcome	Patient Safety	Cardiac Tamponade and/or Pericardiocentesis Following Atrial Fibrillation Ablation: Rate of cardiac tamponade and/or pericardiocentesis following atrial fibrillation ablation. This measure is submitted as four rates stratified by age and gender: <ul style="list-style-type: none"> • Submission Age Criteria 1: Females 18-64 years of age • Submission Age Criteria 2: Males 18-64 years of age • Submission Age Criteria 3: Females 65 years of age and older • Submission Age Criteria 4: Males 65 years of age and older 	American College of Cardiology Foundation
! (Outcome)	N/A / N/A	393	N/A	MIPS CQMs Specifications	Outcome	Patient Safety	Infection within 180 Days of Cardiac Implantable Electronic Device (CIED) Implantation, Replacement, or Revision: Infection rate following CIED device implantation, replacement, or revision.	American College of Cardiology Foundation

B.3b. Electrophysiology

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE ELECTROPHYSIOLOGY SET								
Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.								
NQF #/ eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
N/A / N/A	348	N/A	MIPS CQMs Specifications	Outcome	Patient Safety	Implantable Cardioverter-Defibrillator (ICD) Complications Rate: Patients with physician-specific risk-standardized rates of procedural complications following the first time implantation of an ICD.	American College of Cardiology Foundation	This measure is being proposed for removal beginning with the 2023 MIPS payment year. See Table C for rationale.

B.4. Chiropractic Medicine

In addition to the considerations discussed in the introductory language of Table B of the appendix of this proposed rule, the Chiropractic Medicine specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Chiropractic Medicine specialty set.

B.4. Chiropractic Medicine

PREVIOUSLY FINALIZED MEASURES IN THE CHIROPRACTIC MEDICINE SET								
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward
* ! (Care Coordination)	N/A / N/A	182	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Communication and Care Coordination	Functional Outcome Assessment: Percentage of visits for patients aged 18 years and older with documentation of a current functional outcome assessment using a standardized functional outcome assessment tool on the date of the encounter AND documentation of a care plan based on identified functional outcome deficiencies on the date of the identified deficiencies.	Centers for Medicare & Medicaid Services
* ! (Outcome)	N/A / N/A	217	N/A	MIPS CQMs Specifications	Patient Reported Outcome	Communication and Care Coordination	Functional Status Change for Patients with Knee Impairments: A patient-reported outcome measure of risk-adjusted change in functional status for patients aged 14 years+ with knee impairments. The change in functional status (FS) is assessed using the Knee FS patient-reported outcome measure (PROM) (©2009-2019 Focus on Therapeutic Outcomes, Inc.). The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk adjusted) and used as a performance measure at the patient level, at the individual clinician, and at the clinic level to assess quality. The measure is available as a computer adaptive test, for reduced patient burden, or a short form (static measure).	Focus on Therapeutic Outcomes, Inc.
* ! (Outcome)	N/A / N/A	218	N/A	MIPS CQMs Specifications	Patient Reported Outcome	Communication and Care Coordination	Functional Status Change for Patients with Hip Impairments: A patient-reported outcome measure of risk-adjusted change in functional status for patients 14 years+ with hip impairments. The change in functional status (FS) is assessed using the Hip FS patient-reported outcome measure (PROM) (©2009-2019 Focus on Therapeutic Outcomes, Inc.). The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk adjusted) and used as a performance measure at the patient level, at the individual clinician, and at the clinic level to assess quality. The measure is available as a computer adaptive test, for reduced patient burden, or a short form (static measure).	Focus on Therapeutic Outcomes, Inc.

MEASURES PROPOSED FOR ADDITION TO THE CLINICAL SOCIAL WORK SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
* ! (Care Coordination)	0326 / N/A	047	N/A	Medicare Part B Claims, MIPS CQMs Specifications	Process	Communication and Care Coordination	Advance Care Plan: Percentage of patients aged 65 years and older who have an advance care plan or surrogate decision maker documented in the medical record or documentation in the medical record that an advance care plan was discussed but the patient did not wish or was not able to name a surrogate decision maker or provide an advance care plan.	National Committee for Quality Assurance	We are proposing in Table D.9 to expand the measure's applicability to include coding that would include clinical social worker clinician type. With the expanded patient population and the clinically relevance to this clinician type, we are proposing to add to the Clinical Social Work specialty set.

B.6. Dentistry

In addition to the considerations discussed in the introductory language of Table B of the appendix of this proposed rule, the Dentistry specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Dentistry specialty set.

B.6. Dentistry

National Committee for Quality Assurance
* ! (Outcome)	N/A / N/A	410	N/A	MIPS CQMs Specifications	Outcome	Person and Caregiver-Centered Experience and Outcomes	Psoriasis: Clinical Response to Systemic Medications: Percentage of psoriasis vulgaris patients receiving systemic medication who meet minimal physician- or patient- reported disease activity levels. It is implied that establishment and maintenance of an established minimum level of disease control as measured by physician-and/or patient-reported outcomes will increase patient satisfaction with and adherence to treatment	American Academy of Dermatology
! (Care Coordination)	N/A / N/A	440	N/A	MIPS CQMs Specifications	Process	Communication and Care Coordination	Skin Cancer: Biopsy Reporting Time – Pathologist to Clinician: Percentage of biopsies with a diagnosis of cutaneous Basal Cell Carcinoma (BCC) and Squamous Cell Carcinoma (SCC), or melanoma (including in situ disease) in which the pathologist communicates results to the clinician within 7 days from the time when the tissue specimen was received by the pathologist	American Academy of Dermatology

B.7. Dermatology

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE DERMATOLOGY SET								
Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.								
NQF # / eCQM / M / NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
N/A / N/A	337	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	<p>Psoriasis: Tuberculosis (TB) Prevention for Patients with Psoriasis, Psoriatic Arthritis and Rheumatoid Arthritis on a Biological Immune Response Modifier: Percentage of patients, regardless of age, with psoriasis, psoriatic arthritis and/or rheumatoid arthritis on a biological immune response modifier whose providers are ensuring active tuberculosis prevention either through negative standard tuberculosis screening tests or are reviewing the patient's history to determine if they have had appropriate management for a recent or prior positive test.</p>	American Academy of Dermatology	This measure is being proposed for removal beginning with the 2023 MIPS payment year. See Table C for rationale.

B.8. Diagnostic Radiology

In addition to the considerations discussed in the introductory language of Table B of the appendix of this proposed rule, the Diagnostic Radiology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Diagnostic Radiology specialty set.

B.8. Diagnostic Radiology

PREVIOUSLY FINALIZED MEASURES IN THE DIAGNOSTIC RADIOLOGY SET								
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQMID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward
* ! (Patient Safety)	N/A / N/A	145	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Patient Safety	Radiology: Exposure Dose Indices or Exposure Time and Number of Images Reported for Procedures Using Fluoroscopy: Final reports for procedures using fluoroscopy that document radiation exposure indices, or exposure time and number of fluorographic images (if radiation exposure indices are not available).	American College of Radiology
* ! (Care Coordination)	N/A / N/A	147	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Communication and Care Coordination	Nuclear Medicine: Correlation with Existing Imaging Studies for All Patients Undergoing Bone Scintigraphy: Percentage of final reports for all patients, regardless of age, undergoing bone scintigraphy that include physician documentation of correlation with existing relevant imaging studies (e.g., x-ray, Magnetic Resonance Imaging (MRI), Computed Tomography (CT), etc.) that were performed.	Society of Nuclear Medicine and Molecular Imaging
*	0507 / N/A	195	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Effective Clinical Care	Radiology: Stenosis Measurement in Carotid Imaging Reports: Percentage of final reports for carotid imaging studies (neck magnetic resonance angiography [MRA], neck computed tomography angiography [CTA], neck duplex ultrasound, carotid angiogram) performed that include direct or indirect reference to measurements of distal internal carotid diameter as the denominator for stenosis measurement.	American College of Radiology
! (Care Coordination)	0509 / N/A	225	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Structure	Communication and Care Coordination	Radiology: Reminder System for Screening Mammograms: Percentage of patients undergoing a screening mammogram whose information is entered into a reminder system with a target due date for the next mammogram.	American College of Radiology
! (Appropriate Use)	N/A / N/A	360	N/A	MIPS CQMs Specifications	Process	Patient Safety	Optimizing Patient Exposure to Ionizing Radiation: Count of Potential High Dose Radiation Imaging Studies: Computed Tomography (CT) and Cardiac Nuclear Medicine Studies: Percentage of computed tomography (CT) and cardiac nuclear medicine (myocardial perfusion studies) imaging reports for all patients, regardless of age, that document a count of known previous CT (any type of CT) and cardiac nuclear medicine (myocardial perfusion) studies that the patient has received in the 12-month period prior to the current study.	American College of Radiology

B.8. Diagnostic Radiology

PREVIOUSLY FINALIZED MEASURES IN THE DIAGNOSTIC RADIOLOGY SET								
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCOMID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward
* ! (Appropriate Use)	N/A / N/A	364	N/A	MIPS CQMs Specifications	Process	Communication and Care Coordination	Optimizing Patient Exposure to Ionizing Radiation: Appropriateness: Follow-up CT Imaging for Incidentally Detected Pulmonary Nodules According to Recommended Guidelines: Percentage of final reports for CT imaging studies with a finding of an incidental pulmonary nodule for patients aged 35 years and older that contain an impression or conclusion that includes a recommended interval and modality for follow-up (e.g., type of imaging or biopsy) or for no follow-up, and source of recommendations (e.g., guidelines such as Fleischner Society, American Lung Association, American College of Chest Physicians).	American College of Radiology
* ! (Appropriate Use)	N/A / N/A	405	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Effective Clinical Care	Appropriate Follow-up Imaging for Incidental Abdominal Lesions: Percentage of final reports for imaging studies for patients aged 18 years and older with one or more of the following noted incidentally with a specific recommendation for no follow-up imaging recommended based on radiological findings: • Cystic renal lesion that is simple appearing* (<i>Bosniak I or II</i>). • Adrenal lesion less than or equal to 1.0 cm. • Adrenal lesion greater than 1.0 cm but less than or equal to 4.0 cm classified as likely benign by unenhanced CT or washout protocol CT, or MRI with in- and opposed-phase sequences or other equivalent institutional imaging protocols.	American College of Radiology
! (Appropriate Use)	N/A / N/A	406	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Effective Clinical Care	Appropriate Follow-Up Imaging for Incidental Thyroid Nodules in Patients: Percentage of final reports for computed tomography (CT), CT angiography (CTA) or magnetic resonance imaging (MRI) or magnetic resonance angiogram (MRA) studies of the chest or neck for patients aged 18 years and older with no known thyroid disease with a thyroid nodule < 1.0 cm noted incidentally with follow-up imaging recommended.	American College of Radiology
	N/A / N/A	436	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Effective Clinical Care	Radiation Consideration for Adult CT: Utilization of Dose Lowering Techniques: Percentage of final reports for patients aged 18 years and older undergoing computed tomography (CT) with documentation that one or more of the following dose reduction techniques were used: • Automated exposure control. • Adjustment of the mA and/or kV according to patient size. • Use of iterative reconstruction technique.	American College of Radiology/ American Medical Association-Physician Consortium for Performance Improvement/ National Committee for Quality Assurance

B.8. Diagnostic Radiology

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE DIAGNOSTIC RADIOLOGY SET								
Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.								
NQF # / eCQM NQF #	Quality #	CMS eCOM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0508 / N/A	146	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Efficiency and Cost Reduction	Radiology: Inappropriate Use of “Probably Benign” Assessment Category in Screening Mammograms: Percentage of final reports for screening mammograms that are classified as “probably benign”.	American College of Radiology	This measure is being proposed for removal beginning with the 2023 MIPS payment year. See Table C for rationale.

B.9. Emergency Medicine

In addition to the considerations discussed in the introductory language of Table B of the appendix of this proposed rule, the Emergency Medicine specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Emergency Medicine specialty set.

B.9. Emergency Medicine

MEASURES PROPOSED FOR ADDITION TO THE FAMILY MEDICINE SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
* ! (Care Coordination)	0576 / N/A	391	N/A	MIPS CQM Specifications	Process	Communication and Care Coordination	<p>Follow-Up After Hospitalization for Mental Illness (FUH): The percentage of discharges for patients 6 years of age and older who were hospitalized for treatment of selected mental illness or intentional self-harm diagnoses and who had a follow-up visit with a mental health practitioner. Two rates are submitted:</p> <ul style="list-style-type: none"> • The percentage of discharges for which the patient received follow-up within 30 days after discharge. • The percentage of discharges for which the patient received follow-up within 7 days after discharge. 	National Committee for Quality Assurance	We are proposing to add this measure to the Family Medicine specialty set. Stakeholders commented, as we agree, that the Family Medicine set include several quality measures that address mental health and substance use disorders. Given the high rates that patients are assessed or treated for these conditions within this specialty, they recommended the inclusion of this measure within the Family Medicine specialty set.

B.11. Family Medicine

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE FAMILY MEDICINE SET								
Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.								
NQF # / eCQM / MIPS / NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
N/A / N/A	024	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Communication and Care Coordination	Communication with the Physician or Other Clinician Managing On-Going Care Post-Fracture for Men and Women Aged 50 Years and Older: Percentage of patients aged 50 years and older treated for a fracture with documentation of communication, between the physician treating the fracture and the physician or other clinician managing the patient's on-going care, that a fracture occurred and that the patient was or should be considered for osteoporosis treatment or testing. This measure is submitted by the physician who treats the fracture and who therefore is held accountable for the communication.	National Committee for Quality Assurance	This measure is being proposed for removal beginning with the 2023 MIPS payment year. See Table C for rationale.
N/A / N/A	048	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Effective Clinical Care	Urinary Incontinence: Assessment of Presence or Absence of Urinary Incontinence in Women Aged 65 Years and Older: Percentage of female patients aged 65 years and older who were assessed for the presence or absence of urinary incontinence within 12 months.	National Committee for Quality Assurance	This measure is being proposed for removal beginning with the 2023 MIPS payment year. See Table C for rationale.
N/A / N/A	333	N/A	MIPS CQMs Specifications	Efficiency	Efficiency and Cost Reduction	Adult Sinusitis: Computerized Tomography (CT) for Acute Sinusitis (Overuse): Percentage of patients aged 18 years and older, with a diagnosis of acute sinusitis who had a computerized tomography (CT) scan of the paranasal sinuses ordered at the time of diagnosis or received within 28 days after date of diagnosis.	American Academy of Otolaryngology - Head and Neck Surgery Foundation	This measure is being proposed for removal beginning with the 2023 MIPS payment year. See Table C for rationale.

B.11. Family Medicine

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE FAMILY MEDICINE SET								
Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.								
NQF # / eCQM / NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
N/A / N/A	337	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	Psoriasis: Tuberculosis (TB) Prevention for Patients with Psoriasis, Psoriatic Arthritis and Rheumatoid Arthritis on a Biological Immune Response Modifier: Percentage of patients, regardless of age, with psoriasis, psoriatic arthritis and/or rheumatoid arthritis on a biological immune response modifier whose providers are ensuring active tuberculosis prevention either through negative standard tuberculosis screening tests or are reviewing the patient's history to determine if they have had appropriate management for a recent or prior positive test.	American Academy of Dermatology	This measure is being proposed for removal beginning with the 2023 MIPS payment year. See Table C for rationale.
N/A / N/A	408	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	Opioid Therapy Follow-up Evaluation: All patients 18 and older prescribed opiates for longer than 6 weeks duration who had a follow-up evaluation conducted at least every 3 months during Opioid Therapy documented in the medical record.	American Academy of Neurology	This measure is being proposed for removal beginning with the 2023 MIPS payment year. See Table C for rationale.
N/A / N/A	412	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	Documentation of Signed Opioid Treatment Agreement: All patients 18 and older prescribed opiates for longer than 6 weeks duration who signed an opioid treatment agreement at least once during Opioid Therapy documented in the medical record.	American Academy of Neurology	This measure is being proposed for removal beginning with the 2023 MIPS payment year. See Table C for rationale.
N/A / N/A	414	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	Evaluation or Interview for Risk of Opioid Misuse: All patients 18 and older prescribed opiates for longer than 6 weeks duration evaluated for risk of opioid misuse using a brief validated instrument (e.g. Opioid Risk Tool, Screener and Opioid Assessment for Patients with Pain, revised (SOAPP-R)) or patient interview documented at least once during Opioid Therapy in the medical record.	American Academy of Neurology	This measure is being proposed for removal beginning with the 2023 MIPS payment year. See Table C for rationale.

B.12. Gastroenterology

In addition to the considerations discussed in the introductory language of Table B of the appendix of this proposed rule, the Gastroenterology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Gastroenterology specialty set.

American Gastroenterological Association

B.12. Gastroenterology

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE GASTROENTEROLOGY SET								
Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.								
NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
N/A / N/A	390	N/A	MIPS CQMs Specifications	Process	Person and Caregiver-Centered Experience and Outcomes	<p>Hepatitis C: Discussion and Shared Decision Making Surrounding Treatment Options: Percentage of patients aged 18 years and older with a diagnosis of hepatitis C with whom a physician or other qualified healthcare professional reviewed the range of treatment options appropriate to their genotype and demonstrated a shared decision making approach with the patient. To meet the measure, there must be documentation in the patient record of a discussion between the physician or other qualified healthcare professional and the patient that includes all of the following: treatment choices appropriate to genotype, risks and benefits, evidence of effectiveness, and patient preferences toward treatment.</p>	American Gastroenterological Association	This measure is being proposed for removal beginning with the 2023 MIPS payment year. See Table C for rationale.

B.13 General Surgery

In addition to the considerations discussed in the introductory language of Table B of the appendix of this proposed rule, the General Surgery specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed General Surgery specialty set.

MEASURES PROPOSED FOR ADDITION TO THE INTERNAL MEDICINE SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
*	N/A / 0104e	107	CMS161 v9	eCQM Measure Specificatio ns	Process	Effective Clinical Care	Adult Major Depressive Disorder (MDD): Suicide Risk Assessment: Percentage of patients aged 18 years and older with a diagnosis of major depressive disorder (MDD) with a suicide risk assessment completed during the visit in which a new diagnosis or recurrent episode was identified.	Physician Consortiu m for Performan ce Improvem ent Foundatio n (PCPI®)	We are proposing to add this measure to the Internal Medicine specialty set. Stakeholders commented, and we agree, that the Internal Medicine set include several quality measures that address mental health and substance use disorders. Given the high rates that patients are assessed or treated for these conditions within this specialty, they recommended the inclusion of this measure within the Internal Medicine specialty set.
* ! (Care Coordinati on)	0576 / N/A	391	N/A	MIPS CQM Specificatio ns	Process	Communi cation and Care Coordinati on	Follow-Up After Hospitalization for Mental Illness (FUH): The percentage of discharges for patients 6 years of age and older who were hospitalized for treatment of selected mental illness or intentional self-harm diagnoses and who had a follow-up visit with a mental health practitioner. Two rates are submitted: • The percentage of discharges for which the patient received follow-up within 30 days after discharge. • The percentage of discharges for which the patient received follow-up within 7 days after discharge.	National Committee for Quality Assurance	We are proposing to add this measure to the Internal Medicine specialty set. Stakeholders commented, and we agree, that the Family Medicine set include several quality measures that address mental health and substance use disorders. Given the high rates that patients are assessed or treated for these conditions within this specialty, they recommended the inclusion of this measure within the Internal Medicine specialty set.

B.17. Internal Medicine

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE INTERNAL MEDICINE SET								
Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.								
NQF # / eCQM / MIPS / NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
N/A / N/A	024	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Communication and Care Coordination	Communication with the Physician or Other Clinician Managing On-Going Care Post-Fracture for Men and Women Aged 50 Years and Older: Percentage of patients aged 50 years and older treated for a fracture with documentation of communication, between the physician treating the fracture and the physician or other clinician managing the patient's on-going care, that a fracture occurred and that the patient was or should be considered for osteoporosis treatment or testing. This measure is submitted by the physician who treats the fracture and who therefore is held accountable for the communication.	National Committee for Quality Assurance	This measure is being proposed for removal beginning with the 2023 MIPS payment year. See Table C for rationale.
N/A / N/A	048	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Effective Clinical Care	Urinary Incontinence: Assessment of Presence or Absence of Urinary Incontinence in Women Aged 65 Years and Older: Percentage of female patients aged 65 years and older who were assessed for the presence or absence of urinary incontinence within 12 months.	National Committee for Quality Assurance	This measure is being proposed for removal beginning with the 2023 MIPS payment year. See Table C for rationale.
N/A / N/A	333	N/A	MIPS CQMs Specifications	Efficiency	Efficiency and Cost Reduction	Adult Sinusitis: Computerized Tomography (CT) for Acute Sinusitis (Overuse): Percentage of patients aged 18 years and older, with a diagnosis of acute sinusitis who had a computerized tomography (CT) scan of the paranasal sinuses ordered at the time of diagnosis or received within 28 days after date of diagnosis.	American Academy of Otolaryngology - Head and Neck Surgery Foundation	This measure is being proposed for removal beginning with the 2023 MIPS payment year. See Table C for rationale.

B.17. Internal Medicine

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR **REMOVAL** FROM THE INTERNAL MEDICINE SET

Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF # / eCQM / NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
N/A / N/A	337	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	Psoriasis: Tuberculosis (TB) Prevention for Patients with Psoriasis, Psoriatic Arthritis and Rheumatoid Arthritis on a Biological Immune Response Modifier: Percentage of patients, regardless of age, with psoriasis, psoriatic arthritis and/or rheumatoid arthritis on a biological immune response modifier whose providers are ensuring active tuberculosis prevention either through negative standard tuberculosis screening tests or are reviewing the patient's history to determine if they have had appropriate management for a recent or prior positive test.	American Academy of Dermatology	This measure is being proposed for removal beginning with the 2023 MIPS payment year. See Table C for rationale.
N/A / N/A	408	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	Opioid Therapy Follow-up Evaluation: All patients 18 and older prescribed opiates for longer than 6 weeks duration who had a follow-up evaluation conducted at least every 3 months during Opioid Therapy documented in the medical record.	American Academy of Neurology	This measure is being proposed for removal beginning with the 2023 MIPS payment year. See Table C for rationale.
N/A / N/A	412	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	Documentation of Signed Opioid Treatment Agreement: All patients 18 and older prescribed opiates for longer than 6 weeks duration who signed an opioid treatment agreement at least once during Opioid Therapy documented in the medical record.	American Academy of Neurology	This measure is being proposed for removal beginning with the 2023 MIPS payment year. See Table C for rationale.
N/A / N/A	414	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	Evaluation or Interview for Risk of Opioid Misuse: All patients 18 and older prescribed opiates for longer than 6 weeks duration evaluated for risk of opioid misuse using a brief validated instrument (e.g. Opioid Risk Tool, Screener and Opioid Assessment for Patients with Pain, revised (SOAPP-R)) or patient interview documented at least once during Opioid Therapy in the medical record.	American Academy of Neurology	This measure is being proposed for removal beginning with the 2023 MIPS payment year. See Table C for rationale.

B.18. Interventional Radiology

In addition to the considerations discussed in the introductory language of Table B of the appendix of this proposed rule, the Interventional Radiology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Interventional Radiology specialty set.

B.18. Interventional Radiology

PREVIOUSLY FINALIZED MEASURES IN THE INTERVENTIONAL RADIOLOGY SET								
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward
! (Patient Safety)	2726 / N/A	076	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Patient Safety	Prevention of Central Venous Catheter (CVC) - Related Bloodstream Infections: Percentage of patients, regardless of age, who undergo central venous catheter (CVC) insertion for whom CVC was inserted with all elements of maximal sterile barrier technique, hand hygiene, skin preparation and, if ultrasound is used, sterile ultrasound techniques followed.	American Society of Anesthesiologists
* ! (Patient Safety)	N/A / N/A	145	N/A	Medicare Part B Claims Specifications, MIPS CQMs Specifications	Process	Patient Safety	Radiology: Exposure Dose Indices or Exposure Time and Number of Images Reported for Procedures Using Fluoroscopy: Final reports for procedures using fluoroscopy that document radiation exposure indices, or exposure time and number of fluorographic images (if radiation exposure indices are not available).	American College of Radiology
* ! (Care Coordination)	N/A / N/A	374	CMS50v9	MIPS CQMs Specifications, eCQM Specifications	Process	Communication and Care Coordination	Closing the Referral Loop: Receipt of Specialist Report: Percentage of patients with referrals, regardless of age, for which the referring provider receives a report from the provider to whom the patient was referred.	Centers for Medicare & Medicaid Services
! (Outcome)	N/A / N/A	409	N/A	MIPS CQMs Specifications	Outcome	Effective Clinical Care	Clinical Outcome Post Endovascular Stroke Treatment: Percentage of patients with a mRS score of 0 to 2 at 90 days following endovascular stroke intervention.	Society of Interventional Radiology
! (Outcome)	N/A / N/A	413	N/A	MIPS CQMs Specifications	Intermediate Outcome	Effective Clinical Care	Door to Puncture Time for Endovascular Stroke Treatment: Percentage of patients undergoing endovascular stroke treatment who have a door to puncture time of less than two hours.	Society of Interventional Radiology
! (Outcome)	N/A / N/A	420	N/A	MIPS CQMs Specifications	Patient Reported Outcome	Effective Clinical Care	Varicose Vein Treatment with Saphenous Ablation: Outcome Survey: Percentage of patients treated for varicose veins (CEAP C2-S) who are treated with saphenous ablation (with or without adjunctive tributary treatment) that report an improvement on a disease specific patient reported outcome survey instrument after treatment.	Society of Interventional Radiology
	N/A / N/A	421	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	Appropriate Assessment of Retrievable Inferior Vena Cava (IVC) Filters for Removal: Percentage of patients in whom a retrievable IVC filter is placed who, within 3 months post-placement, have a documented assessment for the appropriateness of continued filtration, device removal or the inability to contact the patient with at least two attempts.	Society of Interventional Radiology
! (Patient Safety)	N/A / N/A	465	N/A	MIPS CQMs Specifications	Process	Patient Safety	Uterine Artery Embolization Technique: Documentation of Angiographic Endpoints and Interrogation of Ovarian Arteries: The percentage of patients with documentation of angiographic endpoints of embolization AND the documentation of embolization strategies in the presence of unilateral or bilateral absent uterine arteries.	Society of Interventional Radiology

B.18. Interventional Radiology

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE INTERVENTIONAL RADIOLOGY SET								
Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.								
NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
N/A / N/A	437	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Outcome	Patient Safety	Rate of Surgical Conversion from Lower Extremity Endovascular Revascularization Procedure: Inpatients assigned to endovascular treatment for obstructive arterial disease, the percent of patients who undergo unplanned major amputation or surgical bypass within 48 hours of the index procedure.	Society of Interventional Radiology	This measure is being proposed for removal beginning with the 2023 MIPS payment year. See Table C for rationale.

B.19. Mental/Behavioral Health

In addition to the considerations discussed in the introductory language of Table B of the appendix of this proposed rule, the Mental/Behavioral Health specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Mental/Behavioral Health specialty set.

B.19. Mental/Behavioral Health

PREVIOUSLY FINALIZED MEASURES IN THE MENTAL/BEHAVIORAL HEALTH SET

*	N/A / N/A	277	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	Sleep Apnea: Severity Assessment at Initial Diagnosis: Percentage of patients aged 18 years and older with a diagnosis of obstructive sleep apnea who had an apnea hypopnea index (AHI) or a respiratory disturbance index (RDI) measured at the time of initial diagnosis.	American Academy of Sleep Medicine	We propose to include this measure in the Neurology specialty set based upon stakeholder feedback, as it is clinically relevant to this clinician type.
*	N/A / N/A	279	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	Sleep Apnea: Assessment of Adherence to Positive Airway Pressure Therapy: Percentage of visits for patients aged 18 years and older with a diagnosis of obstructive sleep apnea who were prescribed positive airway pressure therapy who had documentation that adherence to positive airway pressure therapy was objectively measured.	American Academy of Sleep Medicine	We propose to include this measure in the Neurology specialty set based upon stakeholder feedback, as it is clinically relevant to this clinician type.

B.21. Neurology

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE NEUROLOGY SET								
Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.								
NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
N/A / N/A	408	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	Opioid Therapy Follow-up Evaluation: All patients 18 and older prescribed opiates for longer than 6 weeks duration who had a follow-up evaluation conducted at least every 3 months during Opioid Therapy documented in the medical record.	American Academy of Neurology	This measure is being proposed for removal beginning with the 2023 MIPS payment year. See Table C for rationale.
N/A / N/A	412	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	Documentation of Signed Opioid Treatment Agreement: All patients 18 and older prescribed opiates for longer than 6 weeks duration who signed an opioid treatment agreement at least once during Opioid Therapy documented in the medical record.	American Academy of Neurology	This measure is being proposed for removal beginning with the 2023 MIPS payment year. See Table C for rationale.
N/A / N/A	414	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	Evaluation or Interview for Risk of Opioid Misuse: All patients 18 and older prescribed opiates for longer than 6 weeks duration evaluated for risk of opioid misuse using a brief validated instrument (e.g. Opioid Risk Tool, Screener and Opioid Assessment for Patients with Pain, revised (SOAPP-R)) or patient interview documented at least once during Opioid Therapy in the medical record.	American Academy of Neurology	This measure is being proposed for removal beginning with the 2023 MIPS payment year. See Table C for rationale.
N/A / N/A	435	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Patient Reported Outcome	Effective Clinical Care	Quality Of Life Assessment For Patients With Primary Headache Disorders: Percentage of patients with a diagnosis of primary headache disorder whose health related quality of life (IIRQoL) was assessed with a tool(s) during at least two visits during the 12-month measurement period AND whose health related quality of life score stayed the same or improved.	American Academy of Neurology	This measure is being proposed for removal beginning with the 2023 MIPS payment year. See Table C for rationale.

B.22. Neurosurgical

In addition to the considerations discussed in the introductory language of Table B of the appendix of this proposed rule, the Neurosurgical specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Neurosurgical specialty set.

Centers for Medicare & Medicaid Services
	N/A / N/A	475	CMS349 v3	eCQM Specifications	Process	Community/ Population Health	HIV Screening: Percentage of patients aged 15-65 at the start of the measurement period who were between 15-65 years old when tested for HIV.	Centers for Disease Control and Prevention

B.24. Obstetrics/Gynecology

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE OBSTETRICS/GYNECOLOGY SET								
Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.								
NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
N/A / N/A	048	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Effective Clinical Care	Urinary Incontinence: Assessment of Presence or Absence of Urinary Incontinence in Women Aged 65 Years and Older: Percentage of female patients aged 65 years and older who were assessed for the presence or absence of urinary incontinence within 12 months.	National Committee for Quality Assurance	This measure is being proposed for removal beginning with the 2023 MIPS payment year. See Table C for rationale.

B.25a. Oncology/Hematology

In addition to the considerations discussed in the introductory language of Table B of the appendix of this proposed rule, the Oncology/Hematology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Oncology/Hematology specialty set.

(Outcome)	N/A / N/A	389	N/A	MIPS CQMs Specifications	Outcome	Effective Clinical Care	Cataract Surgery: Difference Between Planned and Final Refraction: Percentage of patients aged 18 years and older who had cataract surgery performed and who achieved a final refraction within +/- 1.0 diopters of their planned (target) refraction.	American Academy of Ophthalmology

B.26. Ophthalmology

MEASURES PROPOSED FOR ADDITION TO THE OPHTHALMOLOGY SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
* ! (Patient Safety)	0022 / N/A	238	CMS156 v9	eCQM Specificatio ns, MIPS CQMs Specificatio ns	Process	Patient Safety	Use of High-Risk Medications in the Elderly: Percentage of patients 65 years of age and older who were ordered high-risk medications. Two rates are submitted. (1) Percentage of patients who were ordered at least one high-risk medication. (2) Percentage of patients who were ordered at least two of the same high-risk medications.	National Committee for Quality Assurance	We are proposing in Table D.48 to expand the measure's applicability to include the ophthalmology patient population. With the expanded patient population and the clinical relevance to this clinician type, we are proposing to add to the Ophthalmology specialty set.

B.27. Orthopedic Surgery

In addition to the considerations discussed in the introductory language of Table B of the appendix of this proposed rule, the Orthopedic Surgery specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Orthopedic Surgery specialty set.

* ! (Outcome)	N/A / N/A	478	N/A	MIPS CQMs Specifications	Patient Reported Outcome	Person and Caregiver- Centered Experience and Outcomes	<p>Functional Status Change for Patients with Neck Impairments: This is a patient-reported outcome performance measure (PRO-PM) consisting of a patient-reported outcome measure (PROM) of risk-adjusted change in functional status (FS) for patients aged 14+ with neck impairments. The change in FS is assessed using the Neck FS PROM. * The measure is risk-adjusted to patient characteristics known to be associated with FS outcomes. It is used as a performance measure at the patient, individual clinician, and clinic levels to assess quality. *The Neck FS PROM is an item-response theory-based computer adaptive test (CAT). In addition to the CAT version, which provides for reduced patient response burden, it is available as a 10-item short form (static/paper-pencil).</p>	Focus on Therapeutic Outcomes, Inc.

B.27. Orthopedic Surgery

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE ORTHOPEDIC SURGERY SET

Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF # / eQM / NQF #	Quality #	CMS eQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
N/A / N/A	024	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Communication and Care Coordination	<p>Communication with the Physician or Other Clinician Managing On-Going Care Post-Fracture for Men and Women Aged 50 Years and Older: Percentage of patients aged 50 years and older treated for a fracture with documentation of communication, between the physician treating the fracture and the physician or other clinician managing the patient's on-going care, that a fracture occurred and that the patient was or should be considered for osteoporosis treatment or testing. This measure is submitted by the physician who treats the fracture and who therefore is held accountable for the communication.</p>	National Committee for Quality Assurance	This measure is being proposed for removal beginning with the 2023 MIPS payment year. See Table C for rationale.
N/A / N/A	408	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	<p>Opioid Therapy Follow-up Evaluation: All patients 18 and older prescribed opiates for longer than 6 weeks duration who had a follow-up evaluation conducted at least every 3 months during Opioid Therapy documented in the medical record.</p>	American Academy of Neurology	This measure is being proposed for removal beginning with the 2023 MIPS payment year. See Table C for rationale.
N/A / N/A	412	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	<p>Documentation of Signed Opioid Treatment Agreement: All patients 18 and older prescribed opiates for longer than 6 weeks duration who signed an opioid treatment agreement at least once during Opioid Therapy documented in the medical record.</p>	American Academy of Neurology	This measure is being proposed for removal beginning with the 2023 MIPS payment year. See Table C for rationale.
N/A / N/A	414	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	<p>Evaluation or Interview for Risk of Opioid Misuse: All patients 18 and older prescribed opiates for longer than 6 weeks duration evaluated for risk of opioid misuse using a brief validated instrument (e.g. Opioid Risk Tool, Screener and Opioid Assessment for Patients with Pain, revised (SOAPP-R)) or patient interview documented at least once during Opioid Therapy in the medical record.</p>		This measure is being proposed for removal beginning with the 2023 MIPS payment year. See Table C for rationale.

B.28. Otolaryngology

In addition to the considerations discussed in the introductory language of Table B of the appendix of this proposed rule, the Otolaryngology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Otolaryngology specialty set.

B.28. Otolaryngology

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE OTOLARYNGOLOGY SET								
Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.								
NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
N/A / N/A	333	N/A	MIPS CQMs Specifications	Efficiency	Efficiency and Cost Reduction	Adult Sinusitis: Computerized Tomography (CT) for Acute Sinusitis (Overuse): Percentage of patients aged 18 years and older, with a diagnosis of acute sinusitis who had a computerized tomography (CT) scan of the paranasal sinuses ordered at the time of diagnosis or received within 28 days after date of diagnosis.	American Academy of Otolaryngology - Head and Neck Surgery Foundation	This measure is being proposed for removal beginning with the 2023 MIPS payment year. See Table C for rationale.

B.29. Pathology

In addition to the considerations discussed in the introductory language of Table B of the appendix of this proposed rule, the Pathology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Pathology specialty set.

N/A / N/A	408	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	Opioid Therapy Follow-up Evaluation: All patients 18 and older prescribed opiates for longer than 6 weeks duration who had a follow-up evaluation conducted at least every 3 months during Opioid Therapy documented in the medical record.	American Academy of Neurology	This measure is being proposed for removal beginning with the 2023 MIPS payment year. See Table C for rationale.
N/A / N/A	412	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	Documentation of Signed Opioid Treatment Agreement: All patients 18 and older prescribed opiates for longer than 6 weeks duration who signed an opioid treatment agreement at least once during Opioid Therapy documented in the medical record.	American Academy of Neurology	This measure is being proposed for removal beginning with the 2023 MIPS payment year. See Table C for rationale.
N/A / N/A	414	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	Evaluation or Interview for Risk of Opioid Misuse: All patients 18 and older prescribed opiates for longer than 6 weeks duration evaluated for risk of opioid misuse using a brief validated instrument (e.g. Opioid Risk Tool, Screener and Opioid Assessment for Patients with Pain, revised (SOAPP-R)) or patient interview documented at least once during Opioid Therapy in the medical record.		This measure is being proposed for removal beginning with the 2023 MIPS payment year. See Table C for rationale.

B.32. Physical Therapy/Occupational Therapy

In addition to the considerations discussed in the introductory language of Table B of the appendix of this proposed rule, the Physical Therapy/Occupational Therapy specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Physical Therapy/Occupational Therapy specialty set.

The change in FS is assessed using the Neck FS PROM.* The measure is risk-adjusted to patient characteristics known to be associated with FS outcomes. It is used as a performance measure at the patient, individual clinician, and clinic levels to assess quality. *The Neck FS PROM is an item-response theory-based computer adaptive test (CAT). In addition to the CAT version, which provides for reduced patient response burden, it is available as a 10-item short form (static/paper-pencil).	Focus on Therapeutic Outcomes, Inc.

B.32. Physical Therapy/Occupational Therapy

MEASURES PROPOSED FOR ADDITION TO THE PHYSICAL THERAPY/OCCUPATIONAL THERAPY SET									
Indicator	NQF # / eCQM M NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
*	N/A / N/A	283	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	Dementia Associated Behavioral and Psychiatric Symptoms Screening and Management: Percentage of patients with dementia for whom there was a documented screening for behavioral and psychiatric symptoms, including depression, and for whom, if symptoms screening was positive, there was also documentation of recommendations for management in the last 12 months.	American Academy of Neurology	We proposed to include this measure in the Physical Therapy/Occupational Therapy specialty set as it is clinically relevant to this clinician type.
* ! (Patient Safety)	N/A / N/A	286	N/A	MIPS CQMs Specifications	Process	Patient Safety	Dementia: Safety Concern Screening and Follow-Up for Patients with Dementia: Percentage of patients with dementia or their caregiver(s) for whom there was a documented safety concerns screening in two domains of risk: 1) dangerousness to self or others and 2) environmental risks; and if safety concerns screening was positive in the last 12 months, there was documentation of mitigation recommendations, including but not limited to referral to other resources.	American Academy of Neurology	We proposed to include this measure in the Physical Therapy/Occupational Therapy specialty set as it is clinically relevant to this clinician type.

B.32. Physical Therapy/Occupational Therapy

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE PHYSICAL THERAPY/OCCUPATIONAL THERAPY SET								
Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.								
NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
N/A / N/A	282	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	Dementia: Functional Status Assessment: Percentage of patients with dementia for whom an assessment of functional status was performed at least once in the last 12 months.	American Psychiatric Association / American Academy of Neurology	We propose to remove this measure from the Physical Therapy/Occupational Therapy set as it is duplicative of measure Q182: Functional Outcome Assessment. Measure Q182 includes much of the patient population in measure Q282, but is more robust in that it requires more frequent assessments and a plan of care.

B.33. Plastic Surgery

In addition to the considerations discussed in the introductory language of Table B of the appendix of this proposed rule, the Plastic Surgery specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Plastic Surgery specialty set.

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE PREVENTIVE MEDICINE SET								
Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.								
NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
N/A / N/A	024	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Communication and Care Coordination	<p>Communication with the Physician or Other Clinician Managing On-Going Care Post-Fracture for Men and Women Aged 50 Years and Older: Percentage of patients aged 50 years and older treated for a fracture with documentation of communication, between the physician treating the fracture and the physician or other clinician managing the patient's on-going care, that a fracture occurred and that the patient was or should be considered for osteoporosis treatment or testing. This measure is submitted by the physician who treats the fracture and who therefore is held accountable for the communication.</p>	National Committee for Quality Assurance	This measure is being proposed for removal beginning with the 2023 MIPS payment year. See Table C for rationale.
N/A / N/A	048	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Effective Clinical Care	<p>Urinary Incontinence: Assessment of Presence or Absence of Urinary Incontinence in Women Aged 65 Years and Older: Percentage of female patients aged 65 years and older who were assessed for the presence or absence of urinary incontinence within 12 months.</p>	National Committee for Quality Assurance	This measure is being proposed for removal beginning with the 2023 MIPS payment year. See Table C for rationale.

B.36. Pulmonology

In addition to the considerations discussed in the introductory language of Table B of the appendix of this final rule, the Pulmonology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable. We request comment on the measures available in the proposed Pulmonology specialty set.

* ! (Patient Safety)	0022 / N/A	238	CMS156 v9	eCQM Specificatio ns, MIPS CQMs Specificatio ns	Process	Patient Safety	Use of High-Risk Medications in the Elderly: Percentage of patients 65 years of age and older who were ordered high-risk medications. Two rates are submitted. (1) Percentage of patients who were ordered at least one high-risk medication. (2) Percentage of patients who were ordered at least two of the same high- risk medications.	National Committee for Quality Assurance	We are proposing in Table D.48 to expand the measure's applicability to include the skilled nursing facility patient population. With the expanded patient population and the clinical relevance to this clinician type, we are proposing to add to the Skilled Nursing Facility specialty set.

B.39. Speech Language Pathology

In addition to the considerations discussed in the introductory language of Table B of the appendix of this proposed rule, the Speech Language Pathology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Speech Language Pathology specialty set.

B.42. Urology

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE UROLOGY SET								
Note: In this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.								
NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
N/A / N/A	048	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Effective Clinical Care	Urinary Incontinence: Assessment of Presence or Absence of Urinary Incontinence in Women Aged 65 Years and Older: Percentage of female patients aged 65 years and older who were assessed for the presence or absence of urinary incontinence within 12 months.	National Committee for Quality Assurance	This measure is being proposed for removal beginning with the 2023 MIPS payment year. See Table C for rationale.

B.43. Vascular Surgery

In addition to the considerations discussed in the introductory language of Table B of the appendix of this proposed rule, the Vascular Surgery specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Vascular Surgery specialty set.

The measure contains four goals. All four goals within a measure must be reached to meet that measure. The numerator for the all-or-none measure should be collected from the organization's total IVD denominator. All-or-None Outcome Measure (Optimal Control) - Using the IVD denominator optimal results include:</p> <ul style="list-style-type: none"> • Most recent blood pressure (BP) measurement is less than or equal to 140/90 mm Hg -- AND • Most recent tobacco status is Tobacco Free -- AND • Daily Aspirin or Other Antiplatelet Unless Contraindicated -- AND • Statin Use Unless Contraindicated. 	Wisconsin Collaborative for Healthcare Quality (WCHQ)

TABLE Group C: Previously Finalized Quality Measures Proposed for Removal in the 2023 MIPS Payment Year and Future Years
 In this proposed rule, we propose to remove 14 previously finalized quality measures from the MIPS Program for the 2021 MIPS performance period/2023 MIPS payment year and future years. These measures are discussed in detail below. Our measure removal criteria was discussed in the CY 2019 PFS final rule (83 FR 59763 through 59765).

Further considerations are given in the evaluation of the measure’s performance data, to determine whether there is or no longer is variation in performance. As discussed in the CY 2019 PFS final rule (83 FR 59761 through 59763), additional criteria that we use for the removal of measures also includes extremely topped out measures, which means measures that are topped-out with an average (mean) performance rate between 98-100 percent. Beginning with the 2020 MIPS performance period/2022 MIPS payment year, we also refer readers to the CY 2020 PFS final rule (84 FR 62957 through 62959) for additional quality measure removal criteria.

TABLE Group C: Previously Finalized Quality Measures Proposed for Removal in the 2023 MIPS Payment Year and Future Years

C.1. Communication with the Physician or Other Clinician Managing On-Going Care Post-Fracture for Men and Women Aged 50 Years and Older

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality #:	024
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Collection Type:	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications
Measure Description:	Percentage of patients aged 50 years and older treated for a fracture with documentation of communication, between the physician treating the fracture and the physician or other clinician managing the patient's on-going care, that a fracture occurred and that the patient was or should be considered for osteoporosis treatment or testing. This measure is submitted by the physician who treats the fracture and who therefore is held accountable for the communication.
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale for Removal	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because the measure supports communication between the physician treating the fracture and the clinician managing the patient's on-going care, but does not ensure that the patient receives the appropriate treatment or testing for osteoporosis. We believe measure Q418: Osteoporosis Management in Women Who Had a Fracture represents a more robust quality outcome in the management of patients with osteoporosis who experience a fracture since the clinical focus of this measure is the care of the patient rather than just the communication of the care plan for on-going post fracture care.
In the Circumstance the Measure is Retained	There are no substantive changes or specialty set movement proposed for this measure.

C.2. Urinary Incontinence: Assessment of Presence or Absence of Urinary Incontinence in Women Aged 65 Years and Older

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality #:	048
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Collection Type:	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications
Measure Description:	Percentage of female patients aged 65 years and older who were assessed for the presence or absence of urinary incontinence within 12 months.
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale for Removal	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because this measure does not align with the meaningful measures initiative. This is a process measure that only requires an assessment for the presence or absence of urinary incontinence, which by itself may not have a meaningful direct impact on patient care as the screening itself does not indicate a plan of care was implemented. Additionally, the Medicare Part B Claims Measure Specifications collection type has reached the end of the topped out lifecycle (82 53640).
In the Circumstance the Measure is Retained	There are no substantive changes or specialty set movement proposed for this measure.

C.3. Hematology: Multiple Myeloma: Treatment with Bisphosphonates

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality #:	069
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Collection Type:	MIPS CQMs Specifications
Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of multiple myeloma, not in remission, who were prescribed or received intravenous bisphosphonate therapy within the 12-month reporting period.
Measure Steward:	American Society of Hematology
High Priority Measure:	No
Measure Type:	Process
Rationale for Removal	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a

	quality measure from the MIPS program because the measure does not align with current treatment guidelines and could inadvertently penalize eligible clinicians who are treating patients appropriately (i.e., Prolia), by excluding those patients instead of being numerator compliant. As currently constructed, the measure may produce misleading results.
In the Circumstance the Measure is Retained	There are no substantive changes or specialty set movement proposed for this measure.

C.4. Radiology: Inappropriate Use of “Probably Benign” Assessment Category in Screening Mammograms

Category	Description
NQF # / eCQM NQF #:	0508 / N/A
Quality #:	146
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Efficiency and Cost Reduction
Collection Type:	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications
Measure Description:	Percentage of final reports for screening mammograms that are classified as “probably benign”.
Measure Steward:	American College of Radiology
High Priority Measure:	Yes
Measure Type:	Process
Rationale for Removal	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because it is considered a standard of care that has limited opportunity to improve clinical outcomes. Performance on this measure is extremely high and unvarying, making this measure extremely topped out as discussed in the CY 2019 PFS final rule (83 FR 59761 through 59763). The average performance for this inverse measure is 0.428 percent for the MIPS CQMs Specifications collection type and 0.253 percent for the Medicare Part B Claims Measure Specifications collection type. For an inverse measure, a lower calculated performance rate indicates better clinical care or control. As such, the MIPS CQMs Specifications collection type and the Medicare Part B Claims Measure Specifications collection type are considered extremely topped out. The average performance rate is based on the current MIPS benchmarking data located at https://qpp-cm-prod-content.s3.amazonaws.com/uploads/824/2020%20MIPS%20Quality%20Benchmarks.zip
In the Circumstance the Measure is Retained	There are no substantive changes or specialty set movement proposed for this measure.

C.5. Adult Sinusitis: Computerized Tomography (CT) for Acute Sinusitis (Overuse)

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality #:	333
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Efficiency and Cost Reduction
Collection Type:	MIPS CQMs Specifications
Measure Description:	Percentage of patients aged 18 years and older, with a diagnosis of acute sinusitis who had a computerized tomography (CT) scan of the paranasal sinuses ordered at the time of diagnosis or received within 28 days after date of diagnosis.
Measure Steward:	American Academy of Otolaryngology – Head and Neck Surgery Foundation
High Priority Measure:	Yes
Measure Type:	Efficiency
Rationale for Removal	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because this measure has reached the end of the topped out lifecycle and has a high performance rate of 2.834 percent for the MIPS CQMs Specifications collection type. For an inverse measure, a lower calculated performance rate indicates better clinical care or control. Given this measure’s continued topped out status, we believe it has a limited opportunity to improve clinical outcomes. The average performance rate is based on the current MIPS benchmarking data located at https://qpp-cm-prod-content.s3.amazonaws.com/uploads/824/2020%20MIPS%20Quality%20Benchmarks.zip
In the Circumstance the Measure is Retained	We would update the denominator eligible encounters to include telehealth encounters as the telehealth setting is directly applicable to this measure and these patients should be included in the denominator to allow for numerator compliance to be measured.

C.6. Psoriasis: Tuberculosis (TB) Prevention for Patients with Psoriasis, Psoriatic Arthritis and Rheumatoid Arthritis on a Biological Immune Response Modifier

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality #:	337
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Collection Type:	MIPS CQMs Specifications
Measure Description:	Percentage of patients, regardless of age, with psoriasis, psoriatic arthritis and/or rheumatoid arthritis on a biological immune response modifier whose providers are ensuring active tuberculosis prevention either through negative standard tuberculosis

	screening tests or are reviewing the patient's history to determine if they have had appropriate management for a recent or prior positive test.
Measure Steward:	American Academy of Dermatology
High Priority Measure:	No
Measure Type:	Process
Rationale for Removal	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because this measure is duplicative to measure Q176: Rheumatoid Arthritis (RA): Tuberculosis Screening because we are proposing in Table D.33 substantive changes to measure Q176 that would broaden the denominator by removing the disease specificity criteria. Therefore, the patient population will overlap between these measures; however, measure Q176 has a broader eligible patient population. In the event the proposed substantive change to measure Q176 is not finalized, we would consider maintaining this measure to ensure this patient population is being assessed for appropriate tuberculosis screening.
In the Circumstance the Measure is Retained	There are no substantive changes or specialty set movement proposed for this measure.

C.7. Implantable Cardioverter-Defibrillator (ICD) Complications Rate

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality #:	348
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Patient Safety
Collection Type:	MIPS CQMs Specifications
Measure Description:	Patients with physician-specific risk-standardized rates of procedural complications following the first time implantation of an ICD.
Measure Steward:	American College of Cardiology Foundation
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale for Removal	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because this measure does not align with the meaningful measures initiative. The limited patient population and adoption of the quality measure does not allow for the creation of benchmarks to provide a meaningful impact to quality improvement. The limited adoption over multiple performance periods suggests this is not an important clinical topic for MIPS eligible clinicians.
In the Circumstance the Measure is Retained	There are no substantive changes or specialty set movement proposed for this measure.

C.8. Hepatitis C: Discussion and Shared Decision Making Surrounding Treatment Options

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality #:	390
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Person and Caregiver-Centered Experience and Outcomes
Collection Type:	MIPS CQMs Specifications
Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of hepatitis C with whom a physician or other qualified healthcare professional reviewed the range of treatment options appropriate to their genotype and demonstrated a shared decision making approach with the patient. To meet the measure, there must be documentation in the patient record of a discussion between the physician or other qualified healthcare professional and the patient that includes all of the following: treatment choices appropriate to genotype, risks and benefits, evidence of effectiveness, and patient preferences toward treatment.
Measure Steward:	American Gastroenterological Association
High Priority Measure:	Yes
Measure Type:	Process
Rationale for Removal	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program at the request of the measure steward because this measure does not align with the advancements in hepatitis C treatments. There are now curative treatments over an 8-12-week period with few side effects. Additionally, the measure is at risk of capturing "chronic HCV" patients who are no longer viremic, which would not necessitate IICV shared decision making.
In the Circumstance the Measure is Retained	There are no substantive changes or specialty set movement proposed for this measure.

C.9. Opioid Therapy Follow-up Evaluation

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality #:	408
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Collection Type:	MIPS CQMs Specifications

Measure Description:	All patients 18 and older prescribed opiates for longer than 6 weeks duration who had a follow-up evaluation conducted at least every 3 months during Opioid Therapy documented in the medical record.
Measure Steward:	American Academy of Neurology
High Priority Measure:	Yes
Measure Type:	Process
Rationale for Removal	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program at the request of the measure steward because this measure does not align with the most recent guidelines. The measure steward will not be further reviewing or updating the measure specifications, citing the measure is topped out and there are newer opioid measures to report that are not topped out.
In the Circumstance the Measure is Retained	There are no substantive changes or specialty set movement proposed for this measure.

C.10. Documentation of Signed Opioid Treatment Agreement

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality #:	412
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Collection Type:	MIPS CQMs Specifications
Measure Description:	All patients 18 and older prescribed opiates for longer than 6 weeks duration who signed an opioid treatment agreement at least once during Opioid Therapy documented in the medical record.
Measure Steward:	American Academy of Neurology
High Priority Measure:	Yes
Measure Type:	Process
Rationale for Removal	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program at the request of the measure steward because this measure does not align with the most recent guidelines. The measure steward will not be further reviewing or updating the measure specifications, citing the measure is topped out and there are newer opioid measures to report that are not topped out.
In the Circumstance the Measure is Retained	There are no substantive changes or specialty set movement proposed for this measure.

C.11. Evaluation or Interview for Risk of Opioid Misuse

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality #:	414
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Collection Type:	MIPS CQMs Specifications
Measure Description:	All patients 18 and older prescribed opiates for longer than 6 weeks duration evaluated for risk of opioid misuse using a brief validated instrument (e.g. Opioid Risk Tool, Screener and Opioid Assessment for Patients with Pain, revised (SOAPP-R)) or patient interview documented at least once during Opioid Therapy in the medical record.
Measure Steward:	American Academy of Neurology
High Priority Measure:	Yes
Measure Type:	Process
Rationale for Removal	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program at the request of the measure steward because this measure does not align with the most recent guidelines. The measure steward will not be further reviewing or updating the measure specifications, citing the measure is topped out and there are newer opioid measures to report that are not topped out.
In the Circumstance the Measure is Retained	There are no substantive changes or specialty set movement proposed for this measure.

C.12. Quality of Life Assessment for Patients With Primary Headache Disorders

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality #:	435
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Collection Type:	Medicare Part B Claims Specifications, MIPS CQMs Specifications
Measure Description:	Percentage of patients with a diagnosis of primary headache disorder whose health related quality of life (HRQoL) was assessed with a tool(s) during at least two visits during the 12-month measurement period AND whose health related quality of life score stayed the same or improved.
Measure Steward:	American Academy of Neurology
High Priority Measure:	Yes
Measure Type:	Patient Reported Outcome
Rationale for Removal	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program at the measure steward's request as it is no longer being maintained for inclusion. As there are various tools that providers may

	choose to use, it difficult to compare measure performance across MIPS eligible clinicians. Additionally, the scores are difficult to capture within the EHR leading to difficulties in determining whether the QoL is being maintained or improving over time.
In the Circumstance the Measure is Retained	There are no substantive changes or specialty set movement proposed for this measure.

C.13. Rate of Surgical Conversion from Lower Extremity Endovascular Revascularization Procedure

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality #:	437
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Patient Safety
Collection Type:	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications
Measure Description:	Inpatients assigned to endovascular treatment for obstructive arterial disease, the percent of patients who undergo unplanned major amputation or surgical bypass within 48 hours of the index procedure.
Measure Steward:	Society of Interventional Radiology
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale for Removal	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because it is considered a standard of care that has limited opportunity to improve clinical outcomes. Performance on this measure is extremely high and unvarying, making this measure extremely topped out as discussed in the CY 2019 PFS final rule (83 FR 59761 through 59763). The average performance for this inverse measure is 1.854 percent for the MIPS CQMs Specifications collection type and 1.031 percent for the Medicare Part B Claims Measure Specifications collection type. For an inverse measure, a lower calculated performance rate indicates better clinical care or control. As such, the MIPS CQMs Specifications collection type and the Medicare Part B Claims Measure Specifications collection type are considered extremely topped out. The average performance rate is based on the current MIPS benchmarking data located at https://qpp-cm-prod-content.s3.amazonaws.com/uploads/824/2020%20MIPS%20Quality%20Benchmarks.zip
In the Circumstance the Measure is Retained	There are no substantive changes or specialty set movement proposed for this measure.

C.14. All-Cause Hospital Readmission

Category	Description
NQF # / eCQM NQF #:	1789 / N/A
Quality #:	458
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Collection Type:	Administrative Claims
Measure Description:	The 30-day All-Cause Hospital Readmission measure is a risk-standardized readmission rate for beneficiaries age 65 or older who were hospitalized at a short-stay acute care hospital and experienced an unplanned readmission for any cause to an acute care hospital within 30 days of discharge.
Measure Steward:	Yale University
High Priority Measure:	No
Measure Type:	Outcome
Rationale for Removal	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because it is duplicative to the new measure being proposed in Table A.1. for the 2021 performance period: Table A.1: Hospital-Wide, 30-Day, All-Cause Unplanned Readmission (HWR) Rate for the Merit-Based Incentive Payment Program (MIPS) Eligible Clinician Groups. This proposed new measure is a re-specification of the hospital-level measure and promotes a systems level approach by clinicians, making it a more applicable measure to MIPS eligible clinicians. In the event we do not finalize the proposed new measure: Hospital-Wide, 30-Day, All-Cause Unplanned Readmission (HWR) Rate for the Merit-Based Incentive Payment Program (MIPS) Eligible Clinician Groups, we would maintain this current measure Q458: All-Cause Hospital Readmission.
In the Circumstance the Measure is Retained	There are no substantive changes or specialty set movement proposed for this measure.

TABLE Group D: Previously Finalized Quality Measures with Substantive Changes Proposed for the 2023 MIPS Payment Year and Future Years

NOTE: Electronic Clinical Quality Measures (eCQMs) that are National Quality Forum (NQF) endorsed are shown in Table D as follows: NQF # / eCQM NQF #.

The D Tables within the NPRM provide the substantive changes proposed for the quality measures in CY 2021. The changes that are made to the denominator codes sets are generalizations of the revisions communicated from the measure stewards to CMS. Additionally, International Classification of Diseases Tenth Edition (ICD-10) and Current Procedural Terminology (CPT) codes that are identified as invalid for CY 2021 may not be identified within the NPRM due to the availability of these changes to the public. If coding revisions to the denominator are impacted due to the timing of 2021 CPT and ICD-10 updates and assessment of these codes inclusion by the Measure Steward, these changes may be postponed until CY 2022. The 2021 Quality Measure Release Notes provide a comprehensive, detailed reference of exact codes changes to the denominators of the quality measures. The Quality Measure Release Notes are available for each of the collection types in the [Quality Payment Program Resource Library](https://qpp.cms.gov/about/resource-library) at <https://qpp.cms.gov/about/resource-library>.

In addition to the proposed substantive changes, there may be changes to the coding utilized within the denominator that are not considered substantive in nature but we believe are important to communicate to stakeholders. These changes align with the scope of the current coding, however, this will expand or contract the current eligible population, therefore, review the current year measure specification and the 2021 Quality Measure Release Notes or the eCQM Technical Release Notes once posted to review all coding changes. Language has also been added, to all applicable 2021 quality measure specifications, in the form of an 'Instructions Note', to clarify that telehealth encounters are allowed for determination of denominator eligibility. Only in the instance telehealth encounters have not been previously allowed as denominator eligible, will the D table corresponding to that measure reflect an update to the denominator allowing for telehealth encounters in the 'Substantive Change' cell.

D.1 Diabetes: Hemoglobin A1c (HbA1c) Poor Control (>9%)

Category	Description
NQF # / eCQM NQF #:	0059 / N/A
Quality#:	001
CMS eCQM ID:	CMS122v9
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	Medicare Part B Claims Measure Specifications, eCQM Specifications, CMS Web Interface Measure Specifications, MIPS CQMs Specifications
Current Measure Description:	Percentage of patients 18-75 years of age with diabetes who had hemoglobin A1c > 9.0% during the measurement period.
Substantive Change:	<p>Modified collection type: Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications.</p> <p>Updated denominator exclusion: For the eCQM Specification collection type: Revised: Exclude patients 66 and older who are living long term in an institution for more than 90 consecutive days during the measurement period.</p> <p>Updated denominator exclusion logic: For the eCQM Specifications collection type: Updated encounters so they are "on or" before the end of the measurement period. Updated the LTI exclusion to be 90 consecutive days. Changed the name of the under 81 exclusion definition to "FrailtyLTI.Advanced Illness and Frailty Exclusion Not Including Over Age 80".</p> <p>Updated denominator exclusion: For Medicare Part B Claims Measure Specifications and MIPS CQMs Specifications collection types: Revised: Patients age 66 and older in Institutional Special Needs Plans (SNP) or residing in long-term care with a POS code 32, 33, 34, 54 or 56 for more than 90 consecutive days during the measurement period.</p> <p>Updated denominator exclusion: For the MIPS CQMs Specifications and Medicare Part B Claims Measure Specification collection type: Added coding to identify patients with advanced illness and frailty</p> <p>Updated numerator options: For the MIPS CQM Specifications and Medicare Part B Claims Measure Specifications collection type: Stratified the Performance Not Met numerator option into three: Performance Not Met: Most recent hemoglobin A1c (HbA1c) level < 7.0% Performance Not Met: Most recent hemoglobin A1c (HbA1c) level greater than or equal to 7.0% and less than 8.0% Performance Not Met: Most recent hemoglobin A1c (HbA1c) level greater than or equal to 8.0% and less than or equal to 9.0%</p> <p>Updated numerator instructions: For the MIPS CQM Specifications and Medicare Part B Claims Measure Specifications collection type: Added: Do not include HbA1c levels reported by the patient. Added: Only patients with a diagnosis of Type 1 or Type 2 diabetes should be included in the denominator of this measure; patients with a diagnosis of secondary diabetes due to another condition should not be included.</p>
Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Intermediate Outcome
Rationale:	We propose that the denominator exclusion language and logic be updated to clarify that, for the measure, long-term care will be defined as patients staying 90 consecutive days at the long-term care facility versus any 90 days within the performance period.

Category	Description
	<p>Additionally, for the MIPS CQMs Specifications and Medicare Part B Claims Measure Specifications collection types, we propose adding applicable coding to better define the advanced illness and frailty patient population for the purposes of this measure. The numerator options for Performance Not Met are being stratified to have the ability to better assess hemoglobin A1c levels within the patient population that showed better control. Instructions have been added to ensure the correct patient population as the measure intent is to assess hemoglobin A1c control in Type 1 or Type 2 diabetics and not those patients who have diabetes due to another condition.</p> <p>We propose to remove the CMS Web Interface Measure Specifications collection type. This collection type is proposed to be sunset for the purposes of MIPS starting with the 2021 performance year. We have determined it is not fiscally viable, feasible, or sustainable for MIPS to continue this collection type/submission type due to an 80 percent reduction and a continued decrease in interest of groups and virtual groups seeking to report quality data on CMS Web Interface measures. For further rationale, please see section IV.A.3.c.(1)(c) of this proposed rule.</p>

D.2 Heart Failure (HF): Angiotensin-Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) or Angiotensin Receptor-Nepriylsin Inhibitor (ARNI) Therapy for Left Ventricular Systolic Dysfunction (LVSD)

Category	Description
NQF # / eCQM NQF #:	0081 / 0081e
Quality#:	005
CMS eCQM ID:	CMS135v9
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	eCQM Specifications, MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of heart failure (HF) with a current or prior left ventricular ejection fraction (LVEF) < 40% who were prescribed ACE inhibitor or ARB or ARNI therapy either within a 12-month period when seen in the outpatient setting OR at each hospital discharge.
Substantive Change:	<p>Updated the denominator exception logic: For the eCQM Specifications collection type: Added sacubitril in the Allergy/Intolerance logic.</p> <p>Updated denominator: For all collection types: Submission Criteria 1: Added telehealth as eligible for all encounters.</p>
Steward:	Physician Consortium for Performance Improvement Foundation (PCPI®)
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We propose to include sacubitril in the Allergy/Intolerance logic as this is one of the components of ARNI and an allergy to this ingredient would be a clinically appropriate reason for allowing a denominator exception for this patient population.</p> <p>We propose to add telehealth encounters as denominator eligible for submission criteria 1 as the telehealth setting is directly applicable to this measure and these patients should be included in the denominator to allow for numerator compliance to be measured.</p>

D.3 Coronary Artery Disease (CAD): Antiplatelet Therapy

Category	Description
NQF # / eCQM NQF #:	0067 / N/A
Quality#:	006
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of coronary artery disease (CAD) seen within a 12-month period who were prescribed aspirin or clopidogrel.
Substantive Change:	Updated denominator: Added telehealth as eligible encounter.
Steward:	American Heart Association
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to add telehealth encounters as denominator eligible as the telehealth setting is directly applicable to this measure and these patients should be included in the denominator to allow for numerator compliance to be measured.

D.4 Coronary Artery Disease (CAD): Beta-Blocker Therapy – Prior Myocardial Infarction (MI) or Left Ventricular Systolic Dysfunction (LVEF < 40%)

Category	Description
NQF # / eCQM NQF #:	0070 / 0070e
Quality#:	007
CMS eCQM ID:	CMS145v9
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	eCQM Specifications, MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of coronary artery disease seen within a 12-month period who also have a prior MI or a current or prior LVEF < 40% who were prescribed beta-blocker therapy.
Substantive Change:	<p>Updated logic: For the eCQM Specifications collection type: Added constraint to measure logic in instances when the patient has both prior (within the past 3 years) MI and LVEF < 40%.</p> <p>The guidance is revised to read: For the eCQM Specifications collection type: Beta-blocker therapy: - For patients with prior MI, beta-blocker therapy includes any agent within the beta-blocker drug class. As of 2015, no recommendations or evidence are cited in current stable ischemic heart disease guidelines for preferential use of specific agents - For patients with prior LVEF <40%, beta-blocker therapy includes the following: bisoprolol, carvedilol, or sustained release metoprolol succinate. The requirement of two or more visits is to establish that the eligible professional or eligible clinician has an existing relationship with the patient. A range value should satisfy the logic requirement for 'Ejection Fraction' as long as the ranged observation value clearly meets the less than 40% threshold noted in the denominator logic. A range that is inclusive of or greater than 40% would not meet the measure requirement. If a patient has had a myocardial infarction (MI) within the past 3 years and a current or prior LVEF < 40% (or moderate or severe LVSD), the patient should only be counted in Population Criteria 1. This eCQM is a patient-based measure. This version of the eCQM uses QDM version 5.5. Please refer to the eCQI resource center (https://ecqi.healthit.gov/qdm) for more information on the QDM. Beta-blocker therapy:</p> <p>The instructions are revised to read: For the MIPS CQMs Specifications collection type: This measure is to be submitted a minimum of once per performance period for all patients with a diagnosis of CAD seen during the performance period. Only patients who had at least two denominator-eligible visits during the performance period will be counted for Submission Criteria 1 and Submission Criteria 2 of this measure. This measure may be submitted by Merit-based Incentive Payment System (MIPS) eligible clinicians who perform the quality actions described in the measure for the primary management of patients with CAD based on the services provided and the measure-specific denominator coding. The MIPS eligible clinician should submit data on one of the submission criteria, depending on the clinical findings. If the patient has CAD or history of cardiac surgery and a current or prior LVEF < 40% (or moderate or severe LVSD), use Submission Criteria 1. If the patient has CAD or history of cardiac surgery and has a prior (within the past 3 years) MI, use Submission Criteria 2. The 3-year lookback period for the prior MI should be from the time of the encounter that is used to qualify for the denominator and evaluate the numerator. If the patient has had an MI within the past 3 years and has a current or prior LVEF < 40% (or moderate or severe LVSD), the MIPS eligible clinician should submit quality-data codes for Submission Criteria 1 and this will count as appropriate submission for this patient.</p> <p>Updated denominator criteria: For all collection type: Added telehealth as eligible for all encounters.</p> <p>Updated denominator criteria: For the MIPS CQMs Specifications collection type: Denominator Criteria One: Revised: Left ventricular ejection fraction (LVEF) < 40% or documentation of moderate or severe LVSD.</p> <p>Updated denominator exception: For eCQM Specifications collection type: Removed coding from the 'Medical Reason' value set for concepts not indicating medical contraindication.</p>
Steward:	Physician Consortium for Performance Improvement Foundation (PCPI®)
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We propose to update the eCQM Specifications collection type logic to improvement alignment with measure intent as it will add constraints to help prevent double counting of patients who had both a myocardial infarction and LVEF < 40% within the past 3 years. Additionally, the guidance is being revised to help clarify which population eligible patients should be included for the purposes of this measure. We also propose to revise the 'Medical Reason' value set based upon expert and stakeholder feedback to remove codes based upon intent of concepts which do not indicate a medical contraindication, but rather a provider decision to discontinue or adjust a course of treatment. These codes do not meet the intent of the denominator exception.</p> <p>For both the eCQM Specifications and MIPS CQMs Specifications collection types, the guidance and instructions have been updated, respectively, to add moderate or severe LVSD as a proxy for LVEF < 40%. The measure steward's Technical Expert Panel (TEP) determined that moderate or severe LVSD is an appropriate proxy and aligns with the intent of the measure. We agree with this addition as LVSD can be "defined as a left ventricular ejection fraction less than 40 percent or a narrative description consistent with moderate or severe systolic dysfunction." (Per the Joint Commission Specifications Manual (v2018A)). Additionally, we propose to add telehealth encounters as denominator eligible as the telehealth setting is directly applicable to this measure and these patients should be included in the denominator to allow for numerator compliance to be measured.</p>

D.5 Heart Failure (HF): Beta-Blocker Therapy for Left Ventricular Systolic Dysfunction (LSVD)

Category	Description
NQF # / eCQM NQF #:	0083 / 0083e
Quality#:	008
CMS eCQM ID:	CMS144v9
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	eCQM Specifications, MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of heart failure (HF) with a current or prior left ventricular ejection fraction (LVEF) < 40% who were prescribed beta-blocker therapy either within a 12-month period when seen in the outpatient setting OR at each hospital discharge.
Substantive Change:	Updated denominator: For all collection types: Submission Criteria 1: Added telehealth as eligible for all encounters. Updated denominator exception: For eCQM Specifications collection type: Removed coding from the 'Medical Reason' value set for concepts not indicating medical contraindication.
Steward:	Physician Consortium For Performance Improvement Foundation (PCPI®)
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to add telehealth encounters as denominator eligible as the telehealth setting is directly applicable to this measure and these patients should be included in the denominator to allow for numerator compliance to be measured. We propose to revise the 'Medical Reason' value set for the eCQM Specifications collection type based upon expert and stakeholder feedback to remove codes based upon intent of concepts which do not indicate a medical contraindication, but rather a provider decision to discontinue or adjust a course of treatment. These codes do not meet the intent of the denominator exception.

D.6 Primary Open-Angle Glaucoma (POAG): Optic Nerve Evaluation

Category	Description
NQF # / eCQM NQF #:	0086 / 0086e
Quality#:	012
CMS eCQM ID:	CMS143v9
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of primary open-angle glaucoma (POAG) who have an optic nerve head evaluation during one or more office visits within 12 months.
Substantive Change:	Modified collection type: eCQM Specifications Updated denominator exception: For eCQM Specifications collection type: Removed coding from the 'Medical Reason' value set for concepts not indicating medical contraindication. Per the 'Telehealth Guidance for Electronic Clinical Quality Measures (eCQMs) for Eligible Professional/Eligible Clinician 2021 Quality Reporting': Medicare telehealth eligible codes found in any encounter value set must only be used for in-person encounters for the following eCQMs.
Steward:	Physician Consortium for Performance Improvement Foundation (PCPI®)
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to remove the Medicare Part B Claims Measure Specifications and MIPS CQMs Specifications collection types as they have reached the end of the topped out lifecycle as finalized in 82 FR 53640. However, the benchmarking data continues to show a gap for the eCQM Specifications collection type, as such, the measure will be retained for this collection type. We also propose to revise the 'Medical Reason' value set based upon expert and stakeholder feedback to remove codes based upon intent of concepts which do not indicate a medical contraindication, but rather a provider decision to discontinue or adjust a course of treatment. These codes do not meet the intent of the denominator exception. We propose to remove telehealth encounters from the denominator of the eCQM Specifications collection type as telehealth is not an appropriate setting for this measure, as well as to align with the other collection types. This guidance can be found in a separate document that will be published on the eCQI Resource Center.

D.7 Age-Related Macular Degeneration (AMD): Dilated Macular Examination

Category	Description
NQF # / eCQM NQF #:	0087 / N/A
Quality#:	014
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 50 years and older with a diagnosis of age-related macular degeneration (AMD) who had a dilated macular examination performed which included documentation of the presence or absence of macular thickening or geographic atrophy or hemorrhage AND the level of macular degeneration severity during one or more office visits within the 12-month performance period.
Substantive Change:	Updated numerator definition: For all collection types: Revised: Severity of Macular Degeneration – Early, intermediate and advanced; or active choroidal neovascularization, inactive choroidal neovascularization, or with inactive scar.
Steward:	American Academy of Ophthalmology
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to update the definition referencing the clinical stages for the ‘Severity of Macular Degeneration’ to clarify and align the concept with ICD-10 terminology. Adding clarity that these codes are clinically relevant and applicable.

D.8 Diabetic Retinopathy: Communication with the Physician Managing Ongoing Diabetes Care

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	019
CMS eCQM ID:	CMS142v9
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	eCQM Specifications, MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of diabetic retinopathy who had a dilated macular or fundus exam performed with documented communication to the physician who manages the ongoing care of the patient with diabetes mellitus regarding the findings of the macular or fundus exam at least once within 12 months.
Substantive Change:	<p>Update numerator logic: For the eCQM Specifications collection type: Removed “sender” and “recipient” attributes.</p> <p>Updated value set/coding: For the eCQM Specifications collection type: Removed “sender” and “recipient” attributes.</p> <p>Updated denominator exception: For eCQM Specifications collection type: Removed coding from the ‘Medical Reason’ value set for concepts not indicating medical contraindication.</p> <p>Per the ‘Telehealth Guidance for Electronic Clinical Quality Measures (eCQMs) for Eligible Professional/Eligible Clinician 2021 Quality Reporting’: Medicare telehealth eligible codes found in any encounter value set must only be used for in-person encounters for the following eCQMs.</p>
Steward:	Physician Consortium for Performance Improvement Foundation (PCPI®)
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	<p>We propose to remove the “sender” and “recipient” attributes from the numerator logic and the value set/coding of the eCQM Specifications collection type and revert to the numerator logic from performance year 2019. These attributes increased burden and were difficult to implement. We also propose to revise the ‘Medical Reason’ value set based upon expert and stakeholder feedback to remove codes based upon intent of concepts, which do not indicate a medical contraindication, but rather a provider decision to discontinue or adjust a course of treatment. These codes do not meet the intent of the denominator exception.</p> <p>We propose to remove telehealth encounters from the denominator of the eCQM Specifications collection type as telehealth is not an appropriate setting for this measure, as well as to align with the other collection types. This guidance can be found in a separate document that will be published on the eCQI Resource Center.</p>

D.9 Advance Care Plan

Category	Description
NQF # / eCQM NQF #:	0326 / N/A
Quality#:	047
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 65 years and older who have an advance care plan or surrogate decision maker documented in the medical record or documentation in the medical record that an advance care plan was discussed but the patient did not wish or was not able to name a surrogate decision maker or provide an advance care plan.
Substantive Change:	Updated denominator: For all collection types: Added clinical social worker clinician type.
Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to add the clinical social worker clinician type to the denominator eligible encounters as this clinical concept is applicable to their scope of practice since these clinicians are integral to ensuring patients have up to date advance care plans and/or surrogate decision makers documented within the medical record.

D.10 Chronic Obstructive Pulmonary Disease (COPD): Long-Acting Inhaled Bronchodilator Therapy

Category	Description
NQF # / eCQM NQF #:	0102 / N/A
Quality#:	052
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of COPD (FEV1/FVC < 70%) and who have an FEV1 less than 60% predicted and have symptoms who were prescribed a long-acting inhaled bronchodilator.
Substantive Change:	Modified collection type: MIPS CQMs Specifications
Steward:	American Thoracic Society
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to remove the Medicare Part B Claims Measure Specifications collection type as it has reached the end of the topped out lifecycle as finalized in 82 FR 53640. As captured in the 2020 Benchmark File, this collection type also has high performance rate. However, the benchmarking data continues to show a gap for the MIPS CQMs Specifications collection type, as such, the measure will be retained for this collection type.

D.11 Appropriate Treatment for Children with Upper Respiratory Infection (URI)

Category	Description
NQF # / eCQM NQF #:	0069 / N/A
Quality#:	065
CMS eCQM ID:	CMS154v9
National Quality Strategy Domain:	Efficiency and Cost Reduction
Current Collection Type:	eCQM Specifications, MIPS CQMs Specifications
Current Measure Description:	Percentage of children 3 months - 18 years of age who were diagnosed with upper respiratory infection (URI) and were not dispensed an antibiotic prescription on or 3 days after the episode.
Substantive Change:	<p>The title is revised from 'Appropriate Treatment for Children with Upper Respiratory Infection (URI)' to: Appropriate Treatment for Upper Respiratory Infection (URI)</p> <p>The description is revised to read: Percentage of episodes for patients 3 months of age and older with a diagnosis of upper respiratory infection (URI) that did not result in an antibiotic dispensing event.</p> <p>The initial patient population is revised to read: For the eCQM Specifications collection type: Outpatient visits, telephone visits, online assessments, observation stays or emergency department visits with a diagnosis of URI during the measurement period among patients 3 months of age and older.</p> <p>Updated stratification: For the eCQM Specifications collection type: 3 months-17 years, 18-64 years, 65 years and older.</p> <p>The guidance is revised to read: For the eCQM Specifications collection type: This is an episode of care measure that examines all eligible episodes for the patient during the measurement period This eCQM is an episode-based measure. This version of the eCQM uses QDM version 5.5. Please refer to the eCQI resource center (https://ecqi.healthit.gov/qdm) for more information on the QDM.</p> <p>The denominator is revised to read: For the MIPS CQMs Specifications collection type: Outpatient visits, telephone visits, online assessments, observation stays or emergency department visits with a diagnosis of upper respiratory infection (URI) during the measurement period among patients 3 months of age and older.</p> <p>Updated denominator criteria: For the MIPS CQMs Specifications collection type: Revised: Patients aged 3 months of age and older on date of encounter. Revised denominator eligible coding to include telehealth with qualified nonphysician health care professional.</p> <p>The denominator instruction is revised to read: For the MIPS CQMs Specifications collection type: This is an episode of care measure that examines all eligible episodes for the patient during the measurement period. If the patient has more than one episode in a 31-day period, include only the first episode.</p> <p>Updated denominator exclusion: For the eCQMs Specifications collection type: Added: 1. Exclude URI episodes when the patient had a competing comorbid condition during the 12 months prior to or on the episode date. Revised: 1. Exclude URI episodes when the patient had a new or refill prescription of antibiotics in the 30 days prior to or on the episode date. 2. Exclude URI episodes when the patient had competing diagnosis on or 3 days after the episode date. 3. Exclude URI episodes when the patient had hospice care overlapping with the measurement period. For MIPS CQMs Specifications collection type: Added: 1. URI episodes where the patient had a competing comorbid condition during the 12 months prior to or on the episode date (e.g., tuberculosis, neutropenia, cystic fibrosis, chronic bronchitis, pulmonary edema, respiratory failure, rheumatoid lung disease). 2. URI episodes when the patient had a new or refill prescription of antibiotics (Table 1) in the 30 days prior to or on the episode date. Revised: 1. URI episodes when the patient had competing diagnoses on or 3 days after the episode date (e.g., intestinal infection, pertussis, bacterial infection, Lyme disease, otitis media, acute sinusitis, acute pharyngitis, acute tonsillitis, chronic sinusitis, infection of the pharynx/larynx/tonsils/adenoids, prostatitis, cellulitis, mastoiditis, or bone infections, acute lymphadenitis, impetigo, skin staph infections, pneumonia/gonococcal infections, venereal disease (syphilis, chlamydia, inflammatory diseases [female reproductive organs]), infections of the kidney, cystitis or UTI, and acne). Removed: 1. Children who are taking antibiotics in the 30 days prior to the date of the encounter during which the diagnosis was established.</p> <p>The numerator is revised to read: For the eCQMs Specifications collection type: URI episodes without a prescription for antibiotic medication on or 3 days after the outpatient visit, telephone visit, online assessment, observation stay or emergency department visit for an upper respiratory infection. For the MIPS CQMs Specifications collection type: URI episodes without a prescription for antibiotic medication (from Table 1) on or 3 days after the outpatient visit, telephone visit, online assessment, observation stay or emergency department visit for an upper respiratory infection.</p>

Category	Description
	<p>The numerator instruction is revised to read: For the MIPS CQMs Specifications collection type: For performance, the measure will be calculated as the number of patient’s encounter(s) where antibiotics from Table 1 were neither prescribed nor dispensed on or within 3 days of the episode for URI over the total number of encounters in the denominator. A higher score indicates appropriate treatment of patients with URI (e.g., the proportion for whom antibiotics were not prescribed or dispensed following the episode). Delayed prescriptions (where an antibiotic was prescribed and patient was instructed to delay taking the antibiotic) are considered “Performance Not Met”.</p> <p>Table 1 - Antibiotic Medications Note: This list should be used when assessing antibiotic prescriptions for the denominator exclusion and numerator components.</p> <p>Revised: Table 1 Antibiotic Medication: Added Penicillin G benzathine and removed ‘Miscellaneous Antibiotics Category’ (Erythromycin-sulfisoxazole)</p> <p>Updated value set: For the eCQM Specifications collection type: Added ‘Aggressive periodontitis’ to the value set for competing diagnosis. Added telehealth services value set to eligible encounters.</p>
Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	<p>We propose the measure language be updated to reflect a broader denominator eligible population by revising the age to include all patients over 3 months of age as concerns regarding overuse of antibiotics are not limited to the pediatric population. This will allow for clinicians to report on both pediatric and adult patients. The denominator instructions and guidance are revised to clarify that only the first episode should be included if a patient has multiple episodes in a 31-day period. The denominator exclusions have been updated to reflect the change in age range and to align language with the measure submission frequency. Additionally, a denominator exclusion has been added to remove patients with competing comorbid conditions from the denominator population as it may be clinically appropriate and warranted to treat them with antibiotics in accordance with appropriate care.</p> <p>The numerator note for the MIPS CQMs Specifications collection type was updated to clarify use of delayed prescriptions and the antibiotic medication table. Given the intent of the measure is to assess appropriate antibiotic use, delayed prescriptions will be considered numerator non-compliant as this would still constitute prescribing an antibiotic. The antibiotic medication table was also updated to be clinically relevant.</p> <p>The eCQM Specifications collection type value set for competing diagnosis was updated to include aggressive periodontitis as it is clinically relevant to the denominator exclusion intent. Additionally, a telehealth services value set was added to the eligible encounters for a more complete patient population.</p>

D.12 Appropriate Testing for Children with Pharyngitis

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	066
CMS eCQM ID:	CMS146v9
National Quality Strategy Domain:	Efficiency and Cost Reduction
Current Collection Type:	eCQM Specifications, MIPS CQMs Specifications
Current Measure Description:	Percentage of children 3-18 years of age who were diagnosed with pharyngitis, ordered an antibiotic and received a group A streptococcus (strep) test for the episode.
Substantive Change:	<p>The title is revised from 'Appropriate Testing for Children with Pharyngitis' to: Appropriate Testing for Pharyngitis</p> <p>The description is revised to read: The percentage of episodes for patients 3 years and older with a diagnosis of pharyngitis that resulted in an antibiotic dispensing event and a group A streptococcus (strep) test.</p> <p>The guidance is revised to read: For the eCQM Specifications collection type: This is an episode of care measure that examines all eligible episodes for the patient during the measurement period. This eCQM is an episode-based measure. This version of the eCQM uses QDM version 5.5. Please refer to the eCQI resource center (https://ecqi.healthit.gov/qdm) for more information on the QDM.</p> <p>The initial patient population is revised to read: For the eCQM Specifications collection type: Outpatient, telephone, online assessment, observation, or emergency department (ED) visits with a diagnosis of pharyngitis and an antibiotic dispensing event among patients 3 years or older.</p> <p>The denominator is revised to read: For the MIPS CQMs Specifications collection type: Outpatient, telephone, online assessment, observation, or emergency department (ED) visits with a diagnosis of pharyngitis and an antibiotic dispensing event among patients 3 years or older.</p> <p>Updated denominator criteria: For the MIPS CQMs Specifications collection type: Revised denominator eligible coding to include telehealth with qualified nonphysician health care professional.</p> <p>The denominator instructions are revised to read: For the MIPS CQMs Specifications collection type: This is an episode of care measure that examines all eligible episodes for the patient during the measurement period. If a patient has more than one eligible episode in a 31-day period, include only the first eligible episode.</p> <p>Updated denominator exclusion: For the eCQMs Specifications collection type: Added: 1. Exclude episodes where the patient had a competing comorbid condition during the 12 months prior to or on the episode date. Revised: 1. Exclude episodes where the patient is taking antibiotics in the 30 days prior to the episode date. 2. Exclude episodes when the patient had hospice care overlapping with the measurement period. 3. Exclude episodes where the patient had a competing diagnosis within 3 days after the episode date. For MIPS CQMs Specifications collection type: Added: 1. Episodes where the patient had a competing comorbid condition during the 12 months prior to or on the episode date (e.g., tuberculosis, neutropenia, cystic fibrosis, chronic bronchitis, pulmonary edema, respiratory failure, rheumatoid lung disease). Revised: 1. Episodes where the patient is taking antibiotics (Table 1) in the 30 days prior to the episode date. 2. Episodes where the patient had a competing diagnosis within 3 days after the episode date (e.g., intestinal infection, pertussis, bacterial infection, Lyme disease, otitis media, acute sinusitis, chronic sinusitis, infection of the pharynx/larynx/tonsils/adenoids, prostatitis, cellulitis, mastoiditis, or bone infections, acute lymphadenitis, impetigo, skin staph infections, pneumonia/gonococcal infections, venereal disease (syphilis, chlamydia, inflammatory diseases [female reproductive organs]), infections of the kidney, cystitis or UTI).</p> <p>Updated Table 1: For the MIPS CQMs Specifications collection type: Added: Note: This list should be used when assessing antibiotic prescriptions for the denominator and denominator exclusion components. Revised: Table 1 – Antibiotic Medication: Added Penicillin G benzathine and removed 'Miscellaneous Antibiotics Category' (Erythromycin-sulfisoxazole)</p> <p>The numerator is revised to read: For all collection types: A group A streptococcus test in the 7-day period from 3 days prior to the episode date through 3 days after the episode date.</p> <p>Updated stratification: For the eCQM Specifications collection type: 3-17 years, 18-64 years, 65 years and older.</p> <p>Updated value set: For the eCQM Specifications collection type: Added telehealth services value set to eligible encounters.</p>
Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose the measure language be updated to reflect a broader denominator eligible population by revising the age to include all patients over 3 months of age as concerns regarding appropriate testing are not limited to the pediatric population. This will allow for clinicians to report on both pediatric and adult patients. The denominator instructions and guidance are revised to clarify

Category	Description
	<p>that only the first episode should be included if a patient has multiple episodes in a 31-day period. The denominator exclusions have been updated to reflect the change in age range and to align language with the measure submission frequency. Additionally, a denominator exclusion has been added to remove patients with competing comorbid conditions from the denominator population as it may be clinically appropriate and warranted to treat them with antibiotics in accordance with appropriate care. For the MIPS CQMs Specifications collection type, Table 1 was updated to remain clinically relevant and a note was added to clarify usage of Table 1 for the purposes of this measure.</p> <p>The eCQM Specifications collection type value set for competing diagnosis was updated to include aggressive periodontitis as it is clinically relevant to the denominator exclusion intent. Additionally, a telehealth services value set was added to the eligible encounters for a more complete patient population.</p>

D.13 Acute Otitis Externa (AOE): Systemic Antimicrobial Therapy – Avoidance of Inappropriate Use

Category	Description
NQF # / eCQM NQF #:	654/N/A
Quality#:	093
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Efficiency and Cost Reduction
Current Collection Type:	Medicare Part B Claims Measure Specifications MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 2 years and older with a diagnosis of AOE who were not prescribed systemic antimicrobial therapy.
Substantive Change:	Updated denominator: For all collection types: Added telehealth as eligible encounter.
Steward:	American Academy of Otolaryngology – Head and Neck Surgery
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to add telehealth encounters as denominator eligible as the telehealth setting is directly applicable to this measure and these patients should be included in the denominator to allow for numerator compliance to be measured.

D.14 Adult Major Depressive Disorder (MDD): Suicide Risk Assessment

Category	Description
NQF # / eCQM NQF #:	N/A / 0104e
Quality#:	107
CMS eCQM ID:	CMS161v9
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	eCQM Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of major depressive disorder (MDD) with a suicide risk assessment completed during the visit in which a new diagnosis or recurrent episode was identified.
Substantive Change:	<p>The description is revised to read: All patient visits during which a new diagnosis of MDD or a new diagnosis of recurrent MDD was identified for patients aged 18 years and older with a suicide risk assessment completed during the visit.</p> <p>Updated guidance: Added: In recognition of the growing use of integrated and team-based care, the diagnosis of dementia and the assessment of cognitive function need not be performed by the same provider or clinician.</p> <p>The initial patient population is revised to read: Patient visits during which a new diagnosis of MDD, single or recurrent episode, was identified.</p> <p>The numerator is revised to read: Patient visits during which a new diagnosis of MDD, single or recurrent episode, was identified and a suicide risk assessment was completed during the visit.</p>
Steward:	Physician Consortium for Performance Improvement Foundation (PCPI®)
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to update the description, initial patient population, and numerator language to better align with the measure intent and clarify that the measure is episodic in nature. The measure steward updated the guidance statement based upon technical expert feedback to reflect that team-based care would be appropriate for this measure. We agree that this guidance update is clinically appropriate and aligns better with clinical care workflows.

