(i) *In general.* Interest is an amount paid, received, or accrued as compensation for the use or forbearance of money under the terms of an instrument or contractual arrangement, including a series of transactions, that is treated as a debt instrument for purposes of section 1275(a) and § 1.1275–1(d), and not treated as stock under § 1.385–3, or an amount that is treated as interest under other provisions of the Code or the Income Tax Regulations. Thus, interest includes, but is not limited to, the following:

(A) Original issue discount (OID), as adjusted by the holder for any acquisition premium or amortizable bond premium;

(B) Qualified stated interest, as adjusted by the holder for any amortizable bond premium or by the issuer for any bond issuance premium;

(C) Acquisition discount;

(D) Amounts treated as taxable OID under section 1286 (relating to stripped bonds and stripped coupons);

(E) Accrued market discount on a market discount bond to the extent includible in income by the holder under either section 1276(a) or 1278(b);

(F) OID includible in income by a holder that has made an election under § 1.1272–3 to treat all interest on a debt instrument as OID;

(G) OID on a synthetic debt instrument arising from an integrated transaction under § 1.1275–6;

(H) Repurchase premium to the extent deductible by the issuer under § 1.163–7(c) (determined without regard to section 163(j));

(I) Deferred payments treated as interest under section 483;

(J) Amounts treated as interest under a section 467 rental agreement;

(K) Amounts treated as interest under section 988;

(L) Forgone interest under section 7872;

(M) De minimis OID taken into account by the issuer;

(N) Amounts paid or received in connection with a sale-repurchase agreement treated as indebtedness under Federal tax principles; however, in the case of a sale-repurchase agreement relating to tax-exempt bonds, the amount is not tax-exempt interest;

(O) Redeemable ground rent treated as interest under section 163(c); and

(P) Amounts treated as interest under section 636.

(ii) *Swaps with significant nonperiodic payments*—(A) *In general.* Except as provided in paragraphs (b)(22)(ii)(B) and (C) of this section, a swap with significant nonperiodic payments is treated as two separate transactions consisting of an on-market, level payment swap and a loan. The loan must be accounted for by the parties to the contract independently of the swap. The time value component associated with the loan, determined in accordance with § 1.446–3(f)(2)(iii)(A), is recognized as interest expense to the payor and interest income to the recipient.

(B) *Exception for cleared swaps.* Paragraph (b)(22)(ii)(A) of this section does not apply to a cleared swap (as defined in paragraph (b)(6) of this section).

(C) *Exception for non-cleared swaps subject to margin or collateral requirements.* Paragraph (b)(22)(ii)(A) of this section does not apply to a non-cleared swap that requires the parties to meet the margin or collateral requirements of a federal regulator or that provides for margin or collateral requirements that are substantially similar to a cleared swap or a non-cleared swap subject to the margin or collateral requirements of a federal regulator. For purposes of this paragraph (b)(22)(ii)(C), the term *federal regulator* means the Securities and Exchange Commission (SEC), the Commodity Futures Trading Commission (CFTC), or a prudential regulator, as defined in section 1a(39) of the Commodity Exchange Act (7 U.S.C. 1a), as amended by section 721 of the Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010, Public Law 111–203, 124 Stat. 1376, Title VII.

(iii) *Other amounts treated as interest*—(A) *Treatment of premium*—(*1*) *Issuer.* If a debt instrument is issued at a premium within the meaning of § 1.163–13, any ordinary income under § 1.163–13(d)(4) is treated as interest income of the issuer.

(*2*) *Holder.* If a taxable debt instrument is acquired at a premium within the meaning of § 1.171–1 and the holder elects to amortize the premium, any amount deductible as a bond premium deduction under section 171(a)(1) and § 1.171–2(a)(4)(i)(A) or (C) is treated as interest expense of the holder.

(B) *Treatment of ordinary income or loss on certain debt instruments.* If an issuer of a contingent payment debt instrument subject to § 1.1275–4(b), a nonfunctional currency contingent payment debt instrument subject to § 1.988–6, or an inflation-indexed debt instrument subject to § 1.1275–7 recognizes ordinary income on the debt instrument in accordance with the rules in § 1.1275–4(b), § 1.988–6(b)(2), or § 1.1275–7(f), whichever is applicable, the ordinary income is treated as interest income of the issuer. If a holder of a contingent payment debt instrument subject to § 1.1275–4(b), a nonfunctional currency contingent payment debt instrument subject to § 1.988–6, or an inflation-indexed debt instrument subject to § 1.1275–7 recognizes an ordinary loss on the debt instrument in accordance with the rules in § 1.1275–4(b), § 1.988–6(b)(2), or § 1.1275–7(f), whichever is applicable, the ordinary loss is treated as interest expense of the holder.

(C) *Substitute interest payments.* A substitute interest payment described in § 1.861–2(a)(7) is treated as interest expense to the payor only if the payment relates to a sale-repurchase agreement or a securities lending transaction that is not entered into by the payor in the ordinary course of the payor's business. A substitute interest payment described in § 1.861–2(a)(7) is treated as interest income to the recipient only if the payment relates to a sale-repurchase agreement or a securities lending transaction that is not entered into by the recipient in the ordinary course of the recipient's business; however, in the case of a sale-repurchase agreement or a securities lending transaction relating to tax-exempt bonds, the recipient of a substitute payment does not receive tax-exempt interest income. This paragraph (b)(22)(iii)(C) does not apply to an amount described in paragraph (b)(22)(i)(N) of this section.

(D) *Section 1258 gain.* Any gain treated as ordinary gain under section 1258 is treated as interest income.

(E) *Factoring income.* The excess of the amount that a taxpayer collects on a factored receivable (or realizes upon the sale or other disposition of the factored receivable) over the amount paid for the factored receivable by the taxpayer is treated as interest income. For purposes of this paragraph (b)(22)(iii)(E), the term *factored receivable* includes any account receivable or other evidence of indebtedness, whether or not issued at a discount and whether or not bearing stated interest, arising out of the disposition of property or the performance of services by any person, if such account receivable or evidence of indebtedness is acquired by a person other than the person who disposed of the property or provided the services that gave rise to the account receivable or evidence of indebtedness. This paragraph (b)(22)(iii)(E) does not apply to an amount described in paragraph (b)(22)(i)(C) or (E) of this section.

(F) [*Reserved*]

(iv) *Anti-avoidance rules*—(A) *Principal purpose to reduce interest expense*—(*1*) *Treatment as interest expense.* Any expense or loss economically equivalent to interest is treated as interest expense if a principal purpose of structuring the transaction(s) is to reduce an amount incurred by the taxpayer that otherwise would have been described in paragraph (b)(22)(i), (ii), or (iii) of this section. For this purpose, the fact that the taxpayer has a business purpose for obtaining the use of funds does not affect the determination of whether the manner in which the taxpayer structures the transaction(s) is with a principal purpose of reducing the taxpayer's interest expense. In addition, the fact that the taxpayer has obtained funds at a lower pre-tax cost based on the structure of the transaction(s) does not affect the determination of whether the manner in which the taxpayer structures the transaction(s) is with a principal purpose of reducing the taxpayer's interest expense. For purposes of this paragraph (b)(22)(iv)(A)(*1*), any expense or loss is economically equivalent to interest to the extent that the expense or loss is—

(*i*) Deductible by the taxpayer;

(*ii*) Incurred by the taxpayer in a transaction or series of integrated or related transactions in which the taxpayer secures the use of funds for a period of time;

(*iii*) Substantially incurred in consideration of the time value of money; and

(*iv*) Not described in paragraph (b)(22)(i), (ii), or (iii) of this section.

(*2*) *Corresponding treatment of amounts as interest income.* If a taxpayer knows that an expense or loss is treated by the payor as interest expense under paragraph (b)(22)(iv)(A)(*1*) of this section, the taxpayer provides the use of funds for a period of time in the transaction(s) subject to paragraph (b)(22)(iv)(A)(*1*) of this section, the taxpayer earns income or gain with respect to the transaction(s), and such income or gain is substantially earned in consideration of the time value of money provided by the taxpayer, such income or gain is treated as interest income to the extent of the expense or loss treated by the payor as interest expense under paragraph (b)(22)(iv)(A)(*1*) of this section.

(B) *Interest income artificially increased.* Notwithstanding paragraphs (b)(22)(i) through (iii) of this section, any income realized by a taxpayer in a transaction or series of integrated or related transactions is not treated as interest income of the taxpayer if and to the extent that a principal purpose for structuring the transaction(s) is to artificially increase the taxpayer's business interest income. For this purpose, the fact that the taxpayer has a business purpose for holding interest generating assets does not affect the determination of whether the manner in which the taxpayer structures the transaction(s) is with a principal purpose of artificially increasing the taxpayer's business interest income.

(C) *Principal purpose.* Whether a transaction or a series of integrated or related transactions is entered into with a principal purpose described in paragraph (b)(22)(iv)(A) or (B) of this section depends on all the facts and circumstances related to the transaction(s), except for those facts described in paragraph (b)(22)(iv)(A) or (B) of this section. A purpose may be a principal purpose even though it is outweighed by other purposes (taken together or separately). Factors to be taken into account in determining whether one of the taxpayer's principal purposes for entering into the transaction(s) include the taxpayer's normal borrowing rate in the taxpayer's functional currency, whether the taxpayer would enter into the transaction(s) in the ordinary course of the taxpayer's trade or business, whether the parties to the transaction(s) are related persons (within the meaning of section 267(b) or section 707(b)), whether there is a significant and bona fide business purpose for the structure of the transaction(s), whether the transactions are transitory, for example, due to a circular flow of cash or other property, and the substance of the transaction(s).

(D) *Coordination with anti-avoidance rule in § 1.163(j)–2(j).* The anti-avoidance rules in paragraphs (b)(22)(iv)(A) through (C) of this section, rather than the anti-avoidance rules in § 1.163(j)–2(j), apply to determine whether an item is treated as interest expense or interest income.

(v) *Examples.* The examples in this paragraph (b)(22)(v) illustrate the application of paragraph (b)(22)(iv) of this section. Unless otherwise indicated, A, B, C, D, and Bank are domestic C corporations that are publicly traded; the exemption for certain small businesses in § 1.163(j)–2(d) does not apply; A is not engaged in an excepted trade or business; and all amounts of interest expense are deductible except for the potential application of section 163(j).

(A) *Example 1*—(*1*) *Facts.* A is engaged in a manufacturing business and uses the calendar year as its annual accounting period. A's functional currency is the U.S. dollar and A conducts virtually all of its business in the U.S. dollar. A has no connection to Japan or the Japanese yen in the ordinary course of business. A projects that it will have business interest expense of $100x on an existing loan obligation with a stated principal amount of $2,000x (Loan 1) and no business interest income in its taxable year ending December 31, 2021. In early 2021, A enters into the following transactions, which A would not have entered into in the ordinary course of A's trade or business:

(*i*) A enters into a loan obligation in which A borrows Japanese yen from Bank in an amount equivalent to $2,000x with an interest rate of 1 percent (Loan 2) (at the time of the loan, the U.S. dollar equivalent interest rate on a loan of $2,000x is 5 percent);

(*ii*) A enters into a foreign currency swap transaction (FX Swap) with Bank with a notional principal amount of $2,000x under which A receives Japanese yen at 1 percent multiplied by the amount of Japanese yen borrowed from Bank (which for 2021 equals $20x) and pays U.S. dollars at 5 percent multiplied by a notional amount of $2,000x ($100x per year);

(*iii*) The FX Swap is not integrated with Loan 2 under § 1.988–5; and

(*iv*) A enters into a spot transaction with Bank to convert the proceeds of Loan 2 into $2,000x U.S. dollars and A uses the U.S. dollars to repay Loan 1.

(*2*) *Analysis.* A principal purpose of A entering into the transactions with Bank was to try to reduce the amount incurred by A that otherwise would be interest expense; in effect, A sought to alter A's cost of borrowing by converting a substantial portion of its interest expense deductions on Loan 1 into section 165 deductions on the FX Swap ($100x interest expense related to Loan 1 compared to $20x interest expense related to Loan 2 and $80x section 165 deduction). A's functional currency is the U.S. dollar and A conducts virtually all of its business in the U.S. dollar. A has no connection to Japan or the Japanese yen and would not have entered into the transactions in the ordinary course of A's trade or business. The section 165 deductions related to the FX Swap were incurred by A in a series of transactions in which A secured the use of funds for a period of time and were substantially incurred in consideration of the time value of money. As a result, under paragraph (b)(22)(iv)(A)(*1*) of this section, for purposes of section 163(j), the $80x paid by A to Bank on the FX Swap is treated by A as interest expense.

(B) *Example 2*—(*1*) *Facts.* A is engaged in a manufacturing business and uses the calendar year as its annual accounting period. A does not use gold in its manufacturing business. In 2021, A expects to borrow $1,000x for six months. In January 2021, A borrows from B two ounces of gold at a time when the spot price for gold is $500x per ounce. A agrees to return the two ounces of gold in six months. A sells the two ounces of gold to C for $1,000x. A then enters into a contract with D to purchase two ounces of gold six months in the future for $1,013x. In exchange for the use of $1,000x in cash for six months, A has sustained a loss of $13x in connection with these related transactions. A would not have entered into the gold transactions in the ordinary course of A's trade or business.

(*2*) *Analysis.* In a series of related transactions, A has obtained the use of $1,000x for six months and created a loss of $13x substantially incurred in consideration of the time value of money. A would not have entered into the gold transactions in the ordinary course of A's trade or business. A entered into the transactions with a principal purpose of structuring the transactions to reduce its interest expense (in effect, A sought to convert what otherwise would be interest expense into a loss through the transactions). As a result, under paragraph (b)(22)(iv)(A)(*1*) of this section, for purposes of section 163(j), the loss of $13x is treated by A as interest expense.

(C) *Example 3*—(*1*) *Facts.* A is engaged in a manufacturing business and uses the calendar year as its annual accounting period. A's functional currency is the U.S. dollar and A conducts virtually all of its business in the U.S. dollar. A has no connection to Argentina or the Argentine peso as part of its ordinary course of business. As of January 1, 2021, A expects to have adjusted taxable income (as defined in paragraph (b)(1) of this section) of $200x in the taxable year ending December 31, 2021. A also projects that it will have business interest expense of $70x on an existing loan in 2021. A has cash equivalents of $100x on which A expects to earn $5x of business interest income. In early 2021, A enters into the following transactions, which A would not have entered into in the ordinary course of A's trade or business:

(*i*) A enters into a spot transaction with Bank to convert the $100x of cash equivalents into an amount in Argentine pesos equivalent to $100x and A uses the Argentine pesos to purchase an Argentine peso note (Note) issued by a subsidiary of Bank for the Argentine peso equivalent of $100x; the Note pays interest at a 10 percent rate; and

(*ii*) A enters into a foreign currency swap transaction (FX Swap) with Bank with a notional principal amount of $100x under which A pays Argentine pesos at 10 percent multiplied by the amount of Argentine peso principal amount on the Note (which for 2021 equals $10x) and receives U.S. dollars at 5 percent multiplied by a notional amount of $100x ($5x per year).

(*2*) *Analysis.* A principal purpose of A entering into the transactions was to increase the amount of business interest income received by A; in effect, A increased its business interest income by separately accounting for its net deduction of $5x per year on the FX Swap. A's functional currency is the U.S. dollar and A conducts virtually all of its business in the U.S. dollar. A has no connection to Argentina or the Argentine peso and would not have entered into the transactions in the ordinary course of A's trade or business. The FX Swap was incurred by A as a part of a transaction that A entered into with a principal purpose of artificially increasing its business interest income. As a result, under paragraph (b)(22)(iv)(B) of this section, for purposes of section 163(j), the $10x business interest income earned on the Note by A is reduced by $5x (the net $5x paid by A on the FX Swap).

(D) *Example 4*—(*1*) *Facts.* A is wholly owned by FC, a foreign corporation organized in foreign country X. A uses the calendar year for its annual accounting period. FC has a better credit rating than A. A needs to borrow $2,000x in the taxable year ending December 31, 2021, to fund its business operations. A also projects that, if it borrows $2,000x on January 1, 2021, and pays a market rate of interest, it will have business interest expense of $100x in its taxable year ending December 31, 2021. In early 2021, A enters into the following transactions:

(*i*) A enters into a loan obligation in which A borrows $2,000x from Bank with an interest rate of 3 percent (Loan 1);

(*ii*) FC and Bank enter into a guarantee arrangement (Guarantee) under which FC agrees to guarantee Bank that Bank will be timely paid all of the amounts due on Loan 1; and

(*iii*) A enters into a guarantee fee agreement with FC (Guarantee Fee Agreement) under which A agrees to pay FC $40x in return for FC entering into the Guarantee, which was not an agreement that A would have entered into in the ordinary course of A's trade or business.

(*2*) *Analysis.* A principal purpose of A entering into the transactions was to reduce the amount incurred by A that otherwise would be interest expense; in effect, A sought to convert a substantial portion of its interest expense deductions on Loan 1 into section 162 deductions on the Guarantee Fee Agreement ($100x interest expense had A borrowed without the Guarantee compared to $60x interest expense related to Loan 1 and $40x section 162 deduction). A would not have entered into the Guarantee Fee Agreement in the ordinary course of A's trade or business. The $40x section 162 deductions related to the Guarantee Fee Agreement were incurred by A in a series of transactions in which A secured the use of funds for a period of time and were substantially incurred in consideration of the time value of money. As a result, under paragraph (b)(22)(iv)(A)(*1*) of this section, for purposes of section 163(j), the $40x paid by A to FC on the Guarantee Fee Agreement is treated by A as interest expense.

(E) *Example 5*—(*1*) *Facts.* A, B, and C are equal partners in ABC partnership. ABC is considering acquiring an additional loan from a third-party lender to expand its business operations. However, ABC already has significant debt and interest expense. For the purpose of reducing the amount of additional interest expense ABC would have otherwise incurred by borrowing, A agrees to make an additional contribution to ABC for use in its business operations in exchange for a guaranteed payment for the use of capital under section 707(c).

(*2*) *Analysis.* The guaranteed payment is deductible by ABC, incurred by ABC in a transaction in which ABC secures the use of funds for a period of time, substantially incurred in consideration of the time value of money, and not described in paragraph (b)(22)(i), (ii), or (iii) of this section. As a result, the guaranteed payment to A is economically equivalent to the interest that ABC would have incurred on an additional loan from a third-party lender. A principal purpose of A making a contribution in exchange for a guaranteed payment for the use of capital was to reduce the amount incurred by ABC that otherwise would be interest expense. As a result, under paragraph (b)(22)(iv)(A)(*1*) of this section, for purposes of section 163(j), such guaranteed payment is treated as interest expense of ABC for purposes of section 163(j). In addition, under paragraph (b)(22)(iv)(A)(*2*) of this section, if A knows that the guaranteed payment is treated as interest expense of ABC, because A provides the use of funds for a period of time in a transaction subject to paragraph (b)(22)(iv)(A)(*1*) of this section, A earns income or gain with respect to the transaction, and such income or gain is substantially earned in consideration of the time value of money provided by A, the guaranteed payment is treated as interest income of A for purposes of section 163(j).

(23) *Interest expense.* The term *interest expense* means interest that is paid or accrued, or treated as paid or accrued, for the taxable year.

(24) *Interest income.* The term *interest income* means interest that is included in gross income for the taxable year.

(25) *Member.* The term *member* has the meaning provided in § 1.1502–1(b).

(26) *Motor vehicle.* The term *motor vehicle* means a motor vehicle as defined in section 163(j)(9)(C).

(27) *Old section 163(j).* The term *old section 163(j)* means section 163(j) immediately prior to its amendment by Public Law 115–97, 131 Stat. 2054 (2017).

(28) *Ownership change.* The term *ownership change* has the meaning provided in section 382 and the regulations in this part under section 382 of the Code.

(29) *Ownership date.* The term *ownership date* has the meaning provided in section 382 and the regulations in this part under section 382 of the Code.

(30) *Real estate investment trust.* The term *real estate investment trust* (REIT) has the meaning provided in section 856.

(31) *Real property.* The term *real property* includes—

(i) Real property as defined in § 1.469–9(b)(2); and

(ii) Any direct or indirect right, including a license or other contractual right, to share in the appreciation in value of, or the gross or net proceeds or profits generated by, an interest in real property, including net proceeds or profits associated with tolls, rents or other similar fees.

(32) *Regulated investment company.* The term *regulated investment company* (RIC) has the meaning provided in section 851.

(33) *Relevant foreign corporation.* The term *relevant foreign corporation* means any foreign corporation whose classification is relevant under § 301.7701–3(d)(1) for a taxable year, other than solely pursuant to section 881 or 882.

(34) *S corporation.* The term *S corporation* has the meaning provided in section 1361(a)(1).

(35) [*Reserved*]

(36) *Section 163(j) limitation.* The term *section 163(j) limitation* means the limit on the amount of business interest expense that a taxpayer may deduct in a taxable year under section 163(j) and § 1.163(j)–2(b).

(37) *Section 163(j) regulations.* The term *section 163(j) regulations* means this section and §§ 1.163(j)–2 through 1.163(j)–11.

(38) *Separate return limitation year.* The term *separate return limitation year* (SRLY) has the meaning provided in § 1.1502–1(f).

(39) *Separate return year.* The term *separate return year* has the meaning provided in § 1.1502–1(e).

(40) *Separate tentative taxable income.* The term *separate tentative taxable income* with respect to a taxpayer and a taxable year has the meaning provided in § 1.1502–12, but for this purpose computed without regard to the application of the section 163(j) limitation and with the addition of the adjustments made in paragraph (b)(43)(ii) of this section and § 1.163(j)–4(d)(2)(iv).

(41) *Tax-exempt corporation.* The term *tax-exempt corporation* means any tax-exempt organization that is organized as a corporation.

(42) *Tax-exempt organization.* The term *tax-exempt organization* means any entity subject to tax under section 511.

(43) *Tentative taxable income*—(i) *In general.* The term *tentative taxable income,* with respect to a taxpayer and a taxable year, generally is determined in the same manner as taxable income under section 63 but for this purpose computed without regard to the application of the section 163(j) limitation. Tentative taxable income is computed without regard to any disallowed business interest expense carryforwards.

(ii) [Reserved]

(iii) *Special rules for defining tentative taxable income.* (A) For special rules defining the tentative taxable income of a RIC or REIT, see § 1.163(j)–4(b)(4)(ii).

(B) For special rules defining the tentative taxable income of consolidated groups, see § 1.163(j)–4(d)(2)(iv).

(C) For special rules defining the tentative taxable income of a partnership, see § 1.163(j)–6(d)(1).

(D) For special rules defining the tentative taxable income of an S corporation, see § 1.163(j)–6(l)(3).

(E) For special rules clarifying that tentative taxable income takes sections 461(l), 465, and 469 into account, see § 1.163(j)–3(b)(4).

(F) For special rules clarifying that tentative taxable income takes sections 461(l), 465, and 469 into account, see § 1.163(j)–3(b)(4).

(G) For special rules clarifying that tentative taxable income takes sections 461(l), 465, and 469 into account, see § 1.163(j)–3(b)(4).

(44) *Trade or business*—(i) *In general.* The term *trade or business* means a trade or business within the meaning of section 162.

(ii) *Excepted trade or business.* The term *excepted trade or business* means the trade or business of performing services as an employee, an electing real property trade or business, an electing farming business, or an excepted regulated utility trade or business. For additional rules related to excepted trades or businesses, including elections made under section 163(j)(7)(B) and (C), see § 1.163(j)–9.

(iii) *Non-excepted trade or business.* The term *non-excepted trade or business* means any trade or business that is not an excepted trade or business.

(45) *Unadjusted basis.* The term *unadjusted basis* means the basis as determined under section 1012 or other applicable sections of chapter 1 of subtitle A of the Code, including subchapters O (relating to gain or loss on dispositions of property), C (relating to corporate distributions and adjustments), K (relating to partners and partnerships), and P (relating to capital gains and losses) of the Code. Unadjusted basis is determined without regard to any adjustments described in section 1016(a)(2) or (3), any adjustments for tax credits claimed by the taxpayer (for example, under section 50(c)), or any adjustments for any portion of the basis that the taxpayer has elected to treat as an expense (for example, under section 179, 179B, or 179C).

(46) *United States shareholder.* The term *United States shareholder* has the meaning provided in section 951(b).

(c) *Applicability date*—(1) *In general.* Except as provided in paragraphs (c)(2) and (3) of this section, this section applies to taxable years beginning on or after November 13, 2020. However, taxpayers and their related parties, within the meaning of sections 267(b) and 707(b)(1), may choose to apply the rules of this section to a taxable year beginning after December 31, 2017, and before November 13, 2020 so long as the taxpayers and their related parties consistently apply the rules of the section 163(j) regulations, and, if applicable, §§ 1.263A–9, 1.263A–15, 1.381(c)(20)–1, 1.382–1, 1.382–2, 1.382–5, 1.382–6, 1.383–0, 1.383–1, 1.469–9, 1.469–11, 1.704–1, 1.882–5, 1.1362–3, 1.1368–1, 1.1377–1, 1.1502–13, 1.1502–21, 1.1502–36, 1.1502–79, 1.1502–91 through 1.1502–99 (to the extent they effectuate the rules of §§ 1.382–2, 1.382–5, 1.382–6, and 1.383–1), and 1.1504–4, to that taxable year. Additionally, taxpayers and their related parties within the meaning of sections 267(b) and 707(b)(1), otherwise relying on the notice of proposed rulemaking that was published on December 28, 2018, in the **Federal Register** (83 FR 67490) in its entirety under § 1.163(j)–1(c), may alternatively choose to follow § 1.163(j)–1(b)(1)(iii), rather than proposed § 1.163(j)–1(b)(1)(iii).

(2) *Anti-avoidance rules.* The anti-avoidance rules in paragraph (b)(22)(iv) of this section apply to transactions entered into on or after September 14, 2020.

(3) *Swaps with significant nonperiodic payments*—(i) *In general.* Except as provided in paragraph (c)(3)(ii) of this section, the rules provided in paragraph (b)(22)(ii) of this section apply to notional principal contracts entered into on or after September 14, 2021. However, taxpayers may choose to apply the rules provided in paragraph (b)(22)(ii) of this section to notional principal contracts entered into before September 14, 2021.

(ii) *Anti-avoidance rule.* The anti-avoidance rules in paragraph (b)(22)(iv) of this section (applied without regard to the references to paragraph (b)(22)(ii) of this section) apply to a notional principal contract entered into on or after September 14, 2020.

§ 1.163(j)–2 Deduction for business interest expense limited.

(a) *Overview.* This section provides general rules regarding the section 163(j) limitation. Paragraph (b) of this section provides rules regarding the basic computation of the section 163(j) limitation. Paragraph (c) of this section provides rules for disallowed business interest expense carryforwards. Paragraph (d) of this section provides rules regarding the small business exemption from the section 163(j) limitation. Paragraph (e) of this section that is part of provides rules regarding real estate mortgage investment conduits (REMICs). Paragraph (f) of this section provides rules regarding the calculation of ATI with respect to certain beneficiaries. Paragraph (g) of this section provides rules regarding tax-exempt organizations. Paragraph (h) of this section provides examples illustrating the application of this section. Paragraph (i) of this section is reserved. Paragraph (j) of this section provides an anti-avoidance rule.

(b) *General rule*—(1) *In general.* Except as otherwise provided in this section or in §§ 1.163(j)–3 through 1.163(j)–11, the amount allowed as a deduction for business interest expense for the taxable year cannot exceed the sum of—

(i) The taxpayer's business interest income for the taxable year;

(ii) 30 percent of the taxpayer's ATI for the taxable year, or zero if the taxpayer's ATI for the taxable year is less than zero; and

(iii) The taxpayer's floor plan financing interest expense for the taxable year.

(2) *50 percent ATI limitation for taxable years beginning in 2019 or 2020*—(i) *In general.* Except as otherwise provided in section 163(j)(10) and paragraph (b)(2) of this section, for any taxable year beginning in 2019 or 2020, paragraph (b)(1)(ii) of this section is applied by substituting 50 percent for 30 percent. The 50 percent ATI limitation does not apply to partnerships for taxable years beginning in 2019. Further, for a partnership taxable year beginning in 2020 for which an election out of section 163(j)(10)(A)(i) has not been made, § 1.163(j)–6(f)(2)(xi) is applied by substituting two for ten-thirds when grossing up each partner's final ATI capacity excess amount.

(ii) *Election out of the 50 percent ATI limitation.* A taxpayer may elect to not have paragraph (b)(2)(i) of this section apply for any taxable year beginning in 2019 or 2020. In the case of a partnership, the election must be made by the partnership and may be made only for taxable years beginning in 2020.

(3) *Election to use 2019 ATI in 2020*—(i) *In general.* Subject to paragraph (b)(3)(ii), a taxpayer may elect to use the taxpayer's ATI for the last taxable year beginning in 2019 (2019 ATI) as the ATI for any taxable year beginning in 2020.

(ii) *Short taxable years.* If an election is made under paragraph (b)(3)(i) of this section for a taxable year beginning in 2020 that is a short taxable year, the ATI for such taxable year is equal to the amount that bears the same ratio to 2019 ATI as the number of months in the short taxable year bears to 12.

(4) *Time and manner of making or revoking the elections.* The rules and procedures regarding the time and manner of making, or revoking, an election under paragraphs (b)(2) and (3) of this section are provided in Revenue Procedure 2020–22, 2020–18 I.R.B. 745, or in other guidance that may be issued (see §§ 601.601(d) and 601.602 of this chapter).

(c) *Disallowed business interest expense carryforward*—(1) *In general.* Any business interest expense disallowed under paragraph (b) of this section, or any disallowed disqualified interest that is properly allocable to a non-excepted trade or business under § 1.163(j)–10, is carried forward to the succeeding taxable year as a disallowed business interest expense carryforward, and is therefore business interest expense that is subject to paragraph (b) of this section in such succeeding taxable year. Disallowed business interest expense carryforwards are not re-allocated between non-excepted and excepted trades or businesses in a succeeding taxable year. Instead, the carryforwards continue to be treated as allocable to a non-excepted trade or business. See § 1.163(j)–10(c)(4).

(2) *Coordination with small business exemption.* If disallowed business interest expense is carried forward under the rules of paragraph (c)(1) of this section to a taxable year in which the small business exemption in paragraph (d) of this section applies to the taxpayer, then the general rule in paragraph (b) of this section does not apply to limit the deduction of the disallowed business interest expense carryforward of the taxpayer in that taxable year. See § 1.163(j)–6(m)(3) for rules applicable to the treatment of excess business interest expense from a partnership that is not subject to section 163(j) in a succeeding taxable year, and see § 1.163(j)–6(m)(4) for rules applicable to S corporations with disallowed business interest expense carryforwards that are not subject to section 163(j) in a succeeding taxable year.

(3) *Cross-references*—(i) For special rules regarding disallowed business interest expense carryforwards for taxpayers that are C corporations, including members of a consolidated group, see § 1.163(j)–5.

(ii) For special rules regarding disallowed business interest expense carryforwards of S corporations, see §§ 1.163(j)–5(b)(2) and 1.163(j)–6(l)(5).

(iii) For special rules regarding disallowed business interest expense carryforwards from partnerships, see § 1.163(j)–6.

(iv)–(v) [Reserved]

(d) *Small business exemption*—(1) *Exemption.* The general rule in paragraph (b) of this section does not apply to any taxpayer, other than a tax shelter as defined in section 448(d)(3), in any taxable year in which the taxpayer meets the gross receipts test of section 448(c) and the regulations in this part under section 448 of the Code for the taxable year. See § 1.163(j)–9(b) for elections available under section 163(j)(7)(B) and 163(j)(7)(C) for real property trades or businesses or farming businesses that also may be exempt small businesses. See § 1.163(j)–6(m) for rules applicable to partnerships and S corporations not subject to section 163(j).

(2) *Application of the gross receipts test*—(i) *In general.* In the case of any taxpayer that is not a corporation or a partnership, and except as provided in paragraphs (d)(2)(ii), (iii), and (iv) of this section, the gross receipts test of section 448(c) and the regulations in this part under section 448 of the Code are applied in the same manner as if such taxpayer were a corporation or partnership.

(ii) *Gross receipts of individuals.* Except as provided in paragraph (d)(2)(iii) of this section (regarding partnership and S corporation interests), an individual taxpayer's gross receipts include all items specified as gross receipts in regulations under section 448(c), whether or not derived in the ordinary course of the taxpayer's trade or business. For purposes of section 163(j), an individual taxpayer's gross receipts do not include inherently personal amounts, including, but not limited to, personal injury awards or settlements with respect to an injury of the individual taxpayer, disability benefits, Social Security benefits received by the taxpayer during the taxable year, and wages received as an employee that are reported on Form W–2.

(iii) *Partners and S corporation shareholders.* Except when the aggregation rules of section 448(c) apply, each partner in a partnership includes a share of partnership gross receipts in proportion to such partner's distributive share (as determined under section 704) of items of gross income that were taken into account by the partnership under section 703. Additionally, each shareholder in an S corporation includes a pro rata share of S corporation gross receipts.

(iv) *Tax-exempt organizations.* For purposes of section 163(j), the gross receipts of a tax-exempt organization include only gross receipts taken into account in determining its unrelated business taxable income.

(e) *REMICs.* For the treatment of interest expense by a REMIC as defined in section 860D, see § 1.860C–2(b)(2)(ii).

(f) *Trusts*—(i) *Calculation of ATI with respect to certain trusts and estates.* The ATI of a trust or a decedent's estate taxable under section 641 is computed without regard to deductions under sections 642(c), 651, and 661.

(ii) *Calculation of ATI with respect to certain beneficiaries.* The ATI of a beneficiary (including a tax-exempt beneficiary) of a trust or a decedent's estate is reduced by any income (including any distributable net income) received from the trust or estate by the beneficiary to the extent such income was necessary to permit a deduction under section 163(j)(1)(B) and § 1.163(j)–2(b) for any business interest expense of the trust or estate that was in excess of any business interest income of the trust or estate.

(g) *Tax-exempt organizations.* Except as provided in paragraph (d) of this section, the section 163(j) limitation applies to tax-exempt organizations for purposes of computing their unrelated business taxable income under section 512. For rules on determining the gross receipts of a tax-exempt organization for purposes of the small business exemption, see paragraph (d)(2)(iv) of this section. For special rules applicable to tax-exempt beneficiaries of a trust or a decedent's estate, see § 1.163(j)–2(f). For special rules applicable to tax-exempt corporations, see § 1.163(j)–4. For special allocation rules applicable to tax-exempt organizations, see § 1.163(j)–10(a)(5).

(h) *Examples.* The examples in this paragraph (h) illustrate the application of section 163(j) and the provisions of this section. Unless otherwise indicated, X and Y are domestic C corporations; C and D are U.S. resident individuals not subject to any foreign income tax; PRS is a domestic partnership with partners who are all individuals; all taxpayers use a calendar taxable year; the exemption for certain small businesses in section 163(j)(3) and paragraph (d) of this section does not apply; and the interest expense would be deductible but for section 163(j).

(1) *Example 1: Limitation on business interest expense deduction*—(i) *Facts.* During its taxable year ending December 31, 2021, X has ATI of $100x. X has business interest expense of $50x, which includes $10x of floor plan financing interest expense, and business interest income of $20x.

(ii) *Analysis.* For the 2021 taxable year, X's section 163(j) limitation is $60x, which is the sum of its business interest income ($20x), plus 30 percent of its ATI ($100x × 30 percent = $30x), plus its floor plan financing interest expense ($10x). See § 1.163(j)–2(b). Because X's business interest expense ($50x) does not exceed X's section 163(j) limitation ($60x), X can deduct all $50x of its business interest expense for the 2021 taxable year.

(2) *Example 2: Carryforward of business interest expense*—(i) *Facts.* The facts are the same as in *Example 1* in paragraph (h)(1)(i) of this section, except that X has $80x of business interest expense, which includes $10x of floor plan financing interest expense.

(ii) *Analysis.* As in *Example 1* in paragraph (h)(1)(ii) of this section, X's section 163(j) limitation is $60x. Because X's business interest expense ($80x) exceeds X's section 163(j) limitation ($60x), X may only deduct $60x of its business interest expense for the 2021 taxable year, and the remaining $20x of its business interest expense will be carried forward to the succeeding taxable year as a disallowed business interest expense carryforward. See § 1.163(j)–2(c).

(3) *Example 3: ATI computation*—(i) *Facts.* During the 2020 taxable year, Y has tentative taxable income of $30x, which is determined without regard to the application of the section 163(j) limitation on business interest expense. Y's tentative taxable income includes the following: $20x of business interest income; $50x of business interest expense, which includes $10x of floor plan financing interest expense; $25x of net operating loss deduction under section 172; and $15x of depreciation under section 167, of which $10x is capitalized to inventory under section 263A. Of the $10x capitalized to inventory, only $7x is recovered through cost of goods sold during the 2020 taxable year and $3x remains in ending inventory at the end of the 2020 taxable year. The $3x of ending inventory is recovered through cost of goods sold during the 2021 taxable year. Y also has a disallowed business interest expense carryforward from the prior year of $8x.

(ii) *Analysis.* (A) For purposes of determining the section 163(j) limitation for 2020, Y's disallowed business interest expense carryforward is not taken into account in determining tentative taxable income or ATI. Y's ATI is $90x, calculated as follows:

TABLE 1 TO PARAGRAPH (h)(3)(ii)(A)

Tentative taxable income	$30x
Less:	
Floor plan financing interest	10x
Business interest income	20x
	0x

(B) Plus:

TABLE 2 TO PARAGRAPH (h)(3)(ii)(B)

Business interest expense	$50x
Net operating loss deduction	25x
Depreciation	15x
ATI	90x

(C) For Y's 2021 taxable year, the $3x of ending inventory that is recovered through cost of goods sold in 2021 is not added back to tentative taxable income (TTI) in determining ATI because it was already included as an addback in ATI in Y's 2020 taxable year. See § 1.163(j)–1(b)(1)(iii).

(4) *Example 4: Floor plan financing interest expense*—(i) *Facts.* C is the sole proprietor of an automobile dealership that uses a cash method of accounting. In the 2021 taxable year, C paid $30x of interest on a loan that was obtained to purchase sedans for sale by the dealership. The indebtedness is secured by the sedans purchased with the loan proceeds. In addition, C paid $20x of interest on a loan, secured by the dealership's office equipment, which C obtained to purchase convertibles for sale by the dealership.

(ii) *Analysis.* For the purpose of calculating C's section 163(j) limitation, only the $30x of interest paid on the loan to purchase the sedans is floor plan financing interest expense. The $20x paid on the loan to purchase the convertibles is not floor plan financing interest expense for purposes of section 163(j) because the indebtedness was not secured by the inventory of convertibles. However, because under § 1.163(j)–10 the interest paid on the loan to purchase the convertibles is properly allocable to C's dealership trade or business, and because floor plan financing interest expense is also business interest expense, C has $50x of business interest expense for the 2021 taxable year.

(5) *Example 5: Interest not properly allocable to non-excepted trade or business*—(i) *Facts.* The facts are the same as in *Example 4* in paragraph (h)(4)(i) of this section, except that the $20x of interest C pays is on acquisition indebtedness obtained to purchase C's personal residence and not to purchase convertibles for C's dealership trade or business.

(ii) *Analysis.* Because the $20x of interest expense is not properly allocable to a non-excepted trade or business, and therefore is not business interest expense, C's only business interest expense is the $30x that C pays on the loan used to purchase sedans for sale in C's dealership trade or business. C deducts the $20x of interest related to his residence under the rules of section 163(h), without regard to section 163(j).

(6) *Example 6: Small business exemption*—(i) *Facts.* During the 2021 taxable year, D, the sole proprietor of a trade or business reported on Schedule C, has interest expense properly allocable to that trade or business. D does not conduct an electing real property trade or business or an electing farming business. D also earns gross income from providing services as an employee that is reported on a Form W–2. Under section 448(c) and the regulations in this part under section 448, D has average annual gross receipts of $21 million, including $1 million of wages in each of the three prior taxable years and $2 million of income from investments not related to a trade or business in each of the three prior taxable years. Also, in each of the three prior taxable years, D received $5 million in periodic payments of compensatory damages awarded in a personal injury lawsuit.

(ii) *Analysis.* Section 163(j) does not apply to D for the taxable year, because D qualifies for the small business exemption under § 1.163(j)–2(d). The wages that D receives as an employee and the compensatory damages that D received from D's personal injury lawsuit are not gross receipts, as provided in § 1.163(j)–2(d)(2)(ii). D may deduct all of its business interest expense for the 2021 taxable year without regard to section 163(j).

(7) *Example 7: Partnership with excess business interest expense qualifies for the small business exemption in a succeeding taxable year*—(i) *Facts.* X and Y are equal partners in partnership PRS. In addition to being partners in PRS, X and Y each operate their own sole proprietorships. For the taxable year ending December 31, 2021, PRS is subject to section 163(j) and has excess business interest expense of $10x. For the taxable year ending December 31, 2022, PRS has $40x of business interest expense, and X and Y have $20x of business interest expense from their respective sole proprietorships. For the taxable year ending December 31, 2022, PRS and Y qualify for the small business exemption under § 1.163(j)–2(d), while X is subject to section 163(j) and has a section 163(j) limitation of $22x.

(ii) *Partnership-level analysis.* For the 2021 taxable year, PRS allocates the $10x of excess business interest expense equally to X and Y ($5x each). See § 1.163(j)–6(f)(2). For the 2022 taxable year, section 163(j) does not apply to PRS because PRS qualifies for the small business exemption. As a result, none of PRS's $40x of business interest expense for the 2022 taxable year is subject to the section 163(j) limitation at the partnership level.

(iii) *Partner-level analysis.* For the 2022 taxable year, each partner treats its $5x of excess business interest expense from PRS as paid or accrued in that year. See § 1.163(j)–6(m)(3). This amount becomes business interest expense that each partner must subject to its own section 163(j) limitation, if any. With this $5x, each partner has $25x of business interest expense for the 2022 taxable year ($20x from its sole proprietorship, plus $5x of excess business interest expense treated as paid or accrued in the 2020 taxable year). X deducts $22x of its business interest expense pursuant to its section 163(j) limitation and carries forward the remainder ($3x) as a disallowed business interest expense carryforward to the taxable year ending December 31, 2023. Y is not subject to section 163(j) because Y qualifies for the small business exemption. Y therefore deducts all $25x of its business interest expense for the 2022 taxable year.

(8) *Example 8: Aggregation of gross receipts*—(i) *Facts.* X and Y are domestic C corporations under common control, within the meaning of section 52(a) and § 1.52–1(b). X's only trade or business is a farming business described in § 1.263A–4(a)(4). During the taxable year ending December 31, 2020, X has average annual gross receipts under section 448(c) of $6 million. During the same taxable year, Y has average annual gross receipts under section 448(c) of $21 million.

(ii) *Analysis.* Because X and Y are under common control, they must aggregate gross receipts for purposes of section 448(c) and the small business exemption in § 1.163(j)–2(d). See section 448(c)(2). Therefore, X and Y are both considered to have $27 million in average annual gross receipts for 2020. X and Y must separately apply section 163(j) to determine any limitation on the deduction for business interest expense. Assuming X otherwise meets the requirements in § 1.163(j)–9 in 2020, X may elect for its farming business to be an excepted trade or business.

(i) [Reserved]

(j) *Anti-avoidance rule*—(1) *In general.* Arrangements entered into with a principal purpose of avoiding the rules of section 163(j) or the section 163(j) regulations, including the use of multiple entities to avoid the gross receipts test of section 448(c), may be disregarded or recharacterized by the Commissioner of the IRS to the extent necessary to carry out the purposes of section 163(j).

(2) *Examples.* The examples in this paragraph (j)(2) illustrate the application of this section.

(i) *Example 1*—(A) *Facts.* Individual A operates an excepted trade or business (Business X) and a non-excepted trade or business (Business Y). With a principal purpose of avoiding the rules of section 163(j) or the regulations in this part under section 163(j) of the Code, A contributes Business X to newly-formed C corporation B in exchange for stock; A then causes B to borrow funds from a third party and distributes a portion of the borrowed funds to A for use in Business Y. B takes the position that its interest payments on the debt are not subject to the section 163(j) limitation because B is engaged solely in an excepted trade or business.

(B) *Analysis.* A has entered into an arrangement with a principal purpose of avoiding the rules of section 163(j) or the regulations in this part under section 163(j). Thus, under paragraph (j)(1) of this section, the Commissioner of the IRS may disregard or recharacterize this transaction to the extent necessary to carry out the purposes of section 163(j). In this case, payments of interest on the debt may be recharacterized as payments of interest properly allocable to a non-excepted trade or business subject to the section 163(j) limitation.

(ii) *Example 2*—(A) *Facts.* Partnership UTP has two non-excepted trades or businesses. Business A has gross income of $1000x and gross deductions of $200x. Business B has gross income of $100x and gross deductions of $600x. With a principal purpose of avoiding the rules in section 163(j) or the regulations in this part under section 163(j), UTP and a partner of UTP form partnership LTP and UTP contributes Business B to LTP prior to borrowing funds. UTP takes the position that it does not take its share of LTP gross deductions into account when computing its ATI.

(B) *Analysis.* UTP has entered into an arrangement with a principal purpose of avoiding the rules of section 163(j) or the regulations in this part under section 163(j). Thus, under paragraph (j)(1) of this section, the Commissioner of the IRS may disregard or recharacterize this transaction to the extent necessary to carry out the purposes of section 163(j). In this case, UTP's share of gross deductions from LTP may be recharacterized as gross deductions incurred directly by UTP solely for purposes of computing UTP's ATI.

(k) *Applicability date.* This section applies to taxable years beginning on or after November 13, 2020. However, taxpayers and their related parties, within the meaning of sections 267(b) and 707(b)(1), may choose to apply the rules of this section to a taxable year beginning after December 31, 2017, so long as the taxpayers and their related parties consistently apply the rules of the section 163(j) regulations, and, if applicable, §§ 1.263A–9, 1.263A–15, 1.381(c)(20)–1, 1.382–1, 1.382–2, 1.382–5, 1.382–6, 1.382–7, 1.383–0, 1.383–1, 1.469–9, 1.469–11, 1.704–1, 1.882–5, 1.1362–3, 1.1368–1, 1.1377–1, 1.1502–13, 1.1502–21, 1.1502–36, 1.1502–79, 1.1502–91 through 1.1502–99 (to the extent they effectuate the rules of §§ 1.382–2, 1.382–5, 1.382–6, and 1.383–1), and 1.1504–4, to that taxable year.

§ 1.163(j)–3 Relationship of the section 163(j) limitation to other provisions affecting interest.

(a) *Overview.* This section contains rules regarding the relationship between section 163(j) and certain other provisions of the Code. Paragraph (b) of this section provides the general rules concerning the relationship between section 163(j) and certain other provisions of the Code. Paragraph (c) of this section provides examples illustrating the application of this section. For rules regarding the relationship between sections 163(j) and 704(d), see § 1.163(j)–6(h)(1) and (2).

(b) *Coordination of section 163(j) with certain other provisions*—(1) *In general.* Section 163(j) and the regulations in this part under section 163(j) of the Code generally apply only to business interest expense that would be deductible in the current taxable year without regard to section 163(j). Thus, for example, a taxpayer must apply § 1.163–8T, if applicable, to determine which items of interest expense are investment interest under section 163(d) before applying the rules in this section to interest expense. Except as otherwise provided in this section, section 163(j) applies after the application of provisions that subject interest expense to disallowance, deferral, capitalization, or other limitation. For the rules that must be applied in determining whether excess business interest is paid or accrued by a partner, see section 163(j)(4)(B)(ii) and § 1.163(j)–6.

(2) *Disallowed interest provisions.* For purposes of section 163(j), business interest expense does not include interest expense that is permanently disallowed as a deduction under another provision of the Code, such as in section 163(e)(5)(A)(i), (f), (l), or (m), or section 264(a), 265, 267A, or 279.

(3) *Deferred interest provisions.* Other than sections 461(l), 465, and 469, Code provisions that defer the deductibility of interest expense, such as section 163(e)(3) and (e)(5)(A)(ii), 267(a)(2) and (3), 1277, or 1282, apply before the application of section 163(j).

(4) *At risk rules, passive activity loss provisions, and limitation on excess business losses of noncorporate taxpayers.* Section 163(j) generally applies to limit the deduction for business interest expense before the application of sections 461(l), 465, and 469. However, in determining tentative taxable income for purposes of computing ATI, sections 461(l), 465, and 469 are taken into account.

(5) *Capitalized interest expenses.* Section 163(j) applies after the application of provisions that require the capitalization of interest, such as sections 263A and 263(g). Capitalized interest expense under those sections is not treated as business interest expense for purposes of section 163(j). For ordering rules that determine whether interest expense is capitalized under section 263A(f), see the regulations under section 263A(f), including § 1.263A–9(g).

(6) *Reductions under section 246A.* Section 246A applies before section 163(j). Any reduction in the dividends received deduction under section 246A reduces the amount of interest expense taken into account under section 163(j).

(7) *Section 381.* Disallowed business interest expense carryforwards are items to which an acquiring corporation succeeds under section 381(a). See section 381(c)(20) and §§ 1.163(j)–5(c) and 1.381(c)(20)–1.

(8) *Section 382.* For rules governing the interaction of sections 163(j) and 382, see section 382(d)(3) and (k)(1), §§ 1.163(j)–5(e) and 1.163(j)–11(c), the regulations in this part under sections 382 and 383 of the Code, and §§ 1.1502–91 through 1.1502–99.

(c) *Examples.* The examples in this paragraph (c) illustrate the application of section 163(j) and the provisions of this section. Unless otherwise indicated, X and Y are calendar-year domestic C corporations; D is a U.S. resident individual not subject to any foreign income tax; none of the taxpayers have floor plan financing interest expense; and the exemption for certain small businesses in § 1.163(j)–2(d) does not apply.

(1) *Example 1: Disallowed interest expense*—(i) *Facts.* In 2021, X has $30x of interest expense. Of X's interest expense, $10x is permanently disallowed under section 265. X's business interest income is $3x and X's ATI is $90x.

(ii) *Analysis.* Under paragraph (b)(2) of this section, the $10x interest expense that is permanently disallowed under section 265 cannot be taken into consideration for purposes of section 163(j) in the 2021 taxable year. X's section 163(j) limitation, or the amount of business interest expense that X may deduct is limited to $30x under § 1.163(j)–2(b), determined by adding X's business interest income ($3x) and 30 percent of X's 2019 ATI ($27x). Therefore, in the 2021 taxable year, none of the $20x of X's deduction for its business interest expense is disallowed under section 163(j).

(2) *Example 2: Deferred interest expense*—(i) *Facts.* In 2021, Y has no business interest income, $120x of ATI, and $70x of interest expense. Of Y's interest expense, $30x is not currently deductible under section 267(a)(2). The $30x expense is allowed as a deduction under section 267(a)(2) in 2022.

(ii) *Analysis.* Under paragraph (b)(3) of this section, section 267(a)(2) is applied before section 163(j). Accordingly, $30x of Y's interest expense cannot be taken into consideration for purposes of section 163(j) in 2021 because it is not currently deductible under section 267(a)(2). Accordingly, in 2021, if the interest expense is properly allocable to a non-excepted trade or business, Y will have $4x of disallowed business interest expense because the $40x of business interest expense in 2021 ($70x − $30x) exceeds 30 percent of its ATI for the taxable year ($36x). The $30x of interest expense not allowed as a deduction in the 2021 taxable year under section 267(a)(2) will be taken into account in determining the business interest expense deduction under section 163(j) in 2022, the taxable year in which it is allowed as a deduction under section 267(a)(2), if it is allocable to a trade or business. Additionally, the $4x of disallowed business interest expense in 2021 will be carried forward to 2022 as a disallowed business interest expense carryforward. See § 1.163(j)–2(c).

(3) *Example 3: Passive activity loss*—(i) *Facts.* D is engaged in a rental activity treated as a passive activity within the meaning of section 469. For the 2021 taxable year, D receives $200x of rental income and incurs $300x of expenses all properly allocable to the rental activity, consisting of $150x of interest expense, $60x of maintenance expenses, and $90x of depreciation expense. D's ATI is $400x.

(ii) *Analysis.* Under paragraph (b)(4) of this section, section 163(j) is applied before the section 469 passive loss rules apply, except that section 469 is taken into account in the determination of tentative taxable income for purposes of computing ATI. D's section 163(j) limitation is $120x, determined by adding to D's business interest income ($0), floor plan financing ($0), and 30 percent of D's ATI ($120x). See § 1.163(j)–2(b). Because D's business interest expense of $150x exceeds D's section 163(j) limitation for 2021, $30x of D's business interest expense is disallowed under section 163(j) and will be carried forward as a disallowed business interest expense carryforward. See § 1.163(j)–2(c). Because the section 163(j) limitation is applied before the limitation under section 469, only $120x of the business interest expense allowable under section 163(j) is included in determining D's passive activity loss limitation for the 2021 tax year under section 469. The $30x of disallowed business interest expense is not an allowable deduction under section 163(j) and, therefore, is not a deduction under section 469 in the current taxable year. See § 1.469–2(d)(8).

(4) *Example 4: Passive activity loss by taxpayer that also participates in a non-passive activity*—(i) *Facts.* For 2021, D has no business interest income and ATI of $1,000x, entirely attributable to a passive activity within the meaning of section 469. D has business interest expense of $1,000x, $900x of which is properly allocable to a passive activity and $100x of which is properly allocable to a non-passive activity in which D materially participates. D has other business deductions that are not subject to section 469 of $600x, and a section 469 passive loss from the previous year of $250x.

(ii) *Analysis.* Under paragraph (b)(4) of this section, section 163(j) is applied before the section 469 passive loss rules apply. D's section 163(j) limitation is $300x, determined by adding D's business interest income ($0), floor plan financing ($0), and 30 percent of D's ATI ($300x)). Next, applying the limitation under section 469 to the $300x business interest expense deduction allowable under section 163(a) and (j), $270x (a proportionate amount of the $300x (0.90 × $300x)) is business interest expense included in determining D's passive activity loss limitation under section 469, and $30x (a proportionate amount of the $300x (0.10 × $300)) is business interest expense not included in determining D's passive activity loss limitation under section 469. Because D's interest expense of $1,000x exceeds 30 percent of its ATI for 2021, $700x of D's interest expense is disallowed under section 163(j) and will be carried forward as a disallowed business interest expense carryforward. Section 469 does not apply to any portion of the $700x disallowed business interest expense because that business interest expense is not an allowable deduction under section 163(j) and, therefore, is not an allowable deduction under section 469 in the current taxable year. See § 1.469–2(d)(8).

(5) *Example 5: ATI calculation with passive activity loss*—(i) *Facts.* D is an individual who engages in a trade or business, V, as a sole proprietorship. D relies on employees to perform most of the work and, as a result, D does not materially participate in V. Therefore, V is a passive activity of D. V is not an excepted trade or business. In Year 1, V generates $500x of passive income, $400x of business interest expense, and $600x of ordinary and necessary expenses deductible under section 162 (not including any interest described in § 1.163(j)–1(b)(22)). No disallowed business interest expense carryforward has been carried to Year 1 from a prior year, and no amounts have been carried over to Year 1 from a prior year under either section 465(a)(2) or section 469(b).

(ii) *Tentative taxable income.* Under § 1.163(j)–1(b)(43), tentative taxable income is determined as though all business interest expense was not subject to the section 163(j) limitation. Sections 461(l), 465, and 469 apply in the determination of tentative taxable income. For year 1, D has $500x of allowable deductions and a $500x tentative passive activity loss under section 469, because D's $1000x of passive expenses exceeds D's $500x of passive income from V. The tentative disallowance of $500x is generally allocated pro rata between D's passive expenses under § 1.469–1T(f)(2)(ii)(A). In this case, fifty percent ($500x of passive activity loss divided by $1000x of total passive expenses) of each category of passive expense is tentatively disallowed: $200x of business interest expense and $300x of section 162 expense. D's tentative taxable income is $0 (zero), which is determined by reducing $500x of gross income by the remaining $200x of business interest expense and $300x of section 162 expense ($500x − $200x − $300x).

(iii) *ATI.* Under section § 1.163(j)–1(b)(1), to determine ATI, D must add business interest expense to tentative taxable income, but only to the extent that the business interest expense reduced tentative taxable income, or $200x. The $200x of business interest expense that was tentatively disallowed under section 469 is not added to tentative taxable income to determine ATI. D's ATI is $200x, which is determined by adding the $200x of business interest expense that reduced tentative taxable income to D's tentative taxable income, or $0 (0 + $200x).

(iv) *Section 163(j) limitation.* D's section 163(j) limitation in Year 1 is D's business interest income, or $0, plus 30 percent of ATI, or $60x (30 percent × $200x ATI), plus D's floor plan financing, or $0, for a total of $60x ($0 + $60x + $0). Before the application of section 469, D has $60x of deductible business interest expense and $340x of disallowed business interest expense carryforward under § 1.163(j)–2(c).

(v) *Passive activity loss.* Because D's passive deductions exceed the passive income from V, and D does not have any passive income from other sources, section 469 applies to limit D's passive loss from V. Having first applied section 163(j), D has $660x of passive expenses, determined by adding D's $60x of business interest expense that is allowed by section 163(j) as a deduction and $600x of section 162 expense ($60x + $600x). D offsets $500x of the passive expenses against $500x of passive income; therefore, D has a passive activity loss of $160x in Year 1, determined as the excess of D's total passive expenses over D's passive income ($660x − $500x). The amount of D's loss from the passive activity that is disallowed under section 469 ($160x) is generally ratably allocated to each of D's passive activity deductions under § 1.469–1T(f)(2)(ii)(A). As a general rule, each deduction is multiplied by the ratio of the total passive loss to total passive expenses (160x/660x). Of D's $60x business interest expense, $14.55x (($160x/$660x) × $60x) is disallowed in Year 1. Additionally, of D's $600x section 162 expense, $145.45x (($160x/$660x) × $600x) is disallowed. The amounts disallowed under section 469(a)(1) and § 1.469–2T(f)(2) are carried over to the succeeding taxable year under section 469(b) and § 1.469–1(f)(4).

(6) *Example 6: Effect of passive activity loss carryforwards*—(i) *Facts.* The facts are the same as in *Example 5* in paragraph (c)(5)(i) of this section. In Year 2, V generates $500x of passive income, $100x of business interest expense, and $0 (zero) of other deductible expenses. D is not engaged in any other trade or business activities. A disallowed business interest expense carryforward of $340x has been carried to Year 2 from Year 1. Under section 469, D has a suspended loss from Year 1 that includes $14.55x of business interest expense and $145.45x of section 162 expense. These amounts are treated as passive activity deductions in Year 2.

(ii) *Tentative taxable income.* To determine D's tentative taxable income, D must first determine D's allowable deductions. In year 2, D has $260x of allowable deductions, which includes $100x of business interest expense generated Year 2, $14.55x of business interest expense disallowed in Year 1 by section 469, and $145.45x of section 162 expense disallowed in Year 1 by section 469 ($100x + $14.55x + $145.45x)). D's disallowed business interest expense carryforward from Year 1 is not taken into account in determining tentative taxable income. See § 1.163(j)–1(b)(43). Additionally, the $14.55x of business interest expense disallowed in Year 1 by section 469 is not business interest expense in Year 2 because it was deductible after the application of section 163(j) (but before the application of section 469) in Year 1. D does not have a tentative passive activity loss in Year 2, because D's $500x of passive income from V exceeds D's $260x of tentative passive expenses. Therefore, D's tentative taxable income in Year 2 is $240x, which is determined by subtracting D's allowable deductions other than disallowed business interest expense carryforwards, or $260x, from D's gross income, or $500x ($500x − $260x).

(iii) *ATI.* D's ATI in Year 2 is $340x, which is determined by adding D's business interest expense, or $100x, to D's tentative taxable income, or $240x ($240x + $100x). Because disallowed business interest expense carryforwards are not taken into account in determining tentative taxable income, there is no corresponding adjustment for disallowed business interest expense carryforwards in calculating ATI. Therefore, there is no adjustment for D's $340x of disallowed business interest expense carryforward in calculating D's ATI. D has no other adjustments to determine ATI.

(iv) *Section 163(j) limitation.* D's section 163(j) limitation in Year 2 is $102x, which is determined by adding D's business interest income, or $0, 30 percent of D's ATI for year 2, $102 ($340x × 30 percent), and D's floor plan financing for Year 2, or $0 ($0 + ($102x) + $0). Accordingly, before the application of section 469 in Year 2, $102x of D's $440x of total business interest expense (determined by adding $340x of disallowed business interest expense carryforward from Year 1 and $100x of business interest expense in Year 2) is deductible. D has $338x of disallowed business interest expense carryforward that will carry forward to subsequent taxable years under § 1.163(j)–2(c), determined by subtracting D's deductible business interest expense in Year 2, or $102x, from D's total business interest expense in Year 2, or $440x ($440x − $102x).

(v) *Section 469.* After applying the section 163(j) limitation, D applies section 469 to determine if any amount of D's expense is a disallowed passive activity loss. For Year 2, D has $262x of passive expenses, determined by adding D's business interest expense deduction allowed by section 163(j) ($102x), D's section 162 expense carried forward from Year 1 under section 469 ($145.45x), and D's interest expense carried forward from Year 1 under section 469 which is not business interest expense in Year 2, or $14.55x ($102x + $145.45x + $14.55x). Therefore, D has $238x of net passive income in Year 2, determined by reducing D's total passive income in Year 2 ($500x), by D's disallowed passive activity loss, or $262x ($500x − $262x). D does not have a passive activity loss in Year 2, and no part of D's $262x of passive expenses is disallowed in Year 2 under section 469.

(7) *Example 7: Capitalized interest expense*—(i) *Facts.* In 2020, X has $50x of interest expense. Of X's interest expense, $10x is required to be capitalized under section 263A. X capitalizes this interest expense to a depreciable asset. X's business interest income is $9x and X's ATI is $80x. X makes the election in § 1.163(j)–2(b)(2)(ii) to use 30 percent, rather than 50 percent, of ATI in determining X's section 163(j) limitation for the 2020 taxable year.

(ii) *Analysis.* Under paragraph (b)(5) of this section, section 263A is applied before section 163(j). Accordingly, $10x of X's interest expense cannot be taken into consideration for purposes of section 163(j) in 2020. Additionally, under paragraph (b)(5) of this section, X's $10 of capitalized interest expense is not business interest expense for purposes of section 163(j). As a result, when X recovers its capitalized interest expense through depreciation deductions, such capitalized interest expense will not be taken into account as business interest expense in determining X's section 163(j) limitation. X's section 163(j) limitation in 2020, or the amount of business interest expense that X may deduct, is limited to $33x under § 1.163(j)–2(b), determined by adding X's business interest income ($9x) and 30 percent of X's 2020 ATI ($24x). X therefore has $7x of disallowed business interest expense in 2020 that will be carried forward to 2021 as a disallowed business interest expense carryforward.

(d) *Applicability date.* This section applies to taxable years beginning on or after November 13, 2020. However, taxpayers and their related parties, within the meaning of sections 267(b) and 707(b)(1), may choose to apply the rules of this section to a taxable year beginning after December 31, 2017, so long as the taxpayers and their related parties consistently apply the rules of the section 163(j) regulations, and, if applicable, §§ 1.263A–9, 1.263A–15, 1.381(c)(20)–1, 1.382–1, 1.382–2, 1.382–5, 1.382–6, 1.382–7, 1.383–0, 1.383–1, 1.469–9, 1.469–11, 1.704–1, 1.882–5, 1.1362–3, 1.1368–1, 1.1377–1, 1.1502–13, 1.1502–21, 1.1502–36, 1.1502–79, 1.1502–91 through 1.1502–99 (to the extent they effectuate the rules of §§ 1.382–2, 1.382–5, 1.382–6, and 1.383–1), and 1.1504–4, to that taxable year.

§ 1.163(j)–4 General rules applicable to C corporations (including REITs, RICs, and members of consolidated groups) and tax-exempt corporations.

(a) *Scope.* This section provides rules regarding the computation of items of income and expense under section 163(j) for taxpayers that are C corporations, including, for example, members of a consolidated group, REITs, RICs, tax-exempt corporations, and cooperatives. Paragraph (b) of this section provides rules regarding the characterization of items of income, gain, deduction, or loss. Paragraph (c) of this section provides rules regarding adjustments to earnings and profits. Paragraph (d) of this section provides rules applicable to members of a consolidated group. Paragraph (e) of this section provides rules governing the ownership of partnership interests by members of a consolidated group. Paragraph (f) of this section provides cross-references to other rules within the 163(j) regulations that may be applicable to C corporations.

(b) *Characterization of items of income, gain, deduction, or loss*—(1) *Interest expense and interest income.* Solely for purposes of section 163(j), all interest expense of a taxpayer that is a C corporation is treated as properly allocable to a trade or business. Similarly, solely for purposes of section 163(j), all interest income of a taxpayer that is a C corporation is treated as properly allocable to a trade or business. For rules governing the allocation of interest expense and interest income between excepted and non-excepted trades or businesses, see § 1.163(j)–10.

(2) *Adjusted taxable income.* Solely for purposes of section 163(j), all items of income, gain, deduction, or loss of a taxpayer that is a C corporation are treated as properly allocable to a trade or business. For rules governing the allocation of tax items between excepted and non-excepted trades or businesses, see § 1.163(j)–10.

(3) *Investment interest, investment income, investment expenses, and certain other tax items of a partnership with a C corporation partner*—(i) *Characterization as expense or income properly allocable to a trade or business.* For purposes of section 163(j), any investment interest, investment income, or investment expense (within the meaning of section 163(d)) that a partnership pays, receives, or accrues and that is allocated to a C corporation partner as a separately stated item is treated by the C corporation partner as properly allocable to a trade or business of that partner. Similarly, for purposes of section 163(j), any other tax items of a partnership that are neither properly allocable to a trade or business of the partnership nor described in section 163(d) and that are allocated to a C corporation partner as separately stated items are treated as properly allocable to a trade or business of that partner.

(ii) *Effect of characterization on partnership.* The characterization of a partner's tax items pursuant to paragraph (b)(3)(i) of this section does not affect the characterization of these items at the partnership level.

(iii) *Separately stated interest expense and interest income of a partnership not treated as excess business interest expense or excess taxable income of a C corporation partner.* Investment interest expense and other interest expense of a partnership that is treated as business interest expense by a C corporation partner under paragraph (b)(3)(i) of this section is not treated as excess business interest expense of the partnership. Investment interest income and other interest income of a partnership that is treated as business interest income by a C corporation partner under paragraph (b)(3)(i) of this section is not treated as excess taxable income of the partnership. For rules governing excess business interest expense and excess taxable income, see § 1.163(j)–6.

(iv) *Treatment of deemed inclusions of a domestic partnership that are not allocable to any trade or business.* If a United States shareholder that is a domestic partnership includes amounts in gross income under sections 951(a) or 951A(a) that are not properly allocable to a trade or business of the domestic partnership, then, notwithstanding paragraph (b)(3)(i) of this section, to the extent a C corporation partner, including an indirect partner in the case of tiered partnerships, takes such amounts into account as a distributive share in accordance with section 702 and § 1.702–1(a)(8)(ii), the C corporation partner may not treat such amounts as properly allocable to a trade or business of the C corporation partner.

(4) *Application to RICs and REITs*—(i) *In general.* Except as otherwise provided in paragraphs (b)(4)(ii) and (iii) of this section, the rules in this paragraph (b) apply to RICs and REITs.

(ii) *Tentative taxable income of RICs and REITs.* The tentative taxable income of a RIC or REIT for purposes of calculating ATI is the tentative taxable income of the corporation, without any adjustment that would be made under section 852(b)(2) or 857(b)(2) to compute investment company taxable income or real estate investment trust taxable income, respectively. For example, the tentative taxable income of a RIC or REIT is not reduced by the deduction for dividends paid, but is reduced by the dividends received deduction (DRD) and the other deductions described in sections 852(b)(2)(C) and 857(b)(2)(A). See paragraph (b)(4)(iii) of this section for an adjustment to ATI in respect of these items.

(iii) *Other adjustments to adjusted taxable income for RICs and REITs.* In the case of a taxpayer that, for a taxable year, is a RIC to which section 852(b) applies or a REIT to which section 857(b) applies, the taxpayer's ATI for the taxable year is increased by the amounts of any deductions described in section 852(b)(2)(C) or 857(b)(2)(A).

(5) *Application to tax-exempt corporations.* The rules in this paragraph (b) apply to a tax-exempt corporation only with respect to that corporation's items of income, gain, deduction, or loss that are taken into account in computing the corporation's unrelated business taxable income, as defined in section 512.

(6) *Adjusted taxable income of cooperatives.* Solely for purposes of computing the ATI of a cooperative under § 1.163(j)–1(b)(1), tentative taxable income is not reduced by the amount of any patronage dividend under section 1382(b)(1) or by any amount paid in redemption of nonqualified written notices of allocation distributed as patronage dividends under section 1382(b)(2) (for cooperatives subject to taxation under sections 1381 through 1388), any amount described in section 1382(c) (for

cooperatives described in section 1381(a)(1) and section 521), or any equivalent amount deducted by an organization that operates on a cooperative basis but is not subject to taxation under sections 1381 through 1388.

(7) *Examples.* The principles of this paragraph (b) are illustrated by the following examples. For purposes of the examples in this paragraph (b)(7) of this section, T is a taxable domestic C corporation whose taxable year ends on December 31; T is neither a consolidated group member nor a RIC or a REIT; neither T nor PS1, a domestic partnership, owns at least 80 percent of the stock of any corporation; neither T nor PS1 qualifies for the small business exemption in § 1.163(j)–2(d) or is engaged in an excepted trade or business; T has no floor plan financing expense; all interest expense is deductible except for the potential application of section 163(j); and the facts set forth the only corporate or partnership activity.

(i) *Example 1: C corporation items properly allocable to a trade or business*—(A) *Facts.* In taxable year 2021, T's tentative taxable income (without regard to the application of section 163(j)) is $320x. This amount is comprised of the following tax items: $1,000x of revenue from inventory sales; $500x of ordinary and necessary business expenses (excluding interest and depreciation); $200x of interest expense; $50x of interest income; $50x of depreciation deductions under section 168; and a $20x gain on the sale of stock.

(B) *Analysis.* For purposes of section 163(j), each of T's tax items is treated as properly allocable to a trade or business. Thus, T's ATI for the 2021 taxable year is $520x ($320x of tentative taxable income + $200x business interest expense − $50x business interest income + $50x depreciation deductions = $520x), and its section 163(j) limitation for the 2021 taxable year is $206x ($50x of business interest income + 30 percent of its ATI (30 percent × $520x) = $206x). As a result, all $200x of T's interest expense is deductible in the 2021 taxable year under section 163(j).

(C) *Taxable year beginning in 2022.* The facts are the same as in *Example 1* in paragraph (b)(7)(i)(A) of this section, except that the taxable year begins in 2022 and therefore depreciation deductions are not added back to ATI under § 1.163(j)–1(b)(1)(i)(E). As a result, T's ATI for 2022 is $470x ($320x of tentative taxable income + $200x business interest expense − $50x business interest income = $470x), and its section 163(j) limitation for the 2022 taxable year is $191x ($50x of business interest income + 30 percent of its ATI (30 percent × $470x) = $191x). As a result, T may only deduct $191x of its business interest expense for the taxable year, and the remaining $9x is carried forward to the 2023 taxable year as a disallowed business interest expense carryforward. See § 1.163(j)–2(c).

(ii) *Example 2: C corporation partner*—(A) *Facts.* T and individual A each own a 50 percent interest in PS1, a general partnership. PS1 borrows funds from a third party (Loan 1) and uses those funds to buy stock in publicly-traded corporation X. PS1's only activities are holding X stock (and receiving dividends) and making payments on Loan 1. In the 2021 taxable year, PS1 receives $150x in dividends and pays $100x in interest on Loan 1.

(B) *Analysis.* For purposes of section 163(d) and (j), PS1 has investment interest expense of $100x and investment income of $150x, and PS1 has no interest expense or interest income that is properly allocable to a trade or business. PS1 allocates its investment interest expense and investment income equally to its two partners pursuant to § 1.163(j)–6(k). Pursuant to paragraph (b)(3) of this section, T's allocable share of PS1's investment interest expense is treated as a business interest expense of T, and T's allocable share of PS1's investment income is treated as properly allocable to a trade or business of T. This business interest expense is not treated as excess business interest expense, and this income is not treated as excess taxable income. See paragraph (b)(3)(iii) of this section. T's treatment of its allocable share of PS1's investment interest expense and investment income as business interest expense and income properly allocable to a trade or business, respectively, does not affect the character of these items at the PS1 level and does not affect the character of A's allocable share of PS1's investment interest and investment income.

(C) *Partnership engaged in a trade or business.* The facts are the same as in *Example 2* in paragraph (b)(7)(ii)(A) of this section, except that PS1 also is engaged in Business 1, and PS1 borrows funds from a third party to finance Business 1 (Loan 2). In 2021, Business 1 earns $150x of net income (excluding interest expense and depreciation), and PS1 pays $100x of interest on Loan 2. For purposes of section 163(d) and (j), PS1 treats the interest paid on Loan 2 as properly allocable to a trade or business. As a result, PS1 has investment interest expense of $100x (attributable to Loan 1), business interest expense of $100x (attributable to Loan 2), $150x of investment income, and $150x of income from Business 1. PS1's ATI is $150x (its net income from Business 1 excluding interest and depreciation), and its section 163(j) limitation is $45x (30 percent × $150x). Pursuant to § 1.163(j)–6, PS1 has $55x of excess business interest expense ($100x − $45x), half of which ($27.5x) is allocable to T. Additionally, pursuant to paragraph (b)(3)(i) of this section, T's allocable share of PS1's investment interest expense ($50x) is treated as a business interest expense of T for purposes of section 163(j), and T's allocable share of PS1's investment income ($75x) is treated as properly allocable to a trade or business of T. Therefore, with respect to T's interest in PS1, T is treated as having $50x of business interest expense that is not treated as excess business interest expense, $75x of income that is properly allocable to a trade or business, and $27.5x of excess business interest expense.

(c) *Effect on earnings and profits*—(1) *In general.* In the case of a taxpayer that is a domestic C corporation, except as otherwise provided in paragraph (c)(2) of this section, the disallowance and carryforward under § 1.163(j)–2 (and § 1.163(j)–5, in the case of a taxpayer that is a consolidated group member) of a deduction for business interest expense of the taxpayer or of a partnership in which the taxpayer is a partner does not affect whether or when the business interest expense reduces the taxpayer's earnings and profits. In the case of a foreign corporation, the disallowance and carryforward of a deduction for the corporation's business interest expense under § 1.163(j)–2 does not affect whether and when such business interest expense reduces the corporation's earnings and profits. Thus, for example, if a United States person has elected under section 1295 to treat a passive foreign investment company (as defined in section 1297) (PFIC) as a qualified electing fund, then the disallowance and carryforward of a deduction for the PFIC's business interest expense under § 1.163(j)–2 does not affect whether or when such business interest expense reduces the PFIC's earnings and profits.

(2) *Special rule for RICs and REITs.* In the case of a taxpayer that is a RIC or a REIT for the taxable year in which a deduction for the taxpayer's business interest expense is disallowed under § 1.163(j)–2(b), or in which the RIC or REIT is allocated any excess business interest expense from a partnership under section 163(j)(4)(B)(i) and § 1.163(j)–6, the taxpayer's earnings and profits are adjusted in the taxable year

or years in which the business interest expense is deductible or, if earlier, in the first taxable year for which the taxpayer no longer is a RIC or a REIT.

(3) *Special rule for partners that are C corporations.* If a taxpayer that is a C corporation is allocated any excess business interest expense from a partnership, and if all or a portion of the excess business interest expense has not yet been treated as business interest expense by the taxpayer at the time of the taxpayer's disposition of all or a portion of its interest in the partnership, the taxpayer must increase its earnings and profits immediately prior to the disposition by an amount equal to the amount of the basis adjustment required under section 163(j)(4)(B)(iii)(II) and § 1.163(j)–6(h)(3).

(4) *Examples.* The principles of this paragraph (c) are illustrated by the following examples. For purposes of the examples in this paragraph (c)(4), except as otherwise provided in the examples, X is a taxable domestic C corporation whose taxable year ends on December 31; X is not a member of a consolidated group; X does not qualify for the small business exemption under § 1.163(j)–2(d); X is not engaged in an excepted trade or business; X has no floor plan financing indebtedness; all interest expense is deductible except for the potential application of section 163(j); X has no accumulated earnings and profits at the beginning of the 2021 taxable year; and the facts set forth the only corporate activity.

(i) *Example 1: Earnings and profits of a taxable domestic C corporation other than a RIC or a REIT*—(A) *Facts.* X is a corporation that does not intend to qualify as a RIC or a REIT for its 2021 taxable year. In that year, X has tentative taxable income (without regard to the application of section 163(j)) of $0, which includes $100x of gross income and $100x of interest expense on a loan from an unrelated third party. X also makes a $100x distribution to its shareholders that year.

(B) *Analysis.* The $100x of interest expense is business interest expense for purposes of section 163(j) (see paragraph (b)(1) of this section). X's ATI in the 2021 taxable year is $100x ($0 of tentative taxable income computed without regard to $100x of business interest expense). Thus, X may deduct $30x of its $100x of business interest expense in the 2021 taxable year under § 1.163(j)–2(b) (30 percent × $100x), and X may carry forward the remainder ($70x) to X's 2022 taxable year as a disallowed business interest expense carryforward under § 1.163(j)–2(c). Although X may not currently deduct all $100x of its business interest expense in the 2021 taxable year, X must reduce its earnings and profits in that taxable year by the full amount of its business interest expense ($100x) in that taxable year. As a result, no portion of X's distribution of $100x to its shareholders in the 2021 taxable year is a dividend within the meaning of section 316(a).

(ii) *Example 2: RIC adjusted taxable income and earnings and profits*—(A) *Facts.* X is a corporation that intends to qualify as a RIC for its 2021 taxable year. In that taxable year, X's only items are $100x of interest income, $50x of dividend income from C corporations that only issue common stock and in which X has less than a twenty percent interest (by vote and value), $10x of net capital gain, and $125x of interest expense. None of the dividends are received on debt financed portfolio stock under section 246A. The DRD determined under section 243(a) with respect to X's $50x of dividend income is $25x. X pays $42x in dividends to its shareholders, meeting the requirements of section 562 during X's 2021 taxable year, including $10x that X reports as capital gain dividends in written statements furnished to X's shareholders.

(B) *Analysis.* (*1*) Under paragraph (b) of this section, all of X's interest expense is considered business interest expense, all of X's interest income is considered business interest income, and all of X's other income is considered to be properly allocable to a trade or business. Under paragraph (b)(4)(ii) of this section, prior to the application of section 163(j), X's tentative taxable income is $10x ($100x business interest income + $50x dividend income + $10x net capital gain − $125x business interest expense − $25x DRD = $10x). Under paragraph (b)(4)(iii) of this section, X's ATI is increased by the DRD. As such, X's ATI for the 2021 taxable year is $60x ($10x tentative taxable income + $125x business interest expense − $100x business interest income + $25x DRD = $60x).

(*2*) X may deduct $118x of its $125x of business interest expense in the 2021 taxable year under section 163(j)(1) ($100x business interest income + (30 percent × $60x of ATI) = $118x), and X may carry forward the remainder ($7x) to X's 2022 taxable year. See § 1.163(j)–2(b) and (c).

(*3*) After the application of section 163(j), X has taxable income of $17x ($100x interest income + $50x dividend income + $10x capital gain − $25x DRD − $118x allowable interest expense = $17x) for the 2021 taxable year. X will have investment company taxable income (ICTI) in the amount of $0 ($17x taxable income − $10x capital gain + $25x DRD − $32x dividends paid deduction for ordinary dividends = $0). The excess of X's net capital gain ($10x) over X's dividends paid deduction determined with reference to capital gain dividends ($10x) is also $0.

(*4*) Under paragraph (c)(2) of this section, X will not reduce its earnings and profits by the amount of interest expense disallowed as a deduction in the 2021 taxable year under section 163(j). Thus, X has current earnings and profits in the amount of $42x ($100x interest income + $50x dividend income + $10x capital gain − $118x allowable business interest expense = $42x) before giving effect to dividends paid during the 2021 taxable year.

(iii) *Example 3: Carryforward of disallowed interest expense*—(A) *Facts.* The facts are the same as the facts in *Example 2* in paragraph (c)(4)(ii)(A) of this section for the 2021 taxable year. In addition, X has $50x of interest income and $20x of interest expense for the 2022 taxable year.

(B) *Analysis.* Under paragraph (b) of this section, all of X's interest expense is considered business interest expense, all of X's interest income is considered business interest income, and all of X's other income is considered to be properly allocable to a trade or business. Because X's $50x of business interest income exceeds the $20x of business interest expense from the 2022 taxable year and the $7x of disallowed business interest expense carryforward from the 2021 taxable year, X may deduct $27x of business interest expense in the 2022 taxable year. Under paragraph (c)(2) of this section, X must reduce its current earnings and profits for the 2022 taxable year by the full amount of the deductible business interest expense ($27x).

(iv) *Example 4: REIT adjusted taxable income and earnings and profits*—(A) *Facts.* X is a corporation that intends to qualify as a REIT for its 2021 taxable year. X is not engaged in an excepted trade or business and is not engaged in a trade or business that is eligible to make any election under section 163(j)(7). In that year, X's only items are $100x of mortgage interest income, $30x of dividend income from C corporations that only issue common stock and in which X has less than a ten percent interest (by vote and value), $10x of net capital gain from the sale of mortgages on real property that is not property described in section 1221(a)(1), and $125x of interest expense. None of the dividends are received on debt financed portfolio stock under section 246A. The DRD determined under section 243(a) with respect to X's $30x of dividend income is $15x. X pays $28x in dividends meeting the requirements of section 562 during X's 2021 taxable year, including $10x that X properly designates as capital gain dividends under section 857(b)(3)(B).

(B) *Analysis.* (*1*) Under paragraph (b) of this section, all of X's interest expense is considered business interest expense, all of X's interest income is considered business interest income, and all of X's other income is considered to be properly allocable to a trade or business. Under paragraph (b)(4)(ii) of this section, prior to the application of section 163(j), X's tentative taxable income is $0 ($100x business interest income + $30x dividend income + $10x net capital gain − $125x business interest expense − $15x DRD = $0). Under paragraph (b)(4)(iii) of this section, X's ATI is increased by the DRD. As such, X's ATI for the 2021 taxable year is $40x ($0 tentative taxable income + $125x business interest expense − $100x business interest income + $15x DRD = $40x).

(*2*) X may deduct $112x of its $125x of business interest expense in the 2021 taxable year under section 163(j)(1) ($100x business interest income + (30 percent × $40x of ATI) = $112x), and X may carry forward the remainder of its business interest expense ($13x) to X's 2022 taxable year.

(*3*) After the application of section 163(j), X has taxable income of $13x ($100x business interest income + $30x dividend income + $10x capital gain − $15x DRD − $112x allowable business interest expense = $13x) for the 2021 taxable year. X will have real estate investment trust taxable income (REITTI) in the amount of $0 ($13x taxable income + $15x of DRD − $28x dividends paid deduction = $0).

(*4*) Under paragraph (c)(2) of this section, X will not reduce earnings and profits by the amount of business interest expense disallowed as a deduction in the 2021 taxable year. Thus, X has current earnings and profits in the amount of $28x ($100x business interest income + $30x dividend income + $10x capital gain − $112x allowable business interest expense = $28x) before giving effect to dividends paid during X's 2021 taxable year.

(v) *Example 5: Carryforward of disallowed interest expense*—(A) *Facts.* The facts are the same as in *Example 4* in paragraph (c)(4)(iv)(A) of this section for the 2021 taxable year. In addition, X has $50x of mortgage interest income and $20x of interest expense for the 2022 taxable year. X has no other tax items for the 2022 taxable year.

(B) *Analysis.* Because X's $50x of business interest income exceeds the $20x of business interest expense from the 2022 taxable year and the $13x of disallowed business interest expense carryforwards from the 2021 taxable year, X may deduct $33x of business interest expense in 2022. Under paragraph (c)(2) of this section, X must reduce its current earnings and profits for 2022 by the full amount of the deductible interest expense ($33x).

(d) *Special rules for consolidated groups*—(1) *Scope.* This paragraph (d) provides rules applicable to members of a consolidated group. For all members of a consolidated group for a consolidated return year, the computations required by section 163(j) and the regulations in this part under section 163(j) are made in accordance with the rules of this paragraph (d) unless otherwise provided elsewhere in the section 163(j) regulations. For rules governing the ownership of partnership interests by members of a consolidated group, see paragraph (e) of this section.

(2) *Calculation of the section 163(j) limitation for members of a consolidated group*—(i) *In general.* A consolidated group has a single section 163(j) limitation, the absorption of which is governed by § 1.163(j)–5(b)(3)(ii).

(ii) *Interest.* For purposes of determining whether amounts, other than amounts in respect of intercompany obligations (as defined in § 1.1502–13(g)(2)(ii)), intercompany items (as defined in § 1.1502–13(b)(2)), or corresponding items (as defined in § 1.1502–13(b)(3)), are treated as interest within the meaning of § 1.163(j)–1(b)(22), all members of a consolidated group are treated as a single taxpayer.

(iii) *Calculation of business interest expense and business interest income for a consolidated group.* For purposes of calculating the section 163(j) limitation for a consolidated group, the consolidated group's current-year business interest expense and business interest income, respectively, are the sum of each member's current-year business interest expense and business interest income, including amounts treated as business interest expense and business interest income under paragraph (b)(3) of this section.

(iv) *Calculation of adjusted taxable income.* For purposes of calculating the ATI for a consolidated group, the tentative taxable income is the consolidated group's consolidated taxable income, determined under § 1.1502–11 but without regard to any carryforwards or disallowances under section 163(j). Further, for purposes of calculating the ATI of the group, intercompany items and corresponding items are disregarded to the extent that they offset in amount. Thus, for example, certain portions of the intercompany items and corresponding items of a group member engaged in a non-excepted trade or business will not be included in ATI to the extent that the counterparties to the relevant intercompany transactions are engaged in one or more excepted trades or businesses.

(v) *Treatment of intercompany obligations*—(A) *In general.* Except as otherwise provided in paragraph (d)(2)(v)(B) of this section, for purposes of determining a member's business interest expense and business interest income, and for purposes of calculating the consolidated group's ATI, all intercompany obligations, as defined in § 1.1502–13(g)(2)(ii), are disregarded. Therefore, except as otherwise provided in paragraph (d)(2)(v)(B) of this section, interest expense and interest income from intercompany obligations are not treated as business interest expense and business interest income.

(B) *Repurchase premium.* This paragraph (d)(2)(v)(B) applies if a member of a consolidated group purchases an obligation of another member of the same consolidated group in a transaction to which § 1.1502–13(g)(5) applies. Notwithstanding the general rule of paragraph (d)(2)(v)(A) of this section, if, as a result of the deemed satisfaction of the obligation under § 1.1502–13(g)(5)(ii), the debtor member has repurchase premium that is deductible under § 1.163–7(c), such repurchase premium is treated as interest that is subject to the section 163(j) limitation. See § 1.163(j)–1(b)(22)(i)(H).

(3) *Investment adjustments.* For rules governing investment adjustments within a consolidated group, see § 1.1502–32(b).

(4) *Examples.* The principles in this paragraph (d) are illustrated by the following examples. For purposes of the examples in this paragraph (d)(4), S is a member of the calendar-year consolidated group of which P is the common parent; the P group does not qualify for the small business exemption in § 1.163(j)–2(d); no member of the P group is engaged in an excepted trade or business; all interest expense is deductible except for the potential application of section 163(j); and the facts set forth the only corporate activity.

(i) *Example 1: Calculation of the section 163(j) limitation*—(A) *Facts.* In the 2021 taxable year, P has $50x of separate tentative taxable income after taking into account $65x of interest paid on a loan from a third party (without regard to any disallowance under section 163(j)) and $35x of depreciation deductions under section 168. In turn, S has $40x of separate tentative taxable income in the 2021 taxable year after taking into account $10x of depreciation deductions under section 168. S has no interest expense in the 2021 taxable year. The P group's tentative taxable income the 2021 taxable year is $90x, determined under § 1.1502–11 without regard to any disallowance under section 163(j).

(B) *Analysis.* As provided in paragraph (b)(1) of this section, P's interest expense is treated as business interest expense for purposes of section 163(j). If P and S were to apply the section 163(j) limitation on a separate-entity basis, then P's ATI would be $150x ($50x + $65x + $35x = $150x), its section 163(j) limitation would be $45x (30 percent × $150x = $45x), and a deduction for $20x of its $65x of business interest expense would be disallowed in the 2021 taxable year under section 163(j). However, as provided in paragraph (d)(2) of this section, the P group computes a single section 163(j) limitation, and that computation begins with the P group's tentative taxable income (as determined prior to the application of section 163(j)), or $90x. The P group's ATI is $200x ($50x + $40x + $65x + $35x + $10x = $200x). Thus, the P group's section 163(j) limitation for the 2021 taxable year is $60x (30 percent × $200x = $60x). As a result, all but $5x of the P group's business interest expense is deductible in the 2021 taxable year. P carries over the $5x of disallowed business interest expense to the succeeding taxable year.

(ii) *Example 2: Intercompany obligations*—(A) *Facts.* On January 1, 2021, G, a corporation unrelated to P and S, lends P $100x in exchange for a note that accrues interest at a 10 percent annual rate. A month later, P lends $100x to S in exchange for a note that accrues interest at a 12 percent annual rate. In 2021, P accrues and pays $10x of interest to G on P's note, and S accrues and pays $12x of interest to P on S's note. For that year, the P group's only other items of income, gain, deduction, and loss are $40x of income earned by S from the sale of inventory, and a $30x deductible expense arising from P's payment of tort liability claims.

(B) *Analysis.* As provided in paragraph (d)(2)(v) of this section, the intercompany obligation between P and S is disregarded in determining P and S's business interest expense and business interest income and in determining the P group's ATI. For purposes of section 163(j), P has $10x of business interest expense and a $30x deduction for the payment of tort liability claims, and S has $40x of income. The P group's ATI is $10x ($40x − $30x = $10x), and its section 163(j) limitation is $3x (30 percent × $10x = $3x). The P group may deduct $3x of its business interest expense in the 2021 taxable year. A deduction for P's remaining $7x of business interest expense is disallowed in the 2021 taxable year, and this amount is carried forward to the 2022 taxable year.

(e) *Ownership of partnership interests by members of a consolidated group.*

(1) [Reserved]

(2) *Change in status of a member.* A change in status of a member (that is, becoming or ceasing to be a member of the group) is not treated as a disposition for purposes of section 163(j)(4)(B)(iii)(II) and § 1.163(j)–6(h)(3).

(3) *Basis adjustments under § 1.1502–32.* A member's allocation of excess business interest expense from a partnership and the resulting decrease in basis in the partnership interest under section 163(j)(4)(B)(iii)(I) is not a noncapital, nondeductible expense for purposes of § 1.1502–32(b)(3)(iii). Additionally, an increase in a member's basis in a partnership interest under section 163(j)(4)(B)(iii)(II) to reflect excess business interest expense not deducted by the consolidated group is not tax-exempt income for purposes of § 1.1502–32(b)(3)(ii). Investment adjustments are made under § 1.1502–32(b)(3)(i) when the excess business interest expense from the partnership is converted into business interest expense, deducted, and absorbed by the consolidated group. See § 1.1502–32(b).

(4) *Excess business interest expense and § 1.1502–36.* Excess business interest expense is a Category D asset within the meaning of § 1.1502–36(d)(4)(i).

(f) *Cross-references.* For rules governing the treatment of disallowed business interest expense carryforwards for C corporations, including rules governing the treatment of disallowed business interest expense carryforwards when members enter or leave a consolidated group, see § 1.163(j)–5. For rules governing the application of section 163(j) to a C corporation or a consolidated group engaged in both excepted and non-excepted trades or businesses, see § 1.163(j)–10.

(g) *Applicability date*—(1) *In general.* This section applies to taxable years beginning on or after November 13, 2020. However, taxpayers and their related parties, within the meaning of sections 267(b) and 707(b)(1), may choose to apply the rules of this section to a taxable year beginning after December 31, 2017, so long as the taxpayers and their related parties consistently apply the rules of the section 163(j) regulations, and, if applicable, §§ 1.263A–9, 1.263A–15, 1.381(c)(20)–1, 1.382–1, 1.382–2, 1.382–5, 1.382–6, 1.382–7, 1.383–0, 1.383–1, 1.469–9, 1.469–11, 1.704–1, 1.882–5, 1.1362–3, 1.1368–1, 1.1377–1, 1.1502–13, 1.1502–21, 1.1502–36, 1.1502–79, 1.1502–91 through 1.1502–99 (to the extent they effectuate the rules of §§ 1.382–2, 1.382–5, 1.382–6, and 1.383–1), and 1.1504–4, to that taxable year.

(2) [Reserved]

§ 1.163(j)–5 General rules governing disallowed business interest expense carryforwards for C corporations.

(a) *Scope and definitions*—(1) *Scope.* This section provides rules regarding disallowed business interest expense carryforwards for taxpayers that are C corporations, including members of a consolidated group. Paragraph (b) of this section provides rules regarding the treatment of disallowed business interest expense carryforwards. Paragraph (c) of this section provides a cross-reference to other rules regarding disallowed business interest expense carryforwards in transactions to which section 381(a) applies. Paragraph (d) of this section provides rules regarding limitations on disallowed business interest expense carryforwards from separate return limitation years (SRLYs). Paragraph (e) of this section provides cross-references to other rules regarding the application of section 382 to disallowed business interest expense carryforwards. Paragraph (f) of this section provides a cross-reference to other rules regarding the overlap of the SRLY limitation with section 382. Paragraph (g) of this section references additional rules that may limit the deductibility of interest or the use of disallowed business interest expense carryforwards.

(2) *Definitions*—(i) *Allocable share of the consolidated group's remaining section 163(j) limitation.* The term *allocable share of the consolidated group's remaining section 163(j) limitation* means, with respect to any member of a consolidated group, the product of the consolidated group's remaining section 163(j) limitation and the member's remaining current-year interest ratio.

(ii) *Consolidated group's remaining section 163(j) limitation.* The term *consolidated group's remaining section 163(j) limitation* means the amount of the consolidated group's section 163(j) limitation calculated pursuant to

§ 1.163(j)–4(d)(2), reduced by the amount of interest deducted by members of the consolidated group pursuant to paragraph (b)(3)(ii)(C)(*2*) of this section.

(iii) *Remaining current-year interest ratio.* The term *remaining current-year interest ratio* means, with respect to any member of a consolidated group for a particular taxable year, the ratio of the remaining current-year business interest expense of the member after applying the rule in paragraph (b)(3)(ii)(C)(*2*) of this section, to the sum of the amounts of remaining current-year business interest expense for all members of the consolidated group after applying the rule in paragraph (b)(3)(ii)(C)(*2*) of this section.

(b) *Treatment of disallowed business interest expense carryforwards*—(1) *In general.* The amount of any business interest expense of a C corporation not allowed as a deduction for any taxable year as a result of the section 163(j) limitation is carried forward to the succeeding taxable year as a disallowed business interest expense carryforward under section 163(j)(2) and § 1.163(j)–2(c).

(2) *Deduction of business interest expense.* For a taxpayer that is a C corporation, current-year business interest expense is deducted in the current taxable year before any disallowed business interest expense carryforwards from a prior taxable year are deducted in that year. Disallowed business interest expense carryforwards are deducted in the order of the taxable years in which they arose, beginning with the earliest taxable year, subject to certain limitations (for example, the limitation under section 382). For purposes of section 163(j), disallowed disqualified interest is treated as carried forward from the taxable year in which a deduction was disallowed under old section 163(j).

(3) *Consolidated groups*—(i) *In general.* A consolidated group's disallowed business interest expense carryforwards for the current consolidated return year (the current year) are the carryforwards from the group's prior consolidated return years plus any carryforwards from separate return years.

(ii) *Deduction of business interest expense*—(A) *General rule.* All current-year business interest expense of members of a consolidated group is deducted in the current year before any disallowed business interest expense carryforwards from prior taxable years are deducted in the current year. Disallowed business interest expense carryforwards from prior taxable years are deducted in the order of the taxable years in which they arose, beginning with the earliest taxable year, subject to the limitations described in this section.

(B) *Section 163(j) limitation equals or exceeds the current-year business interest expense and disallowed business interest expense carryforwards from prior taxable years.* If a consolidated group's section 163(j) limitation for the current year equals or exceeds the aggregate amount of its members' current-year business interest expense and disallowed business interest expense carryforwards from prior taxable years that are available for deduction, then none of the current-year business interest expense or disallowed business interest expense carryforwards is subject to disallowance in the current year under section 163(j). However, a deduction for the members' business interest expense may be subject to limitation under other provisions of the Code or the Income Tax Regulations (see, for example, paragraphs (c), (d), (e), and (f) of this section).

(C) *Current-year business interest expense and disallowed business interest expense carryforwards exceed section 163(j) limitation.* If the aggregate amount of members' current-year business interest expense and disallowed business interest expense carryforwards from prior taxable years exceeds the consolidated group's section 163(j) limitation for the current year, then the following rules apply in the order provided:

(*1*) The group first determines whether its section 163(j) limitation for the current year equals or exceeds the aggregate amount of the members' current-year business interest expense.

(*i*) If the group's section 163(j) limitation for the current year equals or exceeds the aggregate amount of the members' current-year business interest expense, then no amount of the group's current-year business interest expense is subject to disallowance in the current year under section 163(j). Once the group has taken into account its members' current-year business interest expense, the group applies the rules of paragraph (b)(3)(ii)(C)(*4*) of this section.

(*ii*) If the aggregate amount of members' current-year business interest expense exceeds the group's section 163(j) limitation for the current year, then the group applies the rule in paragraph (b)(3)(ii)(C)(*2*) of this section.

(*2*) If this paragraph (b)(3)(ii)(C)(*2*) applies (see paragraph (b)(3)(ii)(C)(*1*)(*ii*) of this section), then each member with current-year business interest expense and with current-year business interest income or floor plan financing interest expense deducts current-year business interest expense in an amount that does not exceed the sum of the member's business interest income and floor plan financing interest expense for the current year.

(*3*) After applying the rule in paragraph (b)(3)(ii)(C)(*2*) of this section, if the group has any section 163(j) limitation remaining for the current year, then each member with remaining current-year business interest expense deducts a portion of its expense based on its allocable share of the consolidated group's remaining section 163(j) limitation.

(*4*) If this paragraph (b)(3)(ii)(C)(*4*) applies (see paragraph (b)(3)(ii)(C)(*1*)(*i*) of this section), and if the group has any section 163(j) limitation remaining for the current year after applying the rules in paragraph (b)(3)(ii)(C)(*1*) of this section, then disallowed business interest expense carryforwards permitted to be deducted (including under paragraph (d)(1)(A) of this section) in the current year are to be deducted in the order of the taxable years in which they arose, beginning with the earliest taxable year. Disallowed business interest expense carryforwards from taxable years ending on the same date that are available to offset tentative taxable income for the current year generally are to be deducted on a pro rata basis under the principles of paragraph (b)(3)(ii)(C)(*3*) of this section. For example, assume that P and S are the only members of a consolidated group with a section 163(j) limitation for the current year (Year 2) of $200x; the amount of current-year business interest expense deducted in Year 2 is $100x; and P and S, respectively, have $140x and $60x of disallowed business interest expense carryforwards from Year 1 that are not subject to limitation under paragraph (c), (d), or (e) of this section. Under these facts, P would be allowed to deduct $70x of its carryforwards from Year 1 ($100x × ($140x/($60x + $140x)) = $70x), and S would be allowed to deduct $30x of its carryforwards from Year 1 ($100x × ($60x/($60x + $140x)) = $30x). But see § 1.383–1(d)(1)(ii), providing that, if losses subject to and not subject to the section 382 limitation are carried from the same taxable year, losses subject to the limitation are deducted before losses not subject to the limitation.

(*5*) Each member with remaining business interest expense after applying the rules of this paragraph (b)(3)(ii), taking into account the limitations in paragraphs (c), (d), (e), and (f) of this section, carries the expense forward to the succeeding taxable year as a disallowed business interest expense carryforward under section 163(j)(2) and § 1.163(j)–2(c).

(iii) *Departure from group.* If a corporation ceases to be a member during a consolidated return year, the corporation's current-year business interest expense from the taxable period ending on the day of the corporation's change in status as a member, as well as the corporation's disallowed business interest expense carryforwards from prior taxable years that are available to offset tentative taxable income in the consolidated return year, are first made available for deduction during that consolidated return year. See § 1.1502–76(b)(1)(i); see also § 1.1502–36(d) (regarding reductions of deferred deductions on the transfer of loss shares of subsidiary stock). Only the amount that is neither deducted by the group in that consolidated return year nor otherwise reduced under the Code or regulations may be carried to the corporation's first separate return year after its change in status.

(iv) *Example: Deduction of interest expense*—(A) *Facts.* (*1*) P wholly owns A, which is a member of the consolidated group of which P is the common parent. P and A each borrow money from Z, an unrelated third party. The business interest expense of P and A in Years 1, 2, and 3, and the P group's section 163(j) limitation for those years, are as follows:

TABLE 1 TO PARAGRAPH (b)(3)(iv)(A)(*1*)

Year	P's business interest expense	A's business interest expense	P group's section 163(j) limitation
1	$150x	$50x	$100x
2	60x	90x	120x
3	25x	50x	185x

(*2*) P and A have neither business interest income nor floor plan financing interest expense in Years 1, 2, and 3. Additionally, the P group is neither eligible for the small business exemption in § 1.163(j)–2(d) nor engaged in an excepted trade or business.

(B) *Analysis*—(*1*) *Year 1.* In Year 1, the aggregate amount of the P group members' current-year business interest expense ($150x + $50x) exceeds the P group's section 163(j) limitation ($100x). As a result, the rules of paragraph (b)(3)(ii)(C) of this section apply. Because the P group members' current-year business interest expense exceeds the group's section 163(j) limitation for Year 1, P and A must apply the rule in paragraph (b)(3)(ii)(C)(*2*) of this section. Pursuant to paragraph (b)(3)(ii)(C)(*2*) of this section, each of P and A must deduct its current-year business interest expense to the extent of its business interest income and floor plan financing interest expense. Neither P nor A has business interest income or floor plan financing interest expense in Year 1. Next, pursuant to paragraph (b)(3)(ii)(C)(*3*) of this section, each of P and A must deduct a portion of its current-year business interest expense based on its allocable share of the consolidated group's remaining section 163(j) limitation ($100x). P's allocable share is $75x ($100x × ($150x/$200x) = $75x), and A's allocable share is $25x ($100x × ($50x/$200x) = $25x). Accordingly, in Year 1, P deducts $75x of its current-year business interest expense, and A deducts $25x of its current-year business interest expense. P has a disallowed business interest expense carryforward from Year 1 of $75x ($150x − $75x = $75x), and A has a disallowed business interest expense carryforward from Year 1 of $25x ($50x − $25x = $25x).

(*2*) *Year 2.* In Year 2, the aggregate amount of the P group members' current-year business interest expense ($60x + $90x) and disallowed business interest expense carryforwards ($75x + $25x) exceeds the P group's section 163(j) limitation ($120x). As a result, the rules of paragraph (b)(3)(ii)(C) of this section apply. Because the P group members' current-year business interest expense exceeds the group's section 163(j) limitation for Year 2, P and A must apply the rule in paragraph (b)(3)(ii)(C)(*2*) of this section. Pursuant to paragraph (b)(3)(ii)(C)(*2*) of this section, each of P and A must deduct its current-year business interest expense to the extent of its business interest income and floor plan financing interest expense. Neither P nor A has business interest income or floor plan financing interest expense in Year 2. Next, pursuant to paragraph (b)(3)(ii)(C)(*3*) of this section, each of P and A must deduct a portion of its current-year business interest expense based on its allocable share of the consolidated group's remaining section 163(j) limitation ($120x). P's allocable share is $48x (($120x × ($60x/$150x)) = $48x), and A's allocable share is $72x (($120x × ($90x/$150x)) = $72x). Accordingly, in Year 2, P deducts $48x of current-year business interest expense, and A deducts $72x of current-year business interest expense. P has a disallowed business interest expense carryforward from Year 2 of $12x ($60x − $48x = $12x), and A has a disallowed business interest expense carryforward from Year 2 of $18x ($90x − $72x = $18x). Additionally, because the P group has no section 163(j) limitation remaining after deducting current-year business interest expense in Year 2, the full amount of P and A's disallowed business interest expense carryforwards from Year 1 ($75x and $25x, respectively) also are carried forward to Year 3. As a result, at the beginning of Year 3, P and A's respective disallowed business interest expense carryforwards are as follows:

TABLE 2 TO PARAGRAPH (b)(3)(iv)(B)(*2*)

	Year 1 disallowed business interest expense carryforwards	Year 2 disallowed business interest expense carryforwards	Total disallowed business interest expense carryforwards
P	$75x	$12x	$87x
A	25x	18x	43x

TABLE 2 TO PARAGRAPH (b)(3)(iv)(B)(*2*)—Continued

	Year 1 disallowed business interest expense carryforwards	Year 2 disallowed business interest expense carryforwards	Total disallowed business interest expense carryforwards
Total	100x	30x	130x

(*3*) *Year 3.* In Year 3, the aggregate amount of the P group members' current-year business interest expense ($25x + $50x = $75x) and disallowed business interest expense carryforwards ($130x) exceeds the P group's section 163(j) limitation ($185x). As a result, the rules of paragraph (b)(3)(ii)(C) of this section apply. Because the P group's section 163(j) limitation for Year 3 equals or exceeds the P group members' current-year business interest expense, no amount of the members' current-year business interest expense is subject to disallowance under section 163(j) (see paragraph (b)(3)(ii)(C)(*1*) of this section). After each of P and A deducts its current-year business interest expense, the P group has $110x of section 163(j) limitation remaining for Year 3 ($185x − $25x − $50x = $110x). Next, pursuant to paragraph (b)(3)(ii)(C)(*4*) of this section, $110x of disallowed business interest expense carryforwards are deducted on a pro rata basis, beginning with carryforwards from Year 1. Because the total amount of carryforwards from Year 1 ($100x) is less than the section 163(j) limitation remaining after the deduction of Year 3 business interest expense ($110x), all of the Year 1 carryforwards are deducted in Year 3. After current-year business interest expense and Year 1 carryforwards are deducted, the P group's remaining section 163(j) limitation in Year 3 is $10x. Because the Year 2 carryforwards ($30x) exceed the remaining section 163(j) limitation ($10x), under paragraph (b)(3)(ii)(C)(*4*) of this section, each of P and A will deduct a portion of its Year 2 carryforwards based on its allocable share of the consolidated group's remaining section 163(j) limitation. P's allocable share is $4x (($10x × ($12x/$30x)) = $4x), and A's allocable share is $6x (($10x × ($18x/$30x)) = $6x). Accordingly, P and A may deduct $4x and $6x, respectively, of their Year 2 carryforwards. For Year 4, P and A have $8x and $12x of disallowed business interest expense carryforwards from Year 2, respectively.

(c) *Disallowed business interest expense carryforwards in transactions to which section 381(a) applies.* For rules governing the application of section 381(c)(20) to disallowed business interest expense carryforwards, including limitations on an acquiring corporation's use of the disallowed business interest expense carryforwards of the transferor or distributor corporation in the acquiring corporation's first taxable year ending after the date of distribution or transfer, see § 1.381(c)(20)–1.

(d) *Limitations on disallowed business interest expense carryforwards from separate return limitation years*—(1) *General rule*—(A) *Cumulative section 163(j) SRLY limitation.* This paragraph (d) applies to disallowed business interest expense carryforwards of a member arising in a SRLY (see § 1.1502–1(f))) or treated as arising in a SRLY under the principles of § 1.1502–21(c) and (g). The amount of the carryforwards described in the preceding sentence that are included in the consolidated group's business interest expense deduction for any taxable year under paragraph (b) of this section may not exceed the aggregate section 163(j) limitation for all consolidated return years of the group, determined by reference only to the member's items of income, gain, deduction, and loss, and reduced (including below zero) by the member's business interest expense (including disallowed business interest expense carryforwards) absorbed by the group in all consolidated return years (cumulative section 163(j) SRLY limitation). For purposes of computing the member's cumulative section 163(j) SRLY limitation, intercompany items referred to in § 1.163(j)–4(d)(2)(iv) are included, with the exception of interest items with regard to intercompany obligations. See § 1.163(j)–4(d)(2)(v). Thus, for purposes of this paragraph (d), income and expense items arising from intercompany transactions (other than interest income and expense with regard to intercompany obligations) are included in the calculation of the cumulative section 163(j) SRLY limitation. In addition, items of interest expense with regard to intercompany obligations are not characterized as business interest expense for purposes of the reduction described in the second sentence of this paragraph (d)(1)(A).

(B) *Subgrouping.* For purposes of this paragraph (d), the SRLY subgroup principles of § 1.1502–21(c)(2)(i) (with regard to carryovers of SRLY losses) apply with appropriate adjustments.

(2) *Deduction of disallowed business interest expense carryforwards arising in a SRLY.* Notwithstanding paragraph (d)(1) of this section, disallowed business interest expense carryforwards of a member arising in a SRLY are available for deduction by the consolidated group in the current year only to the extent the group has remaining section 163(j) limitation for the current year after the deduction of current-year business interest expense and disallowed business interest expense carryforwards from earlier taxable years that are permitted to be deducted in the current year (see paragraph (b)(3)(ii)(A) of this section). SRLY-limited disallowed business interest expense carryforwards are deducted on a pro rata basis (under the principles of paragraph (b)(3)(ii)(C)(*3*) of this section) with non-SRLY limited disallowed business interest expense carryforwards from taxable years ending on the same date. See also § 1.1502–21(b)(1).

(3) *Examples.* The principles of this paragraph (d) are illustrated by the following examples. For purposes of the examples in this paragraph (d)(3), unless otherwise stated, P, R, S, and T are taxable domestic C corporations that are not RICs or REITs and that file their tax returns on a calendar-year basis; none of P, R, S, or T qualifies for the small business exemption under section 163(j)(3) or is engaged in an excepted trade or business; all interest expense is deductible except for the potential application of section 163(j); and the facts set forth the only corporate activity.

(i) *Example 1: Determination of SRLY limitation*—(A) *Facts.* Individual A owns P. In 2021, A forms T, which pays or accrues a $100x business interest expense for which a deduction is disallowed under section 163(j) and that is carried forward to 2022. P does not pay or accrue business interest expense in 2021, and P has no disallowed business interest expense carryforwards from prior taxable years. At the close of 2021, P acquires all of the stock of T, which joins with P in filing a consolidated return beginning in 2022. Neither P nor T pays or accrues business interest expense in 2022, and the P group has a section 163(j) limitation of $300x in that year. This limitation would be $70x if determined by reference solely to T's items for all consolidated return years of the P group.

(B) *Analysis.* T's $100x of disallowed business interest expense carryforwards from 2021 arose in a SRLY. P's acquisition of T was not an ownership change as defined by section 382(g); thus, T's disallowed business interest expense carryforwards are subject to the SRLY limitation in paragraph (d)(1) of this section. T's cumulative section 163(j) SRLY limitation for 2022 is the P group's section 163(j) limitation, determined by reference solely to T's items for all consolidated return years of the P group ($70x). See paragraph (d)(1) of this section. Thus, $70x of T's disallowed business interest expense carryforwards are available to be deducted by the P group in 2022, and the remaining $30x of T's disallowed business interest expense carryforwards are carried forward to 2023. After the P group deducts $70x of T's disallowed business interest expense carryforwards, T's cumulative section 163(j) SRLY limitation is reduced by $70x to $0.

(C) *Cumulative section 163(j) SRLY limitation of $0.* The facts are the same as in *Example 1* in paragraph (d)(3)(i)(A) of this section, except that T's cumulative section 163(j) SRLY limitation for 2022 is $0. Because the amount of T's disallowed business interest expense carryforwards that may be deducted by the P group in 2022 may not exceed T's cumulative section 163(j) SRLY limitation, none of T's carryforwards from 2021 may be deducted by the P group in 2022. Because none of T's disallowed business interest expense carryforwards are absorbed by the P group in 2022, T's cumulative section 163(j) SRLY limitation remains at $0 entering 2023.

(ii) *Example 2: Cumulative section 163(j) SRLY limitation less than zero*—(A) *Facts.* P and S are the only members of a consolidated group. P has neither current-year business interest expense nor disallowed business interest expense carryforwards. For the current year, the P group has a section 163(j) limitation of $150x, $25x of which is attributable to P, and $125x of which is attributable to S. S has $100x of disallowed business interest expense carryforwards that arose in a SRLY and $150x of current-year business interest expense. S's cumulative section 163(j) SRLY limitation entering the current year (computed by reference solely to S's items for all consolidated return years of the P group) is $0.

(B) *Analysis.* Under paragraph (d)(1) of this section, S's cumulative section 163(j) SRLY limitation is increased by $125x to reflect S's tax items for the current year. The P group's section 163(j) limitation permits the P group to deduct all $150x of S's current-year business interest expense. S's cumulative section 163(j) SRLY limitation is reduced by the $150x of S's business interest expense absorbed by the P group in the current year, which results in a −$25x balance. Thus, none of S's SRLY'd disallowed business interest expense carryforwards may be deducted by the P group in the current year. Entering the subsequent year, S's cumulative section 163(j) SRLY limitation remains −$25x.

(iii) *Example 3: Pro rata absorption of SRLY-limited disallowed business interest expense carryforwards*—(A) *Facts.* P, R, and S are the only members of a consolidated group, and no member has floor plan financing or business interest income. P has $60x of current-year business interest expense and $40x of disallowed business interest expense carryforwards from the previous year, which was not a separate return year. R has $120x of current-year business interest expense and $80x of disallowed business interest expense carryforwards from the previous year, which was not a separate return year. S has $70x of current-year business interest expense and $30x of disallowed business interest expense carryforwards from the previous year, which was a separate return year. The P group has a section 163(j) limitation of $300x, $50x of which is attributable to P, $90x to R, and $160x to S. S's cumulative section 163(j) SRLY limitation entering the current year (computed by reference solely to S's items for all consolidated return years of the P group) is $0.

TABLE 3 TO PARAGRAPH (d)(3)(iii)(A)

	Current-year business interest expense	Disallowed business interest expense carryforwards from prior taxable year	Section 163(j) limitation
P	$60x	$40x	$50x
R	120x	80x	90x
S	70x	(SRLY) 30x	160x
Total	250x	150x	300x

(B) *Analysis.* Under paragraph (d)(1) of this section, S's cumulative section 163(j) SRLY limitation is increased in the current year by $160x. The P group's section 163(j) limitation permits the P group to deduct all $70x of S's current-year business interest expense (and all $180x of P and R's current-year business interest expense). S's cumulative section 163(j) SRLY limitation is reduced by the $70x of S's business interest expense absorbed by the P group in the current year, resulting in a $90x balance. Because the P group has $50x of section 163(j) limitation remaining after the absorption of current-year business interest expense, the P group can absorb $50x of its members' disallowed business interest expense carryforwards. Under paragraph (d)(2) of this section, SRLY-limited disallowed business interest expense carryforwards are deducted on a pro rata basis with other disallowed business interest expense carryforwards from the same taxable year. Accordingly, the P group can deduct $10x ($50x × ($30x/$150x)) of S's SRLY-limited disallowed business interest expense carryforwards. S's cumulative section 163(j) SRLY limitation is reduced (to $80x) by the $10x of SRLY-limited disallowed business interest carryforwards absorbed by the P group in the current year.

(C) *Cumulative section 163(j) SRLY limitation of −$75x.* The facts are the same as in *Example 3* in paragraph (d)(3)(iii)(A) of this section, except that S's cumulative section 163(j) SRLY limitation entering the current year is −$75x. After adjusting for S's tax items for the current year ($160x) and the P group's absorption of S's current-year business interest expense ($70x), S's cumulative section 163(j) SRLY limitation is $15x (−$75x + $160x − $70x). Because S's cumulative section 163(j) SRLY limitation ($15x) is less than the amount of S's SRLY-limited disallowed business interest expense carryforwards ($30x), the pro rata calculation under paragraph (d)(2) of this section is applied to $15x (rather than $30x) of S's carryforwards. Accordingly, the P group can deduct $5.56x ($50x × ($15x/$135x)) of S's SRLY-limited disallowed business interest expense carryforwards. S's cumulative section 163(j) SRLY limitation is reduced (to $9.44x) by the $5.56x of SRLY-limited disallowed business interest carryforwards absorbed by the P group in the current year.

(e) *Application of section 382*—(1) *Pre-change loss.* For rules governing the treatment of a disallowed business interest expense as a pre-change loss for purposes of section 382, see §§ 1.382–2(a) and 1.382–6. For rules governing the application of section 382 to disallowed disqualified interest carryforwards, see § 1.163(j)–11(c)(4).

(2) *Loss corporation.* For rules governing when a disallowed business interest expense causes a corporation to be a loss corporation within the meaning of section 382(k)(1), see § 1.382–2(a). For the application of section 382 to disallowed disqualified interest carryforwards, see § 1.163(j)–11(c)(4).

(3) *Ordering rules for utilization of pre-change losses and for absorption of the section 382 limitation.* For ordering rules for the utilization of disallowed business interest expense, net operating losses, and other pre-change losses, and for the absorption of the section 382 limitation, see § 1.383–1(d).

(4) *Disallowed business interest expense from the pre-change period in the year of a testing date.* For rules governing the treatment of disallowed business interest expense from the pre-change period (within the meaning of § 1.382–6(g)(2)) in the year of a testing date, see § 1.382–2.

(5) *Recognized built-in loss.* For a rule providing that a section 382 disallowed business interest carryforward (as defined in § 1.382–2(a)(7)) is not treated as a recognized built-in loss for purposes of section 382, see § 1.382–7(d)(5).

(f) *Overlap of SRLY limitation with section 382.* For rules governing the overlap of the application of section 382 and the application of the SRLY rules, see § 1.1502–21(g).

(g) *Additional limitations.* Additional rules provided under the Code or regulations also apply to limit the use of disallowed business interest expense carryforwards. For rules governing the relationship between section 163(j) and other provisions affecting the deductibility of interest, see § 1.163(j)–3.

(h) *Applicability date.* This section applies to taxable years beginning on or after November 13, 2020. However, taxpayers and their related parties, within the meaning of sections 267(b) and 707(b)(1), may choose to apply the rules of this section to a taxable year beginning after December 31, 2017, so long as the taxpayers and their related parties consistently apply the rules of the section 163(j) regulations, and, if applicable, §§ 1.263A–9, 1.263A–15, 1.381(c)(20)–1, 1.382–1, 1.382–2, 1.382–5, 1.382–6, 1.382–7, 1.383–0, 1.383–1, 1.469–9, 1.469–11, 1.704–1, 1.882–5, 1.1362–3, 1.1368–1, 1.1377–1, 1.1502–13, 1.1502–21, 1.1502–36, 1.1502–79, 1.1502–91 through 1.1502–99 (to the extent they effectuate the rules of §§ 1.382–2, 1.382–5, 1.382–6, and 1.383–1), and 1.1504–4, to that taxable year.

§ 1.163(j)–6 Application of the section 163(j) limitation to partnerships and subchapter S corporations.

(a) *Overview.* If a deduction for business interest expense of a partnership or an S corporation is subject to the section 163(j) limitation, section 163(j)(4) provides that the section 163(j) limitation applies at the partnership or S corporation level and any deduction for business interest expense is taken into account in determining the nonseparately stated taxable income or loss of the partnership or S corporation. Once a partnership or an S corporation determines its business interest expense, business interest income, ATI, and floor plan financing interest expense, the partnership or S corporation calculates its section 163(j) limitation by applying the rules of § 1.163(j)–2(b) and this section. Paragraph (b) of this section provides definitions used in this section. Paragraph (c) of this section provides rules regarding the character of a partnership's deductible business interest expense and excess business interest expense. Paragraph (d) of this section provides rules regarding the calculation of a partnership's ATI and floor plan financing interest expense. Paragraph (e) of this section provides rules regarding a partner's ATI and business interest income. Paragraph (f) of this section provides an eleven-step computation necessary for properly allocating a partnership's deductible business interest expense and section 163(j) excess items to its partners. Paragraph (g) of this section applies carryforward rules at the partner level if a partnership has excess business interest expense. Paragraph (h) of this section provides basis adjustment rules, and paragraph (k) of this section provides rules regarding investment items of a partnership. Paragraph (l) of this section provides rules regarding S corporations. Paragraph (m) of this section provides rules for partnerships and S corporations not subject to section 163(j). Paragraph (o) of this section provides examples illustrating the rules of this section.

(b) *Definitions.* In addition to the definitions contained in § 1.163(j)–1, the following definitions apply for purposes of this section.

(1) *Section 163(j) items.* The term *section 163(j) items* means the partnership or S corporation's business interest expense, business interest income, and items comprising ATI.

(2) *Partner basis items.* The term *partner basis items* means any items of income, gain, loss, or deduction resulting from either an adjustment to the basis of partnership property used in a non-excepted trade or business made pursuant to section 743(b) or the operation of section 704(c)(1)(C)(i) with respect to such property. Partner basis items also include section 743(b) basis adjustments used to increase or decrease a partner's share of partnership gain or loss on the sale of partnership property used in a non-excepted trade or business (as described in § 1.743–1(j)(3)(i)) and amounts resulting from the operation of section 704(c)(1)(C)(i) used to decrease a partner's share of partnership gain or increase a partner's share of partnership loss on the sale of such property.

(3) *Remedial items.* The term *remedial items* means any allocation to a partner of remedial items of income, gain, loss, or deduction pursuant to section 704(c) and § 1.704–3(d).

(4) *Excess business interest income.* The term *excess business interest income* means the amount by which a partnership's or S corporation's business interest income exceeds its

business interest expense in a taxable year.

(5) *Deductible business interest expense.* The term *deductible business interest expense* means the amount of a partnership's or S corporation's business interest expense that is deductible under section 163(j) in the current taxable year following the application of the limitation contained in § 1.163(j)–2(b).

(6) *Section 163(j) excess items.* The term *section 163(j) excess items* means the partnership's excess business interest expense, excess taxable income, and excess business interest income.

(7) *Non-excepted assets.* The term *non-excepted assets* means assets from a non-excepted trade or business.

(8) *Excepted assets.* The term *excepted assets* means assets from an excepted trade or business.

(c) *Business interest income and business interest expense of a partnership*—

(1)–(2) [Reserved]

(3) *Character of business interest expense.* If a partnership has deductible business interest expense, such deductible business interest expense is not subject to any additional application of section 163(j) at the partner-level because it is taken into account in determining the nonseparately stated taxable income or loss of the partnership. However, for all other purposes of the Code, deductible business interest expense and excess business interest expense retain their character as business interest expense at the partner-level. For example, for purposes of section 469, such business interest expense retains its character as either passive or non-passive in the hands of the partner. Additionally, for purposes of section 469, deductible business interest expense and excess business interest expense from a partnership remain interest derived from a trade or business in the hands of a partner even if the partner does not materially participate in the partnership's trade or business activity. For additional rules regarding the interaction between sections 465, 469, and 163(j), see § 1.163(j)–3.

(d) *Adjusted taxable income of a partnership*—(1) *Tentative taxable income of a partnership.* For purposes of computing a partnership's ATI under § 1.163(j)–1(b)(1), the tentative taxable income of a partnership is the partnership's taxable income determined under section 703(a), but computed without regard to the application of the section 163(j) limitation.

(2) *Section 734(b), partner basis items, and remedial items.* A partnership takes into account items resulting from adjustments made to the basis of its property pursuant to section 734(b) for purposes of calculating its ATI pursuant to § 1.163(j)–1(b)(1). However, partner basis items and remedial items are not taken into account in determining a partnership's ATI under § 1.163(j)–1(b)(1). Instead, partner basis items and remedial items are taken into account by the partner in determining the partner's ATI pursuant to § 1.163(j)–1(b)(1). See *Example 6* in paragraph (o)(6) of this section.

(e) *Adjusted taxable income and business interest income of partners*—(1) *Modification of adjusted taxable income for partners.* The ATI of a partner in a partnership generally is determined in accordance with § 1.163(j)–1(b)(1), without regard to such partner's distributive share of any items of income, gain, deduction, or loss of such partnership, except as provided for in paragraph (m) of this section, and is increased by such partner's distributive share of such partnership's excess taxable income determined under paragraph (f) of this section. For rules regarding corporate partners, see § 1.163(j)–4(b)(3).

(2) *Partner basis items and remedial items.* Partner basis items and remedial items are taken into account as items derived directly by the partner in determining the partner's ATI for purposes of the partner's section 163(j) limitation. If a partner is allocated remedial items, such partner's ATI is increased or decreased by the amount of such items. Additionally, to the extent a partner is allocated partner basis items, such partner's ATI is increased or decreased by the amount of such items. See *Example 6* in paragraph (o)(6) of this section.

(3) *Disposition of partnership interests.* If a partner recognizes gain or loss upon the disposition of interests in a partnership, and the partnership in which the interest is being disposed owns only non-excepted trade or business assets, the gain or loss on the disposition of the partnership interest is included in the partner's ATI. See § 1.163(j)–10(b)(4)(ii) for dispositions of interests in partnerships that own—

(i) Non-excepted assets and excepted assets; or

(ii) Investment assets; or

(iii) Both.

(4) *Double counting of business interest income and floor plan financing interest expense prohibited.* For purposes of calculating a partner's section 163(j) limitation, the partner does not include—

(i) Business interest income from a partnership that is subject to section 163(j), except to the extent the partner is allocated excess business interest income from that partnership pursuant to paragraph (f)(2) of this section; and

(ii) The partner's allocable share of the partnership's floor plan financing interest expense, because such floor plan financing interest expense already has been taken into account by the partnership in determining its nonseparately stated taxable income or loss for purposes of section 163(j).

(f) *Allocation and determination of section 163(j) excess items made in the same manner as nonseparately stated taxable income or loss of the partnership*—(1) *Overview*—(i) *In general.* The purpose of this paragraph is to provide guidance regarding how a partnership must allocate its deductible business interest expense and section 163(j) excess items, if any, among its partners. For purposes of section 163(j)(4) and this section, allocations and determinations of deductible business interest expense and section 163(j) excess items are considered made in the same manner as the nonseparately stated taxable income or loss of the partnership if, and only if, such allocations and determinations are made in accordance with the eleven-step computation set forth in paragraphs (f)(2)(i) through (xi) of this section. A partnership first determines its section 163(j) limitation, total amount of deductible business interest expense, and section 163(j) excess items under paragraph (f)(2)(i) of this section. The partnership then applies paragraphs (f)(2)(ii) through (xi) of this section, in that order, to determine how those items of the partnership are allocated among its partners. At the conclusion of the eleven-step computation set forth in paragraphs (f)(2)(i) through (xi) of this section, the total amount of deductible business interest expense and section 163(j) excess items allocated to each partner will equal the partnership's total amount of deductible business interest expense and section 163(j) excess items.

(ii) *Relevance solely for purposes of section 163(j).* No rule set forth in paragraph (f)(2) of this section prohibits a partnership from making an allocation to a partner of any item of partnership income, gain, loss, or deduction that is otherwise permitted under section 704 and the regulations under section 704 of the Code. Accordingly, any calculations in paragraphs (f)(2)(i) through (xi) of this section are solely for the purpose of determining each partner's deductible business interest expense and section 163(j) excess items and do not otherwise affect any other provision under the Code, such as section 704(b). Additionally, floor plan financing interest expense is not allocated in accordance with paragraph (f)(2) of this section. Instead, floor plan financing interest expense of a partnership is allocated to its partners under section 704(b) and is taken into account as a nonseparately stated item of loss for purposes of section 163(j).

(2) *Steps for allocating deductible business interest expense and section 163(j) excess items*—(i) *Partnership-level calculation required by section 163(j)(4)(A).* First, a partnership must determine its section 163(j) limitation pursuant to § 1.163(j)–2(b). This calculation determines a partnership's total amounts of excess business interest income, excess taxable income, excess business interest expense (that is, the partnership's section 163(j) excess items), and deductible business interest expense under section 163(j) for a taxable year.

(ii) *Determination of each partner's relevant section 163(j) items.* Second, a partnership must determine each partner's allocable share of each section 163(j) item under section 704(b) and the regulations under section 704 of the Code, including any allocations under section 704(c), other than remedial items. Only section 163(j) items that were actually taken into account in the partnership's section 163(j) calculation under paragraph (f)(2)(i) of this section are taken into account for purposes of this paragraph (f)(2)(ii). Partner basis items, allocations of investment income and expense, remedial items, and amounts determined for the partner under § 1.163–8T are not taken into account for purposes of this paragraph (f)(2)(ii). For purposes of paragraphs (f)(2)(ii) through (xi) of this section, the term *allocable ATI* means a partner's distributive share of the partnership's ATI (that is, a partner's distributive share of gross income and gain items comprising ATI less such partner's distributive share of gross loss and deduction items comprising ATI), the term *allocable business interest income* means a partner's distributive share of the partnership's business interest income, and the term *allocable business interest expense* means a partner's distributive share of the partnership's business interest expense that is not floor plan financing interest expense. If the partnership determines that each partner has a pro rata share of allocable ATI, allocable business interest income, and allocable business interest expense, then the partnership may bypass paragraphs (f)(2)(iii) through (xi) of this section and allocate its section 163(j) excess items in the same proportion. See *Example 1* through *Example 16* in paragraphs (o)(1) through (16), respectively. This pro-rata exception does not result in allocations of section 163(j) excess items that vary from the array of allocations of section 163(j) excess items that would have resulted had paragraphs (f)(2)(iii) through (xi) been applied.

(iii) *Partner-level comparison of business interest income and business interest expense.* Third, a partnership must compare each partner's allocable business interest income to such partner's allocable business interest expense. Paragraphs (f)(2)(iii) through (v) of this section determine how a partnership must allocate its excess business interest income among its partners, as well as the amount of each partner's allocable business interest expense that is not deductible business interest expense after taking the partnership's business interest income into account. To the extent a partner's allocable business interest income exceeds its allocable business interest expense, the partner has an *allocable business interest income excess.* The aggregate of all the partners' allocable business interest income excess amounts is the *total allocable business interest income excess.* To the extent a partner's allocable business interest expense exceeds its allocable business interest income, the partner has an *allocable business interest income deficit.* The aggregate of all the partners' allocable business interest income deficit amounts is the *total allocable business interest income deficit.* These amounts are required to perform calculations in paragraphs (f)(2)(iv) and (v) of this section, which appropriately reallocate allocable business interest income excess to partners with allocable business interest income deficits in order to reconcile the partner-level calculation under paragraph (f)(2)(iii) of this section with the partnership-level result under paragraph (f)(2)(i) of this section.

(iv) *Matching partnership and aggregate partner excess business interest income.* Fourth, a partnership must determine each partner's final allocable business interest income excess. A partner's *final allocable business interest income excess* is determined by reducing, but not below zero, such partner's allocable business interest income excess (if any) by the partner's step four adjustment amount. A partner's *step four adjustment amount* is the product of the total allocable business interest income deficit and the ratio of such partner's allocable business interest income excess to the total allocable business interest income excess. The rules of this paragraph (f)(2)(iv) ensure that, following the application of paragraph (f)(2)(xi) of this section, the aggregate of all the partners' allocations of excess business interest income equals the total amount of the partnership's excess business interest income as determined in paragraph (f)(2)(i) of this section.

(v) *Remaining business interest expense determination.* Fifth, a partnership must determine each partner's remaining business interest expense. A partner's *remaining business interest expense* is determined by reducing, but not below zero, such partner's allocable business interest income deficit (if any) by such partner's step five adjustment amount. A partner's *step five adjustment amount* is the product of the total allocable business interest income excess and the ratio of such partner's allocable business interest income deficit to the total allocable business interest income deficit. Generally, a partner's remaining business interest expense is a partner's allocable business interest income deficit adjusted to reflect a reallocation of allocable business interest income excess from other partners. Determining a partner's remaining business interest expense is necessary to perform an ATI calculation that begins in paragraph (f)(2)(vii) of this section.

(vi) *Determination of final allocable ATI.* Sixth, a partnership must determine each partner's final allocable ATI. Paragraphs (f)(2)(vi) through (x) of this section determine how a partnership must allocate its excess taxable income and excess business interest expense among its partners.

(A) *Positive allocable ATI.* To the extent a partner's income and gain items comprising its allocable ATI exceed its deduction and loss items comprising its allocable ATI, the partner has *positive allocable ATI.* The aggregate of all the partners' positive allocable ATI amounts is the *total positive allocable ATI.*

(B) *Negative allocable ATI.* To the extent a partner's deduction and loss items comprising its allocable ATI exceed its income and gain items comprising its allocable ATI, the partner has negative allocable ATI. The aggregate of all the partners' negative allocable ATI amounts is the *total negative allocable ATI.*

(C) *Final allocable ATI.* Any partner with a negative allocable ATI, or an allocable ATI of $0, has a positive allocable ATI of $0. Any partner with a positive allocable ATI of $0 has a final allocable ATI of $0. The final allocable ATI of any partner with a positive allocable ATI greater than $0 is such partner's positive allocable ATI reduced, but not below zero, by the partner's step six adjustment amount. A partner's *step six adjustment amount* is the product of the total negative allocable ATI and the ratio of such partner's positive allocable ATI to the total positive allocable ATI. The total of the partners' final allocable ATI amounts must equal the partnership's ATI amount used to compute its section 163(j) limitation pursuant to § 1.163(j)–2(b).

(vii) *Partner-level comparison of 30 percent of adjusted taxable income and remaining business interest expense.* Seventh, a partnership must compare each partner's ATI capacity to such partner's remaining business interest expense as determined under paragraph (f)(2)(v) of this section. A partner's *ATI capacity* is the amount that is 30 percent of such partner's final allocable ATI as determined under paragraph (f)(2)(vi) of this section. A partner's final allocable ATI is grossed down to 30 percent prior to being compared to its remaining business interest expense in this calculation to parallel the partnership's adjustment to its ATI under section 163(j)(1)(B). To the extent a partner's ATI capacity exceeds its remaining business interest expense, the partner has an *ATI capacity excess.* The aggregate of all the partners' ATI capacity excess amounts is the *total ATI capacity excess.* To the extent a partner's remaining business interest expense exceeds its ATI capacity, the partner has an *ATI capacity deficit.* The aggregate of all the partners' ATI capacity deficit amounts is the *total ATI capacity deficit.* These amounts (which may be subject to adjustment under paragraph (f)(2)(viii) of this section) are required to perform calculations in paragraphs (f)(2)(ix) and (x) of this section, which appropriately reallocate ATI capacity excess to partners with ATI capacity deficits in order to reconcile the partner-level calculation under paragraph (f)(2)(vii) of this section with the partnership-level result under paragraph (f)(2)(i) of this section.

(viii) *Partner priority right to ATI capacity excess determination.* (A) Eighth, the partnership must determine whether it is required to make any adjustments described in this paragraph (f)(2)(viii) and, if it is, make such adjustments. The rules of this paragraph (f)(2)(viii) are necessary to account for adjustments made to a partner's allocable ATI in paragraph (f)(2)(vi) of this section to ensure that the partners who had a negative allocable ATI do not inappropriately benefit under the rules of paragraphs (f)(2)(ix) through (xi) of this section to the detriment of the partners who had positive allocable ATI. The partnership must perform the calculations and make the necessary adjustments described under paragraphs (f)(2)(viii)(B) and (C) or paragraph (f)(2)(viii)(D) of this section if, and only if, there is—

(*1*) An excess business interest expense amount greater than $0 under paragraph (f)(2)(i) of this section;

(*2*) A total negative allocable ATI amount greater than $0 under paragraph (f)(2)(vi) of this section; and

(*3*) A total ATI capacity excess amount greater than $0 under paragraph (f)(2)(vii) of this section.

(B) A partnership must determine each partner's priority amount and usable priority amount. A partner's *priority amount* is 30 percent of the amount by which a partner's positive allocable ATI under paragraph (f)(2)(vi)(A) of this section exceeds such partner's final allocable ATI under paragraph (f)(2)(vi)(C) of this section. However, only partners with an ATI capacity deficit as determined under paragraph (f)(2)(vii) of this section can have a priority amount greater than $0. The aggregate of all the partners' priority amounts is the *total priority amount.* A partner's *usable priority amount* is the lesser of such partner's priority amount or such partner's ATI capacity deficit as determined under paragraph (f)(2)(vii) of this section. The aggregate of all the partners' usable priority amounts is the *total usable priority amount.* If the total ATI capacity excess amount, as determined under paragraph (f)(2)(vii) of this section, is greater than or equal to the total usable priority amount, then the partnership must perform the adjustments described in paragraph (f)(2)(viii)(C) of this section. If the total usable priority amount is greater than the total ATI capacity excess amount, as determined under paragraph (f)(2)(vii) of this section, then the partnership must perform the adjustments described in paragraph (f)(2)(viii)(D) of this section.

(C) For purposes of paragraph (f)(2)(ix) of this section, each partner's final ATI capacity excess amount is $0. For purposes of paragraph (f)(2)(x) of this section, the following terms have the following meanings for each partner:

(*1*) Each partner's *ATI capacity deficit* is such partner's ATI capacity deficit as determined under paragraph (f)(2)(vii) of this section, reduced by such partner's usable priority amount.

(*2*) The *total ATI capacity deficit* is the total ATI capacity deficit as determined under paragraph (f)(2)(vii) of this section, reduced by the total usable priority amount.

(*3*) The *total ATI capacity excess* is the total ATI capacity excess as determined under paragraph (f)(2)(vii) of this section, reduced by the total usable priority amount.

(D) Any partner with a priority amount greater than $0 is a *priority partner.* Any partner that is not a priority partner is a *non-priority partner.* For purposes of paragraph (f)(2)(ix) of this section, each partner's final ATI capacity excess amount is $0. For purposes of paragraph (f)(2)(x) of this section, each non-priority partner's final ATI capacity deficit amount is such partner's ATI capacity deficit as determined under paragraph (f)(2)(vii) of this section. For purposes of paragraph (f)(2)(x) of this section, the following terms have the following meanings for priority partners.

(*1*) Each priority partner must determine its step eight excess share. A partner's *step eight excess share* is the product of the total ATI capacity excess as determined under paragraph (f)(2)(vii) of this section and the ratio of the partner's priority amount to the total priority amount.

(*2*) To the extent a priority partner's step eight excess share exceeds its ATI capacity deficit as determined under paragraph (f)(2)(vii) of this section, such excess amount is the priority partner's *ATI capacity excess* for purposes of paragraph (f)(2)(x) of this section. The *total ATI capacity excess* is the aggregate of the priority partners' ATI capacity excess amounts as determined under this paragraph (f)(2)(viii)(D)(*2*).

(*3*) To the extent a priority partner's ATI capacity deficit as determined under paragraph (f)(2)(vii) of this section exceeds its step eight excess share, such excess amount is the priority partner's *ATI capacity deficit* for purposes of paragraph (f)(2)(x) of this section. The *total ATI capacity deficit* is the aggregate of the priority partners' ATI capacity deficit amounts as determined under this paragraph (f)(2)(viii)(D)(*3*).

(ix) *Matching partnership and aggregate partner excess taxable income.* Ninth, a partnership must determine each partner's final ATI capacity excess. A partner's *final ATI capacity excess* amount is determined by reducing, but not below zero, such partner's ATI capacity excess (if any) by the partner's step nine adjustment amount. A partner's *step nine adjustment amount* is the product of the total ATI capacity deficit and the ratio of such partner's ATI capacity excess to the total ATI capacity excess. The rules of this paragraph (f)(2)(ix) ensure that, following the application of paragraph (f)(2)(xi) of this section, the aggregate of all the partners' allocations of excess taxable income equals the total amount of the partnership's excess taxable income as determined in paragraph (f)(2)(i) of this section.

(x) *Matching partnership and aggregate partner excess business interest expense.* Tenth, a partnership must determine each partner's final ATI capacity deficit. A partner's *final ATI capacity deficit* amount is determined by reducing, but not below zero, such partner's ATI capacity deficit (if any) by the partner's step ten adjustment amount. A partner's *step ten adjustment amount* is the product of the total ATI capacity excess and the ratio of such partner's ATI capacity deficit to the total ATI capacity deficit. Generally, a partner's final ATI capacity deficit is a partner's ATI capacity deficit adjusted to reflect a reallocation of ATI capacity excess from other partners. The rules of this paragraph (f)(2)(x) ensure that, following the application of paragraph (f)(2)(xi) of this section, the aggregate of all the partners' allocations of excess business interest expense equals the total amount of the partnership's excess business interest expense as determined in paragraph (f)(2)(i) of this section.

(xi) *Final section 163(j) excess item and deductible business interest expense allocation.* Eleventh, a partnership must allocate section 163(j) excess items and deductible business interest expense to its partners. Excess business interest income calculated under paragraph (f)(2)(i) of this section, if any, is allocated dollar for dollar by the partnership to its partners with final allocable business interest income excess amounts. Excess business interest expense calculated under paragraph (f)(2)(i) of this section, if any, is allocated dollar for dollar to partners with final ATI capacity deficit amounts. After grossing up each partner's final ATI capacity excess amount by ten-thirds, excess taxable income calculated under paragraph (f)(2)(i) of this section, if any, is allocated dollar for dollar to partners with final ATI capacity excess amounts. A partner's allocable business interest expense is deductible business interest expense to the extent it exceeds such partner's share of excess business interest expense. See *Example 17* through *Example 21* in paragraphs (o)(17) through (21) of this section, respectively.

(g) *Carryforwards*—(1) *In general.* The amount of any business interest expense not allowed as a deduction to a partnership by reason of § 1.163(j)–2(b) and paragraph (f)(2) of this section for any taxable year is—

(i) Not treated as business interest expense of the partnership in the succeeding taxable year; and

(ii) Subject to paragraph (g)(2) of this section, treated as excess business interest expense, which is allocated to each partner pursuant to paragraph (f)(2) of this section.

(2) *Treatment of excess business interest expense allocated to partners.* If a partner is allocated excess business interest expense from a partnership under paragraph (f)(2) of this section for any taxable year and the excess business interest expense is treated as such under paragraph (h)(2) of this section—

(i) Solely for purposes of section 163(j), such excess business interest expense is treated as business interest expense paid or accrued by the partner in the next succeeding taxable year in which the partner is allocated excess taxable income or excess business interest income from such partnership, but only to the extent of such excess taxable income or excess business interest income; and

(ii) Any portion of such excess business interest expense remaining after the application of paragraph (g)(2)(i) of this section is excess business interest expense that is subject to the limitations of paragraph (g)(2)(i) of this section in succeeding taxable years, unless paragraph (m)(3) of this section applies. See *Example 1* through *Example 16* in paragraphs (o)(1) through (16) of this section, respectively.

(3) *Excess taxable income and excess business interest income ordering rule.* In the event a partner has excess business interest expense from a prior taxable year and is allocated excess taxable income or excess business interest income from the same partnership in a succeeding taxable year, the partner must treat, for purposes of section 163(j), the excess business interest expense as business interest expense paid or accrued by the partner in an amount equal to the partner's share of the partnership's excess taxable income or excess business interest income in such succeeding taxable year. See *Example 2* through *Example 16* in paragraphs (o)(2) through (16) of this section, respectively.

(h) *Basis adjustments*—(1) *Section 704(d) ordering.* Deductible business interest expense and excess business interest expense are subject to section 704(d). If a partner is subject to a limitation on loss under section 704(d) and a partner is allocated losses from a partnership in a taxable year, § 1.704–1(d)(2) requires that the limitation on losses under section 704(d) be apportioned amongst these losses based on the character of each loss (each grouping of losses based on character being a *section 704(d) loss class*). If there are multiple section 704(d) loss classes in a given year, § 1.704–1(d)(2) requires the partner to apportion the limitation on losses under section 704(d) to each section 704(d) loss class proportionately. For purposes of applying this proportionate rule, any deductible business interest expense and business interest expense of an exempt entity (whether allocated to the partner in the current taxable year or suspended under section 704(d) in a prior taxable year), any excess business interest expense allocated to the partner in the current taxable year, and any excess business interest expense from a prior taxable year that was suspended under section 704(d) (negative section 163(j) expense) shall comprise the same section 704(d) loss class. Once the partner determines the amount of limitation on losses apportioned to this section 704(d) loss class, any deductible business interest expense is taken into account before any excess business interest expense or negative section 163(j) expense. See *Example 7* in paragraph (o)(7) of this section.

(2) *Excess business interest expense basis adjustments.* The adjusted basis of a partner in a partnership interest is reduced, but not below zero, by the amount of excess business interest expense allocated to the partner pursuant to paragraph (f)(2) of this section. Negative section 163(j) expense is not treated as excess business interest expense in any subsequent year until such negative section 163(j) expense is no longer suspended under section 704(d). Therefore, negative section 163(j) expense does not affect, and is not affected by, any allocation of excess taxable income to the partner. Accordingly, any excess taxable income allocated to a partner from a partnership while the partner still has negative section 163(j) expense will be included in the partner's ATI. However, once the negative section 163(j) expense is no longer suspended under section 704(d), it becomes excess business interest expense, which is subject to the general rules in paragraph (g) of this section. See *Example 8* in paragraph (o)(8) of this section.

(3) *Partner basis adjustment upon disposition of partnership interest.* If a partner (transferor) disposes of an interest in a partnership, the adjusted basis of the partnership interest being disposed of (transferred interest) is increased immediately before the disposition by the amount of the excess (if any) of the amount of the basis reduction under paragraph (h)(2) of this section over the portion of any excess business interest expense allocated to the transferor under paragraph (f)(2) of this section which has previously been treated under paragraph (g) of this

section as business interest expense paid or accrued by the transferor, multiplied by the ratio of the fair market value of the transferred interest to the total fair market value of the transferor's partnership interest immediately prior to the disposition. Therefore, the adjusted basis of the transferred interest is not increased immediately before the disposition by any allocation of excess business interest expense from the partnership that did not reduce the transferor's adjusted basis in its partnership interest pursuant to paragraph (h) of this section prior to the disposition, or by any excess business interest expense that was treated under paragraph (g) of this section as business interest expense paid or accrued by the transferor prior to the disposition. If the transferor disposes of all of its partnership interest, no deduction under section 163(j) is allowed to the transferor or transferee under chapter 1 of subtitle A of the Code for any excess business interest expense or negative section 163(j) expense. If the transferor disposes of a portion of its partnership interest, no deduction under section 163(j) is allowed to the transferor or transferee under chapter 1 of subtitle A of the Code for the amount of excess business interest expense proportionate to the transferred interest. The amount of excess business interest expense proportionate to the partnership interest retained by the transferor shall remain as excess business interest expense of the transferor until such time as such excess business interest expense is treated as business interest expense paid or accrued by the transferor pursuant to paragraph (g) of this section. Further, if the transferor disposes of a portion of its partnership interest, any negative section 163(j) expense shall remain negative section 163(j) expense of the transferor partner until such negative section 163(j) expense is no longer suspended under section 704(d). For purposes of this paragraph, a disposition includes a distribution of money or other property by the partnership to a partner in complete liquidation of its interest in the partnership. Further, solely for purposes of this section, each partner is considered to have disposed of its partnership interest if the partnership terminates under section 708(b)(1). See *Example 9* and *Example 10* in paragraphs (o)(9) and (o)(10) of this section, respectively.

(i)–(j) [Reserved]

(k) *Investment items and certain other items.* Any item of a partnership's income, gain, deduction, or loss that is investment interest income or expense pursuant to § 1.163–8T, and any other tax item of a partnership that is neither properly allocable to a trade or business of the partnership nor described in section 163(d), is allocated to each partner in accordance with section 704(b) and the regulations under section 704 of the Code, and the effect of such allocation for purposes of section 163 is determined at the partner-level. See § 1.163(j)–4(b)(3), section 163(d), and § 1.163–8T.

(l) *S corporations*—(1) *In general—(i) Corporate level limitation.* In the case of any S corporation, the section 163(j) limitation is applied at the S corporation level, and any deduction allowed for business interest expense is taken into account in determining the nonseparately stated taxable income or loss of the S corporation. An S corporation determines its section 163(j) limitation in the same manner as set forth in § 1.163(j)–2(b). Allocations of excess taxable income and excess business interest income are made in accordance with the shareholders' pro rata interests in the S corporation pursuant to section 1366(a)(1) after determining the S corporation's section 163(j) limitation pursuant to § 1.163(j)–2(b). See *Example 22* and *Example 23* in paragraphs (o)(22) and (23) of this section, respectively.

(ii) *Short taxable periods.* For rules on applying the section 163(j) limitation where an S corporation has a two short taxable periods or where its taxable year consists of two separate taxable years see §§ 1.1362–3(c), 1.1368–1(g), and 1.1377–1(b).

(2) *Character of deductible business interest expense.* If an S corporation has deductible business interest expense, such deductible business interest expense is not subject to any additional application of section 163(j) at the shareholder-level because such deductible business interest expense is taken into account in determining the nonseparately stated taxable income or loss of the S corporation. However, for all other purposes of the Code, deductible business interest expense retains its character as business interest expense at the shareholder-level. For example, for purposes of section 469, such deductible business interest expense retains its character as either passive or non-passive in the hands of the shareholder. Additionally, for purposes of section 469, deductible business interest expense from an S corporation remains interest derived from a trade or business in the hands of a shareholder even if the shareholder does not materially participate in the S corporation's trade or business activity. For additional rules regarding the interaction between sections 465, 469, and 163(j), see § 1.163(j)–3.

(3) *Adjusted taxable income of an S corporation.* The ATI of an S corporation generally is determined in accordance with § 1.163(j)–1(b)(1). For purposes of computing the S corporation's ATI, the tentative taxable income of the S corporation is determined under section 1363(b) and includes—

(i) Any item described in section 1363(b)(1); and

(ii) Any item described in § 1.163(j)–1(b)(1), to the extent such item is consistent with subchapter S of the Code.

(4) *Adjusted taxable income and business interest income of S corporation shareholders*—(i) *Adjusted taxable income of S corporation shareholders.* The ATI of an S corporation shareholder is determined in accordance with § 1.163(j)–1(b)(1) without regard to such shareholder's distributive share of any items of income, gain, deduction, or loss of such S corporation, except as provided in paragraph (m), and is increased by such shareholder's distributive share of such S corporation's excess taxable income.

(ii) *Disposition of S corporation stock.* If a shareholder of an S corporation recognizes gain or loss upon the disposition of stock of the S corporation, and the corporation the stock of which is being disposed of only owns non-excepted trade or business assets, the gain or loss on the disposition of the stock is included in the shareholder's ATI. See § 1.163(j)–10(b)(4)(ii) for dispositions of stock of S corporations that own—

(A) Non-excepted assets and excepted assets; or

(B) Investment assets; or

(C) Both.

(iii) *Double counting of business interest income and floor plan financing interest expense prohibited.* For purposes of calculating an S corporation shareholder's section 163(j) limitation, the shareholder does not include—

(A) Business interest income from an S corporation that is subject to section 163(j), except to the extent the shareholder is allocated excess business interest income from that S corporation pursuant to paragraph (l)(1) of this section; and

(B) The shareholder's share of the S corporation's floor plan financing interest expense, because such floor plan financing interest expense already has been taken into account by the S corporation in determining its nonseparately stated taxable income or loss for purposes of section 163(j).

(5) *Carryforwards.* The amount of any business interest expense not allowed as a deduction for any taxable year by reason of the limitation contained in § 1.163(j)–2(b) is carried forward in the succeeding taxable year as a disallowed business interest expense carryforward under the rules set forth in § 1.163(j)–2(c) (whether to an S corporation taxable year or a C corporation taxable year). For purposes of applying section 163(j), S corporations are subject to the same ordering rules as a C corporation that is not a member of a consolidated group. See § 1.163(j)–5(b)(2).

(6) *Basis adjustments and disallowed business interest expense carryforwards.* An S corporation shareholder's adjusted basis in its S corporation stock is reduced, but not below zero, when a disallowed business interest expense carryforward becomes deductible under section 163(j).

(7) *Accumulated adjustment accounts.* The accumulated adjustment account of an S corporation is adjusted to take into account business interest expense in the year in which the S corporation treats such business interest expense as deductible under the section 163(j) limitation. See section 1368(e)(1).

(8) *Termination of qualified subchapter S subsidiary election.* If a corporation's qualified subchapter S subsidiary election terminates and any disallowed business interest expense carryforward is attributable to the activities of the qualified subchapter S subsidiary at the time of termination, such disallowed business interest expense carryforward remains with the parent S corporation, and no portion of these items is allocable to the former qualified subchapter S subsidiary.

(9) *Investment items.* Any item of an S corporation's income, gain, deduction, or loss that is investment interest income or expense pursuant to § 1.163–8T is allocated to each shareholder in accordance with the shareholders' pro rata interests in the S corporation pursuant to section 1366(a)(1). See section 163(d) and § 1.163–8T.

(10) *Application of section 382.* In the event of an ownership change, within the meaning of section 382(g), the S corporation's business interest expense is subject to section 382. Therefore, the allocation of the S corporation's business interest expense between the pre-change period (as defined in § 1.382–6(g)(2)) and the post-change period (as defined in § 1.382–6(g)(3)), and the determination of the amount that is deducted and carried forward, is determined pursuant to § 1.382–6. If the date of the ownership change is also the date of a qualifying disposition (as defined in § 1.1368–1(g)(2)) or the date for a termination of shareholder interest (as defined in § 1.1377–1(b)(4)), then—

(i) The rules of this paragraph govern the S corporation's business interest expense;

(ii) The S corporation must make an election under § 1.382–6(b) with respect to such date if it also makes an election under § 1.1368–1(g)(2) or a shareholder termination election to apply normal tax accounting rules, as applicable, with respect to such date; and

(iii) The S corporation may not make an election under § 1.382–6(b) with respect to such date if it does not make an election under § 1.1368–1(g)(2) or a termination election under § 1.1377–1(b)(1), as applicable, with respect to such date.

(m) *Partnerships and S corporations not subject to section 163(j)*—(1) *Exempt partnerships and S corporations.* If the small business exemption in § 1.163(j)–2(d) applies to a partnership or an S corporation in a taxable year (exempt entity), the general rule in § 1.163(j)–2 and this section does not apply to limit the deduction for business interest expense of the exempt entity in that taxable year. Additionally, if a partner or S corporation shareholder is allocated business interest expense from an exempt entity, such business interest expense is not subject to the section 163(j) limitation at the partner's or S corporation shareholder's level. However, see paragraph (h)(1) of this section. Further, a partner or S corporation shareholder of an exempt entity includes its share of non-excepted trade or business items of income, gain, loss, and deduction (including business interest expense and business interest income) of such exempt entity when calculating its ATI. However, if a partner's or S corporation shareholder's allocations of non-excepted trade or business items of loss and deduction from an exempt entity exceed its allocations of non-excepted trade or business items of income and gain from such exempt entity (net loss allocation), then such net loss allocation will not reduce a partner's or S corporation shareholder's ATI. See *Example 11* and *Example 12* in paragraphs (o)(11) and (12) of this section, respectively.

(2) *Partnerships and S corporations engaged in excepted trades or businesses.* To the extent a partnership or an S corporation is engaged in an excepted trade or business, the general rule in § 1.163(j)–2 and this section does not apply to limit the deduction for business interest expense that is allocable to such excepted trade or business. If a partner or S corporation shareholder is allocated any section 163(j) item that is allocable to an excepted trade or business of the partnership or S corporation (excepted 163(j) items), such excepted 163(j) items are excluded from the partner's or shareholder's section 163(j) deduction calculation. See § 1.163(j)–10(c) (regarding the allocation of items between excepted and non-excepted trades or businesses). See also *Example 13* in paragraph (o)(13) of this section.

(3) *Treatment of excess business interest expense from partnerships that are exempt entities in a succeeding taxable year.* If a partner is allocated excess business interest expense from a partnership and, in a succeeding taxable year, such partnership is an exempt entity, then the partner shall treat any of its excess business interest expense that was previously allocated from such partnership as business interest expense paid or accrued by the partner in such succeeding taxable year, which is potentially subject to limitation at the partner level under section 163(j). However, if a partner is allocated excess business interest expense from a partnership and, in a succeeding taxable year, such partnership engages in excepted trades or businesses, then the partner shall not treat any of its excess business interest expense that was previously allocated from such partnership as business interest expense paid or accrued by the partner in such succeeding taxable year by reason of the partnership engaging in excepted trades or businesses. See *Example 14* through *Example 16* in paragraphs (o)(14) through (o)(16) of this section, respectively. For rules regarding the treatment of excess business interest expense from a partnership that terminates under section 708(b)(1), see paragraph (h)(3) of this section.

(4) *S corporations with disallowed business interest expense carryforwards prior to becoming exempt entities.* If an S corporation has a disallowed business interest expense carryforward for a taxable year and, in a succeeding taxable year, such S corporation is an exempt entity, then such disallowed business interest expense carryforward—

(i) Continues to be carried forward at the S corporation level;

(ii) Is no longer subject to the section 163(j) limitation; and

(iii) Is taken into account in determining the nonseparately stated taxable income or loss of the S corporation.

(n) [Reserved]

(o) *Examples.* The examples in this paragraph illustrate the provisions of section 163(j) as applied to partnerships and subchapter S corporations. For purposes of these examples, unless stated otherwise, each partnership and S corporation is subject to the provisions of section 163(j), is only engaged in non-excepted trades or businesses, was created or organized in the United States, and uses the calendar year for its annual accounting period. Unless stated otherwise, all partners and shareholders are subject to the provisions of section 163(j), are not subject to a limitation under section 704(d) or 1366(d), have no tax items other than those listed in the example, are U.S. citizens, and use the calendar year for their annual accounting period. The phrase ''section 163(j) limit'' shall equal the maximum potential deduction allowed under section 163(j)(1). Unless stated otherwise, business interest expense means business interest expense that is not floor plan financing interest expense. With respect to partnerships, all allocations are in accordance with section 704(b) and the regulations in this part under section 704 of the Code.

(1) *Example 1*—(i) *Facts.* X and Y are equal partners in partnership PRS. In Year 1, PRS has $100 of ATI and $40 of business interest expense. PRS allocates the items comprising its $100 of ATI $50 to X and $50 to Y. PRS allocates its $40 of business interest expense $20 to X and $20 to Y. X has $100 of ATI and $20 of business interest expense from its sole proprietorship. Y has $0 of ATI and $20 of business interest expense from its sole proprietorship.

(ii) *Partnership-level.* In Year 1, PRS's section 163(j) limit is 30 percent of its ATI, or $30 ($100 × 30 percent). Thus, PRS has $30 of deductible business interest expense and $10 of excess business interest expense. Such $30 of deductible business interest expense is includable in PRS's nonseparately stated income or loss, and is not subject to further limitation under section 163(j) at the partners' level.

(iii) *Partner-level allocations.* Pursuant to § 1.163(j)–6(f)(2), X and Y are each allocated $15 of deductible business interest expense and $5 of excess business interest expense. At the end of Year 1, X and Y each have $5 of excess business interest expense from PRS, which is not treated as paid or accrued by the partner until such partner is allocated excess taxable income or excess business interest income from PRS in a succeeding taxable year. Pursuant to § 1.163(j)–6(e)(1), X and Y, in computing their limit under section 163(j), do not increase any of their section 163(j) items by any of PRS's section 163(j) items. X and Y each increase their outside basis in PRS by $30 ($50 − $20).

(iv) *Partner-level computations.* X, in computing its limit under section 163(j), has $100 of ATI and $20 of business interest expense from its sole proprietorship. X's section 163(j) limit is $30 ($100 × 30 percent). Thus, X's $20 of business interest expense is deductible business interest expense. Y, in computing its limit under section 163(j), has $20 of business interest expense from its sole proprietorship. Y's section 163(j) limit is $0 ($0 × 30 percent). Thus, Y's $20 of business interest expense is not allowed as a deduction and is treated as business interest expense paid or accrued by Y in Year 2.

(2) *Example 2*—(i) *Facts.* The facts are the same as in *Example 1* in paragraph (o)(1)(i) of this section. In Year 2, PRS has $200 of ATI, $0 of business interest income, and $30 of business interest expense. PRS allocates the items comprising its $200 of ATI $100 to X and $100 to Y. PRS allocates its $30 of business interest expense $15 to X and $15 to Y. X has $100 of ATI and $20 of business interest expense from its sole proprietorship. Y has $0 of ATI and $20 of business interest expense from its sole proprietorship.

(ii) *Partnership-level.* In Year 2, PRS's section 163(j) limit is 30 percent of its ATI plus its business interest income, or $60 ($200 × 30 percent). Thus, PRS has $100 of excess taxable income, $30 of deductible business interest expense, and $0 of excess business interest expense. Such $30 of deductible business interest expense is includable in PRS's nonseparately stated income or loss, and is not subject to further limitation under section 163(j) at the partners' level.

(iii) *Partner-level allocations.* Pursuant to § 1.163(j)–6(f)(2), X and Y are each allocated $50 of excess taxable income, $15 of deductible business interest expense, and $0 of excess business interest expense. As a result, X and Y each increase their ATI by $50. Because X and Y are each allocated $50 of excess taxable income from PRS, and excess business interest expense from a partnership is treated as paid or accrued by a partner to the extent excess taxable income and excess business interest income are allocated from such partnership to a partner, X and Y each treat $5 of excess business interest expense (the carryforward from Year 1) as paid or accrued in Year 2. X and Y each increase their outside basis in PRS by $85 ($100 − $15).

(iv) *Partner-level computations.* X, in computing its limit under section 163(j), has $150 of ATI ($100 from its sole proprietorship, plus $50 excess taxable income) and $25 of business interest expense ($20 from its sole proprietorship, plus $5 excess business interest expense treated as paid or accrued in Year 2). X's section 163(j) limit is $45 ($150 × 30 percent). Thus, X's $25 of business interest expense is deductible business interest expense. At the end of Year 2, X has $0 of excess business interest expense from PRS ($5 from Year 1, less $5 treated as paid or accrued in Year 2). Y, in computing its limit under section 163(j), has $50 of ATI ($0 from its sole proprietorship, plus $50 excess taxable income) and $45 of business interest expense ($20 from its sole proprietorship, plus $20 disallowed business interest expense from Year 1, plus $5 excess business interest expense treated as paid or accrued in Year 2). Y's section 163(j) limit is $15 ($50 × 30 percent). Thus, $15 of Y's business interest expense is deductible business interest expense. The $30 of Y's business interest expense not allowed as a deduction ($45 business interest expense, less $15 section 163(j) limit) is treated as business interest expense paid or accrued by Y in Year 3. At the end of Year 2, Y has $0 of excess business interest expense from PRS ($5 from Year 1, less $5 treated as paid or accrued in Year 2).

(3) *Example 3*—(i) *Facts.* The facts are the same as in *Example 1* in paragraph (o)(1)(i) of this section. In Year 2, PRS has $0 of ATI, $60 of business interest income, and $40 of business interest expense. PRS allocates its $60 of business interest income $30 to X and $30 to Y. PRS allocates its $40 of business interest expense $20 to X and $20 to Y. X has $100 of ATI and $20 of business interest expense from its sole proprietorship. Y has $0 of ATI and $20 of business interest expense from its sole proprietorship.

(ii) *Partnership-level.* In Year 2, PRS's section 163(j) limit is 30 percent of its ATI plus its business interest income, or $60 (($0 × 30 percent) + $60). Thus, PRS has $20 of excess business interest income, $0 of excess taxable income, $40 of deductible business interest expense, and $0 of excess business interest expense. Such $40 of deductible business interest expense is includable in PRS's nonseparately stated income or loss, and is not subject to further limitation under section 163(j) at the partners' level.

(iii) *Partner-level allocations.* Pursuant to § 1.163(j)–6(f)(2), X and Y are each allocated $10 of excess business interest income, and $20 of deductible business interest expense. As a result, X and Y each increase their business interest income by $10. Because X and Y are each allocated $10 of excess business interest income from PRS, and excess business interest expense from a partnership is treated as paid or accrued by a partner to the extent excess taxable income and excess business interest income are allocated from such partnership to a partner, X and Y each treat $5 of excess business interest expense (the carryforward from Year 1) as paid or accrued in Year 2. X and Y each increase their outside basis in PRS by $10 ($30 − $20).

(iv) *Partner-level computations.* X, in computing its limit under section 163(j), has $100 of ATI (from its sole proprietorship), $10 of business interest income (from the allocation of $10 of excess business interest income from PRS), and $25 of business interest expense ($20 from its sole proprietorship, plus $5 excess business interest expense treated as paid or accrued in Year 2). X's section 163(j) limit is $40 (($100 × 30 percent) + $10). Thus, X's $25 of business interest expense is deductible business interest expense. At the end of Year 2, X has $0 of excess business interest expense from PRS ($5 from Year 1, less $5 treated as paid or accrued in Year 2). Y, in computing its limit under section 163(j), has $0 of ATI (from its sole proprietorship), $10 of business interest income, and $45 of business interest expense ($20 from its sole proprietorship, plus $20 disallowed business interest expense from Year 1, plus $5 excess business interest expense treated as paid or accrued in Year 2). Y's section 163(j) limit is $10 (($0 × 30 percent) + $10). Thus, $10 of Y's business interest expense is deductible business interest expense. The $35 of Y's business interest expense not allowed as a deduction ($45 business interest expense, less $10 section 163(j) limit) is treated as business interest expense paid or accrued by Y in Year 3. At the end of Year 2, Y has $0 of excess business interest expense from PRS ($5 from Year 1, less $5 treated as paid or accrued in Year 2).

(4) *Example 4*—(i) *Facts.* The facts are the same as in *Example 1* in paragraph (o)(1)(i) of this section. In Year 2, PRS has $100 of ATI, $60 of business interest income, and $40 of business interest expense. PRS allocates the items comprising its $100 of ATI $50 to X and $50 to Y. PRS allocates its $60 of business interest income $30 to X and $30 to Y. PRS allocates its $40 of business interest expense $20 to X and $20 to Y. X has $100 of ATI and $20 of business interest expense from its sole proprietorship. Y has $0 of ATI and $20 of business interest expense from its sole proprietorship.

(ii) *Partnership-level.* In Year 2, PRS's section 163(j) limit is 30 percent of its ATI plus its business interest income, or $90 (($100 × 30 percent)) + $60). Thus, PRS has $20 of excess business interest income, $100 of excess taxable income, $40 of deductible business interest expense, and $0 of excess business interest expense. Such $40 of deductible business interest expense is includable in PRS's nonseparately stated income or loss, and is not subject to further limitation under section 163(j) at the partners' level.

(iii) *Partner-level allocations.* Pursuant to § 1.163(j)–6(f)(2), X and Y are each allocated $10 of excess business interest income, $50 of excess taxable income, and $20 of deductible business interest expense. As a result, X and Y each increase their business interest income by $10 and ATI by $50. Because X and Y are each allocated $10 of excess business interest income and $50 of excess taxable income from PRS, and excess business interest expense from a partnership is treated as paid or accrued by a partner to the extent excess taxable income and excess business interest income are allocated from such partnership to a partner, X and Y each treat $5 of excess business interest expense (the carryforward from Year 1) as paid or accrued in Year 2. X and Y each increase their outside basis in PRS by $60 ($80 − $20).

(iv) *Partner-level computations.* X, in computing its limit under section 163(j), has $150 of ATI ($100 from its sole proprietorship, plus $50 excess taxable income), $10 of business interest income, and $25 of business interest expense ($20 from its sole proprietorship, plus $5 excess business interest expense treated as paid or accrued in Year 2). X's section 163(j) limit is $55 (($150 × 30 percent) + $10). Thus, $25 of X's business interest expense is deductible business interest expense. At the end of Year 2, X has $0 of excess business interest expense from PRS ($5 from Year 1, less $5 treated as paid or accrued in Year 2). Y, in computing its limit under section 163(j), has $50 of ATI ($0 from its sole proprietorship, plus $50 excess taxable income), $10 of business interest income, and $45 of business interest expense ($20 from its sole proprietorship, plus $20 disallowed business interest expense from Year 1, plus $5 excess business interest expense treated as paid or accrued in Year 2). Y's section 163(j) limit is $25 (($50 × 30 percent) + $10). Thus, $25 of Y's business interest expense is deductible business interest expense. Y's $20 of business interest expense not allowed as a deduction ($45 business interest expense, less $25 section 163(j) limit) is treated as business interest expense paid or accrued by Y in Year 3. At the end of Year 2, Y has $0 of excess business interest expense from PRS ($5 from Year 1, less $5 treated as paid or accrued in Year 2).

(5) *Example 5*—(i) *Facts.* The facts are the same as in *Example 1* in paragraph (o)(1)(i) of this section. In Year 2, PRS has $100 of ATI, $11.20 of business interest income, and $40 of business interest expense. PRS allocates the items comprising its $100 of ATI $50 to X and $50 to Y. PRS allocates its $11.20 of business interest income $5.60 to X and $5.60 to Y. PRS allocates its $40 of business interest expense $20 to X and $20 to Y. X has $100 of ATI and $20 of business interest expense from its sole proprietorship. Y has $0 of ATI and $20 of business interest expense from its sole proprietorship.

(ii) *Partnership-level.* In Year 2, PRS's section 163(j) limit is 30 percent of its ATI plus its business interest income, or $41.20 (($100 × 30 percent) + $11.20). Thus, PRS has $0 of excess business interest income, $4 of excess taxable income, and $40 of deductible business interest expense. Such $40 of deductible business interest expense is includable in PRS's nonseparately stated income or loss, and is not subject to further limitation under section 163(j) at the partners' level.

(iii) *Partner-level allocations.* Pursuant to § 1.163(j)–6(f)(2), X and Y are each allocated $2 of excess taxable income, $20 of deductible business interest expense, and $0 of excess business interest expense. As a result, X and Y each increase their ATI by $2. Because X and Y are each allocated $2 of excess taxable income from PRS, and excess business interest expense from a partnership is treated as paid or accrued by a partner to the extent excess taxable income and excess business interest income are allocated from such partnership to a partner, X and Y each treat $2 of excess business interest expense (a portion of the carryforward from Year 1) as paid or accrued in Year 2. X and Y each increase their outside basis in PRS by $35.60 ($55.60 − $20).

(iv) *Partner-level computations.* X, in computing its limit under section 163(j), has $102 of ATI ($100 from its sole proprietorship, plus $2 excess taxable income), $0 of business interest income, and $22 of business interest expense ($20 from its sole proprietorship, plus $2 excess business interest expense treated as paid or accrued). X's section 163(j) limit is $30.60 ($102 × 30 percent). Thus, X's $22 of business interest expense is deductible business interest expense. At the end of Year 2, X has $3 of excess business interest expense from PRS ($5 from Year 1, less $2 treated as paid or accrued in Year 2).

Y, in computing its limit under section 163(j), has $2 of ATI ($0 from its sole proprietorship, plus $2 excess taxable income), $0 of business interest income, and $42 of business interest expense ($20 from its sole proprietorship, plus $20 disallowed business interest expense from Year 1, plus $2 excess business interest expense treated as paid or accrued in Year 2). Y's section 163(j) limit is $0.60 ($2 × 30 percent). Thus, $0.60 of Y's business interest expense is deductible business interest expense. Y's $41.40 of business interest expense not allowed as a deduction ($42 business interest expense, less $0.60 section 163(j) limit) is treated as business interest expense paid or accrued by Y in Year 3. At the end of Year 2, Y has $3 of excess business interest expense from PRS ($5 from Year 1, less $2 treated as paid or accrued in Year 2).

(6) *Example 6*—(i) *Facts.* In Year 1, X, Y, and Z formed partnership PRS. Upon formation, X and Y each contributed $100, and Z contributed non-excepted and non-depreciable trade or business property with a basis of $0 and fair market value of $100 (Blackacre). PRS allocates all items pro rata between its partners. Immediately after the formation of PRS, Z sold all of its interest in PRS to A for $100 (assume the interest sale is respected for U.S. Federal income tax purposes). In connection with the interest transfer, PRS made a valid election under section 754. Therefore, after the interest sale, A had a $100 positive section 743(b) adjustment in Blackacre. In Year 1, PRS had $0 of ATI, $15 of business interest expense, and $0 of business interest income. Pursuant to § 1.163(j)–6(f)(2), PRS allocated each of the partners $5 of excess business interest expense. In Year 2, PRS sells Blackacre for $100 which generated $100 of ATI. The sale of Blackacre was PRS's only item of income in Year 2. In accordance with section 704(c), PRS allocates all $100 of gain resulting from the sale of Blackacre to A. Additionally, PRS has $15 of business interest expense, all of which it allocates to X. A has $50 of ATI and $20 of business interest expense from its sole proprietorship.

(ii) *Partnership-level.* In Year 2, PRS's section 163(j) limit is 30 percent of its ATI, or $30 ($100 × 30 percent). Thus, PRS has $15 of deductible business interest expense and $50 of excess taxable income. Such $15 of deductible business interest expense is includable in PRS's nonseparately stated income or loss, and is not subject to further limitation under section 163(j) at X's level.

(iii) *Partner-level allocations.* Pursuant to § 1.163(j)–6(f)(2), X is allocated $15 of deductible business interest expense and X's outside basis in PRS is reduced by $15. A is allocated $50 of excess taxable income and, as a result, A increases its ATI by $50. Because A is allocated $50 of excess taxable income, and excess business interest expense from a partnership is treated as paid or accrued by a partner to the extent excess taxable income and excess business interest income are allocated from such partnership to a partner, A treats $5 of excess business interest expense (the carryforward from Year 1) as paid or accrued in Year 2. PRS's $100 of gain allocated to A in Year 2 is fully reduced by A's $100 section 743(b) adjustment. Therefore, at the end of Year 2, there is no change to A's outside basis in PRS.

(iv) *Partner-level.* A, in computing its limit under section 163(j), has $0 of ATI ($50 from its sole proprietorship, plus $50 excess taxable income, less $100 ATI reduction as a result of A's section 743(b) adjustment under § 1.163(j)–6(e)(2)) and $25 of business interest expense ($20 from its sole proprietorship, plus $5 excess business interest expense treated as paid or accrued in Year 2). A's section 163(j) limit is $0 ($0 × 30 percent). Thus, all $25 of A's business interest expense is not allowed as a deduction and is treated as business interest expense paid or accrued by A in Year 3.

(7) *Example 7*—(i) *Facts.* X and Y are equal partners in partnership PRS. At the beginning of Year 1, X and Y each have an outside basis in PRS of $5. In Year 1, PRS has $0 of ATI, $20 of business interest income, and $40 of business interest expense. PRS allocates its $20 of business interest income $10 to X and $10 to Y. PRS allocates $40 of business interest expense $20 to X and $20 to Y. X has $100 of ATI and $20 of business interest expense from its sole proprietorship. Y has $0 of ATI and $20 of business interest expense from its sole proprietorship.

(ii) *Partnership-level.* In Year 1, PRS's section 163(j) limit is 30 percent of its ATI plus its business interest income, or $20 (($0 × 30 percent) + $20). Thus, PRS has $0 of excess business interest income, $0 of excess taxable income, $20 of deductible business interest expense, and $20 of excess business interest expense. Such $20 of deductible business interest expense is includable in nonseparately stated income or loss of PRS, and not subject to further limitation under section 163(j) by the partners.

(iii) *Partner-level allocations.* Pursuant to § 1.163(j)–6(f)(2), X and Y are each allocated $10 of deductible business interest expense and $10 of excess business interest expense. After adjusting each partner's respective basis for business interest income under section 705(a)(1)(A), pursuant to § 1.163(j)–6(h)(1), X and Y each take their $10 of deductible business interest expense into account when reducing their outside basis in PRS before taking the $10 of excess business interest expense into account. Following each partner's reduction in outside basis due to the $10 of deductible business interest expense, each partner has $5 of outside basis remaining in PRS. Pursuant to § 1.163(j)–6(h)(2), each partner has $5 of excess business interest expense and $5 of negative section 163(j) expense. In sum, at the end of Year 1, X and Y each have $5 of excess business interest expense from PRS which reduces each partner's outside basis to $0 (and is not treated as paid or accrued by the partners until such partner is allocated excess taxable income or excess business interest income from PRS in a succeeding taxable year), and $5 of negative section 163(j) expense (which is suspended under section 704(d) and not treated as excess business interest expense of the partners until such time as the negative section 163(j) expense is no longer subject to a limitation under section 704(d)).

(iv) *Partner-level computations.* X, in computing its limit under section 163(j), has $100 of ATI (from its sole proprietorship) and $20 of business interest expense (from its sole proprietorship). X's section 163(j) limit is $30 ($100 × 30 percent). Thus, $20 of X's business interest expense is deductible business interest expense. Y, in computing its limit under section 163(j), has $20 of business interest expense (from its sole proprietorship). Y's section 163(j) limit is $0 ($0 × 30 percent). Thus, $20 of Y's business interest expense is not allowed as a deduction in Year 1, and is treated as business interest expense paid or accrued by Y in Year 2.

(8) *Example 8*—(i) *Facts.* The facts are the same as in *Example 7* in paragraph (o)(7)(i) of this section. In Year 2, PRS has $20 of gross income that is taken into account in determining PRS's ATI (in other words, properly allocable to a trade or business), $30 of gross deductions from an investment activity, and $0 of business interest expense. PRS allocates the items comprising its $20 of ATI $10 to X and $10 to Y. PRS allocates the items comprising its $30 of gross deductions $15 to X and $15 to Y. X has $100 of ATI and $20 of business interest expense from its sole

proprietorship. Y has $0 of ATI and $20 of business interest expense from its sole proprietorship.

(ii) *Partnership-level.* In Year 2, PRS's section 163(j) limit is 30 percent of its ATI plus its business interest income, or $6 ($20 × 30 percent). Because PRS has no business interest expense, all $20 of its ATI is excess taxable income.

(iii) *Partner-level allocations.* Pursuant to § 1.163(j)–6(f)(2), X and Y are each allocated $10 of excess taxable income. Because X and Y are each allocated $10 of excess taxable income from PRS, X and Y each increase their ATI by $10. Pursuant to § 1.704–(1)(d)(2), each partner's limitation on losses under section 704(d) must be allocated to its distributive share of each such loss. Thus, each partner reduces its adjusted basis of $10 (attributable to the allocation of items comprising PRS's ATI in Year 2) by $7.50 of gross deductions from Year 2 ($10 × ($15 of total gross deductions from Year 2/$20 of total losses disallowed)), and $2.50 of excess business interest expense that was carried over as negative section 163(j) expense from Year 1 ($10 × ($5 of negative section 163(j) expense treated as excess business interest expense solely for the purposes of section 704(d)/$20 of total losses disallowed)). Following the application of section 704(d), each partner has $7.50 of excess business interest expense from PRS ($5 excess business interest expense from Year 1, plus $2.50 of excess business interest expense that was formerly negative section 163(j) expense carried over from Year 1). Excess business interest expense from a partnership is treated as paid or accrued by a partner to the extent excess taxable income and excess business interest income are allocated from such partnership to the partner. As a result, X and Y each treat $7.50 of excess business interest expense as paid or accrued in Year 2.

(iv) *Partner-level computations.* X, in computing its limit under section 163(j), has $110 of ATI ($100 from its sole proprietorship, plus $10 excess taxable income) and $27.50 of business interest expense ($20 from its sole proprietorship, plus $7.50 excess business interest expense treated as paid or accrued in Year 2). X's section 163(j) limit is $33 ($110 × 30 percent). Thus, $27.50 of X's business interest expense is deductible business interest expense. At the end of Year 2, X has $0 of excess business interest expense from PRS ($5 from Year 1, plus $2.50 treated as excess business interest expense in Year 2, less $7.50 treated as paid or accrued in Year 2), and $2.50 of negative section 163(j) expense from PRS. Y, in computing its limit under section 163(j), has $10 of ATI ($0 from its sole proprietorship, plus $10 excess taxable income) and $47.50 of business interest expense ($20 from its sole proprietorship, plus $20 disallowed business interest expense from Year 1, plus $7.50 excess business interest expense treated as paid or accrued in Year 2). Y's section 163(j) limit is $3 ($10 × 30 percent). Thus, $3 of Y's business interest expense is deductible business interest expense. The $44.50 of Y's business interest expense not allowed as a deduction ($47.50 business interest expense, less $3 section 163(j) limit) is treated as business interest expense paid or accrued by Y in Year 3. At the end of Year 2, Y has $0 of excess business interest expense from PRS ($5 from Year 1, plus $2.50 treated as excess business interest expense in Year 2, less $7.50 treated as paid or accrued in Year 2), and $2.50 of negative section 163(j) expense from PRS.

(9) *Example 9*—(i) *Facts.* X and Y are equal partners in partnership PRS, and are not members of a consolidated group. At the beginning of Year 1, X and Y each have $120 of outside basis in PRS. Neither X nor Y's share of partnership liabilities exceeds the adjusted basis of its entire interest. In Year 1, X is allocated $20 of excess business interest expense, which reduces its outside basis from $120 to $100. In Year 2, X sells 80 percent of its interest in PRS to Z for $160. Immediately prior to the sale, X's entire PRS interest had a fair market value of $200 and the transferred portion of the interest had a fair market value of $160.

(ii) *Basis adjustment.* Immediately before the sale to Z, X increases its basis in the portion of the interest sold by 80 percent of the amount of the excess of the amount of the basis reduction under paragraph (h)(2) of this section ($20) over the portion of any excess business interest expense allocated the partner under paragraph (f)(2) of this section that has previously been treated under paragraph (g) of this section as business interest expense paid or accrued by X ($0). Therefore, X's basis in the portion of its interest sold is $96 (($100 × 80%) + ($20 × 80%)), and X's gain is $64 ($160 − $96). Following the sale, X has $20 of outside basis in its remaining partnership interest and $4 of excess business interest expense.

(10) *Example 10*—(i) *Facts.* X and Y are equal partners in partnership PRS, and are not members of a consolidated group. At the beginning of Year 1, X and Y each have an outside basis in PRS of $10. Neither X nor Y's share of partnership liabilities exceeds the adjusted basis of its entire interest. In Year 1, X is allocated $8 of excess business interest expense and $12 of loss from PRS. As a result, X has $4 of excess business interest expense, $4 of negative section 163(j) expense, $6 of allowable loss, $6 of loss suspended under section 704(d), and $0 of outside basis in PRS at the end of Year 1. In Year 2, X sells 50 percent of its interest in PRS to Z for $20. Immediately prior to the sale, X's entire partnership interest had a fair market value of $40 and the transferred portion of the interest had a fair market value of $20.

(ii) *Basis adjustment.* Immediately before the sale to Z, X increases its basis in the portion of the interest sold by 50 percent of the amount of the excess of the amount of the basis reduction under paragraph (h)(2) of this section ($4) over the portion of any excess business interest expense allocated the partner under paragraph (f)(2) of this section that has previously been treated under paragraph (g) of this section as business interest expense paid or accrued by X ($0). Therefore, X's basis in the portion of its interest sold is $2 (($0 × 50%) + $2), and X's gain is $18 ($20 − $2). Following the sale, X has $0 of outside basis in its remaining partnership interest, $2 of excess business interest expense, $4 of negative section 163(j) expense, and $6 of loss suspended under section 704(d).

(11) *Example 11*—(i) *Facts.* X (a corporation), Y (an individual), and Z (an individual) are equal partners in partnership PRS. X, Y, and Z are subject to section 163(j). PRS is not subject to section 163(j) under section 163(j)(3). In 2021, PRS has $150 of trade or business income (not taking into account business interest income or business interest expense), $30 of business interest income, and $45 of business interest expense. PRS also has $75 of investment income and $60 of investment interest expense. PRS allocates its items of income, gain, loss, and deduction equally among its partners. X, Y, and Z each have $10 of business interest expense from their respective businesses.

(ii) *Partnership-level.* PRS is not subject to section 163(j) by reason of section 163(j)(3). As a result, none of PRS's $45 of business interest expense is subject to the section 163(j) limitation.

(iii) *Partner-level allocations.* Because PRS is not subject to section 163(j) by reason of section 163(j)(3), PRS's $45 of business interest expense does not retain its character as business interest expense for purposes of section 163(j). As a result, such business interest expense is not subject to the section 163(j) limitation at the level of either the partnership or partner. Additionally, pursuant to § 1.163(j)–6(m)(1), each partner includes its share of non-excepted trade or business items of income, gain, loss, and deduction (including business interest expense and business interest income) of PRS when calculating its ATI. As a result, each partner increases its ATI by $45 (one third of $150 + $30 − $45). Also, X increases its ATI by an additional $25 because its items of investment income and loss from PRS are recharacterized as non-excepted trade or business income and loss at its level pursuant to §§ 1.163(j)–4(b)(3)(i) and 1.163(j)–10(b)(6). Further, X increases its business interest expense by its $20 allocation of investment interest expense from PRS pursuant to §§ 1.163(j)–4(b)(3)(i) and 1.163(j)–10(b)(6).

(iv) *Partner-level computations.* X, in computing its limit under section 163(j), has $70 of ATI and $30 of business interest expense. X's section 163(j) limit is $21 ($70 × 30 percent). Thus, X has $21 of deductible business interest expense. X's $9 of business interest expense not allowed as a deduction is treated as business interest expense paid or accrued by X in 2020. Y and Z, in computing their respective limits under section 163(j), each have $45 of ATI and $10 of business interest expense. Y and Z each have a section 163(j) limit of $13.50 ($45 − 30 percent). Thus, Y and Z each have $10 of deductible business interest expense.

(12) *Example 12*—(i) *Facts.* The facts are the same as in *Example 11* in paragraph (o)(11)(i) of this section, except PRS has $200 of depreciation deductions in addition to its other items of income, gain, loss, and deduction.

(ii) *Partnership-level.* Same analysis as *Example 11* in paragraph (o)(11)(ii) of this section.

(iii) *Partner-level allocations.* Because PRS is not subject to section 163(j) by reason of section 163(j)(3), PRS's $45 of business interest expense does not retain its character as business interest expense for purposes of section 163(j). As a result, such business interest expense is not subject to the section 163(j) limitation at the level of either the partnership or partner. Additionally, pursuant to § 1.163(j)–6(m)(1), each partner includes its share of non-excepted trade or business items of income, gain, loss, and deduction (including business interest expense and business interest income) of PRS when calculating its ATI; however, a net loss allocation of trade or business items from an exempt entity does not reduce a partner's ATI. Because each of the partners has a net loss allocation of trade or business items from PRS, none of the partners adjust their ATI for the trade or business items of PRS. X, the corporate partner, increases its ATI by $25 because its items of investment income and loss from PRS are recharacterized as trade or business income and loss at its level pursuant to §§ 1.163(j)–4(b)(3)(i) and 1.163(j)–10(b)(6). Further, X increases its business interest expense by its $20 allocation of investment interest expense from PRS pursuant to §§ 1.163(j)–4(b)(3)(i) and 1.163(j)–10(b)(6).

(iv) *Partner-level computations.* In computing its limit under section 163(j), each partner has $0 of ATI and $10 of business interest expense. Each partner's section 163(j) limit is $0 ($0 × 30 percent). Thus, each partner's $10 of business interest expense is not allowed as a deduction and is treated as business interest expense paid or accrued by the partner in 2020. X, in computing its limit under section 163(j), has $25 of ATI and $30 of business interest expense. X's section 163(j) limit is $7.50 ($25 × 30 percent). Thus, X has $7.50 of deductible business interest expense. X's $22.50 of business interest expense not allowed as a deduction is treated as business interest expense paid or accrued by X in 2020. Y and Z, in computing their respective limits under section 163(j), each have $0 of ATI and $10 of business interest expense. Thus, Y and Z each have $10 of business interest expense not allowed as a deduction that is treated as business interest expense paid or accrued in 2020.

(13) *Example 13*—(i) *Facts.* X, Y, and Z are equal partners in partnership PRS. X, Y, and Z are each individuals subject to section 163(j). PRS is not subject to section 163(j) under section 163(j)(3). PRS has one excepted and one non-excepted trade or business. In Year 1, PRS has $200 of income and $10 of business interest expense from its excepted trade or business, and $60 of business interest income and $30 of business interest expense from its non-excepted trade or business. PRS allocates its items of income, gain, loss, and deduction equally among its partners. X, Y, and Z each have $10 of business interest expense from their respective businesses.

(ii) *Partnership-level.* PRS is not subject to section 163(j) by reason of section 163(j)(3). As a result, none of PRS's business interest expense is subject to the section 163(j) limitation.

(iii) *Partner-level allocations.* Because PRS's business interest expense is not subject to the section 163(j) limitation, such business interest expense is not subject to the section 163(j) limitation at the level of either the partnership or partner. Additionally, pursuant to § 1.163(j)–6(m)(1), each partner includes its share of non-excepted trade or business items of income, gain, loss, and deduction (including business interest expense and business interest income) of PRS when calculating its ATI. Therefore, each partner increases its ATI by $10 (each partner's share of $20 of non-excepted income less each partner's share of $10 of non-excepted loss).

(iv) *Partner-level computations.* In computing its limit under section 163(j), each partner has $10 of ATI and $10 of business interest expense. Each partner's section 163(j) limit is $3 ($10 × 30 percent). Thus, each partner has $3 of deductible business interest expense. Each partner has $7 of business interest expense not allowed as a deduction that is treated as business interest expense paid or accrued by the partner in Year 2.

(14) *Example 14*—(i) *Facts.* The facts are the same as in *Example 5* in paragraph (o)(5)(i) of this section, except in Year 2 Y is not subject to section 163(j) under section 163(j)(3).

(ii) *Partnership-level.* Same analysis as *Example 5* in paragraph (o)(5)(ii) of this section.

(iii) *Partner-level allocations.* Same analysis as *Example 5* in paragraph (o)(5)(iii) of this section.

(iv) *Partner-level computations.* For X, same analysis as *Example 5* in paragraph (o)(5)(iv) of this section. Y is not subject to section 163(j) under section 163(j)(3). Thus, all $42 of business interest expense ($20 from its sole proprietorship, plus $20 disallowed business interest expense from Year 1, plus $2 excess business interest expense treated as paid or accrued in Year 2) is not subject to limitation under § 1.163(j)–2(d). At the end of Year 2, Y has $3 of excess business interest expense from PRS ($5 from Year 1, less $2 treated as paid or accrued in Year 2).

(15) *Example 15*—(i) *Facts.* The facts are the same as in *Example 5* in paragraph (o)(5)(i) of this section, except in Year 2 PRS and Y become not subject to section 163(j) by reason of section 163(j)(3).

(ii) *Partnership-level.* In Year 2, PRS is not subject to section 163(j) by reason of section 163(j)(3). As a result, none of PRS's $40 of business interest expense is subject to the section 163(j) limitation at the level of either the partnership or partner.

(iii) *Partner-level allocations.* Because PRS is not subject to section 163(j) by reason of section 163(j)(3), PRS's $40 of business interest expense does not retain its character as business interest expense for purposes of section 163(j).

As a result, such business interest expense is not subject to the section 163(j) limitation at the level of either the partnership or partner. Additionally, pursuant to § 1.163(j)–6(m)(1), each partner includes its share of non-excepted trade or business items of income, gain, loss, and deduction (including business interest expense and business interest income) of PRS when calculating its ATI. As a result, X and Y each increase their ATI by $35.60. Further, because PRS is not subject to section 163(j) by reason of section 163(j)(3), the excess business interest expense from Year 1 is treated as paid or accrued by the partners pursuant to § 1.163(j)–6(m)(3). As a result, X and Y each treat their $5 of excess business interest expense from Year 1 as paid or accrued in Year 2, and increase their business interest expense by $5.

(iv) *Partner-level computations.* X, in computing its limit under section 163(j), has $135.60 of ATI ($100 from its sole proprietorship, plus $35.60 ATI from PRS) and $25 of business interest expense ($20 from its sole proprietorship, plus $5 of excess business interest expense treated as paid or accrued in Year 2). X's section 163(j) limit is $40.68 ($135.60 × 30 percent). Thus, $25 of X's business interest expense is deductible business interest expense. Y is not subject to section 163(j) under section 163(j)(3). As a result, Y's business interest expense is not subject to the section 163(j) limitation. Thus, all $45 of Y's business interest expense ($20 from its sole proprietorship, plus $20 disallowed from year 1, plus $5 of excess business interest expense treated as paid or accrued in Year 2) is not subject to the section 163(j) limitation.

(16) *Example 16*—(i) *Facts.* The facts are the same as in *Example 1* in paragraph (o)(1)(i) of this section, except that PRS's only trade or business is a real property trade or business for which PRS does not make the election provided for in section 163(j)(7)(B). In Year 2, when PRS's only trade or business is still its real property trade or business, PRS makes the election provided for in section 163(j)(7)(B). Further, in Year 2, PRS has $100 of income and $40 of business interest expense. PRS allocates its items of income, gain, deduction, and loss equally between X and Y. X has $100 of ATI and $20 of business interest expense from its sole proprietorship. Y has $0 of ATI and $20 of business interest expense from its sole proprietorship.

(ii) *Partnership-level.* In Year 2, PRS is not subject to section 163(j) because its only trade or business is an excepted trade or business. As a result, none of PRS's $40 of business interest expense is subject to the section 163(j) limitation at the level of either the partnership or partner.

(iii) *Partner-level allocations.* Because PRS is not subject to section 163(j), PRS's $40 of business interest expense does not retain its character as business interest expense for purposes of section 163(j). As a result, such business interest expense is not subject to the section 163(j) limitation at the partners' level. Pursuant to § 1.163(j)–6(m)(1), the partners do not include their respective $50 shares of income from PRS when calculating their own ATI because such $50 is excepted trade or business income.

(iv) *Partner-level computations.* X, in computing its limit under section 163(j), has $100 of ATI ($100 from its sole proprietorship) and $20 of business interest expense ($20 from its sole proprietorship). X's section 163(j) limit is $30 ($100 × 30 percent). Thus, $20 of X's business interest expense is deductible business interest expense. At the end of Year 2, X has $5 of excess business interest expense from PRS ($5 from Year 1). Y, in computing its limit under section 163(j), has $0 of ATI and $40 of business interest expense ($20 from its sole proprietorship, plus $20 disallowed business interest expense from Year 1). Y's section 163(j) limit is $0. Thus, Y's $40 of business interest expense not allowed as a deduction is treated as business interest expense paid or accrued by Y in Year 3. At the end of Year 2, Y has $5 of excess business interest expense from PRS ($5 from Year 1).

(17) *Example 17: Facts.* A (an individual) and B (a corporation) own all of the interests in partnership PRS. At the beginning of Year 1, A and B each have $100 section 704(b) capital account and $100 of basis in PRS. In Year 1, PRS has $100 of ATI, $10 of investment interest income, $20 of business interest income (BII), $60 of business interest expense (BIE), and $10 of floor plan financing interest expense. PRS's ATI consists of $100 of gross income and $0 of gross deductions. PRS allocates its items comprising ATI $100 to A and $0 to B. PRS allocates its business interest income $10 to A and $10 to B. PRS allocates its business interest expense $30 to A and $30 to B. PRS allocates all $10 of its investment interest income and all $10 of its floor plan financing interest expense to B. A has ATI from a sole proprietorship, unrelated to PRS, in the amount of $300.

(i) First, PRS determines its limitation pursuant to § 1.163(j)–2. PRS's section 163(j) limit is 30 percent of its ATI plus its business interest income, or $50 (($100 × 30 percent) + $20). Thus, PRS has $0 of excess business interest income (EBII), $0 of excess taxable income, $50 of deductible business interest expense, and $10 of excess business interest expense. PRS takes its $10 of floor plan financing into account in determining its nonseparately stated taxable income or loss.

(ii) Second, PRS determines each partner's allocable share of section 163(j) items used in its own section 163(j) calculation. B's $10 of investment interest income is not included in B's allocable business interest income amount because the $10 of investment interest income was not taken into account in PRS's section 163(j) calculation. B's $10 of floor plan financing interest expense is not included in B's allocable business interest expense. The $300 of ATI from A's sole proprietorship is not included in A's allocable ATI amount because the $300 was not taken into account in PRS's section 163(j) calculation.

TABLE 1 TO PARAGRAPH (o)(17)(ii)

	A	B	Total
Allocable ATI	$100	$0	$100
Allocable BII	10	10	20
Allocable BIE	30	30	60

(iii) Third, PRS compares each partner's allocable business interest income to such partner's allocable business interest expense. Because each partner's allocable business interest expense exceeds its allocable business interest income by $20 ($30 − $10), each partner has an allocable business interest income deficit of $20. Thus, the total allocable business interest income deficit is $40 ($20 + $20). No partner has allocable business interest income excess because no partner has allocable business interest income in excess of its allocable business interest expense. Thus, the total allocable business interest income excess is $0.

TABLE 2 TO PARAGRAPH (o)(17)(iii)

	A	B	Total
Allocable BII	$10	$10	N/A
Allocable BIE	30	30	N/A
If allocable BII exceeds allocable BIE, then such amount = Allocable BII excess	0	0	$0
If allocable BIE exceeds allocable BII, then such amount = Allocable BII deficit	20	20	40

(iv) Fourth, PRS determines each partner's final allocable business interest income excess. Because no partner had any allocable business interest income excess, each partner has final allocable business interest income excess of $0.

(v) Fifth, PRS determines each partner's remaining business interest expense. PRS determines A's remaining business interest expense by reducing, but not below $0, A's allocable business interest income deficit ($20) by the product of the total allocable business interest income excess ($0) and the ratio of A's allocable business interest income deficit to the total business interest income deficit ($20/$40). Therefore, A's allocable business interest income deficit of $20 is reduced by $0 ($0 × 50 percent). As a result, A's remaining business interest expense is $20. PRS determines B's remaining business interest expense by reducing, but not below $0, B's allocable business interest income deficit ($20) by the product of the total allocable business interest income excess ($0) and the ratio of B's allocable business interest income deficit to the total business interest income deficit ($20/$40). Therefore, B's allocable business interest income deficit of $20 is reduced by $0 ($0 × 50 percent). As a result, B's remaining business interest expense is $20.

TABLE 3 TO PARAGRAPH (o)(17)(v)

	A	B	Total
Allocable BII deficit	$20	$20	$40
Less: (Total allocable BII excess) × (Allocable BII deficit/Total allocable BII deficit)	0	0	N/A
= Remaining BIE	20	20	40

(vi) Sixth, PRS determines each partner's final allocable ATI. Any partner with a negative allocable ATI, or an allocable ATI of $0, has a positive allocable ATI of $0. Therefore, B has a positive allocable ATI of $0. Because A's allocable ATI is comprised of $100 of income and gain and $0 of deduction and loss, A has positive allocable ATI of $100. Thus, the total positive allocable ATI is $100 ($100 + $0). PRS determines A's final allocable ATI by reducing, but not below $0, A's positive allocable ATI ($100) by the product of total negative allocable ATI ($0) and the ratio of A's positive allocable ATI to the total positive allocable ATI ($100/$100). Therefore, A's positive allocable ATI is reduced by $0 ($0 × 100 percent). As a result, A's final allocable ATI is $100. Because B has a positive allocable ATI of $0, B's final allocable ATI is $0.

TABLE 4 TO PARAGRAPH (o)(17)(vi)

	A	B	Total
Allocable ATI	$100	$0	$100
If deduction and loss items comprising allocable ATI exceed income and gain items comprising allocable ATI, then such excess amount = Negative allocable ATI	0	0	0
If income and gain items comprising allocable ATI equal or exceed deduction and loss items comprising allocable ATI, then such amount = Positive allocable ATI	100	0	100

TABLE 5 TO PARAGRAPH (o)(17)(vi)

	A	B	Total
Positive allocable ATI	$100	$0	$100
Less: (Total negative allocable ATI) × (Positive allocable ATI/Total positive allocable ATI)	0	0	N/A
= Final allocable ATI	100	0	100

(vii) Seventh, PRS compares each partner's ATI capacity (ATIC) amount to such partner's remaining business interest expense. A's ATIC amount is $30 ($100 × 30 percent) and B's ATIC amount is $0 ($0 × 30 percent). Because A's ATIC amount exceeds its remaining business interest expense by $10 ($30 − $20), A has an ATIC excess of $10. B does not have any ATIC excess. Thus, the total ATIC excess is $10 ($10 + $0). A does not have any ATIC deficit. Because B's remaining business interest expense exceeds its ATIC amount by $20 ($20 − $0), B has an ATIC deficit of $20. Thus, the total ATIC deficit is $20 ($0 + $20).

TABLE 6 TO PARAGRAPH (o)(17)(vii)

	A	B	Total
ATIC (Final allocable ATI × 30 percent)	$30	$0	N/A
Remaining BIE	20	20	N/A
If ATIC exceeds remaining BIE, then such excess = ATIC excess	10	0	$10
If remaining BIE exceeds ATIC, then such excess = ATIC deficit	0	20	20

(viii)(A) Eighth, PRS must perform the calculations and make the necessary adjustments described under paragraph (f)(2)(viii) of this section if, and only if, PRS has—

(*1*) An excess business interest expense greater than $0 under paragraph (f)(2)(i) of this section;

(*2*) A total negative allocable ATI greater than $0 under paragraph (f)(2)(vi) of this section; and

(*3*) A total ATIC excess amount greater than $0 under paragraph (f)(2)(vii) of this section.

(B) Because PRS does not meet all three requirements in paragraph (o)(17)(viii)(A) of this section, PRS does not perform the calculations or adjustments described in paragraph (f)(2)(viii) of this section. In sum, the correct amounts to be used in paragraphs (o)(17)(ix) and (x) of this section are as follows.

TABLE 7 TO PARAGRAPH (o)(17)(viii)(B)

	A	B	Total
ATIC excess	$10	$0	$10
ATIC deficit	0	20	20

(ix) Ninth, PRS determines each partner's final ATIC excess amount. Because A has an ATIC excess, PRS must determine A's final ATIC excess amount. A's final ATIC excess amount is A's ATIC excess ($10), reduced, but not below $0, by the product of the total ATIC deficit ($20) and the ratio of A's ATIC excess to the total ATIC excess ($10/$10). Therefore, A has $0 of final ATIC excess ($10 − ($20 × 100 percent)).

TABLE 8 TO PARAGRAPH (o)(17)(ix)

	A	B	Total
ATIC excess	$10	$0	N/A
Less: (Total ATIC deficit) × (ATIC excess/Total ATIC excess)	20	0	N/A
= Final ATIC excess	0	0	$0

(x) Tenth, PRS determines each partner's final ATIC deficit amount. Because B has an ATIC deficit, PRS must determine B's final ATIC deficit amount. B's final ATIC deficit amount is B's ATIC deficit ($20), reduced, but not below $0, by the product of the total ATIC excess ($10) and the ratio of B's ATIC deficit to the total ATIC deficit ($20/$20). Therefore, B has $10 of final ATIC deficit ($20 − ($10 × 100 percent)).

TABLE 9 TO PARAGRAPH (o)(17)(x)

	A	B	Total
ATIC deficit	$0	$20	N/A
Less: (Total ATIC excess) × (ATIC deficit/Total ATIC deficit)	0	10	N/A
= Final ATIC deficit	0	10	$10

(xi) Eleventh, PRS allocates deductible business interest expense and section 163(j) excess items to the partners. Pursuant to paragraph (f)(2)(i) of this section, PRS has $10 of excess business interest expense. PRS allocates the excess business interest expense dollar for dollar to the partners with final ATIC deficits amounts. Thus, PRS allocates all $10 of its excess business interest expense to B. A partner's allocable business interest expense is deductible business interest expense to the extent it exceeds such partner's share of excess business interest expense. Therefore, A has deductible business interest expense of $30 ($30 − $0) and B has deductible business interest expense of $20 ($30 − $10). As a result of its allocations from PRS, A increases its section 704(b) capital account and basis in PRS by $80 to $180. As a result of its allocations from PRS, B decreases its capital account and basis in PRS by $20 to $80.

TABLE 10 TO PARAGRAPH (o)(17)(xi)

	A	B	Total
Deductible BIE	$30	$20	$50

TABLE 10 TO PARAGRAPH (o)(17)(xi)—Continued

	A	B	Total
EBIE allocated	0	10	10
ETI allocated	0	0	0
EBII allocated	0	0	0

(18) *Example 18: Facts.* A, B, and C own all of the interests in partnership PRS. In Year 1, PRS has $150 of ATI, $10 of business interest income, and $40 of business interest expense. PRS's ATI consists of $200 of gross income and $50 of gross deductions. PRS allocates its items comprising ATI ($50) to A, $200 to B, and $0 to C. PRS allocates its business interest income $0 to A, $0 to B, and $10 to C. PRS allocates its business interest expense $30 to A, $10 to B, and $0 to C.

(i) First, PRS determines its limitation pursuant to § 1.163(j)–2. PRS's section 163(j) limit is 30 percent of its ATI plus its business interest income, or $55 (($150 × 30 percent) + $10). Thus, PRS has $0 of excess business interest income, $50 of excess taxable income, $40 of deductible business interest expense, and $0 of excess business interest expense.

(ii) Second, PRS determines each partner's allocable share of section 163(j) items used in its own section 163(j) calculation.

TABLE 11 TO PARAGRAPH (o)(18)(ii)

	A	B	C	Total
Allocable ATI	($50)	$200	$0	$150
Allocable BII	0	0	10	10
Allocable BIE	30	10	0	40

(iii) Third, PRS compares each partner's allocable business interest income to such partner's allocable business interest expense. Because A's allocable business interest expense exceeds its allocable business interest income by $30 ($30 − $0), A has an allocable business interest income deficit of $30. Because B's allocable business interest expense exceeds its allocable business interest income by $10 ($10 − $0), B has an allocable business interest income deficit of $10. C does not have any allocable business interest income deficit. Thus, the total allocable business interest income deficit is $40 ($30 + $10 + $0). A and B do not have any allocable business interest income excess. Because C's allocable business interest income exceeds its allocable business interest expense by $10 ($10 − $0), C has an allocable business interest income excess of $10. Thus, the total allocable business interest income excess is $10 ($0 + $0 + $10).

TABLE 12 TO PARAGRAPH (o)(18)(iii)

	A	B	C	Total
Allocable BII	$0	$0	$10	N/A
Allocable BIE	30	10	0	N/A
If allocable BII exceeds allocable BIE, then such amount = Allocable BII excess	0	0	10	$10
If allocable BIE exceeds allocable BII, then such amount = Allocable BII deficit	30	10	0	40

(iv) Fourth, PRS determines each partner's final allocable business interest income excess. Because A and B do not have any allocable business interest income excess, each partner has final allocable business interest income excess of $0. PRS determines C's final allocable business interest income excess by reducing, but not below $0, C's allocable business interest income excess ($10) by the product of the total allocable business interest income deficit ($40) and the ratio of C's allocable business interest income excess to the total allocable business interest income excess ($10/$10). Therefore, C's allocable business interest income excess of $10 is reduced by $10 ($40 × 100 percent). As a result, C's allocable business interest income excess is $0.

TABLE 13 TO PARAGRAPH (o)(18)(iv)

	A	B	C	Total
Allocable BII excess	$0	$0	$10	N/A
Less: (Total allocable BII deficit) × (Allocable BII excess/Total allocable BII excess)	0	0	40	N/A
= Final Allocable BII Excess	0	0	0	$10

(v) Fifth, PRS determines each partner's remaining business interest expense. PRS determines A's remaining business interest expense by reducing, but not below $0, A's allocable business interest income deficit ($30) by the product of the total allocable business interest income excess ($10) and the ratio of A's allocable business interest income deficit to the total business interest income deficit ($30/$40). Therefore, A's allocable business interest income deficit of $30 is reduced by $7.50 ($10 × 75 percent). As a result, A's remaining business interest expense is $22.50. PRS determines B's remaining business interest expense by reducing, but not below $0, B's allocable business interest income deficit ($10) by the product of the total allocable business interest income excess ($10) and the ratio of B's allocable business interest income deficit to the total business interest income deficit ($10/$40). Therefore, B's allocable business interest income deficit of $10 is reduced by $2.50 ($10 × 25 percent). As a result, B's remaining business interest expense is $7.50. Because C does not have any allocable business interest income deficit, C's remaining business interest expense is $0.

TABLE 14 TO PARAGRAPH (o)(18)(v)

	A	B	C	Total
Allocable BII deficit	$30	$10	$0	$40
Less: (Total allocable BII excess) × (Allocable BII deficit/Total allocable BII deficit)	7.50	2.50	0	N/A
= Remaining BIE	22.50	7.50	0	N/A

(vi) Sixth, PRS determines each partner's final allocable ATI. Because A's allocable ATI is comprised of $50 of items of deduction and loss and $0 of income and gain, A has negative allocable ATI of $50. A is the only partner with negative allocable ATI. Thus, the total negative allocable ATI amount is $50. Any partner with a negative allocable ATI, or an allocable ATI of $0, has a positive allocable ATI of $0. Therefore, A and C have a positive allocable ATI of $0. Because B's allocable ATI is comprised of $200 of items of income and gain and $0 of deduction and loss, B has positive allocable ATI of $200. Thus, the total positive allocable ATI is $200 ($0 + $200 + $0). PRS determines B's final allocable ATI by reducing, but not below $0, B's positive allocable ATI ($200) by the product of total negative allocable ATI ($50) and the ratio of B's positive allocable ATI to the total positive allocable ATI ($200/$200). Therefore, B's positive allocable ATI is reduced by $50 ($50 × 100 percent). As a result, B's final allocable ATI is $150.

TABLE 15 TO PARAGRAPH (o)(18)(vi)

	A	B	C	Total
Allocable ATI	($50)	$200	$0	$150
If deduction and loss items comprising allocable ATI exceed income and gain items comprising allocable ATI, then such excess amount = Negative allocable ATI	50	0	0	50
If income and gain items comprising allocable ATI equal or exceed deduction and loss items comprising allocable ATI, then such amount = Positive allocable ATI	0	200	0	200

TABLE 16 TO PARAGRAPH (o)(18)(vi)

	A	B	C	Total
Positive allocable ATI	$0	$200	$0	$200
Less: (Total negative allocable ATI) × (Positive allocable ATI/Total positive allocable ATI)	0	50	0	N/A
= Final allocable ATI	0	150	0	150

(vii) Seventh, PRS compares each partner's ATI capacity (ATIC) amount to such partner's remaining business interest expense. A's ATIC amount is $0 ($0 × 30 percent), B's ATIC amount is $45 ($150 × 30 percent), and C's ATIC amount is $0 ($0 × 30 percent). A does not have any ATIC excess. Because B's ATIC amount exceeds its remaining business interest expense by $37.50 ($45 − $7.50), B has an ATIC excess amount of $37.50. C does not have any ATIC excess. Thus, the total ATIC excess amount is $37.50 ($0 + $37.50 + $0). Because A's remaining business interest expense exceeds its ATIC amount by $22.50 ($22.50 − $0), A has an ATIC deficit of $22.50. B and C do not have any ATIC deficit. Thus, the total ATIC deficit is $22.50 ($22.50 + $0 + $0).

TABLE 17 TO PARAGRAPH (o)(18)(vii)

	A	B	C	Total
ATIC (Final allocable ATI × 30 percent)	$0	$45	$0	N/A
Remaining BIE	22.50	7.50	0	N/A
If ATIC exceeds remaining BIE, then such excess = ATIC excess	0	37.50	0	$37.50
If remaining BIE exceeds ATIC, then such excess = ATIC deficit	22.50	0	0	22.50

(viii)(A) Eighth, PRS must perform the calculations and make the necessary adjustments described under paragraph (f)(2)(viii) of this section if, and only if, PRS has—

(*1*) An excess business interest expense greater than $0 under paragraph (f)(2)(i) of this section;

(*2*) A total negative allocable ATI greater than $0 under paragraph (f)(2)(vi) of this section; and

(*3*) A total ATIC excess amount greater than $0 under paragraph (f)(2)(vii) of this section.

(B) Because PRS does not meet all three requirements in paragraph (o)(18)(viii)(A) of this section, PRS does not perform the calculations or adjustments described in paragraph (f)(2)(viii) of this section. In sum, the correct amounts to be used in paragraphs (o)(18)(ix) and (x) of this section are as follows.

TABLE 18 TO PARAGRAPH (o)(18)(viii)(B)

	A	B	C	Total
ATIC excess	$0	$37.50	$0	$37.50
ATIC deficit	22.50	0	0	22.50

(ix) Ninth, PRS determines each partner's final ATIC excess amount. Because B has ATIC excess, PRS must determine B's final ATIC excess amount. B's final ATIC excess amount is B's ATIC excess ($37.50), reduced, but not below $0, by the product of the total ATIC deficit ($22.50) and the ratio of B's ATIC excess to the total ATIC excess ($37.50/$37.50). Therefore, B has $15 of final ATIC excess ($37.50 − ($22.50 × 100 percent)).

TABLE 19 TO PARAGRAPH (o)(18)(ix)

	A	B	C	Total
ATIC excess	$0	$37.50	$0	N/A
Less: (Total ATIC deficit) × (ATIC excess/Total ATIC excess)	0	22.50	0	N/A
= Final ATIC excess	0	15	0	$15

(x) Tenth, PRS determines each partner's final ATIC deficit amount. Because A has an ATIC deficit, PRS must determine A's final ATIC deficit amount. A's final ATIC deficit amount is A's ATIC deficit ($22.50), reduced, but not below $0, by the product of the total ATIC excess ($37.50) and the ratio of A's ATIC deficit to the total ATIC deficit ($22.50/$22.50). Therefore, A has $0 of final ATIC deficit ($22.50 − ($37.50 × 100 percent)).

TABLE 20 TO PARAGRAPH (o)(18)(x)

	A	B	C	Total
ATIC deficit	$22.50	$0	$0	N/A
Less: (Total ATIC excess) × (ATIC deficit/Total ATIC deficit)	37.50	0	0	N/A
= Final ATIC deficit	0	0	0	0

(xi) Eleventh, PRS allocates deductible business interest expense and section 163(j) excess items to the partners. Pursuant to paragraph (f)(2)(i) of this section, PRS has $50 of excess taxable income and $40 of deductible business interest expense. After grossing up each partner's final ATIC excess amounts by ten-thirds, excess taxable income is allocated dollar for dollar to partners with final ATIC excess amounts. Thus, PRS allocates its excess taxable income $50 to B. A partner's allocable business interest expense is deductible business interest expense to the extent it exceeds such partner's share of excess business interest expense. Therefore, A has deductible business interest expense of $30 ($30 − $0), B has deductible business interest expense of $10 ($10 − $0), and C has deductible business interest expense of $0 ($0 − $0).

TABLE 21 TO PARAGRAPH (o)(18)(xi)

	A	B	C	Total
Deductible BIE	$30	$10	$0	$40
EBIE allocated	0	0	0	0
ETI allocated	0	50	0	50
EBII allocated	0	0	0	0

(19) *Example 19: Facts.* A, B, and C own all of the interests in partnership PRS. In Year 1, PRS has $100 of ATI, $0 of business interest income, and $50 of business interest expense. PRS's ATI consists of $200 of gross income and $100 of gross deductions. PRS allocates its items comprising ATI $100 to A, $100 to B, and ($100) to C. PRS allocates its business interest expense $0 to A, $25 to B, and $25 to C.

(i) First, PRS determines its limitation pursuant to § 1.163(j)–2. PRS's section 163(j) limit is 30 percent of its ATI plus its business interest income, or $30 ($100 × 30 percent). Thus, PRS has $30 of deductible business interest expense and $20 of excess business interest expense.

(ii) Second, PRS determines each partner's allocable share of section 163(j) items used in its own section 163(j) calculation.

TABLE 22 TO PARAGRAPH (o)(19)(ii)

	A	B	C	Total
Allocable ATI	$100	$100	($100)	$100
Allocable BII	0	0	0	0
Allocable BIE	0	25	25	50

(iii) Third, PRS compares each partner's allocable business interest income to such partner's allocable business interest expense. No partner has allocable business interest income. Consequently, each partner's allocable business interest income deficit is equal to such partner's allocable business interest expense. Thus, A's allocable business interest income deficit is $0, B's allocable business interest income deficit is $25, and C's allocable business interest income deficit is $25. The total allocable business interest income deficit is $50 ($0 + $25 + $25). No partner has allocable business interest income excess because no partner has allocable business interest income in excess of its allocable business interest expense. Thus, the total allocable business interest income excess is $0.

TABLE 23 TO PARAGRAPH (o)(19)(iii)

	A	B	C	Total
Allocable BII	$0	$0	$0	N/A
Allocable BIE	0	25	25	N/A
If allocable BII exceeds allocable BIE, then such amount = Allocable BII excess	0	0	0	$0
If allocable BIE exceeds allocable BII, then such amount = Allocable BII deficit	0	25	25	50

(iv) Fourth, PRS determines each partner's final allocable business interest income excess. Because no partner had any allocable business interest income excess, each partner has final allocable business interest income excess of $0.

(v) Fifth, PRS determines each partner's remaining business interest expense. Because no partner has any allocable business interest income excess, each partner's remaining business interest expense equals its allocable business interest income deficit. Thus, A's remaining business interest expense is $0, B's remaining business interest expense is $25, and C's remaining business interest expense is $25.

TABLE 24 TO PARAGRAPH (o)(19)(v)

	A	B	C	Total
Allocable BII deficit	$0	$25	$25	$50
Less: (Total allocable BII excess) × (Allocable BII deficit/Total allocable BII deficit)	0	0	0	N/A
= Remaining BIE	0	25	25	N/A

(vi) Sixth, PRS determines each partner's final allocable ATI. Because C's allocable ATI is comprised of $100 of items of deduction and loss and $0 of income and gain, C has negative allocable ATI of $100. C is the only partner with negative allocable ATI. Thus, the total negative allocable ATI amount is $100. Any partner with a negative allocable ATI, or an allocable ATI of $0, has a positive allocable ATI of $0. Therefore, C has a positive allocable ATI of $0. Because A's allocable ATI is comprised of $100 of items of income and gain and $0 of deduction and loss, A has positive allocable ATI of $100. Because B's allocable ATI is comprised of $100 of items of income and gain and $0 of deduction and loss, B has positive allocable ATI of $100. Thus, the total positive allocable ATI is $200 ($100 + $100 + $0). PRS determines A's final allocable ATI by reducing, but not below $0, A's positive allocable ATI ($100) by the product of total negative allocable ATI ($100) and the ratio of A's positive allocable ATI to the total positive allocable ATI ($100/$200). Therefore, A's positive allocable ATI is reduced by $50 ($100 × 50 percent). As a result, A's final allocable ATI is $50. PRS determines B's final allocable ATI by reducing, but not below $0, B's positive allocable ATI ($100) by the product of total negative allocable ATI ($100) and the ratio of B's positive allocable ATI to the total positive allocable ATI ($100/$200). Therefore, B's positive allocable ATI is reduced by $50 ($100 × 50 percent). As a result, B's final allocable ATI is $50. Because C has a positive allocable ATI of $0, C's final allocable ATI is $0.

