In the FY 2017 IPPS/LTCH PPS final rule (81 FR 57064 through 57065), we finalized a policy to address the budget neutrality requirement for the demonstration. We also discussed this policy in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38294 through 38296), the FY 2019 IPPS/LTCH PPS final rule (83 FR 41516 through 41517), and the FY 2020 IPPS/LTCH PPS final rule (84 FR 42044 through 42701), but did not make any changes to the policy that was adopted in FY 2017. As explained in the FY 2017 IPPS/LTCH PPS final rule, we based our selection of CAHs for participation in the demonstration with the goal of maintaining the budget neutrality of the demonstration on its own terms (that is, the demonstration would produce savings from reduced transfers and admissions to other health care providers, thus offsetting any increase in Medicare payments as a result of the demonstration). However, because of the small size of the demonstration and uncertainty associated with the projected Medicare utilization and costs, the policy we adopted in the FY 2017 IPPS/LTCH PPS final rule provides a contingency plan to ensure that the budget neutrality requirement in section 123 of Public Law 110–275 is met. If analysis of claims data for Medicare beneficiaries receiving services at each of the participating CAHs, as well as from other data sources, including cost reports for these CAHs, shows that increases in Medicare payments under the demonstration during the 3-year period are not sufficiently offset by reductions elsewhere, we will recoup the additional expenditures attributable to the demonstration through a reduction in payments to all CAHs nationwide. Because of the small scale of the demonstration, we indicated that we did not believe it would be feasible to implement budget neutrality by reducing payments to only the participating CAHs. Therefore, in the event that this demonstration is found to result in aggregate payments in excess of the amount that would have been paid if this demonstration were not implemented, we will comply with the budget neutrality requirement by reducing payments to all CAHs, not just those participating in the demonstration. We stated that we believe it is appropriate to make any payment reductions across all CAHs because the FCHIP demonstration was specifically designed to test innovations that affect delivery of services by the CAH provider category. We explained our belief that the language of the statutory budget neutrality requirement at section 123(g)(1)(B) of Public Law 110–275 permits the agency to implement the budget neutrality provision in this manner. The statutory language merely refers to ensuring that aggregate payments made by the Secretary do not exceed the amount which the Secretary estimates would have been paid if the demonstration project was not implemented, and does not identify the range across which aggregate payments must be held equal.

Based on actuarial analysis using cost report settlements for FYs 2013 and 2014, the FCHIP demonstration is projected to satisfy the budget neutrality requirement and likely yield a total net savings. For this FY 2021 IPPS/LTCH PPS final rule, we estimate that the total impact of the payment recoupment (if needed) will be no greater than 0.03 percent of CAHs' total Medicare payments (that is, Medicare Part A and Part B) within 1 fiscal year. The final budget neutrality estimates for the FCHIP demonstration will be based on costs incurred during the entire demonstration period, which is August 1, 2016, through July 31, 2019.

b. FCHIP Budget Neutrality Methodology and Analytical Approach

As explained in the FY 2021 IPPS/LTCH PPS proposed rule, our goal was to maintain the budget neutrality of the demonstration on its own terms (that is, the demonstration would produce savings from reduced transfers and admissions to other health care providers, thus offsetting any increase in payments to the participating CAHs

resulting from the demonstration). The budget neutrality assessment will seek to determine if this goal has been met by examining expenditures for beneficiaries who received an intervention-related service(s) at a demonstration CAH or a comparison CAH. The demonstration and comparison groups will be identified as Medicare beneficiaries receiving an intervention-related service (that is, telemedicine, SNF/NF or ambulance) at participating CAHs and non-participating CAHs, respectively. To ensure that there is no cross contamination between the groups, the demonstration and comparison groups will be mutually exclusive so beneficiaries who received intervention-related services at both participating and non-participating CAHs will be included in the demonstration (intervention) group only. The analysis of budget neutrality will seek to identify both the costs related to providing the intervention-related services under the demonstration and any potential downstream effects of these services, including any savings that may have accrued.

We intend to incorporate two components into the budget neutrality analytical approach: (1) Medicare cost reports; and (2) Medicare administrative claims. As described in the FY 2021 IPPS/LTCH PPS proposed rule (85 FR 32800), we propose to estimate the cost of the demonstration for each fiscal year of the demonstration period using Medicare cost reports for the participating hospitals, and Medicare administrative claims and enrollment data for beneficiaries who received demonstration intervention related services.

First, using Medicare administrative claims and enrollment data, a difference-in-difference (DID) regression analysis will be used to compute the impact of the demonstration interventions on Medicare expenditures, relative to what expenditures would have looked like without the demonstration. The DID regression analysis will compare the direct cost and potential downstream effects of intervention services, including any savings that may have accrued, during the baseline and performance period for both the demonstration and comparison groups.

Second, the Medicare administrative claims analysis will be reconciled using data obtained from auditing the participating CAHs' Medicare cost reports. We will estimate the costs of the demonstration using ''as submitted'' cost reports for each hospital's financial fiscal year participation within each demonstration performance year. While the majority of demonstration participants had cost reporting years that aligned with the demonstration period start date of July 1, 2016, several participating CAHs did not have cost reporting years that coincided with the demonstration start date. The cost report is structured to gather costs, revenues and statistical data on the provider's financial fiscal period. As a result, when a CAH's cost reporting year does not align with the timeframes used under the demonstration, additional calculations are necessary to carve-out data that relates to the portion of a cost reporting year when the demonstration was not in effect. We will determine the final budget neutrality results for the demonstration once complete data is available for the demonstration period. As we stated in the proposed rule, while this discussion represents our anticipated approach to assessing the financial impact of the demonstration based on the data available to date, upon receiving data for the full demonstration period, we may update and/or modify the FCHIP budget neutrality methodology and analytical approach to ensure that the full impact of the demonstration is appropriately captured.

Under the policy finalized in the FY 2017 IPPS/LTCH PPS final rule, in the event the demonstration is found not to have been budget neutral, any excess costs will be recouped over a period of 3 cost reporting years. The 3-year period for recoupment will allow for a reasonable timeframe for the payment reduction and minimize any impact on CAHs' operations. Under the policy adopted in FY 2017 IPPS/LTCH PPS final rule, in the event the demonstration is found not to have been budget neutral, any excess costs will be recouped beginning in CY 2020. In the FY 2021 IPPS/LTCH PPS proposed rule (85 FR 32810), we stated that based on the currently available data, the determination of budget neutrality results is preliminary and the amount of any reduction to CAH payments that will be needed in order to recoup excess costs under the demonstration remains uncertain. Therefore, we proposed to revise the policy originally adopted in the FY 2017 IPPS/LTCH PPS final rule, to delay the implementation of any budget neutrality adjustment and stated that we will revisit this policy in rulemaking for FY 2022, when we expect to have complete data for the demonstration period. Since our data analysis is incomplete, it is not possible to determine the impact of this policy for any national payment system for FY 2021.

Comment: Commenters expressed support for our proposal to delay implementation of any budget neutrality adjustment until we have complete data.

Response: We acknowledge and appreciate the comments. After consideration of the public comments received, we are finalizing this proposal without modification.

VII. Changes to the Long-Term Care Hospital Prospective Payment System (LTCH PPS) for FY 2021

A. Background of the LTCH PPS

1. Legislative and Regulatory Authority

Section 123 of the Medicare, Medicaid, and SCHIP (State Children's Health Insurance Program) Balanced Budget Refinement Act of 1999 (BBRA) (Pub. L. 106–113), as amended by section 307(b) of the Medicare, Medicaid, and SCHIP Benefits Improvement and Protection Act of 2000 (BIPA) (Pub. L. 106554), provides for payment for both the operating and capital-related costs of hospital inpatient stays in long-term care hospitals (LTCHs) under Medicare Part A based on prospectively set rates. The Medicare prospective payment system (PPS) for LTCHs applies to hospitals that are described in section 1886(d)(1)(B)(iv) of the Act, effective for cost reporting periods beginning on or after October 1, 2002.

Section 1886(d)(1)(B)(iv)(I) of the Act originally defined an LTCH as a hospital which has an average inpatient length of stay (as determined by the Secretary) of greater than 25 days. Section 1886(d)(1)(B)(iv)(II) of the Act (''subclause II'' LTCHs) also provided an alternative definition of LTCHs. However, section 15008 of the 21st Century Cures Act (Pub. L. 114–255) amended section 1886 of the Act to exclude former ''subclause II'' LTCHs from being paid under the LTCH PPS and created a new category of IPPS-excluded hospitals, which we refer to as ''extended neoplastic disease care hospitals,'' to be paid as hospitals that were formally classified as ''subclause (II)'' LTCHs (82 FR 38298).

Section 123 of the BBRA requires the PPS for LTCHs to be a ''per discharge'' system with a diagnosis-related group (DRG) based patient classification system that reflects the differences in patient resources and costs in LTCHs.

Section 307(b)(1) of the BIPA, among other things, mandates that the Secretary shall examine, and may provide for, adjustments to payments under the LTCH PPS, including adjustments to DRG weights, area wage

adjustments, geographic reclassification, outliers, updates, and a disproportionate share adjustment.

In the August 30, 2002 **Federal Register**, we issued a final rule that implemented the LTCH PPS authorized under the BBRA and BIPA (67 FR 55954). For the initial implementation of the LTCH PPS (FYs 2003 through FY 2007), the system used information from LTCH patient records to classify patients into distinct long-term care-diagnosis-related groups (LTCDRGs) based on clinical characteristics and expected resource needs. Beginning in FY 2008, we adopted the Medicare severity-long-term care-diagnosis related groups (MS–LTC–DRGs) as the patient classification system used under the LTCH PPS. Payments are calculated for each MS–LTC–DRG and provisions are made for appropriate payment adjustments. Payment rates under the LTCH PPS are updated annually and published in the **Federal Register**.

The LTCH PPS replaced the reasonable cost-based payment system under the Tax Equity and Fiscal Responsibility Act of 1982 (TEFRA) (Pub. L. 97248) for payments for inpatient services provided by an LTCH with a cost reporting period beginning on or after October 1, 2002. (The regulations implementing the TEFRA reasonable-cost-based payment provisions are located at 42 CFR part 413.) With the implementation of the PPS for acute care hospitals authorized by the Social Security Amendments of 1983 (Pub. L. 9821), which added section 1886(d) to the Act, certain hospitals, including LTCHs, were excluded from the PPS for acute care hospitals and were paid their reasonable costs for inpatient services subject to a per discharge limitation or target amount under the TEFRA system. For each cost reporting period, a hospital specific ceiling on payments was determined by multiplying the hospital's updated target amount by the number of total current year Medicare discharges. (Generally, in this section of the preamble of this final rule, when we refer to discharges, we describe Medicare discharges.) The August 30, 2002 final rule further details the payment policy under the TEFRA system (67 FR 55954).

In the August 30, 2002 final rule, we provided for a 5-year transition period from payments under the TEFRA system to payments under the LTCH PPS. During this 5-year transition period, an LTCH's total payment under the PPS was based on an increasing percentage of the Federal rate with a corresponding decrease in the percentage of the LTCH PPS payment that is based on reasonable cost concepts, unless an LTCH made a one-time election to be paid based on 100 percent of the Federal rate. Beginning with LTCHs' cost reporting periods beginning on or after October 1, 2006, total LTCH PPS payments are based on 100 percent of the Federal rate.

In addition, in the August 30, 2002 final rule, we presented an in-depth discussion of the LTCH PPS, including the patient classification system, relative weights, payment rates, additional payments, and the budget neutrality requirements mandated by section 123 of the BBRA. The same final rule that established regulations for the LTCH PPS under 42 CFR part 412, subpart O, also contained LTCH provisions related to covered inpatient services, limitation on charges to beneficiaries, medical review requirements, furnishing of inpatient hospital services directly or under arrangement, and reporting and recordkeeping requirements. We refer readers to the August 30, 2002 final rule for a comprehensive discussion of the research and data that supported the establishment of the LTCH PPS (67 FR 55954).

In the FY 2016 IPPS/LTCH PPS final rule (80 FR 49601 through 49623), we implemented the provisions of the Pathway for Sustainable Growth Rate (SGR) Reform Act of 2013 (Pub. L. 113–67), which mandated the application of the ''site neutral'' payment rate under the LTCH PPS for discharges that do not meet the statutory criteria for exclusion beginning in FY 2016. For cost reporting periods beginning on or after October 1, 2015, discharges that do not meet certain statutory criteria for exclusion are paid based on the site neutral payment rate. Discharges that do meet the statutory criteria continue to receive payment based on the LTCH PPS standard Federal payment rate. For more information on the statutory requirements of the Pathway for SGR Reform Act of 2013, we refer readers to the FY 2016 IPPS/LTCH PPS final rule (80 FR 49601 through 49623) and the FY 2017 IPPS/LTCH PPS final rule (81 FR 57068 through 57075).

In the FY 2018 IPPS/LTCH PPS final rule, we implemented several provisions of the 21st Century Cures Act (''the Cures Act'') (Pub. L. 114–255) that affected the LTCH PPS. (For more information on these provisions, we refer readers to 82 FR 38299.)

In the FY 2019 IPPS/LTCH PPS final rule (83 FR 41529), we made conforming changes to our regulations to implement the provisions of section 51005 of the Bipartisan Budget Act of 2018 (Pub. L. 115–123), which extends the transitional blended payment rate for site neutral payment rate cases for an additional 2 years. We refer readers to section VII.C. of the preamble of the FY 2019 IPPS/LTCH PPS final rule for a discussion of our final policy. In addition, in the FY 2019 IPPS/LTCH PPS final rule, we removed the 25-percent threshold policy under 42 CFR 412.538.

In the FY 2020 IPPS/LTCH PPS final rule (84 FR 42439), we further revised our regulations to implement the provisions of the Pathway for SGR Reform Act of 2013 (Pub. L. 113–67) that relate to the payment adjustment for discharges from LTCHs that do not maintain the requisite discharge payment percentage and the process by which such LTCHs may have the payment adjustment discontinued.

We received several public comments that addressed issues, including the Coronavirus disease 2019 (COVID–19) pandemic, that were outside the scope of the FY 2021 IPPS/LTCH PPS proposed rule. We will keep these comments in mind and may consider them for future rulemaking.

2. Criteria for Classification as an LTCH

a. Classification as an LTCH

Under the regulations at § 412.23(e)(1), to qualify to be paid under the LTCH PPS, a hospital must have a provider agreement with Medicare. Furthermore, § 412.23(e)(2)(i), which implements section 1886(d)(1)(B)(iv) of the Act, requires that a hospital have an average Medicare inpatient length of stay of greater than 25 days to be paid under the LTCH PPS. In accordance with section 1206(a)(3) of the Pathway for SGR Reform Act of 2013 (Pub. L. 113–67), as amended by section 15007 of Public Law 114–255, we amended our regulations to specify that Medicare Advantage plans' and site neutral payment rate discharges are excluded from the calculation of the average length of stay for all LTCHs, for discharges occurring in cost reporting period beginning on or after October 1, 2015.

b. Hospitals Excluded From the LTCH PPS

The following hospitals are paid under special payment provisions, as described in § 412.22(c) and, therefore, are not subject to the LTCH PPS rules:

- Veterans Administration hospitals.
- Hospitals that are reimbursed under State cost control systems approved under 42 CFR part 403.
- Hospitals that are reimbursed in accordance with demonstration projects authorized under section 402(a) of the

Social Security Amendments of 1967 (Pub. L. 90–248) (42 U.S.C. 1395b–1), section 222(a) of the Social Security Amendments of 1972 (Pub. L. 92–603) (42 U.S.C. 1395b1 (note)) (Statewide—all payer systems, subject to the—rate-of increase—test at section 1814(b) of the Act), or section 3201 of the Patient Protection and Affordable Care Act (Pub. L. 111–148) (42 U.S.C. 1315a).

- Nonparticipating hospitals furnishing emergency services to Medicare beneficiaries.

3. Limitation on Charges to Beneficiaries

In the August 30, 2002 final rule, we presented an in-depth discussion of beneficiary liability under the LTCH PPS (67 FR 55974 through 55975). This discussion was further clarified in the RY 2005 LTCH PPS final rule (69 FR 25676). In keeping with those discussions, if the Medicare payment to the LTCH is the full LTC–DRG payment amount, consistent with other established hospital prospective payment systems, § 412.507 currently provides that an LTCH may not bill a Medicare beneficiary for more than the deductible and coinsurance amounts as specified under §§ 409.82, 409.83, and 409.87, and for items and services specified under § 489.30(a). However, under the LTCH PPS, Medicare will only pay for services furnished during the days for which the beneficiary has coverage until the short-stay outlier (SSO) threshold is exceeded. If the Medicare payment was for a SSO case (in accordance with § 412.529), and that payment was less than the full LTC–DRG payment amount because the beneficiary had insufficient coverage as a result of the remaining Medicare days, the LTCH also is currently permitted to charge the beneficiary for services delivered on those uncovered days (in accordance with § 412.507). In the FY 2016 IPPS/LTCH PPS final rule (80 FR 49623), we amended our regulations to expressly limit the charges that may be imposed upon beneficiaries whose LTCHs' discharges are paid at the site neutral payment rate under the LTCH PPS. In the FY 2017 IPPS/LTCH PPS final rule (81 FR 57102), we amended the regulations under § 412.507 to clarify our existing policy that blended payments made to an LTCH during its transitional period (that is, an LTCH's payment for discharges occurring in cost reporting periods beginning in FYs 2016 through 2019) are considered to be site neutral payment rate payments.

B. Medicare Severity Long-Term Care Diagnosis-Related Group (MS–LTC–DRG) Classifications and Relative Weights for FY 2021

1. Background

Section 123 of the BBRA required that the Secretary implement a PPS for LTCHs to replace the cost-based payment system under TEFRA. Section 307(b)(1) of the BIPA modified the requirements of section 123 of the BBRA by requiring that the Secretary examine the feasibility and the impact of basing payment under the LTCH PPS on the use of existing (or refined) hospital DRGs that have been modified to account for different resource use of LTCH patients.

When the LTCH PPS was implemented for cost reporting periods beginning on or after October 1, 2002, we adopted the same DRG patient classification system utilized at that time under the IPPS. As a component of the LTCH PPS, we refer to this patient classification system as the ''long-term care diagnosis-related groups (LTC–DRGs).'' Although the patient classification system used under both the LTCH PPS and the IPPS are the same, the relative weights are different. The established relative weight methodology and data used under the LTCH PPS result in relative weights under the LTCH PPS that reflect the differences in patient resource use of LTCH patients, consistent with section 123(a)(1) of the BBRA (Pub. L. 106–113).

As part of our efforts to better recognize severity of illness among patients, in the FY 2008 IPPS final rule with comment period (72 FR 47130), the MS–DRGs and the Medicare severity long-term care diagnosis-related groups (MS–LTC–DRGs) were adopted under the IPPS and the LTCH PPS, respectively, effective beginning October 1, 2007 (FY 2008). For a full description of the development, implementation, and rationale for the use of the MS–DRGs and MS–LTC–DRGs, we refer readers to the FY 2008 IPPS final rule with comment period (72 FR 47141 through 47175 and 47277 through 47299). (We note that, in that same final rule, we revised the regulations at § 412.503 to specify that for LTCH discharges occurring on or after October 1, 2007, when applying the provisions of 42 CFR part 412, subpart O applicable to LTCHs for policy descriptions and payment calculations, all references to LTC–DRGs would be considered a reference to MS–LTC–DRGs. For the remainder of this section, we present the discussion in terms of the current MS–LTC–DRG patient classification system unless specifically referring to the previous LTC–DRG patient classification system that was in effect before October 1, 2007.)

The MS–DRGs adopted in FY 2008 represent an increase in the number of DRGs by 207 (that is, from 538 to 745) (72 FR 47171). The MS–DRG classifications are updated annually. There are currently 761 MS–DRG groupings. For FY 2021, there will be 767 MS–DRG groupings based on the changes, as discussed in section II.E. of the preamble of this final rule. Consistent with section 123 of the BBRA, as amended by section 307(b)(1) of the BIPA, and § 412.515 of the regulations, we use information derived from LTCH PPS patient records to classify LTCH discharges into distinct MS–LTC–DRGs based on clinical characteristics and estimated resource needs. Then we assign an appropriate weight to the MS–LTC–DRGs to account for the difference in resource use by patients exhibiting the case complexity and multiple medical problems characteristic of LTCHs.

In this section of this final rule, we provide a general summary of our existing methodology for determining the FY 2021 MS–LTC–DRG relative weights under the LTCH PPS.

As we proposed in the FY 2021 IPPS/LTCH PPS proposed rule (85 FR 32803), in general, for FY 2021, we are continuing to use our existing methodology to determine the MS–LTC–DRG relative weights (as discussed in greater detail in section VII.B.3. of the preamble of this final rule). As we established when we implemented the dual rate LTCH PPS payment structure codified under § 412.522, which began in FY 2016, as we proposed, the annual recalibration of the MS–LTC–DRG relative weights are determined: (1) Using only data from available LTCH PPS claims that would have qualified for payment under the new LTCH PPS standard Federal payment rate if that rate had been in effect at the time of discharge when claims data from time periods before the dual rate LTCH PPS payment structure applies are used to calculate the relative weights; and (2) using only data from available LTCH PPS claims that qualify for payment under the new LTCH PPS standard Federal payment rate when claims data from time periods after the dual rate LTCH PPS payment structure applies are used to calculate the relative weights (80 FR 49624). That is, under our current methodology, our MS–LTC–DRG relative weight calculations do not use data from cases paid at the site neutral payment rate under § 412.522(c)(1) or data from cases that

would have been paid at the site neutral payment rate if the dual rate LTCH PPS payment structure had been in effect at the time of that discharge. For the remainder of this discussion, we use the phrase ''applicable LTCH cases'' or ''applicable LTCH data'' when referring to the resulting claims data set used to calculate the relative weights (as described later in greater detail in section VII.B.3.c. of the preamble of this final rule). In addition, for FY 2021, as we proposed, we are continuing to exclude the data from all-inclusive rate providers and LTCHs paid in accordance with demonstration projects, as well as any Medicare Advantage claims from the MS–LTC–DRG relative weight calculations for the reasons discussed in section VII.B.3.c. of the preamble of this final rule.

Furthermore, for FY 2021, in using data from applicable LTCH cases to establish MS–LTC–DRG relative weights, as we proposed, we are continuing to establish low-volume MS–LTC–DRGs (that is, MS–LTC–DRGs with less than 25 cases) using our quintile methodology in determining the MS–LTC–DRG relative weights because LTCHs do not typically treat the full range of diagnoses as do acute care hospitals. Therefore, for purposes of determining the relative weights for the large number of low-volume MS–LTC–DRGs, we grouped all of the low-volume MS–LTC–DRGs into five quintiles based on average charges per discharge. Then, under our existing methodology, we accounted for adjustments made to LTCH PPS standard Federal payments for short-stay outlier (SSO) cases (that is, cases where the covered length of stay at the LTCH is less than or equal to five-sixths of the geometric average length of stay for the MS–LTC–DRG), and we made adjustments to account for nonmonotonically increasing weights, when necessary. The methodology is premised on more severe cases under the MS–LTC–DRG system requiring greater expenditure of medical care resources and higher average charges such that, in the severity levels within a base MS–LTC–DRG, the relative weights should increase monotonically with severity from the lowest to highest severity level. (We discuss each of these components of our MS–LTC–DRG relative weight methodology in greater detail in section VII.B.3.g. of the preamble of this final rule.)

2. Patient Classifications Into MS–LTC–DRGs

a. Background

The MS–DRGs (used under the IPPS) and the MS–LTC–DRGs (used under the LTCH PPS) are based on the CMS DRG structure. As noted previously in this section, we refer to the DRGs under the LTCH PPS as MS–LTC–DRGs although they are structurally identical to the MS–DRGs used under the IPPS.

The MS–DRGs are organized into 25 major diagnostic categories (MDCs), most of which are based on a particular organ system of the body; the remainder involve multiple organ systems (such as MDC 22, Burns). Within most MDCs, cases are then divided into surgical DRGs and medical DRGs. Surgical DRGs are assigned based on a surgical hierarchy that orders operating room (O.R.) procedures or groups of O.R. procedures by resource intensity. The GROUPER software program does not recognize all ICD–10–PCS procedure codes as procedures affecting DRG assignment. That is, procedures that are not surgical (for example, EKGs), or minor surgical procedures (for example, a biopsy of skin and subcutaneous tissue (procedure code 0JBH3ZX)) do not affect the MS–LTC–DRG assignment based on their presence on the claim.

Generally, under the LTCH PPS, a Medicare payment is made at a predetermined specific rate for each discharge that varies based on the MS–LTC–DRG to which a beneficiary's discharge is assigned. Cases are classified into MS–LTC–DRGs for payment based on the following six data elements:

- Principal diagnosis.
- Additional or secondary diagnoses.
- Surgical procedures.
- Age.
- Sex.
- Discharge status of the patient.

Currently, for claims submitted using version ASC X12 5010 format, up to 25 diagnosis codes and 25 procedure codes are considered for an MS–DRG assignment. This includes one principal diagnosis and up to 24 secondary diagnoses for severity of illness determinations. (For additional information on the processing of up to 25 diagnosis codes and 25 procedure codes on hospital inpatient claims, we refer readers to section II.G.11.c. of the preamble of the FY 2011 IPPS/LTCH PPS final rule (75 FR 50127).)

Under the HIPAA transactions and code sets regulations at 45 CFR parts 160 and 162, covered entities must comply with the adopted transaction standards and operating rules specified in subparts I through S of part 162. Among other requirements, on or after January 1, 2012, covered entities were required to use the ASC X12 Standards for Electronic Data Interchange Technical Report Type 3—Health Care Claim: Institutional (837), May 2006, ASC X12N/005010X223, and Type 1 Errata to Health Care Claim: Institutional (837) ASC X12 Standards for Electronic Data Interchange Technical Report Type 3, October 2007, ASC X12N/005010X233A1 for the health care claims or equivalent encounter information transaction (45 CFR 162.1102(c)).

HIPAA requires covered entities to use the applicable medical data code set requirements when conducting HIPAA transactions (45 CFR 162.1000). Currently, upon the discharge of the patient, the LTCH must assign appropriate diagnosis and procedure codes from the most current version of the International Classification of Diseases, 10th Revision, Clinical Modification (ICD–10–CM) for diagnosis coding and the International Classification of Diseases, 10th Revision, Procedure Coding System (ICD–10–PCS) for inpatient hospital procedure coding, both of which were required to be implemented October 1, 2015 (45 CFR 162.1002(c)(2) and (3)). For additional information on the implementation of the ICD–10 coding system, we refer readers to section II.F.1. of the preamble of the FY 2017 IPPS/LTCH PPS final rule (81 FR 56787 through 56790) and section II.E.1. of the preamble of this final rule. Additional coding instructions and examples are published in the AHA's *Coding Clinic for ICD–10–CM/PCS.*

To create the MS–DRGs (and by extension, the MS–LTC–DRGs), base DRGs were subdivided according to the presence of specific secondary diagnoses designated as complications or comorbidities (CCs) into one, two, or three levels of severity, depending on the impact of the CCs on resources used for those cases. Specifically, there are sets of MS–DRGs that are split into 2 or 3 subgroups based on the presence or absence of a CC or a major complication or comorbidity (MCC). We refer readers to section II.D. of the preamble of the FY 2008 IPPS final rule with comment period for a detailed discussion about the creation of MS–DRGs based on severity of illness levels (72 FR 47141 through 47175).

MACs enter the clinical and demographic information submitted by LTCHs into their claims processing systems and subject this information to a series of automated screening processes called the Medicare Code Editor (MCE). These screens are designed to identify cases that require further review before assignment into a MS–LTC–DRG can be made. During this process, certain cases are selected for further explanation (74 FR 43949).

After screening through the MCE, each claim is classified into the appropriate MS–LTC–DRG by the Medicare LTCH GROUPER software on the basis of diagnosis and procedure codes and other demographic information (age, sex, and discharge status). The GROUPER software used under the LTCH PPS is the same GROUPER software program used under the IPPS. Following the MS–LTC–DRG assignment, the MAC determines the prospective payment amount by using the Medicare PRICER program, which accounts for hospital-specific adjustments. Under the LTCH PPS, we provide an opportunity for LTCHs to review the MS–LTC–DRG assignments made by the MAC and to submit additional information within a specified timeframe as provided in § 412.513(c).

The GROUPER software is used both to classify past cases to measure relative hospital resource consumption to establish the MS–LTC–DRG relative weights and to classify current cases for purposes of determining payment. The records for all Medicare hospital inpatient discharges are maintained in the MedPAR file. The data in this file are used to evaluate possible MS–DRG and MS–LTC–DRG classification changes and to recalibrate the MS–DRG and MS–LTC–DRG relative weights during our annual update under both the IPPS (§ 412.60(e)) and the LTCH PPS (§ 412.517), respectively.

b. Changes to the MS–LTC–DRGs for FY 2021

As specified by our regulations at § 412.517(a), which require that the MS–LTC–DRG classifications and relative weights be updated annually, and consistent with our historical practice of using the same patient classification system under the LTCH PPS as is used under the IPPS, in this final rule, as we proposed, we updated the MS–LTC–DRG classifications effective October 1, 2020 through September 30, 2021 (FY 2021), consistent with the changes to specific MS–DRG classifications presented in section II.F. of the preamble of this final rule. Accordingly, the MS–LTC–DRGs for FY 2021 presented in section II.F. of the preamble of this final rule are the same as the MS–DRGs that are being used under the IPPS for FY 2021. In addition, because the MS–LTC–DRGs for FY 2021 are the same as the MS–DRGs for FY 2021, the other changes that affect MS–DRG (and by extension MS–LTC–DRG) assignments under GROUPER Version 38 as discussed in section II.E. of the preamble of this final rule, including the changes to the MCE software and the ICD–10–CM/PCS coding system, also are applicable under the LTCH PPS for FY 2021.

3. Development of the FY 2021 MS–LTC–DRG Relative Weights

a. General Overview of the Development of the MS–LTC–DRG Relative Weights

One of the primary goals for the implementation of the LTCH PPS is to pay each LTCH an appropriate amount for the efficient delivery of medical care to Medicare patients. The system must be able to account adequately for each LTCH's case-mix in order to ensure both fair distribution of Medicare payments and access to adequate care for those Medicare patients whose care is costlier (67 FR 55984). To accomplish these goals, we have annually adjusted the LTCH PPS standard Federal prospective payment rate by the applicable relative weight in determining payment to LTCHs for each case. In order to make these annual adjustments under the dual rate LTCH PPS payment structure, beginning with FY 2016, we recalibrate the MS–LTC–DRG relative weighting factors annually using data from applicable LTCH cases (80 FR 49614 through 49617). Under this policy, the resulting MS–LTC–DRG relative weights would continue to be used to adjust the LTCH PPS standard Federal payment rate when calculating the payment for LTCH PPS standard Federal payment rate cases.

The established methodology to develop the MS–LTC–DRG relative weights is generally consistent with the methodology established when the LTCH PPS was implemented in the August 30, 2002 LTCH PPS final rule (67 FR 55989 through 55991). However, there have been some modifications of our historical procedures for assigning relative weights in cases of zero volume and/or nonmonotonicity resulting from the adoption of the MS–LTC–DRGs, along with the change made in conjunction with the implementation of the dual rate LTCH PPS payment structure beginning in FY 2016 to use LTCH claims data from only LTCH PPS standard Federal payment rate cases (or LTCH PPS cases that would have qualified for payment under the LTCH PPS standard Federal payment rate if the dual rate LTCH PPS payment structure had been in effect at the time of the discharge). (For details on the modifications to our historical procedures for assigning relative weights in cases of zero volume and/or nonmonotonicity, we refer readers to the FY 2008 IPPS final rule with comment period (72 FR 47289 through 47295) and the FY 2009 IPPS final rule (73 FR 48542 through 48550).) For details on the change in our historical methodology to use LTCH claims data only from LTCH PPS standard Federal payment rate cases (or cases that would have qualified for such payment had the LTCH PPS dual payment rate structure been in effect at the time) to determine the MS–LTC–DRG relative weights, we refer readers to the FY 2016 IPPS/LTCH PPS final rule (80 FR 49614 through 49617). Under the LTCH PPS, relative weights for each MS–LTC–DRG are a primary element used to account for the variations in cost per discharge and resource utilization among the payment groups (§ 412.515). To ensure that Medicare patients classified to each MS–LTC–DRG have access to an appropriate level of services and to encourage efficiency, we calculate a relative weight for each MS–LTC–DRG that represents the resources needed by an average inpatient LTCH case in that MS–LTC–DRG. For example, cases in an MS–LTC–DRG with a relative weight of 2 would, on average, cost twice as much to treat as cases in an MS–LTC–DRG with a relative weight of 1.

b. Development of the MS–LTC–DRG Relative Weights for FY 2021

In this final rule, as we proposed in the FY 2021 IPPS/LTCH PPS proposed rule (85 FR 32805), we are continuing to use our current methodology to determine the MS–LTC–DRG relative weights for FY 2021, including the continued application of established policies related to: The hospital-specific relative value methodology, the treatment of severity levels in the MS–LTC–DRGs, low-volume and no-volume MS–LTC–DRGs, adjustments for nonmonotonicity, the steps for calculating the MS–LTC–DRG relative weights with a budget neutrality factor, and only using data from applicable LTCH cases (which includes our policy of only using cases that would meet the criteria for exclusion from the site neutral payment rate (or, for discharges occurring prior to the implementation of the dual rate LTCH PPS payment structure, would have met the criteria for exclusion had those criteria been in effect at the time of the discharge)).

In this section, we present our application of our existing methodology for determining the MS–LTC–DRG relative weights for FY 2021, and we discuss the effects of our policies concerning the data used to determine the FY 2021 MS–LTC–DRG relative weights on the various components of our existing methodology in the discussion that follows.

We generally provide the low-volume quintiles and no-volume crosswalk data

previously published in Tables 13A and 13B for each annual proposed and final rule as one of our supplemental IPPS/LTCH PPS related data files that are made available for public use via the internet on the CMS website for the respective rule and fiscal year (that is, FY 2019 and subsequent fiscal years) at: *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html* to streamline the information made available to the public that is used in the annual development of IPPS Table 11 and to make it easier for the public to navigate and find the relevant data and information used for the development of proposed and final payment rates or factors for the applicable payment year while continuing to furnish the same information the tables provided in previous fiscal years (83 FR 41522). We refer readers to the CMS website for the low-volume quintiles and no-volume crosswalk data previously furnished via Tables 13A and 13B.

c. Data

For the FY 2021 IPPS/LTCH PPS proposed rule (85 FR 32805), consistent with our proposals regarding the calculation of the proposed MS–LTC–DRG relative weights for FY 2021, we obtained total charges from FY 2019 Medicare LTCH claims data from the December 2019 update of the FY 2019 MedPAR file, which was the best available data at that time, and we proposed to use Version 38 of the GROUPER to classify LTCH cases. Consistent with our historical practice, we proposed that if more recent data become available, we would use those data and the finalized Version 38 of the GROUPER in establishing the FY 2021 MS–LTC–DRG relative weights in the final rule. Accordingly, for this final rule, we are establishing the FY 2021 MS–LTC–DRG relative weights based on updated FY 2019 Medicare LTCH claims data from the March 2020 update of the FY 2019 MedPAR file, which is the best available data at the time of development of this final rule, and used the finalized Version 38 of the GROUPER to classify LTCH cases.

To calculate the FY 2021 MS–LTC–DRG relative weights under the dual rate LTCH PPS payment structure, as we proposed, we continued to use applicable LTCH data, which includes our policy of only using cases that meet the criteria for exclusion from the site neutral payment rate (or would have met the criteria had they been in effect at the time of the discharge) (80 FR 49624). Specifically, we began by first evaluating the LTCH claims data in the March 2020 update of the FY 2019 MedPAR file to determine which LTCH cases would meet the criteria for exclusion from the site neutral payment rate under § 412.522(b) or had the dual rate LTCH PPS payment structure applied to those cases at the time of discharge. We identified the FY 2019 LTCH cases that were not assigned to MS–LTC–DRGs 876, 880, 881, 882, 883, 884, 885, 886, 887, 894, 895, 896, 897, 945, and 946, which identify LTCH cases that do not have a principal diagnosis relating to a psychiatric diagnosis or to rehabilitation; and that either—

- The admission to the LTCH was ''immediately preceded'' by discharge from a subsection (d) hospital and the immediately preceding stay in that subsection (d) hospital included at least 3 days in an ICU, as we define under the ICU criterion; or
- The admission to the LTCH was ''immediately preceded'' by discharge from a subsection (d) hospital and the claim for the LTCH discharge includes the applicable procedure code that indicates at least 96 hours of ventilator services were provided during the LTCH stay, as we define under the ventilator criterion. Claims data from the FY 2019 MedPAR file that reported ICD–10–PCS procedure code 5A1955Z were used to identify cases involving at least 96 hours of ventilator services in accordance with the ventilator criterion. (We note that, for purposes of developing the MS–LTC–DRG relative weights we have previously addressed the treatment of cases that would have been excluded from the site neutral payment rate under the statutory provisions that provided for temporary exception from the site neutral payment rate under the LTCH PPS for certain spinal cord specialty hospitals or for certain severe wound care discharges from certain LTCHs provided by sections 15009 and 15010 of Public Law 114–255, respectively. The temporary exception from the site neutral payment rate for certain spinal cord specialty hospitals is effective for discharges in cost reporting periods beginning during FYs 2018 and 2019, and the temporary exception from the site neutral payment rate for certain severe wound care discharges from certain LTCHs was effective for a discharge in cost reporting period beginning during FY 2018. These statutory provisions will no longer be in effect for any discharges occurring in FY 2021 (that is, an LTCH with a cost reporting period that begins on the last day of FY 2019, on September 30, 2019, would end on September 29, 2020, the day prior to the start of FY 2021 on October 1, 2020). Therefore, we no longer need to address the treatment of these cases for purposes of developing the MS–LTC–DRG relative weights for FY 2021 and subsequent years.

Furthermore, consistent with our historical methodology, we excluded any claims in the resulting data set that were submitted by LTCHs that were all-inclusive rate providers and LTCHs that are paid in accordance with demonstration projects authorized under section 402(a) of Public Law 90–248 or section 222(a) of Public Law 92–603. In addition, consistent with our historical practice and our policies, we excluded any Medicare Advantage (Part C) claims in the resulting data. Such claims were identified based on the presence of a GHO Paid indicator value of ''1'' in the MedPAR files. The claims that remained after these three trims (that is, the applicable LTCH data) were then used to calculate the MS–LTC–DRG relative weights for FY 2021.

In summary, in general, we identified the claims data used in the development of the FY 2021 MS–LTC–DRG relative weights in this final rule, as we proposed, by trimming claims data that were paid the site neutral payment rate or would have been paid the site neutral payment rate had the dual payment rate structure been in effect. Finally, as we proposed, we trimmed the claims data of all-inclusive rate providers reported in the March 2020 update of the FY 2019 MedPAR file and any Medicare Advantage claims data. There were no data from any LTCHs that are paid in accordance with a demonstration project reported in the March 2020 update of the FY 2019 MedPAR file, but, had there been any, we would have trimmed the claims data from those LTCHs as well, in accordance with our established policy. As we proposed, we used the remaining data (that is, the applicable LTCH data) to calculate the relative weights for FY 2021.

d. Hospital-Specific Relative Value (HSRV) Methodology

By nature, LTCHs often specialize in certain areas, such as ventilator-dependent patients. Some case types (MS–LTC–DRGs) may be treated, to a large extent, in hospitals that have, from a perspective of charges, relatively high (or low) charges. This nonrandom distribution of cases with relatively high (or low) charges in specific MS–LTC–DRGs has the potential to inappropriately distort the measure of average charges. To account for the fact that cases may not be randomly distributed across LTCHs, consistent with the methodology we have used since the implementation of the LTCH

PPS, in this FY 2021 IPPS/LTCH PPS final rule, as we proposed in the FY 2021 IPPS/LTCH PPS proposed rule (85 FR 32806), we continued to use a hospital-specific relative value (HSRV) methodology to calculate the MS–LTC–DRG relative weights for FY 2021. We believe that this method removes this hospital-specific source of bias in measuring LTCH average charges (67 FR 55985). Specifically, under this methodology, we reduce the impact of the variation in charges across providers on any particular MS–LTC–DRG relative weight by converting each LTCH's charge for an applicable LTCH case to a relative value based on that LTCH's average charge for such cases.

Under the HSRV methodology, we standardize charges for each LTCH by converting its charges for each applicable LTCH case to hospital-specific relative charge values and then adjusting those values for the LTCH's case-mix. The adjustment for case-mix is needed to rescale the hospital-specific relative charge values (which, by definition, average 1.0 for each LTCH). The average relative weight for an LTCH is its case-mix; therefore, it is reasonable to scale each LTCH's average relative charge value by its case-mix. In this way, each LTCH's relative charge value is adjusted by its case-mix to an average that reflects the complexity of the applicable LTCH cases it treats relative to the complexity of the applicable LTCH cases treated by all other LTCHs (the average LTCH PPS case-mix of all applicable LTCH cases across all LTCHs).

In accordance with our established methodology, for FY 2021, as we proposed, we continued to standardize charges for each applicable LTCH case by first dividing the adjusted charge for the case (adjusted for SSOs under § 412.529 as described in section VII.B.3.g. of the preamble of this final rule (Step 3) of the preamble of this final rule) by the average adjusted charge for all applicable LTCH cases at the LTCH in which the case was treated. SSO cases are cases with a length of stay that is less than or equal to five-sixths the average length of stay of the MS–LTC–DRG (§§ 412.529 and 412.503). The average adjusted charge reflects the average intensity of the health care services delivered by a particular LTCH and the average cost level of that LTCH. The resulting ratio was multiplied by that LTCH's case-mix index to determine the standardized charge for the case.

Multiplying the resulting ratio by the LTCH's case-mix index accounts for the fact that the same relative charges are given greater weight at an LTCH with higher average costs than they would at an LTCH with low average costs, which is needed to adjust each LTCH's relative charge value to reflect its case-mix relative to the average case-mix for all LTCHs. By standardizing charges in this manner, we count charges for a Medicare patient at an LTCH with high average charges as less resource intensive than they would be at an LTCH with low average charges. For example, a $10,000 charge for a case at an LTCH with an average adjusted charge of $17,500 reflects a higher level of relative resource use than a $10,000 charge for a case at an LTCH with the same case-mix, but an average adjusted charge of $35,000. We believe that the adjusted charge of an individual case more accurately reflects actual resource use for an individual LTCH because the variation in charges due to systematic differences in the markup of charges among LTCHs is taken into account.

e. Treatment of Severity Levels in Developing the MS–LTC–DRG Relative Weights

For purposes of determining the MS–LTC–DRG relative weights, under our historical methodology, there are three different categories of MS–DRGs based on volume of cases within specific MS–LTC–DRGs: (1) MS–LTC–DRGs with at least 25 applicable LTCH cases in the data used to calculate the relative weight, which are each assigned a unique relative weight; (2) low-volume MS–LTC–DRGs (that is, MS–LTC–DRGs that contain between 1 and 24 applicable LTCH cases that are grouped into quintiles (as described later in this section of this final rule) and assigned the relative weight of the quintile); and (3) no-volume MS–LTC–DRGs that are cross-walked to other MS–LTC–DRGs based on the clinical similarities and assigned the relative weight of the cross-walked MS–LTC–DRG (as described in greater detail in this final rule). For FY 2021, as we proposed in the FY 2021 IPPS/LTCH PPS proposed rule (85 FR 32806), we are continuing to use applicable LTCH cases to establish the same volume-based categories to calculate the FY 2021 MS–LTC–DRG relative weights.

In determining the FY 2021 MS–LTC–DRG relative weights, when necessary, as is our longstanding practice, as we proposed, we made adjustments to account for nonmonotonicity, as discussed in greater detail later in Step 6 of section VII.B.3.g. of the preamble of this final rule. We refer readers to the discussion in the FY 2010 IPPS/RY 2010 LTCH PPS final rule for our rationale for including an adjustment for nonmonotonicity (74 FR 43953 through 43954).

f. Low-Volume MS–LTC–DRGs

In order to account for MS–LTC–DRGs with low-volume (that is, with fewer than 25 applicable LTCH cases), consistent with our existing methodology, as we proposed in the FY 2021 IPPS/LTCH PPS proposed rule (85 FR 32807), we are continuing to employ the quintile methodology for low-volume MS–LTC–DRGs, such that we grouped the ''low-volume MS–LTC–DRGs'' (that is, MS–LTC–DRGs that contain between 1 and 24 applicable LTCH cases into one of five categories (quintiles) based on average charges (67 FR 55984 through 55995; 72 FR 47283 through 47288; and 81 FR 25148).) In cases where the initial assignment of a low-volume MS–LTC–DRG to a quintile results in nonmonotonicity within a base-DRG, as we proposed, we made adjustments to the resulting low-volume MS–LTC–DRGs to preserve monotonicity, as discussed in detail in section VII.B.3.g. (Step 6) of the preamble of this final rule.

In this final rule, based on the best available data (that is, the March 2020 update of the FY 2019 MedPAR files), we identified 251 MS–LTC–DRGs that contained between 1 and 24 applicable LTCH cases. This list of MS–LTC–DRGs was then divided into 1 of the 5 low-volume quintiles, each containing at least 50 MS–LTC–DRGs (251/5 = 50 with a remainder of 1). We assigned the low-volume MS–LTC–DRGs to specific low-volume quintiles by sorting the low-volume MS–LTC–DRGs in ascending order by average charge in accordance with our established methodology. Based on the data available for this final rule, the number of MS–LTC–DRGs with less than 25 applicable LTCH cases was not evenly divisible by 5 and, therefore, as we proposed, we employed our historical methodology for determining which of the low-volume quintiles would contain the additional low-volume MS–LTC–DRG. Specifically for this final rule, because the average charge of the 151st low-volume MS–LTC–DRG in the sorted list was closer to the average charge of the 152nd low-volume MS–LTC–DRG (assigned to Quintile 4) than to the average charge of the 150th low-volume MS–LTC–DRG (assigned to Quintile 3), we assigned it to Quintile 4 (such that Quintile 4 contains 51 low-volume MS–LTC–DRGs before any adjustments for nonmonotonicity, as discussed in this final rule). This resulted in 4 of the 5 low-volume quintiles containing 50 MS–LTC–DRGs (Quintiles 1, 2, 3, and 5) and 1 low-volume quintiles containing

51 MS–LTC–DRGs (Quintile 4). As discussed earlier, for this final rule, we are providing the list of the composition of the low-volume quintiles for low-volume MS–LTC–DRGs for FY 2021 in a supplemental data file for public use posted via the internet on the CMS website for this final rule at: *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html* in order to streamline the information made available to the public that is used in the annual development of Table 11.

In order to determine the FY 2021 relative weights for the low-volume MS–LTC–DRGs, consistent with our historical practice, as we proposed, we used the five low-volume quintiles described previously. We determined a relative weight and (geometric) average length of stay for each of the five low-volume quintiles using the methodology described in section VII.B.3.g. of the preamble of this final rule. We assigned the same relative weight and average length of stay to each of the low-volume MS–LTC–DRGs that make up an individual low-volume quintile. We note that, as this system is dynamic, it is possible that the number and specific type of MS–LTC–DRGs with a low-volume of applicable LTCH cases will vary in the future. Furthermore, we note that we continue to monitor the volume (that is, the number of applicable LTCH cases) in the low-volume quintiles to ensure that our quintile assignments used in determining the MS–LTC–DRG relative weights result in appropriate payment for LTCH cases grouped to low-volume MS–LTC–DRGs and do not result in an unintended financial incentive for LTCHs to inappropriately admit these types of cases.

g. Steps for Determining the FY 2021 MS–LTC–DRG Relative Weights

In this final rule, as we proposed in the FY 2021 IPPS/LTCH PPS proposed rule (85 FR 32807), we are continuing to use our current methodology to determine the FY 2021 MS–LTC–DRG relative weights.

In summary, to determine the FY 2021 MS–LTC–DRG relative weights, as we proposed, we grouped applicable LTCH cases to the appropriate MS–LTC–DRG, while taking into account the low-volume quintiles (as described previously) and cross-walked no-volume MS–LTC–DRGs (as described later in this section). After establishing the appropriate MS–LTC–DRG (or low-volume quintile), as we proposed, we calculated the FY 2021 relative weights by first removing cases with a length of stay of 7 days or less and statistical outliers (Steps 1 and 2). Next, as we proposed, we adjusted the number of applicable LTCH cases in each MS–LTC–DRG (or low-volume quintile) for the effect of SSO cases (Step 3). After removing applicable LTCH cases with a length of stay of 7 days or less (Step 1) and statistical outliers (Step 2), which are the SSO-adjusted applicable LTCH cases and corresponding charges (Step 3), as we proposed, we calculated ''relative adjusted weights'' for each MS–LTC–DRG (or low-volume quintile) using the HSRV method.

Step 1—Remove cases with a length of stay of 7 days or less.

The first step in our calculation of the FY 2021 MS–LTC–DRG relative weights is to remove cases with a length of stay of 7 days or less. The MS–LTC–DRG relative weights reflect the average of resources used on representative cases of a specific type. Generally, cases with a length of stay of 7 days or less do not belong in an LTCH because these stays do not fully receive or benefit from treatment that is typical in an LTCH stay, and full resources are often not used in the earlier stages of admission to an LTCH. If we were to include stays of 7 days or less in the computation of the FY 2021 MS–LTC–DRG relative weights, the value of many relative weights would decrease and, therefore, payments would decrease to a level that may no longer be appropriate. We do not believe that it would be appropriate to compromise the integrity of the payment determination for those LTCH cases that actually benefit from and receive a full course of treatment at an LTCH by including data from these very short stays. Therefore, consistent with our existing relative weight methodology, in determining the FY 2021 MS–LTC–DRG relative weights, as we proposed, we removed LTCH cases with a length of stay of 7 days or less from applicable LTCH cases. (For additional information on what is removed in this step of the relative weight methodology, we refer readers to 67 FR 55989 and 74 FR 43959.)

Step 2—Remove statistical outliers.

The next step in our calculation of the FY 2021 MS–LTC–DRG relative weights is to remove statistical outlier cases from the LTCH cases with a length of stay of at least 8 days. Consistent with our existing relative weight methodology, as we proposed, we continued to define statistical outliers as cases that are outside of 3.0 standard deviations from the mean of the log distribution of both charges per case and the charges per day for each MS–LTC–DRG. These statistical outliers are removed prior to calculating the relative weights because we believe that they may represent aberrations in the data that distort the measure of average resource use. Including those LTCH cases in the calculation of the relative weights could result in an inaccurate relative weight that does not truly reflect relative resource use among those MS–LTC–DRGs. (For additional information on what is removed in this step of the relative weight methodology, we refer readers to 67 FR 55989 and 74 FR 43959.) After removing cases with a length of stay of 7 days or less and statistical outliers, we were left with applicable LTCH cases that have a length of stay greater than or equal to 8 days. In this final rule, we refer to these cases as ''trimmed applicable LTCH cases.''

Step 3—Adjust charges for the effects of SSOs.

As the next step in the calculation of the FY 2021 MS–LTC–DRG relative weights, consistent with our historical approach, as we proposed, we adjusted each LTCH's charges per discharge for those remaining cases (that is, trimmed applicable LTCH cases) for the effects of SSOs (as defined in § 412.529(a) in conjunction with § 412.503). Specifically, as we proposed, we made this adjustment by counting an SSO case as a fraction of a discharge based on the ratio of the length of stay of the case to the average length of stay for the MS–LTC–DRG for non-SSO cases. This has the effect of proportionately reducing the impact of the lower charges for the SSO cases in calculating the average charge for the MS–LTC–DRG. This process produces the same result as if the actual charges per discharge of an SSO case were adjusted to what they would have been had the patient's length of stay been equal to the average length of stay of the MS–LTC–DRG.

Counting SSO cases as full LTCH cases with no adjustment in determining the FY 2021 MS–LTC–DRG relative weights would lower the FY 2021 MS–LTC–DRG relative weight for affected MS–LTC–DRGs because the relatively lower charges of the SSO cases would bring down the average charge for all cases within a MS–LTC–DRG. This would result in an ''underpayment'' for non-SSO cases and an ''overpayment'' for SSO cases. Therefore, as we proposed, we continued to adjust for SSO cases under § 412.529 in this manner because it would result in more appropriate payments for all LTCH PPS standard Federal payment rate cases. (For additional information on this step of the relative weight methodology, we refer readers to 67 FR 55989 and 74 FR 43959.)

Step 4—Calculate the FY 2021 MS–LTC–DRG relative weights on an iterative basis.

Consistent with our historical relative weight methodology, as we proposed, we calculated the FY 2021 MS–LTC–DRG relative weights using the HSRV methodology, which is an iterative process. First, for each SSO-adjusted trimmed applicable LTCH case, we calculated a hospital-specific relative charge value by dividing the charge per discharge after adjusting for SSOs of the LTCH case (from Step 3) by the average charge per SSO-adjusted discharge for the LTCH in which the case occurred. The resulting ratio is then multiplied by the LTCH's case-mix index to produce an adjusted hospital-specific relative charge value for the case. We used an initial case-mix index value of 1.0 for each LTCH.

For each MS–LTC–DRG, we calculated the FY 2021 relative weight by dividing the SSO-adjusted average of the hospital-specific relative charge values for applicable LTCH cases for the MS–LTC–DRG (that is, the sum of the hospital-specific relative charge value, as previously stated, divided by the sum of equivalent cases from Step 3 for each MS–LTC–DRG) by the overall SSO-adjusted average hospital-specific relative charge value across all applicable LTCH cases for all LTCHs (that is, the sum of the hospital-specific relative charge value, as previously stated, divided by the sum of equivalent applicable LTCH cases from Step 3 for each MS–LTC–DRG). Using these recalculated MS–LTC–DRG relative weights, each LTCH's average relative weight for all of its SSO-adjusted trimmed applicable LTCH cases (that is, its case-mix) was calculated by dividing the sum of all the LTCH's MS–LTC–DRG relative weights by its total number of SSO-adjusted trimmed applicable LTCH cases. The LTCHs' hospital-specific relative charge values (from previous) are then multiplied by the hospital-specific case-mix indexes. The hospital-specific case-mix adjusted relative charge values are then used to calculate a new set of MS–LTC–DRG relative weights across all LTCHs. This iterative process continued until there was convergence between the relative weights produced at adjacent steps, for example, when the maximum difference was less than 0.0001.

Step 5—Determine a FY 2021 relative weight for MS–LTC–DRGs with no applicable LTCH cases.

Using the trimmed applicable LTCH cases, consistent with our historical methodology, we identified the MS–LTC–DRGs for which there were no claims in the March 2020 update of the FY 2019 MedPAR file and, therefore, for which no charge data was available for these MS–LTC–DRGs. Because patients with a number of the diagnoses under these MS–LTC–DRGs may be treated at LTCHs, consistent with our historical methodology, we generally assign a relative weight to each of the no-volume MS–LTC–DRGs based on clinical similarity and relative costliness (with the exception of ''transplant'' MS–LTC–DRGs, ''error'' MS–LTC–DRGs, and MS–LTC–DRGs that indicate a principal diagnosis related to a psychiatric diagnosis or rehabilitation (referred to as the ''psychiatric or rehabilitation'' MS–LTC–DRGs), as discussed later in this section of this final rule). (For additional information on this step of the relative weight methodology, we refer readers to 67 FR 55991 and 74 FR 43959 through 43960.)

Consistent with our existing methodology, as we proposed, we cross-walked each no-volume MS–LTC–DRG to another MS–LTC–DRG for which we calculated a relative weight (determined in accordance with the methodology as previously described). Then, the ''no-volume'' MS–LTC–DRG is assigned the same relative weight (and average length of stay) of the MS–LTC–DRG to which it was cross-walked (as described in greater detail in this section of this rule).

Of the 767 MS–LTC–DRGs for FY 2021, we identified 375 MS–LTC–DRGs for which there were no trimmed applicable LTCH cases. This number includes the 11 ''transplant'' MS–LTC–DRGs, the 2 ''error'' MS–LTC–DRGs, and the 15 ''psychiatric or rehabilitation'' MS–LTC–DRGs, which are discussed in this section of this rule, such that we identified 347 MS–LTC–DRGs that for which, as we proposed, we assigned a relative weight using our existing ''no-volume'' MS–LTC–DRG methodology (that is, $375 - 11 - 2 - 15 = 347$). As we proposed, we assigned relative weights to each of the 347 no-volume MS–LTC–DRGs based on clinical similarity and relative costliness to 1 of the remaining 392 ($767 - 375 = 392$) MS–LTC–DRGs for which we calculated relative weights based on the trimmed applicable LTCH cases in the FY 2019 MedPAR file data using the steps described previously. (For the remainder of this discussion, we refer to the ''cross-walked'' MS–LTC–DRGs as one of the 392 MS–LTC–DRGs to which we cross-walked each of the 347 ''no-volume'' MS–LTC–DRGs.) Then, as we generally proposed, we assigned the 347 no-volume MS–LTC–DRGs the relative weight of the cross-walked MS–LTC–DRG. (As explained in Step 6, when necessary, we made adjustments to account for nonmonotonicity.)

We cross-walked the no-volume MS–LTC–DRG to a MS–LTC–DRG for which we calculated relative weights based on the March 2020 update of the FY 2019 MedPAR file, and to which it is similar clinically in intensity of use of resources and relative costliness as determined by criteria such as care provided during the period of time surrounding surgery, surgical approach (if applicable), length of time of surgical procedure, postoperative care, and length of stay. (For more details on our process for evaluating relative costliness, we refer readers to the FY 2010 IPPS/RY 2010 LTCH PPS final rule (73 FR 48543).) We believe in the rare event that there would be a few LTCH cases grouped to one of the no-volume MS–LTC–DRGs in FY 2021, the relative weights assigned based on the cross-walked MS–LTC–DRGs would result in an appropriate LTCH PPS payment because the crosswalks, which are based on clinical similarity and relative costliness, would be expected to generally require equivalent relative resource use.

Then we assigned the relative weight of the cross-walked MS–LTC–DRG as the relative weight for the no-volume MS–LTC–DRG such that both of these MS–LTC–DRGs (that is, the no-volume MS–LTC–DRG and the cross-walked MS–LTC–DRG) have the same relative weight (and average length of stay) for FY 2021. We note that, if the cross-walked MS–LTC–DRG had 25 applicable LTCH cases or more, its relative weight (calculated using the methodology as previously described in Steps 1 through 4) is assigned to the no-volume MS–LTC–DRG as well. Similarly, if the MS–LTC–DRG to which the no-volume MS–LTC–DRG was cross-walked had 24 or less cases and, therefore, was designated to 1 of the low-volume quintiles for purposes of determining the relative weights, we assigned the relative weight of the applicable low-volume quintile to the no-volume MS–LTC–DRG such that both of these MS–LTC–DRGs (that is, the no-volume MS–LTC–DRG and the cross-walked MS–LTC–DRG) have the same relative weight for FY 2021. (As we noted previously, in the infrequent case where nonmonotonicity involving a no-volume MS–LTC–DRG resulted, additional adjustments as described in Step 6 are required in order to maintain monotonically increasing relative weights.)

As discussed earlier, for this final rule, we are providing the list of the no-volume MS–LTC–DRGs and the MS–LTC–DRGs to which each was cross-walked (that is, the cross-walked MS–LTC–DRGs) for FY 2021 in a supplemental data file for public use

posted via the internet on the CMS website for this rule at: *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html* in order to streamline the information made available to the public that is used in the annual development of Table 11.

To illustrate this methodology for determining the relative weights for the FY 2021 MS–LTC–DRGs with no applicable LTCH cases, we are providing the following example, which refers to the no-volume MS–LTC–DRGs crosswalk information for FY 2021 (which, as previously stated, we are providing in a supplemental data file posted via the internet on the CMS website for this final rule).

Example: There were no trimmed applicable LTCH cases in the FY 2019 MedPAR file that we are using for this final rule for MS–LTC–DRG 061 (Acute Ischemic Stroke with Use of Thrombolytic Agent with MCC). We determined that MS–LTC–DRG 070 (Nonspecific Cerebrovascular Disorders with MCC) is similar clinically and based on resource use to MS–LTC–DRG 061. Therefore, we assigned the same relative weight (and average length of stay) of MS–LTC–DRG 70 of 0.8730 for FY 2021 to MS–LTC–DRG 061 (we refer readers to Table 11, which is listed in section VI. of the Addendum to this final rule and is available via the internet on the CMS website).

Again, we note that, as this system is dynamic, it is entirely possible that the number of MS–LTC–DRGs with no volume will vary in the future. Consistent with our historical practice, as we proposed, we used the most recent available claims data to identify the trimmed applicable LTCH cases from which we determined the relative weights in the final rule.

For FY 2021, consistent with our historical relative weight methodology, as we proposed, we established a relative weight of 0.0000 for the following transplant MS–LTC–DRGs: Heart Transplant or Implant of Heart Assist System with MCC (MS–LTC–DRG 001); Heart Transplant or Implant of Heart Assist System without MCC (MS–LTC–DRG 002); Liver Transplant with MCC or Intestinal Transplant (MS–LTC–DRG 005); Liver Transplant without MCC (MS–LTC–DRG 006); Lung Transplant (MS–LTC–DRG 007); Simultaneous Pancreas/Kidney Transplant (MS–LTC–DRG 008); Simultaneous Pancreas/Kidney Transplant with Hemodialysis (MS–LTC–DRG 019); Pancreas Transplant (MS–LTC–DRG 010); Kidney Transplant (MS–LTC–DRG 652); Kidney Transplant with Hemodialysis with MCC (MS–LTC–DRG 650), and Kidney Transplant with Hemodialysis without MCC (MS LTC DRG 651). This is because Medicare only covers these procedures if they are performed at a hospital that has been certified for the specific procedures by Medicare and presently no LTCH has been so certified. At the present time, we include these 11 transplant MS–LTC–DRGs in the GROUPER program for administrative purposes only. Because we use the same GROUPER program for LTCHs as is used under the IPPS, removing these MS–LTC–DRGs would be administratively burdensome. (For additional information regarding our treatment of transplant MS–LTC–DRGs, we refer readers to the RY 2010 LTCH PPS final rule (74 FR 43964).) In addition, consistent with our historical policy, as we proposed, we established a relative weight of 0.0000 for the 2 ''error'' MS–LTC–DRGs (that is, MS–LTC–DRG 998 (Principal Diagnosis Invalid as Discharge Diagnosis) and MS–LTC–DRG 999 (Ungroupable)) because applicable LTCH cases grouped to these MS–LTC–DRGs cannot be properly assigned to an MS–LTC–DRG according to the grouping logic.

Additionally, as we proposed, we established a relative weight of 0.0000 for the following ''psychiatric or rehabilitation'' MS–LTC–DRGs: MS–LTC–DRG 876 (O.R. Procedure with Principal Diagnoses of Mental Illness); MS–LTC–DRG 880 (Acute Adjustment Reaction & Psychosocial Dysfunction); MS–LTC–DRG 881 (Depressive Neuroses); MS–LTC–DRG 882 (Neuroses Except Depressive); MS–LTC–DRG 883 (Disorders of Personality & Impulse Control); MS–LTC–DRG 884 (Organic Disturbances & Mental Retardation); MS–LTC–DRG 885 (Psychoses); MS–LTC–DRG 886 (Behavioral & Developmental Disorders); MS–LTC–DRG 887 (Other Mental Disorder Diagnoses); MS–LTC–DRG 894 (Alcohol/Drug Abuse or Dependence, Left Ama); MS–LTC–DRG 895 (Alcohol/Drug Abuse or Dependence, with Rehabilitation Therapy); MS–LTC–DRG 896 (Alcohol/Drug Abuse or Dependence, without Rehabilitation Therapy with MCC); MS–LTC–DRG 897 (Alcohol/Drug Abuse or Dependence, without Rehabilitation Therapy without MCC); MS–LTC–DRG 945 (Rehabilitation with CC/MCC); and MS–LTC–DRG 946 (Rehabilitation without CC/MCC). As we proposed, we established a relative weight 0.0000 for these 15 ''psychiatric or rehabilitation'' MS LTC DRGs because the blended payment rate and temporary exceptions to the site neutral payment rate will not be applicable for any LTCH discharges occurring in FY 2021, and as such payment under the LTCH PPS will be no longer be made in part based on the LTCH PPS standard Federal payment rate for any discharges assigned to those MS–DRGs.

Step 6—Adjust the FY 2021 MS–LTC–DRG relative weights to account for nonmonotonically increasing relative weights.

The MS–DRGs contain base DRGs that have been subdivided into one, two, or three severity of illness levels. Where there are three severity levels, the most severe level has at least one secondary diagnosis code that is referred to as an MCC (that is, major complication or comorbidity). The next lower severity level contains cases with at least one secondary diagnosis code that is a CC (that is, complication or comorbidity). Those cases without an MCC or a CC are referred to as ''without CC/MCC.'' When data do not support the creation of three severity levels, the base MS–DRG is subdivided into either two levels or the base MS–DRG is not subdivided. The two-level subdivisions may consist of the MS–DRG with CC/MCC and the MS–DRG without CC/MCC. Alternatively, the other type of two-level subdivision may consist of the MS–DRG with MCC and the MS–DRG without MCC.

In those base MS–LTC–DRGs that are split into either two or three severity levels, cases classified into the ''without CC/MCC'' MS–LTC–DRG are expected to have a lower resource use (and lower costs) than the ''with CC/MCC'' MS–LTC–DRG (in the case of a two-level split) or both the ''with CC'' and the ''with MCC'' MS–LTC–DRGs (in the case of a three-level split). That is, theoretically, cases that are more severe typically require greater expenditure of medical care resources and would result in higher average charges. Therefore, in the three severity levels, relative weights should increase by severity, from lowest to highest. If the relative weights decrease as severity increases (that is, if within a base MS–LTC–DRG, an MS–LTC–DRG with CC has a higher relative weight than one with MCC, or the MS–LTC–DRG ''without CC/MCC'' has a higher relative weight than either of the others), they are nonmonotonic. We continue to believe that utilizing nonmonotonic relative weights to adjust Medicare payments would result in inappropriate payments because the payment for the cases in the higher severity level in a base MS–LTC–DRG (which are generally expected to have higher resource use and costs) would be lower than the payment for cases in a lower severity level within the same

base MS–LTC–DRG (which are generally expected to have lower resource use and costs). Therefore, in determining the FY 2021 MS–LTC–DRG relative weights, consistent with our historical methodology, as we proposed, we continued to combine MS–LTC–DRG severity levels within a base MS–LTC–DRG for the purpose of computing a relative weight when necessary to ensure that monotonicity is maintained. For a comprehensive description of our existing methodology to adjust for nonmonotonicity, we refer readers to the FY 2010 IPPS/RY 2010 LTCH PPS final rule (74 FR 43964 through 43966). Any adjustments for nonmonotonicity that were made in determining the FY 2021 MS–LTC–DRG relative weights in this final rule by applying this methodology are denoted in Table 11, which is listed in section VI. of the Addendum to this final rule and is available via the internet on the CMS website.

Step 7—Calculate the FY 2021 MS–LTC–DRG reclassification and recalibration budget neutrality factor.

In accordance with the regulations at § 412.517(b) (in conjunction with § 412.503), the annual update to the MS–LTC–DRG classifications and relative weights is done in a budget neutral manner such that estimated aggregate LTCH PPS payments would be unaffected, that is, would be neither greater than nor less than the estimated aggregate LTCH PPS payments that would have been made without the MS–LTC–DRG classification and relative weight changes. (For a detailed discussion on the establishment of the budget neutrality requirement for the annual update of the MS–LTC–DRG classifications and relative weights, we refer readers to the RY 2008 LTCH PPS final rule (72 FR 26881 and 26882).)

The MS–LTC–DRG classifications and relative weights are updated annually based on the most recent available LTCH claims data to reflect changes in relative LTCH resource use (§ 412.517(a) in conjunction with § 412.503). To achieve the budget neutrality requirement at § 412.517(b), under our established methodology, for each annual update, the MS–LTC–DRG relative weights are uniformly adjusted to ensure that estimated aggregate payments under the LTCH PPS would not be affected (that is, decreased or increased). Consistent with that provision, as we proposed, we updated the MS–LTC–DRG classifications and relative weights for FY 2021 based on the most recent available LTCH data for applicable LTCH cases, and continued to apply a budget neutrality adjustment in determining the FY 2021 MS–LTC–DRG relative weights.

In this final rule, to ensure budget neutrality in the update to the MS–LTC–DRG classifications and relative weights under § 412.517(b), as we proposed, we continued to use our established two-step budget neutrality methodology.

To calculate the normalization factor for FY 2021, as we proposed in the FY 2021 IPPS/LTCH PPS proposed rule (85 FR 32811), we grouped applicable LTCH cases using the FY 2021 Version 38 GROUPER, and the recalibrated FY 2021 MS–LTC–DRG relative weights to calculate the average case-mix index (CMI); we grouped the same applicable LTCH cases using the FY 2020 GROUPER Version 37 and MS–LTC–DRG relative weights and calculated the average CMI; and computed the ratio by dividing the average CMI for FY 2020 by the average CMI for FY 2021. That ratio is the normalization factor. Because the calculation of the normalization factor involves the relative weights for the MS–LTC–DRGs that contained applicable LTCH cases to calculate the average CMIs, any low-volume MS–LTC–DRGs are included in the calculation (and the MS–LTC–DRGs with no applicable LTCH cases are not included in the calculation).

To calculate the budget neutrality adjustment factor, we simulated estimated total FY 2021 LTCH PPS standard Federal payment rate payments for applicable LTCH cases using the FY 2021 normalized relative weights and GROUPER Version 38; simulated estimated total FY 2021 LTCH PPS standard Federal payment rate payments for applicable LTCH cases using the FY 2020 MS–LTC–DRG relative weights and the FY 2020 GROUPER Version 37; and calculated the ratio of these estimated total payments by dividing the simulated estimated total LTCH PPS standard Federal payment rate payments using the FY 2020 MS–LTC–DRG relative weights and the GROUPER Version 37 by the simulated estimated total LTCH PPS standard Federal payment rate payments using the FY 2021 MS–LTC–DRG relative weights and the GROUPER Version 38. The resulting ratio is the budget neutrality adjustment factor. The calculation of the budget neutrality factor involves the relative weights for the LTCH cases used in the payment simulation, which includes any cases grouped to low-volume MS–LTC–DRGs or to MS–LTC–DRGs with no applicable LTCH cases, and generally does not include payments for cases grouped to a MS–LTC–DRG with no applicable LTCH cases. (Occasionally, a few LTCH cases (that is, those with a covered length of stay of 7 days or less), which are removed from the relative weight calculation in step 2 that are grouped to a MS–LTC–DRG with no applicable LTCH cases are included in the payment simulations used to calculate the budget neutrality factor. However, the number and payment amount of such cases have a negligible impact on the budget neutrality factor calculation).

In this final rule, to ensure budget neutrality in the update to the MS–LTC–DRG classifications and relative weights under § 412.517(b), as we proposed, we continued to use our established two-step budget neutrality methodology. Therefore, in this final rule, in the first step of our MS–LTC–DRG budget neutrality methodology, for FY 2021, as we proposed, we calculated and applied a normalization factor to the recalibrated relative weights (the result of Steps 1 through 6 discussed previously) to ensure that estimated payments are not affected by changes in the composition of case types or the changes to the classification system. That is, the normalization adjustment is intended to ensure that the recalibration of the MS–LTC–DRG relative weights (that is, the process itself) neither increases nor decreases the average case-mix index.

To calculate the normalization factor for FY 2021 (the first step of our budget neutrality methodology), we used the following three steps: (1.a.) Use the most recent available applicable LTCH cases from the most recent available data (that is, LTCH discharges from the FY 2019 MedPAR file) and group them using the FY 2021 GROUPER (that is, Version 38 for FY 2021) and the recalibrated FY 2021 MS–LTC–DRG relative weights (determined in Steps 1 through 6 discussed previously) to calculate the average case-mix index; (1.b.) group the same applicable LTCH cases (as are used in Step 1.a.) using the FY 2020 GROUPER (Version 37) and FY 2020 MS–LTC–DRG relative weights and calculate the average case-mix index; and (1.c.) compute the ratio of these average case-mix indexes by dividing the average CMI for FY 2021 (determined in Step 1.a.) by the average case-mix index for FY 2020 (determined in Step 1.b.). As a result, in determining the MS–LTC–DRG relative weights for FY 2021, each recalibrated MS–LTC–DRG relative weight is multiplied by the normalization factor of 1.25890 (determined in Step 1.c.) in the first step of the budget neutrality methodology, which produced ''normalized relative weights.''

In the second step of our MS–LTC–DRG budget neutrality methodology, we calculated a second budget neutrality

factor consisting of the ratio of estimated aggregate FY 2021 LTCH PPS standard Federal payment rate payments for applicable LTCH cases (the sum of all calculations under Step 1.a. stated previously) after reclassification and recalibration to estimated aggregate payments for FY 2021 LTCH PPS standard Federal payment rate payments for applicable LTCH cases before reclassification and recalibration (that is, the sum of all calculations under Step 1.b. stated previously).

That is, for this final rule, for FY 2021, under the second step of the budget neutrality methodology, as we proposed, we determined the budget neutrality adjustment factor using the following three steps: (2.a.) Simulate estimated total FY 2021 LTCH PPS standard Federal payment rate payments for applicable LTCH cases using the normalized relative weights for FY 2021 and GROUPER Version 38 (as described previously); (2.b.) simulate estimated total FY 2021 LTCH PPS standard Federal payment rate payments for applicable LTCH cases using the FY 2020 GROUPER (Version 37) and the FY 2020 MS–LTC–DRG relative weights in Table 11 of the FY 2020 IPPS/LTCH PPS final rule available on the internet, as described in section VI. of the Addendum of that final rule; and (2.c.) calculate the ratio of these estimated total payments by dividing the value determined in Step 2.b. by the value determined in Step 2.a. In determining the FY 2021 MS–LTC–DRG relative weights, each normalized relative weight is then multiplied by a budget neutrality factor of 0.9995082 (the value determined in Step 2.c.) in the second step of the budget neutrality methodology to achieve the budget neutrality requirement at § 412.517(b).

Accordingly, in determining the FY 2021 MS–LTC–DRG relative weights in this final rule, consistent with our existing methodology, as we proposed, we applied a normalization factor of 1.25890 and a budget neutrality factor of 0.9995082. Table 11, which is listed in section VI. of the Addendum to this final rule and is available via the internet on the CMS website, lists the MS–LTC–DRGs and their respective relative weights, geometric mean length of stay, and five-sixths of the geometric mean length of stay (used to identify SSO cases under § 412.529(a)) for FY 2021.

C. Changes to the LTCH PPS Payment Rates and Other Changes to the LTCH PPS for FY 2021

1. Overview of Development of the LTCH PPS Standard Federal Payment Rates

The basic methodology for determining LTCH PPS standard Federal payment rates is currently set forth at 42 CFR 412.515 through 412.533 and 412.535. In this section, we discuss the factors that we used to update the LTCH PPS standard Federal payment rate for FY 2021, that is, effective for LTCH discharges occurring on or after October 1, 2020 through September 30, 2021. Under the dual rate LTCH PPS payment structure required by statute, beginning with discharges in cost reporting periods beginning in FY 2016, only LTCH discharges that meet the criteria for exclusion from the site neutral payment rate are paid based on the LTCH PPS standard Federal payment rate specified at § 412.523. (For additional details on our finalized policies related to the dual rate LTCH PPS payment structure required by statute, we refer readers to the FY 2016 IPPS/LTCH PPS final rule (80 FR 49601 through 49623).)

Prior to the implementation of the dual payment rate system in FY 2016, all LTCH discharges were paid similarly to those now exempt from the site neutral payment rate. That legacy payment rate was called the standard Federal rate. For details on the development of the initial standard Federal rate for FY 2003, we refer readers to the August 30, 2002 LTCH PPS final rule (67 FR 56027 through 56037). For subsequent updates to the standard Federal rate (FYs 2003 through 2015)/LTCH PPS standard Federal payment rate (FY 2016 through present) as implemented under § 412.523(c)(3), we refer readers to the FY 2020 IPPS/LTCH PPS final rule (84 FR 42445 through 42446).

In this FY 2021 IPPS/LTCH PPS final rule, we present our policies related to the annual update to the LTCH PPS standard Federal payment rate for FY 2021.

The update to the LTCH PPS standard Federal payment rate for FY 2021 is presented in section V.A. of the Addendum to this rule. The components of the annual update to the LTCH PPS standard Federal payment rate for FY 2021 are discussed in this section, including the statutory reduction to the annual update for LTCHs that fail to submit quality reporting data for FY 2021 as required by the statute (as discussed in section VII.C.2.c. of the preamble of this final rule). As we proposed in the FY 2021 IPPS/LTCH PPS proposed rule (85 FR 32812), we also made an adjustment to the LTCH PPS standard Federal payment rate to account for the estimated effect of the changes to the area wage level for FY 2021 on estimated aggregate LTCH PPS payments, in accordance with § 412.523(d)(4) (as discussed in section V.B. of the Addendum to this final rule).

In addition, as discussed in the FY 2019 IPPS/LTCH PPS final rule (83 FR 41532 through 41537), we eliminated the 25-percent threshold policy in a budget neutral manner. The budget neutrality requirements are codified in the regulations at § 412.523(d)(6). Under these regulations, a temporary, one-time factor is applied to the standard Federal payment rate in FY 2019 and FY 2020, and a permanent, one-time factor in FY 2021. These factors as established in the correction to the FY 2019 IPPS/LTCH PPS final rule (83 FR 41536) are—

- For FY 2019, a temporary, one-time factor of 0.990878;
- For FY 2020, a temporary, one-time factor of 0.990737; and
- For FY 2021 and subsequent years, a permanent, one-time factor of 0.991249.

Therefore, in determining the FY 2021 LTCH PPS standard Federal payment rate, as we proposed, we—

- Removed the temporary, one-time factor of 0.990737 for the estimated cost of the elimination of the 25-percent threshold policy in FY 2020 by applying a factor of (1/0.990737);
- Applied a permanent, one-time factor of 0.991249 for the estimated cost of the elimination of the 25-percent threshold policy in FY 2021;

2. FY 2021 LTCH PPS Standard Federal Payment Rate Annual Market Basket Update

a. Overview

Historically, the Medicare program has used a market basket to account for input price increases in the services furnished by providers. The market basket used for the LTCH PPS includes both operating and capital related costs of LTCHs because the LTCH PPS uses a single payment rate for both operating and capital-related costs. We adopted the 2013-based LTCH market basket for use under the LTCH PPS beginning in FY 2017 (81 FR 57100 through 57102). As discussed in section VII.D. of the preamble of this final rule, as we proposed, we are rebasing and revising the 2013-based LTCH market basket to reflect a 2017 base year. For additional details on the historical development of the market basket used under the LTCH

PPS, we refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53467 through 53476), and for a complete discussion of the LTCH market basket and a description of the methodologies used to determine the operating and capital-related portions of the 2013-based LTCH market basket, we refer readers to section VII.D. of the preamble of the FY 2017 IPPS/LTCH PPS proposed and final rules (81 FR 25153 through 25167 and 81 FR 57086 through 57099, respectively).

Section 3401(c) of the Affordable Care Act provides for certain adjustments to any annual update to the LTCH PPS standard Federal payment rate and refers to the timeframes associated with such adjustments as a ''rate year.'' We note that, because the annual update to the LTCH PPS policies, rates, and factors now occurs on October 1, we adopted the term ''fiscal year'' (FY) rather than ''rate year'' (RY) under the LTCH PPS beginning October 1, 2010, to conform with the standard definition of the Federal fiscal year (October 1 through September 30) used by other PPSs, such as the IPPS (75 FR 50396 through 50397). Although the language of sections 3004(a), 3401(c), 10319, and 1105(b) of the Affordable Care Act refers to years 2010 and thereafter under the LTCH PPS as ''rate year,'' consistent with our change in the terminology used under the LTCH PPS from ''rate year'' to ''fiscal year,'' for purposes of clarity, when discussing the annual update for the LTCH PPS standard Federal payment rate, including the provisions of the Affordable Care Act, we use ''fiscal year'' rather than ''rate year'' for 2011 and subsequent years.

b. Annual Update to the LTCH PPS Standard Federal Payment Rate for FY 2021

CMS has used an estimated market basket increase to update the LTCH PPS. As previously noted, for FY 2021 we rebased and revised the 2013-based LTCH market basket to reflect a 2017 base year. The 2017-based LTCH market basket is primarily based on the Medicare cost report data submitted by LTCHs and, therefore, specifically reflects the cost structures of only LTCHs. As we proposed, we used data from cost reports beginning in FY 2017 because these data are the latest available complete data at the time of rulemaking for purposes of calculating cost weights for the market basket. We believe that the 2017-based LTCH market basket appropriately reflects the cost structure of LTCHs, as discussed in greater detail in section VII.D. of the preamble of this final rule. In this final rule, as we proposed in the FY 2021 IPPS/LTCH PPS proposed rule (85 FR 32812—32813), we used the 2017-based LTCH market basket to update the LTCH PPS standard Federal payment rate for FY 2021.

Section 1886(m)(3)(A) of the Act provides that, beginning in FY 2010, any annual update to the LTCH PPS standard Federal payment rate is reduced by the adjustments specified in clauses (i) and (ii) of subparagraph (A). Clause (i) of section 1886(m)(3)(A) of the Act provides for a reduction, for FY 2012 and each subsequent rate year, by the productivity adjustment described in section 1886(b)(3)(B)(xi)(II) of the Act (that is, ''the multifactor productivity (MFP) adjustment''). Clause (ii) of section 1886(m)(3)(A) of the Act provided for a reduction, for each of FYs 2010 through 2019, by the ''other adjustment'' described in section 1886(m)(4)(F) of the Act; therefore, it is not applicable for FY 2021.

Section 1886(m)(3)(B) of the Act provides that the application of paragraph (3) of section 1886(m) of the Act may result in the annual update being less than zero for a rate year, and may result in payment rates for a rate year being less than such payment rates for the preceding rate year.

c. Adjustment to the LTCH PPS Standard Federal Payment Rate Under the Long-Term Care Hospital Quality Reporting Program (LTCH QRP)

In accordance with section 1886(m)(5) of the Act, the Secretary established the Long-Term Care Hospital Quality Reporting Program (LTCH QRP). The reduction in the annual update to the LTCH PPS standard Federal payment rate for failure to report quality data under the LTCH QRP for FY 2014 and subsequent fiscal years is codified under 42 CFR 412.523(c)(4). The LTCH QRP, as required for FY 2014 and subsequent fiscal years by section 1886(m)(5)(A)(i) of the Act, applies a 2.0 percentage point reduction to any update under § 412.523(c)(3) for an LTCH that does not submit quality reporting data to the Secretary in accordance with section 1886(m)(5)(C) of the Act with respect to such a year (that is, in the form and manner and at the time specified by the Secretary under the LTCH QRP) (§ 412.523(c)(4)(i)). Section 1886(m)(5)(A)(ii) of the Act provides that the application of the 2.0 percentage points reduction may result in an annual update that is less than 0.0 for a year, and may result in LTCH PPS payment rates for a year being less than such LTCH PPS payment rates for the preceding year. Furthermore, section 1886(m)(5)(B) of the Act specifies that the 2.0 percentage points reduction is applied in a noncumulative manner, such that any reduction made under section 1886(m)(5)(A) of the Act shall apply only with respect to the year involved, and shall not be taken into account in computing the LTCH PPS payment amount for a subsequent year. These requirements are codified in the regulations at § 412.523(c)(4). (For additional information on the history of the LTCH QRP, including the statutory authority and the selected measures, we refer readers to section VIII.C. of the preamble of this final rule.)

d. Annual Market Basket Update Under the LTCH PPS for FY 2021

Consistent with our historical practice and our proposal, we estimate the market basket increase and the MFP adjustment based on IGI's forecast using the most recent available data. In the proposed rule (85 FR 32813), we proposed to establish an annual update to the LTCH PPS standard Federal payment rate for FY 2021 of 2.5 percent based on the best available data at that time (that is, the estimated LTCH PPS market basket increase of 2.9 percent less the MFP adjustment of 0.4 percentage point). Consistent with our historical practice, we also proposed to use a more recent estimate of the market basket and the MFP adjustment, if appropriate, in the final rule to establish an annual update to the LTCH PPS standard Federal payment rate for FY 2021.

For this final rule, based on IGIs second-quarter 2020 forecast, the FY 2021 full market basket estimate for the LTCH PPS using the 2017-based LTCH market basket is 2.3 percent. We note that the fourth quarter 2019 forecast used for the proposed market basket update was developed prior to the economic impacts of the COVID–19 pandemic. This lower update (2.3 percent) for FY 2021, relative to the proposed rule (2.9 percent), is primarily driven by slower anticipated compensation growth for both health-related and other occupations as labor markets are expected to be significantly impacted during the recession that started in February 2020 and throughout the anticipated recovery.

For FY 2021, section 1886(m)(3)(A)(i) of the Act requires that any annual update to the LTCH PPS standard Federal payment rate be reduced by the productivity adjustment (''the MFP adjustment'') described in section 1886(b)(3)(B)(xi)(II) of the Act. (We note that sections 1886(m)(3)(A)(ii) and 1886(m)(4)(F) of the Act required an additional reduction each year only for FYs 2010 through 2019.) (For additional details on our established methodology

for adjusting the market basket increase by the MFP adjustment, we refer readers to the FY 2012 IPPS/LTCH PPS final rule (76 FR 51771).)

In the FY 2021 IPPS/LTCH PPS proposed rule, we proposed a MFP adjustment of 0.4 percentage point based on IGIs fourth quarter 2019 forecast. Based on the more recent data available for this final rule, the current estimate of the 10-year moving average growth of MFP for FY 2021 is -0.1 percentage point. This MFP is based on the most recent macroeconomic outlook from IGI at the time of rulemaking (released June 2020) in order to reflect more current historical economic data. IGI produces monthly macroeconomic forecasts, which include projections of all of the economic series used to derive MFP. In contrast, IGI only produces forecasts of the more detailed price proxies used in the LTCH market basket on a quarterly basis. Therefore, IGI's second quarter 2020 forecast is the most recent forecast of the LTCH market basket update.

We note that it has typically been our practice to base the projection of the market basket price proxies and MFP in the final rule on the second quarter IGI forecast. For this final rule, we are using the IGI June macroeconomic forecast for MFP because it is a more recent forecast, and it is important to use more recent data during this period when economic trends, particularly employment and labor productivity, are notably uncertain because of the COVID–19 pandemic. Historically, the MFP adjustment based on the second quarter IGI forecast has been very similar to the MFP adjustment derived with IGI's June macroeconomic forecast. Substantial changes in the macroeconomic indicators in between monthly forecasts are atypical.

Given the unprecedented economic uncertainty as a result of the COVID–19 pandemic, the changes in the IGI macroeconomic series used to derive MFP between the second quarter 2020 IGI forecast and the IGI June 2020 macroeconomic forecast is significant. Therefore, we believe it is technically appropriate to use IGI's more recent June 2020 macroeconomic forecast to determine the MFP adjustment for the final rule as it reflects more current historical data. For comparison purposes, the 10-year moving average growth of MFP for FY 2021 is projected to be -0.1 percentage point based on IGI's June 2020 macroeconomic forecast compared to a FY 2021 projected 10-year moving average growth of MFP of 0.7 percentage point based on IGI's second quarter 2020 forecast. Mechanically subtracting the negative 10-year moving average growth of MFP from the market basket percentage increase using the data from the IGI June 2020 macroeconomic forecast would have resulted in a 0.1 percentage point increase in the FY 2021 annual update to the LTCH PPS standard Federal payment rate. However, under section 1886(m)(3)(A)(i) of the Act, the Secretary is required to reduce (not increase) any annual update to the LTCH PPS standard Federal payment rate by 10-year moving average of changes in annual economy-wide private nonfarm business multi-factor productivity. Accordingly, we will be applying a 0.0 percentage point MFP adjustment to the market basket update. Therefore, the annual market basket update to the LTCH PPS standard Federal payment rate for FY 2021 is 2.3 percent (that is, the FY 2021 full market basket estimate for the LTCH PPS with 0.0 percentage point adjustment made for MFP).