D.15 Preventive Care and Screening: Influenza Immunization

Category	Description
NQF # / eCQM NQF #:	0041 / 0041e
Quality#:	110
CMS eCQM ID:	CMS147v10
National Quality Strategy Domain:	Community/Population Health
Current Collection Type:	Medicare Part B Claims Measure Specifications, eCQM Specifications, CMS Web Interface Measure Specifications, MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 6 months and older seen for a visit between October 1 and March 31 who received an influenza immunization OR who reported previous receipt of an influenza immunization.
Substantive Change:	<p>Modified collection type: Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications</p> <p>Updated guidance: For the eCQM Specifications collection type: Revised: Due to the changing stance of the CDC/ACIP recommendations regarding the live attenuated influenza vaccine (LAIV) for a particular flu season, this measure will not include the administration of this specific formulation of the flu vaccination. Given the variance of the timeframes for the annual update cycles, program implementation, and publication of revised recommendations from the CDC/ACIP, it has been determined that the coding for this measure will specifically exclude this formulation, so as not to inappropriately include this form of the vaccine for flu seasons when CDC/ACIP explicitly advise against it. However, it is recommended that all eligible professionals or eligible clinicians to review the guidelines for each flu season to determine appropriateness of the LAIV and other formulations of the flu vaccine. Should the LAIV be recommended for administration for a particular flu season, eligible professional or clinician may consider one of the following options: 1) satisfy the numerator by reporting either previous receipt or using the CVX 88 for unspecified formulation, 2) report a denominator exception, either as a patient reason (e.g., for patient preference) or a system reason (e.g., the institution only carries LAIV). This is a patient-based measure.</p> <p>Updated denominator note: For the Medicare Part B Claims Measure Specifications collection type: Added: For the purposes of the program, to submit on the flu season 2020-2021, the patient must have a qualifying encounter between January 1 and March 31, 2021. to submit on the flu season 2021-2022, the patient must have a qualifying encounter between October 1 and December 31, 2021. A qualifying encounter needs to occur within the flu season that is being submitted; any additional encounter(s) may occur at any time within the measurement period.</p> <p>Updated denominator exception: For the eCQM Specifications collection type: Removed coding from the 'Medical Reason' value set for concepts not indicating medical contraindication.</p> <p>Updated denominator: For all collection types: Added telehealth as eligible encounter.</p>
Steward:	Physician Consortium for Performance Improvement Foundation (PCPI®)
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We propose to update the denominator note for the Medicare Part B Claims Measure Specifications collection type to add clarity and align the language with the MIPS CQMs Specifications collection type.</p> <p>We propose to update the guidance for the eCQM Specifications collection type to better align with the updated CDC/ACIP clinical guidelines and to clarify the intent of the measure. We also propose to revise the 'Medical Reason' value set based upon expert and stakeholder feedback to remove codes based upon intent of concepts which do not indicate a medical contraindication, but rather a provider decision to discontinue or adjust a course of treatment. These codes do not meet the intent of the denominator exception.</p> <p>We propose to add telehealth encounters as denominator eligible as the telehealth setting is directly applicable to this measure and these patients should be included in the denominator to allow for numerator compliance to be measured.</p> <p>We propose to remove the CMS Web Interface Measure Specifications collection type. This collection type is proposed to be sunset for the purposes of MIPS starting with the 2021 performance year. We have determined it is not fiscally viable, feasible, or sustainable for MIPS to continue this collection type/submission type due to an 80 percent reduction and a continued decrease in interest of groups and virtual groups seeking to report quality data on CMS Web Interface measures. For further rationale, please see section IV.A.3.c.(1)(c) of this proposed rule.</p>

D.16 Breast Cancer Screening

Category	Description
NQF # / eCQM NQF #:	2372 / N/A
Quality#:	112
CMS eCQM ID:	CMS125v9
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	Medicare Part B Claims Measure Specifications, eCQM Specifications, CMS Web Interface Measure Specifications, MIPS CQMs Specifications
Current Measure Description:	Percentage of women 50 - 74 years of age who had a mammogram to screen for breast cancer in the 27 months prior to the end of the measurement period.
Substantive Change:	<p>Modified collection type: Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications</p> <p>Updated denominator exclusion: For the eCQM Specifications collection type: Removed logic and value set related to unilateral mastectomy.</p> <p>Updated denominator exclusion: For the eCQM Specifications collection type: Revised: Exclude patients 66 and older who are living long term in an institution for more than 90 consecutive days during the measurement period.</p> <p>Updated denominator exclusion logic: For the eCQM Specifications collection type: Updated encounters so they are "on or" before the end of the measurement period. Updated the LTI exclusion to be 90 consecutive days. Changed the name of the under 81 exclusion definition to "FrailtyLTI.Advanced Illness and Frailty Exclusion Not Including Over Age 80".</p> <p>Updated denominator exclusion: For the Medicare Part B Claims Measure Specifications and the MIPS CQMs Specifications collection types: Revised: Patients age 66 or older in Institutional Special Needs Plans (SNP) or residing in long-term care with POS code, 32, 33, 34, 54, or 56 for more than 90 consecutive days during the measurement period</p> <p>Updated denominator exclusion: For the Medicare Part B Claims Measure Specifications collection type and the MIPS CQMs Specifications collection type: Added coding to identify patients with advanced illness and frailty</p>
Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We propose that the denominator exclusion language and logic be updated to clarify that, for the measure, long-term care will be defined as patients staying 90 consecutive days at the long-term care facility versus any 90 days within the performance period. For the eCQM Specifications collection, we propose removing the logic and value set related to unilateral mastectomy to ensure that all patients with existing breast tissue are included in the initial patient population as it is important they receive screening for breast cancer on remaining breast tissue.</p> <p>Additionally, for the MIPS CQMs Specifications and Medicare Part B Claims Measure Specifications collection types, we propose adding applicable coding to better define the advanced illness and frailty patient population for the purposes of this measure</p> <p>We propose to remove the CMS Web Interface Measure Specifications collection type. This collection type is proposed to be sunset for the purposes of MIPS starting with the 2021 performance year. We have determined it is not fiscally viable, feasible, or sustainable for MIPS to continue this collection type/submission type due to an 80 percent reduction and a continued decrease in interest of groups and virtual groups seeking to report quality data on CMS Web Interface measures. For further rationale, please see section IV.A.3.c.(1)(c) of this proposed rule.</p>

D.17 Colorectal Cancer Screening

Category	Description
NQF # / eCQM NQF #:	0034 / N/A
Quality#:	113
CMS eCQM ID:	CMS130v9
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	Medicare Part B Claims Measure Specifications, eCQM Specifications, CMS Web Interface Measure Specifications, MIPS CQMs Specifications
Current Measure Description:	Percentage of patients 50-75 years of age who had appropriate screening for colorectal cancer.
Substantive Change:	<p>Modified collection type: Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications.</p> <p>Updated denominator exclusion: For the eCQM Specifications collection type: Revised: 1. Exclude patients 66 and older who are living long term in an institution for more than 90 consecutive days during the measurement period. 2. Exclude patients with a diagnosis or past history of total colectomy or colorectal cancer.</p> <p>Updated denominator exclusion logic: For the eCQM Specifications collection type: Updated encounters so they are "on or" before the end of the measurement period. Updated the LTI exclusion to be 90 consecutive days. Changed the name of the under 81 exclusion definition to "Frailty/LTI Advanced Illness and Frailty Exclusion Not Including Over Age 80".</p> <p>Updated denominator criteria: For the Medicare Part B Claims Measure Specifications and the MIPS CQMs Specifications collection types: Removed coding not applicable to preventive value sets.</p> <p>Updated denominator exclusion: For the Medicare Part B Claims Measure Specifications and the MIPS CQMs Specifications collection types: Revised: Patients age 66 or older in Institutional Special Needs Plans (SNP) or residing in long-term care with POS code, 32, 33, 34, 54, or 56 for more than 90 consecutive days during the measurement period.</p> <p>Updated denominator exclusion: For the Medicare Part B Claims Measure Specifications and the MIPS CQMs Specifications collection types: Added coding to identify patients with advanced illness and frailty.</p>
Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We propose that the denominator exclusion language and logic be updated to clarify that, for the measure, long-term care will be defined as patients staying 90 consecutive days at the long-term care facility versus any 90 days within the performance period. For the eCQM Specifications collection type we also propose to revise the language for the exclusion for diagnosis or past history of total colectomy or colorectal cancer for clarity and to align with the other denominator exclusions.</p> <p>Additionally, for the MIPS CQMs Specifications and Medicare Part B Claims Measure Specifications collection types, we propose adding applicable coding to better define the advanced illness and frailty patient population for the purposes of this measure. We propose to remove denominator eligible coding that is not applicable to a preventive value set and may not be appropriate for inclusion in the measure's denominator eligible patient population.</p> <p>We propose to remove the CMS Web Interface Measure Specifications collection type. This collection type is proposed to be sunset for the purposes of MIPS starting with the 2021 performance year. We have determined it is not fiscally viable, feasible, or sustainable for MIPS to continue this collection type/submission type due to an 80 percent reduction and a continued decrease in interest of groups and virtual groups seeking to report quality data on CMS Web Interface measures. For further rationale, please see section IV.A.3.c.(1)(c) of this proposed rule.</p>

D.18 Avoidance of Antibiotic Treatment in Adults With Acute Bronchitis

Category	Description
NQF # / eCQM NQF #:	0058 / N/A
Quality#:	116
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Efficiency and Cost Reduction
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	The percentage of adults 18–64 years of age with a diagnosis of acute bronchitis who were not prescribed or dispensed an antibiotic prescription.
Substantive Change:	<p>The title is revised from ‘Avoidance of Antibiotic Treatment in Adults With Acute Bronchitis’ to: Avoidance of Antibiotic Treatment for Acute Bronchitis/Bronchiolitis.</p> <p>The description is revised to read: The percentage of episodes for patients ages 3 months and older with a diagnosis of acute bronchitis/bronchiolitis that did not result in an antibiotic dispensing event.</p> <p>The instructions are revised to read: This measure is to be submitted at each occurrence of acute bronchitis/bronchiolitis during the performance period. This measure may be submitted by Merit-based Incentive Payment System (MIPS) eligible clinicians who perform the quality actions described in the measure based on the services provided and the measure-specific denominator coding.</p> <p>The denominator is revised to read: All patients aged 3 months or older with an outpatient, telephone visit, online assessment, observation visit or emergency department (ED) visit with a diagnosis of acute bronchitis/bronchiolitis during the measurement period.</p> <p>Updated denominator criteria: Revised: Patients 3 months of age and older on date of encounter. Added: Diagnosis for bronchiolitis.</p> <p>Updated denominator exclusion: Revised: 1. Outpatient, ED or Observation visits that result in an inpatient admission. Added: 2. Acute bronchitis/bronchiolitis episodes when the patient had a new or refill prescription of antibiotics (Table 1) in the 30 days prior to or on the episode date.</p> <p>The denominator note is revised to read: Do not include outpatient, ED or observation visits that result in an inpatient admission. When an outpatient, ED or observation visit and an inpatient stay are billed on separate claims, the visit results in an inpatient stay when the outpatient/ED/observation date of service occurs on the day prior to the admission date or any time during the admission (admission date through discharge date). An outpatient, ED or observation visit billed on the same claim as an inpatient stay is considered a visit that resulted in an inpatient stay.</p> <p>The numerator instructions are revised to read: For performance, the measure will be calculated as the number of patient encounters where antibiotics were neither prescribed nor dispensed on or within 3 days of the episode for acute bronchitis/bronchiolitis over the total number of encounters in the denominator (patients aged 3 months and older with an outpatient, telephone, online assessment, observation or ED visit for acute bronchitis/bronchiolitis). A higher score indicates appropriate treatment of patients with acute bronchitis/bronchiolitis (e.g., the proportion for whom antibiotics were not prescribed or dispensed on or 3 days after the encounter). Delayed prescriptions (where an antibiotic was prescribed and patient was instructed to delay taking the antibiotic) are considered “Performance Not Met”.</p> <p>Updated numerator instructions: Added: Note: This list should be used when assessing antibiotic prescriptions for the denominator exclusion and numerator components. Removed "Norfloxacin" from Table 1 – Antibiotic Medications.</p>
Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose the measure language be updated to reflect a broader denominator eligible population by revising the age to include all patients over 3 months of age as concerns regarding appropriate use of antibiotics are not limited to the adult population. This will allow for clinicians to report on both pediatric and adult patients. The title, description, instructions, and denominator are also being revised to include the diagnosis of bronchiolitis as denominator eligible to better align with the broadened age range as bronchiolitis is more commonly seen in babies and children. The diagnosis is clinically relevant to the intent of this measure. The denominator exclusion and denominator note are revised to better clarify that all visits resulting in an inpatient admission should be excluded as it may be clinically appropriate and warranted to treat them with antibiotics in accordance with appropriate care. The numerator instructions have been updated to align language with the denominator patient population updates, as well as to clarify that delayed prescriptions are still considered to be a “Performance Not Met” as the clinician is still prescribing or dispensing a prescription, which does not align with the measure’s intent.

D.19 Diabetes: Eye Exam

Category	Description
NQF # / eCQM NQF #:	0055 / N/A
Quality#:	117
CMS eCQM ID:	CMS131v9
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications
Current Measure Description:	Percentage of patients 18-75 years of age with diabetes and an active diagnosis of retinopathy overlapping the measurement period who had a retinal or dilated eye exam by an eye care professional during the measurement period or diabetics with no diagnosis of retinopathy overlapping the measurement period who had a retinal or dilated eye exam by an eye care professional during the measurement period or in the 12 months prior to the measurement period.
Substantive Change:	<p>Updated denominator exclusion: For the eCQM Specifications collection type: Revised: Exclude patients 66 and older who are living long term in an institution for more than 90 consecutive days during the measurement period.</p> <p>Updated denominator exclusion logic: For the eCQM Specifications collection type: Updated encounters so they are "on or" before the end of the measurement period. Updated the LTI exclusion to be 90 consecutive days. Changed the name of the under 81 exclusion definition to "Frailty/LTI.Advanced Illness and Frailty Exclusion Not Including Over Age 80".</p> <p>Updated denominator exclusion: For the Medicare Part B Claims Measure Specifications and the MIPS CQMs Specifications: Revised: Patients age 66 and older in Institutional Special Needs Plans (SNP) or residing in long-term care with a POS code 32, 33, 34, 54 or 56 for more than 90 consecutive days during the measurement period.</p> <p>Updated denominator exclusion: For the Medicare Part B Claims Measure Specifications and the MIPS CQMs Specifications collection types: Added coding to identify patients with advanced illness and frailty.</p> <p>The numerator options are revised to read: For the MIPS CQM Specifications and Medicare Part B Claims Measure Specifications collection type: Performance Met: <ul style="list-style-type: none"> • Dilated retinal eye exam with interpretation by an ophthalmologist or optometrist documented and reviewed. • Dilated retinal eye exam with interpretation by an ophthalmologist or optometrist documented and reviewed; without evidence of retinopathy. • 7 standard field stereoscopic photos with interpretation by an ophthalmologist or optometrist documented and reviewed. • 7 standard field stereoscopic photos with interpretation by an ophthalmologist or optometrist documented and reviewed; without evidence of retinopathy. • Eye imaging validated to match diagnosis from 7 standard field stereoscopic photos results documented and reviewed. • Eye imaging validated to match diagnosis from 7 standard field stereoscopic photos results documented and reviewed, without evidence of retinopathy. • Low risk for retinopathy (no evidence of retinopathy in the prior year)*. Performance Not Met: <ul style="list-style-type: none"> • Dilated eye exam was not performed, reason not otherwise specified. </p> <p>Updated numerator options note: For the MIPS CQM Specifications and Medicare Part B Claims Measure Specifications collection type: Removed: **Note: For Performance Year 2020 reporting, the Centers for Medicare & Medicaid Services and the American Medical Association have approved the use of the 8P modifier with HCPCS codes to report the Performance Not Met numerator option for Quality ID #117.</p>
Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We propose that the denominator exclusion language and logic be updated to clarify that, for the measure, long-term care will be defined as patients staying 90 consecutive days at the long-term care facility versus any 90 days within the performance period.</p> <p>Additionally, for the MIPS CQMs Specifications and Medicare Part B Claims Measure Specifications collection types, we propose adding applicable coding to better define the advanced illness and frailty patient population for the purposes of this measure. The numerator options are being updated to stratify numerator compliant patients into those who are complaint and those who are compliant with evidence of retinopathy. This granularity will give a better picture of the patient population and the percentage of those patients who did not have evidence of retinopathy, and may fall into low risk for retinopathy, for the purposes of this measure. The numerator option note associated with the "Performance Not Met" option is being removed as it will not be applicable as the numerator options are being updated.</p>

D.20 Coronary Artery Disease (CAD): Angiotensin-Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) Therapy - Diabetes or Left Ventricular Systolic Dysfunction (LVEF < 40%)

Category	Description
NQF # / eCQM NQF #:	0066 / N/A
Quality#:	118
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of coronary artery disease seen within a 12-month period who also have diabetes OR a current or prior Left Ventricular Ejection Fraction (LVEF) < 40% who were prescribed ACE inhibitor or ARB therapy.
Substantive Change:	<p>Updated denominator criteria: Added: Eligible coding for the additional patient encounter is identical to 'Patient encounter during the performance period' criteria.</p> <p>Updated denominator: Added telehealth as eligible for all encounters.</p>
Steward:	American Heart Association
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to add telehealth encounters as denominator eligible as the telehealth setting is directly applicable to this measure and these patients should be included in the denominator to allow for numerator compliance to be measured. Additionally, we propose to clarify the denominator eligible coding for the two visits necessary for denominator eligibility.

D.21 Diabetes: Medical Attention for Nephropathy

Category	Description
NQF # / eCQM NQF #:	0062 / N/A
Quality#:	119
CMS eCQM ID:	CMS134v8
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	eCQM Specifications, MIPS CQMs Specifications
Current Measure Description:	The percentage of patients 18-75 years of age with diabetes who had a nephropathy screening test or evidence of nephropathy during the measurement period.
Substantive Change:	<p>Updated denominator: For the eCQM Specifications collection type: Revised: Exclude patients 66 and older who are living long term in an institution for more than 90 consecutive days during the measurement period.</p> <p>Updated denominator exclusion logic: For the eCQM Specifications collection type: Updated encounters so they are "on or" before the end of the measurement period. Updated the LTI exclusion to be 90 consecutive days. Changed the name of the under 81 exclusion definition to "Frailty/LTI.Advanced Illness and Frailty Exclusion Not Including Over Age 80".</p> <p>Updated denominator exclusion: For the MIPS CQMs Specifications collection type: Revised: Patients age 66 and older in Institutional Special Needs Plans (SNP) or residing in long-term care with a POS code 32, 33, 34, 54 or 56 for more than 90 consecutive days during the measurement period</p> <p>Updated denominator exclusion: For the MIPS CQMs Specifications collection type: Added coding to identify patients with advanced illness and frailty.</p>
Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We propose that the denominator exclusion language and logic be updated to clarify that, for the measure, long-term care will be defined as patients staying 90 consecutive days at the long-term care facility versus any 90 days within the performance period.</p> <p>Additionally, for the MIPS CQMs Specifications and Medicare Part B Claims Measure Specifications collection types, we propose adding applicable coding to better define the advanced illness and frailty patient population for the purposes of this measure.</p>

D.22 Diabetes Mellitus: Diabetic Foot and Ankle Care, Peripheral Neuropathy – Neurological Evaluation

Category	Description
NQF # / eCQM NQF #:	0417 / N/A
Quality#:	126
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of diabetes mellitus who had a neurological examination of their lower extremities within 12 months.
Substantive Change:	Updated denominator exception: Added: Clinician documented that patient had medical reason for not performing lower extremity neurological exam.
Steward:	American Podiatric Medical Association
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to add a denominator exception for patients with medical reasons for not performing a lower extremity neurological exam. As there may be instances where a patient is denominator eligible, however, a lower extremity neurological exam would not be reasonably performed due the presence of a burn, ulceration, or infection, for example. Adding this denominator exception allows the MIPS eligible clinician to exercise their clinical judgement as to when it is not feasible to perform a lower extremity neurological exam.

D.23 Diabetes Mellitus: Diabetic Foot and Ankle Care, Ulcer Prevention – Evaluation of Footwear

Category	Description
NQF # / eCQM NQF #:	0416 / N/A
Quality#:	127
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of diabetes mellitus who were evaluated for proper footwear and sizing.
Substantive Change:	Updated denominator exclusion: Added: Clinician documented that patient was not an eligible candidate for evaluation of footwear as patient is bilateral lower extremity amputee.
Steward:	American Podiatric Medical Association
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to add a denominator exclusion for bilateral lower extremity amputee as this patient population is not applicable to this measure and should not be included in the denominator eligible patient population.

D.24 Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	128
CMS eCQM ID:	CMS69v9
National Quality Strategy Domain:	Community/Population Health
Current Collection Type:	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with a BMI documented during the current encounter or during the previous 12 months AND with a BMI outside of normal parameters, a follow-up plan is documented during the encounter or during the previous 12 months of the current encounter. Normal Parameters: Age 18 years and older BMI ≥ 18.5 and < 25 kg/m ² .
Substantive Change:	<p>The description is revised to read: Percentage of patients aged 18 years and older with a BMI documented during the current encounter or within the previous 12 months AND who had a follow-up plan documented if most recent BMI was outside of normal parameters.</p> <p>Updated guidance: For the eCQM Specifications collection type: Removed: Review the following to apply the Medical Reason exception criteria: The Medical Reason exception could include, but is not limited to, the following patients as deemed appropriate by the health care provider: * Elderly patients (65 or older) for whom weight reduction/weight gain would complicate other underlying health conditions such as the following examples: * Illness or physical disability * Mental illness, dementia, confusion * Nutritional deficiency such as Vitamin/mineral deficiency * Patients in an urgent or emergent medical situation where time is of the essence and to delay treatment would jeopardize the patient's health status Revised: See denominator exception section for examples.</p> <p>Updated definition: For all collection types: Added: Normal BMI Parameters – Age 18 years and older BMI ≥ 18.5 and < 25 kg/m² For the Medicare Part B Claims Measure Specifications and the MIPS CQMs Specifications collection types: Revised: Not Eligible for BMI Calculation or Follow-Up Plan (Denominator Exclusion) – A patient is not eligible if one or more of the following reasons are documented: • Patients receiving palliative or hospice care on the date of the current encounter or any time prior to the current encounter • Patients who are pregnant on the date of the current encounter or any time during the measurement period prior to the current encounter</p> <p>Patients with no documented BMI or a documented BMI outside normal parameters and a documented reason for not completing BMI follow-up plan during the current encounter or within the previous 12 months of the current encounter (Denominator Exception) • Patients with a documented medical reason for not documenting BMI or for not documenting a follow-up plan for a BMI outside normal parameters (e.g., elderly patients (65 or older) for whom weight reduction/weight gain would complicate other underlying health conditions such as illness or physical disability, mental illness, dementia, confusion, or nutritional deficiency such as vitamin/mineral deficiency; patients in an urgent or emergent medical situation where time is of the essence and to delay treatment would jeopardize the patient's health status) • Patients who refuse measurement of height and/or weight on the date of the current encounter or any time during the measurement period prior to the current encounter</p> <p>Updated denominator exclusion: For the eCQM Specifications collection type: Removed: Patients who refuse measurement of height and/or weight. Added: Hospice care value sets</p> <p>Updated denominator exception: For the eCQM Specifications collection type: Added: Patients who refuse measurement of height and/or weight. Revised: Patients with a documented medical reason for not documenting BMI or for not documenting a follow-up plan for a BMI outside normal parameters (e.g., elderly patients (65 or older) for whom weight reduction/weight gain would complicate other underlying health conditions such as illness or physical disability, mental illness, dementia, confusion, or nutritional deficiency such as vitamin/mineral deficiency; patients in an urgent or emergent medical situation where time is of the essence and to delay treatment would jeopardize the patient's health status). For the Medicare Part B Claims Measure Specifications and the MIPS CQMs Specifications collection type: Added: BMI not documented due to medical reason OR patient refusal of height or weight measurement.</p> <p>Per the 'Telehealth Guidance for Electronic Clinical Quality Measures (eCQMs) for Eligible Professional/Eligible Clinician 2021 Quality Reporting': Medicare telehealth eligible codes found in any encounter value set must only be used for in-person encounters for the following eCQMs.</p>
Steward:	Centers for Medicare & Medicaid Services

Category	Description
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We propose to update the measure description language to reduce redundancy throughout the specification and clarify the intent. The guidance for the eCQM Specifications collection type was updated to move the medical reason exception language to the denominator exceptions header as this language is more suitable for this field. The definition for "Normal BMI Parameters" was moved to the definition section as it is more applicable here and helps readability. During the change review process, the patient refusal denominator exclusion was moved to the denominator exception. We agree that patient refusal is more appropriately classified as a denominator exception as the patient would still be denominator eligible. For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection type, the definitions for the denominator exclusion and denominator exception were updated to reflect the changes and to align language across collection types. Additionally, a denominator exception was added to reflect the definition revisions and capture patients for whom BMI was not documented due to medical reasons or patient refusal.</p> <p>We propose to remove telehealth encounters from the denominator of the eCQM Specifications collection type as telehealth is not an appropriate setting for this measure, as well as to align with the other collection types. This guidance can be found in a separate document that will be published on the eCQI Resource Center.</p>

D.25 Documentation of Current Medications in the Medical Record

Category	Description
NQF # / eCQM NQF #:	0419 / 0419e
Quality#:	130
CMS eCQM ID:	CMS68v10
National Quality Strategy Domain:	Patient Safety
Current Collection Type:	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications
Current Measure Description:	Percentage of visits for patients aged 18 years and older for which the MIPS eligible clinician attests to documenting a list of current medications using all immediate resources available on the date of the encounter. This list must include ALL known prescriptions, over-the-counters, herbals, and vitamin/mineral/dietary (nutritional) supplements AND must contain the medications' name, dosage, frequency and route of administration.
Substantive Change:	<p>The description is revised to read: For all collection types: Percentage of visits for patients aged 18 years and older for which the eligible professional or eligible clinician attests to documenting a list of current medications using all immediate resources available on the date of the encounter.</p> <p>The guidance is revised to read: For the eCQM Specifications collection type: This eCQM is an episode-based measure. This measure is to be reported for every encounter during the measurement period. Eligible professionals or eligible clinicians reporting this measure may document medication information received from the patient, authorized representative(s), caregiver(s) or other available healthcare resources. This list must include all known prescriptions, over-the-counter (OTC) products, herbals, vitamins, minerals, dietary (nutritional) supplements AND must contain the medications' name, dosage, frequency and route of administration. This measure should also be reported if the eligible professional or eligible clinician documented the patient is not currently taking any medications. By reporting the action described in this measure, the provider attests to having documented a list of current medications utilizing all immediate resources available at the time of the encounter. This version of the eCQM uses QDM version 5.5. Please refer to the eCQI resource center (https://ecqi.healthit.gov/qdm) for more information on the QDM.</p> <p>The denominator exception is revised to read: For the eCQM Specifications collection type: Documentation of a medical reason(s) for not documenting, updating, or reviewing the patient's current medications list (e.g., patient is in an urgent or emergent medical situation where time is of the essence and to delay treatment would jeopardize the patient's health status).</p> <p>The numerator is revised to read: For all collection types: Eligible professional or eligible clinician attests to documenting, updating or reviewing the patient's current medications using all immediate resources available on the date of the encounter.</p> <p>Updated numerator note: For the Medicare Part B Claims Measure Specifications and the MIPS CQMs Specifications collection types: Added: This list must include ALL known prescriptions, over-the-counter (OTC) products, herbals, vitamins, minerals, dietary (nutritional) supplements AND must contain the medications' name, dosage, frequency and route of administration.</p> <p>Updated denominator exception: For the Medicare Part B Claims Measure Specifications and the MIPS CQMs Specifications collection type: Revised: Documentation of a medical reason(s) for not documenting, updating, or reviewing the patient's current medications list (e.g., patient is in an urgent or emergent medical situation).</p>
Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to update the measure description to remove language that is more appropriate for the guidance/notes sections of the measure specification. This will help with measure intent, clarity, and readability. The guidance for the eCQM Specifications collection type has been updated to clarify the intent of the measure. The intent is to document all known prescriptions, since the measure steward believes that MIPS eligible clinician should not be held accountable for information that is not available utilizing all immediate resources. The denominator exception was updated in all collection types to add clarity regarding use of the denominator exception and to align the language throughout the specification. The numerator notes for the Medicare Part B Claims Measure Specifications and the MIPS CQMs Specifications collection types was updated with information removed from the description. This information outlines what is necessary for numerator compliance and is better suited for the numerator notes section for ease of use.

D.26 Preventive Care and Screening: Screening for Depression and Follow-Up Plan

Category	Description
NQF # / eCQM NQF #:	0418 / 0418e
Quality#:	134
CMS eCQM ID:	CMS2v10
National Quality Strategy Domain:	Community/Population Health
Current Collection Type:	Medicare Part B Claims Measure Specifications, eCQM Specifications, CMS Web Interface Measure Specifications, MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 12 years and older screened for depression on the date of the encounter or 14 days prior to the date of the encounter using an age appropriate standardized depression screening tool AND if positive, a follow-up plan is documented on the date of the eligible encounter.
Substantive Change:	<p>Modified collection type: Medicare Part B Claims Measure Specifications, eCQM Specifications, and MIPS CQMs Specifications.</p> <p>The description is revised to read: For all collection types: Percentage of patients aged 12 years and older screened for depression on the date of the encounter or up to 14 days prior to the date of the encounter using an age-appropriate standardized depression screening tool AND if positive, a follow-up plan is documented on the date of the eligible encounter.</p> <p>The definition is revised to read: For all collection types: Screening: Completion of a clinical or diagnostic tool used to identify people at risk of developing or having a certain disease or condition, even in the absence of symptoms. Standardized Depression Screening Tool: A normalized and validated depression screening tool developed for the patient population in which it is being utilized Examples of standardized depression screening tools include but are not limited to: * Adolescent Screening Tools (12-17 years) * Patient Health Questionnaire for Adolescents (PHQ-A) * Beck Depression Inventory-Primary Care Version (BDI-PC) * Mood Feeling Questionnaire (MFQ) * Center for Epidemiologic Studies Depression Scale (CES-D) * Patient Health Questionnaire (PHQ-9) * Pediatric Symptom Checklist (PSC-17) * PRIME MD-PHQ2 * Adult Screening Tools (18 years and older) * Patient Health Questionnaire (PHQ9) * Beck Depression Inventory (BDI or BDI-II) * Center for Epidemiologic Studies Depression Scale (CES-D) * Depression Scale (DEPS) * Duke Anxiety-Depression Scale (DADS) * Geriatric Depression Scale (GDS) * Cornell Scale for Depression in Dementia (CSDD) * PRIME MD-PHQ2 * Hamilton Rating Scale for Depression (HAM-D) * Quick Inventory of Depressive Symptomatology Self-Report (QID-SR) * Computerized Adaptive Testing Depression Inventory (CAT-DI) * Computerized Adaptive Diagnostic Screener (CAD-MDD) * Perinatal Screening Tools * Edinburgh Postnatal Depression Scale * Postpartum Depression Screening Scale * Patient Health Questionnaire 9 (PHQ-9) * Beck Depression Inventory * Beck Depression Inventory-II * Center for Epidemiologic Studies Depression Scale * Zung Self-rating Depression Scale</p> <p>Follow-Up Plan: Documented follow-up for a positive depression screening must include one or more of the following: * Referral to a practitioner who is qualified to diagnose and treat depression * Pharmacological interventions * Other interventions or follow-up for the diagnosis or treatment of depression</p> <p>The numerator definition is revised to read: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection type: Examples of a follow-up plan include but are not limited to: • Referral to a practitioner or program for further evaluation for depression, for example, referral to a psychiatrist, psychologist, social worker, mental health counselor, or other mental health service such as family or group therapy, support group, depression management program, or other service for treatment of depression • Other interventions designed to treat depression such as behavioral health evaluation, psychotherapy, pharmacological interventions, or additional treatment options</p> <p>Patients with a Documented Reason for not Screening for Depression (Denominator Exception) Patient Reason(s) Patient refuses to participate OR </p>

Category	Description
	<p>Medical Reason(s)</p> <p>Documentation of medical reason for not screening patient for depression (e.g., cognitive, functional, or motivational limitations that may impact accuracy of results; patient is in an urgent or emergent situation where time is of the essence and to delay treatment would jeopardize the patient's health status)</p> <p>Updated denominator exclusion definition: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection type: Revised:</p> <p>Not Eligible for Depression Screening or Follow-Up Plan (Denominator Exclusion)</p> <p>Patients who have been diagnosed with bipolar disorder- F31.10, F31.11, F31.12, F31.13, F31.2, F31.30, F31.31, F31.32, F31.4, F31.5, F31.60, F31.61, F31.62, F31.63, F31.64, F31.70, F31.71, F31.72, F31.73, F31.74, F31.75, F31.76, F31.77, F31.78, F31.81, F31.89, F31.9</p> <p>Patients who have been diagnosed with depression-- F01.51, F32.0, F32.1, F32.2, F32.3, F32.4, F32.5, F32.89, F32.9, F33.0, F33.1, F33.2, F33.3, F33.40, F33.41, F33.42, F33.8, F33.9, F34.1, F34.81, F34.89, F43.21, F43.23, F53.0, F53.1, O90.6, O99.340, O99.341, O99.342, O99.343, O99.345</p> <p>The guidance is revised to read: For the eCQM Specifications collection type:</p> <p>A depression screen is completed on the date of the encounter or up to 14 days prior to the date of the encounter using an age-appropriate standardized depression screening tool AND if positive, a follow-up plan must be documented on the date of the encounter, such as referral to a practitioner who is qualified to treat depression, pharmacological interventions or other interventions for the treatment of depression.</p> <p>This eCQM is a patient-based measure. Depression screening is required once per measurement period, not at all encounters. The intent of the measure is to screen for depression in patients who have never had a diagnosis of depression or bipolar disorder prior to the eligible encounter used to evaluate the numerator. Patients who have ever been diagnosed with depression or bipolar disorder will be excluded from the measure.</p> <p>Screening Tools:</p> <ul style="list-style-type: none"> * An age-appropriate, standardized, and validated depression screening tool must be used for numerator compliance. * The name of the age-appropriate standardized depression screening tool utilized must be documented in the medical record * The depression screening must be reviewed and addressed in the office of the provider, filing the code, on the date of the encounter. Positive pre-screening results indicating a patient is at high risk for self-harm should receive more urgent intervention as determined by the provider practice * The screening should occur during a qualifying encounter or up to 14 days prior to the date of the qualifying encounter * The measure assesses the most recent depression screening completed either during the eligible encounter or within the 14 days prior to that encounter. Therefore, a clinician would not be able to complete another screening at the time of the encounter to count towards a follow-up, because that would serve as the most recent screening. To satisfy the follow-up requirement for a patient screening positively, the eligible clinician would need to provide one of the aforementioned follow-up actions, which does not include use of a standardized depression screening tool <p>Follow-Up Plan:</p> <p>The follow-up plan must be related to a positive depression screening, for example: "Patient referred for psychiatric evaluation due to positive depression screening."</p> <p>Examples of a follow-up plan include but are not limited to:</p> <ul style="list-style-type: none"> * Referral to a practitioner or program for further evaluation for depression, for example, referral to a psychiatrist, psychologist, social worker, mental health counselor, or other mental health service such as family or group therapy, support group, depression management program, or other service for treatment of depression * Other interventions designed to treat depression such as behavioral health evaluation, psychotherapy, pharmacological interventions, or additional treatment options <p>Should a patient screen positive for depression, a clinician should opt to complete a suicide risk assessment when appropriate and based on individual patient characteristics. However, for the purposes of this measure, a suicide risk assessment or additional screening using a standardized tool will not qualify as a follow-up plan.</p> <p>This version of the eCQM uses QDM version 5.5. Please refer to the eCQI resource center (https://ceqi.healthit.gov/qdm) for more information on the QDM.</p> <p>Updated denominator criteria: For the Medicare Part B Claims Measures Specifications and the MIPS CQMs Specifications collection types: Revised: Patients aged \geq 12 years.</p> <p>For the eCQM Specifications collection type: Added physical therapy MIPS eligible clinician.</p> <p>Updated denominator note: For the Medicare Part B Claims Measures Specifications and the MIPS CQMs Specifications collection types: Added: The intent of the measure is to screen for depression in patients who have never had a diagnosis of depression or bipolar disorder prior to the eligible encounter used to evaluate the numerator. Patients who have ever been diagnosed with depression or bipolar disorder will be excluded from the measure.</p> <p>Updated denominator exclusion:</p> <p>For the eCQM Specifications collection type: Revised: Patients who have been diagnosed with depression or with bipolar disorder.</p> <p>For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection type: Revised: Documentation stating the patient has had a diagnosis of depression or has had a diagnosis of bipolar disorder.</p> <p>Updated numerator: For the eCQM Specifications collection type: Removed additional evaluation or assessment for depression and suicide risk assessment as follow-up from the measure in header and from technical specifications and add guidance statement regarding suicide risk assessment.</p> <p>The numerator instruction is revised to read: For the Medicare Part B Claims Measures Specifications collection type and the MIPS CQM Specifications collection type: A depression screen is completed on the date of the encounter or up to 14 days prior to the date of the encounter using an age-appropriate standardized depression screening tool AND if positive, a follow-up</p>

Category	Description
	<p>plan must be documented on the date of the encounter, such as referral to a practitioner who is qualified to treat depression, pharmacological interventions or other interventions for the treatment of depression. Depression screening is required once per measurement period, not at all encounters. An age-appropriate, standardized, and validated depression screening tool must be used for numerator compliance. The name of the age-appropriate standardized depression screening tool utilized must be documented in the medical record. The depression screening must be reviewed and addressed in the office of the provider on the date of the encounter. Positive pre-screening results indicating a patient is at high risk for self-harm should receive more urgent intervention as determined by the provider practice. The screening should occur during a qualifying encounter or up to 14 days prior to the date of the qualifying encounter.</p> <p>The measure assesses the most recent depression screening completed either during the eligible encounter or within the 14 days prior to that encounter. Therefore, a clinician would not be able to complete another screening at the time of the encounter to count towards a follow-up, because that would serve as the most recent screening. To satisfy the follow-up requirement for a patient screening positively, the eligible clinician would need to provide one of the aforementioned follow-up actions, which does not include use of a standardized depression screening tool.</p> <p>Should a patient screen positive for depression, a clinician should opt to complete a suicide risk assessment when appropriate and based on individual patient characteristics. However, for the purposes of this measure, a suicide risk assessment or additional screening using a standardized tool, will not qualify as a follow-up plan.</p>
Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We propose to update the description to provide clarity and better align with the measure intent. We propose to update the measure language in the definitions, guidance, and numerator note sections to provide clarity as to what constitutes a follow-up plan. The measure assesses the most recent depression screening completed either during the eligible encounter or within the 14 days prior to that encounter. Therefore, a clinician would not be able to complete another screening at the time of the encounter to count towards a follow-up, since that would serve as the most recent screening. To satisfy the follow-up requirement for a patient screening positively, the eligible clinician would need to provide one of the aforementioned follow-up actions, which does not include use of a standardized depression screening tool. Additionally, suicide risk assessments have been removed as a numerator compliant follow-up plan option as this should be completed when appropriate and based on the assessment by the clinician regarding the severity of the patient's symptoms of depression at the time of depression screening. We also propose to update the measure language and denominator exclusions to reflect that this measure is screening of depression for patients who have not been previously diagnosed or have an active diagnosis of depression or bipolar disorder. This preventive measure assesses screening and follow up plan for patients that are screened positive for depression. We also propose to update the denominator criteria for the Medicare Part B Claims Measure Specifications and the MIPS CQM Specifications collection types to align with the measure denominator language which states patients age 12 or older at the beginning of the measurement period. Additionally, we propose to add the physical therapy MIPS eligible clinician type based on stakeholder feedback regarding the applicability of this measure to this clinician type.</p> <p>We propose to remove the CMS Web Interface Measure Specifications collection type. This collection type is proposed to be sunset for the purposes of MIPS starting with the 2021 performance year. We have determined it is not fiscally viable, feasible, or sustainable for MIPS to continue this collection type/submission type due to an 80 percent reduction and a continued decrease in interest of groups and virtual groups seeking to report quality data on CMS Web Interface measures. For further rationale, please see section IV.A.3.c.(1)(c) of this proposed rule.</p>

D.27 Melanoma: Continuity of Care – Recall System

Category	Description
NQF # / eCQM NQF #:	N/A/N/A
Quality#:	137
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	<p>Percentage of patients, regardless of age, with a current diagnosis of melanoma or a history of melanoma whose information was entered, at least once within a 12-month period, into a recall system that includes:</p> <ul style="list-style-type: none"> • A target date for the next complete physical skin exam, AND • A process to follow up with patients who either did not make an appointment within the specified timeframe or who missed a scheduled appointment.
Substantive Change:	Updated denominator: Added telehealth as eligible encounter.
Steward:	American Academy of Dermatology
High Priority Measure:	Yes
Measure Type:	Structure
Rationale:	We propose to add telehealth encounters as denominator eligible as the telehealth setting is directly applicable to this measure and these patients should be included in the denominator to allow for numerator compliance to be measured.

D.28 Primary Open-Angle Glaucoma (POAG): Reduction of Intraocular Pressure (IOP) by 15% OR Documentation of a Plan of Care

Category	Description
NQF # / eCQM NQF #:	0563 / N/A
Quality#:	141
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of primary open-angle glaucoma (POAG) whose glaucoma treatment has not failed (the most recent IOP was reduced by at least 15% from the pre-intervention level) OR if the most recent IOP was not reduced by at least 15% from the pre-intervention level, a plan of care was documented within the 12-month performance period.
Substantive Change:	Modified collection type: MIPS CQMs Specifications
Steward:	American Academy of Ophthalmology
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale:	We propose to remove the Medicare Part B Claims Measure Specifications as it shows very high performance year after year leaving little opportunity to drive improvement in quality outcomes. However, the benchmarking data continues to show a gap for the MIPS CQMs Specifications collection type, as such, the measure will be retained for this collection type.

D.29 Oncology: Medical and Radiation – Pain Intensity Quantified

Category	Description
NQF # / eCQM NQF #:	0384 / 0384e
Quality#:	143
CMS eCQM ID:	CMS157v9
National Quality Strategy Domain:	Person and Caregiver-Centered Experience and Outcomes
Current Collection Type:	eCQM Specifications, MIPS CQMs Specifications
Current Measure Description:	Percentage of patient visits, regardless of patient age, with a diagnosis of cancer currently receiving chemotherapy or radiation therapy in which pain intensity is quantified.
Substantive Change:	<p>Updated logic: For the eCQM Specifications collection type: Revised logic to limit the date range for chemotherapy administered within 31 days before and after the measurement period. Added definition: Chemotherapy within 30 days Prior and After the Measurement Period.</p> <p>The guidance is revised to read: For the eCQM Specifications collection type: This eCQM is an episode-of-care measure; the level of analysis for this measure is every visit for patients with a diagnosis of cancer who are also currently receiving chemotherapy or radiation therapy during the measurement period. For patients receiving radiation therapy, pain intensity should be quantified at each radiation treatment management encounter where the patient and physician have a face-to-face interaction. Due to the nature of some applicable coding related to radiation therapy (e.g., delivered in multiple fractions), the billing date for certain codes may or may not be the same as the face-to-face encounter date. In this instance, for the reporting purposes of this measure, the billing date should be used to pull the appropriate patients into the initial population. It is expected, though, that the numerator criteria would be performed at the time of the actual face-to-face encounter during the series of treatments. A lookback (retrospective) period of 7 days, including the billing date, may be used to identify the actual face-to-face encounter, which is required to assess the numerator. Therefore, pain intensity should be quantified during the face-to-face encounter occurring on the actual billing date or within the 6 days prior to the billing date. For patients receiving chemotherapy, pain intensity should be quantified at each face-to-face encounter with the physician while the patient is currently receiving chemotherapy. For purposes of identifying eligible encounters, patients "currently receiving chemotherapy" refers to patients administered chemotherapy within 30 days prior to the encounter AND administered chemotherapy within 30 days after the date of the encounter. Pain intensity should be quantified using a standard instrument, such as a 0-10 numerical rating scale, visual analog scale, a categorical scale, or pictorial scale. Examples include the Faces Pain Rating Scale and the Brief Pain Inventory (BPI). This version of the eCQM uses QDM version 5.5. Please refer to the eCQI resource center (https://ecqi.healthit.gov/qdm) for more information on the QDM.</p> <p>Updated Instructions: For the MIPS CQM Specifications collection type: Revised note to reflect both face-to-face and telehealth encounters are allowed.</p> <p>The denominator note is revised to read: For the MIPS CQMs Specifications collection type: For the reporting purposes for this measure, in instances where CPT code 77427 is reported, the billing date, which may or may not be the same date as the face-to-face or telehealth encounter with the physician, should be used to pull the appropriate patient population into the denominator. It is expected, though, that the numerator criteria would be performed at the time of the actual face-to-face or telehealth encounter during the series of treatments. A lookback (retrospective) period of 7 days, including the billing date, may be used to identify the actual face-to-face or telehealth encounter, which is required to assess the numerator. Therefore, pain intensity should be quantified during the face-to-face or telehealth encounter occurring on the actual billing date or within the 6 days prior to the billing date.</p> <p>Updated denominator: For all collection types: Added telehealth as eligible encounter.</p>
Steward:	Physician Consortium for Performance Improvement Foundation (PCPI®)
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	<p>We propose to update the logic within the eCQM Specifications collection type to limit the range of time for chemotherapy procedures to only capture the chemotherapy procedures that satisfy the measure requirements. This will decrease implementation burden for some MIPS eligible clinicians while improving reporting capabilities for some practices. Additionally, the eCQM Specifications and MIPS CQMs Specifications collection types the guidance/denominator note is proposed to be revised to allow for a lookback period when utilizing CPT codes that may not have the same billing and encounter date. This will align more closely with actual clinical workflow and encounter billing practices.</p> <p>We propose to add telehealth encounters as denominator eligible for submission criteria 1 as the telehealth setting is directly applicable to this measure and these patients should be included in the denominator to allow for numerator compliance to be measured.</p>

D.30 Oncology: Medical and Radiation - Plan of Care for Pain

Category	Description
NQF # / eCQM NQF #:	0383 / N/A
Quality#:	144
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Person and Caregiver-Centered Experience and Outcomes
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of visits for patients, regardless of age, with a diagnosis of cancer currently receiving chemotherapy or radiation therapy who report having pain with a documented plan of care to address pain.
Substantive Change:	<p>Updated instructions: Added: THERE ARE TWO SUBMISSION CRITERIA FOR THIS MEASURE: 1) All visits for patients, regardless of age, with a diagnosis of cancer currently receiving chemotherapy who report having pain OR 2) All visits for patients, regardless of age, with a diagnosis of cancer currently receiving radiation therapy who report having pain</p> <p>The denominator is revised to read: Submission Criteria 1: All visits for patients, regardless of age, with a diagnosis of cancer currently receiving chemotherapy who reporting having pain Denominator (Submission Criteria 1): All visits for patients, regardless of age, with a diagnosis of cancer currently receiving chemotherapy who report having pain Submission Criteria 2: All visits for patients, regardless of age, with a diagnosis of cancer currently receiving radiation therapy who report having pain Denominator (Submission Criteria 2): All visits for patients, regardless of age, with a diagnosis of cancer currently receiving radiation therapy who report having pain</p> <p>Updated denominator: For all collection types: Added telehealth as eligible encounter.</p> <p>Updated denominator criteria: Revised: Submission Criteria One</p> <ul style="list-style-type: none"> Removed coding for radiation therapy <p>Submission Criteria Two</p> <ul style="list-style-type: none"> Added coding for cancer diagnosis Added coding for patient procedure <p>Updated denominator note: For Submission Criteria Two: Added: For the reporting purposes of this measure, in instances where CPT code 77427 is reported, the billing date, which may or may not be the same date as the face-to-face or telehealth encounter with the physician, should be used to pull the appropriate patient population into the denominator. It is expected, though, that the numerator criteria would be performed at the time of the actual face-to-face encounter during the series of treatments.</p> <p>The numerator is revised to read: NUMERATOR (SUBMISSION CRITERIA 1): Patient visits that included a documented plan of care to address pain. NUMERATOR (SUBMISSION CRITERIA 2): Patient visits that included a documented plan of care to address pain.</p> <p>Updated numerator instructions: For Submission Criteria Two: Added: A documented plan of care may include: use of opioids, nonopioid analgesics, psychological support, patient and/or family education, referral to a pain clinic, or reassessment of pain at an appropriate time interval.</p> <p>Updated numerator options: For Submission Criteria Two: Added: Performance Met: Plan of care to address pain documented Performance Not Met: Plan of care for pain not documented, reason not otherwise specified</p>
Steward:	American Society of Clinical Oncology
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	<p>We propose to separate the measure into two submission criteria based upon treatment to add clarity based on stakeholder feedback. This also aligns the measure with the format of measure Q143: Oncology: Medical and Radiation – Pain Intensity Quantified. The patient procedure coding was updated to ensure only coding applicable to the updated submission criteria is included within the denominator criteria.</p> <p>We propose to add telehealth encounters as denominator eligible for submission criteria 1 as the telehealth setting is directly applicable to this measure and these patients should be included in the denominator to allow for numerator compliance to be measured.</p>

D.31 Radiology: Exposure Dose Indices or Exposure Time and Number of Images Reported for Procedures Using Fluoroscopy

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	145
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Patient Safety
Current Collection Type:	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications
Current Measure Description:	Final reports for procedures using fluoroscopy that document radiation exposure indices, or exposure time and number of fluorographic images (if radiation exposure indices are not available).
Substantive Change:	Updated numerator instructions: For all collection types: Added: Documentation: Information populating the final report may reside in a dedicated field in the electronic health record (EHR) or picture archiving and communication system (PACS), however fluoroscopy exposure dose or time should be included in the final report to be readily accessible in all circumstances.
Steward:	American College of Radiology
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to update the denominator criteria encounter coding to ensure that all of the codes are associated with fluoroscopy and to create a more complete patient population. Additionally, we propose to add numerator instructions to further clarify how the fluoroscopy information should be recorded in the final report to be numerator compliant and meet the intent of the measure.

D.32 Nuclear Medicine: Correlation with Existing Imaging Studies for All Patients Undergoing Bone Scintigraphy

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	147
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications
Current Measure Description:	Percentage of final reports for all patients, regardless of age, undergoing bone scintigraphy that include physician documentation of correlation with existing relevant imaging studies (e.g., x-ray, Magnetic Resonance Imaging (MRI), Computed Tomography (CT), etc.) that were performed.
Substantive Change:	The denominator is revised to read: For all collection types: All final reports for patients, regardless of age, undergoing bone planar and whole body scintigraphy.
Steward:	Society of Nuclear Medicine and Molecular Imaging
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to update the denominator to account for encounter codes that can be utilized for imaging other than bone scintigraphy. This will narrow the eligible patient population to those using bone imaging agents and only assess MIPS eligible clinicians that are relevant to this measure's intent.

D.33 Rheumatoid Arthritis (RA): Tuberculosis Screening

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	176
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of rheumatoid arthritis (RA) who have documentation of a tuberculosis (TB) screening performed and results interpreted within 12 months prior to receiving a first course of therapy using a biologic disease-modifying anti-rheumatic drug (DMARD).
Substantive Change:	<p>The title is revised from 'Rheumatoid Arthritis (RA): Tuberculosis Screening' to: Tuberculosis Screening Prior to First Course Biologic Therapy</p> <p>The description is revised to read: If a patient has been newly prescribed a biologic disease-modifying anti-rheumatic drug (DMARD) therapy, then the medical record should indicate TB testing in the preceding 12-month period.</p> <p>The instructions are revised to read: This measure is to be submitted a minimum of once per performance period for patients who are being considered or prescribed a first course of biologic disease-modifying anti-rheumatic drug therapy seen during the performance period. This measure may be submitted by Merit-based Incentive Payment System (MIPS) eligible clinicians who perform the quality actions described in the measure based on the services provided and the measure-specific denominator coding.</p> <p>The denominator is revised to read: All patients aged 18 years and older who are receiving a first course of therapy using a biologic DMARD.</p> <p>The denominator instructions are updated to read: Patients are considered to be receiving a first course of therapy using a biologic DMARD only if they have been prescribed DMARD biologic therapy during the measurement period and were not prescribed DMARD biologic therapy in the 12 months preceding the encounter where DMARD biologic therapy was newly started. Biologic DMARD therapy includes: -Abatacept (Orencia) -Adalimumab (HUMIRA) -Anakinra (Kineret) -Baricitinib (Olumiant) -Canakinumab (ILARIS) -Certolizumab pegol and lyophilized certolizumab pegol (CIMZIA) -Denosumab (Prolia) -Etanercept (Enbrel) -Golimumab (Simponi) -Infliximab (REMICADE) -Infliximab-dyyb (Inflectra) -Infliximab-abda (Renflexis) -Sarilumab (KEVZARA) -Secukinumab (Cosentyx) -Tocilizumab (ACTEMRA) -Tofacitinib (XELJANZ) -Ustekinumab (STELARA) The list of biologic DMARD therapies is subject to change as new therapies are approved by the FDA.</p> <p>Updated denominator criteria: Removed: 'Diagnosis for RA' criteria Revised: Patient receiving first-time biologic disease modifying anti-rheumatic drug therapy</p> <p>Updated denominator: Added telehealth as eligible encounter.</p> <p>The numerator is revised to read: Patients for whom any record of TB testing is documented or performed (PPD, IFN-gamma release assays, or other appropriate method) in the medical record in the 12 months preceding the biologic prescription.</p> <p>Updated numerator definition: Removed 'Biologic DMARD Therapy' definition.</p> <p>Updated numerator options: Revised: Performance Met: TB screening performed and results interpreted within 12 months prior to initiation of first-time biologic disease modifying anti-rheumatic drug therapy.</p>
Steward:	American College of Rheumatology
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We propose to expand the measure to remove disease specificity from the measure to assess all patients prescribed a first course biologic DMARD therapy. This will expand monitoring of patient safety guidance compliance to all patients initiating DMARD therapy. The language throughout the measure has been updated to align with the change in patient population.</p> <p>We propose to add telehealth encounters as denominator eligible as the telehealth setting is directly applicable to this measure and these patients should be included in the denominator to allow for numerator compliance to be measured.</p>

D.34 Rheumatoid Arthritis (RA): Functional Status Assessment

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	178
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of rheumatoid arthritis (RA) for whom a functional status assessment was performed at least once within 12 months.
Substantive Change:	Updated denominator: Added telehealth as eligible encounter.
Steward:	American College of Rheumatology
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to add telehealth encounters as denominator eligible as the telehealth setting is directly applicable to this measure and these patients should be included in the denominator to allow for numerator compliance to be measured.

D.35 Rheumatoid Arthritis (RA): Glucocorticoid Management

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	180
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of rheumatoid arthritis (RA) who have been assessed for glucocorticoid use and, for those on prolonged doses of prednisone > 5 mg daily (or equivalent) with improvement or no change in disease activity, documentation of glucocorticoid management plan within 12 months.
Substantive Change:	Updated denominator: Added telehealth as eligible encounter.
Steward:	American College of Rheumatology
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to add telehealth encounters as denominator eligible as the telehealth setting is directly applicable to this measure and these patients should be included in the denominator to allow for numerator compliance to be measured.

D.36 Elder Maltreatment Screen and Follow-Up Plan

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	181
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Patient Safety
Current Collection Type:	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 65 years and older with a documented elder maltreatment screen using an Elder Maltreatment Screening tool on the date of encounter AND a documented follow-up plan on the date of the positive screen.
Substantive Change:	Updated denominator: For all collection types: Added care management services.
Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to add coding applicable to chronic care management services as these capture encounters where screening may occur and is an appropriate patient population for this measure.

D.37 Functional Outcome Assessment

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	182
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications
Current Measure Description:	Percentage of visits for patients aged 18 years and older with documentation of a current functional outcome assessment using a standardized functional outcome assessment tool on the date of the encounter AND documentation of a care plan based on identified functional outcome deficiencies on the date of the identified deficiencies.
Substantive Change:	<p>Updated denominator: For all collection types: Added home health and domiciliary/rest home settings.</p> <p>The numerator note is revised to read: For all collection types: The intent of this measure is for a functional outcome assessment tool to be utilized at a minimum of every 30 days but submission is only required at each qualifying encounter due to coding limitations. Therefore, for visits occurring within 30 days of a previously documented functional outcome assessment, the numerator quality-data code G8942 should be used for submission purposes.</p> <p>Updated numerator definition: For all collection types: Revised: Current (Functional Outcome Assessment) – A patient having a documented functional outcome assessment utilizing a standardized tool and a care plan if indicated at a qualifying encounter within the previous 30 days.</p>
Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to add the home health and domiciliary/rest home settings as denominator eligible settings as functional assessments may occur at these visits and would lead to a more complete denominator eligible patient population. Additionally, we propose to update the definition for ‘Current (Functional Outcome Assessment)’ and the numerator note to clarify the measure intent, which is to only report for qualifying encounters and not each visit.

D.38 Cataracts: 20/40 or Better Visual Acuity within 90 Days Following Cataract Surgery

Category	Description
NQF # / eCQM NQF #:	0565 / 0565e
Quality#:	191
CMS eCQM ID:	CMS133v9
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	eCQM Specifications, MIPS CQMs Specifications
Current Measure Description:	Percentage of cataract surgeries for patients aged 18 years and older with a diagnosis of uncomplicated cataract and no significant ocular conditions impacting the visual outcome of surgery and had best-corrected visual acuity of 20/40 or better (distance or near) achieved in the operative eye within 90 days following the cataract surgery.
Substantive Change:	Updated numerator: For the eCQM Specifications collection type: Added data element: "Best Corrected Visual Acuity Exam Using Snellen Chart" (2.16.840.1.113883.3.526.3.1560)
Steward:	Physician Consortium for Performance Improvement Foundation (PCPI®)
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale:	For the eCQM Specifications collection type, we propose to add a data element for “Best Corrected Visual Acuity Exam Using Snellen Chart” allowing an alternative method to capture an exam commonly used in clinical practice that may not have been accurately captured prior. This added numerator compliant option is clinically in line with the measure intent and appropriate for inclusion.

D.39 Radiology: Stenosis Measurement in Carotid Imaging Reports

Category	Description
NQF # / eCQM NQF #:	0507 / N/A
Quality#:	195
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications
Current Measure Description:	Percentage of final reports for carotid imaging studies (neck magnetic resonance angiography [MRA], neck computed tomography angiography [CTA], neck duplex ultrasound, carotid angiogram) performed that include direct or indirect reference to measurements of distal internal carotid diameter as the denominator for stenosis measurement.
Substantive Change:	<p>The instructions are revised to read: For all collection types: This measure is to be submitted each time a carotid imaging study is performed during the performance period for patients aged 18 years and older during the submission period. There is no diagnosis associated with this measure. Merit-based Incentive Payment System (MIPS) eligible clinicians who provide the professional component of diagnostic imaging studies of the carotids will submit this measure.</p> <p>The denominator is revised to read: For all collection types: All final reports for carotid imaging studies (neck MR angiography [MRA], neck CT angiography [CTA], neck duplex ultrasound, carotid angiogram) performed on patients aged 18 years and older during the submission period.</p> <p>Updated denominator criteria: For all collection types: Added: Patients aged \geq 18 years on date of encounter.</p>
Steward:	American College of Radiology
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to update the measure's eligible patient population to include only patients aged 18 years and older. This will allow for closer monitoring regarding who is eligible and more appropriate for inclusion in the eligible patient population, which will decrease overall burden for the clinicians reporting this measure.

D.40 Functional Status Change for Patients with Knee Impairments

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	217
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	A patient-reported outcome measure of risk-adjusted change in functional status for patients aged 14 years+ with knee impairments. The change in functional status (FS) is assessed using the Knee FS patient-reported outcome measure (PROM) (©2009-2019 Focus on Therapeutic Outcomes, Inc.). The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk adjusted) and used as a performance measure at the patient level, at the individual clinician, and at the clinic level to assess quality. The measure is available as a computer adaptive test, for reduced patient burden, or a short form (static measure).
Substantive Change:	<p>The description is revised to read: A patient-reported outcome measure of risk-adjusted change in functional status for patients aged 14 years+ with knee impairments. The change in functional status (FS) is assessed using the FOTO Lower Extremity Physical Function (LEPF) patient-reported outcome measure (PROM). The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk adjusted) and used as a performance measure at the patient level, at the individual clinician level, and at the clinic level to assess quality. The measure is available as a computer adaptive test, for reduced patient burden, or a short form (static measure).</p> <p>Updated definition: Revised: Encounter – A visit between the patient and the provider for the purpose of assessing and/or improving a functional deficit.</p> <p>Updated denominator exclusion: Revised: Patient unable to complete the LEPF PROM at Initial Evaluation and/or Discharge due to blindness, illiteracy, severe mental incapacity or language incompatibility and an adequate proxy is not available.</p> <p>The numerator is revised to read: Patients who were presented with the LEPF PROM at Initial Evaluation (Intake) and at or near Discharge (Status) for the purpose of calculating the patient’s Risk-Adjusted Functional Status Change Residual Score.</p> <p>Updated denominator exception: Revised:</p> <ol style="list-style-type: none"> 1. Ongoing care not clinically indicated because the patient needed a home program only, referral to another provider or facility, or consultation only, as documented in the medical record. 2. Ongoing care not medically possible because the patient was discharged early due to specific medical events, documented in the medical record, such as the patient became hospitalized or scheduled for surgery. 3. Ongoing care not possible because the patient self-discharged early (e.g., financial or insurance reasons, transportation problems, or reason unknown). <p>Updated numerator options: Revised: Performance Not Met: Risk-Adjusted Functional Status Change Residual Score for the knee impairment not measured because the patient did not complete the LEPF PROM at Initial Evaluation and/or near Discharge, reason not given.</p>
Steward:	Focus on Therapeutic Outcomes, Inc.
High Priority Measure:	Yes
Measure Type:	Patient Reported Outcome
Rationale:	We propose to update the description, denominator exclusion, numerator statement, and numerator options to reflect the change in functional assessment tool, Knee FS PROM to the LEPF PROM. The assessment is being revised to address scientific updates and maintenance necessary for item-response theory based outcome measures. We propose to update the denominator exception language to add clarity and better align with measure’s intent.

D.41 Functional Status Change for Patients with Hip Impairments

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	218
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	A patient-reported outcome measure of risk-adjusted change in functional status for patients 14 years+ with hip impairments. The change in functional status (FS) is assessed using the Hip FS patient-reported outcome measure (PROM) (©2009-2019 Focus on Therapeutic Outcomes, Inc.). The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk adjusted) and used as a performance measure at the patient level, at the individual clinician, and at the clinic level to assess quality. The measure is available as a computer adaptive test, for reduced patient burden, or a short form (static measure).
Substantive Change:	<p>The description is revised to read: A patient-reported outcome measure of risk-adjusted change in functional status for patients 14 years+ with hip impairments. The change in functional status (FS) is assessed using the FOTO Lower Extremity Physical Function (LEPF) patient-reported outcome measure (PROM). The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk adjusted) and used as a performance measure at the patient level, at the individual clinician level, and at the clinic level to assess quality. The measure is available as a computer adaptive test, for reduced patient burden, or a short form (static measure).</p> <p>Updated definition: Revised: Encounter – A visit between the patient and the provider for the purpose of assessing and/or improving a functional deficit.</p> <p>Updated denominator exclusion: Revised: Patient unable to complete the LEPF PROM at Initial Evaluation and/or Discharge due to blindness, illiteracy, severe mental incapacity or language incompatibility and an adequate proxy is not available.</p> <p>The numerator is revised to read: Patients who were presented with the LEPF PROM at Initial Evaluation (Intake) and at or near Discharge (Status) for the purpose of calculating the patient’s Risk-Adjusted Functional Status Change Residual Score.</p> <p>Updated denominator exception: Revised:</p> <ol style="list-style-type: none"> 1. Ongoing care not clinically indicated because the patient needed a home program only, referral to another provider or facility, or consultation only, as documented in the medical record. 2. Ongoing care not medically possible because the patient was discharged early due to specific medical events, documented in the medical record, such as the patient became hospitalized or scheduled for surgery. 3. Ongoing care not possible because the patient self-discharged early (e.g., financial or insurance reasons, transportation problems, or reason unknown). <p>Updated numerator options: Revised: Performance Not Met: Risk-Adjusted Functional Status Change Residual Score for the hip impairment not measured because the patient did not complete the LEPF PROM at Initial Evaluation and/or near discharge, reason not given.</p>
Steward:	Focus on Therapeutic Outcomes, Inc.
High Priority Measure:	Yes
Measure Type:	Patient Reported Outcome
Rationale:	We propose to update the description, denominator exclusion, numerator statement, and numerator options to reflect the change in functional assessment tool, Hip FS PROM to the LEPF PROM. The assessment is being revised to address scientific updates and maintenance necessary for item-response theory based outcome measures. We propose to update the denominator exception language to add clarity and better align with measure’s intent.

D.42 Functional Status Change for Patients with Lower Leg, Foot or Ankle Impairments

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	219
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	A patient-reported outcome measure of risk-adjusted change in functional status for patients 14 years+ with foot, ankle and lower leg impairments. The change in functional status (FS) is assessed using the Foot/Ankle FS patient-reported outcome measure (PROM) (©2009-2019 Focus on Therapeutic Outcomes, Inc.). The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk adjusted) and used as a performance measure at the patient level, at the individual clinician, and at the clinic level to assess quality. The measure is available as a computer adaptive test, for reduced patient burden, or a short form (static measure).
Substantive Change:	<p>The description is revised to read: A patient-reported outcome measure of risk-adjusted change in functional status for patients 14 years+ with foot, ankle and lower leg impairments. The change in functional status (FS) is assessed using the FOTO Lower Extremity Physical Function (LEPF) patient-reported outcome measure (PROM). The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk adjusted) and used as a performance measure at the patient level, at the individual clinician level, and at the clinic level to assess quality. The measure is available as a computer adaptive test, for reduced patient burden, or a short form (static measure).</p> <p>Updated definition: Revised: Encounter – A visit between the patient and the provider for the purpose of assessing and/or improving a functional deficit.</p> <p>Updated denominator criteria: Revised ICD-10 coding for ‘With a lower leg, foot, or ankle impairment and/or diagnosis pertaining to a functional deficit affecting lower leg, foot, or ankle’.</p> <p>Updated denominator exclusion: Revised: Patient unable to complete the LEPF PROM at Initial Evaluation and/or Discharge due to blindness, illiteracy, severe mental incapacity or language incompatibility and an adequate proxy is not available.</p> <p>The numerator is revised to read: Patients who were presented with the LEPF PROM at Initial Evaluation (Intake) and at or near Discharge (Status) for the purpose of calculating the patient’s Risk-Adjusted Functional Status Change Residual Score.</p> <p>Updated denominator exception: Revised:</p> <ol style="list-style-type: none"> 1. Ongoing care not clinically indicated because the patient needed a home program only, referral to another provider or facility, or consultation only, as documented in the medical record. 2. Ongoing care not medically possible because the patient was discharged early due to specific medical events, documented in the medical record, such as the patient became hospitalized or scheduled for surgery. 3. Ongoing care not possible because the patient self-discharged early (e.g., financial or insurance reasons, transportation problems, or reason unknown). <p>Updated numerator options: Revised: Performance Not Met: Risk-Adjusted Functional Status Change Residual Score for the lower leg, foot or ankle impairment not measured because the patient did not complete the LEPF PROM at Initial Evaluation and/or near discharge, reason not given.</p>
Steward:	Focus on Therapeutic Outcomes, Inc.
High Priority Measure:	Yes
Measure Type:	Patient Reported Outcome
Rationale:	We propose to update the description, denominator exclusion, numerator statement, and numerator options to reflect the change in functional assessment tool, Hip FS PROM to the LEPF PROM. The assessment is being revised to address scientific updates and maintenance necessary for item-response theory based outcome measures. We propose to update the denominator exception language to add clarity and better align with measure’s intent. Additionally, we propose to update the ICD-10 coding related to the denominator criteria statement, ‘With a lower leg, foot, or ankle impairment and/or diagnosis pertaining to a functional deficit affecting lower leg, foot, or ankle,’ to align with current coding.

D.43 Functional Status Change for Patients with Low Back Impairments

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	220
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	A patient-reported outcome measure of risk-adjusted change in functional status for patients 14 years+ with low back impairments. The change in functional status (FS) is assessed using the Low Back FS patient-reported outcome measure (PROM) (©2009-2019 Focus on Therapeutic Outcomes, Inc.). The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk adjusted) and used as a performance measure at the patient level, at the individual clinician, and at the clinic level to assess quality. The measure is available as a computer adaptive test, for reduced patient burden, or a short form (static measure).
Substantive Change:	<p>The description is revised to read: A patient-reported outcome measure of risk-adjusted change in functional status for patients 14 years+ with low back impairments. The change in functional status (FS) is assessed using the FOTO Low Back FS patient-reported outcome measure (PROM). The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk adjusted) and used as a performance measure at the patient level, at the individual clinician level, and at the clinic level to assess quality. The measure is available as a computer adaptive test, for reduced patient burden, or a short form (static measure).</p> <p>Updated definition: Revised: Encounter – A visit between the patient and the provider for the purpose of assessing and/or improving a functional deficit.</p> <p>Updated denominator exception: Revised:</p> <ol style="list-style-type: none"> 1. Ongoing care not clinically indicated because the patient needed a home program only, referral to another provider or facility, or consultation only, as documented in the medical record. 2. Ongoing care not medically possible because the patient was discharged early due to specific medical events, documented in the medical record, such as the patient became hospitalized or scheduled for surgery. 3. Ongoing care not possible because the patient self-discharged early (e.g., financial or insurance reasons, transportation problems, or reason unknown).
Steward:	Focus on Therapeutic Outcomes, Inc.
High Priority Measure:	Yes
Measure Type:	Patient Reported Outcome
Rationale:	We propose to refine the description for easier readability. We propose to update the denominator exception language to add clarity and better align and communicate the measure's intent.

D.44 Functional Status Change for Patients with Shoulder Impairments

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	221
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	A patient-reported outcome measure of risk-adjusted change in functional status for patients 14 years+ with shoulder impairments. The change in functional status (FS) is assessed using the Shoulder FS patient-reported outcome measure (PROM) (©2009-2019 Focus on Therapeutic Outcomes, Inc.). The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk adjusted) and used as a performance measure at the patient level, at the individual clinician, and at the clinic level to assess quality. The measure is available as a computer adaptive test, for reduced patient burden, or a short form (static measure).
Substantive Change:	<p>The description is revised to read: A patient-reported outcome measure of risk-adjusted change in functional status for patients 14 years+ with shoulder impairments. The change in functional status (FS) is assessed using the FOTO Shoulder FS patient-reported outcome measure (PROM). The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk adjusted) and used as a performance measure at the patient level, at the individual clinician level, and at the clinic level to assess quality. The measure is available as a computer adaptive test, for reduced patient burden, or a short form (static measure).</p> <p>Updated definition: Revised: Encounter – A visit between the patient and the provider for the purpose of assessing and/or improving a functional deficit.</p> <p>Updated denominator exception: Revised:</p> <ol style="list-style-type: none"> 1. Ongoing care not clinically indicated because the patient needed a home program only, referral to another provider or facility, or consultation only, as documented in the medical record. 2. Ongoing care not medically possible because the patient was discharged early due to specific medical events, documented in the medical record, such as the patient became hospitalized or scheduled for surgery. 3. Ongoing care not possible because the patient self-discharged early (e.g., financial or insurance reasons, transportation problems, or reason unknown).
Steward:	Focus on Therapeutic Outcomes, Inc.
High Priority Measure:	Yes
Measure Type:	Patient Reported Outcome
Rationale:	We propose to refine the description for easier readability. We propose to update the denominator exception language to add clarity and better align and communicate the measure's intent.

D.45 Functional Status Change for Patients with Elbow, Wrist or Hand Impairments

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	222
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	A patient-reported outcome measure of risk-adjusted change in functional status (FS) for patients 14 years+ with elbow, wrist or hand impairments. The change in FS is assessed using the Elbow/Wrist/Hand FS patient-reported outcome measure (PROM) (©2009-2019 Focus on Therapeutic Outcomes, Inc.) The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk adjusted) and used as a performance measure at the patient level, at the individual clinician, and at the clinic level to assess quality. The measure is available as a computer adaptive test, for reduced patient burden, or a short form (static measure).
Substantive Change:	<p>The description is revised to read: A patient-reported outcome measure of risk-adjusted change in functional status for patients 14 years– with elbow, wrist, or hand impairments. The change in functional status (FS) is assessed using the FOTO Elbow/Wrist/Hand FS patient-reported outcome measure (PROM). The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk adjusted) and used as a performance measure at the patient level, at the individual clinician level, and at the clinic level to assess quality. The measure is available as a computer adaptive test, for reduced patient burden, or a short form (static measure).</p> <p>Updated definition: Revised: Encounter – A visit between the patient and the provider for the purpose of assessing and/or improving a functional deficit.</p> <p>Updated denominator exception: Revised:</p> <ol style="list-style-type: none"> 1. Ongoing care not clinically indicated because the patient needed a home program only, referral to another provider or facility, or consultation only, as documented in the medical record. 2. Ongoing care not medically possible because the patient was discharged early due to specific medical events, documented in the medical record, such as the patient became hospitalized or scheduled for surgery. 3. Ongoing care not possible because the patient self-discharged early (e.g., financial or insurance reasons, transportation problems, or reason unknown).
Steward:	Focus on Therapeutic Outcomes, Inc.
High Priority Measure:	Yes
Measure Type:	Patient Reported Outcome
Rationale:	We propose to refine the description for easier readability. We propose to update the denominator exception language to add clarity and better align and communicate the measure’s intent.

D.46 Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention

Category	Description
NQF # / eCQM NQF #:	0028 / 0028e
Quality#:	226
CMS eCQM ID:	CMS138v9
National Quality Strategy Domain:	Community/Population Health
Current Collection Type:	Medicare Part B Claims Measure Specifications, eCQM Specifications, CMS Web Interface Measure Specifications, MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within 24 months AND who received tobacco cessation intervention if identified as a tobacco user a. Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within 24 months. b. Percentage of patients aged 18 years and older who were identified as a tobacco user who received tobacco cessation intervention. c. Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within 24 months AND who received tobacco cessation intervention if identified as a tobacco user.
Substantive Change:	<p>Modified collection type: Medicare Part B Claims Measure Specifications, eCQM Specifications, and MIPS CQMs Specifications.</p> <p>The description is revised to read: For the Medicare Part B Claims Measure Specifications and the MIPS CQMs Specifications collection types: Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within 12 months AND who received tobacco cessation intervention if identified as a tobacco user.</p> <p>The description is revised to read: For the eCQM Specifications collection type: Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within 12 months AND who received tobacco cessation intervention if identified as a tobacco user.</p> <p>Three rates are reported: a. Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within 12 months b. Percentage of patients aged 18 years and older who were identified as a tobacco user who received tobacco cessation intervention c. Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within 12 months AND who received tobacco cessation intervention if identified as a tobacco user</p> <p>Updated instructions: For the Medicare Part B Claims Measure Specifications and the MIPS CQMs Specifications collection types: Revised the language to reflect a 12-month timeframe for the look back period and assessment of clinical quality action.</p> <p>Updated guidance: For the eCQM Specifications collection type: Revised: To satisfy the intent of this measure, a patient must have at least one tobacco use screening during the 12-month period. If a patient has multiple tobacco use screenings during the 12-month period, only the most recent screening, which has a documented status of tobacco user or tobacco non-user, will be used to satisfy the measure requirements. Added: To promote a team-based approach to patient care, the tobacco cessation intervention can be performed by another healthcare provider; therefore, the tobacco use screening and tobacco cessation intervention do not need to be performed by the same provider or clinician.</p> <p>Updated denominator: For all collection types: Added Physical Therapy MIPS eligible clinician and telehealth as eligible encounters for all submission criteria.</p> <p>Updated denominator exception: For eCQM Specifications collection type: Removed coding from the 'Medical Reason' value set for concepts not indicating medical contraindication.</p> <p>Updated logic: For the eCQM Specifications collection type: Revised to reflect a 12-month timeframe for the look back period and assessment of clinical quality action.</p> <p>Updated numerator: For the eCQM Specifications collection type: Revised to reflect a 12-month timeframe for the look back period and assessment of clinical quality action. Additionally, revised the logic to unlink the intervention from having to occur after the tobacco user status.</p> <p>Updated numerator: For the Medicare Part B Claims Measure Specifications and the MIPS CQMs Specifications collection types: Revised to reflect a 12-month timeframe for the look back period and assessment of clinical quality action.</p> <p>Updated numerator note: For the Medicare Part B Claims Measure Specifications and the MIPS CQMs Specifications collection types: Revised to reflect a 12-month timeframe for the look back period and assessment of clinical quality action.</p>
Steward:	Physician Consortium for Performance Improvement Foundation (PCPI®)
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to revise the measure to shorten the look back period to 12 months and require that tobacco screening and cessation, if patient screened positive, occur every 12 months. The revision is based upon stakeholder feedback, input from the eCQM clinical review process, and the measure steward's technical expert panel (TEP). We agree that it is important to do this annually

Category	Description
	<p>as tobacco use is an important population health concern and smoking is the leading cause of preventable death (https://www.cdc.gov/tobacco/data_statistics/fact_sheets/index.htm). The language throughout the measure specification is being revised to reflect this update. Additionally, we propose to add physical therapy MIPS eligible clinicians to the denominator eligible encounters as this is applicable to their scope of practice.</p> <p>For the eCQM Specifications collection type we propose to unlink the intervention from having to occur after the tobacco status within the measure logic. This revision is better aligned with the clinical reality that for patients actively trying to quit a plan will be in place and further tobacco cessation intervention is redundant, as well as lessening the burden of clinicians, especially for those patients who are not planning on quitting. The measure steward updated the guidance statement based upon technical expert feedback to reflect that team-based care would be appropriate for this measure. We agree that this guidance update is clinically appropriate and aligns better with clinical care workflows. Additionally, we propose to revise the 'Medical Reason' value set based upon expert and stakeholder feedback to remove codes based upon intent of concepts which do not indicate a medical contraindication, but rather a provider decision to discontinue or adjust a course of treatment. These codes do not meet the intent of the denominator exception.</p> <p>We propose to add telehealth encounters as denominator eligible as the telehealth setting is directly applicable to this measure and these patients should be included in the denominator to allow for numerator compliance to be measured.</p> <p>We propose to remove the CMS Web Interface Measure Specifications collection type. This collection type is proposed to be sunset for the purposes of MIPS starting with the 2021 performance year. We have determined it is not fiscally viable, feasible, or sustainable for MIPS to continue this collection type/submission type due to an 80 percent reduction and a continued decrease in interest of groups and virtual groups seeking to report quality data on CMS Web Interface measures. For further rationale, please see section IV.A.3.c.(1)(c) of this proposed rule.</p> <p>In the event the proposed substantive change(s) are finalized, the substantive changes would not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes.</p>

D.47 Controlling High Blood Pressure

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	236
CMS eCQM ID:	CMS165v9
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	Medicare Part B Claims Measure Specifications, eCQM Specifications, CMS Web Interface Measure Specifications, MIPS CQMs Specifications
Current Measure Description:	Percentage of patients 18-85 years of age who had a diagnosis of hypertension overlapping the measurement period and whose most recent blood pressure was adequately controlled (<140/90mmHg) during the measurement period.
Substantive Change:	<p>Modified collection type: Medicare Part B Claims Measure Specifications, eCQM Specification and MIPS CQMs Specifications</p> <p>Updated denominator note: For the Medicare Part B Claims Measure Specifications and the MIPS CQMs Specifications collection types: Added: The diagnosis of essential hypertension must be present sometime between 1 year prior to the measurement period and before the end of the measurement period (January 1, 2020 through December 31, 2021).</p> <p>Updated denominator exclusion: For the eCQM Specification collection type: Revised: Exclude patients 66 and older who are living long term in an institution for more than 90 consecutive days during the measurement period.</p> <p>Updated denominator exclusion logic: For the eCQM Specifications collection type: Updated encounters so they are "on or" before the end of the measurement period. Updated the LTI exclusion to be 90 consecutive days. Changed the name of the under 81 exclusion definition to "FrailtyLTI.Advanced Illness and Frailty Exclusion Not Including Over Age 80".</p> <p>Updated denominator exclusion: For the MIPS CQMs Specifications and Medicare Part B Claims Measure Specification collection type: Added coding to identify patients with advanced illness and frailty</p> <p>Updated logic: For the eCQM Specifications collection type: Change to the Essential Hypertension Diagnosis definition logic used to define the initial patient population requires hypertension overlap the measurement period indicating hypertension must be present prior to and during the measurement period.</p> <p>Updated denominator exclusion: For the Medicare Part B Claims Measure Specifications and the MIPS CQMs Specifications collection types: Revised: <ol style="list-style-type: none"> 1. Patients age 66 or older in Institutional Special Needs Plans (SNP) or residing in long-term care with POS code, 32, 33, 34, 54, or 56 for more than 90 consecutive days during the measurement period. 2. Patients 66-80 years of age with at least one claim/encounter for frailty during the measurement period AND a dispensed medication for dementia during the measurement period or the year prior to the measurement period 3. Patients 66-80 years of age with at least one claim/encounter for frailty during the measurement period AND either one acute inpatient encounter with a diagnosis of advanced illness or two outpatient, observation, ED or nonacute inpatient encounters on different dates of service with an advanced illness diagnosis during the measurement period or the year prior to the measurement period Added: <ol style="list-style-type: none"> 1. Patients 81 years of age and older with at least one claim/encounter for frailty during the measurement period. </p> <p>Updated instructions note/numerator note: For the Medicare Part B Claims Measure Specifications and the MIPS CQMs Specifications collection types: Added: <ul style="list-style-type: none"> • Reported by or taken by the patient (with the exception of BP values taken by a remote monitoring device, which are then reported to the provider). </p>
Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Intermediate Outcome
Rationale:	<p>We propose that the denominator exclusion language and logic be updated in all collection types to clarify that, for the measure, long-term care will be defined as patients staying 90 consecutive days at the long-term care facility versus any 90 days within the performance period. For the eCQM Specifications collection type we propose to update the logic to allow for new hypertension diagnoses within the first 6 months of the performance period to better align with the intent of the measure.</p> <p>We propose to add a denominator note to clarify the patient population eligible for the measure and to reflect the revision in timing for the essential hypertension diagnosis; ensuring patients that should be assessed are included within the denominator eligible patient population. Additionally, for the MIPS CQMs Specifications and Medicare Part B Claims Measure Specifications collection types, we propose adding applicable coding to better define the advanced illness and frailty patient population for the purposes of this measure. We also propose to update the instructions note and the numerator note to add clarity regarding the use of remote monitoring devices for the purposes of this measure in response to stakeholder feedback.</p> <p>We propose to remove the CMS Web Interface Measure Specifications collection type. This collection type is proposed to be sunset for the purposes of MIPS starting with the 2021 performance year. We have determined it is not fiscally viable, feasible, or sustainable for MIPS to continue this collection type/submission type due to an 80 percent reduction and a continued decrease in interest of groups and virtual groups seeking to report quality data on CMS Web Interface measures. For further rationale, please see section IV.A.3.c.(1)(c) of this proposed rule.</p>

D.48 Use of High-Risk Medications in the Elderly

Category	Description
NQF # / eCQM NQF #:	0022 / N/A
Quality#:	238
CMS eCQM ID:	CMS156v9
National Quality Strategy Domain:	Patient Safety
Current Collection Type:	eCQM Specifications, MIPS CQMs Specifications
Current Measure Description:	Percentage of patients 65 years of age and older who were ordered high-risk medications. Two rates are submitted. 1) Percentage of patients who were ordered at least one high-risk medication. 2) Percentage of patients who were ordered at least two of the same high-risk medications.
Substantive Change:	<p>The title is revised from 'Use of High-Risk Medications in the Elderly' to: Use of High-Risk Medications in Older Adults.</p> <p>The description is revised to read: Percentage of patients 65 years of age and older who were ordered at least two of the same high-risk medications.</p> <p>Updated measure analytics: For all collection types: One performance rate.</p> <p>The guidance is revised to read: For the eCQM Specifications collection type: The intent of the measure is to assess if the patient has been prescribed at least two of the same high-risk medications on different days. The intent of the measure is to assess if the reporting provider ordered the high-risk medication(s). If the patient had a high-risk medication previously prescribed by another provider, they would not be counted towards the numerator unless the reporting provider also ordered a high-risk medication for them. This eCQM is a patient-based measure. This version of the eCQM uses QDM version 5.5. Please refer to the eCQI resource center (https://ecqi.healthit.gov/qdm) for more information on the QDM.</p> <p>Updated instructions: For the MIPS CQMs Specifications collection type: Removed language related to the submission of two performance rates and two submission criteria.</p> <p>Updated denominator: For all collection types: Removed submission criteria one.</p> <p>For MIPS CQMs Specifications collection type: Added ophthalmology, skilled nursing facility, and domiciliary/rest home settings and preventive care services.</p> <p>The numerator is revised to read: For all collection type: Patients with at least two orders for the same high-risk medication on different days during the measurement period.</p> <p>Updated numerator: For the MIPS CQMs Specifications collection type: Removed submission criteria one numerator. Revised High-Risk Medications at any dose or duration Table 1: Added: Pyrilamine, Orphenadrine, Chlordiazepoxide-clidinium, Methscopolamine, Glimepiride Removed: Clidinium Chlorradiazepoxide, Ticlopidine, Pentazocine</p> <p>For the eCQM Specifications collection type: Added medication value sets: Scopolamine, Secobarbital, Propantheline, Doxylamine, Ergoloid Mesylates, Butalbital, Amobarbital, Pentobarbital</p>
Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	<p>We propose to remove submission criteria one from this measure and continue to assess the percentage of patients 65 years of age and older who were ordered at least two of the same high-risk medications. This change will lessen clinician burden while still assessing an important aspect of patient safety. This patient population is a better assessment of the riskier, longer-term use and allows MIPS eligible clinicians/groups to address potentially inappropriate medication dispensing to improve quality outcomes. The eCQM Specifications collection type added medication value sets to the numerator to align with the Beers Criteria for Potentially Inappropriate Medication list, as well as to reflect expert review and stakeholder feedback. These updates ensure all high-risk medications are being assessed for numerator compliance. The MIPS CQMs Specifications collection type was revised to align medications across collection types.</p> <p>In the event the proposed substantive change(s) are finalized, the substantive changes would not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes.</p>

D.49 Cardiac Rehabilitation Patient Referral from an Outpatient Setting

Category	Description
NQF # / eCQM NQF #:	0643 / N/A
Quality#:	243
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients evaluated in an outpatient setting who within the previous 12 months have experienced an acute myocardial infarction (MI), coronary artery bypass graft (CABG) surgery, a percutaneous coronary intervention (PCI), cardiac valve surgery, or cardiac transplantation, or who have chronic stable angina (CSA) and have not already participated in an early outpatient cardiac rehabilitation/secondary prevention (CR) program for the qualifying event/diagnosis who were referred to a CR program.
Substantive Change:	Updated denominator: Added Skilled Nursing Facility, Domiciliary/Rest Home, Home Visit, and Outpatient Consultation settings. Added telehealth as eligible encounter.
Steward:	American College of Cardiology Foundation
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to add settings, Skilled Nursing Facility, Domiciliary/Rest Home, Home Visit, and Outpatient Consultation, as denominator eligible as they are clinically relevant settings that can ensure that patients receive or continue outpatient cardiac rehabilitation to support positive outcomes in their clinical care. We propose to add telehealth encounters as denominator eligible as the telehealth setting is directly applicable to this measure and these patients should be included in the denominator to allow for numerator compliance to be measured.

D.50 Biopsy Follow-Up

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	265
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of new patients whose biopsy results have been reviewed and communicated to the primary care/referring physician and patient.
Substantive Change:	Updated denominator: Added telehealth as eligible encounter.
Steward:	American Academy of Dermatology
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to add telehealth encounters as denominator eligible as the telehealth setting is directly applicable to this measure and these patients should be included in the denominator to allow for numerator compliance to be measured.

D.51 Epilepsy: Counseling for Women of Childbearing Potential with Epilepsy

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	268
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications
Current Measure Description:	Percentage of all patients of childbearing potential (12 years and older) diagnosed with epilepsy who were counseled at least once a year about how epilepsy and its treatment may affect contraception and pregnancy.
Substantive Change:	Modified collection type: MIPS CQMs Specifications The denominator is revised to read: All females, including all individuals of childbearing potential (12 years and older) with a diagnosis of epilepsy. Updated denominator: Added telehealth as eligible encounter.
Steward:	American Academy of Neurology
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to remove the Medicare Part B Claims Measure Specifications collection type. The limited patient population and adoption of the quality measure for this collection type does not allow for the creation of benchmarks to provide a meaningful impact to quality improvement. We propose the denominator statement be revised to be more inclusive of the eligible patient population. We propose to add telehealth encounters as denominator eligible as the telehealth setting is directly applicable to this measure and these patients should be included in the denominator to allow for numerator compliance to be measured.

D.52 Sleep Apnea: Severity Assessment at Initial Diagnosis

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	277
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of obstructive sleep apnea who had an apnea hypopnea index (AHI) or a respiratory disturbance index (RDI) measured at the time of initial diagnosis.
Substantive Change:	Updated denominator: Added telehealth as eligible encounter.
Steward:	American Academy of Sleep Medicine
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to add telehealth encounters as denominator eligible as the telehealth setting is directly applicable to this measure and these patients should be included in the denominator to allow for numerator compliance to be measured.

D.53 Sleep Apnea: Assessment of Adherence to Positive Airway Pressure Therapy

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	279
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of visits for patients aged 18 years and older with a diagnosis of obstructive sleep apnea who were prescribed positive airway pressure therapy who had documentation that adherence to positive airway pressure therapy was objectively measured.
Substantive Change:	Updated denominator: Added telehealth as eligible encounter.
Steward:	American Academy of Sleep Medicine
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to add telehealth encounters as denominator eligible as the telehealth setting is directly applicable to this measure and these patients should be included in the denominator to allow for numerator compliance to be measured.

D.54 Dementia: Cognitive Assessment

Category	Description
NQF # / eCQM NQF #:	N/A / 2872e
Quality#:	281
CMS eCQM ID:	CMS149v9
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	eCQM Specifications
Current Measure Description:	Percentage of patients, regardless of age, with a diagnosis of dementia for whom an assessment of cognition is performed and the results reviewed at least once within a 12-month period.
Substantive Change:	<p>The guidance is revised to read:</p> <p>Use of a standardized tool or instrument to assess cognition other than those listed will meet numerator performance. Standardized tools can be mapped to the concept "Intervention, Performed": "Cognitive Assessment" included in the numerator logic below.</p> <p>The requirement of two or more visits is to establish that the eligible professional or eligible clinician has an existing relationship with the patient.</p> <p>In recognition of the growing use of integrated and team-based care, the diagnosis of dementia and the assessment of cognitive function need not be performed by the same provider or clinician.</p> <p>The DSM-5 has replaced the term dementia with major neurocognitive disorder and mild neurocognitive disorder. For the purposes of this measure, the terms are equivalent.</p> <p>This eCQM is a patient-based measure.</p> <p>This version of the eCQM uses QDM version 5.5. Please refer to the eCQI resource center (https://ecqi.healthit.gov/qdm) for more information on the QDM.</p>
Steward:	Physician Consortium for Performance Improvement Foundation (PCPI®)
High Priority Measure:	No
Measure Type:	Process
Rationale:	The measure steward's technical expert panel suggested adding language within the guidance statement to reflect that team-based care is appropriate for this measure. We agree that this is an important concept and applicable to this measure, adding the language helps to clarify the measure intent.

D.55 Dementia: Functional Status Assessment

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	282
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients with dementia for whom an assessment of functional status was performed at least once in the last 12 months.
Substantive Change:	<p>The definition is revised to read: Assessment of functional status - Functional status is assessed by use of a validated tool, direct assessment of the patient, or by querying a knowledgeable informant. A direct assessment of functional status includes an evaluation of the patient's ability to perform instrumental activities of daily living (IADL) and basic activities of daily living (ADL).</p> <p>Updated denominator: Added telehealth as eligible encounter.</p> <p>The numerator instructions are revised to read: To meet this measure, providers must assess BOTH IADL and ADL performance.</p> <p>1. IADL Assessment (users must meet one of the two below bullets to meet IADL assessment component)</p> <ul style="list-style-type: none"> • To meet the measure's IADL component using a validated tool, providers must use one of the following tools: <ul style="list-style-type: none"> ○ Lawton Instrumental Activities of Daily Living Scale ○ Bristol Activities of Daily Living Scale ○ Katz Index of Independence in Activities of Daily Living ○ Functional Activities Questionnaire ○ Functional Independence Measure Instrument • To meet the measure's IADL component using a direct assessment, providers must document 3 out of the following 5 domains. <ul style="list-style-type: none"> ○ Cleaning or hobbies ○ Money management, ○ Medication management, ○ Transportation, and ○ Cooking or communication <p>2. ADL Assessment (users must meet one of the two below bullets to meet ADL assessment component)</p> <ul style="list-style-type: none"> • To meet the measure's ADL component using a validated tool, providers must use either: <ul style="list-style-type: none"> ○ Barthel ADL Index ○ Bristol Activities of Daily Living Scale • To meet the measure's ADL component using a direct assessment, providers must document 3 out of the following 7 domains. <ul style="list-style-type: none"> ○ Grooming, ○ Bathing, ○ Dressing, ○ Eating, ○ Toileting, ○ Gait, and ○ Transferring <p>The numerator notes is revised to read: The 12-month look back period is defined as 12 months from the date of the denominator eligible encounter. Denominator Exception(s) are determined on the date of the denominator eligible encounter. Documentation of advanced stage dementia and caregiver knowledge is limited would meet the measure exception criteria.</p> <p>The denominator exception is revised to read: Documentation of advanced stage dementia and caregiver knowledge is limited.</p>
Steward:	American Academy of Neurology
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We propose the measure definition and numerator instructions to provide clarity regarding expectations for numerator compliance. This updated language should address any stakeholder confusion for implementing the measure. The numerator note was updated to align with revised denominator exception. We propose to update the denominator exception to reduce ambiguity regarding patient scenarios where an exception is clinically appropriate.</p> <p>We propose to add telehealth encounters as denominator eligible as the telehealth setting is directly applicable to this measure and these patients should be included in the denominator to allow for numerator compliance to be measured.</p>

D.56 Dementia Associated Behavioral and Psychiatric Symptoms Screening and Management

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	283
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients with dementia for whom there was a documented screening for behavioral and psychiatric symptoms, including depression, and for whom, if symptoms screening was positive, there was also documentation of recommendations for management in the last 12 months.
Substantive Change:	<p>Updated denominator: Added telehealth as eligible encounter.</p> <p>The definition is revised to read: Behavioral and Psychiatric Symptoms Screening - Screening is defined as using a validated instrument or directly examining the patient or knowledgeable informant to determine the presence or absence of symptoms from three domains: Activity disturbances, mood disturbances (including depression), and thought and perceptual disturbances. The following validated instruments can be used to meet the measure:</p> <ul style="list-style-type: none"> • Dementia Signs and Symptoms (DSS) Scale • Neuropsychiatric Inventory (NPI) • Minimum Data Set (MDS) (suggested for nursing home only). <p>Updated numerator instructions: Added: Thought and perceptual disturbances under ‘Thought and perceptual disturbances’. Revised: Examples of reliable and valid instruments that can be used to assess behavioral and psychiatric symptoms are: Dementia Signs and Symptoms (DSS) Scale or Neuropsychiatric Inventory (NPI). For patients residing in nursing homes, it may be the Minimum Data Set (MDS). Other reliable and valid instruments may be used to assess individual measure components for activity disturbances, mood disturbances including depression, and thought and perceptual disturbances.</p>
Steward:	American Academy of Neurology
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We propose to update the definition to remove ‘positive’, as this was not appropriate or aligned with the definition for the purposes of this measure. Additionally, information regarding approved screening instruments was moved to this section as it is more appropriately in this section of the measure specification. We propose to update the numerator instructions to add ‘thought and perceptual disturbance’ and provide greater clarity regarding the requirements of numerator compliance for this measure.</p> <p>We propose to add telehealth encounters as denominator eligible as the telehealth setting is directly applicable to this measure and these patients should be included in the denominator to allow for numerator compliance to be measured.</p>

D.57 Dementia: Safety Concern Screening and Follow-Up for Patients with Dementia

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	286
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Patient Safety
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients with dementia or their caregiver(s) for whom there was a documented safety concerns screening in two domains of risk: 1) dangerousness to self or others and 2) environmental risks; and if safety concerns screening was positive in the last 12 months, there was documentation of mitigation recommendations, including but not limited to referral to other resources.
Substantive Change:	<p>The denominator exception is revised to read: Documentation patient unable to communicate and informant not available.</p> <p>Updated denominator: Added telehealth as eligible encounter.</p>
Steward:	American Academy of Neurology
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	<p>We propose to revise the denominator exception to better align with real-world clinical scenarios where safety screening could not be completed and therefore no mitigation recommendations could be provided. This change aids clinicians reporting the measure with an exception to excuse them from performance in a clinical situation they are unable to control.</p> <p>We propose to add telehealth encounters as denominator eligible as the telehealth setting is directly applicable to this measure and these patients should be included in the denominator to allow for numerator compliance to be measured.</p>

D.58 Dementia: Education and Support of Caregivers for Patients with Dementia

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	288
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients with dementia whose caregiver(s) were provided with education on dementia disease management and health behavior changes AND were referred to additional resources for support in the last 12 months.
Substantive Change:	<p>Updated denominator: Added telehealth as eligible encounter.</p> <p>Updated denominator exceptions: Revised: Patient does not have a caregiver. Added: 1. Documentation caregiver is trained and certified in dementia care. 2. Patient/caregiver dyad has been referred to appropriate resources and connection to those resources is confirmed.</p>
Steward:	American Academy of Neurology
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	<p>We propose to revise the denominator exception to reduce ambiguity regarding patient scenarios where an exception is clinically appropriate. Additionally, we propose to add two denominator exceptions to further clarify clinical scenarios where it may not be appropriate to attribute the quality action to that MIPS eligible clinician.</p> <p>We propose to add telehealth encounters as denominator eligible as the telehealth setting is directly applicable to this measure and these patients should be included in the denominator to allow for numerator compliance to be measured.</p>

D.59 Parkinson's Disease: Psychiatric Symptoms Assessment for Patients with Parkinson's Disease

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	290
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of all patients with a diagnosis of Parkinson's Disease [PD] who were assessed for psychiatric symptoms in the past 12 months.
Substantive Change:	<p>The description is revised to read: Percentage of all patients with a diagnosis of Parkinson's Disease [PD] who were assessed for psychiatric symptoms once in the past 12 months.</p> <p>Updated denominator: Added telehealth as eligible encounter.</p>
Steward:	American Academy of Neurology
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We propose to update the measure description to include the word 'once' to provide added clarity regarding measure intent.</p> <p>We propose to add telehealth encounters as denominator eligible as the telehealth setting is directly applicable to this measure and these patients should be included in the denominator to allow for numerator compliance to be measured.</p>

D.60 Parkinson's Disease: Cognitive Impairment or Dysfunction Assessment for Patients with Parkinson's Disease

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	291
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of all patients with a diagnosis of Parkinson's Disease [PD] who were assessed for cognitive impairment or dysfunction in the past 12 months.
Substantive Change:	<p>The description is revised to read: Percentage of all patients with a diagnosis of Parkinson's Disease [PD] who were assessed for cognitive impairment or dysfunction once in the past 12 months.</p> <p>Updated denominator: Added telehealth as eligible encounter.</p>
Steward:	American Academy of Neurology
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We propose to update the measure description to include the word 'once' to provide added clarity regarding measure intent.</p> <p>We propose to add telehealth encounters as denominator eligible as the telehealth setting is directly applicable to this measure and these patients should be included in the denominator to allow for numerator compliance to be measured.</p>

D.61 Parkinson's Disease: Rehabilitative Therapy Options

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	293
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of all patients with a diagnosis of Parkinson's Disease (or caregiver(s), as appropriate) who had rehabilitative therapy options (i.e., physical, occupational, and speech therapy) discussed in the past 12 months.
Substantive Change:	<p>The description is revised to read: Percentage of all patients with a diagnosis of Parkinson's Disease (or caregiver(s), as appropriate) who had rehabilitative therapy options (i.e., physical, occupational, and speech therapy) discussed once in the past 12 months.</p> <p>Updated denominator exception: Removed: Documentation of medical reason(s) for not discussing rehabilitative therapy options with patient (or caregiver).</p> <p>Updated denominator: Added telehealth as eligible encounter.</p>
Steward:	American Academy of Neurology
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	<p>We propose to update the measure description to include the word 'once' to provide added clarity regarding measure intent. Additionally, we propose to remove the denominator exception which allowed for medical reason(s) for not discussing rehabilitative therapy options. We agree that MIPS eligible clinicians should discuss rehabilitative therapy options with all patients/caregivers as these therapies play an important role in not only improving function in the patient, but also their quality of life.</p> <p>We propose to add telehealth encounters as denominator eligible as the telehealth setting is directly applicable to this measure and these patients should be included in the denominator to allow for numerator compliance to be measured.</p>

D.62 Initiation and Engagement of Alcohol and Other Drug Dependence Treatment

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	305
CMS eCQM ID:	CMS137v9
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	eCQM Specifications
Current Measure Description:	Percentage of patients 13 years of age and older with a new episode of alcohol or other drug abuse or (AOD) dependence who received the following. Two rates are reported. <ul style="list-style-type: none"> a. Percentage of patients who initiated treatment including either an intervention or medication for the treatment of AOD abuse or dependence within 14 days of the diagnosis. b. Percentage of patients who engaged in ongoing treatment including two additional interventions or a medication for the treatment of AOD abuse or dependence within 34 days of the initiation visit. For patients who initiated treatment with a medication, at least one of the two engagement events must be a treatment intervention.
Substantive Change:	<p>The definition is revised to read: The initiation visit is the first visit for alcohol or other drug dependence treatment within 14 days after a diagnosis of alcohol or other drug dependence. Treatment includes inpatient AOD admissions, outpatient visits, intensive outpatient encounters or partial hospitalization. The Intake Period: January 1-November 13 of the measurement year. The Intake Period is used to capture new episodes of Alcohol or Drug Dependence. The November 13 cut-off date ensures that all services can occur before the measurement period ends.</p> <p>Updated numerator logic: Updated 47 days to 48 days for the period within which Initial Dependence Diagnosis must occur.</p> <p>Updated stratification logic: Refinement of CQL logic to include patients at age 17 at end of measurement period.</p>
Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to update the definition to revise the intake period to ensure all services can occur before the performance period ends. The numerator logic timing is also updated to reflect this change.