TABLE 25 TO PARAGRAPH (o)(19)(vi)

	A	B	C	Total
Allocable ATI	$100	$100	($100)	$100
If deduction and loss items comprising allocable ATI exceed income and gain items comprising allocable ATI, then such excess amount = Negative allocable ATI	0	0	100	100
If income and gain items comprising allocable ATI equal or exceed deduction and loss items comprising allocable ATI, then such amount = Positive allocable ATI	100	100	0	200

TABLE 26 TO PARAGRAPH (o)(19)(vi)

	A	B	C	Total
Positive allocable ATI	$100	$100	$0	$200
Less: (Total negative allocable ATI) × (Positive allocable ATI/Total positive allocable ATI)	50	50	0	N/A
= Final allocable ATI	50	50	0	100

(vii) Seventh, PRS compares each partner's ATI capacity (ATIC) amount to such partner's remaining business interest expense. A's ATIC amount is $15 ($50 × 30 percent), B's ATIC amount is $15 ($50 × 30 percent), and C's ATIC amount is $0 ($0 × 30 percent). Because A's ATIC amount exceeds its remaining business interest expense by $15 ($15 − $0), A has an ATIC excess of $15. B and C do not have any ATIC excess. Thus, the total ATIC excess is $15 ($15 + $0 + $0). A does not have any ATIC deficit. Because B's remaining business interest expense exceeds its ATIC amount by $10 ($25 − $15), B has an ATIC deficit of $10. Because C's remaining business interest expense exceeds its ATIC amount by $25 ($25 − $0), C has an ATIC deficit of $25. Thus, the total ATIC deficit is $35 ($0 + $10 + $25).

TABLE 27 TO PARAGRAPH (o)(19)(vii)

	A	B	C	Total
ATIC (Final allocable ATI × 30 percent)	$15	$15	$0	N/A
Remaining BIE	0	25	25	N/A
If ATIC exceeds remaining BIE, then such excess = ATIC excess	15	0	0	$15
If remaining BIE exceeds ATIC, then such excess = ATIC deficit	0	10	25	35

(viii)(A) Eighth, PRS must perform the calculations and make the necessary adjustments described under paragraph (f)(2)(viii) of this section if, and only if, PRS has—

(*1*) An excess business interest expense greater than $0 under paragraph (f)(2)(i) of this section;

(*2*) A total negative allocable ATI greater than $0 under paragraph (f)(2)(vi) of this section; and

(*3*) A total ATIC excess greater than $0 under paragraph (f)(2)(vii) of this section. Because PRS satisfies each of these three requirements, PRS must perform the calculations and make the necessary adjustments described under paragraphs (f)(2)(viii)(B) and (C) or (D) of this section.

(B) PRS must determine each partner's priority amount and usable priority amount. Only partners with an ATIC deficit under paragraph (f)(2)(vii) of this section can have a priority amount greater than $0. Thus, only partners B and C can have a priority amount greater than $0. PRS determines a partner's priority amount as 30 percent of the amount by which such partner's allocable positive ATI exceeds its final allocable ATI. Therefore, A's priority amount is $0, B's priority amount is $15 (($100 − $50) × 30 percent), and C's priority amount is $0 (($0 − $0) × 30 percent). Thus, the total priority amount is $15 ($0 + $15 + $0). Next, PRS must determine each partner's usable priority amount. Each partner's usable priority amount is the lesser of such partner's priority amount or ATIC deficit. Thus, A has a usable priority amount of $0, B has a usable priority amount of $10, and C has a usable priority amount of $0. As a result, the total usable priority amount is $10 ($0 + $10 + $0). Because the total ATIC excess under paragraph (f)(2)(vii) of this section ($15) is greater than the total usable priority amount ($10), PRS must perform the adjustments described in paragraph (f)(2)(viii)(C) of this section.

TABLE 28 TO PARAGRAPH (o)(19)(viii)(B)

	A	B	C	Total
(Positive allocable ATI—Final allocable ATI)	$0	$50	$0	N/A
Multiplied by 30 percent	30%	30%	30%	N/A
= Priority amount	$0	$15	$0	$15

TABLE 29 TO PARAGRAPH (o)(19)(viii)(B)

	A	B	C	Total
Priority amount	$0	$15	$0	N/A
ATIC deficit	0	10	25	N/A
Lesser of priority amount or ATIC deficit = Usable priority amount	0	10	0	$10

(C) For purposes of paragraph (f)(2)(ix) of this section, each partner's final ATIC excess is $0. For purposes of paragraph (f)(2)(x) of this section, the following terms have the following meanings. Each partner's ATIC deficit is such partner's ATIC deficit as determined pursuant to paragraph (f)(2)(vii) of this section reduced by such partner's usable priority amount. Thus, A's ATIC deficit is $0 ($0 − $0), B's ATIC deficit is $0 ($10 − $10), and C's ATIC deficit is $25 ($25 − $0). The total ATIC deficit is the total ATIC deficit determined pursuant to paragraph (f)(2)(vii) ($35) reduced by the total usable priority amount ($10). Thus, the total ATIC deficit is $25 ($35 − $10). The total ATIC excess is the total ATIC excess determined pursuant to paragraph (f)(2)(vii) of this section ($15) reduced by the total usable priority amount ($10). Thus, the total ATIC excess is $5 ($15 − $5).

TABLE 30 TO PARAGRAPH (o)(19)(viii)(C)

	A	B	C	Total
ATIC deficit	$0	$10	$25	N/A
Less: Usable priority amount	0	10	0	N/A
= ATIC deficit for purposes of paragraph (f)(2)(x) of this section	0	0	25	$25

(D)(1) In light of the fact that the total ATIC excess was greater than the total usable priority amount under paragraph (f)(2)(viii)(B) of this section, paragraph (f)(2)(viii)(D) of this section does not apply.

(2) In sum, the correct amounts to be used in paragraphs (o)(19)(ix) and (x) of this section are as follows.

TABLE 31 TO PARAGRAPH (o)(19)(viii)(D)(2)

	A	B	C	Total
ATIC excess	$5	$0	$0	$5
ATIC deficit	0	0	25	25

(ix) Ninth, PRS determines each partner's final ATIC excess amount. Pursuant to paragraph (f)(2)(viii)(C) of this section, each partner's final ATIC excess amount is $0.

(x) Tenth, PRS determines each partner's final ATIC deficit amount. Because C has an ATIC deficit, PRS must determine C's final ATIC deficit amount. C's final ATIC deficit amount is C's ATIC deficit ($25), reduced, but not below $0, by the product of the total ATIC excess ($5) and the ratio of C's ATIC deficit to the total ATIC deficit ($25/$25). Therefore, C has $20 of final ATIC deficit ($25 − ($5 × 100 percent)).

TABLE 32 TO PARAGRAPH (o)(19)(x)

	A	B	C	Total
ATIC deficit	$0	$0	$25	N/A
Less: (Total ATIC excess) × (ATIC deficit/Total ATIC deficit)	0	0	5	N/A
= Final ATIC deficit	0	0	20	$20

(xi) Eleventh, PRS allocates deductible business interest expense and section 163(j) excess items to the partners. Pursuant to paragraph (f)(2)(i) of this section, PRS has $20 of excess business interest expense. PRS allocates the excess business interest expense dollar for dollar to the partners with final ATIC deficits. Thus, PRS allocates its excess business interest expense $20 to C. A partner's allocable business interest expense is deductible business interest expense to the extent it exceeds such partner's share of excess business interest expense. Therefore, A has deductible business interest expense of $0 ($0 − $0), B has deductible business interest expense of $25 ($25 − $0), and C has deductible business interest expense of $5 ($25 − $20).

TABLE 33 TO PARAGRAPH (o)(19)(xi)

	A	B	C	Total
Deductible BIE	$0	$25	$5	$30
EBIE allocated	0	0	20	20
ETI allocated	0	0	0	0

TABLE 33 TO PARAGRAPH (o)(19)(xi)—Continued

	A	B	C	Total
EBII allocated	0	0	0	0

(20) *Example 20: Facts.* A, B, C, and D own all of the interests in partnership PRS. In Year 1, PRS has $200 of ATI, $0 of business interest income, and $140 of business interest expense. PRS's ATI consists of $600 of gross income and $400 of gross deductions. PRS allocates its items comprising ATI $100 to A, $100 to B, $400 to C, and ($400) to D. PRS allocates its business interest expense $0 to A, $40 to B, $60 to C, and $40 to D.

(i) First, PRS determines its limitation pursuant to § 1.163(j)–2. PRS's section 163(j) limit is 30 percent of its ATI plus its business interest income, or $60 ($200 × 30 percent). Thus, PRS has $60 of deductible business interest expense and $80 of excess business interest expense.

(ii) Second, PRS determines each partner's allocable share of section 163(j) items used in its own section 163(j) calculation.

TABLE 34 TO PARAGRAPH (o)(20)(ii)

	A	B	C	D	Total
Allocable ATI	$100	$100	$400	($400)	$200
Allocable BII	0	0	0	0	0
Allocable BIE	0	40	60	40	140

(iii) Third, PRS compares each partner's allocable business interest income to such partner's allocable business interest expense. No partner has allocable business interest income. Consequently, each partner's allocable business interest income deficit is equal to such partner's allocable business interest expense. Thus, A's allocable business interest income deficit is $0, B's allocable business interest income deficit is $40, C's allocable business interest income deficit is $60, and D's allocable business interest income deficit is $40. The total allocable business interest income deficit is $140 ($0 + $40 + $60 + $40). No partner has allocable business interest income excess because no partner has allocable business interest income in excess of its allocable business interest expense. Thus, the total allocable business interest income excess is $0.

TABLE 35 TO PARAGRAPH (o)(20)(iii)

	A	B	C	D	Total
Allocable BII	$0	$0	$0	$0	N/A
Allocable BIE	0	40	60	40	N/A
If allocable BII exceeds allocable BIE, then such amount = Allocable BII excess	0	0	0	0	$0
If allocable BIE exceeds allocable BII, then such amount = Allocable BII deficit	0	40	60	40	140

(iv) Fourth, PRS determines each partner's final allocable business interest income excess. Because no partner has any allocable business interest income excess, each partner has final allocable business interest income excess of $0.

(v) Fifth, PRS determines each partner's remaining business interest expense. Because no partner has any allocable business interest income excess, each partner's remaining business interest expense equals its allocable business interest income deficit. Thus, A's remaining business interest expense is $0, B's remaining business interest expense is $40, C's remaining business interest expense is $60, and D's remaining business interest expense is $40.

TABLE 36 TO PARAGRAPH (o)(20)(v)

	A	B	C	D	Total
Allocable BII deficit	$0	$40	$60	$40	$140
Less: (Total allocable BII excess) × (Allocable BII deficit/ Total allocable BII deficit)	0	0	0	0	N/A
= Remaining BIE	0	40	60	40	N/A

(vi) Sixth, PRS determines each partner's final allocable ATI. Because D's allocable ATI is comprised of $400 of items of deduction and loss and $0 of income and gain, D has negative allocable ATI of $400. D is the only partner with negative allocable ATI. Thus, the total negative allocable ATI amount is $400. Any partner with a negative allocable ATI, or an allocable ATI of $0, has a positive allocable ATI of $0. Therefore, D has a positive allocable ATI of $0. PRS determines A's final allocable ATI by reducing, but not below $0, A's positive allocable ATI ($100) by the product of total negative allocable ATI ($400) and the ratio of A's positive allocable ATI to the total positive allocable ATI ($100/$600). Therefore, A's positive allocable ATI is reduced by $66.67 ($400 × 16.67 percent). As a result, A's final allocable ATI is $33.33. PRS determines B's final allocable ATI by reducing, but not below $0, B's positive allocable ATI ($100) by the product of total negative allocable ATI ($400) and the ratio of B's positive allocable ATI to the total positive allocable ATI ($100/$600). Therefore, B's positive allocable ATI is reduced by $66.67 ($400 × 16.67 percent). As a result, B's final allocable ATI is $33.33. PRS determines C's final allocable ATI by reducing, but not below $0, C's positive allocable ATI ($400) by the product of total negative allocable ATI ($400) and the ratio of C's positive allocable ATI to the total positive allocable ATI ($400/$600). Therefore, C's positive allocable ATI is reduced by $266.67 ($400 × 66.67 percent). As a result, C's final allocable ATI is $133.33. Because D has a positive allocable ATI of $0, D's final allocable ATI is $0.

TABLE 37 TO PARAGRAPH (o)(20)(vi)

	A	B	C	D	Total
Allocable ATI	$100	$100	$400	($400)	$200
If deduction and loss items comprising allocable ATI exceed income and gain items comprising allocable ATI, then such excess amount = Negative allocable ATI	0	0	0	400	400
If income and gain items comprising allocable ATI equal or exceed deduction and loss items comprising allocable ATI, then such amount = Positive allocable ATI	100	100	400	0	600

TABLE 38 TO PARAGRAPH (o)(20)(vi)

	A	B	C	D	Total
Positive allocable ATI	$100	$100	$400	$0	$600
Less: (Total negative allocable ATI) × (Positive allocable ATI/Total positive allocable ATI)	66.67	66.67	266.67	0	N/A
= Final allocable ATI	33.33	33.33	133.33	0	200

(vii) Seventh, PRS compares each partner's ATI capacity (ATIC) amount to such partner's remaining business interest expense. A's ATIC amount is $10 ($33.33 × 30 percent), B's ATIC amount is $10 ($33.33 × 30 percent), C's ATIC amount is $40 ($133.33 × 30 percent), and D's ATIC amount is $0 ($0 × 30 percent). Because A's ATIC amount exceeds its remaining business interest expense by $10 ($10 − $0), A has an ATIC excess of $10. B, C, and D do not have any ATIC excess. Thus, the total ATIC excess is $10 ($10 + $0 + $0 + $0). A does not have any ATIC deficit. Because B's remaining business interest expense exceeds its ATIC amount by $30 ($40 − $10), B has an ATIC deficit of $30. Because C's remaining business interest expense exceeds its ATIC amount by $20 ($60 − $40), C has an ATIC deficit of $20. Because D's remaining business interest expense exceeds its ATIC amount by $40 ($40 − $0), D has an ATIC deficit of $40. Thus, the total ATIC deficit is $90 ($0 + $30 + $20 + $40).

TABLE 39 TO PARAGRAPH (o)(20)(vii)

—	A	B	C	D	Total
ATIC (Final allocable ATI × 30 percent)	$10	$10	$40	$0	N/A
Remaining BIE	0	40	60	40	N/A
If ATIC exceeds remaining BIE, then such excess = ATIC excess	10	0	0	0	$10
If remaining BIE exceeds ATIC, then such excess = ATIC deficit	0	30	20	40	90

(viii)(A) Eighth, PRS must perform the calculations and make the necessary adjustments described under paragraph (f)(2)(viii) of this section if, and only if, PRS has (1) an excess business interest expense greater than $0 under paragraph (f)(2)(i) of this section, (2) a total negative allocable ATI greater than $0 under paragraph (f)(2)(vi) of this section, and (3) a total ATIC excess amount greater than $0 under paragraph (f)(2)(vii) of this section. Because PRS satisfies each of these three requirements, PRS must perform the calculations and make the necessary adjustments described under paragraphs (f)(2)(viii)(B) and (C) or paragraph (f)(2)(viii)(D) of this section.

(B) PRS must determine each partner's priority amount and usable priority amount. Only partners with an ATIC deficit under paragraph (f)(2)(vii) of this section can have a priority amount greater than $0. Thus, only partners B, C, and D can have a priority amount greater than $0. PRS determines a partner's priority amount as 30 percent of the amount by which such partner's allocable positive ATI exceeds its final allocable ATI. Therefore, B's priority amount is $20 (($100 − $33.33) × 30 percent), C's priority amount is $80 (($400 − $133.33) × 30 percent), and D's priority amount is $0 (($0 − $0) × 30 percent). Thus, the total priority amount is $100 ($0 + $20 + $80 + $0). Next, PRS must determine each partner's usable priority amount. Each partner's usable priority amount is the lesser of such partner's priority amount or ATIC deficit. Thus, A has a usable priority amount of $0, B has a usable priority amount of $20, C has a usable priority amount of $20, and D has a usable priority amount of $0. As a result, the total usable priority amount is $40 ($0 + $20 + $20 + $0). Because the total usable priority amount ($40) is greater than the total ATIC excess under paragraph (f)(2)(vii) of this section ($10), PRS must perform the adjustments described in paragraph (f)(2)(viii)(D) of this section.

TABLE 40 TO PARAGRAPH (o)(20)(viii)(B)

	A	B	C	D	Total
(Positive allocable ATI—Final allocable ATI)	$0	$66.67	$266.67	$0	N/A
Multiplied by 30 percent	30%	30%	30%	30%	N/A
= Priority amount	0	20	80	0	$100

TABLE 41 TO PARAGRAPH (o)(20)(viii)(B)

	A	B	C	D	Total
Priority amount	$0	$20	$80	$0	N/A
ATIC deficit	0	30	20	40	N/A
Lesser of priority amount or ATIC deficit = Usable priority amount	0	20	20	0	$40

(C) In light of the fact that the total usable priority amount is greater than the total ATIC excess under paragraph (f)(2)(viii)(B) of this section, paragraph (f)(2)(viii)(C) of this section does not apply.

(D)(*1*) Because B and C are the only partners with priority amounts greater than $0, B and C are priority partners, while A and D are non-priority partners. For purposes of paragraph (f)(2)(ix) of this section, each partner's final ATIC excess amount is $0. For purposes of paragraph (f)(2)(x) of this section, each non-priority partner's final ATIC deficit amount is such partner's ATIC deficit determined pursuant to paragraph (f)(2)(vii) of this section. Therefore, A has a final ATIC deficit of $0 and D has a final ATIC deficit of $40. Additionally, for purposes of paragraph (f)(2)(x) of this section, PRS must determine each priority partner's step eight excess share. A priority partner's step eight excess share is the product of the total ATIC excess and the ratio of the partner's priority amount to the total priority amount. Thus, B's step eight excess share is $2 ($10 × ($20/$100)) and C's step eight excess share is $8 ($10 × ($80/$100)). To the extent a priority partner's step eight excess share exceeds its ATIC deficit, the excess will be the partner's ATIC excess for purposes of paragraph (f)(2)(x) of this section. Thus, B and C each have an ATIC excess of $0, resulting in a total ATIC excess is $0. To the extent a priority partner's ATIC deficit exceeds its step eight excess share, the excess will be the partner's ATIC deficit for purposes of paragraph (f)(2)(x) of this section. Because B's ATIC deficit ($30) exceeds its step eight excess share ($2), B's ATIC deficit for purposes of paragraph (f)(2)(x) of this section is $28 ($30 − $2). Because C's ATIC deficit ($20) exceeds its step eight excess share ($8), C's ATIC deficit for purposes of paragraph (f)(2)(x) of this section is $12 ($20 − $8). Thus, the total ATIC deficit is $40 ($28 + $12).

TABLE 42 TO PARAGRAPH (o)(20)(viii)(D)(*1*)

	A	B	C	D	Total
Non-priority partners ATIC deficit in paragraph (f)(2)(vii) = Final ATIC deficit for purposes of paragraph (f)(2)(x) of this section	$0	N/A	N/A	$40	N/A

TABLE 43 TO PARAGRAPH (o)(20)(viii)(D)(*1*)

	A	B	C	D	Total
Priority partners step eight excess share = (Total ATIC excess) × (Priority/Total priority)	N/A	$2	$8	N/A	N/A
ATIC deficit	N/A	30	20	N/A	N/A
If step eight excess share exceeds ATIC deficit, then such excess = ATIC excess for purposes of paragraph (f)(2)(x) of this section	N/A	0	0	N/A	0
If ATIC deficit exceeds step eight excess share, then such excess = ATIC deficit for purposes of paragraph (f)(2)(x) of this section	N/A	28	12	N/A	40

(*2*) In sum, the correct amounts to be used in paragraphs (o)(20)(ix) and (x) of this section are as follows.

TABLE 44 TO PARAGRAPH (o)(20)(viii)(D)(2)

	A	B	C	D	Total
ATIC excess	$0	$0	$0	$0	$0
ATIC deficit	0	28	12	0	40
Non-priority partner final ATIC deficit	0	0	0	0	N/A

(ix) Ninth, PRS determines each partner's final ATIC excess amount. Pursuant to paragraph (f)(2)(viii)(D) of this section, each priority and non-priority partner's final ATIC excess amount is $0.

(x) Tenth, PRS determines each partner's final ATIC deficit amount. Because B has an ATIC deficit, PRS must determine B's final ATIC deficit amount. B's final ATIC deficit amount is B's ATIC deficit ($28), reduced, but not below $0, by the product of the total ATIC excess ($0) and the ratio of B's ATIC deficit to the total ATIC deficit ($28/$40). Therefore, B has $28 of final ATIC deficit ($28 − ($0 × 70 percent)). Because C has an ATIC deficit, PRS must determine C's final ATIC deficit amount. C's final ATIC deficit amount is C's ATIC deficit ($12), reduced, but not below $0, by the product of the total ATIC excess ($0) and the ratio of C's ATIC deficit to the total ATIC deficit ($12/$40). Therefore, C has $12 of final ATIC deficit ($12 − ($0 × 30 percent)). Pursuant to paragraph (f)(2)(viii)(D) of this section, D's final ATIC deficit amount is $40.

TABLE 45 TO PARAGRAPH (o)(20)(x)

	A	B	C	D	Total
ATIC deficit	N/A	$28	$12	N/A	N/A
Less: (Total ATIC excess) × (ATIC deficit/Total ATIC deficit)	N/A	0	0	N/A	N/A
= Final ATIC deficit	$0	28	12	$40	$80

(xi) Eleventh, PRS allocates deductible business interest expense and section 163(j) excess items to the partners. Pursuant to paragraph (f)(2)(i) of this section, PRS has $80 of excess business interest expense. PRS allocates the excess business interest expense dollar for dollar to the partners with final ATIC deficits. Thus, PRS allocates its excess business interest expense $28 to B, $12 to C, and $40 to D. A partner's allocable business interest expense is deductible business interest expense to the extent it exceeds such partner's share of excess business interest expense. Therefore, A has deductible business interest expense of $0 ($0 − $0), B has deductible business interest expense of $12 ($40 − $28), C has deductible business interest expense of $48 ($60 − $12), and D has deductible business interest expense of $0 ($40 − $40).

TABLE 46 TO PARAGRAPH (o)(20)(xi)

	A	B	C	D	Total
Deductible BIE	$0	$12	$48	$0	$60
EBIE allocated	0	28	12	40	80
ETI allocated	0	0	0	0	0
EBII allocated	0	0	0	0	0

(21) *Example 21: Facts.* A, B, C, and D own all of the interests in partnership PRS. In Year 1, PRS has $200 of ATI, $0 of business interest income, and $150 of business interest expense. PRS's ATI consists of $500 of gross income and $300 of gross deductions. PRS allocates its items comprising ATI $50 to A, $50 to B, $400 to C, and ($300) to D. PRS allocates its business interest expense $0 to A, $50 to B, $50 to C, and $50 to D.

(i) First, PRS determines its limitation pursuant to § 1.163(j)–2. PRS's section 163(j) limit is 30 percent of its ATI plus its business interest income, or $60 ($200 × 30 percent). Thus, PRS has $60 of deductible business interest expense, and $90 of excess business interest expense.

(ii) Second, PRS determines each partner's allocable share of section 163(j) items used in its own section 163(j) calculation.

TABLE 47 TO PARAGRAPH (o)(21)(ii)

	A	B	C	D	Total
Allocable ATI	$50	$50	$400	($300)	$200
Allocable BII	0	0	0	0	0
Allocable BIE	0	50	50	50	150

(iii) Third, PRS compares each partner's allocable business interest income to such partner's allocable business interest expense. No partner has allocable business interest income. Consequently, each partner's allocable business interest income deficit is equal to such partner's allocable business interest expense. Thus, A's allocable business interest income deficit is $0, B's allocable business interest income deficit is $50, C's allocable business interest income deficit is $50, and D's allocable business interest income deficit is $50. The total allocable business interest income deficit is $150 ($0 + $50 + $50 + $50). No partner has allocable business interest income excess because no partner has allocable business interest income in excess of its allocable business interest expense. Thus, the total allocable business interest income excess is $0.

TABLE 48 TO PARAGRAPH (o)(21)(iii)

	A	B	C	D	Total
Allocable BII	$0	$0	$0	$0	N/A
Allocable BIE	0	50	50	50	N/A
If allocable BII exceeds allocable BIE, then such amount = Allocable BII excess	0	0	0	0	0
If allocable BIE exceeds allocable BII, then such amount = Allocable BII deficit	0	50	50	50	150

(iv) Fourth, PRS determines each partner's final allocable business interest income excess. Because no partner has any allocable business interest income excess, each partner has final allocable business interest income excess of $0.

(v) Fifth, PRS determines each partner's remaining business interest expense. Because no partner has any allocable business interest income excess, each partner's remaining business interest expense equals its allocable business interest income deficit. Thus, A's remaining business interest expense is $0, B's remaining business interest expense is $50, C's remaining business interest expense is $50, and D's remaining business interest expense is $50.

TABLE 49 TO PARAGRAPH (o)(21)(v)

	A	B	C	D	Total
Allocable BII deficit	$0	$50	$50	$50	$150
Less: (Total allocable BII excess) × (Allocable BII deficit/ Total allocable BII deficit)	0	0	0	0	N/A
= Remaining BIE	0	50	50	50	N/A

(vi) Sixth, PRS determines each partner's final allocable ATI. Because D's allocable ATI is comprised of $300 of items of deduction and loss and $0 of income and gain, D has negative allocable ATI of $300. D is the only partner with negative allocable ATI. Thus, the total negative allocable ATI amount is $300. Any partner with a negative allocable ATI, or an allocable ATI of $0, has a positive allocable ATI of $0. Therefore, D has a positive allocable ATI of $0. PRS determines A's final allocable ATI by reducing, but not below $0, A's positive allocable ATI ($50) by the product of total negative allocable ATI ($300) and the ratio of A's positive allocable ATI to the total positive allocable ATI ($50/$500). Therefore, A's positive allocable ATI is reduced by $30 ($300 × 10 percent). As a result, A's final allocable ATI is $20. PRS determines B's final allocable ATI by reducing, but not below $0, B's positive allocable ATI ($50) by the product of total negative allocable ATI ($300) and the ratio of B's positive allocable ATI to the total positive allocable ATI ($50/$500). Therefore, B's positive allocable ATI is reduced by $30 ($300 × 10 percent). As a result, B's final allocable ATI is $20. PRS determines C's final allocable ATI by reducing, but not below $0, C's positive allocable ATI ($400) by the product of total negative allocable ATI ($300) and the ratio of C's positive allocable ATI to the total positive allocable ATI ($400/$500). Therefore, C's positive allocable ATI is reduced by $240 ($300 × 80 percent). As a result, C's final allocable ATI is $160. Because D has a positive allocable ATI of $0, D's final allocable ATI is $0.

TABLE 50 TO PARAGRAPH (o)(21)(vi)

	A	B	C	D	Total
Allocable ATI	$50	$50	$400	($300)	$200
If deduction and loss items comprising allocable ATI exceed income and gain items comprising allocable ATI, then such excess amount = Negative allocable ATI	0	0	0	300	300
If income and gain items comprising allocable ATI equal or exceed deduction and loss items comprising allocable ATI, then such amount = Positive allocable ATI	50	50	400	0	500

TABLE 51 TO PARAGRAPH (o)(21)(vi)

Less: (Total negative allocable ATI) × (Positive allocable ATI/Total positive allocable ATI)	30	30	240	0	N/A
= Final allocable ATI	20	20	160	0	200

(vii) Seventh, PRS compares each partner's ATI capacity (ATIC) amount to such partner's remaining business interest expense. A's ATIC amount is $6 ($20 × 30 percent), B's ATIC amount is $6 ($20 × 30 percent), C's ATIC amount is $48 ($160 × 30 percent), and D's ATIC amount is $0 ($0 × 30 percent). Because A's ATIC amount exceeds its remaining business interest expense by $6 ($6 − $0), A has an ATIC excess of $6. B, C, and D do not have any ATIC excess. Thus, the total ATIC excess amount is $6 ($6 + $0 + $0 + $0). A does not have any ATIC deficit. Because B's remaining business interest expense exceeds its ATIC amount by $44 ($50 − $6), B has an ATIC deficit of $44. Because C's remaining business interest expense exceeds its ATIC amount by $2 ($50 − $48), C has an ATIC deficit of $2. Because D's remaining business interest expense exceeds its ATIC amount by $50 ($50 − $0), D has an ATIC deficit of $50. Thus, the total ATIC deficit is $96 ($0 + $44 + $2 + $50).

TABLE 52 TO PARAGRAPH (o)(21)(vii)

	A	B	C	D	Total
ATIC (Final allocable ATI × 30 percent)	$6	$6	$48	$0	N/A
Remaining BIE	0	50	50	50	N/A
If ATIC exceeds remaining BIE, then such excess = ATIC excess	6	0	0	0	$6
If remaining BIE exceeds ATIC, then such excess = ATIC deficit	0	44	2	50	96

(viii)(A) Eighth, PRS must perform the calculations and make the necessary adjustments described under paragraph (f)(2)(viii) of this section if, and only if, PRS has—

(*1*) An excess business interest expense greater than $0 under paragraph (f)(2)(i) of this section;

(*2*) A total negative allocable ATI greater than $0 under paragraph (f)(2)(vi) of this section; and

(*3*) A total ATIC excess amount greater than $0 under paragraph (f)(2)(vii) of this section. Because PRS satisfies each of these three requirements, PRS must perform the calculations and make the necessary adjustments described under paragraph (f)(2)(viii) of this section.

(B) PRS must determine each partner's priority amount and usable priority amount. Only partners with an ATIC deficit under paragraph (f)(2)(vii) of this section of this section can have a priority amount greater than $0. Thus, only partners B, C, and D can have a priority amount greater than $0. PRS determines a partner's priority amount as 30 percent of the amount by which such partner's allocable positive ATI exceeds its final allocable ATI. Therefore, B's priority amount is $9 (($50 − $20) × 30 percent), C's priority amount is $72 (($400 − $160) × 30 percent), and D's priority amount is $0 (($0 − $0) × 30 percent). Thus, the total priority amount is $81 ($0 + $9 + $72 + $0). Next, PRS must determine each partner's usable priority amount. Each partner's usable priority amount is the lesser of such partner's priority amount or ATIC deficit. Thus, B has a usable priority amount of $9, C has a usable priority amount of $2, and D has a usable priority amount of $0. As a result, the total usable priority amount is $11 ($0 + $9 + $2 + $0). Because the total usable priority amount ($11) is greater than the total ATIC excess ($6) under paragraph (f)(2)(vii) of this section, PRS must perform the adjustments described in paragraph (f)(2)(viii)(D) of this section.

TABLE 53 TO PARAGRAPH (o)(21)(viii)(B)

	A	B	C	D	Total
(Positive allocable ATI − Final allocable ATI)	$0	$30	$240	$0	N/A
Multiplied by 30 percent	30%	30%	30%	30%	N/A
= Priority amount	$0	$9	$72	$0	$81

TABLE 54 TO PARAGRAPH (o)(21)(viii)(B)

	A	B	C	D	Total
Priority amount	$0	$9	$72	$0	N/A
ATIC deficit	0	44	2	50	N/A
Lesser of priority amount or ATIC deficit = Usable priority amount	0	9	2	0	$11

(C) In light of the fact that the total usable priority amount is greater than the total ATIC excess under paragraph (f)(2)(viii)(B) of this section, paragraph (f)(2)(viii)(C) of this section does not apply.

(D)(*1*) Because B and C are the only partners with priority amounts greater than $0, B and C are priority partners, while A and D are non-priority partners. For purposes of paragraph (f)(2)(ix) of this section, each partner's final ATIC excess amount is $0. For purposes of paragraph (f)(2)(x) of this section, each non-priority partner's final ATIC deficit amount is such partner's ATIC deficit determined pursuant to paragraph (f)(2)(vii) of this section. Therefore, A has a final ATIC deficit of $0 and D has a final ATIC deficit of $50. Additionally, for purposes of paragraph (f)(2)(x) of this section, PRS must determine each priority partner's step eight excess share. A priority partner's step eight excess share is the product of the total ATIC excess and the ratio of the partner's priority amount to the total priority amount. Thus, B's step eight excess share is $0.67 ($6 × ($9/$81)) and C's step eight excess share is $5.33 ($6 × ($72/$81)). To the extent a priority partner's step eight excess share exceeds its ATIC deficit, the excess will be the partner's ATIC excess for purposes of paragraph (f)(2)(x) of this section. B's step eight excess share does not exceed its ATIC deficit. Because C's step eight excess share ($5.33) exceeds its ATIC deficit ($2), C's ATIC excess for purposes of paragraph (f)(2)(x) of this section is $3.33 ($5.33 − $2). Thus, the total ATIC excess for purposes of paragraph (f)(2)(x) of this section is $3.33 ($0 + $3.33). To the extent a priority partner's ATIC deficit exceeds its step eight excess share, the excess will be the partner's ATIC deficit for purposes of paragraph (f)(2)(x) of this section. Because B's ATIC deficit ($44) exceeds its step eight excess share ($0.67), B's ATIC deficit for purposes of paragraph (f)(2)(x) of this section is $43.33 ($44 − $0.67). C's ATIC deficit does not exceed its step eight excess share. Thus, the total ATIC deficit for purposes of paragraph (f)(2)(x) of this section is $43.33 ($43.33 + $0).

TABLE 55 TO PARAGRAPH (o)(21)(viii)(D)(1)

	A	B	C	D	Total
Non-priority partners ATIC deficit in paragraph (f)(2)(vii) = Final ATIC deficit for purposes of paragraph (f)(2)(x) of this section	$0	N/A	N/A	$50	N/A

TABLE 56 TO PARAGRAPH (o)(21)(viii)(D)(1)

	A	B	C	D	Total
Priority partners step eight excess share = (Total ATIC excess) × (Priority/Total priority)	N/A	$0.67	$5.33	N/A	N/A
ATIC deficit	N/A	44	2	N/A	N/A
If step eight excess share exceeds ATIC deficit, then such excess = ATIC excess for purposes of paragraph (f)(2)(x) of this section	N/A	0	3.33	N/A	$3.33
If ATIC deficit exceeds step eight excess share, then such excess = ATIC deficit for purposes of paragraph (f)(2)(x) of this section	N/A	43.33	0	N/A	43.33

(*2*) In sum, the correct amounts to be used in paragraphs (o)(21)(ix) and (x) of this section are as follows.

TABLE 57 TO PARAGRAPH (o)(21)(viii)(D)(2)

	A	B	C	D	Total
ATIC excess	$0	$0	$3.33	$0	$3.33
ATIC deficit	0	43.33	0	0	43.33
Non-priority partner final ATIC deficit	0	0	0	50	N/A

(ix) Ninth, PRS determines each partner's final ATIC excess amount. Pursuant to paragraph (f)(2)(viii)(D) of this section, each priority and non-priority partner's final ATIC excess amount is $0.

(x) Tenth, PRS determines each partner's final ATIC deficit amount. Because B has an ATIC deficit, PRS must determine B's final ATIC deficit amount. B's final ATIC deficit amount is B's ATIC deficit ($43.33), reduced, but not below $0, by the product of the total ATIC excess ($3.33) and the ratio of B's ATIC deficit to the total ATIC deficit ($43.33/$43.33). Therefore, B has $40 of final ATIC deficit ($43.33 − ($3.33 × 100 percent)). Pursuant to paragraph (f)(2)(viii)(D) of this section, D's final ATIC deficit amount is $40.

TABLE 58 TO PARAGRAPH (o)(21)(x)

	A	B	C	D	Total
ATIC deficit	$0	$43.33	$0	N/A	N/A

TABLE 58 TO PARAGRAPH (o)(21)(x)—Continued

	A	B	C	D	Total
Less: (Total ATIC excess) × (ATIC deficit/Total ATIC deficit)	0	3.33	0	N/A	N/A
= Final ATIC deficit	0	40	0	$50	$90

(xi) Eleventh, PRS allocates deductible business interest expense and section 163(j) excess items to the partners. Pursuant to paragraph (f)(2)(i) of this section, PRS has $90 of excess business interest expense. PRS allocates the excess business interest expense dollar for dollar to the partners with final ATIC deficits. Thus, PRS allocates its excess business interest expense $40 to B and $50 to D. A partner's allocable business interest expense is deductible business interest expense to the extent it exceeds such partner's share of excess business interest expense. Therefore, A has deductible business interest expense of $0 ($0 − $0), B has deductible business interest expense of $10 ($50 − $40), C has deductible business interest expense of $50 ($50 − $0), and D has deductible business interest expense of $0 ($50 − $50).

TABLE 59 TO PARAGRAPH (o)(21)(xi)

	A	B	C	D	Total
Deductible BIE	$0	$10	$50	$0	$60
EBIE allocated	0	40	0	50	90
ETI allocated	0	0	0	0	0
EBII allocated	0	0	0	0	0

(22) *Example 22*—(i) *Facts.* A and B are equal shareholders in X, a subchapter S corporation. In Year 1, X has $100 of ATI and $40 of business interest expense. A has $100 of ATI and $20 of business interest expense from its sole proprietorship. B has $0 of ATI and $20 of business interest expense from its sole proprietorship.

(ii) *S corporation-level.* In Year 1, X's section 163(j) limit is 30 percent of its ATI, or $30 ($100 × 30 percent). Thus, X has $30 of deductible business interest expense and $10 of disallowed business interest expense. Such $30 of deductible business interest expense is includable in X's nonseparately stated income or loss, and is not subject to further limitation under section 163(j). X carries forward the $10 of disallowed business interest expense to Year 2 as a disallowed business interest expense carryforward under § 1.163(j)–2(c). X may not currently deduct all $40 of its business interest expense in Year 1. X only reduces its accumulated adjustments account in Year 1 by the $30 of deductible business interest expense in Year 1 under § 1.163(j)–6(l)(7).

(iii) *Shareholder allocations.* A and B are each allocated $35 of nonseparately stated taxable income ($50 items of income or gain, less $15 of deductible business interest expense) from X. A and B do not reduce their basis in X by the $10 of disallowed business interest expense.

(iv) *Shareholder-level computations.* A, in computing its limit under section 163(j), has $100 of ATI and $20 of business interest expense from its sole proprietorship. A's section 163(j) limit is $30 ($100 × 30 percent). Thus, A's $20 of business interest expense is deductible business interest expense. B, in computing its limit under section 163(j), has $20 of business interest expense from its sole proprietorship. B's section 163(j) limit is $0 ($0 × 30 percent). Thus, B's $20 of business interest expense is not allowed as a deduction and is treated as business interest expense paid or accrued by B in Year 2.

(23) *Example 23*—(i) *Facts.* The facts are the same as in *Example 22* in paragraph (o)(22)(i) of this section. In Year 2, X has $233.33 of ATI, $0 of business interest income, and $30 of business interest expense. A has $100 of ATI and $20 of business interest expense from its sole proprietorship. B has $0 of ATI and $20 of business interest expense from its sole proprietorship.

(ii) *S corporation-level.* In Year 2, X's section 163(j) limit is 30 percent of its ATI plus its business interest income, or $70 ($233.33 × 30 percent). Because X's section 163(j) limit exceeds X's $40 of business interest expense ($30 from Year 2, plus the $10 disallowed business interest expense carryforwards from Year 1), X may deduct all $40 of business interest expense in Year 2. Such $40 of deductible business interest expense is includable in X's nonseparately stated income or loss, and is not subject to further limitation under section 163(j). Pursuant to § 1.163(j)–6(l)(7), X must reduce its accumulated adjustments account by $40. Additionally, X has $100 of excess taxable income under § 1.163(j)–1(b)(17).

(iii) *Shareholder allocations.* A and B are each allocated $96.67 of nonseparately stated taxable income ($116.67 items of income or gain, less $20 of deductible business interest expense) from X. Additionally, A and B are each allocated $50 of excess taxable income under § 1.163(j)–6(l)(4). As a result, A and B each increase their ATI by $50.

(iv) *Shareholder-level computations.* A, in computing its limit under section 163(j), has $150 of ATI ($100 from its sole proprietorship, plus $50 excess taxable income) and $20 of business interest expense (from its sole proprietorship). A's section 163(j) limit is $45 ($150 × 30 percent). Thus, A's $20 of business interest expense is deductible business interest expense. B, in computing its limit under section 163(j), has $50 of ATI ($0 from its sole proprietorship, plus $50 excess taxable income) and $40 of business interest expense ($20 from its sole proprietorship, plus $20 disallowed business interest expense from its sole proprietorship in Year 1). B's section 163(j) limit is $15 ($50 × 30 percent). Thus, $15 of B's business interest expense is deductible business interest expense. The $25 of B's business interest expense not allowed as a deduction ($40 business interest expense, less $15 section 163(j) limit) is treated as business interest expense paid or accrued by B in Year 3.

(p) *Applicability date.* This section applies to taxable years beginning on or after November 13, 2020. However, taxpayers and their related parties, within the meaning of sections 267(b) and 707(b)(1), may choose to apply the rules of this section to a taxable year beginning after December 31, 2017, so long as the taxpayers and their related parties consistently apply the rules of the section 163(j) regulations, and, if applicable, §§ 1.263A–9, 1.263A–15, 1.381(c)(20)–1, 1.382–1, 1.382–2, 1.382–5, 1.382–6, 1.382–7, 1.383–0, 1.383–1, 1.469–9, 1.469–11, 1.704–1, 1.882–5, 1.1362–3, 1.1368–1, 1.1377–1, 1.1502–13, 1.1502–21, 1.1502–36, 1.1502–79, 1.1502–91 through 1.1502–99 (to the extent they effectuate the rules of §§ 1.382–2, 1.382–5, 1.382–6, and 1.383–1), and 1.1504–4, to that taxable year.

§ 1.163(j)–7 Application of the section 163(j) limitation to foreign corporations and United States shareholders.

(a) *Overview.* This section provides rules for the application of section 163(j) to relevant foreign corporations with shareholders that are United States persons. Paragraph (b) of this section describes the general rule regarding the application of section 163(j) to relevant foreign corporations. Paragraphs (c) through (f) of this section are reserved. Paragraph (g) of this section provides rules concerning the computation of ATI of a relevant foreign corporation. Paragraphs (h) through (k) of this section are reserved.

(b) *General rule regarding the application of section 163(j) to relevant foreign corporations.* Except as otherwise provided in this section, section 163(j) and the section 163(j) regulations apply to determine the deductibility of a relevant foreign corporation's business interest expense for purposes of computing its taxable income for U.S. income tax purposes (if any) in the same manner as those provisions apply to determine the deductibility of a domestic C corporation's business interest expense for purposes of computing its taxable income. See also § 1.952–2. If a relevant foreign corporation is a direct or indirect partner in a partnership, see § 1.163(j)–6 (concerning the application of section 163(j) to partnerships).

(c)–(f) [Reserved]

(g) *Rules concerning the computation of adjusted taxable income of a relevant foreign corporation*—(1) *Tentative taxable income.* For purposes of computing the tentative taxable income of a relevant foreign corporation for a taxable year, the relevant foreign corporation's gross income and allowable deductions are determined under the principles of § 1.952–2 or under the rules of section 882 for determining income that is, or deductions that are allocable to, effectively connected income, as applicable.

(2) *Treatment of certain dividends.* For purposes of computing the ATI of a relevant foreign corporation for a taxable year, any dividend included in gross income that is received from a related person, within the meaning of section 954(d)(3), with respect to the distributee is subtracted from tentative taxable income.

(h)–(l) [Reserved]

(m) *Applicability date.* This section applies to taxable years beginning on or after November 13, 2020. However, taxpayers and their related parties, within the meaning of sections 267(b) and 707(b)(1), may choose to apply the rules of this section to a taxable year beginning after December 31, 2017, so long as the taxpayers and their related parties consistently apply the rules of the section 163(j) regulations, and, if applicable, §§ 1.263A–9, 1.263A–15, 1.381(c)(20)–1, 1.382–1, 1.382–2, 1.382–5, 1.382–6, 1.382–7, 1.383–0, 1.383–1, 1.469–9, 1.469–11, 1.704–1, 1.882–5, 1.1362–3, 1.1368–1, 1.1377–1, 1.1502–13, 1.1502–21, 1.1502–36, 1.1502–79, 1.1502–91 through 1.1502–99 (to the extent they effectuate the rules of §§ 1.382–2, 1.382–5, 1.382–6, and 1.383–1), and 1.1504–4, to that taxable year.

§ 1.163(j)–8. [Reserved]

§ 1.163(j)–9 Elections for excepted trades or businesses; safe harbor for certain REITs.

(a) *Overview.* The limitation in section 163(j) applies to business interest, which is defined under section 163(j)(5) as interest properly allocable to a trade or business. The term trade or business does not include any electing real property trade or business or any electing farming business. See section 163(j)(7). This section provides the rules and procedures for taxpayers to follow in making an election under section 163(j)(7)(B) for a trade or business to be an electing real property trade or business and an election under section 163(j)(7)(C) for a trade or business to be an electing farming business.

(b) *Availability of election*—(1) *In general.* An election under section 163(j)(7)(B) for a real property trade or business to be an electing real property trade or business is available to any trade or business that is described in § 1.163(j)–1(b)(14)(i), (ii), or (iii), and an election under section 163(j)(7)(C) for a farming business to be an electing farming business is available to any trade or business that is described in § 1.163(j)–1(b)(13)(i), (ii), or (iii).

(2) *Special rules*—(i) *Exempt small businesses.* An election described in paragraph (b)(1) of this section is available regardless of whether the real property trade or business or farming business making the election also meets the requirements of the small business exemption in section 163(j)(3) and § 1.163(j)–2(d). See paragraph (c)(2) of this section for the effect of the election relating to depreciation.

(ii) *Section 162 trade or business not required for electing real property trade or business.* An election described in paragraph (b)(1) of this section to be an electing real property trade or business is available regardless of whether the trade or business with respect to which the election is made is a trade or business under section 162. For example, a taxpayer engaged in activities described in section 469(c)(7)(C) and § 1.469–9(b)(2), as required in § 1.163(j)–1(b)(14)(i), may make an election for a trade or business to be an electing real property trade or business, regardless of whether its activities rise to the level of a section 162 trade or business.

(c) *Scope and effect of election*—(1) *In general.* An election under this section is made with respect to each eligible trade or business of the taxpayer and applies only to such trade or business for which the election is made. An election under this section applies to the taxable year in which the election is made and to all subsequent taxable years. See paragraph (e) of this section for terminations of elections.

(2) *Irrevocability.* An election under this section is irrevocable.

(3) *Depreciation.* Taxpayers making an election under this section are required to use the alternative depreciation system for certain types of property under section 163(j)(11) and cannot claim the additional first-year depreciation deduction under section 168(k) for those types of property.

(d) *Time and manner of making election*—(1) *In general.* Subject to paragraph (f) of this section, a taxpayer makes an election under this section by attaching an election statement to the taxpayer's timely filed original Federal income tax return, including extensions. A taxpayer may make elections for multiple trades or businesses on a single election statement.

(2) *Election statement contents.* The election statement should be titled ''Section 1.163(j)–9 Election'' and must contain the following information for each trade or business:

(i) The taxpayer's name;

(ii) The taxpayer's address;

(iii) The taxpayer's social security number (SSN) or employer identification number (EIN);

(iv) A description of the taxpayer's electing trade or business sufficient to demonstrate qualification for an election under this section, including the principal business activity code; and

(v) A statement that the taxpayer is making an election under section 163(j)(7)(B) or (C), as applicable.

(3) *Consolidated group's trade or business.* For a consolidated group's trade or business, the election under this section is made by the agent for the group, as defined in § 1.1502–77, on behalf of itself and members of the consolidated group. Only the name and taxpayer identification number (TIN) of the agent for the group, as defined in § 1.1502–77, must be provided on the election statement.

(4) *Partnership's trade or business.* An election for a partnership must be made on the partnership's return for a trade or business that the partnership conducts. An election by a partnership does not apply to a trade or business conducted by a partner outside the partnership.

(e) *Termination of election*—(1) *In general.* An election under this section automatically terminates if a taxpayer ceases to engage in the electing trade or business. A taxpayer is considered to cease to engage in an electing trade or business if the taxpayer sells or transfers substantially all of the assets of the electing trade or business to an acquirer that is not a related party in a taxable asset transfer. A taxpayer is also considered to cease to engage in an electing trade or business if the taxpayer terminates its existence for Federal income tax purposes or ceases operation of the electing trade or business, except to the extent that such termination or cessation results in the sale or transfer of substantially all of the assets of the electing trade or business to an acquirer that is a related party, or in a transaction that is not a taxable asset transfer.

(2) *Taxable asset transfer defined.* For purposes of this paragraph (e), the term *taxable asset transfer* means a transfer in which the acquirer's basis or adjusted basis in the assets is not determined, directly or indirectly, in whole or in part, by reference to the transferor's basis in the assets.

(3) *Related party defined.* For purposes of this paragraph (e), the term *related party* means any person who bears a relationship to the taxpayer which is described in section 267(b) or 707(b)(1).

(4) *Anti-abuse rule.* If, within 60 months of a sale or transfer of assets described in paragraph (e)(1) of this section, the taxpayer or a related party reacquires substantially all of the assets that were used in the taxpayer's prior electing trade or business, or substantially similar assets, and resumes conducting such prior electing trade or business, the taxpayer's previously terminated election under this section is reinstated and is effective on the date the prior electing trade or business is reacquired.

(f) *Additional guidance.* The rules and procedures regarding the time and manner of making an election under this section and the election statement contents in paragraph (d) of this section may be modified through other guidance (see §§ 601.601(d) and 601.602 of this chapter). Additional situations in which an election may terminate under paragraph (e) of this section may be provided through guidance published in the **Federal Register** or in the Internal Revenue Bulletin (see § 601.601(d) of this chapter).

(g) *Examples.* The examples in this paragraph (g) illustrate the application of this section. Unless otherwise indicated, X and Y are domestic C corporations; D and E are U.S. resident individuals not subject to any foreign income tax; and the exemption for certain small businesses in § 1.163(j)–2(d) does not apply.

(1) *Example 1: Scope of election*—(i) *Facts.* For the taxable year ending December 31, 2021, D, a sole proprietor, owned and operated a dairy farm and an orchard as separate farming businesses described in section 263A(e)(4). D filed an original Federal income tax return for the 2021 taxable year on August 1, 2022, and included with the return an election statement meeting the requirements of paragraph (d)(2) of this section. The election statement identified D's dairy farm business as an electing trade or business under this section. On March 1, 2023, D sold some but not all or substantially all of the assets from D's dairy farm business to D's neighbor, E, who is unrelated to D. After the sale, D continued to operate the dairy farm trade or business.

(ii) *Analysis.* D's election under this section was properly made and is effective for the 2021 taxable year and subsequent years. D's dairy farm business is an excepted trade or business because D made the election with D's timely filed Federal income tax return. D's orchard business is a non-excepted trade or business, because D did not make an election for the orchard business to be an excepted trade or business. The sale of some but not all or substantially all of the assets from D's dairy farm business does not affect D's election under this section.

(2) *Example 2: Availability of election*—(i) *Facts.* E, an individual, operates a dairy business that is a farming business under section 263A and also owns real property that is not part of E's dairy business that E leases to an unrelated party through a triple net lease. E's average gross receipts, excluding inherently personal amounts, for the three years prior to 2021 are approximately $25 million, but E is unsure of the exact amount.

(ii) *Analysis.* Under paragraph (b)(2)(i) of this section, E may make an election under this section for the dairy business to be an electing farming business, even though E is unsure whether the small business exemption of § 1.163(j)–2(d) applies. Additionally, under paragraph (b)(2)(ii) of this section, assuming the requirements of section 163(j)(7)(C) and this section are otherwise satisfied, E may make an election under this section for its triple net lease property to be an electing real property trade or business, even though E may not be engaged in a trade or business under section 162 with respect to the real property.

(3) *Example 3: Cessation of entire trade or business*—(i) *Facts.* X has a real property trade or business for which X made an election under this section by attaching an election statement to A's 2021 Federal income tax return. On March 1, 2022, X sold all of the assets used in its real property trade or business to Y, an unrelated party, and ceased to engage in the electing trade or business. On June 1, 2027, X started a new real property trade or business that was substantially similar to X's prior electing trade or business.

(ii) *Analysis.* X's election under this section terminated on March 1, 2022, under paragraph (e)(1) of this section. X may choose whether to make an election under this section for X's new real property trade or business that A started in 2027.

(4) *Example 4: Anti-abuse rule*—(i) *Facts.* The facts are the same as in *Example 3* in paragraph (g)(3)(i) of this section, except that X re-started its previous real property trade or business on February 1, 2023, when X reacquired substantially all of the assets that X had sold on March 1, 2022.

(ii) *Analysis.* X's election under this section terminated on March, 1, 2022, under paragraph (e)(1) of this section. On February 1, 2023, X's election was reinstated under paragraph (e)(4) of this section. X's new real property trade or business is treated as a resumption of X's prior electing trade or business and is therefore treated as an electing real property trade or business.

(5) *Example 5: Trade or business continuing after acquisition*—(i) *Facts.* X has a farming business for which X made an election under this section by attaching an election statement to X's timely filed 2021 Federal income tax return. Y, unrelated to X, also has a farming business, but Y has not made an election under this section. On July 1, 2022, X transferred all of its assets to Y in a transaction described in section 368(a)(1)(D). After the transfer, Y continues to operate the farming trade or business acquired from X.

(ii) *Analysis.* Under paragraph (e)(1) of this section, Y is subject to X's election under this section for the trade or business that uses X's assets because the sale or transfer was not in a taxable transaction. Y cannot revoke X's election, but X's election has no effect on Y's existing farming business for which Y has not made an election under this section.

(6) *Example 6: Trade or business merged after acquisition*—(i) *Facts.* The facts are the same as in *Example 5* in paragraph (g)(5)(i) of this section, except that Y uses the assets acquired from X in a trade or business that is neither a farming business (as defined in section 263A(e)(4) or § 1.263A–4(a)(4)) nor a trade or business of a specified agricultural or horticultural cooperative (as defined in section 199A(g)(4)).

(ii) *Analysis.* Y is not subject to X's election for Y's farming business because the farming trade or business ceased to exist after the acquisition.

(h) *Safe harbor for REITs*—(1) *In general.* If a REIT holds real property, as defined in § 1.856–10, interests in one or more partnerships directly or indirectly holding real property (through interests in other partnerships or shares in other REITs), as defined in § 1.856–10, or shares in one or more other REITs directly or indirectly holding real property (through interests in partnerships or shares in other REITs), as defined in § 1.856–10, the REIT is eligible to make the election described in paragraph (b)(1) of this section to be an electing real property trade or business for purposes of sections 163(j)(7)(B) and 168(g)(1)(F) for all or part of its assets. The portion of the REIT's assets eligible for this election is determined under paragraph (h)(2) or (3) of this section.

(2) *REITs that do not significantly invest in real property financing assets.* If a REIT makes the election under paragraph (h)(1) of this section and the value of the REIT's real property financing assets, as defined in paragraphs (h)(5) and (6) of this section, at the close of the taxable year is 10 percent or less of the value of the REIT's total assets at the close of the taxable year, as determined under section 856(c)(4)(A), then all of the REIT's assets are treated as assets of an excepted trade or business.

(3) *REITs that significantly invest in real property financing assets.* If a REIT makes the election under paragraph (h)(1) of this section and the value of the REIT's real property financing assets, as defined in paragraphs (h)(5) and (6) of this section, at the close of the taxable year is more than 10 percent of the value of the REIT's total assets at the close of the taxable year, as determined under section 856(c)(4)(A), then for the allocation of interest expense, interest income, and other items of expense and gross income to excepted and non-excepted trades or businesses, the REIT must apply the rules set forth in § 1.163(j)–10 as modified by paragraph (h)(4) of this section.

(4) *REIT real property assets, interests in partnerships, and shares in other REITs*—(i) *Real property assets.* Assets held by a REIT described in paragraph (h)(3) of this section that meet the definition of real property under § 1.856–10 are treated as assets of an excepted trade or business.

(ii) *Partnership interests.* If a REIT described in paragraph (h)(3) of this section holds an interest in a partnership, in applying the partnership look-through rule described in § 1.163(j)–10(c)(5)(ii)(A)(*2*), the REIT treats assets of the partnership that meet the definition of real property under § 1.856–10 as assets of an excepted trade or business. This application of the definition of real property under § 1.856–10 does not affect the characterization of the partnership's assets at the partnership level or for any non-REIT partner. However, no portion of the adjusted basis of the REIT's interest in the partnership is allocated to a non-excepted trade or business if the partnership makes an election under paragraph (h)(7) of this section and if all of the partnership's assets are treated as assets of an excepted trade or business under paragraph (h)(2) of this section.

(iii) *Shares in other REITs*—(A) *In general.* If a REIT (shareholder REIT) described in paragraph (h)(3) of this section holds an interest in another REIT, then for purposes of applying the allocation rules in § 1.163(j)–10, the partnership look-through rule described in § 1.163(j)–10(c)(5)(ii)(A)(*2*), as modified by paragraph (h)(4)(ii) of this section, applies to the assets of the other REIT (as if the other REIT were a partnership) in determining the portion of shareholder REIT's adjusted basis in the shares of the other REIT that is allocable to an excepted or non-excepted trade or business of shareholder REIT. However, no portion of the adjusted basis of shareholder REIT's shares in the other REIT is allocated to a non-excepted trade or business if all of the other REIT's assets are treated as assets of an excepted trade or business under paragraph (h)(2) of this section.

(B) *Information necessary.* If shareholder REIT does not receive, either directly from the other REIT or indirectly through the analysis of an applicable financial statement (within the meaning of section 451(b)(3)) of the other REIT, the information necessary to determine whether and to what extent the assets of the other REIT are investments in real property financing assets, then shareholder REIT's shares in the other REIT are treated as assets of a non-excepted trade or business under § 1.163(j)–10(c).

(iv) *Tiered entities.* In applying § 1.163(j)–10(c)(5)(ii)(E), the rules in paragraphs (h)(4)(ii) and (h)(4)(iii)(A) and (B) of this section apply to any partnerships and other REITs within the tier.

(5) *Value of shares in other REITs*—(i) *In general.* If a REIT (shareholder REIT) holds shares in another REIT, then solely for purposes of applying the value tests under paragraphs (h)(2) and (3) of this section, the value of shareholder REIT's real property financing assets includes the portion of the value of shareholder REIT's shares in the other REIT that is attributable to the other REIT's investments in real property financing assets. However, no portion of the value of shareholder REIT's shares in the other REIT is included in the value of shareholder REIT's real property financing assets if all of the other REIT's assets are treated as assets of an excepted trade or business under paragraph (h)(2) of this section.

(ii) *Information necessary.* If shareholder REIT does not receive, either directly from the other REIT or indirectly through the analysis of an applicable financial statement (within the meaning of section 451(b)(3)) of the other REIT, the information necessary to determine whether and to what extent the assets of the other REIT are investments in real property financing assets, then shareholder REIT's shares in the other REIT are treated as real property financing assets for purposes of paragraphs (h)(2) and (3) of this section.

(iii) *Tiered REITs.* The rules in paragraphs (h)(5)(i) and (ii) of this section apply successively to the extent that the other REIT, and any other REIT in the tier, holds shares in another REIT.

(6) *Real property financing assets.* For purposes of this paragraph (h), *real property financing assets* include interests, including participation interests, in the following: Mortgages, deeds of trust, and installment land contracts; mortgage pass-through certificates guaranteed by Government National Mortgage Association (GNMA), Federal National Mortgage Association (FNMA), Federal Home Loan Mortgage Corporation (FHLMC), or Canada Mortgage and Housing Corporation (CMHC); REMIC regular interests; other interests in investment trusts classified as trusts under § 301.7701–4(c) of this chapter that represent undivided beneficial ownership in a pool of obligations principally secured by interests in real property and related assets that would be permitted investments if the investment trust were a REMIC; obligations secured by manufactured housing treated as single family residences under section 25(e)(10), without regard to the treatment of the obligations or the properties under state law; and debt instruments issued by publicly offered REITs.

(7) *Application of safe harbor for partnerships controlled by REITs.* A partnership is eligible to make the election under paragraph (h)(1) of this section if one or more REITs own directly or indirectly at least 50 percent of the partnership's capital and profits, the partnership meets the requirements of section 856(c)(2), (3), and (4) as if the partnership were a REIT, and the partnership satisfies the requirements described in paragraph (h)(1) of this section as if the partnership were a REIT. The portion of the partnership's assets eligible for this election is determined under paragraph (h)(2) or (3) of this section, treating the partnership as if it were a REIT.

(8) *REITs or partnerships controlled by REITs that do not apply the safe harbor.* A REIT or a partnership that is eligible but chooses not to apply the safe harbor provisions of paragraph (h)(1) or (7) of this section, respectively, may still elect, under paragraph (b)(1) of this section, for one or more of its trades or businesses to be an electing real property trade or business, provided that such trade or business is otherwise eligible to elect under paragraph (b)(1) of this section. A REIT or partnership that makes the election under paragraph (b)(1) of this section without utilizing the safe harbor provisions of paragraph (h) of this section may not rely on any portion of paragraphs (h)(1) through (7) of this section.

(i) [Reserved]

(j) *Special anti-abuse rule for certain real property trades or businesses*—(1) *In general.* Except as provided in paragraph (j)(2) of this section, a trade or business (lessor) does not constitute a trade or business eligible for an election described in paragraph (b)(1) of this section to be an electing real property trade or business if at least 80 percent, determined by fair market rental value, of the real property used in the business is leased to a trade or business (lessee) under common control with the lessor, regardless of whether the arrangement is pursuant to a written lease or pursuant to a service contract or another agreement that is not denominated as a lease. For purposes of this paragraph (j), fair market rental value is the amount of rent that a prospective lessee that is unrelated to the lessor would be willing to pay for a rental interest in real property, taking into account the geographic location, size, and type of the real property. For purposes of this paragraph (j), two trades or businesses are under common control if 50 percent of the direct and indirect ownership of both businesses are held by related parties within the meaning of sections 267(b) and 707(b).

(2) *Exceptions*—(i) *De minimis exception.* The limitation in paragraph (j)(1) of this section does not apply, and the lessor is eligible to make an election under paragraph (b)(1) of this section, if the lessor leases, regardless of whether the arrangement is pursuant to a written lease or pursuant to a service contract or another agreement that is not denominated as a lease, at least 90 percent of the lessor's real property, determined by fair market rental value, to one or more of the following:

(A) A party not under common control with the lessor or lessee;

(B) A party under common control with the lessor or lessee that has made an election described in paragraph (b)(1) of this section for a trade or business to be an electing real property trade or business or electing farming business, but only to the extent that the real property is used as part of its electing real property trade or business or electing farming business; or

(C) A party under common control with the lessor or lessee that is an excepted regulated utility trade or business, but only to the extent that the real property is used as part of its excepted regulated utility trade or business.

(ii) *Look-through exception.* If the de minimis exception in paragraph (j)(2)(i) of this section does not apply because less than 90 percent of the lessor's real property is leased to parties described in paragraphs (j)(2)(i)(A), (B), and (C), the lessor is eligible to make the election under paragraph (b)(1) of this section to the extent that the lessor leases the real property to parties described in paragraph (j)(2)(A), (B), or (C), and to the extent that the lessee subleases (or lessees ultimately sublease) the real property to:

(A) A party not under common control with the lessor or lessee;

(B) A party under common control with the lessor or lessee that has made an election described in paragraph (b)(1) of this section for a trade or business to be an electing real property trade or business or electing farming business to the extent that the real property is used as part of its electing real property trade or business or electing farming business; or

(C) A party under common control with the lessor or lessee that is an excepted regulated utility trade or business to the extent that the real property is used as part of its excepted regulated utility trade or business.

(iii) *Inapplicability of exceptions to consolidated groups.* The exceptions in paragraphs (j)(2)(i) and (ii) of this section do not apply when the lessor and lessee are members of the same consolidated group.

(iv) *Exception for certain REITs.* The special anti-abuse rule in paragraph (j)(1) of this section does not apply to REITs or to partnerships making an election under paragraph (h)(7) of this section that lease qualified lodging facilities, as defined in section 856(d)(9)(D), and qualified health care properties, as defined in section 856(e)(6)(D).

(3) *Allocations.* See § 1.163(j)–10(c)(3)(iii)(D) for rules related to the allocation of the basis of assets used in lessor trades or businesses described in paragraphs (j)(1) and (j)(2)(i) of this section.

(4) *Examples.* The examples in this paragraph (j)(4) illustrate the application of paragraphs (j)(1), (2), and (3) of this section. Unless otherwise indicated, the parties are all domestic entities and are not members of a single consolidated group within the meaning of § 1.1502–1(h).

(i) *Example 1: Related party lease of hotel*—(A) *Facts.* X and Y are under common control, as defined in paragraph (j)(1) of this section. X owns one piece of real property, a hotel, that X leases to Y. Y operates the hotel and provides hotel rooms and associated amenities to third party guests of the hotel. The form of the arrangement with third party hotel guests is a license to use rooms in the hotel and associated amenities. Y is a real property trade or business that has made an election under paragraph (b)(1) of this section.

(B) *Analysis.* Because X leases at least 80 percent of X's real property to a party under common control, X is subject to the anti-abuse rule in paragraph (j)(1) of this section. However, under the de minimis exception under paragraph (j)(2)(i) of this section, 100 percent of the fair market rental value of the building is leased to a party under common control that has made an election to be an electing real property trade or business. Accordingly, X is eligible to make the election described in paragraph (b)(1) of this section for its entire trade or business.

(ii) *Example 2*—(A) *Facts.* The facts are the same as in *Example 1* in paragraph (j)(4)(i)(A) of this section, except that Y has not made an election under paragraph (b)(1) of this section, and is not otherwise using the real property in an excepted trade or business.

(B) *Analysis.* Because X leases at least 80 percent of X's real property, determined by fair market rental value, to Y, a party under common control, X is subject to the anti-abuse rule in paragraph (j)(1) of this section. X is not eligible for the de minimis exception under paragraph (j)(2)(i) of this section because X does not lease at least 90 percent of its real property to a party under common control, as defined in paragraph (j)(1) of this section, such as Y, and Y is not using the property in an otherwise excepted trade or business. However, X is eligible for the look-through exception under paragraph (j)(2)(ii) of this section because X leases 100 percent of its real property to Y, a party that is under common control, and Y subleases 100 percent of the real property to parties that are not under common control with X or Y. The fact that the license provided to hotel guests is not denominated as a lease does not prevent these licenses from being treated as a lease for purposes of paragraph (j) of this section. Accordingly, under the look-through exception under paragraph (j)(2)(ii) of this section, X is eligible to make the election described in paragraph (b)(1) of this section with regard to its entire trade or business.

(iii) *Example 3: Sublease to related party and unrelated third party*—(A) *Facts.* X owns one piece of real property that X leases to Y, a party under common control, as defined in paragraph (j)(1) of this section. Y does not operate an excepted trade or business. Y subleases 80 percent of the real property, determined by the fair market rental value, to a party under common control with Y that does not operate an excepted trade or business and 20 percent of the real property, determined by the fair market rental value, to an unrelated third party.

(B) *Analysis.* Because X leases at least 80 percent of X's real property, determined by fair market rental value, to a party under common control, X is subject to the anti-abuse rule in paragraph (j)(1) of this section. X is not eligible for the de minimis exception in paragraph (j)(2)(i) of this section because X is not leasing at least 90 percent of the real property, determined by fair market rental value, to a party under common control that operates an excepted trade or business and/or unrelated parties. Under the look-through exception under paragraph (j)(2)(ii) of this section, X is eligible to make the election described in paragraph (b)(1) of this section with respect to the 20 percent of the fair market rental value of the real property subleased to an unrelated party because X is treated as directly leasing this portion to an unrelated party. X is not eligible to make the election described in paragraph (b)(1) of this section with respect to the 80 percent of the building subleased to a party under common control because X is still treated as directly leasing this portion to a related party. Under § 1.163(j)–10(c)(3)(iii)(D), X must allocate 80 percent of the basis in the real property as a non-excepted trade or business and 20 percent of the basis in the real property as an excepted trade or business.

(iv) *Example 4: Multiple subleases*—(A) *Facts.* X owns a building that X leases to Y, a party under common control as defined in paragraph (j)(1) of this section. Y does not operate an excepted trade or business. Y subleases 80 percent of the building, determined by fair market rental value, to Z, a party under common control with both X and Y. Y subleases the remaining 20 percent of the building, determined by fair market rental value, to unrelated parties. Z subleases 50 percent of its leasehold interest, determined by fair market rental value, to parties unrelated to X, Y and Z, and uses the remaining leasehold interest in its retail business. Z does not operate an excepted trade or business.

(B) *Analysis.* Because X leases at least 80 percent of X's real property, determined by fair market rental value, to a party under common control, X is subject to the anti-abuse rule in paragraph (j)(1) of this section. X is not eligible for the de minimis exception in paragraph (j)(2)(i) because X is not leasing at least 90 percent of the building, determined by fair market rental value, to a party under common control that operates an excepted trade or business and/or unrelated parties. Under the look-through exception under paragraph (j)(2)(ii) of this section, X is eligible to make the election described in paragraph (b)(1) of this section with respect to the 60 percent of the building that is subleased to unrelated parties, determined by adding 40 percent (50 percent of the 80 percent leasehold interest) from Z's sublease to an unrelated party and 20 percent from Y's sublease to unrelated parties (40 + 20). X is not eligible to make the election described in paragraph (b)(1) of this section with respect to the 40 percent of the building subleased to Z, because Z is a related party that does not operate an excepted trade or business.

(v) *Example 5: Lessee's Trade or Business*—(A) *Facts.* X owns a building that X leases to W, a party under common control as defined in paragraph (j)(1) of this section. W operates the building as a widget manufacturing plant and does not sublease any portion of the building.

(B) *Analysis.* X is not eligible to make the election described in paragraph (b)(1) of this section because X leases the entire building to a party under common control. X is not eligible for the de minimis exception in paragraph (j)(2)(i) of this section because X is not leasing at least 90 percent of the real property to a party under common control that operates an excepted trade or business and/or unrelated parties. W's trade or business cannot be an electing real property trade or business. X is not eligible for the look-through exception under paragraph (j)(2)(ii) of this section because W is not subleasing any part of the building.

(k) *Applicability date.* This section applies to taxable years beginning on or after November 13, 2020. However, taxpayers and their related parties, within the meaning of sections 267(b) and 707(b)(1), may choose to apply the rules of this section to a taxable year beginning after December 31, 2017, so long as the taxpayers and their related parties consistently apply the rules of the section 163(j) regulations, and, if applicable, §§ 1.263A–9, 1.263A–15, 1.381(c)(20)–1, 1.382–1, 1.382–2, 1.382–5, 1.382–6, 1.382–7, 1.383–0, 1.383–1, 1.469–9, 1.469–11, 1.704–1, 1.882–5, 1.1362–3, 1.1368–1, 1.1377–1, 1.1502–13, 1.1502–21, 1.1502–36, 1.1502–79, 1.1502–91 through 1.1502–99 (to the extent they effectuate the rules of §§ 1.382–2, 1.382–5, 1.382–6, and 1.383–1), and 1.1504–4, to that taxable year.

§ 1.163(j)–10 Allocation of interest expense, interest income, and other items of expense and gross income to an excepted trade or business.

(a) *Overview*—(1) *In general*—(i) *Purposes.* Except as provided in § 1.163(j)–6(m) or § 1.163(j)–9(h), this section provides the exclusive rules for allocating tax items that are properly allocable to a trade or business between excepted trades or businesses and non-excepted trades or businesses for purposes of section 163(j). The amount of a taxpayer's interest expense that is properly allocable to excepted trades or businesses is not subject to the section 163(j) limitation. The amount of a taxpayer's other items of income, gain, deduction, or loss, including interest income, that is properly allocable to excepted trades or businesses is excluded from the calculation of the taxpayer's section 163(j) limitation. See section 163(j)(6) and (j)(8)(A)(i); see also § 1.163(j)–1(b)(1)(i)(H), (b)(1)(ii)(F), and (b)(3). The general method of allocation set forth in paragraph (c) of this section is based on the approach that money is fungible and that interest expense is attributable to all activities and property, regardless of any specific purpose for incurring an obligation on which interest is paid. In no event may the amount of interest expense allocated under this section exceed the amount of interest paid or accrued, or treated as paid or accrued, by the taxpayer within the taxable year.

(ii) *Application of section.* The amount of a taxpayer's tax items properly allocable to a trade or business, other than interest expense and interest income, that is properly allocable to excepted trades or businesses for purposes of section 163(j) is determined as set forth in paragraph (b) of this section. The amount of a taxpayer's interest expense and interest income that is properly allocable to excepted trades or businesses for purposes of section 163(j) generally is determined as set forth in paragraph (c) of this section, except as otherwise provided in paragraph (d) of this section. For purposes of this section, a taxpayer's activities are not treated as a separate trade or business to the extent those activities involve the provision of real property, goods, or services to a trade or business of the taxpayer (or, if the taxpayer is a member of a consolidated group, the consolidated group). For example, if a taxpayer engaged in a manufacturing trade or business has in-house legal personnel that provide legal services solely with respect to the taxpayer's manufacturing business, the taxpayer is not treated as also engaged in the trade or business of providing legal services. Similarly, if the taxpayer described in the previous sentence constructs or acquires real property solely for use by the taxpayer's manufacturing business, the taxpayer is not treated as also engaged in a real property trade or business.

(2) *Coordination with other rules*—(i) *In general.* The rules of this section apply after a taxpayer has determined whether any interest expense or interest income paid, received, or accrued is properly allocable to a trade or business. Similarly, the rules of this section apply to other tax items after a taxpayer has determined whether those items are properly allocable to a trade or business. For instance, a taxpayer must apply § 1.163–8T, if applicable, to determine which items of interest expense are investment interest under section 163(d) before applying the rules in paragraph (c) of this section to allocate interest expense between excepted and non-excepted trades or businesses. After determining whether its tax items are properly allocable to a trade or business, a taxpayer that is engaged in both excepted and non-excepted trades or businesses must apply the rules of this section to determine the amount of interest expense that is business interest expense subject to the section 163(j) limitation and to determine which items are included or excluded in computing its section 163(j) limitation.

(ii) *Treatment of investment interest, investment income, investment expenses, and certain other tax items of a partnership with a C corporation or tax-exempt corporation as a partner.* For rules governing the treatment of investment interest, investment income, investment expenses, and certain other separately stated tax items of a partnership with a C corporation or tax-exempt corporation as a partner, see §§ 1.163(j)–4(b)(3) and 1.163(j)–6(k).

(3) *Application of allocation rules to foreign corporations and foreign partnerships.* The rules of this section apply to foreign corporations and foreign partnerships.

(4) *Application of allocation rules to members of a consolidated group*—(i) *In general.* As provided in § 1.163(j)–4(d), the computations required by section 163(j) and the regulations in this part under section 163(j) of the Code generally are made for a consolidated group on a consolidated basis. In this regard, for purposes of applying the allocation rules of this section, all members of a consolidated group are treated as one corporation. Therefore, the rules of this section apply to the activities conducted by the group as if those activities were conducted by a single corporation. For example, the group (rather than a particular member) is treated as engaged in excepted or non-excepted trades or businesses. In the case of intercompany obligations, within the meaning of § 1.1502–13(g)(2)(ii), for purposes of allocating asset basis between excepted and non-excepted trades or businesses, the obligation of the member borrower is not considered an asset of the creditor member. Similarly, intercompany transactions, within the meaning of § 1.1502–13(b)(1)(i), are disregarded for purposes of this section, as are the resulting offsetting items, and property is allocated to a trade or business based on the activities of the group as if the members of the group were divisions of a single corporation. Further, stock of a group member that is owned by another member of the same group is not treated as an asset for purposes of this section, and the transfer of any amount of member stock to a non-member is treated by the group as a transfer of the member's assets proportionate to the amount of member stock transferred. Additionally, stock of a corporation that is not a group member is treated as owned by the group.

(ii) *Application of excepted business percentage to members of a consolidated group.* After a consolidated group has determined the percentage of the group's interest expense allocable to excepted trades or businesses for the taxable year (and thus not subject to the section 163(j) limitation), this exempt percentage is applied to the interest paid or accrued by each member during the taxable year to any lender that is not a group member. Therefore, except to the extent paragraph (d) of this section (providing rules for certain qualified nonrecourse indebtedness) applies, an identical percentage of the interest paid or accrued by each member of the group to any lender that is not a group member is treated as allocable to excepted trades or businesses, regardless of whether any particular member actually engaged in an excepted trade or business.

(iii) *Basis in assets transferred in an intercompany transaction.* For purposes of allocating interest expense and interest income under paragraph (c) of this section, the basis of property does not include any gain or loss realized with respect to the property by another member in an intercompany transaction, as defined in § 1.1502–13(b), whether or not the gain or loss is deferred.

(5) *Tax-exempt organizations.* For tax-exempt organizations, section 512 and the regulations in this part under section 512 of the Code determine the rules for allocating all income and expenses among multiple trades or businesses.

(6) *Application of allocation rules to disallowed disqualified interest.* A taxpayer may apply the allocation rules of this section to disallowed disqualified interest by either:

(i) Applying the allocation rules of this section to all of the taxpayer's disallowed disqualified interest in the taxable year(s) in which the disallowed disqualified interest was paid or accrued (the historical approach); or

(ii) Treating all of the taxpayer's disallowed disqualified interest as if it were paid or accrued in the taxpayer's first taxable year beginning after December 31, 2017 (the effective date approach).

(7) *Examples.* The following examples illustrate the principles of this paragraph (a).

(i) *Example 1: Items properly allocable to a trade or business*—(A) *Facts.* Individual T operates Business X, a non-excepted trade or business, as a sole proprietor. In Year 1, T pays or accrues $40x of interest expense and receives $100x of gross income with respect to Business X that is not eligible for a section 199A deduction. T borrows money to buy a car for personal use, and T pays or accrues $20x of interest expense with respect to the car loan. T also invests in corporate bonds, and, in Year 1, T receives $50x of interest income on those bonds.

(B) *Analysis.* Under paragraphs (a)(1) and (2) of this section, T must determine which items of income and expense, including items of interest income and interest expense, are properly allocable to a trade or business. T's $100x of gross income and T's $40x of interest expense with respect to Business X are properly allocable to a trade or business. However, the interest expense on T's car loan is personal interest within the meaning of section 163(h)(2) rather than interest properly allocable to a trade or business. Similarly, T's interest income from corporate bonds is not properly allocable to a trade or business because it is interest from investment activity. See section 163(d)(4)(B).

(ii) *Example 2: Intercompany transaction*—(A) *Facts.* S is a member of a consolidated group of which P is the common parent. P conducts an electing real property trade or business (Business X), and S conducts a non-excepted trade or business (Business Y). P leases Building V (which P owns) to S for use in Business Y.

(B) *Analysis.* Under paragraph (a)(4)(i) of this section, a consolidated group is treated as a single corporation for purposes of applying the allocation rules of this section, and the consolidated group (rather than a particular member of the group) is treated as engaged in excepted and non-excepted trades or businesses. Thus, intercompany transactions are disregarded for purposes of this section. As a result, the lease of Building V by P to S is disregarded. Moreover, because Building V is used in Business Y, basis in this asset is allocated to Business Y rather than Business X for purposes of these allocation rules, regardless of which member (P or S) owns the building.

(iii) *Example 3: Intercompany sale of natural gas*—(A) *Facts.* S is a member of a consolidated group of which P is the common parent. S drills for natural gas and is not an excepted regulated utility trade or business. S sells most of its natural gas production to P, which produces electricity at its natural gas-fired power plants, and S sells the rest of its natural gas production to third parties at market rates. P is an excepted regulated utility trade or business to the extent that it is engaged in a trade or business described in § 1.163(j)–1(b)(15)(i).

(B) *Analysis.* Intercompany transactions are disregarded for purposes of this section. As a result, the intercompany sales of natural gas by S to P are disregarded. Moreover, the assets of S and P are allocated between the excepted and non-excepted trades or businesses of the P group based on the assets used in each trade or business. Assets of S may be allocated to the P group's excepted trade or business to the extent those assets are used in the trade or business of the furnishing or sale of electrical energy. Likewise, assets of P may be allocated to the P group's non-excepted trade or business to the extent those assets are used in the trade or business of natural gas production.

(iv) *Example 4: Disallowed disqualified interest*—(A) *Facts.* S is a member of a consolidated group of which P is the common parent. P and S are the only members of an affiliated group under old section 163(j)(6)(C). S operates a farm equipment leasing business (Business X) that is not an excepted trade or business. P is engaged in an electing farming business (Business Y). Entering its first taxable year beginning after December 31, 2017, the P group has disallowed disqualified interest of $120x, all of which the P group paid or accrued in earlier taxable years in which it only operated Business X. The P group also incurs $100x of interest expense during its 2018 taxable year, of which $25x (25 percent of $100x) is business interest expense properly allocable to Business X and $75x (75 percent of $100x) is properly allocable to Business Y under paragraph (c) of this section.

(B) *Analysis.* Under paragraph (a)(6) of this section, the P group may allocate disallowed disqualified interest to Business X and Business Y by either applying the allocation rules of this section in the taxable years in which the disallowed disqualified interest was paid or accrued (the historical approach) or by treating such interest as though it were paid or accrued in the P group's first taxable year beginning after December 31, 2017 (the effective date approach). Accordingly, if the P group chooses to rely on the historical approach, it allocates all $120x of disallowed disqualified interest to Business X (a non-excepted trade or business), and all $120x of disallowed disqualified interest is subject to the section 163(j) limitation. If, instead, the P group chooses to rely on the effective date approach, it allocates its $120x of disallowed disqualified interest in the same proportion as its $100x of business interest expense that was paid or accrued in its 2018 taxable year. Of the $120x of disallowed disqualified interest, $30x (25 percent of $120x) is allocated to Business X and $90x (75 percent of $120x) is allocated to Business Y. The $90x of disallowed disqualified interest that is properly allocable to Business Y (an excepted trade or business) is not subject to the section 163(j) limitation.

(b) *Allocation of tax items other than interest expense and interest income*—(1) *In general.* Except as otherwise provided in § 1.163(j)–6(m) or § 1.163(j)–9(h), for purposes of calculating ATI, tax items other than interest expense and interest income are allocated to a particular trade or business in the manner described in this paragraph (b). It is not necessary to allocate items under this paragraph (b) for purposes of calculating ATI if all of the taxpayer's items subject to allocation under this paragraph (b) are allocable to excepted trades or businesses, or if all of those items are allocable to non-excepted trades or businesses.

(2) *Gross income other than dividends and interest income.* A taxpayer's gross income other than dividends and interest income is allocated to the trade or business that generated the gross income.

(3) *Dividends*—(i) *Look-through rule.* If a taxpayer receives a dividend, within the meaning of section 316, that is not investment income, within the meaning of section 163(d), and if the taxpayer satisfies the minimum ownership threshold in paragraph (c)(7) of this section, then, solely for purposes of allocating amounts received as a dividend during the taxable year to excepted or non-excepted trades or

businesses under this paragraph (b), the dividend income is treated as allocable to excepted or non-excepted trades or businesses based upon the relative amounts of the payor corporation's adjusted basis in the assets used in its trades or businesses, determined pursuant to paragraph (c) of this section. If at least 90 percent of the payor corporation's adjusted basis in its assets during the taxable year, determined pursuant to paragraph (c) of this section, is allocable to either excepted trades or businesses or to non-excepted trades or businesses, all of the taxpayer's dividend income from the payor corporation for the taxable year is treated as allocable to either excepted or non-excepted trades or businesses, respectively.

(ii) *Inapplicability of the look-through rule.* If a taxpayer receives a dividend that is not investment income, within the meaning of section 163(d), and if the taxpayer does not satisfy the minimum ownership threshold in paragraph (c)(7) of this section, then the taxpayer must treat the dividend as allocable to a non-excepted trade or business.

(4) *Gain or loss from the disposition of non-consolidated C corporation stock, partnership interests, or S corporation stock*—(i) *Non-consolidated C corporations.* (A) If a taxpayer recognizes gain or loss upon the disposition of stock in a non-consolidated C corporation that is not property held for investment, within the meaning of section 163(d)(5), and if the taxpayer looks through to the assets of the C corporation under paragraph (c)(5)(ii) of this section for the taxable year, then the taxpayer must allocate gain or loss from the disposition of stock to excepted or non-excepted trades or businesses based upon the relative amounts of the C corporation's adjusted basis in the assets used in its trades or businesses, determined pursuant to paragraph (c) of this section. If at least 90 percent of the C corporation's adjusted basis in its assets during the taxable year, determined pursuant to paragraph (c) of this section, is allocable to either excepted trades or businesses or to non-excepted trades or businesses, all of the taxpayer's gain or loss from the disposition is treated as allocable to either excepted or non-excepted trades or businesses, respectively.

(B) If a taxpayer recognizes gain or loss upon the disposition of stock in a non-consolidated C corporation that is not property held for investment, within the meaning of section 163(d)(5), and if the taxpayer does not look through to the assets of the C corporation under paragraph (c)(5)(ii) of this section for the taxable year, then the taxpayer must treat the gain or loss from the disposition of stock as allocable to a non-excepted trade or business.

(C) For rules governing the transfer of stock of a member of a consolidated group, see paragraph (a)(4)(i) of this section.

(ii) *Partnerships and S corporations.* (A) If a taxpayer recognizes gain or loss upon the disposition of interests in a partnership or stock in an S corporation that owns—

(*1*) Non-excepted assets and excepted assets;

(*2*) Investment assets; or

(*3*) Both;

(B) The taxpayer determines a proportionate share of the amount properly allocable to a non-excepted trade or business in accordance with the allocation rules set forth in paragraph (c)(5)(ii)(A) or (c)(5)(ii)(B)(*3*) of this section, as appropriate, and includes such proportionate share of gain or loss in the taxpayer's ATI. However, if at least 90 percent of the partnership's or S corporation's adjusted basis in its assets during the taxable year, determined pursuant to paragraph (c) of this section, is allocable to either excepted trades or businesses or to non-excepted trades or businesses, all of the taxpayer's gain or loss from the disposition is treated as allocable to either excepted or non-excepted trades or businesses, respectively. This rule also applies to tiered passthrough entities by looking through each passthrough entity tier (for example, an S corporation that is the partner of the highest-tier partnership would look through each lower-tier partnership), subject to paragraph (c)(5)(ii)(D) of this section. With respect to a partner that is a C corporation or tax-exempt corporation, a partnership's investment assets are taken into account and treated as non-excepted trade or business assets. For purposes of this paragraph, a passthrough entity means a partnership, S corporation, or any other entity (domestic or foreign) that is not a corporation if all items of income and deduction of the entity are included in the income of its owners or beneficiaries.

(5) *Expenses, losses, and other deductions*—(i) *Expenses, losses, and other deductions that are definitely related to a trade or business.* Expenses (other than interest expense), losses, and other deductions (collectively, *deductions* for purposes of this paragraph (b)(5)) that are definitely related to a trade or business are allocable to the trade or business to which they relate. A deduction is considered definitely related to a trade or business if the item giving rise to the deduction is incurred as a result of, or incident to, an activity of the trade or business or in connection with property used in the trade or business (see § 1.861–8(b)(2)). If a deduction is definitely related to one or more excepted trades or businesses and one or more non-excepted trades or businesses, the deduction is apportioned between the excepted and non-excepted trades or businesses based upon the relative amounts of the taxpayer's adjusted basis in the assets used in those trades or businesses, as determined under paragraph (c) of this section.

(ii) *Other deductions.* Deductions that are not described in paragraph (b)(5)(i) of this section are ratably apportioned based on the gross income of each trade or business.

(6) *Treatment of investment items and certain other items of a partnership with a C corporation partner.* Any investment income, investment expense, or other item that a partnership receives, pays, or accrues and that is treated as properly allocable to a trade or business of a C corporation partner under § 1.163(j)–4(b)(3)(i) is treated as properly allocable to a non-excepted trade or business of the C corporation partner, except that any item with respect to property or activities for which an election has been made by the partnership under § 1.163(j)–9(b) is treated as properly allocable to an excepted trade or business. See, for example, an election for activities described in § 1.163(j)–9(b)(2)(ii) or an election under § 1.163(j)–9(h).

(7) *Examples: Allocation of income and expense.* The following examples illustrate the principles of this paragraph (b):

(i) *Example 1: Allocation of income and expense between excepted and non-excepted trades or businesses*—(A) *Facts.* T conducts an electing real property trade or business (Business Y), which is an excepted trade or business. T also operates a lumber yard (Business Z), which is a non-excepted trade or business. In Year 1, T receives $100x of gross rental income from real property leasing activities. T also pays or accrues $60x of expenses in connection with its real property leasing activities and $20x of legal services performed on behalf of both Business Y and Business Z. T receives $60x of gross income from lumber yard customers and pays or accrues $50x of expenses related to the lumber yard business. For purposes of expense allocations under paragraphs (b) and (c) of this section, T has $240x of adjusted basis in its Business Y assets and $80x of adjusted basis in its Business Z assets.

(B) *Analysis.* Under paragraph (b)(2) of this section, for Year 1, $100x of rental income is allocated to Business Y, and $60x of income from lumber yard customers is allocated to Business Z. Under paragraph (b)(5)(i) of this section, $60x of expenses paid or accrued in connection with real property leasing activities are allocated to Business Y, and $50x of expenses related to the lumber yard are allocated to Business Z. The $20x of remaining expenses for legal services performed on behalf of both Business Y and Business Z are allocated according to the relative amounts of T's basis in the assets used in each business. The total amount of T's basis in the assets used in Businesses Y and Z is $320x, of which 75 percent ($240x/$320x) is used in Business Y and 25 percent ($80x/$320x) is used in Business Z. Accordingly, $15x of the expenses for legal services are allocated to Business Y and $5x are allocated to Business Z.

(ii) *Example 2: Allocation of partnership items from investment activity*—(A) *Facts.* U, a domestic C corporation, directly conducts an electing real property trade or business. U also has an interest in PRS, a partnership that holds real property for investment. PRS's investment in real property is not a trade or business under section 162 or a real property trade or business under section 469. During the taxable year, PRS sells some of its real property to third parties and allocates $80x of income to U from these sales. In addition, PRS incurs deductible expenses related to its investment in real property and allocates $9x of these deductible expenses to U.

(B) *Analysis.* Under paragraph (b)(6) of this section, any investment income or investment expense that a partnership receives, pays, or accrues and that is treated as properly allocable to a trade or business of a C corporation partner is treated as properly allocable to a non-excepted trade or business of the C corporation partner. Because PRS generates its income and expense from investment activity that is not a trade or business under section 162 or a real property trade or business under section 469, U's allocation of $80x of income and $9x of deductible expense from PRS is treated as properly allocable to a non-excepted trade or business.

(c) *Allocating interest expense and interest income that is properly allocable to a trade or business*—(1) *General rule*—(i) *In general.* Except as otherwise provided in this section, § 1.163(j)–6(m), or § 1.163(j)–9(h), the amount of a taxpayer's interest expense and interest income that is properly allocable to a trade or business is allocated to the taxpayer's excepted or non-excepted trades or businesses for purposes of section 163(j) based upon the relative amounts of the taxpayer's adjusted basis in the assets, as determined under paragraph (c)(5) of this section, used in its excepted or non-excepted trades or businesses. The taxpayer must determine the adjusted basis in its assets as of the close of each determination date, as defined in paragraph (c)(6) of this section, in the taxable year and average those amounts to determine the relative amounts of asset basis for its excepted and non-excepted trades or businesses for that year. It is not necessary to allocate interest expense or interest income under this paragraph (c) for purposes of determining a taxpayer's business interest expense and business interest income if all of the taxpayer's interest income and expense is allocable to excepted trades or businesses (in which case the taxpayer is not subject to the section 163(j) limitation) or if all of the taxpayer's interest income and expense is allocable to non-excepted trades or businesses.

(ii) *De minimis exception.* If at least 90 percent of the taxpayer's basis in its assets for the taxable year is allocable to either excepted or non-excepted trades or businesses pursuant to this paragraph (c), then all of the taxpayer's interest expense and interest income for that year that is properly allocable to a trade or business is treated as allocable to either excepted or non-excepted trades or businesses, respectively.

(2) *Example.* The following example illustrates the principles of paragraph (c)(1) of this section:

(i) *Facts.* T is a calendar-year C corporation engaged in an electing real property trade or business, the business of selling wine, and the business of selling hand-carved wooden furniture. In Year 1, T has $100x of interest expense that is deductible except for the potential application of section 163(j). Based upon determinations made on the determination dates in Year 1, T's average adjusted basis in the assets used in the electing real property trade or business (an excepted trade or business) in Year 1 is $800x, and T's total average adjusted basis in the assets used in the other two businesses (which are non-excepted trades or businesses) in Year 1 is $200x.

(ii) *Analysis.* $80x (($800x/($800x + $200x)) × $100x) of T's interest expense for Year 1 is allocable to T's electing real property trade or business and is not business interest expense subject to the section 163(j) limitation. The remaining $20x of T's interest expense is business interest expense for Year 1 that is subject to the section 163(j) limitation.

(3) *Asset used in more than one trade or business*—(i) *General rule.* If an asset is used in more than one trade or business during a determination period, as defined in paragraph (c)(6) of this section, the taxpayer's adjusted basis in the asset is allocated to each trade or business using the permissible methodology under this paragraph (c)(3) that most reasonably reflects the use of the asset in each trade or business during that determination period. An allocation methodology most reasonably reflects the use of the asset in each trade or business if it most properly reflects the proportionate benefit derived from the use of the asset in each trade or business. A taxpayer is not required to use the same allocation methodology for each type of asset used in a trade a business. Instead, a taxpayer may use different allocation methodologies for different types of assets used in a trade or business. If none of the permissible methodologies set forth in paragraph (c)(3)(ii) of this section reasonably reflects the use of the asset in each trade or business, the taxpayer's basis in the asset is not taken into account for purposes of this paragraph (c).

(ii) *Permissible methodologies for allocating asset basis between or among two or more trades or businesses.* Subject to the special rules in paragraphs (c)(3)(iii) and (c)(5) of this section, a taxpayer's basis in an asset used in two or more trades or businesses during a determination period may be allocated to those trades or businesses based upon—

(A) The relative amounts of gross income that an asset generates, has generated, or may reasonably be expected to generate, within the meaning of § 1.861–9T(g)(3), with respect to the trades or businesses;

(B) If the asset is land or an inherently permanent structure, the relative amounts of physical space used by the trades or businesses; or

(C) If the trades or businesses generate the same unit of output, the relative amounts of output of those trades or businesses (for example, if an asset is used in two trades or businesses, one of which is an excepted regulated utility trade or business, and the other of which is a non-excepted regulated utility trade or business, the taxpayer may allocate basis in the asset based upon the relative amounts of kilowatt-hours generated by each trade or business).

(iii) *Special rules*—(A) *Consistent allocation methodologies*—(*1*) *In general.* Except as otherwise provided in paragraph (c)(3)(iii)(A)(*2*) of this section, a taxpayer must maintain the same allocation methodology for a period of at least five taxable years.

(*2*) *Consent to change allocation methodology.* If a taxpayer has used the same allocation methodology for at least five taxable years, the taxpayers may change its method of allocation under paragraphs (c)(3)(i) and (ii) of this section without the consent of the Commissioner. If a taxpayer has used the same allocation methodology for less than five taxable years, and if the taxpayer determines that a different allocation methodology properly reflects the proportionate benefit derived from the use of assets in its trades or businesses, the taxpayer may change its method of allocation under paragraphs (c)(3)(i) and (ii) of this section only with the consent of the Commissioner. To obtain consent, a taxpayer must submit a request for a letter ruling under the applicable administrative procedures, and consent will be granted only in extraordinary circumstances.

(B) *De minimis exception.* If at least 90 percent of the taxpayer's basis in an asset would be allocated to either excepted trades or businesses or non-excepted trades or businesses during a determination period pursuant to this paragraph (c)(3), the taxpayer's entire basis in the asset for the determination period must be allocated to either excepted or non-excepted trades or businesses, respectively. This rule applies before the application of paragraph (c)(1)(ii) of this section.

(C) *Allocations of excepted regulated utility trades or businesses*—(*1*) *In general.* Except as provided in the de minimis rule in paragraph (c)(3)(iii)(C)(*3*) of this section, a taxpayer is engaged in an excepted regulated utility trade or business only to the extent that the taxpayer is engaged in an excepted regulated utility trade or business described in § 1.163(j)–1(b)(15)(i)(A), (B), or (C), and any remaining utility trade or business is a non-excepted trade or business. Thus, for example, electricity sold by a utility trade or business at rates not established or approved by an entity described in § 1.163(j)–1(b)(15)(i)(A)(*2*) and not subject to an election under § 1.163(j)–1(b)(15)(iii) must be treated as electricity sold by a non-excepted regulated utility trade or business. The taxpayer must allocate under this paragraph (c) the basis of assets used in the utility trade or business between its excepted and non-excepted trades or businesses.

(*2*) *Permissible method for allocating asset basis for utility trades or businesses.* In the case of a utility trade or business described in paragraph (c)(3)(iii)(C)(*1*) of this section, and except as provided in the de minimis rule in paragraph (c)(3)(iii)(C)(*3*) of this section, the method described in paragraph (c)(3)(ii)(C) of this section is the only permissible method under this paragraph (c)(3) for allocating the taxpayer's basis in assets used in both the excepted and non-excepted trades or businesses of selling or furnishing the items described in § 1.163(j)–1(b)(15)(i)(A)(*1*).

(*3*) *De minimis rule for excepted utility trades or businesses.* If a taxpayer is engaged in a utility trade or business described in paragraph (c)(3)(iii)(C)(*1*) of this section, and if at least 90 percent of the items described in § 1.163(j)–1(b)(15)(i)(A)(*1*) are furnished or sold by trades or businesses described in § 1.163(j)–1(b)(15)(i)(A), (B) or (C), the taxpayer's entire trade or business is an excepted regulated utility trade or business, and paragraph (c)(3)(iii)(C)(*2*) of this section does not apply. This rule applies before the application of paragraph (c)(3)(iii)(B) of this section.

(*4*) *Example.* The following example illustrates the principles of this paragraph (c)(3)(iii)(C):

(*i*) *Facts.* X, a C corporation, is engaged in the trade or business of generating electrical energy. During each determination period in the taxable year, 80 percent of the megawatt-hours generated in the electricity generation trade or business is sold at rates negotiated with the purchaser, and with respect to which X filed a schedule of rates with a public utility commission. The public utility commission has the authority to take action on the filed schedule of rates, but if no action is taken, the rules governing the public utility commission explicitly state that the public utility commission is deemed to have approved the rates. The public utility has taken no action with respect to the negotiated rate. The remaining 20 percent of the megawatt-hours is sold on the wholesale market at rates not established or subject to approval by a regulator described in § 1.163(j)–1(b)(15)(i)(A)(*2*). X has not made an election under § 1.163(j)–1(b)(15)(iii). None of the assets used in X's utility generation trade or business are used in any other trade or business.

(*ii*) *Analysis.* For purposes of section 163(j), under paragraph (c)(3)(iii)(C)(*1*) of this section, 80 percent of X's electricity generation business is an excepted regulated utility trade or business, because the rate for the sale of the electricity was subject to approval by a regulator described in § 1.163(j)–1(b)(15)(i)(A)(*2*). The remaining 20 percent of X's business is a non-excepted utility trade or business. Under paragraph (c)(3)(iii)(C)(*2*) of this section, X must allocate 80 percent of the basis of the assets used in its utility business to excepted trades or business and the remaining 20 percent of the basis in the assets to non-excepted trades or businesses.

(D) *Special allocation rule for real property trades or businesses subject to special anti-abuse rule*—(*1*) *In general.* In the case of a trade or business that leases real property subject to an arrangement described in § 1.163(j)–9(j)(1), including trades or businesses to which the look-through exception in § 1.163(j)–9(j)(2)(ii) applies, the taxpayer must allocate under this paragraph (c)(3) the basis of property used in both the excepted and non-excepted portions of its trade or business, as determined under § 1.163(j)–9(j)(3).

(*2*) *Allocation methodology for real property.* For purposes of this paragraph (c)(3)(iii)(D), a taxpayer must allocate the basis of real property leased under an arrangement described in § 1.163(j)–9(j)(1) or (j)(2)(i) between the excepted and non-excepted portions of the real property trade or business based on the relative fair market rental value of the real property that is attributable to the excepted and non-excepted portions of the trade or business, respectively.

(*3*) *Example.* The following example illustrates the principles of this paragraph (c)(3)(iii)(D):

(*i*) *Facts.* X and Y are domestic C corporations under common control within the meaning of section 267(b), but neither X nor Y are members of a consolidated group. The small business exemption in § 1.163(j)–2(d) does not apply to X or Y. X owns an office building and leases the entire building to Y. Y subleases 80 percent of the office building, measured by fair market rental value, to a related party. Y subleases the remaining 20 percent of the building to unrelated third parties. X also owns depreciable scaffolding equipment, which it uses to clean all of the building's windows as part of its leasing arrangement with Y.

(*ii*) *Analysis.* Under § 1.163(j)–9(j)(2)(ii), X is eligible to make an election for 20 percent of its business of leasing the office building to be an electing real property trade or business. Assuming X makes such an election, X must allocate the basis of assets used in both the excepted and non-excepted portions of its leasing trade or business under this paragraph (c). Under paragraph (c)(3)(iii)(D)(*2*) of this section, X must allocate the basis of the office building based on the relative fair market value attributable to the excepted and non-excepted portions of its leasing business. Therefore, X must allocate 20 percent of the basis of the building to the excepted portion of its leasing business, and it must allocate the remaining 80 percent of the building to the non-excepted portion of its leasing business. Under paragraph (c)(3)(iii)(D)(*2*) of this section, X may use one of the allocation methods described in paragraph (c)(3)(ii) of this section to allocate the basis of its scaffolding equipment between the excepted and non-excepted portions of its leasing trade or business.

(4) *Disallowed business interest expense carryforwards; floor plan financing interest expense.* Disallowed business interest expense carryforwards (which were treated as allocable to a non-excepted trade or business in a prior taxable year) are not re-allocated between non-excepted and excepted trades or businesses in a succeeding taxable year. Instead, the carryforwards continue to be treated as allocable to a non-excepted trade or business. Floor plan financing interest expense also is not subject to allocation between excepted and non-excepted trades or businesses (see § 1.163(j)–1(b)(19)) and is always treated as allocable to non-excepted trades or businesses.

(5) *Additional rules relating to basis*—(i) *Calculation of adjusted basis*—(A) *Non-depreciable property other than land.* Except as otherwise provided in paragraph (c)(5)(i)(E) of this section, for purposes of this section, the adjusted basis of an asset other than land with respect to which no deduction is allowable under section 167, former section 168, or section 197, as applicable, is the adjusted basis of the asset for determining gain or loss from the sale or other disposition of that asset as provided in § 1.1011–1. Self-created intangible assets are not taken into account for purposes of this paragraph (c).

(B) *Depreciable property other than inherently permanent structures.* For purposes of this section, the adjusted basis of any tangible asset with respect to which a deduction is allowable under section 167, other than inherently permanent structures, is determined by using the alternative depreciation system under section 168(g) before any application of the additional first-year depreciation deduction (for example, under section 168(k) or (m)), and the adjusted basis of any tangible asset with respect to which a deduction is allowable under former section 168, other than inherently permanent structures, is determined by using the taxpayer's method of computing depreciation for the asset under former section 168. The depreciation deduction with respect to the property described in this paragraph (c)(5)(i)(B) is allocated ratably to each day during the period in the taxable year to which the depreciation relates. A change to the alternative depreciation system should be determined in a manner similar to that in § 1.168(i)–4(d)(4) or (d)(5)(ii)(B), as applicable.

(C) *Special rule for land and inherently permanent structures.* Except as otherwise provided in paragraph (c)(5)(i)(E) of this section, for purposes of this section, the adjusted basis of any asset that is land, including nondepreciable improvements to land, or an inherently permanent structure is its unadjusted basis.

(D) *Depreciable or amortizable intangible property and depreciable income forecast method property.* For purposes of this section, the adjusted basis of any intangible asset with respect to which a deduction is allowable under section 167 or 197, as applicable, is determined in accordance with section 167 or 197, as applicable, and the adjusted basis of any asset described in section 167(g)(6) for which a deduction is allowable under section 167 is determined in accordance with section 167(g). The adjusted basis of any intangible asset under this paragraph (c)(5)(i)(D) is determined before any application of the additional first-year depreciation deduction. The depreciation or amortization deduction with respect to the property described in this paragraph (c)(5)(i)(D) is allocated ratably to each day during the period in the taxable year to which the depreciation or amortization relates.

(E) *Assets not yet used in a trade or business.* Assets that have been acquired or that are under development but that are not yet used in a trade or business are not taken into account for purposes of this paragraph (c). For example, construction works in progress (such as buildings, airplanes, or ships) are not taken into account for purposes of this paragraph (c). Similarly, land acquired by a taxpayer for construction of a building by the taxpayer to be used in a trade or business is not taken into account for purposes of under this paragraph (c) until the building is placed in service. This rule does not apply to interests in a partnership or stock in a corporation.

(F) *Trusts established to fund specific liabilities.* Trusts required to fund specific liabilities (for example, pension trusts, and nuclear decommissioning funds (including, but not limited to, those funds for which an election is made under section 468A)) are not taken into account for purposes of this paragraph (c).

(G) *Inherently permanent structure.* For purposes of this section, the term *inherently permanent structure* has the meaning provided in § 1.856–10(d)(2).

(ii) *Partnership interests; stock in non-consolidated C corporations*—(A) *Partnership interests*—(*1*) *Calculation of asset basis.* For purposes of this section, a partner's interest in a partnership is treated as an asset of the partner. For these purposes, the partner's adjusted basis in a partnership interest is reduced, but not below zero, by the partner's share of partnership liabilities, as determined under section 752, and is further reduced as provided in paragraph (c)(5)(ii)(A)(*2*)(*iii*) of this section. If a partner elects or is required to apply the rules in this paragraph (c)(5)(ii)(A) to look through to a partnership's basis in the partnership's assets, the partner's basis in the partnership interest is adjusted to the extent of the partner's share of any adjustments to the basis of the partnership's assets required pursuant to the rules in paragraph (c)(5)(i) of this section.

(*2*) *Allocation of asset basis*—(*i*) *In general.* For purposes of determining the extent to which a partner's adjusted basis in its partnership interest is allocable to an excepted or non-excepted trade or business, the partner may look through to such partner's share of the partnership's basis in the partnership's assets, taking into account any adjustments under sections 734(b) and 743(b), and adjusted to the extent required under paragraph (d)(4) of this section, except as otherwise provided in paragraph (c)(5)(ii)(D) of this section. For purposes of the preceding sentence, such partner's share of partnership assets is determined using a reasonable method taking into account special allocations under section 704(b). Notwithstanding paragraph (c)(7) of this section, if a partner's direct and indirect interest in a partnership is greater than or equal to 80 percent of the partnership's capital or profits, the partner must apply the rules in this paragraph (c)(5)(ii)(A)(*2*) to look through to the partnership's basis in the partnership's assets. If a partner elects or is required to apply the rules in this paragraph (c)(5)(ii)(A)(*2*) to look through to a partnership's basis in the partnership's assets, the partner allocates the basis of its partnership interest between excepted and non-excepted trades or businesses based on the ratio in which the partner's share of the partnership's adjusted tax basis in its trade or business assets is allocated between excepted and non-excepted trade or business assets.

(*ii*) *De minimis rule.* If, after applying paragraph (c)(5)(ii)(A)(*2*)(*iii*) of this section, at least 90 percent of a partner's share of a partnership's basis in its assets (including adjustments under sections 734(b) and 743(b)) is allocable to either excepted trades or businesses or non-excepted trades or businesses, without regard to assets not properly allocable to a trade or business, the partner's entire basis in its partnership interest is treated as allocable to either excepted or non-excepted trades or businesses, respectively. For purposes of the preceding sentence, such partner's share of partnership assets is determined using a reasonable method taking into account special allocations under section 704(b).

(*iii*) *Partnership assets not properly allocable to a trade or business.* For purposes of applying paragraphs (c)(5)(ii)(A)(*2*)(*i*) and (*ii*) of this section to a partner that is a C corporation or tax-exempt corporation, such partner's share of a partnership's assets that are not properly allocable to a trade or business is treated as properly allocable to a non-excepted trade or business of such partner. However, if the partnership made an election under § 1.163(j)–9(b) or § 1.163(j)–9(h) with respect to an asset or activity, the assets (or assets related to such activities) are treated as properly allocable to an excepted trade or business of such partner. See, for example, an election under § 1.163(j)–9(h) for an asset or an election under § 1.163(j)–9(b) with respect to activities described in § 1.163(j)–9(b)(2)(ii). For a partner other than a C corporation or tax-exempt corporation, a partnership's assets that are not properly allocable to a trade or business are treated as neither excepted nor non-excepted trade or business assets; instead, such partner's adjusted basis in its partnership interest is decreased by that partner's share of the excess of the partnership's basis in those assets over the partnership's debt that is traced to such assets in accordance with § 1.163–8T, and it is increased by that partner's share of the excess of the partnership's debt that is traced to such assets in accordance with § 1.163–8T over the partnership's basis in those assets. For purposes of the preceding sentence, the partnership's asset basis in property not allocable to a trade or business is adjusted pursuant to the rules in paragraph (c)(5)(i) of this section. For purposes of this paragraph (c)(5)(ii)(A)(*2*)(*iii*), such partner's share of a partnership's assets is determined under a reasonable method taking into account special allocations under section 704(b).

(*iv*) *Inapplicability of partnership look-through rule.* If a partner, other than a C corporation or a tax-exempt corporation, chooses not to look through to the partnership's basis in the partnership's assets under paragraph (c)(5)(ii)(A)(*2*)(*i*) of this section or is precluded by paragraph (c)(5)(ii)(D) of this section from applying such partnership look-through rule, the partner generally will treat its basis in the partnership interest as either an asset held for investment or a non-excepted trade or business asset as determined under section 163(d). If a partner that is a C corporation or a tax-exempt corporation chooses not to look through to the partnership's basis in the partnership's assets under paragraph (c)(5)(ii)(A)(*2*)(*i*) of this section or is precluded by paragraph (c)(5)(ii)(D) of this section from applying such partnership look-through rule, the taxpayer must treat its entire basis in the partnership interest as allocable to a non-excepted trade or business.

(B) *Stock in domestic non-consolidated corporations*—(*1*) *In general.* For purposes of this section, if a taxpayer owns stock in a domestic C corporation that is not a member of the taxpayer's consolidated group, or if the taxpayer owns stock in an S corporation, the stock is treated as an asset of the taxpayer.

(*2*) *Domestic non-consolidated C corporations*—(*i*) *Allocation of asset basis.* If a shareholder satisfies the minimum ownership threshold in paragraph (c)(7) of this section for stock in a domestic non-consolidated C corporation, and if dividends paid on such stock would not be included in the shareholder's investment income under section 163(d)(4)(B), then, for purposes of determining the extent to which the shareholder's basis in the stock is allocable to an excepted or non-excepted trade or business, the shareholder must look through to the corporation's basis in the corporation's assets, adjusted to the extent required under paragraph (d)(4) of this section, except as otherwise provided in paragraph (c)(5)(ii)(D) of this section. If a shareholder does not satisfy the minimum ownership threshold in paragraph (c)(7) of this section for stock in a domestic non-consolidated C corporation, but the shareholder's direct and indirect interest in such corporation is greater than or equal to 80 percent by value, and if dividends paid on such stock would not be included in the shareholder's investment income under section 163(d)(4)(B), then, for purposes of determining the extent to which the shareholder's basis in the stock is allocable to an excepted or non-excepted trade or business, the shareholder may look through to the corporation's basis in the corporation's assets, adjusted to the extent required under paragraph (d)(4) of this section, except as otherwise provided in paragraph (c)(5)(ii)(D) of this section. For purposes of the preceding sentence, indirect stock ownership is determined by applying the constructive ownership rules of section 318(a).

(*ii*) *De minimis rule.* If at least 90 percent of the domestic non-consolidated C corporation's basis in the corporation's assets is allocable to either excepted trades or businesses or non-excepted trades or businesses, the shareholder's entire interest in the corporation's stock is treated as allocable to either excepted or non-excepted trades or businesses, respectively.

(*iii*) *Inapplicability of corporate look-through rule.* If a shareholder other than a C corporation or a tax-exempt corporation is ineligible to look through or chooses not to look through to a corporation's basis in its assets under paragraph (c)(5)(ii)(B)(*2*)(*i*) of this section, the shareholder generally will treat its entire basis in the corporation's stock as an asset held for investment. If a shareholder that is a C corporation or a tax-exempt corporation is ineligible to look through or chooses not to look through to a corporation's basis in its assets under paragraph (c)(5)(ii)(B)(*2*)(*i*) of this section, the shareholder must treat its entire basis in the corporation's stock as allocable to a non-excepted trade or business.

(*iv*) *Use of inside basis for purposes of C corporation look-through rule.* This paragraph (c)(5)(ii)(B)(*2*)(*iv*) applies if a shareholder meets the requirements to look through the stock of a domestic non-consolidated C corporation under paragraph (c)(5)(ii)(B)(*2*)(*i*) of this section, determined without applying the constructive ownership rules of section 318(a). If this paragraph (c)(5)(ii)(B)(*2*)(*iv*) applies, then solely for purposes of allocating asset basis under paragraph (c)(5)(ii)(B)(*2*)(*i*) of this section, and except as otherwise provided in paragraph (c)(5)(ii)(D) of this section, the shareholder may look through to such shareholder's pro rata share of the C corporation's basis in its assets, taking into account the modifications in paragraph (c)(5)(i) of this section with respect to the C corporation's assets, and adjusted to the extent required under paragraph (d)(4) of this section (asset basis look-through approach). If a shareholder applies the asset basis look-through approach, it must do so for all domestic non-consolidated C corporations for which the shareholder is eligible to use this approach, and it must report its use of this approach on the information statement described in paragraph (c)(6)(iii) of this section. The shareholder also must continue to use the asset basis look-through approach in all future taxable years in which the shareholder is eligible to use this approach.

(*3*) *S corporations*—(*i*) *Calculation of asset basis.* For purposes of this section, a shareholder's share of stock in an S corporation is treated as an asset of the shareholder. Additionally, for these purposes, the shareholder's adjusted basis in a share of S corporation stock is adjusted to take into account the modifications in paragraph (c)(5)(i) of this section with respect to the assets of the S corporation (for example, a shareholder's adjusted basis in its S corporation stock is increased by the shareholder's share of depreciation with respect to an inherently permanent structure owned by the S corporation).

(*ii*) *Allocation of asset basis.* For purposes of determining the extent to which a shareholder's basis in its stock of an S corporation is allocable to an excepted or non-excepted trade or business, the shareholder may look through to such shareholder's share of the S corporation's basis in the S corporation's assets, allocated on a pro rata basis, adjusted to the extent required under paragraph (d)(4) of this section, except as otherwise provided in paragraph (c)(5)(ii)(D) of this section. Notwithstanding paragraph (c)(7) of this section, if a shareholder's direct and indirect interest in an S corporation is greater than or equal to 80 percent of the S corporation's stock by vote and value, the shareholder must apply the rules in this paragraph (c)(5)(ii)(B)(*3*) to look through to the S corporation's basis in the S corporation's assets. For these purposes, indirect stock ownership is determined by applying the constructive ownership rules of section 318(a).

(*iii*) *De minimis rule.* If at least 90 percent of a shareholder's share of an S corporation's basis in its assets is allocable to either excepted trades or businesses or non-excepted trades or businesses, the shareholder's entire basis in its S corporation stock is treated as allocable to either excepted or non-excepted trades or businesses, respectively.

(*iv*) *Inapplicability of S corporation look-through rule.* If a shareholder chooses not to look through to the S corporation's basis in the S corporation's assets under paragraph (c)(5)(ii)(B)(*3*)(*ii*) of this section or is precluded by paragraph (c)(5)(ii)(D) of this section from applying such S corporation look-through rule, the shareholder will treat its basis in the S corporation stock as either an asset held for investment or a non-excepted trade or business asset as determined under section 163(d).

(C) *Stock in relevant foreign corporations*—(*1*) *In general.* The rules applicable to domestic non-consolidated C corporations in paragraph (c)(5)(ii)(B) of this section also apply to relevant foreign corporations (as defined in § 1.163(j)–1(b)(33)).

(*2*) *Special rule for CFC utilities.* Solely for purposes of applying the rules in paragraph (c)(5)(ii)(B) of this section, a utility trade or business conducted by an applicable CFC is treated as an excepted regulated utility trade or business, but only to the extent that the applicable CFC sells or furnishes the items described in § 1.163(j)–1(b)(15)(i)(A)(*1*) pursuant to rates established or approved by an entity described in § 1.163(j)–1(b)(15)(i)(A)(*2*), a foreign government, a public service or public utility commission or other similar body of any foreign government, or the governing or ratemaking body of a foreign electric cooperative. For purposes of this paragraph (c)(5)(ii)(C)(*2*), the term *foreign government* means any foreign government, any political subdivision of a foreign government, or any wholly owned agency or instrumentality of any one of the foregoing within the meaning of § 1.1471–6(b).

(D) *Inapplicability of look-through rule to partnerships or non-consolidated C corporations to which the small business exemption applies.* A taxpayer may not apply the look-through rules in paragraphs (b)(3) and (c)(5)(ii)(A), (B), and (C) of this section to a partnership, S corporation, or non-consolidated C corporation that is eligible for the small business exemption under section 163(j)(3) and § 1.163(j)–2(d)(1), unless the partnership, S corporation, or non-consolidated C corporation elects under § 1.163(j)–9 for a trade or business to be an electing real property trade or business or an electing farming business.

(E) *Tiered entities.* If a taxpayer applies the look-through rules of this paragraph (c)(5)(ii), the taxpayer must do so for all lower-tier entities with respect to which the taxpayer satisfies, directly or indirectly, the minimum ownership threshold in paragraph (c)(7) of this section, subject to the limitation in paragraph (c)(5)(ii)(D) of this section, beginning with the lowest-tier entity.

(iii) *Cash and cash equivalents and customer receivables.* Except as otherwise provided in the last sentence of this paragraph (c)(5)(iii), a taxpayer's basis in its cash and cash equivalents and customer receivables is not taken into account for purposes of this paragraph (c). This rule also applies to a lower-tier entity if a taxpayer looks through to the assets of that entity under paragraph (c)(5)(ii) of this section. For purposes of this paragraph (c)(5)(iii), the term *cash and cash equivalents* includes cash, foreign currency, commercial paper, any interest in an investment company registered under the Investment Company Act of 1940 (1940 Act) and regulated as a money market fund under 17 CFR 270.2a–7 (Rule 2a–7 under the 1940 Act), any obligation of a government, and any derivative that is substantially secured by an obligation of a government, or any similar asset. For purposes of this paragraph (c)(5)(iii), a *derivative* is a derivative described in section 59A(h)(4)(A), without regard to section 59A(h)(4)(C). For purposes of this paragraph (c)(5)(iii), the term *government* means the United States or any agency or instrumentality of the United States; a State, a territory, a possession of the United States, the District of Columbia, or any political subdivision thereof within the meaning of section 103 and § 1.103–1; or any foreign government, any political subdivision of a foreign government, or any wholly owned agency or instrumentality of any one of the foregoing within the meaning of § 1.1471–6(b). This paragraph (c)(5)(iii) does not apply to an entity that qualifies as a financial services entity as described in § 1.904–4(e)(3).

(iv) *Deemed asset sale.* Solely for purposes of determining the amount of basis allocable to excepted and non-excepted trades or businesses under this section, an election under section 336, 338, or 754, as applicable, is deemed to have been made for any acquisition of corporate stock or partnership interests with respect to which the taxpayer demonstrates, in the information statement required by paragraph (c)(6)(iii)(B) of this section, that the acquisition qualified for such an election and that, immediately before the acquisition, the acquired entity had a regulatory liability for deferred taxes recorded on its books with respect to property predominantly used in an excepted regulated utility trade or business. Any additional basis taken into account under this rule is reduced ratably over a 15-year period beginning with the month of the acquisition and is not subject to the anti-abuse rule in paragraph (c)(8) of this section.

(v) *Other adjustments.* The Commissioner may make appropriate adjustments to prevent a taxpayer from intentionally and artificially increasing its basis in assets attributable to an excepted trade or business.

(6) *Determination dates; determination periods; reporting requirements*—(i) *Determination dates and determination periods*—(A) *Quarterly determination periods.* For purposes of this section, and except as otherwise provided in paragraph (c)(6)(i)(B) of this section, the term *determination date* means the last day of each quarter of the taxpayer's taxable year (and the last day of the taxpayer's taxable year, if the taxpayer has a short taxable year), and the term *determination period* means the period beginning the day after one determination date and ending on the next determination date.

(B) *Annual determination periods.* If a taxpayer satisfies the requirements of the last sentence of this paragraph (c)(6)(i)(B), the taxpayer may allocate asset basis for a taxable year based on the average of adjusted asset basis at the beginning of the year and the end of the year (annual determination method). For these purposes, the term *determination date* means the last day of the taxpayer's taxable year, and the term *determination period* has the same meaning as provided in paragraph (c)(6)(i)(A) of this section. A taxpayer may use the annual determination method for a taxable year only if the taxpayer demonstrates that its total adjusted basis (as determined under paragraph (c)(5) of this section) at the end of the year in its assets used in its excepted trades or businesses, as a percentage of the taxpayer's total adjusted basis at the end of such year in all of its assets used in a trade or business, does not differ by more than 20 percent from such percentage at the beginning of the year.

(ii) *Application of look-through rules.* If a taxpayer that applies the look-through rules of paragraph (c)(5)(ii) of this section has a different taxable year than the partnership or non-consolidated C corporation to which the taxpayer is applying those rules, then, for purposes of this paragraph (c)(6), the taxpayer must use the most recent asset basis figures from the partnership or non-consolidated C corporation. For example, assume that PS1 is a partnership with a May 31 taxable year, and that C (a calendar-year C corporation that is ineligible to use the annual determination method for the taxable year) is a partner in PS1. PS1's determination dates are February 28, May 31, August 31, and November 30. In turn, C's determination dates are March 31, June 30, September 30, and December 31. If C looks through to PS1's basis in its assets under paragraph (c)(5)(ii) of this section, then, for purposes of determining the amount of C's asset basis that is attributable to its excepted and non-excepted businesses on March 31, C must use PS1's asset basis calculations for February 28.

(iii) *Reporting requirements*—(A) *Books and records.* A taxpayer must maintain books of account and other records and data as necessary to substantiate the taxpayer's use of an asset in an excepted trade or business and to substantiate any adjustments to asset basis for purposes of applying this paragraph (c). One indication that a particular asset is used in a particular trade or business is if the taxpayer maintains separate books and records for all of its excepted and non-excepted trades or businesses and can show the asset in the books and records of a particular excepted or non-excepted trade or business. For rules governing record retention, see § 1.6001–1.

(B) *Information statement.* Except as otherwise provided in publications, forms, instructions, or other guidance, each taxpayer that is making an allocation under this paragraph (c), including any taxpayer that satisfies the de minimis rule in paragraph (c)(1)(ii) of this section, must prepare a statement titled ''Section 163(j) Asset Basis Calculations'' containing the information described in paragraphs (c)(6)(iii)(B)(*1*) through (*7*) of this section and must attach the statement to its timely filed Federal income tax return for the taxable year:

(*1*) The taxpayer's adjusted basis in the assets used in its excepted and non-excepted businesses, determined as set forth in this section, including detailed information for the different groups of assets identified in paragraphs (c)(5)(i) and (ii) and (d) of this section;

(*2*) The determination dates on which asset basis was measured during the taxable year;

(*3*) The names and taxpayer identification numbers (TINs) of all entities for which basis information is being provided, including partnerships and corporations if the taxpayer that owns an interest in a partnership or corporation looks through to the partnership's or corporation's basis in the partnership's or corporation's assets under paragraph (c)(5)(ii) of this section. If the taxpayer is a member of a consolidated group, the name and TIN of the agent for the group, as defined in § 1.1502–77, must be provided, but the taxpayer need not provide the names and TINs of all other consolidated group members;

(*4*) Asset basis information for corporations or partnerships if the taxpayer looks through to the corporation's or partnership's basis in the corporation's or partnership's assets under paragraph (c)(5)(ii) of this section;

(*5*) A summary of the method or methods used to determine asset basis in property used in both excepted and non-excepted businesses, as well as information regarding any deemed sale under paragraph (c)(5)(iv) of this section;

(*6*) Whether the taxpayer used the historical approach or the effective date approach for all of its disallowed disqualified interest; and

(*7*) If the taxpayer changed its methodology for allocating asset basis between or among two or more trades or businesses under paragraph (c)(3)(ii) of this section, a statement that the taxpayer has changed the allocation methodology and a description of the new methodology or, if the taxpayer is required to request consent for the allocation methodology change under paragraph (c)(3)(iii)(A)(*2*) of this section, a statement that the request has been or will be filed and a description of the methodology change.

(iv) *Failure to file statement.* If a taxpayer fails to file the statement described in paragraph (c)(6)(iii) of this section or files a statement that does not comply with the requirements of paragraph (c)(6)(iii) of this section, the Commissioner may treat the taxpayer as if all of its interest expense is properly allocable to a non-excepted trade or business, unless the taxpayer shows that there was reasonable cause for failing to comply with, and the taxpayer acted in good faith with respect to, the requirements of paragraph (c)(6)(iii) of this section, taking into account all pertinent facts and circumstances.

(7) *Ownership threshold for look-through rules*—(i) *Corporations*—(A) *Asset basis.* For purposes of this section, a shareholder must look through to the assets of a domestic non-consolidated C corporation or a relevant foreign corporation under paragraph (c)(5)(ii) of this section if the shareholder's direct and indirect interest in the corporation satisfies the ownership requirements of section 1504(a)(2). For purposes of this paragraph (c)(7)(i)(A), indirect stock ownership is determined by applying the constructive ownership rules of section 318(a). A shareholder may look through to the assets of an S corporation under paragraph (c)(5)(ii) of this section for purposes of allocating the shareholder's basis in its stock in the S corporation between excepted and non-excepted trades or businesses regardless of the shareholder's direct and indirect interest in the S corporation.

(B) *Dividends.* A shareholder must look through to the activities of a domestic non-consolidated C corporation or a relevant foreign corporation under paragraph (b)(3) of this section if the shareholder's direct interest in the corporation satisfies the ownership requirements of section 1504(a)(2). A shareholder may look through to the activities of a domestic non-consolidated C corporation or an applicable CFC under paragraph (b)(3) of this section if the shareholder's direct interest in the corporation is greater than or equal to 80 percent by value. A shareholder may look through to the activities of an S corporation under paragraph (b)(3) of this section regardless of the shareholder's direct interest in the S corporation.

(ii) *Partnerships.* A partner may look through to the assets of a partnership under paragraph (c)(5)(ii) of this section for purposes of allocating the partner's basis in its partnership interest between excepted and non-excepted trades or businesses regardless of the partner's direct and indirect interest in the partnership.

(iii) *Inapplicability of look-through rule.* For circumstances in which a taxpayer that satisfies the ownership threshold in this paragraph (c)(7) may not apply the look-through rules in paragraphs (b)(3) and (c)(5)(ii) of this section, see paragraph (c)(5)(ii)(D) of this section.

(8) *Anti-abuse rule.* If a principal purpose for the acquisition, disposition, or change in use of an asset was to artificially shift the amount of basis allocable to excepted or non-excepted trades or businesses on a determination date, the additional basis or change in use will not be taken into account for purposes of this section. For example, if an asset is used in a non-excepted trade or business for most of the taxable year, and if the taxpayer begins using the asset in an excepted trade or business towards the end of the year with a principal purpose of shifting the amount of basis in the asset that is allocable to the excepted trade or business, the change in use is disregarded for purposes of this section. A purpose may be a principal purpose even though it is outweighed by other purposes (taken together or separately). In determining whether a taxpayer has a principal purpose described in this paragraph (c)(8), factors to be considered include, for example, the following: The business purpose for the acquisition, disposition, or change in use; the length of time the asset was used in a trade or business; whether the asset was acquired from a related person; and whether the taxpayer's aggregate basis in its assets increased or decreased temporarily on or around a determination date. A principal purpose is presumed to be present in any case in which the acquisition, disposition, or change in use lacks a substantial business purpose and increases the taxpayer's basis in assets used in its excepted trades or businesses by more than 10 percent during the taxable year.

(d) *Direct allocations*—(1) *In general.* It is not necessary to allocate interest expense under this paragraph (d) if all of the taxpayer's interest expense is allocable to excepted trades or businesses or if all of the taxpayer's interest expense is allocable to non-excepted trades or businesses.

(2) *Qualified nonrecourse indebtedness.* For purposes of this section, a taxpayer with qualified nonrecourse indebtedness must directly allocate interest expense from the indebtedness to the taxpayer's assets in the manner and to the extent provided in § 1.861–10T(b). For purposes of this paragraph (d)(2), the term *qualified nonrecourse indebtedness* has the meaning provided in § 1.861–10T(b), except that the term *cash flow from the property* (within the meaning of § 1.861–10T(b)(3)(i)) includes revenue derived from the sale or lease of inventory or similar property with respect to an excepted regulated utility trade or business or a non-excepted regulated utility trade or business.

(3) *Assets used in more than one trade or business.* If an asset is used in more than one trade or business, the taxpayer must apply the rules in paragraph (c)(3) of this section to determine the extent to which interest that is directly allocated under this paragraph (d) is allocable to excepted or non-excepted trades or businesses.

(4) *Adjustments to basis of assets to account for direct allocations.* In determining the amount of a taxpayer's basis in the assets used in its excepted and non-excepted trades or businesses for purposes of paragraph (c) of this section, adjustments must be made to reflect direct allocations under this paragraph (d). These adjustments consist of reductions in the taxpayer's basis in its assets for purposes of paragraph (c) of this section to reflect assets to which interest expense is directly allocated under this paragraph (d). The amount of the taxpayer's basis in these assets must be reduced, but not below zero, by the amount of qualified nonrecourse indebtedness secured by these assets. These adjustments must be made before the taxpayer averages the adjusted basis in its assets as determined on each determination date during the taxable year.

(5) *Example: Direct allocation of interest expense*—(i) *Facts.* T conducts an electing real property trade or business (Business X) and operates a retail store that is a non-excepted trade or business (Business Y). In Year 1, T issues Note A to a third party in exchange for $1,000x for the purpose of acquiring Building B. Note A is qualified nonrecourse indebtedness (within the meaning of § 1.861–10T(b)) secured by Building B. T then uses those funds to acquire Building B for $1,200x, and T uses Building B in Business X. During Year 1, T pays $500x of interest, of which $100x is interest payments on Note A. For Year 1, T's basis in its assets used in Business X (as determined under paragraph (c) of this section) is $3,600x (excluding cash and cash equivalents), and T's basis in its assets used in Business Y (as determined under paragraph (c) of this section) is $800x (excluding cash and cash equivalents). Each of Business X and Business Y also has $100x of cash and cash equivalents.

(ii) *Analysis.* Because Note A is qualified nonrecourse indebtedness that is secured by Building B, in allocating interest expense between Businesses X and Y, T first must directly allocate the $100x of interest expense it paid with respect to Note A to Business X in accordance with paragraph (d)(2) of this section. Thereafter, T must allocate the remaining $400x of interest expense between Businesses X and Y under paragraph (c) of this section. After excluding $1,000x of T's basis in Building B to reflect the amount of Note A (see paragraph (d)(4) of this section), and without regard to T's $200x of cash and cash equivalents (see paragraph (c)(5)(iii) of this section), T's basis in its assets used in Businesses X and Y is $2,600x and $800x (76.5 percent and 23.5 percent), respectively. Thus, $306x of the remaining $400x of interest expense would be allocated to Business X, and $94x would be allocated to Business Y.

(e) *Examples.* The examples in this paragraph (e) illustrate the principles of this section. For purposes of these examples, no taxpayer is eligible for the small business exemption under section 163(j)(3) and § 1.163(j)–2(d), no taxpayer has floor plan financing interest expense, and no taxpayer has qualified nonrecourse indebtedness within the meaning of § 1.861–10T(b).

(1) *Example 1: Interest allocation within a consolidated group*—(i) *Facts.* S is a member of a consolidated group of which P is the common parent. P conducts an electing real property trade or business (Business X), and S conducts a non-excepted trade or business (Business Y). In Year 1, P pays or accrues (without regard to section 163(j)) $35x of interest expense and

receives $10x of interest income, and S pays or accrues (without regard to section 163(j)) $115x of interest expense and receives $5x of interest income (for a total of $150x of interest expense and $15x of interest income). For purposes of this example, assume that, pursuant to paragraph (c) of this section, $30x of the P group's interest expense and $3x of the P group's interest income is allocable to Business X, and the remaining $120x of interest expense and $12x of interest income is allocable to Business Y.

(ii) *Analysis.* Under paragraph (a)(4) of this section, 20 percent of the P group's Year 1 interest expense ($30x/$150x) and interest income ($3x/$15x) is allocable to an excepted trade or business. Thus, $7x ($35x × 20 percent) of P's interest expense and $2x ($10x × 20 percent) of P's interest income is allocable to an excepted trade or business. The remaining $28x of P's interest expense is business interest expense subject to the section 163(j) limitation, and the remaining $8x of P's interest income is business interest income that increases the group's section 163(j) limitation. In turn, $23x ($115x × 20 percent) of S's interest expense and $1x ($5x × 20 percent) of S's interest income is allocable to an excepted trade or business. The remaining $92x of S's interest expense is business interest expense subject to the section 163(j) limitation, and the remaining $4x of S's interest income is business interest income that increases the group's section 163(j) limitation.

(2) *Example 2: Interest allocation within a consolidated group with assets used in more than one trade or business*—(i) *Facts.* S is a member of a consolidated group of which P is the common parent. P conducts an electing real property trade or business (Business X), and S conducts a non-excepted trade or business (Business Y). In Year 1, P pays or accrues (without regard to section 163(j)) $50x of interest expense, and S pays or accrues $100x of interest expense (without regard to section 163(j)). P leases 40 percent of space in Building V (which P owns) to S for use in Business Y, and P leases the remaining 60 percent of space in Building V to third parties. For purposes of allocating interest expense under paragraph (c) of this section, the P group's basis in its assets (excluding Building V) used in Businesses X and Y is $180x and $620x, respectively. The P group's basis in Building V for purposes of allocating interest expense under paragraph (c) of this section is $200x.

(ii) *Analysis.* Under paragraph (c)(3)(ii) of this section, the P group's basis in Building V ($200x) is allocated to excepted and non-excepted trades or businesses in accordance with the use of space by Business Y (40 percent) and Business X (the remainder, or 60 percent). Accordingly, $120x of the basis in Building V is allocated to excepted trades or businesses (60 percent × $200x), and $80x is allocated to non-excepted trades or businesses (40 percent × $200x). After allocating the basis in Building V, the P group's total basis in the assets used in excepted and non-excepted trades or businesses is $300x and $700x, respectively. Under paragraphs (a)(4) and (c) of this section, 30 percent ($300x/$1,000x) of the P group's Year 1 interest expense is properly allocable to an excepted trade or business. Thus, $15x ($50x × 30 percent) of P's interest expense is properly allocable to an excepted trade or business, and the remaining $35x of P's interest expense is business interest expense subject to the section 163(j) limitation. In turn, $30x ($100x × 30 percent) of S's interest expense is properly allocable to an excepted trade or business, and the remaining $70x of S's interest expense is business interest expense subject to the section 163(j) limitation.

(3) *Example 3: Application of look-through rules*—(i) *Facts.* (A) Each of Corp A, Corp B, Corp C, and Corp D is a domestic calendar-year corporation that is not a member of a consolidated group. Corp A owns 100 percent of the stock of Corp C; the basis of Corp A's stock in Corp C is $500x. Corp C owns 10 percent of the interests in PS1 (a domestic partnership), and Corp B owns the remaining 90 percent. Corp C's basis in its PS1 interests is $25x; Corp B's basis in its PS1 interests is $225x. PS1 owns 100 percent of the stock of Corp D; the basis of PS1's stock in Corp D is $1,000x. Corp A and Corp B are owned by unrelated, non-overlapping shareholders.

(B) In 2021, Corp C was engaged solely in a non-excepted trade or business. That same year, PS1's only activity was holding Corp D stock. In turn, Corp D was engaged in both an electing farming business and a non-excepted trade or business. Under the allocation rules in paragraph (c) of this section, 50 percent of Corp D's asset basis in 2021 was allocable to the electing farming business, and the remaining 50 percent was allocable to the non-excepted trade or business.

(C) Corp A and Corp B each paid or accrued (without regard to section 163(j)) $150x of interest expense allocable to a trade or business. Corp A's trade or business was an excepted trade or business, and Corp B's trade or business was a non-excepted trade or business. Corp A's basis in the assets used in its trade or business was $100x, and Corp B's basis in the assets used in its trade or business was $112.5x.

(ii) *Analysis.* (A) As provided in paragraph (c)(5)(ii)(E) of this section, if a taxpayer applies the look-through rules of paragraph (c)(5)(ii) of this section, the taxpayer must begin with the lowest-tier entity to which it is eligible to apply the look-through rules. Corp A directly owns 100 percent of the stock of Corp C; thus, Corp A satisfies the 80 percent minimum ownership threshold with respect to Corp C. Corp A also owns 10 percent of the interests in PS1. There is no minimum ownership threshold for partnerships; thus, Corp A may apply the look-through rules to PS1. However, Corp A does not directly or indirectly own at least 80 percent of the stock of Corp D; thus, Corp A cannot look through its indirect interest in Corp D. In turn, Corp B directly owns 90 percent of the interests in PS1, and Corp B indirectly owns at least 80 percent of the stock of Corp D. Thus, Corp B must apply the look-through rules to PS1 and Corp D.

(B) From Corp A's perspective, PS1 is not engaged in a trade or business for purposes of section 163(j); instead, PS1 is merely holding its Corp D stock as an investment. Under paragraph (c)(5)(ii)(A)(*2*) of this section, if a partnership is not engaged in a trade or business, then its C corporation partner must treat its entire basis in the partnership interest as allocable to a non-excepted trade or business. Thus, for purposes of Corp A's application of the look-through rules, Corp C's entire basis in its PS1 interest ($25x) is allocable to a non-excepted trade or business. Corp C's basis in its other assets also is allocable to a non-excepted trade or business (the only trade or business in which Corp C is engaged). Thus, under paragraph (c) of this section, Corp A's $500x basis in its Corp C stock is allocable entirely to a non-excepted trade or business. Corp A's $100x basis in its other business assets is allocable to an excepted trade or business. Thus, 5⁄6 (or $125x) of Corp A's $150x of interest expense is properly allocable to a non-excepted trade or business and is business interest expense subject to the section 163(j) limitation, and the remaining $25x of Corp A's $150x of interest expense is allocable to an excepted trade or business and is not subject to the section 163(j) limitation.

(C) From Corp B's perspective, PS1 must look through its stock in Corp D to determine the extent to which PS1's basis in the stock is allocable to an excepted or non-excepted trade or business. Half of Corp D's basis in its assets is allocable to an excepted trade or business, and the other half is allocable to a non-excepted trade or business. Thus, from Corp B's perspective, $500x of PS1's basis in its Corp D stock (PS1's only asset) is allocable to an excepted trade or business, and the other half is allocable to a non-excepted trade or business. Corp B's basis in its PS1 interests is $225x. Applying the look-through rules to Corp B's PS1 interests, $112.5x of Corp B's basis in its PS1 interests is allocable to an excepted trade or business, and $112.5x of Corp B's basis in its PS1 interests is allocable to a non-excepted trade or business. Since Corp B's basis in the assets used in its non-excepted trade or business also was $112.5x, two-thirds of Corp B's interest expense ($100x) is properly allocable to a non-excepted trade or business and is business interest expense subject to the section 163(j) limitation, and one-third of Corp B's interest expense ($50x) is allocable to an excepted trade or business and is not subject to the section 163(j) limitation.

(4) *Example 4: Excepted and non-excepted trades or businesses in a consolidated group*—(i) *Facts.* P is the common parent of a consolidated group of which A and B are the only other members. A conducts an electing real property trade or business (Business X), and B conducts a non-excepted trade or business (Business Y). In Year 1, A pays or accrues (without regard to section 163(j)) $50x of interest expense and earns $70x of gross income in the conduct of Business X, and B pays or accrues (without regard to section 163(j)) $100x of interest expense and earns $150x of gross income in the conduct of Business Y. B owns Building V, which it uses in Business Y. For purposes of allocating the P group's Year 1 business interest expense between excepted and non-excepted trades or businesses under paragraph (c) of this section, the P group's basis in its assets (other than Building V) used in Businesses X and Y is $180x and $620x, respectively, and the P group's basis in Building V is $200x. At the end of Year 1, B sells Building V to a third party and realizes a gain of $60x in addition to the $150x of gross income B earned that year from the conduct of Business Y.

(ii) *Analysis.* (A) Under paragraphs (a)(4) and (c) of this section, the P group's basis in its assets used in its trades or businesses is allocated between the P group's excepted trade or business (Business X) and its non-excepted trade or business (Business Y) as though these trades or businesses were conducted by a single corporation. Under paragraph (c) of this section, the P group's basis in its assets used in Businesses X and Y is $180x and $820x, respectively. Accordingly, 18 percent ($180x/$1,000x) of the P group's total interest expense ($150x) is properly allocable to an excepted trade or business ($27x), and the remaining 82 percent of the P group's total interest expense is business interest expense properly allocable to a non-excepted trade or business ($123x).

(B) To determine the P group's section 163(j) limitation, paragraph (a) of this section requires that certain items of income and deduction be allocated to the excepted and non-excepted trades or businesses of the P group as though these trades or businesses were conducted by a single corporation. In Year 1, the P group's excepted trade or business (Business X) has gross income of $70x, and the P group's non-excepted trade or business (Business Y) has gross income of $150x. Because Building V was used exclusively in Business Y, the $60x of gain from the sale of Building V in Year 1 is attributed to Business Y under paragraph (b)(2) of this section. The P group's section 163(j) limitation is $63x (30 percent × $210x), which allows the P group to deduct $63x of its $123x of business interest expense allocated to the P group's non-excepted trades or businesses. The group's $27x of interest expense that is allocable to excepted trades or businesses may be deducted without limitation under section 163(j).

(iii) *Intercompany transaction.* The facts are the same as in *Example 4* in paragraph (e)(4)(i) of this section, except that A owns Building V and leases it to B in Year 1 for $20x for use in Business Y, and A sells Building V to a third party for a $60 gain at the end of Year 1. Under paragraphs (a)(4) and (c) of this section, all members of the P group are treated as a single corporation. As a result, the P group's basis in its assets used in its trades or businesses is allocated between the P group's excepted trade or business (Business X) and its non-excepted trade or business (Business Y) as though these trades or businesses were conducted by a single corporation. A lease between two divisions of a single corporation would produce no rental income or expense. Thus, the $20x of rent paid by B to A does not affect the P group's ATI. Moreover, under paragraph (c) of this section, Building V is an asset used in the P group's non-excepted trade or business (Business Y). Accordingly, although A owns Building V, the basis in Building V is added to the P group's basis in assets used in Business Y for purposes of allocating interest expense under paragraph (c) of this section. In the same vein, when A sells Building V to a third party at a gain of $60x, the gain is included in the P group's ATI because Building V was used in a non-excepted trade or business of the P group (Business Y) prior to its sale.

(5) *Example 5: Captive activities*—(i) *Facts.* S and T are members of a consolidated group of which P is the common parent. P conducts an electing real property trade or business (Business X), S conducts a non-excepted trade or business (Business Y), and T provides transportation services to Businesses X and Y but does not have any customers outside of the P group. For Year 1, T provides transportation services using a single bus with a basis of $120x.

(ii) *Analysis.* Under paragraph (a)(4) of this section, activities conducted by a consolidated group are treated as though those activities were conducted by a single corporation. Because the activities of T are limited to providing intercompany transportation services, T does not conduct a trade or business for purposes of section 163(j). Under paragraph (c)(3) of this section, business interest expense is allocated to excepted and non-excepted trades or businesses based on the relative basis of the assets used in those businesses. The basis in T's only asset, a bus, is therefore allocated between Business X and Business Y according to the use of T's bus by these businesses. Business X uses one-third of T's services, and Business Y uses two-thirds of T's services. Thus, $40x of the basis of T's bus is allocated to Business X, and $80x of the basis of T's bus is allocated to Business Y.

(6) *Example 6: Constructive ownership*—(i) *Facts.* P, S, T, and U are domestic C corporations that are not members of a consolidated group. P directly owns 80 percent of the stock of each of S and T as measured by total voting power and value; an unrelated third party, X, owns the remaining 20 percent. In turn, S and T directly own 15 percent and 80 percent, respectively, of the stock of U as measured by total voting power and value; P directly owns the remaining 5 percent. P conducts both excepted and non-excepted trades or businesses. S and T conduct only non-excepted trades or businesses, and U conducts both excepted and non-excepted trades or businesses.

(ii) *Analysis.* Under paragraph (c)(7)(i)(A) of this section, a shareholder must look through to the assets of a domestic non-consolidated C corporation for purposes of allocating the shareholder's basis in its stock in the corporation between excepted and non-excepted trades or businesses if the shareholder's direct and indirect interest in the corporation satisfies the ownership requirements of section 1504(a)(2). For purposes of paragraph (c)(7)(i)(A) of this section, a shareholder's stock ownership is determined by applying the constructive ownership rules of section 318(a). P directly owns 80 percent of each of S and T as measured by total voting power and value; thus, P must look through to the assets of S and T when allocating the basis in its stock of S and T. P directly owns 5 percent of the stock of U as measured by total voting power and value, and P constructively owns the other 95 percent; thus, P also must look through to U's assets when allocating the basis in its U stock. S directly owns 15 percent of the stock of U, and S constructively owns only 5 percent through P; thus, S cannot look through to U's assets when allocating the basis in its U stock. T directly owns 80 percent of the stock of U, and T constructively owns an additional 5 percent; thus, T must look through to U's assets when allocating the basis in its U stock.

(iii) *Dividend.* The facts are the same as in paragraph (e)(6)(i) of this section, except that U distributes a $160x dividend pro rata to its shareholders. Thus, P receives $8x (5 percent of $160x) of the U dividend, S receives $24x (15 percent of $160x), and T receives $128x (80 percent of $160x). Under paragraph (c)(7)(i)(B) of this section, if a shareholder's direct interest in a corporation satisfies the ownership requirements of section 1504(a)(2), the shareholder must look through to the activities of a domestic non-consolidated C corporation in determining whether dividend income is from an excepted or non-excepted trade or business. The constructive ownership rules do not apply in allocating dividends under paragraph (c)(7)(i)(B) of this section. P directly owns 5 percent of the stock of U as measured by vote and value, and S directly owns 15 percent of the stock of U as measured by vote and value; thus, neither P nor S is required to apply the look-through rules in allocating its dividend income from U, and all such income is allocable to non-excepted trades or businesses. T directly owns 80 percent of the stock of U as measured by vote and value; thus, T must allocate its U dividend in accordance with the activities of U's excepted and non-excepted trades or businesses.

(7) *Example 7: Dispositions with a principal purpose of shifting basis*—(i) *Facts.* U and V are members of a consolidated group of which P is the common parent. U conducts an electing farming business (Business F), and V conducts a farm equipment leasing business (Business L) that is a non-excepted trade or business. After the end of a farming season, the P group, with a principal purpose of shifting basis from Business L to Business F, has V sell to U all off-lease farming equipment that previously was leased out as part of Business L. Immediately before the start of the next season, U sells the farming equipment back to V for use in Business L.

(ii) *Analysis.* Under paragraph (c)(8) of this section, in the case of a disposition of assets undertaken with a principal purpose of artificially shifting the amount of basis allocable to excepted or non-excepted trades or businesses on a determination date, the additional basis or change in use will not be taken into account. Because V's sale of farming equipment to U for storage in Business F's facilities is undertaken with a principal purpose of shifting basis from Business L to Business F, the additional basis Business F receives from these transactions will not be taken into account for purposes of this section. Instead, the basis of the farming equipment will be allocated as though the farming equipment continued to be used in Business L.

(f) *Applicability date.* This section applies to taxable years beginning on or after November 13, 2020. However, taxpayers and their related parties, within the meaning of sections 267(b) and 707(b)(1), may choose to apply the rules of this section to a taxable year beginning after December 31, 2017, so long as the taxpayers and their related parties consistently apply the rules of the section 163(j) regulations, and, if applicable, §§ 1.263A–9, 1.263A–15, 1.381(c)(20)–1, 1.382–1, 1.382–2, 1.382–5, 1.382–6, 1.382–7, 1.383–0, 1.383–1, 1.469–9, 1.469–11, 1.704–1, 1.882–5, 1.1362–3, 1.1368–1, 1.1377–1, 1.1502–13, 1.1502–21, 1.1502–36, 1.1502–79, 1.1502–91 through 1.1502–99 (to the extent they effectuate the rules of §§ 1.382–2, 1.382–5, 1.382–6, and 1.383–1), and 1.1504–4, to that taxable year. Accordingly, for purposes of § 1.163(j)–10(c)(5), taxpayers make any change to the alternative depreciation system as of November 13, 2020, or if relying on the provisions of § 1.163(j)–10 in regulation project REG–106089–18 (83 FR 67490), as of December 28, 2018.

§ 1.163(j)–11 Transition rules.

(a) *Overview.* This section provides transition rules regarding the section 163(j) limitation. Paragraph (b) of this section provides rules regarding the application of the section 163(j) limitation to a corporation that joins a consolidated group during a taxable year of the group beginning before January 1, 2018 and is subject to the section 163(j) limitation at the time of its change in status. Paragraph (c) of this section provides rules regarding the treatment of carryforwards of disallowed disqualified interest.

(b) *Application of section 163(j) limitation if a corporation joins a consolidated group during a taxable year of the group beginning before January 1, 2018*—(1) *In general.* If a corporation (S) joins a consolidated group during a taxable year of the group beginning before January 1, 2018, and if S is subject to the section 163(j) limitation at the time of its change in status, then section 163(j) will apply to S's short taxable year that ends on the day of S's change in status, but section 163(j) will not apply to S's short taxable year that begins the next day (when S is a member of the acquiring consolidated group). Any business interest expense paid or accrued (without regard to section 163(j)) by S in its short taxable year ending on the day of S's change in status for which a deduction is disallowed under section 163(j) will be carried forward to the acquiring group's first taxable year beginning after December 31, 2017. Those disallowed business interest expense carryforwards may be subject to limitation under other provisions of these regulations (see, for example, § 1.163(j)–5(c), (d), (e), and (f)).

(2) *Example.* Acquiring Group is a consolidated group with a fiscal year end of November 30; Target is a stand-alone calendar-year C corporation. On May 31, 2018, Acquiring Group acquires Target in a transaction that is not an ownership change for purposes of section 382. Acquiring Group is not subject to the section 163(j) limitation during its taxable year beginning December 1, 2017. As a result of the acquisition, Target has a short taxable year beginning January 1, 2018 and ending May 31, 2018. Target is subject to the section 163(j) limitation during this short taxable year. However, Target (as a member of Acquiring Group) is not subject to the section 163(j) limitation during Acquiring Group's taxable year ending November 30, 2018. Any disallowed business interest expense carryforwards from Target's taxable year ending May 31, 2018, will not be available for use in Acquiring Group's taxable year ending November 30, 2018. However, that disallowed business interest expense is carried forward to Acquiring Group's taxable year beginning December 1, 2018, and can be deducted by the group, subject to the

separate return limitation year (SRLY) limitation. See § 1.163(j)–5(d).

(c) *Treatment of disallowed disqualified interest*—(1) *In general.* Disallowed disqualified interest is carried forward to the taxpayer's first taxable year beginning after December 31, 2017. Disallowed disqualified interest is subject to disallowance as a disallowed business interest expense carryforward under section 163(j) and § 1.163(j)–2 to the extent the interest is properly allocable to a non-excepted trade or business under § 1.163(j)–10. Disallowed disqualified interest that is properly allocable to an excepted trade or business is not subject to the section 163(j) limitation. See § 1.163(j)–10(a)(6) for rules governing the allocation of disallowed disqualified interest between excepted and non-excepted trades or businesses.

(2) *Earnings and profits.* A taxpayer may not reduce its earnings and profits in a taxable year beginning after December 31, 2017, to reflect any disallowed disqualified interest carryforwards to the extent the payment or accrual of the disallowed disqualified interest reduced the earnings and profits of the taxpayer in a prior taxable year.

(3) *Disallowed disqualified interest of members of an affiliated group*—(i) *Scope.* This paragraph (c)(3)(i) applies to corporations that were treated as a single taxpayer under old section 163(j)(6)(C) and that had disallowed disqualified interest.

(ii) *Allocation of disallowed disqualified interest to members of the affiliated group*—(A) *In general.* Each member of the affiliated group is allocated its allocable share of the affiliated group's disallowed disqualified interest as provided in paragraph (c)(3)(ii)(B) of this section.

(B) *Definitions.* The following definitions apply for purposes of paragraph (c)(3)(ii) of this section.

(*1*) *Allocable share of the affiliated group's disallowed disqualified interest.* The term *allocable share of the affiliated group's disallowed disqualified interest* means, with respect to any member of an affiliated group for the member's last taxable year beginning before January 1, 2018, the product of the total amount of the disallowed disqualified interest of all members of the affiliated group under old section 163(j)(6)(C) and the member's disallowed disqualified interest ratio.

(*2*) *Disallowed disqualified interest ratio.* The term *disallowed disqualified interest ratio* means, with respect to any member of an affiliated group for the member's last taxable year beginning before January 1, 2018, the ratio of the exempt related person interest expense of the member for the last taxable year beginning before January 1, 2018, to the sum of the amounts of exempt related person interest expense for all members of the affiliated group.

(*3*) *Exempt related person interest expense.* The term *exempt related person interest expense* means interest expense that is, or is treated as, paid or accrued by a domestic C corporation, or by a foreign corporation with income, gain, or loss that is effectively connected, or treated as effectively connected, with the conduct of a trade or business in the United States, to—

(*i*) Any person related to the taxpayer, within the meaning of sections 267(b) or 707(b)(1), applying the constructive ownership and attribution rules of section 267(c), if no U.S. tax is imposed with respect to the interest under subtitle A of the Code, determined without regard to net operating losses or net operating loss carryovers, and taking into account any applicable treaty obligation of the United States. For this purpose, interest that is subject to a reduced rate of tax under any treaty obligation of the United States applicable to the recipient is treated as, in part, subject to the statutory tax rate under sections 871 or 881 and, in part, not subject to tax, based on the proportion that the rate of tax under the treaty bears to the statutory tax rate. Thus, for purposes of section 163(j), if the statutory tax rate is 30 percent, and pursuant to a treaty U.S. tax is instead limited to a rate of 10 percent, two-thirds of the interest is considered interest not subject to U.S. tax under subtitle A of the Code;

(*ii*) A person that is not related to the taxpayer, within the meaning of section 267(b) or 707(b)(1), applying the constructive ownership and attribution rules of section 267(c), with respect to indebtedness on which there is a disqualified guarantee, within the meaning of paragraph (6)(D) of old section 163(j), of such indebtedness, and no gross basis U.S. tax is imposed with respect to the interest. For purposes of this paragraph (c)(3)(ii)(B)(*3*)(*ii*), a *gross basis U.S. tax* means any tax imposed by this subtitle A of the Code that is determined by reference to the gross amount of any item of income without any reduction for any deduction allowed by subtitle A of the Code. Interest that is subject to a gross basis U.S. tax that is eligible for a reduced rate of tax under any treaty obligation of the United States applicable to the recipient is treated as, in part, subject to the statutory tax rate under section 871 or 881 and, in part, not subject to a gross basis U.S. tax, based on the proportion that the rate of tax under the treaty bears to the statutory tax rate. Thus, for purposes of section 163(j), if the statutory tax rate is 30 percent, and pursuant to a treaty U.S. tax is instead limited to a rate of 10 percent, two-thirds of the interest is considered interest not subject to a gross basis U.S. tax under subtitle A of the Code; or

(*iii*) A REIT, directly or indirectly, to the extent that the domestic C corporation, or a foreign corporation with income, gain, or loss that is effectively connected, or treated as effectively connected, with the conduct of a trade or business in the United States, is a taxable REIT subsidiary, as defined in section 856(l), with respect to the REIT.

(iii) *Treatment of carryforwards.* The amount of disallowed disqualified interest allocated to a taxpayer pursuant to paragraph (c)(3)(ii) of this section is treated in the same manner as described in paragraph (c)(1) of this section.

(4) *Application of section 382*—(i) *Ownership change occurring before* November 13, 2020—(A) *Pre-change loss.* For purposes of section 382(d)(3), unless the rules of § 1.382–2(a)(7) apply, disallowed disqualified interest is not a pre-change loss under § 1.382–2(a) subject to a section 382 limitation with regard to an ownership change on a change date occurring before November 13, 2020. But see section 382(h)(6)(B) (regarding built-in deduction items).

(B) *Loss corporation.* For purposes of section 382(k)(1), unless the rules of § 1.382–2(a)(7) apply, disallowed disqualified interest is not a carryforward of disallowed interest described in section 381(c)(20) with regard to an ownership change on a change date occurring before November 13, 2020. But see section 382(h)(6) (regarding built-in deductions).

(ii) *Ownership change occurring on or after* November 13, 2020—(A) *Pre-change loss.* For rules governing the treatment of disallowed disqualified interest as a pre-change loss for purposes of section 382 with regard to an ownership change on a change date occurring on or after November 13, 2020, see §§ 1.382–2(a)(2) and 1.382–6(c)(3).

(B) *Loss corporation.* For rules governing when disallowed disqualified interest causes a corporation to be a loss corporation with regard to an ownership change occurring on or after November 13, 2020, see § 1.382–2(a)(1)(i)(A).

(5) *Treatment of excess limitation from taxable years beginning before January 1, 2018.* No amount of excess limitation under old section 163(j)(2)(B) may be carried forward to taxable years beginning after December 31, 2017.

(6) *Example: Members of an affiliated group*—(i) *Facts.* A, B, and C are calendar-year domestic C corporations that are members of an affiliated group (within the meaning of section 1504(a)) that was treated as a single taxpayer under old section 163(j)(6)(C) and the proposed regulations in this part under old section 163(j) (see formerly proposed § 1.163(j)–5). For the taxable year ending December 31, 2017, the separately determined amounts of exempt related person interest expense of A, B, and C were $0, $600x, and $150x, respectively (for a total of $750x). The affiliated group has $200x of disallowed disqualified interest in that year.

(ii) *Analysis.* The affiliated group's disallowed disqualified interest expense for the 2017 taxable year ($200x) is allocated among A, B, and C based on the ratio of each member's exempt related person interest expense to the group's exempt related person interest expense. Because A has no exempt related person interest expense, no disallowed disqualified interest is allocated to A. Disallowed disqualified interest of $160x is allocated to B (($600x/$750x) × $200x), and disallowed disqualified interest of $40x is allocated to C (($150x/$750x) × $200x). Thus, B and C have $160x and $40x, respectively, of disallowed disqualified interest that is carried forward to the first taxable year beginning after December 31, 2017. No excess limitation that was allocated to A, B, or C under old section 163(j) will carry forward to a taxable year beginning after December 31, 2017.

(iii) *Carryforward of disallowed disqualified interest to 2018 taxable year.* The facts are the same as in the *Example* in paragraph (c)(7)(i) of this section, except that, for the taxable year ending December 31, 2018, A, B, and C are members of a consolidated group that has a section 163(j) limitation of $140x, current-year business interest expense (as defined in § 1.163(j)–1(b)(9)) of $80x, and no excepted trade or business. Under paragraph (c)(1) of this section, disallowed disqualified interest is carried to the taxpayer's first taxable year beginning after December 31, 2017, and is subject to disallowance under section 163(j) and § 1.163(j)–2. Under § 1.163(j)–5(b)(3)(ii)(D)(*1*), a consolidated group that has section 163(j) limitation remaining for the current year after deducting all current-year business interest expense deducts each member's disallowed disqualified interest carryforwards from prior taxable years, starting with the earliest taxable year, on a pro rata basis (subject to certain limitations). In accordance with paragraph (c)(1) of this section, the rule in § 1.163(j)–5(b)(3)(ii)(D)(*1*) applies to disallowed disqualified interest carried forward to the taxpayer's first taxable year beginning after December 31, 2017. Accordingly, after deducting $80x of current-year business interest expense in 2018, the group may deduct $60x of its $200x disallowed disqualified interest carryforwards. Under paragraph (c)(3) of this section, B has $160x of disallowed disqualified interest carryforwards, and C has $40x of disallowed disqualified interest carryforwards. Thus, $48x (($160x/$200x) × $60x) of B's disallowed disqualified interest carryforwards, and $12x (($40x/$200x) × $60x) of C's disallowed disqualified interest carryforwards, are deducted by the consolidated group in the 2018 taxable year.

(d) *Applicability date.* This section applies to taxable years beginning on or after November 13, 2020. However, taxpayers and their related parties, within the meaning of sections 267(b) and 707(b)(1), may choose to apply the rules of this section to a taxable year beginning after December 31, 2017, so long as the taxpayers and their related parties consistently apply the rules of the section 163(j) regulations, and, if applicable, §§ 1.263A–9, 1.263A–15, 1.381(c)(20)–1, 1.382–1, 1.382–2, 1.382–5, 1.382–6, 1.382–7, 1.383–0, 1.383–1, 1.469–9, 1.469–11, 1.704–1, 1.882–5, 1.1362–3, 1.1368–1, 1.1377–1, 1.1502–13, 1.1502–21, 1.1502–36, 1.1502–79, 1.1502–91 through 1.1502–99 (to the extent they effectuate the rules of §§ 1.382–2, 1.382–5, 1.382–6, and 1.383–1), and 1.1504–4, to that taxable year.

■ **Par. 4.** Section 1.263A–9 is amended by revising the first and third sentences of paragraph (g)(1)(i) to read as follows:

§ 1.263A–9 The avoided cost method.

* * * * *

(g) * * *

(1) * * *

(i) * * * Interest must be capitalized under section 263A(f) before the application of section 163(d) (regarding the investment interest limitation), section 163(j) (regarding the limitation on business interest expense), section 266 (regarding the election to capitalize carrying charges), section 469 (regarding the limitation on passive losses), and section 861 (regarding the allocation of interest to United States sources). * * * However, in applying section 263A(f) with respect to the excess expenditure amount, the taxpayer must capitalize all interest that is neither investment interest under section 163(d), business interest expense under section 163(j), nor passive interest under section 469 before capitalizing any interest that is either investment interest, business interest expense, or passive interest. * * *

* * * * *

■ **Par. 5.** Section 1.263A–15 is amended by adding paragraph (a)(4) to read as follows:

§ 1.263A–15 Effective dates, transitional rules, and anti-abuse rules.

(a) * * *

(4) Section 1.263A–9(g)(1)(i) applies to taxable years beginning on or after November 13, 2020. However, taxpayers and their related parties, within the meaning of sections 267(b) and 707(b)(1), may choose to apply the rules of that section to a taxable year beginning after December 31, 2017, so long as the taxpayers and their related parties consistently apply the rules of the section 163(j) regulations (as defined in § 1.163(j)–1(b)(37)), and, if applicable, §§ 1.381(c)(20)–1, 1.382–1, 1.382–2, 1.382–5, 1.382–6, 1.382–7, 1.383–0, 1.383–1, 1.469–9, 1.469–11, 1.704–1, 1.882–5, 1.1362–3, 1.1368–1, 1.1377–1, 1.1502–13, 1.1502–21, 1.1502–36, 1.1502–79, 1.1502–91 through 1.1502–99 (to the extent they effectuate the rules of §§ 1.382–2, 1.382–5, 1.382–6, and 1.383–1), and 1.1504–4, to that taxable year.

* * * * *

■ **Par. 6.** Section 1.381(c)(20)–1 is added to read as follows:

§ 1.381(c)(20)–1 Carryforward of disallowed business interest.

(a) *Carryover requirement.* Section 381(c)(20) provides that the acquiring corporation in a transaction described in section 381(a) will succeed to and take into account the carryover of disallowed business interest described in section 163(j)(2) to taxable years ending after the date of distribution or transfer.

(b) *Carryover of disallowed business interest described in section 163(j)(2).* For purposes of section 381(c)(20) and this section, the term *carryover of disallowed business interest described in section 163(j)(2)* means the disallowed business interest expense carryforward (as defined in § 1.163(j)–1(b)(11)), including any disallowed disqualified interest (as defined in § 1.163(j)–1(b)(12)), and including the distributor or transferor corporation's disallowed business interest expense from the taxable year that ends on the date of distribution or transfer. For the application of section 382 to disallowed business interest expense described in section 163(j)(2), see the regulations in this part under section 382 of the Code, including but not limited to § 1.382–2.

(c) *Limitation on use of disallowed business interest expense carryforwards in the acquiring corporation's first taxable year ending after the date of distribution or transfer*—(1) *In general.* In determining the extent to which the acquiring corporation may use disallowed business interest expense carryforwards in its first taxable year ending after the date of distribution or transfer, the principles of §§ 1.381(c)(1)–1 and 1.381(c)(1)–2 apply with appropriate adjustments, including but not limited to the adjustments described in paragraphs (c)(2) and (3) of this section.

(2) *One date of distribution or transfer within the acquiring corporation's taxable year.* If the acquiring corporation succeeds to the disallowed business interest expense carryforwards of one or more distributor or transferor corporations on a single date of distribution or transfer within one taxable year of the acquiring corporation, then, for the acquiring corporation's first taxable year ending after the date of distribution or transfer, that part of the acquiring corporation's business interest expense deduction (if any) that is attributable to the disallowed business interest expense carryforwards of the distributor or transferor corporation is limited under this paragraph (c) to an amount equal to the post-acquisition portion of the acquiring corporation's section 163(j) limitation, as defined in paragraph (c)(4) of this section.

(3) *Two or more dates of distribution or transfer in the taxable year.* If the acquiring corporation succeeds to the disallowed business interest expense carryforwards of two or more distributor or transferor corporations on two or more dates of distribution or transfer within one taxable year of the acquiring corporation, the limitation to be applied under this paragraph (c) is determined by applying the principles of § 1.381(c)(1)–2(b) to the post-acquisition portion of the acquiring corporation's section 163(j) limitation, as defined in paragraph (c)(4) of this section.

(4) *Definition.* For purposes of this paragraph (c), the term *post-acquisition portion of the acquiring corporation's section 163(j) limitation* means the amount that bears the same ratio to the acquiring corporation's section 163(j) limitation (within the meaning of § 1.163(j)–1(b)(31)) (or, if the acquiring corporation is a member of a consolidated group, the consolidated group's section 163(j) limitation) for the first taxable year ending after the date of distribution or transfer (taking into account items to which the acquiring corporation succeeds under section 381, other than disallowed business interest expense carryforwards) as the number of days in that year after the date of distribution or transfer bears to the total number of days in that year.

(5) *Examples.* For purposes of this paragraph (c)(5), unless otherwise stated, X, Y, and Z are taxable domestic C corporations that were incorporated on January 1, 2021 and that file their tax returns on a calendar-year basis; none of X, Y, or Z is a member of a consolidated group; the small business exemption in § 1.163(j)–2(d) does not apply; interest expense is deductible except to the extent of the potential application of section 163(j); and the facts set forth the only corporate activity. The principles of this paragraph (c) are illustrated by the following examples.

(i) *Example 1: Transfer before last day of acquiring corporation's taxable year*—(A) *Facts.* On October 31, 2022, X transferred all of its assets to Y in a statutory merger to which section 361 applies. For the 2021 taxable year, X had $400x of disallowed business interest expense, and Y had $0 of disallowed business interest expense. For the taxable year ending October 31, 2022, X had an additional $350x of disallowed business interest expense (X did not deduct any of its 2021 carryforwards in its 2022 taxable year). For the taxable year ending December 31, 2022, Y had business interest expense of $100x, business interest income of $200x, and ATI of $1,000x. Y's section 163(j) limitation for the 2022 taxable year was $500x ($200x + (30 percent × $1,000x) = $500x).

(B) *Analysis.* Pursuant to § 1.163(j)–5(b)(2), Y deducts its $100x of current-year business interest expense (as defined in § 1.163(j)–1(b)(9)) before any disallowed business interest expense carryforwards (including X's carryforwards) from a prior taxable year are deducted. The aggregate disallowed business interest expense of X carried forward under section 381(c)(20) to Y's taxable year ending December 31, 2022, is $750x. However, pursuant to paragraph (c)(2) of this section, for Y's first taxable year ending after the date of distribution or transfer, the maximum amount of X's disallowed business interest expense carryforwards that Y can deduct is equal to the post-acquisition portion of Y's section 163(j) limitation. Pursuant to paragraph (c)(4) of this section, the post-acquisition portion of Y's section 163(j) limitation means Y's section 163(j) limitation times the ratio of the number of days in the taxable year after the date of distribution or transfer to the total number of days in that year. Therefore, only $84x of the aggregate amount ($500x × (61/365) = $84x) may be deducted by Y in that year, and the remaining $666x ($750x − $84x = $666x) is carried forward to the succeeding taxable year.

(C) *Transfer on last day of acquiring corporation's taxable year.* The facts are the same as in *Example 1* in paragraph (c)(5)(i)(A) of this section, except that X's transfer of its assets to Y occurred on December 31, 2022. For the taxable year ending December 31, 2022, X had an additional $350x of disallowed business interest expense (X did not deduct any of its 2021 carryforwards in its 2022 taxable year). For the taxable year ending December 31, 2023, Y had business interest expense of $100x, business interest income of $200x, and ATI of $1,000x. Y's section 163(j) limitation for the 2023 taxable year was $500x ($200x + (30 percent × $1,000x) = $500x). The aggregate disallowed business interest expense of X carried under section 381(c)(20) to Y's taxable year ending December 31, 2023, is $750x. Paragraph (c)(2) of this section does not limit the amount of X's disallowed business interest expense carryforwards that may be deducted by Y in the 2023 taxable year. Since the amount of Y's section 163(j) limit for the 2023 taxable year was $500x, Y may deduct the full amount ($100x) of its own business interest expense for the 2023 taxable year, along with $400x of X's disallowed business interest expense carryforwards.

(ii) *Example 2: Multiple transferors on same date*—(A) *Facts.* On October 31, 2022, X and Y transferred all of their assets to Z in statutory mergers to which section 361 applies. For the 2021 taxable year, X had $300x of disallowed business interest expense, Y had $200x, and Z had $0. For the taxable year ending October 31, 2022, each of X and Y had an additional $125x of disallowed business interest expense (neither X nor Y deducted any of its 2021 carryforwards in 2022). For the taxable year ending December 31, 2022, Z had business interest expense of $100x, business interest income of $200x, and ATI of $1,000x. Z's section 163(j) limitation for the 2022 taxable year was $500x ($200x + (30 percent × $1,000x) = $500x).

(B) *Analysis.* The aggregate disallowed business interest expense of X and Y carried under section 381(c)(20) to Z's taxable year ending December 31, 2022, is $750x. However, pursuant to paragraph (c)(2) of this section, only $84x of the aggregate amount ($500x × (61/365) = $84x) may be deducted by Z in that year. Moreover, under paragraph (b)(2) of this section, this amount only may be deducted by Z in that year after

Z has deducted its $100x of current-year business interest expense (as defined in § 1.163(j)–1(b)(9)).

(d) *Applicability date.* This section applies to taxable years beginning on or after November 13, 2020. However, taxpayers and their related parties, within the meaning of sections 267(b) and 707(b)(1), may choose to apply the rules of this section to ta axable year beginning after December 31, 2017, so long as the taxpayers and their related parties consistently apply the rules of the section 163(j) regulations (as defined in § 1.163(j)–1(b)(37)), and, if applicable, §§ 1.263A–9, 1.263A–15, 1.382–1, 1.382–2, 1.382–5, 1.382–6, 1.382–7, 1.383–0, 1.383–1, 1.469–9, 1.469–11, 1.704–1, 1.882–5, 1.1362–3, 1.1368–1, 1.1377–1, 1.1502–13, 1.1502–21, 1.1502–36, 1.1502–79, 1.1502–91 through 1.1502–99 (to the extent they effectuate the rules of §§ 1.382–2, 1.382–5, 1.382–6, and 1.383–1), and 1.1504–4, to that taxable year.

■ **Par. 7.** Section 1.382–1 is amended by:

■ 1. Adding an entry for § 1.382–2(a)(1)(vi) and (a)(7) and (8);

■ 2. Revising the entry for § 1.382–2(b)(3);

■ 3. Adding entries for § 1.382–6(a)(1) and (2) and (b)(4);

■ 4. Revising the entry for § 1.382–6(h); and

■ 5. Adding an entry for § 1.382–7(c), (d), (d)(1) through (5), (e) through (g), and (g)(1) through (4).

The additions and revisions read as follows:

■ **Par. 8.** Section 1.382–2 is amended by:

■ 1. Revising paragraph (a)(1)(i)(A);

■ 2. Removing '', or'' and adding ''; or'' in its place at the end of paragraph (a)(1)(i)(B);

■ 3. Revising paragraphs (a)(1)(ii) introductory text and (a)(1)(ii)(A);

■ 4. Removing '', and'' and adding ''; and'' in its place at the end of paragraph (a)(1)(ii)(B);

■ 5. Removing the last sentence in paragraphs (a)(1)(iv) and (v);

■ 6. Removing the commas and adding semicolons in their place at the end of paragraphs (a)(2)(i) and (iii);

■ 7. Removing the period and adding a semicolon in its place at the end of paragraph (a)(2)(ii);

■ 8. Removing '', and'' and adding a semicolon in its place at the end of paragraph (a)(2)(iv);

■ 9. Removing the period and adding ''; and'' in its place at the end of paragraph (a)(2)(v);

■ 10. Adding paragraph (a)(2)(vi);

■ 11. Removing the last sentence in paragraphs (a)(3)(i), (a)(4)(i), and (a)(5) and (6);

■ 12. Adding paragraphs (a)(7) and (8); and

■ 13. Revising paragraph (b)(3).

The revisions and additions read as follows:

§ 1.382–2 General rules for ownership change.

(a) * * *

(1) * * *

(i) * * *

(A) Is entitled to use a net operating loss carryforward, a capital loss carryover, a carryover of excess foreign taxes under section 904(c), a carryforward of a general business credit under section 39, a carryover of a minimum tax credit under section 53, or a section 382 disallowed business interest carryforward described in paragraph (a)(7) of this section;

* * * * *

(ii) *Distributor or transferor loss corporation in a transaction under section 381.* Notwithstanding that a loss corporation ceases to exist under state law, if its disallowed business interest expense carryforwards, net operating loss carryforwards, excess foreign taxes, or other items described in section 381(c) are succeeded to and taken into account by an acquiring corporation in a transaction described in section 381(a), such loss corporation will be treated as continuing in existence until—

(A) Any pre-change losses (excluding pre-change credits described in § 1.383–1(c)(3)), determined as if the date of such transaction were the change date, are fully utilized or expire under section 163(j), 172, or 1212;

* * * * *

(2) * * *

(vi) Any section 382 disallowed business interest carryforward.

* * * * *

(7) *Section 382 disallowed business interest carryforward.* The term *section 382 disallowed business interest carryforward* includes the following items:

(i) The loss corporation's disallowed business interest expense carryforwards (as defined in § 1.163(j)–1(b)(11)), including disallowed disqualified interest (as defined in § 1.163(j)–1(b)(12)), as of the date of the ownership change.

(ii) The loss corporation's current-year business interest expense (as defined in § 1.163(j)–1(b)(9)) in the change year (as defined in § 1.382–6(g)(1)) that is allocable to the pre-change period (as defined in § 1.382–6(g)(2)) under § 1.382–6(a) or (b) and that becomes disallowed business interest expense (as defined in § 1.163(j)–1(b)(10)).

(8) *Testing period.* Notwithstanding the temporal limitations provided in § 1.382–2T(d)(3)(i), the testing period for a loss corporation can begin as early as the first day of the first taxable year from which there is a section 382 disallowed business interest carryforward to the first taxable year ending after the testing date.

(b) * * *

(3) *Rules provided in paragraphs (a)(1)(i)(A), (a)(1)(ii), (iv), and (v), (a)(2)(iv) through (vi), (a)(3)(i), and (a)(4) through (8) of this section.* The rules provided in paragraphs (a)(1)(i)(A), (a)(1)(ii), (iv), and (v), (a)(2)(iv) through (vi), (a)(3)(i), and (a)(4) through (8) of this section apply to testing dates

occurring on or after November 13, 2020. For loss corporations that have testing dates occurring before November 13, 2020, see § 1.382–2 as contained in 26 CFR part 1, revised April 1, 2019. However, taxpayers and their related parties, within the meaning of sections 267(b) and 707(b)(1), may choose to apply the rules of this section to testing dates occurring during a taxable year beginning after December 31, 2017, and before November 13, 2020, so long as the taxpayers and their related parties consistently apply the rules of this section, the section 163(j) regulations (as defined in § 1.163(j)–1(b)(37)), §§ 1.382–1, 1.382–5, 1.382–6, 1.382–7, 1.383–0, and 1.383–1, and, if applicable, §§ 1.263A–9, 1.263A–15, 1.381(c)(20)–1, 1.469–9, 1.469–11, 1.704–1, 1.882–5, 1.1362–3, 1.1368–1, 1.1377–1, 1.1502–13, 1.1502–21, 1.1502–36, 1.1502–79, 1.1502–91 through 1.1502–99 (to the extent they effectuate the rules of §§ 1.382–2, 1.382–5, 1.382–6, and 1.383–1), and 1.1504–4, to that taxable year.

■ **Par. 9.** Section 1.382–5 is amended by revising the first and second sentences of paragraph (d)(1) and by adding three sentences to the end of paragraph (f) to read as follows:

§ 1.382–5 Section 382 limitation.

* * * * *

(d) * * *

(1) * * * If a loss corporation has two (or more) ownership changes, any losses or section 382 disallowed business interest carryforwards ((within the meaning of § 1.382–2(a)(7)) attributable to the period preceding the earlier ownership change are treated as pre-change losses with respect to both ownership changes. Thus, the later ownership change may result in a lesser (but never in a greater) section 382 limitation with respect to such pre-change losses. * * *

* * * * *

(f) * * * Paragraph (d)(1) of this section applies with respect to an ownership change occurring on or after November 13, 2020. For loss corporations that have undergone an ownership change before or after November 13, 2020, see § 1.382–5 as contained in 26 CFR part 1, revised April 1, 2019. However, taxpayers and their related parties, within the meaning of sections 267(b) and 707(b)(1), may choose to apply the rules of this section to testing dates occurring during a taxable year beginning after December 31, 2017, so long as the taxpayers and their related parties consistently apply the rules of this section, the section 163(j) regulations (as defined in § 1.163(j)–1(b)(37)), §§ 1.382–1, 1.382–2, 1.382–6, 1.382–7, 1.383–0, and 1.383–1, and, if applicable, §§ 1.263A–9, 1.263A–15, 1.381(c)(20)–1, 1.469–9, 1.469–11, 1.704–1, 1.882–5, 1.1362–3, 1.1368–1, 1.1377–1, 1.1502–13, 1.1502–21, 1.1502–36, 1.1502–79, 1.1502–91 through 1.1502–99 (to the extent they effectuate the rules of §§ 1.382–2, 1.382–5, 1.382–6, and 1.383–1), and 1.1504–4, to that taxable year.

■ **Par. 10.** Section 1.382–6 is amended by:

■ 1. Redesignating the text of paragraph (a) as paragraph (a)(1);

■ 2. Adding a subject heading to newly redesignated paragraph (a)(1);

■ 3. Adding paragraph (a)(2);

■ 4. Removing the language ''Subject to paragraphs (b)(3)(ii) and (d)'' in the first sentence of paragraph (b)(1) and adding ''Subject to paragraphs (b)(3)(ii), (b)(4), and (d)'' in its place;

■ 5. Adding paragraph (b)(4); and

■ 6. Revising paragraph (h).

The additions and revision read as follows:

§ 1.382–6 Allocation of income and loss to periods before and after the change date for purposes of section 382.

(a) * * *

(1) *In general.* * * *

(2) *Allocation of business interest expense*—(i) *Scope.* Except as provided in paragraph (b)(4) of this section, this paragraph (a)(2) applies if a loss corporation has business interest expense (as defined in § 1.163(j)–1(b)(3)) in the change year. The rules of this paragraph (a)(2) apply to determine the amount of current-year business interest expense (as defined in § 1.163(j)–1(b)(9)) that is deducted in the change year. These rules also apply to determine the amount of any current-year business interest expense that is characterized as disallowed business interest expense (as defined in § 1.163(j)–1(b)(10)) allocable to the pre-change period and the post-change period, and to allocate disallowed business interest expense carryforwards (as defined in § 1.163(j)–1(b)(11)) to the change year for deduction in the pre-change period and the post-change period.

(ii) *Deductibility of business interest expense.* The rules of this paragraph (a)(2)(ii) apply in the following order.

(A) First, the loss corporation calculates its section 163(j) limitation (as defined in § 1.163(j)–1(b)(36)) for the change year.

(B) Second, the loss corporation calculates its deductible current-year BIE and deducts this amount in determining its taxable income or net operating loss for the change year. For purposes of this paragraph (a)(2)(ii), the term *deductible current-year BIE* means the loss corporation's current-year business interest expense (including its floor plan financing interest expense, as defined in § 1.163(j)–1(b)(19)), to the extent of its section 163(j) limitation.

(C) Third, if the loss corporation has disallowed business interest expense paid or accrued (without regard to section 163(j)) in the change year that is carried forward to post-change years, it allocates an equal portion of that disallowed business interest expense to each day in the change year. Any amount of disallowed business interest expense that is allocated to the pre-change period pursuant to this paragraph (a)(2)(ii)(C) is carried forward subject to section 382(d)(3). Any amount of disallowed business interest expense that is allocated to the post-change period pursuant to this paragraph (a)(2)(ii)(C) is carried forward and is not subject to section 382(d)(3).

(D) Fourth, if the loss corporation has excess section 163(j) limitation, then the loss corporation calculates its deductible disallowed business interest expense carryforward and allocates an equal portion to each day in the change year. For purposes of this paragraph (a)(2)(ii), the term *excess section 163(j) limitation* means the excess, if any, of the loss corporation's section 163(j) limitation over its deductible current-year BIE, and the term *deductible disallowed business interest expense carryforward* means the loss corporation's disallowed business interest expense carryforward to the extent of its excess section 163(j) limitation.

(E) Fifth, the loss corporation deducts its deductible disallowed business interest expense carryforward that was allocated to the pre-change period under paragraph (a)(2)(ii)(D) of this section. Subject to the application of sections 382(b)(3)(B) and 382(d)(3), the loss corporation deducts its deductible disallowed business interest expense carryforward that was allocated to the post-change period under paragraph (a)(2)(ii)(D) of this section. Any amount of disallowed business interest expense carryforward that is not deducted pursuant to this paragraph (a)(2)(ii)(E) is carried forward subject to section 382(d)(3).

* * * * *

(b) * * *

(4) *Allocation of business interest expense*—(i) *Scope.* This paragraph (b)(4) applies if a loss corporation makes a closing-of-the-books election pursuant to paragraph (b) of this section and has business interest expense in the change year. The rules of this paragraph (b)(4)

apply to determine the amount of deductible current-year business interest expense that is allocable to the pre-change period and the post-change period for purposes of the allocations referred to in paragraph (b)(1) of this section. These rules also apply to determine the amount of any current-year business interest expense that is characterized as disallowed business interest expense allocable to the pre-change period and the post-change period, and to allocate disallowed business interest expense carryforwards to the change year between the pre-change period and the post-change period for deduction.

(ii) *Deductibility of business interest expense.* The rules of this paragraph (b)(4)(ii) apply in the order provided.

(A) The loss corporation calculates its ATI limit, which is the product of its ATI (as defined in § 1.163(j)–1(b)(1)) for the change year and 30 percent. For purposes of this paragraph (b)(4)(ii), the terms *pre-change ATI limit* and *post-change ATI limit* mean the amount of ATI limit allocated to the pre-change period or the post-change period, respectively, computed by allocating an equal portion of the ATI limit to each day in the change year.

(B) Pursuant to paragraph (b)(1) of this section, the loss corporation allocates its current-year business interest expense (including its floor plan financing interest expense) and its business interest income (as defined in § 1.163(j)–1(b)(4)) to the pre-change and post-change periods as if the loss corporation's books were closed on the change date. For purposes of this paragraph (b)(4)(ii), the terms *pre-change BIE* and *post-change BIE* mean the amount of the loss corporation's current-year business interest expense that is allocated to the pre-change period or the post-change period, respectively, under this paragraph (b)(4)(ii)(B).

(C) The loss corporation deducts its pre-change BIE to the extent of its pre-change section 163(j) limit, and the loss corporation deducts its post-change BIE to the extent of its post-change section 163(j) limit. For purposes of this paragraph (b)(4)(ii), the term *pre-change section 163(j) limit* means the sum of the pre-change ATI and the amount of business interest income and floor plan financing interest expense allocated to the pre-change period; the term *post-change section 163(j) limit* means the sum of the post-change ATI limit and the amount of business interest income and floor plan financing interest expense allocated to the post-change period.

(D) If any pre-change BIE or post-change BIE has not been deducted under paragraph (b)(4)(ii)(C) of this section, the loss corporation deducts either any pre-change BIE that has not been deducted to the extent of its surplus post-change section 163(j) limit or any post-change BIE that has not been deducted to the extent of its surplus pre-change section 163(j) limit. For purposes of this paragraph (b)(4)(ii), the term *surplus pre-change section 163(j) limit* means the amount by which the pre-change section 163(j) limit exceeds the amount of pre-change BIE deducted pursuant to paragraph (b)(4)(ii)(C) of this section; the term *surplus post-change section 163(j) limit* means the amount by which the post-change section 163(j) limit exceeds the amount of post-change BIE deducted pursuant to paragraph (b)(4)(ii)(C) of this section.

(E) If the loss corporation has any excess pre-change section 163(j) limit or excess post-change section 163(j) limit, the loss corporation allocates its disallowed business interest expense carryforward, if any, ratably between the pre-change and post-change periods based upon the relative amounts of excess pre-change section 163(j) limit and excess post-change section 163(j) limit. For purposes of this paragraph (b)(4)(ii), the term *excess pre-change section 163(j) limit* means the amount by which the surplus pre-change section 163(j) limit exceeds the amount of post-change BIE deducted pursuant to paragraph (b)(4)(ii)(D) of this section; the term *excess post-change section 163(j) limit* means the amount by which the surplus post-change section 163(j) limit exceeds the amount of pre-change BIE deducted pursuant to paragraph (b)(4)(ii)(D) of this section.

(F) The loss corporation deducts its disallowed business interest expense carryforward that was allocated to the pre-change period under paragraph (b)(4)(ii)(E) of this section to the extent of its excess pre-change section 163(j) limit. Subject to the application of sections 382(b)(3)(B) and 382(d)(3), the loss corporation deducts its disallowed business interest expense carryforward that was allocated to the post-change period under paragraph (b)(4)(ii)(E) of this section to the extent of its excess post-change section 163(j) limit. Any amount of disallowed business interest expense carryforward that is not deducted pursuant to this paragraph (b)(4)(ii)(F) is subject to section 382(d)(3) irrespective of the period to which it was allocated pursuant to paragraph (b)(4)(ii)(E) of this section.

(iii) *Example 1*—(A) *Facts.* X is a calendar-year domestic C corporation that is not a member of a consolidated group. As of January 1, 2021, X has no disallowed business interest expense carryforwards. On October 19, 2021, X experiences an ownership change under section 382(g). For calendar year 2021, X's ATI is $500. For the period beginning on January 1, 2021 and ending on October 19, 2021, X pays or accrues $250 of current-year business interest expense that is deductible but for the potential application of section 163(j), including $50 of floor plan financing interest expense, and X has $60 of business interest income. For the period beginning on October 20, 2021 and ending on December 31, 2021, X pays or accrues $100 of current-year business interest expense that is deductible but for the potential application of section 163(j), including $40 of floor plan financing interest expense, and X has $70 of business interest income. X makes a closing-of-the-books election pursuant to paragraph (b) of this section.

(B) *Analysis*—(*1*) *Calculation and allocation of ATI limit.* For purposes of allocating its net operating loss or taxable income for the change year between the pre-change period and the post-change period under § 1.382–6, X applies paragraph (b)(4) of this section to allocate items related to section 163(j). X's ATI for calendar year 2021 is $500x. Therefore, pursuant to paragraph (b)(4)(ii)(A) of this section, X's ATI limit is $150 ($500 × 30 percent). Additionally, pursuant to paragraph (b)(4)(ii)(A) of this section, X's pre-change ATI limit is $120 ($150 × (292 days/365 days)), and X's post-change ATI limit is $30 ($150 × (73 days/365 days)).

(*2*) *Determination of pre-change BIE and post-change BIE.* Pursuant to paragraph (b)(4)(ii)(B) of this section, X's pre-change BIE and post-change BIE are $250 and $100, respectively.

(*3*) *Determination of pre-change section 163(j) limit and post-change section 163(j) limit.* Pursuant to paragraph (b)(4)(ii)(C) of this section, X's pre-change section 163(j) limit is $230 ($120 (X's pre-change ATI limit) + $60 (X's business interest income allocated to the pre-change period) + $50 (X's floor plan financing interest expense allocated to the pre-change period)). Additionally, pursuant to paragraph (b)(4)(ii)(C) of this section, X's post-change section 163(j) limit is $140 ($30 (X's post-change ATI limit) + $70 (X's business interest income allocated to the post-change period) + $40 (X's floor plan financing interest expense allocated to the post-change period)).

(*4*) *Initial deduction of BIE.* Pursuant to paragraph (b)(4)(ii)(C) of this section, X deducts $230 (its pre-change section 163(j) limit) of its $250 pre-change BIE and all $100 (less than its $140 post-change section 163(j) limit) of its post-change BIE.

(*5*) *Deduction of BIE due to surplus post-change section 163(j) limit.* After applying paragraph (b)(4)(ii)(C) of this section, X has $20 of pre-change BIE that has not been deducted ($250 − $230) and a surplus post-change section 163(j) limit of $40 ($140 − $100). As a result, pursuant to paragraph (b)(4)(ii)(D) of this section, X deducts its remaining $20 of pre-change BIE. (If, after applying paragraph (b)(4)(ii)(C) of this section, X instead had $20 of post-change BIE that had not yet been deducted and a $40 surplus pre-change section 163(j) limit, then X would deduct its remaining $20 of post-change BIE pursuant to paragraph (b)(4)(ii)(D) of this section.)

(iv) *Example 2—Potential deduction of disallowed business interest expense carryforwards.* The facts are the same as in paragraph (b)(4)(iii)(A) of this section, except that, as of January 1, 2021, X has $90 of disallowed business interest expense carryforwards and $150 (rather than $250) of pre-change BIE. X's pre-change section 163(j) limit and post-change section 163(j) limit are the same as in paragraph (b)(4)(iii)(B)(*3*) of this section. Pursuant to paragraph (b)(4)(ii)(C) of this section, X deducts all $150 of its pre-change BIE and all $100 of its post-change BIE. X has no remaining pre-change BIE or post-change BIE to deduct under paragraph (b)(4)(ii)(D) of this section. Paragraph (b)(4)(ii)(E) of this section applies because X has $80 of excess pre-change section 163(j) limit ($230 − $150) and $40 of excess post-change section 163(j) limit ($140 − $100). Under paragraph (b)(4)(ii)(E) of this section, X allocates $60 of its disallowed business interest expense carryforwards to the pre-change period ($90 × ($80/($80 + $40))) and $30 of its disallowed business interest expense carryforwards to the post-change period ($90 × ($40/($80 + $40))). As provided in paragraph (b)(4)(ii)(F) of this section, X deducts all $60 of its disallowed business interest expense carryforwards that are allocated to the pre-change period; subject to the application of section 382, X deducts all $30 of its disallowed business interest expense carryforwards that are allocated to the post-change period.

* * * * *

(h) *Applicability date*—(1) *In general.* This section applies to ownership changes occurring on or after June 22, 1994.

(2) *Ownership changes.* Paragraphs (a) and (b)(1) and (4) of this section apply with respect to an ownership change occurring during a taxable year beginning on or after November 13, 2020. For ownership changes occurring during a taxable year beginning before November 13, 2020, see § 1.382–6 as contained in 26 CFR part 1, revised April 1, 2019. However, taxpayers and their related parties, within the meaning of sections 267(b) and 707(b)(1), may choose to apply the rules of this section to testing dates occurring during a taxable year beginning after December 31, 2017, so long as the taxpayers and their related parties consistently apply the rules of this section, the section 163(j) regulations (as defined in § 1.163(j)–1(b)(37)), §§ 1.382–1, 1.382–2, 1.382–5, 1.383–0, and 1.383–1, and, if applicable, §§ 1.263A–9, 1.263A–15, 1.381(c)(20)–1, 1.469–9, 1.469–11, 1.704–1, 1.882–5, 1.1362–3, 1.1368–1, 1.1377–1, 1.1502–13, 1.1502–21, 1.1502–36, 1.1502–79, 1.1502–91 through 1.1502–99 (to the extent they effectuate the rules of §§ 1.382–2, 1.382–5, 1.382–6, 1.382–7, and 1.383–1), and 1.1504–4, to taxable years beginning after December 31, 2017.

■ **Par. 11.** Section 1.382–7 is amended by adding paragraphs (c), (d), (e), (f), and (g) to read as follows:

§ 1.382–7 Built-in gains and losses.

* * * * *

(c) [Reserved]

(d) *Special rules.* This paragraph (d) contains special rules regarding the identification of recognized built-in losses.

(1)–(4) [Reserved]

(5) *Section 382 disallowed business interest carryforwards.* Section 382 disallowed business interest carryforwards are not treated as recognized built-in losses.

(e)–(f) [Reserved]

(g) *Applicability dates.*

(1)–(3) [Reserved]

(4) Paragraph (d)(5) of this section. Paragraph (d)(5) of this section applies with respect to an ownership change occurring on or after November 13, 2020. For loss corporations that have undergone an ownership change before or after November 13, 2020, see § 1.382–7 as contained in 26 CFR part 1, revised April 1, 2019. However, taxpayers and their related parties, within the meaning of sections 267(b) and 707(b)(1), may choose to apply the rules of paragraph (d)(5) of this section to testing dates occurring during a taxable year beginning after December 31, 2017.

■ **Par. 12.** Section 1.383–0 is amended by revising paragraph (a) to read as follows:

§ 1.383–0 Effective date.

(a) The regulations in this part under section 383 of the Code (other than the regulations described in paragraph (b) of this section) reflect the amendments made to sections 382 and 383 by the Tax Reform Act of 1986 and the amendments made to section 382 by Public Law 115–97 (2017). See § 1.383–1(j) for effective date rules.

* * * * *

■ **Par. 13.** Section 1.383–1 is amended by:

■ 1. In paragraph (a):

■ a. Adding entries for paragraphs (d)(1)(i) and (ii);

■ b. Revising the entries for paragraphs (e)(3) and (j);

■ c. Adding entries for paragraphs (j)(1) and (2); and

■ d. Removing the entry for paragraph (k).

■ 2. Removing ''(iv)'' and adding ''(v)'' in its place in paragraph (c)(6)(i)(B).

■ 3. Revising paragraphs (c)(6)(ii) and (d)(1).

■ 4. Removing the commas and adding semicolons in their place at ends of paragraphs (d)(2)(i), (ii), and (vi).

■ 5. Revising paragraph (d)(2)(iii).

■ 6. Redesignating paragraphs (d)(2)(iv) through (vii) as paragraphs (d)(2)(v) through (viii), respectively.

■ 7. Adding a new paragraph (d)(2)(iv).

■ 8. Revising newly redesignated paragraph (d)(2)(v) and paragraph (d)(3)(ii).

■ 9. Removing ''(iv)'' and adding ''(v)'' in its place in paragraph (e)(1).

■ 10. In paragraph (e)(2):

■ a. Removing ''sections 11(b)(2) and (15)'' and adding ''section 15'' in its place in the fourth sentence; and

■ b. Removing the last two sentences.

■ 11. Removing and reserving paragraph (e)(3).

■ 12. In paragraph (f):

■ a. Removing *Example 4;*

■ b. Designating *Examples 1* through *3* as paragraphs (f)(1) through (3), respectively; and

■ c. Revising newly designated paragraphs (f)(2) and (3).

■ 13. In the last sentence of paragraph (g), removing ''(*e.g.,* 0.34 for taxable years beginning in 1989)''.

■ 14. In paragraph (j):

■ a. Revising the subject heading;

■ b. Designating the text of paragraph (j) as paragraph (j)(1) and adding a heading to newly designated paragraph (j)(1); and

■ c. Adding paragraph (j)(2).

■ 15. Removing paragraph (k).

The revisions and additions read as follows:

§ 1.383–1 Special limitations on certain capital losses and excess credits.

(a) * * *

* * * * *

(d) * * *

(1) * * *

(i) In general.

(ii) Ordering rule for losses or credits from same taxable year.

* * * * *

(e) * * *

(3) [Reserved]

* * * * *

(j) Applicability date.

(1) In general.

(2) Interaction with section 163(j).

* * * * *

(c) * * *

(6) * * *

(ii) *Example.* L, a new loss corporation, is a calendar-year taxpayer. L has an ownership change on December 31, 2021. For 2022, L has taxable income (prior to the use of any pre-change losses) of $100,000. In addition, L has a section 382 limitation of $25,000, a pre-change net operating loss carryover of $12,000, a pre-change general business credit carryforward under section 39 of $50,000, and no items described in § 1.383–1(d)(2)(i) through (iv). L's section 383 credit limitation for 2022 is the excess of its regular tax liability computed after allowing a $12,000 net operating loss deduction (taxable income of $88,000; regular tax liability of $18,480), over its regular tax liability computed after allowing an additional deduction in the amount of L's section 382 limitation remaining after the application of paragraphs (d)(2)(i) through (v) of this section, or $13,000 (taxable income of $75,000; regular tax liability of $15,750). L's section 383 credit limitation is therefore $2,730 ($18,480 minus $15,750).

(d) * * *

(1) *In general*—(i) *General rule.* The amount of taxable income of a new loss corporation for any post-change year that may be offset by pre-change losses shall not exceed the amount of the section 382 limitation for the post-change year. The amount of the regular tax liability of a new loss corporation for any post-change year that may be offset by pre-change credits shall not exceed the amount of the section 383 credit limitation for the post-change year.

(ii) *Ordering rule for losses or credits from same taxable year.* A loss corporation's taxable income is offset first by losses subject to a section 382 limitation, to the extent the section 382 limitation for that taxable year has not yet been absorbed, before being offset by losses of the same type from the same taxable year that are not subject to a section 382 limitation. For example, assume that Corporation X has an ownership change in Year 1 and carries over disallowed business interest expense as defined in § 1.163(j)–1(b)(10), some of which constitutes a section 382 disallowed business interest carryforward, from Year 1 to Year 2. To the extent of its section 163(j) limitation, as defined in § 1.163(j)–1(b)(36), and its remaining section 382 limitation, Corporation X offsets its Year 2 income with the section 382 disallowed business interest carryforward before using any of the disallowed business interest expense that is not a section 382 disallowed business interest carryforward. Similar principles apply to the use of tax credits.

(2) * * *

(iii) Pre-change losses that are described in § 1.382–2(a)(2)(iii), other than losses that are pre-change capital losses, that are recognized and are subject to the section 382 limitation in such post-change year;

(iv)(A) With respect to an ownership change date occurring prior to November 13, 2020, but during the taxable year which includes November 13, 2020, the pre-change loss described in section 382(d)(3);

(B) With respect to an ownership change date occurring on or after November 13, 2020, section 382 disallowed business interest carryforwards (within the meaning of § 1.382–2(a)(7));

(v) Pre-change losses not described in paragraphs (d)(2)(i) through (iv) of this section;

* * * * *

(3) * * *

(ii) *Example.* L, a calendar-year taxpayer, has an ownership change on December 31, 2021. For 2022, L has taxable income of $300,000 and a regular tax liability of $63,000. L has no pre-change losses, but it has a business credit carryforward from 2020 of $25,000. L has a section 382 limitation for 2022 of $50,000. L's section 383 credit limitation is $10,500, an amount equal to the excess of L's regular tax liability ($63,000) over its regular tax liability calculated by allowing an additional deduction of $50,000 ($52,500). Pursuant to the limitation contained in section 38(c), however, L is entitled to use only $9,500 (($63,000 − $25,000) × 25 percent) of its business credit carryforward in 2022. The unabsorbed portion of L's section 382 limitation, $1,000 (computed pursuant to paragraph (e) of this section), is carried forward under section 382(b)(2). The unused portion of L's business credit carryforward, $14,500, is carried forward to the extent provided in section 39.

* * * * *

(f) * * *

(2) *Example 2*—(i) *Facts.* L, a calendar-year taxpayer, has an ownership change on December 31, 2021. For 2022, L has $750,000 of ordinary taxable income (before the application of carryovers) and a section 382 limitation of $1,500,000. L's only carryovers are from pre-2021 taxable years and consist of a $500,000 net operating loss (NOL) carryover, and a $200,000 foreign tax credit carryover (all of which may be used under the section 904 limitation). The NOL carryover is a pre-change loss, and the foreign tax credit carryover is a pre-change credit. L has no other pre-change losses or credits that can be used in 2022.

(ii) *Analysis.* The following computation illustrates the application of this section for 2022:

TABLE 1 TO PARAGRAPH (f)(2)(ii)

1. Taxable income before carryovers	$750,000
2. Pre-change NOL carryover	500,000
3. Section 382 limitation	1,500,000
4. Amount of pre-change NOL carryover that can be used (least of line 1, 2, or 3)	500,000
5. Taxable income (line 1 minus line 4)	250,000
6. Section 382 limitation remaining (line 3 minus line 4)	1,000,000
7. Pre-change credit carryover	200,000
8. Regular tax liability (line 5 × section 11 rates)	52,500
9. Modified tax liability (line 5 minus line 6 (but not less than zero) × section 11 rates)	0
10. Section 383 credit limitation (line 8 minus line 9)	52,500
11. Amount of pre-change credits that can be used in 2022 (lesser of line 7 or line 10)	52,500
12. Amount of pre-change credits to be carried over to 2023 under section 904(c) (line 7 minus line 11)	147,500

TABLE 1 TO PARAGRAPH (f)(2)(ii)—Continued

13. Section 383 credit reduction amount: $52,500/0.21	250,000
14. Section 382 limitation to be carried to 2023 under section 382(b)(2) (line 6 minus line 13)	750,000

(3) *Example 3*—(i) *Facts.* L, a calendar-year taxpayer, has an ownership change on December 31, 2021. L has $80,000 of ordinary taxable income (before the application of carryovers) and a section 382 limitation of $25,000 for 2022, a post-change year. L's only carryover is from a pre-2021 taxable year and is a general business credit carryforward under section 39 in the amount of $10,000 (no portion of which is attributable to the investment tax credit under section 46). The general business credit carryforward is a pre-change credit. L has no other credits which can be used in 2022.

(ii) *Analysis.* The following computation illustrates the application of this section:

TABLE 2 TO PARAGRAPH (f)(3)(ii)

1. Taxable income before carryovers	$80,000
2. Section 382 limitation	25,000
3. Pre-change credit carryover	10,000
4. Regular tax liability (line 1 × section 11 rates)	16,800
5. Modified tax liability ((line 1 minus line 2) × section 11 rates)	11,550
6. Section 383 credit limitation (line 4 minus line 5)	5,250
7. Amount of pre-change credits that can be used (lesser of line 3 or line 6)	5,250
8. Amount of pre-change credits to be carried over to 2023 under sections 39 and 382(l)(2) (line 3 minus line 7)	4,750
9. Regular tax payable (line 4 minus line 7)	11,550
10. Section 383 credit reduction amount: $5,250/0.21	25,000
11. Section 382 limitation to be carried to 2023 under section 382(b)(2) (line 2 minus line 10)	0

* * * * *

(j) Applicability date—(1) *In general.* * * *

(2) *Interaction with section 163(j).* Paragraphs (c)(6)(i)(B) and (c)(6)(ii), (d)(1), (d)(2)(iii) through (viii), (d)(3)(ii), (e)(1) through (3), (f), and (g) of this section apply with respect to ownership changes occurring during a taxable year beginning on or after November 13, 2020. For loss corporations that have undergone an ownership change during a taxable year beginning before November 13, 2020, see § 1.383–1 as contained in 26 CFR part 1, revised April 1, 2019. However, taxpayers and their related parties, within the meaning of sections 267(b) and 707(b)(1), may choose to apply the rules of this section to an ownership change occurring during a taxable year beginning after December 31, 2017, so long as the taxpayers and their related parties consistently apply either the rules of this section (except paragraph (d)(2)(iv)(B) of this section), the section 163(j) regulations (as defined in § 1.163(j)–1(b)(37)), §§ 1.382–1, 1.382–2, 1.382–5, 1.382–6, 1.382–7, and 1.383–0, and, if applicable, §§ 1.263A–9, 1.263A–15, 1.381(c)(20)–1, 1.469–9, 1.469–11, 1.704–1, 1.882–5, 1.1362–3, 1.1368–1, 1.1377–1, 1.1502–13, 1.1502–21, 1.1502–36, 1.1502–79, 1.1502–91 through 1.1502–99 (to the extent they effectuate the rules of §§ 1.382–2, § 1.382–5, 1.382–6, and 1.383–1), and 1.1504–4; or the rules of this section (except paragraph (d)(2)(iv)(A) of this section), the section 163(j) regulations (as defined in § 1.163(j)–1(b)(37)) and §§ 1.382–1, 1.382–2, 1.382–5, 1.382–6, and 1.383–0, and, if applicable, §§ 1.263A–9, 1.263A–15, 1.381(c)(20)–1, 1.469–9, 1.469–11, 1.704–1, 1.882–5, 1.1362–3, 1.1368–1, 1.1377–1, 1.1502–13, 1.1502–21, 1.1502–36, 1.1502–79, 1.1502–91 through 1.1502–99 (to the extent they effectuate the rules of §§ 1.382–2, 1.382–5, 1.382–6, 1.382–7, and 1.383–1), and 1.1504–4, to those ownership changes.

■ **Par. 14.** Section 1.446–3 is amended by revising paragraphs (g)(4) and (j)(2) to read as follows:

§ 1.446–3 Notional principal contracts.

* * * * *

(g) * * *

(4) *Swaps with significant nonperiodic payments*—(i) *General rule.* Except as provided in paragraph (g)(4)(ii) of this section, a swap with significant nonperiodic payments is treated as two separate transactions consisting of an on-market, level payment swap and a loan. The loan must be accounted for by the parties to the contract independently of the swap. The time value component associated with the loan, determined in accordance with paragraph (f)(2)(iii)(A) of this section, is recognized as interest expense to the payor and interest income to the recipient.

(ii) *Exception for cleared swaps and non-cleared swaps subject to margin or collateral requirements.* Paragraph (g)(4)(i) of this section does not apply to a swap if the contract is described in paragraph (g)(4)(ii)(A) or (B) of this section.

(A) The swap is cleared by a derivatives clearing organization, as such term is defined in section 1a of the Commodity Exchange Act (7 U.S.C. 1a), or by a clearing agency, as such term is defined in section 3 of the Securities Exchange Act of 1934 (15 U.S.C. 78c), that is registered as a derivatives clearing organization under the Commodity Exchange Act or as a clearing agency under the Securities Exchange Act of 1934, respectively, and the derivatives clearing organization or clearing agency requires the parties to the swap to post and collect margin or collateral.

(B) The swap is a non-cleared swap that requires the parties to meet the margin or collateral requirements of a federal regulator or that provides for margin or collateral requirements that are substantially similar to a cleared swap or a non-cleared swap subject to the margin or collateral requirements of a federal regulator. For purposes of this paragraph (g)(4)(ii)(B), the term *federal regulator* means the Securities and Exchange Commission (SEC), the Commodity Futures Trading Commission (CFTC), or a prudential regulator, as defined in section 1a(39) of the Commodity Exchange Act (7 U.S.C. 1a), as amended by section 721 of the Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010, Public Law 111–203, 124 Stat. 1376, Title VII.

(iii) *Coordination with section 163(j).* For the treatment of swaps with significant nonperiodic payments under section 163(j), see § 1.163(j)–1(b)(22)(ii).

* * * * *

(j) * * *

(2) The rules provided in paragraph (g)(4) of this section apply to notional principal contracts entered into on or after September 14, 2021. Taxpayers may choose to apply the rules provided in paragraph (g)(4) of this section to notional principal contracts entered into before September 14, 2021.

■ **Par. 15.** Section 1.469–9 is amended by revising paragraph (b)(2) to read as follows:

§ 1.469–9 Rules for certain rental real estate activities.

* * * * *

(b) * * *

(2) *Real property trade or business.* The following terms have the following meanings in determining whether a trade or business is a real property trade or business for purposes of section 469(c)(7)(C) and this section.

(i) *Real property*—(A) *In general.* The term *real property* includes land, buildings, and other inherently permanent structures that are permanently affixed to land. Any interest in real property, including fee ownership, co-ownership, a leasehold, an option, or a similar interest is real property under this section. Tenant improvements to land, buildings, or other structures that are inherently permanent or otherwise classified as real property under this section are real property for purposes of section 469(c)(7)(C). However, property manufactured or produced for sale that is not real property in the hands of the manufacturer or producer, but that may be incorporated into real property through installation or any similar process or technique by any person after the manufacture or production of such property (for example, bricks, nails, paint, and windowpanes), is not treated as real property in the hands of any person (including any person involved in the manufacture, production, sale, incorporation or installation of such property) prior to the completed incorporation or installation of such property into the real property for purposes of section 469(c)(7)(C) and this section.

(B) *Land.* The term *land* includes water and air space superjacent to land and natural products and deposits that are unsevered from the land. Natural products and deposits, such as plants, crops, trees, water, ores, and minerals, cease to be real property when they are harvested, severed, extracted, or removed from the land. Accordingly, any trade or business that involves the cultivation and harvesting of plants, crops, or certain types of trees in a farming operation as defined in section 464(e), or severing, extracting, or removing natural products or deposits from land is not a real property trade or business for purposes of section 469(c)(7)(C) and this section. The storage or maintenance of severed or extracted natural products or deposits, such as plants, crops, trees, water, ores, and minerals, in or upon real property does not cause the stored property to be recharacterized as real property, and any trade or business relating to or involving such storage or maintenance of severed or extracted natural products or deposits is not a real property trade or business, even though such storage or maintenance otherwise may occur upon or within real property.

(C) *Inherently permanent structure.* The term *inherently permanent structure* means any permanently affixed building or other permanently affixed structure. If the affixation is reasonably expected to last indefinitely, based on all the facts and circumstances, the affixation is considered permanent. However, an asset that serves an active function, such as an item of machinery or equipment (for example, HVAC system, elevator or escalator), is not a building or other inherently permanent structure, and therefore is not real property for purposes of section 469(c)(7)(C) and this section, even if such item of machinery or equipment is permanently affixed to or becomes incorporated within a building or other inherently permanent structure. Accordingly, a trade or business that involves the manufacture, installation, operation, maintenance, or repair of any asset that serves an active function will not be a real property trade or business, or a unit or component of another real property trade or business, for purposes of section 469(c)(7)(C) and this section.

(D) *Building*—(*1*) *In general.* A *building* encloses a space within its walls and is generally covered by a roof or other external upper covering that protects the walls and inner space from the elements.

(*2*) *Types of buildings.* Buildings include the following assets if permanently affixed to land: Houses; townhouses; apartments; condominiums; hotels; motels; stadiums; arenas; shopping malls; factory and office buildings; warehouses; barns; enclosed garages; enclosed transportation stations and terminals; and stores.

(E) *Other inherently permanent structures*—(*1*) *In general.* Other inherently permanent structures include the following assets if permanently affixed to land: Parking facilities; bridges; tunnels; roadbeds; railroad tracks; pipelines; storage structures such as silos and oil and gas storage tanks; and stationary wharves and docks.

(*2*) *Facts and circumstances determination.* The determination of whether an asset is an inherently permanent structure is based on all the facts and circumstances. In particular, the following factors must be taken into account:

(*i*) The manner in which the asset is affixed to land and whether such manner of affixation allows the asset to be easily removed from the land;

(*ii*) Whether the asset is designed to be removed or to remain in place indefinitely on the land;

(*iii*) The damage that removal of the asset would cause to the asset itself or to the land to which it is affixed;

(*iv*) Any circumstances that suggest the expected period of affixation is not indefinite (for example, a lease that requires or permits removal of the asset from the land upon the expiration of the lease); and

(*v*) The time and expense required to move the asset from the land.

(ii) *Other definitions*—(A) through (G) [Reserved]

(H) *Real property operation.* The term *real property operation* means handling, by a direct or indirect owner of the real property, the day-to-day operations of a trade or business, under paragraph (b)(1) of this section, relating to the maintenance and occupancy of the real property that affect the availability and functionality of that real property used, or held out for use, by customers where payments received from customers are principally for the customers' use of the real property. The principal purpose of such business operations must be the provision of the use of the real property, or physical space accorded by or within the real property, to one or more customers, and not the provision of other significant or extraordinary personal services, under § 1.469–1T(e)(3)(iv) and (v), to customers in conjunction with the customers' incidental use of the real property or physical space. If the real property or physical space is provided to a customer to be used to carry on the customer's trade or business, the principal purpose of the business operations must be to provide the customer with exclusive use of the real property or physical space in furtherance of the customer's trade or business, and not to provide other significant or extraordinary personal services to the customer in addition to or in conjunction with the use of the real property or physical space, regardless of whether the customer pays for the services separately. However, for purposes of and with respect to the preceding sentence, other incidental personal services may be provided to the customer in conjunction with the use of real property or physical space, as long as such services are insubstantial in relation to the customer's use of the real property or physical space.

(I) *Real property management.* The term *real property management* means handling, by a professional manager, the day-to-day operations of a trade or business, under paragraph (b)(1) of this section, relating to the maintenance and occupancy of real property that affect the availability and functionality of that property used, or held out for use, by customers where payments received from customers are principally for the customers' use of the real property. The principal purpose of such business operations must be the provision of the use of the real property, or physical space accorded by or within the real property, to one or more customers, and not the provision of other significant or extraordinary personal services, under § 1.469–1T(e)(3)(iv) and (v), to customers in conjunction with the customers' incidental use of the real property or physical space. If the real property or physical space is provided to a customer to be used to carry on the customer's trade or business, the principal purpose of the business operations must be to provide the customer with exclusive use of the real property or physical space in furtherance of the customer's trade or business, and not to provide other significant or extraordinary personal services to the customer in addition to or in conjunction with the use of the real property or physical space, regardless of whether the customer pays for the services separately. However, for purposes of and with respect to the preceding sentence, other incidental personal services may be provided to the customer in conjunction with the use of real property or physical space, as long as such services are insubstantial in relation to the customer's use of the real property or physical space. A professional manager is a person responsible, on a full-time basis, for the overall management and oversight of the real property or properties and who is not a direct or indirect owner of the real property or properties.

(iii) *Examples.* The following examples illustrate the operation of this paragraph (b)(2):

(A) *Example 1.* A owns farmland and uses the land in A's farming business to grow and harvest crops of various kinds. As part of this farming business, A utilizes a greenhouse that is an inherently permanent structure to grow certain crops during the winter months. Under the rules of this section, any trade or business that involves the cultivation and harvesting of plants, crops, or trees is not a real property trade or business for purposes of section 469(c)(7)(C) and this section, even though the cultivation and harvesting of crops occurs upon or within real property. Accordingly, under these facts, A is not engaged in a real property trade or business for purposes of section 469(c)(7)(C) and this section.

(B) *Example 2.* B is a retired farmer and owns farmland that B rents exclusively to C to operate a farm. The arrangement between B and C is a trade or business (under paragraph (b)(1) of this section) where payments by C are principally for C's use of B's real property. B also provides certain farm equipment for C's use. However, C is solely responsible for the maintenance and repair of the farm equipment along with any costs associated with operating the equipment. B also occasionally provides oral advice to C regarding various aspects of the farm operation, based on B's prior experience as a farmer. Other than the provision of this occasional advice, B does not provide any significant or extraordinary personal services to C in connection with the rental of the farmland to C. Under these facts, B is engaged in a real property trade or business (which does not include the use or deemed rental of any farm equipment) for purposes of section 469(c)(7)(C) and this section, and B's oral advice is an incidental personal service that B provides in conjunction with C's use of the real property. Nevertheless, under these facts, C is not engaged in a real property trade or business for purposes of section 469(c)(7)(C) and this section because C is engaged in the business of farming.

(C) *Example 3.* D owns a building in which D operates a restaurant and bar. Even though D provides customers with use of the physical space inside the building, D is not engaged in a trade or business where payments by customers are principally for the use of real property or physical space. Instead, the payments by D's customers are principally for the receipt of significant or extraordinary personal services (under § 1.469–1T(e)(3)(iv) and (v)), mainly food and beverage preparation and presentation services, and the use of the physical space by customers is incidental to the receipt of these personal services. Under the rules of this section, any trade or business that involves the provision of significant or extraordinary personal services to customers in conjunction with the customers' incidental use of real property or physical space is not a real property trade or business, even though the business operations occur upon or within real property. Accordingly, under these facts, D is not engaged in a real property trade or business for purposes of section 469(c)(7)(C) and this section.