For FY 2021, section 1886(m)(5) of the Act requires that, for LTCHs that do not submit quality reporting data as required under the LTCH QRP, any annual update to an LTCH PPS standard Federal payment rate, after application of the adjustments required by section 1886(m)(3) of the Act, shall be further reduced by 2.0 percentage points. Therefore, for LTCHs that fail to submit quality reporting data under the LTCH QRP, the 2.3 percent annual market basket update to the LTCH PPS standard Federal payment rate for FY 2021 will be reduced by 2.0 percentage points required by section 1886(m)(5) of the Act.

In this FY 2021 IPPS/LTCH PPS final rule, in accordance with the statute, under the authority of section 123 of the BBRA as amended by section 307(b) of the BIPA, consistent with our proposal, we are establishing an annual market basket update to the LTCH PPS standard Federal payment rate for FY 2021 of 2.3 percent (that is, the most recent estimate of the LTCH PPS market basket increase of 2.3 percent less the MFP adjustment of 0.0 percentage point).

While we have historically implemented the payment updates to the LTCH PPS in individual amendments to the regulations, given existing statutory provisions affecting the LTCH update are constant going forward, in the proposed rule we proposed to revise § 412.523(c)(3) by adding a new paragraph (xvii), which would specify that the LTCH PPS standard Federal payment rate for FY 2021 and subsequent fiscal years is the LTCH PPS standard Federal payment rate for the previous LTCH PPS payment year updated by the market basket (as determined by CMS), less a multifactor productivity adjustment (as determined by CMS), and further adjusted, as appropriate, as described in § 412.523(d) (including the application of the adjustment factor for the cost of the elimination of the 25-percent threshold policy under § 412.523(d)(6) as previously discussed) rather than codifying specific numerical updates annually as was our historical practice. For LTCHs that fail to submit quality reporting data under the LTCH QRP, under § 412.523(c)(3)(xvi) in conjunction with § 412.523(c)(4), we proposed to further reduce the annual update to the LTCH PPS standard Federal payment rate by 2.0 percentage points, in accordance with section 1886(m)(5) of the Act.

We did not receive any comments on this proposal. Therefore we are finalizing it as proposed without modification. Accordingly, as we proposed, we are establishing an annual update to the LTCH PPS standard Federal payment rate of 0.3 percent (that is, 2.3 percent minus 2.0 percentage points) for FY 2021 for LTCHs that fail to submit quality reporting data as required under the LTCH QRP. We note that, consistent with historical practice, as we proposed, we adjusted the FY 2021 LTCH PPS standard Federal payment rate by an area wage level budget neutrality factor in accordance with § 412.523(d)(4) (as discussed in section V.B.5. of the Addendum to this final rule).

D. Rebasing and Revising of the LTCH Market Basket

1. Background

The input price index (that is, the market basket) that was used to develop the LTCH PPS for FY 2003 was the ''excluded hospital with capital'' market basket. That market basket was based on 1997 Medicare cost report data and included data for Medicare-participating IRFs, IPFs, LTCHs, cancer hospitals, and children's hospitals. Although the term ''market basket'' technically describes the mix of goods and services used in providing hospital care, this term is also commonly used to denote the input price index (that is, cost category weights and price proxies combined) derived from that mix. Accordingly, the term ''market basket,'' as used in this section, refers to an input price index.

Beginning with rate year (RY) 2007, LTCH PPS payments were updated using a 2002-based market basket reflecting the operating and capital cost structures for IRFs, IPFs, and LTCHs (hereafter referred to as the rehabilitation, psychiatric, and long-term care (RPL) market basket). We

excluded cancer and children's hospitals from the RPL market basket because their payments are based entirely on reasonable costs subject to rate-of-increase limits established under the authority of section 1886(b) of the Act, which are implemented in regulations at 42 CFR 413.40. Those types of hospitals are not paid under a PPS. Also, the 2002 cost structures for cancer and children's hospitals are noticeably different from the cost structures for freestanding IRFs, freestanding IPFs, and LTCHs. A complete discussion of the 2002-based RPL market basket can be found in the RY 2007 LTCH PPS final rule (71 FR 27810 through 27817).

In the FY 2012 IPPS/LTCH PPS final rule (76 FR 51756), we finalized the rebasing and revising of the 2002-based RPL market basket by creating and implementing a 2008-based RPL market basket. We also discussed the creation of a stand-alone LTCH market basket and received several public comments, all of which supported deriving a standalone LTCH market basket (76 FR 51756 through 51757). In the FY 2013 IPPS/LTCH PPS final rule, we finalized the adoption of a stand-alone 2009-based LTCH-specific market basket that reflects the cost structures of LTCHs only (77 FR 53467 through 53479). In the FY 2017 IPPS/LTCH PPS final rule (81 FR 57085 through 57099), we finalized the rebasing and revising of the 2009-based LTCH market basket to reflect a 2013 base year (the 2013-based LTCH market basket).

For FY 2021, we proposed to rebase and revise the 2013-based LTCH market basket to reflect a 2017 base year (85 FR 32814). The proposed 2017-based LTCH market basket is primarily based on Medicare cost report data for LTCHs for 2017, which are for cost reporting periods beginning on and after October 1, 2016, and before October 1, 2017. We proposed to use data from cost reports beginning in FY 2017 because these data are the latest available complete data for purposes of calculating cost weights for the market basket at the time of rulemaking.

In the following discussion, we provide an overview of the proposed LTCH market basket, describe the proposed methodologies for developing the operating and capital portions of the 2017-based LTCH market basket, and provide information on the proposed price proxies. We then describe any comments received, responses to these comments, and our final policies for this final rule.

2. Overview of the 2017-Based LTCH Market Basket

Similar to the 2013-based LTCH market basket, the proposed 2017-based LTCH market basket is a fixed-weight, Laspeyres-type price index. A Laspeyres price index measures the change in price, over time, of the same mix of goods and services purchased in the base period. Any changes in the quantity or mix (that is, intensity) of goods and services purchased over time are not measured. The index itself is constructed using three steps. First, a base period is selected (in the proposed rule, we proposed to use 2017 as the base period) and total base period expenditures are estimated for a set of mutually exclusive and exhaustive spending categories, with the proportion of total costs that each category represents being calculated. These proportions are called ''cost weights'' or ''expenditure weights.'' Second, each expenditure category is matched to an appropriate price or wage variable, referred to as a ''price proxy.'' In almost every instance, these price proxies are derived from publicly available statistical series that are published on a consistent schedule (preferably at least on a quarterly basis). Finally, the expenditure weight for each cost category is multiplied by the level of its respective price proxy. The sum of these products (that is, the expenditure weights multiplied by their price levels) for all cost categories yields the composite index level of the market basket in a given period. Repeating this step for other periods produces a series of market basket levels over time. Dividing an index level for a given period by an index level for an earlier period produces a rate of growth in the input price index over that timeframe. As previously noted, the market basket is described as a fixed-weight index because it represents the change in price over time of a constant mix (quantity and intensity) of goods and services needed to furnish hospital services. The effects on total expenditures resulting from changes in the mix of goods and services purchased subsequent to the base period are not measured. For example, a hospital hiring more nurses to accommodate the needs of patients would increase the volume of goods and services purchased by the hospital, but would not be factored into the price change measured by a fixed-weight hospital market basket. Only when the index is rebased would changes in the quantity and intensity be captured, with those changes being reflected in the cost weights. Therefore, we rebase the market basket periodically so that the cost weights reflect a recent mix of goods and services that hospitals purchase (hospital inputs) to furnish inpatient care.

3. Development of the 2017-Based LTCH Market Basket Cost Categories and Weights

We invited public comments on our proposed methodology, discussed in this section of this rule, for deriving the proposed 2017-based LTCH market basket.

a. Use of Medicare Cost Report Data

We proposed a 2017-based LTCH market basket that consists of seven major cost categories and a residual derived from the 2017 Medicare cost reports (CMS Form 2552–10, OMB Control Number 0938–0050) for LTCHs. The seven cost categories are Wages and Salaries, Employee Benefits, Contract Labor, Pharmaceuticals, Professional Liability Insurance (PLI), Home Office/Related Organization Contract Labor, and Capital. The residual category reflects all remaining costs not captured in the seven cost categories. The 2013-based LTCH market basket did not use the Medicare cost reports to calculate the Home Office/Related Organization Contract Labor cost weight.

Medicare cost report data include costs for all patients, including Medicare, Medicaid, and private payer. Because our goal is to measure cost shares for facilities that serve Medicare beneficiaries, and are reflective of case mix and practice patterns associated with providing services to Medicare beneficiaries in LTCHs, we proposed to limit our selection of Medicare cost reports to those from LTCHs that have a Medicare average length of stay (LOS) that is within a comparable range of their total facility average LOS. We define the Medicare average LOS based on data reported on the Medicare cost report (CMS Form 2552–10, OMB Control Number 0938–0050) Worksheet S–3, Part I, line 14. We believe that applying the LOS edit results in a more accurate reflection of the structure of costs for Medicare covered days as our proposed edit excludes those LTCHs that had an average total facility LOS that was much different than the average Medicare LOS. For the 2013-based LTCH market basket, we used the cost reports submitted by LTCHs with Medicare average LOS within 25 percent (that is, 25 percent higher or lower) of the total facility average LOS for the hospital. Based on our analysis of the 2017 Medicare cost reports, for the proposed 2017-based LTCH market basket, we proposed to again use the cost reports submitted by LTCHs with

Medicare average LOS within 25 percent (that is, 25 percent higher or lower) of the total facility average LOS for the hospital. The universe of LTCHs had an average Medicare LOS of 26 days, an average total facility LOS of 31 days, and aggregate Medicare utilization (as measured by Medicare inpatient LTCH days as a percentage of total facility inpatient LTCH days) of 49 percent in 2017. Applying the proposed trim excludes 9 percent of LTCH providers and results in a subset of LTCH Medicare cost reports with an average Medicare LOS of 25 days, average facility LOS of 27 days, and aggregate Medicare utilization (based on days) of 58 percent. The 9 percent of providers that are excluded from the proposed 2017-based LTCH market basket had an average Medicare LOS of 27 days, average facility LOS of 70 days, and aggregate Medicare utilization of 15 percent.

We proposed to use the cost reports for LTCHs that meet this requirement to calculate the costs for the seven major cost categories (Wages and Salaries, Employee Benefits, Contract Labor, Professional Liability Insurance, Pharmaceuticals, Home Office/Related Organization Contract Labor, and Capital) for the market basket. For comparison, the 2013-based LTCH market basket utilized the Bureau of Economic Analysis Benchmark Input-Output data rather than Medicare cost report data to derive the Home Office/Related Organization Contract Labor cost weight. A more detailed discussion of this methodological change is provided in section VII.D.3.a.(6). of the preamble of this final rule.

(1) Wages and Salaries Costs

We proposed to derive Wages and Salaries costs as the sum of routine inpatient salaries, ancillary salaries, and a proportion of overhead (or general service cost center) salaries as reported on Worksheet A, column 1. Because overhead salary costs are attributable to the entire LTCH, we proposed to only include the proportion attributable to the Medicare allowable cost centers. For the 2017-based LTCH market basket, we proposed that routine and ancillary Wages and Salaries costs would be equal to salary costs as reported on Worksheet A, column 1, lines 30 through 35, 50 through 76 (excluding 52, 61, and 75), 90 through 91, and 93. Then, we proposed to estimate the proportion of overhead salaries that are attributed to Medicare allowable costs centers by multiplying the ratio of these routine and ancillary Wages and Salaries to total salaries (Worksheet A, column 1, line 200) times total overhead salaries (Worksheet A, column 1, lines 4 through 18). A similar methodology was used to derive Wages and Salaries costs in the 2013-based LTCH market basket.

(2) Employee Benefits Costs

Similar to the 2013-based LTCH market basket, we proposed to calculate Employee Benefits costs using Worksheet S–3, part II data. Specifically, we proposed to use data from Worksheet S–3, part II, column 4, lines 17, 18, 20, and 22, to derive Employee Benefits costs. The completion of Worksheet S–3, part II is only required for IPPS hospitals. For 2017, we found that approximately 20 percent of LTCHs voluntarily reported these data, which has fallen from the roughly 35 percent that reported these data for 2013. Our analysis of the Worksheet S–3, part II data submitted by these LTCHs indicates that we continue to have a large enough sample to enable us to produce a reasonable Employee Benefits cost weight. Specifically, we found that when we recalculated the cost weight after weighting to reflect the characteristics of the universe of LTCHs (type of control (nonprofit, for-profit, and government) and by region), the recalculation did not have a material effect on the resulting cost weight. Therefore, we proposed to use Worksheet S–3, part II data (as was done for the 2013-based LTCH market basket) to calculate the Employee Benefits cost weight in the proposed 2017-based LTCH market basket.

We note that, effective with the implementation of CMS Form 2552–10, OMB Control Number 0938–0050, we began collecting Employee Benefits and Contract Labor data on Worksheet S–3, part V, which is applicable to LTCHs. However, approximately 17 percent of LTCHs reported data on Worksheet S–3, part V for 2017, with most of these providers also reporting data on Worksheet S–3, part II. Because a greater percentage of LTCHs continue to report data on Worksheet S–3, part II than Worksheet S–3, part V for 2017, we did not propose to use the Employee Benefits and Contract Labor data reported on Worksheet S–3, part V to calculate the Employee Benefits cost weight in the proposed 2017-based LTCH market basket. We continue to encourage all providers to report these data on Worksheet S–3, Part V.

(3) Contract Labor Costs

Contract Labor costs are primarily associated with direct patient care services. Contract Labor costs for services such as accounting, billing, and legal are estimated using other government data sources as described in this section of this final rule. Approximately 44 percent of LTCHs voluntarily reported Contract Labor costs on Worksheet S–3, part II, which was similar to the percentage obtained from 2013 Medicare cost reports. Only about 18 percent of LTCHs reported Contract Labor costs data on Worksheet S–3, part V.

As was done for the 2013-based LTCH market basket, we proposed to derive the Contract Labor costs for the proposed 2017-based LTCH market basket using voluntarily reported data from Worksheet S–3, part II. Our analysis of these data indicates that we have a large enough sample to enable us to produce a reasonable Contract Labor cost weight. Specifically, we found that when we recalculated the cost weight after weighting to reflect the characteristics of the universe of LTCHs (type of control (nonprofit, for-profit, and government) and by region), the recalculation did not have a material effect on the resulting cost weight. Therefore, we proposed to use data from Worksheet S–3, part II, column 4, lines 11 and 13 to calculate the Contract Labor cost weight in the proposed 2017-based LTCH market basket.

(4) Pharmaceuticals Costs

We proposed to calculate Pharmaceuticals costs using nonsalary costs for the pharmacy cost center (line 15) and drugs charged to patients cost center (line 73). We proposed to estimate these costs using total pharmaceutical costs reported on Worksheet B, part I, column 0, lines 15 and 73 and then removing a portion of these costs attributable to salaries. We proposed to estimate the proportion of costs for removal as Worksheet A, column 1, lines 15 and 73 divided by the sum of Worksheet A, columns 1 and 2, lines 15 and 73. A similar methodology was used for the 2013-based LTCH market basket.

(5) Professional Liability Insurance Costs

We proposed that Professional Liability Insurance (PLI) costs (often referred to as malpractice costs) be equal to premiums, paid losses and self-insurance costs reported on Worksheet S–2, part I, columns 1 through 3, line 118. A similar methodology was used for the 2013-based LTCH market basket.

(6) Home Office/Related Organization Contract Labor Costs

For the 2017-based LTCH market basket, we proposed to determine the Home Office/Related Organization Contract Labor costs using Medicare

cost report data. Specifically, we proposed to calculate the Home Office/Related Organization Contract Labor costs using data reported on Worksheet S–3, part II, column 4, lines 14, 1401, 1402, 2550, and 2551 for those LTCH providers reporting total salaries on Worksheet S–3, part II, line 1.

The 2013-based LTCH market basket used the 2007 Benchmark Input-Output (I–O) expense data published by the Bureau of Economic Analysis (BEA) to derive these costs (81 FR 57089). A more detailed explanation of the general methodology using the BEA I–O data is provided in section VII.D.3.c. of the preamble of this final rule. We calculated the Home Office/Related Organization Contract Labor cost weight using expense data for North American Industry Classification System (NAICS) code 55, Management of Companies and Enterprises (81 FR 57098). We believe the proposed methodology for the 2017-based LTCH market basket is a technical improvement over the prior methodology because it represents more recent data that is representative compositionally and geographically of LTCHs.

(7) Capital Costs

We proposed that Capital costs be equal to Medicare allowable capital costs as reported on Worksheet B, part II, column 26, lines 30 through 35, 50 through 76 (excluding 52, 61, and 75), 90 through 91 and 93. A similar methodology was used for the 2013-based LTCH market basket.

b. Final Major Cost Category Computation

After we derive costs for the major cost categories for each provider using the Medicare cost report data as previously described, we proposed to trim the data for outliers. For each of the seven major cost categories, we first proposed to divide the calculated costs for the category by total Medicare allowable costs calculated for the provider to obtain cost weights for the universe of LTCH providers. For the 2017-based LTCH market basket (similar to the 2013-based LTCH market basket), we proposed that total Medicare allowable costs would be equal to the total costs as reported on Worksheet B, part I, column 26, lines 30 through 35, 50 through 76 (excluding 52, 61 and 75), 90 through 91, and 93.

For the Wages and Salaries, Employee Benefits, Contract Labor, Pharmaceuticals, Professional Liability Insurance, and Capital cost weights, after excluding cost weights that are less than or equal to zero, we proposed to then remove those providers whose derived cost weights fall in the top and bottom 5 percent of provider specific derived cost weights to ensure the exclusion of outliers. After the outliers have been excluded, we sum the costs for each category across all remaining providers. We proposed to divide this by the sum of total Medicare allowable costs across all remaining providers to obtain a cost weight for the 2017-based LTCH market basket for the given category. This trimming process is done for each cost weight separately.

For the Home Office/Related Organization Contract Labor cost weight, we proposed to apply a 1-percent top only trimming methodology. This allows all providers' Medicare allowable costs to be included, even if their Home Office/Related Organization Contract Labor costs were zero. We believe, as the Medicare cost report data (Worksheet S–2, part I, line 140) indicate, that not all LTCHs have a home office. LTCHs without a home office can incur these expenses directly by having their own staff, for which the costs would be included in the Wages and Salaries and Employee Benefits cost weights. Alternatively, LTCHs without a home office could also purchase related services from external contractors for which these expenses would be captured in the residual ''All Other'' cost weight. We believe this 1-percent top-only trimming methodology is appropriate as it addresses outliers while allowing providers with zero Home Office/Related Organization Contract Labor costs to be included in the Home Office/Related Organization Contract Labor cost weight calculation. If we applied both the top and bottom 5 percent trimming methodology, we would exclude providers who have zero Home Office/Related Organization Contract Labor costs.

Finally, we proposed to calculate the residual ''All Other'' cost weight that reflects all remaining costs that are not captured in the seven cost categories listed.

We received no comments on the proposed methodology to derive the major cost weights using the Medicare cost reports and therefore are finalizing this methodology without modification. We refer readers to Table E1 for the resulting proposed and final cost weights for these major cost categories.

TABLE E1—MAJOR COST CATEGORIES AS DERIVED FROM MEDICARE COST REPORTS

Major Cost Categories	Proposed and Final 2017-Based LTCH Market Basket (Percent)	2013-Based LTCH Market Basket (Percent)
Wages and Salaries	42.6	41.5
Employee Benefits	6.2	6.5
Contract Labor	4.4	5.9
Professional Liability Insurance (Malpractice)	0.5	0.9
Pharmaceuticals	6.2	7.6
Home Office/Related Organization Contract Labor	1.9	N/A
Capital	9.9	9.7
All Other	28.3	27.8

The Wages and Salaries cost weight calculated from the Medicare cost reports for the 2017-based LTCH market basket is approximately 1 percentage point higher than the Wages and Salaries cost weight for the 2013-based LTCH market basket, while the Contract Labor cost weight is 1.5 percentage point lower. The 2017-based Pharmaceuticals cost weight also is roughly 1.5 percentage point lower than the cost weight for the 2013-based LTCH market basket.

As we did for the 2013-based LTCH market basket, we proposed to allocate the Contract Labor cost weight to the Wages and Salaries and Employee Benefits cost weights based on their relative proportions under the assumption that Contract Labor costs are comprised of both Wages and Salaries and Employee Benefits. The Contract Labor allocation proportion for Wages and Salaries is equal to the Wages and Salaries cost weight as a percent of the sum of the Wages and Salaries cost weight and the Employee Benefits cost weight. This rounded percentage is 87 percent. Therefore, we proposed to allocate 87 percent of the Contract Labor cost weight to the Wages and Salaries cost weight and 13 percent to the Employee Benefits cost weight.

We received no comments on the proposed methodology to allocate the Contract Labor cost weight to the Wages and Salaries cost weight and Employee Benefits cost weight and therefore, are finalizing this methodology without modification. We refer readers to Table E2 that shows the proposed and final Wages and Salaries and Employee Benefits cost weights after Contract Labor cost weight allocation for both the 2017-based LTCH market basket and the 2013-based LTCH market basket.

TABLE E2- WAGES AND SALARIES AND EMPLOYEE BENEFITS COST WEIGHTS AFTER CONTRACT LABOR ALLOCATION

Major Cost Categories	Proposed and Final 2017-Based LTCH Market Basket	2013-Based LTCH Market Basket
Wages and Salaries	46.4	46.6
Employee Benefits	6.8	7.3
Compensation	53.2	53.9

After the allocation of the Contract Labor cost weight, the 2017-based Wages and Salaries cost weight is 0.2 percentage point lower and the Employee Benefits cost weight is 0.5 percentage point lower, relative to the respective cost weights for the 2013-based LTCH market basket. As a result, in the 2017-based LTCH market basket, the compensation cost weight is 0.7 percentage point lower than the Compensation cost weight for the 2013-based LTCH market basket.

c. Derivation of the Detailed Operating Cost Weights

To further divide the residual ''All Other'' cost weight estimated from the 2017 Medicare cost report data into more detailed cost categories, we proposed to use the 2012 Benchmark I–O ''Use Tables/Before Redefinitions/Purchaser Value'' for NAICS 622000, Hospitals, published by the Bureau of Economic Analysis (BEA). These data are publicly available at the following website: *https://www.bea.gov/industry/input-output-accounts-data*. For the 2013-based LTCH market basket, we used the 2007 Benchmark I–O data, the most recent data available at the time (81 FR 57089).

The BEA Benchmark I–O data are scheduled for publication every 5 years with the most recent data available for 2012. The 2012 Benchmark I–O data are derived from the 2012 Economic Census and are the building blocks for BEA's economic accounts. Therefore, they represent the most comprehensive and complete set of data on the economic processes or mechanisms by which output is produced and distributed.[451] BEA also produces Annual I–O estimates. However, while based on a similar methodology, these estimates reflect less comprehensive and less detailed data sources and are subject to revision when benchmark data becomes available. Instead of using the less detailed Annual I–O data, we proposed to inflate the 2012 Benchmark I–O data forward to 2017 by applying the annual price changes from the respective price proxies to the appropriate market basket cost categories that are obtained from the 2012 Benchmark I–O data. We repeated this practice for each year. Then, we calculated the cost shares that each cost category represents of the 2012 data inflated to 2017. These resulting 2017 cost shares were applied to the residual ''All Other'' cost weight to obtain the detailed cost weights for the proposed 2017-based LTCH market basket. For example, the cost for Food: Direct Purchases represents 4.9 percent of the sum of the residual ''All Other'' 2012 Benchmark I–O Hospital Expenditures inflated to 2017. Therefore, the Food: Direct Purchases cost weight represents 4.9 percent of the proposed 2017-based LTCH market basket's residual ''All Other'' cost category (28.3 percent), yielding a ''final'' Food: Direct Purchases proposed cost weight of 1.4 percent in the proposed 2017-based LTCH market basket (0.049×28.3 percent = 1.4 percent).

Using this methodology, we proposed to derive 17 detailed LTCH market basket cost category weights from the 2017-based LTCH market basket residual ''All Other'' cost weight (28.3 percent). These categories are: (1) Electricity; (2) Fuel, Oil, and Gasoline; (3) Food: Direct Purchases; (4) Food: Contract Services; (5) Chemicals; (6) Medical Instruments; (7) Rubber and Plastics; (8) Paper and Printing Products; (9) Miscellaneous Products; (10) Professional Fees: Labor-Related; (11) Administrative and Facilities Support Services; (12) Installation, Maintenance, and Repair Services; (13) All Other Labor-Related Services; (14) Professional Fees: Nonlabor-Related; (15) Financial Services; (16) Telephone Services; and (17) All Other Nonlabor-Related Services. We note that for the 2013-based LTCH market basket, we had a Water and Sewerage cost weight. For the 2017-based LTCH market basket, we proposed to include Water and

[451] *http://www.bea.gov/papers/pdf/IOmanual_092906.pdf.*

Sewerage costs in the Electricity cost weight due to the small amount of costs in this category.

For the 2013-based LTCH market basket, we used the I–O data for NAICS 55 Management of Companies to derive the Home Office/Related Organization Contract Labor cost weight, which were classified in the Professional Fees: Labor-related and Professional Fees: Nonlabor-related cost weights. As previously discussed, we proposed to use the Medicare cost report data to derive the Home Office/Related Organization Contract Labor cost weight, which we would further classify into the Professional Fees: Labor-related or Professional Fees: Nonlabor-related categories which we discuss in section VII.D.6. of the preamble of this final rule.

We received no comments on the proposed methodology to derive the detailed operating cost weights and therefore are finalizing this methodology without modification.

d. Derivation of the Detailed Capital Cost Weights

As described in section VII.D.3.b. of the preamble of this final rule, we proposed a Capital-related cost weight of 9.9 percent as calculated from the 2017 Medicare cost reports for LTCHs after applying the proposed trims as previously described. We proposed to then separate this total Capital-related cost weight into more detailed cost categories. Using 2017 Medicare cost reports, we are able to group Capital-related costs into the following categories: Depreciation, Interest, Lease, and Other Capital-Related costs, as shown in Table E3. For each of these categories, we proposed to determine what proportion of total Capital-related costs the category represents using the data reported by the LTCH on Worksheet A–7, which is the same methodology used for the 2013-based LTCH market basket.

We also proposed to allocate lease costs across each of the remaining detailed Capital-related cost categories as was done in the 2013-based LTCH market basket. This would result in three primary Capital-related cost categories in the proposed 2017-based LTCH market basket: Depreciation, Interest, and Other Capital-Related costs. Lease costs are unique in that they are not broken out as a separate cost category in the proposed 2017-based LTCH market basket. Rather, we proposed to proportionally distribute these costs among the cost categories of Depreciation, Interest, and Other Capital-Related, reflecting the assumption that the underlying cost structure of leases is similar to that of Capital-related costs in general. As was done for the 2013-based LTCH market basket, we proposed to assume that 10 percent of the lease costs as a proportion of total Capital-related costs (63.0 percent) represents overhead and to assign those costs to the Other Capital-Related cost category accordingly. Therefore, we are assuming that approximately 6.3 percent (63.0 percent $\times$ 0.1) of total Capital-related costs represent lease costs attributable to overhead, and we proposed to add this 6.3 percentage points to the 6.7 percent Other Capital-Related cost category weight. We are also proposing to distribute the remaining lease costs (56.7 percent, or 63.0 percent less 6.3 percentage points) proportionally across the three cost categories (Depreciation, Interest, and Other Capital-Related) based on the proportion that these categories comprise of the sum of the Depreciation, Interest, and Other Capital-Related cost categories (excluding lease expenses). For example, the Other Capital-Related cost category represented 18.2 percent of all three cost categories (Depreciation, Interest, and Other Capital-Related) prior to any lease expenses being allocated. This 18.2 percent is applied to the 56.7 percent of remaining lease expenses so that another 10.3 percentage points of lease expenses as a percent of total Capital-related costs is allocated to the Other Capital-Related cost category. Therefore, the resulting proposed Other Capital-Related cost weight is 23.3 percent (6.7 percent + 6.3 percent + 10.3 percent). This is the same methodology used for the 2013-based LTCH market basket. The proposed allocation of these lease expenses are shown in Table E3.

Finally, we proposed to further divide the Depreciation and Interest cost categories. We proposed to separate Depreciation cost category into the following two categories: (1) Building and Fixed Equipment and (2) Movable Equipment. We also proposed to separate the Interest cost category into the following two categories: (1) Government/Nonprofit; and (2) For profit.

To disaggregate the Depreciation cost weight, we needed to determine the percent of total depreciation costs for LTCHs (after the allocation of lease costs) that are attributable to Building and Fixed equipment, which we hereafter refer to as the ''fixed percentage.'' We proposed to use depreciation and lease data from Worksheet A–7 of the 2017 Medicare cost reports, which is the same methodology used for the 2013-based LTCH market basket. Based on the 2017 LTCH Medicare cost report data, we have determined that depreciation costs for building and fixed equipment account for 44 percent of total depreciation costs, while depreciation costs for movable equipment account for 56 percent of total depreciation costs. As previously mentioned, we proposed to allocate lease expenses among the Depreciation, Interest, and Other Capital-Related cost categories. We determined that leasing building and fixed equipment expenses account for 88 percent of total leasing expenses, while leasing movable equipment expenses account for 12 percent of total leasing expenses. We proposed to sum the depreciation and leasing expenses for building and fixed equipment, as well as sum the depreciation and leasing expenses for movable equipment. This results in the proposed Building and Fixed Equipment Depreciation cost weight (after leasing costs are included) representing 76 percent of total depreciation costs and the Movable Equipment Depreciation cost weight (after leasing costs are included) representing 24 percent of total depreciation costs.

To disaggregate the Interest cost weight, we determine the percent of total interest costs for LTCHs that are attributable to government and nonprofit facilities, which we hereafter refer to as the ''nonprofit percentage,'' because price pressures associated with these types of interest costs tend to differ from those for for-profit facilities. We proposed to use interest costs data from Worksheet A–7 of the 2017 Medicare cost reports for LTCHs, which is the same methodology used for the 2013-based LTCH market basket. The nonprofit percentage determined using this method is 21 percent.

We received no comments on the proposed methodology to derive the detailed capital cost weights and therefore are finalizing this methodology without modification. Table E3 provides the proposed and final detailed capital cost shares obtained from the Medicare cost reports. Ultimately, these detailed capital cost shares are applied to the total Capital-related cost weight determined in section VII.D.3.b. of the preamble of this final rule to separate the total Capital-related cost weight of 9.9 percent into more detailed cost categories and weights.

TABLE E3--CAPITAL COST SHARE COMPOSITION FOR THE PROPOSED AND FINAL 2017-BASED LTCH MARKET BASKET

	Capital Cost Share Composition Before Lease Expense Allocation (Percent)	Capital Cost Share Composition After Lease Expense Allocation (Percent)
Depreciation	**22**	**56**
Building and Fixed Equipment	17	42
Movable Equipment	5	14
Interest	**8**	**21**
Government/Nonprofit	2	4
For Profit	6	17
Lease	*63*	*N/A*
Other	**7**	**23**

Note: Detail may not add to total due to rounding.

e. 2017-Based LTCH Market Basket Cost Categories and Weights

Table E4 shows the cost categories and weights for the proposed and final 2017-based LTCH market basket compared to the 2013-based LTCH market basket.

BILLING CODE 4120–01–P

TABLE E4--PROPOSED AND FINAL 2017-BASED LTCH MARKET BASKET COST WEIGHTS COMPARED TO 2013-BASED LTCH MARKET BASKET COST WEIGHTS

Cost Category	Proposed and Final 2017-based LTCH Market Basket Cost Weight	2013-based LTCH Market Basket Cost Weight
Total	**100.0**	**100.0**
Compensation	**53.2**	**53.9**
Wages and Salaries	46.4	46.6
Employee Benefits	6.8	7.3
Utilities	**1.9**	**2.2**
Electricity	1.3	1.0
Fuel, Oil, and Gasoline	0.6	1.1
Water & Sewerage	n/a	0.1
Professional Liability Insurance	**0.5**	**0.9**
Malpractice	0.5	0.9
All Other Products and Services	**34.4**	**33.2**
All Other Products	**15.6**	**16.3**
Pharmaceuticals	6.2	7.6
Food: Direct Purchases	1.4	1.8
Food: Contract Services	1.6	1.1
Chemicals	0.5	0.7
Medical Instruments	3.6	2.4
Rubber & Plastics	0.5	0.6
Paper and Printing Products	0.8	1.2
Miscellaneous Products	1.1	0.8
All Other Services	**18.9**	**16.9**
Labor-Related Services	**9.7**	**8.3**
Professional Fees: Labor-related	4.5	3.5
Administrative and Facilities Support Services	0.9	0.9
Installation, Maintenance, and Repair	2.1	2.0
All Other: Labor-related Services	2.3	1.9
Nonlabor-Related Services	**9.1**	**8.6**
Professional Fees: Nonlabor-related	5.9	3.6
Financial services	1.2	2.9
Telephone Services	0.4	0.7
All Other: Nonlabor-related Services	1.6	1.4
Capital-Related Costs	**9.9**	**9.7**
Depreciation	**5.5**	**5.3**
Building and Fixed Equipment	4.2	3.9
Movable Equipment	1.3	1.4
Interest Costs	**2.1**	**2.4**
Government/Nonprofit	0.4	0.5
For Profit	1.6	1.8
Other Capital-Related Costs	**2.3**	**2.0**

Note: Totals may not sum due to rounding.

BILLING CODE 4120–01–C

4. Selection of Price Proxies

After developing the proposed cost weights for the 2017-based LTCH market basket, we selected the most appropriate wage and price proxies currently available to represent the rate of price change for each expenditure category. For the majority of the cost weights, we base the price proxies on U.S. Bureau of Labor Statistics (BLS) data and group them into one of the following BLS categories:

- *Employment Cost Indexes.* Employment Cost Indexes (ECIs) measure the rate of change in employment wage rates and employer costs for employee benefits per hour worked. These indexes are fixed-weight indexes and strictly measure the change in wage rates and employee benefits per hour. ECIs are superior to Average Hourly Earnings (AHE) as price proxies

for input price indexes because they are not affected by shifts in occupation or industry mix, and because they measure pure price change and are available by both occupational group and by industry. The industry ECIs are based on the NAICS and the occupational ECIs are based on the Standard Occupational Classification System (SOC).

• *Producer Price Indexes.* Producer Price Indexes (PPIs) measure the average change over time in the selling prices received by domestic producers for their output. The prices included in the PPI are from the first commercial transaction for many products and some services (*https://www.bls.gov/ppi/*).

• *Consumer Price Indexes.* Consumer Price Indexes (CPIs) measure the average change over time in the prices paid by urban consumers for a market basket of consumer goods and services (*https://www.bls.gov/cpi/*). CPIs are only used when the purchases are similar to those of retail consumers rather than purchases at the producer level, or if no appropriate PPIs are available.

We evaluate the price proxies using the criteria of reliability, timeliness, availability, and relevance:

• *Reliability.* Reliability indicates that the index is based on valid statistical methods and has low sampling variability. Widely accepted statistical methods ensure that the data were collected and aggregated in a way that can be replicated. Low sampling variability is desirable because it indicates that the sample reflects the typical members of the population. (Sampling variability is variation that occurs by chance because only a sample was surveyed rather than the entire population.)

• *Timeliness.* Timeliness implies that the proxy is published regularly, preferably at least once a quarter. The market baskets are updated quarterly, and therefore, it is important for the underlying price proxies to be up-to-date, reflecting the most recent data available. We believe that using proxies that are published regularly (at least quarterly, whenever possible) helps to ensure that we are using the most recent data available to update the market basket. We strive to use publications that are disseminated frequently, because we believe that this is an optimal way to stay abreast of the most current data available.

• *Availability.* Availability means that the proxy is publicly available. We prefer that our proxies are publicly available because this will help ensure that our market basket updates are as transparent to the public as possible. In addition, this enables the public to be able to obtain the price proxy data on a regular basis.

• *Relevance.* Relevance means that the proxy is applicable and representative of the cost category weight to which it is applied.

We believe that the CPIs, PPIs, and ECIs that we have selected meet these criteria. Therefore, we believe that they continue to be the best measure of price changes for the cost categories to which they would be applied.

Table E7 lists all price proxies that we proposed to use for the 2017-based LTCH market basket. In this section of this rule is a detailed explanation of the price proxies we proposed for each cost category weight.

a. Price Proxies for the Operating Portion of the 2017-Based LTCH Market Basket

(1) Wages and Salaries

We proposed to continue to use the ECI for Wages and Salaries for All Civilian workers in Hospitals (BLS series code CIU1026220000000I) to measure the wage rate growth of this cost category. This is the same price proxy used in the 2013-based LTCH market basket (81 FR 57092).

(2) Employee Benefits

We proposed to continue to use the ECI for Total Benefits for All Civilian workers in Hospitals to measure price growth of this category. This ECI is calculated using the ECI for Total Compensation for All Civilian workers in Hospitals (BLS series code CIU1016220000000I) and the relative importance of wages and salaries within total compensation. This is the same price proxy used in the 2013-based LTCH market basket (81 FR 57092).

(3) Electricity

We proposed to continue to use the PPI Commodity Index for Commercial Electric Power (BLS series code WPU0542) to measure the price growth of this cost category. This is the same price proxy used in the 2013-based LTCH market basket (81 FR 57092).

(4) Fuel, Oil, and Gasoline

Similar to the 2013-based LTCH market basket, for the 2017-based LTCH market basket, we proposed to use a blend of the PPI Industry for Petroleum Refineries and the PPI Commodity for Natural Gas. Our analysis of the Bureau of Economic Analysis' 2012 Benchmark I–O data (use table before redefinitions, purchaser's value for NAICS 622000 [Hospitals]), shows that Petroleum Refineries expenses account for approximately 90 percent and Natural Gas expenses account for approximately 10 percent of Hospitals' (NAICS 622000) total Fuel, Oil, and Gasoline expenses. Therefore, we proposed to use a blend of 90 percent of the PPI Industry for Petroleum Refineries (BLS series code PCU324110324110) and 10 percent of the PPI Commodity Index for Natural Gas (BLS series code WPU0531) as the price proxy for this cost category. The 2013-based LTCH market basket used a 70/30 blend of these price proxies, reflecting the 2007 I–O data (81 FR 57092). We believe that these two price proxies continue to be the most technically appropriate indices available to measure the price growth of the Fuel, Oil, and Gasoline cost category in the 2017-based LTCH market basket.

(5) Professional Liability Insurance

We proposed to continue to use the CMS Hospital Professional Liability Index as the price proxy for PLI costs in the proposed 2017-based LTCH market basket. To generate this index, we collect commercial insurance medical liability premiums for a fixed level of coverage while holding non-price factors constant (such as a change in the level of coverage). This is the same proxy used in the 2013-based LTCH market basket (81 FR 57092).

(6) Pharmaceuticals

We proposed to continue to use the PPI Commodity for Pharmaceuticals for Human Use, Prescription (BLS series code WPUSI07003) to measure the price growth of this cost category. This is the same proxy used in the 2013-based LTCH market basket (81 FR 57092).

(7) Food: Direct Purchases

We proposed to continue to use the PPI Commodity for Processed Foods and Feeds (BLS series code WPU02) to measure the price growth of this cost category. This is the same price proxy used in the 2013-based LTCH market basket (81 FR 57092).

(8) Food: Contract Purchases

We proposed to continue to use the CPI for Food Away From Home (BLS series code CUUR0000SEFV) to measure the price growth of this cost category. This is the same proxy used in the 2013-based LTCH market basket (81 FR 57092).

(9) Chemicals

Similar to the 2013-based LTCH market basket, we proposed to use a four-part blended PPI as the proxy for the chemical cost category in the 2017-based LTCH market basket. The proposed blend is composed of the PPI Industry for Industrial Gas Manufacturing, Primary Products (BLS

series code PCU325120325120P), the PPI Industry for Other Basic Inorganic Chemical Manufacturing (BLS series code PCU32518–32518–), the PPI Industry for Other Basic Organic Chemical Manufacturing (BLS series code PCU32519–32519–), and the PPI Industry for Other Miscellaneous Chemical Product Manufacturing (BLS series code PCU325998325998). We note that the four part blended PPI used in the 2013-based LTCH market basket is composed of the PPI Industry for Industrial Gas Manufacturing (BLS series code PCU325120325120P), the PPI Industry for Other Basic Inorganic Chemical Manufacturing (BLS series code PCU32518–32518–), the PPI Industry for Other Basic Organic Chemical Manufacturing (BLS series code PCU32519–32519–), and the PPI Industry for Soap and Cleaning Compound Manufacturing (BLS series code PCU32561–32561–). For the 2017-based LTCH market basket, we proposed to derive the weights for the PPIs using the 2012 Benchmark I–O data. The 2013-based LTCH market basket used the 2007 Benchmark I–O data to derive the weights for the four PPIs (81 FR 57092).

We note that in the 2012 I–O data, the share of total chemicals expenses that the Soap and Cleaning Compound Manufacturing (NAICS 325610) represents decreased relative to the 2007 I–O data (from 5 percent to 2 percent), while the share of the total chemicals expenses that the All Other Chemical Product and Preparation manufacturing (NAICS 3259A0) categories represents increased (from 5 percent to 7 percent). As a result, we proposed to remove the PPI Industry for Soap and Cleaning Compound Manufacturing from the proposed blend for the 2017-based LTCH market basket and replace it with the PPI Industry for Other Miscellaneous Chemical Product Manufacturing.

We did not receive comments on the proposed methodology to derive the blended Chemicals price proxy using the 2012 Benchmark I–O and therefore are finalizing this methodology without modification. Table E5 shows the weights for each of the four PPIs used to create the proposed and final blended Chemical proxy for the 2017-based LTCH market basket compared to the 2013-based blended Chemical proxy.

TABLE E5: BLENDED CHEMICAL PPI WEIGHTS

Name	Proposed and Final 2017-based LTCH Weights (Percent)	2013-based LTCH Weights (Percent)	NAICS
PPI Industry for Industrial Gas Manufacturing	19	32	325120
PPI Industry for Other Basic Inorganic Chemical Manufacturing	13	17	325180
PPI Industry for Other Basic Organic Chemical Manufacturing	60	45	325190
PPI Industry for Soap and Cleaning Compound Manufacturing	n/a	6	325610
PPI Industry for Other Miscellaneous Chemical Product Manufacturing	8	n/a	325998

(10) Medical Instruments

We proposed to continue to use a blend of two PPIs for the Medical Instruments cost category. The 2012 Benchmark I–O data shows an approximate 57/43 split between Surgical and Medical Instruments and Medical and Surgical Appliances and Supplies for this cost category. Therefore, we proposed a blend composed of 57 percent of the commodity-based PPI Commodity for Surgical and Medical Instruments (BLS series code WPU1562) and 43 percent of the PPI Commodity for Medical and Surgical Appliances and Supplies (BLS series code WPU1563). The 2013-based LTCH market basket used a 50/50 blend of these PPIs based on the 2007 Benchmark I–O data (81 FR 57093).

(11) Rubber and Plastics

We proposed to continue to use the PPI Commodity for Rubber and Plastic Products (BLS series code WPU07) to measure price growth of this cost category. This is the same proxy used in the 2013-based LTCH market basket (81 FR 57093).

(12) Paper and Printing Products

We proposed to continue to use the PPI Commodity for Converted Paper and Paperboard Products (BLS series code WPU0915) to measure the price growth of this cost category. This is the same proxy used in the 2013-based LTCH market basket (81 FR 57093).

(13) Miscellaneous Products

We proposed to continue to use the PPI Commodity for Finished Goods Less Food and Energy (BLS series code WPUFD4131) to measure the price growth of this cost category. This is the same proxy used in the 2013-based LTCH market basket (81 FR 57093).

(14) Professional Fees: Labor-Related

We proposed to continue to use the ECI for Total Compensation for Private Industry workers in Professional and Related (BLS series code CIU2010000120000I) to measure the price growth of this category. This is the same proxy used in the 2013-based LTCH market basket (81 FR 57093).

(15) Administrative and Facilities Support Services

We proposed to continue to use the ECI for Total Compensation for Private Industry workers in Office and Administrative Support (BLS series code CIU2010000220000I) to measure the price growth of this category. This is the same proxy used in the 2013-based LTCH market basket (81 FR 57093).

(16) Installation, Maintenance, and Repair Services

We proposed to continue to use the ECI for Total Compensation for All Civilian workers in Installation, Maintenance, and Repair (BLS series code CIU1010000430000I) to measure the price growth of this cost category. This is the same proxy used in the 2013-based LTCH market basket (81 FR 57093).

(17) All Other: Labor-Related Services

We proposed to continue to use the ECI for Total Compensation for Private Industry workers in Service Occupations (BLS series code

CIU2010000300000I) to measure the price growth of this cost category. This is the same proxy used in the 2013-based LTCH market basket (81 FR 57093).

(18) Professional Fees: Nonlabor-Related

We proposed to continue to use the ECI for Total Compensation for Private Industry workers in Professional and Related (BLS series code CIU2010000120000I) to measure the price growth of this category. This is the same proxy used in the 2013-based LTCH market basket (81 FR 57093).

(19) Financial Services

We proposed to continue to use the ECI for Total Compensation for Private Industry workers in Financial Activities (BLS series code CIU201520A000000I) to measure the price growth of this cost category. This is the same proxy used in the 2013-based LTCH market basket (81 FR 57093).

(20) Telephone Services

We proposed to continue to use the CPI for Telephone Services (BLS series code CUUR0000SEED) to measure the price growth of this cost category. This is the same proxy used in the 2013-based LTCH market basket (81 FR 57093).

(21) All Other: Nonlabor-Related Services

We proposed to continue to use the CPI for All Items Less Food and Energy (BLS series code CUUR0000SA0L1E) to measure the price growth of this cost category. This is the same proxy used in the 2013-based LTCH market basket (81 FR 57093).

We received no comments on the proposed price proxies for the operating portion of the 2017-based LTCH market basket and therefore are finalizing the use of these price proxies without modification.

b. Price Proxies for the Capital Portion of the Proposed 2017-Based LTCH Market Basket

(1) Capital Price Proxies Prior to Vintage Weighting

We proposed to continue to use the same price proxies for the capital-related cost categories as were applied in the 2013-based LTCH market basket, which are provided in Table E7 and described in this section of this rule. Specifically, we proposed to proxy:

- Depreciation: Building and Fixed Equipment cost category by BEA's Chained Price Index for Nonresidential Construction for Hospitals and Special Care Facilities (BEA Table 5.4.4. Price Indexes for Private Fixed Investment in Structures by Type).
- Depreciation: Movable Equipment cost category by the PPI Commodity for Machinery and Equipment (BLS series code WPU11).
- Nonprofit Interest cost category by the average yield on domestic municipal bonds (Bond Buyer 20-bond index).
- For-profit Interest cost category by the average yield on Moody's Aaa bonds (Federal Reserve).
- Other Capital-Related cost category by the CPI–U for Rent of Primary Residence (BLS series code CUUS0000SEHA).

We believe these are the most appropriate proxies for LTCH capital-related costs that meet our selection criteria of relevance, timeliness, availability, and reliability. We are also proposing to continue to vintage weight the capital price proxies for Depreciation and Interest in order to capture the long-term consumption of capital. This vintage weighting method is similar to the method used for the 2013-based LTCH market basket and is described in section VII.D.4.b.(2). of the preamble of this final rule.

We received no comments on the proposed price proxies for the capital portion of the 2017-based LTCH market basket and therefore are finalizing the use of these price proxies without modification.

(2) Vintage Weights for Price Proxies

Because capital is acquired and paid for over time, capital-related expenses in any given year are determined by both past and present purchases of physical and financial capital. The vintage-weighted capital-related portion of the proposed 2017-based LTCH market basket is intended to capture the long-term consumption of capital, using vintage weights for depreciation (physical capital) and interest (financial capital). These vintage weights reflect the proportion of capital-related purchases attributable to each year of the expected life of building and fixed equipment, movable equipment, and interest. We proposed to use vintage weights to compute vintage-weighted price changes associated with depreciation and interest expenses.

Capital-related costs are inherently complicated and are determined by complex capital-related purchasing decisions, over time, based on such factors as interest rates and debt financing. In addition, capital is depreciated over time instead of being consumed in the same period it is purchased. By accounting for the vintage nature of capital, we are able to provide an accurate and stable annual measure of price changes. Annual nonvintage price changes for capital are unstable due to the volatility of interest rate changes and, therefore, do not reflect the actual annual price changes for LTCH capital-related costs. The capital-related component of the proposed 2017-based LTCH market basket reflects the underlying stability of the capital-related acquisition process.

The methodology used to calculate the vintage weights for the proposed 2017-based LTCH market basket is the same as that used for the 2013-based LTCH market basket with the only difference being the inclusion of more recent data. To calculate the vintage weights for depreciation and interest expenses, we first need a time series of capital-related purchases for building and fixed equipment and movable equipment. We found no single source that provides an appropriate time series of capital-related purchases by hospitals for all of the previously mentioned components of capital purchases. The early Medicare cost reports did not have sufficient capital-related data to meet this need. Data we obtained from the American Hospital Association (AHA) do not include annual capital-related purchases. However, the AHA does provide a consistent database of total expenses back to 1963. Consequently, we proposed to use data from the AHA Panel Survey and the AHA Annual Survey to obtain a time series of total expenses for hospitals. We proposed to use data from the AHA Panel Survey supplemented with the ratio of depreciation to total hospital expenses obtained from the Medicare cost reports to derive a trend of annual depreciation expenses for 1963 through 2017. We proposed to separate these depreciation expenses into annual amounts of building and fixed equipment depreciation and movable equipment depreciation as previously determined. From these annual depreciation amounts we derive annual end-of-year book values for building and fixed equipment and movable equipment using the expected life for each type of asset category. While data are not available that are specific to LTCHs, we believe this information for all hospitals serves as a reasonable proxy for the pattern of depreciation for LTCHs.

To continue to calculate the vintage weights for depreciation and interest expenses, we also needed to account for the expected lives for building and fixed equipment, movable equipment, and interest for the proposed 2017-based LTCH market basket. We proposed to calculate the expected lives using Medicare cost report data for LTCHs.

The expected life of any asset can be determined by dividing the value of the asset (excluding fully depreciated assets) by its current year depreciation amount. This calculation yields the estimated expected life of an asset if the rates of depreciation were to continue at current year levels, assuming straight-line depreciation. Using this proposed method, we determined the average expected life of building and fixed equipment to be equal to 18 years, and the average expected life of movable equipment to be equal to 9 years. For the expected life of interest, we believe that vintage weights for interest should represent the average expected life of building and fixed equipment because, based on previous research described in the FY 1997 IPPS final rule (61 FR 46198), the expected life of hospital debt instruments and the expected life of buildings and fixed equipment are similar. We note that for the 2013-based LTCH-specific market basket, we derived an expected average life of building and fixed equipment of 18 years and an expected average life of movable equipment of 8 years (81 FR 57094).

Multiplying these expected lives by the annual depreciation amounts results in annual year-end asset costs for building and fixed equipment and movable equipment. Then we calculated a time series, beginning in 1964, of annual capital purchases by subtracting the previous year's asset costs from the current year's asset costs.

For the building and fixed equipment and movable equipment vintage weights, we proposed to use the real annual capital-related purchase amounts for each asset type to capture the actual amount of the physical acquisition, net of the effect of price inflation. These real annual capital-related purchase amounts are produced by deflating the nominal annual purchase amount by the associated price proxy as previously provided. For the interest vintage weights, we proposed to use the total nominal annual capital-related purchase amounts to capture the value of the debt instrument (including, but not limited to, mortgages and bonds). Using these capital-related purchase time series specific to each asset type, we proposed to calculate the vintage weights for building and fixed equipment, for movable equipment, and for interest.

The vintage weights for each asset type are deemed to represent the average purchase pattern of the asset over its expected life (in the case of building and fixed equipment and interest, 18 years, and in the case of movable equipment, 9 years). For each asset type, we used the time series of annual capital-related purchase amounts available from 2017 back to 1964. These data allow us to derive thirty-seven 18-year periods of capital-related purchases for building and fixed equipment and interest, and forty-six 9-year periods of capital-related purchases for movable equipment. For each 18-year period for building and fixed equipment and interest, or 9-year period for movable equipment, we proposed to calculate annual vintage weights by dividing the capital-related purchase amount in any given year by the total amount of purchases over the entire 18-year or 9-year period. This calculation is done for each year in the 18-year or 9-year period and for each of the periods for which we have data. Then we proposed to calculate the average vintage weight for a given year of the expected life by taking the average of these vintage weights across the multiple periods of data.

We received no comments on the proposed methodology to derive the vintage weights for the 2017-based LTCH market basket and therefore are finalizing these vintage weights without modification.

The vintage weights for the capital-related portion of the proposed and final 2017-based LTCH market basket and the 2013-based LTCH market basket are presented in Table E6.

TABLE E6—PROPOSED AND FINAL 2017-BASED LTCH MARKET BASKET AND 2013-BASED LTCH MARKET BASKET VINTAGE WEIGHTS FOR CAPITAL-RELATED PRICE PROXIES

Year	Building and Fixed Equipment		Movable Equipment		Interest	
	2017-based 18 years	2013-based 18 years	2017-based 9 years	2013-based 8 years	2017-based 18 years	2013-based 18 years
1	0.046	0.044	0.093	0.104	0.031	0.029
2	0.047	0.046	0.096	0.110	0.032	0.031
3	0.046	0.048	0.101	0.117	0.033	0.034

17	0.064	0.066	--	--	0.083	0.086
18	0.065	0.067	--	--	0.088	0.091
Total	1.000	1.000	1.000	1.000	1.000	1.000

Note: Numbers may not add to total due to rounding.

The process of creating vintage-weighted price proxies requires applying the vintage weights to the price proxy index where the last applied vintage weight in Table E6 is applied to the most recent data point. We have provided on the CMS website an example of how the vintage weighting price proxies are calculated, using example vintage weights and example price indices. The example can be found at the following link: *http://www.cms.gov/Research-Statistics-Data-and-Systems/Statistics-Trends-and-Reports/MedicareProgramRatesStats/MarketBasketResearch.html* in the zip file titled ''Weight Calculations as described in the FY 2010 IPPS proposed rule.''

c. Summary of Price Proxies of the Proposed 2017-Based LTCH Market Basket

Table E7 shows both the operating and capital price proxies for the proposed and final 2017-based LTCH market basket.

TABLE E7—PRICE PROXIES FOR THE PROPOSED AND FINAL 2017-BASED LTCH MARKET BASKET

Cost Description	Price Proxies
Total	
Compensation	
Wages and Salaries	ECI for Wages and Salaries for All Civilian workers in Hospitals
Employee Benefits	ECI for Total Benefits for All Civilian workers in Hospitals
Utilities	
Electricity	PPI for Commercial Electric Power
Fuel, Oil, and Gasoline	Blend of the PPI for Petroleum Refineries and PPI for Natural Gas
Professional Liability Insurance	
Malpractice	CMS Hospital Professional Liability Insurance Premium Index
All Other Products and Services	
All Other Products	
Pharmaceuticals	PPI Commodity for Pharmaceuticals for human use, prescription
Food: Direct Purchases	PPI for Processed Foods and Feeds
Food: Contract Services	CPI-U for Food Away From Home
Chemicals	Blend of Chemical PPIs
Medical Instruments	Blend of the PPI for Surgical and medical instruments and PPI for Medical and surgical appliances and supplies
Rubber & Plastics	PPI Commodity for Rubber and Plastic Products
Paper and Printing Products	PPI Commodity for Converted Paper and Paperboard Products
Miscellaneous Products	PPI Commodity for Finished Goods Less Food and Energy
All Other Services	
Labor-Related Services	
Professional Fees: Labor-related	ECI for Total compensation for Private industry workers in Professional and related
Administrative and Facilities Support Services	ECI for Total compensation for Private industry workers in Office and administrative support
Installation, Maintenance, and Repair	ECI for Total compensation for Civilian workers in Installation, maintenance, and repair
All Other: Labor-related Services	ECI for Total compensation for Private industry workers in Service occupations
Nonlabor-Related Services	
Professional Fees: Nonlabor-related	ECI for Total compensation for Private industry workers in Professional and related
Financial services	ECI for Total compensation for Private industry workers in Financial activities
Telephone Services	CPI-U for Telephone Services
All Other: Nonlabor-related Services	CPI-U for All Items Less Food and Energy
Capital-Related Costs	
Depreciation	
Building and Fixed Equipment	BEA chained price index for nonresidential construction for hospitals and special care facilities - vintage weighted (18 years)
Movable Equipment	PPI Commodity for machinery and equipment - vintage weighted (9 years)
Interest Costs	
Government/Nonprofit	Average yield on domestic municipal bonds (Bond Buyer 20 bonds) - vintage weighted (18 years)
For Profit	Average yield on Moody's Aaa bonds - vintage weighted (18 years)
Other Capital-Related Costs	CPI-U for Rent of primary residence

Note: Totals may not sum to 100.0 percent due to rounding

5. FY 2021 Market Basket Update for LTCHs

For FY 2021 (that is, October 1, 2020 through September 30, 2021), we proposed to use an estimate of the proposed 2017-based LTCH market basket to update payments to LTCHs based on the best available data. Consistent with historical practice, we estimated the LTCH market basket update for the LTCH PPS based on IHS Global, Inc.'s (IGI's) forecast using the most recent available data. IGI is a nationally recognized economic and financial forecasting firm with which we contract to forecast the components of the market baskets and multifactor productivity (MFP).

Based on IGI's fourth quarter 2019 forecast with history through the third quarter of 2019, the projected market basket update for FY 2021 is 2.9 percent. Therefore, consistent with our historical practice of estimating market basket updates based on the best available data, we proposed a market basket update of 2.9 percent for FY 2021. Furthermore, because the proposed FY 2021 annual update is based on the most recent market basket estimate for the 12-month period (currently 2.9 percent), we also proposed that if more recent data became subsequently available (for example, a more recent estimate of the market basket update), we would use such data, if appropriate, to determine the FY 2021 annual update in the final rule. (The proposed annual update to the LTCH PPS standard payment rate for FY 2021 is discussed in greater detail in section V.A.2. of the Addendum to the proposed rule.)

Based on the more recent data available for this FY 2021 IPPS/LTCH final rule (that is, IGI's second quarter 2020 forecast of the 2017-based LTCH market basket with historical data through the first quarter of 2020), we estimate that the FY 2021 market basket update is 2.3 percent. We note that the fourth quarter 2019 forecast was developed prior to the economic impacts of the Coronavirus disease 2019 (COVID–19) pandemic. This lower update (2.3 percent) for FY 2021 relative to the proposed rule (3.0 percent) is primarily driven by slower anticipated compensation growth for both health-related and other occupations as labor markets are expected to be significantly impacted during the recession that started in February 2020 and throughout the anticipated recovery.

Using the current 2013-based LTCH market basket and IGI's second quarter 2020 forecast for the market basket components, the FY 2021 market basket update would be 2.4 percent (before taking into account any statutory adjustment). Therefore, the update based on the 2017-based LTCH market basket is currently 0.1 percentage point lower. This lower update is primarily due to the lower Pharmaceuticals cost weight in the 2017-based market basket (6.2 percent) compared to the 2013-based LTCH market basket (7.6 percent). This is partially offset by the higher cost weights associated with All Other Services (such as Professional Fees and Installation, Maintenance, and Repair Services) for the 2017-based LTCH market basket relative to the 2013-based LTCH market basket. Table E8 compares the 2017-based LTCH market basket and the 2013-based LTCH market basket percent changes.

TABLE E8—2017-BASED LTCH MARKET BASKET AND 2013-BASED LTCH MARKET BASKET PERCENT CHANGES, FYs 2016 THROUGH 2023

	Fiscal Year (FY)	2017-Based LTCH Market Basket Index Percent Change	2013-Based LTCH Market Basket Index Percent Change
Historical Data	FY 2016	1.8	1.9
	FY 2017	2.4	2.6
	FY 2018	2.4	2.5
	FY 2019	2.3	2.3
	Average 2016-2019	**2.2**	**2.3**
Forecast	FY 2020	2.0	2.0
	FY 2021	2.3	2.4
	FY 2022	2.6	2.7
	FY 2023	2.6	2.7
	Average 2020-2023	**2.4**	**2.5**

Note that these market basket percent changes do not include any further adjustments as may be statutorily required.

Source: IHS Global Inc. 2nd quarter 2020 forecast

Over the time period covering FY 2016 through FY 2019, the average growth rate of the 2017-based LTCH market basket is roughly 0.1 percentage point lower than the 2013-based LTCH market basket. The lower growth rate is primarily a result of the lower Pharmaceuticals cost weight in the 2017-based market basket compared to the 2013-based LTCH market basket. Historically, the price growth of pharmaceutical costs has exceeded the price growth rates for most of the other market basket cost categories. Therefore, a lower Pharmaceuticals cost weight would, all else equal, result in a lower market basket update. As previously stated, the Pharmaceuticals cost weights for the 2017-based LTCH market basket and the 2013-based LTCH market basket are based on the 2017 and 2013

Medicare cost report data for LTCHs, respectively.

6. FY 2021 Labor-Related Share

As discussed in section V.B. of the Addendum to this final rule, under the authority of section 123 of the BBRA as amended by section 307(b) of the BIPA, we established an adjustment to the LTCH PPS payments to account for differences in LTCH area wage levels (§ 412.525(c)). The labor-related portion of the LTCH PPS standard Federal payment rate, hereafter referred to as the labor-related share, is adjusted to account for geographic differences in area wage levels by applying the applicable LTCH PPS wage index. The labor-related share is determined by identifying the national average proportion of total costs that are related to, influenced by, or vary with the local labor market. As discussed in more detail in this section of this rule and similar to the 2013-based LTCH market basket, we classify a cost category as labor-related and include it in the labor-related share if the cost category is defined as being labor-intensive and its cost varies with the local labor market. As stated in the FY 2020 IPPS/LTCH PPS final rule (84 FR 42642), the labor-related share for FY 2020 was defined as the sum of the FY 2020 relative importance of Wages and Salaries; Employee Benefits; Professional Fees: Labor-Related Services; Administrative and Facilities Support Services; Installation, Maintenance, and Repair Services; All Other: Labor-related Services; and a portion of the Capital-Related Costs from the 2013-based LTCH market basket.

We propose to continue to classify a cost category as labor-related if the costs are labor-intensive and vary with the local labor market. Given this, based on our definition of the labor-related share and the cost categories in the proposed 2017-based LTCH market basket, we proposed to include in the labor-related share for FY 2021 the sum of the FY 2021 relative importance of Wages and Salaries; Employee Benefits; Professional Fees: Labor-Related; Administrative and Facilities Support Services; Installation, Maintenance, and Repair Services; All Other: Labor-related Services; and a portion of the Capital-Related cost weight from the proposed 2017-based LTCH market basket.

Similar to the 2013-based LTCH market basket, the proposed 2017-based LTCH market basket includes two cost categories for nonmedical Professional fees (including but not limited to, expenses for legal, accounting, and engineering services). These are Professional Fees: Labor-related and Professional Fees: Nonlabor-related. For the proposed 2017-based LTCH market basket, we proposed to estimate the labor-related percentage of non-medical professional fees (and assign these expenses to the Professional Fees: Labor-related services cost category) based on the same method that was used to determine the labor-related percentage of professional fees in the 2013-based LTCH market basket.

As was done for the 2013-based LTCH market basket, we proposed to determine the proportion of legal, accounting and auditing, engineering, and management consulting services that meet our definition of labor-related services based on a survey of hospitals conducted by CMS in 2008. We notified the public of our intent to conduct this survey on December 9, 2005 (70 FR 73250) and did not receive any public comments in response to the notice (71 FR 8588). A discussion of the composition of the survey and post-stratification can be found in the FY 2010 IPPS/LTCH PPS final rule (74 FR 43850 through 43856). Based on the weighted results of the survey, we determined that hospitals purchase, on average, the following portions of contracted professional services outside of their local labor market:

- 34 percent of accounting and auditing services.
- 30 percent of engineering services.
- 33 percent of legal services.
- 42 percent of management consulting services.

For the proposed 2017-based LTCH market basket, we proposed to apply each of these percentages to the respective 2012 Benchmark I–O cost category underlying the professional fees cost category to determine the Professional Fees: Nonlabor-related costs. The Professional Fees: Labor-related costs were determined to be the difference between the total costs for each Benchmark I–O category and the Professional Fees: Nonlabor-related costs. This is the same methodology that we used to separate the 2013-based LTCH market basket professional fees category into Professional Fees: Labor-related and Professional Fees: Nonlabor-related cost categories.

In the proposed 2017-based LTCH market basket, nonmedical professional fees that were subject to allocation based on these survey results represent approximately 5.6 percent of total costs (and are limited to those fees related to Accounting & Auditing, Legal, Engineering, and Management Consulting services). Based on our survey results, we proposed to apportion approximately 3.6 percentage points of the 5.6 percentage point figure into the Professional Fees: Labor-related share cost category and designate the remaining approximately 2.0 percentage points into the Professional Fees: Nonlabor-related cost category.

In addition to the professional services as previously listed, for the 2017-based LTCH market basket, we proposed to allocate a proportion of the Home Office/Related Organization Contract Labor cost weight, calculated using the Medicare cost reports as previously stated, into the Professional Fees: Labor-related and Professional Fees: Nonlabor-related cost categories. We proposed to classify these expenses as labor-related and nonlabor-related as many facilities are not located in the same geographic area as their home office and, therefore, do not meet our definition for the labor-related share that requires the services to be purchased in the local labor market.

Similar to the 2013-based LTCH market basket, we proposed for the 2017-based LTCH market basket to use the Medicare cost reports for LTCHs to determine the home office labor-related percentages. The Medicare cost report requires a hospital to report information regarding their home office provider. Using information on the Medicare cost report, we compared the location of the LTCH with the location of the LTCH's home office. We proposed to classify a LTCH with a home office located in their respective labor market if the LTCH and its home office are located in the same Metropolitan Statistical Area (MSA). Then we determine the proportion of the Home Office/Related Organization Contract Labor cost weight that should be allocated to the labor-related share based on the percent of total Home Office/Related Organization Contract Labor costs for those LTCHs that had home offices located in their respective local labor markets of total Home Office/Related Organization Contract Labor costs for LTCHs with a home office. We determined a LTCH's and its home office's MSA using their zip code information from the Medicare cost report. Using this methodology, we determined that 4 percent of LTCHs' Home Office/Related Organization Contract Labor costs were for home offices located in their respective local labor markets. Therefore, we proposed to allocate 4 percent of the Home Office/Related Organization Contract Labor cost weight (0.1 percentage point = 1.9 percent × 4 percent) to the Professional Fees: Labor-related cost weight and 96 percent of the Home Office/Related Organization Contract Labor cost weight to the Professional Fees: Nonlabor-related cost weight (1.8 percentage points = 1.9 percent × 96 percent). For

the 2013-based LTCH market basket, we used a similar methodology but we relied on provider counts rather than Home Office/Related Organization Contract Labor costs to determine the labor-related percentage.

In summary, based on the two allocations mentioned earlier, we proposed to apportion 3.7 percentage points of the professional fees and Home Office/Related Organization Contract Labor cost weights into the Professional Fees: Labor-Related cost category. This amount was added to the portion of professional fees that we already identified as labor-related using the I–O data such as contracted advertising and marketing costs (approximately 0.8 percentage point of total costs) resulting in a Professional Fees: Labor-Related cost weight of 4.5 percent.

We received no comments on our proposed methodology to derive the Professional Fees: Labor-Related cost weight and therefore are finalizing this methodology without modification.

As previously stated, we proposed to include in the labor-related share the sum of the relative importance of Wages and Salaries; Employee Benefits; Professional Fees: Labor-Related; Administrative and Facilities Support Services; Installation, Maintenance, and Repair Services; All Other: Labor-related Services; and a portion of the Capital-Related cost weight from the proposed 2017-based LTCH market basket. The relative importance reflects the different rates of price change for these cost categories between the base year (2017) and FY 2021. Based on IGI's fourth quarter 2019 forecast of the proposed 2017-based LTCH market basket, the sum of the FY 2021 relative importance for Wages and Salaries, Employee Benefits, Professional Fees: Labor-related, Administrative and Facilities Support Services, Installation Maintenance & Repair Services, and All Other: Labor-related Services is 63.6 percent. The portion of Capital costs that is influenced by the local labor market is estimated to be 46 percent, which is the same percentage applied to the 2013-based LTCH market basket. Since the relative importance for Capital is 9.5 percent of the proposed 2017-based LTCH market basket in FY 2021, we took 46 percent of 9.5 percent to determine the proposed labor-related share of Capital for FY 2021 of 4.4 percent. Therefore, we proposed a total labor-related share for FY 2021 of 68.0 percent (the sum of 63.6 percent for the operating cost and 4.4 percent for the labor-related share of Capital).

Based on IGI's second quarter 2020 forecast of the 2017-based LTCH market basket, the sum of the FY 2021 relative importance for Wages and Salaries, Employee Benefits, Professional Fees: Labor-related, Administrative and Facilities Support Services, Installation Maintenance & Repair Services, and All Other: Labor-related Services is 63.7 percent. The portion of Capital costs that is influenced by the local labor market is estimated to be 46 percent, which is the same percentage applied to the 2013-based LTCH market basket. Since the relative importance for Capital is 9.5 percent of the 2017-based LTCH market basket in FY 2021, we took 46 percent of 9.5 percent to determine the labor-related share of Capital for FY 2021 of 4.4 percent. Therefore, using more recent data, the total labor-related share for FY 2021 is 68.1 percent (the sum of 63.7 percent for the operating cost and 4.4 percent for the labor-related share of Capital).

We received several comments on the proposed FY 2021 labor-related share.

Comment: A few commenters opposed the proposed increase to the labor-related share for FY 2021. One commenter stated that the data does not support this increase and that it will result in reduced reimbursements for facilities with an area wage index below 1.0. One commenter requested that CMS reconsider putting this adjustment off for a year to allow LTCHs the opportunity to manage through the challenging COVID pandemic.

Response: We proposed our detailed methodology for deriving the 2017-based LTCH market basket cost weights, which are primarily based on Medicare cost reports submitted by LTCHs. We believe the rebasing and revising of the LTCH market basket is a technical improvement as it reflects a more recent cost structure for LTCHs as well as current price pressures. Likewise, we believe the calculation of the labor-related share should also reflect this technical improvement by being based on more recent data.

After consideration of public comments, we are finalizing a FY 2021 labor-related share of 68.1 percent.

Table E9 shows the FY 2021 labor-related share using the 2017-based LTCH market basket relative importance and the FY 2020 labor-related share using the 2013-based LTCH market basket.

TABLE E9-- FY 2021 LTCH LABOR-RELATED SHARE AND FY 2020 LTCH LABOR-RELATED SHARE

	FY 2021 Final Labor-related Share based on 2017-based LTCH Market Basket[1]	FY 2020 Final Labor-related Share based on 2013-based LTCH Market Basket[2]
Wages and Salaries	47.1	46.6
Employee Benefits	6.8	7.2
Professional Fees: Labor-related[3]	4.4	3.4
Administrative and Facilities Support Services	1.0	0.9
Installation, Maintenance, and Repair Services	2.1	2.1
All Other: Labor-related Services	2.3	2.0
Subtotal	**63.7**	**62.2**
Labor-related portion of capital (46%)	4.4	4.1
Total Labor-Related Share	**68.1**	**66.3**

[1] IHS Global Inc. 2nd quarter 2020 forecast.

[2]Based on IHS Global Inc. 2nd quarter 2019 forecast as published in the August 16, 2019 **Federal Register** (84 FR 42642).

[3]Includes all contract advertising and marketing costs and a portion of accounting, architectural, engineering, legal, management consulting, and home office/related organization contract labor costs.

The total difference between the FY 2021 labor-related share using the 2017-based LTCH market basket and the FY 2020 labor-related share using the 2013-based LTCH market basket is 1.8 percentage points (68.1 percent and 66.3 percent, respectively). This difference is attributable to: (1) Revision to the base year cost weights (0.8 percentage point); (2) revision to starting point of calculation of relative importance (base year) from 2013 to 2017 (0.6 percentage point); and (3) using an updated IGI forecast and reflecting an additional year of inflation (0.4 percentage point). The 0.8-percentage point difference in the base year cost weights is primarily due to the incorporation of the 2012 I–O data which shows an increase in the Professional Fees: Labor-Related services.

We note that the use of the Medicare cost report to derive the Home Office/Related Organization Contract Labor cost weight has −0.1 percentage point impact, meaning if we were to use the I–O data to derive the Home Office/Related Organization Contract Labor cost weight, the labor-related share would be 0.1 percentage point higher. The impact of using the Medicare cost report data to calculate the Home Office/Related Organization Contract Labor cost weight is minimal because if we were to instead use the I–O data to derive this weight, it would also increase the residual ''All Other'' cost weight from 28.3 percent (using the Medicare cost report data to calculate the Home Office/Related Organization Contract Labor cost weight) to 30.2 percent (using the I–O data to calculate the Home Office/Related Organization Contract labor cost weight). The higher residual ''All Other'' cost weight then leads to relatively higher cost weight for Administrative and Facilities Support Services which is also reflected in the labor-related share.

VIII. Quality Data Reporting Requirements for Specific Providers and Suppliers

In section VIII. of the preamble of the FY 2021 IPPS/LTCH PPS proposed rule (85 FR 32830 through 32852), we discussed the following Medicare quality reporting systems:

- In section VIII.A., the Hospital IQR Program;
- In section VIII.B., the PCHQR Program; and
- In section VIII.C., the LTCH QRP.

In addition, in section VIII.D. of the preamble of that proposed rule (85 FR 32852 through 32858), we proposed changes to the Medicare and Medicaid Promoting Interoperability Programs (previously known as the Medicare and Medicaid EHR Incentive Programs) for eligible hospitals and critical access hospitals (CAHs).

A. Hospital Inpatient Quality Reporting (IQR) Program

1. Background and History of the Hospital IQR Program

The Hospital IQR Program strives to put patients first by ensuring they are empowered to make decisions about their own healthcare along with their clinicians using information from data-driven insights that are increasingly aligned with meaningful quality measures. We support technology that reduces burden and allows clinicians to focus on providing high quality healthcare for their patients. We also support innovative approaches to improve quality, accessibility, and affordability of care, while paying particular attention to improving clinicians' and beneficiaries' experiences when interacting with CMS programs. In combination with other efforts across the Department of Health and Human Services, we believe the Hospital IQR Program incentivizes hospitals to improve healthcare quality and value, while giving patients the tools and information needed to make the best decisions for themselves.

We seek to promote higher quality and more efficient healthcare for Medicare beneficiaries. This effort is supported by the adoption of widely-agreed upon quality and cost measures. We have worked with relevant stakeholders to define measures in almost every care setting and currently measure some aspect of care for almost

all Medicare beneficiaries. These measures assess clinical processes, patient safety and adverse events, patient experiences with care, care coordination, and clinical outcomes, as well as cost of care. We have implemented quality measure reporting programs for multiple settings of care. To measure the quality of hospital inpatient services, we implemented the Hospital IQR Program, previously referred to as the Reporting Hospital Quality Data for Annual Payment Update (RHQDAPU) Program. We refer readers to the FY 2010 IPPS/LTCH PPS final rule (74 FR 43860 through 43861) and the FY 2011 IPPS/LTCH PPS final rule (75 FR 50180 through 50181) for detailed discussions of the history of the Hospital IQR Program, including the statutory history, and to the FY 2015 IPPS/LTCH PPS final rule (79 FR 50217 through 50249), the FY 2016 IPPS/LTCH PPS final rule (80 FR 49660 through 49692), the FY 2017 IPPS/LTCH PPS final rule (81 FR 57148 through 57150), the FY 2018 IPPS/LTCH PPS final rule (82 FR 38326 through 38328 and 82 FR 38348), the FY 2019 IPPS/LTCH PPS final rule (83 FR 41538 through 41609), and the FY 2020 IPPS/LTCH PPS final rule (84 FR 42448 through 42509) for the measures we have previously adopted for the Hospital IQR Program measure set for the FY 2022 payment determination and subsequent years. We also refer readers to 42 CFR 412.140 for Hospital IQR Program regulations.

2. Retention of Previously Adopted Hospital IQR Program Measures for Subsequent Payment Determinations

We refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53512 through 53513) for our finalized measure retention policy. In the FY 2021 IPPS/LTCH PPS proposed rule (85 FR 32830), we did not propose any changes to this policy.

3. Removal Factors for Hospital IQR Program Measures

We refer readers to the FY 2019 IPPS/LTCH PPS final rule (83 FR 41540 through 41544) for a summary of the Hospital IQR Program's removal factors.

In the FY 2021 IPPS/LTCH PPS proposed rule (85 FR 32830), we did not propose any changes to our policies regarding measure removal.

4. Considerations in Expanding and Updating Quality Measures

We refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53510 through 53512) for a discussion of the previous considerations we have used to expand and update quality measures under the Hospital IQR Program. We also refer readers to the FY 2019 IPPS/LTCH PPS final rule (83 FR 41147 through 41148), in which we describe the Meaningful Measures Initiative, our objectives under this framework for quality measurement, and the quality topics that we have identified as high impact measurement areas that are relevant and meaningful to both patients and providers. In the FY 2021 IPPS/LTCH PPS proposed rule (85 FR 32830), we did not propose any changes to these policies.

5. New Measures for the Hospital IQR Program Measure Set

In the FY 2021 IPPS/LTCH PPS proposed rule (85 FR 32830), we did not propose to adopt any new measures.

6. Summary of Previously Finalized Hospital IQR Program Measures for the FY 2022 Payment Determination

This table summarizes the previously finalized Hospital IQR Program Measures for the FY 2022 Payment Determiniation:

BILLING CODE 4120–01–P

Measures for the FY 2022 Payment Determination		
Short Name	**Measure Name**	**NQF #**
National Healthcare Safety Network Measures		
HCP	Influenza Vaccination Coverage Among Healthcare Personnel	0431
Claims-Based Patient Safety Measures		
COMP-HIP-KNEE *++	Hospital-Level Risk-Standardized Complication Rate (RSCR) Following Elective Primary Total Hip Arthroplasty (THA) and/or Total Knee Arthroplasty (TKA)	1550
CMS PSI 04	CMS Death Rate among Surgical Inpatients with Serious Treatable Complications	+
Claims-Based Mortality Measures		
MORT-30-STK	Hospital 30-Day, All-Cause, Risk Standardized-Mortality Rate Following Acute Ischemic Stroke	N/A
Claims-Based Coordination of Care Measures		
READM-30-HWR	Hospital-Wide All-Cause Unplanned Readmission Measure (HWR)	1789
AMI Excess Days	Excess Days in Acute Care after Hospitalization for Acute Myocardial Infarction	2881
HF Excess Days	Excess Days in Acute Care after Hospitalization for Heart Failure	2880
PN Excess Days	Excess Days in Acute Care after Hospitalization for Pneumonia	2882
Claims-Based Payment Measures		
AMI Payment	Hospital-Level, Risk-Standardized Payment Associated with a 30-Day Episode-of-Care for Acute Myocardial Infarction (AMI)	2431
HF Payment	Hospital-Level, Risk-Standardized Payment Associated with a 30-Day Episode-of-Care For Heart Failure (HF)	2436
PN Payment	Hospital-Level, Risk-Standardized Payment Associated with a 30-day Episode-of-Care For Pneumonia	2579
THA/TKA Payment	Hospital-Level, Risk-Standardized Payment Associated with an Episode-of-Care for Primary Elective Total Hip Arthroplasty and/or Total Knee Arthroplasty	N/A
Chart-Abstracted Clinical Process of Care Measures		
PC-01	Elective Delivery	0469
Sepsis	Severe Sepsis and Septic Shock: Management Bundle (Composite Measure)	0500
EHR-based Clinical Process of Care Measures (that is, Electronic Clinical Quality Measures (eCQMs)		
ED-2	Admit Decision Time to ED Departure Time for Admitted Patients	0497
PC-05	Exclusive Breast Milk Feeding	0480
STK-02	Discharged on Antithrombotic Therapy	0435
STK-03	Anticoagulation Therapy for Atrial Fibrillation/Flutter	0436
STK-05	Antithrombotic Therapy by the End of Hospital Day Two	0438
STK-06	Discharged on Statin Medication	0439
VTE-1	Venous Thromboembolism Prophylaxis	0371
VTE-2	Intensive Care Unit Venous Thromboembolism Prophylaxis	0372
Patient Experience of Care Survey Measures		
HCAHPS***	Hospital Consumer Assessment of Healthcare Providers and Systems Survey (including Care Transition Measure)	0166 (0228)

* Finalized for removal from the Hospital IQR Program beginning with the FY 2023 payment determination, as discussed in the FY 2019 IPPS/LTCH PPS final rule (83 FR 41558 through 41559).

*** In the CY 2019 OPPS/ASC PPS final rule with comment period (83 FR 59140 through 59149), we finalized removal of the Communication About Pain questions from the HCAHPS Survey effective with October 2019 discharges, for the FY 2021 payment determination and subsequent years.

+ Measure is no longer endorsed by the NQF but was endorsed at time of adoption. Section 1886(b)(3)(B)(viii)(IX)(bb) of the Act authorizes the Secretary to specify a measure that is not endorsed by the NQF as long as due consideration is given to measures that have been endorsed or adopted by a consensus organization identified by the Secretary. We attempted to find available measures for each of these clinical topics that have been endorsed or adopted by a consensus organization and found no other feasible and practical measures on the topics for the inpatient setting.

++ We have updated the short name for the Hospital-Level Risk-Standardized Complication Rate Following Elective Primary Total Hip Arthroplasty (THA) and/or Total Knee Arthroplasty (TKA) measure (NQF #1550) measure from Hip/Knee Complications to COMP-HIP-KNEE in order to maintain consistency with the updated Measure ID and hospital reports for the *Hospital Compare* and/or its successor website.

7. Summary of Previously Finalized Hospital IQR Program Measures for the FY 2023 Payment Determination

This table summarizes previously finalized Hospital IQR Program measure set for the FY 2023 Payment Determination:

Measures for the FY 2023 Payment Determination		
Short Name	**Measure Name**	**NQF #**
National Healthcare Safety Network Measures		
HCP	Influenza Vaccination Coverage Among Healthcare Personnel	0431
Claims-Based Patient Safety Measures		
CMS PSI 04	CMS Death Rate among Surgical Inpatients with Serious Treatable Complications	+
Claims-Based Mortality Measures		
MORT-30-STK	Hospital 30-Day, All-Cause, Risk Standardized-Mortality Rate Following Acute Ischemic Stroke	N/A
Claims-Based Coordination of Care Measures		
READM-30-HWR*	Hospital-Wide All-Cause Unplanned Readmission Measure (HWR)	1789
AMI Excess Days	Excess Days in Acute Care after Hospitalization for Acute Myocardial Infarction	2881
HF Excess Days	Excess Days in Acute Care after Hospitalization for Heart Failure	2880
PN Excess Days	Excess Days in Acute Care after Hospitalization for Pneumonia	2882
Claims-Based Payment Measures		
AMI Payment	Hospital-Level, Risk-Standardized Payment Associated with a 30-Day Episode-of-Care for Acute Myocardial Infarction (AMI)	2431
HF Payment	Hospital-Level, Risk-Standardized Payment Associated with a 30-Day Episode-of-Care For Heart Failure (HF)	2436
PN Payment	Hospital-Level, Risk-Standardized Payment Associated with a 30-day Episode-of-Care For Pneumonia	2579
THA/TKA Payment	Hospital-Level, Risk-Standardized Payment Associated with an Episode-of-Care for Primary Elective Total Hip Arthroplasty and/or Total Knee Arthroplasty	N/A
Chart-Abstracted Clinical Process of Care Measures		
PC-01	Elective Delivery	0469
Sepsis	Severe Sepsis and Septic Shock: Management Bundle (Composite Measure)	0500
Structural Measures		
EHR-based Clinical Process of Care Measures (that is, Electronic Clinical Quality Measures (eCQMs))		
ED-2	Admit Decision Time to ED Departure Time for Admitted Patients	0497
PC-05	Exclusive Breast Milk Feeding	0480
Safe Use of Opioids***	Safe Use of Opioids – Concurrent Prescribing	3316e

8. Summary of Previously Finalized Hospital IQR Program Measures for the FY 2024 Payment Determination and Subsequent Years

This tables summarizes the previously finalized Hospital IQR Program measure set for the FY 2024 Payment Determination and Subsequent Years

Measures for the FY 2023 Payment Determination		
Short Name	**Measure Name**	**NQF #**
STK-02	Discharged on Antithrombotic Therapy	0435
STK-03	Anticoagulation Therapy for Atrial Fibrillation/Flutter	0436
STK-05	Antithrombotic Therapy by the End of Hospital Day Two	0438
STK-06	Discharged on Statin Medication	0439
VTE-1	Venous Thromboembolism Prophylaxis	0371
VTE-2	Intensive Care Unit Venous Thromboembolism Prophylaxis	0372
Patient Experience of Care Survey Measures		
HCAHPS	Hospital Consumer Assessment of Healthcare Providers and Systems Survey (including Care Transition Measure)	0166 (0228)

* In the FY 2020 IPPS/LTCH PPS final rule, we finalized our proposal to remove the claims-only Hospital-Wide All-Cause Unplanned Readmission (HWR claims-only) measure (NQF #1789) and to replace it with the Hybrid Hospital-Wide Readmission Measure with Claims and Electronic Health Record Data (NQF #2879) (Hybrid HWR measure), beginning with the FY 2026 payment determination (84 FR 42465 through 42481). The removal of the HWR claims-only measure was contingent on our finalizing our proposal to adopt the Hybrid HWR measure. We finalized our proposal to align the removal of the HWR claims only measure such that its removal aligns with the end of the finalized 2-year voluntary reporting period and the beginning of the finalized mandatory data submission and public reporting of the Hybrid HWR measure.

*** Finalized in the FY 2020 IPPS/LTCH PPS final rule to add to the eCQM measure subset, beginning with the CY 2021 reporting period/FY 2023 payment determination with a clarification and update (84 FR 42449 through 42459).

+ Measure is no longer endorsed by the NQF but was endorsed at time of adoption. Section 1886(b)(3)(B)(viii)(IX)(bb) of the Act authorizes the Secretary to specify a measure that is not endorsed by the NQF as long as due consideration is given to measures that have been endorsed or adopted by a consensus organization identified by the Secretary. We attempted to find available measures for each of these clinical topics that have been endorsed or adopted by a consensus organization and found no other feasible and practical measures on the topics for the inpatient setting.

