Units 1 and 2**

**AGENCY:** Nuclear Regulatory Commission.

**ACTION:** License amendment application; opportunity to request a hearing and to petition for leave to intervene.

The amendments provide a new Technical Specification (TS) 3.7.5, "Auxiliary Feedwater (AFW) System," Condition G, to address a one-time planned Diablo Canyon, Unit 1, Cycle 22, AFW system alignment for which current TS 3.7.5 would require shutdown.

**DATES:** A request for a hearing or petition for leave to intervene must be filed by November 9, 2020.

**SUPPLEMENTARY INFORMATION:**

## I. Introduction

The NRC issued amendments to Facility Operating License Nos. DPR-80 and DPR-82, issued to PG&E for operation of Diablo Canyon, Units 1 and 2. The amendments avoid an unnecessary plant shutdown during the expected time needed to perform potential repairs to the Unit 1 AFW system piping that PG&E conservatively anticipates may be identified during the Diablo Canyon, Unit 1, Cycle 22, planned inspections to the AFW system. Specifically, the amendments provide a new TS 3.7.5, "Auxiliary Feedwater (AFW) System," Condition G, to allow operation of Diablo Canyon, Unit 1, for up to 7 days when the AFW system is aligned in a manner for which current TS 3.7.5 would require shutdown. The amendments are only for Cycle 22 during repair of the AFW piping. The NRC staff finds that the application for the license amendments complies with the requirements of the Atomic Energy Act of 1954, as amended, and the NRC's regulations. The NRC staff's evaluation may be obtained and examined in ADAMS under Accession No. ML20235R635.

In its license amendment request dated August 12, 2020, the licensee requested that the proposed amendments be processed by the NRC on an exigent basis in accordance with the provisions in section 50.91(a)(6) of title 10 of the *Code of Federal Regulations* (10 CFR). The licensee provided the following information to explain the exigency of the amendments. Because of localized corrosion identified on Diablo Canyon, Unit 2, AFW piping during a recent Diablo Canyon, Unit 2, maintenance outage, the licensee intends to perform inspections of Diablo Canyon, Unit 1, AFW piping in the near term to ensure that Diablo Canyon, Unit 1, is not similarly affected. If similar below-minimum pipe wall thicknesses are found in the Unit 1 AFW system piping and elbows that were found in Unit 2, based on the estimated time-to-repair gained from the Unit 2 repair, it is likely that the current TS 3.7.5 Required Actions B.1 or D.1 would result in the required shutdown of Unit 1. The TS 3.7.5 change would avoid an unnecessary plant shutdown during the expected time needed to perform the potential repairs and associated post-maintenance inspections and testing to the Unit 1 AFW system piping. The licensee stated that it has assessed the potential extent of the Unit 1 AFW system piping repairs based on the required repairs for Unit 2 and is making its best efforts to make a timely