D.63 Cervical Cancer Screening

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	309
CMS eCQM ID:	CMS124v9
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	eCQM Specifications
Current Measure Description:	Percentage of women 21-64 years of age who were screened for cervical cancer using either of the following criteria: <ul style="list-style-type: none"> • Women age 21-64 who had cervical cytology performed every 3 years • Women age 30-64 who had cervical cytology/human papillomavirus (HPV) co-testing performed every 5 years.
Substantive Change:	<p>The description is revised to read: Percentage of women 21-64 years of age who were screened for cervical cancer using either of the following criteria:</p> <ul style="list-style-type: none"> * Women age 21-64 who had cervical cytology performed within the last 3 years * Women age 30-64 who had cervical human papillomavirus (HPV) testing performed within the last 5 years <p>The guidance is revised to read: To ensure the measure is only looking for a cervical cytology test only after a woman turns 21 years of age, the youngest age in the initial population is 23. Patient self-report for procedures, as well as diagnostic studies should be recorded in 'Procedure, Performed' template or 'Diagnostic Study, Performed' template in QRDA-1. This version of the eCQM uses QDM version 5.5. Please refer to the eCQI resource center (https://ecqi.healthit.gov/qdm) for more information on the QDM. This eCQM is a patient-based measure.</p> <p>The numerator is revised to read: Women with one or more screenings for cervical cancer. Appropriate screenings are defined by any one of the following criteria:</p> <ul style="list-style-type: none"> * Cervical cytology performed during the measurement period or the two years prior to the measurement period for women who are at least 21 years old at the time of the test * Cervical human papillomavirus (HPV) testing performed during the measurement period or the four years prior to the measurement period for women who are 30 years or older at the time of the test. <p>Updated logic: Updated logic definition to use HPV only every 5 years and remove Pap test.</p>
Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to update the measure to align with current clinical guidelines, which removes the Pap test requirement and allow HPV only testing every 5 years. This update is reflected in revisions to the description, guidance, numerator, and logic.

D.64 Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	317
CMS eCQM ID:	CMS22v9
National Quality Strategy Domain:	Community/Population Health
Current Collection Type:	Medicare Part B Claims Specifications, eCQM Specifications, MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older seen during the submitting period who were screened for high blood pressure AND a recommended follow-up plan is documented based on the current blood pressure (BP) reading as indicated.
Substantive Change:	<p>The description is revised to read: For all collection types: Percentage of patient visits for patients aged 18 years and older seen during the measurement period who were screened for high blood pressure AND a recommended follow-up plan is documented, as indicated, if blood pressure is pre-hypertensive or hypertensive.</p> <p>The guidance is revised to read: For the eCQM Specifications collection type: This eCQM is an episode-based measure and should be reported at every visit for patients aged 18 years and older. This measure will be calculated based upon the clinical actions performed at every visit during the measurement period for each patient. The measure requires that blood pressure measurements (i.e., diastolic and systolic) be obtained during each visit to determine the blood pressure reading used to evaluate if an intervention is needed.</p> <p>Both the systolic and diastolic blood pressure measurements are required for inclusion. If there are multiple blood pressures obtained during a patient visit, only the last, or most recent, pressure measurement will be used to evaluate the measure requirements.</p> <p>The intent of this measure is to screen patients for high blood pressure and provide recommended follow-up as indicated. The documented follow-up plan must be related to the current blood pressure reading as indicated, example: "Patient referred to primary care provider for BP management."</p> <p>This version of the eCQM uses QDM version 5.5. Please refer to the eCQI resource center (https://ecqi.healthit.gov/qdm) for more information on the QDM.</p> <p>The instructions are revised to read: For the Medicare Part B Claims Measure Specifications and the MIPS CQMs collections type: This measure is to be submitted at each visit for patients seen during the measurement period. Merit-based Incentive Payment System (MIPS) eligible clinicians who submit the measure must perform the blood pressure screening at each patient visit by a MIPS eligible clinician and may not obtain measurements from external sources.</p> <p>The initial patient population is revised to read: For the eCQM Specifications collection type: All patient visits for patients aged 18 years and older at the beginning of the measurement period.</p> <p>The denominator is revised to read: For the Medicare Part B Claims Measure Specifications and the MIPS CQMs collections type: All patient visits for patients aged 18 years and older at the beginning of the measurement period.</p> <p>The denominator exception is revised to read: For the eCQM Specifications collection type:</p> <ol style="list-style-type: none"> 1. Documentation of medical reason(s) for not screening for high blood pressure (e.g., patient is in an urgent or emergent medical situation where time is of the essence and to delay treatment would jeopardize the patient's health status). 2. Documentation of patient reason(s) for not screening for blood pressure measurements or for not ordering an appropriate follow-up intervention if patient is pre-hypertensive or hypertensive (e.g., patient refuses). <p>Updated denominator exception logic: For the eCQM Specifications collection type: Added:</p> <ol style="list-style-type: none"> 1. Follow-up within 1 year 2. Follow-up within 4 weeks <p>The numerator is revised to read: For all collection types: Patient visits where patients were screened for high blood pressure AND have a recommended follow-up plan documented, as indicated, if the blood pressure is pre-hypertensive or hypertensive.</p> <p>Updated numerator definition: For the Medicare Part B Claims Measure Specifications and the MIPS CQMs Specifications collection types: Revised: Patients with a Documented Reason for not Screening or no Follow-Up Plan for High Blood Pressure (Denominator Exception) –</p> <ul style="list-style-type: none"> • Documentation of medical reason(s) for not screening for high blood pressure (e.g., patient is in an urgent or emergent medical situation where time is of the essence and to delay treatment would jeopardize the patient's health status). • Documentation of patient reason(s) for not screening for blood pressure measurements or for not ordering an appropriate follow-up intervention if patient is pre-hypertensive or hypertensive (e.g., patient refuses). <p>The numerator notes is revised to read: For the Medicare Part B Claims Measure Specifications and the MIPS CQMs Specifications collection types: Although the recommended screening interval for a normal BP reading is every 2 years, to meet the intent of this measure, BP screening and follow-up must be performed at every patient visit. For patients with Normal blood pressure, a follow-up plan is not required (G8783). Denominator Exception(s) are determined on the date of the denominator eligible encounter.</p> <p>Per the 'Telehealth Guidance for Electronic Clinical Quality Measures (eCQMs) for Eligible Professional/Eligible Clinician 2021 Quality Reporting': Medicare telehealth eligible codes found in any encounter value set must only be used for in-person encounters for the following eCQMs.</p>
Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to update the measure frequency so that the clinical quality action is occurring at all denominator eligible visits. Hypertension is a prevalent condition, and the United States Preventive Services Task Force (USPSTF) found good evidence that

Category	Description
	<p>screening for and treatment of high blood pressure in adults substantially reduces the incidence of cardiovascular events. In alignment with this update, the measure language has been revised to reflect the change in frequency to all visits.</p> <p>Additionally, the eCQM Specifications collection type revised the logic to align with the measure's reporting frequency update, as well as updating the denominator exception logic to add two elements that were missing from the existing logic to ensure that all valid denominator exception options are accounted for within the logic. The denominator exception language was revised in the eCQM Specifications collection type to follow best practices and add clarity to implementing the measure. To align with this update, the definition for denominator exception was revised in the Medicare Part B Claims Measure Specifications and MIPS CQMs Specifications collection types.</p> <p>We propose to remove telehealth encounters from the denominator of the eCQM Specifications collection type as telehealth is not an appropriate setting for this measure, as well as to align with the other collection types. This guidance can be found in a separate document that will be published on the eCQI Resource Center.</p> <p>In the event the proposed substantive change(s) are finalized, the substantive changes would not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes.</p>

D.65 Falls: Screening for Future Fall Risk

Category	Description
NQF # / eCQM NQF #:	0101 / N/A
Quality#:	318
CMS eCQM ID:	CMS139v9
National Quality Strategy Domain:	Patient Safety
Current Collection Type:	eCQM Specifications, CMS Web Interface Measure Specifications
Current Measure Description:	Percentage of patients 65 years of age and older who were screened for future fall risk during the measurement period.
Substantive Change:	<p>Modified collection type: eCQM Specifications</p> <p>Updated denominator exclusion: For the eCQM Specifications collection type: Removed: Exclude patients who were non-ambulatory at some point in the measurement period.</p>
Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	<p>We propose to remove the denominator exclusion for non-ambulatory patients to address implementation challenges as there is a lack of available documentation for a non-ambulatory status.</p> <p>We propose to remove the CMS Web Interface Measure Specifications collection type. This collection type is proposed to be sunset for the purposes of MIPS starting with the 2021 performance year. We have determined it is not fiscally viable, feasible, or sustainable for MIPS to continue this collection type/submission type due to an 80 percent reduction and a continued decrease in interest of groups and virtual groups seeking to report quality data on CMS Web Interface measures. For further rationale, please see section IV.A.3.c.(1)(c) of this proposed rule.</p>

D.66 Atrial Fibrillation and Atrial Flutter: Chronic Anticoagulation Therapy

Category	Description
NQF # / eCQM NQF #:	1525 / N/A
Quality#:	326
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with nonvalvular atrial fibrillation (AF) or atrial flutter who were prescribed warfarin OR another FDA-approved oral anticoagulant drug for the prevention of thromboembolism during the measurement period.
Substantive Change:	<p>The denominator is revised to read: For all collection types: All patients aged 18 years and older with a diagnosis of nonvalvular AF or atrial flutter who do not have a documented CHA₂DS₂-VASc risk score of 0 or 1 for men or 0, 1, or 2 for women.</p> <p>The denominator/numerator note is revised to read: For all collection types: The intent of the denominator exclusion G9931 is to allow patients with a low risk for a thromboembolic event (i.e. a CHA₂DS₂-VASc score of 0 or 1 for men or 0, 1, or 2 for women) to be excluded from the sample. This denominator exclusion serves as documentation that a patient's risk for a thromboembolic event was appropriately assessed using the CHA₂DS₂-VASc scoring tool and that the risk was low enough to warrant anticoagulation treatment. To exclude low risk patients, eligible clinicians must use the CHA₂DS₂-VASc assessment tool to determine a patient's risk score and must document either the numeric score (i.e. 0 or 1 for men or 0, 1, or 2 for women) or all the individual risk factors assessed to support an assessment of the CHA₂DS₂-VASc score.</p> <p>Updated denominator exclusion: For all collection types: Revised: Documentation of CHA₂DS₂-VASc risk score of 0 or 1 for men; 0, 1, or 2 for women.</p> <p>Updated denominator: For all collection types: Added telehealth as eligible encounter.</p>
Steward:	American College of Cardiology
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We propose to revise the measure to reflect the updated guidelines regarding when it is clinically appropriate to prescribe an oral anticoagulant for patients that are diagnosed with atrial fibrillation or atrial flutter. This update is reflected in the denominator statement, denominator note, and denominator exclusion.</p> <p>We propose to add telehealth encounters as denominator eligible as the telehealth setting is directly applicable to this measure and these patients should be included in the denominator to allow for numerator compliance to be measured.</p>

D.67 Adult Sinusitis: Antibiotic Prescribed for Acute Viral Sinusitis (Overuse)

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	331
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Efficiency and Cost Reduction
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients, aged 18 years and older, with a diagnosis of acute viral sinusitis who were prescribed an antibiotic within 10 days after onset of symptoms.
Substantive Change:	Updated denominator: Added telehealth as eligible encounter.
Steward:	American Academy of Otolaryngology – Head and Neck Surgery Foundation
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to add telehealth encounters as denominator eligible as the telehealth setting is directly applicable to this measure and these patients should be included in the denominator to allow for numerator compliance to be measured.

D.68 Adult Sinusitis: Appropriate Choice of Antibiotic: Amoxicillin With or Without Clavulanate Prescribed for Patients with Acute Bacterial Sinusitis (Appropriate Use)

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	332
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Efficiency and Cost Reduction
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of acute bacterial sinusitis that were prescribed amoxicillin, with or without clavulanate, as a first line antibiotic at the time of diagnosis.
Substantive Change:	Updated denominator: Added telehealth as eligible encounter.
Steward:	American Academy of Otolaryngology – Head and Neck Surgery Foundation
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to add telehealth encounters as denominator eligible as the telehealth setting is directly applicable to this measure and these patients should be included in the denominator to allow for numerator compliance to be measured.

D.69 Maternity Care: Elective Delivery or Early Induction Without Medical Indication at < 39 Weeks (Overuse)

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	335
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Patient Safety
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients, regardless of age, who gave birth during a 12-month period who delivered a live singleton at < 39 weeks of gestation completed who had elective deliveries or early inductions without medical indication.
Substantive Change:	<p>The description is revised to read: Percentage of patients, regardless of age, who gave birth during a 12-month period who delivered a live singleton at < 39 weeks of gestation completed who had elective deliveries by cesarean section (C-section), or early inductions of labor, without medical indication.</p> <p>Updated instructions: Revised: This measure is to be submitted each time a procedure is performed for patients undergoing delivery by C-section, or induction of labor, at less than 39 weeks gestation during the performance period.</p> <p>The denominator is revised to read: All patients, regardless of age, who gave birth during a 12-month period delivering a live singleton at < 39 weeks of gestation completed.</p> <p>The numerator is revised to read: Patients who had elective deliveries by C-section, or early inductions of labor, without medical indication.</p> <p>Updated numerator options: Revised: Performance Met: Early elective delivery by C-section, or early elective induction, not performed (< 39 weeks gestation). Performance Not Met: Early elective delivery by C-section, or early elective induction, performed (< 39 weeks gestation).</p>
Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale:	We propose to update the description and instructions to provide further clarity regarding what suffices for elective deliveries. Additionally, we propose to move the “without medical indication” from the denominator to the numerator as the denominator should capture all patients with a single live birth at less than 39 weeks gestation. The numerator assesses whether or not there was medical indication for an early elective delivery by C-section, or early elective induction. This update will better align the language with the measure intent.

D.70 Maternity Care: Postpartum Follow-up and Care Coordination

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	336
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients, regardless of age, who gave birth during a 12-month period who were seen for postpartum care within 8 weeks of giving birth and who received a breast-feeding evaluation and education, postpartum depression screening, postpartum glucose screening for gestational diabetes patients, family and contraceptive planning counseling, tobacco use screening and cessation education, healthy lifestyle behavioral advice, and an immunization review and update.
Substantive Change:	The description is revised to read: Percentage of patients, regardless of age, who gave birth during a 12-month period who were seen for postpartum care before or at 8 weeks of giving birth and received the following at the postpartum visit: breast-feeding evaluation and education, postpartum depression screening, postpartum glucose screening for gestational diabetes patients, family and contraceptive planning counseling, tobacco use screening and cessation education, healthy lifestyle behavioral advice, and an immunization review and update.
Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to update the measure description for clarity and readability so that it is easy to understand the measure intent.

D.71 Optimizing Patient Exposure to Ionizing Radiation: Appropriateness: Follow-up CT Imaging for Incidentally Detected Pulmonary Nodules According to Recommended Guidelines

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	364
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of final reports for CT imaging studies with a finding of an incidental pulmonary nodule for patients aged 35 years and older that contain an impression or conclusion that includes a recommended interval and modality for follow-up (e.g., type of imaging or biopsy) or for no follow-up, and source of recommendations (e.g., guidelines such as Fleischner Society, American Lung Association, American College of Chest Physicians).
Substantive Change:	Updated denominator note: Added: Granulomas, hamartomas or lesions with internal fat, or other characteristically benign findings are not considered incidental findings in the context or intent of this measure. Therefore, they are not included in the measure denominator. However, generally accepted radiology practices should be followed for communication and management of these characteristically benign findings.
Steward:	American College of Radiology
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to add language to the denominator note to add clarity as to which incidental findings are not appropriate for the purposes of this measure. Some incidental findings are widely known to be benign and would therefore not necessitate a specific documentation of a recommendation of no follow-up. This will reduce clinician burden and ensure only the appropriate patients are included in the denominator eligible population.

D.72 Depression Remission at Twelve Months

Category	Description
NQF # / eCQM NQF #:	0710 / 0710e
Quality#:	370
CMS eCQM ID:	CMS159v9
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	eCQM Specifications, CMS Web Interface Measure Specifications, MIPS CQMs Specifications
Current Measure Description:	The percentage of adolescent patients 12 to 17 years of age and adult patients 18 years of age or older with major depression or dysthymia who reached remission 12 months (+/- 60 days) after an index event date.
Substantive Change:	<p>Modified collection type: eCQM Specifications and MIPS CQMs Specifications</p> <p>Updated guidance: For the eCQM Specifications collection type: Added: When a baseline assessment is conducted with PHQ 9M, the follow-up assessment can use either a PHQ 9M or PHQ 9. This eCQM is a patient-based measure. This version of the eCQM uses QDM version 5.5. Please refer to the eCQI resource center (https://ecqi.healthit.gov/qdm) for more information on the QDM.</p> <p>Updated denominator: For the MIPS CQMs Specifications collection type: Added telehealth with qualified non-physician healthcare professional.</p> <p>Updated denominator exclusion: For the eCQM Specifications collection type: Revised: Patients with a diagnosis of personality disorder emotionally labile.</p>
Steward:	Minnesota Community Measurement
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale:	<p>We propose to update the guidance for eCQM Specifications collection type to add clarity regarding the assessment that may be used for the follow-up assessment for the purposes of meeting performance for this measure. Additionally, we propose to revise the denominator exclusion language for a diagnosis of personality disorder to further clarify ensuring the correct patient population is being excluded from quality action assessment.</p> <p>We propose to update the denominator of the MIPS CQMs Specifications collection type to include telehealth encounters with qualified non-physician healthcare professionals as it would be appropriate to assess this patient population for numerator compliance.</p> <p>We propose to remove the CMS Web Interface Measure Specifications collection type. This collection type is proposed to be sunset for the purposes of MIPS starting with the 2021 performance year. We have determined it is not fiscally viable, feasible, or sustainable for MIPS to continue this collection type/submission type due to an 80 percent reduction and a continued decrease in interest of groups and virtual groups seeking to report quality data on CMS Web Interface measures. For further rationale, please see section IV.A.3.c.(1)(c) of this proposed rule.</p>

D.73 Closing the Referral Loop: Receipt of Specialist Report

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	374
CMS eCQM ID:	CMS50v9
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	eCQM Specifications, MIPS CQMs Specifications
Current Measure Description:	Percentage of patients with referrals, regardless of age, for which the referring provider receives a report from the provider to whom the patient was referred.
Substantive Change:	<p>Updated logic: For the eCQM Specifications collection type: Updated logic for 'First Referral During Measurement Period' to allow an additional, optional way to capture the first referral.</p> <p>Updated denominator: For all collection types: Added telehealth as eligible encounter.</p> <p>Updated numerator: For the eCQM Specifications collection type: Removed pathology consult note from 'Consultant Report' value set.</p>
Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	<p>We propose to update the logic for 'First Referral During Measurement Period' to allow for a referral order, in addition to a referral being performed. This revision is consistent with the measure intent and provides options to capture the first referral within the electronic medical record. Additionally, we propose to remove the pathology consult note from the 'Consultant Report' value set based upon terminology updates as the availability of the general consult note is available as an option.</p> <p>We propose to add telehealth encounters as denominator eligible as the telehealth setting is directly applicable to this measure and these patients should be included in the denominator to allow for numerator compliance to be measured.</p>

D.74 Functional Status Assessments for Congestive Heart Failure

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	377
CMS eCQM ID:	CMS90v10
National Quality Strategy Domain:	Person and Caregiver-Centered Experience and Outcomes
Current Collection Type:	eCQM Specifications
Current Measure Description:	Percentage of patients 18 years of age and older with congestive heart failure who completed initial and follow-up patient-reported functional status assessments.
Substantive Change:	<p>Updated logic:</p> <p>Initial Patient Population: Revised timing of congestive heart failure (CHF) diagnosis in the initial population logic so it overlaps before the measurement period.</p> <p>Qualifying Encounter: Revised timing of the encounter from the start of the measurement period to the end of the measure period.</p> <p>Numerator:</p> <ul style="list-style-type: none"> Revised to ensure assessments completed during the encounter count toward the numerator. Revised KCCQ logic to address the 6 domain subcategories used to account for the KCCQ assessment total score. Added the KCCQ Total Assessment Score logic to include the summary score as an option to meet the KCCQ assessment requirement. Revised timing and logic of the follow-up functional status assessment (FSA) to relate to the initial FSA performed and not the encounter. Revised measurement period for the Veterans RAND 12 Item Health Survey (VR-12) to allow for the initial FSA to occur prior to the measurement period if the encounter occurs within the first few days of the measurement period.
Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to update the initial patient population logic to ensure the CHF diagnosis occurs before the denominator eligible encounter, which aligns more closely with the measure intent. We propose to update the qualifying encounter logic to account for leap year. This refinement will eliminate the need to adjust the number of days for leap years. Additionally, we propose to update the numerator logic for the Kansas City Cardiomyopathy Questionnaire (KCCQ) FSA so that it can be reported by either utilizing the six domain subcategories or the total score. This added flexibility better aligns with different clinical workflows, and is consistent with measure intent. The logic and timing were revised to relate to the initial functional status (FSA) and not the encounter to better align with the measure intent. We propose, to all the VR-12, to allow for the initial FSA to occur prior to the measurement in the instance the encounter occurs within the first few days of the measurement period to improve harmonization with the measure intent.

D.75 Children Who Have Dental Decay or Cavities

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	378
CMS eCQM ID:	CMS75v10
National Quality Strategy Domain:	Community/Population Health
Current Collection Type:	eCQM Specifications
Current Measure Description:	Percentage of children, age 0-20 years, who have had tooth decay or cavities during the measurement period.
Substantive Change:	<p>The description is revised to read: Percentage of children, 6 months - 20 years of age, who have had tooth decay or cavities during the measurement period.</p> <p>The stratification is revised to read: None</p> <p>The initial patient population is revised to read: Children, 6 months - 20 years of age, with a visit during the measurement period.</p> <p>Updated denominator: Removed: "Office Visit" (2.16.840.1.113883.3.464.1003.101.12.1001) "Preventive Care - Established Office Visit, 0 to 17" (2.16.840.1.113883.3.464.1003.101.12.1024) "Preventive Care Services - Established Office Visit, 18 and Up" (2.16.840.1.113883.3.464.1003.101.12.1025) "Preventive Care Services-Initial Office Visit, 18 and Up" (2.16.840.1.113883.3.464.1003.101.12.1023) "Preventive Care- Initial Office Visit, 0 to 17" (2.16.840.1.113883.3.464.1003.101.12.1022)</p>
Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale:	We propose to raise the minimum age for this measure to 6 months to better align with average tooth eruption. Children under 6 months of age are less likely to have teeth and would therefore not meet numerator criteria, which is why they are being removed from the initial patient population. Additionally, we propose to update the denominator to limit the denominator eligible encounters to the "Clinical Oral Evaluation" value set as the clinical quality action is more appropriate for the dentistry MIPS eligible clinician.

D.76 Primary Caries Prevention Intervention as Offered by Primary Care Providers, including Dentists

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	379
CMS eCQM ID:	CMS74v10
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	eCQM Specifications
Current Measure Description:	Percentage of children, age 0-20 years, who received a fluoride varnish application during the measurement period.
Substantive Change:	<p>The description is revised to read: Percentage of children, 6 months - 20 years of age, who received a fluoride varnish application during the measurement period.</p> <p>The stratification is revised to read: Population 1: age 6 months-5 years Population 2: age 6-12 Population 3: age 13-20</p> <p>The initial patient population is revised to read: Children, 6 months - 20 years of age, with a visit during the measurement period.</p>
Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to raise the minimum age for this measure to 6 months to better align with average tooth eruption. Children under 6 months of age are less likely to have teeth and would therefore not meet numerator criteria, which is why they are being removed from the initial patient population.

D.77 Child and Adolescent Major Depressive Disorder (MDD): Suicide Risk Assessment

Category	Description
NQF # / eCQM NQF #:	N/A / 1365e
Quality#:	382
CMS eCQM ID:	CMS177v9
National Quality Strategy Domain:	Patient Safety
Current Collection Type:	eCQM Specifications
Current Measure Description:	Percentage of patient visits for those patients aged 6 through 17 years with a diagnosis of major depressive disorder with an assessment for suicide risk.
Substantive Change:	Updated guidance: Added: In recognition of the growing use of integrated and team-based care, the diagnosis of depression and the assessment for suicide risk need not be performed by the same provider or clinician.
Steward:	Physician Consortium for Performance Improvement Foundation (PCPI®)
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	The measure steward updated the guidance statement based upon technical expert feedback to reflect that team-based care would be appropriate for this measure. We agree that this guidance update is clinically appropriate and aligns better with clinical care workflows.

D.78 Adherence to Antipsychotic Medications For Individuals with Schizophrenia

Category	Description
NQF # / eCQM NQF #:	1879 / N/A
Quality#:	383
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Patient Safety
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of individuals at least 18 years of age as of the beginning of the measurement period with schizophrenia or schizoaffective disorder who had at least two prescriptions filled for any antipsychotic medication and who had a Proportion of Days Covered (PDC) of at least 0.8 for antipsychotic medications during the measurement period (12 consecutive months).
Substantive Change:	<p>The description is revised to read: Percentage of individuals at least 18 years of age with schizophrenia or schizoaffective disorder as of the beginning of the performance period who had at least two prescriptions filled for any antipsychotic medication and who had a Proportion of Days Covered (PDC) of at least 0.8 for antipsychotic medications during the performance period.</p> <p>Updated instructions: Revised: This measure is to be submitted a minimum of once per performance period for all patients with a preexisting (before the performance period) diagnosis of schizophrenia or schizoaffective disorder who are seen during the performance period.</p> <p>The denominator statement is revised to read: Individuals at least 18 years of age with schizophrenia or schizoaffective disorder as of the beginning of the performance period and at least two prescriptions filled for antipsychotic medications during the performance period.</p> <p>Updated denominator criteria: Revised the timing for the diagnosis for schizophrenia or schizoaffective disorder to be prior to the performance period.</p> <p>Updated denominator exclusion: Added opioid abuse with intoxication with perceptual disturbance to diagnosis for dementia.</p> <p>Updated numerator note: Revised: PDC NUMERATOR: The PDC numerator is the sum of the days covered by the days' supply of all antipsychotic prescriptions. The period covered by the PDC starts on the day within the performance period when the first prescription is filled (i.e., the index date) and lasts through the end of the performance period, or death, whichever comes first. For prescriptions with a days' supply that extends beyond the end of the performance period, count only the days for which the drug was available to the individual during the performance period. If there are prescriptions for the same drug (generic name) on the same date of service, keep the prescription with the largest days' supply. If prescriptions for the same drug (generic name) overlap, then adjust the prescription start date to be the day after the previous fill has ended.</p>
Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Intermediate Outcome
Rationale:	We propose to update the measure language to reflect that the diagnosis of schizophrenia or schizoaffective disorder should be prior to the performance period as this aligns more closely to the intent of the measure and allows for assessment of medication adherence over a longer timeframe. We propose to remove the "12 consecutive months" from the description as this was causing confusion amongst MIPS eligible clinicians. The denominator exclusion coding was expanded to include opioid abuse with intoxication with perceptual disturbance as this is appropriate for identifying patients with a dementia diagnosis and therefore, applicable to the denominator exclusion. Additionally, we propose to update the numerator note to clarify that the index date is the date the prescription was first filled during the performance period.

D.79 Amyotrophic Lateral Sclerosis (ALS) Patient Care Preferences

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	386
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Person and Caregiver-Centered Experience and Outcomes
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients diagnosed with Amyotrophic Lateral Sclerosis (ALS) who were offered assistance in planning for end of life issues (e.g., advance directives, invasive ventilation, hospice) at least once annually.
Substantive Change:	Updated denominator: Added telehealth as eligible encounter.
Steward:	American Academy of Neurology
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to add telehealth encounters as denominator eligible as the telehealth setting is directly applicable to this measure and these patients should be included in the denominator to allow for numerator compliance to be measured.

D.80 Annual Hepatitis C Virus (HCV) Screening for Patients who are Active Injection Drug Users

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	387
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients, regardless of age, who are active injection drug users who received screening for HCV infection within the 12-month reporting period.
Substantive Change:	Updated denominator: Added telehealth as eligible encounter.
Steward:	Physician Consortium for Performance Improvement Foundation (PCPI®)
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to add telehealth encounters as denominator eligible as the telehealth setting is directly applicable to this measure and these patients should be included in the denominator to allow for numerator compliance to be measured.

D.81 Follow-Up After Hospitalization for Mental Illness (FUH)

Category	Description
NQF # / eCQM NQF #:	0576 / N/A
Quality#:	391
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	The percentage of discharges for patients 6 years of age and older who were hospitalized for treatment of selected mental illness or intentional self-harm diagnoses and who had a follow-up visit with a mental health practitioner. Two rates are submitted: <ul style="list-style-type: none"> • The percentage of discharges for which the patient received follow-up within 30 days after discharge. • The percentage of discharges for which the patient received follow-up within 7 days after discharge.
Substantive Change:	Updated numerator options: Revised: Submission Criteria 1: Performance Met: Patient received follow-up within 30 days after discharge.
Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to update the performance met numerator option to align with the numerator statement, which prohibits the use of visits that occur on the date of discharge, as this would not meet the intent of the measure.

D.82 Immunizations for Adolescents

Category	Description
NQF # / eCQM NQF #:	1407 / N/A
Quality#:	394
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Community/Population Health
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	The percentage of adolescents 13 years of age who had the recommended immunizations by their 13th birthday.
Substantive Change:	The description is revised to read: The percentage of adolescents 13 years of age who had one dose of meningococcal vaccine (serogroups A, C, W, Y), one tetanus, diphtheria toxoids and acellular pertussis (Tdap) vaccine, and have completed the human papillomavirus (HPV) vaccine series by their 13th birthday.
Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to revise the description to detail the components within the measure. This allows for a more clear understanding of the intent of the measure.

D.83 Lung Cancer Reporting (Biopsy/Cytology Specimens)

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	395
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications
Current Measure Description:	Pathology reports based on biopsy and/or cytology specimens with a diagnosis of primary non-small cell lung cancer classified into specific histologic type or classified as non-small cell lung cancer not otherwise specified (NSCLC-NOS) with an explanation included in the pathology report.
Substantive Change:	The numerator is revised to read: For all collection types: Biopsy and cytology specimen reports with a diagnosis of primary non-small cell lung cancer classified into specific histologic type (including but not limited to squamous cell carcinoma, adenocarcinoma, large cell carcinoma) OR classified as NSCLC-NOS with an explanation included in the pathology report.
Steward:	College of American Pathologists
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to update the numerator statement to more clearly detail the acceptable histologic types. This revision, provided based on stakeholder feedback, includes keywords that are can be used in clinical practice.

D.84 One-Time Screening for Hepatitis C Virus (HCV) for Patients at Risk

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	400
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with one or more of the following: a history of injection drug use, receipt of a blood transfusion prior to 1992, receiving maintenance hemodialysis, OR birthdate in the years 1945-1965 who received one-time screening for hepatitis C virus (HCV) infection.
Substantive Change:	Updated denominator: Added telehealth as eligible encounter.
Steward:	Physician Consortium for Performance Improvement Foundation (PCPI®)
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to add telehealth encounters as denominator eligible as the telehealth setting is directly applicable to this measure and these patients should be included in the denominator to allow for numerator compliance to be measured.

D.85 Appropriate Follow-up Imaging for Incidental Abdominal Lesions

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	405
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications
Current Measure Description:	<p>Percentage of final reports for imaging studies for patients aged 18 years and older with one or more of the following noted incidentally with a specific recommendation for no follow-up imaging recommended based on radiological findings:</p> <ul style="list-style-type: none"> • Cystic renal lesion that is simple appearing* (Bosniak I or II) • Adrenal lesion less than or equal to 1.0 cm • Adrenal lesion greater than 1.0 cm but less than or equal to 4.0 cm classified as likely benign by unenhanced CT or washout protocol CT, or MRI with in- and opposed-phase sequences or other equivalent institutional imaging protocols
Substantive Change:	<p>The description is revised to read: Percentage of final reports for imaging studies for patients aged 18 years and older with one or more of the following noted incidentally with a specific recommendation for no follow-up imaging recommended based on radiological findings:</p> <ul style="list-style-type: none"> • Cystic renal lesion that is simple appearing* (Bosniak I or II) • Adrenal lesion less than or equal to 1.0 cm • Adrenal lesion greater than 1.0 cm but less than or equal to 4.0 cm classified as likely benign or diagnostic benign by unenhanced CT or washout protocol CT, or MRI with in- and opposed-phase sequences or other equivalent institutional imaging protocols <p>The denominator is revised to read: For all collection types: All final reports for imaging studies for patients aged 18 years and older with one or more of the following incidentally noted:</p> <ul style="list-style-type: none"> • Cystic renal lesion that is simple appearing (Bosniak I or II) or • Adrenal lesion less than or equal to 1.0 cm or • Adrenal lesion greater than 1.0 cm but less than or equal to 4.0 cm classified as likely benign or diagnostic benign by unenhanced CT or washout protocol CT, or MRI with in- and opposed-phase sequences or other equivalent institutional imaging protocols <p>Updated denominator criteria: For all collection types: Removed diagnostic ultrasound procedures.</p> <p>The denominator note is revised to read: For all collection types: The intent of this measure is to ensure patients with incidental findings that are highly likely to be benign do not receive follow up imaging routinely. * “Simple-appearing criteria”:</p> <ul style="list-style-type: none"> • § Incidental renal mass on non-contrast enhanced abdominal CT that does not contain fat, is homogenous in appearance, -10-20 HU or ≥ 70 HU. (ACR, 2017) • § Incidental renal mass on contrast-enhanced abdominal CT that does not contain fat, is homogenous in appearance, -10-20 HU. (ACR, 2017) <p>When reporting this measure, masses and lesions that do not meet all the criteria for “no further work-up” as provided in Management of the Incidental Renal Mass on CT: A White Paper of the ACR Incidental Findings Committee or the Management of the Incidental Adrenal Mass on CT: A White Paper of the ACR Incidental Findings Committee should not be considered in the context or intent of this measure. However, generally accepted radiology practices should be followed for communication and management of any characteristically benign findings. A measure performance goal of 100% should not substitute for clinical judgment in individual cases.</p> <p>Updated numerator note: For the Medicare Part B Claims Measure Specifications collection type: Removed numerator note.</p> <p>Updated numerator options: For all collection types: Revised:</p> <p>Performance Not Met: Final reports for imaging studies with follow-up imaging recommended, or final reports that do not include a specific recommendation of no follow-up.</p>
Steward:	American College of Radiology
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	<p>We propose to update the numerator options to add clarifying language that accounts for those instances where no follow-up recommendation is given within the final reports for imaging studies. The intent of the measure includes the documentation of follow-up recommendations within the final report. Additionally, we propose to remove diagnostic ultrasound procedures from the denominator eligible criteria as it does not align with the intent of the measure.</p>

D.86 Psoriasis: Clinical Response to Systemic Medications

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	410
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Person and Caregiver-Centered Experience and Outcomes
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of psoriasis vulgaris patients receiving systemic medication who meet minimal physician-or patient- reported disease activity levels. It is implied that establishment and maintenance of an established minimum level of disease control as measured by physician-and/or patient-reported outcomes will increase patient satisfaction with and adherence to treatment.
Substantive Change:	<p>The instructions are revised to read: This measure is to be submitted a minimum of once per performance period for all patients during the performance period. The most recent denominator eligible encounter in which the numerator action was performed, should be used.</p> <p>Updated denominator: Added telehealth as eligible encounter.</p>
Steward:	American Academy of Dermatology
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale:	<p>We propose to revise the instructions language to clarify what denominator eligible encounter should be used when assessing the quality action.</p> <p>We propose to add telehealth encounters as denominator eligible as the telehealth setting is directly applicable to this measure and these patients should be included in the denominator to allow for numerator compliance to be measured.</p>

D.87 Emergency Medicine: Emergency Department Utilization of CT for Minor Blunt Head Trauma for Patients Aged 18 Years and Older

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	415
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Efficiency and Cost Reduction
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of emergency department visits for patients aged 18 years and older who presented with a minor blunt head trauma who had a head CT for trauma ordered by an emergency care provider who have an indication for a head CT.
Substantive Change:	<p>Updated denominator criteria: Diagnosis for minor blunt head trauma - removed coding for fracture of skull and facial bones and superficial injury of neck.</p> <p>The definition is revised to read: Indications for a head CT in patients presenting to the emergency department for minor blunt head trauma: Patients with no loss of consciousness (LOC) AND no post-traumatic amnesia AND any one of the following:</p> <ul style="list-style-type: none"> • GCS score less than 15 • Severe headache • Vomiting • Age 65 years and older • Physical signs of a basilar skull fracture (signs include haemotympanum, "raccoon" eyes, cerebrospinal fluid leakage from the ear or nose, Battle's sign) • Focal neurological deficit • Coagulopathy • Thrombocytopenia • Currently taking any of the following anticoagulant medications**: apixaban, argatroban, betrixaban, bivalirudin, dabigatran, dalteparin, desirudin, edoxaban, enoxaparin, fondaparinux, heparin, rivaroxaban, warfarin • Dangerous mechanism of injury (i.e., ejection from a motor vehicle, a pedestrian struck, and a fall from a height of more than 3 feet or 5 stairs) <p>OR</p> <p>Patients with either LOC OR Posttraumatic amnesia AND any one of the following:</p> <ul style="list-style-type: none"> • GCS score less than 15 • Headache • Age 60 years and older, and less than 65 years • Drug/alcohol intoxication • Short-term memory deficits • Evidence of trauma above the clavicles (physical location, any trauma to the head or neck [i.e., laceration, abrasion, bruising, ecchymosis, hematoma, swelling, fracture]) • Posttraumatic seizure.
Steward:	American College of Emergency Physicians
High Priority Measure:	Yes
Measure Type:	Efficiency
Rationale:	<p>We propose to update the coding for 'Diagnosis of minor blunt head trauma' base on the measure steward's clinical expert input as closed fractures of the skull and facial bones, as well as concepts that relate to neck of below the head anatomical locations. The measures intent is to capture those patients with minor blunt head trauma and the fractures captured above are not clinically appropriate for the denominator criteria and should not be assessed for the purposes of this measure. We propose revisions to the definition language to improve clarity regarding indications for a head CT for the purposes of this measure. We agree that these revisions better define how to determine appropriate indication(s) for a head CT.</p>

D.88 Emergency Medicine: Emergency Department Utilization of CT for Minor Blunt Head Trauma for Patients Aged 2 Through 17 Years

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	416
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Efficiency and Cost Reduction
Current Collection Type:	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications
Current Measure Description:	Percentage of emergency department visits for patients aged 2 through 17 years who presented with a minor blunt head trauma who had a head CT for trauma ordered by an emergency care provider who are classified as low risk according to the Pediatric Emergency Care Applied Research Network (PECARN) prediction rules for traumatic brain injury.
Substantive Change:	<p>Updated denominator criteria: Diagnosis for minor blunt head trauma - removed coding for fracture of skull and facial bones and superficial injury of neck.</p> <p>The numerator definition is revised to read: For all collection types: Low Risk for Traumatic Brain Injury according to PECARN prediction rules – Patients can be classified as low risk if ALL of the following are met:</p> <ul style="list-style-type: none"> • No signs of altered mental status (e.g., agitation, somnolence, repetitive questioning, slow response to verbal communication) OR no GCS < 15 • No signs of basilar skull fracture (signs include haemotympanum, “raccoon” eyes, cerebrospinal fluid leakage from the ear or nose, Battle’s sign) • No loss of consciousness • No vomiting • No severe mechanism of injury (i.e., motor vehicle crash with patient ejection, death of another passenger, or rollover; pedestrian or bicyclist without helmet struck by a motorized vehicle; falls of more than 5 feet; or head struck by a high-impact object) • No severe headache.
Steward:	American College of Emergency Physicians
High Priority Measure:	Yes
Measure Type:	Efficiency
Rationale:	We propose to update the coding for ‘Diagnosis of minor blunt head trauma’ base on the measure steward’s clinical expert input as closed fractures of the skull and facial bones, as well as concepts that relate to neck of below the head anatomical locations. The measures intent is to capture those patients with minor blunt head trauma and the fractures captured above are not clinically appropriate for the denominator criteria and should not be assessed for the purposes of this measure. We propose revisions to the definition language to improve clarity regarding low risk for traumatic brain injury (TBI) for the purposes of this measure. We agree that these revisions better define how to appropriately determine whether the patient is low risk for traumatic brain injury or not.

D.89 Osteoporosis Management in Women Who Had a Fracture

Category	Description
NQF # / eCQM NQF #:	0053 / N/A
Quality#:	418
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications
Current Measure Description:	The percentage of women age 50-85 who suffered a fracture in the 6 months prior to the performance period through June 30 of the performance period and who either had a bone mineral density test or received a prescription for a drug to treat osteoporosis in the 6 months after the fracture.
Substantive Change:	<p>Updated denominator criteria: For all collection types: Option 1: Added denominator eligible patient encounters including discharge, outpatient observation, outpatient consultation, emergency department, home services, preventive medicine and counseling, work related/medical disability, care planning, and annual well check.</p> <p>Updated denominator exclusions: For all collection type: Option 1 and Option 2: Revised: 1. Patients age 66 or older in Institutional Special Needs Plans (SNP) or residing in long-term care with POS code, 32, 33, 34, 54, or 56 for more than 90 consecutive days during 6 months prior to the measurement period through December 31 of the measurement period. 2. Patient 66 - 80 years of age and had at least one claim/encounter for frailty during the measurement period AND either one acute inpatient encounter with a diagnosis of advanced illness or two outpatient, observation, ED or nonacute inpatient encounters on different dates of service with an advanced illness diagnosis during the measurement period or the year prior to the measurement period. 3. Patients 66 - 80 years of age and had at least one claim/encounter for frailty during the measurement period AND a dispensed medication for dementia during the measurement period or the year prior to the measurement period.</p> <p>Added: 1. Patients 81 years of age and older with at least one claim/encounter for frailty during 6 months prior to the measurement period through December 31 of the measurement period.</p> <p>Updated denominator exclusion: For all collection types: For Option 1 and Option 2: Added coding to identify patients with advanced illness and frailty</p> <p>Updated definition: For all collection types: Revised: Pharmacologic Therapy – U.S. Food and Drug Administration approved pharmacologic options for osteoporosis prevention and/or treatment of postmenopausal osteoporosis include: bisphosphonates, alendronate, alendronate-cholecalciferol, ibandronate, risedronate, zoledronic acid, teriparatide, denosumab, abaloparatide, romosozumab, and raloxifine.</p>
Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We propose to expand the eligible encounter coding for Option 1 to include all relevant encounters and create a more complete eligible patient population.</p> <p>We propose that the denominator exclusion language and logic be updated in all collection types to clarify that, for the measure, long-term care will be defined as patients staying 90 consecutive days at the long-term care facility versus any 90 days within the performance period. A denominator exclusion was added to remove patient 81 years of age and older with a frailty encounter during the measurement period as patients within this age stratification are more appropriately assessed less stringently when determine if they should be excluded from the eligible patient population. Additionally, we propose adding applicable coding to better define the advanced illness and frailty patient population for the purposes of this measure.</p> <p>We propose to update the definition for pharmacologic therapy to align with the current U.S. Food and Drug Administration approved pharmacologic options for osteoporosis prevention and/or treatment of postmenopausal osteoporosis.</p>

D.90 Overuse of Imaging for the Evaluation of Primary Headache

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	419
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Efficiency and Cost Reduction
Current Collection Type:	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications
Current Measure Description:	Percentage of patients for whom imaging of the head (CT or MRI) is obtained for the evaluation of primary headache when clinical indications are not present.
Substantive Change:	<p>Modified collection type: MIPS CQMs Specifications</p> <p>Updated denominator criteria: Removed inpatient setting. Removed "Patients with no clinical indications for imaging of the head". Added telehealth as eligible encounter.</p> <p>Updated denominator instructions: Removed denominator instructions.</p> <p>Updated denominator exclusion: Added: Patients with clinical indications for imaging of the head</p> <ul style="list-style-type: none"> • Head trauma • New or change in headache above 50 years of age • Abnormal neurologic exam • Headache radiating to the neck • Positional headaches • Temporal headaches in patients over 55 years of age • New onset headache in pre-school children or younger (<6 years of age) • New onset headache in pediatric patients with disabilities for which headache is a concern as inferred from behavior • Occipital headache in children <ul style="list-style-type: none"> • Thunderclap headache • Trigeminal pain • Persistent headaches <p>Updated denominator exception: Revised: Imaging needed as part of a clinical trial; or other clinician ordered the study.</p>
Steward:	American Academy of Neurology
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	<p>We propose to remove the Medicare Part B Claims Measure Specifications collection type. The limited adoption of the quality measure for this collection type does not allow for the creation of benchmarks to provide a meaningful impact to quality improvement.</p> <p>We propose to update the denominator criteria to remove the inpatient setting as this measure is appropriate for the outpatient setting only. We propose to remove the denominator criteria for patients with no clinical indications for head imaging and replace it with a denominator exclusion that clarifies patients with clinical indications for whom imaging of the head would be clinically relevant and warranted. The denominator instructions were removed as they were duplicative of the added denominator exclusion. Additionally, we propose to add telehealth encounters as denominator eligible as the telehealth setting is directly applicable to this measure and these patients should be included in the denominator to allow for numerator compliance to be measured. The denominator exception is being updated to delete outdated language and no longer allows for system reason(s).</p>

D.91 Preventive Care and Screening: Unhealthy Alcohol Use: Screening & Brief Counseling

Category	Description
NQF # / eCQM NQF #:	2152 / N/A
Quality#:	431
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Community/Population Health
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older who were screened for unhealthy alcohol use using a systematic screening method at least once within the last 24 months AND who received brief counseling if identified as an unhealthy alcohol user.
Substantive Change:	<p>The description is revised to read: Percentage of patients aged 18 years and older who were screened for unhealthy alcohol use using a systematic screening method at least once within the last 12 months AND who received brief counseling if identified as an unhealthy alcohol user.</p> <p>Updated instructions: Revised: For the purposes of the measure, the most recent denominator eligible encounter should be used to determine if the numerator action for the submission criteria was performed within the 12-month look back period. Added: This measure will be calculated with 3 performance rates: 1) Percentage of patients aged 18 years and older who were screened for unhealthy alcohol use using a systematic screening method at least once within the last 12 months 2) Percentage of patients aged 18 years and older who were identified as unhealthy alcohol users who received brief counseling 3) Percentage of patients aged 18 years and older who were screened for unhealthy alcohol use using a systematic screening method at least once within the last 12 months AND who received brief counseling if identified as unhealthy alcohol users The denominator of submission criteria 2 is a subset of the resulting numerator for submission criteria 1, as submission criteria 2 is limited to assessing if patients identified as unhealthy alcohol users received brief counseling. For all patients, submission criteria 1 and 3 are applicable, but submission criteria 2 will only be applicable for those patients who are identified as unhealthy alcohol users. Therefore, data for every patient that meets the age and encounter requirements will only be submitted for submission criteria 1 and 3, whereas data submitted for submission criteria 2 will be for a subset of patients who meet the age and encounter requirements, as the denominator has been further limited to those who were identified as unhealthy alcohol users.</p> <p>THERE ARE THREE SUBMISSION CRITERIA FOR THIS MEASURE: 1) All patients who were screened for unhealthy alcohol use using a systematic screening method AND 2) All patients who were identified as unhealthy alcohol users who received brief counseling AND 3) All patients who were screened for unhealthy alcohol use using a systematic screening method and, if identified as unhealthy alcohol users received brief counseling, or were not identified as unhealthy alcohol users This measure contains three submission criteria which aim to identify patients who were screened for unhealthy alcohol use using a systematic screening method (submission criteria 1), patients who were identified as unhealthy alcohol users and who received brief counseling (submission criteria 2), and a comprehensive look at the overall performance on unhealthy alcohol use screening and brief counseling (submission criteria 3). By separating this measure into various submission criteria, the MIPS eligible professional or MIPS eligible clinician will be able to better ascertain where gaps in performance exist, and identify opportunities for improvement. The overall rate (submission criteria 3) should be utilized to compare performance to published versions of this measure prior to the 2021 performance year, when the measure had a single performance rate. For accountability reporting in the CMS MIPS program, the rate for submission criteria 2 is used for performance.</p> <p>The denominator is revised to read: Submission Criteria 1: All patients aged 18 years and older seen for at least two visits or at least one preventive visit during the measurement period. Submission Criteria 2: All patients aged 18 years and older seen for at least two visits or at least one preventive visit during the measurement period who were screened for unhealthy alcohol use and identified as an unhealthy alcohol user. Submission Criteria 3: All patients aged 18 years and older seen for at least two visits or at least one preventive visit during the measurement period.</p> <p>Updated denominator: Added telehealth as eligible encounter.</p> <p>The numerator is revised to read: Submission Criteria 1: Patients who were screened for unhealthy alcohol use using a systematic screening method at least once within the last 12 months. Submission Criteria 2: Patients who received brief counseling. Submission Criteria 3: Patients who were screened for unhealthy alcohol use using a systematic screening method at least once within 12 months AND who received brief counseling if identified as an unhealthy alcohol user.</p> <p>The numerator definition is revised to read: Submission Criteria 1: Systematic screening method – For purposes of this measure, one of the following systematic methods to assess unhealthy alcohol use must be utilized. Systematic screening methods and thresholds for defining unhealthy alcohol use include: • AUDIT Screening Instrument (score ≥ 4) • AUDIT-C Screening Instrument (score ≥ 4 for men; score ≥ 3 for women) • Single Question Screening - How many times in the past year have you had 5 (for men) or 4 (for women and all adults older than 65 years) or more drinks in a day? (response ≥ 1). Submission Criteria 2 and 3:</p>

Category	Description
	<p>Brief counseling – Brief counseling for unhealthy alcohol use refers to one or more counseling sessions, a minimum of 5-15 minutes, which may include: feedback on alcohol use and harms; identification of high risk situations for drinking and coping strategies; increased motivation and the development of a personal plan to reduce drinking.</p> <p>Updated numerator note: Submission Criteria 1: Added: To satisfy the intent of this measure, a patient must have at least one screening for unhealthy alcohol use during the 12-month period. If a patient has multiple screenings for unhealthy alcohol use during the 12-month period, only the most recent screening, which has a documented status of unhealthy alcohol user or unhealthy alcohol non-user, will be used to satisfy the measure requirements. Submission Criteria 2: Added: In the event that a patient is screened for unhealthy alcohol use and identified as an unhealthy user but did not receive brief alcohol cessation counseling submit GXXXX. Denominator Exception(s) are determined on the date of the most recent denominator eligible encounter for all submission criteria. Submission Criteria 3: Added: To satisfy the intent of this measure, a patient must have at least one unhealthy alcohol use screening during the 12-month period. If a patient has multiple unhealthy alcohol use screenings during the 12-month period, only the most recent screening, which has a documented status of unhealthy alcohol user or unhealthy alcohol non-user, will be used to satisfy the measure requirements. In the event that a patient is screened for unhealthy alcohol use and identified as an unhealthy user but did not receive brief alcohol cessation counseling submit G9624. Denominator Exception(s) are determined on the date of the most recent denominator eligible encounter for all submission criteria.</p> <p>Updated numerator options: Submission Criteria 1: Revised: Performance Met: Patient identified as an unhealthy alcohol user when screened for unhealthy alcohol use using a systematic screening method. Performance Not Met: Patient not screened for unhealthy alcohol use using a systematic screening method, reason not given. Submission Criteria 2: Added: Performance Met: Patient identified as an unhealthy alcohol user received brief counseling. Denominator Exception: Documentation of medical reason(s) for not providing brief counseling (e.g., limited life expectancy, other medical reasons). Performance Not Met: Patient did not receive brief counseling if identified as an unhealthy alcohol user, reason not given. Submission Criteria 3: Performance Met: Patient identified as an unhealthy alcohol user when screened for unhealthy alcohol use using a systematic screening method and received brief counseling. Performance Met: Patient not identified as an unhealthy alcohol user when screened for unhealthy alcohol use using a systematic screening method. Denominator Exception: Documentation of medical reason(s) for not screening for unhealthy alcohol use (e.g., limited life expectancy, other medical reasons). Denominator Exception: Documentation of medical reason(s) for not providing brief counseling if identified as an unhealthy alcohol user (e.g., limited life expectancy, other medical reasons). Performance Not Met: Patient not screened for unhealthy alcohol use using a systematic screening method OR patient did not receive brief counseling if identified as an unhealthy alcohol user, reason not given.</p> <p>Updated performance rate calculation: Revised into three submission criteria. Submission Criteria 2 will be used for benchmarking purposes.</p>
Steward:	Physician Consortium for Performance Improvement Foundation (PCPI®)
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We propose to update the measure overall by splitting the measure into separate populations for three submission criteria. This will allow MIPS eligible clinicians to more readily find where the gaps in performance lie, allowing them to be better informed and able to adjust to improve quality care and patient outcomes. We propose to revise the measure to shorten the look back period to 12 months and require that unhealthy alcohol screening who received brief counseling, if patient screened positive, occur every 12 months. The revision is based upon stakeholder feedback and input from the eCQM Clinical Review Process (CRP) and the measure steward's technical expert panel (TEP) and we agree that it is important to do this annually excessive alcohol use is one of the most common causes of premature mortality in the United States (https://www.uspreventiveservicestaskforce.org/Page/Document/RecommendationStatementFinal/unhealthy-alcohol-use-in-adolescents-and-adults-screening-and-behavioral-counseling-interventions). The numerator definition for Systematic screening method has been revised to align with current recommendations for the AUDIT C and the Single Questions Screening threshold.</p> <p>We propose to add telehealth encounters as denominator eligible as the telehealth setting is directly applicable to this measure and these patients should be included in the denominator to allow for numerator compliance to be measured.</p> <p>In the event the proposed substantive change(s) are finalized, the substantive changes would not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes.</p>

D.92 Statin Therapy for the Prevention and Treatment of Cardiovascular Disease

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	438
CMS eCQM ID:	CMS347v4
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	eCQM Specifications, CMS Web Interface Measure Specifications, MIPS CQMs Specifications
Current Measure Description:	<p>Percentage of the following patients - all considered at high risk of cardiovascular events - who were prescribed or were on statin therapy during the measurement period:</p> <ul style="list-style-type: none"> • Adults aged ≥ 21 years who were previously diagnosed with or currently have an active diagnosis of clinical atherosclerotic cardiovascular disease (ASCVD); OR • Adults aged ≥ 21 years who have ever had a fasting or direct low-density lipoprotein cholesterol (LDL-C) level ≥ 190 mg/dL or were previously diagnosed with or currently have an active diagnosis of familial or pure hypercholesterolemia; OR • Adults aged 40-75 years with a diagnosis of diabetes with a fasting or direct LDL-C level of 70-189 mg/dL.
Substantive Change:	<p>Modified collection type: eCQM Specifications, MIPS CQMs Specifications</p> <p>Updated denominator logic: For the eCQM Specifications collection type: Added "CABG, PCI Procedure" 2.16.840.1.113762.1.4.1138.566 value set.</p> <p>Updated denominator exclusion logic: For the eCQM Specifications collection type: Added Hospice Care value sets.</p> <p>The numerator definition is revised to read: For the MIPS CQMs Specifications collection type: Statin therapy - Administration of one or more of a group of medications that are used to lower plasma lipoprotein levels in the treatment of hyperlipoproteinemia. Table 1 - Statin Medication Therapy List (NOTE: List does NOT include dosage): Atorvastatin, Fluvastatin, Lovastatin (Mevinolin), Pitavastatin, Pravastatin Sodium, Rosuvastatin Calcium, Simvastatin, Amlodipine Besylate/Atorvastatin, Ezetimibe/Simvastatin</p> <p>Updated denominator note: For the MIPS CQMs Specifications collection type: Revised: Denominator Exclusions should be active at any time during the measurement period.</p> <p>Updated denominator: For the MIPS CQMs Specifications collection type: Added telehealth as eligible encounters for all submission criteria.</p>
Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We propose to add a value set to the eCQM Specifications collection type denominator to allow for the use of CPT and HCPCS codes for reporting patients who have had a CABG or PCI for inclusion within the denominator. This will improve data capture to ensure a more complete patient population. Additionally, a Hospice Care value set was added to align with the measure intent to exclude both palliative care and hospice patients.</p> <p>We propose to add telehealth encounters as denominator eligible for the MIPS CQMs Specifications collection type as the telehealth setting is directly applicable to this measure and these patients should be included in the denominator to allow for numerator compliance to be measured.</p> <p>We propose to update the numerator definition for the MIPS CQMs Specifications collection type to include a table of medications within this section and not in the clinical recommendations statement to ensure MIPS eligible clinicians are following these recommendations based on the clinical guidelines. Additionally, we propose to update the denominator note to add clarity regarding when the denominator exclusion would be assessed within the medical record for the purposes of reporting this measure.</p> <p>We propose to remove the CMS Web Interface Measure Specifications collection type. This collection type is proposed to be sunset for the purposes of MIPS starting with the 2021 performance year. We have determined it is not fiscally viable, feasible, or sustainable for MIPS to continue this collection type/submission type due to an 80 percent reduction and a continued decrease in interest of groups and virtual groups seeking to report quality data on CMS Web Interface measures. For further rationale, please see section IV.A.3.c.(1)(c) of this proposed rule.</p>

D.93 Age Appropriate Screening Colonoscopy

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	439
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	The percentage of patients greater than 85 years of age who received a screening colonoscopy from January 1 to December 31.
Substantive Change:	<p>The description is revised to read: The percentage of screening colonoscopies performed in patients greater than or equal to 86 years of age from January 1 to December 31.</p> <p>The denominator is revised to read: All screening colonoscopy examinations performed on patients greater than or equal to 50 years of age during the encounter period.</p> <p>Updated denominator criteria: Revised: All patients greater than or equal to 50 years of age on date of encounter receiving a colonoscopy for screening purposes only.</p> <p>The numerator is revised to read: Screening colonoscopies performed in patients greater than or equal to 86 years of age.</p> <p>The numerator options are revised to read:</p> <p>Performance Met: Patients greater than or equal to 86 years of age who underwent a screening colonoscopy and did not have a history of colorectal cancer or other valid medical reason for the colonoscopy, including: iron deficiency anemia, lower gastrointestinal bleeding, Crohn's Disease (i.e., regional enteritis), familial adenomatous polyposis, Lynch Syndrome (i.e., hereditary non-polyposis colorectal cancer), inflammatory bowel disease, ulcerative colitis, abnormal finding of gastrointestinal tract, or changes in bowel habits.</p> <p>Denominator Exception: Documentation of medical reason(s) for a colonoscopy performed on a patient greater than or equal to 86 years of age (e.g., iron deficiency anemia, lower gastrointestinal bleeding, Crohn's Disease (i.e., regional enteritis), familial history of adenomatous polyposis, Lynch Syndrome (i.e., hereditary non-polyposis colorectal cancer), inflammatory bowel disease, ulcerative colitis, abnormal finding of gastrointestinal tract, or changes in bowel habits).</p> <p>Performance Not Met: Patients greater than or equal to 86 years of age who received a colonoscopy for an assessment of signs/symptoms of GI tract illness, and/or because the patient meets high risk criteria, and/or to follow-up on previously diagnosed advanced lesions.</p> <p>Performance Not Met: Patients between 50 and 85 years of age who received a screening colonoscopy during the performance period.</p>
Steward:	American Gastroenterological Association
High Priority Measure:	Yes
Measure Type:	Efficiency
Rationale:	<p>We propose to update the denominator population to include all patients aged 50 and older to ensure a more complete patient population as the intent of the measure is to assess age appropriate screening colonoscopies, which include patients under the age of 86 years. The description, denominator, and denominator criteria have been updated to reflect these revisions. The numerator and numerator options have been revised to more clearly reflect the patient population and a performance not met numerator option was added to reflect the expanded denominator eligible patient population.</p> <p>In the event the proposed substantive change(s) are finalized, the substantive changes would not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes.</p>

D.94 Medication Management for People with Asthma

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	444
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Efficiency and Cost Reduction
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	The percentage of patients 5-64 years of age during the performance period who were identified as having persistent asthma and were dispensed appropriate medications that they remained on for at least 75% of their treatment period.
Substantive Change:	<p>Updated numerator: Updated medication table to split medications by controller versus reliever and adding 'Medication List' and 'Route' column.</p> <p>Asthma Controller Medications: Dyphylline-guaifenesin, Omalizumab, Benralizumab, Mepolizumab, Reslizumab, Budesonide-formoterol, Fluticasone-salmeterol, Fluticasone-vilanterol, Formoterol-mometasone, Beclomethasone, Budesonide, Ciclesonide, Flunisolide, Fluticasone, Mometasone, Montelukast, Zafirlukast, Zileuton, Theophylline.</p> <p>Asthma Reliever Medications: Albuterol, Levalbuterol.</p>
Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to update the medications table to ensure the list includes current and appropriate medications for the purposes of meeting performance of this measure. The measure specification medication tables were reformatted for clarity and readability.

D.95 Trastuzumab Received By Patients With AJCC Stage I (T1c) – III And HER2 Positive Breast Cancer Receiving Adjuvant Chemotherapy

Category	Description
NQF # / eCQM NQF #:	1858 / N/A
Quality#:	450
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of female patients (aged 18 years and older) with AJCC stage I (T1c) – III, human epidermal growth factor receptor 2 (HER2) positive breast cancer receiving adjuvant chemotherapy who are also receiving Trastuzumab.
Substantive Change:	<p>The title is revised from ‘Trastuzumab received by patients with AJCC stage I (T1c) - III and HER2 positive breast cancer receiving adjuvant chemotherapy’ to: Appropriate Treatment for Patients with Stage I (T1c) - III HER2 Positive Breast Cancer.</p> <p>The description is revised to read: Percentage of female patients aged 18 to 70 with stage I (T1c) - III HER2 positive breast cancer for whom appropriate treatment is initiated.</p> <p>The denominator is revised to read: All female breast cancer patients aged 18 to 70 with stage I (T1c) - III HER2 positive breast cancer.</p> <p>Updated denominator criteria: Revised: Female patients age 18-70 years on date of encounter. Removed: Breast Adjuvant Chemotherapy administered.</p> <p>Updated denominator exclusions: Removed: <ul style="list-style-type: none"> • Patient transferred to practice after initiation of chemotherapy. • Patient has metastatic disease at diagnosis. Added: <ul style="list-style-type: none"> • Patients with pregnancy during adjuvant treatment course. </p> <p>The numerator is revised to read: Patients whose adjuvant treatment course includes both chemotherapy and HER2-targeted therapy.</p> <p>The numerator note is revised to read: The quality action of this measure is the appropriateness of treatment rather than timeliness of treatment. The timing of administration of HER2-targeted therapies is expected to vary depending on the cytotoxic agents used. The numerator statement is intended to capture an adjuvant treatment course that includes both chemotherapy and HER2-targeted therapy, independent of possible administration sequences. Adjuvant chemotherapy is defined as a chemotherapy regimen initiated within 6 months of cancer diagnosis. An FDA-approved trastuzumab biosimilar is an appropriate substitute for trastuzumab.</p> <p>The numerator options are revised to read: Performance Met: Patient received adjuvant treatment course including both chemotherapy and HER2-targeted therapy. Denominator Exception: Reason for not administering adjuvant treatment course including both chemotherapy and HER2-targeted therapy (e.g. poor performance status (ECOG 3-4; Karnofsky ≤50), cardiac contraindications, insufficient renal function, insufficient hepatic function, other active or secondary cancer diagnoses, other medical contraindications, patients who died during initial treatment course or transferred during or after initial treatment course). Performance Not Met: Patient did not receive adjuvant treatment course including both chemotherapy and HER2-targeted therapy.</p>
Steward:	American Society of Clinical Oncology
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	<p>We propose to expand the scope and clinical focus of the measure to include all female patients age 18 – 70 years with stage I (T1c) - III HER2 positive breast cancer, allowing for assessment of chemotherapy within the numerator, necessitating the removal of the denominator criteria for chemotherapy. NCCN recommendations support the administration of chemotherapy and trastuzumab for this patient population.</p> <p>We propose to remove the current denominator exclusions and add new denominator exclusions based upon feasibility testing which determined these histologies are rare enough and are unlikely to have HER2 positivity such that it is not necessary to specifically target for removal from the denominator population. We agree that these exclusions are not appropriate for inclusion. The added denominator exclusions reflect the measure’s change in clinical scope and allows for removal of patients for whom treatment with chemotherapy and HER2-targeted therapy would not be appropriate.</p> <p>The measure steward’s technical expert panel acknowledged that patients who fail to receive timely treatment may also fail to receive appropriate treatment. Because the quality action of this measure is appropriateness rather than timeliness of treatment, a broader timeframe is utilized to capture patients who may be less likely to receive appropriate treatment, therefore, 6 months was chosen to define adjuvant chemotherapy. The inclusion of an FDA-approved trastuzumab biosimilar as substitute for trastuzumab is in accordance with updated NCCN breast cancer guidelines. We agree with this revision to the numerator note as it clarifies the updated measure scope and aligns with current clinical guidelines.</p> <p>Additionally, we propose to update the numerator options to reflect the updated scope and clinical focus of the measure.</p> <p>In the event the proposed substantive change(s) are finalized, the substantive changes would not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes.</p>

D.96 RAS (KRAS and NRAS) Gene Mutation Testing Performed for Patients with Metastatic Colorectal Cancer who receive Anti-epidermal Growth Factor Receptor (EGFR) Monoclonal Antibody Therapy

Category	Description
NQF # / eCQM NQF #:	1859 / N/A
Quality#:	451
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of adult patients (aged 18 or over) with metastatic colorectal cancer who receive anti-epidermal growth factor receptor monoclonal antibody therapy for whom RAS (KRAS and NRAS) gene mutation testing was performed.
Substantive Change:	Updated denominator: Added telehealth exclusion to patient encounter.
Steward:	American Society of Clinical Oncology
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to add a telehealth exclusion to the patient encounter as telehealth encounters are not applicable to this measure and these patients should not be included in the denominator.

D.97 Patients with Metastatic Colorectal Cancer and RAS (KRAS or NRAS) Gene Mutation Spared Treatment with Anti-epidermal Growth Factor Receptor (EGFR) Monoclonal Antibodies

Category	Description
NQF # / eCQM NQF #:	1860 / N/A
Quality#:	452
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Patient Safety
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of adult patients (aged 18 or over) with metastatic colorectal cancer and RAS (KRAS or NRAS) gene mutation spared treatment with anti-EGFR monoclonal antibodies.
Substantive Change:	Updated denominator: Added telehealth exclusion to patient encounter.
Steward:	American Society of Clinical Oncology
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to add a telehealth exclusion to the patient encounter as telehealth encounters are not applicable to this measure and these patients should not be included in the denominator.

D.98 Percentage of Patients Who Died from Cancer Receiving Chemotherapy in the Last 14 Days of Life (lower score – better)

Category	Description
NQF # / eCQM NQF #:	0210 / N/A
Quality#:	453
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients who died from cancer receiving chemotherapy in the last 14 days of life.
Substantive Change:	Updated denominator: Added telehealth exclusion to patient encounter.
Steward:	American Society of Clinical Oncology
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to add a telehealth exclusion to the patient encounter as telehealth encounters are not applicable to this measure and these patients should not be included in the denominator.

**D.99 Percentage of Patients Who Died from Cancer Admitted to the Intensive Care Unit (ICU) in the Last 30 Days of Life
(lower score – better)**

Category	Description
NQF # / eCQM NQF #:	0213 / N/A
Quality#:	455
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients who died from cancer admitted to the ICU in the last 30 days of life.
Substantive Change:	Updated denominator: Added telehealth exclusion to patient encounter.
Steward:	American Society of Clinical Oncology
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale:	We propose to add a telehealth exclusion to the patient encounter as telehealth encounters are not applicable to this measure and these patients should not be included in the denominator.

D.100 Percentage of Patients Who Died from Cancer Admitted to Hospice for Less than 3 days (lower score – better)

Category	Description
NQF # / eCQM NQF #:	0216 / N/A
Quality#:	457
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients who died from cancer and admitted to hospice and spent less than 3 days there.
Substantive Change:	Updated denominator: Added telehealth exclusion to patient encounter.
Steward:	American Society of Clinical Oncology
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale:	We propose to add a telehealth exclusion to the patient encounter as telehealth encounters are not applicable to this measure and these patients should not be included in the denominator.

D.101 Back Pain After Lumbar Discectomy/Laminectomy

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	459
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Person and Caregiver-Centered Experience and Outcomes
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	For patients 18 years of age or older who had a lumbar discectomy/laminectomy procedure, back pain is rated by the patients as less than or equal to 3.0 OR an improvement of 5.0 points or greater on the Visual Analog Scale (VAS) Pain scale at 3 months (6 to 20 weeks) postoperatively.
Substantive Change:	Updated denominator exclusion: Revised: Patient had cancer, acute fracture or infection related to the lumbar spine OR patient had neuromuscular, idiopathic or congenital lumbar scoliosis.
Steward:	Minnesota Community Measurement
High Priority Measure:	Yes
Measure Type:	Patient Reported Outcome
Rationale:	We propose to add neuromuscular scoliosis to the denominator exclusion based upon feedback from clinicians following statewide implementation of the measure. We agree that patients with this type of scoliosis should be removed to help create a more heterogeneous population, which reflects the original intent of this denominator exclusion.

D.102 Back Pain After Lumbar Fusion

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	460
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Person and Caregiver-Centered Experience and Outcomes
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	For patients 18 years of age or older who had a lumbar fusion procedure, back pain is rated by the patient as less than or equal to 3.0 OR an improvement of 5.0 points or greater on the Visual Analog Scale (VAS) Pain* scale at one year (9 to 15 months) postoperatively. * hereafter referred to as VAS Pain
Substantive Change:	Updated denominator exclusion: Revised: Patient had cancer, acute fracture or infection related to the lumbar spine OR patient had neuromuscular, idiopathic or congenital lumbar scoliosis.
Steward:	Minnesota Community Measurement
High Priority Measure:	Yes
Measure Type:	Patient Reported Outcome
Rationale:	We propose to add neuromuscular scoliosis to the denominator exclusion based upon feedback from clinicians following statewide implementation of the measure. We agree that patients with this type of scoliosis should be removed to help create a more heterogeneous population, which reflects the original intent of this denominator exclusion.

D.103 Leg Pain After Lumbar Discectomy/Laminectomy

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	461
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Person and Caregiver-Centered Experience and Outcomes
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	For patients 18 years of age or older who had a lumbar discectomy/laminectomy procedure, leg pain is rated by the patient as less than or equal to 3.0 OR an improvement of 5.0 points or greater on the VAS Pain scale at 3 months (6 to 20 weeks) postoperatively.
Substantive Change:	Updated denominator exclusion: Revised: Patient had cancer, acute fracture or infection related to the lumbar spine OR patient had neuromuscular, idiopathic or congenital lumbar scoliosis.
Steward:	Minnesota Community Measurement
High Priority Measure:	Yes
Measure Type:	Patient Reported Outcome
Rationale:	We propose to add neuromuscular scoliosis to the denominator exclusion based upon feedback from clinicians following statewide implementation of the measure. We agree that patients with this type of scoliosis should be removed to help create a more heterogeneous population, which reflects the original intent of this denominator exclusion.

D.104 Bone Density Evaluation for Patients with Prostate Cancer and Receiving Androgen Deprivation Therapy

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	462
CMS eCQM ID:	CMS645v4
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	eCQM Specifications
Current Measure Description:	Patients determined as having prostate cancer who are currently starting or undergoing androgen deprivation therapy (ADT), for an anticipated period of 12 months or greater and who receive an initial bone density evaluation. The bone density evaluation must be prior to the start of ADT or within 3 months of the start of ADT.
Substantive Change:	Updated definition: Added: First Androgen Deprivation Therapy - The First Androgen Deprivation Therapy (ADT) is measured as the first order or administration of ADT for an anticipated period of 12 months or greater to a patient with prostate cancer.
Steward:	Oregon Urology Institute
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to add a definition for 'First Androgen Deprivation Therapy' to clarify the timing of the bone density evaluation necessary for numerator compliance.

D.105 Otitis Media with Effusion: Systemic Antimicrobials - Avoidance of Inappropriate Use

Category	Description
NQF # / eCQM NQF #:	0657 / N/A
Quality#:	464
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 2 months through 12 years with a diagnosis of OME who were not prescribed systemic antimicrobials.
Substantive Change:	Updated denominator: Added telehealth exclusion to patient encounter.
Steward:	American Academy of Otolaryngology – Head and Neck Surgery Foundation
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to add a telehealth exclusion to the patient encounter as telehealth encounters are not applicable to this measure and these patients should not be included in the denominator.

D.106 Continuity of Pharmacotherapy for Opioid Use Disorder (OUD)

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	468
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of adults aged 18 years and older with pharmacotherapy for opioid use disorder (OUD) who have at least 180 days of continuous treatment.
Substantive Change:	<p>Updated instructions: Revised: This measure is to be submitted a minimum of once per performance period for all adults aged 18 years and older with pharmacotherapy for OUD seen during the measurement period that meet additional denominator criteria described below.</p> <p>The denominator is revised to read: Adults aged 18 years and older who had a qualifying encounter during the performance year, and a diagnosis of OUD and pharmacotherapy for OUD during the denominator identification period. Eligibility to submit results for a patient requires a qualifying encounter in the performance year, i.e., between January 1, 2021, and December 31, 2021. Solely administering or prescribing OUD medication does not convey eligibility to submit. If a patient has a qualifying encounter within the performance year, the patient is included in the denominator, if the following criteria are met in the denominator identification period between July 1, 2020, and June 30, 2021:</p> <ul style="list-style-type: none"> • Have a diagnosis of OUD • Receive pharmacotherapy for OUD <p>Updated denominator definition: Added: Qualifying Encounter – Encounter during the performance year. Revised: Denominator Identification Period – The period in which eligible adults receive pharmacotherapy for OUD. The denominator identification period is defined as the 12-month period from 07/1/2020 to 6/30/2021. The denominator identification period includes the first 6 months of the reporting year and the last 6 months of the previous year to ensure that all included patients can be observed for at least 180 days of treatment in the reporting year. Patients started on treatment in the second half of the reporting year will be included in the denominator of the subsequent year. The patient must have at least one OUD medication and one visit with a OUD diagnosis during the denominator identification period to be eligible for the measure.</p> <p>Updated denominator criteria: Revised: Adults aged ≥ 18 years on date of qualifying encounter. Encounter during the measurement period.</p> <p>Updated denominator exclusion: Removed: Pharmacotherapy for OUD initiated after June 30th of 2020.</p> <p>The numerator note is revised to read: Numerator compliance is expected to be determined within an 18-month period that includes the measurement period and the 6 months prior to the measurement period (July 1, 2020– December 31, 2021).</p>
Steward:	University of Southern California
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to update the measure to ensure the denominator eligible encounter occurs within the current performance period and the initiation of pharmacotherapy for opioid use disorder (OUD) occurs within the denominator identification period to allow for assessment of at least 180 days for continuous pharmacotherapy for OUD. Additionally, we propose to update the definitions by adding an additional definition of qualifying encounter to clarify which encounters are denominator eligible and revising the denominator identification period definition to align with and clarify the changes to the denominator in regards to timing and eligibility. The numerator note is being revised to align with these changes outlined above and reiterates the guidance pertaining to the timeframes allowed for clinicians to determine if the patient was on at least 180 days for continuous. pharmacotherapy for OUD

D.107 Functional Status After Lumbar Fusion

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	469
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Person and Caregiver-Centered Experience and Outcomes
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	For patients 18 years of age and older who had a lumbar fusion procedure, functional status is rated by the patient as less than or equal to 22 OR a change of 30 points or greater on the Oswestry Disability Index (ODI version 2.1a)* at one year (9 to 15 months) postoperatively.
Substantive Change:	Updated denominator exclusion: Revised: Patient had cancer, acute fracture or infection related to the lumbar spine OR patient had neuromuscular, idiopathic or congenital lumbar scoliosis.
Steward:	Minnesota Community Measurement
High Priority Measure:	Yes
Measure Type:	Patient Reported Outcome
Rationale:	We propose to add neuromuscular scoliosis to the denominator exclusion based upon feedback from clinicians following statewide implementation of the measure. We agree that patients with this type of scoliosis should be removed to help create a more heterogeneous population, which reflects the original intent of this denominator exclusion.

D.108 Functional Status After Primary Total Knee Replacement

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	470
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Person and Caregiver-Centered Experience and Outcomes
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	For patients age 18 and older who had a primary total knee replacement procedure, functional status is rated by the patient as greater than or equal to 37 on the Oxford Knee Score (OKS) at one year (9 to 15 months) postoperatively.
Substantive Change:	<p>The description is revised to read: For patients age 18 and older who had a primary total knee replacement procedure, functional status is rated by the patient as greater than or equal to 37 on the Oxford Knee Score (OKS) or a 71 or greater on the KOOS, JR tool at one year (9 to 15 months) postoperatively.</p> <p>Updated instructions: Revised: NOTE: This measure is a target-based measure, where the numerator is met by having a one-year postoperative Oxford Knee Score (OKS) greater than or equal to 37 or a KOOS, JR score greater than or equal to 71. It is expressed as a proportion or rate. Patients having received a primary total knee replacement procedure who are not assessed for functional status postoperatively remain in the denominator and are considered as not meeting the target. The measure intent is that MIPS eligible clinicians will submit all denominator eligible procedures for performance calculation.</p> <p>The numerator is revised to read: All eligible patients whose functional status is greater than or equal to 37 on the Oxford Knee Score (OKS) or greater than or equal to 71 on the KOOS, JR patient reported outcome tool at one year (9 to 15 months) postoperatively.</p> <p>Updated numerator definition: Added: KOOS, JR - The KOOS, JR was developed from the original long version of the Knee injury and Osteoarthritis Outcome Score (KOOS) survey using Rasch analysis. The KOOS, JR contains 7 items from the original KOOS survey. Items are coded from 0 to 4, none to extreme respectively. KOOS, JR is scored by summing the raw response (range 0-28) and then converting it to an interval score using the table provided below. The interval score ranges from 0 to 100 where 0 represents total knee disability and 100 represents perfect knee health. This short form tool was developed by Stephen Lyman, PhD at the Hospital for Specialty Surgery in 2017. https://www.hss.edu/hoos-jr-koos-jr-outcomes-surveys.asp KOOS, JR Target - A patient who is assessed postoperatively at one year (9 to 15 months) after the procedure rates their functional status score as greater than or equal to 71.</p> <p>The numerator note is revised to read: The following situations are those in which the numerator targets cannot be reached and Performance Not Met (M1046) is submitted:</p> <ul style="list-style-type: none"> Oxford Knee Score (OKS) or Knee injury and Osteoarthritis Outcome Score Joint Replacement (KOOS, JR) is not administered postoperatively at one year (9 to 15 Months) Functional status is measured using a different patient-reported functional status tool or Oxford Knee Score (OKS) version or Knee injury and Osteoarthritis Outcome Score Joint Replacement (KOOS, JR) Postoperative Oxford Knee Score (OKS) or Knee injury and Osteoarthritis Outcome Score Joint Replacement (KOOS, JR) is administered less than 9 Months or greater than 15 Months Postoperative Oxford Knee Score (OKS) is less than 37 or Knee injury and Osteoarthritis Outcome Score Joint Replacement (KOOS, JR) is less than 71. <p>The numerator options are revised to read: Performance Met: Functional status measured by the Oxford Knee Score (OKS) at one year (9 to 15 months) postoperatively was greater than or equal to 37 or Knee injury and Osteoarthritis Outcome Score Joint Replacement (KOOS, JR) was greater than or equal to 71. Performance Not Met: Functional status measured by the Oxford Knee Score (OKS) or the Knee injury and Osteoarthritis Outcome Score Joint Replacement (KOOS, JR) at one year (9 to 15 months) postoperatively was less than 37. Performance Not Met: Functional status measured by the Oxford Knee Score (OKS) at one year (9 to 15 months) postoperatively was less than 37 or the Knee injury and Osteoarthritis Outcome Score Joint Replacement (KOOS, JR) was less than 71.</p>
Steward:	Minnesota Community Measurement
High Priority Measure:	Yes
Measure Type:	Patient Reported Outcome
Rationale:	We propose to update the measure to allow for the inclusion of the Knee injury and Osteoarthritis Outcome Score Joint Replacement (KOOS, JR) tool as numerator compliance. The KOOS, JR is recommended by the American Academy of Orthopaedic Surgeons (AAOS) and is part of the Joint Commission on Accreditation of Healthcare Organizations (JCAHO) accreditation and is an appropriate tool for the purposes of this measure. The language was updated throughout the measure to reflect this update and to define numerator compliance when utilizing the KOOS, JR tool.

D.109 Functional Status After Lumbar Discectomy/Laminectomy

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	471
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Person and Caregiver-Centered Experience and Outcomes
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	For patients age 18 and older who had lumbar discectomy/laminectomy procedure, functional status is rated by the patient as less than or equal to 22 OR a change of 30 points or greater on the Oswestry Disability Index (ODI version 2.1a) * at 3 months (6 to 20 weeks) postoperatively.
Substantive Change:	Updated denominator exclusion: Revised: Patient had cancer, acute fracture or infection related to the lumbar spine OR patient had neuromuscular, idiopathic or congenital lumbar scoliosis.
Steward:	Minnesota Community Measurement
High Priority Measure:	Yes
Measure Type:	Patient Reported Outcome
Rationale:	We propose to add neuromuscular scoliosis to the denominator exclusion based upon feedback from clinicians following statewide implementation of the measure. We agree that patients with this type of scoliosis should be removed to help create a more heterogeneous population, which reflects the original intent of this denominator exclusion.

D.110 Leg Pain After Lumbar Fusion

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	473
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Person and Caregiver-Centered Experience and Outcomes
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	For patients 18 years of age or older who had a lumbar fusion procedure, leg pain is rated by the patient as less than or equal to 3.0 OR an improvement of 5.0 points or greater on the Visual Analog Scale (VAS) Pain* scale at one year (9 to 15 months) postoperatively. * hereafter referred to as VAS Pain.
Substantive Change:	Updated denominator exclusion: Revised: Patient had cancer, acute fracture or infection related to the lumbar spine OR patient had neuromuscular, idiopathic or congenital lumbar scoliosis.
Steward:	Minnesota Community Measurement
High Priority Measure:	Yes
Measure Type:	Patient Reported Outcome
Rationale:	We propose to add neuromuscular scoliosis to the denominator exclusion based upon feedback from clinicians following statewide implementation of the measure. We agree that patients with this type of scoliosis should be removed to help create a more heterogeneous population, which reflects the original intent of this denominator exclusion.

D.111 International Prostate Symptom Score (IPSS) or American Urological Association-Symptom Index (AUA-SI) Change 6-12 Months After Diagnosis of Benign Prostatic Hyperplasia

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	476
CMS eCQM ID:	CMS771v2
National Quality Strategy Domain:	Person and Caregiver-centered Experience and Outcomes
Current Collection Type:	eCQM Specifications
Current Measure Description:	Percentage of patients with an office visit within the measurement period and with a new diagnosis of clinically significant Benign Prostatic Hyperplasia who have International Prostate Symptoms Score (IPSS) or American Urological Association (AUA) Symptom Index (SI) documented at time of diagnosis and again 6-12 months later with an improvement of 3 points.
Substantive Change:	The title is revised from 'International Prostate Symptom Score (IPSS) or American Urological Association-Symptom Index (AUA-SI) Change 6-12 Months After Diagnosis of Benign Prostatic Hyperplasia' to: Urinary Symptom Score Change 6-12 Months After Diagnosis of Benign Prostatic Hyperplasia. Per the 'Telehealth Guidance for Electronic Clinical Quality Measures (eCQMs) for Eligible Professional/Eligible Clinician 2021 Quality Reporting': Medicare telehealth eligible codes found in any encounter value set must only be used for in-person encounters for the following eCQMs.
Steward:	Large Urology Group Practice Association and Oregon Urology Institute
High Priority Measure:	Yes
Measure Type:	Patient Reported Outcome
Rationale:	We propose to shorten the title to replace the very specific score wording with more general wording to be more consistent with definitions and language used within the measure. We propose to remove telehealth encounters from the denominator and denominator exclusions as telehealth is not an appropriate setting for this measure. This guidance can be found in a separate document that will be published on the eCQI Resource Center.

D.112 Functional Status Change for Patients with Neck Impairments

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	478
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Person and Caregiver-centered Experience and Outcomes
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	<p>This is a patient-reported outcome performance measure (PRO-PM) consisting of a patient-reported outcome measure (PROM) of risk-adjusted change in functional status (FS) for patients aged 14+ with neck impairments. The change in FS is assessed using the Neck FS PROM.* The measure is risk-adjusted to patient characteristics known to be associated with FS outcomes. It is used as a performance measure at the patient, individual clinician, and clinic levels to assess quality.</p> <p>*The Neck FS PROM is an item-response theory-based computer adaptive test (CAT). In addition to the CAT version, which provides for reduced patient response burden, it is available as a 10-item short form (static/paper-pencil).</p>
Substantive Change:	<p>The description is revised to read: This is a patient-reported outcome measure of risk-adjusted change in functional status for patients aged 14 years+ with neck impairments. The change in functional status (FS) is assessed using the FOTO Neck FS patient-reported outcome measure (PROM). The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk-adjusted) and used as a performance measure at the patient level, at the individual clinician level, and at the clinic level to assess quality. The measure is available as a computer adaptive test, for reduced patient burden, or a short form (static/paper-pencil).</p> <p>The definition is revised to read: Functional Deficit – Limitation or impairment of physical abilities/function resulting in evaluation and inclusion in a treatment plan of care. Treatment Episode – A Treatment Episode is defined as beginning with an Initial Evaluation for a functional neck deficit, progressing through treatment without interruption (for example, a hospitalization or surgical intervention), and ending with Discharge signifying that the treatment has been completed. A patient currently under clinical care for a neck deficit remains in a single Treatment Episode until the Discharge is conducted and documented by the MIPS eligible clinician. Initial Evaluation – An Initial Evaluation is the first encounter for a functional deficit involving the neck and includes an evaluation (CPT 97161, 97162, 97163, 97165, 97166, 97167, 99201, 99202, 99203, 99204, 99205, 99212, 99213, 99214, 99215, 98940, 98941, 98942, or 98943), or an Initial Evaluation Status M-code (M1143). A patient presenting with a neck impairment, who has had an interruption of a Treatment Episode for the same functional neck deficit secondary to an appropriate reason like hospitalization or surgical intervention, is an Initial Evaluation. Discharge Discharge is accompanied by a treatment finalization and evaluation completion M-Code (Mxxxx) identifying the close of a Treatment Episode for the same neck deficit identified at the Initial Evaluation and documented by a Discharge report by the MIPS eligible clinician. An interruption in clinical care for an appropriate reason like hospitalization or surgical intervention requires a discharge from the current Treatment Episode. Encounter – A visit between the patient and the provider for the purpose of assessing and/or improving a functional deficit. Patient Reported – The patient directly provides answers to the FS measure items using a standardized, reliable and valid, computerized adaptive testing or short form (static/paper and pencil-type) method. If the patient cannot reliably respond independently (for example, in the presence of cognitive deficits), a suitable proxy may provide answers.</p> <p>The denominator is revised to read: All patients aged 14 years and older with neck impairments who initiated a Treatment Episode.</p> <p>Updated denominator criteria: Revised: All patients aged ≥14 years on date of Initial Evaluation. Added: With a neck impairment and/or diagnosis pertaining to a functional deficit affecting the neck.</p> <p>Updated denominator exclusions: Removed: Ongoing care not indicated, patient seen only 1-2 visits (e.g., home program only, referred to another provider or facility, consultation only). Added: Patient unable to complete the Neck FS PROM at Initial Evaluation and/or Discharge due to blindness, illiteracy, severe mental incapacity or language incompatibility, and an adequate proxy is not available.</p> <p>The numerator is revised to read: Patients who were presented with the Neck FS PROM at Initial Evaluation (Intake) and at or near Discharge (Status) for the purpose of calculating the patient's Risk-Adjusted Functional Status Change Residual Score.</p> <p>The numerator definition is revised to read: Patient's Functional Status Score – A functional status score is produced when the patient completes the functional status patient-reported outcome measure (either by short form or computerized adaptive testing administration). The functional status score is continuous and linear. Scores range from 0 to 100 with higher scores meaning higher functional abilities. The measure is standardized, and the scores are validated for the measurement of function for this population. Patient's Functional Status Change Score – A functional status change score is calculated by subtracting the Patient's Functional Status Score at Initial Evaluation from the Patient's Functional Status Score at Discharge. Predicted Functional Status Change Score – Functional Status Change Scores for patients are risk adjusted using multiple linear regression methods that include the following independent variables: Patient's Functional Status Score at Initial Evaluation, patient age, symptom acuity, surgical history, gender, specific co- morbidities, use of medication for the condition at Initial Evaluation, exercise history, history of previous treatment for the condition and type of post-surgical status. The Patient's Functional Status Change Score is the dependent variable. For each patient completing a functional status assessment at Initial Evaluation (Intake), the regression model provides a risk-adjusted prediction of functional status change at Discharge. Risk-Adjusted Functional Status Change Residual Score – The difference between the raw non-risk- adjusted Patient's Functional Status Change Score and the Risk-Adjusted Predicted Functional Status Change Score (raw minus predicted) is the</p>

Category	Description
	<p>Risk-Adjusted Functional Status Change Residual Score, which is in the same units as the Patient's Functional Status Scores, and should be interpreted as the unit of functional status change different than predicted given the risk-adjustment variables of the patient being treated. As such, the Risk-Adjusted Residual Change Score represents Risk-Adjusted Change corrected for the level of severity of the patient. Risk-Adjusted Residual Change Scores of zero (0) or greater (> 0) should be interpreted as functional status change scores that were predicted or better than predicted given the risk-adjustment variables of the patient, and risk-adjusted residual change scores less than zero (< 0) should be interpreted as functional status change scores that were less than predicted given the risk-adjustment variables of the patient. Aggregated Risk-Adjusted Residual Scores allow meaningful comparisons amongst clinicians or clinics.</p> <p>Updated numerator note: Removed all.</p> <p>The numerator options are revised to read: Performance Met: Risk-Adjusted Functional Status Change Residual Score for the neck impairment successfully calculated and the score was equal to zero (0) or greater than zero (> 0) Denominator Exceptions:</p> <ol style="list-style-type: none"> 1. Ongoing care not clinically indicated because the patient needed a home program only, referral to another provider or facility, or consultation only, as documented in the medical record. 2. Ongoing care not medically possible because the patient was discharged early due to specific medical events, documented in the medical record, such as the patient became hospitalized or scheduled for surgery. 3. Ongoing care not possible because the patient self-discharged early (e.g., financial or insurance reasons, transportation problems, or reason unknown). 4. Patient refused to participate. <p>Performance Not Met: Risk-Adjusted Functional Status Change Residual Score for the neck impairment not measured because the patient did not complete the Neck FS PROM at Initial Evaluation and/or near Discharge, reason not given. Performance Not Met: Risk-Adjusted Functional Status Change Residual Score for the neck impairment successfully calculated and the score was less than zero (< 0).</p>
Steward:	Focus on Therapeutic Outcomes, Inc.
High Priority Measure:	Yes
Measure Type:	Patient Reported Outcome
Rationale:	<p>We propose to update the measure to align with the other Focus on Therapeutic Outcomes, Inc. (FOTO) measures within MIPS. This will lessen MIPS eligible clinician burden when reporting this measure in conjunction with FOTO's other measures as the structure and content will now align. Definitions were included to add clarity and provide guidance when reporting this measure. Additional denominator criteria for patients with a neck impairment and/or diagnosis pertaining to a functional deficit affect the neck was included to further define the appropriate patient population for this measure. Additionally, the denominator exclusions and exceptions were updated, along with the other numerator options, to align across all FOTO measures for consistency.</p> <p>In the event the proposed substantive change(s) are finalized, the substantive changes would not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes.</p>

APPENDIX 2: IMPROVEMENT ACTIVITIES

NOTE: In this proposed rule, for the CY 2021 performance period and future years, we are proposing to modify two previously adopted improvement activities in the Inventory. These modifications are discussed in detail below.

Table A: Proposed Changes to Previously Adopted Improvement Activities for the MIPS CY 2021 Performance Period and Future Years

Current Improvement Activity	
Current Activity ID:	IA BE 4
Current Subcategory:	Beneficiary Engagement
Current Activity Title:	Engagement of patient through implementation of improvements in patient portal
Current Activity Description:	Access to an enhanced patient portal that provides up to date information related to relevant chronic disease health, blood pressure control, and includes interactive features allowing patients to enter health information and/or enables bidirectional communication about medication changes and adherence.
Current Weighting:	Medium
Proposed Change and Rationale:	<p>This improvement activity was originally finalized in the CY 2017 QPP final rule (81 FR 77825). This proposed modification would add language to include caregivers as additional potential users of the patient portal, instead of just patients and clinicians, given the important role caregivers can play in bidirectional information exchange regarding the clinical care of the patient.</p> <p>This proposed modification also would add language to clarify that the portal’s use should be for “bidirectional information exchange between the patient and their provider” and “the primary use... should be clinical, and not administrative.”</p> <p>In addition, the proposed modifications would replace existing description with a nonexhaustive list of examples of bidirectional portal functions that are clinical rather than administrative. The list of examples would include: “brief patient reevaluation by messaging; communication about test results and follow up; communication about medication adherence, side effects, and refills; blood pressure management for a patient with hypertension; blood sugar management for a patient with diabetes; and any relevant acute or chronic disease management.”</p>
Proposed Revised Activity Description:	To receive credit for this activity, MIPS eligible clinicians must provide access to an enhanced patient/caregiver portal that allows users (patients or caregivers and their clinicians) to engage in bidirectional information exchange. The primary use of this portal should be clinical and not administrative. Examples of the use of such a portal include, but are not limited to: brief patient reevaluation by messaging; communication about test results and follow up; communication about medication adherence, side effects, and refills; blood pressure management for a patient with hypertension; blood sugar management for a patient with diabetes; or any relevant acute or chronic disease management.
Current Improvement Activity	
Current Activity ID:	IA AHE 7
Current Subcategory:	Achieving Health Equity
Current Activity Title:	Comprehensive Eye Exams
Current Activity Description:	<p>To receive credit for this activity, MIPS eligible clinicians must promote the importance of a comprehensive eye exam, which may be accomplished by providing literature and/or facilitating a conversation about this topic using resources such as the “Think About Your Eyes” campaign and/or referring patients to resources providing no-cost eye exams, such as the American Academy of Ophthalmology’s EyeCare America and the American Optometric Association’s VISION USA.</p> <p>This activity is intended for:</p> <ul style="list-style-type: none"> • Non-ophthalmologists / optometrists who refer patients to an ophthalmologist/optometrist; • Ophthalmologists/optometrists caring for underserved patients at no cost; or

	<ul style="list-style-type: none"> Any clinician providing literature and/or resources on this topic. <p>This activity must be targeted at underserved and/or high-risk populations that would benefit from engagement regarding their eye health with the aim of improving their access to comprehensive eye exams.</p>
Current Weighting:	Medium
Proposed Change and Rationale:	<p>This improvement activity was originally finalized in the CY 2019 PFS final rule (83 FR 59452). This proposed modification would add language that expands the types of services that eligible clinicians can promote to underserved and/or high-risk populations to receive credit for this activity. Specifically, we are proposing to add the following sentence: “promoting access to vision rehabilitation services as appropriate for individuals with chronic vision impairment.” Also, “or vision rehabilitation services” would be added to the end of the activity description. These modifications would broaden this improvement activity to eligible clinicians who promote vision rehabilitation services, if they are serving patients with vision impairments detected during comprehensive eye exams.</p>
Proposed Revised Activity Description:	<p>To receive credit for this activity, MIPS eligible clinicians must promote the importance of a comprehensive eye exam, which may be accomplished by any one or more of the following:</p> <ul style="list-style-type: none"> providing literature, facilitating a conversation about this topic using resources such as the “Think About Your Eyes” campaign, referring patients to resources providing no-cost eye exams, such as the American Academy of Ophthalmology’s EyeCare America and the American Optometric Association’s VISION USA, or promoting access to vision rehabilitation services as appropriate for individuals with chronic vision impairment. <p>This activity is intended for:</p> <ul style="list-style-type: none"> Non-ophthalmologists / optometrists who refer patients to an ophthalmologist/optometrist; Ophthalmologists/optometrists caring for underserved patients at no cost; or Any clinician providing literature and/or resources on this topic. <p>This activity must be targeted at underserved and/or high-risk populations that would benefit from engagement regarding their eye health with the aim of improving their access to comprehensive eye exams or vision rehabilitation services.</p>

FEDERAL REGISTER

Vol. 85

Monday,

No. 159

August 17, 2020

Part III

Federal Trade Commission

16 CFR Part 315
Contact Lens Rule; Final Rule

FEDERAL TRADE COMMISSION**16 CFR Part 315**

RIN 3084-AB36

Contact Lens Rule

AGENCY: Federal Trade Commission (“FTC” or “Commission”).