Measures for the FY 2024 Payment Determination and Subsequent Years *		
Short Name	**Measure Name**	**NQF #**
National Healthcare Safety Network Measures		
HCP	Influenza Vaccination Coverage Among Healthcare Personnel	0431
Claims-Based Patient Safety Measures		
CMS PSI 04	CMS Death Rate among Surgical Inpatients with Serious Treatable Complications	+
Claims-Based Mortality Measures		
MORT-30-STK	Hospital 30-Day, All-Cause, Risk Standardized-Mortality Rate Following Acute Ischemic Stroke	N/A
Claims-Based Coordination of Care Measures		
READM-30-HWR*	Hospital-Wide All-Cause Unplanned Readmission Measure (HWR)	1789
AMI Excess Days	Excess Days in Acute Care after Hospitalization for Acute Myocardial Infarction	2881
HF Excess Days	Excess Days in Acute Care after Hospitalization for Heart Failure	2880
PN Excess Days	Excess Days in Acute Care after Hospitalization for Pneumonia	2882
Claims-Based Payment Measures		
AMI Payment	Hospital-Level, Risk-Standardized Payment Associated with a 30-Day Episode-of-Care for Acute Myocardial Infarction (AMI)	2431

Safe Use of Opioids **	Safe Use of Opioids – Concurrent Prescribing	3316e
STK-02	Discharged on Antithrombotic Therapy	0435
STK-03	Anticoagulation Therapy for Atrial Fibrillation/Flutter	0436
STK-05	Antithrombotic Therapy by the End of Hospital Day Two	0438
STK-06	Discharged on Statin Medication	0439
VTE-1	Venous Thromboembolism Prophylaxis	0371
VTE-2	Intensive Care Unit Venous Thromboembolism Prophylaxis	0372
Patient Experience of Care Survey Measures		
HCAHPS	Hospital Consumer Assessment of Healthcare Providers and Systems Survey (including Care Transition Measure)	0166 (0228)

* In the FY 2020 IPPS/LTCH PPS final rule, we removed the claims-only Hospital-Wide All-Cause Unplanned Readmission (HWR claims-only) measure (NQF #1789) and replaced it with the Hybrid Hospital-Wide Readmission Measure with Claims and Electronic Health Record Data (NQF #2879) (Hybrid HWR measure), beginning with the FY 2026 payment determination (84 FR 42465 through 42481). The removal of the HWR claims-only measure was contingent on our finalizing our proposal to adopt the Hybrid HWR measure. We finalized our proposal to align the removal of the HWR claims only measure such that its removal aligns with the end of the finalized 2-year voluntary reporting period and the beginning of the finalized mandatory data submission and public reporting of the Hybrid HWR measure.

** Reporting on the Safe Use of Opioids measure is mandatory for the FY 2024 payment determination.

+ Measure is no longer endorsed by the NQF but was endorsed at time of adoption. Section 1886(b)(3)(B)(viii)(IX)(bb) of the Act authorizes the Secretary to specify a measure that is not endorsed by the NQF as long as due consideration is given to measures that have been endorsed or adopted by a consensus organization identified by the Secretary. We attempted to find available measures for each of these clinical topics that have been endorsed or adopted by a consensus organization and found no other feasible and practical measures on the topics for the inpatient setting.

BILLING CODE 4120–01–C

9. Form, Manner, and Timing of Quality Data Submission

a. Background

Sections 1886(b)(3)(B)(viii)(I) and (b)(3)(B)(viii)(II) of the Act state that the applicable percentage increase for FY 2015 and each subsequent year shall be reduced by one quarter- of such applicable percentage increase (determined without regard to sections 1886(b)(3)(B)(ix), (xi), or (xii) of the Act) for any subsection (d) hospital that does not submit data required to be submitted on measures specified by the Secretary in a form and manner, and at a time, specified by the Secretary. In order to successfully participate in the Hospital IQR Program, hospitals must meet specific procedural, data collection, submission, and validation requirements.[452] Previously, the applicable percentage increase for FY 2007 and each subsequent fiscal year until FY 2015 was reduced by 2.0 percentage points for subsection (d) hospitals failing to submit data in accordance with the previously discussed description. In accordance with the statute, the FY 2021 payment determination will begin the seventh year that the Hospital IQR Program will reduce the applicable percentage increase by one-quarter of such applicable percentage increase.

[452] On March 27, 2020, CMS granted certain reporting requirement exceptions and extensions for subsection (d) hospitals under the Hospital IQR Program. CMS, ''Exceptions and Extensions for Quality Reporting Requirements for Acute Care Hospitals, PPS-Exempt Cancer Hospitals, Inpatient Psychiatric Facilities, Skilled Nursing Facilities, Home Health Agencies, Hospices, Inpatient Rehabilitation Facilities, Long-Term Care Hospitals, Ambulatory Surgical Centers, Renal Dialysis Facilities, and MIPS Eligible Clinicians Affected by COVID–19'' (Mar. 27, 2020) *https://www.cms.gov/files/document/guidance-memo-exceptions-and-extensions-quality-reporting-and-value-based-purchasing-programs.pdf*. Submitting such data is therefore not required under the Hospital IQR Program and a hospital that does not submit excepted data will not experience a reduction in APU on that basis.

b. Maintenance of Technical Specifications for Quality Measures

For each Hospital IQR Program payment determination, we require that hospitals submit data on each specified measure in accordance with the measure's specifications for a particular period of time. We refer readers to the FY 2019 IPPS/LTCH PPS final rule (83 FR 41538) in which we summarized how the Hospital IQR Program maintains the technical measure specifications for quality measures and the subregulatory process for

incorporation of nonsubstantive updates to the measure specifications to ensure that measures remain up-to-date. We did not propose any changes to these policies.

The data submission requirements, Specifications Manual, and submission deadlines are posted on the QualityNet website at: *http://www.QualityNet.org/* (and any other successor CMS-designated websites). The technical specifications used for electronic clinical quality measures (eCQMs) are contained in the CMS Annual Update for the Hospital Quality Reporting Programs (Annual Update). We generally update the measure specifications on an annual basis through the Annual Update, which includes code updates, logic corrections, alignment with current clinical guidelines, and additional guidance for hospitals and electronic health record (EHR) vendors to use in order to collect and submit data on eCQMs from hospital EHRs. For example, for the CY 2020 reporting period/FY 2022 payment determination, hospitals submitted eCQM data using the May 2019 Annual Update and any applicable addenda. The Annual Update and implementation guidance documents are available on the Electronic Clinical Quality Improvement (eCQI) Resource Center website at: *https://ecqi.healthit.gov/*. Hospitals must register and submit quality data through the QualityNet Secure Portal (also referred to as the Hospital Quality Reporting (HQR) System). There are safeguards in place in accordance with the HIPAA Privacy and Security Rules to protect patient information submitted through this website. See 45 CFR parts 160 and 164, subparts A, C, and E.

c. Procedural Requirements

The Hospital IQR Program's procedural requirements are codified in regulation at 42 CFR 412.140. We refer readers to these codified regulations for participation requirements, as further explained by the FY 2014 IPPS/LTCH PPS final rule (78 FR 50810 through 50811) and the FY 2017 IPPS/LTCH PPS final rule (81 FR 57168). We did not propose any changes to these procedural requirements.

d. Data Submission Requirements for Chart-Abstracted Measures

We refer readers to the FY 2012 IPPS/LTCH PPS final rule (76 FR 51640 through 51641), the FY 2013 IPPS/LTCH PPS final rule (77 FR 53536 through 53537), and the FY 2014 IPPS/LTCH PPS final rule (78 FR 50811) for details on the Hospital IQR Program data submission requirements for chart-abstracted measures. We did not propose any changes to the data submission requirements for chart-abstracted measures.

e. Reporting and Submission Requirements for eCQMs

(1) Background

For a discussion of our previously finalized reporting and submission requirements for eCQMs, we refer readers to the FY 2014 IPPS/LTCH PPS final rule (78 FR 50807 through 50810; 50811 through 50819), the FY 2015 IPPS/LTCH PPS final rule (79 FR 50241 through 50253; 50256 through 50259; and 50273 through 50276), the FY 2016 IPPS/LTCH PPS final rule (80 FR 49692 through 49698; and 49704 through 49709), the FY 2017 IPPS/LTCH PPS final rule (81 FR 57150 through 57161; and 57169 through 57172), the FY 2018 IPPS/LTCH PPS final rule (82 FR 38355 through 38361; 38386 through 38394; 38474 through 38485; and 38487 through 38493), the FY 2019 IPPS/LTCH PPS final rule (83 FR 41567 through 41575; 83 FR 41602 through 41607), and the FY 2020 IPPS/LTCH PPS final rule (84 FR 42501 through 42506). Current reporting and submission requirements were established in the FY 2018 IPPS/LTCH PPS final rule. In that final rule (82 FR 38368 through 38361), we finalized eCQM reporting and submission requirements such that hospitals were required to report only one, self-selected calendar quarter of data for four self-selected eCQMs for the CY 2018 reporting period/FY 2020 payment determination. Those reporting requirements were extended to the CY 2019 reporting period/FY 2021 payment determination in the FY 2019 IPPS/LTCH PPS final rule (83 FR 41603 through 41604), as well as to the CY 2020 reporting period/FY 2022 payment determination and the CY 2021 reporting period/FY 2023 payment determination in the FY 2020 IPPS/LTCH PPS final rule (84 FR 42501 through 42503).

In the FY 2020 IPPS/LTCH PPS final rule (84 FR 42503 through 42505), we also finalized that for the CY 2022 reporting period/FY 2024 payment determination, hospitals would be required to report one, self-selected calendar quarter of data for: (a) Three self-selected eCQMs, and (b) the Safe Use of Opioids—Concurrent Prescribing eCQM (Safe Use eCQM), for a total of four eCQMs.

In the FY 2021 IPPS/LTCH PPS proposed rule, we proposed to progressively increase, over a 3-year period, the number of quarters for which hospitals are required to report eCQM data, from the current requirement of one self-selected quarter of data to four quarters of data. We believe that increasing the number of quarters for which hospitals are required to report eCQM data will produce more comprehensive and reliable quality measure data for patients and providers. Increasing the number of reported quarters has several benefits. Primarily, a single quarter of data is not enough to capture trends in performance over time. Evaluating multiple quarters of data would provide a more reliable and accurate picture of overall performance. Further, reporting multiple quarters of data would provide hospitals with a more continuous information stream to monitor their levels of performance. Ongoing, timely data analysis can better identify a change in performance that may necessitate investigation and potentially corrective action.

The current policy requiring more limited reporting was established due to stakeholder feedback about challenges in reporting data, and to give hospitals more time to gain experience with reporting (including upgrading systems and training to support eCQM reporting) (82 FR 78355 through 78361). That policy, as well as the changes we proposed, are consistent with our stated goal to create a gradual shift to more robust eCQM reporting (82 FR 38356). Taking an incremental approach over a 3-year period would give hospitals and their vendors time to plan in advance and build upon and utilize investments already made in their EHR infrastructures. We refer readers to section XI.B.7. of the preamble of this final rule for a discussion of the increased collection of information burden associated with this provision. We also refer readers to section VIII.D.6.b of the preamble of this final rule for similar provisions under the Promoting Interoperability Program.

(2) Reporting and Submission Requirements for eCQMs for the CY 2021 Reporting Period/FY 2023 Payment Determination

In the FY 2021 IPPS/LTCH PPS proposed rule, for the CY 2021 reporting period/FY 2023 payment determination, we proposed to increase the amount of data required while keeping the number of eCQMs required the same. Specifically, in the proposed rule, we proposed that hospitals report two self-selected calendar quarters of data for each of the four self-selected eCQMs for the CY 2021 reporting period/FY 2023 payment determination (85 FR 32837).

(3) Reporting and Submission Requirements for eCQMs for the CY 2022 Reporting Period/FY 2024 Payment Determination

In the FY 2021 IPPS/LTCH PPS proposed rule, for the CY 2022 reporting period/FY 2024 payment determination, we proposed to increase the amount of data required while keeping the number and type of eCQMs required the same. Specifically, in the proposed rule, we proposed to require that hospitals report three self-selected calendar quarters of data for the CY 2022 reporting period/FY 2024 payment determination for each required eCQM: (a) Three self-selected eCQMs; and (b) the Safe Use of Opioids eCQM (85 FR 32837).

(4) Reporting and Submission Requirements for eCQMs for the CY 2023 Reporting Period/FY 2025 Payment Determination and Subsequent Years

In the FY 2021 IPPS/LTCH PPS proposed rule, for the CY 2023 reporting period/FY 2025 payment determination and beyond, we proposed to further increase the amount of data required while keeping the number and type of eCQMs required the same. Specifically, in the proposed rule, we proposed to require that hospitals report four calendar quarters of data beginning with the CY 2023 reporting period/FY 2025 payment determination and for subsequent years for each required eCQM: (a) Three self-selected eCQMs; and (b) the Safe Use of Opioids eCQM (85 FR 32837).

Due to the duplicative nature of comments received on the proposals to progressively increase, over a 3-year period, the number of quarters for which hospitals are required to report eCQM data, from the current requirement of one self-selected quarter of data to four quarters of data, we are responding to all comments received on the proposals in section VII.A.9.e.4. of this final rule below.

In addition, the 21st Century Cures Act final rule that appeared in the May 1, 2020 **Federal Register** (85 FR 25642 through 25961) finalized a number of updates to the 2015 Edition of health IT certification criteria (''2015 Edition Cures Update''). We also refer readers to the CY 2021 Payment Policies Under the Physician Fee Schedule Proposed Rule published August 17, 2020, where we proposed to expand flexibility under the Hospital IQR Program to allow hospitals to use either: (1) Technology certified to the 2015 Edition criteria for CEHRT as was previously finalized for reporting eCQMs in the FY 2019 IPPS/LTCH PPS final rule (83 FR 41537 through 41608) and for reporting hybrid measures in the FY 2020 IPPS/LTCH PPS final rule (84 FR 42507), or (2) technology certified to the 2015 Edition Cures Update standards as finalized in the 21st Century Cures Act final rule (85 FR 25642 through 25961) and sought public comment on our proposal (85 FR 50271).

Comment: Many commenters supported our proposal to increase the number of quarters for which hospitals are required to report eCQM data. Some commenters specifically appreciated CMS's plan to phase in the requirement over 3 years because they believe a progressive increase will give hospitals and their vendors sufficient time to implement the proposal without being overly burdensome. Other commenters stated the proposal will improve the accuracy and reliability of data, provide a more accurate picture of overall hospital performance, increase hospital accountability, and reduce the likelihood that hospitals will report only their top-performing quarter. Commenters also stated the proposal would enable hospitals and other stakeholders to successfully monitor performance trends, particularly through the CMS *Hospital Compare* site, or successor websites, and enhance patient outcomes.

Response: We thank the commenters for their support.

Comment: A few commenters recommended that we phase in the increased requirements at a faster rate, such as over a 2-year period instead of a 3-year period.

Response: We thank the commenters for their recommendations. We considered a faster implementation timeline in developing our proposal, but ultimately determined to propose to progressively increase the number of required quarters of eCQM data over a 3-year period in order to continue to give hospitals and their vendors time to plan in advance and build upon and utilize investments already made in their EHR infrastructure (85 FR 32837). We believe this approach effectively balances the burdens associated with increased reporting of eCQM data and the benefits of providing that quality data to patients and consumers.

Comment: Many commenters did not support the proposal to require additional quarters of eCQM data in light of the impact of the COVID–19 public health emergency (PHE) on hospitals and requested that eCQM reporting and submission requirements for the CY 2021 reporting period/FY 2023 payment determination remain at one self-selected calendar quarter of data for each of the four self-selected eCQMs. Commenters noted that the COVID–19 PHE has shifted focus away from normal operations, increased burden, and strained hospital resources, particularly impacting staffing and technology. A few commenters indicated that the COVID–19 PHE has limited hospitals' ability to make the IT investments needed to report additional quarters of data. Commenters stated that internal resources have been reallocated or reassigned, that current IT investments are focused on caring for COVID–19 patients via telehealth, and that hospitals are already experiencing burdens or costs associated with implementing additional regulations on information blocking and interoperability. In addition, commenters stated that hospitals are complying with numerous federal and state data reporting requirements related to COVID–19 lab testing, patient volumes, and bed capacity, which are constantly evolving. The commenters stated that, while the duration of the COVID–19 PHE remains uncertain, hospitals expect to be operating in this challenging environment well into CY 2021. Given these challenges, commenters requested that reporting and submission requirements for the CY 2021 reporting period/FY 2023 payment determination remain at one self-selected calendar quarter of data so that hospitals may choose the fourth quarter, providing time for EHR upgrades. A few commenters expressed concern that the proposal could cause hospitals to lose their entire annual payment update (¼ for the IQR, and ¾ for the Promoting Interoperability Program) for failing to meet an eCQM mandate that their EHR vendors cannot deliver due to the pandemic and other competing federal EHR-related mandates. Another commenter stated that the COVID–19 PHE's impact on hospital volumes may render data less reliable. A commenter suggested that CMS continue to monitor the COVID–19 PHE and the extent to which hospitals have recovered to inform the exact timeframe to begin increasing eCQM reporting requirements.

Response: We thank the commenters for their comments and recognize the burden that the COVID–19 PHE has had on the healthcare system. In response to the significant impact of the COVID–19 PHE on hospitals, we issued an array of temporary regulatory waivers and exceptions affecting a wide cross-section of Medicare participation, eligibility, and payment requirements, in an effort to reduce burden, provide flexibility to hospitals, and help hospitals maximize their capacity to

focus on patient care.[453] These waivers and exceptions reduce hospital paperwork burden and reporting requirements, increase flexibility for surge capacity and patient quarantine, allow providers to expand access to telehealth, and enable hospitals to enhance their workforces, among other benefits. In relation to the Hospital IQR Program, we issued a nationwide extraordinary circumstances exception (ECE) that excepted certain data reporting requirements and extended numerous deadlines.[454] Additionally, under the Hospital IQR Program ECE Policy, hospitals may request an exception if they are unable to fulfill program requirements due to extraordinary circumstances not within their control. We refer readers to eCQM ECE resources on QualityNet and 42 CFR 412.140(c)(2) for more information.

As noted previously, our current policy for eCQM reporting requires hospitals to report only one, self-selected calendar quarter of data for four self-selected eCQMs for the CY 2020 reporting period/FY 2022 payment determination. Calendar year 2021 will be the fifth year that hospitals have submitted eCQM data, and current reporting and submission requirements were established in the FY 2018 IPPS/LTCH PPS final rule. In that final rule (82 FR 38361), we finalized a policy that eCQM reporting would be required for one self-selected quarter of data for 4 self-selected eCQMs, rather than finalizing our proposal to require reporting on the first three calendar quarters of data for 6 eCQMs in the FY 2018 proposed rule (82 FR 20050 through20051) or continuing our previously finalized policy to require hospitals to submit one full calendar year of data for 8 eCQMs (81 FR 57152). We made this change due to stakeholder concerns about the challenges associated with collecting and reporting eCQM data (82 FR 38355 through 38361). We believed it was important to give stakeholders more time to build and refine their EHR systems and gain experience reporting eCQMs (82 FR 38356). At that time, we stated our intention to gradually transition toward more robust eCQM reporting (82 FR 38356), and we reiterated that intention in a subsequent final rule (84 FR 42502).

As stated in the FY 2021 IPPS/LTCH PPS proposed rule (85 FR 32836), we believe that increasing the number of quarters for which hospitals are required to report eCQM data will produce more comprehensive quality measure data for patients and providers and that submitting and evaluating multiple quarters of data would provide a more reliable and accurate picture of hospital performance.

Internal review of Hospital IQR Program eCQM submissions data revealed that approximately 97 percent of eligible hospitals successfully submitted one quarter of eCQM data for four self-selected eCQMs for CY 2018 (84 FR 42458). We believe that hospitals have had adequate time to prepare for providing two quarters of data, especially given that hospitals may select to report the third and fourth quarters of CY 2021, allowing them to use the first half of CY 2021 to continue to prepare. After holding eCQM reporting and submission policies constant for a number of years in order to give hospitals and their vendors additional time to improve eCQM reporting capabilities, and stating our intention to transition to more robust reporting, we believe that it is time to increase the level of reporting in order to capture additional quarters of data. As we noted in the proposed rule, we believe that a single quarter of data is not enough to capture trends in performance over time. Our goal in proposing to progressively increase the number of quarters of data to be collected over 3 years was to strike an appropriate balance between increasing eCQM reporting and providing hospitals with the necessary time to implement such changes.

If hospitals are concerned that their annual payment update may be impacted because vendors will be unable to meet the regulatory requirements related to the reporting of electronic clinical quality measures, we emphasize that hospitals may be eligible for an ECE under the IQR program as described above and further below.

Comment: A commenter did not support the proposal to increase the number of self-selected quarters of eCQM data that hospitals must submit for the CY 2021 reporting period/FY 2023 payment determination. The commenter noted that given the unknown future of the impact of the COVID–19 PHE, any increase of eCQM submissions in CY 2021 could have a significant detrimental impact on small, rural hospitals, particularly because many of these hospitals do not find the current eCQMs to be meaningful to their quality improvement. The commenter stated that because mandatory reporting on the Safe Use of Opioid—Concurrent Prescribing eCQM begins in CY 2021, it would be beneficial to evaluate the usefulness and challenges of extracting this data after one quarter rather than requiring two quarters. The commenter also recommended that CMS enhance their eCQM data submission tools so that testing of submission files is available sooner and hospitals can resolve issues prior to the start of the reporting period.

Response: We wish to note to the commenter that, as previously finalized, for the CY 2021 reporting period/FY 2023 payment determination, hospitals will continue to report on four self-selected eCQMs and that reporting on the Safe Use of Opioids—Concurrent Prescribing eCQM (Safe Use eCQM) will not be required until the CY 2022 reporting period/FY 2024 payment determination (84 FR 42503 through 42505). The Safe Use eCQM will be included in the eCQM subset, beginning with the CY 2021 reporting period/FY 2023 payment determination (84 FR 42459) and under our proposal, a hospital may voluntarily select to report on the Safe Use eCQM on two quarters of data at that time.

With respect to the usefulness and challenges of extracting this data after one quarter rather than requiring two quarters, we believe that our proposal further advances our goal of incrementally increasing the use of EHR data for quality measurement and improvement and is responsive to the feedback of some stakeholders urging a faster transition to full electronic reporting (84 FR 42503). In fact, past stakeholder feedback has included the concern that rural hospitals specifically have trouble meeting the minimum reporting threshold when the measurement period is one quarter (84 FR 42502). We also believe that reporting of the Safe Use eCQM will provide valuable information on the area of high-risk prescribing to providers, and further our efforts to combat the negative impacts of the opioid crisis. Further, regarding the challenges of data extraction, the Safe Use eCQM was developed with implementation feasibility and ease in mind. Testing showed that 96 percent of the data elements required to calculate the performance rate are: (1) Collected during routine care; (2) extractable from structured fields in the electronic health systems of test sites; and (3) likely to be accurate. (84 FR 42454).

The meaningfulness of eCQMs to small, rural hospitals, rural health and healthcare remains one of our priorities. In 2016, we established an agency-wide Rural Health Council and in 2017 we launched the Meaningful Measures Initiative and included Improving

[453] See *https://www.cms.gov/about-cms/emergency-preparedness-response-operations/current-emergencies/coronavirus-waivers.*

[454] See *https://www.cms.gov/files/document/guidance-memo-exceptions-and-extensions-quality-reporting-and-value-based-purchasing-programs.pdf.*

Access for Rural Communities as an initiative. Additionally, in 2017, we tasked the National Quality Forum (NQF) to establish a Measure Applications Partnership (MAP) Rural Health Workgroup to identify a core set of the best available rural-relevant measures to address the needs of the rural population and provide recommendations from a rural perspective regarding measuring and improving access to care.[455] When selecting eCQMs for inclusion in the measure set we have, and will continue to, consider the recommendations from the rural providers to ensure eCQMs are meaningful to quality improvement for small, rural hospitals.

As for the commenter's recommendation for eCQM submission tool enhancement, we appreciate the commenter's feedback and will take these recommendations into consideration as we assess how to advance eCQM reporting in the Hospital IQR Program. We also note that the eCQM Annual Updates (which include the eCQM specifications, educational materials, value sets, code systems, direct reference codes, terminology, etc.) are released in the spring for the next year's reporting period. For example, the CY 2021 reporting period/FY 2023 payment determination information was released and posted on the eCQI Resource Center in the spring of 2020. This timeframe for updates was adopted in an effort to support EHR system upgrades and development as hospitals and vendors prepare for the next reporting period. We also note that testing becomes available via the HQR System when the submission period opens in the Fall before the Spring eCQM submission deadline.

As to concerns regarding the future of the impact of the COVID–19 PHE, as noted above, we issued a nationwide ECE that excepted certain data reporting requirements and extended numerous deadlines. We will continue to monitor the impact that the COVID–19 PHE has on hospitals, including small, rural hospitals, and will issue additional exceptions as necessary. Additionally, if, due to COVID–19 or any other external circumstance, any hospital—including small, rural hospitals, believes that reporting would have a significant detrimental impact, they can apply for an ECE.

[455] Measures Application Partnership, ''A Core Set of Rural-Relevant Measures and Measuring and Improving Access to Care: 2018 Recommendations from the MAP Rural Health Workgroup'' (Aug. 31, 2018), available at *https://www.qualityforum.org/Publications/2018/08/MAP_Rural_Health_Final_Report_-_2018.aspx.*

Comment: Many commenters requested that CMS adopt a more incremental approach for increasing the eCQM reporting requirements. A few of the numerous alternative approaches recommended by commenters included postponing the proposed increase in data reporting for one calendar year, postponing the increase until the COVID–19 PHE has abated and hospital volumes return to pre-pandemic levels, and increasing the number of calendar quarters of data to be reported by one quarter every other year.

Response: As noted previously, after delaying increased requirements and setting reduced eCQM requirements for a number of years, we believe that increasing the level of reporting in order to capture additional quarters of data at this time is in line with our goals to gradually increase the robustness of eCQM data (82 FR 38356 and 84 FR 42502). We believe our proposal to progressively increase the number of quarters of eCQM data to be collected over a 3-year period strikes an appropriate balance between increasing eCQM reporting and providing hospitals with the necessary time to implement such changes. We also refer readers to our response above about exceptions during the COVID–19 PHE. We understand the desire to postpone the increased reporting requirements until the pandemic has abated and hospital volumes return to pre-pandemic levels. We note that we proposed requiring hospitals to report only two quarters of data for the CY 2021 reporting period/FY 2023 payment determination. We will continue to monitor the impact that the COVID–19 PHE has on hospitals and will issue additional exceptions as necessary. For calendar year 2021, in the absence of an exception, hospitals will be required to report two quarters of data by the end of the submission period (that is, by the end of February 2022). We note that hospitals may choose to report data from the third and fourth quarters of CY 2021, which may have higher volumes. We will continue to monitor the effects of the PHE on hospitals to ensure our policies remain feasible.

Comment: Several commenters raised concerns about the accuracy, reliability, and validity of eCQM data. A commenter stated the data produced by chart-abstracted measures and eCQMs vary significantly. A few commenters recommended that CMS adopt a more incremental approach to increasing eCQM reporting requirements, or delay its proposal altogether until at least CY 2023, to balance benefits with burdens and better ensure reliability and validity for measurement. A commenter stated it would be premature for CMS to require electronic reporting before all measures are fully electronically specified and field tested. The commenter emphasized the need for providers to have detailed electronic specifications in advance in order to adequately prepare their reporting systems. Another commenter encouraged CMS to evaluate how each additional quarter of data improves accuracy and reliability prior to further increasing the number of required quarters.

Response: We understand the commenters' concern about data reliability and validity and wish to emphasize that all types of quality measures in the Hospital IQR Program, including eCQMs, undergo testing during the measure development process for feasibility, validity, and reliability. We recognize that EHR-based extraction methodology for eCQMs is different from the data collection methodology for chart-abstracted measures, and that measure rates may vary depending on methodology (80 FR 49643–49644). For example, eCQMs utilize data from structured fields within the EHR system, while chart-abstracted measures allow data to be collected from unstructured sources such as a clinician's progress notes. For these reasons, we also use a validation process to address concerns about reliability and validity of eCQM data. As stated in the FY 2021 IPPS/LTCH PPS proposed rule (85 FR 32846), we have conducted an eCQM validation pilot (OMB Control #0938–1022) and completed eCQM data validation from the CY 2017 reporting period and the CY 2018 reporting period. Based on our review of the CY 2017 and CY 2018 eCQM data submitted for validation, and on the finding that over half of the measures validated had agreement rates of 80 percent or better, we believe the accuracy of eCQM data is sufficient for continued use of the measures in the Hospital IQR Program and to begin increasing the quarters of data used for the program. As described in section VIII.A.10. of the preamble of this final rule, we are continuously working to improve the eCQM validation process and balance reporting burden. We expect to gain a better understanding of how to increase the accuracy of eCQM data by continuing to analyze that process and the results. Additionally, we believe that the reporting of additional quarters of data by hospitals will help to increase the reliability of the data. We note that eCQM measure specifications for Hospital IQR Program measures can be found on the eCQI

Resource Center,[456] which provides information, tools, and standards for eCQMs. The measure specifications are typically available about eight months prior to the beginning of the calendar year reporting period.

Comment: A few commenters expressed concern about the amount of time that may be required for a hospital or their vendor to internally validate the data and/or create and review CCN files prior to data submission to CMS. A commenter stated the proposal amends more modest, previously finalized policies that hospitals relied on for planning and resource allocation purposes.

Response: We recognize that increasing the number of quarters of eCQM data to be reported can impact a hospital's resource use and refer readers to section XI.B.7 of the preamble of this final rule (information collection requirements) for a detailed discussion of our burden estimates associated with eCQM reporting and submission. We believe the long-term benefits associated with reporting a full year of electronic data will outweigh the burdens and that increasing the number of quarters for which hospitals are required to report eCQM data will produce more comprehensive and reliable quality information for patients and providers. We stated our intention in the FY 2018 IPPS/LTCH PPS final rule to gradually transition toward more robust eCQM reporting (82 FR 38356). We reiterated this stated goal to incrementally increase the use of EHR data for quality measurement in a subsequent final rule (84 FR 42502). We believe that taking an incremental approach to increasing eCQM reporting over a 3-year period will help to ease the burdens associated with reporting larger amounts of data and will provide hospitals and vendors with additional time to plan and sufficiently allocate resources for more robust eCQM reporting.

Comment: A commenter did not support the proposal because they believed it contradicted the trend to make the program simpler. Another commenter stated there is a high burden on hospitals due to duplications of effort in reporting the same measures in both chart-abstracted and eCQM formats.

Response: We disagree with the commenter that the proposal contradicts our efforts to make the program simpler. Since October of 2017, we have undertaken an ambitious effort to reduce regulatory burden on the healthcare industry, lower health care costs, and enhance patient care by streamlining the quality reporting programs through the Meaningful Measures initiative. We refer readers to the FY 2019 IPPS/LTCH PPS final rule for a broader discussion of the Meaningful Measures framework (83 FR 41147). In part due to the adoption of this framework, the number of measures for the Hospital IQR Program has been scaled down significantly, from 65 measures in the FY 2018 payment determination, to 23 measures for the FY 2024 payment determination. We note that the Hospital IQR Program currently includes only two chart-abstracted measures (PC–01-Elective Delivery, NQF #0469, and Sepsis-Severe Sepsis and Septic Shock: Management Bundle, NQF #0500) and that these measures do not overlap with the program's eCQMs. In recent years, we have also improved alignment between Hospital IQR Program's reporting requirements and other quality programs, such as the Promoting Interoperability (PI) program. For example the Hospital IQR Program and Promoting Interoperability Program now have the same eCQMs and data submission requirements. We will continue to look across all quality programs to identify areas for further streamlining and opportunities to reduce any remaining duplication.

Comment: A commenter did not support the proposed expansion of eCQM reporting or public reporting until problems with validation of eCQM data are addressed. The commenter stated that hospitals participating in eCQM data validation continue to report unresolved concerns, such as an inability to authenticate validation results provided for 2017 and 2018 because mismatches on the validation reports were not specifically identified. The commenter stated hospitals and vendors need a better understanding of the cause of mismatches and how to correct them in advance of any public reporting and recommended CMS make improvements to the validation procedures and reports. A few commenters requested that CMS provide additional transparency into the eCQM validation process before increasing the number of quarters required to be reported, such as information on eCQM agreement rates, national eCQM scores, the effect of invalidated data on national and hospital-specific scores, comparisons of the current eCQM data to previously collected chart-abstracted data, and an analysis of how eCQM scores are affected by using the chart-abstracted measure specifications and algorithms for validation. Additionally, the commenters requested that CMS provide analysis of how self-selection of individual eCQMs by each hospital affects the national averages and the number of hospitals reporting each measure.

Response: We appreciate the feedback about hospitals' experience with the eCQM validation process. The specifications for eCQMs contain logic statements and value sets tailored to electronic data sources, and as such, measure specifications and algorithms for chart-abstracted measures are not used for eCQM validation. In other words, we recognize that the information for eCQMs and chart-abstracted measures is pulled from different places and do not use chart-abstracted measure specifications or algorithms for eCQM validation. Based on our review of the CY 2017 and CY 2018 eCQM data submitted for validation, and on the finding that the majority of eCQM data was reported with agreement rates of 80 percent or better, we believe the accuracy of eCQM data is sufficient for continued use of the measures in the Hospital IQR Program and to begin increasing the quarters of data used for the program. We are continuously working to improve eCQM validation and are finalizing several changes to that process in section VIII.A.10 of this final rule. Our decision to extend the educational review process established for chart-abstracted measure validation to eCQM validation may be of particular interest to stakeholders. We also refer commenters to eCQM validation resources on QualityNet.[457] As we make further refinements to eCQM validation policies and practices, we will take the commenters' concerns and suggestions for additional transparency into account. We address concerns related to public reporting of eCQM data in section VIII.A.12.b of the preamble of this final rule.

Comment: A few commenters stated that the required updates to EHRs to modify eCQMs often take significant implementation resources before hospitals are able to report eCQM data. The commenters expressed concern that the proposed increase in data reporting requirements would shorten the timeframe for hospitals to make and validate required measure logic changes, which would require hospitals to expend additional resources in order to finish changes on time. The commenters

[456] The eCQI Resource Center is available at: *https://ecqi.healthit.gov/.*

[457] eCQM Data Validation Resources are available on QualityNet at: *https://www.qualitynet.org/search?q=validation.*

requested that CMS provide hospitals with 18 months to implement changes.

Response: We disagree that there is not enough time to implement changes in eCQM data reporting requirements for existing eCQMs, which are related to, but separate from, adding new eCQMs in EHRs. We note that the eCQM specifications are typically available about eight months prior to the beginning of the calendar year reporting period. Once the eCQM updates are implemented in hospital EHRs, reporting an additional quarter of data should not require the same level of effort as reporting one initial quarter of data because hospitals should not need to update the eCQM specifications each quarter. Thus, we do not expect hospitals to experience a significant amount of added burden reporting three additional quarters of data over a 3-year period. We do thank the commenters for their feedback and will take this information into account when modifying the eCQM measure set in future rulemaking. We note that we did not propose to modify, remove, or add any eCQM measures to the Hospital IQR Program in the FY 2021 IPPS/LTCH PPS proposed rule. However as noted above, in the CY 2021 Payment Policies Under the Physician Fee Schedule Proposed Rule published August 17, 2020, we are proposing to update CEHRT requirements to allow for additional flexibility (85 FR 50271). We believe this flexibility should be helpful to hospitals as they navigate the timing of the changes, because hospitals would be able use either: (1) Technology certified to the 2015 Edition criteria for CEHRT as was previously finalized for reporting eCQMs in the FY 2019 IPPS/LTCH PPS final rule (83 FR 41537–41608) and for reporting hybrid measures in the FY 2020 IPPS/LTCH PPS final rule (84 FR 42507), or (2) technology certified to the 2015 Edition Cures Update standards as finalized in the 21st Century Cures Act final rule (85 FR 25642 through 25961).

Comment: A few commenters expressed concern about variation in readiness and eCQM reporting capabilities across hospitals. Commenters recommended that CMS work with stakeholders to identify underlying structural problems and barriers to successful reporting; consider a process by which hospitals could request and receive a one-year extension, if needed, to increase their eCQM reporting to four calendar quarters; or take a more incremental approach to increasing eCQM reporting requirements.

Response: As stated previously, we reduced or delayed eCQM reporting requirements for a number of years, as compared to reporting requirements for other Hospital IQR Program measures, to give hospitals and their vendors additional time to upgrade IT systems, improve data mapping and other capabilities, and increase staff training for eCQM reporting. In the FY 2021 IPPS/LTCH PPS proposed rule, we proposed to progressively increase the number of quarters of data to be collected over three years to continue to give providers time to gain experience with eCQM reporting and submission. We believe that gradually increasing the number of quarters for which hospitals are required to report eCQM data will produce more comprehensive and reliable quality measure data for patients and providers, and we believe it is time for such an increase. We also refer stakeholders to a discussion about our ECE policies in the FY 2016 IPPS/LTCH PPS final rule (80 FR 49695, 49713) as well as eCQM ECE resources on QualityNet. These resources discuss changes to the Hospital IQR Program ECE policy to provide flexibility for hospitals undergoing extraordinary hardships related to reporting eCQM data. While we are able to grant exceptions via our ECE policy, we note that granting an extension for eCQM reporting under an ECE policy is not operationally feasible. We will continue to work with stakeholders to identify any structural issues or barriers to successful reporting.

Comment: Several commenters requested clarification about the data submission process associated with increasing the number of quarters of data required to be reported. Specifically, commenters asked CMS to clarify the timing of submission deadlines and the ability of hospitals to report non-consecutive quarters of data. A commenter requested that CMS clarify that until all four quarters of data are required, the hospital will be able to self-select which quarters it reports on.

Response: In the FY 2017 IPPS/LTCH PPS final rule (81 FR 57172), we finalized the alignment of the Hospital IQR Program eCQM submission deadline with that of the Promoting Interoperability Program—the end of two months following the close of the calendar year—for the CY 2017 reporting period/FY 2019 payment determination and subsequent years. We did not propose any changes to the Hospital IQR Program eCQM submission deadlines in the FY 2021 IPPS/LTCH PPS proposed rule. We note that in this final rule, the Promoting Interoperability Program is finalizing a proposal that the submission period for the Promoting Interoperability Program would continue to be the 2 months following the close of the respective calendar year (85 FR 32857). Thus, the data submission deadline for eCQM data under the Hospital IQR Program, regardless of how many quarters of data are required to be reported for a given calendar year, will continue to be the end of 2 months following the close of the respective calendar year. In the FY 2021 IPPS/LTCH PPS proposed rule, we proposed to require that hospitals report two self-selected calendar quarters of data for each of the four self-selected eCQMs for the CY 2021 reporting period/FY 2023 payment determination and that hospitals report three self-selected calendar quarters of data for the CY 2022 reporting period/FY 2024 payment determination for each required eCQM: (a) Three self-selected eCQMs; and (b) the Safe Use of Opioids eCQM (85 FR 32837). Thus hospitals would self-select the quarters it reported on until all four quarters were required. The ability self-select quarters would permit hospitals to submit non-consecutive quarters of data.

Comment: Two commenters stated that changing IT systems in a given year, or partnering with new entities with different medical record systems to coordinate care, could make eCQM data submission challenging for hospitals. They asked CMS to provide flexibility and guidance for those hospitals. Another commenter asked if hospitals would be required to submit numerator and denominator data, noting that a requirement to submit combined files would be a major issue for any hospital that converts to a different electronic health record (EHR) system.

Response: We refer readers to the FY 2016 IPPS/LTCH PPS final rule, in which we indicated that hospitals may also use abstraction or may pull the data from non-certified sources and then input these data into CEHRT to capture and report QRDA I files (80 FR 49706). The ability to abstract or pull data from non-certified sources to then input this data into CEHRT reinforces the importance of ensuring the system is properly mapped for consistent and correctly captured data for accurate program reporting. We also expanded the ECE policy to include requests related to the submission of eCQM data if a hospital experiences a hardship that prevents it from eCQM reporting. Specifically, in the FY 2016 IPPS/LTCH PPS final rule, we finalized a policy, effective starting with the FY 2018 payment determination, to allow hospitals to utilize the existing ECE form (OMB control number 0938–1022 (expiration date December 31, 2022)) to request an exception to the Hospital IQR Program's eCQM reporting requirement

for the applicable program year based on hardships preventing hospitals from electronically reporting (80 FR 49695, 49713). We stated that such hardships could include, but are not limited to, infrastructure challenges (hospitals must demonstrate that they are in an area without sufficient internet access or face insurmountable barriers to obtaining infrastructure) or unforeseen circumstances, such as vendor issues outside of the hospital's control (including a vendor product losing certification (80 FR 49695, 49713)). We assess a hospital's request on an individual basis to determine if an exception is merited (80 FR 49695, 49713). We also refer stakeholders to additional eCQM ECE resources on QualityNet.[458]

Comment: A commenter requested clarification on alignment of the timeline for eCQM reporting and submission and the timeline for the transition from the Quality Data Model (QDM) common data layout (CDL) to QI Core FHIR clinical quality language (CQL) based specifications for eCQMs. The commenter stated their belief that the proposal to increase the data reporting period was intended to facilitate the transition to QI Core FHIR CQL specifications in 2022 to 2024 and noted that an underlying change in standards for certified EHR technology and the potential impact on workflows would require a slower transition. The commenter recommends that CMS transition to four quarters of reporting in CY 2021 if the transition to QI CORE FHIR CQL will take place after 2024, because the eCQMs available for the program are established, eligible hospitals should be able to capture the data with little additional burden, and a full year of data is more meaningful.

Response: In the FY 2020 IPPS/LTCH PPS final rule, we explained that we were investigating and testing the potential uses of the FHIR standard [459] for EHR-based quality measure data reporting, but noted it was not required at the time. (84 FR 42471). We do not have a defined timeline for new eCQMs that would be written using QI-Core as the data model. We interpret the comment to mean that the commenter believes a transition to the QI Core FHIR CQL in the 2022 to 2024 timeframe would necessitate a slower transition to the requirement to report a full year of eCQM data. We will take this concern into consideration as we continue to evaluate a transition to the QI Core FHIR CQL and note that any modifications to eCQMs would be made through notice and comment rulemaking per our policies to provide an opportunity for public comment on the proposal. In the meantime, we refer stakeholders to the QI Core Implementation Guide for more information on QDM to QI Core R4 Draft Mapping.[460]

Comment: Several commenters expressed concerns about the eCQM data submission process and described challenges in reporting eCQM data through the QualityNet Secure Portal. Commenters stated that the CMS system regularly experiences technical difficulties with a single quarter of data and expressed concern that submission of larger files will strain the system, resulting in multiple submission attempts by hospitals and further increasing burden. A commenter stated that some hospitals that voluntary reported in 2019 found their data to be incomplete and had to institute changes to ensure complete and timely claims data. Another commenter noted the inability of the QualityNet Secure Portal to receive test submissions until the second half of each calendar year, and expressed concern that hospitals will not be able to test, correct, and submit their Q1 or Q2 data until sometime in Q3 or Q4 (or later). Commenters urged CMS to improve the capacity of the QualityNet Secure Portal, including improving the capacity to receive test and production QRDA I files and send submission summary and performance reports, before considering additional eCQM data reporting requirements.

Response: We thank the commenters for their feedback. The legacy Hospital Quality Reporting (HQR) System began transitioning to the Next Generation of the HQR System for eCQM reporting with the CY 2019 reporting period to improve the experience for program stakeholders. We will continue to make changes to improve the system's usability. The feedback generated by the HQR System improves data quality and supports a submitter's efforts to achieve successful data submission. We note that we continue to improve the eCQM reporting process. Recent improvements include a new HQR System Home Page, refined eCQM user interfaces (UI), and an updated HQR quality data file submission platform. An export of episode of care measure outcomes is now available for users within 24 hours of submission, which allows users to sort and filter data, improving the overall reporting process and driving data quality by providing timely, confidential feedback.[461]

Comment: A few commenters asked CMS to clarify the number of files required, whether eCQMs should be reported as separate reports, and if CMS would provide clear instructions to help hospitals develop and submit large data files.

Response: We refer readers to the FY 2016 IPPS/LTCH PPS final rule (80 FR 49705 through 49708) and the FY 2017 IPPS/LTCH PPS final rule (81 FR 57169 through 57170) for our previously adopted eCQM file format specifications, which require that hospitals: (1) Must submit eCQM data via the Quality Reporting Document Architecture Category I (QRDA I) file format; (2) may use third parties to submit QRDA I files on their behalf; and (3) may either use abstraction or pull the data from noncertified sources in order to then input these data into CEHRT for capture and reporting QRDA I files. We have also clarified that hospitals can continue to meet the reporting requirements by submitting data via QRDA I files, zero denominator declaration, or case threshold exemption (82 FR 38387). More specifically regarding the use of QRDA I files, in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57169 through 57170), we stated that we expect QRDA I files to reflect data for one patient per file per quarter.

In order to fulfill these requirements, hospitals are expected to report QRDA I, patient-level files representative of their patient population for the specified reporting quarter. With regard to the comment on the submission of larger QRDA I files, the maximum QRDA I patient file size remains 10MB. We are maintaining our established submission format of one patient, per file, per quarter, which includes all patient encounters, eCQMs and applicable data elements for those measures. Maintaining this process is intended to reduce provider burden through the preservation of established file requirements so that submitters are familiar and experienced with eCQM reporting.

In addition, users are able to submit multiple quarters of patient data within one batch file to the HQR System, with

[458] See *https://www.qualitynet.org/inpatient/measures/ecqm/participation#tab2.*

[459] FHIR, developed by Health Level Seven International (HL7), is designed to enable information exchange to support the provision of healthcare in a wide variety of settings. The specification builds on and adapts modern, widely used RESTful practices to enable the provision of integrated healthcare across a wide range of teams and organizations. Additional information is available at: *https://www.hl7.org/fhir/overview.html.*

[460] The current version of the implementation guide may be found at: *http://hl7.org/fhir/us/qicore/qdm-to-qicore.html.*

[461] A Comma Separated Values (CSV) file allows data to be exported and saved in a spreadsheet format for easy viewing and use of the data.

a maximum of 14,999 QRDA I files in a batch. Hospitals are encouraged to submit the volume of batches needed to fully represent their patient population for the specified reporting quarter. The HQR System will break down the information that identifies which quarter of data is being submitted. When the submitters generate the reports within the HQR System, they will see the data for the specified quarter.

Comment: A few commenters requested additional clarity regarding the acceptable level of structural data errors in eCQM files. The commenters stated some errors cannot be retroactively resolved, which could impact hospitals' ability to successfully report all quarters if a certain threshold of error is not accepted.

Response: We thank the commenters for this feedback. The QRDA I file format is the required format to submit eCQM data for the Hospital IQR and Promoting Interoperability Programs (80 FR 49706; 80 FR 49759 through 49760). A number of resources, such as the Implementation Checklist eCQM Annual Update, CMS Implementation Guide and sample files, and eCQM Data Element Repository (provides clarification, definitions and clinical focus for all eCQM data elements) are available on the eCQI Resource Center to aid data submitters and their Health IT Vendors to prevent structural data errors.[462] We encourage submitters to test early and often to prevent or reduce the likelihood of structural errors in production data that would generate conformance statements clarifying why the patient file is being rejected. Hospitals are expected to continue working with their health IT vendor to resolve any structural data issues and resubmit the QRDA I files to achieve successful submission.

Comment: A few commenters recommended that CMS monitor implementation of the proposal, such as soliciting feedback from hospitals to learn about reporting challenges and to ensure that the proposal does not impose substantial additional administrative burdens during the COVID–19 PHE. A commenter recommended that CMS work with stakeholders to ensure eCQM data provides actionable insights that support performance improvement, considering the burden required to report it.

Response: We thank the commenters for their suggestions. We plan to monitor the implementation of the increased reporting requirements for eCQM data and welcome continued feedback from stakeholders through webinars, listservs, and help desk questions.

Comment: A commenter expressed concern about reporting fourth quarter data due to complexities caused by changes in ICD–10 codes, measures specifications, and value sets. The commenter indicated that resolving these issues constrains hospitals to two quarters of workable data. Another commenter stated that reporting data on all four calendar quarters would be problematic because vendor updates incorporating eCQM specification changes into EHR systems generally do not occur until mid-year, with the deadline for eCQM reporting for a year occurring during the first calendar quarter of the subsequent year. The commenter believes that to avoid confusion, vendor updates to the eCQM specifications should not take place prior to that data submission.

Response: The eCQM Annual Updates (which include the eCQM specifications, educational materials, value sets, code systems, direct reference codes, terminology, etc.) are typically released in the spring for the subsequent year's reporting period. For example, we posted this information on the eCQI Resource Center in the spring of 2020 applicable for the CY 2021 reporting period/FY 2023 payment determination. We have used this timeframe in an effort to support EHR system upgrades and development as hospitals and vendors prepare for the next reporting period. Any updates to the value sets, code systems (including ICD–10 codes), implementation guides, or other materials can be found on the eCQI Resource Center, which functions as the one-stop shop for the most current information to support electronic clinical quality improvement. Historically, hospitals have voluntarily submitted or been required to report on at least one quarter of eCQM data by the identified submission deadline. Since mandatory eCQM reporting for the Hospital IQR Program began with the CY 2016 reporting period [80 FR 49693 through 49698], a growing number of hospitals have voluntarily and successfully reported two or more quarters of data prior to the submission period deadline, including the fourth quarter of data.

After consideration of comments received, we are finalizing our proposal as proposed to progressively increase, over a 3-year period, the number of quarters for which hospitals are required to report eCQM data, from the current requirement of one self-selected quarter of data to four quarters of data. Specifically, for the CY 2021 reporting period/FY 2023 payment determination, hospitals will be required to report two self-selected calendar quarters of data for each of the four self-selected eCQMs. For the CY 2022 reporting period/FY 2024 payment determination, hospitals will be required to report three self-selected calendar quarters of data for each required eCQM: (a) Three self-selected eCQMs; and (b) the Safe Use of Opioids eCQMs. For the CY 2023 reporting period/FY 2025 payment determination and subsequent years, hospitals will be required to report four calendar quarters of data for each required eCQM: (a) Three self-selected eCQMs; and (b) the Safe Use of Opioids eCQMs. In addition, we are clarifying that until hospitals are required to report all four quarters of data beginning with the CY 2023 reporting period/FY 2025 payment determination, they may submit either consecutive or non-consecutive self-selected quarters of data. We also refer readers to section VIII.D. of this final rule where we are also finalizing similar polices under the PI Program.

(3) Continuation of Certification Requirements for eCQM Reporting

(a) Requiring Use of 2015 Edition Certification Criteria

In the FY 2019 IPPS/LTCH PPS final rule (83 FR 41604 through 41607), to align the Hospital IQR Program with the Promoting Interoperability Program, we finalized a policy to require hospitals to use the 2015 Edition certification criteria for certified EHR technology (CEHRT) for the CY 2019 reporting period/FY 2021 payment determination and subsequent years. While we did not propose any changes to this policy in the FY 2021 IPPS/LTCH PPS proposed rule, as stated above, we did propose changes to this policy in the CY 2021 Payment Policies Under the Physician Fee Schedule Proposed Rule published August 17, 2020. To reiterate, the 21st Century Cures Act final rule that appeared in the May 1, 2020 **Federal Register** (85 FR 25642 through 25961) finalized a number of updates to the 2015 Edition of health IT certification criteria (''2015 Edition Cures Update''). In general, health IT developers have up to 24 months from May 1, 2020 to make technology certified to the updated and/or new criteria available to their customers. In the CY 2021 Payment Policies Under the Physician Fee Schedule Proposed Rule published August 17, 2020, specifically, we proposed to expand flexibility under the Hospital IQR Program to allow hospitals to use either: (1) Technology certified to

[462] See the eCQI Resource Center at: *https://ecqi.healthit.gov/.*

the 2015 Edition criteria for CEHRT as was previously finalized for reporting eCQMs in the FY 2019 IPPS/LTCH PPS final rule (83 FR 41537–41608) and for reporting hybrid measures in the FY 2020 IPPS/LTCH PPS final rule (84 FR 42507), or (2) technology certified to the 2015 Edition Cures Update standards as finalized in the 21st Century Cures Act final rule (85 FR 25642 through 25961) and sought public comment on our proposal (85 FR 50271).

(b) Requiring EHR Technology To Be Certified to All Available eCQMs

In the FY 2020 IPPS/LTCH PPS final rule (84 FR 42505 through 42506), we finalized the requirement that EHRs be certified to all available eCQMs used in the Hospital IQR Program for the CY 2020 reporting period/FY 2022 payment determination and subsequent years. We did not propose any changes to this policy in the FY 2021 IPPS/LTCH PPS proposed rule. However, as mentioned above, we refer readers to the CY 2021 Payment Policies Under the Physician Fee Schedule Proposed Rule published August 17, 2020, where we proposed to expand flexibility under the Hospital IQR Program to allow hospitals to use either: (1) Technology certified to the 2015 Edition criteria for CEHRT as was previously finalized for reporting eCQMs in the FY 2019 IPPS/LTCH PPS final rule (83 FR 41537–41608) and for reporting hybrid measures in the FY 2020 IPPS/LTCH PPS final rule (84 FR 42507), or (2) technology certified to the 2015 Edition Cures Update standards as finalized in the 21st Century Cures Act final rule (85 FR 25642 through 25961) and sought public comment on our proposal (85 FR 50271).

(4) File Format for EHR Data, Zero Denominator Declarations, and Case Threshold Exemptions

We refer readers to the FY 2016 IPPS/LTCH PPS final rule (80 FR 49705 through 49708) and the FY 2017 IPPS/LTCH PPS final rule (81 FR 57169 through 57170) for our previously adopted eCQM file format requirements. Under these requirements, hospitals: (1) Must submit eCQM data via the Quality Reporting Document Architecture Category I (QRDA I) file format as was previously required; (2) may use third parties to submit QRDA I files on their behalf; and (3) may either use abstraction or pull the data from non-certified sources in order to then input these data into CEHRT for capture and reporting QRDA I files. Hospitals can continue to meet the reporting requirements by submitting data via QRDA I files, zero denominator declaration, or case threshold exemption (82 FR 38387).

More specifically regarding the use of QRDA I files, in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57169 through 57170), we stated that we expect QRDA I files to reflect data for one patient per file per quarter, and that they contain the following four key elements that are utilized to identify the file:

- CMS Certification Number (CCN).
- CMS Program Name.
- EHR Patient ID.
- Reporting period specified in the Reporting Parameters Section per the CMS Implementation Guide for the applicable reporting year, which is published on the eCQI Resource Center website at *https://ecqi.healthit.gov/QRDA*.

In the FY 2021 IPPS/LTCH PPS proposed rule, we proposed to add EHR Submitter ID to the four key elements listed, as previously discussed, as a fifth key element for file identification beginning with the CY 2021 reporting period/FY 2023 payment determination (85 FR 32837). An EHR Submitter ID is the ID that is assigned by QualityNet to submitter entities upon registering into the system and will be used to upload QRDA I files. For vendors, the EHR Submitter ID is the Vendor ID; for hospitals, the EHR, Submitter ID is the hospital's CCN. Particularly for situations when a hospital uses one or more vendors to submit QRDA I files via the QualityNet Secure Portal (also referred to as the Hospital Quality Reporting (HQR) System), this additional element would prevent the risk of a previously submitted file by a different vendor unintentionally being overwritten. Therefore, hospitals would be required to submit the following elements to identify the QRDA 1 file:

- CMS Certification Number (CCN).
- CMS Program Name.
- EHR Patient ID.
- Reporting period specified in the Reporting Parameters Section.
- EHR Submitter ID.

Comment: A few commenters supported our proposal to add EHR Submitter ID to the four key elements listed as a fifth key element for file identification. A commenter asked CMS to adopt a standard to keep the QRDA file formats and quality metrics consistent for the duration of the 3 year reporting period, stating that it can take 6–10 months to implement file format or metrics changes, which may lead to data inconsistencies.

Response: We thank the commenters for their support. We will take the request related to the consistency of the QRDA file formats and quality metrics into consideration for future rulemaking.

After consideration of the public comments received, we are finalizing our proposal as proposed to add EHR Submitter ID as the fifth key element for file identification beginning with the CY 2021 reporting period/FY 2023 payment determination.

(5) Submission Deadlines for eCQM Data

We refer readers to the FY 2015 IPPS/LTCH PPS final rule (79 FR 50256 through 50259), the FY 2016 IPPS/LTCH PPS final rule (80 FR 49705 through 49709), and the FY 2017 IPPS/LTCH PPS final rule (81 FR 57169 through 57172) for our previously adopted policies to align eCQM data reporting periods and submission deadlines for both the Hospital IQR and Medicare Promoting Interoperability Programs. In the FY 2017 IPPS/LTCH PPS final rule (81 FR 57172), we finalized the alignment of the Hospital IQR Program eCQM submission deadline with that of the Medicare Promoting Interoperability Program—the end of 2 months following the close of the calendar year—for the CY 2017 reporting period/FY 2019 payment determination and subsequent years. We note the submission deadline may be moved to the next business day if it falls on a weekend or federal holiday. In the FY 2021 IPPS/LTCH PPS proposed rule, we did not propose any changes to the eCQM submission deadlines. Even though hospitals will be required to gradually increase the number of quarters of eCQM data submitted, the submission deadline does not change. Hospitals must still submit eCQM data by the end of the data submission time period regardless of how many quarters of data are required to be reported for a given calendar year. That time period will continue to be the 2 months following the close of the respective calendar year. For example, for the CY 2021 reporting period/FY 2023 payment determination, hospitals should submit data by Monday, February 28, 2022.

f. Data Submission and Reporting Requirements for Hybrid Measures

(1) Background

In the FY 2018 IPPS/LTCH PPS final rule (82 FR 38350 through 38355), we finalized voluntary reporting of the Hybrid Hospital-Wide Readmission (HWR) measure for the CY 2018 reporting period. For data submission and reporting requirements under the 2018 Voluntary Reporting Period, we finalized that the 13 core clinical data elements and six linking variables for

the Hybrid HWR measure be submitted using the QRDA I file format, and that hospitals voluntarily reporting data for the Hybrid HWR measure could use EHR technology certified to the 2014 Edition, the 2015 Edition, or a combination thereof (82 FR 38394 through 38397). In the FY 2020 IPPS/LTCH PPS final rule, we finalized the adoption of the Hybrid HWR measure for the Hospital IQR Program (84 FR 42465 through 42481) as well as a number of requirements related to data submission and reporting requirements for hybrid measures under the Hospital IQR Program (84 FR 42506 through 42508). We adopted the Hybrid HWR measure into the Hospital IQR Program in a stepwise fashion, first accepting data submissions for the Hybrid HWR measure during two voluntary reporting periods (84 FR 42479). Beginning with the FY 2026 payment determination, hospitals are required to report on this measure (84 FR 42479).

(2) Certification and File Format Requirements

In the FY 2020 IPPS/LTCH PPS final rule (84 FR 42507), we finalized a requirement that hospitals use EHR technology certified to the 2015 Edition to submit data on the Hybrid HWR measure. In addition, we finalized that the core clinical data elements and linking variables identified in hybrid measure specifications must be submitted using the QRDA I file format. In order to ensure that the data have been appropriately connected to the encounter, the core clinical data elements specified for risk adjustment need to be captured in relation to the start of an inpatient encounter. The QRDA I file standard enables the creation of an individual patient-level quality report that contains quality data for one patient for one or more quality measures.

In the FY 2021 IPPS/LTCH PPS proposed rule, we proposed to continue the policy that requires hospitals to use EHR technology certified to the 2015 Edition to submit data on the Hybrid HWR measure and expand this requirement to apply to any future hybrid measure adopted into the Hospital IQR Program's measure set (85 FR 32838). We also clarified that core clinical data elements and linking variables must be submitted using the QRDA I file format for future hybrid measures in the program. We invited public comment on our proposals.

As discussed above, the 21st Century Cures Act final rule finalized a number of updates to the 2015 Edition of health IT certification criteria. Since publication of the FY 2021 IPPS/LTCH PPS proposed rule, we proposed in the CY 2021 PFS proposed rule to allow hospitals to continue to use technology certified to the 2015 Edition criteria for CEHRT or to use technology certified to the 2015 Edition Cures Update standards (85 FR 50271). If finalized, this would mean that hospitals could continue to use their current edition or update to the updated edition when made available by their vendor.

Comment: A few commenters supported the proposal but asked CMS to monitor the experience of voluntarily reporting the Hybrid Hospital-Wide Readmission measure and make amendments in future rulemaking, as necessary. Those commenters noted hospitals' limited experience with reporting the hybrid readmission measure and stated that electronic health record vendors are still building out the functionality for reporting.

Response: We thank the commenters for their support and will continue to monitor the experience of reporting the hybrid measure to determine if modifications in future rulemaking are necessary.

Comment: A commenter requested clarification regarding whether the proposal requires a specific functionality in CEHRT or certification criteria in order to be compliant with the hybrid measure reporting requirements or if the proposal is a general requirement for the hospital to have CEHRT capable of reporting eCQMs.

Response: Our proposal in the FY 2021 IPPS/LTCH PPS proposed rule requires hospitals to use EHR technology certified to the 2015 Edition to submit data on the Hybrid Hospital-Wide Readmission measure and any future hybrid measures adopted into the Hospital IQR Program measure set. However as mentioned above, since publication of that rule, we have made another proposal expanding flexibilities to allow hospitals to use either the 2015 Edition or the 2015 Edition Cures Update in the CY 2021 PFS proposed rule (85 FR 50271) and refer readers to that rule for additional detail. If finalized, this would mean that hospitals could use either: (1) Technology certified to the 2015 Edition criteria for CEHRT as was previously finalized for reporting hybrid measures (84 FR 42507), or (2) technology certified to the 2015 Edition Cures Update standards as finalized in the 21st Century Cures Act final rule.

Comment: A commenter expressed concern about the addition of any new hybrid measures until hospitals have recovered from the COVID–19 PHE and urged CMS to limit the number of hybrid measures introduced within the program in years where it increases the number of calendar quarters required for reporting.

Response: We did not propose any additional measures in the FY 2021 IPPS/LTCH PPS proposed rule, but will take the commenter's concerns into consideration for future rulemaking.

After consideration of the public comments we received, we are finalizing our proposals as proposed to continue the policy that requires hospitals to use EHR technology certified to the 2015 Edition to submit data on the Hybrid HWR measure and expand this requirement to apply to any future hybrid measure adopted into the Hospital IQR Program's measure set. However, as noted above, we refer readers to our proposal in the CY 2021 PFS proposed rule to allow hospitals to use either: (1) Technology certified to the 2015 Edition criteria for CEHRT for reporting eCQMs and hybrid measures or (2) technology certified to the 2015 Edition Cures Update standards as finalized in the 21st Century Cures Act final rule (85 FR 50271).

(3) Additional Submission Requirements

In the FY 2020 IPPS/LTCH PPS final rule, we finalized allowing hospitals to meet the hybrid measure reporting and submission requirements by submitting any combination of data via QRDA I files, zero denominator declarations, and/or case threshold exemptions (84 FR 42507). We also finalized applying similar zero denominator declaration and case threshold exemption policies to hybrid measure reporting as we allow for eCQM reporting (84 FR 42507 through 42508). We did not propose any changes to the hybrid measure reporting and submission requirement supporting any combination of data via QRDA I files, zero denominator declaration, and/or case threshold exemptions. We note that the ONC 21st Century Cures Act final rule revises the clinical quality measurement criterion at § 170.315(c)(3) to refer to CMS QRDA Implementation Guides and removes the Health Level 7 (HL7®) QRDA standard requirements (85 FR 25645). Based on our data, the majority of Hospital IQR Program participants already use the CMS QRDA I Implementation Guide for Hospital Quality Reporting for submission of eCQMs to the Hospital IQR Program. Under our proposal in the CY 2021 PFS proposed rule, discussed above, hospitals would have the flexibility to use either: (1) Technology certified to the 2015 Edition criteria for CEHRT for reporting eCQMs and hybrid measures, or (2) technology certified to the 2015

Edition Cures Update standards as finalized in the 21st Century Cures Act final rule (85 FR 50271). As with eCQM reporting, we encourage all hospitals and their health IT vendors to submit QRDA I files early, and to use one of the pre-submission testing tools for electronic reporting, such as submitting test files to the Hospital Quality Reporting (HQR) System, to allow additional time for testing and to make sure all required data files are successfully submitted by the deadline.[463]

(4) Submission Deadlines for Hybrid Measures

We refer readers to the FY 2020 IPPS/LTCH PPS final rule (84 FR 42508), where we finalized submission deadlines for hybrid measures. We did not propose any changes to these policies.

g. Sampling and Case Thresholds for Chart-Abstracted Measures

We refer readers to the FY 2011 IPPS/LTCH PPS final rule (75 FR 50221), the FY 2012 IPPS/LTCH PPS final rule (76 FR 51641), the FY 2013 IPPS/LTCH PPS final rule (77 FR 53537), the FY 2014 IPPS/LTCH PPS final rule (78 FR 50819), and the FY 2016 IPPS/LTCH PPS final rule (80 FR 49709) for details on our sampling and case thresholds for the FY 2016 payment determination and subsequent years. We did not propose any changes to this policy.

h. HCAHPS Administration and Submission Requirements

We refer readers to the FY 2011 IPPS/LTCH PPS final rule (75 FR 50220), the FY 2012 IPPS/LTCH PPS final rule (76 FR 51641 through 51643), the FY 2013 IPPS/LTCH PPS final rule (77 FR 53537 through 53538), and the FY 2014 IPPS/LTCH PPS final rule (78 FR 50819 through 50820) for details on previously-adopted HCAHPS submission requirements. We also refer hospitals and HCAHPS Survey vendors to the official HCAHPS website at: *http://www.hcahpsonline.org* for new information and program updates regarding the HCAHPS Survey, its administration, oversight, and data adjustments. We did not propose any changes to these policies in this final rule.

[463] We recently decommissioned the Pre-Submission Validation Application (PSVA) tool within the HQR System because the system itself now performs the same functions that the PSVA tool previously did.

i. Data Submission Requirements for Structural Measures

There are no remaining structural measures in the Hospital IQR Program.

j. Data Submission and Reporting Requirements for CDC NHSN HAI Measures

For details on the data submission and reporting requirements for Healthcare-Associated Infection (HAI) measures reported via the CDC's National Healthcare Safety Network (NHSN), we refer readers to the FY 2012 IPPS/LTCH PPS final rule (76 FR 51629 through 51633; 51644 through 51645), the FY 2013 IPPS/LTCH PPS final rule (77 FR 53539), the FY 2014 IPPS/LTCH PPS final rule (78 FR 50821 through 50822), and the FY 2015 IPPS/LTCH PPS final rule (79 FR 50259 through 50262). The data submission deadlines are posted on the QualityNet website.

We refer readers to the FY 2019 IPPS/LTCH PPS final rule (83 FR 41547 through 41553), in which we finalized the removal of five of these measures (CLABSI, CAUTI, Colon and Abdominal Hysterectomy SSI, MRSA Bacteremia, and CDI) from the Hospital IQR Program. As a result, hospitals will not be required to submit any data for those measures under the Hospital IQR Program following their removal beginning with the CY 2020 reporting period/FY 2022 payment determination. However, the five CDC NHSN HAI measures are included in the HAC Reduction and Hospital VBP Programs and reported via the CDC NHSN portal (83 FR 41474 through 41477; 83 FR 41449 through 41452). We further note that the HCP measure remains in the Hospital IQR Program and will continue to be reported via NHSN. We did not propose any changes to these policies.

10. Validation of Hospital IQR Program Data

a. Background

We refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53539 through 53553), the FY 2014 IPPS/LTCH PPS final rule (78 FR 50822 through 50835), the FY 2015 IPPS/LTCH PPS final rule (79 FR 50262 through 50273), the FY 2016 IPPS/LTCH PPS final rule (80 FR 49710 through 49712), the FY 2017 IPPS/LTCH PPS final rule (81 FR 57173 through 57181), the FY 2018 IPPS/LTCH PPS final rule (82 FR 38398 through 38403), and the FY 2019 IPPS/LTCH PPS final rule (83 FR 41607 through 41608) for detailed information on validation processes for chart-abstracted measures and eCQMs, and previous updates to these processes for the Hospital IQR Program.

Validation for chart-abstracted measures has been updated over recent years as the number of chart-abstracted measures has been reduced. In the FY 2019 IPPS/LTCH PPS final rule (83 FR 41562 through 41567), we removed four clinical process of care measures,[464] and noted that for the CY 2021 reporting period/FY 2023 payment determination and subsequent years, only one clinical process of care measure (SEP–1) remains in the program for chart-abstracted validation (83 FR 41608).

We adopted the process for validating eCQM data in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57173 through 57181). Validation of eCQM data was finalized for the FY 2020 payment determination and subsequent years (starting with the validation of CY 2017 eCQM data that would impact FY 2020 payment determinations). We refer readers to the FY 2018 IPPS/LTCH PPS final rule (82 FR 38398 through 38403), in which we finalized several updates to the processes and procedures for validation of CY 2017 eCQM data for the FY 2020 payment determination, validation of CY 2018 eCQM data for the FY 2021 payment determination, and eCQM data validation for subsequent years.

In the FY 2021 IPPS/LTCH PPS proposed rule, we proposed to incrementally combine the validation processes for chart-abstracted measure data and eCQM data and related policies in a stepwise process (85 FR 32839). To accomplish this, we proposed to: (1) Update the quarters of data required for validation for both chart-abstracted measures and eCQMs; (2) expand targeting criteria to include hospital selection for eCQMs; (3) change the validation pool from 800 hospitals to 400 hospitals; (4) remove the current exclusions for eCQM validation selection, (5) require electronic file submissions for chart-abstracted measure data; (6) align the eCQM and chart-abstracted measure scoring processes; and (7) update the educational review process to address eCQM validation results. We believe these proposals would ultimately streamline the validation process and reduce the total number of hospitals selected for validation. These are discussed in detail in the following sections.

[464] In the FY 2019 IPPS/LTCH PPS final rule (83 FR 41562 through 41567), we removed three clinical process-of-care measures (IMM–2, ED–1, and VTE–6) for the CY 2019 reporting period/FY 2021 payment determination and subsequent years, and one clinical process of care measure (ED–2) for the CY 2020 reporting period/FY 2022 payment determination and subsequent years.

b. Submission Quarters

(1) Current Policy

Currently, we require hospitals selected for chart-abstracted measures to submit data from the Q3 and Q4 of the calendar year, 3 years before the payment determination and the Q1 and Q2 of the calendar year, 2 years before the payment determination (FY 2014 IPPS/LTCH final rule (78 FR 50822 through 50823). This is because there is a lag associated with validation. In general, validation is a year behind. Validation results affecting a certain FY payment determination are based on measures submitted for the prior payment determination. For example, validation results affecting the FY 2024 payment determination are based on measures submitted for the FY 2023 payment determination (CY 2021 discharge period with data submission completing in CY 2022).

For validation affecting the FY 2023 payment determination, hospitals must submit data to validate chart-abstracted measures from the Q3 and Q4 of CY 2020 and the Q1 and Q2 of CY 2021. These are data originally submitted for the FY 2022 program payment determination. Depending on whether a hospital is selected as a random or targeted hospital, CMS requests data between 1 and 5 months following the data reporting submission deadline for a given reporting quarter. Following this request, hospitals have 30 days to submit randomly selected medical records to the Clinical Data Abstraction Center (CDAC), and after submission, CMS validates the data in preparation to make the associated payment determination. Under the current policy, hospitals selected for eCQM validation for a given payment determination year are required to provide medical records for a sample of cases occurring during one of the self-selected calendar quarters of the year 3 years before that payment determination (82 FR 38399 through 38400). For example, for validation affecting the FY 2023 payment determination period, hospitals selected during CY 2021 for eCQM validation are required to submit data from one self-selected quarter out of the 4 calendar quarters of 2020, that is Q1 through Q4 of CY 2020 (82 FR 38398 through 38403). These requirements are illustrated in the following table.

Current Quarters Required for Validation Affecting FY 2023 Payment Determination		
Measures Submitted	**Required Quarters of Data for Validation**	**Validation Data Request Timeframe**
Chart-Abstracted Measures	3Q 2020	4Q 2020 – 1Q 2021
	4Q 2020	1Q – 2Q 2021
	1Q 2021	2Q-3Q 2021
	2Q 2021	3Q -4Q 2021
eCQMs	1Q 2020 - 4Q 2020	2Q – 3Q 2021

To support the transition to a combined validation process for both chart-abstracted measures and eCQMs, we proposed to shift the quarters of data used for both chart-abstracted measure validation and eCQM validation in an incremental manner in order to align the two over time.

(2) Quarters Required for Validation Affecting the FY 2023 Payment Determination

In order to align the quarters of data used for chart-abstracted measure validation and eCQM validation, we proposed to first change the period for validation affecting the FY 2023 payment determination. Instead of validating chart-abstracted measure data from Q3 2020–Q2 2021, we proposed to validate measure data only from the Q3 and Q4 of CY 2020 for validation affecting the FY 2023 payment determination for chart-abstracted measures (illustrated in Table: 2 that follows) as a transition year. Specifically, this means that we would not require facilities to submit data for chart-abstracted measure validation for the Q1 and Q2 of CY 2021 for validation affecting the FY 2023 payment determination. We would use measure data from only two quarters (Q3 and Q4 of CY 2020) for hospitals selected under both the random and targeted chart-abstracted measure validation. We note that this proposal only affects chart-abstracted measure validation; we would continue to validate the self-selected quarter of eCQM data submitted during 2020 for validation affecting the FY 2023 payment determination as previously finalized.

Updates to Quarters Required for Validation Affecting the FY 2023 Payment Determination	
Measures Submitted	Required Quarters of Data for Validation
Chart-Abstracted Measures	3Q 2020
	4Q 2020
eCQMs	1Q 2020 - 4Q 2020

Comment: Several commenters supported using Q3 and Q4 2020 data for validation affecting the FY 2023 payment determination.

Response: We thank these commenters for their support.

Comment: A commenter recommended that CMS not increase the number of quarters required for validation at this time because many hospitals are responding to the COVID–19 PHE, and therefore, may not have sufficient resources to submit this data.

Response: We acknowledge that many hospitals may be affected by the COVID–19 PHE. However, we note that for validation affecting the FY 2023 payment determination (that is, the first payment determination affected by these changes), we are only requiring submission of chart-abstracted measure validation for two quarters (specifically, Q3 and Q4 of CY 2020), which represents a reduction in the number of quarters that hospitals were previously required to submit; the previous requirement was four quarters. We note that there are no changes to the number of quarters of CY 2020 data required to be submitted for eCQM validation

affecting FY 2023 payment determination. Furthermore, we have granted an exception to medical record submission requirements for eCQM validation for CY 2019 discharges (submission would have been required in 2020) because of the COVID–19 PHE [465] which we believe further reduces validation related burden.

After consideration of the public comments we received, we are finalizing our proposal as proposed to validate measure data only from the Q3 and Q4 of CY 2020 for validation affecting the FY 2023 payment determination for chart-abstracted measures as a transition year.

(3) Quarters Required for Validation Affecting the FY 2024 Payment Determination and Subsequent Years

For validation affecting the FY 2024 payment determination and subsequent years, we proposed to use Q1–Q4 data of the applicable calendar year for validation of both chart-abstracted measures and eCQMs. For example, the quarters required for validation affecting the FY 2024 payment determination would occur as displayed in the following table.

Example: Quarter Alignment Used for Validation Affecting the FY 2024 Payment Determination	
Measures Submitted	**Required Quarters of Data for Validation**
Chart-Abstracted Measures	1Q 2021
	2Q 2021
	3Q 2021
	4Q 2021
eCQMs	1Q 2021 - 4Q 2021

In the FY 2021 IPPS/LTCH PPS proposed rule (85 FR 32840), we stated that we believe aligning the quarters of submission data used for both chart-abstracted measures and eCQM validation will allow hospitals selected for validation to more easily track and meet validation requirements, such as medical records requests from the CDAC.

We invited the public to comment on our proposal to incrementally align the quarters used for chart-abstracted measure and eCQM validation as previously discussed.

Comment: A commenter supported use of Q1–Q4 data for validation affecting FY 2024 payment determination and subsequent years because this would streamline the process and reduce hospital burden.

Response: We thank the commenter for this support.

Comment: A few commenters requested that CMS require fewer quarters for validation. A commenter expressed concern that requiring four quarters of data for validation of both chart-abstracted measures and eCQMs would be too high a burden. This commenter recommended that CMS require no more than two quarters for validation.

Response: While we agree with these commenters that restricting data validation to fewer calendar quarters may lead to some reduction to provider burden, we do not believe restricting data validation to fewer than two quarters would be consistent with our goals or approach, which has been designed to increase opportunities to detect poor reporting (77 FR 53540). Additionally, requiring fewer quarters of data for validation, which would reduce sample size, would impede the calculation of statistically significant validation scores needed to make payment determinations. We also note that the proposed increase in quarters for eCQM validation would occur in a gradual manner; hospitals would be validated on 2 quarters of CY 2021 eCQM data for validation affecting the FY 2024 payment determination, on 3 quarters of CY 2022 eCQM data for validation affecting the FY 2025 payment determination, and 4 quarters of CY 2023 eCQM data for validation affecting the FY 2026 payment determination and for subsequent years.

After consideration of the public comments that we received, we are finalizing our proposal as proposed to use Q1 through Q4 data of the applicable calendar year of both chart-abstracted measures and eCQMs for validation affecting FY 2024 payment determination and subsequent years.

c. Combination of Chart-Abstracted Measure and eCQM Validation Beginning With Validation Affecting the FY 2024 Payment Determination

As noted previously, in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57173), we finalized a separate validation process for eCQMs in the Hospital IQR Program. In addition to validating the chart-abstracted measures, we began validating an additional pool of up to 200 randomly selected hospitals for eCQMs (81 FR 57173).

Upon alignment of validation quarters as in section VIII.A.10.b.(2). of the preamble of this final rule, we wish to combine the validation process for both chart-abstracted measures and eCQMs. Therefore, in the FY 2021 IPPS/LTCH PPS proposed rule, we proposed to remove the separate process for eCQM validation, beginning with the validation affecting the FY 2024 payment determination (for validation commencing in CY 2022 using data from the CY 2021 reporting period) (85 FR 32840). Instead, beginning with validation affecting the FY 2024 payment determination and subsequent years, we proposed to incorporate eCQMs into the existing validation process for chart-abstracted measures such that there would be one pool of hospitals selected through random selection and one pool of hospitals selected using targeting criteria, for both chart-abstracted measures and eCQMs. Under the aligned validation process, a single hospital would be selected for validation of both eCQMs and chart-abstracted measures and would be expected to submit data for both chart-abstracted measures and eCQMs. For specific data submission requirements, we refer readers to section VIII.A.10.e of

[465] *https://www.cms.gov/files/document/guidance-memo-exceptions-and-extensions-quality-reporting-and-value-based-purchasing-programs.pdf.*

the preamble of this final rule ''Number of Cases Required for Validation.''

Comment: Several commenters supported alignment of validation processes between chart-abstracted measures validation, eCQM validation, and HAC Reduction Program validation. These commenters observed that this would reduce burden by improving coordination and allow hospitals to dedicate resources to patient care.

Response: We thank these commenters for their support.

Comment: A few commenters recommended that CMS delay combining the validation processes citing concerns about the current COVID–19 PHE.

Response: We acknowledge that currently many hospitals are being adversely affected by the COVID–19 PHE, and we do not wish to further burden these hospitals. However, our proposal to combine the eCQM and chart-abstracted validation processes begins with validation affecting the FY 2024 payment determination (that is, validation commencing in CY 2022 using data from the CY 2021 reporting period). We believe that this provides sufficient time for hospitals to prepare for the combined process.

Comment: A commenter requested that due to increased data submission requirements associated with having to submit chart-abstracted measure data, eCQM data, and HAC Reduction Program data, CMS extend the data submission timeframe to provide copies of the medical records from 30 days to 60 days.

Response: We do not believe that our proposals significantly increase the data submission requirements. We note that up until validation affecting the FY 2022 payment determination, when the HAC Reduction Program and Hospital IQR Program split validation approaches (83 FR 41482), hospitals selected for validation were already reporting HAC and chart-abstracted measure data. Furthermore, up through validation affecting the FY 2022 payment determination, hospitals reported a total of five chart-abstracted measures for validation (83 FR 41608); whereas, for validation affecting the FY 2023 payment determination and subsequent years, hospitals will only be reporting one chart-abstracted measure for validation (82 FR 38400). Because hospitals have previously been able to report these higher volumes of measures within the previously established validation data submission timeframe of 30-days (76 FR 51645 for chart-abstracted and 81 FR 57179 for eCQMs), we believe that the 30-day period continues to be appropriate.

Comment: A few commenters expressed concern regarding the effect of combining the HAC Reduction Program validation and the Hospital IQR Program's eCQM and chart-abstracted measure validation processes on payment determinations.

Response: We interpret the comment to mean that commenters are concerned that failing validation for the Hospital IQR Program or the HAC Reduction Program could lead to penalties under both programs. We are combining and aligning the hospital pool for the validation selection processes for the Hospital IQR Program and the HAC Reduction Program only. To be clear, these two programs will retain distinct and separate processes for validating submitted data, scoring, and applying any payment impacts to hospitals that fail validation. Failing Hospital IQR Program validation will not directly affect validation under the HAC Reduction Program, or vice versa.

Comment: A commenter recommended against adopting a combined validation process because of the belief that a consolidated process would be more burdensome than individual processes due to the multiple measure types affected by the new process.

Response: We are clarifying here that we are combining and aligning the hospital pool for the validation selection processes for the Hospital IQR Program and the HAC Reduction Program only. To be clear, these two programs will retain distinct and separate processes for validating submitted data, scoring, and applying any payment impacts to hospitals that fail validation. We refer readers to section VIII.A.10.f.2 below where we discuss the Hospital IQR Program validation process and section IV.M.6 where we discuss the HAC Reduction Program validation process in more detail. While there may be some instances of increased burden for specific hospitals, we disagree with the commenter that this approach is more burdensome for the majority of hospitals. Under previously established validation requirements, hospitals selected for validation were already required to submit medical records for both clinical process of care and HAI measures. While our proposed policy would add the requirement for hospitals selected for validation to also submit medical records for eCQMs, the number of requested medical records for eCQM cases (eight cases per quarter over two quarters for a total of 16 cases for validation affecting the FY 2024 payment determination) remains low relative to clinical process of care cases (8 cases per quarter, over four quarters) and HAI cases (10 cases per quarter, over four quarters), that will be required for validation affecting the FY 2024 payment determination. Combining and aligning the hospital pool for validation between the programs would reduce burden by 400 hospitals per year starting with validation affecting the FY 2024 payment determination. This is supported by the majority of comments that we received in response to this proposal, which indicate that most hospitals believe that the combined process will be less burdensome. In addition, as discussed further below, we also proposed to reduce the overall number of hospitals selected for validation from 800 to up to 400, which reduces the overall validation burden.

(1) Targeted Selection of Hospitals for Validation

We refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53552 through 53553) and the FY 2014 IPPS/LTCH PPS final rule (78 FR 50834) where we finalized targeted chart-abstracted measure validation for a supplemental sample of hospitals in addition to random validation. The supplemental sample of hospitals includes all hospitals that failed validation in the previous year and a random sample of hospitals meeting certain targeting criteria. These criteria are as follows:

- Any hospital with abnormal or conflicting data patterns. One example of an abnormal data pattern would be if a hospital has extremely high or extremely low values for a particular measure. As described in the FY 2013 IPPS/LTCH PPS final rule, we define an extremely high or low value as one that falls more than 3 standard deviations from the mean which is consistent with the Hospital OQR Program (76 FR 74485). An example of a conflicting data pattern would be if two records were identified for the same patient episode of care but the data elements were mismatched for primary diagnosis. Primary diagnosis is just one of many fields that should remain constant across measure sets for an episode of care. Other examples of fields that should remain constant across measure sets are patient age and sex. Any hospital not included in the base validation annual sample and with statistically significantly more abnormal or conflicting data patterns per record than would be expected based on chance alone ($p < .05$), would be included in the population of hospitals targeted in the supplemental sample.
- Any hospital with rapidly changing data patterns. For this targeting criterion, we define a rapidly changing

data pattern as a hospital which improves its quality for one or more measure sets by more than 2 standard deviations from 1 year to the next, and also has a statistically significant difference in improvement (one-tailed p < .05) (77 FR 53553).

- Any hospital that submits data to NHSN after the Hospital IQR Program data submission deadline has passed.
- Any hospital that joined the Hospital IQR Program within the previous 3 years, and which has not been previously validated.
- Any hospital that has not been randomly selected for validation in any of the previous 3 years.
- Any hospital that passed validation in the previous year, but had a two-tailed confidence interval that included 75 percent.
- Any hospital which failed to report to NHSN at least half of actual HAI events detected as determined during the previous year's validation effort.

In the FY 2021 IPPS/LTCH PPS proposed rule, we proposed that beginning with validation affecting the FY 2024 payment determination, the existing targeting criteria would apply to all applicable hospitals, capturing both measure types (that is, chart-abstracted measures and eCQMs) (85 FR 32841). In other words, we proposed to expand targeted validation to include eCQMs, not just chart-abstracted-measures. We stated that doing so will facilitate the proposed combination of chart-abstracted and eCQM validation such that hospitals selected under this combined targeting approach would be validated for both chart-abstracted and eCQMs.

Additionally, we clarified that a hospital that has been granted an Extraordinary Circumstances Exception could still be selected for validation (chart-abstracted measures and eCQMs) under the targeting criteria. We invited public comment on our proposal.

Comment: Several commenters supported aligning hospital selection for eCQMs, HAC Reduction Program, and Hospital IQR Program chart-abstracted measure validation, including applying the existing targeted criteria.

Response: We thank these commenters for their support.

Comment: Several commenters expressed concern regarding the proposal to allow hospitals granted ECEs to be selected for validation. A commenter observed that ECEs represent potential operational disruptions to hospitals which could impact validation. A commenter recommended that CMS retain this exclusion. Another commenter recommended that CMS defer validation for hospitals that have been granted an ECE until the first validation period following the expiration of the ECE.

Response: The validation process requires hospitals to submit charts to support data they submitted during an applicable reporting period. If a hospital was granted an ECE and did not report data for the applicable reporting period, the hospital would not submit data on any cases and, therefore, there would be no cases for the hospital to support through submission of medical charts for validation. This would not affect the hospital's validation score. In the case that validation is occurring during a period excepted by an ECE applicable to data submitted prior (that is, validation requests that are sent to hospitals during an ECE period for data reporting periods that occurred prior to the ECE), we believe that the importance of ensuring the validity of publicly reported data (which reflects care provided prior to the extraordinary circumstance) may be sufficient to require hospitals to submit charts for validation during that period. However, we acknowledge the commenters' concern and will consider extending the validation data submission period in future rulemaking.

After consideration of the public comments, we are finalizing our proposal as proposed to apply our existing targeting criteria to all applicable hospitals, capturing both measure types (that is, chart-abstracted measures and eCQMs).

(2) Number of Hospitals

In the FYs 2013 and 2014 IPPS/LTCH PPS final rules (77 FR 53551 through 53554 and 78 FR 50833), we finalized that for chart-abstracted measure validation, we take an annual sample from 400 randomly selected hospitals and from up to 200 hospitals selected using targeting criteria. In the FY 2017 IPPS/LTCH PPS final rule (81 FR 57173 through 57178), we finalized that for eCQMs, we take an annual sample of up to 200 randomly selected hospitals that have not been selected for chart-abstracted measure validation. Under these existing policies, we may validate data from up to a total of 800 hospitals for a given year for both chart-abstracted measures and eCQMs.

