k. This application is not ready for environmental analysis at this time.

l. *The existing pilot project license authorizes the following project facilities:* (a) Thirty 35-kilowatt, 5-meter-diameter axial flow turbine-generator units; (b) ten triframe mounts, each supporting three turbine-generator units; (c) 480-volt underwater cables from each triframe mount to five shoreline switchgear vaults that interconnect to a control room and interconnection points; and (d) appurtenant facilities for navigation safety and operation.

Under the current pilot project license, which expires on December 31, 2021, Verdant installed, tested, and then removed a total of five turbine-generator units. Verdant also proposes to install three turbine-generator units attached to one triframe mount in late 2020 (*i.e.*, Install B–1), under the existing pilot project license.

The proposed project would be constructed in three phases: Install B–1 (under the existing pilot license, as noted above), Install B–2 (three triframe mounts with a total of nine turbine-generator units), and Install C (one triframe mount with three turbine-generator units). The project would consist of a maximum of fifteen 35-kilowatt, 5-meter-diameter axial flow turbine-generator units with a total installed capacity of 0.525 megawatt. Each of the five triframe mounts would be connected via underwater cables to an existing control room and a proposed shoreline switchgear vault, and via an overhead transmission line (for the first two triframe mounts) and an underground transmission line (for the remaining three triframe mounts) to a point of interconnection.