ACTION: Final rule.

SUMMARY: The FTC is publishing a final rule to implement amendments to the Contact Lens Rule. These amendments require that prescribing eye care practitioners obtain a confirmation of prescription release from patients after releasing a contact lens prescription and maintain each such acknowledgment for a period of not less than three years. The Commission is permitting prescribers to comply with automatic prescription release via electronic delivery in certain circumstances. Further, these amendments specify a time period for prescribers to respond to requests for prescriptions; clarify and institute additional requirements for automated telephone verification messages; more precisely delineate what constitutes unlawful alteration of a prescription; and require that sellers provide a method for, and notice of the method for, patient prescription presentation.

DATES: This rule is effective October 16, 2020.

ADDRESSES: Relevant portions of the record of this proceeding, including this document, are available at <https://www.ftc.gov>.

FOR FURTHER INFORMATION CONTACT:

Alysa Bernstein (202-326-3289), abernstein@ftc.gov, Paul Spelman (202-326-2487), pspelman@ftc.gov, or Andrew Wone (202-326-2934), awone@ftc.gov, Bureau of Consumer Protection, Federal Trade Commission, 600 Pennsylvania Avenue NW, Washington, DC 20580.

SUPPLEMENTARY INFORMATION:**Table of Contents**

- I. Background
 - A. Overview of the Contact Lens Rule
 - B. History of the Rule
 - C. Initial Request for Comments in 2015
 - D. Notice of Proposed Rulemaking in 2016
 - E. Supplemental Notice of Proposed Rulemaking
- II. Final Rule Pertaining to Confirmation of Prescription Release
 - A. Proposed Modifications in the SNPRM
 - B. Basis for SNPRM Confirmation of Prescription Release Proposal
 - C. Comments on the Confirmation of Prescription Release Proposal and the Basis for Such Proposal
 - 1. Comments About the Need for the Confirmation of Prescription Release and Whether Prescribers Are Complying

- With the Rule’s Automatic Prescription Release Requirement
 - a. Survey Evidence as Proof of Non-Compliance
 - b. Lack of Consumer Complaints as Evidence of Compliance
 - c. Number of Verifications as Evidence of Non-Compliance With the Automatic Prescription Release Requirement
- 2. Comments About the Need To Improve the Commission’s Ability To Monitor Compliance and Enforce the Rule
- 3. Comments About Whether the Structure of the Contact Lens Market Creates a Need for Verifiable Enforcement of Automatic Prescription Release
- 4. Comments About the Text of the Proposed Confirmation of Prescription and the Option To Include the Confirmation as Part of a Patient’s Prescription or Sales Receipt
- 5. Comments About Option (D) and Using Electronic Delivery for Confirmation of Prescription Release
 - a. Use of Patient Portals and Patient Consent
 - b. Requirement To Maintain Records of Patient Consent
- 6. Comments About Alternatives to the Confirmation of Prescription Release
 - a. Signage
 - b. Educational Programs as an Alternative to Confirmation of Prescription Release
- 7. Comments About the Burden and Benefits of the Confirmation of Prescription Release Proposal
- 8. Comments About the Exemption for Prescribers Who Do Not Have a Direct or Indirect Financial Interest in the Sale of Contact Lenses
- D. Additional Discussion and Commission Determination Regarding the Confirmation of Prescription Release Proposal
- III. Additional Requirements for Sellers Using Verification Calls Containing Automated Messages
 - A. The Congressional Record Does Not Support Prohibiting Automated Telephone Messages
 - B. Comments About, and Adoption of, Requirements Proposed in the SNPRM To Improve Quality of Automated Telephone Messages
 - C. The Commission’s Proposal Requiring Sellers To Record Automated Telephone Messages
 - D. The Final Rule Does Not Adopt Commenters’ Additional Recommendations Regarding Automated Telephone Messages
- IV. Prescribers’ Selection of Communication Mechanism
- V. Miscellaneous Passive Verification Issues
 - A. Active Verification Is Not Required
 - B. Concerns About Patient Manipulation
 - C. Eight-Business-Hour Time Frame Is Appropriate
- VI. Seller Alteration of Contact Lens Prescriptions and Private Label Concerns
 - A. The Final Rule Includes a Requirement for Sellers To Accept Prescription Presentation
 - B. Alteration Includes a Seller Providing a Prescriber With a Verification Request for a Non-Prescribed Manufacturer or

- Brand, but Includes an Exception for Verifying a Manufacturer or Brand That a Consumer Indicates Is on Her Prescription
- 1. The Final Rule Modifications Regarding Alteration Are Beneficial and Address Abuses of the Verification System
- 2. Comments Related to the Exception to Alteration When a Seller Provides the Manufacturer or Brand of Lenses That a Consumer Provides in Response to a Seller’s Request for That Information
- 3. Comments Regarding and Commission Guidance on Acceptable Methods for Obtaining the Brand or Manufacturer Listed on Consumers’ Prescriptions
- 4. The Commission Is Not Imposing a Recordkeeping Requirement for Sellers Related to the Exception
- C. Private Label Issues
 - 1. The Commission Adopts a Technical Amendment and Clarifies That the Only Permissible Substitution Involves Private Label Lenses
 - 2. The Commission Is Not Imposing Additional Requirements on Prescriptions for Private Label Lenses
- VII. “Directly or by Facsimile” Language Includes Use of Online Patient Portals to Present Prescriptions
- VIII. Requests for an Additional Copy of a Prescription
 - A. Benefits of an Additional Copy and the Time Period To Respond to a Request
 - B. Requirement To Maintain Records
- IX. Excessive Quantity
- X. Expiration of Contact Lens Prescriptions
 - A. Length of Contact Lens Prescriptions
 - B. Sales Using Expired Contact Lens Prescriptions
- XI. Paperwork Reduction Act
 - A. Confirmation of Prescription Release and Affirmative Consent to Digital Delivery of a Prescription
 - 1. SNPRM Burden Estimate for the Confirmation of Prescription Release
 - 2. Comments Regarding the SNPRM Estimate for the Confirmation of Prescription Release Requirement
 - 3. Estimated Additional Burden Hours for the Confirmation of Prescription Release Requirement
 - 4. Estimated Total Labor Cost Burden for the Confirmation of Prescription Release Modification
 - 5. Capital and Other Non-Labor Costs for the Confirmation of Prescription Release Requirement
 - B. Recording of Automated Telephone Messages
 - C. Total Burden for the Modifications to the Rule
- XII. Regulatory Flexibility Act
 - A. Need for and Objectives of the Rule Amendments
 - 1. Amendments Affecting Prescribers
 - 2. Amendments Affecting Sellers
 - B. Significant Issues Raised by Public Comments in Response to the IRFA, Including Any Comments Filed by the Chief Counsel for Advocacy of the Small Business Administration, and the Agency’s Response, Including Any Changes Made in the Final Rule Amendments
 - 1. Amendments Affecting Prescribers

- 2. Amendments Affecting Sellers

I. Background

A. Overview of the Contact Lens Rule

In 2003, Congress enacted the Fairness to Contact Lens Consumers Act (“FCLCA” or “Act”),¹ and pursuant to the Act, the Commission promulgated the Contact Lens Rule on July 2, 2004.² The Rule went into effect on August 2, 2004.

The Contact Lens Rule (“Rule”) promotes competition in retail sales of contact lenses by facilitating consumers’ ability to comparison shop for contact lenses. When an eye care practitioner (“prescriber”)³ completes a contact lens fitting, the Rule requires that the prescriber automatically provide the patient with a portable copy of the patient’s prescription, whether or not the patient requests it.⁴ The Rule also requires that the prescriber verify or provide such prescriptions to authorized third parties. At the same time, the Rule requires that sellers only sell contact lenses in accordance with

valid prescriptions written by licensed prescribers that were either (a) presented to the seller by the patient or a designated agent of the patient or (b) verified by direct communication with the prescriber.⁵

The Rule further sets out the information that must be included in a seller’s verification request, and directs that a prescription is only verified under the Rule if: (1) The prescriber confirms the prescription is accurate; (2) the prescriber informs the seller that the prescription is inaccurate and provides an accurate prescription in its stead; or (3) the prescriber fails to communicate with the seller within eight business hours after receiving a compliant verification request.⁶ The Rule states that if the prescriber informs the seller within eight business hours of receiving the verification request that the prescription is inaccurate, expired, or invalid, the seller shall not fill the prescription. The Rule requires that the prescriber specify the basis for the inaccuracy or invalidity of the prescription, and if the prescription is inaccurate, the prescriber must correct it.⁷ Sellers may not alter a prescription, but for private label contact lenses, may substitute identical contact lenses that the same company manufactures and sells under a different name.⁸

The Contact Lens Rule sets a minimum expiration date of one year after the issue date of a prescription with an exception based on a patient’s ocular health.⁹ The Rule also incorporates the Act’s preemption of state and local laws and regulations that establish a prescription expiration date of less than one year or that restrict prescription release or require active verification.¹⁰

B. History of the Rule

The FTC has more than three decades of regulatory and research experience regarding the optical goods industry; this history continues to inform the basis and purpose of the Contact Lens Rule and this rule review. In addition to the Rule, the Commission enforces the Ophthalmic Practice Rules (known as the “Eyeglass Rule”), initially promulgated in 1978.¹¹ Prior to the

Eyeglass Rule, surveys of optometrists found that a majority of prescribers imposed some restriction on the availability of the patient’s prescription, usually by either refusing to release prescriptions or charging an additional fee to do so.¹² Prescribers also used waivers and liability disclaimers to discourage comparison shopping, mislead consumers, and frighten them into purchasing ophthalmic goods from the prescriber.¹³ The Commission determined that these actions reduced consumers’ ability to obtain the lowest prices and hindered competition in the optical marketplace.¹⁴ To address these problems, the Eyeglass Rule required prescribers—generally, optometrists and ophthalmologists—to provide each of their patients, immediately after completion of an eye examination, a free copy of the patient’s eyeglass prescription.¹⁵

The Eyeglass Rule, however, did not encompass contact lens prescriptions. While a majority of states enacted their own statutes requiring some form of contact lens prescription release,¹⁶ many prescribers continued to withhold prescriptions for contact lenses.¹⁷ This,

2, 1978) [hereinafter Eyeglass I]. The Rule was revised in 1992, with the revisions codified at 16 CFR part 456. Ophthalmic Practice Rules, 57 FR 18822 (May 1, 1992).

¹⁵ 16 CFR 456.2 (separation of examination and dispensing). The FTC also has studied the effects of state-imposed restrictions in the optical goods industry. See FTC, “The Effects of Restrictions on Advertising and Commercial Practice in the Professions: The Case of Optometry” (1980), <https://www.ftc.gov/sites/default/files/documents/reports/effects-restrictions-advertising-and-commercial-practice-professions-case-optometry/198009optometry.pdf>.

¹⁶ By 2003, more than two-thirds of states had laws requiring some form of contact lens prescription release. H.R. Rep. No. 108–318, 108th Cong., 1st Sess. 4 (2003), at 8 (2003).

¹⁷ See *id.* at 4 (noting that “[t]he practice of optometrists withholding the prescription [for contact lenses] has limited the consumer’s ability to shop for the best price and has impacted competition”); Fairness to Contact Lens Consumers Act: Hearing Before the Subcomm. on Commerce,

Continued

¹ 15 U.S.C. 7601–7610 (Pub. L. 108–164).

² Contact Lens Rule, 16 CFR part 315 (2015).

³ Under the Rule, prescriber is defined as an ophthalmologist, optometrist, or other person permitted under State law to issue prescriptions for contact lenses in compliance with any applicable requirements established by the Food and Drug Administration. ‘Other person,’ in this context, includes dispensing opticians who are permitted under State law to issue prescriptions and who are authorized or permitted under State law to perform contact lens fitting services. 16 CFR 315.2.

⁴ The Commission also notes that apart from requiring that the contact lens fitting be complete, the FCLCA and Rule do not include any other requirements or exceptions that would permit a prescriber to withhold a patient’s contact lens prescription following a fitting. 16 CFR 315.3(a)(1). Therefore, prescribers must automatically provide patients with copies of their prescriptions following their fitting, regardless of whether patients indicate an intention to purchase contact lenses—no matter the quantity (and even an annual supply)—from their prescribers.

⁵ 16 CFR 315.5(a).

⁶ 16 CFR 315.5(b)–(c).

⁷ 16 CFR 315.5(d).

⁸ 16 CFR 315.5(e).

⁹ 16 CFR 315.6.

¹⁰ 16 CFR 315.11(a). The Rule also preempts any other state or local laws or regulations that are inconsistent with the Act or the relevant section of the Rule, to the extent of the inconsistency. 16 CFR 315.11(b).

¹¹ Final Trade Regulation Rule, Advertising of Ophthalmic Goods and Services, 43 FR 23992 (June

and other prescriber practices (such as requiring liability waivers, refusing to verify prescriptions when consumers tried to buy lenses from third-party sellers, and encouraging manufacturers not to distribute contact lenses to third-party sellers), made it challenging for consumers to obtain lenses from anyone other than their prescribers.¹⁸

According to Congress, these obstacles were rooted in an “inherent conflict of interest” in that “[u]nlike medical doctors who are prohibited from selling the drugs they prescribe, eye doctors and optometrists . . . are able to fill the contact lens prescriptions they write.”¹⁹ Third-party sellers are thus forced to compete for the sale of lenses with the individual who is writing the prescription.²⁰ To address this inherent conflict of interest and achieve freedom of choice and the benefits of competition for contact lens consumers,

Trade, and Consumer Protection of the H. Comm. on Energy and Commerce, 108th Cong. 1 (2003) [hereinafter FCLCA Subcomm. Hearing] (statement of Ami Gadhia, Consumers Union) (noting that multiple surveys of consumers in Texas had found considerable numbers were unable to obtain their contact lens prescription from their prescribers).

¹⁸H.R. Rep. No. 108–318, at 4; FCLCA Subcomm. Hearing, *supra* note 17 (statements of Howard Beales, Jonathan Coon, Ami Gadhia, Robert Hubbard, Maria Martinez, Rep. W. J. Tauzin; Peggy Venable). *See also In re Disposable Contact Lens Antitrust Litig.*, No. 94–MDL 1030–J–20A (M.D. Fla.), in which the Attorneys General of 31 states alleged that eye-care professionals engaged in an organized effort to prevent or hinder consumers from obtaining their contact lens prescriptions. The complaints alleged two conspiracies: (1) That the practitioners and their trade associations conspired to prevent the release of contact lens prescriptions to consumers, and (2) that manufacturers, practitioners, and trade associations, including the American Optometric Association, conspired to eliminate sales of contact lenses by pharmacies, mail order, and other alternative sellers. *Id.* According to the Attorneys General, the conspiracy severely restricted the supply of contact lenses available to alternative sellers, which hampered the growth of such sellers, decreased the supply of lenses to consumers, and increased the price of lenses. *Id.* The parties reached settlements, the last of which the court approved in November 2001. As part of the settlements, manufacturers agreed to sell contact lenses to alternative distribution channels.

Hatch of the United States Senate Regarding the Contact Lens Rule Rulemaking Proceeding and the Proposed Rule Set Forth in the Notice of Proposed Rulemaking (Aug. 11, 2017) (recognizing the “inherent conflict of interest” and noting that the FCLCA was made necessary by “the unique nature of the contact lens marketplace”), https://www.ftc.gov/system/files/filings/initiatives/677/public_comment_from_senators_blumenthal_and_hatch_re_contact_lens_rulemaking.pdf [hereinafter *Blumenthal Letter*].

²⁰H.R. Rep. No. 108–318, at 4; FCLCA Subcomm. Hearing, *supra* note 17 (statements of Rep. W.J. Tauzin) (noting there is a “classic conflict of interest that robs the consumers of the ability to shop competitively for the best price,” and stating that the FCLCA takes the “necessary steps to remedy this stranglehold on contact lens competition”).

Congress passed the Fairness to Contact Lens Consumers Act in 2003,²¹ and, in 2004, the Commission issued the Contact Lens Rule,²² implementing the Act.

As specified in the Act, the Rule imposes requirements on both sellers and prescribers of contact lenses. Because the use of contact lenses involves significant health issues²³ and Congress recognized that consumers may be harmed by contact lenses purchased with an expired, inaccurate, or otherwise invalid prescription,²⁴ the Act requires that contact lenses be sold only to patients with valid prescriptions, which they receive after contact lens fittings by a prescriber. The Act and the Rule only allow sales of contact lenses when a patient presents a seller with a copy of the prescription or the seller has verified the patient’s prescription with the prescriber.²⁵ Sellers also are prohibited from altering a contact lens prescription.²⁶

The Act and the Rule further impose obligations on prescribers. First and foremost, prescribers are required to release a copy of the prescription to the patient promptly upon completion of the contact lens fitting, “[w]hether or not requested by the patient.”²⁷ Prescribers also are prohibited from requiring: (1) The purchase of contact lenses as a condition of either prescription release or verification, (2) a separate payment for prescription release or verification, and (3) that the patient sign a waiver as a condition of prescription release or verification.²⁸

Additionally, prescribers are required to provide or verify a contact lens prescription when “directed by any person designated to act on behalf of the patient.”²⁹ Such verification occurs when the seller provides the prescriber with a consumer’s prescription information and: (1) The prescriber confirms that the prescription is

²¹ 15 U.S.C. 7601–7610. The FCLCA passed with a vote of 406 in favor and 12 opposed in the House, and unanimous consent in the Senate.

²² Contact Lens Rule, 69 FR 40482 (July 2, 2004) (codified at 16 CFR pt. 315). Pursuant to its congressional mandate, the FTC also issued a study of competition in the contact lens industry in 2005. *See* 2005 Contact Lens Report, *supra* note 14.

accurate, by phone, facsimile, or electronic mail; (2) the prescriber informs the seller that the prescription is inaccurate and provides the correct prescription; or (3) the prescriber does not communicate with the seller within eight business hours of the seller’s request for verification (“passive verification”).³⁰ The eight-business-hour passive verification lessens the demands on prescribers in the event a seller forwards a query about an accurate and complete prescription from a properly identified patient. It also prevents prescribers from blocking verification—and impeding consumer access to contact lenses that may be lower-priced, or sold by sellers who offer other benefits or convenience—simply by refusing to respond to verification requests.

One outcome of passive verification, however, is that, if a prescriber does not respond to a verification request containing inaccurate information or for an invalid prescription within eight business hours, the prescription is deemed verified; thus, passive verification allows for the possibility that patients can be sold lenses for which they do not have a valid prescription. Congress, when considering the FCLCA, was aware that a passive-verification regime could, in some instances, allow sellers to sell and ship contact lenses based on an invalid or inaccurate prescription, and that this could potentially lead to health risks.³¹ Congress opted for a passive-verification regime despite this concern in order “to ensure that consumers are not caught in the competitive tug-of-war between doctors and third party sellers for the sale of contact lenses.”³² It was also envisioned that prescribers would remain diligent in ensuring that patients did not receive lenses for which they had not been prescribed, since it is in both prescribers’ self-interest and the health and safety interests of their patients to prevent this from occurring.³³ In this manner, the passive-verification system was perceived, to a certain extent, to be self-enforcing, as prescribers would have both a financial interest and an ethical duty to police invalid, incorrect, or expired prescriptions.³⁴

C. Initial Request for Comments in 2015

As part of its periodic review of its rules and guides, on September 3, 2015, the Commission solicited comments on the Contact Lens Rule, seeking input on: The economic impact of, and continuing need for, the Rule; the benefits of the Rule to consumers purchasing contact lenses; the burdens the Rule places on entities subject to its requirements; the impact the Rule has had on the flow of information to consumers; the degree of industry compliance with the Rule; the need for any modifications to increase its benefits or reduce its burdens or to account for changes in relevant technology; and any overlap or conflict with the Rule and other federal, state, or local laws or regulations.³⁵ The comment period for this initial request closed on October 26, 2015. The Commission received approximately 660 comments from individuals and entities representing a wide range of viewpoints, including prescribing eye-care practitioners (ophthalmologists and optometrists), opticians and other eye-wear industry members, sellers of contact lenses (both online and brick-and-mortar), contact lens manufacturers, and consumers.³⁶

D. Notice of Proposed Rulemaking in 2016

After a review of comments, surveys, other submitted information, and its own enforcement experience, the Commission determined that the overall weight of the evidence demonstrated a need to improve compliance with the Rule's automatic prescription-release requirement, as well as a need to create a mechanism for monitoring and enforcing the Rule.³⁷ To achieve this, the Commission issued a Notice of Proposed Rulemaking ("NPRM") on December 7, 2016 that proposed to add a signed-acknowledgment requirement.³⁸ The signed-

Commission) (stating that passive verification is in many respects self-enforcing). *See also id.* (statements of Jonathan Coon, 1-800 CONTACTS) (explaining to the Committee that from their experience with an existing passive verification-system in California, doctors have motivation to block invalid-prescription sales. "So they tell us if there is any problem with the prescription, if it's expired, it's invalid, whatever the problem is with the prescription. If they can tell us, you can believe they tell us absolutely every time.").

³⁵ Contact Lens Rule Request for Comment ("RFC"), 80 FR 53272 (Sept. 3, 2015).

³⁶ Comment figures are approximations because identical comments are sometimes submitted more than once. RFC comments are available at <https://www.ftc.gov/policy/public-comments/2015/09/initiative-621>.

³⁷ Notice of Proposed Rulemaking, 81 FR 88526 (Dec. 7, 2016) [hereinafter NPRM].

³⁸ *Id.* The NPRM also proposed a technical amendment, to remove the words "private label"

acknowledgment requirement was to be triggered once the prescriber presented the prescription to the patient, and the acknowledgment form could be in either paper or electronic format. As proposed, the acknowledgment form was to be entitled "Patient Receipt of Contact Lens Prescription" ("Signed Acknowledgment"), and state, "My eye care professional provided me with a copy of my contact lens prescription at the completion of my contact lens fitting. I understand that I am free to purchase contact lenses from the seller of my choice." Prescribers would be required to maintain copies of the acknowledgment forms in paper or electronically for not less than three years.

The NPRM sought comment on this proposal as well as the following issues: The provision of additional copies of prescriptions, the amount of time for a prescriber to respond to such a request, the use of patient portals to release prescriptions, and potential modifications to address concerns about automated telephone verification calls. The sixty-day comment period for the Commission's NPRM closed on January 30, 2017.

In response to its NPRM, the Commission received over 4,000 additional comments, many from prescribers concerned about the impact of the proposed signed-acknowledgment requirement.³⁹ After considering these and other comments, the Commission determined that certain issues deserved additional discussion and examination. To obtain additional input and more fully consider commenter concerns, the Commission solicited additional comments⁴⁰ and held a public workshop on the Contact Lens Rule and the Evolving Contact Lens Marketplace on March 7, 2018. The workshop included six panels, covering issues relating to the overall contact lens marketplace, health and safety, competition, purchasing and verification, the proposed Signed Acknowledgment and consumer choice, and the future of contact lens prescribing and selling.⁴¹ In response to the Commission's request and workshop, the Commission received approximately 3,400 additional

from § 315.5(e) to conform the language of the Rule to that of the FCLCA.

³⁹ NPRM comments available at <https://www.ftc.gov/policy/public-comments/2016/10/initiative-677>.

⁴⁰ Public Workshop Examining Contact Lens Marketplace and Analyzing Proposed Changes to the Contact Lens Rule, 82 FR 57889 (Dec. 8, 2017).

⁴¹ Workshop transcripts available at <https://www.ftc.gov/news-events/events-calendar/2018/03/contact-lens-rule-evolving-contact-lens-marketplace>.

comments from a wide range of commenters, including numerous consumers and prescribers, as well as industry associations, state attorneys general, contact lens manufacturers, and contact lens sellers.⁴²

E. Supplemental Notice of Proposed Rulemaking

After reviewing the comments submitted in response to the public workshop and Notice of Proposed Rulemaking, the Commission issued a Supplemental Notice of Proposed Rulemaking ("SNPRM") on May 28, 2019 that modified its previous proposal for a Signed Acknowledgment by instituting a more flexible Confirmation of Prescription Release provision.⁴³ In addition, the SNPRM put forth new proposals to modify the Rule by: (a) Adding a definition of the term "provide to the patient a copy," to allow the prescriber to provide the patient with a digital copy of the patient's prescription in lieu of a paper copy; (b) providing forty business hours as the time period for which a prescriber must provide a prescription upon request to a person designated to act on behalf of the patient; (c) creating new message delivery and recordkeeping requirements for sellers using automated telephone verification messages; (d) amending and clarifying the prohibition on seller alteration of prescriptions; and (e) requiring that sellers provide a method that would allow patients to present their prescriptions to the seller.

The Commission requested comment on its SNPRM proposal; the sixty-day comment period closed on July 29, 2019. In response to its SNPRM, the Commission received approximately 200 unique comments (and approximately 900 comments total) from a variety of stakeholders, including prescribers and prescriber-trade organizations, contact lens manufacturers, contact lens sellers, legislators, state attorneys general, economic think tanks and academics, consumer-interest organizations, and individual consumers themselves.⁴⁴ The majority of commenters opined on the Confirmation of Prescription Release proposal, and many also commented on the Commission's new proposals regarding prescription verification and alteration. This Statement of Basis and Purpose for the Final Rule summarizes

⁴² Workshop comments available at <https://www.ftc.gov/policy/public-comments/2018/01/initiative-733>.

⁴³ Supplemental Notice of Proposed Rulemaking, 84 FR 24664 (May 28, 2019) [hereinafter SNPRM].

⁴⁴ SNPRM comments available at <https://www.regulations.gov/docket?D=FTC-2019-0041>.

the relevant comments received in response to the proposals set forth in the NPRM and SNPRM and explains the Commission's analyses and decisions to amend or not amend the Rule.

II. Final Rule Pertaining to Confirmation of Prescription Release

The following sections discuss the Confirmation of Prescription Release proposal in the SNPRM, the comments to the SNPRM in support of and opposition to the Confirmation of Prescription Release proposal, the Commission's analysis and conclusions, and the amendments to the Final Rule instituting a Confirmation of Prescription Release. Because many of the comments focused on the Commission's basis for its SNPRM proposal, and whether that basis is supported by evidence in the record, the Commission also reiterates the basis set forth in the SNPRM and discusses related comments and subsequent determinations in this Statement of Basis and Purpose for the final amended Contact Lens Rule.

The Commission's authority to modify the Rule and implement a Confirmation of Prescription Release requirement derives from the FCLCA, which directed the FTC to prescribe implementing rules, and authorized the Commission to investigate and enforce the Act in the same manner, by the same means, and with the same jurisdictional powers and duties as a trade regulation rule under the Federal Trade Commission Act.⁴⁵ Congress clearly intended that prescriptions be provided to all consumers at the completion of the contact lens fitting process.⁴⁶ Survey evidence, the record of these proceedings, and the Commission's own experience with the Rule indicate that is not occurring at anywhere near the rate Congress intended. Consequently, the Commission believes that imposing a Confirmation of Prescription Receipt requirement is critical to effectuate congressional intent to the fullest extent.⁴⁷

In a comment to the NPRM, the American Optometric Association ("AOA") contended that the Commission does not have the authority to add requirements to the Rule that are not found in the text of the FCLCA.⁴⁸

According to the AOA, because the FCLCA is a statute that "carefully enumerates specific substantive requirements but not others"—as opposed to a general grant of authority—the agency charged with administering the FCLCA "should not add additional requirements that Congress did not enact."⁴⁹

The Commission does not agree with this interpretation. As noted above, the FCLCA contains an express delegation of authority to the FTC to craft rules to carry out the Act.⁵⁰ Pursuant to this delegation, the FTC has broad rulemaking authority to implement requirements for the purpose of preventing unfair or deceptive acts or practices in or affecting commerce, including failure to provide patients with copies of their prescriptions.⁵¹ The proposed modification requiring that patients sign a Confirmation of Prescription Release is consistent with the statute and falls well within the Commission's statutory jurisdiction under the FCLCA.⁵²

A. Proposed Modifications in the SNPRM

The SNPRM proposed to amend the NPRM's signed-acknowledgment proposal by replacing that requirement with a shorter and more flexible Confirmation of Prescription Release provision. Rather than requiring, as proposed in the NPRM, that prescribers request that each contact lens patient sign a form with mandatory language

⁴⁹ *Id.*

⁵⁰ 15 U.S.C. 7607.

⁵¹ See *id.* (directing the FTC to "prescribe rules pursuant to section 57a of this title to carry out [the FCLCA]"); 15 U.S.C. 57a(a)(1)(B) (authorizing the FTC to prescribe "rules which define with specificity acts or practices which are unfair or deceptive acts or practices in or affecting commerce," including rules that contain "requirements prescribed for the purpose of preventing such acts or practices"); 15 U.S.C. 7601(a) (mandating that when a prescriber completes a contact lens fitting, the prescriber "whether or not requested by the patient, shall provide to the patient a copy of the contact lens prescription").

⁵² 15 U.S.C. 7601(a), 7607. AOA's stance that a statute's enumeration of some requirements but not others necessarily signifies that Congress deliberately excluded the non-included requirements is also incorrect in the rulemaking context. It is well established that the canon of statutory interpretation *expressio unius est exclusio alterius* ("the expression of one is the exclusion of others") does not have force in the administrative setting, where Congress is presumed to have left to reasonable agency discretion questions that it has not directly resolved. See *Adirondack Med. Ctr. v. Sebelius*, 740 F.3d 692, 697 (D.C. Cir. 2014); *St. Marks Place Hous. Co. v. U.S. Dep't of Hous. & Urban Dev.*, 610 F.3d 75 (D.C. Cir. 2010); *AFL-CIO v. Chao*, 409 F.3d 377 (D.C. Cir. 2005); *Mobile Comm'ns Corp. of Am. v. FCC*, 77 F.3d 1399, 1404–05 (D.C. Cir. 1996); see also *Farrell v. Pompeo*, No. 17–490, 2019 U.S. Dist. LEXIS 205831, *25–27 (D.C. Cir. Nov. 27, 2019).

acknowledging receipt of the prescription and an understanding of the right to purchase lenses elsewhere,⁵³ in the SNPRM the Commission proposed requiring prescribers instead to do one of the following:

(A) Request that the patient acknowledge receipt of the contact lens prescription by signing a separate statement confirming receipt of the contact lens prescription;

(B) Request that the patient sign a prescriber-retained copy of a contact lens prescription that contains a statement confirming receipt of the contact lens prescription;

(C) Request that the patient sign a prescriber-retained copy of the sales receipt for the examination that contains a statement confirming receipt of the contact lens prescription; or

(D) If a digital copy of the prescription was provided to the patient (via methods including an online portal, electronic mail, or text message), retain evidence that such prescription was sent, received, or made accessible, downloadable, and printable.⁵⁴

The Commission's proposal provided sample language for confirmation options (A), (B), and (C),⁵⁵ but also allowed prescribers to craft their own wording of the signed confirmation for these options if they so desired. Unlike the NPRM's signed-acknowledgment proposal, which applied to all prescribers, the SNPRM's Confirmation of Prescription Release proposal only applied to prescribers with a financial interest in the sale of contact lenses.⁵⁶

B. Basis for SNPRM Confirmation of Prescription Release Proposal

The Commission explained in the SNPRM that it based its Confirmation of Prescription Release proposal on a variety of evidence, including: Multiple consumer surveys consistently showing prescriber non-compliance with, and lack of consumer awareness of, the Rule's prescription-release requirement; numerous accounts of prescribers' failure to release prescriptions; the

⁵³ NPRM, 81 FR at 88559 (The form would have stated: "My eye care professional provided me with a copy of my contact lens prescription at the completion of my contact lens fitting. I understand I am free to purchase contact lenses from the seller of my choice.")

⁵⁴ SNPRM, 84 FR at 24667.

⁵⁵ The Commission said it had no wish to burden prescribers with the task of formulating adequate confirmation language if they would prefer to use a sentence from the language the Commission previously proposed: "My eye care professional provided me with a copy of my contact lens prescription at the completion of my contact lens fitting." The Commission said use of such language would satisfy the proposed requirement. SNPRM, 84 FR at 24683.

⁴⁷ See H.R. Rep. No. 108–318, at 6 (2003) ("The goal of this legislation is to allow consumer access to their contact lens prescriptions. . . .").

⁴⁸ American Optometric Association (NPRM Comment #3830).

persistently high number of verifications, many of which would be unnecessary were consumers in possession of their prescriptions; the regulatory structure of the contact lens market, which requires a consumer to obtain lenses pursuant to a prescription while permitting prescribers to sell what they prescribe; and the lack of credible empirical evidence rebutting or contradicting the evidence that prescribers are not automatically releasing prescriptions, and that consumers are not fully aware of their rights.⁵⁷ The Commission also noted that the potential benefit of increasing the number of patients in possession of their prescriptions is substantial for consumers, sellers, and prescribers: Namely, increased flexibility and choice for consumers; a reduced verification burden for prescribers and sellers; and a reduced likelihood of errors associated with incorrect, invalid, and expired prescriptions and, consequently, improved patient safety.⁵⁸ The Commission further explained that it faces serious challenges enforcing the Rule and monitoring compliance because it often comes down to the word of the patient against the word of the prescriber, which might require the Commission to issue administrative subpoenas and conduct investigational hearings—which could be resource-intensive for the Commission and costly, time-consuming, and disruptive for prescribers—in order to investigate each potential violation.⁵⁹ The Commission thus concluded that some form of retained documentation is necessary to improve its ability to enforce and monitor prescriber compliance with the prescription-release requirements.⁶⁰

The Commission also determined that signage—an alternative suggested by NPRM commenters—was not an appropriate or effective means of ensuring that patients receive their prescriptions as required by law.⁶¹ Lastly, the Commission determined that despite commenter concerns, the burden to obtain signatures and retain records would be relatively minimal and outweighed by the benefits.⁶² The Commission, however, was receptive to an NPRM commenter recommendation to modify the signed-acknowledgment proposal in order to further reduce the burden and allow for greater

flexibility,⁶³ and thus the SNPRM's Confirmation of Prescription Release proposal included three new options for prescribers to obtain or establish proof of prescription release and exempted prescribers who lacked a financial interest in the sale of contact lenses.⁶⁴ According to the Commission, the Confirmation of Prescription Release proposal retained most of the benefits of the NPRM's signed-acknowledgment proposal, but would be less disruptive and burdensome for prescribers.⁶⁵

C. Comments on the Confirmation of Prescription Release Proposal and the Basis for Such Proposal

Commenter response to the Commission's proposal in the SNPRM was varied. Some commenters applauded the proposed amendments as improvements to the prior signed-acknowledgment proposal, and as a balanced response to competing interests of consumers, sellers, and prescribers.⁶⁶ Some, for instance, praised the confirmation proposal as an attempt to increase consumer access to prescriptions while making it easier and more efficient for prescribers to adhere to the patient-acknowledgment requirement by allowing flexible methods for obtaining the patient's signature.⁶⁷ Other commenters,

⁶³ The recommendation was submitted by the National Association of Optometrists and Opticians in its comments to the Contact Lens Workshop and the NPRM, *see id.* at 24680 (citing National Association of Optometrists and Opticians (WS Comment #3208)).

⁶⁴ SNPRM, 84 FR at 24683.

⁶⁵ *Id.*

⁶⁶ R Street Institute (SNPRM Comment #15) (“The Commission’s proposal is both reasonable and not overly burdensome.”); Grimm (SNPRM Comment #36) (“There is no doubt that the modified Contact Lens Rule should be embraced by prescribers, sellers, and consumers as an improvement to consumer products trade rules.”); Americans for Tax Reform (SNPRM Comment #72) (“These changes strike the correct balance between promoting the free market and protecting important consumer rights.”); Lens.com (SNPRM Comment #85) (“We believe you have struck the correct balance”); Coalition for Contact Lens Consumer Choice (SNPRM Comment #89) (“What the FTC is proposing is a common sense, minimally-burdensome rule that optometrists, ophthalmologists, and consumers alike can and should support.”); Taxpayers Protection Alliance (SNPRM Comment #118) (“Although we are often critical of government overreach and work hard to make government smaller, we believe that the FTC’s proposed Contact Lens Rule is a government rule that works for taxpayers and consumers and creates an open transparent contact lens market in the US where taxpayers have real choice and there is real competition in the marketplace.”); Attorneys General of 27 States (SNPRM Comment #139) (“We believe the proposed modifications in the SNPRM are reasonable modifications that balance the interests of consumers, eye care professionals, and the eye care industry.”).

⁶⁷ Anonymous (SNPRM Comment #63); Rawson (SNPRM Comment #68) (“This proposed rule

however, asserted that the proposal watered down prescriber obligations and would thus be less effective than the NPRM's signed-acknowledgment proposal in ensuring that consumers receive their prescriptions and are aware of their rights.⁶⁸ And several commenters, primarily contact lens prescribers, stated that despite the increased flexibility, the Confirmation of Prescription Release proposal still created too much of a burden for prescribers, and they criticized the Commission's approach and the evidence relied upon.⁶⁹

1. Comments About the Need for the Confirmation of Prescription Release and Whether Prescribers Are Complying With the Rule's Automatic Prescription Release Requirement

a. Survey Evidence as Proof of Non-Compliance

Many of the SNPRM comments focused on the need for a Signed Acknowledgment or Confirmation of Prescription Release, and on whether evidence in the record supports the Commission's determination that prescribers are not complying with the Rule's prescription-release requirement. Several commenters, such as 1–800 CONTACTS, Consumer Action, and the Attorneys General of Twenty-Seven States, contended (as they did in comments responding to either the NPRM, the Contact Lens Workshop, or both)⁷⁰ that prescriber noncompliance remains a problem, and that millions of Americans are not receiving their prescriptions after a contact lens fitting.⁷¹ The Attorneys General of Twenty-Seven States, for instance, commented that consumers in their states continue to report that prescribers are failing to automatically provide patient prescriptions in writing.⁷² Likewise, the online seller 1–800 CONTACTS submitted a new survey of consumers, conducted for it by the

allows prescribers the ability to model the rule to best fit their practice, but still give the consumers the protection and the knowledge they need.”).

⁶⁸ Consumer Reports (SNPRM Comment #133); 1–800 CONTACTS (SNPRM Comment #135).

⁶⁹ American Optometric Association (SNPRM Comment #96); Reeder (SNPRM Comment #55) (even signature on prescription or patient receipt is burdensome); Kegler (SNPRM Comment #99) (proposal will still place financial and administrative burdens on prescribers).

polling firm Dynata (formerly known as Survey Sampling International), showing that prescriber compliance has not markedly improved, despite the attention focused on automatic-prescription-release obligations since the FTC initiated its rule review in 2015.⁷³ According to the new survey, nearly 49% of contact lens patients report that their prescribers did not automatically give them their prescription after their eye examination.⁷⁴ Of those who did not receive their prescription automatically, a little more than half received it after requesting it, while 43% never received their prescription.⁷⁵ Extrapolating this data to the general population of 45 million U.S. contact lens users⁷⁶ would mean there are approximately 22 million annual violations of the Contact Lens Rule, and that each year more than 9.4 million contact lens users do not receive their prescriptions.⁷⁷ The 2019 consumer survey data is consistent with several prior surveys of contact lens users conducted in 2014, 2015, 2016, and 2017 on behalf of 1–800 CONTACTS and the consumer rights organization Consumer Action,⁷⁸ as well as a survey of eyeglass wearers (who, per the FTC’s Eyeglass Rule, are also to automatically receive their prescriptions following a refractive eye exam) conducted on behalf of Warby Parker in 2015.⁷⁹

Some commenters also pointed to previously-submitted evidence indicating that many U.S. contact lens users are still unaware of their right to automatically receive their prescriptions and take them elsewhere for filling.⁸⁰

⁷³ 1–800 CONTACTS (SNPRM Comment #135).

⁷⁴ 1–800 CONTACTS (SNPRM Comment #135, Ex. B). The poll was of 1011 contact lens users between the ages of 18–49, and the relevant questions asked were “At your last eye exam, did the eye care provider provide you with a copy of your contact lens prescription?” and “In order to obtain a copy of your prescription, did you have to ask your eye care provider for it?” Approximately 41% said they received it automatically, 49% said they did not, and 10% did not recall or were unsure.

⁷⁵ *Id.*

⁷⁶ Centers for Disease Control, Healthy Contact Lens Wear and Care, Fast Facts, <https://www.cdc.gov/contactlenses/fast-facts.html>.

⁷⁷ This is based on the estimate—long used to calculate the financial burden of the Rule for Paperwork Reduction Act purposes—that consumers obtain one contact lens prescription per year. See, e.g., SNPRM, 84 FR at 24692; Paperwork Reduction Act Proposed Collection; Comment Request, 81 FR at 31940; Paperwork Reduction Act Proposed Collection; Comment Request, 78 FR at 9392.

⁷⁸ SNPRM, 84 FR at 24671–72.

⁷⁹ NPRM, 81 FR at 88531.

⁸⁰ Coalition for Contact Lens Consumer Choice (SNPRM Comment #89); Consumer Action (SNPRM Comment #101); 1–800 CONTACTS (SNPRM Comment #135).

While commenters to the SNPRM did not submit updated polling data on consumer awareness, several cited previously-submitted data indicating that between 46–60% of consumers are unaware that under federal law a prescriber is required to provide the patient with a copy of their prescription after they complete their contact lens exam.⁸¹

Another commenter, the National Hispanic Medical Association (“NHMA”), noted that polls show that Hispanic patients are disproportionately impacted by prescribers’ failure to release prescriptions, and are less likely to understand their rights under the FCLCA.⁸² According to the NHMA, “Our community continually has been victimized and denied their prescriptions by prescribers and doctors at a higher rate than most other Americans. We strongly believe that more must be done to ensure patients are informed of their rights and given copies of their prescriptions.”⁸³

A number of SNPRM commenters, however, were critical of the polling data provided to, and relied upon by, the Commission. The American Academy of Ophthalmology (“AAO”) asserted that data showing prescriber non-compliance consisted of “industry-sponsored surveys” and was therefore unreliable.⁸⁴ AAO added that it is “unaware of issues” with prescribers failing to release prescriptions, and stated its members “know that ophthalmology has a strong record of compliance.”⁸⁵ Likewise, the American Society of Cataract and Refractive Surgery (“ASCRS”) asserted that there is no independent third-party evidence suggesting physicians are not providing prescriptions to patients, and that the Commission is basing compliance on “survey polls sponsored by stakeholders with financial interest in the sale of contact lenses.”⁸⁶ According to the ASCRS, before amending the Rule, the Commission should obtain data from a disinterested organization.⁸⁷

The AOA was highly critical of polling data supplied by 1–800

⁸¹ Consumer Action (SNPRM Comment #101) (“Our survey showed a fundamental lack of understanding by consumers about their automatic right to receive a copy of their prescription”); 1–800 CONTACTS (SNPRM Comment #135); see SNPRM 84 FR at 24672 (discussing polls of consumer knowledge of their rights).

⁸⁷ *Id.*

CONTACTS, and stated that since the online seller, in its advertising, encouraged consumers to “skip the trip to the optometrist” and instead renew prescriptions online (via telemedicine), the online seller has a demonstrated bias against optometrists that taints the material it submits.⁸⁸ The AOA further stated that some consumer survey findings may be misleading because it is “very typical” for consumers to request their prescriptions before their contact lens fitting is complete, and thus before prescribers are obligated—under the Rule and the FCLCA—to release them to consumers.⁸⁹ Therefore, some consumers might indicate on a survey that they were required to ask for their prescriptions when, in fact, they asked before they were entitled to receive them. As support for this contention, AOA stated that it surveyed some of its members and found that 91.7% “indicated that there are times when a patient will ask for his/her prescription prior to the finalization of the contact lens fitting.”⁹⁰

The Commission recognizes that some consumers may think they had to ask for their prescriptions when, in fact, they would have received them when their fittings were complete. However, the AOA did not suggest, nor provide any data or information, as to how often this may occur, and thus how much it might skew the results of consumer surveys. As a result, the Commission is unable to estimate what portion of the 49% who stated they did not automatically receive their prescription—in the most recent survey—gave that response because they misunderstood when they were entitled to receive their prescription.⁹¹

⁸⁸ American Optometric Association (SNPRM Comment #96).

⁸⁹ *Id.*

⁹⁰ *Id.* The AOA reported this result in its comment, and it stated that its survey was of 629 prescribers, but did not provide the FTC with the underlying survey data, information about the manner in which the survey was conducted, how the 629 prescribers were selected, or the specific questions that were asked.

⁹¹ The Commission also notes that eyeglass patients are entitled to their prescriptions immediately following their exam (since they do not have to wait for a fitting), and thus would rarely ask for their prescriptions before they are entitled to them, and yet two 2015 surveys of eyeglass wearers—one on behalf of Warby Parker, the other for 1–800 CONTACTS—found that 47% and 66%, respectively, of eyeglass patients who visited an optometrist reported that they were not automatically provided a prescription at the end of their exam. NPRM, 81 FR at 88531 (citing Warby Parker (Comment #813 on the Ophthalmic Practice Rule), available at <https://www.ftc.gov/policy/public-comments/initiative-624>); 1–800 CONTACTS (RFC Comment #568, Ex. B). This would seem to indicate that most consumer reports that they did not receive their prescriptions are not

Moreover, even if the Commission were to disregard evidence of consumers who obtained their prescriptions only after asking for them, five consumer surveys from 2015 to 2019 (six if the Warby Parker eyeglass wearers' survey is included) indicate that between 21%–36% of consumers—approximately 9.5 to 16.2 million contact lens users each year—did not receive their prescriptions at all after getting fitted for their lenses.⁹² This level of non-compliance on its own supports the Commission's recommendation.

As for commenter criticism that consumer surveys were submitted by interested parties, the Commission reiterates what it stated in the SNPRM: while cognizant of the interests of submitting parties, the Commission, whenever possible, examines the underlying survey data and methodology to gauge a survey's usefulness and considers factors such as how many people are queried, how the questions are phrased, and whether the surveys are conducted in-house or by independent and established third-party

based on a misunderstanding of when they are supposed to receive them.

⁹² This approximation is based on the current estimate that there are 45 million contact lens users in the United States. Centers for Disease Control, Healthy Contact Lens Wear and Care, Fast Facts, <https://www.cdc.gov/contactlenses/fast-facts.html>. The results from the individual surveys are as follows: (1) June 2019 survey by Dynata on behalf of 1–800 CONTACTS of 1011 contact lens users found that 21% said they never received their prescriptions (1–800 CONTACTS (SNPRM Comment #135)); (2) January 2017 survey by Caravan ORC International on behalf of Consumer Action of 2018 adults found that 31% of contact lens users said that at their last eye exam, their doctor did not provide them with a paper copy of their prescription (Consumer Action (NPRM Comment #3721)); (3) December 2016 survey of 1000 contact lens users by Survey Sampling International (“SSI”) on behalf of 1–800 CONTACTS found that 24% of consumer respondents said they did not receive their prescription (1–800 CONTACTS (NPRM Comment #3898)); (4) October 2015 SSI survey of 500 contact lens users and 303 eyeglass users on behalf of 1–800 CONTACTS found that 36% of contact lens users and 39% of eyeglass wearers said they did not receive their prescription (1–800 CONTACTS (RFC Comment #568, Ex. B)); (5) May 2015 SSI survey of 2000 contact lens wearers found that 34% said they did not receive their prescription (1–800 CONTACTS (RFC Comment #568, Ex. C)); and (6) November 2014 SSI survey of 2000 contact lens wearers found that 34% said they did not receive their prescription (1–800 CONTACTS (RFC Comment #568, Ex. C)). As noted in the SNPRM, the manner in which a few of the questions were phrased in the 2014 and 2015 surveys raised some Commission concerns, since some questions were leading, lacked an “I don't know” response option, and used a term—“hard copy”—which not all consumers may understand. The more recent surveys represented an improvement because they included an option for respondents to acknowledge that they do not recall whether they received their prescriptions, and used the term “paper copy” rather than “hard copy.” SNPRM, 84 FR at 24672.

polling firms.⁹³ The Commission also recognizes that all surveys may have methodological limitations, and, in this instance, does not treat any one survey as controlling. The Commission, however, also recognizes that multiple surveys conducted by different sources at different times with similar results bolster the credibility of each individual survey, as does the fact that in this matter, one survey, submitted by Consumer Action and conducted by the third-party polling firm Caravan ORC International, is not from a party with a direct financial stake in the contact lens industry.⁹⁴

The Commission also notes that despite multiple opportunities and requests for comment since 2015, the Commission has yet to find or receive any reliable consumer-survey data rebutting or contradicting the submitted survey findings, or establishing that consumers consistently receive their prescriptions. The only empirical evidence of prescriber compliance in the record is a survey of fifty-seven “high volume” prescribers submitted by AOA in response to the NPRM, which found that 93% responded “yes” when asked, “Do you follow Federal law and provide patients with a copy of their contact lens prescription upon completion of a contact lens fitting?”⁹⁵ For the reasons stated in the SNPRM,⁹⁶ the Commission does not accord this survey significant weight, and finds that it does not counter the multiple consumer surveys conducted over a number of years showing prescriber non-compliance. The Commission accords the empirical data from multiple consumer surveys significant weight in establishing that a substantial percentage of prescribers are not complying with the automatic-

⁹³ SNPRM, 84 FR at 24672.

⁹⁴ The AOA had previously noted, in response to the NPRM, that Consumer Action has received corporate financial support from, among others, 1–800 CONTACTS. *Id.* Consumer Action, however, is a long-established non-profit consumer advocacy organization without a financial interest in the outcome of this Rule review.

⁹⁵ SNPRM, 84 FR at 24672; American Optometric Association (WS Comment #3303, Ex. B). This survey appears to have been conducted by the AOA itself rather than an outside polling firm. It is not clear from the AOA's submission how the fifty-seven optometrists were selected for the survey, what it means to be a “high volume” optometrist, or why high-volume optometrists were chosen.

⁹⁶ SNPRM, 84 FR at 24673 (noting concerns about the small sample size, lack of detail as to how prescriber respondents were recruited, and that the way the question is phrased allows prescribers to truthfully answer that they provide patients with a copy of their prescription even if they do not do so for every patient, and even if they only do so when the patient requests one).

prescription-release provision of the Rule.

Apart from the empirical data discussed above, none of the commenters submitted new evidence relating to prescriber compliance. Many individual prescribers, however, continue to comment that they always comply with the requirement, as do all the prescribers they know, and therefore they believe that the Commission is looking to solve a non-existent problem.⁹⁷ Some prescribers also reiterated that, in their experience, consumers are well aware that they can buy lenses elsewhere so there is no need to educate them further about their rights.⁹⁸ And a few prescribers opined that the requirement was a “waste of time” because, in their experience, consumers would rather not have a copy of their prescription and know that they can request a copy whenever they want.⁹⁹

The Commission has considered these comments but does not believe they establish that prescribers, on the whole, are complying with the automatic-release requirement, or that consumers are fully aware of their prescription-portability rights. Any prescriber may indeed comply with the Rule but cannot speak for other eye care providers in the United States, nor for contact lens consumers.¹⁰⁰ In addition, several previous comments from prescribers and prescriber organizations who assert that they comply with the Rule actually revealed that many prescribers do not fully understand or comply with the Rule's requirement that prescriptions be provided “whether or not requested by the patient.”¹⁰¹

The Commission does not accord any weight to the comments that consumers do not want their prescriptions. As

⁹⁷ See, e.g., Abert (SNPRM Comment #20); Hyndman (SNPRM Comment #21) (“every OD I know follows” the FCLCA requirements); Fair (SNPRM Comment #26) (“I have ALWAYS and will continue to comply fully with the prescription release requirements of the 2003 Fairness to Contact Lens Consumers Act.”); Hughes (SNPRM Comment #113) (most optometrists comply); Ridder (SNPRM Comment #720) (every patient gets their prescription whether they order or ask for it or not).

⁹⁸ Abert (SNPRM Comment #20); Jones (SNPRM Comment #48).

⁹⁹ Sikes (SNPRM Comment #114); Morey (SNPRM Comment #142).

¹⁰⁰ By one estimate, there are approximately 43,000 optometrists and 16,700 ophthalmologists in the U.S. FTC, The Contact Lens Rule and the Evolving Contact Lens Marketplace, Panel I: Overview of the Contact Lens Marketplace Tr. at 6 (Mar. 7, 2018), https://www.ftc.gov/system/files/documents/public_events/1285493/panel_i_overview_of_the_contact_lens_marketplace.pdf [hereinafter CLR Panel I Tr.].

¹⁰¹ See SNPRM, 84 FR at 24673–74, discussing how a number of prescribers commented that they always offer prescriptions to consumers, or provide them on request.

evidenced by the numerous NPRM comments from consumers urging the Commission to take action to ensure they are given their prescriptions, it cannot be doubted that many consumers have a compelling desire to have them.¹⁰² And more importantly, Congress made the determination that prescribers must provide patients with their prescriptions automatically, “whether or not requested by the patient.”¹⁰³

b. Lack of Consumer Complaints as Evidence of Compliance

Some commenters reiterated the argument—raised and discussed in some detail in the SNPRM¹⁰⁴—that the lack of consumer complaints to the FTC about prescriber non-compliance is evidence that prescribers are releasing prescriptions as required.¹⁰⁵ In the SNPRM, the Commission explained that it did not equate the lack of complaints with compliance because based on its experience, the vast majority of injured or impacted consumers do not register complaints with the government and, for various reasons, even fewer are likely to file a formal complaint about a prescriber’s failure to release their prescription.¹⁰⁶ The Commission also noted that more than fifty consumers submitted comments to the NPRM recounting personal stories of prescribers withholding their prescriptions, yet none of these commenters had previously registered complaints with the FTC.¹⁰⁷

In response, the AOA commented that if complaints to the FTC are not a good bellwether of prescriber compliance because consumers are unlikely to file formal complaints, the FTC should simplify and improve its complaint-reporting system.¹⁰⁸ The AOA deemed it unfair for the Commission to rely on

consumer survey data as evidence of prescribers’ failure to release prescriptions, but not rely on the absence of consumer complaints as evidence that prescribers are automatically providing prescriptions.¹⁰⁹ The AOA stated the Commission should make an effort to make consumer complaint data—or lack thereof—more representative by providing a dedicated FCLCA complaint line for contact-lens-related issues.¹¹⁰ At the same time, however, the AOA stated that since “it is very typical” for patients to ask for their prescription before their contact lens fitting is complete, consumer complaints cannot necessarily be viewed as accurate indications of non-compliance.¹¹¹

The Commission does not find these arguments persuasive. As noted in the SNPRM, the Commission has gleaned, through its extensive experience with consumer complaints and deceptive practices, that the vast majority of injured or impacted consumers do not file complaints with the government.¹¹² And with the exception of the Telemarketing Sales Rule (often referred to as “Do Not Call”), consumer complaints about FTC rule violations are rarer still, perhaps because they require that consumers know what an

¹⁰⁹ *Id.*

¹¹⁰ *Id.*

¹¹¹ *Id.*

¹¹² SNPRM, 84 FR at 24675. Consumer reticence to complain, particularly to a government entity, is well documented. As one example, an FTC survey revealed that in 2017 there were an estimated 61.8 million incidents of fraud in the United States with approximately 40 million individual victims and average losses of \$100 or more, yet the FTC received just 1.2 million complaints of fraud from consumers, approximately 1.9% of all incidents. Keith B. Anderson, FTC, “Mass Market Consumer Fraud in the United States, A 2017 Update,” 24, 56 (Oct. 2019); FTC, “Consumer Sentinel Network Data Book 2017,” Number of Reports by Type, <https://www.ftc.gov/site-information/open-government/data-sets#csn>. It is likely these figures actually overstate the percentage of frauds reported to the FTC, since the FTC’s fraud surveys are limited to specific types of fraud, while there is no such limitation on complaints of fraud from consumers. See also Keith B. Anderson, FTC, “Consumer Fraud in the United States: An FTC Survey” 80 (2004), <http://www.ftc.gov/reports/consumer-fraud-united-states-ftc-survey>, (indicating that only 8.4% of U.S. fraud victims complained to an official source, with only 1.4% complaining to the FTC); Marc A. Grainer et al., “Consumer Problems and Complaints: a National View,” 6 Advances in Consumer Res. 494 (1979) (noting that “only a small, vocal minority of consumers complain about the problems they experience,” and even fewer (less than 10% of complaints) complain to the government), <http://acrwebsite.org/volumes/9603/volumes/v06/NA-06>; John Goodman & Steve Newman, “Understand Customer Behavior and Complaints,” Quality Progress, Jan. 2003, at 51 (finding that for problems that resulted in a relatively minor inconvenience or a small loss of money, only 3% of consumers complained), http://web.ist.utl.pt/~ist11038/CD_Casquilho/PRINT/qp0103goodman.pdf.

FTC rule specifies and how it has been violated.¹¹³ While the Commission continues to regard consumer complaints as valuable and informative, they often represent the tip of the iceberg.

Furthermore, for reasons discussed in detail in the NPRM, the Commission does not believe its complaint-reporting system bears principal responsibility for the shortage of complaints about prescriber violations of the Contact Lens Rule.¹¹⁴ While the FTC does not have a dedicated complaint system solely for FCLCA violations, as sought by the AOA, the FTC Complaint Assistant is configured to capture and report all contact lens-related complaints, whether they originate from consumers, prescribers, sellers, or others.¹¹⁵

More to the point, multiple surveys have established that a high percentage of contact lens wearers (46–60%, according to submitted data) do not realize they are entitled to receive their prescription,¹¹⁶ and thus would not be aware that an incident about which they should complain had occurred. Many other consumers might be unaware of where to direct a complaint when they do not receive a prescription. Even consumers who are aware that they have a right to their prescription, and know they can file a complaint with the FTC, may be unlikely to file one if they ultimately receive their prescription *after they have asked their provider for it*. From the consumers’ perspective, they have resolved their problem and may perceive little benefit to themselves from filing a complaint with the government, even if the method for filing one was more streamlined or convenient. Consumers may also not want to risk antagonizing their providers or subjecting them to legal penalties. Thus, for evaluating Contact Lens Rule compliance, the Commission has considered the low rate of consumer complaints filed with the FTC’s Complaint Assistant, but remains convinced this is less probative of the

¹¹³ See generally, FTC, “Consumer Sentinel Network Data Book 2017,” Number of Reports by Type, <https://www.ftc.gov/site-information/open-government/data-sets#csn>. FTC, “Consumer Sentinel Network Data Book for January–December 2016” (2017), https://www.ftc.gov/system/files/documents/reports/consumer-sentinel-network-data-book-january-december-2016/csn_cy-2016_data_book.pdf.

¹¹⁴ NPRM, 81 FR at 88554–55.

¹¹⁵ The Commission also notes that if, as the AOA asserts, some consumers would complain that they did not receive their prescriptions before they were, in fact, entitled to them, creating a dedicated system for FCLCA complaints would not make the number of complaints any more or less reflective of prescriber compliance.

scope of the problem than other evidence.¹¹⁷

c. Number of Verifications as Evidence of Non-Compliance With the Automatic Prescription Release Requirement

In the SNPRM, the Commission noted that it would accord the number of verifications less weight than it had in the NPRM as evidence of prescriber non-compliance out of a recognition that some consumers—even if in possession of their prescription—may find it easier to type in their specifications than present a prescription to the seller, and because some online contact lens sellers do not have a mechanism for consumers to present their prescriptions.¹¹⁸ In its comment to the SNPRM, the AOA contended that the high number of verifications should not be accorded *any* weight at all for those reasons. As additional support for this contention, the AOA cited internal prescriber complaint data showing that the percentage of prescriber complaints about “problematic verification calls” has increased from roughly 6% to 17% in the past four years; it attributed much of this increase to the emergence of an online seller that does not permit patient prescription presentation.¹¹⁹ According to the AOA, the increase in complaints about verification, and the high percentage of such complaints about the online seller, demonstrate that a “high volume of verification calls are occurring based on a prescription that was never written,” and therefore the number of verification calls is “simply not an appropriate measure for assessing contact lens prescription requirements and should be afforded no weight.”¹²⁰

The Commission is aware of the issues raised by the AOA, but still believes that the high number of verifications is an indication that many consumers are not receiving their prescriptions from their prescribers. While a few new online sellers do not permit prescription presentation, these sellers’ share of the overall contact lens sales is still quite small, even if their share of prescriber complaints, according to the AOA, is disproportionately large.¹²¹ Sellers with

far greater sales, such as 1–800 CONTACTS and Walmart, actively encourage consumers to present their prescriptions, and 1–800 CONTACTS has even at times offered consumers discounts for doing so, because it is faster and less expensive than verification.¹²² Yet despite that encouragement, roughly 73% of overall sales by third-party sellers continues to occur via verification.¹²³ Therefore, while the Commission will accord the high number of verifications less weight than it did in the NPRM, the Commission cannot dismiss its significance altogether as an indicator that consumers are not always provided their prescriptions, and will consider it as one of several factors in weighing the evidence of non-compliance in the record. The Commission also notes that even if the high number of verifications were disregarded altogether, the Commission’s overall assessment of prescriber compliance, and the need for Rule modifications, would not change.

2. Comments About the Need To Improve the Commission’s Ability To Monitor Compliance and Enforce the Rule

Several commenters focused on the need to create an auditable record that would enable the Commission to monitor compliance and better enforce the automatic-release provision.¹²⁴ One

See Fed. Trade Comm’n, The Contact Lens Rule and the Evolving Contact Lens Marketplace, Panel IV: Examining the Verification Process Tr. at 17 (Mar. 7, 2018), https://www.ftc.gov/system/files/documents/public_events/1285493/panel_iv_examining_the_verification_process.pdf [hereinafter CLR Panel IV Tr.] (statement of Cindy Williams, 1–800 CONTACTS General Counsel). ¹²⁴ Bosley (SNPRM Comment #58); Coalition for Contact Lens Consumer Choice (SNPRM Comment #89); National Hispanic Medical Association (SNPRM Comment #146).

commenter, the Coalition for Contact Lens Consumer Choice, stated the Confirmation of Prescription Release proposal gives prescribers more leeway to design a system of confirmation of prescription release, but “the important thing is that prescribers are still required to have patients affirmatively acknowledge release. . . . This is critical to increase enforcement of the law and to ensure that bad actors are identified quickly without inconveniencing those who are obeying the law.”¹²⁵ The commenter Citizen Outreach agreed, stating that the only way to ensure compliance with automatic release is by requiring consumers to sign a confirmation, and suggested that failing to require a consumer’s signed confirmation would be a loophole “large enough for ‘bad actors’ to drive a truckload of contact lenses through.”¹²⁶ Likewise, the Attorneys General of Twenty-Seven States commented that the proposed Confirmation of Prescription Release modifications “strengthen the Commission’s ability to verify compliance with the CLR [which] ensures more contact lens consumers have the necessary information to make informed decisions, spurring competition and consumer choice.”¹²⁷

Other commenters, however, felt that the FTC already has sufficient mechanisms to enforce the Contact Lens Rule, and should bring enforcement actions against so-called “outliers” who are violating the Rule, rather than imposing new requirements on all contact lens prescribers.¹²⁸ Some suggested that the Confirmation of Prescription Release requirements should be imposed only on those found to be violating the prescription-release requirement.¹²⁹ “By refocusing these ideas as penalties, rather than mandates,” according to AAO, “the FTC can ensure that they are not inflicting burdens on prescribers that have a record of compliance with the prescription release requirement in the

¹²¹ 1–800 CONTACTS accounts for approximately 10% of overall retail contact lens sales in the United States, and as much as 60–65% of online sales. The next closest online competitor has less than a quarter of the sales of 1–800 CONTACTS.

CLR.”¹³⁰ AOA believes that the FTC already has sufficient authority and investigative tools at its disposal, and suggested the Commission could use its ability to issue administrative subpoenas to investigate prescribers who might be violating the Rule.¹³¹ One prescriber also commented that he was skeptical that prescribers who currently disregard the prescription-release requirement would comply with the confirmation requirement,¹³² a concern previously raised and discussed in the SNPRM.¹³³

Some commenters also criticized the FTC for, in their words, trying to acquire new authority to target small and mid-sized businesses, and stated this ran counter to the current trend for Congress and other federal agencies to “recognize the need to alleviate the administrative burden that federal programs place on physician practices.”¹³⁴ And several commenters asserted that the Commission should not focus on enforcing requirements against prescribers while contact lens sellers, in their view, are violating Rule provisions in far greater numbers.¹³⁵

After considering these comments, the Commission continues to believe that some form of retained documentation is necessary to improve the Commission’s enforcement and monitoring ability. As previously noted, the Commission currently faces challenges in enforcing the Rule. Prescribers, whether intentionally or not, currently can fail to release prescriptions yet risk little because consumers are unlikely to file a complaint if they ask for and subsequently receive a prescription. When a consumer does complain to the FTC, typically the only evidence is the word of the consumer against that of the prescriber, making it difficult for the Commission to establish with a degree of certainty whether a violation has occurred. This fact has played a

¹³⁰ American Academy of Ophthalmology (SNPRM Comment #136). The AAO suggested that the acknowledgment and record-keeping provisions should be imposed on prescribers who have had multiple complaints, and whose non-compliance was verified after allowing prescribers an avenue to respond and defend themselves.

¹³⁵ McManus (SNPRM Comment #18); Ulrich (SNPRM Comment #19) (FTC is punishing the wrong actors); Gilberg (SNPRM Comment #46); American Optometric Association (SNPRM Comment #96); American Academy of Ophthalmology (SNPRM Comment #136).

significant role in the lack of Rule enforcement against prescribers over the last fifteen years, and may be a contributing factor to the high number of contact lens patients who do not currently receive their prescriptions automatically as required by law.

While the AOA suggests that the Commission can use its current authority to issue administrative subpoenas and conduct investigative hearings to explore possible Rule violations, an examination of a prescriber’s Confirmation of Prescription Release records allows a much more efficient means of determining whether a prescriber is complying with the Rule, and is much less disruptive and burdensome for the prescriber.¹³⁶

As for the assertion that prescribers who do not currently comply with prescription release are unlikely to comply with the confirmation requirement, the difference is that in the latter instance, there would be a way to check compliance. If the Commission has concerns about a prescriber’s compliance, it can request patient confirmations or proof of digital delivery, or a sample of such, which should resolve most questions as to whether the prescriber provided prescriptions in accordance with the law. In this way, it would benefit prescribers because they would have a relatively quick and inexpensive way to show the FTC they complied with their automatic-release obligations.

Further, the Commission is not attempting to expand its authority to target small businesses. The Commission already possesses the authority under the FCLCA to enforce the Rule for all contact lens prescribers, large and small. The Commission’s Final Rule institutes a more effective mechanism for enforcing and evaluating the authority it already has. And while the Commission recognizes the need to avoid unnecessary government regulations, the Rule itself is, as one commenter put it, “deregulatory” in nature since its purpose is to restore free market competition, not to rein it in.¹³⁷ If the Rule, as currently applied and enforced, is failing to meet this congressionally mandated goal in some respects, it is the duty of the

¹³⁶ Serving administrative subpoenas on a wide-scale basis to prescribers who might not be releasing prescriptions, and requiring that a prescriber identify all of her contact lens customers for the last several months so they could be interviewed, would likely be criticized as excessive and heavy-handed.

¹³⁷ National Taxpayers Union (SNPRM Comment #149).

Commission to find a more effective manner to realize that purpose.

With regard to the argument that it is unjust to focus on enforcing the automatic-release provision while not enforcing regulations that apply to sellers, the Commission does not agree with this premise. The Commission is aware of complaints about seller misconduct and is implementing several changes in this Final Rule to improve seller compliance. The Commission has also brought enforcement actions against sellers for violating the Rule and expects it will bring others in the future.¹³⁸ Moreover, seller non-compliance does not excuse prescriber non-compliance, nor does it provide a justification for the Commission to reject taking action to improve compliance with a different requirement in the Rule.

3. Comments About Whether the Structure of the Contact Lens Market Creates a Need for Verifiable Enforcement of Automatic Prescription Release

Many SNPRM commenters focused on the structure of the contact lens market and whether a system in which prescribers sell the items they prescribe creates an inherent conflict that requires additional corrective action by the Commission.¹³⁹ U.S. Senator Ron Wyden, for example, commented that

¹³⁸ See, e.g., *U.S. v. Duskin*, No. 1:18-cv-07359 (N.D. Cal. Dec. 6, 2018) (consent); *U.S. v. Kim*, No. 1:11-cv-05723 (E.D.N.Y. Feb 7, 2012) (consent); *U.S. v. ¹³⁹ Citizen Outreach (SNPRM Comment #78) (prescribers’ ability to sell what they prescribe ensures a “captive market”); Lens.com (SNPRM Comment #85) (“the current system is rigged against consumers and companies who compete with prescribers”); Coalition for Contact Lens Consumer Choice (SNPRM Comment #89); Taxpayers Protection Alliance (SNPRM Comment #118); Information Technology & Innovation Foundation (SNPRM Comment #103); National Hispanic Medical Association (SNPRM Comment #146).

Congress passed the FCLCA “to address a distorted contact lens marketplace that had seen freedom of choice eroded as prescribers largely sold the contact lenses they prescribed.”¹⁴⁰ and another commenter wrote, “The system here in the U.S. for buying contact lenses is stacked against consumers because the people who issue you your prescription are also allowed to sell you contact lenses at the very same time. Consumers who don’t know their rights are getting ‘trapped in the exam chair’ so to speak, unaware that they can buy lenses elsewhere for lower prices.”¹⁴¹

According to the Information Technology & Innovation Foundation, which describes itself as a nonpartisan research and educational institute, “the profession has both a powerful economic interest (profits) and a powerful tool (the prescription) to make it more difficult for consumers to buy their lenses from lower-cost providers.”¹⁴² In fact, a number of commenters support the Commission’s proposal because, while regulatory in nature, it is designed to promote free market competition and protect consumers’ ability to purchase from the seller of their choice.¹⁴³ One commenter wrote that the only solution to what she termed “the inherent structural problem that continues to cause friction between providers and patients” is to prohibit prescribers from selling contact lenses.¹⁴⁴

The AOA, on the other hand, disputes the premise that the contact lens market is unique, and argues that the fact that prescribers sell what they prescribe does not create an impetus for corrective

regulation.¹⁴⁵ According to the AOA, health care professionals in certain other areas—such as ambulatory surgery centers, orthopedic centers, and dental service providers, among others—also sell what they prescribe or recommend for treatment. Furthermore, according to the AOA, helping patients “obtain treatment while in their doctor’s office builds strong doctor-patient relationships and promotes patient-centered care.”¹⁴⁶ The AOA therefore concludes that “the Commission seems to have used the inaccurate belief that contact lens prescribers’ role in the market is entirely unique as a justification for implementing new regulations on physicians,” and thus, “the entire argument for supporting prescriber rule changes must be reevaluated.”¹⁴⁷

Several commenters also felt that the contact lens market is functioning properly, as evidenced by the relatively large number of contact lens sellers, and by lens prices that appear competitive, and thus there is no need for FTC intervention to modify the Rule.¹⁴⁸ As support for this position, the AOA submitted a price-comparison analysis that it stated showed that the average price difference for contact lenses between online sellers and office prescribers was just thirty-two cents.¹⁴⁹ According to the AOA, this demonstrates that the market is highly competitive, and thus the FCLCA and Rule are working as intended and, consequently, there is no need for Rule modification and a Confirmation of Prescription Release.¹⁵⁰

The Commission does not share this assessment. While there are now a number of different types of sellers, and the market has become more competitive than it was before the Rule,¹⁵¹ prescribers still possess a significantly higher share of contact lens sales than online sellers, mass merchandisers, or retail chains,¹⁵² even

though prescriber prices, on the whole, are consistently higher.¹⁵³ The AOA’s assessment appears to be based on lens price per-packet, rather than per-day or per-year.¹⁵⁴ The Commission does not believe per-packet pricing is a fair method of comparison, because it compares some lenses that are effectively sold in a multi-month supply with lenses that are only sold as a single month’s supply. The Commission conducted a re-analysis of the AOA’s data by aggregating to a consistent time-frame in order to compare what consumers might actually spend to wear lenses on a regular basis. This re-analysis—using the data supplied by AOA—determined that the average annual prices of contacts were from \$9 to \$40 more expensive if purchased from a private practice than from the leading online seller.¹⁵⁵ The price difference for an annual supply of lenses was even starker between a private practitioner and a leading mass merchandiser, with private practitioners averaging between \$62 and \$92 more for an annual supply.¹⁵⁶ Likewise, at the Commission’s Contact Lens Workshop, an eye care consultant presented a price survey for sixteen leading contact lens brands and concluded that an annual supply of lenses purchased online

steve_kodey_ppt_presentation.pdf. It is also worth noting that while the contact lens retail market has evolved since 2004, it may well have changed *less* dramatically than many other retail industries have since the internet revolution began diverting sales from brick and mortar to online merchants.

¹⁵³ See CLR Panel I Tr., *supra* note 100, at 9 (remarks of Wallace Lovejoy and accompanying slides, Contact Lens Price Ranges By Sales Channel); see also Opinion of the Commission, *In the Matter of 1-800 CONTACTS*, 4 (“Among brick-and-mortar retailers, independent ECPs typically have the highest prices for contact lenses . . .”), https://www.ftc.gov/system/files/documents/cases/docket_no_9372_opinion_of_the_commission_redacted_public_version.pdf.

¹⁵⁴ The Commission has not been able to precisely replicate the thirty-two-cent-difference figure stated by AOA. But by comparing average packet prices in the data supplied, the difference between private practices and online sellers is 35 cents. For the reasons stated, however, the Commission does not believe this figure is an appropriate comparison measure.

¹⁵⁵ The average depends on whether a consumer purchased an annual supply all at once (in which case they received a discount from the online retailer) or in individual package increments. The Commission also notes that prices at the “Leading Online Retailer,” which, based on sales and market share, could be 1-800 CONTACTS, might not represent the average online price for contact lenses, and prices at 1-800 CONTACTS, by its own admission, are typically higher than those of both other online sellers and retail club stores. Brief of 1-800 CONTACTS, *1-800 CONTACTS v. Federal Trade Commission* (2d Cir. June 12, 2019); see also Opinion of the Commission, *In the Matter of 1-800 CONTACTS*, 4, https://www.ftc.gov/system/files/documents/cases/docket_no_9372_opinion_of_the_commission_redacted_public_version.pdf.

¹⁵⁰ *Id.*

¹⁵¹ CLR Panel I Tr., *supra* note 100, at 3–5 (remarks of Steve Kodey and accompanying slides, U.S. Optical Market Overview).

¹⁵² Approximately 39% of all contact lenses sales revenue in the U.S. occurs at independent eye care professionals, compared to 18% at conventional chains, 25% at mass merchants and wholesale clubs, and 16% online. Vision Council, U.S. Optical Market Eyewear Overview 4 (2018), https://www.ftc.gov/sites/default/files/filefield_paths/

averaged \$17.56 less than at an independent prescribers' office, and lenses purchased from a shopper's club averaged \$42.44 less.¹⁵⁷

There can be valid reasons for differences in prices among sellers (some sellers may offer more convenience, options, or better customer service), and the Commission does not view price differences between private eye care practitioners and third-party sellers, in and of itself, as dispositive evidence that the market is not functioning in a competitive manner. But the Commission disagrees that the submitted pricing data is proof that the market *is* functioning in a perfectly competitive manner, and is proof that prescribers are providing patients with their prescriptions.

The Commission is also aware that there are other health care professionals who may sell what they prescribe or recommend for treatment, and has not based its proposal solely on a belief that contact lens prescribers' role and market is unique. Rather, the Commission has considered the structure of the market as a contributing factor in an overall evaluation of the need for improved Rule compliance and enforcement. It must be acknowledged—as it was by Congress when it enacted the FCLCA and directed the FTC to implement the Rule—that it is not in prescribers' self-interest for their patients to take prescriptions elsewhere to buy lenses.¹⁵⁸ And while it is true that some health care professionals in other fields sell products that they prescribe or recommend for treatment, the sheer volume of contact lens prescribers' revenue and profit derived from the sale of contact lenses—16–32% of revenue, by some accounts¹⁵⁹—creates a

¹⁵⁷ CLR Panel I Tr., *supra* note 100, at 9 (remarks of Wallace Lovejoy and accompanying slides, Contact Lens Price Ranges By Sales Channel).

¹⁵⁸ See H.R. Rep. No. 108–318, at 4–5 (stating that “[t]he practice of optometrists withholding the prescription has limited the consumer’s ability to shop for the best price and has impacted competition” and that obstacles to free market competition are rooted in an “inherent conflict of interest” in that “[u]nlike medical doctors who are prohibited from selling the drugs they prescribe, eye doctors and optometrists . . . are able to fill the contact lens prescriptions they write”); see also 149 Cong. Rec. H11564–65 (daily ed. Nov. 19, 2003) (statement of Rep. Stark) (“Eye doctors cite health concerns, but the fact is they have a strong financial incentive to restrict consumer access to the contact lens market.”).

¹⁵⁹ Harris Williams & Co., Vision Industry Update, at 4 (Mar. 2017); Harris Williams & Co., Vision Industry Overview, at 3 (Jan. 2015). Contact Lens Spectrum has estimated the percentage of gross practice revenue from contact lenses to be 30%, and the net practice revenue at 26%, but the estimate does not specify how much of that was derived from sales of lenses versus professional fees for contact lens fittings and examinations. Contact Lens Spectrum, at 19 (Jan. 2019), <https://>

powerful incentive to keep those sales in house.

4. Comments About the Text of the Proposed Confirmation of Prescription Release, and the Options To Include the Confirmation as Part of a Patient’s Prescription or Sales Receipt

As noted previously, unlike the two-sentence signed-acknowledgment proposal from the NPRM,¹⁶⁰ the SNPRM’s Confirmation of Prescription Release proposal did not mandate specific text for the patient’s signed confirmation. Instead, the SNPRM, for convenience, provided optional sample language that prescribers could use but left it up to individual prescribers to draft their own confirmation language if they so preferred.¹⁶¹ The Commission proposed this flexibility in response to commenter concerns that the language of the NPRM’s signed-acknowledgment interfered with the prescriber-patient relationship by imparting the impression that prescribers had done something wrong. By permitting prescribers to draft their own confirmation language or use the provided, shortened sample language, the Commission aimed to allow prescribers to use wording that they believe would be less likely to reflect negatively on the prescribers’ conduct.¹⁶² The Commission also proposed to allow prescribers to include the confirmation as part of a patient’s prescription or sales receipt.¹⁶³

One commenter, the National Association of Optometrists and Opticians (“NAOO”), praised the new options and flexibility, stating it would “assist the industry in, and lighten the burdens of, compliance.”¹⁶⁴ The NAOO also approved of the FTC sample confirmation language, calling it a “concise statement of the point of the Rule,” and predicting it would be used by most of its members.¹⁶⁵ The NAOO did suggest, however, that to avoid

bt.editionsbyfry.com/publication/frame.php?i=552776&p=&pn=&ver=html5. See also Ken Kriviak, How to Hubble-Proof Your Contact Lens Practice, Review of Optometric Business (Jan. 17, 2018) (optometrist stating that 17% of his practice’s total revenue is generated from the sale of contact lens related materials, with another 8% from related professional fees), <https://reviewob.com/can-hubble-proof-contact-lens-practice/>.

¹⁶⁰ NPRM, 81 FR at 88559.

¹⁶¹ SNPRM, 84 FR at 24683. The sample language provided by the Commission consisted of the following: “My eye care professional provided me with a copy of my contact lens prescription at the completion of my contact lens fitting.”

¹⁶² *Id.*

¹⁶³ *Id.*

¹⁶⁴ National Association of Optometrists and Opticians (SNPRM Comment #129).

¹⁶⁵ *Id.*

potential confusion from a confirmation statement containing additional acknowledgments or unnecessary information, the Rule should clarify that the patient’s confirmation statement should not contain any message or acknowledgment other than that relating to confirmation of prescription release.¹⁶⁶ The NAOO also suggested that in instances where a consumer refused to sign the confirmation, the Commission should allow the prescriber to note the refusal and the reason for it as evidence of compliance.¹⁶⁷

Other commenters felt that even with the new confirmation-language flexibility, requiring patients to confirm receipt of their prescriptions would imply that prescribers had been improperly withholding them.¹⁶⁸ One prescriber commented, “Why would I need to get a signature of my patient to confirm they received a prescription unless I was doing something wrong that required proof.”¹⁶⁹ Others felt that the requirement still unfairly forced them to aid their competition by reminding consumers that they could take their prescriptions to other sellers to have them filled.¹⁷⁰

In contrast, some commenters felt that allowing prescribers to draft their own language, and removing the second sentence of the acknowledgment (the requirement that patients confirm the statement: “I understand I am free to purchase contact lenses from the seller of my choice”), greatly reduced the effectiveness of the new proposal.¹⁷¹ The online seller 1–800 CONTACTS, in particular, asserted that removal of the second sentence significantly reduced the educational benefit of the

¹⁶⁶ *Id.*

¹⁶⁷ *Id.*

¹⁶⁸ Abert (SNPRM Comment #20) (“The additional time required for this unneeded paperwork would disrupt the patient-doctor relationship by communicating to the patients that they should be wary of their physician, and assume that their doctor is a violator of Federal law.”); Ohio Optometric Association (SNPRM Comment #47) (“The proposal, even in its latest form, will . . . cast public doubt on the integrity of the optometrists and ophthalmologists”); Cutter (SNPRM Comment #81); Ritzel (SNPRM Comment #157) (“The idea of me having to have a patient sign a form certifying that I actually gave them a copy of their contact lens prescription—because “Big Brother” is watching—is insulting to myself as a person, and to my profession.”).

¹⁶⁹ Cutter (SNPRM Comment #81).

¹⁷⁰ Sanders (SNPRM Comment #61) (“It’s akin to having Target have a big sign next to their own that states, ‘You can get everything here at Walmart as well!’”); Poulter (SNPRM Comment #131) (“It is no more necessary for providers to inform patients of their right to purchase elsewhere than it is for a dentist to let a patient know he can purchase a crown from another party, then return to the dentist to have it placed.”).

¹⁷¹ Consumer Reports (SNPRM Comment #133); 1–800 CONTACTS (SNPRM Comment #135).

requirement since consumers who were unaware they had a right to their prescription would not be so informed. 1-800 CONTACTS also stated that eliminating the second sentence made it less likely prescribers would release prescriptions directly after the fitting is complete, and prescribers would instead wait until patients had purchased lenses before giving them their prescriptions and obtaining Confirmations of Prescription Release.¹⁷² 1-800 CONTACTS also said there is no reason the second sentence would “sow consumer doubt or harm prescribers’ reputations” unless the prescriber had previously been withholding prescriptions.¹⁷³ The online seller therefore proposed that instead of leaving the wording up to prescribers, the confirmation requirement should again specify the wording required and include the second sentence from the acknowledgment proposal—albeit with a minor adjustment—so as to state, “I understand that I am free to purchase contact lenses from my eye care professional or the seller of my choice.”¹⁷⁴ Inclusion of the option to purchase from the “eye care professional” might alleviate some concern that the notice was instructing consumers to buy from someone other than their prescriber.

The consumer advocacy organization Consumer Reports also opposed permitting prescribers to devise their own language of confirmation, and opposed allowing prescribers to make the confirmation part of a prescription copy or sales receipt (Confirmation of Prescription Release options (B) and (C)).¹⁷⁵ Instead, Consumer Reports stated that the confirmation should remain a stand-alone document, and suggested requiring the statement, “My eye care professional provided me with a copy of my contact lens prescription at the completion of my contact lens fitting. I should give a copy of my prescription to the contact lens seller I choose.”¹⁷⁶ According to Consumer Reports, there are “clear advantages to standardized wording,” and by

¹⁷² 1-800 CONTACTS (SNPRM Comment #135) (According to a survey conducted by an independent polling firm on behalf of 1-800 CONTACTS, 38% of consumers who are given their prescription receive it at the same time or only after they have already purchased lenses from the prescriber).

¹⁷³ *Id.* (“Because the Confirmation does not require that prescribers provide consumers with any notice of their rights, but merely requires that consumers acknowledge receipt by signature, it is far less likely to either educate consumers or discourage prescribers from pressuring consumers into buying lenses.”).

¹⁷⁵ Consumer Reports (SNPRM Comment #133).

¹⁷⁶ *Id.*

instructing consumers to present their prescription to sellers, this would further promote the Commission’s goal of reducing verifications.¹⁷⁷ Consumer Reports opined that a statement of confirmation added to the prescriber’s copy of the prescription, or added to an examination receipt, might not be noticed by the patient.¹⁷⁸

Some commenters also opined that when prescribers satisfy the confirmation by releasing the prescription electronically (option (D)), prescribers should still provide consumers with a statement advising them that they have a right to their prescription and have the option to buy lenses elsewhere.¹⁷⁹ And many commenters raised concerns about whether to allow option (D) altogether, as discussed in more detail below.

With respect to allowing options (B) and (C), and permitting prescribers to craft their own wording, the Commission acknowledges that the confirmation proposal may provide less of an immediate educational benefit than the NPRM’s proposed Signed Acknowledgment. By permitting prescribers to include the confirmation on the prescription itself, or on a sales receipt, it is indeed possible that some consumers will fail to understand its purpose, or what it is they are signing. And by not requiring that the confirmation include a sentence specifically informing consumers of their right to have prescriptions filled elsewhere, and not requiring a notice to this effect with digital delivery, some consumers may remain unaware of prescription portability.

The Commission, however, continues to believe that the benefit from providing prescribers with greater flexibility, reducing the possible paperwork burden, and limiting potential interference with the prescriber-patient relationship, justifies the trade-off. As noted in the SNPRM, the Confirmation of Prescription Release will maintain much of the effectiveness and enforceability of the Signed Acknowledgment, while reducing the impact on prescribers.¹⁸⁰

The Commission also does not believe that requiring patients to sign a confirmation will provoke doubts about the integrity of their prescribers. While patients might draw the conclusion that some prescribers have not always automatically released prescriptions, there is little reason for patients to

conclude that their individual prescriber had failed to do so, especially if their prescriber has always provided them with their prescription. It seems more likely that patients may simply conclude that the law has changed. Furthermore, as noted in the SNPRM, consumers are accustomed to signing acknowledgments or receipts. Many pharmacists require patients to acknowledge that they do not have questions upon receiving a prescription; physicians’ offices require visitors to sign in; and patients are accustomed to signing HIPAA acknowledgment forms signifying they received a provider’s Notice of Privacy Practices.¹⁸¹ The Commission is not aware of any evidence that such requirements sow distrust on the part of the person signing the receipt. The Commission believes this will hold true for the Confirmation of Prescription Release, particularly since prescribers can devise their own language of confirmation. The Commission also believes that while it may be advisable for providers to avoid potential patient confusion by not including any other acknowledgments or information on the confirmation document, it is not necessary to expressly prohibit this in the Rule at this time. Such a prohibition might limit the flexibility of the new proposal, and could make it more difficult for providers to avail themselves of options (B) and (C) by including patient confirmation as part of a sales receipt or prescription copy. Moreover, as noted in the SNPRM, while prescribers are free to provide their own language, it would remain a violation for the receipt to include additional information proscribed by the Rule, such as liability waivers or agreements to purchase lenses from the prescriber.¹⁸²

5. Comments About Option (D) and Using Electronic Delivery for Confirmation of Prescription Release

In the SNPRM, the Commission proposed modifying the Rule to allow prescribers to satisfy the automatic prescription release requirement by providing a digital copy in lieu of a paper copy when the patient gives verifiable affirmative consent.¹⁸³ The Commission noted that using online patient portals and other electronic methods to complete the automatic prescription release offered potential benefits for sellers, prescribers, and patients.¹⁸⁴ Patients would be able to

access their prescriptions and have electronic copies to send to sellers. With the prescription, a seller would no longer need to submit a verification request, which would benefit prescribers by reducing the volume of requests. However, there were also some concerns about portals, including that patients may not be aware of the portal or have difficulty accessing it.¹⁸⁵ Because the Commission did not have sufficient information to determine whether solely posting a contact lens prescription on a patient portal would be sufficient to satisfy the Rule's obligation for prescribers to provide a copy of the prescription after completing the contact lens fitting, the Commission sought comments on its proposed Rule modification.¹⁸⁶ The Commission also asked for comments on whether prescribers should be required to maintain any records documenting a patient's verifiable consent to receive a prescription electronically.¹⁸⁷

a. Use of Patient Portals and Patient Consent

Many commenters expressed support for allowing prescribers to use electronic methods, such as a patient portal, to provide prescriptions to patients who consent.¹⁸⁸ Among the potential benefits, commenters noted the reduction in verification calls or requests for additional copies, easier access to and use of a prescription, lower costs, and flexibility for patients and prescribers.¹⁸⁹ Currently, many prescribers already use a portal or other electronic methods to communicate with and, in some instances, provide

prescriptions to their patients,¹⁹⁰ and use of electronic methods is expected to increase in the future.¹⁹¹ For example, one survey found that approximately 64.2% of eye care professionals communicated with patients by text message, of which 26.4% used it to respond to personal questions about the patient's eye health.¹⁹² Because a significant percentage of eye care providers already use electronic communications and portals, the Commission believes that the required, automatic prescription release could be completed effectively through a digital copy when a patient provides verifiable affirmative consent. Verifiable affirmative consent means that a patient must have provided his or her consent to the prescriber in a way that can be later confirmed. A signed consent form, an email from the patient to the prescriber, or an audio recording from a telephone conversation with a patient would be examples of verifiable affirmative consent. Notification through, for example, a posted office sign or a general written notice of office policies or practices would not constitute affirmative consent because patients have not indicated to the prescriber whether or not they consent.

Several commenters supported the use of electronic methods, but had a variety of concerns or proposed changes. Some thought patients might prefer a paper copy instead of an electronic copy of their prescription, including people who are older, reluctant to use technology or worried

about online privacy or identity theft, unable to navigate a cumbersome portal, without internet or smartphone access, or not proficient in English.¹⁹³ The Commission shares these concerns and the Final Rule thus maintains the ability for patients who prefer a paper copy for any reason to obtain such a copy. Even if a prescriber offers electronic delivery, a patient could decline to provide consent. Likewise, prescribers who are concerned about the security or costs of electronic methods can continue providing paper copies.¹⁹⁴ The Final Rule neither compels prescribers to offer prescription release by an electronic method nor requires that patients accept their prescription by electronic method when offered by the prescriber.

One seller urged the Commission to require that the prescribers, when seeking affirmative consent, identify to patients the specific method of electronic delivery that would be used.¹⁹⁵ The Commission believes that requiring prescribers to identify the specific method or methods¹⁹⁶ would allow patients to make a more informed decision and increase awareness of how the prescription would be provided if they were to consent. It is also possible that a patient prefers one method of electronic communication, but not others.¹⁹⁷ Therefore, the Commission is amending the definition of "Provide to the patient a copy" to require that prescribers who choose to offer an electronic method, identify the specific method or methods to be used and, if a patient consents, have evidence of verifiable affirmative consent to the identified method or methods.

Regarding patient portals specifically, some commenters expressed concerns that: (1) Patients would be unaware that their prescription is on a portal; (2) there could be a delay in posting prescriptions to the portal; or (3) prescribers might intentionally make portals difficult to use, post prescriptions without telling their patients, or confuse patients into thinking that they must buy lenses from

them.¹⁹⁸ They urged the Commission to require that prescribers notify patients when a prescription is available on the portal, provide instructions on how to access the portal, or confirm that the prescription has been received.¹⁹⁹ The Commission believes that the Final Rule provides adequate safeguards for patients who have opted to receive their prescription on a portal. As noted in the SNPRM, the use of a portal or other electronic method does not change the timing of when a prescriber must provide a copy of the contact lens prescription.²⁰⁰ A prescriber must provide the prescription immediately after the completion of the contact lens fitting, or in the case of a renewal, when a prescriber determines that no change to the existing prescription is required.²⁰¹ Furthermore, prescribers can only use a portal to satisfy their obligation under § 315.3(a)(1) when they have affirmative consent to the specific method or methods of electronic delivery. Therefore, patients should be aware that their prescription will be provided electronically using the method to which they consented. The Rule also requires that patients be able to access, download, and print the prescriptions from the portal.²⁰² If patients were to have any problems with using the portal, they could revoke their consent and request a paper copy.²⁰³ Notwithstanding these safeguards, the Commission encourages prescribers to provide instructions to patients who may encounter difficulties accessing their portal. The Commission believes that the Rule, with the modification to require that prescribers identify the specific electronic method to be used, balances the interests of prescribers and patients by offering a flexible method that could reduce the burden on

prescribers and allow patients greater access to their prescriptions.²⁰⁴

Furthermore, some commenters want a paper copy to be provided in addition to the electronic copy,²⁰⁵ but the Commission declines to adopt this suggestion because requiring both copies would undercut a benefit of using electronic methods and be unnecessary for patients who have expressed a preference for an electronic copy. Finally, a commenter states that telemedicine prescribers should not be required to provide paper prescriptions.²⁰⁶ Although patients who opt for telemedicine might be more comfortable with technology and receiving health care online,²⁰⁷ some patients may still prefer their prescription on paper. Since telemedicine providers should have been providing a paper copy under the current Rule, continuation of this practice, when a patient does not consent to electronic delivery, should not be impractical or overly burdensome.

b. Requirement To Maintain Records of Patient Consent

In the SNPRM, the Commission proposed requiring that prescribers obtain affirmative consent in order to provide a prescription electronically, but did not require that prescribers maintain evidence of consent. In response, several commenters have urged the Commission to require that prescribers maintain records pertaining to patients' affirmative consent.²⁰⁸ According to some of these commenters, a record of consent would allow more effective compliance monitoring, while the burden of storing such a record

would be minimal.²⁰⁹ By contrast, the AOA states that prescribers should not be required to maintain records of consent because the AOA believes it would be burdensome²¹⁰ and "provides no obvious benefit to the patient" since "the likelihood of harm from a patient receiving a contact lens prescription electronically is low to nonexistent."²¹¹ However, other commenters countered that there is a potential for harm since patients who do not consent might not realize that they received their prescription electronically, or might be unable to access it.²¹²

The Commission finds persuasive the arguments in favor of requiring a record of patient consent to electronic delivery. The burden of retaining a record of patient consent should be minimal, since prescribers who opt for electronic delivery of prescriptions will, in all likelihood, obtain and/or store such consent electronically. Even if they do not, it should not take any longer to obtain and store patient consent to electronic delivery than it would to obtain and store a patient's Confirmation of Prescription Release via options (A), (B) or (C). Furthermore, a prescriber is not required to offer patients a digital prescription. Rather, it is at his or her option. Moreover, consent to receipt of a digital copy would aid in enforcing the Rule since,

²⁰⁹ Consumer Action (SNPRM Comment #101) (stating that the cost of storing digital records is not burdensome); Information Technology & Innovation Foundation (SNPRM Comment #103) (stating that the cost of storing a consent form would be virtually zero).

²¹⁰ See also American Society of Cataract and Refractive Surgery (SNPRM Comment #127) (discussing the administrative burden related to maintaining records of consent). Other commenters contend that the burden of storing these records would be minimal. Information Technology & Innovation Foundation (SNPRM Comment #103).

²¹¹ American Optometric Association (SNPRM Comment #96). The AOA also asserts that "[p]atients do not have to consent to the electronic delivery of other prescriptions." However, there may be differences between contact lens prescriptions and some other types of medical prescriptions. In many instances, other types of prescriptions being delivered electronically are not being sent to a patient, but rather to a pharmacy that then fills the prescription. When a prescription is sent to a pharmacy, the patient would likely have selected or have knowledge of the receiving pharmacy. In 2013, 57% of prescriptions nationally were sent electronically from physicians to pharmacies, with the rate in some states over 80%. U.S. Dep't of Health & Human Servs., The Office of the National Coordinator for Health Information Technology, "E-Prescribing Trends in the United States" 8 (2014) (stating also that 96% of all community pharmacies in the U.S. accept e-prescriptions).

²⁰⁰ SNPRM, 84 FR at 24669 n.54.

²⁰¹ *Id.*

²⁰² The Commission does not have any evidence that prescribers are intentionally making portals difficult for their patients to use. However, such conduct, if it were to occur, could violate the Rule because patients would not be able to access their prescription.

²⁰³ Patients could also request an additional copy under 16 CFR 315.3(a)(3).

²⁰⁴ Consumer Action appears to encourage the Commission to provide further guidance on portal design in the Rule. SNPRM Comment #101. Given the potential for future developments in technology and the differences among prescribers' practices and current software, the Commission declines to mandate requirements on portal design. without a record of consent, there would be no way for the Commission to confirm that patients who were given their prescriptions electronically agreed to such electronic delivery, and had the ability to access their prescriptions in this manner. The Final Rule will thus require that prescribers keep records or evidence of a patient's affirmative consent to a digital copy for at least three years. Although some commenters have sought longer retention periods,²¹³ three years is a time period consistent with other recordkeeping obligations in the Rule.