(D) *Example 4.* E owns a majority interest in an S corporation, X, that is engaged in the trade or business of manufacturing industrial cooling systems for installation in commercial buildings and for other uses. E also owns a majority interest in an S corporation, Y, that purchases the industrial cooling systems from X and that installs, maintains, and repairs those systems in both existing commercial buildings and commercial buildings under construction. Under the rules of this section, any trade or business that involves the manufacture, installation, operation, maintenance, or repair of any machinery or equipment that serves an active function will not be a real property trade or business (or a unit or component of another real property trade or business) for purposes of section 469(c)(7)(C) and this section, even though the machinery or equipment will be permanently affixed to real property once it is installed. In this case, the industrial cooling systems are machinery or equipment that serves an active function. Accordingly, under these facts, E, X and Y will not be treated as engaged in one or more real property trades or businesses for purposes of section 469(c)(7)(C) and this section.

(E) *Example 5.* (*1*) F owns an interest in P, a limited partnership. P owns and operates a luxury hotel. In addition to providing rooms and suites for use by customers, the hotel offers many additional amenities such as in-room food and beverage service, maid and linen service, parking valet service, concierge service, front desk and bellhop service, dry cleaning and laundry service, and in-room barber and hairdresser service. P contracted with M to provide maid and janitorial services to P's hotel. M is an S corporation principally engaged in the trade or business of providing maid and janitorial services to various types of businesses, including hotels. G is a professional manager employed by M who handles the day-to-day business operations relating to M's provision of maid and janitorial services to M's various customers, including P.

(*2*) Even though the personal services that P provides to the customers of its hotel are significant personal services under § 1.469–1T(e)(3)(iv), the principal purpose of P's hotel business operations is the provision of use of the hotel's rooms and suites to customers, and not the provision of the significant personal services to P's customers in conjunction with the customers' incidental use of those rooms or suites. The provision of these significant personal services by P to P's customers is incidental to the customers' use of the hotel's real property. Accordingly, under these facts, F is treated as owning an interest in a real property trade or business conducted by or through P and P is treated as engaged in a real property trade or business for purposes of section 469(c)(7)(C) and this section.

(*3*) With respect to the maid and janitorial services provided by M, M's operations affect the availability and functionality of real property used, or held out for use, by customers in a trade or business where payments by customers are principally for the use of real property (in this case, P's hotel). However, M does not operate or manage real property. Instead, M is engaged in a trade or business of providing maid and janitorial services to customers, such as P, that are engaged in real property trades or businesses. Thus, M's business operations are merely ancillary to real property trades or businesses. Therefore, M is not engaged in real property operations or management as defined in this section. Accordingly, under these facts, M is not engaged in a real property trade or business under section 469(c)(7)(C) and this section.

(*4*) With respect to the day-to-day business operations that G handles as a professional manager of M, the business operations that G manages is not the provision of use of P's hotel rooms and suites to customers. G does not operate or manage real property. Instead, G manages the provision of maid and janitorial services to customers, including P's hotel. Therefore, G is not engaged in real property management as defined in this section. Accordingly, under these facts, G is not engaged in a real property trade or business under section 469(c)(7)(C) and this section.

* * * * *

■ **Par. 16.** Section 1.469–11 is amended by:

■ 1. Revising the section heading;

■ 2. Removing the period at the end of paragraph (a)(1) and adding a semicolon in its place;

■ 3. Revising paragraph (a)(3);

■ 4. Redesignating paragraphs (a)(4) and (5) as paragraphs (a)(5) and (6), respectively; and

■ 5. Adding a new paragraph (a)(4).

The revision and addition read as follows:

§ 1.469–11 Applicability date and transition rules.

(a) * * *

(3) The rules contained in § 1.469–9, other than paragraph (b)(2), apply for taxable years beginning on or after January 1, 1995, and to elections made under § 1.469–9(g) with returns filed on or after January 1, 1995;

(4) The rules contained in § 1.469–9(b)(2) apply to taxable years beginning on or after November 13, 2020. However, taxpayers and their related parties, under sections 267(b) and 707(b)(1), may choose to apply the rules of § 1.469–9(b)(2) for a taxable year beginning after December 31, 2017, so long as they consistently apply the rules of § 1.469–9(b)(2), the section 163(j) regulations (as defined in § 1.163(j)–1(b)(37)), and, if applicable, §§ 1.263A–9, 1.263A–15, 1.381(c)(20)–1, 1.382–1, 1.382–2, 1.382–5, 1.382–6, 1.382–7, 1.383–0, 1.383–1, 1.469–9, 1.704–1, 1.882–5, 1.1362–3, 1.1368–1, 1.1377–1, 1.1502–13, 1.1502–21, 1.1502–79, 1.1502–91 through 1.1502–99 (to the extent they effectuate the rules of §§ 1.382–2, 1.382–5, 1.382–6, 1.382–7, and 1.383–1), and 1.1504–4 to that taxable year;

* * * * *

■ **Par. 17.** Section 1.704–1 is amended by adding paragraph (b)(4)(xi) to read as follows:

§ 1.704–1 Partner's distributive share.

* * * * *

(b) * * *

(4) * * *

(xi) *Section 163(j) excess items.* Allocations of section 163(j) excess items as defined in § 1.163(j)–6(b)(6) do not have substantial economic effect under paragraph (b)(2) of this section and, accordingly, such expenditures must be allocated in accordance with the partners' interests in the partnership. See paragraph (b)(3)(iv) of this section. Allocations of section 163(j) excess items will be deemed to be in accordance with the partners' interests in the partnership if such allocations are made in accordance with § 1.163(j)–6(f).

* * * * *

■ **Par. 18.** Section 1.860C–2 is amended by revising paragraph (b)(2) to read as follows:

§ 1.860C–2 Determination of REMIC taxable income or net loss.

* * * * *

(b) * * *

(2) *Deduction allowable under section 163*—(i) A REMIC is allowed a deduction, determined without regard to section 163(d), for any interest expense accrued during the taxable year.

(ii) For taxable years beginning after December 31, 2017, a REMIC is allowed a deduction, determined without regard to section 163(j), for any interest expense accrued during the taxable year.

* * * * *

■ **Par. 19.** Section 1.1362–3 is amended by:

■ 1. Redesignating the text in paragraph (c)(3) as paragraph (c)(3)(i), adding a subject heading to newly redesignated paragraph (c)(3)(i), and adding paragraph (c)(3)(ii); and

■ 2. Designating *Examples 1* through *4* of paragraph (d) as paragraphs (d)(1) through (d)(4), respectively.

The additions read as follows:

§ 1.1362–3 Treatment of S termination year.

* * * * *

(c) * * *

(3) * * *

(i) *In general.* * * *

(ii) *Application of section 163(j).* For purposes of section 163(j), a separate limitation (as defined in § 1.163(j)–1(b)(36)) applies to each S short year and each C short year. Any items necessary to determine the amount of business interest expense (as defined in § 1.163(j)–1(b)(3)) that are deducted in each S short year or C short year must be allocated between the S short year and C short year in accordance with an allocation methodology provided in section 1362(e).

* * * * *

■ **Par. 20.** Section 1.1368–1 is amended by adding a sentence to the end of paragraph (g)(2)(ii) to read as follows:

§ 1.1368–1 Distributions by S corporations.

* * * * *

(g) * * *

(2) * * *

(ii) * * * In the case of a taxable year for which an election is made under paragraph (g)(2)(i), for purposes of section 163(j), a separate section 163(j) limitation (as defined in § 1.163(j)–1(b)(36)) applies to each separate taxable year. Any items necessary to determine the amount of business interest expense (as defined in § 1.163(j)–1(b)(3)) that are deducted in each separate taxable year must be allocated between the two separate taxable years in accordance with an allocation methodology provided in this paragraph (g).

* * * * *

■ **Par. 21.** Section 1.1377–1 is amended by:

■ 1. Redesignating paragraphs (b)(3)(ii) through (iv) as paragraphs (b)(3)(iii) through (v), respectively; and

■ 2. Adding a new paragraph (b)(3)(ii).

The addition reads as follows:

§ 1.1377–1 Pro rata share.

* * * * *

(b) * * *

(3) * * *

(ii) *Section 163(j).* If a terminating election is made to treat the S corporation's taxable year as consisting of separate taxable years, for purposes of section 163(j), a separate limitation (as defined in § 1.163(j)–1(b)(36)) will apply to each separate taxable year. Any items necessary to determine the amount of business interest expense (as defined in § 1.163(j)–1(b)(3)) that are deducted in each separate taxable year must be allocated between the separate taxable years in accordance with an allocation methodology provided in this section.

* * * * *

■ **Par. 22.** Section 1.1502–13 is amended:

■ 1. In paragraph (a)(6)(ii), under the heading ''Anti-avoidance rules. (§ 1.1502–13(h)(2))'', by:

■ i. Designating *Examples 1* through *5* as entries (i) through (v); and

■ ii. Adding an entry (vi);

■ 2. In paragraph (h)(2) by:

■ a. Designating *Examples 1* through *5* as paragraphs (h)(2)(i) through (v), respectively.

■ b. In newly designated paragraphs (h)(2)(i) through (v):

■ i. Redesignating paragraphs (h)(2)(i)(a) and (b) as paragraphs (h)(2)(i)(A) and (B);

■ ii. Redesignating paragraphs (h)(2)(ii)(a) and (b) as paragraphs (h)(2)(ii)(A) and (B);

■ iii. Redesignating paragraphs (h)(2)(iii)(a) and (b) as paragraphs (h)(2)(iii)(A) and (B);

■ iv. Redesignating paragraphs (h)(2)(iv)(a) and (b) as paragraphs (h)(2)(iv)(A) and (B);

■ v. Redesignating paragraphs (h)(2)(v)(a) and (b) as paragraphs (h)(2)(iv)(A) and (B); and

■ c. Adding paragraph (h)(2)(vi).

The additions read as follows:

§ 1.1502–13 Intercompany transactions.

(a) * * *

(6) * * *

(ii) * * *

Anti-avoidance rules. (§ 1.1502–13(h)(2))

* * * * *

(vi) *Example 6.* Section 163(j) interest limitation.

* * * * *

(h) * * *

(2) * * *

(vi) *Example 6: Section 163(j) interest limitation*—(A) *Facts.* S1 and S2 are members of a consolidated group of which P is the common parent. S1 is engaged in an excepted trade or business, and S2 is engaged in a non-excepted trade or business. If S1 were to lend funds directly to S2 in an intercompany transaction, under § 1.163(j)–10(a)(4)(i), the intercompany obligation of S2 would not be considered an asset of S1 for purposes of § 1.163(j)–10 (concerning allocations of interest and other taxable items between excepted and non-excepted trades or businesses for purposes of section 163(j)). With a principal purpose of avoiding treatment of a lending transaction between S1 and S2 as an intercompany transaction (and increasing the P group's basis in its assets allocable to excepted trades or businesses), S1 lends funds to X (an unrelated third party). X then on-lends funds to S2 on substantially similar terms.

(B) *Analysis.* A principal purpose of the steps undertaken was to avoid treatment of a lending transaction between S1 and S2 as an intercompany transaction. Therefore, under paragraph (h)(1) of this section, appropriate adjustments are made, and the X obligation in the hands of S1 is not treated as an asset of S1 for purposes of § 1.163(j)–10, to the extent of the loan from X to S2.

* * * * *

■ **Par. 23.** Section 1.1502–21 is amended by adding new paragraph (c)(3) to read as follows:

§ 1.1502–21 Net operating losses.

* * * * *

(c) * * *

(3) *Cross-reference.* For rules governing the application of a SRLY limitation to business interest expense for which a deduction is disallowed under section 163(j), see § 1.163(j)–5(d) and (f).

* * * * *

■ **Par. 24.** Section 1.1502–36 is amended by:

■ 1. Revising the second sentence of paragraph (f)(2);

■ 2. Revising the paragraph (h) heading;

■ 3. Designating the text of paragraph (h) as paragraph (h)(1) and adding a heading to newly designated paragraph (h)(1); and

■ 4. Adding paragraph (h)(2).

The revisions and addition read as follows:

§ 1.1502–36 Unified loss rule.

* * * * *

(f) * * *

(2) * * * Such provisions include, for example, sections 163(j), 267(f), and 469, and § 1.1502–13. * * *

* * * * *

(h) *Applicability date*—(1) *In general.* * * *

(2) *Definition in paragraph (f)(2) of this section.* Paragraph (f)(2) of this section applies to taxable years beginning on or after November 13, 2020. For taxable years beginning before November 13, 2020, see § 1.1502–36 as contained in 26 CFR part 1, revised April 1, 2019. However, taxpayers and their related parties, within the meaning of sections 267(b) and 707(b)(1), may choose to apply the rules of this section to a taxable year beginning after December 31, 2017, and before November 13, 2020, so long as the taxpayers and their related parties consistently apply the rules of this section, the section 163(j) regulations (as defined in § 1.163(j)–1(b)(37)), and, if applicable, §§ 1.263A–9, 1.263A–15, 1.381(c)(20)–1, 1.382–1, 1.382–2, 1.382–5, 1.382–6, 1.382–7, 1.383–0, 1.383–1, 1.469–9, 1.469–11, 1.704–1, 1.882–5, 1.1362–3, 1.1368–1, 1.1377–1, 1.1502–13, 1.1502–21, 1.1502–79, 1.1502–91 through 1.1502–99 (to the extent they effectuate the rules of §§ 1.382–2, 1.382–5, 1.382–6, 1.382–7, and 1.383–1), and 1.1504–4, to that taxable year.

■ **Par. 25.** Section 1.1502–79 is amended by adding paragraph (f) to read as follows:

§ 1.1502–79 Separate return years.

* * * * *

(f) *Disallowed business interest expense carryforwards.* For the treatment of disallowed business interest expense carryforwards (as defined in § 1.163(j)–1(b)(11)) of a member arising in a separate return limitation year, see § 1.163(j)–5(d) and (f).

■ **Par. 26.** Section 1.1502–90 is amended by revising the entry for § 1.1502–98 and adding an entry for § 1.1502–99(d) to read as follows:

§ 1.1502–90 Table of contents.

* * * * *

§ 1.1502–98 Coordination with sections 383 and 163(j).

§ 1.1502–99 Effective dates.

* * * * *

(d) Application to section 163(j).

■ **Par. 27.** Section 1.1502–91 is amended by revising paragraph (e)(2) to read as follows:

§ 1.1502–91 Application of section 382 with respect to a consolidated group.

* * * * *

(e) * * *

(2) *Example*—(i) *Facts.* The L group has a consolidated net operating loss arising in Year 1 that is carried over to Year 2. The L loss group has an ownership change at the beginning of Year 2.

(ii) *Analysis.* The net operating loss carryover of the L loss group from Year 1 is a pre-change consolidated attribute because the L group was entitled to use the loss in Year 2 and therefore the loss was described in paragraph (c)(1)(i) of this section. Under paragraph (a)(2)(i) of this section, the amount of consolidated taxable income of the L group for Year 2 that may be offset by this loss carryover may not exceed the consolidated section 382 limitation of the L group for that year. See § 1.1502–93 for rules relating to the computation of the consolidated section 382 limitation.

(iii) *Business interest expense.* The facts are the same as in the *Example* in paragraph (e)(2)(i) of this section, except that, rather than a consolidated net operating loss, a member of the L group pays or accrues a business interest expense in Year 1 for which a deduction is disallowed in that year under section 163(j) and § 1.163(j)–2(b). The disallowed business interest expense is carried over to Year 2 under section 163(j)(2) and § 1.163(j)–2(c). Thus, the disallowed business interest expense carryforward is a pre-change loss. Under section 163(j), the L loss group is entitled to deduct the carryforward in Year 2; however, the amount of consolidated taxable income of the L group for Year 2 that may be offset by this carryforward may not exceed the consolidated section 382 limitation of the L group for that year. See § 1.1502–98(b) (providing that §§ 1.1502–91 through 1.1502–96 apply section 382 to business interest expense, with appropriate adjustments).

* * * * *

■ **Par. 28.** Section 1.1502–95 is amended in paragraph (b)(4) by:

■ 1. Designating *Examples 1* and *2* as paragraphs (b)(4)(i) and (ii), respectively;

■ 2. In newly designated paragraph (b)(4)(i), redesignating paragraphs (b)(4)(i)(i) and (ii) as paragraphs (b)(4)(i)(A) and (B), respectively;

■ 3. In newly designated paragraph (b)(4)(ii), redesignating paragraphs (b)(4)(ii)(i) and (ii) as paragraphs (b)(4)(ii)(A) and (B), respectively; and

■ 4. Adding two sentences at the end of newly redesignated paragraph (b)(4)(ii)(B).

The additions read follows:

§ 1.1502–95 Rules on ceasing to be a member of a consolidated group (or loss subgroup).

* * * * *

(b) * * *

(4) * * *

(ii) * * *

(B) * * * The analysis would be similar if the L loss group had an ownership change under § 1.1502–92 in Year 2 with respect to disallowed business interest expense paid or accrued by L2 in Year 1 and carried forward under section 163(j)(2) to Year 2 and Year 3. See § 1.1502–98(b) (providing that §§ 1.1502–91 through 1.1502–96 apply section 382 to business interest expense, with appropriate adjustments).

* * * * *

■ **Par. 29.** Section 1.1502–98 is amended by:

■ 1. Revising the section heading;

■ 2. Designating the undesignated text as paragraph (a) and adding a subject heading for newly designated paragraph (a); and

■ 3. Adding paragraph (b).

The revision and additions read as follows:

§ 1.1502–98 Coordination with sections 383 and 163(j).

(a) *Coordination with section 383.* * * *

(b) *Application to section 163(j)*—(1) *In general.* The regulations in this part under sections 163(j), 382, and 383 of the Code contain rules governing the application of section 382 to interest expense governed by section 163(j) and the regulations in this part under section 163(j) of the Code. See, for example, §§ 1.163(j)–11(c), 1.382–2, 1.382–6, 1.382–7, and 1.383–1. The rules contained in §§ 1.1502–91 through 1.1502–96 apply these rules to members of a consolidated group, or corporations that join or leave a consolidated group, with appropriate adjustments. For example, for purposes of §§ 1.1502–91 through 1.1502–96, the term *loss group* includes a consolidated group in which any member is entitled to use a disallowed business interest expense carryforward, as defined in § 1.163(j)–1(b)(11), that did not arise, and is not treated as arising, in a SRLY with regard to that group. Additionally, a reference to net operating loss carryovers in §§ 1.1502–91 through 1.1502–96 generally includes a reference to disallowed business interest expense carryforwards. References to a loss or losses in §§ 1.1502–91 through 1.1502–96 include references to disallowed business interest expense carryforwards or section 382 disallowed business interest carryforwards, within the meaning of § 1.382–2(a)(7), as appropriate.

(2) *Appropriate adjustments.* For purposes of applying the rules in §§ 1.1502–91 through 1.1502–96 to current-year business interest expense (as defined in § 1.163(j)–1(b)(9)), disallowed business interest expense carryforwards, and section 382 disallowed business interest carryforwards, appropriate adjustments are required.

■ **Par. 30.** Section 1.1502–99 is amended by adding paragraph (d) to read as follows:

§ 1.1502–99 Effective/applicability dates.

* * * * *

(d) *Application to section 163(j)*—(1) *Sections 1.382–2 and 1.382–5.* To the extent the rules of §§ 1.1502–91 through 1.1502–99 effectuate the rules of §§ 1.382–2 and 1.382–5, the provisions apply with respect to ownership changes occurring on or after November 13, 2020. For loss corporations that have ownership changes occurring before November 13, 2020, see §§ 1.1502–91 through 1.1502–99 as contained in 26 CFR part 1, revised April 1, 2019. However, taxpayers and their related parties, within the meaning of sections 267(b) and 707(b)(1), may choose to apply the rules of §§ 1.1502–91 through 1.1502–99 to the extent they apply the rules of §§ 1.382–2 and 1.382–5, to ownership changes occurring during a taxable year beginning after December 31, 2017, as well as consistently applying the rules of the §§ 1.1502–91 through 1.1502–99 (to the extent they effectuate the rules of §§ 1.382–6 and 1.383–1), the section 163(j) regulations (as defined in § 1.163(j)–1(b)(37)), and, if applicable, §§ 1.263A–9, 1.263A–15, 1.381(c)(20)–1, 1.382–7, 1.469–9, 1.469–11, 1.704–1, 1.882–5, 1.1362–3, 1.1368–1, 1.1377–1, 1.1502–13, 1.1502–21, 1.1502–79, and 1.1504–4, to that taxable year.

(2) *Sections 1.382–6 and 1.383–1.* To the extent the rules of §§ 1.1502–91 through 1.1502–98 effectuate the rules of §§ 1.382–6 and 1.383–1, the provisions apply with respect to ownership changes occurring during a taxable year beginning on or after November 13, 2020. For the application of these rules to an ownership change with respect to an ownership change

occurring during a taxable year beginning before November 13, 2020, see §§ 1.1502–91 through 1.1502–99 as contained in 26 CFR part 1, revised April 1, 2019. However, taxpayers and their related parties, within the meaning of sections 267(b) and 707(b)(1), may choose to apply the rules of §§ 1.1502–91 through 1.1502–99 (to the extent that those rules effectuate the rules of §§ 1.382–6 and 1.383–1), to ownership changes occurring during a taxable year beginning after December 31, 2017, so long as the taxpayers and their related parties consistently apply the rules of 1.1502–91 through 1.1502–99 (to the extent that those rules effectuate the rules of §§ 1.382–2 and 1.382–5), the section 163(j) regulations (as defined in § 1.163(j)–1(b)(37)), and, if applicable, §§ 1.263A–9, 1.263A–15, 1.381(c)(20)–1, 1.382–7, 1.469–9, 1.469–11, 1.704–1, 1.882–5, 1.1362–3, 1.1368–1, 1.1377–1, 1.1502–13, 1.1502–21, 1.1502–36, 1.1502–79, and 1.1504–4, to a taxable year beginning after December 31, 2017.

■ **Par. 31.** Section 1.1504–4 is amended by:

■ 1. Removing ''163(j), 864(e),'' from the first sentence of paragraph (a)(2) and adding ''864(e)'' in its place; and

■ 2. Adding two sentences at the end of paragraph (i).

The additions read as follows:

§ 1.1504–4 Treatment of warrants, options, convertible obligations, and other similar interests.

* * * * *

(i) * * * Paragraph (a)(2) of this section applies with respect to taxable years beginning on or after November 13, 2020. However, taxpayers and their related parties, within the meaning of sections 267(b) and 707(b)(1), may choose to apply the rules of this section to a taxable year beginning after December 31, 2017, so long as the taxpayers and their related parties consistently apply the rules of this section, the section 163(j) regulations (as defined in § 1.163(j)–1(b)(37)), and, if applicable, §§ 1.263A–9, 1.263A–15, 1.381(c)(20)–1, 1.382–1, 1.382–2, 1.382–5, 1.382–6, 1.382–7, 1.383–0, 1.383–1, 1.469–9, 1.469–11, 1.704–1, 1.882–5, 1.1362–3, 1.1368–1, 1.1377–1, 1.1502–13, 1.1502–21, 1.1502–36, 1.1502–79, 1.1502–91 through 1.1502–99 (to the extent they effectuate the rules of §§ 1.382–2, 1.382–5, 1.382–6, 1.382–7, and 1.383–1), to that taxable year.

Sunita Lough,

Deputy Commissioner for Services and Enforcement.

Approved: July 14, 2020.

David J. Kautter,

Assistant Secretary of the Treasury (Tax Policy).

BILLING CODE 4830–01–P

DEPARTMENT OF THE TREASURY

Internal Revenue Service

26 CFR Part 1

[REG–107911–18]

RIN 1545–BP73

Limitation on Deduction for Business Interest Expense; Allocation of Interest Expense by Passthrough Entities; Dividends Paid by Regulated Investment Companies; Application of Limitation on Deduction for Business Interest Expense to United States Shareholders of Controlled Foreign Corporations and to Foreign Persons With Effectively Connected Income

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Notice of proposed rulemaking.

SUMMARY: This notice of proposed rulemaking provides rules concerning the limitation on the deduction for business interest expense after amendment of the Internal Revenue Code (Code) by the provisions commonly known as the Tax Cuts and Jobs Act, which was enacted on December 22, 2017, and the Coronavirus Aid, Relief, and Economic Security Act, which was enacted on March 27, 2020. Specifically, these proposed regulations address application of the limitation in contexts involving passthrough entities, regulated investment companies (RICs), United States shareholders of controlled foreign corporations, and foreign persons with effectively connected income in the United States. These proposed regulations also provide guidance regarding the definitions of real property development, real property redevelopment, and a syndicate. These proposed regulations affect taxpayers that have business interest expense, particularly passthrough entities, their partners and shareholders, as well as foreign corporations and their United States shareholders and foreign persons with effectively connected income. These proposed regulations also affect RICs that have business interest income, RIC shareholders that have business interest expense, and members of a consolidated group.

DATES: Written or electronic comments and requests for a public hearing must be received by November 2, 2020, which is 60 days after the date of filing for public inspection with the Office of the Federal Register.

ADDRESSES: Commenters are strongly encouraged to submit public comments electronically. Submit electronic submissions via the Federal eRulemaking Portal at *www.regulations.gov* (indicate IRS and REG–107911–18) by following the online instructions for submitting comments. Once submitted to the Federal eRulemaking Portal, comments cannot be edited or withdrawn. The IRS expects to have limited personnel available to process public comments that are submitted on paper through mail. The Department of the Treasury (Treasury Department) and the IRS will publish for public availability any comment submitted electronically, and when practicable on paper, to its public docket.

Send paper submissions to: CC:PA:LPD:PR (REG–107911–18), Room 5203, Internal Revenue Service, P.O. Box 7604, Ben Franklin Station, Washington, DC 20044.

FOR FURTHER INFORMATION CONTACT: Concerning § 1.163(j)–1, Steven Harrison, (202) 317–6842, Michael Chin, (202) 317–6842 or John Lovelace, (202) 317–5363; concerning § 1.163(j)–2, Sophia Wang, (202) 317–4890 or John Lovelace, (202) 317–5363, concerning § 1.163–14, § 1.163(j)–6, or § 1.469–9, William Kostak, (202) 317–5279 or Anthony McQuillen, (202) 317–5027; concerning § 1.163–15, Sophia Wang, (202) 317–4890; concerning § 1.163(j)–7 or § 1.163(j)–8, Azeka J. Abramoff, (202) 317–3800 or Raphael J. Cohen, (202) 317–6938, concerning § 1.1256(e)–2, Sophia Wang, (202) 317–4890 or Pamela Lew, (202) 317–7053; concerning submissions of comments and/or requests for a public hearing, Regina L. Johnson, (202) 317–5177 (not toll-free numbers).

SUPPLEMENTARY INFORMATION:

Background

This document contains proposed amendments to the Income Tax Regulations (26 CFR part 1) under sections 163 (in particular section 163(j)), 469 and 1256(e) of the Code. Section 163(j) was amended as part of Public Law 115–97, 131 Stat. 2054 (December 22, 2017), commonly referred to as the Tax Cuts and Jobs Act (TCJA), and the Coronavirus Aid, Relief, and Economic Security Act, Public Law 116–136 (2020) (CARES Act). Section 13301(a) of the TCJA amended section 163(j) by removing prior section 163(j)(1) through (9) and adding section 163(j)(1) through (10). The provisions of section 163(j) as amended by section 13301 of the TCJA are effective for tax years beginning after December 31, 2017. The CARES Act further amended section 163(j) by redesignating section 163(j)(10), as amended by the TCJA, as new section 163(j)(11), and adding a new section 163(j)(10) providing special rules for applying section 163(j) to taxable years beginning in 2019 or 2020.

Section 163(j) generally limits the amount of business interest expense (BIE) that can be deducted in the current taxable year (also referred to in this Preamble as the current year). Under section 163(j)(1), the amount allowed as a deduction for BIE is limited to the sum of (1) the taxpayer's business interest income (BII) for the taxable year; (2) 30 percent of the taxpayer's adjusted taxable income (ATI) for the taxable year (30 percent ATI limitation); and (3) the taxpayer's floor plan financing interest expense for the taxable year (in sum, the section 163(j) limitation). As further described later in this Background section, section 163(j)(10), as amended by the CARES Act, provides special rules relating to the ATI limitation for taxable years beginning in 2019 or 2020. Under section 163(j)(2), the amount of any BIE that is not allowed as a deduction in a taxable year due to the section 163(j) limitation is treated as business interest paid in the succeeding taxable year.

The section 163(j) limitation applies to all taxpayers, except for certain small businesses that meet the gross receipts test in section 448(c) and certain trades or businesses listed in section 163(j)(7). Section 163(j)(3) provides that the section 163(j) limitation does not apply to any taxpayer that meets the gross receipts test under section 448(c), other than a tax shelter prohibited from using the cash receipts and disbursements method of accounting under section 448(a)(3).

Section 163(j)(4) provides special rules for applying section 163(j) in the case of passthrough entities. Section 163(j)(4)(A) requires that the section 163(j) limitation be applied at the partnership level, and that a partner's ATI be increased by the partner's share of excess taxable income, as defined in section 163(j)(4)(C), but not by the partner's distributive share of income, gain, deduction, or loss. Section 163(j)(4)(B) provides that the amount of partnership BIE limited by section 163(j)(1) (EBIE) is carried forward at the partner level. Section 163(j)(4)(B)(ii) provides that EBIE allocated to a partner and carried forward is available to be deducted in a subsequent year only to the extent that the partnership allocates excess taxable income to the partner. As further described later in this Background section, section 163(j)(10), as amended by the CARES Act, provides a special rule for excess business interest expense allocated to a partner in a taxable year beginning in 2019.

Section 163(j)(4)(B)(iii) provides rules for the adjusted basis in a partnership of a partner that is allocated EBIE. Section 163(j)(4)(D) provides that rules similar to the rules of section 163(j)(4)(A) and (C) apply to S corporations and S corporation shareholders.

Section 163(j)(5) and (6) define ''business interest'' and ''business interest income,'' respectively, for purposes of section 163(j). Generally, these terms include interest expense and interest includible in gross income that is properly allocable to a trade or business (as defined in section 163(j)(7)) and do not include investment income or investment expense within the meaning of section 163(d). The legislative history states that ''a corporation has neither investment interest nor investment income within the meaning of section 163(d). Thus, interest income and interest expense of a corporation is properly allocable to a trade or business, unless such trade or business is otherwise explicitly excluded from the application of the provision.'' H. Rept. 115–466, at 386, fn. 688 (2017).

Under section 163(j)(7), the limitation on the deduction for business interest expense in section 163(j)(1) does not apply to certain trades or businesses (excepted trades or businesses). The excepted trades or businesses are the trade or business of providing services as an employee, electing real property businesses, electing farming businesses, and certain regulated utility businesses.

Section 163(j)(8) defines ATI as the taxable income of the taxpayer without regard to the following: Items not properly allocable to a trade or business; business interest and business interest income; net operating loss (NOL) deductions; and deductions for qualified business income under section 199A. ATI also generally excludes deductions for depreciation, amortization, and depletion with respect to taxable years beginning before January 1, 2022, and it includes other adjustments provided by the Secretary of the Treasury.

Section 163(j)(9) defines ''floor plan financing interest'' as interest paid or accrued on ''floor plan financing indebtedness.'' These provisions allow taxpayers incurring interest expense for the purpose of securing an inventory of motor vehicles held for sale or lease to deduct the full expense without regard to the section 163(j) limitation.

Under section 163(j)(10)(A)(i), the amount of business interest that is deductible under section 163(j)(1) for taxable years beginning in 2019 or 2020 is computed using 50 percent, rather than 30 percent, of the taxpayer's ATI for the taxable year (50 percent ATI limitation). A taxpayer may elect not to apply the 50 percent ATI limitation to any taxable year beginning in 2019 or 2020, and instead apply the 30 percent ATI limitation. This election must be made separately for each taxable year. Once the taxpayer makes the election, the election may not be revoked without the consent of the Secretary of the Treasury or his delegate. See section 163(j)(10)(A)(iii).

Sections 163(j)(10)(A)(ii)(I) and 163(j)(10)(A)(iii) provide that, in the case of a partnership, the 50 percent ATI limitation does not apply to partnerships for taxable years beginning in 2019, and the election to not apply the 50 percent ATI limitation may be made only for taxable years beginning in 2020, and may be made only by the partnership. Under section 163(j)(10)(A)(ii)(II), however, a partner treats 50 percent of its allocable share of a partnership's excess business interest expense for 2019 as a business interest expense in the partner's first taxable year beginning in 2020 that is not subject to the section 163(j) limitation (50 percent EBIE rule). The remaining 50 percent of the partner's allocable share of the partnership's excess business interest expense remains subject to the section 163(j) limitation applicable to excess business interest expense carried forward at the partner level. A partner may elect out of the 50 percent EBIE rule.

Section 163(j)(10)(B)(i) allows a taxpayer to elect to substitute its ATI for the last taxable year beginning in 2019 (2019 ATI) for the taxpayer's ATI for a taxable year beginning in 2020 (2020 ATI) in determining the taxpayer's section 163(j) limitation for the taxable year beginning in 2020.

Section 163(j)(11) provides cross-references to provisions requiring that electing farming businesses and electing real property businesses excepted from the section 163(j) limitation use the alternative depreciation system (ADS), rather than the general depreciation system, for certain types of property. The required use of ADS results in the inability of these electing trades or businesses to use the additional first-year depreciation deduction under section 168(k) for those types of property.

On December 28, 2018, the Department of the Treasury (Treasury Department) and the IRS (1) published proposed regulations under section 163(j), as amended by the TCJA, in a notice of proposed rulemaking (REG–106089–18) (2018 Proposed Regulations) in the **Federal Register** (83 FR 67490), and (2) withdrew the notice of proposed rulemaking (1991–2 C.B. 1040) published in the **Federal Register** on June 18, 1991 (56 FR 27907 as corrected by 56 FR 40285 (August 14, 1991)) to implement rules under section 163(j) before amendment by the TCJA. The 2018 Proposed Regulations were issued following guidance announcing and describing regulations intended to be issued under section 163(j). See Notice 2018–28, 2018–16 I.R.B. 492 (April 16, 2018).

A public hearing on the 2018 Proposed Regulations was held on February 27, 2019. The Treasury Department and the IRS also received written comments responding to the 2018 Proposed Regulations (available at *http://www.regulations.gov*). In response to certain comments, the Treasury Department and the IRS are publishing this notice of proposed rulemaking to provide additional proposed regulations (these Proposed Regulations) under section 163(j).

Concurrently with the publication of these Proposed Regulations, the Treasury Department and the IRS are publishing in the Rules and Regulations section of this edition of the **Federal Register** (RIN 1545–BO73) final regulations under section 163(j) (the Final Regulations).

On April 10, 2020, the Treasury Department and the IRS released Revenue Procedure 2020–22, 2020–18 I.R.B. 745, to provide the time and manner of making a late election, or withdrawing an election, under section 163(j)(7)(B) to be an electing real property trade or business or section 163(j)(7)(C) to be an electing farming business for taxable years beginning in 2018, 2019, or 2020. Revenue Procedure 2020–22 also provides the time and manner of making or revoking elections provided by the CARES Act under section 163(j)(10) for taxable years beginning in 2019 or 2020. As described earlier in this Background section, these elections are: (1) To not apply the 50 percent ATI limitation under section 163(j)(10)(A)(iii); (2) to use the taxpayer's 2019 ATI to calculate the taxpayer's section 163(j) limitation for any taxable year beginning in 2020 under section 163(j)(10)(B); and (3) for a partner to elect out of the 50 percent EBIE rule under section 163(j)(10)(A)(ii)(II).

Explanation of Provisions

These Proposed Regulations would provide guidance in addition to the Final Regulations regarding the section 163(j) limitation. These Proposed Regulations would also add or amend regulations under certain other provisions of the Code where necessary to provide conformity across the Income Tax Regulations. A significant number of the terms used throughout these Proposed Regulations are defined in § 1.163(j)–1 of the Final Regulations and discussed in the Explanation of Provisions section of the 2018 Proposed Regulations and the Summary of Comments and Explanation of Revisions section of the Final Regulations. Some of these terms are further discussed in this Explanation of Provisions section as they relate to specific provisions of these Proposed Regulations.

Part I of this Explanation of Provisions describes proposed rules that would allocate interest expense for purposes of sections 469, 163(d), 163(h), and 163(j) in connection with certain transactions involving passthrough entities. Part II provides proposed rules relating to distributions of debt proceeds from any taxpayer account or from cash so that interest expense may be allocated for purposes of sections 469, 163(d), 163(h), and 163(j). Part III describes proposed modifications to the definitions and general guidance in § 1.163(j)–1, including proposed rules permitting taxpayers to apply a different computational method in determining adjustments to tentative taxable income to address sales or other dispositions of depreciable property, stock of a consolidated group member, or interests in a partnership, and proposed rules allowing RIC shareholders to treat certain RIC dividends as interest income for purposes of section 163(j). Part IV describes proposed modifications to § 1.163(j)–6, relating to the applicability of the section 163(j) limitation to passthrough entities, including proposed rules on the applicability of the section 163(j) limitation to trading partnerships and publicly traded partnerships, the application of the section 163(j) limitation in partnership self-charged lending transactions, proposed rules relating to the treatment of excess business interest expense in tiered partnerships, proposed rules relating to partnership basis adjustments upon partner dispositions, proposed rules regarding the election to substitute 2019 ATI for the partnership's 2020 ATI in determining the partnership's section 163(j) limitation for a taxable year beginning in 2020, and proposed rules regarding excess business interest expense allocated to a partner in a taxable year beginning in 2019.

Part V discusses re-proposed rules regarding the application of the section 163(j) limitation to foreign corporations and United States shareholders (as defined in section 951(b) (U.S. shareholders) of controlled foreign corporations (as defined in section 957(a)) (CFCs). Part VI discusses re-proposed rules regarding the application of the section 163(j) limitation to nonresident alien individuals and foreign corporations with effectively connected income in the United States. Part VII describes proposed modifications to the definition of a real property trade or business under § 1.469–9 for purposes of the passive activity loss rules and the definition of an electing real property trade or business under section 163(j)(7)(B). Part VIII describes proposed rules regarding the definition of a ''tax shelter'' for purposes of § 1.163(j)–2 and section 1256(e), as well as proposed rules regarding the election to use 2019 ATI in determining the taxpayer's section 163(j) limitation for a taxable year beginning in 2020. Part IX describes proposed modifications regarding the application of the corporate look-through rules to tiered structures.

I. Proposed § 1.163–14: Allocation of Interest Expense With Respect to Passthrough Entities

Section 1.163–8T provides rules regarding the allocation of interest expense for purposes of applying the passive activity loss limitation in section 469, the investment interest limitation in section 163(d), and the personal interest limitation in section 163(h) (such purposes, collectively, § 1.163–8T purposes). Under § 1.163–8T, debt generally is allocated by tracing disbursements of the debt proceeds to specific expenditures and interest expense associated with debt is allocated for § 1.163–8T purposes in the same manner as the debt to which such interest expense relates. When debt proceeds are deposited to the borrower's account, and the account also contains unborrowed funds, § 1.163–8T(c) provides that the debt generally is allocated to expenditures by treating subsequent expenditures from the account as made first from the debt proceeds to the extent thereof. The rules further provide that if the proceeds of two or more debts are deposited in the account, the proceeds are treated as expended in the order in which they were deposited. In addition to these rules, § 1.163–8T also provides specific rules to address reallocation of debt, repayments and refinancing.

The preamble to § 1.163–8T (52 FR 24996) stated that ''interest expense of partnerships and S corporations, and of partners and S corporation shareholders, is generally allocated in the same manner as the interest expense of other taxpayers.'' The preamble acknowledged the need for special rules for debt financed distributions to owners of partnerships and S corporations, and for cases in which taxpayers incur debt to acquire or increase their capital interest in the passthrough entity, but reserved on these issues and requested comments.

In a series of notices, the Treasury Department and the IRS provided further guidance with respect to the allocation of interest expense in connection with certain transactions involving passthrough entities and owners of passthrough entities. See Notice 88–20, 1988–1 C.B. 487, Notice 88–37, 1988–1 C.B. 522, and Notice 89–35, 1989–1 C.B. 675. Specifically, Notice 89–35 provides, in part, rules addressing the treatment of (1) a passthrough entity owner's debt allocated to contributions to, or purchases of, interests in a passthrough entity (debt-financed contributions or acquisitions), and (2) passthrough entity debt allocated to distributions by the entity to its owners (debt-financed distributions).

In the case of a debt-financed acquisition of an interest in a passthrough entity by purchase (rather than by way of a contribution to the capital of the entity), Notice 89–35 provides that the interest expense of the owner of the passthrough entity, for § 1.163–8T purposes, is allocated among the assets of the entity using any reasonable method. A reasonable method for this purpose includes, for example, allocating the debt among all of the assets of the passthrough entity based on the fair market value, the book value, or the adjusted basis of the assets, reduced by the amount of any debt of the entity or the amount of any debt that the owner of the entity allocates to such assets. Notice 89–35 also provides that interest expense on debt proceeds allocated to a contribution to the capital of a passthrough entity shall be allocated using any reasonable method for § 1.163–8T purposes. For this purpose, any reasonable method includes allocating the debt among the assets of the passthrough entity or tracing the debt proceeds to the expenditures of the passthrough entity.

In the case of debt-financed distributions, Notice 89–35 provides a general allocation rule and an optional allocation rule. The general allocation rule applies the principles of § 1.163–8T to interest expense associated with debt-financed distributions by applying a tracing approach to determine the character of the interest expense for § 1.163–8T purposes. Under this approach, the debt proceeds and the associated interest expense related to a debt-financed distribution are allocated under § 1.163–8T in accordance with the use of the distributed debt proceeds by the distributee owner of the passthrough entity. To the extent an owner's share of a passthrough entity's interest expense related to the debt-financed distribution exceeds the entity's interest expense on the portion of the debt proceeds distributed to that particular owner, Notice 89–35 provides that the passthrough entity may allocate such excess interest expense using any reasonable method.

The optional allocation rule applicable to debt-financed distributions allows a passthrough entity to allocate distributed debt proceeds and the associated interest expense to one or more expenditures, other than distributions, of the entity that are made during the same taxable year of the entity as the distribution, to the extent that debt proceeds, including other distributed debt proceeds, are not otherwise allocated to such expenditures. Under the optional allocation rule, distributed debt proceeds are traced to the owner's use of the borrowed funds to the extent that such distributed debt proceeds exceed the entity's expenditures, not including distributions, for the taxable year to which debt proceeds are not otherwise allocated.

While the 2018 Proposed Regulations did not include rules to further address the application of § 1.163–8T to passthrough entities, the Treasury Department and the IRS received comments indicating that, for purposes of section 163(j), a tracing rule based on how a passthrough entity owner uses the proceeds of a debt-financed distribution does not align well with the statutory mandate in section 163(j)(4) to apply section 163(j) at the passthrough entity level. Based on these comments and a review of the rules under § 1.163–8T, the Treasury Department and the IRS have determined that additional rules, specific to passthrough entities and their owners, are needed to clarify how the rules under § 1.163–8T work when applied to a passthrough entity and to account for the entity-level limitation under section 163(j)(4).

A. In General

The rules of § 1.163–8T generally apply to partnerships, S corporations, and their owners and the rules in proposed § 1.163–14 would provide additional rules for purposes of applying the § 1.163–8T rules to passthrough entities. As with the rules under § 1.163–8T, proposed § 1.163–14 would provide that interest expense on a debt incurred by a passthrough entity is allocated in the same manner as the debt to which such interest relates is allocated, and that debt is generally allocated by tracing disbursements of the debt proceeds to specific expenditures.

The Treasury Department and the IRS have determined that the scope of § 1.163–8T(a)(4) and (b) is not appropriate in the passthrough entity context. Section 1.163–8T(a)(4) generally provides rules regarding the treatment of interest expense allocated to specific expenditures, which are described in § 1.163–8T(b). However, the list of expenditures described in § 1.163–8T(b) is based on an allocation of interest for purposes of applying sections 163(d), 163(h), and 469, and does not adequately account for the uses of debt proceeds by a passthrough entity (for example, distributions to owners).

To more accurately account for the types of expenditures made by passthrough entities, proposed § 1.163–14(b) would provide rules tailored to passthrough entities. In addition, the framework that proposed § 1.163–14(b) would provide is needed for a passthrough entity to determine how much of its interest expense is allocable to a trade or business for purposes of applying section 163(j). These proposed regulations would apply before a passthrough entity applies any of the rules in section 163(j) (including § 1.163(j)–10).

In application, a passthrough entity would continue to apply the operative rules in § 1.163–8T to allocate debt and the interest expense associated with such debt. However, instead of generally tracing debt proceeds to the types of expenditures described under § 1.163–8T(b) and treating any interest expense associated with such debt proceeds in the manner described under § 1.163–8T(a)(4), a passthrough entity would generally trace debt proceeds to the types of expenditures described under proposed § 1.163–14(b)(2) and treat any interest expense associated with such debt proceeds in the manner provided under proposed § 1.163–14(b)(1).

B. Debt Financed Distributions

Proposed § 1.163–14 would provide that when debt proceeds of a passthrough entity are allocated under § 1.163–8T to distributions to owners of the entity, the debt proceeds distributed to any owner and the associated interest expense shall be allocated under proposed § 1.163–14(d). In general, proposed § 1.163–14(d) would adopt a rule similar to Notice 89–35, but with the following modifications. First, instead of providing that passthrough entities may use the optional allocation rule, proposed § 1.163–14(d) would generally provide that passthrough entities are required to apply a rule that is similar to the optional allocation rule. Second, instead of providing that the passthrough entity may allocate excess interest expense using any reasonable method, proposed § 1.163–14(d) would generally provide that the passthrough entity must allocate excess interest expense based on the adjusted tax basis of the passthrough entity's assets.

Specifically, proposed § 1.163–14(d)(1) would provide a rule based in principle on the optional allocation rule in Notice 89–35. Under this proposed rule, distributed debt proceeds (debt proceeds of a passthrough entity allocated under § 1.163–8T to distributions to owners of the entity) would first be allocated under proposed § 1.163–14(d)(1)(i) to the passthrough entity's available expenditures. Available expenditures are those expenditures of a passthrough entity made in the same taxable year as the distribution, but only to the extent that debt proceeds (including other distributed debt proceeds) are not otherwise allocated to such expenditure. This approach is consistent with the concept that money is fungible (a passthrough entity may be fairly treated as distributing non-debt proceeds rather than debt proceeds and using debt proceeds rather than non-debt proceeds to finance its non-distribution expenditures) and seeks to coordinate the interest allocation rules with the entity-level approach to passthroughs adopted in section 163(j). Where the distributed debt proceeds exceed the passthrough entity's available expenditures, this excess amount of distributed debt proceeds would be allocated to distributions to owners of the passthrough entity (debt financed distributions) under proposed § 1.163–14(d)(1)(ii).

After determining the amount of its distributed debt proceeds allocated to available expenditures and debt financed distributions, a passthrough entity would use this information to determine the tax treatment of each owner's allocable interest expense (that is, an owner's share of interest expense associated with the distributed debt proceeds allocated under section 704(b) or 1366(a)). To aid the passthrough entity and owner in determining the tax treatment of each owner's allocable interest expense, proposed § 1.163–14(d)(2) would provide rules for determining the portion of each owner's allocable interest expense that is (1) debt financed distribution interest expense, (2) expenditure interest expense, and (3) excess interest expense. These three categories of allocable interest expense are mutually exclusive—*e.g.,* a given dollar of allocable interest expense cannot simultaneously be both debt financed distribution interest expense and expenditure interest expense. The computations in proposed § 1.163–14(d)(2) would ensure this outcome.

Once a passthrough entity categorizes each owner's allocable interest expense as described earlier, it would apply proposed § 1.163–14(d)(3) to determine the tax treatment of such interest expense. The manner in which the tax treatment of allocable interest expense is determined depends on how such allocable interest expense was categorized under proposed § 1.163–14(d)(2).

Conceptually, each of the three categories described earlier, as well as the prescribed tax treatment of interest expense in each category, is discussed in Notice 89–35. Debt financed distribution interest expense is referred to in Notice 89–35 as an owner's share of a passthrough entity's interest expense on debt proceeds allocated to such owner. Similar to Notice 89–35, proposed § 1.163–14(d)(3)(i) would generally provide that such interest expense is allocated under § 1.163–8T in accordance with the owner's use of the debt proceeds. Further, expenditure interest expense is referred to in Notice 89–35 as interest expense allocated under the optional allocation rule. Similar to Notice 89–35, proposed § 1.163–14(d)(3)(ii) would generally provide that the tax treatment of such interest expense is determined based on how the distributed debt proceeds were allocated among available expenditures. Finally, both Notice 89–35 and proposed § 1.163–14(d) would use the term excess interest expense to refer to an owner's share of allocable interest expense in excess of the entity's interest expense on the portion of the debt proceeds distributed to that particular owner. Unlike Notice 89–35, which generally allows any reasonable method for determining the tax treatment of excess interest expense, proposed § 1.163–14(d)(3)(iii) would generally provide that the tax treatment of excess interest expense is determined by allocating the distributed debt proceeds among all the assets of the passthrough entity, pro-rata, based on the adjusted basis of such assets.

Proposed § 1.163–14(d)(4) also would provide rules addressing the tax treatment of the interest expense of a transferee owner where the transferor had previously been allocated debt financed distribution interest expense. In the case of a transfer of an interest in a passthrough entity, any debt financed distribution interest expense of the transferor generally shall be treated as excess interest expense by the transferee. However, in the case of a transfer of an interest in a passthrough entity to a person who is related to the transferor, any debt financed distribution interest expense of the transferor shall continue to be treated as debt financed distribution interest expense by the related party transferee, and the tax treatment of such debt financed distribution expense shall be the same to the related party transferee as it was to the transferor. The term related party means any person who bears a relationship to the taxpayer which is described in section 267(b) or 707(b)(1).

The proposed regulations also would include an anti-avoidance rule to recharacterize arrangements entered into with a principal purpose of avoiding the rules of proposed § 1.163–14(d), including the transfer of an interest in a passthrough entity by an owner who treated a portion of its allocable interest expense as debt financed distribution interest expense to an unrelated party pursuant to a plan to transfer the interest back to the owner who received the debt financed distribution interest expense or to a party who is related to the owner who received the debt financed distribution interest expense.

C. Operational Rules

Proposed § 1.163–14 also would include several operational rules that clarify the application of certain rules under § 1.163–8T as they apply to passthrough entities. Proposed § 1.163–14(e) would provide an ordering rule applicable to repayment of debt by passthrough entities similar to the rules in § 1.163–8T(d)(1). Proposed § 1.163–14(g) would provide that any transfer of an ownership interest in a passthrough entity is not a reallocation event for purposes of § 1.163–8T(j), except as provided for in § 1.163–14(d)(4).

D. Debt-Financed Acquisitions

Proposed § 1.163–14(f) would adopt a rule providing that the tax treatment of an owner's interest expense associated with a debt financed acquisition (either by purchase or contribution) will be determined by allocating the debt proceeds among the assets of the entity. The owner would allocate the debt proceeds (1) in proportion to the relative adjusted tax basis of the entity's assets reduced by any debt allocated to such assets, or (2) based on the adjusted basis of the entity's assets in accordance with the rules in § 1.163(j)–10(c)(5)(i) reduced by any debt allocated to such assets. The Treasury Department and the IRS request comments regarding whether asset basis (either adjusted tax basis or adjusted tax basis based on the rules in § 1.163(j)–10(c)(5)(i)) less the amount of debt allocated to assets under §§ 1.163–14 and 1.163–8T is appropriate as the sole method for allocating interest expense in this context.

II. Proposed § 1.163–15: Debt Proceeds Distributed From Any Taxpayer Account or From Cash

Proposed § 1.163–15 supplements the rules in § 1.163–8T regarding debt proceeds distributed from any taxpayer account or from cash proceeds. Section 1.163–8T(c)(4)(iii)(B) provides that a taxpayer may treat any expenditure made from an account within 15 days after the debt proceeds are deposited in such account as being made from such proceeds, regardless of any other rules in § 1.163–8T(c)(4). Under § 1.163–8T(c)(5)(i), if a taxpayer receives debt proceeds in cash, the taxpayer may treat any cash expenditure made within 15 days after receiving the cash as being made from such debt proceeds, and may treat such expenditure as being made on the date the taxpayer received the cash. Commenters have suggested that the 15-day limit in § 1.163–8T could encourage taxpayers to keep separate accounts, rather than commingled accounts for tracing purposes.

In Notice 88–20, 1988–1 C.B. 487, the IRS announced the intention to issue regulations providing that, for debt proceeds deposited in an account on or before December 31, 1987, taxpayers could treat any expenditure made from any account of the taxpayer or from cash within 30 days before or after debt proceeds are deposited in such account or any other account of the taxpayer as made from such proceeds. The Notice states that the regulations also would provide that for debt proceeds received in cash on or before December 31, 1987, taxpayers may treat any expenditure made from any account of the taxpayer or from cash within 30 days before or after debt proceeds are received in cash as made from such proceeds. Section VI of Notice 89–35 adopts the standard described in Notice 88–20 without the date limitation, although no regulations have been issued.

Consistent with Notice 89–35, proposed § 1.163–15 provides that taxpayers may treat any expenditure made from an account of the taxpayer or from cash within 30 days before or after debt proceeds are deposited in any account of the taxpayer or received in cash as made from such proceeds.

III. Proposed Modifications to § 1.163(j)–1(b): Definitions

A. Adjustments to Tentative Taxable Income

Section 1.163(j)–1(b)(1) requires taxpayers to make certain adjustments to tentative taxable income in computing ATI, including adjustments to address certain sales or other dispositions of depreciable property, stock of a consolidated group member (member stock), or interests in a partnership. More specifically, § 1.163(j)–1(b)(1)(ii)(C) provides that, if property is sold or otherwise disposed of, the greater of the allowed or allowable depreciation, amortization, or depletion of the property for the taxpayer (or, if the taxpayer is a member of a consolidated group, the consolidated group) for taxable years beginning after December 31, 2017, and before January 1, 2022 (such years, the EBITDA period), with respect to such property is subtracted from tentative taxable income. Section 1.163(j)–1(b)(1)(ii)(D) provides that, with respect to the sale or other disposition of stock of a member of a consolidated group by another member, the investment adjustments under § 1.1502–32 with respect to such stock that are attributable to deductions described in § 1.163(j)–1(b)(1)(ii)(C) are subtracted from tentative taxable income. Section 1.163(j)–1(b)(1)(ii)(E) provides that, with respect to the sale or other disposition of an interest in a partnership, the taxpayer's distributive share of deductions described in § 1.163(j)–1(b)(1)(ii)(C) with respect to property held by the partnership at the time of such sale or other disposition is subtracted from tentative taxable income to the extent such deductions were allowable under section 704(d). See the preamble to the Final Regulations for a discussion of the rationale for these adjustments.

The preamble to the Final Regulations noted that, in the 2018 Proposed Regulations, § 1.163(j)–1(b)(1)(ii)(C) incorporated a ''lesser of'' standard. In other words, the lesser of (i) the amount of gain on the sale or other disposition of property, or (ii) the amount of depreciation deductions with respect to such property for the EBITDA period, was required to be subtracted from tentative taxable income to determine ATI. As explained in the preamble to the Final Regulations, commenters raised several questions regarding this ''lesser of'' standard. The Final Regulations removed the ''lesser of'' approach due in part to concerns that this approach would be more difficult to administer than the approach reflected in the Final Regulations.

However, the Treasury Department and the IRS recognize that, in certain cases, the ''lesser of'' approach might not create administrative difficulties for taxpayers. Thus, these Proposed Regulations permit taxpayers to choose whether to compute the amount of their adjustment using a ''lesser of'' standard. While the 2018 Proposed Regulations applied this standard solely to dispositions of property, these Proposed Regulations extend this standard to dispositions of partnership interests and member stock to eliminate the discontinuity between the amount of the adjustment for these different types of dispositions. Taxpayers opting to use this alternative computation method must do so for all sales or other dispositions that otherwise would be subject to § 1.163(j)–1(b)(1)(ii)(C), (D), or (E) when the taxpayer computes tentative taxable income.

The Treasury Department and the IRS request comments on the ''lesser of'' approach, including how such an approach should apply to dispositions of member stock and partnership interests.

B. Dividends From Regulated Investment Company (RIC) Shares

Some commenters on the 2018 Proposed Regulations recommended that dividend income from a RIC be treated as interest income for a shareholder in a RIC, to the extent that the income earned by the RIC is interest income. Because a RIC is a subchapter C corporation, section 163(j) applies at the RIC level, and any BIE that is disallowed at the RIC level is carried forward to subsequent years at the RIC level. Furthermore, because a RIC is a subchapter C corporation, a shareholder in a RIC generally does not take into account a share of the RIC's items of income, deduction, gain, or loss. Thus, if a RIC's BII exceeds its BIE in a taxable year, the RIC may not directly allocate the excess amount to its shareholders (unlike a partnership, which may allocate excess BII to its partners).

Under part 1 of subchapter M and other Code provisions, however, a RIC that has certain items of income or gain may pay dividends that a shareholder in the RIC may treat in the same manner (or a similar manner) as the shareholder would treat the underlying items of income or gain if the shareholder realized the items directly. Although this treatment differs fundamentally from the passthrough treatment of partners or trust beneficiaries, this Explanation of Provisions refers to this treatment as ''conduit treatment.'' For example, under sections 871(k)(1) and 881(e)(1), a RIC that has qualified interest income within the meaning of section 871(k)(1)(E) may pay interest-related dividends, and no tax generally would be imposed under sections 871(a)(1)(A) or 881(a)(1) on an interest-related dividend paid to a nonresident alien individual or foreign corporation. Section 871(k)(1) provides necessary limits and procedures that apply to interest-related dividends. The Code provides similar conduit treatment for capital gain dividends in section 852(b)(3), exempt-interest dividends in section 852(b)(5), short-term capital gain dividends in section 871(k)(2), dividends eligible for the dividends received deduction in section 854(b)(1)(A), and qualified dividend income in section 854(b)(1)(B).

In response to comments, these Proposed Regulations provide rules under which a RIC that earns BII may pay section 163(j) interest dividends. A shareholder that receives a section 163(j) interest dividend may treat the dividend as interest income for purposes of section 163(j), subject to holding period requirements and other limitations. A section 163(j) interest dividend that meets these requirements is treated as BII if it is properly allocable to a non-excepted trade or business of the shareholder. A section 163(j) interest dividend is treated as interest income solely for purposes of section 163(j).

The rules under which a RIC may report section 163(j) interest dividends are based on the rules for reporting exempt-interest dividends in section 852(b)(5) and interest-related dividends in section 871(k)(1). The total amount of a RIC's section 163(j) interest dividends for a taxable year is limited to the excess of the RIC's BII for the taxable year over the sum of the RIC's BIE for the taxable year and the RIC's other deductions for the taxable year that are properly allocable to the RIC's BII. For some types of income and gain to which conduit treatment applies, the gross amount of the RIC's income or gain of that type serves as the limit on the RIC's corresponding dividends. It would be inconsistent with the purposes of section 163(j) to permit a RIC to pay section 163(j) interest dividends in an amount based on the RIC's gross BII, unreduced by the RIC's BIE. Further reducing the limit on a RIC's section 163(j) interest dividends by the amount of the RIC's other deductions that are properly allocable to the RIC's BII is consistent with the provisions of the Code that provide conduit treatment for types of interest earned by a RIC. For example, the limit on interest-related dividends in section 871(k)(1)(D) is reduced by the deductions properly allocable to the RIC's qualified interest income. Similarly, the limit on exempt-interest dividends in section 852(b)(5)(A)(iv)(V) is reduced by the amounts disallowed as deductions under sections 265 and 171(a)(2). Taking into account the appropriate share of deductions also reduces the likelihood that the sum of a RIC's items that are eligible for conduit treatment and that are relevant to a particular shareholder will exceed the amount of the dividend distribution paid to the particular shareholder.

These Proposed Regulations contain an additional limit to prevent inconsistent treatment of RIC dividends by RIC shareholders. Revenue Ruling 2005–31, 2005–1 C.B. 1084, allows a RIC to report the maximum amount of capital gain dividends, exempt-interest dividends, interest-related dividends, short-term capital gain dividends, dividends eligible for the dividends received deduction, and qualified dividend income for a taxable year, even if the sum of the reported amounts exceeds the amount of the RIC's dividends for the taxable year. The ruling allows different categories of shareholders (United States persons and nonresident aliens) to report the dividends they receive by giving effect to the conduit treatment of the items relevant to them. A single shareholder, however, generally does not benefit from the conduit treatment of amounts in excess of the dividend paid to that shareholder, because to do so would require the shareholder to include in its taxable income amounts exceeding the dividend it received. Conduit treatment of BII, however, differs from the conduit treatment of other items, because a section 163(j) interest dividend is treated as interest income only for purposes of section 163(j). Thus, absent a limit, a RIC shareholder could obtain an inappropriate benefit by treating a portion of a RIC dividend as interest income for purposes of section 163(j) while treating the same portion of the dividend as another non-interest type of income, such as a dividend eligible for the dividends received deduction under sections 243 and 854(b). Therefore, these Proposed Regulations limit the amount of a section 163(j) interest dividend that a shareholder may treat as interest income for purposes of section 163(j) to the excess of the amount of the RIC dividend that includes the section 163(j) interest dividend over the sum of the portions of that dividend affected by conduit treatment in the hands of that shareholder, other than interest-related dividends under section 871(k)(1)(C) and section 163(j) interest dividends.

Under these Proposed Regulations, a shareholder generally may not treat a section 163(j) interest dividend as interest income unless it meets certain holding period and similar requirements. The holding period requirements do not apply to (i) dividends paid by a RIC regulated as a money market fund under 17 CFR 270.2a–7 or (ii) certain regular dividends paid by a RIC that declares section 163(j) interest dividends on a daily basis and distributes such dividends on a monthly or more frequent basis. The Treasury Department and the IRS request comments on whether there are other categories of section 163(j) interest dividends for which the holding period requirements should not apply or should be modified. The Treasury Department and the IRS also request comments on whether any payments that are substitutes for section 163(j) interest dividends (for example, in a securities lending or sale-repurchase transaction with respect to RIC shares) should be treated for purposes of section 163(j) as interest expense of taxpayers making the payments or interest income to taxpayers receiving the payments. Cf. § 1.163(j)–1(b)(22)(iii)(C) (addressing certain payments that are substitutes for interest).

These Proposed Regulations, to the extent they concern the payment of section 163(j) interest dividends by a RIC and the treatment of such dividends as interest by a RIC shareholder, are proposed to apply to taxable years beginning on or after the date that is 60 days after the date the Treasury decision adopting these regulations as final regulations is published in the **Federal Register**. Solely in the case of section 163(j) interest dividends that would be exempt from the holding period rules under these Proposed Regulations, the RIC paying such dividends and the shareholders receiving such dividends may rely on the provisions of these Proposed Regulations pertaining to section 163(j) interest dividends for taxable years ending on or after September 14, 2020, and beginning before the date that is 60 days after the date the Treasury decision adopting these regulations as final regulations is published in the **Federal Register**.

IV. Proposed § 1.163(j)–6: Application of the Business Interest Expense Deduction Limitations to Partnerships and Subchapter S Corporations

A. Trading Partnerships

The preamble to the 2018 Proposed Regulations states that the business interest expense of certain passthrough entities, including S corporations, allocable to trade or business activities that are described in section 163(d)(5)(A)(ii) (*i.e.,* activities that are per se non-passive under section 469 in which the taxpayer does not materially participate) and illustrated in Revenue Ruling 2008–12, 2008–1 C.B. 520 (March 10, 2008) (trading activities), will be subject to section 163(j) at the entity level, even if the interest expense is later subject to limitation under section 163(d) at the individual partner or shareholder level. Accordingly, at least with respect to partnerships, to the extent that interest expense from a trading activity is limited under section 163(j) and becomes a carryover item of partners who do not materially participate in the trading activity, the interest expense will be treated as investment interest in the hands of those partners for purposes of section 163(d) once the interest expense is no longer limited under section 163(j). As a result, the interest expense would be subject to two section 163 limitations.

The Treasury Department and the IRS received multiple comments questioning this interpretation of section 163(j)(5) and its interaction with section 163(d)(5)(A)(ii). Specifically, commenters stated that the interpretation improperly results in the application of section 163(j) to partnerships engaged in a trade or business activity of trading personal property (including marketable securities) for the account of owners of interests in the activity, as described in § 1.469–1T(e)(6) (trading partnerships). At issue is the extent to which BIE of trading partnerships should be subject to limitation under section 163(j). This issue involves the definition of BIE under section 163(j)(5) and, more specifically, the second sentence of section 163(j)(5), which generally provides that BIE shall not include investment interest within the meaning of section 163(d).

The approach described in the preamble to the 2018 Proposed Regulations interprets section 163(j)(5) as simply providing that interest expense cannot be both BIE and investment interest expense in the hands of the same taxpayer. Under this interpretation, section 163(j)(5) will treat interest as investment interest where conflicting provisions may otherwise subject an amount of interest expense to limitation under both section 163(j) and section 163(d) with respect to the same taxpayer (for example, interest expense allocable to business assets comprising ''working capital'' as that term is used in section 469(e)(1)(B)). In addition, this approach views the partnership as an entity separate from its partners for purposes of section 163(j) to the partnership and section 163(d) at the individual partner level. Several commenters disagreed with this interpretation of section 163(j)(5), asserting that the second sentence of section 163(j)(5) unequivocally provides that interest expense can never be subject to limitation under both section 163(j) and section 163(d) under any circumstances. Based on these comments, the Treasury Department and the IRS considered three alternative approaches for interpreting section 163(j)(5).

One approach would require a partnership engaged in a trading activity to apply section 163(j) at the partnership level to all of the partnership's interest expense from the trading activity. Under this approach, any deductible interest expense from the partnership's trading activity would not be subject to any further limitation under section 163(d) at the individual partner level. This interpretation would respect the partnership as an entity separate from its partners for purposes of section 163(j), but would treat section 163(j)(4) and (5) as superseding section 163(d)(5)(A)(ii).

A second approach would require a partnership engaged in a trading activity to bifurcate its interest expense from a trading activity between partners that materially participate in the trading activity and partners that are passive investors in the activity, and subject only the portion that is allocable to the materially participating partners to limitation under section 163(j). Under this approach, to the extent any interest expense is allocable to passive investors in the trading activity, the interest expense would be subject only to section 163(d) at the partner level and would never be subject to section 163(j) at the partnership level.

A third approach would require a partnership to treat all of the interest expense from a trading activity as investment interest under section 163(d), regardless of whether any individual partners materially participate in the trading activity. Under this approach, the interest expense properly allocable to materially participating partners would never be subject to limitation under section 163(j), even though interest expense allocable to materially participating partners would also not be subject to limitation under section 163(d) at the individual partner level.

After considering the comments, Treasury Department and the IRS have concluded that the approach described in the preamble to the 2018 Proposed Regulations is inconsistent with the statutory language and intent of section 163(j)(5) because the second sentence of section 163(j)(5) specifically states that BIE shall not include investment interest expense. In addition, the Treasury Department and the IRS have determined that the second alternative approach, as described earlier, appears to be the most consistent with the intent of sections 163(d) and 163(j). Accordingly, these Proposed Regulations would interpret section 163(j)(5) as requiring a trading partnership to bifurcate its interest expense from a trading activity between partners that materially participate in the trading activity and partners that are passive investors, and as subjecting only the portion of the interest expense that is allocable to the materially participating partners to limitation under section 163(j) at the partnership level. The portion of interest expense from a trading activity allocable to passive investors will be subject to limitation under section 163(d) at the partner level, as provided in section 163(d)(5)(A)(ii).

In addition, these Proposed Regulations require that a trading partnership bifurcate all of its other items of income, gain, loss and deduction from its trading activity between partners that materially participate in the partnership's trading activity and partners that are passive investors. The portion of the partnership's other items of income, gain, loss or deduction from its trading activity properly allocable to the passive investors in the partnership will not be taken into account at the partnership level as items from a trade or business for purposes of applying section 163(j) at the partnership level. Instead, all such partnership items properly allocable to passive investors will be treated as items from an investment activity of the partnership, for purposes of sections 163(j) and 163(d).

This approach, in order to be effective, adopts the presumption that a trading partnership generally will possess knowledge regarding whether its individual partners are material participants in its trading activity. No rules currently exist requiring a partner to inform the partnership whether the partner has grouped activities of the partnership with other activities of the partner outside of the partnership. Therefore, the partnership might possess little or no knowledge regarding whether an individual partner has made such a grouping. Without this information, a trading partnership may presume that an individual partner is a passive investor in the partnership's trading activity based solely on the partnership's understanding as to the lack of work performed by the partner in that activity, whereas the partner may in fact be treated as a material participant in the partnership's trading activity by grouping that activity with one or more activities of the partner in which the partner materially participates. In order to avoid this result and the potential for abuse, a new rule is proposed for the section 469 activity grouping rules to provide that any activity described in section 163(d)(5)(A)(ii) may not be grouped with any other activity of the taxpayer, including any other activity described in section 163(d)(5)(A)(ii). The Treasury Department and the IRS invite comments regarding whether other approaches may be feasible and preferable to a special rule that prohibits the grouping of trading activities with other activities of a partner, such as adoption of a rule or reporting regime requiring all partners in the partnership to annually certify or report to the partnership whether they are material participants in a grouped activity that includes the partnership's trading activity.

The Treasury Department and the IRS further invite comments regarding whether similar rules should be adopted with respect to S corporations that may also be involved in trading activities, and whether such rules would be compatible with Subchapter S (for example, whether the bifurcation of items from the S corporation's trading activity between material participants and passive investors would run afoul of the second class of stock prohibition).

B. Fungibility of Publicly Traded Partnerships

In order to be freely marketable, each unit of a publicly traded partnership (PTP), as defined in § 1.7704–1, must have identical economic and tax characteristics so that such PTP units are fungible. For PTP units to be fungible, the section 704(b) capital account associated with each unit must be economically equivalent to the section 704(b) capital account of all other units of the same class, and a PTP unit buyer must receive equivalent tax allocations regardless of the specific unit purchased. In other words, from the perspective of a buyer, a PTP unit cannot have variable tax attributes depending on the identity of the PTP unit seller. In general, to achieve fungibility, a PTP (1) makes a section 754 election, pursuant to which a purchaser can insulate itself from its predecessor's allocable section 704(c) gain or loss through a section 743(b) basis adjustment, and (2) adopts the remedial allocation method under section 704(c) for all of its assets.

Pursuant to § 1.704–3(d)(1), a partnership adopts the section 704(c) remedial allocation method to eliminate distortions caused by the application of the ceiling rule, as defined in § 1.704–3(b)(1), under the section 704(c) traditional method. A partnership adopting the remedial allocation method eliminates ceiling rule distortions by creating remedial items and allocating those items to its partners. Under the remedial allocation method, a partnership first determines the amount of section 704(b) book items under § 1.704–3(d)(2) and the partners' section 704(b) distributive shares of such items. The partnership then allocates the corresponding tax items recognized by the partnership, if any, using the traditional method described in § 1.704–3(b)(1). If the ceiling rule causes the section 704(b) book allocation of an item to a noncontributing partner to differ from the tax allocation of the same item to the noncontributing partner, the partnership creates a remedial item of income, gain, loss, or deduction equal to the full amount of the difference and allocates it to the noncontributing partner. The partnership simultaneously creates an offsetting remedial item in an identical amount and allocates it to the contributing partner. In sum, by coupling the remedial allocation method with a section 754 election, PTP units remain fungible from a net tax perspective, regardless of the PTP unit seller's section 704(c) position.

However, even when the remedial allocation method is coupled with a section 754 election, the application of section 163(j) in the partnership context results in variable tax attributes for a buyer depending upon the tax characteristics of the interest held by the seller. The Treasury Department and the IRS have determined this is an inappropriate result for PTPs because PTPs, unlike other partnerships, always require that tax attributes be proportionate to economic attributes to retain the fungibility of their units. The Treasury Department and the IRS have determined that the manner in which section 163(j) applies in the partnership context should not result in the non-fungibility of PTP units. Accordingly, these Proposed Regulations provide a method, solely for PTPs, for applying section 163(j) in a manner that does not result in PTP units lacking fungibility.

Specifically, commenters identified three ways in which the 2018 Proposed Regulations may cause PTP units to be non-fungible. First, the method for allocating excess items may cause PTP units to be non-fungible. In general, under § 1.163(j)–6(f)(2), the allocation of the components of ATI dictate the allocation of a partnership's deductible BIE and section 163(j) excess items. Consequently, the unequal sharing of inside basis, including cost-recovery deductions, amortization, gain, and loss affects the ratio in which a partnership's section 163(j) excess items, as defined in § 1.163(j)–6(b)(6), are shared. A partner's share of section 163(j) excess items affects the tax treatment and economic consequences of the partner. For example, a greater share of excess taxable income enables a partner subject to section 163(j) to deduct more interest.

The Treasury Department and the IRS recognize that a non-pro rata sharing of inside basis could result in a non-pro rata allocation of excess items, which may result in PTP units lacking fungibility. Therefore, these Proposed Regulations would amend § 1.163(j)–6(f)(1)(iii) to provide that, solely for purposes of section 163(j), a PTP allocates section 163(j) excess items in accordance with the partners' shares of corresponding section 704(b) items that comprise ATI.

Second, the required adjustments to partner ATI for partner basis items (*e.g.,* section 743(b) income and loss) may cause PTP units to lack fungibility. A non-pro rata sharing of inside basis may result in a different allocation of partner basis items, as defined in § 1.163(j)–6(b)(2), and section 704(c) remedial items, as defined in § 1.163(j)–6(b)(3), among partners. Pursuant to § 1.163(j)–6(d)(2), partner basis items and remedial items are not taken into account in determining a partnership's ATI under § 1.163(j)–1(b)(1). Instead, partner basis items and section 704(c) remedial items affect the tax treatment and economic consequences of the partner. Similar to the disproportionate sharing of excess items discussed earlier, the disproportionate sharing of partner basis items and section 704(c) remedial items among partners may cause PTP units to lack fungibility.

The Treasury Department and the IRS recognize that a non-pro rata sharing of inside basis could result in different partner basis items and remedial items being allocated to different partners. Therefore, these Proposed Regulations would amend § 1.163(j)–6(e)(2)(ii) to provide that, solely for the purpose of determining remedial items under section 163(j), a PTP either allocates gain or loss that would otherwise be allocated under section 704(c) to a specific partner to all partners based on each partner's section 704(b) sharing ratio, or, for purposes of allocating cost recovery deductions under section 704(c), determines each partner's remedial items based on an allocation of the partnership's inside basis items among its partners in proportion to their share of corresponding section 704(b) items, rather than applying the traditional method as described in § 1.704–3(b).

Third, the treatment of section 704(c) remedial income allocations for taxable years beginning before 2022 may cause PTP units to lack fungibility. For taxable years beginning before January 1, 2022, when tentative taxable income is not reduced by depreciation and amortization deductions for purposes of determining ATI, a buyer acquiring PTP units with section 704(c) remedial income allocations (and an offsetting section 743(b) adjustment) will have an increase to its ATI that exceeds that of a buyer of the same number of otherwise fungible units that is not stepping into section 704(c) remedial income (with no corresponding section 743(b) deduction). While the net amount of the section 743(b) and section 704(c) remedial items is the same to both buyers, for taxable years beginning before January 1, 2022, different units would affect a buyer's ATI differently. The section 704(c) remedial income of a buyer of units with section 704(c) remedial income would be included in its ATI, while the section 743(b) deductions would not. Thus, a buyer of units with section 704(c) remedial income would increase its ATI each year (before 2022). A buyer of units with no section 704(c) remedial income, however, would add back any remedial depreciation and amortization deductions before 2022, and its ATI would be unaffected by the remedial deductions for such years.

The Treasury Department and the IRS recognize that, before 2022, a buyer of PTP units with inherent section 704(c) gain would include any remedial income and would not include section 743(b) deductions in its ATI. Therefore, these Proposed Regulations would amend § 1.163(j)–6(d)(2)(ii) to provide that, solely for purposes of section 163(j), a PTP treats the amount of any section 743(b) adjustment of a purchaser of a partnership unit that relates to a remedial item that the purchaser inherits from the seller as an offset to the related section 704(c) remedial item. The Treasury Department and the IRS request comments as to whether the approaches outlined adequately resolves the fungibility issues created by section 163(j).

C. Treatment of Business Interest Income and Business Interest Expense With Respect to Lending Transactions Between a Partnership and a Partner (Self-Charged Lending Transactions)

The 2018 Proposed Regulations reserved on the treatment of BII and BIE with respect to lending transactions between a partnership and a partner (self-charged lending transactions). The preamble to the 2018 Proposed Regulations requested comments regarding self-charged lending transactions. One commenter recommended the final regulations include rules under § 1.163(j)–6(n) akin to those contained in § 1.469–7 to identify self-charged interest income and expense and further allow such self-charged interest income and expense to be excluded from the definition of BIE and BII under section 163(j)(5) and (6), respectively. The same commenter recommended that the final regulations retain the rule in § 1.163(j)–3(b)(4), as set forth in the 2018 Proposed Regulations, which applies the section 163(j) limitation prior to the application of the passive activity loss rules of section 469. Other commenters recommended the Final Regulations exclude BIE and BII from the section 163(j) calculation where a partner or S-corporation shareholder lends to, or borrows from, a passthrough entity. These commenters recommended that the amount excluded be based on the amount of income or expense recognized by partners or shareholders that are lenders or borrowers, as well as partners or shareholders that are related to a lender or borrower partner within the meaning of section 267(b) because it would be appropriate to exclude the BII and BIE realized by the related parties for purposes of the section 163(j) calculation.

In response to these comments, the Treasury Department and the IRS propose adding a rule in proposed § 1.163(j)–6(n) to provide that, in the case of a lending transaction between a partner (lending partner) and partnership (borrowing partnership) in which the lending partner owns a direct interest (self-charged lending transaction), any BIE of the borrowing partnership attributable to the self-charged lending transaction is BIE of the borrowing partnership for purposes of § 1.163(j)–6. If in a given taxable year the lending partner is allocated EBIE from the borrowing partnership and has interest income attributable to the self-charged lending transaction (interest income), the lending partner shall treat such interest income as an allocation of excess business interest income (EBII) from the borrowing partnership in such taxable year, but only to the extent of the lending partner's allocation of EBIE from the borrowing partnership in such taxable year. To prevent the double counting of BII, the lending partner includes interest income that was re-characterized as EBII pursuant to proposed § 1.163(j)–6(n) only once when calculating the lending partner's own section 163(j) limitation. In cases where the lending partner is not a C corporation, to the extent that any interest income exceeds the lending partner's allocation of EBIE from the borrowing partnership for the taxable year, and such interest income otherwise would be properly treated as investment income of the lending partner for purposes of section 163(d) for that year, such excess amount of interest income will continue to be treated as investment income of the lending partner for that year for purposes of section 163(d).

The Treasury Department and the IRS generally agree that lending partners should not be adversely affected by the fact that, without special rules, the interest income received at the partner level from such lending transactions generally will be treated as investment income if the partner is not engaged in the trade or business of lending money, while the BIE of the partnership will be subject to section 163(j) and potentially limited at the partner level as EBIE. This situation would create a mismatch between the character of the interest income and of the interest expense at the partner level from the same lending transaction. These proposed rules would apply only to items of interest income attributable to the lending transaction and EBIE from the same partnership that arise in the same taxable year of the lending partner. By applying these proposed rules only to correct a mismatch in character that may occur at the partner level during a single taxable year, these proposed rules otherwise ensure that a partnership engaged in a self-charged lending transaction will be subject to the rules of section 163(j) to the same extent regardless of the sources of its loans.

These proposed rules will not apply in the case of an S corporation because BIE of an S corporation is carried over by the S corporation as a corporate-level attribute rather than immediately passed through to its shareholders. In the year such disallowed BIE is deductible at the corporate level, it is not separately stated, and it is not subject to further limitation under section 163(j) at either the S corporation or shareholder level. Therefore, a limited self-charged rule to ensure proper matching of the character of interest income and BIE at the shareholder level is not necessary. This approach is consistent with the treatment of S corporations as separate entities from their owners, both generally and specifically with respect to section 163(j).

However, the Treasury Department and the IRS recognize that issues analogous to the issues faced by partnerships in self-charged lending transactions exist with respect to lending transactions between S corporations and their shareholders. The Treasury Department and the IRS request comments on whether a similar rule is appropriate for S corporations in light of section 163(j)(4)(B) not applying and, if so, how such rule should be structured.

D. Partnership Basis Adjustments Upon Partner Dispositions

In general, a partnership's disallowed BIE is allocated to its partners as EBIE rather than carried forward at the partnership level in order to prevent the trafficking of deductions for BIE carryforwards in the partnership context. To achieve this, section 163(j)(4)(B)(iii)(I) provides that the adjusted basis of a partner in a partnership interest is reduced (but not below zero) by the amount of EBIE allocated to the partner. If a partner disposes of a partnership interest, section 163(j)(4)(B)(iii)(II) provides that the adjusted basis of the partner in the partnership interest is increased immediately before the disposition by the amount of any EBIE that was not treated as BIE paid or accrued by the partner prior to the disposition. Further, under section 163(j)(4)(B)(iii)(II), no deduction shall be allowed to the transferor or transferee for any EBIE resulting in a basis increase.

The Treasury Department and the IRS have determined that the basis increase required by section 163(j)(4)(B)(iii)(II) is not fully descriptive of what is occurring when a partner with EBIE disposes of its partnership interest. If EBIE is not treated as BIE paid or accrued by the partner pursuant to § 1.163(j)–6(g) prior to the partner disposing of its partnership interest (nondeductible EBIE), section 163(j)(4)(B)(iii)(II) treats such nondeductible EBIE as though it were a nondeductible expense of the partnership.

This nondeductible expense is not a nondeductible, non-capitalizable expense under section 705(a)(2)(B). If it were, the partner's basis in its partnership interest at the time of the disposition would already reflect such an expense. Instead, section 163(j)(4)(B)(iii)(II) requires the partner to increase its basis immediately before the disposition—in effect, treating the partner as though the partnership made a payment that decreased the value of the partnership interest but did not affect the partner's basis in its partnership interest. Thus, upon a disposition, section 163(j)(4) treats nondeductible EBIE as though it were a nondeductible, capitalizable expense of the partnership.

While the statute is clear that a partner increases the basis in its partnership interest immediately prior to a disposition by any nondeductible EBIE, it does not specifically state that there must also be a corresponding increase to the basis of partnership assets to account for the nondeductible, capitalized expense (*i.e.,* the nondeductible EBIE). The absence of a corresponding increase to the partnership's basis immediately before the partner's disposition would create distortions that are inconsistent with the intent of both section 163(j) and subchapter K of the Code.

For example, the basis increase attributable to nondeductible EBIE immediately before a liquidating distribution results in less gain recognized under section 731(a)(1) (or more loss recognized under section 731(a)(2)) for the partner disposing of its partnership interest. Consequently, following a liquidating distribution to a partner with EBIE, section 163(j)(4)(B)(iii)(II) causes a reduced section 734(b) adjustment if the partnership has a section 754 election in effect (versus the partner basis increase not occurring), resulting in basis disparity between the partnership's basis in its assets and the aggregate outside basis of the remaining partners.

To illustrate, consider the following example. In Year 1, A, B, and C formed partnership PRS by each contributing $1,000 cash. PRS borrowed $900, causing each partner's basis in PRS to increase by $300. Also in Year 1, PRS purchased Capital Asset X for $200. In Year 2, PRS pays $300 of BIE, all of which is disallowed and treated as EBIE. PRS allocated the $300 of EBIE to its partners, $100 each. Pursuant to § 1.163(j)–6(h)(2), each partner reduced its outside basis by its $100 allocation of EBIE to $1,200. In Year 3, when the fair market value of Capital Asset X is $3,200 and no partner's basis in PRS has changed, PRS distributed $1,900 to C in complete liquidation of C's partnership interest. PRS has a section 754 election in effect in Year 3.

Pursuant to § 1.163(j)–6(h)(3), C increases the adjusted basis of its partnership interest by $100 immediately before the disposition. Thus, C's section 731(a)(1) gain recognized on the disposition of its partnership interest is $900 (($1,900 cash + $300 relief of liabilities) − ($1,200 outside basis + $100 EBIE add-back)). Because the election under section 754 is in effect, PRS has a section 734(b) increase to the basis of its assets of $900 (the amount of section 731(a)(1) gain recognized by C). Under section 755, the entire adjustment is allocated to Capital Asset X. As a result, PRS's basis for Capital Asset X is $1,100 ($200 + $900 section 734(b) adjustment). Following the liquidation of C, PRS's basis in its assets ($1,500 of cash + $1,100 of Capital Asset X) does not equal the aggregate outside basis of partners A and B ($2,700).

The Treasury Department and the IRS have determined that basis disparity resulting from the absence of a corresponding inside basis increase, as described earlier, is an inappropriate result. Accordingly, these Proposed Regulations would provide for a corresponding inside basis increase that would serve as the partnership analog of section 163(j)(4)(B)(iii)(II). Specifically, proposed § 1.163(j)–6(h)(5) would provide that if a partner (transferor) disposes of its partnership interest, the partnership shall increase the adjusted basis of partnership property by an amount equal to the amount of the increase required under § 1.163(j)–6(h)(3), if any, to the adjusted basis of the partnership interest being disposed of by the transferor. Such increase in the adjusted basis of partnership property (§ 1.163(j)–6(h)(5) basis adjustment) shall be allocated among partnership properties in the same manner as a positive section 734(b) adjustment. Because a § 1.163(j)–6(h)(5) basis adjustment is taken into account when determining the gain or loss upon a sale of the asset, a § 1.163(j)–6(h)(5) basis adjustment prevents the shifting of built-in gain to the remaining partners.

These Proposed Regulations would adopt an approach that treats the increase in the adjusted basis of any partnership property resulting from a § 1.163(j)–6(h)(5) basis adjustment as not depreciable or amortizable under any section of the Code, regardless of whether the partnership property allocated such § 1.163(j)–6(h)(5) basis adjustment is otherwise generally depreciable or amortizable. This approach perceives EBIE as a deduction that was disallowed to the partnership (consistent with section 163(j)(4)(B)(iii)(II)), and thus should not result in a depreciable section 734(b) basis adjustment.

The Treasury Department and the IRS request comments on this approach. An alternative approach considered by the Treasury Department and the IRS would treat a § 1.163(j)–6(h)(5) basis adjustment as depreciable or amortizable if it is allocated to depreciable or amortizable property. However, section 163(j)(4)(B)(iii)(II) provides that no deduction shall be allowed to the transferor or transferee for any EBIE resulting in a basis increase to the partner that disposed of its interest. If a § 1.163(j)–6(h)(5) basis adjustment were depreciable or amortizable, a partnership—which can arguably be viewed as a transferee in a transaction in which a partner receives a distribution in complete liquidation of its partnership interest—could effectively deduct an expense that section 163(j)(4)(B)(iii)(II) states is permanently disallowed. The Treasury Department and the IRS request comments on whether treating a § 1.163(j)–6(h)(5) basis adjustment as potentially depreciable or amortizable is consistent with section 163(j)(4)(B)(iii)(II).

E. Treatment of Excess Business Interest Expense in Tiered Partnerships

1. Entity Approach

The preamble to the 2018 Proposed Regulations reserved and requested comments on the application of section 163(j)(4) to tiered partnership structures. Specifically, the preamble to the 2018 Proposed Regulations requested comments regarding whether, in a tiered partnership structure, EBIE should be allocated through an upper-tier partnership to the partners of upper-tier partnership. Additionally, comments were requested regarding how and when the basis of an upper-tier partnership partner should be adjusted when a lower-tier partnership has BIE that is limited under section 163(j).

In response, commenters recommended approaches that, in general, either (1) allocated EBIE through upper-tier partnership to the partners of upper-tier partnership (Aggregate Approach), or (2) did not allocate EBIE through upper-tier partnership to the partners of upper-tier partnership (Entity Approach). Commenters stated that both approaches reasonably implement Congressional intent of applying section 163(j) at the partnership level; however, the Entity

Approach reflects a stronger allegiance to entity treatment of partnerships for purposes of section 163(j). Commenters noted that the ultimate determination of which approach is more appropriate should rest, in large part, on whether partnerships or partners are more able to comply with the provision. The Entity Approach places more of that burden on partnerships, and the Aggregate Approach places more of the burden on partners. Commenters recommended that partnerships are better able to comply with an Entity Approach than partners are able to comply with an Aggregate Approach. Further, because the Entity Approach centers a significant portion of the compliance effort with partnerships, the Entity Approach may increase compliance and simplify Service review.

The Treasury Department and the IRS have concluded that an Entity Approach is the most consistent with the approach taken to partnerships under section 163(j)(4). Further, the Treasury Department and the IRS agree with commenters that partnerships are better able to comply with section 163(j) tiered partnership rules than partners. Accordingly, proposed § 1.163(j)–6(j)(3) would provide that if lower-tier partnership allocates excess business interest expense to upper-tier partnership, then upper-tier partnership reduces its basis in lower-tier partnership pursuant to § 1.163(j)–6(h)(2). Upper-tier partnership partners do not, however, reduce the bases of their upper-tier partnership interests pursuant to § 1.163(j)–6(h)(2) until upper-tier partnership treats such excess business interest expense as business interest expense paid or accrued pursuant to § 1.163(j)–6(g).

Although proposed § 1.163(j)–6(j)(3) would provide that EBIE allocated from a lower-tier partnership to an upper-tier partnership is not subject to further allocation by the upper-tier partnership, such EBIE necessarily reflects a reduction in the value of lower-tier partnership by the amount of the economic outlay that resulted in such EBIE. Accordingly, proposed § 1.163(j)–6(j)(2) would provide that if lower-tier partnership pays or accrues business interest expense and allocates such business interest expense to upper-tier partnership, then both upper-tier partnership and any direct or indirect partners of upper-tier partnership shall, solely for purposes of section 704(b) and the regulations thereunder, treat such business interest expense as a section 705(a)(2)(B) expenditure. Any section 704(b) capital account reduction resulting from such treatment occurs regardless of whether such business interest expense is characterized under this section as excess business interest expense or deductible business interest expense by lower-tier partnership. If upper-tier partnership subsequently treats any excess business interest expense allocated from lower-tier partnership as business interest expense paid or accrued pursuant to § 1.163(j)–6(g), the section 704(b) capital accounts of any direct or indirect partners of upper-tier partnership are not further reduced.

2. Basis and Carryforward Component of EBIE

Some commenters stated that an Entity Approach—that is, the approach these Proposed Regulations would adopt—would result in basis disparity between upper-tier partnership's basis in its assets and the aggregate basis of the upper-tier partners' interests in upper-tier partnership. The Treasury Department and the IRS do not agree. EBIE is neither an item of deduction nor a section 705(a)(2)(B) expense. If an allocation of EBIE from lower-tier partnership results in a reduction of the upper-tier partnership's basis in its lower-tier partnership interest, there is not a net reduction in the tax attributes of the upper-tier partnership. Rather, in such an event, upper-tier partnership merely exchanges one tax attribute (tax basis in its lower-tier partnership interest) for a different tax attribute (EBIE, which, in a subsequent year, could result in either a deduction or a basis adjustment). Thus, basis is preserved in this exchange.

Accordingly, proposed § 1.163(j)–6(j)(4) would provide that if lower-tier partnership allocates excess business interest expense to upper-tier partnership and such excess business interest expense is not suspended under section 704(d), then upper-tier partnership shall treat such excess business interest expense (UTP EBIE) as a nondepreciable capital asset, with a fair market value of zero and basis equal to the amount by which upper-tier partnership reduced its basis in lower-tier partnership pursuant to § 1.163(j)–6(h)(2) due to the allocation of such excess business interest expense. The fair market value of UTP EBIE, described in the preceding sentence, is not adjusted by any revaluations occurring under § 1.704–1(b)(2)(iv)(f).

In addition to generally treating UTP EBIE as having a basis component in excess of fair market value and, thus, built-in loss property, proposed § 1.163(j)–6(j)(4) would also provide that upper-tier partnership shall also treat UTP EBIE as having a carryforward component associated with it. The carryforward component of UTP EBIE shall equal the amount of excess business interest expense allocated from lower-tier partnership to upper-tier partnership under § 1.163(j)–6(f)(2) that is treated as such under § 1.163(j)–6(h)(2) by upper-tier partnership.

The carryforward component of UTP EBIE and the basis component of such UTP EBIE will always be equal immediately following the allocation of such EBIE from lower-tier partnership to upper-tier partnership if, at the time of such allocation, upper-tier partnership was required to reduce its section 704(b) capital account pursuant to proposed § 1.163(j)–6(j)(2) due to such allocation. However, subsequent to such initial allocation of EBIE from lower-tier partnership to upper-tier partnership, disparities between the carryforward component of UTP EBIE and the basis component of such UTP EBIE may arise as a result of proposed § 1.163(j)–6(j)(7).

Similar to the treatment of partner basis items (which do not affect the ATI of a partnership), proposed § 1.163(j)–6(j)(7)(i) would provide that negative basis adjustments under sections 734(b) and 743(b) allocated to UTP EBIE do not affect the carryforward component of such UTP EBIE; rather, negative basis adjustments under sections 734(b) and 743(b) affect only the basis component of such UTP EBIE. Although section 734(b) adjustments do affect a partnership's computation of ATI, the Treasury Department and the IRS have determined that negative section 734(b) adjustments, if allocated to UTP EBIE, should not reduce the carryforward component of such UTP EBIE. The purpose of proposed § 1.163(j)–6(j)(7)—in addition to preventing the duplication of loss—is to make partners indifferent for section 163(j) purposes as to whether a partner exiting upper-tier partnership sells its interest or receives a liquidating distribution from upper-tier partnership. Excluding negative section 734(b) adjustments from proposed § 1.163(j)–6(j)(7) would frustrate this purpose.

3. UTP EBIE Conversion Events

Proposed § 1.163(j)–6(j)(4) would further provide that if an allocation of excess business interest expense from lower-tier partnership is treated as UTP EBIE of upper-tier partnership, upper-tier partnership shall treat such allocation of excess business interest expense from lower-tier partnership as UTP EBIE until the occurrence of an UTP EBIE conversion event described in proposed § 1.163(j)–6(j)(5). In the non-tiered context, EBIE generally has two types of conversion events. The first EBIE conversion event is when EBIE is treated as BIE paid or accrued pursuant to § 1.163(j)–6(g). The second EBIE conversion event is the basis addback that occurs pursuant to proposed § 1.163(j)–6(h)(3) when a partner disposes of its interest in a partnership. Proposed § 1.163(j)–6(j)(5)(i) and (ii), respectively, would provide guidance regarding these two types of conversion events in the tiered partnership context.

a. First Type of Conversion Event—UTP EBIE Treated as Paid or Accrued

Regarding the first type of conversion event, proposed § 1.163(j)–6(j)(5)(i) would provide that to the extent upper-tier partnership is allocated excess taxable income (or excess business interest income) from lower-tier partnership, or § 1.163(j)–6 (m)(3) applies, upper-tier partnership shall apply proposed § 1.163(j)–6(j)(5)(i)(A) through (C).

First, proposed § 1.163(j)–6(j)(5)(i)(A) requires upper-tier partnership to apply the rules in § 1.163(j)–6(g) to its UTP EBIE, using any reasonable method (including, for example, FIFO and LIFO) to determine which UTP EBIE is treated as business interest expense paid or accrued pursuant § 1.163(j)–6(g). If § 1.163(j)–6(m)(3) applies, upper-tier partnership shall treat all of its UTP EBIE from lower-tier partnership as paid or accrued.

Proposed § 1.163(j)–6(j)(5)(i)(A) would provide that upper-tier partnership must determine which of its UTP EBIE is treated as paid or accrued, as opposed to just providing that upper-tier partnership reduces its UTP EBIE, because UTP EBIE is not necessarily a unified tax attribute of upper-tier partnership. UTP EBIE of upper-tier partnership could have been allocated in different years, have different bases, and have different specified partners (defined in the next paragraph). For example, assume $30 of UTP EBIE was allocated a negative $10 section 734(b) adjustment, resulting in the aggregate of upper-tier partnership's UTP EBIE having a carryforward component of $30 and basis component of $20. Thus, such UTP EBIE could, at most, result in $20 of deduction (the basis of such UTP EBIE). However, upper-tier partnership does not necessarily need $100 of ETI (or $30 of EBII) to deduct such $20. Rather, if upper-tier partnership was allocated $20 of EBII, upper-tier partnership could deduct $20 of business interest expense if, using a reasonable method, it determined the $20 of UTP EBIE with full basis was the UTP EBIE treated as business interest expense paid or accrued pursuant to § 1.163(j)–6(j)(5)(i)(A). Following such treatment, upper-tier partnership would still have $10 of UTP EBIE with $0 basis remaining (that is, $10 of carryforward component and $0 of basis component).

Second, with respect to any UTP EBIE treated as business interest expense paid or accrued in proposed § 1.163(j)–6(j)(5)(i)(A), proposed § 1.163(j)–6(j)(5)(i)(B) would require upper-tier partnership to allocate any business interest expense that was formerly such UTP EBIE to its specified partner. For purposes of proposed § 1.163(j)–6(j), the term specified partner refers to the partner of upper-tier partnership that, due to the initial allocation of excess business interest expense from lower-tier partnership to upper-tier partnership, was required to reduce its section 704(b) capital account pursuant to proposed § 1.163(j)–6(j)(2). Similar principles apply if the specified partner of such business interest expense is itself a partnership.

Proposed § 1.163(j)–6(j)(6) would provide rules if a specified partner disposes of its interest. Specifically, proposed § 1.163(j)–6(j)(6)(i) would provide that if a specified partner (transferor) disposes of an upper-tier partnership interest (or an interest in a partnership that itself is a specified partner), the portion of any UTP EBIE to which the transferor's status as specified partner relates is not reduced pursuant to proposed § 1.163(j)–6(j)(5)(ii). Stated otherwise, if a partner of an upper-tier partnership disposes of its interest in the upper-tier partnership, an interest in the lower-tier partnership held by upper-tier partnership is not deemed to have been similarly disposed of for purposes of proposed § 1.163(j)–6(j)(5)(ii). See Rev. Rul. 87–115. Rather, such UTP EBIE attributable to the interest disposed of is retained by upper-tier partnership and the transferee is treated as the specified partner for purposes of proposed § 1.163(j)–6(j) with respect to such UTP EBIE. Thus, upper-tier partnership must allocate any business interest expense that was formerly such UTP EBIE to the transferee.

Additionally, proposed § 1.163(j)–6(j)(6)(ii) would provide special rules regarding the specified partner of UTP EBIE following certain nonrecognition transactions. Proposed § 1.163(j)–6(j)(6)(ii)(A) would provide that if a specified partner receives a distribution of property in complete liquidation of an upper-tier partnership interest, the portion of UTP EBIE of upper-tier partnership attributable to the liquidated interest shall not have a specified partner. If a specified partner (transferee) receives a distribution of an interest in upper-tier partnership in complete liquidation of a partnership interest, the transferee is the specified partner with respect to UTP EBIE of upper-tier partnership only to the same extent it was prior to the distribution. Similar principles apply where an interest in a partnership that is a specified partner is distributed in complete liquidation of a transferee's partnership interest.

Proposed § 1.163(j)–6(j)(6)(ii)(B) would further provide that if a specified partner (transferor) contributes an upper-tier partnership interest to a partnership (transferee), the transferee is treated as the specified partner for purposes of proposed § 1.163(j)–6(j) with respect to the portion of the UTP EBIE attributable to the contributed interest. Following the transaction, the transferor continues to be the specified partner with respect to the UTP EBIE attributable to the contributed interest. Similar principles apply where an interest in a partnership that is a specified partner is contributed to a partnership.

Finally, after determining the specified partner of the UTP EBIE treated as business interest expense paid or accrued in proposed § 1.163(j)–6(j)(5)(i)(A) and allocating such business interest expense to its specified partner pursuant to proposed § 1.163(j)–6(j)(5)(i)(B), proposed § 1.163(j)–6(j)(5)(i)(C) would require upper-tier partnership to, in the manner provided in proposed § 1.163(j)–6(j)(7)(ii) (or (iii), as the case may be), take into account any negative basis adjustments under section 734(b) previously made to the UTP EBIE treated as business interest expense paid or accrued in (A) earlier. Additionally, persons treated as specified partners with respect to the UTP EBIE treated as business interest expense paid or accrued in (A) earlier shall take any negative basis adjustments under section 743(b) into account in the manner provided in proposed § 1.163(j)–6(j)(7)(ii) (or (iii), as the case may be).

Proposed § 1.163(j)–6(j)(7)(ii) would provide that if UTP EBIE that was allocated a negative section 734(b) adjustment is subsequently treated as deductible business interest expense, then such deductible business interest expense does not result in a deduction to the upper-tier partnership or the specified partner of such deductible business interest expense. If UTP EBIE that was allocated a negative section 743(b) adjustment is subsequently treated as deductible business interest expense, the specified partner of such deductible business interest expense recovers any negative section 743(b) adjustment attributable to such deductible business interest expense (effectively eliminating any deduction for such deductible business interest expense).

Proposed § 1.163(j)–6(j)(7)(iii) would provide that if UTP EBIE that was allocated a negative section 734(b) or 743(b) adjustment is subsequently treated as excess business interest expense, the specified partner's basis decrease in its upper-tier partnership interest required under proposed § 1.163(j)–6(h)(2) is reduced by the amount of the negative section 734(b) or 743(b) adjustment previously made to such excess business interest expense. If such excess business interest expense is subsequently treated as business interest expense paid or accrued by the specified partner, no deduction shall be allowed for any of such business interest expense. If the specified partner of such excess business interest expense is a partnership, such excess business interest expense is considered UTP EBIE that was previously allocated a negative section 734(b) adjustment for purposes of proposed § 1.163(j)–6(j).

b. Second Type of Conversion Event—UTP EBIE Reduction

Regarding the second type of conversion event, proposed § 1.163(j)–6(j)(5)(ii) would provide that if upper-tier partnership disposes of a lower-tier partnership interest (transferred interest), upper-tier partnership shall apply proposed § 1.163(j)–6(j)(5)(ii)(A) through (C).

First, proposed § 1.163(j)–6(j)(5)(ii)(A) would require upper-tier partnership to apply the rules in § 1.163(j)–6(h)(3) (except as provided in (B) and (C) later), using any reasonable method (including, for example, FIFO and LIFO) to determine which UTP EBIE is reduced pursuant to § 1.163(j)–6(h)(3). Stated otherwise, proposed § 1.163(j)–6(j)(5)(ii)(A) would require upper-tier partnership to apply all of the rules in § 1.163(j)–6(h)(3), except for the rule that determines the amount of the basis increase immediately before the disposition to the disposed of interest (the first sentence of § 1.163(j)–6(h)(3)). In lieu of applying the first sentence of § 1.163(j)–6(h)(3), upper-tier partnership would apply proposed § 1.163(j)–6(j)(5)(ii)(B) and (C) to determine the amount of such basis increase.

Second, proposed § 1.163(j)–6(j)(5)(ii)(B) would require upper-tier partnership to increase the adjusted basis of the transferred interest immediately before the disposition by the total amount of the UTP EBIE that was reduced in (A) earlier (the amount of UTP EBIE proportionate to the transferred interest). For example, if upper-tier partnership disposed of half of its lower-tier partnership interest while it held $40 of UTP EBIE allocated from lower tier partnership, upper-tier partnership would increase the adjusted basis of the disposed of lower-tier partnership interest by $20. However, immediately before the disposition, such $20 increase may be reduced pursuant to proposed § 1.163(j)–6(j)(5)(ii)(C).

Third, proposed § 1.163(j)–6(j)(5)(ii)(C) would require upper-tier partnership to, in the manner provided in proposed § 1.163(j)–6(j)(7)(iv), take into account any negative basis adjustments under sections 734(b) and 743(b) previously made to the UTP EBIE that was reduced in (A) earlier. Proposed § 1.163(j)–6(j)(7)(iv) would provide that if UTP EBIE that was allocated a negative section 734(b) or 743(b) adjustment is reduced pursuant to proposed § 1.163(j)–6(j)(5)(ii)(A), the amount of upper-tier partnership's basis increase under proposed § 1.163(j)–6(j)(5)(ii)(B) to the disposed of lower-tier partnership interest is reduced by the amount of the negative section 734(b) or 743(b) adjustment previously made to such UTP EBIE.

Continuing with the previous example, assume that $5 of the $20 of UTP EBIE reduced pursuant to proposed § 1.163(j)–6(j)(5)(ii)(A) was previously allocated a $5 negative section 743(b) adjustment. Pursuant to proposed § 1.163(j)–6(j)(5)(ii)(C), upper-tier partnership would reduce the $20 increase it determined under proposed § 1.163(j)–6(j)(5)(ii)(B) by $5. Thus, the adjusted basis of the lower-tier partnership interest being disposed of would be increased by $15 immediately before the disposition. Consequently, lower-tier partnership would have a corresponding § 1.163(j)–6(h)(5) basis adjustment to its property of $15.

4. Anti-Loss Trafficking Rules

Proposed § 1.163(j)–6(j) generally relies on negative sections 734(b) and 743(b) adjustments to prevent a partner from deducting business interest expense that was formerly UTP EBIE if such partner did not bear the economic cost of such business interest expense payment. To the extent a negative section 734(b) or 743(b) adjustment fails to prohibit such a deduction (or basis increase under proposed § 1.163(j)–6(j)(5)(ii)), the anti-loss trafficking rules in proposed § 1.163(j)–6(j)(8) would prohibit such a deduction (or basis addback under proposed § 1.163(j)–6(j)(5)(ii)).

The anti-loss trafficking rule under proposed § 1.163(j)–6(j)(8)(i) would prohibit the trafficking of business interest expense by providing that no deduction shall be allowed to any transferee specified partner for any business interest expense derived from a transferor's share of UTP EBIE. For purposes of proposed § 1.163(j)–6(j), the term transferee specified partner refers to any specified partner that did not reduce its section 704(b) capital account upon the initial allocation of excess business interest expense from lower-tier partnership to upper-tier partnership pursuant to proposed § 1.163(j)–6(j)(2). However, the transferee described in proposed § 1.163(j)–6(j)(ii)(B) is not a transferee specified partner for purposes of proposed § 1.163(j)–6(j).

Proposed § 1.163(j)–6(j)(8)(i) would also provide the mechanism for disallowing such BIE. Proposed § 1.163(j)–6(j)(8)(i) would provide that if, pursuant to proposed § 1.163(j)–6(j)(5)(i)(B), a transferee specified partner is allocated business interest expense derived from a transferor's share of UTP EBIE (business interest expense to which the partner's status as transferee specified partner relates), the transferee specified partner is deemed to recover a negative section 743(b) adjustment with respect to, and in the amount of, such business interest expense and takes such negative section 743(b) adjustment into account in the manner provided in proposed § 1.163(j)–6(j)(7)(ii) (or (iii), as the case may be), regardless of whether a section 754 election was in effect or a substantial built-in loss existed at the time of the transfer by which the transferee specified partner acquired the transferred interest. However, to the extent a negative section 734(b) or 743(b) adjustment was previously made to such business interest expense, the transferee specified partner does not recover an additional negative section 743(b) adjustment pursuant to this paragraph.

Additionally, the anti-loss trafficking rule under proposed § 1.163(j)–6(j)(8)(ii) would prohibit the trafficking of BIE that was formerly the UTP EBIE of a specified partner that received a distribution in complete liquidation of its upper-tier partnership interest. Specifically, proposed § 1.163(j)–6(j)(8)(ii) would provide that if UTP EBIE does not have a specified partner (as the result of a transaction described in proposed § 1.163(j)–6(j)(6)(ii)(A)), upper-tier partnership shall not allocate any business interest expense that was formerly such UTP EBIE to its partners. Rather, for purposes of applying § 1.163(j)–6(f)(2), upper-tier partnership shall treat such business interest expense as the allocable business interest expense (as defined in

§ 1.163(j)–6(f)(2)(ii)) of a § 1.163(j)–6(j)(8)(ii) account.

Any deductible business interest expense and excess business interest expense allocated to a § 1.163(j)–6(j)(8)(ii) account at the conclusion of the eleven-step computation set forth in § 1.163(j)–6(f)(2) is not tracked in future years. Treating such business interest expense as the allocable business interest expense of a separate account for purposes of applying § 1.163(j)–6(f)(2)(ii) ensures that partners of upper-tier partnership do not support a deduction for such business interest expense (for which no deduction will be allowed) using their shares of allocable ATI and allocable business interest income before supporting a deduction for their own shares of allocable business interest expense (for which a deduction may be allowed).

Additionally, if UTP EBIE that does not have a specified partner (as the result of a transaction described in proposed § 1.163(j)–6(j)(6)(ii)(A)) is treated as paid or accrued pursuant to § 1.163(j)–6(g), upper-tier partnership shall make a § 1.163(j)–6(h)(5) basis adjustment to its property in the amount of the adjusted basis (if any) of such UTP EBIE at the time such UTP EBIE is treated as business interest expense paid or accrued pursuant to § 1.163(j)–6(g). The purpose of this § 1.163(j)–6(h)(5) basis adjustment is to preserve basis in the system.

Thus, any time upper-tier partnership treats UTP EBIE as business interest expense paid or accrued pursuant to proposed § 1.163(j)–6(j)(5)(i)(A) it must apply proposed § 1.163(j)–6(j)(8)(i) and (ii). In application, upper-tier partnership would generally undertake the following analysis when applying proposed § 1.163(j)–6(j)(8)(i) and (ii). With respect to any UTP EBIE treated as business interest expense paid or accrued pursuant to proposed § 1.163(j)–6(j)(5)(i)(A) (UTP BIE), upper-tier partnership must first determine whether such UTP BIE has a specified partner. If it does not have a specified partner, upper-tier partnership must apply proposed § 1.163(j)–6(j)(8)(ii), which, in general, requires upper-tier partnership to capitalize the basis (if any) of such UTP BIE into the basis of upper-tier partnership property via a § 1.163(j)–6(h)(5) basis adjustment.

If UTP BIE does have a specified partner, upper-tier partnership must next determine whether the specified partner of such UTP BIE reduced its section 704(b) capital account upon the initial allocation of such excess business interest expense from lower-tier partnership to upper-tier partnership pursuant to proposed § 1.163(j)–6(j)(2). If the specified partner did reduce its section 704(b) capital account upon such initial allocation, then any deduction for such UTP BIE is not disallowed under proposed § 1.163(j)–6(j)(8)(i). However, if the specified partner did not reduce its section 704(b) capital account upon such initial allocation, upper-tier partnership must next determine whether such specified partner is a transferee described in proposed § 1.163(j)–6(j)(6)(ii)(B). If it is, then any deduction for such UTP BIE is not disallowed under proposed § 1.163(j)–6(j)(8)(i). However, if the specified partner is not a transferee described in proposed § 1.163(j)–6(j)(6)(ii)(B), then it is a transferee specified partner, as defined in proposed § 1.163(j)–6(j)(8)(i). As a result, any deduction for such UTP BIE is disallowed under proposed § 1.163(j)–6(j)(8)(i). If there are multiple tiers of partnerships, each tier must apply these rules.

Finally, proposed § 1.163(j)–6(j)(8)(iii) would provide a similar mechanism to proposed § 1.163(j)–6(j)(8)(i) for disallowing basis addbacks under § 1.163(j)–6(h)(3) for certain UTP EBIE. Specifically, proposed § 1.163(j)–6(j)(8)(iii) would provide that no basis increase under proposed § 1.163(j)–6(j)(5)(ii) shall be allowed to upper-tier partnership for any disallowed UTP EBIE. For purposes of § 1.163(j)–6, the term disallowed UTP EBIE refers to any UTP EBIE that has a specified partner that is a transferee specified partner (as defined in proposed § 1.163(j)–6(j)(8)(i)) and any UTP EBIE that does not have a specified partner (as the result of a transaction described in proposed § 1.163(j)–6(j)(6)(ii)(A)). For purposes of applying proposed § 1.163(j)–6(j)(5)(ii), upper-tier partnership shall treat any disallowed UTP EBIE in the same manner as UTP EBIE that has previously been allocated a negative section 734(b) adjustment. However, upper-tier partnership does not treat disallowed UTP EBIE as though it were allocated a negative section 734(b) adjustment pursuant to this paragraph to the extent a negative section 734(b) or 743(b) adjustment was previously made to such disallowed UTP EBIE.

5. Foundational Determinations

In general, the rules under proposed § 1.163(j)–6(j) are derived from the following three foundational determinations made by the Treasury Department and the IRS. First, basis is preserved when upper-tier partnership exchanges basis in its lower-tier partnership for EBIE allocated from lower-tier partnership (UTP EBIE). Thus, upper-tier partnership generally must treat UTP EBIE in the same manner as built-in loss property. Second, UTP EBIE has two components—a basis component and a carryforward component. In general, negative basis adjustments under section 734(b) and 743(b) reduce the basis component of UTP EBIE (and thus, any possible deduction for UTP EBIE), but do not reduce the carryforward component of UTP EBIE; only the two conversion events in proposed § 1.163(j)–6(j)(5) are capable of reducing the carryforward component of UTP EBIE. Third, upper-tier partnership must allocate any business interest expense that was formerly UTP EBIE to its specified partner—that is, the partner that reduced its section 704(b) capital account at the time of the initial allocation of the UTP EBIE from lower-tier partnership to upper-tier partnership. If there is a transfer of a partnership interest, the transferor generally steps into the shoes of the transferee's status as specified partner, but may not deduct any business interest expense derived from the transferor's share of UTP EBIE.

The Treasury Department and the IRS request comments on this approach. Specifically, the Treasury Department and the IRS request comments on whether further guidance on the treatment of UTP EBIE under the rules of subchapter K of the Code is necessary.

F. Partner Basis Adjustments Upon a Distribution

Under the 2018 Proposed Regulations, if a partner disposed of all or substantially all of its partnership interest, the adjusted basis of the partnership interest was increased immediately before the disposition by the entire amount of the EBIE not previously treated as paid or accrued by the partner. If a partner disposed of less than substantially all of its interest in a partnership, the partner could not increase its basis by any portion of the EBIE not previously treated as paid or accrued by the partner. The Treasury Department and the IRS requested comments on this approach in the preamble to the 2018 Proposed Regulations.

As discussed in the preamble to Final Regulations, commenters cited multiple concerns with the approach adopted in the 2018 Proposed Regulations and recommended that the Final Regulations adopt a proportionate approach. Under such an approach, a partial disposition of a partnership interest would trigger a proportionate EBIE basis addback and corresponding decrease in such partner's EBIE carryover. The Treasury

Department and the IRS agreed with commenters. Accordingly, § 1.163(j)–6(h)(3) provides for a proportionate approach.

In general, a distribution from a partnership is either a current distribution or a liquidating distribution; the concept of a redemptive distribution does not exist in the partnership context. Accordingly, proposed § 1.163(j)–6(h)(4) would provide that, for purposes of § 1.163(j)–6(h)(3), a disposition includes a distribution of money or other property by the partnership to a partner in complete liquidation of the partner's interest in the partnership. Proposed § 1.163(j)–6(h)(4) would further provide that, for purposes of § 1.163(j)–6(h)(3), a current distribution of money or other property by the partnership to a continuing partner is not a disposition for purposes of § 1.163(j)–6(h)(3). The Treasury Department and the IRS request comments on whether a current distribution of money or other property by the partnership to a continuing partner as consideration for an interest in the partnership should also trigger an addback and, if so, how to determine the appropriate amount of the addback.

G. Allocable ATI and Allocable Business Interest Income of Upper-Tier Partnership Partners

Section 1.163(j)–6(f)(2) provides an eleven-step computation necessary for properly allocating a partnership's deductible BIE and section 163(j) excess items among its partners. Pursuant to § 1.163(j)–6(f)(2)(ii), a partnership must determine each of its partner's allocable share of each section 163(j) item under section 704(b) and the regulations under section 704 of the Code, including any allocations under section 704(c), other than remedial items. Further, § 1.163(j)–6(f)(2)(ii) provides that the term allocable ATI means a partner's distributive share of the partnership's ATI (that is, a partner's distributive share of gross income and gain items comprising ATI less such partner's distributive share of gross loss and deduction items comprising ATI), and the term allocable business interest income means a partner's distributive share of the partnership's business interest income.

In general, if a partnership is not a partner in a partnership, each dollar of taxable income that is properly allocable to a trade or business will have a corresponding dollar of ATI associated with it. Accordingly, in the non-tiered partnership context, if a partner's share of gross income and gain items comprising ATI less such partner's share of gross loss and deduction items comprising ATI equals $1, such partner will have $1 of allocable ATI for purposes of § 1.163(j)–6(f)(2)(ii).

However, if a partnership is a partner in a partnership, each dollar of taxable income that is properly allocable to a trade or business may not have a full dollar of ATI associated with it. Section 163(j)(4)(A)(ii)(I) provides that the ATI of a partner in a partnership is determined without regard to such partner's distributive share of any items of income, gain, deduction, or loss of such partnership. Further, section 163(j)(4)(A)(ii)(II) provides that a partner only increases its ATI by its distributive share of a partnership's ETI.

To illustrate, consider the following example. LTP has $100 of income and $100 of loss properly allocable to a trade or business. Thus, LTP has $0 of ATI. LTP specially allocates the $100 of income to partner UTP. Under section 163(j)(4)(A)(ii)(I), UTP does not treat such $100 of income as ATI. Additionally, UTP has $300 of income properly allocable to a trade or business, which UTP properly treats as ATI. Here, UTP's taxable income that is properly allocable to a trade or business ($400) does not equal the amount of its ATI ($300).

The Treasury Department and the IRS recognize that a special rule is necessary to coordinate situations like the one illustrated earlier with the general requirement under § 1.163(j)–6(f)(2)(ii) for partnerships to determine a partner's allocable ATI based on such partner's allocation of items comprising the ATI of the partnership. Accordingly, proposed § 1.163(j)–6(j)(9) would provide that, when applying § 1.163(j)–6(f)(2)(ii), an upper-tier partnership determines the allocable ATI and allocable business interest income of each of its partners in the manner provided in proposed § 1.163(j)–6(j)(9). Specifically, if an upper-tier partnership's net amount of tax items that comprise (or have ever comprised) ATI is greater than or equal to its ATI, upper-tier partnership applies the rules in paragraph (j)(9)(ii)(A) to determine each partner's allocable ATI. However, if an upper-tier partnership's net amount of tax items that comprise (or have ever comprised) ATI is less than its ATI, upper-tier partnership applies the rules in proposed § 1.163(j)–6(j)(9)(ii)(B) to determine each partner's allocable ATI. To determine each partner's allocable business interest income, an upper-tier partnership applies the rules in proposed § 1.163(j)–6(j)(9)(iii).

H. Qualified Expenditures

The 2018 Proposed Regulations provided that partnership ATI is reduced by deductions claimed under sections 173 (relating to circulation expenditures), 174(a) (relating to research and experimental expenditures), 263(c) (relating to intangible drilling and development expenditures), 616(a) (relating to mine development expenditures), and 617(a) (relating to mining exploration expenditures) (collectively ''qualified expenditures''). As a result, deductions for qualified expenditures reduced the amount of business interest expense a partnership could potentially deduct.

A partner may elect to capitalize its distributive share of any qualified expenditures of a partnership under section 59(e)(4)(C) or may be required to capitalize a portion of its distributive share of certain qualified expenditures of a partnership under section 291(b). As a result, the taxable income reported by a partner in a taxable year attributable to the ownership of a partnership interest may exceed the amount of taxable income reported to the partner on a Schedule K–1.

Commenters on the 2018 Proposed Regulations recommended that a distributive share of partnership deductions capitalized by a partner under section 59(e) or section 291(b) increase the ATI of the partner because qualified expenditures reduce both partnership ATI and excess taxable income, but may not reduce the taxable income of a partner. Two different approaches for achieving this result were suggested: (1) Adjust the excess taxable income of the partnership, resulting in an increase to partner ATI, and (2) increase the ATI of the partner directly, without making any adjustments to partnership excess taxable income.

The Treasury Department and IRS agree that a distributive share of partnership deductions capitalized by a partner under section 59(e) should increase the ATI of the partner and adopt the recommended approach of increasing the ATI of the partner directly, without making any adjustments to partnership excess taxable income. The approach of increasing partner ATI by adjusting partnership excess taxable income is rejected, as it would result in partnerships with more excess taxable income than ATI—a result not possible under the current statutory conceptual framework. The Treasury Department and IRS have the authority to adjust ATI, but do not have a similar grant of authority to make adjustments to partnership excess taxable income, which is explicitly defined by statute.

Accordingly, proposed § 1.163(j)–6(e)(6) would provide that the ATI of a partner is increased by the portion of such partner's allocable share of qualified expenditures (as defined in section 59(e)(2)) to which an election under section 59(e) applies. Any deduction allowed under section 59(e)(1) would be taken into account in determining a partner's ATI pursuant to § 1.163(j)–1(b). Proposed § 1.163(j)–6(l)(4)(iv) would provide a similar rule in the S corporation context.

The Treasury Department and IRS are aware that a similar issue exists in the context of depletion and request comments as to whether a similar partner level add-back is appropriate. The Treasury Department and IRS are also aware that a partner may be required to capitalize certain qualified expenditures of a partnership under section 291(b) and request comments as to whether a similar partner level add-back is appropriate.

I. CARES Act Partnership Rules

As stated in the Background section of this preamble, section 163(j)(10), as enacted by the CARES Act, provides special rules for partners and partnerships for taxable years beginning in 2019 or 2020. Under sections 163(j)(10)(A)(i) and 163(j)(10)(A)(ii)(I), for partnerships, the amount of business interest that may be deductible under section 163(j)(1) for taxable years beginning in 2020 is computed using the 50 percent ATI limitation. The 50 percent ATI limitation does not apply to partnerships for taxable years beginning in 2019. See section 163(j)(10)(A)(ii)(I). Under section 163(j)(10)(A)(iii), a partnership may elect to not apply the 50 percent ATI limitation and, instead, to apply the 30 percent ATI limitation. This election is made by the partnership.

Under section 163(j)(10)(A)(ii)(II), a partner treats 50 percent of its allocable share of a partnership's excess business interest expense for 2019 as a business interest expense in the partner's first taxable year beginning in 2020 that is not subject to the section 163(j) limitation (50 percent EBIE rule). The remaining 50 percent of the partner's allocable share of the partnership's 2019 excess business interest expense remains subject to the section 163(j) limitation applicable to excess business interest expense carried forward at the partner level. A partner may elect out of the 50 percent EBIE rule. Proposed § 1.163(j)–6(g)(4) provides further guidance on the 50 percent EBIE rule.

Additionally, section 163(j)(10)(B)(i) allows a taxpayer to elect to substitute its 2019 ATI for the taxpayer's 2020 ATI in determining the taxpayer's section 163(j) limitation for any taxable year beginning in 2020. Section 1.163(j)–2(b)(3) and (4) of the Final Regulations provide general rules regarding this election. Proposed § 1.163(j)–6(d)(5) provides further guidance on this election in the partnership context. The Treasury Department and the IRS request comments on these proposed rules and on whether further guidance is necessary.

V. Proposed § 1.163(j)–7: Application of the Section 163(j) Limitation to Foreign Corporations and United States Shareholders

Proposed § 1.163(j)–7 in these Proposed Regulations (Proposed § 1.163(j)–7) provides general rules regarding the application of the section 163(j) limitation to foreign corporations and U.S. shareholders of CFCs. This section V describes proposed § 1.163(j)–7 contained in the 2018 Proposed Regulations, the comments received on proposed § 1.163(j)–7 contained in the 2018 Proposed Regulations, and Proposed § 1.163(j)–7.

A. Overview of Proposed § 1.163(j)–7 Contained in the 2018 Proposed Regulations

1. General Application of Section 163(j) Limitation to Applicable CFCs

The 2018 Proposed Regulations clarify that, consistent with § 1.952–2, section 163(j) and the section 163(j) regulations apply to determine the deductibility of an applicable CFC's BIE in the same manner as these provisions apply to determine the deductibility of a domestic C corporation's BIE. The 2018 Proposed Regulations define an applicable CFC as a CFC in which at least one U.S. shareholder owns stock within the meaning of section 958(a). However, in certain cases, the 2018 Proposed Regulations allow certain applicable CFCs to make a CFC group election and be treated as part of a CFC group for purposes of computing the applicable CFC's section 163(j) limitation.

2. Limitation on Amount of Business Interest Expense of a CFC Group Member Subject to the Section 163(j) Limitation

Under the 2018 Proposed Regulations, if a CFC group election is in effect, the amount of BIE of a CFC group member that is subject to the section 163(j) limitation is limited to the amount of the CFC group member's allocable share of the CFC group's applicable net BIE (which is equal to the sum of the BIE of all CFC group members, reduced by the BII of all CFC group members). Thus, for example, if a CFC group has no debt other than loans between CFC group members, no portion of the BIE of a CFC group member would be subject to the section 163(j) limitation. A CFC group member's allocable share is computed by multiplying the applicable net BIE of the CFC group by a fraction, the numerator of which is the CFC group member's net BIE (computed on a separate company basis), and the denominator of which is the sum of the amounts of the net BIE of each CFC group member with net BIE (computed on a separate company basis).

After applying the CFC group rules to determine each CFC group member's allocable share of the CFC group's applicable net BIE, each CFC group member that has BIE is required to perform a stand-alone section 163(j) calculation to determine whether any BIE is disallowed under the section 163(j) limitation.

3. Membership in a CFC Group

Under the 2018 Proposed Regulations, in general, a CFC group means two or more applicable CFCs if at least 80 percent of the value of the stock of each applicable CFC is owned, within the meaning of section 958(a), by a single U.S. shareholder or, in the aggregate, by related U.S. shareholders that own stock of each member in the same proportion. The 2018 Proposed Regulations also generally treat a controlled partnership (in general, a partnership in which CFC group members own, in the aggregate, at least 80 percent of the interests) as a CFC group member. For purposes of identifying a CFC group, members of a consolidated group are treated as a single person, as are individuals filing a joint return, and stock owned by certain passthrough entities is treated as owned proportionately by the owners or beneficiaries of the passthrough entity.

The 2018 Proposed Regulations exclude from the definition of a CFC group member an applicable CFC that has any income that is effectively connected with the conduct of a trade or business in the United States. In addition, if one or more CFC group members conduct a financial services business, those entities are treated as comprising a separate subgroup.

Under the 2018 Proposed Regulations, a CFC group election is made by applying the rules applicable to CFC groups for purposes of computing each CFC group member's deduction for BIE. Once made, the CFC group election is irrevocable.

4. Roll-Up of CFC Excess Taxable Income to Other CFC Group Members and U.S. Shareholders

Under the 2018 Proposed Regulations, if a CFC group election is in effect with respect to a CFC group, then an upper-tier CFC group member takes into account a proportionate share of any ''CFC excess taxable income'' of a lower-tier CFC group member in which it directly owns stock for purposes of computing the upper-tier member's ATI. The meaning of the term ''CFC excess taxable income'' is analogous to the meaning of the term ''excess taxable income'' in the context of a partnership and S corporation, and, in general, means the amount of a CFC group member's ATI in excess of the amount needed to prevent any BIE of the CFC group member from being disallowed under section 163(j).

Under the 2018 Proposed Regulations, a U.S. shareholder is not permitted to include in its ATI amounts included in gross income under section 951(a) (subpart F inclusions), section 951A(a) (GILTI inclusions), or section 78 (section 78 inclusions) that are properly allocable to a non-excepted trade or business (collectively, deemed income inclusions). However, the 2018 Proposed Regulations provide that a portion of CFC excess taxable income of the highest-tier applicable CFC is permitted to be used to increase the ATI of its U.S. shareholders. That portion is equal to the U.S. shareholder's interest in the highest-tier applicable CFC multiplied by its specified ETI ratio. The numerator of the specified ETI ratio is the sum of the U.S. shareholder's income inclusions under sections 951(a) and 951A(a) with respect to the specified highest-tier member and specified lower-tier members, and the denominator is the sum of the taxable income of the specified highest-tier member and specified lower-tier members.

B. Summary of Comments on Proposed § 1.163(j)–7 Contained in the 2018 Proposed Regulations

The Treasury Department and the IRS requested comments in the preamble to the 2018 Proposed Regulations regarding whether it would be appropriate to further modify the application of section 163(j) to applicable CFCs and whether there are particular circumstances in which it may be appropriate to exempt an applicable CFC from the application of section 163(j). Some commenters recommended that section 163(j) not apply to applicable CFCs. Those comments are addressed in part VIII of the Summary of Comments and Explanation of Revisions section in the Final Regulations.

A number of commenters broadly requested changes to the roll-up of CFC excess taxable income. Many of these commenters expressed concern about the administrability of rolling up CFC excess taxable income. Some commenters suggested that the CFC group election be available to a stand-alone applicable CFC in order to allow its CFC excess taxable income to be used to increase the ATI of a U.S. shareholder, or that an applicable CFC be permitted to use any CFC excess taxable income to increase the ATI of a shareholder without regard to whether it is a CFC group member. Furthermore, some commenters asserted that the nature of the roll-up compels multinationals to restructure their operations in order to move CFCs with relatively high amounts of ATI and low amounts of interest expense to the bottom of the ownership chain and CFCs with relatively low amounts of ATI and high amounts of interest expense to the top of the ownership chain, in order to maximize the benefits of the roll-up of CFC excess taxable income.

Some commenters asserted that because multinational organizations may own hundreds of CFCs, applying the section 163(j) limitation on a CFC-by-CFC basis, without regard to whether a CFC group election has been made under the 2018 Proposed Regulations, represents a significant administrative burden. Many comments suggested that CFC groups should be permitted to apply section 163(j) on a group basis, with a single group-level section 163(j) calculation similar to the rules applicable to a consolidated group. A few commenters suggested that this rule should be applied in addition to the roll-up of CFC excess taxable income, but most commenters recommended that the group rule be applied instead of the roll-up.

A number of commenters asserted that the requirements to be a member of a CFC group under the 2018 Proposed Regulations are overly restrictive. Some of these commenters recommended that the 80-percent ownership threshold be replaced with the ownership requirements of affiliated groups under section 1504(a), the rules of which are well-known and understood. Others recommended that the 80-percent ownership requirement be reduced to 50 percent, consistent with the standard for treatment of a foreign corporation as a CFC. Still others asserted that U.S. shareholders owning stock in applicable CFCs should not each be required to own the same proportion of stock in each applicable CFC in order for their ownership interests to count towards the 80-percent ownership requirement, or that the attribution rules of section 958(b), rather than section 958(a), should apply for purposes of determining whether the ownership requirements are met. Finally, some of these commenters requested that a CFC group election be permitted when one applicable CFC meets the ownership requirements for other applicable CFCs, even if no U.S. shareholder meets the ownership requirements for a highest-tier applicable CFC.

Some commenters requested the CFC financial services subgroups not be segregated from the CFC group and their BIE and BII be included in the general CFC group.

Some commenters requested that an applicable CFC with effectively connected income be permitted to be a member of a CFC group and that only its effectively connected income items should be excluded. Alternatively, commenters requested a de minimis rule that would permit an applicable CFC to be a member of a CFC group if the applicable CFC's effectively connected income is below a certain threshold of total income, such as 10 percent.

Some commenters requested that the CFC group election be revocable. The commenters proposed either making the CFC group election an annual election or providing that the election applies for a certain period, for example, three or five years, before it can be revoked.

Finally, commenters requested a safe harbor or exclusion providing that if a CFC group would not be limited under section 163(j) either because the CFC group has no net BIE or because its BIE does not exceed 30 percent of the CFC group's ATI, a U.S. shareholder would not have to apply section 163(j) for the applicable CFC or be subject to applicable CFC section 163(j) reporting requirements.

C. Proposed § 1.163(j)–7

1. Overview

As noted in the preamble to the Final Regulations, the Treasury Department and the IRS have determined, based on a plain reading of section 163(j) and § 1.952–2, that section 163(j) applies to foreign corporations where relevant under current law and has applied to such corporations since the effective date of the new provision.[1] Congress

[1] Section 1.952–2(b) generally provides that the taxable income for a foreign corporation is determined by treating the foreign corporation as a

Continued

expressly provided that section 163(j) should not apply to certain small businesses or to certain excepted trades or businesses. Nothing in the Code or legislative history indicates that Congress intended to except other persons with trades or businesses, as defined in section 163(j)(7), from the application of section 163(j). Accordingly, the Treasury Department and the IRS have determined that, consistent with a plain reading of section 163(j) and § 1.952–2, it is appropriate for section 163(j) to apply to applicable CFCs and other foreign corporations whose taxable income is relevant for Federal tax purposes (other than by reason of having ECI or income described in section 881 (FDAP)) (relevant foreign corporations).[2] In the case of CFCs with ECI, see proposed § 1.163(j)–8. For further discussion of the Treasury Department and the IRS's determination that there is not a statutory basis for exempting applicable CFCs from the application of section 163(j), see part VIII of the Summary of Comments and Explanation of Revisions section of the Final Regulations.

A number of comments were received asserting that there are other mechanisms that eliminate the policy need for section 163(j) to apply to limit leverage in CFCs. For example, some commenters have cited tax rules in foreign jurisdictions limiting interest deductions, including thin capitalization rules (or similar rules intended to implement the Organisation for Economic Co-operation and Development (OECD) recommendations under Action 4 of the Base Erosion and Profits Shifting Project). The Treasury Department and the IRS disagree with these assertions. The Treasury Department and the IRS note that these rules are not universally applied in other jurisdictions, that many jurisdictions do not have any meaningful interest expense limitation rules, and that some jurisdictions have no interest expense limitation rules of any kind.

Even if some CFCs owned by a U.S. shareholder are in foreign jurisdictions with meaningful thin capitalization rules, in the absence of section 163(j), it would still be possible to use leverage to reduce or eliminate a U.S. shareholder's global intangible low-taxed income (GILTI) under section 951A for these CFCs. This is because for purposes of computing a U.S. shareholder's GILTI under section 951A, tested income of CFCs may be offset by tested losses of CFCs owned by the U.S. shareholder. See section 951A(c). The ability to deduct interest without limitation under section 163(j) would result in tested losses in CFCs with significant leverage. Because of this aggregation, one overleveraged CFC in a single jurisdiction that does not have rules limiting interest expense can, without the application of section 163(j), reduce or eliminate tested income from all CFCs owned by a U.S. shareholder regardless of jurisdiction.

Other comments suggested that, to the extent that debt of a CFC is held by a related party, transfer pricing principles would discipline the amount of interest expense. Comments also note that to the extent that debt of a CFC is held by a third party, market forces would discipline the leverage present in the CFC. While both of these concepts may discipline the amount of leverage present in a CFC, they would also discipline the amount of leverage in any entity. If Congress believed that market forces and transfer pricing principles were sufficient disciplines to prevent overleverage, section 163(j) would not have been amended as part of TCJA to clearly apply to interest expense paid or accrued to both third parties and related parties. In addition, if transfer pricing were sufficient to police interest expense in the related party context, old section 163(j) (as enacted in 1989 and subsequently revised prior to TCJA) would not have been necessary.

However, the Treasury Department and the IRS also have determined that it is appropriate, while still carrying out the provisions of the statute and the policies of section 163(j), to reduce the administrative and compliance burdens of applying section 163(j) to applicable CFCs. Accordingly, Proposed § 1.163(j)–7 allows for an election to be made to apply section 163(j) on a group basis with respect to applicable CFCs that are ''specified group members'' of a ''specified group.'' If the election is made, the specified group members are referred to as ''CFC group members'' and all of the CFC group members collectively are referred to as a ''CFC group.'' The rules for determining a specified group and specified group members are discussed in part V.C.3. of this Explanation of Provisions section. The rules and procedures for treating specified group members as CFC group members and for determining a CFC group are discussed in part V.C.4. of this Explanation of Provisions section.

In addition, Proposed § 1.163(j)–7 provides a safe harbor election that exempts certain applicable CFCs from application of section 163(j). The safe-harbor election is available for stand-alone applicable CFCs (which is an applicable CFC that is not a specified group member of a specified group) and CFC group members. The election is not available for an applicable CFC that is a specified group member but not a CFC group member because a CFC group election is not in effect. See part V.C.7. of this Explanation of Provisions section.

Proposed § 1.163(j)–7 also provides an anti-abuse rule that increases ATI in certain circumstances.

Finally, Proposed § 1.163(j)–7 allows a U.S. shareholder of a stand-alone applicable CFC or a CFC group member of a CFC group to include a portion of its deemed income inclusions attributable to the applicable CFC in the U.S. shareholder's ATI. This rule does not apply with respect to an applicable CFC that is a specified group member but not a CFC group member because a CFC group election is not in effect. See part V.C.9. of this Explanation of Provisions section.

The Treasury Department and the IRS anticipate that, in many instances, Proposed § 1.163(j)–7 will significantly reduce the administrative and compliance burdens of applying section 163(j) to applicable CFCs relative to the 2018 Proposed Regulations.

Unlike Proposed § 1.163(j)–8, which provides rules for allocating disallowed BIE to ECI and non-ECI, Proposed § 1.163(j)–7 does not allocate disallowed BIE among classes of income. The Treasury Department and the IRS request comments on appropriate methods of allocating disallowed BIE among classes of income, such as subpart F income, as defined in section 952, and tested income, as defined in section 951A(c)(2)(A) and § 1.951A–2(b)(1), as well as comments on whether and the extent to which rules implementing such methods may be necessary.

In addition, the Treasury Department and the IRS request comments on appropriate methods of allocating disallowed BIE for other purposes, including between items described in § 1.163(j)–1(b)(22)(i) and other items described in § 1.163(j)–1(b)(22) (defining interest), as well as comments on whether and the extent to which rules implementing such methods may be necessary.

The Treasury Department and the IRS do not anticipate that section 163(j) will affect the tax liability of a passive foreign investment company, within the

domestic corporation but with certain enumerated exceptions. Section 1.952–2(c) provides for a number of exceptions, but none of the exceptions affects the application of section 163(j).

[2] For purposes of Proposed § 1.163(j)–7, the term effectively connected income (or ECI) means income or gain that is ECI, as defined in § 1.884–1(d)(1)(iii), and deduction or loss that is allocable to, ECI, as defined in § 1.884–1(d)(1)(iii).

meaning of section 1297(a) (PFIC), or its shareholders, solely because the PFIC is a relevant foreign corporation. See § 1.163(j)–4(c)(1) (providing that section 163(j) does not affect earnings and profits). The Treasury Department and the IRS request comments on whether any additional guidance is needed to reduce the compliance burden of section 163(j) on PFICs and their shareholders.

2. Application of Section 163(j) to CFC Group Members

a. Single Section 163(j) Limitation for a CFC Group

Proposed § 1.163(j)–7(c) provides rules for applying section 163(j) to CFC group members of a CFC group. Under the Proposed Regulations, a single section 163(j) limitation is computed for a CFC group. See proposed § 1.163(j)–7(c)(2). For this purpose, the current-year BIE, disallowed BIE carryforwards, BII, floor plan financing interest expense, and ATI of a CFC group are equal to the sums of the current-year amounts of such items for each CFC group member for its specified taxable year with respect to the specified period. (The terms ''specified taxable year'' and ''specified period'' are discussed in part V.C.3. of this Explanation of Provisions section.) A CFC group member's current-year BIE, BII, floor plan financing interest expense, and ATI for a specified taxable year are generally determined on a separate-company basis before being included in the CFC group calculation.

b. Allocation of CFC Group's Section 163(j) Limitation to Business Interest Expense of CFC Group Members

The extent to which a CFC group's section 163(j) limitation is allocated to a particular CFC group member's current-year BIE and disallowed BIE carryforwards is determined using the rules that apply to consolidated groups under § 1.163(j)–5(a)(2) and (b)(3)(ii) (consolidated BIE rules), subject to certain modifications. See proposed § 1.163(j)–7(c)(3)(i). Because many CFC groups will be owned by consolidated groups, many taxpayers will be familiar with the consolidated BIE rules.

If the sum of the CFC group's current-year BIE and disallowed BIE carryforwards exceeds the CFC group's section 163(j) limitation, then current-year BIE is deducted first. If the CFC group's current-year BIE exceeds the CFC group's section 163(j) limitation, then each CFC group member deducts the amount of its current-year BIE not in excess of the sum of its BII and floor plan financing interest expense, if any. Then, if the CFC group has any section 163(j) limitation remaining for the current year, each applicable CFC with remaining current-year BIE deducts a pro rata portion thereof.

If the CFC group's section 163(j) limitation exceeds its current-year BIE, then CFC group members may deduct all of their current-year BIE and may deduct disallowed BIE carryforwards not in excess of the CFC group's remaining section 163(j) limitation. The disallowed BIE carryforwards are deducted in the order of the taxable years in which they arose, beginning with the earliest taxable year, and disallowed BIE carryforwards that arose in the same taxable year are deducted on a pro rata basis. This taxable year ordering rule is consistent with the consolidated BIE rules. However, Proposed § 1.163(j)–7 provides special rules for disallowed BIE carryforwards when CFC group members have different taxable years, or a CFC group member has multiple taxable years with respect to the specified period of the CFC group. Unlike members of a consolidated group, not all CFC group members will have the same taxable years, and not all CFC group members will have the same taxable year as the parent of the CFC group. As discussed in part V.C.3 of this Explanation of Provisions section, a CFC group member is included in a CFC group for its entire taxable year that ends with or within a specified period.[3]

c. Limitation on Pre-Group Disallowed Business Interest Expense Carryforwards

The disallowed BIE carryforwards of a CFC group member when it joins a CFC group (pre-group disallowed BIE carryforwards) are subject to the same CFC group section 163(j) limitation and are deducted pro rata with other CFC group disallowed BIE carryforwards. However, pre-group disallowed BIE carryforwards are subject to additional limitations, similar to the limitations on deducting the disallowed BIE carryforwards of a consolidated group arising in a SRLY, as defined in § 1.1502–1(f), or treated as arising in a SRLY under the principles of § 1.1502–21(c) and (g). The policy of the limitation imposed on pre-group BIE carryforwards is analogous to the policy of the SRLY limitation for consolidated groups.

The rules and principles of § 1.163(j)–5(d)(1)(B), which applies SRLY subgroup principles to disallowed BIE carryforwards of a consolidated group, apply to pre-group subgroups. If a CFC group member with pre-group disallowed BIE carryforwards (loss member) leaves one CFC group (former group) and joins another CFC group (current group), the loss member and each other CFC group member that left the former group and joined the current group for a specified taxable year with respect to the same specified period consists of a ''pre-group subgroup.'' Unlike SRLY subgroups, it is not required that all members of a pre-group subgroup join the CFC group at the same time, since each applicable CFC that joins a CFC group is treated as joining on the first day of its taxable year. As a result, even if multiple applicable CFCs are acquired on the same day in a single transaction, they would join the CFC group on different days if they have different taxable years.

d. Special Rules for Specified Periods Beginning in 2019 or 2020

Proposed § 1.163(j)–7(c)(5) provides special rules for applying section 163(j)(10) to CFC groups. The proposed regulations provide that elections under section 163(j)(10) are made for a CFC group (rather than for each CFC group member). For a specified period of a CFC group beginning in 2019 or 2020, unless the election described in § 1.163(j)–2(b)(2)(ii)(A) is made, the CFC group section 163(j) limitation is determined by using 50 percent (rather than 30 percent) of the CFC group's ATI for the specified period, without regard to whether the taxable years of CFC group members begin in 2019 or 2020. If the election described in § 1.163(j)–2(b)(2)(ii)(A) is made for a specified period of a CFC group, the CFC group section 163(j) limitation is determined by using 30 percent (rather than 50 percent) of the CFC group's ATI for the specified period, without regard to whether the taxable years of CFC group members begin in 2019 or 2020. The election is made for the CFC group by each designated U.S. person.

[3] For example, assume a U.S. multinational group parented by a consolidated group with a taxable year that is the calendar year includes applicable CFCs with November 30 taxable years and other applicable CFCs with calendar year taxable years. In this case, as discussed in more detail in part V.C.3.b. of the Explanation of Provisions section, the specified period of the CFC group for 2020 would begin on January 1, 2020, and end on December 31, 2020. Furthermore, the specified taxable year of a CFC group member with a taxable year that is the calendar year is its taxable year ending December 31, 2020, and the specified taxable year of a CFC group member with a November 30 taxable year is its taxable year ending November 30, 2020 (the taxable years that end with or within the specified period). A CFC group member can also have multiple taxable years with respect to a specified period. For example, a CFC group member may have a short taxable year due to an election under § 1.245A–5T(e)(3)(i) (elective exception to close a CFC's taxable year in the case of an extraordinary reduction).

The election under § 1.163(j)–2(b)(3)(i) to use 2019 ATI (that is, ATI for the last taxable year beginning in 2019) rather than 2020 ATI (that is, ATI for a taxable year beginning in 2020) is made for a specified period of a CFC group beginning in 2020 (2020 specified period) and applies to the specified taxable years of CFC group members with respect to the 2020 specified period. Accordingly, if a specified taxable year of a CFC group member with respect to a CFC group's 2020 specified period begins in 2020, then the election is applied to such taxable year using the CFC group member's ATI for its last taxable year beginning in 2019. In some cases, the specified taxable year of a CFC group member with respect to a CFC group's 2020 specified period will begin in 2019 or 2021. If the specified taxable year of the CFC group member begins in 2019, then the election is applied to such taxable year using the CFC group member's ATI for its last taxable year beginning in 2018; if the specified taxable year of the CFC group member begins in 2021, then the election is applied to such taxable year using the CFC group member's ATI for its last taxable year beginning in 2020.

For example, assume a CFC group has two CFC group members, CFC1 and CFC2, and has a specified period that is the calendar year. CFC1 has a taxable year that is the calendar year, and CFC2 has a taxable year that ends November 30. The election under § 1.163(j)–2(b)(3)(i) is in effect for the specified period beginning January 1, 2020, and ending December 31, 2020 (which is the 2020 specified period). As a result, the ATI of the CFC group for the 2020 specified period is determined by reference to the specified taxable year of CFC1 beginning January 1, 2019, and ending December 31, 2019 (the last taxable year beginning in 2019), and the specified taxable year of CFC2 beginning December 1, 2018, and ending November 30, 2019 (the last taxable year beginning in 2018).

Alternatively, assume (i) the same CFC group instead has a 2020 specified period that begins on December 1, 2020, and ends on November 30, 2021; (ii) in 2019 and 2020, CFC1 has a taxable year that is the calendar year, but in 2021, CFC1 has a short taxable year that begins on January 1, 2021, and ends on June 30, 2021; and (iii) CFC2 has a taxable year ending November 30 (for all years). Further assume that the election under § 1.163(j)–2(b)(3)(i) is in effect for the 2020 specified period. In this case, the election applies to the specified taxable year of CFC1 that begins on January 1, 2020, and ends on December 31, 2020; the specified taxable year of CFC1 that begins on January 1, 2021, and ends on June 30, 2021; and the specified taxable year of CFC2 that begins on December 1, 2020, and ends on November 30, 2021. As a result of the election, the ATI of the CFC group for the 2020 specified period is determined by reference to the specified taxable year of CFC1 beginning January 1, 2019, and ending December 31, 2019, the specified taxable year of CFC1 beginning January 1, 2020, and ending December 31, 2020, and the specified taxable year of CFC2 beginning December 1, 2019, and ending November 30, 2020.

If the election under § 1.163(j)–2(b)(3)(i) to use 2019 ATI rather than 2020 ATI is made for a CFC group, the CFC group's ATI for the 2020 specified period is determined by reference to the 2019 ATI of all CFC group members (except to the extent that 2018 or 2020 ATI is used, as described earlier), including any CFC group member that joins the CFC group during the 2020 specified period. Therefore, a CFC group's ATI for the 2020 specified period may be determined by reference to a prior taxable year of a new CFC group member even though the CFC group member was not a CFC group member in the prior taxable year. If a CFC group member leaves the CFC group during the 2020 specified period, the ATI of the CFC group for the 2020 specified period is determined without regard to the ATI of the departing CFC group member.

As stated in the Background section of this preamble, Revenue Procedure 2020–22 generally provides the time and manner of making or revoking elections under section 163(j)(10), including elections with respect to applicable CFCs. References in Revenue Procedure 2020–22 to CFC groups and CFC group members are to CFC groups and applicable CFCs for which a CFC group election is made under the 2018 Proposed Regulations. The rules described in this part V.C.2.d of this Explanation of Provisions section and proposed § 1.163(j)–7(c)(5) modify the application of Revenue Procedure 2020–22 and the elections under section 163(j)(10) for CFC groups and applicable CFCs for which a CFC group election is made under Proposed § 1.163(j)–7.

Thus, for example, if a CFC group has two designated U.S. persons that are U.S. corporations, pursuant to proposed § 1.163(j)–7(c)(5), the election to not apply the 50 percent ATI limitation to the CFC group for a specified period beginning in 2020 is made for the specified period of the CFC group by each designated U.S. person, and pursuant to Revenue Procedure 2020–22, section 6.01(2), the election to not apply the 50 percent ATI limitation is made by the each designated U.S. person timely filing a Federal income tax return, including extensions, using the 30 percent ATI limitation for purposes of determining the taxable income of the CFC group.

For purposes of applying § 1.964–1(c), the elections described in proposed § 1.163(j)–7(c)(5) are treated as if made for each CFC group member. Thus, the requirements to provide a statement and written notice as provided under § 1.964–1(c)(3)(i)(B) and (C) apply.

3. Specified Groups and Specified Group Members

a. In General

Proposed § 1.163(j)–7(d) provides rules for determining a specified group and specified group members. The determination of a specified group and specified group members is the basis for determining a CFC group and CFC group members. This is because a CFC group member is a specified group member of a specified group for which a CFC group election is in effect, and a CFC group consists of all the CFC group members. See proposed § 1.163(j)–7(e)(2).

b. Specified Group

Under proposed § 1.163(j)–7(d)(2), a specified group includes one or more chains of applicable CFCs connected through stock ownership with a specified group parent, but only if the specified group parent owns stock meeting the requirements of section 1504(a)(2)(B) (pertaining to value) in at least one applicable CFC, and stock meeting the requirements of section 1504(a)(2)(B) in each of the applicable CFCs (except the specified group parent) is owned by one or more of the other applicable CFCs or the specified group parent.

Unlike the general rules in section 1504, in order to avoid breaking affiliation with a partnership or foreign trust or foreign estate, for purposes of determining whether stock in an applicable CFC meeting the requirements of section 1504(a)(2)(B) is owned by the specified group parent or other applicable CFCs, proposed § 1.163(j)–7(d)(2) takes into account both stock owned directly and stock owned indirectly under section 318(a)(2)(A) through a domestic or foreign partnership or under section 318(a)(2)(A) or (a)(2)(B) through a foreign estate or trust (the look-through rule). For example, assume CFC1 and CFC2 is each an applicable CFC and a specified group member of a specified group. If CFC1 and CFC2 each own 50 percent of the capital and profits interests in a partnership, and the partnership wholly owns CFC3, an applicable CFC, then, by reason of the look-through rule, CFC3 is also included in the specified group, although the partnership is not.

The specified group rules also differ from the affiliated group rules in section 1504 in that they require only that 80 percent of the total value (pursuant to section 1504(a)(2)(B)), not 80 percent of both vote and value (pursuant to section 1504(a)(2)(A) and (a)(2)(B)), of an applicable CFC be owned by the specified group parent or other applicable CFCs in the specified group in order for the applicable CFC to be included in the specified group. The Treasury Department and the IRS determined that limiting the 80-percent threshold to value is appropriate to prevent taxpayers from breaking affiliation by diluting voting power below 80 percent.

The specified group has a single specified group parent, which may be either a qualified U.S. person or an applicable CFC. However, the specified group parent is included in the specified group only if it is an applicable CFC. For this purpose, a *qualified U.S. person* means a U.S. person that is a citizen or resident of the United States or a domestic corporation. For purposes of determining the specified group parent, members of a consolidated group are treated as a single corporation and individuals whose filing status is ''married filing jointly'' are treated as a single individual (aggregation rule). The Treasury Department and the IRS have determined that the aggregation rule is appropriate because all deemed inclusions with respect to applicable CFCs included in gross income of members of a consolidated group or of individuals filing a joint return, as applicable, are reported on a single U.S. tax return. The Treasury Department and the IRS determined that it is appropriate for an S corporation to be a qualified U.S. person because an S corporation can have only a single class of stock and therefore the economic rights of its shareholders in all applicable CFCs owned by the S corporation are proportionate to share ownership. On the other hand, the Treasury Department and the IRS have determined that it is not appropriate for a domestic partnership to be a qualified U.S. person because of the ability of partnerships to make disproportionate or special allocations and therefore the economic rights of partners in the partnership with respect to all applicable CFCs owned by a partnership will not necessarily be proportionate to ownership. However, if, for example, a domestic partnership wholly owns an applicable CFC, which wholly owns multiple other applicable CFCs, and no qualified U.S. person owns stock in the top-tier CFC meeting the requirements of section 1504(a)(2)(B), taking into account the look-through rule, then the applicable CFCs are included in a specified group of which the top-tier CFC is the specified group parent.

The Treasury Department and the IRS request comments regarding whether, and to what extent, the definition of a ''qualified U.S. person'' should be expanded to include domestic estates and trusts or whether and to what extent the look-through rule should apply if stock of applicable CFCs is owned by domestic estates and trusts.

Each specified group has a specified period. A specified period is similar to a taxable year but determined with respect to a specified group. A specified group does not have a taxable year because the specified group members may not have the same taxable year. If the specified group parent is a qualified U.S. person, the specified period generally ends on the last day of the taxable year of the specified group parent and begins on the first day after the last day of the prior specified period. Thus, for example, if the specified group parent is a domestic corporation with a calendar year taxable year, the specified period generally begins on January 1 and ends on December 31. If the specified group parent is an applicable CFC, the specified period generally ends on the last day of the required year of the specified group parent, determined under section 898(c)(1), without regard to section 898(c)(2), and begins on the first day after the last day of the prior specified period. However, a specified period never begins before the first day on which the specified group exists or ends after the last day on which the specified group exists. Like a taxable year, a specified period can never be longer than 12 months.

The principles of § 1.1502–75(d)(1), (d)(2)(i) through (d)(2)(ii), and (d)(3)(i) through (d)(3)(iv) (regarding when a consolidated group remains in existence) (§ 1.1502–75(d) principles) apply for purposes of determining when a specified group ceases to exist. Solely for purposes of applying the § 1.1502–75(d) principles, each applicable CFC that is treated as a specified group member for a taxable year of the applicable CFC with respect to a specified period is treated as affiliated with the specified group parent from the beginning to the end of the specified period, without regard to the beginning or end of its taxable year. This rule does not affect the general rule that, for purposes other than § 1.1502–75(d) (such as the application of section 163(j) to a CFC group), an applicable CFC is a specified group member with respect to a specified period for its taxable year ending with or within the specified period.[4]

The Treasury Department and the IRS request comments as to whether any modifications to the § 1.1502–75(d) principles should be made for specified groups.

c. Specified Group Members

Proposed § 1.163(j)–7(d)(3) provides rules for determining specified group members with respect to a specified group. The determination as to whether an applicable CFC is a specified group member is made with respect to a taxable year of the applicable CFC and specified period of a specified group. Specifically, if the applicable CFC is included in a specified group on the last day of its taxable year that ends with or within the specified period, the applicable CFC is a specified group member with respect to the specified period for the entire taxable year.[5]

[4] For example, assume a specified group parent with a specified period that is the calendar year acquires all of the stock of CFC1, an applicable CFC, on June 30, Year 1, and sells all of the stock of CFC1 on June 30, Year 3. CFC1 has a November 30 taxable year, and the specified period is the calendar year. CFC1 is included in the specified group on November 30, Year 1, and November 30, Year 2 (but not November 30, Year 3). As a result, CFC1 is a specified group member for its taxable year ending November 30, Year 1, with respect to the specified period ending December 31, Year 1, and for its taxable year ending November 30, Year 2, with respect to the specified period ending December 31, Year 2. Solely for purposes of applying the § 1.1502–75(d) principles, CFC1 is treated as affiliated with the specified group parent from the beginning to the end of the specified period ending December 31, Year 1, and from the beginning to the end of the specified period ending December 31, Year 2. In other words, CFC1 is treated as affiliated with the specified group parent from January 1, Year 1, to December 31, Year 2.

[5] For example, assume CFC1, an applicable CFC, has a taxable year beginning December 1, Year 1, and ending November 30, Year 2, and a specified group has a specified period beginning January 1, Year 2, and ending December 31, Year 2. If CFC1 is included in the specified group on November 30, Year 2, then CFC1 is a specified group member with respect to the specified period for its entire taxable year ending November 30, Year 2. This is the case even if CFC1 is not included in the specified group during part of its taxable year ending November 30, Year 2 (for example, because all of the stock of CFC2 is purchased by the specified group on June 1, Year 2, and its taxable year does not close as a result of joining the specified group), or if CFC1 ceases to be included in the specified group after November 30, Year 2, but before December 31, Year 2 (for example, because all of the stock of CFC1 is

Continued

The Treasury Department and the IRS are concerned about the potential for abuse that may arise if taxpayers cause an applicable CFC that otherwise would be treated as a specified group member and a CFC group member to avoid being treated as a CFC group member. For example, the Treasury Department and the IRS have determined that it is not appropriate for taxpayers to prevent an applicable CFC with high ATI and low BIE from being part of a CFC group with a goal of increasing its CFC excess taxable income and its U.S. shareholders' ATI inclusions, rather than allowing the applicable CFC's ATI to be used by the CFC group. The Treasury Department and the IRS request comments on appropriate methods of preventing an applicable CFC from avoiding being a CFC group member for purposes of increasing the ATI of its U.S. shareholders. The Treasury Department and the IRS also request comments on whether a rule similar to the rule in section 1504(a)(3), which prevents domestic corporations from rejoining a consolidated group for 60 months, should apply to prevent applicable CFCs from rejoining a CFC group.

4. CFC Groups and CFC Group Members

a. In General

Proposed § 1.163(j)–7(e) provides rules and procedures for treating specified group members as CFC group members and for determining a CFC group. A CFC group member means a specified group member of a specified group for which a CFC group election is in effect. The specified group member is a CFC group member for a specified taxable year with respect to a specified period. A CFC group means all CFC group members for their specified taxable years with respect to a specified period. See proposed § 1.163(j)–7(e)(2) (defining CFC group and CFC group member). Thus, if a CFC group election is in place, the terms ''specified group members,'' ''CFC group members,'' and a ''CFC group'' refer to the same applicable CFCs. The term ''specified group,'' which is determined at any moment in time, may not necessarily refer to the exact same applicable CFCs.

Once a CFC group election is made, the CFC group continues until the CFC group election is revoked or until the end of the last specified period with respect to the specified group. See proposed § 1.163(j)–7(e)(3). When a CFC group election is in effect, if an applicable CFC becomes a specified group member with respect to a specified period of the specified group, the CFC group election applies to the applicable CFC and it becomes a CFC group member. When an applicable CFC ceases to be a specified group member with respect to a specified period of a specified group, the CFC group election terminates solely with respect to the applicable CFC. See proposed § 1.163(j)–7(e)(4) (joining or leaving a CFC group).

b. Making or Revoking a CFC Group Election

Proposed § 1.163(j)–7(e)(5) provides rules for making and revoking a CFC group election. Proposed § 1.163(j)–7(e)(5)(i) provides that a CFC group election applies with respect to a specified period of a specified group. Accordingly, the CFC group election applies to each specified group member for its entire specified taxable year that ends with or within the specified period. In response to comments to the 2018 Proposed Regulations, the CFC group election is not irrevocable. Instead, once made, a CFC group election cannot be revoked with respect to any specified period of the specified group that begins during the 60-month period following the last day of the first specified period for which the election was made. Similarly, once revoked, a CFC group election cannot be made again with respect to any specified period of the specified group that begins during the 60-month period following the last day of the first specified period for which the election was revoked.

The Treasury Department and the IRS request comments regarding whether a specified group that does not make a CFC group election when it first comes into existence (or for the first specified period following 60 days after the date of publication of the Treasury decision adopting these regulations as final in the **Federal Register**) should be prohibited from making the CFC group election for any specified period beginning during the 60-month period following that specified period.

Thus, under the Proposed Regulations, in the case of a specified group, taxpayers choose to apply section 163(j) to specified group members on a CFC group basis or on a stand-alone basis for no less than a 60-month period. The Treasury Department and the IRS have determined that a 60-month period is an appropriate balance between making the choice irrevocable and providing an annual election, the latter of which may facilitate inappropriate tax planning (in this regard, see, for example, the discussion in part C.7 of this part V of the Explanation of Provisions section).

c. Specified Financial Services Subgroup Rules

In response to comments, Proposed § 1.163(j)–7 does not provide for CFC financial services subgroups. Instead, applicable CFCs that otherwise qualify as CFC group members are treated as part of the same CFC group.

d. Interaction of the CFC Group Election in Proposed § 1.163(j)–7 With the CFC Group Election in the 2018 Proposed Regulations

The CFC group election can be made only in accordance with the method prescribed in proposed § 1.163(j)–7(e)(5). The 2018 Proposed Regulations also contained an election called a ''CFC group election'' (old CFC group election). The old CFC group election is a different election than the CFC group election contained in Proposed § 1.163(j)–7. Accordingly, the old CFC group election may be relied on only for taxable years in which the taxpayer relies on the 2018 Proposed Regulations. Whether an old CFC group election was made under the 2018 Proposed Regulations has no effect on whether a CFC group election under proposed § 1.163(j)–7(e)(5) is in effect for any taxable year in which the taxpayer relies on Proposed § 1.163(j)–7.

5. Exclusion of ECI From Application of Section 163(j) to a CFC Group

In response to comments, proposed § 1.163(j)–7 provides that an applicable CFC with ECI is not precluded from being a CFC group member. However, under proposed § 1.163(j)–7(f), only the ATI, BII, BIE, and floor plan financing of the applicable CFC that are not attributable to ECI are included in the CFC group's section 163(j) calculations. The ECI items of the applicable CFC are not included in the CFC group calculations. Instead, the ECI of the applicable CFC is treated as income of a separate CFC, an ''ECI deemed corporation,'' that has the same taxable year and shareholders as the applicable CFC, but that is not a CFC group member. The ECI deemed corporation must do a separate section 163(j) calculation for its ECI in accordance with Proposed § 1.163(j)–8. See Proposed § 1.163(j)–8 and part VI of this Explanation of Provisions section for rules applicable to foreign corporations with ECI.

6. Treatment of Foreign Taxes for Purposes of Computing ATI

Proposed § 1.163(j)–7(g)(3) provides that, for purposes of computing its ATI, tentative taxable income of a relevant foreign corporation is determined by taking into account a deduction for

sold by the specified group on December 15, Year 2).

foreign taxes. This rule is consistent with § 1.952–2, which provides that the taxable income of a foreign corporation for any taxable year is determined by treating the foreign corporation as a domestic corporation, and section 164(a), which allows a deduction for foreign taxes. The Treasury Department and the IRS request comments regarding whether, and the extent to which, the ATI of a relevant foreign corporation should be determined by adding to tentative taxable income any deductions for foreign income taxes.

7. Anti-Abuse Rule

The Treasury Department and the IRS are concerned that, in certain situations, U.S. shareholders may inappropriately affirmatively plan to limit BIE deductions as part of a tax-planning transaction, including by not making a CFC group election for purposes of increasing the disallowed BIE of a specified group member or of a partnership substantially owned by specified group members of the same specified group. For example, in a taxable year in which a U.S. shareholder would otherwise have foreign tax credits in the section 951A category in excess of the section 904 limitation, a U.S. shareholder might inappropriately cause one specified group member to pay interest to another specified group member in an amount in excess of the borrowing specified group member's section 163(j) limitation. As a result, the U.S. shareholder's pro rata share of tested income of the borrowing specified group member for the taxable year would be increased without increasing the U.S. shareholder's Federal income tax because excess foreign tax credits in the section 951A category in the taxable year that cannot be carried forward to a future taxable year would offset the Federal income tax on the incremental increase in the U.S. shareholder's pro rata share of tested income, while also enabling the borrowing specified group member to generate a disallowed BIE carryforward that may be used in a subsequent taxable year.

Accordingly, under proposed § 1.163(j)–7(g)(4), if certain conditions are met, when one specified group member or applicable partnership (specified borrower) pays interest to another specified group member or applicable partnership (specified lender), and the payment is BIE to the specified borrower and income to the specified lender, then the ATI of the specified borrower is increased by the amount necessary such that the BIE of the specified borrower is not limited under section 163(j). This amount is determined by multiplying the lesser of the payment amount or the disallowed BIE (computed without regard to this ATI adjustment) by 3⅓ (or by 2, in the case of taxable years or specified taxable years with respect to a specified period for which the section 163(j) limitation is determined by reference to 50 percent of ATI). A partnership is an applicable partnership if at least 80 percent of the capital or profits interests is owned, in aggregate, by direct or direct partners that are specified group members of the same specified group. The conditions for this rule to apply are as follows: (i) The BIE is incurred with a principal purpose of reducing the Federal income tax liability of a U.S. shareholder (including over multiple taxable years); (ii) the effect of the specified borrower treating the payment amount as disallowed BIE would be to reduce the Federal income tax of a U.S. shareholder; and (iii) either no CFC group election is in effect or the specified borrower is an applicable partnership.

8. The Safe-Harbor Election

Proposed § 1.163(j)–7(h) provides a safe-harbor election for stand-alone applicable CFCs and CFC groups. If the safe-harbor election is in effect for a taxable year, no portion of the BIE of the stand-alone applicable CFC or of each CFC group member, as applicable, is disallowed under the section 163(j) limitation. The safe-harbor election is an annual election. If the election is made, then no portion of any CFC excess taxable income is included in a U.S. shareholder's ATI. See proposed § 1.163(j)–7(j)(2)(iv).

The safe-harbor election cannot be made with respect to any foreign corporation that is not a stand-alone applicable CFC or a CFC group member. As a result, if a CFC group election is not in effect for a specified period, a specified group member of the specified group is not eligible for the safe-harbor election.

In the case of a stand-alone applicable CFC, the safe-harbor election may be made for a taxable year of the stand-alone applicable CFC if its BIE does not exceed 30 percent of the lesser of (i) its tentative taxable income attributable to non-excepted trades or businesses (referred to as ''qualified tentative taxable income''), and (ii) its ''eligible amount'' for the taxable year. In the case of a CFC group, the safe-harbor election may be made for the specified taxable years of each CFC group member with respect to a specified period if the CFC group's BIE does not exceed 30 percent of the lesser of (i) the sum of the qualified tentative taxable income of each CFC group member, and (ii) the sum of the eligible amounts of each CFC group member. For taxable years of a stand-alone applicable CFC or specified periods of a CFC group beginning in 2019 or 2020, the 30 percent limitation is replaced with a 50 percent limitation, consistent with the change in the section 163(j) limitation to take into account 50 percent, rather than 30 percent, of ATI for such taxable years or specified periods.

The ''eligible amount'' is a CFC-level determination. In general, the eligible amount is the sum of the applicable CFC's subpart F income plus the approximate amount of GILTI inclusions its U.S. shareholders would have were the applicable CFC wholly owned by domestic corporations that had no tested losses and that were not subject to the section 250(a)(2) limitation on the section 250(a)(1) deduction. Amounts used in the determination of the eligible amount are computed without regard to the application of section 163(j) and the section 163(j) regulations. While the eligible amount of an applicable CFC cannot be negative, qualified tentative taxable income can be negative. Thus, limiting the safe-harbor to 30 percent of qualified tentative taxable income ensures that losses of a stand-alone applicable CFC or a CFC group are taken into account in determining whether the stand-alone applicable CFC or the CFC group qualifies for the safe-harbor.[6]

The safe-harbor election does not apply to EBIE, as described in § 1.163(j)–6(f)(2), and EBIE is not taken into account for purposes of determining whether the safe-harbor election is available for a stand-alone applicable CFC or a CFC group, until such business interest expense is treated as paid or accrued by an applicable CFC in a succeeding year (that is, until the applicable CFC is allocated excess taxable income or excess business interest income from such partnership in accordance with § 1.163(j)–6(g)(2)(i)).

The safe-harbor election is intended to reduce the compliance burden on applicable CFCs that would not have disallowed BIE if they applied the

[6] For example, assume that, before taking into account BIE, a stand-alone applicable CFC has net income of $0x, consisting of $100x of subpart F income, a $100x loss attributable to foreign oil and gas extraction income, as defined in section 907(c)(1). It also has $20x of BIE, no BII, and no floor plan financing interest expense. The ATI of the CFC is zero and the section 163(j) limitation would be zero. However, the eligible amount of the CFC is $100x. Thus, absent a rule limiting the safe harbor to 30 percent of qualified tentative taxable income, the CFC would be permitted to deduct its $20x of business interest expense under the safe harbor, even though none of the BIE would be deductible under the section 163(j) limitation.

section 163(j) calculation. However, the Treasury Department and the IRS are concerned that the safe-harbor election might be used to deduct pre-group disallowed BIE carryforwards that would be limited under proposed § 1.163(j)–7(c)(3)(iv) (rules similar to the consolidated SRLY rules). Accordingly, the proposed regulations provide that a safe-harbor election cannot be made for a CFC group that has pre-group disallowed BIE carryforward. The Treasury Department and the IRS request comments on whether the safe-harbor election should be available for CFC groups with pre-group disallowed BIE carryforwards and, if so, appropriate methods of preventing pre-group disallowed BIE carryforwards that would be limited under proposed § 1.163(j)–7(c)(3)(iv) from being deductible by CFC group members of CFC groups that apply the safe-harbor election.

The Treasury Department and the IRS also request comments on appropriate modifications, if any, to the safe-harbor election that would further the goal of reducing the compliance burden on stand-alone applicable CFCs and CFC groups that would not have disallowed BIE if they applied the section 163(j) limitation.

9. Increase in Adjusted Taxable Income of U.S. Shareholders

As a general matter, a U.S. shareholder does not include in its ATI any portion of its specified deemed inclusions. Specified deemed inclusions include the U.S. shareholder's deemed income inclusions attributable to an applicable CFC and a non-excepted trade or business of the U.S. shareholder. See § 1.163(j)–1(b)(2)(ii)(G). Specified deemed inclusions also include amounts included in a domestic C corporation's allocable share of a domestic partnership's gross income inclusions under sections 951(a) and 951A(a) with respect to an applicable CFC that are investment income to the partnership, to the extent that such amounts are treated as properly allocable to a non-excepted trade or business of the domestic C corporation under §§ 1.163(j)–4(b)(3) and 1.163(j)–10.[7] However, consistent with comments received, proposed § 1.163(j)–7(j) allows a U.S. shareholder to include in its ATI a portion of its specified deemed inclusions that are attributable to either a stand-alone applicable CFC or a CFC group member, except to the extent attributable to section 78 ''gross-up'' inclusions. That portion is equal to the ratio of the applicable CFC's CFC excess taxable income over its ATI.

In the case of a stand-alone applicable CFC, CFC excess taxable income is equal to an amount that bears the same ratio to the applicable CFC's ATI as (i) the excess of 30 percent of the applicable CFC's ATI over the amount, if any, by which its BIE exceeds its BII and floor plan financing interest expense, bears to (ii) 30 percent of its ATI. In the case of a CFC group, each applicable CFC's CFC excess taxable income is determined by calculating the excess taxable income of the CFC group and allocating it to each CFC group member pro rata on the basis of the CFC group member's ATI. For any taxable year or specified period to which the 50 percent (rather than 30 percent) limitation applies under section 163(j)(10), the formula for calculating CFC excess taxable income is adjusted accordingly.

The Treasury Department and the IRS are concerned that taxpayers may inappropriately attempt to aggregate debt in certain specified group members for which a CFC group election is not in effect, thereby overleveraging some specified group members and artificially creating CFC excess taxable income in other specified group members for purposes of increasing the ATI of a U.S. shareholder.[8] Accordingly, the Treasury Department and the IRS have determined that any excess taxable income of a specified group member should not become available to increase the ATI of a U.S. shareholder unless a CFC group election is in effect and the CFC group has not exceeded its section 163(j) limitation. Accordingly, under proposed § 1.163(j)–7(j)(4)(ii), only U.S. shareholders of stand-alone applicable CFCs and CFC group members can increase their ATI for a portion of their specified deemed inclusion. To the extent that a CFC group election is not in effect, a U.S. shareholder may not increase its ATI for any portion of its specified deemed inclusion attributable to a specified group member of the specified group.

In addition, if a safe-harbor election is in effect with respect to the taxable year of a stand-alone applicable CFC or the specified period of a CFC group, CFC excess taxable income is not calculated for the stand-alone applicable CFC or the CFC group members. As a result, proposed § 1.163(j)–7(j)(4)(i) provides that a U.S. shareholder of a stand-alone applicable CFC or of a CFC group member for which the safe-harbor election is in effect does not increase its ATI for any portion of its specified deemed inclusion attributable to the stand-alone applicable CFC or CFC group member.

VI. Section 1.163(j)–8: Application of the Business Interest Deduction Limitation to Foreign Persons With Effectively Connected Income

A. Proposed § 1.163(j)–8 Contained in the 2018 Proposed Regulations

The 2018 Proposed Regulations under § 1.163(j)–8 provide rules for how section 163(j) applies to a nonresident alien individual or foreign corporation that is not an applicable CFC (specified foreign person) with ECI. Although the regulations under section 163(j) generally apply to specified foreign persons, a number of the general rules under section 163(j) need to be adjusted to take into account the fact that a specified foreign person is taxed only on its ECI rather than all of its income. Accordingly, the definitions for ATI, BIE, BII, and floor plan financing interest expense are modified to limit such amounts to items that are, or are allocable to, ECI. The 2018 Proposed Regulations also modify § 1.163(j)–10(c) to provide that a specified foreign person's interest expense and interest income are only allocable to excepted or non-excepted trades or businesses that have ECI.

Under the 2018 Proposed Regulations, a specified foreign person that is a partner in a partnership that has ECI (specified foreign partner) is required to modify the application of the general allocation rules in § 1.163(j)–6 with respect to ETI, EBIE, and EBII of the

[7] The Treasury Department and the IRS anticipate that a domestic partnership's gross income inclusions under sections 951(a) and 951A(a) will virtually always be investment income to the partnership. See section 163(j)(5), excluding ''investment interest'' subject to section 163(d) from the definition of business interest, and sections 163(d)(3)(A) and (d)(5), treating as investment interest any interest properly allocable to ''property which produces income of a type described in section 469(e)(1).'' See also § 1.469–2T(c)(3).

[8] For example, assume a U.S. shareholder wholly owns CFC1, which wholly owns CFC2. CFC1 and CFC2 each have $100x of ATI and no business interest income or floor plan financing interest expense. CFC1 and CFC2 have not made a CFC group election. If CFC1 and CFC2 each have $35x of business interest expense, under section 163(j), CFC1 and CFC2 could each deduct $30x of business interest expense and have a $5x disallowed business interest expense carryforward. Neither CFC1 nor CFC2 would have CFC excess taxable income. As a result, the U.S. shareholder would have no ATI inclusion from CFC1 or CFC2. However, if the CFCs move all of CFC2's debt to CFC1, CFC1 would deduct $30x of business interest expense and have a $40x disallowed business interest expense carryforward. Absent rules providing otherwise, CFC2 would have $100x of CFC excess taxable income and $100x of ATI, allowing the U.S. shareholder to include in its ATI its CFC income inclusion attributable to CFC2 (to the extent attributable to a non-excepted trade or business and not attributable to section 78 ''gross-up'' inclusions).

partnership to take into account only the partnership's items that are, or are allocable to, ECI. Although the section 163(j) limitation is determined on an entity basis by a partnership, the Treasury Department and the IRS determined that excess items of a partnership should only be used by the specified foreign partner to the extent that the excess items arise from partnership items that are ECI with respect to the specified foreign partner. The amount of ETI and EBIE to be used by a specified foreign partner was determined by multiplying the amount of the ETI or the EBIE allocated under § 1.163(j)–6 to the specified foreign partner by a fraction, the numerator of which is the ATI of the partnership, with the adjustments described previously to limit such amount to only items that are ECI, and the denominator of which is the ATI of the partnership determined under § 1.163(j)–6(d). The amount of EBII that could be used by a specified foreign partner was limited to the amount of allocable BII that is ECI from the partnership that exceeds allocable BIE that is allocable to income that is ECI from the partnership.

Lastly, the 2018 Proposed Regulations provide that an applicable CFC that has ECI must first apply the general rules of section 163(j) and the section 163(j) regulations to determine how section 163(j) applies to the applicable CFC. If the applicable CFC has disallowed BIE, the applicable CFC then must apportion a part of its disallowed BIE to BIE allocable to income that is ECI. The amount of disallowed BIE allocable to income that is ECI is equal to the disallowed BIE multiplied by a fraction, the numerator of which is the applicable CFC's ECI ATI, and the denominator of which is the CFC's ATI.

No comments were received on the 2018 Proposed Regulations under § 1.163(j)–8. Nonetheless, the Treasury Department and the IRS have become aware of certain distortions that can result under the 2018 Proposed Regulations. Accordingly, proposed § 1.163(j)–8 has been revised, and re-proposed, to alleviate these distortions and to provide additional guidance and clarity on the manner in which these rules apply to specified foreign partners and CFCs with ECI.

B. Proposed § 1.163(j)–8 in the Proposed Regulations

Proposed § 1.163(j)–8 in the Proposed Regulations (Proposed § 1.163(j)–8) provides rules concerning the application of section 163(j) to foreign persons with ECI.[9] Similar to proposed § 1.163(j)–8(b) in the 2018 Proposed Regulations, proposed § 1.163(j)–8(b)(1)–(5) provides that, for purposes of applying section 163(j) and the section 163(j) regulations to a specified foreign person, certain definitions (ATI, BIE, BII, and floor plan financing interest expense) are modified to take into account only ECI items. Additionally, proposed § 1.163(j)–8(b)(6) provides that, for purposes of applying § 1.163(j)–10(c) to a specified foreign person, only ECI items and assets that are U.S. assets are taken into account in determining the amount of interest income and interest expense allocable to a trade or business.

Proposed § 1.163(j)–8(c) determines the portion of a specified foreign partner's allocable share of ETI, EBIE, and EBII (as determined under § 1.163(j)–6) that is treated as ECI and the portion that is not treated as ECI. The portion of the specified foreign partner's allocable share of ETI that is ECI is equal to its allocable share of ETI multiplied by a fraction, the specified ATI ratio (which compares the specified foreign partner's distributive share of the partnership's ECI to its distributive share of the partnership's total income). The remainder of the specified foreign partner's allocable share of ETI is not ECI. See proposed § 1.163(j)–8(c)(1). Similar to ETI, the portion of the specified foreign partner's allocable share of EBII that is ECI is equal to its allocable share of EBII multiplied by a fraction, the specified BII ratio (which compares the specified foreign partner's allocable share of BII that is ECI to its allocable share of total BII). See proposed § 1.163(j)–8(c)(4).

The portion of the specified foreign partner's allocable share of EBIE that is ECI is determined by subtracting the portion of the specified foreign partner's allocable share of deductible BIE that is characterized as ECI from the amount of the specified foreign partner's allocable share of BIE that is characterized as ECI. See proposed § 1.163(j)–8(c)(2). A similar rule applies for purposes of determining the portion of EBIE that is not ECI. A specified foreign partner's allocable share of deductible BIE that is characterized as ECI or not ECI is determined by allocating the deductible BIE pro rata between the respective amounts of deductible BIE that the specified foreign partner would have if the specified foreign partner's allocable share of the ECI items of the partnership and the non-ECI items of the partnership were treated as separate partnerships and a 163(j) limitation was applied to each hypothetical partnership. However, no more deductible BIE can be characterized as ECI or not ECI than the specified foreign partner's allocable share of BIE that is ECI or the specified foreign partner's allocable share of BIE that is not ECI, respectively. Any deductible BIE in excess of the hypothetical partnership limitations is characterized as ECI or not ECI pro rata in proportion to the remaining amounts of the specified foreign partner's allocable share of BIE that is ECI and not ECI.

Proposed § 1.163(j)–8(d) determines the portion of deductible and disallowed BIE of a relevant foreign corporation (as defined in § 1.163(j)–1(b)(33)) that is characterized as ECI or not ECI. These rules are similar to the rules in proposed § 1.163(j)–8(c) for characterizing a specified foreign partner's allocable share of excess items of a partnership as ECI or not ECI in that they calculate the hypothetical section 163(j) limitation for two hypothetical foreign corporations—a foreign corporation with ECI and a foreign corporation with non-ECI—and allocate the deductible BIE between the two hypothetical limitations. The portion of the relevant foreign corporation's disallowed BIE that is ECI is determined by subtracting the portion of the relevant foreign corporation's deductible BIE that is characterized as ECI from the relevant foreign corporation's BIE that is ECI. A similar rule applies for purposes of determining the portion of disallowed BIE that is characterized as not ECI.

Proposed § 1.163(j)–8(e) provides rules regarding disallowed BIE. These rules provide that disallowed BIE is characterized as ECI or not ECI in the year in which it arises and retains its characterization in subsequent years. Additionally, an ordering rule determines the EBIE that is treated as paid or accrued by a specified foreign partner in a subsequent year. Specifically, the specified foreign partner's allocable share of EBIE is treated as paid or accrued by the specified foreign partner in a subsequent year pursuant to § 1.163(j)–6(g)(2)(i) in the order of the taxable years in which the allocable EBIE arose and pro rata between the specified foreign partner's allocable share of EBIE that is ECI and not ECI that arose in the same taxable year.

Proposed § 1.163(j)–8(e)(2) provides that, for purposes of characterizing deductible BIE and EBIE as ECI or not ECI, a specified foreign partner's BIE is

[9] For purposes of Proposed § 1.163(j)–8, the term *effectively connected income* (or *ECI*) means income or gain that is ECI, as defined in § 1.884–1(d)(1)(iii), and deduction or loss that is allocable to, ECI, as defined in § 1.884–1(d)(1)(iii).

deemed to include its allocable share of EBIE of partnerships in which it is a direct or indirect partner. As a result, EBIE of both top-tier partnerships and lower-tier partnerships is characterized as ECI or not ECI in the year in which it arises, even if it is not included in the specified foreign partner's allocable share of EBIE.

Proposed § 1.163(j)–8(f) provides rules coordinating the application of section 163(j) with § 1.882–5 and similar rules and with the branch profits tax. Proposed § 1.163(j)–8(f)(1)(i) provides that a foreign corporation first determines its interest expense on liabilities that are allocable to ECI under § 1.882–5 before applying section 163(j). Similarly, interest expense, as defined in § 1.163(j)–1(b)(23), that is not allocable to ECI under § 1.882–5 must be allocable to income that is ECI under the regulations under section 861 before section 163(j) is applied.

Proposed § 1.163(j)–8(f)(1)(ii) provides rules for determining the portion of a specified foreign partner's BIE that is ECI, as determined under § 1.882–5(b) through (d) or § 1.882–5(e) (§ 1.882–5 interest expense), that is treated as attributable to a partner's allocable share of interest expense of a partnership. As a general matter, the determination as to whether a partnership's items of income and expense are allocable to ECI is made by the partnership. However, the determination as to the amount of interest expense that is allocable to ECI is made by a partner, not the partnership. Because section 163(j) applies separately to partnerships and their partners, a determination must be made as to the source of § 1.882–5 interest expense. If the BIE is attributable to BIE of the partnership, it is subject to the rules of §§ 1.163(j)–6 and 1.163(j)–8(c).

The § 1.882–5 interest expense is first treated as attributable to interest expense on U.S. booked liabilities, determined under § 1.882–5(d)(2)(vii), of the partner or a partnership. Any remaining § 1.882–5 interest expense (excess § 1.882–5 interest expense) is treated as attributable to interest expense on liabilities of the partner in proportion to its U.S. assets (other than partnership interests) over all of its U.S. assets, and as attributable to interest expense on liabilities of the partner's direct or indirect partnership interests in proportion to the portion of the partnership interest that is a U.S. asset over all of the partner's U.S. assets. The total amount of § 1.882–5 interest expense attributed to the partner or a partnership (taking into account both interest expense on U.S. booked liabilities and excess § 1.882–5 interest expense) and interest expense on a liability described in § 1.882–5(a)(1)(ii)(A) or (B) (direct allocations) may never exceed the amount of the partner's interest expense on liabilities or the partner's allocable share of the partnership's interest expense on liabilities (the interest expense limitation). The interest expense limitation prevents more § 1.882–5 interest expense from being attributed to the partner or the partner's allocable share of interest expense of a partnership than the actual amount of such interest expense. Any excess § 1.882–5 interest expense that would have been attributed to the partner or a partnership, but for the interest expense limitation, is re-attributed in accordance with these attribution rules.

When excess § 1.882–5 interest expense has been attributed to all of the interest expense on liabilities of the foreign corporation and its allocable share of partnership interests that have U.S. assets, the remaining excess § 1.882–5 interest expense, if any, is first attributed to interest expense on liabilities of the foreign corporation (but not in excess of the interest expense limitation), and then, pro rata, to its allocable share of interest expense on liabilities of its partnership interests that do not have U.S. assets, subject to the interest expense limitation. See proposed § 1.163(j)–8(f)(1)(iii). These rules merely characterize interest expense of the foreign corporation and its partnership interests as ECI or not ECI. These rules do not change the amount of interest expense of the foreign corporation or its partnership interests.

The rule in proposed § 1.163(j)–8(f)(1) of 2018 Proposed Regulations providing that the disallowance and carryforwards of BIE does not affect effectively connected earnings and profits of a foreign corporation is not retained in Proposed § 1.163(j)–8. This rule is not necessary in Proposed § 1.163(j)–8 because the general rule regarding the effect of section 163(j) on earnings and profits in § 1.163(j)–4(c)(1) applies to effectively connected earnings and profits.

VII. Proposed § 1.469–9: Definition of Real Property Trade or Business

Section 469(c)(7)(C) defines real property trade or business by reference to eleven undefined terms. The Final Regulations amended § 1.469–9 to define two of the eleven terms—management and operations. In response to questions received about the application of section 469(c)(7)(C) to timberlands, these proposed regulations would provide definitions for two additional terms—development and redevelopment—to further clarify what constitutes a real property trade or business.

The Treasury Department and IRS have determined that real property development and redevelopment trades or businesses should be defined to include business activities that involve the preservation, maintenance, and improvement of forest-covered areas (timberland). Congress most likely intended and expected that such business activities would be excepted from section 163(j), through election, similar to other real property and farming businesses. However, because timber is specifically excluded from the definition of farming under other Code provisions (such as section 464(e)), the Treasury Department and IRS have determined that such business activities are more properly described by and should be included in the definition of real property trade or business for this purpose. These proposed regulations would clarify that ''real property development'' is the maintenance and improvement of raw land to make the land suitable for subdivision, further development, or construction of residential or commercial buildings, or to establish, cultivate, maintain or improve timberlands (generally defined as parcels of land covered by forest). Similarly, these proposed regulations would clarify that ''real property redevelopment'' is the demolition, deconstruction, separation, and removal of existing buildings, landscaping, and infrastructure on a parcel of land to return the land to a raw condition or otherwise prepare the land for new development or construction, or for the establishment and cultivation of new timberlands.

VIII. Proposed § 1.163(j)–2 and § 1.1256(e)–2: Section 1256 and Determination of Tax Shelter Status; Election To Use 2019 ATI To Determine 2020 Section 163(j) Limitation

A. Section 1256 and Determination of Tax Shelter Status

Several commenters raised questions regarding the exclusion of ''a tax shelter that is not permitted to use a cash method of accounting'' from the small business exemption provided in section 163(j)(3). Section 448 and § 1.448–1T describe limitations on the use of the cash method of accounting, including an explicit prohibition on the use of the cash method of accounting by a tax shelter. Section 448(d)(3) defines a tax shelter by cross reference to section 461(i)(3), which defines a tax shelter, in part, as a syndicate within the meaning of section 1256(e)(3)(B). Under § 1.448–1T(b)(3), a syndicate is defined as an entity that is not a C corporation if more than 35 percent of the losses of such entity during the taxable year are *allocated* to limited partners or limited entrepreneurs. Section 1256(e)(3)(B) refers instead to losses that are *allocable* to limited partners or limited entrepreneurs. As a result, the scope of the small business exemption in section 163(j)(3) is unclear. To provide clarity, and to make these rules consistent, the Treasury Department and the IRS would define the term syndicate for purposes of section 1256 using the actual allocation rule from the definition in § 1.448–1T(b)(3). This proposed definition is also consistent with the definition of a syndicate used in a number of private letter rulings that were issued under section 1256. See proposed § 1.1256(e)–2(a).

One commenter asked for clarification on how to compute the amount of losses to be allocated for purposes of determining syndicate status under section 1256(e)(3)(A). The commenter provided a particular fact pattern in which a small business would be caught in an iterative loop of (a) having net losses due to an interest deduction, (b) which would trigger disallowance of the exemption in section 163(j)(3), (c) which would trigger the application of section 163(j)(1) to reduce the amount of the interest deduction, (d) which would then lead to the taxpayer having no net losses and therefore being eligible for the application of section 163(j)(3). To address this fact pattern, the Treasury Department and the IRS have added rules providing that, for purposes of section 1256(e)(3)(B), losses are determined without regard to section 163(j). See proposed §§ 1.163(j)–2(d)(3) and 1.1256(e)–2(b).

Several commenters requested that the exemption in section 163(j)(3) be broadened to apply to all small businesses without regard to the parenthetical that denies the section 163(j)(3) exemption for a small business that is ‘‘a tax shelter that is not permitted to use a cash method of accounting.’’ See section 163(j)(3). One commenter specifically requested that, for a small business meeting the gross receipts test in section 448(c), all interests held by limited partners or limited entrepreneurs be treated as held by owners actively managing the business even if those interests would not qualify for the active management exception under section 1256(e)(3)(C). After considering the comments, the Treasury Department and the IRS have determined that the requests are contrary to both the statutory language in section 163(j)(3) and the accompanying legislative history and therefore decline to adopt the comments.

B. Election To Use 2019 ATI To Determine 2020 Section 163(j) Limitation

As stated in the Background section of this preamble, section 163(j)(10)(B)(i) allows a taxpayer to elect to use its 2019 ATI in determining the taxpayer's section 163(j) limitation for its taxable year beginning in 2020. Section 1.163(j)–2(b)(3) and (4) of the Final Regulations provide general rules regarding this election.

These proposed regulations clarify that, if the acquiring corporation in a transaction to which section 381 applies makes an election under section 163(j)(10)(B)(i), the acquiring corporation's 2019 ATI for purposes of section 163(j)(10)(B)(i) is its ATI for its last taxable year beginning in 2019 (subject to the limitation for short taxable years in section 163(j)(10)(B)(ii)). For example, assume that T's 2019 ATI is $100 and A's 2019 ATI is $200. If T merges into A during A's 2020 taxable year in a transaction described in section 368(a)(1)(A), and if A makes an election under section 163(j)(10)(B)(i), A's 2019 ATI for purposes of this election is $200. Similarly, these proposed regulations clarify that a consolidated group's 2019 ATI for purposes of section 163(j)(10)(B)(i) is the consolidated group's ATI for its last taxable year beginning in 2019 (subject to the limitation in section 163(j)(10)(B)(ii)). The Treasury Department and the IRS request comments on these proposed rules. The Treasury Department and the IRS also request comments on (1) whether the 2019 ATI of an acquired corporation in a transaction to which section 381 applies should be included in the acquiring corporation's 2019 ATI for purposes of section 163(j)(10)(B)(i) and (2) how such a rule would address more complex fact patterns, such as situations where the acquiring corporation is acquired in a subsequent transaction described in section 381, or where the acquired corporation and the acquiring corporation have different tax years.

IX. Proposed § 1.163(j)–10: Application of Corporate Look-Through Rules to Tiered Structures

For purposes of determining the extent to which a shareholder's basis in the stock of a domestic non-consolidated C corporation or CFC is allocable to an excepted or non-excepted trade or business, § 1.163(j)–10(c)(5)(ii)(B) provides several look-through rules whereby the shareholder ‘‘looks through’’ to the corporation's basis in its assets.

A commenter pointed out that the application of these look-through rules may produce distortive results in certain situations. For example, assume Corporation X's basis in its assets is split equally between X's excepted and non-excepted trades or businesses, and that (as a result) X has a 50 percent exempt percentage applied to its interest expense. However, rather than operate its excepted trade or business directly, X operates its excepted trade or business through a wholly owned, non-consolidated subsidiary (Corporation Y), and each of X and Y borrows funds from external lenders. Assuming for purposes of this example that neither the anti-avoidance rule in § 1.163(j)–2(h) nor the anti-abuse rule in § 1.163(j)–10(c)(8) applies, Y's interest expense would not be subject to the section 163(j) limitation because Y is engaged solely in an excepted trade or business. Moreover, a portion of X's interest expense also would be allocable to an excepted trade or business by virtue of the application of the look-through rule in proposed § 1.163(j)–10(c)(5)(ii)(B)(2) to X's basis in Y's stock.

The anti-avoidance rule in proposed § 1.163(j)–2(h) and the anti-abuse rule in proposed § 1.163(j)–10(c)(8) would preclude the foregoing result in certain circumstances. However, these proposed regulations would modify the look-through rule for domestic non-consolidated C corporations and CFCs to limit the potentially distortive effect of this look-through rule on tiered structures in situations to which the anti-avoidance and anti-abuse rules do not apply. More specifically, these proposed regulations would modify the look-through rule for non-consolidated C corporations to provide that, for purposes of determining a taxpayer's basis in its assets used in excepted and non-excepted trades or businesses, any such corporation whose stock is being looked through may not itself apply the look-through rule.

For example, P wholly and directly owns S1, which wholly and directly owns S2. Each of these entities is a non-consolidated C corporation to which the small business exemption does not apply. In determining the extent to which its interest expense is subject to the section 163(j) limitation, S1 may look through the stock of S2 for purposes of allocating S1's basis in its S2 stock between excepted and non-excepted trades or businesses. However, in determining the extent to which P's interest expense is subject to the section 163(j) limitation, S1 may not look through the stock of S2 for purposes of allocating P's basis in its S1 stock between excepted and non-excepted trades or businesses.

However, the Treasury Department and the IRS are aware that taxpayers are organized into multi-tiered structures for legitimate, non-tax reasons. The Treasury Department and the IRS request comments on the proposed limitation on the application of the corporate look-through rules. The Treasury Department and the IRS also request comments on whether there are other situations in which the look-through rules for domestic non-consolidated C corporations or CFCs should apply and whether there are other approaches for addressing the distortions that these proposed rules are intended to minimize.

Proposed Applicability Dates

These Proposed Regulations are proposed to apply to taxable years beginning on or after 60 days after the date the Treasury Decision adopting these rules as final regulations is published in the **Federal Register**.

Taxpayers and their related parties, within the meaning of sections 267(b) and 707(b)(1), may rely on § 1.163–14, § 1.163–15, § 1.163(j)–2(d)(3), or § 1.1256(e)–2 of these Proposed Regulations for a taxable year beginning after December 31, 2017, and before 60 days after the date the Treasury Decision adopting these rules as final regulations is published in the **Federal Register**, provided taxpayers and their related parties consistently follow all of the rules of the relevant section of the Proposed Regulations for that taxable year and for each subsequent taxable year. Taxpayers and their related parties, within the meaning of sections 267(b) and 707(b)(1), may choose to apply § 1.163–14, 1.163–15, 1.163(j)–2(d)(3), or 1.1256(e)–2 of the final version of these Proposed Regulations for a taxable year beginning after December 31, 2017, and before 60 days after the date the Treasury Decision adopting these rules as final regulations is published in the **Federal Register**, provided that taxpayers and their related parties consistently apply all of the rules of the relevant section, as applicable, to that taxable year and each subsequent taxable year. See also §§ 1.163–14(i), 1.163–15(b), 1.163(j)–2(k)(2), and 1.1256(e)–2(d) of these Proposed Regulations.

Taxpayers and their related parties, within the meaning of sections 267(b) and 707(b)(1), who apply the Final Regulations (as defined in the Explanation of Provisions) published elsewhere in this issue of the **Federal Register** to a taxable year beginning after December 31, 2017, and before 60 days after the Treasury Decision adopting these rules as final regulations is published in the **Federal Register** may rely on §§ 1.163(j)–1(b)(1)(iv)(B) and 1.163(j)–1(b)(1)(iv)(E) of these Proposed Regulations for a taxable year beginning after December 31, 2017, and before 60 days after the Treasury Decision adopting these rules as final regulations is published in the **Federal Register**, provided that taxpayers and their related parties consistently apply the rules of both §§ 1.163(j)–1(b)(1)(iv)(B) and 1.163(j)–1(b)(1)(iv)(E) of these Proposed Regulations, and, if applicable, §§ 1.263A–9, 1.263A–15, 1.381(c)(20)–1, 1.382–1, 1.382–2, 1.382–5, 1.382–6, 1.382–7, 1.383–0, 1.383–1, 1.469–9, 1.469–11, 1.704–1, 1.882–5, 1.1362–3, 1.1368–1, 1.1377–1, 1.1502–13, 1.1502–21, 1.1502–36, 1.1502–79, 1.1502–91 through 1.1502–99 (to the extent they effectuate the rules of §§ 1.382–2, 1.382–5, 1.382–6, and 1.383–1), and 1.1504–4, to that taxable year and each subsequent taxable year See also § 1.163(j)–1(c)(4)(i) of these Proposed Regulations.

Taxpayers and their related parties, within the meaning of sections 267(b) and 707(b)(1), who apply the Final Regulations published elsewhere in this issue of the **Federal Register** to a taxable year beginning after December 31, 2017, and before 60 days after the Treasury Decision adopting these rules as final regulations is published in the **Federal Register**, may rely on the rules in § 1.163(j)–2(b)(3)(iii) and (iv) of these Proposed Regulations for such taxable year, provided that taxpayers and their related parties consistently follow the rules of both § 1.163(j)–2(b)(3)(iii) and (iv) for that taxable year and for each subsequent taxable year beginning before 60 days after the Treasury Decision adopting these rules as final regulations is published in the **Federal Register**. Taxpayers not applying the Final Regulations to taxable years beginning before November 13, 2020 may not rely on the rules in § 1.163(j)–2(b)(3)(iii) and (iv) of these Proposed Regulations for those taxable years. See also § 1.163(j)–2(k)(2) of these Proposed Regulations.

Taxpayers and their related parties, within the meaning of sections 267(b) and 707(b), who apply the Final Regulations published elsewhere in this issue of the **Federal Register** to a taxable year beginning after December 31, 2017, and before 60 days after the Treasury Decision adopting these rules as final regulations is published in the **Federal Register** may rely on the rules in § 1.163(j)–10(c)(5)(ii)(D)(2), 1.469–4(d)(6), or 1.469–9(b)(2) of these Proposed Regulations for a taxable year beginning after December 31, 2017, and before 60 days after the Treasury Decision adopting these rules as final regulations is published in the **Federal Register**, provided that taxpayers and their related parties consistently follow the rules of § 1.163(j)–10(c)(5)(ii)(D)(2), 1.469–4(d)(6), or 1.469–9(b)(2) of these Proposed Regulations, as applicable, and, if applicable, §§ 1.263A–9, 1.263A–15, 1.381(c)(20)–1, 1.382–1, 1.382–2, 1.382–5, 1.382–6, 1.382–7, 1.383–0, 1.383–1, 1.469–4, 1.469–9, 1.469–11, 1.704–1, 1.882–5, 1.1362–3, 1.1368–1, 1.1377–1, 1.1502–13, 1.1502–21, 1.1502–36, 1.1502–79, 1.1502–91 through 1.1502–99 (to the extent they effectuate the rules of §§ 1.382–2, 1.382–5, 1.382–6, and 1.383–1), and 1.1504–4, for that taxable year and for each subsequent taxable year. See also §§ 1.163(j)–10(f)(2) and 1.469–11(a)(1) and (4) of these Proposed Regulations.

Taxpayers and their related parties, within the meaning of sections 267(b) and 707(b), may rely on the rules in § 1.163(j)–6 of these Proposed Regulations for a taxable year beginning after December 31, 2017, and before 60 days after the Treasury Decision adopting these rules as final regulations is published in the **Federal Register**, provided that taxpayers and their related parties also apply the rules of § 1.163(j)–6 in the Final Regulations and consistently follow all of those rules for that taxable year and for each subsequent taxable year. See also § 1.163(j)–6(p)(2) of these Proposed Regulations.

Taxpayers and their related parties, within the meaning of sections 267(b) and 707(b)(1), who apply the Final Regulations published elsewhere in this issue of the **Federal Register** to a taxable year beginning after December 31, 2017, and before 60 days after the date the Final Regulations are published in the **Federal Register**, may rely on §§ 1.163(j)–7 and 1.163(j)–8 of these Proposed Regulations for that taxable year, provided the taxpayers and their related parties also rely on §§ 1.163(j)–7 and 1.163(j)–8 of these Proposed Regulations and apply the Final Regulations for each subsequent taxable year. Taxpayers who choose not to apply the Final Regulations to a taxable year beginning after December 31, 2017, and before 60 days after the date the Final Regulations are published in the **Federal Register** may not rely on either § 1.163(j)–7 or 1.163(j)–8 of these Proposed Regulations for that taxable year. For any taxable year beginning on or after 60 days after the date the Final Regulations are published in the

Federal Register and before 60 days after the date the Treasury Decision adopting these Proposed Regulations as final regulations is published in the **Federal Register**, taxpayers and their related parties, within the meaning of sections 267(b) and 707(b)(1), may rely on §§ 1.163(j)–7 and 1.163(j)–8 of these Proposed Regulations provided they consistently follow all of the rules of §§ 1.163(j)–7 and 1.163(j)–8 for such taxable year and for each subsequent taxable year beginning before 60 days after the Treasury Decision adopting these Proposed Regulations as final regulations is published in the **Federal Register**. See also §§ 1.163(j)–7(m) and 1.163(j)–8(j) of these Proposed Regulations. Taxpayers and their related parties who rely on § 1.163(j)–7 of these Proposed Regulations for any taxable year ending before November 13, 2020 can make a CFC group election or a safe-harbor election even if the deadline provided in § 1.163(j)–7(e)(5)(iii) or (h)(5)(i) of these Proposed Regulations has passed. Such taxpayers and their related parties are permitted to make the election on an amended Federal income tax return filed on or before the due date (taking into account extensions, if any) of the original Federal income tax return for the first taxable year ending after November 13, 2020.

See part III.B of the Explanation of Provisions for rules concerning reliance on these Proposed Regulations with respect to section 163(j) interest dividends.

Special Analyses

I. Regulatory Planning and Review—Economic Analysis

Executive Orders 13771, 13563, and 12866 direct agencies to assess costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits, including potential economic, environmental, public health and safety effects, distributive impacts, and equity. Executive Order 13563 emphasizes the importance of quantifying both costs and benefits, reducing costs, harmonizing rules, and promoting flexibility. The Executive Order 13771 designation for any final rule resulting from these proposed regulations will be informed by comments received. The preliminary Executive Order 13771 designation for this proposed rule is regulatory.

These proposed regulations have been designated by the Office of Information and Regulatory Affairs as subject to review under Executive Order 12866 pursuant to the Memorandum of Agreement (MOA, April 11, 2018) between the Treasury Department and the Office of Management and Budget (OMB) regarding review of tax regulations. OMB has designated the proposed regulations as economically significant under section 1(c) of the MOA. Accordingly, the proposed regulations have been reviewed by OMB's Office of Information and Regulatory Affairs.

A. Background and Need for These Proposed Regulations

Section 163(j), substantially revised by the Tax Cuts and Jobs Act (TCJA), provides a set of relatively complex statutory rules that impose a limitation on the amount of business interest expense that a taxpayer may deduct for Federal tax purposes. This limitation does not apply to businesses with gross receipts of $25 million or less (inflation adjusted). This provision has the general effect of putting debt-financed investment by businesses on a more equal footing with equity-financed investment, a treatment that Congress believed will lead to a more efficient capital structure for firms. See Senate Budget Explanation of the Bill as Passed by SFC (2017–11–20) at pp. 163–4.

As described in the Background section earlier, the Coronavirus Aid, Relief, and Economic Security Act (CARES Act) amended section 163(j) to provide special rules relating to the adjusted taxable income (ATI) limitation for taxable years beginning in 2019 or 2020.

Because this limitation on deduction for business interest expense is new, taxpayers would benefit from regulations that explain key terms and calculations. The Treasury Department and the IRS published proposed regulations in December 2018 (2018 Proposed Regulations) and are issuing final regulations simultaneously with the current proposed regulations. This current set of proposed regulations covers topics that were reserved in the 2018 Proposed Regulations, were raised by commenters to the proposed regulations, or need to be re-proposed.

B. Overview of the Proposed Regulations

The proposed regulations provide guidance on the definition of interest as it relates to income flowing through regulated investment companies (RICs); debt-financed distributions from pass-through entities; the treatment of business interest expense for publicly traded partnerships and trading partnerships [10]; the application of the section 163(j) limitation in the context of self-charged interest; and the treatment of excess business interest expense in tiered-partnership structures. The proposed regulations also modify the definition of real property development and real property redevelopment in section 1.469–9 of the regulations and the definition of syndicate for purposes of applying the small business exception in section 163(j)(3). The proposed regulations also re-propose rules regarding the application of the interest limitation to foreign corporations (including controlled foreign corporations as defined in section 957(a)) and United States shareholders of controlled foreign corporations, and the applicability of the section 163(j) limitation to foreign persons with U.S. effectively connected income.

C. Economic Analysis

1. Baseline

The Treasury Department and the IRS have assessed the benefits and costs of these proposed regulations relative to a no-action baseline that reflects anticipated Federal income tax-related behavior in the absence of these regulations.

2. Summary of Economic Effects

The proposed regulations provide certainty and clarity to taxpayers regarding terms and calculations that are contained in section 163(j), which was substantially modified by TCJA. In the absence of this clarity, the likelihood that different taxpayers would interpret the rules regarding the deductibility of business interest expense differently would be exacerbated. In general, overall economic performance is enhanced when businesses face more uniform signals about tax treatment. Certainty and clarity over tax treatment also reduce compliance costs for taxpayers.

For those situations where taxpayers would generally adopt similar interpretations of the statute even in the absence of guidance, the proposed regulations provide value by helping to ensure that those interpretations are consistent with the intent and purpose of the statute. For example, the proposed regulations may specify a tax treatment that few or no taxpayers would adopt in the absence of specific guidance.

The Treasury Department and the IRS project that the proposed regulations

[10] A trading partnership is a partnership engaged in the per se non-passive activity of trading personal property (including market securities) for the account of owners of interests in the activity, as described in section 1.469–1T(e)(6) (trading partnerships).

will have an annual economic effect greater than $100 million ($2019). This determination is based on the substantial volume of business interest payments in the economy [11] and the general responsiveness of business investment to effective tax rates,[12] one component of which is the deductibility of interest expense. Based on these two magnitudes, even modest changes in the deductibility of interest payments (and in the certainty of that deductibility) provided by the proposed regulations, relative to the no-action baseline, can be expected to have annual effects greater than $100 million. This claim is particularly likely to hold for the first set of general section 163(j) guidance that is promulgated following major legislation, such as TCJA, and for other major guidance, which we have determined includes these proposed regulations.

Regarding the nature of the economic effects, the Treasury Department and the IRS project that the proposed regulations will increase investment in the United States and increase the proportion that is debt-financed, relative to the no-action baseline. We have further determined that these effects are consistent with the intent and purpose of the statute. Because taxpayer favorable provisions will lead to a decrease in Federal tax revenue relative to the no-action baseline, there may be an increase in the Federal deficit relative to the no-action baseline. This may lead to a decrease in investment by taxpayers not directly affected by these proposed regulations, relative to the no-action baseline. This effect should be weighed against the enhanced efficiency arising from the clarity and enhanced consistency with the intent and purpose of the statute provided by these regulations. The Treasury Department and the IRS have determined that the proposed regulations provide a net benefit to the U.S. economy.

The Treasury Department and the IRS have not undertaken more precise quantitative estimates of these effects because many of the definitions and calculations under 163(j) are new and many of the economic decisions that are implicated by these proposed regulations involve highly specific taxpayer circumstances. We do not have readily available data or models to estimate with reasonable precision the types and volume of different financing arrangements that taxpayers might undertake under the proposed regulations versus the no-action baseline.

In the absence of such quantitative estimates, the Treasury Department and the IRS have undertaken a qualitative analysis of the economic effects of the proposed regulations relative to the no-action baseline and relative to alternative regulatory approaches. This analysis is presented in Part I.C.3 of this Special Analyses.

The Treasury Department and the IRS solicit comments on these findings and more generally on the economic effects of these proposed regulations. The Treasury Department and the IRS particularly solicit data, other evidence, or models that could be used to enhance the rigor of the process by which the final regulations might be developed.

3. Economic Effects of Specific Provisions

a. Definition of Interest

The final regulations set forth several categories of amounts and transactions that generate interest for purposes of section 163(j). The proposed regulations provide further guidance on the definition of interest relevant to the calculation of interest expense and interest income. In particular, the proposed regulations provide rules under which the dividends paid by a RIC that earns net business interest income (referred to as section 163(j) interest dividends) are to be treated as interest income by the RIC's shareholders. That is, under the proposed regulations, certain interest income earned by the RIC and paid to a shareholder as a dividend is treated as if the shareholder earned the interest income directly for purposes of section 163(j).

To the extent that taxpayers believed, in the absence of the proposed regulations, that dividends paid by RICs are not treated as business interest income for the purposes of the section 163(j) limitation, then taxpayers will likely respond to the proposed regulations by reducing their holding of other debt instruments and increasing investment in RICs. The Treasury Department and the IRS have determined that this treatment is consistent with the intent and purpose of the statute.

Number of Affected Taxpayers. The Treasury Department and the IRS have determined that the rules regarding section 163(j) interest dividends will potentially affect approximately 10,000 RICs. The Treasury Department and the IRS do not have readily available data on the number of RIC shareholders that would receive section 163(j) interest dividends that the shareholder could treat as business interest income for purposes of the shareholder's section 163(j) limitation.

b. Provisions Related to Partnerships

i. Trading Partnerships

Section 163(j) limits the deductibility of interest expense at the partnership level. These proposed regulations address commenter concerns about the interaction between this section 163(j) limitation and the section 163(d) partner level limitation on interest expense that existed prior to TJCA. Under logic described in the preamble to the 2018 Proposed Regulations, section 163(j) limitations would apply at the partnership level while section 163(d) limitations would apply at the partner level and these tests would be applied independently. Commenters suggested and Treasury has agreed that the correct interpretation of the statute is to exempt interest expense that is limited at the partner level by section 163(d) from the partnership level section 163(j) limitation in accordance with the language of section 163(j)(5).

These proposed regulations provide that interest expense at the partnership level that is allocated to non-materially participating partners subject to section 163(d) is not included in the section 163(j) limitation calculation of the partnership. Generally, the section 163(d) limitation is more generous than the section 163(j) limitation. Relative to the 2018 Proposed Regulations, this change may encourage these partners to incur additional interest expense because they will be less likely to be limited in their ability to use it to offset other income. Commenters argued that exempting from section 163(j) any interest expense allocated to non-materially participating partners subject to section 163(d) will treat this interest expense in the same way as the interest expense generated through separately managed accounts, which are not subject to section 163(j) limitations.

The Treasury Department and the IRS project that these proposed regulations will result in additional investment in trading partnerships and generally higher levels of debt in any given trading partnership relative to the 2018 Proposed Regulations. Because investments in trading partnerships may be viewed as economically similar to investments in separately managed accounts arrangements, we further project that the proposed regulations, by making the tax treatments of these two arrangements generally similar, will

[11] Interest deductions in tax year 2013 for corporations, partnerships, and sole proprietorships were approximately $800 billion.

[12] See E. Zwick and J. Mahon, ''Tax Policy and Heterogeneous Investment Behavior,'' at *American Economic Review* 2017, 107(1): 217–48 and articles cited therein.

improve U.S. economic performance relative to the no-action baseline.

Number of Affected Taxpayers. The Treasury Department and the IRS have determined that the rules regarding trading partnerships will potentially affect approximately 275,000 taxpayers. This number was reached by determining, using data for the 2017 taxable year, the number of Form 1065 and Form 1065–B filers that (1) completed Schedule B to Form 1065 and marked box b, c, or d in question 1 to denote limited partnership, limited liability company, or limited liability partnership status; and (2) have a North American Industry Classification System (NAICS) code starting with 5231 (securities and commodity contracts intermediation and brokerage), 5232 (securities and commodity exchanges), 5239 (other financial investment activities), or 5259 (other investment pools and funds).

Additionally, the Treasury Department and the IRS have determined that the rules regarding publicly traded partnerships will potentially affect approximately 80 taxpayers. This number was reached by determining, using data for the 2017 taxable year, the number of Form 1065 and 1065–B filers with gross receipts exceeding $25 million that answered ''yes'' to question 5 on Schedule B to Form 1065 denoting that the entity is a publicly traded partnership. The Treasury Department and the IRS do not have readily available data on the number of filers that are tax shelters that are potentially affected by these provisions.

ii. Debt-Financed Distributions

Prior to TCJA, partners were responsible for determining the applicability of any limitations on the use of proceeds from debt because limitations on interest expense deductibility were determined at the partner level. Under section 163(j) as amended by TCJA, the partnership is required to complete a calculation to determine its limitation on trade or business interest expense. These proposed regulations provide guidance on the method that partnerships and partners should use to allocate interest expense in cases where a partner receives a distribution financed from debt. The Treasury Department and the IRS project that this guidance will reduce taxpayer uncertainty regarding the application of section 163(j) in this situation relative to the no-action baseline.

The proposed regulations require that partnerships allocate the interest expense of the partners not receiving a debt-financed distribution first. This interest expense is allocated to trade or business expense to the extent of the partnership's expenses. The character of any remaining interest expense is determined based on the partnership's asset basis. Next, the proposed regulations allocate the interest expense of the partner receiving the debt-financed distribution. If there is any remaining business expense that was not used by the other partners it is used first to allocate the interest expense. Then the partner receiving the debt financed distribution looks to the use of the proceeds of the distribution to determine the character of any additional interest expense.

This procedure provides lower compliance costs relative to alternative regulatory approaches. Any alternative method that required information on the partner's use of the proceeds to determine the partnership level section 163(j) limitation would have increased compliance costs for partnerships and partners because it would require a new reporting from partners to partnerships. In cases of tiered partnerships, this reporting could become extremely complex. The method outlined in these proposed regulations avoids the need for partnerships and other partners to have information about the use the debt-financed distribution proceeds. However, it maintains that interest expense allocated to the partner receiving the debt-financed distribution could still be subject to other limitations besides section 163(j) based on the use of the proceeds. For example, proceeds used for personal expenditures would still be subject to section 163(h) limitations on interest expense, which may be seen as an important existing anti-abuse provision.

The proposed procedure bases the allocation rules on optional and general allocation rules outlined in a previously issued notice, Notice 89–35, which will minimize compliance costs to partnerships (relative to the no-action baseline) to the extent that they are already familiar with allocating interest expense first to the partnership's business expenses and subsequently based on assets. Relative to the no-action baseline, the Treasury Department and the IRS expect these proposed regulations will reduce taxpayer uncertainty regarding the application of section 163(j). Treasury and IRS expect that this resolution of uncertainty itself will reduce taxpayer compliance costs and encourage similarly situated taxpayers to interpret section 163(j) similarly.

Number of Affected Taxpayers. The Treasury Department and the IRS are not currently able to determine the number of taxpayers affected by rules regarding debt financed distributions because debt financed distributions are not separately identified on tax forms, and therefore using the numbers of entities reporting interest on a Form K–1, Schedule C or Schedule E would produce overly broad results.

iii. Tiered Partnerships

Section 163(j) does not explicitly address how the interest deduction limitation should be applied to tiered partnerships. The 2018 Proposed Regulations requested comments on the treatment of tiered partnership structures. Suppose that an upper-tier partnership (UTP) is a partner of a lower-tier partnership (LTP), and that the LTP has business interest expense that is limited under section 163(j). Under the 2018 Proposed Regulations, the UTP would receive an excess business interest expense (EBIE) carryforward from the LTP. In response to comments received, these proposed regulations adopt the Entity Approach and specify that this EBIE carryforward should not be allocated to the partners of the UTP for purposes of section 163(j).

While some commenters favored the Entity Approach that these proposed regulations adopt, others favored an alternative under which the EBIE carryforward would be allocated to the UTP's partners (Aggregate Approach). Additionally, if the UTP's partner were itself a partnership, the EBIE would again be allocated to that partnership's partners. This would continue until the EBIE is eventually allocated to a non-partnership partner. Relative to the Entity Approach, the Aggregate Approach generally places greater compliance burden on partners. Under the Aggregate Approach, partners would be required to keep records linking separate amounts of EBIE to the partnerships that generated them. In simple partnership structures, this is not onerous; however, in a partnership structure with many tiers and many partners, this would prove cumbersome. In contrast, under the Entity Approach, only the UTP keeps a record of the EBIE carryforward.

In summary, the Treasury Department and the IRS project lower record-keeping requirements, higher compliance rates, and easier compliance monitoring of tiered partnerships under the Entity Approach relative to the Aggregate Approach, with no meaningful difference in the economic decisions that taxpayers would make under the two approaches.

Moreover, relative to the no-action baseline, the Treasury Department and the IRS expect these proposed regulations for tiered partnerships will reduce taxpayer uncertainty regarding the application of section 163(j). Treasury and IRS expect that this resolution of uncertainty itself will reduce taxpayer compliance costs and encourage similarly situated taxpayers to interpret section 163(j) similarly.

iv. Self-Charged Lending

The 2018 Proposed Regulations requested comments on the treatment of lending transactions between a partnership and a partner (self-charged lending transactions). Suppose that a partnership receives a loan from a partner and allocates the resulting interest expense to that partner. Prior to the TCJA, the interest income and interest expense from this loan would net precisely to zero on the lending partner's tax return. Under section 163(j) as revised by TCJA, however, the partnership's interest expense deduction may now be limited. Therefore, in absence of specific regulatory guidance, the lending partner may receive interest income from the partnership accompanied by less-than-fully-offsetting interest expense. Instead, the lending partner would receive EBIE, which would not be available to offset his personal interest income. This outcome has the effect of increasing the cost of lending transactions between partners and their partnerships relative to otherwise similar financing arrangements.