In the FY 2021 IPPS/LTCH PPS proposed rule, we proposed to change the hospital selection policies to reduce the total number of hospitals selected for validation from up to 800 hospitals to up to 400 hospitals, beginning with validation affecting the FY 2024 payment determination (85 FR 32841). We proposed that up to 200 hospitals would be selected randomly and up to 200 would be selected using targeted criteria. Here, we summarize and respond to general comments. Detailed descriptions on proposals to effectuate that reduction and related comments and responses follow further below.

Comment: Several commenters supported the reduction from 800 hospitals to up to 400 hospitals to be selected for validation. Some of these commenters observed that this would reduce administrative burden and others observed that it would allow hospitals to focus resources on patient focused activities.

Response: We thank these commenters for their support.

Comment: Several commenters expressed concern that reducing the number of hospitals selected for validation may lead to too small a sample size to ensure data validity.

Response: We recognize that a smaller sample size may impact the reliability of the data. However, as we noted in the proposed rule, based on the expected percentage of hospitals passing validation (which we estimated at 96 percent based on values from validation affecting the FY 2018, FY 2019, and FY 2020 payment determinations, which were 96.4 percent, 95.8 percent, and 96.2 percent respectively), our power calculation indicates that with a pool of up to 200 hospitals, we can be highly confident that at least 94.8 percent of all hospitals in the Hospital IQR Program population are achieving the requisite reliability score. We will continue to monitor the number of hospitals passing validation and if the pass rate falls to a level where we can no longer be confident in the reliability scores of hospitals in the Hospital IQR Program population, we will address this issue in future rulemaking.

Comment: A few commenters recommended further reducing the number of selected hospitals to further reduce burden, especially due to the burden of COVID–19 on hospitals.

Response: Because the minimum sample size required to assess the percentage of hospitals in the Hospital IQR Program depends on the expected percentage of hospitals that fail validation, we do not believe that we can reduce the number of selected hospitals below the proposed amount of up to 400 at this time. However, we will continue to evaluate the number of hospitals required to be statistically confident that hospitals in the Hospital IQR Program population are achieving the requisite reliability score.

(a) Number of Hospitals Under Random Selection

Instead of taking an annual sample from 400 randomly selected hospitals as

previously finalized, we proposed to reduce the number of hospitals selected at random for validation to up to 200 hospitals, beginning with validation affecting the FY 2024 payment determination (measure data collected during CY 2021 and submitted during CY 2022 for the FY 2023 payment determination). We proposed these changes in conjunction with the HAC Reduction Program and refer readers to section IV.M. of this final rule for those proposals. We believe that reducing the total number of hospitals selected for chart-abstracted measure validation each year to ''up to 200'' would maintain a sufficient sample size for a statistically meaningful estimate of hospitals' reporting accuracy and help streamline the process for both programs.

One of our goals for the annual random sample is to estimate the total percentage of hospitals in the Hospital IQR Program that have been reporting unreliable data. The basic premise behind random sampling is that one can learn something about all hospitals by gathering data on just a subset of hospitals (77 FR 53552). The minimum sample size required to assess the percentage of hospitals in the Hospital IQR Program that have been reporting unreliable data depends on the expected percentage of hospitals that fail validation. Because a very high percentage of Hospital IQR Program hospitals pass validation (96.4 percent for the FY 2018 payment determination, 95.8 percent for the FY 2019 payment determination, and 96.2 percent for the FY 2020 payment determination), we believe that we can reduce burden on hospitals by selecting fewer hospitals for the base annual random sample without adversely affecting our estimate of this percentage. Using an estimated passing rate of 96 percent, our power calculations indicate that with a pool of up to 200 hospitals, we can be highly confident that at least 94.8 percent of all hospitals in the Hospital IQR Program population are achieving the requisite reliability score.

In addition, in the FY 2019 IPPS/LTCH PPS final rule, we finalized removal of five healthcare associated infection measures [466] from the Hospital IQR Program and incorporated the same measures into the HAC Reduction Program (83 FR 41547 through 41553). Because of this, in the FY 2019 IPPS/LTCH PPS final rule, we also created validation policies under the HAC Reduction Program (83 FR 41479 through 41483). Following the transfer of NHSN HAI measure validation to the HAC Reduction Program, we are proposed that both the Hospital IQR Program and the HAC Reduction Program use a single random hospital sample of up to 200 hospitals beginning with validation affecting the FY 2024 payment determination. In other words, hospitals would be randomly selected and this pool of up to 200 hospitals would be validated under both programs.

In the FY 2021 IPPS/LTCH PPS proposed Rule, we proposed to change the Hospital IQR Program policy from an exact number of hospitals selected for random validation (that is, 400) to a range (that is, up to 200) (85 FR 32842). This is because there are some hospitals that are eligible for the HAC Reduction Program, but which do not also participate in the Hospital IQR Program. Over 95 percent of hospitals that are eligible for the HAC Reduction Program also participate in the Hospital IQR Program. The small proportion of hospitals that do not participate in the Hospital IQR Program would be included in the single pool from which hospitals could be randomly selected; however, if such a hospital were selected for validation, it would not be required to submit data for validation under the Hospital IQR Program. Therefore, selecting a single sample for both programs could potentially result in a number totaling less than 200 hospitals for validation of Hospital IQR Program chart-abstracted data because hospitals that are eligible for the HAC Reduction Program, but do not participate in the Hospital IQR Program would not be validated in the Hospital IQR Program. This is consistent with the previously finalized Hospital IQR Program chart-abstracted validation process, for which hospitals were subject to both chart-abstracted measure validation as well as HAI measure validation (83 FR 41608). The only difference is that HAI measure validation has since moved to the HAC Reduction Program and, hence, the HAI validation performance will be accounted for under the HAC Reduction Program.

We stated our belief that this proposal will simplify validation for hospitals under both programs and enable us to continue validating Hospital IQR Program chart-abstracted data without increasing the total number of hospitals selected for validation across both programs. We also refer readers to section IV.M. of the preamble of this final rule for more detail on the validation proposals for the HAC Reduction Program. Again, we note that this proposal is being made in conjunction with that in the HAC Reduction Program, and finalization of this proposal in the Hospital IQR Program would be contingent on the HAC Reduction Program proposal also being finalized.

We invited public comment on this proposal.

Comment: A commenter requested clarification regarding how the HAC Reduction Program validation process would apply to hospitals selected for Hospital IQR Program validation. This commenter observed that the validation process for the HAC Reduction Program is described in a separate rule section and noted that this could lead to confusion regarding how the two processes interact.

Response: We are clarifying here that we are combining and aligning the hospital pool for the validation selection processes for the Hospital IQR Program and the HAC Reduction Program only. To be clear, these two programs will retain distinct and separate processes for validating submitted data, scoring, and applying any payment impacts to hospitals that fail validation. The Hospital IQR Program will validate these hospitals' data using the methodology laid out in this section; the HAC Reduction Program will validate these hospitals' data using the methodology described in section IV.M of the preamble of this final rule.

After consideration of the public comments, we are finalizing our proposal as proposed to change the Hospital IQR Program policy from an exact number of hospitals selected for random validation (that is, 400) to a range (that is, up to 200). We refer readers to section M.6 of this final rule where we are also finalizing similar policies under the HAC Reduction Program.

(b) Exclusion Criteria

In the FY 2018 IPPS/LTCH PPS final rule (82 FR 38399), we finalized exclusion criteria, applied before the random selection of up to 200 hospitals for eCQM validation. The exclusion criteria include any hospital—

- Selected for chart-abstracted measure validation;
- That has been granted an Extraordinary Circumstances Exception (ECE); and
- That does not have at least five discharges for at least one reported eCQM included among their QRDA I file submissions (81 FR 57174 and 82 FR 38399).

Hospitals meeting one or more of these exclusion criteria are not eligible for selection for eCQM validation each year (82 FR 38399).

[466] CAUTI, CDI, CLABSI, Colon and Abdominal Hysterectomy SSI, and MRSA Bacteremia.

In the FY 2021 IPPS/LTCH PPS proposed rule, in conjunction with our proposal to combine chart-abstracted measure and eCQM validation, we proposed to remove all of the previously finalized exclusion criteria (as previously referenced) beginning with validation affecting the FY 2024 payment determination and for subsequent years (85 FR 32842). Since a separate sample of hospitals for eCQM validation will no longer need to be identified, the previously finalized exclusion criteria for eCQM validation hospital selection will no longer be needed. We invited public comment on our proposal to remove the previously finalized exclusion criteria. We stated that finalization of this proposal would be contingent on finalization of our proposal to combine chart-abstracted measure and eCQM validation.

Comment: A few commenters requested clarification regarding how the existing exclusion criteria, particularly the exclusion of hospitals from selection for eCQM validation if they have been granted an ECE, apply to the consolidated validation process.

Response: We refer readers to the FY 2016 IPPS/LTCH PPS Final Rule (80 FR 49695) for our policies regarding ECEs for eCQM issues. Our regulations at 42 CFR 412.140 state that CMS may grant an exception with respect to quality data reporting requirements in the event of extraordinary circumstances beyond the control of the hospital. Specific requirements for submission of a request for an exception are available on *QualityNet.org.* In the FY 2016 IPPS/LTCH PPS Final Rule, we stated that our targeting criteria permits that a hospital may be selected for chart-abstracted validation even if it has been granted an ECE with respect to one or more chart-abstracted measures for the applicable data collection period (81 FR 57174). Our previous policy was that if a hospital was granted an ECE with respect to eCQM reporting for the applicable eCQM reporting period, the hospital would be excluded from the eCQM validation sample due to its inability to supply data for validation (81 FR 57174). In the FY 2021 IPPS/LTCH PPS proposed rule (85 FR 32842), we proposed to remove this exclusion in light of our proposal to combine chart-abstracted measure and eCQM validation. While such hospitals may be unable to supply eCQM data, we believe they would continue to be able to supply HAI and chart-abstracted measure data for validation of these measures. We note that hospitals that have been granted ECEs for any general reason have not previously been automatically excluded from being selected for chart-abstracted or HAI measure data validation (77 FR 53552 through 53553), and this continues to be the case. However, because the consolidated validation process will apply across multiple data types, we no longer believe that these exclusions are necessary. A hospital affected by an ECE related to eCQM reporting may be unable to supply data regarding eCQMs however, we believe it would still be able to supply data for validation of the HAIs and chart-abstracted measures as they have been required to under our existing policies.

Comment: A commenter requested that CMS clarify whether a hospital would be excluded from validation if it did not have at least five discharges for at least one reported eCQM included among its QRDA I file submissions.

Response: We do not believe this or any of the other previously established exclusion criteria are needed because these exclusion criteria were established for hospitals that may not have data for eCQM validation. Because we are finalizing our proposal to combine chart-abstracted measure and eCQM validation in section VIII.A.10.f, below, we believe that even if hospitals do not have data to submit for eCQM validation, they should have data to submit for chart-abstracted measure validation, and therefore, should be eligible to be selected for validation. After consideration of the public comments, we are finalizing our proposal as proposed to remove all of the previously finalized exclusion criteria beginning with validation affecting the FY 2024 payment determination and for subsequent years.

(c) Number of Hospitals Selected Under Targeted Selection

We refer readers to FY 2013 IPPS/LTCH PPS final rule (77 FR 53552 through 53553) where we previously established that we would select up to 200 hospitals for chart-abstracted measures data validation using the targeting criteria described in section VIII.A.11.c. of the preamble of this final rule. The Hospital IQR Program does not currently have a policy for targeted selection of hospitals for eCQM validation.

In the FY 2021 IPPS/LTCH PPS proposed rule, while we did not propose any changes to the number of hospitals selected using targeting criteria (see sections VIII.A.3.c.(1) and VIII.A.10.a. of this final rule), we proposed to combine chart-abstracted measure and eCQM validation and to decrease the number of randomly selected hospitals (85 FR 32842 through 32843); we also refer readers to sections VIII.A.3.c.(1) and VIII.A.10.a above where these are discussed. If these proposals are both finalized, the total number of hospitals selected for validation (for both chart-abstracted measures and eCQMs) would be at maximum 400 (up to 200 hospitals randomly selected + up to 200 hospitals using targeting criteria). The current and proposed validation hospital numbers and measure types are illustrated in the tables that follow:

Current Validation Process		
Selection Process	**Number of Hospitals**	**Measure Type**
Random Selection	400	Chart-Abstracted
Targeted Selection	Up to 200	Chart-Abstracted
Random Selection	Up to 200	eCQMs
Total:	Up to 800	

Validation Process Beginning with Validation Affecting the FY 2024 Payment Determination		
Selection Process	Number of Hospitals	Measure Type
Random Selection	Up to 200	Chart-Abstracted and eCQM
Targeted Selection	Up to 200	Chart-Abstracted and eCQM
Total:	Up to 400	Chart-Abstracted and eCQM

Under the aligned validation process we are finalizing in this final rule, the Hospital IQR Program would validate a pool of up to 400 hospitals (up to 200 randomly selected and up to 200 selected using the targeting criteria), across both measure types.

d. Use of Electronic File Submissions for Chart-Abstracted Measure Medical Records Requests Beginning With Validation Affecting the FY 2024 Payment Determination

Currently, hospitals may choose to submit paper copies of medical records for chart-abstracted measure validation (75 FR 50226), or they may submit copies of medical records for validation by securely transmitting electronic versions of medical information (78 FR 50834 and 79 FR 50269). Submission of electronic versions can either entail downloading or copying the digital image of the medical record onto CD, DVD, or flash drive (78 FR 50835), or submission of PDFs using a secure file transmission process after logging into the QualityNet Secure Portal (also referred to as the Hospital Quality Reporting (HQR) System) (79 FR 50269). We reimburse hospitals at $3.00 per chart (78 FR 50956). Neither paper copies nor submission of CD, DVD, or flash drive is applicable for eCQMs since that data is required to be submitted electronically via Secure File Transfer (81 FR 57174 through 57178).

In the FY 2021 IPPS/LTCH PPS proposed rule, we proposed to discontinue the option for hospitals to send paper copies of, or CDs, DVDs, or flash drives containing medical records for validation affecting the FY 2024 payment determination (that is, beginning with data submission for Q1 of CY 2021) (85 FR 32843). We proposed to require hospitals to instead submit only electronic files when submitting copies of medical records for validation of chart-abstracted measures, beginning with validation affecting the FY 2024 payment determination (that is, Q1 of CY 2021) and for subsequent years. Under this proposal, hospitals would be required to submit PDF copies of medical records using direct electronic file submission via a CMS-approved secure file transmission process. We would continue to reimburse hospitals at $3.00 per chart, consistent with the current reimbursement amount for electronic submissions of charts.

We strive to provide the public with accurate quality data while maintaining alignment with hospital recordkeeping practices. We appreciate that hospitals have rapidly adopted EHR systems as their primary source of information about patient care, which can facilitate the process of producing electronic copies of medical records (78 FR 50834). Additionally, we monitor the medical records submissions to the CMS Clinical Data Abstraction Center (CDAC) contractor, and have found that almost two-thirds of hospitals already use the option to submit PDF copies of medical records as electronic files. In our assessment based on this monitoring, we believe requiring electronic file submissions can be a more effective and efficient process for hospitals selected for validation. Requiring electronic file submissions reduces the burden of not only coordinating numerous paper-based pages of medical records, but also of having to then ship the papers or physical digital media storage to the CDAC. Therefore, we believe it is appropriate to require that hospitals use electronic file submissions via a CMS-approved secure file transmission process. We invited public comment on our proposal.

Comment: Several commenters supported the proposal to require hospitals to submit only electronic files when submitting copies of medical records for validation of chart-abstracted measures. A commenter noted that requiring electronic files will reduce administrative burden.

Response: We thank the commenters for their support and agree that the proposal will reduce administrative burden.

Comment: A few commenters supported the proposal, but expressed concern that requiring electronic file submissions for chart-abstracted measure validation will be burdensome given the COVID–19 public health emergency (PHE) and asked CMS to delay this requirement. A commenter expressed concern that the influenza season and potential increased COVID–19 case counts in fall 2020 would make it more difficult for facilities to implement such a change and asked that the proposal be delayed by one year. In the meantime, the commenter suggested reducing the reimbursement rate for the paper-based submissions to encourage electronic submissions and reduce the cost to CMS of administering the program.

Response: We appreciate the commenters support for the proposal and recognize that some organizations do not submit validation data electronically and therefore will need to update their processes if they are selected for validation. However, we believe that the relative security of electronic submission versus mailing paper records outweighs the effort of updating processes. Furthermore, we believe that the reduced effort of printing, packaging, and mailing records

will offset the burden of updating processes and reduce the impact of potential shipping delays on validation Based on our monitoring of medical record submissions to the CMS Clinical Data Abstraction Center (CDAC) contractor, we believe requiring electronic file submissions is a more effective and efficient process and will reduce burden for hospitals selected for validation, which we believe to be especially critical during the COVID–19 PHE and a potential increase in volume of influenza cases. We appreciate the commenter's suggestion to reduce reimbursement for paper charts to incentivize transition to electronic records, however, we believe that the efficiencies of electronic data submission outweigh any benefits to delaying this change.

Comment: A commenter expressed concern that PDF copies of some patient files may take a long time to upload to Secure File Transfer and cause the application to time out. The commenter suggested a work around should any upload errors occur. Another commenter stated their belief that PDF files cannot be easily extracted without further processing or formatting and that interoperability requires that information be exchanged using common data standards to facilitate coordinated care and improved outcomes. This commenter encouraged CMS to develop and implement an industry-wide open application program interface (API) standard.

Response: We appreciate the commenters' concerns and will monitor the PDF upload process, and if needed, modify the process or consider improvements for future rulemaking. We believe that requiring PDF file submissions will ultimately decrease burden.

Comment: A commenter asked if the format for CMS's validation request to hospitals will be modified and if all communication between the hospital and CMS for the validation process will be electronic.

Response: We have not proposed any changes to the formats of the validation request or other communications in the validation process.

After consideration of the public comments, we are finalizing our proposal as proposed to require hospitals to submit only electronic files when submitting copies of medical records for validation of chart-abstracted measures, beginning with validation affecting the FY 2024 payment determination (that is, Q1 of CY 2021) and for subsequent years. Under this policy, hospitals would be required to submit PDF copies of medical records using direct electronic file submission via a CMS approved secure file transmission process. We will continue to reimburse hospitals at $3.00 per chart, consistent with the current reimbursement amount for electronic submissions of charts.

e. Number of Cases Required for Validation

(1) Chart-Abstracted Measures

We refer readers to the FY 2017 IPPS/LTCH PPS final rule (81 FR 57179 through 57180) where we established a process in which the CDAC contractor requests selected hospitals to submit eight randomly selected medical records on a quarterly basis from which data are abstracted (for a total of 32 records per year). Once the CDAC contractor receives the data, it re-abstracts the measures which were submitted by the hospitals for the Hospital IQR Program and calculates the percentage of matching measure numerators and denominators for each measure within each chart submitted by the hospital. Each selected case may have multiple measures included in the validation. We did not propose any changes to the number of cases required from each selected hospital for chart-abstracted measure validation.

(2) eCQMs

In the FY 2018 IPPS/LTCH PPS final rule (82 FR 38398 through 38399), we finalized that selected hospitals must submit eight cases per reported quarter to complete eCQM data validation. We consider a sample of eight cases per quarter to be the minimum sample size needed to accurately ascertain the quality of the reported data (82 FR 38399). Each selected case may have multiple measures included in the validation.

In the FY 2021 IPPS/LTCH PPS proposed rule, we did not propose any changes to this policy. However, we refer readers to section VIII.A.10.e. of the preamble (Reporting and Submission Requirements for eCQMs) of this final rule for more details on our finalized proposal to increase the number of quarters for which hospitals are required to report eCQM data: From one self-selected quarter of data to four quarters of data progressively over several years. With the finalization of the increased eCQM reporting quarters, hospitals selected for validation will be required to submit: (1) A total of 16 requested cases from 2 calendar quarters of CY 2021 eCQM data (8 cases × 2 quarters) for validation affecting the FY 2024 payment determination; (2) a total of 24 requested cases from 3 quarters of CY 2022 eCQM data (8 cases × 3 quarters) for validation affecting the FY 2025 payment determination; and (3) a total of 32 requested cases over 4 quarters of data (8 cases × 4 quarters), starting with validation of CY 2023 eCQM data, for validation affecting the FY 2026 payment determination and for subsequent years. This means that for eCQM validation, hospitals will have to submit validation data for each quarter of their self-selected eCQM submission quarters.

f. Scoring Processes

(1) Current Scoring Process

Currently, there are two separate processes for payment determinations related to validation requirements—one for chart-abstracted measure validation and another for eCQM validation.

For chart-abstracted measure validation scoring, under the current process, the CDAC contractor requests that hospitals submit eight randomly selected medical records on a quarterly basis from which data are abstracted and submitted by the hospital to the Clinical Data Warehouse (for a total of 32 records per year per hospital). Once the CDAC contractor receives the data, it re-abstracts the same data submitted by the hospitals and calculates the percentage of matching measure numerators and denominators for each measure within each chart submitted by the hospital (81 FR 57179 through 57180). Each selected case may have multiple measures included in the validation score. Specifically, one patient may meet the numerator and denominator criteria for multiple measures, and therefore, would generate multiple measures in the validation score. Consistent with previous years, each quarter and clinical topic is treated as a stratum for variance estimation purposes. Approximately 4 months after each quarter's validation submission deadline, validation results for chart-abstracted measures for the quarter are posted on the QualityNet Secure Portal (also referred to as the Hospital Quality Reporting (HQR) System). At the end of the year, the validation score is calculated by combining the data from all four quarters into one agreement rate for each hospital. At this point, we calculate a confidence interval around the agreement rate for each hospital using a normal distribution assumption. The upper bound of the confidence interval is calculated as the final validation score. A hospital must attain at least a 75 percent validation score based upon all four quarters of chart-abstracted data validation to pass the validation requirement. The overall

validation score from the chart-abstracted measure is used to determine whether a hospital has met the validation requirement under the Hospital IQR Program for purposes of the annual payment update. Specifically, if a hospital fails chart-abstracted validation (because the validation score was below 75 percent), it would receive an applicable annual reduction to the hospital's IPPS market basket update (APU) for failing to meeting all Hospital IQR Program requirements.

eCQM validation is different, because the accuracy of eCQM data submitted for validation (as measured by the agreement rate) does not currently affect a hospital's payment determination as described in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57181). As finalized in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38398 through 38399), selected hospitals must submit eight cases, per self-selected quarter to complete eCQM data validation. Because the reporting quarter is self-selected, validation occurs on an annual basis using all 8 cases that are submitted. For hospitals to receive their full APU, they must provide at least 75 percent of requested eCQM medical records in a timely and complete manner (82 FR 38398 through 38401). Hospitals receive eCQM validation results through email communications on an annual basis.[467]

(2) Weighted Scoring

To support the transition to a combined validation process for both chart-abstracted measures and eCQMs, in the FY 2021 IPPS/LTCH PPS proposed rule (85 FR 32844), we proposed to provide one combined validation score starting with validation affecting the FY 2024 payment determination and for subsequent years. Specifically, this single score would reflect a weighted combination of a hospital's validation performance for chart-abstracted measures and eCQMs. Since eCQMs are not currently validated for accuracy, we proposed that the eCQM portion of the combined agreement rate would be multiplied by a weight of zero percent and chart-abstracted measure agreement rate would be weighted at 100 percent for validation affecting the FY 2024 payment determination and subsequent years (that is, starting with the CY 2021 discharge data submitted for FY 2023 payment determination and validation affecting the FY 2024 payment determination). The agreement rate and associated confidence interval would be calculated based on the validation data collected from each hospital for each fiscal year. The validation score associated with the combined agreement rate would be the upper bound of the calculated confidence interval. For more detailed information on the confidence interval, please refer to the Chart-Abstracted Data validation page of QualityNet: *https://www.qualitynet.org/inpatient/data-management/chart-abstracted-data-validation*. Under this policy, however, in the absence of an eCQM score that reflects reporting accuracy, hospitals would continue to be required to successfully submit at least 75 percent of the requested medical records for eCQM validation. Submission of requested medical records at or in excess of this threshold would meet the eCQM validation requirements. Under this proposal, hospitals would continue to receive their total validation score annually.

As we move forward, we will determine when eCQM measure data are ready for accuracy scoring for validation. We have progressively increased the number of eCQM validation cases (from 8 cases for validation affecting FY 2023 payment determination, to 16 cases for validation affecting FY 2024 payment determination, to 24 cases for validation affecting FY 2025 payment determination, and to 32 cases for validation affecting FY 2026 payment determination and beyond). The additional cases collected and validated under the proposal will support the calculation of a statistically robust validation score. We anticipate increasing the eCQM validation score weighting in the future to include eCQM measures accuracy as part of the overall validation score. Any adjustments in the weighting and scoring would be proposed through future rulemaking. We invited public comments on our proposal.

Comment: A few commenters supported the proposal to provide a single weighted validation score in which the eCQM portion of the score would be multiplied by a weight of zero percent and chart-abstracted measure agreement rate would be weighted at 100 percent. A few of these commenters encouraged CMS to continue weighting the eCQM score at zero until hospitals have become accustomed to reporting more than one self-selected quarter of data and to the updated validation process.

Response: We thank commenters for their support and plan to determine when eCQM measure data are ready for accuracy scoring for validation as we move forward. Any adjustments to the validation process, including weighting or the method for calculating scores, would be proposed through future rulemaking.

Comment: A commenter opposed the proposal to weigh the eCQM portion of the combined agreement rate at zero percent and the chart-abstracted measure portion of the agreement rate at 100 percent. The commenter argued that such a weighting would formalize that eCQMs can be less accurate measures, and therefore, would not serve the purpose of validation. The commenter recommended developing a validation process and scoring system that consistently identifies and educates on measurement errors regardless of whether these errors are in chart-abstracted data or electronically captured in the EHR.

Response: Currently, the accuracy of eCQM data submitted for validation does not affect a hospital's payment determination as described in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57181). The proposal to weight the eCQM portion of the combined agreement rate at zero percent takes this existing policy into account and is therefore not a change in policy regarding the scoring of eCQM data for accuracy. Therefore, we disagree with commenters that we are formalizing that eCQMs can be less accurate measures, rather we believe that it continues to serve to allow hospitals and their vendors to become proficient in collecting and reporting eCQM data. We appreciate the commenter's recommendation and anticipate increasing the eCQM validation score weighting in the future to include eCQM accuracy as part of the overall validation score. We reiterate that any adjustments in the weighting and scoring of validation scores would be proposed through future rulemaking. We refer readers to section VIII.A.10.h.ii below where we are finalizing an educational review process for eCQMs, which will provide an opportunity for hospitals to ask questions and better understand their eCQM validation results in addition to the established educational review procedures for chart-abstracted measures.

Comment: A few commenters expressed concern that CMS would increase the weight of the eCQM validation score without ensuring the eCQM validation process has a level of rigor and transparency comparable to that of validation of chart-abstracted measures. These commenters recommended improving the eCQM validation process by (1) providing more detailed information in validation

[467] *https://qualitynet.org/inpatient/data-management/ecqm-data-validation.*

reports about the causes of a mismatch; (2) developing transparent, consistent criteria for where in medical records CMS's validators look for information; and (3) gradually increasing any requirement for eCQM accuracy slowly over time. Several commenters provided specific recommendations regarding the eCQM validation process including: (1) Developing a process based on QRDA I data; (2) accounting for mid-year eCQM specification changes; (3) publishing eCQM validation data; and (4) ensuring that the team validating eCQM data understands the differences between eCQM abstraction and chart abstraction. A commenter recommended that CMS convene stakeholders to address the issue of eCQM validation.

Response: We acknowledge commenters' concerns and thank them for their recommendations. We refer readers to section VIII.A.12.b.(1). below, where we discuss our eCQM validation development in more detail. We are continually working to improve our validation processes including developing improved validation reports. Furthermore, our intent is to increase requirements for eCQM accuracy gradually over time from our current weighting of zero percent. Additionally, we note that we provide the same information to hospitals and to our validation team regarding measure specifications, and therefore we believe that we have provided sufficient information regarding where within medical records abstractors look for information. We will take these concerns and suggestions into consideration as we continue to evaluate and develop our eCQM validation policies and processes. We reiterate that any adjustments in the weighting and validation scoring would be proposed through future rulemaking. We believe that the expanded educational review process described in section VIII.A.10.h.ii. below will increase the transparency of the eCQM validation process which will allow stakeholders to better comment on the rigor of this process at such a time as we propose to increase the weight.

Comment: A few commenters requested that CMS delay its proposal to provide a combined validation score for eCQM and chart-abstracted measure validation. These commenters noted that, unlike chart-abstracted measure validation, eCQM validation does not currently account for the accuracy of the submissions, rather eCQM validation is scored based on submission of the data. These commenters recommended delaying the proposal to combine eCQM and chart-abstracted measure validation until an eCQM validation process that incorporates accuracy of eCQM data is developed and validated.

Response: We acknowledge that our proposed policy does not currently reflect validation of eCQMs' accuracy, but believe that our proposal adequately addresses the commenters' concerns by weighing the eCQM portion of the combined agreement rate at zero percent for the time being. We refer readers to section VIII.A.12.b.(1). below, where we discuss our eCQM validation development in more detail. Based on our experience, we believe a gradual, step-wise approach is beneficial. As we move forward, we will use the results of these eCQM validation efforts to inform future policy-making for when eCQM measure data are ready for accuracy scoring for validation and when an increase in weighting is warranted. Thus, we do not believe we should delay our proposal.

After consideration of the public comments, we are finalizing our proposal as proposed to provide one combined validation score starting with validation affecting the FY 2024 payment determination and for subsequent years. Specifically, this single score would reflect a weighted combination of a hospital's validation performance for chart-abstracted measures and eCQMs. Since eCQMs are not currently validated for accuracy, the eCQM portion of the combined agreement rate will be multiplied by a weight of zero percent and chart-abstracted measure agreement rate will be weighted at 100 percent for validation affecting the FY 2024 payment determination and subsequent years (that is, starting with the CY 2021 discharge data submitted for FY 2023 payment determination and validation affecting the FY 2024 payment determination).

g. Summary

Our validation proposals are summarized in the following table:

	Quarters of Data Required for Validation	Scoring
Finalized Process for Validation Affecting the FY 2023 Payment Determination		
Chart-Abstracted Measures Validation: 400 Random Hospitals + up to 200 Targeted Hospitals	3Q 2020	At least 75% validation score
	4Q 2020	
eCQM Validation: Up to 200 Random Hospitals	1Q 2020 - 4Q 2020	Successful submission of at least 75% of requested medical records
Finalized Process for Validation Affecting the FY 2024 Payment Determination and Subsequent Years		
COMBINED Process (Chart-Abstracted Measures and eCQM Validation): up to 200 Random Hospitals + up to 200 Targeted Hospitals	1Q 2021 - 4Q 2021	Chart-abstracted Measures: At least 75% validation score (weighted at 100%) And eCQMs: Successful submission of at least 75% of requested medical records

h. Educational Review Process

(1) Chart-Abstracted Measures

In the FY 2015 IPPS/LTCH PPS final rule (79 FR 50260), we established an educational review process for validation of chart-abstracted measures. The process was subsequently updated in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38402 through 38403). In this process, hospitals may request an educational review if they believe they have been scored incorrectly or if they have questions about their validation results. As noted previously, approximately 4 months after each quarter's validation submission deadline, validation results for chart-abstracted measures for the quarter are posted on the QualityNet Secure Portal (also referred to as the Hospital Quality

Reporting (HQR) System). Hospitals have 30 calendar days following the date validation results are posted to identify any potential CDAC or CMS errors for the first three quarters of validation results and contact the Validation Support Contractor (VSC) to request an educational review. Upon receipt of an educational review request, we review the data elements identified in the request, as well as the written justifications provided by the hospital. We provide the results of an educational review, outlining the findings of whether the scores were correct or incorrect, to the requesting hospital through a CMS-approved secure file transmission process (82 FR 38402). We note that at the end of the year, the validation score is calculated by combining the data from all four quarters into one agreement rate for each hospital.

If an educational review yields incorrect CMS validation results for chart-abstracted measures, we use the corrected quarterly score, as recalculated during the educational review process to compute the final confidence interval (82 FR 38402). We use the revised score identified through an educational review when determining whether or not a hospital failed validation (82 FR 38402). Corrected scores, however, are only used if they indicate that the hospital performed more favorably than previously determined (82 FR 38402).[468] We note that corrections only occur to calculations, not to the underlying measure data (82 FR 38402). A detailed description of the educational review process for validation of chart-abstracted measures is also available on the QualityNet website. We did not propose any changes to our educational review process for chart-abstracted measures.

(2) Educational Review Process for eCQMs for Validation Affecting the FY 2023 Payment Determination and Subsequent Years

In the FY 2021 IPPS/LTCH PPS proposed rule (85 FR 32845), we proposed to extend a similar process established for chart-abstracted measure validation educational reviews to eCQM validation beginning with validation affecting the FY 2023 payment determination and subsequent years (that is, starting with data from CY 2020). While we proposed and are finalizing combining the hospital pool and generating a single score for both eCQM and chart-abstracted measure data validation, these underlying processes would still remain distinct because the underlying data being validated is distinct. We believe that expanding the educational review process to incorporate eCQMs would allow hospitals to better understand the processes and data for eCQM validation. Under our proposal, hospitals may request an educational review if they believe they have been scored incorrectly or if they have questions about their validation of eCQMs. Specifically, a hospital would have 30 calendar days to contact the VSC to solicit a written explanation of the validation performance following the date that the validation results were provided to the hospital. Because hospitals receive eCQM validation results on an annual basis, however, they would have the opportunity to request an educational review once annually following receipt of their results. Upon receipt of an educational review request, we would review the requested data elements and written justifications provided by the hospital. We also proposed to provide the results of the eCQM validation educational review to the requesting hospital, outlining the findings of whether the scores were correct or incorrect, through a CMS-approved secure file transmission process.

We invited public comment on our proposal.

Comment: Several commenters supported the proposal to extend the educational review process established for chart-abstracted measure validation to eCQM validation.

Response: We thank the commenters for their support.

After consideration of the public comments, we are finalizing our proposal as proposed to extend a similar process established for chart-abstracted measure validation educational reviews to eCQM- validation beginning with validation affecting the FY 2023 payment determination and subsequent years (that is, starting with data from CY 2020).

11. Data Accuracy and Completeness Acknowledgement (DACA) Requirements

We refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53554) for previously adopted details on DACA requirements. We did not propose any changes to this policy.

12. Public Display Requirements

a. Background

Section 1886(b)(3)(B)(viii)(VII) of the Act requires the Secretary to report quality measures of process, structure, outcome, patients' perspectives on care, efficiency, and costs of care that relate to services furnished in inpatient settings in hospitals on the internet website of CMS. Section 1886(b)(3)(B)(viii)(VII) of the Act also requires that the Secretary establish procedures for making information regarding measures available to the public after ensuring that a hospital has the opportunity to review its data before they are made public. Our current policy is to report data from the Hospital IQR Program as soon as it is feasible on CMS websites such as the *Hospital Compare* and/or its successor website after a 30-day preview period (78 FR 50776 through 50778). We refer readers to the FY 2008 IPPS/LTCH PPS final rule (72 FR 47364), the FY 2011 IPPS/LTCH PPS final rule (75 FR 50230), the FY 2012 IPPS/LTCH PPS final rule (76 FR 51650), the FY 2013 IPPS/LTCH PPS final rule (77 FR 53554), the FY 2014 IPPS/LTCH PPS final rule (78 FR 50836), the FY 2015 IPPS/LTCH PPS final rule (79 FR 50277), the FY 2016 IPPS/LTCH PPS final rule (80 FR 49712 through 49713), the FY 2018 IPPS/LTCH PPS final rule (82 FR 38403 through 38409), and the FY 2019 IPPS/LTCH PPS final rule (83 FR 41538 through 41539) for details on public display requirements. The Hospital IQR Program quality measures are typically reported on the *Hospital Compare* website at: *http://www.medicare.gov/hospitalcompare*, or on other CMS websites such as: *https://data.medicare.gov,* or their successor websites.

b. Public Reporting of eCQM Data

(1) Background

The Hospital IQR Program initiated voluntary reporting of eCQM data in the FY 2014 IPPS/LTCH PPS final rule, for the CY 2014 reporting period/FY 2016 payment determination (78 FR 50807 through 50810). At that time, we noted our belief that electronic collection and reporting of quality data using health IT would ultimately simplify and streamline quality reporting (78 FR 50807). Based on our ongoing experience with eCQMs, we continue to believe this. We also believe that electronic reporting furthers CMS and HHS policy goals to promote quality through performance measurement and, in the long-term, will both improve the accuracy of the data and reduce

[468] Hospitals may still request reconsideration even if an educational review determined that a hospital was scored correctly. Hospitals that fail Hospital IQR Program requirements, including validation, may request reconsideration after receiving notification of their payment determination for the applicable fiscal year.

reporting burden for providers. We expect that over time, hospitals will continue to leverage EHRs to capture, calculate, and electronically submit quality data, build and refine their EHR systems, and gain more familiarity with reporting eCQM data (78 FR 50807).

Since the FY 2014 IPPS/LTCH PPS final rule, the Hospital IQR Program's eCQM reporting requirements have evolved. In the FY 2016 IPPS/LTCH PPS final rule, the reporting of eCQM data became required (rather than voluntary) under the Hospital IQR Program, beginning with the CY 2016 reporting period/FY 2018 payment determination (80 FR 49693 through 49698). At the time of publication of this final rule, hospitals will have completed the reporting of eCQM data for the CY 2019 reporting period/FY 2021 payment determination by the March 2, 2020 submission deadline, the fourth year of required eCQM reporting.

Most recently, in the FY 2020 IPPS/PPS LTCH final rule, we finalized the Hospital IQR Program's reporting requirements for the CY 2022 reporting period/FY 2024 payment determination, to require that hospitals report one self-selected calendar quarter of data for: (a) three self-selected eCQMs; and (b) the Safe Use of Opioids—Concurrent Prescribing eCQM (Safe Use eCQM), for a total of four eCQMs (84 FR 42503). We refer readers to section VIII.A.10.e of the preamble of this final rule where we discuss our finalized proposal to progressively increase the quarters of eCQM data, beginning with the CY 2021 reporting period/FY 2023 payment determination.

As eCQM reporting for the Hospital IQR Program continues to advance and hospitals have gained several years of experience with successfully collecting and reporting eCQM data, we believe it is important to further our policy goals of leveraging EHR-based quality measure reporting in order to incentivize data accuracy, promote interoperability, increase transparency, and reduce long-term provider burden by providing public access to the reported eCQM data. Originally, as we incorporated eCQMs into the Hospital IQR Program on a voluntary basis, we stated that we would need time to assess the data submitted by hospitals to determine the optimal timing and transition strategy for publicly reporting eCQM data (78 FR 50813). We finalized that eCQM data reported for the Hospital IQR Program would only be publicly reported if we determine the data are accurate enough to be reported (78 FR 50818). In the FY 2016 IPPS/LTCH PPS final rule when we made the reporting of eCQMs required rather than voluntary, we stated that any data submitted electronically would not be posted on the *Hospital Compare* website at that time, and that we would address public reporting in future rulemaking, after the conclusion and assessment of the validation pilot (80 FR 49698).

The eCQM validation pilot was completed in 2015 and was addressed in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57173 through 57174). Building upon the validation pilot, we adopted procedures to begin the required validation of eCQM data under the Hospital IQR Program in the FY 2017 IPPS/LTCH PPS final rule, and stated that the first validation of eCQM data would occur in spring 2018 to validate data from the CY 2017 reporting period. As finalized in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57180 through 57181), the validation process for eCQMs was established as an incremental process to ensure hospitals are able to successfully report the medical records that correspond to the data used for eCQM measure reporting. Scoring for eCQM validation is different, because the accuracy of eCQM data submitted for validation currently does not affect a hospital's payment determination.

Our validation of eCQM data submitted from CY 2017 and CY 2018 has demonstrated that hospitals are capable of reporting eCQM measure data. Since the eCQM validation pilot, we have completed eCQM data validation from the CY 2017 reporting period and the CY 2018 reporting period, and worked with stakeholders to develop a more fulsome understanding of the eCQM data submitted. Our review of the CY 2017 and CY 2018 eCQM data submitted for validation included an analysis of over 1,200 patient episodes of care submitted by over 190 hospitals per reporting period. The majority of hospitals successfully submitted validation records within the timeline requested. The results demonstrate that over half of the measures validated had agreement rates of 80 percent or better. Agreement rates are the ratios which reflect the frequency at which a hospital's electronically reported medical record data matches results adjudicated by the Clinical Data Abstraction Center (CDAC). CMS calculates an agreement rate for each hospital. Our analysis demonstrates that hospitals continue to improve the accuracy of identifying patients appropriate for measure denominator inclusion, and tend to accurately report a wide variety of data types, including diagnoses, medications, and laboratory values. Based on our review of the CY 2017 and CY 2018 eCQM data submitted for validation, and on the finding that the majority of eCQM data was reported with agreement rates of 80 percent or better, we believe eCQM data are accurate enough to be publicly reported in aggregate. Because eCQM validation examines eCQMs on a chart-by-chart basis (as opposed to in aggregate) and affects payment, in section VIII.A.10.f. of the preamble of this final rule, we discuss the finalized proposal that eCQM validation continue to be based on successful submission of at least 75 percent of the requested medical records for eCQM validation instead of reporting accuracy. In the interests of providing data to the public as quickly as possible, and as expressed in more detail later in this section, we proposed to begin public reporting of eCQM data beginning in CY 2022 using data reported for the CY 2021 reporting period/FY 2023 payment determination.

(2) Public Reporting Requirements of eCQMs for the CY 2021 Reporting Period/FY 2023 Payment Determination and Subsequent Years

Based on our validation of eCQM data submitted from CY 2017 and CY 2018, and in alignment with our goal to encourage data accuracy and transparency, in the FY 2021 IPPS/LTCH PPS proposed rule (85 FR 32847), we proposed to publicly report eCQM data beginning with the eCQM data reported by hospitals for the CY 2021 reporting period/FY 2023 payment determination and for subsequent years. These data could be made available to the public as early as the fall of 2022. We refer readers to section VIII.A.10.f.(2). of the preamble to this final rule for a discussion of finalized chart-abstracted measure and eCQM validation weighted scoring.

As with other Hospital IQR Program measures, hospitals would have the opportunity to review their data before they are made public, as required by section 1886(b)(3)(B)(viii)(VII) of the Act, during a 30-day preview period in accordance with previously finalized policies (76 FR 51608). Measure data, including eCQM data, are published on the *Hospital Compare* and/or *https://data.medicare.gov* websites or successor websites.

We plan to continue assessing the eCQM data submitted in future years and will continue working to ensure that hospitals receive feedback on their validation results aimed at improving transparency and reporting accuracy. We are committed to providing data to patients, consumers, and providers as quickly as possible so they are empowered to make informed decisions

about their own, and their patients' healthcare.

Understanding that it will be important for hospitals and stakeholders alike to know how to find the eCQM data once they are publicly posted, we would convey any updates to the posting locations through routine communication channels to hospitals, vendors, and QIOs, including, but not limited to, issuing memos, emails, and notices on the QualityNet and eCQI Resource Center websites.

We also refer readers to section VIII.D. of the preamble of this final rule for a discussion of a similar proposal in the Medicare Promoting Interoperability Program. We solicited public comment on this proposal.

Comment: A few commenters supported public reporting of eCQM data for the CY 2021 reporting period/FY 2023 payment determination, with these data available to the public as early as Fall 2022. A commenter stated the proposal strikes a balance between reducing the administrative burden for providers of collecting and reporting eCQM data without sacrificing the meaningfulness of quality information available to the public and also ensuring that CMS has a more robust dataset to make payment decisions. A commenter finds the proposed change reasonable and appropriate and agrees that the current submission requirement does not effectively capture performance trends. A few commenters appreciated the greater public disclosure of eCQM data and agreed that the proposed change will provide a more accurate picture of overall performance for hospitals.

Response: We thank commenters for their support.

Comment: A few commenters requested additional information about the proposal to begin public reporting of eCQM data and publish data on the *Hospital Compare* and/or successor websites including information on benchmarking for peer comparisons, data interpretation by consumers and hospitals, expectations for timeliness for eCQM specification and vendor updates, and the source of the data that would be published. A commenter questioned if a target will be set for each measure and if hospital standing will be shown by percentile. A few commenters expressed concerns about consumers understanding the data and recommended CMS educate consumers about the differences in measurement methods for eCQM, chart-abstracted, and claims-based measures.

Response: We appreciate commenters' requests for additional information. Regarding benchmarks for peer comparisons, we remind readers that the Hospital IQR Program is a pay-for-reporting program, and therefore, there are no set performance targets. Similar to other publicly reported Hospital IQR Program measures, we plan to publish state and national rates for each eCQM that has a sufficient level of hospital reporting to reliably calculate and display. Similar to other publicly reported Hospital IQR Program measures, we plan to publish state and national rates for each eCQM that has a sufficient level of hospital reporting to reliably calculate and display. However, we do refer readers to the CY 2021 OPPS/ASC proposed rule where we are proposing a new methodology for the Overall Hospital Quality Star Ratings, which would use Hospital IQR Program measure data (85 FR 48996 through 49027). As proposed, these star ratings would use CMS quality data, including Hospital IQR Program and eCQM data, posted on the *Hospital Compare* website to assign hospitals a star rating and would provide meaningful peer comparisons on overall hospital performance through the application of peer grouping that allows hospital scores to be equivalent and comparable among all hospitals (85 FR 49022 through 49025). We encourage stakeholders to submit comments related to this methodology under that proposed rule.

In the FY 2021 IPPS/LTCH PPS proposed rule, we proposed to begin publicly reporting eCQM data beginning with the eCQM data reported by hospitals for the CY 2021 reporting period/FY 2023 payment determination and for subsequent years (85 FR 32847). These data could be made available to the public as early as the fall of 2022. We stated that measure data, including eCQM data, are published on the *Hospital Compare* and/or the *https://data.medicare.gov* website or successor websites (85 FR 32847). As a clarification, we plan to initially publish CY 2021 reporting period/FY 2023 payment determination eCQM data, of which there will be two quarters of data per our finalized policy in sectionVIII.A.9.e. of this final rule, on *https://data.medicare.gov*, or its successor website, before publishing it on the *Hospital Compare,* or its successor website, sometime in the future. The *https://data.medicare.gov* website, or its successor website, provides the public with access to downloadable datasets to ensure the information is publicly available. As more eCQM data are progressively reported, we will then additionally display the information on the *Hospital Compare* website, or its successor website, where comparisons of hospital performance will be available. We believe this gradual approach is appropriate because it advances our goal to accelerate the use of eCQMs in quality reporting while supporting providers as they gain familiarity and success with increasing eCQM submissions.

Regarding consumer and hospital interpretation of the eCQM data, we note that there are public resources available to help consumers better understand measurement methods for different types of measures used in the Hospital IQR Program, and we refer readers to general information about chart-abstracted measures on the *medicare.gov* website [469] and National Quality Forum website [470] as well as specifications and implementation guides for eCQMs are available on the eCQI Resource Center site (see *https://ecqi.healthit.gov/*). Additionally, when the eCQM data is published on the *Hospital Compare* and/or *https://data.medicare.gov* websites, or successor websites, we will post the same explanations and information that we currently post regarding other measure data to assist hospitals and consumers in understanding the data.[471] We understand the importance of publicly displaying eCQM data in a consumer-friendly format to provide meaningful information on hospital performance for patients, families, and caregivers. In addition to hosting consumer-friendly webinars,[472] we also refer readers to the Hospital IQR Program Resources and Quality Reporting Center Newsletters available on the QualityNet website.[473]

We also appreciate commenters' requests for additional information related to eCQM specifications and vendor updates. Under the Hospital IQR Program, hospitals are required to submit data on each specified measure in accordance with the measure's specifications for a particular period of time (84 FR 42501). This submitted data

[469] *Medicare.gov Hospital Compare* measures and current data collection periods. *https://www.medicare.gov/HospitalCompare/data/Data-Updated.html#MG3.*

[470] National Quality Forum, hospital inpatient quality measures. *http://www.qualityforum.org/Home.aspx.*

[471] Hospital Compare Data Resource. *https://www.medicare.gov/hospitalcompare/Data/Data-Updated.html#%20.*

[472] Hospital IQR Program 2020 Webinars & Calls, available at: *https://www.qualitynet.org/inpatient/iqr/webinars.*

[473] Hospital IQR Program Resources, available at: *https://www.qualitynet.org/inpatient/iqr/resources#tab1* and Quality Reporting Center Newsletters, available at: *https://www.qualitynet.org/inpatient/iqr/resources#tab3.*

will be the source of the publicly reported eCQM data. The data submission requirements, Specifications Manual, and submission deadlines are posted on the QualityNet website at: *http://www.qualitynet.org.* The technical specifications used for electronic clinical quality measures (eCQMs) are contained in the CMS Annual Update for the Hospital Quality Reporting Programs (Annual Update). We generally update the measure specifications on an annual basis through the Annual Update, which includes code updates, logic corrections, alignment with current clinical guidelines, and additional guidance for hospitals and electronic health record (EHR) vendors to use in order to collect and submit data on eCQMs from hospital EHRs. The Annual Update and implementation guidance documents are available on the Electronic Clinical Quality Improvement (eCQI) Resource Center website at: *https://ecqi.healthit.gov/.* For example, for the CY 2019 reporting period/FY 2021 payment determination, hospitals needed to submit eCQM data using the May 2018 Annual Update and any applicable addenda. We refer readers to the FY 2020 IPPS/LTCH PPS final rule for the most recent statement of the sub-regulatory process for eCQM specification updates (84 FR 42501).

Comment: Many commenters did not support public reporting of eCQM data due to concerns about eCQM data accuracy, generally. A commenter expressed concern that reporting less than 12 months of data at a time will not accurately reflect a hospital's performance. Another commenter expressed concern that the proposal to report data for a few selected eCQMs could result in publicly reported hospital performance based on as few as 12 cases.

Response: We have previously stated that eCQM data reported for the Hospital IQR Program would only be publicly reported if we determined the data are accurate enough to be reported (78 FR 50818). We refer readers to section VIII.A.9.e. of this final rule where this analysis is discussed in more detail. Based on our review of data submitted for CY 2017 and CY 2018 validation, we believe eCQM data is accurate enough to publicly report, with the majority of eCQM data with agreement rates of 80 percent or better. Our review is based upon an analysis of over 1,200 patient episodes of care submitted by over 190 hospitals per reporting period (85 FR 32846). As stated previously, we believe that public reporting of eCQM data will incentivize data accuracy and increase transparency. Additionally, in conjunction with this policy to publicly report eCQM data, in section VIII.A.9.e. of the preamble of this final rule, we have finalized a policy to progressively increase the number of quarters for which hospitals are required to report eCQM data. We believe that beginning to publicly report eCQM data as early as the fall of 2022, while progressively increasing the quarters of reported eCQM data, strikes the appropriate balance between the importance of public reporting eCQM data and stakeholder concerns regarding the burden associated with increasing the reporting of such data. We refer readers to section VIII.a.9.E. of this final rule, where we are finalizing a gradual approach to increasing the amount of eCQM data required. Taking that into account, for the CY 2021 reporting period/FY 2023 payment determination, we will publicly report two quarters of data. For the CY 2022 reporting period/FY 2024 payment determination, we will publicly report three quarters of data, and for the CY 2023 reporting period/FY 2025 payment determination and subsequent years, we will publicly report four quarters of eCQM data. The following table summarizes our finalized policy:

eCQM Data Public Reporting Requirements	
Reporting Period / Payment Determination	eCQM Data Publicly Reported
CY 2021 / FY 2023	Two Quarters of Data
CY 2022 / FY 2024	Three Quarters of Data
CY 2024 / FY 2025	Four Quarters of Data

In addition, in the FY 2010 IPPS/LTCH PPS final rule (74 FR 43881), we established that if a hospital has fewer than 25 eligible cases combined over a measure's reporting period, we would replace the hospital's data with a footnote indicating that the number of cases is too small to reliably determine how well the hospital is performing.

Comment: Some commenters did not support public reporting of eCQM data due to concerns about eCQMs being compared to similar chart-abstracted measures.

Response: As noted in the FY 2020 IPPS/LTCH PPS final rule (84 FR 42502), following the removal of several chart-abstracted clinical process of care measures in the FY 2019 IPPS/LTCH PPS final rule (83 FR 41562 through 41567), the only chart-abstracted measure for which there was also an eCQM version was PC–01. The eCQM version of the PC–01 measure was removed from the Hospital IQR Program in the FY 2019 IPPS/LTCH PPS final rule (83 FR 41569). Therefore, there are no longer any eCQMs that have similar chart-abstracted measures.

Comment: A few commenters did not support public reporting of eCQM data from the CY 2021 reporting period/FY 2023 payment determination data beginning as early as Fall 2022 due to the impact of the COVID–19 PHE on hospitals, including needing to reassign and reduce hospital staff, redirect resources, and concerns about increasing provider burden. A few commenters did not support our proposal to publicly report eCQM data due to concern about measure performance during the COVID–19 PHE. Several commenters opposed publishing data on *Hospital Compare* for the CY 2021 reporting period and recommended a delay until the CY 2022 reporting period or later due to the COVID–19 PHE that may impact the validity and reliability of data, especially when comparing performance across hospitals. A few commenters supported the proposal to publicly report eCQM data but recommended that CMS confer with hospitals to ensure data reporting for the CY 2021 reporting period will not impose unreasonable administrative burden during the COVID–19 PHE.

Response: We continue to closely monitor and analyze the impact that the unpredictable nature of the COVID–19 PHE may have on the national comparability of Hospital IQR Program measures as well as burden on hospitals. We will continue to communicate as needed through routine communication channels and to Medicare beneficiaries. We appreciate the commenters' concerns regarding the impact COVID–19 PHE has had on hospitals and have issued exceptions

related to the COVID–19 PHE in an effort to reduce burden, provide flexibility to hospitals, and help hospitals maximize their capacity to focus on patient care. Additionally, under the Hospital IQR Program ECE Policy, hospitals may request an exception if they are unable to fulfill program requirements due to extraordinary circumstances not within their control. The ECE policy includes requests related to the submission of eCQM data if a hospital experiences a hardship that prevents it from eCQM reporting (80 FR 49695). We refer readers to section VIII.A.14. for additional information. However, we do not believe that public reporting of reported eCQM data adds to that burden because public reporting will not change how hospitals submit or report their eCQM data nor the number of measures that will be required to be reported. We also note that the CY 2020 reporting period/FY 2022 payment determination data will not be publicly reported, as we are finalizing our proposal to start public reporting of eCQM data with the CY 2021 reporting period/FY 2023 payment determination. Regarding opposition to publishing eCQM data on *Hospital Compare* for the CY 2021 reporting period/FY 2023 payment determination and a recommendation to delay publishing eCQM data until the CY 2022 reporting period/FY2024 payment determination, our plan is to initially publish CY 2021 eCQM data on *https://data.medicare.gov*, or its successor website, before publishing the data on *Hospital Compare,* or its successor website, sometime in the future. We will continue to communicate as needed through routine communication channels and to Medicare beneficiaries.

Comment: Some commenters did not support public reporting of eCQM data due to the burden for some hospitals to successfully submit eCQM data.

Response: We understand commenters' concern. However, we believe we have sufficiently mitigated potential burden for hospitals by taking an incremental approach to allow hospitals to become familiar with eCQM reporting (see section VIII.A.9.e. in the preamble of this final rule for a discussion of our incremental approach). After a period of voluntary submission, which began in the CY 2014 reporting period/FY 2016 payment determination (78 FR 50818), hospitals have had several years of consistent eCQM measure submission requirements (82 FR 38361, 83 FR 41604, 84 FR 42502). Internal reviews of Hospital IQR Program eCQM submission data revealed that 97 percent of eligible hospitals successfully submitted one quarter of eCQM data for four self-selected eCQMs for the CY 2018 reporting period/FY 2020 payment determination (84 FR 42458). Additionally, we provide numerous resources to support successful eCQM data reporting[474] and host events and webinars to enhance understanding of eCQM reporting.[475]

Comment: Many commenters did not support public reporting of eCQM data as early as Fall 2022 and recommended a delay in public reporting to provide hospitals with additional time to prepare, to provide greater technical consistency, or until four quarters of data are required to be reported.

Response: We appreciate the commenters' feedback but disagree that hospitals need more time to prepare for public reporting of eCQM data. As noted previously, CY 2021 will be the fifth year that hospitals have submitted eCQM data and validation of CY 2017 and CY 2018 data has shown that a majority of eCQM data was reported with agreement rates of 80 percent or higher. We have therefore determined that eCQM data is accurate enough to begin reporting. We interpret the phrase ''greater technical consistency'' to refer to consistency in eCQM specification implementation in EHRs, consistency in the extraction of structured data for eCQM measure calculation, and consistency in testing to identify eCQM accuracy. We understand the references to be aspects of eCQM reporting and validation. In VIII.A.9.b., we reference the technical specifications for quality measures and refer readers to the FY 2019 IPPS/LTCH PPS final rule where we summarize how the Hospital IQR Program maintains the technical measure specifications for quality measures and the subregulatory process for incorporation of nonsubstantive updates to the measure specifications. We did not propose any changes to these policies. As described in section VIII.A.10. of this final rule, we are continuously working to improve eCQM validation and finalized several changes to that process. We believe the eCQM educational review process policy finalized in section in VIII.A.10.h.(2) of this final rule will support hospitals in better understanding the processes and data for eCQM validation.

Additionally, although we appreciate commenters' concern about public reporting eCQM data representing fewer than four quarters of data, we disagree that this should inhibit the advancement of public reporting of eCQM data. As stated previously, we believe it is important to provide data to the public as soon as practicable while increasing the amount of eCQM data to be reported to CMS. We believe that beginning to publicly report eCQM data as early as the fall of 2022, while progressively increasing the quarters of reported eCQM data strikes the appropriate balance between the importance of transparency by publicly reporting eCQM data and stakeholder concerns about using sufficient data for publicly reporting eCQM data.

Comment: Many commenters did not support public reporting of eCQM data beginning as early as Fall 2022, citing concern that inconsistency in the number of cases reported and the self-selection of eCQMs reported across individual hospitals might not accurately depict hospital performance. These commenters recommended aligning the start of public reporting with one consistent mandated eCQM across all hospitals.

Response: We refer readers to the FY 2020 IPPS/LTCH PPS final rule, where we previously finalized mandatory reporting of the Safe Use eCQM beginning with the CY 2022 reporting period/FY 2024 payment determination (84 FR 42503 through 42505). Therefore, beginning with public reporting in fall of 2023, there will be one eCQM that all Hospital IQR Program hospitals must submit, in addition to the other eCQMs they may self-select. We believe we should begin public reporting prior to that time (that is, fall 2022 as proposed), because our finalized public reporting policy advances our step-wise approach to achieve the goal of increased use of eCQMs in quality reporting while supporting providers as they gain familiarity and success with increasing eCQM submissions. We acknowledge the commenters' concern, and as detailed in section VIII.A.9.e. of the preamble of this final rule, we are finalizing incremental increases in eCQM data reporting requirements over a 3-year period. As we described previously, we plan to initially publish CY 2021 eCQM data, of which there will be two quarters of data per our finalized policy in sectionVIII.A.9.e. of this final rule, on *https://data.medicare.gov*, or its successor website, before publishing it on *Hospital Compare,* or its successor website, sometime in the future. The *https://data.medicare.gov* website, or its successor website, provides the public with access to downloadable datasets to ensure the information is publicly

[474] eCQI Resource Center, Tools and Resources. *https://ecqi.healthit.gov/ecqi-tools-key-resources*; eCQI Resource Center Measure Collaboration (MC) Workspace. *https://ecqi.healthit.gov/mc-workspace-2.*

[475] Upcoming events and webinars, eCQI Resource Center. *https://ecqi.healthit.gov.*

available. As more eCQM data are progressively reported, we will then additionally display the information on the *Hospital Compare* website, or its successor website, where comparisons of hospital performance will be available. We believe these finalized policies address the commenters' concerns while providing flexibility for hospitals and their vendors to build upon and utilize investments in their EHRs.

Comment: Many commenters did not support public reporting of eCQM data beginning as early as Fall 2022 due to a lack of insight on hospital performance individually or in comparison with other hospitals, and lack of analyses from prior eCQM validation efforts to provide useful feedback. A commenter noted that some hospitals have participated in eCQM audits but have not received audit results nor reports that compare an audited hospital to all reporting organizations.

Response: We thank commenters for their feedback. As with other Hospital IQR Program measures, hospitals will have the opportunity to review their eCQM data before they are made public, as required by section 1886(b)(3)(B)(viii)(VII) of the Act, during a 30-day preview period in accordance with finalized policies (76 FR 51609). Hospitals will be able to obtain feedback on their individual performance from their EHR vendors and through feedback reports provided to them from the HQR system, which contain information on file history, data accuracy, and measure outcomes.[476] Further, as noted previously, publicly reporting eCQM data on *https://data.medicare.gov* will provide hospitals with the opportunity to make comparisons to their peers before the information begins to also be publicly displayed on the *Hospital Compare* website, or its successor website. Additionally, we refer readers to the CY 2021 OPPS/ASC proposed rule where we are proposing a new methodology for the Overall Hospital Quality Star Ratings, which would use Hospital IQR Program measure data, among other CMS quality data, to summarize hospital quality measure results and provide meaningful insight on hospital performance by assigning acute care hospitals and facilities that provide acute inpatient and outpatient care in the U.S. with an overall rating between one and five whole stars (85 FR 48996 through 49027).

We interpret the commenters' inquiry about ''eCQM audits'' to refer to eCQM validation. We refer readers to section VIII.A.10.h. of the preamble of this final rule, where we finalized an education review process for validated eCQM data beginning with validation affecting the FY 2023 payment determination and subsequent years, which will provide hospitals with additional analyses of eCQM validation.

Comment: Several commenters did not support our proposal to publicly report eCQM data for the CY 2021 reporting period and asked for CMS to provide hospitals the opportunity to review the data. These commenters recommended a dry run with one quarter and two quarters of data to enable hospitals to preview their performance and national comparison data confidentially before the data are made public. Commenters recommended CMS conduct reliability analyses to determine the minimum volume of cases needed for public reporting and make the analyses public. Commenters also recommended that CMS provide clear information about how data will be presented to the public and provide information on the process to dispute publicly accessible data.

Response: We thank the commenter for the comments. As stated previously, the publicly reported eCQM data will first be reported on the *https://data.medicare.gov* website, or its successor website, which provides the public with access to downloadable datasets. As more eCQM data are progressively reported, we will then additionally display the information on the *Hospital Compare* website, or its successor website.

We interpret the term ''dry run'' to reference the dry run provision in the Blueprint for the CMS Measures Management System, utilized during the first use of a measure in a CMS program or first results reporting.[477] We do not believe a dry run before the start of public reporting is necessary and have determined that the eCQM data are accurate enough to begin reporting. As noted previously, the CY 2021 reporting period/FY 2023 payment determination will be the fifth year that hospitals have submitted eCQM data and for each year, we have provided confidential feedback reports on the eCQM data file submissions to each individual hospital.[478] Internal review of eCQM submission data revealed that 97 percent of eligible hospitals successfully submitted one quarter of eCQM data for four self-selected eCQMs for the CY 2018 reporting period/FY2020 payment determination (84 FR 42458). We refer readers to section VIII.A.9.e. of this final rule where this analysis is discussed in more detail. In addition, as previously stated, as with other Hospital IQR Program measures, hospitals would have the opportunity to preview their eCQM data before they are made public, as required by section 1886(b)(3)(B)(viii)(VII) of the Act, during a 30-day preview period in accordance with previously finalized policies (76 FR 51608). Additionally, we refer readers to the CY 2021 OPPS/ASC proposed rule where we are proposing a new methodology for the Overall Hospital Quality Star Ratings, which would use Hospital IQR Program measure data (85 FR 48996 through 49027). As proposed, these star ratings would use CMS quality data, including Hospital IQR Program and eCQM data, posted on the *Hospital Compare* website to assign hospitals a star rating and would provide meaningful peer comparisons on overall hospital performance through the application of peer grouping that allows hospital scores to be equivalent and comparable among all hospitals (85 FR 49022 through 49025). We encourage stakeholders to submit comments related to this methodology under that proposed rule.

We thank commenters for their recommendation to conduct measure reliability analyses to determine the minimum number of cases needed for public reporting. Validation of CY 2017 reporting period/FY 2019 payment determination data and CY 2018 reporting period/FY 2020 payment determination data has shown that a majority of eCQM data was reported with agreement rates of 80 percent or higher. Our review is based upon an analysis of over 1,200 patient episodes of care submitted by over 190 hospitals per reporting period (85 FR 32846). We refer readers to section VIII.A.10. of this final rule where this is discussed in more detail. We note that in the FY 2010 IPPS/LTCH PPS final rule (74 FR 43881), we established that if a hospital has fewer than 25 eligible cases combined over a measure's reporting period, we would replace the hospital's data with a footnote indicating that the number of cases is too small to reliably

[476] CMS Hospital Quality Reporting System Now Accepting CY 2019 eCQM Data, available at: *https://ecqi.healthit.gov/cms-hospital-quality-reporting-system-now-accepting-cy-2019-ecqm-data.*

[477] Blueprint for CMS Measures Management System, *https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/MMS/Downloads/Blueprint.pdf.*

[478] *https://www.qualityreportingcenter.com/globalassets/iqr_resources/030819/cy-2019-ecqm-ehr-reports-overview_vfinal508.pdf.*

determine how well the hospital is performing.

Generally speaking, measure data, including eCQM data, are published on the *Hospital Compare* and/or *https://data.medicare.gov* websites or successor websites. As discussed above, we are clarifying that we plan to initially publish CY 2021 reporting period/FY 2023 payment determination eCQM data, of which there will be two quarters of data per our finalized policy in sectionVIII.A.9.e. of this final rule, on *https://data.medicare.gov*, or its successor website, before publishing it on *Hospital Compare,* or its successor website, sometime in the future. The *https://data.medicare.gov* website, or its successor website, provides the public with access to downloadable datasets to ensure the information is publicly available. As more eCQM data are progressively reported, we will then additionally display the information on the *Hospital Compare* website, or its successor website.

Comment: Several commenters opposed publishing eCQM data on *Hospital Compare* citing concerns about data context as it pertains to safety net hospitals.

Response: We thank commenters for their feedback concerning the public reporting of eCQM data as it pertains to safety net hospitals. We plan to monitor the initiation of public reporting of eCQM data and welcome continued feedback from all stakeholders through webinars, listservs, and help desk questions as information shared can be used to inform public reporting processes over time. We will continue to monitor trends in performance, including that of safety net hospitals. Additionally, we refer readers to the CY 2021 OPPS/ASC proposed rule, where we are proposing a new methodology for the Overall Hospital Quality Star Ratings, which would use Hospital IQR Program measure data (85 FR 48996 through 49027). As proposed, these star ratings would use CMS quality data, including Hospital IQR Program and eCQM data, posted on the *Hospital Compare* website to assign hospitals a star rating. This would provide meaningful peer comparisons on overall hospital performance through the application of peer grouping that allows hospital scores to be equivalent and comparable among all hospitals (85 FR 49022 through 49025). We encourage stakeholders to submit comments related to this methodology under that proposed rule.

After consideration of the public comments, we are finalizing our proposal as proposed to publicly report eCQM data beginning with eCQM data reported by hospitals for the CY 2021 reporting period/FY 2023 payment determination and for subsequent years. As a clarification, we plan to initially publish CY 2021 reporting period/FY 2023 payment determination eCQM data, of which there will be two quarters of data per our finalized policy in section VIII.A.9.e. of this final rule, on *https://data.medicare.gov*, or its successor website, before publishing it on the *Hospital Compare* website, or its successor website, sometime in the future. We also refer readers to section VIII.D.6.c. of this final rule where we are also finalizing similar polices under the PI Program.

c. Overall Hospital Quality Star Rating

As mentioned above, in the CY 2021 OPPS/ASC proposed rule, we proposed a methodology to calculate the Overall Hospital Quality Star Rating (Overall Star Rating) (85 FR 48996 through 49027). The Overall Star Rating would utilize data collected on hospital inpatient and outpatient measures that are publicly reported on *Hospital Compare* or its successor site through CMS quality programs, including data from the Hospital IQR Program. We refer readers to section XVI. Proposed Overall Hospital Quality Star Rating Methodology for Public Release in CY 2021 and Subsequent Years of that proposed rule for details.

13. Reconsideration and Appeal Procedures

We refer readers to the FY 2012 IPPS/LTCH PPS final rule (76 FR 51650 through 51651), the FY 2014 IPPS/LTCH PPS final rule (78 FR 50836), and 42 CFR 412.140(e) for details on reconsideration and appeal procedures for the FY 2017 payment determination and subsequent years. We did not propose any changes to this policy.

14. Hospital IQR Program Extraordinary Circumstances Exceptions (ECE) Policy

We refer readers to the FY 2012 IPPS/LTCH PPS final rule (76 FR 51651 through 51652), the FY 2014 IPPS/LTCH PPS final rule (78 FR 50836 through 50837), the FY 2015 IPPS/LTCH PPS final rule (79 FR 50277), the FY 2016 IPPS/LTCH PPS final rule (80 FR 49713), the FY 2017 IPPS/LTCH PPS final rule (81 FR 57181 through 57182), the FY 2018 IPPS/LTCH PPS final rule (82 FR 38409 through 38411), and 42 CFR 412.140(c)(2) for details on the current Hospital IQR Program ECE policy. We also refer readers to the QualityNet website at: *http://www.QualityNet.org/* for our current requirements for submission of a request for an exception. We did not propose any changes to this policy.

B. Changes to the PPS-Exempt Cancer Hospital Quality Reporting (PCHQR) Program

1. Background

The PPS-Exempt-Cancer Hospital Quality Reporting (PCHQR) Program is authorized by section 1866(k) of the Act, and it applies to hospitals described in section 1866(d)(1)(B)(v) (referred to as ''PPS-Exempt Cancer Hospitals'' or ''PCHs''). Under the PCHQR Program, PCHs must submit to the Secretary data on quality measures with respect to a program year in a form and manner, and at a time, specified by the Secretary.

For additional background information, including previously finalized measures and other policies for the PCHQR Program, we refer readers to the following final rules: The FY 2013 IPPS/LTCH PPS final rule (77 FR 53556 through 53561); the FY 2014 IPPS/LTCH PPS final rule (78 FR 50838 through 50846); the FY 2015 IPPS/LTCH PPS final rule (79 FR 50277 through 50288); the FY 2016 IPPS/LTCH PPS final rule (80 FR 49713 through 49723); the FY 2017 IPPS/LTCH PPS final rule (81 FR 57182 through 57193); the FY 2018 IPPS/LTCH PPS final rule (82 FR 38411 through 38425); the FY 2019 IPPS/LTCH PPS final rule (83 FR 41609 through 41624); CY 2019 OPPS/ASC final rule with comment period (83 FR 59149 through 59154); and the FY 2020 IPPS/LTCH PPS final rule (84 FR 42509 through 42524).

In the FY 2021 IPPS/LTCH PPS proposed rule, we proposed to incorporate refinements to two existing measures in the PCHQR Program measure set—the Catheter-Associated Urinary Tract Infection (CAUTI) Outcome Measure (NQF #0138) and the Central Line-Associated Bloodstream Infection (CLABSI) Outcome Measure (NQF #0139). While we did not propose to add any new measures or remove any existing measures, we continue to assess the PCHQR Program measure set's alignment with the Meaningful Measures Initiative, which is discussed in more detail in I.A.2. of the preamble of the FY 2019 IPPS/LTCH PPS final rule (83 FR 41147 through 41148).

2. Summary of PCHQR Program Measures for the FY 2023 Program Year

The table in this section of this rule summarizes the PCHQR Program measure set for the FY 2023 program year.

BILLING CODE 4120–01–P

FY 2023 PCHQR Program Measure Set

Short Name	NQF Number	Measure Name
Safety and Healthcare-Associated Infection (HAI) Measures		
CAUTI	0138	National Healthcare Safety Network (NHSN) Catheter-associated Urinary Tract Infection (CAUTI) Outcome Measure
CLABSI	0139	National Healthcare Safety Network (NHSN) Central line-associated Bloodstream Infection (CLABSI) Outcome Measure
HCP	0431	Influenza Vaccination Coverage Among Healthcare Personnel
Colon and Abdominal Hysterectomy SSI	0753	American College of Surgeons – Centers for Disease Control and Prevention (ACS-CDC) Harmonized Procedure Specific Surgical Site Infection (SSI) Outcome Measure [currently includes SSIs following Colon Surgery and Abdominal Hysterectomy Surgery]
MRSA	1716	National Healthcare Safety Network (NHSN) Facility-wide Inpatient Hospital-onset Methicillin-resistant *Staphylococcus aureus* (MRSA) Bacteremia Outcome Measure
CDI	1717	National Healthcare Safety Network (NHSN) Facility-wide Inpatient Hospital-onset *Clostridium difficile* Infection (CDI) Outcome Measure
Clinical Process/Oncology Care Measures		
EOL-Chemo	0210	Proportion of Patients Who Died from Cancer Receiving Chemotherapy in the Last 14 Days of Life
EOL-Hospice	0215	Proportion of Patients Who Died from Cancer Not Admitted to Hospice
N/A	0383	Oncology: Plan of Care for Pain – Medical Oncology and Radiation Oncology
Intermediate Clinical Outcome Measures		
EOL-ICU	0213	Proportion of Patients Who Died from Cancer Admitted to the ICU in the Last 30 Days of Life
EOL-3DH	0216	Proportion of Patients Who Died from Cancer Admitted to Hospice for Less Than Three Days
Patient Engagement/Experience of Care Measure		
HCAHPS*	0166	HCAHPS (Hospital Consumer Assessment of Healthcare Providers and Systems) Survey
Claims Based Outcome Measures		
N/A	N/A	Admissions and Emergency Department (ED) Visits for Patients Receiving Outpatient Chemotherapy
N/A	3188	30-Day Unplanned Readmissions for Cancer Patients
N/A	N/A	Surgical Treatment Complications for Localized Prostate Cancer

***Note:** In the FY 2020 IPPS/LTCH PPS final rule (84 FR 42509 through 42524), we finalized our proposal to remove the "pain management questions" from the HCAHPS survey beginning with October 2019 discharges.

BILLING CODE 4120–01–C

3. Refinements to the Catheter-Associated Urinary Tract Infection (CAUTI) Outcome Measure (NQF #0138) and the Central Line-Associated Bloodstream Infection (CLABSI) Outcome Measure (NQF #0139) Beginning With the FY 2023 Program Year

a. Background

In the FY 2021 IPPS/LTCH PPS proposed rule, we provided an overview of the history of CAUTI and CLABSI measures in the PCHQR Program (85 FR 32848 through 32849). Specifically, in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53556 through 53559), we adopted the Catheter-associated Urinary Tract Infection (CAUTI) (NQF #0138) and Central line-associated Bloodstream Infection (CLABSI) (NQF #0139) measures for use in the PCHQR Program beginning with the FY 2014 program year, and we refer readers to this rule for a detailed discussion of these measures. In the FY 2019 IPPS/LTCH PPS proposed rule (83 FR 20503), we proposed to remove both measures from the program because we believed that removing the measures would reduce program costs and complexities associated with the use of these data by patients in decision-making. We stated that we believed the costs, coupled with the high technical and administrative burden on PCHs associated with collecting and reporting the measure data, outweighed the benefits of their

continued use. We further stated that it had become difficult for CMS to publicly report data on these measures due to the low volume of data produced and reported by the small number of PCHs that participate in the PCHQR Program, and that we lacked an appropriate methodology to publicly report these data. For these reasons, we believed that the measures should be removed beginning with the FY 2021 program year under measure removal Factor 8: The costs associated with the measures outweighed the benefit of their continued use in the program.

However, after considering the comments we had received on this proposal and other updated information, in the CY 2019 OPPS/ASC final rule (83 FR 59150), we decided to retain both the CAUTI and CLABSI measures in the PCHQR Program. We stated that since the time we made our proposal, we had conducted our own analyses regarding the continued use of the CAUTI and CLABSI measures using updated CDC data. We also stated that although the CDC had previously believed that oncology unit locations, including those in PCHs, had a higher incidence of infections than other types of units in acute care hospitals, the CDC now believes, after controlling for location type, that oncology unit locations in PCHs do not have a higher incidence of infection than oncology units within other acute care hospitals. We stated that the CDC's updated analysis also produced a consistent finding that cancer hospital status was not a significant risk factor in any of the device-associated HAI risk models, including those used for CAUTI and CLABSI. Lastly, we stated that we believe these results indicate that reporting PCH CAUTI and CLABSI performance measure data is just as important as reporting acute care hospital CAUTI and CLABSI performance measure data (83 FR 59151). Based on this updated information, as well as the public comments, we concluded that the importance of emphasizing patient safety in quality care delivery justified retaining the CAUTI and CLABSI measures in the PCHQR Program (83 FR 59151).

We also noted in the CY 2019 OPPS/ASC PPS final rule that the CAUTI and CLABSI measure specifications had been recently updated to use new standard infection ratio (SIR) calculations that can be applied to cancer hospitals, including PCHs. We noted that this updated SIR calculation methodology is different than the methodology we are currently using to calculate the CAUTI and CLABSI measures. Additionally, the use of raw location-stratified rates in the current methodology had created a concern that the CAUTI and CLABSI data calculated under the current methodology might appear to inaccurately show lower performance among PCHs than the performance reported by acute care hospitals that are reporting CAUTI and CLABSI data using the updated methodology (83 FR 59151). We stated that we believed the updated methodology addresses this concern because the updates include rates that are stratified by patient care locations within PCHs, without the use of predictive models or comparisons in the rate calculations. We also stated that we intended to propose to adopt these updated versions of the CAUTI and CLABSI measures, and that we would work closely with the CDC to assess the updated risk adjusted versions of these measures (83 FR 59151).

b. Updates to the CAUTI and CLABSI Measures

In the FY 2021 IPPS/LTCH PPS proposed rule, we discussed our proposal to refine the CAUTI and CLABSI measures by adopting the updated SIR calculation methodology. This updated methodology was developed by the CDC and calculates rates that are stratified by patient care locations within PCHs, without the use of predictive models or comparisons in the rate calculations (85 FR 32849 through 32850).

(1) Description of the CDC Re-Baselining Efforts

The CDC's National Healthcare Safety Network (NHSN) uses healthcare-associated infection (HAI) incidence data from a prior time period and a standard population of facilities that report data to the NHSN (such as all healthcare facilities of a specified type) to establish a HAI baseline for those facilities, including a HAI baseline for CAUTI and CLABSI.[479] The NHSN then uses that baseline to calculate the SIR. For both of these measures, the SIR is calculated as a comparison of the actual number of HAIs reported by a facility with the number that would be predicted by the HAI baseline.[480]

In 2016, the CDC used 2015 HAI incidence data to update both the source of aggregate data and the risk adjustment methodology used to create the HAI baselines. As a result, the CDC established new HAI baselines for purposes of calculating the SIRs used to calculate HAI measures, including the CAUTI and CLABSI measures.[481] The CDC's decision to use 2015 data was multifactorial and relied partially on its implementation of updated surveillance protocols and definitions as well as increased reporting of certain HAI types by additional healthcare facility types.[482]

During its re-baselining effort, the CDC determined that it could generate HAI baselines that produce more accurate SIR calculations for the 17 hospitals that enroll in NHSN as facility type ''HOSP–ONC'' (11 PCHs and 6 other hospitals that classify themselves as cancer hospitals but are not PCHs for purposes of Medicare) by standardizing the new HAI baselines across infection type and facility type.[483] Therefore, the CDC created a risk adjustment model for acute care hospitals and determined that it could include the 17 cancer hospitals in that risk adjustment model because it found that cancer hospital status was not a significant risk factor that would preclude their inclusion.[484]

The CDC also evaluated what additional oncology-specific patient locations (for example, hematology/oncology ward, medical oncology ICU) should be adjusted for when deriving SIR calculations for hospitals in the acute care risk adjustment model. The CDC considered this because examining patient care location allows for the assessment of which patient populations are at higher risk for CAUTI and CLABSI incidences. Further, stakeholders had previously raised concerns that the omission of a risk adjustment for oncology-specific patient care locations in the SIR calculations could inaccurately appear to show lower performance (that is, higher SIR) on the HAI measures, including CLABSI and CAUTI, by PCHs and other cancer hospitals than other acute care hospitals; adjusting for oncology-specific patient locations as a part of the new risk model mitigates this concern. When the CDC stratified by location within the acute care hospital risk adjustment model, it found that in comparison to non-oncology-specific patient locations, the oncology-specific locations, particularly those designated as oncology units,[485] produced statistically significant differences in HAI measure performance. As a result, the CDC further updated the acute care

[479] Centers for Disease Control and Prevention. ''Paving Path Forward: 2015 Rebase line.'' Available at: *https://www.cdc.gov/nhsn/2015rebaseline/index.html.*

[481] *Ibid.*

[482] Summary of CDC's Rebaseline Analysis of NHSN HAI Data. Updated September 7, 2018.

[483] Ibid.

[484] Ibid.

[485] A ward is a floor or section of a hospital or outpatient clinic where cancer patients are treated.

risk adjustment model to stratify the HAI baselines by oncology-specific location types.[486]

(2) CAUTI and CLABSI Results Using the Updated HAI Baselines That Incorporate New Risk-Adjustment

We indicated in the FY 2021 IPPS/LTCH PPS proposed rule that the CDC tested the CAUTI and CLABSI measures based on the updated HAI baselines that incorporate the new risk adjustment described above (85 FR 32850). According to the CDC's calculation methodology, when assessing the performance results for the CAUTI or CLABSI measure, a p-value of 0.05 or less was noted to be statistically significant.[487] They noted that when assessed based on the adjustment for oncology unit, both the CAUTI and CLABSI measures yielded p-values of <0.0001.[488] This means that within the acute care hospital risk adjustment model, the categorization of a patient care location as an oncology unit is a statistically significant predictor of CAUTI and CLABSI incidence. Given that the majority of reporting locations within PCHs would be classified as oncology units, the application of this additional risk adjustment by location within the acute care hospital risk adjustment model will result in a more accurate assessment of the incidence of CAUTIs and CLABSIs within PCHs.

(3) Measure Applications Partnership Analysis of the Refinements to the CAUTI and CLABSI Measures

In compliance with section 1890A(a)(2) of the Act, we included the updated versions of the CAUTI and CLABSI outcome measures in a publicly available document entitled ''2019 Measures Under Consideration Spreadsheet.'' [489] This is a list of quality and efficiency measures under consideration for use in various Medicare programs, which the Measure Applications Partnership (MAP) reviews. The MAP supported the use of both refined measures in the PCHQR Program for rulemaking.[490]

Regarding the CAUTI measure, the MAP indicated that because CAUTIs are the most common HAI, hospitals should continue working to reducing their incidence and prevalence across all inpatient settings. The MAP also determined that even though CAUTI is a chart-abstracted measure that is burdensome to collect, the benefit of collecting data on this measure outweighs that cost.[491] In addition, the MAP acknowledged it is imperative to evaluate CAUTI incidence in all inpatient settings, including cancer hospitals. The revised version of this measure was endorsed by the National Quality Forum on October 23, 2019.[492] We refer readers to NQF's Final Report—Spring 2019 Cycle [493] for a more detailed discussion of this measure.

For the CLABSI measure, the MAP also determined that even though the measure is chart-abstracted and burdensome to collect, the benefit of collecting data on this measure outweighs the cost.[494] The MAP further noted that this measure is pertinent in the healthcare domain of patient safety and suggested that the CDC consider the differences in types of cancer and/or differences in types of cancer treatments when assessing the measure's performance in the future.[495] Like the CAUTI measure, we note that the revised version of this measure was endorsed by the NQF on October 23, 2019.[496] We refer readers to NQF's Final Report—Spring 2019 Cycle [497] for a more detailed discussion of this measure.

c. Summary of Proposal

In the FY 2021 IPPS/LTCH PPS proposed rule, we proposed to refine the CAUTI and CLABSI measures by adopting the updated measure specifications that use the new SIR calculation methodology, which calculates measure rates that are stratified by patient care locations (specifically, oncology units) within PCHs (85 FR 32850). We indicated that we believe it is important to continue to measure CAUTI and CLABSI incidence because of the implications these two measures have in the patient safety domain of healthcare. We also believe it is important to provide stratified performance results where appropriate for the cohort of patients with cancer, which is why we believe that applying the CDC's update of the risk-adjustment model (which will ultimately yield more precise SIR results) is appropriate for the CAUTI and CLABSI measures. Implementation of the refined, stratified measures will make the measures more representative of the quality of care provided at PCHs, particularly when performance rates are compared to other acute care hospitals. Further, stratified performance results will more accurately demonstrate the incidence of CAUTI and CLABSI for comparison among PCHs. In addition, implementation of the refined versions would address previous stakeholder requests to use a statistically significant method for public reporting of these measures. Lastly, implementing the refined versions of these measures means that the PCHQR Program would be utilizing the most recently NQF-endorsed versions of these measures.

We invited public comment on our proposal to refine the Catheter-associated Urinary Tract Infection (CAUTI) (NQF #0138) and Central line-associated Bloodstream Infection (CLABSI) (NQF #0139) measures to utilize the updated HAI baselines that incorporate an updated risk adjustment approach, as developed by the CDC, for the FY 2023 program year and subsequent years.

Comment: Several commenters supported the proposed refinements to the CAUTI and CLABSI measures. Commenters expressed that reporting CAUTI and CLABSI performance data for PCHs remains no less important than reporting acute care hospital CAUTI and CLABSI data. Commenters also noted that avoiding HAIs is an appropriate goal across all hospitals, especially PCHs where safety concerns for patients with cancer and related conditions may be heightened.

Response: We thank the commenters for their support.

Comment: Several commenters encouraged CMS to consider future refinements for these measures. While the refined measures have some level of adjustment for oncology units, commenters stated that the adjustments are not detailed enough to account for patients who suffer from significantly complex, high risk cancers. Further, while Standardized Infection Ratios (SIRs) and Adjusted Ranking Metrics (ARMs) are among the best benchmarking tools available, commenters requested that CMS base

SIRs and ARMs solely on cancer hospitals with inpatient units. If the calculation of SIRs and ARMs includes all acute care hospitals, commenters asked that CMS report these scores by individual NHSN locations to maximize interpretability and utility for quality improvement purposes. Commenters also cautioned against reporting comparisons between the cancer hospitals and all acute care hospitals. Specifically, commenters indicated that cancer hospital patient populations have a greater propensity to be immunocompromised and, consequently, comparisons between other types of hospitals and cancer hospitals would not be appropriate as rates in cancer hospitals would generally trend higher. Lastly, commenters indicated that not all PPS-Exempt and other cancer hospitals are homogenous in their services, patient populations, and case mixes. They stated that some hospitals may not generate enough data to report on a quarterly basis and that a more granular presentation of data, such as comparing similar units across hospitals, may enhance insights for consumers.