6. Comments About Alternatives to the Confirmation of Prescription Release

In addition to the suggestions—discussed previously—that the Commission increase its enforcement of the current Rule, or impose new requirements only as a penalty for specific providers found in non-compliance,²¹⁴ some commenters proposed alternative means of ensuring that consumers receive their prescriptions.

a. Signage

Several commenters reiterated the idea—raised and discussed in some detail in the SNPRM²¹⁵—that instead of requiring a patient acknowledgment or confirmation, the Commission ought simply to require that prescribers post signs informing consumers of their right to their prescriptions.²¹⁶ In its SNPRM, the Commission acknowledged that signage offers some of the benefits of a patient confirmation, but concluded that it had significant drawbacks: In the particular environment of a prescriber's office, far fewer consumers would learn of their rights from a sign than from being asked to sign a receipt; signage would serve as less of a reminder to prescribers and their staff to release prescriptions; signage would do nothing to aid the Commission in monitoring and enforcing the prescription-release requirement; and relying on patients to notice a sign and ask for their prescriptions put the onus on

consumers to enforce the Rule, and would effectively amend the FCLCA's automatic-release provision to release-upon-request, a statutory revision only Congress can make.²¹⁷ The Commission also noted that relying on consumers to ask for their prescriptions is problematic since consumers might not see the sign, or might be uncomfortable asking their prescribers for their prescriptions.²¹⁸ Based on those reasons, the Commission declined to propose signage as an alternative to a Confirmation of Prescription Release.²¹⁹

Some SNPRM commenters agreed with the Commission's position, stating that “requiring prescribers to post signs doesn't work.”²²⁰ and asserting that in California, where a state law requires contact lens prescribers to post signs detailing patient rights, some optometrists fail to comply, or post the signs in locations consumers are unlikely to see them.²²¹ In contrast, other commenters contended that the Commission should reconsider the signage alternative, reiterating that it would be less burdensome and intrusive for prescribers and could address the FTC's educational objectives without costly regulation.²²² The AOA also took issue with the fact that the Commission cited HHS's implementation of a signed-acknowledgment for a prescriber's HIPAA obligation instead of opting for signage.²²³ According to the AOA, anything HHS concluded when it constructed the HIPAA signed-acknowledgment is no longer relevant since HHS is now considering eliminating the requirement and switching to signage in order to reduce

the burden on health care practitioners.²²⁴ Furthermore, according to the AOA, “the physician community is united in its belief” that the HIPAA signed-acknowledgment should be eliminated, and this shows that such acknowledgment requirements constitute poor policy, and signage is a better option.²²⁵

While it is true that HHS is presently evaluating whether to eliminate the HIPAA Notice of Privacy Practices signed-acknowledgment requirement, the Commission's Confirmation of Prescription Release proposal, and the decision not to allow signage as an alternative, does not rely on the HIPAA signed-acknowledgment requirement as precedent. In the SNPRM, the Commission merely referenced aspects of HIPAA's signed-acknowledgment requirement and HHS's evaluation of the regulatory burden as informative when considering whether to require some form of patient confirmation of

²²⁴ American Optometric Association (SNPRM Comment #96) (quoting Request for Information on Modifying HIPAA Rules to Improve Coordinated Care, 83 FR 64302, 64302-03 (2018), <https://www.govinfo.gov/content/pkg/FR-2018-12-14/pdf/2018-27162.pdf#page=1>).

²²⁵ American Optometric Association (SNPRM Comment #96). It is worth noting that a review of the comments submitted in response to the recent HHS proposal to eliminate HIPAA's signed-acknowledgment requirement reveals that while many health care providers do consider it an unnecessary use of staff time and resources, other health care providers support the acknowledgment requirement, and several noted that the burden of obtaining a patient's signed acknowledgment is relatively minimal. *See, e.g.*, Jackson Health System (Comment in Response to Request For Information, Office for Civil Rights, Department of Health and Human Services [hereinafter “HHS RFI Comment”] #467) (does not support modifying the requirement because signed NPP acknowledgment forms are “useful” to prove that the NPP was provided to the patient); Dr. Mitchell Strauss (HHS RFI Comment #851) (“The signature is the only way of confirming for posterity that the NPP was discussed. If this step is no longer required, it will be far too easy for practices to stop making the effort for acknowledgement of the NPP.”); Multnomah and Clackamas Counties (HHS RFI Comment #926) (foresees adverse consequences—potential complaints and misunderstandings—if signed acknowledgment requirement is removed); San Francisco Department of Public Health (HHS RFI Comment #1241) (“Having a written record assures patients and covered entities that patients are informed about privacy practices.”); American College of Osteopathic Family Physicians (HHS RFI Comment #1262) (strongly believes that there must be some level of accountability and responsibility for ensuring patients understand their privacy rights); Massachusetts Department of Mental Health (HHS RFI Comment #1003) (“The burden is negligible.”); Missouri Hospital Association (HHS RFI Comment #1175) (“MHA's members do not find the requirement cumbersome.”); Cigna (HHS RFI Comment #1132) (“Obtaining acknowledgment of receipt is not an operational burden [and] the burden to maintain document of acknowledgment or declination is minimal.”). HHS RFI Comments are available at <https://www.regulations.gov/docketBrowser?ppp=25&po=0&D=HHS-OCR-2018-0028>.

Lisa Murkowski (SNPRM Comment #49); Cutter (SNPRM Comment #81); American Optometric Association (SNPRM Comment #96); Gilbert (SNPRM Comment #119); Patel (SNPRM Comment #123); Letter from N.D. State Sen. Judy Lee (SNPRM Comment #161).

prescription release.²²⁶ Any other reliance on the HIPAA signed-acknowledgment requirement is generally inappropriate since that signed-acknowledgment requirement differs from the Commission's confirmation proposal in important respects. The primary intent of the HIPAA signed-acknowledgment was to provide patients an opportunity to review the provider's Notice of Privacy Practices, discuss concerns related to their private health information, and request additional confidentiality.²²⁷ It was not to remedy a lack of compliance by doctors with HIPAA requirements. Unlike this Rule review, the HHS record does not contain empirical evidence showing that doctors are not fulfilling their obligations to provide Notices of Privacy Practices to patients, and only a handful of commenters to HHS's recent Request for Information even suggested that this could occur should the HIPAA signed acknowledgment be removed.²²⁸ This contrasts sharply with the circumstances of the Commission's proposed Confirmation of Prescription Release, which is intended to remedy a documented compliance gap resulting, at least to some extent, from inherent incentives that may discourage prescribers from providing patients with their prescriptions.

The Commission continues to believe that for purposes of automatic prescription release, signage would be significantly less effective than the proposed Confirmation of Prescription Release. None of the comments to the SNPRM presented any data or evidence that would counter the Commission's prior conclusion. The AOA's argument that the HIPAA signed-acknowledgment experience should not be looked to as a model does not alter the Commission's determination that there is a compelling need for a verifiable method of ensuring that contact lens patients receive their prescriptions.

b. Educational Programs as an Alternative to Confirmation of Prescription Release

Some commenters opined that instead of having consumers confirm that they received their prescription, the best manner to inform consumers about their

prescription rights was through an educational program.²²⁹ According to one contact lens manufacturer, the FTC and sellers should continue to "communicate to patients through social media, websites, advertising, and other channels so that patients become even more aware that they can leave their final fitting with a copy of their right prescription."²³⁰ Others suggested that the Commission could partner with the Centers for Disease Control and the Food and Drug Administration ("FDA") to produce public service announcements informing patients of their rights.²³¹ Another commenter suggested that instead of a signed confirmation, patients' rights to their prescriptions could be "spelled out in the entry forms a patient signs when they check in."²³² Similarly, the AOA suggested that a "patient bill of rights for contact lens wearers" could be provided to patients that would include FDA information on considerations for buying lenses.²³³ One commenter, the NAOO, said that even with a Confirmation of Prescription Release, the Commission should focus on educating the public about its rights to automatic release of a prescription.²³⁴

The Commission agrees that educating the public can aid in increasing the likelihood that contact lens users will receive their prescriptions after a fitting.²³⁵ Consumer education in itself, however, whether provided via information entry forms, a patients' bill of rights, advertising, or public service announcements, would not have a significant impact on prescriber compliance with automatic prescription release, and would not increase the Commission's ability to monitor and enforce the Rule. The proposed education alternatives would also place a burden on consumers to enforce their own rights, an approach the Commission has rejected repeatedly in the past when considering whether to amend the Contact Lens Rule and Eyeglass Rule to release-upon-

request.²³⁶ Therefore, while the Commission believes education about the Rule and its automatic-prescription-release provision is important, the Commission does not believe education should be the sole means of improving Rule compliance.

7. Comments About the Burden and Benefits of the Confirmation of Prescription Release Proposal

Many commenters stated that even with the proposed modifications to increase flexibility, the Confirmation of Prescription Release requirement is still overly burdensome for prescribers.²³⁷ According to commenters, eye care practitioners are already overburdened by regulatory requirements, and the confirmation requirement would divert resources from patient care, increase health care costs, and might even drive some prescribers to cease prescribing contact lenses or close their practices.²³⁸ More specifically, the AAO stated that many of the options for obtaining patient confirmation would require practices to change procedures and alter administrative forms.²³⁹ Others noted

²³⁶ See Eyeglass I, 43 FR at 23998 (stating that relying upon release-upon-request is problematic because many consumers are unaware of their right to a prescription, and because the right should be "immunized from an evidentiary squabble over whether the consumer actually did or did not request the prescription"); Final Trade Regulation Rule, Ophthalmic Practice Rules 54 FR 10285, 10286-87 (Mar. 13, 1989) [hereinafter Eyeglass II] (rejecting a proposal to change the Rule to release-upon-request and finding a "continuing need" for automatic release). See also Contact Lens Rule, 69 FR at 40492 (discussing a commenter proposal to allow prescribers to not release the prescription or release it for "informational purposes only" if the patient has purchased a full year's supply of contact lenses at the time of the examination, and rejecting it because "such an exception would be contrary to the Act's express requirement that consumers receive a copy of their prescription at the completion of a contact lens fitting").

²³⁷ Warner (SNPRM Comment #9); Mass Mail Campaign (SNPRM Comment #25) (saying the requirement imposed "massive new costs and far-reaching new requirements on all contact lens prescribing"); Yokum (SNPRM Comment #53); Staup (SNPRM Comment #104); American Society of Cataract and Refractive Surgery (SNPRM Comment #127); Letter from Sen. Lisa Murkowski (SNPRM Comment #49).

²³⁸ Goldstein (SNPRM Comment #14) ("The economic burdens of administrative compliance with these new regulations would except in rare cases encourage me not to fit or prescribe contact lenses."); Pierce (SNPRM Comment #17) (will ultimately lead to higher health care costs, might have to raise fees); Mass Mail Campaign (SNPRM Comment #25); Shum (SNPRM Comment #80) ("Adding more paperwork and scanning work—and making it required on everyone—doesn't sound like it would be a big deal, but to a small practice it's huge."); Cinalli (SNPRM Comment #93) (new regulation will close many practices); Klepfisz (SNPRM Comment #140) (burden has the potential to put some prescribers out of business).

²³⁵ The Commission educates consumers on their rights under the Contact Lens Rule through a variety of sources, including blog posts, Facebook, Twitter, and on the FTC's website. See, e.g., <https://www.consumer.ftc.gov/articles/0116-prescription-glasses-and-contact-lenses>.

²²⁶ SNPRM, 84 FR at 24682.

²²⁷ Request for Information on Modifying HIPAA Rules to Improve Coordinated Care, Office for Civil Rights, Department of Health and Human Services, 83 FR at 64308.

²²⁸ See generally Comments in Response to Request for Information on Modifying HIPAA Rules to Improve Coordinated Care, Office for Civil Rights, Department of Health and Human Services, <https://www.regulations.gov/docketBrowser?rpp=25&po=0&D=HHS-OCR-2018-0028>.

that the requirement to dispense paper copies of the confirmation to patients runs counter to the trend towards electronic records, particularly for those who have already invested in an electronic recordkeeping system.²⁴⁰ One commenter opined that patients ought to bear more responsibility for their own health care.²⁴¹ Others noted that the proposal was “going against the tide” by adding a new regulation at a time when some government agencies are looking to reduce regulations.²⁴²

Some commenters believed the Commission was underestimating the burden to obtain confirmations and preserve the records, and provided their own estimates, including that it would cost \$10,000 per year,²⁴³ or would require 10 minutes per patient for a total of “850 man-hours per year,”²⁴⁴ the equivalent of about 21 additional weeks of work. The AOA, which had previously estimated the cost of the signed-acknowledgment requirement to be as high as \$18,795 per optometrist,²⁴⁵ did not submit a new burden estimate for the Confirmation of Prescription Release proposal, but reiterated its belief that the Rule’s burden falls disproportionately on prescribers, and expressed concern that the estimated financial burden for the Rule in the 2019 SNPRM is higher than the financial burden estimate cited for the NPRM’s signed-acknowledgment proposal.²⁴⁶ Some commenters also stated that the use of option (D), electronic delivery, would not significantly reduce their burden, since it would require them to update their systems or invest in expensive

technology.²⁴⁷ According to the AOA, many prescribers would not be able to opt for electronic delivery because of limitations in electronic health records systems, privacy and data-security concerns, and state regulations that might not permit prescription posting to portals.²⁴⁸

Other commenters disputed that the burden would be significant, and stated that the confirmation requirement would not add significant costs or time.²⁴⁹ According to the Information Technology & Innovation Foundation, prescriber claims that the proposal would require significant additional staff training are overstated.²⁵⁰ Another commenter, a prescriber, stated, “In our office, we already have patients sign a contact lens agreement before the contact lens evaluation process. I don’t see a problem adding a document at the end of the process and having the patient sign an acknowledgment of rx receipt.”²⁵¹ One commenter contended that while there would be some burden on eye care providers, it represented just a “tiny fraction” of the industry’s overall revenue, and would be far outweighed by the benefits.²⁵² Others asserted that allowing prescribers to provide patients with digital copies would save both prescribers and patients time and money.²⁵³ Some commenters suggested that the Commission was actually overestimating the burden imposed by the confirmation requirement.²⁵⁴ 1–800 CONTACTS, for example, submitted a new analysis from Stanford University Professor Laurence Baker, which called the assumptions used in the

Commission’s burden analysis very “conservative,” and estimated that a reduction in verifications by just 15% would be sufficient to offset all of the costs of the confirmation requirement.²⁵⁵ The NAOO also felt the burden would be “minimal,” and opined that with more patients in possession of their prescriptions, there would be fewer orders relying on the verification process, and thus fewer verifications for prescribers to have to take the time to respond to.²⁵⁶ NAOO also opined that with more practitioners moving to practice management systems and electronic health records, digital delivery of contact lens prescriptions is a “very feasible” option for many prescribers, which would reduce the burden of the confirmation requirement.²⁵⁷

Some commenters also felt that the Commission should not give much weight to burden concerns raised by prescribers due to their history of not complying with their prescription-release obligations.²⁵⁸ The National Hispanic Medical Association, for example, stated that the focus on the burden for prescribers was “upsetting when one remembers just how many patients are being robbed of their right to lower prices and more convenient shipping and being denied a copy of something that they worked hard to pay for, namely, their own prescription.”²⁵⁹

The Commission has considered the burden the Confirmation of Prescription Release requirement would place on prescribers. As stated in the SNPRM, the evidentiary record does not establish that the burden will be substantial.²⁶⁰ Nothing received or revealed since the SNPRM alters that assessment. In fact, numerous health care providers—commenting on their experience with HIPAA—said that the burden of requiring that a patient sign a confirmation-type receipt is “minimal,”²⁶¹ “negligible,”²⁶² or “not significant.”²⁶³ And while AOA is

²⁶⁶ *See* Section XI, *infra*.

²⁶⁷ This is based on an estimate from Wallace Lovejoy, a consultant for the National Association of Optometrists and Opticians, that there are approximately 43,000 optometrists and 16,700 ophthalmologists in the U.S. CLR Panel I Tr., *supra* note 100, at 6. Estimates vary as to the total number of eye care providers and contact lens prescribers in the United States, making it difficult to precisely calculate the burden on a per-provider or per-prescriber basis. The investment firm Harris Williams & Co., for instance, put the estimate at 46,000 optometrists and 18,000 ophthalmologists. Harris Williams & Co., Vision Industry Update, at 2 (Mar. 2017) https://www.harriswilliams.com/system/files/industry_update/vision_industry_update_hcls_0.pdf. Meanwhile, the U.S. Bureau of Labor Statistics estimates there are 42,100 optometrists in the U.S., but does not provide an estimate for the number of ophthalmologists. <https://www.bls.gov/oo/healthcare/optometrists.htm#tab-1>. It must be noted, however, that not all optometrists and ophthalmologists prescribe contact lenses.

to deliver a prescription electronically, the Commission is confident that this option will still reduce the burden for many, especially as more prescribers move toward electronic recordkeeping.

8. Comments About the Exemption for Prescribers Who Do Not Have a Direct or Indirect Financial Interest in the Sale of Contact Lenses

In the SNPRM, the Commission proposed an exemption from the Confirmation of Prescription Release requirement for prescribers who do not have a direct or indirect financial interest in the sale of contact lenses, including, but not limited to, though an association, affiliation, or co-location with a contact lens seller.²⁶⁸ The purpose of the proposed exemption was to reduce the burden on prescribers who do not sell lenses, and therefore, have no incentive to withhold prescriptions. The failure of the prescriber to provide the prescription under such circumstances would provide no benefit to the prescriber while likely alienating the patient. In fact, there is a strong incentive to provide patients with their prescriptions, since that is the only way they would be able to obtain contact lenses.

At least one commenter voiced support for the exemption,²⁶⁹ but some were critical of the proposal.²⁷⁰ Some commenters suggested removing it in order to “future proof” the prescription-release process in light of new and evolving business models—and intermingled financial interests—between prescribers and contact lens sellers.²⁷¹ According to one commenter, the exception for those without a financial interest is “intentionally vague and leaves the barn door open for interpretation and abuse.”²⁷² The AOA also objected to the underlying premise that prescribers might consider their own interests above those of their patients.²⁷³

The Commission recognizes these concerns, but believes there is a significant benefit in more narrowly targeting only those with an incentive to

withhold prescriptions, thereby further reducing the overall burden and avoiding unnecessarily impacting prescribers who are unlikely to violate the Rule. Moreover, the Commission believes that determination of whether a financial interest exists is feasible, and that prescribers are unlikely to arrange their financial interests and business structures solely to circumvent the Confirmation of Prescription Release requirement. The Commission also believes it has the investigative tools to examine whether there is a financial interest, should the need arise. And if the Commission determines upon later review that such financial manipulation is occurring to circumvent the Rule, the Commission can revisit whether to remove the exemption.

D. Additional Discussion and Commission Determination Regarding the Confirmation of Prescription Release Proposal

The Commission has carefully reviewed and analyzed the entire record developed with respect to the Confirmation of Prescription Release proposal. This record includes more than 8,000 comments submitted in response to its 2015 Request for Comment, 2016 NPRM, 2018 Contact Lens Workshop, and 2019 SNPRM, as well as the original history and legislative record relating to enactment of the FCLCA and the Rule in 2004.

The evidentiary record as set forth in the NPRM and the SNPRM, as well as the Commission's enforcement and oversight experience, supports the view that compliance with the Rule's automatic-prescription-release requirement is sub-optimal, and as a result, a substantial number of consumers—several million contact lens users every year—are not receiving their contact lens prescriptions as required by law. Many consumers are unaware they even have a right to receive them. Implementing a Confirmation of Prescription Release requirement will result in an increase in the number of patients in possession of their prescriptions; improved flexibility and choice for consumers; a reduced verification burden for prescribers and sellers; a reduced likelihood of medical errors associated with incorrect, invalid, and expired prescriptions; and a reduction in the number of attempts to verify with the wrong prescriber.²⁷⁴ The ultimate result will be improved competition in the market, more efficient contact lens sales, improved patient safety, and lower prices for consumers. Furthermore, the

²⁶⁸ SNPRM, 84 FR at 24698.

²⁶⁹ Consumer Reports (SNPRM Comment #133) (“Although getting and keeping a record of the patient confirmation will not pose any significant burden, by definition these prescribers would seem not to pose any risk of conflict of interest in releasing the prescription; indeed, they would have an inherent interest in releasing it.”).

requirement will increase the Commission's ability to enforce and assess its Rule, and will accomplish this in a reasonable manner that takes into consideration the needs and burdens of prescribers and sellers.

In response to commenters' concerns, the Commission has made three modifications to the proposal put forth in the SNPRM. The Commission concurs with the suggestion that requiring prescribers to identify the specific method or methods they would use for electronic delivery of prescriptions will increase awareness and allow patients to make a more informed decision. The Commission will therefore define "Provide to the patient a copy" in the Final Rule to require that prescribers who choose to offer an electronic method of delivery identify the specific method or methods used. The Commission also believes that evidence of consumer consent to electronic delivery of a prescription will aid in enforcing the Rule, and thus in its Final Rule, the Commission is requiring that prescribers keep records or evidence of a patient's affirmative consent to a digital copy for at least three years. Lastly, for instances where a consumer refuses to sign the confirmation, in the Final Rule, the Commission directs the prescriber to note the refusal and preserve this record as evidence of compliance. The Commission believes that the burden from these three changes will be minimal.

III. Additional Requirements for Sellers Using Verification Calls Containing Automated Messages

In response to the Commission's NPRM, a number of commenters criticized the use of verification calls containing automated messages ("automated telephone messages"), which they often refer to as "robocalls,"²⁷⁵ with some requesting an outright ban of these calls.²⁷⁶ The Act and the Rule dictate that sellers that do not have a contact lens prescription presented to them directly or by facsimile verify the prescription by "direct communication."²⁷⁷ That term, in the Act and Rule, is defined as "completed communication by telephone, facsimile, or electronic mail."²⁷⁸ The Commission has stated

that the Act expressly permits telephone communication for verification and believes that it would be contrary to congressional intent to prohibit use of automated telephone calls for the purpose of prescription verification.²⁷⁹

In response to the SNPRM, commenters continued to express criticism of automated telephone messages²⁸⁰ with some continuing to urge the Commission to ban them.²⁸¹ The AOA indicated that issues surrounding automated telephone messages have increased in the past five years and that poor quality automated telephone messages are jeopardizing eye health and resulting in consumers wearing non-prescribed contact lenses. It reports an increase in the use of calls that are difficult to understand, do not include all of the necessary information to confirm the prescription, and create barriers for prescribers to communicate corrections.²⁸² Johnson & Johnson Vision Care and individual prescribers believe that automated telephone messages can ultimately lead to patients receiving incorrect lenses and suffering adverse health outcomes.²⁸³

Other commenters, however, indicated that automated telephone messages were not problematic and should not be prohibited.²⁸⁴ Consumer Action stated that "automated call systems appear to be working in a majority of cases" and that prescribers should design more responsive systems for handling such requests.²⁸⁵ The NAOO commented that from its members' perspective, there are "no

communication via one of these three methods, 16 CFR 315.2, a distinction discussed below.

issues with the use of automated calls, which tend to be infrequent to any particular prescriber's office" and that such calls are an efficient method of verification.²⁸⁶

A. The Congressional Record Does Not Support Prohibiting Automated Telephone Messages

Commenters in favor of a ban on such calls argue that the Commission lacks evidence that Congress intended to include automated calls in the definition of "direct communication"²⁸⁷ and should eliminate the use of this antiquated technology in favor of methods that provide written documentation and the possibility of greater oversight in the verification process.²⁸⁸ In support of a ban, commenters stated that the Act does not mention the use of automated telephone messages and that the Commission's interpretation of such calls as a valid form of "direct communication" may be counter to testimony provided during hearings that occurred prior to the Act's implementation.²⁸⁹ These commenters stated that "congressional members and the then CEO of a major online contact lens seller made statements critical of automated telephone verification, stating explicitly that fax or another verifiable method were the preferred prescription verification methods for contact lens prescriptions."²⁹⁰

A closer analysis of the congressional testimony reveals a question to the CEO of the contact lens seller about earlier testimony by the AOA mentioning problems with both automated calls and continuous faxes.²⁹¹ The CEO's

Shimkus: "Mr. Coon [CEO of 1-800 CONTACTS], there have been some questions [raised in earlier hearing testimony from the AOA] about the techniques companies like yours use to verify orders for contact lens

²⁷⁵ See SNPRM, 16 FR at 24684 and n.270.

²⁷⁶ See SNPRM, 16 FR at 24685 and n.281.

²⁷⁷ 15 U.S.C. 7603(a); 16 CFR 315.5(a)(2).

²⁷⁸ Specifically, the Act defines direct communication to "include" a completed communication via one of these three methods, 15 U.S.C. 7603(g), whereas the Rule defines "direct communication" to "mean" a completed

response merely recognized that there had been criticism of automated calls, and stated that at that time the company preferred fax verifications because they were written.²⁹² There is no other mention of issues with automated calls by congressional members or the CEO during that hearing.²⁹³ Instead, such testimony arguably shows that Congress had been made aware of the criticisms of automated calls and, if it had wished to do so, could have banned their use explicitly. Yet, Congress specifically included telephone as a valid form of direct communication. The hearing also evidences a recognition that telephone communications, unlike faxes, would not be written. As a result, reference to this testimony does not change the Commission's view that automated telephone messages are a permissible form of direct communication.

The Health Care Alliance for Patient Safety referred to automated telephone messages as antiquated technology,²⁹⁴ and stated that the Commission should ban such calls in favor of methods that provide verifiable written communication, including fax, emails, and electronic portals.²⁹⁵ Such documentation, according to the Alliance, will allow for greater oversight and a safer environment allowing prescription verification through clearer, more concise and accurate communication between the prescriber and the seller.²⁹⁶ As previously stated,

prescriptions, and problems such as automated calls and continuous faxes inhibiting optometrists from verifying prescriptions. Could you just go through your procedures for me?").

²⁹² *Id.* (In response to Rep. Shimkus's request to go through the company's procedures, Rep. Burr: Mr. Coon, how does 1-800 currently request doctor verification? Mr. Coon: Well, the best system that we have found works the best, which we do in a majority of our orders—and there has been criticism of phone automated systems and other things. The system that works the best is in writing by fax. We know that there is a confirmation that it was received. And that's the system that we would recommend.'").

²⁹³ The Commission is also unaware of any other on-the-record discussions about automated calls during congressional consideration of the FCLCA.

²⁹⁴ Health Care Alliance for Patient Safety (SNPRM Comment #128).

²⁹⁵ Health Care Alliance for Patient Safety (SNPRM Comment #128); CooperVision, Inc. (SNPRM Comment #130). The Commission declines to include portals as a method by which sellers can verify prescriptions. In considering the proposal, the Commission considered that the Act defines direct communication to include telephone, fax, or email. As stated in the 2004 SBP, Congress's use of the term "includes" contemplates that additional methods of communication could develop that could be used in the verification process. 69 FR 40490. However, there is no evidence that prescribers and sellers are using, or are likely to use, portals in the verification process.

²⁹⁶ Health Care Alliance for Patient Safety (SNPRM Comment #128). The Contact Lens Institute criticized the Commission for failing to

Congress expressly permitted use of the telephone knowing that this method did not produce writings like the other delineated verification methods, facsimile and email, and thus, the Commission declines to prohibit the use of this medium for verification.

B. Comments About, and Adoption of, Requirements Proposed in the SNPRM To Improve Quality of Automated Telephone Messages

In the SNPRM, the Commission recognized that additional requirements for automated verification calls were necessary to relieve the burden on prescribers and reduce potential health risks to patients from incomplete or incomprehensible automated telephone messages. Specifically, the Commission noted that prescribers must be able to understand automated messages so they can, if necessary, respond to sellers to prevent improper sales.²⁹⁷ As a result, the Commission proposed, via an amendment to § 315.5, requirements for sellers to improve verification calls that use, in whole or in part, an automated message. For these calls, sellers must: (1) Record the entire call; (2) commence the call by identifying it as a request for prescription verification; (3) provide the information required by § 315.5(b) in a slow and deliberate manner and at a reasonably understandable volume; and (4) give the prescriber the option to repeat the information.²⁹⁸

Commenters were largely in favor of the Commission's proposals to: (1) Commence the call by identifying it as a request for prescription verification; (2) provide the information required by § 315.5(b) in a slow and deliberate manner and at a reasonably understandable volume;²⁹⁹ and (3) give the prescriber the option to repeat this information.³⁰⁰ Seller 1-800

address the fact that the information conveyed in a telephonic communication needs to be reduced to a writing by the prescriber's office so it can be compared to patient records, a process that must in virtually all cases be conducted separately from the call itself. SNPRM Comment #79. It follows, according to CLI, that written requests are more efficient and effective communication tools for both sellers and prescribers.

²⁹⁷ SNPRM, 16 FR at 24685.

²⁹⁸ SNPRM, 16 FR at 24685.

²⁹⁹ The Commission notes that these criteria have always been part of the Rule, but it has determined that they should be expressly set forth in the Rule. See 81 FR 88540 ("A request delivered by an automated telephone system does not comply with the Rule if it is not delivered in a volume and cadence that a reasonable person can understand.'").

³⁰⁰ American Optometric Association (SNPRM Comment #96) (stating support for these requirements, but expressing concern they are coming too late); National Association of Optometrists & Opticians (SNPRM Comment #129); 1-800 CONTACTS (SNPRM Comment #135); Johnson & Johnson Vision Care, Inc. (SNPRM

CONTACTS indicated that its verification messages already comply with these proposed requirements, and the NAOO indicated that its members have not identified any significant burdens in complying with these requirements.³⁰¹ CooperVision indicated that these proposals, along with some of the Commission's other proposals, helped address some of the more troubling issues with automated messages.³⁰² On the other hand, the Contact Lens Institute, comprised of the major contact lens manufacturers, indicated that the Commission's proposed measures demonstrate the impossibility of assuring that automated messages provide effective communication of required information and a reliable basis for passive verification.³⁰³ For instance, it stated that the Commission's requirements to commence the call by identifying it as a request for prescription verification and to give prescribers an option to repeat assumes that prescribers will have live staff available 24 hours a day and will not need to rely on recording devices.³⁰⁴

The Commission does not find these criticisms compelling. The Commission recommended these proposals with an awareness that sometimes prescribers' offices take these calls live and, at other times, the calls are left on recording devices. An option to repeat the information is helpful if a person answers live. If not, the prescriber has the ability to replay the message from the recording device. Similarly, commencing the call by identifying it as a request for prescription verification should help ensure that the prescriber's office is ready to take the relevant information down, both when answering live and when playing the message from a recording device. As a

Comment #151) (expressing approval for these provisions should the Commission not prohibit these calls altogether).

³⁰¹ National Association of Optometrists & Opticians (SNPRM Comment #129); 1-800 CONTACTS (SNPRM Comment #135).

³⁰² CooperVision, Inc. (SNPRM Comment #130).

³⁰³ Contact Lens Institute (SNPRM Comment #79). Members of the Contact Lens Institute are Alcon Vision, Bausch + Lomb, CooperVision and Johnson & Johnson Vision Care. The Commission notes that the opinions expressed in the CLI's comment do not always conform with the opinions of the manufacturers as expressed in their individually filed comments.

³⁰⁴ It also described the Commission's requirement to deliver the message in a "slow and deliberate manner" and at a "reasonable volume" as so vague as to be potentially unenforceable. Contact Lens Institute (SNPRM Comment #79). The Commission disagrees with this assessment, finding that these conditions are met if, upon listening to a call, the required information is comprehensible to a reasonable person.

result, the Commission is implementing these amendments in its Final Rule.

C. The Commission's Proposal Requiring Sellers To Record Automated Telephone Messages

In the SNPRM, the Commission also requested comments on its proposed amendment to § 315.5 to require sellers who verify prescriptions through automated telephone verification messages to record the entire call.³⁰⁵ Some commenters opposed the proposal,³⁰⁶ while others supported it.³⁰⁷ 1-800 CONTACTS opposed the recording requirement, stating that it would impose a costly burden on sellers, is unnecessary because the Commission lacks evidence of a systematic problem with automated calls, and would not facilitate enforcement or improve compliance.³⁰⁸ This seller also commented that the requirement combined with state wiretapping laws may cause sellers to switch to other, perhaps less-reliable verification methods.³⁰⁹ In favor of the proposal, the AOA indicated that the cost of compliance is justified given the widespread issues with robocalls that currently exist.³¹⁰

In support of its position that the recording requirement is unnecessary, 1-800 CONTACTS pointed to the Commission's statement in the SNPRM that it does not have empirical data showing the frequency of verification calls that contain incomplete or incomprehensible automated messages.³¹¹ The seller further commented that the number of sellers that use this particular technology is likely limited and the Commission can much more easily acquire the evidence necessary to investigate complaints and bring an enforcement action in appropriate circumstances.³¹² It stated

that "the same cost-benefit approach that justifies additional recordkeeping for prescription release, counsels against additional superfluous and costly regulation and in favor of targeted enforcement."³¹³ Consumer Reports noted that it was not aware of noncompliance similar to that of prescribers' failure to release prescriptions.³¹⁴

The Commission lacks empirical data on this issue, as noted in the SNPRM.³¹⁵ However, it is undisputed that automated telephone messages are a commonly used method of verification. Moreover, these calls impose a cost on prescribers, and there are potential health risks to patients from incomplete and incomprehensible automated telephone requests.³¹⁶ In fact, many commenters have indicated problems with the quality of automated telephone messages.³¹⁷ The AOA commented in response to the SNPRM that, in its survey of 629 doctors of optometry, 85% reported that automated calls for prescription verifications have increased in the past five years, and 88% indicated that the quality of such calls has decreased in the past five years.³¹⁸ These commenters have exposed an issue for enforcement: Without a call recording,³¹⁹ the Commission cannot reliably assess whether that call was compliant and further whether the seller has a pattern

instance, the Commission could obtain the recording itself from prescribers who assert that they have received an invalid or incomprehensible verification call. *Id.* Although the Commission could obtain such recordings from prescribers, the information would not be complete. Without the ability to obtain recordings from the seller, the Commission would be unable to assess if the call the seller relied on was compliant, was non-compliant (violating the Rule) but an anomaly, or was part of a widespread use of problematic calls. Moreover, as to its point about the limited number of sellers making these calls, new contact lens sellers are routinely entering the market and the Commission needs to ensure it can enforce against them if it receives complaints.

³¹³ 1-800 CONTACTS (SNPRM Comment #135).

³¹⁴ Consumer Reports (SNPRM Comment #133).

³¹⁵ SNPRM, 84 FR at 24685.

³¹⁶ *Id.*

³¹⁷ SNPRM, 81 FR at 88538 nn.152, 154, 155; SNPRM, 84 FR at 24684 n.270. *See also* CLR Panel IV Tr., *supra* note 121, at 8 (statement of David Cockrell that the office can't understand many of the robocalls); *id.* at 8 (statement of Tim Steinemann that many robocalls are unintelligible or cut off).

³¹⁸ American Optometric Association (SNPRM Comment #96). However, because the AOA did not provide the survey itself or the data from the survey, the Commission does not rely on it as more than anecdotal evidence.

³¹⁹ The Commission has received numerous comments from prescribers indicating that they have received non-compliant messages, some of which were left on their answering machines, yet has received very few actual recordings of these messages from prescribers.

of placing non-compliant calls (and selling after such calls).

1-800 CONTACTS commented that it is an unnecessary burden for sellers to record and retain copies of thousands of identical verification calls, the costs of which would exceed the benefits.³²⁰ Consumer Reports shared this sentiment and suggested that it would be more reasonable for the Commission to require sellers to retain a sample recording of the standard script, leaving blanks for prescription and patient details.³²¹ The Commission believes that seeing a script of information relayed or a sample recording has limited utility. A script or a sample recording would not reveal whether the required information was transmitted for any particular automated telephone message or if, for instance, required information was transmitted before a representative or machine answered, after an answering machine cut off, when a prescriber's office put the call on hold, or over hold music, in which case the call could not be lawfully used as a basis for the sale.³²² Further, a script or sample recording would not permit the Commission to assess whether each call was delivered in a "slow and deliberate manner" and at a "reasonably understandable volume." Without knowing this information, the Commission would be unable to determine conclusively whether any particular verification request was valid. Therefore, the Commission is not adopting this recommendation.

1-800 CONTACTS asserted that the requirement to record verification calls would not only impose additional regulatory burdens on sellers, but also expose sellers to legal risk.³²³ The seller argued that by recording telephone communications, sellers might risk violating two-party consent laws in the states that require all parties on the call to consent to recordings.³²⁴ After

³²⁰ 1-800 CONTACTS (SNPRM Comment #135).

³²¹ Consumer Reports (SNPRM Comment #133).

³²² One commenter requested a requirement for online sellers to maintain files of recordings of *each verification attempt* made by automated message for a period of no less than three years. Health Care Alliance for Patient Safety (SNPRM Comment #128). The Commission is only requiring sellers to maintain recordings of automated telephone calls that are the basis for the sale, and to maintain these recordings for three years. There is no need under the Rule for sellers to maintain recordings of unsuccessful verification attempts.

³²³ 1-800 CONTACTS (SNPRM Comment #135).

³²⁴ Twelve states have such a requirement: California, Connecticut, Delaware, Florida, Illinois, Maryland, Massachusetts, Montana, Nevada, New Hampshire, Pennsylvania, and Washington. *See* Cal. Penal Code § 632(a), (c) (West 2019); Conn. Gen. Stat. § 52-570d(a) (West 2019); Del. Code Ann. tit. 11, § 2402(a), (c)(4) (West 2019); Fla. Stat. Ann. § 934.03(1), (3)(d) (West 2019); 720 Ill. Comp. Stat. Ann. 5/14-2(a) (West 2019); Md. Code Ann., Cts.

³⁰⁷ The Health Care Alliance for Patient Safety (SNPRM Comment #128), CooperVision, Inc. (SNPRM Comment #130), and Johnson & Johnson Vision Care, Inc. (SNPRM Comment #151), supported the recording requirement if the Commission did not ban automated telephone messages altogether. *See also* American Optometric Association (SNPRM Comment #96); National Association of Optometrists & Opticians (SNPRM Comment #129).

³⁰⁸ 1-800 CONTACTS (SNPRM Comment #135).

³⁰⁹ *Id.*

³¹⁰ American Optometric Association (SNPRM Comment #96).

³¹¹ 1-800 CONTACTS (SNPRM Comment #135).

³¹² 1-800 CONTACTS stated that the Commission lacked evidence about whether problems occur with automated calls of more than a limited number of sellers, and if it is a limited number of sellers, the Commission should consider education and enforcement efforts instead of rule changes. For

reviewing the relevant statutes and applicable case law, the Commission does not believe sellers risk conducting illegal calls by recording them.³²⁵

For instance, though the California penal code prohibits eavesdropping on or recording confidential communications without two-party consent, the code excludes from the definition of “confidential communication” any circumstances “in which the parties to the communication may reasonably expect that the communication may be overheard or recorded.”³²⁶ The California Supreme Court has stressed that § 632 of the California penal code does not preclude parties from ever recording conversations, but rather prohibits parties from doing so “secretly” or “surreptitiously,” declaring that a business would not violate the state’s wiretapping laws if it advised parties to a communication of its intent to record the call at the outset of the conversation.³²⁷ Similarly, in

& Jud. Proc. § 10–402(a), (c)(3) (West 2019); Mass. Gen. Laws Ann. ch. 272, § 99(C) (West 2019); Mont. Code Ann. § 45–8–213(1)(c), (2)(a)(iii) (West 2019); Nev. Rev. Stat. Ann. § 200.620 (West 2019); N.H. Rev. Stat. Ann. § 570–A:2 (2019); 18 Pa. Stat. and Cons. Stat. Ann. § 5703, 5704(4) (West 2019); Wash. Rev. Code Ann. § 9.73.030(1), (3) (West 2019). It is also possible that Michigan has a two-party consent law, although interpretations of the law differ, and the issue has not been firmly resolved. *See* Mich. Comp. Laws Ann. § 750.539c (“Any person . . . who willfully uses any device to eavesdrop . . . without the consent of all parties thereto . . . is guilty of a felony). *Compare AFT Mich. v. Project Veritas*, 378 F. Supp. 3d 614, 620 (E.D. Mich. 2019) (finding statute prohibits participants from recording private discourse of any other person involved in the conversation unless all persons consent); *with Sullivan v. Gray*, 324 N.W.2d 58, 60 (Mich. Ct. App. 1982) (finding statute does not require two-party consent because it only prohibits eavesdropping, which is defined as recording the “private discourse of others.” (emphasis added)).

³²⁵ Of course, the Commission cannot predict precisely how different jurisdictions will apply state laws. However, the Commission is unaware of a party ever being held liable for violating two-party consent requirements in a situation where the call contained a disclosure message at its onset. The Commission further notes that jurisdictions take different approaches to deciding which state law applies for interstate or multi-state phone calls. *See, e.g., Ditech Fin. LLC v. Buckles*, 401 P.3d 215 (Nev. 2017). Therefore, when recording calls with prescribers located in other states, sellers should abide by the more stringent law that applies or obtain the consent of all parties to the communication. As the Commission stated in the SNPRM, 84 FR at 24685 n.288, sellers are responsible for determining compliance with state law taping requirements.

³²⁶ Cal. Penal Code § 632(a), (c).

³²⁷ *Kearney v. Salomon Smith Barney, Inc.*, 137 P.3d 914, 930 (Cal. 2006); *see also Hataishi v. First Am. Home Buyers Prot. Corp.*, 168 Cal. Rptr. 3d 262, 271 (Cal. Ct. App. 2014) (stating California consumers are accustomed to receiving notice of a business’s intention to record a call); *CS Wang & Assoc. v. Wells Fargo Bank, N.A.*, 305 F. Supp. 3d 864, 885 (N.D. Ill. 2018) (Under the California Invasion of Privacy Act, “the baseline assumption

Massachusetts, a person cannot willfully intercept any wire or oral communication, with “interception” defined in the statute as secretly hearing, secretly recording, or aiding another to do so without the parties’ consent.³²⁸ The Massachusetts Supreme Court has ruled that a system that expressly notifies the parties that the call will be recorded does not commit an interception because the system does not record the conversation in secrecy.³²⁹ Thus, in California and Massachusetts, sellers who provide a standard notification at the beginning of the call, which has become customary in many business communications, are unlikely to risk violating state wiretapping laws.

Moreover, after reviewing the plain language of other state statutes requiring two-party consent and case law, the Commission concludes that if sellers express their intentions to record the conversation at the outset of each call, sellers located in or contacting prescribers in two-party consent states will not risk violating a state’s respective wiretapping law. Announcements at the outset of the calls would prevent sellers from committing violations because prescribers can either provide or withhold consent. For instance, under Florida’s and Maryland’s statutes,³³⁰ as long as a party has received notice of an intent to record, the notified party can expressly or impliedly consent by remaining on the line.³³¹ 1–800

in situations where the recorded party does not initiate the call, does not have a prior relationship with the caller, and does not receive a warning at the outset of the call, is that it is reasonable for a party to expect that its conversation is not being recorded.”) (emphasis added).

³²⁸ *See* Mass. Gen. Laws Ann. ch. 272, § 99(B)(4), (C)(1).

³²⁹ *See Commonwealth v. Boyarsky*, 897 N.E.2d 574, 579 (Mass. 2008) (finding “there was no interception because there was no secret recording, and the inquiry is at an end”); *see also Marquis v. Google, Inc.*, No. SUCV2011–02808–BLS1, 2014 WL 4180400, at *12 (Mass. Super. Ct. July 27, 2014) (“The core of the statute is . . . the prevention of the *secret* interception of wire communications In consequence, if a recording is ‘not made secretly,’ it does ‘not constitute an ‘interception’ and there has been no violation of the statute.”).

³³⁰ Fla. Stat. Ann. § 934.03(2)(d); Md. Code. Ann., Cts. & Jud. Proc. § 10–402(a), (c)(3).

³³¹ *See Levin v. Red Rock Fin. Servs., LLC*, No. 70006, 2017 WL 519414, at *1 (Nev. Ct. App. Jan. 30, 2017) (agreeing that summary judgment applying Nevada and Florida law had been properly granted because appellant “necessarily heard the pre-recorded announcement during every phone call . . . and consequently gave implied consent to be recorded during each call by continuing with the call”) (emphasis added); *Bridgell v. State*, No. 1220, 2016 WL 4698158, at *3–4 (Md. Ct. Spec. App. Sept. 7, 2016) (finding plaintiff “was not forced to communicate . . . nor continue with the phone conversation after being notified that it would be recorded and monitored” and consented to

CONTACTS notes that a prescriber could effectively reject a valid method of verification—verification by telephone—by declining to give consent.³³² In the event that a prescriber declines to consent to a recorded call containing an automated telephone verification message, sellers may make verification requests via email, live call, or fax. Sellers may also elect to leave automated telephone messages after hours on prescribers’ answering machines. Such calls would not implicate wiretapping laws since the prescriber is not on the line.³³³

Commenters also opined on whether the Commission should extend its recording requirement to verification calls that do not involve automated messages, *i.e.*, live calls. 1–800 CONTACTS suggested that the requirement to record calls including automated messages should apply equally to live calls because sellers might otherwise have an incentive to outsource live verification calls to inexpensive call centers that can “game the system” by making it difficult for prescribers to understand or respond to live verification requests.³³⁴ On the other hand, the NAOO, without explanation, supported the Commission’s recording requirement for automated calls as long as the Commission does not expand the requirement to apply to live calls.³³⁵

For several reasons, the Commission declines to compel sellers to record live calls. Foremost, during live calls, a prescriber can ask a seller to repeat the message or to clarify unintelligible information, and can look up a patient’s file in real time to verify the

recording “by continuing to speak after the [warning] message [had] played.”) (emphasis added). *See also* Wash. Rev. Code Ann. § 9.73.030(3) (“[C]onsent shall be considered obtained whenever one party has announced to all other parties engaged in the communication or conversation, in any reasonably effective manner, that such communication or conversation is about to be recorded or transmitted.”).

³³² 1–800 CONTACTS (SNPRM Comment #135).

³³³ Some prescribers commenting on the Rule have expressed concern that verification calls placed during non-business hours violate the Rule. *See* NPRM, 81 FR at 88544 and n.232. Sellers who leave compliant verification messages after hours do not violate the Rule as long as they wait the required eight business hours before selling lenses (assuming there is no communication from the prescriber invalidating or approving the message before that time period concludes).

³³⁴ 1–800 CONTACTS (SNPRM Comment #135). The seller also pointed to the Commission’s statement in the SNPRM that it does not know that a phone call with an automated message is necessarily less reliable than one with a live person. *Id.* (citing SNPRM, 84 FR at 24685).

³³⁵ National Association of Optometrists and Opticians (SNPRM Comment #129).

prescription.³³⁶ In this setting, a seller is likely to limit any bad conduct. While bad actors could speak incoherently, exclude key information, or refuse to repeat the message when asked, the Commission has not received or seen evidence of such behavior, and the record does not reflect any other widespread issue involving the quality of live calls. Finally, the Commission considered mass merchandisers that verify prescriptions largely or exclusively by calling prescribers to obtain verification via a live call when a customer purchases lenses at the store. Because these sellers use their phone lines for a multitude of purposes unrelated to prescription verification, such as taking consumer orders or checking inventory for a consumer, it would be difficult to implement a recording system in compliance with this Rule. However, should the Commission receive complaints that show an issue with sellers' conduct on live calls, the Commission will reassess the need to require sellers to record live verification calls.

D. The Final Rule Does Not Adopt Commenters' Additional Recommendations Regarding Automated Telephone Messages

A number of additional recommendations were suggested by commenters regarding calls that contain, in full or in part, automated messages.³³⁷ The Health Care Alliance for Patient Safety and Johnson & Johnson Vision Care requested that the FTC review and approve a transcript of sellers' automated telephone messages before sellers are permitted to use calls containing such messages.³³⁸ The Contact Lens Institute urged the Commission to require sellers to follow a "specific script that includes standardized terms, a standardized order of presenting the required information, and a standardized pace,"³³⁹ and to require sellers to document that they only use means of transmission that have been tested and shown to result in receipt of clear and

unambiguous information at the receiving end of the call.³⁴⁰

The Commission is not implementing these recommendations. The information that sellers need to include to make a valid verification request is clearly delineated in § 315.5(b), (d)(2), and (d)(4) of the Final Rule.³⁴¹ The Commission does not believe that reviewing and approving a transcript would be an effective use of its resources because it is the call itself that ultimately determines whether there is a valid verification request. Further, while there is some utility in providing a script so prescribers receive the information in a predictable manner, the Commission is not convinced that there is only one effective way for a seller to comply with the Rule, or that this requirement is necessary.³⁴² The Rule already indicates what information needs to be included in the message, and the additional requirements the Commission is implementing should make it easier for prescribers to obtain the information. Should seller verification messages be deficient in providing all the required information, prescribers should notify the seller. Moreover, assuming a seller is complying with the Rule by recording calls that contain these messages, the Commission can ascertain whether the call included all the required information (and whether the seller ultimately sold lenses pursuant to an invalid verification call). A review of the recording will provide better information on compliance than would knowing that the seller used a transcript—including an FTC-approved transcript—or a means of transmission that the seller has tested and documented as effective.

The Health Care Alliance for Patient Safety and Johnson & Johnson Vision Care also requested a requirement that online sellers confirm that automated calls are answered by a person at the prescriber's office, as opposed to a recording device, before initiating an

automated message.³⁴³ In essence, they are asking for a requirement that all verification calls be placed during a prescriber's business hours, presumably the time when prescribers' phone lines are staffed.³⁴⁴ These commenters also requested that the Commission require online sellers who use automated telephone messages to provide, for prescriber's use, a centralized call-back number and have the call-back number staffed by a person from the seller.³⁴⁵ In the same vein, CooperVision commented that the Commission should require sellers to provide the means for the prescriber to disrupt a verification call that uses, in whole or in part, an automated message, in order to connect with a person at the seller to provide correct information.³⁴⁶ Without this requirement, according to CooperVision, eye care professionals are limited in their ability to correct information that is important for the patient's eye health or that could prevent improper substitution of lenses.³⁴⁷

The Rule does not require sellers' communication via telephone, email, or fax to occur during business hours. The Rule requires, instead, that sellers wait eight business hours after a valid verification call to sell the lenses. Moreover, the Rule already requires the seller to provide the name of a contact person at the seller's company, including facsimile and telephone numbers.³⁴⁸ Should a prescriber inform the seller within eight business hours that the prescription was inaccurate, expired, or otherwise invalid, the seller cannot lawfully sell those contact lenses. If a prescriber informs a seller that the verification request itself was non-compliant, the seller is on notice that it may need to provide another verification request prior to selling the lenses. The prescriber need not relay that information to a person at the seller, whether during the verification

³³⁶ CLR Panel IV Tr., *supra* note 121, at 15 (statement of David Cockrell referring to how live calls provide opportunity for two-way conversation).

³³⁷ The Contact Lens Institute (SNPRM Comment #79), Health Care Alliance for Patient Safety (SNPRM Comment #128), and Johnson & Johnson Vision Care, Inc. (SNPRM Comment #151) proposed these additional requirements in the event that the Commission declined to prohibit use of verification via automated telephone messages.

³³⁸ Health Care Alliance for Patient Safety (SNPRM Comment #128); Johnson & Johnson Vision Care, Inc. (SNPRM Comment #151).

³³⁹ Contact Lens Institute (SNPRM Comment #79). Alcon Vision made a similar recommendation. *See* SNPRM Comment #117.

³⁴⁰ Contact Lens Institute (SNPRM Comment #79).

³⁴¹ Commission review of a script would not reveal whether the seller was complying with Section 315.5(d)(3) and (4) of the Final Rule (the requirements as to cadence, volume, and the ability to repeat the information).

³⁴² Similarly, 1-800 CONTACTS requested a requirement that a pre-recorded message be limited to providing only the information required under the Rule and not include extraneous information that could make the call confusing or more burdensome. SNPRM Comment #135. Although the Commission cautions sellers against including extraneous information, it has not seen evidence of a widespread use of calls including such information and thus is not implementing this recommendation.

³⁴³ Health Care Alliance for Patient Safety (SNPRM Comment #128); Johnson & Johnson Vision Care, Inc. (SNPRM Comment #151).

³⁴⁴ It is not clear that this option would be desired by prescribers, some of whom have indicated that they do not have time during business hours to respond to these requests or that such calls tie up their phone lines. *See* NPRM, 81 FR 88539 n.158.

³⁴⁵ *Id.*; *see also* CLR Panel IV Tr., *supra* note 121, at 10 (statement of David Cockrell that the office needs to be able to contact the seller immediately and it "can't even leave a message").

³⁴⁶ CooperVision, Inc. (SNPRM Comment #130).

³⁴⁷ CooperVision also stated confusion as to whether the Commission's requirement for sellers to provide an option to repeat the verification information included a requirement for sellers to provide the means for the prescriber to immediately disrupt an automatic call in order to connect with a live person. SNPRM Comment #130. It does not.

³⁴⁸ 16 CFR 315.5(b)(6).

call or at other times.³⁴⁹ Instead, it is sufficient notice for a prescriber to leave a voicemail, or send a facsimile, that provides the seller with enough information so as to identify the consumer or order being called about (a consumer name, reference number, or even the prescriber's name with the date of the verification call could be adequate), and that the prescription is inaccurate, expired, or otherwise invalid.³⁵⁰ In addition, requiring sellers to reach a person (and not a machine) at the prescriber's office, or to provide a call-back number that is answered by a person (and not a machine), would mean either that sellers would need to have agents available at all times, or else only contact prescribers during business hours for both the seller and prescriber, which may be difficult if they are located in different time zones. Requiring that sellers have someone available at all times to respond to prescriber inquiries would also be costly for sellers, with no readily apparent countervailing benefit. For these reasons, the Commission declines to implement a requirement that sellers ensure that automated telephone messages are answered by a person at the prescriber's office, as opposed to a recording device, or that prescribers be able to reach a live person at the seller.³⁵¹

The Health Care Alliance for Patient Safety and Johnson & Johnson Vision Care further requested a requirement that online sellers verify that they are making verification calls to the office of a legitimate eye care professional. The Commission is aware of allegations of sellers making verification calls to numbers clearly not affiliated with eye care prescribers. The Rule requires a seller to sell contact lenses in accordance with a contact lens

³⁴⁹ If a seller does not maintain a person to answer the phone number it provides, it must provide an opportunity for the prescriber to leave a message. A seller that does not check its voicemail runs the risk of selling lenses after a prescriber has timely invalidated or corrected the prescription, thereby violating the Rule.

³⁵⁰ Final Rule § 315.5(e) requires the prescriber to specify the basis for the inaccuracy or invalidity of the prescription, and if the prescription is inaccurate, the prescriber shall correct it. Final Rule 16 CFR 315.5(e). Even if the prescriber violates the Rule by failing to specify the basis for the inaccuracy or invalidity, or by failing to correct the prescription, the seller is still prohibited from selling if a prescriber informs the seller that the prescription is inaccurate, expired, or otherwise invalid within the eight-business-hour time period.

³⁵¹ The Commission notes that some sellers have agents who stay on the line to ensure that, before commencing the automated message, an individual at the prescriber's office has answered the phone, or that the answering machine has picked up before leaving the message. Such a practice helps ensure that the beginning of the message is not cutoff or played over hold music.

prescription for the patient that, if not presented to the seller, is verified by direct communication.³⁵² Of course, for prescription verification to be meaningful, that verification must go to the consumer's eye care prescriber. Although the seller does not know whether the prescriber contact information provided by the consumer is that of the consumer's own eye care prescriber, to ensure that its verification request complies with the Rule, it is incumbent upon the seller to ascertain whether the number provided by the consumer is for an eye care prescriber. If it is apparent from the consumer's entry itself,³⁵³ or from the seller's research on the internet or otherwise, that the number provided is not affiliated with a prescriber, or if it cannot be determined whether it is, the seller should either reach out to the consumer to obtain better contact information or cancel the order. Calls to numbers clearly not associated with eye care prescribers are not compliant verification requests, and any sales made pursuant to such requests violate the Rule. The Commission intends for this notice to provide sufficient guidance for sellers and does not see a need to amend the Rule to address this issue.

The Commission is implementing the recommendations outlined in the SNPRM for automated telephone messages in the Final Rule, without modification. CooperVision requested guidance on how the Commission intends to interpret and enforce these provisions.³⁵⁴ This notice should provide sellers with information to assist them in complying with the new rule requirements. The Commission also plans to publish education on these Final Rule requirements. As to enforcement, should the Commission receive complaints about the quality of automated calls, it can request that the seller produce the recording of the call in question.

IV. Prescribers' Selection of Communication Mechanism

In the NPRM, the Commission pointed out that the Act does not permit prescribers to limit the communication mechanism sellers may use to submit requests for verifying prescriptions, and

³⁵² 16 CFR 315.5(a).

³⁵³ For instance, sellers should not verify a prescription when the consumer identifies the prescriber as "Santa Claus." Similarly, sellers should not place verification calls to phone numbers that consumers list as the prescriber phone number when that phone number is the same number a consumer lists as her own contact number.

³⁵⁴ CooperVision, Inc. (SNPRM Comment #130).

that sellers are able to use any or all of the three delineated methods, telephone, facsimile, or electronic mail.³⁵⁵

In response, prescribers continued to request that they be able to select the method of communication used to submit verification requests from among telephone, facsimile, or electronic mail.³⁵⁶ Johnson & Johnson Vision Care commented that it wished to work with the Commission and Congress to improve prescriber-seller communications, such as by allowing a prescriber to select her preferred method for verification requests.³⁵⁷ The AOA commented that the Commission took a step in the right direction when it suggested that sellers evaluate whether honoring prescriber preferences with regard to communication method would increase the speed and efficiency of the verification process.³⁵⁸ It nevertheless urged the Commission to provide more instruction to sellers, and to outline the verification-related complaints that the Commission has received, so prescribers and sellers can work together to ensure patients receive the contact lenses that were prescribed.³⁵⁹

The Commission reiterates its suggestion that sellers and prescribers work together to ensure that patients receive their prescribed lenses. As stated in the NPRM, the Commission requests sellers to consider whether the speed and efficiency of the verification process would be increased by accommodating prescribers' requests to contact them with verification requests via a certain method.³⁶⁰ However, because the Act defines "direct communication" to include three different communication mechanisms that sellers may use—telephone, facsimile, or electronic mail—the Act does not permit prescribers to limit the communication mechanisms sellers may

use to submit verification requests.³⁶¹ The Commission is therefore not making any changes to the Rule in this area.

V. Miscellaneous Passive Verification Issues

A. Active Verification Is Not Required

In the NPRM, the Commission declined to propose replacing passive verification with active verification, despite concerns from many commenters.³⁶² Commenters expressed concern that the passive verification system could easily be manipulated, for example, by a patient who provides false or incorrect prescriber information to a seller, or by a seller who sends the same verification request over and over again in the hope that the prescriber will fail to reply and deny one of them.³⁶³ However, because Congress decided to include a passive verification system in the Act, and the issues commenters raised were identical to those raised during the initial 2004 rulemaking, the Commission chose not to revisit the decision to include passive verification.³⁶⁴

Following the NPRM, many commenters reiterated the same concerns with respect to passive verification, including that sellers could abuse the system or that consumers might obtain lenses without a prescription or receive incorrect lenses, and they advocated for a switch to active verification.³⁶⁵ Because these concerns are similar to those raised during the initial rulemaking in 2004 and because Congress mandated passive verification in the FCLCA, the Commission again declines to modify the Rule to require active verification.³⁶⁶

³⁶¹ See 15 U.S.C. 7603(g). The Commission came to the same conclusion in its initial rulemaking. 69 FR at 40497. The Commission recognizes that in practice, sellers' options may be limited. For instance, should a prescriber's office not have facsimile, a seller would be unable to complete a verification request via fax.

Some commenters continued to support passive verification. See 1–800 CONTACTS (WS Comment #3207); National Association of Optometrist and Opticians (WS Comment #3208) (“No changes are needed to the passive verification system.”).

³⁶⁶ The Commission also notes that nothing in the Rule prevents active verification by a seller. If it prefers, a seller can choose to actively verify a prescription. CLR Panel IV Tr., *supra* note 121, at 5 (statement of Jennifer Sommer) (stating that

However, the Commission has made several changes to the Rule aimed at improving the quality of automated verification calls, which will allow prescribers to more effectively prevent the sale of contact lenses when the prescription is inaccurate, expired, or otherwise invalid.³⁶⁷ The Commission has also improved patients' access to their prescriptions by implementing requirements enabling patients to obtain electronic copies and additional copies of their prescriptions, and to present their prescriptions directly to sellers, which should reduce the need for passive verification requests.³⁶⁸ The Commission recognizes that some sellers may engage in verification practices that violate the Rule's requirements³⁶⁹ and, for that reason, will continue to monitor the marketplace and investigate potential violations when appropriate.

B. Concerns About Patient Manipulation

In the NPRM, the Commission declined to propose any changes to the Rule to address concerns that patients were manipulating the passive verification system by deliberately providing inaccurate prescriber information to the seller.³⁷⁰ The Commission noted that if prescribers received a verification request for an individual who was not their patient, they have the ability to respond that such request is invalid, which would prevent the sale under § 315.5 of the Rule. Some commenters provided anecdotal evidence of instances where consumers have intentionally provided inaccurate information, but the Commission did not have any empirical evidence showing the frequency of this problem.³⁷¹ Moreover, Congress was aware that passive verification was not a foolproof method to prevent verification of invalid prescriptions, but nonetheless mandated passive verification to balance the interests of consumer health and prescription portability.

In response to the NPRM, commenters continued to express concerns with patients being able to obtain contact lenses without a valid prescription, especially with only eight business hours to respond to a verification request, and with the potential health

Walmart often actively verifies prescriptions by calling the prescriber's office).

³⁷¹ *Id.*

consequences.³⁷² To address concerns with patient manipulation of passive verification, commenters advocated using an active verification system, requiring that a prescription be presented, changing the method used to send verification requests, or increasing the amount of time for a prescriber to respond.³⁷³

The Commission recognizes prescribers' concerns about the potential health effects on patients who wear non-prescribed lenses. However, as noted in the NPRM, Congress chose the passive verification framework as a way to balance consumer health and prescription portability.³⁷⁴ Congress also allowed verifications by direct communication, which it defined as including telephone, facsimile, and electronic mail.³⁷⁵ Congress was aware that passive verification was not a perfect method to prevent patients from deliberately providing incorrect information.³⁷⁶ The Commission does not have any evidence, aside from anecdotal reports, showing the extent to which patients are intentionally providing incorrect information to a seller in order to obtain contact lenses. Thus, the Commission does not believe that significant modifications to the Rule to address the concern about consumers submitting inaccurate prescriber information are warranted.

However, in its Final Rule, the Commission has implemented several changes to improve verification calls that use an automated telephone system, which will make it easier for prescribers to deny requests based on inaccurate prescriber information. These changes

include identifying at the start of the call that it is a prescription verification request, delivering the information in a slow and deliberate manner and at a reasonably understandable volume, and giving the prescriber the option to repeat the call.³⁷⁷ Prescribers will be better able to identify the relevant patient information and inform sellers during the eight-business-hour period that the request is invalid.³⁷⁸ The Commission will also continue to monitor the marketplace, investigate any sellers encouraging patients to provide false information, and continue its consumer education efforts communicating the importance of having a prescription when purchasing contact lenses.³⁷⁹

C. Eight-Business-Hour Time Frame Is Appropriate

In the NPRM, the Commission considered commenters' concerns that the eight-business-hour time frame was too short and that verification calls were being placed outside of business hours or when the prescriber's office was closed.³⁸⁰ The Commission declined to lengthen or otherwise modify the eight-business-hour time frame during which a prescriber must respond to a verification request.³⁸¹ The Commission did not find sufficient evidence quantifying how the eight-business-hour time frame imposed a significant burden or showing that a significant number of prescribers were unable to respond to the verification requests within the allotted time. The Commission further noted that there have been no compelling changes to the marketplace since the Rule was implemented in 2004 that would justify extending the period beyond eight business hours.

In response to the NPRM, some commenters indicated that eight business hours constituted a sufficient period for a prescriber to respond to a verification request.³⁸² However, other

commenters continued to express concerns with the limited time frame,³⁸³ particularly due to the potential negative health consequences for patients wearing non-prescribed lenses, should a prescriber fail to deny an invalid verification request in time.³⁸⁴ Many prescribers wrote that eight business hours was just not a sufficient amount of time to respond due to, for example, busy offices, limited staff, high volume of requests, and regular office closures on business days.³⁸⁵

Comment 3969 (stating that eight business hours "was generally sufficient and has proven workable," but suggesting that the period could be changed to twenty-four hours with weekends and holidays excluded); *see also* CLR Panel IV Tr., *supra* note 121, at 16 (statement of Cindy Williams) (stating that eight hours is sufficient time to respond).

³⁸³ *See, e.g.*, Becker (WS Comment #571); Contact Lens Association of Ophthalmologists, Inc. (WS Comment #770); Begeny-Mahan (WS Comment #1702) (requesting that the eight-business-hour period be changed to forty-eight hours); Kirkconnell (WS Comment #1754) (requesting two business days to respond and stating that requests should be faxed); American Society of Cataract and Refractive Surgery (WS Comment #3142) (advocating for extending the eight-business-hour time-period for passive verification to five business days); Hanen-Smith (NPRM Comment #154); Cade (NPRM Comment #2163) (suggesting that sellers should exclude a weekday from the eight-business-hour calculation if they become aware that the prescriber's office is closed); American Academy of Ophthalmology (NPRM Comment #3657) (proposing lengthening the response period to two business days); Coalition for Patient Vision Care Safety (NPRM Comment #3883); Contact Lens Association of Ophthalmologists (NPRM Comment #4259) (asking that the period be extended to two days).

³⁸⁴ *See, e.g.*, Rhee (WS Comment #3468); Meyers (NPRM Comment #173); Gilberg (NPRM Comment #198); Engler (NPRM Comment #453); Kempf (NPRM Comment #915); McPherson (NPRM Comment #3397); American Society of Cataract and Refractive Surgery (NPRM Comment #3820); Tesinsky (NPRM Comment #4012).

³⁸⁵ Boyer (SNPRM Comment #59); Becker (WS Comment #571) (recommending two business days); Contact Lens Association of Ophthalmologists, Inc. (WS Comment #770); Begeny-Mahan (WS Comment #1702) (stating that the eight-hour period is a problem because the office is closed on Wednesdays); Huynh (WS Comment #1940); Dhaliwal (WS Comment #2684); American Society of Cataract and Refractive Surgery (WS Comment #3142); Morales (WS Comment #3404); Yu-Davis (WS Comment #3410); Rhee (WS Comment #3468); Meyers (NPRM Comment #173); Pierce (NPRM Comment #187) (estimating that the office spends approximately twelve minutes responding to a verification request); Kempf (NPRM Comment #915) (stating that the office is closed on Wednesdays and incorrect prescriptions received late on Tuesday will be filled); Goodman (NPRM Comment #1340) (stating that the prescriber is unable to respond to requests within the eight-hour period because the office is closed on Mondays); Speiser (NPRM Comment #2233) (stating that eight hours are not enough time because the doctor spends time at the hospital and is not in the office every day); Weingeist (NPRM Comment #2496) (stating that the practice is small and the requests are burdensome); American Society of Cataract and Refractive Surgery (NPRM Comment #3820); McPherson (NPRM Comment #3397) (stating that the office is very busy with patients and verification requests can be forgotten).

The Commission considered these comments and, for the reasons stated in the NPRM, declines to change the eight-business-hour period, including by lengthening the period or changing how the period is calculated. Congress mandated the verification system and that a prescriber respond within "8 business hours, or a similar time as defined by the Federal Trade Commission."³⁸⁶ In determining this time period, Congress balanced the harm to consumers if they were unduly delayed in receiving their contact lenses against the harm from receiving contact lenses based on an invalid prescription.³⁸⁷ The Commission does not find any compelling changes to the marketplace since the Rule's promulgation in 2004 that support extending the eight business hour period.³⁸⁸

³⁸⁶ NPRM, 81 FR at 88544. Some prescribers or sellers may be confused about when the eight-business-hour period starts following a verification request and the applicable time zone. *See, e.g.*, Goodman (WS Comment #599); Palmer (WS Comment #2215); Wang (WS Comment #3448); Gilberg (NPRM Comment #198); Huff (NPRM Comment #1964); Osterholzer (NPRM Comment #2085) (stating that the office is not open during the same hours as the seller and in a different time zone). Under the Rule, when a request is received after 5 p.m., the eight-business-hour period would not start until 9 a.m. the next weekday that is not a federal holiday, or if applicable, on Saturday at the beginning of the prescriber's actual business hours. A business hour is determined based on the time zone of the prescriber. 16 CFR 315.2, 315.5.

³⁸⁷ NPRM, 81 FR at 88544.

³⁸⁸ The Commission recognizes a need for clarification with respect to whether a seller can ship lenses to a consumer after receiving notification from a prescriber that the submitted prescription is inaccurate, invalid, or expired but when such notification occurs after the eight-business-hour period has passed. In its initial rulemaking, the Commission declined to expressly prohibit sellers from shipping lenses in such an instance, but noted that nothing in the Rule prohibits a prescriber from submitting late notifications to the seller or the seller from acting upon them, and that it would likely be in the best interest of their mutual consumer for them to do so. Contact Lens Rule, 69 FR 40050. However, the Commission is aware that the marketplace for contact lens sales now includes subscription models, in which sellers provide a quantity of lenses to consumers, not in a single-delivery supply, but rather in periodic installments (usually every month, although sometimes quarterly or semi-annually). In such a circumstance, the seller would have plenty of time to halt a subsequent installment shipment after being informed that the consumer's prescription was invalid, inaccurate, or expired. Therefore, the Commission clarifies that while the Rule does not prohibit an initial shipment to a consumer in instances where the seller received such notification after the eight-business-hour period has passed, any subsequent shipments based on the initial verification request would violate the Rule. A seller who has been notified that the patient does not have a valid prescription cannot ignore such notification and continue to sell and ship lenses every month simply because the notification came in after the eight-business-hour deadline.

VI. Seller Alteration of Contact Lens Prescriptions and Private Label Concerns

The current Rule states that a “seller may not alter a contact lens prescription.” The only exception applies to private label contact lenses and allows the seller, when a patient has a prescription for private label contact lenses, to substitute identical contact lenses that the same company manufactures and sells under a different name.³⁸⁹

In the SNPRM, the Commission expressed its concern about the emergence of sellers’ business models that rely exclusively on passive verification as a means to substitute their own brand of contact lenses for the prescribed lens.³⁹⁰ As noted in the SNPRM, many prescribers detailed harm that resulted from wearing unprescribed lenses, such as headaches, corneal neovascularization, corneal ulcers, and other irreversible and vision-threatening diagnoses.³⁹¹ As a result, the Commission proposed two modifications to the Rule.

The first modification proposed in the SNPRM, adding a paragraph (g) to § 315.5, would require sellers to provide a clear and prominent method for the patient to present the seller with a copy of the patient’s prescription. Such method might include, without limitation, electronic mail, text message, file upload, or facsimile. The Commission stated that this proposal would address prescriber and manufacturer concerns by increasing the number of patients who present online sellers with their prescriptions rather than relying on verification.³⁹²

The second modification proposed in the SNPRM targeted concerns about prescription verification more directly. The proposed modification of § 315.5(f) would define alteration to include a seller’s providing, as part of a verification request, a prescriber with a manufacturer or brand other than that specified on a patient’s prescription. The proposal included an exception, however, for sellers when they provide a manufacturer or brand that a patient provided to the seller, either on the order form or orally in response to a request for the manufacturer or brand listed on the prescription. In other words, to avail themselves of the exception, sellers must ask consumers to provide the manufacturer or brand listed on their prescription. The SNPRM further provided that a seller would not

be able to avail itself of the exception by relying on a prepopulated or preselected box, or on consumers’ online searches for a particular manufacturer or brand, as an indication that they were prescribed that manufacturer or brand.³⁹³ A seller not covered under the exception discussed above who made a verification request containing a manufacturer or brand other than, and not identical to, the one written on the consumer’s prescription by their prescriber, would violate the Rule, even if a prescriber subsequently invalidated the request and the lenses were never sold.³⁹⁴

A. The Final Rule Includes a Requirement for Sellers To Accept Prescription Presentation

Commenters who discussed the Commission’s proposal to require sellers to provide a clear and prominent method to present prescriptions were unanimous in their support, although some suggested revisions that they believed would make it more effective.³⁹⁵ A number of commenters asserted that this amendment would help decrease the number of verification requests³⁹⁶ and eliminate errors stemming from incorrect verification requests.³⁹⁷ In addition, the NAOO pointed out that such presentation benefits the consumer and the seller by reducing the time needed to fill the order and providing additional assurance of the prescription’s validity.³⁹⁸ 1–800 CONTACTS also supported—and says that it already complies with—the prescription presentation proposal.³⁹⁹ Simple Contacts commented that the proposed requirement is fair, and opined that “any seller who does not support prescription presentation has not made a good faith attempt to accurately verify

all patient prescriptions.”⁴⁰⁰ Simple Contacts, however, expressed skepticism that the amendment would significantly reduce the number of alterations by sellers abusing the passive verification system.⁴⁰¹

Because the Commission did not receive any comments opposing this proposal, the Commission is incorporating the requirement in its Final Rule. The Commission believes the proposal will help reduce the number of verifications, reduce errors associated with incorrect verification attempts, and make it more difficult for ill-intentioned sellers to abuse the passive verification framework and take advantage of consumers who might not realize that the seller intends to verify a different lens than the one written on their prescription.

In the Final Rule, the Commission has changed the “clear and prominent” requirement to pertain to a disclosure of the method of prescription presentation (e.g., a disclosure that the method is available to provide the prescription). In so doing, the Commission makes clear that sellers cannot provide a method of prescription presentation without also providing a clear and prominent disclosure thereof.⁴⁰² The Commission has retained the requirement that the method (e.g., email address, phone number to receive text messages, or upload link) be prominent.⁴⁰³ The Commission has also determined that it is unnecessary to include prescribers in this section of the Rule since it pertains to the ordering process between a seller and a consumer.⁴⁰⁴

Commenters suggested three additional requirements for the prescription presentation proposal. First, the NAOO suggested the

⁴⁰⁰ Simple Contacts (SNPRM Comment #87). *See also* National Association of Optometrists and Opticians (SNPRM Comment #129) (“Contact lens sellers that do not provide a method to upload the prescription may be trying to avoid getting the patient’s specific brand information, so that they can switch the patient into a different proprietary brand.”).
⁴⁰¹ Simple Contacts (SNPRM Comment #87). The Health Care Alliance for Patient Safety stated that “it is unclear whether the proposed amendment would have any effect on the incidence of alteration[s]” since the Commission is not also prohibiting calls containing automated verification messages. SNPRM Comment #128.

⁴⁰² For telephone orders, sellers would comply by making a prominent method available and giving clear and prominent notice of the method.

⁴⁰³ The Commission finds its proposed SNPRM requirement that the method be clear unnecessary given the new language requiring the disclosure of the method to be clear and prominent.

⁴⁰⁴ The Rule anticipates prescription presentation by prescribers to sellers. Section 315.5(a)(1) indicates that one way sellers can sell contact lenses is if they receive a prescription from a prescriber directly or by facsimile. 16 CFR 315.5(a)(1).

Commission require that the method to present prescriptions be in close proximity to the option to provide the parameters of the contact lens for verification, so as to increase the likelihood that consumers would understand they have a choice between providing a prescription or having one verified with their prescriber.⁴⁰⁵ As drafted, the language did not specify at what point in the process a seller must make the method for prescription presentation available. The Commission believes that the NAOO's suggestion of close proximity would be helpful, but notes that if the method, and a disclosure thereof, are provided in close proximity but *after* the collection of all information required for verification is provided, the prescription presentation benefit may be diminished. In other words, if a consumer enters all the information required for verification (contact lens brand, powers, prescriber name and phone number) before learning about prescription presentation, and having an opportunity to present the prescription, the consumer may choose not to also provide the prescription. As a result, the Commission is amending the language of § 315.5(g) in the Final Rule to require that the method and the disclosure of the method for the patient to present the seller with a copy of the patient's prescription must be *prior to* requesting a prescriber's contact information, which is necessary to verify a contact lens prescription.⁴⁰⁶

Two commenters opined on whether consumers should be able to choose the method for providing their prescriptions. Consumer Reports stated its belief that, when offering prescription presentation, sellers should be required to provide consumers all four methods listed in the proposed Rule—electronic mail, text message, file upload, and facsimile—in lieu of giving sellers the option to choose from those methods.⁴⁰⁷ It indicated that requiring all four would not burden the seller, and there may be reasons that patients prefer one option over the others.⁴⁰⁸ On the other hand, the NAOO supported the Commission's proposal to let the seller decide the method.⁴⁰⁹ The Commission has decided to require sellers to offer

prescription presentation by the same medium through which the order is placed, or by electronic mail, text message, or file upload.⁴¹⁰ When orders are placed via telephone, sellers are required to offer prescription presentation via electronic mail, text message, or file upload. Because faxes are not commonly used by consumers, sellers can offer fax presentation as the sole option only when the orders are placed by fax. This framework gives consumers and prescribers an opportunity to present prescriptions, while limiting the burden on sellers, some of whom are small.⁴¹¹ The Commission believes that these changes from the SNPRM proposal are not significant, are consistent with the stated purpose of the proposal as outlined in the SNPRM,⁴¹² and will help ensure the maximum benefit from the Rule change.

Consumer Reports also recommended that sellers be required not just to accept prescription presentation, but also to specifically request and encourage patients to provide prescriptions.⁴¹³ The Commission declines to adopt this suggestion. The Commission's Final Rule requires sellers to accept prescriptions. The Final Rule also requires that sellers clearly and prominently disclose how consumers can provide them with prescriptions. Sellers that more overtly request or encourage the submission of prescriptions (*e.g.*, through price cuts and faster delivery times) will likely further increase the number of prescriptions presented, allowing both sellers and consumers to reap the benefits. However, the Commission has determined that beyond providing a method for consumers to present their prescriptions and notice of such method prior to requesting their prescriber's contact information, sellers should have discretion whether to promote or incentivize that practice.

⁴¹⁰ A seller who chooses to offer all methods will likely benefit by having more consumers provide prescriptions than if it offered only one or even two methods. Benefits to sellers from having prescriptions on file include avoiding the costs involved in verification, and having the ability to provide contact lenses more quickly than relying on verification.

⁴¹¹ For all orders, sellers can meet the requirement by accepting prescriptions via email. There should not be a significant burden on business to obtain and maintain an email address and process and store prescriptions received through email.

⁴¹² SNPRM, 84 FR at 24688–89.

⁴¹³ Consumer Reports (SNPRM Comment #133).

B. Alteration Includes a Seller Providing a Prescriber With a Verification Request for a Non-Prescribed Manufacturer or Brand, but Includes an Exception for Verifying a Manufacturer or Brand That a Consumer Indicates Is on Her Prescription

In the SNPRM, the Commission proposed a modification of § 315.5(f) to define alteration to include a seller's providing, as part of a verification request, a prescriber with a manufacturer or brand other than that specified on a patient's prescription. The proposal included an exception, however, for sellers when they provide in a verification request a manufacturer or brand that a patient provided to the seller, either on the order form or orally in response to a request for the manufacturer or brand listed on the prescription.⁴¹⁴ As discussed below, in the Final Rule, the Commission has determined to adopt this definition of alteration along with a modified version of the accompanying exception.

1. The Final Rule Modifications Regarding Alteration Are Beneficial and Address Abuses of the Verification System

1–800 CONTACTS expressed its belief that the proposed alteration modification was unnecessary and requested that the Commission carefully evaluate any new regulations that could interfere with the convenience and competitive pricing of legitimate sellers.⁴¹⁵ Although the seller recognized the presence of single-brand sellers in the market, and the problems some cause, 1–800 CONTACTS stated that the addition of quality standards for verification calls, along with targeted enforcement against sellers with a business model based solely on noncompliant verification methods, would reduce the ability of these sellers to profit from abusing the passive verification system.⁴¹⁶ Specifically, it felt that “enforcement against one such business [] would likely be sufficient to chill or completely eliminate replication of this business model.”⁴¹⁷ The Commission agrees that the requirement to provide a method for prescription presentation, and a disclosure thereof, should reduce the number of verification requests, and that the addition of quality standards for verification calls should reduce the incidence of non-compliant verification calls and increase the ability of prescribers to deny invalid requests or

⁴⁰⁹ National Association of Optometrists and Opticians (SNPRM Comment #129).

correct inaccurate ones. However, based on comments from prescribers as well as its own investigations and experience, the Commission believes those amendments on their own are inadequate to curb the practice of substitution to non-prescribed brands through abuse of the verification system. The Commission has previously stated that, under the existing Rule, a verification request is not valid and does not commence the eight-business-hour verification period if a seller knows or should know that the verification request includes a different brand and manufacturer than that prescribed.⁴¹⁸ Any sales after such requests violate the Rule, even if a prescriber has not responded. In these instances, the seller is not selling in accordance with a prescription. Despite clearly articulating this position, the FTC continues to receive reports about the proliferation of passive verification abuses. Furthermore, sellers may argue that they are technically compliant with the Rule because they submitted verification requests and prescribers had an opportunity to respond to the requests. They may also argue that they did not have knowledge that a consumer did not have a prescription for that manufacturer or brand of lens.

Additionally, this is not an issue of one bad actor. As noted in the SNPRM, the Commission has seen the emergence of businesses that rely exclusively, or almost exclusively, on passive verification as a means to substitute their own brand of contact lenses.⁴¹⁹ Simple Contacts' comment notes that, within the last two years, several new companies have entered the U.S. market and that their abuse of the verification system appears willful.⁴²⁰ The AOA similarly noted an increase of direct-to-consumer brands and named three new market entrants that reportedly replace their own brand of lenses for the prescribed brand.⁴²¹ The Commission therefore sees benefits to defining alteration to include a seller's providing a prescriber, as part of a verification request, with a manufacturer or brand other than that specified on a patient's prescription.

2. Comments Related to the Exception to Alteration When a Seller Provides The Manufacturer or Brand of Lenses That a Consumer Provides in Response to a Seller's Request for That Information

The SNPRM proposed that sellers receive an exception from alteration when they provide, in a verification request, a manufacturer or brand that a patient provided to them, either on the order form or orally in response to a request for the manufacturer or brand listed on the prescription.⁴²² If the seller seeks to verify a manufacturer or brand other than that indicated by the consumer, even if a prescriber ultimately denies the request, the seller has committed a violation. The implementation of the alteration definition, including the exception, should serve as an effective deterrent against sellers that try to game the verification system to sell non-prescribed contact lenses.

In response to the SNPRM, commenters expressed concerns that some sellers might take advantage of the exception by inducing, suggesting, advertising, or otherwise causing consumers to provide a name other than that on their prescription so as to allow the seller to seek verification of a brand that had not been prescribed for the consumer.⁴²³ The NAOO was specifically concerned that "less scrupulous sellers" would attempt to take advantage of this exception, and noted that currently some sellers only request the power of the lenses from the customer and then ask prescribers to verify a prescription with a private label brand.⁴²⁴ Commenters proffered different recommendations as to how to address this issue. CooperVision requested that the Commission state in a guidance document that sellers cannot induce, suggest, advertise, or otherwise cause patients to provide the wrong name, and to provide examples of improper statements.⁴²⁵ Johnson & Johnson Vision Care suggested that, should the Commission retain the exception, it should add the following clarifying language to the preamble section of the Rule: "This exception is intended to provide explicit direction for sellers as to when they are responsible for instances of prescription alteration. Under no circumstances may a seller, wishing to avail themselves of

this exception, direct, encourage, motivate, or suggest, either implicitly or explicitly, that a patient enter any manufacturer or brand other than that listed on the patient's prescription."⁴²⁶ The NAOO recommended that the Rule itself be further amended to provide more specific direction as to what the seller must, may, and cannot do when asking patients for the information the FCLCA requires in a verification request. Specifically, it recommended adding a requirement that to avail itself of the exception, a seller must have had no reason to believe that the name provided by the consumer was not the manufacturer or brand listed on that consumer's prescription.⁴²⁷

The Commission agrees that sellers must not induce, suggest, advertise, or otherwise lead consumers to provide a manufacturer or brand different from that listed on their prescriptions. The Commission believes, however, that the recommended change is unnecessary because, should a seller attempt to induce or trick the consumer into providing the seller with a manufacturer or brand different from that listed on the consumer's prescription, it would not be able to avail itself of the exception. Any such conduct by the seller would call into question whether the consumer had *provided* the seller with the manufacturer or brand listed *on her prescription* in response to a clear request for such information, as required by the Rule.

Commenters expressed concern that the exception for patient prescription entry would allow consumers to override their prescriptions by providing a manufacturer or brand of contact lenses other than that prescribed to them by their prescriber.⁴²⁸ Similarly, one commenter stated that sellers should ensure that consumers understand that they need to request the lens specified on their prescription and, if consumers want a different lens,

⁴²⁶ Johnson & Johnson Vision Care recognized that the exception could serve as guidance for sellers to determine whether they are responsible for an illegal prescription alteration. However, it believes the exception should not be added to the Rule because a patient may not be able to correctly enter their information given the nuances of a contact lens prescription and the meaning of the different elements therein. Ultimately, Johnson & Johnson Vision Care is concerned that the exception may contribute to passive verification of an inaccurate prescription, and thus, illegal substitution. SNPRM Comment #151. The Commission does not believe that this concern is relevant to the exception, which relates to a consumer only providing her manufacturer or brand.

sellers shall state prominently that consumers must discuss the request with, and make the change through, their prescribers.⁴²⁹ The concern that this amendment gives consumers permission to override their prescriptions, including choosing a new brand, is unfounded. The exception in no way gives consumers the ability to override prescribers' prescriptions, and it does not change the prescriber's ability to inform a seller that the prescription submitted for verification is inaccurate, expired, or otherwise invalid.⁴³⁰ In fact, by requiring sellers to ask consumers their manufacturer or brand to meet the exception, the proposal is encouraging just the opposite—inviting consumers to choose the brand prescribed for them. And, once the seller receives a communication from the prescriber that the prescription is invalid, it cannot sell the lenses without violating the Rule. The Commission therefore does not see a need to require sellers to inform consumers that if they want a different lens, they must go to their prescribers. Asking consumers for the manufacturer or brand listed on their prescriptions, and clarifying that sellers may not induce, suggest, or otherwise cause consumers to select or provide a manufacturer or brand other than that prescribed, should be adequate to curtail much of the illegal alterations occurring through abuse of the verification system. Moreover, the Commission has issued consumer notices that indicate that if consumers wish to switch their brand of lens, they need to contact their prescribers.⁴³¹ The Commission will continue its educational efforts in this area.

3. Comments Regarding and Commission Guidance on Acceptable Methods for Obtaining the Brand or Manufacturer Listed on Consumers' Prescriptions

1-800 CONTACTS expressed concern that the Commission's amendment might interfere with its ability to improve the user experience. It

⁴²⁹ CooperVision, Inc. (SNPRM Comment #130).

⁴³⁰ Final Rule 16 CFR 315.5(e). Despite this prohibition, substitution to another brand of lenses was always a risk with passive verification, but it was a risk Congress considered before instituting the verification framework set forth in the Act. *See, e.g.,* FCLCA Subcomm. Hearing, *supra* note 17 (statements of Howard Beales, Federal Trade Commission); *id.* (statements of J. Pat Cummings, American Optometric Association) ("And the problem with passive verification is that people will get contact lenses without a prescription.").

⁴³¹ *See, e.g.,* Federal Trade Commission, *Prescription Glasses and Contact Lenses*, <https://www.consumer.ftc.gov/articles/0116-prescription-glasses-and-contact-lenses> (last visited Nov. 19, 2019).

indicated that it sells hundreds of brands of lenses and offers consumers a variety of methods to identify their brand, including drop-down menus, a search box, and filters that display lenses by brand, modality, and other parameters and that some consumers do not enter their brand information on an order form.⁴³²

Simple Contacts asked for greater specificity on the acceptable mechanisms for soliciting the contact lens brand or manufacturer, as a way to prevent bad actors from finding mechanisms to circumvent the intent of the Rule. Simple Contacts recommended limiting such mechanisms to five: Providing verbal confirmation of the brand or manufacturer; providing a copy of a prior prescription indicating the brand or manufacturer; typing a selection into a free entry text or search field; selecting a brand or manufacturer from a list or database containing the majority of commercially available brands (*e.g.,* a drop-down menu), or providing a photo of a contact lens box.⁴³³

Johnson & Johnson Vision Care opined that should the Commission proceed with the exception, a seller should not be able to avail itself of the exception by relying on a prepopulated or preselected box, or on consumers' online searches for a particular brand or manufacturer, as a representation by consumers that they do, in fact, have a prescription for that brand or manufacturer. In contrast to the view expressed by 1-800 CONTACTS and Simple Contacts, Johnson & Johnson Vision Care requested the Commission prohibit drop-down menus and similar tools as methods by which a seller could avail itself of the exception.⁴³⁴

The Commission agrees that greater specificity surrounding acceptable methods would benefit sellers trying to comply with the Rule, but recognizes the myriad of ways consumers can interact with sellers to purchase lenses. Specifically, the Commission agrees that the requirement to provide the manufacturer or brand if not orally, then on an order form, imposes unnecessary limits for a consumer to select her manufacturer or brand. As a result, it is removing the term "order form" from the Final Rule. However, while sensitive to sellers' needs to create the best and most convenient consumer experience,

⁴³² 1-800 CONTACTS (SNPRM Comment #135).

⁴³³ Simple Contacts (SNPRM Comment #87). The NAOO also stated that a seller should be able to rely on a customer-provided photograph of packaging of contact lenses for a current prescription. SNPRM Comment #129.

⁴³⁴ Johnson & Johnson Vision Care, Inc. (SNPRM Comment #151).

the Commission believes requiring that they ask for the name of the manufacturer or brand listed on consumers' prescriptions can still be done while providing a positive purchasing experience for their customers.

At a minimum, in order for sellers to consider the consumer's indication of manufacturer or brand as adequate to qualify for the exception, the manufacturer or brand must be: (1) Provided in response to a seller's request for the manufacturer or brand listed on the consumer's prescription, and (2) an affirmative statement or selection by the consumer, not a preselected or prefilled entry (collectively "the minimum criteria"). As to the first minimum criterion, a seller cannot assume that a consumer who searches on the internet for a specific manufacturer or brand of lens has a prescription for that manufacturer or brand of lens. Similarly, a consumer's selection next to a request for the manufacturer or brand the consumer wears or wishes to purchase would be insufficient because a consumer may be wearing or attempting to order a non-prescribed lens. In contrast, a seller can reasonably rely on a consumer's entry of a manufacturer or brand in response to a request for the "manufacturer or brand listed on your prescription." The second minimum criterion for sellers to qualify for the exception is that they must elicit from the consumer an affirmative statement or selection of the manufacturer or brand. A seller that relies on a preselected, prechecked box stating "I agree I have a prescription for this brand," or something similar, would not qualify for the exception to alteration. For telephone orders, the consumer must state the name of the manufacturer or brand in response to a seller's request for the manufacturer or brand listed on her prescription.⁴³⁵ A seller can rely on a consumer-provided photograph of a contact lens box or a copy of a prior prescription so long as the seller meets the two minimum criteria listed above and obtains additional information from the consumer or prescriber that the consumer has a current prescription for that brand.⁴³⁶

The Commission is not limiting the permissible methods for obtaining

⁴³⁵ A seller receiving an affirmative response to its request "Do you have a prescription for this brand?" would be unable to meet the exception.

⁴³⁶ The information from the prescriber or consumer would provide the seller with a basis for the verification other than the expired prescription. *See* Section X.B., *supra* and NPRM, 81 FR at 88546-67 (a seller may not use an expired prescription as the basis for a verification request).

manufacturer or brand to meet the exception to only those discussed above. The Commission instead is leaving sellers the option of deriving other ways to elicit the prescribed manufacturer or brand, within the guidelines discussed in this section. The Commission also declines to add a preamble further explaining the ways for sellers to meet the exception, but instead relies on this notice as guidance.

1-800 CONTACTS opined that the Commission should not refer to “brand” in the amendment to the Rule as that language does not appear elsewhere in the Rule. It points out that the Rule defines a prescription as including a “material or manufacturer or both” and that the Commission’s inclusion of the reference to brand imposes an additional limit on consumer choice that the Act does not require. 1-800 CONTACTS requested instead that the exception to the Rule be applicable to “providing the prescriber with the name of a manufacturer or material other than that specified by the patient’s prescriber” The reference to brand in the definition of alteration and in the exception would indeed be the only references to brand in the Rule.

However, in practice, it appears many, if not most, prescriptions list the manufacturer’s brand, not the manufacturer or material, and the brand is viewed as shorthand for the entire device.⁴³⁷ Furthermore, very few consumers know the manufacturer or material of contact lens that they wear, and typically refer to their lenses by brand name. Amending the exception in the way 1-800 CONTACTS recommended would be unworkable since many consumers would be unable to provide the manufacturer or material in response to a seller’s request, and might even have to ask their prescribers. Should prescribers’ practices change from listing a brand on a prescription to listing a manufacturer or material, the Commission will reevaluate its decision.

4. The Commission Is Not Imposing a Recordkeeping Requirement for Sellers Related to the Exception

Lastly, CooperVision strongly recommended that the Commission reconsider its decision not to require sellers to keep records related to the exception and noted that the Rule relies heavily on requiring written evidence. CooperVision claimed that the lack of a

recordkeeping requirement would leave a gap that could be exploited, and would make it difficult for the Commission to pursue enforcement against sellers who violate the Rule.⁴³⁸ The Commission disagrees with this assessment. Since the exception to alteration would be a defense for a seller, the seller would have the burden of proof to show it met the exception. Should the Commission believe that the seller has altered a contact lens prescription and submitted a verification request for a manufacturer or brand other than that indicated by a consumer, the seller would need evidence that it meets the exception. Sellers who determine not to maintain records do so at their own peril.

C. Private Label Issues

Although most contact lenses in the United States are sold under national brand names (such as Acuvue Oasys, or Dailies Aquacomfort Plus), some manufacturers distribute their lenses to prescribers and retail sellers under private labels (such as Costco’s Kirkland Signature contact lens brand or LensCrafters 1-Day Premium contact lenses). Private label contact lenses can be unique to one seller, or the private label brand may be available at multiple unaffiliated sellers.⁴³⁹ Despite the label, however, the lenses inside the packaging are exactly the same as lenses sold under a national brand.⁴⁴⁰

1. The Commission Adopts a Technical Amendment and Clarifies That the Only Permissible Substitution Involves Private Label Lenses

In § 315.2, the Rule defines private label lenses as “contact lenses that are sold under the label of a seller where the contact lenses are identical to lenses made by the same manufacturer but sold under the labels of other sellers.”⁴⁴¹ The Rule also provides that a prescription for private label contact lenses must include, in addition to other required information, the name of the manufacturer, trade name of the private label brand, and if applicable, the trade name of equivalent brand name.⁴⁴² The Rule’s definition for a private label lens prescription tracks the language of the Act.⁴⁴³

With respect to how sellers treat and substitute private label lenses, however,

the Commission recognized in the NPRM that the construction of § 315.5(e) of the Rule does not presently conform to the language or intent of the Act.⁴⁴⁴ The clear language of the Act allows sellers to substitute national brand name lenses for private label lenses, and vice versa, so long as it is “the same contact lens manufactured by the same company and sold under multiple labels to individual providers.”⁴⁴⁵ The Rule, meanwhile, states that a seller may “substitute for private label contact lenses specified on a prescription identical contact lenses that the same company manufactures and sells under different labels.”⁴⁴⁶ The different language of the Act thus allows sellers to substitute brand names for identical private labels, and private labels for identical brand names, while the Rule, as currently drafted, could be read to proscribe the latter.

To conform the Rule to the Act, the Commission proposed in the NPRM to strike the words “private label” from § 315.5(e), so it would state that a seller may “substitute for contact lenses specified on a prescription identical contact lenses that the same company manufactures and sells under different labels.”⁴⁴⁷ The Rule’s definitions of a “contact lens prescription” and of a “private label contact lens” would remain unchanged. The Commission made this proposal after becoming aware that, in addition to prescribers, some other sellers (such as Costco) now market and sell private label contact lenses that are identical to, and are made by the same manufacturer as, brand name contact lenses. As a result, when a patient presents a contact lens prescription for brand name contact lenses to certain sellers, those sellers may wish to sell, as a substitute, their own private label lenses to the patient.

While the Commission’s proposal was intended to clarify the Rule and align it with the Act’s intent, some commenters opposed the change because they believed it could be interpreted as allowing substitution beyond that of private label lenses.⁴⁴⁸ According to Johnson & Johnson Vision Care, the

⁴⁴⁴ NPRM, 81 FR at 88552.

⁴⁴⁵ 15 U.S.C. 7603(f). Although the Commission imagines it would be quite rare, it believes a seller should be permitted under the Rule to substitute one private label lens for another private label lens so long as the lenses are identical.

