

proposed functionality would provide ATP Holders with a greater choice of exchanges from which to execute such orders. The proposal is structured to offer the same enhancement to all market participants and would not impose an intra-market competitive burden on any participant. The price improvement functionality for the AON functionality for both Single-Leg and CUBE Auctions are designed to promote competition for ATP Holders to compete amongst each other by responding with not only their best price, but also the full size for a particular auction.

The Exchange notes that it operates in a highly competitive market in which market participants can readily direct order flow to competing venues who offer similar functionality. The Exchange believes that the proposed rule change will relieve any burden on, or otherwise promote, competition. The Exchange believes this proposed rule change is necessary to permit fair competition among the options exchanges and to establish more uniform price improvement auction rules on the various options exchanges. The proposed functionality may lead to an increase in Exchange volume and should allow the Exchange to better compete against other markets that already offer similar price improvement mechanisms for larger-sized orders. The Exchange anticipates that this proposal will create new opportunities for the Exchange to attract new business and compete on equal footing with those options exchanges that offer auction AON functionality for larger-sized orders and for this reason the proposal does not create an undue burden on intermarket competition. By contrast, not having the proposed functionality places the Exchange at a competitive disadvantage vis-à-vis other exchanges that offer similar price improvement mechanisms for larger-sized orders.