Response: We thank the commenters for their feedback. Regarding the concern about the refinements to the measures being insufficient to account for complex, high risk forms of cancer, we believe that the updated measure specifications that use the new SIR calculation methodology will allow for a more representative comparison of performance of the CAUTI and CLABSI measures in PCH settings. We will remain vigilant of data trends and continue to work cooperatively with the CDC to monitor whether or not additional refinements are warranted after an evaluation of a years' worth of performance data. We will pay particular attention to PCHs' ability to collect and report sufficient data, as we are cognizant of the issues commenters raised around generating enough data for quarterly reporting. We want to clarify that for the refined versions of the CAUTI and CLABSI measures, we only intend to calculate Standardized Infection Ratios (SIRs) and not Adjusted Ranking Metrics (ARMs) as commenters mentioned. As such, pertaining to the inclusion of acute care hospitals scores in the calculation of SIR rates, for the PCHQR Program, we intend to calculate and report PCH scores. Further, to the point of level of granularity of data for PCHs, we intend to report hospital-level SIRs that are calculated using a risk model that is applied at the individual location level (that is, oncology units). Lastly, we recognize the importance of comparability among PCHs (for example comparison of oncology units). Likewise, we will publicly report data that reflects the performance of the PCHQR Program participants. That stated, while we currently do not display comparative data of PCHs to acute care facilities for any of the measures in the PCHQR Program's measure set, we continue to believe the ability to compare data across hospitals is important for those who wish to examine general performance trends for the CAUTI and CLABSI measures.

Comment: A commenter expressed concern that the updated risk-adjustment model does not account for the impact of COVID–19. The commenter agreed that stratifying data by patient care location would yield a more statistically significant predictor of CAUTIs and CLABSIs. However, the commenter asserted that this stratification would not take into consideration COVID–19 surge conditions. Specifically, increased demand on emergency departments (EDs) and intensive care units (ICUs) have required hospitals—especially those located in COVID–19 ''hotspots''—to transfer patients to other departments or units within the hospital. The commenter also noted that COVID–19 contributed to an increase in CLABSIs in acute care facilities, due in large part to a surge in hospital capacity, with most infections occurring among patients diagnosed with COVID–19. As such, the commenter shared concern that the increase in CLABSIs may impose a greater burden on hospitals located in hotspots.

Response: We appreciate the commenter's feedback. We note that the updated risk model adjusts for several risk factors that have been found to be significantly associated with differences in infection incidence. Additionally, the CDC is collecting an optional data element regarding a patient's concurrent COVID–19 infection. While this data element is not included in the updated risk model, it can be utilized to indicate confirmed COVID–19 infection for patients with HAIs. Data reported for this element will enable a better understanding of the possible association between COVID–19 and HAIs. That stated, it is also important to note that COVID–19 status is not available for every hospitalized patient with a CAUTI or CLABSI incident, which will limit analysis opportunities, therefore determination of associated risk may not be possible. Regarding increased demand on hospital units and potential reporting burden surge for hospitals in hot spots, we note that we will not require hospitals to begin data collection for the refined CAUTI and CLABSI measures until CY 2021. Recognizing the potential for COVID–19 to impact data collection in CY 2021, we will closely monitor the reporting capacity of participating PCHs and if COVID–19 poses issues.

After consideration of the public comments received, we are finalizing our proposal to refine the Catheter-associated Urinary Tract Infection (CAUTI) (NQF #0138) and Central line-associated Bloodstream Infection (CLABSI) (NQF #0139) measures to utilize the updated HAI baselines that incorporate an updated risk adjustment approach, as developed by the CDC, for the FY 2023 program year and subsequent years.

4. Maintenance of Technical Specifications for Quality Measures

We maintain and periodically update technical specifications for the PCHQR Program measures. The specifications may be found on the QualityNet website at *https://www.qualitynet.org/pch*. We also refer readers to the FY 2015 IPPS/LTCH PPS final rule (79 FR 50281), where we adopted a policy under which we use a subregulatory process to make nonsubstantive updates to measures used for the PCHQR Program. We did not propose any changes to our processes for maintaining technical specifications for PCHQR Program measures.

5. Public Display Requirements

a. Background

Under section 1866(k)(4) of the Act, we are required to establish procedures for making the data submitted under the PCHQR Program available to the public. Such procedures must ensure that a PCH has the opportunity to review the data that are going to be made public with respect to that PCH, prior to such data being made public. Section 1866(k)(4) of the Act also provides that the Secretary must report quality measures of process, structure, outcome, patients' perspectives on care, efficiency, and costs of care that relate to services furnished in such hospitals on the CMS website.

In the FY 2017 IPPS/LTCH PPS final rule (81 FR 57191 through 57192), we finalized that although we would continue to use rulemaking to establish what year we would first publicly report data on each measure, we would publish the data as soon as feasible during that year. We also stated that our intent is to make the data available on at least a yearly basis, and that the time period for PCHs to review their data before the data are made public would

be approximately 30 days in length. We announce the exact data review and public reporting timeframes on a CMS website and/or on our applicable listservs.

In the FY 2020 IPPS/LTCH PPS final rule (84 FR 42520 through 42523), we finalized that we would begin to publicly display data on a number of PCH measures as soon as is practicable due to planned website improvements that we stated could delay our ability to begin the public display. In October 2019, we began to publicly report data on the following four HAI measures: (1) Specific Surgical Site Infection (SSI) Outcome Measure (NQF #0753); (2) NHSN Facility-wide Inpatient Hospital-onset Methicillin resistant Staphylococcus aureus Bacteremia Outcome Measure (NQF #1716); (3) NHSN Facility-wide Inpatient Hospital-onset Clostridium difficile Infection (CDI) Outcome Measure (NQF #1717); and (4) NHSN Influenza Vaccination Coverage Among Healthcare Personnel (NQF #0431).

In the table that follows, we summarize our current public display requirements for the PCHQR Program measures. The PCHQR measures' performance data is made publicly available on the Hospital Compare website or its successor. *https://www.medicare.gov/hospitalcompare/cancer-measures.html.*

Finalized Public Display Requirements for PCHQR Program

Summary of Finalized Public Display Requirements	
Measures	**Public Reporting**
● HCAHPS (NQF #0166)● Oncology: Plan of Care for Pain – Medical Oncology and Radiation Oncology (NQF #0383)	2016 and subsequent years
● External Beam Radiotherapy for Bone Metastases (EBRT) (NQF #1822)*	2017 and subsequent years
● American College of Surgeons – Centers for Disease Control and Prevention (ACS-CDC) Harmonized Procedure Specific Surgical Site Infection (SSI) Outcome Measure [currently includes SSIs following Colon Surgery and Abdominal Hysterectomy Surgery] (NQF #0753) ● National Healthcare Safety Network (NHSN) Facility-wide Inpatient Hospital-onset Methicillin-resistant *Staphylococcus aureus* Bacteremia Outcome Measure (NQF #1716) ● National Healthcare Safety Network (NHSN) Facility-wide Inpatient Hospital-onset *Clostridium difficile* Infection (CDI) Outcome Measure (NQF #1717) ● National Healthcare Safety Network (NHSN) Influenza Vaccination Coverage Among Healthcare Personnel (NQF #0431)	2019 and subsequent years
● Admissions and Emergency Department (ED) Visits for Patients Receiving Outpatient Chemotherapy**	April 2020 and subsequent years
● CAUTI (NQF #0138) ● CLABSI (NQF #0139)	Deferred until CY 2022

**Measure finalized for removal, beginning with the FY 2022 program year.*

*** Since we issued the FY 2021 IPPS/LTCH PPS Proposed Rule, we have begun to publicly display data on this measure.*

b. Public Display of the Refined Versions of the CAUTI and CLABSI Measures

As described in section VIII.B.3.b. of the preamble of the FY 2021 IPPS/LTCH PPS proposed rule, we proposed to adopt refined versions of the CAUTI and CLABSI measures in the PCQHR Program beginning with the FY 2023 program year (85 FR 32851). We also proposed that we would begin publicly reporting the refined versions of the CAUTI and CLABSI measures in the fall of 2022 and that we would not publicly report the current versions of those measures because, as described above, the refined versions of the measures more accurately capture the quality of care furnished at PCHs (85 FR 32851).

We invited public comment on these proposals.

Comment: Commenters supported the proposal to begin publicly reporting the refined measures in the fall of 2022. Commenters encouraged CMS to evaluate the inpatient volumes of each cancer hospital when determining specific time periods for public reporting, realizing that some cancer hospitals may have insufficient inpatient volumes to generate quarterly SIRs. Commenters also suggested that Hospital Compare provide comparisons of CAUTI and CLABSI rates among the PPS-exempt cancer hospitals themselves.

Response: We thank the commenters for their support. We recognize the importance of being able to provide sufficient data and will monitor performance trends prior to publicly reporting data on the refined CAUTI and CLABSI measures. We also reiterate that we intend to publicly report the CAUTI and CLABSI performance data for the PCHs participating in the PCHQR Program to enable data comparisons among PCHs.

After consideration of the public comments received, we are finalizing our proposal to begin publicly reporting the refined CAUTI and CLABSI measures in the fall of 2022. We are also finalizing our proposal to not publicly report the current versions of the measures.

6. Form, Manner, and Timing of Data Submission

Data submission requirements and deadlines for the PCHQR Program are posted on the QualityNet website. We did not propose any updates to our previously finalized data submission requirements and deadlines.

7. Extraordinary Circumstances Exceptions (ECE) Policy Under the PCHQR Program

We refer readers to the FY 2019 IPPS/LTCH PPS final rule (83 FR 41623 through 41624), for a discussion of the Extraordinary Circumstances Exceptions (ECE) policy under the PCHQR Program. We did not propose any changes to this policy.

C. Long-Term Care Hospital Quality Reporting Program (LTCH QRP)

1. Background

The Long-Term Care Hospital Quality Reporting Program (LTCH QRP) is authorized by section 1886(m)(5) of the Act, and it applies to all hospitals certified by Medicare as long-term care hospitals (LTCHs). Under the LTCH QRP, the Secretary must reduce by 2 percentage points the annual payment update to the LTCH PPS standard Federal rate for discharges for an LTCH during a fiscal year if the LTCH has not complied with the LTCH QRP requirements specified for that fiscal year. For more information on the background for the LTCH QRP, we refer readers to the FY 2012 IPPS/LTCH PPS final rule (76 FR 51743 through 51744), the FY 2013 IPPS/LTCH PPS final rule (77 FR 53614), the FY 2014 IPPS/LTCH PPS final rule (78 FR 50853), the FY 2015 IPPS/LTCH PPS final rule (79 FR 50286), the FY 2016 IPPS/LTCH PPS final rule (80 FR 49723 through 49725), the FY 2017 IPPS/LTCH PPS final rule (81 FR 57193), the FY 2018 IPPS/LTCH PPS final rule (82 FR 38425 through 38426), the FY 2019 IPPS/LTCH PPS final rule (83 FR 41624), and the FY 2020 IPPS/LTCH PPS final rule (84 FR 42524).

2. General Considerations Used for the Selection of Quality Measures for the LTCH QRP

For a detailed discussion of the considerations we historically use for the selection of LTCH QRP quality, resource use, and other measures, we refer readers to the FY 2016 IPPS/LTCH PPS final rule (80 FR 49728). For further information on how measures are considered for removal, we refer readers to the regulations at 42 CFR 412.560(b)(3).

3. Quality Measures Currently Adopted for the FY 2022 LTCH QRP

The LTCH QRP currently has 17 measures for the FY 2022 LTCH QRP, which are set out in the following table:

Quality Measures Currently Adopted for the FY 2022 LTCH QRP

Short Name	Measure Name & Data Source
LTCH CARE Data Set	
Pressure Ulcer/Injury	Changes in Skin Integrity Post-Acute Care: Pressure Ulcer/Injury
Application of Falls	Application of Percent of Residents Experiencing One or More Falls with Major Injury (Long Stay) (NQF #0674)
Functional Assessment	Percent of Long-Term Care Hospital (LTCH) Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function (NQF #2631)
Application of Functional Assessment	Application of Percent of Long-Term Care Hospital (LTCH) Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function (NQF #2631)
Change in Mobility	Functional Outcome Measure: Change in Mobility Among Long-Term Care Hospital (LTCH) Patients Requiring Ventilator Support (NQF #2632)
DRR	Drug Regimen Review Conducted With Follow-Up for Identified Issues–Post Acute Care (PAC) Long-Term Care Hospital (LTCH) Quality Reporting Program (QRP)
Compliance with SBT	Compliance with Spontaneous Breathing Trial (SBT) by Day 2 of the LTCH Stay
Ventilator Liberation	Ventilator Liberation Rate
TOH – Provider	Transfer of Health Information to the Provider Post-Acute Care
TOH – Patient	Transfer of Health Information to the Patient Post-Acute Care
NHSN	
CAUTI	National Healthcare Safety Network (NHSN) Catheter-Associated Urinary Tract Infection (CAUTI) Outcome Measure (NQF #0138)
CLABSI	National Healthcare Safety Network (NHSN) Central Line-associated Bloodstream Infection (CLABSI) Outcome Measure (NQF #0139)
CDI	National Healthcare Safety Network (NHSN) Facility-wide Inpatient Hospital-onset *Clostridium difficile* Infection (CDI) Outcome Measure (NQF #1717)
HCP Influenza Vaccine	Influenza Vaccination Coverage among Healthcare Personnel (NQF #0431)
Claims-Based	
MSPB LTCH	Medicare Spending Per Beneficiary (MSPB)–Post Acute Care (PAC) Long-Term Care Hospital (LTCH) Quality Reporting Program (QRP)
DTC	Discharge to Community–Post Acute Care (PAC) Long-Term Care Hospital (LTCH) Quality Reporting Program (QRP)
PPR	Potentially Preventable 30-Day Post-Discharge Readmission Measure for Long-Term Care Hospital (LTCH) Quality Reporting Program (QRP)

Furthermore, LTCHs are required to report additional standardized patient assessment data beginning with the FY 2022 LTCH QRP. For more information on the reporting of this additional standardized patient assessment data, we refer readers to the FY 2020 IPPS/LTCH PPS final rule (84 FR 42536 through 42590).

There were no proposals or updates to finalize for the LTCH QRP.

4. Form, Manner, and Timing of Data Submission Under the LTCH QRP

We refer readers to the regulations at 42 CFR 412.560(b) for information regarding the current policies for reporting LTCH QRP data.

For more details about the required reporting periods of measures or standardized patient assessment data during the first and subsequent years upon adoption, please refer to the FY 2020 IPPS/LTCH PPS final rule (84 FR 42588 through 42590).

5. Policies Regarding Public Display of Measure Data for the LTCH QRP

CMS is not finalizing any policies regarding the public display of measure data at this time.

6. Miscellaneous Comments

The proposed rule contained no LTCH QRP proposals. However, we received several comments on the LTCH QRP.

Comment: A few commenters expressed support for CMS's actions to

alleviate burden on providers arising from the COVID–19 Public Health Emergency (PHE.) A commenter was concerned about the reliability and accuracy of the measures due to the exempted data and urged CMS to conduct thorough analyses to ensure measure performance. Another commenter supported the idea to expand ICD–10–CM codes to capture additional Social Risk Factors (SRF) data.

Response: We appreciate the commenters' support and feedback. However, we consider these comments to be outside the scope of the current rulemaking. We refer providers to our June 23, 2020 announcement at *https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-Quality-Reporting-Spotlight-Announcements that, effective July 1, 2020 LTCHs must resume reporting their quality data.*

D. Changes to the Medicare and Medicaid Promoting Interoperability Programs

1. Background

a. Statutory Authority for the Medicare and Medicaid Promoting Interoperability Programs

The HITECH Act (Title IV of Division B of the ARRA, together with Title XIII of Division A of the ARRA) authorizes incentive payments under Medicare and Medicaid for the adoption and meaningful use of certified electronic health record technology (CEHRT). Incentive payments under Medicare were available to eligible hospitals and CAHs for certain payment years (as authorized under sections 1886(n) and 1814(l) of the Act, respectively) if they successfully demonstrated meaningful use of CEHRT, which included reporting on clinical quality measures using CEHRT. Incentive payments were available to Medicare Advantage (MA) organizations under section 1853(m)(3) of the Act for certain affiliated hospitals that successfully demonstrate meaningful use of CEHRT. In accordance with the timeframe set forth in the statute, these incentive payments under Medicare generally are no longer available, except for Puerto Rico eligible hospitals. For more information on the Medicare incentive payments available to Puerto Rico eligible hospitals, we refer readers to the FY 2019 IPPS/LTCH PPS final rule (83 FR 41672 through 41675).

Sections 1886(b)(3)(B)(ix) and 1814(l)(4) of the Act also establish downward payment adjustments under Medicare, beginning with FY 2015, for eligible hospitals and CAHs that do not successfully demonstrate meaningful use of CEHRT for certain associated EHR reporting periods. Section 1853(m)(4) of the Act establishes a negative payment adjustment to the monthly prospective payments of a qualifying MA organization if its affiliated eligible hospitals are not meaningful users of CEHRT, beginning in 2015.

Section 1903(a)(3)(F)(i) of the Act establishes 100 percent Federal financial participation (FFP) to States for providing incentive payments to eligible Medicaid providers (described in section 1903(t)(2) of the Act) to adopt, implement, upgrade, and meaningfully use CEHRT. However, we previously established that in accordance with section 1903(t)(5)(D) of the Act, in no case may any Medicaid eligible hospital receive an incentive after CY 2021 (§ 495.310(f), 75 FR 44319). Therefore, December 31, 2021 is the last date that States could make Medicaid Promoting Interoperability Program payments to Medicaid eligible hospitals (other than pursuant to a successful appeal related to CY 2021 or a prior year) (84 FR 42591 through 42592). For additional discussion or context around the discontinuation of the Medicaid Promoting Interoperability Program, we refer readers to the FY 2019 IPPS/LTCH PPS final rule (*83 FR 41676* through 41677) and the CY 2019 PFS/QPP final rule (*83 FR 59704* through 59706).

2. EHR Reporting Period

a. EHR Reporting Period in CY 2022 for Eligible Hospitals and CAHs

Under the definitions of ''EHR reporting period'' and ''EHR reporting period for a payment adjustment year'' at 42 CFR 495.4, the EHR reporting period in CY 2021 is a minimum of a continuous 90-day period in CY 2021 for new and returning participants in the Promoting Interoperability Programs. Eligible hospitals and CAHs may select an EHR reporting period of a minimum of any continuous 90-day period in CY 2021 (from January 1, 2021 through December 31, 2021).

For CY 2022, in the FY 2021 IPPS/LTCH PPS proposed rule (85 FR 32853), we proposed an EHR reporting period of a minimum of any continuous 90-day period in CY 2022 for new and returning participants (eligible hospitals and CAHs) in the Medicare Promoting Interoperability Program. We stated that we believe that adopting a 90-day EHR reporting period in CY 2022 as in CY 2021 would be appropriate because it would provide programmatic consistency for hospital reporting for an additional year. We proposed corresponding changes to the definition of ''EHR reporting period for a payment adjustment year'' at 42 CFR 495.4. We did not propose to define an EHR reporting period in CY 2022 for the Medicaid Promoting Interoperability Program because the program will end with CY 2021 in accordance with section 1903(t)(5)(D) of the Act (see also 42 CFR 495.310(f)) as described previously. For additional discussion or context around the discontinuation of the Medicaid Promoting Interoperability Program, we refer readers to the FY 2019 IPPS/LTCH PPS final rule (83 FR 41676 through 41677) and the CY 2019 PFS/QPP final rule (83 FR 59704 through 59706).

Comment: Many commenters supported the EHR reporting period proposal to continue the current policy of a minimum of any continuous 90-day period for CY 2022. Commenters emphasized how it would ease overall provider burden and offer healthcare systems stability as they work to implement other recent ONC 21st Century Cures Act final rule and CMS Interoperability and Patient Access final rule requirements related to interoperability, information blocking, and patient access).

Response: We thank commenters for supporting the CY 2022 EHR reporting period proposal. We agree that for CY 2022 keeping the EHR reporting period to a minimum of 90 days will afford eligible hospitals and CAHs the individual, site-specific flexibility they might need in order to update their EHR systems and implement new regulatory requirements such as in the ONC Cures Act final rule (85 FR 25642 through 25961). We note that the 90-day EHR reporting period is a minimum and eligible hospitals and CAHs are encouraged to use longer periods, up to and including the full CY 2022.

Comment: One commenter strongly supported the proposal as representative of CMS's goals for rural and small hospitals to help reduce provider burden, improve the use of electronic data exchange, and provide adequate support or flexibility in those communities lacking a sufficient IT workforce.

Response: We thank the commenter for sharing their input, as we continue to strive toward promoting greater interoperable strategies among these electronic systems. We believe such goals help to enhance the strengthened support utilized by all inpatient-stay systems, including those serving rural and small hospitals.

Comment: Several commenters encouraged CMS to consider making

this existing policy the standard amount of time for the EHR reporting period for future years or for the rest of the program. One commenter cited the existing systems-related workload around necessary assessments or functionality improvements and another concurred that 90 days is a sufficient amount of time to capture required information which reflects the highest utilization numbers. While the same commenters expressed support for this proposal for CY 2022, they also stated it would be beneficial to all if it was also continued past CY 2022.

Response: We thank the commenters for their support and suggestion to continue this policy beyond CY 2022. Although our proposal was limited to CY 2022, we will consider the commenters' suggestion for future rulemaking.

After consideration of the public comments we received, we are finalizing our proposal that for CY 2022, the EHR reporting period is a minimum of any continuous 90-day period in CY 2022 for new and returning participants (eligible hospitals and CAHs) in the Medicare Promoting Interoperability Program. We are finalizing, as proposed, the corresponding changes to the definition of ''EHR reporting period for a payment adjustment year'' at 42 CFR 495.4.

3. Changes to the Query of Prescription Drug Monitoring Program Measure Under the Electronic Prescribing Objective

a. Background

In the FY 2019 IPPS/LTCH PPS final rule (83 FR 41648 through 41656), we adopted two new opioid measures for the Electronic Prescribing objective; however, we changed certain policies related to those measures in the subsequent FY 2020 IPPS/LTCH PPS final rule (84 FR 42593 through 42596): (1) Query of Prescription Drug Monitoring Program (PDMP), which was optional in CY 2019 and CY 2020 and worth 5 bonus points each year; and (2) Verify Opioid Treatment Agreement, which was optional in CY 2019 but removed entirely from the program starting in CY 2020.

b. Query of PDMP Measure

In the FY 2020 IPPS/LTCH PPS final rule (84 FR 42595), we finalized that the Query of PDMP measure is optional and eligible for 5 bonus points in CY 2020. We received substantial feedback from health IT vendors and hospitals that the flexibility currently included in the measure presents unintended challenges such as significant burden associated with IT system design and additional development needed to accommodate the measure and any future changes to it. Since publication of the FY 2020 IPPS/LTCH PPS final rule, stakeholders have continued to express concern that it is still too premature to require the Query of PDMP measure and score it based on performance in CY 2021.

We agree with stakeholders that PDMPs are still maturing in their development and use. PDMPs vary among the states and are not linked at this time to one another or to a larger national system.[498]

Stakeholders also mentioned the challenge posed by the frequent lack of integration of PDMPs into the clinical workflow. Historically, health care providers have had to go outside of the EHR in order to separately log in to and access a State PDMP. In addition, stakeholders noted the wide variation in whether PDMP data can be stored in the EHR. By integrating PDMP data into the health record, health care providers can improve clinical decision making by utilizing this information to identify potential opioid use disorders, inform the development of care plans, and develop effective interventions.

ONC recently engaged in an assessment to better understand the current state of policy and technical factors impacting PDMP integration across States. This assessment explored factors like PDMP data integration, standards and hubs used to facilitate interstate PMDP data exchange, access permissions, and laws and regulations governing PDMP data storage. The assessment revealed ambiguous or non-existent policies regarding PDMP placement in health IT systems, interpretation of PDMP data, and PDMP access roles. One-third of hospitals have reported integration of PDMP queries within their EHR workflows.[499] In addition, variability in standards and hubs used to facilitate interstate PMDP data exchange, as well as to store and report PDMP data, contribute to the complexity of PDMPs.

The SUPPORT for Patients and Communities Act (Pub. L. 115–271),[500] enacted in 2018, is an important investment in combating the opioid epidemic. Several of the provisions of the SUPPORT for Patients and Communities Act address opioid use disorder prevention, recovery, and treatment, including increased access to evidence-based treatment and follow-up care, through legislative changes specific to the Medicare and Medicaid programs. Specifically, with respect to PDMPs, the SUPPORT for Patients and Communities Act included new requirements and federal funding for PDMP enhancement, integration, interoperability, and established mandatory use of PDMPs by certain Medicaid providers to help reduce opioid misuse and overprescribing and to help promote the overall effective prevention and treatment of opioid use disorder.

Section 5042(a) of the SUPPORT for Patients and Communities Act added section 1944 to the Act, titled ''Requirements relating to qualified prescription drug monitoring programs and prescribing certain controlled substances.'' Subsection (f) of section 1944 of the Act increased Medicaid FFP during FY 2019 and FY 2020 for certain state expenditures to design, develop, or implement a qualified PDMP (and to make subsequent connections to such program). As a condition of this enhanced FFP, states must meet the conditions described in section 1944(f)(2) regarding agreements with contiguous states. There are currently a number of states that have used, or are seeking to use, this enhanced FFP.

Under section 1944(b)(1) of the Act, to be a qualified PDMP, a PDMP must facilitate access by a covered provider to the following information (at a minimum) about a covered individual, in as close to real-time as possible: Information regarding the prescription drug history of a covered individual with respect to controlled substances; the number and type of controlled substances prescribed to and filled for the covered individual during at least the most recent 12-month period; and the name, location, and contact information of each covered provider who prescribed a controlled substance to the covered individual during at the least the most recent 12-month period. Under section 1944(b)(2) of the Act, a qualified PDMP must also facilitate the integration of the information described in section 1944(b)(1) of the Act into the workflow of a covered provider, which may include the electronic system used by the covered provider for prescribing controlled substances. CMS issued additional guidance to states about the enhanced FFP authorized by the SUPPORT for Patients and Communities Act, which can be found at *https://www.medicaid.gov/sites/default/files/Federal-Policy-Guidance/Downloads/faq051519.pdf.*

[498] See *https://namsdl.org/topics/pdmp/* and *https://www.pdmpassist.org/content/pdmp-maps-and-tables.*

[499] See ONC analysis of 2017 AHA survey data at: *https://www.healthit.gov/buzz-blog/health-it/new-data-show-nearly-one-third-of-hospitals-can-access-pdmp-data-within-their-ehr.*

[500] See *https://crsreports.congress.gov/product/pdf/R/R45449.*

Additionally, we note that section 7162 of the SUPPORT for Patients and Communities Act supports PDMP integration as part of the CDC's grant programs aimed at efficiency and enhancement by states, including improvement in the intrastate and interstate interoperability of PDMPs.

In support of efforts to expand the use of PDMPs, there are currently a number of federally supported activities underway aimed at developing a more robust and standardized approach to EHR–PDMP integration. Partners including CMS, CDC, ONC, and private sector stakeholders are focused on developing and refining standard-based approaches to enable effective integration into clinical workflows, exploring emerging technical solutions to enhance access and use of PDMP data, and providing technical resources to a variety of stakeholders to advance and scale the interoperability of health IT systems and PDMPs. For instance, stakeholders are working to map the NCPDP SCRIPT standard version 2017071 and the 2015 ASAP Prescription Monitoring Program Web Service standard version 2.1A to the HL7® FHIR® standard version R4.[501] These mapping efforts are currently targeting completion by summer of 2020 after which the standard would be balloted. Moreover, a number of enhancements to PDMPs are occurring across the country, including enhancements to RxCheck which is a federally supported interstate exchange hub for PDMP data.[502] In addition, the ONC Interoperability Standards Advisory includes monitoring of current and emerging standards related to PDMP and OUD data capture and exchange that would allow a provider to request a patient's medication history from a State PMDP.[503] We believe these standards and technical approaches are likely to rapidly reach maturity and to support adoption across health care system stakeholders.

In addition to monitoring activities which can provide a stronger technical foundation for a measure focused on PDMP use, we also requested comments in the FY 2020 IPPS/LTCH PPS proposed rule on alternative measures designed to advance clinical goals related to the opioid crisis (84 FR 19568 and additional comment responses in the FY 2020 IPPS/LTCH PPS final rule in 84 FR 42593 through 42595). Specifically, we sought public comment on the development of potential measures for consideration for the Promoting Interoperability Program that are based on existing efforts to measure clinical and process improvements specifically related to the opioid epidemic, including opioid quality measures endorsed by the National Quality Forum (NQF) and CDC Quality Improvement (QI) opioid measures based on CDC guidelines around prescribing practices. The latter of these includes the use of electronically-specified CDS to support OUD prevention and treatment best practices and the integration of a PDMP query as a part of specific clinical workflows. We stated that these measures relate to a range of activities that hold promise in combatting the opioid epidemic as part of OUD prevention and treatment best practices, that they can be supported using CEHRT, and that they may include the use of PDMP queries as a tool within the broader clinical workflows. We continue to evaluate the comments received in response to this request for information, and will explore how measures such as those discussed may help participants to better understand the relationship between the measure description and the use of health IT to support the actions of the measures related to opioid use.

We understand that there is wide variation across the country in how health care providers are implementing and integrating PDMP queries into health IT and clinical workflows, and that it could be burdensome for health care providers if we were to narrow the measure to specify a single approach to EHR–PDMP integration at this time. At the same time, we have heard extensive feedback from EHR developers that effectively incorporating the ability to count the number of PDMP queries in the EHR would require more robust certification specifications and standards. These stakeholders stated that health IT developers may face significant cost burdens under the current flexibility allowed for health care providers if they either fully develop numerator and denominator calculations for all the potential use cases and are required to change the specification at a later date. Stakeholders have noted that the costs of additional development will likely be passed on to health care providers without additional benefit as this development would be solely for the purpose of calculating the measure rather than furthering the clinical goal of the measure (for a summary of public comments discussed in last year's final rule, we refer readers to 84 FR 42593 through 42595, continued from last year's proposed rule in 84 FR 19556 through 19558).

Given current efforts to improve the technical foundation for EHR–PDMP integration, the continued implementation of the SUPPORT for Patients and Communities Act (in particular, its provisions specific to Medicaid providers and qualified PDMPs), our ongoing review of alternative measure approaches, and stakeholder concerns as previously discussed about the current readiness across states for implementation of the existing measure, we believe that additional time is needed prior to requiring a Query of PDMP measure for performance-based scoring. While we appreciate the concerns that stakeholders have shared, we believe that this measure can play an important role in helping to address the opioid crisis. Maintaining it as an optional measure with bonus points signals to the hospital and vendor community that this is an important measure which addresses a current gap that can help to spur development and innovation to reduce the barriers and challenges expressed to CMS.

Therefore, we proposed for CY 2021 to maintain the Electronic Prescribing Objective's Query of PDMP measure as optional and worth 5 bonus points, as well as corresponding changes to the regulation at § 495.24(e)(5)(iii)(B) (85 FR 32853 through 32855). Continuing to include the measure as optional in CY 2021 would allow time for further progress around EHR–PDMP efforts minimizing the burden on eligible hospitals and CAHs reporting while still providing an opportunity for capable implementers to report on and earn 5 bonus points for the optional measure. We sought comments on our proposal to maintain the Query of PDMP measure in CY 2021 as optional and worth 5 bonus points.

Comment: The majority of commenters agreed with the proposal to maintain the Electronic Prescribing Objective's Query of PDMP measure as optional and worth 5 bonus points in CY 2021. Several of the comments expressed support given their concerns over how current workflows may require providers to repeatedly log into multiple, separate databases in order to manually enter patient data into CEHRT and document completion of the measure's query. One of the commenters raised a concern where non-integrated state PDMPs lead to data-entry by hand which can increase the probability of human errors related to erroneous patient-matching or documentation.

[501] See *http://hl7.org/fhir/us/meds/pdmp.html.*

[502] See *https://www.pdmpassist.org/RxCheck.*

[503] See *https://www.healthit.gov/isa/allows-a-provider-request-a-patients-medication-history-a-state-prescription-drug-monitoring.*

Response: We thank commenters for their continued support regarding the Query of PDMP measure. We recognize that various state programs are still maturing toward the development of fully fledged EHR–PDMP integration. We continue to collaborate with our partners in ONC, on how to advance standards surrounding PDMP functionality and integration. Keeping the Query of PDMP measure as optional for CY 2021 would allow states and other stakeholders an additional year to make further progress on developing functionality to support better integration of PDMP use within clinical workflows.

Comment: Two commenters who agreed with the proposal requested clarification that the measure would continue to require a yes/no response as finalized in previous rules.

Response: We appreciate these commenters support. The measure will continue to require a yes/no attestation response for CY 2021.

After consideration of the public comments we received, we are finalizing our proposal for CY 2021 to maintain the Electronic Prescribing Objective's Query of PDMP measure as optional and worth 5 bonus points, as well as finalizing corresponding changes to the regulation at § 495.24(e)(5)(iii)(B) as proposed.

4. Health Information Exchange Objective: Support Electronic Referral Loops by Receiving and Incorporating Health Information Measure

In the FY 2019 IPPS/LTCH PPS final rule (83 FR 41659 through 41661), we established a new Support Electronic Referral Loops by Receiving and Incorporating Health Information measure by combining the Request/Accept Summary of Care measure and the Clinical Information Reconciliation measure. In establishing the new measure, we did not change the specifications or actions associated with the two combined measures, which address receiving an electronic summary of care record and conducting reconciliation of the summary of care record. However, the name of the measure includes the word ''incorporating,'' which is not always an action that is required for purposes of meeting the numerator of the measure. Instead, clinical information reconciliation must be completed using CEHRT for the following three clinical information sets: (1) Medication; (2) Medication Allergy; and (3) Current Problem List. In addition, we established that for cases in which the eligible hospital or CAH determines no update or modification is necessary within the patient record based on the electronic clinical information received, the eligible hospital or CAH may count the reconciliation in the numerator without completing a redundant or duplicate update to the record (83 FR 41661). Thus, we proposed to modify the name of the Support Electronic Referral Loops by Receiving and Incorporating Health Information measure to better reflect the actions required by the numerator and denominator (85 FR 32855). We proposed to replace the word ''incorporating'' with the word ''reconciling'' such that the new name would read: Support Electronic Referral Loops by Receiving and Reconciling Health Information measure, and to codify this change at § 495.24(e)(6)(ii)(B). We sought comments on our proposals.

Comment: Many commenters supported the proposal to modify the measure's name by replacing the word ''incorporating'' with the word ''reconciling'' to better reflect the measure's intent and reduce confusion on the actions required for the numerator and denominator calculation.

Response: We thank the commentators for their input and agree that the new name, Support Electronic Referral Loops by Receiving and Reconciling Health Information, best reflects the measure's intent relating to the specific actions required in calculating the numerator and denominator.

Comment: Two commenters did not believe that the name should be updated and stated that the measure modification could lead to unnecessary administrative burden and tedious documentation edits.

Response: While the updating of the name may require edits to existing documentation in EHR systems or reports, we disagree that this update would alone outweigh the benefit of implementing programmatic improvements to reduce potential confusion caused by the measure's existing name. The measure specifications establish that no duplicative update is necessary within the patient record based upon the clinical information received, only that it must be compared against what is currently available (a reconciliatory act, as indicated in the measure's current specification sheet).[504] In agreement with the majority of commenters, we see the name change as more clearly reflecting the existing policy that the measure is not requiring providers to input redundant information, but rather to review and reconcile what is received with what is already in the patient record.

After consideration of the public comments we received, we are finalizing our proposal to modify the name of the Support Electronic Referral Loops by Receiving and Incorporating Health Information measure such that the new name will read: Support Electronic Referral Loops by Receiving and Reconciling Health Information measure. In addition, we are also finalizing the corresponding changes at § 495.24(e)(6)(ii)(B) as proposed.

5. Scoring Methodology for Eligible Hospitals and CAHs Attesting to CMS Under the Medicare Promoting Interoperability Program for an EHR Reporting Period in CY 2021

The following table reflects the objectives and measures as finalized for CY 2021. As discussed in sections VII.D.3 and VII.D.4 in the preamble of this final rule, we are finalizing our proposals for CY 2021 to include: (1) Changing the name of the Support Electronic Referral Loops by Receiving and Incorporating Health Information measure, and (2) the continuation of the optional Query of PDMP measure worth 5 bonus points for CY 2021.

[504] See *https://www.cms.gov/files/document/medicare-eh-2020-support-electronic-referral-loops-receiving-and-incorporating-information.pdf.*

Performance-Based Scoring Methodology
EHR Reporting Period in CY 2021

Objective	Measure	Maximum Points
Electronic Prescribing	e-Prescribing	10 points
	Bonus: Query of PDMP	5 points (*bonus*)
Health Information Exchange	Support Electronic Referral Loops by Sending Health Information	20 points
	Support Electronic Referral Loops by Receiving and Reconciling Health Information *	20 points
Provider to Patient Exchange	Provide Patients Electronic Access to Their Health Information	40 points
Public Health and Clinical Data Exchange	Choose any two: • Syndromic Surveillance Reporting • Immunization Registry Reporting • Electronic Case Reporting • Public Health Registry Reporting • Clinical Data Registry Reporting • Electronic Reportable Laboratory Result Reporting	10 Points

Notes: The Security Risk Analysis measure is required, but will not be scored;
The information blocking attestation statements are required, but will not be scored;
eCQM measures are required, but will not be scored.
Measure with a name change in this final rule is denoted with an asterisk (*)

6. Clinical Quality Measurement for Eligible Hospitals and CAHs Participating in the Medicare and Medicaid Promoting Interoperability Programs

a. Background and Current Clinical Quality Measures

Under sections 1814(l)(3)(A), 1886(n)(3)(A), and 1903(t)(6)(C)(i)(II) of the Act and the definition of ''meaningful EHR user'' under 42 CFR 495.4, eligible hospitals and CAHs must report on clinical quality measures (CQMs; also referred to as electronic CQMs, or eCQMs) selected by CMS using CEHRT, as part of being a meaningful EHR user under the Medicare and Medicaid Promoting Interoperability Programs. However, as previously established in accordance with section 1903(t)(5)(D) of the Act, in no case may any Medicaid eligible hospital receive an incentive after CY 2021 (§ 495.310(f), 75 FR 44319). Therefore, December 31, 2021 is the last date that states could make Medicaid Promoting Interoperability Program payments to Medicaid eligible hospitals (other than pursuant to a successful appeal related to 2021 or a prior year) (84 FR 42591 through 42592).

The following table lists the previously finalized eCQMs available for eligible hospitals and CAHs to report under the Medicare and Medicaid Promoting Interoperability Programs (84 FR 42597 through 42599) for the reporting period in CY 2021 and subsequent years, including the Safe Use of Opioids—Concurrent Prescribing measure (NQF #3316e), finalized as mandatory for reporting beginning with CY 2022 (84 FR 42598 through 42600).

CQMs for Eligible Hospitals and CAHs for CY 2021 and Subsequent Years

Short Name	Measure Name	NQF No.
ED-2	Admit Decision Time to ED Departure Time for Admitted Patients (ED-2)	0497
PC-05	Exclusive Breast Milk Feeding	0480
STK-02	Discharged on Antithrombotic Therapy	0435
STK-03	Anticoagulation Therapy for Atrial Fibrillation/Flutter	0436
STK-05	Antithrombotic Therapy by the End of Hospital Day Two	0438
STK-06	Discharged on Statin Medication	0439
VTE-1	Venous Thromboembolism Prophylaxis	0371
VTE-2	Intensive Care Unit Venous Thromboembolism Prophylaxis	0372
Safe Use of Opioids	Safe Use of Opioids – Concurrent Prescribing	3316e

b. eCQM Reporting Periods and Criteria for the Medicare and Medicaid Promoting Interoperability Programs in CYs 2021, 2022, and 2023

In the FY 2021 IPPS/LTCH PPS proposed rule (85 FR 32856 through 32857), consistent with a similar proposal under the Hospital IQR Program in the same proposed rule (85 FR 32836 through 32837), we proposed to progressively increase the number of quarters for which hospitals are required to report eCQM data, from the current requirement of one self-selected calendar quarter of data, to four calendar quarters of data, over a 3-year period. Specifically, we proposed to require two self-selected calendar quarters of data from CY 2021, three self-selected calendar quarters of data from CY 2022, and four calendar quarters of data beginning with CY 2023. We stated that we believe increasing the number of quarters for which hospitals are required to report eCQM data would produce more comprehensive and reliable quality measure data for patients and providers. Taking an incremental approach over a 3-year period would also give hospitals and their vendors time to plan in advance, build upon, and utilize investments already made in their existing EHR infrastructure. Additionally, reporting multiple quarters of data would provide hospitals with a more continuous stream of information to monitor their levels of performance, as ongoing, timely data analysis can better identify a change in performance that may necessitate investigation, and potentially corrective action. We also refer readers to section VIII.A.9 of the preamble of this final rule for a discussion of similar proposals made for the Hospital IQR Program.

(1) Changes to the eCQM Reporting Period in CY 2021

In the FY 2020 IPPS/LTCH PPS final rule (84 FR 42599 through 42600), we established the eCQM reporting periods, reporting criteria, and submission periods for CY 2021. We refer readers to that final rule for a more detailed discussion of our previously established final policies. Consistent with our proposal for the Hospital IQR Program in the FY 2021 IPPS/LTCH PPS proposed rule (85 FR 32856), we proposed to modify the eCQM reporting period in CY 2021 under the Medicare and Medicaid Promoting Interoperability Programs for eligible hospitals and CAHs that report CQMs electronically. Specifically, we proposed to require eligible hospitals and CAHs to report two self-selected calendar quarters of eCQM data from CY 2021, on four self-selected eCQMs from the set of available eCQMs, for CY 2021 as previously established (84 FR 42599 through 42600).

(2) Changes to the eCQM Reporting Period in CY 2022

In the FY 2020 IPPS/LTCH PPS final rule (84 FR 42600), we established the eCQM reporting periods, reporting criteria, and submission periods for CY 2022. We refer readers to that final rule for a more detailed discussion of our previously established final policies. Consistent with our proposal for the Hospital IQR Program in the FY 2021 IPPS/LTCH PPS proposed rule (85 FR 32856), we proposed to modify the eCQM reporting period in CY 2022 under the Medicare Promoting Interoperability Program for eligible hospitals and CAHs that report eCQMs electronically. Specifically, we proposed to require eligible hospitals and CAHs to report three self-selected calendar quarters of eCQM data from CY 2022, for each required eCQM as previously established (84 FR 42600): (a) Three self-selected eCQMs from the set of available eCQMs for CY 2022, and (b) the Safe Use of Opioids—Concurrent Prescribing eCQM.

(3) Reporting and Submission Requirements for eCQMs for CY 2023 and Subsequent Years

For CY 2023 and each subsequent year, we proposed to require eligible hospitals and CAHs reporting CQMs for the Medicare Promoting Interoperability Program to report 4 calendar quarters of data from CY 2023 and each subsequent year (85 FR 32856 through 32857) for: (a) 3 self-selected eCQMs from the set of available eCQMs for CY 2023 and each subsequent year; and (b) the Safe Use of Opioids—Concurrent Prescribing eCQM (NQF #3316e), for a total of 4 eCQMs. As finalized in the FY 2020 IPPS/LTCH PPS final rule (84 FR 42601 through 42602), attestation is no longer a method for reporting eCQMs for the Medicare Promoting Interoperability Program, beginning with the reporting period in CY 2023, and instead, all eligible hospitals and CAHs are required to submit their eCQM data electronically through reporting methods made available through the Hospital IQR Program. Additionally, we proposed that the submission period for the Medicare Promoting Interoperability Program would be during the 2 months following the close of the respective calendar year. For example, the submission period for CY 2023 would be the 2 months following the close of CY 2023, ending February 28, 2024, and the same 2-month pattern would follow for each subsequent year.

Comment: Many commenters supported our proposal to increase the number of quarters for which hospitals are required to report eCQM data. Some commenters specifically appreciated CMS's plan to phase in the requirement over three years because they believe a progressive approach will allow hospitals and vendors sufficient time to implement the proposal without being overly burdensome. Other commenters stated the proposal will improve accuracy and reliability of data, provide a more accurate picture of overall hospital performance, increase hospital accountability, and reduce the likelihood that hospitals will report only on their top-performing quarter. Commenters also stated the proposal would enable hospitals and other stakeholders to successfully monitor performance trends, particularly through the CMS *Hospital Compare* site, or successor websites, and enhance patient outcomes.

Response: We thank the commenters for their support. We believe increasing eCQM reporting over a 3-year period will help to ease the burdens associated with reporting larger amounts of data, and will provide hospitals and vendors with additional time to plan and sufficiently allocate resources for more robust eCQM reporting. We believe the long-term benefits associated with reporting a full year of electronic data will outweigh the burdens, and that increasing the number of quarters for which hospitals are required to report eCQM data will produce more comprehensive and reliable quality information for patients and providers.

Comment: A few commenters recommended that we phase in the increased requirements at a faster rate, such as over a 2-year period instead of a 3-year period.

Response: We thank the commenters for their recommendations. We considered a faster implementation timeline in developing our proposals, but ultimately determined to propose to align with the Hospital IQR Program's proposal to progressively increase the number of required quarters of eCQM data over a 3-year period in order to continue to give hospitals and their vendors time to plan in advance and build upon and utilize investments already made in their EHR infrastructure (85 FR 32837). We believe this approach effectively balances the burdens associated with increased reporting of eCQM data and the benefits of providing that quality data to patients and consumers.

Comment: Many commenters did not support the proposal to require additional quarters of eCQM data given the impact of the COVID–19 public health emergency (PHE) on hospitals, and requested that eCQM reporting and submission requirements for the CY 2021 reporting period remain at one self-selected calendar quarter of data for each of the four self-selected eCQMs. Commenters stated that the COVID–19 PHE has shifted focus from normal operations toward increased burden and strained hospital resources, particularly impacting staffing and technology. A few commenters indicated that the COVID–19 PHE has limited hospitals' ability to make the IT investments needed to report additional quarters of data. Commenters stated that internal resources have been reallocated or reassigned, that current IT investments are focused on caring for COVID–19 patients via telehealth, and that hospitals are already experiencing burdens or costs associated with implementing additional regulations on information blocking and interoperability. Commenters also stated that hospitals are complying with numerous federal and state data reporting requirements related to COVID–19 lab testing, patient volumes, and bed capacity, which are constantly evolving. The commenters stated that, while the duration of the COVID–19 PHE remains uncertain, hospitals expect to be operating in this challenging environment well into CY 2021.

Given these challenges, commenters requested that reporting and submission requirements for the CY 2021 reporting period remain at one self-selected calendar quarter of data so that hospitals may choose the fourth quarter, providing additional time for EHR upgrades. A few commenters expressed concern that the proposal could cause hospitals to lose their entire annual payment update for failing to meet an eCQM mandate that their EHR vendors cannot deliver, due to the pandemic and other competing federal EHR-related mandates. One commenter stated that the COVID–19 PHE's impact on hospital volumes may render data less reliable. Another commenter suggested that CMS continue to monitor the COVID–19 PHE, and the extent to which hospitals have recovered, to inform the exact timeframe to begin increasing eCQM reporting requirements.

Response: We thank commenters for their comments and recognize the burden that the COVID–19 PHE has had on the healthcare system. In response to the significant impact of the COVID–19 PHE on hospitals, CMS issued an array of temporary regulatory waivers and exceptions affecting a wide cross-section of Medicare participation, eligibility, and payment requirements in an effort to reduce burden, provide flexibility to hospitals, and help hospitals maximize their capacity to focus on patient care.[505] These waivers and exceptions reduce hospital paperwork burden and reporting requirements, increase flexibility for surge capacity and patient quarantine, allow providers to expand access to telehealth, and enable hospitals to enhance their workforces, among other benefits. Specific to the Promoting Interoperability Program, we issued a hardship exception extension, allowing eligible hospitals additional time to submit these requests.[506]

Our current policy for eCQM reporting requires hospitals to report only one, self-selected calendar quarter of data for four self-selected eCQMs for the CY 2020 reporting period. We believe that a single quarter of data is not enough to capture trends in performance over time, therefore our goal in proposing to progressively increase the number of quarters of data to be collected over 3 years was to strike an appropriate balance between increasing eCQM reporting and providing hospitals with the necessary time to implement such changes.

Comment: A commenter did not support the proposal to increase the number of self-selected quarters of eCQM data that hospitals must support for the CY 2021 reporting period. The commenter stated that given the unknown future of the impact of the COVID–19 PHE, any increase in eCQM submissions for CY 2021 could have a significant detrimental impact on small, rural hospitals, particularly because many of these hospitals do not find the current eCQMs (including the Safe Use of Opioids—Concurrent Prescribing measure (NQF #3316e), finalized as mandatory for reporting beginning with CY 2022) to be meaningful to their quality improvement. The commenter stated that because mandatory reporting on the Safe Use of Opioids-Concurrent Prescribing measure (NQF #3316e) begins in CY 2022, it would be beneficial to evaluate the usefulness and challenges of extracting this data after one quarter, rather than requiring two quarters.

Response: As previously established in rulemaking, for the CY 2021 reporting period, hospitals will continue to report on four self-selected eCQMs, and reporting on the Safe Use of Opioids—Concurrent Prescribing eCQM (Safe Use eCQM) will not be required until the CY 2022 reporting period. The Safe Use eCQM will be included in the eCQM subset beginning with the CY 2021 reporting period, and a hospital may voluntarily select to report on the Safe Use eCQM on two quarters of data at that time.

With respect to the usefulness and challenges of extracting eCQM data after one quarter rather than requiring two quarters, we believe that our proposal further advances our goal of increasing the use of EHR data for quality measurement and improvement. We believe that reporting on the Safe Use eCQM will provide valuable information in the area of high-risk prescribing to providers, and further our efforts to combat the negative impacts of the opioid crisis. Last, we appreciate that there may be challenges with extracting data for the Safe Use eCQM. Although this measure was developed being mindful that logistically, the implementation of the data extraction process needed to be feasible, we will be considerate of this feedback in future rulemaking.

Regarding the meaningfulness of eCQMs in small, rural hospitals—rural health continues to be one of our top priorities. In 2016, we established an agency-wide Rural Health Council, and in 2017 we launched the Meaningful Measures Initiative and included Improving Access for Rural Communities as an initiative. Additionally in 2017, we tasked the National Quality Forum (NQF) to establish a Measure Applications Partnership (MAP) Rural Health Workgroup to identify a core set of the best available rural-relevant measures to address the needs of the rural population and provide recommendations from a rural perspective regarding measuring and improving access to care.[507] When selecting eCQMs for inclusion in the measure set, we have, and will continue to consider the recommendations from the rural providers to ensure eCQMs are meaningful to quality improvement for small, rural hospitals.

In response to concerns regarding the future of the impact of the COVID–19 PHE, we will continue to monitor the impact that the COVID–19 PHE has on

[505] See *https://www.cms.gov/about-cms/emergency-preparedness-response-operations/current-emergencies/coronavirus-waivers.*

[506] See *https://www.cms.gov/files/document/medicare-pi-hardship-fact-sheet-2020.pdf.*

[507] See Measures Application Partnership, ''A Core Set of Rural-Relevant Measures and Measuring and Improving Access to Care: 2018 Recommendations from the MAP Rural Health Workgroup'' (Aug. 31, 2018), available at *https://www.qualityforum.org/Publications/2018/08/MAP_Rural_Health_Final_Report_-_2018.aspx.*

hospitals, including small, rural hospitals, and will issue additional guidance as appropriate. Please also see our previous responses, specifically addressing the COVID–19 PHE.

Comment: Many commenters requested that CMS adopt a more incremental approach for increasing the eCQM reporting requirements. A few of the numerous alternative approaches recommended by commenters included postponing the proposed increase in data reporting for one calendar year, postponing the increase until the COVID–19 PHE has abated and hospital volumes return to pre-pandemic levels, and increasing the number of calendar quarters of data to be reported by one quarter every other year.

Response: As noted previously, after delaying the increased eCQM reporting requirements for a number of years, we believe our proposal to progressively increase the number of quarters of eCQM data to be collected over a three-year period strikes an appropriate balance between increasing eCQM reporting and providing hospitals with the necessary time to implement such changes. We understand the desire to postpone the increased reporting requirements until the pandemic has abated, and hospital volumes return to pre-pandemic levels, and note that we proposed requiring hospitals to report only two quarters of data for the CY 2021 reporting period. We note that hospitals may choose to report data from the third and fourth quarters of CY 2021, which may have higher volumes, and data would not need to be reported until the end of the data submission period (that is, by the end of February 2022). Specific to the Promoting Interoperability Program's response to COVID–19 PHE, we issued a hardship exception extension, allowing eligible hospitals additional time to submit these requests. Please also see our previous responses, specifically addressing the COVID–19 PHE.

Comment: Several commenters raised concerns about the accuracy, reliability, and validity of eCQM data. One commenter stated the data produced by chart-abstracted measures and eCQMs vary significantly. A few commenters recommended that CMS adopt a more incremental approach to increasing eCQM reporting requirements, or delay its proposal altogether until at least CY 2023, to balance benefits with burdens and better ensure reliability and validity for measurement. A commenter stated that it would be premature for CMS to require electronic reporting before all measures are fully electronically specified and field tested. The commenter emphasized the need for providers to have detailed electronic specifications in advance in order to adequately prepare their reporting systems. Another commenter encouraged CMS to evaluate how each additional quarter of data improves accuracy and reliability prior to further increasing the number of required quarters.

Response: We understand the commenters' concern about data reliability and validity and wish to emphasize that all types of quality measures, including eCQMs, undergo testing during the measure development process for feasibility, validity, and reliability. We also recognize that EHR-based extraction methodology for eCQMs is different from the data collection methodology for chart-abstracted measures, and that measure rates may vary depending on methodology (80 FR 49643 through 49644).

For example, eCQMs utilize data from structured fields within the EHR system, while chart-abstracted measures allow data to be collected from unstructured sources such as a clinician's progress notes. For these reasons, we use a validation process to address concerns about reliability and validity of eCQM data. Together, alongside the Hospital IQR Program (as described in section VIII.A.10. of the preamble of this final rule), we are continuously working to improve the eCQM validation process and balance reporting burden. We expect to gain a better understanding of how to continue to increase the accuracy of eCQM data by continuing to analyze and improve upon that process. We do believe that the reporting of additional quarters of data by hospitals will help to increase the reliability of the data, and we also note that measure specifications are typically available about eight months prior to the beginning of the calendar year reporting period.

Comment: A few commenters expressed concern about the amount of time that may be required for a hospital or their vendor to internally validate the data, and/or create and review CCN files prior to data submission to CMS. One commenter stated the proposal amends more modest, previously finalized policies that hospitals relied on for planning and resource allocation purposes.

Response: We recognize that increasing the number of quarters of eCQM data to be reported can impact a hospital's resource use, and refer readers to section XI. B.9 of the preamble of this final rule for a detailed discussion on our burden estimates associated with eCQM reporting and submission. We believe the long-term benefits associated with reporting a full year of electronic data will outweigh these burdens and that increasing the number of quarters for which hospitals are required to report eCQM data will produce more comprehensive and reliable quality information for patients and providers. We believe that taking an incremental approach to increasing eCQM reporting over a three-year period will help to ease the burdens associated with reporting larger amounts of data and will provide hospitals and vendors with additional time to plan and sufficiently allocate resources for more robust eCQM reporting.

Comment: One commenter did not support the proposal because they believed it contradicted the trend to make the program simpler. Another commenter stated there is increased burden on hospitals due to duplications of effort in reporting the same measures in both chart-abstracted and eCQM formats.

Response: We disagree with the commenter that the proposal contradicts our efforts to make the program simpler. Since October of 2017, we have undertaken an ambitious effort to reduce regulatory burden on the healthcare industry, lower health care costs, and enhance patient care by streamlining the quality reporting programs through the Meaningful Measures initiative. We refer readers to the FY 2019 IPPS/LTCH PPS final rule for a broader discussion of the Meaningful Measures framework (83 FR 41147). In recent years, we have also improved and continued to maintain alignment between the Promoting Interoperability Program and the Hospital IQR Program, such that we now have the same eCQMs and data submission requirements. We will continue to look across all quality programs to identify areas to further streamline, and opportunities to reduce any remaining duplicative efforts.

Comment: One commenter did not support the proposed expansion of eCQM reporting or public reporting until problems with validation of eCQM data are addressed. The commenter stated that hospitals participating in eCQM data validation continue to report unresolved concerns, such as the inability to authenticate validation results provided for 2017 and 2018 because mismatches on the validation reports were not specifically identified. The commenter stated that hospitals and vendors need a better understanding of the cause of mismatches and how to correct them in advance of any public reporting, and recommended CMS make improvements

to the validation procedures and reports. A few commenters requested that CMS provide additional transparency into the eCQM validation process before increasing the number of quarters required to be reported, such as information on eCQM agreement rates, national eCQM scores, the effect of invalidated data on national and hospital-specific scores, comparisons of the current eCQM data against previously collected chart-abstracted data, and an analysis on how eCQM scores are affected by using the chart-abstracted measure specifications and algorithms for validation. Last, commenters requested that CMS provide an analysis of how self-selection of individual eCQMs by each hospital affects national averages, and the number of hospitals reporting on each measure.

Response: We appreciate the feedback from hospitals on their experiences with the eCQM validation process. The specifications for eCQMs contain logic statements and value sets tailored to electronic data sources, and as such, measure specifications and algorithms for chart-abstracted measures are not used for eCQM validation. As the Hospital IQR Program further describes in sectionVIII.A.10 of the preamble of this rule, together, we are continuously working to improve eCQM validation and are finalizing several changes to that process. Our decision to extend the educational review process established for chart-abstracted measure validation to eCQM validation may be of particular interest to stakeholders. We would also like to refer commenters to the eCQM validation resources available on QualityNet.[508]

Comment: A few commenters stated that the required updates to EHRs to modify eCQMs often take significant implementation resources before hospitals are able to report eCQM data. The commenters expressed concern that the proposed increase in data reporting requirements would shorten the timeframe for hospitals to make and validate required measure logic changes, which would require hospitals to expend additional resources in order to finish changes on time. The commenters requested that CMS provide hospitals with 18 months to implement changes.

Response: We disagree that there is not enough time to implement eCQM data measure reporting requirements. We note that the eCQM specifications are typically available around eight months prior to the beginning of the calendar year of the reporting period. We also believe that once the eCQM updates are implemented in hospital EHRs, reporting an additional quarter of data should not require the same level of effort as reporting one initial quarter of data. Thus, we do not expect hospitals to experience a significant amount of added burden reporting three additional quarters of data over a three-year period. We would like to note that we did not propose to modify, remove, or add any additional eCQM measures to the Promoting Interoperability Program in the FY 2021 IPPS/LTCH PPS proposed rule. We do thank the commenters for their feedback and will take this information into account when modifying and aligning the eCQM measure set in future rulemaking.

Comment: A few commenters expressed concern about variation in readiness and eCQM reporting capabilities across hospitals. Commenters recommended that CMS work with stakeholders to identify underlying structural problems and barriers to successful reporting; consider a process by which hospitals could request and receive a one-year extension, if needed, to increase their eCQM reporting to four calendar quarters, or take a more incremental approach to increasing eCQM reporting requirements.

Response: As stated previously, we have reduced the number of eCQMs, and delayed eCQM reporting requirements over a number of years in order to allow hospitals and vendors additional time to upgrade IT systems, improve data mapping and other capabilities, and increase staff training for eCQM reporting. In the FY 2021 IPPS/LTCH PPS proposed rule, we proposed to progressively increase the number of quarters of data to be collected over three years to continue to give providers time to gain experience with eCQM reporting and submission. We believe that gradually increasing the number of quarters for which hospitals are required to report eCQM data will produce more comprehensive and reliable quality measure data for patients and providers. We will continue to work with stakeholders to identify any structural issues or barriers to successful reporting.

Comment: Several commenters requested clarification about the data submission process associated with increasing the number of quarters of data required to be reported. Specifically, commenters requested that CMS clarify the timing of submission deadlines and the ability of hospitals to report non-consecutive quarters of data. One commenter requested that CMS clarify that until all four quarters of data are required, the hospital will be able to self-select which quarters it reports on.

Response: In the FY 2021 IPPS/LTCH PPS proposed rule, our proposals would allow hospitals to self-select the calendar quarters of data to report for CYs 2021 and 2022, with data submission in the two months following the close of the calendar year (85 FR 32856 through 32857). Thus, the data submission deadline for eCQM data under the Promoting Interoperability Program, regardless of how many quarters of data are required to be reported for a given calendar year, will continue to be by the end of the 2 months following the close of the respective calendar year. The ability to self-select calendar quarters would enable hospitals to submit non-consecutive quarters of data of their choice. More specifically, we proposed to require that hospitals report two self-selected calendar quarters of data for each of the four self-selected eCQMs for the CY 2021 reporting period, three self-selected calendar quarters of data for the CY 2022 reporting period for each required eCQM: (a) Three self-selected eCQMs; and (b) the Safe Use of Opioids eCQM (85 FR 32837). Hospitals would self-select the quarters it reported on until all four quarters were required, as proposed for the CY 2023 reporting period. The ability self-select quarters would permit hospitals to submit non-consecutive quarters of data.

Comment: A few commenters recommended that CMS monitor implementation of the proposal, such as soliciting feedback from hospitals to learn about reporting challenges and to ensure that the proposal does not impose substantial additional administrative burdens during the COVID–19 PHE. One commenter recommended that CMS work with stakeholders to ensure eCQM data provides actionable insights that support performance improvement, considering the burden required to report it.

Response: We thank the commenters for their suggestions. We plan to monitor the implementation of the increased reporting requirements for eCQM data alongside the Hospital IQR Program, and welcome continued feedback from stakeholders through webinars, listservs, and help desk questions. Finally, see our previous discussion on our approach with the COVID–19 PHE.

After consideration of the public comments we received, we are finalizing all of our proposals as proposed to progressively increase, over a 3-year period, the number of calendar

[508] See eCQM Data Validation Resources are available on QualityNet at: *https://www.qualitynet.org/search?q=validation.*

quarters that eligible hospitals and CAHs are required to report eCQM data for the Promoting Interoperability Program. For the CY 2021 reporting period, hospitals will be required to report two self-selected calendar quarters of data for each of the four self-selected eCQMs, and the quarters chosen do not need to be consecutive. For the CY 2022 reporting period, hospitals will be required to report three self-selected calendar quarters of data for each required eCQM: (a) Three self-selected eCQMs; and (b) the Safe Use of Opioids—Concurrent Prescribing eCQM. For the CY 2023 reporting period and subsequent years, hospitals will be required to report four calendar quarters of data for each required eCQM: (a) Three self-selected eCQMs; and (b) the Safe Use of Opioids—Concurrent Prescribing eCQM, and the submission period for the Medicare Promoting Interoperability Program will be the 2 months following the close of the respective calendar year.

c. Public Reporting of eCQM Data

Electronic reporting serves to further the CMS and HHS policy goals to promote quality through performance measurement and, in the long-term, improve the accuracy of the data and reduce reporting burden for providers. It also promotes the continued effort to align the Promoting Interoperability Program with the Hospital IQR Program through simplifying and streamlining quality reporting. We expect that over time, hospitals will continue to leverage EHRs to capture, calculate, and electronically submit quality data, build and refine their EHR systems, and gain more familiarity with reporting eCQM data. As eCQM reporting continues to advance, and hospitals have gained several years of experience with successfully collecting and reporting eCQM data, it is important to further our policy goals of leveraging EHR-based quality measure reporting in order to incentivize data accuracy, promote interoperability, increase transparency, and reduce long-term provider burden by providing public access to the eCQM data being reported.

Section 1886(b)(3)(B)(viii)(VII) of the Act requires the Secretary to report quality measures of process, structure, outcome, patients' perspectives on care, efficiency, and costs of care that relate to services furnished in inpatient settings in hospitals on the internet website of CMS. Section 1886(b)(3)(B)(viii)(VII) of the Act also requires that the Secretary establish procedures for making information regarding measures available to the public after ensuring that a hospital has the opportunity to review its data before they are made public. In the proposed rule, we stated that the current Hospital IQR Program policy is to report data as soon as it is feasible on CMS websites such as the Hospital Compare and/or its successor website after a 30-day preview period (78 FR 50776 through 50778). For additional information, we referred readers to section VIII.12.a. of the proposed rule, the Hospital IQR Program's Public Display Requirements.

Section 1886(n)(4)(B) of the Act requires the Secretary to post on the CMS website, in an easily understandable format, a list of the names of the eligible hospitals and CAHs that are meaningful EHR users, and other relevant data as determined appropriate by the Secretary. We believe other relevant data could include clinical quality measure performance rates, and data intended to improve transparency and reporting accuracy, because such data would enable patients, consumers, and health care providers to make informed decisions about their own, and their patients' healthcare.

Section 1886(n)(4)(B) of the Act also requires the Secretary to ensure that an eligible hospital or CAH has the opportunity to review the other relevant data that are to be made public with respect to the eligible hospital or CAH prior to such data being made public. By publicly reporting clinical quality measure data, this demonstrates our commitment to providing data to patients, consumers, and providers as quickly as possible to assist them in their decision-making.

Therefore, in alignment with our goal to encourage data accuracy and transparency, we proposed to align with the Hospital IQR Program in publicly reporting eCQM data submitted by eligible hospitals and CAHs for the Promoting Interoperability Program starting with the CY 2021 reporting period, and continuing through subsequent years (85 FR 32857). We stated that this data could be made available to the public as early as the fall of CY 2022. We also refer readers to section VIII.A. of the preamble of this final rule for a discussion of a similar proposal under the Hospital IQR Program.

Comment: A few commenters supported public reporting of eCQM data for the CY 2021 reporting period, with this data being made available to the public as early as Fall 2022. One commenter stated the proposal strikes a balance between reducing the administrative burden for providers of collecting and reporting eCQM data, without sacrificing the meaningfulness of quality information available to the public, and also ensuring that CMS has a more robust dataset to make payment decisions. One commenter found the proposed change reasonable and appropriate, and agrees that the current submission requirement does not effectively capture performance trends. A few commenters appreciated the greater public disclosure of eCQM data and agreed that the proposed change will provide a more accurate picture of overall performance for hospitals.

Response: We thank commenters for their support. We believe it is important to provide data to the public as soon as practicable while increasing the amount of eCQM data to be reported to CMS. We believe that beginning to publicly report eCQM data as early as the fall of 2022, while simultaneously progressively increasing the quarters of reported eCQM data strikes the appropriate balance between the importance of transparency by publicly reporting eCQM data and stakeholder concerns about using sufficient data for publicly reporting eCQM data.

Comment: A few commenters did not support public reporting of eCQM data from the CY 2021 reporting period beginning as early as Fall 2022 due to the impact of the COVID–19 PHE on hospitals, including needing to reassign and reduce hospital staff, redirect resources, and concerns about increasing provider burden. A few commenters did not support our proposal to publicly report eCQM data due to concern about measure performance during the COVID–19 PHE. Several commenters opposed publishing data on *Hospital Compare* for the CY 2021 reporting period, and recommended a delay until the CY 2022 reporting period or later due to the COVID–19 PHE that may impact the validity and reliability of data, especially when comparing performance across hospitals. A few commenters supported the proposal to publicly report eCQM data, but recommended that CMS confer with hospitals to ensure data reporting for the CY 2021 reporting period will not impose unreasonable administrative burden during the COVID–19 PHE.

Response: We continue to closely monitor and analyze the impact that the unpredictable nature that the COVID–19 PHE may have on the national comparability of Promoting Interoperability Program measures, as well as burden on hospitals, and will continue to communicate through routine channels as necessary. We appreciate commenters' concerns regarding the impact COVID–19 PHE has had on hospitals, however, we do

not believe that public reporting of eCQM data adds to that burden, as public reporting will not change how hospitals submit or report their eCQM data, nor the number of measures that will be required to be reported. For clarification, CY 2020 reporting period data will not be publicly reported, as we are finalizing to start public reporting of eCQM data with the CY 2021 reporting period in Fall of 2022.

Comment: Some commenters did not support public reporting of eCQM data due to the burden for some hospitals to successfully submit eCQM data.

Response: We understand commenters' concerns, however, we believe we have sufficiently mitigated any potential burden for hospitals by taking an incremental approach to allow hospitals to become familiar with eCQM reporting, prior to publicly reporting eCQM data.

Comment: Many commenters did not support public reporting of eCQM data as early as Fall 2022, and recommended a delay in public reporting to provide hospitals with additional time to prepare, to provide greater technical consistency, or until four quarters of data are required to be reported.

Response: We appreciate the commenters' feedback, but disagree that hospitals need more time to prepare for public reporting of eCQM data. CY 2021 will be the fifth year of mandated reporting of eCQM data for hospitals, and we have determined that eCQM data is accurate enough to begin reporting. While we appreciate commenters' concerns about public reporting eCQM data representing fewer than four quarters of data, we disagree that this should inhibit the advancement of public reporting of eCQM data. We believe it is important to provide data to the public as soon as practicable, while simultaneously increasing the amount of eCQM data being reported to CMS. We believe that beginning to publicly report eCQM data as early as the fall of 2022, while progressively increasing the quarters of reported eCQM data appropriately balances the importance of transparency by publicly reporting eCQM data and stakeholder concerns about using sufficient data for publicly reporting eCQM data. Last, we refer commenters to section VIII.A.9.b. of the preamble of this final rule, where the Hospital IQR Program references technical specifications for quality measures, and in addition, the FY 2019 IPPS/LTCH final rule where the Hospital IQR Program summarizes technical measure specifications for quality measures, and the sub-regulatory process for incorporation of non-substantive updates to the measure specifications.

Comment: Many commenters did not support public reporting of eCQM data beginning as early as Fall 2022, citing concern that inconsistency in the number of cases reported and the self-selection of eCQMs reported across individual hospitals might not accurately depict hospital performance. These commenters recommended aligning the start of public reporting with one consistent mandated eCQM across all hospitals.

Response: We acknowledge the commenters' concerns, however, we plan to initially publish CY 2021 eCQM data, consisting of two self-selected quarters of data, on *https://data.Medicare.gov* or its successor website, before publishing it on *Hospital Compare,* or its successor website. The Data.Medicare.gov website or its successor website, provides the public with access to downloadable datasets to ensure the information is publicly available, but does not offer side-by-side comparison capabilities like *Hospital Compare* or its successor website, without additional data management by the user. As more eCQM data are progressively reported, we will then display the additional information on the *Hospital Compare* website, or its successor website, where more direct comparisons of hospital performance will be available. We believe these finalized policies address the commenters' concerns while providing flexibility for hospitals and their vendors to build upon and utilize investments in their EHRs.

Comment: Several commenters did not support our proposal to publicly report eCQM data for the CY 2021 reporting period and to provide hospitals the opportunity to review the data. These commenters recommended a dry run with one quarter and two quarters of data to enable hospitals to preview their performance and national comparison data confidentially before the data are made public. Commenters recommended CMS conduct reliability analyses to determine the minimum volume of cases needed for public reporting and make the analyses public, provide clear information about how data will be presented to the public, and provide information on the process to dispute publicly accessible data.

Response: We thank the commenter for their comments. We interpret the term ''dry run'' to reference the dry run provision in the Blueprint for the CMS Measures Management System, used in the first use of a measure in a CMS program or first results reporting.[509] We do not believe a dry run before the start of public reporting is necessary and have determined that the eCQM data are accurate enough to begin reporting. In addition, hospitals would have the opportunity to preview their eCQM data before they are made public, as required by section 1886(n)(4)(B) the Act, during a 30-day preview period.

We thank commenters for their recommendations to conduct measure reliability analyses to determine the minimum number of cases needed for public reporting. Validation of CY 2017 and CY 2018 data has shown that a majority of eCQM data was reported with agreement rates of 80 percent or higher. We refer readers to section VIII.A.10 of this final rule where this is discussed in more detail.

Comment: Several commenters opposed publishing eCQM data on *Hospital Compare* citing concerns about data context as it pertains to safety net hospitals.

Response: We thank commenters for their feedback concerning the eCQM data as it pertains to safety net hospitals. We plan to monitor the initiation of public reporting of eCQM data and welcome continued feedback from all stakeholders through webinars, listservs, and help desk questions. We will continue to monitor trends in performance, including that of safety net hospitals.

After consideration of the public comments we received, we are finalizing our proposal to begin publicly reporting eCQM data submitted by eligible hospitals and CAHs for the Promoting Interoperability Program, beginning with the eCQM data reported for the CY 2021 reporting period and for subsequent years, and we expect to begin publicly reporting the data in the Fall of CY 2022. Hospitals will have the opportunity to review their eCQM data before it is made public, as required by section 1886(n)(4)(B) of the Act, during a 30-day preview period.

7. Technical Corrections to the Regulations

a. Corrections to Regulations for Puerto Rico Eligible Hospitals Participating in the Medicare Promoting Interoperability Program

In the FY 2019 IPPS/LTCH PPS final rule (83 FR 41673 and 41674), we amended § 495.104(c)(5) to specify transition factors under section 1886(n)(2)(E)(i) of the Act for the

[509] See Blueprint for CMS Measures Management System, *https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/MMS/Downloads/Blueprint.pdf.*

incentive payments for Puerto Rico eligible hospitals. Although our preamble discussion of the transition factors was accurate (83 FR 41673 and 41674), our amendments to the regulation text included inadvertent technical errors. Specifically, under § 495.104(c)(5)(viii), we inadvertently included FY 2018 twice and omitted FY 2021 (83 FR 41710 and 41711). We proposed to correct these errors in the FY 2021 IPPS/LTCH PPS proposed rule (85 FR 32857) by revising § 495.104(c)(5)(viii) to specify the correct transition factors for FYs 2018 through 2021 as follows:

- 1 for FY 2018.
- 3/4 for FY 2019.
- 1/2 for FY 2020.
- 1/4 for FY 2021.

b. Corrections to Regulatory Citations

In prior rulemaking, we adopted regulatory text at § 495.20 which cross-references ONC's certification criteria under 45 CFR 170.314. We recently identified two typographical errors in § 495.20: specifically, paragraphs (e)(5)(iii) and (l)(11)(ii)(C)(*1*) should have cross-referenced provisions of 45 CFR 170.314, but instead certain numbers were inadvertently transposed in the cross-references. Therefore, in the FY 2021 IPPS/LTCH PPS proposed rule (85 FR 32857 through 32858), we proposed to revise §§ 495.20(e)(5)(iii) and (l)(11)(ii)(C)(*1*) to correct these errors.

We received no comments on these proposals and are finalizing the proposed revisions to § 495.104(c)(5)(viii) and §§ 495.20(e)(5)(iii) and (l)(11)(ii)(C)(*1*) as proposed.

8. Future Direction of the Medicare Promoting Interoperability Program

In the FY 2021 IPPS/LTCH PPS proposed rule (85 FR 32858), we solicited public comment on several areas involving the Promoting Interoperability Program. This included reducing administrative burden, supporting continued alignment with the Quality Payment Program, supporting alignment with the 21st Century Cures Act final rule, advancing interoperability and the exchange of health information, and promoting innovative uses of health IT. We also solicited public comment on potential areas of overlap including: information blocking, transitioning from the Common Clinical Data Set (CCDS) to the United States Core Data for Interoperability (USCDI), finalization of a new certification criterion for a standards-based API using FHIR, and other updates to 2015 Edition health IT certification criteria and the ONC Health IT Certification Program. In maintaining our focus on how promoting interoperability, alignment, and simplification will reduce health care provider burden while allowing flexibility to pursue innovative applications that improve care delivery, we further solicited comment on how Medicare can best support these areas of overlap.

Although we are not summarizing and responding to the comments we received in this final rule, we would like to bring attention to ONC's 21st Century Cures Act final rule (85 FR 25642 through 25961), specifically, the finalized updates to the 2015 Edition certification criteria and the ONC Certification Program. As these updates impact certification criteria referenced in the CEHRT definitions for the Promoting Interoperability Program and the MIPS Promoting Interoperability performance category, we proposed to align with these updates in the CY 2021 PFS proposed rule (85 FR 50265 through 50272), where we invite our readers to review and provide public comment.

We would like to thank commenters for the feedback, support, and responses we have received. We will continue to take all feedback into account as we develop future policies for the Promoting Interoperability Program.

IX. Changes for Hospitals and Other Providers

A. Changes in the Submission of Electronic Patient Records to Beneficiary and Family Centered Care Quality Improvement Organizations (BFCC–QIOs)

1. Background

CMS' Quality Improvement Organization (QIO) Program is part of the HHS' national quality strategy for providing quality and patient centered care to Medicare beneficiaries. The mission of the QIO Program is to improve the effectiveness, efficiency, economy, and quality of services delivered to Medicare beneficiaries. We identify the core functions of the QIO Program as: (1) Improving quality of care for beneficiaries; (2) protecting the integrity of the Medicare Trust Fund by ensuring that Medicare pays only for services and goods that are reasonable and necessary and that are provided in the most appropriate setting; and (3) protecting beneficiaries by expeditiously addressing individual concerns (such as beneficiary complaints, provider-based notice appeals, violations of the Emergency Medical Treatment and Labor Act (EMTALA), and other related responsibilities). The QIO Program is an important resource in our effort to improve quality and efficiency of care for Medicare beneficiaries.

A QIO is an organization comprised of health quality experts, clinicians, and consumers organized to improve the quality of care delivered to people with Medicare. QIOs work under the direction of CMS, to improve the quality of healthcare for all Medicare beneficiaries, and to support the Medicare program.

Current law authorizes the QIOs to have access to the records of providers, suppliers, and practitioners under Medicare in order to perform their functions. For example, section 1154(a)(7)(C) of the Act requires QIOs, to the extent necessary and appropriate, to examine the pertinent records of any practitioner or provider of health care services that is providing services for which payment may be made under the Medicare program. Section 1156(a)(3) of the Act requires that any person who provides health care services payable under Medicare assure that services or items ordered or provided are supported by evidence of the medical necessity and quality as may reasonably be required by a reviewing QIO in the exercise of its responsibilities. Our regulations at 42 CFR 476.78(b) provide that health care providers that submit Medicare claims must cooperate in the assumption and conduct of QIO reviews. Under 42 CFR 476.78(b)(2), providers (defined broadly to include any health care facility, institution, or organization involved in the delivery of Medicare-covered services) and practitioners (defined broadly to include an individual credentialed within a recognized health care discipline and involved in providing the services of that discipline to patients) must provide patient care data and other pertinent data to the QIO when the QIO is collecting review information. In practice, this typically includes providing the QIO with copies of medical records for Medicare beneficiaries. In addition, under 42 CFR 480.111, QIOs are authorized to have access to and obtain records and information pertinent to the health care services furnished to Medicare patients, held by any institution or practitioner in the QIO area; QIOs may require the institution or practitioner to provide copies of such records or information to the QIO. In some cases, this access to information may include information from the records of non-Medicare patients.

While § 480.111 does not explicitly require submission of electronic patient

records, the current regulation at § 476.78(b)(2)(ii) requires providers and practitioners to send patient records in electronic format, if available, and subject to the QIO's ability to support receipt and transmission of the electronic version of patient records. The changes included in this final rule will make electronic submission the default method of submission, mandating all providers and practitioners who provide patient records to the QIO to submit them in electronic format unless they have an approved waiver. Providers and practitioners would be required to deliver patient records within 14 calendar days of a request. We believe the QIOs have developed the capability to securely receive and transmit medical patient records in electronic format, such that requiring submission of requested patient records in electronic format by providers and practitioners who has the capability is now reasonable. This is demonstrated by the fact that QIOs currently submit case files and patient records to the Departmental Appeals Board (DAB) and the Office of Medicare Hearings and Appeals (OMHA) electronically. Based on these facts, it is now evident that all QIOs are able and capable of receiving and sending patient records in electronic format.

In 2011, we established the Medicare and Medicaid EHR Incentive Programs (now known as the Promoting Interoperability programs) to encourage eligible professionals, eligible hospitals, and critical access hospitals (CAHs) to adopt, implement, upgrade, and demonstrate meaningful use of certified electronic health record technology (CEHRT). Beginning in 2019, all eligible professionals, eligible hospitals, and CAHs are required to use CEHRT to meet the requirements of the Medicare and Medicaid Promoting Interoperability Programs. Requirements for eligible hospitals, and CAHs that submit an attestation to CMS under the Medicare Promoting Interoperability Program were updated in the FY 2019 IPPS/LTCH PPS final rule (83 FR 41634 through 41677). Based on the National Center for Health Statistics' 2017 National Electronic Health Records Survey, 97 percent of hospitals and 80 percent of office based physicians have adopted certified EHRs. The use of certified EHRs would enable healthcare providers to electronically submit patientrecords to the QIOs. See: *https://www.cdc.gov/nchs/fastats/electronic-medical-records.htm.*

In § 476.1, ''provider'' is defined as a health care facility, institution, or organization, including but not limited to a hospital, involved in the delivery of health care services for which payment may be made in whole or in part under Title XVIII of the Act. The term ''practitioner'' means an individual credentialed within a recognized health care discipline and involved in providing the services of that discipline to patients. The regulations define ''QIO review'' as a review performed in fulfillment of a contract with CMS, either by the QIO or its subcontractors. The definitions specific to 42 CFR part 480 do not explicitly define the terms institution or practitioner but the context makes it clear that these terms are references to health care providers that are facilities and individual practitioners. The changes we are implementing in this final rule address submissions of patient records by all types of health care providers to QIOs and reimbursement for those submissions.

2. Changes

In this final rule, we amend §§ 412.115, 413.355, 476.78, 480.111, and 484.265 to mandate providers and practitioners submit patient records to Beneficiary and Family Centered Care Quality Improvement Organizations (BFCC–QIOs) in an electronic format. This proposal would also update the procedures and reimbursement rates for patient records providers and practitioners furnish to QIOs. We define the term ''patient record'' at § 476.78(e)(1) as all patient care data and other pertinent data or information relating to care or services provided to an individual patient, in the possession of the provider or practitioner, as requested by a BFCC–QIO for the purpose of performing one or more QIO functions. Providers in this context would include an institution. As discussed in more detail later in this section, we understand that QIOs request and receive primarily (if not only) records and information that is about or related to the health care provided to specific individuals. This broad definition would include any information relevant or pertinent to a particular individual (or services or Medicare-covered benefits provided to an individual) that is requested by a QIO is part of the patient record for that individual, even if the information is not necessarily part of what is traditionally understood as a medical record. We received no public comment on this definition of the term ''patient record'' and how we use the term defined this way as the basis for reimbursement for submission of electronic patient records.

Under section 1866(a)(1)(F) of the Act, CMS is required to reimburse hospitals for the cost of providing patient records to the QIOs for QIO functions as discussed in this final rule. Based on similar requirements applicable to other providers and the history of litigation related to this provision, we subsequently applied this requirement to additional providers and suppliers under Medicare. The provisions governing reimbursement for sending patient records to the QIOs is codified at 42 CFR 476.78 and 42 CFR 480.111. In this final rule, we are finalizing the following changes to the reimbursement requirements:

- Patient records that are required to be provided to a QIO under § 476.78(b)(2) must be delivered in electronic format, unless a QIO approves a waiver. Providers and practitioners who lack the capability to submit patient records in an electronic format may only submit patient records by facsimile or photocopying and mailing, after the QIO approves a waiver. Initial waiver requests by those providers that are required to execute a written agreement with a QIO are expected to be made at the time the provider executes a written agreement with the QIO. Other providers and practitioners who are not required to execute a written agreement with a QIO may request a waiver by giving the QIO notice of their lack of capability to submit patient records in electronic format.
- We establish reimbursement rates of $3.00 per patient record that is submitted to the QIO in electronic format and $0.15 per page for requested patient records submitted by facsimile or by photocopying and mailing (plus the cost of first class postage for mailed photocopies), after a waiver is approved by the QIO.
- We establish that these reimbursement rates are applicable to patient records submitted to a QIO in accordance with §§ 412.115, 413.355, 476.78, 480.111, and 484.265.

We believe these changes bring the procedures and associated reimbursement rates for submission of patient records to a QIO up to date with CMS policies for promoting use of electronic health records and burden reduction.

These changes are applicable to all providers and practitioners providing patient records to QIOs for purpose of QIO reviews under § 476.78. In addition, these requirements are applicable to institutions and practitioners submitting records and information to the QIOs in accordance with § 480.111. Specifically, such

institutions and practitioners must conform with the requirement applicable to providers and practitioners under § 476.78(c) and (d). By the cross-references in the amended regulation text, we permit reimbursement by the QIOs to institutions and practitioners for providing records and information to the QIOs under § 480.111 using the same manner and rates as would apply to providers and practitioners under § 476.78(e). To align with these and other changes, we also amend other regulations that address submitting patient records for QIO reviews, specifically: §§ 412.115, 413.355, and 484.265. We address these changes individually in this section of the document.

We proposed in §§ 412.115(c), 413.355, and 484.265 to revise the current text which provides for an additional payment to be made, respectively, to hospitals, skilled nursing facilities and home health agencies in accordance with § 476.78 for the costs of photocopying and mailing medical records requested by a QIO. Specifically, we proposed to revise these provisions to permit an additional payment to a hospital, skilled nursing facility, or home health agency in accordance with § 476.78 for the costs of sending requested patient records to the QIO in electronic format, by facsimile, or by photocopying and mailing. These changes ensure that reimbursement is permitted for all healthcare providers and practitioners, on the same basis and at the same rates as authorized for the submission of requested patient records to the QIO under our proposed revisions to § 476.78.

The previously adopted regulation at § 476.78(c) described a photocopying reimbursement methodology for prospective payment system providers and included a step-by-step analysis of how CMS calculates provider costs of photocopying. We believe that including this description of how CMS determines a rate for reimbursement for photocopying patient records is no longer necessary in light of changes in technology and procedure, and proposed to remove the step-by-step analysis from § 476.78(c). We expect that up to 20 percent of providers will seek waivers allowing them to submit patient records by facsimile or photocopying and mailing if CMS authorizes reimbursement for the submission of patient records in an electronic format, and that that number would decrease further over time. This estimate of the number of affected entities that will submit waiver requests is based on the fact that according to the 2017 Office of National Coordinator (ONC) and Center for Disease Control (CDC) provider and practitioner survey of EHR adoption and use of Certified EHR technology, 99 percent of hospitals and 76 percent of office based clinicians have adopted certified EHR technology. See: *https://www.cdc.gov/nchs/fastats/electronic-medical-records.htm.*

This assumption is further supported by the number of providers that currently have access to CMS's esMD portal, which eliminates the need for healthcare providers to submit medical documentation to CMS's medical review contractors (such as QIOs and Regional Audit Contractors) by facsimile or photocopying and mailing. Therefore, we expect that future updates to the calculation of photocopying reimbursement rate would be of decreasing concern to the majority of stakeholders.

At § 476.78(c), we proposed that information that is required to be delivered to a QIO by a provider or a practitioner under § 476.78 must be delivered in an electronic format using a mechanism specified by the requesting QIO. We proposed that in the absence of a mechanism specified by the requesting QIO, the requested records may be submitted using any CMS approved secure mechanism. This includes mechanisms such as: secure file transfer (SFT), managed file transfer (MTF), Electronic Submission of Medical Documentation System (esMD), or CMS-approved internet portal, or CMS-approved physical medium for submitting electronic records. Under our proposal, CMS will provide a list of approved mechanisms for submission of records and information to the QIO in an electronic format when the QIO contacts the provider to conduct a review, or when a written agreement between the QIO and provider is executed. We proposed to address the amount of reimbursement in new paragraph (e) of § 476.78, as discussed later in this section. CMS would not permit the QIOs to reimburse for any patient record submitted by facsimile or by photocopying and mailing, if the provider or practitioner in question does not have an approved waiver.