⁴⁴⁶ 16 CFR 315.5(e).

⁴⁴² *Id.*

⁴⁴³ See 15 U.S.C. 7610(3)(H).

“private label” modifier is necessary to provide guidance that the only instance in which a seller can lawfully substitute lenses for those written on a prescription is for identical private label lenses, and that removing the words “private label” from the command section of the Rule (leaving it only in the definitions section), will render the term meaningless.⁴⁴⁹ The removal of this term is especially problematic, according to the manufacturer, because illegal substitution is a problem in the marketplace, and it could ultimately cause undue, avoidable harm to patient eye health and vision safety.⁴⁵⁰ Should the Commission choose to proceed with its removal of the term “private label” from § 315.5(e), Johnson & Johnson Vision Care requested that the Commission explicitly clarify that such removal does not allow for substitution beyond the scope of private label lenses or identical contact lenses that the same company manufactures and sells under different labels. It further suggested that the most appropriate and effective place to clarify how the Commission interprets this Rule provision would be in the preamble of the Rule, rather than the regulatory language itself.⁴⁵¹

Costco, in contrast, supported the Commission’s proposed change, because it would make clear that sellers can substitute their own private label contact lenses for prescribed lenses that are identical to lenses made by the same manufacturer and sold under the manufacturer’s brand.⁴⁵² Although Costco believes that the existing Rule allows it, when presented with a valid prescription for the manufacturer’s brand, to substitute Kirkland Signature lenses, it believed that modifications to the language of § 315.5(e) would clarify and eliminate any doubt about the lawfulness of this practice. Costco also opined that without such a change, the legality of such substitution might be in question, and, as a result, some sellers, particularly those without an established relationship with prescribers, would likely be unwilling

⁴⁴⁹ Johnson & Johnson Vision Care, Inc. (NPRM Comment #4327); see also American Optometric Association (NPRM Comment #3830) (opposing Commission’s proposal and finding the term “private label” provides necessary clarity to ensure inappropriate substitutions do not occur).

⁴⁵⁰ Johnson & Johnson Vision Care, Inc. (NPRM Comment #4327).

⁴⁵¹ Johnson & Johnson Vision Care, Inc. also supported its position that the clarification should be made in the preamble by reference to the fact that there were not specific reports of sellers encountering issues with the original Rule language. NPRM Comment #4327.

⁴⁵² Costco Wholesale Corporation (NPRM Comment #4281).

to invest in a private label lens line.⁴⁵³ Consumers Union also supported the change, indicating that it increases the choices available to consumers, including potentially more affordable options, without in any way undermining patient safety.⁴⁵⁴

The Commission did not intend for the removal of the words “private label” in the Rule to make substitution more widely permissible beyond that of a seller being able to provide a private label lens when the *identical* lens (made by the same manufacturer but sold under a different label) is written on the prescription. However, in order to allay concerns, the Commission has retained the term “private label,” but reordered the provision to clarify that permissible substitution only involves private label contact lenses. Thus, the Final Rule allows private label and brand name lenses, when they are identical lenses made by the same manufacturer listed on the prescription, to be substituted for each other.⁴⁵⁵

2. The Commission Is Not Imposing Additional Requirements on Prescriptions for Private Label Lenses

As mentioned above, the Act and the Rule require prescriptions for private label contact lenses to include “the name of the manufacturer, trade name of the private label brand, and if applicable, trade name of equivalent brand name.”⁴⁵⁶ LD Vision Group (*LensDiscounters.com*), in response to the NPRM, provided the Commission with instances of alleged rule violations involving private label prescriptions improperly written or written without equivalents.⁴⁵⁷ It also requested that the Commission reconsider LD Vision Group’s previous recommendations to: (1) Require prescribers to annotate private label lens prescriptions with the brand-name equivalent and if the name-brand equivalent is unavailable, the private-label prescription must be

⁴⁵³ *Id.* Costco also commented that bringing a private label lens to market can significantly benefit consumers in terms of introducing lower prices. NPRM Comment #4281.

⁴⁵⁴ Consumers Union (NPRM Comment #3969).

⁴⁵⁵ Section 315.5(f) of the Final Rule reads: “Notwithstanding the preceding sentences, for private label contact lenses, a seller may substitute for contact lenses specified on a prescription identical contact lenses that the same company manufactures and sells under different labels.” The Commission revised the provision to refer to the “preceding sentences” to make it clear that the phrase beginning with “[n]otwithstanding” does not apply to anything other than § 315.5(f).

⁴⁵⁶ 15 U.S.C. 7610; 16 CFR 315.2 (in definition of contact lens prescription).

⁴⁵⁷ This commenter also disagreed with what it stated was the “Commission’s diminishment of private label concerns.” LD Vision Group, Inc. (NPRM Comment #3958).

medically necessary for that particular patient; (2) require manufacturers of contact lenses to make brand information available to all sellers, consumers, and the FTC; or (3) require manufacturers and sellers to make brand equivalency information available and easily accessible for private labels on their brand label packaging and online.

Although the Commission appreciates the additional information provided by LD Vision Group, the information has not altered the fact, as stated in the SNPRM, that the Act does not impose a requirement of medical necessity in order for a prescriber to prescribe a private label lens for which no name-brand equivalent exists.⁴⁵⁸ The Act also does not expressly contemplate the imposition of disclosure requirements on manufacturers. Therefore, the Commission is not implementing the recommendations of LD Vision Group.

The Act and the Rule expressly require that, for private label contact lens prescriptions, prescribers include “trade name of equivalent brand name.”⁴⁵⁹ Prescribers violate the Rule if they provide a script that omits this information because the script does not meet the definition of a contact lens prescription. With that in mind and given the additional information provided by LD Vision Group, the Commission will consider whether enforcement action is appropriate.

VII. “Directly or by Facsimile” Language Includes Use of Online Patient Portals to Present Prescriptions

Section 315.5(a)(1) of the Rule provides that a seller may sell contact lenses in accordance with a prescription that is presented to the seller “directly or by facsimile.” In the NPRM, the Commission initially determined that the provision “directly or by facsimile” includes the use of online patient portals by patients and prescribers to present contact lens prescriptions to

⁴⁵⁸ SNPRM, 81 FR 88551. In the SNPRM, the Commission also referenced the initial rulemaking, where sellers recommended that prescribers be required, when prescribing private label contact lenses, to identify on the prescription the name of a brand that a consumer could purchase from a seller other than the prescribing office. 69 FR 40503. The Act does not limit, in any way, the brand that a prescriber must select, and the current record does not have sufficient evidence indicating that this is a problem. *Id.* Therefore, LD Vision Group’s proposal to limit prescribers from prescribing private label brands without a brand-equivalent is not adopted.

⁴⁵⁹ 15 U.S.C. 7610, 16 CFR 315.2 (contact lens prescription defined to include, in the case of a private label contact lens, the name of the manufacturer, trade name of the private label brand, and, if applicable, trade name of equivalent brand name).

sellers.⁴⁶⁰ The Commission noted that use of a patient portal “necessarily involves ‘an exact copy of the prescription within the scope of acceptable direct presentation mechanisms.’”⁴⁶¹ The Commission observed in the NPRM that technology had evolved since the Rule’s implementation in 2004 and that patient portals offered several potential benefits, including reducing: The chance of an inaccurate or expired prescription being presented to a seller; the costs for prescribers, patients, and sellers by making it easier and more efficient for patients to share and present prescriptions; and the number of verification requests to prescribers.⁴⁶² The Commission sought comments on whether the use of online portals complies with the Rule and requested information about whether the Commission should consider any other issues related to the presentation of prescriptions to sellers.

Although the Commission received many comments indicating that patients are able to receive their prescriptions electronically, including through patient portals, and interact with their prescribers electronically,⁴⁶³ few comments addressed the use of portals to present prescriptions directly to sellers. Commenters agreed that such technology could offer benefits, including reducing the number of requests for verification and additional copies, and giving patients greater access to their prescriptions.⁴⁶⁴

⁴⁶⁰ NPRM, 81 FR at 88537–38.

⁴⁶¹ *Id.* at 88538.

⁴⁶² *Id.*

⁴⁶³ See, e.g., Eklund (WS Comment #502); Reed (WS Comment #749); Gitchell (WS Comment #759); Andrews (WS Comment #1014); Carvell (WS Comment #1021); Cecil (WS Comment #1892); Kuryan (WS Comment #3472); Hopkins (NPRM Comment #184); Wilson (NPRM Comment #1310); Grove (NPRM Comment #1702); MacDonald (NPRM Comment #2118); Andrus (NPRM Comment #3345); American Academy of Ophthalmology (NPRM Comment #3657) (“For practices that utilize electronic medical record systems, patients can request a copy of their prescription and [be] issued one electronically.”); Coalition for Contact Lens Consumer Choice (SNPRM Comment #89).

⁴⁶⁴ National Association of Optometrists and Opticians (NPRM Comment #3851) (noting that the option to provide a prescription through a portal should be available because technology will continue to advance); 1–800 CONTACTS (NPRM Comment #3898); Costco Wholesale Corp. (NPRM Comment #4281) (supporting the FTC’s determination regarding presentation of prescriptions directly or by facsimile for the reasons cited in the NPRM); NPRM, 81 FR at 88538 (identifying the potential benefits of using a portal to present a prescription to a seller). Other commenters have expressed the potential benefits of portals or electronic health records generally. See, e.g., Information Technology & Innovation Foundation (SNPRM Comment #103); Opticians Association of Americas (WS Comment #482); Marshall (WS Comment #518) (suggesting the

benefit of electronic medical records in allowing easier access to the prescription); McCarty (WS Comment #1898); CooperVision, Inc. (WS Comment #3077); Coalition for Contact Lens Consumer Choice (WS Comment #3239) (stating that new technologies like electronic health records have benefits for consumers).

However, it is unclear how often, if at all, prescribers send prescriptions to sellers through a portal. Use of portals to transmit prescriptions to sellers could face barriers, including technology issues between the parties caused by using different software and platforms, and privacy restrictions preventing sellers from accessing patients’ portal accounts.⁴⁶⁵

The Act and Rule clearly envision and support the use of electronic means to provide prescriptions. Section 7601(a)(2) of the Act requires prescribers to “provide or verify the contact lens prescription by electronic or other means” to patients’ agents.⁴⁶⁶ As discussed in the NPRM, it would be inconsistent for the Rule to permit prescribers to provide prescriptions electronically to patients, but not allow prescribers to provide a prescription electronically to a seller.⁴⁶⁷

Use of electronic medical records has increased in the health field generally,⁴⁶⁸ and many prescribers already use electronic methods to communicate with patients, including through patient portals.⁴⁶⁹ Given the

benefit of electronic medical records in allowing easier access to the prescription); McCarty (WS Comment #1898); Shum (WS Comment #543) (stating that “[t]he use of patient portals to send Rx would be unreliable due to inconsistent EHR [(electronic health records)] software and that some doctors do not have EHR”); National Hispanic Medical Association (SNPRM Comment #146) (stating that creating a portal to share prescription information could be a burden on prescribers and patients); 1–800 CONTACTS (NPRM Comment #3898) (stating that “to the extent prescribers use portals to provide sellers with prescriptions, their portal should have the ability to send the prescription to the seller directly by email, text, or facsimile, and a seller should not be required to develop direct communication links to the portal”); CLR Panel V Tr., *supra* note 191, at 19–20.

⁴⁶⁶ 15 U.S.C. 7601(a)(2); 16 CFR 315.3(a)(2).

⁴⁶⁷ NPRM, 81 FR at 88538.

⁴⁶⁸ One survey from 2017 found that 52% of individuals were offered online access to their medical records by a health provider or insurer, an increase from 42% in 2014. Of those patients who were offered online access, more than half actually viewed their online medical records at least once in the past year. U.S. Dep’t of Health & Human Servs., The Office of the National Coordinator for Health Information Technology, “Individuals’ Use of Online Medical Records & Technology for Health Needs” 1–2 (2018). Furthermore, in 2013, 57% of prescriptions nationally were sent electronically from physicians to pharmacies, with the rate in some states over 80%. U.S. Dep’t of Health & Human Servs., The Office of the National Coordinator for Health Information Technology, “E- Prescribing Trends in the United States” 8 (2014).

⁴⁶⁹ American Optometric Association (SNPRM Comment #96) (stating that approximately 47.5% of optometrists used electronic health records with a patient portal in their practice); National

potential benefits, prescribers and patients should have the option to present a prescription to sellers through a patient portal when this method is available. Therefore, the Commission affirms its initial determination that the “directly or by facsimile” language includes the use of online patient portals by patients and prescribers to present contact lens prescriptions to sellers.

VIII. Requests for an Additional Copy of a Prescription

In the SNPRM, the Commission proposed requiring that prescribers who receive requests for additional copies of prescriptions from patients or their agents respond within forty business hours.⁴⁷⁰ The Commission believed that the forty-business-hour requirement was necessary to ensure that patients or their agents could receive additional copies of their prescription in a timely manner while recognizing that a shorter time period was unnecessary because patients would have already received a copy of their prescription after the contact lens fittings were completed and sellers could always submit a verification request.⁴⁷¹ Additionally, prescribers would be required to note in the patient’s file the name of the requester and the date and time the prescription was provided. The Commission sought comment on whether prescribers should be required to respond within a certain time period, whether forty business hours was the appropriate time period, and what records, if any, prescribers should be required to keep to document the request and response.⁴⁷²

A. Benefits of an Additional Copy and the Time Period To Respond to a Request

The AOA contends that Congress did not intend for sellers to be given authorization to serve as the patient’s agent.⁴⁷³ Rather, the AOA “assume[s] that Congress implemented this provision to account for cases in which a family member or caregiver needed authorization to obtain a patient’s

Association of Optometrists and Opticians (SNPRM Comment #129) (“Practice management systems and electronic health records (EHRs) with the capacity to allow patient portals, email, and text communication are easily available at reasonable prices to optometrists”); National Hispanic Medical Association (SNPRM Comment #146); 1–800 CONTACTS (NPRM Comment #3898). *But see* CLR Panel V Tr., *supra* note 191, at 17 (comment by a panelist that only 8% of his office’s patients used the portal).

⁴⁷³ American Optometric Association (SNPRM Comment #96).

prescription.”⁴⁷⁴ As noted in the NPRM, the Commission relied on the plain language of the Act and Rule to determine that sellers could serve as agents for patients,⁴⁷⁵ and the AOA does not point to any contrary evidence.⁴⁷⁶ Additionally, the AOA believes that no deadline to respond to requests for additional copies is necessary because prescribers take their responsibilities to their patients seriously.⁴⁷⁷

Other commenters supported the Commission’s proposal regarding requests for additional copies.⁴⁷⁸ Commenters noted that a deadline to respond would: (1) Make the process more predictable for patients and sellers, especially when involving a prescriber who has not responded to such requests in the past;⁴⁷⁹ (2) potentially reduce the number of verification requests, which would benefit prescribers, sellers, and patients; and (3) improve the accuracy of information provided to sellers ensuring that patients receive the correct lenses.⁴⁸⁰ In addition to anecdotal

accounts of prescribers not responding to requests for additional copies, 1–800 CONTACTS commented that, in 2019 to date, it had received a response to approximately 52% of its requests for an additional copy with 82% of the responses being received within forty-eight hours of the request.⁴⁸¹ This 2019 data is similar to 1–800 CONTACTS’ 2016 data, which showed that 46% of the requests received a response and 90% of those responses were received within two days.⁴⁸² In response, the AOA questions 1–800 CONTACTS’ 2016 data because patients, who gave consent through a prechecked box, may not have intended for 1–800 CONTACTS to act as their agent in requesting the prescription.⁴⁸³ The AOA posits that prescriber concern over patients’ consent “may have impacted responses to [1–800 CONTACTS’] requests,” but offers no evidence to support this argument.⁴⁸⁴ Likewise, the AOA did not provide any data showing the extent to which prescribers have responded to requests for additional copies. Given the potential benefits and the aforementioned data, the Commission does not believe it is sufficient to rely simply on the expectation that all prescribers would fulfill their responsibilities to their patients. Rather, the Commission believes that the Rule should be amended to add a deadline to respond to a request for an additional copy.

Although some commenters agreed that the Commission’s proposed deadline of forty business hours was a reasonable length of time,⁴⁸⁵ other commenters urged the Commission to use a shorter period, such as one business day⁴⁸⁶ or twenty-four business hours,⁴⁸⁷ because (1) patients would want a quicker response, (2) the longer time period could undercut a benefit of using a prescription—reducing the number of verification requests, and (3) prescribers could be confused between forty business hours for an additional

copy request and eight business hours for a verification request.⁴⁸⁸ Additionally, the work involved for a prescriber’s office to respond to a request would not increase with a shorter deadline.⁴⁸⁹ Although patients would benefit from a shorter response period, the Commission recognizes the additional stress on prescribers of having less time to respond, even if the work involved to complete a response remains the same. Because patients should have already received a copy of their prescription after the fitting,⁴⁹⁰ sellers can submit a verification request to complete the sale more quickly,⁴⁹¹ and prescribers have an obligation to respond to a request for an additional copy, unlike a verification request, the Commission declines to make any further changes and will adopt the proposed forty-business-hour period.

B. Requirement To Maintain Records

Finally, as to what records, if any, a prescriber should be required to maintain regarding the request for an additional copy, the AOA believes that sellers, not prescribers, should shoulder this burden because sellers are “leveraging the patient agent provision to obtain patient prescriptions.”⁴⁹² Records of the request and the response would allow the Commission to monitor compliance.⁴⁹³ However, the Commission does not believe requiring the requestor to maintain such information would be appropriate because the obligation under the Rule to respond to prescription requests rests with prescribers and they would be in the best position to maintain records.⁴⁹⁴ Importantly, the Rule allows “any person designated to act on behalf of the patient[.]” including the patients themselves, family members, or caregivers, to request a copy of a prescription, not just sellers.⁴⁹⁵ A shift of the recordkeeping burden to any

⁴⁷⁴ *Id.*

⁴⁷⁵ NPRM, 81 FR at 88536. In addition to sellers, the SNPRM noted that patients themselves could request an additional copy of the prescription. Although a commenter requested that the Commission modify the Rule to clarify that patients can request their own additional copy (National Association of Optometrists and Opticians (SNPRM Comment #129)), the Commission believes that the Rule’s language is sufficient and declines to make such change. SNPRM, 84 FR at 24684 n.259.

⁴⁷⁶ American Optometric Association (SNPRM Comment #96).

⁴⁷⁷ *Id.* The AOA also urged the Commission not to rely on 1–800 CONTACTS data indicating that only 46% of its requests for an additional copy of a prescription received a response because 1–800 CONTACTS may not have the patients’ consent to act as an agent. Although the Commission considered the 1–800 CONTACTS data, the Commission did not rely solely on this information when issuing its proposed Rule. SNPRM, 84 FR at 24669.

⁴⁹³ The proposed Rule would mandate that prescribers make notations of the required information in their records, but would not require that they keep specific documentation. SNPRM, 84 FR at 24698. However, prescribers could choose to keep documentation of the request and response if they preferred.

⁴⁹⁴ See also National Association of Optometrists and Opticians (SNPRM Comment #129) (“We believe it will be straight-forward and simple for the prescriber to keep a record of receiving the request for a copy and noting how and when the prescriber responded.”).

⁴⁹⁵ SNPRM, 84 FR at 24684 n.259, 24698.

designated agent making a request would not allow for effective monitoring because the Commission might need to obtain records from a wide variety of agents in order to determine whether a particular prescriber is complying with the Rule. Thus, the Commission declines to change the recordkeeping requirement.

In conclusion, the Commission adopts the changes proposed in the SNPRM to require that prescribers respond to requests for an additional copy of a prescription within forty business hours and note in the patient's record the name of the requestor and the date and time that the prescription was provided in response.

IX. Excessive Quantity

In the NPRM, the Commission declined to make any changes regarding the number of lenses that a consumer can purchase with a prescription.⁴⁹⁶ Several commenters had expressed concerns that consumers were able to obtain more than a year's supply of contact lenses, often by purchasing more than a year's worth at one time or by refilling their prescription just before the expiration date.⁴⁹⁷ However, the Commission determined that there was insufficient evidence on the record to support a limit on the maximum quantity of lenses that consumers can purchase prior to the prescription's expiration.⁴⁹⁸ Although there was some evidence that patients purchased contact lenses just before their prescriptions expired, this evidence did not show that the quantity of lenses being purchased was excessive or that consumers were skipping eye exams.⁴⁹⁹ Furthermore, the Commission believed that a maximum quantity limit would be difficult to administer and could have a more significant negative effect on consumers who, instead of following the recommended replacement schedule, opt to wear their lenses longer until they see a prescriber.⁵⁰⁰

In response to the NPRM, some commenters supported the Commission's decision not to impose

quantity limits⁵⁰¹ while others expressed concerns about the purchase of excessive quantities and advocated for limits.⁵⁰² The commenters who support quantity limits are concerned that patients who purchase excessive quantities of lenses face increased health risks because they do not see their prescriber as often.⁵⁰³ Contrary to the Commission's position in the NPRM, they believe that there is evidence in the record that consumers are purchasing an excessive number of lenses close to the end of their prescription and that a quantity limit can be implemented.⁵⁰⁴ These commenters point to survey evidence by Johnson & Johnson Vision Care showing that consumers, in response to reminders that their prescriptions would be expiring soon, ordered more lenses.⁵⁰⁵

However, the concern is not whether consumers are purchasing lenses near the end of their prescription, but whether they are purchasing excessive quantities. As noted in the NPRM, the Johnson & Johnson Vision Care survey did not ask about the quantity of lenses purchased by consumers.⁵⁰⁶ The Commission had previously found that consumers typically do not purchase a year's supply of lenses at one time.⁵⁰⁷ Additionally, 1-800 CONTACTS stated that it was aware of survey evidence it

believed showed that six months is the average size of an order made during the last thirty days of a prescription, which is similar to, based on 1-800 CONTACTS internal data, the average quantity ordered throughout the duration of the prescription.⁵⁰⁸ Thus, the Commission does not have sufficient basis to conclude, despite anecdotal reports and alleged practices by some sellers, that consumers are purchasing lenses in excessive quantities near the end of their prescription.⁵⁰⁹ Neither does the Commission have sufficient evidence showing that consumers are going to eye care providers less frequently because they previously purchased large quantities of contact lenses. In fact, evidence suggests that a majority of consumers are seeing their eye care provider regularly. One survey found that contact lens wearers have an eye exam every thirteen months on average while another survey showed that about 56% of respondents received an eye exam every twelve months or less, with an overall average of approximately sixteen months.⁵¹⁰ These surveys appear consistent with a prior survey by the Coalition for Patient Vision Care Safety, which found that 87% of contact lens wearers had an eye exam last year.⁵¹¹

Some commenters also believe that a quantity limitation would not be difficult to implement when the seller has the prescription because sales could be limited to the amount of lenses necessary for the remaining period of the prescription or based on typical usage.⁵¹² However, it would be impractical for sellers to determine whether the quantity of lenses being purchased is necessary or typical because such amounts may not be the same for all consumers. Additionally, as noted in the NPRM, there are legitimate reasons why a consumer may want to purchase a supply of lenses that exceeds the remaining period of the

(NPRM Comment #3841).

⁴⁹⁶ NPRM, 81 FR at 88549.

⁴⁹⁷ *Id.* at 88547-48.

⁴⁹⁸ *Id.* at 88548-49. The Commission also declined to modify the Rule to state that contact lens prescriptions are valid for an unlimited quantity of lenses regardless of any prescriber-imposed limitation. The Commission found no evidence that prescribers were using quantity limits to undercut the prescription length and recognized that some state laws or regulations mandated that quantity information be included on a prescription, or that a prescriber may choose to do so. NPRM, 81 FR at 88549-50. However, prescribers cannot use quantity limits as a way to frustrate the Rule's prescription expiration requirements. *Id.* at 88550.

⁴⁹⁹ *Id.*

⁵⁰⁰ *Id.*

prescription, including having enough lenses until the next scheduled appointment, having replacements for lost or torn lenses, or replacing lenses more frequently.⁵¹³ Additionally, quantity limitations could encourage some consumers to stretch out their lens supply by wearing them longer than recommended, which is a well-documented health issue that outweighs the potential harm of patients purchasing a quantity of lenses that exceeds what is strictly anticipated by the remaining length of the prescription.⁵¹⁴ Although it is possible that patients could purchase large quantities of lenses by presenting their prescription to multiple sellers, the Commission does not have evidence about the extent of such practice.⁵¹⁵ Finally, when verification is used, a prescriber can determine whether the quantity ordered is excessive, and, if it is, inform the seller within the eight-business-hour period that the request is inaccurate and specify the appropriate amount of lenses.⁵¹⁶ In conclusion, the Commission declines to modify the Rule to limit the quantity of lenses that consumers can purchase.

X. Expiration of Contact Lens Prescriptions

Section 315.6(a) of the Rule requires that a prescription expire on the date specified by the law of the state in which the prescription was written, if that date is one year or more after the issue date of the prescription.⁵¹⁷ The Rule also provides that a prescription shall not expire less than one year after the issue date of the prescription, unless the prescriber specifies a shorter period that is “based on the medical judgment of the prescriber with respect to the ocular health of the patient” and documents the reasoning for the shorter expiration period in the patient’s medical record.⁵¹⁸

The NPRM addressed comments requesting that the Commission set a longer minimum length for prescriptions, prohibit expirations on certain prescriptions, or leave prescription length to the sole discretion of the provider.⁵¹⁹ However, because the Rule’s provisions closely track the Act,

which sets a minimum expiration date “to prevent prescribers from selecting a short expiration date . . . that unduly limits the ability of consumers to purchase contact lenses” and because the Commission concluded that, in drafting the Act, Congress intended to defer to state law except where such law establishes a period of less than one year, the Commission stated that the current framework is appropriate and declined to make changes.⁵²⁰ The NPRM also addressed prescriber reports of patients obtaining contact lenses through sellers, especially online sellers, with expired contact lens prescriptions.⁵²¹ Commenters requested a Rule change or greater enforcement of the Rule to deal with this problem.⁵²² However, finding that the Rule sufficiently prohibited the use of expired prescriptions, the Commission declines to amend the Rule.⁵²³

A. Length of Contact Lens Prescriptions

Following the NPRM’s discussion of expiration length, the Commission received additional comments that favored making prescriptions valid for more than one year.⁵²⁴ Some commenters advocated for such change because they believed that prescriptions rarely change⁵²⁵ or that consumers would save money if they needed to obtain exams less often.⁵²⁶ Other commenters expressed concern that shorter prescription expirations may have the undesirable result of encouraging consumers to wear contacts for longer than recommended⁵²⁷ or that there should not be a standard minimum expiration in the Rule due to variations in patient needs.⁵²⁸

However, some manufacturer and prescriber organizations favored maintaining the Rule’s current expiration provisions. Johnson & Johnson Vision Care stated that the current Rule “ensures that patients continue to receive the vital professional oversight to decrease avoidable risks and increases patient access to the latest technologies to best meet their vision care needs.”⁵²⁹

⁵²⁹ Johnson & Johnson Vision Care, Inc. (NPRM Comment #4327). Peter Menziuso, President of

Likewise, the AOA and the Contact Lens Institute supported the Commission maintaining the Rule’s current prescription length provisions.⁵³⁰

After reviewing the comments, the Commission again declines to modify or remove the Rule’s prescription length provisions. The current Rule closely tracks the Act, which Congress mandated, and already contains provisions that allow for prescriptions longer than one year, dependent upon state law, and shorter than one year, when those are appropriate based on the medical judgment of the prescriber, ensuring flexibility.⁵³¹ The Commission does not find the record adequately supports lengthening the Rule’s prescription expiration provisions. Therefore, the Commission declines to alter the Rule’s provisions relating to prescription length.

B. Sales Using Expired Contact Lens Prescriptions

After the NPRM, commenters again raised the issue of sellers selling contact lenses past the prescription expiration dates,⁵³² and some argued that additional regulation is needed.⁵³³ The Rule already makes clear that expired prescriptions are invalid and prohibits

JJVCI, also echoed this sentiment at the workshop, stating that the company feels strongly about maintaining the one-year expiration to assure patients are seeing their prescriber regularly and prioritizing health. See CLR Panel IV Tr., *supra* note 121, at 16.

sales with such prescriptions.⁵³⁴ If a consumer presents the seller with an expired prescription, the seller cannot use it as the basis for the sale. Not only is the seller unable to base a sale on that expired prescription, but as the Commission clarified in the NPRM, a seller may not use an expired prescription as the basis for a verification request.⁵³⁵ If, however, a seller is presented with a prescription that lacks an expiration date,⁵³⁶ and that seller does not have knowledge as to whether the prescription is expired, the seller must verify the prescription with the prescriber prior to dispensing lenses. In this instance, the seller may rely on the prescriber to inform the seller if the prescription is expired.⁵³⁷

CooperVision requested that the Commission require that sellers, when not in possession of an unexpired prescription, ask consumers if their prescriptions have expired.⁵³⁸ In the NPRM, the Commission addressed a similar request by AOA to require sellers to include the expiration and issue dates, both required elements of a prescription, in verification requests.⁵³⁹ According to the AOA, this requirement would incentivize sellers to make sure patients know their prescription expiration date. However, as explained in the NPRM, the seller would not necessarily have the expiration or issue dates, and neither would the patient.⁵⁴⁰ A better source for this information is the prescriber, who has the ability to invalidate a prescription request because it is expired.⁵⁴¹ For this reason, the Commission will not implement CooperVision's proposal. Additionally, a number of prescriber organizations expressed concerns that consumers are able to buy lenses on expired prescriptions because of passive verification.⁵⁴² Further, to lessen the

chances of the sale of lenses after the expiration of a prescription, some commenters requested that the Commission require that prescriptions be presented at the time of the sale of lenses.⁵⁴³ As stated in Section V, Congress mandated passive verification, and requiring prescription presentation would be inconsistent with Congress's intent. The Final Rule also includes several changes to automated verification calls that will improve passive verification by allowing prescribers to better identify requests based on expired prescriptions.⁵⁴⁴

Finally, commenters again requested that the Commission bring enforcement actions against sellers that sell lenses after the expiration of the prescription.⁵⁴⁵ As stated in the NPRM, if the Commission receives credible evidence that sellers are selling contact lenses when they have actual knowledge that the prescriptions are expired (either because they were presented with a copy of an expired prescription or received a response from a prescriber within the time frame specified in the Rule telling the seller that the prescription is expired), the Commission will take appropriate steps to investigate the allegations.⁵⁴⁶

XI. Paperwork Reduction Act

The existing Rule contains recordkeeping and disclosure requirements that constitute "collection[s] of information" as defined by 5 CFR 1320.3(c) under Office of Management and Budget ("OMB") regulations that implement the Paperwork Reduction Act ("PRA"), 44 U.S.C. 3501 *et seq.*⁵⁴⁷ On May 28, 2019,

concerns with patient safety, as the current eight-hour validation window allows inaccurate, falsified, and expired contact lens prescriptions to be filled. Subsequently, patients' ocular health is put at risk because of a restricted validation period." American Society of Cataract and Refractive Surgery (NPRM Comment #3820) ("Many of our members practice in solo or small practices that often do not have the resources to respond to verification requests within the eight-hour time frame. This rule allows a seller to fill a prescription that is inaccurate, expired, or falsified simply because the prescriber has been unable to respond within eight hours. As a result, patients suffer serious eye injuries by wearing ill-fitted contacts."); Massachusetts Society of Eye Physicians and Surgeons (NPRM Comment #4270).

⁵⁴⁶ NPRM, 81 FR at 88547.

⁵⁴⁷ On October 2, 2019, the Commission requested permission from OMB to continue these

the Commission issued a SNPRM proposing amendments that would contain new information collection requirements subject to OMB review and approval. Specifically, the SNPRM estimated an additional recordkeeping burden for prescribers resulting from the proposed Rule modifications to 597,917 hours (85,417 hours regarding signatures + 512,500 hours regarding their retention) and the associated estimated annual labor cost burden of \$13,244,727.⁵⁴⁸ On the same date, the Commission also submitted a request to OMB seeking approval for the new information collections associated with the proposed rulemaking. On September 20, 2019, the OMB directed the Commission to examine public comments relating to the proposed rulemaking and describe any public comments received regarding the collection, as well as why the Commission did or did not incorporate the commenter's recommendation.⁵⁴⁹ Below, the Commission describes and discusses the amendments to the Final Rule, the public comments received relating to the collection of information burden associated with the SNPRM, and the Commission's ultimate determination of the burden generated by the final amendments.

The Commission has made a number of modifications to the Rule that contain recordkeeping requirements that are collections of information as defined by 5 CFR 1320.3(c). First, the Rule has been modified to require that prescribers either: (A) Obtain from patients, and maintain for a period of not less than three years, a signed confirmation of prescription release on a separate stand-alone document; (B) obtain from patients, and maintain for a period of not less than three years, a patient's signature on a confirmation of prescription release included on a copy of a patient's prescription; (C) obtain from patients, and maintain for a period of not less than three years, a patient's signature on a confirmation of

pre-existing information collections, which were estimated to be 2,104,050 annual hours of burden (which were derived by adding 1,045,650 disclosure hours for contact lens prescribers to 1,058,400 recordkeeping hours for contact lens sellers). See 84 FR 51162 (Sept. 27, 2019); Agency Information Collection Activities; Submission for OMB. On December 9, 2019, OMB approved the Rule's existing information collection requirements through December 31, 2022. OMB Control No. 3804-0127. ⁵⁴¹ As explained in the Alteration section, Section VI, *supra*, if a seller wishes to avail itself of the exception to alteration, it may use an expired prescription as an indication of manufacturer or brand if the minimum criteria discussed in that Section are met, and the seller obtains additional information, from the consumer or the prescriber, that the consumer has a current prescription for that brand. In so doing, the seller obtains a basis for the verification request other than the expired prescription.

⁵⁴² Contact Lens Institute (SNPRM Comment #79) ("Indeed, CLI remains concerned about the contribution of passive verification via robocalls to filling expired or invalid prescriptions . . ."); American Society of Cataract and Refractive Surgery (SNPRM Comment #127) ("Significant

prescription release included on a copy of a patient's contact lens fitting sales receipt; or (D) provide each patient with a copy of the prescription via online portal, electronic mail, or text message, and for three years retain evidence that such prescription was sent, received, or, if provided via an online-patient portal, made accessible, downloadable, and printable by the patient.⁵⁵⁰ For prescribers who choose to offer an electronic method of prescription delivery, the Final Rule requires that such prescribers identify the specific method or methods to be used, and maintain records or evidence of affirmative consent by patients to such digital delivery for three years.⁵⁵¹ For instances where a consumer refuses to sign the confirmation or accept digital delivery of their prescription, the Final Rule directs the prescriber to note the refusal and preserve this record as evidence of compliance.⁵⁵² None of these new requirements, however, would apply to prescribers who do not have a direct or indirect financial interest in the sale of contact lenses.⁵⁵³

Additional modifications to the Rule that constitute collections of information as defined by 5 CFR 1320.3(c) require that sellers who use calls containing automated verification messages: (1) Record the entire call; (2) commence the call by identifying it as a request for prescription verification; (3) provide the information required by § 315.5(b) in a slow and deliberate manner and at a reasonably understandable volume; and (4) give the prescriber the option to repeat the information.⁵⁵⁴ The call recordings must be preserved for at least three years.⁵⁵⁵

The Commission hereby provides PRA burden estimates, analysis, and discussion for the requirements to collect patient signatures as confirmation of prescription release and as consent to electronic prescription delivery; and the requirement to record automated verification messages; and associated recordkeeping obligations.

A. Confirmation of Prescription Release and Affirmative Consent to Digital Delivery of a Prescription

1. SNPRM Burden Estimate for the Confirmation of Prescription Release

In its SNPRM, the Commission put forth estimates for the additional burden on individual prescribers' offices to generate and present to patients the

confirmations of prescription release, and to collect and maintain the confirmations of prescription release for a period of not less than three years.⁵⁵⁶ As set out in the PRA section's introductory paragraph above, the Commission previously calculated this burden to be 597,917 hours (85,417 hours for prescribers to collect patient signatures and 512,500 hours for prescribers' office staff to store them).⁵⁵⁷ Based on average hourly wage rates, the Commission calculated the aggregate labor cost burden (totaling prescribers and prescribers' office staff) at \$13,244,727.⁵⁵⁸ The Commission noted, however, that arguably, the overall burden of the Rule—including verification costs previously approved by the Office of Management and Budget⁵⁵⁹—could be lower (or not increase) given the proposed modification's potential offsetting effects of more patients being in possession of their prescriptions and consequently fewer verifications.⁵⁶⁰

The Commission requested comment on the accuracy of the FTC's burden estimates, including whether the methodology and assumptions used are valid (such as whether prescribers or office staff are more likely to collect patient signatures and retain associated recordkeeping), and a quantification of the reduction in verifications resulting from the confirmation of prescription proposal.⁵⁶¹

2. Comments Regarding the SNPRM Estimate for the Confirmation of Prescription Release Requirement

In response to the Commission's SNPRM proposal, several commenters reiterated that obtaining and storing the Confirmations of Prescription Release would create "onerous" administrative and financial burdens, but most commenters did not supply financial estimates for this burden.⁵⁶² The AOA, which had previously estimated the cost of the NPRM's signed-acknowledgment proposal to be as high as \$18,795 per optometrist,⁵⁶³ did not submit a new

burden estimate for the Confirmation of Prescription Release proposal, but did opine that the increased flexibility of the new proposal would not reduce the overall burden on prescribers.⁵⁶⁴ One commenter estimated that it would cost his practice \$10,000 per year in "paperwork, storage, and time spent by secretaries handling paperwork," but did not provide details about his practice (the number of patients and prescribers, for instance) or how the estimate was derived, and what the cost amounted to on a per-patient or per-prescription basis.⁵⁶⁵ Another commenter, Dr. Thomas Steinemann, wrote, "I dispute the FTC contention that each documentation will only take 'one minute.' Additional documentation can actually take several minutes when there are discrepancies in verification."⁵⁶⁶ Dr. Steinemann commented that according to his office manager, the "additional steps of verification and documentation" would add 10 minutes of administrative time per patient.⁵⁶⁷ The comment, however, does not articulate how the Confirmation of Prescription Release requirement can create discrepancies in verification, or what "additional steps of verification" Dr. Steinemann or his office manager are referring to. The Confirmation of Prescription Release requirement does not directly impact the requirement that prescribers verify prescriptions upon request, other than to potentially make such requests less common if more patients have possession of their prescriptions and can present them to sellers when ordering.

In contrast to those critical of the burden and the Commission's SNPRM PRA analysis, other commenters contended that the burden of the new requirement would be minimal or offset by a reduced burden in other respects of the Rule.⁵⁶⁸ One commenter, the ITIF, asserted that evidence that the new

it was based not on the cost of the proposed Signed Acknowledgment but on the overall cost of government regulations (including those already in place), and because the survey had numerous methodological limitations. SNPRM, 84 FR at 24677.

⁵⁶⁴ American Optometric Association (SNPRM Comment #96). A few SNPRM commenters reiterated the AOA's \$18,000 estimate (which the Commission previously determined it could not rely on, for reasons explained in the SNPRM), 84 FR at 24677, but did not provide additional information or empirical support for this figure. Koerber (SNPRM Comment #110); American Society of Cataract and Refractive Surgery (SNPRM Comment #127).

⁵⁶¹ *Id.*

⁵⁶² See Section II.C.7, *supra*.

⁵⁶³ American Optometric Association (NPRM Comment #3830). As noted in note 247, *supra*, the Commission explained in the SNPRM that it could not accord this estimate significant weight because

requirement would increase prescriber costs “appears to be significantly overstated,” and noted that storing confirmation signatures in paper takes up “very little room and cost,” and, if stored electronically, storage costs are “essentially zero.”⁵⁶⁹ The ITIF also stated allowing prescribers to deliver prescriptions digitally would reduce the “already small” burden on prescribers of the confirmation of release requirement, and at the same time reduce the number of verification calls from third party lens sellers, thus further reducing the overall burden on both sellers and prescribers.⁵⁷⁰

Another commenter, the National Taxpayers Union (“NTU”), felt the SNPRM burden-estimates were “plausible,” and noted that the FTC’s estimates were based on underlying assumptions that may be overly cautious, and thus lead to overcounting.⁵⁷¹ In particular, the NTU noted that the Commission, in calculating the SNPRM’s PRA burden: (1) Assumed that only optometrists would obtain patient signatures, when, in fact, support staff—who are paid less per hour—are permitted to do so; (2) provided sample confirmation language so prescribers wouldn’t have to formulate their own; (3) assumed that every provider would spend a minute per confirmation even though states already impose recordkeeping requirements, and electronic storage might take seconds; and (4) did not account for potentially offsetting reductions in burden hours for eye care providers due to reduced time and effort spent responding to verification requests (since more patients would have possession of their prescriptions and be able to present them to third-party contact lens sellers).⁵⁷²

Likewise, 1-800 CONTACTS submitted a new analysis from Stanford Health Research Professor Laurence Baker that called the Commission’s burden analysis “conservative,” and estimated that a reduction in verification requests by 13–15% would

be sufficient to offset all of the costs of the confirmation requirement.⁵⁷³

None of the SNPRM commenters offered detailed suggestions for reducing the burden resulting from the Confirmation of Prescription Release proposal, other than to suggest that the Commission withdraw its proposal completely or choose a substantially different alternative, such as signage or public education.⁵⁷⁴ For reasons discussed in Section II.C.6., *supra*, the Commission does not believe such alternatives would effectively serve the purpose of the Rule.

3. Estimated Additional Burden Hours for the Confirmation of Prescription Release Requirement

Commission staff estimates the PRA burden of the Confirmation of Prescription Release requirement based on comments received and its long-standing knowledge and experience with the eye care industry.⁵⁷⁵ Staff continues to believe there will be an additional burden on individual prescribers’ offices to satisfy the confirmations of prescription release requirements, but that this burden will be relatively small in the context of the overall market for contact lenses and examinations.⁵⁷⁶

The number of contact lens wearers in the United States is currently estimated to be approximately 45 million.⁵⁷⁷ Therefore, assuming an annual contact lens exam for each contact lens wearer, the Confirmation of Prescription Release requirement would require that 45 million people either read and sign a Confirmation of Prescription Release or agree to receive their prescription electronically.

Nothing in the comments to the SNPRM alters the Commission’s belief that generating and presenting the Confirmation of Prescription Release will not require significant time or effort. The comments describing the burden as crippling and onerous do not

contain empirical facts or data regarding the amount of time and cost of the Commission’s proposal, and some estimates appear overstated.

The Commission continues to believe that creating the Confirmation of Prescription Release should not be difficult to implement since the requirement is flexible in that it allows any one of several different modalities and delivery methods, including adding the confirmation to existing documentation that prescribers routinely provide (sales receipts) or are already required to provide (prescriptions) to patients. The requirement is also flexible in that it does not prescribe other details such as the precise content or language of the patient confirmation, but merely requires that, if provided to the patient pursuant to options specified in § 315.3(c)(1)(i)(A), (B), and (C), the confirmation from the patient must be in writing. At the same time, it is not required that prescribers spend time formulating their own content for the confirmation, since the Rule provides draft language that prescribers are free to use, should they so desire. Furthermore, the confirmation requirement is flexible enough to cover situations where a contact lens fitting is completed remotely, since a prescriber can readily satisfy the confirmation and prescription-release requirements by various methods, including email, text, or uploading the prescription to a patient portal, so long as the patient consents to such delivery.

The four options for a prescriber to confirm a prescription release to a patient are set out in § 315.3(c)(1)(i)(A), (B), (C), and (D). The requirement in options (A), (B), and (C) to provide the patient with a Confirmation of Prescription Release statement are not disclosures constituting an information collection under the PRA because the FTC, in § 315.3(c)(1)(ii), has supplied the prescriber with draft language the prescriber can use to satisfy this requirement.⁵⁷⁸ As noted above, however, the requirement in (A), (B), and (C) to collect a patient’s signature on the Confirmation of Prescription Release and preserve it constitutes an information collection as defined by OMB regulations that implement the PRA. Nonetheless, the Commission believes it will require minimal time for a patient to read the confirmation and provide a signature. The Commission estimated in the SNPRM that it would

⁵⁷⁷ Centers for Disease Control, Healthy Contact Lens Wear and Care, Fast Facts, <https://www.cdc.gov/contactlenses/fast-facts.html>. This is an updated figure that represents an increase of four million wearers since the NPRM and SNPRM estimates were prepared.

⁵⁷⁸ “The public disclosure of information originally supplied by the Federal government to the recipient for the purpose of disclosure to the public is not included within” the definition of “collection of information.” 5 CFR 1320.3(c)(2).

take patients ten seconds to read the one-sentence Confirmation of Prescription Release and provide a signature,⁵⁷⁹ and the Commission believes that ten seconds remains an appropriate estimate.

The fourth option, § 315.3(c)(1)(i)(D), does not, in and of itself, constitute an information collection under the PRA, since no new information that would not otherwise be provided under the Rule is provided to or requested from the patient.⁵⁸⁰ Excluding that option from consideration, and assuming the remaining three options are exercised with equal frequency, 75% of approximately 45 million annual prescription releases will entail reading and signing a confirmation statement. Thus, assuming ten seconds for each release, prescribers and their office staff would devote 93,750 hours, cumulatively (75% × 45 million prescriptions yearly × 10 seconds each) to obtaining patient signatures as confirmations of prescription release.⁵⁸¹

Maintaining those signed confirmations for a period of not less than three years should also not impose substantial new burdens on individual prescribers and office staff. The majority of states already require that optometrists keep records of eye examinations for at least three years,⁵⁸² and thus many prescribers who opt to include the confirmation of prescription release on the prescription itself would be preserving that document, regardless. Similarly, most prescribers already retain customer sales receipts for

financial accounting and recordkeeping purposes, and thus prescribers who opt to include the confirmation of prescription release on the sales receipt also could be retaining that document, regardless. Moreover, storing a one-page document per patient per year should not require more than a few seconds, and an inconsequential, or *de minimis*, amount of record space. Some prescribers might also present the Confirmation of Prescription Release in electronic form, enabling patients to sign a computer screen or tablet directly and have their confirmation immediately stored as an electronic document. For other prescribers, the new recordkeeping requirement would likely require that office staff either preserve the confirmation in paper format, or electronically scan the signed confirmation and save it as an electronic document. For prescribers who preserve the confirmation electronically by scanning it, Commission staff estimates that saving such a document would consume approximately one minute of staff time. Commission staff does not possess detailed information on the percentage of prescribers' offices that currently use and maintain paper forms, electronic forms, or that scan paper files and maintain them electronically. Thus, for purposes of this PRA analysis, Commission staff will assume that *all* prescriber offices who opt for § 315.3(c)(1)(i) (A), (B), or (C) require a full minute per confirmation for recordkeeping arising from the modifications. Excluding from PRA consideration the fourth option, § 315.3(c)(1)(i)(D), as there is no signature to obtain or retain, and assuming that prescribers elect the other options three-fourths or 75% of the time, the recordkeeping burden for all prescribers to scan and save such confirmations would amount to 562,500 hours (75% × 45 million prescriptions yearly × one minute for scanning and storing) per year.

As noted previously, the fourth option for satisfying the Confirmation of Prescription Release requirement does not necessitate that prescribers obtain or maintain a record of the patient's signature confirming receipt of her prescription. However, as explained in § 315.2, under the Rule's now-modified definition of *Provide to the patient a copy*, in order to avail themselves of the fourth option, prescribers must obtain and maintain records or evidence of the patients' affirmative consent to electronic delivery for three years. In order to remain as cautious as possible in estimating the burden, the Commission will use the assumption

that consumers sign such consents for electronic delivery pursuant to § 315.3(c)(1)(i)(D) for one quarter of the 45 million prescriptions released per year,⁵⁸³ and that this task would take the same amount of time as to obtain and maintain a signature of the patient's Confirmation of Prescription Release. Thus, the Commission will allot 218,750 hours⁵⁸⁴ for the time required for prescribers to obtain affirmative consents and maintain records of same.

Therefore, the estimated incremental PRA recordkeeping burden for prescribers and their staff resulting from the Confirmation of Prescription Release modifications to the Rule amounts to 906,250 total hours ((93,750 and 31,250 hours, respectively, to obtain signatures confirming release and consenting to electronic delivery) plus (562,500 and 218,750 hours, respectively, to maintain such records for three years)).

As some commenters noted, the overall burden of the Rule—particularly verification costs previously approved by the Office of Management and Budget⁵⁸⁵—could lessen (or not increase by as much as the incremental burden from the proposed Rule modifications), given potentially offsetting effects presented by the Commission's Rule modifications.⁵⁸⁶ With more patients in possession of their prescriptions (due to increased prescription release), and a greater ability to present them to sellers (due to the modification requiring sellers to provide a method for patients to present prescriptions) fewer time-consuming verifications would be necessary.⁵⁸⁷

Based on new projections from 1–800 CONTACTS⁵⁸⁸ and a previous analysis by the Commission,⁵⁸⁹ a decrease of between 13%–23% in verifications could be sufficient to offset the entire cost of the Confirmation of Prescription Release requirement. In the SNPRM, however, the Commission noted that these estimates rely on a number of assumptions, not all of which are confirmed as accurate.⁵⁹⁰ Furthermore,

⁵⁸³ 11,250,000 (45 million prescriptions × 25%).

⁵⁸⁴ 31,250 hours (11,250,000 prescriptions yearly × 10 seconds) for obtaining the signature plus 187,500 hours (11,250,000 affirmative consents × one minute) for storing such records.

⁵⁸⁵ See note 549, *supra*.

⁵⁸⁶ See Information Technology & Innovation Foundation (SNPRM Comment #103); 1–800 CONTACTS (SNPRM Comment #135); National Taxpayers Union (SNPRM Comment #149).

⁵⁸⁷ *Id.*

⁵⁸⁸ 1–800 CONTACTS (SNPRM Comment #135) (estimating that a reduction of 13%–15% in verifications would offset the estimated costs of the proposal).

⁵⁸⁹ SNPRM, 84 FR at 24693–94.

⁵⁹⁰ *Id.* at 24678. The calculation also does not take into account any of the benefit to consumers from

⁵⁷⁹ SNPRM, 84 FR at 24693. This estimate was based on responses to a consumer survey regarding how long it would take consumers to read the Signed Acknowledgment, and a prior PRA estimate for consumers to complete a similar signed acknowledgment.

⁵⁸⁰ In order to utilize § 315.3(c)(1)(i)(D), however, a prescriber must obtain and maintain records or evidence of affirmative consent by patients to electronic delivery of their prescriptions. 16 CFR 315.2. The burden to do so is included in the recordkeeping burden calculation of this PRA Section.

⁵⁸¹ Section 315.3(c)(1)(iii) also requires that in the event that a patient declines to sign a confirmation requested under paragraphs (c)(1)(i)(A), (B), or (C), the prescriber must note the patient's refusal on the document and sign it. However, the Commission has no reason to believe that such notation should take any longer than for the patient to read and sign the document, so the Commission will maintain its calculation as if all confirmations requested under (c)(1)(i)(A), (B), or (C) require the same amount of time.

⁵⁸² See, e.g., 246 Mass. Code Regs. § 3.02 (requiring optometrists to maintain patient records for at least seven years); Wash. Admin. Code § 246–851–290 (requiring optometrists to maintain records of eye exams and prescriptions for at least five years); Iowa Admin. Code r. 645–182.2(2) (requiring optometrists to maintain patient records for at least five years); Fla. Admin. Code r. 64B13–3.003(6) (requiring optometrists to maintain patient records for at least five years).

neither 1-800 CONTACTS, nor any other commenter, provided empirical data or projections as to how much the number of verifications will decline due to the Rule modifications. The Commission continues to lack this data, and thus cannot predict whether the verification decrease—should it occur—would be sufficient to offset any or all of the burden. Therefore, the Commission will not make an adjustment for offsetting effects and benefits at this time.

For this specific reason, and the various cautious assumptions described above, the Commission's estimate of 906,250 total hours for prescribers and their staff resulting from the Confirmation of Prescription Release requirement may well overstate the burden of the modification. Furthermore, the actual burden should be even lower because none of the Confirmation of Prescription Release requirements apply to prescribers who do not have a direct or indirect financial interest in the sale of contact lenses. The Commission requested but did not receive comment on the percentage of prescribers who might be exempt, and does not currently possess sufficient information to determine what percentage of prescribers do not have a financial interest in the sale of contact lenses. The Commission thus has not reduced the estimated PRA burden accordingly at this time.

4. Estimated Total Labor Cost Burden for the Confirmation of Prescription Release Modification

Commission staff derives labor costs by applying appropriate hourly-cost figures to the burden hours described above. The task to obtain patient confirmations and consent to electronic delivery could theoretically be performed by medical professionals (e.g., optometrists, ophthalmologists) or their support staff (e.g., dispensing opticians, medical technicians, office clerks). In the SNPRM, the Commission requested comment as to whether prescribers or office staff are more likely to collect patient signatures and retain associated recordkeeping, but did not receive significant guidance on this. Therefore, staff will continue to assume that optometrists will perform the task of collecting patient signatures, and staff will perform the labor pertaining to

having their prescriptions and being able to choose from among competing sellers; the savings consumers might achieve by purchasing lower-priced lenses; the improvements to health and safety due to a reduction in errors associated with invalid prescriptions currently verified through passive verification; and the Commission's ability to assess and verify compliance with the Rule.

printing, scanning, and storing of documents, even though this may lead to some overcounting of the burden.

According to the Bureau of Labor Statistics, salaried optometrists earn an average wage of \$57.68 per hour, and general office clerks earn an average wage of \$16.92 per hour.⁵⁹¹ Using the aforementioned estimate of 125,000 total prescriber labor hours for obtaining patient signatures, the resultant aggregate labor costs to obtain patient signatures is \$7,210,000 (125,000 hours × \$57.68).

As previously noted, Commission staff assumes that office clerks will typically perform the labor pertaining to the printing, scanning and storing of prescription release confirmations. Applying a mean hourly wage for office clerks of \$16.92 per hour to the aforementioned estimate of 781,250 hours, cumulative labor costs for those tasks would total \$13,218,750.

Therefore, combining the aggregate labor costs for both prescribers and office staff to obtain signed patient confirmations and consent to electronic delivery and preserve the associated records, the Commission estimates the total labor burden of the Confirmation of Prescription Release modification to be \$20,428,750. This represents an increase from the SNPRM's estimated burden for the Confirmation of Prescription Release proposal due to a relatively large increase in the number of contact lens wearers now estimated by the Centers for Disease Control,⁵⁹² increases in the estimated wages of optometrists and office staff by the Bureau of Labor Statistics,⁵⁹³ and the additional Rule modification requiring prescribers to collect and preserve patients' affirmative consent to electronic delivery of their prescriptions.

5. Capital and Other Non-Labor Costs for the Confirmation of Prescription Release Requirement

The proposed recordkeeping requirements detailed above regarding prescribers impose negligible capital or other non-labor costs, as prescribers likely have already the necessary equipment and supplies (e.g., prescription pads, patients' medical charts, scanning devices, recordkeeping storage) to perform those requirements.

⁵⁹¹ Press Release, Bureau of Labor Statistics, United States Department of Labor, Occupational Employment Statistics—May 2018, <https://www.bls.gov/news.release/ocwage.t01.htm>.

⁵⁹³ Press Release, Bureau of Labor Statistics, United States Department of Labor, Occupational Employment Statistics—May 2018, <https://www.bls.gov/news.release/ocwage.t01.htm>.

B. Recording of Automated Telephone Messages

As noted above, the Commission has further modified the Rule to require that sellers who use automated verification messages record the calls and preserve the recordings for three years. In the SNPRM, the Commission staff did not put forth a specific burden estimate for this requirement, but rather sought comments to help inform such estimated burden, to the extent applicable.⁵⁹⁴

The Commission received a few comments stating that the requirement presented a burden for sellers.⁵⁹⁵ 1-800 CONTACTS, for instance, commented that the requirement to store the recorded calls would impose a costly new burden while providing relatively few associated benefits.⁵⁹⁶ Consumer Reports essentially reiterated this view.⁵⁹⁷ None of the commenters, however, provided data or cost figures that would help inform the Commission's estimated burden.

The Commission does not believe that requiring sellers who use automated telephone messages for verification to record the calls and preserve the recordings will create a substantial burden. The requirement will not require additional labor time for sellers, since the verification calls will be for the same duration that they are now (the length of time required to submit the information required for verification under § 315.5 (b)). However, the new requirement will likely require capital and other non-labor costs to record the calls and store them electronically. But sellers who utilize automated telephone messages for verification are already availing themselves of sophisticated communication technology, and thus should not find it daunting to implement technology to record such calls. Meanwhile the growth of digital recording technology, and the capital investment required for recording equipment and record storage, is rapidly declining and has been for some time.⁵⁹⁸ A phone service provider used by at least one online contact lens seller, for example, advertises that it charges a quarter of one cent (\$.0025) for each minute recorded, plus a storage fee of \$.0005-per-month for each minute of

⁵⁹⁴ SNPRM, 84 FR at 24694.

⁵⁹⁵ See Sections III.B., C. and D, *supra*.

⁵⁹⁶ 1-800 CONTACTS (SNPRM Comment #135).

⁵⁹⁷ Consumer Reports (SNPRM Comment #133).

⁵⁹⁸ See Final Rule, Telemarketing Sales Rule, 68 FR 4622 (Jan. 29, 2003) (discussing the cost for recording calls, and determining it was not a significant obstacle for telemarketers).

recorded storage over 10,000.⁵⁹⁹ In other words, assuming each verification call requires three minutes of recording, the first 3333 verification calls recorded and stored would cost \$25 (three-fourths of one cent per call),⁶⁰⁰ and each additional verification call would cost approximately six cents apiece to record and store for three years.⁶⁰¹ Other phone service providers surveyed advertise call-recording options such as \$4.99 per gigabyte (about 5000 minutes) of recorded calls (about 4/10th of a cent per verification call),⁶⁰² and 1000 minutes of call recording for \$14.95 (approximately 4.5 cents per verification call).⁶⁰³ Some services also advertise unlimited call-recording plans ranging anywhere from \$20–70 a month, depending on how many lines, and how much storage is required.⁶⁰⁴ The costs of these services would vary depending on what other options are selected, how long storage is required, and the size of the order, among other things, and the Commission does not vouch for the sufficiency of any of these services. Rather, the Commission mentions these advertised promotions to demonstrate that the cost of recording calls does not appear to be burdensome. Moreover, the Commission believes, as stated in Section III, *supra*, that any incremental costs to sellers for recording calls is outweighed by the benefit to consumers and prescribers from curtailing invalid verification calls. For purposes of calculating the PRA burden, however, the Commission will estimate that each three-minute verification call costs five cents to record.

According to recent survey data, approximately 36% of contact lens purchases are from a source other than the prescriber.⁶⁰⁵ Assuming that each of the 45 million contact lens wearers in the U.S. makes one purchase per year, this would mean that approximately 16,200,000 contact lens purchases (45

million \times 36%) are made annually from sellers other than the prescriber. Based on prior discussions with industry, approximately 73% of sales by non-prescriber sellers require verification, meaning that approximately 11,826,000 purchases would require verification calls, faxes, or emails (16,200,000 \times 73%). The Commission does not possess information as to the percentage of verifications completed by telephone versus fax or email. Thus for purposes of this analysis, the Commission will assume that all verifications are performed via telephone. Furthermore, the Commission does not have information as to the percentage of telephone verifications that are automated as opposed to live calls, and thus will assume that all telephone verifications are automated calls and subject to the new call-recording requirement.

Based on the aforementioned assumptions, the Commission estimates that the requirement to record automated telephone messages will require recording 11,826,000 calls⁶⁰⁶ at an annual cost to third-party sellers, in the aggregate, of \$591,300 (11,826,000 \times \$.05).

C. Total Burden for the Modifications to the Rule

Combining the marginal cost of the Rule modifications for both sellers and prescribers, the Commission estimates that the amendments will impose an additional burden of \$21,020,050 (\$20,428,750 for prescribers + \$591,300 for third-party sellers). Adding these estimated costs to the OMB's already approved existing cost burden (\$84,548,448) results in a total PRA burden from the Rule of \$105,568,498. While not insubstantial, this represents just two percent of the overall \$5,012,800,000 contact lens market in the United States.⁶⁰⁷ Moreover, as noted previously, the estimated burden is calculated using several cautious assumptions that may overstate the actual cost; in all likelihood, the actual burden will be significantly less.

⁶⁰⁶ In some instances, sellers may have to call more than once to verify an order. In those instances, however, only the recording of the successful verification would need be preserved.

XII. Regulatory Flexibility Act

The Regulatory Flexibility Act ("RFA")⁶⁰⁸ requires that the Commission provide an Initial Regulatory Flexibility Analysis ("IRFA") with a Proposed Rule, and a Final Regulatory Flexibility Analysis ("FRFA") with the Final Rule, unless the Commission certifies that the Rule will not have a significant economic impact on a substantial number of small entities.⁶⁰⁹ The purpose of the regulatory flexibility analysis is to ensure that the agency considers the impact on small entities and examines regulatory alternatives that could achieve the regulatory purpose while minimizing burdens on small entities.

Although the Commission believed that the amendments it proposed would not have a significant economic impact on small entities, it included an IRFA in the SNPRM and solicited public comment.⁶¹⁰ In this section, the Commission discusses the SNPRM comments that addressed the IRFA,⁶¹¹ as appropriate, below. The Final Rule is similar to the rule proposed in the SNPRM. The Commission continues to believe that the amendments it is adopting will not have a significant economic impact upon small entities, but has nonetheless deemed it appropriate as a matter of discretion to provide this FRFA.

A. Need for and Objectives of the Rule Amendments

The Commission's Final Rule incorporates changes affecting prescribers and sellers. These changes were, in large part, previously addressed in the Commission's NPRM and SNPRM, including in the Regulatory Flexibility Act sections. As explained in the earlier IRFAs, the need for and objective of these changes is to clarify

⁶⁰⁸ 5 U.S.C. 601–612.

⁶⁰⁹ 5 U.S.C. 603–605.

⁶¹⁰ SNPRM, 84 FR at 24694. The Commission's NPRM also included an IRFA. NPRM, 81 FR at 88588.

⁶¹¹ Unlike many other commenters who addressed the IRFA indirectly, the AOA commented on the RFA by name stating its belief that the Commission "has not fully considered the regulatory burden under which physicians are already operating" and cited to the Office of Advocacy of the U.S. Small Business Administration's FY 2018 Report on the Regulatory Flexibility Act. According to the AOA, that report stated that "[s]mall businesses have told advocacy stories that exemplify how federal regulations drain small businesses' resources, energy, and in some cases even their desire to stay in business." The AOA indicated that it "has heard the same concerns voiced by doctors of optometry who after years of service in patient care find that the regulatory framework is so intrusive to the doctor patient relationship, [sic] that some consider leaving the profession." SNPRM Comment #96.

⁵⁹⁹ Twilio Support, <https://support.twilio.com/hc/en-us/articles/223132527-How-much-does-it-cost-to-record-a-call->.

⁶⁰⁰ (10,000 minutes \times \$.0025) + 3333 three-minute calls = \$.0075 per call.

⁶⁰¹ *Id.* For each additional three-minute verification call, it would cost three-quarters of a cent to record and .15 of a cent per month to store the recording (5.4 cents for 36 months), for a total of 6.15 cents per call.

⁶⁰² <https://getvoip.com/blog/2017/11/16/call-recording/>; see also <https://jive.com/features/call-recording> (estimating that one gigabyte typically stores about 5,000 minutes of recorded calls).

and update the Rule in accordance with marketplace practices.

1. Amendments Affecting Prescribers

The following changes affect prescribers, many of whom are small businesses: (1) Should the prescriber so choose, allow for electronic delivery of prescriptions as a means for automatic prescription release when agreed to by the patient (and in such cases, prescribers must retain evidence for not less than three years that the prescription was sent, received, or made accessible, downloadable, and printable). The prescriber must identify to the patient the specific method of electronic delivery and obtain the patient's consent to that method, and maintain the evidence of consent for a period of not less than three years; (2) Request the patient sign a confirmation of receipt of a contact lens prescription (and if a patient declines to sign, must note the patient's refusal on the document and sign it);⁶¹² and (3) Respond to authorized seller requests for copies of a prescription within forty business hours, and require the prescriber to make a notation in the patient's record when responding to such requests.

As explained in detail in this Final Rule notice, the Commission has determined that a Confirmation of Prescription Release is necessary for several reasons, including: (1) Multiple consumer surveys consistently show prescriber non-compliance with, and lack of consumer awareness of, the Rule's prescription-release requirement; (2) numerous personal accounts of prescribers' failure to release prescriptions; (3) the persistently high number of verifications, many of which would be unnecessary were consumers in possession of their prescriptions; (4) the regulatory structure of the contact lens market, which requires a consumer to obtain lenses pursuant to a prescription while permitting prescribers to sell what they prescribe, thus creating an incentive for prescribers to withhold prescriptions; and (5) the lack of credible empirical evidence rebutting or contradicting the evidence that prescribers are not automatically releasing prescriptions, and that consumers are not fully aware of their rights.⁶¹³

The Commission further determined that allowing prescribers to satisfy the automatic prescription release requirement by using an online patient

portal or other electronic method in lieu of a paper copy, when the patient gives verifiable affirmative consent, offered benefits for sellers, prescribers, and patients. Patients would be able to access their prescriptions and have electronic copies to send to sellers. With the prescription, a seller would no longer need to submit a verification request, which would also benefit prescribers by reducing the volume of requests.⁶¹⁴

The Commission is also instituting a forty-business-hour requirement for prescribers to provide additional copies of prescriptions upon request from a patient's agent to ensure that patients or their agents can receive additional copies of their prescription in a timely manner.⁶¹⁵ Additionally, prescribers would be required to note in the patient's file the name of the requester and the date and time the prescription was provided so that the Commission is able to determine, if necessary, whether a prescriber has complied with the Rule.

2. Amendments Affecting Sellers

The amendments affecting sellers require them: (1) When using automated telephone messages to verify prescriptions, to record the entire call (and maintain such recordings for a period of not less than three years), commence the call by identifying it as a request for prescription verification made in accordance with the Contact Lens Rule, deliver the required information in a slow and deliberate manner and at a reasonably understandable volume, and make the required information repeatable at the prescriber's option; (2) to provide consumers with a method that allows consumers to submit their prescriptions to sellers; and (3) to verify only the contact lens brand or manufacturer that appears on the consumer's prescription, unless the consumer has provided an unprescribed contact lens manufacturer or brand in response to a specific request from the seller.

The Commission implemented the additional requirements for automated verification calls to relieve the burden on prescribers and reduce potential health risks to patients from incomplete or incomprehensible automated telephone messages. Specifically, the Commission noted that prescribers must be able to understand automated messages so they can, if necessary, respond to sellers to prevent improper sales. The Commission imposed the

amendments in response to concerns about the quality of automated telephone messages, and instated the recording requirement because without such a record, the Commission cannot reliably assess whether a call was compliant, and further, whether the seller has a pattern of placing non-compliant calls (and unlawfully selling after such calls).

The Commission also imposed a requirement for sellers to accept prescription presentation to reduce the number of verifications, reduce errors associated with incorrect verification attempts, and make it more difficult for ill-intentioned sellers to abuse the passive verification framework and take advantage of consumers who might not realize that the seller intends to verify a different lens than the one written on their prescription.

The Commission modified the definition of alteration, and included an exception for sellers that verify only the contact lens brand or manufacturer that consumers indicate is on their prescriptions in order to address the emergence of several businesses that rely exclusively, or almost exclusively, on passive verification as a means to substitute their own brand of contact lenses for those originally prescribed by the patient's prescriber. The Commission continues to receive reports about the proliferation of passive verification abuses. The implementation of the alteration definition, including the exception, should serve as an effective deterrent against sellers that try to game the verification system to sell non-prescribed contact lenses.⁶¹⁶

B. Significant Issues Raised by Public Comments in Response to the IRFA, Including Any Comments Filed by the Chief Counsel for Advocacy of the Small Business Administration, and the Agency's Response, Including Any Changes Made in the Final Rule Amendments

The Commission did not receive any comments from the Small Business Administration on this Rule Review. The Commission did receive comments from various interested parties in response to the SNPRM, and it discusses them below.

1. Amendments Affecting Prescribers

As discussed in detail in this notice, the Commission, in the SNPRM, determined that the Rule needs to contain some form of patient confirmation requirement, but the Commission made changes to its prior

⁶¹² This requirement does not apply to prescribers who do not have a direct or indirect financial interest in the sale of contact lenses.

⁶¹³ See Section II, *supra*.

⁶¹⁴ For a more detailed analysis of the reasons the Commission allowed prescribers to satisfy the automatic release requirement electronically in the Final Rule, see Section II.C.5., *supra*.

⁶¹⁵ See Section VIII, *supra*.

⁶¹⁶ The reasons for this Final Rule amendment are more fully discussed in Section VI, *supra*.

signed-acknowledgment proposal (put forth in the NPRM) in an effort to reduce the burden associated with, and address other criticisms surrounding, the proposal. These changes included: (1) Adding an option for prescribers to satisfy the confirmation requirement by releasing the prescription electronically under certain conditions; (2) excluding from the requirement eye care prescribers who have no direct or indirect financial interest in the sale of contact lenses; and (3) allowing prescribers to craft their own wording of the signed confirmation, while providing sample confirmation language that prescribers can use at their discretion.⁶¹⁷ In response to the SNPRM proposal, the Commission received a number of comments, mostly from prescribers, criticizing, and detailing the burden of, and other issues associated with complying with, the Commission's Confirmation of Prescription Release requirement.⁶¹⁸

Other SNPRM commenters provided new views or concerns about the NPRM's proposal to require that prescribers respond to requests from patients or their agent for an additional copy of a prescription within forty business hours. Some commenters felt that the Commission should not impose a time period for prescribers to respond to requests from patients or their agents for an additional copy of a prescription. Other commenters recommended that the Commission require prescribers to respond to such requests within a shorter period of time. The Commission has determined that a defined time period is necessary, and that its SNPRM proposal of forty business hours should be sufficient to ensure prescribers comply within a reasonable amount of time, while at the same time limit the additional burden on them to do so.⁶¹⁹

2. Amendments Affecting Sellers

In response to the SNPRM's proposal to require that each verification call: commence by identifying it as a request for prescription verification made in accordance with the Contact Lens Rule; deliver the required information in a slow and deliberate manner and at a reasonably understandable volume; and make the required information repeatable at the prescriber's option, the Commission did not receive any comments suggesting that this resulted

in a burden. Some commenters did raise objections, however, to the Commission's recording requirement, as discussed in detail in Section III.C., *supra*. For the reasons discussed in that Section and reiterated in A.2. of this Section, the Commission determined to retain the recording requirement.

The Commission did not receive any comments opposing the SNPRM's proposal requiring that sellers provide a method of, and a disclosure of the method of, prescription presentation. The Commission did receive a comment, however, suggesting that the Commission require that the method to present prescriptions be in close proximity to the option to provide the parameters of the contact lens for verification. Although the Commission did not impose that requirement, it took that comment into account in determining that, to maximize the potential benefit from the amendment, the seller must provide and disclose the method for the patient to present the seller with a copy of the patient's prescription prior to requesting a prescriber's contact lens prescription. In addition, the Commission, in response to comments addressing the issue, provided more guidance on the methods that sellers need to use (*i.e.*, the method by which the order is taken or email, text or file upload).

The Commission also received comments on the SNPRM's proposed modification defining alteration, and providing an exception to alteration for sellers that verify only the brand or manufacturer that consumers indicate is on their prescription. Some commenters felt the modification was unnecessary, and that other Rule changes were adequate to curb the practices of substitution to non-prescribed brands through use of the verification system. As addressed in Section VI.B., *supra*, the Commission has determined that there are benefits to retaining this modification. In response to comments, however, the Commission provided additional guidance on the acceptable methods for obtaining brand and manufacturer information.

C. Description and Estimate of the Number of Small Entities to Which the Amendments Will Apply or Explanation Why No Estimate Is Available

Prescribers of contact lenses are affected by the amendments concerning the option for electronic delivery of prescriptions as a means for automatic prescription release, Confirmation of Prescription Release, and the imposition of a forty-business-hour time frame for responding to authorized requests for additional copies of prescriptions. There

are approximately 43,000 optometrists and 16,700 ophthalmologists in the United States,⁶²⁰ though not all optometrists and ophthalmologists would be affected by the amendments since some do not prescribe contact lenses. Some prescribers who prescribe contact lenses also would not be affected by the Confirmation of Prescription Release requirement if they do not have a direct or indirect interest in the sale of contact lenses. Of the contact lens prescribers who are affected by the modifications, the Commission—based on its knowledge of the eye-care industry—believes that many fall into the category of small entities (*e.g.*, offices of optometrists with less than \$7.5 million in average annual receipts).⁶²¹ Determining a precise estimate of the number of small entities covered by the Rule's prescription-release requirements is not readily feasible, however, because most prescribers' offices are private entities that do not release the underlying revenue information necessary to make this determination.⁶²² The Commission sought comment in its SNPRM regarding the estimated number or nature of such small business entities, if any, for which the proposed amendments would have a significant impact, and did not receive commenter guidance in return.

Non-prescriber sellers of contact lenses are affected by the amendments concerning the additional requirements for using an automated telephone verification message, requirements to accept prescription presentation, and requirements to verify only the contact lens brand or manufacturer that consumers indicate is on their prescriptions.⁶²³ Based on its knowledge of the industry, staff believes that the number of these entities that likely qualify as small businesses (less than \$22 million in average annual receipts) is not likely to be substantial.⁶²⁴

⁶²⁰ See note 269, *supra*.

⁶²¹ See U.S. Small Business Admin., "Table of Small Business Size Standards Matched to North American Industry Classification System Codes," (eff. Feb. 26, 2016), https://www.sba.gov/sites/default/files/files/Size_Standards_Table.pdf.

⁶²² 5 U.S.C. 601(6).

⁶²³ Most prescribers who sell lenses do so after fitting the patient with the prescribed lens, and thus do not rely on prescription verification. The amendments affecting sellers pertain to verification or prescription presentation and do not pertain to these sales. As a result, the Commission does not consider prescribers in its estimated burden for the proposals affecting sellers.

⁶²⁴ See U.S. Small Business Admin., "Table of Small Business Size Standards Matched to North American Industry Classification System Codes" (Aug. 19, 2019), <https://www.ecfr.gov/cgi-bin/text>

⁶¹⁷ In the Final Rule, for instances where a patient refuses to sign the confirmation, the Commission directs the prescriber to note the refusal and preserve this record as evidence of compliance.

⁶¹⁸ See Section II, *supra*.

⁶¹⁹ These commenters' concerns and the Commission's response to such concerns are addressed more fully in Section VIII, *supra*.

D. Description of the Projected Reporting, Recordkeeping and Other Compliance Requirements of the Amendments, Including an Estimate of the Classes of Small Entities That Will Be Subject to the Requirement and the Type of Professional Skills Necessary for Preparation of the Report or Record

1. Amendments Affecting Prescribers

The Confirmation of Prescription Release amendment requires that prescribers with a direct or indirect interest in the sale of contact lenses request that patients sign, and maintain for a period of not less than three years, either (A) a statement confirming receipt of the contact lens prescription; (B) a prescriber-retained copy of a contact lens prescription that contains a statement confirming receipt of the contact lens prescription; or (C) a prescriber-retained copy of the receipt for the examination that contains a statement confirming receipt of the contact lens prescription.

As an alternative to (A), (B), and (C), under certain conditions, prescribers can provide a contact lens prescription digitally. In order to avail themselves of this option, prescribers must maintain, for a period of not less than three years, evidence that the prescriptions were sent, received, or made accessible, downloadable and printable. In addition, the prescriber must identify to the patient the specific method or methods of electronic delivery to be used, such as text message, electronic mail, or an online patient portal, obtain the patient's verifiable affirmative consent to receive a digital copy through the identified method or methods, and maintain records or evidence of a patient's affirmative consent for a period of not less than three years.

The small entities potentially covered by these amendments will include all such entities subject to the Rule. The professional skills necessary for compliance with the Rule as modified will include office and administrative support supervisors to create the language and format of the confirmation, and clerical personnel to collect signatures from patients and maintain records, or in the case of digital prescriptions, retain evidence that the prescription was sent, received, or made accessible, downloadable and printable and retain evidence of a patient's affirmative consent. Compliance may include some minimal training time as well. The Commission has provided language that prescribers

can use for the Confirmation of Prescription Release which, should a prescriber elect to use such language, negates the burden of formulating appropriate language. The Commission believes the overall burden imposed on small businesses by these requirements is relatively small, for the reasons described previously in Section II.C.7. of this notice. That section also addresses in detail the comments received, which discuss the burden from this amendment.

The amendment relating to providing a designated agent with an additional copy of a prescription requires that the prescriber respond within forty business hours of receipt of the request, and note in the patient's record the name of the requester and the date and time that the prescription was provided to the requester. The professional skills necessary for compliance with this amendment will include office and administrative support staff to respond to the request within forty business hours. Previously, office and administrative support staff were already required to respond to such requests, just not within a specific time frame. The forty-business-hour time period, in and of itself, should not impose a significant new burden. The office and administrative support staff will also need to make the required notations in the patient's records. As noted, the required notation would be limited to the name of the requester and the date and time the prescription was provided to the requester. Although the Rule does not require that prescribers retain the notations, the Commission expects prescribers would make and retain such notations in the ordinary course of their business and thus believes the proposal would not create much, if any, additional burden.

2. Amendments Affecting Sellers

To the extent, if any, that non-prescriber sellers are small entities, the amendments relating to changes in verifications made through automated telephone messages require sellers to record the entire call, commence the call by identifying it as a request for prescription verification made in accordance with the Rule, deliver the information in a slow and deliberate manner and at a reasonably understandable volume, and make the information repeatable at the prescriber's option. Sellers must retain the complete call recording of such automated telephone messages for at least three years.

The Commission believes that most small sellers who are covered by the Rule, if any, are unlikely to have

undergone or to undergo the expense associated with creating and maintaining an automated telephone system for verification requests.⁶²⁵ Instead, the Commission believes that small sellers typically comply with the Rule by receiving copies of prescriptions from patients, or making verification requests to prescribers via fax, email, or telephone calls using "live" agents. If a small seller already has an automated system for verification, the Commission does not believe the costs to accommodate the changes would be more than minimal, if any. For a seller who was following the FTC's prior guidance that automated messages be delivered at a volume and cadence that a reasonable person can understand,⁶²⁶ it already complies with the new proposal that all such messages be at a "reasonably understandable volume" and delivered in a "slow and deliberate manner." Similarly, if not already in compliance, a seller might need to modify its model verification recording to identify at the start that a call is being made in accordance with the Contact Lens Rule and to make the required information repeatable at the prescriber's option.

The Commission also has little reason to believe that the new requirement that sellers who use automated messages record such calls and retain them for no less than three years creates a substantial burden for small sellers. The Commission's SNPRM invited comment on the frequency with which small sellers use automated telephone messages for verification and the costs associated with the proposals pertaining to these messages, including whether existing verification systems include the capability to record and the capacity for storage, and the costs associated with recording the calls and maintaining the recordings for no less than three years. The Commission received little guidance in response. 1-800 CONTACTS, a large contact lens seller, stated the proposal to record and store these calls imposes a "costly" burden, but did not detail the costs associated with recording and maintaining the calls. The Commission's own research surrounding such costs for recording phone calls does not support this contention.⁶²⁷ And as noted above, the

⁶²⁵ 1-800 CONTACTS also believes this to be the case. See 1-800 CONTACTS (SNPRM Comment #135) (stating that the number of sellers that use this particular technology is likely limited).

⁶²⁶ Prior guidance from the FTC directed sellers to deliver verification messages at a volume and cadence that a reasonable person can understand. See note 301, *supra*.

⁶²⁷ See PRA discussion of the cost of recording calls, Section XI.B., *supra*.

number of sellers that employ this technology is limited, and the Commission does not believe that small sellers use or are likely to use automated messages for verification calls.

The new requirement that sellers provide a method, and a clear and prominent disclosure of the method, for the consumer to present the seller with a copy of the patient's prescription also does not impose a large burden on small sellers. A small seller would need to update its website or other consumer interface to inform consumers about the ability to provide the seller with a prescription, or alternatively, if an order occurs via telephone or in person, to verbally inform the consumer about the ability to provide the seller with a prescription. The professional skill or time necessary for this task would include personnel with the skills required to update the website or other consumer interface, and the time it takes to make the updates, or if the information is relayed over the phone or in person, the additional time for an employee or agent of the seller to inform a consumer that he or she is able to provide a prescription, and of the method by which a consumer can do so. These proposals may also require training time for staff. The seller would also need to provide a mechanism for a consumer to provide the prescription to the seller. Because a small seller almost certainly already has the capacity to accept prescriptions via an existing electronic system or email account, the Commission believes there is little additional burden of complying with this part of the proposal.

The small seller would also need to maintain prescriptions it receives via patient presentation. The Commission has not received any comments that alter its understanding that such retention does not create more than a minimal burden. Further, by retaining a patient's prescription, a seller is relieved of the burden to verify that prescription or maintain records of verification. As a result, the burden from obtaining and retaining prescriptions likely offsets the burden from making verification requests and storing records of such requests.

Both the FCLCA and the Rule prohibit illegal alteration of a prescription. The modification of the Rule's definition of alteration would clarify what constitutes alteration, and permit sellers to avail themselves of an exception by verifying only the contact lens brand or manufacturer that consumers indicate is on their prescriptions when asked by the seller. As a result, all non-prescriber sellers that qualify as small businesses would need to request and obtain

manufacturer or brand information via website or other consumer interface, telephone, or in person to qualify for the exception. The professional skill or time necessary for this task would include personnel with the skills required to update the website or other consumer interface and the time it takes to make the updates, or if the information is relayed over the phone or in person, the additional time for an employee or agent of the seller to obtain the information. Such employees would also need to be trained on this requirement.

Although there is no associated document retention requirement set forth in the Rule, the Commission is aware that without the evidence that the manufacturer or brand provided on the verification request was the one provided by the customer, the seller would not be able to avail itself of the exception to illegal alteration. As a result, the Commission has considered the associated document retention as a new burden. However, since many contact lens sales by non-prescriber sellers occur online, the burden of such record retention may be minimized by the ability to keep electronic sales records. For sales that occur via telephone or in person, the seller would be required to maintain records of the request made by, and the information supplied by, the consumer. The Commission believes that sellers retain phone-order records in the ordinary course of business and any additional recordkeeping sellers may do to qualify for the exception is likely to be minimal.

E. Steps Taken To Minimize the Significant Impact, if Any, of the Amendments, Including Why Any Significant Alternatives Were Not Adopted

1. Steps and Alternatives for Amendments Affecting Prescribers

The Commission considered a number of alternatives to the requirement for prescribers to request the patient sign a confirmation of receipt of a contact lens prescription, including signage and educating consumers about their rights to a contact lens prescription. The Commission determined that signage would be significantly less effective than a Confirmation of Prescription Release requirement. It also determined that consumer education in itself, whether provided via information entry forms, a patients' bill of rights, advertising, or public service announcements, would not have a significant impact on prescriber compliance with automatic prescription release, and would not increase the Commission's ability to

monitor and enforce the Rule.⁶²⁸ In response to commenter concerns about its proposal as outlined in the NPRM and SNPRM, the Commission took steps to minimize the impact of the Confirmation of Prescription Release. First, the Commission included an option for prescribers to satisfy the confirmation by releasing the prescription electronically. While not every prescriber will be able to use this option to deliver a prescription electronically, the Commission is confident that this option will still reduce the burden for many, especially as more prescribers move toward electronic recordkeeping. Second, the Commission excluded from the requirement eye care prescribers who have no direct or indirect financial interest in the sale of contact lenses. By more narrowly targeting the requirement to only those with an incentive to withhold prescriptions, the Commission further reduced the overall burden and avoided unnecessarily impacting prescribers who are unlikely to violate the Rule. Third, the Commission reduced the burden by allowing a significant degree of flexibility in how prescribers comply with the confirmation requirement. The Final Rule allows prescribers to craft their own wording for statements confirming receipt of contact lens prescriptions (on a stand-alone statement, on a prescriber-retained copy of a prescription, or on a prescriber-retained copy of an examination receipt), while providing sample language for prescribers to use, should they not wish to formulate their own confirmation. This change reduces the possible paperwork burden and limits potential interference with the prescriber-patient relationship.⁶²⁹

In considering the amendment requiring prescribers to respond to requests for copies of a prescription within a defined period (forty business hours), the Commission considered, but rejected, the option to simply rely on the expectation that all prescribers would fulfill their responsibilities to their patients. It is the Commission's understanding that prescribers do not always comply, or comply expeditiously, and therefore believes the time-limit requirement is necessary. In order to minimize the burden on prescribers, however, the Commission rejected

⁶²⁸ These alternatives and the reasons the Commission found them to be insufficient alternatives to Confirmation of Prescription Release are more fully described in Section II.C.6., *supra*, of this notice.

⁶²⁹ In the Final Rule, for instances where a patient refuses to sign the confirmation, the Commission directs the prescriber to note the refusal and preserve this record as evidence of compliance.

commenter requests to make the time limit significantly shorter, such as eight business hours. As for the new requirement that prescribers make a notation in the patient's record when responding to such requests, the Commission declined to shift the recordkeeping burden to the designated agent making a request because, to determine whether a particular prescriber is complying with the Rule, the Commission would need to obtain records from a wide variety of agents.

2. Steps and Alternatives for Amendments Affecting Sellers

The Commission did not consider specific alternatives to the Final Rule's requirement that sellers, when using automated telephone messages to verify prescriptions, commence the call by identifying it as a request for prescription verification made in accordance with the Contact Lens Rule, deliver the required information in a slow and deliberate manner and at a reasonably understandable volume, and make the required information repeatable at the prescriber's option.⁶³⁰ The Commission included these amendments in the Final Rule to relieve the burden on prescribers and reduce potential health risks to patients from incomplete or incomprehensible automated telephone messages. Specifically, the Commission noted that prescribers must be able to understand automated messages so they can, if necessary, respond to sellers to prevent improper sales. Commenters presented additional suggestions to improve call quality, but did not suggest alternatives to commencing the call by identifying it as a request for prescription verification made in accordance with the Contact Lens Rule, and to make the required information repeatable at the prescriber's option, nor did they express opposition to such requirements.

The Commission considered whether to require sellers to retain a sample recording of the standard script leaving blanks for prescription and patient details instead of recording all calls using automated telephone messages. However, the Commission determined that a script or a sample recording would not reveal whether the required information was transmitted effectively or if, for instance, it was transmitted before a representative or machine answered, after an answering machine cut off, when a prescriber's office put

the call on hold, or over hold music, in which case the call could not be used as a basis for the sale. In addition, a script or sample recording would not permit the Commission to assess whether a particular call was delivered in a "slow and deliberate manner" and at a "reasonable understandable volume." Without knowing this information, the Commission would be unable to determine conclusively whether any particular verification request was valid. Therefore, the Commission did not adopt this recommendation.

With respect to the requirement that sellers accept prescription presentation, the Commission did not receive any comments opposing this proposal, and thus did not consider alternatives. In response to commenter concerns, however, the Commission determined not to permit sellers to select any method of communication, but opted instead to maximize the benefits from the amendment by requiring the seller to present the prescription through the same medium by which the order is placed, or electronic mail, text message, or file upload.

For verification requests, the Commission expressly defined alteration as occurring when sellers provide prescribers with the name of a manufacturer or brand other than that specified on a patient's prescription. However, the Commission provided an exception such that it would not amount to alteration in instances when sellers verify only the contact lens brand or manufacturer that consumers indicate is on their prescriptions after a seller requests that information. As possible alternatives to these changes, the Commission considered whether it could instead rely on the new requirements that sellers (a) provide a method for prescription presentation and (b) meet quality standards for verification calls, but the Commission determined that those requirements alone are inadequate to curb the practice of unlawful substitution to non-prescribed brands through abuse of the verification system. Although the Commission has previously stated that a verification request is not valid and does not commence the eight-business-hour verification period if a seller knows or should know that the verification request includes a different brand and manufacturer than that prescribed, the FTC continues to receive reports about the proliferation of passive verification abuses, and sellers "gaming the system" to substitute a different brand or manufacturer. Furthermore, without the changes to the definition of alteration, sellers may argue that they

are technically compliant with the Rule because they submitted verification requests and prescribers had an opportunity to respond to the requests, and may also argue that they did not have knowledge that a consumer did not have a prescription for that manufacturer or brand of lens. The Final Rule amendment will give them a basis of knowledge by requesting that a consumer state the brand or manufacturer of her brand of lens. Additionally, the Commission determined that without the express definition of alteration and the exception thereto, enforcement would not, in and of itself, be adequate to protect consumers, because alteration via abuse of the verification system does not occur with only one bad actor, and because of an increase in companies that appear to alter prescriptions in this way.

Seller 1-800 CONTACTS also commented that the amendment should not refer to "brand" as that language does not appear elsewhere in the Rule. It pointed out that the Rule defines a prescription as including a "material or manufacturer or both" and that the Commission's inclusion of the reference to brand imposes an additional limit on consumer choice that is not required by the Act. 1-800 CONTACTS requested that the exception to the Rule be applicable to "providing the prescriber with the name of a manufacturer or material other than that specified by the patient's prescriber" The reference to brand in the definition of alteration and in the exception are the only references to brand in the Rule. However, because many, if not most, prescriptions list the manufacturer's brand, not the manufacturer or material, and very few consumers know the manufacturer or material of contact lens that they wear (typically referring to their lenses by brand name), the Commission declines to follow 1-800 CONTACTS' recommendation because many consumers would be unable to respond to a seller's request.

1-800 CONTACTS expressed concern that the Commission's amendment might interfere with its ability to improve the user experience. It indicated that it sells hundreds of brands of lenses and offers consumers a variety of methods to identify their brand, including drop-down menus, a search box, and filters that display lenses by brand, modality, and other parameters and that some consumers do not enter their brand information on an order form. In response, the Commission, in the Final Rule, removed the language from its earlier proposal that sellers must obtain the information

⁶³⁰ The requirements that the seller deliver the required information in a slow and deliberate manner and at a reasonably understandable volume have been part of the FTC's prior guidance that the information be delivered at a volume and cadence that a reasonable person can understand.

on “an order form.” In comparison, other commenters requested greater specificity or even prohibitions on the acceptable mechanisms for sellers to request and consumers to select their brand. In response, the Commission clarified that, at a minimum, in order for sellers to consider the consumer’s indication of manufacturer or brand as adequate to qualify for the exception, the manufacturer or brand must be: (1) Provided in response to a seller’s request for the manufacturer or brand listed on the consumer’s prescription; and (2) an affirmative statement or selection by the consumer, not a preselected or prefilled entry.⁶³¹

XIII. Congressional Review Act

Pursuant to the Congressional Review Act (5 U.S.C. 801 *et seq.*), the Office of Information and Regulatory Affairs designated these rule amendments as not a “major rule,” as defined by 5 U.S.C. 804(2).

List of Subjects in 16 CFR Part 315

Advertising, Medical devices, Ophthalmic goods and services, Trade practices.

For the reasons discussed in the preamble, the Federal Trade Commission amends title 16 of the Code of Federal Regulations, part 315, as follows:

PART 315—CONTACT LENS RULE

■ 1. The authority for part 315 is revised to read as follows:

Authority: 15 U.S.C. 7601–7610.

■ 2. Amend § 315.2 by adding in alphabetical order the definitions of “Provide to the patient a copy”, “Reasonably understandable volume” and “Slow and deliberate manner” to read as follows:

§ 315.2 Definitions.

* * * * *

Provide to the patient a copy means giving a patient a copy of his or her contact lens prescription:

- (1) On paper; or
- (2) In a digital format that can be accessed, downloaded, and printed by the patient. For a copy provided in a digital format, the prescriber shall identify to the patient the specific method or methods of electronic delivery to be used, such as text message, electronic mail, or an online patient portal, and obtain the patient’s verifiable affirmative consent to receive a digital copy through the identified method or methods; and maintain records or evidence of a patient’s

affirmative consent for a period of not less than three years. Such records or evidence shall be available for inspection by the Federal Trade Commission, its employees, and its representatives.

Reasonably understandable volume means at an audible level that renders the message intelligible to the receiving audience.

Slow and deliberate manner means at a rate that renders the message intelligible to the receiving audience.

- 3. Amend § 315.3 by:
 - a. Revising paragraphs (a)(1) and (2);
 - b. Adding paragraph (a)(3);
 - c. Revising paragraphs (b)(1) through (3); and
 - d. Adding paragraph (c).

The additions and revisions read as follows:

§ 315.3 Availability of contact lens prescriptions to patients.

(a) *In general.* When a prescriber completes a contact lens fitting, the prescriber:

(1) Whether or not requested by the patient, shall provide to the patient a copy of the contact lens prescription;

(2) Shall, as directed by any person designated to act on behalf of the patient, verify the contact lens prescription by electronic or other means; and

(3) Shall, upon request, provide any person designated to act on behalf of the patient with a copy of the patient’s contact lens prescription by electronic or other means within forty (40) business hours of receipt of the request. A prescriber shall note in the patient’s record the name of the requester and the date and time that the prescription was provided to the requester.

(b) *Limitations.* A prescriber may not:

(1) Require the purchase of contact lenses from the prescriber or from another person as a condition of providing a copy of a prescription under paragraph (a)(1) or (a)(3) of this section or as a condition of verification of a prescription under paragraph (a)(2) of this section;

(2) Require payment in addition to, or as part of, the fee for an eye examination, fitting, and evaluation as a condition of providing a copy of a prescription under paragraph (a)(1) or (a)(3) of this section or as a condition of verification of a prescription under paragraph (a)(2) of this section; or

(3) Require the patient to sign a waiver or release as a condition of releasing or verifying a prescription under paragraph (a)(1), (a)(2), or (a)(3) of this section.

(c) *Confirmation of prescription release.* (1)(i) Upon completion of a

contact lens fitting, the prescriber shall do one of the following:

(A) Request that the patient acknowledge receipt of the contact lens prescription by signing a statement confirming receipt of the contact lens prescription;

(B) Request that the patient sign a prescriber-retained copy of a contact lens prescription that contains a statement confirming receipt of the contact lens prescription;

(C) Request that the patient sign a prescriber-retained copy of the receipt for the examination that contains a statement confirming receipt of the contact lens prescription; or

(D) If a digital copy of the prescription was provided to the patient (via methods including an online portal, electronic mail, or text message) in compliance with paragraph (a)(1) of this section, retain evidence that the prescription was sent, received, or made accessible, downloadable, and printable.

(ii) If the prescriber elects to confirm prescription release via paragraphs (c)(1)(i)(A), (B), or (C) of this section, the prescriber may, but is not required to, use the statement, “My eye care professional provided me with a copy of my contact lens prescription at the completion of my contact lens fitting” to satisfy the requirement.

(iii) In the event the patient declines to sign a confirmation requested under paragraph (c)(1)(i)(A), (B), or (C) of this section, the prescriber shall note the patient’s refusal on the document and sign it.

(2) A prescriber shall maintain the records or evidence required under paragraph (c)(1) of this section for a period of not less than three years. Such records or evidence shall be available for inspection by the Federal Trade Commission, its employees, and its representatives.

(3) Paragraphs (c)(1) and (c)(2) of this section shall not apply to prescribers who do not have a direct or indirect financial interest in the sale of contact lenses, including, but not limited to, through an association, affiliation, or co-location with a contact lens seller.

- 4. Amend § 315.5 by:
 - a. Redesignating paragraphs (d), (e), (f), and (g) as paragraphs (e), (f), (h), and (i), respectively;
 - b. Adding new paragraph (d);
 - c. Revising newly redesignated paragraph (f);
 - d. Adding new paragraph (g);
 - e. Adding new paragraph (h)(2)(iii);
 - f. Revising newly redesignated paragraph (i).

The additions and revisions read as follows:

⁶³¹ See Section VI.B., *supra*.

§ 315.5 Prescriber verification.

* * * * *

(d) *Automated telephone verification messages.* If a seller verifies prescriptions through calls that use, in whole or in part, an automated message, the seller must:

- (1) Record the entire call;
- (2) Commence the call by identifying it as a request for prescription verification made in accordance with the Contact Lens Rule;
- (3) Deliver the information required by paragraph (b) of this section in a slow and deliberate manner and at a reasonably understandable volume; and
- (4) Make the information required by paragraph (b) of this section repeatable at the prescriber's option.

* * * * *

(f) *No alteration of prescription.* A seller may not alter a contact lens prescription. In the context of prescription verification, alteration includes, but is not limited to, providing the prescriber with the name of a manufacturer or brand other than that specified by the patient's prescription, unless such name is provided because the patient entered or orally provided it when asked for the manufacturer or

brand listed on the patient's prescription. Notwithstanding the preceding sentences, for private label contact lenses, a seller may substitute for contact lenses specified on a prescription identical contact lenses that the same company manufactures and sells under different labels.