To avoid this outcome, these proposed regulations treat the lending partner's interest income from the loan as excess business interest income (EBII) from the partnership, but only to the extent of the partner's share of any EBIE from the partnership for the taxable year. This allows the interest income from the loan to be offset by the EBIE. The business interest expense (BIE) of the partnership attributable to the lending transaction will thus be treated as BIE of the partnership for purposes of applying section 163(j) to the partnership.

The Treasury Department and the IRS expect that these proposed regulations will lead a higher proportion of self-charged lending transactions in partnership financing, relative to the no-action baseline. We further project that these proposed regulations will increase the proportion of partnership financing that is debt-financed relative to the no-action baseline. We have determined that these effects are consistent with the intent and purpose of the statute.

Number of Affected Taxpayers. The Treasury Department and the IRS do not have readily available data to determine the number of taxpayers affected by rules regarding self-charged interest because no reporting modules currently connect these payments by and from partnerships.

c. Provisions Related to Controlled Foreign Corporations (CFCs)

i. How To Apply Section 163(j) When CFCs Have Shared Ownership

The Final Regulations clarify that section 163(j) and the section 163(j) regulations apply to determine the deductibility of a CFC's business interest expense for tax purposes in the same manner as these provisions apply to a domestic corporation. These proposed regulations provide further rules and guidance on how section 163(j) applies to CFCs when CFCs have shared ownership and are eligible to be members of CFC groups.

The Treasury Department and the IRS considered three options with respect to the application of section 163(j) to CFC groups. The first option was to apply the 163(j) limitation to CFCs on an individual basis, regardless of whether CFCs have shared ownership. However, if section 163(j) is applied on an individual basis, business interest deductions of individual CFCs may be limited by section 163(j) even when, if calculated on a group basis, business interest deductions would not be limited. Taxpayers could restructure or ''self-help'' to mitigate the effects of the section 163(j) limitation, but that option involves economically restructuring costs for the taxpayer (relative to the third option, described subsequently) with no corresponding economically productive activity.

The second option, which was proposed in the 2018 Proposed Regulations, was to allow an election to treat related CFCs and their U.S. shareholders as a group. Under this option, while the section 163(j) rules would still be computed at the individual CFC level, the ''excess taxable income'' of a CFC could be passed up from lower-tier CFCs to upper-tier CFCs and U.S. shareholders in the same group. Excess taxable income is the amount of income by which a CFC's adjusted taxable income (ATI) exceeds the threshold amount of ATI below which there would be disallowed business expense.

Many comments suggested that computing a section 163(j) limitation for each CFC and rolling up CFC excess taxable income would be burdensome for taxpayers, especially since some multinational organizations have hundreds of CFCs. In addition, comments noted that the ability to pass up excess taxable income would encourage multinational organizations to restructure such that CFCs with low interest payments and high ATI are lower down the ownership chain and CFCs with high interest payments and low ATI are higher up in the chain of ownership. Similar to the first option, this restructuring would be expensive to taxpayers without any corresponding productive economic activity.

The third option was to allow taxpayers to elect to apply the section 163(j) rules to CFC groups on an aggregate basis, similar to the rules applicable to U.S. consolidated groups. This option was suggested by many comments and is the approach taken in the proposed regulations. Under this option, a single 163(j) limitation is computed for a CFC group by summing the items necessary for this computation (*e.g.,* current-year business interest expense and ATI) across all CFC group members. The CFC group's limitation is then allocated to each CFC member using allocation rules similar to those that apply to U.S. consolidated groups.

This option reduces the compliance burden on taxpayers in comparison to applying the section 163(j) rules on an individual CFC basis and calculating the excess taxable income to be passed up from lower tier CFCs to higher tier CFCs. In comparison to the first and second options, this option also removes the incentive for taxpayers to undertake costly restructuring, since the location of interest payments and ATI among CFC group members will not affect the interest disallowance for the group.

The proposed regulations also set out a number of rules to govern membership in a CFC group. These rules specify which CFCs can be members of the same CFC group, how CFCs with U.S. effectively connected income (ECI) should be treated, and the timing for making or revoking a CFC group election. These rules provide clarity and certainty to taxpayers regarding the CFC group election for section 163(j). In the absence of these regulations, taxpayers would face uncertainty regarding CFC group membership, and may make financing decisions or undertake restructuring that would be inefficient relative to the proposed regulations.

Number of Affected Taxpayers. The population affected by this proposed rule includes any taxpayer with ownership in a CFC group, consisting of two or more CFCs that has average gross receipts over a three year period in excess of $25 million. The Treasury

Department and the IRS estimate that there are approximately 7,500 taxpayers with two or more CFCs based on counts of e-filed tax returns for tax years 2015–2017. This estimate includes C corporations, S corporations, partnerships, and individuals with CFC ownership.

ii. CFC Excess Taxable Income and ATI of U.S. Shareholders

Generally, for the purposes of computing interest expense disallowed under section 163(j), deemed income inclusions, such as subpart F and GILTI inclusions, are excluded from a U.S. shareholder's ATI under the Final Regulations. The proposed regulations allow a U.S. shareholder to add back to its ATI a percentage of its deemed income inclusions attributable to an applicable CFC. That percentage is equal to the ratio of the CFC's excess taxable income to its ATI.

The Treasury Department and the IRS considered three options with respect to the addition of deemed income inclusions to a U.S. shareholder's ATI. The first option is to allow such inclusions to be added to ATI with respect to any of a taxpayer's applicable CFCs regardless of whether a CFC group election is made. However, under this option, taxpayers with a number of highly leveraged CFCs would have the incentive to not make a CFC group election and concentrate debt in certain CFCs. The taxpayer could thereby reduce the leverage of other CFCs in order to create excess taxable income in those CFCs. This excess taxable income could be then passed up to increase the U.S. shareholder's ATI. This incentive could lead to costly debt shifting among CFCs with no corresponding productive economic activity.

The second option considered was to allow such income inclusions to be added to ATI with respect to CFC group members only. Deemed income attributable to CFCs that are not members of groups would not be allowed to be added to a U.S. shareholder's ATI. This would remove the incentive for taxpayers to aggregate debt in certain CFCs, since if CFCs are treated as members of a group, then the distribution of interest payments across members will not affect the total excess taxable income of the group. However, comments noted that this option would not allow deemed income from stand-alone CFCs, which do not meet the requirements to join a CFC group, to increase shareholders' ATI.

The third option, which is proposed by the Treasury Department and the IRS, is to allow such income inclusions to be added to ATI with respect to both CFC group members and stand-alone CFCs. Under this option, if CFCs are eligible to be members of a CFC group, then the group election must be made in order for deemed inclusions attributable to these CFCs to increase shareholder ATI. The ATI of a U.S. shareholder can also be increased with respect to CFCs that are not eligible to be members of CFC groups. In this way, the rule does not penalize, relative to shareholders of CFC groups, shareholders which own only one CFC or own CFCs which for other reasons are not eligible for group membership.

Number of Affected Taxpayers. The population of affected taxpayers includes any taxpayer with a CFC since the proposed rule affects both stand-alone CFCs as well as CFC groups. The Treasury Department and the IRS estimate that there are approximately 10,000 to 11,000 affected taxpayers based on a count of e-filed tax returns for tax years 2015–2017. These counts include C corporations, S corporations, partnerships, and individuals with CFC ownership that meet a $25 million three-year average gross receipts threshold. The Treasury Department and the IRS do not have readily available data on the number of filers that are tax shelters that are potentially affected by these provisions.

d. Election To Use 2019 ATI To Determine 2020 Section 163(j) Limitation for Consolidated Groups

The proposed regulations provide that if a taxpayer filing as a consolidated group elects to substitute its 2019 ATI for its 2020 ATI, that group can use the consolidated group ATI for the 2019 taxable year, even if membership of the consolidated group changed in the 2020 taxable year. For example, suppose consolidated group C has three members in the 2019 taxable year, P, the common parent of the consolidated group, and S1 and S2, which are both wholly owned by P. In the 2019 taxable year, each member of consolidated group C had $100 of ATI on a stand-alone basis, for a total of $300 of ATI for the consolidated group C. In the 2020 taxable year, consolidated group C sells all of the stock of S2 and acquires all of the stock of a new member, S3. In the 2019 taxable year, S3 had $50 in ATI on a stand-alone basis. Under the proposed regulations, consolidated group C may elect to use $300 in ATI from 2019 as a substitute for its ATI in the 2020 taxable year.

The Treasury Department and the IRS considered as an alternative basing the 2019 ATI on the membership of the consolidated group in the 2020 taxable year. In the example in the previous paragraph, this approach would subtract out the $100 in ATI from S2 and add the $50 in ATI from S3, for a total of $250 in 2019 ATI that could potentially be substituted for 2020 ATI for consolidated group C. This approach would add burden to taxpayers relative to the proposed regulations by requiring additional calculations and tracking of ATI on a member-by-member basis to determine the amount of 2019 ATI that can be used in the 2020 taxable year without providing any general economic benefit.

In addition, the 2019 tax year will have closed for many taxpayers by the time these proposed regulations will be published. This implies that proposed rule of basing the consolidated group composition on the 2019 taxable year to calculate the amount of 2019 ATI that can be used in the 2020 taxable year will, relative to the alternative approach of using the composition in the 2020 taxable year, reduce the incentive for taxpayers to engage in costly mergers, acquisitions, or divestures to achieve a favorable tax result.

Number of Affected Taxpayers. The Treasury Department and the IRS estimate that approximately 34,000 corporate taxpayers filed a consolidated group tax return for tax year 2017. This represents an upper-bound of the number of taxpayers affected by the proposed rule as not all consolidated groups would need to calculate the amount of section 163(j) interest limitation in tax years 2019 and 2020.

D. Paperwork Reduction Act

The collection of information in these Proposed Regulations has been submitted to the Office of Management and Budget for review in accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. 3507(d)). An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a valid OMB control number. The collection of information in these Proposed Regulations has been submitted to the Office of Management and Budget for review in accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. 3507(d)).

Books or records relating to a collection of information must be retained as long as their contents may become material in the administration of any internal revenue law. Generally, tax returns and return information are confidential, as required by section 6103.

1. Collections of Information

The collections of information subject to the Paperwork Reduction Act in these

Proposed Regulations are in proposed §§ 1.163(j)–6(d)(5), 1.163(j)–6(g)(4), and 1.163(j)–7.

The collections of information in proposed §§ 1.163(j)–6(d)(5) and 1.163(j)–6(g)(4) are required to make two elections relating to changes made to section 163(j) by the CARES Act. The election under proposed § 1.163(j)–6(d)(5) is for a passthrough taxpayer to use the taxpayer's ATI for the last taxable year beginning in 2019 as its ATI for any taxable year beginning in 2020, in accordance with section 163(j)(10)(B). The election under proposed § 1.163(j)–6(g)(4) relates to excess business interest expense of a partnership for any taxable year beginning in 2019 that is allocated to a partner. Section 163(j)(10)(A)(ii)(II) provides that, unless the partner elects out, in 2020, the partner treats 50 percent of the excess business interest expense as not subject to the section 163(j) limitation. If the partner elects out, the partner treats all excess business interest expense as subject to the same limitations as other excess business interest expense allocated to the partner.

Revenue Procedure 2020–22 describes the time and manner for making these elections. For both elections, taxpayers make the election by timely filing a Federal income tax return or Form 1065, including extensions, an amended Federal income tax return, amended Form 1065, or administrative adjustment request, as applicable. More specifically, taxpayers complete the Form 8990, ''Limitation on Business Interest Expense under Section 163(j),'' using the taxpayer's 2019 ATI and/or not applying the rule in section 163(j)(10)(ii)(II), as applicable. No formal statements are required to make these elections. Accordingly, the reporting burden associated with the collections of information in proposed § 1.163(j)–6(d)(5) and –6(g)(4) will be reflected in the IRS Form 8990 Paperwork Reduction Act Submissions (OMB control number 1545–0123).

The collections of information in proposed § 1.163(j)–7 are required for taxpayers to make an election to apply section 163(j) to a CFC group (CFC group election) or an annual election to exempt a CFC or CFC group from the section 163(j) limitation (safe-harbor election). The elections are made by attaching a statement to the US shareholder's annual return. The CFC group election remains in place until revoked and may not be revoked for any period beginning prior to 60 months following the period for which it is made. The safe-harbor election is made on an annual basis.

Under § 1.964–1(c)(3)(i), no election of a foreign corporation is effectuated unless the controlling domestic shareholder provides a statement with their return and notice of the election to the minority shareholders under § 1.964–1(c)(3)(ii) and (iii). See also, § 1.952–2(b)–(c). These collections are necessary to ensure that the election is properly effectuated, and that taxpayers properly report the amount of interest that is potentially subject to the limitation.

2. Future Modifications to Forms To Collect Information

At this time, no modifications to any forms, including the Form 8990, ''Limitation on Business Interest Expense IRC 163(j),'' are proposed with regard to the elections under section 163(j)(10), or the CFC group or safe-harbor elections. The Treasury Department and the IRS are considering revisions to the Instructions for Form 8990 to reflect changes made to section 163(j)(10) regarding the elections under proposed §§ 1.163(j)–6(d)(5) and 1.163(j)–6(g)(4). For purposes of the Paperwork Reduction Act of 1995 (44 U.S.C. 3507(d)), the reporting burden of Form 8990 is associated with OMB control number 1545–0123. In the 2018 Proposed Regulations, Form 8990 was estimated to be required by fewer than 92,500 taxpayers.

If an additional information collection requirement is imposed through these regulations in the future, for purposes of the Paperwork Reduction Act, any reporting burden associated with these regulations will be reflected in the aggregated burden estimates and the OMB control numbers for general income tax forms or the Form 8990, ''Limitation on Business Interest Expense Under Section 163(j)''.

The forms are available on the IRS website at:

Form	OMB No.	IRS website link
Form 1040	1545–0074	*https://www.irs.gov/pub/irs-pdf/f1040.pdf* (Instructions: *https://www.irs.gov/pub/irs-pdf/i1040gi.pdf).*
Form 1120	1545–0123	*https://www.irs.gov/pub/irs-pdf/f1120.pdf* (Instructions: *https://www.irs.gov/pub/irs-pdf/i1120.pdf).*
Form 1120S		*https://www.irs.gov/pub/irs-pdf/f1120s.pdf* (Instructions: *https://www.irs.gov/pub/irs-pdf/i1120s.pdf).*
Form 1065		*https://www.irs.gov/pub/irs-pdf/f1065.pdf* (Instructions: *https://www.irs.gov/pub/irs-pdf/i1065.pdf).*
Form 1120–REIT		*https://www.irs.gov/pub/irs-prior/f1120rei--2018.pdf* (Instructions: *https://www.irs.gov/pub/irs-pdf/i1120rei.pdf).*
Form 8990		*https://www.irs.gov/pub/irs-access/f8990_accessible.pdf* (Instructions: *https://www.irs.gov/pub/irs-pdf/i8990.pdf).*

In addition, when available, drafts of IRS forms are posted for comment at *https://apps.irs.gov/app/picklist/list/draftTaxForms.htm.* IRS forms are available at *https://www.irs.gov/forms-instructions.* Forms will not be finalized until after they have been approved by OMB under the PRA.

3. Burden Estimates

The following estimates for the collections of information in these proposed regulations are based on the most recently available Statistics of Income (SOI) tax data.

For the collection of income in proposed § 1.163(j)–6(d)(5), where a passthrough taxpayer elects to use the taxpayer's ATI for the last taxable beginning in 2019 as the taxpayer's ATI for any taxable year beginning in 2020, the most recently available 2017 SOI tax data indicates that, on the high end, the estimated number of respondents is 49,202. This number was determined by examining, for the 2017 tax year, Form 1065 and Form 1120–S filers with greater than $26 million in gross receipts that have reported interest expense, and do not have an NAICS code that is associated with a trade or business that normally would be excepted from the section 163(j) limitation.

For the collection of information under § 1.163(j)–6(g)(4), in which a partner elects out of treating 50 percent of any excess business interest expense allocated to the partner in 2019 as not subject to a limitation in 2020, the Treasury Department and the IRS estimate that only taxpayers that actively want to reduce their deductions will make this election. The application of the base erosion minimum tax under section 59A depends, in part, on the amount of a taxpayer's deductions.

Accordingly, the Treasury Department and the IRS estimate that taxpayers that are subject to both the base erosion minimum tax under section 59A and section 163(j) are the potential filers of this election. Using the 2017 SOI tax data, the Treasury Department estimate that 1,182 firms will make the election. This estimate was determined by examining three criteria: First, the number of taxpayers subject to section 59A, namely, C corporations with at least $500,000,000 in gross receipts, second, the portion of those taxpayers that do not have an NAICS code associated with a trade or business that is generally not subject to the section 163(j) limitation (2211 (electric power generation, transmission and distribution), 2212 (natural gas distribution), 2213 (water, sewage and other systems), 111 or 112 (farming), 531 (real property)), and, third, the portion of taxpayers satisfying the first two criteria that received a Form K–1, ''Partner's Share of Income, Deductions, Credits, etc.''

For the collections of information in proposed § 1.163(j)–7, namely the CFC and safe-harbor elections, and the corresponding notice under § 1.964–1(c)(3)(iii), the most recently available 2017 SOI tax data indicates that, on the high end, the estimated number of respondents is 4,980 firms. This number was determined by examining, for the 2017 tax year, Form 1040, Form 1120, Form 1120–S, and Form 1065 filers with greater than $26 million in gross receipts that filed a Form 5471, Information Return of U.S. Persons With Respect to Certain Foreign Corporations, where an interest expense amount was reported on Schedule C of the Form 5471.

The estimated number of respondents that could be subject to the collection of information for the CFC group or safe-harbor election is 4,980. The estimated annual burden per respondent/recordkeeper varies from 0 to 30 minutes, depending on individual circumstances, with an estimated average of 15 minutes. The estimated total annual reporting and/or recordkeeping burden is 1,245 hours (4,980 respondents × 15 minutes). The estimated annual cost burden to respondents is $95 per hour. Accordingly, we expect the total annual cost burden for the CFC group election and safe-harbor election statements to be $118,275 (4,980 * .25 * $95).

The Treasury Department and the IRS request comment on the assumptions, methodology, and burden estimates related to this information collection. Comments on the collection of information should be sent to the Office of Management and Budget, Attn: Desk Officer for the Department of the Treasury, Office of Information and Regulatory Affairs, Washington, DC 20503, with copies to the Internal Revenue Service, Attn: IRS Reports Clearance Officer, SE:W:CAR:MP:T:T:SP, Washington, DC 20224. Comments on the collection of information should be received by November 2, 2020, which is 60 days after the date of filing for public inspection with the Office of the Federal Register.

Comments are specifically requested concerning—

Whether the proposed collection of information is necessary for the proper performance of the functions of the IRS, including whether the information will have practical utility;

The accuracy of the estimated burden associated with the proposed collection of information;

How the quality, utility, and clarity of the information to be collected may be enhanced;

How the burden of complying with the proposed collection of information may be minimized, including through the application of automated collection techniques or other forms of information technology; and

Estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information.

II. Regulatory Flexibility Act

It is hereby certified that these Proposed Regulations, if adopted as final, will not have a significant economic impact on a substantial number of small entities.

This certification can be made because the Treasury Department and the IRS have determined that the number of small entities that are affected as a result of the regulations is not substantial. These rules do not disincentivize taxpayers from their operations, and any burden imposed is not significant because the cost of implementing the rules, if any, is low.

As discussed in the 2018 Proposed Regulations, section 163(j) provides exceptions for which many small entities will qualify. First, under section 163(j)(3), the limitation does not apply to any taxpayer, other than a tax shelter under section 448(a)(3), which meets the gross receipts test under section 448(c) for any taxable year. A taxpayer meets the gross receipts test under section 448(c) if the taxpayer has average annual gross receipts for the 3-taxable year period ending with the taxable year that precedes the current taxable year that do not exceed $26,000,000. The gross receipts threshold is indexed annually for inflation. Because of this threshold, the Treasury Department and the IRS project that entities with 3-year average gross receipts below $26 million will not be affected by these regulations except in rare cases.

Section 163(j) provides that certain trades or businesses are not subject to the limitation, including the trade or business of performing services as an employee, electing real property trades or businesses, electing farming businesses, and certain utilities as defined in section 163(j)(7)(A)(iv). Under the 2018 Proposed Regulations, taxpayers that otherwise qualified as real property trades or businesses or farming businesses that satisfied the small business exemption in section 448(c) were not eligible to make an election to be an electing real property trade or business or electing farming business. Under the Final Regulations, however, those taxpayers are eligible to make an election to be an electing real property trade or business or electing farming business. Additionally, the Final Regulations provide that certain utilities not otherwise excepted from the limitation can elect for a portion of their non-excepted utility trade or business to be excepted from the limitation. Any economic impact on any small entities as a result of the requirements in these Proposed Regulations, not just the requirements that impose a Paperwork Reduction Act burden, is not expected to be significant because the cost of implementing the rules, if any, is low.

The Treasury Department and the IRS do not have readily available data on the number of filers that are tax shelters, as defined in section 448(a)(3), that are potentially affected by these provisions. As described in more detail earlier in this Preamble, these Proposed Regulations cover several topics, including, but not limited to, debt financed distributions from passthrough entities, self-charged interest, the treatment of section 163(j) in relation to trader funds, the impact of section 163(j) on publicly traded partnerships, and the application of section 163(j) to United States shareholders of controlled foreign corporations and to foreign persons with effectively connected income in the United States.

The Treasury Department and the IRS do not have readily available data to determine the number of taxpayers affected by rules regarding self-charged interest because no reporting modules currently connect these payments by and from partnerships.

The Treasury Department and the IRS likewise do not have precise data on the number of taxpayers affected by rules regarding debt financed distributions. The Treasury Department and the IRS estimate that the number of taxpayers affected by the rules regarding debt-financed distributions is 50,036. This number was reached first by adding the number of Form 1065 filers that reported code W on line 13b of schedule K of the Form 1065, or approximately 410,996 using 2018 taxable year data, and the number of Form 1120–S filers that reported code S on line 12d of schedule K of the Form 1120–S, or approximately 89,367 using 2018 taxable year data. Those codes are used to report interest expense allocated to debt financed distributions. Using the result of the two numbers, 500,363 (410,996 + 89,367), produces overly broad results because the codes referenced above are used to report more than just interest expense allocated to debt financed distributions. Code W on line 13b of schedule K of the Form 1065 also is used to report at least nine other items, including, but not limited to, itemized deductions that Form 1040 or 1040–SR filers report on Schedule A, soil and water conservation expenditures, and the domestic productions activities deductions. Code S on line 12d of schedule K of the Form 1120–S also is used to report at least eleven other items, including, but not limited to, itemized deductions that Form 1040 or 1040–SR filers report on Schedule A, expenditures for the removal of architectural and transportation barriers for the elderly and disabled that the corporation elected to treat as a current expense, and film, television, and live theatrical production expenses. Considering the number of other items reported under those codes, the Treasury Department and the IRS estimate that approximately 10% of the filers using those codes report interest expense allocated to debt financed distributions (500,363 * 0.10 = 50,036).

Despite not having precise data, these rules do not impose a significant paperwork or implementation cost burden on taxpayers. Under Notice 89–35, taxpayers have been required to maintain books and records to properly report the tax treatment of interest associated with debt financed acquisitions and contributions by partners, and debt financed distributions to partners. Additional reporting requirements are needed to allow passthrough entities and their owners to comply with the interest tracing rules under § 1.163–8T. Without additional reporting, the mechanism for determining the tax treatment of interest under § 1.163–8T is burdensome and unclear. For example, in some cases, partners would need to report back to the partnership how they used debt financed distribution to allow the partnership to properly report its interest expense. This notice of proposed rules would provide consistent reporting and compliance by passthrough entities and their owners, which would reduce their overall burden. The estimated time to determine whether a distribution is a debt financed distribution and to comply with these rules would be 0 minutes to 30 minutes per taxpayer, depending on individual circumstances, for an average of 15 minutes. The 2018 monetization rates for this group of filers is $57.53. According, the Treasury Department and the IRS estimate the burden to be $719,642.77 (50,036 respondents * 0.25 hours * $57.53).

The Treasury Department and the IRS have determined that, on the high end, the rules regarding trading partnerships might affect approximately 309 small entities. This number was reached by determining, using data for the 2017 taxable year, the number of Form 1065 and Form 1065–B filers, with more than $26 million in gross receipts, that (1) completed Schedule B to Form 1065 and marked box b, c, or d in question 1 to denote limited partnership, limited liability company or limited liability partnership status; (2) have a North American Industry Classification System (NAICS) code starting with 5231, 5232, 5239 or 5259, and (3) do not have gross receipts exceeding the small business thresholds for the various NAICS codes. The following table provides a breakdown of the potentially affected taxpayers by NAICS code.

NAICS code	Titles	Gross receipts threshold	Number of respondents
5231	Securities and Commodity Contracts Intermediation and Brokerage, including Investment Bank and Securities Dealing; Securities Brokerage; Commodity Contract Dealing; Commodity Contracts Brokerage.	$41.5M	42
5232	Securities and Commodities Exchanges	41.5M	0
5239	Other Financial Investment Activities, including Miscellaneous Intermediation; Portfolio Management; Investment Advice; Trust, Fiduciary, and Custody Activities; Miscellaneous Financial Investment Activities.	41.5M	267
5259	Other Investment Pools and Funds, including Open-End Investment Funds; Trusts, Estates, and Agency Accounts; Other Financial Vehicles.	35M	[d]
Total Respondents.			309

[d] Data is suppressed based on disclosure rules detailed in Publication 1075.

Additionally, the Treasury Department and the IRS have determined that the rules regarding publicly traded partnerships might affect approximately 83 taxpayers. This number was reached by determining, using data for the 2017 taxable year, the number of Form 1065 and 1065–B filers with gross receipts exceeding $25 million that answered ''yes'' to question 5 on Schedule B to Form 1065 denoting that the entity is a publicly traded partnership.

As noted earlier, these Proposed Regulations do not impose any new collection of information on these entities. These Proposed Regulations actually assist small entities in meeting their filing obligations by providing definitive advice on which they can rely.

For the section 163(j)(10) elections for passthrough taxpayers under proposed §§ 1.163(j)–6(d)(5) and 1.163(j)–6(g)(4), most small taxpayers do not need to make the elections because, as discussed earlier, they are not subject to the section 163(j) limitation. For small taxpayers that are subject to the limitation, the cost to implement the election is low. Pursuant to Revenue Procedure 2020–22, these passthrough taxpayers simply complete the Form 8990 as if the election has been made. Accordingly, the burden of complying with the elections, if needed, is no different than for taxpayers who do not make the elections.

The persons potentially subject to proposed § 1.163(j)–7 are U.S. shareholders in one or more CFCs for which BIE is reported, and that (1) have average annual gross receipts for the 3-taxable year period ending with the taxable year that precedes the current taxable year exceeding $26,000,000, and (2) want to make the CFC group election or safe-harbor election. Proposed § 1.163(j)–7 requires such taxpayers to attach a statement to their return providing basic information regarding the CFC group or standalone CFC.

As discussed in the Paperwork Reduction Act section of this Preamble, the reporting burden for both statements is estimated at 0 to 30 minutes, depending on individual circumstances, with an estimated average of 15 minutes for all affected entities, regardless of size. The estimated monetized burden for compliance is $95 per hour.

For these reasons, the Treasury Department and the IRS have determined that these Proposed Regulations will not have a significant economic impact on a substantial number of small entities. Notwithstanding this certification, the Treasury Department and the IRS invite comments from interested members of the public on both the number of small entities affected and the economic impact on those small entities.

E. Unfunded Mandates Reform Act

Section 202 of the Unfunded Mandates Reform Act of 1995 requires that agencies assess anticipated costs and benefits and take certain other actions before issuing a final rule that includes any Federal mandate that may result in expenditures in any one year by a state, local, or tribal government, in the aggregate, or by the private sector, of $100 million in 1995 dollars, updated annually for inflation. In 2019, that threshold was approximately $154 million. These Proposed Regulations do not include any Federal mandate that may result in expenditures by state, local, or tribal governments, or by the private sector in excess of that threshold.

F. Executive Order 13132: Federalism

Executive Order 13132 (entitled ''Federalism'') prohibits an agency from publishing any rule that has federalism implications if the rule either imposes substantial, direct compliance costs on state and local governments, and is not required by statute, or preempts state law, unless the agency meets the consultation and funding requirements of section 6 of the Executive Order. These Proposed Regulations do not have federalism implications and do not impose substantial direct compliance costs on state and local governments or preempt state law within the meaning of the Executive Order.

Comments and Requests for a Public Hearing

Before these proposed amendments to the regulations are adopted as final regulations, consideration will be given to comments that are submitted timely to the IRS as prescribed in the preamble under the **ADDRESSES** section. The Treasury Department and the IRS request comments on all aspects of the proposed regulations. Any electronic comments submitted, and to the extent practicable any paper comments submitted, will be made available at *www.regulations.gov* or upon request.

A public hearing will be scheduled if requested in writing by any person who timely submits electronic or written comments. Requests for a public hearing are also encouraged to be made electronically. If a public hearing is scheduled, notice of the date and time for the public hearing will be published in the **Federal Register**. Announcement 2020–4, 2020–17 I.R.B. 667 (April 20, 2020), provides that until further notice, public hearings conducted by the IRS will be held telephonically. Any telephonic hearing will be made accessible to people with disabilities.

Drafting Information

The principal authors of these regulations are Susie Bird, Charles Gorham, Jaime Park, Joanna Trebat and Sophia Wang (Income Tax & Accounting), Anthony McQuillen, Adrienne M. Mikolashek, and William Kostak (Passthroughs and Special Industries), Azeka J. Abramoff (International), Russell Jones, and John Lovelace (Corporate), and Pamela Lew, Steven Harrison, and Michael Chin (Financial Institutions & Products). Other personnel from the Treasury Department and the IRS participated in their development.

Effect on Other Documents

Notice 89–35, 1989–1 C.B. 675, is proposed to be obsoleted.

Statement of Availability of IRS Documents

IRS Revenue Procedures, Revenue Rulings notices, and other guidance cited in this document are published in the Internal Revenue Bulletin (or Cumulative Bulletin) and are available from the Superintendent of Documents, U.S. Government Publishing Office, Washington, DC 20402, or by visiting the IRS website at *http://www.irs.gov.*

List of Subjects in 26 CFR Part 1

Income taxes, Reporting and recordkeeping requirements.

Proposed Amendments to the Regulations

Accordingly, 26 CFR part 1 is proposed to be amended as follows:

PART 1—INCOME TAXES

■ **Paragraph 1.** The authority citation for part 1 continues to read in part as follows:

Authority: 26 U.S.C. 7805 * * *

■ **Par. 2.** Section 1.163–14 is added to read as follows:

§ 1.163–14 Allocation of interest expense among expenditures—Passthrough Entities.

(a) *In general*—(1) *Application.* This section prescribes rules for allocating interest expense associated with debt proceeds of a partnership or S corporation (a *passthrough entity*). In general, interest expense on a debt of a passthrough entity is allocated in the same manner as the debt to which such interest expense relates is allocated. Debt is allocated by tracing disbursements of the debt proceeds to specific expenditures. This section prescribes rules for tracing debt proceeds to specific expenditures of a passthrough entity.

(2) *Cross-references.* This paragraph provides the general manner in which interest expense of a passthrough entity is allocated. See paragraph (b) of this section for the treatment of interest expense allocated under the rules of this section, paragraph (c) for the manner in which debt proceeds of a passthrough entity are allocated and the manner in which interest expense allocated under this section is treated, paragraph (d) for rules relating to debt allocated under the rules of § 1.163–8T to distributions to owners of a passthrough entity, paragraph (e) for rules relating to debt repayments, paragraph (f) for rules relating to debt allocated under the rules of § 1.163–8T to expenditures for interests in passthrough entities, paragraph (g) for change of ownership rules for interest expense allocation

purposes, and paragraph (h) for examples.

(b) *Treatment of interest expense*—(1) *General rule.* Except as otherwise provided in section § 1.163(j)-8T(m), interest expense allocated under the rules of this section is treated in the following manner:

(i) Interest expense allocated to trade or business expenditures (as defined in paragraph (b)(2)(v) of this section) is taken into account under section 163(j) by the passthrough entity;

(ii) Interest expense allocated to other trade or business expenditures (as defined in paragraph (b)(2)(ii) of this section) is taken into account under the rules of § 1.163–8T, as applicable, by the passthrough entity owner allocated such interest expense;

(iii) Interest expense allocated to rental expenditures (as defined in paragraph (b)(2)(iv) of this section) is taken into account under the rules of § 1.163–8T, as applicable, by the passthrough entity owner allocated such interest expense;

(iv) Interest expense allocated to investment expenditures (as defined in paragraph (b)(2)(i) of this section) is taken into account under the rules of § 1.163–8T, as applicable, by the passthrough entity owner allocated such interest expense;

(v) Interest expense allocated to personal expenditures (as defined in paragraph (b)(2)(iii) of this section) is taken into account under the rules of § 1.163–8T, as applicable, by the passthrough entity owner allocated such interest expense;

(vi) Interest expense allocated to distributions to owners of a passthrough entity is taken into account in the manner provided under paragraph (d) of this section.

(2) *Definitions.* For purposes of this section—

(i) *Investment expenditure* means an expenditure defined in § 1.163–8T(b)(3), including any expenditure made with respect to a trade or business described in section 163(d)(5)(A)(ii) to the extent such expenditure is properly allocable under section 704(b) to partners that do not materially participate (within the meaning and for purposes of section 469) in the trade or business.

(ii) *Other trade or business expenditure* means an expenditure made with respect to any activity described in § 1.469–4(b)(1)(ii) and (iii).

(iii) *Personal expenditure* means an expenditure (other than a distribution) not described in paragraphs (b)(2)(i), (ii), (iv) and (v) of this section.

(iv) *Rental expenditure* means an expenditure made with respect to any activity described in § 1.469–4(b)(2) that is not a trade or business, as defined in § 1.163(j)–1(b)(44).

(v) *Trade or business expenditure* means an expenditure made with respect to a trade or business, as defined in § 1.163(j)–1(b)(44), except for an expenditure made with respect to a trade or business described in section 163(d)(5)(A)(ii) to the extent such expenditure is properly allocable under section 704(b) to partners that do not materially participate (within the meaning and for purposes of section 469) in the trade or business.

(c) *Allocation of debt and interest expense.* Except as otherwise provided in this section, the rules of § 1.163–8T apply to partnerships, S Corporations, and their owners.

(d) *Debt allocated to distributions by passthrough entities*—(1) *Allocation of distributed debt proceeds*—(i) *Available expenditures.* To the extent a passthrough entity has available expenditures (as defined in paragraph (d)(5)(ii) of this section), the passthrough entity shall first allocate distributed debt proceeds (as defined in paragraph (d)(5)(iii) of this section) to such available expenditures. If a passthrough entity has multiple available expenditures, the passthrough entity shall allocate distributed debt proceeds to such available expenditures in proportion to the amount of each expenditure.

(ii) *Debt financed distributions.* If a passthrough entity's distributed debt proceeds exceeds its available expenditures, the passthrough entity shall allocate such excess amount of distributed debt proceeds to distributions to owners of the passthrough entity (debt financed distributions).

(2) *Allocation of interest expense*—(i) *Interest expense allocated to debt financed distributions.* If distributed debt proceeds are allocated to distributions to owners of the passthrough entity (pursuant to paragraph (d)(1)(ii) of this section), the passthrough entity shall determine the portion of each passthrough entity owner's allocable interest expense that is debt financed distribution interest expense. The amount of a passthrough entity owner's *debt financed distribution interest expense* equals the lesser of such passthrough entity owner's allocable interest expense (as defined in paragraph (d)(5)(i) of this section) or the product of—

(A) The portion of the debt proceeds distributed to that particular passthrough entity owner; multiplied by

(B) A fraction, the numerator of which is the portion of the passthrough entity's distributed debt proceeds allocated to debt financed distributions (determined under paragraph (d)(1)(ii) of this section), and the denominator of which is the passthrough entity's total amount of distributed debt proceeds; multiplied by

(C) The distributed debt proceeds interest rate (as defined in paragraph (d)(5)(iv of this section).

(ii) *Interest expense allocated to available expenditures.* If distributed debt proceeds are allocated to available expenditures (pursuant to paragraph (d)(1)(i) of this section), the passthrough entity shall determine the portion of each passthrough entity owner's allocable interest expense that is expenditure interest expense. The amount of a passthrough entity owner's *expenditure interest expense* equals the product of—

(A) The portion of the passthrough entity's distributed debt proceeds allocated to available expenditures (determined under paragraph (d)(1)(i) of this section); multiplied by

(B) The distributed debt proceeds interest rate; multiplied by

(C) A fraction, the numerator of which is the excess of that particular passthrough entity owner's allocable interest expense over its debt financed distribution interest expense (determined under paragraph (d)(2)(i) of this section) (remaining interest expense), and the denominator of which is aggregate of all the passthrough owners' remaining interest expense amounts.

(iii) *Excess interest expense.* To the extent a passthrough entity owner's allocable interest expense is not treated as either debt financed distribution interest expense (determined under paragraph (d)(2)(i) of this section) or expenditure interest expense (determined under paragraph (d)(2)(ii) of this section), such allocable interest expense is *excess interest expense.*

(3) *Tax treatment of interest expense*—(i) *Debt financed distribution interest expense.* The tax treatment of a passthrough entity owner's debt financed distribution interest expense (determined under paragraph (d)(2)(i) of this section), if any, shall be determined by the passthrough entity owner under the rules of § 1.163–8T, as applicable, in accordance with such passthrough entity owner's use of its portion of the passthrough entity's distributed debt proceeds. The passthrough entity shall separately state the amount of each owner's debt financed distribution interest expense. Debt financed distribution interest expense is not treated as interest expense of the entity for purposes of this section.

(ii) *Expenditure interest expense.* The tax treatment of a passthrough entity owner's expenditure interest expense (determined under paragraph (d)(2)(ii) of this section), if any, shall be determined based on how the distributed debt proceeds were allocated among available expenditures (pursuant to paragraph (d)(1)(i) of this section). For example, if distributed debt proceeds are allocated to a rental activity under paragraph (d)(1)(i) of this section, the interest expense associated with such debt should be taken into account by the passthrough entity in computing income or loss from the rental activity that is reported to the owner.

(iii) *Excess interest expense.* The tax treatment of a passthrough entity owner's excess interest expense (determined under paragraph (d)(2)(iii) of this section), if any, shall be determined by allocating the distributed debt proceeds among all the assets of the passthrough entity, pro-rata, based on the adjusted basis of such assets. For purposes of the preceding sentence, the passthrough entity shall use either the adjusted tax bases of its assets reduced by any debt of the passthrough entity allocated to such assets, or determine its adjusted basis in its assets in accordance with the rules in § 1.163(j)–10(c)(5)(i), reduced by any debt of the passthrough entity allocated to such assets. Once a passthrough entity chooses a method for determining its adjusted basis in its assets for this purpose, the passthrough entity must consistently apply the same method in all subsequent tax years. Any assets purchased in the same taxable year as the distribution (such that the expenditure for those assets was taken into account in § 1.163–14(b)(1)) are not included in this allocation.

(4) *Treatment of transfers of interests in a passthrough entity by an owner that received a debt financed distribution*—(i) *In general.* In the case of a transfer of an interest in a passthrough entity, any debt financed distribution interest expense of the transferor shall be treated as excess interest expense by the transferee. However, in the case of a transfer of an interest in a passthrough entity to a person who is related to the transferor, any debt financed distribution interest expense of the transferor shall continue to be treated as debt financed distribution interest expense by the related party transferee, and the tax treatment of such debt financed distribution expense under paragraph (d)(3) of this section shall be the same to the related party transferee as it was to the transferor. The term related party means any person who bears a relationship to the taxpayer which is described in section 267(b) or 707(b)(1).

(ii) *Anti-avoidance rule.* Arrangements entered into with a principal purpose of avoiding the rules of this paragraph, including the transfer of an interest in a passthrough entity by an owner who treated a portion of its allocable interest expense as debt financed distribution interest expense to an unrelated party pursuant to a plan to transfer the interest back to the owner who received the debt financed distribution interest expense or to a party who is related to the owner who received the debt financed distribution interest expense, may be disregarded or recharacterized by the Commissioner of the IRS to the extent necessary to carry out the purposes of this paragraph.

(5) *Definitions.* For purposes of this paragraph—

(i) *Allocable interest expense* means a passthrough entity owner's share of interest expense associated with the distributed debt proceeds allocated under section 704 or section 1366(a).

(ii) *Available expenditure* means an expenditure of a passthrough entity described in paragraph (b)(2) of this section made in the same taxable year of the entity as the distribution, to the extent that debt proceeds (including other distributed debt proceeds) are not otherwise allocated to such expenditure.

(iii) *Distributed debt proceeds* means debt proceeds of a passthrough entity that are allocated under § 1.163–8T and this section to distributions to owners of the passthrough entity in a taxable year. If debt proceeds from multiple borrowings are allocated under § 1.163–8T to distributions to owners of the passthrough entity in a taxable year, then all such borrowings are treated as a single borrowing for purposes of this section.

(iv) *Distributed debt proceeds interest rate* means a fraction, the numerator of which is the amount of interest expense associated with distributed debt proceeds, and the denominator of which is the amount of distributed debt proceeds.

(e) *Repayment of passthrough entity debt*—(1) *In general.* If any portion of passthrough entity debt is repaid at a time when such debt is allocated to more than one expenditure, the debt is treated for purposes of this section as repaid in the following order:

(i) Amounts allocated to one or more expenditures described in paragraph (b)(2)(iii);

(ii) Amounts allocated to one or more expenditures described in paragraph (b)(2)(i) (relating to investment expenditures as defined in § 1.163–8T(b)(3));

(iii) Amounts allocated to one or more expenditures described in paragraphs (b)(2)(ii) and (iv) (relating to expenditures with respect to any activities described in § 1.469–4(b)(1)(ii) and (iii), and § 1.469–4(b)(2)); and

(iv) Amounts allocated to one or more expenditures described in paragraph (b)(2)(v) (generally relating to expenditures made with respect to a trade or business as defined in § 1.163(j)–1(b)(44)).

(2) *Repayment of debt used to finance a distribution.* Any repayment of debt of a passthrough entity that has been allocated to debt financed distributions under paragraph (d)(1)(ii) of this section and to one or more available expenditures under paragraph (d)(1)(i) of this section may, at the option of the passthrough entity, be treated first as a repayment of the portion of the debt that had been allocated to such debt financed distributions.

(f) *Debt allocated to expenditures for interests in passthrough entities.* In the case of debt proceeds allocated under the rules of § 1.163–8T and this section to contributions to the capital of or to the purchase of an interest in a passthrough entity, the character of the debt proceeds and any associated interest expense shall be determined by allocating the debt proceeds among the adjusted tax bases of the entity's assets. For purposes of this paragraph, the owner must allocate the debt proceeds either in proportion to the relative adjusted tax basis of the entity's assets reduced by any debt allocated to such assets, or based on the adjusted basis of the entity's assets in accordance with the rules in § 1.163(j)–10(c)(5)(i) reduced by any debt allocated to such assets. Once the owner chooses a method for allocating the debt proceeds for this purpose, the owner must consistently apply the same method in all subsequent tax years. Individuals shall report interest expense paid or incurred in connection with debt-financed acquisitions on their individual income tax return in accordance with the asset to which the interest expense is allocated under this paragraph.

(g) *Change in ownership.* Any transfer of an ownership interest in a passthrough entity is not a reallocation event for purposes of § 1.163–8T(j), except as provided for in paragraph (d)(4) of this section.

(h) *Examples*—(1) *Example 1*—(i) *Facts.* A (an individual) and B (an individual) are partners in partnership PRS. PRS conducts two businesses; a manufacturing business, which is a trade or business as defined in § 1.163(j)–1(b)(44) (manufacturing), and a separate commercial real estate leasing business, which is an activity described in § 1.469–4(b)(2) (leasing). In Year 1, PRS borrowed $100,000 from an unrelated third-party lender (the loan). Other than the loan, PRS does not have any outstanding debt. During Year 1, PRS paid $80,000 in manufacturing expenses, $120,000 in leasing expenses, and made a $100,000 distribution to A, the proceeds of which A used to make a personal expenditure. Under § 1.163–8T, PRS treated the $100,000 of loan proceeds as having been distributed to A. As a result, in Year 1 PRS had $200,000 of available expenditures (as defined in paragraph (d)(5)(ii) of this section) and $100,000 of distributed debt proceeds (as defined in paragraph (d)(5)(iii) of this section). PRS paid $10,000 in interest expense that accrued during Year 1 on the loan, and allocated such interest expense under section 704(b) equally to A and B ($5,000 each). Thus, A and B each had $5,000 of allocable interest expense (as defined in paragraph (d)(5)(i) of this section).

(ii) *Applicability.* Because PRS treated all $100,000 of the loan proceeds as having been distributed under § 1.163–8T, PRS allocated all $10,000 of the interest expense associated with the loan to the distribution. Thus, pursuant to paragraph (b)(1)(vi) of this section, PRS must determine the tax treatment of such $10,000 of interest expense in the manner provided in paragraph (d) of this section.

(iii) *Debt allocated to distributions.* Under paragraph (d)(1)(i) of this section, to the extent PRS has available expenditures (as defined under paragraph (d)(5)(ii) of this section), it must allocate any distributed debt proceeds (as defined under paragraph (d)(5)(iii) of this section) to such available expenditures. Here, PRS has distributed debt proceeds of $100,000 and available expenditures of $200,000 (manufacturing expenditures of $80,000, plus leasing expenditures of $120,000). Thus, PRS allocates all $100,000 of the distributed debt proceeds to available expenditures as follows: $40,000 to manufacturing expenditures ($100,000 × ($80,000/$200,000)) and $60,000 to leasing expenditures ($100,000 × ($120,000/$200,000)). Because the amount of PRS's distributed debt proceeds is less than its available expenditures, none of the distributed debt proceeds are allocated to debt financed distributions pursuant to paragraph (d)(1)(ii) of this section.

(iv) *Allocation of interest expense.* Because all of PRS's distributed debt proceeds are allocated to available expenditures (pursuant to paragraph (d)(1)(i) of this section), A and B each treat all $5,000 of their allocable interest expense as expenditure interest expense.

(v) *Tax treatment of interest expense.* Pursuant to paragraph (d)(3)(ii) of this section, each partner treats its expenditure interest expense (determined under paragraph (d)(2)(ii) of this section) in the same manner as the distributed debt proceeds that were allocated to available expenditures under paragraph (d)(1)(i) of this section. Thus, A's $5,000 of expenditure interest expense comprises of $2,000 of business interest expense ($5,000 × ($40,000/$100,000)) and $3,000 of interest expense allocated to rental expenditures ($5,000 × ($60,000/$100,000)). B's $5,000 of expenditure interest expense similarly comprises of $2,000 of business interest expense and $3,000 of interest expense allocated to rental expenditures. As a result, $4,000 of interest expense associated with the distributed debt proceeds (A's $2,000 plus B's $2,000 of expenditure interest expense treated as business interest expense) is business interest expense of PRS, subject to section 163(j) at the PRS level.

TABLE 1 TO PARAGRAPH (h)(2)(vii)

	Partner A	Partner B
Allocable interest expense:		
Debt financed distribution interest expense:		
N/A	$0	$0
Expenditure interest expense:		
Business interest (to PRS)	2,000	2,000
Rental activity interest expense	3,000	3,000
Excess interest expense:		
N/A	0	0
Total	5,000	5,000

(2) *Example 2*—(i) *Facts.* The facts are the same as in *Example 1* in paragraph (h)(1)(i) of this section, except PRS did not have any rental expenditures in Year 1. As a result, in Year 1 PRS had $80,000 of available expenditures (as defined in paragraph (d)(5)(ii) of this section) and $100,000 of distributed debt proceeds (as defined in paragraph (d)(5)(iii) of this section).

(ii) *Applicability.* Because PRS treated all $100,000 of the loan proceeds as having been distributed to A under § 1.163–8T, PRS allocated all $10,000 of the interest expense associated with the loan to the distribution. Thus, pursuant to paragraph (b)(1)(vi) of this section, PRS must determine the tax treatment of such $10,000 of interest expense in the manner provided in paragraph (d) of this section.

(iii) *Debt allocated to distributions.* Under paragraph (d)(1)(i) of this section, to the extent PRS has available expenditures (as defined under paragraph (d)(5)(ii) of this section), it must allocate any distributed debt proceeds (as defined under paragraph (d)(5)(i) of this section) to such available expenditures. Here, PRS has distributed debt proceeds of $100,000 and available expenditures of $80,000. Thus, $80,000 of the distributed debt proceeds are allocated to such available expenditures. Pursuant to paragraph (d)(1)(ii) of this section, PRS allocates the remaining $20,000 of the distributed debt proceeds to debt financed distributions.

(iv) *Allocation of interest expense—debt financed distribution interest expense.* Pursuant to paragraph (d)(2)(i) of this section, A treats $2,000 of its allocable interest expense as debt financed distribution interest expense, which is the lesser of $5,000 or $2,000 ((A) the portion of debt proceeds distributed to A ($100,000), multiplied by (B) a fraction, the numerator of which is the portion of PRS's distributed debt proceeds allocated to debt financed distributions pursuant to paragraph (d)(1)(ii) of this section ($20,000), and the denominator of which is PRS's total amount of distributed debt proceeds ($100,000), multiplied by (C) the distributed debt proceeds interest rate, as defined in paragraph (d)(5)(iii) of this section, of 10% (the amount of interest expense associated with distributed debt proceeds ($10,000), divided by the amount of distributed debt proceeds ($100,000))) and B treats $0 of its allocable interest expense as debt financed distribution interest expense, which is the lesser of $5,000 or $0 ((A) $0 × (B) 20% × (C) 10%).

BILLING CODE 4830–01–P

Table 2 to paragraph (h)(2)(iv)

The portion of partner A's allocable interest expense that is debt financed distribution interest expense equals the lesser of:					
Partner A's allocable interest expense; or				=	$5,000
(d)(2)(i)(A)	Portion of debt proceeds allocated to partner A	=	$100,000		
(d)(2)(i)(B)	$\frac{\text{Debt financed distributions}}{\text{Distributed debt proceeds}}$	=	$\frac{\$20{,}000}{\$100{,}000}$		
(d)(2)(i)(C)	$\frac{\text{Distributed debt proceeds}}{\text{interest rate}}$	=	$\frac{\$10{,}000}{\$100{,}000}$		
The product of (d)(2)(i)(A), (B), and (C).				=	$2,000

Table 3 to paragraph (h)(2)(iv)

The portion of partner B's allocable interest expense that is debt financed distribution interest expense equals the lesser of:					
Partner B's allocable interest expense; or				=	$5,000
(d)(2)(i)(A)	Portion of debt proceeds allocated to partner B	=	$0		
(d)(2)(i)(B)	$\frac{\text{Debt financed distributions}}{\text{Distributed debt proceeds}}$	=	$\frac{\$20{,}000}{\$100{,}000}$		
(d)(2)(i)(C)	$\frac{\text{Distributed debt proceeds}}{\text{interest rate}}$	=	$\frac{\$10{,}000}{\$100{,}000}$		
The product of (d)(2)(i)(A), (B), and (C).				=	$0

(v) *Allocation of interest expense—expenditure interest expense.* Pursuant to paragraph (d)(2)(ii) of this section, A treats $3,000 of its allocable interest expense as expenditure interest expense ((A) the portion of PRS's distributed debt proceeds allocated to available expenditures pursuant to paragraph (d)(1)(i) of this section ($80,000), multiplied by (B) the distributed debt proceeds interest rate (10%), multiplied by (C) a fraction, the numerator of which is A's remaining interest expense (that is, the excess of A's allocable interest expense ($5,000) over its debt financed distribution interest expense as determined under paragraph (d)(2)(i) of this section ($2,000)), and the denominator of which is the aggregate of A's and B's remaining interest expense amounts ($3,000 + $5,000)) and B treats $5,000 of its allocable interest expense as expenditure interest expense ((A) $80 × (B) 10% × (C) 62.5%).

Table 4 to paragraph (h)(2)(v)			
The portion of partner A's allocable interest expense that is expenditure interest expense equals the product of:			
(d)(2)(ii)(A)	Distributed debt proceeds allocated to available expenditures	=	$80,000
(d)(2)(ii)(B)	Distributed debt proceeds interest rate	=	$10,000 / $100,000
(d)(2)(ii)(C)	Partner A's remaining interest expense / Aggregate remaining interest expense	=	$3,000 / $8,000
The product of (d)(2)(ii)(A), (B), and (C).		=	$3,000

Table 5 to paragraph (h)(2)(v)			
The portion of partner B's allocable interest expense that is expenditure interest expense equals the product of:			
(d)(2)(ii)(A)	Distributed debt proceeds allocated to available expenditures	=	$80,000
(d)(2)(ii)(B)	Distributed debt proceeds interest rate	=	$10,000 / $100,000
(d)(2)(ii)(C)	Partner B's remaining interest expense / Aggregate remaining interest expense	=	$5,000 / $8,000
The product of (d)(2)(ii)(A), (B), and (C).		=	$5,000

(vi) *Allocation of interest expense—excess interest expense.* Neither partner treats any of its allocable interest expense as excess interest expense under paragraph (d)(2)(iii) of this section.

(vii) *Tax treatment of interest expense.* Pursuant to paragraph (d)(3)(i) of this section, each partner determines the tax treatment of its debt financed distribution interest expense (determined under paragraph (d)(2)(i) of this section) based on its use of the distributed debt proceeds. Because A used its $100,000 of distributed debt proceeds on a personal expenditure, A's $2,000 of debt financed distribution interest expense is personal interest subject to section 163(h) at A's level. Pursuant to paragraph (d)(3)(ii) of this section, each partner treats its expenditure interest expense (determined under paragraph (d)(2)(ii) of this section) in the same manner as the distributed debt proceeds that were allocated to available expenditures under paragraph (d)(1)(i) of this section. Thus, all $3,000 of A's expenditure interest expense and all $5,000 of B's expenditure interest expense is business interest expense. As a result, $8,000 interest expense associated with the distributed debt proceeds (A's $3,000 plus B's $5,000 of expenditure interest expense treated as business interest expense) is business interest expense of PRS, subject to section 163(j) at the PRS level.

TABLE 6 TO PARAGRAPH (h)(2)(vii)

	Partner A	Partner B
Allocable interest expense;		
Debt financed distribution interest expense:		
Personal interest	$2,000	$0
Expenditure interest expense:		
Business interest (to PRS)	3,000	5,000
Excess interest expense:		
N/A	0	0
Total	5,000	5,000

(3) *Example 3*—(i) *Facts.* The facts are the same as in *Example 2* in paragraph (h)(2)(i) of this section, except PRS paid $20,000 in manufacturing expenses, made a distribution of $75,000 to A (the proceeds of which A used on a personal expenditure), and made a distribution of $25,000 to B (the proceeds of which B used on a trade or business expenditure). As a result, in Year 1 PRS had $20,000 of available expenditures (as defined in paragraph (d)(5)(ii) of this section) and $100,000 of distributed debt proceeds (as defined in paragraph (d)(5)(iii) of this section). The $20,000 manufacturing expenditure was to acquire assets used in PRS's manufacturing business. At the end of Year 1, the adjusted tax basis of PRS's assets used in manufacturing was $720,000 and the adjusted tax basis of PRS's assets used in leasing was $200,000. In addition, at the end of Year 1, the adjusted basis of PRS's assets held for investment (within the meaning of section 163(d)(5)) was $100,000.

(ii) *Applicability.* Because PRS treated all $100,000 of the loan proceeds as having been distributed under § 1.163–8T, PRS allocated all $10,000 of the interest expense associated with the loan to the distribution. Thus, pursuant to paragraph (b)(1)(vi) of this section, PRS must determine the tax treatment of such $10,000 of interest expense in the manner provided in paragraph (d) of this section.

(iii) *Debt allocated to distributions.* Under paragraph (d)(1)(i) of this section, to the extent PRS has available expenditures (as defined under paragraph (d)(5)(ii) of this section), it must allocate any distributed debt proceeds (as defined under paragraph (d)(5)(i) of this section) to such available expenditures. Here, PRS has distributed debt proceeds of $100,000 and available expenditures of $20,000. Thus, PRS allocates $20,000 of the distributed debt proceeds to available expenditures. Pursuant to paragraph (d)(1)(ii) of this section, PRS allocates the remaining $80,000 of distributed debt proceeds to debt financed distributions.

(iv) *Allocation of interest expense—debt financed distribution interest expense.* Pursuant to paragraph (d)(2)(i) of this section, A treats $5,000 of its allocable interest expense as debt financed distribution interest expense, which is the lesser of $5,000 or $6,000 ((A) $75,000 × (B) 80% × (C) 10%) and B treats $2,000 of its allocable interest expense as debt financed distribution interest expense, which is the lesser of $5,000 or $2,000 ((A) $25,000 × (B) 80% × (C) 10%).

Table 7 to paragraph (h)(3)(iv)

The portion of partner A's allocable interest expense that is debt financed distribution interest expense equals the lesser of:

Partner A's allocable interest expense; or				=	$5,000
(d)(2)(i)(A)	Portion of debt proceeds allocated to partner A	=	$75,000		
(d)(2)(i)(B)	$\frac{\text{Debt financed distributions}}{\text{Distributed debt proceeds}}$	=	$\frac{\$80,000}{\$100,000}$		
(d)(2)(i)(C)	Distributed debt proceeds interest rate	=	$\frac{\$10,000}{\$100,000}$		
The product of (d)(2)(i)(A), (B), and (C).				=	$6,000

Table 8 to paragraph (h)(3)(iv)

The portion of partner B's allocable interest expense that is debt financed distribution interest expense equals the lesser of:

Partner B's allocable interest expense; or				=	$5,000
(d)(2)(i)(A)	Portion of debt proceeds allocated to partner B	=	$25,000		
(d)(2)(i)(B)	$\frac{\text{Debt financed distributions}}{\text{Distributed debt proceeds}}$	=	$\frac{\$80,000}{\$100,000}$		
(d)(2)(i)(C)	Distributed debt proceeds interest rate	=	$\frac{\$10,000}{\$100,000}$		
The product of (d)(2)(i)(A), (B), and (C).				=	$2,000

(v) *Allocation of interest expense—expenditure interest expense.* Pursuant to paragraph (d)(2)(ii) of this section, A does not treat any of its allocable interest expense as expenditure interest expense ((A) $20,000 × (B) 10% × (C) 0%) and B treats $2,000 of its allocable interest expense as expenditure interest expense ((A) $20,000 × (B) 10% × (C) 100%).

Table 9 to paragraph (h)(3)(v)			
The portion of partner A's allocable interest expense that is expenditure interest expense equals the product of:			
(d)(2)(ii)(A)	Distributed debt proceeds allocated to available expenditures	=	$20,000
(d)(2)(ii)(B)	Distributed debt proceeds interest rate	=	$10,000 / $100,000
(d)(2)(ii)(C)	Partner A's remaining interest expense / Aggregate remaining interest expense	=	$0 / $3,000
The product of (d)(2)(ii)(A), (B), and (C).		=	$0

Table 10 to paragraph (h)(3)(v)			
The portion of partner B's allocable interest expense that is expenditure interest expense equals the product of:			
(d)(2)(ii)(A)	Distributed debt proceeds allocated to available expenditures	=	$20,000
(d)(2)(ii)(B)	Distributed debt proceeds interest rate	=	$10,000 / $100,000
(d)(2)(ii)(C)	Partner B's remaining interest expense / Aggregate remaining interest expense	=	$3,000 / $3,000
The product of (d)(2)(ii)(A), (B), and (C).		=	$2,000

BILLING CODE 4830–01–C

(vi) *Allocation of interest expense—excess interest expense.* Pursuant to paragraph (d)(2)(iii) of this section, A does not treat any of its allocable interest expense as excess interest expense ($5,000 of allocable interest expense, less $5,000 of debt financed distribution interest expense, less $0 of expenditure interest expense) and B treats $1,000 of its allocable interest expense as excess interest expense ($5,000 of allocable interest expense, less $2,000 of debt financed distribution interest expense, less $2,000 of expenditure interest expense).

(vii) *Tax treatment of interest expense.* Pursuant to paragraph (d)(3)(i) of this section, each partner determines the tax treatment of its debt financed distribution interest expense based on its use of the distributed debt proceeds. A used its share of the distributed debt proceeds to make personal expenditures. Thus, A's $5,000 of debt financed distribution interest expense is subject to section 163(h) at A's level. B used its share of the distributed debt proceeds to make trade or business expenditures. Thus, B's $2,000 of debt financed distribution interest expense is subject to section 163(j) at B's level. Pursuant to paragraph (d)(3)(ii) of this section, B treats its $2,000 of expenditure interest expense in the same manner as the distributed debt proceeds were allocated to available expenditures under paragraph (d)(1)(i) of this section. Thus, B's $2,000 of expenditure interest expense is business interest expense, subject to section 163(j) at the level of PRS. Pursuant to paragraph (d)(3)(iii) of this section, B determines the tax treatment of its $1,000 of excess interest expense by allocating distributed debt proceeds among the adjusted basis of PRS's assets, reduced by any debt allocated to such assets. For purposes of paragraph (d)(3)(iii) of this section, PRS's has $700,000 ($720,000 − $20,000 debt proceeds allocated to such assets) of basis in its manufacturing assets, $200,000 of basis in its leasing assets, and $100,000 of basis in its assets held for investment. Thus, B's $1,000 of excess interest expense is treated as $700 of business interest expense subject to 163(j) at the PRS level, $200 of interest expense related to a rental activity, and $100 of investment interest expense.

TABLE 11 TO PARAGRAPH (h)(3)(vii)

	Partner A	Partner B
Allocable interest expense:		
Debt financed distribution interest expense:		
Personal interest:	$5,000	$0
Business interest (but not to PRS)	0	2,000

TABLE 11 TO PARAGRAPH (h)(3)(vii)—Continued

	Partner A	Partner B
Expenditure interest expense:		
Business interest (to PRS)	0	2,000
Excess interest expense:		
Business interest (to PRS):	0	700
Rental activity interest expense	0	200
Investment interest expense	0	100
Total	5,000	5,000

(4) *Example 4.* The facts are the same as in *Example 2* in paragraph (h)(2)(i) of this section. In Year 2, A sells its interest in PRS to C. C is not related to either A or B under the rules of either section 267(b) or section 707(b)(1). No facts have changed with respect to PRS's loan. Under these facts, and only for purposes of this section, C's share of the debt financed distribution interest expense will be treated as excess interest expense pursuant to paragraph (d)(4)(i) of this section. Accordingly, C will determine the character of its share of this interest expense by allocating the debt proceeds associated with this interest expense among the assets of PRS under paragraph (d)(3)(iii) of this section.

(5) *Example 5.* The facts are the same as in *Example 4* in paragraph (h)(4) of this section, except that C is a party that is related to A under the rules of either section 267(b) or section 707(b)(1). Under these facts, and only for purposes of this section, A's $2,000 of debt financed distribution interest expense shall, pursuant to paragraph (d)(4)(i) of this section, continue to be treated as debt financed distribution interest expense of C, subject to the same tax treatment as it was to the transferor (personal interest expense).

(6) *Example 6.* The facts are the same as in *Example 2* in paragraph (h)(2)(i) of this section, except that in Year 2 B sells its interest in PRS to D. D is not related to either A or B under the rules of either section 267(b) or section 707(b)(1). No other facts have changed with respect to PRS's loan. Under these facts, the tax treatment of the expenditure interest expense does not change with respect to PRS or any of the partners as a result of the ownership change pursuant to paragraph (g) of this section. Accordingly, the tax treatment of the expenditure interest expense allocable to D under section 704(b) is identical to the expenditure interest expense that had been allocable to B prior to the sale.

(7) *Example 7*—(i) *Facts.* A (an individual) and B (an individual) are equal shareholders in S corporation X. X conducts a manufacturing business, which is a trade or business as defined in § 1.163(j)–1(b)(44) (manufacturing). In Year 1, X borrowed $100,000 from an unrelated third-party lender (the loan). Other than the loan, X does not have any outstanding debt. During Year 1, X paid $100,000 in manufacturing expenses and made a $50,000 distribution to each of its shareholders, A and B, which each shareholder used to make a personal expenditure. Under § 1.163–8T, X treated all $100,000 of the loan proceeds as having been distributed to A and B. As a result, in Year 1 X had $100,000 of available expenditures (as defined in paragraph (d)(5)(ii) of this section) and $100,000 of distributed debt proceeds (as defined in paragraph (d)(5)(iii) of this section). X paid $10,000 in interest expense that accrued during Year 1 on the loan, and allocated such interest expense under section 1366(a) equally to A and B ($5,000 each). Thus, A and B each had $5,000 of allocable interest expense (as defined in paragraph (d)(5)(i) of this section).

(ii) *Applicability.* Because X treated all $100,000 of the loan proceeds as having been distributed to A and B under § 1.163–8T, PRS allocated all $10,000 of the interest expense associated with the loan to the distributions. Thus, pursuant to paragraph (b)(1)(vi) of this section, PRS must determine the tax treatment of such $10,000 of interest expense in the manner provided in paragraph (d) of this section.

(iii) *Debt allocated to distributions.* Under paragraph (d)(1)(i) of this section, to the extent X has available expenditures (as defined under paragraph (d)(5)(ii) of this section), it must allocate any distributed debt proceeds (as defined under paragraph (d)(5)(iii) of this section) to such available expenditures. Here, X has distributed debt proceeds of $100,000 and available expenditures of $100,000. Thus, PRS allocates all $100,000 of the distributed debt proceeds to available expenditures

(iv) *Allocation of interest expense.* Because all of X's distributed debt proceeds are allocated to available expenditures (pursuant to paragraph (d)(1)(i) of this section), A and B each treat all $5,000 of their allocable interest expense as expenditure interest expense.

(v) *Tax treatment of interest expense.* Pursuant to paragraph (d)(3)(ii) of this section, each partner treats its expenditure interest expense (determined under paragraph (d)(2)(ii) of this section) in the same manner as the distributed debt proceeds that were allocated to available expenditures under paragraph (d)(1)(i) of this section. Thus, A's $5,000 of expenditure interest expense and B's $5,000 of expenditure interest expense is treated as business interest expense of X, subject to section 163(j) at X's level.

TABLE 12 TO PARAGRAPH (h)(7)(v)

	Partner A	Partner B
Allocable interest expense:		
Debt financed distribution interest expense:		
N/A	$0	$0
Expenditure interest expense:		
Business interest (to X)	5,000	5,000
Excess interest expense:		
N/A	0	0
Total	5,000	5,000

(h) *Applicability date.* This section applies to taxable years beginning on or after [DATE 60 DAYS AFTER DATE OF PUBLICATION OF THE FINAL RULE IN THE **FEDERAL REGISTER**]. However, taxpayers and their related parties, within the meaning of sections 267(b) and 707(b)(1), may choose to apply the rules of this section to a taxable year beginning after December 31, 2017, and before [DATE 60 DAYS AFTER DATE OF PUBLICATION OF THE FINAL RULE IN THE **FEDERAL REGISTER**], provided that they consistently apply the rules of this section to that taxable year and each subsequent taxable year.

■ **Par. 3.** Section 1.163–15 is added to read as follows:

§ 1.163–15 Debt Proceeds Distributed from Any Taxpayer Account or from Cash.

(a) *In general.* Regardless of paragraphs (c)(4) and (5) of § 1.163–8T, in the case of debt proceeds deposited in an account, a taxpayer that is applying § 1.163–8T or § 1.163–14 may treat any expenditure made from any account of the taxpayer, or from cash, within 30 days before or 30 days after debt proceeds are deposited in any account of the taxpayer as made from such proceeds to the extent thereof. Similarly, in the case of debt proceeds received in cash, a taxpayer that is applying § 1.163–8T or § 1.163–14 may treat any expenditure made from any account of the taxpayer, or from cash, within 30 days before or 30 days after debt proceeds are received in cash as made from such proceeds to the extent thereof. For purposes of this section, terms used have the same meaning as in § 1.163–8T(c)(4) and (5).

(b) *Applicability date.* This section applies to taxable years beginning on or after [DATE 60 DAYS AFTER DATE OF PUBLICATION OF THE FINAL RULE IN THE **FEDERAL REGISTER**]. However, taxpayers and their related parties, within the meaning of sections 267(b) and 707(b)(1), may choose to apply the rules of this section to a taxable year beginning after December 31, 2017, and before [DATE 60 DAYS AFTER DATE OF PUBLICATION OF THE FINAL RULE IN THE **FEDERAL REGISTER**], provided that they consistently apply the rules of this section to that taxable year and each subsequent taxable year.

■ **Par. 4.** As added in a final rule published elsewhere in this issue of the **Federal Register**, effective November 13, 2020, § 1.163(j)–0 is amended by:

■ 1. Revising the entries for § 1.163(j)–1(b)(1)(iv)(B), (b)(22)(iii)(F), and (b)(35);

■ 2. Adding entries for §§ 1.163(j)–1(b)(1)(iv)(E), (c)(4), and (c)(4)(i) and (ii);

■ 3. Adding an entry for § 1.163(j)–2(d)(3);

■ 4. Revising the entries for §§ 1.163(j)–2(k) and 1.163(j)–6(c)(1) and (2);

■ 5. Adding an entry for § 1.163(j)–6(d)(3), (4), and (5) and (e)(5);

■ 6. Revising the entries for §§ 1.163(j)–6(f)(1)(iii), (g)(4), (h)(4) and (5), (j), and (n) and 1.163(j)–7;

■ 7. Adding an entry for § 1.163(j)–8;

■ 8. Revising the entries for § 1.163(j)–10(c)(5)(ii)(D) and (f).

The revisions and additions read as follows:

(c) Application of section 163(j) to CFC group members of a CFC group.
(1) Scope.
(2) Calculation of section 163(j) limitation for a CFC group for a specified period.
(i) In general.
(ii) Certain transactions between CFC group members disregarded.
(iii) CFC group treated as a single C corporation for purposes of allocating items to an excepted trade or business.
(iv) CFC group treated as a single taxpayer for purposes of determining interest.
(3) Deduction of business interest expense.
(i) CFC group business interest expense.
(A) In general.
(B) Modifications to relevant terms.
(ii) Carryforwards treated as attributable to the same taxable year.
(iii) Multiple specified taxable years of a CFC group member with respect to a specified period.
(iv) Limitation on pre-group disallowed business interest expense carryforward.
(A) General rule.
(*1*) CFC Group member pre-group disallowed business interest expense carryforward.
(*2*) Subgrouping.
(B) Deduction of pre-group disallowed business interest expense carryforwards.
(4) Currency translation.
(5) Special rule for specified periods beginning in 2019 or 2020.
(i) 50 percent ATI limitation applies to a specified period of a CFC group.
(ii) Election to use 2019 ATI applies to a specified period of a CFC group.
(A) In general.
(B) Specified taxable years that do not begin in 2020.
(d) Determination of a specified group and specified group members.
(1) Scope.
(2) Rules for determining a specified group.
(i) Definition of a specified group.
(ii) Indirect ownership.
(iii) Specified group parent.
(iv) Qualified U.S. person.
(v) Stock.
(vi) Options treated as exercised.
(vii) When a specified group ceases to exist.
(3) Rules for determining a specified group member.
(e) Rules and procedures for treating a specified group as a CFC group.
(1) Scope.
(2) CFC group and CFC group member.
(i) CFC group.
(ii) CFC group member.
(3) Duration of a CFC group.
(4) Joining or leaving a CFC group.
(5) Manner of making or revoking a CFC group election.
(i) In general.
(ii) Revocation by election.
(iii) Timing.
(iv) Election statement.
(v) Effect of prior CFC group election.
(f) Treatment of a CFC group member that has ECI.
(1) In general.
(2) Ordering rule.
(g) * * *

* * * * *

(3) Treatment of certain taxes.
(4) Anti-abuse rule.
(i) In general.
(ii) ATI adjustment amount.
(A) In general.
(B) Special rule for taxable years or specified periods beginning in 2019 or 2020.
(iii) Applicable partnership.
(h) Election to apply safe-harbor.
(1) In general.
(2) Eligibility for safe-harbor election.
(i) Stand-alone applicable CFC.
(ii) CFC group.
(A) In general.
(B) Currency translation.
(3) Eligible amount.
(i) In general.
(ii) Amounts properly allocable to a non-excepted trade or business.
(4) Qualified tentative taxable income.
(5) Manner of making a safe-harbor election.
(i) In general.
(ii) Election statement.
(6) Special rule for taxable years or specified periods beginning in 2019 or 2020.

* * * * *

(j) Rules regarding the computation of ATI of certain United States shareholders of applicable CFCs.
(1) In general.
(2) Rules for determining CFC excess taxable income.
(i) In general.
(ii) Applicable CFC is a stand-alone applicable CFC.
(iii) Applicable CFC is a CFC group member.
(iv) ATI percentage.
(3) Cases in which an addition to tentative taxable income is not allowed.
(4) Special rule for taxable years or specified periods beginning in 2019 or 2020.
(k) Definitions.
(1) Applicable partnership.
(2) Applicable specified taxable year.
(3) ATI adjustment amount.
(4) ATI percentage.
(5) CFC excess taxable income.
(6) CFC group.
(7) CFC group election.
(8) CFC group member.
(9) CFC-level net deemed tangible income return.
(i) In general.
(ii) Amounts properly allocable to a non-excepted trade or business.
(10) Cumulative section 163(j) pre-group carryforward limitation.
(11) Current group.
(12) Designated U.S. person.
(13) ECI deemed corporation.
(14) Effectively connected income.
(15) Eligible amount.
(16) Former group.
(17) Loss member.
(18) Payment amount.
(19) Pre-group disallowed business interest expense carryforward.
(20) Qualified tentative taxable income.
(21) Qualified U.S. person.
(22) Relevant period.
(23) Safe-harbor election.
(24) Specified borrower.
(25) Specified group.
(26) Specified group member.
(27) Specified group parent.
(28) Specified lender.
(29) Specified period.
(i) In general.
(ii) Short specified period.
(30) Specified taxable year.
(31) Stand-alone applicable CFC.

§ 1.163(j)–8 Application of the section 163(j) limitation to foreign persons with effectively connected income.

(a) Overview.
(b) Application to a specified foreign person with ECI.
(1) In general.
(2) Modification of adjusted taxable income.
(3) Modification of business interest expense.
(4) Modification of business interest income.
(5) Modification of floor plan financing interest expense.
(6) Modification of allocation of interest expense and interest income that is allocable to a trade or business.
(c) Rules for a specified foreign partner.
(1) Characterization of excess taxable income.
(i) In general.
(ii) Specified ATI ratio.
(iii) Distributive share of ECI.
(iv) Distributive share of non-ECI.
(2) Characterization of excess business interest expense.
(i) Allocable ECI excess BIE.
(ii) Allocable non-ECI excess BIE.

(3) Characterization of deductible business interest expense.
(i) In general.
(ii) Allocation between allocable ECI deductible BIE and allocable non-ECI deductible BIE.
(A) Allocation to hypothetical deductible amounts.
(*1*) In general.
(*2*) Limitation.
(B) Allocation of remaining deductible amounts.
(iii) Hypothetical partnership deductible business interest expense.
(A) Hypothetical partnership ECI deductible BIE.
(B) Hypothetical partnership non-ECI deductible BIE.
(4) Characterization of excess business interest income.
(i) In general.
(ii) Specified BII ratio.
(iii) Allocable ECI BII.
(5) Rules for determining ECI.
(d) Characterization of disallowed business interest expense by a relevant foreign corporation with ECI.
(1) Scope.
(2) Characterization of disallowed business interest expense.
(i) FC ECI disallowed BIE.
(ii) FC non-ECI disallowed BIE.
(3) Characterization of deductible business interest expense.
(i) In general.
(ii) Allocation between FC ECI deductible BIE and FC non-ECI deductible BIE.
(A) Allocation to hypothetical deductible amounts.
(*1*) In general.
(*2*) Limitation.
(B) Allocation of remaining deductible amounts.
(iii) Hypothetical FC deductible business interest expense.
(A) Hypothetical FC ECI deductible BIE.
(B) Hypothetical FC non-ECI deductible BIE.
(e) Rules regarding disallowed business interest expense.
(1) Retention of character in a succeeding taxable year.
(2) Deemed allocation of excess business interest expense of a partnership to a specified foreign partner.
(3) Ordering rule for conversion of excess business interest expense to business interest expense paid or accrued by a partner.
(4) Allocable ECI excess BIE and allocable non-ECI excess BIE retains its character when treated as business interest expense paid or accrued in a succeeding taxable year.
(f) Coordination of the application of section 163(j) with § 1.882–5 and similar provisions and with the branch profits tax.
(1) Coordination of section 163(j) with § 1.882–5 and similar provisions.
(i) Ordering rule.
(ii) Treatment of excess business interest expense.
(iii) Attribution of certain § 1.882–5 interest expense among the foreign corporation and its partnership interests.
(A) In general.
(B) Attribution of interest expense on U.S. booked liabilities.
(C) Attribution of excess § 1.882–5 three-step interest expense.
(*1*) In general.
(*2*) Attribution of excess § 1.882–5 three-step interest expense to the foreign corporation.
(*3*) Attribution of excess § 1.882–5 three-step interest expense to partnerships.
(*i*) In general.
(*ii*) Direct and indirect partnership interests.
(*4*) Limitation on attribution of excess § 1.882–5 three-step interest expense.
(2) Coordination with the branch profits tax.
(g) Definitions.
(1) § 1.882–5 and similar provisions.
(2) § 1.882–5 three-step interest expense.
(3) Allocable ECI BIE.
(4) Allocable ECI BII.
(5) Allocable ECI deductible BIE.
(6) Allocable ECI excess BIE.

(2) Paragraph (c)(5)(ii)(D)(*2*).

■ **Par. 5.** As added in a final rule published elsewhere in this issue of the **Federal Register**, effective November 13, 2020, § 1.163(j)–1 is amended by:

■ 1. Revising paragraph (b)(1)(iv)(B).
■ 2. Adding paragraphs (b)(1)(iv)(E), (b)(22)(iii)(F), and (b)(35)
■ 3. In paragraph (c)(1), removing ''paragraphs (c)(2) and (3)'' from the first sentence and adding ''paragraphs (c)(2), (3), and (4)'' in its place.
■ 4. Adding paragraph (c)(4).

The revisions and additions read as follows:

§ 1.163(j)–1 Definitions.

* * * * *

(b) * * *
(1) * * *
(iv) * * *

(B) *Deductions by members of a consolidated group*—(*1*) *In general.* If paragraph (b)(1)(ii)(C), (D), or (E) of this section applies to adjust the tentative taxable income of a taxpayer, and if the taxpayer does not use the computation method in paragraph (b)(1)(iv)(E) of this section, the amount of the adjustment under paragraph (b)(1)(ii)(C) of this section equals the greater of the allowed or allowable depreciation, amortization, or depletion of the property, as provided under section 1016(a)(2), for any member of the consolidated group for the taxable years beginning after December 31, 2017, and before January 1, 2022, with respect to such property.

(*2*) *Application of the alternative computation method.* If paragraph (b)(1)(ii)(C), (D), or (E) of this section applies to adjust the tentative taxable income of a taxpayer, and if the taxpayer uses the computation method in paragraph (b)(1)(iv)(E) of this section, the amount of the adjustment under paragraph (b)(1)(ii)(C) of this section equals the lesser of:

(i) Any gain recognized on the sale or other disposition of such property by the taxpayer (or, if the taxpayer is a member of a consolidated group, the consolidated group); and

(ii) The greater of the allowed or allowable depreciation, amortization, or depletion of the property, as provided under section 1016(a)(2), for the taxpayer (or, if the taxpayer is a member of a consolidated group, the consolidated group) for the taxable years beginning after December 31, 2017, and before January 1, 2022, with respect to such property.

* * * * *

(E) *Alternative computation method.* If paragraph (b)(1)(ii)(C), (D), or (E) of this section applies to adjust the tentative taxable income of a taxpayer, the taxpayer may compute the amount of the adjustments required by such paragraph using the formulas in paragraph (b)(1)(iv)(E)(*1*), (*2*), and (*3*) of this section, respectively, provided that the taxpayer applies such formulas to all dispositions for which an adjustment is required under paragraph (b)(1)(ii)(C), (D), or (E) of this section.

(*1*) *Alternative computation method for property dispositions.* With respect to the sale or other disposition of property, the lesser of:

(*i*) Any gain recognized on the sale or other disposition of such property by the taxpayer (or, if the taxpayer is a member of a consolidated group, the consolidated group); and

(*ii*) The greater of the allowed or allowable depreciation, amortization, or depletion of the property, as provided under section 1016(a)(2), for the taxpayer (or, if the taxpayer is a member of a consolidated group, the consolidated group) for the taxable years beginning after December 31, 2017, and before January 1, 2022, with respect to such property.

(*2*) *Alternative computation method for dispositions of member stock.* With respect to the sale or other disposition of stock of a member of a consolidated group by another member, the lesser of:

(*i*) Any gain recognized on the sale or other disposition of such stock; and

(*ii*) The investment adjustments under § 1.1502–32 with respect to such stock that are attributable to deductions described in paragraph (b)(1)(ii)(C) of this section.

(*3*) *Alternative computation method for dispositions of partnership interests.* With respect to the sale or other disposition of an interest in a partnership, the lesser of (*i*) any gain recognized on the sale or other disposition of such interest, and (*ii*) the taxpayer's (or, if the taxpayer is a consolidated group, the consolidated group's) distributive share of deductions described in paragraph (b)(1)(ii)(C) of this section with respect to property held by the partnership at the time of such sale or other disposition to the extent such deductions were allowable under section 704(d).

* * * * *

(22) * * *

(iii) * * *

(F) *Section 163(j) interest dividends*—(*1*) *In general.* Except as otherwise provided in this paragraph (b)(22)(iii)(F), a section 163(j) interest dividend is treated as interest income.

(*2*) *Limitation on amount treated as interest income.* A shareholder may not treat any part of a section 163(j) interest dividend as interest income to the extent the amount of the section 163(j) interest dividend exceeds the excess of the amount of the entire dividend that includes the section 163(j) interest dividend over the sum of the conduit amounts other than interest-related dividends under section 871(k)(1)(C) and section 163(j) interest dividends that affect the shareholder's treatment of that dividend.

(*3*) *Conduit amounts.* For purposes of paragraph (b)(22)(iii)(F)(*2*) of this section, the term *conduit amounts* means, with respect to any category of income (including tax-exempt interest) earned by a RIC for a taxable year, the amounts identified by the RIC (generally in a designation or written report) in connection with dividends paid by the RIC for that taxable year that are subject to a limit determined by reference to that category of income. For example, a RIC's conduit amount with respect to its net capital gain is the amount of capital gain dividends that the RIC pays under section 852(b)(3)(C).

(*4*) *Holding period.* Except as provided in paragraph (b)(22)(iii)(F)(*5*) of this section, no dividend is treated as interest income under paragraph (b)(22)(iii)(F)(*1*) of this section if the dividend is received with respect to a share of RIC stock—

(*i*) That is held by the shareholder for 180 days or less (taking into account the principles of section 246(c)(3) and (4)) during the 361-day period beginning on the date which is 180 days before the date on which the share becomes ex-dividend with respect to such dividend; or

(*ii*) To the extent that the shareholder is under an obligation (whether pursuant to a short sale or otherwise) to make related payments with respect to positions in substantially similar or related property.

(*5*) *Exception to holding period requirement for money market funds and certain regularly declared dividends.* Paragraph (b)(22)(iii)(F)(*4*)(*i*) of this section does not apply to dividends distributed by any RIC regulated as a money market fund under 17 CFR 270.2a–7 (Rule 2a–7 under the 1940 Act) or to regular dividends paid by a RIC that declares section 163(j) interest dividends on a daily basis in an amount equal to at least 90 percent of its excess section 163(j) interest income, as defined in paragraph (b)(35)(iv)(E) of this section, and distributes such dividends on a monthly or more frequent basis.

* * * * *

(35) *Section 163(j) interest dividend.* The term *section 163(j) interest dividend* means a dividend paid by a RIC for a taxable year for which section 852(b) applies to the RIC, to the extent described in paragraph (b)(35)(i) or (ii) of this section, as applicable.

(i) *In general.* Except as provided in paragraph (b)(35)(ii) of this section, a section 163(j) interest dividend is any dividend, or part of a dividend, that is reported by the RIC as a section 163(j) interest dividend in written statements furnished to its shareholders.

(ii) *Reduction in the case of excess reported amounts.* If the aggregate reported amount with respect to the RIC for the taxable year exceeds the excess section 163(j) interest income of the RIC for such taxable year, the section 163(j) interest dividend is—

(A) The reported section 163(j) interest dividend amount; reduced by

(B) The excess reported amount that is allocable to that reported section 163(j) interest dividend amount.

(iii) *Allocation of excess reported amount*—(A) *In general.* Except as provided in paragraph (b)(35)(iii)(B) of this section, the excess reported amount, if any, that is allocable to the reported section 163(j) interest dividend amount is that portion of the excess reported amount that bears the same ratio to the excess reported amount as the reported section 163(j) interest dividend amount bears to the aggregate reported amount.

(B) *Special rule for noncalendar year RICs.* In the case of any taxable year that does not begin and end in the same calendar year, if the post-December reported amount equals or exceeds the excess reported amount for that taxable year, paragraph (b)(35)(iii)(A) of this section is applied by substituting ''post-December reported amount'' for ''aggregate reported amount,'' and no excess reported amount is allocated to any dividend paid on or before December 31 of such taxable year.

(iv) *Definitions.* The following definitions apply for purposes of this paragraph (b)(35):

(A) *Reported section 163(j) interest dividend amount.* The term *reported section 163(j) interest dividend amount* means the amount of a dividend distribution reported to the RIC's shareholders under paragraph (b)(35)(i) of this section as a section 163(j) interest dividend.

(B) *Excess reported amount.* The term *excess reported amount* means the excess of the aggregate reported amount over the RIC's excess section 163(j) interest income for the taxable year.

(C) *Aggregate reported amount.* The term *aggregate reported amount* means the aggregate amount of dividends reported by the RIC under paragraph (b)(35)(i) of this section as section 163(j) interest dividends for the taxable year (including section 163(j) interest dividends paid after the close of the taxable year described in section 855).

(D) *Post-December reported amount.* The term *post-December reported* *amount* means the aggregate reported amount determined by taking into account only dividends paid after December 31 of the taxable year.

(E) *Excess section 163(j) interest income.* The term *excess section 163(j) interest income* means, with respect to a taxable year of a RIC, the excess of the RIC's business interest income for the taxable year over the sum of the RIC's business interest expense for the taxable year and the RIC's other deductions for the taxable year that are properly allocable to the RIC's business interest income.

(v) *Example*—(A) *Facts.* X is a domestic C corporation that has elected to be a RIC. For its taxable year ending December 31, 2021, X has $100x of business interest income (all of which is qualified interest income for purposes of section 871(k)(1)(E)) and $10x of dividend income (all of which is qualified dividend income within the meaning of section 1(h)(11) and would be eligible for the dividends received deduction under section 243, determined as described in section 854(b)(3)). X has $10x of business interest expense and $20x of other deductions. X has no other items for the taxable year. On December 31, 2021, X pays a dividend of $80x to its shareholders, and reports, in written statements to its shareholders, $71.82x as a section 163(j) interest dividend; $10x as dividends that may be treated as qualified dividend income or as dividends eligible for the dividends received deduction; and $72.73x as interest-related dividends under section 871(k)(1)(C). Shareholder A, a domestic C corporation, meets the holding period requirements in paragraph (b)(22)(iii)(F)(*4*) of this section with respect to the stock of X, and receives a dividend of $8x from X on December 31, 2021.

(B) *Analysis.* X determines that $18.18x of other deductions are properly allocable to X's business interest income. X's excess section 163(j) interest income under paragraph (b)(35)(iv)(E) of this section is $71.82x ($100x business interest income − ($10x business interest expense + $18.18x other deductions allocated) = $71.82x). Thus, X may report up to $71.82x of its dividends paid on December 31, 2021, as section 163(j) interest dividends to its shareholders. X may also report up to $10x of its dividends paid on December 31, 2021, as dividends that may be treated as qualified dividend income or as dividends that are eligible for the dividends received deduction. X determines that $9.09x of interest expense and $18.18x of other deductions are properly allocable to X's qualified interest income. Therefore, X may report up to $72.73x of its dividends paid on December 31, 2021, as interest-related dividends under section 871(k)(1)(C) ($100x qualified interest income − $27.27x deductions allocated = $72.73x). A treats $1x of its $8x dividend as a dividend eligible for the dividends received deduction and no part of the dividend as an interest-related dividend under section 871(k)(1)(C). Therefore, under paragraph (b)(22)(iii)(F)(*2*) of this section, A may treat $7x of the section 163(j) interest dividend as interest income for purposes of section 163(j) ($8x dividend − $1x conduit amount = $7x limitation).

* * * * *

(c) * * *

(4) *Alternative computation for certain adjustments to tentative taxable income, and section 163(j) interest dividends*—(i) *Alternative computation for certain adjustments to tentative taxable income.* Paragraphs (b)(1)(iv)(B) and (E) of this section apply to taxable years beginning on or after [DATE 60 DAYS AFTER DATE OF PUBLICATION OF THE FINAL RULE IN THE **Federal Register**]. Taxpayers and their related parties, within the meaning of sections 267(b) and 707(b)(1), may choose to apply the rules in paragraphs (b)(1)(iv)(B) and (E) of this section to a taxable year beginning after December 31, 2017, and before [DATE 60 DAYS AFTER DATE OF PUBLICATION OF THE FINAL RULE IN THE **Federal Register**], so long as the taxpayers and their related parties consistently apply the rules of the section 163(j) regulations, and, if applicable, §§ 1.263A–9, 1.263A–15, 1.381(c)(20)–1, 1.382–1, 1.382–2, 1.382–5, 1.382–6, 1.382–7, 1.383–0, 1.383–1, 1.469–9, 1.469–11, 1.704–1, 1.882–5, 1.1362–3, 1.1368–1, 1.1377–1, 1.1502–13, 1.1502–21, 1.1502–36, 1.1502–79, 1.1502–91 through 1.1502–99 (to the extent they effectuate the rules of §§ 1.382–2, 1.382–5, 1.382–6, and 1.383–1), and 1.1504–4, to that taxable year and each subsequent taxable year.

(ii) *Section 163(j) interest dividends.* Paragraphs (b)(22)(iii)(*F*) and (b)(35) of this section apply to taxable years beginning on or after [DATE 60 DAYS AFTER DATE OF PUBLICATION OF THE FINAL RULE IN THE **Federal Register**]. Taxpayers and their related parties, within the meaning of sections 267(b) and 707(b)(1), may choose to apply the rules in paragraphs (b)(22)(iii)(F) and (b)(35) of this section for a taxable year beginning after December 31, 2017, and before [DATE 60 DAYS AFTER DATE OF PUBLICATION OF THE FINAL RULE IN THE **Federal Register**], so long as the taxpayers and their related parties consistently apply the rules of the section 163(j) regulations.

■ **Par. 6.** As added in a final rule published elsewhere in this issue of the **Federal Register**, effective November 13, 2020, § 1.163(j)–2 is amended by:

■ 1. Adding paragraphs (b)(3)(iii) and (iv) and (d)(3).

■ 2. Redesignating paragraph (k) as paragraph (k)(1).

■ 3. Adding a new subject heading for paragraph (k).

■ 4. Revising the subject heading of redesignated paragraph (k)(1).

■ 5. Adding paragraph (k)(2).

The additions and revision read as follows:

§ 1.163(j)–2 Deduction for business interest expense limited.

* * * * *

(b) * * *

(3) * * *

(iii) *Transactions to which section 381 applies.* For purposes of the election described in paragraph (b)(3)(i) of this section, and subject to the limitation in paragraph (b)(3)(ii) of this section, the 2019 ATI of the acquiring corporation in a transaction to which section 381 applies equals the amount of the acquiring corporation's ATI for its last taxable year beginning in 2019.

(iv) *Consolidated groups.* For purposes of the election described in paragraph (b)(3)(i) of this section, and subject to the limitation in paragraph (b)(3)(ii) of this section, the 2019 ATI of a consolidated group equals the amount of the consolidated group's ATI for its last taxable year beginning in 2019.

* * * * *

(d) * * *

(3) *Determining a syndicate's loss amount.* For purposes of section 163(j), losses allocated under section 1256(e)(3)(B) and § 1.448–1T(b)(3) are determined without regard to section 163(j). See also § 1.1256(e)–2(b).

* * * * *

(k) *Applicability dates.*

(1) *In general.* * * *

(2) *Paragraphs (b)(3)(iii), (b)(3)(iv), and (d)(3).* Paragraphs (b)(3)(iii) and (iv) and (d)(3) of this section apply to taxable years beginning on or after [DATE 60 DAYS AFTER DATE OF PUBLICATION OF THE FINAL RULE IN THE **FEDERAL REGISTER**]. However, taxpayers and their related parties, within the meaning of sections 267(b) and 707(b)(1), may choose to apply the rules of paragraphs (b)(3)(iii) and (iv) of this section to a taxable year beginning after December 31, 2017, and before [DATE 60 DAYS AFTER DATE OF PUBLICATION OF THE FINAL RULE IN THE **FEDERAL REGISTER**], provided that they consistently apply the rules of paragraphs (b)(3)(iii) and (iv) of this section and the rules in the section 163(j) regulations for that taxable year and for each subsequent taxable year. Taxpayers and their related parties, within the meaning of sections 267(b) and 707(b), may choose to apply the rules of paragraph (d)(3) of this section to a taxable year beginning after December 31, 2017, and before [DATE 60 DAYS AFTER DATE OF PUBLICATION OF THE FINAL RULE

IN THE **FEDERAL REGISTER**], provided that they consistently apply the rules of paragraph (d)(3) of this section for that taxable year and for each subsequent taxable year.

■ **Par. 7.** As added in a final rule published elsewhere in this issue of the **Federal Register**, effective November 13, 2020, § 1.163(j)–6 is amended by:

■ 1. Adding paragraphs (c)(1) and (2), (d)(3) through (5), (e)(5) and (6), (f)(1)(iii), (g)(4), (h)(4) and (5), (j), (l)(4)(iv), (n), and (o)(24) through (29).

■ 2. Redesignating paragraph (p) as paragraph (p)(1).

■ 3. Adding a new subject heading for paragraph (p).

■ 4. Revising the subject heading of newly redesignated paragraph (p)(1).

■ 5. Adding paragraph (p)(2).

The additions and revision read as follows:

§ 1.163(j)–6 Application of the business interest deduction limitation to partnerships and subchapter S corporations.

* * * * *

(c) * * *

(1) *Modification of business interest income for partnerships.* The business interest income of a partnership generally is determined in accordance with § 1.163(j)–1(b)(3). To the extent that interest income of a partnership that is properly allocable to trades or businesses that are per se non-passive activities and is allocated to partners that do not materially participate (within the meaning of section 469), as described in section 163(d)(5)(A)(ii), such interest income shall not be considered business interest income for purposes of determining the section 163(j) limitation of a partnership pursuant to § 1.163(j)–2(b). A per se non-passive activity is an activity that is not treated as a passive activity for purposes of section 469 regardless of whether the owners of the activity materially participate in the activity.

(2) *Modification of business interest expense for partnerships.* The business interest expense of a partnership generally is determined in accordance with § 1.163(j)–1(b)(2). To the extent that interest expense of a partnership that is properly allocable to trades or businesses that are per se non-passive activities is allocated to partners that do not materially participate within the meaning of section 469, as described in section 163(d)(5)(A)(ii), such interest expense shall not be considered business interest expense for purposes of determining the section 163(j) limitation of a partnership pursuant to § 1.163(j)–2(b).

* * * * *

(d) * * *

(3) *Section 743(b) adjustments and publicly traded partnerships.* Solely for purposes of § 1.163(j)–6, a publicly traded partnership, as defined in § 1.7704–1, shall treat the amount of any section 743(b) adjustment of a purchaser of a partnership unit that relates to a remedial item that the purchaser inherits from the seller as an offset to the related section 704(c) remedial item. For this purpose, § 1.163(j)–6(e)(2)(ii) applies. See *Example 25* in paragraph (o)(25) of this section.

(4) *Modification of adjusted taxable income for partnerships.* The adjusted taxable income of a partnership generally is determined in accordance with § 1.163(j)–1(b)(1). To the extent that the items comprising the adjusted taxable income of a partnership are properly allocable to trades or businesses that are per se non-passive activities and are allocated to partners that do not materially participate (within the meaning of section 469), as described in section 163(d)(5)(A)(ii), such partnership items shall not be considered adjusted taxable income for purposes of determining the section 163(j) limitation of a partnership pursuant to § 1.163(j)–2(b).

(5) *Election to use 2019 adjusted taxable income for taxable years beginning in 2020.* In the case of any taxable year beginning in 2020, a partnership may elect to apply this section by substituting its adjusted taxable income for the last taxable year beginning in 2019 for the adjusted taxable income for such taxable year. See § 1.163(j)–2(b)(4) for the time and manner of making or revoking this election. An electing partnership determines each partner's allocable ATI (as defined in paragraph (f)(2)(ii) of this section) pursuant to paragraph (j)(9) of this section in the same manner as an upper-tier partnership. See *Example 34* in paragraph (o)(34) of this section.

* * * * *

(e) * * *

(5) *Partner basis items, remedial items, and publicly traded partnerships.* Solely for purposes of § 1.163(j)–6, a publicly traded partnership, as defined in § 1.7704–1, shall either allocate gain that would otherwise be allocated under section 704(c) based on a partner's section 704(b) sharing ratios, or, for purposes of allocating cost recovery deductions under section 704(c), determine a partner's remedial items, as defined in § 1.163(j)–6(b)(3), based on an allocation of the partnership's asset basis (inside basis) items among its partners in proportion to their share of corresponding section 704(b) items (rather than applying the traditional method, described in § 1.704–3(b)). See *Example 24* in paragraph (o)(24) of this section.

(6) *Partnership deductions capitalized by a partner.* The ATI of a partner is increased by the portion of such partner's allocable share of qualified expenditures (as defined in section 59(e)(2)) to which an election under section 59(e) applies.

* * * * *

(f) * * *

(1) * * *

(iii) *Exception applicable to publicly traded partnerships.* Publicly traded partnerships, as defined in § 1.7704–1, do not apply the rules in paragraph (f)(2) of this section to determine a partner's share of section 163(j) excess items. Rather, publicly traded partnerships determine a partner's share of section 163(j) excess items by applying the same percentage used to determine the partner's share of the corresponding section 704(b) items that comprise ATI.

* * * * *

(g) * * *

(4) *Special rule for taxable years beginning in 2019 and 2020.* In the case of any excess business interest expense of a partnership for any taxable year beginning in 2019 that is allocated to a partner under paragraph (f)(2) of this section, 50 percent of such excess business interest expense (§ 1.163(j)–6(g)(4) business interest expense) is treated as business interest expense that, notwithstanding paragraph (g)(2) of this section, is paid or accrued by the partner in the partner's first taxable year beginning in 2020. Additionally, § 1.163(j)–6(g)(4) business interest expense is not subject to the section 163(j) limitation at the level of the partner. For purposes of paragraph (h)(1) of this section, any § 1.163(j)–6(g)(4) business interest expense is, similar to deductible business interest expense, taken into account before any excess business interest expense. This paragraph applies after paragraph (n) of this section. If a partner disposes of a partnership interest in the partnership's 2019 or 2020 taxable year, § 1.163(j)–6(g)(4) business interest expense is deductible by the partner and thus does not result in a basis increase under paragraph (h)(3) of this section. See *Example 35* and *Example 36* in paragraphs (o)(35) and (o)(36), respectively, of this section. A taxpayer may elect to not have this provision apply. The rules and procedures regarding the time and manner of making, or revoking, such an election are provided in Revenue Procedure 2020–22, 2020–18 I.R.B. 745, and may

be further modified through other guidance (see §§ 601.601(d) and 601.602 of this chapter).

* * * * *

(h) * * *

(4) *Partner basis adjustments upon liquidating distribution.* For purposes of paragraph (h)(3) of this section, a disposition includes a distribution of money or other property by the partnership to a partner in complete liquidation of the partner's interest in the partnership. However, a current distribution of money or other property by the partnership to a continuing partner is not a disposition for purposes of paragraph (h)(3) of this section.

(5) *Partnership basis adjustments upon partner dispositions.* If a partner (transferor) disposes of its partnership interest, the partnership shall increase the adjusted basis of partnership property by an amount equal to the amount of the increase required under paragraph (h)(3) (or, if the transferor is a partnership, (j)(5)(ii)) of this section (if any) to the adjusted basis of the partnership interest being disposed of by the transferor. Such increase in the adjusted basis of partnership property (§ 1.163(j)–6(h)(5) basis adjustment) shall be allocated among capital gain property of the partnership in the same manner as a positive section 734(b) adjustment. However, the increase in the adjusted basis of any partnership property resulting from a § 1.163(j)–6(h)(5) basis adjustment is not depreciable or amortizable under any section of the Code, regardless of whether the partnership property allocated such § 1.163(j)–6(h)(5) basis adjustment is otherwise generally depreciable or amortizable. In general, a partnership allocates its § 1.163(j)–6(h)(5) basis adjustment immediately before the disposition (simultaneous with the transferor's basis increase required under paragraph (h)(3) or (j)(5)(ii) of this section). However, if the disposition was the result of a distribution by the partnership of money or other property to the transferor in complete liquidation of the transferor's interest in the partnership, the partnership allocates its § 1.163(j)–6(h)(5) basis adjustment among its properties only after it has allocated its section 734(b) adjustment (if any) among its properties. See *Example 31* in paragraph (o)(31) of this section.

* * * * *

(j) *Tiered partnerships*—(1) *Purpose.* The purpose of this section is to provide guidance regarding the treatment of business interest expense of a partnership (lower-tier partnership) that is allocated to a partner that is a partnership (upper-tier partnership). Specifically, this section clarifies that disparities are not created between an upper-tier partner's basis in its upper-tier partnership interest and such partner's share of the adjusted basis of upper-tier partnership's property following the allocation of excess business interest expense from lower-tier partnership to upper-tier partnership. Further, these rules disallow any deduction for business interest expense that was formerly excess business interest expense to any person that is not the specified partner of such business interest expense. See *Example 27* through *Example 30* in paragraphs (o)(27) through (30), respectively.

(2) *Section 704(b) capital account adjustments.* If lower-tier partnership pays or accrues business interest expense and allocates such business interest expense to upper-tier partnership, then both upper-tier partnership and any direct or indirect partners of upper-tier partnership shall, solely for purposes of section 704(b) and the regulations thereunder, treat such business interest expense as a section 705(a)(2)(B) expenditure. Any section 704(b) capital account reduction resulting from such treatment occurs regardless of whether such business interest expense is characterized under this section as excess business interest expense or deductible business interest expense by lower-tier partnership. If upper-tier partnership subsequently treats any excess business interest expense allocated from lower-tier partnership as business interest expense paid or accrued pursuant to paragraph (g) of this section, the section 704(b) capital accounts of any direct or indirect partners of upper-tier partnership are not further reduced.

(3) *Basis adjustments of upper-tier partnership.* If lower-tier partnership allocates excess business interest expense to upper-tier partnership, then upper-tier partnership reduces its basis in lower-tier partnership pursuant to paragraph (h)(2) of this section. Upper-tier partnership partners do not, however, reduce the bases of their upper-tier partnership interests pursuant to paragraph (h)(2) of this section until upper-tier partnership treats such excess business interest expense as business interest expense paid or accrued pursuant to paragraph (g) of this section.

(4) *Treatment of excess business interest expense allocated by lower-tier partnership to upper-tier partnership.* Except as provided in paragraph (j)(7) of this section, if lower-tier partnership allocates excess business interest expense to upper-tier partnership and such excess business interest expense is not suspended under section 704(d), then upper-tier partnership shall treat such excess business interest expense (UTP EBIE) as a nondepreciable capital asset, with a fair market value of zero and basis equal to the amount by which upper-tier partnership reduced its basis in lower-tier partnership pursuant to paragraph (h)(2) of this section due to the allocation of such excess business interest expense. The fair market value of UTP EBIE, described in the preceding sentence, is not adjusted by any revaluations occurring under § 1.704–1(b)(2)(iv)(f). In addition to generally treating UTP EBIE as having a basis component in excess of fair market value and, thus, built-in loss property, upper-tier partnership shall also treat UTP EBIE as having a carryforward component associated with it. The carryforward component of UTP EBIE shall equal the amount of excess business interest expense allocated from lower-tier partnership to upper-tier partnership under paragraph (f)(2) of this section that is treated as such under paragraph (h)(2) of this section by upper-tier partnership. If an allocation of excess business interest expense from lower-tier partnership is treated as UTP EBIE of upper-tier partnership, upper-tier partnership shall treat such allocation of excess business interest expense from lower-tier partnership as UTP EBIE until the occurrence of an event described in paragraph (j)(5) of this section.

(5) *UTP EBIE conversion events*—(i) *Allocation to upper-tier partnership by lower-tier partnership of excess taxable income (or excess business interest income).* To the extent upper-tier partnership is allocated excess taxable income (or excess business interest income) from lower-tier partnership, or paragraph (m)(3) of this section applies, upper-tier partnership shall—

(A) First, apply the rules in paragraph (g) of this section to its UTP EBIE, using any reasonable method (including, for example, FIFO and LIFO) to determine which UTP EBIE is treated as business interest expense paid or accrued pursuant paragraph (g) of this section. If paragraph (m)(3) of this section applies, upper-tier partnership shall treat all of its UTP EBIE from lower-tier partnership as business interest expense paid or accrued.

(B) Second, with respect to any UTP EBIE treated as business interest expense paid or accrued in paragraph (j)(5)(i)(A) of this section, allocate any business interest expense that was formerly such UTP EBIE to its specified partner. For purposes of this section, the term specified partner refers to the partner of upper-tier partnership that, due to the initial allocation of excess business interest expense from lower-tier partnership to upper-tier partnership, was required to reduce its section 704(b) capital account pursuant to paragraph (j)(2) of this section. Similar principles apply if the specified partner of such business interest expense is itself a partnership. See paragraph (j)(6) of this section for rules that apply if a specified partner disposes of its partnership interest.

(C) Third, in the manner provided in paragraph (j)(7)(ii) (or (iii), as the case may be) of this section, take into account any negative basis adjustments under section 734(b) previously made to the UTP EBIE treated as business interest expense paid or accrued in paragraph (j)(5)(i)(A) of this section. Additionally, persons treated as specified partners with respect to the UTP EBIE treated as business interest expense paid or accrued in paragraph (j)(5)(i)(A) shall take any negative basis adjustments under section 743(b) into account in the manner provided in paragraph (j)(7)(ii) (or (iii), as the case may be) of this section.

(ii) *Upper-tier partnership disposition of lower-tier partnership interest.* If upper-tier partnership disposes of a lower-tier partnership interest (transferred interest), upper-tier partnership shall—

(A) First, apply the rules in paragraph (h)(3) of this section (except as provided in paragraphs (j)(5)(ii)(B) and (C) of this section), using any reasonable method (including, for example, FIFO and LIFO) to determine which UTP EBIE is reduced pursuant paragraph (h)(3) of this section.

(B) Second, increase the adjusted basis of the transferred interest immediately before the disposition by the total amount of the UTP EBIE that was reduced in paragraph (j)(5)(ii)(A) of this section (the amount of UTP EBIE proportionate to the transferred interest).

(C) Third, in the manner provided in paragraph (j)(7)(iv) of this section, take into account any negative basis adjustments under sections 734(b) and 743(b) previously made to the UTP EBIE that was reduced in (A) earlier.

(6) *Disposition of a specified partner's partnership interest*—(i) *General rule.* If a specified partner (transferor) disposes of an upper-tier partnership interest (or an interest in a partnership that itself is a specified partner), the portion of any UTP EBIE to which the transferor's status as specified partner relates is not reduced pursuant to paragraph (j)(5)(ii) of this section. Rather, such UTP EBIE attributable to the interest disposed of is retained by upper-tier partnership and the transferee is treated as the specified partner for purposes of this section with respect to such UTP EBIE. Thus, upper-tier partnership must allocate any business interest expense that was formerly such UTP EBIE to the transferee. However, see paragraph (j)(8) of this section for rules regarding the deductibility of such transferee's business interest expense that was formerly UTP EBIE.

(ii) *Special rules*—(A) *Distribution in liquidation of a specified partner's partnership interest.* If a specified partner receives a distribution of property in complete liquidation of an upper-tier partnership interest, the portion of UTP EBIE of upper-tier partnership attributable to the liquidated interest shall not have a specified partner. If a specified partner (transferee) receives a distribution of an interest in upper-tier partnership in complete liquidation of a partnership interest, the transferee is the specified partner with respect to UTP EBIE of upper-tier partnership only to the same extent it was prior to the distribution. Similar principles apply where an interest in a partnership that is a specified partner is distributed in complete liquidation of a transferee's partnership interest. See paragraph (j)(8) of this section for rules regarding the treatment of UTP EBIE that does not have a specified partner.

(B) *Contribution of a specified partner's partnership interest.* If a specified partner (transferor) contributes an upper-tier partnership interest to a partnership (transferee), the transferee is treated as the specified partner with respect to the portion of the UTP EBIE attributable to the contributed interest. Following the transaction, the transferor continues to be the specified partner with respect to the UTP EBIE attributable to the contributed interest. Similar principles apply where an interest in a partnership that is a specified partner is contributed to a partnership.

(7) *Effect of basis adjustments allocated to UTP EBIE*—(i) *In general.* Negative basis adjustments under sections 734(b) and 743(b) allocated to UTP EBIE do not affect the carryforward component (described in paragraph (j)(4) of this section) of such UTP EBIE. Rather, negative basis adjustments under sections 734(b) and 743(b) affect only the basis component of such UTP EBIE. For purposes of §§ 1.743–1(d), 1.755–1(b), and 1.755–1(c), the amount of tax loss that would be allocated to a transferee from a hypothetical disposition by upper-tier partnership of its UTP EBIE equals the adjusted basis of the UTP EBIE to which the transferee's status as specified partner relates. Additionally, solely for purposes of § 1.755–1(b), upper-tier partnership shall treat UTP EBIE as an ordinary asset of upper-tier partnership.

(ii) *UTP EBIE treated as deductible business interest expense.* If UTP EBIE that was allocated a negative section 734(b) adjustment is subsequently treated as deductible business interest expense, then such deductible business interest expense does not result in a deduction to the upper-tier partnership or the specified partner of such deductible business interest expense. If UTP EBIE that was allocated a negative section 743(b) adjustment is subsequently treated as deductible business interest expense, the specified partner of such deductible business interest expense recovers any negative section 743(b) adjustment attributable to such deductible business interest expense (effectively eliminating any deduction for such deductible business interest expense).

(iii) *UTP EBIE treated as excess business interest expense.* If UTP EBIE that was allocated a negative section 734(b) or 743(b) adjustment is subsequently treated as excess business interest expense, the specified partner's basis decrease in its upper-tier partnership interest required under paragraph (h)(2) of this section is reduced by the amount of the negative section 734(b) or 743(b) adjustment previously made to such excess business interest expense. If such excess business interest expense is subsequently treated as business interest expense paid or accrued by the specified partner, no deduction shall be allowed for any of such business interest expense. If the specified partner of such excess business interest expense is a partnership, such excess business interest expense is considered UTP EBIE that was previously allocated a negative section 734(b) adjustment for purposes of this section.

(iv) *UTP EBIE reduced due to a disposition.* If UTP EBIE that was allocated a negative section 734(b) or 743(b) adjustment is reduced pursuant to paragraph (j)(5)(ii)(A) of this section, the amount of upper-tier partnership's basis increase under paragraph (j)(5)(ii)(B) of this section to the disposed of lower-tier partnership interest is reduced by the amount of the negative section 734(b) or 743(b) adjustment previously made to such UTP EBIE.

(8) *Anti-loss trafficking*—(i) *Transferee specified partner.* No deduction shall be allowed to any

transferee specified partner for any business interest expense derived from a transferor's share of UTP EBIE. For purposes of this section, the term transferee specified partner refers to any specified partner that did not reduce its section 704(b) capital account due to the initial allocation of excess business interest expense from lower-tier partnership to upper-tier partnership pursuant to paragraph (j)(2) of this section. However, the transferee described in paragraph (j)(6)(ii)(B) of this section is not a transferee specified partner for purposes of this section. If pursuant to paragraph (j)(5)(i)(B) of this section a transferee specified partner is allocated business interest expense derived from a transferor's share of UTP EBIE (business interest expense to which the partner's status as transferee specified partner relates), the transferee specified partner is deemed to recover a negative section 743(b) adjustment with respect to, and in the amount of, such business interest expense and takes such negative section 743(b) adjustment into account in the manner provided in paragraph (j)(7)(ii) (or (iii), as the case may be) of this section, regardless of whether a section 754 election was in effect or a substantial built-in loss existed at the time of the transfer by which the transferee specified partner acquired the transferred interest. However, to the extent a negative section 734(b) or 743(b) adjustment was previously made to such business interest expense, the transferee specified partner does not recover an additional negative section 743(b) adjustment pursuant to this paragraph.

(ii) *UTP EBIE without a specified partner.* If UTP EBIE does not have a specified partner (as the result of a transaction described in paragraph (j)(6)(ii)(A) of this section), upper-tier partnership shall not allocate any business interest expense that was formerly such UTP EBIE to its partners. Rather, for purposes of applying paragraph (f)(2) of this section, upper-tier partnership shall treat such business interest expense as the allocable business interest expense (as defined in paragraph (f)(2)(ii) of this section) of a § 1.163(j)–6(j)(8)(ii) account. Additionally, if UTP EBIE that does not have a specified partner (as the result of a transaction described in paragraph (j)(6)(ii)(A) of this section) is treated as paid or accrued pursuant to paragraph (g) of this section, upper-tier partnership shall make a § 1.163(j)–6(h)(5) basis adjustment to its property in the amount of the adjusted basis (if any) of such UTP EBIE at the time such UTP EBIE is treated as business interest expense paid or accrued pursuant to paragraph (g) of this section.

(iii) *Disallowance of addback.* No basis increase under paragraph (j)(5)(ii) of this section shall be allowed to upper-tier partnership for any disallowed UTP EBIE. For purposes of this section, the term disallowed UTP EBIE refers to any UTP EBIE that has a specified partner that is a transferee specified partner (as defined in paragraph (j)(8)(i) of this section) and any UTP EBIE that does not have a specified partner (as the result of a transaction described in paragraph (j)(6)(ii)(A) of this section). For purposes of applying paragraph (j)(5)(ii) of this section, upper-tier partnership shall treat any disallowed UTP EBIE in the same manner as UTP EBIE that has previously been allocated a negative section 734(b) adjustment and take such negative section 734(b) adjustment into account in the manner provided in paragraph (j)(7)(iv) of this section. However, upper-tier partnership does not treat disallowed UTP EBIE as though it were allocated a negative section 734(b) adjustment pursuant to this paragraph to the extent a negative section 734(b) or 743(b) adjustment was previously made to such disallowed UTP EBIE.

(9) *Determining allocable ATI and allocable business interest income of upper-tier partnership partners*—(i) *In general.* When applying paragraph (f)(2)(ii) of this section, an upper-tier partnership determines the allocable ATI and allocable business interest income of each of its partners in the manner provided in this paragraph. Specifically, if an upper-tier partnership's net amount of tax items that comprise (or have ever comprised) ATI is greater than or equal to its ATI, upper-tier partnership applies the rules in paragraph (j)(9)(ii)(A) of this section to determine each partner's allocable ATI. See *Example 32* in paragraph (o)(32) of this section. However, if an upper-tier partnership's net amount of tax items that comprise (or have ever comprised) ATI is less than its ATI, upper-tier partnership applies the rules in paragraph (j)(9)(ii)(B) of this section to determine each partner's allocable ATI. See *Example 33* in paragraph (o)(33) of this section. To determine each partner's allocable business interest income, an upper-tier partnership applies the rules in paragraph (j)(9)(iii) of this section.

(ii) *Upper-tier partner's allocable ATI*—(A) If an upper-tier partnership's net amount of tax items that comprise (or have ever comprised) ATI is greater than or equal to its ATI (as determined under § 1.163(j)–1(b)(1)), then an upper-tier partner's allocable ATI (for purposes of paragraph (f)(2)(ii) of this section) is equal to the product of—

(*1*) Such partner's distributive share of gross income and gain items that comprise (or have ever comprised) ATI, minus such partner's distributive share of gross loss and deduction items that comprise (or have ever comprised) ATI; multiplied by

(*2*) A fraction, the numerator of which is upper-tier partnership's ATI (as determined under § 163(j)–1(b)(1)), and the denominator of which is upper-tier partnership's net amount of tax items that comprise (or have ever comprised) ATI.

(B) If an upper-tier partnership's net amount of tax items that comprise (or have ever comprised) ATI is less than its ATI (as determined under § 1.163(j)–1(b)(1)), then an upper-tier partner's allocable ATI (for purposes of paragraph (f)(2)(ii) of this section) is equal to—

(*1*) The excess (if any) of such partner's distributive share of gross income and gain items that comprise (or have ever comprised) ATI, over such partner's distributive share of gross loss and deduction items that comprise (or have ever comprised) ATI; increased by

(*2*) The product of—

(*i*) Such partner's share of residual profits expressed as a fraction; multiplied by

(*ii*) Upper-tier partnership's ATI (as determined under § 1.163(j)–1(b)(1)), minus the aggregate of all the partners' amounts determined under paragraph (j)(9)(ii)(B)(*1*) of this section.

(iii) *Upper-tier partner's allocable business interest income.* An upper-tier partner's allocable business interest income (for purposes of paragraph (f)(2)(ii) of this section) is equal to the product of—

(A) Such partner's distributive share of items that comprise (or have ever comprised) business interest income; multiplied by

(B) A fraction, the numerator of which is upper-tier partnership's business interest income (as determined under § 1.163(j)–1(b)(4)), and the denominator of which is the upper-tier partnership's amount of items that comprise (or have ever comprised) business interest income.

* * * * *

(l) * * *

(4) * * *

(iv) *S corporation deductions capitalized by an S corporation shareholder.* The ATI of an S corporation shareholder is increased by the portion of such S corporation shareholder's allocable share of qualified expenditures (as defined in section 59(e)(2)) to which an election under section 59(e) applies.

* * * * *

(n) *Treatment of self-charged lending transactions between partnerships and partners.* In the case of a lending transaction between a partner (lending partner) and partnership (borrowing partnership) in which the lending partner owns a direct interest (self-charged lending transaction), any business interest expense of the borrowing partnership attributable to the self-charged lending transaction is business interest expense of the borrowing partnership for purposes of this section. If in a given taxable year the lending partner is allocated excess business interest expense from the borrowing partnership and has interest income attributable to the self-charged lending transaction (interest income), the lending partner is deemed to receive an allocation of excess business interest income from the borrowing partnership in such taxable year. The amount of the lending partner's deemed allocation of excess business interest income is the lesser of such lending partner's allocation of excess business interest expense from the borrowing partnership in such taxable year or the interest income attributable to the self-charged lending transaction in such taxable year. To prevent the double counting of business interest income, the lending partner includes interest income that was treated as excess business interest income pursuant to this paragraph (n) only once when calculating its own section 163(j) limitation. In cases where the lending partner is not a C corporation, to the extent that any interest income exceeds the lending partner's allocation of excess business interest expense from the borrowing partnership for the taxable year, and such interest income otherwise would be properly treated as investment income of the lending partner for purposes of section 163(d) for that year, such excess amount of interest income will continue to be treated as investment income of the lending partner for that year for purposes of section 163(d).

See *Example 26* in paragraph (o)(26) of this section.

(o) * * *

(24) *Example 24*—(i) *Facts.* On January 1, 2020, L and M form LM, a publicly traded partnership (as defined in § 1.7704–1), and agree that each will be allocated a 50 percent share of all LM items. The partnership agreement provides that LM will make allocations under section 704(c) using the remedial allocation method under § 1.704–3(d). L contributes depreciable property with an adjusted tax basis of $4,000 and a fair market value of $10,000. The property is depreciated using the straight-line method with a 10-year recovery period and has 4 years remaining on its recovery period. M contributes $10,000 in cash, which LM uses to purchase land. Except for the depreciation deductions, LM's expenses equal its income in each year of the 10 years commencing with the year LM is formed. LM has a valid section 754 election in effect.

(ii) *Section 163(j) remedial items and partner basis items.* LM sells the asset contributed by L in a fully taxable transaction at a time when the adjusted basis of the property is $4,000. Under § 1.163(j)–6(e)(2)(ii), solely for purposes of § 1.163(j)–6, the tax gain of $6,000 is allocated equally between L and M ($3,000 each). To avoid shifting built-in gain to the non-contributing partner (M) in a manner consistent with the rule in section 704(c), a remedial deduction of $3,000 is allocated to M (leaving M with no net tax gain), and remedial income of $3,000 is allocated to L (leaving L with total tax gain of $6,000).

(25) *Example 25*—(i) *Facts.* The facts are the same as *Example 24* in paragraph (o)(24) of this section except the property contributed by L had an adjusted tax basis of zero. For each of the 10 years following the contribution, there would be $500 of section 704(c) remedial income allocated to L and $500 of remedial deductions allocated to M with respect to the contributed asset. A buyer of M's units would step into M's shoes with respect to the $500 of annual remedial deductions. A buyer of L's units would step into L's shoes with respect to the $500 of annual remedial income and would have an annual section 743(b) deduction of $1,000 (net $500 of deductions).

(ii) *Analysis.* Pursuant to § 1.163(j)–6(d)(2)(ii), solely for purposes of § 1.163(j)–6, a buyer of L's units immediately after formation of LM would offset its $500 annual section 704(c) remedial income allocation with $500 of annual section 743(b) adjustment (leaving the buyer with net $500 of section 743(b) deduction). As a result, such buyer would be in the same position as a buyer of M's units. Each buyer would have net deductions of $500 per year, which would not affect ATI before 2022.

(26) *Example 26*—(i) *Facts.* X and Y are partners in partnership PRS. In Year 1, PRS had $200 of excess business interest expense. Pursuant to § 1.163(j)–6(f)(2), PRS allocated $100 of such excess business interest expense to each of its partners. In Year 2, X lends $10,000 to PRS and receives $1,000 of interest income for the taxable year (self-charged lending transaction). X is not in the trade or business of lending money. The $1,000 of interest expense resulting from this loan is allocable to PRS's trade or business assets. As a result, such $1,000 of interest expense is business interest expense of PRS. X and Y are each allocated $500 of such business interest expense as their distributive share of PRS's business interest expense for the taxable year. Additionally, in Year 2, PRS has $3,000 of ATI. PRS allocates the items comprising its $3,000 of ATI $0 to X and $3,000 to Y.

(ii) *Partnership-level.* In Year 2, PRS's section 163(j) limit is 30 percent of its ATI plus its business interest income, or $900 ($3,000 × 30 percent). Thus, PRS has $900 of deductible business interest expense, $100 of excess business interest expense, $0 of excess taxable income, and $0 of excess business interest income. Pursuant to § 1.163(j)–6(f)(2), $400 of X's allocation of business interest expense is treated as deductible business interest expense, $100 of X's allocation of business interest expense is treated as excess business interest expense, and $500 of Y's allocation of business interest expense is treated as deductible business interest expense.

(iii) *Lending partner.* Pursuant to § 1.163(j)–6(n), X treats $100 of its $1,000 of interest income as excess business interest income allocated from PRS in Year 2. Because X is deemed to have been allocated $100 of excess business interest income from PRS, and excess business interest expense from a partnership is treated as paid or accrued by a partner to the extent excess business interest income is allocated from such partnership to a partner, X treats its $100 allocation of excess business interest expense from PRS in Year 2 as business interest expense paid or accrued in Year 2. X, in computing its limit under section 163(j), has $100 of business interest income ($100 deemed allocation of excess business interest income from PRS in Year 2) and $100 of business interest expense ($100 allocation of excess business interest expense treated as paid or accrued in Year 2). Thus, X's $100 of business interest expense is deductible business interest expense. At the end of Year 2, X has $100 of excess business interest expense from PRS ($100 from Year 1). X treats $900 of its $1,000 of interest income as investment income for purposes of section 163(d).

(27) *Example 27*—(i) *Formation.* A, B, and C formed partnership UTP in Year 1, each contributing $1,000 cash in exchange for a one third interest. Also in Year 1, UTP, D, and E formed partnership LTP, each contributing $1,200 cash in exchange for a one third interest. LTP borrowed $9,000, resulting in each of its partners increasing its basis in LTP by $3,000. Further, the partners of UTP each increased their bases in UTP by $1,000 each as a result of the LTP borrowing.

(ii) *Application of section 163(j) to LTP.* In Year 1, LTP's only item of income, gain, loss, or deduction was $900 of BIE. As a result, LTP had $900 of excess business interest expense. Pursuant to § 1.163(j)–6(f)(2), LTP allocated $300 of excess business interest expense to each of its partners.

(iii) *Section 704(b) capital account adjustments.* Solely for purposes of section 704(b) and the regulations thereunder, each direct and indirect partner of LTP treats its allocation of excess business interest expense from LTP as a section 705(a)(2)(B) expenditure pursuant to § 1.163(j)–6(j)(2). Further, each indirect partner of LTP that reduced its section 704(b) capital account as a result of the $300 allocation of excess business interest expense to UTP is the specified partner of such UTP EBIE, as defined in § 1.163(j)–6(j)(5)(i)(B). Each partner of UTP reduced its capital account by $100 as a result of the $300 allocation of excess business interest expense from LTP to

UTP. As a result, A, B, and C are each a specified partner with respect to $100 of UTP EBIE.

(iv) *Basis adjustments.* Pursuant to § 1.163(j)–6(h)(2), D, E, and UTP each reduce its basis in LTP by the amount of its allocation of excess business interest expense from LTP. As a result, each partner's basis in its LTP interest is $3,900. Pursuant to § 1.163(j)–6(j)(3), the direct partners of UTP (A, B, and C) do not reduce the bases of their interests in UTP as a result of the allocation of excess business interest expense from LTP to UTP. UTP treats its $300 allocation of excess business interest expense from LTP as UTP EBIE, as defined in § 1.163(j)–6(j)(4). At the end of Year 1, the section 704(b) and tax basis balance sheets of LTP and UTP are as follows:

BILLING CODE 4830–01–P

Table 60 to paragraph (o)(27)(iv)--UTP Balance Sheet - End of Year 1

	Assets			Liabilities and Capital		
	Tax	Book		Tax	Book	
Cash	$1,800	$1,800	Liability	$3,000	$3,000

B	100	100			
C	100	100			
Total	300	300	Total	300	300

(28) *Example 28*—(i) *Facts.* The facts are the same as *Example 27* in paragraph (o)(27) of this section. In Year 2, while a section 754 election was in effect, C sold its UTP interest to D for $900. In Year 3, LTP's only item of income, gain, loss, or deduction was $240 of income, which it allocated to UTP. Such $240 of income resulted in $240 of excess taxable income, which LTP allocated to UTP pursuant to § 1.163(j)–f(2). Further, in Year 3, UTP's only item of income, gain, loss, or deduction was its $240 allocation of income from LTP. UTP allocated such $240 of income equally among its partners. In Year 4, UTP sold its interest in LTP to X for $1,140.

(ii) *Sale of specified partner's UTP interest.* C's section 741 loss recognized on the sale of its partnership interest to D in Year 2 is $100 (amount realized of $900 cash, plus $1,000 relief of liabilities, less $2,000 basis in UTP). D's initial adjusted basis in the UTP interest acquired from C in Year 2 is $1,900 (the cash paid for C's interest, $900, plus $1,000, D's share of UTP liabilities). D's interest in UTP's previously taxed capital is $1,000 ($900, the amount of cash D would receive if PRS liquidated immediately after the hypothetical transaction, decreased by $0, the amount of tax gain allocated to D from the hypothetical transaction, and increased by $100, the amount of tax loss that would be allocated to D from the hypothetical transaction). D's share of the adjusted basis to the partnership of the partnership's property is $2,000 ($1,000 share of previously taxed capital, plus $1,000 share of the partnership's liabilities). Therefore, the amount of the basis adjustment under section 743(b) to partnership property is negative $100 (the difference between $1,900 and $2,000). D's negative $100 section 743(b) adjustment is allocated among UTP's assets under section 755. Under § 1.755–1(b)(2), the amount of D's section 743(b) adjustment allocated to ordinary income property is equal to the total amount of income or loss that would be allocated to D from the sale of all ordinary income property in a hypothetical transaction. Solely for purposes of § 1.755–1(b), any UTP EBIE is treated as ordinary income property. Thus, D's negative $100 section 743(b) basis adjustment is allocated to UTP EBIE.

(iii) *Application of section 163(j) to UTP.* In Year 3, UTP was allocated excess taxable income from LTP. Thus, UTP applies the rules in § 1.163(j)–6(j)(5)(i). First, pursuant to § 1.163(j)–6(j)(5)(i)(A), UTP applies the rules in § 1.163(j)–6(g) to its UTP EBIE. Because UTP was allocated $240 of excess taxable income from LTP in Year 3, UTP treats $240 of its UTP EBIE as business interest expense paid or accrued in Year 3. Specifically, UTP treats $80 of each partner's share of UTP EBIE as business interest expense paid or accrued. Under these circumstances, UTP's method for determining which UTP EBIE is treated as business interest expense paid or accrued is reasonable. Second, pursuant to § 1.163(j)–6(j)(5)(i)(B), UTP allocates such business interest expense that was formerly UTP EBIE to its specified partner. Accordingly, A and B are each allocated $80 of business interest expense. Pursuant to § 1.163(j)–6(j)(6)(i), D is treated as the specified partner with respect to $100 of UTP EBIE (C's share of UTP EBIE prior to the sale). Further, pursuant to § 1.163(j)–6(j)(5)(i)(A), $80 of the UTP EBIE to which D is the specified partner was treated as business interest expense paid or accrued. Accordingly, D is allocated such $80 of business interest expense. After determining each partner's allocable share of section 163(j) items used in its own section 163(j) calculation, UTP determines each partner's allocable share of excess items pursuant to § 1.163(j)–6(f)(2).

TABLE 62 TO PARAGRAPH (o)(28)(iii)—UTP'S APPLICATION OF § 1.163(j)–6(f)(2)(II) IN YEAR 3

	A	B	D	Total
Allocable ATI	$80	$80	$80	$240
Allocable BII	0	0	0	0
Allocable BIE	80	80	80	240

TABLE 63 TO PARAGRAPH (o)(28)(iii)—UTP'S APPLICATION OF § 1.163(j)–6(f)(2)(xi) IN YEAR 3

	A	B	D	Total
Deductible BIE	$24	$24	$24	$72
EBIE allocated	56	56	56	168
ETI allocated	0	0	0	0
EBII allocated	0	0	0	0

(iv) *Treatment of business interest expense that was formerly UTP EBIE.* After determining each partner's share of deductible business interest expense and section 163(j) excess items, UTP takes into account any basis adjustments under section 734(b) and the partners take into account any basis adjustments under section 743(b) to business interest expense that was formerly UTP EBIE pursuant to § 1.163(j)–6(j)(5)(i)(C). None of the UTP EBIE treated as business interest expense paid or accrued in Year 3 was allocated a section 734(b) adjustment. Additionally, neither A's nor B's share of business interest expense that was formerly UTP EBIE was allocated a section 743(b) basis adjustment. Further, neither A nor B is a transferee specified partner, as defined in § 1.163(j)–6(j)(8)(i). Therefore, no special adjustments are required to A's or B's $24 of deductible business interest expense and $56 of excess business interest expense. At the end of Year 3, A and B each has an adjusted basis in UTP of $2,000 and each is the specified partner with respect to $20 of UTP EBIE. D's share of business interest expense that was formerly UTP EBIE was allocated a negative $80 section 743(b) adjustment. Pursuant to § 1.163(j)–6(j)(7)(ii), D recovers $24 of the negative section 743(b) adjustment, effectively eliminating the $24 deduction resulting from its $24 allocation of deductible business interest expense. Additionally, pursuant to § 1.163(j)–6(j)(7)(iii), the $56 basis decrease required under § 1.163(j)–6(h)(2) for D's allocation of excess business interest expense is reduced by the negative section 743(b) adjustment attributable to such excess business interest expense ($56). Consequently, D does not reduce the basis of its interest in UTP pursuant § 1.163(j)–6(h)(2) upon being allocated such excess business interest expense. As a result, D has $56 of excess business interest expense with a basis of $0. At the end of Year 3, D has an adjusted basis in UTP of $1,980 and is the specified partner with respect to $20 of UTP EBIE.

(v) *Application of anti-loss trafficking rules.* Although D is a transferee specified partner, as defined in § 1.163(j)–6(j)(8)(i), with respect to its $80 allocation of business interest expense from UTP, no special basis adjustments under § 1.163(j)–6(j)(8)(i) are required because all $80 of such business interest expense was already fully offset by negative section 743(b) adjustment. However, if such $80 of business interest expense was not fully offset by a negative section 743(b) adjustment, D's status as transferee specified partner would cause such business interest expense to be fully offset by a negative section 743(b) adjustment pursuant to § 1.163(j)–6(j)(8)(i), regardless of whether a section 754 election was not in effect with respect to the sale of UTP from C to D. Such negative section 743(b) adjustment would be taken into account in the manner described in § 1.163(j)–6(j)(7).

Table 64 to paragraph (o)(28)(v)--UTP EBIE - End of Year 3

	Specified partner				Partnership	
	Basis	743(b)	Carryforward		Basis	Carryforward
A	$20		$20	UTP	$60	$60
B	20		20			
D	20	(20)	20			
Total	60		60	Total	60	60

BILLING CODE 4830–01–C

(vi) *Sale of LTP interest.* In Year 4, UTP disposed of its interest in LTP. Thus, UTP applies the rules in § 1.163(j)–6(j)(5)(ii). First, pursuant to § 1.163(j)–6(j)(5)(ii)(A), UTP applies the rules in § 1.163(j)–6(h)(3) to its UTP EBIE. Because UTP disposed of all of its LTP interest, UTP reduces its UTP EBIE by $60. Second, pursuant to § 1.163(j)–6(j)(5)(ii)(B), UTP increases the adjusted basis of its LTP interest by $60 (the total amount of UTP EBIE that was reduced pursuant to § 1.163(j)–6(j)(5)(ii)(A)). Third, pursuant to § 1.163(j)–6(j)(5)(ii)(C), this $60 increase is reduced by $20 to take into account the negative $20 section 743(b) adjustment allocated in Year 2 to the $20 of UTP EBIE reduced pursuant to § 1.163(j)–6(j)(5)(ii)(A). As a result, UTP's adjusted basis in its LTP interest immediately prior to the sale to X is $4,180 ($3,900 at the end of Year 1, plus $240 allocation of income from LTP in Year 3, plus $40 increase immediately prior to the sale attributable to the basis of UTP EBIE). UTP's section 741 loss recognized on the sale is $40 (amount realized of $1,140 cash, plus $3,000 relief of liabilities, less $4,180 adjusted basis in LTP). No deduction under section 163(j) is allowed to the UTP or X under chapter 1 of subtitle A of the Code for any of such UTP EBIE reduced under § 1.163(j)–6(h)(3). Pursuant to § 1.163(j)–6(h)(5), LTP has a § 1.163(j)–6(h)(5) basis adjustment of $40. LTP does not own property of the character required to be adjusted. Thus, under § 1.755–1(c)(4), the adjustment is made when LTP subsequently acquires capital gain property to which an adjustment can be made. Regardless of whether a $20 negative section 743(b) adjustment was allocated to the $20 of UTP EBIE reduced pursuant to § 1.163(j)–6(j)(5)(ii)(A), UTP would only increase its basis in LTP pursuant to § 1.163(j)–6(j)(5)(ii) by $40. The specified partner of such $20 of UTP EBIE is a transferee specified partner. Therefore, it is treated as disallowed UTP EBIE under § 1.163(j)–6(j)(8)(iii) of this section. As a result, UTP would treat such $20 of UTP EBIE for purposes of § 1.163(j)–6(j)(5)(ii) as though it were allocated a negative section 734(b) adjustment of $20.

(29) *Example 29*—(i) *Facts.* The facts are the same as *Example 27* in paragraph (o)(27) of this section. In Year 2, while a section 754 election was in effect, UTP distributed $900 to C in complete liquidation of C's partnership interest. In Year 3, LTP's only item of income, gain, loss, or deduction was $240 of income, which it allocated to UTP. Such $240 of income resulted in $240 of excess taxable income, which LTP allocated to UTP pursuant to § 1.163(j)–f(2). Further, in Year 3, UTP's only item of income, gain, loss, or deduction was its $240 allocation of income from LTP. UTP allocated such $240 of income equally among its partners. In Year 4, UTP sold its interest in LTP to X for $1,140.

(ii) *Liquidating distribution to specified partner.* C's section 731(a)(2) loss recognized on the disposition of its partnership interest is $100 ($2,000 basis in UTP, less amount realized of $900 cash, plus $1,000 relief of liabilities). Because the election under section 754 is in effect, UTP has a section 734(b) decrease to the basis of its assets of $100 (the amount of section 731(a)(2) loss recognized by C). Under section 755, the entire negative $100 section 734(b) adjustment is allocated to UTP EBIE. Following the liquidation of C, UTP's basis in its assets ($900 of cash, plus $3,900 interest in LTP, plus $200 basis of UTP EBIE) equals the aggregate outside basis of partners A and B ($5,000).

(iii) *Application of section 163(j) to UTP.* In Year 3, UTP was allocated excess taxable income from LTP. Thus, UTP applies the rules in § 1.163(j)–6(j)(5)(i). First, pursuant to § 1.163(j)–6(j)(5)(i)(A), UTP applies the rules in § 1.163(j)–6(g) to its UTP EBIE. Because UTP was allocated $240 of excess taxable income from LTP in Year 3, UTP treats $240 of its UTP EBIE as business interest expense paid or accrued in Year 3. Specifically, UTP treats $100 of A's share, $100 of B's share, and $40 of the UTP EBIE that does not have a specified partner as business interest expense paid or accrued. Under these circumstances, UTP's method for determining which UTP EBIE is treated as business interest expense paid or accrued is reasonable. Second, pursuant to § 1.163(j)–6(j)(5)(i)(B), UTP allocates such business interest expense that was formerly UTP EBIE to its specified partner. Accordingly, each of A and B is allocated $100 of business interest expense.

(iv) *Application of anti-loss trafficking rules.* Following the liquidating distribution to C in Year 2 (a transaction described in § 1.163(j)–6(j)(6)(ii)(A)), the $100 of UTP EBIE to which C was formerly the specified partner does not have a specified partner. Thus, UTP does not allocate any deductible business interest expense or excess business interest expense that was formerly C's share of UTP EBIE to A or B. Rather, pursuant to § 1.163(j)–6(j)(8)(ii), UTP treats such business interest expense as the allocable business interest expense, as defined in § 1.163(j)–6(f)(2)(ii), of a § 1.163(j)–6(j)(8)(ii) account for purposes of applying § 1.163(j)–6(f)(2). After determining each partner's allocable share of section 163(j) items used in its own section 163(j) calculation, UTP determines each partner's allocable share of excess items pursuant to § 1.163(j)–6(f)(2).

TABLE 65 TO PARAGRAPH (o)(29)(iv)—UTP'S APPLICATION OF § 1.163(j)–6(f)(2)(ii) IN YEAR 3

	A	B	§ 1.163(j)–6(j)(8)(ii) account	Total
Allocable ATI	$120	$120	$0	$240
Allocable BII	0	0	0	0
Allocable BIE	100	100	40	240

TABLE 65 TO PARAGRAPH (o)(29)(iv)—UTP'S APPLICATION OF § 1.163(j)–6(f)(2)(xi) IN YEAR 3

	A	B	§ 1.163(j)–6(j)(8)(ii) account	Total
Deductible BIE	$36	$36	$0	$72
EBIE allocated	64	64	40	168
ETI allocated	0	0	0	0
EBII allocated	0	0	0	0

(v) *Treatment of business interest expense that was formerly UTP EBIE.* After determining each partner's share of deductible business interest expense and section 163(j) excess items, UTP takes into account any basis adjustments under section 734(b) and the partners take into account any basis under section 743(b) to business interest expense that was formerly UTP EBIE pursuant to § 1.163(j)–6(j)(5)(i)(C). None of the UTP EBIE treated as business interest expense paid or accrued in Year 3 was allocated a section 743(b) adjustment. Further, neither A nor B is a transferee specified partner, as defined in § 1.163(j)–6(j)(8)(i). Therefore, no special basis adjustments are required under § 1.163(j)–6(j)(8)(i). The $40 of excess business interest expense allocated to the § 1.163(j)–6(j)(8)(ii) account is not allocated to A or B and is not carried over by UTP. Additionally, UTP does not have a § 1.163(j)–6(h)(5) basis adjustment because such $40 of business interest expense does not have any basis. Thus, A and B each has $36 of deductible business interest expense and $64 of excess business interest expense. At the end of Year 3, A and B each has an adjusted basis in UTP of $2,520 ($2,500 outside basis, plus $120 allocation of income, less $36 of deductible business interest expense, less $64 of excess business interest expense), and neither A nor B is a specified partner with respect to any of UTP's $60 of UTP EBIE.

TABLE 66 TO PARAGRAPH (o)(29)(v)—UTP EBIE—END OF YEAR 3

	Specified partner			Partnership	
	Basis	Carryforward		Basis	Carryforward
A	$0	$0	UTP	$0	$60
B	0	0			
§ 1.163(j)–6(j)(8)(ii) account	0	60			
Total	0	60	Total	0	60

(vi) *Sale of LTP interest.* In Year 4, UTP disposed of its interest in LTP. Thus, UTP applies the rules in § 1.163(j)–6(j)(5)(ii). First, pursuant to § 1.163(j)–6(j)(5)(ii)(A), UTP applies the rules in § 1.163(j)–6(h)(3) to its UTP EBIE. Because UTP disposed of all of its LTP interest, UTP reduces its UTP EBIE by $60. Second, pursuant to § 1.163(j)–6(j)(5)(ii)(B), UTP increases the adjusted basis of its LTP interest by $60 (the total amount of UTP EBIE that was reduced pursuant to § 1.163(j)–6(j)(5)(ii)(A)). Third, pursuant to § 1.163(j)–6(j)(5)(ii)(C), this $60 increase is reduced by $60 to take into account the negative $60 section 734(b) adjustment allocated in Year 2 to the $60 of UTP EBIE reduced pursuant to § 1.163(j)–6(j)(5)(ii)(A). As a result, UTP's adjusted basis in its LTP interest immediately prior to the sale to X is $4,140 ($3,900 at the end of Year 1, plus $240 allocation of income from LTP in Year 3). UTP has no section 741 gain or loss recognized on the sale (amount realized of $1,140 cash, plus $3,000 relief of liabilities, equals $4,140 adjusted basis in LTP). No deduction under section 163(j) is allowed to the UTP or X under chapter 1 of subtitle A of the Code for any of such UTP EBIE reduced under § 1.163(j)–6(h)(3). Regardless of whether the $60 of UTP EBIE's basis was reduced by a $60 negative section 734(b) adjustment, UTP would not increase its basis in LTP pursuant to § 1.163(j)–6(j)(5)(ii) of this section as a result of the sale to X. The $60 of UTP EBIE does not have a specified partner. Therefore, it is treated as disallowed UTP EBIE under § 1.163(j)–6(j)(8)(iii) of this section. As a result, UTP would treat such $60 of UTP EBIE for purposes of § 1.163(j)–6(j)(5)(ii) as though it were allocated a negative section 734(b) adjustment of $60.

(30) *Example 30*—(i) X, Y and Z are partners in partnership PRS, PRS and A are partners in UTP, and UTP is a partner in LTP. LTP allocates $15 of excess business interest expense to UTP. Pursuant to § 1.163(j)–6(j)(2), UTP reduces its section 704(b) capital account (capital account) in LTP by $15, A reduces its capital account in UTP by $5, PRS reduces its capital account in UTP by $10, X reduces its capital account in PRS by $4, and Y reduces its capital account in PRS by $6. Thus, A, PRS, X, and Y are the specified partner with respect to $5, $10, $4, and $6 of UTP EBIE, respectively.

(ii) Assume the same facts in (i) except that PRS distributed cash to Y in complete liquidation of Y's interest in PRS. As a result, pursuant to § 1.163(j)–6(j)(6)(ii)(A), Y's share of UTP EBIE would not have a specified partner. In a subsequent year, if LTP allocated UTP $15 of excess business interest income, UTP would apply the rules in § 1.163(j)–6(j)(5)(i) and allocate $5 of deductible business interest expense to A and $10 of deductible business interest expense to PRS (the specified partners of such deductible business interest expense). Because the $10 of deductible business interest expense allocated to PRS was formerly UTP EBIE, PRS must also apply the rules in § 1.163(j)–6(j)(5)(i). PRS would allocate $4 of such deductible business interest expense to X (the specified partner of such $4). However, as a result of the liquidating distribution to Y, the remaining $6 of deductible business interest expense does not have a specified partner. Thus, pursuant to § 1.163(j)–6(j)(8)(ii), PRS would make a § 1.163(j)–6(h)(5) basis adjustment to its property in the amount of the adjusted basis (if any) of such $6 of deductible business interest expense.

(iii) Assume the same facts as in (i) except that PRS distributed its interest in UTP to Y in complete liquidation of Y's interest in PRS. Pursuant to § 1.163(j)–6(j)(6)(ii)(A), Y is the specified partner with respect to UTP EBIE of UTP only to the same extent it was prior to the distribution ($6). As a result, the UTP EBIE of UTP in excess of the UTP EBIE for which Y is the specified partner (X's $4) does not have a specified partner. If in a subsequent year LTP allocated UTP $15 of excess business interest income, UTP would apply the rules in § 1.163(j)–6(j)(5)(i) and allocate $5 of deductible business interest expense to A and $6 of deductible business interest expense to Y. Regarding the $4 of DBIE without a specified partner, UTP would apply the rules in § 1.163(j)–6(j)(8)(ii) and make a § 1.163(j)–6(h)(5) basis adjustment to its property in the amount of the adjusted basis (if any) of such $4 of deductible business interest expense.

(iv) Assume the same facts as in (i) except that A contributes its UTP interest to a new partnership, PRS2. Following the contribution, PRS2 is treated as the specified partner with respect to the portion of the UTP EBIE attributable to the contributed interest ($5). Further, A continues to be the specified partner with respect to the UTP EBIE attributable to the contributed interest ($5). If in a subsequent year LTP allocated UTP $15 of excess business interest income, UTP would apply the rules in § 1.163(j)–6(j)(5)(i) and allocate $5 of deductible business interest expense to PRS2, and PRS2 would allocate such $5 of deductible business interest expense to A.

(31) *Example 31*—(i) *Facts.* In Year 1, A, B, and C formed partnership PRS by each contributing $1,000 cash. PRS borrowed $900, causing each partner's basis in PRS to increase by $300 under section 752. Also in Year 1, PRS purchased Capital Asset X for $200. In Year 2, PRS pays $300 of business interest expense, all of which is disallowed and treated as excess business interest expense. PRS allocated the $300 of excess business interest expense to its partners, $100 each. Pursuant to § 1.163(j)–6(h)(2), each partner reduced its adjusted basis in its PRS interest by its $100 allocation of excess business interest expense to $1,200. In Year 3, when the fair market value of Capital Asset X is $3,200 and no partner's basis in PRS has changed, PRS distributed $1,900 to C in complete liquidation of C's partnership interest in a distribution to which section 737 does not apply. PRS had a section 754 election in effect in Year 3.

(ii) *Consequences to selling partner.* Pursuant to § 1.163(j)–6(h)(3), C increases the adjusted basis of its interest in PRS by $100 immediately before the disposition. Thus, C's section 731(a)(1) gain recognized on the disposition of its interest in PRS is $900 (($1,900 cash + $300 relief of liabilities) − ($1,200 outside basis + $100 excess business interest expense add-back)).

(iii) *Partnership basis.* Pursuant to § 1.163(j)–6(h)(5), PRS has a $100 increase to the basis of its assets attributable to a § 1.163(j)–6(h)(5) basis increase immediately before C's disposition. Under section 755, the entire $100 adjustment is allocated to Capital Asset X. Pursuant to § 1.163(j)–6(h)(5), regardless of whether Capital Asset X is a depreciable or amortizable asset, none of the $100 of § 1.163(j)–6(h)(5) basis increase allocated to Capital Asset X is depreciable or amortizable. Additionally, PRS has a section 734(b) increase to the basis of its assets of $900 (the amount of section 731(a)(1) gain recognized by C). Under section 755, the entire $900 adjustment is allocated to Capital Asset X. As a result, PRS's basis in Capital Asset X is $1,200 ($200 + $100 § 1.163(j)–6(h)(5) basis increase + $900 section 734(b) adjustment). Following the liquidation of C, PRS's basis in its assets ($600 cash + $1,200

Capital Asset X) equals the aggregate adjusted basis of partners A and B in PRS ($1,800).

(32) *Example 32*—(i) *Facts.* X and Y are equal partners in partnership UTP, which is a partner in partnership LTP. In Year 1, LTP allocated $100 of income to UTP. LTP, in computing its limit under section 163(j), treated such $100 of income as ATI. Accordingly, in LTP's § 1.163(j)–6(f)(2)(ii) calculation, UTP's allocable ATI was $100. Additionally, pursuant to § 1.163(j)–6(f)(2), LTP allocated $50 of excess taxable income to UTP. UTP's only items of income, gain, loss or deduction in Year 1, other than the $100 allocation from LTP, were $100 of trade or business income and $30 of business interest expense. UTP allocated its $200 of income and gain items $100 to X and $100 to Y, and all $30 of its business interest expense to X.

(ii) *Partnership-level.* Pursuant to § 1.163(j)–6(e)(1), UTP, in computing its limit under section 163(j), does not increase or decrease any of its section 163(j) items by any of LTP's section 163(j) items. Pursuant to § 1.163(j)–1(b)(1), UTP determines it has $150 of ATI in Year 1 ($100 of ATI resulting from its $100 of trade or business income, plus $50 of excess taxable income from LTP). UTP's section 163(j) limit is 30 percent of its ATI, or $45 ($150 × 30 percent). Thus, UTP has $50 of excess taxable income and $30 of deductible business interest expense.

(iii) *Partner-level allocations.* UTP allocates its $50 of excess taxable income and $30 of deductible business interest expense to X and Y pursuant to § 1.163(j)–6(f)(2). To determine each partner's share of the $50 of excess taxable income, UTP must determine each partner's allocable ATI and allocable business interest expense (as defined in § 1.163(j)–6(f)(2)(ii)). X's allocable business interest expense is $30 and Y's allocable business interest expense is $0. Because UTP is an upper-tier partnership, UTP determines the allocable ATI of each of its partners in the manner provided in § 1.163(j)–6(j)(9). Specifically, because UTP's net amount of tax items that comprise (or have ever comprised) ATI is $200 ($100 of trade or business income that UTP treated as ATI, plus UTP's $100 allocation from LTP of items that comprised ATI to LTP), which is greater than its $150 of ATI, UTP must apply the rules in § 1.163(j)–6(j)(9)(ii)(A) to determine each of its partner's allocable ATI. UTP determines X's allocable ATI is $75 (X's $100 distributive share of gross income and gain items that comprise (or have ever comprised) ATI, multiplied by ($150/$200), the ratio of UTP's ATI to its tax items that comprise (or have ever comprised) ATI). In a similar manner, UTP determines Y's allocable ATI also equals $75. Therefore, pursuant to § 1.163(j)–6(f)(2), X is allocated $30 of deductible business interest expense and Y is allocated $50 of excess taxable income.

(33) *Example 33*—(i) *Facts.* X and Y are equal partners in partnership UTP, which is a partner in partnership LTP. Further, X and Y share the residual profits of UTP equally. In Year 1, LTP allocated ($99) of income to UTP. LTP, in computing its limit under section 163(j), treated such ($99) of income as ATI. Accordingly, in LTP's § 1.163(j)–6(f)(2)(ii) calculation, UTP's allocable ATI was ($99). UTP's only items of income, gain, loss or deduction in Year 1, other than the ($99) allocation from LTP, were $100 of trade or business income and $15 of business interest expense. UTP allocated $1 of income to X and $0 to Y pursuant to section 704(c), the ($99) of loss and remaining $99 of income equally pursuant to section 704(b), and all $15 of its business interest expense to X.

(ii) *Partnership-level.* Pursuant to § 1.163(j)–6(e)(1), UTP, in computing its limit under section 163(j), does not increase or decrease any of its section 163(j) items by any of LTP's section 163(j) items. Pursuant to § 1.163(j)–1(b)(1), UTP determines it has $100 of ATI in Year 1 ($100 of ATI resulting from its $100 of trade or business income). UTP's section 163(j) limit is 30 percent of its ATI, or $30 ($100 × 30 percent). Thus, UTP has $50 of excess taxable income and $15 of deductible business interest expense.

(iii) *Partner-level allocations.* UTP allocates its $50 of excess taxable income and $15 of deductible business interest expense to X and Y pursuant to § 1.163(j)–6(f)(2). To determine each partner's share of the $50 of excess taxable income, UTP must determine each partner's allocable ATI and allocable business interest expense (as defined in § 1.163(j)–6(f)(2)(ii)). X's allocable business interest expense is $15 and Y's allocable business interest expense is $0. Because UTP is an upper-tier partnership, UTP determines the allocable ATI of each of its partners in the manner provided in § 1.163(j)–6(j)(9). Specifically, because UTP's net amount of tax items that comprise (or have ever comprised) ATI is $1 ($100 of trade or business income that UTP treated as ATI, plus UTP's ($99) allocation from LTP of items that comprised ATI to LTP), which is less than its $100 of ATI, UTP must apply the rules in § 1.163(j)–6(j)(9)(ii)(B) to determine each of its partner's allocable ATI. UTP determines X's allocable ATI is $50.50 ($1, which is the excess of X's distributive share of gross income and gain items that comprise (or have ever comprised) ATI, $100, over X's distributive share of gross loss and deduction items that comprise (or have ever comprised) ATI, $99; increased by $49.50, which is the product of 50 percent, X's residual profit sharing percentage, and $99, UTP's $100 of ATI minus $1, which is the aggregate of all the partners' amounts determined under § 1.163(j)–6(j)(9)(ii)(B)(*1*)). In a similar manner, UTP determines Y's allocable ATI is $49.50. Therefore, pursuant to § 1.163(j)–6(f)(2), X is allocated $15 of deductible business interest expense and $0.50 of excess taxable income, and Y is allocated $49.50 of excess taxable income.

(34) *Example 34*—(i) *Facts.* X and Y are equal partners in partnership PRS. Further, X and Y share the profits of PRS equally. In 2019, PRS had ATI of $100. In 2020, PRS's only items of income, gain, loss or deduction was $1 of trade or business income, which it allocated to X pursuant to section 704(c).

(ii) *Partnership-level.* In 2020, PRS makes the election described in § 1.163(j)–6(d)(5) to use its 2019 ATI in 2020. As a result, PRS has $100 of ATI in 2020. PRS does not have any business interest expense. Therefore, PRS has $100 of excess taxable income in 2020.

(iii) *Partner-level allocations.* PRS allocates its $100 of excess taxable income to X and Y pursuant to § 1.163(j)–6(f)(2). To determine each partner's share of the $100 of excess taxable income, PRS must determine each partner's allocable ATI (as defined in § 1.163(j)–6(f)(2)(ii)). Because PRS made the election described in § 1.163(j)–6(d)(5), PRS must determine the allocable ATI of each of its partners pursuant to paragraph (j)(9) of this section in the same manner as an upper-tier partnership. Specifically, because PRS's amount of tax items that comprise ATI before the election is $1, which is less than its $100 of ATI following the election, PRS must apply the rules in § 1.163(j)–6(j)(9)(ii)(B) to determine each of its partner's allocable ATI. PRS determines X's allocable ATI is $50.50 ($1, which is the excess of X's distributive share of gross income and gain items that would have comprised ATI had PRS not made the election, $1, over X's distributive share of gross loss and deduction items that would have comprised ATI had PRS not made the election, $0; increased by $49.50, which is the product of 50%, X's residual profit share, and $99, PRS's $100 of ATI minus $1, the aggregate of all the partners' amounts determined under § 1.163(j)–6(j)(9)(ii)(B)(*1*)). In a similar manner, PRS determines Y's allocable ATI is $49.50. Therefore, pursuant to § 1.163(j)–6(f)(2), X is allocated $50.50 of excess taxable income, and Y is allocated $49.50 of excess taxable income.

(35) *Example 35*—(i) *Facts.* X, a partner in partnership PRS, was allocated $20 of excess business interest expense from PRS in 2018 and $10 of excess business interest expense from PRS in 2019. In 2020, PRS allocated $16 of excess taxable income to X.

(ii) *Analysis.* X treats 50 percent of its $10 of excess business interest expense allocated from PRS in 2019 as § 1.163(j)–6(g)(4) business interest expense. Thus, $5 of § 1.163(j)–6(g)(4) business interest expense is treated as paid or accrued by X in 2020 and is not subject to the section 163(j) limitation at X's level. Because X was allocated $16 of excess taxable income from PRS in 2020, X treats $16 of its $25 of excess business interest expense as business interest expense paid or accrued pursuant to § 1.163(j)–6(g)(2). X, in computing its limit under section 163(j) in 2020, has $16 of ATI (as a result of its allocation of $16 of excess taxable income from PRS), $0 of business interest income, and $16 of business interest expense ($16 of excess business interest expense treated as paid or accrued in 2020). Pursuant to § 1.163(j)–2(b)(2)(i), X's section 163(j) limit in 2020 is $8 ($16 × 50 percent). Thus, X has $8 of business interest expense that is deductible under section 163(j). The $8 of X's business interest expense not allowed as a deduction ($16 business interest expense subject to section 163(j), less $8 section 163(j) limit) is treated as business interest expense paid or accrued by X in 2021. At the end of 2020, X has $9 of excess business interest expense from PRS ($20 from 2018, plus $10 from 2019, less $5 treated as paid or accrued pursuant to § 1.163(j)–6(g)(4), less $16 treated as paid or accrued pursuant to § 1.163(j)–6(g)(2)).

(36) *Example 36*—(i) *Facts.* X is a partner in partnership PRS. At the beginning of 2018, X's outside basis in PRS was $100. X was

allocated $20 of excess business interest expense from PRS in 2018 and $10 of excess business interest expense from PRS in 2019. X sold its PRS interest in 2019 for $70.

(ii) *Analysis.* X treats 50 percent of its $10 of excess business interest expense allocated from PRS in 2019 as § 1.163(j)–6(g)(4) business interest expense. Thus, $5 of § 1.163(j)–6(g)(4) business interest expense is treated as paid or accrued by X in 2020 and is not subject to the section 163(j) limitation at X's level. Pursuant to paragraph (h)(3) of this section, immediately before the disposition, X increases the basis of its PRS interest to $95. Thus, X has a $25 section 741 loss recognized on the sale ($70–$95).

(p) *Applicability dates*—(1) *In general.*

* * *

(2) *Paragraphs (c)(1) and (2), (d)(3) through (5), (e)(5) and (6), (f)(1)(iii), (g)(4), (h)(4) and (5), (j), (l)(4)(iv), (n), and (o)(24) through (29).* Paragraphs (c)(1) and (2), (d)(3) through (5), (e)(5) and (6), (f)(1)(iii), (g)(4), (h)(4) and (5), (j), (l)(4)(iv), (n), and (o)(24) through (29) of this section apply to taxable years beginning on or after [DATE 60 DAYS AFTER DATE OF PUBLICATION OF THE FINAL RULE IN THE **FEDERAL REGISTER**]. However, taxpayers and their related parties, within the meaning of sections 267(b) and 707(b)(1), may choose to apply the rules of those paragraphs to a taxable year beginning after December 31, 2017, and before [DATE 60 DAYS AFTER DATE OF PUBLICATION OF THE FINAL RULE IN THE **FEDERAL REGISTER**], provided that they also apply the provisions of § 1.163(j)–6 in the section 163(j) regulations, and consistently apply all of the rules of § 1.163(j)–6 in the section 163(j) regulations to that taxable year and to each subsequent taxable year.

* * * * *

■ **Par. 8.** As added in a final rule elsewhere in this issue of the **Federal Register**, effective November 13, 2020, § 1.163(j)–7 is amended by revising paragraph (a), adding paragraphs (c) through (f), (g)(3) and (4), (h), and (j) through (l), and revising paragraph (m) to read as follows:

§ 1.163(j)–7 Application of the section 163(j) limitation to foreign corporations and United States shareholders.

(a) *Overview.* This section provides rules for the application of section 163(j) to relevant foreign corporations and United States shareholders of relevant foreign corporations. Paragraph (b) of this section provides the general rule regarding the application of section 163(j) to a relevant foreign corporation. Paragraph (c) of this section provides rules for applying section 163(j) to CFC group members of a CFC group. Paragraph (d) of this section provides rules for determining a specified group and specified group members. Paragraph (e) of this section provides rules and procedures for treating a specified group member as a CFC group member and for determining a CFC group. Paragraph (f) of this section provides rules regarding the treatment of a CFC group member that has ECI. Paragraph (g) of this section provides rules concerning the computation of ATI of an applicable CFC. Paragraph (h) of this section provides a safe-harbor that exempts certain stand-alone applicable CFCs and CFC groups from the application of section 163(j) for a taxable year. Paragraph (i) of this section is reserved. Paragraph (j) of this section provides rules concerning the computation of ATI of a United States shareholder of an applicable CFC. Paragraph (k) of this section provides definitions that apply for purposes of this section. Paragraph (l) of this section provides examples illustrating the application of this section.

* * * * *

(c) *Application of section 163(j) to CFC group members of a CFC group*—(1) *Scope.* This paragraph (c) provides rules for applying section 163(j) to a CFC group member. Paragraph (c)(2) of this section provides rules for computing a single section 163(j) limitation for a specified period of a CFC group. Paragraph (c)(3) of this section provides rules for allocating a CFC group's section 163(j) limitation to CFC group members for specified taxable years. Paragraph (c)(4) of this section provides currency translation rules. Paragraph (c)(5) of this section provides special rules for specified periods beginning in 2019 or 2020.

(2) *Calculation of section 163(j) limitation for a CFC group for a specified period*—(i) *In general.* A single section 163(j) limitation is computed for a specified period of a CFC group. For purposes of applying section 163(j) and the section 163(j) regulations, the current-year business interest expense, disallowed business interest expense carryforwards, business interest income, floor plan financing interest expense, and ATI of a CFC group for a specified period equal the sums of each CFC group member's respective amounts for its specified taxable year with respect to the specified period. A CFC group member's current-year business interest expense, business interest income, floor plan financing interest expense, and ATI for a specified taxable year are generally determined on a separate-company basis.

(ii) *Certain transactions between CFC group members disregarded.* Any transaction between CFC group members of a CFC group that is entered into with a principal purpose of affecting a CFC group or a CFC group member's section 163(j) limitation by increasing or decreasing a CFC group or a CFC group member's ATI for a specified taxable year is disregarded for purposes of applying section 163(j) and the section 163(j) regulations.

(iii) *CFC group treated as a single C corporation for purposes of allocating items to an excepted trade or business.* For purposes of allocating items to an excepted trade or business under § 1.163(j)–10, all CFC group members of a CFC group are treated as a single C corporation.

(iv) *CFC group treated as a single taxpayer for purposes of determining interest.* For purposes of determining whether amounts, other than amounts in respect of transactions between CFC group members of a CFC group, are treated as interest within the meaning of § 1.163(j)–1(b)(22), all CFC group members of a CFC group are treated as a single taxpayer.

(3) *Deduction of business interest expense*—(i) *CFC group business interest expense*—(A) *In general.* The extent to which a CFC group member's current-year business interest expense and disallowed business interest expense carryforwards for a specified taxable year that ends with or within a specified period may be deducted under section 163(j) is determined under the rules and principles of § 1.163(j)–5(a)(2) and (b)(3)(ii), subject to the modifications described in paragraph (c)(3)(i)(B) of this section.

(B) *Modifications to relevant terms.* For purposes of paragraph (c)(3)(i)(A) of this section, the rules and principles of § 1.163(j)–5(b)(3)(ii) are applied by—

(*1*) Replacing "§ 1.163(j)–4(d)(2)" in § 1.163(j)–5(a)(2)(ii) with "§ 1.163(j)–7(c)(2)(i)";

(*2*) Replacing the term "allocable share of the consolidated group's remaining section 163(j) limitation" with "allocable share of the CFC group's remaining section 163(j) limitation";

(*3*) Replacing the terms "consolidated group" and "group" with "CFC group";

(*4*) Replacing the term "consolidated group's remaining section 163(j) limitation" with "CFC group's remaining section 163(j) limitation";

(*5*) Replacing the term "consolidated return year" with "specified period";

(*6*) Replacing the term "current year" or "current-year" with "current specified period" or "specified taxable year with respect to the current specified period," as the context requires;

(*7*) Replacing the term ''member'' with ''CFC group member''; and

(*8*) Replacing the term ''taxable year'' with ''specified taxable year with respect to a specified period.''

(ii) *Carryforwards treated as attributable to the same taxable year.* For purposes of applying the principles of § 1.163(j)–5(b)(3)(ii), as required under paragraph (c)(3)(i) of this section, CFC group members' disallowed business interest expense carryforwards that arose in specified taxable years with respect to the same specified period are treated as disallowed business interest expense carryforwards from taxable years ending on the same date and are deducted on a pro rata basis, under the principles of § 1.163(j)–5(b)(3)(ii)(C)(*3*), pursuant to paragraph (c)(3)(i) of this section.

(iii) *Multiple specified taxable years of a CFC group member with respect to a specified period.* If a CFC group member has more than one specified taxable year (each year, an *applicable specified taxable year*) with respect to a single specified period of a CFC group, then all such applicable specified taxable years are taken into account for purposes of applying the principles of § 1.163(j)–5(b)(3)(ii), as required under paragraph (c)(3)(i) of this section, with respect to the specified period. The portion of the section 163(j) limitation allocable to disallowed business interest expense carryforwards of the CFC group member for its applicable specified taxable years is prorated among the applicable specified taxable years in proportion to the number of days in each applicable specified taxable year.

(iv) *Limitation on pre-group disallowed business interest expense carryforward*—(A) *General rule*—(*1*) *CFC group member pre-group disallowed business interest expense carryforward.* This paragraph (c)(3)(iv) applies to pre-group disallowed business interest expense carryforwards of a CFC group member. The amount of the pre-group disallowed business interest expense carryforwards described in the preceding sentence that are included in any CFC group member's business interest expense deduction for any specified taxable year under this paragraph (c)(3) may not exceed the aggregate section 163(j) limitation for all specified periods of the CFC group, determined by reference only to the CFC group member's items of income, gain, deduction, and loss, and reduced (including below zero) by the CFC group member's business interest expense (including disallowed business interest expense carryforwards) taken into account as a deduction by the CFC group member in all specified taxable years in which the CFC group member has continuously been a CFC group member of the CFC group (*cumulative section 163(j) pre-group carryforward limitation*).

(*2*) *Subgrouping.* In the case of a CFC group member with a pre-group disallowed business interest expense carryforward (the *loss member*) that joined the CFC group (the *current group*) for a specified taxable year with respect to a specified period (the *relevant period*), if the loss member was a CFC group member of a different CFC group (the *former group*) immediately prior to joining the current group, a pre-group subgroup is composed of the loss member and each other CFC group member that became a CFC group member of the current group for a specified taxable year with respect to the relevant period and was a member of the former group immediately prior to joining the current group. For purposes of this paragraph (c), the rules and principles of § 1.163(j)–5(d)(1)(B) apply to a pre-group subgroup as if the pre-group subgroup were a SRLY subgroup.

(B) *Deduction of pre-group disallowed business interest expense carryforwards.* Notwithstanding paragraph (c)(3)(iv)(A)(*1*) of this section, pre-group disallowed business interest expense carryforwards are available for deduction by a CFC group member in its specified taxable year only to the extent the CFC group has remaining section 163(j) limitation for the specified period after the deduction of current-year business interest expense and disallowed business interest expense carryforwards from earlier taxable years that are permitted to be deducted in specified taxable years of CFC group members with respect to the specified period. See paragraph (c)(3)(i) of this section and § 1.163(j)–5(b)(3)(ii)(A). Pre-group disallowed business interest expense carryforwards are deducted on a pro rata basis (under the principles of paragraph (c)(3)(i) of this section and § 1.163(j)–5(b)(3)(ii)(C)(*3*)) with other disallowed business interest expense carryforwards from taxable years ending on the same date.

(4) *Currency translation.* For purposes of applying this paragraph (c), items of a CFC group member are translated into a single currency for the CFC group and back to the functional currency of the CFC group member using the average rate for the CFC group member's specified taxable year, using any reasonable method, consistently applied. The single currency for the CFC group may be the U.S. dollar or the functional currency of a plurality of the CFC group members.

(5) *Special rule for specified periods beginning in 2019 or 2020*—(i) *50 percent ATI limitation applies to a specified period of a CFC group.* In the case of a CFC group, § 1.163(j)–2(b)(2) (including the election under § 1.163(j)–2(b)(2)(ii)) applies to a specified period of the CFC group beginning in 2019 or 2020, rather than to a specified taxable year of a CFC group member. An election under § 1.163(j)–2(b)(2)(ii) for a specified period of a CFC group is not effective unless made by each designated U.S. person. Except as otherwise provided in this paragraph (c)(5)(i), the election is made in accordance with Revenue Procedure 2020–22, 2020–18 I.R.B. 745. For purposes of applying § 1.964–1(c), the election is treated as if made for each CFC group member.

(ii) *Election to use 2019 ATI applies to a specified period of a CFC group*—(A) *In general.* In the case of a CFC group, for purposes of applying paragraph (c)(2) of this section, an election under § 1.163(j)–2(b)(3)(i) is made for a specified period of a CFC group beginning in 2020 and applies to the specified taxable years of each CFC group member with respect to such specified period, taking into account the application of paragraph (c)(5)(ii)(B) of this section. The election under § 1.163(j)–2(b)(3)(i) does not apply to any specified taxable year of a CFC group member other than those described in the preceding sentence. An election under § 1.163(j)–2(b)(3)(i) for a specified period of a CFC group is not effective unless made by each designated U.S. person. Except as otherwise provided in this paragraph (c)(5)(ii)(A), the election is made in accordance with Revenue Procedure 2020–22, 2020–18 I.R.B. 745. For purposes of applying § 1.964–1(c), the election is treated as if made for each CFC group member.

(B) *Specified taxable years that do not begin in 2020.* If a specified taxable year of a CFC group member with respect to the specified period described in paragraph (c)(5)(ii)(A) of this section begins in 2019, then, for purposes of applying paragraph (c)(2) of this section, § 1.163(j)–2(b)(3) is applied to such specified taxable year by substituting ''2018'' for ''2019'' and ''2019'' for ''2020.'' If a specified taxable year of a CFC group member with respect to the specified period described in paragraph (c)(5)(ii)(A) of this section begins in 2021, then, for purposes of applying paragraph (c)(2) of this section, § 1.163(j)–2(b)(3) is applied to such specified taxable year by substituting ''2020'' for ''2019'' and ''2021'' for ''2020.''

(d) *Determination of a specified group and specified group members*—(1) *Scope.* This paragraph (d) provides rules for determining a specified group and specified group members. Paragraph (d)(2) of this section provides rules for determining a specified group. Paragraph (d)(3) of this section provides rules for determining specified group members.

(2) *Rules for determining a specified group*—(i) *Definition of a specified group.* Subject to paragraph (d)(2)(ii) of this section, the term *specified group* means one or more chains of applicable CFCs connected through stock ownership with a specified group parent (which is included in the specified group only if it is an applicable CFC), but only if—

(A) The specified group parent owns directly or indirectly stock meeting the requirements of section 1504(a)(2)(B) in at least one applicable CFC; and

(B) Stock meeting the requirements of section 1504(a)(2)(B) in each of the applicable CFCs (except the specified group parent) is owned directly or indirectly by one or more of the other applicable CFCs or the specified group parent.

(ii) *Indirect ownership.* For purposes of applying paragraph (d)(2)(i) of this section, stock is owned indirectly only if it is owned under section 318(a)(2)(A) through a partnership or under section 318(a)(2)(A) or (B) through an estate or trust not described in section 7701(a)(30).

(iii) *Specified group parent.* The term *specified group parent* means a qualified U.S. person or an applicable CFC.

(iv) *Qualified U.S. person.* The term *qualified U.S. person* means a United States person described in section 7701(a)(30)(A) or (C). For purposes of this paragraph (d), members of a consolidated group that file (or that are required to file) a consolidated U.S. federal income tax return are treated as a single qualified U.S person and individuals described in section 7701(a)(30)(A) whose filing status is married filing jointly are treated as a single qualified U.S. person.

(v) *Stock.* For purposes of paragraph (d)(3)(i) of this section, the term *stock* has the same meaning as ''stock'' in section 1504 (without regard to § 1.1504–4, except as provided in paragraph (d)(2)(vi) of this section) and all shares of stock within a single class are considered to have the same value. Thus, control premiums and minority and blockage discounts within a single class are not taken into account.

(vi) *Options treated as exercised.* For purposes of this paragraph (d)(2), options that are reasonably certain to be exercised, as determined under § 1.1504–4(g), are treated as exercised. For purposes of this paragraph (d)(2)(vi), options include call options, warrants, convertible obligations, put options, and any other instrument treated as an option under § 1.1504–4(d), determined by replacing the term ''a principal purpose of avoiding the application of section 1504 and this section'' with ''a principal purpose of avoiding the application of section 163(j).''

(vii) *When a specified group ceases to exist.* The principles of § 1.1502–75(d)(1), (d)(2)(i) through (d)(2)(ii), and (d)(3)(i) through (d)(3)(iv), apply for purposes of determining when a specified group ceases to exist. Solely for purposes of applying these principles, each applicable CFC that is treated as a specified group member for a taxable year with respect to a specified period is treated as affiliated with the specified group parent from the beginning to the end of the specified period, without regard to the beginning or end of its taxable year.

(3) *Rules for determining a specified group member.* If an applicable CFC is included in a specified group on the last day of a taxable year of the applicable CFC that ends with or within a specified period, the applicable CFC is a *specified group member* with respect to the specified period for its entire taxable year ending with or within the specified period. If an applicable CFC has multiple taxable years that end with or within a specified period, this paragraph (d)(3) is applied separately to each taxable year to determine if the applicable CFC is a specified group member for such taxable year.

(e) *Rules and procedures for treating a specified group as a CFC group*—(1) *Scope.* This paragraph (e) provides rules and procedures for treating a specified group member as a CFC group member and for determining a CFC group for purposes of applying section 163(j) and the section 163(j) regulations.

(2) *CFC group and CFC group member*—(i) *CFC group.* The term *CFC group* means, with respect to a specified period, all CFC group members for their specified taxable years.

(ii) *CFC group member.* The term *CFC group member* means, with respect to a specified taxable year and a specified period, a specified group member of a specified group for which a CFC group election is in effect.

(3) *Duration of a CFC group.* A CFC group continues until the CFC group election is revoked, or there is no longer a specified period with respect to the specified group.

(4) *Joining or leaving a CFC group.* If an applicable CFC becomes a specified group member for a specified taxable year with respect to a specified period of a specified group for which a CFC group election is in effect, the CFC group election applies to the applicable CFC and the applicable CFC becomes a CFC group member. If an applicable CFC ceases to be a specified group member for a specified taxable year with respect to a specified period of a specified group for which a CFC group election is in effect, the CFC group election terminates solely with respect to the applicable CFC.

(5) *Manner of making or revoking a CFC group election*—(i) *In general.* An election is made or revoked under this paragraph (e)(5) (a *CFC group election*) with respect to a specified period of a specified group. A CFC group election remains in effect for each specified period of the specified group until revoked. A CFC group election that is in effect with respect to a specified period of a specified group applies to each specified group member for its specified taxable year that ends with or within the specified period. The making or revoking of a CFC group election is not effective unless made or revoked by each designated U.S. person.

(ii) *Revocation by election.* A CFC group election cannot be revoked with respect to any specified period beginning prior to 60 months following the last day of the specified period for which the election was made. Once a CFC group election has been revoked, a new CFC group election cannot be made with respect to any specified period beginning prior to 60 months following the last day of the specified period for which the election was revoked.

(iii) *Timing.* A CFC group election must be made or revoked with respect to a specified period of a specified group no later than the due date (taking into account extensions, if any) of the original Federal income tax return for the taxable year of each designated U.S. person in which or with which the specified period ends.

(iv) *Election statement.* Except as otherwise provided in publications, forms, instructions, or other guidance, to make or revoke a CFC group election for a specified period of a specified group, each designated U.S. person must attach a statement to its relevant Federal tax or information return. The statement must include the name and taxpayer identification number of all designated U.S. persons, a statement that the CFC group election is being made or revoked, as applicable, the specified period for which the CFC group election is being made or revoked, and the name of each CFC group member and its specified taxable year with respect to the specified period. The statement must be filed in the manner prescribed in publications, forms, instructions, or other guidance.

(v) *Effect of prior CFC group election.* A CFC group election is made solely pursuant to the provisions of this paragraph (e)(5), without regard to whether the election described in proposed § 1.163(j)–7(f)(7) that was included in a notice of proposed rulemaking (REG–106089–18) that was published on December 28, 2018, in the **Federal Register** (83 FR 67490) was in effect.

(f) *Treatment of a CFC group member that has ECI*—(1) *In general.* If a CFC group member has ECI in its specified taxable year, then for purposes of section 163(j) and the section 163(j) regulations—

(i) The items, disallowed business interest expense carryforwards, and other attributes of the CFC group member that are ECI are treated as items, disallowed business interest expense carryforwards, and attributes of a separate applicable CFC (such deemed corporation, an *ECI deemed corporation*), subject to § 1.163(j)–8(d), that has same taxable year and shareholders as the applicable CFC; and

(ii) The ECI deemed corporation is not treated as a specified group member for the specified taxable year.

(2) *Ordering rule.* Paragraph (f)(1) of this section applies before application of § 1.163(j)–8(d).

(g) * * *

(3) *Treatment of certain taxes.* For purposes of computing the ATI of a relevant foreign corporation for a taxable year, tentative taxable income takes into account any deduction for foreign taxes. See section 164(a).

(4) *Anti-abuse rule*—(i) *In general.* If a specified group member of a specified group or an applicable partnership (*specified lender*) includes an amount (the *payment amount*) in income and such amount is attributable to business interest expense incurred by another specified group member or an applicable partnership of the specified group (a *specified borrower*) during its taxable year, then the ATI of the specified borrower for the taxable year is increased by the ATI adjustment amount if—

(A) The business interest expense is incurred with a principal purpose of reducing the Federal income tax liability of any United States shareholder of a specified group member (including over multiple taxable years);

(B) Absent the application of this paragraph (g)(4), the effect of the specified borrower treating all or part of the payment amount as disallowed business interest expense would be to reduce the Federal income tax liability of any United States shareholder of a specified group member; and

(C) Either no CFC group election is in effect with respect to the specified group or the specified borrower is an applicable partnership.

(ii) *ATI adjustment amount*—(A) *In general.* For purposes of this paragraph (g)(4), the term *ATI adjustment amount* means, with respect to a specified borrower and a taxable year, the product of 3⅓ and the lesser of the payment amount or the disallowed business interest expense, computed without regard to this paragraph (g)(4).

(B) *Special rule for taxable years or specified periods beginning in 2019 or 2020.* For any taxable year of an applicable CFC or specified taxable year of a CFC group member with respect to a specified period for which the section 163(j) limitation is determined based, in part, on 50 percent of ATI, in accordance with § 1.163(j)–2(b)(2), paragraph (g)(4)(ii)(A) of this section is applied by substituting ''2'' for ''3⅓.''

(iii) *Applicable partnership.* For purposes of this paragraph (g)(4), the term *applicable partnership* means, with respect to a specified group, a partnership in which at least 80 percent of the interests in capital or profits is owned, directly or indirectly through one or more other partnerships, by specified group members of the specified group.

(h) *Election to apply safe-harbor*—(1) *In general.* If an election to apply this paragraph (h)(1) (*safe-harbor election*) is in effect with respect to a taxable year of a stand-alone applicable CFC or a specified taxable year of a CFC group member, as applicable, then, for such year, no portion of the applicable CFC's business interest expense is disallowed under the section 163(j) limitation. This paragraph (h) does not apply to excess business interest expense, as described in § 1.163(j)–6(f)(2), until the taxable year in which it is treated as paid or accrued by an applicable CFC under § 1.163(j)–6(g)(2)(i). Furthermore, excess business interest expense is not taken into account for purposes of determining whether the safe-harbor election is available for a stand-alone applicable CFC or a CFC group until the taxable year in which it is treated as paid or accrued by an applicable CFC under § 1.163(j)–6(g)(2)(i).

(2) *Eligibility for safe-harbor election*—(i) *Stand-alone applicable CFC.* The safe-harbor election may be made for the taxable year of a stand-alone applicable CFC only if business interest expense of the applicable CFC is less than or equal to 30 percent of the lesser of qualified tentative taxable income or the eligible amount of the applicable CFC for its taxable year.

(ii) *CFC group*—(A) *In general.* The safe-harbor election may be made for the specified period of a CFC group only if the business interest expense of the CFC group for the specified period is less than or equal to 30 percent of the lesser of the sum of qualified tentative taxable income or the sum of the eligible amounts of each CFC group member for its specified taxable year with respect to the specified period, and no CFC group member has pre-group disallowed business interest expense carryforward.

(B) *Currency translation.* For purposes of applying paragraph (h)(2)(ii) of this section, qualified tentative taxable income and eligible amounts of each CFC group member are translated into the currency in which the business interest expense of the CFC group is denominated using the method used under paragraph (c)(4) of this section. See paragraph (c)(2)(i) of this section for rules for determining the business interest expense of a CFC group.

(3) *Eligible amount*—(i) *In general.* Subject to paragraph (h)(3)(ii) of this section, the term *eligible amount* means, with respect to the taxable year of an applicable CFC, the sum of the following amounts, computed without regard to the application of section 163(j) and the section 163(j) regulations (including without regard to any disallowed business interest expense carryforwards)—

(A) Subpart F income (within the meaning of section 952);

(B) The product of—

(*1*) The excess of 100 percent over the percentage described in section 250(a)(1)(B), taking into account section 250(a)(3)(B), and

(*2*) The excess, if any, of tested income (within the meaning of section 951A(c)(2)(A) and § 1.951A–2(b)(1)), over the CFC-level net deemed tangible income return.

(ii) *Amounts properly allocable to a non-excepted trade or business.* For purposes of computing an eligible amount, subpart F income and tested income are determined by only taking into account items properly allocable to a non-excepted trade or business.

(4) *Qualified tentative taxable income.* The term *qualified tentative taxable income* means, with respect to a taxable year of an applicable CFC, the applicable CFC's tentative taxable income, determined by only taking into

account items properly allocable to a non-excepted trade or business.

(5) *Manner of making a safe-harbor election*—(i) *In general.* A safe-harbor election is an annual election made under this paragraph (h)(5) with respect to a taxable year of a stand-alone applicable CFC or with respect to a specified period of a CFC group. A safe-harbor election that is made with respect to a specified period of a CFC group is effective with respect to each CFC group member for its specified taxable year. A safe-harbor election is only effective if made by each designated U.S. person with respect to a stand-alone applicable CFC or a CFC group. A safe-harbor election is made with respect to a taxable year of a stand-alone applicable CFC, or a specified period of a CFC group, no later than the due date (taking into account extensions, if any) of the original Federal income tax return for the taxable year of each designated U.S. person, respectively, in which or with which the taxable year of the stand-alone applicable CFC ends or the specified period of the CFC group ends.

(ii) *Election statement.* Unless otherwise provided in publications, forms, instructions, or other guidance, to make a safe-harbor election, each designated U.S. person must attach to its relevant Federal income tax return or information return a statement that includes the name and taxpayer identification number of all designated U.S. persons, a statement that a safe-harbor election is being made pursuant to § 1.163(j)–7(h) and that the requirements for making the election are satisfied, and the taxable year of the stand-alone applicable CFC or the specified period of the CFC group, as applicable, for which the safe-harbor election is being made. In the case of a CFC group, the statement must also include the name of each CFC group member and its specified taxable year that ends with or within the specified period for which the safe-harbor election is being made. The statement must be filed in the manner prescribed in publications, forms, instructions, or other guidance.

(6) *Special rule for taxable years or specified periods beginning in 2019 or 2020.* In the case of a stand-alone applicable CFC, for any taxable year beginning in 2019 or 2020, paragraph (h)(2)(i) of this section is applied by substituting ''50 percent'' for ''30 percent.'' In the case of a CFC group, for any specified period beginning in 2019 or 2020, paragraph (h)(2)(ii)(A) of this section is applied by substituting ''50 percent'' for ''30 percent.''

* * * * *

(j) *Rules regarding the computation of ATI of certain United States shareholders of applicable CFCs*—(1) *In general.* For purposes of computing ATI of a United States shareholder of an applicable CFC, for the taxable year of the United States shareholder in which or with which the taxable year of the applicable CFC ends, there is added to the United States shareholder's tentative taxable income the product of—

(i) The portion of the adjustment, if any, made to the United States shareholder's tentative taxable income under § 1.163(j)–1(b)(1)(ii)(G) (regarding specified deemed inclusions) that is attributable to the applicable CFC, but for this purpose excluding the portion of the adjustment that is attributable to an inclusion under section 78 with respect to the applicable CFC; and

(ii) A fraction, expressed as a percentage, but not greater than 100 percent, the numerator of which is CFC excess taxable income and the denominator of which is the ATI of the applicable CFC for the taxable year.

(2) *Rules for determining CFC excess taxable income*—(i) *In general.* The term *CFC excess taxable income* means, with respect to a taxable year of an applicable CFC, the amount described in paragraph (j)(2)(ii) or (j)(2)(iii) of this section, as applicable.

(ii) *Applicable CFC is a stand-alone applicable CFC.* If an applicable CFC is a stand-alone applicable CFC for a taxable year, its CFC excess taxable income for the taxable year is the amount that bears the same ratio to the applicable CFC's ATI as—

(A) The excess (if any) of—

(*1*) 30 percent of the applicable CFC's ATI; over

(*2*) The amount (if any) by which the applicable CFC's business interest expense exceeds its business interest income and floor plan financing interest expense; bears to

(B) 30 percent of the applicable CFC's ATI.

(iii) *Applicable CFC is a CFC group member.* If an applicable CFC is a CFC group member for a specified taxable year, its CFC excess taxable income is equal to the product of the CFC group member's ATI percentage and the amount that bears the same ratio to the CFC group's ATI for the specified period as—

(A) The excess (if any) of—

(*1*) 30 percent of the CFC group's ATI; over

(*2*) The amount (if any) by which the CFC group's business interest expense exceeds the CFC group's business interest income and floor plan financing interest expense; bears to

(B) 30 percent of the CFC group's ATI.

(iv) *ATI percentage.* For purposes of this paragraph (j), the term *ATI percentage* means, with respect to a specified taxable year of a CFC group member and a specified period of the CFC group, a fraction (expressed as a percentage), the numerator of which is the ATI of the CFC group member for the specified taxable year, and the denominator of which is the ATI of the CFC group for the specified period. If either the numerator or denominator of the fraction is less than or equal to zero, the ATI percentage is zero.

(3) *Cases in which an addition to tentative taxable income is not allowed.* Paragraph (j)(1) of this section is not applicable for a taxable year of a United States shareholder if, with respect to the taxable year of the applicable CFC described in paragraph (j)(1) of this section—

(i) A safe-harbor election (as described in paragraph (h) of this section) is in effect; or

(ii) The applicable CFC is neither a stand-alone applicable CFC nor a CFC group member.

(4) *Special rule for taxable years or specified periods beginning in 2019 or 2020.* In the case of a stand-alone applicable CFC, for any taxable year beginning in 2019 or 2020 to which the election described in § 1.163(j)–2(b)(2)(ii) does not apply, paragraph (j)(2)(ii) of this section is applied by substituting ''50 percent'' for ''30 percent'' each place it appears. In the case of a CFC group member, for any specified taxable year with respect to a specified period beginning in 2019 or 2020 to which the election described in § 1.163(j)–2(b)(2)(ii) does not apply, paragraph (j)(2)(iii) of this section is applied by substituting ''50 percent'' for ''30 percent'' each place it appears.

(k) *Definitions.* The following definitions apply for purposes of this section.

(1) *Applicable partnership.* The term *applicable partnership* has the meaning provided in paragraph (g)(4)(iii) of this section.

(2) *Applicable specified taxable year.* The term *applicable specified taxable year* has the meaning provided in paragraph (c)(3)(iii) of this section.

(3) *ATI adjustment amount.* The term *ATI adjustment amount* has the meaning provided in paragraph (g)(4)(ii) of this section.

(4) *ATI percentage.* The term *ATI percentage* has the meaning provided in paragraph (j)(2)(iv) of this section.

(5) *CFC excess taxable income.* The term *CFC excess taxable income* has the meaning provided in paragraph (j)(2)(i) of this section.

(6) *CFC group.* The term *CFC group* has the meaning provided in paragraph (e)(2)(i) of this section.

(7) *CFC group election.* The term *CFC group election* means the election described in paragraph (e)(5) of this section.

(8) *CFC group member.* The term *CFC group member* has the meaning provided in paragraph (e)(2)(ii) of this section.

(9) *CFC-level net deemed tangible income return*—(i) *In general.* The term *CFC-level net deemed tangible income return* means, with respect to a taxable year of an applicable CFC, the excess (if any) of—

(A) 10 percent of the qualified business asset investment, as defined in section 951A(d)(1) and § 1.951A–3(b), of the applicable CFC, over

(B) The excess, if any, of—

(*1*) Tested interest expense, as defined in § 1.951A–4(b)(1), of the applicable CFC, over

(*2*) Tested interest income, as defined in § 1.951A–4(b)(2), of the applicable CFC.

(ii) *Amounts properly allocable to a non-excepted trade or business.* For purposes of computing CFC-level net deemed tangible income return, qualified business asset investment is determined by only taking into account assets properly allocable to a non-excepted trade or business, as determined in § 1.163(j)–10(c)(3), and tested interest expense and tested interest income are determined by only taking into account items properly allocable to a non-excepted trade or business, as determined in § 1.163(j)–10(c).

(10) *Cumulative section 163(j) pre-group carryforward limitation.* The term *cumulative section 163(j) pre-group carryforward limitation* has the meaning provided in paragraph (c)(3)(iv)(A)(*1*) of this section.

(11) *Current group.* The term *current group* has the meaning provided in paragraph (c)(3)(iv)(A)(*2*) of this section.

(12) *Designated U.S. person.* The term *designated U.S. person* means—

(i) With respect to a stand-alone applicable CFC, each controlling domestic shareholder, as defined in § 1.964–1(c)(5) of the applicable CFC; or

(ii) With respect to a specified group, the specified group parent, if the specified group parent is a qualified U.S. person, or each controlling domestic shareholder, as defined in § 1.964–1(c)(5), of the specified group parent, if the specified group parent is an applicable CFC.

(13) *ECI deemed corporation.* The term *ECI deemed corporation* has the meaning provided in paragraph (f)(1)(i) of this section.

(14) *Effectively connected income.* The term *effectively connected income* (or *ECI*) means income or gain that is ECI, as defined in § 1.884–1(d)(1)(iii), and deduction or loss that is allocable to, ECI, as defined in § 1.884–1(d)(1)(iii).

(15) *Eligible amount.* The term *eligible amount* has the meaning provided in paragraph (h)(3)(i) of this section.

(16) *Former group.* The term *former group* has the meaning provided in paragraph (c)(3)(iv)(A)(*2*) of this section.

(17) *Loss member.* The term *loss member* has the meaning provided in paragraph (c)(3)(iv)(A)(*2*) of this section.

(18) *Payment amount.* The term *payment amount* has the meaning provided in paragraph (g)(4)(i) of this section.

(19) *Pre-group disallowed business interest expense carryforward.* The term *pre-group disallowed business interest expense carryforward* means, with respect to a CFC group member and a specified taxable year, any disallowed business interest expense carryforward of the CFC group member that arose in a taxable year during which the CFC group member (or its predecessor) was not a CFC group member of the CFC group.

(20) *Qualified tentative taxable income.* The term *qualified tentative taxable income* has the meaning provided in paragraph (h)(4) of this section.

(21) *Qualified U.S. person.* The term *qualified U.S. person* has the meaning provided in paragraph (d)(2)(iv) of this section.

(22) *Relevant period.* The term *relevant period* has the meaning provided in paragraph (c)(3)(iv)(A)(*2*) of this section.

(23) *Safe-harbor election.* The term *safe-harbor election* has the meaning provided in paragraph (h)(1) of this section.

(24) *Specified borrower.* The term *specified borrower* has the meaning provided in paragraph (g)(4)(i) of this section.

(25) *Specified group.* The term *specified group* has the meaning provided in paragraph (d)(2)(i) of this section.

(26) *Specified group member.* The term *specified group member* has the meaning provided in paragraph (d)(3) of this section.

(27) *Specified group parent.* The term *specified group parent* has the meaning provided in paragraph (d)(2)(iii) of this section.

(28) *Specified lender.* The term *specified lender* has the meaning provided in paragraph (g)(4)(i) of this section

(29) *Specified period*—(i) *In general.* Except as otherwise provided in paragraph (k)(29)(ii) of this section, the term *specified period* means, with respect to a specified group—

(A) If the specified group parent is a qualified U.S. person, the period ending on the last day of the taxable year of the specified group parent and beginning on the first day after the last day of the specified group's immediately preceding specified period; or

(B) If the specified group parent is an applicable CFC, the period ending on the last day of the specified group parent's required year described in section 898(c)(1), without regard to section 898(c)(2), and beginning on the first day after the last day of the specified group's immediately preceding specified period.

(ii) *Short specified period.* A specified period begins no earlier than the first date on which a specified group exists. A specified period ends on the date a specified group ceases to exist under paragraph (d)(2)(vii) of this section. If the last day of a specified period, as determined under paragraph (k)(29)(i) of this section, changes, and, but for this paragraph (k)(29)(ii), the change in the last day of the specified period would result in the specified period being longer than 12 months, the specified period ends on the date on which the specified period would have ended had the change not occurred.

(30) *Specified taxable year.* The term *specified taxable year* means, with respect to an applicable CFC that is a specified group member of a specified group and a specified period, a taxable year of the applicable CFC that ends with or within the specified period.

(31) *Stand-alone applicable CFC.* The term *stand-alone applicable CFC* means any applicable CFC that is not a specified group member.

(32) *Stock.* The term *stock* has the meaning provided in paragraph (d)(2)(v) of this section.

(l) *Examples.* The following examples illustrate the application of this section. For each example, unless otherwise stated, no exemptions from the application of section 163(j) are available, no foreign corporation has ECI, and all relevant taxable years and specified periods begin after December 31, 2020.

(1) *Example 1. Specified taxable years included in specified period of a specified*

group—(i) *Facts.* As of June 30, Year 1, USP, a domestic corporation, owns 60 percent of the common stock of FP, which owns all of the stock of FC1, FC2, and FC3. The remaining 40 percent of the common stock of FP is owned by an unrelated foreign corporation. FP has a single class of stock. FP acquired the stock of FC3 from an unrelated person on March 22, Year 1. The acquisition did not result in a change in FC3's taxable year or a close of its taxable year. USP's interest in FP and FP's interest in FC1 and FC2 has been the same for a number of years. USP has a taxable year ending June 30, Year 1, which is not a short taxable year. Each of FP, FC1, FC2, and FC3 are applicable CFCs. Pursuant to section 898(c)(2), FP and FC1 have taxable years ending May 31, Year 1. Pursuant to section 898(c)(1), FC2 and FC3 have taxable years ending June 30, Year 1.

(ii) *Analysis*—(A) *Determining a specified group and specified period of the specified group.* Pursuant to paragraph (d) of this section, FP, FC1, FC2, and FC3 are members of a specified group, and FP is the specified group parent. Because the specified group parent, FP, is an applicable CFC, the specified period of the specified group is the period ending on June 30, Year 1, which is the last day of FP's required year described in section 898(c)(1), without regard to section 898(c)(2), and on beginning July 1, Year 0, which is the first day following the last day of the specified group's immediately preceding specified period (June 30, Year 0). See paragraph (k)(29)(i)(B) of this section.

(B) *Determining the specified taxable years with respect to the specified period.* Pursuant to paragraph (d)(3) of this section, because each of FP and FC1 are included in the specified group on the last day of their taxable years ending May 31, Year 1 and such taxable years end with or within the specified period ending June 30, Year 1, FP and FC1 are specified group members with respect to the specified period ending June 30, Year 1, for their entire taxable years ending May 31, Year 1, and those taxable years are specified taxable years. Similarly, because each of FC2 and FC3 are included in the specified group on the last day of their taxable years ending June 30, Year 1, and such taxable years end with or within the specified period ending June 30, Year 1, FC2 and FC3 are specified group members with respect to the specified period ending June 30, Year 1, for their entire taxable years ending June 30, Year 1, and those taxable years are specified taxable years. The fact that FC3 was acquired on March 22, Year 1, does not prevent FC3 from being a specified group member with respect to the specified period for the portion of its specified taxable year prior to March 22, Year 1.

(2) *Example 2. CFC groups*—(i) *Facts.* The facts are the same as in *Example 1* in paragraph (l)(1)(i) of this section. In addition, a CFC group election is in place with respect to the specified period ending June 30, Year 1.

(ii) *Analysis.* Because a CFC group election is in place for the specified period ending June 30, Year 1, pursuant to paragraph (e)(2)(ii) of this section, each specified group member is a CFC group member with respect to its specified taxable year ending with or within the specified period. Accordingly, FP, FC1, FC2, and FC3 are CFC group members with respect to the specified period ending June 30, Year 1, for their specified taxable years ending May 31, Year 1, and June 30, Year 1, respectively. Pursuant to paragraph (e)(2)(i) of this section, the CFC group for the specified period ending June 30, Year 1, consists of FP, FC1, FC2, and FC3 for their specified taxable years ending May 31, Year 1, and June 30, Year 1, respectively. Pursuant to paragraph (c)(2) of this section, a single section 163(j) limitation is computed for the specified period ending June 30, Year 1. That section 163(j) calculation will include FP and FC1's specified taxable years ending May 31, Year 1, and FC2 and FC3's specified taxable years ending June 30, Year 1.

(3) *Example 3. Application of anti-abuse rule*—(i) *Facts.* USP, a domestic corporation, is the specified group parent of a specified group. The specified group members include CFC1 and CFC2. USP owns (within the meaning of section 958(a)) all of the stock of all specified group members. USP has a calendar year taxable year. All specified group members also have a calendar year taxable year and a functional currency of the U.S. dollar. CFC1 is organized in, and a tax resident of, a jurisdiction that imposes no tax on certain types of income, including interest income. With respect to Year 1, USP expects to pay no residual U.S. tax on its income inclusion under section 951A(a) (GILTI inclusion) and expects to have unused foreign tax credits in the category described in section 904(d)(1)(A). A CFC group election is not in effect for Year 1. With a principal purpose of reducing USP's Federal income tax liability, on January 1, Year 1, CFC1 loans $100x to CFC2. On December 31, Year 1, CFC2 pays interest of $10x to CFC1 and repays the principal of $100x. Absent application of paragraph (g)(4)(i) of this section, CFC2 would treat all $10x of interest expense as disallowed business interest expense and therefore would have $10x of disallowed business interest expense carryforward to Year 2. In Year 2, CFC2 disposes of one of its businesses at a substantial gain that gives rise to tested income (within the meaning of section 951A(c)(2)(A) and § 1.951A–2(b)(1)). Assume that as a result of the gain being included in the ATI of CFC2, absent application of paragraph (g)(3)(i) of this section, CFC2 would be allowed to deduct the entire $10x of disallowed business interest expense carryforward and therefore reduce the amount of CFC2's tested income. Also, assume that USP would have residual U.S. tax on its GILTI inclusion in Year 2, without regard to the application of paragraph (g)(4)(i) of this section.

(ii) *Analysis.* The $10x of interest expense paid in Year 1 is a payment amount described in paragraph (g)(4)(i) of this section because it is between specified group members, CFC1 and CFC2. Furthermore the requirements of paragraph (g)(4)(i)(A), (B), and (C) of this section are satisfied because the business interest expense is incurred with a principal purpose of reducing USP's Federal income tax liability; absent the application of paragraph (g)(4)(i) of this section, the effect of CFC2 treating the $10x of business interest expense as disallowed business interest expense in Year 1 would be to reduce USP's Federal income tax liability in Year 2; and no CFC group election is in effect with respect to the specified group in Year 1. Because the requirements of paragraph (g)(4)(i)(A), (B), and (C) of this section are satisfied, CFC2's ATI for Year 1 is increased by $33.33x, which is the amount equal to 3 ⅓ multiplied by $10x (the lesser of the payment amount of $10x and the disallowed business interest expense of $10x). As a result, the $10x of business interest expense is not treated by CFC2 as disallowed business interest expense in Year 1, and therefore does not give rise to a disallowed business interest expense carryforward to Year 2.

(m) *Applicability dates*—(1) *General applicability date.* Except as provided in paragraph (m)(2) of this section, this section applies to taxable years of a foreign corporation beginning on or after November 13, 2020 However, except as provided in paragraph (m)(2) of this section, taxpayers and their related parties, within the meaning of sections 267(b) and 707(b)(1), may choose to apply the rules of this section to a taxable year beginning after December 31, 2017, so long as the taxpayers and their related parties consistently apply the rules of this section to each subsequent taxable year and the section 163(j) regulations, and if applicable, §§ 1.263A–9, 1.263A–15, 1.381(c)(20)–1, 1.382–1, 1.382–2, 1.382–5, 1.382–6, 1.382–7, 1.383–0, 1.383–1, 1.469–9, 1.469–11, 1.704–1, 1.882–5, 1.1362–3, 1.1368–1, 1.1377–1, 1.1502–13, 1.1502–21, 1.1502–36, 1.1502–79, 1.1502–91 through 1.1502–99 (to the extent they effectuate the rules of §§ 1.382–2, 1.382–5, 1.382–6, and 1.383–1), and 1.1504–4 to that taxable year and each subsequent taxable year.

(2) *Exception.* Paragraphs (a), (c) through (f), (g)(3) and (4), and (h) through (k) of this section apply to taxable years beginning on or after [DATE 60 DAYS AFTER DATE OF PUBLICATION OF THE FINAL RULE IN THE **FEDERAL REGISTER**]. However, taxpayers and their related parties, within the meaning of sections 267(b) and 707(b)(1), may choose to apply paragraphs (a), (c) through (f), (g)(3) and (4), and (h) through (k) of this section in their entirety for a taxable year beginning after December 31, 2017, so long as the taxpayers and their related parties also apply § 1.163(j)–8 for the taxable year. For taxable years beginning before November 13, 2020, taxpayers and their related parties may not choose to apply paragraphs (a), (c) through (f), (g)(3) and (4), and (h) through (k) of this section unless they also apply paragraphs (b) and (g)(1) and (2) of this section in accordance with

the second sentence of paragraph (m)(1) of this section. Notwithstanding paragraph (e)(5)(iii) or (h)(5)(i) of this section, in the case of a specified period of a specified group or a taxable year of a stand-alone applicable CFC that ends with or within a taxable year of a designated U.S. person ending before November 13, 2020, a CFC group election or a safe-harbor election may be made on an amended Federal income tax return filed on or before the due date (taking into account extensions, if any) of the original Federal income tax return for the first taxable year of each designated U.S. person ending after November 13, 2020.

■ **Par. 9.** As reserved in a final rule elsewhere in this issue of the **Federal Register**, effective November 13, 2020, § 1.163(j)–8 is added to read as follows:

§ 1.163(j)–8 Application of the section 163(j) limitation to foreign persons with effectively connected income.

(a) *Overview.* This section provides rules concerning the application of section 163(j) to foreign persons with ECI. Paragraph (b) of this section modifies the application of section 163(j) for a specified foreign person with ECI. Paragraph (c) of this section sets forth rules for a specified foreign partner in a partnership with ECI. Paragraph (d) of this section allocates disallowed business interest expense for relevant foreign corporations with ECI. Paragraph (e) of this section provides rules concerning disallowed business interest expense. Paragraph (f) of this section coordinates the application of section 163(j) with § 1.882–5 and the branch profits tax under section 884. Paragraph (g) of this section provides definitions that apply for purposes of this section. Paragraph (h) of this section illustrates the application of this section through examples.

(b) *Application to a specified foreign person with ECI*—(1) *In general.* If a taxpayer is a specified foreign person, then the taxpayer applies the modifications described in this paragraph (b), taking into account the application of paragraph (c) of this section.

(2) *Modification of adjusted taxable income.* Adjusted taxable income for a specified foreign person for a taxable year means the specified foreign person's adjusted taxable income, as determined under § 1.163(j)–1(b)(1), taking into account only items that are ECI.

(3) *Modification of business interest expense.* Business interest expense for a specified foreign person means business interest expense described in § 1.163(j)–1(b)(3) that is ECI, taking into account the application of paragraph (f)(1)(iii) of this section.

(4) *Modification of business interest income.* The business interest income of a specified foreign person means business interest income described in § 1.163(j)–1(b)(4) that is ECI.

(5) *Modification of floor plan financing interest expense.* The floor plan financing interest expense of a specified foreign person means floor plan financing interest expense described § 1.163(j)–1(b)(19) that is ECI.

(6) *Modification of allocation of interest expense and interest income that is allocable to a trade or business.* For purposes of applying § 1.163(j)–10(c) to a specified foreign person, only interest income and interest expense that are ECI and only assets that are U.S. assets, as defined in § 1.884–1(d), are taken into account. If the specified foreign person is also a specified foreign partner, this paragraph (b)(6) does not apply to any trade or business of the partnership.

(c) *Rules for a specified foreign partner*—(1) *Characterization of excess taxable income*—(i) *In general.* The portion of excess taxable income allocated to a specified foreign partner from a partnership pursuant to § 1.163(j)–6(f)(2) that is ECI is equal to the specified foreign partner's allocation of excess taxable income from the partnership multiplied by its specified ATI ratio with respect to the partnership, and the remainder is not ECI.

(ii) *Specified ATI ratio.* The term *specified ATI ratio* means the fraction described in this paragraph (c)(1)(ii). If the specified foreign partner's distributive share of ECI and distributive share of non-ECI are both positive, the numerator of this fraction is the specified foreign partner's distributive share of ECI and the denominator is the specified foreign partner's distributive share of partnership items of income, gain, deduction, and loss. If the specified foreign partner's distributive share of ECI is negative or zero and its distributive share of non-ECI is positive, this fraction is treated as zero. If the specified foreign partner's distributive share of non-ECI is negative or zero and its distributive share of ECI is positive, this fraction is treated as one. If the specified foreign partner's distributive share of ECI and distributive share of non-ECI are both negative, the numerator of this fraction is its distributive share of non-ECI and the denominator is its distributive share of partnership items of income, gain, deduction, and loss.

(iii) *Distributive share of ECI.* The term *distributive share of ECI* means the net amount of the specified foreign partner's distributive share of partnership items of income, gain, deduction, and loss that are ECI.

(iv) *Distributive share of non-ECI.* The term *distributive share of non-ECI* means the net amount of the specified foreign partner's distributive share of partnership items of income, gain, deduction, and loss that are not ECI.

(2) *Characterization of excess business interest expense*—(i) *Allocable ECI excess BIE.* The portion of excess business interest expense allocated to a specified foreign partner from a partnership pursuant to § 1.163(j)–6(f)(2) or paragraph (e)(2) of this section that is ECI (*allocable ECI excess BIE*) is equal to the excess, if any, of allocable ECI BIE over allocable ECI deductible BIE.

(ii) *Allocable non-ECI excess BIE.* The portion of excess business interest expense allocated to a specified foreign partner from a partnership pursuant to § 1.163(j)–6(f)(2) or paragraph (e)(2) of this section that is not ECI (*allocable non-ECI excess BIE*) is equal to the excess, if any, of allocable non-ECI BIE over allocable non-ECI deductible BIE.

(3) *Characterization of deductible business interest expense*—(i) *In general.* The portion of deductible business interest expense, if any, that is allocated to a specified foreign partner from a partnership pursuant to § 1.163(j)–6(f)(2) that is ECI (*allocable ECI deductible BIE*) is equal to the sum of the amounts described in paragraphs (c)(3)(ii)(A)(*1*)(*i*) and (c)(3)(ii)(B)(*1*) of this section. The portion of deductible business interest expense, if any, that is allocated to a specified foreign partner from a partnership pursuant to § 1.163(j)–6(f)(2) that is not ECI (*allocable non-ECI deductible BIE*) is equal to the sum of the amounts described in paragraphs (c)(3)(ii)(A)(*1*)(*ii*) and (c)(3)(ii)(B)(*2*) of this section.

(ii) *Allocation between allocable ECI deductible BIE and allocable non-ECI deductible BIE.* For purposes of paragraph (c)(3)(i) of this section—

(A) *Allocation to hypothetical deductible amounts*—(*1*) *In general.* Subject to paragraph (c)(3)(ii)(A)(*2*) of this section, deductible business interest expense that is allocated to the specified foreign partner from the partnership pursuant to § 1.163(j)–6(f)(2) is allocated pro rata to—

(*i*) Hypothetical partnership ECI deductible BIE; and

(*ii*) Hypothetical partnership non-ECI deductible BIE.

(*2*) *Limitation.* The amount allocated to hypothetical partnership ECI deductible BIE in paragraph (c)(3)(ii)(A)(*1*)(*i*) of this section cannot exceed the lesser of hypothetical partnership ECI deductible BIE or allocable ECI BIE, and the amount allocated to hypothetical partnership non-ECI deductible BIE in paragraph (c)(3)(ii)(A)(*1*)(*ii*) of this section cannot exceed the lesser of hypothetical partnership non-ECI deductible BIE or allocable non-ECI BIE.

(B) *Allocation of remaining deductible amounts.* Deductible business interest expense that is allocated to the specified foreign partner from the partnership pursuant to § 1.163(j)–6(f)(2) in excess of the amount allocated in paragraph (c)(3)(ii)(A) of this section, if any, is allocated pro rata to—

(*1*) Allocable ECI BIE, reduced by the amount described in paragraph (c)(3)(ii)(A)(*1*)(*i*) of this section; and

(*2*) Allocable non-ECI BIE, reduced by the amount described in paragraph (c)(3)(ii)(A)(*1*)(*ii*) of this section.

(iii) *Hypothetical partnership deductible business interest expense*—(A) *Hypothetical partnership ECI deductible BIE.* The term *hypothetical partnership ECI deductible BIE* means the deductible business interest expense of the partnership, as defined in § 1.163(j)–6(b)(5), determined by only taking into account the specified foreign partner's allocable share of items that are ECI (including by reason of paragraph (f)(1)(iii) of this section).

(B) *Hypothetical partnership non-ECI deductible BIE.* The term *hypothetical partnership non-ECI deductible BIE* means the deductible business interest expense of the partnership, as defined in § 1.163(j)–6(b)(5), determined by only taking into account the specified foreign partner's allocable share of items that are not ECI (including by reason of paragraph (f)(1)(iii) of this section).

(4) *Characterization of excess business interest income*—(i) *In general.* The portion of excess business interest income allocated to a specified foreign partner from a partnership pursuant to § 1.163(j)–6(f)(2) that is ECI is equal to the specified foreign partner's allocation of excess business interest income from the partnership multiplied by its specified BII ratio with respect to the partnership, and the remainder is not ECI.

(ii) *Specified BII ratio.* The term *specified BII ratio* means the ratio of the specified foreign partner's allocable ECI BII to allocable business interest income (determined under § 1.163(j)–6(f)(2)(ii)).

(iii) *Allocable ECI BII.* The term *allocable ECI BII* means the specified foreign partner's allocable BII, as determined under § 1.163(j)–6(f)(2)(ii), computed by only taking into account income that is ECI.

(5) *Rules for determining ECI.* Except as described in paragraph (f)(1) of this section, if the determination as to whether partnership items are ECI is made by a direct or indirect partner, rather than the partnership itself, then for purposes of this paragraph (c), the partnership must use a reasonable method to characterize such items as ECI or as not ECI.

(d) *Characterization of disallowed business interest expense by a relevant foreign corporation with ECI*—(1) *Scope.* A relevant foreign corporation that has ECI and disallowed business interest expense for a taxable year determines the portion of its disallowed business interest expense and deductible business interest expense that is characterized as ECI or as not ECI under this paragraph (d). A relevant foreign corporation that is a specified foreign partner also applies the rules in paragraph (c) of this section. See also § 1.163(j)–7(f) for rules regarding CFC group members with ECI.

(2) *Characterization of disallowed business interest expense*—(i) *FC ECI disallowed BIE.* For purposes of this section, the portion of disallowed business interest expense of a relevant foreign corporation that is ECI (*FC ECI disallowed BIE*) is equal to the excess, if any, of FC ECI BIE over FC ECI deductible BIE.

(ii) *FC non-ECI disallowed BIE.* For purposes of this section, the portion of disallowed business interest expense of a relevant foreign corporation that is not ECI (*FC non-ECI disallowed BIE*) is equal to the excess, if any, of FC non-ECI BIE over FC non-ECI deductible BIE.

(3) *Characterization of deductible business interest expense*—(i) *In general.* The portion of deductible business interest expense, if any, that is ECI (*FC ECI deductible BIE*) is equal to the sum of the amounts described in paragraphs (d)(3)(ii)(A)(*1*)(*i*) and (d)(3)(ii)(B)(*1*) of this section. The portion of deductible business interest expense, if any, that is allocable to income that is not ECI (*FC non-ECI deductible BIE*) is equal to the sum of the amounts described in paragraphs (d)(3)(ii)(A)(*1*)(*ii*) and (d)(3)(ii)(B)(*2*) of this section.

(ii) *Allocation between FC ECI deductible BIE and FC non-ECI deductible BIE.* For purposes of paragraph (d)(3)(i) of this section—

(A) *Allocation to hypothetical deductible amounts*—(*1*) *In general.* Subject to paragraph (d)(3)(ii)(A)(*2*) of this section, deductible business interest expense is allocated pro rata to—

(*i*) Hypothetical FC ECI deductible BIE; and

(*ii*) Hypothetical FC non-ECI deductible BIE.

(*2*) *Limitation.* The amount allocated to hypothetical FC ECI deductible BIE in paragraph (d)(3)(ii)(A)(*1*)(*i*) of this section cannot exceed the lesser of hypothetical FC ECI deductible BIE or FC ECI BIE, and the amount allocated to hypothetical FC non-ECI deductible BIE in paragraph (d)(3)(ii)(A)(*1*)(*ii*) of this section cannot exceed the lesser of hypothetical FC non-ECI deductible BIE or FC non-ECI BIE.

(B) *Allocation of remaining deductible amounts.* Deductible business interest expense in excess of the amount allocated in paragraph (d)(3)(ii)(A) of this section, if any, is allocated pro rata to—

(*1*) FC ECI BIE, reduced by the amount described in paragraph (d)(3)(ii)(A)(*1*)(*i*) of this section; and

(*2*) FC non-ECI BIE, reduced by the amount described in paragraph (d)(3)(ii)(A)(*1*)(*ii*) of this section.

(iii) *Hypothetical FC deductible business interest expense*—(A) *Hypothetical FC ECI deductible BIE.* The term *hypothetical FC ECI deductible BIE* means the deductible business interest expense of the relevant foreign corporation determined by only taking into account its items that are ECI.

(B) *Hypothetical FC non-ECI deductible BIE.* The term *hypothetical FC non-ECI deductible BIE* means the deductible business interest expense of the relevant foreign corporation determined by only taking into account its items that are not ECI.

(e) *Rules regarding disallowed business interest expense*—(1) *Retention of character in a succeeding taxable year.* Disallowed business interest expense of a specified foreign person or a relevant foreign corporation for a taxable year (including excess business interest expense allocated to a specified foreign partner under § 1.163(j)–6(f)(2) or paragraph (e)(2) of this section) that is ECI or is not ECI retains its character as ECI or as not ECI in a succeeding taxable year.

(2) *Deemed allocation of excess business interest expense of a partnership to a specified foreign partner.* For purposes of this paragraph (e) and paragraphs (c)(2), (g)(3), and (g)(7) of this section, a specified foreign partner's allocable share of business interest expense is deemed to include its allocable share of excess business interest expense of a partnership in which it is a direct or indirect partner. For purposes of this paragraph (e)(2), a specified foreign partner's allocable share of excess business interest

expense of a partnership in which it is a direct or indirect partner is determined as if the excess business interest expense of the partnership were deductible in the taxable year in which the interest expense is first paid or accrued.

(3) *Ordering rule for conversion of excess business interest expense to business interest expense paid or accrued by a partner.* A specified foreign partner's allocable share of excess business interest expense (determined under § 1.163(j)–6(f)(2) or paragraph (e)(2) of this section) is treated as business interest expense paid or accrued under § 1.163(j)–6(g)(2)(i) in the order of the taxable years in which the excess business interest expense arose, and pro rata between allocable ECI excess BIE and allocable non-ECI excess BIE that arose in the same taxable year. This paragraph (e)(3) applies before application of paragraph (b)(3) of this section.

(4) *Allocable ECI excess BIE and allocable non-ECI excess BIE retains its character when treated as business interest expense paid or accrued in a succeeding taxable year.* If excess business interest expense of a partnership in which a specified foreign partner is a direct or indirect partner is treated as business interest expense paid or accrued by the specified foreign partner or a partnership in which it is a direct or indirect partner under § 1.163(j)–6(g)(2)(i), then allocable ECI excess BIE is treated as business interest expense allocable to ECI and allocable non-ECI excess BIE is treated as business interest expense allocable to income that is not ECI.

(f) *Coordination of the application of section 163(j) with § 1.882–5 and similar provisions and with the branch profits tax*—(1) *Coordination of section 163(j) with § 1.882–5 and similar provisions*—(i) *Ordering rule.* A foreign corporation first determines its business interest expense allocable to ECI under § 1.882–5 or any other relevant provision (*§ 1.882–5 and similar provisions*) before applying section 163(j) to the foreign corporation. If a foreign corporation has a disallowed business interest expense carryforward from a taxable year, then none of that business interest expense is taken into account for purposes of determining business interest expense under § 1.882–5 and similar provisions in a succeeding taxable year.