We proposed to redesignate existing § 476.78(d) as § 476.78(f), with revisions to be consistent with our proposed reimbursement rates. We proposed to create a new provision at § 476.78(d) to establish a process for practitioners and providers to request waivers of the requirements for the electronic submission of requested patient records to the QIOs under proposed § 476.78(c). A QIO-approved waiver would afford a provider or practitioner who is not capable of submitting patient records to its QIO in an electronic format the opportunity to continue submitting patient records using facsimile or by photocopying and mailing. We proposed that providers who are required to execute a written agreement with a QIO, but which lack the capability to submit requested patient records in electronic format to the requesting QIO, must request a waiver of the requirement to submit records in an electronic format to the QIO. A request for a waiver by providers who are required to execute a written agreement with the QIO, must generally be made to the QIO when executing a written agreement with the QIO. However, where such a provider's lack of capability arises after the written agreement is executed, we proposed that the provider could request a waiver by notifying the QIO that they lack the capability to submit patient records in electronic format. We also proposed, at § 476.78(d)(2)(ii), that the waiver would become part of the written agreement between the QIO and the provider. Upon approval of a waiver, a provider or practitioner may submit requested patient records by facsimile or photocopying and mailing. We note that the current regulations do not specifically provide for reimbursement for patient records submitted to the QIO by facsimile, but in order to encourage efficiency in patient record transmission, CMS has historically interpreted the provisions governing reimbursement for patient records submitted to the QIOs through photocopying and mailing to also authorize reimbursement for the submission of patient records by facsimile. We proposed to specifically incorporate our historic interpretation into the regulatory framework. We solicited comment on these proposals, including the requirement that the request for a waiver must generally be made during execution of the written agreement.

Similarly, we proposed that providers, practitioners and institutions subject to § 476.78 or § 480.111 that are not required to execute a written agreement with the QIO, may also request a waiver of the requirement to submit records in electronic format to the QIO, by notifying the QIO that they lack the capability to submit patient records in an electronic format. Upon approval of the waiver, a provider or practitioner may submit requested patient records and information by photocopying and mailing. We solicited comment on this proposal, including

whether the regulation should require a written record of the waiver.

We proposed to establish these waiver processes because we recognize that some practitioners and providers may lack the capacity to submit records to the QIOs in an electronic format. However, these providers and practitioners are still required to comply with QIO requests for records. We believe the waiver request process would not add extra burden on the providers and practitioners because they can request a waiver simply by notifying the QIO that they lack the capability to submit patient records in an electronic format, either when executing a written agreement with the QIO in accordance with § 476.78(a) or when they are contacted by the QIO to request patient records. Under our proposal, such waiver requests could be made by whatever means the provider or practitioner uses to communicate with the QIO. We invited comment on these proposals.

We also proposed to add a new paragraph (e) to § 476.78. In § 476.78(e)(1), we proposed a definition of the term ''patient record'' for purposes of reimbursement for submitting patient records to the QIO for one or more QIO functions. In § 476.78(e)(2), we proposed to authorize QIOs to reimburse providers and practitioners for submitting patient records, requested by a QIO for the purpose of carrying out one or more QIO functions with the proposed rates of reimbursement based on the electronic format of submission. The QIOs could not reimburse for any patient record submitted by facsimile or by photocopying and mailing without an approved waiver. Each of these reimbursement rates were calculated to reflect the costs associated with submitting a patient record, including labor and supplies. Proposed § 476.78(e)(2) would provide that a QIO could reimburse a provider or practitioner for requested patient records submitted in an electronic format, at the rate of $3.00 per record. We proposed that § 476.78(e)(3) will provide that a QIO may reimburse a provider or practitioner, with an approved waiver in place, for requested patient records submitted by facsimile or photocopying and mailing at the rate of $0.15 per page, plus the cost of first class postage for patient records submitted via photocopying and mailing. We discuss the methodology, we proposed to use to calculate these payment rates in section IX.A.2.b. of the preamble of this final rule.

For purposes of QIO reimbursement under § 476.78(e), we proposed to define a ''patient record'' at § 476.78(e)(1) as all patient care data and any other pertinent data or information relating to care or services provided to an individual patient in the possession of the provider or practitioner, as requested by a QIO, for the purpose of performing one or more QIO functions. We proposed to interpret and use this definition of patient record broadly. For example, this definition of ''patient record'' would include the policies and established operating procedures of a health care provider, to the extent that that information is pertinent to an individual patient or the services or Medicare-covered benefits provided to an individual patient, and the QIO requests that information. We also proposed at § 476.78(e)(4) that the QIOs will only be permitted to reimburse a practitioner or providers once for each patient record submitted, for each request made by a QIO. Each request from a QIO would be reimbursed separately at the rates specified in § 476.78(e), including for records that had already been provided in response to a previous request. However, only one reimbursement would be provided by the QIO for each patient record submitted, per request, even if a particular patient record is submitted to the QIO using multiple different formats, in fragments, or more than once in response to a particular request.

We proposed to revise the requirements applicable to institutions and practitioners submitting records and information to the QIOs in accordance with § 480.111. Specifically, we proposed to require such institutions and practitioners to conform with the requirement applicable to providers and practitioners under § 476.78(c) and (d). By the cross-references in the regulation text, we proposed to permit reimbursement by the QIOs to institutions and practitioners for providing records and information to the QIOs under § 480.111 in the same manner and rates as would apply to providers and practitioners under proposed § 476.78(e). In our proposal, the reimbursement rates proposed under § 476.78(e) will also apply to institutions and practitioners subject to § 480.111. We proposed to replace the current language in§ 480.111(d) governing the reimbursement by the QIO for requested patient records with a provision that refers to the reimbursement rates in § 476.78(e).

Therefore, if these changes are finalized, reimbursement for patient records submitted under § 480.111 would be consistent with reimbursement under § 476.78. This proposal would provide a consistent level of reimbursement from submission of patient records to the QIOs, across all health care providers and practitioners, that submit patient records to the QIO under §§ 476.78 and 480.111. The goal of our proposal was to put all QIO reimbursement for patient records in the same section of the regulations, so that QIOs, providers, and practitioners know where to find the relevant provisions. This proposal would also help to reduce the risk of inconsistencies in policy application due to duplication of related QIO regulations in multiple sections.

We received no comments on the definition of the term ''patient record'' for purposes of reimbursement by a QIO at 476.78 (e)(1) when submitted for one or more required QIO activities; the requirement for QIOs to reimburse providers and practitioners once per request for the submission of a patient record at 476.78 (e)(4). We are finalizing these changes as proposed without modification.

We proposed redesignating the existing provisions previously under § 476.78 (d) to a new paragraph: § 476.78(f). We proposed revisions to the text of proposed redesignated § 476.78(f) to provide greater consistency with our proposed reimbursement requirements; the proposed revisions to § 476.78(b)(2)(ii) to make electronic submission the default method of submission and mandate that all providers and practitioners who provide patient records to the QIO to submit them in electronic format within 14 calendar days of a request, unless they have an approved waiver. In addition, the requirements for submitting patient records to the QIO in an electronic format unless they obtain an approved waiver from the QIO and the ability for the QIO to reimburse providers for electronic submission of patient records are applicable to all providers and practitioners under §§ 412.115, 413.355; 476.78, 480.111, and 484.265. Accordingly, we are finalizing these provisions as proposed, without modification.

a. Required Submission of Patient Records in Electronic Format to the QIO, and Process for Obtaining a Waiver From Required Submission in Electronic Format

Currently § 476.78 requires providers and practitioners who are subject to QIO review activities under 42 CFR part 476 to submit requested patient care data and other pertinent data and information to the QIO. We proposed to require those submissions be made in electronic format in revised § 476.78(c).

We proposed to require electronic submission because it is more efficient, cost effective, and timely. Based on our comparison of patient record submission in electronic format and submission by facsimile and photocopying and mailing we expect a savings of about $71.8 million to CMS over 5 years. These savings represent an estimated combination of $37.6 million cost savings from reimbursement to providers for sending patient records via facsimile, photocopying and mailing, and $34.2 million cost saving from payment to QIOs to cover the costs for scanning and uploading paper based patient records.

Currently, § 476.78(b)(2)(ii) requires providers and practitioners send secure transmission of an electronic version of medical information to the QIO, if available, and subject to the QIO's ability to support receipt and transmission of the electronic version of patient records. Because most providers and all QIOs have demonstrated the ability to send and receive patient records in electronic format, we proposed to mandate providers and practitioners to submit requested patient records and information to the QIO in electronic format.

Our interoperability programs, quality reporting programs, and other programs are now requiring electronic submission of patient care data and information to CMS and its contractors. The Promoting Interoperability program has been successful in encouraging widespread adoption of EHRs by providers and practitioners. By participation in these CMS data transfer programs, providers, practitioners, and QIOs have demonstrated the capability to collect, store, and safely transmit EHR data electronically. Based on our years of experience administering the Medicare and Medicaid EHR Incentive and Promoting Interoperability programs, we believe that most providers and practitioners are now able to safely communicate patient's medical records electronically to QIOs. This is evidenced by the increased number of providers, practitioners, and QIOs that currently participate in the use of esMD, Managed File Transfer (MFT), and other related electronic data communication methods.

On September 15, 2011, we implemented the esMD system for programs requiring the review of medical documentation and patient records such as: Medicare Fee for service payment appeals, prior authorization requests, and durable medical equipment requests. The esMD system is used by providers on a voluntary basis to transmit medical documentation to review contractors electronically. This medical documentation (including patient records) is used by CMS contractors to review claims and to verify providers' compliance with Medicare rules for documentation and payment. Medicare providers and review contractors believe that using the esMD system results in cost savings and increased efficiencies, as well as improve payment turnaround time, and reduce the administrative burden associated with medical documentation requests and responses. By 2017, about 60,579 providers had access and used esMD to send medical records, and up to 2.5 million medical records were transmitted from providers to Medicare contractors. See 2017 esMD Annual Report: *https://www.cms.gov/Research-Statistics-Data-and-Systems/Computer-Data-and-Systems/ESMD/Downloads/2017-esMD-Annual-Program-Report-10-01-2016-09-30-2017.pdf*.

Managed File Transfer (MFT) refers to a software or a service that manages the secure transfer of data from one computer to another through a network (for example, the internet). MFT software is marketed to corporate enterprises as an alternative to using ad-hoc file transfer solutions. MFT is currently available to providers and practitioners, and QIOs currently use MFT to transmit data to its clinical peer reviewers. MFT provides another good option for providers and practitioners to submit records and information securely to QIOs.

Given numerous improvements in electronic data communication capabilities among both providers and QIOs, and the expansion in access to electronic data communication technology, we believe it is in the best interest of the Medicare program for CMS to support electronic data communication between the QIOs and providers and practitioners. We proposed to require providers and practitioners to provide patient records to the QIO electronically beginning in FY 2021 and for subsequent years. Our proposal provided for a waiver for providers and practitioners that lack the capability to submit patient records in electronic format. Lacking the capability to submit patient records in electronic format may have a number of causes, such as the records not being in an electronic format or readily convertible to an electronic format or the provider or practitioner suffering a loss of the necessary resources to submit records through the QIO-approved or CMS-approved mechanism (such as because of a power outage). The intent of this policy change is to incentivize health care providers and practitioners subject to § 476.78 to use the most efficient mechanisms available to submit required data to the QIOs for review activities, in order to minimize the time and expense required to satisfy their responsibilities under § 476.78(b), and thereby minimize the expense CMS incurs in the administering the QIO program. A complete discussion of the anticipated impact of these proposals can be found section I.H.11. of Appendix A to this final rule.

We received no comments on our proposal to require providers and practitioners to submit patient records in an electronic format under § 476.78 (c) unless they have an approved waiver from a QIO pursuant to § 476.78(d); the process for providers and practitioners to obtain a waiver from the requirement to submit patient records to the QIO in an electronic format under § 476.78(d); and the applicability of these requirements to providers practitioners and institutions under §§ 412.115, 413.355; 476.78, 480.111, and 484.265.

We proposed to permit providers and practitioners who cannot submit requested patient records and information in electronic format to request a waiver under § 476.78(d). Under our proposal, any provider or practitioner that lacks the capability to submit patient records and information to the QIO in electronic format must obtain a waiver to be exempted from the requirement of submitting patient records and information in electronic format. Upon approval of the waiver, the provider or practitioner can submit requested patient records and information to QIO by facsimile or first class mail. We also proposed that requests for waivers by providers that are required to execute a written agreement with the QIO must generally be made to the QIO when executing the written agreement. Those providers and practitioners that are *not* required to execute a written agreement with the QIO may request a waiver to be exempted from submitting patient records in electronic format by notifying the QIO that they lack the capability to submit patient records in electronic format.

After the waiver is approved a provider or practitioner may send requested patient records and information by facsimile or first class mail. The QIOs may reimburse providers and practitioners with approved waivers for requested patient records submitted by facsimile or by photocopying and mailing, as proposed in § 476.78(e)(3). We proposed that a waiver would be approved by the QIO after the provider or practitioner has

demonstrated that it lacks the capability to submit patient records in an electronic format. Under our proposal, reimbursement would not be permitted for any patient record submitted to the QIO by facsimile or by photocopying and mailing, when the provider or practitioner does not have an approved waiver.

We received no comments on the proposed waiver process at § 476.78(d) for exempting providers and practitioners from the requirement to submit patient records to the QIO in an electronic format, or on limiting reimbursement of providers and practitioners under § 476.78(e)(3) for the submission of patient records to the QIO through photocopying and mailing or by facsimile to circumstances in which a provider or practitioner has obtained an approved waiver from the electronic submission requirements under § 476.78(d). As a result, we are finalizing the proposed changes at § 476.78(d) and § 476.78(e)(3) without modification.

b. Reimbursement for Submission of Patient Records to the QIOs in Electronic Format

We proposed at § 476.78(e)(2) to authorize the QIOs to reimburse providers and practitioners, for submitting requested patient records to the QIO in an electronic format, starting in FY 2021. The regulation previously did not authorize or set a rate for reimbursement when providers submit patient records to the QIOs in an electronic format. We believe the lack of reimbursement for the submission of requested patient records in an electronic format discouraged providers and practitioners from sending patient records in an electronic format, which is a more efficient and cost effective method for transmitting patient records than facsimile or photocopying and mailing. This lack of reimbursement for electronic submission of patient records did not align with other CMS programs and policies that seek to incentivize the use of electronic records and the electronic transmission of information such as the Promoting Interoperability Program. We believe this change in regulation, allowing QIOs to reimburse providers and practitioners for submitting patient records in electronic format, would encourage more practitioners and providers to do so.

In calculating the rate of reimbursement for submission of patient records in an electronic format, we took into consideration the labor rate and materials cost associated with submitting patient records in an electronic format. We proposed to follow steps similar to those used in CMS' methodology for calculating reimbursement for photocopying patient records for the QIOs. We calculated the proposed reimbursement rate for patient records submitted in electronic format as follows:

- *Step 1*—Calculate total salary of a medical records clerk, including fringe benefits, using the salary level for an experienced midlevel (GS–5 step 5) secretary in the Federal government as representative of that of a medical records clerk.
- *Step 2*—Calculate labor costs associated with searching for, downloading, and submitting electronic records.
- *Step 3*—Determine the number of patient records that can be searched, retrieved, processed, and submitted per hour.
- *Step 4*—Calculate the cost of active productive time of a medical record clerk by dividing annual salary with total productive hours, taking into account time spent at rest, and away from work.
- *Step 5*—Calculate total reimbursement for submitting patient records to the QIOs in electronic format by dividing the total productive hour cost by the total number of patient records we estimate a medical records clerk can process in 1 hour.

Using this methodology, we calculated the reimbursement for submitting records electronically to QIO as follows:

(1) The Labor Costs Associated With Searching for, Downloading, and Submitting Patient Records

Labor costs were calculated by adding the annual salary of a medical records clerk with the costs of fringe benefits, and dividing that sum with the number of patient records that can reasonably be expected to be processed in a year.

In this final rule, we will continue to use the salary of a Federal GS–5 midlevel secretary as representative of a medical records clerk's salary. We will take into account increases in the payment rate for a midlevel secretary in the federal government for the CY 2020. Using the salary level for an experienced midlevel (GS–5 step 5) secretary in the Federal government as representative of that of a medical records clerk, the annual salary of the medical records clerk is estimated to be $39,573 according to the Office of Personnel Management's 2020 General Schedule pay scale, with locality adjustment for the rest of the United States. In calculating the fringe benefits applicable to a medical records clerk, we used OMB Circular A–76 to calculate the annual fringe benefit cost, based on 36.25 percent of the GS–5 salary. The estimated annual fringe benefit cost is therefore $14,345 ($39,573 * 36.25 percent). Adding the fringe benefit cost, the estimated total annual salary of a medical records clerk is $53,918. Assuming a full time equivalent of 2080 hours per year and divide the annual salary by the number of hours worked ($53,918/2080 hours) in a year, the total salary per hour of a medical records clerk would be $26 per hour.

(2) Labor Costs Associated With Searching for, Downloading, and Submitting Patient Records

We assume that an average patient record request by QIO will be contained in a single electronic file that can be classified as one electronic record. This assumption is based on CMS' experience with current QIO transfer of electronic patient records to OMHA and the DAB. We estimated that it will take a medical record clerk an average of 5 minutes to search, retrieve, process, and submit a requested patient record in electronic format. Using this estimate we calculate that a medical records clerk could search for, retrieve, process, and submitted a total of 12 medical records per hour.

(3) Active Productive Time of a Medical Record Clerk

We estimate a medical records clerk is active and productive for a total of 1,430 hours per year (about 5.5 productive hours per day). We took into account the time spent by the medical records clerk at rest and lunch, and time away from work on annual vacation, sick, and holiday leave. To calculate the cost of one active productive hour we divide the estimated cost for annual salary and fringe benefits by the total number of active productive hours per year. We estimated the cost of one active productive hour at $38 per hour ($53,918/1430 hours).

(4) Cost of Supplies

We estimated that there would be no cost for supplies directly attributable to searching, downloading, and submitting patient records to the QIO.

(5) Total Reimbursement Rate for Submitting Patient Records to the QIOs in an Electronic Format

We estimated total cost for submitting a patient record to the QIO at $3 per record. This calculation was derived by dividing the total productive hour cost of $38 by the number of patient records that can processed in an hour, which is 12 records ($38/12 records = 3.17).

Consistent with our policy and generally accepted mathematics principles, we chose to round our calculations to nearest decimal. We believe this decision is both reasonable and supportable.

We invited public comment on this proposed methodology for calculating the rate of reimbursement for processing patient records in an electronic format. In addition, we invited public comment on alternative methodologies for determining more appropriate reimbursement rate for the submission of patient records to the QIOs in an electronic format, and we intend to finalize our policy in this final rule based upon the public comments received.

We received no comments regarding our proposals under § 476.78(e)(2) to allow QIOs to reimburse providers or practitioners for the electronic submission of patient records, or the methodology or content used to calculate the $3.00 reimbursement rate for the electronic submission of patient records. Therefore we are finalizing our proposals for the regulation at § 476.78(e)(2) allowing QIOs to reimburse providers and practitioners at a flat rate of $3.00 per requested patient record as proposed and without modification.

c. Reimbursement Rate for Providers Submitting Patient Records by Photocopying and Mailing

We proposed that the QIOs would reimburse providers with approved waivers for submitting patient record by photocopying and mailing. We proposed at § 476.78(e)(3) to increase the reimbursement rate for submitting patient records by photocopying and mailing from $0.12 per page to $0.15 per page. We are updating this payment rate in accordance with CMS's commitment to periodically revise the photocopying reimbursement rate. This rate adjustment is fair, reasonable, and meets the current labor and material cost articulated in the established formula for calculating photocopying reimbursement rate. We proposed to use the following formula for updating the rate of reimbursement for photocopying and mailing records to QIO as follows:

- *Step 1.* CMS adds the annual salary of a photocopy machine operator and the costs of fringe benefits as determined in accordance with the principles set forth in OMB circular A–76, to establish a total annual salary for the photocopy machine operator.
- *Step 2.* CMS divides the total annual salary of the photocopy machine operator by the number of pages that can be reasonably expected to be made annually by the photocopy machine operator to establish the labor cost per page.
- *Step 3.* CMS adds to the per-page labor cost as previously determined in step two to the per-page costs of photocopying supplies.

We used this methodology to determine what specific rate to propose for the reimbursement for sending patient records by photocopying and mailing patient records. We proposed to increase the per-page reimbursement rate to $0.15 for photocopying patient records. We calculated the proposed photocopying reimbursement rate by updating the salary, fringe benefits, and supply figures associated with photocopying and submitting patient records to the QIO. In accordance with this methodology we considered the following factors in calculating the proposed new rate:

(1) Labor Costs Associated With Photocopying and Submitting Patient Records

Labor costs for photocopying patient records were calculated by adding the annual salary of a photocopy machine operator with the costs of fringe benefits, and dividing that sum by the number of pages that can reasonably be expected to be photocopied in 1 year. We proposed to continue to rely upon the salary of a Federal GS–5 midlevel secretary as representative of a photocopy machine operator's salary. Using the salary level for an experienced (GS–5) midlevel secretary in the Federal government as representative of that of a photocopy machine operator, the annual salary of the photocopy machine operator is estimated to be $39,573, according to the Office of Personnel Management's 2020 General Schedule pay scale. This estimate included the locality pay adjustment for the rest of the United States. In calculating the fringe benefit of we used OMB Circular A–76 to calculate the annual fringe benefit cost, based on 36.25 percent of the GS–5 salary. The annual fringe benefit cost is $14,345 ($39,573 * 36.25 percent). Adding the fringe benefit, the estimated total annual salary of the photocopying operator is estimated at: $53,918. To determine the per-page labor cost, the total of salary ($39,573) and fringe benefits ($14,345) costs, which amount to $53,918, was divided by 624,000 pages, the number of photocopies a photocopy machine operator can make in 1 year. The estimated labor cost for photocopying 1 page of patient records is $0.08 ($53,918/624,000 pages).

(2) Number of Pages a Photocopy Machine Operator Can Photocopy Annually

We estimated the total number of pages that a photocopy machine operator can photocopy per year based on hand feeding of documents into a photocopying machine. We recognize that modern technologies exist which support faster photocopying, such as through automatic paper feeds. We are aware that using an automatic paper feeds can greatly increase the number of pages that can be photocopied per minutes, and as a result, greatly decrease the cost of photocopying per page. We assume that not all providers and practitioners has access to modern technology or uses modern photocopier capable of automatic paper feed. Therefore, we would calculate the number of page a photocopy machine operator can photocopy, using the manual paper feed estimate. In calculating the number of pages that can be photocopied per hour using a manual feed, we took into consideration that recent improvements in photocopying machine technology has improved the speed of photocopier up to 8 pages per minute. In order to account for time spent by the photocopy machine operator in search and retrieval tasks, and time away from work on annual vacation, sick, and holiday leave, the total number of work hours per year is estimated at 1,300 (an average of 5 productive hours per day), resulting in a total of 624,000 (1,300 hour × 60 minutes × 8 pages) pages per year.

(3) Costs of Photocopying Materials and Supplies

We proposed a total estimated supply cost of $0.07 per page, based on a per-page paper cost of $0.06 and a per-page toner and developer cost of $0.01 per page. The supply cost include the cost of photocopying paper and toner cartridge. Using the market survey cost for these materials we estimated the average cost, using the average price and quality at the GSA material supplies rate, we estimated that copier paper cost of $0.06 per page for paper and $0.01 per page for photocopy machine toner. The paper cost was based on a cost of $32.49 per case for recycled white photocopier paper of 5,000 sheets in a case. The costs of photocopier toner that yield 37,000 copies was estimated at $54.99 per toner cartridge. We calculated these costs using estimates of the costs for recycled photocopier paper and toner cartridges contained in the GSA supply catalogue.

(4) Total Reimbursement Rate for Photocopying Patient Records

We estimate total cost of photocopying at $0.15 per page. This calculation was derived by adding the total estimated labor cost of $0.8 per page and total cost of photocopying supplies of $0.07 per page. Consistent with our policy and generally accepted mathematics principles, we chose to round our calculations to nearest decimal. We believe this decision is both reasonable and supportable. We invited public comment on this proposed methodology for calculation of the rate for reimbursement for sending patient records and information by photocopying. In addition, we invited public comment on alternative methodologies for determining a more appropriate photocopying reimbursement rate and intend to finalize a policy based upon the public comments received.

Comment: A commenter suggested that CMS eliminate the reimbursement for patient records submitted to QIOs by photocopying and mailing. The commenter suggested that to encourage modernization, CMS should only pay for electronic submission of patient records.

Response: We consider this comment generally supportive of the proposed change to require electronic submission of patient records to the QIO, however we disagree with the commenter's suggestion to eliminate reimbursement for patient records submitted to the QIOs via photocopying and mailing. As stated earlier in this rule, CMS believes that up to 20 percent of providers may lack the capacity to submit patient records in electronic format, and will seek a waiver from the requirement to submit electronically. CMS seeks to provide fair reimbursement to these providers and practitioners for submitting patient records as requested by a QIO for the purpose of performing one or more QIO functions via alternative modes of submission until such time as evidence indicates these alternative modes of submission are obsolete. While we are not adopting the commenter's suggestion at this time, we appreciate the feedback and will take this comment into consideration in future development of CMS's reimbursement policies and rates for patient records submitted to the QIOs.

After consideration of the public comment received, we are finalizing the updated reimbursement rate for the submission of patient records to the QIOs via photocopying and mailing, of $0.15 per page for photocopying plus first class postage for providers with approved waivers from the requirement to submit patient records in electronic format, without modification.

d. Reimbursement Rate for Providers Submitting Patient Records by Facsimile

We proposed at § 476.78(e)(3) to reimburse providers and practitioners with approved waivers that submit patient records to the QIO by facsimile at the rate of $0.15 per page. The current regulations do not specifically provide for reimbursement for patient records submitted to the QIO by facsimile, but CMS has historically interpreted the provisions governing reimbursement for patient records submitted to the QIOs through photocopying and mailing to also authorize reimbursement for the submission of patient records by facsimile. We are now proposing to specifically incorporate our historic interpretation into the regulatory framework. According to this proposal the QIOs would continue to provide for reimbursement for patient records submitted to the QIO via facsimile, using a rate estimated based on the costs associated with submitting patient records to the QIO by facsimile. We believe the rate we proposed is fair, reasonable, and reflects current labor and material costs associated with sending patient records to the QIOs by facsimile. We calculated the reimbursement for submitting patient records by facsimile to the QIO as follows:

- *Step 1.* CMS adds the annual salary of a facsimile machine operator and the costs of fringe benefits as determined in accordance with the principles set forth in OMB circular A–76, to establish a total annual salary for the facsimile machine operator.
- *Step 2.* CMS divides the total annual salary of the facsimile machine operator by the number of pages of patient records that can be reasonably expected to be sent annually by facsimile. This calculation establishes the labor cost per page of patient records submitted by facsimile.
- *Step 3.* CMS adds to the per-page labor cost as determined in step two to the average cost of maintaining a dedicated phone line for facsimile service.

We used this methodology to determine the specific rate of reimbursement we proposed for submitting patient records to the QIO by facsimile. Similar to our methodology for calculating a fair and appropriate reimbursement rate for submitting records to the QIO via photocopying and mailing, we calculated the proposed reimbursement rate for sending patient records to the QIO by facsimile as follows:

(1) Labor Costs Associated With Submitting Patient Records by Facsimile

Labor costs were calculated by adding the annual salary of a facsimile machine operator with the costs of fringe benefits, and dividing that sum by the number of pages that a single facsimile operator can reasonably be expected to submit in a year. We proposed to rely upon the salary of a Federal GS–5 midlevel secretary as representative of a facsimile machine operator's salary. Using the salary level for an experienced (GS–5) midlevel secretary in the Federal government as representative of that of a facsimile machine operator, the annual salary of the facsimile operator is estimated to be $39,573 according to the Office of Personnel Management's 2020 General Schedule pay scale, including the locality adjustment for the rest of the United States. In calculating the cost of fringe benefits we used OMB Circular A–76 to calculate the annual fringe benefit cost, based on 36.25 percent of the GS–5 salary. The annual estimated fringe benefit cost is $14,345 ($39,573 * 36.25 percent). With fringe benefits, we estimated total annual salary of the facsimile operator at $53,918.

(2) Number of Pages a Facsimile Operator Can Submit Annually

We estimated the total number of pages that a facsimile machine operator could submit per year based on hand feeding of documents into facsimile machine. We recognize that several modern technologies exist which support faster faxing, such as through automatic paper feeds or faxing over the internet. These technologies greatly increase the number of pages that can be submitted by facsimile on an hourly basis, and as a result, greatly decrease per page cost of submitting patient records by facsimile. However, we took into consideration the fact that not all providers and practitioners have access to the internet or modernized facsimile machines. Therefore, we proposed to calculate the per page reimbursement rate using the manual paper feed as our guide. We estimated that a facsimile machine operator using a manual feed can submit 5 pages of patient records to the QIO in 1 minute. This estimate does not account for any delay in transmission due to poor connectivity or machine fault. In order to account for time spent by the facsimile machine operator in search and retrieval tasks, and time away from work on annual vacation, sick, and holiday leave, we estimated the total number of work

hours per year at 1,300 (an average of 5 productive hours per day), resulting in a total of 390,000 (1,300 hours × 60 minutes × 5 pages) pages of patient records, which a facsimile operator can submit to the QIO in 1 year.

To determine the per-page labor cost for submitting patient records to the QIO via facsimile, we divided the total salary ($39,573) and fringe benefits ($14,345) costs, $53,918, by 390,000, the number of copies a facsimile operator can submit in a year, resulting in an estimated labor cost of $0.14 per page ($53,918/390,000 pages).

(3) Other Costs Associated With Sending Patient Records by Facsimile

We proposed to reimburse the cost of a dedicated telephone line used for a facsimile machine at the rate of $29.99 per month, for an estimated total cost of $359.88 per year. Our estimate does not take into consideration that multiple facsimile machines can use on telephone line, and that a telephone line can be used for other purposes than transmitting records via facsimile. We estimated that 1 cent per page ($359.88/390,000 pages) will reflect the cost of a dedicated telephone line used for facsimile service, based on estimated the estimated 390,000 pages of patient records we expect a facsimile machine operator could submit in a year. We estimated the cost of telephone line using the average per month cost for a single business telephone line per month based on an average drawn from comparison of major telecommunications service provider rates. We estimate that there is no reimbursable paper or material cost associated with sending patient records to the QIO by facsimile, as CMS does not reimburse providers and suppliers for the cost of machinery and overhead costs for submitting patient records to the QIOs.

(4) Reimbursement Rate for Sending Patient Records by Facsimile

We estimated the total cost of or submitting patient records by facsimile to the QIO at $0.15 per page. This estimate was calculated by adding the total estimated labor cost of $0.14 per page, and total cost of a dedicated telephone line at $0.01 per page. Consistent with our policy and generally accepted mathematics principles, we chose to round our calculations to nearest decimal. We believe this decision is both reasonable and supportable. We invited public comment on this proposed methodology for calculating the rate for reimbursement for submitting patient records by facsimile. In addition, we invited public comment on alternative methodologies for determining an appropriate facsimile reimbursement rate and intend to finalize our policy based upon the public comments received.

Comment: A commenter suggested that CMS eliminate the reimbursement for submitting patient records to QIOs via facsimile. The commenter suggested that to encourage modernization, CMS should only pay for electronic submission of patient records.

Response: We consider this comment generally supportive of the proposed change to require electronic submission of patient records to the QIO, however we disagree with the commenter's suggestion to eliminate reimbursement for patient records submitted to the QIOs via photocopying and mailing. As stated earlier in this rule, CMS believes that up to 20 percent of providers may lack the capacity to submit patient records in electronic format, and will seek a waiver from the requirement to submit electronically. CMS seeks to provide fair reimbursement to these providers and practitioners for submitting patient records as requested by a QIO for the purpose of performing one or more QIO functions via alternative modes of submission until such time as evidence indicates these alternative modes of submission are obsolete. While we are not adopting the commenter's suggestion at this time, we appreciate the feedback and will take this comment into consideration in future development of CMS's reimbursement policies and rates for patient records submitted to the QIOs.

After consideration of the public comment received, we are finalizing the updated reimbursement rate for the submission of patient records to the QIOs via facsimile of $0.15 per page for providers with approved waivers from the requirement to submit patient records in electronic format at § 476.78(e)(3), without modification.

B. Revised Regulations To Prepare for Implementation of Mandatory PRRB Electronic Filing (42 CFR Part 405, Subpart R)

1. Background

Congress created the Provider Reimbursement Review Board (PRRB or Board) in 1972 to furnish providers with an independent forum for resolving payment disputes typically arising from certain Medicare Part A final determinations (usually cost report audit appeals). (See 42 U.S.C. 1395oo and 42 CFR 405.1801 and 405.1840 through 405.1873.) The Board has the full power and authority to make rules and establish procedures, not inconsistent with the law, regulations, and CMS Rulings, that are necessary or appropriate to carry out its function. (See 42 U.S.C. 1395oo(e) and 42 CFR 405.1868(a).)

On average, the PRRB receives approximately 3,000 new appeals annually. The PRRB's docket is unique and complex, so it is imperative that the Board manage its docket in the most efficient manner possible. For example, an individual provider appeal may involve one or more issues; in contrast, a group appeal involves multiple providers appealing a common issue. (See 42 U.S.C. 1395oo(b) and 42 CFR 405.1837.) In addition, many providers or issues may be transferred between the cases to create a complex web of interrelated appeals. In light of these complexities, it is imperative that the Board continue to improve the efficiencies of its processes.

Until mid-2018, appeal documents (including documents such as appeal requests, transfer requests, and position papers) could only be filed with the PRRB on paper. Over the past decade, CMS and the Board have received feedback from its stakeholders requesting an electronic filing system. On August 16, 2018, the CMS Office of Hearings (OH) and the Board released the OH Case and Document Management System (OH CDMS). OH CDMS is a web-based portal where providers can file appeals and all parties can manage their cases. Besides instantaneously accepting submissions electronically, OH CDMS releases outgoing electronic correspondence and Board decisions as well. OH CDMS enables providers and their representatives to manage their cases in real time, and it allows parties to view all documents officially filed through the system (including viewing opposing parties' submissions). When a party makes a submission, whether submitting a new appeal or taking an action on an existing case, there is an immediate system notification that confirms the submission was made. All parties on the case will then receive an email confirming the date and time of delivery. Internally, the system also serves as a daily workflow management system for the PRRB and its staff and aids the PRRB in strategically managing its docket in a more efficient manner.

The feedback we have received from active users of OH CDMS has been largely positive. We have also incorporated user suggestions to refine the system. OH CDMS offers a Help Desk, available each business day, to assist users with technical questions that may arise.

2. Technical Changes To Support Electronic Filing

To support the use of the electronic filing system, we proposed technical changes throughout the regulations at 42 CFR part 405, subpart R. First, we proposed to update the definitions of ''date of receipt'' and ''reviewing entity'' at 42 CFR 405.1801(a) to indicate that submissions to an electronic filing system are considered received on the date of electronic delivery. We also proposed to add a new definition of ''in writing or written'' that indicates either of these terms means a hard copy or electronic submission. We believe these are common sense technical changes that reflect current practice and understanding. We note that we did not propose to revise the requirement in § 405.1801(a) that the date of receipt by a party or affected nonparty of documents involved in proceedings before a reviewing entity, including the Board, is presumed to be 5 days after the date of issuance. Therefore, regardless of whether the Board issues a decision electronically or by some other means, the 5-day presumption regarding receipt by a party would continue to apply. We also proposed technical changes throughout the subpart to replace references related to hard copy documents such as ''mail'' and ''hand delivery'' with terms that apply to both hard copy and electronic submissions. We sought comments on these changes.

We also proposed to update 42 CFR 405.1857, related to subpoenas, so that it generally conforms to the technical changes we are proposing. However, we proposed adding the following statement to this section, ''If the subpoena request is being sent to a nonparty subject to the subpoena, then the subpoena must be sent by certified mail.'' This change is to ensure that the subpoena rule is in accordance with section 205(d) of the Act (Issuance of subpoenas in administrative proceedings).

3. Intention To Revise Board Instructions To Require Mandatory Electronic Submissions

As stated earlier in this preamble, the Board has the full power and authority to make rules and establish procedures, not inconsistent with the law, regulations, and CMS Rulings, that are necessary or appropriate to carry out its function. (See 42 U.S.C. 1395oo(e) and 42 CFR 405.1868(a).) It is critically important that the PRRB docket records be fully populated within OH CDMS so that the Board and its stakeholders can optimally realize the technological benefits and efficiencies of OH CDMS. Therefore, we are proposing to amend the regulations at 42 CFR 405.1843 (Parties to proceedings in a Board appeal) to make clear that parties to a Board appeal shall familiarize themselves with the instructions for handling a PRRB appeal, including any and all requirements related to the electronic or online filing of documents for future mandatory filing. This change to require electronic submissions would transform the PRRB's docket to a more efficient and less costly paperless environment, and will support a better continuity of operations posture. Accordingly, no earlier than FY 2021, the PRRB may require that all new submissions (in new and pending appeals) be filed electronically using OH CDMS. This requirement would be reflected in updated Board instructions, which are currently published at *https://www.cms.gov/Regulations-and-Guidance/Review-Boards/PRRBReview/Downloads/PRRB-Rules-August-29-2018.pdf*.

Because the Board plans to wait until at least FY 2021 to potentially require electronic filings, we believe that stakeholders would have ample time necessary to register and start using the system to the extent they have not already done so on a voluntary basis. Stakeholders can access the Electronic Filing web page located at *https://www.cms.gov/Regulations-and-Guidance/Review-Boards/PRRBReview/Electronic-Filing* to find instructions on accessing and using OH CDMS. We recommend that parties to PRRB appeals, who have not already, sign up for and begin using OH CDMS as soon as possible to allow time to become familiar with the system and to avoid any issues that may arise if signing up for the system is delayed until after use of the system becomes mandatory.

It has already been approximately 21 months since the system became operational and available to stakeholders. In this regard, we note the following:

- Many providers started using the system immediately after OH CDMS was launched.
- OH CDMS now has over 800 registered users, and continues to grow. We believe that this number of users is largely representative of the cohort of stakeholders that will use OH CDMS.
- Over 75 percent of all new appeals have been filed electronically by providers using the system.
- All government contractors that participate in PRRB appeals (including Medicare Administrative Contractors (MACs), the Cost Report Audit and Appeals contractor (CRAA), and the Appeals Support Contractor (ASC)) use the system.

Nevertheless, to provide additional notice to stakeholders, the PRRB would provide at least 120 calendar days' notice (through its instructions) before the exact date that electronic filing would become mandatory. Thus, under the final rule, the earliest the PRRB could publish such instructions would be October 1, 2020 and, as a result, the earliest effective date for mandatory usage of the system for PRRB appeals submissions would be November 30, 2020.

We note that making use of OH CDMS mandatory for PRRB appeals is consistent with recent revisions updating the Medicare Geographic Classification Review Board (MGCRB) regulations that similarly permit the MGCRB to require the use of OH CDMS through its instructions. The MGCRB regulatory change was published in the FY 2017 IPPS/LTCH PPS final rule (81 FR 56928 (August 22, 2016)) and the requirement to file electronically was effective for the 2020 reclassification cycle. The transition to mandatory electronic filing of MGCRB applications went smoothly, and we received positive feedback regarding OH CDMS from the user community.

Finally, we note that the provisions governing contractor hearing officer appeals, Administrative and Judicial Review and reopenings are also found in part 405 subpart R. However, we did not propose changes to the submission procedures for these processes.

Comment: We received largely positive feedback in the comments regarding OH CDMS itself, as well as support for mandatory use of OH CDMS. A commenter who has represented Providers before the PRRB for more than 35 years stated that the introduction of OH CDMS has been of substantial benefit and represents a great improvement over the hard copy filing process, and states that OH staff should be complimented on the design and implementation of the system. Another commenter applauded OH CDMS and stated that the system improves the efficient management of PRRB appeals, and that the proposed changes to the regulation are sensible and appropriate. A commenter supported the proposed changes that would allow the PRRB's adoption of rules mandating electronic filing, because OH CDMS has made it easier and quicker for providers to file and manage appeals, especially for group appeals or consolidated appeals that may include many providers and cost reporting periods.

Response: The Office of Hearings (OH) appreciates the positive feedback,

especially because OH CDMS was, in large part, created in response to the requests of parties before the PRRB to create an electronic filing system.

Comment: We received a few comments that stated that Schedules of Providers (SOP) for group appeals should be accepted in PDF format via OH CDMS, because every other document may be filed in PDF format via OH CDMS.

Response: We understand the comments regarding electronic filing of SOPs and the Board is reviewing its Instructions regarding the filing requirements for SOPs and will take this feedback into consideration.

Comment: A few commenters also stated that there should be an exception to mandatory electronic filing if a user is unable to access OH CDMS for a filing deadline due to routine maintenance of the system, technical difficulty in accessing the system, or interruption to the user's internet access. A commenter suggested that the PRRB adopt the process used by some federal district courts which allows email filings if the system is inaccessible. A commenter also stated that any day or portion of a day when OH CDMS is unavailable should not be counted for purposes of computing a deadline.

Response: We understand the concern expressed by the commenters but the nature of potential issues with electronic filing is not significantly different from those associated with hard copy filings. Accordingly, we decline to make any changes to the current regulations because we believe they provide sufficiently flexible procedural processes for the Board to address any potential filing issues (regardless of whether such issues arise with electronic filings versus hard copy filings). In this regard, we note that 42 CFR 405.1801(d)(3) provides that deadlines may be adjusted if a reviewing entity is unable to conduct business in the usual manner, which would allow the PRRB to make allowances where appropriate, *e.g.,* if OH CDMS were down for the entire last day of a deadline. Additionally, specifically with respect to timely filing of appeals, 42 CFR 405.1836 allows for good cause extension of the time limit for requesting a Board appeal, and PRRB Rule 1.6 provides for Accessibility Standards and allows for accommodations. We disagree that any day or portion of a day when OH CDMS is unavailable should not be counted for purposes of computing a deadline. We believe that while, as noted previously, exceptions to deadlines may be granted, the deadline dates should be clearly established, and shifting the deadlines for a day or portion of a day as the commenter proposes would be administratively impractical and could cause great confusion for the Board, parties, and reviewing entities alike.

Comment: A commenter noted that a provider is only allowed one representative for all appeal-related communications. The commenter was concerned that if the representative organization were to terminate that employee, electronic correspondence from the PRRB would be delivered to a dead email address and no one would actually receive the notice. The commenter requested that the PRRB monitor for ''non-delivery'' or ''out-of-office'' automated responses, so that the PRRB can send a hard copy letter to the Provider's CEO or CFO to ensure that a provider's appeal rights are not jeopardized by missed electronic communications from the PRRB.

Response: Currently, there may only be one representative per appeal and the provider's designated representative is responsible for ensuring his/her contact information is up to date and, in turn, the provider is responsible for notifying the Board of any change in its representative. Thus, it is the responsibility of the provider and/or representative to notify the PRRB if the email address is no longer valid (for example employee departure or extended leave). We believe this is a reasonable procedure and, therefore, decline to make alterations to this procedure at this time.

Comment: A commenter applauded the updates to functionality of OH CDMS that have been made since OH CDMS went live on August 16, 2018. However, some commenters also suggested the PRRB consider additional upgrades to OH CDMS, such as the functionality of ''batch uploads,'' before use of the system becomes mandatory. Users must manually enter multiple data elements for each provider, as well as separate documents that comprise each issue. The commenters believed that this process is especially time consuming for appeals that challenge rulemaking notices in the **Federal Register**, as these appeals may involve a large number of providers in a single submission and that, as a result, paper filing currently remains a distinct advantage for them for these large group submissions. A commenter suggested that being able to upload provider information as structured data would make electronic submission of large groups more feasible and reliable. A commenter requested that the OH CDMS interface be updated so that users can submit appeal in its final form, rather than in the discrete data entries.

Response: We appreciate the acknowledgement of the updates made to OH CDMS; it has been important to receive and incorporate, as appropriate, user feedback we have received to make the system work better for both internal and external users, and will continue to do so. We understand the concern that parties have regarding the data entry requirements; however, these data points are imperative to the functionality of OH CDMS particularly with regards to allowing providers to transfer issues between cases. The information that is entered into the system (as opposed to uploaded via PDF) allows the parties and the Board to better access that information (in whole or in part) for reporting and other purposes. Currently, OH CDMS does not have the ability to pull data out of a PDF, therefore OH CDMS could not provide the necessary reporting and other capabilities to its users if appeals were to be batch uploaded as single PDF files. If in the future this functionality becomes cost-effectively available (and is functionally reliable), we will consider this functionality along with other improvements. Regarding **Federal Register** appeals, in response to feedback from the user community, as of January 2020, users are now able to select a previously-uploaded document in order to save time instead of being required to re-upload the document each time it is needed. We are also considering making similar OH CDMS enhancements for other uploads to facilitate the Board's requisite filing process and will consider all feedback received.

Comment: Commenters were mostly positive and supportive of mandatory electronic filing of PRRB appeals. However, a commenter suggested that the PRRB should not mandate electronic filing stating that it does not allow users the flexibility and security that is required for appeals, and that paper (that is, hard copy) documents were the only acceptable method for filing an appeal for the first 46 years of the Board's history. The commenter added that it would be a mistake to require parties to file all documents electronically during the Covid–19 pandemic, because hospitals are not operating under normal circumstances. The commenter stated that even under normal circumstances, it would be unreasonable to require hospitals and their representative to abandon their internal processes related to filing appeals in paper with only 60 days' notice, as early as this November.

Response: We do not believe it is unreasonable to require hospitals and their representatives to use OH CDMS

for PRRB appeals; many courts have transitioned from paper filing to electronic filing, and the PRRB has received feedback over the years from the provider community requesting the ability to file electronically. We note that the proposed regulation would allow the PRRB to mandate electronic filing with 60 days' notice. The commenter raised concern about having only 60 days' notice of the mandatory use of OH CDMS. However, OH CDMS has been live for close to two years, and there have been various trainings and seminars offered for OH CDMS users, as well as daily Help Desk access for any issues. Notwithstanding, in order to ensure providers have adequate time, we are revising the proposed 60-day notice to require the PRRB to give at least 120 days' notice prior to mandatory use of OH CDMS taking effect. In light of the facts that there are already many registered users of OH CDMS and the majority of filings are now being made using OH CDMS, we believe that this Rule as well as the 120-day advance notice gives Providers and their representatives more than ample time and notice to register for OH CDMS (to the extent they have not already done so), and make any necessary internal changes to processes.

The Covid–19 public health emergency has highlighted the need to have all documents submitted electronically to the PRRB. CMS has maximized telework for the past several months, and while PRRB staff have not been able to access any mail during that time, the PRRB has been able to successfully continue operations largely because it may access the records that have been filed electronically using OH CDMS. Likewise, the need to transition away from paper records, which are vulnerable to risk of fire, flood, loss etc., has become increasingly obvious. Finally, the Federal Government as a whole is moving towards all-electronic records by 2022. *See Memorandum for Heads of Executive Departments and Agencies M–19–21 Transition to Electronic Records* (June 28, 2019), *available at https://www.whitehouse.gov/wp-content/uploads/2019/06/M-19-21.pdf.*

Comment: A commenter stated that provider appeals often require flexibility that is not currently built into OH CDMS, which takes a ''one-size-fits-all'' approach to appeal filings, and does not provide hospitals the opportunity to file an explanation of exigent circumstances. The commenter explained that OH CDMS requires users to make certain certifications to conclusively state that the appeal issues are not pending in any other appeal, but a user can never know with absolute certainty whether another party has mistakenly filed an appeal on the duplicate issue.

Response: With respect to the certifications that are required to be made under Board Rules by the Provider's authorized representative when an appeal is filed, it is reasonable to expect that providers (whether through their authorized internal or external representative(s)) are responsible for knowing any appeals that have been filed, and ensuring that: (1) Duplicate appeals are not made; and (2) if they are part of a provider chain, they establish mandatory group appeals when required by 42 CFR 405.1837(b)(1). Additionally, providers are able to submit any kind of correspondence through OH CDMS once the appeal is established, and could provide an explanation of any exigent circumstances at that time.

Comment: A commenter also stated that there are data security concerns with the OH CDMS user enrollment process, which requires applicants to provide their Social Security Number for a limited credit check. As data breaches can occur, the commenter urged the agency to reconsider requiring personal information for those seeking to file institutional appeals.

Response: The OH CDMS system is integrated within the larger agency-wide CMS Enterprise Portal. The CMS Enterprise Portal relies on the enterprise identity management system (''EIDM'') to authenticate individual users of the system, including where those individuals represent institutional entities. EIDM protects the security of CMS' IT systems and meets CMS, HHS, and other federal government security requirements. In order to keep all CMS IT systems secure, and as required under federal IT security rules, the EIDM process identity proofs individual users before they can access CMS systems. CMS currently conducts this process by using Experian. Experian uses information that it has in its databases to validate the user's identity. Experian's credit information is not shared with CMS, only the positive or negative identity proofing result is shared. In addition, this process is not a credit check but is reflected as a ''soft inquiry'' on the person's credit history.

Comment: Several commenters supported mandatory use of OH CDMS, but suggested that CMS revise the regulatory definition of ''date of receipt'' at 42 CFR 405.1801(a) so that the 5-day presumption does not apply to decision or other documents that the PRRB or another reviewing entity issues electronically to providers. Several comments referred to 42 U.S.C. 1395oo(f)(1) which sets a deadline of 60 days for the Secretary to reverse, affirm, or modify a PRRB decision, therefore the agency does not have the authority to extend this deadline by allowing for a 5-day presumption. One commenter explained that while the 5-day presumption might have been necessary when the PRRB mailed its decisions to providers, now that the PRRB issues all of its decisions electronically, the 5-day presumption is not necessary because all parties to the appeal are notified of the decision instantaneously. The commenter states that similar rules that specifically address email correspondence have been revised to remove the concept of ''presumptive receipt,'' such as Rule 6 of the Federal Rules of Civil Procedure, and the three-day presumption for service of email from 2001 was removed in 2016 because of advances in technology and widespread usage of electronic transmissions. The commenters argued that ''notice'' of the PRRB decision should be based on ''actual'' receipt, which the commenters suggested should be considered to occur upon transmission.

Response: The regulation at 42 CFR 405.1801(a) provides that: ''(iii) The date of receipt by a party or affected nonparty of documents involved in proceedings before a reviewing entity is presumed to be 5 days after the date of issuance of a contractor notice or a reviewing entity document. This presumption, which is otherwise conclusive, may be overcome if it is established by a preponderance of the evidence that such materials were actually received on a later date.''

In the proposed rule, we specifically stated we were not proposing any change in the regulation text defining the ''date of receipt.'' (''We note that we are not proposing to revise the requirement in § 405.1801(a) that the date of receipt by a party or affected nonparty of documents involved in proceedings before a reviewing entity, including the Board, is presumed to be 5 days after the date of issuance. Therefore, regardless of whether the Board issues a decision electronically or by some other means, the 5 day presumption regarding receipt by a party would continue to apply.'' 85 FR 32460, 32865 (May 20, 2020)). We proposed to make limited technical changes to the regulation text to reflect that parties before the Board and the Board itself now file or issue documents in Board cases electronically.

Congress has vested in the Secretary broad rulemaking authority to administer the Medicare program.''

Sebelius v. *Auburn Reg'l Med. Ctr.,* 568 U.S. 145, 156 (2013); *see also* sections 1102(a) and 1871(a)(1) of the Social Security Act. Relying on that authority, the Secretary promulgated the regulation after notice and comment rulemaking. *See* 73 FR 30190, 30193 (May 23, 2008). The 5-day rule continues to be within our statutory authority and is not being revisited in this rule. Even though the rule was originally conceived in the context of paper Board filings and decisions that were sent by regular mail, we continue to believe that the rule is useful and reasonable as it applies equally to providers, the MACs and the reviewing entities themselves and provides needed certainty about when the deadlines run. Among other things, it also ensures continuity on how to calculate the 60 days for a judicial action under 42 CFR 405.1877, regardless of whether the final decision of the Secretary is a decision issued by the PRRB electronically or whether the final decision of the Secretary is a decision issued by the Administrator using regular certified mail. The present regulatory text continues to serve its original purposes to avoid difficult factual disputes regarding the date of receipt through the clarification of the meaning of ''is notified'' and consistent application of a single rule for calculating deadlines, regardless of the means of transmission of the document by the particular reviewing entity. As CMS explained during prior rulemaking, some uniform definition is ''need[ed] to dispel potential confusion'' about when the review period begins to run. 69 FR 35716, 35719 (June 25, 2004). Using a presumption further ''avoid[s] any problem of verifying when a document or other material is actually received,'' (*Id.* at 35719) a burden on parties and courts and reviewing entities. The need for such consistency as a way to avoid disputes has not been made obsolete in the email age.

After consideration of the public comments we received, we are finalizing our FY 2021 proposal to modify regulations in 42 CFR 405 Subpart R to allow the PRRB to mandate electronic filing of appeals. We are modifying our proposal, however, to give 120 days' notice prior to mandatory use of OH CDMS taking effect, rather than the 60 days' notice that was proposed.

C. Revisions of Medicare Bad Debt Policy

1. Background

Under the Medicare program, beneficiaries may be responsible for payments of premiums, copayments, deductibles (including blood deductibles), and coinsurance amounts that are related to covered services (42 CFR 409.80 through 409.89). The Medicare program recognizes that a beneficiary's failure to pay a deductible or coinsurance amount could lead to non-Medicare patients bearing the related costs of covered Medicare services, a result that is barred by the statutory prohibition on the cross-subsidization of the Medicare program by non-Medicare patients, as set out at section 1861(v)(1)(A)(i) of the Act (*see also* 42 CFR 413.89(d)).

Medicare pays beneficiaries' unpaid deductible and coinsurance amounts for covered services if such services are reimbursed by the program on the basis of reasonable cost or paid under a cost-based prospective payment system. Thus, the following amounts are not included as allowable bad debts under Medicare:

- Unpaid Medicare deductible and coinsurance amounts associated with furnishing non-covered services and services furnished to non-Medicare patients.
- Unpaid Medicare premiums and Medicare copayments [510] associated with any covered service.
- Unpaid Medicare deductible and coinsurance amounts associated with any covered services paid by the program under a fee schedule or under a reasonable charge-based methodology including Program fee schedule payments made to physicians (and payments to providers on behalf of provider-based physicians) for professional services and fee schedule payments made to other practitioners.
- Unpaid Medicare deductible and coinsurance amounts associated with covered services paid for under a contractual capitated rate-based plan, such as but not limited to, a Medicare Advantage plan.
- Unpaid Medicare deductible and coinsurance amounts written off to charity care.
- Unpaid Medicare deductible and coinsurance amounts written off to a contractual allowance account.

In accordance with section 1861(v)(1) of the Act and our regulations at § 413.89, Medicare pays some of the uncollectible deductible and coinsurance amounts to certain providers, suppliers and other entities (hereinafter collectively referred to as ''providers'') eligible to receive reimbursement for bad debt of Medicare beneficiaries. Sections 1815(a) and 1833(e) of the Act state that no Medicare payments will be made to a provider unless it has furnished information requested by the Secretary to determine payment amounts due under the Medicare program. To determine if bad debt amounts are allowable, providers must meet the requirements at § 413.89, and Chapter 3, Bad Debts, Charity, and Courtesy Allowances, of the Provider Reimbursement Manual (PRM) (CMS Pub. 15–1) (hereinafter referred to as PRM), *https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Paper-Based-Manuals-Items/CMS021929,* which provides further explanation and instruction regarding the requirements for Medicare bad debt reimbursement.

The reimbursement of Medicare bad debt was not originally statutorily mandated; rather, it was first promulgated by CMS [511] in 1966 [512] shortly after the Medicare Program's inception and was thereafter set forth in the regulations.[513] Congress later statutorily created reimbursement limits on allowable Medicare bad debt under section 1861(v)(1)(T), (V) and (W) of the Act. The regulations at § 413.89(b)(1) define ''bad debts'' as amounts considered to be uncollectible from accounts and notes receivable that were created or acquired in providing services. Accounts receivable and notes receivable are designations for claims arising from the furnishing of services, and are collectible in money in the relatively near future. Similar language is set forth in the PRM § 302.1. To be an allowable Medicare bad debt, the debt must meet all of the following criteria (see § 413.89(e) and PRM § 308):

- The debt must be related to covered services and derived from deductible and coinsurance amounts.
- The provider must be able to establish that reasonable collection efforts were made.

[510] While copayments and coinsurance amounts are both amounts of Medicare beneficiary cost sharing, a copayment is usually a fixed amount a beneficiary may be required to pay as their share of cost for a medical service or supply (for example, a doctor's visit, hospital outpatient visit, or prescription drug). Unpaid copayments are excluded from bad debt reimbursement. Conversely, a coinsurance amount is usually an amount a beneficiary may be required to pay as a percentage share of cost with the Medicare plan for services after the payment of any applicable deductible.

[511] To implement the Medicare statute, the Social Security Administration (SSA) was reorganized and the Bureau of Health Insurance (BHI) was established on July 30, 1965. The BHI then became responsible for the development of health insurance policy before the creation of the Health Care Financing Administration (HCFA), later renamed CMS. CMS Milestones 1937–2015 (July 2015).

[512] November 22, 1966 (31 FR 14813).

[513] The current Medicare bad debt regulations were originally proposed and finalized in 1966 and codified at § 405.420.

• The debt was actually uncollectible when claimed as worthless.

• Sound business judgment established that there was no likelihood of recovery at any time in the future.

In 1987, Congress enacted legislation that implemented a moratorium prohibiting the Secretary and contractors from making changes to Medicare bad debt reimbursement policies that were in effect on August 1, 1987 for hospitals. This is typically referred to as the ''Bad Debt Moratorium.'' (*See* section 4008(c) of the Omnibus Budget Reconciliation Act of 1987 (Pub. L. 100–203)). In section 3201 of the Middle Class Tax Relief and Job Creation Act of 2012 (Pub. L. 112–96), the Bad Debt Moratorium was repealed by Congress, effective for cost reporting periods beginning on or after October 1, 2012.

Because the Bad Debt Moratorium is no longer in existence, we believe it is appropriate to clarify certain Medicare bad debt policies that have been the subject of litigation, and generated interest and questions from stakeholders over the past several years. Hence, in the FY 2021 IPPS proposed rule, we proposed to clarify, update and codify certain longstanding Medicare bad debt principles into the regulations by revising § 413.89, ''Bad debts, charity, and courtesy allowances.'' We also solicited comments from stakeholders that we could consider to finalize a process to accept alternate documentation to the Medicaid remittance advice (RA) to determine a state's cost sharing liability for dual eligible beneficiaries in instances where a state has a Medicare cost sharing liability but does not issue the provider a Medicaid RA due to the state's non-recognition of a Medicare provider for Medicare crossover cost sharing determinations. Additionally, we proposed to recognize the new Accounting Standards Update—Topic 606 for revenue recognition and classification of Medicare bad debts. We also proposed technical corrections to the incorrect cross references in 42 CFR 412.622 and 417.536 to refer to the Medicare bad debt reimbursement regulation at § 413.89.

We proposed that the clarification and codification of our longstanding Medicare bad debt policies, where indicated herein, be effective for cost reporting periods beginning before, on, and after the effective date of this rule, because of the important public interest it would serve to do so as set forth in section 1871(e)(1)(A)(ii) of the Act. Our specific proposals for revising our regulations, the public comments received, and implementation decisions are discussed in this section of this rule.

2. Revisions to Regulations

a. Reasonable Collection Effort, Non-Indigent Beneficiaries

Providers are permitted to collect unpaid Medicare cost sharing amounts from beneficiaries, unless beneficiaries have been determined to be categorically or medically needy by State Medicaid Agencies to receive medical assistance from Medicaid, or determined to be indigent by the provider for Medicare bad debt purposes. If a beneficiary's Medicare cost sharing remains unpaid, in order to claim reimbursement from Medicare for the bad debt, providers must demonstrate that they have first made a reasonable effort to collect the beneficiary's unpaid deductible and/or coinsurance amounts. (See § 413.89(e)(2) and the PRM § 310.) This reasonable effort to collect the unpaid deductible and coinsurance amounts is, in part, based on the provider applying sound business judgment and has been a longstanding Medicare bad debt policy requirement articulated in the PRM since 1968. The PRM § 310 describes a ''reasonable collection effort'' and sets forth how providers must effectuate the reasonable collection effort, as a precondition to reimbursement of a provider's bad debt. We note that the provider's required collection efforts set forth in PRM § 310 apply only to non-indigent beneficiaries; the provider's required collection efforts are different for beneficiaries who have been determined by the provider to be indigent, including medically indigent, or beneficiaries enrolled in Medicaid. In the proposed rule, we proposed to clarify and codify the distinction between non-indigent beneficiaries and indigent beneficiaries for Medicare bad debt purposes.

Specifically, we proposed to amend § 413.89(e)(2) by adding a new paragraph (e)(2)(i) to define, for Medicare bad debt purposes, a non-indigent beneficiary as a beneficiary who has not been determined to be categorically or medically needy by a State Medicaid Agency to receive medical assistance from Medicaid, and has not been determined to be indigent by the provider for Medicare bad debt purposes.

These proposals would be effective for cost reporting periods beginning before, on, and after the effective date of this rule because the difference in collection efforts required by a provider for indigent and non-indigent beneficiaries has existed since the promulgation of Medicare bad debt policy and the definition of a non-indigent beneficiary codifies the existing meaning of the term.

Comment: Some commenters were supportive of the proposal to codify the definition of a non-indigent beneficiary because it would provide clarity to the Medicare bad debt policies. Other commenters suggested that the codification of the definition for this beneficiary category did not serve an important interest and should not be applied retroactively.

Response: We appreciate the commenters' suggestions and perspectives. Because the longstanding Medicare bad debt rules requiring a provider's reasonable collection effort are different for beneficiaries who are either non-indigent, beneficiaries who have been determined by the provider to be indigent, including medically indigent, or beneficiaries enrolled in Medicaid, we believe that as we clarify and codify these longstanding bad debt policies, it is important to set forth the definition of each beneficiary category so that it is clear which bad debt policies applied, and continue to apply, to each. We believe that the retroactive codification of the definition of a non-indigent beneficiary serves to promote a public interest to provide clarity because the definition has existed inherently in the longstanding bad debt collection effort policies that applied, and continue to apply, to a non-indigent beneficiary. Our longstanding Medicare bad debt rules in the PRM requiring a provider's reasonable collection effort are different for beneficiaries who are non-indigent and beneficiaries who have been determined by the provider to be indigent (including medically indigent) or beneficiaries enrolled in Medicaid. Providers must follow reasonable collection effort procedures set forth in PRM § 310 for non-indigent beneficiaries, procedures set forth in PRM § 312 for beneficiaries determined by the provider to be indigent, and procedures described in PRM § 322 for beneficiaries enrolled in Medicaid. Therefore, we believe that as we clarify and codify these longstanding bad debt policies, it is important to set forth the definition of each of these three beneficiary categories so that it is clear which bad debt collection effort policy applied, and continue to apply, to each. We believe that providers will not be burdened or harmed by the application and formalization of a label and definition for this beneficiary category.

Our longstanding bad debt policies have existed in Medicare guidance, including the PRM, for several decades and providers and beneficiaries are

familiar with and rely upon them. The clarification and codification of longstanding Medicare bad debt policies into the regulations with a retroactive effective date does not affect prior transactions or impose additional duties or adverse consequences upon providers or beneficiaries, nor does it diminish rights of providers or beneficiaries. The clarification and codification of longstanding Medicare bad debt policies into the regulations with a retroactive effective date also serves an important public interest to assist providers and beneficiaries by avoiding confusion as to which longstanding policy should be applied for which cost reporting period, as might arise if the effective date was instead proposed for cost reporting periods beginning on or after the effective date of this rule. Failing to adopt the clarification and codification of longstanding Medicare bad debt policies with a retroactive effective date might lead some providers to believe that those policies did not apply to earlier cost reporting periods, and thus might cause those providers to resubmit previously submitted cost reports. The clarification and codification of longstanding Medicare bad debt policies into the regulations with a retroactive effective date serves the important public interest of promoting fairness and economy to providers by saving them the time and resources required for such resubmissions, and by saving government resources and funds from the taxpayer-funded Medicare Trust Fund that would be expended in review of cost report resubmissions. These considerations apply equally to all aspects of this final rule that we are finalizing with a retroactive effective date.

After consideration of the public comments we received, we are finalizing our proposal to amend § 413.89(e)(2) by adding a new paragraph (e)(2)(i) to define, for Medicare bad debt purposes, a non-indigent beneficiary as a beneficiary who has not been determined to be categorically or medically needy by a State Medicaid Agency to receive medical assistance from Medicaid, and has not been determined to be indigent by the provider for Medicare bad debt purposes. This provision will be effective for cost reporting periods beginning before, on, and after the effective date of this rule.

(1) Issuance of a Bill for Non-Indigent Beneficiaries, PRM Section 310

Under Medicare bad debt policy, a provider is required to demonstrate that it has made a reasonable effort to collect beneficiaries' unpaid deductibles and coinsurance amounts. PRM § 310 sets forth that to be considered a reasonable collection effort, a provider's effort to collect Medicare deductible and coinsurance amounts must be similar to the effort the provider puts forth to collect comparable amounts from non-Medicare patients. It must involve the issuance of a bill on or shortly after discharge or death of the beneficiary to the party responsible for the patient's personal financial obligations. It also includes other actions such as subsequent billings, collection letters and telephone calls or personal contacts with this party which constitute a genuine, rather than a token, collection effort. The provider's collection effort may include using or threatening to use court action to obtain payment.

Generally, providers will have financial incentives to issue bills to patients as soon as possible to collect the outstanding debt and remove it from their financial records, or present beneficiaries' unpaid deductible and coinsurance amounts to Medicare after a reasonable collection effort period for reimbursement of the Medicare reimbursable amount.

Over the past several years, we have received feedback from stakeholders indicating that ''shortly after'' in PRM § 310 is too vague, as well as inquiries as to what timeframe ''shortly after'' means for providers to comply with the reasonable collection effort. Stakeholders have suggested that ''shortly after'' could be anywhere from 30 days to a year following the discharge or death of the beneficiary. The Merriam Webster definition of ''short(ly)'' [514] is ''not extended in time,'' ''brief,'' ''expeditious,'' or ''quick.'' Although the timeframe ''shortly after'' was drafted in the PRM § 310 decades ago with an eye toward affording flexibility to providers, inquiries from stakeholders and variances in the application of ''shortly after'' over the years have led us to believe that a more definitive timeframe should be considered while still maintaining the greatest flexibility for providers.

We believe that a timeframe of 30 or 60 days would be too short because it may not allow providers with varying billing practices the ability to issue the bill within that timeframe. A timeframe of 90 or 120 days would afford greater flexibility, as we have found this to be in the upper parameters of most providers' billing practices for the issuances of bills to patients.

In addition to the queries over the definition of ''shortly after,'' stakeholders have questioned whether the benchmark event for the issuance of the bill should be the ''discharge or death of the beneficiary,'' or some other event. Generally, Medicare fee for service claims must be filed with the appropriate Medicare claims processing contractor no later than 12 months, or 1 calendar year, after the date the services were furnished (42 CFR 424.44). For institutional providers that have a span of dates of services (that is, from X date through Y date), the ''through'' date (that is, the last day of service) is used as the date of service for the 12 month (or 1 calendar year) timeframe for a provider to timely submit a bill (CMS Pub. 100–04, section 70.4). Following the processing of the claim, the provider receives a Medicare remittance advice evidencing the claim processing. Because providers have 12 months from the date of service to timely submit a bill to Medicare, we believe that requiring a provider to issue a bill for the beneficiary's unpaid cost sharing following the ''discharge or death of the beneficiary'' is a much shorter timeframe and does not afford flexibility to the provider when the provider has a much longer timeframe of 12 months from the date a service was provided to bill Medicare in accordance with the billing requirements. We note that providers usually issue a bill to a beneficiary, or the party who is financially responsible for the beneficiary's personal financial obligations, within 120 days of death or discharge. We believe that a more flexible option could be to require the provider to issue a bill for Medicare cost sharing no later than 120 days following the provider's receipt of the Medicare remittance advice for the processed claim, because this is similar to providers' usual billing timeframes, or some other event as discussed herein.

We have received suggestions from stakeholders that the benchmark event for the provider to issue a bill to the beneficiary for Medicare cost sharing should be after the provider's receipt of payment from the beneficiary's secondary payer,[515] if any. In this instance, a beneficiary may have other insurance, secondary to Medicare, which may also have a coverage liability to pay for the service provided to the beneficiary. Secondary insurance may pay some or all of the costs left after the primary insurer, Medicare, has paid (for example, deductibles and/or coinsurance amounts). In this regard,

[514] *https://www.merriam-webster.com/dictionary/short.*

[515] This secondary payer is other than Medicaid for a dual eligible beneficiary.

the provider must bill Medicare and the secondary payer in order to determine the beneficiary's accurate and outstanding Medicare cost sharing liability. Because there is no minimum date by which a provider must issue a bill to the party responsible for the beneficiary's cost sharing, and providers can claim Medicare bad debt in the cost reporting period in which the debt was deemed worthless, there is no disadvantage to the provider for us to adopt one or all of the aforementioned benchmark scenarios upon which a provider must issue a bill.

Longstanding Medicare bad debt policy also requires that a provider's reasonable collection effort include other actions such as subsequent billings, collection letters and telephone calls or personal contacts with this party which constitute a genuine, rather than token, collection effort.'' Additionally, a provider must furnish documentation to its contractor that includes the provider's bad debt collection policy which describes the collection process for Medicare and non-Medicare patients; the beneficiary's account history documents which show the dates of various collection actions such as the issuance of bills to the beneficiary, follow-up collection letters, reports of telephone calls and personal contact, etc.; and the beneficiary's file with copies of the bill(s) and follow-up notices.

Therefore, we proposed to amend § 413.89(e)(2) by adding a new paragraph (e)(2)(i)(A) to specify the reasonable collection effort requirement for a non-indigent beneficiary must be similar to the effort the provider, and/or the collection agency acting on the provider's behalf, puts forth to collect comparable amounts from non-Medicare patients. It must involve the issuance of a bill to the beneficiary or the party responsible for the beneficiary's personal financial obligations on or before 120 days after: (1) The date of the Medicare remittance advice; or (2) the date of the remittance advice from the beneficiary's secondary payer, if any; whichever is latest. A provider's reasonable collection effort also includes other actions such as subsequent billings, collection letters and telephone calls or personal contacts with this party which constitute a genuine, rather than token, collection effort. Additionally, a provider must maintain and, upon request, furnish documentation to its contractor that includes the provider's bad debt collection policy which describes the collection process for Medicare and non-Medicare patients; the beneficiary's account history documents which show the dates of various collection actions such as the issuance of bills to the beneficiary, follow-up collection letters, reports of telephone calls and personal contact, etc.; and the beneficiary's file with copies of the bill(s) and follow-up notices.

We proposed that these revisions, except for § 413.89(e)(2)(i)(A)(*2*) and (*3*), would be effective for cost reporting periods beginning before, on and after the effective date of this rule. The provisions proposed in § 413.89(e)(2)(i)(A)(*3*), regarding the requirement to issue a bill to the beneficiary or the party responsible for the beneficiary's personal financial obligations based on the remittance advice date from Medicare or the beneficiary's secondary payer, if any, would be effective for cost reporting periods beginning on or after the effective date of this rule.

We also proposed that § 413.89(e)(2)(i)(A)(*2*), regarding the prior longstanding Medicare bad debt policy requiring the issuance of a bill to the beneficiary or the party responsible for the beneficiary's personal financial obligations on or shortly after discharge or death of the beneficiary, would be effective for cost reporting periods beginning before the effective date of this final rule.

Comment: We received many comments in support of our attempt to clarify what constitutes a reasonable collection effort for non-indigent beneficiaries and set forth the timeframe within which a provider must issue a bill to commence its reasonable collection effort. Many commenters agreed that the longstanding policy benchmark event, ''shortly after death or discharge of the beneficiary'' as set forth in the PRM, § 310 was vague and subject to interpretation. Some commenters requested that the proposed timeframe within which to issue a bill to the beneficiary in proposed § 413.89(e)(2)(i)(A)(*3*) also include a third circumstance of the date of the notification that the beneficiary's secondary payer does not cover the service furnished to the beneficiary.

Response: We appreciate commenters' support of our proposals to clarify the timeframe within which a provider must issue a bill to a non-indigent beneficiary to commence its reasonable collection effort. We agree with providers that there may be instances when a provider's reasonable collection effort should commence following a notification of no coverage from a beneficiary's secondary payer. To keep this event objective, consistent and auditable we agree that the third benchmark timeframe, within which a provider must issue a bill to a non-indigent beneficiary to commence its reasonable collection effort, should be the date on the notification of no coverage from the beneficiary's secondary payer, as opposed to the more subjective and immeasurable date when the provider receives the notification of no coverage from the secondary payer.

Comment: A few commenters requested that we further define what constitutes a provider's personal contacts with beneficiaries to collect the unpaid deductibles and coinsurance amounts, and whether personal contacts can include communication methods such as email and text message.

Response: We appreciate commenters' inquiries and believe that a provider's reasonable collection effort as set forth in the PRM includes a provider's actions ''such as subsequent billings, collection letters and telephone calls or personal contacts with this party which constitute a genuine, rather than token, collection effort.'' We note that the definition of a ''personal contact'' means an encounter where two or more people are in visual or physical proximity to each other or a face-to-face encounter.[516] We believe that a provider's reasonable collection effort that can include subsequent billings, collection letters and telephone calls or personal contacts with the beneficiary or responsible party, as long as the collection effort constitutes a genuine, rather than a token, collection effort, can also include other actions such as sending electronic communications (for example, emails and text messages) as long as they also constitute a genuine, rather than a token, collection effort, and are auditable and verifiable.

After consideration of the public comments we received, we are finalizing our proposal to amend § 413.89(e)(2) by adding a new paragraph (e)(2)(i)(A)(1) through (4) to specify the reasonable collection effort requirement for a non-indigent beneficiary must be similar to the effort the provider, and/or the collection agency acting on the provider's behalf, puts forth to collect comparable amounts from non-Medicare patients. For cost reporting periods beginning before October 1, 2020, a provider's collection effort must involve the issuance of a bill to the beneficiary or the party responsible for the beneficiary's personal financial obligations on or shortly after discharge or death of the beneficiary. For cost

[516] *https://www.lawinsider.com/dictionary/personal-contact#:~:text=Personal%20contact%20means%20an%20encounter,include%20these%20types%20of%20contacts.*

reporting periods beginning on or after October 1, 2020, a provider's collection effort must involve the issuance of a bill to the beneficiary or the party responsible for the beneficiary's personal financial obligations on or before 120 days after the latter of one of the following: (1) The date of the Medicare remittance advice that is produced from processing the claim for services furnished to the beneficiary that generates the beneficiary's cost sharing amounts; (2) the date of the remittance advice from the beneficiary's secondary payer, if any; and (3) the date of the notification that the beneficiary's secondary payer does not cover the service(s) furnished to the beneficiary. A provider's reasonable collection effort must also include other actions such as subsequent billings, collection letters and telephone calls or personal contacts with this party.

(2) 120-Day Collection Effort and Reporting Period for Writing Off Bad Debts

Under Medicare bad debt policy, PRM § 310.2 sets forth a ''presumption of noncollectibility,'' which provides that if after reasonable and customary attempts to collect a bill, the debt remains unpaid more than 120 days from the date the first bill is mailed to the beneficiary, the debt may be deemed uncollectible.

This means that a provider must make reasonable and customary attempts to collect a bill for at least 120 days from (and including) the date the first bill is mailed to the beneficiary (or the party responsible for the beneficiary's personal financial obligations), including when a provider uses a collection agency to collect a bill. If the debt remains unpaid on the 121st day from the date the first bill is mailed to the beneficiary, the provider can cease collection efforts and presume that the account is non-collectible, and designate the unpaid deductible and coinsurance amounts as an uncollectible bad debt.

Over the past several years, questions have arisen from stakeholders with regard to the effect on the collection effort when a provider receives partial payments during the 120-day collection effort time period. We have always intended that when a partial payment is received within the required 120-day collection effort period, the collection effort is not completed and the 120-day time period restarts on the day the partial payment is received. The language in the PRM § 310.2 supports this interpretation, as it sets forth ''if, after 120 days, a payment is not received, the unpaid amount can be written off.'' We have implemented a policy that if, within the 120 days, a partial payment is received, the remaining uncollected amount cannot be written off to Medicare bad debt because the collection effort is active and ongoing by way of the response from the beneficiary submitting a payment. The partial payment received evidences the beneficiary's willingness to pay the debt, at least in part, and the provider must further engage with the beneficiary and follow up, by way of continuing the collection effort and sending additional collection letters or bills to the beneficiary for another 120-day collection effort time period. It is reasonable to place a date of finality on the collection effort time period; hence, the 120-day minimum collection time period. However, when partial payments are received within the 120-day time period, it is reasonable to presume the remaining unpaid amount is collectible and expect the provider to continue the collection effort instead of presuming it to be non-collectible and requesting Medicare to reimburse the provider for what the beneficiary is actively engaging to pay. This constitutes a reasonable collection effort as required by § 413.89(e)(2).

Requiring the 120-day collection effort timeframe to start anew when a partial payment is received during the 120 days is not burdensome to the provider and requires little additional resources from the provider because the account is still open on the provider's accounting books, and has not yet been written off as a bad debt. Additionally, because ''uncollectible deductibles and coinsurance amounts are recognized as allowable bad debts in the reporting period in which the debts are determined to be worthless,'' (PRM § 314), the provider can claim the unpaid amounts as a Medicare bad debt after the additional 120-day collection effort time period, provided that no additional payment is received that would require an extension of the 120-day collection effort time period again.

We proposed to amend § 413.89(e)(2) by adding a new paragraph (e)(2)(i)(A)(*5*)(*ii*) to specify that when the provider receives a partial payment within the minimum 120-day required collection effort period, the provider must continue the collection effort and the day the partial payment is received is day one of the new collection period. For each subsequent partial payment received during a 120-day collection effort period, the provider must continue the collection effort and the day the subsequent partial payment is received is day one of the new collection period. The provider is permitted to end the collection effort at the end of a 120-day collection effort period when no payments have been received during those consecutive 120 days. These revisions would be effective for cost reporting periods beginning before, on and after the effective date of this final rule because we proposed to clarify and codify our longstanding policy pertaining to the required 120-day collection effort.

We also proposed to clarify and codify into the regulations our longstanding policy regarding the reporting periods and recovery of bad debts, which specifies required procedures for when a provider recovers (that is, receives a payment in the current year) an amount that was previously claimed and paid as a Medicare bad debt, in a prior cost reporting period. In some cases an amount written off as a bad debt and reimbursed by the program in a prior cost reporting period may be recovered in a subsequent accounting period; in such situations, the recovered amount must be used to reduce the provider's reimbursable costs in the period in which the amount is recovered. However, the amount of such reduction in the period of recovery must not exceed the actual amount reimbursed by the program for the related bad debt in the applicable prior cost reporting period. Because this is has been our longstanding policy as set forth in the PRM and the regulations for several decades, we proposed to clarify this policy in the regulations to also apply to cost reporting periods beginning before, on and after the effective date of this final rule. We also proposed to amend § 413.89(f) by adding language to specify that, effective for cost reporting periods beginning before, on and after October 1, 2020, the deductible and coinsurance amounts uncollected from beneficiaries are to be written off and recognized as allowable bad debts in the cost reporting period in which the accounts are deemed to be worthless. Any payment on the account made by the beneficiary, or a responsible party, after the write-off date but before the end of the cost reporting period, must be used to reduce the final bad debt for the account claimed in that cost report.

Comment: Some commenters were supportive of the proposal to codify the longstanding Medicare bad debt 120-day collection effort required by providers from non-indigent beneficiaries. However, many commenters were not supportive of our proposal to codify our longstanding collection effort policy requiring the provider engage in a continuous 120-day collection effort with no payment received, as they

believed doing so would unnecessarily require them to keep their accounts receivable open for longer periods of time. Commenters were not supportive of a retroactive effective date for the codification of this provision, as they believed providers would be confused by the applicability of the policy for various cost reporting periods and suffer harm.

Response: We respectfully disagree with commenters. Longstanding Medicare bad debt policy regarding the presumption of noncollectibility, as set forth in the PRM § 310.2 supports a continuous 120-day period without a payment as part of a reasonable collection effort. Section 310.2 states that ''if, after 120 days, a payment is not received, the unpaid amount can be written off.'' We therefore have concluded that if, within the 120 days, a partial payment is received, the remaining uncollected amount cannot be written off to Medicare bad debt because the collection effort is active and ongoing by way of the response from the beneficiary submitting a payment. Our longstanding position, asserted in court cases and legal documents over the years, is that if the provider continues to receive money, then the account is not a worthless account without value. The account has some recovery value when payments continue to be received and therefore, it is appropriate for the provider to keep the account open for an additional collection period to attempt further collection efforts before presenting the unpaid amounts as a Medicare bad debt which is funded by the Medicare Trust Fund and comprised of taxpayer money. This longstanding bad debt policy has existed in Medicare guidance, including the PRM, for decades, and providers and beneficiaries are familiar with and rely upon it. The clarification and codification of this longstanding Medicare bad debt policy into the regulations with a retroactive effective date does not affect prior transactions or impose additional duties or adverse consequences upon providers or beneficiaries, nor does it diminish rights of providers or beneficiaries. The clarification and codification of this longstanding Medicare bad debt policy into the regulations with a retroactive effective date also serves an important public interest to assist providers and beneficiaries by avoiding confusion as to which longstanding policy should be applied for which cost reporting period, as might arise if the effective date was instead proposed for cost reporting periods beginning on or after the effective date of this rule. Failing to adopt the clarification and codification of longstanding Medicare bad debt policies with a retroactive effective date might lead some providers to believe that those policies did not apply to earlier cost reporting periods, and thus might cause confusion among some providers or cause others to resubmit previously submitted cost reports. The clarification and codification of longstanding Medicare bad debt policies into the regulations with a retroactive effective date serves the important public interest of promoting fairness and economy to providers by saving them the time and resources required for such resubmissions, and by saving government resources and funds from the taxpayer-funded Medicare Trust Fund that would be expended in review of cost report resubmissions. These considerations apply equally to all aspects of this final rule that we are finalizing with a retroactive effective date.

After consideration of the public comments we received, we are finalizing our proposal to amend § 413.89(e)(2) by adding a new paragraph (e)(2)(i)(A)(5)(*i*) to specify that a provider's reasonable collection effort requirement for a non-indigent beneficiary must also last at least 120 days after § 413.89(e)(2)(i)(A)(2) or (3) is met before being written off as uncollectible under paragraph § 413.89(e)(3). We are finalizing our proposal to amend § 413.89(e)(2) by adding a new paragraph (e)(2)(i)(A)(5)(*ii*), effective for cost reporting periods beginning before, on, and after the effective date of this rule, to specify that a provider's reasonable collection effort requirement for a non-indigent beneficiary must also start a new 120-day collection period each time a payment is received within a 120-day collection period.

(3) Similar Collection Effort Required, Including Collection Agency Use, PRM Section 310

Under Medicare bad debt policy, Medicare regulations at § 413.89(e)(2) require that providers engage in reasonable collection efforts. Our manual guidance currently states that, ''[t]o be considered a reasonable collection effort, a provider's effort to collect Medicare deductible and coinsurance amounts must be similar to the effort the provider puts forth to collect comparable amounts from non-Medicare patients.'' PRM § 310. As such, a provider's dissimilar debt collection practices for Medicare and non-Medicare patient accounts do not constitute a provider's ''reasonable collection effort'' to claim reimbursement from Medicare for a bad debt, whether the collection effort from the provider is an in-house collection effort or if the provider elects to refer bad debt accounts to a collection agency for an outside collection effort. This policy has been the subject of dispute by stakeholders in the past and we believe that a clarification of the policy is necessary with incorporation of the PRM guidance into the regulations.

If a provider elects to refer its non-Medicare accounts to a collection agency, the provider must similarly refer its Medicare accounts of ''like amount.'' The PRM § 310.A states that where a collection agency is used, Medicare expects the provider to refer all uncollected patient charges of like amount to the agency without regard to class of patient. The ''like amount'' requirement may include uncollected charges above a specified minimum amount. Therefore, if a provider refers to a collection agency its uncollected non-Medicare patient charges which in amount are comparable to the individual Medicare deductible and coinsurance amounts due the provider from its Medicare patient, Medicare requires the provider to also refer its uncollected Medicare deductible and coinsurance amounts to the collection agency.

When the provider uses a collection agency to perform a reasonable collection effort on its behalf, the provider must ensure that the collection agency's collection effort is similar to the effort the collection agency puts forth to collect comparable amounts from non-Medicare patients. This means that for similar, comparable amounts of the collection accounts, the collection agency must use similar collection practices for both accounts.

The collection agency's collection effort can include subsequent billings, collection letters, and telephone calls or personal contacts with the party who is financially responsible for the beneficiary's personal financial obligation which constitute a genuine, rather than a token, collection effort. The collection agency's collection effort may also include using or threatening to use court action to obtain payment. Where the collection agency does not follow the reasonable collection effort requirement, Medicare does not recognize the fees as an allowable administrative cost. Collection accounts that remain at a collection agency, for whatever reason, including accounts that are monitored passively by the collection agency, cannot be claimed by the provider as a Medicare bad debt. This is because during the period the unpaid account remains at the

collection agency, the provider cannot meet the fourth regulatory requirement in § 413.89(e)(4) that ''sound business judgment established that there was no likelihood of recovery at any time in the future.'' While an account remains at a collection agency, there is always a likelihood of at least some recovery on the account. The purpose of having an account at a collection agency is to collect on the account, even if the account is in a passive collection status. Hence, the very act of having an account at a collection agency is deemed to be a collection effort undertaken by the provider. As such, the provider cannot establish that there is ''no likelihood of recovery at any time in the future'' for the account and the provider is unable to claim the account as an allowable Medicare bad debt.

The fee charged by the collection agency is its charge for providing the collection service and is not considered a Medicare bad debt. Where a provider uses the services of a collection agency and the collection agency performs a reasonable collection effort, Medicare recognizes the fees the collection agency charges the provider as an allowable administrative cost. When a collection agency obtains payment of an account receivable, the gross amount collected reduces the patient's account receivable by the same amount and must be credited to the patient's account. The collection fee deducted by the agency is charged to administrative costs.

Example 1—Collection Agency Charges Percent Fee

The provider sends a beneficiary's account of $400 to the collection agency and the collection agency's fee for its service is 30 percent of the collected amount. If the collection agency collects $220 from the beneficiary, the collection agency keeps $66 (30 percent of $220) as its fee for the collection services and remits $154 ($220 less $66) to the provider. The provider records the full amount collected by the collection agency ($220) in the beneficiary's account receivable and records the collection fee ($66) in administrative costs. Once the collection agency completes the required collection efforts on this account, returns the account back to the provider and the provider deems the account worthless, the provider can claim on its cost report the amount of $180 ($400 less $220) as a Medicare bad debt (subject to further statutorily mandated reductions as set forth in § 413.89(h)). The provider cannot claim the $66 collection agency fee as a Medicare bad debt.

Example 2—Collection Agency Charges Flat Fee

The provider sends a beneficiary's account of $400 to the collection agency and the collection agency's flat fee is $100 per account for its services. If the collection agency collects $250 from the beneficiary, the collection agency keeps $100 as its fee for the collection services and remits $150 ($250 less $100) to the provider. The provider records the full amount collected by the collection agency ($250) in the beneficiary's account receivable and records the collection fee ($100) in administrative costs. Once the collection agency completes the required collection effort on this account, returns the account back to the provider and the provider deems the account worthless, the provider can claim on its cost report the amount of $150 ($400 less $250) as a Medicare bad debt (subject to further statutory mandated reductions as set forth in § 413.89(h)). The provider cannot claim the $100 collection agency fee as a Medicare bad debt.