(g) *Seller requirement to accept prescription presentation:* A seller shall provide a prominent method, and a clear and prominent disclosure of that method, for the patient to present the seller with a copy of the patient's prescription. Such method and the disclosure shall be provided prior to requesting a prescriber's contact information for verification of the prescription; provided, however, in the case of an order placed by telephone, a seller shall comply by providing a disclosure of the method prior to requesting a prescriber's contact information for verification of the prescription. The method to present the prescription shall be provided through (i) the same medium by which the order is placed, or (ii) electronic mail, text message, or file upload.

- (h) * * *
- (2) * * *

(iii) If the communication occurs via telephone and uses an automated message, the complete recording required pursuant to paragraph (d)(1) of this section.

* * * * *

(i) *Recordkeeping requirement—Saturday business hours.* A seller that exercises its option to include a prescriber's regular Saturday business hours in the time period for a request for a copy of the prescription specified in § 315.3(a)(3) or for verification specified in paragraph (c)(3) of this section shall maintain a record of the prescriber's regular Saturday business hours and the basis for the seller's actual knowledge thereof. Such records shall be maintained for a period of not less than three years, and these records must be available for inspection by the Federal Trade Commission, its employees, and its representatives.

By direction of the Commission.

April J. Tabor,

Secretary.

National Oceanic and Atmospheric Administration

50 CFR Part 217

Takes of Marine Mammals Incidental to Specified Activities; Taking Marine Mammals Incidental to Alaska Liquefied Natural Gas (LNG) Project in Cook Inlet; Final Rule

DEPARTMENT OF COMMERCE**National Oceanic and Atmospheric Administration****50 CFR Part 217**

[Docket No. 200709–0185]

RIN 0648–BH44

Takes of Marine Mammals Incidental to Specified Activities; Taking Marine Mammals Incidental to Alaska Liquefied Natural Gas (LNG) Project in Cook Inlet

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Final rule.

SUMMARY: Upon application from the Alaska Gasline Development Corporation (AGDC), NMFS is issuing regulations under the Marine Mammal Protection Act (MMPA) for the taking of marine mammals incidental to the Alaska Liquefied Natural Gas (LNG) project in Cook Inlet, Alaska, over the course of five years (2020–2025). These regulations allow NMFS to issue a Letter of Authorization (LOA) for the incidental take of marine mammals during the specified construction activities carried out during the rule's period of effectiveness, set forth the permissible methods of taking, set forth other means of effecting the least practicable adverse impact on marine mammal species or stocks and their habitat, and set forth requirements pertaining to the monitoring and reporting of the incidental take.

DATES: Effective January 1, 2021 through December 31, 2025.

ADDRESSES: To obtain an electronic copy of the AGDC's LOA application or other referenced documents, visit the internet at: <https://www.fisheries.noaa.gov/national/marine-mammal-protection/incidental-take-authorizations-other-energy-activities-renewable>. In case of problems accessing these documents, please call the contact listed below (see **FOR FURTHER INFORMATION CONTACT**).

FOR FURTHER INFORMATION CONTACT: Shane Guan, Office of Protected Resources, NMFS, (301) 427–8401. Electronic copies of the application and supporting documents, as well as a list of the references cited in this document, may be obtained online at: <https://www.fisheries.noaa.gov/national/marine-mammal-protection/incidental-take-authorizations-other-energy-activities-renewable>. In case of problems

accessing these documents, please call the contact listed above.

SUPPLEMENTARY INFORMATION:**Purpose and Need for Regulatory Action**

This final rule establishes a framework under the authority of the MMPA (16 U.S.C. 1361 *et seq.*) to allow for the authorization of take of marine mammals incidental to the AGDC's construction activities of an LNG facility in Cook Inlet, Alaska.

We received an application from AGDC requesting five-year regulations and authorization to take multiple species of marine mammals. Take would occur by Level A and Level B harassment incidental to impact and vibratory pile driving and pipe laying. Please see "Background" below for definitions of harassment.

Legal Authority for the Proposed Action

Section 101(a)(5)(A) of the MMPA (16 U.S.C. 1371(a)(5)(A)) directs the Secretary of Commerce to allow, upon request, the incidental, but not intentional taking of small numbers of marine mammals by U.S. citizens who engage in a specified activity (other than commercial fishing) within a specified geographical region for up to five years if, after notice and public comment, the agency makes certain findings and issues regulations that set forth permissible methods of taking pursuant to that activity and other means of effecting the "least practicable adverse impact" on the affected species or stocks and their habitat (see the discussion below in the Mitigation section), as well as monitoring and reporting requirements. Section 101(a)(5)(A) of the MMPA and the implementing regulations at 50 CFR part 216, subpart I, provide the legal basis for issuing this final rule containing five-year regulations, and for any subsequent letters of authorization (LOAs). As directed by this legal authority, this final rule contains mitigation, monitoring, and reporting requirements.

Summary of Major Provisions Within the Final Rule

Following is a summary of the major provisions of this final rule regarding AGDC's construction activities. These measures include:

- Required time/area closure for beluga whale during summer months in the western portion of the Cook Inlet;
- Required monitoring of the construction areas to detect the presence of marine mammals before beginning construction activities;

- Shutdown of construction activities under certain circumstances to avoid injury of marine mammals; and

- Soft start for impact pile driving to allow marine mammals the opportunity to leave the area prior to beginning impact pile driving at full power.

Background

The MMPA prohibits the "take" of marine mammals, with certain exceptions. Sections 101(a)(5)(A) and (D) of the MMPA (16 U.S.C. 1361 *et seq.*) direct the Secretary of Commerce (as delegated to NMFS) to allow, upon request, the incidental, but not intentional, taking of small numbers of marine mammals by U.S. citizens who engage in a specified activity (other than commercial fishing) within a specified geographical region if certain findings are made and either regulations are issued or, if the taking is limited to harassment, a notice of a proposed incidental take authorization may be provided to the public for review.

Authorization for incidental takings must be granted if NMFS finds that the taking will have a negligible impact on the species or stock(s) and will not have an unmitigable adverse impact on the availability of the species or stock(s) for taking for subsistence uses (where relevant). Further, NMFS must prescribe the permissible methods of taking and other "means of effecting the least practicable adverse impact" on the affected species or stocks and their habitat, paying particular attention to rookeries, mating grounds, and areas of similar significance, and on the availability of such species or stocks for taking for certain subsistence uses (referred to in shorthand as "mitigation"); and requirements pertaining to the mitigation, monitoring and reporting of such takings are set forth.

NMFS has defined "negligible impact" in 50 CFR 216.103 as an impact resulting from the specified activity that cannot be reasonably expected to, and is not reasonably likely to, adversely affect the species or stock through effects on annual rates of recruitment or survival.

The MMPA states that the term "take" means to harass, hunt, capture, kill or attempt to harass, hunt, capture, or kill any marine mammal. Except with respect to certain activities not pertinent here, the MMPA defines "harassment" as any act of pursuit, torment, or annoyance which (i) has the potential to injure a marine mammal or marine mammal stock in the wild (Level A harassment); or (ii) has the potential to disturb a marine mammal or marine mammal stock in the wild by causing disruption of behavioral patterns,

including, but not limited to, migration, breathing, nursing, breeding, feeding, or sheltering (Level B harassment).

National Environmental Policy Act

To comply with the National Environmental Policy Act of 1969 (NEPA; 42 U.S.C. 4321 *et seq.*) and NOAA Administrative Order (NAO) 216–6A, NMFS must review our proposed action (*i.e.*, the issuance of an incidental harassment authorization) with respect to potential impacts on the human environment.

Accordingly, NMFS has adopted the Federal Energy Regulatory Commission's (FERC's) Final Environmental Impact Statement (FEIS). Our independent evaluation of the FEIS found that it includes the requisite information analyzing the effects on the human environment of issuing the Letter of Authorization (LOA). NMFS is a cooperating agency on the FERC's FEIS.

The FERC's EIS is available at <https://www.ferc.gov/industries/gas/enviro/eis/2020/03-06-20-FEIS.asp>.

Summary of Request

On April 18, 2017, NMFS received a request from AGDC for a LOA to take marine mammals incidental to constructing LNG facilities in Cook Inlet. The application was deemed adequate and complete on March 14, 2018. AGDC's request is for takes of a small number of five species of marine mammals by Level B harassment. On April 11, 2018, NMFS published a Notice of Receipt announcing the receipt of AGDC's LOA application (83 FR 15556). Further analysis by NMFS concludes that potential effects to marine mammals from AGDC's activity could result in Level A harassment.

Neither AGDC nor NMFS expects serious injury or mortality to result from this activity. However, since AGDC's LNG facility construction activities are expected to last for five years, an LOA is appropriate. On June 28, 2019, NMFS published a proposed rule (84 FR 30991; June 28, 2019) and proposed regulations to govern takes of marine mammals incidental to AGDC's LNG facility construction and requested comments on the proposed regulations. After the public comment period, NMFS further worked with AGDC to address the public comments, which included the addition of monitoring and mitigation measures. On February 17, 2020, AGDC submitted a revised LOA application that includes these additional monitoring and mitigation measures.

Description of Proposed Activity

Overview

AGDC proposes to construct facilities to transport and offload LNG in Cook Inlet, AK, for export. The Project activities include:

- Construction of the proposed Marine Terminal in Cook Inlet, including construction of a temporary Marine Terminal Material Offloading Facility (Marine Terminal MOF) and a permanent Product Loading Facility (PLF);
- Construction of the Mainline (main pipeline) across Cook Inlet, including the potential construction of a temporary Mainline Material Offloading Facility (Mainline MOF) on the west side of Cook Inlet; and

Components of proposed construction activities in Cook Inlet that have the potential to expose marine mammals to received acoustic levels that could result in take include:

- Vibratory and impact pile driving associated with Marine Terminal MOF and PLF construction; and
- Anchor handling associated with pipe laying across the Cook Inlet.

There is no change in the AGDC's proposed LNG facilities construction from what was described in the proposed rule (84 FR 30991; June 28, 2019).

Dates and Duration

AGDC plans to start the Alaska LNG facilities construction on April 1, 2021, and complete it by the end of October 31, 2025. Construction activities would be divided into phases, with all construction occurring between April 1 and October 31 each year from 2021 to 2025. During the construction season, crews will be working 12 hours per day, 6 days per week.

Specific Geographic Region

The Alaska LNG facilities, which include a Marine Terminal and the Mainline crossing, will be constructed in Cook Inlet. The Marine Terminal would be constructed adjacent to the proposed onshore LNG Plant near Nikiski, Alaska.

In addition, a Mainline Material Offloading Facility (Mainline MOF) may be constructed on the west side of Cook Inlet to support installation of the Cook Inlet shoreline crossing and onshore construction between the Beluga Landing shoreline crossing and the Yentna River. The Mainline MOF would be located near the existing Beluga Landing.

A map of the Alaska LNG facilities action area is provided in Figure 1 below and is also available in Figures 2 to 4 in the LOA application.

BILLING CODE 3510–22–P

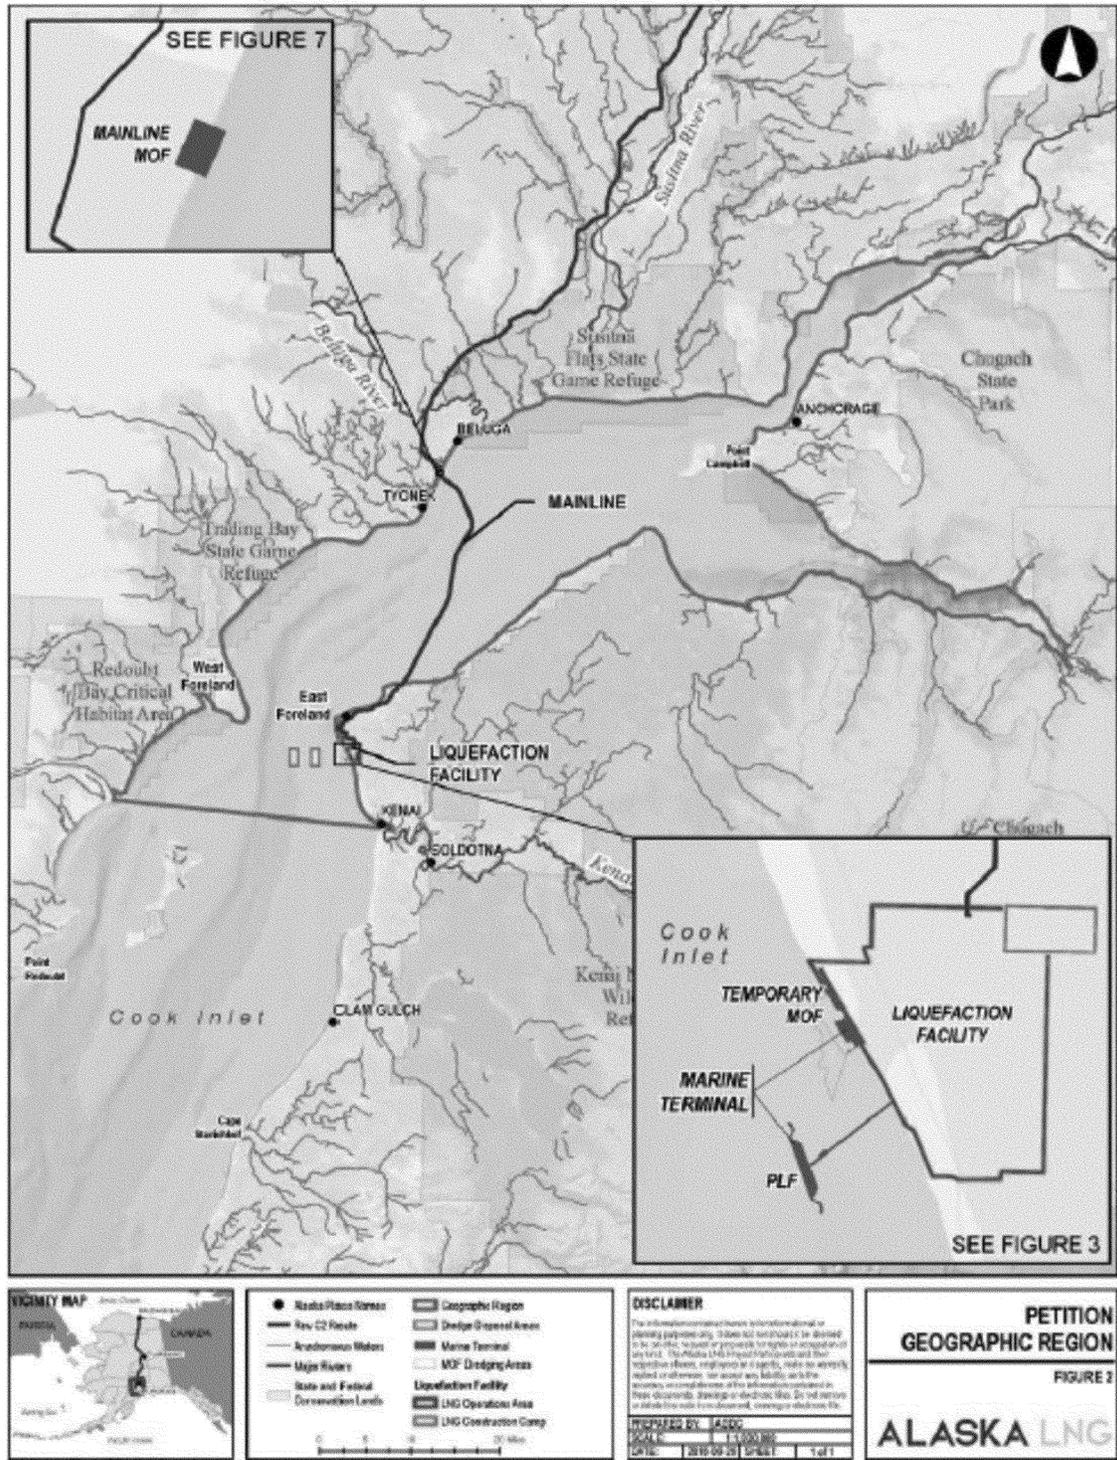

Figure 1. Geographic area of the proposed Alaska LNG facilities (AGDC, 2018) (see AGDC’s LOA application for color legends).

BILLING CODE 3510-22-C

Detailed Description of Specific Activity

The construction of the Alaska LNG facilities includes the construction of a

product loading facility, marine terminal material offloading facility, a mainline material offloading facility, and the Mainline crossing of Cook Inlet. For all construction activities, each

season extends from April 1 through October 31, during which construction crews would be working 12 hours per day, six days per week.

The following provides a detailed description of the Alaska LNG facilities to be constructed.

Product Loading Facility (PLF)

The proposed PLF would be a permanent facility used to load LNG carriers (LNGCs) for export. It consists of two loading platforms, two berths, a Marine Operations Platform, and an access trestle that supports the piping that delivers LNG from shore to LNGCs and includes all the equipment to dock LNGCs. Analyzed elements of the PLF are shown in Figures 3 and 4 of the LOA application, and are described as follows.

- **PLF Loading Platforms**—Two loading platforms, one located at either end of the north-south portion of the trestle, would support the loading arm package, a gangway, supporting piping, cabling, and equipment. The platforms would be supported above the seafloor on steel-jacketed structures called quadropods;

- **PLF Berths**—Two berths would be located in natural water depths greater than—53 feet (ft) mean lower low water (MLLW) and would be approximately 1,600 feet apart at opposite ends of the north-south portion of the trestle. Each berth would have four concrete pre-cast breasting dolphins and six concrete pre-cast mooring dolphins. The mooring and breasting dolphins would be used to secure vessels alongside the berth for cargo loading operations. The mooring and breasting dolphins would be supported over the seabed on quadropods. A catwalk, supported on two-pile bents, would connect the mooring dolphins to the loading platforms;

- **Marine Operations Platform**—A Marine Operations Platform would be located along the east-west portion of the access trestle (Figure 4 of the LOA application) and would support the proposed Marine Terminal Building, an electrical substation, piping, cabling, and other equipment used to monitor the loading operations. The platform would be supported above the seafloor on four-pile bents; and

- **Access Trestle**—This structure is T-shaped with a long east-west oriented section and a shorter north-south oriented section and carries pipe rack, roadway, and walkway. The pipe rack contains LNG loading system pipelines, a fire water pipeline, utility lines, power and instrument cables, and lighting. The east-west portion of the trestle extends from shore, seaward, for a distance of approximately 3,650 feet and would be supported on three-pile and four-pile bents at 120-foot intervals. The north-south oriented portion of the access

trestle is approximately 1,560 feet long, and is supported on five-pile quadropods.

The PLF would be constructed using both overhead and marine construction methods. As planned, the PLF would be constructed over the course of four ice-free seasons (Seasons 2–5); however, Season 2 activities associated with PLF construction include only installation of onshore portions of the PLF and are not included in the analysis. Activities in Seasons 3 through 5 are described below.

In Season 3, the marine construction activities would be mobilized and the cantilever bridge would be commissioned. A total of 35 bents and quadropod structures would be installed for part of the east-west and north-south access trestles and berth loading platforms.

In Season 4, the remainder of the bents for the east-west access trestle would be installed. Additionally, bents supporting the Marine Operations Platform and north-south trestle would be installed. A total of 26 bent and quadropod structures would be installed.

In Season 5, installation of the mooring quadropods would be completed, and the bents supporting the catwalk between the loadout platforms and the mooring dolphins would be installed. A total of 18 bent and quadropod structures would be installed.

PLF bents and quadropods are expected to be installed with impact hammers. The anticipated production rate for installation of the bents is one bent per six construction days, and for quadropods it is one quadropod per eight work days. Pile driving is expected to occur during only two of the six days for bents and two of the eight days for quadropods. It is also assumed the impact hammer would only be operated approximately 25 percent of time during the two days of pile driving.

Marine Terminal Material Offloading Facility (Marine Terminal MOF)

The proposed Marine Terminal MOF, to be located near the PLF in Nikiski, would consist of three berths and a quay that would be used during construction of the Liquefaction Facility to enable direct deliveries of equipment modules, bulk materials, construction equipment, and other cargo to minimize the transport of large and heavy loads over road infrastructure.

The Marine Terminal MOF quay would be approximately 1,050 feet long and 600 feet wide, which would provide sufficient space for cargo discharge operations and accommodate 200,000

square feet of staging area. It would have a general dock elevation of +32 feet MLLW.

The quay would have an outer wall consisting of combi-wall (combination of sheet piles and pipe piles) tied back to a sheet pile anchor wall, and 11 sheet pile coffer cells, backfilled with granular materials.

Berths at the Marine Terminal MOF would include:

- One Lift-on/Lift-off (Lo-Lo) berth with a maintained depth alongside of –32 feet MLLW;
- One Roll-on/Roll-off (Ro-Ro) berth with a maintained depth alongside of –32 feet MLLW; and
- One grounded barge bed with a ground pad elevation of +10 feet MLLW.

The Temporary MOF has been designed as a temporary facility and would be removed early in operations when it is no longer needed to support construction of the Liquefaction Facility.

The Temporary MOF would be constructed over the course of two construction seasons (Seasons 1 and 2).

The combi-wall and the first six of eleven coffer cells would be installed in Season 1. An equal amount of sheet pile anchor wall would be associated with the combi-wall, but this is not considered in the analysis as the anchor wall would be driven into fill and would not generate substantial underwater sound. Six 24-inch template pipe piles would be installed with a vibratory hammer before the sheet pile is installed for each coffer cell and then removed when coffer cell installation is complete. The remaining five coffer cells and fill would be installed in Season 2, along with the quadropods for the dolphins for the Ro-Ro berth.

The Marine Terminal MOF would be constructed using both land-based (from shore and subsequently from constructed portions of the Marine Terminal MOF) and marine construction methods. The anticipated production rate for installation of combi-wall and coffer cells is 25 linear feet per day per crew, with two crews operating, and vibratory hammers operating 40 percent of each 12-hour construction day. The anticipated production rate for quadropod installation is the same as described in Section 1, above.

Dredging would be conducted over two ice free seasons. Dredging at the Marine Terminal MOF during the first season of marine construction may be conducted with either an excavator or clamshell (both mechanical dredges). Various bucket sizes may be used. Sediment removed would be placed in split hull or scow/hopper barges tended

by tugs that would transport the material to the location of dredge material placement.

Dredging at the Marine Terminal MOF during the second season may be conducted with either a hydraulic (cutter head) dredger or a mechanical dredger. For a hydraulic dredger, the dredged material would be pumped from the dredge area to the disposal location or pumped into split-hull barges for transport to the placement location. If split-hull barges are used rather than direct piping of material, a manifold system may be set up to load multiple barges simultaneously. For a mechanical dredger, two or more sets of equipment would likely be required to achieve total dredging production to meet the Project schedule. Personnel transfer, support equipment, and supply would be similar to the first season. However, due to the low activity level and source levels from dredging, we do not consider there would be take of marine mammals. Therefore, dredging is not further analyzed in this document.

Mainline Material Offloading Facility (Mainline MOF)

A Mainline MOF may be required on the west side of Cook Inlet to support installation of the Cook Inlet shoreline crossing, and onshore construction between the South of Beluga Landing shoreline crossing and the Yentna River. The Mainline MOF would be located near, but at a reasonable distance, from the existing Beluga Landing. Use of the existing landing is not considered to be feasible.

The Mainline MOF would consist of a quay, space for tugs, and berths including:

- Lo-Lo Berth for unloading pipes and construction materials;
- Ro-Ro Berth and ramp dedicated to Ro-Ro operations; and
- Fuel berth dedicated to unloading fuel.

The quay would be 450 feet long (along the shoreline) and 310 feet wide (extending into the Cook Inlet). A Ro-Ro ramp (approximately 80 feet by 120 feet) would be constructed adjacent to the quay. Both the quay and the Ro-Ro ramp would consist of anchored sheet pile walls backed by granular fill. The sources for the granular material would be onshore. Surfacing on the quay would be crushed rock. Some fill material for the quay and Ro-Ro ramp are expected to be generated by excavation of the access road. Any additional needed fill materials and crushed rock for surfacing would be barged in.

The quay and the Ro-Ro ramp are located within the 0-foot contour, so

berths would be practically dry at low tide. No dredging is planned; vessels would access the berths and ground themselves during high tide cycles. The proposed top level of the Mainline MOF is +36 feet MLLW, which is about 11 feet above Mean Higher High Water (MHHW).

Approximately 1,270 feet of sheet pile would be installed for construction of the quay and Ro-Ro ramp, and a corresponding length of sheet pile would be installed as anchor wall; however, only 670 feet of sheet pile would be installed in the waters of Cook Inlet. The remainder would be installed as anchor wall in fill material, or in the intertidal area when the tide is out, and would not result in underwater sound.

The Mainline MOF would be constructed in a single construction season (Season 1). A break-down of activities per season is provided below. Crews are expected to work 12 hours per day, six days per week. The sheet pile would be installed using marine equipment, with the first 50 percent of embedment conducted using a vibratory hammer and the remaining 50 percent conducted using an impact hammer. Hammers would be expected to be operated either 25 percent of a 12-hour construction day (impact hammer) or 40 percent of a 12-hour construction day (vibratory hammer).

Mainline Crossing of Cook Inlet

The proposed Mainline, a 42-inch-diameter, natural gas pipeline, would cross the Cook Inlet shoreline on the west side of the inlet (north landfall) south of Beluga Landing at pipeline milepost (MP) 766.3, traverse Cook Inlet in a generally southward direction for approximately 26.7 miles, and cross the east Cook Inlet shoreline near Suneva Lake at MP 793.1 (south landfall). The pipe would be trenched into the seafloor and buried from the shoreline out to a water depth of approximately 35–45 feet MLLW on both sides of the inlet, approximately 8,800 feet from the north landfall and 6,600 feet from the south landfall. Burial depth (depth of top of pipe below the seafloor) in these areas would be 3–6 feet. Seaward of these sections, the concrete coated pipeline would be placed on the seafloor. Additional footprint would be impacted by the use of anchors to hold the pipelay vessel in place while installing the pipeline on the seafloor.

Geophysical surveys would be conducted just prior to pipeline construction. A detailed bathymetric profile (longitudinal and cross) would be conducted. Types of geophysical equipment expected to be used for the surveys could include:

- Single-beam echosounder planned for use during this program operate at frequencies greater than 200 kilohertz (kHz);
- Multi-beam echo sounders planned for this program operate at frequencies greater than 200 kHz;
- Side-scan sonar system planned for use during this program operate at a frequency of 400 and 900 kHz; and
- Magnetometer. These instruments do not emit sound.

Operation of geophysical equipment such as echosounders and side-scan sonars at frequencies greater than 200 kHz are not considered to result in takes of marine mammals due to the extremely high frequencies emitted that are above the range of marine mammals' hearing thresholds. Magnetometers do not emit underwater sound. Therefore, geophysical surveys are not evaluated further in this document.

The pipeline would be trenched and buried in the nearshore portions of the route across the Cook Inlet.

The nearshore portion of the trench is expected to be constructed using amphibious or barge-based excavators. This portion of the trench would extend from the shoreline out to a transition water depth where a dredge vessel can be employed. On the west side of the inlet (Beluga Landing) this is expected to be from the shore out 655 feet, and on the east side (Suneva Lake) from the shoreline out 645 feet. The trench basis is to excavate a mustow slope trench that would not retain sediments (*i.e.*, a self-cleaning trench). A backhoe dredge may also be required to work in this portion of the crossing.

From the transition water depth to water depths of the –35 feet or –45 feet MLLW, a trailing suction hopper dredger would be used to excavate a trench for the pipeline. Alternative burial techniques, such as plowing, backhoe dredging, or clamshell dredging, would be considered if conditions become problematic for the dredger. After installation of the nearshore pipelines, a jet sled or mechanical burial sled could be used to achieve post dredge burial depths.

Pipeline joints would be welded together onshore in 1,000-foot-long strings and laid on the ground surface in an orientation that approximates the offshore alignment. A pipe pull barge would be anchored offshore near the seaward end of the trench, and would then be used to pull the pipe strings from their onshore position, out into the trench.

Following pipeline installation, the trench is expected to backfill naturally through the movement of seafloor sediments. If manual backfilling is

required, the backfill would be placed by reversing the flow of the trailing suction hopper dredger used offshore (see below) or mechanically with the use of excavators.

Seaward of the trenched sections, the pipeline would be laid on the seafloor across Cook Inlet using conventional pipelay vessel methods. The pipelay vessel would likely employ 12 anchors to keep it positioned during pipe laying and provide resistance as it is winched ahead 80 feet each time an additional 80-foot section of pipe is added/welded on the pipe string. Dynamic positioning may be used in addition to the conventional mooring system. Mid-line buoys may be used on the anchor chains when crossing other subsea infrastructure (*i.e.*, pipelines and cables). A pipe laying rate of 2,000 to 2,500 feet per 24-hour period is expected. It is anticipated that three anchor handling attendant tugs would be used to repeatedly reposition the anchors, thereby maintaining proper position and permitting forward movement. The primary underwater sound sources of concern would be from

the anchor handling tugs (AHTs) during the anchor handling for the pipelay vessel.

The pipeline crossing of Cook Inlet would be installed in two consecutive construction seasons (Seasons 3 and 4). Work from the pipelay vessel and pull barge would be conducted 24 hours per day, seven days per week, until the work planned for that season is completed. Anchor handling durations were estimated differently for the two construction seasons. Anchor handling is expected to be conducted 25 percent of the time that the pull barge is on site in Season 3. The estimate for anchor handling duration in Season 4 was based on the proposed route length, the total numbers of individual anchors moves, and the estimated time required to retrieve and reset each anchor (approximately 30 minutes per anchor to retrieve and reset). A break-down of activities per season is provided below.

Activities in Season 3 include:

- Conduct onshore enabling works including establishing winch/laydown and welding area, and excavation of a trench through onshore sections of the shore approach (open cut the shoreline).

- Excavate trench in very nearshore waters using land and amphibious excavation equipment.

- Conduct pre-lay excavation of the pipe trench out to depths of -35 to -45 feet MLLW using various subsea excavation methods.

- Install the pipe in the nearshore trenches using a pull barge.

Anchor handling would occur for approximately six (5.75 days) 24-hour periods in Season 3.

Activities in Season 4 include:

- Lay unburied offshore section of Mainline across Cook Inlet using conventional pipelay vessel. The Applicant estimates that anchor handling would occur over 13 24-hour periods in Season 4.

- Tie-in the offshore section to the buried nearshore sections on both sides of the Cook Inlet.

- Flood, hydrotest, and dry the Mainline pipeline with Cook Inlet.

A summary of pile driving activities for the entire Alaska LNG facilities construction, breaking down by seasons and project elements, is provided in Table 1.

TABLE 1—IN-WATER PILE DRIVING ASSOCIATED WITH ALASKA LNG FACILITIES CONSTRUCTION

Element	Driving method	Pile type & size	Pile number or length	Number strikes/hr (impact only)	Hours pile driving/day	Number days	Total piling hours
Season 1:							
Marine Terminal MOF combi wall.	Vibratory	60-in steel pipe.	35	NA	11	11	120

Catwalk	Impact	60-in steel pipe.	8	1560	6	16	96

A summary of anchor handling activities associated to mooring,

trenching, and pipe laying are provided in Table 2.

TABLE 2—DURATION OF ANCHOR HANDLING ASSOCIATED WITH ALASKA LNG FACILITIES PROJECT

Season	Activity	Hours/day	Days
3	Mooring	6.00	9
3	Pipe trenching	6.00	14
4	Pipeline days at a rate of 2,500 feet per day	6.00	53

Comments and Responses

NMFS published a Proposed Rule in the **Federal Register** on June 28, 2019 (84 FR 30991). During the 30-day public comment period on the Proposed Rule, NMFS received comments from the Marine Mammal Commission (Commission), Center for Biological Diversity (CBD), Cook Inletkeeper, Friends of Animals (FoA), Environmental Investigation Agency (EIA), Defenders of Wildlife (DoF), and an anonymous person. All relevant comments and responses are provided below.

Comment 1: The Commission, CBD, Cook Inletkeeper, DoW, and EIA state that they are concerned about the potential cumulative impacts of human activities on the endangered Cook Inlet beluga whale population. The Commission in particular recommends that NMFS defer issuance of a final rule to AGDC or any other applicant proposing to conduct sound-producing activities in Cook Inlet until it has a reasonable basis for determining that authorizing any additional incidental harassment takes of Cook Inlet beluga whales would not contribute to or exacerbate the stock’s decline. CBD,

Cook Inletkeeper, FoA, and the anonymous person request that NMFS deny AGDC’s request for an MMPA incidental take authorization.

Response: In accordance with our implementing regulations at 50 CFR 216.104(c), we use the best available scientific evidence to determine whether the taking by the specified activity within the specified geographic region will have a negligible impact on the species or stock and will not have an unmitigable adverse impact on the availability of such species or stock for subsistence uses. Based on the scientific evidence available, which includes the inclusion of updated density estimates for Cook Inlet beluga whales as well as consideration of the revised abundance estimates (NMFS 2020), NMFS determined that the impacts of the AGDC LNG facility construction activities, which are primarily acoustic in nature, would meet these standards.

In addition, NMFS worked with AGDC and developed a suite of rigorous monitoring and mitigation measures to reduce impacts to Cook Inlet beluga whales and other marine mammals to the lowest level practicable. Some of the major measures that were put in place after the Proposed Rule was published

include: (1) Time/area restriction to minimize underwater noise input in the Susitna River delta during summer months (to reduce impacts to belugas during important foraging behaviors) by prohibiting in-water pile driving in west Cook Inlet; (2) requiring AGDC to implement shutdown measures for beluga whales to prevent Level B harassment, shutdown measures for humpback whales and killer whales to prevent Level A harassment, and a 1,000-m exclusion zone for harbor porpoises and harbor seals to reduce Level A harassment; and (3) requiring AGDC to test the effectiveness of air bubble curtains around in-water pile driving. If the results of passive acoustic monitoring show that the air bubble curtain can reduce the source level by 2-dB or greater for a specific type of pile, AGDC will be required to deploy the air bubble curtain system for the driving of such piles. These additional mitigation measures are expected to further reduce both the number and severity of marine mammal takes, particular the Cook Inlet beluga whale, in the AGDC LNG facility construction area. NMFS included these additional mitigation measures after working with AGDC and determined that they are

practicable to further reduce potential impacts to Cook Inlet beluga whales.

Our analysis indicates that issuance of these regulations will not contribute to or worsen the observed decline of the Cook Inlet beluga whale population. Additionally, the ESA Biological Opinion determined that the issuance of regulations is not likely to jeopardize the continued existence of the Cook Inlet beluga whales or destroy or adversely modify Cook Inlet beluga whale critical habitat. The Biological Opinion also outlined Terms and Conditions and Reasonable and Prudent Measures to reduce impacts, which have been incorporated into the rule. Therefore, based on the analysis of potential effects, the parameters of the activity, and the rigorous mitigation and monitoring program, NMFS determined that the activity would have a negligible impact on the population.

Moreover, the LNG facility construction activity would take only small numbers of marine mammals relative to their population sizes. As described in the proposed rule notice, NMFS used a method that incorporates density of marine mammals overlaid with the anticipated ensonified area to calculate an estimated number of takes for belugas, which was estimated to be less than 10% of the stock abundance. The refined analysis using a 1 km by 1 km grid of Cook Inlet beluga whale density later showed that the estimated take would be even smaller (see detailed discussion in Estimated Take section below), at less than 5% of the population for any given year, which NMFS considers small. Based on all of this information, NMFS determined that the number of beluga whales likely to be taken is small.

Comment 2: The Commission recommends that NMFS ensure that AGDC's draft environmental impact statement (EIS) addresses the cumulative impacts of AGDC's proposed activities and all other sound-producing activities on beluga whales, as well as other marine mammals. CBD, Cook Inletkeeper, and EIA also comment that NMFS did not provide adequate analysis for how it arrived at its take estimates and negligible impact finding, and that NMFS did not look into the ongoing and cumulative impacts of the proposed activities combined with other foreseeable activities in Cook Inlet.

Response: Both the statute and the agency's implementing regulations call for analysis of the effects of the applicant's activities on the affected species and stocks, not analysis of other unrelated activities and their impacts on the species and stocks. That does not mean, however, that effects on the

species and stocks caused by other non-AGDC activities are ignored. The preamble for NMFS' implementing regulations under section 101(a)(5) (54 FR 40338; September 29, 1989) explains in response to comments that the impacts from other past and ongoing anthropogenic activities are to be incorporated into the negligible impact analysis via their impacts on the environmental baseline. Consistent with that direction, NMFS has factored into its negligible impact analyses the impacts of other past and ongoing anthropogenic activities via their impacts on the baseline (e.g., as reflected in the density/distribution and status of the species, population size and growth rate, and other relevant stressors). See the Analysis and Negligible Impact Determination section of this rule.

Regarding the analysis supporting the take estimates and the negligible impact finding, for the assessments of potential impacts to Cook Inlet beluga whales and other marine mammals in the vicinity of AGDC's LNG facilities construction area, NMFS evaluated the noise sources as well as other stressors produced by the construction activities. We analyzed the noise source types, source levels, and the duration of noise-producing activities, as well as the expanses of ensonified areas in different seasons, to estimate the number of marine mammals that would be exposed to noise levels that could result in takes—both in the forms of Level A harassment and Level B harassment. In addition, NMFS analyzed the likely impacts of those takes on individual marine mammals and the impact on their habitat, including marine mammal prey species and the Cook Inlet beluga whale critical habitat, to support the determination that the authorized takes will result in a negligible impact to the affected species and stocks. These analyses were detailed in the Potential Effects of Specified Activities on Marine Mammals and Their Habitat and Estimated Takes by Incidental Harassment sections in the proposed rule (84 FR 39931; June 18, 2019).

Our 1989 final rule for the MMPA implementing regulations also addressed public comments regarding cumulative effects from future, unrelated activities. There we stated that such effects are not considered in making findings under section 101(a)(5) concerning negligible impact. We indicated that NMFS would consider cumulative effects that are reasonably foreseeable when preparing a NEPA analysis and also that reasonably foreseeable cumulative effects would be considered under section 7 of the ESA

for ESA-listed species. Accordingly, detailed analysis of the cumulative impacts of the proposed activities combined with other foreseeable activities (including sound-producing activities) in Cook Inlet is provided in FERC's FEIS and, further, the reasonably foreseeable cumulative effects on listed species are considered in NMFS biological opinion.

Comment 3: The Commission also recommends that NMFS establish annual limits on the total number and types of takes that are authorized for all sound-producing activities in Cook Inlet before issuing the final rule. FoA states that the proposed project would have more than a negligible impact when analyzed in combination with other authorizations.

Response: As mentioned above, under the MMPA NMFS is required to make our required determinations for the specified activity and, therefore, establishing limits on the total number of takes authorized across multiple actions is inappropriate. Further, setting limits on the number and types of takes across all projects is also unnecessary in the context of the consideration of AGDC's activity. There are few incidental takes of Cook Inlet beluga whales currently authorized under the MMPA in Cook Inlet, and the projects for which takes are authorized are separated spatially and temporally. NMFS considered the effects of potential overlap in projects and the effects of sources other than those authorized for incidental take on Cook Inlet beluga whales in the Cumulative Effects section of the FERC's Final EIS. The analysis concludes that the issuance of an authorization to AGDC for the proposed LNG facility construction in Cook Inlet would not have significant impacts to Cook Inlet beluga whale and other marine mammals in the study area, provided that prescribed monitoring and mitigation measures are implemented.

Comment 4: The Commission recommends that NMFS require AGDC to submit a stakeholder engagement plan that includes stakeholders contacted (or to be contacted), a summary of input received, a schedule for ongoing community engagement, and measures that would be implemented to mitigate any potential conflicts with subsistence hunting.

Response: NMFS worked with AGDC to ensure that AGDC engages with stakeholders throughout the project area, including Cook Inlet, including submission of a Stakeholder Engagement Plan (Plan). AGDC provided the Plan to NMFS in April 2020, which includes a list of

stakeholders to be further contacted, and implementation of the Plan through communication. The Plan provides a detailed analysis of subsistence use of marine mammals in the Cook Inlet area, which indicates that Cook Inlet does not have as strong of a subsistence hunting community. Nevertheless, AGDC stated in the Plan that it will actively involve subsistence communities in the process, hearing concerns, and responding to issues. No concerns were raised by subsistence users through this process. Through the Stakeholder Engagement Plan, AGDC would implement measures to keep subsistence users in the Cook Inlet region informed of its project activities.

Comment 5: The Commission states that the estimated mean density of beluga whales of 0.000158 animals/km² near the temporary MOF appears to be an underestimate when compared to densities used by other recent applicants to estimate takes associated with activities in similar areas of Cook Inlet. The Commission further states that density estimates for beluga whales in Cook Inlet are typically derived from a habitat model developed by Goetz *et al.* (2012), which generated density for each 1-square-km cell of Cook Inlet. The Commission recommends that NMFS ensure consistency in density estimates used by applicants for beluga whales in Cook Inlet and update relevant habitat density models as new information becomes available.

Response: Density estimates for beluga in Cook Inlet in the Proposed Rule did use a habitat based model developed by Goetz *et al.* (2012). The analysis separated the data into upper, middle, and lower Cook Inlet; and the Goetz model is provided in GIS so that a specific density can be selected for a specific location. AGDC used the highest density estimate for each project location, which in all cases was the Goetz model for the specific area.

After the Proposed Rule was published, AGDC conducted additional analyses using Goetz *et al.* (2012) modeled aerial survey data collected by NMFS between 1993 and 2008 and developed beluga whale summer densities for each 1-square-kilometer cell of Cook Inlet. To develop a density estimate associated with Project components, the GIS files of the predicted ensonified area for both Level A and Level B harassment associated with each location and pile type, size, and hammer was overlain with the GIS file of the 1-square-kilometer beluga density cells. The cells falling within each ensonified area were provided in an output spreadsheet, and an average cell density for each Project component

was calculated. This level of detailed analysis shows that average beluga whale density near the temporary MOF is 0.00005 animal/km².

Regarding the Commission's recommendation that NMFS ensure consistency across authorization, while we agree that the best available science should consistently be used to support density estimates for all projects, we disagree that this means the identical density estimate must necessarily be used for all projects. Density estimates themselves may appropriately vary to best inform activities conducted at varied temporal and spatial scales.

Comment 6: For harbor seal take estimates, the Commission recommends that NMFS use the haul-out correction factor of 2.33 from Boveng *et al.* (2012) to revise the yearly abundance estimates and resulting density estimates and recalculate the number of takes accordingly. The Commission also recommends that NMFS use the gray whale and harbor porpoise densities specified in Table 9 of the Hilcorp Final Rule (84 FR 37481; July 31, 2019) and recalculate the numbers of takes accordingly. The Commission further recommends that NMFS (1) consult with researchers at the Alaska Fisheries Science Center that specialize in both cetacean and pinniped density derivation to ensure it is compiling, enumerating, and analyzing the aerial sightings data and estimating the various marine mammal densities correctly and (2) use marine mammal densities consistently for all future incidental take authorizations in Cook Inlet.

Response: NMFS consulted with researchers at the Alaska Fisheries Science Center and revised the yearly abundance estimates and resulting density estimates and recalculated the number of takes of harbor seals and harbor porpoises as suggested by the Commission (pers. comm.; J. London; April 16, 2020). The revised abundance and density estimates are used in take calculation described in the Estimated Take section.

The gray whale was not originally included in the AGDC LOA application, as it was added by NMFS in the Proposed Rule. Further analysis (see Description of Marine Mammals in the Area of Specified Activities section) led us to conclude that takes of gray whale are highly unlikely in upper Cook Inlet where AGDC's construction activity is located. Therefore, this species is not included in the analysis for the final rule.

NMFS addressed the comment about density estimation consistency in our response to the previous comment.

Comment 7: The Commission states that animal modeling that considers various operational and animal scenarios is the best way to determine the appropriate accumulation time to assess acoustic impacts. The Commission recommends that NMFS continue to make a priority to address the modeling issue to resolve in the near future and consider incorporating animal modeling into its user spreadsheet for acoustic impact assessment.

Response: NMFS has formed a working group to explore and develop such a model-based approach as discussed in the comment.

Comment 8: The Commission, CBD, and Cook Inletkeeper point out that AGDC's method for estimating days of pile driving activities, which sums fractions of days in which activities occur to generate the total number of days for each proposed activity, is inconsistent with NMFS' policy for enumerating takes for construction activities in general and underestimated the numbers of days of pile driving activity and Level A and Level B takes. The Commission recommends that NMFS revise the numbers of Level A and Level B harassment takes for all marine mammal species to reflect the actual number of days that impact and vibratory pile driving will occur, regardless of the duration of those activities on a given day.

Response: NMFS worked with AGDC to better characterize the activity and quantify the days of pile driving. Given that the precise number of piles to be installed or removed is generally unknown, the actual number of pile driving days is used in the revised take calculation to calculate potential takes, as recommended.

Comment 9: The Commission recommends that NMFS refrain from authorizing Level A harassment takes for species in which the proposed activities are not likely to result in Level A harassment takes during vibratory pile and sheet pile driving, which includes harbor porpoises, Dall's porpoises, Steller sea lions, and California sea lions.

Response: NMFS worked with AGDC and evaluated the potential impact to marine mammal species in the project area and reassessed the likelihood of the species' presence. Based on the reassessment, NMFS determined that it is highly unlikely that AGDC's proposed construction activities would result in Level A harassment of Dall's porpoise, Steller sea lion, or California sea lion in the project area, due to extra-limital distribution of these species. However, presence of harbor porpoise has been

confirmed near the AGDC's project location. In addition, the relatively large Level A harassment zone for high-frequency cetaceans and the difficulty of detection harbor porpoise in the field make it challenging to implement shutdown measures in a timely fashion. Therefore, we consider the possibility that harbor porpoise could be taken by Level A harassment if AGDC PSOs fail to detect an animal before it enters an exclusion zone and remains for the amount of time necessary to incur PTS. The possibility of harbor porpoise Level A harassment is also confirmed by our calculations (see Estimated Take section). Accordingly, a small number of Level A harassment takes of harbor porpoise have been analyzed and authorized.

Comment 10: The Commission recommends that NMFS (1) require AGDC to provide a detailed hydroacoustic monitoring plan, (2) provide the plan to the Commission for review, and (3) include in the final rule, the requirement to conduct hydroacoustic monitoring during impact and vibratory pile driving of each pile type to verify and adjust the extents of the Level A and B harassment zones, as necessary.

Response: NMFS required AGDC to provide a detailed hydroacoustic monitoring plan for its pile driving activities associated with the LNG facility construction in Cook Inlet and received the plan in February 2020. NMFS has provided the plan to the Commission for review and addressed all comments and questions from the Commission. NMFS also required AGDC to conduct hydroacoustic monitoring at the beginning of in-water pile driving of each pile type to verify and adjust the extents of the Level A and Level B harassment zones, as necessary.

Comment 11: The Commission states that the proposed number of Level A and B harassment takes also are not allocated appropriately based on the extents of the Level A and B harassment zones. As an example, the Commission points out that in Year 5, the Level A harassment zone for high-frequency cetaceans during impact installation of 48- and 60-in pile is 4,524 m, which is 97 percent of the Level B harassment zone of 4,642 m. However, NMFS proposed to authorize 10 Level A harassment takes and 20 Level B harassment takes of harbor porpoises for that year. The Commission recommends that NMFS reallocate the proposed Level A and B harassment take for low-frequency and high-frequency for Years 2, 3, 4, and 5 to ensure that the authorized limits reflect the relative extents of each harassment zone.

Response: NMFS worked with AGDC and recalculated the takes based on animal density, ensonified area, and pile driving days. The estimated takes conservatively reflect the relative extents of each harassment zone. However, it is important to note that while NMFS agrees that comparison of the areas of the Level B and Level A harassment zones is a useful qualitative consideration, we do not agree with the Commission's premise that takes must necessarily be allocated proportionally to the areas of the Level B and Level A harassment zones, as these two "zones" do not represent the same thing. The Level B harassment zone is based on a threshold utilizing a metric of instantaneous exposure and the general underlying assumption is that if an animal enters this zone, even momentarily, it will be exposed above the received level threshold for Level B harassment and thereby taken. Alternately, the thresholds for incurring PTS are not solely based on an instantaneous exposure to some level of sound, they are based on an accrual of energy that results from a combination of the animal's proximity to the source and the time spent there. The isopleth produced by NMFS' User Spreadsheet (which delineates the Level A harassment zone) includes an assumption about the amount of time that an animal would need to remain within the distance identified and, therefore, does not support the assumption that any animal that enters the zone, even briefly, is taken by Level A harassment. Animals that only come within the outer edges of the Level A zone would need to remain there near the full duration of time indicated for the full day of pile driving operation to incur PTS (typically 30 minutes to multiple hours), while animals coming further within the zone would need to remain for progressively shorter amounts of time as they get closer to the source to risk incurring PTS.

Comment 12: The Commission states that AGDC would not be able to monitor the entire Level B harassment zones due to the extent of these zones and recommends that NMFS specify how AGDC should enumerate the numbers of marine mammals taken particularly when observers are only monitoring a portion of the Level A and B harassment zones.

Response: NMFS has worked with AGDC on the effectiveness of marine mammal monitoring for extended distances and concluded that if the protected species observers (PSOs) are placed in locations with appropriate height and equipment, they are able to detect beluga whales out to 1.5 km from

the site on clear days. However, during less ideal visibility conditions when only a portion of the Level B harassment zone is visible, AGDC are required to enumerate the numbers of marine mammal taken based on take number within the area that is within the visual observation corrected by the proportion of area beyond visual observation.

Comment 13: The Commission recommends that NMFS require AGDC to keep a tally of the numbers of marine mammals taken, alert NMFS when the authorized limit is close to being met, and follow any guidance provided.

Response: AGDC is required to keep a tally of the number of marine mammals taken and alert NMFS when the authorized limit is close to being met based on prescribed monitoring measured in the final rule. In addition, AGDC is required to keep a tally of all marine mammal sightings during the pile driving activities.

Comment 14: The CBD and Cook Inletkeeper state that NMFS did not adequately consider the impacts to Cook Inlet beluga whale critical habitat.

Response: The Cook Inlet beluga whale critical habitat is adequately addressed in the Negligible Impact Analysis and Determination section. We noted that AGDC's LNG facilities construction activities could potentially impact Cook Inlet beluga whale critical habitat. Satellite-tagging studies and aerial survey indicate that seasonal shifts exist in Cook Inlet beluga whale distribution, with the whales spending a great percentage of time in coastal areas during the summer and early fall (June through October or November), and dispersing to larger ranges that extend to the middle of the inlet in winter and spring (November or December through May). However, fine scale modeling based on NMFS long-term aerial survey data indicate that the AGDC's proposed LNG facilities construction does not overlap with beluga whale high density areas during the summer and fall (Goetz *et al.*, 2012).

Further, NMFS also addressed potential effects on beluga whale prey species. Studies have shown that fish reacted to sounds when the sound level increased to about 20 dB above the detection level of about 120 dB (Ona, 1988); however, the physical injury and mortality to fish only occurred in the immediate vicinity of impact pile driving (Caltrans, 2015). Therefore, it is highly unlikely that in-water impact pile driving would cause noticeable level fish injury or mortality. During the Alaska LNG facilities construction, only a small fraction of the available habitat would be ensonified at any given time. Disturbance to fish species would be

short-term, and fish would return to their pre-disturbance behavior once the pile driving activity ceases.

Furthermore, potential impacts to Cook Inlet beluga whale critical habitat were also addressed in the FERC's FEIS, of which NMFS is a cooperating agency. In addition, the ESA Biological Opinion determined that the issuance of regulations is not likely to jeopardize the continued existence of the Cook Inlet beluga whales or destroy or adversely modify Cook Inlet beluga whale critical habitat. NMFS adequately considered impacts in critical habitat in the analyses supporting its determination.

Comment 15: Citing a study by Mooney *et al.* (2018), the CBD and Cook Inletkeeper claim that NMFS thresholds of 120 dB re 1 μ Pa (rms) for continuous and 160 dB re 1 μ Pa (rms) for impulsive or intermittent sources to determine Level B harassment are insufficiently conservative to protect Cook Inlet beluga whale because beluga whales are highly sensitive to noise.

Response: The study CBD and Cook Inletkeeper cited addresses the variation of hearing sensitivity in a wild beluga whale population Bristol Bay, AK. The study used auditory evoked potential (AEP) to obtain audiograms of 26 wild beluga whales during capture-release events. The results showed that most beluga whales from the study showed sensitive hearing with low thresholds (<80 dB re 1 μ Pa) from 16 to 100 kHz, a frequency range that is much higher than noises generated from in-water pile driving, vessels, and pipe laying. Although not reported in their AEP study, audiograms provided in the paper show a rapid decrease in beluga whale hearing sensitivity as the frequencies get lower, like most odontocetes. Behavioral audiograms of beluga whales show that hearing sensitivity in the frequency below 1 kHz is above 100 dB re 1 μ Pa, and elevates to above 120 dB 1 μ Pa at about 100 Hz (White *et al.*, 1978).

In addition, CBD and Cook Inletkeeper are confused between the animals' detection thresholds and threshold of noise induced behavioral disturbances. Being able to detect the sound does not indicate that the animal would respond to the sound, much less be taken by Level B harassment, as defined under the MMPA. Studies show that animals usually respond to received noise at levels much higher than their hearing thresholds.

Comment 16: CBD states that impacts of pile driving on beluga whales have been underestimated. CBD further states that pile driving [noise] could mask "strong bottlenose dolphin

vocalizations" 10–15 km from the source (David, 2006).

Response: NMFS has carefully reviewed the best available scientific information in assessing impacts to marine mammals and recognizes that these activities have the potential to impact marine mammals through threshold shifts, behavioral effects, stress responses, and auditory masking. However, NMFS has determined that the nature of such potentially localized exposure means that the likelihood of any impacts to fitness and population level disturbance from the authorized take, including from detrimental energetic effects or reproductive impacts, is low. NMFS has also prescribed a robust suite of mitigation measures, such as shutdown measures to avoid beluga Level B harassment, which is expected to further reduce both the number and severity of beluga whale takes.

NMFS considers it highly unlikely that dolphin vocalizations could be masked by pile driving noise. As discussed in detail in the Potential Effects of Specified Activities on Marine Mammals and Their Habitat section of the proposed rule, auditory masking occurs at the frequency band that the animals utilize. Since noise generated from vibratory pile driving is mostly concentrated at low frequency ranges below 2 kHz, it is expected to have minimal effects masking high frequency echolocation (clicks) and communication (whistles) sounds by odontocetes, including bottlenose dolphins. The analysis by David (2006) on masking is flawed as it did not adequately consider the frequency spectra of pile driving noise as it relates to auditory frequency response of the dolphin.

Comment 17: CBD and Cook Inletkeeper claims that NMFS relied on avoidance [behavior] to make its negligible determination.

Response: CBD's claim is inaccurate. NMFS did not rely on marine mammal avoidance behavior to make our negligible determination. To the contrary, NMFS considered avoidance as a form of Level B harassment. As stated clearly in the Proposed Rule (84 FR 39901; June 28, 2019), "marine mammals' exposure to certain sounds could lead to behavioral disturbance (Richardson *et al.*, 1995), such as changing durations of surfacing and dives, number of blows per surfacing, or moving direction and/or speed; reduced/increased vocal activities; changing/cessation of certain behavioral activities (such as socializing or feeding); visible startle response or aggressive behavior (such as tail/fluke

slapping or jaw clapping); avoidance of areas where noise sources are located; and/or flight responses (e.g., pinnipeds flushing into water from haul-outs or rookeries)."

Comment 18: CBD and Cook Inletkeeper state that NMFS failed to account for numerous harmful activities such as dredging, pipeline trenching, vessels transiting, and geophysical surveys that could result in takes of marine mammals.

Response: As stated in the Proposed Rule (84 FR 39901; June 28, 2019), dredging activity would occur during the construction of the Marine Terminal MOF using either a hydraulic (cutter head) dredger or a mechanical dredger, and pipeline trenching would occur in the Cook Inlet during pipeline laying operations. These activities typically have low noise levels (120-dB isopleths are typically within 150 m) and slow, predictable movement, which support the unlikelihood of resulting take. For example, URS (2007) measured underwater sound level was 141 dB re 1 μ Pa rms at 12 m associated with U.S. Army Corps of Engineers (USACE) dredging activities at the Port of Alaska (formerly Port of Anchorage). The resulting 120-dB isopleths was 134.6 m. In addition, these activities are typically associated with slow moving barge/vessel and the noise output are intermittent. Nevertheless, NMFS considers how other activities associated with pipeline trenching, such as anchor handling that generates much louder noise, could cause takes of marine mammals. Effects from these activities have been analyzed and takes were estimated.

Although noises generated from the vessel can be louder than dredging noise, similar to dredging, the movement is relatively predictable, and habituation to vessel traffic has been documented for some marine mammals in more industrialized areas. Therefore, we do not consider animals exposed to transiting vessels likely to respond in a manner that would rise to the level of a take as defined under the MMPA.

The equipment AGDC proposed to use for its geophysical surveys are all high-frequency sources with frequencies above 200 kHz, as described in the Proposed Rule. These frequencies are beyond the detection thresholds of marine mammals. Therefore, NMFS does not expect operating these sources would have takes of marine mammals.

Comment 19: CBD, Cook Inletkeeper, and FoA claim that the small numbers determination is flawed and that NMFS underestimated Cook Inlet beluga takes.

Response: NMFS does not agree with CBD, Cook Inletkeeper, and FoA's

assessment. As described in details in the Proposed Rule (84 FR 39901; June 28, 2019), density estimates for Cook Inlet beluga were based on a habitat-based model developed by Goetz *et al.* (2012). Take estimates were calculated using the beluga whale densities in different areas of the Cook Inlet that overlap with the construction activities, taking into consideration ensonified areas and the duration of each activity. After the Proposed Rule was published, AGDC conducted additional analysis, which NMFS concurred was appropriate, using Goetz *et al.* (2012) modeled aerial survey data collected by NMFS between 1993 and 2008 and developed beluga whale densities for each 1-square-kilometer cell of Cook Inlet. The calculation shows that the maximum annual take of Cook Inlet beluga whale, adjusted for group number is 13 animals. This translates to less than 5% of the Cook Inlet beluga whale stock's population.

Regarding the small numbers determination, NMFS disagrees that it is flawed. NMFS refers the reader to the **Federal Register** Notice announcing NMFS' issuance of five IHAs authorizing take incidental to seismic surveys in the Atlantic (83 FR 63268; December 7, 2018), in which the agency describes in detail its method and rationale for determining whether take of marine mammals constitutes small numbers. As described in that notice, and in the associated sections of this notice, the small numbers determination and negligible impact analysis are conducted separately using entirely different approaches, although they necessarily consider some of the same biological information. Also, contrary to the commenter's assertion, NMFS has indicated that the determination of whether take of marine mammals is of small numbers is appropriately considered on an annual basis and the commenter has offered no justification for why this might not be appropriate.

Comment 20: CBD and Cook Inletkeeper state that the proposed rule failed to ensure the least practicable adverse impact. Specifically, CBD and Cook Inletkeeper claimed that NMFS did not address the following issues: Limit on cumulative beluga whale takings in Cook Inlet; time-area restrictions; larger exclusion zones; air curtains or other noise reduction technologies; and sound source verification.

Response: NMFS does not agree with CBD and Inletkeeper's assertion. As described in the Proposed Rule (84 FR 39901; June 28, 2019), NMFS worked with AGDC and proposed a wide range of monitoring and mitigation to achieve

the least practicable adverse impact. These measures included, but were not limited to: (1) Limiting in-water pile driving activities to daylight hours only; (2) implementing shutdown measures for beluga whales to prevent Level A harassment of this species; (3) implementing soft start for all impact pile driving; and (4) monitoring both Level A and Level B harassment zones to ensure takes does not exceed the number or species that would not be authorized. NMFS has described why these measures, along with monitoring and mitigation measures described in the proposed rule, will ensure the least practicable adverse impacts to AGDC's LNG facility construction project. After the Proposed Rule was published, NMFS further worked with AGDC to identify additional practicable measures and included the following additional mitigation and monitoring measures: (1) Prohibiting in-water pile driving near beluga whale summer feeding ground between June 1 and September 7 in west Cook Inlet; (2) implementing larger exclusion zones for shutdown measures to prevent/reduce Level B harassment of Cook Inlet beluga whales; (3) implementing shutdown measure to prevent Level A harassment of all mid-frequency cetaceans; (4) implement shutdown measures to reduce Level A takes of all other marine mammals; (5) requiring AGDC to conduct passive acoustic monitoring to assess the range of ensonified zones; (6) requiring AGDC to assess the effectiveness of air bubble curtains by conducting sound source verification; and (7) requiring AGDC to deploy air bubble curtains to reduce pile driving noise level if the air bubble curtains are found to be able to achieve a noise reduction of 2 dB or more. These additional monitoring and mitigation measures address four out of the five concerns raised by CBD and Cook Inletkeeper. Regarding CBD and Cook Inletkeeper's comments on limiting cumulative beluga whale takes in Cook Inlet, NMFS addressed this in Response to Comments 2 and 3 above.

Additionally, for the issuance of the LOA, our analysis showed that at a maximum, 14 Cook Inlet beluga whales could be exposed to noise levels that result to Level B harassment in a given year without any mitigation measures in place. This number equates to 5% of the Cook Inlet beluga whale population. Implementation of required monitoring and mitigation are likely to further reduce the severity and number of takes of Cook Inlet beluga whale.

Comment 21: CBD and Cook Inletkeeper claims that NMFS finding of no unmitigable impacts on subsistence

harvest is arbitrary because the proposed action may have an adverse impact on the availability of beluga whales, harbor seals, Steller sea lions, and sea otters for Native Alaskan subsistence harvest.

Response: NMFS does not agree with CBD and Cook Inletkeeper's assertion. First, there is no subsistence harvest of Cook Inlet beluga whales because of its low population in more than a decade. The criteria established for when subsistence hunt of Cook Inlet beluga could resume included the need for a ten-year average abundance estimate to exceed 350 animals, as well as a requirement for an increasing population trajectory; therefore, there are no active subsistence uses of beluga whales that the activity could interfere with. Further, as described in this notice, the Level B harassment take of beluga whales allowed through these regulations would be of small numbers and of a low degree not expected to effect the fitness, reproduction, or survival of any individuals, and therefore would not impede the recovery of the population or otherwise affect the ten-year abundance average. In regard to other marine mammal species, NMFS conducted a thorough analysis on substance use of these species. Jones and Kostick (2016) reported that 2 percent of households in Nikiski, the closest village to AGDC's proposed project area, used harbor seals and 1 percent reported using unknown seal species (both gifted from another region). No marine mammals were actively hunted by Alaska Native residents in Nikiski. There is limited use of marine mammals thought to be from the small number of Alaska Natives living in Nikiski (Jones and Kostick, 2016). In other locations, the hunt of marine mammals is conducted opportunistically and at such a low level that totals approximately 50 harbor seals and fewer than 10 Steller sea lions in a typical year. Therefore, AGDC's program is not expected to have an impact on the subsistence use of marine mammals.

Nevertheless, NMFS required AGDC to develop a stakeholder engagement plan and communicate with subsistence users in the region to inform its proposed activities.

Comment 22: CBD and Cook Inletkeeper claim the draft Environmental Impact Statement (EIS) is flawed based on the assertion that (1) the purpose and need are too narrowly defined; (2) NMFS failed to consider a reasonable range of alternatives related to mitigation measures; and (3) the discussion of environmental and cumulative impacts of the proposed

project is inadequate as it does not discuss the planned oil and gas lease sales, the Hilcorp seismic survey and exploratory drilling, and Pebble Mine.

Response: NMFS does not agree with CBD and Cook Inletkeeper's assertions. First, NMFS worked with the Federal Energy Regulatory Commission (FERC) and clarified NMFS' responsibility in the "Purpose and Scope of This EIS" section of the final EIS. Specifically, the EIS states that NMFS, in accordance with 40 CFR 1506.3 and 1505.2, intends to adopt this EIS and issue a separate record of decision (ROD) associated with its decision to grant or deny AGDC's request for regulations and a Letter of Authorization (LOA) pursuant to Section 101(a)(5)(A) of the MMPA for construction activities in Cook Inlet.

In regard to the range of alternatives being considered, NMFS worked with FERC and required a suite of monitoring and mitigation measures that are the most protective to ensure the least practicable adverse impact. While a range of alternatives concerning the scope of the project were presented in the EIS, many of these project-related alternatives were eliminated either due to no environmental advantage or impracticable for the project and were eliminated.

Finally, we note that the projects that CBD and Cook Inletkeeper note (planned oil and gas lease sales, the Hilcorp seismic survey and exploratory drilling, and Pebble Mine) are all discussed in the Cumulative Impacts of the final EIS (pages 4–1188 and 4–1189 of the FEIS). The first two projects are also shown in a map on page 4–1168 of the FEIS, while the site of Pebble Mine is outside the vicinity of AGDC's proposed project area in Cook Inlet.

Comment 23: CBD and Cook Inletkeeper states that NMFS should not issue take authorization under the Endangered Species Act (ESA).

Response: NMFS disagree with CBD and Cook Inletkeeper's opinion. As stated in Response to Comment 1, NMFS is required to issue a marine mammal incidental take authorization for a specified activity within the specified geographic region if NMFS is able to determine that the activity will have a negligible impact on the species or stock and will not have an unmitigable adverse impact on the availability of such species or stock for subsistence uses. Based on the scientific evidence available, NMFS determined that the impacts of the AGDC LNG facility construction activities meet these standards.

Regarding ESA compliance for the NMFS authorization (under the MMPA) of ESA-listed species such the Cook

Inlet beluga whale and Western North Pacific, Hawaii, and Mexico DPS of humpback whales, NMFS' Permit and Conservation Division requested initiation of section 7 consultation with the Alaska Region for the promulgation of 5-year regulations and the subsequent issuance of annual LOAs. The Alaska Region issued a Biological Opinion concluding that NMFS' action is not likely to adversely affect the listed species named above or adversely modify their critical habitat.

Comment 24: FoA states that the proposed project would create noise pollution that is likely to cause hearing damage to Cook Inlet beluga whales.

Response: NMFS does not agree with FoA's assertion. While FoA did not define what constitute to "noise pollution," NMFS provided an in-depth analysis on noise generated from AGDC's proposed LNG facility construction. Based on the analysis, NMFS finds it extremely unlikely that a beluga whale would experience hearing damage (permanent threshold shift) from the proposed AGDC construction activity. The analysis is supported by scientific information presented in NMFS' *Technical Guidance for Assessing the Effects of Anthropogenic Sound on Marine Mammal Hearing (V.2.0)* (NMFS, 2016; 2018) and based on density estimate of Cook Inlet beluga whales in the project area, ensonified area and noise exposure duration from construction activities. Our analysis showed that anticipated takes of Cook Inlet beluga whales are expected to be limited to short-term Level B harassment. Beluga whales present in the vicinity of the action area and taken by Level B harassment would most likely show overt brief disturbance (startle reaction) and avoidance of the area from elevated noise levels during pile driving.

Comment 25: FoA states that the proposed project is susceptible to catastrophic events, such as oil spill, which is reasonably likely to negatively impact the species.

Response: Oil spills are not considered because take of marine mammals due to oil spills are not anticipated or authorized. AGDC is required to comply with all regulations related to pipeline laying and vessel transiting and is responsible for ensuring its compliance with those regulations. An oil spill, or a violation of other federal regulations, is not authorized under this rule.

Comment 26: FoA claims that NMFS' issuance of the LOA would violate the NEPA, and that NMFS should prepare a Programmatic EIS (PEIS).

Response: NMFS originally declared its intent to prepare a PEIS for oil and gas activities in Cook Inlet, Alaska (79 FR 61616; October 14, 2014). However, in a 2017 **Federal Register** notice (82 FR 41939; September 5, 2017), NMFS indicated that due to a reduced number of Incidental Take Authorization (ITA) requests in the region, combined with funding constraints at that time, we were postponing any potential preparation of a PEIS for oil and gas activities in Cook Inlet. As stated in the 2017 **Federal Register** notice, should the number of ITA requests, or anticipated requests, noticeably increase, NMFS will re-evaluate whether preparation of a PEIS is necessary. Currently, the number of ITA requests for activities that may affect marine mammals in Cook Inlet is at such a level that preparation of a PEIS is not yet necessary. Nonetheless, under NEPA, NMFS is required to consider cumulative effects of other potential activities in the same geographic area, and these are discussed in greater detail in FERC's Alaska LNG Project Final Environmental Impact Statement (FERC, 2020), which NMFS adopted.

Comment 27: DoW requests NMFS defer the comment period for the Proposed Rule until later in the EIS process, when additional relevant information could be available for NMFS and public review, or reopen a public comment period before finalizing the rulemaking on its own determination that additional relevant information has become available.

Response: When evaluating the AGDC's petition to take marine mammal incidental to its proposed construction of LNG facilities in Cook Inlet, Alaska, NMFS has conducted thorough review of the scope of the proposed activities and the level of potential impacts to marine mammals. In doing so, NMFS consulted internally with its experts who have the best scientific information on the species and their habitat. A Proposed Rule is published for public comment only when NMFS is convinced that it has all relevant information to conduct the impact analyses to support preliminary findings pursuant to the statutory standards. While the NEPA analysis will be finalized at a later time, since NMFS is a cooperating agency on the FERC's EIS, NMFS reviewed all the public comments from the EIS as well to inform its final decision. Therefore, in this case, NMFS does not believe there was a need to defer the public comment period, or reopen a public comment period before finalize the rulemaking.

Comment 28: DoW states that NMFS' proposed rule did not consider

operational noise associated with the proposed LNG facilities. Citing FERC's DEIS, DoW states that the highest noise levels would occur when there are two LNG carrier ships docked at the facility. DoW states that NMFS should include this additional noise in its analysis.

Response: The action being considered here is the issuance of a Letter of Authorization under a rulemaking for the incidental take of small numbers of marine mammals that could result from AGDC's proposed construction of LNG facilities in Cook Inlet. Our action does not include the operation of LNG carrier ships in the future. Therefore, potential impacts to marine mammals beyond what were analyzed for AGDC's proposed LNG facilities construction activities were not analyzed, and any takes caused by those activities are not authorized.

Comment 29: DoW claims that twelve hours of noise exposure every day from April through October and the take of 7% Cook Inlet beluga whales should not be considered a negligible impact.

Response: NMFS does not agree with DoW's conclusion and nor are the assumptions upon which it is based accurate. First, while some of the pile driving activities may occur twelve hours per day, construction activities are expected to be conducted six days a week from April through October. In addition, not all construction activities generate intense underwater noise, and most of the in-water pile driving activities would not last for 12 hours per day. Furthermore, as marine mammals move around Cook Inlet, animals would only be exposed to in-water construction noise when they are present in the area. Finally, the negligible impact determination considers relevant biological and contextual factors, *i.e.*, the anticipated impacts to the individuals and the stock, of the take authorized, as described in details in the Proposed Rule (84 FR 39901; June 28, 2019).

Comment 30: The EIA expressed concern about potential renewal of the proposed incidental take authorization (IHA).

Response: NMFS does not propose to issue nor renew an IHA to AGDC for the proposed LNG facility construction in Cook Inlet. EIA may be confused with NMFS proposed issuance of an LOA under a 5-year regulation. The regulations are valid for five years from the date of issuance with a maximum of a five-year Letter of Authorization requested under these regulations. If AGDC wanted to pursue marine mammal take authorization beyond the effective period of these regulations,

they would need to apply anew for an IHA or LOA.

Comment 31: EIA is concerned that it was not able to comment on the updated version of the LOA application until July 24, 2019, and that the only application available was a previous version dated February 20, 2019. EIA further states that it was difficult to evaluate the project's impact, because the activities described in both documents are roughly similar for each season and estimates rely on the same research for each density estimate, but NMFS estimated a total of 14 beluga takes from Level B harassments from 2020–2025, while AGDC estimated 10 belugas but in different seasons.

Response: While reviewers were mistakenly not provided the most up-to-date version of the application, the scope of the project and analytical methods were accurately described and remained the same in later versions. In AGDC's LOA application, it estimated a total of 10 Cook Inlet beluga whale noise exposure by Level B harassment over the 5-year period of the activity but requested for an annual take of 32 animals. In NMFS' analysis, which is using the same methods, we proposed an annual take of 20 beluga whales based on exposure analysis that is adjusted to account for group size.

Changes Between Proposed Rule and Final Rule

Several changes were made after the publication of the proposed rule on June 28, 2019 (84 FR 39931). Those changes resulted from updated marine mammal density and population information, more detailed analyses on potential impacts using refined data sets, and additional mitigation and monitoring measures to minimize impacts. The changes between proposed and final rules are summarized below.

Authorized takes of marine mammal species were reduced from 10 species to 5 species. In the proposed rule, NMFS proposed to authorize takes of humpback whale, fin whale, gray whale, beluga whale, killer whale, harbor porpoise, Dall's porpoise, harbor seal, California sea lion, and Steller sea lion. In the final rule, takes of fin whale, gray whale, Dall's porpoise, California sea lion, and Steller sea lion are not authorized because data show that they are not likely to be present and exposed to the construction activities (see Description of Marine Mammals in the Area of Specified Activities section below).

Take numbers of marine mammals were updated based on the newest information on population estimates and refined density modeling. Marine

mammal density data in the proposed rule were based on NMFS aerial survey in Cook Inlet from 2000 to 2016. In the final rule, additional density from the 2018 aerial survey were also included. In addition, Cook Inlet beluga whale density was further updated based on the latest population estimated that became available in January 2020 (NMFS, 2020), and the take estimate for this species was reanalyzed using a more refined density grid than what was used for the proposed rule. The take number for harbor seals was adjusted based on comments from the Commission and consultation with NMFS National Marine Mammal Laboratory.

The final rule also included additional monitoring and mitigation measures to further reduce potential impacts to marine mammals. Many of these measures are based on consideration of public comments. These additional monitoring and mitigation measures include:

- Implementing time/area restriction to minimize potential noise exposure to Cook Inlet beluga whales in the Susitna River Delta;
- Implementing larger exclusion zones for all in-water construction activities to prevent or reduce Level A harassment for all marine mammals and to prevent Level B harassment for Cook Inlet beluga whales;
- Requiring sound source verification (SSV) measurement for in-water pile driving to better understand underwater noise generated from pile driving activities; and
- Deploying air bubble curtains to attenuate noise from in-water pile driving if SSV results show a 2-dB reduction of noise from air bubble curtains.

Description of Marine Mammals in the Area of Specified Activities

Sections 4 and 5 of the IHA application summarize available information regarding status and trends, distribution and habitat preferences, and behavior and life history, of the potentially affected species. Additional information regarding population trends and threats may be found in NMFS' Stock Assessment Reports (SARs; www.fisheries.noaa.gov/national/marine-mammal-protection/marine-mammal-stock-assessments) and more general information about these species (*e.g.*, physical and behavioral descriptions) may be found on NMFS' website (www.fisheries.noaa.gov/find-species).

Five species that were analyzed in the Proposed Rule (84 FR 39901; June 28, 2019) but since were removed in the

final analysis due to their extralimital presence in the proposed area, based on in depth analysis of NMFS marine mammal aerial survey data (summarized in Shelden *et al.*, 2017; 2019). These species are: Fin whale (*Balaenoptera physalus*), gray whale (*Eschrichtius robustus*), Dall’s porpoise (*Phocoenoides dali*), California sea lion (*Zalophus californianus*), and Steller sea lion (*Eumetopias jubatus*). As take

of these species is not anticipated as a result of the proposed activities, these species are not analyzed further in this document.

Table 3 summarizes information related to the population or stock, including regulatory status under the MMPA and ESA and potential biological removal (PBR), where known. For taxonomy, we follow Committee on Taxonomy (2019). PBR is defined by the

MMPA as the maximum number of animals, not including natural mortalities, that may be removed from a marine mammal stock while allowing that stock to reach or maintain its optimum sustainable population (as described in NMFS’ SARs). While no mortality is anticipated or authorized here, PBR is included here as a gross indicator of the status of the species and other threats.

TABLE 3—MARINE MAMMALS WITH POTENTIAL PRESENCE WITHIN THE PROJECT AREA

Common name	Scientific name	Stock	ESA/ MMPA status; strategic (Y/N) ¹	Stock abundance (CV, N _{min} , most recent abundance survey) ²	PBR	Annual M/SI ³
Order Cetartiodactyla—Cetacea—Superfamily Mysticeti (baleen whales)						
Family Balaenopteridae: Humpback whale	<i>Megaptera novaeangliae</i>	Western North Pacific	E/D; Y	1,107 (0.300, 865)	3.0	2.6
Family Delphinidae: Killer whale	<i>Orcinus orca</i>	Eastern North Pacific Alaska Resident. Cook Inlet	-; N	2,347 (NA, 2,347)	24	1
Beluga whale ⁴	<i>Delphinapterus leucas</i>	Cook Inlet	E/D; Y	279 (0.06, NA)	unk	0
Family Phocoenidae (porpoises): Harbor porpoise	<i>Phocoena phocoena</i>	Gulf of Alaska	-; N	31,046 (2.14, NA)	unk	72
Order Carnivora—Superfamily Pinnipedia						
Family Phocidae (earless seals): Harbor seal	<i>Phoca vitulina</i>	Cook Inlet/Sheikof Strait	-; N	28,411 (NA, 26,907)	807	107

¹ Endangered Species Act (ESA) status: Endangered (E), Threatened (T)/MMPA status: Depleted (D). A dash (-) indicates that the species is not listed under the ESA or designated as depleted under the MMPA. Under the MMPA, a strategic stock is one for which the level of direct human-caused mortality exceeds PBR or which is determined to be declining and likely to be listed under the ESA within the foreseeable future. Any species or stock listed under the ESA is automatically designated under the MMPA as depleted and as a strategic stock.

² NMFS marine mammal stock assessment reports online at: <https://www.fisheries.noaa.gov/national/marine-mammal-protection/marine-mammal-stock-assessment-reports-region#reports>. CV is coefficient of variation; N_{min} is the minimum estimate of stock abundance.

³ These values, found in NMFS’ SARs, represent annual levels of human-caused mortality plus serious injury from all sources combined (e.g., commercial fisheries, ship strike). Annual M/SI often cannot be determined precisely and is in some cases presented as a minimum value or range. A CV associated with estimated mortality due to commercial fisheries is presented in some cases.

⁴ Cook Inlet beluga whale population estimates are updated based on Sheldon *et al.* (2019).

Marine mammal species that could potentially occur in the proposed construction areas are included in Table 3. Detailed discussion of these species is provided in the LOA application and summary information is provided below.

In addition, sea otters may be found in Cook Inlet. However, sea otters are managed by the U.S. Fish and Wildlife Service and are not considered further in this document.

Humpback Whale

The humpback whale is distributed worldwide in all ocean basins. In winter, most humpback whales occur in the subtropical and tropical waters of the Northern and Southern Hemispheres. Humpback whales in the high latitudes of the North Pacific Ocean are seasonal migrants that feed on euphausiids and small schooling fishes (Nemoto, 1957, 1959; Clapham and Mead, 1999). The humpback whale population was considerably reduced as a result of intensive commercial exploitation during the 20th century.

The historical summer feeding range of humpback whales in the North Pacific encompassed coastal and inland waters around the Pacific Rim from Point Conception, California, north to the Gulf of Alaska and the Bering Sea, and west along the Aleutian Islands to the Kamchatka Peninsula and into the Sea of Okhotsk and north of the Bering Strait (Zenkovich, 1954; Nemoto, 1957; Tomlin, 1967; Johnson and Wolman, 1984). Historically, the Asian wintering area extended from the South China Sea east through the Philippines, Ryukyu Retto, Ogasawara Gunto, Mariana Islands, and Marmust Islands (Rice, 1998). Humpback whales are currently found throughout this historical range. Most of the current winter range of humpback whales in the North Pacific is relatively well known, with aggregations of whales in Japan, the Philippines, Hawaii, Mexico, and Central America. The winter range includes the main islands of the Hawaiian archipelago, with the greatest concentration along the west side of Maui. In Mexico, the winter breeding

range includes waters around the southern part of the Baja California peninsula, the central portions of the Pacific coast of mainland Mexico, and the Revillagigedo Islands off the mainland coast. The winter range also extends from southern Mexico into Central America, including Guatemala, El Salvador, Nicaragua, and Costa Rica (Calambokidis *et al.*, 2008).

Although there is considerable distributional overlap in the humpback whale stocks that use Alaskan waters, the whales seasonally found in lower Cook Inlet are probably of the Central North Pacific stock (Barlow *et al.*, 2011; Allen and Angliss 2015).

Humpback whale use of Cook Inlet has been observed to be confined to Lower Cook Inlet; the whales have been regularly seen near Kachemak Bay during the summer months (Rugh *et al.*, 2005). There are anecdotal observations of humpback whales as far north as Anchor Point, with recent summer observations extending to Cape Starichkof (Owl Ridge, 2014). Humpback whales will move about their

range. It is possible for a small number of humpback whales to be observed near the Marine Terminal construction area, but they are unlikely to venture north into the proposed Upper Cook Inlet pipeline crossings.

Killer Whale

Killer whales are widely distributed, although they occur in higher densities in colder and more productive waters (Allen and Angliss, 2015). Two different stocks of killer whales inhabit the Cook Inlet region: The Alaska Resident Stock and the Gulf of Alaska, Aleutian Islands, Bering Sea Transient Stock (Allen and Angliss, 2015).

Killer whales are occasionally observed in Lower Cook Inlet, especially near Homer and Port Graham (Shelden *et al.*, 2003; Rugh *et al.*, 2005). A concentration of sightings near Homer and inside Kachemak Bay may represent high use, or high observer-effort given most records are from a whale-watching venture based in Homer. The few whales that have been photographically identified in Lower Cook Inlet belong to resident groups more commonly found in nearby Kenai Fjords and Prince William Sound (Shelden *et al.*, 2003). Prior to the 1980s, killer whale sightings in Upper Cook Inlet were very rare (Rugh *et al.*, 2005). During aerial surveys conducted between 1993 and 2004, killer whales were observed on only three flights, all in the Kachemak and English Bay area (Rugh *et al.*, 2005). However, anecdotal reports of killer whales feeding on belugas in Upper Cook Inlet began increasing in the 1990s, possibly in response to declines in sea lions and harbor seals elsewhere (Shelden *et al.*, 2003). Observations of killer whales in beluga summering grounds have been implicated as a possible contributor to decline of Cook Inlet belugas in the 1990s, although the number of confirmed mortalities from killer whales is small (Shelden *et al.*, 2003). Recent industry monitoring programs only reported a few killer whale sightings (Kendall *et al.*, 2015). The sporadic movements and small numbers of this species suggest that there is a rare possibility of encountering this whale during Marine Terminal construction and Mainline pipe laying. There is, however, a greater possibility of transiting vessels associated with the Project encountering killer whales during transit through Lower Cook Inlet.

Beluga Whale

The Cook Inlet beluga whale distinct population segment (DPS) is a small, geographically isolated, and genetically distanced population separated from

other beluga populations by the Alaska Peninsula (O'Corry-Crowe *et al.*, 1997). The Cook Inlet beluga DPS was originally estimated at 1,300 whales in 1979 (Calkins, 1989) and has been the focus of management concerns since experiencing a dramatic decline between 1994 and 1998, when the stock declined 47 percent, attributed to overharvesting by subsistence hunting (Mahoney and Shelden, 2000). Prior to subsistence hunting restrictions, harvest was estimated to annually remove 10 to 15 percent of the population (Mahoney and Shelden, 2000). Only five belugas have been harvested since 1999, yet the population has continued to decline. NMFS listed the population as "depleted" in 2000 because of the decline, and as "endangered" under the ESA in 2008 when the population failed to recover following a moratorium on subsistence harvest.

In April 2011, NMFS designated critical habitat for Cook Inlet beluga whales (76 FR 20180; April 11, 2011) in two specific areas of Cook Inlet:

- *Area 1:* All marine waters of Cook Inlet north of a line from the mouth of Threemile Creek (61°08.5' N, 151°04.4' W) connecting to Point Possession (61°02.1' N, 150°24.3' W), including waters of the Susitna River south of 61°20.0' N, the Little Susitna River south of 61°18.0' N, and the Chickaloon River north of 60°53.0' N; and
- *Area 2:* All marine waters of Cook Inlet south of a line from the mouth of Threemile Creek (61°08.5' N, 151°04.4' W) to Point Possession (61°02.1' N, 150°24.3' W) and north of 60°15.0' N, including waters within 2 nautical miles seaward of mean-high high water (MHHW) along the western shoreline of Cook Inlet between 60°15.0' N and the mouth of the Douglas River (59°04.0' N, 153°46.0' W); all waters of Kachemak Bay east of 151°40.0' W; and waters of the Kenai River below the Warren Ames bridge at Kenai, Alaska.

The Cook Inlet beluga whale population is estimated to have declined from 1,300 animals in the 1970s (Calkins, 1989) to about 340 animals in 2014 (Shelden *et al.*, 2015). The current population estimate is 279 animals (Shelden *et al.*, 2019). The precipitous decline documented in the mid-1990s was attributed to unsustainable subsistence practices by Alaska Native hunters (harvest of more than 50 whales per year) (Mahoney and Shelden, 2000). In 2006, a moratorium of the harvest of Cook Inlet beluga whales was agreed upon through a cooperative agreement between the Cook Inlet Marine Mammal Council and NMFS.

During late spring, summer, and fall, beluga whales concentrate near the Susitna River mouth, Knik Arm, Turnagain Arm, and Chickaloon Bay (Nemeth *et al.*, 2007) where they feed on migrating eulachon and salmon (Moore *et al.*, 2000). Critical Habitat Area 1 reflects this summer distribution. During winter, beluga whales concentrate in deeper waters in the mid-inlet to Kalgin Island, and in the waters along the west shore of Cook Inlet to Kamishak Bay. Although belugas may be found throughout Cook Inlet at any time of year, they generally spend the ice-free months in Upper Cook Inlet and expand their distribution south and into more offshore waters of Upper Cook Inlet in winter. These seasonal movements appear to be related to changes in the physical environment from sea ice and currents and shifts in prey resources (NMFS, 2016). Belugas spend most of their time year-round in the coastal areas of Knik Arm, Turnagain Arm, Susitna Delta, Chickaloon Bay, and Trading Bay (Goetz *et al.*, 2012). During the open-water months in Upper Cook Inlet (north of the Forelands), beluga whales are typically concentrated near river mouths (Rugh *et al.*, 2010).

Satellite tags from 10 whales tagged from 2000 through 2002 transmitted through the fall, and of those, three tags deployed on adult males transmitted through April and late May. None of the tagged beluga moved south of Chinitna Bay on the western side of Cook Inlet. A review of marine mammal surveys conducted in the Gulf of Alaska from 1936 to 2000 discovered only 31 beluga sightings among 23,000 marine mammal sightings, indicating that very few belugas occur in the Gulf of Alaska outside of Cook Inlet (Laidre *et al.*, 2000 cited in Allen and Angliss, 2014).

Based on these studies, it is anticipated that beluga whales are most likely to occur near the Marine Terminal in moderate densities during the period when sea ice is typically present in Cook Inlet north of the Forelands (December through May; Goetz *et al.*, 2012). Few belugas may occur near the Marine Terminal during the ice-free period (June through November). Belugas would not be expected to focus their foraging (dive) efforts near the proposed Marine Terminal location. If belugas do forage near the Marine Terminal, their foraging dives are more likely to be long and deep during the sea-ice season (December through May; Goetz *et al.*, 2012).

Beluga whales could be found in the vicinities of the Mainline crossing during summer-fall and the Marine Terminal construction area during

winter. Previous marine mammal surveys conducted between the Beluga River and the West Forelands (Nemeth *et al.*, 2007; Brueggeman *et al.*, 2007a, b; Lomac-MacNair *et al.*, 2013, 2014; Kendall *et al.*, 2015) suggest that beluga whale numbers near the proposed Mainline MOF on the west side of Cook Inlet and the pipeline landing peak in May and again in October, with few whales observed in the months in between.

Beluga whales are expected to occur along the entire portion of the Mainline route within Upper Cook Inlet year-round; but, as discussed previously, beluga distribution is concentrated in mustow coastal waters near Knik Arm, Chickaloon Bay, and Trading Bay during the ice-free season (June through November), and in deeper waters of the Susitna Delta, and offshore between East and West Forelands, and around Fire Island during the sea-ice season (December through May) (Goetz *et al.*, 2012). Belugas may remain near the Mainline route during the winter (December through May).

Belugas forage in the Trading Bay area from June to through November (Goetz *et al.*, 2012). Belugas may remain near the Mainline route during the winter (December through May) (Goetz *et al.*, 2012). Belugas would be expected to focus their foraging (dive) efforts near the Trading Bay area during June to November, south of where the proposed Mainline would enter Cook Inlet.

Harbor Porpoise

The Gulf of Alaska harbor porpoise stock is distributed from Cape Suckling to Unimak Pass (Allen and Angliss, 2015). They are found primarily in coastal waters less than 328 feet deep (Hobbs and Waite, 2010) where they feed on Pacific herring (*Clupea pallasii*), other schooling fishes, and cephalopods.

Although harbor porpoises have been frequently observed during aerial surveys in Cook Inlet, most sightings are of single animals, and the sightings have been concentrated nearshore between Iliamna and Tuxedni bays on the lower west side of Lower Cook Inlet (Rugh *et al.*, 2005; Shelden *et al.*, 2013). No harbor porpoises were recorded near Nikiski during NMFS aerial surveys conducted between 1993 and 2012 (Shelden *et al.*, 2013). Dahlheim *et al.* (2000) estimated the 1991 Cook Inlet-wide population at 136 animals. However, they are one of the three marine mammals (besides belugas and harbor seals) regularly seen in Upper Cook Inlet (Nemeth *et al.*, 2007), especially during spring eulachon and summer salmon runs. Brueggeman *et al.*

(2007a, b) also reported small numbers of harbor porpoise between Granite Point and the Beluga River. Recent industry monitoring programs in Lower and Middle Cook Inlet reported harbor porpoise sightings in all summer months (Lomac-MacNair *et al.*, 2013, 2014; Kendall *et al.*, 2015). Because harbor porpoise have been observed throughout Cook Inlet during the summer months, they represent a species that could be encountered during all phases and locations of construction.

Harbor Seal

Harbor seals inhabit coastal and estuarine waters along the West Coast, including southeast Alaska west through the Gulf of Alaska and Aleutian Islands, in the Bering Sea and Pribilof Islands (Allen and Angliss, 2015). At more than 150,000 animals state-wide, harbor seals are one of the more common marine mammal species in Alaskan waters (Allen and Angliss, 2015). Harbor seals haul out on rocks, reefs, beaches, and drifting glacial ice (Allen and Angliss, 2015).

Large numbers of harbor seals concentrate at the river mouths and embayments of Lower Cook Inlet, including the Fox River mouth in Kachemak Bay (Rugh *et al.*, 2005). Montgomery *et al.* (2007) recorded over 200 haulout sites in Lower Cook Inlet alone. However, only a few hundred seals seasonally occur in Upper Cook Inlet (Rugh *et al.*, 2005; Shelden *et al.*, 2013), mostly at the mouth of the Susitna River where their numbers vary in concert with the spring eulachon and summer salmon runs (Nemeth *et al.*, 2007; Boveng *et al.*, 2012). In 2012, up to 83 harbor seals were observed hauled out at the mouths of the Theodore and Lewis rivers during April to May monitoring activity associated with a Cook Inlet seismic program (Brueggeman, 2007a). Montgomery *et al.* (2007) also found seals elsewhere in Cook Inlet to move in response to local steelhead (*Onchorhynchus mykiss*) and salmon runs. Recent industry monitoring programs in Lower and Middle Cook Inlet reported harbor seal sightings in all summer months, both in-water and on haulouts (Lomac-MacNair *et al.*, 2013, 2014; Kendall *et al.*, 2015). During summer, small numbers of harbor seals are expected to occur near the Marine Terminal construction area near Nikiski, and along the proposed Mainline pipeline crossing route.

Marine Mammal Hearing

Hearing is the most important sensory modality for marine mammals underwater, and exposure to

anthropogenic sound can have deleterious effects. To appropriately assess the potential effects of exposure to sound, it is necessary to understand the frequency ranges marine mammals are able to hear. Current data indicate that not all marine mammal species have equal hearing capabilities (e.g., Richardson *et al.*, 1995; Wartzok and Ketten, 1999; Au and Hastings, 2008). To reflect this, Southall *et al.* (2007) recommended that marine mammals be divided into functional hearing groups based on directly measured or estimated hearing ranges on the basis of available behavioral response data, audiograms derived using auditory evoked potential techniques, anatomical modeling, and other data. Note that no direct measurements of hearing ability have been successfully completed for mysticetes (*i.e.*, low-frequency cetaceans). Subsequently, NMFS (2018) described generalized hearing ranges for these marine mammal hearing groups. Generalized hearing ranges were chosen based on the approximately 65 dB threshold from the normalized composite audiograms, with the exception for lower limits for low-frequency cetaceans where the lower bound was deemed to be biologically implausible and the lower bound from Southall *et al.* (2007) retained. The functional groups and the associated frequencies are indicated below (note that these frequency ranges correspond to the range for the composite group, with the entire range not necessarily reflecting the capabilities of every species within that group):

- Low-frequency cetaceans (mysticetes): Generalized hearing is estimated to occur between approximately 7 Hz and 35 kHz;
- Mid-frequency cetaceans (larger toothed whales, beaked whales, and most delphinids): Generalized hearing is estimated to occur between approximately 150 Hz and 160 kHz;
- High-frequency cetaceans (porpoises, river dolphins, and members of the genera *Kogia* and *Cephalorhynchus*; including two members of the genus *Lagenorhynchus*, on the basis of recent echolocation data and genetic data): Generalized hearing is estimated to occur between approximately 275 Hz and 160 kHz;
- Pinnipeds in water; Phocidae (true seals): Generalized hearing is estimated to occur between approximately 50 Hz to 86 kHz; and
- Pinnipeds in water; Otariidae (eared seals): Generalized hearing is estimated to occur between 60 Hz and 39 kHz.

The pinniped functional hearing group was modified from Southall *et al.* (2007) on the basis of data indicating

that phocid species have consistently demonstrated an extended frequency range of hearing compared to otariids, especially in the higher frequency range (Hemilä *et al.*, 2006; Kastelein *et al.*, 2009; Reichmuth and Holt, 2013).

For more detail concerning these groups and associated frequency ranges, please see NMFS (2016) for a review of available information. Five marine mammal species (4 cetacean and 1 pinniped (phocid) species) have the reasonable potential to co-occur with the proposed construction activities. Please refer to Table 3. Of the cetacean species that may be present, one species is classified as low-frequency cetaceans (*i.e.*, humpback whale), two are classified as mid-frequency cetaceans (killer and beluga whales), and one is classified as high-frequency cetaceans (*i.e.*, harbor porpoise).

Potential Effects of Specified Activities on Marine Mammals and Their Habitat

This section includes a summary and discussion of the ways that components of the specified activity may impact marine mammals and their habitat. The *Estimated Take by Incidental Harassment* section later in this document includes a quantitative analysis of the number of individuals that are expected to be taken by this activity. The Negligible Impact Analysis and Determination section considers the content of this section, the Estimated Take by Incidental Harassment section, and the Mitigation section, to draw conclusions regarding the likely impacts of these activities on the reproductive success or survivorship of individuals and how those impacts on individuals are likely to impact marine mammal species or stocks.

Potential impacts to marine mammals from the Alaska LNG project are from noise generated during in-water pile driving and anchor handling activities.

Acoustic Effects

Acoustic effects to marine mammals from the proposed Alaska LNG facilities construction mainly include behavioral disturbances and temporary masking of animals in the area. A few individual animals could experience mild levels of temporary and/or permanent hearing threshold shift.

The AGDC's LNG facilities construction project using in-water pile driving and anchor handling during trenching and pipe laying could adversely affect marine mammal species and stocks by exposing them to elevated noise levels in the vicinity of the activity area.

Threshold Shift (noise-induced loss of hearing)—Exposure to high intensity

sound for a sufficient duration may result in auditory effects such as a noise-induced threshold shift (TS)—an increase in the auditory threshold after exposure to noise (Finneran *et al.*, 2005). Factors that influence the amount of threshold shift include the amplitude, duration, frequency content, temporal pattern, and energy distribution of noise exposure. The magnitude of hearing threshold shift normally decreases over time following cessation of the noise exposure. The amount of TS just after exposure is the initial TS. If the TS eventually returns to zero (*i.e.*, the threshold returns to the pre-exposure value), it is a temporary threshold shift (TTS) (Southall *et al.*, 2007). When animals exhibit reduced hearing sensitivity (*i.e.*, sounds must be louder for an animal to detect them) following exposure to an intense sound or sound for long duration, it is referred to as a noise-induced TS. An animal can experience TTS or permanent threshold shift (PTS). TTS can last from minutes or hours to days (*i.e.*, there is complete recovery), can occur in specific frequency ranges (*i.e.*, an animal might only have a temporary loss of hearing sensitivity between the frequencies of 1 and 10 kHz), and can be of varying amounts (for example, an animal's hearing sensitivity might be reduced initially by only 6 dB or reduced by 30 dB). PTS is permanent, but some recovery is possible. PTS can also occur in a specific frequency range and amount as mentioned above for TTS.