(ii) *Treatment of excess business interest expense.* For purposes of applying § 1.882–5 and similar provisions, the business interest expense of a specified foreign partner that is a direct or indirect partner in a partnership is determined without regard to the application of section 163(j) to the partnership. As a result, for purposes of applying § 1.882–5 and similar provisions, the specified foreign partner's share of business interest expense on liabilities of a partnership in which it is a direct or indirect partner is determined as if any excess business interest expense of the partnership (determined under § 1.163(j)–6(f)(2) or paragraph (e)(2) of this section) were deductible in the taxable year in which the business interest expense is first paid or accrued and not in a succeeding taxable year.

(iii) *Attribution of certain § 1.882–5 interest expense among the foreign corporation and its partnership interests*—(A) *In general.* If a foreign corporation is a specified foreign partner in one or more partnerships, then, for purposes of section 163(j) and the section 163(j) regulations, interest expense determined under § 1.882–5(b) through (d) or § 1.882–5(e) (*§ 1.882–5 three-step interest expense*) is treated as attributable to liabilities of the foreign corporation or the foreign corporation's share of liabilities of each partnership in accordance with paragraphs (f)(1)(iii)(B) and (f)(1)(iii)(C) of this section. Accordingly, the portion of the § 1.882–5 three-step interest expense attributable to liabilities of the foreign corporation described in this paragraph (f)(1)(iii) is subject to section 163(j) and the section 163(j) regulations at the level of the foreign corporation. The portion of the § 1.882–5 three-step interest expense interest attributable to liabilities of a partnership described in this paragraph (f)(1)(iii) is subject to section 163(j) and the section 163(j) regulations at the partnership-level. See § 1.163(j)–6. This paragraph (f)(1)(iii) merely characterizes interest expense of the foreign corporation and its partnership interests as ECI or not ECI. It does not change the amount of interest expense of the foreign corporation or its partnership interests.

(B) *Attribution of interest expense on U.S. booked liabilities.* The § 1.882–5 three-step interest expense is treated as attributable, pro rata, to interest expense on U.S. booked liabilities of a foreign corporation, determined under § 1.882–5(d)(2)(ii)–(iii) or its interest expense on its share of U.S. booked liabilities of a partnership, determined under § 1.882–5(d)(2)(vii), as applicable, to the extent thereof (without regard to whether the foreign corporation uses the method described in § 1.882–5(b) through (d) or the method described in § 1.882–5(e) for purposes of determining § 1.882–5 interest expense).

(C) *Attribution of excess § 1.882–5 three-step interest expense*—(*1*) *In general.* The § 1.882–5 three-step interest expense in excess of interest expense attributable to U.S. booked liabilities described in § 1.882–5(d)(2), if any (*excess § 1.882–5 three-step interest expense*), is treated as attributable to liabilities of the foreign corporation or the foreign corporation's allocable share of liabilities of one or more partnerships, in accordance with paragraphs (f)(1)(iii)(C)(*2*) and (f)(1)(iii)(C)(*3*) of this section, subject to the limitation in paragraph (f)(1)(iii)(C)(*4*) of this section. For purposes of this paragraph (f)(1)(iii)(C), the term ''U.S. assets'' means U.S. assets described in § 1.882–5(b).

(*2*) *Attribution of excess § 1.882–5 three-step interest expense to the foreign corporation.* Excess § 1.882–5 three-step interest expense is treated as attributable to interest expense on liabilities of the foreign corporation (and not its partnership interests) in proportion to its U.S. assets other than its partnership interests over all of its U.S. assets.

(*3*) *Attribution of excess § 1.882–5 three-step interest expense to partnerships*—(*i*) *In general.* Excess § 1.882–5 three-step interest expense is treated as attributable to interest expense on the foreign corporation's direct or indirect allocable share of liabilities of a partnership in proportion to the portion of the partnership interest that is treated as a U.S. asset under paragraph (f)(1)(iii)(C)(*3*)(*ii*) of this section over all of the foreign corporation's U.S. assets.

(*ii*) *Direct and indirect partnership interests.* If a foreign corporation owns an interest in a partnership that does not own an interest in any other partnerships, the portion of the partnership interest that is a U.S. asset is determined under § 1.882–5(b). If a foreign corporation owns an interest in a partnership (the top-tier partnership) that owns an interest in one or more other partnerships, directly or indirectly (the lower-tier partnerships), the portion of the foreign corporation's direct or indirect interest in the top-tier partnership and lower-tier partnerships that is a U.S. asset is determined by re-attributing the portion of the top-tier partnership interest that is a U.S. asset, as determined under § 1.882–5(b), among the foreign corporation's direct interest in the top-tier partnership and indirect interests in each lower-tier partnership in proportion to their contribution to the portion of the foreign corporation's interest in the upper-tier partnership that is a U.S. asset. Each partnership interest's contribution is determined based on a reasonable method consistent with the method used to determine the portion of the top-tier partnership interest that is a U.S. asset under § 1.882–5(b).

(*4*) *Limitation on attribution of excess § 1.882–5 three-step interest expense.* The portion of excess § 1.882–5 three-step interest expense attributable to a foreign corporation under paragraph (f)(1)(iii)(C)(*2*) of this section or to a partnership under paragraph (f)(1)(iii)(C)(*2*) or (f)(1)(iii)(C)(*3*) of this section, as applicable, is limited to interest on liabilities of the foreign corporation or the foreign corporation's allocable share of liabilities of the partnership, reduced by the sum of the amounts of interest expense on its U.S. booked liabilities described in § 1.882–5(d)(2) and interest expense on liabilities described in § 1.882–5(a)(1)(ii)(A) or (B) (regarding direct allocations of interest expense). The portion of any excess § 1.882–5 three-step interest expense that would be treated as attributable to the foreign corporation or a partnership interest, as applicable, but for this paragraph (f)(1)(iii)(C)(*4*) is re-attributable in accordance with the rules and principles of this paragraph (f)(1)(iii)(C). The portion of any excess § 1.882–5 three-step interest expense that cannot be re-attributed under the rules of (f)(1)(iii)(C)(*1*) through (*3*) of this section because of the application of the first sentence of this paragraph (f)(1)(iii)(C)(*4*) is attributable, first to interest on liabilities of the foreign corporation, and then, pro rata, to the foreign corporation's allocable share of interest on liabilities of its direct or indirect partnership interests, to the extent such attribution is not in excess of the limitation described in this paragraph (f)(1)(iii)(C)(*4*), and without regard to whether the foreign corporation or its partnership interests have U.S. assets.

(2) *Coordination with the branch profits tax.* The disallowance and carryforward of business interest expense under § 1.163(j)–2(b) and (c) will not affect the computation of the U.S. net equity of a foreign corporation, as defined in § 1.884–1(c).

(g) *Definitions.* The following definitions apply for purposes of this section.

(1) *§ 1.882–5 and similar provisions.* The term *§ 1.882–5 and similar provisions* has the meaning provided in paragraph (f)(1)(i) of this section.

(2) *§ 1.882–5 three-step interest expense.* The term *§ 1.882–5 three-step interest expense* has the meaning provided in paragraph (f)(1)(iii)(A) of this section.

(3) *Allocable ECI BIE.* The term *allocable ECI BIE* means, with respect to a partnership, the specified foreign partner's allocable share of the partnership's business interest expense that is ECI, taking into account the application of paragraph (e)(2) of this section.

(4) *Allocable ECI BII.* The term *allocable ECI BII* has the meaning provided in paragraph (c)(4)(ii) of this section.

(5) *Allocable ECI deductible BIE.* The term *allocable ECI deductible BIE* has the meaning provided in paragraph (c)(3)(i) of this section.

(6) *Allocable ECI excess BIE.* The term *allocable ECI excess BIE* has the meaning provided in paragraph (c)(2)(i) of this section.

(7) *Allocable non-ECI BIE.* The term *allocable non-ECI BIE* means, with respect a partnership, the specified foreign partner's allocable share of the partnership's business interest expense that is not ECI, taking into account the application of paragraph (e)(2) of this section.

(8) *Allocable non-ECI deductible BIE.* The term *allocable non-ECI deductible BIE* has the meaning provided in paragraph (c)(3)(i) of this section.

(9) *Allocable non-ECI excess BIE.* The term *allocable non-ECI excess BIE* has the meaning provided in paragraph (c)(2)(ii) of this section.

(10) *Distributive share of ECI.* The term *distributive share of ECI* has the meaning provided in paragraph (c)(1)(iii) of this section.

(11) *Distributive share of non-ECI.* The term *distributive share of non-ECI* has the meaning provided in paragraph (c)(1)(iv) of this section.

(12) *Effectively connected income.* The term *effectively connected income* (or *ECI*) means income or gain that is ECI, as defined in § 1.884–1(d)(1)(iii), and deduction or loss that is allocable to, ECI, as defined in § 1.884–1(d)(1)(iii).

(13) *Excess § 1.882–5 three-step interest expense.* The term *excess § 1.882–5 three-step interest expense* has the meaning provided in paragraph (f)(1)(iii)(C)(*1*) of this section.

(14) *FC ECI BIE.* The term *FC ECI BIE* means, with respect to a relevant foreign corporation and a taxable year, business interest expense that is ECI, determined without regard to the application of section 163(j) and the section 163(j) regulations except for the application of paragraph (f)(1)(iii) of this section.

(15) *FC ECI deductible BIE.* The term *FC ECI deductible BIE* has the meaning provided in paragraph (d)(3)(i) of this section.

(16) *FC ECI disallowed BIE.* The term *FC ECI disallowed BIE* has the meaning provided in paragraph (d)(2)(i) of this section.

(17) *FC non-ECI BIE.* The term *FC non-ECI BIE* means, with respect to a relevant foreign corporation and a taxable year, business interest expense that is not ECI, determined without regard to the application of section 163(j) and the section 163(j) regulations except for the application of paragraph (f)(1)(iii) of this section.

(18) *FC non-ECI deductible BIE.* The term *FC non-ECI deductible BIE* has the meaning provided in paragraph (d)(3)(i) of this section.

(19) *FC non-ECI disallowed BIE.* The term *FC non-ECI disallowed BIE* has the meaning provided in paragraph (d)(2)(ii) of this section.

(20) *Hypothetical partnership ECI deductible BIE.* The term *hypothetical partnership ECI deductible BIE* has the meaning provided in paragraph (c)(3)(iii)(A) of this section.

(21) *Hypothetical partnership non-ECI deductible BIE.* The term *hypothetical partnership non-ECI deductible BIE* has the meaning provided in paragraph (c)(3)(iii)(B) of this section.

(22) *Hypothetical FC ECI deductible BIE.* The term *hypothetical FC ECI deductible BIE* has the meaning provided in paragraph (d)(3)(iii)(A) of this section.

(23) *Hypothetical FC non-ECI deductible BIE.* The term *hypothetical FC non-ECI deductible BIE* has the meaning provided in paragraph (d)(3)(iii)(B) of this section.

(24) *Specified ATI ratio.* The term *specified ATI ratio* has the meaning provided in paragraph (c)(1)(ii) of this section.

(25) *Specified BII ratio.* The term *specified BII ratio* has the meaning provided in paragraph (c)(4)(ii) of this section.

(26) *Specified foreign partner.* The term *specified foreign partner* means, with respect to a partnership that has ECI, a direct or indirect partner that is a specified foreign person or a relevant foreign corporation.

(27) *Specified foreign person.* The term *specified foreign person* means a nonresident alien individual, as defined in section 7701(b) and the regulations under section 7701(b), or a foreign corporation other than a relevant foreign corporation.

(28) *Successor.* The term *successor* includes, with respect to a foreign corporation, the acquiring corporation in a transaction described in section 381(a) in which the foreign corporation is the distributor or transferor corporation.

(h) *Examples.* The following examples illustrate the application of this section. For all examples, assume that all referenced interest expense is deductible but for the application of section 163(j), the small business exemption under § 1.163(j)–2(d) is not available, no entity is engaged in an excepted trade or business, no business interest expense is floor plan financing interest expense, all entities have the same taxable year, all entities use the U.S. dollar as their functional currency, no foreign corporation is a relevant foreign corporation, all relevant taxable years begin after December 31, 2020, and, for purposes of computing ATI, none of the adjustments described in § 1.163(j)–1(b) are relevant other than the adjustment for business interest expense.

(1) *Example 1. Limitation on business interest deduction of a foreign corporation*—(i) *Facts.* FC, a foreign corporation, has $100x of gross income that is ECI. FC has $60x of other income which is not ECI. FC has total expenses of $100x, of which $50x is business interest expense. Assume that FC has $30x of § 1.882–5 three-step interest expense. Under section 882(c) and the regulations, FC has $40x of other expenses that are ECI, none of which are business interest expense. FC does not have any business interest income. All amounts described in this paragraph (h)(1)(i) are with respect to a single taxable year of FC.

(ii) *Analysis.* FC is a specified foreign person under paragraph (g)(27) of this section. The amount of FC's business interest expense that is disallowed for the taxable year is determined under § 1.163(j)–2(b) with respect to business interest expense described in paragraph (b)(3) of this section. Under paragraph (b)(3) of this section, FC has business interest expense of $30x. Under paragraph (b)(2) of this section, FC has ATI of $60x ($100x − $40x). Accordingly, FC's section 163(j) limitation is $18x ($60x × 30 percent). Because FC's business interest expense ($30x) that is ECI exceeds the section 163(j) limitation ($18x), FC may only deduct $18x of business interest expense. Under § 1.163(j)–2(c), the remaining $12x is disallowed business interest expense carryforward, and under paragraph (f)(1)(i) of this section, the $12x is not taken into account for purposes of applying § 1.882–5 in the succeeding taxable year.

(2) *Example 2. Use of a disallowed business interest expense carryforward*—(i) *Facts.* The facts are the same as in *Example 1* in paragraph (h)(1)(i) of this section except that for the taxable year FC has $300x of gross income that is all ECI. Furthermore, assume that for the taxable year FC has a disallowed business interest expense carryforward of $25x with respect to business interest expense described in paragraph (b)(3) of this section.

(ii) *Analysis.* Under paragraph (f)(1)(i) of this section, FC's $25x of disallowed business interest expense carryforward is not taken into account for purposes of determining FC's interest expense under § 1.882–5 for the taxable year. Therefore, FC has $30x of § 1.882–5 three-step interest expense. Under paragraph (b)(2) of this section, FC has ATI of $260x ($300x of gross income reduced by $40 of expenses other than business interest expense). Accordingly, FC's section 163(j) limitation is $78x ($260x × 30 percent). Because FC's business interest expense ($55x) does not exceed the section 163(j) limitation ($78x), FC may deduct all $55x of business interest expense.

(3) *Example 3. Foreign corporation is engaged in a U.S. trade or business and is also a specified foreign partner*—(i) *Facts.* FC, a foreign corporation, owns a 50-percent interest in ABC, a partnership that has ECI. In addition to owning a 50-percent interest in ABC, FC conducts a separate business that is engaged in a trade or business in the United States, Business Y. Business Y produces $65x of taxable income before taking into account business interest expense and has U.S. assets with an adjusted basis of $300x, business interest expense of $15x on $160x of liabilities, and no business interest income. All of the liabilities of Business Y are U.S. booked liabilities for purposes of § 1.882–5(d). FC also has various foreign operations, some of which have U.S. dollar denominated debt. ABC has two lines of business, Business S and Business T. FC is allocated 50 percent of all items of income and expense of Business S and Business T. Business S produces $140x of taxable income before taking into account business interest expense, and Business T produces $80x of taxable income before taking into account business interest expense. Business S has business interest expense of $20x on $400x of liabilities and no business interest income. Business T has business interest expense of $10x on $150x of liabilities and no business interest income. With respect to FC, only Business S produces ECI. FC has an outside basis of $600x in the portion of its ABC partnership interest that is a U.S. asset for purposes of § 1.882–5(b), step 1. All of the liabilities of Business S are U.S. booked liabilities for purposes of § 1.882–5(d). FC computes its interest expense under the three-step method described in § 1.882–5(b) through (d) and for purposes of § 1.882–5(c), step 2, FC uses the fixed ratio of 50 percent described in § 1.882–5(c)(4) for taxpayers that are neither a bank nor an insurance company. Under § 1.882–5(d)(5)(ii), FC's interest rate on excess U.S. connected liabilities is 5 percent. For the taxable year, assume FC has total interest expense of $100x for purposes of § 1.882–5(a)(3). All amounts described in this paragraph (h)(3)(i) are with respect to a single taxable year of FC or ABC, as applicable.

(ii) *Analysis*—(A) *Application of § 1.882–5 to FC.* FC is a specified foreign person under paragraph (g)(27) of this section and a specified foreign partner under paragraph (g)(26) of this section. Under paragraph (f)(1) of this section, FC first determines its § 1.882–5 three-step interest expense and then applies section 163(j). Under § 1.882–5(b), step 1, FC has U.S. assets of $900x ($600x of basis in the portion of its ABC partnership interest that is a U.S. asset determined using the asset method described in § 1.884–1(d)(3)(ii) + $300x basis in U.S. assets of Business Y). Under § 1.882–5(c), step 2, applying the 50-percent fixed ratio described in § 1.882–5(c)(4), FC has U.S. connected liabilities of $450x ($900x × 50 percent). Under § 1.882–5(d), step 3, FC has U.S. booked liabilities of $360x ($200x attributable to its 50-percent share of Business S liabilities of ABC + $160x of Business Y liabilities) and interest on U.S. booked liabilities of $25x ($10x attributable to its 50-percent share of $20x interest expense of Business S + $15x of Business Y interest expense). FC has excess U.S. connected liabilities of $90x ($450x − $360x) and under § 1.882–5(d)(5) has interest expense on excess U.S. connected liabilities of $4.50x ($90x × 5 percent), which is excess § 1.882–5 three-step interest expense. FC's § 1.882–5 three-step interest expense is $29.50x ($25x + $4.50x).

(B) *Attribution of § 1.882–5 business interest expense between FC and ABC.* Under paragraph (f)(1)(iii) of this section, FC's § 1.882–5 three-step interest expense is attributable to interest on its liabilities or on its share of ABC liabilities. Under paragraph (f)(1)(iii)(B), FC's § 1.882–5 three-step interest expense of $29.50x is first attributable to $15 of interest expense on FC's (Business Y) U.S. booked liabilities and $10x of interest expense on FC's share of U.S. booked liabilities of ABC. Under paragraph (f)(1)(iii)(C)(*2*) of this section, of the excess § 1.882–5 three-step interest expense of $4.50x ($29.50x − $15x − $10x), 66.67 percent ($600x of basis in the portion of the ABC partnership interest that is a U.S. asset/$900x of total U.S. assets), or $3.00x, is attributable to interest expense on FC's share of liabilities of ABC and 33.33 percent ($300x U.S. assets other than partnership interests/$900x of total U.S. assets), or $1.50x, is attributable to interest expense on liabilities of FC. As a result, $16.50x of business interest expense ($15x + $1.50x) is attributed to FC and $13x of business interest expense ($10x + $3x) is attributed to ABC. The limitation under paragraph (f)(1)(iii)(C)(*4*) of this section does not change the result described in the preceding sentence. Specifically, under paragraph (f)(1)(iii)(C)(*4*) of this section, the amount attributed to ABC (tentatively, $3.00x) is limited to $5x (FC's 50-percent share of the $30x of business interest expense of ABC or $15x, reduced by FC's 50-percent share of the $20x of business interest expense on U.S. booked liabilities of Business S), and the amount attributed to FC (tentatively, $1.50x) is limited to $70x (FC's business interest expense of $100x, reduced by $15x of business interest expense on U.S. booked liabilities of Business Y and its $15x allocable share of ABC's business interest expense).

(C) *Application of the section 163(j) limitation to ABC.* Under § 1.163(j)–6(a), ABC computes a section 163(j) limitation at the partnership level. ABC has business interest expense of $30x ($20x from Business S and $10x from Business T). Under § 1.163(j)–6(d), ABC has ATI of $220x ($140 + $80). Under § 1.163(j)–2(b), ABC's section 163(j) limitation is $66x ($220x × 30 percent). Because ABC's business interest expense ($30x) does not exceed the section 163(j) limitation ($66x), all of ABC's business interest expense is deductible for the taxable year.

(D) *Excess taxable income of ABC.* Under § 1.163(j)–1(b)(15), ABC has excess taxable income of $120x ($220x × ($36x/$66x)). Under § 1.163(j)–6(f)(2), FC is allocated 50 percent of the $120x of ABC's excess taxable income or $60x of allocable excess taxable income. Under paragraph (c)(1) of this section, the amount of the allocable excess taxable income of $60x that is ECI is equal to FC's allocable excess taxable income multiplied by the specified ATI ratio. Under paragraph (c)(1)(iii) of this section, FC's distributive share of ECI of ABC is $57x (FC's 50-percent share of $140x (Business S income computed without regard to business interest expense) or $70x–$13x of business interest expense that is ECI). Under paragraph (c)(1)(iv) of this section, FC's distributive share of non-ECI of ABC is $38x (FC's 50-percent share of $80x (Business T income computed without regard to business interest expense) or $40x–$2x of business interest expense that is not ECI). FC's distributive share of partnership items of income, gain, deduction, and loss of ABC is $95x ($57x distributive share of ECI and $38x distributive share of non-ECI). Because both FC's distributive share of ECI and distributive share of non-ECI are positive, under paragraph (c)(1)(ii) of this section, the specified ATI ratio is 60 percent ($57x distributive share of ECI/$95x distributive share of partnership items of income, gain, deduction, and loss of ABC). As a result, the amount of FC's allocable excess taxable income from ABC that is ECI is $36x ($60 of allocable excess taxable income × 60 percent specified ATI ratio).

(E) *Application of section 163(j) to FC.* Under paragraph (b)(3) of this section, FC's business interest expense is $16.50x. Under § 1.163(j)–6(e)(1), FC's ATI is determined under § 1.163(j)–1(b)(1) without regard to FC's distributive share of any items of income, gain, deduction, or loss of ABC. Under paragraph (b)(2) of this section, FC's ATI is $101x ($65x of ECI from Business Y + $36x of allocable excess taxable income from ABC that is ECI). FC's section 163(j) limitation is $30.30x ($101x × 30 percent). Because FC's business interest expense ($16.50x) is less than FC's section 163(j) limitation ($30.30x) and all of its share of ABC's business interest expense that is allocable to ECI ($13x) is deductible, FC may deduct all $29.50x of § 1.882–5 three-step interest expense determined under paragraph (h)(3)(ii)(A) of this section.

(4) *Example 4. Specified foreign partner with excess business interest expense from a partnership*—(i) *Facts*—(A) *In general.* FC, a foreign corporation, owns a 50-percent interest in ABC, a partnership that has ECI. In addition to owning a 50-percent interest in ABC, FC conducts a separate business that is engaged in a trade or business in the United States, Business Y. Business Y produces $56x of taxable income before taking into account business interest expense and has U.S. assets with an adjusted basis of $800x, business interest expense of $16x on $200x of liabilities, and no business interest income. All of the liabilities of Business Y are U.S. booked liabilities for purposes of § 1.882–5(d). FC also has various foreign operations, some of which have U.S. dollar denominated debt.

(B) *ABC Partnership.* ABC has two lines of business, Business S and Business T, and owns a 50-percent interest in DEF, a partnership. FC is allocated 50 percent of all items of income and expenses of Business S and Business T and ABC's allocable share of items from partnership DEF. Business S produces $80x of taxable income before taking into account business interest expense, and Business T produces $90x of taxable income before taking into account business interest expense. Business S has business interest expense of $30x on $500x of liabilities and no business interest income. Business T has business interest expense of $50x on $500x of liabilities and no business interest income. With respect to FC, only Business S produces ECI. All of the liabilities of Business S are U.S. booked liabilities for purposes of § 1.882–5(d).

(C) *DEF Partnership.* DEF has two lines of business, Business U and Business V. ABC is allocated 50 percent of all items of income and expenses of Business U and Business V. Business U produces $100x of taxable income before taking into account business interest expense and Business V produces $140x of taxable income before taking into account business interest expense. Business U has business interest expense of $40x on $600x of liabilities and no business interest income. Business V has business interest expense of $60x on $600x of liabilities and no business interest income. With respect to FC, only Business U produces ECI. All of the liabilities of Business U are U.S. booked liabilities for purposes of § 1.882–5(d).

(D) *Section 1.882–5.* FC has an outside basis of $600x in the portion of its ABC partnership interest that is a U.S. asset for purposes of § 1.882–5(b), step 1, determined using the asset method described in § 1.884–1(d)(3)(ii). For purposes of § 1.884–1(d)(3)(ii), ABC has a total basis of $500 in assets that would be treated as U.S. assets if ABC were a foreign corporation, including a basis of $250x in the portion of its interest in DEF partnership interest that would be treated as a U.S. asset if ABC were a foreign corporation. FC computes its interest expense under the three-step method described in § 1.882–5(b) through (d), and for purposes of § 1.882–5(c), step 2, FC uses the fixed ratio of 50 percent described in § 1.882–5(c)(4) for taxpayers that are neither a bank nor an insurance company. FC has total interest expense of $100x for purposes of § 1.882–5(a)(3). Under § 1.882–5(d)(5)(ii), FC's interest rate on excess U.S. connected liabilities is 6 percent. All amounts described in this paragraph (h)(4)(i) are with respect to a single taxable year of FC, ABC, or DEF, as applicable.

(ii) *Analysis*—(A) *Application of § 1.882–5 to FC.* FC is a specified foreign person under paragraph (g)(27) of this section and a specified foreign partner under paragraph (g)(26) of this section. Under paragraph (f)(1) of this section, FC first determines its § 1.882–5 three-step interest expense and then applies section 163(j). Under § 1.882–5(b), step 1, FC has U.S. assets of $1400x ($600x of basis in the portion of its ABC partnership interest that is a U.S. asset + $800x basis in U.S. assets of Business Y). Under § 1.882–5(c), step 2, applying the 50-percent fixed ratio described in § 1.882–5(c)(4), FC has U.S. connected liabilities of $700x ($1400x × 50 percent). Under § 1.882–5(d), step 3, FC has U.S. booked liabilities of $600x ($250x attributable to its 50-percent share of Business S liabilities of ABC + $150x attributable to its indirect 25-percent share of Business U liabilities of DEF + $200x of Business Y liabilities), and interest on U.S. booked liabilities of $41x ($15x attributable to its 50-percent share of $30x interest expense of Business S + $10x attributable to its 25-percent share of $40 interest expense of Business U + $16x of Business Y interest expense). FC has excess U.S. connected liabilities of $100x ($700x − $600x) and under § 1.882–5(d)(5), interest expense on excess U.S. connected liabilities of $6x ($100x × 6 percent), which is excess § 1.882–5 three-step interest expense. FC's § 1.882–5 three-step interest expense is $47x ($41x + $6x).

(B) *Attribution of certain § 1.882–5 business interest expense among FC, ABC, and DEF.* Under paragraph (f)(1)(iii) of this section, FC's § 1.882–5 three-step interest expense is attributable to interest on its liabilities or on its share of ABC and DEF's liabilities. Under paragraph (f)(1)(iii)(B) of this section, FC's § 1.882–5 three-step interest expense of $47x is first attributable to $16 of interest expense on FC's U.S. booked liabilities, $15x of interest expense on FC's share of U.S. booked liabilities of ABC, and $10x of interest expense on FC's share of U.S. booked liabilities of DEF. Under paragraph (f)(1)(iii)(C)(*2*) of this section, of the excess § 1.882–5 three-step interest expense of $6x ($47x − $16x − $15x − $10x), 42.86 percent ($600x of basis in the portion of the ABC partnership interest that is a U.S. asset/ $1400x of total U.S. assets) or $2.57x is attributable to interest expense on FC's share of liabilities of ABC (and its partnership interests), and 57.14 percent ($800x U.S. assets other than partnership interests/ $1400x of total U.S. assets) or $3.43x is attributable to interest expense on liabilities of FC. Under paragraph (f)(1)(iii)(C)(*3*) of this section, of the $2.57x of business interest expense that is ECI and that is attributable to interest expense on FC's share of liabilities of ABC (and its partnership interests), 50 percent ($250x of basis in the portion of the DEF partnership interest that would be a U.S. asset if ABC were a foreign corporation/ $500x total basis in assets that would be U.S. assets if ABC were a foreign corporation), or $1.29x, is attributable to interest expense on FC's share of liabilities of ABC and 50 percent ($250x of basis in assets other than partnership interests that would be U.S. assets if ABC were a foreign corporation/ $500x of total basis in assets that would be U.S. assets if ABC were a foreign corporation), or $1.29x is attributable to interest expense on FC's share of liabilities of DEF. As a result, $19.43x ($16x + $3.43x) of business interest expense is attributed to FC, $16.29x ($15x + $1.29x) of business interest expense is attributed to ABC, and $11.29x ($10x + $1.29x) of business interest expense is attributed to DEF. The limitation under paragraph (f)(1)(iii)(C)(*4*) of this section does not change the result described in the preceding sentence. Specifically, under paragraph (f)(1)(iii)(C)(*4*) of this section, the amount attributed to FC (tentatively, $3.43x) is limited to $19x (FC's business interest expense of $100x, reduced by $16x of business interest expense on U.S. booked liabilities of Business Y, its $40x allocable share of ABC's business interest expense, and its $25 allocable share of DEF's business interest expense); the amount attributed to ABC (tentatively, $1.29x) is limited to $25x (FC's 50-percent share of the $80x of business interest expense of ABC, or $40x, reduced by FC's 50-percent share of the $30x of business interest expense on U.S. booked liabilities of Business S, or $15x); and the amount attributed to DEF (tentatively, $1.29x) is limited to $15x (FC's 25-percent share of the $100x of business interest expense of DEF, or $25x, reduced by FC's 25-percent share of the $40x of business interest expense on U.S. booked liabilities of Business U, or $10x).

(C) *Application of section 163(j) to DEF*—(*1*) *In general.* Under § 1.163(j)–6(a), DEF computes a section 163(j) limitation at the partnership-level. DEF has business interest expense of $100x ($40x from Business U + $60x from Business V). Under § 1.163(j)–6(d), DEF has ATI of $240x ($100x + $140x). Under § 1.163(j)–2(b), DEF's section 163(j) limitation is $72x ($240x × 30 percent). Because DEF's business interest expense ($100x) exceeds the section 163(j) limitation ($72x), only $72x of DEF's business interest expense is deductible and $28x is disallowed under section 163(j). Pursuant to paragraph (e)(2) of this section, FC is allocated $7x of excess business interest expense (25 percent × $28x) and $18x of deductible business interest expense (25 percent × $72x).

(*2*) *Deductible business interest expense.* Under paragraph (c)(3) of this section, in order to determine the portion of FC's allocable deductible business interest expense ($18x) that is allocable ECI deductible BIE and the portion that is allocable non-ECI deductible BIE, the hypothetical partnership ECI deductible BIE and hypothetical partnership non-ECI deductible BIE must be determined. Under paragraph (c)(3)(iii)(A) of this section, FC's hypothetical partnership ECI deductible BIE with respect to DEF is $7.50x ($25x of FC's allocable share of ECI before taking into account interest expense × 30 percent). Under paragraph (c)(3)(iii)(B) of this section, FC's hypothetical partnership non-ECI deductible BIE with respect to DEF is $10.50x ($35x of FC's allocable share of income that is not ECI before taking into account interest expense × 30 percent). Under paragraph (c)(3)(i) of this section, allocable ECI deductible BIE is equal to the amounts described in paragraphs (c)(3)(ii)(A)(*1*)(*i*) and (c)(3)(ii)(B)(*1*) of this section and allocable non-ECI deductible BIE is equal to the amounts described in paragraphs (c)(3)(ii)(A)(*1*)(*ii*) and (c)(3)(ii)(B)(*2*) of this section. Under paragraph (c)(3)(ii)(A)(*1*) of this section, FC's allocable deductible business interest expense ($18x) is allocated pro rata between hypothetical partnership ECI deductible BIE ($7.50x) and hypothetical partnership non-ECI deductible BIE ($10.50x). However, the amount allocated to hypothetical partnership ECI deductible BIE cannot exceed the lesser of hypothetical partnership ECI deductible BIE ($7.50x) or allocable ECI BIE ($11.29x), and the amount allocated to hypothetical partnership non-ECI deductible BIE cannot exceed the lesser of hypothetical partnership non-ECI deductible BIE ($10.50x) or allocable non-ECI BIE (total allocable business interest expense of $25x reduced by allocable ECI BIE of $11.29x, or $13.71x). The portion of FC's allocable deductible business interest expense ($18x) from DEF that is allocable ECI deductible BIE is 41.67 percent ($7.50x of hypothetical partnership ECI deductible BIE/ $18x of total hypothetical partnership deductible BIE), or $7.5x. The portion of FC's allocable deductible business interest expense from DEF ($18x) that is allocable non-ECI deductible BIE is 58.33 percent ($10.50x of hypothetical partnership ECI deductible BIE/$18x of total hypothetical partnership deductible BIE), or $10.50x. Because the full amount of FC's allocable deductible business interest expense ($18x) is allocable under paragraph (c)(3)(ii)(A)(*1*) of this section, no portion is allocated under paragraph (c)(3)(ii)(B) of this section.

(*3*) *Excess business interest expense.* Under paragraph (c)(2)(i) of this section, the portion of excess business interest expense allocated to FC from DEF pursuant to paragraph (e)(2) of this section ($7x) that is allocable ECI excess BIE is $3.79x ($11.29x of allocable ECI BIE − $7.50x allocable ECI deductible BIE). Under paragraph (c)(2)(ii) of this section, the portion of excess business interest expense allocated to FC from DEF pursuant to paragraph (e)(2) of this section ($7x) that is allocable non-ECI excess BIE is $3.21x ($13.71x of allocable non-ECI BIE − $10.50x allocable non-ECI deductible BIE).

(D) *Application of section 163(j) to ABC*—(*1*) *In general.* Under § 1.163(j)–6(a), ABC computes a section 163(j) limitation at the partnership-level. ABC has business interest expense of $80x ($30x from Business S + $50x from Business T). Under § 1.163(j)–6(d), ABC has ATI of $170x ($80x + $90x). Under § 1.163(j)–2(b), ABC's section 163(j) limitation is $51x ($170x × 30 percent). Because ABC's business interest expense ($80x) exceeds the section 163(j) limitation ($51x), ABC may only deduct $51x of business interest expense, and $29x is disallowed under section 163(j). Pursuant to § 1.163(j)–6(f)(2), FC is allocated $14.50x of excess business interest expense (50 percent × $29x) and $25.50x of deductible business interest expense (50 percent × $51x).

(*2*) *Deductible business interest expense.* Under paragraph (c)(3) of this section, in order to determine the portion of FC's allocable deductible business interest expense ($25.50x) that is allocable ECI deductible BIE and the portion that is allocable non-ECI deductible BIE, the hypothetical partnership ECI deductible BIE and hypothetical partnership non-ECI deductible BIE must be determined. Under paragraph (c)(3)(iii)(A) of this section, FC's hypothetical partnership ECI deductible BIE with respect to ABC is $12x ($40x of FC's allocable share of ECI before taking into account interest expense × 30 percent). Under paragraph (c)(3)(iii)(B) of this section, FC's hypothetical partnership non-ECI deductible BIE with respect to ABC is $13.50x ($45x of FC's allocable share of income that is not ECI before taking into account interest expense × 30 percent). Under paragraph (c)(3)(i) of this section, allocable ECI deductible BIE is equal to the amounts described in paragraphs (c)(3)(ii)(A)(*1*)(*i*) and (c)(3)(ii)(B)(*1*) of this section and allocable non-ECI deductible BIE is equal to the amounts described in paragraphs (c)(3)(ii)(A)(*1*)(*ii*) and (c)(3)(ii)(B)(*2*) of this section. Under paragraph (c)(3)(ii)(A)(*1*) of this section, FC's allocable deductible business interest expense ($25.50x) is allocated pro rata between hypothetical partnership ECI deductible BIE ($12x) and hypothetical partnership non-ECI deductible BIE ($13.50x). However, the amount allocated to hypothetical partnership ECI deductible BIE cannot exceed the lesser of hypothetical partnership ECI deductible BIE ($12x) or allocable ECI BIE ($16.29x), and the amount allocated to hypothetical partnership non-ECI deductible BIE cannot exceed the lesser of hypothetical partnership non-ECI deductible BIE ($13.50x) or allocable non-ECI BIE (total allocable business interest expense of $40x reduced by allocable ECI BIE of $16.29x, or $23.71x). The portion of FC's allocable deductible business interest expense from ABC ($25.50x) that is allocable ECI deductible BIE is 47.06 percent ($12x of hypothetical partnership ECI deductible BIE/ $25.50x of total hypothetical partnership deductible BIE), or $12x. The portion of FC's allocable deductible business interest expense from ABC that is allocable non-ECI deductible BIE is 52.94 percent ($13.50x of hypothetical partnership ECI deductible BIE/ $25.50x of total hypothetical partnership deductible BIE), or $13.50x. Because the full amount of FC's allocable deductible business interest expense ($25.50x) is allocable under paragraph (c)(3)(ii)(A)(*1*) of this section, no portion is allocated under paragraph (c)(3)(ii)(B) of this section.

(*3*) *Excess business interest expense.* Under paragraph (c)(2)(i) of this section, the portion of excess business interest expense allocated to FC from ABC pursuant to § 1.163(j)–6(f)(2)($14.50x) that is allocable ECI excess BIE is $4.29x ($16.29x of allocable ECI BIE − $12x allocable ECI deductible BIE). Under paragraph (c)(2)(ii) of this section, the portion of excess business interest expense allocated to FC from ABC pursuant to § 1.163(j)–6(f)(2) ($14.50x) that is allocable non-ECI excess BIE is $10.21x ($23.71x of allocable non-ECI BIE − $13.50x allocable non-ECI deductible BIE).

(E) *Application of section 163(j) to FC.* Under paragraph (b)(3) of this section, FC's business interest expense is $19.43x. Under § 1.163(j)–6(e)(1), FC's ATI is determined under § 1.163(j)–1(b)(1) without regard to FC's distributive share of any items of income, gain, deduction, or loss of ABC or DEF. Under paragraph (b)(2) of this section, FC's ATI is $56x ($56x of ECI of Business Y before taking into account interest expense). FC's section 163(j) limitation is $16.80x ($56x × 30 percent). Because the portion of FC's business interest expense determined under § 1.882–5 that is attributed to FC ($19.43x) exceeds the section 163(j) limitation ($16.80x), FC may only deduction $16.80x of business interest expense, and $2.63x is disallowed business interest expense carryforward. After taking into account FC's allocable share of deductible business interest expense, FC may deduct $36.30x ($16.80x from FC + $12x allocable ECI deductible BIE from ABC + $7.50x allocable ECI deductible BIE from DEF). FC also has $2.63x disallowed business interest expense carryforward characterized as ECI, $4.29x allocable ECI excess BIE from ABC, $10.21x allocable non-ECI excess BIE from ABC, and, under paragraph (e)(2) of this section, is deemed to have $3.79x allocable ECI excess BIE from DEF and $3.21x allocable non-ECI excess BIE from DEF.

(i) [Reserved]

(j) *Applicability date.* This section applies to taxable years beginning on or after [DATE 60 DAYS AFTER DATE OF PUBLICATION OF THE FINAL RULE IN THE **FEDERAL REGISTER**]. However, taxpayers and their related parties, within the meaning of sections 267(b) and 707(b)(1), may choose to apply this section in its entirety for a taxable year beginning after December 31, 2017, so long as the taxpayers and their related parties also apply § 1.163(j)–7(a), (c) through (f), (g)(3) and (4), and (h) through (k) for the taxable year. For a taxable year beginning before November 13, 2020, taxpayers and their related parties may not choose to apply this section unless they also apply § 1.163(j)–7(b) and (g)(1) and (2) in accordance with the second sentence of § 1.163(j)–7(m)(1).

■ **Par. 10.** As added in a final rule elsewhere in this issue of the **Federal Register**, effective November 13, 2020, § 1.163(j)–10 is amended by:

■ 1. Designating paragraph (c)(5)(ii)(D) as paragraph (c)(5)(ii)(D)(*1*).

■ 2. Adding a subject heading for paragraph (c)(5)(ii)(D).

■ 3. Adding paragraph (c)(5)(ii)(D)(*2*).

■ 4. Designating paragraph (f) as paragraph (f)(1).

■ 5. Adding a subject heading for paragraph (f).

■ 6. Revising the subject heading of newly redesignated paragraph (f)(1).

■ 7. Adding paragraph (f)(2).

The additions and revision read as follows:

1.163(j)–10 Allocation of interest expense, interest income, and other items of expense and gross income to an excepted trade or business.

* * * * *

(c) * * *

(5) * * *

(ii) * * *

(D) *Limitations on application of look-through rules.* * * *

(*2*) *Limitation on application of look-through rule to C corporations.* Except as provided in § 1.163(j)–9(h)(4)(iii) and (iv) (for a REIT or a partnership making the election under § 1.163(j)–9(h)(1) or (7), respectively), for purposes of applying the look-through rules in paragraph (c)(5)(ii)(B) and (C) of this section to a non-consolidated C corporation (upper-tier entity), that upper-tier entity may not apply these look-through rules to a lower-tier non-consolidated C corporation. For example, assume that P wholly and directly owns S1 (the upper-tier entity), which wholly and directly owns S2. Further assume that each of these entities is a non-consolidated C corporation to which the small business exemption does not apply. S1 may not look through the stock of S2 (and may not apply the asset basis look-through rule described in paragraph (c)(5)(ii)(B)(*2*)(*iv*) of this section) for purposes of P's allocation of its basis in its S1 stock between excepted and non-excepted trades or businesses; instead, S1 must treat its stock in S2 as an asset used in a non-excepted trade or business for that purpose. However, S1 may look through the stock of S2 for purposes of S1's allocation of its basis in its S2 stock between excepted and non-excepted trades or businesses.

* * * * *

(f) *Applicability dates.*

(1) *In general.* * * *

(2) *Paragraph (c)(5)(ii)(D)(2).* The rules contained in paragraph (c)(5)(ii)(D)(*2*) of this section apply for taxable years beginning on or after [DATE 60 DAYS AFTER DATE OF PUBLICATION OF THE FINAL RULE IN THE **FEDERAL REGISTER**]. However, taxpayers may choose to apply the rules of paragraph (c)(5)(ii)(D)(*2*) of this section to a taxable year beginning after December 31, 2017, and before [DATE 60 DAYS AFTER DATE OF PUBLICATION OF THE FINAL RULE IN THE **FEDERAL REGISTER**], so long as they consistently apply the rules in the section 163(j) regulations, and, if applicable, §§ 1.263A–9, 1.263A–15, 1.381(c)(20)–1, 1.382–1, 1.382–2, 1.382–5, 1.382–6, 1.383–0, 1.383–1, 1.469–9, 1.704–1, 1.882–5, 1.1362–3, 1.1368–1, 1.1377–1, 1.1502–13, 1.1502–21, 1.1502–79, 1.1502–91 through 1.1502–99 (to the extent they effectuate the rules of §§ 1.382–2, 1.382–5, 1.382–6, and 1.383–1), and 1.1504–4 to that taxable year and each subsequent taxable year.

■ **Par. 11.** Section 1.469–4 is amended by adding paragraph (d)(6) to read as follows:

§ 1.469–4 Definition of activity.

* * * * *

(d) * * *

(6) *Activities described in section 163(d)(5)(A)(ii).* An activity described in section 163(d)(5)(A)(ii) that involves the conduct of a trade or business which is not a passive activity of the taxpayer and with respect to which the taxpayer does not materially participate may not be grouped with any other activity or activities of the taxpayer, including any other activity described in section 163(d)(5)(A)(ii).

* * * * *

■ **Par. 12.** As amended in a final rule elsewhere in this issue of the **Federal Register**, effective November 13, 2020, § 1.469–9 is further amended by revising paragraphs (b)(2)(ii)(A) and (B) to read as follows:

§ 1.469–9 Rules for certain rental real estate activities.

* * * * *

(b) * * *

(2) * * *

(ii) * * *

(A) *Real property development.* The term *real property development* means the maintenance and improvement of raw land to make the land suitable for subdivision, further development, or construction of residential or commercial buildings, or to establish, cultivate, maintain or improve timberlands (that is, land covered by timber-producing forest). Improvement of land may include any clearing (such as through the mechanical separation and removal of boulders, rocks, brush, brushwood, and underbrush from the land); excavation and gradation work; diversion or redirection of creeks, streams, rivers, or other sources or bodies of water; and the installation of roads (including highways, streets, roads, public sidewalks, and bridges), utility lines, sewer and drainage systems, and any other infrastructure that may be necessary for subdivision, further development, or construction of residential or commercial buildings, or for the establishment, cultivation, maintenance or improvement of timberlands.

(B) *Real property redevelopment.* The term *real property redevelopment* means the demolition, deconstruction, separation, and removal of existing buildings, landscaping, and infrastructure on a parcel of land to return the land to a raw condition or otherwise prepare the land for new development or construction, or for the establishment and cultivation of new timberlands.

* * * * *

■ **Par. 13.** Section 1.469–11 is amended by revising paragraphs (a)(1) and (4) to read as follows:

§ 1.469–11 Applicability date and transition rules.

(a) * * *

(1) The rules contained in §§ 1.469–1, 1.469–1T, 1.469–2, 1.469–2T, 1.469–3, 1.469–3T, 1.469–4, but not § 1.469–4(d)(6), 1.469–5 and 1.469–5T apply for taxable years ending after May 10, 1992. The rules contained in § 1.469–4(d)(6) apply for taxable years beginning on or after [DATE 60 DAYS AFTER DATE OF PUBLICATION OF THE FINAL RULE IN THE **FEDERAL REGISTER**]. However, taxpayers and their related parties, within the meaning of sections 267(b) and 707(b), may choose to apply the rules of § 1.469–4(d)(6) to a taxable year beginning after December 31, 2017, and before [DATE 60 DAYS AFTER DATE OF PUBLICATION OF THE FINAL RULE IN THE **FEDERAL REGISTER**], so long as they consistently apply the rules in the section 163(j) regulations, and, if applicable, §§ 1.263A–9, 1.263A–15, 1.381(c)(20)–1, 1.382–1, 1.382–2, 1.382–5, 1.382–6, 1.383–0, 1.383–1, 1.469–9, 1.704–1, 1.882–5, 1.1362–3, 1.1368–1, 1.1377–1, 1.1502–13, 1.1502–21, 1.1502–79, 1.1502–91 through 1.1502–99 (to the extent they effectuate the rules of §§ 1.382–2, 1.382–5, 1.382–6, and 1.383–1), and 1.1504–4 to that taxable year and each subsequent taxable year.

* * * * *

(4) The rules contained in § 1.469–9(b)(2), other than paragraphs (b)(2)(ii)(A) and (B), apply to taxable years beginning on or after [INSERT DATE 60 DAYS AFTER DATE OF PUBLICATION OF THE FINAL RULE IN THE **FEDERAL REGISTER**]. Section 1.469–9(b)(2)(ii)(A) and (B) applies to taxable years beginning on or after [DATE 60 DAYS AFTER DATE OF PUBLICATION OF THE FINAL RULE IN THE **FEDERAL REGISTER**]. However, taxpayers and their related parties, within the meaning of sections 267(b) and 707(b)(1), may choose to apply the rules of § 1.469–9(b)(2), other than paragraphs (b)(2)(ii)(A) and (B), to a taxable year beginning after December 31, 2017, and before [INSERT DATE 60 DAYS AFTER DATE OF PUBLICATION OF THE FINAL RULE IN THE **FEDERAL REGISTER**] and may choose to apply the rules contained in 1.469–9(b)(2)(ii)(A) and (B) to taxable years beginning after December 31, 2017, and before [DATE 60 DAYS AFTER DATE OF PUBLICATION OF THE FINAL RULE IN THE **FEDERAL REGISTER**], so long as they consistently apply the rules of the section 163(j) regulations, and, if applicable, §§ 1.263A–9, 1.263A–15, 1.381(c)(20)–1, 1.382–1, 1.382–2, 1.382–5, 1.382–6, 1.383–0, 1.383–1, 1.469–9, 1.704–1, 1.882–5, 1.1362–3, 1.1368–1, 1.1377–1, 1.1502–13, 1.1502–21, 1.1502–79, 1.1502–91 through 1.1502–99 (to the extent they effectuate the rules of §§ 1.382–2, 1.382–5, 1.382–6, and 1.383–1), and 1.1504–4 to that taxable year and each subsequent taxable year.

* * * * *

■ **Par. 14.** Section 1.1256(e)–2 is added to read as follows:

§ 1.1256 (e)–2 Special rules for syndicates.

(a) *Allocation of losses.* For purposes of section 1256(e)(3), *syndicate* means any partnership or other entity (other than a corporation that is not an S corporation) if more than 35 percent of the losses of such entity during the taxable year are allocated to limited partners or limited entrepreneurs (within the meaning of section 461(k)(4)).

(b) *Determination of loss amount.* For purposes of section 1256(e)(3), the amount of losses to be allocated under paragraph (a) of this section is calculated without regard to section 163(j).

(c) *Example.* The following example illustrates the rules in this section:

(1) *Facts.* Entity is an S corporation that is equally owned by individuals A and B. A provides all of the goods and services provided by Entity. B provided all of the capital for Entity but does not participate in Entity's business. For the current taxable year, Entity has gross receipts of $5,000,000, non-interest expenses of $4,500,000, and interest expense of $600,000.

(2) *Analysis.* Under paragraph (b) of this section, Entity has a net loss of $100,000 ($5,000,000 minus $5,100,000) for the current taxable year. One half (50 percent) of this loss is allocated to B, a limited owner. Therefore, for the current taxable year, Entity is a syndicate within the meaning of section 1256(e)(3)(B).

(d) *Applicability date.* This section applies to taxable years beginning on or after [DATE 60 DAYS AFTER DATE OF PUBLICATION OF THE FINAL RULE IN THE **FEDERAL REGISTER**]. However, taxpayers and their related parties, under sections 267(b) and 707(b)(1), may choose to apply the rules of this section for a taxable year beginning after December 31, 2017, and before [DATE 60 DAYS AFTER DATE OF PUBLICATION OF THE FINAL RULE IN THE **FEDERAL REGISTER**], provided that they consistently apply the rules of this section to that taxable year and each subsequent taxable year.

Sunita Lough,

Deputy Commissioner for Services and Enforcement.

No. 178 September 14, 2020

Part III

Commodity Futures Trading Commission

17 CFR Part 23
Cross-Border Application of the Registration Thresholds and Certain Requirements Applicable to Swap Dealers and Major Swap Participants; Final Rule

COMMODITY FUTURES TRADING COMMISSION

17 CFR Part 23

RIN 3038–AE84

Cross-Border Application of the Registration Thresholds and Certain Requirements Applicable to Swap Dealers and Major Swap Participants

AGENCY: Commodity Futures Trading Commission.

ACTION: Final rule.

SUMMARY: The Commodity Futures Trading Commission (''Commission'' or ''CFTC'') is adopting a final rule (''Final Rule'') addressing the cross-border application of certain swap provisions of the Commodity Exchange Act (''CEA or ''Act''), as added by Title VII of the Dodd-Frank Wall Street Reform and Consumer Protection Act (''Dodd-Frank Act''). The Final Rule addresses the cross-border application of the registration thresholds and certain requirements applicable to swap dealers (''SDs'') and major swap participants (''MSPs''), and establishes a formal process for requesting comparability determinations for such requirements from the Commission. The Final Rule adopts a risk-based approach that, consistent with the applicable section of the CEA, and with due consideration of international comity principles and the Commission's interest in focusing its authority on potential significant risks to the U.S. financial system, advances the goals of the Dodd-Frank Act's swap reforms, while fostering greater liquidity and competitive markets, promoting enhanced regulatory cooperation, and improving the global harmonization of swap regulation.

DATES: The Final Rule is effective November 13, 2020. Specific compliance dates are set forth in the Final Rule.

I. Background

A. Statutory Authority and Prior Commission Action

In 2010, the Dodd-Frank Act [1] amended the CEA [2] to, among other things, establish a new regulatory framework for swaps. Added in the wake of the 2008 financial crisis, the Dodd-Frank Act was enacted to reduce systemic risk, increase transparency, and promote market integrity within the financial system. Given the global nature of the swap market, the Dodd-Frank Act amended the CEA by adding section 2(i) to provide that the swap provisions of the CEA enacted by Title VII of the Dodd-Frank Act (''Title VII''), including any rule prescribed or regulation promulgated under the CEA, shall not apply to activities outside the United States (''U.S.'') unless those activities have a direct and significant connection with activities in, or effect on, commerce of the United States, or they contravene Commission rules or regulations as are necessary or appropriate to prevent evasion of the swap provisions of the CEA enacted under Title VII.[3]

In May 2012, the CFTC and Securities and Exchange Commission (''SEC'') jointly issued an adopting release that, among other things, further defined and provided registration thresholds for SDs and MSPs in § 1.3 of the CFTC's regulations (''Entities Rule'').[4]

In July 2013, the Commission published interpretive guidance and a policy statement regarding the cross-border application of certain swap provisions of the CEA (''Guidance'').[5] The Guidance included the Commission's interpretation of the ''direct and significant'' prong of section 2(i) of the CEA.[6] In addition, the Guidance established a general, non-binding framework for the cross-border application of many substantive Dodd-Frank Act requirements, including registration and business conduct requirements for SDs and MSPs, as well as a process for making substituted compliance determinations. Given the complex and dynamic nature of the global swap market, the Guidance was intended to be a flexible and efficient way to provide the Commission's views on cross-border issues raised by market participants, allowing the Commission to adapt in response to changes in the global regulatory and market landscape.[7] The Commission accordingly stated that it would review and modify its cross-border policies as the global swap market continued to evolve and consider codifying the cross-border application of the Dodd-Frank Act swap provisions in future rulemakings, as appropriate.[8] At the time that it adopted the Guidance, the Commission was tasked with regulating a market that grew to a global scale without any meaningful regulation in the United States or overseas, and the United States was the first member country of the Group of 20 (''G20'') to adopt most of the swap reforms agreed to at the G20 Pittsburgh Summit in 2009.[9] Developing a regulatory framework to fit that market necessarily requires adapting and responding to changes in the global market, including developments resulting from requirements imposed on market participants under the Dodd-Frank Act and the Commission's implementing regulations in the U.S., as well as those that have been imposed by non-U.S. regulatory authorities since the Guidance was issued.

On November 14, 2013, DSIO issued a staff advisory (''ANE Staff Advisory'') stating that a non-U.S. SD that regularly uses personnel or agents located in the United States to arrange, negotiate, or execute a swap with a non-U.S. person (''ANE Transactions'') would generally be required to comply with ''Transaction-Level Requirements,'' as the term was used in the Guidance (discussed in section V.A).[10] On November 26, 2013, Commission staff issued certain no-action relief to non-U.S. SDs registered with the Commission from these requirements in connection with ANE Transactions (''ANE No-Action Relief'').[11] In January 2014, the Commission published a request for comment on all aspects of the ANE Staff Advisory (''ANE Request for Comment'').[12]

In May 2016, the Commission issued a final rule on the cross-border application of the Commission's margin requirements for uncleared swaps (''Cross-Border Margin Rule'').[13] Among other things, the Cross-Border Margin Rule addressed the availability of substituted compliance by outlining the circumstances under which certain SDs and MSPs could satisfy the Commission's margin requirements for uncleared swaps by complying with comparable foreign margin requirements. The Cross-Border Margin Rule also established a framework by which the Commission assesses whether a foreign jurisdiction's margin requirements are comparable.

In October 2016, the Commission proposed regulations regarding the cross-border application of certain requirements under the Dodd-Frank Act regulatory framework for SDs and MSPs (''2016 Proposal'').[14] The 2016 Proposal incorporated various aspects of the Cross-Border Margin Rule and addressed when U.S. and non-U.S. persons, such as foreign consolidated subsidiaries (''FCSs'') and non-U.S. persons whose swap obligations are guaranteed by a U.S. person, would be required to include swaps or swap positions in their SD or MSP registration threshold calculations, respectively.[15] The 2016 Proposal also addressed the extent to which SDs and MSPs would be required to comply with the Commission's business conduct standards governing their conduct with swap counterparties (''external business conduct standards'') in cross-border

transactions.[16] In addition, the 2016 Proposal addressed ANE Transactions, including the types of activities that would constitute arranging, negotiating, and executing within the context of the 2016 Proposal, the treatment of such transactions with respect to the SD registration threshold, and the application of external business conduct standards with respect to such transactions.[17]

B. Proposed Rule and Brief Summary of Comments Received

In January 2020, the Commission published a notice of proposed rulemaking (''Proposed Rule''), which proposed to: (1) Address the cross-border application of the registration thresholds and certain requirements applicable to SDs and MSPs; and (2) establish a formal process for requesting comparability determinations for such requirements from the Commission.[18] In the Proposed Rule, the Commission also withdrew the 2016 Proposal, stating that the Proposed Rule reflected the Commission's current views on the matters addressed in the 2016 Proposal, which had evolved since the 2016 Proposal as a result of market and regulatory developments in the swap markets and in the interest of international comity.[19] The Commission requested comments generally on all aspects of the Proposed Rule and on many specific questions.

The Commission received 18 relevant comment letters.[20] Though AFR and IATP did not support the Commission adopting the Proposed Rule in its entirety, most commenters were supportive of the Proposed Rule, generally, or supportive of specific elements of the Proposed Rule. However, many of these commenters suggested modifications to portions of the Proposed Rule, which are discussed in the relevant sections discussing the Final Rule below. In addition, several commenters requested Commission action beyond the scope of the Proposed Rule.[21] Further, IIB/SIFMA requested that the Commission re-visit in the Final Rule the applicability of the Commission's cross-border uncleared swap margin requirements that were addressed in the Cross-Border Margin Rule. The Commission addressed those requirements in the Cross-Border Margin Rule, did not propose modifying them in the Proposed Rule, and therefore is not making any changes to the Cross-Border Margin Rule in this Final Rule.

C. Global Regulatory and Market Structure

As noted in the Proposed Rule, the regulatory landscape is far different now than it was when the Dodd-Frank Act was enacted in 2010.[22] When the CFTC published the Guidance in 2013, very few jurisdictions had made significant progress in implementing the global swap reforms to which the G20 leaders agreed at the Pittsburgh G20 Summit. Today, however, as a result of the cumulative implementation efforts by regulators throughout the world, significant progress has been made in the world's primary swap trading jurisdictions to implement the G20 commitments.[23] Since the enactment of the Dodd-Frank Act, regulators in a number of large developed markets have adopted regulatory regimes that are designed to mitigate systemic risks associated with a global swap market. These regimes include central clearing requirements, margin requirements for non-centrally cleared derivatives, and other risk mitigation requirements.[24]

Many swaps involve at least one counterparty that is located in the United States or another jurisdiction that has adopted comprehensive swap regulations.[25] Conflicting and duplicative requirements between U.S. and foreign regimes can contribute to potential market inefficiencies and regulatory arbitrage, as well as competitive disparities that undermine the relative positions of U.S. SDs and their counterparties. This may result in market fragmentation, which can lead to significant inefficiencies that result in additional costs to end-users and other market participants. Market fragmentation can also reduce the capacity of financial firms to serve both domestic and international customers.[26] The Final Rule supports a cross-border framework that promotes the integrity, resilience, and vibrancy of the swap market while furthering the important policy goals of the Dodd-Frank Act. In that regard, it is important to consider how market practices have evolved since the publication of the Guidance. As certain market participants may have conformed their practices to the Guidance, the Final Rule will ideally cause limited additional costs and burdens for these market participants, while supporting the continued operation of markets that are much more comprehensively regulated than they were before the Dodd-Frank Act and the actions of governments worldwide taken in response to the Pittsburgh G20 Summit.

The approach described below is informed by the Commission's understanding of current market practices of global financial institutions under the Guidance. For business and regulatory reasons, a financial group that is active in the swap market often operates in multiple market centers around the world and carries out swap activity with geographically-diverse counterparties using a number of different operational structures.[27]

Financial groups often prefer to operate their swap dealing businesses and manage their swap portfolios in the jurisdiction where the swaps and the underlying assets have the deepest and most liquid markets. In operating their swap dealing businesses in these market centers, financial groups seek to take advantage of expertise in products traded in those centers and obtain access to greater liquidity. These arrangements permit them to price products more efficiently and compete more effectively in the global swap market, including in jurisdictions different from the market center in which the swap is traded.

In this sense, a global financial enterprise effectively operates as a single business, with a highly integrated network of business lines and services conducted through various branches or affiliated legal entities that are under the control of the parent entity.[28] Branches and affiliates in a global financial enterprise are highly interdependent, with separate entities in the group providing financial or credit support to each other, such as in the form of a guarantee or the ability to transfer risk through inter-affiliate trades or other offsetting transactions. Even in the absence of an explicit arrangement or guarantee, a parent entity may, for reputational or other reasons, choose to assume the risk incurred by its affiliates located overseas. Swaps are also traded by an entity in one jurisdiction, but booked and risk-managed by an affiliate in another jurisdiction. The Final Rule recognizes that these and similar arrangements among global financial enterprises create channels through which swap-related risks can have a direct and significant connection with activities in, or effect on, commerce of the United States.

D. Interpretation of CEA Section 2(i)

1. Proposed Rule and Discussion of Comments

The Proposed Rule set forth the Commission's interpretation of CEA section 2(i), which mirrored the approach that the Commission took in the Guidance.

Several commenters provided their views on the Commission's interpretation of CEA section 2(i). Better Markets agreed with the Commission's description of the Commission's authority to regulate swaps activities outside of the United States, recognizing that CEA section 2(i)'s mandatory exclusion of only certain, limited non-U.S. activities (*i.e.,* those that do not have a direct and significant connection with activities in, or effect on, U.S. commerce) evidences clear congressional intent to preserve jurisdiction with respect to others. Better Markets stated its belief that this reflects an intent to ensure U.S. law broadly applies to non-U.S. activities having requisite U.S. connections or effects. Better Markets argued, however, that the Commission does not have the discretion to determine whether and when to apply U.S. regulatory requirements based on vague principles of international comity, stating that the Commission has not cited a legally valid basis for its repeated reliance on international comity, where it simultaneously acknowledges direct and significant risks to the U.S. financial system.

BGC/Tradition supported the Commission's analysis related to CEA section 2(i) and what constitutes ''direct and significant.'' Specifically, BGC/Tradition agreed that the appropriate approach is ''to apply the swap provisions of the CEA to activities outside the United States that have either: (1) A direct and significant effect on U.S. commerce; or, in the alternative, (2) a direct and significant connection with activities in U.S. commerce, and through such connection present the type of risks to the U.S. financial system and markets that Title VII directed the Commission to address.''

IIB/SIFMA discussed the Commission's interpretation of ''direct'' in CEA section 2(i) and argued that the Commission should have followed Supreme Court precedent interpreting the ''direct effect'' test found in the Foreign Sovereign Immunities Act of 1976, which the Court has interpreted to be satisfied only by conduct abroad that has ''an immediate consequence'' in the United States.[29] IIB/SIFMA argued that a case cited by the Commission as a factor in its interpretation, the Seventh Circuit *en banc* decision in *Minn-Chem, Inc.* v. *Agrium, Inc.,* was based on considerations that are relevant to the Foreign Trade Antitrust Improvements Act of 1982 (''FTAIA''),[30]—but *not* section 2(i)—namely that (a) because the FTAIA includes the word ''foreseeable'' along with ''direct,'' the word ''direct'' should be interpreted as part of an integrated phrase that includes ''foreseeable'' effects, and (b) the FTAIA already addresses foreign conduct that has an immediate consequence in the United States through its separate provision for import commerce.[31] But, IIB/SIFMA argued, CEA section 2(i) does not include the word ''foreseeable,'' nor does it include any other provisions addressing foreign conduct that have an immediate consequence within the United States, so the *Minn-Chem* Court's reasoning does not support the Commission's decision to discount the Supreme Court's interpretation of the word ''direct'' in *Weltover.*

IATP argued that the Commission did not provide a sufficient ''international comity'' argument to justify deviating from the plain meaning of ''direct,'' nor a sufficient argument to rely on FTAIA case law to interpret ''direct.'' IATP stated its belief that the Commission's reliance on cross-border anti-trust trade law to interpret its statutory authority under CEA section 2(i) is an inconsistent and unreliable foundation for a rule that proposes no measures to prevent or discipline SDs' unreasonable restraint of trade. IATP recommended that the Commission abandon its ''restatement'' of its CEA section 2(i) authority and rely on a plain reading of CEA section 2(i).

In response to Better Markets' contention that the Commission does not have the discretion to determine whether and when to apply U.S. regulatory requirements based on principles of international comity where it simultaneously acknowledges direct and significant risks to the U.S. financial system, the Commission has followed the Restatement of Foreign Relations law in striving to minimize conflicts with the laws of other jurisdictions while seeking, pursuant to CEA section 2(i), to apply the swaps requirements of Title VII to activities outside the United States that have a direct and significant connection with activities in, or effect on, U.S. commerce. The Commission has determined that the rule appropriately accounts for these competing interests, ensuring that the Commission can discharge its responsibilities to protect the U.S. markets, market participants, and financial system, consistent with international comity, as set forth in the Restatement.

With respect to IIB/SIFMA's contention that the Commission erred in its interpretation of the meaning of ''direct'' in CEA section 2(i), IIB/SIFMA incorrectly asserted that the

[28] The largest U.S. banks have thousands of affiliated global entities, as shown in data from the National Information Center (''NIC''), a repository of financial data and institutional characteristics of banks and other institutions for which the Federal Reserve Board has a supervisory, regulatory, or research interest. *See* NIC, available at *https://www.ffiec.gov/npw.*

[29] *See Republic of Argentina* v. *Weltover,* 504 U.S. 607, 618 (1992).

[30] 15 U.S.C. 6a.

[31] *See Minn-Chem, Inc.* v. *Agrium, Inc.,* 683 F.3d 845, 857 (7th Cir. 2012).

Commission relied on the Seventh Circuit *en banc* decision in *Minn-Chem, Inc.* v. *Agrium, Inc.* Rather, the Commission was clear that its interpretation of CEA section 2(i) is not reliant on the reasoning of any individual judicial decision, but instead is drawn from a holistic understanding of both the statutory text *and* legal analysis applied by courts to analogous statutes and circumstances, specifically noting that the Commission's interpretation of CEA section 2(i) is not solely dependent on one's view of the Seventh Circuit's *Minn-Chem* decision,[32] but informed by its overall understanding of the relevant legal principles.

Finally, the Commission disagrees with IATP's advice that the Commission should abandon its interpretation of CEA section 2(i) and proceed with a ''plain reading'' of the statute. The Commission believes that IATP's assertion that the extraterritorial provisions of FTAIA and the case law construing such provisions are not relevant to CEA section 2(i) because the rule is not concerned with the regulation of anti-competitive behavior misconstrues the use that the Commission's interpretation has made of the Federal case law construing the meaning of the word ''direct'' in CEA section 2(i).[33]

2. Final Interpretation

In light of the foregoing, the Commission is restating its interpretation of section 2(i) of the CEA with its adoption of the Final Rule in substantially the same form as appeared in the Proposed Rule.

CEA section 2(i) provides that the swap provisions of Title VII shall not apply to activities outside the United States unless those activities—

- Have a direct and significant connection with activities in, or effect on, commerce of the United States; or
- Contravene such rules or regulations as the Commission may prescribe or promulgate as are necessary or appropriate to prevent the evasion of any provision of the CEA that was enacted by the Dodd-Frank Act.

The Commission believes that section 2(i) provides it express authority over swap activities outside the United States when certain conditions are met, but it does not require the Commission to extend its reach to the outer bounds of that authorization. Rather, in exercising its authority with respect to swap activities outside the United States, the Commission will be guided by international comity principles and will focus its authority on potential significant risks to the U.S. financial system.

(i) Statutory Analysis

In interpreting the phrase ''direct and significant,'' the Commission has examined the plain language of the statutory provision, similar language in other statutes with cross-border application, and the legislative history of section 2(i).

The statutory language in CEA section 2(i) is structured similarly to the statutory language in the FTAIA,[34] which provides the standard for the cross-border application of the Sherman Antitrust Act (''Sherman Act'').[35] The FTAIA, like CEA section 2(i), excludes certain non-U.S. commercial transactions from the reach of U.S. law. Specifically, the FTAIA provides that the antitrust provisions of the Sherman Act shall not apply to anti-competitive conduct involving trade or commerce with foreign nations.[36] However, like paragraph (1) of CEA section 2(i), the FTAIA also creates exceptions to the general exclusionary rule and thus brings back within antitrust coverage any conduct that: (1) Has a direct, substantial, and reasonably foreseeable effect on U.S. commerce; [37] and (2) such effect gives rise to a Sherman Act claim.[38] In *F. Hoffman-LaRoche, Ltd.* v. *Empagran S.A.,* the U.S. Supreme Court stated that ''this technical language initially lays down a general rule placing *all* (nonimport) activity involving foreign commerce outside the Sherman Act's reach. It then brings such conduct back within the Sherman Act's reach *provided that* the conduct *both* (1) sufficiently affects American commerce, *i.e.,* it has a 'direct, substantial, and reasonably foreseeable effect' on American domestic, import, or (certain) export commerce, *and* (2) has an effect of a kind that antitrust law considers harmful, *i.e.,* the 'effect' must 'giv[e] rise to a [Sherman Act] claim.' '' [39]

It is appropriate, therefore, to read section 2(i) of the CEA as a clear expression of congressional intent that the swap provisions of Title VII of the Dodd-Frank Act apply to activities beyond the borders of the United States when certain circumstances are present.[40] These circumstances include, pursuant to paragraph (1) of section 2(i), when activities outside the United States meet the statutory test of having a ''direct and significant connection with activities in, or effect on,'' U.S. commerce.

An examination of the language in the FTAIA, however, does not provide an unambiguous roadmap for the Commission in interpreting section 2(i) of the CEA because there are both similarities, and a number of significant differences, between the language in CEA section 2(i) and the language in the FTAIA. Further, the Supreme Court has not provided definitive guidance as to the meaning of the direct, substantial, and reasonably foreseeable test in the FTAIA, and the lower courts have interpreted the individual terms in the FTAIA differently.

Although a number of courts have interpreted the various terms in the FTAIA, only the term ''direct'' appears in both CEA section 2(i) and the FTAIA.[41] Relying upon the Supreme Court's definition of the term ''direct'' in the Foreign Sovereign Immunities Act (''FSIA''),[42] the U.S. Court of Appeals for the Ninth Circuit construed the term ''direct'' in the FTAIA as requiring a ''relationship of logical causation,'' [43] such that ''an effect is 'direct' if it follows as an immediate consequence of the defendant's activity.'' [44] However, in an *en banc* decision, *Minn-Chem, Inc.* v. *Agrium, Inc.,* the U.S. Court of Appeals for the Seventh Circuit held that ''the Ninth Circuit jumped too quickly on the assumption that the FSIA and the FTAIA use the word 'direct' in the same way.'' [45] After examining the text of the FTAIA as well as its history and

purpose, the Seventh Circuit found persuasive the ''other school of thought [that] has been articulated by the Department of Justice's Antitrust Division, which takes the position that, for FTAIA purposes, the term 'direct' means only 'a reasonably proximate causal nexus.' '' [46] The Seventh Circuit rejected interpretations of the term ''direct'' that included any requirement that the consequences be foreseeable, substantial, or immediate.[47] In 2014, the U.S. Court of Appeals for the Second Circuit followed the reasoning of the Seventh Circuit in the *Minn-Chem* decision.[48] That said, the Commission would like to make clear that its interpretation of CEA section 2(i) is not reliant on the reasoning of any individual judicial decision, but instead is drawn from a holistic understanding of both the statutory text *and* legal analysis applied by courts to analogous statutes and circumstances. In short, as the discussion below will illustrate, the Commission's interpretation of section 2(i) is not solely dependent on one's view of the Seventh Circuit's *Minn-Chem* decision, but informed by its overall understanding of the relevant legal principles.

Other terms in the FTAIA differ from the terms used in section 2(i) of the CEA. First, the FTAIA test explicitly requires that the effect on U.S. commerce be a ''reasonably foreseeable'' result of the conduct,[49] whereas section 2(i) of the CEA, by contrast, does not provide that the effect on U.S. commerce must be foreseeable. Second, whereas the FTAIA solely relies on the ''effects'' on U.S. commerce to determine cross-border application of the Sherman Act, section 2(i) of the CEA refers to both ''effect'' and ''connection.'' ''The FTAIA says that the Sherman Act applies to foreign 'conduct' with a certain kind of harmful domestic effect.'' [50] Section 2(i), by contrast, applies more broadly—not only to particular instances of conduct that have an effect on U.S. commerce, but also to activities that have a direct and significant ''connection with activities in'' U.S. commerce. Unlike the FTAIA, section 2(i) applies the swap provisions of the CEA to activities outside the United States that have the requisite connection with activities in U.S. commerce, regardless of whether a ''harmful domestic effect'' has occurred.

As the foregoing textual analysis of the relevant statutory language indicates, section 2(i) differs from its analogue in the antitrust laws. Congress delineated the cross-border scope of the Sherman Act in section 6a of the FTAIA as applying to conduct that has a ''direct,'' ''substantial,'' and ''reasonably foreseeable'' ''effect'' on U.S. commerce. In section 2(i), on the other hand, Congress did not include a requirement that the effects or connections of the activities outside the United States be ''reasonably foreseeable'' for the Dodd-Frank Act swap provisions to apply. Further, Congress included language in section 2(i) to apply the Dodd-Frank Act swap provisions in circumstances in which there is a direct and significant connection with activities in U.S. commerce, regardless of whether there is an effect on U.S. commerce. The different words that Congress used in paragraph (1) of section 2(i), as compared to its closest statutory analogue in section 6a of the FTAIA, inform the Commission in construing the boundaries of its cross-border authority over swap activities under the CEA.[51] Accordingly, the Commission believes it is appropriate to interpret section 2(i) such that it applies to activities outside the United States in circumstances in addition to those that would be reached under the FTAIA standard.

One of the principal rationales for the Dodd-Frank Act was the need for a comprehensive scheme of systemic risk regulation. More particularly, a primary purpose of Title VII of the Dodd-Frank Act is to address risk to the U.S. financial system created by interconnections in the swap market.[52] Title VII of the Dodd-Frank Act gave the Commission new and broad authority to regulate the swap market to address and mitigate risks arising from swap activities that could adversely affect the resiliency of the financial system in the future.

In global markets, the source of such risk is not confined to activities within U.S. borders. Due to the interconnectedness between firms, traders, and markets in the U.S. and abroad, a firm's failure, or trading losses overseas, can quickly spill over to the United States and affect activities in U.S. commerce and the stability of the U.S. financial system. Accordingly, Congress explicitly provided for cross-border application of Title VII to activities outside the United States that pose risks to the U.S. financial system.[53] Therefore, the Commission construes section 2(i) to apply the swap provisions of the CEA to activities outside the United States that have either: (1) A direct and significant effect on U.S. commerce; or, in the alternative, (2) a direct and significant connection with activities in U.S. commerce, and through such connection present the

[50] *Hoffman-LaRoche,* 452 U.S. at 173.

[51] The provision that ultimately became section 722(d) of the Dodd-Frank Act was added during consideration of the legislation in the House of Representatives. *See* 155 Cong. Rec. H14685 (Dec. 10, 2009). The version of what became Title VII that was reported by the House Agriculture Committee and the House Financial Services Committee did not include any provision addressing cross-border application. *See* 155 Cong. Rec. H14549 (Dec. 10, 2009). The Commission finds it significant that, in adding the cross-border provision before final passage, the House did so in terms that, as discussed in text, were different from, and broader than, the terms used in the analogous provision of the FTAIA.

[52] *Cf.* 156 Cong. Rec. S5818 (July 14, 2010) (statement of Sen. Lincoln) (''In 2008, our Nation's economy was on the brink of collapse. America was being held captive by a financial system that was so interconnected, so large, and so irresponsible that our economy and our way of life were about to be destroyed.''), available at *http://www.gpo.gov/fdsys/pkg/CREC-2010-07-14/pdf/CREC-2010-07-14.pdf;* 156 Cong. Rec. S5888 (July 15, 2010) (statement of Sen. Rec. S5905 (July 15, 2010) (statement of Sen. Stabenow) (''For too long the over-the-counter derivatives market has been unregulated, transferring risk between firms and creating a web of fragility in a system where entities became too interconnected to fail.''), available at *http://www.gpo.gov/fdsys/pkg/CREC-2010-07-15/pdf/CREC-2010-07-15-senate.pdf.*

[53] The legislative history of the Dodd-Frank Act shows that in the fall of 2009, neither the Over-the-Counter Derivatives Markets Act of 2009, H.R. 3795, 111th Cong. (1st Sess. 2009), reported by the Financial Services Committee chaired by Rep. Barney Frank, nor the Derivatives Markets Transparency and Accountability Act of 2009, H.R. 977, 111th Cong. (1st Sess. 2009), reported by the Agriculture Committee chaired by Rep. Collin Peterson, included a general territoriality limitation that would have restricted Commission regulation of transactions between two foreign persons located outside of the United States. During the House Financial Services Committee markup on October 14, 2009, Rep. Spencer Bachus offered an amendment that would have restricted the jurisdiction of the Commission over swaps between non-U.S. resident persons transacted without the use of the mails or any other means or instrumentality of interstate commerce. Chairman Frank opposed the amendment, noting that there may well be cases where non-U.S. residents are engaging in transactions that have an effect on the United States and that are insufficiently regulated internationally and that he would not want to prevent U.S. regulators from stepping in. Chairman Frank expressed his commitment to work with Rep. Bachus going forward, and Rep. Bachus withdrew the amendment. *See* H. Fin. Serv. Comm. Mark Up on Discussion Draft of the Over-the-Counter Derivatives Markets Act of 2009, 111th Cong., 1st Sess. (Oct. 14, 2009) (statements of Rep. Bachus and Rep. Frank), available at *http://financialservices.house.gov/calendar/eventsingle.aspx?EventID=231922.*

type of risks to the U.S. financial system and markets that Title VII directed the Commission to address. The Commission interprets section 2(i) in a manner consistent with the overall goal of the Dodd-Frank Act to reduce risks to the resiliency and integrity of the U.S. financial system arising from swap market activities.[54] Consistent with this interpretation, the Commission interprets the term ''direct'' in section 2(i) to require a reasonably proximate causal nexus, and not to require foreseeability, substantiality, or immediacy.

Further, the Commission does not interpret section 2(i) to require a transaction-by-transaction determination that a specific swap outside the United States has a direct and significant connection with activities in, or effect on, commerce of the United States to apply the swap provisions of the CEA to such transaction. Rather, it is the connection of swap activities, viewed as a class or in the aggregate, to activities in commerce of the United States that must be assessed to determine whether application of the CEA swap provisions is warranted.[55]

Similar interpretations of other federal statutes regulating interstate commerce support the Commission's interpretation here. For example, the Supreme Court has long supported a similar ''aggregate effects'' approach when analyzing the reach of U.S. authority under the Commerce Clause.[56] The Court phrased the holding in the seminal ''aggregate effects'' decision, *Wickard* v. *Filburn,*[57] in this way: ''[The farmer's] decision, when considered in the aggregate along with similar decisions of others, would have had a substantial effect on the interstate market for wheat.'' [58] In another relevant decision, *Gonzales* v. *Raich,*[59] the Court adopted similar reasoning to uphold the application of the Controlled Substances Act [60] to prohibit the intrastate use of medical marijuana for medicinal purposes. In *Raich,* the Court held that Congress could regulate purely intrastate activity if the failure to do so would ''leave a gaping hole'' in the federal regulatory structure. These cases support the Commission's cross-border authority over swap activities that as a class, or in the aggregate, have a direct and significant connection with activities in, or effect on, U.S. commerce—whether or not an individual swap may satisfy the statutory standard.[61]

(ii) Principles of International Comity

Principles of international comity counsel the government in one country to act reasonably in exercising its jurisdiction with respect to activity that takes place in another country. Statutes should be construed to ''avoid unreasonable interference with the sovereign authority of other nations.'' [62] This rule of construction ''reflects customary principles of international law'' and ''helps the potentially conflicting laws of different nations work together in harmony—a harmony particularly needed in today's highly interdependent commercial world.'' [63]

The Restatement (Third) of Foreign Relations Law of the United States,[64] together with the Restatement (Fourth) of Foreign Relations Law of the United States [65] (collectively, the ''Restatement''), states that a country has jurisdiction to prescribe law with respect to ''conduct outside its territory that has or is intended to have substantial effect within its territory.'' [66] The Restatement also counsels that even where a country has a basis for extraterritorial jurisdiction, it should not prescribe law with respect to a person or activity in another country when the exercise of such jurisdiction is unreasonable.[67]

As a general matter, the Fourth Restatement indicates that the concept of reasonableness as it relates to foreign relations law is ''a principle of statutory interpretation'' that ''operates in conjunction with other principles of statutory interpretation.'' [68] More specifically, the Fourth Restatement characterizes the inquiry into the reasonableness of exercising extraterritorial jurisdiction as an examination into whether ''a genuine connection exists between the state seeking to regulate and the persons, property, or conduct being regulated.'' [69] The Restatement explicitly indicates that the ''genuine connection'' between the state and the person, property, or conduct to be regulated can derive from the effects of the particular conduct or activities in question.[70]

Consistent with the Restatement, the Commission has carefully considered, among other things, the level of the foreign jurisdiction's supervisory interests over the subject activity and the extent to which the activity takes place within the foreign territory. In doing so, the Commission has strived to

[54] The Commission also notes that the Supreme Court has indicated that the FTAIA may be interpreted more broadly when the government is seeking to protect the public from anticompetitive conduct than when a private plaintiff brings suit. *See Hoffman-LaRoche,* 452 U.S. at 170 (''A Government plaintiff, unlike a private plaintiff, must seek to obtain the relief necessary to protect the public from further anticompetitive conduct and to redress anticompetitive harm. And a Government plaintiff has legal authority broad enough to allow it to carry out its mission.'').

[55] The Commission believes this interpretation is supported by Congress's use of the plural term ''activities'' in CEA section 2(i), rather than the singular term ''activity.'' The Commission believes it is reasonable to interpret the use of the plural term ''activities'' in section 2(i) to require not that each particular activity have the requisite connection with U.S. commerce, but rather that such activities in the aggregate, or a class of activity, have the requisite nexus with U.S. commerce. This interpretation is consistent with the overall objectives of Title VII, as described above. Further, the Commission believes that a swap-by-swap approach to jurisdiction would be ''too complex to prove workable.'' *See Hoffman-LaRoche,* 542 U.S. at 168.

[56] *Nat'l Fed'n of Indep. Bus.* v. *Sebelius,* 567 U.S. 519 (2012).

[57] 317 U.S. 111 (1942).

[58] 567 U.S. at 552–53. At issue in *Wickard* was the regulation of a farmer's production and use of wheat even though the wheat was ''not intended in any part for commerce but wholly for consumption on the farm.'' 317 U.S. at 118. The Supreme Court upheld the application of the regulation, stating that although the farmer's ''own contribution to the demand for wheat may be trivial by itself,'' the federal regulation could be applied when his contribution ''taken together with that of many others similarly situated, is far from trivial.'' *Id.* at 128–29. The Court also stated it had ''no doubt that Congress may properly have considered that wheat consumed on the farm where grown, if wholly outside the scheme of regulation, would have a substantial effect in defeating and obstructing its purpose . . ..'' *Id.*

minimize conflicts with the laws of other jurisdictions while seeking, pursuant to section 2(i), to apply the swaps requirements of Title VII to activities outside the United States that have a direct and significant connection with activities in, or effect on, U.S. commerce.

The Commission believes the Final Rule appropriately accounts for these competing interests, ensuring that the Commission can discharge its responsibilities to protect the U.S. markets, market participants, and financial system, consistent with international comity, as set forth in the Restatement. Of particular relevance is the Commission's approach to substituted compliance in the Final Rule, which mitigates burdens associated with potentially conflicting foreign laws and regulations in light of the supervisory interests of foreign regulators in entities domiciled and operating in their own jurisdictions.

E. Final Rule

The Final Rule identifies which cross-border swaps or swap positions a person will need to consider when determining whether it needs to register with the Commission as an SD or MSP, as well as related classifications of swap market participants and swaps (*e.g.,* U.S. person, foreign branch, swap conducted through a foreign branch).[71] Further, the Commission is adopting several tailored exceptions from, and a substituted compliance process for, certain regulations applicable to registered SDs and MSPs. The Final Rule also creates a framework for comparability determinations for such regulations that emphasizes a holistic, outcomes-based approach that is grounded in principles of international comity. Finally, the Final Rule requires SDs and MSPs to create a record of their compliance with the Final Rule and to retain such records in accordance with § 23.203.[72] The Final Rule supersedes the Commission's policy views as set forth in the Guidance with respect to its interpretation and application of section 2(i) of the CEA and the swap provisions addressed in the Final Rule.[73]

Some commenters provided their views on the Proposed Rule generally. AFR and IATP both argued that, in sum, the Proposed Rule would fatally weaken the implementation of Title VII of the Dodd-Frank Act and its application to CFTC-regulated derivatives markets, and urged the Commission to step back from the course outlined in the Proposed Rule and restore elements of the Guidance and the 2016 Proposal that, they maintained, offered better oversight of derivatives markets. The Commission has considered these comments but believes that the Final Rule generally reflects the approach outlined by the Commission in the Guidance, and has determined that it takes account of conflicts with the laws of other jurisdictions when applying the swaps requirements of Title VII to activities outside the United States that have a direct and significant connection with activities in, or effect on, U.S. commerce, permitting the Commission to discharge its responsibilities to protect the U.S. markets, market participants, and financial system, consistent with international comity.

More specifically, the Final Rule takes into account the Commission's experience implementing the Dodd-Frank Act reforms, including its experience with the Guidance and the Cross-Border Margin Rule, comments submitted in connection with the ANE Request for Comment and the Proposed Rule, as well as discussions that the Commission and its staff have had with market participants,[74] other domestic[75] and foreign regulators, and other interested parties. It is essential that a cross-border framework recognize the global nature of the swap market and the supervisory interests of foreign regulators with respect to entities and transactions covered by the Commission's swap regime. In determining the extent to which the Dodd-Frank Act swap provisions addressed by the Final Rule apply to activities outside the United States, the Commission has strived to protect U.S. interests as contemplated by Congress in Title VII, and minimize conflicts with the laws of other jurisdictions. The Commission has carefully considered, among other things, the level of a home jurisdiction's supervisory interests over the subject activity and the extent to which the activity takes place within the home country's territory.[76] At the same time, the Commission has also considered the potential for cross-border activities to have a significant connection with activities in, or effect on, commerce of the United States, as well as the global, highly integrated nature of today's swap markets.

To fulfill the purposes of the Dodd-Frank Act swap reforms, the Commission's supervisory oversight cannot be confined to activities strictly within the territory of the United States. Rather, the Commission will exercise its supervisory authority outside the United States in order to reduce risk to the resiliency and integrity of the U.S. financial system.[77] The Commission will also strive to show deference to non-U.S. regulation when such regulation achieves comparable outcomes to mitigate unnecessary conflict with effective non-U.S. regulatory frameworks and limits fragmentation of the global marketplace.

The Commission has also sought to target those classes of entities whose activities—due to the nature of their relationship with a U.S. person or U.S. commerce—most clearly present the risks addressed by the Dodd-Frank Act provisions, and related regulations covered by the Final Rule. The Final Rule is designed to limit opportunities for regulatory arbitrage by applying the registration thresholds in a consistent manner to differing organizational structures that serve similar economic functions or have similar economic effects. At the same time, the Commission is mindful of the effect of its choices on market efficiency and competition, as well as the importance of international comity when exercising the Commission's authority. The Commission believes that the Final Rule reflects a measured approach that advances the goals underlying SD and MSP regulation, consistent with the Commission's statutory authority, while mitigating market distortions and inefficiencies, and avoiding fragmentation.

II. Key Definitions

The Commission is adopting definitions for certain terms for the purpose of applying the Dodd-Frank Act swap provisions addressed by the Final Rule to cross-border transactions. Certain of these definitions are relevant

[71] There were no MSPs registered with the Commission as of the date of the Final Rule.

[72] *See* Final § 23.23(h)(1).

[73] *See infra* section V for a discussion of certain swap provisions not addressed in the Final Rule.

[74] Summaries of such discussions with market participants are included in the relevant public comment file, available on the Commission's website at *https://comments.cftc.gov/PublicComments/CommentList.aspx?id=3067.*

[75] The Commission has consulted with the Securities and Exchange Commission (''SEC'') and prudential regulators regarding the Final Rule, as required by section 712(a)(1) of the Dodd-Frank Act for the purposes of assuring regulatory consistency and comparability, to the extent possible. Dodd-Frank Act, section 712(a)(1); 15 U.S.C. 8302(a)(1). SEC staff was consulted to increase understanding of each other's regulatory approaches and to harmonize the cross-border approaches of the two agencies to the extent possible, consistent with their respective statutory mandates. As noted in the Entities Rule, the CFTC and SEC intended to address the cross-border application of Title VII in separate releases. *See* Entities Rule, 77 FR at 30628 n.407.

[76] The terms ''home jurisdiction'' or ''home country'' are used interchangeably in this release and refer to the jurisdiction in which the person or entity is established, including the European Union.

[77] *See supra* section I.D.

in assessing whether a person's activities have the requisite ''direct and significant'' connection with activities in, or effect on, U.S. commerce within the meaning of CEA section 2(i). Specifically, the definitions are relevant in determining whether certain swaps or swap positions need to be counted toward a person's SD or MSP threshold and in addressing the cross-border application of certain Dodd-Frank Act requirements (as discussed below in sections III through VII).

A. Reliance on Representations—Generally

The Commission acknowledges that the information necessary for a swap counterparty to accurately assess whether its counterparty or a specific swap meets one or more of the definitions discussed below may be unavailable, or available only through overly burdensome due diligence. For this reason, the Commission believes that a market participant should generally be permitted to reasonably rely on written counterparty representations in each of these respects.[78] Therefore, the Commission proposed that a person may rely on a written representation from its counterparty that the counterparty does or does not satisfy the criteria for one or more of the definitions below, unless such person knows or has reason to know that the representation is not accurate.[79] AFEX/GPS supported the proposed written representation language and noted that it would facilitate compliance with the rules.

The Commission is adopting the ''reliance on representations'' language as proposed.[80] For the purposes of this rule, a person would have reason to know the representation is not accurate if a reasonable person should know, under all of the facts of which the person is aware, that it is not accurate. This language is consistent with: (1) The reliance standard articulated in the Commission's external business conduct rules; [81] (2) the Commission's approach in the Cross-Border Margin Rule; [82] and (3) the reliance standard articulated in the ''U.S. person'' and ''transaction conducted through a foreign branch'' definitions adopted by the SEC in its rule addressing the regulation of cross-border securities-based swap activities (''SEC Cross-Border Rule'').[83] A number of commenters also specifically addressed reliance on representations obtained under the Cross-Border Margin Rule or the Guidance for the ''U.S. person'' and ''Guarantee'' definitions. These comments are addressed below in sections II.B.5 and II.C.

B. U.S. Person, Non-U.S. Person, and United States

1. Generally

(i) Proposed Rule

As discussed in more detail below, the Commission proposed defining ''U.S. person'' consistent with the definition of ''U.S. person'' in the SEC Cross-Border Rule.[84] The proposed definition of ''U.S. person'' was also consistent with the Commission's statutory mandate under the CEA, and in this regard was largely consistent with the definition of ''U.S. person'' in the Cross-Border Margin Rule.[85] Specifically, the Commission proposed to define ''U.S. person'' as:

(1) A natural person resident in the United States;

(2) A partnership, corporation, trust, investment vehicle, or other legal person organized, incorporated, or established under the laws of the United States or having its principal place of business in the United States;

(3) An account (whether discretionary or non-discretionary) of a U.S. person; or

(4) An estate of a decedent who was a resident of the United States at the time of death.[86]

As noted in the Cross-Border Margin Rule,[87] and consistent with the SEC [88] definition of ''U.S. person,'' proposed § 23.23(a)(22)(ii) provided that the principal place of business means the location from which the officers, partners, or managers of the legal person primarily direct, control, and coordinate the activities of the legal person. Consistent with the SEC, the Commission noted that the principal place of business for a collective investment vehicle (''CIV'') would be in the United States if the senior personnel responsible for the implementation of the CIV's investment strategy are located in the United States, depending on the facts and circumstances that are relevant to determining the center of direction, control, and coordination of the CIV.[89]

Additionally, in consideration of the discretionary and appropriate exercise of international comity-based doctrines, proposed § 23.23(a)(22)(iii) stated that the term ''U.S. person'' would not include certain international financial institutions.[90] Specifically, consistent with the SEC's definition,[91] the term U.S. person would not include the International Monetary Fund, the International Bank for Reconstruction and Development, the Inter-American Development Bank, the Asian Development Bank, the African Development Bank, the United Nations, and their agencies and pension plans, and any other similar international organizations, their agencies, and pension plans.

Further, to provide certainty to market participants, proposed § 23.23(a)(22)(iv) permitted reliance, until December 31, 2025, on any U.S. person-related representations that were obtained to comply with the Cross-Border Margin Rule.[92]

(ii) Summary of Comments

In general, AIMA, AFEX/GPS, Barnard, Chatham, CS, IIB/SIFMA, JFMC/IBAJ, JBA, JSCC, and State Street supported the proposed ''U.S. person'' definition, while IATP generally opposed the proposed definition. Additional comments and suggestions are discussed below.

AIMA, Barnard,[93] Chatham, CS, IIB/SIFMA, JFMC/IBAJ, JSCC, and State Street generally supported the Commission's view that aligning with the SEC's definition of ''U.S. person'' provided consistency to market participants, noting that the harmonized definition would: (1) Provide a consistent approach from operational and compliance perspectives; (2) help avoid undue regulatory complexity for purposes of firms' swaps and security-based swaps businesses; and/or (3) simplify market practice and reduce complexity. AFEX/GPS, Chatham, CS, JFMC/IBAJ, JSCC, and State Street generally stated that the simpler and

[93] However, as noted below, Barnard expressed concern regarding other proposed definitions and treatments.

streamlined prongs in the proposed ''U.S. person'' definition allowed for more straightforward application of the definition as compared to the Guidance. Chatham also noted that the proposed definition of ''U.S. person'' establishes a significant nexus to the United States.

FIA recommended that the Commission explicitly state that the scope of the proposed definition of a ''U.S. person'' would not extend to provisions of the CEA governing futures commission merchants (''FCMs'') with respect to both: (1) Exchange-traded futures, whether executed on a designated contract market or a foreign board of trade; and (2) cleared swaps.

IATP suggested restoring the ''U.S. person'' definition from the Guidance and 2016 Proposal. IATP argued that the SEC definition applies to the relatively small universe of security-based swaps, and therefore, the Commission should adopt the ''U.S. person'' and other definitions from the 2016 Proposal for the much larger universe of physical and financial commodity swaps the Commission is authorized to regulate. IATP also asserted that adopting the SEC definition for harmonization purposes was not necessary because SDs and MSPs should have the personnel and information technology resources to comply effectively with reporting and recordkeeping of swaps and security-based swaps. Further, any reduced efficiency would be compensated for by having the ''U.S. person'' definition apply not only to enumerated entities but to a non-exhaustive listing that anticipates the creation of new legal entities engaged in swaps activities.

(iii) Final Rule

As discussed in more detail below, the Commission is adopting the ''U.S. person'' definition as proposed, with certain clarifications.[94] In response to IATP, the Commission continues to be of the view that harmonization of the ''U.S. person'' definition with the SEC is the appropriate approach given that it is straightforward to apply compared to the Guidance definition, and will capture substantially the same types of entities as the ''U.S. person'' definition in the Cross-Border Margin Rule.[95] In addition, harmonizing with the definition in the SEC Cross-Border Rule is not only consistent with section 2(i) of the CEA,[96] but is also expected to reduce undue compliance costs for market participants. Therefore, as noted by several commenters, the definition will reduce complexity for entities that are participants in the swaps and security-based swaps markets and may register both as SDs with the Commission and as security-based swap dealers with the SEC. The Commission is also of the view that the ''U.S. person'' definition in the Cross-Border Margin Rule largely encompasses the same universe of persons as the definition used in the SEC Cross-Border Rule and the Final Rule.[97]

In response to FIA, pursuant to § 23.23(a), ''U.S. person'' only has the meaning in the definition for the purposes of § 23.23. However, to be clear that the definition of ''U.S. person'' is only applicable for purposes of the Final Rule, the rule now includes the word ''solely'' and reads ''*Solely* for purposes of this section . . . .''

Generally, the Commission believes that the definition offers a clear, objective basis for determining which individuals or entities should be identified as U.S. persons for purposes of the swap requirements addressed by the Final Rule. Specifically, the various prongs, as discussed in more detail below, are intended to identify persons whose activities have a significant nexus to the United States by virtue of their organization or domicile in the United States.[98]

Additionally, the Commission is adopting as proposed the definitions for ''non-U.S. person,'' ''United States,'' and ''U.S.'' The term ''non-U.S. person'' means any person that is not a U.S. person.[99] Further, the Final Rule defines ''United States'' and ''U.S.'' as the United States of America, its territories and possessions, any State of the United States, and the District of Columbia.[100] The Commission did not receive any comments regarding these definitions.

2. Prongs

As the Commission noted in the Proposed Rule, paragraph (i) of the ''U.S. person'' definition identifies certain persons as a ''U.S. person'' by virtue of their domicile or organization within the United States.[101] The Commission has traditionally looked to where legal entities are organized or incorporated (or in the case of natural persons, where they reside) to determine whether they are U.S. persons.[102] In the Commission's view, these persons—by virtue of their decision to organize or locate in the United States and because they are likely to have significant financial and legal relationships in the United States—are appropriately included within the definition of ''U.S. person.'' [103]

(i) § 23.23(a)(23)(i)(A) and (B)

Paragraphs (i)(A) and (B) of the ''U.S. person'' definition generally incorporate a ''territorial'' concept of a U.S. person.[104] That is, these are natural persons and legal entities that are physically located or incorporated within U.S. territory, and thus are subject to the Commission's jurisdiction. Further, the Commission generally considers swap activities where such persons are counterparties, as a class and in the aggregate, as satisfying the ''direct and significant'' test under CEA section 2(i). Consistent with the ''U.S. person'' definition in the Cross-Border Margin Rule[105] and the SEC Cross-Border Rule,[106] the definition encompasses both foreign and domestic branches of an entity. As discussed below, a branch does not have a legal identity apart from its principal entity.[107]

[94] Final § 23.23(a)(23). Note that due to renumbering, the paragraph references for the definitions in § 23.23(a) of the Final Rule vary from the paragraph references in the Proposed Rule.

[95] *See* Proposed Rule, 85 FR at 959.

[96] Harmonizing the Commission's definition of ''U.S. person'' with the definition in the SEC Cross-Border Rule also is consistent with the dictate in section 712(a)(7) of the Dodd-Frank Act that the CFTC and SEC ''treat functionally or economically similar'' SDs, MSPs, security-based swap dealers, and major security-based swap participants ''in a similar manner.'' Dodd-Frank Act, section 712(a)(7)(A); 15 U.S.C. 8307(a)(7)(A). *See* Proposed Rule, 85 FR at 959.

[97] *See* Cross-Border Margin Rule, 81 FR at 34824. The Final Rule defines ''U.S. person'' in a manner that is substantially similar to the definition used by the SEC in the context of cross-border regulation of security-based swaps. Proposed Rule, 85 FR at 959.

[103] Proposed Rule, 85 FR at 959.

[104] *Id.*

[105] *See* 17 CFR 23.160(a)(10)(iii) (U.S. person includes a corporation, partnership, limited liability company, business or other trust, association, joint-stock company, fund or any form of entity similar to any of the foregoing (other than an entity described in paragraph (a)(10)(iv) or (v) of this section) (a legal entity), in each case that is organized or incorporated under the laws of the United States or that has its principal place of business in the United States, *including any branch of such legal entity*) (emphasis added).

[106] *See* SEC Cross-Border Rule, 79 FR at 47308 (''[T]he final definition determines a legal person's status at the entity level and thus applies to the entire legal person, including any foreign operations that are part of the U.S. legal person. Consistent with this approach, a foreign branch, agency, or office of a U.S. person is treated as part of a U.S. person, as it lacks the legal independence to be considered a non-U.S. person for purposes of Title VII even if its head office is physically located within the United States.'').

[107] *See* Proposed Rule, 85 FR at 959.

The first prong of the proposed definition stated that a natural person resident in the United States would be considered a U.S. person. No comments were received regarding the first prong of the ''U.S. person'' definition and the Commission is adopting it as proposed.[108]

The second prong of the proposed definition stated that a partnership, corporation, trust, investment vehicle, or other legal person organized, incorporated, or established under the laws of the United States or having its principal place of business in the United States would be considered a U.S. person. In the Proposed Rule, the Commission stated that the second prong of the definition would subsume the pension fund and trust prongs of the ''U.S. person'' definition in the Cross-Border Margin Rule.[109] No comments were received regarding this aspect of the Proposed Rule and the Commission is adopting it as proposed.[110]

Specifically, the Commission is of the view that, as adopted, § 23.23(a)(23)(i)(B) includes in the definition of the term ''U.S. person'' pension plans for the employees, officers, or principals of a legal entity described in § 23.23(a)(23)(i)(B), which is a separate prong in the Cross-Border Margin Rule.[111] Although the SEC Cross-Border Rule directly addresses pension funds only in the context of international financial institutions, discussed below, the Commission believes it is important to clarify that pension funds in other contexts could meet the requirements of § 23.23(a)(23)(i)(B).[112]

Additionally, § 23.23(a)(23)(i)(B) subsumes the trust prong of the ''U.S. person'' definition in the Cross-Border Margin Rule.[113] With respect to trusts addressed in § 23.23(a)(23)(i)(B), the Commission expects that its approach is consistent with the manner in which trusts are treated for other purposes under the law. The Commission has considered that each trust is governed by the laws of a particular jurisdiction, which may depend on steps taken when the trust was created or other circumstances surrounding the trust. The Commission believes that if a trust is governed by U.S. law (*i.e.,* the law of a state or other jurisdiction in the United States), then it is generally reasonable to treat the trust as a U.S. person for purposes of the Final Rule. Another relevant element in this regard is whether a court within the United States is able to exercise primary supervision over the administration of the trust. The Commission expects that this aspect of the definition generally aligns the treatment of the trust for purposes of the Final Rule with how the trust is treated for other legal purposes. For example, the Commission expects that if a person could bring suit against the trustee for breach of fiduciary duty in a U.S. court (and, as noted above, the trust is governed by U.S. law), then treating the trust as a U.S. person is generally consistent with its treatment for other purposes.[114]

(ii) § 23.23(a)(23)(i)(D)

Under the fourth prong of the proposed definition, an estate of a decedent who was a resident of the United States at the time of death would be included in the definition of ''U.S. person.'' No comments were received regarding this aspect of the Proposed Rule and the Commission is adopting it as proposed.[115] With respect to § 23.23(a)(23)(i)(D), the Commission believes that the swaps of a decedent's estate should generally be treated the same as the swaps entered into by the decedent during their life.[116] If the decedent was a party to any swaps at the time of death, then those swaps should generally continue to be treated in the same way after the decedent's death, at which time the swaps would most likely pass to the decedent's estate. Also, the Commission expects that this prong will be predictable and straightforward to apply for natural persons planning for how their swaps will be treated after death, for executors and administrators of estates, and for the swap counterparties to natural persons and estates.

(iii) § 23.23(a)(23)(i)(C)

The third prong of the definition, the ''account'' prong, was proposed to ensure that persons described in prongs (A), (B), and (D) of the definition would be treated as U.S. persons even if they use discretionary or non-discretionary accounts to enter into swaps, irrespective of whether the person at which the account is held or maintained is a U.S. person.[117] Consistent with the Cross-Border Margin Rule, the Commission stated that this prong would apply for individual or joint accounts.[118] IIB/SIFMA recommended that, consistent with the SEC, the Commission clarify that under the ''account'' prong of the definition, an account's U.S. person status should depend on whether any U.S.-person owner of the account actually incurs obligations under the swap in question.

The Commission is adopting this aspect of the U.S. person definition as proposed, with a clarification.[119] In response to the IIB/SIFMA comment, the Commission is clarifying that an account's U.S. person status depends on whether any U.S. person owner of the account actually incurs obligations under the swap in question. Consistent with the SEC Cross-Border Rule, where an account is owned by both U.S. persons and non-U.S. persons, the U.S.-person status of the account, as a general matter, turns on whether any U.S.-person owner of the account incurs obligations under the swap.[120] Neither the status of the fiduciary or other person managing the account, nor the discretionary or non-discretionary nature of the account, nor the status of the person at which the account is held or maintained, are relevant in determining the account's U.S.-person status.

(iv) Exclusion of Unlimited U.S. Responsibility Prong

Unlike the Cross-Border Margin Rule, the proposed definition of ''U.S. person'' did not include certain legal entities that are owned by one or more U.S. person(s) and for which such person(s) bear unlimited responsibility for the obligations and liabilities of the legal entity (''unlimited U.S. responsibility'' prong).[121] The Commission invited comment on whether it should include an unlimited U.S. responsibility prong in the definition of ''U.S. person,'' and if not, whether it should revise its interpretation of ''guarantee'' in a manner consistent with the SEC such that persons that would have been considered U.S. persons pursuant to an unlimited U.S. responsibility prong would instead be considered entities with guarantees from a U.S. person.[122]

Chatham and IIB/SIFMA agreed that the Commission should not include an unlimited U.S. responsibility prong in the ''U.S. Person'' definition, noting that

[117] *Id.*

[118] *Id. See* 17 CFR 23.160(a)(10)(vii).

[119] Final § 23.23(a)(23)(i)(C).

[120] *See* SEC Cross-Border Rule, 79 FR at 47312.

[121] Proposed Rule, 85 FR at 961. *See* 17 CFR 23.160(a)(10)(vi); Cross-Border Margin Rule, 81 FR at 34823–34824. *See also* Guidance, 78 FR at 45312–13 (discussing the unlimited U.S. responsibility prong for purposes of the Guidance).

[122] Proposed Rule, 85 FR at 969.

the persons that would be captured under the prong are corporate structures that are not commonly in use in the marketplace (*e.g.,* unlimited liability corporations, general partnerships, and sole proprietorships). IIB/SIFMA added that to the extent a firm uses this structure, the Commission can sufficiently address the resulting risks to the United States by treating the firm as having a guarantee from a U.S. person, as the SEC does.

The Commission is adopting as proposed a definition of ''U.S. person'' that does not include an unlimited U.S. responsibility prong. Although this corporate structure may exist in some limited form, the Commission does not believe that justifies the cost of classification as a ''U.S. person.'' This prong was designed to capture persons that could give rise to risk to the U.S. financial system in the same manner as with non-U.S. persons whose swap transactions are subject to explicit financial support arrangements from U.S. persons.[123] Rather than including this prong in its ''U.S. person'' definition, the SEC took the view that when a non-U.S. person's counterparty has recourse to a U.S. person for the performance of the non-U.S. person's obligations under a security-based swap by virtue of the U.S. person's unlimited responsibility for the non-U.S. person, the non-U.S. person would be required to include the security-based swap in its security-based swap dealer (if it is a dealing security-based swap) and major security-based swap participant threshold calculations as a guarantee.[124] Therefore, as discussed below with respect to the definition of ''guarantee,'' the Commission is clarifying that legal entities that are owned by one or more U.S. person(s) and for which such person(s) bear unlimited responsibility for the obligations and liabilities will be considered as having a guarantee from a U.S. person, similar to the approach in the SEC Cross-Border Rule. The CFTC's anti-evasion rules address concerns that persons may structure transactions to avoid classification as a U.S. person.[125]

The treatment of the unlimited U.S. liability prong in the Final Rule does not affect an entity's obligations with respect to the Cross-Border Margin Rule. To the extent that entities are considered U.S. persons for purposes of the Cross-Border Margin Rule as a result of the unlimited U.S. liability prong, the Commission believes that the different purpose of the registration-related rules justifies this potentially different treatment.[126]

(v) Exclusion of Collective Investment Vehicle Prong

Consistent with the definition of ''U.S. person'' in the Cross-Border Margin Rule and the SEC Cross-Border Rule, the proposed definition did not include a commodity pool, pooled account, investment fund, or other CIV that is majority-owned by one or more U.S. persons.[127] This prong was included in the Guidance definition. The Commission invited comment on whether it is appropriate that commodity pools, pooled accounts, investment funds, or other CIVs that are majority-owned by U.S. persons would not be included in the proposed definition of ''U.S. person.''[128]

AIMA, Chatham, IIB/SIFMA, JFMC/IBAJ,[129] JBA, and State Street supported not including this prong in the ''U.S. person'' definition. They generally noted that there are practical difficulties in tracking the beneficial ownership in CIVs, and therefore, including a CIV prong would increase the complexity of the ''U.S. person'' definition. AIMA stated that this could necessitate conservative assumptions being made to avoid the risk of breaching regulatory requirements that depend on the status of investors in the vehicle. JBA noted that non-U.S. persons may choose not to enter into transactions with CIVs in which U.S. persons are involved to avoid the practical burdens of identifying and tracking the beneficial ownership of funds in real-time and the excessive cost arising from the registration threshold calculations. JFMC/IBAJ elaborated that ownership composition can change throughout the life of the vehicle due to redemptions and additional investments.

AIMA, Chatham, and State Street also noted that there are limited benefits to including a requirement to ''look-through'' non-U.S. CIVs to identify and track U.S. beneficial owners of such vehicles. AIMA stated that it is reasonable to assume that the potential investment losses to which U.S. investors in CIVs are exposed are limited to their initial capital investment. Chatham stated that the composition of a CIV's beneficial owners is not likely to have a significant bearing on the degree of risk that the CIV's swap activity poses to the U.S. financial system, noting that CIVs organized or having a principal place of business in the U.S. would be under the Commission's authority, and majority-owned CIVs may be subject to margin requirements in foreign jurisdictions.

AIMA added that the definition of ''U.S. person'' in the Guidance is problematic for certain funds managed by investment managers because they are subject to European rules on clearing, margining, and risk mitigation.

After consideration of the comments, and consistent with the definition of ''U.S. person'' in the Cross-Border Margin Rule and the SEC Cross-Border Rule, the Commission is adopting as proposed a ''U.S. person'' definition that does not include a commodity pool, pooled account, investment fund, or other CIV that is majority-owned by one or more U.S. persons.[130] Similar to the SEC, the Commission is of the view that including majority-owned CIVs within the definition of ''U.S. person'' for the purposes of the Final Rule would likely cause more CIVs to incur additional programmatic costs associated with the relevant Title VII requirements and ongoing assessments, while not significantly increasing programmatic benefits given that the composition of a CIV's beneficial owners is not likely to have significant bearing on the degree of risk that the CIV's swap activity poses to the U.S. financial system.[131] Although many of these CIVs have U.S. participants that could be adversely affected in the event of a counterparty default, systemic risk concerns are mitigated to the extent these CIVs are subject to margin requirements in foreign jurisdictions. In addition, the exposure of participants to losses in CIVs is typically limited to their investment amount, and it is unlikely that a participant in a CIV would make counterparties whole in the event of a default.[132] Further, the Commission continues to believe that identifying and tracking a CIV's beneficial ownership may pose a significant challenge, particularly in certain circumstances such as fund-of-funds or master-feeder structures.[133] Therefore, although the U.S. participants in such CIVs may be adversely affected in the event of a counterparty default, the Commission has determined that the majority-

[123] *Id.* at 960–961.

[128] Proposed Rule, 85 FR at 969.

[129] JFMC/IBAJ also requested that conforming amendments be made to the ''U.S. person'' definition under the Cross-Border Margin Rule. However, this comment is outside of the scope of the Final Rule.

[130] *See* Cross-Border Margin Rule, 81 FR at 34824; SEC Cross-Border Rule, 79 FR at 47311, 47337.

[131] Proposed Rule, 85 FR at 961. *See* SEC Cross-Border Rule, 79 FR at 47337.

[132] Proposed Rule, 85 FR at 961; SEC Cross-Border Rule, 79 FR at 47311.

[133] *See* Cross-Border Margin Rule, 81 FR at 34824.

ownership test should not be included in the definition of ''U.S. person.''

A CIV fitting within the majority U.S. ownership prong may also be a U.S. person within the scope of § 23.23(a)(23)(i)(B) of the Final Rule (entities organized or having a principal place of business in the United States). As the Commission clarified in the Cross-Border Margin Rule, whether a pool, fund, or other CIV is publicly offered only to non-U.S. persons and not offered to U.S. persons is not relevant in determining whether it falls within the scope of the ''U.S. person'' definition.[134]

(vi) Exclusion of Catch-All Prong

Unlike the non-exhaustive ''U.S. person'' definition provided in the Guidance,[135] the Commission proposed that the definition of ''U.S. person'' be limited to persons enumerated in the rule, consistent with the Cross-Border Margin Rule and the SEC Cross-Border Rule.[136] The Commission invited comment on whether the ''U.S. person'' definition should include a catch-all provision.[137]

AFEX/GPS, Chatham, IIB/SIFMA, and JBA supported elimination of the ''include, but not limited to'' language from the Guidance. AFEX/GPS stated that this approach should help facilitate compliance with Commission rules. Chatham stated that the catch-all prong works against the core purposes of the cross-border rules, to enhance regulatory cooperation and transparency. IIB/SIFMA stated that market participants have lacked any practical way to delineate the scope of that catch-all phrase, leading to legal uncertainty. JBA stated that the provision is difficult to interpret and leads to uncertainty, and potentially reduced transactions by market participants, leading to increased bifurcation in the market.

The Commission is adopting this aspect of the ''U.S. person'' definition as proposed.[138] Unlike the non-exhaustive ''U.S. person'' definition provided in the Guidance, the definition of ''U.S. person'' is limited to persons enumerated in the rule, consistent with the Cross-Border Margin Rule and the SEC Cross-Border Rule.[139] The Commission believes that the prongs adopted in the Final Rule capture those persons with sufficient jurisdictional nexus to the U.S. financial system and commerce in the United States that they should be categorized as ''U.S. persons.''[140]

3. Principal Place of Business

The Commission proposed to define ''principal place of business'' as the location from which the officers, partners, or managers of the legal person primarily direct, control, and coordinate the activities of the legal person, consistent with the SEC definition of ''U.S. person.''[141] Additionally, with respect to a CIV, the Proposed Rule stated that this location is the office from which the manager of the CIV primarily directs, controls, and coordinates the investment activities of the CIV, and noted that activities such as formation of the CIV, absent an ongoing role by the person performing those activities in directing, controlling, and coordinating the investment activities of the CIV, generally would not be as indicative of activities, financial and legal relationships, and risks within the United States of the type that Title VII is intended to address as the location of a CIV manager.[142] The Commission invited comment on whether, when determining the principal place of business for a CIV, the Commission should consider including as a factor whether the senior personnel responsible for the formation and promotion of the CIV are located in the United States, similar to the approach in the Cross-Border Margin Rule.[143]

AIMA supported the proposed definition of ''principal place of business'' and stated that there are more relevant indicia of U.S. nexus than the activities of forming and promoting a CIV, such as the location of staff who control the investment activities of the CIV. Similarly, IIB/SIFMA supported adopting the SEC's ''principal place of business'' test for CIVs because it better captures business reality by focusing more on investment strategy rather than the location of promoters who do not have an ongoing responsibility for the vehicle.

The Commission is adopting the ''principal place of business'' aspect of the ''U.S. person'' definition as proposed.[144] As noted in the Cross-Border Margin Rule,[145] and consistent with the SEC definition of ''U.S. person,''[146] § 23.23(a)(23)(ii) provides that the principal place of business means the location from which the officers, partners, or managers of the legal person primarily direct, control, and coordinate the activities of the legal person. With the exception of externally managed entities, as discussed below, the Commission is of the view that for most entities, the location of these officers, partners, or managers generally corresponds to the location of the person's headquarters or main office. However, the Commission believes that a definition that focuses exclusively on whether a legal person is organized, incorporated, or established in the United States could encourage some entities to move their place of incorporation to a non-U.S. jurisdiction to avoid complying with the relevant Dodd-Frank Act requirements, while maintaining their principal place of business—and therefore, risks arising from their swap transactions—in the United States. Moreover, a ''U.S. person'' definition that does not include a ''principal place of business'' element could result in certain entities falling outside the scope of the relevant Dodd-Frank Act-related requirements, even though the nature of their legal and financial relationships in the United States is, as a general matter, indistinguishable from that of entities incorporated, organized, or established in the United States. Therefore, the Commission is of the view that it is appropriate to treat such entities as U.S. persons for purposes of the Final Rule.[147]

However, determining the principal place of business of a CIV, such as an investment fund or commodity pool, may require consideration of additional factors beyond those applicable to operating companies.[148] The Commission interprets that, for an externally managed investment vehicle, this location is the office from which the manager of the vehicle primarily directs, controls, and coordinates the investment activities of the vehicle.[149] This interpretation is consistent with the Supreme Court's decision in *Hertz Corp.* v. *Friend,* which described a corporation's principal place of business, for purposes of diversity jurisdiction, as the ''place where the corporation's high level officers direct, control, and coordinate the

[149] Final § 23.23(a)(23)(ii).

corporation's activities.'' [150] In the case of a CIV, the senior personnel that direct, control, and coordinate a CIV's activities are generally not the named directors or officers of the CIV, but rather persons employed by the CIV's investment advisor or promoter, or in the case of a commodity pool, its CPO. Therefore, consistent with the SEC Cross-Border Rule,[151] when a primary manager is responsible for directing, controlling, and coordinating the overall activity of a CIV, the CIV's principal place of business under the Final Rule is the location from which the manager carries out those responsibilities.

Under the Cross-Border Margin Rule,[152] the Commission generally considers the principal place of business of a CIV to be in the United States if the senior personnel responsible for either: (1) The formation and promotion of the CIV; or (2) the implementation of the CIV's investment strategy are located in the United States, depending on the facts and circumstances that are relevant to determining the center of direction, control, and coordination of the CIV. Although the second prong is consistent with the approach discussed above, the Commission does not believe that activities such as formation of the CIV, absent an ongoing role by the person performing those activities in directing, controlling, and coordinating the investment activities of the CIV, generally will be as indicative of activities, financial and legal relationships, and risks within the United States of the type that Title VII is intended to address as the location of a CIV manager.[153] The Commission may also consider amending the ''U.S. person'' definition in the Cross-Border Margin Rule in the future.

4. Exception for International Financial Institutions

The Commission proposed that, in consideration of the discretionary and appropriate exercise of international comity-based doctrines, the term ''U.S. person'' would not include certain multilateral and other international financial institutions.[154]

IIB/SIFMA supported the proposed exception for certain international financial institutions, noting that the Commission has routinely recognized the special status afforded these institutions under the traditions of the international system by effectively treating them as non-U.S. persons for most purposes, and it is therefore appropriate for the Commission to codify this treatment through this exception. IIB/SIFMA also stated that the catch-all for ''similar international organizations'' appropriately addresses the international comity considerations that underlie this exception.

The Commission is adopting this aspect of the ''U.S. person'' definition as proposed, with a technical modification as discussed below.[155] Consistent with the SEC's definition,[156] the term ''U.S. person'' does not include the International Monetary Fund, the International Bank for Reconstruction and Development, the Inter-American Development Bank, the Asian Development Bank, the African Development Bank, the United Nations, and their agencies and pension plans, and any other similar international organizations, and their agencies and pension plans. The Commission believes that although such foreign entities are not necessarily immune from U.S. jurisdiction for commercial activities undertaken with U.S. counterparties or in U.S. markets, the sovereign or international status of such international financial institutions that themselves participate in the swap markets in a commercial manner is relevant in determining whether such entities should be treated as U.S. persons, regardless of whether any of the prongs of the definition apply.[157] There is nothing in the text or history of the swap-related provisions of Title VII to suggest that Congress intended to deviate from the traditions of the international system by including such international financial institutions within the definitions of the term ''U.S. person.''

Consistent with the Entities Rule and the Guidance, the Commission interprets the term ''international financial institutions'' to include the ''international financial institutions'' that are defined in 22 U.S.C. 262r(c)(2) and institutions defined as ''multilateral development banks'' in the European Union's regulation on ''OTC derivatives, central counterparties and trade repositories.'' [158] Reference to 22 U.S.C. 262r(c)(2) and the European Union definition is consistent with Commission precedent in the Entities Rule.[159] Both of those definitions identify many of the entities for which discretionary and appropriate exercise of international comity-based doctrines is appropriate with respect to the ''U.S. person'' definition.[160] This prong also includes institutions identified in CFTC Staff Letters 17–34 [161] and 18–13.[162] In CFTC Staff Letter 17–34, Commission staff provided relief from CFTC margin requirements to swaps between SDs and the European Stability Mechanism (''ESM''),[163] and in CFTC Staff Letter

[162] *See* CFTC Staff Letter No. 18–13, No-Action Position: Relief for Certain Non-U.S. Persons from Including Swaps with International Financial Institutions in Determining Swap Dealer and Major Swap Participant Status (May 16, 2018), available at *https://www.cftc.gov/sites/default/files/csl/pdfs/18/18-13.pdf.*

[163] *See* CFTC Staff Letter No. 17–34. In addition, in May 2020, the Commission adopted an amendment to § 23.151 to exclude ESM from the definition of ''financial end user,'' which will have the effect of excluding swaps between certain SDs and ESM from the Commission's uncleared swap margin requirements. *See* Margin Requirements for Uncleared Swaps for Swap Dealers and Major Swap Participants, 85 FR 27674 (May 11, 2020).

18–13, Commission staff identified the North American Development Bank (''NADB'') as an additional entity that should be considered an international financial institution for purposes of applying the SD and MSP definitions.[164] Interpreting the definition to include the two entities identified in CFTC Staff Letters 17–34 and 18–13 is consistent with the discretionary and appropriate exercise of international comity because the status of both entities is similar to that of the other international financial institutions identified in the Entities Rule. Consistent with the SEC definition of ''U.S. person,'' the Final Rule lists specific international financial institutions but also provides a catch-all for ''any other similar international organizations, and their agencies and pension plans.'' As a technical edit, the Commission notes that the catch-all for international financial institutions in the Final Rule now includes ''and'' in the clause ''*and* their agencies and pension plans.'' The catch-all provision extends to any of the entities discussed above that are not explicitly listed in the Final Rule.[165]

5. Reliance on Prior Representations

As noted above in section II.A, the Final Rule states that a person may rely on a written representation from its counterparty that the counterparty does or does not satisfy the criteria for one or more of the definitions, unless such person knows or has reason to know that the representation is not accurate.[166]

Further, with respect to the ''U.S. person'' definition, to provide certainty to market participants, the Commission proposed to permit reliance, until December 31, 2025, on any U.S. person-related representations that were obtained to comply with the Cross-Border Margin Rule.[167] The Commission also stated that any person designated as a ''U.S. person'' under the Proposed Rule would also be a ''U.S. person'' under the Guidance, and therefore, market participants would also be able to rely on representations previously obtained under the ''U.S. person'' definition in the Guidance.[168]

IIB/SIFMA and State Street recommended that the reliance on U.S. person representations made with respect to the Cross-Border Margin Rule should be permitted on a permanent basis. State Street asserted that permanent relief raises no new policy considerations, eliminates a ''cliff effect'' in 2025, and eliminates the potential need for market participants to seek Commission extension of the 2025 deadline should circumstances arise where seeking new representations is impractical or unduly burdensome. Additionally, IIB/SIFMA, ISDA, JFMC/IBAJ, and State Street stated that reliance should explicitly be permitted with respect to representations made pursuant to the Guidance. JFMC/IBAJ stated that this would be appropriate given the compliance burdens associated with obtaining representations. State Street noted that the Commission would increase clarity and market efficiency by explicitly providing for Guidance-related representations in final rule text.

In response to these comments, the Commission notes that it proposed temporary reliance on prior representations in the Proposed Rule because it assumed that SDs and MSPs somewhat routinely amend swap trading relationship documentation and thus updated representations based on the proposed U.S. person definition could be obtained in the course of these routine amendments. Permitting temporary reliance to facilitate this method of updating representations is less burdensome and more cost efficient than requiring all affected SDs and MSPs to update representations within a relatively brief compliance period. The Commission has determined that permanent reliance on representations obtained under the Guidance or the Cross-Border Margin Rule would be contrary to good recordkeeping practices, particularly for dormant relationships, which require updated representations within a set time period. Additionally, there are a variety of circumstances that routinely lead SDs and MSPs to amend counterparty trading relationship documentation, such as address changes, payment detail updates, ISDA definition changes, and LIBOR amendments.

To relieve concerns that the December 31, 2025 deadline is burdensome, the Commission is adopting an approximately seven year time limit, until December 31, 2027, for reliance on ''U.S. person'' representations made pursuant to the Cross-Border Margin Rule, instead of the five year limit that was proposed.[169] Thus, for those counterparties for whom a person has already obtained U.S. person-related representations under the Cross-Border Margin Rule, U.S. person-related representations under the Final Rule will only be required from those counterparties with whom swaps are entered after December 31, 2027. Nevertheless, best practice is to obtain updated representations as soon as practicable.

In addition, the Commission has adjusted the rule text of § 23.23(a)(23)(iv) to clarify that reliance is only permitted for representations obtained prior to the effective date of the Final Rule.[170] Persons should not be permitted to rely on representations obtained pursuant to the Cross-Border Margin Rule after the effective date of the Final Rule when such persons could have also obtained representations pursuant to the Final Rule contemporaneously therewith.

The Commission reiterates that it believes that any person designated as a ''U.S. person'' under the Final Rule is also a ''U.S. person'' under the Guidance definition, as the Final Rule's definition is narrower in scope. Therefore, the Commission is of the view that market participants may also rely on representations previously obtained using the ''U.S. person'' definition in the Guidance.[171] A representation obtained under the Guidance should not be relied on permanently, and new representations should be obtained as soon as practicable, but in the Commission's view it would not be appropriate to rely on representations under the Guidance after the December 31, 2027 deadline for similar representations made under the Cross-Border Margin Rule. Thus, for those counterparties for whom a person has already obtained U.S. person-related representations under the Guidance, U.S. person-related representations under the Final Rule will only be required from those counterparties with whom swaps are entered after December 31, 2027.

In response to commenters, the Commission has determined to add rule text permitting reliance on representations obtained under the Guidance.[172] The Commission understands that while the Guidance is non-binding, many market participants have chosen to develop policies and practices that take into account the views expressed therein, including expending time and resources to classify counterparties in accordance with the interpretation of the term ''U.S. person''

as set forth in the Guidance. Adding rule text permitting reliance on representations obtained under the Guidance recognizes, and should reduce, the practical burdens of compliance with the Final Rule by enhancing regulatory certainty.

Finally, the rule text of § 23.23(a)(23)(iv)(B) clarifies that reliance is only permitted for representations obtained prior to the effective date of the Final Rule. As with U.S. person-related representations obtained pursuant to the Cross-Border Margin Rule, persons should not be permitted to rely on representations obtained pursuant to the Guidance after the effective date of the Final Rule when such persons could have also obtained representations pursuant to the Final Rule contemporaneously therewith.

6. Other

The Commission considers the following comments in connection with the proposed ''U.S. person'' definition beyond the scope of this rulemaking and is not addressing them in the Final Rule. However, the Commission takes these comments under advisement for any relevant future Commission action.

AIMA encouraged the CFTC to use the proposed ''U.S. person'' definition universally across all Title VII requirements and the CEA, including in part 4 for CPOs, commodity pools, and commodity trading advisors (''CTAs''). CS encouraged further harmonization of the ''U.S. person'' definition, to the extent possible, within the context of SD activity, including the CFTC's capital and margin rules. IIB/SIFMA recommended making conforming changes to the ''U.S. person'' definition under the Cross-Border Margin Rule to avoid the confusion that will arise from using different definitions of the same term in a single, comprehensive regulatory regime. Finally, JFMC/IBAJ and JSCC requested that the Commission specify that the ''U.S. person'' definition would also apply to, and supersede, the definition referenced in the CFTC's Orders of Exemption from Registration granted to the Japan Securities Clearing Corporation.[173]

C. Guarantee

1. Proposed Rule

The Commission proposed defining ''guarantee'' as an arrangement, pursuant to which one party to a swap has rights of recourse against a guarantor, with respect to its counterparty's obligations under the swap.[174] For these purposes, a party to a swap would have rights of recourse against a guarantor if the party has a conditional or unconditional legally enforceable right to receive or otherwise collect, in whole or in part, payments from the guarantor with respect to its counterparty's obligations under the swap. Also, the term ''guarantee'' would encompass any arrangement pursuant to which the guarantor itself has a conditional or unconditional legally enforceable right to receive or otherwise collect, in whole or in part, payments from any other guarantor with respect to the counterparty's obligations under the swap.

2. Summary of Comments

In general, AFEX/GPS, Chatham, IIB/SIFMA, and JFMC/IBAJ supported the proposed ''guarantee'' definition, while AFR, Barnard, and Better Markets opposed the proposed definition.

AFEX/GPS, Chatham, and JFMC/IBAJ supported the consistency of the proposed definition with the definition in the Cross-Border Margin Rule. JFMC/IBAJ also supported the consistency with the SEC Cross-Border Rule. AFEX/GPS and Chatham noted that the consistency would make the definition more workable.

AFEX/GPS stated that using the broad and vague definition of guarantee in the Guidance, which includes consideration of ''facts and circumstances'' and a non-exclusive list of examples, would not be appropriate, while the proposed definition would be objective and should facilitate compliance without sacrificing concerns about systemic risk flowing back to the United States. Chatham stated that the proposed definition would provide greater legal certainty around what is considered to be a guarantee and focuses the Commission's authority on potential significant risks to the U.S. financial system. IIB/SIFMA noted that the proposed definition would promote legal certainty by establishing a clearer test for when a non-U.S. person is considered to have financial support from a U.S. person, eliminating coverage of certain risk-shifting arrangements (*e.g.,* keepwells and liquidity puts) that do not provide a non-U.S. person's counterparty with recourse against a U.S. guarantor. IIB/SIFMA added that to the extent a firm uses the unlimited U.S. responsibility structure (discussed in section II.B.2.iv above), the Commission could sufficiently address the resulting risks to the United States by treating the firm as having a guarantee from a U.S. person, as the SEC does, rather than considering such an entity a U.S. person. JFMC/IBAJ stated that the definition under the Guidance introduced compliance challenges to market participants globally, including difficulties in confirming or obtaining representations from counterparties regarding whether certain arrangements, particularly purely internal arrangements within a counterparty's corporate group, constituted a ''guarantee.'' JFMC/IBAJ also supported the clarification that a non-U.S. person would be considered a ''guaranteed entity,'' as described below, only with respect to swaps that are guaranteed by a U.S. person.

ISDA, IIB/SIFMA, JFMC/IBAJ, and State Street also recommended that the Commission permit reliance on guarantee-related representations received pursuant to the Cross-Border Margin Rule and Guidance, analogous to the Proposed Rule and related comments with respect to the ''U.S. person'' definition, discussed above. IIB/SIFMA and State Street stated that such reliance should not be time limited.

AFR asserted that the narrower definition of guarantee, as compared to the Guidance, would permit numerous informal or even formal forms of guarantees between U.S. parent corporations and their subsidiaries to escape the definition. Barnard stated that the narrower definition would allow significant risk to be transferred back to the U.S. financial system over time. Barnard noted that economic implications are just as important as legal considerations, as confirmed and intended by CEA section 2(i)(1). Similarly, Better Markets recommended that the Commission revise its proposed definition of ''guarantee'' to include all forms of U.S. financial support used to facilitate dealing through non-U.S. affiliates because financial arrangements posing potential risks to U.S. persons and the U.S. financial system include more than solely contractual guarantees contained in swap trading relationship documentation between non-U.S. counterparties.

Better Markets added that a narrower definition of ''guarantee'' would elevate form over substance and have possible significant adverse effects on the U.S. financial system. Better Markets did not agree that a definition posing possible significant adverse effects on the U.S. financial system nevertheless should be adopted, merely because the proposed ''guarantee'' definition mirrors the definition in the Cross-Border Margin

[173] *See* Amended Order of Exemption from Registration issued for JSCC (May 15, 2017), available at *https://www.cftc.gov/idc/groups/public/@otherif/documents/ifdocs/jsccdcoexemptamdorder5-15-17.pdf.*

[174] Proposed § 23.23(a)(8); Proposed Rule, 85 FR at 963–64, 1002–03.

Rule and therefore would not demand ''a separate independent assessment.'' Better Markets asserted that it is neither a valid statutory purpose nor a benefit that outweighs, or even reasonably approximates, its costs. Better Markets added that CEA section 5(b) and related provisions make clear that the CFTC's core statutory policy objectives are to protect the safety and soundness of SDs, prevent disruptions to the integrity of derivatives markets, ensure the financial integrity of swaps transactions and the avoidance of systemic risk, and preserve the stability of the U.S. financial system.

Better Markets also stated that the CFTC's use of the margin-related ''guarantee'' definition is not appropriate. Its view was that margin requirements on uncleared swaps are market and credit risk mitigants that are imposed on specific portfolios of derivatives with specific counterparties, while the proposed definition would address broader systemic risk reduction and other policy objectives, including statutory concerns about the evasion of U.S. law through legal entity booking strategies. Further, Better Markets asserted that the narrower definition would increase risks to U.S. persons, because the definition would result in fewer swaps transactions being treated as ''guaranteed,'' opening a loophole for dealing conducted through unregistered affiliates of U.S. banks that nevertheless benefit from direct U.S. financial support.

3. Final Rule

After carefully considering the comments received, the Commission is adopting the definition of ''guarantee'' as proposed, with certain modifications and clarifications as discussed below.[175]

Consistent with the Cross-Border Margin Rule, the term ''guarantee'' applies regardless of whether the right of recourse is conditioned upon the non-U.S. person's insolvency or failure to meet its obligations under the relevant swap, and regardless of whether the counterparty seeking to enforce the guarantee is required to make a demand for payment or performance from the non-U.S. person before proceeding against the U.S. guarantor.[176] The terms of the guarantee need not necessarily be included within the swap documentation or even otherwise reduced to writing, provided that, under the laws of the relevant jurisdiction, a swap counterparty has a conditional or unconditional legally enforceable right, in whole or in part, to receive payments from, or otherwise collect from, the U.S. person in connection with the non-U.S. person's obligations under the swap. For purposes of the Final Rule, the Commission generally considers swap activities involving guarantees from U.S. persons to satisfy the ''direct and significant'' test under CEA section 2(i).[177]

However, in contrast to the Cross-Border Margin Rule and the Proposed Rule, but consistent with the recommendation by IIB/SIFMA, the Commission is interpreting ''guarantee'' in a manner similar to the SEC, specifically with respect to the unlimited U.S. responsibility prong. Similar to the SEC, when a non-U.S. person's counterparty has recourse to a U.S. person for the performance of the non-U.S. person's obligations under a swap by virtue of the U.S. person's unlimited responsibility for the non-U.S. person, such an arrangement is considered a guarantee, and as discussed in sections III.B.3.i and IV.B.3.i below, the non-U.S. person is required to include the swap in its SD and MSP threshold calculations, respectively.[178] As noted above, the Commission is not including the unlimited U.S. responsibility prong in the ''U.S. person'' definition, but interprets such relationships as guarantees to ensure they are appropriately covered by the Final Rule.

The term ''guarantee'' also encompasses any arrangement pursuant to which the counterparty to the swap has rights of recourse, regardless of the form of the arrangement, against at least one U.S. person (either individually, jointly, and/or severally with others) for the non-U.S. person's obligations under the swap. This addresses concerns that swaps could be structured such that they would not count toward a non-U.S. person's threshold calculations. For example, consider a swap between two non-U.S. persons (''Party A'' and ''Party B''), where Party B's obligations to Party A under the swap are guaranteed by a non-U.S. affiliate (''Party C''), and where Party C's obligations under the guarantee are further guaranteed by a U.S. parent entity (''Parent D''). The definition of ''guarantee'' deems a guarantee to exist between Party B and Parent D with respect to Party B's obligations under the swap with Party A.[179]

The Commission's definition of guarantee is not affected by whether the U.S. guarantor is an affiliate of the non-U.S. person because, regardless of affiliation, the swap counterparty has a conditional or unconditional legally enforceable right, in whole or in part, to receive payments from, or otherwise collect from, the U.S. person in connection with the non-U.S. person's obligations.

Also, the ''guarantee'' definition does not apply when a non-U.S. person has a right to be compensated by a U.S. person with respect to the non-U.S. person's own obligations under the swap. For example, consider a swap between two non-U.S. persons (''Party E'' and ''Party F''), where Party E enters into a back-to-back swap with a U.S. person (''Party G''), or enters into an agreement with Party G to be compensated for any payments made by Party E under the swap in return for passing along any payments received. In such an arrangement, a guarantee does not exist because Party F does not have a right to collect payments from Party G with respect to Party E's obligations under the swap (assuming no other agreements exist).[180]

As with the Cross-Border Margin Rule, the definition of ''guarantee'' in the Final Rule is narrower in scope than the one used in the Guidance.[181] Under the Guidance, the Commission advised that it would interpret the term ''guarantee'' generally to include not only traditional guarantees of payment or performance of the related swaps, but also other formal arrangements that, in view of all the facts and circumstances, support the non-U.S. person's ability to pay or perform its swap obligations. The Commission stated that it believed that it was necessary to interpret the term ''guarantee'' to include the different financial arrangements and structures that transfer risk directly back to the United States.[182] The Commission is aware that many other types of financial arrangements or support, other than a guarantee as defined in the Final Rule, may be provided by a U.S. person to a non-U.S. person (*e.g.,* keepwells and liquidity puts, certain types of indemnity agreements, master trust agreements, liability or loss transfer or sharing agreements). The Commission understands that these other financial arrangements or support transfer risk directly back to the U.S. financial system, with possible adverse effects, in a manner similar to a guarantee with a

direct recourse to a U.S. person. However, the Commission has determined that a narrower definition of guarantee than that in the Guidance achieves a more workable framework for non-U.S. persons, particularly because the Final Rule's definition of ''guarantee'' is consistent with the Cross-Border Margin Rule, and therefore does not require a separate independent assessment, without undermining the protection of U.S. persons and the U.S. financial system. The Commission is sympathetic to comments regarding, and is independently aware of, the difficulty in confirming or obtaining representations from counterparties regarding whether certain arrangements, particularly purely internal arrangements within a counterparty's corporate group, constitute a ''guarantee.'' However, such difficulty does not extend to classifying as guarantees arrangements that provide a non-U.S. person's counterparty with recourse to a U.S. person for the performance of the non-U.S. person's obligations under a swap.

A broad definition of guarantee, as recommended by AFR, Barnard, and Better Markets, would make it difficult for certain entities to determine whether their counterparty is guaranteed or not. General consistency with the Cross-Border Margin Rule definition means no additional burden for market participants. Additionally, though the definition of ''guarantee'' in the Guidance was broader, having a specific standard in a rule is preferable to an open-ended interpretation. The Commission recognizes that the definition of ''guarantee'' could lead to certain entities counting fewer swaps towards their SD or MSP thresholds or qualify additional counterparties for exceptions to certain regulatory requirements as compared to the definition in the Guidance. However, such concerns could be mitigated to the extent such non-U.S. persons meet the definition of a ''significant risk subsidiary,'' and thus, as discussed below, are required to count certain swaps or swap positions toward their SD or MSP registration thresholds. In this way, non-U.S. persons receiving support from a U.S. person and representing a significant risk to the U.S. financial system are captured by the Final Rule. Accordingly, the Final Rule achieves the dual goals of protecting the U.S. markets and promoting a workable cross-border framework.

In response to comments, the Commission is adopting language in the ''guarantee'' definition that is parallel to the language for ''U.S. persons,'' allowing persons to rely on counterparty representations with respect to a counterparty's ''guarantee'' status obtained pursuant to the Cross-Border Margin Rule. As discussed above, permitting temporary reliance to facilitate this method of updating representations is less burdensome and more cost efficient than requiring all affected SDs to update representations within a relatively brief compliance period. However, permanent reliance on representations obtained under the Guidance or the Cross-Border Margin Rule would be inconsistent with good recordkeeping practices, particularly for dormant relationships, thus, the Commission has determined to require an updated representation within a set time period. The Commission is thus adopting an approximately seven year time limit, until December 31, 2027, on counterparty representations with respect to a counterparty's ''guarantee'' status obtained pursuant to the Cross-Border Margin Rule, the same as is permitted for reliance on the ''U.S. person'' representations. Thus, for those counterparties for whom a person has already obtained guarantee-related representations under the Cross-Border Margin Rule, guarantee-related representations under the Final Rule will only be required from those counterparties with whom swaps are entered after December 31, 2027. Nevertheless, best practice is to obtain updated representations as soon as practicable.

In addition, the Commission has adjusted the rule text of § 23.23(a)(9) to clarify that reliance is only permitted for representations obtained prior to the effective date of the Final Rule.[183] Persons should not be permitted to rely on representations obtained pursuant to the Cross-Border Margin Rule after the effective date of the Final Rule when such persons could have also obtained representations pursuant to the Final Rule contemporaneously therewith.

The Commission believes that any ''guarantee'' related representation received under the Guidance definition would also apply under the Final Rule, as the Final Rule's definition is generally narrower in scope. Therefore, the Commission is of the view that market participants may also rely on representations previously obtained using the ''guarantee'' definition in the Guidance.[184] Nevertheless, a representation obtained under the Guidance should not be relied on permanently and should be obtained as soon as practicable, but in the Commission's view it would not be appropriate to rely on representations under the Guidance after the December 31, 2027 deadline for similar representations made under the Cross-Border Margin Rule. Thus, for those counterparties for whom a person has already obtained guarantee-related representations under the Guidance, guarantee-related representations under the Final Rule will only be required from those counterparties with whom swaps are entered after December 31, 2027.

In response to commenters, the Commission has determined to add rule text permitting reliance on representations obtained under the Guidance.[185] The Commission understands that while the Guidance is non-binding, many market participants have chosen to develop policies and practices that take into account the views expressed therein, including expending time and resources to classify counterparties in accordance with the interpretation of the term ''guarantee'' as set forth in the Guidance. Adding rule text permitting reliance on representations obtained under the Guidance recognizes, and should reduce, the practical burdens of compliance with the Final Rule by enhancing regulatory certainty.

Finally, the rule text of § 23.23(a)(9)(ii) clarifies that reliance is only permitted for representations obtained prior to the effective date of the Final Rule. As with guarantee-related representations obtained pursuant to the Cross-Border Margin Rule, persons should not be permitted to rely on representations obtained pursuant to the Guidance after the effective date of the Final Rule when such persons could have also obtained representations pursuant to the Final Rule contemporaneously therewith.

For ease of understanding, the discussion in this release uses the term ''Guaranteed Entity'' to refer to a non-U.S. person whose swaps are guaranteed by a U.S. person, but only with respect to the swaps that are so guaranteed. Thus, a non-U.S. person may be a Guaranteed Entity with respect to its swaps with certain counterparties because the non-U.S. person's swaps with those counterparties are guaranteed, but would not be a Guaranteed Entity with respect to its

183 Final § 23.23(a)(9)(i).

184 An SD or MSP may not rely on a representation obtained for purposes of the Guidance that a counterparty's swaps are not guaranteed by a U.S. person if the SD or MSP has classified the counterparty as a U.S. person under the unlimited U.S. responsibility prong of the U.S. person definition in the Guidance.

185 Final § 23.23(a)(9)(ii).

swaps with other counterparties if the non-U.S. person's swaps with the other counterparties are not guaranteed by a U.S. person. In other words, depending on the nature of the trading relationship, a single entity could be a Guaranteed Entity with respect to some of its swaps, but not others.

Additionally, this release uses the term ''Other Non-U.S. Person'' to refer to a non-U.S. person that is neither a Guaranteed Entity nor a significant risk subsidiary (as defined below).[186] Depending on an entity's corporate structure and financial relationships, a single entity could be both a Guaranteed Entity and a significant risk subsidiary and, as noted above, it may be a Guaranteed Entity for certain of its swaps and an Other Non-U.S. Person for others.

D. Significant Risk Subsidiary, Significant Subsidiary, Subsidiary, Parent Entity, and U.S. GAAP

1. Proposed Rule

The Commission proposed a new category of entity termed a significant risk subsidiary (''SRS''). Under the Proposed Rule, a non-U.S. person would be considered an SRS if: (1) The non-U.S. person is a ''significant subsidiary'' of an ''ultimate U.S. parent entity,'' as those terms were proposed to be defined; (2) the ''ultimate U.S. parent entity'' has more than $50 billion in global consolidated assets, as determined in accordance with U.S. generally accepted accounting principles (''GAAP'') at the end of the most recently completed fiscal year; and (3) the non-U.S. person is not subject to either: (a) Consolidated supervision and regulation by the Board of Governors of the Federal Reserve System (''Federal Reserve Board'') as a subsidiary of a U.S. bank holding company (''BHC''); or (b) capital standards and oversight by the non-U.S. person's home country regulator that are consistent with the Basel Committee on Banking Supervision's ''International Regulatory Framework for Banks'' (''Basel III'') and margin requirements for uncleared swaps in a jurisdiction for which the Commission has issued a comparability determination (''CFTC Margin Determination'') with respect to uncleared swap margin requirements.[187] If an entity is determined to be an SRS, the Commission proposed to apply certain regulations to the entity in the same manner as a U.S. person in some instances, for example in the application of the SD and MSP registration threshold calculations, and in the same manner as a Guaranteed Entity in other instances, for example in the application of group B and C requirements.

With respect to conduit affiliates, the Guidance included a discussion of factors that would be taken into account when determining whether an entity was a conduit affiliate of a U.S. person. The Proposed Rule stated that this concept was not being included in the proposed regulations because the concerns posed by a conduit affiliate were intended to be addressed through the proposed definition and regulation of SRSs.

2. Summary of Comments

In the Proposed Rule, the Commission asked whether it should use the concept of a conduit affiliate, as was done in the Guidance, in order to harmonize with the SEC.[188] AEFX/GPS, Chatham, JFMC/IBAJ, and IIB/SIFMA all stated that they prefer the SRS entity definition to the use of the conduit affiliate concept from the Guidance. AFEX/GPS, Chatham, and IIB/SIFMA stated that the objective criteria in the SRS definition are preferable to the conduit affiliate concept in the Guidance, which is more difficult to apply. JFMC/IBAJ and IIB/SIFMA also commented that the SRS definition is an improvement over the FCS concept previously proposed in the 2016 Proposal because the SRS definition excludes those subsidiaries that are not significant to their parent entities. Better Markets stated that the proposed SRS definition does not address the avoidance and evasion risks addressed by the conduit affiliate concept in the Guidance. IATP suggested that the previously proposed FCS concept be retained in place of the SRS definition. JBA stated that market participants have already assessed, under the Guidance, whether their activities are subject to the swap rules based on the attributes of their counterparties and requiring them to re-assess will create significant burdens on market participants. ISDA suggested that with respect to SRSs, entities should be permitted to rely on counterparty representations pertaining to conduit affiliates as described in the Guidance.

CS and IIB/SIFMA stated that the exclusion for subsidiaries of BHCs in the SRS definition should be expanded to include those entities that are subsidiaries of intermediate holding companies (''IHCs''). These commenters noted that IHCs are subject to prudential regulation, including Basel III capital requirements, stress testing, liquidity, and risk management requirements.

JFMC/IBAJ and IIB/SIFMA suggested that accounting consolidation does not create a sufficient jurisdictional nexus to the United States because there is no requirement that the U.S. entity be directly liable for the foreign subsidiary's swaps. These commenters stated that if the SRS definition is nevertheless retained then the proposed significance tests should also be retained. IIB/SIFMA and the Working Group stated that the definition of ultimate U.S. parent entity should be limited to those groups of entities where the top-tier ultimate parent company is a U.S. person.

With respect to the exception in § 23.23(a)(13)(i) for subsidiaries of BHCs, AFR and Better Markets stated that the Commission should eliminate this exception because deference to the prudential regulators in this way is not justified. AFR noted the failure of prudential supervision of banks to adequately address derivatives markets risks prior to the 2008 financial crisis. IATP, AFR, and Barnard stated that the broad exemptions would exclude almost all foreign subsidiaries of U.S. companies and be a significant reduction in the application of the Commission's swap regulations. Better Markets stated that the Commission does not have the discretion to determine whether and when to apply U.S. regulatory requirements based on principles of international comity when there is a direct and significant risk to U.S. BHCs and the U.S. financial system.

Better Markets suggested that if the SRS definition is retained then there should be two additional significance tests added to those in § 23.23(a)(14). This commenter proposed that if an entity were to meet a risk transfer test, measuring the notional amount of swaps that are back-to-backed with U.S. entities, or a risk acceptance test, measuring the trading activity of the subsidiary over a three month time period, then the entity would be considered a significant subsidiary.

The Working Group suggested that the proposed SRS definition should be modified to limit the applicability to only those entities that qualify as financial entities because the systemic risk associated with non-financial entities is mitigated because their activities primarily take place outside of the financial system. The Working Group agreed with the Commission's proposal to exclude from the SRS definition those entities that are subject to oversight by the non-U.S. person's home country regulator and capital

[186] Note that an Other Non-U.S. Person can include a registered SD or MSP.

[187] Proposed Rule, 85 FR at 964–968.

[188] Proposed Rule, 85 FR at 969–970.

standards consistent with Basel III. However, the commenter added that to the extent a regulator has exempted a particular type of entity from capital requirements otherwise consistent with Basel III, the CFTC should defer to such exemption and consider such entity as subject to comparable capital requirements.

3. Final Rule and Commission Response

The Commission is adopting the SRS definition as proposed, with two modifications as discussed below. First, the Final Rule adds IHCs to the exclusion in § 23.23(a)(13)(i) for those companies that are subject to consolidated supervision and regulation by the Federal Reserve Board. Second, with respect to the carve-out in § 23.23(a)(13)(ii), the Final Rule makes a clarifying revision to the margin requirements aspect of that provision.

(i) Non-U.S. Persons With U.S. Parent Entities

As discussed in the Proposed Rule, in addition to the U.S. persons described above in section II.B, the Commission understands that U.S. persons may organize the operations of their businesses through the use of one or more subsidiaries that are organized and operated outside the United States.[189] Through consolidation, non-U.S. subsidiaries of U.S. persons may permit U.S. persons to accrue risk through the swap activities of their non-U.S. subsidiaries. This risk, in the aggregate, may have a significant effect on the U.S. financial system. Therefore, the Commission may subject consolidated non-U.S. subsidiaries of U.S. persons to Commission regulation due to their direct and significant relationship to their U.S. parent entities. Further, consolidated non-U.S. subsidiaries of U.S. parent entities present a greater supervisory interest to the CFTC, relative to Other Non-U.S. Persons.[190] Moreover, because U.S. persons have regulatory obligations under the CEA that Other Non-U.S. Persons may not have, consolidated non-U.S. subsidiaries of U.S. parent entities present a greater supervisory interest to the CFTC relative to Other Non-U.S. Persons due to the Commission's interest in preventing the evasion of obligations under the CEA.

Pursuant to the consolidation requirements of U.S. GAAP, the financial statements of a U.S. parent entity reflect the financial position and results of operations of that parent entity, together with the network of branches and subsidiaries in which the U.S. parent entity has a controlling interest, including non-U.S. subsidiaries, which is an indication of connection and potential risk to the U.S. parent entity. Consolidation under U.S. GAAP is predicated on the financial control of the reporting entity. Therefore, an entity within a financial group that is consolidated with its parent entity for accounting purposes in accordance with U.S. GAAP is subject to the financial control of that parent entity. By virtue of consolidation then, a non-U.S. subsidiary's swap activity creates direct risk to the U.S. parent.[191] That is, as a result of consolidation and financial control, the financial position, operating results, and statement of cash flows of a non-U.S. subsidiary are included in the financial statements of its U.S. parent and therefore affect the financial condition, risk profile, and market value of the parent. Because of that relationship, risks taken by a non-U.S. subsidiary can have a direct effect on the U.S. parent entity. Furthermore, a non-U.S. subsidiary's counterparties may generally look to both the subsidiary and its U.S. parent for fulfillment of the subsidiary's obligations under a swap, even without any explicit guarantee. In many cases, counterparties would not enter into the transaction with the subsidiary (or would not do so on the same terms), and the subsidiary would not be able to engage in a swap business, absent this close relationship with a parent entity. In addition, a non-U.S. subsidiary may enter into offsetting swaps or other arrangements with its U.S. parent entity or other affiliate(s) to transfer the risks and benefits of swaps with non-U.S. persons to its U.S. affiliates, which could also lead to risk for the U.S. parent entity. Because such swap activities may have a direct effect on the financial position, risk profile, and market value of a U.S. parent entity, they can lead to spill-over effects on the U.S. financial system.

IIB/SIFMA and JFMC/IBAJ stated that there is no legal basis to apply swap regulations based on accounting consolidation. The Commission continues to believe, as it stated in its Cross-Border Margin Rule, by virtue of an entity having its financial statements consolidated with those of its U.S. ultimate parent, the financial position, operating results, and statement of cash flows of the entity are included in the financial statements of its U.S. ultimate parent entity and therefore affect the financial position, risk profile, and market value of the U.S. ultimate parent. Because of the entity's direct relationship with, and the possible negative effect of its swap activities on, its U.S. ultimate parent entity and the U.S. financial system, the entity raises greater supervisory concern in the United States relative to other non-U.S. swap entities.[192] Accordingly, it is appropriate to apply certain swap regulations to certain entities that have financial statements consolidated with U.S. parent entities.

However, the principles of international comity militate against applying the Commission's swap regulations to all non-U.S. subsidiaries of U.S. parent entities. Rather, it is consistent with such principles to apply a risk-based approach to determining which of such entities should be required to comply with the Commission's swap requirements. The Commission's approach in the Final Rule, as discussed further below with respect to the exclusion for subsidiaries of BHCs and IHCs, makes that determination in a manner that accounts for the risk that non-U.S. subsidiaries may pose to the U.S. financial system and the ability of large global entities to operate efficiently outside the United States. The Commission's risk-based approach is embodied in the definition of an SRS, which, as discussed above, captures entities whose obligations under swaps may not be guaranteed by U.S. persons, but nonetheless raise particular supervisory concerns in the United States due to the possible negative effect on their ultimate U.S. parent entities and thus the U.S. financial system.

(ii) Preliminary Definitions

For purposes of the SRS definition, the term ''subsidiary'' means an affiliate of a person controlled by such person directly, or indirectly through one or more intermediaries.[193] The definition of ''subsidiary'' has been revised in the Final Rule for clarity. For purposes of this definition, an affiliate of, or a person affiliated with, a specific person is a person that directly, or indirectly through one or more intermediaries, controls, or is controlled by, or is under common control with, the person specified.[194] In the Final Rule, the definition of ''affiliate'' has been moved out of the definition of ''subsidiary'' and into its own definition for added clarity, since the term ''affiliate'' is relevant for other provisions of the Final Rule, as

[189] Proposed Rule, 85 FR at 964.

[190] This release uses the term ''Other Non-U.S. Person'' to refer to a non-U.S. person that is neither a Guaranteed Entity nor an SRS.

[191] Proposed Rule, 85 FR at 964.

[192] *See* Cross-Border Margin Rule, 81 FR at 34827.

[193] Final § 23.23(a)(15).

[194] Final § 23.23(a)(1).

discussed in this release. The term ''control,'' including controlling, controlled by, and under common control with, means the possession, direct or indirect, of the power to direct or cause the direction of the management and policies of a person, whether through the ownership of voting shares, by contract, or otherwise.[195] The definition of ''control'' is also relevant to other provisions of the Final Rule, as discussed in this release. The definitions of subsidiary, affiliate, and control are substantially similar to the definitions found in SEC Regulation S–X.[196] Further, under the Final Rule, the term ''parent entity'' means any entity in a consolidated group that has one or more subsidiaries in which the entity has a controlling interest, in accordance with U.S. GAAP.[197] U.S. GAAP is defined in the Final Rule as U.S. generally accepted accounting principles.[198]

Notably, a U.S. parent entity for purposes of the definition of SRS need not be a non-U.S. subsidiary's ultimate parent entity. The SRS definition encompasses U.S. parent entities that may be intermediate entities in a consolidated corporate family with an ultimate parent entity located outside the U.S. To differentiate between multiple possible U.S. parent entities, the Final Rule defines an ''ultimate U.S. parent entity'' for purposes of the significant subsidiary test. A non-U.S. person's ''ultimate U.S. parent entity'' is the U.S. parent entity that is not a subsidiary of any other U.S. parent entity.[199] Risk of a non-U.S. subsidiary that flows to its U.S. parent entity may not flow back out of the U.S. to a non-U.S. ultimate or intermediate parent entity. Because the risk may ultimately stop in the United States, the Commission is basing the SRS definition on whether a non-U.S. person has any U.S. parent entity, subject to certain risk-based thresholds.

IIB/SIFMA and the Working Group stated that the SRS definition should be limited to subsidiaries that have a ''top-tier'' U.S. person parent entity, rather than including subsidiaries that have a U.S. parent entity that may not be the ultimate parent entity. The Commission is including subsidiaries that have non-''top-tier'' U.S. parent entities because the risk that the subsidiary poses may be consolidated in the United States. The Final Rule treats all subsidiaries of U.S. parent entities equally, regardless of where the U.S. parent entity sits in the corporate structure.

(iii) Significant Risk Subsidiaries

In addition to the definitions discussed above, whether an entity is an SRS depends on the size of its ultimate U.S. parent entity, the significance of the subsidiary to its ultimate U.S. parent entity, and the regulatory oversight of its ultimate U.S. parent entity or the regulatory oversight of the non-U.S. subsidiary in the jurisdiction in which it is regulated.

Under the Final Rule, the ultimate U.S. parent entity must exceed a $50 billion consolidated asset threshold.[200] The Commission is adopting the $50 billion threshold after considering both the Commission's interest in adequately overseeing those non-U.S. persons that may have a significant effect on their ultimate U.S. parent entity—and, by extension—the U.S. financial system, and also its interest in avoiding unnecessary burdens on those non-U.S. persons that would not have such an effect.[201] The $50 billion threshold limits the burden of the SRS definition to only those entities whose ultimate U.S. parent entity may pose a systemic risk to the U.S. financial system.

In addition, before a non-U.S. subsidiary of an ultimate U.S. parent entity that meets the $50 billion consolidated asset threshold is an SRS, the subsidiary needs to constitute a significant part of its ultimate U.S. parent entity. This concept of a ''significant subsidiary'' borrows from the SEC's definition of ''significant subsidiary'' in Regulation S–X, as well as the Federal Reserve Board in its financial statement filing requirements for foreign subsidiaries of U.S. banking organizations.[202] The Commission is focusing on only those subsidiaries that are significant to their ultimate U.S. parent entities, in order to capture those subsidiaries that have a significant effect on their large ultimate U.S. parent entities. To provide certainty to market participants as to what constitutes a significant subsidiary, the Final Rule includes a set of quantitative significance tests. Although not identical, the SEC includes similar revenue and asset significance tests in its definition of significant subsidiary in Regulation S–X.[203] In this case, in order to determine whether a subsidiary meets such significance, the Final Rule measures the significance of a subsidiary's equity capital, revenue, and assets relative to its ultimate U.S. parent entity.

Under the Final Rule, the term ''significant subsidiary'' means a subsidiary, including its own subsidiaries, where: (1) The three year rolling average of the subsidiary's equity capital is equal to or greater than five percent of the three year rolling average of its ultimate U.S. parent entity's consolidated equity capital, as determined in accordance with U.S. GAAP at the end of the most recently completed fiscal year (the ''equity capital significance test''); (2) the three year rolling average of the subsidiary's revenue is equal to or greater than ten percent of the three year rolling average of its ultimate U.S. parent entity's consolidated revenue, as determined in accordance with U.S. GAAP at the end of the most recently completed fiscal year (the ''revenue significance test''); or (3) the three year rolling average of the subsidiary's assets is equal to or greater than ten percent of the three year rolling average of its ultimate U.S. parent entity's consolidated assets, as determined in accordance with U.S. GAAP at the end of the most recently completed fiscal year (the ''asset significance test'').[204] For the equity capital significance test, equity capital includes perpetual preferred stock, common stock, capital surplus, retained earnings, accumulated other comprehensive income, and other equity capital components and is calculated in accordance with U.S. GAAP.

The Final Rule results in an entity being a significant subsidiary only if it passes at least one of these significance tests. The equity capital test is used to measure a subsidiary's significance to its ultimate U.S. parent entity and is used in the context of financial statement reporting of foreign subsidiaries.[205] If a subsidiary constitutes more than ten percent of its ultimate U.S. parent entity's assets or revenues, it is of significant importance to its ultimate U.S. parent entity such that swap activity by the subsidiary may

[205] *See* FR 2314 and FR 2314S Instructions, at Gen-2.

have a material effect on its ultimate U.S. parent entity and, consequently, the U.S. financial system. The Commission is using a three year rolling average throughout its significance tests in order to mitigate the potential for frequent changes in an entity's SRS status based on fluctuations in its share of equity capital, revenue, or assets of its ultimate U.S. parent entity. If a subsidiary satisfies any one of the three significance tests, then it is of sufficient significance to its ultimate U.S. parent entity, which under § 23.23(a)(13) has consolidated assets of more than $50 billion, to warrant the application of requirements addressed by the Final Rule if such subsidiary otherwise meets the definition of SRS.

As noted above, Better Markets suggested that the Commission add two activity-based tests to the proposed significant subsidiary definition: A risk transfer test and a risk acceptance test. The Commission declines to include these two tests because they do not consider the risk to the broader financial system of the entities that are potentially captured by the Final Rule. Better Markets' proposed tests are activity-based, rather than risk-based, whereas the Commission has determined to apply swap requirements to foreign entities using a risk-based test. Better Markets' proposed tests would set thresholds above which an entity would be deemed to be significant subsidiaries, however these tests do not provide any measure that is relative to the parent entity. Such notional-based thresholds may be a measure of activity, but they are not a measure of risk that a subsidiary poses to a parent entity.[206] The significance tests adopted here to identify SRSs include those entities that meet the commenters' proposed tests to the extent those entities pose what the Commission considers a significant risk to the financial system.

(iv) Exclusions From the Definition of SRS

As indicated above, under the Final Rule, a non-U.S. person will not be an SRS to the extent the entity is subject to prudential regulation as a subsidiary of a U.S. BHC or IHC, or is subject to comparable capital and margin standards.[207] An entity that meets either of those two exceptions, in the Commission's view, is subject to a level of regulatory oversight that is sufficiently comparable to the Dodd-Frank Act swap regime with respect to prudential oversight. Non-U.S. subsidiaries that are part of BHCs are already subject to consolidated supervision and regulation by the Federal Reserve Board,[208] including with respect to capital and risk management requirements, and therefore their swap activity poses less risk to the financial position and risk profile of the ultimate U.S. parent entity, and thus less risk to the U.S. financial system than the swap activity of a non-U.S. subsidiary of an ultimate U.S. parent entity that is not a BHC.[209] In this case, deference to the foreign regulatory regime is appropriate because the swap activity is occurring within an organization that is under the umbrella of U.S. prudential regulation with certain regulatory protections already in place.

The exclusion from the SRS definition for subsidiaries of IHCs is being added to the Final Rule in response to comments. IHCs are subject to prudential standards of the Federal Reserve Board that are similar to those that apply to BHCs. In general, IHCs and BHCs of similar size are subject to similar liquidity, risk management, stress testing, and credit limit standards.[210] Therefore, for the same risk-based reasons that the Commission proposed to exclude subsidiaries of BHCs from the definition of SRS,[211] the Commission is expanding the SRS exclusion to include subsidiaries of both BHCs and IHCs in § 23.23(a)(13)(i).

In response to comments from AFR and Better Markets that the Commission should not defer to the prudential regulators with respect to the regulation of derivative market activity of BHCs and those entities subject to the required non-U.S. capital and margin regimes, under the Guidance, absent a guarantee, the Commission had generally not expected these entities to count their swaps or swap positions with non-US persons towards the SD or MSP thresholds or, if registered as swap entities, comply with Transaction-Level Requirements (discussed in section VI below) when transacting with non-U.S. persons that were not guaranteed by a U.S. person nor acting as conduit affiliates. Thus, the deference to U.S. and non-U.S. prudential regulators in the Final Rule maintains the status quo of the last seven years rather than representing a relinquishment of existing regulatory oversight by the Commission. Moreover, the SRS definition does not defer to prudential regulators to regulate derivatives market activity, which is carried on by the foreign subsidiary, but rather defers to the role of prudential regulation in the consolidated oversight of prudential risk in evaluating the extent to which the Commission should expand its oversight of non-U.S. entities that are not guaranteed by a U.S. person beyond the Guidance. For the reasons noted above, the Commission has determined not to apply the Final Rule on the basis of accounting consolidation alone, but rather, in exercising its oversight of non-U.S. entities, has taken a risk-based approach to determining which foreign subsidiaries present a significant risk to their ultimate U.S. parent and thus to the U.S. financial system. The Commission thus has determined that because the risk presented by foreign subsidiaries that are consolidated with a BHC or IHC, or are subject to the specified prudential regulation in their local jurisdiction, is already being adequately monitored, such foreign subsidiaries should not also be subject to the Commission's oversight.

With respect to the BHC exception, Better Markets suggested that the Commission does not have the legal discretion to defer to prudential regulators because of the requirements in CEA section 2(i). As the Commission stated in the Proposed Rule, CEA section 2(i) does not require the Commission to extend its reach to the outer bounds of the authorization provided in CEA section 2(i).[212] In determining how to exercise its authority, the Commission stated that it will be guided by principles of international comity and will focus its authority on potential significant risks to the U.S. financial system. The Commission noted that the Restatement also provides that even where a country has a basis for extraterritorial jurisdiction, it should not prescribe law with respect to a person or activity in another country when the exercise of

[206] The Commission also has noted in the past that such notional amount-based thresholds are not measures of the exposure or risk of particular swap positions. *See* Entities Rule, 77 FR at 30630.

such jurisdiction is unreasonable.[213] In the context of the SRS definition, the risk-based approach to limiting the application of the Commission's requirements extraterritorially focuses its requirements on those entities that pose significant risk to the U.S. financial system, as discussed above.

Similarly, in the case of entities that are subject to capital standards and oversight by their home country regulators that are consistent with Basel III and subject to a CFTC Margin Determination, the Commission will defer to the home country regulator.[214] In cases where entities are subject to capital standards and oversight by home country regulators that are consistent with Basel III and subject to a CFTC Margin Determination, the potential risk that the entity might pose to the U.S. financial system is adequately addressed through these home country capital and margin requirements. Further, such an approach is consistent with the Commission's historical commitment to show deference to non-U.S. regulators whose requirements are comparable to the CFTC's requirements. To make clear that the CFTC Margin Determination must be a positive determination of comparability, the provision in § 23.23(a)(13)(ii) has been modified to read ''and margin requirements for uncleared swaps in a jurisdiction that the Commission has found comparable pursuant to a published comparability determination with respect to uncleared swap margin requirements.'' For margin purposes, the Commission has issued a number of determinations that entities can look to in order to determine if they satisfy this aspect of the exception.[215] For capital standards and oversight consistent with Basel III, entities should look to whether the BIS has determined the jurisdiction is in compliance as of the relevant Basel Committee on Banking Supervision deadline set forth in its most recent progress report.[216] The Commission is excluding these entities from the definition of SRS, in large part, because the swaps entered into by such entities are already subject to significant regulation, either by the Federal Reserve Board or by the entity's home country.

The Working Group suggested that where a jurisdiction has capital and margin requirements consistent with Basel III requirements, but certain entities located in that jurisdiction are exempted from those requirements, such entities should nonetheless be considered as subject to sufficient capital and margin requirements for the purpose of the proposed SRS exclusion. The Commission is declining to adopt this suggestion here, but it may warrant further consideration in the future. It is not clear whether a foreign jurisdiction's exemption from capital and margin requirements would be based on a risk assessment of the exempted entities, whether such exemptions are granted on a case-by-case basis or provided to entire classes or categories, or whether such exemptions are based on deference to some other form of prudential regulation. Under the Final Rule, where an entity is exempt from a country's capital and margin requirements, such an entity will not be considered to be subject to sufficient capital and margin requirements for the purpose of the SRS exclusion. As noted above, if a non-U.S. subsidiary of an ultimate U.S. parent entity does not fall into either of the exceptions in § 23.23(a)(13)(i) through (ii), the Final Rule classifies the subsidiary as a SRS only if its ultimate U.S. parent entity has more than $50 billion in global consolidated assets and if the subsidiary meets the definition of a significant subsidiary, set forth in § 23.23(a)(14).

With respect to the Working Group comment that the SRS definition should not apply to non-financial entities, the Commission has determined to apply the SRS definition to those non-financial entities that satisfy the risk-based tests contained in the definition. Those entities are not subject to prudential regulation and are, by definition, significant subsidiaries of large U.S. parent entities that may pose a risk to the U.S. financial system, and therefore the Commission believes that such entities should not be excluded from the SRS definition. Accordingly, the Commission is not adding an exception for non-financial entities to the SRS definition. However, Other Non-U.S. Person counterparties to SRSs are not required to include such swaps in either their SD or MSP registration threshold calculations, as discussed below. The Commission has also determined for the Final Rule that non-U.S. swap entities that are neither SRSs nor Guaranteed Entities are not required to comply with the group B and group C requirements (as defined in section VI.A.2 and VI.A.3 below) when entering into foreign-based swaps with certain foreign counterparties, including SRSs that are neither swap entities nor Guaranteed Entities (''SRS End Users'').[217] This application of the Final Rule should assuage the commenter's concerns about the effect SRS status will have on the swap trading relationships of a non-financial entity that is an SRS but does not engage in swap dealing or meet the definition of MSP.

In response to Better Markets' comment that the SRS definition does not address evasion and avoidance concerns that are addressed by the conduit affiliate concept, the Commission believes that the SRS definition adequately addresses those concerns within a risk-based framework. The Commission believes that to the extent an off-shore entity is entering into transactions with non-U.S. entities and subsequently back-to-backing those transactions to a U.S. entity, it is appropriate to subject such an entity to certain of the Commission's swap requirements if that entity meets the definition of an SRS and is consequently a significant subsidiary of a U.S. parent entity that is significant to the U.S. financial system. This approach is a risk-based assessment rather than merely a structural or activity-based assessment. Without this risk-based approach, the SD de minimis threshold, which is a strictly activity-based test (*i.e.,* a test based on the aggregate gross notional amount of dealing activity), becomes the de facto risk test of when an entity would be subject to the Commission's swap requirements as an SD. The Commission continues to believe that the risk-based SRS test is better-suited to make such a determination.

(v) Counterparty Status and Representations

The Commission acknowledges comments that the implementation of the SRS definition may require entities to reevaluate the status of their counterparties. The Commission understands that SDs may have to re-document whether their counterparties are SRS entities and that this could require, for example, a new industry protocol, which may be an additional burden resulting from the adoption of this rule. The potential burden of this re-assessment of counterparties is considered in the cost-benefit considerations section of this adopting release.

Regarding the ISDA comment that the Commission should permit swap entities to rely on representations obtained under the Guidance with respect to the status of counterparties as conduit affiliates, the Commission responds that the representations made by counterparties with respect to the conduit affiliate concept in the Guidance are not applicable to the SRS definition. Because the definition of an SRS is new and substantially differs from the conduit affiliate concept, such conduit affiliate representations do not capture all counterparties that may be SRSs and may capture entities that fall within the conduit affiliate concept but are excluded from the definition of SRS.

E. Foreign Branch and Swap Conducted Through a Foreign Branch

1. Proposed Rule

The Commission proposed that the term ''foreign branch'' would mean an office of a U.S. person that is a bank that: (1) Is located outside the United States; (2) operates for valid business reasons; (3) maintains accounts independently of the home office and of the accounts of other foreign branches, with the profit or loss accrued at each branch determined as a separate item for each foreign branch; and (4) is engaged in the business of banking or finance and is subject to substantive regulation in banking or financing in the jurisdiction where it is located.[218]

The Commission also proposed that the term ''swap conducted through a foreign branch'' would mean a swap entered into by a foreign branch where: (1) The foreign branch or another foreign branch is the office through which the U.S. person makes and receives payments and deliveries under the swap pursuant to a master netting or similar trading agreement, and the documentation of the swap specifies that the office for the U.S. person is such foreign branch; (2) the swap is entered into by such foreign branch in its normal course of business; and (3) the swap is reflected in the local accounts of the foreign branch.[219] In the Proposed Rule, the Commission stated that the second prong of the definition (whether the swap is entered into by such foreign branch in the normal course of business) is intended as an anti-evasion measure to prevent a U.S. bank from simply routing swaps for booking in a foreign branch so that the swap would be treated as a swap conducted through a foreign branch for purposes of the SD and MSP registration thresholds or for purposes of certain regulatory requirements applicable to registered SDs or MSPs. To satisfy this prong, the Commission proposed that it must be the normal course of business for employees located in the branch (or another foreign branch of the U.S. bank) to enter into the type of swap in question. The Commission stated that this requirement would not prevent personnel of the U.S. bank located in the U.S. from participating in the negotiation or execution of the swap so long as the swaps that are booked in the foreign branch are primarily entered into by personnel located in the branch (or another foreign branch of the U.S. bank).[220]

2. Summary of Comments

While IIB/SIFMA and JFMC/IBAJ supported the proposed definition of ''foreign branch,'' noting that it was consistent with the definition given to the term in the Guidance, Better Markets recommended that the definition include a requirement that the foreign branch be operated pursuant to U.S. banking laws and regulations and in compliance with applicable restrictions. Better Markets stated that the addition of this prong adds no additional burden and ensures a foreign branch cannot be established outside of the considered restrictions and substantive requirements of U.S. law.

With respect to the proposed definition of a ''swap conducted through a foreign branch,'' Better Markets recommended that the Commission require that the swap be arranged, negotiated, and executed on behalf of the foreign branch solely by persons located outside the United States, rather than permit personnel of the U.S. bank located in the U.S. to participate in the negotiation or execution of a swap so long as the swaps that are booked in the foreign branch are primarily entered into by personnel located in the branch (or another foreign branch of the U.S. bank). Better Markets believes that this formulation defers too significantly to the foreign branches themselves to decide whether the ''primarily'' restriction has been met, and, instead recommends that the Commission adopt a foreign branch booking restriction that harmonizes with the SEC's approach. Better Markets argues that such restriction is necessary because foreign branches remain part of the U.S. person in the most critical, risk-related respects.

IIB/SIFMA and JFMC/IBAJ, on the other hand, supported the proposed definition, noting that a requirement that the personnel agreeing to a swap be located in the foreign branch is not necessary because the location of a U.S. bank's employees in connection with a particular swap does not determine whether that swap presents risks to the United States. IIB/SIFMA further argued that because foreign branches of a U.S. bank are generally subject to foreign rules when transacting with non-U.S. counterparties regardless of whether the bank's U.S. personnel are involved, applying additional U.S. rules to swaps with non-U.S. counterparties based on the involvement of U.S. personnel causes market distortions by discouraging non-U.S. counterparties from interacting with U.S. personnel. IIB/SIFMA stated further that since 2013 many U.S. banks have had to rearrange their front office coverage of non-U.S. counterparties in order to address this concern and adoption of the proposed definition would help to reverse this damaging trend.

3. Final Rule and Commission Response

Having considered the foregoing comments, the Commission has determined to adopt the definitions of ''foreign branch'' and ''swap conducted through a foreign branch'' as proposed.[221] Regarding Better Markets' recommendation that a fifth prong be added to the definition of ''foreign branch'' to more closely align the definition with the definitions used by the prudential regulators, as noted below, the definition of ''foreign branch'' proposed by the Commission is consistent with the definitions of ''foreign branch'' in the regulations of the Federal Reserve Board, the Office of the Comptroller of the Currency

[218] Proposed § 23.23(a)(2). *See* Proposed Rule, 85 FR at 966–968.

[221] Final § 23.23(a)(2) and (16).

(''OCC''), and the Federal Deposit Insurance Corporation (''FDIC'').[222]

Regarding Better Markets' comment that a foreign branch should be treated as a U.S. person unless the employees negotiating and agreeing to the terms of the swap are exclusively located in a foreign branch, the Commission responds that such a prescriptive limitation is not required to prevent evasion of the Commission's swap requirements through booking strategies. By requiring swaps to be entered into by a foreign branch in its normal course of business, primarily by personnel located in the foreign branch, the definition proposed by the Commission provides a workable standard of review that will permit the Commission to detect evasive booking strategies while not discouraging non-U.S. counterparties from interacting with U.S. personnel.

The Commission is adopting the factors listed in the proposed definition of ''foreign branch'' for determining when an entity is considered a foreign branch for purposes of the Final Rule.[223] The requirement that the foreign branch be located outside of the United States is consistent with the stated goal of identifying certain swap activity that is not conducted within the United States. The requirements that the foreign branch maintain accounts independent of the U.S. entity,[224] operate for valid business reasons, and be engaged in the business of banking or finance and be subject to substantive banking or financing regulation in its non-U.S. jurisdiction will prevent an entity from setting up shell operations outside the United States in a jurisdiction without substantive banking or financial regulation in order to evade Dodd-Frank Act requirements and CFTC regulations.[225] This definition incorporates concepts from the Federal Reserve Board's Regulation K,[226] the FDIC's international banking regulation,[227] and the OCC's ''foreign branch'' definition.[228]

The definition of ''foreign branch'' in the Final Rule is also consistent with the SEC's approach, which, for purposes of security-based swap dealer regulation, defines a foreign branch as any branch of a U.S. bank that: (1) Is located outside the United States; (2) operates for valid business reasons; and (3) is engaged in the business of banking and is subject to substantive banking regulation in the jurisdiction where located.[229] The Commission's intention is to ensure that the definition provides sufficient clarity as to what constitutes a ''foreign branch''—specifically, an office outside of the U.S. that has independent accounts from the home office and other branches—while striving for greater regulatory harmony with the SEC.

A foreign branch does not include an affiliate of a U.S. bank that is incorporated or organized as a separate legal entity.[230] For similar reasons, the Commission declines in the Final Rule to recognize foreign branches of U.S. persons separately from their U.S. principal for purposes of registration.[231] That is, if the foreign branch engages in swap activity in excess of the relevant SD or MSP registration thresholds, as discussed further below, the U.S. person would be required to register, and the registration would encompass the foreign branch. However, upon consideration of principles of international comity and the factors set forth in the Restatement, rather than broadly excluding foreign branches from the ''U.S. person'' definition, the Commission is calibrating the requirements for counting certain swaps entered into through a foreign branch, as described in sections III.B.2 and IV.B.2, and calibrating the requirements otherwise applicable to foreign branches of a registered U.S. SD, as discussed in section VI. One of the benefits, as discussed below, will be to enable foreign branches of U.S. banks to have greater access to foreign markets.

The definition of ''swap conducted through a foreign branch'' identifies the type of swap activity for which the foreign branch performs key dealing functions outside the United States. Because a foreign branch of a U.S. bank is not a separate legal entity, the first prong of the definition clarifies that the foreign branch must be the office of the U.S. bank through which payments and deliveries under the swap are made. This approach is consistent with the standard ISDA Master Agreement, which requires that each party specify an ''office'' for each swap, which is generally where a party ''books'' a swap and/or the office through which the party makes and receives payments and deliveries.[232]

The second prong of the definition (whether the swap is entered into by such foreign branch in the normal course of business) is intended as an anti-evasion measure to prevent a U.S. bank from simply routing swaps for booking in a foreign branch so that the swap would be treated as a swap conducted through a foreign branch for purposes of the SD and MSP registration thresholds or for purposes of certain regulatory requirements applicable to registered SDs or MSPs. To satisfy this prong, it must be the normal course of business for employees located in the branch (or another foreign branch of the U.S. bank) to enter into the type of swap in question. This requirement should not prevent personnel of the U.S. bank located in the U.S. from participating in the negotiation or execution of the swap so long as the swaps that are booked in the foreign branch are primarily entered into by personnel located in the branch (or another foreign branch of the U.S. bank). As noted above, the Commission

[222] *See infra* notes 226- 228, and accompanying text.

[223] As discussed in sections III.B.2 and IV.B.2, *infra,* the Final Rule does not require an Other Non-U.S. Person to count toward its SD and MSP threshold calculations swaps conducted through a foreign branch of a registered U.S. SD.

[224] The Commission notes that national banks operating foreign branches are required under section 25 of the Federal Reserve Act (''FRA'') to conduct the accounts of each foreign branch independently of the accounts of other foreign branches established by it and of its home office, and are required at the end of each fiscal period to transfer to their general ledgers the profit or loss accrued at each branch as a separate item. 12 U.S.C. 604. The FRA is codified at 12 U.S.C. 221 *et seq.*

[225] As discussed below, the Commission is concerned that the material terms of a swap would be negotiated or agreed to by employees of the U.S. bank that are located in the United States and then be routed to a foreign branch so that the swap would be treated as a swap with the foreign branch for purposes of the SD and MSP registration thresholds or for purposes of certain regulatory requirements applicable to registered SDs or MSPs.

[226] Regulation K is a regulation issued by the Federal Reserve Board under the authority of the FRA; the Bank Holding Company Act of 1956 (''BHC Act'') (12 U.S.C. 1841 *et seq.*); and the International Banking Act of 1978 (''IBA'') (12 U.S.C. 3101 *et seq.*). Regulation K sets forth rules governing the international and foreign activities of U.S. banking organizations, including procedures for establishing foreign branches to engage in international banking. 12 CFR part 211. Under Regulation K, a ''foreign branch'' is defined as ''an office of an organization (other than a representative office) that is located outside the country in which the organization is legally established and at which a banking or financing business is conducted.'' 12 CFR 211.2(k).

[227] 12 CFR part 347 is a regulation issued by the FDIC under the authority of the Federal Deposit Insurance Act (12 U.S.C. 1828(d)(2)), which sets forth rules governing the operation of foreign branches of insured state nonmember banks. Under 12 CFR 347.102(j), a ''foreign branch'' is defined as an office or place of business located outside the United States, its territories, Puerto Rico, Guam, American Samoa, the Trust Territory of the Pacific Islands, or the Virgin Islands, at which banking operations are conducted, but does not include a representative office.

[228] 12 CFR 28.2 (defining ''foreign branch'' as an office of a national bank (other than a representative office) that is located outside the United States at which banking or financing business is conducted).

[229] *See* 17 CFR 240.3a71–3(a)(2).

[230] This is similar to the approach described in the Guidance. *See* Guidance, 78 FR at 45328–45329.

[231] This is similar to the approach described in the Guidance. *See id.* at 45315, 45328–45329.

[232] The ISDA Master Agreement defines ''office'' as a branch or office of a party, which may be such party's head or home office. *See* 2002 ISDA Master Agreement, available at *https://www.isda.org/book/2002-isda-master-agreement-english/library.*

believes this is a workable standard of review that will permit the Commission to detect evasive booking strategies by examining the types of swaps booked in the foreign branch and determining whether any type of swap is primarily entered into by personnel located in the United States.

With respect to the third prong, where a swap is with the foreign branch of a U.S. bank, it generally would be reflected in the foreign branch's accounts.

F. Swap Entity, U.S. Swap Entity, and Non-U.S. Swap Entity

The Commission proposed that the term ''swap entity'' would mean a person that is registered with the Commission as a SD or MSP pursuant to the CEA.[233] In addition, the Commission proposed to define ''U.S. swap entity'' as a swap entity that is a U.S. person, and ''non-U.S. swap entity'' as a swap entity that is not a U.S swap entity.[234]

The Commission did not receive any comments on these proposed definitions, and is adopting them as proposed.[235]

G. U.S. Branch

The Commission proposed that the term ''U.S. branch'' would mean a branch or agency of a non-U.S. banking organization where such branch or agency: (1) Is located in the United States; (2) maintains accounts independently of the home office and other U.S. branches, with the profit or loss accrued at each branch determined as a separate item for each U.S. branch; and (3) engages in the business of banking and is subject to substantive banking regulation in the state or district where located.[236]

The only comment the Commission received on this definition was from JFMC/IBAJ, stating that they generally supported the proposed new definition, as they believe it provides a clear and objective standard and provides market participants with legal certainty. Thus, the Commission is adopting the definition of ''U.S. branch'' as proposed.[237]

H. Swap Conducted Through a U.S. Branch

1. Proposed Rule

The Commission proposed that the term ''swap conducted through a U.S. branch'' would mean a swap entered into by a U.S. branch where: (1) The U.S. branch is the office through which the non-U.S. person makes and receives payments and deliveries under the swap pursuant to a master netting or similar trading agreement, and the documentation of the swap specifies that the office for the non-U.S. person is such U.S. branch; or (2) the swap is reflected in the local accounts of the U.S. branch.[238]

2. Summary of Comments

The same as for the definition of ''U.S. branch'' above, JFMC/IBAJ generally supported the proposed definition of ''swap conducted through a U.S. branch,'' as they believe it provides a clear and objective standard and provides market participants with legal certainty. However, JFMC/IBAJ, CS, and IIB/SIFMA asked the Commission to conform the definition to the definition of ''swap conducted through a foreign branch'' by (1) including a ''normal course of business'' prong, and (2) applying the definition conjunctively rather than disjunctively. JFMC/IBAJ stated that they see no policy rationale or countervailing policy benefit of these inconsistencies. CS agreed, stating that, as a matter of policy, it encourages the CFTC to provide consistent flexibility for U.S. branches and foreign branches. IIB/SIFMA stated that, in accordance with principles of international comity, the Commission should instead take a balanced and symmetric approach to recognizing when home versus host country regulators have an interest in applying their rules and that the Proposed Rule offers no justification for this asymmetric approach. ISDA also requested that the Commission apply the definition conjunctively, stating that only when a swap is booked at a particular entity can it be considered a swap transaction that is attributed to such an entity.

3. Final Rule—Swap Booked in a U.S. Branch

After carefully considering the comments, the Commission is adopting the definition with certain modifications reflected in the rule text in this release.[239] The Commission is removing the first prong of the definition such that the only relevant factor is whether the swap is reflected in the local accounts of the U.S. branch, meaning swaps for which the U.S. branch holds the risks and rewards, with the swap being accounted for as an obligation of the branch on the balance sheet of the U.S. branch under applicable accounting standards[240] and under regulatory reporting requirements[241] (*i.e.,* the swap is ''booked'' in the U.S. branch). This standard captures activity of non-U.S. banking organizations taking place in their U.S. branches that should be treated as taking place in the United States to prevent evasion of CFTC rules by such organizations. As discussed in the Proposed Rule, in the case of the swap activities of the U.S. branches of non-U.S. banking organizations, the Commission has determined that the location of personnel involved in arranging, negotiating, and execution activities will not be relevant for application of the Final Rule.[242] For this reason, the Commission had intended in the Proposed Rule only to reach swaps that are booked in the United States under the definition of ''swap conducted through a U.S. branch.''

The Commission now understands that a U.S. branch may be listed as the office through which a non-U.S. person makes and receives deliveries under a swap or as the office identified in the master, netting, or similar trading agreement without the swap being booked in a U.S. branch. Commenters explained, for example, that the U.S. branch is often listed for payments and deliveries for swaps denominated in U.S. Dollars even where the risk/benefit of the swap resides outside the United States.

Further, to emphasize that booking is the focus of the definition, the Commission is changing the term from ''swap conducted through a U.S. branch'' to ''swap booked in a U.S. branch'' (and, accordingly, revising the definitions of ''foreign-based swap'' and ''foreign counterparty'' below to reflect this change in terminology).

In response to comments objecting to the differences in the proposed definitions of ''swap conducted through a foreign branch'' and ''swap conducted through a U.S. branch,'' the Commission

[239] Final § 23.23(a)(16).

[240] Or would be accounted for on its balance sheet under applicable accounting standards if the U.S. branch were a separate legal entity.

[241] For example, the swap is included in the non-U.S. person's Report of Assets and Liabilities of U.S. Branches and Agencies of Foreign Banks published by the Federal Financial Institution Examinations Council (FFIEC 002).

[242] *See infra* section V; Proposed Rule, 85 FR at 978.

is retaining these differences because, as a general matter, U.S. swap entities should be subject to all of the Commission's Title VII requirements set forth in the Final Rule. Because classifying a swap as a ''swap conducted through a foreign branch'' makes a U.S. swap entity eligible for certain exceptions from these requirements and substituted compliance for the swap under the Final Rule, merely booking a swap in the foreign branch is not sufficient for a U.S. swap entity to qualify for these exceptions and substituted compliance. Rather, the U.S. swap entity is required also to show that the swap is a transaction of a type that is endemic to the foreign market (*i.e.,* that it is a type of transaction entered into by personnel in the foreign branch in the normal course of the business of the branch, rather than a transaction more normally entered into in a different location and merely booked in the foreign branch to evade CFTC regulatory requirements). Hence, as discussed above, the Commission is including a ''normal course of business'' prong in the definition of ''a swap conducted through a foreign branch'' and requiring that all three prongs of the definition be satisfied.

As noted in the Proposed Rule and consistent with the Commission's approach to foreign branches, a U.S. branch of a non-U.S. banking organization does not include a U.S. affiliate of the organization that is incorporated or organized as a separate legal entity. Also consistent with this approach, the Commission declines in the Final Rule to recognize U.S. branches of non-U.S. banking organization separately from their non-U.S. principal for purposes of registration.

I. Foreign-Based Swap and Foreign Counterparty

1. Proposed Rule

The Commission proposed that the term ''foreign-based swap'' would mean: (1) A swap by a non-U.S. swap entity, except for a swap conducted through a U.S. branch; or (2) a swap conducted through a foreign branch.[243] Further, the term ''foreign counterparty'' would mean: (1) A non-U.S. person, except with respect to a swap conducted through a U.S. branch of that non-U.S. person; or (2) a foreign branch where it enters into a swap in a manner that satisfies the definition of a swap conducted through a foreign branch.[244] Under the Proposed Rule, together with the proposed defined terms ''foreign branch,'' ''swap conducted through a foreign branch,'' ''U.S. branch,'' and ''swap conducted through a U.S. branch,'' these terms were to be used to determine which swaps would be foreign swaps of non-U.S. swap entities and foreign branches of U.S. swap entities, for which certain relief from Commission requirements would be available under the Proposed Rule, and which swaps would be treated as domestic swaps not eligible for such relief.

2. Summary of Comments

AIMA was supportive of the definition of ''foreign counterparty'' and, in particular, its application to CIVs. However, JFMC/IBAJ requested that the Commission expand the definition of ''foreign-based swap'' and ''foreign counterparty'' under the proposed exceptions from the group B and C requirements (described in sections VI.A.2 and VI.A.3 below) to cover swaps conducted through the U.S. branch of a non-U.S. swap entity. JFMC/IBAJ stated that these are swap trades between two non-U.S. persons and thus should be governed by the home country regulation of the non-U.S. persons according to principles of international comity, and that there is no material importation of risk to the U.S. financial system and hence a lack of sufficient jurisdictional nexus for purposes of CEA section 2(i). JBA similarly requested that, generally, swap requirements not apply to U.S. branches in a different manner than the related non-U.S person.

3. Final Rule

After carefully considering the comments, the Commission is adopting the definitions of ''foreign-based swap'' and ''foreign counterparty'' as proposed, with a minor technical modification included in the rule text in this release.[245] Specifically, to reflect that the term ''swap conducted through a U.S. branch'' is being replaced with the term ''swap booked in a U.S. branch,'' each of the definitions of ''foreign-based swap'' and ''foreign counterparty'' is being revised to replace the term ''swap conducted through a U.S. branch'' with the term ''swap booked in a U.S. branch.''

When a swap is booked in a U.S. branch of a non-U.S. swap entity, that swap is part of the U.S. swap market, and, accordingly, the group B and group C requirements (described in sections VI.A.2 and VI.A.3 below) should generally apply.[246] Therefore, the Commission has determined to carve out a swap booked in a U.S. branch from the definitions of ''foreign-based swap'' and ''foreign counterparty.''

As discussed in the Proposed Rule, the Commission is using the terms ''foreign-based swap'' and ''foreign counterparty'' to identify the types of swaps that are eligible for certain relief, consistent with section 2(i) of the CEA, in order that swaps that demonstrate sufficient indicia of being domestic generally remain subject to the Commission's requirements under the Final Rule, notwithstanding that the swap is entered into by a non-U.S. swap entity or a foreign branch of a U.S. swap entity. Otherwise, an entity or branch might simply be established outside of the United States to evade Dodd-Frank Act requirements and CFTC regulations.

As the Commission has previously stated, it has a strong supervisory interest in regulating swap activities that occur in the United States.[247] However, consistent with section 2(i) of the CEA, foreign swaps of non-U.S. swap entities and foreign branches of U.S. swap entities should be eligible for relief from certain of the Commission's requirements. Accordingly, certain exceptions from the group B and group C requirements and portions of the Commission's substituted compliance regime (discussed below in sections VI.B and VI.C), are designed to apply only to certain foreign swaps of non-U.S. swap entities and foreign branches of U.S. swap entities that the Commission believes should be treated as occurring outside the United States. Specifically, these provisions are applicable only to a swap by a non-U.S. swap entity—except for a swap booked in a U.S. branch—and a swap conducted through a foreign branch such that it satisfies the definition of a ''foreign-based swap'' above. They are generally not applicable to swaps of non-U.S. swap entities that are booked in a U.S. branch of that swap entity, and swaps of foreign branches of U.S. swap entities where the foreign branch does not enter into the swaps in a manner that satisfies the definition of a swap conducted through a foreign branch, because the

[243] *See* Proposed § 23.23(a)(4); Proposed Rule, 85 FR at 968–969, 1002.

[244] *Id.*

[245] Final § 23.23(a)(4) and (5).

[246] The Commission notes that swap activities of the U.S. branches of non-U.S. banking organizations take place inside the United States and, thus, section 2(i)'s applicability (*i.e.,* to activities ''outside the U.S.'') is not implicated. Nevertheless, as discussed in sections VI.B and VI.C, *infra,* the Commission has determined under the Final Rule to provide certain exceptions from application of the group C requirements and the availability of substituted compliance for the group B requirements for certain swaps booked in the U.S. branches of non-U.S. swap entities.

[247] *See* Guidance, 78 FR at 45350, n.513.

entrance into a swap by a U.S. swap entity (through its foreign branch) or a U.S. branch of a non-U.S. swap entity under these circumstances, demonstrates sufficient indicia of being a domestic swap to be treated as such for purposes of the Final Rule. Similarly, in certain cases, the availability of an exception or substituted compliance for a swap depends on whether the counterparty to such a swap qualifies as a ''foreign counterparty'' under the Final Rule. The Commission is establishing this requirement to ensure that foreign-based swaps of swap entities in which their counterparties demonstrate sufficient indicia of being domestic and, thus, trigger the Commission's supervisory interest in domestic swaps, remain subject to the Commission requirements under the Final Rule.

The Commission's approach in the Final Rule to limit certain relief for U.S. branches of non-U.S. swap entities is parallel to the Commission's approach in the Final Rule to provide certain exceptions from Commission requirements or substituted compliance for certain transactions of foreign branches of U.S. swap entities to take into account the supervisory interest of local regulators, as discussed below in section VI.

III. Cross-Border Application of the Swap Dealer Registration Threshold

CEA section 1a(49) defines the term ''swap dealer'' to include any person that: (1) Holds itself out as a dealer in swaps; (2) makes a market in swaps; (3) regularly enters into swaps with counterparties as an ordinary course of business for its own account; or (4) engages in any activity causing the person to be commonly known in the trade as a dealer or market maker in swaps (collectively referred to as ''swap dealing,'' ''swap dealing activity,'' or ''dealing activity'').[248] The statute also requires the Commission to promulgate regulations to establish factors with respect to the making of a determination to exempt from designation as an SD an entity engaged in a de minimis quantity of swap dealing.[249]

In accordance with CEA section 1a(49), the Commission issued the Entities Rule,[250] which, among other things, further defined the term ''swap dealer'' and excluded from designation as an SD any entity that engages in a de minimis quantity of swap dealing with or on behalf of its customers.[251] Specifically, the definition of ''swap dealer'' in § 1.3 provides that a person shall not be deemed to be an SD as a result of its swap dealing activity involving counterparties unless, during the preceding 12 months, the aggregate gross notional amount of the swaps connected with those dealing activities exceeds the de minimis threshold.[252] Paragraph (4) of that definition further requires that, in determining whether its swap dealing activity exceeds the de minimis threshold, a person must include the aggregate gross notional amount of the swaps connected with the dealing activities of its affiliates under common control.[253] For purposes of the Commission's interpretation of the aggregation requirement in the cross-border context as set forth in this release, the Commission construes ''affiliates under common control'' by reference to the Entities Rule, which defined control as the possession, direct or indirect, of the power to direct or cause the direction of the management and policies of a person, whether through the ownership of voting securities, by contract, or otherwise.[254] Accordingly, any reference in the Commission's aggregation interpretation to ''affiliates under common control'' with a person includes affiliates that are controlling, controlled by, or under common control with such person.

The Commission is now adopting rules to address how the de minimis threshold should apply to the cross-border swap dealing transactions of U.S. and non-U.S. persons. Specifically, the Final Rule identifies when a potential SD's cross-border dealing activities should be included in its de minimis threshold calculation and when they may properly be excluded. As discussed below, whether a potential SD includes a particular swap in its de minimis threshold calculation depends on how the entity and its counterparty are classified (*e.g.,* U.S. person, SRS, etc.) and, in some cases, the jurisdiction in which a non-U.S. person is regulated.

A. U.S. Persons

The Commission is adopting, as proposed and consistent with the Guidance, the requirement that a U.S. person include all of its swap dealing transactions in its de minimis threshold calculation without exception.[255] The Commission did not receive comments regarding this requirement. As discussed in section II.B above, the term ''U.S. person'' encompasses a person that, by virtue of being domiciled, organized, or having its principal place of business in the United States, raises the concerns intended to be addressed by the Dodd-Frank Act, regardless of the U.S. person status of its counterparty. In addition, a person's status as a U.S. person is determined at the entity level and, thus, a U.S. person includes the swap dealing activity of operations that are part of the same legal person, including those of its foreign branches. Therefore, a U.S. person includes in its SD de minimis threshold calculation dealing swaps entered into by a foreign branch of the U.S. person.[256]

B. Non-U.S. Persons

Under the Final Rule, as discussed in more detail below, whether a non-U.S. person needs to include a swap in its de minimis threshold calculation depends on the non-U.S. person's status, the status of its counterparty, and, in some cases, the jurisdiction in which the non-U.S. person is regulated. Specifically, the Final Rule requires a person that is a Guaranteed Entity or an SRS to count all of its dealing swaps towards the de minimis threshold.[257] In addition, an Other Non-U.S. Person is required to count dealing swaps with a U.S. person toward its de minimis threshold calculation, except for swaps conducted through a foreign branch of a registered U.S. SD.[258] Further, subject to certain exceptions, the Final Rule requires an

[256] Proposed Rule, 85 FR at 970–971. This approach mirrors the SEC's approach in its cross-border rule. *See* 17 CFR 240.3a71–3(b)(1)(i); SEC Cross-Border Rule, 79 FR at 47302, 47371.

[257] As discussed in section II.C, *supra,* for purposes of this release and ease of reading, a non-U.S. person whose obligations under a swap are subject to a guarantee by a U.S. person is being referred to as a ''Guaranteed Entity.'' A non-U.S. person may be a Guaranteed Entity with respect to certain swaps and not others (including, *e.g.,* where the non-U.S. person is guaranteed only with respect to its swaps with certain counterparties). Thus, a non-U.S. person could be a Guaranteed Entity or an Other Non-U.S. Person, depending on the specific swap.

[258] As stated, ''swap conducted through a foreign branch'' means a swap entered into by a foreign branch where: (1) The foreign branch or another foreign branch is the office through which the U.S. person makes and receives payments and deliveries under the swap pursuant to a master netting or similar trading agreement, and the documentation of the swap specifies that the office for the U.S. person is such foreign branch; (2) the swap is entered into by such foreign branch in its normal course of business; and (3) the swap is reflected in the local accounts of the foreign branch.

Other Non-U.S. Person to count dealing swaps toward its de minimis threshold calculation if the counterparty to such swaps is a Guaranteed Entity.

1. Swaps by a Significant Risk Subsidiary

The Commission proposed to require an SRS to include all of its dealing swaps in its de minimis threshold calculation without exception.[259]

IIB/SIFMA stated that, generally, the Commission should not require a non-U.S. person, whether or not it is an SRS or other FCS, to include dealing swaps with a non-U.S. person in its SD de minimis threshold calculation when the risk of such swaps is transferred to an affiliated, registered U.S. SD. In such a situation, IIB/SIFMA asserted that there is no significant potential for risk to the United States or evasion of the Dodd-Frank Act because the Commission already can exercise appropriate regulatory oversight through direct regulation of the registered SD, which is subject to Dodd-Frank Act provisions such as risk management requirements and Commission or prudential regulator margin and capital requirements. IIB/SIFMA argued that this consideration underlies the Commission's decision to exclude affiliates of a registered SD from the ''conduit affiliate'' definition in the Guidance, as well as the similar approach taken by the SEC in its implementation of the Dodd-Frank Act.

After considering this comment, the Commission is adopting this requirement as proposed.[260] As discussed in section II.D above, the SRS test identifies a person that, by virtue of being a significant subsidiary of a U.S. person, and not being subject to prudential supervision as a subsidiary of a BHC or IHC, or subject to comparable capital and margin rules, raises the concerns intended to be addressed by the Dodd-Frank Act requirements addressed by the Final Rule, regardless of the status of its counterparty as a U.S. person or non-U.S. person. The Commission believes that treating an SRS differently from a U.S. person could create a substantial regulatory loophole, incentivizing U.S. persons to conduct their dealing business with non-U.S. persons through SRSs to avoid application of the Dodd-Frank Act SD requirements. Allowing swaps entered into by SRSs, which have the potential to affect the ultimate U.S. parent entity and U.S. commerce, to be treated differently depending on how the parties structure their transactions could undermine the effectiveness of the Dodd-Frank Act swaps provisions and related Commission regulations addressed by the Final Rule. Applying the same standard to similar transactions helps to limit those incentives and regulatory implications. Because the SRS definition is a risk-based test, the Commission has determined not to include a carve-out for back-to-back swaps to SDs, as was provided in the Guidance for conduit affiliates. Additionally, the SRS definition, as adopted in the Final Rule, already includes a carve-out for affiliates of BHCs and IHCs. This approach allows for streamlined application of the rule, and the comment letters have not identified specific downsides to this approach.[261]

In addition, a person's status as an SRS is determined at the entity level and, thus, an SRS is required to include in its SD de minimis threshold calculation the dealing swaps of its operations that are part of the same legal person, including those of its branches.[262]

The Proposed Rule also provided that an Other Non-U.S. Person would not be required to count a dealing swap with an SRS toward its de minimis threshold calculation, unless the SRS was also a Guaranteed Entity (and no exception applied).[263] JFMC/IBAJ supported this approach, while JBA asserted that an Other Non-U.S. Person should not have to count a swap entered into with a non-U.S. person in any circumstance. As noted above, an SRS is required to count all of its dealing swaps. However, the Commission continues to believe that where an Other Non-U.S. Person is entering into a dealing swap with an SRS, requiring the Other Non-U.S. Person to count the swap towards its de minimis threshold could cause the Other Non-U.S. Person to stop engaging in swap activities with SRSs. Though an SRS is required to count all of its dealing swaps, for the reasons stated above, the Commission believes that it is important to ensure that SRSs, particularly ones that are a commercial or non-financial entity that do not engage in swap dealing activities, continue to have access to swap liquidity from Other Non-U.S. Persons for hedging or other non-dealing purposes.

2. Swaps With a U.S. Person

Consistent with the Guidance, the Commission proposed to require a non-U.S. person to count all dealing swaps with a counterparty that is a U.S. person toward its de minimis threshold calculation, except for swaps with a counterparty that is a foreign branch of a registered U.S. SD if such swaps meet the definition of being ''conducted through a foreign branch'' of such registered SD.[264]

IIB/SIFMA, JFMC/IBAJ, and JBA supported allowing an Other Non-U.S. Person to exclude swap dealing transactions conducted through a foreign branch of a registered SD counterparty. IIB/SIFMA agreed that the Commission's regulatory interest in these swaps is not sufficient to warrant a competitive disadvantage for foreign branches of U.S. SDs, especially considering that other Dodd-Frank Act requirements, such as margin, mitigate the risk of these swaps to the U.S. SD. Additionally, IIB/SIFMA stated that the exclusion helps prevent market fragmentation by enabling Other Non-U.S. Persons to access liquidity provided by U.S. SDs through their foreign branches. On the other hand, AFR asserted that the Proposed Rule would allow branches of U.S. persons, which are actually formally and legally part of the parent U.S. organization, to effectively act as non-U.S. persons.

After considering the comments, the Commission is adopting this aspect of the cross-border application of the SD registration threshold as proposed.[265] As discussed in section II.B, the term ''U.S. person'' encompasses persons that inherently raise the concerns intended to be addressed by the Dodd-Frank Act regardless of the U.S. person status of their counterparty. In the event of a default or insolvency of a non-U.S. SD, the SD's U.S. counterparties could be adversely affected. A credit event, including funding and liquidity problems, downgrades, default, or insolvency at a non-U.S. SD could therefore have a direct and significant adverse effect on its U.S. counterparties, which could in turn create the risk of disruptions to the U.S. financial system.[266]

Allowing a non-U.S. person to exclude swaps conducted through a foreign branch of a registered SD counterparty from its de minimis threshold calculation is consistent with the Guidance.[267] In response to AFR's comment that the Proposed Rule allows foreign branches of U.S. persons to effectively act as non-U.S. persons, the

[263] *Id.*

[264] Proposed § 23.23(b)(2)(i); Proposed Rule, 85 FR at 971–972, 1004. *See* Guidance, 78 FR at 45323–45324.

[265] Final § 23.23(b)(2)(i).

[266] Proposed Rule, 85 FR at 971–972.

[267] *Id. See* Guidance, 78 FR at 45323–45324.

Commission continues to believe that its regulatory interest in these swaps is not sufficient to warrant creating a potential competitive disadvantage for foreign branches of U.S. SDs with respect to their foreign entity competitors by requiring non-U.S. persons to count trades with them toward their de minimis threshold calculations. In this regard, a swap conducted through a foreign branch of a registered SD triggers certain Dodd-Frank Act transactional requirements (or comparable requirements), particularly margin requirements, and thus, such swap activity is not conducted fully outside the Dodd-Frank Act regime. Moreover, in addition to certain Dodd-Frank Act requirements that apply to such swaps, other foreign regulatory requirements may also apply similar transactional requirements to the transactions.[268] Accordingly, the Commission believes that it is appropriate and consistent with section 2(i) of the CEA to allow non-U.S. persons to exclude from their de minimis calculation any swap dealing transactions conducted through a foreign branch of a registered SD counterparty. However, this exception does not apply to Guaranteed Entities (discussed below) or SRSs (discussed above), who have to count all of their dealing swaps.

The Commission also requested comment on whether it would be appropriate to require a U.S. branch to include in its SD de minimis threshold calculation all of its swap dealing transactions, as if they were swaps entered into by a U.S. person, and whether it would be appropriate to require an Other Non-U.S. Person to include in its SD de minimis threshold calculation dealing swaps conducted through a U.S. branch of its counterparty.[269] IIB/SIFMA supported not requiring a U.S. branch of a non-U.S. banking organization to include all of its swap dealing transactions in its SD de minimis threshold calculation as if they were swaps entered into by a U.S. person or to require an Other Non-U.S. Person to include in its SD de minimis threshold calculation dealing swaps conducted through such a branch of its counterparty. IIB/SIFMA stated that swaps between a U.S. branch and an Other Non-U.S. Person do not present risks to the United States that would justify applying the Commission's SD requirements. JBA also stated that Other Non-U.S. Persons should not have to count swaps conducted through a U.S. branch of a counterparty since such an approach may lead to Other Non-U.S. Persons decreasing activity with U.S. branches.

Having considered the foregoing comments, in this Final Rule, the Commission is not requiring a U.S. branch of an Other Non-U.S. Person to count all of its swap dealing transactions in its SD threshold calculation, as if they were swaps entered into by a U.S. person. Rather, a U.S. branch is required to count swaps pursuant to the requirements for Other Non-U.S. Persons (*e.g.,* count swaps with U.S. persons, Guaranteed Entities subject to certain exceptions, etc.). Additionally, an Other Non-U.S. Person is not required to include in its SD de minimis threshold calculation dealing swaps booked in a U.S. branch of a counterparty, unless that swap has to be counted pursuant to other requirements of this Final Rule.

3. Guaranteed Swaps

(i) Swaps Entered Into by a Guaranteed Entity

In an approach that is generally consistent with the Guidance, the Commission proposed to require a non-U.S. person to include in its de minimis threshold calculation swap dealing transactions where its obligations under the swaps are guaranteed by a U.S. person.[270] No comments were received regarding this aspect of the Proposed Rule.

The Commission is adopting this requirement as proposed,[271] because the swap obligations of a Guaranteed Entity are identical, in relevant aspects, to a swap entered into directly by a U.S. person. As a result of the guarantee, the U.S. guarantor generally bears risk arising out of the swap as if it had entered into the swap directly. The U.S. guarantor's financial resources in turn enable the Guaranteed Entity to engage in dealing activity, because the Guaranteed Entity's counterparties will look to both the Guaranteed Entity and its U.S. guarantor to ensure performance of the swap. Absent the guarantee from the U.S. person, a counterparty may choose not to enter into the swap or may not do so on the same terms. In this way, the Guaranteed Entity and the U.S. guarantor effectively act together to engage in the dealing activity.[272]

Further, treating a Guaranteed Entity differently from a U.S. person could create a substantial regulatory loophole, incentivizing U.S. persons to conduct their dealing business with non-U.S. persons through non-U.S. affiliates, with a U.S. guarantee, to avoid application of the Dodd-Frank Act SD requirements. Allowing transactions that have a similar economic reality with respect to U.S. commerce to be treated differently depending on how the parties structure their transactions could undermine the effectiveness of the Dodd-Frank Act swap provisions and related Commission regulations addressed by the Final Rule. Applying the same standard to similar transactions helps to limit those incentives and regulatory implications.[273]

(ii) Swaps Entered Into With a Guaranteed Entity

The Commission also proposed to require a non-U.S. person to count dealing swaps with a Guaranteed Entity in its SD de minimis threshold calculation, except when: (1) The Guaranteed Entity is registered as an SD; or (2) the Guaranteed Entity's swaps are subject to a guarantee by a U.S. person that is a non-financial entity.[274] The Commission also invited comment on whether it should the follow the SEC's approach, which does not require a non-U.S. person that is not guaranteed by a U.S. person to count dealing swaps with a Guaranteed Entity.[275]

IIB/SIFMA, ISDA, JFMC/IBAJ, and JBA recommended that the Commission further conform this provision with the Guidance by expanding the exceptions to also cover a Guaranteed Entity that engages in de minimis swap dealing activity and is affiliated with a

[268] As noted in section I.C, *supra,* significant and substantial progress has been made in the world's primary swaps trading jurisdictions to implement the G20 swaps reform commitments.

[269] Proposed Rule, 85 FR at 973. *See* discussion of the modification of the definition of a ''swap conducted through a U.S. branch'' to be a ''swap booked in a U.S. branch'' in section II.H.3, *supra.*

[270] Proposed § 23.23(b)(2)(ii); Proposed Rule, 85 FR at 972, 1004. The Guidance stated that where a non-U.S. affiliate of a U.S. person has its swap dealing obligations with non-U.S. persons guaranteed by a U.S. person, the guaranteed affiliate generally would be required to count those swap dealing transactions with non-U.S. persons (in addition to its swap dealing transactions with U.S. persons) for purposes of determining whether the affiliate exceeds a de minimis amount of swap dealing activity and must register as an SD. Guidance, 78 FR at 45312–45313. As discussed above, the Final Rule does not require that the guarantor be an affiliate of the guaranteed person for that person to be a Guaranteed Entity.

[271] Final § 23.23(b)(2)(ii).

[272] Proposed Rule, 85 FR at 972. This view is consistent with the SEC's approach in its cross-border rule. *See* SEC Cross-Border Rule, 79 FR at 47289.

[273] Proposed Rule, 85 FR at 972.

[274] Proposed § 23.23(b)(2)(iii); Proposed Rule, 85 FR at 973, 1004.

[275] Proposed Rule, 85 FR at 974. The SEC noted that ''concerns regarding the risk posed to the United States by such security-based swaps, and regarding the potential use of such guaranteed affiliates to evade the Dodd-Frank Act . . . are addressed by the requirement that guaranteed affiliates count their own dealing activity against the de minimis thresholds when the counterparty has recourse to a U.S. person.'' SEC Cross-Border Rule, 79 FR at 47322.

registered SD. IIB/SIFMA and ISDA noted that the Commission's regulatory concerns are addressed because the Guaranteed Entity would already be required to count the swap towards its de minimis threshold. IIB/SIFMA, ISDA, and JFMC/IBAJ noted that absent this exception, Other Non-U.S. Persons may choose not to trade with Guaranteed Entities, leading to increased market fragmentation or competitive disadvantages. JFMC/IBAJ also stated that there has been no material change in the swaps market since issuance of the Guidance warranting removing this exception. JBA commented that Other Non-U.S. Persons should not have to count swaps where the non-U.S. counterparty transfers risks to an affiliated U.S. SD because of the burdens associated with such an approach, and the limited risks arising from transactions between two non-U.S. persons. JBA also recommended that the CFTC follow the SEC approach and not require a non-U.S. person to count a swap with a Guaranteed Entity because it is burdensome to assess whether a guarantee exists.

Consistent with the Guidance, the Commission is adopting, as proposed, the requirement that a non-U.S. person must count dealing swaps with a Guaranteed Entity in its SD de minimis threshold calculation, except when: (1) The Guaranteed Entity is registered as an SD; or (2) the Guaranteed Entity's swaps are subject to a guarantee by a U.S. person that is a non-financial entity.[276] Additionally, after carefully considering the comments, and to maintain consistency with the Guidance, the Commission is also adopting an exception that allows a non-U.S. person to exclude from its de minimis calculation swaps entered into with a Guaranteed Entity that is itself below the de minimis threshold and is affiliated with a registered SD.[277]

The guarantee of a swap is an integral part of the swap and, as discussed above, counterparties may not be willing to enter into a swap with a Guaranteed Entity in the absence of the guarantee. The Commission recognizes that, given the highly integrated corporate structures of global financial enterprises described above, financial groups may elect to conduct their swap dealing activity in a number of different ways, including through a U.S. person or through a non-U.S. affiliate that benefits from a guarantee from a U.S. person. Therefore, in order to avoid creating a regulatory loophole, swaps of a non-U.S. person with a Guaranteed Entity should receive the same treatment as swaps with a U.S. person. The exceptions are intended to address those situations where the risk of the swap between the non-U.S. person and the Guaranteed Entity is otherwise managed under the Dodd-Frank Act swap regime or is primarily outside the U.S. financial industry.[278] JBA supported the SEC's approach, which, as noted, does not require a non-U.S. person that is not a conduit affiliate or guaranteed by a U.S. person to count dealing swaps with any guaranteed entity toward its de minimis threshold in any case.[279] Given the broader global scope of the swaps market regulated under the Commission's swap regime versus the relatively more limited U.S.-focused scope of the security-based swap market regulated under the SEC's security-based swap regime, the Commission has determined to treat swaps with Guaranteed Entities differently.

Where an Other Non-U.S. Person enters into swap dealing transactions with a Guaranteed Entity that is a registered SD, the Commission will permit the non-U.S. person not to count its dealing transactions with the Guaranteed Entity against the non-U.S. person's de minimis threshold for two principal reasons. First, requiring the non-U.S. person to count such swaps may incentivize them to not engage in dealing activity with Guaranteed Entities, thereby contributing to market fragmentation and competitive disadvantages for entities wishing to access foreign markets. Second, one counterparty to the swap is a registered SD, and therefore is subject to comprehensive swap regulation under the oversight of the Commission.[280]

In addition, an Other Non-U.S. Person need not include in its de minimis threshold calculation its swap dealing transactions with a Guaranteed Entity where the Guaranteed Entity is guaranteed by a non-financial entity. In these circumstances, systemic risk to U.S. financial markets is mitigated because the U.S. guarantor is a non-financial entity whose primary business activities are not related to financial products and such activities primarily occur outside the U.S. financial sector.[281] For purposes of the Final Rule, the Commission interprets ''non-financial entity'' to mean a counterparty that is not an SD, an MSP, or a financial end-user (as defined in the SD and MSP margin rule in § 23.151).[282]

Lastly, as discussed, the Commission requested comment on whether it should expand the exception to not require a non-U.S. person that is not a Guaranteed Entity to count dealing swaps with a Guaranteed Entity, consistent with the SEC. IIB/SIFMA, ISDA, JFMC/IBAJ, and JBA requested a narrower version of this exception, noting that the Guidance allowed a non-U.S. person to exclude from its de minimis calculation swaps entered into with a Guaranteed Entity that is itself below the de minimis threshold and is affiliated with a registered SD. The Guidance reflected the Commission's view that when the aggregate level of swap dealing by a non-U.S. person that is not a guaranteed affiliate, considering both swaps with U.S. persons and swaps with unregistered guaranteed affiliates, exceeds the de minimis level of swap dealing, the non-U.S. person's swap dealing transactions have the requisite direct and significant connection with activities in, or effect on, commerce of the United States.[283] The Commission believes, however, that where the counterparty to a swap is a Guaranteed Entity and is not a registered SD, the Commission's regulatory concerns, such as systemic risk to U.S. financial markets, are addressed because the Guaranteed Entity engages in a level of swap dealing below the de minimis threshold and is part of an affiliated group with an SD.[284] Risk to the Guaranteed Entity should be mitigated by the SD's risk management program, which under Commission rules must take account of risks posed by affiliates and must be integrated into risk management at the consolidated entity level.[285] Including this exception also addresses concern that its elimination would discourage Other Non-U.S. Persons from entering into swaps with Guaranteed Entities, creating competitive disadvantages.

C. Aggregation Requirement

Paragraph (4) of the SD definition in § 1.3 requires that, in determining whether its swap dealing transactions exceed the de minimis threshold, a person must include the aggregate notional amount of any swap dealing transactions entered into by its affiliates

[276] Final § 23.23(b)(2)(iii)(A) and (B). *See* Guidance, 78 FR at 45324.