Therefore, we proposed to amend § 413.89(e)(2) by adding a new paragraph (e)(2)(i)(A) to specify that a provider's effort to collect Medicare deductible and coinsurance amounts must be similar to the effort the provider puts forth to collect comparable amounts from non-Medicare patients. A provider's dissimilar debt collection practices for Medicare and non-Medicare patient accounts do not constitute a reasonable collection effort to claim reimbursement from Medicare for a bad debt, whether the collection effort from the provider is an in-house collection effort or if the provider elects to refer bad debt accounts to a collection agency for an outside collection effort. A provider may use a collection agency to perform a reasonable collection effort on its behalf. The provider must ensure that the collection agency's collection effort is similar to the effort the collection agency puts forth to collect comparable amounts from non-Medicare patients. The collection agency's collection effort can include subsequent billings, collection letters, and telephone calls or personal contacts with the responsible party which constitute a genuine, rather than a token, collection effort. The collection agency's collection effort may include using or threatening to use court action to obtain payment. The fee charged by the collection agency is its charge for providing the collection service and is not considered a Medicare bad debt. Where a provider uses the services of a collection agency and the collection agency performs a reasonable collection effort, Medicare recognizes the fees the collection agency charges the provider as an allowable administrative cost. Where the collection agency does not follow the reasonable collection effort requirement, Medicare does not recognize the fees as an allowable administrative cost. Collection accounts that remain at a collection agency, for whatever reason, including accounts that are monitored passively by the collection agency, cannot be claimed by the provider as a Medicare bad debt. When a collection agency obtains payment of an account receivable, the gross amount collected reduces the patient's account receivable by the same amount and must be credited to the patient's account. The collection fee deducted by the agency is charged to administrative costs.

These revisions would be effective for cost reporting periods beginning before, on and after the effective date of this final rule because we are clarifying and codifying our longstanding policy.

Comment: Some commenters suggested that CMS abandon the proposal to codify the requirement that accounts remaining at a collection agency cannot be considered for Medicare bad debt because accounts at a collection agency have little to no value and providers simply place them with collection agencies for the small possibility of a collection. Some commenters cited federal court decisions and asserted that they foreclosed our adoption of similar collection effort policies. Other commenters suggested that if a payment were to be made on an account while at a collection agency, providers could reconcile the amount paid and record it as a recovery on the provider's subsequently submitted cost report.

Response: We appreciate commenters' suggestions but respectfully disagree. The current Medicare bad debt regulation requires that to be allowable, a bad debt must be ''actually uncollectible when claimed as worthless,'' and also that ''sound business judgment established that there was no likelihood of recovery at any time in the future.'' § 413.89(e)(3) and (4). It has been our longstanding policy that an account that remains at a collection agency has satisfied neither of these regulatory conditions, remains in a collection effort status, and thus cannot be claimed as a Medicare bad debt. An account that remains at a collection agency still holds some value for the chance of a recovery and there is a possibility, a likelihood, of recovery while the account remains there. We have also reviewed the federal court decisions cited in some comments and

do not agree that they prevent us from adopting the rules regarding similar collection efforts that we are finalizing.

Comment: Some commenters suggested that further definitions be set forth for what constitutes a genuine, and not a token collection effort.

Response: A genuine, rather than a token, collection effort is based on the reasonableness of a provider's effort to collect the unpaid Medicare deductible and coinsurance amounts from the beneficiary or responsible party. It entails a serious and concerted effort by the provider to collect the unpaid debt. The provider's genuine, rather than token, collection effort has been addressed in PRM § 310 under the concept of ''reasonable collection effort'' as ''also include[ing] other actions such as subsequent billings, collection letters and telephone calls or personal contacts with this party which constitute a genuine, rather than a token, collection effort.'' As we have asserted in the past in policy statements and proceedings, a genuine collection effort requires the provider to engage in prompt and continuous collection efforts, over at least 120 days, advising the beneficiary of the amounts to be collected, engaging in subsequent follow up and billing, and may include the provider engaging a collection agency.

After consideration of the public comments we received, we are finalizing our proposal to amend § 413.89(e)(2) by adding a new paragraph (e)(2)(i)(A) to specify that a provider's effort to collect Medicare deductible and coinsurance amounts must be similar to the effort the provider puts forth to collect comparable amounts from non-Medicare patients.

(4) Documentation Required—Reasonable Collection Effort for Non-Indigent Beneficiaries

Medicare's longstanding bad debt policy requires that as part of a provider's reasonable collection effort for beneficiaries, including non-indigent beneficiaries, the provider must maintain and, upon request, furnish to the Medicare contractor documentation of the provider's collection effort, whether the provider performs the collection effort in house or whether the provider uses a collection agency to perform the required collection effort on the provider's behalf. PRM § 310.B. The documentation of the collection effort must include: The provider's bad debt collection policy which describes the collection process for Medicare and non-Medicare patients; and the patient account history documents which show the dates of various collection actions such as the issuance of bills, follow-up collection letters, reports of telephone calls and personal contact, etc. Unpaid deductible and coinsurance amounts without collection effort documentation are not allowable bad debts.

Therefore, we proposed to amend § 413.89(e)(2) by adding a new paragraph (e)(2)(i)(A)(*6*) to specify the requirements a provider must follow in order to document the provider's reasonable collection effort for non-indigent beneficiaries.

Because these are clarifications of codifications of longstanding Medicare bad debt policy, these policies would be effective for cost reporting periods beginning before, on and after the effective date of the final rule.

Comment: Some commenters disagreed with the proposal that documentation requirements for a provider's collection effort be codified. Some commenters suggested that documentation practices can vary among providers and are subject to interpretation by contractors. Commenters instead suggested that the documentation requirements be set forth in subregulatory guidance.

Response: We appreciate commenters' concerns but respectfully disagree. We note that regulatory guidance exists at 42 CFR 413.20 and 413.24 regarding providers' recordkeeping and documentation requirements to substantiate payment. We also note other regulations set forth specific documentation requirements, for example, 42 CFR 413.75 for direct GME payments. We believe that our rules governing documentation requirements for a provider's reasonable collection effort should be similarly appropriately codified in regulations text. Such codification will provide clarity and should therefore minimize the possibility of varying interpretations that have caused some commenters' concerns. We also, however, believe the requirements are general enough to afford needed flexibility to providers.

After consideration of the public comments we received, we are finalizing our proposal to amend § 413.89(e)(2) by adding a new paragraph (e)(2)(i)(A)(6) to specify the requirements a provider must follow in order to document the provider's reasonable collection effort for non-indigent beneficiaries. Specifically, providers must maintain and, upon request, furnish verifiable documentation to its contractor that includes all of the following: (*i*) The provider's bad debt collection policy which describes the collection process for Medicare and non-Medicare patients, (*ii*) The patient account history documents which show the dates of various collection actions such as the issuance of bills to the beneficiary, follow-up collection letters, reports of telephone calls and personal contact, etc.; and (*iii*) The beneficiary's file with copies of the bill(s) and follow-up notices. We will evaluate the burden estimates for the recordkeeping requirements in all applicable cost reports, such as OMB Control No. 0938–0050 (Hospitals and Health Care Complex Cost Report), and if these recordkeeping activities have not been accounted for we will revise the ICR(s) via a Paperwork Reduction Act notice.

b. Reasonable Collection Effort, Beneficiaries Determined Indigent by Provider Using Required Criteria

Under PRM § 312, a provider may determine a beneficiary to be indigent for purposes of claiming a beneficiary's unpaid deductible and/or coinsurance amounts as a Medicare bad debt. A provider can determine a beneficiary's indigence in one of two ways: (1) When the beneficiary is eligible for Medicaid as either a categorically or medically needy individual (that is, a dual eligible Medicare beneficiary); or (2) the provider determines a non-dual eligible Medicare beneficiary, to be indigent by applying the provider's customary methods for determining a patient to be indigent under the evaluation criteria in PRM § 312. A. through D. Once indigence is determined by the provider, and the provider concludes that there has been no improvement in the beneficiary's financial condition, the debt may be deemed uncollectible without the provider having to collect the unpaid Medicare cost sharing liability from beneficiaries by applying the requirements set forth in PRM § 310 for non-indigent beneficiaries.

Over the past several years, the criteria set forth in PRM § 312 regarding the determination of indigence have been the subject of litigation as questions have been raised as to whether the criteria are mandatory. In the proposed rule, we proposed to clarify and codify our longstanding policy and criteria set forth in PRM § 312 A. through D. (setting for the requirements for a facility's determination of indigency).

Stakeholders have questioned why PRM § 312.B requires that the beneficiary's total resources be considered when a provider evaluates a beneficiary's indigence. We believe that each beneficiary's unique total resources must be evaluated to determine whether a beneficiary is indigent. This evaluation must include, but is not limited to, an analysis of assets (only those convertible to cash, and

unnecessary for the beneficiary's daily living), liabilities, and income and expenses, as well as any extenuating circumstances that would affect the determination of the beneficiary's indigence.

Therefore, we proposed to amend § 413.89(e)(2) by adding new paragraph (e)(2)(ii) to define an indigent non-dual eligible beneficiary as a Medicare beneficiary who is determined to be indigent by the provider and not eligible for Medicaid as categorically or medically needy. We also proposed to amend § 413.89(e)(2) by adding new paragraph (e)(2)(ii)(A) to specify that to determine a beneficiary to be an indigent non-dual eligible beneficiary, the provider must apply its customary methods for determining whether the beneficiary is indigent under the following requirements: (1) The beneficiary's indigence must be determined by the provider, not by the beneficiary; that is, a beneficiary's signed declaration of their inability to pay their medical bills and/or deductibles and coinsurance amounts cannot be considered proof of indigence; (2) the provider must take into account a beneficiary's total resources which include, but are not limited to, an analysis of assets (only those convertible to cash and unnecessary for the beneficiary's daily living), liabilities, and income and expenses. While a provider must take into account a beneficiary's total resources in determining indigence, any extenuating circumstances that would affect the determination of the beneficiary's indigence must also be considered; and (3) the provider must determine that no source other than the beneficiary (for example, a legal guardian) would be legally responsible for the beneficiary's medical bill.

We also proposed to amend § 413.89(e)(2) by adding new paragraph (e)(2)(ii)(B) to specify that as part of its determination of indigence, the provider must maintain and furnish, upon request to its Medicare contractor, documentation (for example, a Policy for Determination of Indigence) describing the method by which indigence or medical indigence is determined and the beneficiary-specific documentation which supports the provider's documentation of each beneficiary's indigence or medical indigence. Once indigence is determined and the provider concludes that there has been no improvement in the beneficiary's financial status, the bad debt may be deemed uncollectible without applying a collection effort. Unpaid deductible and coinsurance amounts without the provider's documentation of its determination of indigence will not be considered as allowable bad debts.

We proposed that these revisions would be effective for cost reporting periods beginning before, on and after the effective date of this rule because they are clarifications and codifications of longstanding Medicare policies.

Comment: Some commenters were supportive of the codification of the definition for an indigent non-dual eligible beneficiary because it would provide clarity to the Medicare bad debt policies. Other commenters suggested that the codification of the definitions for each beneficiary category may cause confusion and questioned whether there could be an instance when a beneficiary moved from a non-indigent beneficiary category to an indigent beneficiary category. Some commenters suggested that the codification of the definition for an indigent non-dual eligible beneficiary did not serve an important interest and should not be applied retroactively.

Response: We appreciate the commenters' comments and perspectives. Our longstanding Medicare bad debt rules requiring a provider's reasonable collection effort are different for the three categories of: Beneficiaries who are non-indigent; beneficiaries who have been determined by the provider to be indigent (including medically indigent); or beneficiaries enrolled in Medicaid. Therefore, we believe that as we clarify and codify these longstanding bad debt policies, it is important to set forth the definition of each of these beneficiary categories so that it is clear which bad debt collection effort policies applied to each. A beneficiary's status can change from non-indigent to ''provider-determined indigent'' status during the cost reporting period, or the beneficiary could be enrolled in Medicaid; the provider's required reasonable collection effort is different for each category. We believe that we are promoting the public interest with the retroactive codification of the definition for an indigent non-dual eligible beneficiary. This definition serves to provide clarity because the definitions for this beneficiary category have existed implicitly in the longstanding bad debt collection effort policies that applied to them. We believe that providers will not be burdened or harmed by the application and formalization of a label and definition for a non-indigent beneficiary and an indigent non-dual eligible beneficiary.

Comment: Many commenters opposed the proposal to codify Medicare's longstanding bad debt policy with respect to a provider's determination of a patient's indigence by the required evaluation of a patient's total resources, including a patient's assets, income, expenses and liabilities. Many commenters suggested that only a patient's income be considered when determining whether a patient is indigent and also suggested that an evaluation of a patient's assets, liability and expenses requires additional resources and burden to the provider. Some commenters suggested that an evaluation of a patient's liabilities and expenses only serves to further qualify a patient as indigent. Some commenters questioned why additional parameters were required to evaluate a patient's indigence when the PRM sets forth that providers should apply its customary methods for determining the indigence of patients. Other commenters cited federal court decisions and objected to the proposal to require providers to evaluate assets, income, liabilities and expenses because some viewed the language in the PRM as suggestive requirements and not mandatory. Many commenters opposed the retroactive codification of this policy as proposed.

Response: We appreciate the commenters' varied views on the longstanding Medicare bad debt indigence policies. In the proposed rule, we proposed to codify Medicare's longstanding bad debt policy that requires providers to evaluate a beneficiary's financial status to determine whether the beneficiary can be deemed to be indigent by the provider, permitting the provider to forgo the process to collect a beneficiary's unpaid deductible and coinsurance amounts. In this regard, a provider can deem a beneficiary indigent or medically indigent when the beneficiary has also been determined eligible for Medicaid. If the beneficiary has not been determined eligible for Medicaid, then the provider applies its customary methods for determining indigence under certain guidelines. Our longstanding policy has been that those guidelines require a provider to take into account the beneficiary's total resources to include the consideration of a beneficiary's assets, income, liabilities and expenses. Upon further review and consideration of the comments, we understand that reviewing a patient's liabilities and expenses may not be beneficial in instances when the beneficiary has already qualified for indigence upon evaluation of the beneficiary's income and assets because an evaluation of a beneficiary's liabilities and expenses would only reduce the income and

assets, which serves to further ensure a beneficiary's indigence determination. However, we do not agree, as some commenters suggest, that only a beneficiary's income, but not assets, should be evaluated for indigence for Medicare bad debt purposes. It is possible that a Medicare beneficiary may have assets that are convertible to cash, unnecessary for the beneficiary's daily living, and that can be used for the beneficiary's care, including medical cost sharing expenses. Therefore, we believe that evaluating a beneficiary's income and assets yields a more appropriate assessment of indigence. In circumstances in which a beneficiary may not qualify as financially indigent based on a review of assets and income alone, because their income is too high or their assets too great, a further review of the beneficiary's liabilities and expenses may serve to qualify them for a medical indigence status. Finally, we have reviewed the federal court decisions cited in some comments and do not agree that they prevent us from adopting the rules regarding total resources that we are finalizing.

Comment: Some commenters suggested that providers be permitted to use presumptive eligibility tools, such as those used to qualify patients for federal, state and local uncompensated care or charity care programs, to qualify Medicare beneficiaries for indigence determinations for Medicare bad debt purposes.

Response: We appreciate the commenters' suggestions to allow providers to determine Medicare beneficiaries to be indigent by using presumptive eligibility tools for Medicare bad debt purposes, which could also serve to reduce burden to providers when evaluating indigence. Commenters suggested that many presumptive eligibility tools utilize various factors to evaluate a patient's ability to pay for medical services, including but not limited to, a patient's demographics, zip code, credit score, or income, and could also be used to determine a Medicare beneficiary to be indigent for bad debt purposes. Although presumptive eligibility tools may reduce a provider's burden when evaluating indigence, we disagree that presumptive eligibility tools should be used to determine a Medicare beneficiary's indigence status for Medicare bad debt purposes. Many of the presumptive eligibility tools cursorily review a patient's financial status, based either on the patient's declaration or demographic presumptions, or income and presume one to be indigent. Because we understand that an assessment of a beneficiary's liabilities and expenses may serve to qualify a beneficiary for indigence, we believe that it is appropriate to allow a provider flexibility to consider a beneficiary's extenuating circumstances that would affect the determination of the beneficiary's indigence or medical indigence, which may include an analysis of the beneficiary's liabilities and expenses, if indigence cannot be determined with a review of the beneficiary's income and assets only.

Comment: Commenters asserted that the proposal to codify the Medicare bad debt indigence evaluation criteria contradicts terms of indigence policies from other programs, such as the National Health Service Corps program, that commenters assert, do not permit providers to inquire about a patient's assets, liabilities, or expenses, and therefore a provider's compliance with Medicare bad debt indigence policy would adversely cause providers to be non-compliant with other indigent policies.

Response: We appreciate commenters' concerns, however we respectfully disagree that a provider's compliance with Medicare bad debt indigence criteria for Medicare beneficiaries precludes providers from participating in other indigence programs. We believe that a provider's compliance with Medicare bad debt indigence policy, in order to qualify a Medicare beneficiary as indigent and claim a Medicare bad debt which is paid from the Medicare Trust Fund, is separate and apart from a provider participating in, or qualifying patients for, other indigence programs that may have different indigence program criteria. As commenters indicate, other Federal, state or local indigent programs may have criteria different from the Medicare bad debt indigence policy, for various reasons or program incentives, and permit providers to use presumptive eligibility tools, to qualify patients for other indigent program. The Medicare bad debt policy is not an indigence program; it is a Medicare policy to pay providers for a beneficiary's unreimbursed deductible and coinsurance amounts after the provider has met certain criteria. The criteria for other indigence programs, such as charity care, may have different program or policy requirements than Medicare bad debt. Medicare does not pay providers directly for charity care, whereas Medicare bad debt amounts may be allowable, and directly paid to various provider types, without the providers performing a reasonable collection effort if the beneficiary qualifies for indigence. As previously stated, we believe it is possible that a Medicare beneficiary may have assets that are convertible to cash, unnecessary for the beneficiary's daily living expenses, which can be used for the beneficiary's care, including medical cost-sharing expenses. Therefore, we believe that evaluating a beneficiary's income and assets yields a more appropriate assessment of indigence for Medicare bad debt purposes. As stewards of the Medicare Trust Fund, CMS must ensure that providers comply with Medicare program policy in order to receive payment for bad debt for Medicare beneficiaries determined to be indigent under Medicare's indigence bad debt policy criteria.

Comment: Some commenters questioned what a provider would need to do to conclude ''that there has been no improvement in the beneficiary's financial status'' once indigence is determined before the bad debt may be deemed uncollectible without applying a collection effort as proposed in § 413.89(e)(2)(ii)(B). Some commenters suggested that this phrase in the proposed regulation text requires additional actions by providers and is vague and burdensome.

Response: We appreciate commenters' concerns. Longstanding Medicare bad debt policy, as published in the PRM § 312, has always required that ''once indigence is determined and the provider concluded that there had been no improvement in the beneficiary's financial condition, the debt may be deemed uncollectible without applying the § 310 procedures.'' We agree with providers that this proposed codification may not be beneficial to providers as it requires providers to take additional actions which may be burdensome, and not produce a different result, once the provider has determined the beneficiary to be indigent under proposed § 413.89(e)(2)(ii)(A). We believe that providers should be afforded more flexibility when determining a beneficiary's indigence and that an analysis of liabilities and expenses should be reviewed in situations where it is only necessary to do so if the beneficiary does not first qualify for indigence with an analysis of income and assets. We also believe that flexibility should be afforded to providers so that they do not have to continually review a beneficiary's financial condition once indigence is determined. However, we recognize that a beneficiary's financial condition may improve, resulting in a change in the beneficiary's indigence status from indigent to non-indigent. If a provider discovers that the beneficiary's financial

condition has improved following the provider's determination of indigence, we expect the provider will no longer classify the beneficiary as indigent and implement reasonable collection efforts for the non-indigent beneficiary.

After consideration of the public comments we received, we are finalizing Medicare bad debt indigence policies applicable to indigent non-dual eligible beneficiaries by amending § 413.89(e)(2) by adding new paragraph (e)(2)(ii) to define an indigent non-dual eligible beneficiary as a Medicare beneficiary who is determined to be indigent by the provider and not eligible for Medicaid as categorically or medically needy. We are not finalizing our proposal to add new paragraph (e)(2)(ii)(A), which would have required a provider to evaluate a beneficiary's liabilities and expenses to determine indigence. Instead, new paragraph (e)(2)(ii)(A) specifies that in order to conclude that a beneficiary is an indigent non-dual eligible beneficiary, the provider: (1) Must not use a beneficiary's declaration of their inability to pay their medical bills or deductibles and coinsurance amounts as sole proof of indigence or medical indigence, (2) Must take into account the analysis of both the beneficiary's assets (only those convertible to cash and unnecessary for the beneficiary's daily living) and income, (3) May consider extenuating circumstances that would affect the determination of the beneficiary's indigence or medical indigence which may include an analysis of both the beneficiary's liabilities and expenses, if indigence is unable to be determined under (ii)(A)(2), (4) Must determine that no source other than the beneficiary would be legally responsible for the beneficiary's medical bill, such as a legal guardian or State Medicaid program, and (5) Must maintain and, upon request, furnish its Medicare contractor with the provider's indigence determination policy describing the method by which indigence or medical indigence is determined and all the verifiable beneficiary specific documentation which supports the provider's determination of each beneficiary's indigence or medical indigence. We believe that this policy finalization will reduce burden to providers when determining a beneficiary's indigence. We will evaluate the burden estimates for the recordkeeping requirements in all applicable cost reports, such as OMB Control No. 0938–0050 (Hospitals and Health Care Complex Cost Report), and if these recordkeeping activities have not been accounted for we will revise the ICR(s) via a Paperwork Reduction Act notice. We are not finalizing our proposal to amend § 413.89(e)(2) by adding new paragraph (e)(2)(ii)(B), as proposed, to require that once indigence is determined and the provider concludes that there has been no improvement in the beneficiary's financial status, the bad debt may be deemed uncollectible without applying a collection effort. Instead, we are amending § 413.89(e)(2) by adding new paragraph (e)(2)(ii)(B) to specify that once indigence is determined, the bad debt may be deemed uncollectible without applying a collection effort. Unpaid deductible and coinsurance amounts without the provider's documentation of its determination of indigence will not be considered as allowable bad debts. We believe that this policy finalization will reduce burden to providers when determining a beneficiary's indigence.

In the proposed rule, we proposed that our proposals would be effective for cost reporting periods beginning before, on and after the effective date of this rule because our proposals were clarifications and codifications of longstanding Medicare policies. However, because of the changes to the policies we are finalizing after consideration of public comments, we are finalizing these policies with an effective date for cost reporting periods beginning on or after October 1, 2020.

c. Reasonable Collection Effort, Dual Eligible Beneficiaries and the Medicaid Remittance Advice

Dual eligible beneficiaries are Medicare beneficiaries who are enrolled in Medicare (either Part A, Part B, or both), and are also enrolled in ''full Medicaid'' coverage and/or the Medicare Savings Program (MSP).[517] Authorized under sections 1902(a)(10)(E) and 1905(p) and (s) of the Act, the MSP includes four mandatory Medicaid eligibility groups that assist low income Medicare beneficiaries with their Medicare expenses.[518] One specific category of MSP is the Qualified Medicare Beneficiaries (QMB) program. Under 1905(p)(1) of the Act, a QMB is an individual who is entitled to hospital insurance benefits under Part A of Medicare, with income not exceeding 100 percent of the Federal poverty level, and resources not exceeding three times the Supplemental Security Income limit.

Section 1902(a)(10)(E) of the Act directs State Medicaid Agencies to pay providers for QMB cost sharing amounts as defined in section 1905(p)(3) of the Act. Under section 1905(p)(3) of the Act, ''Medicare cost sharing'' includes costs incurred with respect to a QMB, ''without regard to whether the costs incurred were for items and services for which medical assistance is otherwise available under the plan.'' The ''Medicare cost sharing'' includes Medicare Part A and B coinsurance and deductibles. Section 1902(n)(2) of the Act permits the State to limit payment for QMB cost sharing to the amount necessary to provide a total payment to the provider (including Medicare, Medicaid, required nominal Medicaid copayments, and third party payments) equal to the amount a State would have paid for the service under the State plan.

State Medicaid Management Information Systems (MMIS), funded under section 1903(a)(3) of the Act, are required, as an express condition of a State receiving enhanced federal matching funds for the design, development, installation and administration of their MMIS systems, to process Medicare crossover[519] claims, including QMB cost sharing, for adjudication of Medicaid payment of Medicare cost sharing amounts, including deductibles and coinsurance for Medicare services. The MMIS is also required to furnish the provider with a Medicaid remittance advice (RA), a document that outlines the State's cost sharing liability for a particular service or set of services for the patient/beneficiary.[520] The Medicaid RA will also show whether the State has no liability for Medicare cost sharing for a beneficiary's service pursuant to the State plan.[521] The MMIS must process all Medicare crossover claims for QMBs, including Medicare-adjusted claims that

[517] ''Full Medicaid'' coverage refers to the package of services, beyond coverage of Medicare premiums and cost-sharing, that certain individuals are entitled to when they qualify under eligibility groups covered under a state's Medicaid program.

[518] The MSP includes the Qualified Medicare Beneficiary, Specified Low-Income Medicare Beneficiary Qualifying Individual, and Qualified Disabled and Working Individual programs. Depending upon the MSP group the individual is enrolled in, the MSP pays all or some of an individual's Medicare expenses, including Parts A and B premiums, deductibles, coinsurance and copayments.

[519] ''Crossover'' claims are initiated when a Medicare certified provider submits a claim to its Medicare contractor for processing of the Medicare covered service and the claim ''crosses over'' to Medicaid for the State to determine and set forth the State's cost sharing liability towards beneficiaries' Medicare cost sharing. This crossover claim includes the primary payment amount from Medicare.

[520] *http://www.medicaid.gov/Federal-Policy-Guidance/downloads/CIB-06-07-2013.pdf.*

[521] *http://www.medicaid.gov/Federal-Policy-Guidance/downloads/CIB-06-07-2013.pdf.*

are submitted by Medicaid-enrolled providers, even if a service or provider category is not currently recognized in the Medicaid State Plan. However, we recognize that there may be instances where the Medicare crossover claim process does not occur automatically, and providers must instead submit their Medicare claims manually to Medicaid for adjudication and determination of the state's cost sharing liability. The most direct and logical way to know a State's cost sharing liability for a QMB is from the Medicaid RA. If a State Medicaid program had Medicare cost sharing responsibility and refused to pay, or failed to process a Medicare crossover claim to determine its cost sharing liability, it would be out of compliance with its Medicaid State plan and would be subject to enforcement action by CMS.

A State's requirement to determine its cost sharing liability for QMBs was also set forth at section 3490.14(A) of the State Medicaid Manual (SMM) (CMS Pub. 45); Payment of Medicare Part A and Part B Deductibles and Coinsurance—State Agency Responsibility, when paper claims were submitted by Medicare providers to the State to determine its cost sharing liability. Specifically, section 3490.14(A)(l) and (2) of the SMM required the State Agency to provide, through the State Plan, the payment rates applicable for services that are either covered or not covered by the State Plan, in order to determine the amount of Medicare coinsurance and deductibles that the State was responsible to pay. Because a QMB's financial situation and Medicaid eligibility status may change over the course of a very short period of time and the State is required to maintain the most current patient eligibility and financial information, the State is in the best position to fulfill its statutory requirement and make the most accurate determination of its cost sharing liability for any unpaid Medicare deductibles and coinsurance.

Providers are prohibited under section 1902(n)(3) of the Act from seeking to collect payment from a QMB for Medicare deductibles or coinsurance, even if the Medicaid State plan's cost sharing liability is less than the total amount of the Medicare deductibles and coinsurance. Medicare may reimburse providers who provide Medicare covered services to dual eligible beneficiaries the difference between beneficiaries' unpaid Medicare cost sharing and the State's Medicare cost sharing liability for the beneficiary, up to the allowable Medicare bad debt amount if the provider has made a reasonable collection effort. To satisfy the reasonable collection effort, a provider that has furnished services to a dual eligible beneficiary must determine whether the State's Title XIX Medicaid Program (or a local welfare agency, if applicable) is responsible to pay all or a portion of the beneficiary's Medicare deductible and/or coinsurance amounts. A provider satisfies this by billing the State or State designee such as a Medicaid managed care organization (MCO), to determine any Medicare cost sharing amounts for which the State may be liable to the provider. This is known as the ''must-bill policy'' for dual eligible beneficiaries and is outlined in PRM §§ 312 and 322.

In accordance with PRM § 312, providers seeking Medicare reimbursement for bad debts for dual eligible beneficiaries' cost sharing are required to: (1) Bill the State Medicaid program to determine that no source other than the patient would be legally responsible for the patient's medical bill; for example, title XIX, local welfare agency and guardian (the ''must bill requirement''); and (2) obtain and submit to the Contractor, a Medicaid RA from the State Medicaid program (the ''RA requirement''). The must-bill policy and the RA requirement to document the States' cost sharing liability are both longstanding policies of CMS, as shown in PRM §§ 312 and 322 themselves: Administrative decisions applying the policies; and section 4499, exhibit 15.08 of the Medicare Intermediary Manual (CMS Pub. 13–4) (December 1985).

It has always been our position that the must-bill policy and the RA requirement are necessary to ensure that the provider obtains contemporaneous documentation that can be maintained in the usual course of the provider's business as required by § 413.20(a). The historical background of the RA requirement is also set forth in PRM § 322, Medicare Bad Debts Under State Welfare Programs.

Thus, when Medicare certified providers provide services to QMBs and claim bad debt to Medicare for unpaid cost sharing amounts, Medicare bad debt policy requires providers to bill the State and submit to their contractors the Medicaid RA as documentation to evidence the State's liability for dual eligible beneficiaries' deductible and/or coinsurance amounts. If a provider does not bill the State and submit the Medicaid RA to Medicare with its claim for bad debt reimbursement for dual eligible beneficiaries, the result is that unpaid deductible and coinsurance amounts cannot be included as an allowable Medicare bad debt.

In 2003, the Medicare ''must bill'' and RA requirements were upheld by the 9th Circuit Court of Appeals in *Community Hospital of the Monterey Peninsula* v. *Thompson,* 323 F.3d 782 (9th Cir. 2003). In August 2004, CMS issued a Joint Signature Memorandum (''JSM'') 370, reiterating the ''must bill'' policy for dual eligible beneficiaries. Specifically, the JSM 370 reiterated that where the State owes none or only a portion of the dual eligible beneficiary's deductible or coinsurance, the unpaid cost sharing for the beneficiary is not reimbursable to the provider by Medicare until the provider bills the State, and the State refuses payment by producing a Medicaid RA.

In October 2004, we issued a newsletter that reiterated and clarified the contents of the JSM by stating that in instances where the State owes none or only a portion of the dual eligible patient's deductible or copayment, the unpaid liability for the bad debt is not reimbursable to the provider by Medicare until the provider bills the State, and the State refuses payment (with a State Remittance Advice).

In order to satisfy the regulatory requirement that a bad debt is uncollectible, the provider must bill the State Medicaid Agency and receive a Medicaid RA that contains a formal denial from the State or a statement setting forth the State's cost sharing liability. A State's failure to process a bill for determination of its cost sharing equates to a provider's failure to determine the cost sharing liability of the State. The burden remains on the provider to work with the State to determine the State's cost sharing amounts. This burden is not transferred to the Medicare program, and the Medicare program has no duty to determine a State's cost sharing liability. A provider cannot substitute an estimate of the State's cost sharing liability for the Medicaid RA, as this does not satisfy the regulatory requirement of demonstrating that the bad debt is uncollectible. Any amount that the State is obligated to pay, either by statute or under the terms of its approved Medicaid State plan, will not be included as an allowable Medicare bad debt, regardless of whether the State actually pays its obligated amount to the provider. However, the deductible and/or coinsurance amount, or any portion thereof, that the State is not obligated to pay and which remains unpaid by the beneficiary can be included as an allowable Medicare bad debt.

Prior to the implementation of automated claims processing, section

3490.14(B) of the SMM previously provided a mechanism whereby providers could bill the State for the determination of the State's cost sharing amounts without actually being or becoming a Medicaid provider. In accordance with section 3490.14(B), ''Subject to State law a provider has the right to accept a patient either as private pay only, as a QMB only, or (if the patient is both a QMB and Medicaid eligible) as a full Medicaid patient, but the provider must advise the patient, for payment purposes, how he/she is accepted. Medicaid payment of Medicare deductible and coinsurance amounts may be made only to Medicaid participating providers, even though a Medicare service may not be covered by the Medicaid State plan. A provider agreement necessary for participation for this purpose (for example, for furnishing the services to the individual as a QMB) may be executed through the submission of a claim to the Medicaid agency requesting Medicaid payment for Medicare deductibles and coinsurance for QMBs.'' Although this SMM provision is no longer in effect, we believe State Medicaid Agencies have a statutory obligation to determine any Medicare cost sharing for QMBs, however some States do not recognize certain Medicare provider types or services under the State Medicaid program and do not process Medicare crossover claims and issue a Medicaid RA.

Some States' noncompliance with the statutory requirement to process Medicare crossover claims and produce a Medicaid RA have resulted in numerous appeals filed by providers whose claims for reimbursement of unpaid Medicare cost sharing from services provided to dual eligible beneficiaries were denied for Medicare bad debt reimbursement because the State did not process the Medicare crossover claim and issue a Medicaid RA to the provider.

In 2013, CMS attempted to address States' non-compliance with the Federal statutory requirements at sections 1902(a)(10)(E), 1902(n) and 1903(a)(3) of the Act, by issuing an Informational Bulletin,[522] which reminded States of the Federal statutory requirement to process Medicare cost sharing claims for QMBs from Medicare-certified providers, and to be able to document proper processing of such claims. A State's non-compliance with the Federal statutory requirements conflicts with Medicare's must bill policy, resulting in the State's non-compliance and leaving providers disadvantaged.

We continue to believe that the best documentation to evidence States' cost sharing liability for a dual eligible beneficiary is the Medicaid RA, and that the Medicare requirements for the provider to bill the State and submit the RA to its contractor should remain. Where the State processes a Medicare crossover claim and issues a Medicaid RA to the provider that details the State's Medicare cost sharing liability, we believe that providers must continue to provide the Medicaid RA in order to claim Medicare bad debt. Therefore, we proposed that the provider must bill that State and submit the Medicaid RA to Medicare to evidence the State's Medicare cost sharing liability, so that any State Medicare cost sharing liability can be deducted from the Medicare bad debt reimbursement.

Consistent with this proposal, we proposed to amend § 413.89(e)(2) by adding a new paragraph (e)(2)(iii) to clarify and codify that that, effective for cost reporting periods beginning on and before the effective date of this rule, to be considered a reasonable collection effort, a provider that has furnished services to a dual eligible beneficiary must determine whether the State's Title XIX Medicaid Program (or a local welfare agency, if applicable) is responsible to pay all or a portion of the beneficiary's Medicare deductible and/or coinsurance amounts. To make this determination, the provider must submit a bill to its Medicaid/title XIX agency (or to its local welfare agency) to determine the State's cost sharing obligation to pay all or a portion of the applicable Medicare deductible and coinsurance. (This is effectuated by the provider submitting a bill to Medicare for payment and the MAC administering the payment process automatically 'crosses over' the bill to the applicable Medicaid/title XIX agency for determination of the State's obligation, if any, toward the cost sharing.) The provider must then submit to its contractor a Medicaid RA reflecting the State's payment decision. Any amount that the State is obligated to pay, either by statute or under the terms of its approved Medicaid State plan, will not be included as an allowable Medicare bad debt, regardless of whether the State actually pays its obligated amount to the provider. However, the Medicare deductible and/or coinsurance amount, or any portion thereof that the State is not obligated to pay, can be included as an allowable Medicare bad debt. A provider's failure to bill the State and produce to its Medicare contractor documentation, including the RA reflecting the State's verification that it processed a bill to determine its liability, will result in unpaid deductible and coinsurance amounts not being included as an allowable Medicare bad debt. Unpaid deductible and coinsurance amounts without collection effort documentation will not be considered as allowable bad debts.

We proposed that these revisions be effective for cost reporting periods beginning before, on and after the effective date of this rule because they clarify and codify our longstanding policy to require that the provider effectuate a reasonable collection effort by billing the party (state) responsible for the Medicare cost sharing of the beneficiary. The result of the provider billing the State and the State processing the Medicare crossover claim is the provider's receipt of the Medicaid RA which is necessary to evidence the State's Medicare cost sharing liability.

Although the best documentation to evidence a State's Medicare cost sharing liability for a dual eligible beneficiary is the Medicaid RA, we acknowledged that challenges exist for providers when States do not comply with the Federal statutory requirements. So as not to disadvantage providers in States that are not in compliance with the Federal statute, we considered alternatives for providers to comply with the ''must bill'' policy and still evidence a State's cost sharing liability (or absence thereof) for dual eligible beneficiaries when a State does not process a Medicare crossover claim and issue a Medicaid RA to providers that could be finalized in the final rule. For example, alternative documentation to a Medicaid RA could be obtained by providers from a State that demonstrates it will not enroll the provider in Medicaid, or a certain class of a type of provider, for the limited purpose of processing a claim for determining cost sharing liability. Providers could obtain alternative documentation to a RA such as a State Medicaid notification where the State has no legal obligation to pay the beneficiary's Medicare cost sharing. In a State that has a Medicare cost sharing liability for a beneficiary's service, the Medicaid State Plan may set forth the Medicare cost sharing liability for particular services. Alternatively, in a State that has a Medicare cost sharing liability for a beneficiary's service, the provider could obtain alternative documentation to a Medicaid RA that sets forth the State's Medicare cost sharing liability that would then be deducted from the provider's Medicare bad debt reimbursement. In addition to verifying the state's cost sharing liability, it will also be important that

[522] *https://www.medicaid.gov/federal-policy-guidance/downloads/cib-06-07-2013.pdf.*

any alternative documentation to a Medicaid RA accurately verifies a beneficiary's eligibility for Medicaid for the date of service. We stated that we would consider adopting a policy in this final rule to the effect that when a State does not process a Medicare crossover claim and issue a Medicaid RA, the provider could obtain, and submit to its Medicare contractor, some form of alternative documentation to evidence a state's Medicare cost sharing liability (or absence thereof). We welcomed suggestions from stakeholders regarding the best alternative documentation to the Medicaid RA that a provider could obtain and submit to Medicare to evidence a beneficiary's Medicaid eligibility for the date of service and the State's Medicare cost sharing liability (or absence thereof) and regarding whether we should or could adopt such a policy effective for past cost reporting periods, including whether doing so would serve an important public interest by allowing providers with cases currently pending before the PRRB an avenue for timely and cost-effective resolution.

Comment: Many commenters asserted that CMS lacks the statutory authority to retroactively codify the Medicare bad debt must bill policy applicable to dual eligible beneficiaries and also asserted that the Bad Debt Moratorium prevents retroactive codification. Some commenters asserted that applying Medicare bad debt policies retroactively would create confusion among providers causing providers to request reopening of prior years' cost reports. Some commenters were supportive of the codification of the Medicare bad debt must bill policy applicable to dual eligible beneficiaries.

Response: We respectfully disagree with commenters' assertions that CMS lacks statutory authority to retroactively codify the reasonable collection effort, must bill policy, for dual eligible beneficiaries. The must bill policy is based on a combination of regulatory and sub-regulatory rules that existed for many years prior to the 1987 Bad Debt Moratorium, as explicitly articulated not only in those pre-moratorium rules themselves but also in final agency adjudicatory decisions. We have asserted for many years, based on rules promulgated prior to the moratorium, that Medicare will not reimburse a provider for dual eligible beneficiaries' unpaid deductible and coinsurance amounts unless the provider has first billed the relevant state Medicaid agency and obtained from the state a determination of the state's payment responsibility for the beneficiary's unpaid deductible and coinsurance amounts. Several federal courts have agreed with that position, including the court in *Community Hospital of the Monterey Peninsula* as previously discussed. The court there not only upheld both the must-bill and RA policies as compliant with the moratorium, but indeed struck down our attempt to liberalize the RA requirement while the moratorium was in effect. On several other occasions courts have found that our must-bill and/or RA requirements predated the moratorium. *See Mercy Gen'l Hosp.* v. *Price,* No.16–99, 2017 WL 4797796 (D.D.C. 2017) (Mag. Report and Recommendation) (must-bill and RA requirements predate the moratorium); *Mercy Gen'l Hosp.* v. *Azar,* 410 F. Sup.3d 63 (D.D.C. 2019) (must-bill requirement predates the moratorium); *Select Specialty Hosp.-Denver, Inc.* v. *Azar,* 391 F. Supp.3d 53 (D.D.C. 2019) (must-bill requirements has been consistently articulated since at least 1983). We reject the commenters' suggestion that we are not now merely clarifying and codifying our longstanding must-bill and RA requirements for the reasons stated in these cases. To the extent any of these cases suggest the RA requirement did not predate the moratorium, we disagree with such a characterization. At least one agency adjudication involving cost years predating the moratorium articulates the requirement that a provider obtain a state determination of its payment obligation before claiming bad debt reimbursement from Medicare. *See Hosp. de Area de Carolina* v. *Coop. de Seguros de Vida de Puerto Rico,* PRRB No. 93–D23, CCH ¶ 41,411 (HCFA Ad. 1993).

Some commenters cited *Bowen* v. *Georgetown Univ. Hosp.,* 488 U.S. 204, 208 (1988), as showing that CMS lacked statutory authority to retroactively codify our longstanding Medicare bad debt policies. In *Georgetown,* the Supreme Court of the United States held that the APA did not grant federal agencies the statutory authority to promulgate rules retroactively, but noted that Congress could bestow that authority in other specific statutory provisions. However, we note that *Georgetown* was decided in 1988, prior to the promulgation of SSA 1871(e)(1) in 2003 which Congress granted CMS the statutory authority to promulgate rules retroactively in certain circumstances, one of which is when the failure to do so would be contrary to the public interest. We believe there is significant public interest served by applying these Medicare bad debt rules retroactively because doing so would provide guidance with certainty and clarity, yielding timely and cost-effective relief to providers with cases currently pending before the PRRB. In this regard, we believe that our failure to codify these rules in a retroactive manner would actually harm providers and be contrary to public interest. While some commenters stated that we misunderstood the statutory standard for promulgating retroactive rules as being whether such promulgation was in the public interest, (not whether failing to do so would be contrary to the public interest), that is not the case. We also reject some commenters' suggestion that applying these rules retroactively would cause rather than alleviate confusion because it might lead to provider requests for reopening of notices of program reimbursement (NPRs). Any such request would only apply to an NPR issued within three years before the request. Moreover, CMS has almost total discretion to deny a request for reopening. For all these reasons, we believe any additional confusion or burden imposed in connection with reopening requests prompted by retroactive application of these rules would be minimal. We continue to believe that on balance applying these rules retroactively will promote rather than impede clarity and understanding of the applicable rules by providers, beneficiaries, our contractors, and other stakeholders. To the extent commenters assert that our bad debt policies have been subject to varying interpretations or the subject of litigation, that is a factor in favor of clarifying them retroactively, not one against it.

Comment: Some commenters asserted that the bad debt must bill policy applicable to dual eligible beneficiaries did not serve an important interest for a dual eligible beneficiary's Medicare cost sharing because they assert that states pay little, if anything, toward a dual eligible beneficiary's Medicare cost sharing and thus, billing the state Medicaid agency was not a worthwhile exercise. Some commenters noted that the crossover billing process sometimes fails for other various reasons.

Response: We disagree with commenters' conclusions that the Medicare bad debt must-bill policy does not serve an important interest to ascertain the states' cost sharing liability for dual eligible beneficiaries. As noted earlier, we continue to believe that the best documentation to evidence States' cost sharing liability for a dual eligible beneficiary is the Medicaid RA, produced by the state following its claim by claim adjudication of the Medicare crossover billing. Amounts

that the State is obligated to pay, either by statute or under the terms of its approved Medicaid State plan, will not be included as an allowable Medicare bad debt and thus are amounts that are not paid from the taxpayer funded Medicare Trust Fund. As stewards of the Medicare Trust Fund, CMS is obligated to manage the Medicare Trust Fund in a fiscally prudent manner which entails ensuring accurate amounts are paid therefrom. If the Medicare crossover billing fails or is not completed in certain instances when submitted as a matter of course in the crossover claims process, the provider has opportunity to work with the Contractor to identify and resolve the issue.

Comment: Many commenters were supportive of a policy whereby providers can submit alternate documentation to a Medicaid RA in instances where the State fails to issue the provider a Medicaid RA that evidences the State's Medicare cost sharing liability for a dual eligible beneficiary, however some commenters expressed disappointment that a specific proposal for alternate documentation was not set forth in the proposed rule. Some commenters were not supportive of a resolution that would be applied retroactively. Some commenters suggested that submission of alternate documentation be permitted, similar to what was previously set forth in the now obsolete section 1102.3L of the PRM, Part 2 manual provision, that required submission of evidence the beneficiary was eligible for Medicaid on the date of service, copies of billing for the Medicare cost sharing amounts that were sent to the State Medicaid Agency, and copies of the Medicaid RA showing the denial and the amounts of the Medicare cost sharing. Other commenters suggested that providers should be allowed to submit, as alternate documentation to the Medicaid RA, the State Medicaid notification evidencing that the State has no legal obligation to pay the beneficiary's Medicare cost sharing, documentation setting forth the State's liability for the Medicare cost sharing, and documentation verifying the beneficiary's eligibility for Medicaid for the date of service. Some commenters suggested that Medicare contractors assist providers in ascertaining the State's Medicare cost sharing liability.

Response: We appreciate commenters' support of the adoption of a policy whereby providers can submit alternate documentation to a Medicaid RA. As previously mentioned, we considered adopting a policy in this final rule to the effect that when a State does not process a Medicare crossover claim and issue a Medicaid RA, the provider could obtain, and submit to its Medicare contractor, some form of alternative documentation to evidence a state's Medicare cost sharing liability (or absence thereof). We welcomed suggestions from stakeholders regarding the best alternative verifiable documentation to the Medicaid RA that would set forth the State's Medicare cost sharing liability. We agree with many commenters' suggestions and believe that the vital items needed to substitute a Medicaid RA must contain all of the following: (1) The State Medicaid notification stating that the State has no obligation to pay the beneficiary's Medicare cost sharing or notification evidencing the provider's inability to enroll in Medicaid for purposes of processing a crossover cost sharing claim, (2) documentation setting forth the State's liability, or lack thereof, for the Medicare cost sharing, and (3) documentation verifying the beneficiary's eligibility for Medicaid for the date of service.

We believe that under (1), as previously detailed, the State's Medicaid notification stating that the State has no legal obligation to pay the provider for the beneficiary's Medicare cost sharing, or documentation evidencing the provider's inability to enroll in Medicaid for purposes of processing a Medicare crossover cost sharing claim, must be through no fault or deficiency of the provider. This means that if the provider could have enrolled as a Medicaid provider, but chose not to do so for reasons such as inconvenience or a business decision, the evidence of non-enrollment would be an impermissible document to accept as an alternate to the Medicaid RA acceptance. However, if the provider was not recognized by the State Medicaid Agency as a Medicaid provider type, then documentation evidencing that the State Medicaid Agency does not recognize the provider as a Medicaid provider type for purposes of processing a Medicare crossover cost sharing claim would be sufficient to evidence the State's notification of no obligation to pay the beneficiary's Medicare cost sharing. We understand that in some states it may be difficult to supply evidence that the state will not enroll a specific provider type. Medicare contractors will have to afford providers flexibility in producing acceptable evidence. We encourage states to consider separate enrollment pathways for Medicare providers that seek to enroll in Medicaid solely for the purposes of processing Medicare crossover claims for dually eligible beneficiaries.

We also believe that under (2), as previously detailed, documentation setting forth the State's liability for the Medicare cost sharing, or lack thereof, can be produced by the provider, in part, from the State Plan documents and may also include other documents such as state and state contractor fee schedules or payment rates, or other documents the provider produces that can be verified by the contractor. We note that the process of documenting the State's liability for Medicare cost sharing may entail a comparison of the Medicare and Medicaid rates for certain services, as well as documentation from the Medicaid State plan on whether the state uses a lesser-of methodology for that service type. We believe that ascertaining the State's cost sharing liability amount may result from a collaborative effort between the provider, state, and the Medicare contractor. Medicare contractors will afford providers flexibility in producing documentation acceptable to evidence the State's Medicare cost sharing in the absence of a Medicaid RA.

Regarding (3), as previously detailed and noted by some commenters, documentation verifying the beneficiary's eligibility for Medicaid for the date of service could take the form of an eligibility report from a state's eligibility verification system. For example, for QMBs the provider can query the CMS HIPAA Eligibility Transaction System (HETS), or for Medicare claims processed on or after October 2, 2017, provide a Medicare remittance advice showing the QMB status.

Medicare contractors will afford providers flexibility in producing acceptable evidence of the beneficiary's eligibility for Medicaid for the date of service. We will work with the providers, states, and Medicare contractors on guidelines for acceptable alternative documentation to the Medicaid RA. We believe that codifying an alternate documentation policy and applying it retroactively will serve an important public policy interest by providing clarity, cost effective relief and burden reduction to providers with cases currently pending before the PRRB.

After consideration of the public comments we received, we are finalizing our proposal to codify our longstanding Medicare must bill bad debt policy with respect to QMB dual eligible beneficiaries to require that the provider must bill the State for the QMB's Medicare cost sharing and

submit the resulting Medicaid RA the provider receives to Medicare to evidence the State's Medicare cost sharing liability, so that any State Medicare cost sharing liability can be deducted from the Medicare bad debt reimbursement. We are also codifying an alternate Medicaid RA documentation policy so that, in limited circumstances, providers can comply with the must bill policy and still evidence a State's cost sharing liability (or absence thereof) for dual eligible beneficiaries when a State does not process a Medicare crossover claim and issue a Medicaid RA to providers. In this regard, we are codifying that to be considered a reasonable collection effort for dual eligible beneficiaries when alternative documentation to the Medicaid remittance advice is submitted, a provider must submit all of the following: (1) The State Medicaid notification evidencing that the State has no obligation to pay the beneficiary's Medicare cost sharing or notification evidencing the provider's inability to enroll in Medicaid for purposes of processing a crossover cost sharing claim, (2) documentation setting forth the State's liability, or lack thereof, for the Medicare cost sharing, and (3) documentation verifying the beneficiary's eligibility for Medicaid for the date of service. These policies are effective for cost reporting periods beginning before, on and after the effective date of this final rule. We will continue to evaluate our alternative Medicaid RA documentation policy so that any policy refinements can be addressed in future rulemaking, if needed. We will instruct contractors to commence a process to work with providers to resolve cases pending before the PRRB so that providers may experience relief and burden reduction through the application of this rule to their existing cases.

d. Accounting Standard Update Topic 606 and Accounting for Medicare Bad Debt

(1) Accounting Standard Update Topic 606

The principles of cost reimbursement require that providers maintain sufficient financial records and statistical data for proper determination of costs payable under the program (see § 413.20(a)). Additionally, providers must use standardized definitions and follow accounting, statistical, and reporting practices that are widely accepted in the hospital and related fields (see § 413.20(a)). Medicare accounting standards follow the general accounting standards unless the Secretary declares otherwise on a particular matter (see § 413.20(a)). The regulations at § 413.89(c) provide that the normal accounting treatment for bad debts, charity, and courtesy allowances represent reductions in revenue. The failure to collect charges for services furnished does not add to the cost of providing the services. Such costs have already been incurred in the production of the services. In this regard, providers are required to record bad debts and uncollectible accounts as a direct reduction of net patient revenue rather than an operating expense in their financial records.

Additionally, PRM § 314, ''Accounting Period for Bad Debts'', provides further guidance to providers for the accounting treatment of Medicare bad debts and sets forth that ''Uncollectible deductibles and coinsurance amounts are recognized as allowable bad debts in the reporting period in which the debts are determined to be worthless. Allowable bad debts must be related to specific amounts which have been determined to be uncollectible. Since bad debts are uncollectible accounts receivable and notes receivable, the provider should have the usual accounts receivable records-ledger cards and source documents to support its claim for a bad debt for each account included'' (PRM § 314). PRM § 320 sets forth methods of determining bad debt expense, where ''accounts receivable are analyzed and a determination made as to specific accounts which are deemed uncollectible. The amounts deemed to be uncollectible are charged to an expense account for uncollectible accounts. The amounts charged to the expense account for bad debts should be adequately identified as to those which represent deductible and coinsurance amounts applicable to beneficiaries and those which are applicable to other than beneficiaries or which are for other than covered services. Those bad debts which are applicable to beneficiaries for uncollectible deductible and coinsurance amounts are included in the calculation of reimbursable bad debts.''

The Financial Accounting Standards Board's (FASB) Accounting Standards Update (ASU) 2014–09, Revenue from Contracts with Customers (Topic 606), (hereinafter ''ASU Topic 606''), was published in May 2014 with the first implementation period in 2018. Under the ASU Topic 606, there are changes in the national accounting standard for revenue recognition of patient-related bad debts and uncollectible accounts, as well as changes to terminology regarding bad debts. These changes are for all industries and organizations nationwide, including the healthcare sector and providers. Under the ASU Topic 606, an amount representing a bad debt would generally no longer be reported separately as an operating expense in the provider's financial statements, but would generally be treated as an ''implicit price concession,'' and included as a reduction in patient revenue. Additionally, under the ASU Topic 606 standards, bad debts treated as ''implicit price concessions'' are now considered to be ''reductions in patient revenue'' instead of ''uncollectible accounts receivable and notes receivable'' in accordance with the current language in PRM § 316. Additionally, under the ASU Topic 606 standards, the provider should have the usual ''accounting recordations for the reductions in revenue'' instead of ''accounts receivable records ledger cards'' as set forth in the current language in PRM § 316.

Although ASU Topic 606 requires different reporting for providers and terminology for bad debts (also known as implicit price concessions), there is no change in the required criteria a provider must meet to qualify a beneficiary's bad debt account for Medicare bad debt reimbursement under § 413.89. Therefore, we proposed to recognize the ASU Topic 606 terminology in § 413.89. Specifically, we proposed to recognize that bad debts, also known as ''implicit price concessions,'' are amounts considered to be uncollectible from accounts that were created or acquired in providing services. ''Implicit price concessions'' are designations for uncollectible claims arising from the furnishing of services, and may be collectible in money in the relatively near future and are recorded in the provider's accounting records as a component of net patient revenue.

We proposed to amend § 413.89(b)(1) by adding new paragraph (b)(1)(i) to specify that for cost reporting periods beginning before October 1, 2020, bad debts are amounts considered to be uncollectible from accounts and notes receivable that were created or acquired in providing services. ''Accounts receivable'' and ''notes receivable'' are designations for claims arising from the furnishing of services, and are collectible in money in the relatively near future. Consistent with this proposal, we are also proposing to amend § 413.89(b)(1) by adding new paragraph (b)(1)(ii) to specify that for cost reporting periods beginning on or after October 1, 2020, bad debts, also known as ''implicit price concessions,'' are amounts considered to be

uncollectible from accounts that were created or acquired in providing services. ''Implicit price concessions'' are designations for uncollectible claims arising from the furnishing of services, and may be collectible in money in the relatively near future and are recorded in the provider's accounting records as a component of net patient revenue. We also proposed to amend § 413.89(c) by adding new paragraph (c)(1) to specify that effective for cost reporting periods beginning before October 1, 2020 bad debts, charity, and courtesy allowances represent reductions in revenue. We also proposed to amend § 413.89(c) by adding new paragraph (c)(2) to specify that, effective for cost reporting periods beginning on or after October 1, 2020, bad debts, also known as ''implicit price concessions,'' charity, and courtesy allowances represent reductions in revenue.

Comment: Many commenters were supportive of our proposal to adopt the ASU Topic 606 terminology for bad debt to be recognized as an implicit price concession. Some commenters suggested that many of our ASU Topic 606 terminology adoptions have already been adopted by hospitals on their financial statements but have not been incorporated for purposes of the Medicare cost report. Other commenters suggested that the implicit price concession terminology should be incorporated into the Worksheet S–10 for incorporation into uncompensated care calculations. Some commenters suggested a retroactive effective date to coincide with the effective date of ASU Topic 606.

Response: We appreciate commenters' support of our proposals to adopt the ASU Topic 606 terminology for bad debt to be recognized as an implicit price concession, a reduction in revenue. We recognize that under the ASU Topic 606 standards, the provider should have the usual ''accounting recordations for the reductions in revenue.'' We believe that our proposals to include this terminology in the regulatory definition of bad debt are responsive to stakeholders' requests. We agree with commenters' suggestions that the implicit price concession terminology should be incorporated into the Worksheet S–10 for incorporation into uncompensated care calculations. We believe that it is most appropriate to adopt this policy with a future effective date.

We note that we did not propose to adopt this policy retroactively and that providers might or might not have already changed their accounting terminology to coincide with the ASU Topic 606 standards. Nor is the policy we are finalizing a longstanding Medicare policy that we are merely clarifying. As a result, we have not determined that failing to apply this provision retroactively would be contrary to the public interest.

After consideration of the public comments we received, we are finalizing our proposal to amend § 413.89(c) by adding new paragraph (c)(1) to specify that effective for cost reporting periods beginning before October 1, 2020 bad debts, charity, and courtesy allowances represent reductions in revenue. We also finalizing our proposal to amend § 413.89(c) by adding new paragraph (c)(2) to specify that, effective for cost reporting periods beginning on or after October 1, 2020, bad debts (also known as ''implicit price concessions)'' charity, and courtesy allowances represent reductions in revenue.

(2) Medicare Bad Debt and Contractual Allowances

Medicare regulations require providers to follow standardized definitions, accounting, statistics, and reporting practices that are widely accepted in the hospital and related fields. PRM § 320 sets forth methods of determining bad debt expense, where accounts receivable are analyzed and a determination made as to specific accounts which are deemed uncollectible. The amounts deemed to be uncollectible are charged to an expense account for uncollectible accounts. The amounts charged to the expense account for bad debts should be adequately identified as amounts that represent deductible and coinsurance amounts applicable to Medicare beneficiaries, including QMBs, amounts that are applicable to non-beneficiaries, or amounts that are for other than covered services. Those bad debts which are applicable to Medicare beneficiaries, including QMBs, for uncollectible deductible and coinsurance amounts are included in the calculation of reimbursable bad debts.''

Based on recent questions received, it appears that many providers are not accurate in their accounting classification method of writing-off a beneficiary's deductible and coinsurance amounts for Medicare-Medicaid crossover claims, by incorrectly writing off Medicare-Medicaid crossover bad debts to a contractual allowance account. Contractual allowances, also known as contractual adjustments, are the difference between what a healthcare provider bills for the service rendered versus what it will contractually be paid (or should be paid) based on the terms of its contracts with third-party insurers and/or government programs.[523] Some providers have been writing Medicare-Medicaid crossover bad debt amounts off to a contractual allowance account because they are unable to bill the beneficiary for the difference between the billed amount and the Medicaid claim payment amount. Other providers are writing these amounts off to a contractual allowance account because the Medicaid remittance advice referenced the unpaid amount as a ''Medicaid contractual allowance.'' These Medicare-Medicaid crossover claim amounts do not meet the classification requirements for a Medicare bad debt as set forth in PRM § 320 and are not compliant with § 413.20 when these amounts are written off to a contractual adjustment or allowance account instead of a bad debt expense account.

The April 4, 2019 Medicare Learning Network Special Edition (MLN SE) article served to remind providers of Medicare's longstanding policy with regard to the provider's proper reporting of Medicare bad debts for cost reporting periods beginning before October 1, 2019. The MLN SE also served as a notification to providers but also provided flexibility by allowing providers to report contractual allowance amounts as a bad debt, as long as 413.89 requirements are met, for cost reporting periods beginning before October 1, 2019. The MLN SE also served to remind providers of the expectation for proper reporting of Medicare bad debts and that following the flexibility notice period, reporting Medicare bad debts as a contractual allowance was no longer permissible for cost reporting periods on or after October 1, 2019.

In the proposed rule, we proposed to clarify that Medicare bad debts must not be written off to a contractual allowance account but must be charged to an expense account for uncollectible accounts (bad debt or implicit price concession). Consistent with this proposal, we proposed to amend § 413.89(c) by adding paragraph (c)(3) to specify that, effective for cost reporting periods beginning on or after October 1, 2020, Medicare bad debts must not be written off to a contractual allowance account but must be charged to an expense account for uncollectible accounts (bad debt or implicit price concession).

Comment: Many commenters were not supportive of the proposed

[523] *https://www.lbmc.com/blog/contractual-allowance-for-healthcare-providers.*

regulation text in § 413.89(c)(3) that ''Effective for cost reporting periods beginning on or after October 1, 2020, Medicare bad debts must not be written off to a contractual allowance account but must be charged to an expense account for uncollectible accounts.'' Many commenters suggested that the language refer to implicit price concessions instead of bad debt and also that the accounts be charged to ''a reduction in revenue expense account for uncollectible accounts'' instead of ''an expense account for uncollectible accounts.'' Many commenters suggested that the proposal would increase burden to providers by requiring them to change accounting practices and that providers have recorded bad debts in their accounting records as contractual allowances for years citing the Generally Accepted Accounting Principles (GAAP) as the permissive authority to do so. Another commenter indicated that providers classify their Medicare-Medicaid crossover bad debt as contractual allowances and contractors reimburse them for a portion of these contractual allowance amounts. Other commenters suggested a retroactive date to coincide with the effective date of ASU Topic 606, while other commenters did not favor a retroactive effective date. Some commenters questioned whether the effective date for this provision should be October 1, 2019, pursuant to the effective date for which we issued guidance to contractors in a technical direction letter issued in March 2019, regarding the treatment of contractual allowances on the Medicare cost report.

Response: We appreciate the commenters' suggestions. We believe it is necessary to reiterate that it is never appropriate for a provider to write off Medicare-Medicaid crossover bad debt amounts to a contractual allowance account simply because they are unable to bill the beneficiary for the difference between the billed amount and the Medicaid claim payment amount. It is likewise inappropriate to present these amounts to Medicare for reimbursement as Medicare bad debts. We agree with commenters that the proposal to amend § 413.89(c) by adding paragraph (c)(3) to specify that, ''effective for cost reporting periods beginning on or after October 1, 2020, Medicare bad debts must not be written off to a contractual allowance account but must be charged to an expense account for uncollectible accounts (bad debt or implicit price concession),'' incorrectly refers to an ''expense account'' and should instead more clearly refer to as a ''component of net patient revenue'' or a ''reduction in revenue'' account.

We believe the April 4, 2019 MLN SE article served as a notification to providers and provided flexibility by allowing providers to report contractual allowance amounts as a bad debt, as long as 413.89 requirements are met, for cost reporting periods beginning before October 1, 2019. The MLN SE notification also served to remind providers that compliance with the longstanding Medicare bad debt policy in § 320 of the PRM for cost reporting periods beginning on or after October 1, 2019 is required, so that bad debts are written off to an expense account, and not a contractual allowance account. Because we are now adopting the implicit price concession terminology effective for cost reporting periods beginning on or after October 1, 2020, for Medicare bad debt purposes, the bad debt must be recorded in the provider's accounting records as a component of net patient revenue. We are not codifying this retroactively because we believe that all providers should have equal understanding and footing as we move forward with the standardized definitions, accounting and reporting practices and the intersection with the new implicit price concession standards.

After consideration of the public comments we received, we are revising our proposal to amend § 413.89(c) by adding paragraph (c)(3)(i) to specify that, for cost reporting periods beginning before October 1, 2020, Medicare bad debts must not be written off to a contractual allowance account but must be charged to an expense account for uncollectible accounts. We are also revising our proposal to amend § 413.89(c) by adding paragraph (c)(3)(ii) to specify that, for cost reporting periods beginning on or after October 1, 2020, Medicare bad debts must not be written off to a contractual allowance account but must be charged to an uncollectible receivables account that results in a reduction in revenue. We are not applying a retroactive effective date to this proposal for the same reasons as previously discussed regarding the effective date of ASU Topic 606.

e. Technical Corrections in 42 CFR Parts 412 and 417

A technical correction is required for 42 CFR 412.622(b)(2)(i) which incorrectly refers to 42 CFR 413.80 instead of the correct citation of § 413.89, which is the regulation that sets forth rules pertaining to the bad debts of Medicare beneficiaries.

A technical correction is also required for 42 CFR 417.536(g) which incorrectly refers to § 413.80 instead of the correct citation of § 413.89, which sets forth that bad debts, charity, and courtesy allowances are deductions from revenue and are not to be included in allowable costs.

We received no comments on the proposal to make technical corrections to the citations in § 412.622(b)(2)(i) and § 417.536(g), and therefore are finalizing these citation corrections without modification.

X. MedPAC Recommendations

Under section 1886(e)(4)(B) of the Act, the Secretary must consider MedPAC's recommendations regarding hospital inpatient payments. Under section 1886(e)(5) of the Act, the Secretary must publish in the annual proposed and final IPPS rules the Secretary's recommendations regarding MedPAC's recommendations. We have reviewed MedPAC's March 2020 ''Report to the Congress: Medicare Payment Policy'' and have given the recommendations in the report consideration in conjunction with the policies set forth in this final rule. MedPAC recommendations for the IPPS for FY 2021 are addressed in Appendix B to this final rule.

For further information relating specifically to the MedPAC reports or to obtain a copy of the reports, contact MedPAC at (202) 653–7226, or visit MedPAC's website at: *http://www.medpac.gov*.

XI. Other Required Information

A. Publicly Available Files

IPPS-related data are available on the internet for public use. The data can be found on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.* We listed the data files available in the FY 2021 IPPS/LTCH PPS proposed rule (85 FR 32876 through 32878).

Commenters interested in discussing any data files used in construction of this final rule should contact Michael Treitel at (410) 786–4552.

B. Collection of Information Requirements

1. Statutory Requirement for Solicitation of Comments

Under the Paperwork Reduction Act (PRA) of 1995, we are required to provide 60-day notice in the **Federal Register** and solicit public comment before a collection of information requirement is submitted to the Office of Management and Budget (OMB) for review and approval. In order to fairly evaluate whether an information

collection should be approved by OMB, section 3506(c)(2)(A) of the PRA of 1995 requires that we solicit comment on the following issues:

- The need for the information collection and its usefulness in carrying out the proper functions of our agency.
- The accuracy of our estimate of the information collection burden.
- The quality, utility, and clarity of the information to be collected.
- Recommendations to minimize the information collection burden on the affected public, including automated collection techniques.

In the FY 2021 IPPS/LTCH PPS proposed rule, we solicited public comment on each of these issues for the following sections of this document that contain information collection requirements (ICRs).

2. ICRs Regarding PRRB Electronic Filing (§§ 405.1801 Through 405.1889)

As stated earlier in section IX.B.3 of the preamble of this final rule, we are finalizing our proposal to amend the regulations at 42 CFR 405.1801 through 405.1889 to allow the PRRB to make use of the system mandatory in PRRB appeals. Proposed § 405.1801 states that except for subpoena requests being sent to a nonparty pursuant to § 405.1857(c), the reviewing entity may prescribe the method(s) by which a party must make a submission, including the requirement to use an electronic filing system for submission of documents. Proposed amendments to the regulations at 42 CFR 405.1843 make clear that parties to a Board appeal must familiarize themselves with the instructions for handling a PRRB appeal, including any and all requirements related to the electronic or online filing of documents for future mandatory filing.

The burden associated with the requirements as discussed in this section is the time and effort necessary to review instructions and register for the electronic submission system as well as the time and effort to gather develop and submit various documents associated with a PRRB appeal. While these requirements impose burden, we believe the requirements are exempt from the PRA in accordance with the implementing regulations of the PRA at 5 1320.4(a)(2). Information collected during the conduct of a criminal investigation or civil action or during the conduct of an administrative action, investigation, or audit involving an agency against specific individuals or entities is not subject to the PRA.

3. ICRs for Requests for Changes to the Medicare Severity Diagnosis-Related Group (MS–DRG) Classifications

As discussed in section II.D. of the preamble of this final rule, the public may request changes to the MS–DRG classifications to reflect changes in treatment patterns, technology, and any other factors that may change the relative use of hospital resources. The burden associated with requesting changes to the MS–DRG classifications will be discussed in a forthcoming information collection request, which is currently under development. However, upon completion of the ICR, we will publish the required 60-day and 30-day notices to solicit public comments in accordance with the requirements of the PRA.

4. ICRs Relating to the Hospital Readmissions Reduction Program

In section IV.K. of the preamble of this final rule, we note that we did not propose the removal or adoption of any new measures into the Hospital Readmissions Reduction Program. All six of the Hospital Readmissions Reduction Program's measures are claims-based measures. We do not believe that continuing to use these claims-based measures creates or reduces any burden for hospitals because they will continue to be collected using Medicare FFS claims that hospitals are already submitting to the Medicare program for payment purposes. We did not receive any comments regarding the ICRs for the Hospital Readmissions Reduction Program and therefore are finalizing without modification.

5. ICRs for the Hospital Value-Based Purchasing (VBP) Program

In section IV.L. of the preamble of this final rule, we provide newly established performance standards for the Hospital VBP Program for certain measures for the FY 2023, FY 2024, FY 2025, and FY 2026 program years. We do not believe that updating program performance standards will create or reduce any burden for hospitals. Data submissions for the Hospital VBP Program are associated with the Hospital Inpatient Quality Reporting Program under OMB control number 0938–1022, the National Healthcare Safety Network under OMB control number 0920–0666, and the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey under OMB control number 0938–0981. Because the FY 2023 Hospital VBP Program will use data that are also used to calculate quality measures in other programs and Medicare fee-for-service claims data that hospitals are already submitting to CMS for payment purposes, the program does not anticipate any change in burden associated with this final rule.

Comment: A few commenters expressed their support for the newly established performance standards for certain measures for the FY 2023 through FY 2026 program years.

Response: We thank commenters for their support.

After consideration of the public comments we received, we are finalizing this provision without modification.

6. ICRs Relating to the Hospital-Acquired Condition (HAC) Reduction Program

In section IV.M. of the preamble of this final rule, we discuss proposed requirements for the HAC Reduction Program. In this final rule, we are not removing any measures or adopting any new measures into the HAC Reduction Program. The HAC Reduction Program has adopted six measures. We do not believe that the claims-based CMS PSI 90 measure in the HAC Reduction Program creates or reduces any burden for hospitals because it is collected using Medicare FFS claims hospitals are already submitting to the Medicare program for payment purposes. We note the burden associated with collecting and submitting data for the HAI measures (CAUTI, CLABSI, Colon and Abdominal Hysterectomy SSI, MRSA bactermia, and CDI) via the NHSN system is captured under a separate OMB control number, 0920–0666 (expiration November 30, 2021), and therefore will not impact our burden estimates.

In the FY 2019 IPPS/LTCH PPS final rule (83 FR 41478 through 41484), we finalized our policy to validate NHSN HAI measures under the HAC Reduction Program, which will require hospitals to submit validation templates for the NHSN HAI measures beginning with Q3 CY 2020 discharges. OMB has currently approved these 43,200 hours of burden and approximately $1.6 million under OMB control number 0938–1352 (expiration date January 31, 2021), accounting for information collection burden experienced by up to 600 IPPS hospitals selected for validation under the HAC Reduction Program for the FY 2023 program year and each subsequent year.

In section IV.M.6. of the preamble of this final rule, we finalized changing the pool of hospitals selected for validation under the HAC Reduction Program from up to 600 hospitals to up to 400 hospitals, as similarly proposed under

the Hospital IQR Program, as discussed in section VIII.A. of the preamble of this final rule. In this FY 2021 IPPS/LTCH PPS final rule, we updated our burden calculation to reflect the reduction in the number of hospitals selected for validation each year along with using the most recent data from the Bureau of Labor Statistics that reflects a median hourly wage of $19.40 [524] per hour for a Medical Records and Health Information Technician professional. We calculate the cost of overhead, including fringe benefits, at 100 percent of the hourly wage estimate. This is necessarily a rough adjustment, both because fringe benefits and overhead costs vary significantly from employer-to-employer and because methods of estimating these costs vary widely from study-to-study. Nonetheless, we believe that doubling the hourly wage rate ($19.40 × 2 = $38.80) to estimate total cost is a reasonably accurate estimation method. Accordingly, we calculate cost burden to hospitals using a wage plus benefits estimate of $38.80 per hour.

We previously estimated a reporting burden of 80 hours (20 hours per record × 1 record per hospital per quarter × 4 quarters) per hospital selected for validation per year to submit the CLABSI and CAUTI templates, and 64 hours (16 hours per record × 1 record per hospital per quarter × 4 quarters) per hospital selected for validation per year to submit the MRSA and CDI templates for a total of 43,200 hours ([80 hours × 300 hospitals] + [64 hours × 300 hospitals]). We estimate a new total burden of 28,800 hours ([80 hours per hospital to submit CLABSI and CAUTI templates × 200 hospitals selected for validation] + [64 hours per hospital to submit MRSA and CDI templates × 200 hospitals selected for validation]), reflecting a total burden decrease of 14,400 hours (43,200 hours − 28,800 hours), and a new total burden cost of approximately $1,117,440 (28,800 hours × $38.80 per hour [525]). We will submit the revised information collection estimates to OMB for approval under OMB control number 0938–1352. We did not receive any comments regarding the ICRs for the HAC Reduction Program and are therefore finalizing these ICRs without modification.

7. ICRs for the Hospital Inpatient Quality Reporting (IQR) Program

a. Background

The Hospital IQR Program (formerly referred to as the Reporting Hospital Quality Data for Annual Payment Update (RHQDAPU) Program) was originally established to implement section 501(b) of the MMA, Public Law 108–173. OMB has currently approved 1,612,710 hours of burden and approximately $60.7 million under OMB control number 0938–1022, accounting for information collection burden experienced by approximately 3,300 IPPS hospitals and 1,100 non-IPPS hospitals for the FY 2022 payment determination. In this final rule, we describe the burden changes with regard to collection of information under OMB control number 0938–1022 (expiration date December 31, 2022) for IPPS hospitals due to the finalized proposals in this final rule.

In section VIII.A.5.b. of the preamble to this final rule, we are finalizing a policy to progressively increase the numbers of quarters of eCQM data reported, from one self-selected quarter of data to four quarters of data over a 3-year period, by requiring hospitals to report two quarters of data for the CY 2021 reporting period/FY 2023 payment determination, three quarters of data for the CY 2022 reporting period/FY 2024 payment determination, and four quarters of data beginning with the CY 2023 reporting period/FY 2025 payment determination and for subsequent years. We expect these policies will increase our collection of information burden estimates. Details on these policies as well as the expected burden changes are discussed further in this section of this rule.

In section VIII.A. of the preamble to this final rule, we are finalizing the proposal to begin public display of eCQM data beginning with data reported by hospitals for the CY 2021 reporting period and for subsequent years. As discussed further in this final rule, we do not expect this policy to affect our information collection burden estimates.

In section VIII.A.11. of the preamble to this final rule, we also are finalizing proposals to streamline validation processes under the Hospital IQR Program. We are finalizing proposals to: (1) Update the quarters of data required for validation for both chart-abstracted measures and eCQMs; (2) expand targeting criteria to include hospital selection for eCQMs; (3) change the validation pool from 800 hospitals to 400 hospitals; (4) remove the current exclusions for eCQM validation selection, (5) require electronic file submissions for chart-abstracted measure data; (6) align the eCQM and chart-abstracted measure scoring processes; and (7) update the educational review process to address eCQM validation results. As discussed further in this final rule, we expect our finalized proposal to align the hospital selection process will increase our information collection burden estimates. We do not expect the other finalized validation proposals to affect our information collection burden estimates. Details on these policies as well as the expected burden changes are discussed further in this section of this rule.

In the FY 2020 IPPS/LTCH PPS final rule (84 FR 42602 through 42605), we estimated that reporting measures for the Hospital IQR Program could be accomplished by staff with a median hourly wage of $18.83 per hour. We note that since then, more recent wage data have become available, and we are updating the wage rate used in these calculations in this final rule. The most recent data from the Bureau of Labor Statistics reflects a median hourly wage of $19.40 per hour for a Medical Records and Health Information Technician professional.[526] We calculated the cost of overhead, including fringe benefits, at 100 percent of the median hourly wage, consistent with previous years. This is necessarily a rough adjustment, both because fringe benefits and overhead costs vary significantly by employer and methods of estimating these costs vary widely in the literature. Nonetheless, we believe that doubling the hourly wage rate ($19.40 × 2 = $38.80) to estimate total cost is a reasonably accurate estimation method. Accordingly, we will calculate cost burden to hospitals using a wage plus benefits estimate of $38.80 per hour throughout the discussion in this section of this rule for the Hospital IQR Program.

b. Information Collection Burden Estimates for Proposed Policies Related to eCQM Reporting and Submission Requirements for the CY 2021 Reporting Period/FY 2023 Payment Determination, the CY 2022 Reporting Period/FY 2024 Payment Determination, and the CY 2023 Reporting Period/FY 2025 Payment Determination and Subsequent Years

In the FY 2020 IPPS/LTCH PPS final rule, we finalized eCQM reporting and submission requirements such that hospitals submit one, self-selected calendar quarter of data for four eCQMs for the CYs 2020 and 2021 reporting periods/FYs 2022 and 2023 payment determinations (84 FR 42503) and one, self-selected calendar quarter of data for three self-selected eCQMs and the Safe Use of Opioids—Concurrent Prescribing

[524] Occupational Employment and Wages. Available at: *https://www.bls.gov/ooh/healthcare/medical-records-and-health-information-technicians.htm.*

[526] *https://www.bls.gov/ooh/healthcare/medical-records-and-health-information-technicians.htm.*

eCQM for the CY 2022 reporting period/FY 2024 payment determination (84 FR 42505). Our related information collection estimates were discussed at (84 FR 42604).

In sections VIII.A.10.e.(1). through (4). of the preamble to this final rule, we are finalizing our proposal to progressively increase the number of quarters of eCQM data reported, from one self-selected quarter of data to four quarters of data over a 3-year period, by requiring hospitals to report: (1) Two quarters of data for the CY 2021 reporting period/FY 2023 payment determination, while continuing to require hospitals to report four self-selected eCQMs; (2) three quarters of data for the CY 2022 reporting period/FY 2024 payment determination, while continuing to report three self-selected eCQMs and the Safe Use of Opioids—Concurrent Prescribing eCQM ; and (3) four quarters of data beginning with the CY 2023 reporting period/FY 2025 payment determination and for subsequent years, while continuing to require hospitals to report three self-selected eCQMs and the Safe Use of Opioids—Concurrent Prescribing eCQM. We believe there would be a progressive increase to the burden estimate over the 3-year period due to these proposed policies.

We previously estimated the information collection burden associated with the eCQM reporting and submission requirements to be 40 minutes per hospital per year (10 minutes × 4 eCQMs × 1 quarter = 40 minutes), or 0.67 hours per hospital per year (40 minutes/60). We estimated a total annual burden of 2,200 hours across all IPPS hospitals (0.67 hours × 3,300 IPPS hospitals). Using the updated wage estimate as described previously, we estimate this to represent a total annual cost of $85,360 ($38.80 hourly wage × 2,200 annual hours) across all IPPS hospitals. Based on our proposal to progressively increase the number of quarters of data reported, from one self-selected quarter of data to four quarters of data over a 3-year period, we estimate an annual burden increase of 2,200 hours and $85,360 for all participating IPPS hospitals for each of the CY 2021 reporting period/FY 2023 payment determination, CY 2022 reporting period/FY 2024 payment determination, and CY 2023 reporting period/FY 2025 payment determination. By increasing the number of quarters of eCQM data required to be reported by hospitals from one self-selected quarter of data to two quarters of data, then to three quarters of data, and finally to four quarters of data, respectively, we estimate a total increase of 6,600 hours (2,200 hours + 2,200 hours + 2,200 hours) and $256,080 ($85,360 + $85,360 + $85,360) across a 3-year period for all participating IPPS hospitals.

c. Information Collection Burden Estimate for Proposed eCQM Public Display Requirements Beginning With the CY 2021 Reporting Period/FY 2023 Payment Determination

In section VIII.A.13.b. of the preamble to this final rule, we are finalizing a policy to begin public display of eCQM data beginning with data reported by hospitals for the CY 2021 reporting period and for subsequent years. Because hospitals would not have any additional information collection requirements, we believe there would be no change to the information collection burden estimate due to this policy, but acknowledge that there are other types of burden associated with this proposal. For example, there is burden associated with the optional reviewing of hospital-specific reports during the public reporting preview period; however, we believe this burden is nominal because hospitals already review these reports with respect to other types of measures for the Hospital IQR Program.

d. Information Collection Burden Estimate for Proposed Updates to the Processes for Validation of Hospital IQR Program Measure Data

In section VIII.A.11. of the preamble to this final rule, we are finalizing proposals to make several changes to streamline the validation process. We are finalizing our proposals to: (1) Require the use of electronic file submissions via a CMS-approved secure file transmission process and no longer allow the submission of paper copies of medical records or copies on digital portable media such as CD, DVD, or flash drive, beginning with validation of Q1 2021 data affecting the FY 2024 payment determination; (2) combine the validation processes for chart-abstracted measures and eCQMs by: (a) Aligning data submission quarters, with the validation quarters affecting the FY 2023 payment determination serving as a transition year before being fully aligned as to validation quarters affecting the FY 2024 payment determination; (b) combining hospital selection, including: (i) Reducing the pool of hospitals randomly selected for chart-abstracted measure validation, and (ii) integrating and applying targeting criteria for eCQM validation, beginning with validation affecting the FY 2024 payment determination; (c) removing previous exclusion criteria; and (d) combining scoring processes by providing one combined validation score for the validation of chart-abstracted measures and eCQMs with the eCQM portion of the combined score weighted at zero, beginning with validation affecting the FY 2024 payment determination; and (3) formalize the process for conducting educational reviews for eCQM validation in alignment with current processes for providing feedback for chart-abstracted validation results, beginning with eCQM validation affecting the FY 2023 payment determination.

As noted in the FY 2017 IPPS/LTCH IPPS final rule (81 FR 57261), we have been reimbursing hospitals directly for expenses associated with submission of medical records for data validation; specifically, we reimburse hospitals at 12 cents per photocopied page; for hospitals providing medical records digitally via a rewritable disc, such as encrypted CD–ROMs, DVDs, or flash drives, we reimburse hospitals at a rate of 40 cents per disc, along with $3.00 per record; and for hospitals providing medical records as electronic files submitted via secure file transmission, we reimburse hospitals at $3.00 per record. In addition, in the FY 2017 IPPS/LTCH IPPS final rule (81 FR 57261), we finalized that for eCQM validation, we reimburse hospitals at $3.00 per record for providing medical records as electronic files submitted via secure file transmission (paper copies and digital portable media are not accepted for eCQM validation). Because we directly reimburse, we do not anticipate any net change in information collection burden associated with our finalized proposal to require electronic file submissions of medical records via secure file transmission for hospitals selected for chart-abstracted measures validation; hospitals would continue to be reimbursed at $3.00 per record.

We do not anticipate any net change in information collection burden associated with our finalized proposals to align the data submission quarters, to combine the hospital selection process by reducing the pool of hospitals randomly selected for validation for chart-abstracted measures from 400 hospitals to up to 200 hospitals, or to combine the scoring processes to provide one combined validation score for the validation of chart-abstracted measures and eCQMs. However, we refer readers to section I.K. of Appendix A of this final rule for a discussion of how our finalized proposals to align the validation processes for chart-abstracted measures and eCQMs may have the potential to reduce burden other than information collection burden. In addition, we do not anticipate any

information collection burden associated with our finalized proposal to formalize the process for conducting educational reviews for eCQM validation. As discussed in section VIII.A.11.b.(3). of the preamble to this final rule, this process would allow any validated hospital to request an educational review of their eCQM validation results with CMS.

We previously estimated the information collection burden associated with eCQM validation to be 80 minutes per record, or approximately 11 hours per hospital per year (80 minutes per record × 8 records × 1 quarter/60 = 10.67 hours) (81 FR 57261). We estimated a total annual burden of approximately 2,200 hours across 200 IPPS hospitals selected for eCQM validation each year (11 hours × 200 IPPS hospitals). Using the updated wage estimate as described previously, we estimate this to represent a total annual cost of $85,360 (2,200 hours × $38.80) across 200 hospitals.

The previous estimate of 80 minutes per record was based on our limited experience working with voluntary hospital participants during the eCQM validation pilot conducted in 2015 (79 FR 50269 through 50272). For the validation pilot, participating hospitals attended a 30-minute pre-briefing session and had to install CMS-approved software that allowed our Clinical Data Abstraction Center (CDAC) contractor to remotely view isolated records in real-time under hospital supervision in order to compare all abstracted data with QRDA Category I file data and summarize the results of the real-time session (79 FR 50270). Since this 2015 pilot, the eCQM validation process that we have implemented under the Hospital IQR Program has been significantly streamlined so that we no longer need hospitals to allow remote access to the CDAC contractor to view records in real-time under each hospital's supervision nor for them to engage in discussions with our contractor during the process. Instead, hospitals selected for eCQM validation are required to submit timely and complete copies of medical records on eCQMs selected for validation to CMS by submitting records in PDF file format within 30 calendar days following the medical records request date listed on the CDAC request form via the QualityNet secure file transmission process (81 FR 57179).

Based on this updated process, as well as hospitals having gained several years of experience using EHRs, we are revising our previous estimate from 80 minutes per record to 10 minutes per record. This is the amount of time we estimate is needed for hospitals to create PDF files and to electronically submit each medical record to us via the CMS-approved secure file transmission process. The estimate of 10 minutes per record is similar to our estimate of 10 minutes per eCQM per quarter in submitting QRDA Category I files via the QualityNet secure portal (81 FR 57260). We note that as mentioned previously, hospitals will still be reimbursed at $3.00 per record (81 FR 57261).

In addition, we anticipate that our finalized proposal to progressively increase the number of quarters of eCQM data reported, from one self-selected quarter of data to four quarters of data over a 3-year period, would similarly increase the total number of quarters of data from which cases would be selected for eCQM validation over a 3-year period. We also anticipate that our finalized proposal to combine the hospital selection process such that the Hospital IQR Program would validate a pool of up to 400 hospitals across measure types (up to 200 hospitals would be randomly selected and up to 200 hospitals would be selected using targeting criteria) would increase the number of hospitals selected for eCQM validation from up to 200 hospitals to up to 400 hospitals. Therefore, we estimate the following burden changes over a 3-year period using the revised estimate of 10 minutes (0.1667 hours) per record as discussed previously. For eCQM validation of CY 2021 data affecting the FY 2024 payment determination, we estimate a total burden of 1,067 hours across 400 IPPS hospitals selected for eCQM validation (0.1667 hours × 2 quarters × 8 cases × 400 IPPS hospitals) and $41,400 (1,067 hours × 38.80). This reflects a total burden decrease of 1,133 hours (2,200 hours − 1,067 hours) and $43,960 ($85,360 − $41,400) compared to our previous burden estimate for eCQM validation affecting the FY 2024 payment determination. For eCQM validation of CY 2022 data affecting the FY 2025 payment determination, we estimate a total burden of 1,600 hours across 400 IPPS hospitals selected for eCQM validation (0.1667 hours × 3 quarters × 8 cases × 400 IPPS hospitals) and $62,080 (1,600 hours × $38.80). This reflects a total burden decrease of 600 hours (2,200 hours − 1,600 hours) and $23,280 ($85,360 − $62,080) compared to our previous burden estimate for eCQM validation affecting the FY 2025 payment determination. For eCQM validation of CY 2023 data affecting the FY 2026 payment determination, and for subsequent years, we estimate a total burden of 2,133 hours across 400 IPPS hospitals selected for eCQM validation (0.1667 hours × 4 quarters × 8 cases × 400 IPPS hospitals) and $82,760 (2,133 hours × $38.80). This reflects a total burden decrease of 67 hours (2,200 hours − 2,133 hours) and $2,600 ($85,360 − $82,760) compared to our previous burden estimate for eCQM validation affecting the FY 2026 payment determination and subsequent years.

e. Summary of Information Collection Burden Estimates for the Hospital IQR Program

In summary, under OMB control number 0938–1022, we estimate that the policies finalized in this final rule will result in an increase of 6,533 hours (6,660 − 67 hours) for 3,300 IPPS hospitals across a 4-year period from the CY 2021 reporting period/FY 2023 payment determination through the CY 2024 reporting period/FY 2026 payment determination. The total cost increase related to this information collection is approximately $253,480 (6,533 hours × $38.80) (which also reflects use of an updated hourly wage rate as previously discussed). The tables summarize the total burden changes for each respective FY payment determination compared to our currently approved information collection burden estimates (the table for the FY 2026 payment determination reflects the cumulative burden changes). We will submit the revised information collection estimates to OMB for approval under OMB control number 0938–1022.