For marine mammals, published data are limited to the captive bottlenose dolphin, beluga, harbor porpoise, and Yangtze finless porpoise (Finneran, 2015). For pinnipeds in water, data are limited to measurements of TTS in harbor seals, an elephant seal, and California sea lions (Kastak *et al.*, 1999, 2005; Kastelein *et al.*, 2012b).

Lucke *et al.* (2009) found a TS of a harbor porpoise after exposing it to airgun noise with a received sound pressure level (SPL) at 200.2 dB (peak-to-peak) re: 1 micropascal (μPa), which corresponds to a sound exposure level (SEL) of 164.5 dB re: 1 $\mu\text{Pa}^2 \text{ s}$ after integrating exposure. Because the airgun noise is a broadband impulse, one cannot directly determine the equivalent of root mean square (rms) SPL from the reported peak-to-peak SPLs. However, applying a conservative conversion factor of 16 dB for broadband signals from seismic surveys (McCaughey, *et al.*, 2000) to correct for the difference between peak-to-peak levels reported in Lucke *et al.* (2009) and rms SPLs, the rms SPL for TTS would be approximately 184 dB re: 1 μPa , and the received levels associated

with PTS (Level A harassment) would be higher. Therefore, based on these studies, NMFS recognizes that TTS of harbor porpoises is lower than other cetacean species empirically tested (Finneran & Schlundt, 2010; Finneran *et al.*, 2002; Kastelein and Jennings, 2012).

Marine mammal hearing plays a critical role in communication with conspecifics, and interpretation of environmental cues for purposes such as predator avoidance and prey capture. Depending on the degree (elevation of threshold in dB), duration (*i.e.*, recovery time), and frequency range of TTS, and the context in which it is experienced, TTS can have effects on marine mammals ranging from discountable to serious (similar to those discussed in auditory masking, below). For example, a marine mammal may be able to readily compensate for a brief, relatively small amount of TTS in a non-critical frequency range that occurs during a time where ambient noise is lower and there are not as many competing sounds present. Alternatively, a larger amount and longer duration of TTS sustained during time when communication is critical for successful mother/calf interactions could have more serious impacts. Also, depending on the degree and frequency range, the effects of PTS on an animal could range in severity, although it is considered generally more serious because it is a permanent condition. Of note, reduced hearing sensitivity as a simple function of aging has been observed in marine mammals, as well as humans and other taxa (Southall *et al.*, 2007), so one can infer that strategies exist for coping with this condition to some degree, though likely not without cost.

Masking—In addition, chronic exposure to excessive, though not high-intensity, noise could cause masking at particular frequencies for marine mammals, which utilize sound for vital biological functions (Clark *et al.*, 2009). Acoustic masking is when other noises such as from human sources interfere with animal detection of acoustic signals such as communication calls, echolocation sounds, and environmental sounds important to marine mammals. Therefore, under certain circumstances, marine mammals whose acoustical sensors or environment are being severely masked could also be impaired from maximizing their performance fitness in survival and reproduction.

Masking occurs at the frequency band that the animals utilize. Therefore, since noise generated from vibratory pile driving is mostly concentrated at low frequency ranges, it may have less effect on high frequency echolocation sounds

by odontocetes (toothed whales). However, lower frequency man-made noises are more likely to affect detection of communication calls and other potentially important natural sounds such as surf and prey noise. It may also affect communication signals when they occur near the noise band and thus reduce the communication space of animals (e.g., Clark *et al.*, 2009) and cause increased stress levels (e.g., Foote *et al.*, 2004; Holt *et al.*, 2009).

Unlike TS, masking, which can occur over large temporal and spatial scales, can potentially affect the species at population, community, or even ecosystem levels, as well as individual levels. Masking affects both senders and receivers of the signals and could have long-term chronic effects on marine mammal species and populations. Recent science suggests that low frequency ambient sound levels have increased by as much as 20 dB (more than three times in terms of SPL) in the world's ocean from pre-industrial periods, and most of these increases are from distant shipping (Hildebrand, 2009). For AGDC's LNG facilities construction project, noises from pile driving contribute to the elevated ambient noise levels in the project area, thus increasing potential for or severity of masking. Baseline ambient noise levels in the vicinity of project area are high due to ongoing shipping, construction and other activities in Cook Inlet.

Behavioral Disturbance—Finally, marine mammals' exposure to certain sounds could lead to behavioral disturbance (Richardson *et al.*, 1995), such as changing durations of surfacing and dives, number of blows per surfacing, or moving direction and/or speed; reduced/increased vocal activities; changing/cessation of certain behavioral activities (such as socializing or feeding); visible startle response or aggressive behavior (such as tail/fluke slapping or jaw clapping); avoidance of areas where noise sources are located; and/or flight responses (e.g., pinnipeds flushing into water from haulouts or rookeries).

The onset of behavioral disturbance from anthropogenic noise depends on both external factors (characteristics of noise sources and their paths) and the receiving animals (hearing, motivation, experience, demography) and is also difficult to predict (Southall *et al.*, 2007). Currently NMFS uses a received level of 160 dB re 1 μ Pa (rms) to predict the onset of behavioral disturbance from impulse noises (such as impact pile driving), and 120 dB re 1 μ Pa (rms) for continuous noises (such as vibratory pile driving). For the AGDC's LNG

facilities construction project, both 160- and 120-dB levels are considered for effects analysis because AGDC plans to conduct both impact and vibratory pile driving.

The biological significance of many of these behavioral disturbances is difficult to predict, especially if the detected disturbances appear minor. However, the consequences of behavioral modification could be biologically significant if the change affects growth, survival, and/or reproduction, which depends on the severity, duration, and context of the effects.

Potential Effects on Marine Mammal Habitat

Project activities that could potentially impact marine mammal habitats by causing acoustical injury to prey resources and disturbing benthic habitat include dredging/trenching, disposal of dredged material, and facility installation, as well as impacting marine mammal prey from noise generated by in-water pile driving.

Approximately 42 hectares (103 acres) would be disturbed directly by dredging of the Marine Terminal MOF and trenching for the Mainline crossing, and another 486 hectares (1,200 acres) would be disturbed by the disposal of dredged material. Approximately 26 hectares (64 acres) of seafloor would be disturbed by installation of the Marine Terminal MOF, Mainline MOF, and Mainline Crossing. Additional area would be indirectly affected by the re-deposition of sediments suspended in the water column by the dredging/trenching and dredge disposal. However, such disturbances are expected to be temporary and mild. Recovery and re-colonization of the benthic habitat are expected to occur as soon as any anthropogenic stressors are removed.

With regard to fish as a prey source for cetaceans and pinnipeds, fish are known to hear and react to sounds and to use sound to communicate (Tavolga *et al.*, 1981) and possibly avoid predators (Wilson and Dill, 2002). Experiments have shown that fish can sense both the strength and direction of sound (Hawkins, 1981). Primary factors determining whether a fish can sense a sound signal, and potentially react to it, are the frequency of the signal and the strength of the signal in relation to the natural background noise level.

The level of sound at which a fish will react or alter its behavior is usually well above the detection level. Fish have been found to react to sounds when the sound level increased to about 20 dB above the detection level of 120 dB (Ona, 1988); however, the response

threshold can depend on the time of year and the fish's physiological condition (Engas *et al.*, 1993). In general, fish react more strongly to pulses of sound (such as noise from impact pile driving) rather than continuous signals (such as noise from vibratory pile driving) (Blaxter *et al.*, 1981), and a quicker alarm response is elicited when the sound signal intensity rises rapidly compared to sound rising more slowly to the same level.

During the Alaska LNG facilities construction, only a small fraction of the available habitat would be ensonified at any given time. Disturbance to fish species would be short-term, and fish would return to their pre-disturbance behavior once the pile driving activity ceases. Thus, the proposed construction would have little, if any, impact on marine mammals' prey availability in the area where construction work is planned.

Estimated Take

This section provides an estimate of the number of incidental takes authorized through the LOA under the rulemaking, which will inform both NMFS' consideration of "small numbers" and the negligible impact determination. We note several changes that have been made to this section since the Proposed Rule was published, including: The density of beluga whales used for take estimation has changed; take methodologies and estimates for Cook Inlet beluga whale and harbor seal have changed for Level B harassment. These changes are described in more detail below. In addition, take of fin whale, grey whale, Dall's porpoise, California sea lion, and Steller sea lion is no longer proposed for authorization because these species are unlikely to occur in the AGDC's LNG facilities construction area in Cook Inlet. This is explained in the Description of Marine Mammals in the Area of Specified Activities section above.

Harassment is the only type of take expected to result from these activities. Except with respect to certain activities not pertinent here, section 3(18) of the MMPA defines "harassment" as: Any act of pursuit, torment, or annoyance which (i) has the potential to injure a marine mammal or marine mammal stock in the wild (Level A harassment); or (ii) has the potential to disturb a marine mammal or marine mammal stock in the wild by causing disruption of behavioral patterns, including, but not limited to, migration, breathing, nursing, breeding, feeding, or sheltering (Level B harassment).

Authorized takes would primarily be by Level B harassment, as noise

generated from in-water pile driving (vibratory and impact) and anchor handling has the potential to result in disruption of behavioral patterns for individual marine mammals. There is also some potential for auditory injury (Level A harassment) to result, primarily for low- and high-frequency cetacean species and phocids because predicted auditory injury zones are larger than for mid-frequency cetacean species. Auditory injury is unlikely to occur for mid-frequency cetacean species. The prescribed mitigation and monitoring measures are expected to minimize the severity of such taking to the extent practicable.

As described previously, no serious injury or mortality is anticipated or authorized for this activity. Below we describe how the take is estimated.

Generally speaking, we estimate take by considering: (1) Acoustic thresholds above which NMFS believes the best available science indicates marine mammals will be behaviorally disturbed or incur some degree of permanent hearing impairment; (2) the area or volume of water that will be ensonified above these levels in a day; (3) the density or occurrence of marine mammals within these ensonified areas; and, (4) and the number of days of activities. We note that while these basic factors can contribute to a basic calculation to provide an initial prediction of takes, additional information that can qualitatively inform take estimates is also sometimes available (e.g., previous monitoring

results or average group size). Below, we describe the factors considered here in more detail and present the proposed take estimate.

Acoustic Thresholds

Using the best available science, NMFS has developed acoustic thresholds that identify the received level of underwater sound above which exposed marine mammals would be reasonably expected to experience behavioral disturbance (equated to Level B harassment) or to incur PTS of some degree (equated to Level A harassment).

Level B Harassment for non-explosive sources—Though significantly driven by received level, the onset of behavioral disturbance from anthropogenic noise exposure is also informed by varying degrees by other factors related to the source (e.g., frequency, predictability, duty cycle), the environment (e.g., bathymetry), and the receiving animals (hearing, motivation, experience, demography, behavioral context) and can be difficult to predict (Southall *et al.*, 2007, Ellison *et al.*, 2012). Based on what the available science indicates and the practical need to use a threshold based on a factor that is both predictable and measurable for most activities, NMFS uses a generalized acoustic threshold based on received level to estimate the onset of Level B harassment. NMFS predicts that marine mammals are likely to experience behavioral disturbance in a manner we consider Level B harassment when exposed to underwater anthropogenic

noise above received levels of 120 dB re 1 μ Pa (rms) for continuous (e.g., vibratory pile-driving, drilling) and above 160 dB re 1 μ Pa (rms) for non-explosive impulsive (e.g., seismic airguns) or intermittent (e.g., scientific sonar) sources.

Because AGDC’s Alaska LNG facilities project involves the generation of non-impulsive (vibratory pile driving and anchor handling) and impulsive (impact pile driving) sources, both 120 and 160 dB re 1 μ Pa (rms) thresholds are used to evaluate Level B harassment as explained above.

Level A harassment for non-explosive sources—NMFS’ Technical Guidance for Assessing the Effects of Anthropogenic Sound on Marine Mammal Hearing (Version 2.0) (Technical Guidance, 2018) identifies dual criteria to assess auditory injury (Level A harassment) to five different marine mammal groups (based on hearing sensitivity) as a result of exposure to noise from two different types of sources (impulsive or non-impulsive). AGDC’s Alaska LNG facilities project involves the generation of impulsive (impact pile driving) and non-impulsive (vibratory pile driving and anchor handling) sources.

These thresholds are provided in the Table 4 below. The references, analysis, and methodology used in the development of the thresholds are described in NMFS 2016 Technical Guidance, which may be accessed at: <http://www.nmfs.noaa.gov/pr/acoustics/guidelines.htm>.

TABLE 4—THRESHOLDS IDENTIFYING THE ONSET OF PERMANENT THRESHOLD SHIFT

Hearing group	PTS onset thresholds		Behavioral thresholds	
	Impulsive	Non-impulsive	Impulsive	Non-impulsive
Low-Frequency (LF) Cetaceans	$L_{pk,flat}$: 219 dB; $L_{E,LF,24h}$: 183 dB.	$L_{E,LF,24h}$: 199 dB.		
Mid-Frequency (MF) Cetaceans	$L_{pk,flat}$: 230 dB; $L_{E,MF,24h}$: 185 dB.	$L_{E,MF,24h}$: 198 dB.		
High-Frequency (HF) Cetaceans	$L_{pk,flat}$: 202 dB; $L_{E,HF,24h}$: 155 dB.	$L_{E,HF,24h}$: 173 dB	$L_{rms,flat}$: 160 dB	$L_{rms,flat}$: 120 dB.
Phocid Pinnipeds (PW) (Underwater)	$L_{pk,flat}$: 218 dB; $L_{E,PW,24h}$: 185 dB.	$L_{E,PW,24h}$: 201 dB.		
Otariid Pinnipeds (OW) (Underwater)	$L_{pk,flat}$: 232 dB; $L_{E,OW,24h}$: 203 dB.	$L_{E,OW,24h}$: 219 dB.		

* Dual metric acoustic thresholds for impulsive sounds: Use whichever results in the largest isopleth for calculating PTS onset. If a non-impulsive sound has the potential of exceeding the peak sound pressure level thresholds associated with impulsive sounds, these thresholds should also be considered.

Note: Peak sound pressure (L_{pk}) has a reference value of 1 μ Pa, and cumulative sound exposure level (LE) has a reference value of 1 μ Pa²s. In this Table, thresholds are abbreviated to reflect American National Standards Institute standards (ANSI 2013). However, peak sound pressure is defined by ANSI as incorporating frequency weighting, which is not the intent for this Technical Guidance. Hence, the subscript “flat” is being included to indicate peak sound pressure should be flat weighted or unweighted within the generalized hearing range. The subscript associated with cumulative sound exposure level thresholds indicates the designated marine mammal auditory weighting function (LF, MF, and HF cetaceans, and PW and OW pinnipeds) and that the recommended accumulation period is 24 hours. The cumulative sound exposure level thresholds could be exceeded in a multitude of ways (i.e., varying exposure levels and durations, duty cycle). When possible, it is valuable for action proponents to indicate the conditions under which these acoustic thresholds will be exceeded.

Ensonified Area

Here, we describe operational and environmental parameters of the activity that will feed into identifying the area ensonified above the acoustic thresholds, which include source levels and transmission loss coefficient.

Source Levels

The project includes impact pile driving and vibratory pile driving and anchor handling associated with trenching and cable laying activities. Source levels of pile driving activities are based on reviews of measurements of the same or similar types and dimensions of piles available in the literature (Caltrans, 2015). Based on this review, the following source levels are assumed for the underwater noise produced by construction activities:

- Source levels of impact driving of 18- and 24-inch steel piles are based on those of 24-inch steel pile impact driving reported by California Department of Transportation (Caltrans)

in a pile driving source level compendium document (Caltrans, 2015);

- Source level of impact driving of 60-inch steel pile is based on that of same type and size of steel pile reported in the Caltrans compendium document (Caltrans, 2015) in shallow-water (5 m);
- Source levels of impact driving of 48-inch steel pile is based on that of same type and size of steel pile reported by Austin *et al.* (2016) on the Anchorage Port Modernization Project Test Pile Program in water depth 18 m;
- Source level of impact pile driving of steel sheet pile is based on that of 24-in steel AZ sheet pile impact driving reported in the Caltrans compendium (Caltrans, 2015);
- Source levels of vibratory pile driving of 18- and 24-in steel piles are based on that of 36-inch steel pile vibratory driving reported in the Caltrans compendium (Caltrans, 2015);
- Source levels of vibratory pile driving of 48- and 60-in steel piles are

based on that of 72-inch steel pile vibratory driving reported in the Caltrans compendium (Caltrans, 2015);

- Source level of vibratory pile driving of steel sheet pile is based on that of 24-in steel AZ sheet pile vibratory driving reported in the Caltrans compendium (Caltrans, 2015); and
- Underwater sound levels associated with offshore pipe laying and trenching operations when engaging thrusters and anchor handling were based on measurements by Blackwell and Greene (2003) of a tug pushing a full barge near the Port of Alaska when engaging thrusters during docking. The levels are calculated from measured 149 dB re 1 μ Pa rms at 100 meters/328 feet applying $15 \cdot \log(r)$, which yield a source level of 178.9 dB re 1 μ Pa rms at 1 meter.

A summary of source levels from different pile driving activities is provided in Table 5.

TABLE 5—SUMMARY OF IN-WATER PILE DRIVING SOURCE LEVELS
[At 10 m from source]

Method	Pile type/size	SPL _{pk} (dB re 1 μ Pa)	SPL _{rms} (dB re 1 μ Pa)	SEL (dB re 1 μ Pa ² -s)	Reference
Impact driving	18-in steel pipe pile	207	194	178	Caltrans 2015.
Impact driving	24-in steel pipe pile	207	194	178	Caltrans 2015.
Impact driving	48-in steel pipe pile	210	200	185	Austin <i>et al.</i> 2016.
Impact driving	60-in steel pipe pile	210	195	185	Caltrans 2015.

Vibratory driving	48-in steel pipe pile	183	170	170	Caltrans 2015.
Vibratory driving	60-in steel pipe pile	183	170	170	Caltrans 2015.
Vibratory driving	Sheet pile	175	160	160	Caltrans 2015.
Anchor handling and thruster		NA	178.9	178.9	Blackwell & Greene 2003.

These source levels are used to compute the Level A harassment zones and to estimate the Level B harassment zones.

Estimating Injury Zones

When the NMFS' Technical Guidance (2016) was published, in recognition of the fact that ensonified area/volume could be more technically challenging to predict because of the duration component in the new thresholds, we developed a User Spreadsheet that includes tools to help predict a simple isopleth that can be used in conjunction with marine mammal density or occurrence to help predict takes. We note that because of some of the assumptions included in the methods used for these tools, we anticipate that isopleths produced are typically going to be overestimates of some degree, which may result in some degree of overestimate of Level A harassment

take. However, these tools offer the best way to predict appropriate isopleths when more sophisticated 3D modeling methods are not available, and NMFS continues to develop ways to quantitatively refine these tools, and will qualitatively address the output where appropriate. In the prior analysis for the Proposed Rule, AGDC used NMFS User Spreadsheet and simple geometric spreading model with transmission loss coefficient 15 to calculate Level A and Level B harassment distances, respectively. However, after the public comment period, in response to NMFS' concern of needing a more sophisticated acoustic model to have estimates of the expected ensonified zones, AGDC contracted SLR Corporation to perform a quantitative noise modeling assessment to identify the ensonified distances and areas. Using the dBSea software package, this

modeling incorporates one-third octave band spectral sound level for each of the sources, bathymetry for each project location, water depth, sound speed profiles (temperature and salinity for both spring and summer profiles), and seafloor characteristics.

Specifically, pile driving noise was modelled as a single stationary, omnidirectional point source in each of the three main construction areas (PLF, Temporary MOF, and Mainline MOF) for each pile and hammer type. Source spectral shape information for each noise source and location were used from other studies. All piling sources were assumed to be located midway down the water column. Noise associated with anchor handling during pipe laying is represented as a series of five points on a line along the route, assuming a depth midway in the water

column (see Figure 12 of AGDC LOA application).

Modelling for this assessment used the dBSea software package. The fluid parabolic equation modelling algorithm has been used with 5 Padé terms to calculate the transmission loss between the source and the receiver at low frequencies (16 Hz up to 1 kHz). For higher frequencies (1 kHz up to 8 kHz) the ray tracing model has been used with 1000 reflections for each ray.

The received noise levels throughout the project have been calculated following the procedure outlined below:

- One-third octave source spectral levels are obtained via reference spectral curves with subsequent corrections based on their corresponding overall source levels;
- Transmission loss is modelled at one-third octave band central frequencies along 100 radial paths at regular increments around each source location, out to the maximum range of

the bathymetry data set or until constrained by land;

- The bathymetry variation of the vertical plane along each modelling path is obtained via interpolation of the bathymetry dataset which has 50 m grid resolution;
- The one-third octave source levels and transmission loss are combined to obtain the received levels as a function of range, depth and frequency at 100 m intervals; and
- The overall received levels are calculated at a 1-m depth resolution along each propagation path by summing all frequency band spectral levels.

The predicted distances to the thresholds and ensonified areas for pile driving and anchor handling are summarized in Table 6. In practice, the distances to the Level A harassment thresholds are controlled by the cumulative sound exposure levels (SEL_{cum}) within 24 hours.

For the low frequency cetaceans (humpback whale), the predicted distances to the Level A harassment distances range from 238 meters for the vibratory driving of sheet piles at the temporary MOF to 3,239 meters for the impact pile driving of 48-inch pipe piles at the temporary MOF. For the mid-frequency cetaceans (beluga and killer whales), the predicted distances to the Level SELs range from 0 to 248 meters for the impact driving of sheet piles at the Mainline MOF. For the high frequency cetaceans (harbor porpoise), the predicted distances to the Level A harassment distances ranges from 0 to 2,350 meters at for impact pile driving of 48-inch and 60-inch pipe piles at the PLF. For phocids (harbor seals), the predicted distances to the Level A harassment distances ranges from 0 to 1,018 meters impact pile driving of 48-inch and 60-inch pipe piles at the PLF.

TABLE 6—MODELED HARASSMENT ZONES AND MAXIMUM DISTANCES

Activity description	Level A distance (m) (Level A area (km ²))				Level B distance (m) (area (km ²))

Marine Mammal Occurrence

In this section we provide the information about the presence, density, or group dynamics of marine mammals that will inform the take calculations.

Marine mammal density data in the proposed rule were based on NMFS aerial survey in Cook Inlet from 2000 to 2016. In the final rule, additional density from the 2018 aerial survey were also included.

In addition, Cook Inlet beluga whale density was further updated based on the latest population estimated that became available in January 2020 (NMFS, 2020), and take estimate of this species was reanalyzed using a more refined density grid than what was used for the proposed rule (see below). Take numbers for harbor seals were adjusted

to account for animals that were hauled out,

Density estimates were calculated for marine mammals (except beluga whales) using aerial survey data collected by NMFS in Cook Inlet between 2000 and 2018 (summarized in Shelden *et al.*, 2017; 2019). To estimate the densities of marine mammals, the total number of animals of each species for each year observed over the 19-year survey period was divided by the total area surveyed each year (Tables 7).

Table 7 summarizes the number of marine mammals, other than beluga whales, observed each year during the NMFS Annual Aerial Surveys and the area covered. To calculate a conservative density for exposure estimation, the total number of individuals per species observed in each

survey year was divided by the area covered during that year and then averaged across all years. The total number of animals observed accounts for the entire Cook Inlet, so these densities may not be representative of the expected densities at Project locations. The raw densities were not corrected for animals missed during the aerial surveys as no accurate correction factors are currently available for these species except for harbor seal.

For harbor seal take estimates, density numbers were adjusted using a correction factor of 2.33 from Boveng *et al.* (2012) to revise the yearly abundance estimates and resulting density estimates and recalculate the number of takes accordingly.

The averaged marine mammal densities other than beluga whale is provided in Table 8.

TABLE 7—SIGHTING AND DENSITIES OF MARINE MAMMALS OTHER THAN BELUGA WHALE DURING NMFS AERIAL SURVEY BETWEEN 2000 AND 2018

Species	2000	2001	2002	2003	2004	2005	2006	2007	2008	2009	2010	2011	2012	2014	2016	2018

Harbor seal	607	635	687	433	343	465	625	656	667	562	443	630	672	735	531	307

TABLE 8—DENSITY ESTIMATES FOR MARINE MAMMALS OTHER THAN BELUGA WHALES

Species	Mean density (animals/km ²)
Humpback whale	0.00177
Killer whale	0.00060
Harbor porpoise	0.00439
Harbor seal	0.56246

Beluga whale density estimates were based on the maximum number of beluga whales observed during each survey year of the NMFS Annual Aerial Surveys and the area covered. To estimate beluga densities, the maximum number of belugas observed each survey year was divided by the area covered, and these annual densities were then

averaged across all 16 survey years. The survey area can be separated into Upper, Middle, and Lower Cook Inlet, resulting in different densities for beluga whales in each area. Using these combined data for Middle and Lower Cook Inlet, the density for beluga whales using the NMFS Annual Aerial Surveys for all Project components is 0.00050 whales per square kilometer, which is what was used for take estimation in the Proposed Rule.

Goetz *et al.* (2012) modeled aerial survey data collected by NMFS between 1993 and 2008 and developed beluga whale summer densities for each 1-square-kilometer (0.4-square-mile) cell of Cook Inlet. Given the clumped and distinct distribution of beluga whales in Cook Inlet during the summer months, these results provide a more precise

estimate of beluga whale density at a given location than multiplying all aerial observations by the total survey effort. Accordingly, NMFS used more refined density estimates to inform the take calculations in this Final Rule. To develop a density estimate associated with Project components, the GIS files of the predicted ensonified area for both Level A and B associated with each location and pile type, size, and hammer were overlain with the GIS file of the 1-square-kilometer (0.4-square-mile) beluga density cells. The cells falling within each ensonified area were provided in an output spreadsheet, and an average cell density for each Project component was calculated. Table 9 shows beluga density for each project component.

TABLE 9—AVERAGE BELUGA WHALE DENSITY (ANIMALS/km²) WITHIN PREDICTED LEVEL A AND LEVEL B HARASSMENT AREAS FOR EACH PROJECT COMPONENT

Project component	Average density within Level A harassment zone	Average density within Level B harassment zone
Impact drive for 48-inch pipe piles at PLF	0.00004	0.00005
Impact drive for 60-inch pipe piles at PLF	0.00005	0.00005
Impact drive for 24-inch pipe piles at temporary MOF	0.00000	0.00005
Impact drive for 48-inch pipe piles at temporary MOF	0.00000	0.00005

Anchor handling at Location 4	0.00000	0.00284
Anchor handling at Location 5	0.00000	0.02323
Anchor handling at all locations	0.00000	0.00551

Take Calculation and Estimation

Here we describe how the information provided above is brought together to produce a quantitative take estimate. For all marine mammals, estimated takes are calculated based on ensonified area for a specific pile driving activity

multiplied by the marine mammal density in the action area, multiplied by the number of pile driving days.

For both Level A and Level B harassment, estimated exposure are calculated using the following steps:

- Number of takes per activity = density (average number of animals per km²) * area of ZOI (km²) * number of days;
- Marine mammal densities in the project area are provided in Tables 8 and 9;

- The number of days for each activity component is provided in Table 1; and

- Takes by Level A and Level B harassment are calculated separately based on the respective ZOIs for each type of activity, providing a maximum estimate for each type of take which corresponds to the authorization requested under the MMPA.

For beluga whale, NMFS considered group size from the long-term scientific monitoring effort and opportunistic observation data at Port of Alaska to determine if these numbers represented

realistic scenarios. The Alaska Pacific University (APU) scientific monitoring data set documented 390 beluga whale sightings. Group size exhibits a mode of 1 and a median of 2, indicating that over half of the beluga groups observed over the 5-year span of the monitoring program were of individual beluga whales or pairs. The 95th percentile of group size from the APU scientific monitoring data set is 11.1 beluga whales. This means that, of the 390 documented beluga whale groups in this data set, 95 percent consisted of fewer

than 11.1 whales; 5 percent of the groups consisted of more than 11.1 whales. Therefore, a group number of 11 is added to the estimated value to allow for one encounter with a larger group of whales.

For killer whale and harbor porpoise, a group number of 3 is added to the estimated value to adjust for estimated takes of these two species.

The estimated numbers of instances of acoustic harassment (takes) by year, species and severity (Level A or Level B) are shown in Table 10.

TABLE 10—ESTIMATED NUMBERS OF MARINE MAMMALS THAT MAY BE EXPOSED TO RECEIVED NOISE LEVELS THAT CAUSE LEVEL A AND LEVEL B HARASSMENT

Year	Species	Estimated Level A harassment	Estimated Level B harassment	Estimated total take	Abundance	Percentage (instances take versus abundance)
1	Humpback whale *	0	1	1	1,107	0.09
	Killer whale	0	4	4	2,347	0.17
	Beluga whale	0	11	11	279	3.94
	Harbor porpoise	0	5	5	31,046	0.02
	Harbor seal	1	316	317	28,411	1.12
2	Humpback whale *	0	4	4	1,107	0.36

	Killer whale	0	4	4	2,347	0.17
	Beluga whale	0	11	11	279	3.94
	Harbor porpoise	5	5	10	31,046	0.03
	Harbor seal	45	190	235	28,411	0.83

* Includes Hawaii, Western North Pacific, and Mexico DPS's.

Mitigation

In order to issue an LOA under Section 101(a)(5)(A) of the MMPA, NMFS must set forth the permissible methods of taking pursuant to such activity, and other means of effecting the least practicable impact on such species or stock and its habitat, paying particular attention to rookeries, mating grounds, and areas of similar significance, and on the availability of such species or stock for taking for certain subsistence uses (latter not applicable for this action). NMFS regulations require applicants for incidental take authorizations to include information about the availability and feasibility (economic and technological) of equipment, methods, and manner of

conducting such activity or other means of effecting the least practicable adverse impact upon the affected species or stocks and their habitat (50 CFR 216.104(a)(11)).

In evaluating how mitigation may or may not be appropriate to ensure the least practicable adverse impact on species or stocks and their habitat, as well as subsistence uses where applicable, we carefully consider two primary factors:

(1) The manner in which, and the degree to which, the successful implementation of the measure(s) is expected to reduce impacts to marine mammals, marine mammal species or stocks, and their habitat. This considers the nature of the potential adverse

impact being mitigated (likelihood, scope, range). It further considers the likelihood that the measure will be effective if implemented (probability of accomplishing the mitigating result if implemented as planned) the likelihood of effective implementation (probability implemented as planned); and

(2) The practicability of the measures for applicant implementation, which may consider such things as cost, impact on operations, and, in the case of a military readiness activity, personnel safety, practicality of implementation, and impact on the effectiveness of the military readiness activity.

Additional mitigation measures that were not included in the proposed rule but were added to the final rule include:

(1) Time/area restriction of pile driving and noise generating activities during summer months in the western portion of Cook Inlet at the Mainline Material Offloading Facility (Mainline MOF). The density of beluga whales is notably higher in this area and the measure was added in order to further reduce the number of takes of beluga whales.

(2) Deployment of air bubble curtains for in-water pile driving activities if the air bubble curtains can show to reduce noise level by 2 dB. This measure is to reduce the noise level from pile driving, as air bubble curtain system would reduce potential takes of marine mammals by reducing the ensounded zones. The in situ measurement will determine whether continued implementation is warranted by measuring the likely conservation benefit (degree of sound reduction) versus the financial cost to the company.

(3) Vessel speed and transits restriction in western portion of Cook Inlet during summer months. This measure would minimize disturbances to beluga whales in the Susitna Delta during the time when beluga whales are likely to congregate in the area.

NMFS included these mitigation measures after working with AGDC and determined that they are practicable to further reduce potential impacts to Cook Inlet beluga whales.

Time/Area Restriction

For pile driving, work would occur only during daylight hours, when visual

monitoring of marine mammals can be conducted. Other construction activities, such as pipe laying, anchor handling, and dredging could occur outside of daylight hours or during periods of low visibility.

Pile driving associated with the Mainline MOF will not occur from June 1 to September 7 (pile driving can occur from September 8 to May 31).

Other than the activities described in the Description of Proposed Activity section (e.g., sheet pile driving, anchor handling, trenching, pipe-laying and support vessels), AGDC will not engage in in-water sound-producing activities within 10 miles (16 km) of the mean higher high water (MHHW) line of the Susitna Delta (Beluga River to the Little Susitna River) between April 15 and October 15 for activities with underwater noise levels in excess of 120 dB rms re 1µPa @1 m.

Establishing and Monitoring Level A and Level B Harassment Zones, and Exclusion Zones

Before the commencement of in-water construction activities, which include impact pile driving and vibratory pile driving, AGDC must establish Level A harassment zones where received underwater SEL_{cum} could cause PTS (see Table 6 above).

AGDC must also establish Level B harassment zones where received underwater SPLs are higher than 160 dB_{rms} re 1 µPa for impulsive noise sources (impact pile driving) and 120 dB_{rms} re 1 µPa for non-impulsive noise sources (vibratory pile driving).

For all impact and vibratory pile driving, AGDC is required to establish

the exclusion zones and implement shutdown measures for humpback whale and killer whale to prevent Level A harassment. AGDC is required to establish a maximum of 1,000-m exclusion zone and implement shutdown measures for harbor porpoise and harbor seal to minimize Level A harassment. AGDC is required to establish the exclusion zones and implement shutdown measures for beluga whale to prevent Level A and Level B harassment. AGDC is required to establish a 2,900-m clearance zone for beluga whale before activities involving anchor handling can occur.

If visibility degrades to where the entire exclusion zones cannot be effectively monitored during pile driving, AGDC may continue to drive the pile section that was being driven to its target depth but will not drive additional sections of pile.

Further, AGDC must implement shutdown measures if the number of marine mammals observed within harassment zones and recorded as a takes for any particular marine mammal species reaches the authorized limit, or any marine mammal species/stocks not authorized to take under the LOA, and such species are sighted within the vicinity of the project area and are approaching the Level B harassment zone during in-water construction activities.

A summary of these exclusion zones based on Level A and Level B harassment distances for different project components is provided in Table 11.

TABLE 11—MARINE MAMMAL EXCLUSION ZONES

Pile driving activities	Exclusion distances (m)				
	Humpback whale	Killer whale	Harbor porpoise	Harbor seal	Beluga whale *
Impact pile driving of 48- and 60-inch piles at PLF	3,200	250	1,000	1,000	3,600
Impact pile driving of 24- and 48-inch piles at temporary MOF	3,300	250	1,000	1,000	3,600
Vibratory pile driving of all types and sizes of piles at temporary MOF	300	250	250	250	5,600
Vibratory pile driving of sheet piles at Mainline MOF	300	250	250	250	3,200
Impact pile driving of sheet piles at Mainline MOF	1,200	250	1,000	650	800
Anchor handling	NA	NA	NA	NA	**2,900

* These zones also apply to all marine mammals if the number of take is approaching to the authorized takes, and to all marine mammals that takes are not authorized.

** The 2,900m zone will be a clearing zone prior to the start of work, since activities cannot start and stop. Beluga whales occurring within this clearing zone during anchor handling operations will be recorded as having been taken by harassment.

In all cases, a minimum of 10-m exclusion zone must be established for in-water construction and heavy machinery not addressed elsewhere in these measures. If marine mammals are found within the exclusion zone, pile

driving of the segment would be delayed until they move out of the area. If a marine mammal is seen above water and then dives below, the contractor would wait 30 minutes for large cetaceans (baleen whales) and 15

minutes for small cetaceans (beluga and killer whales and porpoises) and pinnipeds. If no marine mammals of that species are seen by the observer in that time it can be assumed that the

animal has moved beyond the exclusion zone.

If pile driving of a segment ceases for 30 minutes or more and a marine mammal is sighted within the designated exclusion zone prior to commencement of pile driving, the observer(s) must notify the pile driving operator (or other authorized individual) immediately and continue to monitor the exclusion zone. Operations may not resume until the marine mammal has exited the exclusion zone or 30 minutes have elapsed for large cetaceans or 15 minutes have elapsed for small cetaceans and pinnipeds since the last sighting.

Soft Start

Once the exclusion zone has been cleared of all marine mammals, soft-start procedures must be implemented immediately prior to impact pile driving activities. Soft-start is comprised of an initial set of three strikes from the hammer at about 40 percent energy, followed by a 30-second waiting period, then two subsequent three-strike sets with associated 30-second waiting periods at the reduced energy.

If circumstances result in discontinuation of pile driving for greater than 30 minutes, then the PSO will monitor the exclusion zone for 30 minutes prior to the resumption of pile driving and will ensure that the zone remains devoid of marine mammals for the 30 minutes immediately prior to the restarting of pile driving. Impact Pile driving will resume following an additional soft start.

Noise Attenuation

For pile-driving at the Mainline MOF near the Beluga River, and on the east side of Cook Inlet near Nikiski associated with the liquefaction facility, AGDC must deploy air bubble curtains around piles. If the sound source verification (SSV) measurements indicate that the best-performing bubble

curtain configuration provides less than a 2 dB reduction in in-water sound beyond the bubble curtain, use of the bubble curtain may be discontinued.

Vessel Transits

Consistent with NMFS marine mammal viewing guidelines (<https://alaskafisheries.noaa.gov/pr/mm-viewing-guide>), operators of vessels will, at all times, avoid approaching within 100 yards of marine mammals. Operators will observe direction of travel of marine mammals and attempt to maintain a distance of 100 yards or greater between the animal and the vessel by working to alter vessel course or velocity.

The vessel operator will avoid placing the vessel between members of a group of marine mammals in a way that may cause separation of individuals in the group from other individuals in that group. A group is defined as being three or more whales observed within 500-m (1,641-ft) of one-another and displaying behaviors of directed or coordinated activity (e.g., migration or group feeding).

If the vessel approaches within 1.6 km (1 mi) of one or more whales, the vessel operator will take reasonable precautions to avoid potential interaction with the whales by taking one or more of the following actions, as appropriate:

(1) Steering to the rear of whale(s) to avoid causing changes in their direction of travel.

(2) Maintaining vessel speed of 10 knots (19 km/hr) or less when transiting to minimize the likelihood of lethal vessel strikes.

(3) Reducing vessel speed to less than 5 knots (9 km/hour) within 274 m (300 yards) of the whale(s).

Project vessels must remain a minimum of 2.8 km (1.5 nm) seaward of the mean lower low water (MLLW) line between the Little Susitna River and -150.80 degrees west longitude (see Figure 2 for line depicting the

approximate MLLW line) to minimize the impacts of vessel sound and avoid strikes on Cook Inlet beluga whales within this highly essential portion of their critical habitat during late spring and throughout the summer the Susitna Delta Exclusion Zone is defined as the union of the areas defined by:

(1) A 16 km (10-mile) buffer of the Beluga River thalweg seaward of the mean lower low water (MLLW) line,

(2) A 16 km (10-mile) buffer of the Little Susitna River thalweg seaward of the MLLW line, and,

(3) A 16 km (10-mile) seaward buffer of the MLLW line between the Beluga River and Little Susitna River.

(4) The buffer extends landward along the thalweg to include intertidal waters within rivers and streams up to their mean higher high water line (MHHW). The seaward boundary has been simplified so that it is defined by lines connecting readily discernable landmarks.

For vessels operating in the Susitna Delta Exclusion Zone, the following will be implemented:

(1) All project vessels operating within the designated Susitna Delta area will maintain a speed above ground below 4 knots. PSOs will note the numbers, date, time, coordinates, and proximity to vessels of all belugas observed during operations, and report these observations to NMFS in monthly PSO reports.

(2) Vessel crew will be trained to monitor for ESA-listed species prior to and during all vessel movements within the Susitna Delta Exclusion Zone. The vessel crew will report sightings to the PSO team for inclusion in the overall sighting database and reports.

(3) Vessel operators will not move their vessels when they are unable to adequately observe the 100-meter zone around vessels under power (in gear) due to darkness, fog, or other conditions, unless necessary for ensuring human safety.

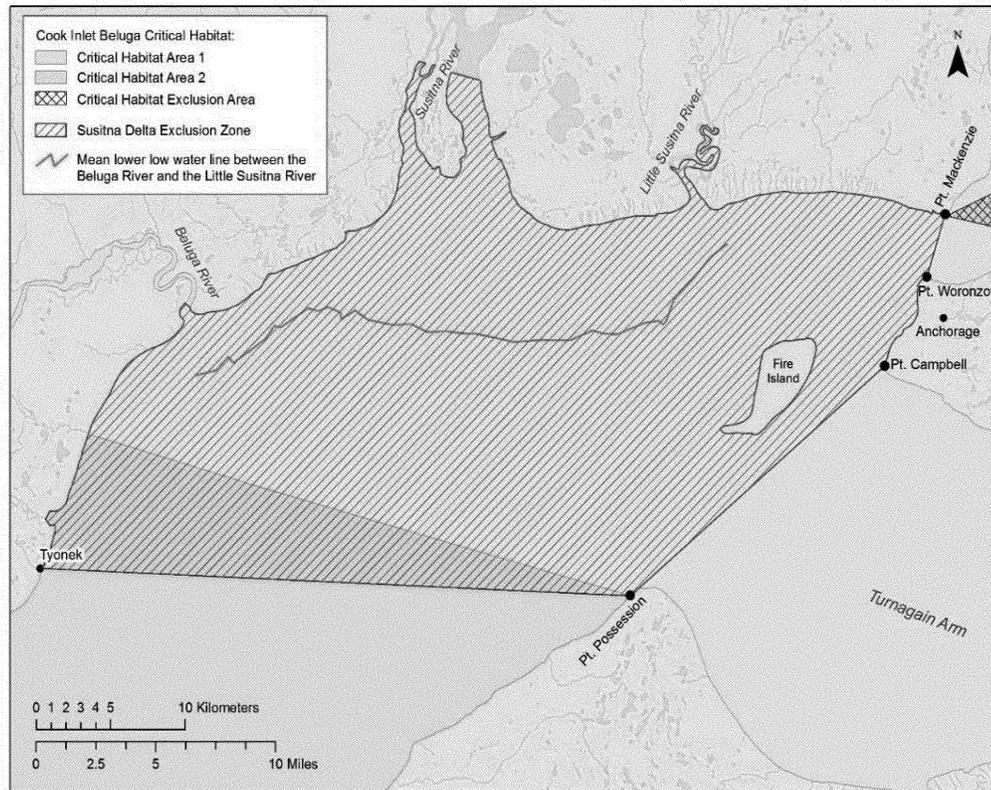

Figure 2. Susitna Delta Exclusion Zone, showing MLLW line between the Beluga and Little Susitna Rivers

Based on our evaluation of the required measures, NMFS has determined that the prescribed mitigation measures provide the means effecting the least practicable adverse impact on the affected species or stocks and their habitat, paying particular attention to rookeries, mating grounds, and areas of similar significance.

Monitoring and Reporting

In order to issue an LOA for an activity, Section 101(a)(5)(A) of the MMPA states that NMFS must set forth requirements pertaining to the monitoring and reporting of such taking. The MMPA implementing regulations at 50 CFR 216.104(a)(13) indicate that requests for authorizations must include the suggested means of accomplishing the necessary monitoring and reporting that will result in increased knowledge of the species and of the level of taking or impacts on populations of marine mammals that are expected to be present in the proposed action area. Effective reporting is critical both to compliance as well as ensuring that the most value is obtained from the required monitoring.

Monitoring and reporting requirements prescribed by NMFS should contribute to improved understanding of one or more of the following:

- Occurrence of marine mammal species or stocks in the area in which take is anticipated (*e.g.*, presence, abundance, distribution, density).
- Nature, scope, or context of likely marine mammal exposure to potential stressors/impacts (individual or cumulative, acute or chronic), through better understanding of: (1) Action or environment (*e.g.*, source characterization, propagation, ambient noise); (2) affected species (*e.g.*, life history, dive patterns); (3) co-occurrence of marine mammal species with the action; or (4) biological or behavioral context of exposure (*e.g.*, age, calving or feeding areas).
- Individual marine mammal responses (behavioral or physiological) to acoustic stressors (acute, chronic, or cumulative), other stressors, or cumulative impacts from multiple stressors.
- How anticipated responses to stressors impact either: (1) Long-term fitness and survival of individual

marine mammals; or (2) populations, species, or stocks.

- Effects on marine mammal habitat (*e.g.*, marine mammal prey species, acoustic habitat, or other important physical components of marine mammal habitat).
- Mitigation and monitoring effectiveness.

Visual Monitoring

Marine mammal monitoring must be conducted in accordance with the Marine Mammal Monitoring Plan, dated April 2020. Marine mammal monitoring during pile driving and removal must be conducted by NMFS-approved PSOs in a manner consistent with the following:

- Independent PSOs (*i.e.*, not construction personnel) who have no other assigned tasks during monitoring periods must be used;
- Where a team of three or more PSOs are required, a lead observer or monitoring coordinator must be designated. The lead observer must have prior experience working as a marine mammal observer during construction;
- Other PSOs may substitute education (degree in biological science or related field) or training for experience. PSOs may also substitute

Alaska native traditional knowledge for experience. (NMFS recognizes that PSOs with traditional knowledge may also have prior experience and be eligible to serve as the lead PSO.); and

- AGDC must submit PSO CVs for approval by NMFS prior to the onset of pile driving.

PSOs must have the following additional qualifications:

- Ability to conduct field observations and collect data according to assigned protocols;
- Experience or training in the field identification of marine mammals, including the identification of behaviors;
- Sufficient training, orientation, or experience with the construction operation to provide for personal safety during observations;
- Writing skills sufficient to prepare a report of observations including but not limited to the number and species of marine mammals observed; dates and times when in-water construction activities were conducted; dates, times, and reason for implementation of mitigation (or why mitigation was not implemented when required); and marine mammal behavior; and
- Ability to communicate orally, by radio or in person, with project personnel to provide real-time information on marine mammals observed in the area as necessary.

Marine mammal monitoring must comply with the follow protocols:

(1) For pile driving activities, a minimum of two PSOs must be on duty at all times;

(2) For pile driving activities, PSOs must be stationed on a bluff with minimum height at 500 feet above sea level immediately above the construction site;

(3) For marine mammal monitoring during pipe laying activities, at least one PSO must be on the barge and on watch;

(4) PSOs may not exceed 4 consecutive watch hours; must have a minimum two-hour break between watches; and may not exceed a combined watch schedule of more than 12 hours in a 24-hour period;

(5) PSOs must have no other construction-related tasks while conducting monitoring;

(6) Monitoring must be conducted from 30 minutes prior to commencement of pile driving, throughout the time required to drive a pile, and for 30 minutes following the conclusion of pile driving;

(7) Monitoring must be conducted from 30 minutes prior to commencement of pipe laying activity, throughout the time of pipe laying, and

for 30 minutes following the conclusion of pipe laying for the segment;

(8) During all observation periods, PSOs must use high-magnification (25X), as well as standard handheld (7X) binoculars, and the naked eye to search continuously for marine mammals;

(9) Monitoring distances must be measured with range finders. Distances to animals must be based on the best estimate of the PSO, relative to known distances to objects in the vicinity of the PSO; and

(10) Bearings to animals must be determined using a compass.

PSOs must collect the following information during marine mammal monitoring:

(1) Date and time that monitored activity begins and ends for each day conducted (monitoring period);

(2) Construction activities occurring during each daily observation period, including how many and what type of piles driven and distances covered during pipe laying;

(3) Deviation from initial proposal in pile numbers, pile types, average driving times, and pipe laying distances, etc.;

(4) Weather parameters in each monitoring period (e.g., wind speed, percent cloud cover, visibility);

(5) Water conditions in each monitoring period (e.g., sea state, tide state);

(6) For each marine mammal sighting:

- Species, numbers, and, if possible, sex and age class of marine mammals;
- Description of any observable marine mammal behavior patterns, including bearing and direction of travel and distance from pile driving and pipe laying activities, and notable changes in patterns;

- Location and distance from pile driving and pipe laying activities to marine mammals and distance from the marine mammals to the observation point; and

- Estimated amount of time that the animals remained in the Level A and/or Level B harassment zones;

(7) Description of implementation of mitigation measures within each monitoring period (e.g., shutdown or delay); and

(8) Other human activity in the area within each monitoring period.

Acoustic Monitoring

AGDC must conduct sound source verification (SSV) in accordance with the Sound Source Verification Plan, dated February 12, 2020, at the beginning of the pile driving to characterize the sound levels associated with different pile and hammer types, as well as to establish the marine mammal monitoring and mitigation zones.

(1) A minimum of 2 piles of each type and size must be measured.

(2) The following data, at minimum, shall be collected during acoustic monitoring and reported:

i. Hydrophone equipment and methods: Recording device, sampling rate, distance from the pile where recordings were made; depth of recording device(s).

ii. Type of pile being driven and method of driving during recordings.

iii. Mean, median, and maximum sound levels (dB re: 1μPa): Cumulative sound exposure level (SEL_{cum}), peak sound pressure level (SPL_{peak}), root mean square sound pressure level (SPL_{rms}), and single-strike sound exposure level (SEL_{s-s}).

(3) An SSV report must be submitted to NMFS within 72 hours after field measurements for approval of the results.

(4) The results of the SSV report may be used to adjust the extent of Level A and Level B harassment zones in-water pile driving.

Reporting

AGDC must notify NMFS 48 hours prior to the start of each activity in Cook Inlet that may cause harassment of marine mammals. If there is a delay in activity, AGDC will also notify NMFS as soon as practicable.

AGDC must submit monthly reports via email to NMFS Office of Protected Resources (OPR) and Alaska Regional Office (AKRO) for all months with project activities by the 15th of the month following the monthly reporting period. For example, for the monthly reporting period of June 1–30, the monthly report will be submitted by July 15. The monthly report will contain and summarize the following information:

- Dates, times, locations, heading, speed, weather, sea conditions (including Beaufort sea state and wind force), and a list of all in-water sound-producing activities occurring concurrent with marine mammal observations.

- Species, number, location, distance from the vessel, and behavior of all observed marine mammals, as well as associated project activity (e.g., number of power-downs and shutdowns), observed throughout all monitoring activities.

- Observation data in (a) and (b) above will be provided in digital spreadsheet format that can be queried.

- An estimate of the number of animals (by species) exposed to sound at received levels greater than or equal to either the Level A or Level B harassment thresholds, with a

discussion of any specific behaviors those individuals exhibited.

- If the extent of Level B harassment zone is beyond visual observation, AGDC should make appropriate adjustment to estimate the numbers of marine mammals taken based on the portion of the areas that are monitored.
- A description of the implementation and effectiveness of the:
 - Terms and conditions of the Biological Opinion's Incidental Take Statement; and
 - mitigation measures of the LOA. For the Biological Opinion, the report will confirm the implementation of each Term and Condition, as well as any conservation recommendations, and describe their effectiveness for minimizing the adverse effects of the action on ESA-listed marine mammals.

In addition, AGDC is required to keep a tally of the estimated number of marine mammals taken, and alert NMFS when the authorized limit is close to being met based on prescribed monitoring measured in the final rule. In addition, AGDC is required to keep a tally of all marine mammal sightings during the pile driving activities.

AGDC should immediately notify NMFS if the number of Cook Inlet beluga takes documented reaches 80% of the authorized takes in any given calendar year during which take is authorized.

Within 90 calendar days of the cessation of in-water work each year, a comprehensive annual report will be submitted to NMFS for review. The report will synthesize all sighting data and effort during each activity for each year. NMFS will provide comments within 30 days after receiving annual reports, and the action agency or its non-federal designee will address the comments and submit revisions within 30 days after receiving NMFS comments. If no comments are received from the NMFS within 30 days, the annual report is considered completed. The report will include the following information:

- Summaries of monitoring effort including total hours, observation rate by species and marine mammal distribution through the study period, accounting for sea state and other factors affecting visibility and detectability of marine mammals.
- Analyses of the effects of various factors that may have influenced detectability of marine mammals (*e.g.*, sea state, number of observers, fog/glare, and other factors as determined by the PSOs).
- Species composition, occurrence, and distribution of marine mammal sightings, including date, water depth,

numbers, age/size/gender categories (if determinable), group sizes, and ice cover.

- Marine mammal observation data with a digital record of observation data provided in digital spreadsheet format that can be queried.
- Summary of implemented mitigation measures (*i.e.*, shutdowns and delays).
- Number of marine mammals during periods with and without project activities (and other variables that could affect detectability), such as: (i) Initial sighting distances versus project activity at the time of sighting; (ii) closest point of approach versus project activity; (iii) observed behaviors and types of movements versus project activity; (iv) numbers of sightings/individuals seen versus project activity; (v) distribution around the source vessels versus project activity; and (vi) numbers of animals detected in the exclusion zone.

- Analyses of the effects of project activities on listed marine mammals.

In addition to providing NMFS monthly and annual reporting of marine mammal observations and other parameters described above, AGDC will provide NMFS, within 90 days of project completion at the end of the five-year period, a report of all parameters listed in the monthly and annual report requirements above, noting also all operational shutdowns or delays necessitated due to the proximity of marine mammals. NMFS will provide comments within 30 days after receiving this report, and the action agency or its non-federal designee will address the comments and submit revisions within 30 days after receiving NMFS comments. If no comments are received from the NMFS within 30 days, the final report is considered as final.

In the event that personnel involved in the construction activities discover an injured or dead marine mammal, AGDC must immediately cease the specified activities and report the incident to the Office of Protected Resources (OPR) (301-427-8401), NMFS and to the Alaska regional stranding coordinator (907-586-7209) as soon as feasible. If the death or injury was clearly caused by the specified activity, AGDC must immediately cease the specified activities until NMFS is able to review the circumstances of the incident and determine what, if any, additional measures are appropriate to ensure compliance with the terms of the LOA. AGDC must not resume their activities until notified by NMFS.

The report must include the following information:

- Time, date, and location (latitude/longitude) of the first discovery (and

updated location information if known and applicable);

- Species identification (if known) or description of the animal(s) involved;
- Condition of the animal(s) (including carcass condition if the animal is dead);
- Observed behaviors of the animal(s), if alive;
- If available, photographs or video footage of the animal(s); and
- General circumstances under which the animal was discovered.

Negligible Impact Analysis and Determination

NMFS has defined negligible impact as an impact resulting from the specified activity that cannot be reasonably expected to, and is not reasonably likely to, adversely affect the species or stock through effects on annual rates of recruitment or survival (50 CFR 216.103). A negligible impact finding is based on the lack of likely adverse effects on annual rates of recruitment or survival (*i.e.*, population-level effects). An estimate of the number of takes alone is not enough information on which to base an impact determination. In addition to considering estimates of the number of marine mammals that might be "taken" through harassment, NMFS considers other factors, such as the likely nature of any responses (*e.g.*, intensity, duration), the context of any responses (*e.g.*, critical reproductive time or location, migration), as well as effects on habitat, and the likely effectiveness of the mitigation. We also assess the number, intensity, and context of estimated takes by evaluating this information relative to population status. Consistent with the 1989 preamble for NMFS' implementing regulations (54 FR 40338; September 29, 1989), the impacts from other past and ongoing anthropogenic activities are incorporated into this analysis via their impacts on the environmental baseline (*e.g.*, as reflected in the regulatory status of the species, population size and growth rate where known, ongoing sources of human-caused mortality, or ambient noise levels).

To avoid repetition, this introductory discussion of our analyses applies to all the species listed in Table 3, given that the anticipated effects of AGDC's Alaska LNG facilities construction project activities involving pile driving and pipe laying on marine mammals are expected to be relatively similar in nature. Among the species that would be affected from AGDC's LNG facilities construction activities, the Cook Inlet beluga whale is expected to be the most vulnerable species due to its small

population and declining status (NMFS, 2020), and additional species-specific information is included in the analysis below.

Pile driving and removal activities associated with the project as well as pipe laying activity, as outlined previously, have the potential to disturb or displace marine mammals. Specifically, the specified activities may result in take, in the form of Level B harassment, from underwater sounds generated from pile driving and pipe laying. Potential takes could occur if individuals of these species are present in zones ensounded above the thresholds for Level A or Level B harassment, identified above, when these activities are underway.

Cook Inlet beluga whale and humpback whales are listed as endangered under the ESA. These stocks are also considered depleted under the MMPA. The estimated annual rate of decline for Cook Inlet beluga whales was 0.6 percent between 2002 and 2012. Data from Calambokidis *et al.* (2008) suggest the population of humpback whales may be increasing. The other species that may be taken by harassment during AGDC's LNG facilities construction project are not listed as threatened or endangered under the ESA nor as depleted under the MMPA.

Although a few individual marine mammals (up to 3 humpback whales, 13 harbor porpoises, and 88 harbor seals over the entire project duration of 5 years) are estimated to experience Level A harassment in the form of PTS if they stay within the Level A harassment zone during the entire pile driving for the day, the degree of injury that might occur would be expected to be mild and not likely to affect the reproduction or survival of the individual animals. Specifically, it is expected that, if hearing impairments occur, most likely the affected animal would lose a few dB in its hearing sensitivity, limited to the dominant frequency of the noise sources, *i.e.*, in the low-frequency region below 2 kHz. While we have considered the potential impacts to any individuals that could incur PTS, and the number authorized, we reiterate that in general marine mammals are likely to avoid areas where sound levels are intense enough to cause hearing impairment and it is unlikely to occur.

Under the majority of the circumstances, anticipated takes are expected to be limited to relatively short-term Level B harassment. Marine mammals present in the vicinity of the action area during the construction season and taken by Level B harassment would most likely show overt brief

disturbance (startle reaction) and avoidance of the area from elevated noise levels during pile driving. Given the limited estimated number of incidents of Level A and Level B harassment and the limited, anticipated short-term nature of the responses by the individuals, the impacts of the estimated take are not expected to impact the fitness, reproduction, or survival of any individual marine mammals, and further are not expected to rise to the level that they would adversely affect any marine mammal species at the population level, through effects on annual rates of recruitment or survival. While AGDC's LNG facilities construction activities could in general increase the ambient noise level in the vicinity of the project area, the elevated noise levels are only expected during the construction work window during daytime and in the limited area immediately around the construction activities. Additionally, any potential auditory masking occur primarily in the frequency band of the noise, which is generally below 2 kHz for in-water pile driving, and would not be expected to mask most communication vocalizations of the species in the area, or echolocation calls. Given this, any potential auditory masking for marine mammals in the project area is expected to have relatively minor impacts.

Mitigation measures such as time/area restrictions, dedicated marine mammal observers, pre-construction exclusion zone clearance, deployment of air bubble curtains, soft-start, and shutdown measures when marine mammals are seen within the exclusion zones reduce both the number and severity of behavioral disturbances and minimize any effects on hearing sensitivity. In most cases, only cause Level B harassment in the form of behavioral disturbance and/or temporary avoidance. While some Level A harassment to a few individual harbor seals, harbor porpoises, and humpback whales may occur, individuals are unlikely to remain in the proximity of the source for a duration of time likely to result in more than a few dB of PTS (low level), and therefore these impacts are unlikely to impact individual fitness, reproduction, or survival incurred would be expected to be of a low level (no more than a few dB).

The area where the activities will take place is within the Cook Inlet beluga whale critical habitat. Satellite-tagging studies and aerial survey indicate that seasonal shifts exist in Cook Inlet beluga whale distribution, with the whales spending a great percentage of time in coastal areas during the summer and early fall (June through October or

November), and dispersing to larger ranges that extend to the middle of the inlet in winter and spring (November or December through May) (Hansen and Hubbard, 1999; Rugh *et al.*, 2004; Hobbs *et al.*, 2005; Goetz *et al.*, 2012). However, fine scale modeling based on NMFS long-term aerial survey data indicate that the AGDC's proposed LNG facilities construction does not overlap with beluga whale high density areas during the summer and fall (Goetz *et al.*, 2012). Furthermore, specific mitigation measures are required to offer additional protections to Cook Inlet beluga whales given the vulnerable status of the population. These measures call for time and area restriction for all activities that generate underwater noise greater than 120 dB rms re 1 μ Pa, including in-water pile driving events, in west Cook Inlet construction area during summer months when beluga whales are likely to use the Susitna River delta for feeding. Additional mitigation measure to protect the Cook Inlet beluga whale also include implementing shutdown measures for beluga whales to prevent Level B harassment. These measures are expected reduce both the number and severity of the takes of beluga whales.

There are no known important habitats, such as rookeries or haulouts, in the vicinity of the AGDC's LNG facilities construction project for other marine mammal species. The project also is not expected to have significant adverse effects on affected marine mammals' habitat, including prey, as analyzed in detail in the Anticipated Effects on Marine Mammal Habitat section. Therefore, the exposure of marine mammals to sounds produced by AGDC's LNG facilities construction activities is not anticipated to have an effect on annual rates of recruitment or survival of the affected species or stocks.

In summary and as described above, the following factors primarily support our determination that the impacts resulting from this activity are not expected to adversely affect the species or stock through effects on annual rates of recruitment or survival:

- No series injury or mortality is anticipated or authorized;
- Injury—a small individuals of humpback whales, harbor porpoises, and harbor seals could experience mild level of PTS as a form of injury. However, as mentioned earlier in this section, the level of PTS is expected to be small;
- TTS—a small individuals of marine mammals could experience mild level of TTS before the threshold shifts become permanent. However, most of the TTS effects are expected to be brief

in duration, and will not progress into PTS;

- Behavioral disturbance—most of the noise effects on marine mammals are expected to be in the form of behavioral disturbance. However, such effects are expected to be in short duration, within the day during the construction activities when the animal is nearby. As construction activities only occur for a maximum of 12 hours during daylight hours between April and October of the year, chronic noise exposure would be limited; and

- Important Areas—the area where the activities will take place is within the Cook Inlet beluga whale critical habitat. However, fine scale modeling based on NMFS long-term aerial survey data indicate that the AGDC's proposed LNG facilities construction does not overlap with beluga whale high density areas during the summer and fall.

Based on the analysis contained herein of the likely effects of the specified activity on marine mammals and their habitat, and taking into consideration the implementation of the monitoring and mitigation measures, NMFS finds that the total marine mammal take from the proposed activity will have a negligible impact on all affected marine mammal species or stocks.

Small Numbers

As noted above, only small numbers of incidental take may be authorized under section 101(a)(5)(A) of the MMPA for specified activities other than military readiness activities. The MMPA does not define small numbers and so, in practice, NMFS compares the number of individuals taken to the most appropriate estimation of abundance of the relevant species or stock in our determination of whether an authorization is limited to small numbers of marine mammals.

The number of authorized takes are below one third of the stock abundance (in fact less than seven percent) of the population for all marine mammals (Table 10).

Based on the analysis contained herein of the proposed activity (including the prescribed mitigation and monitoring measures) and the anticipated take of marine mammals, NMFS finds that small numbers of marine mammals will be taken relative to the population size of the affected species or stocks.

Unmitigable Adverse Impact Analysis and Determination

In order to issue an LOA, NMFS must find that the specified activity will not have an “unmitigable adverse impact”

on the subsistence uses of the affected marine mammal species or stocks by Alaska Natives. NMFS has defined “unmitigable adverse impact” in 50 CFR 216.103 as an impact resulting from the specified activity: (1) That is likely to reduce the availability of the species to a level insufficient for a harvest to meet subsistence needs by: (i) Causing the marine mammals to abandon or avoid hunting areas; (ii) Directly displacing subsistence users; or (iii) Placing physical barriers between the marine mammals and the subsistence hunters; and (2) That cannot be sufficiently mitigated by other measures to increase the availability of marine mammals to allow subsistence needs to be met.

The project is unlikely to affect beluga whale harvests because no beluga harvest will take place in 2020, nor is one likely to occur in the other years that would be covered by the 5-year regulations and associated LOAs.

The proposed Marine Terminal construction activities would occur closest to the marine subsistence area used by Nikiski, while the offshore pipeline and Beluga Mainline MOF would occur within the subsistence use area used by Tyonek. However, the proposed action area is not an important native subsistence site for subsistence harvest of marine mammals because subsistence hunt is only conducted opportunistically. Also, because of the relatively small proportion of marine mammals utilizing Cook Inlet, the number harvested is expected to be extremely low (NMFS, 2013c). Therefore, AGDC's program is not expected to have an impact on the subsistence use of marine mammals.

Nevertheless, AGDC is required to and has prepared a Stakeholder Engagement Plan to involve subsistence communities in the process, hearing concerns, and responding to issues. Through the Stakeholder Engagement Plan, AGDC would implement the following measures to keep subsistence users in the Cook Inlet region informed of its project activities.

- Provide a stakeholder engagement specialist as a local point of contact;
- Provide informational letters summarizing planned activities for summer and winter on a periodic basis to a comprehensive list of stakeholders;
- Set up a call-in number for interested marine mammal hunters during active construction;
- When requested by stakeholders, as resources allow, attend meetings to provide information on upcoming projects; and
- Be available periodically at large-scale events in Anchorage for questions from the public and Alaska Native

groups, such as the Alaska Federation of Natives or Alaska Forum for the Environment.

AGDC has travelled to several operations-related meetings and plans to schedule and plans to attend more meetings throughout the construction and operation period. AGDC has developed a comprehensive stakeholder list of Alaska native communities, organizations, and other interested parties in the Cook Inlet region. This list is a “living” list and will be updated with new stakeholders or as people change positions. The updated list will be submitted to NMFS as part of the annual reports.

Adaptive Management

The regulations governing the take of marine mammals incidental to AGDC's proposed LNG facilities construction activities would contain an adaptive management component.

The reporting requirements associated with this Final Rule are designed to provide NMFS with monitoring data from the previous year to allow consideration of whether any changes are appropriate. The use of adaptive management allows NMFS to consider new information from different sources to determine (with input from AGDC regarding practicability) on an annual basis if mitigation or monitoring measures should be modified (including additions or deletions). Mitigation measures could be modified if new data suggests that such modifications would have a reasonable likelihood of reducing adverse effects to marine mammals and if the measures are practicable.

The following are some of the possible sources of applicable data to be considered through the adaptive management process: (1) Results from monitoring reports, as required by MMPA authorizations; (2) results from general marine mammal and sound research; and (3) any information which reveals that marine mammals may have been taken in a manner, extent, or number not authorized by these regulations or subsequent LOAs.

Endangered Species Act (ESA)

Section 7(a)(2) of the Endangered Species Act of 1973 (ESA: 16 U.S.C. 1531 *et seq.*) requires that each Federal agency insure that any action it authorizes, funds, or carries out is not likely to jeopardize the continued existence of any endangered or threatened species or result in the destruction or adverse modification of designated critical habitat. To ensure ESA compliance for the issuance of ITAs, NMFS consults internally, in this case with the Alaska Protected

Resources Division Office, whenever we propose to authorize take for endangered or threatened species.

Pursuant to the MMPA and through these regulations and the associated LOA, NMFS is authorizing take of Cook Inlet beluga whale and Hawaii, Western North Pacific, and Mexico DPS's of humpback whales, which are listed under the ESA.

The Permit and Conservation Division requested initiation of section 7 consultation with the Alaska Region for the promulgation of 5-year regulations and the subsequent issuance of a Letter of Authorization. The Alaska Region issued a Biological Opinion concluding that NMFS' action is not likely to adversely affect the listed species named above or adversely modify their critical habitat.

Classification

Pursuant to the procedures established to implement Executive Order 12866, the Office of Management and Budget has determined that this final rule is not significant. Pursuant to section 605(b) of the Regulatory Flexibility Act (RFA), the Chief Counsel for Regulation of the Department of Commerce certified to the Chief Counsel for Advocacy of the Small Business Administration at the proposed rule stage that this rule, if adopted, would not have a significant economic impact on a substantial number of small entities. The AGDC is the only entity that would be subject to the requirements in these final regulations. During construction, AGDC would employ or contract thousands of people and the Alaska LNG Project would generate a market value in the billions of dollars. AGDC is not a small governmental jurisdiction, small organization, or small business, as defined by the RFA. We did not receive any public comments on the certification. Therefore a final regulatory flexibility analysis is not required and none has been prepared.

List of Subjects in 50 CFR Part 217

Penalties, Reporting and recordkeeping requirements, Seafood, Transportation.

Dated: July 13, 2020.

Samuel D. Rauch III,

Deputy Assistant Administrator for Regulatory Programs, National Marine Fisheries Service.

For reasons set forth in the preamble, 50 CFR part 217 is amended as follows:

PART 217—REGULATIONS GOVERNING THE TAKE OF MARINE MAMMALS INCIDENTAL TO SPECIFIED ACTIVITIES

■ 1. The authority citation for part 217 continues to read as follows:

Authority: 16 U.S.C. 1361 *et seq.*, unless otherwise noted.

■ 2. Add subpart E to part 217 to read as follows:

Subpart E—Taking and Importing Marine Mammals; Alaska Gasline Development Corporation Liquefied Natural Gas Facilities Construction

Sec.

217.40 Specified activity and specified geographical region.

217.41 Effective dates.

217.42 Permissible methods of taking.

217.43 Prohibitions.

217.44 Mitigation requirements.

217.45 Requirements for monitoring and reporting.

217.46 Letters of Authorization.

217.47 Renewals and modifications of Letters of Authorization.

217.48–217.49 [Reserved]

Subpart E—Taking and Importing Marine Mammals; Alaska Gasline Development Corporation Liquefied Natural Gas Facilities Construction

§ 217.40 Specified activity and specified geographical region.

(a) Regulations in this subpart apply only to the Alaska Gasline Development Corporation (AGDC) or successor entities and those persons it authorizes or funds to conduct activities on its behalf for the taking of marine mammals that occurs in the area outlined in paragraph (b) of this section and that occurs incidental to the activities described in paragraph (c) of this section.

(b) The taking of marine mammals by AGDC may be authorized in a Letter of Authorization (LOA) only if it occurs within AGDC's Alaska liquefied natural gas (LNG) facilities' construction areas, which are located between the Beluga Landing shoreline crossing on the north and the Kenai River south of Nikiski on the south in Cook Inlet, Alaska.

(c) The taking of marine mammals during this project is only authorized if it occurs incidental to construction activities associated with the proposed LNG facilities or the Mainline crossing of Cook Inlet.

§ 217.41 Effective dates.

Regulations in this subpart are effective January 1, 2021 through December 31, 2025.

§ 217.42 Permissible methods of taking.

Under LOAs issued pursuant to §§ 216.106 of this chapter and 217.46, the Holder of the LOAs (hereinafter "AGDC") may incidentally, but not intentionally, take marine mammals within the area described in § 217.40(b) by Level A harassment and Level B harassment associated with pile driving and pipe laying activities, provided the activity is in compliance with all terms, conditions, and requirements of the regulations in this subpart and the applicable LOAs.

§ 217.43 Prohibitions.

Notwithstanding takings contemplated in § 217.42 and authorized by LOAs issued under §§ 216.106 of this chapter and 217.46, no person in connection with the activities described in § 217.40 may:

- (a) Violate, or fail to comply with, the terms, conditions, and requirements of this subpart or a LOA issued under §§ 216.106 of this chapter and 217.46;
- (b) Take any marine mammal not specified in such LOAs; and
- (c) Take any marine mammal specified in such LOAs in any manner other than as specified.

§ 217.44 Mitigation requirements.

When conducting the activities identified in § 217.40(c), the mitigation measures contained in any LOAs issued under §§ 216.106 of this chapter and 217.46 must be implemented. These mitigation measures must include but are not limited to:

(a) *Time and area restriction.* AGDC must follow the following time and area restrictions.

(1) In-water pile driving must occur only during daylight hours. Times for other construction activities, such as pipe laying, anchor handling, and dredging are not restricted.

(2) Pile driving associated with the Mainline Material Offloading Facility (Mainline MOF) must not occur from June 1 to September 7 (pile driving can occur from September 8 to May 31).

(3) Other than in-water sheet pile driving and pile removal, anchor handling, trenching, pipe laying, and vessel transits related to these activities, AGDC may not engage in in-water sound-producing activities within 10 miles (16 km) of the mean higher high water (MHHW) line of the Susitna Delta (Beluga River to the Little Susitna River) between April 15 and October 15 which produce sound levels in excess of 120 dB rms re 1µPa @ 1 m.

(b) *Establishment of monitoring and exclusion zones.* (1) For all relevant in-water construction activity, AGDC must designate Level A harassment zones

with radial distances as identified in any LOA issued under §§ 216.106 of this chapter and 217.46.

(2) For all relevant in-water construction activity, AGDC must designate Level B harassment zones with radial distances as identified in any LOA issued under §§ 216.106 of this chapter and 217.46.

(3) For all in-water pile driving work, AGDC must implement an exclusion zone for each specific activity as identified in any LOA issued under §§ 216.106 of this chapter and 217.46. If a marine mammal comes within or enters the exclusion zone, AGDC must cease all operations.

(i) For humpback whale and killer whale during in-water pile driving activity, the exclusion zones must be based on the Level A harassment distances, but must not be less than 10 m from the pile.

(ii) For harbor porpoise and harbor seal during in-water pile driving activity, the exclusion zones must be based on the Level A harassment distances up to 1,000 m, but must not be less than 10 m from the pile.

(iii) For Cook Inlet beluga whale during in-water pile driving activity, the exclusion zones must be based on the Level B harassment distances.

(iv) A 2,900-m exclusion zone must be established for Cook Inlet beluga whale before pipe laying activity associated with anchor handling can occur.

(v) A minimum of 10-m exclusion zone must be established for in-water construction and heavy machinery not addressed elsewhere in this paragraph (b)(3).

(c) *Monitoring of exclusion zones.* Pile driving must only take place when the exclusion zones are visible and can be adequately monitored. If visibility degrades to where the entire exclusion zone cannot be effectively monitored during pile driving, AGDC may continue to drive the pile section that was being driven to its target depth, but may not drive additional sections of pile.

(d) *Shutdown measures.* (1) AGDC must deploy protected species observers (PSOs) to monitor marine mammals during in-water pile driving and pipe laying activities.

(2) Monitoring must take place from 30 minutes prior to initiation of pile driving or pipe laying activities through 30 minutes post-completion of pile driving or pipe laying activities.

(i) For pile driving activity, pre-activity monitoring must be conducted for 30 minutes to confirm that the exclusion zone is clear of marine mammals, and pile driving may commence only if observers have

declared the exclusion zone clear of marine mammals for that full duration of time. Monitoring must occur throughout the time required to drive a pile. A determination that the exclusion zone is clear must be made during a period of good visibility (*i.e.*, the entire exclusion zone and surrounding waters must be visible to the naked eye).

(ii) If marine mammals are found within the exclusion zone, pile driving of the segment must be delayed until they move out of the area. If a marine mammal is seen above water and then dives below, the contractor must wait 30 minutes for large cetaceans (humpback whale) and 15 minutes for small cetaceans (beluga and killer whales and harbor porpoise) and pinnipeds. If no marine mammals of that species are seen by the observer in that time it can be assumed that the animal has moved beyond the exclusion zone.

(iii) If pile driving of a segment ceases for 30 minutes or more and a marine mammal is sighted within the designated exclusion zone prior to commencement of pile driving, the observer(s) must notify the pile driving operator (or other authorized individual) immediately and continue to monitor the exclusion zone. Operations may not resume until the marine mammal has exited the exclusion zone or 30 minutes have elapsed for large cetaceans or 15 minutes have elapsed for small cetaceans and pinnipeds since the last sighting.

(3) If a marine mammal authorized to be taken by Level B harassment enters or approaches the exclusion zone, if a marine mammal not specified in the LOAs enters the Level B harassment zone, or if the take of a marine mammal species or stock has reached the take limits specified in any LOA issued under §§ 216.106 of this chapter and 217.46 and enters the Level B harassment zone, AGDC must halt all construction activities at that location. If construction is halted or delayed due to the presence of a marine mammal, the activity may not commence or resume until either the animal has voluntarily left and been visually confirmed beyond the shutdown or Level B harassment zone, whichever applicable, or 30 minutes have passed without re-detection of the animal if it is a larger cetacean (humpback whale), or 15 minutes have passed without re-detection of the animal if it is a small cetacean (beluga and killer whales and porpoises) or pinniped.

(e) *Soft start.* (1) AGDC must implement soft start techniques for impact pile driving. AGDC must conduct an initial set of three strikes

from the impact hammer at 40 percent energy, followed by a 30-second waiting period, then two subsequent three strike sets with associated 30-seconds waiting periods at the reduced energy.

(2) Soft start must be required for any impact driving, including at the beginning of the day, and at any time following a cessation of impact pile driving of 30 minutes or longer.

(f) *Noise attenuation device.* For pile-driving at the Mainline MOF near the Beluga River, and on the east side of Cook Inlet near Nikiski associated with the liquefaction facility, AGDC must deploy air bubble curtains around piles. If the sound source verification (SSV) measurements indicate that the best-performing bubble curtain configuration provides less than a 2 dB reduction in in-water sound beyond the bubble curtain, use of the bubble curtain may be discontinued.

(g) *Vessel transit.* (1) Operators of vessels must, at all times, avoid approaching within 100 yards of marine mammals. Operators must observe direction of travel of marine mammals and attempt to maintain a distance of 100 yards or greater between the animal and the vessel by working to alter vessel course or velocity.

(2) The vessel operator must avoid placing the vessel between members of a group of marine mammals in a way that may cause separation of individuals in the group from other individuals in that group. A group is defined as being three or more whales observed within 500-m of one-another and displaying behaviors of directed or coordinated activity (*e.g.*, migration or group feeding).

(3) If the vessel approaches within 1.6 km (1 mi) of one or more whales, the vessel operator must take reasonable precautions to avoid potential interaction with the whales by taking one or more of the following actions, as appropriate:

(i) Steering to the rear of whale(s) to avoid causing changes in their direction of travel.

(ii) Maintaining vessel speed of 10 knots (19 km/hr) or less when transiting to minimize the likelihood of lethal vessel strikes.

(iii) Reducing vessel speed to less than 5 knots (9 km/hour) within 274 m (300 yards) of the whale(s).

(4) Project vessels must remain a minimum of 2.8 km (1.5 nm) seaward of the mean lower low water (MLLW) line between the Little Susitna River and -150.80 degrees west longitude to minimize the impacts of vessel sound and avoid strikes on Cook Inlet beluga whales between June 1 and September 7. The Susitna Delta Exclusion Zone is

defined as the union of the areas defined by:

- (i) A 16-km (10-mile) buffer of the Beluga River thalweg seaward of the mean lower low water (MLLW) line;
 - (ii) A 16-km (10-mile) buffer of the Little Susitna River thalweg seaward of the MLLW line; and
 - (iii) A 16-km (10-mile) seaward buffer of the MLLW line between the Beluga River and Little Susitna River.
- (iv) The buffer extends landward along the thalweg to include intertidal waters within rivers and streams up to their mean higher high water line (MHHW). The seaward boundary has been simplified so that it is defined by lines connecting readily discernable landmarks.

(5) For vessels operating in the Susitna Delta Exclusion Zone, the following must be implemented:

(i) All project vessels operating within the designated Susitna Delta area must maintain a speed over ground below 4 knots. PSOs must note the numbers, date, time, coordinates, and proximity to vessels of all belugas observed during operations, and report these observations to NMFS in monthly PSO reports.

(ii) Vessel crew must be trained to monitor for Endangered Species Act (ESA)-listed species prior to and during all vessel movements within the Susitna Delta Exclusion Zone. The vessel crew must report sightings to the PSO team for inclusion in the overall sighting database and reports.

(iii) Vessel operators must not move their vessels when they are unable to adequately observe the 100-m zone around vessels under power (in gear) due to darkness, fog, or other conditions, unless necessary for ensuring human safety.

§ 217.95 Requirements for monitoring and reporting.

(a) *Marine mammal visual monitoring*—(1) *Protected species observers*. AGDC must employ trained protected species observers (PSO) to conduct marine mammal monitoring for its LNG facilities construction projects.

(i) The PSOs must observe and collect data on marine mammals in and around the project area for 30 minutes before, during, and for 30 minutes after all construction work. PSOs must have no other assigned tasks during monitoring periods, and must be placed at appropriate and safe vantage point(s) practicable to monitor for marine mammals and implement shutdown or delay procedures, when applicable, through communication with the equipment operator.

(ii) [Reserved]

(2) *Protected species observer qualifications*. AGDC must adhere to the following observer qualifications:

(i) Independent PSOs (*i.e.*, not construction personnel) who have no other assigned tasks during monitoring periods must be used;

(ii) Where a team of three or more PSOs are required, a lead observer or monitoring coordinator must be designated. The lead observer must have prior experience working as a marine mammal observer during construction;

(iii) Other PSOs may substitute education (degree in biological science or related field) or training for experience;

(iv) AGDC must submit PSO CVs for approval by NMFS prior to the onset of pile driving;

(v) The PSOs must have the ability to conduct field observations and collect data according to assigned protocols;

(vi) The PSOs must have the experience or training in the field identification of marine mammals, including the identification of behaviors;

(vii) The PSOs must have sufficient training, orientation, or experience with the construction operation to provide for personal safety during observations;

(viii) The PSOs must have writing skills sufficient to prepare a report of observations including but not limited to the number and species of marine mammals observed; dates and times when in-water construction activities were conducted; dates, times, and reason for implementation of mitigation (or why mitigation was not implemented when required); and marine mammal behavior; and

(ix) The PSOs must have the ability to communicate orally, by radio or in person, with project personnel to provide real-time information on marine mammals observed in the area as necessary.

(3) *Marine mammal monitoring protocols*. AGDC must adhere to the following marine mammal monitoring protocols:

(i) For pile driving activities, a minimum of two PSOs must be on duty at all times;

(ii) For pile driving activities, PSOs must be stationed on a bluff with minimum height 500 feet above sea level immediately above the construction site;

(iii) For marine mammal monitoring during pipe laying activities, at least one PSO must be on the barge and on watch;

(iv) PSOs may not exceed 4 consecutive watch hours; must have a minimum two-hour break between watches; and may not exceed a

combined watch schedule of more than 12 hours in a 24-hour period;

(v) PSOs must have no other construction-related tasks while conducting monitoring;

(vi) Monitoring must be conducted from 30 minutes prior to commencement of pile driving, throughout the time required to drive a pile, and for 30 minutes following the conclusion of pile driving;

(vii) Monitoring must be conducted from 30 minutes prior to commencement of pipe laying activity, throughout the time of pipe laying, and for 30 minutes following the conclusion of pipe laying for the segment;

(viii) During all observation periods, PSOs must use high-magnification (25X), as well as standard handheld (7X) binoculars, and the naked eye to search continuously for marine mammals;

(ix) Monitoring distances must be measured with range finders. Distances to animals must be based on the best estimate of the PSO, relative to known distances to objects in the vicinity of the PSO; and

(x) Bearings to animals must be determined using a compass.

(4) *Marine mammal monitoring data collection*. PSOs must collect the following information during marine mammal monitoring:

(i) Date and time that monitored activity begins and ends for each day conducted (monitoring period);

(ii) Construction activities occurring during each daily observation period, including how many and what type of piles driven and distances covered during pipe laying;

(iii) Deviation from initial proposal in pile numbers, pile types, average driving times, and pipe laying distances, etc.;

(iv) Weather parameters in each monitoring period (*e.g.*, wind speed, percent cloud cover, visibility);

(v) Water conditions in each monitoring period (*e.g.*, sea state, tide state);

(vi) For each marine mammal sighting:

(A) Species, numbers, and, if possible, sex and age class of marine mammals;

(B) Description of any observable marine mammal behavior patterns, including bearing and direction of travel and distance from pile driving and pipe laying activities, and notable changes in patterns;

(C) Location and distance from pile driving and pipe laying activities to marine mammals and distance from the marine mammals to the observation point; and

(D) Estimated amount of time that the animals remained in the Level A and/ or Level B harassment zones;

(vii) Description of implementation of mitigation measures within each monitoring period (e.g., shutdown or delay); and

(viii) Other human activity in the area within each monitoring period.

(b) *Acoustic monitoring.* AGDC must conduct a sound source verification (SSV) in accordance with the requirements in the LOA, at the beginning of the pile driving to characterize the sound levels associated with different pile and hammer types, as well as to establish the marine mammal monitoring and mitigation zones.

(1) A minimum of 2 piles of each type and size must be measured.

(2) The following data, at minimum, shall be collected during acoustic monitoring and reported:

(i) Hydrophone equipment and methods: Recording device, sampling rate, distance from the pile where recordings were made; depth of recording device(s);

(ii) Type of pile being driven and method of driving during recordings; and

(iii) Mean, median, and maximum sound levels (dB re: 1 μ Pa): Cumulative sound exposure level (SEL_{cum}), peak sound pressure level (SPL_{peak}), root mean square sound pressure level (SPL_{rms}), and single-strike sound exposure level (SEL_{s-s}).

(3) An SSV report must be submitted to NMFS within 72 hours after field measurements for approval of the results.

(4) The results of the SSV report may be used to adjust the extent of Level A and Level B harassment zones in-water pile driving.

(c) *Reporting measures*—(1) *Notification.* AGDC must notify NMFS 48 hours prior to the start of each activity in Cook Inlet that may cause harassment of marine mammals. If there is a delay in activity, AGDC must also notify NMFS as soon as practicable.

(2) *Monthly report.* AGDC must submit monthly reports via email to NMFS Office of Protected Resources (OPR) and Alaska Regional Office (AKRO) for all months with project activities by the 15th of the month following the monthly reporting period. The monthly report must contain and summarize the following information:

(i) Dates, times, locations, heading, speed, weather, sea conditions (including Beaufort sea state and wind force), and a list of all in-water sound-producing activities occurring concurrent with marine mammal observations;

(ii) Species, number, location, distance from the vessel, and behavior of all observed marine mammals, as

well as associated project activity (e.g., number of power-downs and shutdowns), observed throughout all monitoring activities;

(iii) Observation data in paragraphs (a) and (b) of this section must be provided in digital spreadsheet format that can be queried;

(iv) An estimate of the number of animals (by species) exposed to sound at received levels greater than or equal to either the Level A or Level B harassment thresholds, with a discussion the time spent above those received levels and of any specific behaviors those individuals exhibited;

(v) If the extent of Level B harassment zone is beyond visual observation, AGDC must also include an appropriate adjustment to estimate the total numbers of marine mammals taken based on the portion of the areas that are monitored; and

(vi) A description of the implementation and effectiveness of the terms and conditions of the Biological Opinion's Incidental Take Statement and mitigation and monitoring measures of the LOA.

(3) *Marine mammal tally numbers.* (i) AGDC must keep a tally of the estimated number of marine mammals that are taken, based on the number of marine mammals observed within the applicable harassment zones, and alert NMFS when the authorized limit is close to being met based on prescribed monitoring measured in the final rule; and

(ii) AGDC must keep a tally of the number of marine mammal that are sighted during the pile driving and pipe laying activities.

(4) *Beluga whale takes.* AGDC must immediately notify NMFS if the number of Cook Inlet beluga estimated as taken (based on observed exposures above thresholds) reaches 80% of the authorized takes in any given calendar year during which take is authorized.

(5) *Annual report.* (i) AGDC must submit a comprehensive annual report to NMFS within 90 calendar days of the cessation of in-water work each year for review. The report must synthesize all sighting data and effort during each activity for each year.

(ii) NMFS will provide comments within 30 days after receiving annual reports, and AGDC must address the comments and submit revisions within 30 days after receiving NMFS comments.

(iii) If no comments are received from the NMFS within 30 days, the annual report is considered completed.

(iv) The report must include the following information:

(A) Summaries of monitoring effort including total hours, observation rate by species and marine mammal distribution through the study period, accounting for sea state and other factors affecting visibility and detectability of marine mammals.

(B) Analyses of the effects of various factors that may have influenced detectability of marine mammals (e.g., sea state, number of observers, fog/glare, and other factors as determined by the PSOs).

(C) Species composition, occurrence, and distribution of marine mammal sightings, including date, water depth, numbers, age/size/gender categories (if determinable), group sizes, and ice cover.

(D) Marine mammal observation data with a digital record of observation data provided in digital spreadsheet format that can be queried.

(E) Summary of implemented mitigation measures (i.e., shutdowns and delays).

(F) Number of marine mammals during periods with and without project activities (and other variables that could affect detectability), such as:

(1) Initial sighting distances versus project activity at the time of sighting;

(2) Closest point of approach versus project activity;

(3) Observed behaviors and types of movements versus project activity;

(4) Numbers of sightings/individuals seen versus project activity;

(5) Distribution around the source vessels versus project activity; and

(6) Numbers of animals detected in the exclusion zone.

(G) Analyses of the effects of project activities on listed marine mammals.

(6) *Final report.* (i) AGDC must provide NMFS, within 90 days of project completion at the end of the five-year period, a report of all parameters listed in the monthly and annual report requirements in paragraph (c) of this section, noting also all operational shutdowns or delays necessitated due to the proximity of marine mammals.

(ii) NMFS will provide comments within 30 days after receiving this report, and AGDC must address the comments and submit revisions within 30 days after receiving NMFS comments.

(iii) If no comments are received from the NMFS within 30 days, the final report is considered as final.

(7) *Reporting of injured or dead marine mammals.* (i) In the unanticipated event that the construction or demolition activities clearly cause the take of a marine mammal in a prohibited manner, such

as an injury, serious injury, or mortality, AGDC must immediately cease operations with the potential to impact marine mammals in the vicinity and immediately report the incident to the NMFS Office of Protected Resources, NMFS Alaska Regional Office, and the Alaska Region Stranding Coordinators. The report must include the following information:

(A) Time, date, and location (latitude/longitude) of the incident;

(B) Description of the incident;

(C) Status of all sound source use in the 24 hours preceding the incident;

(D) Environmental conditions (*e.g.*, wind speed and direction, sea state, cloud cover, visibility, and water depth);

(E) Description of marine mammal observations in the 24 hours preceding the incident;

(F) Species identification or description of the animal(s) involved;

(G) The fate of the animal(s); and

(H) Photographs or video footage of the animal (if equipment is available).

(ii) Activities must not resume until NMFS is able to review the circumstances of the prohibited take. NMFS must work with AGDC to determine what is necessary to minimize the likelihood of further prohibited take and ensure Marine Mammal Protection Act (MMPA) compliance. AGDC may not resume its activities until notified by NMFS via letter, email, or telephone.

(iii) In the event that AGDC discovers an injured or dead marine mammal, and the lead PSO determines that the cause of the injury or death is unknown and the death is relatively recent (*i.e.*, in less than a moderate state of decomposition as described in paragraph (c)(7)(iv) of this section), AGDC must immediately report the incident to the NMFS Office of Protected Resources, NMFS Alaska Regional Office, and the Alaska Regional Stranding Coordinators. The report must include the same information identified in paragraph (b)(3)(i) of this section. Activities may continue while NMFS reviews the circumstances of the incident. NMFS will work with AGDC to determine whether modifications in the activities are appropriate.

(iv) In the event that AGDC discovers an injured or dead marine mammal, and the lead PSO determines that the injury or death is not associated with or related to the activities authorized in the LOA (*e.g.*, previously wounded animal, carcass with moderate to advanced decomposition, or scavenger damage),

AGDC must report the incident to the NMFS Office of Protected Resources, NMFS Alaska Regional Office, and the Alaska Regional Stranding Coordinators, within 48 hours of the discovery. AGDC must provide photographs or video footage (if available) or other documentation of the stranded animal sighting to NMFS and the Marine Mammal Stranding Network. AGDC may continue its operations under such a case.

§ 217.46 Letters of Authorization.

(a) To incidentally take marine mammals pursuant to the regulations in this subpart, AGDC must apply for and obtain (LOAs) in accordance with § 216.106 of this chapter for conducting the activity identified in § 217.40(c).

(b) LOAs, unless suspended or revoked, may be effective for a period of time not to extend beyond the expiration date of the regulations in this subpart.

(c) If an LOA(s) expires prior to the expiration date of the regulations in this subpart, AGDC may apply for and obtain a renewal of the LOA(s).

(d) In the event of projected changes to the activity or to mitigation, monitoring, reporting (excluding changes made pursuant to the adaptive management provision of § 217.47(c)(1)) required by an LOA, AGDC must apply for and obtain a modification of LOAs as described in § 217.47.

(e) Each LOA must set forth:

(1) Permissible methods of incidental taking;

(2) Means of effecting the least practicable adverse impact (*i.e.*, mitigation) on the species, their habitat, and the availability of the species for subsistence uses; and

(3) Requirements for monitoring and reporting.

(f) Issuance of the LOA(s) must be based on a determination that the level of taking must be consistent with the findings made for the total taking allowable under the regulations in this subpart.

(g) Notice of issuance or denial of the LOA(s) must be published in the **Federal Register** within 30 days of a determination.

§ 217.47 Renewals and modifications of Letters of Authorization.

(a) An LOA issued under §§ 216.106 of this chapter and 217.46 for the activity identified in § 217.40(c) must be renewed or modified upon request by the applicant, provided that:

(1) The proposed specified activity and mitigation, monitoring, and

reporting measures, as well as the anticipated impacts, are the same as those described and analyzed for the regulations in this subpart (excluding changes made pursuant to the adaptive management provision in paragraph (c)(1) of this section); and

(2) NMFS determines that the mitigation, monitoring, and reporting measures required by the previous LOA(s) under the regulations in this subpart were implemented.

(b) For LOA modification or renewal requests by the applicant that include changes to the activity or the mitigation, monitoring, or reporting measures (excluding changes made pursuant to the adaptive management provision in paragraph (c)(1) of this section) that do not change the findings made for the regulations in this subpart or result in no more than a minor change in the total estimated number of takes (or distribution by species or years), NMFS may publish a notice of proposed LOA in the **Federal Register**, including the associated analysis of the change, and solicit public comment before issuing the LOA.

(c) An LOA issued under §§ 216.106 of this chapter and 217.46 for the activity identified in § 217.40(c) may be modified by NMFS under the following circumstances:

(1) *Adaptive management.* After consulting with AGDC regarding the practicability of the modifications, NMFS may modify (including by adding or removing measures) the existing mitigation, monitoring, or reporting measures if doing so creates a reasonable likelihood of more effectively accomplishing the goals of the mitigation and monitoring set forth in the regulations in this subpart.

(i) Possible sources of data that could contribute to the decision to modify the mitigation, monitoring, or reporting measures in an LOA:

(A) Results from AGDC's monitoring from the previous year(s);

(B) Results from other marine mammal and/or sound research or studies; or

(C) Any information that reveals marine mammals may have been taken in a manner, extent or number not authorized by the regulations in this subpart or subsequent LOAs.

(ii) If, through adaptive management, the modifications to the mitigation, monitoring, or reporting measures are substantial, NMFS must publish a notice of proposed LOA in the **Federal Register** and solicit public comment.

(2) *Emergencies*. If NMFS determines that an emergency exists that poses a significant risk to the well-being of the species or stocks of marine mammals specified in LOAs issued pursuant to

§§ 216.106 of this chapter and 217.46, an LOA may be modified without prior notice or opportunity for public comment. Notice would be published in

the **Federal Register** within 30 days of the action.

§§ 217.48–217.49 [Reserved]

ELECTRONIC RESEARCH

World Wide Web

Full text of the daily Federal Register, CFR and other publications is located at: www.govinfo.gov.

Federal Register information and research tools, including Public Inspection List and electronic text are located at: www.federalregister.gov.

E-mail

FEDREGTOC (Daily Federal Register Table of Contents Electronic Mailing List) is an open e-mail service that provides subscribers with a digital form of the Federal Register Table of Contents. The digital form of the Federal Register Table of Contents includes HTML and PDF links to the full text of each document.

To join or leave, go to <https://public.govdelivery.com/accounts/USGPOOFR/subscriber/new>, enter your email address, then follow the instructions to join, leave, or manage your subscription.

PENS (Public Law Electronic Notification Service) is an e-mail service that notifies subscribers of recently enacted laws.

To subscribe, go to <http://listserv.gsa.gov/archives/publaws-l.html> and select *Join or leave the list (or change settings)*; then follow the instructions.

FEDREGTOC and **PENS** are mailing lists only. We cannot respond to specific inquiries.

Reference questions. Send questions and comments about the Federal Register system to: fedreg.info@nara.gov

The Federal Register staff cannot interpret specific documents or regulations.

LIST OF PUBLIC LAWS

Note: No public bills which have become law were received by the Office of the Federal Register for inclusion in today's **List of Public Laws**.

Last List August 13, 2020

Public Laws Electronic Notification Service (PENS)

PENS is a free email notification service of newly enacted public laws. To subscribe, go to <https://>

listserv.gsa.gov/cgi-bin/wa.exe?SUBED1=PUBLAWS-L&A=1

Note: This service is strictly for email notification of new laws. The text of laws is not available through this service. **PENS** cannot respond to specific inquiries sent to this address.