[277] Final § 23.23(b)(2)(iii)(C). *See* Guidance, 78 FR at 45324.

[278] Proposed Rule, 85 FR at 972.

[279] SEC Cross-Border Rule, 79 FR at 47322.

[280] Proposed Rule, 85 FR at 972.

[281] Moreover, the SRS definition includes those non-financial U.S. parent entities that meet the risk-based thresholds set out in section II.D, *supra.*

[282] Proposed Rule, 85 FR at 972.

[283] Guidance, 78 FR at 45324.

[284] *Id.*

[285] 17 CFR 23.600(c)(1)(ii).

under common control.[286] Consistent with CEA section 2(i), the Commission interprets this aggregation requirement in a manner that applies the same aggregation principles to all affiliates in a corporate group, whether they are U.S. or non-U.S. persons.

Accordingly, consistent with the Guidance, the Commission proposed to require a potential SD, whether a U.S. or non-U.S. person, to aggregate all swaps connected with its dealing activity with those of persons controlling, controlled by, or under common control with the potential SD to the extent that these affiliated persons are themselves required to include those swaps in their own de minimis threshold calculations, unless the affiliated person is itself a registered SD.[287]

Better Markets supported the proposed aggregation requirement because it would prevent structuring to avoid or evade the de minimis threshold. As discussed above in connection with the definition of ''significant risk subsidiary,'' AFR stated that it would be simple for large international banks and other significant actors to conduct dealing through foreign subsidiaries that need not be counted toward de minimis thresholds at the subsidiary level. AFR claimed that the aggregation provision is negated by the fact that affiliates which are not SRSs would not have to count non-guaranteed swaps with other non-U.S., non-SRS persons toward their own de minimis calculations. In this way, it argued that the weakness of the other definitions in the Proposed Rule affects the calculation of the de minimis registration thresholds.

Having considered these comments, the Commission is adopting this interpretation of the cross-border application of the SD registration threshold as proposed, and consistent with the Guidance.[288] Stated in general terms, the Commission's approach allows both U.S. persons and non-U.S. persons in an affiliated group to engage in swap dealing activity up to the de minimis threshold. When the affiliated group meets the de minimis threshold in the aggregate, one or more affiliate(s) (a U.S. affiliate or a non-U.S. affiliate) have to register as an SD so that the relevant swap dealing activity of the unregistered affiliates remains below the threshold. The Commission recognizes the borderless nature of swap dealing activities, in which a dealer may conduct swap dealing business through its various affiliates in different jurisdictions, and believes that its approach addresses the concern that an affiliated group of U.S. and non-U.S. persons engaged in swap dealing transactions with a significant connection to the United States may not be required to register solely because such swap dealing activities are divided among affiliates that all individually fall below the de minimis threshold. The Commission's approach ensures that the aggregate gross notional amount of applicable swap dealing transactions of all such unregistered U.S. and non-U.S. affiliates does not exceed the de minimis level.[289]

In response to AFR's comment, pursuant to the status quo under the aggregation policy set forth in the Guidance, foreign subsidiaries of U.S. persons (that are not ''conduit affiliates'' as described in the Guidance) have not counted non-guaranteed swaps with other non-U.S. persons toward their de minimis calculations and U.S. person parent entities have therefore not aggregated such swaps with their own or their affiliates' de minimis calculations. Thus, the new SRS category expands the swaps included by the aggregation requirement rather than ''negating the aggregation provision'' as claimed by AFR.

D. Certain Exchange-Traded and Cleared Swaps

The Commission proposed, in an approach that is generally consistent with the Guidance, to allow an Other Non-U.S. Person to exclude from its de minimis threshold calculation any swap that it anonymously enters into on a designated contract market (''DCM''), a swap execution facility (''SEF'') that is registered with the Commission or exempted by the Commission from SEF registration pursuant to section 5h(g) of the CEA, or a foreign board of trade (''FBOT'') that is registered with the Commission pursuant to part 48 of its regulations,[290] if such swap is also cleared through a registered or exempt derivatives clearing organization (''DCO'').[291]

IIB/SIFMA recommended that this exception be expanded to cover swaps executed anonymously by an Other Non-U.S. Person on a non-U.S. trading venue and cleared by a non-U.S. clearing organization, regardless of whether the trading venue and clearing organization are registered or exempt from registration with the Commission. IIB/SIFMA stated that: (1) With such trades, the Other Non-U.S. Person cannot determine whether the swaps would count towards the SD de minimis threshold; (2) even if the Other Non-U.S. Person was registered as an SD, the swaps generally would not be subject to the Commission's external business conduct rules; and (3) a non-U.S. clearing organization becomes the counterparty to the Other Non-U.S. Person, and therefore the swaps do not present risk to the U.S. that would justify application of the Commission's risk mitigation rules. IIB/SIFMA stated that if the Other Non-U.S. Person's original counterparty was a U.S. person, the Commission's SEF and DCO registration requirements would independently require the trading venue and clearing organization to register with the Commission or obtain an exemption from registration and, therefore, it is not necessary for the Commission to limit this exception in a manner that would indirectly expand the SEF and DCO registration requirements to non-U.S. trading venues and clearing organizations with Other Non-U.S. Person participants.

Similarly, JFMC/IBAJ generally supported the exception, but also requested that the Commission not require the clearing organization or trading venue to be registered or exempt from registration with the CFTC because, in their view, the same policy rationale of exempting cleared swaps executed anonymously on a SEF or DCM applies to swaps executed on non-U.S. trading venues or clearing organizations operating without a CFTC registration or exemption. JFMC/IBAJ also recommended that the scope be expanded to include cleared swaps executed bilaterally outside a trading venue. JBA generally supported the proposal but also recommended that the exclusion be available for all cleared swaps, regardless of whether they are anonymously entered into on a DCM, registered or exempt SEF, or an FBOT, because risk to the U.S. would be limited after the swap is cleared. JSCC recommended that a non-U.S. person should be able to exclude swaps entered into with a U.S. person from the de minimis threshold calculation, if the swap is cleared with a registered DCO or exempt DCO because any non-U.S. person-related risk arising from the

[286] 17 CFR 1.3, Swap dealer, paragraph (4).

[288] Proposed Rule, 85 FR at 972–973; Guidance, 78 FR at 45323.

[289] Proposed Rule, 85 FR at 972–973.

[290] The Commission considers the exception described herein also to apply with respect to an FBOT that provides direct access to its order entry and trade matching system from within the U.S. pursuant to no-action relief issued by Commission staff.

[291] Proposed § 23.23(d); Proposed Rule, 85 FR at 973, 1004. *See* Guidance, 78 FR at 45325.

swap will be replaced and instead managed by the DCO.

Better Markets stated that the exception must be amended to limit the exclusion to DCO-cleared, anonymously SEF or DCM-executed swaps in which neither counterparty is subsequently disclosed through the practice of post-trade name give-up. Additionally, Better Markets objected to the expansion of the exchange-trading exclusion for any swaps anonymously executed or cleared through an exempted intermediary.

Having considered these comments, the Commission is adopting this exception as proposed.[292] When a non-U.S. person enters into a swap that is executed anonymously on a registered or exempt SEF, DCM, or registered FBOT, the Commission recognizes that the non-U.S. person does not have the necessary information about its counterparty to determine whether the swap should be included in its SD de minimis threshold calculation. The Commission therefore has determined that in this case the swap should be excluded altogether due to these practical difficulties.[293] However, the exception is limited to Other Non-U.S. Persons since, as discussed, Guaranteed Entities and SRSs have to count all of their dealing swaps towards the threshold, so the practical obstacles that would challenge Other Non-U.S. Persons are not relevant for Guaranteed Entities and SRSs.

The Final Rule expands the exception as it appeared in the Guidance to include SEFs and DCOs that are exempt from registration under the CEA, and also states that SRSs do not qualify for this exception. The CEA provides that the Commission may grant an exemption from registration if it finds that a foreign SEF or DCO is subject to comparable, comprehensive supervision and regulation by the appropriate governmental authorities in the SEF or DCO's home country.[294] The Commission believes that the policy rationale for providing relief to swaps anonymously executed on a SEF, DCM, or FBOT and then cleared also extends to swaps executed on a foreign SEF and/or cleared through a foreign DCO that has been granted an exemption from registration. As noted, the foreign SEF or DCO is subject to comprehensive regulation that is comparable to that applicable to registered SEFs and DCOs.

The Commission has determined not to expand at this time the exception to allow an Other Non-U.S. Person to exclude swaps executed anonymously on an exchange and which are subsequently cleared, regardless of whether the exchange and clearing organization are registered or exempt from registration with the Commission. Commenters argued that if the Other Non-U.S. Person's original counterparty was a U.S. person, the Commission's SEF and DCO registration requirements would independently require the trading venue and clearing organization to register with the Commission or obtain an exemption from registration. While guidance from DMO has suggested that this might be the case with respect to SEFs and DCMs,[295] the Commission has not taken a formal position on whether registration of a SEF or DCM is required where a U.S. person participates on the trading facility, and has stated that it will do so in the future.[296] The Commission may consider expanding the exception pending other amendments to the SEF/DCO regulations and registration requirements.

In response to comments that anonymity should not be required, the Commission proposed this exception (and included it in the Guidance) because when a trade is entered into anonymously on an exchange, the non-U.S. person would not have the necessary information about its counterparty to determine whether the swap should be included in its de minimis threshold calculation.[297] Therefore, these practical difficulties justify the exclusion of the swap altogether. However, if the identity of the counterparty is known to be a U.S. person, then the Other Non-U.S. Person should be seen to be participating in the U.S. swap market. Thus, the Commission has determined that such a non-U.S. person should count such swaps towards its de minimis threshold as otherwise required. Where the U.S. person status of a counterparty is known to the non-U.S. person, the Commission sees no reason to treat a cleared swap differently in the cross-border context than such swap is treated in the domestic U.S. context where cleared swaps entered into in a dealing capacity, whether executed anonymously or otherwise, count toward the SD de minimis threshold.

IV. Cross-Border Application of the Major Swap Participant Registration Tests

CEA section 1a(33) defines the term ''major swap participant'' to include persons that are not SDs but that nevertheless pose a high degree of risk to the U.S. financial system by virtue of the ''substantial'' nature of their swap positions.[298] In accordance with the Dodd-Frank Act and CEA section 1a(33)(B), the Commission adopted rules further defining ''major swap participant'' and providing that a person shall not be deemed an MSP unless its swap positions exceed one of several thresholds.[299] The thresholds were designed to take into account default-related credit risk, the risk of multiple market participants failing close in time, and the risk posed by a market participant's swap positions on an aggregate level.[300] The Commission also adopted interpretive guidance stating

[292] Final § 23.23(d).

[293] *See* Proposed Rule, 85 FR at 973. Additionally, as the Commission has clarified in the past, when a non-U.S. person clears a swap through a registered or exempt DCO, such non-U.S. person would not have to include the resulting swap (*i.e.,* the novated swap) in its de minimis threshold calculation. *See, e.g.,* 2016 Proposal, 81 FR at 71957 n.88. A swap that is submitted for clearing is extinguished upon novation and replaced by new swap(s) that result from novation. *See* 17 CFR 39.12(b)(6). *See also* Derivatives Clearing Organization General Provisions and Core Principles, 76 FR 69334, 69361 (Nov. 8, 2011). Where a swap is created by virtue of novation, such swap does not implicate swap dealing, and therefore it would not be appropriate to include such swaps in determining whether a non-U.S. person should register as an SD.

[294] *See* CEA sections 5h(g) for the SEF exemption provision and 5b(h) for the DCO exemption provision.

[295] Division of Market Oversight Guidance on Application of Certain Commission Regulations to Swap Execution Facilities, at 2 n.8 (Nov. 15, 2013) (''[DMO] expects that a multilateral swaps trading platform located outside the United States that provides U.S. persons . . . with the ability to trade or execute swaps on or pursuant to the rules of the platform, either directly or indirectly through an intermediary, will register as a SEF or DCM.'').

[296] *See* Swap Execution Facilities and Trade Execution Requirement, 83 FR 61946, 61961 n.106 (''[T]he Commission learned that many foreign multilateral swaps trading facilities prohibited U.S. persons and U.S-located persons from accessing their facilities due to the uncertainty that the guidance created with respect to SEF registration. The Commission understands that these prohibitions reflect concerns that U.S. persons and U.S.-located persons accessing their facilities would trigger the SEF registration requirement. . . . [T]he Commission expects to address the application of CEA section 2(i) to foreign multilateral swaps trading facilities, including foreign swaps broking entities, in the future.'').

[297] Proposed Rule, 85 FR at 973; Guidance, 78 FR 45325.

[298] 7 U.S.C. 1a(33)(A) (defining ''major swap participant'' to mean any person that is not an SD and either: (1) Maintains a substantial position in swaps for any of the major swap categories, subject to certain exclusions; (2) whose outstanding swaps create substantial counterparty exposure that could have serious effects on the U.S. financial system; or (3) is a highly leveraged financial entity that is not subject to prudential capital requirements and that maintains a substantial position in swaps for any of the major swap categories).

[299] 17 CFR 1.3, Major swap participant, paragraph (1). *See generally* Entities Rule, 77 FR 30596.

[300] Entities Rule, 77 FR at 30666 (discussing the guiding principles behind the Commission's definition of ''substantial position'' in 17 CFR 1.3); *id.* at 30683 (noting that the Commission's definition of ''substantial counterparty exposure'' in 17 CFR 1.3 is founded on similar principles as its definition of ''substantial position'').

that, for purposes of the MSP analysis, an entity's swap positions are attributable to a parent, other affiliate, or guarantor to the extent that the counterparty has recourse to the parent, other affiliate, or guarantor and the parent or guarantor is not subject to capital regulation by the Commission, SEC, or a prudential regulator (''attribution requirement'').[301]

The Commission is now adopting rules to address the cross-border application of the MSP thresholds to the swap positions of U.S. and non-U.S. persons.[302] Applying CEA section 2(i) and principles of international comity, the Final Rule identifies when a potential MSP's cross-border swap positions apply toward the MSP thresholds and when they may be properly excluded. As discussed below, whether a potential MSP includes a particular swap in its MSP threshold calculations depends on how the entity and its counterparty are classified (*e.g.,* U.S. person, SRS, etc.) and, in some cases, the jurisdiction in which a non-U.S. person is regulated.[303] The Final Rule's approach for the cross-border application of the MSP thresholds is similar to the approach described above for the SD threshold.

A. U.S. Persons

The Commission is adopting, as proposed, the requirement that a U.S. person include all of its swap positions in its MSP registration threshold calculations without exception.[304] The Commission did not receive comments regarding this requirement. As discussed in the context of the Final Rule's approach to applying the SD de minimis registration threshold, by virtue of it being domiciled or organized in the United States, or the inherent nature of its connection to the United States, all of a U.S. person's activities have a significant nexus to U.S. markets, giving the Commission a particularly strong regulatory interest in its swap activities.[305] Accordingly, the Commission believes that all of a U.S. person's swap positions, regardless of where they occur or the U.S. person status of the counterparty, should apply toward the MSP thresholds.

B. Non-U.S. Persons

Under the Final Rule, as discussed in more detail below, whether a non-U.S. person includes a swap position in its MSP threshold calculations depends on its status, the status of its counterparty, or the characteristics of the swap. Specifically, the Final Rule requires a person that is a Guaranteed Entity or an SRS to count all of its swap positions. In addition, an Other Non-U.S. Person is required to count all swap positions with a U.S. person, except for swaps conducted through a foreign branch of a registered U.S. SD. Subject to an exception, the Final Rule also requires an Other Non-U.S. Person to count all swap positions if the counterparty to such swaps is a Guaranteed Entity.[306]

1. Swaps by a Significant Risk Subsidiary

The Commission proposed to require an SRS to include all of its swap positions in its MSP threshold calculations.[307]

IIB/SIFMA recommended that the Commission not adopt the proposal, asserting that absent a guarantee or other form of direct risk transfer to a U.S. person, a foreign subsidiary does not present sufficiently ''direct'' risk to the United States to justify extraterritorial application of the MSP registration requirement under section 2(i). IIB/SIFMA stated that permitting foreign subsidiaries to transact in swaps without registering as MSPs also would not create a substantial regulatory loophole, as there is no evidence of sufficiently substantial non-dealing swap activity occurring in foreign subsidiaries at present when SRSs are not subject to MSP registration (just as there are no U.S. persons currently registered as MSPs).

After considering the comment, the Commission is adopting this aspect of the cross-border application of the MSP registration thresholds as proposed.[308] As noted in section II.D, the term SRS encompasses a person that, by virtue of being a significant subsidiary of a U.S. person, and not being subject to prudential supervision as a subsidiary of a BHC or IHC or subject to comparable capital and margin rules, raises the concerns intended to be addressed by the Dodd-Frank Act requirements addressed by the Final Rule, regardless of the U.S. person status of its counterparty. Further, the Commission believes that treating an SRS differently from a U.S. person could create a substantial regulatory loophole by incentivizing U.S. persons to conduct their swap business with non-U.S. persons through SRSs to avoid application of the Dodd-Frank Act MSP requirements. Allowing swaps entered into by SRSs, which have the potential to affect the ultimate U.S. parent entity and U.S. commerce, to be treated differently depending on how the parties structure their transactions could undermine the effectiveness of the Dodd-Frank Act swap provisions and related Commission regulations addressed by the Final Rule. Applying the same standard to similar swap positions helps to limit those incentives and regulatory implications.[309] Additionally, the SRS definition already includes a carve-out for affiliates of U.S. BHCs and IHCs. This approach allows for streamlined application of the rule, and the comment letters have not identified specific problems caused by applying the same standard to similar swap positions.

In addition, a person's status as an SRS is determined at the entity level and, thus, an SRS is required to include in its MSP threshold calculations the swap positions of its operations that are part of the same legal person, including those of its branches.[310]

For added clarity, the Commission also notes that an Other Non-U.S. Person is not be required to include swap positions entered into with an SRS in its MSP threshold calculations, unless the SRS is also a Guaranteed Entity and no other exception applies.

2. Swap Positions With a U.S. Person

The Commission proposed to require an Other Non-U.S. Person to count toward its MSP registration thresholds swap positions where the counterparty is a U.S. person, other than swaps with a foreign branch of a registered U.S. SD if such swaps are conducted through a foreign branch of such registered SD.[311]

IIB/SIFMA supported this approach, stating that it is consistent with the Guidance, except that it does not require that swaps with a foreign branch of a registered SD be subject to daily variation margin in order to be excluded from an Other Non-U.S. Person's MSP

[301] *Id.* at 30689.

[302] Final § 23.23(c).

[303] As indicated above, for purposes of the Final Rule, an ''Other Non-U.S. Person'' refers to a non-U.S. person that is neither a Guaranteed Entity nor an SRS.

[304] Final § 23.23(c)(1); Proposed Rule, 85 FR at 974, 1004.

[305] *See supra* section III.A; Proposed Rule, 85 FR at 974.

[306] As discussed in sections II.C and III.B, *supra,* for purposes of this release and ease of reading, such a non-U.S. person whose obligations under the swaps are subject to a guarantee by a U.S. person is being referred to as a ''Guaranteed Entity.'' Depending on the characteristics of the swap, a non-U.S. person may be a Guaranteed Entity with respect to swaps with certain counterparties, but not be deemed a Guaranteed Entity with respect to swaps with other counterparties.

[307] Proposed § 23.23(c)(1); Proposed Rule, 85 FR at 974–975, 1004.

[308] Final § 23.23(c)(1).

[309] Proposed Rule, 85 FR at 974–975.

[310] *Id.*

[311] Proposed § 23.23(c)(2)(i); Proposed Rule, 85 FR at 975, 1004.

registration thresholds. IIB/SIFMA noted that this was appropriate because the Dodd-Frank Act's margin requirements independently impose variation margin requirements on SDs where appropriate. Further, they stated that the change removes the complexity of non-U.S. persons having to determine their own ''financial entity'' status in order to evaluate whether variation margin was required now that the uncleared swap margin rules use a slightly different ''financial end user'' definition.

After considering this comment, the Commission is adopting this aspect of the cross-border application of the MSP registration thresholds as proposed.[312] Generally, a potential MSP must include in its MSP threshold calculations any swap position with a U.S. person. As discussed above, the term ''U.S. person'' encompasses persons that inherently raise the concerns intended to be addressed by the Dodd-Frank Act, regardless of the U.S. person status of their counterparty. The default or insolvency of the non-U.S. person would have a direct and significant adverse effect on a U.S. person and, by virtue of the U.S. person's significant nexus to the U.S. financial system, potentially could result in adverse effects or disruption to the U.S. financial system as a whole, particularly if the non-U.S. person's swap positions are substantial enough to exceed an MSP registration threshold.[313]

The Final Rule's approach in allowing a non-U.S. person to exclude swap positions conducted through a foreign branch of a registered SD counterparty is consistent with the approach described in section III.B.2 for cross-border treatment with respect to SDs.[314] In this regard, a swap conducted through a foreign branch of a registered SD triggers certain Dodd-Frank Act transactional requirements (or comparable requirements), particularly margin requirements, and therefore mitigates concern that this exclusion could be used to engage in swap activities outside the Dodd-Frank Act regime.

Accordingly, the Commission has determined that it is appropriate and consistent with section 2(i) of the CEA to allow a non-U.S. person, which is not a Guaranteed Entity or SRS, to exclude from its MSP threshold calculations any swaps conducted through a foreign branch of a registered SD counterparty. The Commission recognizes that the Guidance provided that such swaps would need to be cleared or that the documentation of the swaps would have to require the foreign branch to collect daily variation margin, with no threshold, on its swaps with such non-U.S. person.[315] The Final Rule does not include such a requirement because the foreign branch of the registered SD is nevertheless required to post and collect margin, as required by the SD margin rules. In addition, a non-U.S. person's swaps conducted through a foreign branch of a registered SD counterparty must be addressed in the SD's risk management program. Such program must account for, among other things, overall credit exposures to non-U.S. persons.[316]

In response to a request for comment,[317] IIB/SIFMA supported not requiring a U.S. branch of a non-U.S. banking organization to include all of its swap positions in its MSP calculation as if they were swaps entered into by a U.S. person or to require an Other Non-U.S. Person to include in its MSP calculation dealing swaps conducted through such a branch. IIB/SIFMA stated that swaps between a U.S. branch and an Other Non-U.S. Person do not present risks to the United States that would justify applying the Commission's MSP requirements. Consistent with the Proposed Rule, the Commission has determined not to require a U.S. branch to include swaps with Other Non-U.S. Persons in its MSP threshold calculations as if they were swaps entered into by a U.S. person. Similarly, the Final Rule does not require an Other Non-U.S. Person to include in its MSP calculation dealing swaps booked in a U.S. branch.

3. Guaranteed Swap Positions

(i) Swap Positions Entered Into by a Guaranteed Entity

The Commission proposed to require a non-U.S. person to include in its MSP calculation each swap position with respect to which it is a Guaranteed Entity.[318] No comments were received regarding this aspect of the Proposed Rule, and the Commission is adopting this aspect of the cross-border application of the MSP registration thresholds as proposed.[319]

As explained in the context of the SD de minimis threshold calculation, the Commission believes that the swap positions of a Guaranteed Entity are identical, in relevant aspects, to those entered into directly by a U.S. person and thus present similar risks to the stability of the U.S. financial system or of U.S. entities.[320] As a result of the guarantee, the U.S. guarantor generally bears risk arising out of the swap as if it had entered into the swap directly. Absent the guarantee from the U.S. person, a counterparty may choose not to enter into the swap or may not do so on the same terms. Treating Guaranteed Entities differently from U.S. persons could also create a substantial regulatory loophole, allowing transactions that have a similar connection to or effect on U.S. commerce to be treated differently depending on how the parties are structured and thereby undermining the effectiveness of the Dodd-Frank Act swap provisions and related Commission regulations.

(ii) Swaps Positions Entered Into With a Guaranteed Entity

The Commission also proposed to require an Other Non-U.S. Person to count toward its MSP registration thresholds swap positions with a counterparty that is a Guaranteed Entity, except when the counterparty is registered as an SD.[321]

IIB/SIFMA supported this approach, stating that it is consistent with the Guidance, except that it does not require that swaps with a Guaranteed Entity be subject to daily variation margin in order to be excluded from an Other Non-U.S. Person's MSP registration thresholds. IIB/SIFMA noted that this was appropriate because the Dodd-Frank Act's margin requirements independently impose variation margin requirements on SDs where appropriate. Further, they stated that the change removes the complexity of non-U.S. persons having to determine their own ''financial entity'' status in order to evaluate whether variation margin was required now that the uncleared swap margin rules use a slightly different ''financial end user'' definition.

The Commission is adopting as proposed the requirement that a non-U.S. person must count swap positions

with a Guaranteed Entity counterparty, except when the counterparty is registered as an SD.[322] The guarantee of a swap is an integral part of the swap and, as discussed above, counterparties may not be willing to enter into a swap with a Guaranteed Entity in the absence of the guarantee. The Commission also recognizes that, given the highly integrated corporate structures of global financial enterprises, financial groups may elect to conduct their swap activity in a number of different ways, including through a U.S. person or through a non-U.S. affiliate that benefits from a guarantee from a U.S. person. Therefore, in order to avoid creating a substantial regulatory loophole, the Commission has determined that swap positions of a non-U.S. person with a counterparty whose obligations under the swaps are guaranteed by a U.S. person must receive the same treatment as swap positions with a U.S. person.[323]

However, similar to the discussion regarding SDs in section III.B.3.ii, where an Other Non-U.S. Person enters into a swap with a Guaranteed Entity that is a registered SD, it is appropriate to permit the non-U.S. person not to count its swap position with the Guaranteed Entity against the non-U.S. person's MSP thresholds, because one counterparty to the swap is a registered SD subject to comprehensive swap regulation and operating under the oversight of the Commission. For example, the swap position must be addressed in the SD's risk management program and account for, among other things, overall credit exposures to non-U.S. persons.[324] In addition, a non-U.S. person's swap positions with a Guaranteed Entity that is an SD are included in exposure calculations and attributed to the U.S. guarantor for purposes of determining whether the U.S. guarantor's swap exposures are systemically important on a portfolio basis and therefore require the protections provided by MSP registration. Therefore, in these circumstances, the Commission has determined that the non-U.S. person need not count such a swap position toward its MSP thresholds.[325]

C. Attribution Requirement

In the Entities Rule, the Commission and the SEC provided a joint interpretation that an entity's swap positions in general are attributed to a parent, other affiliate, or guarantor for purposes of the MSP analysis to the extent that the counterparties to those positions have recourse to the parent, other affiliate, or guarantor in connection with the position, such that no attribution is required in the absence of recourse.[326] Even in the presence of recourse, however, attribution of a person's swap positions to a parent, other affiliate, or guarantor is not necessary if the person is already subject to capital regulation by the Commission or the SEC or is a U.S. entity regulated as a bank in the United States (and is therefore subject to capital regulation by a prudential regulator).[327]

The Commission proposed to address the cross-border application of the attribution requirement in a manner consistent with the Entities Rule and CEA section 2(i) and generally comparable to the approach adopted by the SEC.[328] Specifically, the Commission stated that the swap positions of an entity, whether a U.S. or non-U.S. person, should not be attributed to a parent, other affiliate, or guarantor for purposes of the MSP analysis in the absence of a guarantee. The Commission stated that even in the presence of a guarantee, attribution would not be required if the entity that entered into the swap directly is subject to capital regulation by the Commission or the SEC or is regulated as a bank in the United States.[329] Additionally, the Commission invited comment on whether it should modify its interpretation with regard to the attribution requirement to provide that attribution of a person's swap positions to a parent, other affiliate, or guarantor would not be required if the person is subject to capital standards that are comparable to and as comprehensive as the capital regulations and oversight by the Commission, SEC, or a U.S. prudential regulator.[330]

IIB/SIFMA stated that the Guidance clarified that the exception for entities subject to capital regulation also includes entities subject to non-U.S. capital standards that are comparable to, and as comprehensive as, the capital regulations and oversight by the Commission, SEC, or a U.S. prudential regulator (*i.e.,* Basel compliant capital standards and oversight by a G20 prudential supervisor). Therefore, IIB/SIFMA recommended that the attribution requirement in the MSP threshold context should exclude entities subject to Basel compliant capital standards and oversight by a G20 prudential supervisor, as those entities should pose no higher risk than entities subject to capital regulation by the Commission, SEC, or a prudential regulator.

The Commission is adopting the interpretation of the attribution requirement as discussed in the Proposed Rule, with a clarification. The Commission has determined that, in addition to entities that are subject to capital regulation by the Commission, SEC, or U.S. prudential regulators, the attribution requirement in the MSP threshold context also excludes entities subject to Basel compliant capital standards and oversight by a G20 prudential supervisor. As noted by IIB/SIFMA in response to a request for comment, this approach is consistent with the Guidance, and is recommended because those entities pose no higher risk than entities subject to capital regulation by the Commission, SEC, or a prudential regulator. The Commission has further determined that the swap positions of an entity that is required to register as an MSP, or whose MSP registration is pending, are not subject to the attribution requirement.

Generally, if a guarantee is present, however, and the entity being guaranteed is not subject to capital regulation (as described above), whether the attribution requirement applies depends on the U.S. person status of the person to whom there is recourse under the guarantee (*i.e.,* the U.S. person status of the guarantor). Specifically, a U.S. person guarantor attributes to itself any swap position of an entity subject to a guarantee, whether a U.S. person or a non-U.S. person, for which the counterparty to the swap has recourse against that U.S. person guarantor. The Commission finds that when a U.S. person acts as a guarantor of a swap position, the guarantee creates risk within the United States of the type that MSP regulation is intended to address, regardless of the U.S. person status of the entity subject to a guarantee or its counterparty.[331]

A non-U.S. person attributes to itself any swap position of an entity for which the counterparty to the swap has

[322] Final § 23.23(c)(2)(iii). The MSP provision does not include an exception for swap positions with non-U.S. persons guaranteed by a non-financial entity, or for swap positions with a Guaranteed Entity where such Guaranteed Entity is itself below the SD de minimis threshold under paragraph (4)(i) of the "swap dealer" definition in § 1.3 and is affiliated with a registered SD, similar to the carve-outs in the SD provision. *See* Final § 23.23(b)(2)(iii)(B) and (C); *supra* section III.B.3.ii.

[323] Proposed Rule, 85 FR at 975–976.

[330] *Id.* at 977.

[331] *Id.* at 976. *See* Entities Rule, 77 FR at 30689 (attribution is intended to reflect the risk posed to the U.S. financial system when a counterparty to a position has recourse against a U.S. person).

recourse against the non-U.S. person unless all relevant persons (*i.e.,* the non-U.S. person guarantor, the entity whose swap positions are guaranteed, and its counterparty) are non-U.S. persons that are not Guaranteed Entities.[332] In this regard, the Commission finds that when a non-U.S. person provides a guarantee with respect to the swap position of a particular entity, the economic reality of the swap position is substantially identical, in relevant respects, to a position entered into directly by the non-U.S. person.

In addition, the Commission believes that entities subject to a guarantee are able to enter into significantly more swap positions (and take on significantly more risk) as a result of the guarantee than they can otherwise, amplifying the risk of the non-U.S. person guarantor's inability to carry out its obligations under the guarantee. Given the types of risk that MSP regulation is intended to address, the Commission has a strong regulatory interest in ensuring that the attribution requirement applies to non-U.S. persons that provide guarantees to U.S. persons and Guaranteed Entities. Accordingly, the Commission has determined that a non-U.S. person must attribute to itself the swap positions of any entity for which it provides a guarantee unless it, the entity subject to the guarantee, and its counterparty are all non-U.S. persons that are not Guaranteed Entities.

D. Certain Exchange-Traded and Cleared Swaps

Consistent with its approach for SDs, the Commission proposed to allow a non-U.S. person that is not a Guaranteed Entity or an SRS to exclude from its MSP calculation any swap position that it anonymously enters into on a DCM, a registered SEF or a SEF exempted from registration by the Commission pursuant to section 5h(g) of the CEA, or an FBOT registered with the Commission pursuant to part 48 of its regulations,[333] if such swap is also cleared through a registered or exempt DCO.[334]

As discussed in section III.D in connection with the cross-border application of the SD registration threshold, as compared to the Proposed Rule, IIB/SIFMA, JFMC/IBAJ, JBA, and JSCC advocated for expansion of this exception, while Better Markets stated that the proposed exception should be narrowed.

Consistent with the cross-border application of the SD registration threshold, the Commission is adopting this exception as proposed.[335] When a non-U.S. person enters into a swap position that is executed anonymously on a registered or exempt SEF, DCM, or registered FBOT, the Commission recognizes that the non-U.S. person does not have the necessary information about its counterparty to determine whether the swap position should be included in its MSP calculation. The Commission has determined that in this case the swap position should be excluded altogether due to these practical difficulties.[336] However, the exception is limited to Other Non-U.S. Persons since, as discussed, Guaranteed Entities and SRSs have to count all of their swap positions towards the threshold, so the practical obstacles that would challenge Other Non-U.S. Persons are not relevant for Guaranteed Entities and SRSs.

The Final Rule expands the exception as it appeared in the Guidance to include SEFs and DCOs that are exempt from registration under the CEA, and also states that SRSs do not qualify for this exception. The CEA provides that the Commission may grant an exemption from registration if it finds that a foreign SEF or DCO is subject to comparable, comprehensive supervision and regulation by the appropriate governmental authorities in the SEF or DCO's home country.[337] The policy rationale for providing relief to swap positions anonymously executed on a SEF, DCM, or FBOT and then cleared also extends to swaps executed on a foreign SEF and/or cleared through a foreign DCO that has been granted an exemption from registration. As noted, the foreign SEF or DCO is subject to comprehensive regulation that is comparable to that applicable to registered SEFs and DCOs.

The Commission is not at this time expanding the exception to allow an Other Non-U.S. Person to exclude swap positions executed anonymously on an exchange and which are subsequently cleared, regardless of whether the exchange and clearing organization are registered or exempt from registration with the Commission. Commenters argued that if the Other Non-U.S. Person's original counterparty was a U.S. person, the Commission's SEF and DCO registration requirements would independently require the trading venue and clearing organization to register with the Commission or obtain an exemption from registration. While guidance from DMO has suggested that this might be the case with respect to SEFs and DCMs,[338] the Commission has not taken a formal position on whether registration of a SEF or DCM is required where a U.S. person participates on the trading facility, and has stated that it will do so in the future.[339] The Commission may consider expanding the exception pending other amendments to the SEF/DCO regulations.

In response to comments that anonymity should not be required, the Commission proposed this exception (and included it in the Guidance) because when a trade is entered into anonymously on an exchange, the non-U.S. person would not have the necessary information about its counterparty to determine whether the swap position should be included in its MSP calculation.[340] Therefore, these practical difficulties justify exclusion of the swap position altogether. However, if the identity of the counterparty is known to be a U.S. person, then the Other Non-U.S. Person should be seen to be participating in the U.S. swap market. Thus, the Commission has determined that such a non-U.S. person should count such swap positions towards its MSP calculation as otherwise required. As stated above, where the U.S. person status of a counterparty is known to the non-U.S. person, the Commission sees no reason to treat a cleared swap differently in the cross-border context than such swap

[332] As noted above, the term Guaranteed Entity is limited to entities that are guaranteed by a U.S. person.

[333] The Commission considers the exception described herein also to apply with respect to an FBOT that provides direct access to its order entry and trade matching system from within the U.S. pursuant to no-action relief issued by Commission staff.

position is treated in the domestic U.S. context.

V. ANE Transactions

A. Background and Proposed Approach

The ANE Staff Advisory provided that a non-U.S. SD would generally be required to comply with Transaction-Level Requirements (as that term was used in the Guidance) when entering into ANE Transactions.[341]

In the Proposed Rule the Commission stated that, based on the Commission's consideration of its experience under the Guidance, the comments it had received pursuant to the ANE Request for Comment,[342] respect for international comity, and the Commission's desire to focus its authority on potential significant risks to the U.S. financial system, the Commission had determined that ANE Transactions will not be considered a relevant factor for purposes of applying the Proposed Rule.[343] Therefore, under the Proposed Rule, all foreign-based swaps entered into between a non-U.S. swap entity and a non-U.S. person would be treated the same regardless of whether the swap is an ANE Transaction. The Commission further noted that, to the extent the Proposed Rule is finalized, this treatment would effectively supersede the ANE Staff Advisory with respect to the application of the group B and C requirements (discussed in sections VI.A.2 and VI.A.3 below) to ANE Transactions.

With respect to its experience, the Commission noted that the ANE No-Action Relief, which went into effect immediately after issuance of the ANE Staff Advisory, generally relieved non-U.S. swap entities from the obligation to comply with most Transaction-Level Requirements when entering into swaps with most non-U.S. persons.[344] The Commission also noted that in the intervening period, the Commission had not found a negative effect on either its ability to effectively oversee non-U.S. swap entities, or the integrity and transparency of U.S. derivatives markets.

Noting its interest in international comity, the Commission observed that ANE Transactions involve swaps between non-U.S. persons, and thus the Commission considered whether the U.S. aspect of ANE Transactions should override its general view that such transactions should qualify for the same relief provided under the Proposed Rule (and the Guidance) for swaps between certain non-U.S. persons (*e.g.,* an exception from compliance with Transaction-Level Requirements under the Guidance and group B and C requirements under the Proposed Rule, as discussed below). The Commission expressly recognized that a person that, in connection with its dealing activity, engages in market-facing activity using personnel located in the United States is conducting a substantial aspect of its dealing business in the United States. But, because the transactions involve two non-U.S. persons, and the financial risk of the transactions lies outside the United States, the Commission considered the extent to which the underlying regulatory objectives of the Dodd-Frank Act would be advanced in light of other policy considerations, including undue market distortions and international comity, when making a determination of the extent to which the Dodd-Frank Act swap requirements would apply to ANE Transactions.

The Commission noted that the consequences of not applying the Dodd-Frank Act swap requirements would be mitigated in two respects. First, persons engaging in any aspect of swap transactions within the U.S. remain subject to the CEA and Commission regulations prohibiting the employment, or attempted employment, of manipulative, fraudulent, or deceptive devices, such as section 6(c)(1) of the CEA,[345] and § 180.1.[346] The Commission thus would retain anti-fraud and anti-manipulation authority, and would continue to monitor the trading practices of non-U.S. persons that occur within the territory of the United States in order to enforce a high standard of customer protection and market integrity. Even where a swap is entered into by two non-U.S. persons, the United States has a significant interest in deterring fraudulent or manipulative conduct occurring within its borders and cannot be a haven for such activity.

Second, with respect to more specific regulation of swap dealing in accordance with the Commission's swap regime, the Commission noted that, in most cases, non-U.S. persons entering into ANE Transactions would be subject to regulation and oversight in their home jurisdictions similar to the Commission's Transaction-Level Requirements as most of the major swap trading centers have implemented similar risk mitigation requirements.[347]

With respect to market distortion, the Commission gave weight to comments submitted in response to the ANE Request for Comment, who argued that application of Transaction-Level Requirements to ANE Transactions would cause non-U.S. SDs to relocate personnel to other countries (or otherwise terminate agency contracts with U.S.-based agents) in order to avoid Dodd-Frank Act swap regulation or to have to interpret and apply what the commenters considered a challenging ANE analysis, thereby potentially increasing market fragmentation.[348]

The Commission also gave weight to the regulatory interests of the home jurisdictions of non-U.S. persons engaged in ANE Transactions. Because the risk of the resulting swaps lies in those home countries and not the U.S. financial system, the Commission recognized that, with the exception of enforcing the prohibition on fraudulent or manipulative conduct taking place in the United States, non-U.S. regulators will have a greater incentive to regulate the swap dealing activities of such non-U.S. persons—such as, for example, with respect to business conduct standards with counterparties, appropriate documentation, and recordkeeping. In these circumstances, where the risk lies outside the U.S. financial system, the Commission recognized the greater supervisory interest of the authorities in the home jurisdictions of the non-U.S. persons. The Commission also noted that no major swap regulatory jurisdiction applies its regulatory regime to U.S. entities engaging in ANE Transactions within its territory.

In light of the foregoing, the Commission determined that the mitigating effect of the anti-fraud and anti-manipulation authority retained by

[341] *See* ANE Staff Advisory. The ANE Staff Advisory represented the views of DSIO only, and not necessarily those of the Commission or any other office or division thereof. As discussed in section VI.A, *infra,* the Transaction-Level Requirements are: (1) Required clearing and swap processing; (2) margining (and segregation) for uncleared swaps; (3) mandatory trade execution; (4) swap trading relationship documentation; (5) portfolio reconciliation and compression; (6) real-time public reporting; (7) trade confirmation; (8) daily trading records; and (9) external business conduct standards.

[342] In the January 2014 ANE Request for Comment, the Commission requested comments on all aspects of the ANE Staff Advisory, including: (1) The scope and meaning of the phrase ''regularly arranging, negotiating, or executing'' and what characteristics or factors distinguish ''core, front-office'' activity from other activities; and (2) whether the Commission should adopt the ANE Staff Advisory as Commission policy, in whole or in part.

[343] *See* Proposed Rule, 85 FR at 977–979.

[344] Specifically, non-U.S. persons that are neither guaranteed nor conduit affiliates, as described in the Guidance.

[345] 7 U.S.C. 9(1).

[347] *See* 2019 FSB Progress Report, Table M.

[348] Proposed Rule, 85 FR at 977.

the Commission and the prevalence of applicable regulatory requirements similar to the Commission's own, the likelihood of market fragmentation and disruption, the Commission's respect for the regulatory interests of the foreign jurisdictions where the actual financial risks of ANE Transactions primarily lie in accordance with the principles of international comity, and the awareness that application of its swap requirements in the ANE context would make the Commission an outlier among the major swap regulatory jurisdictions, outweighed the Commission's regulatory interest in applying its swap requirements to ANE Transactions differently than such were otherwise proposed to be applied to swaps between Other Non-U.S. Persons. The Commission invited comment on all aspects of the proposed treatment of ANE Transactions.

B. Summary of Comments

Neither Better Markets nor AFR supported the Commission's determination to disregard ANE Transactions and commented that the Commission should not permit U.S.-located personnel to arrange, negotiate, or execute swaps on behalf of the non-U.S. affiliates of U.S. BHCs (and others) without being subject to the full panoply of U.S. regulations. Better Markets stated its belief that any such policy facilitates avoidance, if not evasion, and regulatory arbitrage. Better Markets specifically disputed the Commission's contention in the Proposed Rule that ''the financial risk of the [ANE] transactions [only] lie outside of the United States,'' which Better Markets contends is demonstrably untrue and conflicts with the Commission's own views elsewhere in the Proposed Rule, presumably referring to the proposed treatment of swaps of non-U.S. persons with Guaranteed Entities and SRSs, which are also non-U.S. persons that the Commission nevertheless proposed generally would be subject to certain Dodd-Frank Act requirements.[349]

On the other hand, AIMA, Chatham Financial, CS, IIB/SIFMA, ISDA, and JFMC/IBAJ supported the Commission's decision in the Proposed Rule to only apply anti-fraud and anti-manipulation rules to ANE Transactions, agreeing in various respects with the Commission's analysis that:

1. ANE Transactions do not present direct financial risk to the United States;
2. The Commission's anti-fraud and anti-manipulation rules that would remain applicable would mitigate potential concerns associated with any potential misconduct occurring in connection with ANE Transactions and any other conduct subject to the jurisdiction of the CEA;
3. Most ANE Transactions are expected to be subject to foreign regulatory requirements similar to the Commission's own, unlike at the time of the adoption of the Guidance; and
4. Applying the Commission's rules to ANE Transactions would likely result in disruptive and unnecessary market fragmentation as transactions ordinarily arranged, negotiated, or executed by U.S. personnel would shift to non-U.S. locations, resulting in decreased Commission oversight.

Commenting on specific aspects of the Commission's proposed treatment of ANE Transactions, AIMA encouraged the CFTC to adopt the SEC's approach and require counting of ANE Transactions toward the SD registration threshold and to apply reporting requirements to ensure that a baseline level of transparency is maintained.

IIB/SIFMA recognized that the Proposed Rule's approach to ANE Transactions would deviate from that taken by the SEC, but argued that this deviation is justified. They argued that the relationship of the security-based swap market to the cash securities markets, and Congress's decision to define security-based swaps as ''securities,'' presents some justification for the SEC to apply a test for use of U.S. jurisdictional means to conduct security-based swap business that is similar to the test that applies in connection with existing, pre-Dodd-Frank Act securities broker-dealer regulation, while no similar justification applies in connection with swaps regulation by the Commission, as the swaps market generally trades independently of the U.S. futures market, and Congress did not define swaps to be a type of futures contract.

IIB/SIFMA, CS, JFMC/IBAJ, and ISDA also commented on the continuing viability of the ANE Staff Advisory. These commenters stated that, currently, ANE Transactions are subject to the ANE Staff Advisory and related ANE No-Action Relief, noting that, if adopted, the Proposed Rule would supersede the ANE Staff Advisory, but only with respect to those requirements covered by the Proposed Rule. These commenters noted that certain other Commission requirements—mandatory clearing, mandatory trade execution, and real-time public reporting—would remain subject to the ANE Staff Advisory and related ANE No-Action Relief, pending further Commission action. To achieve a coherent, Commission-driven ANE Transaction policy, these commenters all requested that the Commission immediately direct staff to withdraw the ANE Staff Advisory (which, in their view, would render the ANE No-Action Relief moot).

ISDA noted that the ANE No-Action Relief was issued two weeks after the ANE Staff Advisory and that market participants have operated under this relief for almost seven years. ISDA argued that, during this time, to ISDA's knowledge, there have been no regulatory concerns associated with these transactions that would warrant a change in course. Thus, should the Commission decide to switch gears and apply clearing, trading, and real-time reporting requirements to ANE Transactions, market participants would incur significant compliance costs without commensurate benefit to the Commission's regulatory oversight.

Although Citadel agreed that the Commission should apply its jurisdiction over ANE Transactions in a targeted manner, taking into account principles of international comity, as well as its supervisory interests and statutory objectives, Citadel argued that because the Commission's relevant statutory objectives include not only mitigating systemic risk, but also increasing transparency, competition, and market integrity, the Commission should, at a minimum, apply regulatory and public reporting requirements to ANE Transactions. AIMA also encouraged the Commission to apply reporting requirements to ensure that a baseline level of transparency is maintained. Citadel stated that application of reporting requirements to these transactions would enable the Commission to better monitor for disruptive trading practices and provide the necessary data regarding overall market trading activity to allow the Commission to evaluate market trends and accurately assess the effect of other reforms implemented in the swaps market.

Stating that ANE Transactions could account for a material portion of total swap dealing activity in the United States, Citadel claimed that market transparency in EUR interest rate swaps for U.S. investors has been greatly reduced based on data showing that, following issuance of the ANE No-Action Relief, interdealer trading activity in EUR interest rate swaps

[349] As discussed below, the Final Rule excepts certain transactions with ''SRS End-Users'' from the Group B requirements, excepts certain transactions with Guaranteed Entities and SRSs from the Group C requirements, and provides a limited exception from the Group B requirements for transactions entered into by Guaranteed Entities and SRSs that are swap entities with certain non-U.S. persons. *See infra* sections VI.B.3 and VI.B.5.

began to be booked almost exclusively to non-U.S. entities, a fact pattern that Citadel believes is ''consistent with (although not direct proof of) swap dealers strategically choosing the location of the desk executing a particular trade in order to avoid trading in a more transparent and competitive setting.'' Citadel further noted that applying regulatory and public reporting requirements to ANE Transactions would be consistent with the SEC's approach.

C. Commission Determination

Having considered the comments received, the Commission's consideration of its experience under the Guidance, respect for international comity, and the Commission's desire to focus its authority on potential significant risks to the U.S. financial system, the Commission has determined that, consistent with its rationale expressed in the Proposed Rule summarized above, ANE Transactions will not be considered a relevant factor for purposes of applying the Final Rule.

Regarding the many comments and suggestions received regarding whether the Commission should withdraw the ANE Staff Advisory and related ANE No-Action Relief and extend its proposed treatment of ANE Transactions to requirements in addition to the group B and group C requirements, in 2014, subsequent to the publication of the ANE Staff Advisory, the Commission, citing the complex legal and policy issues raised by the statements in the ANE Staff Advisory, requested comments on whether the Transaction-Level Requirements should apply to swap transactions between certain non-U.S. SDs and non-U.S. counterparties that are ''arranged, negotiated, or executed'' by the SDs' personnel or agents located in the United States.[350] The Commission did not follow-up on the request for comment. In this rulemaking, the Commission is addressing the issue with respect to the group B and group C requirements; the Commission intends to address the issue with respect to the remaining Transaction-Level Requirements (the ''Unaddressed TLRs'') in connection with future cross-border rulemakings relating to such requirements. Until such time, the Commission will not consider, as a matter of policy, a non-U.S. swap entity's use of their personnel or agents located in the United States to ''arrange, negotiate, or execute'' swap transactions with non-U.S. counterparties for purposes of determining whether Unaddressed TLRs apply to such transactions. As part of any such rulemaking, the Commission expects to first engage in fact-finding to determine the extent to which ANE Transactions raise policy concerns that are not otherwise addressed by the CEA or Commission regulations. In this connection, DSIO is withdrawing the ANE Staff Advisory and, together with the Division of Clearing and Risk and DMO, is withdrawing the ANE No-Action Relief and granting certain non-U.S. SDs no-action relief with respect to the applicability of the Unaddressed TLRs to their transactions with non-U.S. counterparties that are arranged, negotiated, or executed in the United States.

The Commission will take AIMA and Citadel's comments regarding the advisability of applying the Commission's regulatory and real-time reporting requirements to ANE Transactions under advisement when considering the cross-border application of those requirements in a future rulemaking.

With respect to AFR and Better Markets' contentions that the Commission should not permit derivatives dealers located within the U.S. to engage in transactions using U.S. personnel on U.S. soil without being subject to U.S. law, the Proposed Rule clearly stated that the Commission recognized that a person that, in connection with its dealing activity, engages in market-facing activity using personnel located in the United States is conducting a substantial aspect of its dealing business in the United States and is subject to U.S. law. But, because the transactions involve two non-U.S. persons, and the financial risk of the transactions lies primarily outside the United States, the Commission also recognized that it must consider the extent to which the underlying regulatory objectives of the Dodd-Frank Act would be advanced in light of other policy considerations, including undue market distortions and international comity, when making a determination of the extent to which the Dodd-Frank Act swap requirements should apply to ANE Transactions.

With respect to AIMA's comment encouraging the CFTC to adopt the SEC's approach with respect to ANE Transactions by requiring counting of ANE Transactions toward the SD registration threshold, the Commission sees little value in requiring counting of ANE Transactions when, if such counting resulted in SD registration, such ANE Transactions would not be subject to most of the SD requirements. ANE Transactions by definition are swaps between non-U.S. persons, the risk of which lies primarily outside of the U.S., and which, in accordance with the Commission's determination above and the regulatory exceptions discussed immediately below, are generally excepted from the group B and C requirements.

VI. Exceptions From Group B and Group C Requirements, Substituted Compliance for Group A and Group B Requirements, and Comparability Determinations

As discussed in the Proposed Rule, Title VII of the Dodd-Frank Act and Commission regulations thereunder establish a broad range of requirements applicable to SDs and MSPs, including requirements regarding risk management and internal and external business conduct.[351] These requirements are designed to reduce systemic risk, increase counterparty protections, and increase market efficiency, orderliness, and transparency.[352] Consistent with the Guidance,[353] SDs and MSPs (whether or not U.S. persons) are subject to all of the Commission regulations described below by virtue of their status as Commission registrants. Put differently, the Commission's view is that if an entity is required to register as an SD or MSP under the Commission's interpretation of section 2(i) of the CEA, then such entity should be subject to these regulations with respect to all of its swap activities. As explained further below, such an approach is necessary because of the important role that the SD and MSP requirements play in the proper operation of a registrant.

However, consistent with section 2(i) of the CEA, in the interest of international comity, and for other reasons discussed in this release, the Commission is providing exceptions from, and a substituted compliance process for, certain regulations applicable to registered SDs and MSPs, as appropriate.[354] Further, the Final

[350] *See* ANE Request for Comment, *supra* note 12.

[351] *See* Proposed Rule, 85 FR at 979–980.

[352] *See, e.g.,* Entities Rule, 77 FR at 30629, 30703.

[353] *See* Guidance, 78 FR at 45342. The Commission notes that while the Guidance states that all swap entities (wherever located) are subject to all of the CFTC's Title VII requirements, the Guidance went on to describe how and when the Commission would expect swap entities to comply with specific requirements and when substituted compliance would be available under its non-binding framework.

[354] As noted in the Proposed Rule, the Commission intends to separately address the cross-border application of Title VII requirements not addressed in the Final Rule (*e.g.,* capital adequacy, clearing and swap processing, mandatory trade execution, swap data repository reporting, large trader reporting, and real-time public reporting)

Continued

Rule creates a framework for comparability determinations that emphasizes a holistic, outcomes-based approach that is grounded in principles of international comity.

A. Classification and Application of Certain Regulatory Requirements—Group A, Group B, and Group C Requirements

As discussed in the Proposed Rule, the Guidance applied a bifurcated approach to the classification of certain regulatory requirements applicable to SDs and MSPs, based on whether the requirement applies to the firm as a whole (''Entity-Level Requirement'' or ''ELR'') or to the individual swap or trading relationship (''Transaction-Level Requirement'' or ''TLR'').[355]

The Guidance categorized the following regulatory requirements as ELRs: (1) Capital adequacy; (2) chief compliance officer (''CCO''); (3) risk management; (4) swap data recordkeeping; (5) swap data repository (''SDR'') reporting; and (6) large trader reporting.[356] The Guidance further divided ELRs into two subcategories.[357] The first category of ELRs includes: (1) Capital adequacy; (2) CCO; (3) risk management; and (4) certain swap data recordkeeping requirements [358] (''First Category ELRs'').[359] The second category of ELRs includes: (1) SDR reporting; (2) certain aspects of swap data recordkeeping relating to complaints and marketing and sales materials under § 23.201(b)(3) and (4); and (3) large trader reporting (''Second Category ELRs'').[360]

The Guidance categorized the following regulatory requirements as TLRs: (1) Required clearing and swap processing; (2) margin (and segregation) for uncleared swaps; (3) mandatory trade execution; (4) swap trading relationship documentation; (5) portfolio reconciliation and compression; (6) real-time public reporting; (7) trade confirmation; (8) daily trading records; and (9) external business conduct standards.[361] As with the ELRs, the Guidance similarly subdivided TLRs into two subcategories.[362] The Commission determined that all TLRs, other than external business conduct standards, address risk mitigation and market transparency.[363] Accordingly, under the Guidance, all TLRs except external business conduct standards are classified as ''Category A TLRs,'' whereas external business conduct standards are classified as ''Category B TLRs.'' [364] Under the Guidance, generally, whether a specific Commission requirement applies to a swap entity and a swap and whether substituted compliance is available depends on the classification of the requirement as an ELR or TLR and the sub-classification of each and the type of swap entity and, in certain cases, the counterparty to a specific swap.[365]

To avoid confusion that may have arisen from using the ELR/TLR classification in the Proposed Rule, given that the Proposed Rule did not address the same set of Commission regulations as the Guidance, the Commission proposed to classify certain of its regulations as group A, group B, and group C requirements for purposes of determining the availability of certain exceptions from, and/or substituted compliance for, such regulations. The Commission requested comment on the group A, group B, and group C requirement classifications and on whether any modifications should be made to the set of requirements in such groups.[366]

The Commission received several comments on its proposed use of the group A, group B, and group C requirements classifications. IIB/SIFMA and JFMC/IBAJ generally supported the Proposed Rule's classification of swap entity requirements. However, IIB/SIFMA requested that the Commission expand and clarify such categorization in certain respects (discussed in the relevant sections below) to align the cross-border application of the Commission's requirements with the policy objectives for those requirements. AIMA stated its belief that any swap involving a non-U.S. person (even where its counterparty is a U.S. person) should also be able to use substituted compliance and encouraged the CFTC to review the group B and group C requirements with this approach in mind, but did not provide any specific recommended changes to those classifications. IATP stated that it was not clear which set of regulations were covered by the Proposed Rule that are not covered by the Guidance and that, without a comparative summary of the different set of regulations covered by each, there is no grounds to judge readily why the Commission proposed to abandon the readily understood ''entity level'' and ''transaction level'' requirement classifications to compare for granting substituted compliance to foreign regulatory regimes.

After considering the comments, the Commission continues to believe that classifying certain of its regulations as group A, group B, and group C requirements is appropriate and helpful for purposes of determining the availability of certain exceptions from, and/or substituted compliance for, such regulations.[367] The proposed and final group A, group B, and group C requirements are discussed below.

1. Group A Requirements

(i) Proposed Rule

The Commission proposed that the group A requirements would include: (1) CCO; (2) risk management; (3) swap data recordkeeping; and (4) antitrust considerations. Specifically, under the Proposed Rule, the group A requirements consisted of the requirements set forth in §§ 3.3, 23.201, 23.203, 23.600, 23.601, 23.602, 23.603, 23.605, 23.606, 23.607, and 23.609.[368] As discussed in the Proposed Rule, the Commission believes that the group A requirements would be impractical to apply only to specific transactions or counterparty relationships and are most effective when applied consistently across the entire enterprise, noting that they ensure that swap entities implement and maintain a comprehensive and robust system of internal controls to ensure the financial integrity of the firm, and, in turn, the protection of the financial system. Further, the Commission noted that, together with other Commission requirements, the proposed group A requirements constitute an important line of defense against financial, operational, and compliance risks that could lead to a firm's default; and, further, that requiring swap entities to rigorously monitor and address the risks they incur as part of their day-to-day businesses lowers the registrants' risk of default—and ultimately protects the public and the financial system. For this reason, the Commission stated that it

(hereinafter, the ''Unaddressed Requirements''). In that regard, the Commission notes that it adopted capital adequacy and related financial reporting requirements for SDs and MSPs at its open meeting on July 22, 2020.

[366] Proposed Rule, 85 FR at 982.

[367] With respect to AIMA's comment, the Commission notes that the Proposed Rule provided a summary of all of the requirements addressed by the Guidance and which requirements were addressed in the Proposed Rule.

[368] 17 CFR 3.3, 23.201, 23.203, 23.600, 23.601, 23.602, 23.603, 23.605, 23.606, 23.607, and 23.609.

has strong supervisory interests in ensuring that swap entities (whether domestic or foreign) are subject to the group A requirements or comparably rigorous standards.[369]

Each of the proposed group A requirements is discussed in more detail below.

(a) Chief Compliance Officer

Section 4s(k) of the CEA requires that each SD and MSP designate an individual to serve as its CCO and specifies certain duties of the CCO.[370] Pursuant to section 4s(k), the Commission adopted § 3.3,[371] which requires SDs and MSPs to designate a CCO responsible for administering the firm's compliance policies and procedures, reporting directly to the board of directors or a senior officer of the SD or MSP, as well as preparing and filing with the Commission a certified annual report discussing the registrant's compliance policies and activities. The CCO function is an integral element of a firm's risk management and oversight, as well as the Commission's effort to foster a strong culture of compliance within SDs and MSPs.

(b) Risk Management

Section 4s(j) of the CEA requires each SD and MSP to establish internal policies and procedures designed to, among other things, address risk management, monitor compliance with position limits, prevent conflicts of interest, and promote diligent supervision, as well as maintain business continuity and disaster recovery programs.[372] The Commission implemented these provisions in §§ 23.600, 23.601, 23.602, 23.603, 23.605, and 23.606.[373] The Commission also adopted § 23.609,[374] which requires certain risk management procedures for SDs or MSPs that are clearing members of a DCO.[375] Collectively, these requirements help to establish a comprehensive internal risk management program for SDs and MSPs, which is critical to effective systemic risk management for the overall swap market.

(c) Swap Data Recordkeeping

CEA section 4s(f)(1)(B) requires SDs and MSPs to keep books and records for all activities related to their swap business.[376] Sections 4s(g)(1) and (4) require SDs and MSPs to maintain trading records for each swap and all related records, as well as a complete audit trail for comprehensive trade reconstructions.[377] Additionally, CEA section 4s(f)(1) requires SDs and MSPs to ''make such reports as are required by the Commission by rule or regulation regarding the transactions and positions and financial condition of'' the registered SD or MSP.[378] Further, CEA section 4s(h) requires SDs and MSPs to ''conform with such business conduct standards . . . as may be prescribed by the Commission by rule or regulation.''[379]

Pursuant to these provisions, the Commission promulgated final rules that set forth certain reporting and recordkeeping requirements for SDs and MSPs.[380] Specifically, §§ 23.201 and 23.203[381] require SDs and MSPs to keep records including complete transaction and position information for all swap activities (*e.g.,* documentation on which trade information is originally recorded). In particular, § 23.201 states that each SD and MSP shall keep full, complete, and systematic records of all activities related to its business as a SD or MSP.[382] Such records must include, among other things, a record of each complaint received by the SD or MSP concerning any partner, member, officer, employee, or agent,[383] as well as all marketing and sales presentations, advertisements, literature, and communications.[384] Commission regulation 23.203[385] requires, among other things, that records (other than swap data reported in accordance with part 45 of the Commission's regulations[386]) be maintained in accordance with § 1.31.[387] Commission regulation 1.31 requires that records relating to swaps be maintained for specific durations, including that records of swaps be maintained for a minimum of five years and as much as the life of the swap plus five years, and that most records be ''readily accessible'' for the entire recordkeeping period.[388]

(d) Antitrust Considerations

Section 4s(j)(6) of the CEA prohibits an SD or MSP from adopting any process or taking any action that results in any unreasonable restraint of trade or imposes any material anticompetitive burden on trading or clearing, unless necessary or appropriate to achieve the purposes of the CEA.[389] The Commission promulgated this requirement in § 23.607(a)[390] and also adopted § 23.607(b), which requires SDs and MSPs to adopt policies and procedures to prevent actions that result in unreasonable restraints of trade or impose any material anticompetitive burden on trading or clearing.[391]

(ii) Summary of Comments

JFMC/IBAJ and IIB/SIFMA were supportive of the streamlining of the Commission's recordkeeping requirements under § 23.201 as group A requirements (which the Guidance separated into two different subcategories). JFMC/IBAJ also requested the Commission explicitly categorize § 1.31 as a group A requirement in furtherance of the goal of providing legal certainty and streamlining recordkeeping requirements. IIB/SIFMA requested that the Commission include §§ 1.31 and 45.2 as group A requirements, which they stated would be consistent with categorizing § 23.203 as a group A requirement. IIB/SIFMA also was supportive of including the Commission's antitrust rules (which were not addressed by the Guidance) as a group A requirement.

(iii) Final Rule

After carefully considering the comments, the Commission is adopting the proposed group A requirements and adding § 45.2(a) to the group A requirements to the extent it duplicates § 23.201, as shown in the rule text in

this release.[392] The Commission is making this addition to clarify that, to the extent the same substantive recordkeeping requirement is included in both §§ 23.201 and 45.2(a),[393] each is a group A requirement for which substituted compliance may be available, as discussed in section VI.C below.[394]

Regarding the comments to include § 1.31 as a group A requirement, § 1.31 is a general requirement providing maintenance and access requirements for many regulatory records, and not only those required under the group A requirements. Further, to the extent an SD/MSP receives substituted compliance for a group A requirement, such as § 23.203, that incorporates § 1.31's recordkeeping requirements for certain regulatory records, the Commission's view is that § 1.31 would also not apply to such regulatory records. Therefore, the Commission is declining to include § 1.31 as a group A requirement.

2. Group B Requirements

(i) Proposed Rule

The Commission proposed that the group B requirements would include: (1) Swap trading relationship documentation; (2) portfolio reconciliation and compression; (3) trade confirmation; and (4) daily trading records. Specifically, under the Proposed Rule, the group B requirements consist of the requirements set forth in §§ 23.202, 23.501, 23.502, 23.503, and 23.504.[395] As discussed in the Proposed Rule, the group B requirements relate to risk mitigation and the maintenance of good recordkeeping and business practices.[396] The Commission stated that, unlike for the group A requirements, it believes that the group B requirements can practically be applied on a bifurcated basis between domestic and foreign transactions or counterparty relationships and, thus, do not need to be applied uniformly across an entire enterprise. Therefore, the Commission stated that it can have greater flexibility with respect to the application of these requirements to non-U.S. swap entities and foreign branches of U.S. swap entities.[397]

Each of the proposed group B requirements is discussed in more detail below.

(a) Swap Trading Relationship Documentation

CEA section 4s(i) requires each SD and MSP to conform to Commission standards for the timely and accurate confirmation, processing, netting, documentation, and valuation of swaps.[398] Pursuant to section 4s(i), the Commission adopted, among other regulations, § 23.504.[399] Regulation 23.504(a) requires SDs and MSPs to ''establish, maintain and follow written policies and procedures'' to ensure that the SD or MSP executes written swap trading relationship documentation, and § 23.504(c) requires that documentation policies and procedures be audited periodically by an independent auditor to identify material weaknesses.[400] Under § 23.504(b), the swap trading relationship documentation must include, among other things: (1) All terms governing the trading relationship between the SD or MSP and its counterparty; (2) credit support arrangements; (3) investment and re-hypothecation terms for assets used as margin for uncleared swaps; and (4) custodial arrangements.[401] Swap documentation standards facilitate sound risk management and may promote standardization of documents and transactions, which are key conditions for central clearing, and lead to other operational efficiencies, including improved valuation.

(b) Portfolio Reconciliation and Compression

CEA section 4s(i) directs the Commission to prescribe regulations for the timely and accurate processing and netting of all swaps entered into by SDs and MSPs.[402] Pursuant to CEA section 4s(i), the Commission adopted §§ 23.502 and 23.503,[403] which require SDs and MSPs to perform portfolio reconciliation and compression for their swaps.[404] Portfolio reconciliation is a post-execution risk management tool designed to ensure accurate confirmation of a swap's terms and to identify and resolve any discrepancies between counterparties regarding the valuation of the swap. Portfolio compression is a post-trade processing and netting mechanism that is intended to ensure timely, accurate processing and netting of swaps.[405] Further, § 23.503 requires all SDs and MSPs to establish policies and procedures for terminating fully offsetting uncleared swaps, when appropriate, and periodically participating in bilateral and/or multilateral portfolio compression exercises for uncleared swaps with other SDs or MSPs or through a third party.[406] The rule also requires policies and procedures for engaging in such exercises for uncleared swaps with non-SDs and non-MSPs upon request.[407]

(c) Trade Confirmation

Section 4s(i) of the CEA requires that each SD and MSP must comply with the Commission's regulations prescribing timely and accurate confirmation of swaps.[408] The Commission adopted § 23.501,[409] which requires, among other things, timely and accurate confirmation of swap transactions (which includes execution, termination, assignment, novation, exchange, transfer, amendment, conveyance, or extinguishing of rights or obligations of a swap) among SDs and MSPs by the end of the first business day following the day of execution.[410] Timely and accurate confirmation of swaps—together with portfolio reconciliation and compression—is an important post-

[392] Final § 23.23(a)(6).

[393] Commission regulation 23.201 requires, in relevant part, that each SD and MSP keep full, complete, and systematic records, together with all pertinent data and memoranda, of all its swaps activities and its activities related to its business as a SD or MSP. Commission regulation 45.2(a) requires, in relevant part, that each SD and MSP subject to the jurisdiction of the Commission shall keep full, complete, and systematic records, together with all pertinent data and memoranda, of all activities relating to the business of such entity or person with respect to swaps, as prescribed by the Commission.

[394] Similarly, the Commission will view any previously issued comparability determination that allows substituted compliance for § 23.201 to also allow for substituted compliance with § 45.2(a) to the extent it duplicates § 23.201.

trade processing mechanism for reducing risks and improving operational efficiency.[411]

(d) Daily Trading Records

Pursuant to CEA section 4s(g),[412] the Commission adopted § 23.202,[413] which requires SDs and MSPs to maintain daily trading records, including records of trade information related to pre-execution, execution, and post-execution data that is needed to conduct a comprehensive and accurate trade reconstruction for each swap. The regulation also requires that records be kept of cash or forward transactions used to hedge, mitigate the risk of, or offset any swap held by the SD or MSP.[414] Accurate and timely records regarding all phases of a swap transaction can serve to greatly enhance a firm's internal supervision, as well as the Commission's ability to detect and address market or regulatory abuses or evasion.

(ii) Summary of Comments

IIB/SIFMA stated that they support the Commission's proposed categorization of the group B requirements, but requested that the Commission recategorize its pre-execution daily trading records requirements under § 23.202 as group C requirements instead of group B requirements. IIB/SIFMA asserted that pre-execution information generally has no nexus to the risk management of the swap entity or to the Commission's risk mitigation rules and instead relate to a swap entity's sales practices.

(iii) Final Rule

After carefully considering the comments, the Commission is adopting the group B requirements as proposed.[415] With respect to the request to make pre-execution trading records requirements a group C requirement, accurate and timely records regarding all phases of a swap transaction (including pre-execution trading records) can serve to greatly enhance a firm's internal supervision, as well as the Commission's ability to detect and address market or regulatory abuses or evasion. Because these records relate to market integrity (and not only customer protection), the Commission believes the pre-execution trading records requirements should continue to be group B requirements and not be eligible for the exceptions the Final Rule provides from the group C requirements.

3. Group C Requirements

(i) Proposed Rule

Pursuant to CEA section 4s(h),[416] the Commission adopted external business conduct rules, which establish certain additional business conduct standards governing the conduct of SDs and MSPs in dealing with their swap counterparties.[417] The Commission proposed that the group C requirements would consist of these rules, which are set forth in §§ 23.400 through 23.451.[418] As discussed in the Proposed Rule, broadly speaking, these rules are designed to enhance counterparty protections by establishing robust requirements regarding SDs' and MSPs' conduct with their counterparties. Under these rules, SDs and MSPs are required to, among other things, conduct due diligence on their counterparties to verify eligibility to trade (including eligible contract participant (''ECP'') status), refrain from engaging in abusive market practices, provide disclosure of material information about the swap to their counterparties, provide a daily mid-market mark for uncleared swaps, and, when recommending a swap to a counterparty, make a determination as to the suitability of the swap for the counterparty based on reasonable diligence concerning the counterparty.

As the Commission discussed in the Proposed Rule, the group C requirements have a more attenuated link to, and are therefore distinguishable from, systemic and market-oriented protections in the group A and group B requirements. Additionally, the Commission noted its belief that the foreign jurisdictions in which non-U.S. persons and foreign branches of U.S. swap entities are located are likely to have a significant interest in the type of business conduct standards that would be applicable to transactions with such non-U.S. persons and foreign branches within their jurisdiction, and, consistent with section 2(i) of the CEA and in the interest of international comity, it is generally appropriate to defer to such jurisdictions in applying, or not applying, such standards to foreign-based swaps with foreign counterparties.[419]

(ii) Summary of Comments

IIB/SIFMA supported the Proposed Rule's categorization of the Commission's external business conduct standards as group C requirements because the approach is consistent with the Guidance, and these requirements focus on counterparty protection. However, IIB/SIFMA requested that the Commission add its rules for elective initial margin segregation to the list of group C requirements.[420] They argued that these rules found in part 23, subpart L (§§ 23.700–23.704) (''Subpart L''),[421] like the proposed group C requirements, are largely focused on customer protection rather than risk mitigation.

(iii) Final Rule

After careful consideration of the comments, the Commission is adopting the group C requirements as proposed and adding the requirements of Subpart L as group C requirements, as shown in the rule text in this release.[422]

Section 724(c) of the Dodd-Frank Act amended the CEA to add section 4s(l),[423] which addresses segregation of initial margin held as collateral in uncleared swap transactions (*i.e.,* swaps not submitted for clearing on a DCO). Section 4s(l) was implemented in Subpart L, which imposes requirements on SDs and MSPs with respect to the treatment of collateral posted by their counterparties to margin, guarantee, or secure certain uncleared swaps.[424] Specifically, § 23.701 requires, except in those circumstances where segregation is mandatory under the Margin Rules,

[411] Additionally, the Commission notes that § 23.504(b)(2) requires that the swap trading relationship documentation of SDs and MSPs must include all confirmations of swap transactions. 17 CFR 23.504(b)(2).

[419] *See* Proposed Rule, 85 FR at 982.

[420] As noted in the discussion of the group B requirements, IIB/SIFMA also requested that the Commission recategorize pre-execution daily trading records rules as group C requirements (not group B requirements).

[421] 17 CFR part 23, subpart L.

[422] Final § 23.23(a)(8).

[423] 7 U.S.C. 6s(l).

[424] Protection of Collateral of Counterparties to Uncleared Swaps; Treatment of Securities in a Portfolio Margining Account in a Commodity Broker Bankruptcy, 78 FR 66621 (Nov. 2013). The Commission later amended Subpart L in light of the Commission's adoption of subpart E of part 23 (Capital and Margin Requirements for Swap Dealers and Major Swap Participants) in January 2016 and the prudential regulators' adoption of similar rules in November 2015 (together, ''Margin Rules''), which, among other things, established initial margin requirements applicable to SDs and MSPs. As a result, Subpart L's segregation requirements apply only when the Margin Rules' segregation requirements do not. Further, the Commission understands that counterparties have elected segregation under Subpart L very rarely. *See, e.g.,* Segregation of Assets Held as Collateral in Uncleared Swap Transactions, 84 FR 12894 (Apr. 2019).

that a SD/MSP provide notice to its counterparty of its right to have Initial Margin (''IM'') [425] provided by it to the SD/MSP segregated in accordance with §§ 23.702 and 23.703.[426] Commission regulations 23.702 and 23.703 provide requirements for segregation and investment of IM where the counterparty elects such segregation,[427] and § 23.704 requires that each SD/MSP report quarterly to each counterparty that does not choose to require IM segregation that the back office procedures of the SD/MSP relating to margin and collateral requirements are in compliance with the agreement of the counterparties.[428]

The Commission agrees with IIB/SIFMA that these requirements are focused on customer protection rather than risk mitigation and are appropriately included as group C requirements. In this regard, the Commission notes, specifically, that Subpart L leaves to the discretion of the counterparty to the SD/MSP whether IM is segregated, rather than mandating its segregation, and has largely been superseded by the Margin Rules, which specifically address systemic risk in relation to margin for uncleared swaps.

B. Exceptions From Group B and Group C Requirements

1. Proposed Exceptions, Generally

(i) Proposed Rule

Consistent with section 2(i) of the CEA, the Commission proposed four exceptions from certain Commission regulations for foreign-based swaps in the Proposed Rule.[429]

First, the Commission proposed an exception from certain group B and C requirements for certain anonymous, exchange-traded, and cleared foreign-based swaps (''Exchange-Traded Exception'').

Second, the Commission proposed an exception from the group C requirements for certain foreign-based swaps with foreign counterparties (''Foreign Swap Group C Exception'').

Third, the Commission proposed an exception from the group B requirements for certain foreign-based swaps of foreign branches of U.S. swap entities with certain foreign counterparties, subject to certain limitations, including a quarterly cap on the amount of such swaps (''Limited Foreign Branch Group B Exception'').[430]

Fourth, the Commission proposed an exception from the group B requirements for the foreign-based swaps of certain non-U.S. swap entities with certain foreign counterparties (''Non-U.S. Swap Entity Group B Exception'').

While these exceptions each have different eligibility requirements, a common requirement is that they would be available only to foreign-based swaps,[431] as other swaps would be treated as domestic swaps for purposes of applying the group B and group C requirements and, therefore, would not be eligible for the above exceptions. Further, swap entities that avail themselves of these exceptions for their foreign-based swaps would be required to comply with the applicable laws of the foreign jurisdiction(s) to which they are subject, rather than the relevant Commission requirements, for such swaps; however, notwithstanding these exceptions, swap entities would remain subject to the CEA and Commission regulations not covered by the exceptions, including the prohibition on the employment, or attempted employment, of manipulative and deceptive devices in § 180.1.[432] The Commission also would expect swap entities to address any significant risk that may arise as a result of the utilization of one or more exceptions in their risk management programs required pursuant to § 23.600.[433]

The Commission requested comments on whether, in light of the Commission's supervisory interests, the proposed exceptions were appropriate or whether they should be broadened or narrowed.[434]

(ii) Summary of Comments

JFMC/IBAJ generally supported the proposed exceptions to the application of group B and C requirements under the Proposed Rule, stating that they believe the exceptions generally strike the right balance in protecting the integrity, safety, and soundness of the U.S. financial system while recognizing the principles of international comity. ISDA stated that it supported the Commission's intent to place non-U.S. swap entities (that are Other Non-U.S. Persons) and foreign branches of U.S. swap entities on equal footing with respect to the cross-border application of certain CFTC requirements, noting that foreign branches of U.S. swap entities are subject to the laws of the foreign jurisdictions in which they operate and, thus, imposing U.S. requirements on these entities results in duplicative regulation—increasing compliance costs, complexity, and inefficiencies. However, JFMC/IBAJ, ISDA, and IIB/SIFMA requested that the Commission expand and clarify the Proposed Rule's exceptions in certain specific respects, which are discussed in the relevant sections below. AFR asserted that the Proposed Rule would allow branches of U.S. persons, which are actually formally and legally part of the parent U.S. organization, to effectively act as non-U.S. persons.[435] IATP stated that it only understands the Exchange-Traded Exception and did not comment on the other proposed exceptions. Its comment on the proposed Exchange-Traded Exception is discussed below.

2. Exchange-Traded Exception

(i) Proposed Rule

The Commission proposed that, with respect to its foreign-based swaps, each non-U.S. swap entity and foreign branch of a U.S. swap entity would be excepted from the group B requirements (other than the daily trading records requirements in §§ 23.202(a) through 23.202(a)(1) [436]) and the group C requirements with respect to any swap entered into on a DCM, a registered SEF or a SEF exempted from registration by the Commission pursuant to section 5h(g) of the CEA, or an FBOT registered with the Commission pursuant to part 48 of its regulations [437] where, in each case, the swap is cleared through a registered DCO or a clearing organization that has been exempted from registration by the Commission

[425] ''Initial Margin'' is defined in § 23.700 for purposes of Subpart L as money, securities, or property posted by a party to a swap as performance bond to cover potential future exposures arising from changes in the market value of the position. 17 CFR 23.700.

[426] 17 CFR 23.701.

[427] 17 CFR 23.702 and 703.

[428] 17 CFR 23.704.

[429] *See* Proposed Rule, 85 FR at 982–984.

[430] This exception was defined as the ''Foreign Branch Group B Exception'' in the Proposed Rule. The Commission is adding the word ''Limited'' to the beginning of the defined term, to reflect the conditions that apply to the use of the exception, including the cap on its use in a calendar quarter.

[431] As discussed in section II.I, *supra,* a foreign-based swap means: (1) A swap by a non-U.S. swap entity, except for a swap booked in a U.S. branch; or (2) A swap conducted through a foreign branch.

[432] 17 CFR 180.1.

[433] 17 CFR 23.600.

[434] Proposed Rule, 85 FR at 984.

[435] The Commission disagrees with this assertion. For example, under the Proposed Rule, group B requirements apply more broadly to foreign branches than to non-U.S. persons due to the limited scope of the Limited Foreign Branch Group B Exception as compared to the Non-U.S. Swap Entity Group B Exception (each discussed below), and foreign branches (as a part of a U.S. person) are not eligible for substituted compliance for the group A requirements.

[436] 17 CFR 23.202(a) through (a)(1).

[437] The Commission stated that it would consider the proposed exception also to apply with respect to an FBOT that provides direct access to its order entry and trade matching system from within the U.S. pursuant to no-action relief issued by Commission staff.

pursuant to section 5b(h) of the CEA, and the swap entity does not know the identity of the counterparty to the swap prior to execution.[438]

With respect to the group B trade confirmation requirement, the Commission noted that where a cleared swap is executed anonymously on a DCM or SEF (as discussed above), independent requirements that apply to DCM and SEF transactions pursuant to the Commission's regulations should ensure that these requirements are met.[439] And, for a combination of reasons, including the fact that a registered FBOT is analogous to a DCM and is expected to be subject to comprehensive supervision and regulation in its home country,[440] and the fact that the swap will be cleared, the Commission believes that the Commission's trade confirmation requirements should not apply to foreign-based swaps that meet the requirements of the exception and are traded on registered FBOTs.

Of the remaining group B requirements, the Commission noted that the portfolio reconciliation and compression and swap trading relationship documentation requirements would not apply to the cleared DCM, SEF, or FBOT transactions described above because the Commission regulations that establish those requirements make clear that they do not apply to cleared transactions.[441] For the last group B requirement—the daily trading records requirement[442]—the Commission stated that it believes that, as a matter of international comity and recognizing the supervisory interests of foreign regulators who may have their own trading records requirements, it is appropriate to except such foreign-based swaps from certain of the Commission's daily trading records requirements. However, the Commission stated that the requirements of § 23.202(a) through (a)(1) should continue to apply, as all swap entities should be required to maintain, among other things, sufficient records to conduct a comprehensive and accurate trade reconstruction for each swap. The Commission noted that, in particular, for certain pre-execution trade information under § 23.202(a)(1),[443] the swap entity may be the best, or only, source for such records, and for this reason, paragraphs (a) through (a)(1) of § 23.202 are carved out from the group B requirements in the proposed exception.

Additionally, the Commission noted that, given that this exception is predicated on anonymity, many of the group C requirements would be inapplicable.[444] Further, because the Commission believes a registered FBOT is analogous to a DCM for these purposes and is expected to be subject to comprehensive supervision and regulation in its home country, and because a SEF that is exempted from registration by the Commission pursuant to section 5h(g) of the CEA must be subject to supervision and regulation that is comparable to that to which Commission-registered SEFs are subject, the Commission also proposed that these group C requirements would not be applicable where such a swap is executed anonymously on a registered FBOT, or a SEF that has been exempted from registration with the Commission pursuant to section 5h(g) of the CEA, and cleared. In the interest of international comity and because the proposed exception requires that the swap be exchange-traded and cleared, the Commission proposed that foreign-based swaps would also be excepted from the remaining group C requirements in these circumstances. The Commission noted that it expects that the requirements that the swaps be exchange-traded and cleared will generally limit swaps that benefit from the exception to standardized and commonly-traded, foreign-based swaps, for which the Commission believes application of the remaining group C requirements is not necessary.

(ii) Summary of Comments

IIB/SIFMA requested that the Commission expand the exception to apply to all anonymous cleared swaps (whether or not the trading venue and clearing organization are registered or exempt from registration with the Commission), in light of the risk mitigating effects of central clearing and the regulatory compliance and market integrity protections of trading anonymously on a regulated platform. They stated that it is not necessary for the Commission to limit this exception for anonymous cleared swaps in a manner that would indirectly expand the SEF and DCO registration requirements to non-U.S. trading venues and clearing organizations with non-U.S. swap entity participants. Further, they asserted that if the counterparty to a swap was a U.S. person, the Commission's SEF and DCO registration requirements would independently require the trading venue and clearing organization to register with the Commission or obtain an exemption from registration. Additionally, IIB/SIFMA requested the exception be made available to U.S. swap entities, as well, except for daily trading records rules, arguing that the interposition of clearing organizations reduces risk to the United States, thereby obviating the need to apply the risk mitigation rules (where applicable). They also noted that SEFs provide market participants with the regulatory compliance protections associated with centralized trading and that many group C requirements already do not apply to a swap entity in connection with swaps executed anonymously, regardless of the U.S. person status of the swap entity.[445]

ISDA was supportive of the proposed exception, but requested that it be extended to cover: (1) All relevant group B and C requirements; and (2) U.S. and non-U.S. entities' transactions that are SEF- (or exempt SEF-) executed and cleared at a DCO, exempt DCO, or clearinghouse subject to CFTC no-action relief, regardless of whether they are anonymously executed. ISDA noted that one of the regulatory benefits of SEF trading is that market participants receive the necessary regulatory compliance protections associated with centralized trading, and that, as self-regulatory organizations, SEFs (and exempt SEFs) are expected to keep daily trading records and audit trails of each transaction executed on their platforms, so it makes sense to allow counterparties not to comply with group B requirements when executing trades on SEFs (or exempt SEFs), and restricting this exemption to a particular method of execution on a SEF does not serve any regulatory purpose. Moreover, ISDA argued that imposing CFTC external business conduct standards to centrally-executed and cleared trades also creates redundancies, as counterparties that trade on SEFs (or exempt SEFs) receive necessary disclosures as part of the onboarding process and regulatory required pre-trade credit checks ensure that counterparties have sufficient credit to execute transactions.

IATP stated that the biggest exception, in terms of the notional amount of swaps and the number of group B and C requirements that would be exempted

[438] *See* Proposed Rule, 85 FR at 982–983. This approach is similar to the Guidance. *See* Guidance, 78 FR at 45351–45352 and 45360–45361.

[439] *See* 17 CFR 23.501(a)(4)(i) and 37.6(b).

[440] *See* 17 CFR 48.5(d)(2).

[441] *See* 17 CFR 23.502(d), 23.503(c), 23.504(a)(1)(iii).

[443] *See* 17 CFR 23.202(a)(1).

[444] *See* 17 CFR 23.402(b)–(c), 23.430(e), 23.431(c), 23.450(h), 23.451(b)(2)(iii).

[445] In addition to noting the exceptions in the regulations themselves, IIB/SIFMA reference the relief provided by Staff Letter 13–70 for intended to be cleared swaps (''Staff ITBC Letter'').

from compliance, is the Exchange-Traded Exception, and that this exception would comport generally with G20 reform objectives to centrally clear swaps and trade them anonymously (preferably post-trade as well as pre-trade) on regulated exchanges. However, IATP objected to the granting of the exception for foreign SEFs and clearing organizations that have not qualified for registration with the Commission, but have been granted exemptions from registration, presumably in the interest of international comity, noting that if the Exchange-Traded Exception results in disapplication of Commission requirements to customized foreign affiliate swaps traded and cleared on exempted entities, the risks to U.S. ultimate parents could be most unexpected.

(iii) Final Rule

After carefully considering the comments, the Commission is adopting the exception as proposed.[446]

Regarding requests to expand the exception to include all anonymous foreign-based swaps entered into on an exchange and which are subsequently cleared, regardless of whether the exchange and clearing organization are registered or exempt from registration with the Commission, or to include swaps that are cleared on a DCO that has received staff no-action relief from registration requirements, the Commission is declining to expand the exception. As noted in the Proposed Rule, the exception is based, in part, on the swaps eligible for it being subject to independent requirements that apply to transactions on a DCM or registered SEF pursuant to Commission regulations or, with respect to exempt SEFs and registered FBOTs, to comprehensive supervision and regulation in their home countries. Similarly, the Commission believes that limiting the exception to DCOs that are registered or exempt provides assurance that the DCOs clearing swaps eligible for the exception will be subject to comprehensive supervision and regulation. Further, as explained above, the Commission does not find persuasive IIB/SIFMA's argument that if the counterparty to a foreign-based swap is a U.S. person, other Commission rules require that the trade be executed on a registered or exempt SEF and cleared through a registered or exempt DCO.[447] The Commission will consider expanding the exception pending other amendments to the SEF/DCO regulations.

Regarding the request not to require that eligible foreign-based swaps be anonymous, the Commission declines to expand the exception in this manner. The other exceptions in the Final Rule provide relief where appropriate for foreign-based swaps where the counterparty is known, and this limited exception, as in the Guidance, is only meant to provide relief from certain of the group B and group C requirements where the counterparty is unknown and, thus, it would be impractical to comply with such requirements.

Regarding the request to allow U.S. swap entities (other than their foreign branches) to utilize the exception, the Commission declines to expand the exception in this manner. The Commission is of the view, consistent with the Guidance, that where a U.S. swap entity (other than its foreign branch) enters into a swap, that swap is part of the U.S. swap market. And, accordingly, the group B and group C requirements should generally apply fully to such swap entity.[448] In addition, the Commission is generally of the view that the Final Rule is not the appropriate place to make changes to the regulation of the U.S. swap market. Expanding the exception to cover swaps in the U.S. swaps market would require amendments to the underlying group B and group C requirements that apply to all covered swaps rather than creating a limited exception to them for certain foreign swaps. However, as comments were supportive of extending the exception to U.S. swap entities, the Commission will continue to analyze this issue and take these comments into consideration when next considering changes to the group B and group C requirements.

With respect to the request to include pre-execution trading records (*i.e.,* by revising the exception to apply to all group B requirements), the Commission declines to expand the exception in this manner. Excluding pre-execution trading records requirements is consistent with the Guidance and, as noted in the Proposed Rule, these requirements should continue to apply, as all swap entities should be required to maintain, among other things, sufficient records to conduct a comprehensive and accurate trade reconstruction for each swap, and the swap entity may be the best, or only, source for pre-execution trading records.

3. Foreign Swap Group C Exception

(i) Proposed Rule

The Commission proposed that each non-U.S. swap entity and foreign branch of a U.S. swap entity would be excepted from the group C requirements with respect to its foreign-based swaps with a foreign counterparty.[449] The Commission noted that such swaps would not include as a party a U.S. person (other than a foreign branch where the swap is conducted through such foreign branch) or be conducted through a U.S. branch,[450] and, given that the group C requirements are intended to promote counterparty protections in the context of local market sales practices, foreign regulators may have a relatively stronger supervisory interest than the Commission in regulating such swaps in relation to the group C requirements. Accordingly, the Commission stated that it believed applying the group C requirements to these transactions may not be warranted.

The Commission noted that, just as the Commission has a strong supervisory interest in regulating and enforcing the group C requirements associated with swaps taking place in the United States, foreign regulators would have a similar interest in overseeing sales practices for swaps occurring within their jurisdictions. Further, given the scope of section 2(i) of the CEA with respect to the Commission's regulation of swap activities outside the United States, the Commission stated that it believes imposing its group C requirements on a foreign-based swap between a non-U.S. swap entity or foreign branch of a U.S. swap entity, on one hand, and a foreign counterparty, on the other, is generally not necessary to advance the customer protection goals of the Dodd-Frank Act embodied in the group C requirements.

[446] Final § 23.23(e)(1)(i). The Commission notes that the addition of the Subpart L requirements to the group C requirements under the Final Rule will not substantively expand the Exchange-Traded Exception as the Subpart L requirements do not apply to swaps cleared by a DCO. Also, as stated in the Proposed Rule, the Commission considers the exception also to apply with respect to an FBOT that provides direct access to its order entry and trade matching system from within the U.S. pursuant to no-action relief issued by Commission staff.

[447] *See supra* sections III.D and IV.D.

[448] The Commission notes that, as referenced by IIB/SIFMA and subject to certain specified conditions, the Staff ITBC Letter provides relief to all swap entities from certain of the group B and group C requirements for intended to be cleared swaps.

[449] *See* Proposed Rule, 85 FR at 983–984. This approach is similar to the Guidance. *See* Guidance, 78 FR at 45360–45361. As used herein, the term swap includes transactions in swaps as well as swaps that are offered but not entered into, as applicable.

[450] *See* discussion of the modification of the definition of a ''swap conducted through a U.S. branch'' to be a ''swap booked in a U.S. branch'' in section II.H.3, *supra.*

By contrast, the Commission stated that whenever a swap involves at least one party that is a U.S. person (other than a foreign branch where the swap is conducted through such foreign branch) or is a swap conducted through a U.S. branch, the Commission believes it has a strong supervisory interest in regulating and enforcing the group C requirements, as a major purpose of Title VII is to control the potential harm to U.S. markets that can arise from risks that are magnified or transferred between parties via swaps. Therefore, the Commission concluded that exercise of U.S. jurisdiction with respect to the group C requirements over such swaps is reasonable because of the strong U.S. interest in minimizing the potential risks that may flow to the U.S. economy as a result of such swaps.[451]

(ii) Summary of Comments

ISDA stated that it fully agrees with the Commission that there is no policy benefit in subjecting non-U.S. market participants to the CFTC's extensive customer protection regime,[452] and therefore, believes that these rules should be left within the remit of home country regulators. Further, ISDA stated that it agrees that foreign branch ANE Transactions should not be subject to group C Requirements.[453] IIB/SIFMA also supported the proposed exception. However, ISDA and IIB/SIFMA requested specific changes to the underlying group C requirements, including that certain of the group C requirements apply only on an ''opt-in'' basis.

Specifically, ISDA stated that non-U.S. persons should be allowed to opt-in to receiving external business conduct disclosures from U.S. persons. Under ISDA's proposed alternative, unless a non-U.S. client chooses to ''opt-in'' into the full spectrum of the CFTC requirements, U.S swap entities and U.S. branches of non-U.S. swap entities would only have the obligation to provide disclosures related to: (1) Prohibition on fraud, manipulation, and other abusive practices; (2) verification of ECP status; (3) material risks, excluding requirements to provide daily mark and scenario analysis; (4) fair dealing communications; and (5) brief descriptions of other external business conduct disclosures, including the option to opt-in to receiving such disclosures.

IIB/SIFMA similarly requested that, to better balance counterparty protection interests against the market fragmentation that results when swap entities ask their non-U.S. counterparties to enter into documentation designed to satisfy U.S. legal requirements, the Commission refine how the group C requirements apply to all swaps entered into by U.S. swap entities and U.S. branches of non-U.S. swap entities when they transact with non-U.S. counterparties, including swaps entered into by U.S. swap entities in the United States. IIB/SIFMA argued that, because the business conduct requirements are designed to provide customer protection rather than to mitigate risk to the United States, the Commission has a limited regulatory interest in mandating full application of its customer protection requirements to all swap transactions between swap entities and their non-U.S. counterparties. Further, IIB/SIFMA asserted that, in other contexts, the Commission has recognized that non-U.S persons do not generally implicate U.S. investor protection concerns (*e.g.,* in its CPO and CTA rules). They proposed that only the following requirements would apply to a U.S. swap entity (including its U.S. branches or when it otherwise trades in the United States) or U.S. branch of a non-U.S. swap entity when it trades with a non-U.S. counterparty unless otherwise opted into by a non-U.S. person counterparty: (1) The prohibition on fraud, manipulation, and other abusive practices (but not additional confidentiality requirements under § 23.410(c)); (2) verification of ECP status (although in their view such verification should not require a written representation regarding a specific prong of the ECP definition, as it does for U.S. persons); (3) disclosure of material risks (but not scenario analysis under § 23.431(b)), material characteristics and economic terms, and material conflicts of interest and incentives (but not pre-trade mid-market marks under § 23.431(a)(3)(i)), without requiring the counterparty to agree in writing to the manner of disclosure as under § 23.402(e) and (f); (4) fair and balanced communications; and (5) a one-time notification prior to entering into a new trading relationship with a non-U.S. counterparty that the non-U.S. counterparty may opt in to the additional customer protections provided by the remaining external business conduct rules along with a summary description of those rules. Further, IIB/SIFMA requested that the Commission clarify that non-U.S. persons are not ''Special Entities'' (as defined in CEA section 4s(h)(2)(C) and § 23.401(c)), considering that Congress was not seeking to protect foreign pension plans and endowments.

(iii) Final Rule—Foreign Swap Group C Exception and U.S. Branch Group C Exception

After carefully considering the comments, the Commission is adopting the exception as proposed.[454] The Commission recognizes that, although the exception is being adopted as proposed, the scope of the exception is being expanded because the Subpart L requirements have been added to the group C requirements under the Final Rule. For the reasons discussed in section VI.A.3, the Commission believes that the Subpart L requirements are appropriately classified as group C requirements and, thus, the expansion of the exception in this manner is appropriate.

In addition, based on the comments received, the Commission is adopting an additional exception from the group C requirements for certain swaps of U.S. branches of non-U.S. swap entities (''U.S. Branch Group C Exception''), as shown in the rule text in this release.[455] Specifically, under the U.S. Branch Group C Exception, a non-U.S. swap entity is excepted from the group C requirements with respect to any swap booked in a U.S. branch with a foreign counterparty that is neither a foreign branch nor a Guaranteed Entity. The Commission is adopting this exception because, although the swaps benefiting from the exception are part of the U.S. swap market, the Commission believes that foreign regulators have a stronger interest in such swaps with respect to the group C requirements—which relate to counterparty protection rather than risk mitigation—because they are between a non-U.S. swap entity (by definition, a non-U.S. person) and certain foreign counterparties that have a limited nexus to the United States (*i.e.,* non-U.S. persons, including SRSs that are not Guaranteed Entities). The Commission is not providing this exception to swaps booked in a U.S. branch of a non-U.S. swap entity with a foreign branch of a U.S. swap entity, Guaranteed Entity, or U.S. branch counterparty (where, for the U.S. branch, the swap is booked in the U.S. branch of the counterparty). A foreign branch (which is, by definition, a part of U.S. person), a Guaranteed Entity, and a U.S. branch counterparty have a closer nexus to the United States, and,

[451] *See supra* section I.D.2.

[452] As explained more fully below, the Commission notes that it did not make such a statement in the Proposed Rule.

[453] As explained more fully below, this statement does not wholly comport with the Commission's position as set forth in the Proposed Rule.

[454] Final § 23.23(e)(1)(ii).

[455] Final § 23.23(e)(2).

thus, the Commission believes that the group C requirements should continue to apply to swaps with such counterparties.

Regarding the requests to change the application of some or all of the group C requirements to swaps entered into by U.S. swap entities and U.S. branches of non-U.S. swap entities when they transact with non-U.S. counterparties such that certain of the requirements would apply only where non-US counterparties ''opt-in'' to such treatment, the Commission is of the view that where a U.S. swap entity (other than its foreign branch) enters into a swap or where a swap is booked in a U.S. branch of a non-U.S. swap entity, those swaps are part of the U.S. swap market, and, accordingly, other than as provided in the U.S. Branch Group C Exception, the group C requirements should generally apply fully to such swap entities, regardless of the U.S. person status of its counterparty.

In response to IIB/SIFMA's comment that adopting their requested change is in line with the Commission's recognition in the CPO/CTA context that non-U.S persons do not generally implicate U.S. investor protection concerns, the Commission has never stated that U.S.-based CPOs/CTAs do not need to register or comply with the Commission's applicable rules. Rather, under § 3.10(c)(3), a foreign person is not required to register as a CPO/CTA (or comply with most Commission regulations) in connection with commodity interest transactions on behalf of persons located outside the United States that are submitted for clearing through a registered futures commission merchant. Moreover, a CPO/CTA advising a customer on the investment of their funds or managing such investment is in a fundamentally different position than a swap entity that is acting as a counterparty under a swap. In addition, as noted above, the Commission is of the view that, generally, the Final Rule is not the appropriate place to make changes to the regulation of the U.S. swap market. Making the group C requirements an ''opt-in'' regime would require changing the underlying group C requirements that apply to all covered swaps rather than creating a limited exception to them for certain foreign swaps.

On the request of IIB/SIFMA that the Commission ''clarify'' that non-U.S. persons are not Special Entities because ''Congress was not seeking to protect foreign pension plans and endowments,'' the Commission received similar comments when it adopted the definition of ''Special Entity'' in its final rule on external business conduct standards for swap entities and addressed them in that rulemaking.[456] First, the Commission, in interpreting the CEA, refined the definition of ''Special Entity'' to remove, among other things, certain foreign employee benefit plans from the scope of the definition.[457] Second, the Commission expressly addressed foreign endowments potentially being classified as Special Entities, saying that because ''the statute does not distinguish between foreign and domestic counterparties in Section 4s(h) . . . the Commission has determined that prong (v) of Section 4s(h)(2)(C) and § 23.401(c)(5) [the endowment prongs of the definitions] will apply to any endowment, whether foreign or domestic.'' [458] Therefore, the Commission is declining to provide the clarification that IIB/SIFMA requested.

Regarding ISDA's statement that it fully agrees with the Commission that there is no policy benefit in subjecting non-U.S. market participants to the CFTC's extensive customer protection regime and, therefore, believes that these rules should be left within the remit of home country regulators, this statement does not wholly comport with the Commission's position as set forth in the Proposed Rule. Rather, the Commission proposed that only certain foreign-based swaps meeting the eligibility criteria for the exception would be excepted from the group C requirements. ISDA also stated that it agrees that foreign branch ANE Transactions should not be subject to group C Requirements. The Commission notes that this would only be true to the extent the swap is conducted through the relevant foreign branch or branches, which would require, among other things, that the swap be entered into by each relevant foreign branch in its normal course of business. To satisfy this prong, it must be the normal course of business for employees located in the branch (or another foreign branch of the U.S. bank) to enter into the type of swap in question. Under the Final Rule (and as proposed), where the swap is primarily entered into by personnel not located in a foreign branch of the U.S. bank, this requirement would not be satisfied.

4. Limited Foreign Branch Group B Exception

(i) Proposed Rule

The Commission proposed that each foreign branch of a U.S. swap entity would be excepted from the group B requirements with respect to any foreign-based swap with a foreign counterparty that is an Other Non-U.S. Person, subject to certain limitations.[459] Specifically, under the Proposed Rule: (1) The exception would not be available with respect to any group B requirement for which substituted compliance (discussed in section VI.C below) is available for the relevant swap; and (2) in any calendar quarter, the aggregate gross notional amount of swaps conducted by a swap entity in reliance on the exception may not exceed five percent of the aggregate gross notional amount of all its swaps in that calendar quarter.

As discussed in the Proposed Rule, the Commission proposed the Limited Foreign Branch Group B Exception to allow the foreign branches of U.S. swap entities to continue to access swap markets for which substituted compliance may not be available under limited circumstances.[460] The Commission stated that it believes the Limited Foreign Branch Group B Exception is appropriate because U.S. swap entities' activities through foreign branches in these markets, though not significant in volume in many cases, may nevertheless be an integral element of a U.S. swap entity's global business. Additionally, although not the Commission's main purpose, the Commission noted that it endeavors to preserve liquidity in the emerging markets in which it expects this exception to be utilized, which may further encourage the global use and development of swap markets. Further, because of the proposed five percent cap on the use of the exception, the Commission stated that it preliminarily believed that the swap activity that would be excepted from the group B requirements would not raise significant supervisory concerns.

(ii) Summary of Comments

IIB/SIFMA generally supported this exception, but requested that the Commission clarify that: (1) The exception applies on a swap-by-swap,

[459] *See* Proposed Rule, 85 FR at 984. This is similar to a limited exception for transactions by foreign branches in certain specified jurisdictions in the Guidance. *See* Guidance, 78 FR at 45351.

[460] As noted above, under the Proposed Rule, where substituted compliance is available for a particular group B requirement and swap, the exception would not be available.

requirement-by-requirement basis; (2) that it is optional for a U.S. swap entity to rely on the exception for any given swap; and (3) that the five percent notional amount cap would only cover transactions entered into ''in reliance on'' the exception, not all swaps eligible for the exception. In a subsequent discussion with Commission staff, IIB/SIFMA further clarified their request that the exception should apply on a ''requirement-by-requirement basis'' to mean that the exception should have a separate five percent gross notional amount cap applicable to each requirement, rather than a single five percent gross notional amount cap where any swap that relied on the exception for any group B requirement would count towards the cap. State Street also supported the proposed exception; however, it requested that the Commission provide further guidance on the calculation of the notional amount cap.

IIB/SIFMA also asked that, consistent with its other requests, the exception be available when a foreign branch transacts with an SRS that is not a swap entity or with a U.S. branch of a foreign bank. With respect to such an entity, IIB/SIFMA noted that the group B requirements indirectly regulate the end user (*i.e.,* non-swap entity) counterparties of swap entities by requiring them to execute documentation and engage in portfolio reconciliation and compression exercises, when they trade with swap entities subject to the requirements. IIB/SIFMA asserted that many more end users will qualify as SRSs than swap entities under the proposed definition because, unlike swap entities, commercial and non-financial end users generally will not qualify for the exclusions from the SRS definition and that, as a result, significant foreign subsidiaries of large U.S. multinational companies would find themselves subject to group B requirements when they trade with non-U.S. swap entities. IIB/SIFMA noted that the indirect application of the group B requirements would pose particular problems for significant subsidiaries doing business in emerging market jurisdictions that have not yet adopted comparable rules to the group B requirements because swap entities' operations in those jurisdictions might not be set up to apply the group B requirements to trading with those subsidiaries, and that this could cause those subsidiaries to lose access to key interest or currency hedging products and face increased hedging and risk management costs relative to their foreign competitors. IIB/SIFMA also stated that subjecting an SRS that is not a swap entity to group B requirements would impose undue costs on non-U.S. swap entities, noting that because the SRS test depends on a non-U.S. counterparty's internal organizational structure and financial metrics, it generally would not be possible for a swap entity to determine whether its non-U.S. counterparty is an SRS without obtaining an affirmative representation and, because it would be difficult for a swap entity categorically to rule out any class of non-U.S. counterparties from being an SRS, swap entities would be forced to obtain relevant representations from nearly their entire global client bases.

Further, IIB/SIFMA noted that any credit or legal risks arising from swaps conducted in reliance on the exception should already be addressed through existing provisions of § 23.600 and, accordingly, they assume the Proposed Rule was not meant to imply some additional risk management program requirement in connection with reliance on the exception.

JBA asked that the Commission review the Proposed Rule from the perspective of ensuring symmetric application of requirements between U.S. swap entities and non-U.S. swap entities. Specifically, JBA requested that an exception consistent with the Limited Foreign Branch Group B Exception should be applicable to the non-U.S. swap entities even when their counterparty is a foreign branch of a U.S. person. As an example, JBA stated that when the Seoul branch of a U.S. bank that is registered as an SD enters into a swap with the Tokyo headquarters of a Japanese bank that is registered as an SD, the U.S. bank SD may rely on the Limited Foreign Branch Group B Exception, whereas the Japanese bank SD may not rely on an exception from the group B requirements.

ISDA stated that it agrees that foreign branch ANE Transactions should not be subject to group B requirements where substituted compliance is available.[461]

(iii) Final Rule

After carefully considering the comments, the Commission is adopting the exception with certain modifications, as shown in the rule text in this release.[462] Specifically, the Commission is: (1) Adjusting the exception such that it is not available for swaps between swap entities; (2) broadening the exception to apply to foreign-based swaps with an SRS End User; and (3) making some minor technical changes to the text of the Final Rule.

The Commission believes that a swap between the foreign branch of a U.S. swap entity and a non-U.S. swap entity should generally be subject to the group B requirements. Where both parties to a swap are swap entities, the rationale for the Limited Foreign Branch Group B Exception is not present. As discussed in the Proposed Rule and the Guidance, as well as above, the exception is designed to allow the foreign branches of U.S. swap entities to continue to access swap markets for which substituted compliance may not be available under limited circumstances (a) because U.S. swap entities' activities through foreign branches in these markets, though not significant in volume in many cases, may nevertheless be an integral element of a U.S. swap entity's global business, and (b) to preserve liquidity in the emerging markets in which it expects this exception to be utilized. Where both parties to a swap are registered swap entities, the Commission sees no impediment to compliance with the group B requirements.

With respect to SRS End Users, the Commission acknowledges that applying the group B requirements to a swap entity's swaps indirectly affects their counterparties, including SRS End User counterparties, by requiring them to execute documentation (*e.g.,* compliant swap trading relationship documentation), and engage in portfolio reconciliation and compression exercises as a condition to entering into swaps with swap entity counterparties. As noted by IIB/SIFMA, requiring compliance with these obligations may cause counterparties, including SRS End Users, to face increased costs relative to their competitors not affected by the application of the group B requirements (*e.g.,* for legal fees or as a result of costs being passed on to them by their swap entity counterparties), and/or to potentially lose access to key interest or currency hedging products. Also, the Commission recognizes that, as IIB/SIFMA notes, because the SRS test depends on a non-U.S. counterparty's internal organizational structure and financial metrics and it would be difficult to rule out any category of non-U.S. counterparties as being an SRS, the proposed application of group B requirements to all SRSs may cause swap entities to obtain SRS representations from nearly their entire non-U.S. client bases, potentially increasing costs for all of these clients.

[461] As discussed more fully below, this statement is not an accurate description of the Proposed Rule.

[462] Final § 23.23(e)(4).

Taking this into account and the Commission's belief that it is important to ensure that an SRS, particularly a commercial or non-financial entity, continues to have access to swap liquidity for hedging or other non-dealing purposes, the Commission is expanding the exception only to SRS End Users (and not to SRSs that are swap entities (''SRS Swap Entities'') or Guaranteed Entities). The Commission believes that an SRS End User does not pose as significant a risk to the United States as an SRS Swap Entity or a Guaranteed Entity, because an SRS End User: (1) Has a less direct connection to the United States than a Guaranteed Entity; and (2) has been involved, at most, in only a de minimis amount of swap dealing activity, or has swap positions below the MSP thresholds, such that it is not required to register as an SD or MSP, respectively. In addition, because the SRS category was first considered in the Proposed Rule, unlike for Guaranteed Entities, there is no precedent in the Guidance to apply the group B requirements to all SRSs as originally proposed. Moreover, treating SRSs End Users and Guaranteed Entities differently under the exception is consistent with the differences in swap counting requirements under the Final Rule.[463] For example, an Other Non-U.S. Person is generally not required to count a dealing swap with an SRS toward its de minimis threshold calculation for SD registration, whereas an Other Non-U.S. Person is (absent certain exceptions) generally required to count its dealing swaps with a Guaranteed Entity.

In addition, in response to commenters requesting further guidance on the application of the exception, the Commission is clarifying that the five percent gross notional amount cap applies only to swaps entered into in reliance on the exception. This does not include situations where a foreign branch of a U.S. swap entity complies with all of the group B requirements, either directly or through substituted compliance, with respect to a swap that is eligible for the exception. In such situation, though the swap is eligible for the exception for the requirements not addressed by substituted compliance, it does not count toward the five percent gross notional amount cap for swaps entered into in reliance on the exception because compliance with the applicable group B requirements was achieved. On the other hand, where a foreign branch relies on the exception with respect to any group B requirement for a swap, the notional amount of that swap counts toward the five percent gross notional amount cap for the relevant calendar quarter. The Commission is declining to expand the five percent cap as requested by IIB/SIFMA such that there would be a separate five percent gross notional amount cap for each group B requirement, because it believes such an exception would potentially allow a much greater percentage of swaps by notional amount to be eligible for the exception, and it would be difficult for a swap entity to track and for the Commission and the National Futures Association (''NFA'') to monitor compliance with such a standard. Accordingly, the five percent cap applies on a swap-by-swap basis, but does not apply on a requirement-by-requirement basis such that a foreign branch may rely on the exception for greater than five percent of its swaps by gross notional amount in any calendar quarter.

Regarding the request to expand the exception to make it available to swaps of a foreign branch with U.S. branches of foreign banks, the Commission does not believe that such an expansion is appropriate. As noted above, the exception is designed to allow the foreign branches of U.S. swap entities to continue to access swap markets for which substituted compliance may not be available under limited circumstances. It is not designed to allow foreign branches to transact with U.S. branches of non-U.S. banking organizations without complying with the group B requirements. A foreign branch of a U.S. bank is a U.S. person, and, as noted above, the Commission is of the view that where a swap is booked in a U.S. branch, that swap is part of the U.S. swap market. Accordingly, the Commission retains a supervisory interest in swaps between a foreign branch and a U.S. branch such that the group B requirements should generally apply to such swaps.

Regarding ISDA's statement that it agrees that foreign branch ANE Transactions should not be subject to group B requirements where substituted compliance is available, the Commission notes that this statement is not accurate as the Limited Foreign Branch Group B Exception does not apply where substituted compliance is available. Also, as discussed above, even where substituted compliance is not available, this statement would only be true to the extent the swap is conducted through the relevant foreign branch or branches, which would require, among other things, that the swap be entered into by each relevant foreign branch in its normal course of business. To satisfy this prong, it must be the normal course of business for employees located in the branch (or another foreign branch of the U.S. bank) to enter into the type of swap in question. Under the Final Rule (and as proposed), where the swap is primarily entered into by personnel not located in a foreign branch of the U.S. bank, this requirement would not be satisfied.

Further, in line with IIB/SIFMA's comment, the Commission confirms that its stated expectation that swap entities will address any significant risk that may arise as a result of the utilization of one or more exceptions in their risk management programs required pursuant to § 23.600 is not meant to imply an additional risk management program requirement, but rather to remind swap entities of their obligations under § 23.600.

5. Non-U.S. Swap Entity Group B Exception

(i) Proposed Rule

The Commission also proposed that each non-U.S. swap entity that is an Other Non-U.S. Person would be excepted from the group B requirements with respect to any foreign-based swap with a foreign counterparty that is also an Other Non-U.S. Person.[464] The Commission stated that, in these circumstances, where no party to the foreign-based swap is a U.S. person, a Guaranteed Entity, or an SRS, and, the particular swap is not conducted through a U.S. branch[465] of a party, notwithstanding that one or both parties to such swap may be a swap entity, the Commission believes that foreign regulators may have a relatively stronger supervisory interest in regulating such swaps with respect to the subject matter covered by the group B requirements, and that, in the interest of international comity, applying the group B requirements to these foreign-based swaps is not warranted.

The Commission noted that, generally, it would expect that swap entities that rely on this exception are subject to risk mitigation standards in the foreign jurisdictions in which they reside similar to those included in the group B requirements, as most

[463] *See* discussion of counting requirements of swaps with SRSs in sections III.B.1 and IV.B.1, *supra.*

[464] *See* Proposed Rule, 85 FR at 984. This approach is similar to the Guidance; however, the Commission notes that the Proposed Rule limited the non-U.S. swap entities eligible for this exception to those that are Other Non-U.S. Persons, and the Guidance did not contain a similar limitation. See Guidance, 78 FR at 45352–45353.

[465] *See* discussion of the modification of the definition of a ''swap conducted through a U.S. branch'' to be a ''swap booked in a U.S. branch'' in section II.H.3, *supra.*

jurisdictions surveyed by the FSB in respect of their swaps trading have implemented such standards.[466]

(ii) Summary of Comments

IIB/SIFMA agreed with the Commission that foreign regulators have a stronger supervisory interest in these swaps than the Commission in regards to the risk mitigation matters covered by the group B requirements, but recommended that the Commission expand the proposed exception by: (1) Applying the exception to swaps with an SRS that is not a swap entity, so as to avoid inappropriately burdening the foreign subsidiaries of U.S. multinational corporations and their counterparties (as discussed in section VI.B.4 above); (2) conforming the treatment of a non-U.S. swap entity that either is an SRS Swap Entity or benefits from a U.S. guarantee for the relevant swap (''Guaranteed Swap Entity'') to the Guidance[467] (or, at a minimum, adopting an exception for de minimis trading by these entities in jurisdictions not eligible for substituted compliance similar to the Limited Foreign Branch Group B Exception where, for SRS Swap Entities, the five percent notional amount cap would apply at the level of the ultimate U.S. parent entity), so as to minimize the competitive disadvantages faced by such swap entities and their counterparties when they are subject to U.S. rules extraterritorially; and (3) permitting a U.S. branch to rely on the exception when it trades with a non-U.S. person that is neither a Guaranteed Entity nor another U.S. branch, which, in their view, would appropriately recognize that such swaps do not present risks to the United States, are generally unnecessary due to home country regulation, and align the scope of the exception to be consistent with analogous EU rules.

JFMC/IBAJ similarly requested that the Commission exclude transactions between a Guaranteed Swap Entity or an SRS Swap Entity and an Other Non-U.S. Person from the application of group B requirements, stating that these requirements would not apply to such transactions under the Guidance and they see no justification for the change in Commission policy. They argued that the expanded extraterritorial application will indirectly impose regulatory compliance burdens on Japanese market participants, most of which are Other Non-U.S. Persons, when trading swaps with Guaranteed Swap Entities, especially where a Guaranteed Swap Entity cannot rely on substituted compliance with local Japanese regulations to satisfy group B requirements, and that Japanese market participants will likely refrain from trading swaps with a Guaranteed Swap Entity to avoid the indirect imposition of the Commission's swaps regulations and the costs associated therewith. They noted that this may diminish the ability of U.S.-headquartered firms to compete or access liquidity in the Japanese swaps market, which could result in fragmented global swaps markets comprised of small and disconnected liquidity pools, leading to exacerbation of systemic risk.

ISDA requested that, in line with the Proposed Rule's intent to give deference to home country regulators where there are applicable foreign regulatory requirements, the Commission not apply the proposed group B requirements to transactions between: (1) U.S. branches of non-U.S. swap entities and Other Non-U.S. Persons; and (2) Guaranteed Entities and Other Non-U.S. Persons, supporting the position and rationale of IIB/SIFMA on this topic. ISDA noted that the Commission has set a precedent for taking this approach by providing an exemption in the Guidance to Guaranteed Entities from compliance with group B requirements when transacting with Other Non-U.S. Persons.[468]

(iii) Final Rule—Non-U.S. Swap Entity Group B Exception and Limited Swap Entity SRS/Guaranteed Entity Group B Exception

After carefully considering the comments, the Commission is adopting the Non-U.S. Swap Entity Group B Exception with certain modifications, as shown in the rule text in this release.[469] Specifically, for the same reasons that the Commission is expanding the Limited Foreign Branch Group B Exception to include swaps with SRS End Users,[470] the Commission is also expanding the Non-U.S. Swap Entity Group B Exception to include swaps with SRS End Users.

In addition, based on the comments received, the Commission is adopting an additional limited exception from the group B requirements similar to the Limited Foreign Branch Group B Exception in the Final Rule (discussed above), for trading by an SRS Swap Entity or a Guaranteed Swap Entity, on the one hand, and certain non-U.S. persons, on the other (''Limited Swap Entity SRS/Guaranteed Entity Group B Exception''), as shown in the rule text in this release.[471] As commenters noted, under the Guidance, a Guaranteed Swap Entity or a non-U.S. swap entity that was a conduit affiliate would not have been expected to comply with the group B requirements when transacting with a non-U.S. person that was not a conduit or guaranteed affiliate, so the Proposed Rule deviated from the Guidance and would have disadvantaged SRS Swap Entities and Guaranteed Swap Entities relative to foreign branches of U.S. swap entities in the application of the group B requirements. Thus, the Commission believes a limited exception is warranted because, as a policy matter, it has determined that Guaranteed Swap Entities and SRS Swap Entities (who, by definition, are non-U.S. persons) should not be subject to stricter application of the group B requirements than foreign branches of U.S swap entities (who are U.S. persons). Under the Limited Swap Entity SRS/Guaranteed Entity Group B Exception, each Guaranteed Swap Entity and SRS Swap Entity is excepted from the group B requirements, with respect to any foreign-based swap with a foreign counterparty (other than a foreign branch) that is neither a swap entity[472] nor a Guaranteed Entity, subject to certain conditions. Specifically, (1) the exception is not available with respect to any group B requirement if the requirement as applicable to the swap is eligible for substituted compliance pursuant to a comparability determination issued by the Commission prior to the execution of the swap (discussed in sections VI.C and VI.D below); and (2) in any calendar quarter, the aggregate gross notional amount of swaps conducted by an SRS Swap Entity or a Guaranteed Swap Entity in reliance on this exception aggregated with the gross notional amount of swaps conducted by all affiliated SRS Swap Entities and Guaranteed Swap Entities in reliance on

[466] *See* 2019 FSB Progress Report, Table M.

[467] The Commission notes that SRSs were not contemplated by the Guidance, so the Commission assumes that the comment requested that the Commission conform the treatment of SRSs to conduit affiliates under the Guidance.

[468] The Commission assumes that ISDA was referring to non-U.S. Persons that are not a guaranteed or conduit affiliate of a U.S. Person (each as defined or described in the Guidance), as the term ''Other Non-U.S. Person'' is not used in the Guidance.

[469] Final § 23.23(e)(3).

[470] *See supra* section VI.B.4.iii.

[471] Final § 23.23(e)(5). As noted above, the Commission, generally, expects that swap entities that rely on this exception are subject to risk mitigation standards in the foreign jurisdictions in which they reside similar to those included in the group B requirements, as most jurisdictions surveyed by the FSB in respect of their swaps trading have implemented such standards. *See* 2019 FSB Progress Report, Table M.

[472] As discussed above, the Commission is also excluding swaps with a swap entity counterparty from the Limited Foreign Branch Group B Exception.

this exception does not exceed five percent of the aggregate gross notional amount of all swaps entered into by the SRS Swap Entity or a Guaranteed Swap Entity and all affiliated swap entities.[473]

With respect to the request to dis-apply fully the group B requirements to swaps between an SRS Swap Entity or Guaranteed Swap Entity, on the one hand, and an Other Non-U.S. Person on the other, the Commission believes that the group B requirements should generally continue to apply to these swaps, as these requirements relate to risk mitigation, and SRS Swap Entities and Guaranteed Swap Entities may pose significant risk to the United States. Other than the Limited Foreign Branch Group B Exception, this matches the treatment of swaps between a foreign branch of a U.S. swap entity and an Other Non-U.S. Person under the Proposed Rule. Therefore, it is the Commission's view that providing the Limited Swap Entity SRS/Guaranteed Entity Group B Exception (discussed above) to put these entities on a substantially similar footing as such foreign branches under the group B requirements under the Final Rule is the better approach.

Regarding the requests to expand the exception to include transactions between U.S. branches and certain non-U.S. persons, the Commission declines such an expansion. As noted above, the Commission believes that where a swap is booked in a U.S. branch of a non-U.S. swap entity, that swap is part of the U.S. swap market, and, accordingly, the group B requirements should generally apply.

C. Substituted Compliance

As discussed in the Proposed Rule, substituted compliance is a fundamental component of the Commission's cross-border framework.[474] It is intended to promote the benefits of integrated global markets by reducing the degree to which market participants will be subject to duplicative regulations. Substituted compliance also fosters international harmonization by encouraging U.S. and foreign regulators to adopt consistent and comparable regulatory regimes that can result in deference to each other's regime. Substituted compliance, therefore, also is consistent with the directive of Congress in the Dodd-Frank Act that the Commission ''coordinate with foreign regulatory authorities on the establishment of consistent international standards with respect to the regulation'' of swaps and swap entities.[475] When properly calibrated, substituted compliance promotes open, transparent, and competitive markets without compromising market integrity. On the other hand, if construed too broadly, substituted compliance could defer important regulatory interests to foreign regulators that have not implemented comparably robust regulatory frameworks.

The Commission has determined that, in order to achieve the important policy goals of the Dodd-Frank Act, U.S. swap entities (excluding their foreign branches) must be fully subject to the Dodd-Frank Act requirements addressed by the Final Rule, without regard to whether their counterparty is a U.S. or non-U.S. person. Given that such firms are U.S. persons conducting their business within the United States, their activities inherently have a direct and significant connection with activities in, or effect on, U.S. commerce. However, the Commission recognizes that, in certain circumstances, non-U.S. swap entities' and foreign branches' swaps with non-U.S. persons have a more attenuated nexus to U.S. commerce. Further, the Commission acknowledges that foreign jurisdictions also have a supervisory interest in such swaps. The Commission therefore believes that substituted compliance is appropriate for non-U.S. swap entities and foreign branches of U.S. swap entities in certain circumstances.

In light of the interconnectedness of the global swap market and consistent with CEA section 2(i) and principles of international comity, the Commission is implementing a substituted compliance regime with respect to the group A and group B requirements that builds upon the Commission's prior substituted compliance framework and aims to promote diverse markets without compromising the central tenets of the Dodd-Frank Act. As discussed below, the Final Rule outlines the circumstances in which a non-U.S. swap entity or foreign branch of a U.S. swap entity is permitted to comply with the group A and/or group B requirements by complying with comparable standards in its home jurisdiction.

1. Proposed Rule

The Commission proposed to permit a non-U.S. swap entity to avail itself of substituted compliance with respect to the group A requirements on an entity-wide basis.[476] The Commission also proposed to permit a non-U.S. swap entity or a foreign branch of a U.S. swap entity to avail itself of substituted compliance with respect to the group B requirements for its foreign-based swaps with foreign counterparties.[477] The Commission did not propose to permit substituted compliance for the group C requirements, where broader exceptions for swaps with foreign counterparties would be available.

2. Summary of Comments

Chatham, JFMC/IBAJ, and BGC/Tradition generally supported the Proposed Rule's approach to substituted compliance, stating that it is consistent with the principles of international comity. The Commission also received two comments requesting that the Commission expand the proposed scope of substituted compliance. Specifically, AIMA stated that the Commission should expand the availability of substituted compliance by making it available to cross-border transactions as far as possible, including any swap involving a non-U.S. person, even swaps with U.S. persons. AIMA stated that the Commission's supervisory interest in the swap activities of U.S. persons should not prelude the availability of substituted compliance for U.S. persons. AIMA also supported a universal, entity-wide approach to substituted compliance, whereby substituted compliance would be fully available for cross-border transactions.

In addition, IIB/SIFMA stated that the Commission should expand the availability of substituted compliance for the group B requirements to: (1) All swaps entered into by a non-U.S. swap entity or foreign branch, including swaps with U.S. persons; and (2) swaps conducted through a U.S. branch.[478] IIB/SIFMA further requested that the Commission make substituted compliance available for the group C requirements where such requirements apply. IIB/SIFMA noted that the SEC permits substituted compliance for U.S.-facing transactions with respect to its external business conduct standards.

[473] Final § 23.23(e)(5)(i) and (ii). As described above for the Limited Foreign Branch Group B Exception, a swap entered into by a SRS Swap Entity or Guaranteed Swap Entity will only count toward the gross notional amount cap where it is entered into in reliance on the Limited Swap Entity SRS/Guaranteed Entity Group B Exception.

[474] For example, in addition to the Guidance, the Commission has provided substituted compliance with respect to foreign futures and options transactions (*see, e.g.,* Foreign Futures and Options Transactions, 67 FR 30785 (May 8, 2002); Foreign Futures and Options Transactions, 71 FR 6759 (Feb. 9, 2006)); and margin for uncleared swaps (*see* Cross-Border Margin Rule, 81 FR 34818).

[475] *See* Dodd-Frank Act, section 752(a); 15 U.S.C. 8325.

[476] *See* Proposed § 23.23(f)(1); Proposed Rule, 85 FR at 985.

[477] *See* Proposed § 23.23(f)(2); Proposed Rule, 85 FR at 985.

[478] *See* discussion of the modification of the definition of a ''swap conducted through a U.S. branch'' to be a ''swap booked in a U.S. branch'' in section II.H.3, *supra.*

3. Final Rule

After carefully considering the comments, the Commission is adopting the scope of substituted compliance largely as proposed. The Commission continues to believe that the group A requirements, which relate to compliance programs, risk management, and swap data recordkeeping, cannot be effectively applied on a fragmented jurisdictional basis. Accordingly, it is not practical to limit substituted compliance for the group A requirements to only those transactions involving non-U.S. persons. Therefore, in furtherance of international comity, the Final Rule permits a non-U.S. swap entity, subject to the terms of the relevant comparability determination, to satisfy any applicable group A requirement on an entity-wide basis by complying with the applicable standards of a foreign jurisdiction.[479]

Unlike the group A requirements, the group B requirements, which relate to counterparty relationship documentation, portfolio reconciliation and compression, trade confirmation, and daily trading records, are more closely tied to local market conventions and can be effectively implemented on a transaction-by-transaction or relationship basis. As noted above, the Commission believes that Congress intended for the Dodd-Frank Act to apply fully to U.S. persons (other than their foreign branches) with no substituted compliance available; therefore, an expansion of substituted compliance for the group B requirements for U.S. persons is not appropriate. However, in light of the comments received, the Commission has reconsidered the availability of substituted compliance for U.S. branches of non-U.S. swap entities. In the Proposed Rule, the Commission treated a swap conducted through a U.S. branch[480] in the same manner as a swap of a U.S. swap entity for the purposes of substituted compliance. The Commission acknowledges, however, that a swap booked in a U.S. branch of a non-U.S. swap entity with a foreign counterparty that is neither a foreign branch nor a Guaranteed Entity has a comparatively smaller nexus to U.S. commerce than a swap booked in a U.S. branch with a U.S. person, Guaranteed Entity, or another U.S. branch.

Accordingly, subject to the terms of the relevant comparability determination, the Final Rule permits a non-U.S. swap entity or foreign branch of a U.S. swap entity to avail itself of substituted compliance for the group B requirements in certain circumstances, depending on the nature of its counterparty. Specifically, given the Commission's interest in promoting international comity and market liquidity, the Final Rule allows a non-U.S. swap entity or foreign branch of a U.S. swap entity, subject to the terms of the relevant comparability determination, to satisfy any applicable group B requirement for a foreign-based swap with a foreign counterparty by complying with the applicable standards of a foreign jurisdiction.[481] Further, the Final Rule allows a non-U.S. swap entity, subject to the terms of the relevant comparability determination, to satisfy any applicable group B requirement for any swap booked in a U.S. branch with a foreign counterparty that is neither a foreign branch nor a Guaranteed Entity by complying with the applicable standards of a foreign jurisdiction.[482]

The Commission is also modifying the text of § 23.23(f)(1) and (2) as shown in the rule text in this release (and including rule text in § 23.23(f)(3)) to clarify that substituted compliance is only available to a non-U.S swap entity or foreign branch of a U.S. swap entity to the extent permitted by, and subject to any conditions specified in, a comparability determination, and only where it complies with the standards of a foreign jurisdiction applicable to it, as opposed to other foreign standards to which it is not subject.[483]

With respect to the group C requirements, the Commission reiterates its longstanding position that it has a strong supervisory interest in ensuring that the counterparty protections of the group C requirements generally apply to swaps with U.S. persons with no substituted compliance available.

D. Comparability Determinations

The Commission is also implementing a process pursuant to which it will, in connection with certain requirements addressed by the Final Rule, conduct comparability determinations regarding a foreign jurisdiction's regulation of swap entities. This approach builds upon the Commission's prior substituted compliance regime and aims to promote international comity and market liquidity without compromising the Commission's interests in reducing systemic risk, increasing market transparency, enhancing market integrity, and promoting counterparty protections. Specifically, the Final Rule outlines procedures for initiating comparability determinations, including eligibility and submission requirements, with respect to certain requirements addressed by the Final Rule. The Final Rule also establishes a standard of review that the Commission will apply to such comparability determinations that emphasizes a holistic, outcomes-based approach. The Final Rule does not affect the effectiveness of any existing Commission comparability determinations that were issued consistent with the Guidance, which will remain effective pursuant to their terms.[484] The Commission may, however, reevaluate prior comparability determinations in due course pursuant to the terms of the Final Rule.

As discussed above, the Final Rule permits a non-U.S. swap entity or foreign branch of a U.S. swap entity to comply with a foreign jurisdiction's swap standards in lieu of the Commission's corresponding requirements in certain cases, provided that the Commission determines that such foreign standards are comparable to the Commission's requirements. All swap entities, regardless of whether they rely on such a comparability determination, will remain subject to the Commission's examination and enforcement authority.[485] Accordingly, if a swap entity fails to comply with a foreign jurisdiction's relevant standards, or the terms of the applicable comparability determination, the Commission may initiate an action for a violation of the Commission's corresponding requirements.

[479] Final § 23.23(f)(1).

[480] *See* discussion of the modification of the definition of a ''swap conducted through a U.S. branch'' to be a ''swap booked in a U.S. branch'' in section II.H.3, *supra.*

[481] Final § 23.23(f)(2). Thus, substituted compliance is not available for a swap booked in the U.S. branch of a non-U.S. swap entity entered into with a foreign branch of a U.S. swap entity.

[482] Final § 23.23(f)(3).

[483] Final § 23.23(f)(1) through (3).

[484] *See, e.g.,* Comparability Determination for Australia: Certain Entity-Level Requirements, 78 FR 78864 (Dec. 27, 2013); Comparability Determination for Canada: Certain Entity-Level Requirements, 78 FR 78839 (Dec. 27, 2013); Comparability Determination for the European Union: Certain Entity-Level Requirements, 78 FR 78923 (Dec. 27, 2013); Comparability Determination for Hong Kong: Certain Entity-Level Requirements, 78 FR 78852 (Dec. 27, 2013); Comparability Determination for Japan: Certain Entity-Level Requirements, 78 FR 78910 (Dec. 27, 2013); Comparability Determination for Switzerland: Certain Entity-Level Requirements, 78 FR 78899 (Dec. 27, 2013); Comparability Determination for the European Union: Certain Transaction-Level Requirements, 78 FR 78878 (Dec. 27, 2013); Comparability Determination for Japan: Certain Transaction-Level Requirements, 78 FR 78890 (Dec. 27, 2013).

[485] Final § 23.23(g)(5). The Commission notes that NFA has certain delegated authority with respect to SDs and MSPs. Additionally, all registered SDs and MSPs are required to be members of the NFA and are subject to examination by the NFA.

1. Standard of Review

(i) Proposed Rule

The Commission proposed a flexible outcomes-based approach that emphasized comparable regulatory outcomes over identical regulatory approaches. Specifically, the Commission proposed a standard of review that was designed to allow the Commission to consider all relevant elements of a foreign jurisdiction's regulatory regime, thereby permitting the Commission to tailor its assessment to a broad range of foreign regulatory approaches.[486] Accordingly, pursuant to the Proposed Rule, a foreign jurisdiction's regulatory regime did not need to be identical to the relevant Commission requirements, so long as both regulatory frameworks are comparable in terms of holistic outcome. The Proposed Rule permitted the Commission to consider any factor it deems appropriate when assessing comparability.[487]

(ii) Summary of Comments

The Commission received five comments that generally supported the proposed standard of review. However, of those commenters, JFMC/IBAJ and ISDA stated that the Commission should not consider whether a foreign jurisdiction has issued a reciprocal comparability determination in its assessment.

Further, the Commission received four comments opposing the proposed standard of review. Specifically, AFR, Better Markets, Citadel, and IATP stated that the proposed standard provides the Commission with overly-broad discretion that undermines objectivity in the assessment process. Citadel contended that the proposed standard may harm U.S. investors as a result of an overall reduction in market transparency and liquidity if trading activity is permitted to migrate to less transparent jurisdictions as a result of inaccurate comparability determinations.

IATP stated that the Commission should not base comparability on a foreign jurisdiction's supervisory guidelines or voluntary standards. IATP stated that if a foreign jurisdiction lacks a standard that compares to a Commission requirement, the Commission should issue a more limited comparability determination until such time as the foreign jurisdiction has published a standard that would result in a regulatory outcome comparable to the Commission's requirements. IATP also stated that regulatory deference to jurisdictions whose rules the Commission finds to produce regulatory outcomes comparable to those of the Commission must not be vague, unconditional, nor of indefinite duration. IATP noted that during market events or credit events, or in the event of swaps trading data anomalies, the Commission must retain the means to verify that the foreign affiliate swaps trading of U.S. parents does not result in losses that the U.S. parent must guarantee, either as a matter of law or a matter of market practice.

Citadel also recommended that the Commission provide an opportunity for public comment prior to finalizing a comparability determination to ensure that all relevant costs and benefits are considered.

(iii) Final Rule

After carefully considering the comments, the Commission is adopting the standard of review as proposed, with certain modifications as shown in the rule text in this release.[488] Specifically, the Commission is making some technical changes to the standard of review to clarify, as stated in the Proposed Rule[489] and discussed below, that the Commission may issue a comparability determination based on its determination that some or all of the relevant foreign jurisdiction's standards would result in outcomes comparable to those of the Commission's corresponding requirements or group of requirements.[490]

The Commission believes that this standard of review appropriately reflects a flexible, outcomes-based approach that emphasizes comparable regulatory outcomes over identical regulatory approaches. Accordingly, pursuant to the Final Rule, the Commission may consider any factor it deems appropriate in assessing comparability, which may include: (1) The scope and objectives of the relevant foreign jurisdiction's regulatory standards; (2) whether, despite differences, a foreign jurisdiction's regulatory standards achieve comparable regulatory outcomes to the Commission's corresponding requirements; (3) the ability of the relevant regulatory authority or authorities to supervise and enforce compliance with the relevant foreign jurisdiction's regulatory standards; and (4) whether the relevant foreign jurisdiction's regulatory authorities have entered into a memorandum of understanding or similar cooperative arrangement with the Commission regarding the oversight of swap entities.[491] In assessing comparability, the Commission need not find that a foreign jurisdiction has a comparable regulatory standard that corresponds to each group A or group B requirement. Rather, the Commission may find a foreign jurisdiction's standards comparable if, viewed holistically, the foreign jurisdiction's standards achieve a regulatory outcome that adequately serves the same regulatory purpose as the group A or group B requirements as a whole.

Further, given that some foreign jurisdictions may implement prudential supervisory guidelines in the regulation of swaps, the Final Rule allows the Commission to base comparability on a foreign jurisdiction's regulatory standards, rather than regulatory requirements. The Guidance similarly provided that the Commission has broad discretion to consider ''all relevant factors'' in assessing comparability, in addition to a non-exhaustive list of elements of comparability.[492] However, this standard of review is broader than the Guidance in that it explicitly allows the Commission to consider a foreign jurisdiction's regulatory standards (as opposed to regulatory requirements) comparable to the CEA and Commission regulations, as experience has demonstrated that such standards are often implemented in a similar manner as the Commission's swaps regime.

Although, when assessed against the relevant Commission requirements, the Commission may find comparability with respect to some, but not all, of a foreign jurisdiction's regulatory standards, it may also make a holistic finding of comparability that considers the broader context of a foreign jurisdiction's related regulatory standards. Accordingly, a comparability determination need not contain a standalone assessment of comparability for each relevant regulatory requirement, so long as it clearly indicates the scope of regulatory requirements that are covered by the determination. Further, the Commission may impose any terms and conditions on a comparability determination that it deems appropriate.[493]

The Final Rule adopts many of the Commission's existing practices with respect to comparability determinations, and does not reflect a significant change in policy. Accordingly, the phrasing of

[486] *See* Proposed § 23.23(g)(4); Proposed Rule, 85 FR at 986–987.

[487] *Id.*

[488] § 23.23(g)(4).

[489] See Proposed Rule, 85 FR at 986.

[490] *Id.*

[491] Final § 23.23(g)(4).

[492] Guidance, 78 FR at 45353.

[493] Final § 23.23(g)(6).

the standard of review is primarily intended to clarify, rather than change, the standard of review articulated in the Guidance. Reciprocity is only one of many non-determinative factors that the Commission may consider when assessing comparability. However, absence of a reciprocal comparability determination would not preclude a finding of comparability on the part of the Commission. Further, the Commission may, at its own discretion, seek public comment on any comparability determination issued pursuant to the Final Rule.

2. Supervision of Swap Entities Relying on Substituted Compliance

The Commission proposed to retain its examination and enforcement authority with respect to all swap entities relying on substituted compliance.[494] Accordingly, if a swap entity failed to comply with a foreign jurisdiction's relevant standards, or the terms of an applicable comparability determination, the Commission could initiate an action for a violation of the Commission's corresponding requirements.

IIB/SIFMA requested that the Commission state that it and NFA would not independently examine for or otherwise assess whether a swap entity is complying with foreign standards, but would instead look to the relevant foreign regulatory authority to conduct such examinations or assessments. IIB/SIFMA contended that the Commission and NFA lack the subject-matter expertise to interpret and apply foreign laws.

After carefully considering IIB/SIFMA's comment, the Commission is adopting this aspect of the rule as proposed.[495] In considering IIB/SIFMA's comment, and the broader issue of the Commission's supervision of non-U.S. swap entities, the Commission notes the various manifestations of international comity, deference, and supervisory cooperation presently taking place in the examination practices of the Commission and NFA. As a preliminary matter, the Commission's and NFA's examinations of non-U.S. swap entities occur with appropriate notice and consultation with the relevant foreign authority in the foreign jurisdiction that has primary oversight of the non-U.S swap entity. The Commission continues to be open to further ways to cooperate with such authorities in the supervision of non-U.S. swap entities.

Moreover, the Commission generally relies upon the relevant foreign regulator's oversight of a non-U.S. swap entity in relation to the application of a foreign jurisdiction's standards where a non-U.S. swap entity complies with such standards pursuant to a comparability determination issued by the Commission. To briefly recount these instances, a foreign swap entity may demonstrate compliance with a Commission requirement in group A through substituted compliance (*i.e.,* complying with comparable standards in its home jurisdiction that the Commission has determined to be comparable), regardless of whether the transactions involve a U.S. person.[496] Given the Commission's interest in promoting international comity and market liquidity, the Final Rule allows a non-U.S. swap entity (unless booking a transaction in a U.S. branch or Guaranteed Entity), or a U.S. swap entity transacting through a foreign branch, to avail itself of substituted compliance with respect to the group B requirements for swaps with foreign counterparties. Further, the Final Rule allows a non-U.S. swap entity, subject to the terms of the relevant comparability determination, to satisfy any applicable group B requirement for any swap booked in a U.S. branch with a foreign counterparty that is neither a foreign branch nor a Guaranteed Entity by complying with an applicable corresponding standard of a foreign jurisdiction. With regard to the group C requirements, the Commission considers that it is generally appropriate to defer to foreign jurisdictions and thus provides an exception from application of the business conduct standards to foreign-based swaps with foreign counterparties. The Commission has also noted above certain exceptions from the group B requirements in the Final Rule for certain foreign-based swaps; non-U.S. swap entities that avail themselves of these exceptions for their eligible swaps would only be required to comply with the applicable laws of the foreign jurisdiction(s) to which they are subject, rather than the relevant Commission requirements, for such swaps.

With regard to exams of non-U.S. swap entities and access to their books and records by the Commission and NFA, the general focus is on assessing compliance with any of the Commission's group A requirements for which substituted compliance is not found, group B requirements for transactions involving a U.S. person, and group C requirements as to transactions where the counterparty customer is in the U.S. Both the Commission and NFA retain examination and enforcement authority over swap entities to assess compliance with any Commission requirements in appropriate circumstances.[497]

3. Effect on Existing Comparability Determinations

In the Proposed Rule, the Commission stated that this rulemaking would not have any impact on the effectiveness of existing Commission comparability determinations that were issued consistent with the Guidance, which would remain effective pursuant to their terms.[498] Three commenters requested that the Commission revisit prior comparability determinations in light of this rulemaking. Specifically, ISDA stated that the Commission should recalibrate existing comparability determinations with the aim of issuing holistic, outcomes-based substituted compliance and clarify in the meantime that existing determinations would continue to be valid under the Commission's new cross-border framework. Further, IIB/SIFMA and JFMC/IBAJ requested that the Commission amend its previously-issued comparability determinations for Australia, Canada, the EU, Hong Kong, Japan, and Switzerland to include § 23.607 (antitrust requirements), which the Commission is adding to the scope of the group A requirements. The Commission has carefully considered these comments and is adopting this aspect of the rule as proposed. The Commission will consider applications to amend existing comparability determinations in due course. However, the Commission will view any previously issued comparability determination that allows for substituted compliance for § 23.201 to also allow for substituted compliance with § 45.2(a) to the extent it duplicates § 23.201.

4. Eligibility Requirements

The Proposed Rule outlined eligibility requirements to allow a comparability determination to be initiated by the Commission itself or certain outside

[494] *See* Proposed § 23.23(g)(5); Proposed Rule, 85 FR at 986. The Commission notes that it similarly retained its examination and enforcement authority in comparability determinations that were issued pursuant to the Guidance.

[495] Final § 23.23(g)(5).

[496] Moreover, to the extent a foreign swap entity receives substituted compliance for a group A requirement that incorporates § 1.31's recordkeeping requirements for certain regulatory records, § 1.31 would also not apply to such regulatory records.

[497] A non-U.S. swap entity remains subject to the Commission's anti-fraud and anti-manipulation authority, which may entail access to books and records covering transactions and/or activities not involving a U.S. person.

[498] *See* Proposed Rule, 85 FR at 986.

parties, including: (1) Swap entities that are eligible for substituted compliance; (2) trade associations whose members are such swap entities; or (3) foreign regulatory authorities that have direct supervisory authority over such swap entities and are responsible for administering the relevant swap standards in the foreign jurisdiction.[499] The Commission did not receive any comments regarding eligibility, and is therefore adopting this aspect of the rule as proposed.[500]

5. Submission Requirements

The Proposed Rule also outlined submission requirements in connection with a comparability determination with respect to some or all of the group A and group B requirements. Specifically, the Proposed Rule stated that applicants would be required to furnish certain information to the Commission that provides a comprehensive understanding of the foreign jurisdiction's relevant swap standards, including how they might differ from the corresponding requirements in the CEA and Commission regulations.[501] Further, the Proposed Rule stated that applicants would be expected to provide an explanation as to how any such differences may nonetheless achieve comparable outcomes to the Commission's attendant regulatory requirements.[502] The Commission did not receive any comments regarding submission requirements, and is therefore adopting this aspect of the rule substantially as proposed and shown in the rule text in this release.[503] Specifically, to provide the Commission additional information to use in making its comparability determinations, the Commission is revising § 23.23(g)(3)(ii) to require that the submission address how the relevant foreign jurisdiction's standards address the elements or goals of the Commission's corresponding requirements or group of requirements.[504]

VII. Recordkeeping

The Commission proposed to require a SD or MSP to create a record of its compliance with all provisions of the Proposed Rule, and retain those records in accordance with § 23.203.[505] The Commission received no comments on this provision. The Commission is therefore adopting this provision as proposed.[506] The Commission reiterates that registrants' records are a fundamental element of an entity's compliance program, as well as the Commission's oversight function. Accordingly, such records should be sufficiently detailed to allow compliance officers and regulators to assess compliance with the Final Rule.

VIII. Other Comments

The Commission received several comments that it considers beyond the scope of this rulemaking.

BGC/Tradition, IIB/SIFMA, and ISDA requested that the Commission include certain of the Unaddressed Requirements as group A requirements, group B requirements, and group C requirements.

ISDA requested that the Commission take a number of actions regarding the cross-border application of regulatory reporting requirements prior to finalizing the Proposed Rule. These included codifying an SDR reporting obligation no-action letter (CFTC Staff Letter 17–64),[507] providing substituted compliance for SDR reporting obligations for certain transactions, eliminating the Commission's large trader reporting requirements with respect to certain cross-border transactions, and revisiting the group C requirements in their entirety.

State Street recommended that the Commission address fragmentation of global non-deliverable forward liquidity pools created by Commission rulemaking and guidance in future Commission rulemaking.

JBA requested guidance on how swap requirements will apply to a non-U.S. person that is not a swap entity similar to Appendix F of the Guidance.

BGC/Tradition requested that the Commission confirm that non-U.S. introducing brokers (''IBs'') engaged in soliciting or accepting swap orders from customers, including U.S. person SDs, may comply with the applicable rules in the relevant non-U.S. jurisdictions without duplicative regulatory liability under the CEA and Commission regulations. BGC/Tradition requests that the CFTC provide guidance on how these foreign operations may avail themselves of relief through substituted compliance or another form of mutual recognition.

As noted above, these comments are beyond the scope of this rulemaking. Although not addressed in this rulemaking, the Commission appreciates the information provided by commenters and will take the requests and suggestions under advisement in the context of any relevant future Commission action.

IX. Compliance Dates and Transition Issues

A. Summary of Comments

IIB/SIFMA commented that, if adopted, the Proposed Rule would bring significant changes to portions of the Commission's cross-border framework and thus, the Commission should consider making the following clarifications and conforming changes to ensure an orderly transition process:

1. The Commission should clarify that any no-action relief or guidance that applies to the requirements not addressed in the Proposed Rule will remain effective, and that any no-action letter or guidance not specifically revoked by the Proposed Rule remains in effect.
2. If the Commission plans to amend or revoke any applicable letters, guidance, or other relief not specifically addressed in the Proposed Rule, the Commission should only do so following adequate notice and opportunity for comment.
3. The Commission should grandfather transactions entered into prior to the compliance date of any final cross-border rules adopted by the Commission.
4. The Commission should continue the codification exercise reflected by the Proposed Rule further by codifying the cross-border application of the Unaddressed Requirements.
5. The Commission should delay the compliance date for the changes set forth in the Proposed Rule until it has codified the cross-border application of the swap-related requirements not covered by the Proposed Rule. Until that time, market participants could continue to follow the Guidance.

JBA requested that the Commission clarify as soon as possible the cross-border treatment of other requirements not addressed in the Proposed Rule, and consider harmonizing the timing of application of all requirements such that they are applied simultaneously.

B. Commission Determination

As requested by IIB/SIFMA, the Commission hereby clarifies that any no-action relief or guidance that applies to the Unaddressed Requirements will remain effective, and that any no-action

[499] Proposed § 23.23(g)(2); Proposed Rule, 85 FR at 987.

[500] Final § 23.23(g)(2).

[501] Proposed § 23.23(g)(3); Proposed Rule, 85 FR at 987.

[502] Proposed § 23.23(g)(3)(iii); Proposed Rule, 85 FR at 987.

[503] Final § 23.23(g)(3).

[504] Final § 23.23(g)(3)(ii).

[505] Proposed § 23.23(h); Proposed Rule, 85 FR at 987.

[506] Final § 23.23(h)(1).

[507] CS also requested codification of CFTC Staff Letter 17–64.

letter or guidance not specifically revoked remains in effect.[508]

Regarding the scope of application of the Final Rule, as requested by commenters the Commission has provided in the Final Rule that it will only apply to swaps entered into on or after the specified compliance date.

The effective date of the Final Rule will be the date that is 60 days after publication of the Final Rule in the **Federal Register**.

The Commission has provided under paragraph (h) of the Final Rule that the exceptions provided in paragraph (e) of the Final Rule will be effective upon the effective date of the rule, provided that SDs and MSPs comply with the recordkeeping requirements set forth in paragraph (h)(1) of the Final Rule.

Otherwise, affected market participants must comply with § 23.23 on or before September 14, 2021. Given the similarity of the Final Rule to the Guidance with which market participants have been familiar since 2013, the Commission believes that a compliance period of one year is adequate for market participants to come into compliance, especially given that the Final Rule permits reliance on representations received from counterparties pursuant to the Cross-Border Margin Rule and the Guidance for many aspects of the Final Rule.

X. Related Matters

A. Regulatory Flexibility Act

The Regulatory Flexibility Act (''RFA'') requires that agencies consider whether the regulations they propose will have a significant economic impact on a substantial number of small entities.[509] In the Proposed Rule, the Commission certified that the Proposed Rule would not have a significant economic impact on a substantial number of small entities. The Commission received no comments with respect to the RFA.

The Commission previously established definitions of ''small entities'' to be used in evaluating the impact of its regulations on small entities in accordance with the RFA.[510] The Final Rule addresses when U.S. persons and non-U.S. persons are required to include their cross-border swap dealing transactions or swap positions in their SD or MSP registration threshold calculations, respectively,[511] and the extent to which SDs or MSPs are required to comply with certain of the Commission's regulations in connection with their cross-border swap transactions or swap positions.[512]

The Commission previously determined that SDs and MSPs are not small entities for purposes of the RFA.[513] The Commission believes, based on its information about the swap market and its market participants, that: (1) The types of entities that may engage in more than a de minimis amount of swap dealing activity such that they would be required to register as an SD—which generally would be large financial institutions or other large entities—would not be ''small entities'' for purposes of the RFA, and (2) the types of entities that may have swap positions such that they would be required to register as an MSP would not be ''small entities'' for purposes of the RFA. Thus, to the extent such entities are large financial institutions or other large entities that would be required to register as SDs or MSPs with the Commission by virtue of their cross-border swap dealing transactions and swap positions, they would not be considered small entities.[514]

To the extent that there are any affected small entities under the Final Rule, they would need to assess how they are classified under the Final Rule (*i.e.,* U.S. person, SRS, Guaranteed Entity, and Other Non-U.S. Person) and monitor their swap activities in order to determine whether they are required to register as an SD or MSP under the Final Rule. The Commission believes that, with the adoption of the Final Rule, market participants will only incur incremental costs, which are expected to be small, in modifying their existing systems and policies and procedures resulting from changes to the status quo made by the Final Rule.[515]

Accordingly, for the foregoing reasons, the Commission finds that there will not be a substantial number of small entities impacted by the Final Rule. Therefore, the Chairman, on behalf of the Commission, hereby certifies pursuant to 5 U.S.C. 605(b) that the Final Rule will not have a significant economic impact on a substantial number of small entities.

B. Paperwork Reduction Act

The Paperwork Reduction Act of 1995 (''PRA'') [516] imposes certain requirements on Federal agencies, including the Commission, in connection with their conducting or sponsoring any collection of information, as defined by the PRA. The Final Rule provides for the cross-border application of the SD and MSP registration thresholds and the group A, group B, and group C requirements.

Commission regulations 23.23(b) and (c), which address the cross-border application of the SD and MSP registration thresholds, respectively, potentially could lead to non-U.S. persons that are currently not registered as SDs or MSPs to exceed the relevant registration thresholds, therefore requiring the non-U.S. persons to register as SDs or MSPs. However, the Commission believes that the Final Rule will not result in any new registered SDs or MSPs or the deregistration of registered SDs,[517] and therefore, it does not believe an amendment to any existing collection of information is necessary as a result of § 23.23(b) and (c). Specifically, the Commission does not believe the Final Rule will change the number of respondents under the existing collection of information, ''Registration of Swap Dealers and Major Swap Participants,'' Office of Management and Budget (''OMB'') Control No. 3038–0072.

Similarly, § 23.23(h)(1) contains collection of information requirements within the meaning of the PRA as it requires that swap entities create a record of their compliance with § 23.23 and retain records in accordance with § 23.203; however, the Commission believes that records suitable to demonstrate compliance are already required to be created and maintained under the collections related to the

[508] As noted in section V, *supra,* the ANE Staff Advisory and related ANE No-Action Relief has been withdrawn contemporaneously with promulgation of the Final Rule, while Commission staff has provided new no-action relief concerning the Unaddressed TLRs in the context of ANE Transactions.

[509] *See* 5 U.S.C. 601 *et seq.*

[510] *See* Policy Statement and Establishment of Definitions of ''Small Entities'' for Purposes of the Regulatory Flexibility Act, 47 FR 18618 (Apr. 30, 1982) (finding that DCMs, FCMs, CPOs, and large traders are not small entities for RFA purposes).

[511] Final § 23.23(b) through (d).

[512] Final § 23.23(e) through (g).

[513] *See* Entities Rule, 77 FR at 30701; Registration of Swap Dealers and Major Swap Participants, 77 FR 2613, 2620 (Jan. 19, 2012) (noting that like FCMs, SDs will be subject to minimum capital requirements, and are expected to be comprised of large firms, and that MSPs should not be considered to be small entities for essentially the same reasons that it previously had determined large traders not to be small entities).

[514] The SBA's Small Business Size Regulations, codified at 13 CFR 121.201, identifies (through North American Industry Classification System codes) a small business size standard of $38.5 million or less in annual receipts for Sector 52, Subsector 523—Securities, Commodity Contracts, and Other Financial Investments and Related Activities. Entities that are affected by the Final Rule are generally large financial institutions or other large entities that are required to include their cross-border dealing transactions or swap positions toward the SD and MSP registration thresholds, respectively, as specified in the Final Rule.

[515] The Final Rule addresses the cross-border application of the registration and certain other regulations. The Final Rule does not change such regulations.

[516] 44 U.S.C. 3501 *et seq.*

[517] There are not currently any registered MSPs.

Commission's swap entity registration, and group B and group C requirements. Specifically, existing collections of information, ''Confirmation, Portfolio Reconciliation, and Portfolio Compression Requirements for Swap Dealers and Major Swap Participants,'' OMB Control No. 3038–0068; ''Registration of Swap Dealers and Major Swap Participants,'' OMB Control No. 3038–0072; ''Swap Dealer and Major Swap Participant Conflicts of Interest and Business Conduct Standards with Counterparties,'' OMB Control No. 3038–0079; ''Confirmation, Portfolio Reconciliation, Portfolio Compression, and Swap Trading Relationship Documentation Requirements for Swap Dealers and Major Swap Participants,'' OMB Control No. 3038–0083; ''Reporting, Recordkeeping, and Daily Trading Records Requirements for Swap Dealers and Major Participants,'' OMB Control No. 3038–0087; and ''Confirmation, Portfolio Reconciliation, Portfolio Compression, and Swap Trading Relationship Documentation Requirements for Swap Dealers and Major Swap Participants,'' OMB Control No. 3038–0088 relate to these requirements.[518] Accordingly, the Commission is not submitting to OMB an information collection request to create a new information collection in relation to § 23.23(h)(1).

Final § 23.23(g) results in collection of information requirements within the meaning of the PRA, as discussed below. The Final Rule contains collections of information for which the Commission has not previously received control numbers from the OMB. Responses to this collection of information are required to obtain or retain benefits. An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid control number. The Commission has submitted to OMB an information collection request to create a new information collection under OMB control number 3038–0072 (Registration of Swap Dealers and Major Swap Participants) for the collections contained in the Final Rule.

As discussed in section VI.C above, the Commission is permitting a non-U.S. swap entity or foreign branch of a U.S. swap entity to comply with a foreign jurisdiction's swap standards in lieu of the Commission's corresponding group A and group B requirements in certain cases, provided that the Commission determines that such foreign standards are comparable to the Commission's requirements. Commission regulation 23.23(g) implements a process pursuant to which the Commission will conduct these comparability determinations, including outlining procedures for initiating such determinations. As discussed in section VI.D above, a comparability determination could be requested by swap entities that are eligible for substituted compliance, their trade associations, and foreign regulatory authorities meeting certain requirements.[519] Applicants seeking a comparability determination are required to furnish certain information to the Commission that provides a comprehensive explanation of the foreign jurisdiction's relevant swap standards, including how they might differ from the corresponding requirements in the CEA and Commission regulations and how, notwithstanding such differences, the foreign jurisdiction's swap standards achieve comparable outcomes to those of the Commission.[520] The information collection is necessary for the Commission to consider whether the foreign jurisdiction's relevant swap standards are comparable to the Commission's requirements.

Though under the Final Rule many entities are eligible to request a comparability determination,[521] the Commission expects to receive far fewer requests because once a comparability determination is made for a jurisdiction it applies for all entities or transactions in that jurisdiction to the extent provided in the Commission's determination. Further, the Commission has already issued comparability determinations under the Guidance for certain of the Commission's requirements for Australia, Canada, the European Union, Hong Kong, Japan, and Switzerland,[522] and the effectiveness of those determinations is not affected by the Final Rule. Nevertheless, in an effort to be conservative in its estimate for purposes of the PRA, the Commission estimates that it will receive a request for a comparability determination in relation to five (5) jurisdictions per year under the Final Rule. Further, based on the Commission's experience in issuing comparability determinations, the Commission estimates that each request would impose an average of 40 burden hours, for an aggregate estimated hour burden of 200 hours. Accordingly, the changes are estimated to result in an increase to the current burden estimates of OMB control number 3038–0072 by 5 in the number of submissions and 200 burden hours.

The frequency of responses and total new burden associated with OMB control number 3038–0072, in the aggregate, reflecting the new burden associated with all the amendments made by the Final Rule and current burden not affected by this Final Rule,[523] is as follows:

Estimated annual number of respondents: 770.

Estimated aggregate annual burden hours per respondent: 1.13 hours.

Estimated aggregate annual burden hours for all respondents: 872.

Frequency of responses: As needed.

Information Collection Comments. In the Proposed Rule, the Commission requested comments on the information collection requirements discussed above, including, without limitation, on the Commission's discussion of the estimated burden of the collection of information requirements in proposed § 23.23(h) (§ 23.23(h)(1) in the Final Rule). The Commission did not receive any such comments.

C. Cost-Benefit Considerations

As detailed above, the Commission is adopting rules that define certain key terms for purposes of certain Dodd-Frank Act swap provisions and that address the cross-border application of the SD and MSP registration thresholds and the Commission's group A, group B, and group C requirements.

Since issuing the Proposed Rule, the baseline against which the costs and benefits of the Final Rule are considered is unchanged and is, in principle, current law: In other words, applicable Dodd-Frank Act swap provisions in the CEA and regulations promulgated by the Commission to date, as made applicable to cross-border transactions by Congress in CEA section 2(i), in the absence of a

[518] To the extent a swap entity avails itself of an exception from a group B or group C requirement under the Final Rule and, thus, is no longer required to comply with the relevant group B and/or group C requirements and related paperwork burdens, the Commission expects the paperwork burden related to that exception would be less than that of the corresponding requirement(s). However, in an effort to be conservative, because the Commission does not know how many swap entities will choose to avail themselves of the exceptions and for how many foreign-based swaps, the Commission is not changing the burden of its related collections to reflect the availability of such exceptions.

[519] Final § 23.23(g)(2).

[520] Final § 23.23(g)(3).

[521] Currently, there are approximately 108 swap entities provisionally registered with the Commission, many of which may be eligible to apply for a comparability determination as a non-U.S. swap entity or a foreign branch. Additionally, a trade association, whose members include swap entities, and certain foreign regulators may also apply for a comparability determination.

[522] *See supra* notes 215 and 484.

[523] The numbers below reflect the current burden for two separate information collections that are not affected by this rulemaking.

Commission rule establishing more precisely the application of that provision in particular situations. However, in practice, use of this baseline poses important challenges, for a number of reasons.

First, there are intrinsic difficulties in sorting out costs and benefits of the Final Rule from costs and benefits intrinsic to the application of Dodd-Frank Act requirements to cross-border transactions directly pursuant to section 2(i), given that the statute sets forth general principles for the cross-border application of Dodd-Frank Act swap requirements but does not attempt to address particular business situations in detail.

Second, the Guidance established a general, non-binding framework for the cross-border application of many substantive Dodd-Frank Act requirements. In doing so, the Guidance considered, among other factors, the regulatory objectives of the Dodd-Frank Act and principles of international comity. As is apparent from the text of the Final Rule and the discussion in this preamble, the Final Rule is in certain respects consistent with the Guidance. The Commission understands that while the Guidance is non-binding, many market participants have developed policies and practices that take into account the views expressed therein. At the same time, some market participants may currently apply CEA section 2(i), the regulatory objectives of the Dodd-Frank Act, and principles of international comity in ways that vary from the Guidance, for example because of circumstances not contemplated by the general, non-binding framework in the Guidance.

Third, in addition to the Guidance, the Commission has issued comparability determinations finding that certain provisions of the laws and regulations of other jurisdictions are comparable in outcome to certain requirements under the CEA and regulations thereunder.[524] In general, under these determinations, a market participant that complies with the specified provisions of the other jurisdiction would also be deemed to be in compliance with Commission regulations, subject to certain conditions.[525]

Fourth, the Commission staff has issued several interpretive and no-action letters that are relevant to cross-border issues.[526] As with the Guidance, the Commission recognizes that many market participants have relied on these staff letters in framing their business practices.

Fifth, as noted above, the international regulatory landscape is far different now than it was when the Dodd-Frank Act was enacted in 2010.[527] Even in 2013, when the CFTC published the Guidance, very few jurisdictions had made significant progress in implementing the global swap reforms that were agreed to by the G20 leaders at the Pittsburgh G20 Summit. Today, however, as a result of cumulative implementation efforts by regulators throughout the world, substantial progress has been made in the world's primary swap trading jurisdictions to implement the G20 commitments. For these reasons, the actual costs and benefits of the Final Rule that are experienced by a particular market participant may vary depending on the jurisdictions in which the market participant is active and when the market participant took steps to comply with various legal requirements.

Because of these complicating factors, as well as limitations on available information, the Commission believes that a direct comparison of the costs and benefits of the Final Rule with those of a hypothetical cross-border regime based directly on section 2(i)—while theoretically the ideal approach—is infeasible in practice. As a further complication, the Commission recognizes that the Final Rule's costs and benefits would exist, regardless of whether a market participant: (1) First realized some of those costs and benefits when it conformed its business practices to provisions of the Guidance or Commission staff action that will be binding legal requirements under the Final Rule; (2) does so now for the first time; or (3) did so in stages as international requirements evolved.

In light of these considerations and given that there were no public comments regarding the baseline outlined in the Proposed Rule, the Commission has considered costs and benefits by focusing primarily on two types of information and analysis.

First, the Commission compared the Final Rule with current business practices, with the understanding that many market participants are now conducting business taking into account, among other things, the Guidance, applicable CFTC staff letters, and existing comparability determinations. This approach, for example, included a comparison of the expected costs and benefits of conducting business under the Final Rule with those of conducting business in conformance with analogous provisions of the Guidance. In effect, this analysis included an examination of new costs and benefits that will result from the Final Rule for market participants that are currently following the relevant Dodd-Frank Act swap provisions and regulations thereunder, the Guidance, the comparability determinations, the Cross-Border Margin Rule, and applicable staff letters. This is referred to as ''Baseline A.''

Second, to the extent feasible, the Commission considered relevant information on costs and benefits that market participants have incurred to date in complying with the Dodd-Frank Act in cross-border transactions of the type that will be affected by the Final Rule, absent the Guidance. This second form of analysis is, to some extent, over-inclusive in that it is likely to capture some costs and benefits that flow directly from Congress's enactment of section 2(i) of the CEA or that otherwise are not strictly attributable to the Final Rule. However, since a theoretically perfect baseline for consideration of costs and benefits does not appear feasible, this second form of analysis helps ensure that costs and benefits of the Final Rules are considered as fully as possible. This is referred to as ''Baseline B.''

The Commission requested comments regarding all aspects of the baselines applied in this consideration of costs and benefits, including a discussion of any variances or different circumstances commenters have experienced that affect the baseline for those commenters. While no commenters questioned the Commission's defined baseline, the Commission received a few cost-benefit related comments that are addressed in the relevant sections of this discussion.

The costs associated with the key elements of the Commission's cross-border approach to the SD and MSP registration thresholds—requiring market participants to classify themselves as U.S. persons, Guaranteed Entities, or SRSs[528] and to apply the rules accordingly—fall into a few categories. Market participants will incur costs determining which category of market participant they and their counterparties fall into (''assessment

[528] Final § 23.23(a).

costs''), tracking their swap activities or positions to determine whether they should be included in their registration threshold calculations (''monitoring costs''), and, to the degree that their activities or positions exceed the relevant threshold, registering with the Commission as an SD or MSP (''registration costs'').

Entities required to register as SDs or MSPs as a result of the Final Rule will also incur costs associated with complying with the relevant Dodd-Frank Act requirements applicable to registrants, such as the capital, margin, and business conduct requirements (''programmatic costs'').[529] While only new registrants will assume these programmatic costs for the first time, the obligations of entities that are already registered as SDs may also change in the future as an indirect consequence of the Final Rule.

In developing the Final Rule, the Commission took into account the potential for creating or accentuating competitive disparities between market participants, which could contribute to market deficiencies, including market fragmentation or decreased liquidity, as more fully discussed below. Notably, competitive disparities may arise between U.S.-based financial groups and non-U.S. based financial groups as a result of differences in how the SD and MSP registration thresholds apply to the various classifications of market participants. For instance, an SRS must count all dealing swaps toward its SD de minimis calculation. Therefore, SRSs are more likely to trigger the SD registration threshold relative to Other Non-U.S. Persons, and may therefore be at a competitive disadvantage compared to Other Non-U.S. Persons when trading with non-U.S. persons, as non-U.S. persons may prefer to trade with non-registrants in order to avoid application of the Dodd-Frank Act swap regime.[530] On the other hand, certain counterparties may prefer to enter into swaps with SDs and MSPs that are subject to the robust requirements of the Dodd-Frank Act.

Other factors also create inherent challenges associated with attempting to assess costs and benefits of the Final Rule. To avoid the prospect of being regulated as an SD or MSP, or otherwise falling within the Dodd-Frank Act swap regime, some market participants may restructure their businesses or take other steps (*e.g.,* limiting their counterparties to Other Non-U.S. Persons) to avoid exceeding the relevant registration thresholds. The degree of comparability between the approaches adopted by the Commission and foreign jurisdictions and the potential availability of substituted compliance, whereby a market participant may comply with certain Dodd-Frank Act SD or MSP requirements by complying with a comparable requirement of a foreign financial regulator, may also affect the competitive effect of the Final Rule. The Commission expects that such effects will be mitigated as the Commission continues to work with foreign and domestic regulators to achieve international harmonization and cooperation.

In the sections that follow, the Commission discusses the costs and benefits associated with the Final Rule.[531] Section 1 discusses the main benefits of the Final Rule. Section 2 begins by addressing the assessment costs associated with the Final Rule, which derive in part from the defined terms used in the Final Rule (*e.g.,* the definitions of ''U.S. person,'' ''significant risk subsidiary,'' and ''guarantee''). Sections 3 and 4 consider the costs and benefits associated with the Final Rule's determinations regarding how each classification of market participants applies to the SD and MSP registration thresholds, respectively. Sections 5, 6, and 7 address the monitoring, registration, and programmatic costs associated with the Final Rule's cross-border approach to the SD (and, as appropriate, MSP) registration thresholds, respectively. Section 8 addresses the costs and benefits associated with the Final Rule's exceptions from, and available substituted compliance for, the group A, group B, and group C requirements, as well as comparability determinations. Section 9 addresses the costs associated with the Final Rule's recordkeeping requirements. Section 10 discusses the factors established in section 15(a) of the CEA.

1. Benefits

The main benefits of the Final Rule are two-fold: (1) Legal certainty; and (2) creating and continuing to maintain a harmonized regulatory framework internationally that shows deference to other countries' laws and regulations when such laws and regulations achieve comparable outcomes, a construct known as comity. The clarity of the Final Rule makes it easier for market participants to comply with the Commission's regulations, to conduct business in a well-organized, efficient way, and to re-allocate resources from compliance to other areas, such as productivity, business development, and innovation.

Congress directed the Commission in the Dodd-Frank Act to ''coordinate with foreign regulatory authorities on the establishment of consistent international standards with respect to the regulation'' of swaps and SDs and MSPs.[532] In doing so, the Commission is acting in the public interest and employing comity as one of the justifications for the choices the Commission is making in the Final Rule. For example, the provision of substituted compliance in the Final Rule allows some market participants to elect a regulatory jurisdiction that best suits their needs. Accordingly, some market participants may choose the U.S. as a jurisdiction in which to register and operate to achieve benefits such as robust SD requirements, third-party custodial arrangements, transparent exchanges, and bankruptcy regimes that have strong property rights and tend to lead to assets being recovered sooner than some other regimes. Therefore, the Commission believes that substituted compliance may lead to more effective regulation over time as regulators are incentivized to have their jurisdiction be chosen over other jurisdictions, and to modify ineffective or inefficient regulation as needed to adapt to market innovations and other changes that occur over time. The Commission recognizes, however, that such provision may present an opportunity for regulatory arbitrage, which could undermine the fundamental principles of the reduction of systemic risk and the promotion of market integrity.

2. Assessment Costs

As discussed above, in applying the Final Rule's cross-border approach to the SD and MSP registration thresholds,

[529] The Commission's discussion of programmatic costs and registration costs does not address MSPs. No entities are currently registered as MSPs, and the Commission does not expect that this status quo will change as a result of the Final Rule being adopted given the general similarities between the Final Rule's approach to the MSP registration threshold calculations and the Guidance.

[530] Dodd-Frank Act swap requirements may impose significant direct costs on participants falling within the SD or MSP definitions that are not borne by other market participants, including costs related to capital and margin requirements and business conduct requirements. To the extent that foreign jurisdictions adopt comparable requirements, these costs would be mitigated.

[531] The Commission endeavors to assess the expected costs and benefits of its rules in quantitative terms where possible. Where estimation or quantification is not feasible, the Commission provides its discussion in qualitative terms. Given a general lack of relevant data, the Commission's analysis in the Final Rule is generally provided in qualitative terms.

[532] *See* Dodd-Frank Act, section 752(a); 15 U.S.C. 8325.

market participants are required to first classify themselves as a U.S. person, an SRS, a Guaranteed Entity, or an Other Non-U.S. Person.

With respect to Baseline A, the Commission expects that the costs to affected market participants of assessing which classification they fall into will generally be small and incremental. In most cases, the Commission believes an entity will have performed an initial determination or assessment of its status under either the Cross-Border Margin Rule (which uses substantially similar definitions of ''U.S. person'' and ''guarantee'') or the Guidance (which interprets ''U.S. person'' in a manner that is similar but not identical to the Final Rule's definition of ''U.S. person''). Harmonizing the ''U.S. person'' definition in the Final Rule with the definition in the SEC Cross-Border Rule is also expected to reduce undue compliance costs for market participants. Additionally, the Final Rule allows market participants to rely on representations from their counterparties with regard to their classifications.[533] However, the Commission acknowledges that swap entities will have to modify their existing operations to accommodate the new concept of an SRS. Specifically, market participants must determine whether they qualify as SRSs. Further, in order to rely on certain exceptions outlined in the Final Rule, swap entities must ascertain whether they or their counterparty qualify as an SRS.

With respect to Baseline B, wherein only certain market participants have previously determined their status under the similar, but not identical, Cross-Border Margin Rule (and not the Guidance), the Commission believes that their assessment costs will nonetheless be small as a result of the Final Rule's reliance on clear, objective definitions of the terms ''U.S. person,'' ''significant risk subsidiary,'' and ''guarantee.'' Further, with respect to the determination of whether a market participant falls within the ''significant risk subsidiary'' definition,[534] the Commission believes that assessment costs are small as the definition relies, in part, on a familiar consolidation test already used by affected market participants in preparing their financial statements under U.S. GAAP. Further, only those market participants with an ultimate U.S. parent entity that has more than $50 billion in global consolidated assets and that do not fall into one of the exceptions in § 23.23(a)(13)(i) or (ii) of the Final Rule must consider if they are an SRS.

Additionally, the Final Rule primarily relies on the definition of ''guarantee'' provided in the Cross-Border Margin Rule, which is limited to arrangements in which one party to a swap has rights of recourse against a guarantor with respect to its counterparty's obligations under the swap.[535] The Final Rule also incorporates the concept of an entity with unlimited U.S. responsibility into the guarantee definition; however, the Commission is of the view that the corporate structure that this prong is designed to capture is not one that is commonly in use in the marketplace. Therefore, although non-U.S. persons must determine whether they are Guaranteed Entities with respect to the relevant swap on a swap-by-swap basis for purposes of the SD and MSP registration calculations, the Commission believes that this information is already known by non-U.S. persons.[536] Accordingly, with respect to both baselines, the Commission believes that the costs associated with assessing whether an entity or its counterparty is a Guaranteed Entity is small and incremental.

Better Markets commented that the proposed definition of ''guarantee,'' which was narrower than that in the Guidance, would increase systemic risk and hinder other public interest objectives by possibly excluding certain arrangements that may import risk into the United States. In the Proposed Rule, the Commission stated that the alignment of the definitions of ''guarantee'' in this rulemaking and the Cross-Border Margin Rule would benefit market participants to the extent that they would not be required to make a separate independent assessment of a counterparty's guarantee status. Better Markets stated that this benefit to market participants does not outweigh or reasonably approximate the potential costs to the underlying policy objectives of the Dodd-Frank Act, including promoting the safety and soundness of SDs, preventing disruptions to the derivatives markets, ensuring the financial integrity of swaps transactions and the avoidance of systemic risk, and preserving the stability of the U.S. financial system. The Commission has carefully considered the attendant costs and benefits of narrowing the definition of ''guarantee'' from the Guidance, and continues to believe, however, that the alignment of the ''guarantee'' definitions in this Final Rule and the Cross-Border Margin Rule serves to reduce costs to market participants without sacrificing the attendant policy goals of the Dodd-Frank Act. The Commission will continue to monitor arrangements that were previously considered guarantees that could shift risk back to the U.S. swap market, in general, and take appropriate action as warranted in the future.

3. Cross-Border Application of the SD Registration Threshold

(i) U.S. Persons, Guaranteed Entities, and SRSs

Under the Final Rule, a U.S. person must include all of its swap dealing transactions in its de minimis calculation, without exception.[537] As discussed above, that includes any swap dealing transactions conducted through a U.S. person's foreign branch, as such swaps are directly attributed to, and therefore affect, the U.S. person. Given that this requirement mirrors the Guidance in this respect, the Commission believes that the Final Rule will have a negligible effect on the status quo with regard to the number of registered or potential U.S. SDs, as measured against Baseline A.[538] With respect to Baseline B, all U.S. persons would have included all of their transactions in their de minimis calculation, even absent the Guidance, pursuant to paragraph (4) of the SD definition.[539] However, the Commission acknowledges that, absent the Guidance, some U.S. persons may not have interpreted CEA section 2(i) to require them to include swap dealing transactions conducted through their foreign branches in their de minimis calculation. Accordingly, with respect

[533] The Commission believes that these assessment costs for the most part have already been incurred by potential SDs and MSPs as a result of adopting policies and procedures under the Guidance and Cross-Border Margin Rule (which had similar classifications), both of which permitted counterparty representations. *See* Guidance, 78 FR at 45315; Cross-Border Margin Rule, 81 FR at 34827.

[534] The ''substantial risk subsidiary'' definition is discussed further in section II.D, *supra.*

[535] *See supra* section II.C.

[536] Because a guarantee has a significant effect on pricing terms and on recourse in the event of a counterparty default, the Commission believes that the guarantee would already be in existence and that a non-U.S. person therefore would have knowledge of its existence before entering into a swap.

[537] Final § 23.23(b)(1).

[538] The Commission is not estimating the number of new U.S. SDs, as the methodology for including swaps in a U.S. person's SD registration calculation does not diverge from the approach included in the Guidance (*i.e.,* a U.S. person must include all of its swap dealing transactions in its de minimis threshold calculation). Further, the Commission does not expect a change in the number of SDs will result from the Final Rule's definition of U.S. person and therefore assumes that no additional entities will register as U.S. SDs, and no existing U.S.-SD registrants will deregister as a result of the Final Rule.

[539] *See* 17 CFR 1.3, Swap dealer, paragraph (4).

to Baseline B, the Commission expects that some U.S. persons may incur some incremental costs as a result of having to count swaps conducted through their foreign branches.

The Final Rule also requires Guaranteed Entities to include all of their swap dealing transactions in their de minimis threshold calculation without exception.[540] This approach, which recognizes that a Guaranteed Entity's swap dealing transactions may have the same potential to affect the U.S. financial system as a U.S. person's dealing transactions, closely parallels the approach taken in the Guidance with respect to the treatment of the swaps of ''guaranteed affiliates.''[541] Given that the Final Rule establishes a more limited definition of ''guarantee'' as compared to the Guidance, and a similar definition of guarantee as compared to the Cross-Border Margin Rule, the Commission does not expect that the Final Rule will cause more Guaranteed Entities to register with the Commission. Accordingly, the Commission believes that, in this respect, any increase in costs associated with the Final Rule, with respect to Baselines A and B, will be small.

Under the Final Rule, an SRS must include all swap dealing transactions in its de minimis threshold calculation.[542] Given that the concept of an SRS was not included in the Guidance or the Cross-Border Margin Rule, the Commission believes that this aspect of the Final Rule will have a similar effect on market participants when measured against Baseline A and Baseline B. Under the Guidance, an SRS would likely have been categorized as either a conduit affiliate (which would have been required to count all dealing swaps towards its de minimis threshold calculation) or a non-U.S. person that is neither a conduit affiliate nor a guaranteed affiliate (which would have been required to count only a subset of its dealing swaps towards its de minimis threshold calculation). Accordingly, under the Final Rule, there may be some SRSs that will have to count more swaps towards their de minimis threshold calculation than would have been required under the Guidance.

However, as noted in sections II.D and III.B.1, the Commission believes that it is appropriate to distinguish SRSs from Other Non-U.S. Persons in determining the cross-border application of the SD de minimis threshold to such entities. As discussed above, SRSs, as a class of entities, present a greater supervisory interest to the CFTC relative to Other Non-U.S. Persons, due to the nature and extent of their relationships with their ultimate U.S. parent entities. Of the 61 non-U.S. SDs that were provisionally registered with the Commission as of July 2020, the Commission believes that few, if any, will be classified as SRSs pursuant to the Final Rule. With respect to Baseline A, any potential SRSs would have likely classified themselves as a conduit affiliate or a non-U.S. person that is neither a conduit affiliate nor a guaranteed affiliate pursuant to the Guidance. Accordingly, some may incur incremental costs associated with assessing and implementing the additional counting requirements for SRSs. With respect to Baseline B, the Commission believes that most potential SRSs would have interpreted section 2(i) so as to require them to count their dealing swaps with U.S. persons, but acknowledges that some may not have interpreted section 2(i) so as to require them to count swaps with non-U.S. persons toward their de minimis calculation. Accordingly, such non-U.S. persons will incur the incremental costs associated with the additional SRS counting requirements contained in the Final Rule. The Commission believes that the SRS de minimis calculation requirements will prevent regulatory arbitrage by ensuring that certain entities do not simply book swaps through a non-U.S. affiliate to avoid CFTC registration. Accordingly, the Commission believes that such provisions will benefit the swap market by ensuring that the Dodd-Frank Act swap provisions addressed by the Final Rule are applied specifically to entities whose activities, in the aggregate, have a direct and significant connection to, and effect on, U.S. commerce.

(ii) Other Non-U.S. Persons

Under the Final Rule, non-U.S. persons that are neither Guaranteed Entities nor SRSs are required to include in their de minimis threshold calculations swap dealing activities with U.S. persons (other than swaps conducted through a foreign branch of a registered SD) and certain swaps with Guaranteed Entities.[543] The Final Rule does not, however, require Other Non-U.S. Persons to include swap dealing transactions with: (1) Guaranteed Entities that are SDs; (2) Guaranteed Entities that are affiliated with an SD and are also below the de minimis threshold; (3) Guaranteed Entities that are guaranteed by a non-financial entity; (3) SRSs (other than SRSs that are also Guaranteed Entities and no other exception applies); or (4) Other Non-U.S. Persons. Additionally, Other Non-U.S. Persons are not required to include in their de minimis calculation any transaction that is executed anonymously on a DCM, registered or exempt SEF, or registered FBOT, and cleared through a registered or exempt DCO.

The Commission believes that requiring all non-U.S. persons to include their swap dealing transactions with U.S. persons in their de minimis calculations is necessary to advance the goals of the Dodd-Frank Act SD registration regime, which focuses on U.S. market participants and the U.S. market. As discussed above, the Commission believes it is appropriate to allow Other Non-U.S. Persons to exclude swaps conducted through a foreign branch of a registered SD because, generally, such swaps would be subject to Dodd-Frank Act transactional requirements and, therefore, will not evade the Dodd-Frank Act regime.

Given that these requirements are consistent with the Guidance in most respects, the Commission believes that the Final Rule will have a negligible effect on Other Non-U.S. Persons, as measured against Baseline A. With respect to Baseline B, the Commission believes that most non-U.S. persons would have interpreted CEA section 2(i) to require them to count their dealing swaps with U.S. persons, but acknowledges that some non-U.S. persons may not have interpreted 2(i) so as to require them to count such swaps with non-U.S. persons toward their de minimis calculation. Accordingly, such non-U.S. persons will incur the incremental costs associated with the counting requirements for Other Non-U.S. Persons contained in the Final Rule.

The Commission recognizes that the Final Rule's cross-border approach to

[540] Final § 23.23(b)(2)(ii).

[541] While the Final Rule and the Guidance treat swaps involving Guaranteed Entities in a similar manner, they have different definitions of the term ''guarantee.'' Under the Guidance, a ''guaranteed affiliate'' would generally include all swap dealing activities in its de minimis threshold calculation without exception. The Guidance interpreted ''guarantee'' to generally include ''not only traditional guarantees of payment or performance of the related swaps, but also other formal arrangements that, in view of all the facts and circumstances, support the non-U.S. person's ability to pay or perform its swap obligations with respect to its swaps.'' *See* Guidance, 78 FR at 45320. In contrast, the term ''guarantee'' in the Final Rule has the same meaning as defined in § 23.160(a)(2) (cross-border application of the Commission's margin requirements for uncleared swaps), except that application of the definition of ''guarantee'' in the Final Rule is not limited to uncleared swaps, and also now incorporates the concept of ''unlimited U.S. responsibility.'' *See supra* section II.C.

[542] Final § 23.23(b)(1).

[543] Final § 23.23(b)(2).

the de minimis threshold calculation could contribute to competitive disparities arising between U.S.-based financial groups and non-U.S. based financial groups. Potential SDs that are U.S. persons, SRSs, or Guaranteed Entities will be required to include all of their swap dealing transactions in their de minimis threshold calculations. In contrast, Other Non-U.S. Persons will be permitted to exclude certain dealing transactions from their de minimis calculations. As a result, Guaranteed Entities and SRSs may be at a competitive disadvantage, as more of their swap activity will apply toward the de minimis threshold (and thereby trigger SD registration) relative to Other Non-U.S. Persons.[544] While the Commission does not believe that any additional Other Non-U.S. Persons will be required to register as a SD under the Final Rule, the Commission acknowledges that to the extent that one does, its non-U.S. person counterparties (clients and dealers) may possibly cease transacting with it in order to operate outside the Dodd-Frank Act swap regime.[545] Additionally, unregistered non-U.S. dealers may be able to offer swaps on more favorable terms to non-U.S. persons than their registered competitors because they are not required to incur the costs associated with CFTC registration.[546]

As noted above, however, the Commission believes that these competitive disparities will be mitigated to the extent that foreign jurisdictions impose comparable requirements. Given that the Commission has found many foreign jurisdictions comparable with respect to various aspects of the Dodd-Frank Act swap requirements, the Commission believes that such competitive disparities will be negligible.[547] Further, as discussed below, the Commission is adopting a flexible standard of review for comparability determinations relating to the group A and group B requirements that will be issued pursuant to the Final Rule, which will serve to further mitigate any competitive disparities arising out of disparate regulatory regimes. Finally, the Commission reiterates its belief that the cross-border approach to the SD registration threshold taken in the Final Rule is appropriately tailored to further the policy objectives of the Dodd-Frank Act while mitigating unnecessary burdens and disruption to market practices to the extent possible.

(iii) Aggregation Requirement

The Final Rule also addresses the cross-border application of the aggregation requirement in a manner consistent with the Entities Rule and CEA section 2(i). Specifically, paragraph (4) of the SD definition in § 1.3 requires that, in determining whether its swap dealing transactions exceed the de minimis threshold, a person must include the aggregate notional amount of any swap dealing transactions entered into by its affiliates under common control. Consistent with CEA section 2(i), the Commission interprets this aggregation requirement in a manner that applies the same aggregation principles to all affiliates in a corporate group, whether they are U.S. or non-U.S. persons. In general, the Commission's approach allows both U.S. persons and non-U.S. persons in an affiliated group to engage in swap dealing activity up to the de minimis threshold. When the affiliated group meets the de minimis threshold in the aggregate, one or more affiliate(s) (a U.S. affiliate or a non-U.S. affiliate) have to register as an SD so that the relevant swap dealing activity of the unregistered affiliates remains below the threshold. The Commission's approach ensures that the aggregate gross notional amount of applicable swap dealing transactions of all such unregistered U.S. and non-U.S. affiliates does not exceed the de minimis level.

Given that this approach is consistent with the Guidance, the Commission believes that market participants will only incur incremental costs with respect to Baseline A in modifying their existing systems and policies and procedures in response to the Final Rule. Absent the Guidance, the Commission believes that most market participants would have relied on the interpretation of the aggregation requirement in the Entities Rule, which is similar to the approach set forth in the Final Rule. Accordingly, with respect to Baseline B, the Commission believes that market participants will only incur incremental costs in modifying their existing systems and policies and procedures in response to the Final Rule.

4. Cross-Border Application of the MSP Registration Thresholds

(i) U.S. Persons, Guaranteed Entities, and SRSs

The Final Rule's approach to the cross-border application of the MSP registration thresholds closely mirrors the approach for the SD registration threshold. Under the Final Rule, a U.S. person must include all of its swap positions in its MSP thresholds, without exception.[548] As discussed above, that includes any swap conducted through a U.S. person's foreign branch, as such swaps are directly attributed to, and therefore affect, the U.S. person. Given that this requirement is consistent with the Guidance in this respect, the Commission believes that the Final Rule will have a minimal effect on the status quo with regard to the number of potential U.S. MSPs, as measured against Baseline A. With respect to Baseline B, all of a U.S. person's swap positions would apply toward the MSP threshold calculations, even absent the Guidance, pursuant to paragraph (6) of the MSP definition.[549] However, the Commission acknowledges that, absent the Guidance, some U.S. persons may not have interpreted CEA section 2(i) to require them to include swaps conducted through their foreign branches in their MSP threshold calculations. Accordingly, with respect to Baseline B, the Commission expects that some U.S. persons may incur incremental costs as a result of having to count swaps conducted through their foreign branches.

The Final Rule also requires Guaranteed Entities to include all of their swap positions in their MSP threshold calculations without exception.[550] This approach, which recognizes that such swap transactions may have the same potential to affect the U.S. financial system as a U.S. person's swap positions, closely parallels the approach taken in the Guidance with respect to ''conduit affiliates'' and ''guaranteed affiliates.'' [551] The Commission believes that few, if any, additional MSPs will qualify as Guaranteed Entities pursuant to the Final Rule, as compared to Baseline A. Accordingly, the Commission believes that, in this

[544] On the other hand, as noted above, the Commission acknowledges that some market participants may prefer to enter into swaps with counterparties that are subject to the swaps provisions adopted pursuant to the Dodd-Frank Act. Further, Guaranteed Entities and SRSs may enjoy other competitive advantages due to the support of their guarantor or ultimate U.S. parent entity.

[545] Additionally, some unregistered dealers may opt to withdraw from the market, thereby contracting the number of dealers competing in the swaps market, which may have an adverse effect on competition and liquidity.

[546] These non-U.S. dealers also may be able to offer swaps on more favorable terms to U.S. persons, giving them a competitive advantage over U.S. competitors with respect to U.S. counterparties.

[547] *See supra* notes 215 and 484.

[548] Final § 23.23(c)(1).

[549] 17 CFR 1.3, Major swap participant, paragraph (6).

[550] Final § 23.23(c)(2)(ii).

[551] *See* Guidance, 78 FR at 45319–45320.

respect, any increase in costs associated with the Final Rule will be small.

Under the Final Rule, an SRS must also include all of its swap positions in its MSP threshold calculations.[552] Under the Guidance, an SRS would likely have been categorized as either a conduit affiliate (which would have been required to count all its swap positions towards its MSP threshold calculations) or a non-U.S. person that is neither a conduit affiliate nor a guaranteed affiliate (which would have been required to count only a subset of its swap positions towards its MSP threshold calculations). Unlike an Other Non-U.S. Person, SRSs will additionally be required to include in their MSP threshold calculations any transaction that is executed anonymously on a DCM, registered or exempt SEF, or registered FBOT, and cleared through a registered or exempt DCO.

As noted in sections II.D and IV.B.1, the Commission believes that it is appropriate to distinguish SRSs from Other Non-U.S. Persons in determining the cross-border application of the MSP thresholds to such entities, as well as with respect to the Dodd-Frank Act swap provisions addressed by the Final Rule more generally. As discussed above, SRSs, as a class of entities, present a greater supervisory interest to the CFTC relative to Other Non-U.S. Persons, due to the nature and extent of the their relationships with their ultimate U.S. parent entities. Therefore, the Commission believes that it is appropriate to require SRSs to include more of their swap positions in their MSP threshold calculations than Other Non-U.S. Persons do. Additionally, allowing an SRS to exclude all of its non-U.S. swap positions from its calculation could incentivize U.S. financial groups to book their non-U.S. positions into a non-U.S. subsidiary to avoid MSP registration requirements.

Given that this requirement was not included in the Guidance or the Cross-Border Margin Rule, the Commission believes that this aspect of the Final Rule will have a similar effect on market participants when measured against Baseline A and Baseline B. The Commission notes that there are no MSPs registered with the Commission, and expects that few entities will be required to undertake an assessment to determine whether they would qualify as an MSP under the Final Rule. Any such entities would likely have classified themselves as a non-U.S. person that is neither a conduit affiliate nor a guaranteed affiliate pursuant to the Guidance. Accordingly, they may incur incremental costs associated with assessing and implementing the additional counting requirements for SRSs. With respect to Baseline B, the Commission believes that most potential SRSs would have interpreted CEA section 2(i) to require them to count their swap positions with U.S. persons, but acknowledges that some may not have interpreted CEA section 2(i) so as to require them to count swap positions with non-U.S. persons toward their MSP threshold calculations. Accordingly, such SRSs will incur the incremental costs associated with the additional SRS counting requirements contained in the Final Rule. The Commission believes that these SRS calculation requirements will mitigate regulatory arbitrage by ensuring that U.S. entities do not simply book swaps through an SRS affiliate to avoid CFTC registration. Accordingly, the Commission believes that such provisions will benefit the swap market by ensuring that the Dodd-Frank Act swap requirements that are addressed by the Final Rule are applied to entities whose activities have a direct and significant connection to, or effect on, U.S. commerce.

(ii) Other Non-U.S. Persons

Under the Final Rule, Other Non-U.S. Persons are required to include in their MSP calculations swap positions with U.S. persons (other than swaps conducted through a foreign branch of a registered SD) and certain swaps with Guaranteed Entities.[553] The Final Rule does not, however, require Other Non-U.S. Persons to include swap positions with a Guaranteed Entity that is an SD, SRSs (other than SRSs that are also Guaranteed Entities and no other exception applies), or Other Non-U.S. Persons. Additionally, Other Non-U.S. Persons will not be required to include in their MSP threshold calculations any transaction that is executed anonymously on a DCM, a registered or exempt SEF, or registered FBOT, and cleared through a registered or exempt DCO.[554]

Given that these requirements are consistent with the Guidance in most respects, the Commission believes that the Final Rule will have a minimal effect on Other Non-U.S. Persons, as measured against Baseline A. With respect to Baseline B, the Commission believes that most non-U.S. persons would have interpreted CEA section 2(i) to require them to count their swap positions with U.S. persons, but acknowledges that some non-U.S. persons may not have interpreted CEA section 2(i) so as to require them to count swaps with non-U.S. persons toward their MSP threshold calculations. Accordingly, such non-U.S. persons will incur the incremental costs associated with the counting requirements for Other Non-U.S. Persons contained in the Final Rule.

The Commission recognizes that the Final Rule's cross-border approach to the MSP threshold calculations could contribute to competitive disparities arising between U.S.-based financial groups and non-U.S. based financial groups. Potential MSPs that are U.S. persons, SRSs, or Guaranteed Entities will be required to include all of their swap positions. In contrast, Other Non-U.S. Persons will be permitted to exclude certain swap positions from their MSP threshold calculations. As a result, SRSs and Guaranteed Entities may be at a competitive disadvantage, as more of their swap activity will apply toward the MSP calculation and trigger MSP registration relative to Other Non-U.S. Persons. While the Commission does not believe that any additional Other Non-U.S. Persons will be required to register as MSPs under the Final Rule, the Commission acknowledges that to the extent that a currently unregistered non-U.S. person is required to register as an MSP under the Final Rule, its non-U.S. person counterparties may possibly cease transacting with it in order to operate outside the Dodd-Frank Act swap regime.[555] Additionally, unregistered non-U.S. persons may be able to enter into swaps on more favorable terms to non-U.S. persons than their registered competitors because they are not required to incur the costs associated with CFTC registration.[556] As noted above, however, the Commission believes that these competitive disparities will be mitigated to the extent that foreign jurisdictions impose comparable requirements. Further, the Commission reiterates its belief that the cross-border approach to the MSP registration thresholds taken in the Final Rule aims to further the policy objectives of the Dodd-Frank Act while mitigating unnecessary burdens and disruption to market practices to the extent possible.

[552] Final § 23.23(c)(1).

[553] Final § 23.23(c)(2).

[554] Final § 23.23(d).

[555] Additionally, some unregistered swap market participants may opt to withdraw from the market, thereby contracting the number of competitors in the swaps market, which may have an effect on competition and liquidity.

[556] These non-U.S. market participants also may be able to offer swaps on more favorable terms to U.S. persons, giving them a competitive advantage over U.S. competitors with respect to U.S. counterparties.

(iii) Attribution Requirement

The Final Rule also addresses the cross-border application of the attribution requirement in a manner consistent with the Entities Rule and CEA section 2(i) and generally comparable to the approach adopted by the SEC. Specifically, the swap positions of an entity, whether a U.S. or non-U.S. person, should not be attributed to a parent, other affiliate, or guarantor for purposes of the MSP analysis in the absence of a guarantee. Even in the presence of a guarantee, attribution is not required if the entity that enters into the swap directly is subject to capital regulation by the Commission or the SEC, is regulated as a bank in the United States, or is subject to Basel compliant capital standards and oversight by a G20 prudential supervisor. The Final Rule also clarifies that the swap positions of an entity that is required to register as an MSP, or whose MSP registration is pending, is not subject to the attribution requirement. Given that this approach is largely consistent with the Guidance, with certain caveats, the Commission believes that market participants will only incur incremental costs with respect to Baseline A in modifying their existing systems and policies and procedures in response to the Final Rule. Absent the Guidance, the Commission believes that most market participants would have relied on the interpretation of the attribution requirement in the Entities Rule, which is similar to the approach set forth in the Final Rule. Accordingly, with respect to Baseline B, the Commission believes that market participants will only incur incremental costs in modifying their existing systems and policies and procedures in response to the Final Rule. In addition, the Commission believes that consistency with the approach in the SEC Cross-Border Rule will reduce compliance costs for market participants.

5. Monitoring Costs

Under the Final Rule, market participants must continue to monitor their swap activities in order to determine whether they are, or continue to be, required to register as an SD or MSP. With respect to Baseline A, the Commission believes that market participants have developed policies and practices consistent with the cross-border approach to the SD and MSP registration thresholds expressed in the Guidance. Therefore, the Commission believes that market participants will only incur incremental costs in modifying their existing systems and policies and procedures in response to the Final Rule (*e.g.,* determining which swap activities or positions are required to be included in the registration threshold calculations).[557]

For example, with respect to the SD registration threshold, SRSs may have adopted policies and practices in line with the Guidance's approach to non-U.S. persons that are not guaranteed or conduit affiliates and therefore may only be currently counting (or be provisionally registered by virtue of) their swap dealing transactions with U.S. persons, other than foreign branches of U.S. SDs. Although an SRS will be required under the Final Rule to include all dealing swaps in its de minimis calculation, the Commission believes that any increase in monitoring costs for SRSs will be negligible, both initially and on an ongoing basis, because they already have systems that track swap dealing transactions with certain counterparties in place, which includes an assessment of their counterparties' status.[558] The Commission expects that any adjustments made to these systems in response to the Final Rule will be minor.

With respect to Baseline B, the Commission believes that, absent the Guidance, most market participants would have interpreted CEA section 2(i) to require them, at a minimum, to monitor their swap activities with U.S. persons to determine whether they are, or continue to be, required to register as an SD or MSP. Accordingly, such persons will incur the incremental costs in modifying their existing systems and policies and procedures in response to the Final Rule to monitor their swap activity with certain non-U.S. persons. To the extent that market participants did not interpret CEA section 2(i) in such manner, they will incur more substantial costs in implementing such monitoring activities.

6. Registration Costs

With respect to Baseline A, the Commission believes that few, if any, additional non-U.S. persons will be required to register as an SD pursuant to the Final Rule. With respect to Baseline B, the Commission acknowledges that, absent the Guidance, some non-U.S. persons may not have interpreted CEA section 2(i) so as to require them to register with the Commission. Accordingly, a subset of such entities could be required to register with the Commission pursuant to the Final Rule.

The Commission acknowledges that if a market participant is required to register, it will incur registration costs. The Commission previously estimated registration costs in its rulemaking on registration of SDs;[559] however, the costs that may be incurred should be mitigated to the extent that any new SDs are affiliated with an existing SD, as most of these costs have already been realized by the consolidated group. While the Commission cannot anticipate the extent to which any potential new registrants will be affiliated with existing SDs, it notes that most current registrants are part of a consolidated group. The Commission has not included any discussion of registration costs for MSPs because it believes that few, if any, market participants will be required to register as an MSP under the Final Rule, as noted above.

7. Programmatic Costs

With respect to Baseline A, as noted above, the Commission believes that few, if any, additional non-U.S. persons will be required to register as an SD under the Final Rule. With respect to Baseline B, the Commission acknowledges that, absent the Guidance, some non-U.S. persons may not have interpreted CEA section 2(i) so as to require them to register with the Commission. Accordingly, a subset of such entities could be required to register with the Commission pursuant to the Final Rule.

To the extent that the Final Rule acts as a ''gating'' rule by affecting which entities engaged in cross-border swap activities must comply with the SD requirements, the Final Rule will result in increased costs for particular entities that otherwise would not register as an SD and comply with the swap requirements.[560]

8. Exceptions From Group B and Group C Requirements, Availability of Substituted Compliance, and Comparability Determinations

As discussed in section VI above, the Commission, consistent with section 2(i) of the CEA, is adopting exceptions

[557] Although the cross-border approach to the MSP registration threshold calculations in the Final Rule is not identical to the approach included in the Guidance (*see supra* section IV.B), the Commission believes that any resulting increase in monitoring costs resulting from the adoption of the Final Rule will be incremental and de minimis.

[558] *See supra* section X.C.2, for a discussion of assessment costs.

[559] *See* Registration of Swap Dealers and Major Swap Participants, 77 FR at 2623–2625.

[560] As noted above, the Commission believes that few (if any) market participants will be required to register as an MSP under the Final Rule, and therefore it has not included a separate discussion of programmatic costs for registered MSPs in this section.

from, and substituted compliance for, certain group A, group B, and group C requirements applicable to swap entities, as well as the creation of a framework for comparability determinations.

(i) Exceptions

Specifically, as discussed above in section VI, the Final Rule includes: (1) The Exchange-Traded Exception from certain group B and group C requirements for certain anonymously executed, exchange-traded, and cleared foreign-based swaps; (2) the Foreign Swap Group C Exception for certain foreign-based swaps with foreign counterparties; (3) the U.S. Branch Group C Exception, for swaps booked in a U.S. branch with certain foreign counterparties; (4) the Limited Foreign Branch Group B Exception for certain foreign-based swaps of foreign branches of U.S. swap entities with certain foreign counterparties; (5) the Non-U.S. Swap Entity Group B Exception for foreign-based swaps of non-U.S. swap entities that are Other Non-U.S. Persons with certain foreign counterparties; and (6) the Limited Swap Entity SRS/Guaranteed Entity Group B Exception for certain foreign-based swaps of SRS Swap Entities and Guaranteed Swap Entities with certain foreign counterparties.

Under the Final Rule, U.S. swap entities (other than their foreign branches) are not excepted from, or eligible for substituted compliance for, the Commission's group A, group B, and group C requirements. These requirements apply fully to registered SDs and MSPs that are U.S. persons because their swap activities are particularly likely to affect the integrity of the swap market in the United States and raise concerns about the protection of participants in those markets. With respect to both baselines, the Commission does not expect that this will impose any additional costs on market participants given that the Commission's relevant business conduct requirements already apply to U.S. SDs and MSPs pursuant to existing Commission regulations.

Pursuant to the Exchange-Traded Exception, non-U.S. swap entities and foreign branches of non-U.S. swap entities are generally excepted from most of the group B and group C requirements with respect to their foreign-based swaps that are executed anonymously on a DCM, a registered or exempt SEF, or registered FBOT, and cleared through a registered or exempt DCO.

Further, pursuant to the Foreign Swap Group C Exception, non-U.S. swap entities and foreign branches of U.S. swap entities are excepted from the group C requirements with respect to their foreign-based swaps with foreign counterparties.

Under the U.S. Branch Group C Exception, a non-U.S. swap entity is excepted from the group C requirements with respect to any swap booked in a U.S. branch with a foreign counterparty that is neither a foreign branch nor a Guaranteed Entity.

Pursuant to the Limited Foreign Branch Group B Exception, foreign branches of U.S. swap entities are excepted from the group B requirements, with respect to any foreign-based swap with a foreign counterparty that is an SRS End User or an Other Non-U.S. Person that is not a swap entity, subject to certain conditions: Specifically, (1) a group B requirement is not eligible for the exception if the requirement, as applicable to the swap, is eligible for substituted compliance pursuant to a comparability determination issued by the Commission prior to the execution of the swap; and (2) in any calendar quarter, the aggregate gross notional amount of swaps conducted by a swap entity in reliance on this exception does not exceed five percent of the aggregate gross notional amount of all its swaps.

In addition, pursuant to the Non-U.S. Swap Entity Group B Exception, non-U.S. swap entities that are Other Non-U.S. Persons are excepted from the group B requirements with respect to any foreign-based swap with a foreign counterparty that is an SRS End User or Other Non-U.S. Person.

Finally, pursuant to the Limited Swap Entity SRS/Guaranteed Entity Group B Exception, each Guaranteed Swap Entity and SRS Swap Entity is excepted from the group B requirements, with respect to any foreign-based swap with a foreign counterparty that is an SRS End User or an Other Non-U.S. Person that is not a swap entity, subject to certain conditions. Specifically, under the Final Rule: (1) The exception is not available with respect to any group B requirement if the requirement as applicable to the swap is eligible for substituted compliance pursuant to a comparability determination issued by the Commission prior to the execution of the swap; and (2) in any calendar quarter, the aggregate gross notional amount of swaps conducted by an SRS Swap Entity or a Guaranteed Swap Entity in reliance on this exception aggregated with the gross notional amount of swaps conducted by all affiliated SRS Swap Entities and Guaranteed Swap Entities in reliance on this exception does not exceed five percent of the aggregate gross notional amount of all swaps entered into by the SRS Swap Entity or a Guaranteed Swap Entity and all affiliated swap entities.

The Commission acknowledges that the group B requirements may apply more broadly to swaps between non-U.S. persons than as contemplated in the Guidance. For example, the Final Rule generally requires non-U.S. swap entities that are Guaranteed Entities or SRSs to comply with the group B requirements for swaps with Other Non-U.S. Persons, whereas the Guidance stated that all non-U.S. swap entities (other than their U.S. branches) were excluded from the group B requirements with respect to swaps with a non-U.S. person that is not a guaranteed or conduit affiliate.[561] However, the Commission believes that the exceptions from the group B requirements in the Final Rule, coupled with the availability of substituted compliance, will help to alleviate any additional burdens that may arise from such application. Further, the group C requirements have been expanded to include Subpart L, which consequently expands the scope of certain of the exceptions from the group C requirements under the Final Rule. Notwithstanding the availability of these exceptions and substituted compliance, the Commission acknowledges that some non-U.S. swap entities may incur costs to the extent that a comparability determination has not yet been issued for certain jurisdictions. Further, the Commission expects that swap entities that avail themselves of the exceptions will be able to reduce their costs of compliance with respect to the excepted requirements (which, to the extent they are similar to requirements in the jurisdiction in which they are based, may be potentially duplicative or conflicting). Swap entities are not required to take any additional action to avail themselves of these exceptions (*e.g.,* notification to the Commission) that would cause them to incur additional costs. The Commission recognizes that the exceptions (and the inherent cost savings) may give certain swap entities a competitive advantage with respect to swaps that meet the requirements of the exception.[562]

The Commission nonetheless believes that it is appropriate to tailor the application of the group B and group C

[561] The group B requirements were categorized as Category A transaction-level requirements under the Guidance.

[562] The degree of competitive disparity will depend on the degree of disparity between the Commission's requirements and that of the relevant foreign jurisdiction.

requirements in the cross-border context, consistent with section 2(i) of the CEA and international comity principles, by providing the exceptions in the Final Rule. In doing so, the Commission is aiming to reduce market fragmentation which may result by applying certain duplicative swap requirements in non-U.S. markets, which are often subject to robust foreign regulation. Other than the U.S. Branch Group C Exception, the exceptions in the Final Rule are largely similar to those provided in the Guidance. Therefore, the Commission does not expect that the exceptions in the Final Rule will, in the aggregate, have a significant effect on the costs of, and benefits to, swap entities.

(ii) Substituted Compliance

As described in section VI.C, the extent to which substituted compliance is available under the Final Rule depends on the classification of the swap entity or branch and, in certain cases the counterparty, to a particular swap. The Commission recognizes that the decision to offer substituted compliance carries certain trade-offs. Given the global and highly-interconnected nature of the swap market, where risk is not bound by national borders, market participants are likely to be subject to the regulatory interest of more than one jurisdiction. Allowing compliance with foreign swap standards as an alternative to compliance with the Commission's requirements can therefore reduce the application of duplicative or conflicting requirements, resulting in lower compliance costs and potentially facilitating a more efficient regulatory framework over time. Substituted compliance also helps preserve the benefits of an integrated, global swap market by fostering and advancing efforts among U.S. and foreign regulators to collaborate in establishing robust regulatory standards. If substituted compliance is not properly implemented, however, the Commission's swap regime could lose some of its effectiveness. Accordingly, the ultimate costs and benefits of substituted compliance are affected by the standard under which it is granted and the extent to which it is applied. The Commission was mindful of this dynamic in structuring a substituted compliance regime for the group A and group B requirements and has determined that the Final Rule will enhance market efficiency and foster global coordination of these requirements while ensuring that swap entities (wherever located) are subject to comparable regulation.

The Commission also understands that by not offering substituted compliance equally to all swap entities, the Final Rule could lead to certain competitive disparities between swap entities. For example, to the extent that a non-U.S. swap entity can rely on substituted compliance that is not available to a U.S. swap entity, it may enjoy certain cost advantages (*e.g.,* avoiding the costs of potentially duplicative or inconsistent regulation). The non-U.S. swap entity may then be able to pass on these cost savings to its counterparties in the form of better pricing or some other benefit. U.S. swap entities, on the other hand, could, depending on the extent to which foreign swap requirements apply, be subject to both U.S. and foreign requirements, and therefore be at a competitive disadvantage. Counterparties may also be incentivized to transact with swap entities that are offered substituted compliance in order to avoid being subject to duplicative or conflicting swap requirements, which could lead to increased market deficiencies.[563]

Nevertheless, the Commission does not believe it is appropriate to make substituted compliance broadly available to all swap entities because it needs to protect market participants and the public. As discussed above, the Commission has a strong supervisory interest in the swap activity of all swap entities, including non-U.S. swap entities, by virtue of their registration with the Commission. Further, U.S. swap entities are particularly key swap market participants, and their safety and soundness is critical to a well-functioning U.S. swap market and the stability of the U.S. financial system. The Commission believes that losses arising from the default of a U.S. entity are more likely to be borne by other U.S. entities (including parent companies); therefore, a U.S. entity's risk to the U.S. financial system is more acute than that of a similarly situated non-U.S. entity. Accordingly, in light of the Commission's supervisory interest in the activities of U.S. persons and its statutory obligation to ensure the safety and soundness of swap entities and the U.S. swap market, the Commission believes that it is generally not appropriate for substituted compliance to be available to U.S. swap entities for purposes of the Final Rule. With respect to non-U.S. swap entities, however, the Commission believes that, in the interest of international comity, making substituted compliance generally available for the requirements discussed in the Final Rule is appropriate.

IATP stated that the Commission should not make the costs of complying with, or economic benefits from, substituted compliance a decision criterion for comparability determinations, and that participation in U.S. markets is a privilege with consequent costs and benefits. Such costs and benefits drive the underlying policy of the substituted compliance regime as discussed in this Final Rule, rather than the decision-making that accompanies an individual comparability determination assessment.

(iii) Comparability Determinations

As noted in section VI.D above, under the Final Rule, a comparability determination may be requested by: (1) Eligible swap entities; (2) trade associations whose members are eligible swap entities; or (3) foreign regulatory authorities that have direct supervisory authority over eligible swap entities and are responsible for administering the relevant foreign jurisdiction's swap requirements.[564] Once a comparability determination is made for a jurisdiction, it applies for all entities or transactions in that jurisdiction to the extent provided in the determination, as approved by the Commission.[565] Accordingly, given that the Final Rule will have no effect on any existing comparability determinations, swap entities may continue to rely on such determinations with no effect on the costs or benefits of such reliance. To the extent that an entity wishes to request a new comparability determination pursuant to the Final Rule, it will incur costs associated with the preparation and filing of a submission request. However, the Commission anticipates that a person would not elect to incur the costs of submitting a request for a comparability determination unless such costs were exceeded by the cost savings associated with substituted compliance.

The Final Rule includes a standard of review that allows for a holistic, outcomes-based approach that enables the Commission to consider any factor it deems relevant in assessing comparability. Further, in determining whether a foreign regulatory standard is comparable to a corresponding Commission requirement, the Final Rule

[563] The Commission recognizes that its substituted compliance framework may impose certain initial operational costs, as in certain cases swap entities will be required to determine the status of their counterparties in order to determine the extent to which substituted compliance is available.

[564] Final § 23.23(g)(2).

[565] Final § 23.23(f).

allows the Commission to consider the broader context of a foreign jurisdiction's related regulatory requirements. Allowing for a comparability determination to be made based on comparable outcomes, notwithstanding potential differences in foreign jurisdictions' relevant standards, helps to ensure that substituted compliance is made available to the fullest extent possible. While the Commission recognizes that, to the extent that a foreign swap regime is not deemed comparable in all respects, swap entities eligible for substituted compliance may incur costs from being required to comply with more than one set of specified swap requirements, the Commission believes that this approach is preferable to an all-or-nothing approach, in which market participants may be forced to comply with both regimes in their entirety.

9. Recordkeeping

The Final Rule also requires swap entities to create and retain records of their compliance with the Final Rule.[566] Given that swap entities are already subject to robust recordkeeping requirements, the Commission believes that swap entities will only incur incremental costs, which are expected to be minor, in modifying their existing systems and policies and procedures resulting from changes to the status quo made by the Final Rule.

10. Alternatives Considered

The Commission carefully considered several alternatives to various provisions of the Final Rule. In determining whether to accept or reject each alternative, the Commission considered the potential costs and benefits associated with each alternative.

For example, the Commission considered Better Markets' suggestion that the Commission add two additional tests to determine whether an entity is a significant subsidiary. Better Markets proposed that if an entity were to meet a risk transfer test, measuring the notional amount of swaps that are back-to-backed with U.S. entities, or a risk acceptance test, measuring the trading activity of the subsidiary over a three month time period, then the entity should be considered a significant subsidiary. The Commission declined to include these two tests because these activity-based tests do not provide a measure of risk that a subsidiary poses to a parent entity, and thus would potentially subject a greater number of entities to certain Commission regulations without providing a significant reduction in systemic risk.

Similarly, the Commission considered IIB/SIFMA's comment that the application of the group B requirements to swaps of Guaranteed Swap Entities and SRS Swap Entities should conform to the Guidance, so as to reduce the competitive disadvantages faced by such swap entities and their counterparties when they are subject to U.S. rules extraterritorially. The Commission declined to adopt this alternative, citing the fact that the group B requirements relate to risk mitigation, and SRS Swap Entities and Guaranteed Swap Entities may pose significant risk to the United States. However, the Commission acknowledged the potential competitive disadvantages that such application may pose to Guaranteed Swap Entities and SRS Swap Entities (as opposed to foreign branches of U.S. swap entities), and therefore also adopted the Limited Swap Entity SRS/Guaranteed Entity Group B Exception in an effort to reduce potential burdens to such entities without sacrificing the important risk mitigation goals associated with the group B requirements.

On the other hand, the Commission adopted certain alternatives to elements of the Proposed Rule. For example, CS and IIB/SIFMA stated that the exclusion for subsidiaries of BHCs in the SRS definition should be expanded to include those entities that are subsidiaries of IHCs. These commenters noted that IHCs are subject to prudential regulation, including Basel III capital requirements, stress testing, liquidity, and risk management requirements. The Commission determined that IHCs are subject to prudential standards by the Federal Reserve Board that are similar to those to which BHCs are subject. In general, IHCs and BHCs of similar size are subject to similar liquidity, risk management, stress testing, and credit limit standards. Therefore, for the same risk-based reasons that the Commission proposed to exclude subsidiaries of BHCs from the definition of SRS, the Commission is expanding the SRS exclusion to include subsidiaries of both BHCs and IHCs in § 23.23(a)(13)(i).

The Commission is also adopting an alternative raised by IIB/SIFMA, who recommended that the Commission expand the proposed Non-U.S. Swap Entity Group B Exception and the Limited Foreign Branch Group B Exception by applying the exceptions to swaps with an SRS that is not a swap entity, so as to avoid inappropriately burdening the foreign subsidiaries of U.S. multinational corporations and their counterparties. In doing so, the Commission acknowledges that applying the group B requirements to a swap entity's swaps indirectly affects their counterparties, including SRS End User counterparties, by requiring them to execute documentation (*e.g.,* compliant swap trading relationship documentation), and engage in portfolio reconciliation and compression exercises as a condition to entering into swaps with swap entity counterparties. Accordingly, mandating compliance with these obligations may cause counterparties, including SRS End Users, to face increased costs relative to their competitors not affected by the application of the group B requirements (*e.g.,* for legal fees or as a result of costs being passed on to them by their swap entity counterparties) and/or to potentially lose access to key interest rate or currency hedging products. Also, because the SRS test depends on a non-U.S. counterparty's internal organizational structure and financial metrics and it would be difficult to rule out any category of non-U.S. counterparties as being an SRS, the proposed application of group B requirements to all SRSs may cause swap entities to obtain SRS representations from nearly their entire non-U.S. client bases, potentially increasing costs for all of these clients.

In light of the importance of ensuring that an SRS, particularly a commercial or non-financial entity, continues to have access to swap liquidity for hedging or other non-dealing purposes, the Commission expanded the exceptions to apply to SRS End Users. The Commission noted that an SRS End User does not pose as significant a risk to the United States as an SRS Swap Entity or a Guaranteed Entity, because an SRS End User: (1) Has a less direct connection to the United States than a Guaranteed Entity; and (2) has been involved, at most, in only a de minimis amount of swap dealing activity, or has swap positions below the MSP thresholds, such that it is not required to register as a SD or MSP, respectively.

The Commission considered several other alternatives to the Final Rule, which are discussed in detail throughout this release.[567] In each instance, the Commission considered the costs and burdens of the Final Rule and the regulatory benefits that the Final Rule seeks to achieve.

11. Section 15(a) Factors

Section 15(a) of the CEA[568] requires the Commission to consider the costs and benefits of its actions before

[566] Final § 23.23(h)(1).

[567] *See supra* sections II–VI.

[568] 7 U.S.C. 19(a).

promulgating a regulation under the CEA or issuing certain orders. Section 15(a) further specifies that the costs and benefits shall be evaluated in light of five broad areas of market and public concern: (1) Protection of market participants and the public; (2) efficiency, competitiveness, and financial integrity of futures markets; (3) price discovery; (4) sound risk management practices; and (5) other public interest considerations. The Commission considers the costs and benefits resulting from its discretionary determinations with respect to the section 15(a) factors.

(i) Protection of Market Participants and the Public

The Commission believes the Final Rule will support protection of market participants and the public. By focusing on and capturing swap dealing transactions and swap positions involving U.S. persons, SRSs, and Guaranteed Entities, the Final Rule's approach to the cross-border application of the SD and MSP registration threshold calculations works to ensure that, consistent with CEA section 2(i) and the policy objectives of the Dodd-Frank Act, significant participants in the U.S. market are subject to these requirements. The cross-border approach to the group A, group B, and group C requirements similarly ensures that these requirements apply to swap activities that are particularly likely to affect the integrity of, and raise concerns about, the protection of participants in the U.S. market while, consistent with principles of international comity, recognizing the supervisory interests of the relevant foreign jurisdictions in applying their own requirements to transactions involving non-U.S. swap entities and foreign branches of U.S. swap entities with non-U.S. persons and foreign branches of U.S. swap entities.

(ii) Efficiency, Competitiveness, and Financial Integrity of the Markets

To the extent that the Final Rule leads additional entities to register as SDs or MSPs, the Commission believes that the Final Rule will enhance the financial integrity of the markets by bringing significant U.S. swap market participants under Commission oversight, which may reduce market disruptions and foster confidence and transparency in the U.S. market. The Commission recognizes that the Final Rule's cross-border approach to the SD and MSP registration thresholds may create competitive disparities among market participants, based on the degree of their connection to the United States, that could contribute to market deficiencies, including market fragmentation and decreased liquidity, as certain market participants may reduce their exposure to the U.S. market. As a result of reduced liquidity, counterparties may pay higher prices, in terms of bid-ask spreads. Such competitive effects and market deficiencies may, however, be mitigated by global efforts to harmonize approaches to swap regulation and by the large inter-dealer market, which may link the fragmented markets and enhance liquidity in the overall market. The Commission believes that the Final Rule's approach is necessary and appropriately tailored to ensure that the purposes of the Dodd-Frank Act swap regime and its registration requirements are advanced while still establishing a workable approach that recognizes foreign regulatory interests and reduces competitive disparities and market deficiencies to the extent possible. The Commission further believes that the Final Rule's cross-border approach to the group A, group B, and group C requirements will promote the financial integrity of the markets by fostering transparency and confidence in the significant participants in the U.S. swap markets.

(iii) Price Discovery

The Commission recognizes that the Final Rule's approach to the cross-border application of the SD and MSP registration thresholds and group A, group B, and group C requirements could have an effect on liquidity, which may in turn influence price discovery. As liquidity in the swap market is lessened and fewer dealers compete against one another, bid-ask spreads (cost of swap and cost to hedge) may widen and the ability to observe an accurate price of a swap may be hindered. However, as noted above, these negative effects will be mitigated as jurisdictions harmonize their swap regimes and global financial institutions continue to manage their swap books (*i.e.,* moving risk with little or no cost, across an institution to market centers, where there is the greatest liquidity). The Commission does not believe that the Final Rule's approach to the group A, group B, and group C requirements will have a noticeable effect on price discovery.

(iv) Sound Risk Management Practices

The Commission believes that the Final Rule's approach could promote the development of sound risk management practices by ensuring that significant participants in the U.S. market are subject to Commission oversight (via registration), including in particular important counterparty disclosure and recordkeeping requirements that will encourage policies and practices that promote fair dealing while discouraging abusive practices in U.S. markets. On the other hand, to the extent that a registered SD or MSP relies on the exceptions in the Final Rule, and is located in a jurisdiction that does not have comparable swap requirements, the Final Rule could lead to weaker risk management practices for such entities.

(v) Other Public Interest Considerations

The Commission believes that the Final Rule is consistent with principles of international comity. The Commission has carefully considered, among other things, the level of foreign jurisdictions' supervisory interests over the subject activity and the extent to which the activity takes place within a particular foreign territory. In doing so, the Commission has strived to minimize conflicts with the laws of other jurisdictions while seeking, pursuant to section 2(i), to apply the swaps requirements of the Dodd-Frank Act to activities outside the United States that have a direct and significant connection with activities in, or effect on, U.S. commerce.

The Commission believes the Final Rule appropriately accounts for these competing interests, ensuring that the Commission can discharge its responsibilities to protect the U.S. markets, market participants, and financial system, consistent with international comity. Of particular relevance is the Commission's approach to substituted compliance in the Final Rule, which mitigates burdens associated with potentially duplicative foreign laws and regulations in light of the supervisory interests of foreign regulators in entities domiciled and operating in their own jurisdictions.

D. Antitrust Laws

Section 15(b) of the CEA requires the Commission to take into consideration the public interest to be protected by the antitrust laws and endeavor to take the least anticompetitive means of achieving the objectives of the CEA, as well as the policies and purposes of the CEA, in issuing any order or adopting any Commission rule or regulation (including any exemption under section 4(c) or 4c(b)), or in requiring or approving any bylaw, rule, or regulation of a contract market or registered futures association established pursuant to section 17 of the CEA.[569]

[569] 7 U.S.C. 19(b).

The Commission believes that the public interest to be protected by the antitrust laws is generally to protect competition. The Commission requested and did not receive any comments on whether the Proposed Rule implicated any other specific public interest to be protected by the antitrust laws.

The Commission has considered the Final Rule to determine whether it is anticompetitive and has identified no significant discretionary anticompetitive effects.[570] The Commission requested and did not receive any comments on whether the Proposed Rule was anticompetitive and, if it was, what the anticompetitive effects are.

Because the Commission has determined that the Final Rule is not anticompetitive and has no significant discretionary anticompetitive effects and received no comments on its determination on the Proposed Rule, the Commission has not identified any less anticompetitive means of achieving the purposes of the CEA.

XI. Preamble Summary Tables

A. Table A—Cross-Border Application of the SD De Minimis Threshold

Table A should be read in conjunction with the text of the Final Rule.

BILLING CODE 6351–01–P

Potential SD ↓ / Counterparty →		U.S. Person	Non-U.S. Person		
			Guaranteed Entity	SRS	Other Non-U.S. Person
U.S. Person		Include	Include	Include	Include
Non-U.S. Person	Guaranteed Entity	Include	Include	Include	Include
	SRS	Include	Include	Include	Include
	Other Non-U.S. Person[1]	Include[2]	Include[3]	Exclude	Exclude

[1] Does not include swaps entered into anonymously on a DCM, a registered SEF or a SEF exempted from registration, or a registered FBOT and cleared through a registered DCO or a DCO exempted from registration.
[2] Unless the swap is conducted through a foreign branch of a registered SD.
[3] Unless the Guaranteed Entity is registered as an SD, unless the guarantor is a non-financial entity, or unless the Guaranteed Entity is itself below the de minimis threshold and is affiliated with a registered SD.

B. Table B—Cross-Border Application of the MSP Threshold

Table B should be read in conjunction with the text of the Final Rule.

[570] The Final Rule is being adopted pursuant to the direction of Congress in section 2(i) of the CEA, as discussed in section I.D, that the swap provisions of the CEA enacted by Title VII of the Dodd-Frank Act, including any rule prescribed or regulation promulgated under the CEA, shall not apply to activities outside the United States unless those activities have a direct and significant connection with activities in, or effect on, commerce of the United States, or they contravene Commission rules or regulations as are necessary or appropriate to prevent evasion of the swap provisions of the CEA enacted under Title VII. As discussed above, the degree of any competitive disparity will depend on the degree of disparity between the Commission's requirements and that of the relevant foreign jurisdiction.

Counterparty → / Potential MSP ↓		U.S. Person	Non-U.S. Person		
			Guaranteed Entity	SRS	Other Non-U.S. Person
U.S. Person		Include	Include	Include	Include
Non-U.S. Person	Guaranteed Entity	Include	Include	Include	Include
	SRS	Include	Include	Include	Include
	Other Non-U.S. Person[1]	Include[2]	Include[3]	Exclude	Exclude

[1] Does not include swap positions entered into anonymously on a DCM, a registered SEF or a SEF exempted from registration, or a registered FBOT and cleared through a registered DCO or a DCO exempted from registration.
[2] Unless the swap is conducted through a foreign branch of a registered SD.
[3] Unless the Guaranteed Entity is registered as an SD.

Additionally, all swap positions that are subject to recourse should be attributed to the guarantor, whether it is a U.S. person or a non-U.S. person, unless the guarantor, the Guaranteed Entity, and its counterparty are Other Non-U.S. Persons.

C. Table C—Cross-Border Application of the Group B Requirements in Consideration of Related Exceptions and Substituted Compliance

Table C[571] should be read in conjunction with the text of the Final Rule.

[571] As discussed in section VI.A.2, *supra,* the group B requirements are set forth in §§ 23.202, 23.501, 23.502, 23.503, and 23.504 and relate to (1) swap trading relationship documentation; (2) portfolio reconciliation and compression; (3) trade confirmation; and (4) daily trading records. Exceptions from the group B requirements are discussed in sections VI.B.2, VI.B.4, and VI.B.5, *supra.* Substituted compliance for the group B requirements is discussed in section VI.C, *supra.*

Swap Entity ↓ / Counterparty →		U.S. Person		Non-U.S. Person			
		Non-Foreign Branch	Foreign Branch	U.S. Branch	Guaranteed Entity	Swap Entity SRS	Other Non-U.S. Person or SRS End User
U.S. Swap Entity	Non-Foreign Branch	Yes	Yes	Yes	Yes	Yes	Yes
	Foreign Branch	Yes[1]	Yes[1] *Sub. Comp. Available*	Yes[1]	Yes[1] *Sub. Comp. Available*	Yes[1] *Sub. Comp. Available*	Yes[1, 2] *Sub. Comp. Available*
Non-U.S. Swap Entity	U.S. Branch	Yes	Yes	Yes	Yes	Yes *Sub. Comp. Available*	Yes *Sub. Comp. Available*
	Guaranteed Entity or SRS	Yes[1]	Yes[1] *Sub. Comp. Available*	Yes[1]	Yes[1] *Sub. Comp. Available*	Yes[1] *Sub. Comp. Available*	Yes[1, 3] *Sub. Comp. Available*
	Other Non-U.S. Person	Yes[1]	Yes[1] *Sub. Comp. Available*	Yes[1]	Yes[1] *Sub. Comp. Available*	Yes[1] *Sub. Comp. Available*	No

[1] The Exchange-Traded Exception is available from certain group B and C requirements for certain anonymous, exchange-traded, and cleared foreign-based swaps between the listed parties.

[2] The Limited Foreign Branch Group B Exception is available from the group B requirements for a foreign branch's foreign-based swaps with a foreign counterparty that is an SRS End User or an Other Non-U.S. Person that is not a swap entity, subject to certain conditions.

[3] The Limited Swap Entity SRS/Guaranteed Entity Group B Exception is available from the group B requirements for the foreign-based swaps of each SRS Swap Entity or Guaranteed Swap Entity with a foreign counterparty that is an SRS End User or an Other Non-U.S. Person that is not a swap entity, subject to certain conditions.

D. Table D—Cross-Border Application of the Group C Requirements in Consideration of Related Exceptions

Table D [572] should be read in conjunction with the text of the Final Rule.

[572] As discussed in section VI.A.3, *supra,* the group C requirements are set forth in §§ 23.400 through 23.451 and 23.700 through 23.704 and relate to certain business conduct standards governing the conduct of SDs and MSPs in dealing with their swap counterparties, and the segregation of assets held as collateral in certain uncleared swaps. Exceptions from the group C requirements are discussed in sections VI.B.2 and VI.B.3, *supra.*

Swap Entity ↓	Counterparty →	U.S. Person		Non-U.S. Person			
		Non-Foreign Branch	Foreign Branch	U.S. Branch	Guaranteed Entity	SRS	Other Non-U.S. Person
U.S. Swap Entity	Non-Foreign Branch	Yes	Yes	Yes	Yes	Yes	Yes
	Foreign Branch	Yes[1]	No	Yes[1]	No	No	No
Non-U.S. Swap Entity	U.S. Branch	Yes	Yes	Yes	Yes	No	No
	Guaranteed Entity or SRS	Yes[1]	No	Yes[1]	No	No	No
	Other Non-U.S. Person	Yes[1]	No	Yes[1]	No	No	No

[1]The Exchange-Traded Exception is available from certain group B and C requirements for certain anonymous, exchange-traded, and cleared foreign-based swaps between the listed parties.

BILLING CODE 6351–01–C

List of Subjects in 17 CFR Part 23

Business conduct standards, Counterparties, Cross-border, Definitions, De minimis exception, Major swap participants, Swaps, Swap Dealers.

For the reasons stated in the preamble, the Commodity Futures Trading Commission amends 17 CFR part 23 as follows:

PART 23—SWAP DEALERS AND MAJOR SWAP PARTICIPANTS

■ 1. The authority citation for part 23 continues to read as follows:

Authority: 7 U.S.C. 1a, 2, 6, 6a, 6b, 6b–1, 6c, 6p, 6r, 6s, 6t, 9, 9a, 12, 12a, 13b, 13c, 16a, 18, 19, 21.

Section 23.160 also issued under 7 U.S.C. 2(i); Sec. 721(b), Public Law 111–203, 124 Stat. 1641 (2010).

■ 2. Add § 23.23 to read as follows:

§ 23.23 Cross-border application.

(a) *Definitions.* Solely for purposes of this section the terms listed in this paragraph (a) have the meanings set forth in paragraphs (a)(1) through (24) of this section. A person may rely on a written representation from its counterparty that the counterparty does or does not satisfy the criteria for one or more of the definitions listed in paragraphs (a)(1) through (24) of this section, unless such person knows or has reason to know that the representation is not accurate; for the purposes of this rule a person would have reason to know the representation is not accurate if a reasonable person should know, under all of the facts of which the person is aware, that it is not accurate.

(1) An *affiliate of,* or a *person affiliated with a specific person,* means a person that directly, or indirectly through one or more intermediaries, controls, or is controlled by, or is under common control with, the person specified.

(2) *Control* including the terms controlling, controlled by, and under common control with, means the possession, direct or indirect, of the power to direct or cause the direction of the management and policies of a person, whether through the ownership of voting shares, by contract, or otherwise.

(3) *Foreign branch* means any office of a U.S. bank that:

(i) Is located outside the United States;

(ii) Operates for valid business reasons;

(iii) Maintains accounts independently of the home office and of the accounts of other foreign branches, with the profit or loss accrued at each branch determined as a separate item for each foreign branch; and

(iv) Is engaged in the business of banking and is subject to substantive regulation in banking or financing in the jurisdiction where it is located.

(4) *Foreign-based swap* means:

(i) A swap by a non-U.S. swap entity, except for a swap booked in a U.S. branch; or

(ii) A swap conducted through a foreign branch.

(5) *Foreign counterparty* means:

(i) A non-U.S. person, except with respect to a swap booked in a U.S. branch of that non-U.S. person; or

(ii) A foreign branch where it enters into a swap in a manner that satisfies the definition of a swap conducted through a foreign branch.

(6) *Group A requirements* mean the requirements set forth in § 3.3 of this chapter, §§ 23.201, 23.203, 23.600, 23.601, 23.602, 23.603, 23.605, 23.606, 23.607, 23.609 and, to the extent it duplicates § 23.201, § 45.2(a) of this chapter.

(7) *Group B requirements* mean the requirements set forth in §§ 23.202 and 23.501 through 23.504.

(8) *Group C requirements* mean the requirements set forth in §§ 23.400 through 23.451 and 23.700 through 23.704.

(9) *Guarantee* means an arrangement pursuant to which one party to a swap has rights of recourse against a guarantor, with respect to its counterparty's obligations under the swap. For these purposes, a party to a swap has rights of recourse against a guarantor if the party has a conditional or unconditional legally enforceable right to receive or otherwise collect, in whole or in part, payments from the guarantor with respect to its counterparty's obligations under the swap. In addition, in the case of any arrangement pursuant to which the guarantor has a conditional or unconditional legally enforceable right to receive or otherwise collect, in whole or in part, payments from any other guarantor with respect to the counterparty's obligations under the swap, such arrangement will be deemed a guarantee of the counterparty's obligations under the swap by the other guarantor. Notwithstanding the foregoing, until December 31, 2027, a person may continue to classify counterparties based on:

(i) Representations that were made pursuant to the ''guarantee'' definition in § 23.160(a)(2) prior to the effective date of this section; or

(ii) Representations made pursuant to the interpretation of the term ''guarantee'' in the Interpretive Guidance and Policy Statement Regarding Compliance With Certain Swap Regulations, 78 FR 45292 (Jul. 26, 2013), prior to the effective date of this section.

(10) *Non-U.S. person* means any person that is not a U.S. person.

(11) *Non-U.S. swap entity* means a swap entity that is not a U.S. swap entity.

(12) *Parent entity* means any entity in a consolidated group that has one or more subsidiaries in which the entity has a controlling interest, as determined in accordance with U.S. GAAP.

(13) *Significant risk subsidiary* means any non-U.S. significant subsidiary of an ultimate U.S. parent entity where the ultimate U.S. parent entity has more than $50 billion in global consolidated assets, as determined in accordance with U.S. GAAP at the end of the most recently completed fiscal year, but excluding non-U.S. subsidiaries that are:

(i) Subject to consolidated supervision and regulation by the Board of Governors of the Federal Reserve System as a subsidiary of a U.S. bank holding company or an intermediate holding company; or

(ii) Subject to capital standards and oversight by the subsidiary's home country supervisor that are consistent with the Basel Committee on Banking Supervision's ''International Regulatory Framework for Banks'' and subject to margin requirements for uncleared swaps in a jurisdiction that the Commission has found comparable pursuant to a published comparability determination with respect to uncleared swap margin requirements.

(14) *Significant subsidiary* means a subsidiary, including its subsidiaries, which meets any of the following conditions:

(i) The three year rolling average of the subsidiary's equity capital is equal to or greater than five percent of the three year rolling average of the ultimate U.S. parent entity's consolidated equity capital, as determined in accordance with U.S. GAAP as of the end of the most recently completed fiscal year;

(ii) The three year rolling average of the subsidiary's total revenue is equal to or greater than ten percent of the three year rolling average of the ultimate U.S. parent entity's total consolidated revenue, as determined in accordance with U.S. GAAP as of the end of the most recently completed fiscal year; or

(iii) The three year rolling average of the subsidiary's total assets is equal to or greater than ten percent of the three year rolling average of the ultimate U.S. parent entity's total consolidated assets, as determined in accordance with U.S. GAAP as of the end of the most recently completed fiscal year.

(15) *Subsidiary* means an affiliate of a person controlled by such person directly, or indirectly through one or more intermediaries.

(16) *Swap booked in a U.S. branch* means a swap entered into by a U.S. branch where the swap is reflected in the local accounts of the U.S. branch.

(17) *Swap conducted through a foreign branch* means a swap entered into by a foreign branch where:

(i) The foreign branch or another foreign branch is the office through which the U.S. person makes and receives payments and deliveries under the swap pursuant to a master netting or similar trading agreement, and the documentation of the swap specifies that the office for the U.S. person is such foreign branch;

(ii) The swap is entered into by such foreign branch in its normal course of business; and

(iii) The swap is reflected in the local accounts of the foreign branch.

(18) *Swap entity* means a person that is registered with the Commission as a swap dealer or major swap participant pursuant to the Act.

(19) *Ultimate U.S. parent entity* means the U.S. parent entity that is not a subsidiary of any other U.S. parent entity.

(20) *United States and U.S.* means the United States of America, its territories and possessions, any State of the United States, and the District of Columbia.

(21) *U.S. branch* means a branch or agency of a non-U.S. banking organization where such branch or agency:

(i) Is located in the United States;

(ii) Maintains accounts independently of the home office and other U.S. branches, with the profit or loss accrued at each branch determined as a separate item for each U.S. branch; and

(iii) Engages in the business of banking and is subject to substantive banking regulation in the state or district where located.

(22) *U.S. GAAP* means U.S. generally accepted accounting principles.

(23) *U.S. person:*

(i) Except as provided in paragraph (a)(23)(iii) of this section, U.S. person means any person that is:

(A) A natural person resident in the United States;

(B) A partnership, corporation, trust, investment vehicle, or other legal person organized, incorporated, or established under the laws of the United States or having its principal place of business in the United States;

(C) An account (whether discretionary or non-discretionary) of a U.S. person; or

(D) An estate of a decedent who was a resident of the United States at the time of death.

(ii) For purposes of this section, principal place of business means the location from which the officers, partners, or managers of the legal person primarily direct, control, and coordinate the activities of the legal person. With respect to an externally managed investment vehicle, this location is the office from which the manager of the vehicle primarily directs, controls, and coordinates the investment activities of the vehicle.

(iii) The term U.S. person does not include the International Monetary Fund, the International Bank for Reconstruction and Development, the Inter-American Development Bank, the Asian Development Bank, the African Development Bank, the United Nations, and their agencies and pension plans, and any other similar international organizations, and their agencies and pension plans.

(iv) Notwithstanding paragraph (a)(23)(i) of this section, until December 31, 2027, a person may continue to classify counterparties as U.S. persons based on:

(A) Representations made pursuant to the ''U.S. person'' definition in § 23.160(a)(10) prior to the effective date of this section; or

(B) Representations made pursuant to the interpretation of the term ''U.S. person'' in the Interpretive Guidance and Policy Statement Regarding Compliance With Certain Swap Regulations, 78 FR 45292 (Jul. 26, 2013), prior to the effective date of this section.

(24) *U.S. swap entity* means a swap entity that is a U.S. person.

(b) *Cross-border application of swap dealer de minimis registration threshold calculation.* For purposes of determining whether an entity engages in more than a de minimis quantity of swap dealing activity under paragraph (4)(i) of the swap dealer definition in § 1.3 of this chapter, a person shall include the following swaps (subject to paragraph (d) of this section and paragraph (6) of the swap dealer definition in § 1.3 of this chapter):

(1) If such person is a U.S. person or a significant risk subsidiary, all swaps connected with the dealing activity in which such person engages.

(2) If such person is a non-U.S. person (other than a significant risk subsidiary), all of the following swaps connected with the dealing activity in which such person engages:

(i) Swaps with a counterparty that is a U.S. person, other than swaps conducted through a foreign branch of a registered swap dealer.

(ii) Swaps where the obligations of such person under the swaps are subject to a guarantee by a U.S. person.

(iii) Swaps with a counterparty that is a non-U.S. person where the counterparty's obligations under the swaps are subject to a guarantee by a U.S. person, except when:

(A) The counterparty is registered as a swap dealer; or

(B) The counterparty's swaps are subject to a guarantee by a U.S. person that is a non-financial entity; or

(C) The counterparty is itself below the swap dealer de minimis threshold under paragraph (4)(i) of the swap dealer definition in § 1.3, and is affiliated with a registered swap dealer.

(c) *Cross-border application of major swap participant tests.* For purposes of determining a person's status as a major swap participant, as defined in § 1.3 of this chapter, a person shall include the following swap positions (subject to paragraph (d) of this section and the major swap participant definition in § 1.3 of this chapter):

(1) If such person is a U.S. person or a significant risk subsidiary, all swap positions that are entered into by the person.

(2) If such person is a non-U.S. person (other than a significant risk subsidiary), all of the following swap positions of such person:

(i) Swap positions where the counterparty is a U.S. person, other than swaps conducted through a foreign branch of a registered swap dealer.

(ii) Swap positions where the obligations of such person under the swaps are subject to a guarantee by a U.S. person.

(iii) Swap positions with a counterparty that is a non-U.S. person where the counterparty's obligations under the swaps are subject to a guarantee by a U.S. person, except when the counterparty is registered as a swap dealer.

(d) *Exception from counting for certain exchange-traded and cleared swaps.* Notwithstanding any other provision of § 23.23, for purposes of determining whether a non-U.S. person (other than a significant risk subsidiary or a non-U.S. person whose performance under the swap is subject to a guarantee by a U.S. person) engages in more than a de minimis quantity of swap dealing activity under paragraph (4)(i) of the swap dealer definition in § 1.3 of this chapter or for determining the non-U.S. person's status as a major swap participant as defined in § 1.3 of this chapter, such non-U.S. person does not need to count any swaps or swap positions, as applicable, that are entered into by such non-U.S. person on a designated contract market, a registered swap execution facility or a swap execution facility exempted from registration by the Commission pursuant to section 5h(g) of the Act, or a registered foreign board of trade, and cleared through a registered derivatives clearing organization or a clearing organization that has been exempted from registration by the Commission pursuant to section 5b(h) of the Act, where the non-U.S. person does not know the identity of the counterparty to the swap prior to execution.

(e) *Exceptions from certain swap requirements for certain foreign swaps.* (1) With respect to its foreign-based swaps, each non-U.S. swap entity and foreign branch of a U.S. swap entity shall be excepted from:

(i) The group B requirements (other than § 23.202(a) introductory text and (a)(1)) and the group C requirements with respect to any swap—

(A) Entered into on a designated contract market, a registered swap execution facility or a swap execution facility exempted from registration by the Commission pursuant to section 5h(g) of the Act, or a registered foreign board of trade;

(B) Cleared through a registered derivatives clearing organization or a clearing organization that has been exempted from registration by the Commission pursuant to section 5b(h) of the Act; and

(C) Where the swap entity does not know the identity of the counterparty to the swap prior to execution; and

(ii) The group C requirements with respect to any swap with a foreign counterparty.

(2) A non-U.S. swap entity shall be excepted from the group C requirements with respect to any swap booked in a U.S. branch with a foreign counterparty that is neither a foreign branch nor a person whose performance under the swap is subject to a guarantee by a U.S. person.

(3) With respect to its foreign-based swaps, each non-U.S. swap entity that is neither a significant risk subsidiary nor a person whose performance under the swap is subject to a guarantee by a U.S. person shall be excepted from the group B requirements with respect to any swap with a foreign counterparty (other than a foreign branch) that is neither—

(i) A significant risk subsidiary that is a swap entity nor

(ii) A person whose performance under the swap is subject to a guarantee by a U.S. person.

(4) With respect to its foreign-based swaps, each foreign branch of a U.S. swap entity shall be excepted from the group B requirements with respect to any swap with a foreign counterparty (other than a foreign branch) that is neither a swap entity nor a person whose performance under the swap is subject to a guarantee by a U.S. person, subject to the following conditions:

(i) A group B requirement is not eligible for the exception if the requirement, as applicable to the swap, is eligible for substituted compliance pursuant to a comparability determination issued by the Commission prior to the execution of the swap; and

(ii) In any calendar quarter, the aggregate gross notional amount of swaps conducted by a swap entity in reliance on this exception does not exceed five percent (5%) of the aggregate gross notional amount of all its swaps.

(5) With respect to its foreign-based swaps, each non-U.S. swap entity that is a significant risk subsidiary (an ''SRS

SE'') or a person whose performance under the swap is subject to a guarantee by a U.S. person (a ''Guaranteed SE'') shall be excepted from the group B requirements with respect to any swap with a foreign counterparty (other than a foreign branch) that is neither a swap entity nor a person whose performance under the swap is subject to a guarantee by a U.S. person, subject to the following conditions:

(i) A group B requirement is not eligible for the exception if the requirement, as applicable to the swap, is eligible for substituted compliance pursuant to a comparability determination issued by the Commission prior to the execution of the swap; and

(ii) In any calendar quarter, the aggregate gross notional amount of swaps conducted by an SRS SE or a Guaranteed SE in reliance on this exception aggregated with the gross notional amount of swaps conducted by all affiliated SRS SEs and Guaranteed SEs in reliance on this exception does not exceed five percent (5%) of the aggregate gross notional amount of all swaps entered into by the SRS SE or Guaranteed SE and all affiliated swap entities.

(f) *Substituted Compliance.* (1) A non-U.S. swap entity may satisfy any applicable group A requirement by complying with the applicable standards of a foreign jurisdiction to the extent permitted by, and subject to any conditions specified in, a comparability determination issued by the Commission under paragraph (g) of this section;

(2) With respect to its foreign-based swaps, a non-U.S. swap entity or foreign branch of a U.S. swap entity may satisfy any applicable group B requirement for a swap with a foreign counterparty by complying with the applicable standards of a foreign jurisdiction to the extent permitted by, and subject to any conditions specified in, a comparability determination issued by the Commission under paragraph (g) of this section; and

(3) A non-U.S. swap entity may satisfy any applicable group B requirement for any swap booked in a U.S. branch with a foreign counterparty that is neither a foreign branch nor a person whose performance under the swap is subject to a guarantee by a U.S. person by complying with the applicable standards of a foreign jurisdiction to the extent permitted by, and subject to any conditions specified in, a comparability determination issued by the Commission under paragraph (g) of this section.

(g) *Comparability determinations.* (1) The Commission may issue comparability determinations under this section on its own initiative.

(2) *Eligibility requirements.* The following persons may, either individually or collectively, request a comparability determination with respect to some or all of the group A requirements and group B requirements:

(i) A swap entity that is eligible, in whole or in part, for substituted compliance under this section or a trade association or other similar group on behalf of its members who are such swap entities; or

(ii) A foreign regulatory authority that has direct supervisory authority over one or more swap entities subject to the group A requirements and/or group B requirements and that is responsible for administering the relevant foreign jurisdiction's swap standards.

(3) *Submission requirements.* Persons requesting a comparability determination pursuant to this section shall electronically provide the Commission:

(i) A description of the objectives of the relevant foreign jurisdiction's standards and the products and entities subject to such standards;

(ii) A description of how the relevant foreign jurisdiction's standards address, at minimum, the elements or goals of the Commission's corresponding requirements or group of requirements. Such description should identify the specific legal and regulatory provisions that correspond to each element or goal and, if necessary, whether the relevant foreign jurisdiction's standards do not address a particular element or goal;

(iii) A description of the differences between the relevant foreign jurisdiction's standards and the Commission's corresponding requirements, and an explanation regarding how such differing approaches achieve comparable outcomes;

(iv) A description of the ability of the relevant foreign regulatory authority or authorities to supervise and enforce compliance with the relevant foreign jurisdiction's standards. Such description should discuss the powers of the foreign regulatory authority or authorities to supervise, investigate, and discipline entities for compliance with the standards and the ongoing efforts of the regulatory authority or authorities to detect and deter violations of, and ensure compliance with, the standards;

(v) Copies of the foreign jurisdiction's relevant standards (including an English translation of any foreign language document); and

(vi) Any other information and documentation that the Commission deems appropriate.

(4) *Standard of review.* The Commission may issue a comparability determination pursuant to this section to the extent that it determines that some or all of the relevant foreign jurisdiction's standards are comparable to the Commission's corresponding requirements or group of requirements, or would result in comparable outcomes as the Commission's corresponding requirements or group of requirements, after taking into account such factors as the Commission determines are appropriate, which may include:

(i) The scope and objectives of the relevant foreign jurisdiction's standards;

(ii) Whether the relevant foreign jurisdiction's standards achieve comparable outcomes to the Commission's corresponding requirements;

(iii) The ability of the relevant regulatory authority or authorities to supervise and enforce compliance with the relevant foreign jurisdiction's standards; and

(iv) Whether the relevant regulatory authority or authorities has entered into a memorandum of understanding or other arrangement with the Commission addressing information sharing, oversight, examination, and supervision of swap entities relying on such comparability determination.

(5) *Reliance.* Any swap entity that, in accordance with a comparability determination issued under this section, complies with a foreign jurisdiction's standards, would be deemed to be in compliance with the Commission's corresponding requirements. Accordingly, if a swap entity has failed to comply with the foreign jurisdiction's standards or a comparability determination, the Commission may initiate an action for a violation of the Commission's corresponding requirements. All swap entities, regardless of whether they rely on a comparability determination, remain subject to the Commission's examination and enforcement authority.

(6) *Discretion and Conditions.* The Commission may issue or decline to issue comparability determinations under this section in its sole discretion. In issuing such a comparability determination, the Commission may impose any terms and conditions it deems appropriate.

(7) *Modifications.* The Commission reserves the right to further condition, modify, suspend, terminate, or otherwise restrict a comparability determination issued under this section in the Commission's discretion.

(8) *Delegation of authority.* The Commission hereby delegates to the Director of the Division of Swap Dealer and Intermediary Oversight, or such other employee or employees as the Director may designate from time to time, the authority to request information and/or documentation in connection with the Commission's issuance of a comparability determination under this section.

(h) *Records, scope of application, effective and compliance dates*—(1) *Records.* Swap dealers and major swap participants shall create a record of their compliance with this section and shall retain records in accordance with § 23.203.

(2) *Scope of Application.* The requirements of this section shall not apply to swaps executed prior to September 14, 2021.

(3) *Effective date and compliance date.* (i) This section shall be effective on the date that is 60 days following its publication in the **Federal Register**.

(ii) Provided that swap dealers and major swap participants comply with the recordkeeping requirements in paragraph (h)(1) of this section, the exceptions in paragraph (e) of this section are effective upon the effective date of the rule.

(iii) Swap dealers and major swap participants must comply with the requirements of this section no later than September 14, 2021.

Issued in Washington, DC, on July 24, 2020, by the Commission.

Christopher Kirkpatrick,

Secretary of the Commission.

Note: The following appendices will not appear in the Code of Federal Regulations.

Appendices to Cross-Border Application of the Registration Thresholds and Certain Requirements Applicable to Swap Dealers and Major Swap Participants—Commission Voting Summary, Chairman's Statement, and Commissioners' Statements

Appendix 1—Commission Voting Summary

On this matter, Chairman Tarbert and Commissioners Quintenz and Stump voted in the affirmative. Commissioners Behnam and Berkovitz voted in the negative.

Appendix 2—Supporting Statement of Chairman Heath P. Tarbert

President John Adams once warned: ''Great is the guilt of unnecessary war.'' [1] While he was obviously referring to military conflicts, his admonition applies to conflicts among nations more generally. Financial regulation has not been exempt from international discord. And in recent years, the CFTC's own cross-border guidance on swaps has caused concerns about a regulatory arms race and the balkanization of global financial markets. Consider the following entreaties by our overseas allies and regulatory counterparts:

''*At a time of highly fragile economic growth, we believe that it is critical to avoid taking steps that risk withdrawal from global financial markets into inevitably less efficient regional or national markets.*''

—Letter from the Finance Ministers of the United Kingdom, France, Japan, and the European Commission to CFTC Chairman regarding the CFTC's cross-border guidance (Oct. 17, 2012)

''*We believe a failure to address [our] concerns could have unintended consequences, including increasing market fragmentation and, potentially, systemic risk in these markets, as well as unduly increasing the compliance burden on industry and regulators.*''

—Letter from the Australian Securities and Investments Commission, the Hong Kong Monetary Authority, the Monetary Authority of Singapore, the Reserve Bank of Australia, and the Securities and Futures Commission of Hong Kong to CFTC Chairman regarding the CFTC's cross-border guidance (Aug. 27, 2012)

''*. . . [U]sing personnel or agents located in the U.S. would not be a sufficient criterion supporting the duplication of applicable sets of rules to transactions [between non-U.S. persons,] and [we] ask you to consider not directly applying rules on this basis.*''

—Letter from Steven Maijoor, Chair, European Securities and Markets Authority to Acting CFTC Chairman regarding the CFTC staff's ''ANE Advisory,'' No. 13–69 (Mar. 13, 2014)

I will leave it to others to debate whether the international discord caused by the CFTC's cross-border guidance [2] and related staff advisory [3] was ''necessary'' at the time it was introduced. Far more constructive is for us to ask whether it is necessary today. For me, there is but one conclusion: Because nearly all G20 jurisdictions have adopted similar swaps regulations pursuant to the Pittsburgh Accords,[4] it is unnecessary for the CFTC to be the world's policeman for all swaps.

On this basis, I am pleased to support the Commission's final rule on the cross-border application of registration thresholds and certain requirements for swap dealers and major swap participants (''swap entities''). This final rule provides critically needed regulatory certainty to the global swaps markets. And I believe it properly balances protection of our national interests with appropriate deference to international counterparts.

Need for Rule-Based Finality

As noted above, the Commission's 2013 Guidance left much to be desired by both our market participants and our regulatory colleagues overseas. The action was taken outside the standard rulemaking process under the Administrative Procedure Act,[5] so was merely ''guidance'' that is not technically enforceable. But because market participants as a practical matter followed it nonetheless, it had a sweeping impact on the global swaps markets. Over the intervening years, a patchwork of staff advisories and no-action letters has supplemented the 2013 Guidance. With almost seven years of experience, it is high time for the Commission to bring finality to the issues the 2013 Guidance and its progeny sought to address.

Congressional Mandate

We call this final rule a ''cross-border'' rule, and in certain respects it is. For example, the rule addresses when non-U.S. persons must count dealing swaps with U.S. persons, including foreign branches of American banks, toward the *de minimis* threshold in our swap dealer definition. More fundamentally, however, the rule answers a basic question: *What swap dealing activity outside the United States should trigger CFTC registration and other requirements?*

To answer this question, we must turn to section 2(i) of the Commodity Exchange Act (''CEA''),[6] a provision Congress added in Title VII of the Dodd-Frank Act. Section 2(i) provides that the CEA does not apply to swaps activities outside the United States except in two circumstances: (1) Where activities have a ''direct and significant connection with activities in, or effect on, commerce of the United States'' or (2) where they run afoul of the Commission's rules or regulations that prevent evasion of Title VII. Section 2(i) evidences Congress's clear intent for the U.S. swaps regulatory regime to stop at the water's edge, except where foreign activities either are closely and meaningfully related to U.S. markets or are vehicles to evade our laws and regulations.

I believe the final rule we issue today is a levelheaded approach to the exterritorial application of our swap dealer registration regime and related requirements, and it fully implements the congressional mandate in section 2(i). At the same time, it acknowledges the important role played by the CFTC's domestic and international counterparts in regulating parts of the global swaps markets. In short, the final rule employs neither a full-throated ''intergalactic commerce clause'' [7] nor an isolationist

mentality. It is thoughtful and balanced, and it will avoid future unnecessary conflicts among regulators.

Guiding Principles for Regulating Foreign Activities

As I have stated before,[8] I am guided by three additional principles in considering the extent to which the CFTC should make use of our extraterritorial powers.

1. Protect the National Interest

An important role of the CFTC is to protect and advance the interests of the United States. In this regard, Congress provided the CFTC with explicit extraterritorial power to safeguard the U.S. financial system where swaps activities are concerned.

It is incumbent upon us to guard against risks created outside the United States flowing back into our country. But our focus cannot be on *all* risks. Congress made that clear in section 2(i). It would be a markedly poor use of American taxpayers' dollars to regulate swaps activities in far-flung lands simply to prevent every risk that might have a nexus to the United States. It would also divert the CFTC from channeling our resources where they matter the most: To our own markets and participants. The rule therefore focuses on instances where material risks from abroad are most likely to come back to the United States and where no one but the CFTC is responsible for those risks.

Hence, guarantees of offshore swaps by U.S. parent companies are counted toward our registration requirements because that risk is effectively underwritten and borne in the United States. The same is true with the concept of a ''significant risk subsidiary'' (''SRS''). As explained in the rule, an SRS is a large non-U.S. subsidiary of a large U.S. company that deals in swaps outside the United States but (1) is not subject to comparable capital and margin requirements in its home country, and (2) is not a subsidiary of a holding company subject to consolidated supervision by an American regulator, namely the Federal Reserve Board. Our final cross-border rule requires an SRS to register as a swap dealer or major swap participant with the CFTC if the SRS exceeds the same registration thresholds as a U.S. firm operating within the United States. The national interest demands it.[9]

2. Follow Kant's Categorical Imperative

As I said when we proposed this rule, I believe cross-border rulemaking should follow Kant's ''categorical imperative'': We should act according to the maxim that we wish all other rational people to follow, as if it were a universal law.[10]

What I take from that is that we should ourselves establish a regulatory regime that we believe should be the global convention. How would this work? Let me start by explaining how it would not work. If we impose our regulations on non-U.S. persons whenever they have a remote nexus to the United States, then we should be willing for all other jurisdictions to do the same. The end result would be absurdity, with everyone trying to regulate everyone else. And the duplicative and overlapping regulations would inevitably lead to fragmentation in the global swaps markets—itself a potential source of systemic risk.[11] Instead, we should adopt a framework that applies CFTC regulations outside the United States only when it addresses one or more important risks to our markets.

Furthermore, we should afford comity to other regulators who have adopted comparable regulations, just as we expect them to do for us. This is especially important when we evaluate whether foreign subsidiaries of U.S. parent companies could pose a significant risk to our financial system. The categorical imperative leads us to an unavoidable result: We should not impose our regulations on the non-U.S. activities of non-U.S. companies in those jurisdictions that have comparable capital and margin requirements to our own.[12] By the same token, when U.S. subsidiaries of foreign companies operate within our borders, we expect them to follow our laws and regulations and not simply comply with rules from their home country.

Charity, it is often said, begins at home. The categorical imperative further compels us to avoid duplicating the work of other American regulators. If a foreign subsidiary of a U.S. financial institution is subject to consolidated regulation and supervision by the Federal Reserve Board, then we should defer to our domestic counterparts on questions of dealing activity outside the United States. The Federal Reserve Board has extensive regulatory and supervisory tools to ensure a holding company is prudent in its risk-taking at home and abroad.[13] The CFTC instead should focus on regulating dealing activity within the United States or with U.S. persons.

3. Pursue SEC Harmonization Where Appropriate

As I said in connection with our proposal of this rule, I find it surreal that the SEC and the CFTC, two federal agencies that regulate similar products pursuant to the same title of the same statute—with an explicit mandate to ''consult and coordinate'' with each other—have not agreed until today on how to define ''U.S. person.'' This failure to coordinate has unnecessarily increased operational and compliance costs for market participants.[14] I am pleased that this final rule uses the same definition of ''U.S. person'' as the SEC's cross-border rulemaking.

To be sure, as my colleagues have said on several occasions, we should not harmonize with the SEC merely for the sake of harmonization.[15] We should do so only if it

Policy Statement; (2) Notice of Proposed Exemptive Order and Request for Comment Regarding Compliance with Certain Swap Regulations (June 29, 2012), *https://www.cftc.gov/PressRoom/SpeechesTestimony/sommersstatement062912* (noting that ''staff had been guided by what could only be called the 'Intergalactic Commerce Clause' of the United States Constitution, in that every single swap a U.S. person enters into, no matter what the swap or where it was transacted, was stated to have a direct and significant connection with activities in, or effect on, commerce of the United States'').

[8] Statement of Chairman Heath P. Tarbert in Support of the Cross-Border Swaps Proposal (Dec. 18, 2019), *https://www.cftc.gov/PressRoom/SpeechesTestimony/tarbertstatement121819.*

[9] The SRS concept is designed to address a potential situation where a U.S. entity establishes an offshore subsidiary to conduct its swap dealing business without an explicit guarantee on the swaps in order to avoid U.S. regulation. For example, the U.S.-regulated insurance company American International Group (''AIG'') nearly failed as a result of risk incurred by the London swap trading operations of its subsidiary AIG Financial Products. *See, e.g.,* Congressional Oversight Panel, June Oversight Report, *The AIG Rescue, Its Impact on Markets, and the Government's Exit Strategy* (June 10, 2010), *http://www.gpo.gov/fdsys/pkg/CPRT-111JPRT56698/pdf/CPRT-111JPRT56698.pdf.* If the Commission did not regulate SRSs, an AIG-type entity could establish a non-U.S. affiliate to conduct its swaps dealing business, and, so long as it did not explicitly guarantee the swaps, it would avoid application of the Dodd-Frank Act and bring risk created offshore back into the United States without appropriate regulatory safeguards.

[10] ''Act only according to that maxim whereby you can, at the same time, will that it should become a universal law.'' Immanuel Kant, *Grounding for the Metaphysics of Morals* (1785) [1993], translated by James W. Ellington (3rd ed.).

[12] *See, e.g.,* Comments of the European Commission in respect of CFTC Staff Advisory No. 13–69 regarding the applicability of certain CFTC regulations to the activity in the United States of swap dealers and major swap participants established in jurisdictions other than the United States (Mar. 10, 2014), *https://comments.cftc.gov/PublicComments/ViewComment.aspx?id=59781&SearchText=* (''In order to ensure that cross-border activity is not inhibited by the application of inconsistent, conflicting or duplicative rules, regulators must work together to provide for the application of one set of comparable rules, where our rules achieve the same outcomes. Rules should therefore include the possibility to defer to those of the host regulator in most cases.''); FSB Fragmentation Report, *supra* note 11, at 8 (noting that the G20 ''has agreed that jurisdictions and regulators should be able to defer to each other when it is justified by the quality of their respective regulatory and enforcement regimes, based on similar outcomes in a non-discriminatory way, paying due respect to home country regulation regimes'').

[13] For example, the Federal Reserve Board requires all foreign branches and subsidiaries ''to ensure that their operations conform to high standards of banking and financial prudence.'' 12 CFR 211.13(a)(1). Furthermore, they are subject to examinations on compliance. *See Bank Holding Company Supervision Manual,* Section 3550.0.9 (''The procedures involved in examining foreign subsidiaries of domestic bank holding companies are generally the same as those used in examining domestic subsidiaries engaged in similar activities.'').

[14] *See, e.g.,* Futures Industry Association Letter re: Harmonization of SEC and CFTC Regulatory Frameworks (Nov. 29, 2018), *https://fia.org/articles/fia-offers-recommendations-cftc-and-sec-harmonization.*

[15] *See, e.g.,* Dissenting Statement of Commissioner Dan M. Berkovitz, Rulemaking to Provide Exemptive Relief for Family Office CPOs: Customer Protection Should be More Important than Relief for Billionaires (Nov. 25, 2019), *https://www.cftc.gov/PressRoom/SpeechesTestimony/berkovitzstatement112519* (''The Commission eliminates the notice requirement largely on the basis that this will harmonize the Commission's regulations with those of the SEC. Harmonization for harmonization's sake is not a rational basis for agency action.'').

is sensible. In the first instance, we must determine whether Congress has explicitly asked us to do something different or implicitly did so by giving us a different statutory mandate. We must also consider whether differences in our respective products or markets warrant a divergent approach. Just as today's final rule takes steps toward harmonization, it also diverges where appropriate.

The approach we have taken with respect to ''ANE Transactions'' is deliberately different than the SEC's.[16] ANE Transactions are swap (or security-based swap) transactions between two non-U.S. persons that are ''arranged, negotiated, or executed'' by their personnel or agents located in the United States, but booked to entities outside America. While some or all of the front-end sales activity takes place in the United States, the financial risk of the transactions resides overseas.

Here, key differences in the markets for swaps and security-based swaps are dispositive. The swaps market is far more global than the security-based swaps market. While commodities such as gold and oil are traded throughout the world, equity and debt securities trade predominantly in the jurisdictions where they were issued. For this reason, security-based swaps are inextricably tied to the underlying security, and vice versa. This is particularly the case with single-name credit default swaps, where the arranging, negotiating, or execution is typically done in the United States because the underlying reference entity is a U.S. company. More generally, security-based swaps can affect the price and liquidity of the underlying security, so the SEC has a legitimate interest in regulating transactions in those instruments. By contrast, because commodities are traded globally, there is less need for the CFTC to apply its swaps rules to ANE Transactions.[17]

Moreover, as noted above, Congress directed the CFTC to regulate foreign swaps activities outside the United States that have a ''direct and significant'' connection to our financial system. Congress did not give a similar mandate to the SEC. As a result, the SEC has not crafted its cross-border rule to extend to an SRS engaged in security-based swap dealing activity offshore that may pose a systemic risk to our financial system. Our rule does with respect to swaps, aiming to protect American taxpayers from another Enron conducting its swaps activities through a major foreign subsidiary without CFTC oversight.

The final rule addresses Transaction-Level Requirements applicable to swap entities (specifically, the Group B and Group C requirements), but does not cover other Transaction-Level Requirements, such as the reporting, clearing, and trade execution requirements. The Commission intends to address these remaining Transaction-Level Requirements (the ''Unaddressed TLRs'') in connection with future cross-border rulemakings. Until such time, the Commission will not consider, as a matter of policy, a non-U.S. swap entity's use of their personnel or agents located in the United States to ''arrange, negotiate, or execute'' swap transactions with non-U.S. counterparties for purposes of determining whether Unaddressed TLRs apply to such transactions.

In connection with the final rule, DSIO has withdrawn Staff Advisory No. 13–69,[18] and, together with the Division of Clearing and Risk and the Division of Market Oversight, granted certain non-U.S. swap dealers no-action relief with respect to the applicability of the Unaddressed TLRs to their transactions with non-U.S. counterparties that are arranged, negotiated, or executed in the United States. In Staff Advisory 13–69, the CFTC's staff applied Transaction-Level Requirements to ANE Transactions, without the Commission engaging in notice and comment rulemaking to determine whether such an application is appropriate. Going forward, I fully expect that the Commission will first conduct fact-finding to determine the extent to which ANE Transactions raise policy concerns that are not otherwise addressed by the CEA or our regulations.

Refinements to the Proposed Rule

In response to public comment, and consistent with the guiding principles described above, the final rule includes a number of refinements from the proposal issued last December. I will leave it to our extremely knowledgeable staff to outline all the changes in detail, but I will highlight some of the key refinements here. These principally concern the treatment of SRSs and U.S. branches of foreign swap entities.

1. Significant Risk Subsidiaries

As noted, the SRS concept is not intended to reach subsidiaries of holding companies that are subject to consolidated supervision by the Federal Reserve Board. The final rule recognizes that intermediate holding companies of foreign banking organizations under the Federal Reserve Board's Regulation YY are subject to such consolidated supervision, and to enhanced capital, liquidity, risk-management, and stress-testing requirements. Accordingly, foreign subsidiaries of intermediate holding companies are excluded from the SRS definition under the final rule.

In addition, the final rule recognizes that certain SRSs may act as ''customers'' or ''end users'' in the global swaps markets, engaging in only a *de minimis* level of swap dealing or no dealing activity at all. Consistent with the principle of focusing on risk to the United States, the ''Group B'' category of risk-mitigating regulatory requirements will not apply to swaps between a non-U.S. swap entity and an SRS that is simply an end user.[19] This approach will help preserve end users' access to liquidity in foreign markets.

For similar reasons, the final rule also provides a limited exception from the Group B requirements for a swap entity that is an SRS or a guaranteed entity—to the extent that swap entity's counterparty is an SRS end user or an Other Non-U.S. Person that is not a swap entity. In addition, the final rule clarifies that a non-U.S. person that is not itself an SRS or a guaranteed entity need not count swaps with an SRS toward its swap dealer *de minimis* threshold, unless that SRS is a guaranteed entity.

I believe these adjustments to the proposed SRS regime will further serve to channel our regulatory resources, while offering appropriate deference to our domestic and foreign regulatory counterparts.

2. U.S. Branches

The final rule also includes two key changes to the treatment of U.S. branches of foreign swap entities. First, it expands the availability of substituted compliance for the Group B requirements to include swaps between such a U.S. branch, on the one hand, and an SRS or Other Non-U.S. Person, on the other.[20] And second, it creates a new exception from the ''Group C'' external business conduct standards for swaps between U.S. branches and foreign counterparties (other than guaranteed entities and foreign branches of U.S. swap entities). These changes recognize that U.S. branches, though located on U.S. soil, are part of a non-U.S. legal entity. Accordingly, while such branches should be subject to certain risk-mitigating regulations, they should not be subject to the full panoply of requirements applicable to true U.S. persons.

Conclusion

In sum, the final rule before us today provides a critical measure of regulatory certainty for the global swaps markets. I believe the rule is also a sensible and principled approach to addressing when foreign transactions should fall within the CFTC's swap entity registration and related requirements.

I have noted before President Eisenhower's observation that ''The world must learn to

[16] *See* Securities and Exchange Commission, Final Rules and Guidance on Cross-Border Application of Certain Security-Based Swap Requirements, 85 FR 6270, 6272 (Feb. 4, 2020) (stating that ''the [SEC] continues to believe the 'arranged, negotiated, or executed' criteria form an appropriate basis for applying Title VII requirements in the cross-border context'').

[17] Under the final rule, persons engaging in any aspect of swap transactions within the United States remain subject to the CEA provisions and Commission regulations prohibiting the employment, or attempted employment, of manipulative, fraudulent, or deceptive devices, such as section 6(c)(1) of the CEA (7 U.S.C. 9(1)) and Commission regulation 180.1 (17 CFR 180.1). The Commission thus would retain anti-fraud and anti-manipulation authority, and would continue to monitor the trading practices of non-U.S. persons that occur within the territory of the United States in order to enforce a high standard of customer protection and market integrity. Even where a swap is entered into by two non-U.S. persons, we have a significant interest in deterring fraudulent or manipulative conduct occurring within our borders, and we cannot let our country be a haven for such activity.

[18] CFTC Staff Advisory No. 13–69 (Nov. 14, 2013), *https://www.cftc.gov/sites/default/files/idc/groups/public/@lrlettergeneral/documents/letter/13-69.pdf.*

[19] This exception applies only to ''Other Non-U.S. Person'' swap entities, *i.e.,* non-U.S. swap entities that are neither an SRS nor an entity subject to a U.S. person guarantee (''guaranteed entity''). A non-U.S. swap entity that is an SRS or guaranteed entity would need to rely on the limited Group B exception discussed below.

[20] This expansion of substituted compliance does not apply to swaps between two U.S. branches of non-U.S. swap entities.

work together, or finally it will not work at all.'' I sincerely hope our domestic and international counterparts will view today's action as a positive step toward further cooperation to provide sound regulation to the global swaps markets.

Appendix 3—Supporting Statement of Commissioner Brian Quintenz

I am very pleased to support today's final rule interpreting Congress' statutory directive that the Commission may only regulate those foreign activities that ''have a direct and significant connection with activities in, or effect on commerce, of the United States.'' [1] As I noted when I supported the proposal last December, Congress deliberately placed a clear and strong limitation on the CFTC's extraterritorial reach, recognizing the need for international comity and deference in a global swaps market.[2] Today's rule provides important safeguards to the US financial markets in delineating which cross-border swap activity must be counted towards potential registration with the Commission, and which transactions should be subject to the CFTC's business conduct requirements for swap dealers (SDs) and major swap participants (MSPs). At the same time, the final rule appropriately defers to foreign regulatory regimes to avoid duplicative regulation and disadvantaging U.S. institutions acting in foreign markets.

Today's rule achieves the goals for cross-border regulation that I articulated in a speech before the ISDA Annual Japan Conference in October of last year.[3] I stated that each jurisdiction's recognition of, and deference to, the sovereignty of other jurisdictions is crucial in avoiding market fragmentation that poses serious risks to the liquidity and health of the derivatives markets. This rule properly grants deference to other jurisdictions by limiting the extent to which non-US counterparties must comply with significant aspects of the CFTC's regulatory framework for SDs and MSPs and by providing market participants with the opportunity to comply with local laws that the Commission has deemed comparable to the CFTC's regulations (''substituted compliance'').

Substituted Compliance

As I noted with respect to the proposal, substituted compliance is the lynchpin of a global swaps market, and the absence of regulatory deference has been the fracturing sound we hear when the global swaps market fragments. The final rule provides a framework for substituted compliance with respect to two sets of regulations, ''group A'' entity-level requirements, such as conflicts of interest policies and a risk management program, and ''group B'' transaction-level requirements, such as daily trading records, confirmation, and portfolio reconciliation. While the Commission has issued substituted compliance determinations for entity-level requirements in six jurisdictions and for transaction-level requirements in two jurisdictions, they all contain exceptions for particular provisions of the Commission's regulations, and one of the transaction-level determinations partially addresses only two of the five regulations in group B.[4]

Today's rule provides for a flexible, outcomes-based framework for future comparability determinations that will assess the goals of the Commission's regulations against the standards of its foreign counterparts' regimes, instead of directing the Commission to focus on a rigid line-by-line or even regulation-by-regulation comparison.[5] More specifically, and a primary reason for my support of this final rule, under this new framework, the Commission can compare the goals of its regulations to the outcomes of foreign regulations on an entire group-wide basis, so that the standards of a foreign regime will be considered holistically compared to the goals of all the Commission's either group A or group B requirements.

Additionally, this final rule allows the Commission to proactively assess and issue comparability determinations without waiting for a request from a jurisdiction. I recognize that several G–20 jurisdictions have made significant progress in the area of issuing transaction-level requirements, as evidenced by a recent report by the Financial Stability Board (FSB).[6] I hope that the Commission will soon issue additional substituted compliance determinations in order that foreign firms registered as SDs with the Commission, as well as foreign branches of US SDs, can gain the efficiencies of complying with local laws for many of their transactions with non-US persons.[7] Ideally, future determinations will provide for comprehensive, holistic substituted compliance in a particular jurisdiction for all transaction-level requirements in the CFTC's group B.

ANE

Today's rule properly eliminates the possibility that a non-US SD be required to follow many of the CFTC's transaction-level requirements for a swap opposite a non-US counterparty if US-based personnel of that SD ''arrange, negotiate, or execute'' (ANE) the swap. This action brings to a close almost seven years of uncertainty, beginning with the misguided DSIO Advisory of November 2013.[8] I note that the staff's no-action letter issued this week suspends enforcement of ANE with respect to transaction-level requirements not covered by today's rule, specifically in the areas of real-time reporting of swaps to data repositories and the clearing and trade execution requirements, pending future Commission rulemakings that address these rules in a cross-border context. I expect the Commission will issue such rules in the near future in order to provide the marketplace with legal certainty in these areas and formally dispense with the ANE construct, just as it has with respect to the requirements addressed today. I believe strongly that ANE has no place with respect to real-time reporting, the clearing requirement, or the trade execution requirement, just like it has no place with respect to the business conduct regulations.

US Guarantees and SRS

Another important element of today's rule is that it only requires two, clearly defined classes of non-US entities to count all of their swaps towards the Commission's SD and MSP registration thresholds, and to generally comply with the Commission's SD and MSP rules if registered. The first is an entity whose obligations to a swap are guaranteed by a US person, under a standard consistent with the Commission's cross-border rule for uncleared swap margin requirements.[9] The second is an entity deemed a ''significant risk subsidiary'' (SRS) of a US firm. It is very important that subsidiaries of US bank holding companies, including intermediate subsidiaries, are carved out from the SRS definition. Those firms are subject to supervision by the Federal Reserve Board, and, therefore, it does not make sense for the CFTC to deploy its precious resources to regulating those entities.

Helping US SDs' Foreign Branches Compete

Today's rule properly makes substituted compliance available for group B requirements to a foreign branch of a US SD similarly to how substituted compliance is available for many non-US SDs registered with the Commission. I expect that this will help these branches compete with local institutions in that they will be subject to the same rules. For example, the Commission has already granted substituted compliance to EU regulations with respect to certain group B regulations.[10] As a result, both the EU branch of a US firm registered with the Commission as an SD and an EU firm registered as an SD could comply with many of the same EU rules for swaps with a US person or with a non-US person that is either US-guaranteed or an SRS registered as an SD or MSP (''swap entity SRS''). Moreover, under the ''limited foreign branch group B exception,'' the foreign branch of a US firm would be excused from complying with any group B rules, subject to a 5% notional cap, for a swap with a non-US person that is neither US guaranteed nor a swap entity SRS. However, if substituted compliance has been provided in a jurisdiction, then instead of

[10] 78 FR 78878 (Dec. 27, 2013).

being excused from the group B rules for those swaps, the foreign branch would have to comply with the local rules. Due to the fact that neither of the transaction-level determinations granted comparability for all of the group B requirements, with respect to those requirements not subject to a substituted compliance determination, the foreign branch may either comply with CFTC regulations or count the notional value of the swap towards its 5% limited group B exception. Clearly, the rules favor the possibility of substituted compliance, pursuant to which a foreign branch of a US firm would have no limitation in following local rules. I believe that group-wide comparability determinations, without any exceptions, would simplify this situation and make more consistent the treatment of US dealer's foreign branches and their local competitors.

In conclusion, I am very pleased to have been a part of the Commission that accomplished this major milestone in a long road of issuing final regulations in the area of cross-border swaps oversight. I would like to thank the staff of the Division of Swap Dealer and Intermediary Oversight for all of their work in completing this final rule and to Chairman Tarbert for his leadership on this important issue.

Appendix 4—Dissenting Statement of Commissioner Rostin Behnam Introduction and Overview

Today, by approving a final rule addressing the cross-border application of the registration thresholds and certain requirements applicable to swap dealers (''SDs'') and major swap participants (''MSPs'') (the ''Final Rule''), the Commodity Futures Trading Commission (''CFTC'' or ''Commission'') overlooks Dodd-Frank Act [1] purposes, Congressional mandates thereunder, an opinion of the DC District Court,[2] and multiple comments raising significant concerns. The Commission instead relies on broad deference that opens a gaping hole [3] in the federal regulatory structure. I cannot support a decision to jettison a cross-border regime that has not proven unreasonable, inflexible, or ineffective in favor of an approach that fails to address the most critical concerns that the Dodd-Frank Act directed the CFTC to address in favor of ''*more workable*'' [4] solutions. As the Final Rule opts to address the conflicts of economic interest between the regulated and those who are advantaged by it [5] by usurping Congressional (and congressionally delegated) authority to rethink section 2(i) of the Commodity Exchange Act (''CEA'' or ''Act'') via prescriptive rules, I must respectfully dissent.

Almost ten years ago to the day, Congress passed the Dodd-Frank Wall Street Reform and Consumer Protection Act as a legislative response to the 2008 financial crisis. Driven by a series of systemic failures, the crisis laid bare that the essentially unregulated and unmonitored over-the-counter derivatives or ''swaps'' markets were not the bastions of efficiency, stability, and resiliency they were thought to be.[6] Title VII of the Dodd-Frank Act gave the Commission new and broad authority to regulate the swaps market to address and mitigate risks arising from swap activities.[7]

Although much of the over-the-counter derivatives market's contributions to the 2008 financial crisis completed their journey within the continental U.S., the risk originated in foreign jurisdictions.[8] Accordingly, Congress provided in CEA section 2(i) that the provisions of Title VII, as well as any rules or regulations issued by the CFTC, apply to cross-border activities when certain conditions are met.[9]

The D.C. District Court recognized that ''Section 2(i) operates independently, without the need for implementing regulations, and that the CFTC is well within its discretion to proceed by case-by-case adjudications, rather than rulemaking, when applying Section 2(i)'s jurisdictional nexus.'' [10] The D.C. District Court also found that, because the Commission was ''not required to issue *any* rules (let alone binding rules) regarding its intended enforcement policies pursuant to Section 2(i),'' the CFTC's decision to issue the Guidance as a non-binding policy statement benefits market participants.[11] To the extent the CFTC interpreted the meaning of CEA section 2(i) in its 2013 cross-border Guidance, an interpretation carried forward in the Final Rule today (and in its proposal), such interpretation is permissibly drawn linguistically from the statute and, regardless, cannot substantively change the legislative reach of section 2(i) or the Title VII regime.[12] In this regard, the interpretation reinforces the direct meaning of CEA section (2)(i)'s grant of authority—without implementing regulations—to enforce the Title VII rules extraterritorially whenever activities ''have a direct and significant connection with activities in, or effect on, commerce of the United States.'' [13] Putting aside the anti-evasion prong in CEA section 2(i)(2), it remains that CEA section 2(i) applies the swaps provisions of the CEA to certain activities, viewed in the class or aggregate, outside the United States, that meet either of two jurisdictional nexuses: (1) A direct and significant effect on U.S. commerce; or (2) a direct and significant connection with activities in U.S. commerce, and through such connection, present the type of risks to the U.S. financial system and markets that Title VII directed the Commission to address.[14]

The Dodd-Frank Act's derivatives reforms contemplate that an individual entity's systemic riskiness is a product of the interrelations among its various activities and risk-management practices. As a result, the post-crisis reforms target the activity of derivatives trading as a means to reach those entities that conduct the trading.[15] As the Commission has acknowledged, ''Neither the statutory definition of 'swap dealer' nor the Commission's further definition of that term turns solely on risk to the U.S. financial system.'' [16] And to that end, ''[T]he Commission does not believe that the location of counterparty credit risk associated with a dealing swap—which . . . is easily and often frequently moved across the globe—should be determinative of whether a person's dealing activity falls within the scope of the Dodd-Frank Act.'' [17] By adopting an overarching risk-based approach to cross-border regulation today, the Commission jeopardizes the integrity and soundness of the markets it regulates. The Final Rule acknowledges that systemic risk may derive from the activities of entities that do not individually generate the kind of risk that

would subject them to systemic risk-based regulation, but then chooses not to address that very risk. When the CFTC focuses its regulatory oversight only on individually systemically significant entities, it unavoidably leaves risky activities unregulated that due to the interconnectedness of global markets individually, and in the aggregate, can and likely will negatively impact U.S. markets.[18]

Moreover, Congress embedded a risk-based approach, appropriate to the Commission's mandate, within the Dodd-Frank Act's swap dealer definition by instructing the Commission to exempt from designation as a dealer a person that ''engages in a *de minimis* quantity of swap dealing in connection with transactions with or on behalf of its customers'' and providing that an insured depository institution is not to be considered a swap dealer ''to the extent it offers to enter into a swap with a customer in connection with originating a loan with that customer.'' [19] The swap dealer definition further provides that a person may be designated as a dealer for one or more types, classes or categories of swaps or activities without being designated a dealer for other types, classes, or categories of swaps or activities,[20] further indicating that the type and level of risk a particular person's activities present are the guiding factor in determining whether they may be required to register with the Commission as an SD and comply with the requirements of Title VII. The Commission seems to have lost sight of the fact that the activity of swap dealing itself presents the type of risk addressed by Title VII.[21] The Commission's ability to establish a threshold amount of such activity that warrants direct oversight via registration does not diminish this underlying trait, which is not binary, but a measure of the scale of risk. Risk is simply in the DNA of an SD.

As recognized by the Commission, requiring registration and compliance with the requirements of the Dodd-Frank Act reduces risk and enhances operational standards and fair dealing in the swaps markets.[22] To the extent the Dodd-Frank Act was enacted to reduce systemic risk to the financial system, the CFTC's role is to individually utilize its expertise in addressing risk to the financial system created by interconnections in the swaps market as a market conduct regulator through supervisory oversight of SDs and MSPs,[23] and to contribute as a voting member in support of the broader systemic risk oversight carried out by the Financial Stability Oversight Council (''FSOC'').[24]

Since 2013, when the Commission announced its first cross-border approach in flexible guidance as a non-binding policy statement,[25] the Commission has understood that the global scale of the swap markets and domestic scale of regulation poses significant challenges for regulators and market participants.[26] I dissented from the December 2019 proposal for the Final Rule the Commission considers today.[27] Like the Final Rule, the Proposal suggested that we can resolve all complexities in one fell swoop if we alter our lens, abandon our longstanding and literal interpretation of CEA section 2(i), and limit ourselves to the purely *risk-based approach* described therein.

Today's action ignores that, ''It is the essence of regulation that it lays a restraining hand on the self-interest of the regulated and that the advantages from the regulation commonly fall to others.'' [28] The Final Rule is essentially the Proposal with a more clearly articulated intention to rethink the Commission's mandate under the Dodd-Frank Act to seize the status of primary significant risk regulator—a position the Commission was neither delegated to assume nor provided the resources to occupy—so as to limit the application of Title VII. Like the Proposal, the Final Rule acknowledges the likelihood that the chosen course will result in increased risks of the kind Title VII directs us to address flowing into the U.S., or even originating in the U.S. via ANE activities, and then states a belief that the chosen approach is either ''adequate'' [29] or of no moment because our focus on significant participants in the U.S. market should ensure the appropriate persons are subject to Commission oversight via registration, even if, ''to the extent that a registered SD or MSP relies on the exceptions in the Final Rule, and is located in a jurisdiction that does not have comparable swap requirements, the Final Rule could lead to weaker risk management practices for such entities.''.[30] This approach boils down to: ad hoc harmonizing with the Securities and Exchange Commission (''SEC''); de facto delegating to the U.S. prudential regulators; or deferring to a foreign jurisdiction under a banner of comity without ever explaining how the application of the swap dealer *de minimis* registration threshold is unreasonable.

In various statements throughout the preamble, the Commission subtly—and not so subtly—promotes its emergent ''desire to focus its authority on potential significant risks to the U.S. financial system.'' [31] In one glaring instance, the Commission responds to a very clear comment on the weakness of the SRS definition in terms of addressing evasion and avoidance concerns by eviscerating Congress's very carefully crafted SD definition, stating, ''[w]ithout this risk-based approach [SRS], the SD de minimis threshold, which is a strictly activity-based test (*i.e.,* a test based on the aggregate gross notional amount of dealing activity), becomes the de facto risk test of when an entity would be subject to the Commission's swap requirements as an SD.'' [32] In the past several years, I have noted the Commission's eagerness to bypass clear Congressional intent in order to address longstanding concerns with Dodd-Frank Act implementation.[33] Indeed, the Commission has at times made a concerted effort to avoid targeted amendments in favor of sweeping changes to the regulation of swap dealers without regard for the long term consequences of its fickle interpretation of the law and analysis of risk.[34] I have grave concerns that the Final Rule's motive in commandeering the role of systemic risk regulator is to provide certainty to entities that they will have sufficient paths in the future to avoid registration with the Commission, and thus fly under the radar of the FSOC and the entire Title VII regime. As the DC District Court noted, the Commission cannot second-guess Congress' decision that Title VII apply extraterritorially.[35] In layering its new approach over the CEA section 2(i) analysis, the Commission does just that.

My dissent to the Proposal expounded at length on concerns with the Commission's ''new approach,'' which seeks to improve upon and clarify the Guidance while reallocating responsibilities in a manner that

[18] *See* Guidance, 78 FR at 45300 (consistent with relevant case law and the purpose of Title VII to protect the U.S. financial system from the build-up of systemic risks, under CEA section 2(i), the Commission must assess the connection of swap activities, viewed as a class or in the aggregate, to activities in commerce of the United States to determine whether application of the CEA swaps provisions is warranted).

is ill-conceived given that we are just 10 years past one crisis, and currently navigating a global pandemic. Accordingly, I will not reiterate my earlier points, but incorporate by reference my prior dissent,[36] which is still on point save for a comment I made on the ''unlimited U.S. responsibility prong'' to the U.S. person definition, which has been addressed, and I thank staff for addressing my concern.[37] I will, however, take the opportunity here to focus on how the Commission's approach to the cross-border application of the SD registration threshold in the Final Rule amounts to a re-write of the Dodd-Frank Act, as exemplified by the ''significant risk subsidiary'' or ''SRS'' definition.

The Commission Does Not Have a Blank Check

By codifying a purely and defined risk-based approach to its extraterritorial jurisdiction, exempting from the CFTC's regulatory oversight all entities but those which individually pose systemic risk to the U.S. financial system, the CFTC abdicates its Congressionally-mandated responsibility under CEA section 2(i) to regulate activities outside of the United States that meet one of the aforementioned jurisdictional nexuses.[38] The Final Rule today defies Congress' clear intent in enacting CEA section 2(i), improperly elevates comity over adhesion to the CFTC's mandate, and increases the riskiness of global swap markets.

Congress demonstrated its ability to discern between purely systemic risk-based and activities-based regulation when it designated authority to the CFTC. It directed the Commission to develop a metric to analyze which entities pose enough risk to require SD registration, creating an exception to the registration requirement for entities engaged in only a *de minimis* quantity of swap dealing.[39] It is telling that the CEA does not, under section 2(i), direct the CFTC to develop a similar threshold measurement to evaluate whether foreign entities singularly pose systemic risk to U.S. commerce. The lack of a comparable exception in CEA section 2(i) indicates that Congress intended to do exactly what the plain language of CEA section 2(i) suggests—require that the CFTC oversee *activities* outside of the U.S. that pose risk to U.S. commerce (not individual persons or entities). [40] Furthermore, nothing in the swap dealer definition or CEA section 2(i) expresses that we should defer to prudential regulators, whether U.S. or foreign; prudentially-regulated entities may be required to register as swap dealers with the CFTC.[41] If the Congress believed that prudential regulation could sufficiently mitigate risk to the U.S. financial system, it would have chosen to delegate this function to the U.S. prudential regulators. Congress instead chose to enact a registration requirement in Title VII of the Dodd-Frank Act. Ultimately, the introduction of the concept of an ''SRS'' and accompanying exemptions for: (1) Entities with parents that have less than $50 billion in consolidated assets, and for entities that are already (2) prudentially regulated or (3) subject to comparable foreign regulation, is impermissible under CEA section 2(i).

Whether or not we agree with Congress, the CFTC is not free to rewrite the statute and enact rules that contravene our mandate. Agencies may not act like they have a ''blank check'' to proffer legislative rules outside of their delegated authority; [42] regulators have to take directives from their governing statute and not second-guess Congress.[43] Thus, the CFTC is not free to disregard its mandate in the pursuit of other objectives—such as comity, deference, adequacy, workability, or an inexplicable desire to act solely like a prudential regulator—no matter how laudable some of those objectives might be.[44] The Commission today dodges the responsibility with which it was entrusted in the wake of a crisis, impermissibly rewriting the Dodd-Frank Act to pass the buck to prudential regulators and our international counterparts.

The CFTC's implementation of the Final Rule's purely risk-based approach to regulating global swaps is neither allowable under Title VII, nor is it wise. Our current Chairman, in fulfilling his role as the CFTC's representative on the FSOC, when supporting guidance signifying that the FSOC would adopt an activities-based approach to determining risks to financial stability, stated that an entity-based approach, ''inevitably leads to a 'whack-a-mole' scenario in which risky activities are transferred out of highly-regulated entities and into less-regulated ones.'' [45] Given the conglomeration of exceptions built into the Final Rule's definitions of ''guarantee,'' and ''SRS,'' and its determination regarding ''ANE Transactions,'' it is hard to see how this transfer of risk to less-regulated entities—which still pose risk in the aggregate to U.S. markets—will not come to pass, inevitably leaving gaps in the CFTC's ability to oversee the activities it regulates.

With respect to our cooperation with foreign counterparts, I firmly believe that the CFTC should work diligently to coordinate oversight and elevate principles of international comity as we develop our cross-border approach—but not when doing so requires us to abdicate our mandate. To that end, I generally support the Final Rule's application of substituted compliance even if I do not fully agree with entity categorizations via the definitions. I also generally support the CFTC's deference to foreign regulators when it makes sound comparability determinations. To the extent the Final Rule grants somewhat indeterminate discretion to the CFTC to depart from an objective evaluation in making such determinations, as noted by several commenters,[46] I will remain vigilant when participating in such Commission action and be mindful of potential for slippage.

I remain concerned that the Final Rule, like the Proposal, makes vague references to ''comity'' to justify our resistance to regulating overseas activities that pose risk to U.S. markets. I agree that making substituted compliance available to foreign entities or subsidiaries, via sound comparability determinations, is appropriately deferential to principles of international comity. Nevertheless, we should only use comity to justify rulemaking when there is ambiguity in the governing statute,[47] or when our requirements unreasonably interfere with those of our international counterparts [48]—neither of which is overtly true regarding our statutory obligation under CEA sections 4s(a) and (c) [49] to register SDs and MSPs based on

their swap activities. Registration is a critical first step in determining whether a non-U.S. entity is engaged in activities covered under 2(i), and must not be disregarded for the sake of comity.

It is also pertinent to note here that by prioritizing comity and refusing to appropriately retain jurisdiction, at least to some degree, over transactions that are arranged, negotiated, or executed in the United States by non-U.S. SDs with non-U.S. counterparties (''ANE Transactions''), the Commission's abdication of Congressionally-mandated responsibility extends beyond CEA section 2(i). There is no need to even address whether these transactions have a ''direct and substantial'' impact on U.S. commerce, because they occur *in* the United States and accordingly fall squarely within the regulatory purview of the CFTC.[50] Ignoring all ANE Transactions invites entities to evade U.S. law, even as they avail themselves of the benefits of U.S. markets by residing in the U.S. and using U.S. personnel, as they can administratively treat transactions as booked in a foreign subsidiary based on the conclusion that any relevant risk has been shipped off. I am concerned that the CFTC is improperly fixating on comity at the expense of not only its mandate, but also at the expense of developing sound regulation that increases transparency, competition, and market integrity. The Final Rule brushes past concerns raised by a market participant that exempting ANE transactions from reporting requirements gives non-U.S. entities an advantage over U.S. SDs and jeopardizes the intended benefits of the CFTC's public reporting regime.[51] I am concerned by the Commission's response to the comment,[52] and I struggle to understand why any U.S. regulator would implement a rule that defies its statutory mandate, subjects U.S. entities to a competitive disadvantage relative to its foreign counterparts, and reduces U.S. investors' transparency into the markets.

SRS: This Is the Way

In my dissent to the Proposal, I identified SRS as the most elaborate departure from both the Commission's interpretation of CEA section 2(i) and from our mandate under the Dodd-Frank Act, in its elimination of a large cross-section of non-U.S. subsidiaries of U.S. parent entities from having to count their swap dealing activities toward the relevant SD or MSP registration threshold calculations.[53] The SRS replaces the conduit affiliate concept from the Guidance, which, although broader, served to (1) appropriately define the universe of entities whose risks related to swap activities may accrue and have a direct and significant connection with activities in, or effect on, U.S. commerce, and (2) harmonize with the SEC's cross-border application of the *de minimis* threshold relevant to security-based swap dealing activity.[54]

Despite a clear split among Commissioners and commenters, the Commission has determined to move forward with the SRS, which creates broad exceptions that could exclude large amounts of the swap dealing activities by foreign subsidiaries of U.S. entities from counting towards the SD and MSP registration threshold calculations and therefore, ultimately exclude them from the Commission's oversight and application of the swap dealer regulations. In support of its determination, the Commission rehashes and repeats the argument that SRS ''embodies'' the Commission's purely risk-based approach.[55] If ''this is the way,''[56] then I am afraid our new approach may not account—perhaps at all—for the risk that Congress and the Dodd-Frank Act directed the Commission to oversee. If Congress had wanted the Commission to focus its cross-border authority solely on systemically significant non-bank entities, it would have been explicit, and refrained from using language in CEA section 2(i) that was so embedded in common law.[57]

In excluding subsidiaries of bank holding companies and intermediate holding companies from the SRS definition, the Commission defers to the ''role of prudential regulation in the consolidated oversight of prudential risk,'' again relying on ''the risk-based approach to determining which foreign subsidiaries present a significant risk to their ultimate U.S. parent and thus to the financial system.''[58] In presuming that prudential oversight provides ''sufficient'' comparable oversight to that prescribed by Title VII, the Commission entirely ignores that history weighs against such a presumption[59] and Congress acted accordingly.[60] Under the Dodd-Frank Act, the CFTC is the ''primary financial regulatory agency'' for swap dealers.[61] CEA section 4s(c)[62] provides that any person that is required to be registered as an SD or MSP shall register with the CFTC regardless of whether the person also is a depository institution (*i.e.,* any bank or savings association) or is registered with the SEC as a security-based swap dealer. Moreover, to the extent SDs or MSPs have a prudential regulator, Title VII recognizes that such SDs/MSPs are to comply with capital and margin requirements established by their respective prudential regulators.[63] However, it explicitly does not recognize prudential regulation as a substitute for SD/MSP regulatory oversight by the Commission.[64]

Again, I believe that our cross-border approach must absolutely align with principles of international comity and that our rules and supervisory approach should harmonize and work in tandem with prudential regulation. However, I do not believe that the SRS definition is reasonable or consistent with the SD definition or CEA section 2(i), due to its deference to the role of prudential regulation in the consolidated oversight of prudential risk to carve out consideration of swap dealing activities of non-U.S. entities (that are not guaranteed by a U.S. person) for purposes of SD registration and Commission oversight.

The Final Rule would suggest that our consideration of the activities of non-U.S. subsidiaries of U.S. entities is an ''expansion'' of the Commission's oversight.[65] I disagree. The post-2010 crisis reforms require intensive oversight of entities engaged in swaps activities throughout the world. The Commission must retain in full

[50] *See SIFMA,* 67 F. Supp. 3d at 426 (''Section 2(i)'s ''technical language initially lays down a general rule placing all [swap] activity'' occurring outside of the United States beyond Title VII's reach. But it then expressly brings such swap activities ''back within'' Title VII's purview). ANE Transactions should not be a part of the initial exemption step required by section 2(i), because they do not occur outside of the United States.

[65] Final Rule at II. D. 3. (iv).

its oversight and regulatory responsibilities over entities whose activities have a direct and significant connection with activities in, or effect on, U.S. commerce. To do that effectively, we must be able to apply the SD definition and *de minimis* threshold to the web of interconnections through which risk travels, not simply rely on bright line balance sheet box checking to wholesale elimination of non-U.S. subsidiaries from our scope of consideration. As I stated in my prior dissent, without a more concrete understanding as to whether SRS is truly superior to the conduit affiliate [66] concept currently outlined in the Guidance and presumably similar to the SEC's own approach, it is difficult to get behind a policy that would bring risk into the U.S. of the very type CEA Section 2(i) seeks to address.

Complexity and Burden Should Not Direct the Outcomes

I continue to have reservations regarding the Commission's determination to discard the Guidance and the use of agency guidance and non-binding policy statements in favor of prescriptive rules.[67] As I noted with regard to the Proposal, while the Guidance is complex, it is no more complex than this Final Rule. Complexity is the hallmark of the regulation of cross-border derivatives, and ''merely reflects the complexity of swaps markets, swaps transactions, and the corporate structures of the market participants that the CFTC regulates.'' [68] I am especially concerned that the Commission is acting in haste to nail down hard and fast rules while many pieces in the global regulatory puzzle are still in flux.

Commenters refrained from weighing in on the virtues of retaining the Guidance—or agency guidance generally. The Proposal garnered just 18 relevant comment letters.[69] It is difficult to determine why, but perhaps market participants have followed the Guidance and utilized their expertise in reviewing the overall statutory scheme and the straightforward language of CEA section 2(i) to come into compliance with Title VII either directly or via substituted compliance and have not found it prohibitive to do so.[70]

[66] *See, e.g.,* 85 FR at 1012 (noting the Proposal's lack of explaining whether and how the conduit affiliate concept failed to achieve its purpose, is no longer relevant, resulted in loss of liquidity or market fragmentation, proved unworkable, etc.).

[67] *Id.* at 1010.

[68] *SIFMA,* 67 F.Supp.3d at 419–20 (''Indeed, the complexity of a regulatory issue is one reason an agency might choose to issue a non-binding policy statement rather than a rigid 'hard and fast rule.' '' (citing *SEC* v. *Chenery Corp.,* 332 U.S. 194, 202–203 (1947))).

[69] Comments to the Proposal are available at *https://comments.cftc.gov/PublicComments/CommentList.aspx?id=3067.* Of note, the proposal to the Guidance received approximately 290 comment letters. Guidance, 78 FR at 45295. The 2016 Proposal received approximately 29 substantive comment letters, available at *https://comments.cftc.gov/PublicComments/CommentList.aspx?id=1752.*

[70] Indeed, the DC District Court concluded that the CFTC need not address every facet of the overall regulatory scheme and can rely on regulated market participants to reference other controlling statutes and regulations to address issues left unresolved by a given Title VII rule. *See SIFMA,* 67 F. Supp. 3d at 428 n.31.

Like the Proposal, the Final Rule prides its alteration of various definitions such as ''U.S. person'' and ''guarantee,'' the substitution of SRS for conduit affiliates, and the abandonment of ANE Transactions, as burden and/or cost reducing (or, ''more workable''). Unfortunately, I believe the Commission in some instances has not fully evaluated the true weight of the burdens, and in other instances, not fully measured those burdens against the goals of Title VII and the benefits of the overall intent of CEA section 2(i).

A straightforward example is the Commission's determination to increase the proposed five-year time limits for reliance on representations regarding U.S. person and guarantee status to seven years to appease commenters who asked for perpetual reliance on previously obtained representations.[71] There is no indication that the Commission considered anything but providing market participants more time, in spite of recognizing that best practice would be to obtain updated representations as soon as practicable.

A more concerning example is the Commission's decision to move forward with a narrower definition of ''guarantee'' than that outlined in the Guidance, despite recognizing that it could lead to entities counting fewer swaps towards their *de minimis* registration threshold or ''qualify additional counterparties for exceptions to certain regulatory requirements as compared to the definition in the Guidance.'' [72] The Commission did not address the commenter who also pointed out that the narrower definition would allow significant risk to be transferred back to the U.S. financial system over time noting that, ''economic implications are just as important as legal considerations, as confirmed and intended by CEA section 2(i)(1).[73] Instead, the Final Rule offers the possibility that the SRS definition would capture some non-U.S. persons, returning to the mantra that in this way we focus on those entities that represent ''material risk to the U.S. financial system,'' through something ''workable.'' [74]

Conclusion

Before I conclude, I would like to take a moment to thank staff from the Division of Swap Dealer and Intermediary Oversight for their presentations, tireless work on this rulemaking, and frequent engagement with my office over the last few weeks leading up to today's open meeting. Like all of the CFTC's work, today's discussion would not have been possible without the expertise and commitment of our dedicated staff.

As the Commission wraps up its scheduled work, before a brief summer respite, particularly on this 10th anniversary week of the Dodd-Frank Act, our work yesterday and today, although some may like to think it, is *not* the culmination of years of work towards implementing the Dodd-Frank Act. In fact, the Commission acted promptly in issuing the cross-border 2013 Guidance, only a few

[71] *See* Final Rule at II.B.5. and C.3.

[72] *See* Final Rule at II.C.2. and 3.

[73] *Id.*

[74] *See* Final Rule at II.C.3.

years after bill passage and in the throes of dozens of other equally important Title VII rulemakings.

This week's exercise is a retrenchment of sound derivatives policy that provided the CFTC the tools necessary to monitor swap markets and protect the U.S. financial system and American taxpayers, and most importantly was steadfast to clearly articulated Congressional intent. There is always room for improvement, tweaking, and evolving—I have said as much, many times since becoming a Commissioner.

But, unfortunately, during this week that we should be lifting up the merits of financial reform, especially given the role post-crisis reforms played in absorbing massive shocks during the worst of the Covid–19 pandemic just a few months ago, we are turning back the clock to a previous era that proved to be inadequate to meeting our core responsibilities.

Appendix 5—Statement of Commissioner Dawn D. Stump

Overview

When we met together in person late last year to consider proposing cross-border rules with respect to registration thresholds and regulatory requirements applicable to swap dealers and major swap participants (the ''Proposal''),[1] I stressed that because we were proposing to replace the Commission's 2013 cross-border guidance (the ''Guidance'') [2] with binding and enforceable rules, those rules must be clear, sensible, and workable.[3] In supporting the Proposal at the time, I concluded that the proposed rules met those standards. And I have not seen anything in the many thoughtful comment letters we received that causes me to doubt that conclusion.

The final rules that are before us today, as we meet remotely several months later, are largely the same as those we proposed. But based on public input: (1) In several places, we are providing clarifications requested by market participants; [4] (2) in a few places where the proposal deviated from the Guidance, we have been persuaded that the Guidance got it right, and thus are returning to the Guidance approach; [5] and (3) in still

[1] There are no registered major swap participants at this time. Accordingly, for convenience, this Statement generally will refer only to swap dealers, and not to major swap participants.

[3] Statement of Commissioner Dawn D. Stump Regarding Proposed Rule: Cross-Border Application of the Registration Thresholds and Certain Requirements Applicable to Swap Dealers and Major Swap Participants (December 18, 2019), available at *https://www.cftc.gov/PressRoom/SpeechesTestimony/stumpstatement121819.*

[4] *E.g.,* clarification that in addition to entities that are subject to capital regulation by the CFTC, Securities and Exchange Commission (''SEC''), or U.S. prudential regulators, the attribution requirement in connection with the major swap participant registration threshold also excludes entities subject to Basel-compliant capital standards and oversight by a G–20 prudential supervisor.

[5] *E.g.,* addition of a provision that was in the Guidance, but not in the Proposal, whereby a non-

Continued

other places, we are incorporating suggestions made by commenters.[6] As a result, the final rules build and improve upon the foundation laid by the Proposal. They, too, are clear, sensible, and workable, and I am pleased to support them.

I do not plan to summarize here the changes to the Proposal that are encompassed within the final rules. To those not steeped in the minutiae of *de minimis* swap dealer registration calculations and entity- and transaction-level requirements under the Guidance,[7] such a summary can become somewhat mind-numbing. Instead, I would like to place today's cross-border rulemaking in context, and explain my support from a broader perspective.

Section 2(i) and Codifying the Guidance

We begin, as we must, with the terms of the statute—Section 2(i) of the Commodity Exchange Act (''CEA''), which was added by the Dodd-Frank Act.[8] Given the importance of this topic, please indulge my reiterating a few points that I made about the Proposal.

Section 2(i) limits the international reach of CFTC swap regulations by affirmatively stating that they ''shall not apply to activities outside the United States unless those activities . . . have a direct and significant connection with activities in, or effect on, commerce of the United States.'' [9] A common-sense reading of this section is that there is a limited extraterritorial reach to the Dodd-Frank swap requirements, and to stretch them beyond the stated statutory criteria impermissibly infringes upon the rule sets of other nations.

That is, the plainly stated congressional intent is to start with US law not applying beyond our borders, and then continue to the limited conditions where extraterritoriality would be deemed appropriate. The law does not say that CFTC rules govern derivatives market activities around the world if there is *any* linkage or tie to the United States and should not be interpreted and abused as such.

In adopting rules setting out how we will apply Section 2(i) to the registration thresholds and regulatory requirements relevant to the cross-border activities of swap dealers, we are not writing on a blank canvas. The Guidance has been in place for seven years now, and although it is non-binding,[10] market participants (both those that have registered and those that have had to determine whether they are required to register) have devoted a tremendous amount of human and financial resources to conform to its complicated contours.

Faced with that reality, although I was not a fan of the Guidance when it was issued,[11] I agree that it is appropriate to codify its basic elements into our rule set rather than start from scratch. And that is what the final rules before us today will do. The final rules codify many elements of the Guidance, while updating a few provisions to reflect current realities and incorporating some improvements based on our experience during the intervening years.[12]

Much has been made of statements in the Proposal, which are carried over into today's release, that the focus of the Commission's analysis under Section 2(i) is on risk to the U.S. financial system. But this, too, is essentially a codification of the approach taken in the Guidance. While I do not often quote then-Chairman Gary Gensler, I note that in his Statement supporting the adoption of the Guidance, he said:

There's no question to me, at least, that the words of Dodd-Frank addressed this (*i.e.,* risk importation) when they said that a direct and significant connection with activities and/or effect on commerce in the United States covers these risks that may come back to us.

I want to publicly thank Chairman Barney Frank along with Spencer Bachus, Frank Lucas, and Collin Peterson, and their staffs for reaching out to the CFTC and the public to ask how to best address offshore risks that could wash back to our economy in Dodd-Frank.[13]

Implementing our statutory cross-border mandate through a risk-based analysis that focuses on the pertinent issue of risk to the US financial system is a sensible approach, which I endorse.

For those who maintain that the final rules take too narrow a view of the Commission's extraterritorial reach with respect to swap dealers, I note the truly remarkable fact that today, with the Guidance in effect, approximately half of the over 100 swap dealers currently registered with the CFTC are located outside the United States.[14] This percentage has stayed relatively constant since the CFTC's swap dealer registration regime ''went live'' at the end of 2012. Registered non-US swap dealers are located across the globe—in North and South America, Europe, Asia, and Australia.

In other words, although it is non-binding, the Commission's Guidance appears to have brought a substantial portion of global swap dealing activity into the Commission's swap dealer regulatory regime. And the record before us is devoid of evidence suggesting that the number of registered non-US swap dealers is seriously over- or under-inclusive. Given the extent to which the final rules codify the Guidance, a significant change in that number is unlikely.

Because the final rules essentially codify the Guidance, and because I support the final rules for the reasons explained herein, I accept the interpretation of CEA Section 2(i) stated in the Guidance and the final rules in the limited context of registration thresholds and regulatory requirements applicable to swap dealers. To codify the Guidance while revising the foundation on which it was based would only generate confusion—as opposed to the clarity that I hope this rulemaking will bring to one aspect of our cross-border work.

But the analysis of, in Mr. Gensler's words, ''offshore risks that could wash back to our economy'' may well differ in the context of other Dodd-Frank requirements. As we proceed with other aspects of our cross-border work—in areas such as clearing, trade execution, and reporting—rigorous analysis of the Section 2(i) test for each rule we adopt is necessary to ensure that the law is followed both to the letter and in spirit.

Clear, Sensible, and Workable Rules

Transitioning from the interpretation of Section 2(i) to the rules before us, some have questioned why we are adopting rules in the first place. While it is true that Section 2(i), unlike other provisions in Dodd-Frank, does not require the Commission to adopt implementing rules, I believe it is good government to do so. Guidance has its place, of course. Given the nascent state of post-Pittsburgh derivatives reforms in 2013, reliance on guidance made sense at the time. But I have spoken before of the benefits of codifying interpretations issued by our staff where appropriate,[15] and those benefits accrue in equal measure to the codification

U.S. person does not have to count in its *de minimis* swap dealer registration calculation swaps entered into with an entity whose swap obligations are guaranteed by a U.S. person if the guaranteed entity is itself below the *de minimis* threshold and is affiliated with a registered swap dealer.

[6] *E.g.:* (1) While the Proposal removed the prong of the ''U.S. person'' definition in the Guidance that included a legal entity that is majority-owned by one or more U.S. person(s) in which such person(s) ''bears unlimited responsibility for the obligations and liabilities'' of the legal entity, the final rules add such a circumstance to the definition of a ''guarantee;'' and (2) while the Proposal excepted certain subsidiaries of bank holding companies from the definition of a ''significant risk subsidiary,'' the final rules also except certain subsidiaries of intermediate holding companies in the same circumstances.

[7] The final rules replace the Guidance's classification of requirements imposed on registered swap dealers under the Commission's rules as entity- and transaction-level requirements with a similar (but not identical) classification into group A, group B, and group C requirements (discussed further below).

[8] Public Law 111–203, 124 Stat. 1376 (2010) (''Dodd-Frank'').

[10] *SIFMA* v. *CFTC,* 67 F. Supp.3d 373 (D.D.C. 2014).

[11] When the CFTC was considering the Guidance, I shared the view vividly articulated by then-Commissioner Jill Sommers that the Guidance, as it had been proposed, reflected ''what could only be called the 'Intergalactic Commerce Clause' of the United States Constitution . . .'' *See* Cross-Border Application of Certain Swaps Provisions of the Commodity Exchange Act, 77 FR 41214, 41239 (proposed July 12, 2012) (Statement of Commissioner Sommers).

[12] Several commenters asked the Commission to take the opportunity of this rulemaking to significantly alter the Guidance approach to the cross-border activities of swap dealers in various respects. As noted, we have determined to codify, rather than reconstruct, most of the decisions that underlie the Guidance (although we have made some adjustments as discussed herein). While maintaining the *status quo* under the Guidance may deny affected market participants results they wish for, it does not require them to give up what they have had for the past seven years.

Stump Regarding Amending Rule 3.10(c)(3)—Exemption from Registration for Foreign Persons Acting as Commodity Pool Operators on Behalf of Offshore Commodity Pools (May 28, 2020) (''Commissioner Stump Part 3 Statement''), available at *https://www.cftc.gov/PressRoom/SpeechesTestimony/stumpstatement052820.*

of Commission guidance. Replacing the prior Guidance with rules that reflect current realities and are based on experience developed during the past seven years provides certainty to the marketplace and a shared understanding of the ''rules of the road.''

Some may argue that in those few places where the rules of the road that we are adopting today depart from the Guidance, the Commission has retreated with respect to the extraterritorial application of its swap regulatory regime. As I shall discuss, however, such criticisms fail to take account of other, equally important, considerations relevant to the exercise of our rulemaking authority: (1) The aforementioned need for clear, sensible, and workable rules; and (2) appropriate deference to comparable regimes of our international regulatory colleagues.

Definition of a ''Guarantee''

For example, the release accompanying the final rules acknowledges that the definition of a ''guarantee'' that we are adopting today is narrower than that in the Guidance. The final rules define a ''guarantee'' as an arrangement in which one party to a swap has rights of recourse against a guarantor with respect to its counterparty's obligations under the swap, with ''rights of recourse'' meaning a legally enforceable right to collect payments from the guarantor. By contrast, the Guidance interpreted a ''guarantee'' to include not only the foregoing, ''but also other formal arrangements that, *in view of all the facts and circumstances,* support the non-U.S. person's ability to pay or perform its swap obligations with respect to its swaps.'' [16]

The concept of a guarantee is important to our cross-border rules for swap dealers in part because a guarantee of a non-U.S. person's swap obligations by a US person can require the non-US person—or its non-US counterparty—to count the swap towards its *de minimis* swap dealer registration threshold. But when the determination of whether an entity must register with the CFTC depends on whether the entity's or its counterparty's obligations under a swap are guaranteed by a U.S. person, the meaning of the term ''guarantee'' cannot be left to a review of ''all the facts and circumstances.''

A rule in which non-US persons must try to determine, or obtain representations from non-U.S. counterparties regarding, whether the CFTC might subsequently conclude that a particular arrangement satisfies an open-ended definition of a ''guarantee'' is not a workable rule. By contrast, the definition of a ''guarantee'' in the final rules, which is based on concepts of legal recourse and a legally enforceable right to recover, is clear and workable. Some may downplay the importance of ''workability'' in Commission rulemakings, but no matter how well-intentioned a rule may be, if it is not workable, it cannot deliver on its intended purpose.

Significant Risk Subsidiaries

Some commenters objected that the definition of a ''significant risk subsidiary'' inappropriately substitutes oversight by the Board of Governors of the Federal Reserve System (the ''FRB''), and/or foreign regulatory authorities, for the Commission's regulation of derivatives market activity overseas. A significant risk subsidiary, or ''SRS,'' is a non-U.S. ''significant subsidiary'' (based on varioU.S. numerical metrics set out in the final rules) of an ultimate U.S. parent entity that has more than $50 billion in global consolidated assets. Excluded from the definition, however, are non-U.S. subsidiaries that are subject to either: (1) Consolidated supervision and regulation by the FRB as a subsidiary of a U.S. bank holding company (''BHC'') or intermediate holding company (''IHC''); or (2) capital standards and oversight by the subsidiary's home country supervisor that are consistent with Basel requirements and subject to margin requirements for uncleared swaps in a jurisdiction for which the Commission has issued a margin comparability determination. It is these exclusions that commenters have cited as a concern.

To this, there are three responses. First, as discussed above, in exercising the Commission's oversight responsibilities with respect to an SRS (which, again, is a non-U.S. subsidiary), we look to the risk that such a subsidiary poses to its ultimate parent in the United States, and thus to the U.S. financial system. It is not that we are replacing our oversight responsibilities with those of the FRB or foreign regulators. Rather, it is that we have determined that the risk presented by foreign subsidiaries consolidated with a BHC or IHC, or subject to regulation as specified in the SRS definition in their home country, is already being adequately monitored and thus does not warrant an additional layer of regulation by the CFTC.

Second, we must compare the SRS definition in the final rules to what it replaces in the Guidance: The ''conduit affiliate.'' The Guidance did not actually define a conduit affiliate, but rather described it in terms of certain ''factors.'' The most critical factor, but unfortunately also the most amorphous, was the last one, which asked whether ''the non-U.S. person in the regular course of business, engages in swaps with non-U.S. third-party(ies) for the purpose of hedging or mitigating risks faced by, or to take positions on behalf of, its U.S. affiliate(s), and enters into offsetting swaps or other arrangements with its U.S. affiliate(s) in order to transfer the risks and benefits of such swaps with third-party(ies) to its U.S. affiliates.'' [17]

As with the definition of a ''guarantee,'' I make no apologies for supporting the workable definition of an SRS in the final rules, which is based on objective and observable metrics, as compared to the ambiguous description of a conduit affiliate set forth in the Guidance. We owe the global swaps market the certainty that can only come from clarity in our rules, and the definition of an SRS in the final rules fits the bill.

Third, the record before us does not afford any basis on which to conclude that the definition of an SRS in the final rules will lead to any less robust Commission oversight of the cross-border swap activities of swap dealers than does the vague description of a conduit affiliate in the Guidance. We have no evidence that the number of non-U.S. entities that have waded through the multi-faceted conduit affiliate description in the Guidance and concluded that they were a conduit affiliate, but would conclude that they are not an SRS under the definition in the final rules, is significant—or even material. If experience going forward proves otherwise, the Commission can always amend the SRS definition accordingly. But absent such evidence, hypothetical concerns are an insufficient basis on which to reject the clear and workable SRS definition in the final rules.

ANE Transactions, Exceptions to Regulatory Requirements, and Substituted Compliance

Finally, some may see a retreat from the Guidance in the Commission's determinations: (1) Not to apply its group A, group B, or group C requirements [18] to swaps of a non-U.S. swap dealer with a non-U.S. counterparty where the non-U.S. swap dealer uses personnel or agents in the United States to arrange, negotiate, or execute the swaps (''ANE transactions''); (2) to except certain foreign-based swaps from the group B and group C requirements; and (3) to expand the availability of substituted compliance to encompass group B requirements for swaps between a U.S. branch of a non-U.S. swap dealer and certain non-U.S. counterparties. I respectfully disagree.

First, the notion that the CFTC's swap regulatory regime should apply to ANE transactions was not stated in the Commission's Guidance; rather, it was stated in a staff Advisory published after the Guidance was adopted. The Commission has never endorsed that staff view, and it has never taken effect.[19] Second, the exceptions from swap dealer requirements that apply to the swaps of non-U.S. swap dealers with non-U.S. persons, again, generally codify

[16] Guidance, 78 FR at 45320 (emphasis added).

[17] Guidance, 78 FR at 45318 n.258 and 45359.

[18] Under the final rules: (1) Group A requirements for swap dealers generally relate to the Chief Compliance Officer requirement, risk management, swap data recordkeeping, and antitrust considerations; (2) group B requirements for swap dealers generally relate to swap trading relationship documentation, portfolio reconciliation and compression, trade confirmation, and daily trading records; and (3) group C requirements for swap dealers generally relate to external business conduct rules, including voluntary initial margin segregation.

[19] Today's release acknowledges that the policy the Commission is adopting with respect to the applicability of CFTC requirements to non-U.S. swap dealers' ANE transactions differs from that taken by the SEC. But as has often been said, harmonization with the SEC, while an important goal and one that Congress supported in Dodd-Frank, should not be undertaken simply for harmonization's own sake. Here, the Commission has determined that, in light of Congress' decision to define security-based swaps as ''securities'' in Dodd-Frank, harmonization with the SEC's determination to apply its existing, pre-Dodd-Frank securities broker-dealer regulation to ANE transactions in security-based swaps is not appropriate.

exceptions that were included in the Guidance, too.

To be sure, based on input we received in the comments, the final rules include two exceptions to swap dealer regulatory requirements that were not included in the Proposal. Yet, to take one as an example, today's release explains that the ''Limited Swap Entity SRS/Guaranteed Entity Group B Exception'' is: (1) *Tailored* to placing foreign swap dealer subsidiaries of U.S. firms on the same footing as foreign branches of U.S. swap dealers; (2) *consistent* with an exception in the Guidance that was not carried forward in the Proposal;[20] and (3) *limited* in terms of the amount of swaps that can be entered into in reliance on the exception, and unavailable if the parties can rely on substituted compliance instead.

But what is critically important for the treatment of ANE transactions, the exceptions to certain regulatory requirements, and substituted compliance in the final rules is to keep in mind the scenario at issue: Although in some instances activity with respect to the swap may occur in the United States, the swaps involve non-U.S. swap dealers (or foreign branches of U.S. swap dealers) and a non-U.S. counterparty (or a foreign branch of a U.S. person) and, therefore, will also be subject to regulation in another jurisdiction. Where the regulatory interest of that other jurisdiction is paramount, the CFTC should appropriately defer, just as where the Commission's regulatory interest is paramount, we expect other foreign jurisdictions to defer to our regulation. As I stated in connection with a recent Open Meeting that also addressed cross-border issues:

[T]he Commission's historical commitment to appropriate deference to our international regulatory colleagues (which also is sometimes referred to as mutual recognition), 'is a demonstration of international comity—an expression of mutual respect for the important interests of foreign sovereigns.' This deference also reflects the shared goals of global authorities seeking to achieve the most effectively regulated markets through coordination rather than duplication.[21]

The Commission's historical commitment to mutual recognition is in keeping with principles of international comity. In reviewing the comment letters, frankly, there sometimes seems to be a sense that ''international comity'' is simply a buzzword the Commission invokes to justify what critics believe is an improper easing of its regulation of cross-border activity. I emphatically reject the notion that appropriate deference to international regulatory authorities weakens oversight or protections of our markets, market participants, or financial system. To the contrary, our reliance on international comity is deeply rooted in several sources.

First, as discussed in greater detail in the release, the Restatement (Fourth) of Foreign Relations Law of the United States counsels that even where a country has a basis for extraterritorial jurisdiction, it should not prescribe law with respect to a person or activity in another country when the exercise of such jurisdiction is unreasonable.[22] This doctrine of reasonableness is ''a principle of statutory interpretation''[23] that has been recognized in Supreme Court case law.[24]

Second, Congress in Dodd-Frank specifically directed the Commission, ''[i]n order to promote effective and consistent global regulation of swaps,'' to ''consult and coordinate with foreign regulatory authorities on the establishment of consistent international standards with respect to the regulation . . . of swaps [and] swap entities . . .''[25] Congress recognized that global swap markets cannot function absent consistent international standards.

Third, as I have previously observed on multiple occasions, when the G–20 leaders met in Pittsburgh in the midst of the financial crisis in 2009, they, too, recognized that due to the global nature of the derivatives markets, designing a workable solution, though complicated, demands coordinated policies and cooperation.[26] To do otherwise would ignore the reality that modern markets are not bound by jurisdictional borders.

And fourth, this Commission historically has been a global leader in its commitment to applying principles of international comity, in the form of mutual recognition, in a variety of contexts. That commitment is reflected in the Commission's Part 30 rules,[27] which apply to foreign firms ''with respect to the offer and sale of foreign futures and options to U.S. customers and are designed to ensure that such products offered and sold in the U.S. are subject to regulatory safeguards comparable to those applicable to transactions entered into on designated contract markets.''[28] It also is reflected in our approach (initially through staff no-action relief, and later through registration after Dodd-Frank) to foreign boards of trade (''FBOTs'') offering US participants ''direct access'' to enter trades directly into the FBOT's order entry and trade matching systems.[29] And just recently, it was reflected in the Commission's proposal to amend Rule 3.10(c)(3) to permit non-US commodity pool operators to claim exemption from CFTC registration for offshore commodity pools with no US participants on a pool-by-pool basis.[30]

When the Commission issued the Guidance in 2013, only a few derivatives reforms had been adopted in a few other jurisdictions. How things have changed since then. Many of our fellow regulators in the world's major financial centers have implemented reforms governing the conduct of swap dealers commensurate to our own, and extensive strides have been made (and continue to be made) towards international harmonization—thereby aligning our regulatory principles, just as the G–20 envisioned. As a result, most swaps involving non-U.S. counterparties today are expected to be subject to foreign regulatory requirements similar to the Commission's own, unlike at the time the Guidance was adopted.[31] Further, our deference to the comprehensive swap regulation of our international colleagues has been demonstrated by the fact that since the Guidance was issued, the CFTC has issued 11 comparability determinations regarding the regulation of swap dealers in the European Union, Canada, Japan, Australia, Hong Kong, and Switzerland.

Thus, regulation of global swap markets that imposes overlapping and duplicative requirements on swap dealers and their cross-border activities by multiple regulators is inconsistent with: (1) Principles of statutory interpretation; (2) Congress' direction to the Commission; (3) the vision of the G–20 Leaders at the Pittsburgh Summit; and (4) the Commission's own longstanding commitment to international comity through mutual recognition of foreign regulatory regimes. In a word: It is not workable.

[20] The release explains that under the Guidance, a non-U.S. person that was guaranteed by a U.S. person or a conduit affiliate would not have been expected to comply with group B requirements when transacting with a non-U.S. counterparty that also was not guaranteed by a U.S. person or a conduit affiliate.

[31] As recounted in the release, CEA Section 2(i) has its origins in an amendment that Rep. Spencer Bachus offered during the House Financial Services Committee markup on October 14, 2009, that would have restricted the Commission's jurisdiction over swaps between non-U.S. resident persons. Chairman Frank opposed the amendment, noting that there may well be cases where non-U.S. residents are engaging in transactions that have an effect on the United States and that are insufficiently regulated internationally and that he would not want to prevent U.S. regulators from stepping in. Chairman Frank expressed his commitment to work with Rep. Bachus going forward, Rep. Bachus withdrew the amendment, and eventually Section 2(i) was included in Dodd-Frank. *See* H. Fin. Serv. Comm. Mark Up on Discussion Draft of the Over-the-Counter Derivatives Markets Act of 2009, 111th Cong., 1st Sess. (Oct. 14, 2009) (statements of Rep. Bachus and Rep. Frank). For the reasons discussed in text, the prospect of swaps between non-U.S. counterparties being insufficiently regulated internationally is far less today than it was when the extraterritoriality of the CFTC's jurisdiction over swaps was being debated.

Conclusion

In conclusion, I support codifying our prior cross-border Guidance into enforceable rules. I believe that the final rules before us today are clear, sensible, and workable, and that they appropriately apply the Commission's regulations to the cross-border activities of swap dealers. They improve upon the Guidance based on our experience in administering the Dodd-Frank swap regulatory regime over the past several years, and they recognize the current state of global regulation of globally interconnected derivatives markets by carrying on this agency's established tradition of mutual recognition and substituted compliance.

I therefore support the final cross-border rules for swap dealers before us today. I want to very much thank the staff of the Division of Swap Dealer and Intermediary Oversight, the General Counsel's Office, and the Chief Economist's Office for their efforts in preparing this rulemaking. I am particularly appreciative of the time that the staff devoted to answering our diverse questions—always in a thoughtful and comprehensive manner—and reviewing and addressing the various comments and requests from me and my team.

Appendix 6—Dissenting Statement of Commissioner Dan M. Berkovitz

Introduction

I dissent from today's final cross-border swap rulemaking (the ''Final Rule''). As described by the Chairman, this Final Rule will ''pare[] back our extraterritorial application of our swap dealer regime.'' [1] Over the past seven years, the current cross-border regime has helped protect the U.S. financial system from risky overseas swap activity. The Commission should not be paring back these protections for the American financial system, particularly now, during a global pandemic.

The Final Rule will permit U.S. swap dealers to book their swaps with non-U.S. persons in offshore affiliates, thereby avoiding the CFTC's swap regulations, even when they conduct those swap activities from within the United States and the U.S. parent retains the risks from those swap activities. The structure of the Final Rule practically invites multinational U.S. banks and hedge funds to book their swaps in offshore affiliates to avoid our swap dealer regulations. This will permit risks to flow back into the United States with none of the intended regulatory protections.

The Commission defends its retreat by citing principles of international comity and asserting that compliance with the laws of another jurisdiction in lieu of the CFTC's requirements will be permitted only when the CFTC finds that the laws of the other jurisdiction are ''comparable'' to those of the CFTC. The Final Rule, however, establishes a weak and vague standard for determining when the swap regulations of another jurisdiction are comparable. Further, the Final Rule even permits substituted compliance where the swap activity occurs within the United States—such as for swaps between a U.S. branch of a non-U.S. swap dealer and another non-U.S. person, even if those swaps are negotiated and booked in the United States. The Commission is not permitted to defer to regulators in other jurisdictions when the swap activity is conducted within the United States, nor should it do so even if such deference were permitted.

As I noted in my dissent on the proposed rule, experience has taught us that while finance may be global, global financial rescues are American. We should not loosely outsource the protection of the U.S. financial system and American taxpayers to foreign regulators that are unaccountable to the American people.

Less Regulation of U.S. Persons Conducting Swap Activities Outside the U.S.

In the Final Rule, the Commission acknowledges that cross-border swaps activities can have a ''direct and significant'' connection with activities in, or effect on, U.S. commerce. The Final Rule, however, removes several key protections in the 2013 Cross-Border Guidance (''Guidance'') [2] that mitigated the risks arising from such cross-border activities.[3] The Final Rule narrows the definition of ''guarantee'' in a legalistic manner, permitting banks to craft financing arrangements for their overseas swap activities that bring risks back into the U.S. parent organization without triggering the application of Dodd-Frank requirements for those activities. The Final Rule also discards the Guidance's firewalls that were designed to prevent banks from evading Dodd-Frank requirements by using foreign affiliates as the front office for swaps with non-U.S. persons while bringing the risk from those swaps back to the U.S. home office through back-to-back internal swaps (''affiliate conduits'').

The Final Rule creates a new category of entities—the SRS—supposedly to capture the risks arising from the swap activities of very large foreign affiliates of U.S. firms. But the Commission admits that this new category likely will include ''few, if any'' entities.[4] Most likely, therefore, the SRS construct will provide no protections to the financial system from the swap activities of overseas affiliates of U.S. entities that bring risks to their U.S. parents and to the U.S. financial system. Each of these significant deficiencies is discussed in greater detail below.

Swap activity outside the U.S. guaranteed by a U.S. Person. The Guidance provided that when a swap of a non-U.S. person is guaranteed by a U.S. person, then the Dodd-Frank requirements regarding swap dealer registration and many of the attendant swap dealer regulations would apply to that non-U.S. person in the same manner as they would apply to a U.S. person. This is because a swap conducted by a non-U.S. person guaranteed by a U.S. person poses essentially the same risks to the U.S. financial system as a swap conducted by a U.S. person.[5] The Guidance adopted a functional rather than literal approach to the term ''guarantee'':

> The Commission also is affirming that, for purposes of this Guidance, the Commission would interpret the term ''guarantee'' generally to include not only traditional guarantees of payment or performance of the related swaps, but also other formal arrangements that, in view of all the facts and circumstances, support the non-U.S. person's ability to pay or perform its swap obligations with respect to its swaps. The Commission believes that it is necessary to interpret the term ''guarantee'' to include the different financial arrangements and structures that transfer risk directly back to the United States. In this regard, it is the substance, rather than the form, of the arrangement that determines whether the arrangement should be considered a guarantee for purposes of the application of section 2(i).[6]

The Final Rule, however, adopts a narrow, legalistic definition of guarantee: ''Guarantee means an arrangement pursuant to which one party to a swap has rights of recourse against a guarantor, with respect to its counterparty's obligations under the swap.'' [7] The Commission recognizes that this definition is ''narrower'' than the definition in the Guidance, and that this narrower definition could result in increased risk to the U.S. financial system.[8] The Commission further acknowledges that this narrower definition ''could lead to certain entities counting fewer

[2] Interpretive Guidance and Policy Statement Regarding Compliance with Certain Swap Regulations, 78 FR 45292, 45298–45301 (July 26, 2013).

[3] The preamble to the final rule observes (Sec. I.C.):

> In this sense, a global financial enterprise effectively operates as a single business, with a highly integrated network of business lines and services conducted through various branches or affiliated legal entities that are under the control of the parent entity. [footnote omitted]. Branches and affiliates in a global financial enterprise are highly interdependent, with separate entities in the group providing financial or credit support to each other, such as in the form of a guarantee or the ability to transfer risk through inter-affiliate trades or other offsetting transactions. Even in the absence of an explicit arrangement or guarantee, a parent entity may, for reputational or other reasons, choose to assume the risk incurred by its affiliates, branches, or offices located overseas. Swaps are also traded by an entity in one jurisdiction, but booked and risk-managed by an affiliate in another jurisdiction. The Final Rule recognizes that these and similar arrangements among global financial enterprises create channels through which swap-related risks can have a direct and significant connection with activities in, or effect on, commerce of the United States.

[4] Final Rule release, Sec. X.C.3.

[5] ''The Commission believes that swap activities outside the U.S. that are guaranteed by U.S. persons would generally have a direct and significant connection with activities in, or effect on, U.S. commerce in a similar manner as the underlying swap would generally have a direct and significant connection with activities in, and effect on, U.S. commerce if the guaranteed counterparty to the underlying swap were a U.S. person.'' Cross-Border Guidance, 78 FR at 45319.

[6] *Id.* at 45320 (footnotes omitted).

[7] Final Rule release, Section 23.23(a)(9).

[8] The Commission states that arrangements that would meet the broader definition in the Guidance, but are not within the narrower scope of the Final Rule, ''transfer risk directly back to the U.S. financial system, with possible adverse effects, in a manner similar to a guarantee with direct recourse to a U.S. person.'' Final Rule release, Sec. II.C.3.

swaps towards their de minimis threshold or qualify additional counterparties for exceptions to certain regulatory requirements as compared to the definition in the Guidance.'' [9]

The Commission asserts, however, that the narrower definition is ''more workable'' because it is consistent with the definition of guarantee in the Cross-Border Margin Rule, and therefore will not require an ''independent assessment.'' [10] The Commission presents no evidence, however, as to why the current definition, which has now been in place for seven years, is not ''workable,'' or why multinational financial institutions that trade hundreds of billions, and even trillions, of dollars of swaps on a daily basis are not capable of determining whether their overseas affiliates are guaranteed by a U.S. person. A global financial institution that cannot readily determine or represent whether or not the risks from its overseas swaps are guaranteed by one of its U.S. entities should not be a global financial institution.

Affiliate conduits. The Guidance also applied the Dodd-Frank swap dealer registration requirements, and many of the attendant swap dealer regulations, to the swap activities of ''affiliate conduits'' [11] of U.S. persons in the same manner as it applies to U.S. persons. Under the Guidance, a key factor in determining whether a non-U.S. person would be considered to be an affiliate conduit of a U.S. person is whether the non-U.S. person regularly enters into swaps with non-U.S. counterparties and then enters into ''offsetting swaps or other arrangements with its U.S. affiliate(s) in order to transfer the risks and benefits of such swaps with third parties to its U.S. affiliates.'' [12]

The affiliate conduit provisions in the Guidance were designed to prevent U.S. entities from booking those swaps in their non-U.S. affiliates to escape the CFTC's Dodd-Frank requirements that would otherwise apply to the entity's swap activity in the United States. The risks and benefits of those swaps booked offshore could then be transferred back to the U.S. with back-to-back internal swaps between the U.S. parent and its non-U.S. affiliate. Ultimately, risk from the swap would reside on the books of the U.S. entity. Through this back-to-back process, the U.S. entity could still conduct the swap activity, and bear the risk of the swaps, yet would avoid the application of CFTC requirements that would apply had the swap been booked directly in the U.S. entity.

The Final Rule does not include any comparable provisions to prevent the use of affiliate conduits to avoid CFTC regulation. This is an invitation to abuse and to risk for the U.S. financial system.

Significant risk subsidiary (SRS). The Final Rule adopts a new construct—the ''significant risk subsidiary''—to supposedly encompass overseas affiliates of U.S. entities whose swap activities pose significant risks to the U.S. financial system. An SRS is defined as any non-U.S. ''significant subsidiary'' of an ultimate U.S. parent entity where that ultimate parent has more than $50 billion in global consolidated assets. An entity is a ''significant subsidiary'' if it has a sufficient size relative to its parent, measured in terms of percentage of either revenue, equity capital, or total assets.[13] However, the definition then excludes non-U.S. subsidiaries that are either (i) prudentially regulated by the Federal Reserve; or (ii) prudentially regulated by the entity's home country prudential regulator whose regulations are consistent with the Basel Committee's capital standards, and subject to comparable margin requirements for uncleared swaps in its home country. An entity that survives the gantlet of thresholds and exclusions to be considered an SRS would then be subject to the same registration requirements as a U.S. person, and many of the same regulatory requirements that apply to U.S. swap dealers. That outcome, however, is very unlikely. The threshold criteria to be a ''significant subsidiary'' are high, and because entities that meet these high thresholds are typically affiliated with prudentially-regulated banks, it is likely they will be excluded from the SRS definition. It therefore is improbable that any entities will fall into the SRS category. The Cost-Benefit Considerations in the notice of proposed rulemaking for the Final Rule concede that ''few, if any'' entities would fall within its ambit.[14]

Furthermore, the criteria apply to each subsidiary separately. If an institution has a subsidiary that is approaching the high thresholds set in the Final Rule, it can incorporate another non-U.S. subsidiary and conduct swap dealing activity out of that entity to avoid SRS designation for any of its subsidiaries.

One commenter noted that the qualifications only indirectly address the significance of the subsidiary and suggested the test be modified to assess the extent to which swap risk is accepted by a non-U.S. subsidiary or transferred back to the subsidiary's U.S. affiliates.[15] The Commission characterized the suggested test as an activity-based test and rejected the commenter's proposed fix. On the other hand, when other commenters noted that subsidiaries that do not engage in any swap dealing activity would potentially be captured by the SRS qualifications—because the qualifications have *nothing to do with swaps*—the Commission modified the Final Rule with an activity-based end-user test to exempt those entities from the SRS category.

Under the Final Rule, a significant subsidiary that is regulated by U.S. or foreign banking regulators is *excluded* from the SRS category. ''The Commission is excluding these entities from the definition of SRS, in large part, because the swaps entered into by such entities are already subject to significant regulation, either by the Federal Reserve Board or by the entity's home country.'' [16]

Here the Commission forgets the lessons of the 2008 financial crisis and ignores the mandate of Congress. Following the financial crisis—and as a result of the lessons learned during the crisis—Congress subjected the swaps markets to *both* prudential and market regulation. The Commodity Futures Modernization Act of 2000, which spectacularly failed to prevent the build-up of catastrophic systemic risks within the financial system leading to the 2008 financial crisis, was based on the premise that market regulation is unnecessary to protect against systemic risks for financial entities that are subject to prudential regulation.[17] Events taught us, however, that prudential regulation alone was insufficient to prevent the build-up of those risks to the financial system. Following the crisis, Congress mandated both prudential regulation and market regulation for banks conducting swap activities. The safeguards and protections to the financial system afforded under Title VII of the Dodd-Frank Act were to be applied regardless of the extent of prudential regulation. The prudential regulation in a non-U.S. jurisdiction of an affiliate of a U.S. swap dealer whose swaps risks are transferred back into the U.S. is not an adequate substitute for the protections mandated by Title VII of the Dodd-Frank Act.

The Commission does not dispute that the Final Rule will allow affiliates currently subjected to the Guidance provisions regarding guarantees and affiliate conduits affiliates to operate free of CFTC swap regulations. The Commission also acknowledges that the activities of these entities may pose risks to the U.S. financial system.[18] Not only will the Final Rule permit

[9] *Id.*

[10] *Id.*

[11] The term ''affiliate conduit'' and ''conduit affiliate'' are used interchangeably. *See, e.g.,* Cross-Border Guidance, 78 FR at 45319.

[12] The Commission explained, ''the Commission believes that swap activities outside the United States of an affiliate conduit would generally have a direct and significant connection with activities in, or effect on, U.S. commerce in a similar manner as would be the case if the affiliate conduit's U.S. affiliates entered into the swaps directly.'' *Id.*

[13] The Final Rule release asserts that the criteria for qualifying as a ''significant subsidiary'' are risk-based. The relative financial measures of revenue, equity capital, and total assets, however, are not related to the risks presented by the subsidiary's swap activity. These criteria have nothing at all to do with swaps and in no way a measure or reflect the risks posed by the subsidiary's swap activities.

[14] ''Of the 61 non-U.S. SDs that were provisionally registered with the Commission in June 2020, the Commission believes that few, if any, will be classified as SRSs pursuant to the Final Rule.'' Final Rule release, Sec. X.C.3.

[15] Better Markets, Comment Letter, Cross-Border Application of the Registration Thresholds and Certain Requirements Applicable to Swap Dealers and Major Swap Participants, at 17 (Mar. 9, 2020); available at *https://comments.cftc.gov/Handlers/PdfHandler.ashx?id=29136.*

[16] Final Rule release, Sec. II.D.3.iv.

[17] For a more detailed discussion of the financial firm failures involving cross border activity and related U.S. government and bail outs, see my dissenting statement to the Proposed Cross-border swap regulations (Dec. 18, 2019), available at *https://www.cftc.gov/PressRoom/SpeechesTestimony/berkovitzstatement121819b.*

[18] ''The Commission is aware that many other types of financial arrangements or support, other than a guarantee as defined in the Final Rule, may be provided by a U.S. person to a non-U.S. person (*e.g.,* keepwells and liquidity puts, certain types of indemnity agreements, master trust agreements, liability or loss transfer or sharing agreements). The Commission understands that these other financial arrangements or support transfer risk directly back to the U.S. financial system, with possible adverse effects, in a manner similar to a guarantee with a

risks to flow into the U.S., but it will provide an incentive for U.S. banks to move their swap activities into these foreign affiliates, where they can conduct the same activities but be free from the CFTC's regulations.

Less Regulation of Swap Activity in the U.S.

ANE Swaps. In 2013, the CFTC issued a Staff Advisory addressing the applicability of the ''Transaction-Level Requirements'' to non-U.S. swap dealers that use persons in the U.S. to facilitate swap transactions with other non-U.S. persons. The CFTC staff observed that ''persons regularly arranging, negotiating, or executing swaps for or on behalf of an SD [swap dealer] are performing core, front-office activities of that SD's dealing business,'' and declared that ''the Commission has a strong supervisory interest in swap dealing activities that occur within the United States, regardless of the status of the counterparties.'' [19] The CFTC staff advised that a non-U.S. swap dealer ''regularly using personnel or agents located in the U.S. to arrange, negotiate, or execute [''ANE''] a swap with a non-U.S. person generally would be required to comply with the Transaction-Level Requirements.'' [20]

The Staff Advisory prompted an outcry from non-U.S. swap dealers, including wholly-owned non-U.S. affiliates of U.S. financial institutions, who objected to the CFTC's imposition of its clearing, trade execution, reporting, and business conduct standards on their swaps with other non-U.S. persons. Non-U.S. dealers argued that the risks from these swap activities resided primarily in the home country, and warned that they may remove their swap dealing business from the U.S. if these requirements applied. Shortly thereafter, the CFTC staff provided no-action relief from the application of the Staff Advisory,[21] and the Commission issued a Request for Comment on whether the Commission should adopt the Staff Advisory, in whole or in part.[22]

The Final Rule discards the ANE concept entirely. ''ANE transactions will not be considered a relevant factor for purposes of applying the Final Rule.'' [23]

The ability of non-U.S. persons to use personnel within the U.S., without limitation, to conduct their swap activities with other non-U.S. persons without CFTC regulation or oversight could have a variety of detrimental consequences. Foremost among these is the possibility, perhaps even likelihood, that U.S. swap dealers will move the booking of their swaps with non-U.S. persons (including non-U.S. affiliates of other U.S. firms) into their own non-U.S. affiliates, while maintaining the U.S. location of the personnel conducting the swap business, in order to avoid the application of the Dodd-Frank requirements to those transactions. In fact, Citadel noted in its comments on the proposed rule that this may be happening already. Citadel stated that ''market transparency in EUR interest rate swaps for U.S. investors has been greatly reduced based on data showing that, following issuance of the ANE No-Action Relief, interdealer trading activity in EUR interest rate swaps began to be booked almost exclusively to non-U.S. entities, a fact pattern that Citadel believes is 'consistent with (although not direct proof of) swap dealers strategically choosing the location of the desk executing a particular trade in order to avoid trading in a more transparent and competitive setting.' '' [24]

If more than one U.S. swap dealer were to employ this strategy, the result could be that swap activity between two U.S. swap dealers that currently takes place within the U.S. and is fully subject to the CFTC's swap regulations might then be booked in two non-U.S. affiliates outside the United States. So long as the U.S. parents do not provide explicit guarantees for the swaps of the subsidiaries,[25] the trading between these subsidiaries would not count toward the dealer registration threshold. Furthermore, even if one of those non-U.S. entities were a registered swap dealer, the trading would not be subject to any CFTC transaction-level requirements, even though the risk from those transactions is ultimately borne by the U.S. parent through consolidated accounting, and U.S. personnel would be negotiating those transactions.[26]

---

direct recourse to a U.S. person.'' Final Rule release, Sec.II.C.3. See also Final Rule release, Sec. II.D.3 (recognition that conduit affiliate structures may present significant risks to the U.S. financial system but determination not to apply de minimis registration threshold to a non-U.S. affiliates that is not an SRS).

[20] *Id.*

[21] CFTC No-Action Letter No. 13–71, Certain Transaction-Level Requirements for Non-U.S. Swap Dealers (Nov. 26, 2013), available at *https://www.cftc.gov/csl/13-71/download.* This no-action relief has been extended multiple times and will continue in effect until the Final Rule becomes effective. Concurrent with the issuance of the Final Rule, the CFTC staff is extending this no-action relief for transaction-level requirements not addressed by the Final Rule (which includes requirements relating to clearing, trade-execution, and real-time public reporting). At the same time, the staff is withdrawing the 2013 Staff Advisory as it applies to all transaction-level requirements, including requirements not addressed in the Final Rule. In conjunction with the Commission's consideration of the Final Rule, both of these staff actions were presented to the Commission in a single package under the ''Absent Objection'' process, with any objections due the day before the Commission is scheduled to vote on the Final Rule. Although I would support the extension of this no-action relief for such transactions not covered by this rulemaking, were it issued separately, I cannot support, in conjunction with this rulemaking, the withdrawal of the ANE advisory for transactions not covered by the Final Rule. The withdrawal of the Staff Advisory for transactions not covered by the rulemaking is being taken in response to selected comments received as part of the rulemaking, yet the public was not afforded notice and opportunity for comment as to the manner in which the Commission should address transaction-level requirements not within the scope of the rulemaking. It would have been just as workable for market participants to provide the no-action relief while maintaining the Staff Advisory. Accordingly, I have objected to the ''Absent Objection'' package presented to the Commission that included both the withdrawal of the Staff Advisory and the extension of no-action relief for transactions not covered by the Final Rule.

[22] Request for Comment on Application of Commission Regulations to Swaps Between Non-U.S. Swap Dealers and Non-U.S. Counterparties Involving Personnel or Agents of the Non-U.S. Swap Dealers Located in the United States, 79 FR 1347 (Jan. 8, 2014).

[23] Final Rule release, Sec. V.C. The Securities and Exchange Commission (''SEC'') requires a non-U.S. person to include ANE transactions in determining whether the amount of its swap dealing activity exceeds the de minimis threshold for registration. Cross-Border Application of Certain Security-Based Swap Requirements, 85 FR 6270, 6272 (Feb. 4, 2020), available at *https://www.federalregister.gov/documents/2020/02/04/2019-27760/cross-border-application-of-certain-security-based-swap-requirements.* The preamble to the Final Rule includes many statements regarding the importance of ''harmonization'' with the SEC rules. However, on this issue, which imposes a more stringent result for potential swap dealers, the Commission has decided *not* to harmonize with the SEC.

[24] Final Rule release, Sec. V.C. In support of this assertion, Citadel cites Evangelos Benos, Richard Payne and Michalis Vasios, Bank of England Staff Working Paper (No. 580), Centralized trading, transparency and interest rate swap market liquidity: Evidence from the implementation of the Dodd-Frank Act (May 2018), available at: *https://www.bankofengland.co.uk/-/media/boe/files/working-paper/2018/centralized-trading-transparency-and-interest-rate-swap-market-liquidity-update.* In addition to the language quoted by Citadel, this study concluded:

Additionally, we find that, for the EUR-denominated swap market, the bulk of interdealer trading previously executed between U.S. and non-U.S. trading desks is now largely executed by the non-U.S. (mostly European) trading desks of the same institutions (*i.e.* banks have shifted inter-dealer trading of their EUR swap positions from their U.S. desks to their European desks). We interpret this as an indication that swap dealers wish to avoid being captured by the SEF trading mandate and the associated impartial access requirements. Migrating the EUR inter-dealer volume off-SEFs enables dealers to choose who to trade with and (more importantly) who not to trade with. This might allow them to erect barriers to potential entrants to the dealing community. Thus this fragmentation of the global market may be interpreted as dealers trying to retain market power, where possible. Importantly, we find no evidence that customers in EUR swap markets try to avoid SEF trading and the improved liquidity it delivers.

Id. at 31–32.

[25] Even in the absence of an explicit guarantee or other financial support, there is likely an expectation that the U.S. parent will ensure the subsidiary has sufficient funds to pay its swap obligations. The U.S. parent has substantial reputation risk if its subsidiaries start defaulting on their swaps. The expansive definition of ''guarantee'' in the Guidance is perhaps one reason that U.S. banks that withdrew the explicit guarantees provided their affiliates have not yet attempted to withdraw their swap dealer registration. Further regulatory uncertainty about the viability of de-registering may have arisen from the cross-border rule proposed by the Commission in 2016 that would have treated non-U.S. affiliates that were consolidated subsidiaries of U.S. persons as U.S. persons.

[26] This strategy would be less effective if either of the non-U.S. affiliates were an SRS. However, as described above, it is likely that ''few, if any,'' non-U.S. affiliates will be captured within this definition particularly affiliates of prudentially regulated banks, which are excepted out of the definition altogether.

U.S. banks already conduct a significant amount of inter-bank business through their non-U.S. affiliates. Data from swap data repositories shows that U.S. bank swap dealers commonly book swaps with each other through their respective non-U.S. subsidiaries. For a recent one-year period, the data shows that a number of U.S. banks booked more than 10 percent—and in some cases close to 50 percent—of the reported notional amount of swaps across their entire bank-to-bank swaps books through non-U.S. subsidiaries. In other words, a number of U.S. banks are already booking material amounts of swaps with each other through their non-U.S. wholly-owned consolidated subsidiaries.

Non-U.S. banks conducting swap activity in the U.S. The Final Rule reverses the position taken by the Commission in the proposed rule that would have prevented a U.S. branch of a non-U.S. swap entity from obtaining substituted compliance for various transactional requirements for swaps with non-U.S. swap entities that are booked in the U.S. branch.[27] The cross-border notice of proposed rulemaking upon which the Final Rule is based (''2019 Proposal'') would have permitted substituted compliance only for the foreign-based swaps of a non-U.S. swap entity. Both under the 2019 Proposal and the Final Rule, a swap conducted by a non-U.S. swap entity through a U.S. branch would not be considered a ''foreign-based swap.''

Sensibly, under the 2019 Proposal, substituted compliance would be available only for foreign-based swaps. As the Commission explained in the 2019 Proposal, ''[t]he Commission preliminarily believes that the requirements listed in the proposed definitions are appropriate to identify swaps of a non-U.S. banking organization operating through a foreign branch in the United States that should remain subject to Commission requirements. . . .''[28]

Although the Commission repeats nearly verbatim the rationale articulated in the 2019 Proposal for applying CFTC regulations without substituted compliance to transactions booked in the United States, conducted in the United States, and within an organization regulated under the laws of the United States, the Final Rule now excludes swaps booked in a U.S. branch of a non-U.S. swap entity from this general principle, and permits it to obtain substituted compliance for its transactions with non-U.S. persons.[29]

The Commission has no authority to grant substituted compliance for transactions occurring within the United States. The ability of the Commission to consider international comity in determining whether to apply CFTC regulations or permit substituted compliance with the laws of a foreign regulator only applies with respect to activities outside the United States. The Final Rule defines a ''foreign-based swap'' in a manner that does not include swaps booked in the U.S. branch of a non-U.S. swap entity. The fact that one of the counterparties to a transaction is owned by a non-U.S. entity does not transform activity conducted by that entity within the United States into foreign activity. Thus, the Final Rule not only retreats from the application of U.S. law to transactions that are arranged, negotiated, and executed in the United States, it even retreats from the application of U.S. law to transactions that are booked in the United States. This is not in accordance with either Section 2(i) of the Commodity Exchange Act (''CEA''), which limits the application of the swaps provisions of the CEA only with respect to activities outside the United States, or with the principles of international comity, which the Commission recognizes only applies with respect to activity occurring in another jurisdiction.

Weakening the Standards for Substituted Compliance

I agree with the Commission's interpretation of CEA Section 2(i) that international comity is an important consideration in determining the extent to which the CEA and the CFTC's swap regulations should apply to cross-border swap activity occurring in another jurisdiction. I have voted for every substituted compliance determination presented to the Commission during my tenure under the standards adopted in the Guidance.

The standards established in the Final Rule for substituted compliance determinations, however, depart significantly from the current standards. The Final Rule creates a lesser standard that permits a finding of comparability if the Commission determines that ''some or all of the relevant foreign jurisdiction's standards are comparable . . . or would result in comparable outcomes . . . .''[30] Under the Guidance, however, the Commission must also find that the regulations of the other jurisdiction are as ''comprehensive'' as the Commission's regulations. Furthermore, the Final Rule permits the Commission to consider any factors it ''determines are appropriate, which *may* include''[31] any of four factors listed in the Final Rule. This ''standard for review'' is not a standard at all. It permits the Commission to withdraw the cross-border application of its regulations regardless of the robustness of the other jurisdiction's regulatory regime, for whatever reasons the Commission chooses. In the absence of more rigorous, objective criteria, it will be very difficult for the Commission to deny requests from other jurisdictions or market participants for comparability determinations.

Conclusion

The Final Rule is a significant retreat from the robust yet balanced cross-border framework presented in the Guidance. The current framework has worked well to both protect the U.S. financial system from systemic risks arising from swap activities outside the U.S. and recognize the interests of other nations in regulating conduct within their own borders. The Final Rule destroys this balance.

I cannot support this abdication of responsibility to protect the U.S. financial markets and the American taxpayer.

Environmental Protection Agency

40 CFR Part 60

Oil and Natural Gas Sector: Emission Standards for New, Reconstructed, and Modified Sources Review; Final Rule

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 60

[EPA–HQ–OAR–2017–0757; FRL–10013–44–OAR]

RIN 2060–AT90

Oil and Natural Gas Sector: Emission Standards for New, Reconstructed, and Modified Sources Review

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: This action finalizes amendments to the oil and natural gas new source performance standards (NSPS) promulgated in 2012 and 2016. These amendments remove sources in the transmission and storage segment from the source category, rescind the NSPS (including both the volatile organic compounds (VOC) and methane requirements) applicable to those sources, and separately rescinds the methane-specific requirements of the NSPS applicable to sources in the production and processing segments. Furthermore, the U.S. Environmental Protection Agency (EPA) adopts an interpretation of Clean Air Act (CAA) section 111 under which the EPA, as a predicate to promulgating NSPS for certain air pollutants, must determine that the pertinent pollutant causes or contributes significantly to dangerous air pollution.

DATES: This final rule is effective on September 14, 2020.

ADDRESSES: The EPA established a docket for this action under Docket ID No. EPA–HQ–OAR–2017–0757. All documents in the docket are listed on the *https://www.regulations.gov/* website. Although listed, some information is not publicly available, *e.g.,* Confidential Business Information or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the internet and will be publicly available only in hard copy form. Publicly available docket materials are available electronically through *https://www.regulations.gov/.* Out of an abundance of caution for members of the public and our staff, the EPA Docket Center and Reading Room are closed to the public, with limited exceptions, to reduce the risk of transmitting COVID–19. Our Docket Center staff will continue to provide remote customer service via email, phone, and webform. For further information and updates on EPA Docket Center services, please visit us online at *https://www.epa.gov/dockets.* The EPA continues to carefully and continuously monitor information from the Center for Disease Control, local area health departments, and our Federal partners so that we can respond rapidly as conditions change regarding COVID–19.

FOR FURTHER INFORMATION CONTACT: For questions about this final action, contact Ms. Amy Hambrick, Sector Policies and Programs Division (E143–05), Office of Air Quality Planning and Standards, U.S. Environmental Protection Agency, Research Triangle Park, North Carolina 27711; telephone number: (919) 541–0964; fax number: (919) 541–0516; and email address: *hambrick.amy@epa.gov.*

SUPPLEMENTARY INFORMATION: *Preamble acronyms and abbreviations.* We use multiple acronyms and terms in this preamble. While this list may not be exhaustive, to ease the reading of this preamble and for reference purposes, the EPA defines the following terms and acronyms here:

I. Executive Summary

A. Purpose and Summary of the Regulatory Action

The EPA is finalizing amendments to its 2012 and 2016 Rules affecting the oil and natural gas industry, titled, respectively, ''Oil and Natural Gas Sector: New Source Performance Standards and National Emission Standards for Hazardous Air Pollutants Reviews; Final Rule'' (''2012 Rule'') [1] and ''Oil and Natural Gas Sector: Emission Standards for New, Reconstructed, and Modified Sources; Final Rule'' (''2016 Rule'').[2] Those rules established NSPS for VOC emissions from the oil and natural gas industry, and the 2016 Rule also established NSPS for greenhouse gases (GHG), in the form of limitations on methane, for that industry.[3] The amendments that the EPA is finalizing are intended to continue existing protections from emission sources within the source category that the EPA originally listed for regulation under CAA section 111—termed the Oil and Natural Gas Production Source Category—while removing regulatory duplication.

In response to President Donald J. Trump's March 2017 Executive Order on Promoting Energy Independence and Economic Growth, the EPA has reviewed the 2012 and 2016 Rules with attention to whether they ''unduly burden the development of domestic energy resources beyond the degree necessary to protect the public interest or otherwise comply with the law'' and, thus, should be ''suspend[ed], revise[d], or rescind[ed]''.[4] [5] From this review, the EPA has determined that some of the requirements under those rules are inappropriate. For example, some of these requirements affect sources that are not appropriately identified as part of the regulated source category. In addition, some of the requirements under the 2016 Rule are unnecessary insofar as they impose redundant requirements. Accordingly, the EPA is acting to rescind those requirements while maintaining health and environmental protections from appropriately identified emission sources within the regulated source category.[6]

Specifically, the EPA is finalizing what it referred to as the primary proposal in the September 24, 2019, proposed action (''2019 Proposal''). Thus, this final rule contains two main actions. First, the EPA is finalizing a determination that the source category includes only the production and processing segments of the industry and is rescinding the standards applicable to the transmission and storage segment of the industry. This determination is based on the EPA's review of the original source category listing and its 2012 and 2016 Rules' interpretations of, and its 2016 Rule's revision to, the scope of the source category, which, as revised, covered sources in the transmission and storage segment. Having reexamined its prior rulemakings regarding the scope of this source category and the transmission and storage segment, the EPA has determined that the revision in the 2016 Rule of the original source category was not appropriate. Because the EPA is determining that the original source category did not cover the transmission and storage segment, and that this segment constitutes a separate source category from the production and processing segments, the EPA was authorized to list it for regulation under CAA section 111(b) only by making a cause-or-contribute-significantly and endangerment finding as required by the statute, which the EPA never did. Accordingly, in this first action, the EPA is rescinding the standards applicable to sources in the transmission and storage segment of the oil and natural gas industry.

Second, the EPA is separately rescinding the methane requirements of the NSPS applicable to sources in the production and processing segments. The EPA is concluding that those methane requirements are redundant with the existing NSPS for VOC and, thus, establish no additional health protections. The emission source control technologies that apply to the sources achieve reductions in both methane and VOC emissions, and the recordkeeping and other requirements overlap as well. Rescinding the applicability of the 2016 Rule requirements to methane emissions, while leaving the applicability to VOC emissions in place, will not affect the amount of methane emission reductions that those requirements will achieve.

This final rule also concludes that, as a prerequisite for newly regulating any air pollutant that the EPA did not consider when listing or initially regulating the source category, CAA section 111 requires the EPA to make a finding that emissions of that air pollutant from the source category cause or contribute significantly (which we term the significant contribution finding, or SCF) to air pollution which may reasonably be anticipated to endanger public health or welfare (which we sometimes refer to as dangerous air pollution). Further, the final rule determines that the SCF for methane that the EPA made in the alternative in the 2016 Rule was invalid and did not meet this statutory standard, for two reasons: (i) The EPA made that finding on the basis of methane emissions from the production, processing, and transmission and storage segments, instead of just the production and processing segments; and (ii) the EPA failed to support that finding with either established criteria or some type of reasonably explained and intelligible standard or threshold for determining when an air pollutant contributes significantly to dangerous air pollution. The fact that the 2016 Rule's SCF for methane was invalid provides another basis for rescinding the methane requirements for the

[3] Docket ID No. EPA–HQ–OAR–2010–0505.

[4] Executive Order 13783, ''Promoting Energy Independence and Economic Growth,'' section 1(c) (March 28, 2017); *see also* section 7(a) (specifically directing the EPA to review the 2016 Rule, ''and any rules and guidance issued pursuant to it, for consistency with the policy set forth in section 1 of this order and, if appropriate, [to], as soon as practicable, suspend, revise, or rescind the guidance, or publish for notice and comment proposed rules suspending, revising, or rescinding those rules'').

[5] 82 FR 16331 (April 4, 2017) (review of 2016 Rule pursuant to Executive Order 13783, signed by the EPA Administrator).

[6] We note that the EPA is addressing certain specific reconsideration issues—fugitive emissions requirements at well sites and compressor stations, well site pneumatic pump standards, and the requirements for certification of closed vent systems by a professional engineer (PE)—in a separate final rule. *See* Docket ID Item No. EPA–HQ–OAR–2010–0505–7730 and 82 FR 25730.

production and processing segments. While the EPA took comment in the 2019 Proposal on what criteria should inform its judgment as to whether a pollutant causes or contributes significantly to dangerous air pollution, the EPA is not taking further action on such criteria in this rulemaking.

B. Costs and Benefits

The EPA has projected the compliance cost reductions, emissions changes, and forgone benefits that may result from the final rule for the years of analysis, 2021 to 2030. The projected cost reductions and forgone benefits are presented in detail in the Regulatory Impact Analysis (RIA) accompanying this final rule. The EPA notes that the projected cost reductions and forgone benefits are directly associated with the rescission of the NSPS applicable to sources in the transmission and storage segment of the source category and not the rescission of methane from the production and processing segments.

A summary of the key results of this final rule is presented in Table 1.[7] Table 1 presents the present value (PV) and equivalent annualized value (EAV), estimated using discount rates of 7 and 3 percent, of the changes in benefits, costs, and net benefits, as well as the change in emissions under the final rule. Here, the EPA refers to the cost reductions as the ''benefits'' of this rule and the forgone benefits as the ''costs'' of this rule in Table 1. The net benefits are the benefits (cost reductions) minus the costs (forgone benefits).

TABLE 1—COST REDUCTIONS, FORGONE BENEFITS, AND FORGONE EMISSIONS REDUCTIONS OF THE FINAL RULE, 2021 THROUGH 2030

[Millions 2016$]

	7-Percent discount rate		3-Percent discount rate	
	PV	EAV	PV	EAV
Benefits (Total Cost Reductions)	$31	$4.1	$38	$4.3
Costs (Forgone Benefits)	17	2.2	63	7.2
Net Benefits [1]	14	1.9	−25	−2.9
Emissions	Forgone Reductions			
Methane (short tons)	400,000			
VOC (short tons)	11,000			
Hazardous Air Pollutant(s) (HAP) (short tons)	330			
Methane (million metric tons carbon dioxide equivalent (CO_2 Eq.))	9			

[1] **Note:** Estimates may not sum due to independent rounding.

This final rule is expected to result in benefits (compliance cost reductions) for affected owners and operators. The PV of these benefits (cost reductions), discounted at a 7-percent rate, is estimated to be about $31 million, with an EAV of about $4.1 million (Table 1). Under a 3-percent discount rate, the PV of cost reductions is $38 million, with an EAV of $4.3 million (Table 1).

The estimated costs (forgone benefits) include the monetized climate effects of the projected increase in methane emissions under the final rule. The PV of these climate-related costs (forgone benefits), discounted at a 7-percent rate, is estimated to be about $17 million, with an EAV of about $2.2 million (Table 1). Under a 3-percent discount rate, the PV of the climate-related costs (forgone benefits) is about $63 million, with an EAV of about $7.2 million (Table 1). The EPA also expects that there will be increases in VOC and HAP emissions as a result of this final rule. While the EPA expects that the forgone VOC emission reductions may also degrade air quality and adversely affect health and welfare effects associated with exposure to ozone, particulate matter with a diameter of 2.5 micrometers or less ($PM_{2.5}$), and HAP, we are unable to quantify these effects at this time. This omission should not imply that these forgone benefits do not exist. To the extent that the EPA were to quantify these ozone and particulate matter (PM) impacts, the Agency would estimate the number and value of avoided premature deaths and illnesses using an approach detailed in the Particulate Matter National Ambient Air Quality Standards (NAAQS) and Ozone NAAQS RIA (U.S. EPA, 2012; U.S. EPA, 2015).

The PV of the net benefits of this rule, discounted at a 7-percent rate, is estimated to be about $14 million, with an EAV of about $1.9 million (Table 1). Under a 3-percent discount rate, the PV of net benefits is about $−25 million, with an EAV of about $−2.9 million (Table 1).

II. General Information

A. Does this action apply to me?

Categories and entities potentially affected by this action include:

TABLE 2—INDUSTRIAL SOURCE CATEGORIES AFFECTED BY THIS ACTION

Category	NAICS code [1]	Examples of regulated entities
Industry	211120	Crude Petroleum Extraction.
	211130	Natural Gas Extraction.
	221210	Natural Gas Distribution.
	486110	Pipeline Distribution of Crude Oil.
	486210	Pipeline Transportation of Natural Gas.
Federal Government		Not affected.

[7] In a separate action, the EPA is finalizing technical reconsideration amendments to 40 CFR part 60, subpart OOOOa (EPA–HQ–OAR–2017–0483; FRL–10013–60–OAR; FR Doc. 2020–18115). These technical amendments where proposed in October 2018. 83 FR 52056. Please reference that final rule for the summary and rationale of those technical changes. Please refer to the RIA for both rules to see the combined impacts.

TABLE 2—INDUSTRIAL SOURCE CATEGORIES AFFECTED BY THIS ACTION—Continued

Category	NAICS code [1]	Examples of regulated entities
State/local/tribal government		Not affected.

[1] North American Industry Classification System (NAICS).

This table is not intended to be exhaustive, but rather provides a guide for readers regarding entities likely to be affected by this action. Other types of entities not listed in the table could also be affected by this action. To determine whether your entity is affected by this action, you should carefully examine the applicability criteria found in the final rule. If you have questions regarding the applicability of this action to a particular entity, consult the person listed in the **FOR FURTHER INFORMATION CONTACT** section, your air permitting authority, or your EPA Regional representative listed in 40 CFR 60.4 (General Provisions).

B. How do I obtain a copy of this document, background information, and other related information?

In addition to being available in the docket, an electronic copy of the final action is available on the internet. Following signature by the Administrator, the EPA will post a copy of this final action at *https://www.epa.gov/controlling-air-pollution-oil-and-natural-gas-industry.* Following publication in the **Federal Register**, the EPA will post the **Federal Register** version of the final rule and key technical documents at this same website. A redline version of the regulatory language that incorporates the final changes in this action is available in the docket for this action (Docket ID No. EPA–HQ–OAR–2017–0757). Additional background information about this final rule, including industry and emissions information, regulatory history, litigation background, other notable events, related Federal actions, and a comprehensive summary and rationale of the proposed options can be found at 84 FR 50244 (September 24, 2019).

C. Judicial Review

Under section 307(b)(1) of the CAA, judicial review of this final rule is available only by filing a petition for review in the United States Court of Appeals for the District of Columbia Circuit (''the Court'') by November 13, 2020. Moreover, under section 307(b)(2) of the CAA, the requirements established by this final rule may not be challenged separately in any civil or criminal proceedings brought by the EPA to enforce these requirements. Section 307(d)(7)(B) of the CAA further provides that ''[o]nly an objection to a rule or procedure which was raised with reasonable specificity during the period for public comment (including any public hearing) may be raised during judicial review.'' This section also provides a mechanism for the EPA to convene a proceeding for reconsideration, ''[i]f the person raising an objection can demonstrate to the EPA that it was impracticable to raise such objection within [the period for public comment] or if the grounds for such objection arose after the period for public comment (but within the time specified for judicial review) and if such objection is of central relevance to the outcome of the rule.'' Any person seeking to make such a demonstration to us should submit a Petition for Reconsideration to the Office of the Administrator, U.S. Environmental Protection Agency, Room 3000, WJC South Building, 1200 Pennsylvania Ave. NW, Washington, DC 20460, with a copy to both the person(s) listed in the preceding **FOR FURTHER INFORMATION CONTACT** section, and the Associate General Counsel for the Air and Radiation Law Office, Office of General Counsel (Mail Code 2344A), U.S. Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460.

III. Background

The EPA reviewed the relevant background in the 2019 Proposal, including discussing the oil and natural gas industry and its emissions, 84 FR 50247 through 50; the statutory background, *Id.* at 50251; the regulatory history and litigation background regarding performance standards for the oil and natural gas industry, *Id.* at 50251 and 52; other notable events, including the March 28, 2017, Executive Order that led the EPA to initiate this rulemaking, *Id.* at 50252 and 53; and related state and Federal regulatory actions, *Id.* at 50253 and 54. The EPA incorporates that information by reference and will not repeat it here.

Since the 2019 Proposal, the EPA has updated information on the oil and natural gas industry emissions inventories based on the recently released Inventory of United States Greenhouse Gas Emissions and Sinks: 1990–2018 (published April 13, 2020) and the 2017 National Emissions Inventory (NEI) (released February 2020). In Tables 3 to 7 below, the EPA provides the updated estimate of emissions of methane, VOC, and sulfur dioxide (SO_2) from oil and natural gas industry sources.

Methane emissions in the U.S. and from the oil and natural gas industry. Official U.S. estimates of national level GHG emissions and sinks are developed by the EPA for the U.S. GHG Inventory (GHGI) to comply with commitments under the United Nations Framework Convention on Climate Change. The U.S. GHGI, which includes recent trends, is organized by industrial sectors. The oil and natural gas production, natural gas processing, and natural gas transmission and storage sectors emit 25 percent of U.S. anthropogenic methane. Table 3 below presents total U.S. anthropogenic methane emissions for the years 1990, 2008, and 2018.

TABLE 3—U.S. METHANE EMISSIONS BY SECTOR

[Million metric ton carbon dioxide equivalent (MMT CO_2 eq.)]

Sector	1990	2008	2018
Oil and Natural Gas Production, and Natural Gas Processing and Transmission and Storage	185	185	163
Oil and Natural Gas Production, and Natural Gas Processing	128	153	129
Oil and Natural Gas Transmission and Storage	57	32	34
Landfills	180	125	111

Natural Gas Transmission and Storage	14	1

Emissions from the 2017 NEI, (published April 2020), in kt (or thousand metric tons). *Note:* Totals may not sum due to rounding.

IV. 2019 Proposal

On September 24, 2019, the EPA issued a proposed rulemaking (2019 Proposal) to amend the 2012 Rule and 2016 Rule for the oil and natural gas industry that would remove regulatory duplication and save the industry millions of dollars in compliance costs each year, while maintaining health and environmental protections from oil and natural gas sources that the Agency considers appropriate to regulate in this rule.[11] The EPA issued the proposal in response to President Trump's Executive Order on Promoting Energy Independence and Economic Growth. Generally speaking, that order directs agencies to review existing regulations that potentially ''burden the development or use of domestically produced energy resources,'' including oil and natural gas, and to suspend, revise, or rescind such regulatory requirements if appropriate. The proposal included a primary regulatory option and an alternative regulatory option. The primary option proposed to remove all sources in the transmission and storage segment of the oil and natural gas industry from regulation under the NSPS, both for VOC and for GHG. The primary option separately proposed to rescind the methane requirements in the 2016 Rule that apply to sources in the production and processing segments of the industry. The alternative option proposed to rescind the methane requirements that apply to all sources in the oil and natural gas industry, without removing any sources from the source category as defined in the 2016 Rule. The EPA additionally solicited comment on alternative interpretations of the EPA's legal authority to regulate pollutants under CAA section 111.

CAA section 111 requires the EPA to set NSPS for categories of stationary sources that the EPA has listed (''source categories'') because they cause, or significantly contribute to, air pollution that may reasonably be anticipated to endanger public health or welfare. The Agency's original source category listing for the oil and natural gas industry, issued in 1979, included only the crude oil and natural gas production and natural gas processing segments of the industry. However, in the 2012 Rule and 2016 Rule, the EPA interpreted the 1979 listing to have established the scope of the source category as including the industry's transmission and storage segment. In the 2016 Rule, the EPA also, as an alternative, expanded the source category to include the transmission and storage segment. In the 2019 Proposal, the EPA proposed to remove sources in the transmission and storage segment from the Oil and Natural Gas Production source category on the grounds that the Agency had erred in the 2012 and 2016 Rules when it had interpreted or expanded the source category, because the transmission and storage segment of the industry is functionally separate from the production and processing segment. The EPA further stated that a separate SCF would be necessary for that segment to be listed as a source category for regulation. The proposal further stated that the emissions limits that apply to sources in the transmission and storage segment in the 2012 Rule and 2016 Rule would be rescinded because that segment would be removed from the source category. Finally, the EPA proposed to rescind emissions requirements for methane for sources located in the production and processing segments on grounds that those requirements are redundant to the requirements for VOC. The proposal made clear that the emissions limits for VOC would remain for the production and processing segments.

In the alternative proposal, the EPA proposed to rescind the methane requirements in the 2016 Rule for all oil and natural gas sources, without removing the transmission and storage sources from the source category. Under this alternative, the rule would retain VOC standards for the production, processing, and transmission and storage segments of the industry. As with the primary proposal, the alternative proposal is based on the view that because the controls to reduce VOC emissions also reduce methane, separate methane requirements for the industry are redundant.

The EPA further stated that the proposed amendments would remove the Agency's obligation to develop emission guidelines (EG) to address methane emissions from existing sources under section 111(d) of the CAA. The EPA stated its belief that not

[9] Other sources include remaining sources emitting less than 1,000 kt VOC in 2017.

[10] Other sources include remaining sources emitting less than 100 kt SO_2 in 2017.

[11] 84 FR 50244.

regulating existing sources would have limited environmental impact, because some existing sources will ''modify'' such that they will become subject to requirements for new sources, and because the number of remaining sources may decline over time as they are shut down or become obsolete.

The EPA also took comment on an alternative interpretation of its legal authority to regulate pollutants under CAA section 111. In the 2016 Rule, the EPA took the position that the law did not require the Agency, as a prerequisite to regulating methane as part of the NSPS, to first make a separate determination that GHG emissions from the oil and natural gas industry cause, or significantly contribute to, dangerous air pollution (a pollutant-specific SCF). However, the Agency also made a finding in the alternative that if the CAA were interpreted to require a pollutant-specific SCF, then GHG emissions from the Oil and Natural Gas source category do cause or contribute significantly to dangerous air pollution. The 2019 Proposal solicited comment on three issues: (1) Whether the Agency should revise the interpretation it took in the 2016 Rule, so that CAA section 111 requires the EPA to make a pollutant-specific SCF for GHG emissions from the oil and natural gas industry as a predicate to regulation; (2) whether, if CAA section 111 does require a pollutant-specific SCF, whether the finding in the alternative in the 2016 Rule satisfied that requirement; and (3) what, if any, specific criteria the EPA should use to make a pollutant-specific SCF.

The EPA solicited comments on all aspects of the proposal during a 60-day public comment period. The EPA held a public hearing in Dallas, Texas, in October 2019; 105 speakers provided oral testimony and 32 observers attended. The EPA received almost 300,000 public comments on the proposed rule. The EPA is not responding to any late comment received.

V. Final Action and Rationale

A. Summary of Final Action

The EPA is finalizing what was referred to as the primary proposal in the 2019 Proposal. First, the final rule removes all sources in the transmission and storage segment of the oil and natural gas industry from regulation under the NSPS and removes all emissions limitations for both VOC and GHG for sources in the transmission and storage segment. Second, the final rule separately rescinds the standards for methane emissions in the 2016 Rule that apply to sources in the production and processing segments of the industry. Third, the final rule articulates the EPA's interpretation that under CAA section 111(b)(1)(A), as a prerequisite for newly regulating any air pollutant, the Agency is required to make a finding that emissions of the air pollutant, from the source category, cause or contribute significantly to air pollution which may reasonably be anticipated to endanger public health or welfare. Further, the final rule concludes that the alternative SCF made by the EPA in the 2016 Rule was invalid and did not meet this statutory standard.

B. Rationale

1. Revision of the Source Category To Remove Transmission and Storage Segment

As noted above, the EPA is finalizing its proposal to remove the transmission and storage segment entirely from the source category and rescind the NSPS requirements applicable to sources within that segment. This final action is based on the EPA's determination that its 2012 and 2016 rulemakings that interpreted or expanded the source category to include sources in that segment were improper. The following discussion provides background on CAA section 111, the history of the Oil and Natural Gas Production source category, and the rationale for this final decision.

Under CAA section 111(b)(1)(A), the EPA must ''publish . . . a list of categories of stationary sources, emissions from which, in the judgment of the Administrator, cause[ ], or contribute[ ] significantly to, air pollution which may reasonably be anticipated to endanger public health or welfare.'' Further, CAA section 111(b)(1)(A) directs that ''from time to time thereafter'' the EPA ''shall revise'' this ''list'' of categories of stationary sources. Following the ''inclusion of a category of stationary sources in a list,'' the EPA then proposes and promulgates ''standards of performance for new sources within such category.'' CAA Section 111(b)(1)(B). Thereafter, the EPA ''shall . . . review and, if appropriate, revise such standards.'' *Id.*

CAA section 111(b)(1)(A) does not include any specific criteria for determining the reasonable scope of a given ''category'' of ''stationary sources'' beyond the requirement that the Administrator make a finding that, in his or her ''judgment,'' emissions from the ''category of sources . . . cause[ ], or contribute[ ]significantly to, air pollution which may reasonably be anticipated to endanger public health or welfare.'' Accordingly, the EPA is afforded some measure of discretion in determining at the outset the scope of a source category.

In 1978, the EPA published ''Priorities for New Source Performance Standards Under the Clean Air Act Amendments of 1977.''[12] The purpose of this document was to implement the requirements of CAA section 111(f) to develop and apply a methodology for identifying, establishing, and prioritizing the source categories that should be considered first for in-depth analysis prior to NSPS promulgation under CAA section 111. For purposes of the 1978 analysis, the EPA aggregated emissions from ''oil and gas production fields'' and ''natural gas processing'' as part of the ''Crude Oil and Natural Gas Production Plant'' source category. The EPA identified this aggregated source category as a major source of hydrocarbon (HC) and SO_2 emissions. When the EPA finalized the priority list in 1979, it revised the name of the source category as ''Crude Oil and Natural Gas Production.'' 49 FR 49222 (August 21, 1979).

In 1985, the EPA promulgated two rulemakings establishing NSPS for the Crude Oil and Natural Gas Production source category. These were 40 CFR part 60, subpart KKK—Standards of Performance for Equipment Leaks of VOC from Onshore Natural Gas Processing Plants (50 FR 26124, June 23, 1985); and subpart LLL—Standards of Performance for SO_2 Emissions from Onshore Natural Gas Processing (50 FR 40160, October 1, 1985). When it first proposed 40 CFR part 60, subpart KKK, the EPA noted that the ''crude oil and natural gas production industry encompasses the operations of exploring for crude oil and natural gas products, removing them from beneath the earth's surface, and processing these products for distribution to petroleum refineries and gas pipelines.''[13] The EPA repeated that description of the identified source category when it proposed 40 CFR part 60, subpart LLL, explaining that the ''crude oil and natural gas production industry encompasses not only processing of the natural gas (associated or not associated with crude oil) but operations of exploration, drilling, and subsequent removal of the gas from porous geologic formations beneath the earth's surface.''[14]

In 2012, the EPA reviewed the VOC and SO_2 standards and at the same time

[12] Priorities for New Source Performance Standards Under the Clean Air Act Amendments of 1977. April 1978. EPA–450/3–78–019.

[13] 49 FR 2637 (January 20, 1984).

[14] 49 FR 2658 (January 20, 1984).

established new requirements for additional stationary sources of VOC emissions that had not been regulated in the 1985 rulemaking (*e.g.,* well completions, pneumatic controllers, storage vessels, and compressors)—''Oil and Natural Gas Sector: New Source Performance Standards and National Emission Standards for Hazardous Air Pollutants Reviews—Final Rule'' (77 FR 49490, August 16, 2012). In the preamble of the 2011 proposal for the 2012 Rule, the EPA interpreted the 1979 listing as indicating that ''the currently listed Oil and Natural Gas source category covers all operations in this industry (*i.e.,* production, processing, transmission, storage and distribution).'' ''Oil and Natural Gas Sector: New Source Performance Standards and National Emission Standards for Hazardous Air Pollutants Reviews—Proposed Rule,'' 76 FR 52738, 52745 (August 23, 2011). Further, the EPA stated that ''[t]o the extent there are oil and gas operations not covered by the currently listed Oil and Natural Gas source category. . . ., we hereby modify the category list to include all operations in the oil and natural gas sector.'' *Id.* The stated basis for that proposed decision was that ''[s]ection 111(b) of the CAA gives the EPA the broad authority and discretion to list and establish NSPS for a category that, in the Administrator's judgment, causes or contributes significantly to air pollution which may reasonably be anticipated to endanger public health or welfare.'' *Id.* No additional discussion of this listing position was provided in the 2011 proposal.

In the 2012 final rulemaking, the EPA promulgated NSPS for emission sources in the production, processing, and transmission and storage segments, 77 FR 49492, and stated that ''[t]he listed Crude Oil and Natural Gas Production source category covers, at a minimum, those operations for which we are establishing standards in this final rule.'' *Id.* at 49496. In responding to comments, the EPA took the position that it was not actually revising the source category to include emission sources in the transmission and storage segment, but rather, was interpreting the 1979 listing to be ''broad,'' and interpreting the 1985 rulemaking as ''view[ing] this source category listing very broadly,'' *Id.* at 49514, so that, in the EPA's view, the source category was already sufficiently broad to include that segment.[15]

In 2016, the EPA promulgated additional NSPS (40 CFR part 60, subpart OOOOa) for the Crude Oil and Natural Gas Production source category (81 FR 35824, June 3, 2016). As the EPA did in the 2012 Rule, the EPA took the position that the 1979 listing was broad enough to encompass the transmission and storage segment and that the 1985 rulemakings confirmed that broad listing. 81 FR 35832 (''The scope of the 1978 Priority List is further demonstrated by the Agency's pronouncements during the NSPS rulemaking that followed the listing.''). The EPA stated that the inclusion of the transmission and storage segment into the original 1979 source category was warranted because equipment and operations at production, processing, transmission and storage facilities are a sequence of functions that are interrelated and necessary for getting the recovered gas ready for distribution. Nevertheless, the EPA recognized that the scope of the prior listing may have had some ambiguity. Accordingly, ''as an alternative,'' the EPA finalized a revision of the category to broaden it, so that ''[a]s revised, the listed oil and natural gas source category includes oil and natural gas production, processing, transmission, and storage'' and the EPA changed the source category name to be ''Crude Oil and Natural Gas source category.'' (81 FR 35840).

a. Scope of 1979 Listing Action

For this final rule, the EPA has reviewed the original 1979 listing of the Crude Oil and Natural Gas Production source category and the associated background materials and now finds that its 2012 and 2016 interpretation of the 1979 listing (*i.e.,* that the 1979 listing included natural gas transmission and storage) was erroneous. *See F.C.C.* v. *Fox Television Stations, Inc.,* 556 U.S. 502 (2009) (an agency may revise its policy, but must demonstrate that the new policy is permissible under the statute and is supported by good reasons, taking into account the record of the previous rule). The EPA received comments on the 2019 Proposal concerning this issue and the associated rationale. These comments are provided, along with the EPA's responses, in section VIII.A of this preamble and in Chapter 5 of the Response to Comments Document for this action. None of the comments received resulted in a change in the EPA's rationale and conclusions from proposal. The following explains our decision.[16]

While the EPA has listed source categories that are broad,[17] the silence of the 1979 listing as to the transmission and storage segment suggests that the segment was *not* considered for inclusion at the time of the listing. Principles of administrative law require that in order for something (in this case, the transmission and storage segment) to be subject to regulation, the EPA should provide for and explain such regulation clearly. Moreover, where the EPA has remained silent on any explanation for its choice of regulation, the Court has held, ''a rule without a stated reason is necessarily arbitrary and capricious.'' *Small Refiner Lead Phase-Down Task Force* v. *U.S. EPA,* 705 F.2d 506, 551 (1983). Accordingly, if the EPA had intended for the 1979 listing to include the transmission and storage segment, the Agency's failure to explain that decision would have rendered it arbitrary and capricious. It is reasonable to presume that the Agency did not act arbitrarily and capriciously, and, therefore, that its silence regarding the transmission and storage segment indicated that it did not intend to cover that segment in the 1979 listing.

Additionally, to the extent there was ambiguity in the original 1979 listing, the EPA made clear its interpretation in 1984, when the EPA proposed to set the first standards of performance for sources within the Crude Oil and Natural Gas Production source category (*i.e.,* 40 CFR part 60, subpart KKK). The views the Agency expressed concerning the scope of the source category are particularly relevant because this rulemaking was conducted shortly after the listing and because it established the initial NSPS. In this proposal, the EPA described the category as ''encompass[ing] the operations of exploring for crude oil and natural gas products, removing them from beneath the earth's surface and processing these products for distribution to petroleum refineries and gas pipelines,'' but this description made no reference to the subsequent activities of transmission

[15] In the 2012 Rule rulemaking, the EPA referred to the distribution segment of the oil and natural gas industry, which entails transporting natural gas to the end user. 76 FR 52738, 52745 (August 23, 2011) (proposed rule); 77 FR 49514, 77 FR 49493 (Table 2) (August 16, 2012) (final rule). However, in the 2016 Rule, the EPA clarified that the scope of the Oil and Natural Gas Production and Processing source category includes the transmission and storage segment, but not the distribution segment. In addition, the EPA has never treated any sources in the distribution segment as subject to the requirements of NSPS subpart OOOO or OOOOa.

[16] In 1979, the EPA named the source category ''Crude Oil and Natural Gas Production source category.'' In 2016, the EPA changed the source category name to be ''Crude Oil and Natural Gas source category.'' Because this final rule rescinds the 2016 expansion, the EPA is finalizing the source category's name back to how it read in 1979.

[17] The EPA also has listed narrow source categories, as noted in section VIII.A of this preamble.

and storage of crude oil and natural gas products.[18] This description is reasonably read to establish that sources in the transmission and storage segment were not included in the Crude Oil and Natural Gas Production source category as listed in 1979.

Similarly, in the same sentence, the EPA defined the scope of the source category as encompassing oil operations up to the point of distribution to petroleum refineries, which are a separate source category. In this manner, the EPA indicated that the Crude Oil and Natural Gas Production source category includes operations from well sites (exploration, drilling, and removal) and natural gas processing plants (processing). While gathering and boosting compressor stations were not specified, it is reasonable to conclude that they are also included because they are located between two covered sites, the well site and the processing plant. However, to reiterate, subsequent operations, such as transmission and storage, and distribution were not included.

In the 1984 proposal, the EPA added that ''there are several VOC emission points within this industry,'' which the Agency categorized as process, storage, and equipment leaks. 49 FR 2637. In the 2016 NSPS, the EPA used this description of the three sets of emission points as support for the proposition that the Agency previously intended the source category to include transmission and storage. Specifically, the EPA stated that ''these emissions can be found throughout the various segments of the natural gas industry.'' 81 FR 35832. The EPA has closely reexamined the language of the 1984 proposal and found that, importantly, in the descriptions of these three categories of emission points, it is clear that the EPA considered these emission sources only in the production and processing segments. Therefore, while it is true that there are process, storage, and equipment leak emissions throughout the oil and natural gas sector, the discussion in the 1984 proposal entirely focused on these sources in the production and processing segments, and made no reference to the transmission and storage segment. The following discusses each of those three sets of sources in more detail.

With respect to process sources, the 1984 proposal states that they include well systems, field oil and natural gas separators, wash tanks, settling tanks, and other sources. The proposal further states that process sources remove the crude oil and natural gas from beneath the earth and separate gas and water from the crude oil. 49 FR 2637. This description of the process emission point clearly refers to the production and processing segments and is silent concerning the transmission and storage segment.

For the second set of emission points, storage sources, the 1984 proposal states that they include field storage tanks, condensate tanks, and cleaned oil tanks. These tanks emit VOC, the pollutant addressed in the 1984 proposal. These three types of tanks are common in the production segment and/or at natural gas processing plants; as gas is separated from oil, condensate and impurities, these tanks are used to store oil and condensate, which contain VOC. As such, these tanks are storage sources of VOC emissions. In contrast, storage at natural gas transmission and storage facilities refers to storage of gas, mostly in the underground storage reservoirs. Because the gas stored in underground reservoirs is pipeline quality natural gas (95–98 percent methane), these storage facilities in the transmission and storage segment are not emission points of concern for VOC, or any of the other pollutants identified in the 1984 proposal as being emitted from the oil and gas industry. Additionally, the cited discussion in the proposal made no explicit mention of transmission and storage facilities. Furthermore, there are no oil tanks or field tanks in the transmission and storage segment. As for condensate tanks, these tanks are rarely used at the transmission and storage segment because, as mentioned above, the gas that enters this segment is pipeline quality gas and, therefore, contains little to no condensate. Given the reference in the 1984 proposal to two other types of tanks that are also commonly found in the production and processing segments but absent in the transmission and storage segment, it is reasonable to conclude that the proposal's reference to condensate tanks was also intended to be limited to the production and processing segments. For all of these reasons, the better reading of the 1984 proposal discussion on storage tanks is that it was limited only to such tanks located in the production and processing segments, and was not intended to encompass tanks located in the transmission and storage segment.

Similarly, the 1984 proposal describes the equipment leak emission points as referring to the production and processing segments of the Oil and Natural Gas source category and is silent concerning the transmission and storage segment. The proposal explains that equipment leaks of VOC can occur from ''pumps, valves, compressors, open ended lines or valves, and pressure relief devices used in onshore crude oil and natural gas *production* (emphasis added).'' *Id.* Additionally, the preamble acknowledges that there is equipment used in crude oil and natural gas production and distinguishes this from equipment used in natural gas processing. The EPA examined the use of leak detection and repair work practices for equipment leaks of VOC at natural gas processing plants and explained in the preamble that the costs and emission reduction numbers for the application of these techniques at the ''widely dispersed'' crude oil and natural gas production sites were not known at that time. In this manner, the EPA clearly acknowledged the existence of equipment leaks at both the production and processing segments. In contrast, although equipment leaks do occur in the transmission and storage segment, the proposal makes no mention of leaks in that segment. Thus, each of the three sets of emission sources under consideration in the 1984 proposal clearly is in the production and processing segments, and the proposal is silent about the transmission and storage segment.

Another indicator that the 1984 proposal did not consider transmission and storage lies in the fact that this proposal addressed VOC emissions. As discussed below, the composition of the natural gas in the transmission and storage segment is significantly different than in the production and processing segments, as the transmission and storage segment contains considerably less VOC, and as a result, sources in that segment emit low amounts of VOC. In many areas of the country, particularly those that produce liquids and associated gas, the production and processing segments have high VOC-content gases, but the transmission and storage operations have substantially lower VOC-content gases. In light of the fact that the 1979 listing concerned VOC content (termed, at that time, HC), this difference between the segments further supports the view that the EPA would not have included transmission and storage in the 1979 listing. This corroborates that the proposal did not consider emission sources related to the transmission and storage of natural gas. Thus, although process, storage, and equipment leaks are emission sources that are present across the industry, including in natural gas transmission and storage, additional examination of the 1984 proposal makes it clear that it considered process, storage, and equipment leaks in only the production

[18] 49 FR 2637; *see* also 49 FR 2658.

and processing segments of the oil and natural gas industry.

For the reasons noted above, the EPA concludes that its statements in the 2012 and 2016 Rules that the 1979 listing of the Crude Oil and Natural Gas Production source category included the transmission and storage segment, and that the 1984 proposal confirmed that action, were in error. Rather, the record of the 1979 action indicates that the source category did not include that segment, and the Agency confirmed that narrower scope of the source category in its 1984 proposal to promulgate the initial set of NSPS.

b. Operations in the Transmission and Storage Segment Are Distinctly Different

As noted above, the 2016 Rule stated that the ''1979 listing of [the Crude Oil and Natural Gas Production] source category provides sufficient authority for this action'' to promulgate NSPS for sources in the transmission and storage segment, but then added that, ''to the extent that there is ambiguity in the prior listing, the EPA hereby . . ., as an alternative, . . . revis[es] . . . the category listing to broadly include the oil and natural gas industry.''[19] ''As revised,'' the 2016 Rule continued, ''the listed oil and natural gas category includes oil and natural gas production, processing, transmission, and storage.''[20] As discussed in the following paragraphs, the EPA is concluding, in line with the 2019 Proposal, that this alternative approach of revising the scope of the source category to include sources within the transmission and storage segment was also in error and should be rejected.

The EPA received comments on this issue, including the associated rationale. These comments are provided, along with the EPA's responses, in section VIII.A of this preamble and in Chapter 5 of the Response to Comments Document for this action. None of the comments received resulted in a change in the EPA's rationale and conclusions from proposal.

While CAA section 111(b)(1)(A) and (B) respectively authorize the EPA to ''revise,'' where warranted, both the ''list of source categories'' and ''standards of performance'' that the EPA has promulgated, nothing in CAA section 111 expressly authorizes or directs the EPA to ''revise'' a particular ''source category'' by altering its scope once the EPA has listed that source category. However, the EPA has inherent authority to reconsider, repeal, or revise past decisions, to the extent permitted by law, so long as the Agency provides a reasoned explanation. *See Sang Seup Shin* v. *INS,* 750 F.2d 122, 130 (D.C. Cir. 1984) (in absence of specific statutory prohibition, an agency has inherent authority to reconsider its decisions). The CAA complements the EPA's inherent authority to reconsider prior rulemakings by providing the Agency with broad authority to prescribe regulations as necessary, under CAA section 301(a). Even so, the authority to revise the scope of a source category must be exercised within reasonable boundaries and cannot be employed in a way that results in an unreasonable expansion of an existing source category. For the reasons discussed below, the EPA is not authorized to expand the scope of a listed source category to cover a new set of sources that are not sufficiently related to the sources in the pre-existing category, so that they constitute a separate source category for which the EPA would be required to make a new SCF and endangerment finding under CAA section 111(b)(1)(A) as a prerequisite to regulating them. Otherwise, expanding the source category by including new sources could be used to circumvent that requirement.

The EPA proposed to determine that the operations in the transmission and storage segment are not sufficiently related to the production and processing segments that were included in the original source category listing. In the 2016 Rule, the EPA held that the source category should be expanded because equipment and operations at production, processing, and transmission and storage facilities are a sequence of functions that are interrelated and necessary for getting the gas ready for distribution. In the 2019 Proposal, the EPA proposed to determine that this 2016 finding was unreasonable and proposed that transmission and storage operations are distinct from production and processing operations because (among other things) the natural gas that enters the transmission and storage segment has different composition and characteristics than the natural gas that enters the production and processing segments. 84 FR 50257.

While CAA section 111 does not define the term ''source category'' or use the phrase ''sufficiently related,'' this concept is inherent in the everyday definition of ''category.'' Merriam-Webster defines ''category'' as ''any of several fundamental and distinct classes to which entities or concepts belong,''[21] and it defines a ''class[ ]'' as ''a group, set, or kind sharing *common* attributes'' (emphasis added).[22] Commenters point out what they view as commonalities among both the production and processing and transmission and storage segments. These comments implicitly acknowledge that, to be a ''category,'' the associated sources must have something in common, that is, they must be sufficiently related to merit being associated as part of the same category. The EPA may not have articulated the ''sufficiently related'' test in those terms in prior actions, but, again, that test is implicit in the everyday meaning of ''category.'' That is, for items to be part of a ''category'' they must have key things in common, and if they have substantial differences, they should not be included in the same category. Without this test, it would be difficult to develop a basis for ascertaining the scope of a category. For this reason, the EPA has in effect regularly applied this test. For example, fugitive VOC emissions from leaking equipment occurs across several industries, including the synthetic organic chemical manufacturing industry and the petroleum refinery industry, but there are substantial enough differences between those industries to warrant putting them in separate source categories, notwithstanding the fact that some of their equipment is similar. For another example, when proposing to expand the original Asphalt Roofing Plants source category listing to include other locations where the preparation of asphalt for roofing may take place, such as oil refineries, the EPA stated that, ''the emissions, processes, and applicable controls for blowing stills and asphalt storage tanks at oil refineries and asphalt processing plants are the same as those at asphalt roofing plants. It is therefore reasonable to treat the asphalt processing and roofing manufacture industry as a single category of sources for the purposes of establishing standards of performance.'' 45 FR 76428. By finding commonality in emissions, processes, and applicable controls for these otherwise different sources, the EPA determined that they should be part of the same source category.

[19] 81 FR 35833.

In contrast, based on a reexamination of the processes and operations found in the transmission and storage segment, the EPA is finalizing its determination that transmission and storage sources are, in fact, sufficiently distinct from production and processing sources so that the Agency erred when, in the 2016 Rule, it revised the source category to include sources in the transmission and storage segment. Specifically, the EPA now concludes that the processes and operations found in the transmission and storage segment are distinct from those found in the production and processing segments because the purposes of the operations are different and because the natural gas that enters the transmission and storage segment has different composition and characteristics than the natural gas that enters the production and processing segments.

The primary operations of the production and processing segments are exploring crude oil and natural gas products beneath the earth's surface, drilling wells to extract these products, and processing the crude oil and field gas for distribution to petroleum refineries and natural gas pipelines. As stated previously in this section, the EPA described this source category's operations similarly when proposing 40 CFR part 60, subpart KKK, in 1984. 49 FR 2637. The primary purpose of these segments is to obtain the product and then, in the case of natural gas, to remove impurities from the extracted product. At a well site (production segment), crude oil and natural gas are extracted from the ground. Some processing can take place at the well site, such as the physical separation of gas, production fluids, and condensate. Of these products, crude oil and natural gas undergo successive, separate processing. Crude oil is separated from water and other impurities and transported to a refinery via truck, railcar, or pipeline. The EPA treats oil refineries as a separate source category, accordingly, for present purposes, the oil component of the production segment ends at the point of custody transfer at the refinery.[23] The separated gas (''field gas'') is then sent through gathering pipelines to the natural gas processing plant (processing segment).[24] At the processing plant, the field gas is converted to sales gas or pipeline quality gas. This involves several steps, including the extraction of natural gas liquids (*e.g.,* a mixture of propane, butane, pentane) from the field gas, the fractionation of these natural gas liquids into individual products (*e.g.,* liquid propane), or both extraction and fractionation. The final natural gas that exits in the processing plant is sales gas, which is predominantly methane. In these segments, the field gas has physically changed such that it is a usable product.

The operations of the production and processing segments differ from the transmission and storage segment operations because in the latter, the natural gas does not undergo changes in composition, except for some limited removal of liquids that condensed during the temperature and pressure changes as the natural gas moves through the pipeline. Therefore, the natural gas that enters the transmission and storage segment has approximately the same composition and characteristics as the natural gas that leaves the segment for distribution. The segment includes natural gas transmission compressor stations, whose primary operation is to move the natural gas through transmission pipelines by increasing the pressure. Dehydration, which can also occur at compressor stations, is a secondary operation used when the natural gas has collected water during transmission. As discussed in the 2019 Proposal, this differs from the significant natural gas processing in the production and processing segments, which involves a series of processing steps dependent on factors such as the type of natural gas (*e.g.,* wet or dry gas), market conditions, and company contract specifications. 84 FR 50258. At storage facilities, natural gas is injected into underground storage for use during peak seasons.[25] When demand increases, the natural gas is extracted from the underground storage, dehydrated to remove water that has entered during storage, compressed, and moved through distribution pipelines.

Analysis of the composition of natural gas on a nationwide basis in the various industry segments confirms the different character of the segments. In 2011 and subsequently in 2018, the EPA conducted an analysis of the composition, expressed in percent volume, of natural gas based on the methane, VOC, and HAP content across the various industry segments.[26 27] For example, in 2011, the nationwide composition for the production segment, which included wells and unprocessed natural gas, consisted of approximately 83-percent methane, 4-percent VOC, and less than 1-percent HAP. In contrast, the transmission segment, which included pipeline and sales gas (*i.e.,* post processing), consisted of approximately 93-percent methane, 1-percent VOC, and less than 0.01-percent HAP. In 2018, the EPA reviewed new studies available and found similar results for the production segment. The nationwide composition for the production segment consisted of approximately 88-percent methane and 4-percent VOC. At proposal in 2019, we concluded that these differences in the gas composition demonstrated that the emissions profile is different following gas processing. After proposal in 2019, the EPA conducted a comprehensive analysis of data reported directly to the Greenhouse Gas Reporting Program (GHGRP) for reporting years 2015 through 2018 to determine whether the composition of natural gas, in terms of methane content, is statistically different between industry segments.[28] In order to determine whether the methane content is statistically different between industry segments, the analysis evaluated the average methane concentration for each segment based on the 2015–2018 GHGRP reporting data.[29]

[23] *See* 40 CFR part 60, subparts J and Ja, and 40 CFR part 63, subparts CC and UUU.

[24] Natural gas with high methane content is referred to as ''dry gas,'' while natural gas with significant amounts of ethane, propane, or butane is referred to as ''wet gas.'' The degree and location of processing is dependent on various factors, one being the type of natural gas (*e.g.,* wet or dry gas). In some ''dry gas'' areas, the field gas, with naturally higher methane content, may go from the well site directly into the transmission and storage segment without processing in a gas processing plant. The fact that some produced natural gas does not require processing and can be transported directly into the transmission and storage segment does not diminish the differences between the production and processing segments, on the one hand, and the transmission and storage segment, on the other. Rather, it just means that some gas does not need to go through the processing segment.

[25] Storage can also take place in above ground storage vessels; however, it is the EPA's understanding that these are more commonly used after the local distribution company custody transfer (LDC) or commonly ''city gate,'' which has not been included in the source category at any point. The term ''local distribution company custody transfer,'' defined in 40 CFR part 60, subpart OOOOa, means a metering station where the LDC receives a natural gas supply from an upstream supplier, which may be an interstate transmission pipeline or a local natural gas producer, for delivery to customers through the LDC's intrastate transmission or distribution lines. This final rule adds the definition of LDC to 40 CFR part 60, subpart OOOO.

[28] Memorandum. Analysis of Average Methane Concentrations in the Oil and Gas Industry Using Data Reported Under 40 CFR part 98 Subpart W. April 9, 2020. Included in Docket ID No. EPA–HQ–OAR–2017–0757.

[29] See Table 17 of Memorandum. Analysis of Average Methane Concentrations in the Oil and Gas

For oil and natural gas production, the analysis estimated an average methane content of 69 and 83 percent, respectively. For gathering and boosting,[30] the analysis estimated an average methane content of 81 percent, and for gas processing, an average methane content of 78 percent. The analysis estimated an average methane content of 94 percent for transmission and 95 percent for storage. The analysis performed additional calculations and statistical assessments to generate the final statistical analysis and subsequent conclusions.

This analysis found that there is a substantial difference in methane concentrations between (1) gas production, gathering and boosting, and gas processing and (2) transmission and storage. This agrees with earlier data and analyses and the conclusion that there is a difference in the emissions profile between the production and processing segments and the transmission and storage segment.

It should be noted that in regulating HAP from the oil and natural gas industry, the EPA created separate source categories for the production and processing segments, regulated under subpart HH of 40 CFR part 63; and the transmission and storage segment, regulated under subpart HHH of 40 CFR part 63. *See* 64 FR 32610, June 17, 1999. In addition, the EPA has made a similar distinction between other source categories with segments that handle the production and processing of a material and subsequent transport of the product. As the EPA noted in the 2019 Proposal, 84 FR 50258, one example is the petroleum industry, in which production facilities,[31] refineries,[32] and bulk gasoline terminals [33] all have operational differences, and the EPA placed them in three different source categories. Those operational differences are similar to the operational differences between the production and processing segments and the transmission and storage segment at issue in this final rule.

It should be noted that in the 2016 Rule, the EPA justified including the transmission and storage segment in the Crude Oil and Natural Gas source category partly because some similar equipment (*e.g.,* storage vessels, pneumatic pumps, compressors) is used across the industry. While that is true, the differences in the operations of, and the differences in emission profiles of, the different segments support excluding the transmission and storage segment from the source category. A review of 2016 Rule compliance reports from sources in the EPA Regions (3, 6, 8, 9, and 10) with the greatest oil and natural gas activity indicates that there were no storage vessels emitting more than 6 tons per year (tpy) VOC reported in the transmission and storage segment.[34] Therefore, even though there are storage vessels in the transmission and storage segment, the liquids (condensate) stored and the throughputs are such that the VOC emissions are significantly different. This supports our understanding that VOC emissions are lower in the transmission and storage segment and that any gas processing that occurs in the transmission and storage segment generally is limited to removing liquids that condensed during the temperature and pressure changes as the gas moves through the pipeline. In addition, there are types of equipment present in the production segment (*e.g.,* oil tanks, three-phase separators) and processes at natural gas processing plants (*e.g.,* natural gas liquid extraction, natural gas liquids fractionation, sulfur and CO_2 removal) that are either not present or uncommon at natural gas transmission and storage facilities.

In summary, there are distinct differences in the operations between oil and natural gas production and natural gas processing, on the one hand, and natural gas transmission and storage, on the other. The primary operations of the production and processing segments are exploring crude oil and natural gas products beneath the earth's surface, drilling wells that are used to extract these products, and processing the crude oil and field gas for distribution to petroleum refineries and natural gas pipelines. The operations of the production and processing segments differ from the transmission and storage segment operations because in the latter, the natural gas does not undergo changes in composition, except for some limited removal of liquids that condensed during the temperature and pressure changes as the natural gas moves through the pipeline. Second, there are statistically significant differences in the emissions profiles between the production and processing segments and the transmission and storage segment. Third, there are equipment types and processes present in the oil and natural gas production and processing segments that are not present, or not common, at natural gas transmission and storage facilities. The EPA is, therefore, finalizing a revised source category which excludes transmission and storage sources from the Crude Oil and Natural Gas Production source category.

As the EPA stated in the 2019 Proposal, the 2016 Rule's expansion of the source category to include sources in the transmission and storage segment did, in fact, exceed the reasonable boundaries of the EPA's authority to revise source categories. 81 FR 35833. The 2016 Rule also erred in purporting to list, under CAA section 111(b)(1)(A), the source category, as expanded to include transmission and storage sources, for regulation on grounds that it causes or contributes significantly to air pollution which may reasonably be anticipated to endanger public health or welfare. *Id.* Rather, in order to include the transmission and storage segment on the CAA section 111(b)(1)(A) list for regulation, the EPA is required to treat it as a separate source category and determine that in and of itself it causes or contributes significantly to air pollution which may reasonably be anticipated to endanger public health or welfare. The EPA did not make that determination in the course of promulgating the 2016 Rule. 81 FR 35833.

2. Rescission of the NSPS for Sources in Transmission and Storage Segment

A prerequisite for the EPA to promulgate an NSPS applicable to new sources is that the new sources must be in a source category that the EPA has listed under CAA section 111(b)(1). As stated in section V.B.1 of this preamble, the EPA is removing the transmission and storage segment from the source category. Accordingly, the promulgation of NSPS for transmission and storage sources was contrary to law, and as a result, the EPA is also rescinding the standards for both VOC and GHG emissions in the 2012 Rule and the 2016 Rule for emission sources located in the transmission and storage segment. Specifically, we are rescinding the requirements for compressor affected facilities, pneumatic controller affected facilities, storage vessel affected facilities, and the affected facility that is the collection of fugitive emissions components located at a compressor

[33] 45 FR 83126 (December 12, 1980); 48 FR 37578 (August 18, 1983).

[34] These reports have since been made available for public viewing at *https://www.foiaonline.gov/foiaonline/action/public/submissionDetails?trackingNumber=EPA-HQ-2018-001886&type=request.*

station, where these affected facilities are located downstream of the natural gas processing plant or, if no gas processing plant is present, after the point of custody transfer. To further clarify that the requirements do not apply to these units, we are adding a definition of ''natural gas transmission and storage segment'' which describes the boundaries of the segment. The definitions of ''natural gas processing plant'' and ''custody transfer'' are unchanged.

3. Status of Sources in Transmission and Storage Segment

The result of this final rule, as it relates to the transmission and storage segment, is that these sources are not part of a listed source category under CAA section 111(b)(1)(A) and, thus, are not subject to regulation under CAA section 111(b) (for new sources) or CAA section 111(d) (for existing sources that emit certain air pollutants). This is consistent with the treatment of emissions sources in other industries that the EPA has not listed as a source category under CAA section 111(b)(1)(A). In the future, the EPA may evaluate these emissions more closely and determine whether the transmission and storage segment should be listed as a source category under CAA section 111(b)(1)(A).[35]

4. Rescission of the Limitations on Methane for Sources in the Production and Processing Segments

As the second of the two main actions of this final rule, the EPA is also rescinding the limits on methane emissions for the NSPS applicable to sources in the production and processing segments. The EPA finds that, in the specific circumstances presented here, the EPA erred in establishing the methane NSPS because those requirements are redundant with the NSPS for VOC, establish no additional health protections, and are, thus, unnecessary. Even if the 2016 Rule's establishment of limits on methane emissions is not considered to be, the EPA would exercise its discretion to rescind them on those same grounds. Rescinding the applicability of the 2016 Rule requirements to methane emissions, while maintaining the applicability of those requirements to VOC emissions, will not affect the amount of methane reductions that those requirements will achieve, because the controls that reduce VOC emissions simultaneously reduce methane emissions.

Comments were received on both sides of this proposed decision and the rescission of the requirements for methane and the associated rationale. We respond to some of the major comments in the discussion immediately below and in section VIII.B of this preamble, and to the rest in Chapter 6 of the Response to Comments Document. None of the comments received have led the EPA to materially change its views from the proposal, and as a result, the EPA is rescinding the methane NSPS. The following is the rationale for this decision.

In the 2016 Rule, the EPA justified regulating methane for the following reasons: At the outset, the EPA noted that methane is a GHG, that the EPA has determined that GHG pollution endangers public health and welfare, and that the Crude Oil and Natural Gas Production source category is one of the nation's largest industrial emitters of methane. 81 FR 35825. The EPA also noted that ''[r]educing methane emissions . . . will contribute to efforts to reduce global background ozone concentrations that contribute to the incidence of ozone-related health effects.'' *Id.* at 35837. The EPA went on to determine that the amounts of emissions of methane from the source category were sufficiently large that it was rational to regulate them under CAA section 111, and that, in the alternative, assuming that it was necessary to determine that those emissions cause or contribute significantly to dangerous GHG air pollution, the EPA made that determination as well. *Id.* at 35841–43.

The EPA recognized that the controls that facilities use to meet the VOC NSPS ''also reduce methane emissions incidentally.'' *Id.* at 35841. However, the Agency added that ''in light of the current and projected future GHG emissions from the oil and natural gas industry, reducing GHG emissions from this source category should not be treated simply as an incidental benefit to VOC reduction; rather, it is something that should be directly addressed through GHG standards in the form of limits on methane emissions under CAA section 111(b) based on direct evaluation of the extent and impact of GHG emissions from this source category and the emission reductions that can be achieved through the best system for their reduction.'' *Id.* The Agency added, ''The standards detailed in this final action will achieve meaningful GHG reductions and will be an important step towards mitigating the impact of GHG emissions on climate change.'' *Id.*

The EPA further justified methane requirements by noting that ''there are cost-effective controls that can simultaneously reduce both methane and VOC emissions from these equipment across the industry, and in many instances, they are cost effective even if all the costs are attributed to methane reduction.'' *Id.* In addition, the EPA noted that ''establishing both GHG and VOC standards for equipment across the industry will also promote consistency by providing the same regulatory regime for this equipment throughout the oil and natural gas source category for both VOC and GHG, thereby facilitating implementation and enforcement.'' *Id.* The Agency added that, ''[w]hile this final rule will result in additional reductions [of GHG] . . ., the EPA often revises standards even where the revision will not lead to any additional reductions of a pollutant because another standard regulates a different pollutant using the same control equipment. For example, in 2014, the EPA revised the Kraft Pulp Mill NSPS in 40 CFR part 60 subpart BB published at 70 FR 18952 (April 4, 2014) to align the NSPS standards with the National Emission Standards for Hazardous Air Pollutants (NESHAP) standards for those sources in 40 CFR part 63, subpart S. Although no previously unregulated sources were added to the Kraft Pulp Mill NSPS, several emission limits were adjusted downward. The revised NSPS did not achieve additional reductions beyond those achieved by the NESHAP, but aligning the NSPS with the NESHAP eased the compliance burden for the sources.'' *Id.* n.60.

In *F.C.C.* v. *Fox Television Stations, Inc.,* 556 U.S. 502 (2009), the U.S. Supreme Court described the type of reasoning an agency must provide to justify changing a rule it has previously adopted:

> We find no basis in the Administrative Procedure Act or in our opinions for a requirement that all agency change be subjected to more searching review. The Act mentions no such heightened standard. And our opinion in *Motor Vehicle Mfrs. Assn. of United States, Inc.* v. *State Farm Mut. Automobile Ins. Co.,* 463 U.S. 29 (1983)

[35] Methane emissions from the transmission and storage segment are 34 MMT CO_2 Eq. (1,355 kt methane) per the Inventory of United States Greenhouse Gas Emissions and Sinks: 1990–2018 (published April 13, 2020), which amounts to 5 percent of United States methane emissions and 0.6 percent of total U.S. GHG emissions on a CO_2 equivalent basis (using a GWP of 25 for methane). With respect to VOC emissions, the transmission and storage segment emitted 14 kt in 2017, which amounts to just 5.8 percent of national VOC emissions from that year. With respect to SO_2 emissions, there were 1 kt emitted from the transmission and storage segment in 2017, or just 1.8 percent of national SO_2 emissions. For HAP emissions, the transmission and storage segment emitted 1,143 tons in 2014, or just 0.01 percent of national HAP emissions for that year.

neither held nor implied that every agency action representing a policy change must be justified by reasons more substantial than those required to adopt a policy in the first instance. . . . The statute makes no distinction, however, between initial agency action and subsequent agency action undoing or revising that action.

To be sure, the requirement that an agency provide reasoned explanation for its action would ordinarily demand that it display awareness that it *is* changing position. . . . And of course the agency must show that there are good reasons for the new policy. But it need not demonstrate to a court's satisfaction that the reasons for the new policy are *better* than the reasons for the old one; it suffices that the new policy is permissible under the statute, that there are good reasons for it, and that the agency *believes* it to be better, which the conscious change of course adequately indicates. This means that the agency need not always provide a more detailed justification than what would suffice for a new policy created on a blank slate. Sometimes it must—when, for example, its new policy rests upon factual findings that contradict those which underlay its prior policy; or when its prior policy has engendered serious reliance interests that must be taken into account. *Smiley* v. *Citibank (South Dakota), N. A.,* 517 U.S. 735, 742, 116 S.Ct. 1730, 135 L.Ed.2d 25 (1996). It would be arbitrary or capricious to ignore such matters. In such cases it is not that further justification is demanded by the mere fact of policy change; but that a reasoned explanation is needed for disregarding facts and circumstances that underlay or were engendered by the prior policy.

Id. at 514–16.

In the 2019 Proposal, the EPA acknowledged that in the 2016 Rule, it decided to add methane requirements even though it was aware that the VOC requirements would, by themselves, achieve the same reductions in methane. 84 FR 50259–60 and n.64 (citing 81 FR 35841). However, in that proposal, the EPA nevertheless stated that upon further review, it was proposing that it erred in 2016 by including methane requirements and explained that those requirements were redundant to the VOC requirements. *Id.* The EPA is finalizing this position for several reasons, which meet the requirements of *Fox Television* for reversing the 2016 Rule and rescinding the methane requirements.

In the 2016 Rule, the EPA justified regulating methane on grounds that methane emissions from this source category are great enough to provide a rational basis for regulation in light of the dangers of GHG air pollution and, in fact, if it were necessary, the Agency would determine that those emissions contribute significantly to GHG air pollution. However, in the present action, the EPA is determining that its rational basis finding and alternative SCF in the 2016 Rule were invalid because they included emissions from the transmission and storage segment, as discussed in section VI of this preamble. Accordingly, this basis [36] in the 2016 Rule for regulating methane is invalid.

Considering only the production and processing segments, the 2016 rational basis determination was incorrect because the methane NSPS was redundant on the grounds that it does not achieve any additional methane reductions beyond what sources achieve by implementing the VOC NSPS.[37] The EPA explained its basis for this view at length in the 2019 Proposal, noting that ''for each emission source in the source category subject to the NSPS, the requirements overlap completely.'' 84 FR 50259. The EPA explained that each emission source in the source category emits methane and VOC as co-pollutants through the same emission points and processes. The requirements of the NSPS, including the emission limits, required controls or changes in operations, monitoring, recordkeeping, reporting, and all other requirements, apply to each emission source's emission points and processes and, therefore, to each emission source's methane and VOC emissions, in precisely the same way. The capture and control devices used to meet the NSPS requirements are the same for these co-pollutants and are not selective with respect to either VOC or methane emissions. *Id.* In the proposal, the EPA gave several examples of how the VOC and methane requirements are duplicative of each other. Some examples include the requirements for well affected facilities, pneumatic controllers, pneumatic pumps, and compressors. For each of these emission points, the applicability requirements in NSPS subpart OOOOa are entirely ''pollutant-blind.'' That is, the requirement to control is based on applicability criteria that are not specific to VOC. For example, a pneumatic controller affected facility is a controller operating at a natural gas bleed rate of greater than 6 standard cubic feet per hour (scfh). The ''natural gas'' bleed rate is based on total gas and does not consider the amount of VOC in the gas. In fact, the VOC content could be zero. Similarly, pneumatic pumps are affected facilities if they are ''natural gas driven.'' All reciprocating and wet-sealed compressors, except those at well sites, are affected facilities. Rescission of the methane standards will have no impact on the number of affected facilities that will be subject to the control requirements in NSPS subpart OOOOa. Further, for well completions, pneumatic controllers, reciprocating compressors, and pneumatic pumps at natural gas processing plants, the control requirements are either equipment standards or work practices that do not distinguish between VOC and methane. For pneumatic pumps, the requirement is a 95-percent reduction in ''natural gas emissions.'' Finally, for wet-sealed centrifugal compressors, the requirement is the only one that specifically mentions VOC or methane, as it requires a 95-percent reduction in VOC and methane. However, removal of ''methane'' will not result in any change in methane reduction as the test method required to demonstrate this level of reduction (EPA Method 25A) measures the reduction of total organic carbon, which includes methane.

Thus, after the rescission of the methane standards, there will be no change in the number of affected facilities subject to the rule. There will also be no impact in the methane emission reductions achieved from those sources. While commenters recognized this fact, some raised concerns that in the future, advances in leak measurement technology may result in situations where VOC and methane controls are not redundant. The EPA points out that any future request for an alternative means of emissions limitation must include a demonstration that the alternative identifies emissions for repair that are at least equivalent to the visible emissions observed (and repaired) using optical gas imaging (OGI) with the current levels of sensitivity to methane, especially where the technology speciates emissions. Section VIII.B of this preamble, as well as Chapter 6 of the Response to Comments Document, includes comments and responses on this topic. Because methane reductions occur anyway as a result of the same controls required under the VOC requirements, the benefits of the methane reductions in protecting public health or welfare do not justify regulation of methane under CAA section 111. By the same token, the fact that the controls are cost effective—even, in many cases, when all of the costs are assigned to the methane requirements—does not justify those requirements. Again, the controls, imposed to reduce VOC, would result in the same amount of methane reductions, even without the methane requirements.

Nor can the methane requirements be justified on grounds that their overlap with VOC requirements is a means to

[36] 81 FR 35833.

[37] The same is true for methane reductions that reduce global ozone levels.

promote consistency by providing the same regulatory regime for this equipment throughout the Oil and Natural Gas source category for both VOC and methane, thereby facilitating implementation and enforcement. Although, as noted above, the EPA regulates the same sources/same pollutants at kraft mills under two differing rules, the requirements were established under two different CAA regulatory programs (*i.e.,* under CAA sections 111 and 112) (two different regulatory regimes). The pollutants regulated under CAA section 111(b) for new, modified, or reconstructed emission units at kraft pulp mills are filterable PM and total reduced sulfur compounds. Opacity is regulated to ensure proper operation and maintenance of the electrostatic precipitator used to control PM emissions. Particulate matter emissions and opacity are also regulated under a separate Federal standard, the subpart MM NESHAP for chemical recovery combustion sources at kraft, soda, sulfite, and stand-alone semichemical pulp mills (40 CFR part 63).

It is rational for the EPA to determine that requirements that are redundant to other requirements are not necessary because they do not result in emission reductions beyond what would otherwise occur. As the EPA noted in the 2019 Proposal, the rulemaking to promulgate NSPS for lime manufacturing plants provides another example of the Agency determining not to promulgate a NSPS for an air pollutant, SO_2, on grounds that the emissions were adequately controlled by emissions controls required under a NSPS for another air pollutant, PM. Standards of Performance for New Stationary Sources Lime Manufacturing Plants, 42 FR 22506 (May 3, 1977). Although in that rulemaking, the EPA did not explicitly state that SO_2 controls would have been redundant and, thus, were unnecessary, the Agency's reasoning was fully consistent with that characterization. Specifically, the EPA noted that the controls it was requiring for PM (a baghouse or an electrostatic precipitator) would achieve 85- to 90-percent reductions in SO_2, and that although the EPA could impose further controls to achieve another 7 percent reduction in SO_2, based on the use of a scrubber, the cost would be too high and the environmental benefits too little for that approach to be appropriate. *Id.* at 22507. Accordingly, the EPA prescribed standards for PM but not for SO_2. *Id.* at 22509 (40 CFR 60.342). That is, it appears that the EPA could have promulgated standards for SO_2 that required the same 85- to 90-percent level of control achieved through compliance with the PM standards (and not the additional 7 percent that would have necessitated installation of a scrubber), but the Agency declined to do so. Even though the EPA did not explicitly describe the potential SO_2 NSPS as redundant and, therefore, unnecessary, the fact that it did not promulgate any standards for SO_2 coupled with its explanation that PM controls reduced SO_2 by 85 to 90 percent make clear that the rulemaking serves as a precedent for the present rulemaking and the Agency's present position that the methane NSPS is redundant to the VOC NSPS. By the same token, in the Lime Manufacturing Plants rule, the EPA declined to promulgate NSPS for (1) nitrogen oxides (NO_X) because they are emitted in low concentrations or (2) CO because, among other things, regulation would produce little environmental benefit. *Id.* at 22507. These rationales for not adopting controls for those air pollutants are similar to the redundancy rationale—the essential point in all cases is that any controls would not result in meaningful emission reductions.

In a more recent rulemaking, under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), the EPA also declined to promulgate requirements that it considered to be redundant, and the Court upheld that action. Under 42 U.S.C. 9608(b)(1), the EPA is required to ''promulgate requirements . . . that classes of facilities establish and maintain evidence of financial responsibility consistent with the degree and duration of risk associated with the production, transportation, treatment, storage, or disposal of hazardous substances.'' In 2018, the EPA took an action in which it declined to issue financial responsibility regulations for the hardrock mining industry. Financial Responsibility Requirements Under CERCLA Section 108(b) for Classes of Facilities in the Hardrock Mining Industry (Final Action), 83 FR 7556, 7556 (February 21, 2018). As summarized by the Court, the EPA stated that ''existing federal and state programs as well as modern mining practices reduced the risk that the EPA would be required to use the Superfund to finance response actions at currently active mines.'' *Idaho Conservation League* v. *Wheeler,* 930 F.3d 494, 501 (D.C. Cir. 2019) (citing 83 FR 7556). The Court upheld that determination, stating that 42 U.S.C. 9608(b)(1) ''does not place any obligation on the EPA to issue redundant financial responsibility requirements.'' *Id.* at 504–5.[38] [39]

One commenter cites two Court cases that it asserts support the view that the EPA must regulate a source's emissions of a particular pollutant under CAA section 111 even where the source already controls those emissions because of other legal obligations. In *New York* v. *Reilly,* 969 F.2d 1147, 1153 (D.C. Cir. 1992), the Court rejected the EPA's argument that it need not ban the burning of lead-acid vehicle batteries under the NSPS for municipal waste combustors because the Resource Conservation and Recovery Act precludes the burning of lead-acid batteries. The Court responded that ''the mere existence of other statutory authority which might undergird EPA's final stance is insufficient to justify the omission of the battery ban.'' In *Portland Cement Ass'n* v. *EPA,* 665 F.3d 177, 191 (D.C. Cir. 2011), the Court rejected legal challenges to an NSPS limit for PM that tracked a concurrently issued PM standard adopted under CAA section 112. The Court explained that, ''[a]lthough both the NSPS and NESHAP rulemaking resulted in a PM emissions limit of 0.01 pounds per ton, EPA arrived at that limit using two different mechanisms,'' and added that ''the final rule . . . noted that kilns would have to install fabric filter technology to comply

[38] In addition, as the EPA noted in the 2019 Proposal, it ''ha[s] 'historically declined to propose standards for a pollutant [that] is emit[ted] in low amounts . . . .' '' 80 FR 56599 (quoting 75 FR 54970, 54997 (September 9, 2010). This situation is similar to the present situation in which a pollutant (methane) is fully controlled by requirements applicable to a second pollutant (VOC).

[39] The EPA notes that removing the applicability of the NSPS to methane emissions does not alter the basis for the applicability of the NSPS to VOC emissions for affected sources in the source category, which for some affected sources have been regulated since the 2012 Rule. To determine the best system of emission reduction (BSER), the EPA assesses a set of factors, which include the amount of emissions reduction, costs, energy requirements, non-air quality impacts, and the advancement of particular types of technology or other means of reducing emissions, and retains discretion to weight the factors differently in any case. In the 2016 NSPS subpart OOOOa, the EPA gave primary weight to the amount of emission reductions and cost. The EPA describes this analysis in depth in the 2015 NSPS subpart OOOOa proposal at 80 FR 56618 through 56620 and 80 FR 56625 through 56627. For the source types in the production and processing segments, the NSPS requirements, considered on a VOC-only basis, are cost effective (relatively low cost and relatively high emissions reductions). *See* memorandum titled ''Control Cost and Emission Changes under the Amendments to 40 CFR part 60, subpart OOOOa Under Executive Order 13783,'' in the public docket for this action. The EPA provides this information for the benefit of the public and is not reopening the above-described determination in the 2016 NSPS subpart OOOOa that the VOC-only requirements for sources in the production and processing segments meet the requirements of CAA section 111.

with NESHAP, . . . and the parallel NSPS rule would therefore have no additional cost.'' The commenter states that, similarly, while the EPA set the same BSER for methane and VOC in the 2016 Rule, the considerations underlying the BSER analysis differs significantly for these pollutants, which cause distinct harms. However, these cases are distinguishable because they stand for the proposition that when two separate statutory requirements apply, each must be given effect, and compliance with one does not obviate the other. In the present rulemaking, only one statutory requirement is applicable—the CAA section 111(b)(1)(B) requirement to promulgate standards of performance—and the EPA has determined that promulgating a standard of performance for VOC emissions obviates the need for a standard of performance for methane emissions from the same sources. Further, as the EPA noted in the 2019 Proposal, the EPA has historically declined to propose standards for a pollutant that is emitted in small amounts. 84 FR 50260. In the case of the Oil and Natural Gas Production source category, there are no methane emissions from the sources subject to the NSPS beyond those emissions already subject to control by the provisions to control VOC in the NSPS. Accordingly, there is no need to add NSPS requirements applicable to methane.

The EPA recognizes that in rescinding one set of standards in part for its redundancy with another set, the EPA is choosing to rescind the applicability of those standards to methane emissions and not VOC emissions, rather than vice-versa. Rescinding the methane-specific standards is reasonable because the requirements for VOC and correspondingly, sources' compliance with those requirements, are longer established than those for methane. As described earlier, the EPA regulated VOC first, beginning in 1985 and continuing in 2012, and then added regulation of methane for some sources in 2016.

Additionally, redundancy is not uniform across affected facilities in the production and processing segments. All sources in the segments are subject to VOC requirements and many are subject to methane requirements as well. However, some sources, such as storage vessels, are subject only to VOC requirements and not methane requirements. For those sources, it cannot be said that regulation of VOC is redundant to regulation of methane because the EPA has not regulated methane from them. In addition, there are no sources that are subject to only methane requirements. For these reasons, in choosing between the two requirements, the EPA considers it appropriate and less disruptive to rescind the methane standards.

Commenters asserted that the methane NSPS are not redundant to the VOC NSPS because the former trigger the requirements in CAA section 111(d) to regulate methane from existing sources, but the VOC NSPS do not trigger CAA section 111(d) requirements to regulate VOC from existing sources. The commenters noted that the EPA must consider emissions from existing sources when determining whether to list the source category, which is the predicate to regulating a given pollutant under CAA section 111.

The commenters are correct that methane NSPS, but not VOC NSPS, would trigger the CAA section 111(d) requirements for existing sources,[40] but the fact that the methane NSPS carries with it a trigger for CAA section 111(d) regulation of existing sources is simply a legal consequence of the requirements of CAA section 111, and does not undermine the EPA's conclusion that methane NSPS are redundant. Nor does the fact that the EPA considers emissions from existing sources in listing the source category. These conclusions are supported by the structure of CAA section 111. This provision establishes a multi-step process for regulation. Section 111(b)(1)(A) of the CAA directs the EPA to list source categories for regulation, CAA section 111(b)(1)(B) directs the EPA then to promulgate standards of performance for pollutants emitted from new sources, and CAA section 111(d)(1) directs the EPA then to promulgate guidelines for states to adopt standards of performance for certain of those pollutants emitted by existing sources. As explained above and in responses to comments, the basis for rescinding the applicability of the standards of performance for methane emissions is that those NSPS are redundant with the VOC NSPS. The legal consequence of that rescission is that the EPA is not authorized to promulgate CAA section 111(d) guidelines for existing sources. That consequence does not negate the fact that the methane NSPS is redundant with the VOC NSPS.

As discussed in section VII.B of this preamble, the EPA believes that the impact of not regulating existing oil and natural gas sources under CAA section 111(d) will be limited due to existing factors that encourage or require control of emissions from oil and natural gas existing sources. For comments on that view, and the EPA's response to those comments, see section X.B of this preamble.

Additional comments and responses by the EPA on the rescission of the applicability to methane are provided in section VIII.B of this preamble and in Chapter 6 of the Response to Comments Document.

In the next section, the EPA concludes that the 2016 Rule's determination that methane emissions from the source category contribute significantly to dangerous air pollution was erroneous and must be rescinded. Rescinding that determination also requires rescinding the methane NSPS. The redundancy of the methane requirements and the inadequacy of the 2016 Rule's SCF for methane are separate and independent reasons for rescinding the methane NSPS, and, thus, are severable from each other.

VI. Significant Contribution

The EPA is finalizing the position that the Administrator is required to determine that methane emissions from the Crude Oil and Natural Gas Production source category cause or contribute significantly to GHG air pollution as a predicate for promulgating standards of performance for methane. The EPA solicited comment on this position in the 2019 Proposal, based on an interpretation of section 111 of the CAA, and the EPA bases this final action on a refinement of that interpretation. Specifically, the EPA interprets the requirement of CAA section 111(b)(1)(B) that the Administrator propose to ''establish[ ] . . . standards of performance'' and then finalize ''such standards''—together with the CAA section 111(a)(1) definition of ''standard of performance'' as a ''standard for emissions of air pollutants''—to limit the standards of performance to only those air pollutants that the Administrator determined cause or contribute significantly to dangerous air pollution when listing the source category under CAA section 111(b)(1)(A). If the Administrator did not, when listing the source category, determine that a particular air pollutant causes or contributes significantly to dangerous air pollution, then the Administrator must do so as a predicate to promulgating standards of performance for that air pollutant.

Section VI.A of this preamble, immediately below, discusses that interpretation of CAA section 111. In section VI.B of this preamble, we explain how this interpretation applies

[40] In section VII below, we finalize our proposal that VOC NSPS do not trigger CAA section 111(d) requirements.

to the regulation of methane from the Crude Oil and Natural Gas Production source category. In section VI.C of this preamble, we briefly discuss criteria for making a SCF under CAA section 111.

A. Legal Interpretation Concerning the Air Pollutants That Are Subject to CAA Section 111

1. 2019 Proposal

As noted above, CAA section 111 establishes a process for the EPA to regulate air pollutants from industrial source categories. Section 111(b)(1)(A) of the CAA requires the first step: the Administrator must list a particular category of stationary sources that ''causes, or contributes significantly to, air pollution which may reasonably be anticipated to endanger public health or welfare,'' and then, under CAA section 111(b)(1)(B), the Administrator must proceed to promulgate standards of performance for that source category. For convenience, we refer to ''air pollution which may reasonably be anticipated to endanger public health or welfare'' as dangerous air pollution, and we refer to the reference to ''causes or contributes significantly'' as the SCF. In the 2019 Proposal, we solicited comment on whether CAA section 111(b)(1)(A) must be read, or reasonably could be read, to require the Administrator to make not only a SCF to list the source category, but also a SCF for a particular air pollutant as a predicate to promulgating a standard of performance for that pollutant under CAA section 111(b)(1)(B).

The EPA supported this interpretation with a detailed discussion of the relevant statutory provisions, their context, and purpose, as well as past administrative practice. At the outset, the EPA acknowledged that CAA section 111(b)(1)(A) by its terms requires that the Administrator make a SCF for the source category, and is silent on individual air pollutants.[41] However, the EPA noted that CAA section 111(b)(1)(A) should be read in conjunction with CAA sections 111(b)(1)(B) and 111(a)(1), which require the Administrator to promulgate ''standards of performance,'' defined as ''standard[s] for emissions of air pollutants.'' The EPA posited that those provisions, read together, by virtue of their focus on emissions of air pollutants, could be interpreted to require or authorize the EPA to require a pollutant-specific SCF as a predicate for promulgating a standard of performance. 84 FR 50263. The EPA acknowledged that in the past it has not promulgated a pollutant-specific SCF, and instead has taken the position that it may promulgate a standard of performance for a pollutant not previously regulated under CAA section 111 as long as it simply has a rational basis for doing so. In the 2019 Proposal, the EPA explained that this approach is flawed because it is vague and not guided by any statutory criteria, and that as a result, it could result in the Agency promulgating standards for air pollutants that are emitted in relatively minor amounts. 84 FR 50263. The Agency stated that interpreting CAA section 111 to require a pollutant-specific SCF as a predicate to regulating the pollutant would guard against this possibility.[42]

2. Comments

The EPA received comment on all aspects of its solicitation of comment. Some commenters supported the EPA's arguments and urged the Agency to finalize an interpretation that requires the Administrator to make a pollutant-specific SCF as a predicate to promulgating standards of performance for that pollutant from a source category. Other commenters opposed this interpretation and sought to counter the support for it that the EPA offered. They argued that under CAA section 111(b)(1)(A), the SCF applies only to source categories. They further argued that the references in CAA sections 111(b)(1)(B) and 111(a)(1) to air pollutants are unremarkable because standards of performance necessarily apply to particular air pollutants, and should not be read to elucidate the meaning of CAA section 111(b)(1)(A) in the manner the EPA suggested.[43] These comments are discussed in more detail in section IX of this preamble and in Chapter 8 of the Response to Comments Document located in the docket for this rulemaking.

3. Final Action

The EPA is finalizing the position that CAA section 111 requires, or at least authorizes the Administrator to require a pollutant-specific SCF as a predicate for promulgating a standard of performance for that air pollutant. The EPA bases this position primarily on a refinement of the interpretation of CAA section 111, described above, on which it solicited comment. Specifically, the EPA interprets the CAA section 111(b)(1)(B) requirement that the Administrator propose to ''establish[ ] . . . standards of performance'' and then finalize ''such standards with such modifications as he deems appropriate,'' in light of both the CAA section 111(a)(1) definition of ''standard of performance'' as a ''standard for emissions of air pollutants,'' and CAA section 111(b)(1)(A), which requires the Administrator to list a source category only ''if in his judgment it causes, or contributes significantly to [dangerous] air pollution.'' Read in this context, CAA section 111(b)(1)(B) is best understood *not* to require the Administrator to promulgate standards for emissions of *all* air pollutants but only to require him or her to promulgate standards for the emissions of air pollutants that the Administrator has determined ''cause or contribute significantly'' to the ''air pollution'' that the Administrator determined to be dangerous when listing the source category. Under this interpretation, if the Administrator did not, in listing the source category, determine that a particular air pollutant causes or contributes significantly to the dangerous air pollution, section 111 requires the Administrator to make—or, at least, authorizes the Administrator to require—a pollutant-specific SCF as a predicate to regulating that air pollutant.[44]

[41] It should be noted that even though CAA section 111(b)(1)(A) is clear in requiring a SCF for the source category, its silence as to individual air pollutants, which of course are what causes or contributes significantly to dangerous air pollution and are the subject of regulation, leaves to the EPA the task of addressing individual air pollutants.

[42] The EPA went on to review other provisions in the CAA that explicitly require a pollutant-specific SCF; the legislative history accompanying these provisions; the references in another CAA section 111 provision, CAA section 111(f)(2)(A) and (B), to the impacts of particular pollutants on dangerous air pollution; and previous interpretations that the EPA had made of the CAA section 111 requirements concerning individual air pollutants. 84 FR 50263–67.

[43] The commenters objected to the EPA's interpretation of other CAA provisions, of legislative history, and of other provisions of CAA section 111, as well as the EPA's interpretations of CAA section 111 in earlier administrative actions. We discuss these comments in the Response to Comments Document located in the public docket of this final rulemaking.

[44] Although this interpretation is a refinement of the interpretation for which the EPA solicited comment in the 2019 Proposal, it is rooted in the Proposal. As noted in the summary above, in supporting the interpretation that CAA section 111(b)(1)(A) requires or authorizes the EPA to require a pollutant-specific SCF, the EPA made numerous references to CAA sections 111(a)(1) and 111(b)(1)(B), and made clear that those three provisions must be read together. The EPA made other references as well to the need to make a pollutant-specific SCF in order to promulgate standards of performance, which is the thrust of the interpretation described in this final action. *See Id.* at 50262–63. The rational basis approach was an interpretation of CAA section 111(b)(1)(B). That is, under this approach, the EPA interpreted that provision to authorize standards of performance for those air pollutants for which the EPA had a rational basis, but not necessarily standards for all air pollutants. *See* 81 FR 35842 (2016 Rule), *cited*

4. Legal Interpretation of CAA Sections 111(a)(1), (b)(1)(B), and (b)(1)(A) and the Pollutants Subject to Regulation

The EPA interprets CAA sections 111(b)(1)(B), in light of CAA sections (b)(1)(A) and (a)(1), to require, or at least to authorize the Administrator to require, a pollutant-specific SCF as a predicate for promulgating a standard of performance for that air pollutant. The EPA bases this interpretation on a close reading of these provisions in the context of CAA section 111. CAA section 111 directs the EPA to regulate, through a multi-step process, air pollutants from categories of stationary sources. CAA section 111(b)(1)(A) requires the initial action, which is that the Administrator must ''publish . . . a list of categories of stationary sources. He shall include a category of sources in such list if in his judgment it causes, or contributes significantly to, air pollution which may reasonably be anticipated to endanger public health or welfare.'' This provision does not by its terms require the Administrator, in listing a source category, to identify particular air pollutants of concern that are emitted from the source category, but it does make clear that the Administrator must identify air pollution that is of concern and must make a finding that this air pollution, in our shorthand, is dangerous.

CAA section 111(b)(1)(B) then directs the EPA to propose regulations ''establishing Federal standards of performance'' for new sources within the source category, then to allow public comment, and then to ''promulgate . . . such standards with such modifications as he deems appropriate.'' CAA section 111(a)(1) defines the term ''standard of performance'' as ''a standard for emissions of air pollutants which [the Administrator is required to determine through a specified methodology].'' This definition makes clear that the standards of performance that CAA section 111(b)(1)(A) directs the Administrator to promulgate must concern air pollutants emitted from the sources in the source category. However, industrial sources of the type subject to CAA section 111(b)(1)(A) invariably emit more than one air pollutant and neither CAA section 111(b)(1)(B) nor 111(a)(1) by its terms specifies for which of those air pollutants the EPA must promulgate standards of performance.

But the statute does provide guidance as to the class of air pollutants for which the EPA must promulgate standards of performance. Section 111(b)(1)(A) of the CAA demonstrates that the statutory scheme of CAA section 111 is aimed at controlling ''air pollution which may reasonably be anticipated to endanger public health or welfare.'' It follows that the air pollutants for which the Administrator must establish standards must, or at least may reasonably, be limited to those air pollutants which contribute to this dangerous air pollution.

The Administrator's discretion to limit the class of air pollutants for which he promulgates standards is supported by his statutory discretion under CAA section 111(b)(1)(B) to finalize standards ''with such modifications as he deems appropriate.'' In an exercise of this discretion, the Administrator deems it appropriate to limit the standards of performance to those air pollutants that contribute to dangerous air pollution.

Several other provisions in CAA section 111 also refer to air pollutants, including CAA section 111(b)(3), which requires the Administrator to, ''from time to time, issue information on pollution control techniques for categories of new sources and air pollutants subject to the provisions of this section.'' This reference to ''air pollutants *subject to the provisions of this section*'' (emphasis added) implies that some air pollutants may not be subject to CAA section 111; otherwise, the emphasized phrase would be superfluous.[45]

As noted in the 2019 Proposal, in the past, the EPA has interpreted CAA section 111(b)(1)(B) to authorize it to promulgate standards of performance for any air pollutant that the EPA identified in listing the source category and any additional air pollutant for which the EPA has identified a rational basis for regulation. 81 FR 35843 (2016 Oil & Gas Methane Rule); ''Standards of Performance for Greenhouse Gas Emissions from New, Modified, and Reconstructed Stationary Sources: Electric Utility Generating Units—Final Rule,'' 80 FR 64510 (October 23, 2015) (EGU CO_2 NSPS Rule). Inherent in this approach is the recognition that CAA section 111(b)(1)(A) does not, by its terms, necessarily require the EPA to promulgate standards of performance for all air pollutants emitting from the source category. Citizen group stakeholders and some states have endorsed the rational basis approach. Some industry stakeholders and other states, however, have advocated a narrower approach with respect to, at least, the GHG for which the EPA promulgated standards of performance for the Fossil Fuel-Fired Electric Utility Generating Units source category and the Crude Oil and Natural Gas Production source category. The stakeholders argued that under this narrower approach, the EPA is not authorized to promulgate NSPS for at least GHG unless it first makes a SCF with respect to that pollutant.

The EPA interprets the phrase at issue in CAA section 111(b)(1)(B), ''standards of performance,'' and the associated phrase in CAA section 111(a)(1), ''emissions of air pollutants,'' by analogy to the similar phrase, ''any air pollutant,'' found in the CAA permitting provisions that the U.S. Supreme Court considered in *Utility Air Regulatory Group* v. *EPA,* 573 U.S. 302 (2014) (*UARG*). In *UARG,* the Court interpreted CAA section 169(1), which provides construction and modification permitting requirements under the Prevention of Significant Deterioration (PSD) program, and CAA sections 501(2)(B) and 302(j), which provide the operating permit requirements of the title V program. The Court concluded that when read in the context of the permitting provisions, the phrase ''any air pollutant'' did not encompass GHG, even though they are air pollutants. The EPA considers that the analytical approach that the Court adopted in *UARG* also applies to CAA section 111(b)(1)(B). Under this approach, the provisions in that section that direct the Administrator to establish ''standards of performance'' for new sources in the source category, require, or at least reasonably allow, the Administrator to promulgate standards for only those air pollutants for which the EPA has made a SCF.

The EPA considers the same analytical approach to support interpreting ''emissions of air pollutants'' in CAA section 111(a)(1) to encompass only those air pollutants for which the EPA has made a SCF. Under the PSD requirements, no ''major emitting facility'' may be constructed or

in 84 FR 50262 (2019 Proposal). This approach is similar to the pollutant-specific SCF approach. By the same token, the EPA's discussions in the 2019 Proposal of the legislative history, CAA section 111(f), and previous statements the EPA made in support documents all contain references to a pollutant-specific SCF as a predicate for promulgating standards of performance. 84 FR 50263 through 67.

[45] Similarly, CAA section 111(d)(1)(A) makes clear by its terms that ''a standard of performance under this section'' need not govern *all* pollutants emitted from a regulated source to give effect to Congress's purpose. The requirements of CAA section 111(d)(1)(A) apply to only a subset of air pollutants, that is, ''any air pollutant . . . for which air quality criteria have not been issued or which is not included on a list published under section 7408(a) of this title or emitted from a source category which is regulated under section 7412 of this title but . . . to which a standard of performance under this section would apply if such existing source were a new source.''

modified in certain areas of the U.S. unless it has received a permit that includes certain conditions and emission limits. CAA section 165(a)(1). In the PSD definitional provisions, CAA section 169(1) defines the term ''major emitting facility'' as any stationary source of air pollutants that emits, or has the potential to emit, at least 100 or 250 tpy (depending on the source) of ''any air pollutant.'' *See* CAA sections 169(2)(C), 111(a)(4) (defining ''construction'' to include ''modification,'' which in turn is defined to mean, in relevant part, a certain type of change that increases the amount of ''any air pollutant'' emitted by the source). Title V makes it unlawful to operate a ''major source'' without an operating permit that includes all applicable CAA requirements. Title V defines a ''major source'' by incorporating the CAA-wide definition of ''major stationary source:'' A stationary source that emits or has the potential to emit at least 100 tons per year of ''any air pollutant.'' CAA section 501(2)(B), 302(j).

In a 2010 rule, ''Prevention of Significant Deterioration and Title V Greenhouse Gas Tailoring Rule,'' 75 FR 31514 (June 3, 2010) (Tailoring Rule), the EPA took the position that the phrase ''any air pollutant'' in these provisions necessarily included GHG, based on the 2007 decision by the U.S. Supreme Court that the CAA-wide definition of ''air pollutant,'' CAA section 302(g), encompasses GHG. *Massachusetts* v. *EPA,* 549 U.S. 497 (2007). The EPA's interpretation, however, created practical problems, which the Agency recognized in the Tailoring Rule: It would cause numerous commercial and small industrial sources to become subject to the permitting requirements, which were burdensome and which Congress designed to apply only to large industrial sources that were equipped to carry those burdens. *UARG,* 573 U.S. at 310–11 (citing 73 FR 44355, 44498 and 99).

UARG held that the EPA's interpretation of the PSD and title V provisions was unreasonable, and that the phrase ''any air pollutant'' in these provisions did not include GHG. The Court adopted a two-step analysis. First, the Court found that the fact that the CAA-wide definition of ''air pollutant'' included GHG did not mean that all the references to ''air pollutant'' in the CAA's operative provisions necessarily include GHG; rather, whether the term included GHG was dependent on the context of the particular operative provision. 573 U.S. at 316. The Court found support for this position in the fact that ''where the term 'air pollutant' appears in the Act's operative provisions, EPA has routinely given it a narrower, context-appropriate meaning.'' *Id.* The Court explained that the EPA had already interpreted ''any air pollutant'' in the permitting provisions to be limited to ''regulated'' air pollutants, which the Court described as ''a reasonable, context-appropriate meaning.'' *Id.* at 316–17. The Court identified several other provisions ''where EPA has inferred from statutory context that a generic reference to air pollutants does not encompass every substance falling within the Act-wide definition.'' For example, and of particular significance here, the Court noted that CAA section 111(a)(4), read together with CAA sections 111(a)(2) and (b)(1)(B), applies NSPS requirements to a source that undergoes a physical or operational change that increases its emission of ''any air pollutant,'' but the EPA interprets this provision as limited to air pollutants for which the EPA has promulgated standards of performance. 573 U.S. at 317. Similarly, the Court noted that CAA sections 169A(b)(2)(A) and (g)(7) require a certain type of source that interferes with visibility to retrofit if it has the potential to emit 250 tpy of ''any pollutant,'' but that the EPA interprets this provision as limited to visibility-impairing air pollutants. 573 U.S. at 318. The Court emphasized that *Massachusetts* did not call these interpretations into question; rather, according to the Court, ''*Massachusetts* does not foreclose the Agency's use of statutory context to infer that certain of the Act's provisions use 'air pollutant' to denote not every conceivable airborne substance, but only those that may sensibly be encompassed within the particular regulatory program.'' 573 U.S. at 319. Therefore, in this first step, the Court concluded that the CAA did not compel the EPA to interpret the phrase ''any air pollutant'' in the permitting provisions to include GHG.

Second, the Court found that the EPA did not have the discretion to interpret this phrase to include GHG, because it was unreasonable to do so in light of the permitting provisions. The Court explained that including GHG would expand the permitting programs to large numbers of small sources, but that ''a brief review of the relevant statutory provisions leaves no doubt that the PSD program and Title V are designed to apply to, and cannot rationally be extended beyond, a relative handful of large sources capable of shouldering heavy substantive and procedural burdens.'' *Id.* at 322. The Court went on to describe the various PSD and title V statutory requirements that are resource-intensive and time-consuming, and, therefore, incompatible with application to large numbers of small sources. *Id.* at 322–23.

The EPA is adopting *UARG's* two-step analytical approach to conclude that, in light of its context, CAA section 111(b)(1)(B) does not mandate, and cannot reasonably be read to authorize, the EPA to promulgate standards of performance for an air pollutant for which the EPA has not made a SCF. At a minimum, even if these provisions are not read to preclude the EPA from promulgating standards of performance without first making a pollutant-specific SCF, it is reasonable to interpret these provisions as authorizing the EPA to decline to promulgate standards without first making such a SCF. *UARG* was explicit that provisions of CAA section 111 are subject to its analytical approach. As noted above, the Court endorsed the EPA's interpretation that, notwithstanding the reference to ''any air pollutant'' in CAA section 111(a)(4), the requirements concerning a ''modification'' in CAA section 111(b)(1)(B), which is at issue here, and CAA sections 111(a)(2) and (4) do not require the EPA to promulgate standards for every pollutant that a modified source emits, because those provisions must be understood in context to embrace a limited set of air pollutants. 573 U.S. at 317.

As is clear from the EPA's summary above of the CAA section 111 rulemaking process, the first action that the EPA must take, specified in CAA section 111(b)(1)(A), is to list a source category for regulation on the basis of a determination that the category contributes significantly to dangerous air pollution, and it is this provision that establishes the context that is relevant for present purposes. This provision makes clear that although Congress designed CAA section 111 to apply broadly to source categories of all types wherever located, Congress also imposed a constraint: The EPA is authorized to regulate only sources that it finds cause or contribute significantly to air pollution that the EPA finds to be dangerous.

Congress' direction to EPA to promulgate standards of performance for the sources in the category, under CAA section 111(b)(1)(B), must be viewed in this context. Congress did not specify which air pollutants the standards of performance must address, stating only, as noted above, in the definitional provisions of CAA section 111 that the term ''standard of performance'' means a standard for ''emissions of air pollutants.'' This phrase is substantially similar to the phrase ''any air pollutant'' in the PSD and Title V provisions addressed in *UARG.* In fact, ''emissions of air pollutants'' appears to be less encompassing than ''any air pollutant.'' As the U.S. Supreme Court has noted, ''Read naturally, the word 'any' has an expansive meaning, that is, 'one or some indiscriminately of whatever kind.' Webster's Third New International Dictionary 97 (1976).'' *United States* v. *Gonzales,* 520 U.S. 1, 4, 1997), *quoted in Department of Housing and Urban Development* v. *Rucker,* 535 U.S. 125, 131 (2002), *cited in Massachusetts,* 549 U.S. at 529 n.25.

Under the analytical approach of *UARG,* because the regulatory scope of the CAA's ''operative provisions,'' such as CAA sections 111(b)(1)(B) and 111(a)(1), must be understood in context, their reference to ''standards of performance'' and ''emissions of air pollutants'' cannot be read to mandate promulgation of standards of performance for each and every air pollutant emitted from the source category. In addition, because Congress limited the EPA to regulating only stationary sources in a category that the Administrator must first determine to cause or contribute significantly to dangerous air pollution, it is not reasonable to read ''air pollutants'' to refer to any of the source category's air pollutants for which the EPA has not made a SCF. At the very least, it is reasonable to interpret that phrase more narrowly. As noted in the 2019 Proposal, interpreting the CAA section 111 provisions to authorize the EPA to regulate any air pollutant, even ones that the EPA did not consider in listing the source category, creates the risk that the EPA may regulate air pollutants emitted in small quantities or otherwise having little adverse effect.[46]

It is true that, recently, the EPA has adopted the approach of regulating additional air pollutants that it did not address in the listing determination only after determining that it has a rational basis for doing so, and in making that determination, has considered the same factors as it would in making a SCF. 81 FR 35843 (2016 Rule). However, this approach is a creature of Agency practice and, therefore, is not as firmly established as statutory requirements. As noted in the 2019 Proposal, interpreting CAA section 111 to require only a pollutant-specific rational basis standard, and not a SCF, could lead to potentially anomalous results when the Agency, after listing a source category on grounds that its emissions taken together contribute significantly to dangerous air pollution, proceeds to promulgate NSPS for individual air pollutants. EPA stated that, as an example, under the rational basis interpretation, the EPA could list a source category on grounds that it emits numerous air pollutants that, taken together, significantly contribute to air pollution that may reasonably be anticipated to endanger public health or welfare, and proceed to regulate each of those pollutants, without ever finding that each (or any) of those air pollutants by itself causes or contributes significantly to—or, in terms of the text of other provisions, causes or contributes to—air pollution that may reasonably be anticipated to endanger public health or welfare. 84 FR 50263. As further noted in the 2019 Proposal, CAA section 111(b)(1)(A) does not provide or suggest any criteria to define the rational basis approach, the EPA has not articulated any criteria in its previous applications in the EGU CO_2 NSPS and the 2016 subpart OOOOa rules, and in instances before those rules in which the EPA has relied on the ''rational basis'' approach, the EPA has done so to justify not setting a standard for a given pollutant, rather than to justify setting such a standard. *Id.* Thus, the rational basis test allows the EPA virtually unfettered discretion in determining which air pollutants to regulate. As a result, the rational basis standard creates the possibility that the EPA could seek to promulgate NSPS for pollutants that may be emitted in relatively minor amounts, as the EPA noted in the 2019 Proposal. 84 FR 50263. As noted in section IX below, numerous commenters reiterated these concerns.

In contrast, CAA section 111(b)(1)(A) is clear that the EPA may list a source category for regulation only if the EPA determines that the source category ''causes or contributes *significantly*'' (emphasis added) to dangerous air pollution. In light of the stringency of this statutory requirement for listing a source category, it would be unreasonable to interpret CAA section 111(b)(1)(B) to allow the Agency to regulate air pollutants from the source category merely by making an administrative determination under the open-ended and undefined rational basis test. Rather, it is logical to interpret CAA section 111(b)(1)(B) to require that the Agency apply the same degree of rigor in determining which air pollutants to regulate as it does in determining which source categories to list for regulation.

For these reasons, the EPA concludes that in the context of CAA section 111, the requirement that the EPA promulgate ''standards of performance,'' (CAA section 111(b)(1)(B)), defined as ''standard[s] for emissions of air pollutants'' (CAA section 111(a)(1)), must be interpreted to require a pollutant-specific SCF (CAA section 111(b)(1)(A)) as a predicate for promulgating standards of performance. At a minimum, the Agency considers this interpretation to be reasonable and, accordingly, adopts it. Requiring a pollutant-specific SCF establishes a clearer framework for assessing which air pollutants merit regulatory attention that will require sources to bear control costs. This promotes regulatory certainty for stakeholders and consistency in the EPA's identification of which air pollutants to regulate and reduces the risk that air pollutants that do not merit regulation will nevertheless become subject to regulation due to an unduly vague standard.

In the 2019 Proposal, the EPA solicited comment on whether to interpret CAA section 111(b)(1)(A) to require a determination that the pollutant causes or contributes significantly to dangerous air pollution (the SCF) or instead, to interpret it to require a determination that the pollutant simply causes or contributes to dangerous air pollution. 84 FR 50261. The same issue arises with respect to CAA sections 111(b)(1)(B) and (a)(1), but the EPA has concluded that interpreting these provisions to require a SCF as the pollutant-specific finding is consistent with the source-category SCF in CAA section 111(b)(1)(A). That is, in light of Congress' clearly expressed intent in CAA section 111(b)(1)(A) that the EPA base its listing of a source category on a finding that the emissions from the source category contribute significantly to dangerous air pollution, the EPA concludes that CAA sections 111(b)(1)(B) and (a)(1) require the EPA to base its regulation of a pollutant on a similarly rigorous finding that the pollutant contributes significantly to dangerous air pollution. If, in the alternative, the statute is ambiguous in this regard, the EPA exercises its

[46] As should be clear from this discussion immediately above, this interpretation of CAA sections 111(b)(1)(B) and (a)(1) differ from the interpretation of CAA section 111(b)(1)(A) that the EPA described in the 2019 Proposal. *See* 84 FR 50263 (stating that interpreting CAA section 111(b)(1)(B), the EPA was mindful that an Agency ''[may] avoid a literal interpretation at Chevron step one . . . [by] show[ing] either that, as a matter of historical fact, Congress did not mean what it appears to have said, or that, as a matter of logic and statutory structure, it almost surely could not have meant it'' (citation omitted)).

discretion to interpret it to require a pollutant-specific SCF.

In the 2019 Proposal, the EPA noted that interpreting CAA section 111 to require a pollutant-specific SCF as a predicate to regulation ''need not result in duplicative SCFs (or duplicative associated endangerment findings). That is, the EPA would not need to make separate SCFs (and associated endangerment findings) for both the source category and each pollutant emitted by the source category that the EPA seeks to regulate.'' 84 FR 50266. The EPA continues to hold this view. In identifying any new source categories under CAA section 111(b)(1)(A), the EPA could identify each air pollutant of concern and make a SCF, as appropriate, for emissions of each of those pollutants from the source category, and, in that same action, make the SCF for the source category itself. In addition, in the 2019 Proposal, the EPA solicited comment on what implications interpreting CAA section 111 to require a pollutant-specific SCF would give rise to for already promulgated standards of performance. *Id.* The EPA believes that standards of performance will generally not be affected by this requirement because generally, the EPA identified and analyzed the air pollutants of concern when the EPA listed a source category, or initiated promulgation of standards of performance at the same time or shortly after listing the source category, and, therefore, in association with the significance determination the Agency made in that listing. For example, as noted elsewhere, the EPA followed that process when it listed the Crude Oil and Natural Gas Production source category, that is, it identified and analyzed the air pollutants of concern at that time in the supporting documents. Importantly, the EPA relied on its analyses of those air pollutants as the basis for determining that the source categories' emissions contribute significantly to dangerous air pollution.[47]

B. Flaws in the 2016 Rule's Significant Contribution Finding

When the Administrator listed the oil and natural gas industry as a source category in 1979, he did not determine that methane emissions from the source category cause or contribute significantly to dangerous air pollution. In this rulemaking, the EPA is taking the position that the EPA must make that determination as a predicate to promulgating standards of performance for methane from this source category. The Administrator did determine in the 2016 Rule that methane from the source category contributes significantly to dangerous air pollution, but that determination was flawed and must be rescinded for two reasons: (1) The Administrator made that determination on the basis of methane emissions from the production, processing, and transmission and storage segments, instead of just the production and processing segments; and (2) the Administrator failed to support that determination with either established criteria or some type of reasonably explained and intelligible standard or threshold for determining when an air pollutant contributes significantly to dangerous air pollution.

1. Improper Scope of Source Category

In the 2016 Rule, the Administrator made the significant contribution finding on the basis of assessing methane emissions from the source category as defined to include the production, processing, and transmission and storage segments. In the present action, we are removing the transmission and storage segment, leaving only the production and processing segments. Because the 2016 Rule did not assess whether methane emissions from the production and processing segments alone cause or contribute significantly to dangerous air pollution, we find that the Rule's determination is not adequate and, therefore, we are rescinding it. Until the EPA makes an appropriate determination that methane emissions from the Oil and Natural Gas source category, properly calculated, contribute significantly to dangerous air pollution, it does not have authority to promulgate standards of performance for methane from these sources under CAA section 111(b)(1)(b).

2. Lack of Criteria or Standard for Determining Significant Contribution

In the 2019 Proposal, the EPA ''solicit[ed] comment on the question of whether the SCF in the 2016 . . . [R]ule can be considered appropriate given that nowhere in the course of developing and promulgating that rule did the EPA set forth the standard by which the 'significance' of the contribution of the methane emissions from the source category (as revised) was to be assessed.'' 84 FR 50267. The EPA elaborated that it was asking for comment on whether, as a matter of law, under CAA section 111, the EPA is obligated to identify the standard by which it determines whether a source category's emissions ''contribute significantly,'' and whether, if not so obligated, the EPA nevertheless fails to engage in reasoned decision-making by not identifying that standard. *Id.* The EPA cited *Motor Vehicle Mfrs. Assn. of United States, Inc.* v. *State Farm Mut. Automobile Ins. Co.,* 463 U.S. 29, 43 (1983), which states, ''Normally, an agency rule would be arbitrary and capricious if the agency has . . . entirely failed to consider an important aspect of the problem.''. *Id. See Department of Homeland Security* v. *Regents of Univ. of Cal.,* No. 18–587, slip op. at 18 (U.S. June 18, 2020) (executive action to rescind the Deferred Action for Childhood Arrivals program failed to provide a reasoned explanation when it failed to consider certain ''conspicuous issues''). For the reasons that follow, the EPA concludes that the failure to identify any such standard or any established set of criteria for the 2016 Rule's SCF for methane emissions from the source category is unreasonable and requires rescinding the 2016 Rule's SCF.

As the EPA noted in the 2019 Proposal, the ''contributes significantly'' provision in CAA section 111(b)(1)(A) is ambiguous. *See* 84 FR 50267–68 (citing *EPA* v. *EME Homer City Generation, L.P.,* 572 U.S. 489 (2014) (holding that a similar provision in CAA section 110(a)(2)(D)(i), often termed the ''good neighbor'' provision, is ambiguous)). Accordingly, the EPA has authority to interpret that provision. *Id.* at 50268. As noted above, the EPA reads CAA section 111(b)(1)(B) in light of CAA sections 111(b)(1)(A) and (a)(1) to incorporate the ''contributes significantly'' standard in connection with promulgating NSPS for particular air pollutants. The EPA has concluded that to allow the EPA to distinguish between a *contribution* and a *significant contribution* to dangerous pollution, some type of (reasonably explained and intelligible) standard and/or established set of criteria that can be consistently applied is necessary. Without at least one or the other, it is impossible to evaluate whether the SCF is well reasoned. Therefore, the lack of a standard or established set of criteria for the 2016 Rule's SCF renders the finding arbitrary and capricious. A supporting basis for this conclusion can be found in the EPA's analysis of the ''contribute significantly'' provisions of CAA section 189(e), concerning major stationary sources of PM with a diameter of 10 micrometers or less (PM_{10}). This provision requires that the

[47] The EPA also took the approach in the 2016 Rule that it is revising here, when it attempted to expand the Crude Oil and Natural Gas Production source category. It discussed the pollutant emissions, including GHG, VOC, and SO_2, made a SCF for those emissions, and, on the basis of that SCF, listed the expanded source category. 81 FR 35837 through 40.

control requirements applicable to major stationary sources of PM_{10} also apply to major stationary sources of PM_{10} precursors ''except where the Administrator determines that such sources [of precursors] do not contribute significantly to PM_{10} levels which exceed the standard in the area.'' As the EPA noted in the 2019 Proposal, in CAA section 189(e), Congress intended that, in order to be subject to regulation, the emissions must have a greater impact than a simple contribution not characterized as a significant contribution. However, Congress did not quantify how much greater. Therefore, the EPA developed criteria for identifying whether the impact of a particular precursor would ''contribute significantly'' to a NAAQS exceedance. 84 FR 50268. These criteria included numerical thresholds. *Id.*

The EPA has concluded similarly that, under CAA section 111(b), a standard or an established set of a criteria, or perhaps both, are necessary to identify what is significant and what is not. Moreover, without either, any determination of significance is arbitrary and capricious because it does not identify a reasoned basis for that determination.[48] This is evident in the flawed significance finding in the 2016 Rule. There, the EPA determined that ''the collective GHG emissions from the oil and natural gas source category are significant'' and based that determination on several facts concerning the amount of methane emissions from the Oil and Gas source category, in comparison to other domestic and global emissions. Specifically, the EPA stated that oil and gas GHG emissions are significant, whether the comparison is (i) ''domestic'' (noting that this sector is ''the largest source of methane emissions, accounting for 32 percent of United States methane and 3.4 percent of total United States emissions of all GHG''), (ii) ''global'' (noting that this sector, ''while accounting for 0.5 percent of all global GHG emissions, emits more than the total national emissions of over 150 countries, and combined emissions of over 50 countries''), or (iii) ''when both the domestic and global GHG emissions comparisons are viewed in combination.'' 81 FR 35840. The EPA did add a qualitative assessment of those facts. It noted that ''no single GHG source category dominates on the global scale,'' noted further that the oil and natural gas source category, ''like many (if not all) individual GHG source categories, could appear small in comparison to total emissions,'' and asserted that nevertheless, ''in fact, it is a very important contributor in terms of both absolute emissions, and in comparison to other source categories globally or within the United States.'' *Id.* However, the EPA did not identify any set of criteria by which to evaluate those facts and to ensure that those facts constituted the comprehensive set of data for determining significance. In contrast, when the EPA determines whether an area should be designated nonattainment on grounds that it ''contributes'' to ambient air quality problems in a nearby area, the EPA applies an established set of criteria that identify the relevant sets of data to analyze and explain how to analyze them. *See Catawba Cty.* v. *EPA,* 571 F.3d 20, 39–40 (DC Cir. 2009) (*Catawba*) (holding that in determining whether an area ''contributes'' to downwind ozone air quality problems, the EPA, ''[t]o be reasonable . . . must . . . define and explain the criteria the agency is applying''; explaining that the EPA adopted a set of nine criteria that it defined and explained ''in spades''). These criteria help ensure that the EPA's decision-making is well-reasoned and consistent. The EPA considers it particularly important to develop a set of criteria and/or a standard in order to determine when a *significant* contribution occurs, in order, as noted above, to distinguish it from a simple contribution. A contribution can be greater or lesser and remain a contribution, but a significant contribution determination necessarily involves a judgment about the degree of the contribution that rises to the level of significance. For such a judgment to be meaningful (and to be understood by regulated parties and by the public), the Agency must identify the criteria it will use to determine significance. In the 2016 Rule's significance finding, the EPA did not identify such criteria.

Nor did the EPA identify any threshold against which to compare the cited facts concerning methane emissions, and thereby assess their importance, much less explain why a contribution above such a threshold should be deemed significant while a contribution below it should not. Thus, for example, although the EPA justified the significance determination, in part, on grounds that the source category's emissions constitute 3.4 percent of total U.S. GHG emissions and 0.5 percent of all global GHG emissions, the EPA did not explain why either of those facts supports the significance determination. Because the EPA did not identify a threshold or criteria for evaluating the oil and gas industry's percentage of domestic or global GHG emissions, the EPA could not justify the 2016 Rule's SCF. As a result, that determination cannot be considered the result of reasoned and appropriate decision-making.[49] The EPA intends to begin

[48] As noted in the 2019 Proposal, in a 1994 rule concerning CAA section 213(a), which requires the EPA to make a finding that air pollutant emissions from new and existing nonroad engines and vehicles are ''significant contributors'' to dangerous air pollution, the EPA determined that it is not necessary to establish a ''specific numerical standard'' for determining significance. 84 FR 50268 (citing 59 FR 31306 and 31308 (June 17, 1994)). However, more recently, as further noted in the 2019 Proposal, the EPA promulgated criteria to interpret and apply ''contribute significantly'' in the ''good neighbor'' provision, CAA section 110(a)(2)(D)(i). 84 FR 50267 and 68 (discussing the criteria and the EPA's use of them in the Cross State Air Pollution Rule, which the U.S. Supreme Court upheld in *EPA* v. *EME Homer City Generation, LP.,* 572 U.S. 489 (2014)). In *Coalition for Responsible Regulation* v. *EPA (CRR),* the Court considered a challenge to the EPA's 2009 determination under CAA section 202(a) that GHG air pollution may reasonably be anticipated to endanger public health and welfare (the GHG Endangerment Finding) on grounds that the EPA had failed to quantify a threshold amount of GHG air pollution that would be safe and that, as a result, the EPA had no basis for concluding that the current amount may endanger. 684 F.3d 102, 122–23 (DC Cir. 2012), *aff'd in part and rev'd in part on other grounds sub nom. Utility Air Regulatory Group* v. *EPA,* 573 U.S. 302 (2014). The Court upheld the GHG Endangerment Finding, concluding that the EPA based it on an overall assessment of risk—accounting for ''the precautionary thrust of the CAA and the multivariate and sometimes uncertain nature of climate science''—for which no quantitative threshold is necessary. *Id.* at 123. That case is distinguishable because it focused on the endangerment finding for GHG air pollution, not on the amount of contribution that GHG emissions make to that air pollution. In any event, the contribution requirement of section 202(a)(1) requires only a simple contribution determination, not a significant contribution.

[49] In the EGU CO_2 NSPS Rule, the EPA determined, in the alternative, that CO_2 emissions from fossil fuel-fired EGUs contribute significantly to dangerous air pollution. The EPA explained that fossil fuel-fired EGUs ''emit almost one-third of all U.S. GHG emissions, and are responsible for almost three times as much as the emissions from the next ten stationary source categories combined.'' The EPA added that ''[t]he CO_2 emissions from even a single new coal-fired power plant may amount to millions of tons each year,'' and that ''the CO_2 emissions from even a single NGCC unit may amount to one million or more tons per year.'' The EPA also asserted that in that rulemaking, ''[i]t is not necessary'' for the EPA ''to decide whether it must identify a specific threshold for the amount of emissions from a source category that constitutes a significant contribution.'' The EPA explained that ''under any reasonable threshold or definition, the emissions from combustion turbines and steam generators are a significant contribution.'' 80 FR 64531. In 2018, the EPA proposed to revise the EGU CO_2 NSPS Rule, and solicited comment on whether a SCF for GHG emissions from fossil fuel-fired EGUs was a necessary predicate for promulgating a NSPS for those emissions. ''Review of Standards of Performance for Greenhouse Gas Emissions From New, Modified, and Reconstructed Stationary Sources: Electric Utility Generating Units—Proposed Rule, 83 FR 65424, 65432 n.25 (December 20, 2018). While the EPA has not taken final action

Continued

rulemaking shortly to identify thresholds and/or criteria and to apply them in future significance determinations.

Commenters objected that the 2016 Rule's SCF should not be considered invalid due to the lack of a standard by which to assess significant contribution, citing *Mississippi Commission on Envtl. Quality* v. *EPA,* 790 F.3d 138 (D.C. Cir. 2015) (*Mississippi*), the most recent decision in the line of cases that includes *Catawba,* noted above. In that line of cases, the Court upheld the EPA's approach to determining whether, under CAA section 107(d)(1)(A)(i), an upwind area should be treated as nonattainment because it ''contributes'' to downwind air quality problems. *See Mississippi,* 790 F.3d at 150 (citing *Catawba,* 571 F.3d at 39–40). The Court held that the EPA was not required to establish a threshold level of impact for determining whether an upwind area ''contributes'' to a downwind area. The *Mississippi* Court cited *Catawba,* 571 F.3d at 39–40), which commenters, in turn, cite to argue that such a threshold is not necessary for determining a significant contribution under CAA section 111(b). However, as noted above, the EPA had ''define[d] and explain[ed]'' a set of criteria for determining whether an upwind area ''contributes,'' and in the cited case law, the Court found that these criteria facilitated the reasonableness of the EPA's decision-making. *Catawba,* 571 F.3d at 39–40. In any event, this case law is distinguishable because it concerns the EPA's determination under CAA section 107(d)(1)(A)(i) of a simple contribution, whereas CAA section 111(b) requires the EPA to determine a *significant* contribution. As noted above, the EPA considers it particularly important to develop a set of criteria and/or a standard in order to determine when a significant contribution occurs, in order to distinguish it from a simple contribution.

C. Criteria for Making a Significant Contribution Finding Under CAA Section 111

In the 2019 Proposal, the EPA solicited comment regarding criteria for the Agency to consider in making a SCF. 84 FR 50267. The solicitation for comment was not on the factors the Agency should consider in determining whether air pollution may reasonably be anticipated to endanger public health or welfare, but rather the factors that should be considered when determining under CAA section 111 whether a pollutant from a source category significantly contributes to that air pollution. Several commenters recommend that the EPA defer any action on SCF criteria and suggest the EPA undertake these questions in a separate future rulemaking. Some commenters suggest specific criteria the EPA could consider.

The EPA made clear in the 2019 Proposal that it would not finalize criteria in this rulemaking, but rather would conduct a separate rulemaking to do so. 84 FR 50267. There is no need for the EPA to promulgate criteria at this time because this rule rescinds NSPS. The EPA expects that in the future, it will promulgate criteria before promulgating additional NSPS.

It should be noted that several commenters contend that oil and gas methane emissions are too small to be considered ''significant.'' For example, some commenters cite as support that the contribution of oil and gas methane to total U.S. GHG emissions is only about 3 percent, that U.S. methane emissions are only about 7 percent of global methane emissions, and that U.S. methane emissions are only about 1 percent of global GHG emissions. The EPA appreciates the commenters' views concerning the amounts and impacts of methane emissions from the transmission and storage segment, as well as the production and processing segments. The EPA acknowledges that depending on the criteria that it adopts to support a SCF in the future, such a relatively small contribution to the national and global pool of methane emissions may not be deemed significant. But until the EPA itself reviews and assesses those amounts of emissions according to the criteria that it eventually adopts, the EPA cannot make a determination as to whether methane emissions from the production and processing segments contribute significantly to dangerous air pollution.

VII. Implications for Regulation of Existing Sources

As discussed in section VII of the proposal preamble, the EPA recognizes that by rescinding the applicability of the NSPS, issued under CAA section 111(b), to methane emissions for the sources in the Crude Oil and Natural Gas Production source category that are currently covered by the NSPS, existing sources of the same type in the source category will not be subject to regulation under CAA section 111(d). This is a legal consequence that results from the application of the CAA section 111 requirements. Comments were received that both agreed and disagreed with the proposed decision and reflected varying opinions on the implications for regulation of existing sources. These comments are provided, along with the EPA's responses, in section X of this preamble and in Chapter 9 of the Response to Comments Document. None of the comments received resulted in a material change in the EPA's rationale and conclusions from proposal. The following provides a summary of the EPA's legal interpretation of CAA section 111(d)(1) and rationale for why the lack of regulation of existing sources under CAA section 111(d) will have a limited environmental impact.

A. Existing Source Regulation Under CAA Section 111(d)

As the EPA stated at proposal (see section VII of the 2019 Proposal preamble), CAA section 111(d) authorizes the regulation of existing sources in a source category for particular air pollutants to which a standard of performance would apply if those existing sources were new sources. By legal operation of the terms of CAA section 111(d), certain existing sources in the Crude Oil and Natural Gas Production source category will no longer be subject to regulation under CAA section 111(d) as a result of this final rule. Under CAA section 111(d)(1)(A), CAA section 111(d) applies only to air pollutants (1) for which air quality criteria have not been issued, and which are not on the EPA's list of air pollutants issued under CAA section 108(a) (commonly referred to as the ''CAA 108(a) exclusion''), and (2) which are not HAP emitted from a source category regulated under CAA section 112 (commonly referred to as the ''CAA 112 exclusion''). *See* 42 U.S.C. 7411(d)(1)(A) (CAA section 111(d) applies to ''any air pollutant (i) for which air quality criteria have not been issued or which is not included on a list published under section 7408(a) of this title or emitted from a source category which is regulated under section 7412 of this title'').

For reasons set out in the proposal preamble, the EPA has concluded that VOC fall within the CAA 108(a) exclusion and, thus, are not the type of air pollutant that, if subjected to a standard of performance for new sources, would trigger the application of CAA section 111(d). VOC are not expressly listed as CAA section 108(a) pollutants, but they are precursors to photochemical oxidants (*e.g.,* ozone) and PM, both of which are listed CAA section 108(a) pollutants. As provided in CAA section 302(g), the term ''air pollutant'' is defined to include

for that rule, the unique CO_2 emissions profile of fossil fuel-fired EGUs should be noted: The volume of emissions from EGUs dwarfs the amount of GHG emissions from every other source category.

precursors ''to the extent that the Administrator has identified such precursor or precursors for the particular purpose for which the term 'air pollutant' is used.'' For the following reasons, it is appropriate to consider VOC within the scope of photochemical oxidants and PM, which are listed CAA section 108(a) pollutants, for the particular purpose of applying the CAA section 108 exclusion in CAA section 111(d).

First, VOC are regulated through the CAA's NAAQS implementation program established under CAA section 110, as a result of the inclusion of ozone and PM on the CAA section 108(a) list, because VOC are precursors to those two listed pollutants. See, *e.g.,* CAA section 182(b)(2) (establishing ''reasonably available control technology'' requirements for VOC sources in moderate ozone attainment areas); CAA section 182(c)(2)(b) (requiring serious ozone areas to submit a reasonable further progress demonstration that will account for a set amount of VOC emissions reductions); CAA section 182(d)(2) (requiring specific VOC reductions to satisfy the offset requirement for severe areas); CAA section 182(e)(1) (requiring specific VOC reductions to satisfy the offset requirement for extreme areas). Indeed, the regulation of ozone precursors is the means of addressing ozone in the ambient air, because ozone levels in the ambient air are the result of photochemical reactions of precursors (VOC and NO_X), as opposed to being directly emitted from sources.

Second, as explained in the proposal preamble, excluding VOC from regulation under CAA section 111(d) makes sense within the CAA's three-part structure for addressing emissions from stationary sources. As the EPA has discussed in past rulemakings, the CAA sets out a comprehensive scheme for air pollution control, addressing three general categories of pollutants emitted from stationary sources: (1) Criteria pollutants (which are addressed in CAA sections 108 through 110); (2) hazardous pollutants (which are addressed under CAA section 112); and (3) ''pollutants that are (or may be) harmful to public health or welfare but are not or cannot be controlled under [CAA] sections 108–110 or 112.'' ''Carbon Pollution Emission Guidelines for Existing Stationary Sources: Electric Utility Generating Units: Final Rule,'' 80 FR 64661, 64711 (October 23, 2015) (quoting 40 FR 53340 (November 17, 1975)). Within this three-part structure, CAA section 111(d) is properly understood as a ''gap-filling'' measure to address pollutants that are not addressed under either the criteria pollutant and NAAQS implementation provisions in CAA sections 108 through 110 or the HAP provisions in CAA section 112. Because VOC are regulated as precursors to ozone and $PM_{2.5}$ under CAA sections 108 through 110, they are properly excluded from regulation under CAA section 111(d) because the ''gap-filling'' function of CAA section 111(d) is not needed.

Third, reading the phrase ''included on a list published under [CAA section 108(a)]'' as including precursors is reasonable in light of the provision in CAA section 112(b)(2) that restricts what pollutants may be listed as CAA section 112 HAP.

Finally, as discussed in detail in the proposal preamble, the fact that precursors are not always treated as CAA section 108(a) listed pollutants under all contexts across the CAA does not undermine the conclusion that they should be excluded under the CAA section 108 exclusion in CAA section 111(d).

B. Impact of Lack of Regulation of Existing Oil and Natural Gas Sources Under CAA Section 111(d)

The EPA maintains its position from the proposed rule that the lack of regulation of existing sources under CAA section 111(d) through an Emission Guideline (EG) will have limited impact. This is because there are several factors that will continue to contribute to the downward trend of total methane emissions from oil and natural gas existing sources even in the absence of an EG.

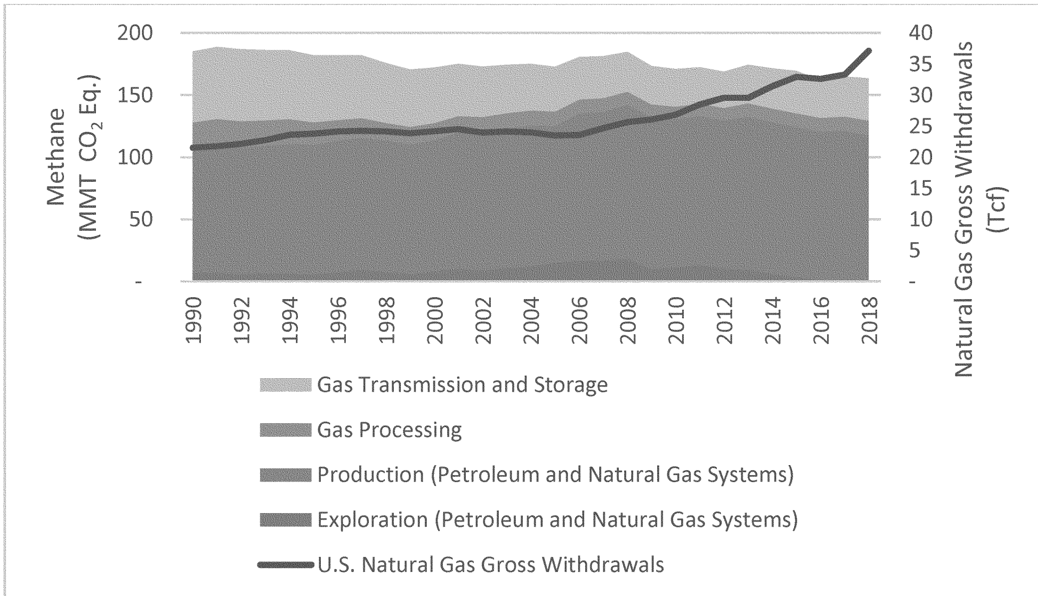
First, as the EPA stated in the 2019 Proposal preamble, the 2016 Rule includes a definition and approach to determining new source applicability that are very broad, and in the specific context of the oil and natural gas production industry, can be anticipated to result in wide applicability of the NSPS to existing sources due to the frequency with which such sources can be reasonably expected to engage in ''modification'' activity. Specifically, it would take at least 7 years from date of promulgation of an EG for requirements to be fully implemented.[50] During this time, the EPA expects that a percentage of existing sources will shut down or undertake modification which will result in them becoming subject to regulation under CAA section 111(b). However, based on limited information that commenters submitted, the EPA acknowledges there may be some existing sources that have never been modified and accepts that these are examples of existing sources that have continued to operate for long periods of time without being reconstructed or modified. The EPA did not prepare and include a quantitative analysis that estimates the levels at which source modification/equipment turnover may occur. However, the EPA maintains that this is one factor (among other factors) that in the absence of an EG will continue to contribute to the downward trend of total methane emissions from oil and natural gas existing sources.

Secondly, there are market incentives for the oil and natural gas industry to capture as much natural gas (and, by extension, methane) as is cost effective. Depending on the future trajectories of natural gas prices and the costs of natural gas capture and emission reductions, market incentives may continue to drive emission reductions, even in the absence of specific regulatory requirements applicable to methane emissions from existing sources. Assessing the relationship of methane emissions and natural gas production, overall natural gas gross withdrawals have increased about 50 percent from 1990 to 2018, while aggregate methane emissions from the NSPS subpart OOOOa-relevant industry segments have stayed relatively flat (Figure 1). This trend indicates decreasing aggregate methane emissions intensity for these segments over this period (Figure 1). These trends are likely driven by a combination of economic and technical advances.

[50] This estimation considers the development of states' plans and the Federal plan. Unlike NSPS, EG are not directly enforceable; thus, these mechanisms are critical for implementation.

[51] Methane emissions from Table 3–37 (Petroleum Systems) and Table 3–57 (Natural Gas Systems) in U.S. EPA. 2020. Inventory of U.S. Greenhouse Gas Emissions and Sinks: 1990–2018. EPA 430–R–20–002. Available at: *https://www.epa.gov/ghgemissions/inventory-us-greenhouse-gas-emissions-and-sinks-1990-2018.* Accessed July 1, 2020. U.S. Energy Information Administration (EIA) data on natural gas gross withdrawals available at: *https://www.eia.gov/dnav/ng/ng_prod_sum_a_EPG0_FGW_mmcf_a.htm.* Accessed July 1, 2020.

FIGURE 1. NET EMISSIONS OF METHANE EMISSIONS (FROM 2020 GHGI) and U.S. NATURAL GAS GROSS WITHDRAWALS IN TRILLION CUBIC FEET (TCF) (FROM U.S. ENERGY INFORMATION ADMISTRATION NATURAL GAS DATA), 1990 TO 2018.[51]



While environmental performance is a challenging concept to quantify in monetary terms, improving such performance is increasingly important for firms that seek to maintain a ''social license to operate.'' Generally speaking, the social license to operate means that the firm's employees, investors, customers, and the general public find that the firm's business activities and operations are acceptable to continue to freely participate in the marketplace. Maintaining the social license by improving environmental performance, such as reducing emissions, can help firms respond to the complex environment within which they operate in ways that are favorable to their longer-term business interests.

Third, the EPA maintains, and has received a substantial amount of comments confirming its position that participation in the various voluntary methane emissions mitigation programs is one factor (among other factors) that in the absence of an EG that will continue to contribute to the downward trend of total methane emissions from oil and natural gas existing sources. Owners and operators of facilities in the oil and natural gas industry participate in voluntary programs that reduce their methane emissions. Specifically, many owners and operators of facilities participate in two EPA partnership programs: The Natural Gas STAR Program[52] and the Methane Challenge Program.[53] Owners and operators also participate in voluntary programs that are not administered by the EPA, such as the Environmental Partnership[54] and the Climate and Clean Air Coalition (CCAC) Oil & Gas Methane Partnership.[55] Firms might participate in voluntary environmental programs for a variety of reasons, including attracting customers, employees, and investors who value more environmentally responsible goods and services; finding approaches to improve efficiency and reduce costs; and reducing pressures for potential new regulations or helping shape future regulations.[56][57] The EPA does acknowledge that the industry as a whole is not uniformly meeting voluntary measures at the same level of control and that some companies may not be participating in cited voluntary methane emissions programs at all. This makes it difficult to verify the impacts on emissions as a result of voluntary program participation. Additional time will be needed to allow these programs to further develop and to be fully implemented to better quantify the impacts the varied programs have on

[52] The Natural Gas STAR Program started in 1993 and seeks to achieve methane emission reductions through cost-effective best practices and technologies. Partner companies document their voluntary emission reduction activities and report their accomplishments to the EPA annually. Natural Gas STAR includes over 100 partners across the natural gas value chain and has eliminated nearly 1.39 trillion cubic feet of methane emissions since 1993.

[53] The Methane Challenge Program, started in 2016 and designed for companies that want to adopt more ambitious actions for methane reductions, expands the Natural Gas STAR Program through specific, ambitious commitments; transparent reporting; and company-level recognition of commitments and progress. This program includes more than 50 companies from production, gathering and boosting, transmission and storage, and distribution.

[54] The Environmental Partnership is composed of various companies of different sizes and includes commitments to replace all high-bleed pneumatic controllers with low-bleed controllers (*i.e.,* controllers with a bleed rate less than 6 scfh) within 5 years, require operators to be on-site or nearby when conducting liquids unloading, and require initial monitoring for fugitive emissions at all sites within 5 years, with repairs completed within 60 days of fugitive emissions detection. *https://theenvironmentalpartnership.org/.*

[55] The CCAC Oil and Gas Methane Partnership is a technical partnership between oil and natural gas companies, the Environmental Defense Fund, the EPA Natural Gas STAR Program, and the Global Methane Initiative that provides technical documents on a wide variety of opportunities for reducing methane emissions and requires annual progress reports from its participants. Yearly data on the progress being made by participants is available on the CCAC website. *http://ccacoalition.org/en/content/oil-and-gas-methane-partnership-reporting.*

reducing emissions from oil and natural gas industry sources.

Fourth, several major oil and natural gas producing states have established regulations on oil and natural gas sector emissions. The EPA recognizes that state requirements vary in stringency and that only a subset of states include requirements for sources that the EPA could potentially define as existing sources. However, states that have standards applicable to existing sources include California, Colorado, Utah, Wyoming (in the Upper Green River Basin ozone non-attainment area), and Texas, and account for a substantial portion of oil [58] and natural gas production [59] in the United States. Furthermore, current state regulations (and permits) controlling VOC emissions will concurrently reduce methane emissions from the oil and natural gas industry. For example, areas that are designated Moderate nonattainment and above for certain ozone NAAQS, and states within the Ozone Transport Region, are required to adopt and implement VOC controls for oil and gas sources covered by the EPA's 2016 Control Techniques Guidelines.[60] These controls, which the EPA will address through the state implementation plan (SIP) approval process, will concurrently reduce methane emissions.

As with other factors cited by the EPA, existing source state requirements are one factor (among others) that in absence of an EG will continue to contribute to the downward trend of total methane emissions from oil and natural gas existing sources. Further detail regarding comments received on the potential for limiting emissions from existing sources can be found in section X of this preamble.

VIII. Summary of Major Comments and Responses

In this section, we respond to many of the major comments made on the 2019 Proposal. In the Response to Comments Document in the docket, we provide additional discussion for some of these comments, and respond to additional comments.

A. Revision of the Source Category To Remove Transmission and Storage Segment

1. History of Scope of Oil and Natural Gas Source Category

Comment: Commenters assert that language in CAA section 111 demonstrates that Congress contemplated that source categories would be broad and encompass a variety of different types of emission sources. The commenters disagree that the 1979 listing did not include the natural gas transmission and storage segment, and add that, in 1980, the Agency explained: ''Source categories are intended to be broad enough in scope to include all processes associated with the particular industry.'' Commenters state that, in practice, the EPA has long listed broad source categories, covering an entire industry or a source that may be found in numerous industries, and sometimes establishing different subcategories within source categories, including electric utilities, non-metallic mineral processing, and compressor engines. The commenters contend that the EPA's treatment of other source categories soon after the priority listing process consistently recognized the interrelatedness of facilities or of emissions controls for those facilities and that this helps determine what sources to include in each source category. Although petroleum refineries are a separate source category under CAA section 111, the commenters note that the EPA previously explained that the source category for the asphalt roofing industry ''encompasses not only asphalt roofing plants but certain production units at oil refineries and asphalt processing plants which were not included on the Priority List promulgated on August 21, 1979.'' 45 FR 76405.

Response: The EPA has generally exercised discretion in identifying the scope of any particular industry, including which industrial processes it includes, for purposes of treating it as a source category under CAA section 111.[61] The EPA acknowledges that some of the listed source categories were broad in scope. However, the EPA has also listed source categories that are relatively narrow in scope—they have distinct facility boundaries that encompass a particular process that, in turn, follows a linear path and results in a specific product. Examples of narrowly defined source categories include the following.

- *Primary Copper Smelting, Subpart P:* A primary copper smelter is any installation or any intermediate process engaged in the production of copper from copper sulfide ore concentrates through the use of pyrometallurgical techniques. The affected facilities in primary copper smelters are dryers, roasters, smelting furnaces, and copper converters.
- *Nitric Acid Plants, Subpart G and Ga:* A nitric acid plant is a nitric acid production unit, which, in turn, is any facility producing weak nitric acid by either the pressure or atmospheric pressure process.
- *Kraft Pulp Mills, Subparts BB and BBa:* A kraft pulp mill is any stationary source which produces pulp from wood by cooking (digesting) wood chips in a water solution of sodium hydroxide and sodium sulfide (white liquor) at high temperature and pressure. Regeneration of the cooking chemicals through a recovery process is also considered part of the kraft pulp mill. The affected sources are digester systems, brown stock washer systems, evaporator systems, condensate stripper systems, recovery furnaces, smelt dissolving tanks, and lime kilns at kraft pulp mills.
- *Sulfuric Acid Plants, Subpart H:* The affected sources are sulfuric acid production units. These are defined as any facility producing sulfuric acid by the contact process by burning elemental sulfur, alkylation acid, hydrogen sulfide, organic sulfide and mercaptans, or acid sludge, but do not include facilities where conversion to sulfuric acid is utilized primarily as a means of preventing emissions to the atmosphere of sulfur dioxide or other sulfur compounds.

If the EPA does not originally include in a listing certain processes, and subsequently seeks to include those processes, the EPA must make the requisite statutory findings in order to do so. The action that the commenters cite supports this point. In the original 1979 Priority List, the EPA listed the Asphalt Roofing Plants source category. Subsequently, based on studies on the asphalt roofing industries, the EPA determined that the initial processing of asphalt for roofing manufacture may take place at sources other than asphalt roofing plants. Accordingly, the EPA, through rulemaking, amended the 1979 source category listing to include additional locations such as asphalt processing plants and asphalt storage tanks at oil refineries. *See* 45 FR 76427 and 28. In doing so, the EPA provided a specific rationale for broadening the source category. The present situation

[58] Approximately 52 percent of crude oil production in 2019 according to *https://www.eia.gov/dnav/pet/pet_crd_crpdn_adc_mbblpd_a.htm.*

[59] Approximately 35 percent of natural gas production in 2019 according to *https://www.eia.gov/dnav/ng/ng_prod_sum_a_EPG0_VGM_mmcf_a.htm.*

[60] On October 27, 2016, the EPA provided notice of the availability of a final control techniques guideline document titled *Control Techniques Guidelines for the Oil and Natural Gas Industry* (EPA 453/B–16–001). 81 FR 74798 (October 27, 2016).

[61] The EPA has not relied on particular formulations, such as standard industrial classification, to identify an industry for purposes of classifying it.

requires a similar analytical framework: (1) The original source category listing for Crude Oil and Natural Gas Production was not broadly defined to include transmission and storage, and (2) the requisite statutory findings have not been made to expand the category to include it.

Comment: Several commenters assert that nothing in the 1979 listing decision supports the EPA's claim that the Agency at the time viewed facilities used in natural gas transmission and storage (*e.g.,* stationary pipeline compressor engines) as a separate source category.

Another commenter asserts that the omission in the 1979 listing of a source in the transmission and storage segment that had been included in the 1978 technical document suggests that this source was incorporated into the Crude Oil and Natural Gas Production source category. The commenter states that, while the EPA studied Stationary Pipeline Compressor Engines, which are found in the transmission and storage segment, as a potential independent source category in the 1978 technical document,[62] this source was not listed as a major or minor source in the 1979 Listing.[63] The commenter states that, while the Agency argues that the source was included in the Stationary Internal Combustion Engines listing, the EPA supports this proposition only by citing to a 2008 rule, which does not expressly include stationary pipeline compressor engines within the Stationary Internal Combustion Engines source category.[64] The commenter notes that the EPA cites to a page stating that ''[c]ategories and entities potentially regulated by this action'' include ''[a]ny manufacturer that produces or any industry using a stationary internal combustion engine as defined in the final rule.'' 73 FR 3568 and 69. The preamble contains a list of ''[e]xamples of regulated entities'' that includes ''[n]atural gas transmission.'' 73 FR 3569. However, according to the commenter, the applicability criteria of the final rule contains no explicit reference to stationary pipeline compressor engines.

Response: As a general matter, the Agency has the authority to revisit its prior categorization determinations. Nonetheless, the EPA, upon a close read of its prior rules believes that this and certain other comments on prior Agency determinations are mistaken, as described further in this section. The EPA notes that while it believes the 1979 listing did not include the transmission and storage segment for the reasons described in this final rule, any interpretation otherwise (*i.e.,* that the listing did include this segment) did not have any practical effect until the 2012 Rule, when the EPA promulgated standards for this segment for the first time. Therefore, to the extent the 1979 listing can be considered to have included the transmission and storage segment, the EPA is alternatively determining that such inclusion was incorrect for the same reasons why the 2012 and 2016 Rules incorrectly included the segment as part of the source category.

The EPA disagrees with the commenter's suggestion that the 1979 listing incorporated stationary pipeline compressor engines into the Crude Oil and Natural Gas Production source category. This is clearly evidenced by examining the pollutants which are identified for the category. For the 1979 listing, the pollutants identified for the Crude Oil and Natural Gas Production source category were VOC and SO_2. In the 1978 background documentation, the pollutants identified for stationary pipeline compressor engines were NO_X, SO_2, and carbon monoxide (CO). If the EPA had included stationary pipeline compressor engines in the Crude Oil and Natural Gas Production source category in 1979, the Agency likely would have added NO_X and CO to the list of pollutants for the category.

That the Stationary Internal Combustion Engine rule (40 CFR part 60, subpart IIII) covers engines in the natural gas transmission and storage segment is further evidenced by the statement from the February 26, 2008, **Federal Register** document that specifically identifies engines in natural gas transmission as example entities subject to the rule. The commenter is incorrect in asserting that the applicability criteria of the regulations are silent on engines in natural gas transmission. Those applicability criteria are *characteristics* of the engine (*e.g.,* maximum engine power), which are unrelated to the *location* of the engine (*e.g.,* in the transmission segment). *See* § 60.4230 of 40 CFR part 60, subpart JJJJ. Therefore, the lack of explicit mention of the transmission segment does not mean that engines in that segment are not included in the category.

Comment: Several commenters stated that the description of the Crude Oil and Natural Gas Production source category in the 1984 proposed NSPS for VOC and SO_2 emissions made clear that the category did not include transmission and storage operations. The commenters pointed to the statement in the preamble that the source category excluded emission sources related to the ''distribution'' of products ''to petroleum refineries and gas pipelines'' (citing, *e.g.,* 49 FR 2636.

Other commenters disagree. One commenter asserts that the EPA defined the source category as ''encompass[ing] the operations of exploring for oil and natural gas products, drilling for these products, removing them from beneath the earth's surface, and processing these products from oil and gas fields for distribution to petroleum refineries and gas pipelines.'' The commenter states that it is clear that compressor stations within the transmission and storage segment ''process these products . . . for distribution'' by compressing the gas and forcing it through the pipelines.

Response: The EPA does not agree with the commenter's interpretation of the quotation from the 1984 proposal. Specifically, the EPA does not agree that the compression of the natural gas along transmission pipelines constitutes processing of the natural gas. Natural gas processing has historically been defined by the Agency to include the extraction of natural gas liquids from field gas, fractionation of mixed natural gas liquids to natural gas products, or both. (40 CFR part 60, subpart KKK; 40 CFR part 63, subpart HH). The EPA maintains that the language in the 1984 proposal, *i.e.,* that the category includes ''the operations of exploring for oil and natural gas products, drilling for these products, removing them from beneath the earth's surface, and processing these products from oil and gas fields for distribution to petroleum refineries and gas pipelines,'' is not ambiguous. Following the well-defined ''processing'' operations, the natural gas enters transmission gas pipelines. These are the gas pipelines referred to in the 1984 preamble, meaning that the gas leaves the processing segment of the oil and natural gas production source category and travels to the next segment, the natural gas transmission pipelines.

Comment: One commenter asserts that, within the 1984 definition of the production segment, the EPA drew a definitional boundary whereby production consisted of extraction ''and processing [of oil and natural gas] for distribution to petroleum refineries and gas pipelines.'' The commenter states that this implies that the boundary at which the Agency has always historically defined the category as being where production meets local distribution to pipelines or refineries. The commenter states that this interpretation of the CAA meant that the

[64] 73 FR 3568, 3569 (January 18, 2008).

production segment abuts the distribution end of the industry—not an arbitrarily created ''Transmission and Storage'' segment.

Response: The EPA's use of the term ''distribution'' in the 1984 preamble was misinterpreted by the commenter. The commenter appears to interpret ''distribution'' as the distribution segment of the natural gas industry, and that the source category includes everything up to that segment. In the context of the 1984 preamble, the EPA's use of the term ''distribute'' means the transfer to the next segment of the industry.

Comment: A commenter asserts that the 1984 proposal serves to demonstrate that the EPA did not view its listing as constrained to its literal terms—''Crude Oil and Natural Gas Production''—because the 1985 NSPS regulated the processing, not the production, segment of the natural gas industry. Specifically, the EPA stated that, with regard to the discussion of equipment leaks, ''equipment used in crude oil and natural gas production (not to be confused with natural gas processing) for equipment leaks of VOC is not appropriate for widely dispersed equipment.'' 49 FR 2637. The commenter states that, taken to a literal extreme, the proposal's argument would mean that the 1985 NSPS exceeded the scope of the source category and was, thus, unlawful.

Response: The EPA agrees that the language that the commenter quotes indicates the Agency's view in the 1985 NSPS that the source category covered both production and processing. However, this does not in turn mean that the Agency thought that the source category included the transmission and storage segment as well. As described above, the 1984 proposal acknowledged equipment leaks in the production segment but declined to set standards for them based on a technical analysis. This discussion makes clear that the Agency considered production to be part of the source category. In contrast, as discussed above, the preamble is silent on equipment leaks in the transmission and storage segment.

Comment: Further, the commenter states that the EPA's proposal appears to concede that the Agency has never been limited to regulating only those specific sources within the listed category that it regulated in the first NSPS. The commenter states that, prior to 2012, the EPA had issued standards for emissions at gas processing plants only as part of the ''Crude Oil and Natural Gas Production.'' The commenter notes that in 2012 the EPA regulated VOC from previously unregulated upstream sources, including well completions, centrifugal compressors, reciprocating compressors, pneumatic controllers and storage vessels (citing 77 FR 49490 (Final Rule promulgating 40 CFR part 60, subpart OOOO)). The commenter states that these sources were not part of the EPA's analysis in 1979 or 1984 NSPS, yet the proposal does not suggest that they were improperly regulated in the 2012 Rule. Specifically, in 2012 the EPA stated: ''[i]n addition to the operations covered by the existing standards, the newly established standards will regulate volatile organic compounds from gas wells, centrifugal compressors, reciprocating compressors, pneumatic controllers and storage vessels'' (citing 77 FR 49490).

The commenter also indicates that the EPA's citation to the 1984 NSPS ignores other statements made during other rulemakings for the source category, including the same 1984 rulemaking, that suggest that the source category was intended to cover broadly the oil and natural gas sector, or at least was not limited to production and processing (citing 84 FR 50256). The commenter states that, in that NSPS, the EPA felt the need to exclude specifically certain sources found in the transmission and storage segment from the standards it set, something that would not have been necessary if the Agency had intended to exclude these segments themselves from the definition of the source category. The sources excluded in that NSPS are compressor stations, dehydration units, sweetening units, underground storage facilities, and field gas gathering systems, unless the facility is located at an onshore natural gas processing plant.

Response: The commenter's representation of the 1984 rulemaking is not entirely accurate. It is true that the 1984 proposal limits the sources covered to those at natural gas processing facilities. However, the EPA does not agree that this rulemaking was an expansion of the original ''Crude Oil and Natural Gas Production'' source category. The commenter is implying that natural gas processing operations were not included in the original source category listing in 1979 but does not provide any evidence from the 1978/1979 actions to support that assertion. An alternative interpretation of this text could also be that the Agency wished to make it sufficiently clear that while sources in part of the production and processing segment are included in the source category, the same sources that are part of the transmission and storage segment are not included in the source category. However, in the absence of an explanation for this exclusion, the most that can be taken away from this text is that these sources are not subject to the 1984 NSPS; this text alone is not dispositive on whether these sources are included in the broader Oil and Natural Gas source category. Therefore, the commenter extrapolates a conclusion without a basis to do so. The fact that SO_2 was a pollutant identified for the Crude Oil and Natural Gas Production source category clearly shows that processing was included, as the sweetening units covered by the 1984 proposed rules are the primary source of SO_2 emissions in the oil and natural gas industry.

In addition, there are numerous statements made by the EPA throughout the 1984 proposal that clearly demonstrate consideration of sources across the entire Crude Oil and Natural Gas Production source category. The commenter cites the statement in the1984 proposal that emission points can be divided into three categories and uses this statement to argue that the source category included transmission and storage. However, the comment fails to include the remainder of the paragraph that includes that statement:

> These emission points can be divided into three main categories: Process, storage, and equipment leaks. Process emission sources include well systems, field oil and gas separators, wash tanks, steeling tanks, and other sources. *These process sources remove the crude oil and natural gas from beneath the earth and separate gas and water from the crude oil. Best demonstrated control technology has not been identified for these process emission points; therefore, these sources have not been considered in developing the proposed standards.* 49 FR 2637 (emphasis added).

This part of the paragraph clarifies two points. First, the EPA clearly considered the upstream sources (well systems, field oil and natural gas separators, etc.) as part of the source category but indicated that since best demonstrated control technology had not been identified for those sources, no standards were being proposed at that time. These sources were then addressed in the 2012 rulemaking, when the best demonstrated technology/BSER had been determined for them. Second, this discussion did not mention operations in the transmission segment.

One commenter also refers to the parenthetical in the 1984 proposal related to oil and natural gas production and argues that it is proof that natural gas processing was not included in the Crude Oil and Natural Gas Production source category. The following provides more of the discussion to provide the full context.

> Equipment leaks of VOC can occur from pumps, valves, compressors, opened ended

lines or valves, and pressure relief devices used in onshore crude oil and natural gas production. These leaks usually occur due to design or failure of the equipment. Equipment used in crude oil and natural gas production (not to be confused with natural gas processing) are widely dispersed over large areas. The analysis presented in the BID for the principal control technique (leak detection and repair work practices) for equipment leaks of VOC is not appropriate for widely dispersed equipment. The costs and emission reduction numbers for such an analysis are unknown at this time. Thus, the proposed standards do not apply to equipment associated with crude oil and natural gas production. The proposed standards apply only to equipment located at onshore natural gas processing plants. 49 FR 2637.

Taking the 1984 preamble excerpt in context illustrates that the distinction made between production and processing was specifically related to the application of leak detection and repair work practices for equipment leaks and not to define the source category. In fact, the discussion makes it clear that the EPA's definition of the source category includes production and processing. Again, there is no mention here of the application of leak detection and repair programs to the transmission and storage segment.

Finally, the commenter cites a paragraph from the proposed regulation, which clarifies that sources not located at a natural gas processing plant are not affected facilities, as evidence that the category includes the transmission and storage segment, since ''compressor stations'' are included. This is also not a compelling argument. It is not uncommon for equipment, other than that used to extract natural gas liquids from field gas or to fractionate mixed natural gas liquids to natural gas products, to be located at a natural gas processing plant. This paragraph—40 CFR 60.630(e)—simply clarifies that if other operations (*i.e.,* compressor stations, dehydration units, sweetening units, underground storage facilities, field gas gathering units, and liquefied natural gas units) are located at a natural gas processing plant, the associated components are subject to the leak detection and repair requirements in NSPS subpart KKK. This list cannot be extrapolated to the conclusion that the EPA considered all these operations to be in the source category. As evidence of this note that ''liquefied natural gas units'' are included in the list. These units, while part of the overall oil and natural gas industry, have never been contemplated as being part of the Crude Oil and Natural Gas source category.

2. ''Sufficiently Related'' Test and Whether Transmission and Storage Operations Are Distinct From Production and Processing

Comment: Commenters contend that the proposal to amend the source category definition is fundamentally at cross-purposes with the proposal to remove standards of performance for methane. The EPA proposed to justify the latter by finding that regulation of methane and VOC is redundant because the controls that sources are required to implement to reduce their VOC emissions will also reduce their methane emissions, and this is true regardless of the relative amounts of VOC and methane in their overall emissions. The commenters state that if methane regulation is redundant on those grounds, then differences in gas composition cannot be the basis for determining that two distinct source categories are necessary.

Response: The commenters conflate the proposal to remove the transmission and storage segment from the source category with the proposal to rescind the methane requirements for the remaining production and processing segment, without acknowledging that while the substance of each may have technical similarities, each proposal addresses discrete, stepwise legal aspects of CAA section 111(b). Under CAA section 111(b), a source category must first be listed before the EPA can promulgate an NSPS for sources within the category. The EPA proposed the first action of removing the transmission and storage segment from the source category, in part based on the conclusion that the segment was not previously properly added to the source category because there are distinct differences in operations and differences in the emissions profiles between the production and processing segments and the transmission and storage segment. As described further in this section, based on the sufficiently related test, these distinct differences in operations and differences in emissions profile means that the transmission and storage segment requires a separate SCF in order to be properly regulated under CAA section 111(b).

However, once a source category is properly listed and defined, as are the production and processing segments, the inquiry then is what are the appropriate standards of performance for sources within that category. This inquiry is separate from and subsequent to the initial inquiry of whether a source category is properly identified for regulation under CAA section 111(b). For example, the EPA has previously identified sources as appropriately subject to regulation under CAA section 111(b), but then subsequently declined to promulgate standards of performance based on inadequate data. In proposing VOC standards for equipment leaks in oil and gas processing, the EPA declined to apply such standards to equipment in the production segment, which is clearly part of the source category, because it did not have data on costs and emission reduction numbers at that time. 49 FR 2637.

Similarly, here, while the production and processing segments have been properly identified as subject to regulation under CAA section 111(b) through the 1979 listing of the source category, the EPA must then contend with *how* to regulate these segments. Accordingly, the EPA proposed the second action to rescind the methane requirements for the production and processing segments based on the fact that VOC and methane controls are redundant. While the rationales for both actions are premised partly on differences in gas composition, the legal and technical inquiry for each action is different, as these are discrete steps to regulation under CAA section 111(b). Though the findings under each inquiry are similarly premised on differences in gas composition, that does not mean that the response to both inquiries must be the same, as each inquiry is distinctly different from one another (*i.e.,* one is whether the transmission and storage segment is properly part of the source category, the other is whether and how to regulate methane from the production and processing segments). The rationale for this second action was also discussed at length in section IV.D of the 2019 Proposal (84 FR 50259 and 50260). The comments received and the EPA responses on this second action are provided in section VIII.B below.

Comment: Commenters do not agree that the transmission and storage segment cannot be included in the Crude Oil and Natural Gas source category because the gas composition and operations in that segment are too different from those in the production and processing segments. These commenters assert that the EPA's own data do not support the EPA's rationale. The commenters suggest that, while the EPA compares the average composition of the production segment to the average composition of the transmission segment, the Agency fails to consider the extensive overlap in the range of compositions in both segments. The commenters state that the EPA's 2011 Natural Gas Composition memorandum data show the wide range of compositions of gas in the production and transmission segments.[65] The commenters contend that the range of methane compositions in the production segment fully encompasses the range in the transmission segment, demonstrating the similarity of the gas composition in the two segments; similarly, there is extensive overlap between the segments' VOC compositions.

Commenters also discussed the EPA's more recent 2018 composition data,[66] asserting that it shows even more variation in gas composition. A commenter asserts that while the EPA recognizes that variations in the gas composition can occur from basin-to-basin within each segment, the EPA does not acknowledge that these basin-to-basin variations can swamp the purported variations on which the EPA relies to justify a distinction between production and transmission segments.

One commenter states that its experience with the oil and natural gas industry operating in Pennsylvania shows that unprocessed field gas [67] can range from, by volume, 75-percent to 98-percent methane and 0.1-percent to 10-percent VOC. The commenter states that in a number of Pennsylvania counties, the county average field gas composition meets the EPA's pipeline quality gas composition (*i.e.,* is equal to or greater than 93-percent methane and less than or equal to 1-percent VOC; HAP data is unavailable). The commenter states that there are several natural gas well pads that dehydrate the produced gas onsite and transfer custody directly to an interstate pipeline. The commenter notes that this reality further blurs the distinction between the production and the transmission and storage segments. The commenter contends that, if a well site is required to meet the requirements of the 2016 Rule, it stands to reason that a transmission compressor station accepting the same gas should be required to meet the same requirements.

One of the commenters also notes that the 2018 Natural Gas Composition memorandum did not include any updated data for the transmission and storage segment. The commenter states that, given the significant difference in the production segment data from 2011 and 2018, the EPA must collect more current data for the transmission and storage segment if it seeks to justify any claims about the segment being sufficiently distinct from production and processing to warrant revision of the source category.

Response: The EPA recognizes that the composition of natural gas in the production segment can vary considerably, and that in some basins/areas it is possible that the composition can mirror that in the transmission segment. However, while the commenters stress this overlap in the gas composition in limited geographical regions in the U.S., such as in some parts of Pennsylvania, they seem to discount the substantial differences in most areas. For example, for Texas, the EPA's 2011 gas composition analysis showed that the methane content in the production segment was, on average, 80.1 percent, but ranged from 55.0 percent to 97.8 percent.[68] Because the NSPS subpart OOOOa is a nationwide regulation which applies equally across the country, it is most appropriate to consider the average composition for the segments. Further, on a nationwide basis, the data clearly reveal a distinction in the gas composition between the production and processing segments and the transmission and storage segment.

The commenter is correct that the 2018 Natural Gas Composition memorandum did not include data for the transmission and storage segment. The EPA conducted a new analysis which analyzed average methane concentrations using 2015 through 2018 data reported under 40 CFR part 98, subpart W (Petroleum and Natural Gas Systems), of the EPA's GHGRP.[69] This analysis did include recent data for the transmission and storage segment. The EPA found that there is a statistically significant difference between the average methane concentration in natural gas at either the gas production, gathering and boosting, or gas processing [70] industry segments and the average methane concentration in natural gas at either the transmission compression or underground storage segment. This difference further supports the EPA's justification to remove the transmission and storage segment from this source category.

Comment: Several commenters disagree with the EPA's statements in the 2019 Proposal that equipment and operations in the production and processing segments were not interrelated with the transmission and storage facilities. The commenters contend that while the transmission and storage segment serves a different role than the production, processing, and distribution segments, it is still part of the overall oil and natural gas industry and is a necessary element of the source category because it prepares the recovered gas for distribution. They add that, as the 2019 Proposal notes, the processes used to remove impurities (for example, dehydrators) in the production and processing segments are also used in the transmission and storage segment (citing 84 FR 50258). Commenters noted that the 2016 Rule stated that the equipment and operations at production, processing, transmission, and storage facilities are a sequence of functions that are interrelated and necessary for getting the product ready for distribution (citing 81 FR 35838). Commenters also noted that the 2016 Rule also cited the increase in natural gas production from hydraulic fracturing and horizontal drilling as an example of the interrelated nature of the industry—*i.e.,* increased production resulting in an increase in the amount of natural gas needing to be processed and moved to market or stored, which in turn results in increases in emissions across the entire natural gas industry.

Response: The EPA agrees with the commenters that production, processing, transmission and storage are all segments of the oil and natural gas industry and that the transmission and storage segment is a part of the industry because it prepares the recovered gas for distribution.

However, this does not necessitate that all of the segments belong in the same source category for regulatory purposes under CAA section 111. As explained in the 2019 Proposal, the primary purposes of each segment differs. The purposes of the production and processing segments are to explore, drill, extract, and process crude oil and natural gas found beneath the earth's surface. Extracting crude oil and field gas through drilling wells and processing these products for distribution to petroleum refineries and gas pipelines is an industrial process that is distinct from the transmission and storage segment, whose primary purpose is to move to market pipeline quality natural gas through transmission

[68] Memorandum to Bruce Moore, U.S. EPA from Heather Brown, EC/R. ''Composition of Natural Gas for use in the Oil and Natural Gas Sector Rulemaking.'' July 2011. Docket ID Item No. EPA–HQ–OAR–2010–0505–0084.

[69] Analysis of Average Methane Concentrations in the Petroleum and Natural Gas Industry Using Data Reported Under 40 CFR part 98 Subpart W. April 6, 2020. Included in Docket ID No. EPA–HQ–OAR–2017–0757.

[70] Methane concentrations at gas processing facilities evaluated in this study are based on the inlet gas composition (as received) by the gas processing facilities.

pipelines by increasing the pressure and to store the gas underground along the pipeline.

The EPA understands that dehydrators are used to remove impurities from the natural gas in both the production and processing segments and in the transmission and storage segment. In the latter segment, dehydrators are occasionally present along transmission pipelines and at natural gas storage facilities to remove water and other impurities that condense as a result of temperature and pressure changes as the gas moves through the pipeline or is stored underground. However, the different uses of dehydrators illustrate the separate functions that the segments have in the industry. In the transmission and storage segment, dehydrators simply remove these impurities as they accumulate in pipelines. In the production and processing segment, dehydrators are a part of the process to change the overall composition of the gas. It is also noteworthy that the EPA included and regulated air toxics emissions from dehydrators in two separate source categories and in two different NESHAP. Dehydrators in the production and processing segments are covered by 40 CFR part 63, subpart HH, and dehydrators in the natural gas transmission and storage segment are covered by 40 CFR part 63, subpart HHH.

The EPA continues to assert that the comparison with the petroleum industry is directly relevant. The commenters insist that the necessary link between the extraction and processing of the natural gas in the production and processing segments and the transmission of the natural gas predetermines that the two segments must be treated as a single source category. However, this same link exists between the extraction and processing of oil, condensate (and other liquids from oil and natural gas wells) in the production segment and the petroleum refineries and pipelines that refine/process and distribute these liquids. However, the commenters do not suggest the interrelatedness of the production and processing sources originally included in the Crude Oil and Natural Gas Production source category with those in the petroleum liquid source categories necessitates that Crude Oil and Natural Gas Production and Petroleum Refineries be combined into one category and regulated together. The EPA applies the same logic to conclude that the fact that the transmission and storage segment is related to the production and processing sources in the Crude Oil and Natural Gas Production source category does not necessarily result in the requirement that they be regulated together. In addition, other instances in which similar source types emitting the same air pollutants and subject to the same types of controls are included in different source categories. For example, leaking pumps, valves, connectors, and other components at a wide variety of types of facilities that emit VOC and GHG are included in different source categories.

3. The Authority To Expand Source Categories and the EPA's Alternative Approach

Comment: One commenter asserts that, while the 2012 Rule and 2016 Rule expanded the source category, this expansion was appropriate considering the statutory mandate that the Administrator should from time to time review the source categories. The commenter states that the purpose of this review was to assure that the EPA periodically consider new scientific developments to ensure that the Agency was continually acting in a way that protected the public health. The commenter adds that the statute provides no guidance regarding the proper scope of a source category, and that Congress left that determination to Agency expertise, so long as the Agency considers the impacts of the source's emissions on public health. According to the commenter, the EPA's expansion of the source category in the 2016 Rule properly considered the source category's impact on the public health. However, the commenter adds, but the EPA's current effort to rescind that expansion is based on alleged procedural errors and fails to consider the public health impacts of the transmission and storage segment. The commenter states that the transmission and storage segment does significantly contribute to the deterioration of public health. The commenter asserts that the natural gas held at storage facilities contains all of the same toxic air pollutants and hazardous chemicals as natural gas does at other stages of the production process, and that the methane and VOC emissions from compressor stations have the same adverse impact on public health regardless of what segment of the source category the methane and VOC emissions are coming from. The commenter suggests that the EPA take this opportunity to do its own analysis to determine whether methane, VOC, and HAP (air toxic) emissions from the transmission and storage segment of the source category adversely impact public health.

Response: The EPA agrees that the CAA authorizes the EPA to review and revise source categories, and that its purpose was to ensure that the Agency was continually acting in a way that protected the public health. However, the EPA disagrees with the commenters' position on the EPA's past consideration of public health in the expansion of the Crude Oil and Natural Gas source category. The EPA's 2015 evaluation of the impacts of GHG, VOC, and SO_2 on public health and welfare (80 FR 56601) was conducted for crude oil and natural gas production and processing, along with natural gas transmission and storage. While it is true, as the commenter points out, that methane and VOC are emitted from the natural gas transmission and storage segment, the EPA's 2015 analysis did not separate the impacts of the pollutants emitted by natural gas transmission and storage to demonstrate that the emissions from this segment contribute significantly to the overall impacts. In the 2019 Proposal, the EPA proposed that it was required to make a finding that the transmission and storage segment, in and of itself, contributes significantly to air pollution which may reasonably be anticipated to endanger public health and welfare. Nothing in the comments provided cause the EPA to change this conclusion.

4. Significant Contribution Finding for Natural Gas Transmission and Storage

Comment: Several commenters state that the SCF that the EPA made in the 2016 Rule, which was for the production, processing, transportation, and storage segments collectively, was not appropriate to authorize the EPA to promulgate NSPS for sources in the transmission and storage segment. The commenters assert that to regulate sources in that segment, the EPA was required to make a SCF determination for emissions from that segment itself. Commenters explain that, to consider otherwise, once the EPA makes a SCF determination for a source category consisting of certain types of sources, the Agency would then be able to add into that source category all manner of ancillary equipment and operations, even if those ancillary equipment and operations do not in and of themselves significantly contribute to the previously-identified endangerment. The commenter states that this would allow the EPA to evade the express listing criteria by lumping loose associations of nominally related segments of an industry into a sector.

Other commenters disagreed, stating that in the 2016 Rule, the EPA determined that the rulemaking record supported a revision of the source category listing to include broadly the entire oil and natural gas industry (*i.e.,* production, processing, transmission and storage) that, in the Administrator's judgment, contributes significantly to air pollution which may reasonably be anticipated to endanger public health or welfare. Commenters add that CAA section 111(b)(1)(A) grants the Administrator authority to ''from time to time . . . revise'' the listed categories, and that nothing in the statutory text or relevant case law suggests that the EPA must, before revising a source category in a way that expands its scope, make a SCF determination for the newly added part of the category, considered alone. The commenter adds that nothing in the statute indicates that Congress intended for it to be more difficult for the EPA to add sources to a category than to include those sources in the category in the first instance. The commenter states that the EPA's obligation when revising a source category is only to conclude that the entire category, as revised, can still be deemed to contribute significantly to pollution that endangers public health or welfare.

Response: In this action, the EPA is determining that the transmission and storage segment of the oil and natural gas industry should not be included with the production and processing segments as a single source category. For that reason, if, in the future, the EPA seeks to promulgate standards of performance for any air pollutants from the transmission and storage segment, it must first list the segment as a source category and then determine that their emissions cause or contribute significantly to air pollution reasonably anticipated to endanger public health or welfare (SCF). Commenters take different positions on the question of whether the EPA must make a SCF for the transmission and storage segment as a predicate to adding them into a source category that already includes the production and processing segments. However, because the EPA is determining that the transmission and storage segment was not properly added to the source category, it is not necessary to resolve that question, and the EPA does not do so in this action.

Comment: Several commenters assert that, in order to remove transmission and storage segment sources from the Oil and Natural Gas source category, the EPA must affirmatively show that emissions from the sources do not significantly impact public health.

Response: The EPA disagrees with this comment. In this action, the EPA is determining that its previous determinations that the Crude Oil and Natural Gas source category included the transmission and storage segment beginning in 1979, or, in the alternative, that the EPA was justified in expanding the category to include that segment, were improper. Rather, the EPA is determining that the source category did not include that segment beginning in 1979 and that the EPA's action in 2012 and 2016 to add this segment into the source category was improper. These reasons justify the EPA in determining that the proper scope of the source category is the production and processing segments alone. There is no requirement under CAA section 111 that the improperly added segment must remain in the source category until the EPA determines that they do not cause or contribute significantly to dangerous air pollution.

5. Whether EPA Must Move To Add/Expand the Source Category and Regulate Transmission and Storage Emission Sources

Comment: Several commenters suggest that if the EPA finalizes the proposal to remove natural gas transmission and storage and rescind the applicable requirements for this segment, that the EPA should also move to properly and legally expand the source category and regulate natural gas transmission and storage emission sources. The commenters state that, beyond asserting that it might do so in the future, the proposal fails to explain why it does not take the logical next step and assess whether the emissions from the transmission and storage segment contribute significantly to dangerous pollution. The commenters contend that the current record, as well as the EPA's past findings, demonstrates that the emissions from the transmission and storage segment by itself does contribute significantly to dangerous air pollution.

Response: The EPA determined that the Agency's past interpretations and actions related to the inclusion of the transmission and storage segment in the Crude Oil and Natural Gas Production source category were in error. This action focuses on the correction of these past errors and interpretations. The EPA posits that retaining this focus, in the absence of established SCF criteria for GHG emissions/methane needed to add/expand the scope of this rulemaking, is necessary and appropriate, and that doing so provides greater clarity and certainty for the regulated community.

The EPA agrees with commenters that if an appropriate assessment of the emissions from the transmission and storage segment concludes that emissions from this segment contribute significantly to the endangerment to public health or welfare, we would need to propose a separate rulemaking for the regulation of emissions from sources in this segment. However, the EPA is not, at this time, assessing whether the emissions from the transmission and storage segment contribute significantly to the endangerment to public health or welfare.

Further, the proposal preamble solicited comment regarding appropriate criteria for the EPA to consider in making a SCF. This request was made both as a broad matter and with particular reference to GHG emissions generally, and to methane emissions from the Oil and Natural Gas source category most particularly. The EPA is evaluating the responses received to its solicitation and has not yet established criteria that it would follow to make such a SCF for the transmission and storage segment as it relates to GHG emissions/methane. Discussion on comments received on the EPA's solicitation related to SCF criteria can be found in section VI.C of this preamble.

B. Rescission of the Applicability to Methane of the NSPS for Production and Processing Segments

The following summarizes some of the major comments on the EPA's proposal to rescind the methane NSPS for the production and processing segments and provides the EPA's responses. Additional discussion and comments and responses on this topic are provided above, in section V.B, and in Chapter 6 of the Response to Comments Document.

Comment: Several commenters do not agree with the proposal that section 111 of the CAA authorizes the EPA to rescind one pollutant's standards because another pollutant's standards may capture them. The EPA claims that it lacked a rational basis for its 2016 action because the requirements added in 2016 are entirely redundant with the existing NSPS for VOC. However, commenters indicate that there is not a specific provision within the CAA that expressly exempts pollutants from regulation due to overlapping control technology.

Response: Although it is true that no CAA provision explicitly authorizes rescinding requirements on the ground that they are redundant, the EPA's basis for this action is that it erred in the 2016 Rule when it concluded that it had a rational basis to regulate methane. It is not rational to impose redundant requirements, because they are not necessary and do not achieve additional health or environmental protections. This basis for the EPA's action does not depend on explicit statutory authorization.

Comment: Multiple commenters support removing methane requirements for the production and processing segments on the ground that they are redundant with the existing NSPS for VOC, for the reasons the EPA stated in the 2019 subparts OOOO and OOOOa Proposal. Another commenter states that: (1) Methane can be detected more economically than VOC and detecting VOC typically is 2 to 4 times the cost of detecting methane, (2) methane is a reliable indicator of VOC, and (3) detecting methane is safer than detecting VOC. Other commenters disagreed. One commenter states that, while the release of VOC may always be accompanied by methane, it does not follow that the release of methane will always be accompanied by the release of VOC. Some commenters make the case that the NSPS does not simply duplicate requirements for emission controls; rather, it allows, but does not require, operators to comply with both VOC and methane controls using the same practices. Another commenter states that selective technologies do exist and could be applied to reduce VOC but not methane emissions if the methane rescission is finalized. One commenter asserts that it would be arbitrary to regulate methane and VOC as the same just because the currently chosen control technologies are the same. Another commenter adds that, while the sources of VOC and methane leaks may overlap, the two have distinct pollutant effects. The commenter further adds that the urgency and stringency of desired reductions may differ considerably for the two pollutant categories and may change over time, if, for example, the need for climate change mitigation becomes more acute. The commenter suggests that the most sensible approach to regulation of emissions from oil and natural gas operations is, thus, to keep performance standards for both VOC and methane on the books, and to update those standards periodically as the science and technology evolve.

Response: The EPA acknowledges the comments but emphasizes that all of the requirements in the rule apply independently of emissions of either methane or VOC. We discussed this redundancy in detail in section IV.D of the 2019 Proposal (84 FR 50259) and in section V.B of this preamble. The EPA continues to take the position that standards of performance for methane emissions from the production and processing segments are redundant with the existing NSPS for VOC and establish no additional health protections. As explained, every affected source in the production and processing segments will continue to be subject to the same NSPS requirements for VOC as before, and those requirements will have the same impact in reducing the source's methane emissions as before the removal of methane requirements. The EPA maintains that removing the methane NSPS, while retaining the VOC NSPS, will not affect the amount of methane reductions that those requirements will achieve.

One commenter claims that methane can be detected more economically and more safely than VOC. First, it is important to note that BSER for leaking equipment is based on the use of OGI equipment, which does not require the direct measurement of VOC. It is also worthy to note that this commenter was primarily referring to economic and safety advantages of methane leak detection technologies deployed via aircraft, which is not an option currently allowed under the rule.

Comment: One commenter asserts that removing methane standards would almost certainly lead to the adoption of less protective requirements. The commenter notes that in the 2016 Response to Comment Document (p. 2–61), the EPA stated, ''that direct regulation of GHG enables the reduction of additional methane emissions beyond what could be achieved by prior VOC-focused rules.''

Response: The EPA agrees that, in theory, the direct regulation of GHG and consideration of the costs in relation to GHG reduction could result in more stringent standards and more emission reductions than if decisions were made entirely based on VOC emission reductions. The EPA also acknowledges that, for the 2016 Rule, the costs were considered both in relation to the VOC and methane emission reductions. However, the EPA disagrees with the comment that removing methane standards would ''almost certainly'' lead to less protective standards. A separate action amending NSPS subpart OOOOa (EPA–HQ–OAR–2017–0483; FRL–10013–60–OAR; FR Doc. 2020–18115), which will be finalized in the **Federal Register** of Tuesday, September 15, 2020, is an example of how this assertion by the commenter is incorrect.

In 2018, the EPA proposed amendments and clarifications to NSPS subpart OOOOa (83 FR 52056, October 15, 2018) as a result of the reconsideration of issues raised in petitions on the 2016 Rule. In 2018, the EPA proposed to decrease the monitoring frequency for well sites with average combined oil and natural gas production for the wells at the site greater than or equal to 15 barrels of oil equivalent (boe) per day from semi-annually to annually. The EPA also proposed to decrease the monitoring frequency at compressor stations from quarterly to semi-annually. For both of these situations, the standards were both for VOC and methane and the cost-effectiveness based on both VOC and methane emission reductions considered. In fact, the ''multi-pollutant'' cost effectiveness was also considered where the control costs were split between VOC and methane.

In a separate action, the EPA is finalizing the reconsideration amendments to NSPS subpart OOOOa (EPA–HQ–OAR–2017–0483; FRL–10013–60–OAR; FR Doc. 2020–18115). However, the decisions for these reconsideration amendments take into account this final policy review action, which first rescinds the methane standards for production and processing sources. Therefore, the separate reconsideration amendments are finalizing ''VOC-only'' standards based on the cost effectiveness of the reduction in VOC only. These final reconsideration amendments are more stringent than the proposed reconsideration amendments, which were based on both VOC and methane standards. Specifically, in the separate reconsideration action, the EPA is finalizing semi-annual monitoring for well sites with average combined oil and natural gas production for the wells at the site greater than or equal to 15 boe per day and semi-annual monitoring for gathering and boosting compressor stations. Therefore, in this specific situation, the elimination of methane standards resulted in more stringent standards.

Comment: Commenters state that the redundancy rationale does not consider future BSER evaluations required by CAA section 111(b)(1)(B). One commenter notes that CAA section 111(b)(1)(B) requires the EPA to periodically—every 8 years—review and, if appropriate, revise the standards established under this section (we refer to this as the 8-year review). Commenters state that removing methane will mean that the methane requirements will not be subject to this review. One commenter states that the EPA's claimed redundancy ignores that methane regulation will have unique impacts on the 8-year review, including how the Agency considers cost and benefits, which are relevant factors in the likely stringency of the standards the EPA ultimately adopts.

A commenter states that, while the BSER is largely the same for methane and VOC in the current NSPS, there is no guarantee that the BSER will not diverge for the two pollutants in the future. The commenter adds that at least one other GHG—CO_2—is emitted in significant quantities from this industry, and the EPA may determine in the future that it has a rational basis to regulate those emissions under CAA section 111(b). The commenter states that, in that case, the BSER for GHG may differ significantly from the BSER for VOC, since the former would encompass controls for methane and CO_2.

Some commenters remark specifically on the future of technologies for fugitive emission detection and the impact on redundancy. One commenter states that future developments in leak monitoring technology may be able to speciate emissions (*i.e.,* distinguish between methane and VOC), potentially allowing operators to comply with a VOC-only NSPS by controlling VOC while leaving methane emissions unabated. The commenter states that the EPA fails to consider the impact of these VOC-only technologies on future methane emissions in the absence of the current NSPS. Another commenter similarly notes that for newly developed technologies that have the potential to significantly reduce the cost of compliance for regulated entities, the mandates are not redundant. The commenter states that more than 20 percent of natural gas produced in the U.S. has little or no VOC content, making VOC an inherently poor measurement target compared to methane. The commenter adds that some emerging emissions detection technologies—such as spectroscopic sensors used for aerial and satellite surveillance—are more sensitive to methane than to VOC. The commenter adds that, by signaling that reduction of methane emissions is not a national priority, the EPA discourages the development and improvement of the best available controls for methane.

Response: The EPA acknowledges the comments made regarding potential future control technologies and how that could impact redundancy. However, methane and VOC emissions occur through the same emission points and processes, and the same currently available technologies and techniques minimize both pollutants from these emission sources. The EPA recognizes that new control technologies are under development, particularly for detecting fugitive emissions. These emerging technologies include technologies that would detect speciated fugitive emissions from oil and natural gas operations, and, in the 2019 Proposal, the EPA solicited comment on these technologies. 84 FR 50260. We received some information, but we consider it speculative and lacking in specific examples, so that we do not have enough information to evaluate these technologies at this time, much less how these technologies could impact future analyses. In short, the potential for developing future technology that will distinguish between methane and VOC emissions does not change our conclusion that methane requirements at present are redundant. If such technology does develop, the EPA could consider whether to revisit the issue of regulation of methane. By the same token, it is speculative that the 8-year review would result in different levels of controls if EPA were to consider methane emissions and requirements, along with VOC emissions and requirements. In any event, commenters on that review could raise the issue of whether methane should be controlled and whether doing so would result in more stringent VOC controls. With respect to the comment that some natural gas produced has little or no VOC content, the detection of a leak using OGI equipment is not dependent on the relative concentrations of VOC or methane, so that leaks of even low VOC gases would still be identified and required to be repaired. As discussed above, how the emergence of technology in the future could impact the requirements to detect and repair leaks is speculative at this point in time.

The EPA does not agree with the commenter that this action signals a reduction in the prioritization of the reduction in methane. As explained in section V.B.4 of this preamble and above in this section, the methane and VOC requirements are redundant, and the rescission of the methane requirements will streamline the regulation without impacting the methane reductions. With regard to discouraging the development of the best available controls for methane, future evaluations of BSER will continue to recognize the nationwide profile of natural gas, which includes VOC and methane. Therefore, improvements for the control of methane will be considered, as they also will represent improvements for VOC reductions.

Comment: One commenter expresses concern that although methane reductions would still occur even after the EPA rescinds the methane NSPS, the EPA has recently indicated its view that that reductions of co-emitted (but formally unregulated) pollutants should not factor into a benefits analysis in the same manner as those pollutants that are directly regulated. The commenter contends that, under this view, removing methane as a regulated pollutant could result in the Agency disregarding the benefits of methane emission reductions, which the EPA states are the only pollution reduction benefits from the oil and natural gas sector that the EPA can monetize (citing 81 FR 35827, June 3, 2016).

Response: The EPA maintains, as it did at proposal (84 FR 50278), that because the methane control options are redundant with VOC control options in the NSPS subpart OOOOa rule, there are no expected emission impacts or environmental disbenefits from rescinding the methane requirement for the production and processing segments. The EPA has made control decisions on the basis of the cost-effectiveness of the controls, for which monetization of health and environmental impacts other than emission reductions is not necessary. The decision whether to quantify and monetize health and environmental impacts is based upon technical judgments made within the context of developing RIAs which are written to satisfy Executive Order 12866 requirements. The EPA recognizes that in the current previous Oil and Natural Gas NSPS RIAs, the Agency has not quantified the benefits of reductions in emissions other than methane (except for quantifying the amounts of emissions reduced). These RIAs also explained these technical decisions. However, these choices have not influenced the choice of what pollutants to regulate, or the stringency of the standards promulgated, in the Oil and Natural Gas NSPS rulemakings.[71]

Comment: Several commenters state that the EPA fails to identify any way in which the alleged redundancy is problematic. The commenter notes that, while agencies may reconsider and revise their policies, before doing so they must demonstrate ''that the new policy is permissible under the statute, [and] that there are good reasons for it,'' taking into account the record of the previous rule (citing *Fox Television,* 556 U.S. at 515–16). The commenter states

[71] It should be noted that in its recently promulgated rule, ''National Emission Standards for Hazardous Air Pollutants: Coal- and Oil-Fired Electric Utility Steam Generating Units—Reconsideration of Supplemental Finding and Residual Risk and Technology Review'' (signed by the Administrator on April 16, 2020), *https://www.epa.gov/sites/production/files/2020-04/documents/frn_mats_finding_and_rtr_2060-at99_final_rule.pdf,* the EPA based its regulatory decision primarily on the amounts and costs of reductions of the regulated pollutant, but stated that it may continue to consider the co-benefits of reductions in other pollutants, as long as doing so is consistent with the applicable CAA provisions.

that the EPA has failed to provide any ''good reasons'' for why the alleged redundancy between methane and VOC requirements justifies the removal of methane requirements. The commenter explains that the EPA states in the 2019 Proposal that there are ''no expected cost . . . effects from removing the methane requirements . . .'' (citing 84 FR 50247). The commenter states that the EPA characterizes removal of methane requirements as ''less disruptive'' than removal of VOC requirements (citing 84 FR 50260), but does not explain why it is taking any ''disruptive'' action at all, especially since the 2016 Rule has been in full effect and successfully implemented for over 3 years.

Response: The fact that the air pollution controls implemented by sources in the Crude Oil and Natural Gas Production source category to comply with the VOC NSPS reduce methane emissions along with VOC emissions means that the legal requirement to control methane—that is, the methane NSPS—is redundant to the VOC requirement, and, therefore, is unnecessary. The fact that the methane NSPS does not provide benefits—it does not reduce emissions beyond what would otherwise occur—means that the EPA erred in the 2016 Rule when it determined that it had a rational basis to promulgate the methane NSPS, which is sufficient justification to rescind that regulation. As discussed elsewhere, as a predicate for promulgating NSPS for methane, the EPA was required to, and failed, to make a SCF for methane emissions from the appropriately constituted source category.

Comment: One commenter states that the EPA's true rationale for rescinding the methane NSPS is to prevent regulation of existing sources under CAA section 111(d). The commenter notes that the courts have held that administrative agencies must identify their actual reasons for policy choices, that an agency's decision may be arbitrary or pretextual if there is a substantial mismatch between the action and the rationale, and that the courts will compare the evidence for the Agency's decision with the stated explanation to discern whether such a mismatch is present (citing *Dep't of Commerce* v. *New York,* 139 S.Ct. 2551, 2575 (2019)). Noting that CAA section 111(d) imposes, as a precondition to regulation of GHG from existing sources, promulgation of NSPS for GHG under CAA section 111(b), the commenter asserts that in this case, the Agency's true rationale for rescinding the methane NSPS is to prevent regulation of methane emissions from existing oil and natural gas sources under CAA section 111(d). The commenter reviews email communications between oil and natural gas industry officials and EPA (including transition team) officials related to the Agency's decision in early 2017 to rescind the Information Collection Request (ICR) under CAA section 114 for information from existing oil and natural gas sources concerning their methane emissions, coupled with the rescission of that ICR, as evidence of what the commenter considers to be the Agency's true rationale. The commenter asserts that the Agency's stated rationale of redundancy is arbitrary and pretextual.

Response: The EPA disagrees with the commenter. The EPA's reasons for rescinding the methane NSPS are as stated in the 2019 NSPS subparts OOOO and OOOOa proposal, this preamble, and the accompanying documents: The methane NSPS is redundant to the VOC NSPS and does not achieve additional reductions. In other sections of this preamble and the supporting documents, the EPA elaborates upon this rationale and relies on it in responding to adverse comments. The Agency justified its rescission of the ICR in the rulemaking action in which it did so, and that action is separate from this rulemaking.

Comment: Several commenters address the issue of which set of NSPS to retain, methane or VOC. One commenter notes that by keeping the focus on VOC, the EPA ensures that storage tanks, which represent an important source of emissions in the production, gathering and boosting, and processing segments, remain regulated, whereas storage vessels would not be regulated under a methane-only rule. The commenter adds that the EPA data supporting NSPS subpart OOOO shows that, aside from completion activities, estimated VOC reductions from storage vessels represent the largest source of VOC reductions. *See* Regulatory Impact Analysis, April 2012 at Table 3–4. *See* 2019 Proposal, 50260 (''Some sources, such as storage vessels, are subject only to VOC requirements and not methane requirements.''). Other commenters asserted that, if redundancy is the concern for the EPA, the Agency should make methane the key pollutant and remove VOC from the requirements because this will allow for the regulation of existing sources of methane and VOC, and thereby result in reduced environmental, social, and health impacts from both pollutants.

Response: As noted in section V.B above, the EPA is rescinding the methane NSPS and retaining the VOC NSPS, rather than vice versa, because rescinding the latter would affect more facilities, and affect facilities that had been regulated for a longer period. The EPA does not agree that the methane standards should be retained instead of the VOC standards in order to retain the trigger of the CAA section 111(d) requirement to develop standards for existing sources standards. The purpose of the NSPS is to reduce emissions from new sources; as a result, the decision of which NSPS to retain should not turn on the impact on existing sources.

IX. Summary of Significant Comments and Responses on Significant Contribution Finding for Methane

This section summarizes and responds to comments on the 2019 Proposal's solicitation of comment on whether the EPA is required to make, or is authorized to make, a SCF for methane emissions from the Oil and Natural Gas Production source category as a predicate for promulgating methane NSPS.

A. Requirement for Pollutant-Specific Significant Contribution Finding

1. Promulgation of NSPS for Pollutants That the EPA Did Not Evaluate When It Listed the Source Category

Comment: Some commenters assert that CAA section 111 cannot be interpreted to authorize the EPA to promulgate NSPS for air pollutants that were not the subject of the EPA's initial determination that the source category causes or significantly contributes to dangerous air pollution. Commenters argue that in determining which pollutants the EPA should regulate from a source category under CAA section 111(b), it is reasonable to conclude that it should be limited to the pollutants that justified listing that source category for regulation in the first place. Commenters add that this interpretation provides for consistency in applying CAA section 111 across all air pollutants, that is, the EPA regulates air pollutants that it considered when it made a SCF determination for the source category, as well as air pollutants that it regulates subsequently, as long as it makes a similar SCF determination for those subsequently regulated air pollutants. A commenter adds that this approach makes sense because, to list the source category, the Agency must engage in some level of analysis to understand the nature of the emissions from that category; and that the Agency should apply the same analysis to air pollutants that it subsequently seeks to regulate. Numerous commenters state that it is anomalous for the EPA to attempt to regulate methane, as of 2016, based on a SCF determination the EPA made in 1977 and 1978, when methane was not even a regulated pollutant under the CAA.

Other commenters take the opposite view. One asserts that CAA section 111(b)(1) affords the EPA broad discretion to determine which pollutants and sources to regulate and allows the EPA to revise the NSPS to include pollutants or emission sources that were not currently regulated for a particular source category. Other commenters assert that, if the Agency failed to regulate a pollutant emitted from a listed category when it first issued standards for the source category, it must do so in a later rulemaking to achieve the purposes of the CAA, within the limitations set forth in CAA section 111. One commenter argues that CAA section 111(b)(1)(A)'s statutory factors for listing a source category provide a floor according to which the EPA must regulate a particular pollutant from that category, regardless of whether the pollutant is addressed in the initial listing decision.

Response: The EPA agrees that it promotes consistent treatment of all air pollutants subject to the NSPS to require a pollutant-specific SCF as a predicate for regulating a pollutant that the Agency did not consider at the time it made the SCF for the source category and promulgated the initial NSPS. The EPA further agrees that it is anomalous for the Agency to newly regulate an air pollutant, like methane, long after listing the source category on the basis of other pollutants, unless the Agency makes a determination concerning that pollutant that is comparable to the determination that it made when it listed the source category. These considerations support the Agency's interpretation, described in section VI above, that the Agency's authority to promulgate standards of performance for particular air pollutants under CAA section 111(b)(1)(B), along with the definition of ''standard of performance'' under CAA section 111(a)(1), must be interpreted within the context of the finding the Agency makes concerning the source category's contribution to dangerous air pollution under CAA section 111(b)(1)(A). For the same reasons, the Agency disagrees with commenters who assert that listing the source category is a sufficient predicate for subsequent regulation of air pollutants that the Agency did not address in that listing or in promulgating the initial set of standards of performance.

2. Congressional Intent

Comment: The EPA noted in the 2019 Proposal that during the 1977 CAA Amendments, the House-Senate Conference Committee Report described the revisions made to the SCF and endangerment requirements in CAA section 111 and other provisions as follows:

> Provides a uniform standard of proof for EPA regulation of air pollutants which applies to the setting of . . . criteria for national ambient air quality standards under Section 108; . . . new stationary source performance standards under Section 111; . . . new auto emission standards under Section 202; . . . regulations of fuels and fuel additives under Section 211; aircraft emission standards under Section 231.
>
> *In all future rulemaking in these areas, the Administrator could regulate any air pollutant from those sources, the emissions of which ''in his judgment cause or contribute to air pollution which may reasonably be anticipated to endanger public health or welfare.''*

H.R. Rep. No. 95–564, at 183–84 (1977) (emphasis added) (cited in 84 FR 50264). The EPA stated in the 2019 Proposal that the emphasized language is evidence that Congress intended to require the EPA (or understood that the EPA had always been required), in promulgating a pollutant-specific NSPS under CAA section 111, to make a pollutant-specific finding, as the EPA does under the other provisions mentioned in the Conference Report. *Id.* at 50264–65.

The 2019 Proposal added that the House Committee Report for the 1977 CAA Amendments included a similar statement in describing one of its purposes for rephrasing the various endangerment finding provisions: ''To provide the same standard of proof for *regulation of any air pollutant, whether that pollutant comes from stationary or mobile sources, or both,* and to make the vehicle and fuel industries equally responsible for cleaning up vehicle exhaust emissions.'' H.R. Rep. No. 94–1175, at 33 (1976) (emphasis added) (cited in *Id.* at 50265). The EPA added that the emphasized phrase could suggest that the House Committee drafters understood the SCF provision in CAA section 111(b)(1)(A) to concern the particular air pollutant subject to the NSPS, like other analogous provisions. *Id.*

Commenters offered competing interpretations of these statements in the 1977 legislative history. Some commenters agreed with the EPA's discussion, noted above. Other commenters, however, state that those Committee Report statements do not support interpreting CAA section 111 to require a pollutant-specific SCF. They assert that the 2019 Proposal was incorrect in suggesting that the 1977 CAA Amendments imposed uniform requirements on the several CAA provisions calling for contribution and endangerment determinations; rather, the commenters noted, the precise terms Congress adopted varied for each of those provisions, the terms function differently for each of the provisions, and the language in the Conference Report was a paraphrase of those provisions. For example, one commenter noted, the statement in the Conference Report does not describe how the cause-or-contribute phrase that appears in section 108 works. The commenter explained that this phrase relates not the to ''the Administrator['s] . . . regulat[ion] [of an] air pollutant from [a] source[ ],'' but instead to the Administrator's decision as to which emissions to include on the list of NAAQS pollutants. The commenter states that the NAAQS program is an area-specific program, not a source-specific one, and it grants states, not the Administrator, the primary authority to directly control emissions to achieve the NAAQS. Other commenters state that the purpose of this language in the Conference Report was to explain that Congress revised the various SCF and endangerment provisions to assure that they were each precautionary, not to assure that they each required a pollutant-specific SCF. Another commenter notes that these revisions to the SCF and endangerment provisions were made to CAA section 111(b)(1)(A), which covers source category listings, but not to CAA section 111(b)(1)(B), which requires the EPA to promulgate standards of performance. The commenter asserts that, if Congress had wanted to make clear that the EPA may not issue standards under CAA section 111(b)(1)(B) unless it had made a pollutant-specific SCF, it could have achieved that result by amending CAA section 111(b)(1)(B) in addition to CAA section 111(b)(1)(A), but it chose not to do so. The commenter asserts that ''[w]hen Congress amends one statutory provision but not another, it is presumed to have acted intentionally'' (citing *Gross* v. *FBL Fin. Servs., Inc.,* 557 U.S. 167, 174 (2009)). Other commenters contend that the Conference Report is at best ambiguous as to whether the source or the air pollutant must be the focus of the ''cause or contribute'' finding, and, in any event, cannot overcome what they describe as the plain meaning of the statute.

Response: We appreciate the different perspectives that commenters provide on the above-quoted statements in the legislative history. Because these statements explicitly describe CAA section 111, along with other CAA provisions, as requiring a pollutant-specific SCF, we think that they can fairly be read to indicate that interpreting CAA section 111 to require, or at least authorize the Administrator to require, a pollutant-specific SCF is consistent with Congressional intent. It was not necessary for Congress to amend CAA section 111(b)(1)(B) explicitly to require a pollutant-specific SCF because its provisions, read in context, already required, or at least authorized the EPA to require, that SCF. None of the commenters point to anything in the legislative history that indicates Congress did not intend to require a pollutant-specific SCF under CAA section 111.

3. Comparison With Other CAA Provisions That Generally Include a Cause or Contribute Finding on a Pollutant-Specific Basis

In the 2019 Proposal, the EPA noted that when Congress enacted CAA section 111 as part of the 1970 CAA Amendments, Congress also enacted several other provisions that required the EPA to promulgate regulations for certain pollutants or certain sources, and that in each of these provisions, Congress required the EPA to make an endangerment or cause or contribute finding, and, further, required the EPA to make the relevant finding on a pollutant-specific basis. The EPA solicited comment on the relevance of whether any of these other provisions for whether CAA section 111 could be interpreted to require, or at least authorize, a pollutant-specific SCF. 84 FR 50263 and 64, 50265 n.74 (discussing, among others, CAA sections 108(a)(1)(A) and (B), 115(a), 202(a)(1), 211(c)(1), 231(a)(2)).

Comment: Some commenters stated that interpreting CAA section 111 to not require a pollutant-specific SCF renders that section anomalous compared with other CAA provisions that premise the EPA's regulatory authority on a pollutant-specific ''cause or contribute'' finding. One commenter suggests that the primary difference between CAA section 111(b) and certain other CAA provisions is that CAA section 111(b) requires that the source category cause or contribute ''significantly'' to air pollution endangering public health or welfare. The commenter states that this implies that the EPA should face a higher burden to justify regulating each specific pollutant under CAA section 111, not a lower burden that allows the EPA to regulate every pollutant from the source category so long as just one meets the statutory criteria.

Other commenters take the opposite position. They assert that the requirements for pollutant-specific cause-or-contribute findings under other CAA sections shows that Congress knew how to require pollutant-specific findings when it intended to do so, and it evidently did not intend to do so under CAA section 111. Another commenter adds that Congress clearly chose to use different phrasing in different sections because it amended all these provisions at the same time in the same section of the 1977 CAA Amendments. From this, the commenter infers that Congress chose to use different phrasing in CAA section 111 than in the other provisions.

One commenter distinguishes CAA section 111 from other CAA provisions that the EPA cited because the latter provisions identify the particular category or class of sources as requiring regulation, and the EPA proceeds to regulate particular pollutants from those sources that it determines cause or contribute to dangerous air pollution. The commenter states that these provisions include CAA section 183(f)(1)(A) (addressing standards applicable to the loading and unloading of tank vessels) and CAA section 213(a)(1) through (4) (governing emission standards for new nonroad engines and vehicles). In contrast, the commenter explains, CAA section 111 does not pre-define any source category for regulation, but instead directs the EPA to fulfill this obligation. The commenter asserts that it is implausible that Congress would rest on any implication from CAA section 111(b) that the EPA must make an additional SCF for each pollutant regulated. The commenter adds that Congress knew how to provide for such an additional finding because CAA section 213(a)(4) requires one for an air pollution problem that (1) emissions from new nonroad engines or vehicles contribute significantly to and (2) emissions from classes or categories of new nonroad engines or vehicles cause or contribute to.

The commenter also identifies another distinction between CAA section 111 and some of the other provisions the EPA cites, which is that the latter address a specific kind or sub-class of pollutants. For example, according to the commenter, CAA sections 108(a)(1)(A) and (B) charges the Administrator with determining which emissions should be classified as criteria pollutants subject to the NAAQS because they contribute to dangerous air pollution and are emitted by numerous diverse mobile or stationary sources, and CAA section 115(a) concerns specific instances in which a pollutant or pollutants that originated in the U.S. cross an international border and endanger public health or welfare in a foreign country. The commenter suggests that a pollutant-specific contribution finding is sensible for these programs: The Agency's task is to identify all the air pollutants that contribute to an air pollution problem in order to determine whether they should qualify as NAAQS pollutants or whether they are harming public health or welfare in another country. The commenter states that this approach is distinct from CAA section 111, which is oriented toward source categories and requires them to achieve an emission limitation that reflects deployment of the BSER for dangerous pollutants, and which does not focus on or even reference any particular type or sub-class of pollutants.

Response: The EPA appreciates the commenters' perspectives on whether the other provisions in the CAA that explicitly require a pollutant-specific contribution finding suggest that Congress did or did not intend that CAA section 111 do so as well. For the reasons described in section VI above, by their terms, CAA section 111(b)(1)(B), in conjunction with CAA section 111(a)(1), and in the context of CAA section 111(b)(1)(A), requires, or at least authorizes the EPA to require, a pollutant-specific SCF as a predicate to promulgating a NSPS for that pollutant, notwithstanding the fact that Congress did not explicitly require such a determination in CAA section 111(b)(1)(B). We believe that this interpretation is consistent with the fact that Congress included requirements for a pollutant-specific cause-or-contribute finding in other CAA provisions. It is true, as the EPA recognized in the 2019 Proposal, 84 FR 50264, and as commenters noted, these other provisions differ from CAA section 111(b) in certain respects, but they differ from each other as well. For example, in CAA sections 213(a)(2), (3), and (4), Congress required a two-step determination, unlike in other provisions. In addition, the fact that CAA section 111 delegates to the EPA the task of identifying the source category for regulation, whereas other provisions themselves identify the source category, explains why it is necessary for the EPA to make a SCF for the source category (it is to assure that the source category merits regulation), but does not provide a compelling reason why the EPA should not also, when it subsequently promulgates a NSPS for a particular pollutant, make a SCF for that pollutant. The important point from comparing these various provisions is that Congress recognized the utility of a pollutant-specific cause-or-contribute finding in a range of circumstances, including a range of regulatory schemes for a range of industries that emit a range of air pollutants that affect a range of geographic areas (including other nations, under CAA section 115). That supports interpreting CAA section 111 to include a pollutant-specific finding as well.

Comment: A commenter asserts that a two-step process in which the EPA makes a SCF for the source category and then for the particular pollutant is anomalous since the other provisions the EPA cites involve only a one-step process. The commenter adds that the two-step process is anomalous because the first step—listing the source category on grounds that it contributes significantly to dangerous air pollution—becomes unnecessary if the EPA must also determine that particular pollutants contribute significantly to dangerous air pollution. The commenter further suggests that a two-step scheme creates two additional anomalies: (1) The EPA might determine that emissions from a source category significantly contribute, but might not be able to determine that any individual air pollutant significantly contributes, and, therefore, might not be able to regulate at all; and (2) the EPA might determine that emissions from a source category significantly contributes, but might be able to regulate only an insignificant portion of those emissions. Another commenter asserts that the other provisions require only a cause-or-contribute finding, not a cause-or-contribute significantly finding, which casts doubt on the EPA's interpretation that CAA section 111(b) requires the latter type of finding.

Response: As noted above, CAA sections 213(a)(2), (3), and (4) impose a two-step process. The commenter's claimed anomalies may be theoretically possible but are highly unlikely to actually occur. The source categories that the EPA lists under CAA section 111(b)(1)(A) are industrial sources that the EPA has determined contribute significantly to dangerous air pollution and that typically emit more than one air pollutant; it is highly unlikely that none of such a category's air pollutants, or only a minor portion of its pollutants, would contribute significantly to dangerous air pollution, and the commenter does not claim that either of those situations is true of any of the some 76 source categories that the EPA has listed. As noted below, the rational-basis approach creates its own set of anomalies. Contrary to the commenter's views, a two-step process under CAA section 111(b)(1), under which the EPA makes a SCF for the source category and a SCF for the particular air pollutants, does not render the first step unnecessary. As the EPA explained in section VI above, the EPA has generally evaluated the contributions of the source category and the air pollutants it emits at the same time, and it has generally relied on data concerning the individual air pollutants to make the SCF for the source category. As a practical matter, then, the EPA generally would need to make a SCF for an air pollutant separately from the SCF for the source category only when the EPA seeks to promulgate a NSPS for an air pollutant that the EPA did not consider when it listed the source category. It is true, as the commenter noted, that the other provisions cited by the EPA in the 2019 Proposal and discussed by the commenters require a pollutant-specific cause-or-contribute finding, and not a SCF, but interpreting CAA section 111(b)(1)(B) to require, or at least authorize the EPA to require, a SCF is consistent with the requirement for a SCF under CAA section 111(b)(1)(A). Section 111(b)(1)(B) of the CAA is not unique in this regard—in the 1990 CAA Amendments, Congress revised the Good Neighbor Provision, CAA section 110(a)(2)(D)(i)(I), to require that SIPs prohibit sources from emitting air pollutants in amounts that will "contribute significantly" to nonattainment downwind.

4. Rational Basis Approach

Comment: Numerous commenters agree with, and elaborate on, the concerns that the EPA expressed in the 2019 Proposal about the rational basis approach (discussed in section VI of this preamble). Some note that the approach is not tied to any language in the CAA, is not based on any statutory criteria, and, thus, is largely undefined. They state that it does not meaningfully limit the EPA's authority and, therefore, injects confusion into the regulatory process. One commenter asserts that it makes no sense to regulate unless there is assurance that the regulation will produce the desired benefits, which may be accomplished only by analyzing emissions on a pollutant-specific basis. Other commenters add that the rational basis standard allows the EPA to rely on a SCF made for a source category decades ago for a different pollutant in order to justify regulating any pollutant from the category—even pollutants that do not cause or significantly contribute to endangerment. Many commenters assert that, without a pollutant-specific SCF, the EPA would have unfettered discretion to add pollutants no matter how minimal the contribution or how benign the impacts to public health and welfare, and that this could result in potentially costly, disruptive, and inefficient regulations on an industry. Another commenter points to anomalies that could result from the rational basis approach: (1) The approach could lead to a case where the EPA would be free to regulate all pollutants from a source category, even though only one of the pollutants was found to contribute to endangerment; and (2) it could result in disparate treatment of similarly emitting source categories: For example, Source Categories 1 and 2 may both emit Pollutant A in equal amounts that do not significantly contribute to endangerment, while Source Category 1 also emits Pollutant B in an amount that does significantly contribute to endangerment. The commenter states that, under the rational basis approach, the EPA would have the authority to list Source Category 1 and regulate emissions of Pollutant A from it, but would not have the authority to list Source Category 2, and, therefore, would not be able to regulate emissions of Pollutant A from it, even though each Source Category's emissions of Pollutant A present identically insignificant risks. The commenter contends that requiring a SCF for each pollutant would prevent these anomalies. In contrast to the vague rational basis standard, other commenters state, CAA section 111(b) provides clear criteria for whether the EPA is authorized to regulate a source's emissions of a pollutant: The endangerment and SCF determinations for listing a source category. Other commenters add that CAA section 111(b) established this rigorous finding as necessary to justify the EPA's authority to promulgate nationwide standards, and that only a pollutant-specific SCF, not a rational basis standard, would maintain that rigorous approach.

Other commenters assert that the requirement of a rational basis standard is appropriate. They note that the standard is equivalent to the "arbitrary and capricious" standard. They state that CAA section 111(b)(1)(A), by its terms, applies the endangerment and SCF findings to the source category as a whole, and not to each newly-regulated pollutant emitted from a previously-listed source category, and that, given that many decisions delegated to the EPA are governed by a default rational basis standard, it is reasonable to conclude that Congress could have intended that standard to govern the regulation of subsequent pollutants from previously-listed sources in the absence of any other prescription for how the EPA is to make the decision. Commenters further state that the arbitrary and capricious standard is not undefined. Rather, one commenter says, the Supreme Court, in defining ''[t]he scope of review under the 'arbitrary and capricious' standard,'' has explained that ''the agency must examine the relevant data and articulate a satisfactory explanation for its action including a rational connection between the facts found and the choice made'' (citing *Motor Vehicle Mfrs. Ass'n of U.S., Inc.* v. *State Farm Mut. Auto. Ins. Co.,* 463 U.S. 29, 42–43 (1983)). The commenter adds that the Court affirmed that it ''may not set aside an agency rule that is rational, based on consideration of the relevant factors and within the scope of the authority delegated to the agency by the statute.'' [72] The commenter adds that this standard applies whether or not Congress has expressly specified the criteria relevant to the Agency's decision. A commenter further notes that under the ''arbitrary and capricious'' standard, the Court has identified certain factors that the EPA must consider in promulgating emission standards under CAA section 111(b) (citing *Sierra Club* v. *Costle,* 657 F.2d 298, 326 (D.C. Cir. 1981). A commenter adds that the Court remanded the Lime Kiln NSPS under the ''arbitrary and capricious'' standard, and quoted from the legislative history of the 1977 Amendments, which indicated Congress's intent that the arbitrary and capricious standard to have teeth: ''With respect to the 'arbitrary and capricious' scope of review retained in these amendments, the conferees intend that the courts continue their thorough, comprehensive review which has characterized judicial proceedings under the CAA thus far'' (citing *Nat'l Lime Ass'n* v. *EPA,* 627 F.2d 416, 452 (D.C. Cir. 1980) (quoting H.R. Conf. Rep. No. 564, 95th Cong., 1st Sess. 178 (1977))). The commenters contend that, under the arbitrary and capricious standard, an EPA decision to promulgate a standard of performance for a benign or harmless substance would fail.

Response: In the 2019 Proposal, the EPA acknowledged that the rational basis test ''offers some protection against arbitrary or capricious decisions by the EPA.'' 84 FR 50263. However, CAA section 111 includes no explicit criteria to guide the application of such a test, and in the times that the EPA has used the test, the EPA has not attempted to articulate criteria or metrics to guide it, and rather, has relied on facts and circumstances. In those respects, the rational basis test is largely (or wholly) undefined and could potentially incorporate a wide range of considerations and lead to inconsistent results. This creates uncertainty for the regulated industry and other stakeholders over whether particular additional pollutants will be regulated or not. The EPA has concluded that the standard is not appropriate for determining the air pollutants for which it will promulgate standards of performance under CAA section 111(b)(1)(B) because of statutory context: CAA section 111(b)(1)(A) makes clear that before the EPA may regulate any air pollutants from major new sources, it must determine that the source category whose sources emit the air pollutants cause or contribute significantly to dangerous air pollution. This is a rigorous predicate for regulation. It is not consonant with this rigorous predicate for the Agency to proceed to regulate the individual air pollutants based only on a rational basis determination. Rather, requiring the Agency to make a SCF determination is consistent with CAA section 111(b)(1)(A). In addition, the SCF determination is better defined because it is focused directly on the extent of the air pollutant's impact on dangerous air pollution, and it provides a metric for assessing that extent: The air pollutant causes or contributes significantly to that air pollution. These metrics more clearly cabin the EPA's discretion.

5. Impacts on the CAA Section 111 Program if a Pollutant-Specific SCF Is Needed

Comment: Commenters state that for more than 4 decades the EPA has interpreted CAA section 111(b)(1) to require a SCF as a prerequisite only for the initial listing of a source category. Commenters contend that, if the EPA now contradicts its past practice and interpretation and undermines or repeals what they describe as the dozens of NSPS it has issued during that time, entities that are subject to new and existing source performance standards under CAA section 111, as well as for the states and local agencies that implement those standards, and other stakeholders, will face regulatory uncertainty and harm to their reliance interests. Commenters add that the EPA's reversal of precedent would also call into question the validity of state implementation plans that were based in part on the continued existence of regulation under CAA section 111(b), as well as the validity of state and Federal plans based on CAA section 111(d) guidelines, and conclude that health and welfare will suffer. Commenters express concern that the EPA fails to provide an analysis of the potential impacts on the overall CAA section 111 program if a pollutant-specific SCF is needed. Commenters assert the EPA should not alter what they describe as the EPA's longstanding interpretation that a pollutant-specific SCF is not needed without first completing a full analysis of impacts such a change would have on existing CAA section 111 rules and soliciting further public participation through a separate notice-and-comment rulemaking process. One commenter contends that, even if the EPA begins requiring a pollutant specific contribution finding, this should not affect the validity of previously, lawfully issued NSPS and CAA section 111(d) guidelines and state plans.

Response: The EPA has listed some 76 source categories and promulgated over 100 standards of performance for them. In the vast majority of cases, the EPA identified the pollutants of concern at the time that it listed the source category or when it promulgated the initial set of standards of performance contemporaneously with the listing or shortly thereafter. It is only in recent rulemakings concerning GHG that stakeholders have expressed concerns that the EPA had not considered GHG when listing the source category, and, thus, had not made determinations for GHG consistent with the determinations that the EPA made to justify regulation of other pollutants from the source categories. Accordingly, the EPA disagrees with commenters who are concerned that interpreting CAA section 111 to require a pollutant-specific SCF will undermine numerous NSPS, with adverse effects for other CAA control programs. In addition, the rational basis approach, under which the EPA promulgates a standard of performance for a pollutant upon determining that it has a rational basis for doing so, cannot be considered to be long-established. The EPA clearly articulated this standard for the first time to justify regulation of a previously unregulated

[72] By the same token, a commenter notes that the EPA explained the rational basis test in its response to comments on the 2016 Rule as follows: ''the EPA's use of the phrase 'rational basis' . . . explains how the agency's actions are supported by the record and is a reasonable exercise of the EPA's broad authority under section 111'' (citing the EPA's Response to Public Comments at 2–16, Docket ID Item No. EPA–HQ–OAR–2010–0505–7632 (May 2016).

air pollutant in the 2015 EGU GHG NSPS rule, and then again in the 2016 Rule. The EPA considers that the present rulemaking has provided a full opportunity for the public to respond to the solicitation of comment on the pollutant-specific SCF interpretation.

B. Significant Contribution Finding in 2016 Rule

1. 2016 SCF for Methane Emissions From the Oil and Natural Gas Source Category

Comment: Several commenters contend that oil and gas methane emissions are too small to be considered ''significant.'' These commenters cite as support that the contribution of oil and gas to total U.S. GHG emissions is only 3 percent, that U.S. methane emissions are only 7 percent of global methane emissions, that U.S. methane emissions are only 1 percent of global GHG emissions, and that estimated impacts of the 2016 Rule would be to reduce methane concentrations in 2100 by 0.12 percent and temperatures by less than a thousandth of a degree. Other commenters assert that, if a SCF for methane emissions from the Oil and Natural Gas source category were required under the statute, the EPA fully satisfied this obligation in the 2016 Rule. Several commenters assert that, even if the EPA eliminates the transmission and storage segment from the source category, the 2016 SCF remains appropriate and binding. A commenter notes in the 2019 Proposal the production and processing segments account for 1.8 percent of global methane and 0.3 percent of total global GHG and states this is equal to or greater than the total methane emissions from all but eight countries around the world. The commenter asserts that these totals are significant by any measure. One commenter states that because climate change is a global phenomenon, small percentage changes are relevant and addressing a large number of smaller sources will ultimately reduce the rate of climate change. The commenter adds that to solve a global problem, reductions of a fraction of a percent are substantial and important (citing 2016 Rule's Response to Comments Document, Docket ID Item No. EPA–HQ–OAR–2010–0505–7632). One commenter states that, if the production and processing segments were listed as an individual methane source, it would still be larger than every other source currently listed apart from enteric fermentation. One commenter notes that in light of methane's 20-year GWP of 87, methane from the domestic sources accounts for 9.3 percent of total U.S. GHG emissions and 1.2 percent of global GHG emissions. One commenter states that the transmission and storage segment emits 16.8 percent of the source category's total GHG emissions and it would be arbitrary and capricious for the EPA to undermine its 2016 SCF by removing from that source category facilities that emit only a minority of the pollutants.

Response: The EPA agrees with commenters that the 2016 Rule failed to provide a pollutant-specific SCF as a prerequisite to imposing NSPS regulations for methane emissions. The SCF determination made in the 2016 Rule was on the basis of methane emissions from the production, processing, transmission and storage segments. In this action, the EPA is removing the transmission and storage segment from the source category. The 2016 Rule did not assess whether methane emissions from the production and processing segments alone cause or contribute significantly to dangerous air pollution; thus, we find that the 2016 Rule's determination is not adequate. In addition, the EPA has yet to makes an appropriate determination that methane emissions from the Oil and Natural Gas Production source category cause or contribute significantly to dangerous air pollution. The EPA appreciates the commenters' views concerning the amounts and impacts of methane emissions from the transmission and storage segment, as well as the production and processing segments, but until the EPA itself reviews and assesses those amounts of emissions, it cannot make a determination as to whether methane emissions from the production and processing segments contribute significantly to dangerous air pollution.

2. Identification of the Standard for Determining Significance

Comment: Commenters responded to the EPA's solicitation of comment concerning whether, as a matter of law, under CAA section 111, the EPA is obligated to identify the standard by which it determines whether a source category's emissions contribute significantly, and whether, if not so obligated, the EPA nevertheless fails to engage in reasoned decision-making by not identifying that standard. Some commenters stated that the EPA must identify the standard by which it determines whether a source category's emissions ''contribute significantly.'' They asserted that, in order to not be arbitrary and capricious, an agency must articulate a reasonable explanation for the actions it takes, and that as a result, the EPA should establish what constitutes ''significant'' contribution for purposes of CAA section 111(b). They note that the EPA has done so for other programs that require a similar showing, such as CAA sections 110(a)(2)(D)(i), 189(e), and 213 (citing 76 FR 48208, 48236 and 37 (August 8, 2011) (Cross-State Air Pollution Rule)). Other commenters assert there is no indication that Congress intended that the EPA must establish such a standard before making a SCF and that the EPA has made SCFs for dozens of source categories over almost 50 years without having established such a standard. They added that in the past, the EPA has appropriately relied on a facts and circumstances analysis and that it would be irrational to adopt a standard or threshold because different air pollutants have different effects on health and/or welfare, as well as different geographic trajectories.

Response: The EPA appreciates these comments, as well as the additional ones noted in the Response to Comments Document. They will inform the Agency's future consideration of this issue. As explained above, the Agency has concluded that it must identify a standard for ''contribute significantly'' in order to make a SCF for a source category, to ensure not only that the public is on notice of the criteria that the Agency uses in making such determinations but also that the Agency itself is acting consistently in making such determinations. However, it is not necessary to resolve the specific content of this standard in this rulemaking because, as discussed above in section VI of this preamble, the EPA is rescinding the SCF for methane from the Oil and Natural Gas Production source category that the Agency made in the 2016 Rule, on the ground that the scope of the source category inappropriately included the transmission and storage segment.

C. Criteria for Making a Significant Contribution Finding Under CAA Section 111

Comment: Several commenters responded to the EPA's solicitation of comment regarding criteria for the EPA to consider in making a SCF. Some recommend that the EPA defer any action on SCF criteria and instead address this question in a future advance notice of proposed rulemaking, ICR, and/or proposed rulemaking. One commenter adds that deferring the issue would allow the EPA to focus on finalizing the core rulemaking and to streamline issues in any future legal challenge to a final rule. Some commenters discuss other contexts under the CAA in which the Agency has interpreted and applied similar language to governing the SCF determinations under CAA section 111(b)(1)(A). For example, these commenters discuss factors suggested by past EPA action under CAA sections 189(e) and 213(a)(2), (3), and (4). Some commenters suggest specific criteria that the EPA could consider, including, among others, consideration of the 1979 source category listing methodology, factors related to climate change, all factors relevant to a source category's contribution on a case-by-case basis, accumulation in the atmosphere of pollutants, projected future emissions, and consistency with the goal of protection of the Nation's air resources. We summarize these comments at greater length in the Response to Comments Document.

Response: The EPA acknowledges the commenters' statements. As pointed out in the proposal, the EPA does not intend for these comments to inform the finalization of this rule, but rather to inform the EPA's actions in future rules. Therefore, the EPA is not evaluating the merits of comments on these topics at this time. However, the Agency will look at the details provided in these comments when considering future action in making a SCF.

X. Summary of Significant Comments and Responses Concerning Implications for Regulation of Existing Sources

A. Existing Source Regulation Under CAA Section 111(d)

Comment: Several commenters agree with the statements in the 2019 Proposal that the EPA's rescission of the applicability of the NSPS to methane emissions for the sources in the Crude Oil and Natural Gas Production source category that are currently covered by the NSPS would have the consequence that the EPA would no longer be authorized to regulate existing sources of the same type in the source category under CAA section 111(d).

However, other commenters assert that the 2016 Rule regulation of methane from the oil and natural gas sector has already triggered a mandatory duty for the EPA to develop CAA section 111(d) EG for existing sources within that sector. They state that the EPA's 2009 endangerment finding for GHG emissions and its 2016 rational basis determination and pollutant-specific endangerment/SCF for methane emissions from the Oil and Natural Gas Production source category obligate the EPA to regulate such emissions not just from new sources under CAA section 111(b), but also from existing sources under CAA section 111(d).

Response: The EPA agrees that following promulgation of the methane NSPS in the 2016 Rule, the EPA was obligated to develop EG under CAA section 111(d) for existing sources of methane in the source category. However, that obligation ends with the rescission of those NSPS. Section 111(d)(1) of the CAA provides by its terms that the EPA is authorized to promulgate guidelines for regulation of any existing source ''to which a standard of performance under this section would apply if such existing source were a new source.'' Once the EPA has rescinded the methane NSPS, existing sources of methane would no longer be subject to such an NSPS if they were new sources. As a result, from the time of the rescission forward, the EPA would no longer have authority to promulgate guidelines to regulate those sources. Nothing in CAA section 111(d) indicates that once the EPA promulgates NSPS that trigger an obligation to regulate existing sources, that obligation remains in place even after the NSPS has been rescinded.

Comment: As discussed in the proposal preamble for this action, the EPA interprets CAA section 111(d) as not permitting a CAA section 111(d) existing source regulation to be developed as a result of the NSPS for VOC emissions from new sources in the Crude Oil and Natural Gas Production source category under CAA section 111(b). Specifically, the EPA stated that VOC do not qualify as the type of air pollutant that, if subjected to a standard of performance for new sources, would trigger the application of CAA section 111(d) the pollutants excluded from regulation under CAA section 111(d) include pollutants which have been included on the EPA's CAA section 108(a) list. VOC are not expressly listed on the EPA's CAA section 108(a) list, but they are precursors to ozone and PM, both of which are listed CAA section 108(a) pollutants. The definition of ''air pollutant'' in CAA section 302(g) expressly provides that the term ''air pollutant'' includes precursors to the formation of an air pollutant ''to the extent that the Administrator has identified such precursor or precursors for the particular purpose for which the term 'air pollutant' is used.'' Based on this ''particular purpose'' phrasing, it is appropriate to identify VOC as a listed CAA section 108(a) pollutant for the particular purpose of applying the CAA section 108(a) exclusion in CAA section 111(d) [hereinafter referred to as the EPA's ''VOC exclusion argument'']. 84 FR 50272. Comments provided on the proposal both agree and disagree with this interpretation. These comments are provided below.

Commenters that agree with the EPA's interpretation assert that the statute is clear that a source category cannot be subject to CAA section 111(d) emission standards for ''any pollutant . . . for which air quality criteria have . . . been issued or which is . . . included on a list published under'' CAA section 108(a). The commenters state that while VOC are not themselves directly on the list of criteria pollutants under CAA section 108, the EPA has designated them as precursors for ozone and PM, both of which are listed CAA section 108(a) criteria pollutants. The commenters add that the CAA defines ''air pollutant'' to include ''any precursors to the formation of any air pollutant, to the extent the Administrator has identified such precursor or precursors for the particular purpose for which the term 'air pollutant' is used,'' and because the ''particular purpose'' of the term ''air pollutant'' in CAA section 111(d) is to identify pollutants that are already subject to regulation under the NAAQS program, it is appropriate to conclude that VOC are one of the ''air pollutants'' covered by this exclusion.

Conversely, several other commenters disagree with the EPA's interpretation that CAA section 111(d) does not require that existing source regulation be developed as a result of the NSPS for VOC emissions from new sources in the Crude Oil and Natural Gas Production source category under CAA section 111(b). One commenter notes that the EPA first argues that VOC are ''regulated under the CAA's NAAQS/SIP program'' because they are precursors to listed pollutants ozone and PM, pointing to provisions of the CAA relating to requirements for ozone non-attainment areas that explicitly call for reductions in VOC emissions. The commenter asserts, however, that the statutory test for whether a pollutant is excluded is not whether it is ''regulated under'' CAA section 108 or CAA section 110, but rather the test is whether air quality criteria have been issued for the pollutant of concern, or the pollutant has been listed under CAA section 108. The commenter asserts that neither of these is true here for VOC, as the only pollutants for which air quality criteria have been issued or included on a list published under CAA section 108(a) are SO_2, PM_{10} and $PM_{2.5}$, CO, ozone, NO_X, and lead.

One commenter contends that the proposal VOC exclusion argument contradicts the Agency's own position in other regulations and notes that in 1996 the EPA finalized parallel rulemakings for new and existing municipal solid waste (MSW) landfills under CAA sections 111(b) and 111(d), respectively. The commenter states that pollutants deemed harmful to human health emitted from MSW landfills included methane, VOC, HAP, and odorous compounds, collectively termed ''landfill gas.'' The commenter notes that the EPA chose to use non-methane organic compounds (NMOC), which includes VOC, as a surrogate for landfill gas in its setting standards of performance and EG for new and existing MSW landfills under CAA sections 111(b) and 111(d). The EPA updated these regulations in 2016 (2016 Standard), with its new EG ''expected to significantly reduce emissions of LFG [landfill gas] and its components, which include methane, VOC, and hazardous air pollutants (HAP).'' The commenter states that the EPA noted that reducing methane had become more important since the prior 1996 rulemaking, which had focused on NMOC (including VOC) ''because NMOC contain[ed] the air pollutants that at that time were of most concern due to their adverse effects on public health and welfare.'' The commenter adds that, as such, the 2016 Standard was focused on ''reducing [both] the NMOC and methane components of LFG.'' The commenter provides that the EPA acknowledged VOC was a precursor to criteria pollutants $PM_{2.5}$ and ozone, but nowhere did the EPA make the argument the Agency now raises that VOC status as a precursor means that it is not subject to regulation under CAA section 111(d).

Response: First, with respect to the comment that the EPA has applied a ''regulated under CAA 108'' test rather than the ''listed under CAA 108'' test that is stated in the statute, this comment misstates the EPA's argument. The EPA's conclusion is that VOC are included within the CAA section 108(a) listings for ozone and $PM_{2.5}$ for the particular purpose of applying the CAA section 108(a) exclusion in CAA section 111(d). The ''regulated under CAA 108'' point is one of the reasons why the EPA has concluded that it is appropriate to consider VOC to be part of the CAA section 108(a) listings for ozone and PM 2.5 for this purpose—because VOC are regulated through the NAAQS implementation program, and thus there is no gap in the CAA regulation of VOC that needs to be covered by CAA 111(d) regulation. In other words, we are not concluding that VOC are excluded from CAA 111(d) regulation because they are regulated under the NAAQS implementation program. Instead, we are concluding that VOC are excluded from 111(d) regulation because they are part of the CAA 108(a) listings for ozone and $PM_{2.5}$ for the purpose of applying CAA section 111(d), and we reach that conclusion based in part on the fact that VOC are regulated through the NAAQS implementation program.

Second, the argument that EPA's regulation of municipal solid waste (MSW) landfill emissions (sometimes referred to as ''landfill gas'') under CAA 111(d) contradicts EPA's conclusion that VOC cannot be regulated under CAA 111(d), because MSW landfill emissions landfill includes VOC among its components, is incorrect. The EG and standards of performance for MSW landfills that were originally promulgated in subparts Cc and WWW of part 60 and subsequently in subparts Cf and XXX regulate only ''MSW landfill emissions,'' not the individual components of landfill gases. *See* 40 CFR 60.30c through 60.36c; 40 CFR 60.30f through 60.41f; 40 CFR 60.750 through 60.759, and 40 CFR 60.760 through 60.769. Both the regulatory text in these subparts and the EPA's preamble discussion explicitly address this issue and clarify that ''MSW landfill emissions'' is a single designated pollutant and the only pollutant subject to regulation by these subparts.

For example, the regulatory text of 40 CFR part 60, subpart Cc, clarified that it contains guidelines for the control of ''certain designated pollutants'' and identifies ''MSW landfill emissions'' as the pollutant to be controlled by the state plans. 40 CFR 60.30c and 60.33c(a). The same is true for 40 CFR part 60, subpart Cf. 40 CFR 60.30f (subpart establishes requirements for ''designated pollutants), 60.33f(a) (pollutant to be controlled is ''MSW landfill emissions''). Similarly, 40 CFR part 60, subparts WWW and XXX, require affected sources to collect and control landfill gases, and each defines ''MSW landfill emissions'' as ''gas generated by the decomposition of organic waste deposited in an MSW landfill or derived from the evolution of organic compounds in the waste.'' 40 CFR 60.751; 40 CFR 60.761. This definition in each subpart makes clear that the regulated pollutant is confined to emissions that originate from an MSW landfill.

Further, in proposing the MSW regulations in 1991, the EPA was explicit that it was regulating only MSW landfill emissions collectively, and not the individual components of those emissions. The EPA stated the following in the preamble to the proposed rule:

> The pollutant to be regulated under the proposed standards and guidelines is ''MSW landfill emissions.'' Municipal solid waste landfill emissions, also commonly referred to as ''landfill gas,'' is a collection of air pollutants, including methane and NMOC's [non-methane organic compounds], some of which are toxic. The composite pollutant is proposed to be regulated under section 111(b), for new facilities, and is proposed to be the designated pollutant under section 111(d), for existing facilities.

56 FR 24468, 24470 (May 30, 1991). In additional discussion, the EPA explained the following:

> The EPA views these emissions as a complex aggregate of pollutants which together pose a threat to public health and welfare based on the combined adverse effects of the various components. . . . [T]he exact composition of MSW landfill emissions can vary significantly from landfill to landfill and over time. Although the types of compounds are typically the same, the complex mixture cannot be characterized quantitatively in terms of single pollutants. The EPA thus views the complex air emission mixture from landfills to constitute a single designated pollutant.

Id. at 24474–24475. Thus, the argument that VOC or any other of the individual components of landfill gases are separately regulated under these provisions is incorrect and inconsistent with the regulatory text and record for these subparts.

Comment: The proposal preamble for this action cited CAA section 112(b)(2) and argued that the ''except'' phrasing of CAA section 112(b)(2) suggests that air pollutants which are ''listed under section 7408(a)'' can be read to include precursors to the pollutant that is listed under CAA section 108(a). The EPA provided that otherwise the pollutants that are described in the second part of the sentence (pollutants that meet the listing criteria and are precursors to a CAA section 108(a) pollutant) would not be an exception to the prohibition in the first part of the sentence. 84 FR 50272.

One commenter contends that the EPA's analogy to CAA section 112 to ostensibly demonstrate that Congress would have explicitly subjected precursors to regulation in CAA section 111(d) if it wanted to, because it did so in CAA section 112 is inapposite here. The commenter states that, first, as the EPA acknowledges, Congress provided a flexible definition of ''air pollutant'' depending on ''the particular purpose for which the term 'air pollutant' is used.'' The commenter states that the particular purpose for which the term ''air pollutant'' is used in CAA section 112 is quite different than in CAA section 111(d). The commenter notes that the relevant statutory provision in

CAA section 112 excludes from regulation as a HAP any ''air pollutant[s] listed under section [108(a)] . . . except that . . . precursor[s] to a pollutant which [are] listed under section [108(a)]'' can be regulated as a HAP. The commenter states that the EPA argues that to interpret the phrase ''air pollutant[s] listed under section [108(a)]'' as being exclusive of precursors would render meaningless the exception in CAA section 112(b)(2) for precursors. The commenter contends that it may be true in the context of CAA section 112, but it does not follow that the same interpretation applies in CAA section 111, which lacks such an express statutory exception.

Response: This commenter misunderstands the relevance of the text in CAA section 112(b)(2) in determining whether VOC are excluded from CAA section 111(d) regulation by the CAA section 108(a) exclusion. The EPA is not drawing an analogy to the outcome in CAA section 112(b)(2), which expressly removes precursors from the prohibition on the regulation under CAA section 112 of air pollutants listed under CAA section 108(a). The point here is that CAA section 112(b)(2) demonstrates that Congress understood that the phrase ''air pollutant listed under section 7408(a)'' could be read to encompass precursors. Moreover, in CAA section 112(b)(2) Congress included express language stating its choice: That regulation of precursors under CAA section 112 was not barred by the prohibition on regulating pollutants listed under CAA section 108(a). In CAA section 111(d), however, Congress did not state a choice; it stated an exclusion for pollutants listed under CAA section 108(a) without specifying whether that exclusion extended to precursors. This ambiguity, combined with the CAA section 302(g) definition of ''air pollutant'' that expressly gives the EPA the discretion to determine whether precursors are to be considered part of ''air pollutant'' on a case-by-case basis for each ''particular purpose for which the term 'air pollutant' is used,'' means that the EPA has to apply its expertise in administering the CAA program to determine whether the air pollutants excluded from CAA section 111(d) regulation by the CAA section 108(a) exclusion covers precursors. For all of the reasons discussed, the EPA has reasonably concluded that precursors are excluded by the CAA section 108(a) exclusion.

Comment: The proposal preamble for this action stated that ''CAA section 111(d) is properly understood as a 'gap-filling' measure to address pollutants that are not addressed under either the NAAQS/SIP provisions in CAA sections 108–110 or the HAP provisions in CAA section 112. Because VOC are regulated as precursors to ozone and $PM_{2.5}$ under CAA sections 108–110, they are properly excluded from regulation under CAA section 111(d) because the ''gap-filling'' function of CAA section 111(d) is not needed.'' 84 FR 50272. Some commenters agreed with the EPA's interpretation that CAA ''section 111(d) is properly understood as a 'gap filling' measure to address pollutants that are not addressed under either the NAAQS [SIP] provisions in CAA sections 108–110 or the [HAP] provisions in CAA section 112.'' These commenters generally note that regulation of existing sources under CAA section 111(d) is very rare and that the provision has been used only a handful of times, in part because it can only be triggered by a handful of pollutants and that Congress' inclusion of CAA section 111(d) can only be viewed as a safety valve for a limited number of circumstances. One commenter concludes that because VOC emissions are regulated under CAA section 108 and related statutory provisions as part of the NAAQS implementation program, they do not fall into this ''gap'' and cannot be regulated under CAA section 111(d).

Conversely, other commenters assert that the EPA's proposal preamble discussion regarding CAA section 111(d) as a gap-filling measure does not support the EPA's claim that Congress intentionally chose to exclude criteria pollutant precursors from regulation under CAA section 111(d) and that the ramifications of such an interpretation would be enormous.

The commenter states that the EPA makes a structural argument that excluding VOC from regulation under CAA section 111(d) makes sense with respect to that section's ''gap-filling'' role, since VOC are already ''regulated as pre-cursors under CAA sections 108–110'' and, thus, there is no gap to be filled. However, the commenter believes that this argument ignores the legislative history of CAA section 111(d). The commenter asserts that CAA section 111(d) began as a Senate proposal with an explicit list of pollutants to be regulated, and that ultimately, this explicit list was replaced with gradually broader phrasing until the language we see today was included in the 1970 CAA Amendments. The commenter adds that the legislative history reflects Congress' intent to give the EPA the flexibility to regulate a broad range of pollutants, rather than to constrain the EPA's discretion to a designated list of pollutants subject to regulation under CAA section 111(d). The commenter contends that the EPA's current interpretation would restrict the applicability of CAA section 111(d) to a narrower set of pollutants than Congress intended, and indeed, to a narrower set of pollutants than the Agency itself has regulated in the past. The commenter concludes that contrary to the EPA's assertions in its proposal, such a narrow interpretation upends the very idea of a ''gap-filling'' provision intended to give the Agency the flexibility to regulate a broad range of pollutants where necessary to fill gaps left by the NAAQS and NESHAP programs.

Response: The EPA disagrees with this comment. First, the argument that legislative history shows that Congress intended to give the EPA the authority to regulate a broad range of pollutants under CAA section 111(d) fails in the face of the statutory exclusions of pollutants that Congress enacted. The exclusions in CAA section 111(d) expressly narrowed the breadth of the pollutants that the EPA can regulate under CAA section 111(d). Second, the gap-filling role of CAA section 111(d) is properly understood to fill the gaps that exist *between* the regulatory regimes that address criteria/CAA section 108(a) pollutants and HAP—that is, the regulation of those pollutants that are not listed and regulated under those other CAA programs. CAA section 111(d) is not properly read to fill gaps that exist *within* those other CAA programs.

B. Impact of Lack of Regulation of Existing Oil and Natural Gas Sources Under CAA Section 111(d)

In the proposal preamble, the EPA stated that ''the lack of regulation of existing sources under CAA section 111(d) will not mean a substantial amount of lost emission reductions.'' 84 FR 50271. The proposal preamble provided several reasons for why there could be limited impact from not regulating existing oil and natural gas sources under CAA section 111(d), including (1) equipment turnover/source modifications will result in existing sources being subject to the NSPS, (2) market incentives capture valuable methane product, (3) voluntary actions to reduce methane emissions are prevalent, and (4) state regulations result in emission reductions. The EPA received comments that both agree and disagree with the EPA's conclusions and reasoning presented in the proposal preamble. These comments and the EPA response to their comments are provided below.

Comment: Several commenters assert that the EPA's assertion that the lack of regulation of existing sources directly caused by the proposed rule to deregulate methane emissions from new sources will have ''limited impact,'' does not have sufficient supporting data or analysis, and is false and arbitrary and capricious. One commenter states that, although the EPA attempts to downplay the likely impact from its non-regulation of existing sources, the EPA fails either to define what it means by ''substantial'' or to provide evidence to support this claim.

The commenters state that it would not be rational or legal for the EPA to put blinders on in order to ignore the enormous consequences of rescinding methane regulation for existing sources. The commenters assert that section 111 of the CAA is concerned with reducing dangerous pollution from stationary sources—new, modified, and existing. *See, e.g.,* 42 U.S.C. 7411(b)(1)(B) (discussing ''new sources within such category''); *Id.* 42 U.S.C. 7411(d)(2)(B) (discussing existing sources as ''sources in the category of sources''). Some commenters state that while the EPA claims that ''[a]nalysis of potential impacts of removing the requirement to regulate existing sources under CAA section 111(d) is outside the scope . . . and would be speculative,'' the EPA's refusal to consider these impacts renders its proposal unlawful.

Response: The EPA acknowledges in the proposal preamble (84 FR 50271) that by rescinding the applicability of the methane NSPS for the sources in the Crude Oil and Natural Gas Production source category, existing sources of the same type in the source category will not be subject to regulation under CAA section 111(d). The EPA is not required under a CAA section 111(b) NSPS subpart OOOOa rulemaking, however, to consider the impacts of existing sources not being regulated under a hypothetical CAA section 111(d) rule as a result of amending a CAA section 111(b) rule. While the EPA did not prepare and include a quantitative analysis that estimates the levels at which source modification/equipment turnover, market incentives, voluntary programs, and state requirements—might limit potential emissions increases from not regulating existing sources, the EPA discusses how each of these factors currently contribute and will continue to contribute to the downward trend of total methane emissions from oil and natural gas existing sources in absence of an EG in absence of existing source CAA section 111(d) guidelines.

The EPA concedes, however, that the use of the term ''substantial'' conveys a quantitative value, and that it would have been more accurate in absence of a quantitative analysis to state that these factors all have the potential to motivate or require operators to control emissions from existing sources in absence of a CAA section 111(d) EG. Further detail regarding comments received on the potential for limiting emissions from existing sources for each of these factors, and responses to these comments are provided below.

Comment: Several commenters suggest that the EPA's claim that equipment turnover, market incentives, voluntary actions, and state regulations will mean that there will not be a substantial loss of emission reductions is inconsistent with findings the EPA itself made in prior rulemakings, including the 2016 Rule. The commenters state that the EPA has provided no rational basis for its drastic shift in position (citing *Lone Mountain Processing, Inc.* v. *Secretary of Labor,* 709 F.3d 1161, 1164 (D.C. Cir. 2013)).

Response: The EPA's notes that changes have occurred since the earlier rulemakings that affect emissions from existing oil and natural gas sources. For example, there is greater industry participation in voluntary methane emissions reduction programs/actions and more state regulations/permits limiting emissions from oil and natural gas operations than there were when the EPA developed the 2016 Rule.

Comment: Commenters contend that the EPA cannot support not establishing standards under CAA section 111(d) based on source modification/ equipment turnover, market incentives, voluntary programs, or state requirements factors mitigating potential emissions increases from not regulating existing sources. The commenters note that the cited factors are precisely the ones that Congress rejected when it chose to require uniform national standards. The commenters also note that the CAA is clear: The EPA ''shall prescribe regulations'' for existing sources in listed source categories that are subject to new source requirements for air pollutants not regulated under the NAAQS or section 112. 42 U.S.C. 7411(d)(1). The commenters suggest that the EPA's reliance on source modification, market incentives, voluntary programs, and state requirements to justify the proposal exceeds the Agency's authority under the CAA (citing *Massachusetts* v. *EPA,* 549 U.S. 497, 533–535 (2007) (the EPA cannot rely on a ''laundry list of reasons not to regulate'' when there is a ''clear statutory command'' under the CAA)).

Response: The EPA recognizes that rescinding the applicability of the NSPS to methane emissions for the sources in the Crude Oil and Natural Gas Production source category that are currently covered by the NSPS will mean that existing sources of the same type in the source category will not be subject to regulation under CAA section 111(d). The reasoning for not developing a CAA section 111(d) standard is not because source modification, market incentives, voluntary programs, and state requirements will limit emissions increases that may result from not pursuing a CAA section 111(d) standard. Rather, this is a legal consequence that results from the application of the CAA section 111 requirements.

Comment: Several commenters specifically provide support for, and opposition to, the individual factors (equipment turnover/source modifications, market incentives, voluntary actions, and state regulation) cited by the EPA as mitigating emission increases as a result of not regulating existing sources.

Equipment turnover/source modifications. One of the factors that the EPA provided in the proposal for the limited impact of the lack of regulation of existing sources under CAA section 111(d) was ''that the number of existing sources may decline over time due to obsolescence or to shut down and removal actions.'' 84 FR 50273. The EPA provided analysis to support this rationale and also solicited comment regarding the rate at which this decline can be expected to occur. One commenter supported the proposal by stating that because CAA section 111 defines an ''existing source'' as one that is not a ''new source,'' the universe of existing oil and natural gas sources potentially subject to CAA section 111(d) requirements would be any affected facility for which construction commenced on or before September 18, 2015, indicating that any ''existing source'' has already been in operation for at least 4 years. The commenter contends that even if the EPA were to issue EG for methane for these sources today, the Agency's 40 CFR part 60, subpart Ba regulations implementing CAA section 111(d) (Emission Guidelines for Municipal Solid Waste Landfills) provide states with 3 years to develop and submit their state plans. The commenter notes that these state plans may provide a source with up to 24 months to comply with emission standards (or longer if the compliance schedule includes legally enforceable increments of progress), and states retain discretion under CAA section 111(d) and the regulations to further extend these compliance deadlines for an individual source based on its remaining useful life or other factors. The commenter states that by the time CAA section 111(d) emission standards would become effective, roughly 10 years will have passed since the date marking the cutoff between ''new'' and ''existing'' sources. During that time period, the commenter states, it is likely that sources constructed before this cutoff will have been plugged and abandoned or replaced with new equipment that would itself be subject to the VOC requirements of NSPS subpart OOOO (which will also reduce associated methane emissions). The commenter adds that those existing oil and natural gas sources that are not plugged and abandoned or replaced may also undergo changes that qualify as ''modifications'' under NSPS subpart OOOOa, and in that case would be treated as new sources.

Conversely, several other commenters express concern that the EPA has not supported its claim that source turnover is one reason for the limited impact of not regulating existing sources. One commenter contends that the EPA's withdrawal of the ICR, coupled with its lack of information that could support a reasoned analysis, makes its action arbitrary and capricious. One commenter notes that the average life of an oil and natural gas well is 20 to 30 years, meaning that facilities installed prior to September 2015 could still be in operation in September 2045. The commenter points out that many of the largest-emitting facilities (*e.g.,* field storage tanks) typically do not undergo modification or reconstruction during their useful life.

Another commenter asserts that the EPA's claim that the existing source inventory will turn over is undercut by the EPA's extensive list, in the 2019 Proposal preamble, of questions to stakeholders about the rate of modification practices within the sector. The commenter states that the existence of the EPA's extensive list of questions indicates that the EPA has little information on how regularly these transitions occur and cannot claim that there will be little emissions impacts until after the Agency has analyzed the information that it requests.

Some commenters assert that the EPA-cited data from the U.S. Greenhouse Gas Inventory (GHGI) (for pneumatic controllers, compressors, tank throughput, and well completions); *Drillinginfo.com* (for well completions); and NSPS subpart OOOOa compliance reports (for assessing turnover rates) do not support the EPA's turnover conclusions, and exhibit substantial limitations for assessing turnover and obsolescence rates. For example, the commenters note that the GHGI provides absolute source counts for each year, but does not include information on specific sources—meaning it is not possible to assess the number of sources that are new, the number that have ceased operation, or the number that have remained in use over a time period.

Furthermore, the commenters contend that the EPA's analysis ignores large sources of emissions, such as reciprocating compressors and all leaks downstream of well pads. The commenters address the data the EPA provided by source (*i.e.,* pneumatic controllers, compressors, storage vessels, well completions) to illustrate their point that the data are insufficient or do not support the EPA's claim that many existing sources will become ''modified'' sources in the future, while other existing sources will be replaced by new facilities or shut down.

Some commenters also assert that the compliance reports and the preliminary data submitted in response to the ICR indicate that the large majority of facilities in the oil and natural gas sector are not currently complying with the NSPS. This means, according to the commenters, that these sources are existing sources with limited turnover. One commenter adds that records of natural gas operations in New Mexico demonstrates that numerous oil and natural gas fugitive emissions sources, storage tanks, and loadout emissions sources with construction dates going back to 1970 have not been modified, reconstructed, or replaced with new equipment.

Market incentives. Many commenters generally agree with the EPA's statements in the 2019 Proposal that market incentives already provide a powerful impetus for owners and operators of sources in the oil and natural gas industry to limit their methane emissions. Commenters state that the fact that the ''pollutant'' at issue is itself a valuable commodity means that source owners and operators have economic incentives to prevent its release in order to maximize the amount of natural gas that is sold for revenue. One commenter notes that the EPA's data bear that out, demonstrating that over the past 80 years, the fraction of natural gas withdrawals lost to venting and flaring has decreased from over 20 percent to just 1 or 2 percent.

Conversely, other commenters contend that there are a number of flaws with the EPA's theory that market incentives will meaningfully address methane emissions from existing oil and natural gas sources. First, one commenter notes that these theoretical ''market incentives'' largely depend on natural gas price trajectories, and contends that the EPA fails to conduct any analysis of how operators might be anticipated to reduce their emissions in light of expected natural gas prices. In reality, the commenter states, examples abound of operators choosing to flare or vent gas, rather than capture it, under current market prices. Second, a commenter states that the EPA ignores a fundamental economic principle in its discussion of market incentives: When there is a negative externality associated with an activity (here, the emission of both climate-disrupting and conventional pollution) that is not reflected in an individual operator's costs, market incentives are typically insufficient to reduce the activity to socially optimal levels. Third, a commenter states that the emissions trends noted by the EPA do not support the proposition that market incentives are adequate to reduce methane emissions from existing sources; and in fact, the data cited by the EPA shows that emissions from the oil and natural gas industry have remained persistently high despite those incentives.

Voluntary actions. Several commenters present information regarding existing voluntary programs and methane mitigation strategies being employed to reduce methane emissions from oil and natural gas operations. These commenters present a series of voluntary programs/strategies that the industry is currently undertaking and will continue to undertake to help reduce its methane emissions.

One industry representative organization [American Petroleum Institute (API)] adds that participants in The Environmental Partnership's Leak Detection and Repair Program reported a leak occurrence rate of just 0.16 percent, and that figure comes from more than 156,000 surveys across more than 78,000 production sites and is an important signal that ongoing industry efforts to identify and fix emissions sources are working.

Several other commenters contend that voluntary measures to control methane emissions would not compensate for the removal of the Federal methane requirements. Commenters note that of the thousands of oil and natural gas sources across the U.S., only about 1 percent participate in voluntary programs to address methane emissions (citing *http://blogs.edf.org/energyexchange/2019/09/03/epas-proposal-to-rollback-methane-rules-ignores-scientific-evidence-will-lead-to-5-million-tons-of-methane-pollution/*).

Commenters note that even industry members that have participated in these voluntary programs have noted that they are not a substitute for strong, uniform regulatory requirements. In addition, some commenters state that while voluntary efforts are important for reducing emissions and understanding how production operations can become more efficient and deliver environmental benefits, they cannot replace uniform Federal methane regulations for the oil and natural gas industry.

State regulations. Some commenters agree with the EPA that there are several states—including many of the states with the most significant oil and natural gas activity levels, that are already taking actions to reduce VOC and, by extension, methane emissions. One commenter states that while not every state has adopted such regulations, the states the EPA cites in the proposal cover the vast majority of the nation's oil and natural gas production, and while not every state's regulatory program covers all of the emission sources listed in NSPS subparts OOOO and OOOOa, they do all include regulatory requirements for storage vessels and fugitive emissions at well sites, ''two of the largest emission sources within the oil and natural gas industry.'' Another commenter concludes that current regulations of VOC emissions in North Dakota and other top oil and natural gas producing states will be sufficient to reduce methane emissions from the oil and natural gas industry, and that the participation of those states in national organizations such as the Environmental Council of the States (ECOS) are generating increasingly consistent state requirements that will meaningfully reduce emissions should the proposed amendments be finalized.

Other commenters assert that emissions control requirements of state regulatory programs will not be sufficient to reduce methane emissions. Commenters note that California, Colorado, Montana, New Mexico, North Dakota, Ohio, Pennsylvania, Texas, Utah, and Wyoming—the states that the EPA includes in the Proposal's ''Comparison of State Oil and Natural Gas Regulations'' table, 84 FR 50277—take widely divergent approaches that vary significantly in stringency, and most states have no standards applicable to existing sources. In 2020, according to the commenters, state standards applicable to existing sources (certain standards in California, Colorado, Utah, Wyoming (in the Upper Green River Basin ozone non-attainment area), and Texas) will reduce only 180,000 metric tons of methane, roughly 5 percent of what CAA section 111(d) guidelines modeled on the current NSPS could achieve. Other commenters added that regulation of existing sources by the EPA under section 111(d) of the CAA is preferable to a patchwork of regulations created separately by each state Agency (or the lack of regulation in some states). One commenter explains that Federal regulation creates a consistent framework that establishes a minimum level of emission control that strengthens public confidence in the natural gas industry and ensures GHG emission reductions.

Modeling analyses of impacts of foregone regulation of existing sources. Commenters presented two competing modeling analyses estimating the potential impacts of not pursuing EGs under CAA section 111(d). One presented by API supported the EPA's statements in the 2019 Proposal that the impacts would be limited, and one presented by the Environmental Defense Fund (EDF) disputed the EPA's claim.[73] [74] The assumptions used in these analyses vary; including the assumed EG requirements, the date when emissions that could have and would be controlled under an EG, what sources/segments the EG would cover, and how they accounted for turnover rates and state regulations when projecting emissions from existing sources. Neither of these analyses provide sufficient detail by emission source by segment to do a direct comparison of their analyses. However, the most important driver of differences between the competing analyses appears to be the differing assumptions regarding the emissions sources and segments the EG would regulate and the date when emissions could have and would be controlled under an EG.

The API Analysis includes a subset of emission sources compared to the EDF Analysis. The API Analysis includes the following production sources: Storage vessels, pneumatic devices, pneumatic pumps, and fugitive emissions from non-low production wells—it does not include low production wells, reciprocating/centrifugal compressors, or fugitive emissions from gathering and boosting compressor stations based on what was covered under the 2016 *Control Techniques Guidelines for the Oil and Natural Gas Industry.*[75] The EDF Analysis assumes that the EG will extend the requirements found in the 2016 Rule to all affected existing sources, specifically: High-bleed pneumatic controllers at well sites and transmission and storage compressor stations, all continuous bleed pneumatic controllers at natural gas processing plants, fugitive emissions from gas processing plants, well sites, and compressor stations, reciprocating and centrifugal compressors at both processing plants and compressor stations, and pneumatic pumps at well sites and processing plants. The EDF Analysis estimates emissions uncontrolled from existing sources starting in 2017 that would have been controlled by an EG and API assumes that an EG would not have been implemented (and, therefore, uncontrolled emissions as a result of a lack of an EG would not apply) until 2028. In absence of any other assumptions, this difference leads to vastly different results.

According to the API Analysis, if an existing source rule were implemented in 2028, minimal methane emission reductions (5 percent − (102,000 MT (metric tons) methane) from NSPS regulated sources would be realized with their hypothetical reductions decaying to ~1 percent (24,000 MT) of the total emissions from regulated sources by 2043. The API Analysis concludes that by 2028, 94 percent (and by 2043, 99 percent) of oil and natural gas production will be regulated by 40 CFR part 60, subpart OOOO or OOOOa. In other words, the API Analysis estimates that an EG modeled after a modified version of the EPA's 2016 Control Techniques Guideline would only achieve an additional 5 percent of emissions reductions when compared to the NSPS regulations alone. The API provides that their analysis illustrates that an existing source rule would provide negligible environmental benefit.

This is in contrast to the EDF Analysis that estimates that each year that the EPA does not promulgate EG under CAA section 111(d) will allow substantial additional emissions. They estimate emissions that have occurred and will occur starting in 2017 through 2030 by the EPA's failure to adopt EGs, as well as the emission reductions possible if EGs were promulgated. For example, they estimate that, in 2021, 9.8

[73] Earth Systems Sciences, LLC (for API). Methane Emissions from Regulated Onshore Production Sources. Evaluating the Impact of Existing Federal and State Regulations. October 2019. (Docket ID Item No. EPA–HQ–OAR–2017–0757–2090, Appendix A) (API Analysis).

[74] EDF. Assessment of Harm to the Public from Foregoing Methane Guidelines for Existing Sources. November 21, 2019. (Docket ID Item No. EPA–HQ–OAR–2017–0757–2134; Appendix D) (EDF Analysis).

[75] U.S. EPA. Control Techniques Guidelines for the Oil and Natural Gas Industry. October 2016. EPA–453–/B–16–001). *https://www.epa.gov/sites/production/files/2016-10/documents/2016-ctg-oil-and-gas.pdf.*

million metric tons of methane will be emitted by affected existing sources. The EDF Analysis estimates that by 2030, emissions from existing sources will be substantial and have a cumulative impact of about 126 MMT of methane; about 29 MMT of VOC; and about 1.1 million tons of HAP. The EDF Analysis estimates that in the over 3 years since the EPA has promulgated the 2016 Rule, 33.4 MMT of methane have been emitted by existing oil and natural gas sources. They further estimate that 12.2 MMT of those methane emissions, or 37 percent, could have been avoided if EGs were in effect.

Response: The EPA's response to comments specific to the four factors cited by the EPA in the proposal preamble for why there would be limited impacts from not regulating existing oil and natural gas sources under CAA section 111(d), are provided in the following paragraphs. *Equipment turnover/source modifications.* For the first factor (equipment turnover/source modifications will result in existing sources being subject to the NSPS), the EPA reviewed information and analyses supporting the proposal's claim of a high turnover rate (limited impact of an EG) and information/analyses that supporting a low turnover rate (substantial impact of an EG).

Referring to the API and EDF Analyses, each of those analyses accounted for turnover and source modifications differently in their emissions projections in absence of an EG under CAA section 111(d). The approaches used and information provided in these analyses do not allow for a direct comparison on how their differing assumptions impact their results. The API Analysis does not include modification triggers in their projection modeling, contending that the lack of modification triggers in their model is a conservative assumption because it will underestimate the number of wells that are covered by NSPS requirements in the future. However, the API Analysis used historical well records to estimate a distribution for the expected lifetime of wells (and associated equipment) in each state. The EDF Analysis assumes that emissions attributable to existing sources decline year-over-year as existing sources are removed from operation or undertake modifications that subject them to regulation as modified sources under the 2016 Rule based on turnover rate percentages. Insufficient detail provided by EDF on where the turnover percentage rates they used in their analysis came from. It is unclear how the percentages used (existing source decline turnover rate of 5 percent for production sources, 4 percent for gathering and boosting sources, and 1 percent for all downstream sources) in the EDF Analysis were estimated.

The EPA recognizes the limitations pointed out by commenters regarding the GHGI (for pneumatic controllers, compressors, tank throughput, and well completions); *Drillinginfo.com* (for well completions); and NSPS subpart OOOOa compliance reports (for assessing turnover rates). As commenters indicate, when comparing activity counts, compliance reports, and preliminary information received in the ICR process, the data indicates that there is incomplete information to assess turnover and obsolescence rates. The justification of the EPA's rescission of the ICR is presented in a separate rulemaking action, ''Notice Regarding Withdrawal of Obligation To Submit Information'' (82 FR 12817, March 7, 2017). Absent further information (which is why we solicited comment on turnover rates) and time, where compliance report information can be assessed over a longer time period, there will continue to be a high level of uncertainty with any estimates on turnover/obsolescence rates.

The EPA maintains, however, as it did in the proposal, that equipment turnover and source modification are a factor (albeit difficult to quantify with any certainty) that will limit the emissions from existing sources in the oil and natural gas industry in the absence of a CAA section 111(d) EG. In addition to the reasons stated in the proposal, we acknowledge that it could take up to 7 to 10 years from date of promulgation of an EG for requirements to be fully implemented. During this time, the EPA expects that a percentage of existing sources will shut down or undertake modification, which will result in them becoming subject to regulation under CAA section 111(b). This turnover, in the case of well-sites, would likely be impacted as production declines and dependent on the economic viability of the well-site.

Lastly, the EPA acknowledges the information the state of New Mexico identifies that indicates that there are existing sources in that state that have never been modified as supporting that turnover and modifications will not be a factor that results in reducing emissions from oil and natural gas existing sources in that area in absence of an EG and accepts that these are examples of existing sources that have continued to operate for long periods of time without being reconstructed or modified.

Market incentives. With regards to the second factor (market incentives), as stated in section VII.B of this preamble, there are market incentives for the oil and natural gas industry to capture as much natural gas (and, by extension, methane) as is cost effective. Depending on the future trajectories of natural gas prices and the costs of natural gas capture and emission reductions, market incentives may continue to drive emission reductions, even in the absence of specific regulatory requirements applicable to methane emissions from existing sources. While it is a challenging concept to quantify in monetary terms, improving their environmental performance is increasingly important for firms to maintain a ''social license to operate.'' Generally speaking, the social license to operate means that the firm's employees, investors, customers, and the general public find that the firm's business activities and operations are acceptable to continue to freely participate in the marketplace. Maintaining the social license by improving environmental performance, such as reducing emissions, can help firms respond to the complex environment within which they operate in ways that are favorable to their longer-term business interests.

In response to the commenter that states that the emissions trends noted by the EPA do not support the proposition that market incentives are adequate to reduce methane emissions from existing sources in lieu of Federal regulation, the EPA is not making that claim. The EPA claims that market incentives are one factor (among others) that contribute and will continue to contribute to the downward trend of total methane emissions from oil and natural gas existing sources in absence of an EG.

Voluntary action. With regards to the third factor (voluntary actions), the EPA maintains, and has received a lot of comments in support of, its position that the plethora of voluntary methane emissions mitigation programs will limit (among other factors) methane emissions increases from existing oil and natural gas industry emission sources in absence of a CAA section 111(d) EG. The EPA does acknowledge, however, as several commenters contend, that the industry as a whole is not uniformly meeting voluntary measures at the same level of control and that some companies may not be participating in cited voluntary methane emissions programs at all. This makes it difficult to verify the impacts on emissions as a result of voluntary program participation. Additional time will be needed to allow these programs to further develop and to be fully implemented to better quantify the impacts the varied programs have on limiting emissions from oil and natural gas industry sources.

In response to the commenters that contend that voluntary actions cannot be relied upon to reduce methane emissions from existing sources in lieu of Federal regulation, the EPA is not making that claim. As with other mitigating factors cited by the EPA, voluntary actions are one factor (among others) that contribute and will continue to contribute to the downward trend of total methane emissions from oil and natural gas existing sources in absence of an EG.

State regulations. With regards to the fourth and final factor (state regulations), the EPA agrees that there could be an impact of not regulating existing oil and natural gas sources, but at this time, the EPA has not conducted a quantitative analysis of the impact of state regulatory programs to determine the degree to which those programs would reduce emissions from existing sources. The EPA also acknowledges that state requirements do vary in stringency and that only a subset of states include requirements for sources that the EPA could potentially define as existing sources. However, those states that have standards applicable to existing sources (certain standards in California, Colorado, Utah, Wyoming (in the Upper Green River Basin ozone non-attainment area), and Texas) account for a substantial portion of oil and natural gas production in the United States. The EPA also expects a percentage of existing sources to shut down or undertake modification which would make them become subject to certain state standards or permits. As one of the commenters points out, and the EPA agrees, while not every state has adopted specific methane emissions regulations for oil and natural gas industry existing sources, current regulations (and permits) controlling VOC emissions in North Dakota and other top oil and natural gas producing states will concurrently reduce methane emissions from the oil and natural gas industry.

In response to the commenters that contend that state regulations/permits that include oil and natural gas industry existing source emissions control requirements cannot be relied upon to reduce methane emissions from existing sources in lieu of Federal regulation, the EPA is not making that claim. As with other mitigating factors cited by the EPA, existing source state requirements are one factor (among others) that contribute and will continue to contribute to the downward trend of total methane emissions from oil and natural gas existing sources in absence of an EG.

XI. Impacts of This Final Rule

A. What are the air impacts?

The EPA projected that, from 2021 to 2030, relative to the baseline, the final rule will forgo about 448,000 short tons of methane emissions reductions (10.1 million tons CO_2 Eq.), 12,000 short tons of VOC emissions reductions, and 400 short tons of HAP emission reductions from facilities affected by this reconsideration.[76] The EPA estimated regulatory impacts beginning in 2021 as it is the first full year of implementation of this rule. The EPA estimated impacts through 2030 to illustrate the accumulating effects of this rule over a longer period. The EPA did not estimate impacts after 2030 for reasons including limited information, as explained in the RIA.

B. What are the energy impacts?

Energy impacts in this section are those energy requirements associated with the operation of emissions control devices. Potential impacts on the national energy economy from the rule are discussed in the economic impacts section. Under the final rule, there will likely be little change in the national energy demand resulting from the deregulatory actions finalized here.

C. What are the compliance costs?

The PV of the regulatory compliance cost reduction associated with this final rule over the 2021 to 2030 period was estimated to be $67 million (in 2016 dollars) using a 7-percent discount rate and $83 million using a 3-percent discount rate. The EAV of these cost reductions is estimated to be $8.9 million per year using a 7-percent discount rate and $9.4 million per year using a 3-percent discount rate.

These estimates do not, however, include the forgone producer revenues associated with the decrease in the recovery of saleable natural gas, though some of the compliance actions required in the baseline would likely have captured saleable product that would have otherwise been emitted to the atmosphere. Estimates of the value of the recovered product were included in previous regulatory analyses as offsetting compliance costs. Because of the deregulatory nature of this final action, the EPA projected a reduction in the recovery of saleable product. Using the 2020 Annual Energy Outlook (AEO) projection of natural gas prices to estimate the value of the change in the recovered gas at the wellhead projected to result from the final action, the EPA estimated a PV of regulatory compliance cost reductions of the final rule over the 2021 to 2030 period of $31 million using a 7-percent discount rate and $38 million using a 3-percent discount rate. The corresponding estimates of the EAV of cost reductions after accounting for the forgone revenues were $4.1 million per year using a 7-percent discount rate and $4.3 million per year using a 3-percent discount rate.

D. What are the economic and employment impacts?

The EPA used the National Energy Modeling System (NEMS) to estimate the impacts of the 2016 Rule on the U.S. energy system. The NEMS is a publicly available model of the U.S. energy economy developed and maintained by the EIA and is used to produce the AEO, a reference publication that provides detailed projections of the U.S. energy economy.[77] The EPA estimated small impacts on crude oil and natural gas markets of the 2016 Rule over the 2020 to 2025 period. This final rule will result in a decrease in total compliance costs relative to the baseline. Therefore, the EPA expects that this rule will partially reduce the impacts estimated for the 2016 Rule in the 2016 Rule RIA.

Executive Order 13563 directs Federal agencies to consider the effect of regulations on job creation and employment. According to the Executive order, ''our regulatory system must protect public health, welfare, safety, and our environment while promoting economic growth, innovation, competitiveness, and job creation. It must be based on the best available science.'' (Executive Order 13563, 2011). While a standalone analysis of employment impacts is not included in a standard benefit-cost analysis, such an analysis is of concern in the current economic climate given continued interest in the employment impact of regulations such as this proposed rule. The EPA estimated the change in compliance-related labor due to the reduced requirements for the installation, operation, and maintenance of control equipment, control activities, and labor associated with reporting and recordkeeping requirements in the 2016

[76] In a separate action, the EPA is finalizing technical reconsideration amendments to 40 CFR part 60, subpart OOOOa (EPA–HQ–OAR–2017–0483; FRL–10013–60–OAR; FR Doc. 2020–18115). These technical amendments were proposed in October 2018. 83 FR 52056. Please reference that final rule for the summary and rationale of those technical changes. Please refer to the RIA for both rules to see the combined impacts.

[77] *https://www.eia.gov/outlooks/aeo/.*

Rule RIA. Under the final rule, the EPA expects there will be slight reductions in the labor required for compliance-related activities associated with the 2016 Rule requirements relating to the rescission of requirements in the transmission and storage segment of the oil and natural gas industry.

E. What are the benefits of the final standards?

The EPA expects forgone climate and health benefits due to the forgone emissions reductions projected under this final rule. The EPA estimated the forgone domestic climate benefits from the forgone methane emissions reductions using an interim measure of the domestic social cost of methane (SC-CH_4). The SC-CH_4 estimates used here were developed under Executive Order 13783 for use in regulatory analyses until an improved estimate of the impacts of climate change to the U.S. can be developed based on the best available science and economics. Executive Order 13783 directed agencies to ensure that estimates of the social cost of GHG used in regulatory analyses ''are based on the best available science and economics'' and are consistent with the guidance contained in OMB Circular A–4, ''including with respect to the consideration of domestic versus international impacts and the consideration of appropriate discount rates'' (Executive Order 13783, Section 5(c)). In addition, Executive Order 13783 withdrew the technical support documents (TSDs) and the August 2016 Addendum to these TSDs describing the global social cost of GHG estimates developed under the prior Administration as no longer representative of government policy. The withdrawn TSDs and Addendum were developed by an interagency working group that included the EPA and other executive branch entities and were used in the 2016 Rule RIA.

The EPA estimated the PV of the forgone domestic climate benefits over the 2021 to 2030 period to be $17 million under a 7-percent discount rate and $63 million under a 3-percent discount rate. The EAV of these forgone benefits is estimated $2.2 million per year under a 7-percent discount rate and $7.2 million per year under a 3-percent discount rate. These values represent only a partial accounting of domestic climate impacts from methane emissions and do not account for health effects of ozone exposure from the increase in methane emissions.

Under the final rule, the EPA expects that forgone VOC emission reductions will degrade air quality and are likely to adversely affect health and welfare associated with exposure to ozone, $PM_{2.5}$, and HAP, but did not quantify these effects at this time. This omission should not imply that these forgone benefits may not exist; rather, it reflects the inherent difficulties in accurately modeling the direct and indirect impacts of the projected reductions in emissions for this industrial sector. To the extent that the EPA were to quantify these ozone and PM impacts, it would estimate the number and value of avoided premature deaths and illnesses using an approach detailed in the Particulate Matter NAAQS and Ozone NAAQS Regulatory Impact Analyses.[78 79] This approach relies on full-form air quality modeling. The Agency is committed to assessing ways of conducting full-form air quality modeling for the oil and natural gas sector that would be suitable for use in regulatory analysis in the context of NSPS, including ways to address the uncertainties regarding the scope and magnitude of VOC emissions.

When quantifying the incidence and economic value of the human health impacts of air quality changes, the Agency sometimes relies upon alternative approaches to using full-form air quality modeling, called reduced-form techniques, often reported as ''benefit-per-ton'' values that relate air pollution impacts to changes in air pollutant precursor emissions.[80] A small, but growing, literature characterizes the air quality and health impacts from the oil and natural gas sector.[81 82 83] The Agency feels more work needs to be done to vet the analysis and methodologies for all potential approaches for valuing the health effects of VOC emissions before they are used in regulatory analysis, but is committed to continuing this work. Recently, the EPA systematically compared the changes in benefits, and concentrations where available, from its benefit-per-ton technique and other reduced-form techniques against the changes in benefits and concentrations derived from full-form photochemical model representation of a few different specific emissions scenarios.[84] The Agency's goal was to create a methodology by which investigators could better understand the suitability of alternative reduced-form air quality modeling techniques for estimating the health impacts of criteria pollutant emissions changes in the EPA's benefit-cost analysis, including the extent to which reduced form models may over- or under-estimate benefits (compared to full-scale modeling) under different scenarios and air quality concentrations. The EPA Science Advisory Board (SAB) recently convened a panel to review this report.[85] In particular, the SAB will assess the techniques the Agency used to appraise these tools; the Agency's approach for depicting the results of reduced-form tools; and, steps the Agency might take for improving the reliability of reduced-form techniques for use in future Regulatory Impact Analyses RIAs. The scenario-specific emission inputs developed for this project are currently available online.[86] A thorough description of the study design and methodology is also available.[87]

XII. Statutory and Executive Order Reviews

Additional information about these statutes and Executive orders can be found at *https://www.epa.gov/laws-regulations/laws-and-executive-orders*.

A. Executive Order 12866: Regulatory Planning and Review and Executive Order 13563: Improving Regulation and Regulatory Review

This action is a significant regulatory action that was submitted to the Office of Management and Budget (OMB) for review because it raises novel legal or policy issues. Any changes made in response to OMB recommendations have been documented in the docket. In addition, the EPA prepared an RIA of the potential costs and benefits associated with this final action. The RIA available in the docket describes in detail the empirical basis for the EPA's assumptions and characterizes the various sources of uncertainties affecting the estimates below. Table 8 shows the PV and EAV of the costs, benefits, and net benefits of the final rule for the 2021 to 2030 period relative to the baseline using discount rates of 7 and 3 percent, respectively. The table also shows the total forgone emission reductions projected from 2021 to 2030 relative to the baseline.

In the following table, we refer to the compliance cost reductions as the ''benefits'' and the forgone benefits as the ''costs'' of this final action. The net benefits are the benefits (total cost reductions) minus the costs (forgone domestic climate benefits).

TABLE 8—SUMMARY OF THE PV AND EAV OF THE MONETIZED FORGONE BENEFITS, COST REDUCTIONS, AND NET BENEFITS FROM 2021 TO 2030, 7- AND 3-PERCENT DISCOUNT RATES

[Millions of 2016$]

	7-Percent discount rate		3-Percent discount rate	
	PV	EAV	PV	EAV
Benefits (Total Cost Reductions)	$31	$4.1	$38	$4.3
Compliance Cost Reductions	*67*	*8.9*	*83*	*9.4*
Forgone Value of Product Recovery	*36*	*4.7*	*45*	*5.1*
Costs (Forgone Domestic Climate Benefits)	17	2.2	63	7.2
Net Benefits	14	1.9	−25	−2.9
Non-Monetized Forgone Benefits	Non-monetized climate impacts from increases in methane emissions. Health effects of $PM_{2.5}$ and ozone exposure from an increase of about 11,000 short tons of VOC from 2021 through 2030. Health effects of HAP exposure from an increase of about 330 short tons of HAP from 2021 through 2030. Health effects of ozone exposure from an increase of about 400,000 short tons of methane from 2021 through 2030. Visibility impairment. Vegetation effects.			

Note: Estimates may not sum due to independent rounding.

B. Executive Order 13771: Reducing Regulations and Controlling Regulatory Costs

This action is considered an Executive Order 13771 deregulatory action. Details on the estimated cost savings of this final rule can be found in the EPA's analysis of the potential costs and benefits associated with this action.

C. Paperwork Reduction Act (PRA)

The information collection activities in this final rule have been submitted for approval to OMB under the PRA. The ICR document that the EPA prepared has been assigned EPA ICR number 2604.02 and OMB Control Number 2060–0729. The information collection requirements are not enforceable until OMB approves them.

A summary of the information collection activities previously submitted to the OMB for the final action titled ''Standards of Performance for Crude Oil and Natural Gas Facilities for Construction, Modification, or Reconstruction'' (2016 Rule) under the PRA, and assigned OMB Control Number 2060–0721 (EPA ICR number 2523.02), can be found at 81 FR 35890. You can find a copy of the ICR in the 2016 Rule Docket (Docket ID Item No. EPA–HQ–OAR–2010–0505–7626). In this rule, the EPA is finalizing the information collection activities as a result of the EPA's review under Executive Order 13783 (EPA ICR number 2604.02). These final changes (2020 NSPS Subpart OOOOa Executive Order 13783 Review Final) would remove reporting and recordkeeping requirements associated with the rescinded requirements.[88]

Comments were received on the October 15, 2018 (83 FR 52056) proposed rule indicating that the recordkeeping and reporting burden for the 2016 Rule was significantly underestimated. In particular, the commenters pointed to the estimated burden associated with the fugitive emissions requirements. As a result of these comments, the EPA reexamined the analysis for the 2016 Rule recordkeeping and reporting burden and made adjustments where warranted. This resulted in an updated and more accurate assessment of the recordkeeping and reporting burden for the 2016 Rule. The updated 2016 Rule recordkeeping and reporting burden was estimated at a 3-year annual average of 689,154 hours and $110,336,343 (2016$) over the 3-year period. These figures represent the ''baseline'' from which changes made in these final amendments (2020 NSPS Subpart OOOOa Executive Order 13783 Review Final) can be compared. Burden associated with this rule (2020 Rule E.O. 13783 Review Final):

Respondents/affected entities: Oil and natural gas operators and owners.

Respondent's obligation to respond: Mandatory.

Estimated number of respondents: 519.

[88] In a separate action, the EPA is finalizing technical reconsideration amendments to NSPS subpart OOOOa (EPA–HQ–OAR–2017–0483; FRL–10013–60–OAR; FR Doc. 2020–18115). These technical amendments where proposed in October 2018. 83 FR 52056. The information collection burden for the combination of these NSPS subpart OOOOa Reconsideration final amendments and the Policy Review final amendments is addressed in a separate ICR (OMB Control Number 2060–0721; EPA ICR number 2523.04).

Frequency of response: Varies depending on affected facility.[89]

Total estimated burden: 680,841 hours (per year). Burden is defined at 5 CFR 1320.3(b).

Total estimated cost: $108,723,359 (2016$), which includes no capital or O&M costs.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number. The OMB control numbers for the EPA's regulations in 40 CFR are listed in 40 CFR part 9. When OMB approves this ICR, the Agency will announce that approval in the **Federal Register** and publish a technical amendment to 40 CFR part 9 to display the OMB control number for the approved information collection activities contained in this final rule.

D. Regulatory Flexibility Act (RFA)

I certify that this action will not have a significant economic impact on a substantial number of small entities under the RFA. In making this determination, the impact of concern is any significant adverse economic impact on small entities. An agency may certify that a rule will not have a significant economic impact on a substantial number of small entities if the rule relieves regulatory burden, has no net burden, or otherwise has a positive economic effect on the small entities subject to the rule. This is a deregulatory action, and the burden on all entities affected by this final rule, including small entities, is the same or reduced compared to the 2016 Rule. *See* the discussion in section XI of this preamble and the RIA for details. The EPA has, therefore, concluded that this action will have no net increase regulatory burden for all directly regulated small entities.

E. Unfunded Mandates Reform Act (UMRA)

This action does not contain any unfunded mandate as described in UMRA, 2 U.S.C. 1531–1538, and does not significantly or uniquely affect small governments. The action imposes no enforceable duty on any state, local, or tribal governments or the private sector.

F. Executive Order 13132: Federalism

This action does not have federalism implications. It will not have substantial direct effects on the states, on the relationship between the National Government and the states, or on the distribution of power and responsibilities among the various levels of government.

G. Executive Order 13175: Consultation and Coordination With Indian Tribal Governments

This action does not have tribal implications as specified in Executive Order 13175. It will not have substantial direct effects on tribal governments, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes, as specified in Executive Order 13175. Thus, Executive Order 13175 does not apply to this action.

Consistent with the EPA Policy on Consultation and Coordination with Indian Tribes, on September 10, 2019, the EPA sent a letter to all tribal governments inviting consultation. Additionally, on August 29, 2019, and September 18, 2019, the EPA provided an overview of the proposed rule to the National Tribal Air Association. The EPA did not receive any requests for consultation.

H. Executive Order 13045: Protection of Children From Environmental Health Risks and Safety Risks

This action is not subject to Executive Order 13045 because it is not economically significant as defined in Executive Order 12866. The 2016 Rule, as discussed in the RIA,[90] was anticipated to reduce emissions of methane, VOC, and HAP, and some of the benefits of reducing these pollutants would have accrued to children. The final rule is expected to decrease the impact of the emissions reductions estimated from the 2016 Rule on these benefits, as discussed in the RIA.

The final action does not affect the level of public health and environmental protection already being provided by existing NAAQS and other mechanisms in the CAA. This final action does not affect applicable local, state, or Federal permitting or air quality management programs that will continue to address areas with degraded air quality and maintain the air quality in areas meeting current standards. Areas that need to reduce criteria air pollution to meet the NAAQS will still need to rely on control strategies to reduce emissions. The EPA does not believe the decrease in emission reductions projected by the final rule will have a disproportionate adverse effect on children's health.

I. Executive Order 13211: Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use

This action is not a ''significant energy action'' because it is not likely to have a significant adverse effect on the supply, distribution, or use of energy. In the RIA accompanying the 2016 Rule, the EPA used the NEMS to estimate the impacts of the 2016 Rule on the United States energy system. The EPA estimated small impacts of that rule over the 2020 to 2025 period relative to the baseline for that rule. This final rule is estimated to result in a decrease in total compliance costs, with the reduction in costs affecting a subset of the affected entities under NSPS subpart OOOOa. Therefore, the EPA expects that this deregulatory action will reduce the impacts estimated for the final NSPS in the 2016 RIA and, as such, is not a significant energy action.

J. National Technology Transfer and Advancement Act (NTTAA)

This rulemaking does not involve technical standards.

K. Executive Order 12898: Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations

The EPA believes that this final action is unlikely to have disproportionately high and adverse human health or environmental effects on minority populations, low-income populations, and/or indigenous peoples, as specified in Executive Order 12898 (59 FR 7629, February 16, 1994). The 2016 Rule was anticipated to reduce emissions of methane, VOC, and HAP, and some of the benefits of reducing these pollutants would have accrued to minority populations, low-income populations, and/or indigenous peoples. The final rule is expected to decrease the impact of the emission reductions estimated from the 2016 Rule on these benefits. These communities may experience forgone benefits as a result of this action, as discussed in the RIA.

This final action does not affect the level of public health and environmental protection already being provided by existing NAAQS and other mechanisms in the CAA. This final action does not affect applicable local, state, or Federal permitting or air quality management programs that will continue to address areas with degraded air quality and maintain the air quality in areas meeting current standards. Areas that need to reduce criteria air pollution to meet the NAAQS will still

---

[89] The specific frequency for each information collection activity within this request is shown in Tables 1a through 1d of the Supporting Statement in the public docket.

[90] *See* Final RIA in the public docket for this rulemaking.

need to rely on control strategies to reduce emissions.

The EPA believes that this final action is unlikely to have disproportionately high and adverse human health or environmental effects on minority populations, low-income populations, and/or indigenous peoples. The EPA notes that the potential impacts of the final rule are not expected to be experienced uniformly, and the distribution of avoided compliance costs associated with this action depends on the degree to which costs would have been passed through to consumers.

L. Congressional Review Act (CRA)

This action is subject to the CRA, and the EPA will submit a rule report to each House of the Congress and to the Comptroller General of the United States. This action is not a ''major rule'' as defined by 5 U.S.C. 804(2).

List of Subjects in 40 CFR Part 60

Environmental protection, Administrative practice and procedure, Air pollution control, Reporting and recordkeeping requirements.

Andrew Wheeler,

Administrator.

For the reasons set forth in the preamble, the EPA amends 40 CFR part 60 as follows:

PART 60—STANDARDS OF PERFORMANCE FOR NEW STATIONARY SOURCES

■ 1. The authority citation for part 60 continues to read as follows:

Authority: 42 U.S.C. 7401 *et seq.*

■ 2. Revise the heading of subpart OOOO to read as follows:

Subpart OOOO—Standards of Performance for Crude Oil and Natural Gas Facilities for Which Construction, Modification, or Reconstruction Commenced After August 23, 2011, and on or Before September 18, 2015

■ 3. Section 60.5360 is amended to read as follows:

§ 60.5360 What is the purpose of this subpart?

This subpart establishes emission standards and compliance schedules for the control of volatile organic compounds (VOC) and sulfur dioxide (SO_2) emissions from affected facilities in the crude oil and natural gas production source category that commence construction, modification, or reconstruction after August 23, 2011, and on or before September 18, 2015.

■ 4. Section 60.5365 is amended by revising the introductory text and paragraphs (b), (c), and (d)(1), removing and reserving paragraph (d)(2), and revising paragraph (e) introductory text to read as follows:

§ 60.5365 Am I subject to this subpart?

You are subject to the applicable provisions of this subpart if you are the owner or operator of one or more of the onshore affected facilities listed in paragraphs (a) through (g) of this section that is located within the Crude Oil and Natural Gas Production source category, as defined in § 60.5430 for which you commence construction, modification, or reconstruction after August 23, 2011, and on or before September 18, 2015.

* * * * *

(b) Each centrifugal compressor affected facility, which is a single centrifugal compressor using wet seals. A centrifugal compressor located at a well site, or an adjacent well site and servicing more than one well site, is not an affected facility under this subpart.

(c) Each reciprocating compressor affected facility, which is a single reciprocating compressor. A reciprocating compressor located at a well site, or an adjacent well site and servicing more than one well site, is not an affected facility under this subpart.

(d)(1) For the oil and natural gas production segment, each pneumatic controller affected facility, which is a single continuous bleed natural gas-driven pneumatic controller operating at a natural gas bleed rate greater than 6 standard cubic feet per hour.

* * * * *

(e) Each storage vessel affected facility, which is a single storage vessel, and has the potential for VOC emissions equal to or greater than 6 tons per year (tpy) as determined according to this section by October 15, 2013, for Group 1 storage vessels and by April 15, 2014, or 30 days after startup (whichever is later) for Group 2 storage vessels, except as provided in paragraphs (e)(1) through (4) of this section. The potential for VOC emissions must be calculated using a generally accepted model or calculation methodology, based on the maximum average daily throughput determined for a 30-day period of production prior to the applicable emission determination deadline specified in this section. The determination may take into account requirements under a legally and practically enforceable limit in an operating permit or other requirement established under a Federal, State, local or tribal authority.

* * * * *

■ 5. Section 60.5420 is amended by revising paragraph (c)(5)(iv) to read as follows:

§ 60.5420 What are my notification, reporting, and recordkeeping requirements?

* * * * *

(c) * * *

(5) * * *

(iv) For storage vessels that are skid-mounted or permanently attached to something that is mobile (such as trucks, railcars, barges, or ships), records indicating the number of consecutive days that the vessel is located at the site. If a storage vessel is removed from the site and, within 30 days, is either returned to or replaced by another storage vessel at the site to serve the same or similar function, then the entire period since the original storage vessel was first located at the site, including the days when the storage vessel was removed, will be added to the count towards the number of consecutive days.

* * * * *

■ 6. Section 60.5430 is amended by:

■ a. Adding the definition for *Crude Oil and Natural Gas Production source category* in alphabetical order.

■ b. Revising the definition of *Custody transfer.*

■ c. Adding the definitions for *Local distribution company (LDC) custody transfer station* and *Natural gas transmission and storage segment* in alphabetical order.

The additions and revision read as follows:

§ 60.5430 What definitions apply to this subpart?

* * * * *

Crude Oil and Natural Gas Production source category means:

(1) Crude oil production, which includes the well and extends to the point of custody transfer to the crude oil transmission pipeline or any other forms of transportation; and

(2) Natural gas production and processing, which includes the well and extends to, but does not include, the point of custody transfer to the natural gas transmission and storage segment.

Custody transfer means the transfer of crude oil or natural gas after processing and/or treatment in the producing operations, or from storage vessels or automatic transfer facilities or other such equipment, including product loading racks, to pipelines or any other forms of transportation.

* * * * *

Local distribution company (LDC) custody transfer station means a metering station where the LDC receives a natural gas supply from an upstream supplier, which may be an interstate transmission pipeline or a local natural gas producer, for delivery to customers through the LDC's intrastate transmission or distribution lines.

* * * * *

Natural gas transmission and storage segment means the transport or storage of natural gas prior to delivery to a ''local distribution company custody transfer station'' (as defined in this section) or to a final end user (if there is no local distribution company custody transfer station). For the purposes of this subpart, natural gas enters the natural gas transmission and storage segment after the natural gas processing plant, when present. If no natural gas processing plant is present, natural gas enters the natural gas transmission and storage segment after the point of ''custody transfer'' (as defined in this section). A compressor station that transports natural gas prior to the point of ''custody transfer'' or to a natural gas processing plant (if present) is not considered a part of the natural gas transmission and storage segment.

* * * * *

Subpart OOOOa—Standards of Performance for Crude Oil and Natural Gas Facilities for Which Construction, Modification, or Reconstruction Commenced After September 18, 2015

■ 7. Section 60.5360a is revised to read as follows:

§ 60.5360a What is the purpose of this subpart?

(a) This subpart establishes emission standards and compliance schedules for the control of volatile organic compounds (VOC) and sulfur dioxide (SO_2) emissions from affected facilities in the Crude Oil and Natural Gas Production source category that commence construction, modification, or reconstruction after September 18, 2015. The effective date of the rule in this subpart is August 2, 2016.

(b) [Reserved]

■ 8. Section 60.5365a is amended by revising the introductory text to read as follows:

§ 60.5365a Am I subject to this subpart?

You are subject to the applicable provisions of this subpart if you are the owner or operator of one or more of the onshore affected facilities listed in paragraphs (a) through (j) of this section, that is located within the Crude Oil and Natural Gas Production source category, as defined in § 60.5430a, for which you commence construction, modification, or reconstruction after September 18, 2015.

* * * * *

■ 9. Section 60.5375a is amended by revising the section heading and introductory text to read as follows:

§ 60.5375a What VOC standards apply to well affected facilities?

If you are the owner or operator of a well affected facility as described in § 60.5365a(a) that also meets the criteria for a well affected facility in § 60.5365(a) (in subpart OOOO of this part), you must reduce VOC emissions by complying with paragraphs (a) through (g) of this section. If you own or operate a well affected facility as described in § 60.5365a(a) that does not meet the criteria for a well affected facility in § 60.5365(a) (in subpart OOOO of this part), you must reduce VOC emissions by complying with paragraphs (f)(3) and (4) or paragraph (g) of this section for each well completion operation with hydraulic fracturing prior to November 30, 2016, and you must comply with paragraphs (a) through (g) of this section for each well completion operation with hydraulic fracturing on or after November 30, 2016.

* * * * *

■ 10. Section 60.5380a is amended by revising the section heading, introductory text, and paragraph (a)(1) to read as follows:

§ 60.5380a What VOC standards apply to centrifugal compressor affected facilities?

You must comply with the VOC standards in paragraphs (a) through (d) of this section for each centrifugal compressor affected facility.

(a)(1) You must reduce VOC emissions from each centrifugal compressor wet seal fluid degassing system by 95.0 percent.

* * * * *

■ 11. Section 60.5385a is amended by revising the section heading, introductory text, and paragraph (a)(3) to read as follows:

§ 60.5385a What VOC standards apply to reciprocating compressor affected facilities?

You must reduce VOC emissions by complying with the standards in paragraphs (a) through (d) of this section for each reciprocating compressor affected facility.

(a) * * *

(3) Collect the VOC emissions from the rod packing using a rod packing emissions collection system that operates under negative pressure and route the rod packing emissions to a process through a closed vent system that meets the requirements of § 60.5411a(a) and (d).

* * * * *

■ 12. Section 60.5390a is amended by revising the section heading and introductory text to read as follows:

§ 60.5390a What VOC standards apply to pneumatic controller affected facilities?

For each pneumatic controller affected facility you must comply with the VOC standards, based on natural gas as a surrogate for VOC, in either paragraph (b)(1) or (c)(1) of this section, as applicable. Pneumatic controllers meeting the conditions in paragraph (a) of this section are exempt from the requirements in paragraph (b)(1) or (c)(1) of this section.

* * * * *

■ 13. Section 60.5393a is amended by revising the section heading and introductory text to read as follows:

§ 60.5393a What VOC standards apply to pneumatic pump affected facilities?

For each pneumatic pump affected facility you must comply with the VOC standards, based on natural gas as a surrogate for VOC, in either paragraph (a) or (b) of this section, as applicable, on or after November 30, 2016.

* * * * *

■ 14. Section 60.5397a is amended by revising the section heading and introductory text to read as follows:

§ 60.5397a What fugitive emissions VOC standards apply to the affected facility which is the collection of fugitive emissions components at a well site and the affected facility which is the collection of fugitive emissions components at a compressor station?

For each affected facility under § 60.5365a(i) and (j), you must reduce VOC emissions by complying with the requirements of paragraphs (a) through (j) of this section. The requirements in this section are independent of the closed vent system and cover requirements in § 60.5411a.

* * * * *

■ 15. Section 60.5398a is amended by revising the section heading and paragraphs (a) and (d)(1)(xi) to read as follows:

§ 60.5398a What are the alternative means of emission limitations for VOC from well completions, reciprocating compressors, the collection of fugitive emissions components at a well site and the collection of fugitive emissions components at a compressor station?

(a) If, in the Administrator's judgment, an alternative means of emission limitation will achieve a reduction in VOC emissions at least equivalent to the reduction in VOC emissions achieved under §§ 60.5375a, 60.5385a, and 60.5397a, the Administrator will publish, in the **Federal Register**, a notice permitting the use of that alternative means for the purpose of compliance with §§ 60.5375a, 60.5385a, and 60.5397a. The notice may condition permission on requirements related to the operation and maintenance of the alternative means.

* * * * *

(d) * * *

(1) * * *

(xi) Operation and maintenance procedures and other provisions necessary to ensure reduction in VOC emissions at least equivalent to the reduction in VOC emissions achieved under § 60.5397a.

* * * * *

■ 16. Section 60.5400a is amended by revising the section heading and paragraph (c) to read as follows:

§ 60.5400a What equipment leak VOC standards apply to affected facilities at an onshore natural gas processing plant?

* * * * *

(c) You may apply to the Administrator for permission to use an alternative means of emission limitation that achieves a reduction in emissions of VOC at least equivalent to that achieved by the controls required in this subpart according to the requirements of § 60.5402a.

* * * * *

■ 17. Section 60.5401a is amended by revising the section heading to read as follows:

§ 60.5401a What are the exceptions to the equipment leak VOC standards for affected facilities at onshore natural gas processing plants?

* * * * *

■ 18. Section 60.5402a is amended by revising the section heading and paragraphs (a) and (d)(2) introductory text to read as follows:

§ 60.5402a What are the alternative means of emission limitations for VOC equipment leaks from onshore natural gas processing plants?

(a) If, in the Administrator's judgment, an alternative means of emission limitation will achieve a reduction in VOC emissions at least equivalent to the reduction in VOC emissions achieved under any design, equipment, work practice or operational standard, the Administrator will publish, in the **Federal Register**, a notice permitting the use of that alternative means for the purpose of compliance with that standard. The notice may condition permission on requirements related to the operation and maintenance of the alternative means.

* * * * *

(d) * * *

(2) The application must include operation, maintenance, and other provisions necessary to assure reduction in VOC emissions at least equivalent to the reduction in VOC emissions achieved under the design, equipment, work practice or operational standard in paragraph (a) of this section by including the information specified in paragraphs (d)(2)(i) through (x) of this section.

* * * * *

■ 19. Section 60.5410a is amended by revising paragraphs (a) introductory text, (b)(1), (d) introductory text, and (f) to read as follows:

§ 60.5410a How do I demonstrate initial compliance with the standards for my well, centrifugal compressor, reciprocating compressor, pneumatic controller, pneumatic pump, storage vessel, collection of fugitive emissions components at a well site, collection of fugitive emissions components at a compressor station, and equipment leaks and sweetening unit affected facilities at onshore natural gas processing plants?

* * * * *

(a) To achieve initial compliance with the VOC standards for each well completion operation conducted at your well affected facility you must comply with paragraphs (a)(1) through (4) of this section.

* * * * *

(b)(1) To achieve initial compliance with standards for your centrifugal compressor affected facility you must reduce VOC emissions from each centrifugal compressor wet seal fluid degassing system by 95.0 percent or greater as required by § 60.5380a(a) and as demonstrated by the requirements of § 60.5413a.

* * * * *

(d) To achieve initial compliance with VOC emission standards for your pneumatic controller affected facility you must comply with the requirements specified in paragraphs (d)(1) through (6) of this section, as applicable.

* * * * *

(f) For affected facilities at onshore natural gas processing plants, initial compliance with the VOC standards is demonstrated if you are in compliance with the requirements of § 60.5400a.

* * * * *

■ 20. Section 60.5412a is amended by paragraphs (a)(1)(i) and (a)(2) to read as follows:

§ 60.5412a What additional requirements must I meet for determining initial compliance with control devices used to comply with the emission standards for my centrifugal compressor, and storage vessel affected facilities?

* * * * *

(a) * * *

(1) * * *

(i) You must reduce the mass content of VOC in the gases vented to the device by 95.0 percent by weight or greater as determined in accordance with the requirements of § 60.5413a(b), with the exceptions noted in § 60.5413a(a).

* * * * *

(2) Each vapor recovery device (*e.g.,* carbon adsorption system or condenser) or other non-destructive control device must be designed and operated to reduce the mass content of VOC in the gases vented to the device by 95.0 percent by weight or greater as determined in accordance with the requirements of § 60.5413a(b). As an alternative to the performance testing requirements in § 60.5413a(b), you may demonstrate initial compliance by conducting a design analysis for vapor recovery devices according to the requirements of § 60.5413a(c).

* * * * *

■ 21. Section 60.5413a is amended by revising paragraph (d)(11)(iii) to read as follows:

§ 60.5413a What are the performance testing procedures for control devices used to demonstrate compliance at my centrifugal compressor and storage vessel affected facilities?

* * * * *

(d) * * *

(11) * * *

(iii) A manufacturer must demonstrate a destruction efficiency of at least 95 percent for THC, as propane. A control device model that demonstrates a destruction efficiency of 95 percent for THC, as propane, will meet the control requirement for 95-percent destruction of VOC (if applicable) required under this subpart.

* * * * *

■ 22. Section 60.5415a is amended by revising paragraphs (b)(1) and (f) to read as follows:

§ 60.5415a How do I demonstrate continuous compliance with the standards for my well, centrifugal compressor, reciprocating compressor, pneumatic controller, pneumatic pump, storage vessel, collection of fugitive emissions components at a well site, and collection of fugitive emissions components at a compressor station affected facilities, and affected facilities at onshore natural gas processing plants?

* * * * *

(b) * * *

(1) You must reduce VOC emissions from the wet seal fluid degassing system by 95.0 percent or greater.

* * * * *

(f) For affected facilities at onshore natural gas processing plants, continuous compliance with VOC requirements is demonstrated if you are in compliance with the requirements of § 60.5400a.

* * * * *

■ 23. Section 60.5420a is amended by revising paragraph (c)(5)(iv) to read as follows:

§ 60.5420a What are my notification, reporting, and recordkeeping requirements?

* * * * *

(c) * * *

(5) * * *

(iv) For storage vessels that are skid-mounted or permanently attached to something that is mobile (such as trucks, railcars, barges, or ships), records indicating the number of consecutive days that the vessel is located at a site in the Crude Oil and Natural Gas source category. If a storage vessel is removed from a site and, within 30 days, is either returned to the site or replaced by another storage vessel at the site to serve the same or similar function, then the entire period since the original storage vessel was first located at the site, including the days when the storage vessel was removed, will be added to the count towards the number of consecutive days.

* * * * *

■ 24. Section 60.5421a is amended by revising the section heading to read as follows:

§ 60.5421a What are my additional recordkeeping requirements for my affected facility subject to VOC requirements for onshore natural gas processing plants?

* * * * *

■ 25. Section 60.5422a is amended by revising the section heading to read as follows:

§ 60.5422a What are my additional reporting requirements for my affected facility subject to VOC requirements for onshore natural gas processing plants?

* * * * *

■ 26. Section 60.5430a is amended by:

■ a. Revising the definition for *Compressor station.*

■ b. Removing the definition for *Crude oil and natural gas source category.*

■ c. Adding the definition for *Crude Oil and Natural Gas Production source category* in alphabetical order.

■ d. Revising the definitions for *Equipment* and *Fugitive emissions component.*

■ e. Adding the definition for *Natural gas transmission and storage segment* in alphabetical order.

The revisions and additions read as follows:

§ 60.5430a What definitions apply to this subpart?

* * * * *

Compressor station means any permanent combination of one or more compressors that move natural gas at increased pressure through gathering pipelines. This includes, but is not limited to, gathering and boosting stations. The combination of one or more compressors located at a well site, or located at an onshore natural gas processing plant, is not a compressor station for purposes of § 60.5397a.

* * * * *

Crude Oil and Natural Gas Production source category means:

(1) Crude oil production, which includes the well and extends to the point of custody transfer to the crude oil transmission pipeline or any other forms of transportation; and

(2) Natural gas production and processing, which includes the well and extends to, but does not include, the point of custody transfer to the natural gas transmission and storage segment.

* * * * *

Equipment, as used in the standards and requirements in this subpart relative to the equipment leaks of VOC from onshore natural gas processing plants, means each pump, pressure relief device, open-ended valve or line, valve, and flange or other connector that is in VOC service or in wet gas service, and any device or system required by those same standards and requirements in this subpart.

* * * * *

Fugitive emissions component means any component that has the potential to emit fugitive emissions of VOC at a well site or compressor station, including valves, connectors, pressure relief devices, open-ended lines, flanges, covers, and closed vent systems not subject to § 60.5411 or § 60.5411a, thief hatches or other openings on a controlled storage vessel not subject to § 60.5395 or § 60.5395a, compressors, instruments, and meters. Devices that vent as part of normal operations, such as natural gas-driven pneumatic controllers or natural gas-driven pumps, are not fugitive emissions components, insofar as the natural gas discharged from the device's vent is not considered a fugitive emission. Emissions originating from other than the device's vent, such as the thief hatch on a controlled storage vessel, would be considered fugitive emissions.

* * * * *

Natural gas transmission and storage segment means the transport or storage of natural gas prior to delivery to a ''local distribution company custody transfer station'' (as defined in this section) or to a final end user (if there is no local distribution company custody transfer station). For the purposes of this subpart, natural gas enters the natural gas transmission and storage segment after the natural gas processing plant, when present. If no natural gas processing plant is present, natural gas enters the natural gas transmission and storage segment after the point of ''custody transfer'' (as defined in this section). A compressor station that transports natural gas prior to the point of ''custody transfer'' or to a natural gas processing plant (if present) is not considered a part of the natural gas transmission and storage segment.

The President

Presidential Determination No. 2020–10 of September 9, 2020

Continuation of the Exercise of Certain Authorities Under the Trading With the Enemy Act

Memorandum for the Secretary of State [and] the Secretary of the Treasury

Under section 101(b) of Public Law 95–223 (91 Stat. 1625; 50 U.S.C. 4305 note), and a previous determination on September 13, 2019 (84 *FR* 49189, September 18, 2019), the exercise of certain authorities under the Trading With the Enemy Act is scheduled to expire on September 14, 2020.

I hereby determine that the continuation of the exercise of those authorities with respect to Cuba for 1 year is in the national interest of the United States.

Therefore, consistent with the authority vested in me by section 101(b) of Public Law 95–223, I continue for 1 year, until September 14, 2021, the exercise of those authorities with respect to Cuba, as implemented by the Cuban Assets Control Regulations, 31 CFR part 515.

The Secretary of the Treasury is authorized and directed to publish this determination in the *Federal Register*.

LIST OF PUBLIC LAWS

Note: No public bills which have become law were received by the Office of the Federal Register for inclusion in today's **List of Public Laws**.

Last List August 18, 2020

Public Laws Electronic Notification Service (PENS)

PENS is a free email notification service of newly enacted public laws. To subscribe, go to *https://listserv.gsa.gov/cgi-bin/wa.exe?SUBED1=PUBLAWS-L&A=1*

Note: This service is strictly for email notification of new laws. The text of laws is not available through this service. **PENS** cannot respond to specific inquiries sent to this address.