*Reflects revised estimate from 80 minutes per record to 10 minutes per record as discussed previously.

A number of commenters expressed concern about an increase in burden related to our eCQM related proposals to increase the number of required reporting quarters for eCQM data and our proposal to begin publicly reporting eCQM data.

We believe the long-term benefits associated with reporting a full year of electronic data will outweigh the burdens and that increasing the number of quarters for which hospitals are required to report eCQM data will produce more comprehensive and reliable quality information for patients and providers. We stated our intention in the FY 2018 IPPS/LTCH PPS final rule to gradually transition toward more robust eCQM reporting (82 FR 38356). We reiterated this stated goal to incrementally increase the use of EHR data for quality measurement in a subsequent final rule (84 FR 42502). We believe that taking an incremental approach to increasing eCQM reporting over a 3-year period will help to ease the burdens associated with reporting larger amounts of data and will provide hospitals and vendors with additional time to plan and sufficiently allocate resources for more robust eCQM reporting. For a detailed discussion of comments we received on the information collection burden associated with the finalization of these proposals, please see section VIII.A.10 of the preamble of this final rule. We believe the finalization of these proposals effectively balances the burdens associated with increased reporting of eCQM data and the benefits of providing that quality data to patients and consumers.

8. ICRs for the PPS-Exempt Cancer Hospital Quality Reporting (PCHQR) Program

As discussed in section VIII.B. of the preamble of this final rule, section 1866(k)(1) of the Act requires, for purposes of FY 2014 and each subsequent fiscal year, that a hospital described in section 1886(d)(1)(B)(v) of the Act (a PPS-exempt cancer hospital, or a PCH) submit data in accordance with section 1866(k)(2) of the Act with respect to such fiscal year. There is no financial impact to PCH Medicare payment if a PCH does not participate.

As discussed in section VIII.B.3. of the preamble of this final rule, we are finalizing our proposal to adopt refined versions of two existing measures: Catheter-associated Urinary Tract Infection (CAUTI) and Central Line-associated Bloodstream Infection (CLABSI), beginning with the FY 2023 program year. The refined versions of the measure incorporate an updated SIR calculation methodology developed by the Centers for Disease Control and Prevention (CDC) that calculates rates stratified by patient care locations within PCHs, without the use of predictive models or comparisons in the rate calculations. We do not estimate any net change in burden hours for the PCHQR Program for the FY 2023 program year because there would be no change in the data submission requirements for PCHs. We note that burden estimates for these CDC NHSN measures are submitted separately under OMB control number 0920–0666.

The PCHQR Program measure set would continue to consist of 15 measures for the FY 2023 program year. The most recent data from the Bureau of Labor Statistics reflects a median hourly wage of $19.40 (previously $18.83).[527] Consequently, while our finalized policy will not yield a net change in burden hours, the change in labor wage will cause an increase in burden cost for the PCHQR Program. Therefore, using the previously finalized [528] hourly burden estimate of 75,779 burden hours across the 11 PCHs for data collection and submission of all 15 measures, we estimate a total annual labor cost of $2,940,225 (75,779 hours × $38.80 per hour) for all 11 PCHs for the FY 2023 program year. The burden hours associated with these reporting requirements is currently approved under OMB control number 0938–1175. The updated burden cost, based on the increase in the labor wage, will be submitted to OMB.

We received no comments in response to the burden estimates specifically discussed above. Thus, we are finalizing them without modification.

9. ICRs for the Promoting Interoperability Programs

In section VIII.D. of the preamble of this final rule, we discuss several finalized proposals for the Medicare and Medicaid Promoting Interoperability Programs. OMB has currently approved 623,562 total burden hours and approximately $61 million under OMB control number 0938–1278, accounting for information collection burden experienced by approximately 3,300 eligible hospitals and CAHs (serving Medicare-only and dual eligible beneficiaries) that attest to CMS under the Medicare Promoting Interoperability Program. The collection of information burden analysis in this final rule focuses on eligible hospitals and CAHs that attest to the objectives and measures, and report CQMs, under the Medicare Promoting Interoperability Program for the reporting period in CY 2021.

b. Summary of Policies for Eligible Hospitals and CAHs That Attest to CMS Under the Medicare Promoting Interoperability Program

In section VIII.D.3.b. of the preamble of this final rule, we are finalizing the following changes for eligible hospitals and CAHs that attest to CMS under the Medicare Promoting Interoperability Program: (1) An EHR reporting period of a minimum of any continuous 90-day period in CY 2022 for new and returning participants (eligible hospitals and CAHs); (2) to maintain the Electronic Prescribing Objective's Query of PDMP measure as optional and worth 5 bonus points in CY 2021; (3) to modify the name of the Support Electronic Referral Loops by Receiving and Incorporating Health Information measure; (4) to progressively increase the number of quarters for which hospitals are required to report eCQM data, from the current requirement of one self-selected calendar quarter of data, to four calendar quarters of data, over a 3-year period. Specifically, we propose to require: (a) 2 self-selected calendar quarters of data for the CY 2021 reporting period; (b) 3 self-selected calendar quarters of data for the CY 2022 reporting period; and (c) 4 calendar quarters of data beginning with the CY 2023 reporting period, where the submission period for the Medicare Promoting Interoperability Program will be the 2 months following the close of the respective calendar year; (5) to begin publicly reporting eCQM performance data beginning with the eCQM data reported by eligible hospitals and CAHs for the reporting period in CY 2021 on the *Hospital Compare* and/or *data.medicare.gov* websites or successor websites; (6) to correct errors and amend regulation text under § 495.104(c)(5)(viii)(B) through (D) regarding transition factors under section 1886(n)(2)(E)(i) of the Act for the incentive payments for Puerto Rico eligible hospitals; and (7) to correct errors and amend regulation text under § 495.20(e)(5)(iii) and (l)(11)(ii)(C)(*1*) for regulatory citations for the ONC certification criteria. We are finalizing the amendments to the regulations to incorporate the proposed changes.

c. Summary of Collection of Information Burden Estimates

(1) Summary of Estimates Used To Calculate the Collection of Information Burden

In the Medicare and Medicaid Programs; Electronic Health Record Incentive Program—Stage 3 and Modifications to Meaningful Use in 2015 Through 2017 final rule (80 FR 62917), we estimated it will take an individual provider or designee approximately 10 minutes to attest to each objective and associated measure that requires a numerator and denominator to be generated. The measures that require a ''yes/no'' response will take approximately one minute to complete. We estimated that the Security Risk Analysis measure will take approximately 6 hours for an individual provider or designee to complete (we note this measure is still part of the program, but is not subject to performance-based scoring). We continue to believe these are appropriate burden estimates for reporting and have used this methodology in our collection of information burden estimates for this final rule.

Given the proposals, we estimated a total burden estimate of 6 hours 31 minutes per respondent (6.5 hours) which remains unchanged from the FY 2020 IPPS/LTCH PPS final rule (84 FR 42044).

Medicare Promoting Interoperability Program Estimated Annual Information Collection Burden Per Respondent for CY 2021: § 495.24(e) - Objectives/Measures Medicare (Eligible Hospitals/CAHs)

Objective	Measure	Burden Estimate per Eligible Hospital and CAH
N/A	Security Risk Analysis	6 hours
Electronic Prescribing	e-Prescribing	10 minutes
	Query of PDMP	
Health Information Exchange	Support Electronic Referral Loops by Sending Health Information	10 minutes
	Support Electronic Referral Loops by Receiving and Incorporating Health	
Provider to Patient Exchange	Provide Patients Electronic Access to Their Health Information	10 minutes
Public Health and Clinical Data Exchange	• Syndromic Surveillance Reporting • Immunization Registry Reporting • Electronic Case Reporting • Public Health Registry Reporting • Clinical Data Registry -Reporting • Electronic Reportable Laboratory Result Reporting	1 minute
Total Burden Estimate per Respondent		6 hours 31 minutes (6.5 hours)

(2) Hourly Labor Costs

In the Medicare and Medicaid Programs; Electronic Health Record Incentive Program—Stage 3 and Modifications to Meaningful Use in 2015 Through 2017 final rule (80 FR 62917), we estimated a mean hourly rate of $63.46 for the staff involved in attesting to EHR technology, meaningful use objectives and associated measures, and electronically submitting the clinical quality measures. We had previously used the mean hourly rate of $68.22 for the necessary staff involved in attesting to the objectives and measures under 42 CFR 495.24(e) in the FY 2020 IPPS/LTCH PPS final rule (84 FR 42609), however, this rate has since been updated to $69.34 for the FY 2021 final rule based upon recently-released 2018 data from the Bureau of Labor Statistics (BLS).[529]

We are finalizing these provisions as proposed, therefore, we do not estimate any net change in burden hours for the Medicare Promoting Interoperability Program for CY 2021, as there is no substantive change in measures or data submission requirements for eligible hospitals and CAHs in our proposals. However, we discovered an incorrect mathematical calculation in last year's final rule and are correcting it in the table that follows. The correction we are providing in following table is that 3,300 responses multiplied by 6.5 burden hours equals 21,450 total annual burden hours (a decrease in 44 hours from what was mistakenly reported last year). While we reiterate that the provisions included in this rule do not contribute to additional or reduced burden hours, please note that the correction of this error will update subsequent burden calculations detailed later in this section.

As previously stated, recent data from the BLS reflects a median hourly staff wage of $69.34 (previously $68.22). Consequently, while our proposal will not yield a net change in burden hours, the change in labor wage will cause an increase in burden cost for the program. Therefore, using the updated estimate of total annual burden hours of 21,450 burden hours across 3,300 responses to data collection and submissions for the program objectives' measures, we estimate a total annual labor cost of $1,487,343 (21,450 hours × $69.34 per hour) for the CY 2021 EHR reporting period. The burden hours associated with these reporting requirements is currently approved under OMB control number 0938–1278. The updated burden cost, based solely on the increase in labor wages, will be revised and submitted to OMB.

[529] *https://www.bls.gov/oes/current/oes231011.htm.*

Medicare Promoting Interoperability Program Estimated Annual Information Collection Burden (Total Cost) for CY 2021

Regulations Section	Number of Respondents	Number of Responses	Burden per Response (hours)	Total Annual Burden (hours)	Hourly Labor Cost of Reporting ($)	Total Cost ($)
§495.24(e)	3,300	3,300	6.5	21,450	69.34	1,487,343

As no measures have been removed nor introduced since last year's final rule, but are mainly continuations of current policies, we do not consider the finalized proposals included in this section to change the program. That being said, the numerical-correction of the total annual burden hours and an updated BLS hourly labor cost of reporting will impact the program's total cost. Thus, the Collection Burden's Total Cost for CY 2021 of $1,487,343 is an increase of $24,024 from last year's final rule.

We did not receive comments on to the information collection requirement discussed in this section.

10. ICR for the Submission of Electronic Medical Records to Quality Improvement Organizations (QIOs)

In section IX.A. of this final rule, we discuss the changes we are finalizing relating to the submission of patient records to the QIOs in an electronic format by providers and practitioners in accordance with § 476.78 and by institutions and practitioners in accordance with § 480.111. These patient records must be submitted to the QIOs for purposes of one or more QIO functions. As a result, the collection and review of such records by the QIOs constitutes an audit, investigation or administrative action as specified in section 1154(a) of the Act. Therefore, we believe these collection requirements are not subject to the PRA as stipulated under 5 CFR 1320.4(a)(2).

11. ICR for Payer-Specific Negotiated Charges Data Collection

Section IV.P. of the preamble of this final rule discusses the collection of market-based payment rate information by MS–DRG on the Medicare cost report for cost reporting periods ending on or after January 1, 2021. Hospitals would report the median payer-specific negotiated charge by MS–DRG for payers that are MA organizations. We proposed to collect this market-based information on new form CMS–2552–10, Worksheet S–12. The required cost report reporting changes to accomplish this will be in more detail in the Information Collection Request approved under OMB No. 0938–0050, which is subject to a separate comment solicitation.

We believe reporting this market based information will be less burdensome for hospitals given that hospitals are required, beginning in CY 2021, to make public their payer-specific negotiated charges for the same service packages under the requirements we finalized in the Hospital Price Transparency final rule. The market-based rate information we are finalizing to collect on the Medicare cost report would be the median of the payer-specific negotiated charges for every MS–DRG, that the hospital has negotiated with its MA organizations. We believe that because hospitals are already required to publically report the payer-specific negotiated charge information that they will use to calculate these medians, the additional calculation and reporting of the median payer-specific negotiated charge will be less burdensome for hospitals.

Burden hours estimate the time (number of hours) required for each IPPS hospital to complete ongoing data gathering and recordkeeping tasks, search existing data resources, review instructions, and complete the Form CMS–2552–10, Worksheet S–12. The most recent data from the System for Tracking Audit and Reimbursement, an internal CMS data system maintained by the Office of Financial Management (OFM), reports that 3,189 hospitals, the current number of Medicare certified IPPS hospitals, file Form CMS–2552–10 annually.

In section IV.P.2.c. of the preamble to this final rule, we finalized that subsection (d) hospitals in the 50 states and DC, as defined at section 1886(d)(1)(B) of the Act, and subsection (d) Puerto Rico hospitals, as defined under section 1886(d)(9)(A) of the Act, would be required to report the median payer-specific negotiated charge information, as proposed. Hospitals that do not negotiate payment rates and only receive non-negotiated payments for service would be exempted from this definition. Hospitals that are exempted from this policy include, Critical Access Hospitals (CAHs), hospitals in Maryland, which are currently paid under the Maryland Total Cost of Care Model, during the performance period of that Model, hospitals operated by an Indian Health Program as defined in section 4(12) of the Indian Health Care Improvement Act, and federally owned and operated facilities, and non-subsection (d) hospitals. Based on this policy, we estimate that 3,189 hospitals would be required to comply with this market-based data collection requirement.

Based on our understanding of the resources necessary to report this information, we estimate an average annual burden per hospital of 20 hours (5 hours for recordkeeping and 15 hours for reporting) for the Worksheet S–12. This represents an increase of 5 hours over the burden estimate provided within the proposed rule, based on feedback from commenters that additional effort would be necessary to crosswalk inpatient discharges to an MS–DRG, specifically if a hospital is not familiar with the MS–DRG classification system, for use in calculating the median payer-specific negotiated charges. The burden is minimized because the median payer-specific negotiated charge data collected on the Worksheet S–12 is based on payer-specific data already maintained by the hospital. We believe that since hospitals assign the underlying ICD–10–CM principal diagnosis, and any other secondary diagnosis codes and ICD–10–PCS procedure codes, which determine how patients are assigned to an MS–DRG, that hospitals are able to associate those items and services to MS–DRGs for each discharge. Additionally, hospitals that are not as familiar with MS–DRGs have access to the most current publically available version of the CMS Grouper used to group ICD–10 codes to MS–DRGs, and are able to use this software to uniformly group inpatient items and services to MS–DRGs, either initially by proactively using the same Grouper version used by CMS, or retrospectively after an inpatient hospital stay, but prior to submitting this information on the hospital cost report.

We estimated the total annual burden hours as follows: 3,189 hospitals times 20 hours per hospital equals 63,780 annual burden hours.

The 5 hours for recordkeeping include hours for bookkeeping, accounting and auditing clerks; the 15 hours for reporting include accounting and audit professionals' activities. We believe the basic median calculation would be captured within the recordkeeping portion of this assessment.

Based on the most recent Bureau of Labor Statistics (BLS) in its 2019 Occupation Outlook Handbook, the mean hourly wage for Category 43–3031 (bookkeeping, accounting and auditing clerks) is $20.65 (*https://www.bls.gov/oes/current/oes433031.htm*). We added 100 percent of the mean hourly wage to account for fringe and overhead benefits, which calculates to $41.30 ($20.65 + $20.65) and multiplied it by 5 hours, to determine the annual recordkeeping costs per hospital to be $206.50 ($41.30 × 5 hours).

The mean hourly wage for Category 13–2011 (accounting and audit professionals) is $38.23 (*www.bls.gov/oes/current/oes132011.htm*). We added 100 percent of the mean hourly wage to account for fringe and overhead benefits, which calculates to $76.46 ($38.23 + $38.23) and multiplied it by 15 hours, to determine the annual reporting costs per hospital to be $1,146.90 ($76.46 × 15 hours). We have calculated the total annual cost per hospital of $1,353.40 by adding the recordkeeping costs of $206.50 plus the reporting costs of $1,146.90 (see Table K1). We estimated the total annual cost to be $4,315,993 ($1,353.40 × 3,189 IPPS hospitals) (see Table K2).

Table K1: Estimated Annual Cost per Hospital

Average Hourly Rate Analysis: August 2020	Hours Per Response	BLS Cost Per Hour	Cost Per Hour with Overhead and Fringes	Cost Per Response	Average Hourly Rate
Reporting	15	38.23	76.46	1146.90	
Record Keeping	5	20.65	41.30	206.50	
Third Party Disclosure					
Total	20			1353.40	N/A

Table K2: Estimated Total Annual Cost

	Currently Approved			Total Requested			Increase/(Decrease) Over Currently Approved	
Respondent Costs	Number of Providers	Per Provider	Total Hours	Number of Providers	Per Provider	Total Hours	Number of Providers	Total
Hours required for CR preparation	3,189	-	-	3,189	20	63,780	-	63,780
Cost for CR preparation						$4,315,993		$4,315,993

We believe that because hospitals are already required to publically report the payer-specific negotiated charge information that they will use to calculate these medians, the additional calculation and reporting of the median payer-specific negotiated charge will be less burdensome for hospitals than if hospitals did not already have this information compiled. The Hospital Price Transparency final rule required that hospitals establish, update, and make public via the internet standard charges in two different ways: (1) A single machine-readable file with a list of standard charges (including gross charges, payer-specific negotiated charges, de-identified minimum negotiated charges, de-identified maximum negotiated charges, and discounted cash prices) for all items and services including service packages identified by MS–DRG; and (2) standard charges (including payer-specific negotiated charges, discounted cash prices, de-identified minimum negotiated charges, de-identified maximum negotiated charges) in a consumer-friendly manner for as many of the 70 CMS-specified shoppable services that are provided by the hospital, and as many additional hospital-selected shoppable services as is necessary for a combined total of at least 300 shoppable services. We note that the data collection requirement in this final rule would apply to a smaller subset of hospitals as compared to the public reporting requirements under the Hospital Price Transparency final rule.

In total, the Hospital Price Transparency final rule estimated in the first year of public reporting, it would take a hospital an estimated 150 hours at a cost of $11,898.60 per hospital [530] to implement and comply with the requirements, as specified at 45 CFR part 180. The estimated 150 hours of burden for the first year includes 10 total hours for a lawyer ($138.68/hour) and general operations manager ($119.12/hour) to read and review the rule; 80 hours for a business operations specialist ($74.00/hour) to gather and compile the required information and post it in the form and manner specified in the Hospital Price Transparency final rule; 30 hours for a network and computer system administrator ($83.72/hour) to comply with the form and manner standards set forth in the

[530] The estimated hourly cost for each labor category used in this analysis were referencing the Bureau of Labor Statistics report on Occupational Employment and Wages, May 2018 (Bureau of Labor Statistics report on Occupational Employment and Wages, May 2018 Available at: *https://www.bls.gov/oes/2018/may/oes_nat.htm*). We also have calculated the cost of overhead at 100 percent of the mean hourly wage, in line with the Hospital Inpatient and Hospital Outpatient Quality Reporting programs (81 FR 57260 and 82 FR 59477, respectively).

Hospital Price Transparency final rule; 30 hours for a registered nurse ($72.60/hour) to capture the necessary clinical input to comply with reporting the CMS-specified and hospital-selected shoppable services. (150 hours = 5 hours + 5 hours + 80 hours + 30 hours + 30 hours; totaling a cost of $11,898.60 ($693.40 + $595.60 + $5,920 + $2,511.60 + $2,178) per hospital.)

In this final rule, we finalized the requirement for hospitals to calculate and report on the Medicare cost report the median payer-specific negotiated charge by MS–DRG using the payer-specific negotiated charge data that hospitals are required to make public under the Hospital Price Transparency final rule. Therefore, the burden associated with establishing and updating the payer-specific negotiated charges has already been assumed. Specifically, given that the payer-specific negotiated charge is one of the five types of standard charges (gross charges, payer-specific negotiated charges, de-identified minimum negotiated charges, de-identified maximum negotiated charges, and discounted cash prices) that the Hospital Price Transparency final rule requires that hospitals estimate, update and make public, we believe that a fraction of the estimated 80 hours of burden associated with gathering, compiling, and posting, that required information in the form and manner specified in the Hospital Price Transparency final rule, would support the reporting efforts in this final rule. We heard from commenters that additional effort would be necessary to crosswalk discharges to an MS–DRG, specifically if a hospital is not familiar with the MS–DRG classification system, for use in calculating the median payer-specific negotiated charges. In recognition of this additional effort, we have increased the burden hours associated with reporting the median payer-specific negotiated charge. However, we note that much of the burden associated with gathering and compiling the payer-specific negotiated charge is captured initially in the Hospital Price Transparency burden estimate provided in that final rule. We refer readers to the Hospital Price Transparency final rule for the full burden assessment analysis for the requirements set forth within that final rule (84 FR 65524).

We maintain that the estimated burden associated with completing the Worksheet S–12 would be 20 hours (5 hours for recordkeeping and 15 hours for reporting), given the minimized burden since hospitals would already have collected the payer-specific negotiated charge data and would only then need to calculate the median payer-specific negotiated charge by MS–DRG for payers that are MA organizations.

Further instructions for the reporting and complying with this market-based data collection requirement on the Medicare cost report will be discussed in a forthcoming revision of the ICR request currently approved under OMB control number 0938–0050, expiration date March 31, 2022.

12. Summary of All Burden in This Final Rule

The following chart reflects the total burden and associated costs for the provisions included in this final rule.

Information Collection Requests	Burden Hours Increase/Decrease (+/-)*	Cost (+/-)*
Hospital Inpatient Quality Reporting Program	+6,533	+$253,480
Hospital Value-Based Purchasing Program[1]	N/A	N/A
Hospital-Acquired Condition Reduction Program	-14,400	-$558,720
Hospital Readmissions Reduction Program[2]	N/A	N/A
Promoting Interoperability Programs	-44	+$24,024
PPS-Exempt Cancer Hospital Quality Reporting Program[3]	N/A	+$86,388
Payer-Specific Negotiated Charges Data Collection	+63,780	+$4,315,993
TOTAL	**+55,869**	**+$4,121,165**

* Numbers rounded.

[1] Because the FY 2023 Hospital VBP Program will use data that are also used to calculate quality measures in other programs and Medicare fee-for-service claims data that hospitals are already submitting to CMS for payment purposes, the program does not anticipate any change in burden associated with this final rule.

[2] Because the Hospital Readmissions Reduction Program measures are all collected via Medicare fee-for service- claims that hospitals are already submitting to CMS for payment purposes, there is no unique information collection burden associated with the program.

[3] The increase in cost is a function of the Bureau of Labor Statistics' updated labor wage.

C. Waiver of the 60-Day Delay in Effective Date for the Final Rule

We are committed to ensuring that we fulfill our statutory obligation to update the IPPS and LTCH PPS as required by law and we have worked diligently in that regard. We ordinarily provide a 60-day delay in the effective date of final rules after the date they are issued in accord with the Congressional Review Act (CRA) (5 U.S.C. 801(a)(3)). However, section 808(2) of the CRA provides that, if an agency finds good cause that notice and public procedure are impracticable, unnecessary, or contrary to the public interest, the rule shall take effect at such time as the agency determines. In addition, the Administrative Procedure Act, (5 U.S.C. 553(d)), ordinarily requires a 30-day delay in the effective date of a final rule from the date of its public availability in the **Federal Register**. This 30-day delay in effective date can be waived, however, if an agency finds good cause to support an earlier effective date. Section 1871(e)(1)(B)(ii) of the Act, also permits a substantive rule to take effect less than 30 days after its publication if the Secretary finds that waiver of the 30-day period is necessary to comply with statutory requirements or that the 30-day delay would be contrary to the public interest.

The United States is responding to an outbreak of respiratory disease caused by a novel (new) coronavirus that has now been detected in more than 190 locations internationally, including in

all 50 States and the District of Columbia. The virus has been named ''SARS–CoV–2'' and the disease it causes has been named ''coronavirus disease 2019'' (abbreviated ''COVID–19'').

On January 30, 2020, the International Health Regulations Emergency Committee of the World Health Organization (WHO) declared the outbreak a ''Public Health Emergency of international concern'' (PHEIC). On January 31, 2020, Health and Human Services Secretary, Alex M. Azar II, declared a PHE for the United States to aid the nation's healthcare community in responding to COVID–19. On March 11, 2020, the WHO publicly characterized COVID–19 as a pandemic. On March 13, 2020, the President of the United States declared the COVID–19 outbreak a national emergency.

The COVID–19 PHE has required the agency to divert energy and personnel resources that would otherwise have been used to complete this IPPS and LTCH PPS payment rule to other priority matters, including three interim final rules necessary because of the PHE. (See 85 FR 19230 (April 6, 2020); 85 FR 27550 (May 8, 2020); and the interim final rule scheduled to appear in the September 2, 2020 **Federal Register**.) Although we have devoted significant resources to completing the IPPS and LTCH PPS payment rule, it was impracticable for CMS to complete the work needed on the rule in accordance with our usual schedule for this rulemaking or in sufficient time to ensure a full 60-day period of public notice prior to the next fiscal year that begins on October 1, 2020. The IPPS and LTCH PPS payment rule is necessary to annually review and update the payment systems, and it is critical to ensure that the payment policies for these systems are effective on the first day of the fiscal year to which they are intended to apply. Therefore, in light of the COVID–19 PHE, and the resulting strain on CMS's resources, it was impracticable for CMS to publish this final rule either 30 or 60 days prior to the beginning of the upcoming fiscal year, and CMS has determined that, for good cause, it would be contrary to the public interest to delay the effective date of this final rule for any longer than 28 days.

List of Subjects

42 CFR Part 405

Administrative practice and procedure, Health facilities, Health professions, Kidney diseases, Medical devices, Medicare, Reporting and recordkeeping requirements, Rural areas, X-rays.

42 CFR Part 412

Administrative practice and procedure, Health facilities, Medicare, Puerto Rico, Reporting and recordkeeping requirements.

42 CFR Part 413

Health facilities, Kidney diseases, Medicare, Puerto Rico, Reporting and recordkeeping requirements.

42 CFR Part 417

Administrative practice and procedure, Grant programs—health, Health care, Health insurance, Health maintenance organizations (HMO), Loan programs—health, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 476

Grant programs—health, Health care, Health facilities, Health professions, Quality Improvement Organizations (QIOs), Reporting and recordkeeping requirements.

42 CFR Part 480

Health care, Health professions, Health records, Penalties, Privacy, Quality Improvement Organizations (QIOs), Reporting and recordkeeping requirements.

42 CFR Part 484

Health facilities, Health professions, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 495

Administrative practice and procedure, Health facilities, Health maintenance organizations (HMO), Health professions, Health records, Medicaid, Medicare, Penalties, Privacy, Reporting and recordkeeping requirements.

For the reasons set forth in the preamble, the Centers for Medicare and Medicaid Services amends 42 CFR chapter IV as set forth below:

PART 405—FEDERAL HEALTH INSURANCE FOR THE AGED AND DISABLED

■ 1. The authority citation for part 405 continues to read as follows:

Authority: 42 U.S.C. 263a, 405(a), 1302, 1320b-12, 1395x, 1395y(a), 1395ff, 1395hh, 1395kk, 1395rr, and 1395ww(k).

■ 2. Section 405.1801 is amended—
■ a. In paragraph (a), in the definition of ''Date of receipt''—
■ i. By revising paragraphs (1)(ii) and (2) introductory text;
■ ii. In paragraph (2)(i) by removing ''; or'' and adding a period in its place; and
■ iii. By adding paragraph (2)(iii); and
■ b. By revising paragraph (d) introductory text.

The revisions and addition read as follows:

§ 405.1801 Introduction.

(a) * * *

Date of receipt * * *

(1) * * *

(ii) For purposes of a contractor hearing, if no contractor hearing officer is appointed (or none is currently presiding), the date of receipt of materials sent to the contractor hearing officer (as permitted under paragraph (d) of this section) is presumed to be, as applicable, the date that the contractor stamps ''Received'' on the materials, or the date of electronic delivery.

* * * * *

(2) *A reviewing entity.* For purposes of this definition, a reviewing entity is deemed to include the Office of the Attorney Advisor. The determination as to the date of receipt by the reviewing entity to which the document or other material was submitted (as permitted under paragraph (d) of this section) is final and binding as to all parties to the appeal. The date of receipt of documents by a reviewing entity is presumed to be, as applicable, one of the following dates:

* * * * *

(iii) Of electronic delivery. *In writing* or *written* means a hard copy or electronic submission (subject to the restrictions in paragraph (d) of this section), as applicable throughout this subpart.

* * * * *

(d) *Method for submissions and calculating time periods and deadlines.* Except for subpoena requests being sent to a nonparty under § 405.1857(c), the reviewing entity may prescribe the method(s) by which a party must make a submission, including the requirement to use an electronic filing system for submission of documents. Such methods or instructions apply to any period of time or deadline prescribed or allowed under this subpart (for example, requests for appeal under §§ 405.1811(b), 405.1835(b), and 405.1837(c) and (e)) or authorized by a reviewing entity. In computing any period of time or deadline prescribed or allowed under this subpart or authorized by a reviewing entity the following principles are applicable:

* * * * *

§ 405.1811 [Amended]

■ 3. Section 405.1811 is amended in paragraph (c)(1) by removing the phrase

''the date the contractor stamped'' and adding in its place is the phrase ''the date of electronic delivery, or the date the contractor stamped''.

§ 405.1813 [Amended]

■ 4. Section 405.1813 is amended—
■ a. In paragraph (d) by removing the phrase ''must give prompt written notice to the provider, and mail a copy'' and adding in its place is the phrase ''must send prompt written notice to the provider, and send a copy''; and
■ b. In paragraph (e)(1) by removing the phrase ''promptly mails the decision'' and adding in its place is the phrase ''promptly sends the decision''.

§ 405.1814 [Amended]

■ 5. Section 405.1814 is amended in paragraph (c)(2) by removing the phrase ''must be mailed promptly'' and adding in its place is the phrase ''must be sent promptly''.

§ 405.1819 [Amended]

■ 6. Section 405.1819 is amended by removing the phrase ''prior to the mailing of notice'' and adding in its place is the phrase ''prior to the sending of notice''.

§ 405.1821 [Amended]

■ 7. Section 405.1821 is amended—
■ a. In paragraph (c)(1) by removing the phrase ''be mailed promptly'' and adding in its place is the phrase ''be sent promptly''; and
■ b. In paragraph (c)(3)(iii)(B) by removing the phrase ''Issue and mail'' and adding in its place is the phrase ''Issue and send''.

§ 405.1831 [Amended]

■ 8. Section 405.1831 is amended in paragraph (d) by removing the phrase ''must be mailed'' and adding in its place is the phrase ''must be sent''.

§ 405.1834 [Amended]

■ 9. Section 405.1834 is amended in paragraph (e)(3) by removing the phrase ''must be mailed'' and adding in its place is the phrase ''must be sent''.

§ 405.1835 [Amended]

■ 10. Section 405.1835 is amended—
■ a. In paragraph (b) introductory text by removing ''in writing to the Board'', ''(b)(1) through (b)(4)'', and ''(b)(1), (b)(2), or (b)(3)'' and adding in their places ''in writing in the manner prescribed by the Board'', ''(b)(1) through (4)'', and ''(b)(1), (2), or (3)'', respectively.
■ b. In paragraph (d) introductory text by removing ''in writing to the Board'', ''(d)(1) through (d)(4)'', and ''(d)(1), (d)(2), or (d)(3)'' and adding in their places ''in writing in the manner prescribed by the Board'', ''(d)(1) through (4)'', and ''(d)(1), (2), or (3)'', respectively.

§ 405.1836 [Amended]

■ 11. Section 405.1836 is amended—
■ a. In paragraph (d) by removing the phrase ''and mail a copy'' and adding in its place is the phrase ''and send a copy''; and
■ b. In paragraph (e)(1) by removing the phrase ''of this subpart'' in two places and removing the phrase ''must be mailed'' and adding in its place is the phrase ''must be sent''.

§ 405.1840 [Amended]

■ 12. Section 405.1840 is amended paragraph (c)(2) by removing the phrase ''of this subpart'' in two places and removing the phrase ''must be mailed'' and adding in its place is the phrase ''must be sent''.

■ 13. Section 405.1843 is amended—
■ a. By redesignating paragraph (a) as paragraph (a)(1);
■ b. In newly redesignated paragraph (a)(1) by removing the phrase ''of this subpart'';
■ c. By adding paragraph (a)(2); and
■ d. In paragraph (d)(2) by removing the phrase ''promptly mail copies'' and adding in its place is the phrase ''promptly send copies''.

The addition reads as follows:

§ 405.1843 Parties to proceedings in a Board appeal.

(a) * * *

(2) All parties to a Board appeal are to familiarize themselves with the instructions for handling a Provider Reimbursement Review Board (PRRB) appeal, including any and all requirements related to the electronic/online filing of documents.

* * * * *

§ 405.1845 [Amended]

■ 14. Section 405.1845 is amended in paragraph (h)(2)(iii) by removing the phrase ''Mail the remand'' and adding in its place is the phrase ''Send the remand''.

§ 405.1849 [Amended]

■ 15. Section 405.1849 is amended by removing the phrase ''mail written notice thereof to the parties at their last known addresses,'' and adding in its place is the phrase ''send notice thereof to the parties' contact information on file,''.

§ 405.1851 [Amended]

■ 16. Section 405.1851 is amended by removing the phrase ''mailing of notice'' and adding in its place is the phrase ''issuing of the notice''.

§ 405.1853 [Amended]

■ 17. Section 405.1853 is amended in paragraph (e)(5)(vi)(A) by removing the phrase ''issue and mail'' and adding in its place is the phrase ''issue and send''.

■ 18. Section 405.1857 is amended—
■ a. By revising paragraph (c)(1) introductory text; and
■ b. In paragraph (c)(4)(iii)(A) by removing the phrase ''mail promptly to each party'' and adding in its place is the phrase ''send promptly to each party''.

The revision reads as follows:

§ 405.1857 Subpoenas.

* * * * *

(c) * * *

(1) *Subpoena requests.* The requesting party must send any subpoena request submitted to the Board promptly to the party or nonparty subject to the subpoena, and to any other party to the Board appeal. If the subpoena request is being sent to a nonparty subject to the subpoena, then the subpoena request must be sent by certified mail. The request must—

* * * * *

§ 405.1868 [Amended]

■ 19. Section 405.1868 is amended in paragraph (d)(1) by removing the phrase ''must be mailed'' and adding in its place is the phrase ''must be sent''.

§ 405.1871 [Amended]

■ 20. Section 405.1871 is amended in paragraph (a)(5) by removing the phrase ''must be mailed'' and adding in its place is the phrase ''must be sent''.

§ 405.1875 [Amended]

■ 21. Section 405.1875 is amended—
■ a. In paragraph (c)(1)(iv) by removing the phrase ''must be mailed'' and adding in its place is the phrase ''must be sent''; and
■ b. In paragraph (e)(2) by removing the phrase ''mail a copy'' and adding in its place is the phrase ''send a copy''.

§ 405.1885 [Amended]

■ 22. Section 405.1885 is amended—
■ a. In paragraph (b)(1) by removing the phrase ''of this subpart'' and by removing the term ''mailed'' and adding in its place the term ''sent'' each time it appears; and
■ b. In paragraph (b)(2)(i) by removing the phrase ''request to reopen is conclusively presumed to be the date of delivery by a nationally-recognized next-day courier, or the date stamped ''Received'' by CMS, the contractor or

the reviewing entity (where a nationally-recognized next-day courier is not employed),'' and adding in its place the phrase ''request to reopen is determined by applying the date of receipt presumption criteria for reviewing entities defined in § 405.1801(a),''.

PART 412—PROSPECTIVE PAYMENT SYSTEMS FOR INPATIENT HOSPITAL SERVICES

■ 23. The authority citation for part 412 continues to read as follows:

Authority: 42 U.S.C. 1302 and 1395hh.

■ 24. Section 412.1 is amended by revising paragraph (a)(1) to read as follows:

§ 412.1 Scope of part.

(a) * * *

(1) This part implements sections 1886(d) and (g) of the Act by establishing a prospective payment system for the operating costs of inpatient hospital services furnished to Medicare beneficiaries in cost reporting periods beginning on or after October 1, 1983, and a prospective payment system for the capital-related costs of inpatient hospital services furnished to Medicare beneficiaries in cost reporting periods beginning on or after October 1, 1991.

(i) Under these prospective payment systems, payment for the operating and capital-related costs of inpatient hospital services furnished by hospitals subject to the systems (generally, short-term, acute-care hospitals) is made on the basis of prospectively determined rates and applied on a per discharge basis.

(ii) Payment for other costs related to inpatient hospital services (organ acquisition costs incurred by hospitals with approved organ transplantation centers, the costs of qualified nonphysician anesthetist's services, as described in § 412.113(c), direct costs of approved nursing and allied health educational programs, costs related to hematopoietic stem cell acquisition for the purpose of an allogeneic hematopoietic stem cell transplant as described in § 412.113(e)) is made on a reasonable cost basis.

(iii) Payment for the direct costs of graduate medical education is made on a per resident amount basis in accordance with §§ 413.75 through 413.83 of this chapter.

(iv) Additional payments are made for outlier cases, bad debts, indirect medical education costs, and for serving a disproportionate share of low-income patients.

(v) Under either prospective payment system, a hospital may keep the difference between its prospective payment rate and its operating or capital-related costs incurred in furnishing inpatient services, and the hospital is at risk for inpatient operating or inpatient capital-related costs that exceed its payment rate.

* * * * *

■ 25. Section 412.2 is amended by adding paragraph (e)(6) to read as follows:

§ 412.2 Basis of payment.

* * * * *

(e) * * *

(6) For cost reporting periods beginning on or after October 1, 2020, the costs of allogenic hematopoietic stem cell acquisition, as described in § 412.113(e), for the purpose of an allogeneic hematopoietic stem cell transplant.

* * * * *

■ 26. Section 412.64 is amended by adding paragraph (e)(5) to read as follows:

§ 412.64 Federal rates for inpatient operating costs for Federal fiscal year 2005 and subsequent fiscal years.

* * * * *

(e) * * *

(5) CMS makes an adjustment to the standardized amount to ensure that the reasonable cost based payments for allogeneic hematopoietic stem cell acquisition costs are made in a manner so that aggregate payments to hospitals are not affected.

* * * * *

§ 412.82 [Amended]

■ 27. Section 412.82 is amended in paragraph (c) by removing the reference ''§ 412.86'' and adding in its place ''§ 412.83''.

■ 28. Section 412.85 and an undesignated center heading preceding the section are added to read as follows:

Payment Adjustment for Certain Clinical Trial Cases and Expanded Access Use Immunotherapy

§ 412.85 Payment adjustment for certain clinical trial and expanded access use immunotherapy cases.

(a) *General rule.* For discharges occurring on or after October 1, 2020, the amount of payment for a discharge described in paragraph (b) of this section is adjusted as described in paragraph (c) of this section.

(b) *Discharges subject to payment adjustment.* Payment is adjusted in accordance with paragraph (c) of this section for discharges assigned to MS–DRG 018 involving expanded access use of immunotherapy, or that are part of an applicable clinical trial as determined by CMS based on the reporting of a diagnosis code indicating the encounter is part of a clinical research program on the claim for the discharge.

(c) *Adjustment.* The DRG weighting factor determined under § 412.60(b) is adjusted by a factor that reflects the average cost for cases to be assigned to MS–DRG 018 that involve expanded access use of immunotherapy, or are part of an applicable clinical trial, to the average cost for cases to be assigned to MS–DRG 018 that do not involve expanded access use of immunotherapy and are not part of an applicable clinical trial.

§ 412.86 [Redesignated as § 412.83]

■ 29. Section 412.86 is redesignated as § 412.83.

§ 412.86 [Added and Reserved]

■ 30. New reserved § 412.86 is added.

■ 31. Section 412.87 is amended by revising paragraphs (c)(1), (d) introductory text, (d)(1), the paragraph (e) subject heading, and (e)(2) and by adding paragraph (e)(3) to read as follows:

§ 412.87 Additional payment for new medical services and technologies: General provisions.

* * * * *

(c) * * *

(1) A new medical device is part of the Food and Drug Administration's (FDA) Breakthrough Devices Program and has received marketing authorization for the indication covered by the Breakthrough Device designation.

* * * * *

(d) *Eligibility criteria for alternative pathway for certain antimicrobial products.* (1)(i) A new medical product is designated by FDA as a Qualified Infectious Disease Product and has received marketing authorization for the indication covered by the Qualified Infectious Disease Product designation; or

(ii) For discharges occurring on or after October 1, 2021, a new medical product is approved under FDA's Limited Population Pathway for Antibacterial and Antifungal Drugs (LPAD) and used for the indication approved under the LPAD pathway.

* * * * *

(e) *Announcement of determinations and deadline for consideration of new medical service or technology applications, and conditional approval for certain antimicrobial products.*

* * *

(2) Except as provided for in paragraph (e)(3) of this section, CMS

only considers, for add-on payments for a particular fiscal year, an application for which the new medical service or technology has received FDA marketing authorization by July 1 prior to the particular fiscal year.

(3) A technology for which an application is submitted under an alternative pathway for certain antimicrobial products under paragraph (d) of this section that does not receive FDA marketing authorization by the July 1 deadline specified in paragraph (e)(2) of this section may be conditionally approved for the new technology add-on payment for a particular fiscal year, effective for discharges beginning in the first quarter after FDA marketing authorization is granted, provided that FDA marketing authorization is granted before July 1 of the fiscal year for which the applicant applied for new technology add-on payments.

■ 32. Section 412.88 is amended—

■ a. In paragraph (a)(2)(ii)(A) introductory text by removing the reference ''paragraph (a)(2)(ii)(*2*) of this section'' and adding in its place ''paragraph (a)(2)(ii)(B) of this section'';

■ b. By revising paragraphs (a)(2)(ii)(B) introductory text and (b)(2).

The revisions read as follows:

§ 412.88 Additional payment for new medical service or technology.

(a) * * *

(2) * * *

(ii) * * *

(B) For a medical product designated by FDA as a Qualified Infectious Disease Product or, for discharges occurring on or after October 1, 2020, for a product approved under FDA's Limited Population Pathway for Antibacterial and Antifungal Drugs, if the costs of the discharge (determined by applying the operating cost-to-charge ratios as described in § 412.84(h)) exceed the full DRG payment, an additional amount equal to the lesser of—

* * * * *

(b) * * *

(2) *For discharges occurring on or after October 1, 2019.* Unless a discharge case qualifies for outlier payment under § 412.84, Medicare will not pay any additional amount beyond the DRG payment plus—

(i) 65 percent of the estimated costs of the new medical service or technology;

(ii) For a medical product designated by FDA as a Qualified Infectious Disease Product, 75 percent of the estimated costs of the new medical service or technology; or

(iii) For discharges occurring on or after October 1, 2020, for a product approved under FDA's Limited Population Pathway for Antibacterial and Antifungal Drugs, 75 percent of the estimated costs of the new medical service or technology.

■ 32. Section 412.92 is amended by revising paragraph (c)(3) to read as follows:

§ 412.92 Special treatment: Sole community hospitals.

* * * * *

(c)* * *

(3) The term *service area* means the area from which a hospital draws at least 75 percent of its inpatients during the most recent 12-month cost reporting period ending before it applies for classification as a sole community hospital. If the most recent cost reporting period ending before the hospital applies for classification as a sole community hospital is for less than 12 months, the hospital's most recent 12-month or longer cost reporting period before the short period is used.

* * * * *

■ 33. Section 412.96 is amended by adding paragraph (c)(2)(iii) to read as follows:

§ 412.96 Special treatment: Referral centers.

* * * * *

(c) * * *

(2) * * *

(iii) If the hospital's cost reporting period that began during the same fiscal year as the cost reporting periods used to compute the regional median discharges under paragraph (i) of this section is for less than 12 months or longer than 12 months, the hospital's number of discharges for that cost reporting period will be annualized to estimate the total number of discharges for a 12-month cost reporting period.

* * * * *

■ 34. Section 412.104 is amended by revising paragraph (a) to read as follows:

§ 412.104 Special treatment: Hospitals with high percentage of ESRD discharges.

(a) *Criteria for classification.* CMS provides an additional payment to a hospital for inpatient services provided to ESRD beneficiaries who receive a dialysis treatment during a hospital stay, if the hospital has established that ESRD beneficiary discharges, excluding discharges classified into any of the following MS–DRGs, where the beneficiary received dialysis services during the inpatient stay, constitute 10 percent or more of its total Medicare discharges:

(1) MS–DRG 019 (Simultaneous Pancreas/Kidney Transplant with Hemodialysis).

(2) MS–DRGs 650 and 651 (Kidney Transplant with Hemodialysis with MCC, without MCC, respectively).

(3) MS–DRGs 682, 683, and 684 (Renal Failure with MCC, with CC, without CC/MCC, respectively).

* * * * *

§ 412.105 [Amended]

■ 35. Section 412.105 is amended in paragraph (f)(1)(ix)(A)—

■ a. By removing the phrase ''to reflect residents added because'' and adding in its place the phrase ''to reflect displaced residents added because'' each time it appears.

■ b. By removing the citations ''§§ 413.79(h)(1) and (h)(2)'', ''§§ 413.79(h)(1) and (h)(3)(ii)'', and ''§§ 413.79(h)(1) and (h)(3)(i)'' and adding in their places the citations ''§ 413.79(h)(1) and (2)'', ''§ 413.79(h)(1) and (h)(3)(ii)'', and ''§ 413.79(h)(1) and (h)(3)(i)'', respectively.

■ 36. Section 412.106 is amended by removing the semicolon at the end of paragraph (g)(1)(iii)(C)(*6*) and adding a period in its place and adding paragraphs (g)(1)(iii)(C)(*7*) and (*8*).

The additions read as follows:

§ 412.106 Special treatment: Hospitals that serve a disproportionate share of low-income patients.

* * * * *

(g) * * *

(1) * * *

(iii) * * *

(C) * * *

(*7*) For fiscal year 2021, CMS will base its estimates of the amount of hospital uncompensated care on data on uncompensated care costs, defined as charity care costs plus non-Medicare and non-reimbursable Medicare bad debt costs from 2017 cost reports from the most recent Hospital Cost Report Information System (HCRIS) database extract, except that, for Puerto Rico hospitals and Indian Health Service or Tribal hospitals, CMS will base its estimates on utilization data for Medicaid and Medicare Supplemental Security Income (SSI) patients, as determined by CMS in accordance with paragraphs (b)(2)(i) and (b)(4) of this section, using data on Medicaid utilization from 2013 cost reports from the most recent HCRIS database extract and the most recent available year of data on Medicare SSI utilization (or, for Puerto Rico hospitals, a proxy for Medicare SSI utilization data).

(*8*) For each subsequent fiscal year, for all eligible hospitals, except Indian Health Service and Tribal hospitals and Puerto Rico hospitals, CMS will base its estimates of the amount of hospital uncompensated care on data on

uncompensated care costs, defined as charity care costs plus non-Medicare and non-reimbursable Medicare bad debt costs from cost reports from the most recent cost reporting year for which audits have been conducted.

* * * * *

■ 37. Section 412.113 is amended by adding paragraph (e) to read as follows:

§ 412.113 Other payments.

* * * * *

(e) *Allogeneic hematopoietic stem cell acquisition.* For cost reporting periods beginning on or after October 1, 2020, in the case of a subsection (d) hospital that furnishes an allogeneic hematopoietic stem cell transplant to an individual, payment to such hospital for hematopoietic stem cell acquisition costs is made on a reasonable cost basis.

(1) An allogeneic hematopoietic stem cell transplant is the intravenous infusion of hematopoietic cells derived from bone marrow, peripheral blood stem cells, or cord blood, but not including embryonic stem cells, of a donor to an individual that are or may be used to restore hematopoietic function in such individual having an inherited or acquired deficiency or defect.

(2) Allogeneic hematopoietic stem cell acquisition costs recognized under this paragraph (e) are costs of acquiring hematopoietic stem cells from a donor. These costs are as follows:

(i) Registry fees from a national donor registry described in 42 U.S.C. 274k, if applicable, for stem cells from an unrelated donor.

(ii) Tissue typing of donor and recipient.

(iii) Donor evaluation.

(iv) Physician pre-admission/pre-procedure donor evaluation services.

(v) Costs associated with the collection procedure (for example, general routine and special care services, procedure/operating room and other ancillary services, apheresis services), and transportation costs of stem cells if the recipient hospital incurred or paid such costs.

(vi) Post-operative/post-procedure evaluation of donor.

(vii) Preparation and processing of stem cells derived from bone marrow, peripheral blood stem cells, or cord blood (but not including embryonic stem cells).

(3) A subsection (d) hospital that furnishes inpatient allogeneic hematopoietic stem cell transplants is required to hold all allogeneic hematopoietic stem cell acquisition charges and bill them to Medicare using the appropriate revenue code, when the transplant occurs.

(4) A subsection (d) hospital must maintain an itemized statement that identifies, for all costs defined in paragraph (e)(2) of this section, the services furnished in collecting hematopoietic stem cells including all invoices or statements for purchased services for all donors and their service charges. Records must be for the person receiving the services (donor or recipient; for all donor sources, the hospital must identify the prospective recipient), and the recipient's Medicare beneficiary identification number.

■ 38. Section 412.115 is amended by revising paragraph (c) to read as follows:

§ 412.115 Additional payments.

* * * * *

(c) *QIO reimbursement for cost of sending requested patient records to the QIO.* An additional payment is made to a hospital in accordance with § 476.78 of this chapter for the costs of sending requested patient records to the QIO in electronic format, by facsimile, or by photocopying and mailing.

■ 39. Section 412.152 is amended by revising the definitions of ''Applicable period'' and ''Applicable period for dual eligibility'' to read as follows:

§ 412.152 Definitions for the Hospital Readmissions Reduction Program.

* * * * *

Applicable period is, with respect to a fiscal year, the 3-year period (specified by the Secretary) from which data are collected in order to calculate excess readmission ratios and adjustments under the Hospital Readmissions Reduction Program.

(1) The applicable period for FY 2022 is the 3-year period from July 1, 2017 through June 30, 2020; and

(2) Beginning with the FY 2023 program year, the applicable period is the 3-year period advanced by 1-year from the prior year's period from which data are collected in order to calculate excess readmission ratios and adjustments under the Hospital Readmissions Reduction Program, unless otherwise specified by the Secretary.

Applicable period for dual eligibility is the 3-year data period corresponding to the applicable period for the Hospital Readmissions Reduction Program, unless otherwise established by the Secretary.

* * * * *

■ 40. Section 412.170 is amended by revising the definition of ''Applicable period'' and adding definitions for ''CDC NHSN HAI'' and ''CMS PSI 90'' in alphabetical order to read as follows:

§ 412.170 Definitions for the Hospital-Acquired Condition Reduction Program.

* * * * *

Applicable period is, unless otherwise specified by the Secretary, with respect to a fiscal year, the 2-year period (specified by the Secretary) from which data are collected in order to calculate the total hospital-acquired condition score under the Hospital-Acquired Condition Reduction Program.

(1) The applicable period for FY 2022—

(i) For the CMS PSI 90 measure, is the 24-month period from July 1, 2018 through June 30, 2020; and

(ii) For the CDC NHSN HAI measures, is the 24-month period from January 1, 2019 through December 31, 2020.

(2) Beginning with the FY 2023 program year, the applicable period is the 24-month period advanced by 1-year from the prior fiscal year's period from which data are collected in order to calculate the total hospital-acquired condition score under the Hospital-Acquired Condition Reduction Program, unless otherwise specified by the Secretary.

CDC NHSN HAI stands for Centers for Disease Control and Prevention National Healthcare Safety Network healthcare-associated infection measures.

CMS PSI 90 stands for Patient Safety and Adverse Events Composite for Selected Indicators (modified version of PSI 90).

* * * * *

■ 41. Section 412.230 is amended by revising paragraph (d)(2)(ii)(A) to read as follows:

§ 412.230 Criteria for an individual hospital seeking redesignation to another rural area or an urban area.

* * * * *

(d) * * *

(2) * * *

(ii) * * *

(A) For hospital-specific data, the hospital must provide a weighted 3-year average of its average hourly wages using data from the CMS hospital wage survey used to construct the wage index in effect for prospective payment purposes.

(*1*) For the limited purpose of qualifying for geographic reclassification based on wage data from cost reporting periods beginning prior to FY 2000, a hospital may request that its wage data be revised if the hospital is in an urban area that was subject to the rural floor for the period during which the wage data the hospital wishes to revise were used to calculate its wage index.

(*2*) Once a hospital has accumulated at least 1 year of wage data in the

applicable 3-year average hourly wage period used by the MGCRB, the hospital is eligible to apply for reclassification based on those data.

* * * * *

■ 42. Section 412.278 is amended by revising paragraph (b)(1) to read as follows:

§ 412.278 Administrator's review.

* * * * *

(b) * * *

(1) The hospital's request for review must be in writing and sent to the Administrator, in care of the Office of the Attorney Advisor. The request must be received by the Administrator within 15 days after the date the MGCRB issues its decision. The hospital must also submit an electronic copy of its request for review to CMS's Hospital and Ambulatory Policy Group.

* * * * *

■ 43. Section 412.312 is amended by adding paragraph (f) to read as follows:

§ 412.312 Payment based on the Federal rate.

* * * * *

(f) *Payment adjustment for certain clinical trial or expanded access use immunotherapy cases.* For discharges occurring on or after October 1, 2020, in determining the payment amount under this section for certain clinical trial or expanded access use immunotherapy cases as described in § 412.85(b), the DRG weighting factor described in paragraph (b)(1) of this section is adjusted as described in § 412.85(c).

■ 44. Section 412.523 is amended by adding paragraph (c)(3)(xvii) to read as follows:

§ 412.523 Methodology for calculating the Federal prospective payment rates.

* * * * *

(c) * * *

(3) * * *

(xvii) *For long-term care prospective payment system fiscal year 2021 and subsequent fiscal years.* The long-term care hospital prospective payment system standard Federal payment rate for a long-term care hospital prospective payment system fiscal year is the standard Federal payment rate for the previous long-term care prospective payment system fiscal year updated by the percentage increase in the market basket index (as determined by CMS) less a multifactor productivity adjustment (as determined by CMS), and further adjusted, as appropriate, as described in paragraph (d) of this section.

* * * * *

■ 45. Section 412.622 is amended by revising paragraph (b)(2)(i) to read as follows:

§ 412.622 Basis of payment.

* * * * *

(b) * * *

(2) * * *

(i) Bad debts of Medicare beneficiaries, as provided in § 413.89 of this chapter; and

* * * * *

PART 413—PRINCIPLES OF REASONABLE COST REIMBURSEMENT; PAYMENT FOR END–STAGE RENAL DISEASE SERVICES; PROSPECTIVELY DETERMINED PAYMENT RATES FOR SKILLED NURSING FACILITIES; PAYMENT FOR ACUTE KIDNEY INJURY DIALYSIS

■ 46. The authority citation for part 413 continues to read as follows:

Authority: 42 U.S.C. 1302, 1395d(d), 1395f(b), 1395g, 1395l(a), (i), and (n), 1395x(v), 1395hh, 1395rr, 1395tt, and 1395ww.

■ 47. Section 413.20 is amended by revising paragraph (d)(3) to read as follows:

§ 413.20 Financial data and reports.

* * * * *

(d) * * *

(3)(i) The provider must furnish the contractor—

(A) Upon request, copies of patient service charge schedules and changes thereto as they are put into effect; and

(B) Its median payer-specific negotiated charge by MS–DRG for payers that are Medicare Advantage (MA) organizations, as applicable, and changes thereto as they are put into effect.

(ii) The contractor evaluates the charge schedules as specified in paragraph (d)(3)(i) of this section to determine the extent to which they may be used for determining program payment.

* * * * *

■ 48. Section 413.79 is amended by adding paragraph (h)(1)(iii) to read as follows:

§ 413.79 Direct GME payments: Determination of the weighted number of FTE residents.

* * * * *

(h) * * *

(1) * * *

(iii) *Displaced resident* means a resident who—

(A) Leaves a program after the hospital or program closure is publicly announced, but before the actual hospital or program closure;

(B) Is assigned to and training at planned rotations at another hospital who will be unable to return to his/her rotation at the closing hospital or program;

(C) Is accepted into a GME program at the closing hospital or program but has not yet started training at the closing hospital or program;

(D) Is physically training in the hospital on the day prior to or day of program or hospital closure; or

(E) Is on approved leave at the time of the announcement of closure or actual closure, and therefore, cannot return to his/her rotation at the closing hospital or program.

* * * * *

■ 49. Section 413.89 is amended by revising paragraphs (b)(1), (c), (e)(2), and (f) to read as follows:

§ 413.89 Bad debts, charity, and courtesy allowances.

* * * * *

(b) *Definitions*—(1) *Bad debts.* (i) For cost reporting periods beginning before October 1, 2020:

(A) ''Bad debts'' are amounts considered to be uncollectible from accounts and notes receivable that were created or acquired in providing services.

(B) ''Accounts receivable'' and ''notes receivable'' are designations for claims arising from the furnishing of services, and are collectible in money in the relatively near future.

(ii) For cost reporting periods beginning on or after October 1, 2020, ''bad debts'' are amounts considered to be uncollectible from patient accounts that were created or acquired in providing services and are categorized as implicit price concessions for cost reporting purposes and are recorded in the provider's accounting records as a component of net patient revenue.

* * * * *

(c) *Normal accounting treatment: Reduction in revenue.* (1) For cost reporting periods beginning before October 1, 2020:

(i) Bad debts, charity, and courtesy allowances represent reductions in revenue. The failure to collect charges for services furnished does not add to the cost of providing the services as these costs have already been incurred in the production of the services.

(ii) Medicare bad debts must not be written off to a contractual allowance account but must be charged to an expense account for uncollectible accounts.

(2) For cost reporting periods beginning on or after October 1, 2020:

(i) Bad debts, also known as ''implicit price concessions,'' charity, and

courtesy allowances represent reductions in revenue. The failure to collect charges for services furnished does not add to the cost of providing the services as these costs have already been incurred in the production of the services.

(ii) Medicare bad debts must not be written off to a contractual allowance account but must be recorded as an implicit price concession that results in a reduction in revenue.

* * * * *

(e) * * *

(2) The provider must be able to establish that reasonable collection efforts were made.

(i) *Non-indigent beneficiary.* A non-indigent beneficiary is a beneficiary who has not been determined to be categorically or medically needy by a State Medicaid Agency to receive medical assistance from Medicaid, nor have they been determined to be indigent by the provider for Medicare bad debt purposes. To be considered a reasonable collection effort for non-indigent beneficiaries, all of the following are applicable:

(A) A provider's collection effort or the effort of a collection agency acting on the provider's behalf, or both, to collect Medicare deductible or coinsurance amounts must consist of all of the following:

(*1*) Be similar to the collection effort put forth to collect comparable amounts from non-Medicare patients.

(*2*) For cost reporting periods beginning before October 1, 2020, involve the issuance of a bill to the beneficiary or the party responsible for the beneficiary's personal financial obligations on or shortly after discharge or death of the beneficiary.

(*3*) For cost reporting periods beginning on or after October 1, 2020, involve the issuance of a bill to the beneficiary or the party responsible for the beneficiary's personal financial obligations on or before 120 days after the latter of one of the following:

(*i*) The date of the Medicare remittance advice that results from processing the claim for services furnished to the beneficiary and generates the beneficiary's cost sharing amounts.

(*ii*) The date of the remittance advice from the beneficiary's secondary payer, if any.

(*iii*) The date of the notification that the beneficiary's secondary payer does not cover the service furnished to the beneficiary.

(*4*) Include other actions such as subsequent billings, collection letters, and telephone calls, emails, text messages, or personal contacts with this party.

(*5*)(*i*) Last at least 120 days after paragraph (e)(2)(i)(A)(*2*) or (*3*) of this section is met before being written off as uncollectible under paragraph (e)(3) of this section.

(*ii*) Start a new 120-day collection period each time a payment is received within a 120-day collection period.

(*6*) Maintaining and, upon request, furnishing verifiable documentation to its contractor that includes all of the following:

(*i*) The provider's bad debt collection policy which describes the collection process for Medicare and non-Medicare patients.

(*ii*) The patient account history documents which show the dates of various collection actions such as the issuance of bills to the beneficiary, follow-up collection letters, reports of telephone calls and personal contact, etc.

(*iii*) The beneficiary's file with copies of the bill(s) and follow-up notices.

(B) A provider that uses a collection agency to perform its collection effort must do all of the following:

(*1*) Reduce the beneficiary's account receivable by the gross amount collected.

(*2*) Include any fee charged by the collection agency as an administrative cost.

(*3*) Before claiming the unpaid amounts as a Medicare bad debt, cease all collection efforts, including the collection agency efforts, and ensure that the collection accounts have been returned to the provider from the agency.

(ii) *Indigent non-dual eligible beneficiary.* An indigent non-dual eligible beneficiary is a beneficiary who is determined to be indigent or medically indigent by the provider and is not eligible for Medicaid as categorically or medically needy.

(A) To determine a beneficiary to be an indigent non-dual eligible beneficiary, the provider—

(*1*) Must not use a beneficiary's declaration of their inability to pay their medical bills or deductibles and coinsurance amounts as sole proof of indigence or medical indigence;

(*2*) Must take into account the analysis of both the beneficiary's assets (only those convertible to cash and unnecessary for the beneficiary's daily living) and income;

(*3*) May consider extenuating circumstances that would affect the determination of the beneficiary's indigence or medical indigence which may include an analysis of both the beneficiary's liabilities and expenses, if indigence is unable to be determined under paragraph (e)(ii)(A)(*2*) of this section;

(*4*) Must determine that no source other than the beneficiary would be legally responsible for the beneficiary's medical bill, such as a legal guardian or State Medicaid program; and

(*5*) Must maintain and, upon request, furnish its contractor its indigence policy describing the method by which indigence or medical indigence is determined and all the verifiable beneficiary specific documentation which supports the provider's determination of each beneficiary's indigence or medical indigence.

(B) Once indigence is determined the bad debt may be deemed uncollectible without applying a collection effort under paragraph (e)(2)(i)(A) or (B) of this section.

(iii) *Indigent dual-eligible beneficiaries (including qualified Medicare beneficiaries).* Providers may deem Medicare beneficiaries indigent or medically indigent when such individuals have also been determined eligible for Medicaid under a State's Title XIX Medicaid program as either categorically needy individuals or medically needy individuals. To be considered a reasonable collection effort for dual-eligible beneficiaries:

(A) When a State permits a Medicare provider's Medicaid enrollment for the purposes of processing a beneficiary's claim, to determine the State's liability for the beneficiary's Medicare cost sharing, the provider—

(*1*) Must determine whether the State's Title XIX Medicaid Program (or a local welfare agency, if applicable) is responsible to pay all or a portion of the beneficiary's Medicare deductible or coinsurance amounts;

(*2*) Must submit a bill to its Medicaid/Title XIX agency (or to its local welfare agency) to determine the State's cost sharing obligation to pay all or a portion of the applicable Medicare deductible and coinsurance;

(*3*) Must submit the Medicaid remittance advice received from the State to its Medicare contractor;

(*4*) Must reduce allowable Medicare bad debt by any amount that the State is obligated to pay, either by statute or under the terms of its approved Medicaid State plan, regardless of whether the State actually pays its obligated amount to the provider; and

(*5*) May include the Medicare deductible or coinsurance amount, or any portion thereof that the State is not obligated to pay, and which remains unpaid by the beneficiary, as an allowable Medicare bad debt.

(B) When, through no fault of the provider, a provider does not receive a Medicaid remittance advice because the State does not permit a Medicare provider's Medicaid enrollment for the purposes of processing a beneficiary's claim, or because the State does not generate a Medicaid remittance advice, the provider—

(*1*) Must submit to its contractor, all of the following auditable and verifiable documentation:

(*i*) The State's Medicaid notification stating that the State has no legal obligation to pay the provider for the beneficiary's Medicare cost sharing.

(*ii*) A calculation of the amount the State owes the provider for Medicare cost sharing.

(*iii*) Verification of the beneficiary's eligibility for Medicaid for the date of service;

(*2*) Must reduce allowable Medicare bad debt by any amount the State is obligated to pay, regardless of whether the State actually pays its obligated amount to the provider; and

(*3*) May include the Medicare deductible or coinsurance amount, or any portion thereof that the State is not obligated to pay, and which remains unpaid by the beneficiary, as an allowable Medicare bad debt.

* * * * *

(f) *Reporting period for writing off bad debts and reporting of recoveries of bad debts reimbursed in prior periods.* For cost reporting periods beginning before, on, or after October 1, 2020, the deductible and coinsurance amounts uncollected from beneficiaries are to be written off and recognized as allowable bad debts in the cost reporting period in which the accounts are deemed to be worthless.

(1) Any payment on the account made by the beneficiary or a responsible party, after the write-off date but before the end of the cost reporting period, must be used to reduce the final bad debt for the account claimed in that cost report.

(2) In some cases an amount written off as a bad debt and reimbursed by the program in a prior cost reporting period may be recovered in a subsequent period.

(i) In situations described in this paragraph (f)(2), the recovered amount must be used to reduce the provider's reimbursable costs in the period in which the amount is recovered.

(ii) The amount of reduction in the period of recovery (as specified in paragraph (f)(2)(i) of this section) must not exceed the actual amount reimbursed by the program for the related bad debt in the applicable prior cost reporting period.

* * * * *

■ 50. Section 413.355 is revised to read as follows:

§ 413.355 Additional payment: QIO reimbursement for cost of sending records electronically or by photocopy and mailing.

An additional payment is made to a skilled nursing facility in accordance with § 476.78 of this chapter for the costs of sending requested patient records to the QIO in electronic format, by facsimile, or by photocopying and mailing.

PART 417—HEALTH MAINTENANCE ORGANIZATIONS, COMPETITIVE MEDICAL PLANS, AND HEALTH CARE PREPAYMENT PLANS

■ 51. The authority citation for part 417 is revised to read as follows:

Authority: 42 U.S.C. 300e, 300e-5, 300e-91302 and 1395hh), and 31 U.S.C. 9701.

■ 52. Section 417.536 is amended by revising paragraph (g) to read as follows:

§ 417.536 Cost payment principles.

* * * * *

(g) *Charity and courtesy allowances.* As specified in § 413.89 of this chapter, charity and courtesy allowances are deductions from revenue and may not be included as allowable costs.

* * * * *

PART 476—QUALITY IMPROVEMENT ORGANIZATION REVIEW

■ 53. The authority citation for part 476 is revised to read as follows:

Authority: 42 U.S.C. 1302 and 1395hh.

■ 54. Section 476.78 is amended—

■ a. In paragraph (b)(2)(i) by removing the phrase ''photocopy and deliver to the QIO'' and adding in its place ''deliver to the QIO'';

■ b. By revising paragraphs (b)(2)(ii) and (c);

■ c. By redesignating paragraph (d) as paragraph (f);

■ d. By adding new paragraph (d) and paragraph (e); and

■ e. By revising newly redesignated paragraph (f).

The revisions and additions read as follows:

§ 476.78 Responsibilities of providers and practitioners.

* * * * *

(b) * * *

(2) * * *

(ii) Except if granted a waiver as described in paragraph (d) of this section, send secure transmission of an electronic version of each requested patient record to the QIO.

(A) Providers and practitioners must deliver electronic versions of patient records within 14 calendar days of the request.

(B) A QIO is authorized to require the receipt of the patient records earlier than the 14-day timeframe if the QIO makes a preliminary determination that the review involves a potential gross and flagrant or substantial violation as specified in part 1004 of this title and circumstances warrant earlier receipt of the patient records.

(C) A practitioner's or provider's failure to comply with the request for patient records within the established timeframe may result in the QIO taking action in accordance with § 476.90.

* * * * *

(c) *Submission of patient records in electronic format.* Except as specified in paragraph (d) of this section, a provider or practitioner must deliver patient records requested by a QIO for the purpose of fulfilling one or more QIO functions, in an electronic format, using the mechanism specified by the QIO. In the absence of any mechanism specified by the requesting QIO, the requested patient records must be submitted using any CMS-approved mechanism.

(d) *Waiver from the requirement to submit patient records in an electronic format.* (1) A provider or practitioner that lacks the capability to submit requested patient records to the requesting QIO in an electronic format may request a waiver from the requirements in paragraph (c) of this section.

(i) For providers that are required to execute a written agreement with the QIO, a request for a waiver must be made during execution of the written agreement with the QIO.

(ii) Providers that are required to execute a written agreement with the QIO must request a waiver by notifying the QIO that they lack the capability to submit patient records in electronic format, if their lack of capability arises after the written agreement is executed.

(iii) Upon approval of the waiver, the waiver becomes part of the written agreement with the QIO.

(iv) A provider with an approved waiver may submit patient records by facsimile or by photocopying and mailing to the QIO.

(v) A provider with an approved waiver may be reimbursed by the QIO for patient records submitted by facsimile or by photocopying and mailing in accordance with paragraph (e)(2) of this section.

(vi) A QIO may not reimburse for any patient record submitted to the QIO by

facsimile or by photocopying and mailing if the provider does not have an approved waiver.

(2) Providers and practitioners that are not required to execute a written agreement with the QIO may request a waiver to be exempted from submitting patient records in an electronic format.

(i) Such providers and practitioners may request a waiver by notifying the QIO that they lack the capability to submit patient records in electronic format.

(ii) Upon approval of the waiver, a provider or practitioner may submit patient records by facsimile or by photocopying and mailing to the QIO.

(iii) Providers and practitioners with approved waivers may be reimbursed by the QIO for patient records submitted by facsimile or by photocopying and mailing in accordance with paragraph (e)(2) of this section.

(iv) A QIO may not reimburse for any patient records submitted to the QIO by facsimile or by photocopying and mailing, if the provider or practitioner does not have an approved waiver.

(e) *Reimbursement for submitting patient records to the QIO.* (1) For purposes of this paragraph (e), a *patient record* means all patient care data and other pertinent data or information relating to care or services provided to an individual patient in the possession of the provider or practitioner, as requested by a QIO for the purpose of performing one or more QIO functions.

(2) A QIO may reimburse a provider or practitioner for requested patient records submitted in an electronic format, at the rate of $3.00 per patient record.

(3) For a provider or practitioner that has an approved waiver under paragraph (d) of this section, a QIO may reimburse the provider or practitioner for requested records submitted by—

(i) Facsimile at the rate of $0.15 per page; or

(ii) Photocopying and mailing at the rate of $0.15 per page, plus the cost of first class postage.

(4) A QIO may only reimburse a provider or practitioner once for each patient record submitted, per request, even if a patient record is submitted using multiple formats, in fragments, or more than once in response to a single request by the QIO.

(f) *Appeals.* Reimbursement for the costs of submitting requested patient records to the QIO in electronic format, by facsimile or by photocopying and mailing is an additional payment to providers under the prospective payment system, as specified in §§ 412.115, 413.355, and 484.265 of this chapter. Appeals concerning these costs are subject to the review process specified in part 405, subpart R, of this chapter.

PART 480—ACQUISITION, PROTECTION, AND DISCLOSURE OF QUALITY IMPROVEMENT ORGANIZATION INFORMATION

■ 55. The authority citation for part 480 is revised to read as follows:

Authority: 42 U.S.C. 1302 and 1395hh.

■ 56. Section 480.111 is amended by revising paragraph (d) to read as follows:

§ 480.111 QIO access to records and information of institutions and practitioners.

* * * * *

(d)(1) When submitting patient records to the QIO under this section, the institution or practitioner must do so consistent with the requirements in § 476.78(c) and (d) of this chapter.

(2) Reimbursement to an institution or practitioner for the cost of providing patient records is paid in accordance with § 476.78(e) of this chapter.

PART 484—HOME HEALTH SERVICES

■ 57. The authority citation for part 484 continues to read as follows:

Authority: 42 U.S.C. 1302 and 1395hh.

■ 58. Section 484.265 is revised to read as follows:

§ 484.265 Additional payment.

An additional payment is made to a home health agency in accordance with § 476.78 of this chapter for the costs of sending requested patient records to the QIO in electronic format, by facsimile, or by photocopying and mailing.

PART 495—STANDARDS FOR THE ELECTRONIC HEALTH RECORD TECHNOLOGY INCENTIVE PROGRAM

■ 59. The authority citation for part 495 continues to read as follows:

Authority: 42 U.S.C. 1302 and 1395hh.

■ 60. Section 495.4 is amended in the definition of ''EHR reporting period for a payment adjustment year'' by adding paragraphs (2)(vi) and (3)(vi) to read as follows:

§ 495.4 Definitions.

* * * * *

EHR reporting period for a payment adjustment year. * * *

(2) * * *

(vi) The following are applicable for 2022:

(A) If an eligible hospital has not successfully demonstrated it is a meaningful EHR user in a prior year, the EHR reporting period is any continuous 90-day period within CY 2022 and applies for the FY 2023 and 2024 payment adjustment years. For the FY 2023 payment adjustment year, the EHR reporting period must end before and the eligible hospital must successfully register for and attest to meaningful use no later than October 1, 2022.

(B) If in a prior year an eligible hospital has successfully demonstrated it is a meaningful EHR user, the EHR reporting period is any continuous 90-day period within CY 2022 and applies for the FY 2024 payment adjustment year.

(3) * * *

(vi) The following are applicable for 2022:

(A) If a CAH has not successfully demonstrated it is a meaningful EHR user in a prior year, the EHR reporting period is any continuous 90-day period within CY 2022 and applies for the FY 2022 payment adjustment year.

(B) If in a prior year a CAH has successfully demonstrated it is a meaningful EHR user, the EHR reporting period is any continuous 90-day period within CY 2022 and applies for the FY 2022 payment adjustment year.

* * * * *

§ 495.20 [Amended]

■ 61. Section 495.20 is amended—

■ a. In paragraph (e)(5)(iii) by removing the reference ''45 CFR 170.304(g)'' and adding in its place the reference ''45 CFR 170.314(g)''; and

■ b. In paragraph (l)(11)(ii)(C)(*1*) by removing the reference ''45 CFR 107.314(b)(2)'' and adding in its place the reference ''45 CFR 170.314(b)(2)''.

■ 62. Section 495.24 to be amended by revising paragraph (e)(5)(iii)(B) and the paragraph (e)(6)(ii)(B) subject heading to read as follows:

§ 495.24 Stage 3 meaningful use objectives and measures for EPs, eligible hospitals and CAHs for 2019 and subsequent years.

* * * * *

(e) * * *

(5) * * *

(iii) * * *

(B) *Query of prescription drug monitoring program (PDMP) measure.* Subject to paragraph (e)(3) of this section, for at least one Schedule II opioid electronically prescribed using CEHRT during the EHR reporting period, the eligible hospital or CAH uses data from CEHRT to conduct a query of a Prescription Drug Monitoring Program (PDMP) for prescription drug history, except where prohibited and in accordance with applicable law. This

measure is worth 5 bonus points in CYs 2019, 2020, and 2021.

* * * * *

(6) * * *

(ii) * * *

■ 63. Section 495.104 is amended by revising paragraphs (c)(5)(viii)(B) through (D) to read as follows:

§ 495.104 Incentive payments to eligible hospitals.

* * * * *

(c) * * *

(5) * * *

(viii) * * *

(B) ¾ for FY 2019;

(C) ½ for FY 2020; and

(D) ¼ for FY 2021.

* * * * *

Dated: August 31, 2020

Seema Verma,

Administrator, Centers for Medicare and Medicaid Services.

Dated: September 1, 2020.

Alex M. Azar II,

Secretary, Department of Health and Human Services.

Note: The following Addendum and Appendixes will not appear in the Code of Federal Regulations.

Addendum—Schedule of Standardized Amounts, Update Factors, Rate of Increase- Percentages Effective With Cost Reporting Periods Beginning on or After October 1, 2020, and Payment Rates for LTCHs Effective for Discharges Occurring on or After October 1, 2020

I. Summary and Background

In this Addendum, we are setting forth a description of the methods and data we used to determine the prospective payment rates for Medicare hospital inpatient operating costs and Medicare hospital inpatient capital-related costs for FY 2021 for acute care hospitals. We also are setting forth the rate-of-increase percentage for updating the target amounts for certain hospitals excluded from the IPPS for FY 2021. We note that, because certain hospitals excluded from the IPPS are paid on a reasonable cost basis subject to a rate-of-increase ceiling (and not by the IPPS), these hospitals are not affected by the figures for the standardized amounts, offsets, and budget neutrality factors. Therefore, in this final rule, we are setting forth the rate-of-increase percentage for updating the target amounts for certain hospitals excluded from the IPPS that will be effective for cost reporting periods beginning on or after October 1, 2020.

In addition, we are setting forth a description of the methods and data we used to determine the LTCH PPS standard Federal payment rate that will be applicable to Medicare LTCHs for FY 2021.

In general, except for SCHs and MDHs, for FY 2021, each hospital's payment per discharge under the IPPS is based on 100 percent of the Federal national rate, also known as the national adjusted standardized amount. This amount reflects the national average hospital cost per case from a base year, updated for inflation.

SCHs are paid based on whichever of the following rates yields the greatest aggregate payment: the Federal national rate (including, as discussed in section IV.G. of the preamble of this final rule, uncompensated care payments under section 1886(r)(2) of the Act); the updated hospital-specific rate based on FY 1982 costs per discharge; the updated hospital-specific rate based on FY 1987 costs per discharge; the updated hospital-specific rate based on FY 1996 costs per discharge; or the updated hospital-specific rate based on FY 2006 costs per discharge.

Under section 1886(d)(5)(G) of the Act, MDHs historically were paid based on the Federal national rate or, if higher, the Federal national rate plus 50 percent of the difference between the Federal national rate and the updated hospital-specific rate based on FY 1982 or FY 1987 costs per discharge, whichever was higher. However, section 5003(a)(1) of Public Law 109–171 extended and modified the MDH special payment provision that was previously set to expire on October 1, 2006, to include discharges occurring on or after October 1, 2006, but before October 1, 2011. Under section 5003(b) of Public Law 109–171, if the change results in an increase to an MDH's target amount, we must rebase an MDH's hospital specific rates based on its FY 2002 cost report. Section 5003(c) of Public Law 109–171 further required that MDHs be paid based on the Federal national rate or, if higher, the Federal national rate plus 75 percent of the difference between the Federal national rate and the updated hospital specific rate. Further, based on the provisions of section 5003(d) of Public Law 109–171, MDHs are no longer subject to the 12-percent cap on their DSH payment adjustment factor. Section 50205 of the Bipartisan Budget Act of 2018 extended the MDH program for discharges on or after October 1, 2017 through September 30, 2022.

As discussed in section IV.B. of the preamble of this final rule, in accordance with section 1886(d)(9)(E) of the Act as amended by section 601 of the Consolidated Appropriations Act, 2016 (Pub. L. 114–113), for FY 2021, subsection (d) Puerto Rico hospitals will continue to be paid based on 100 percent of the national standardized amount. Because Puerto Rico hospitals are paid 100 percent of the national standardized amount and are subject to the same national standardized amount as subsection (d) hospitals that receive the full update, our discussion later in this section does not include references to the Puerto Rico standardized amount or the Puerto Rico-specific wage index.

As discussed in section II. of this Addendum, as we proposed, we are making we changes in the determination of the prospective payment rates for Medicare inpatient operating costs for acute care hospitals for FY 2021. In section III. of this Addendum, we discuss our policy changes for determining the prospective payment rates for Medicare inpatient capital-related costs for FY 2021. In section IV. of this Addendum, we are setting forth the rate-of-increase percentage for determining the rate-of-increase limits for certain hospitals excluded from the IPPS for FY 2021. In section V. of this Addendum, we discuss policy changes for determining the LTCH PPS standard Federal rate for LTCHs paid under the LTCH PPS for FY 2021. The tables to which we refer in the preamble of this final rule are listed in section VI. of this Addendum and are available via the internet on the CMS website.

II. Changes to Prospective Payment Rates for Hospital Inpatient Operating Costs for Acute Care Hospitals for FY 2021

The basic methodology for determining prospective payment rates for hospital inpatient operating costs for acute care hospitals for FY 2005 and subsequent fiscal years is set forth under § 412.64. The basic methodology for determining the prospective payment rates for hospital inpatient operating costs for hospitals located in Puerto Rico for FY 2005 and subsequent fiscal years is set forth under §§ 412.211 and 412.212. Below we discuss the factors we used to use for determining the prospective payment rates for FY 2021.

In summary, the standardized amounts set forth in Tables 1A, 1B, and 1C that are listed and published in section VI. of this Addendum (and available via the internet on the CMS website) reflect—

- Equalization of the standardized amounts for urban and other areas at the level computed for large urban hospitals during FY 2004 and onward, as provided for under section 1886(d)(3)(A)(iv)(II) of the Act.
- The labor-related share that is applied to the standardized amounts to give the hospital the highest payment, as provided for under sections 1886(d)(3)(E) and 1886(d)(9)(C)(iv) of the Act. For FY 2021, depending on whether a hospital submits quality data under the rules established in accordance with section 1886(b)(3)(B)(viii) of the Act (hereafter referred to as a hospital that submits quality data) and is a meaningful EHR user under section 1886(b)(3)(B)(ix) of the Act (hereafter referred to as a hospital that is a meaningful EHR user), there are four possible applicable percentage increases that can be applied to the national standardized amount. We refer readers to section IV.B. of the preamble of this final rule for a complete discussion on the FY 2021 inpatient hospital update. The table that follows shows these four scenarios:

FY 2021 APPLICABLE PERCENTAGE INCREASES FOR THE IPPS				
FY 2021	**Hospital Submitted Quality Data and is a Meaningful EHR User**	**Hospital Submitted Quality Data and is NOT a Meaningful EHR User**	**Hospital Did NOT Submit Quality Data and is a Meaningful EHR User**	**Hospital Did NOT Submit Quality Data and is NOT a Meaningful EHR User**
Market Basket Rate-of-Increase	2.4	2.4	2.4	2.4
Adjustment for Failure to Submit Quality Data under Section 1886(b)(3)(B)(viii) of the Act	0	0	-0.6	-0.6
Adjustment for Failure to be a Meaningful EHR User under Section 1886(b)(3)(B)(ix) of the Act	0	-1.8	0	-1.8
MFP Adjustment under Section 1886(b)(3)(B)(xi) of the Act	0	0	0	0
Applicable Percentage Increase Applied to Standardized Amount	**2.4**	**0.6**	**1.8**	**0**

We note that section 1886(b)(3)(B)(viii) of the Act, which specifies the adjustment to the applicable percentage increase for ''subsection (d)'' hospitals that do not submit quality data under the rules established by the Secretary, is not applicable to hospitals located in Puerto Rico.

In addition, section 602 of Public Law 114–113 amended section 1886(n)(6)(B) of the Act to specify that Puerto Rico hospitals are eligible for incentive payments for the meaningful use of certified EHR technology, effective beginning FY 2016, and also to apply the adjustments to the applicable percentage increase under section 1886(b)(3)(B)(ix) of the Act to Puerto Rico hospitals that are not meaningful EHR users, effective FY 2022. Accordingly, because the provisions of section 1886(b)(3)(B)(ix) of the Act are not applicable to hospitals located in Puerto Rico until FY 2022, the adjustments under this provision are not applicable for FY 2021.

- An adjustment to the standardized amount to ensure budget neutrality for DRG recalibration and reclassification, as provided for under section 1886(d)(4)(C)(iii) of the Act.
- An adjustment to ensure the wage index and labor-related share changes (depending on the fiscal year) are budget neutral, as provided for under section 1886(d)(3)(E)(i) of the Act (as discussed in the FY 2006 IPPS final rule (70 FR 47395) and the FY 2010 IPPS final rule (74 FR 44005). We note that section 1886(d)(3)(E)(i) of the Act requires that when we compute such budget neutrality, we assume that the provisions of section 1886(d)(3)(E)(ii) of the Act (requiring a 62-percent labor-related share in certain circumstances) had not been enacted.
- An adjustment to ensure the effects of geographic reclassification are budget neutral, as provided for under section 1886(d)(8)(D) of the Act, by removing the FY 2020 budget neutrality factor and applying a revised factor.
- A positive adjustment of 0.5 percent in FYs 2019 through 2023 as required under section 414 of the MACRA.
- An adjustment to ensure the effects of the Rural Community Hospital Demonstration program required under section 410A of Public Law 108–173 (as amended by sections 3123 and 10313 of Public Law 111–148, which extended the demonstration program for an additional 5 years and section 15003 of Public Law 114–255), are budget neutral as required under section 410A(c)(2) of Public Law 108–173.
- Beginning with FY 2021, as we proposed, we applied an adjustment to ensure the effects of the reasonable cost based payment for allogeneic hematopoietic stem cell acquisition costs under section 108 of the Further Consolidated Appropriations Act, 2020 (Pub. L. 116–94), are budget neutral as required under section 108 of Public Law 116–94.
- An adjustment to the standardized amount to implement in a budget neutral manner the increase in the wage index values for hospitals with a wage index value below the 25th percentile wage index value across all hospitals (as described in section III.N. of the preamble of this final rule).
- As discussed in this section and in section III.2.d of the preamble of this final rule, an adjustment to the standardized amount (using our exceptions and adjustments authority under section 1886(d)(5)(I)(i) of the Act) to implement in a budget neutral manner our transition for hospitals negatively impacted due to changes to the wage index (including the implementation of the revised OMB market labor delineations). We refer reader to section III.2.d. of the preamble of this final rule, for a detailed discussion.
- An adjustment to remove the FY 2020 outlier offset and apply an offset for FY 2021, as provided for in section 1886(d)(3)(B) of the Act.

For FY 2021, consistent with current law, as we proposed, we applied the rural floor budget neutrality adjustment to hospital wage indexes. Also, consistent with section 3141 of the Affordable Care Act, instead of applying a State-level rural floor budget neutrality adjustment to the wage index, we applied a uniform, national budget neutrality adjustment to the FY 2021 wage index for the rural floor, as we proposed.

A. Calculation of the Adjusted Standardized Amount

1. Standardization of Base-Year Costs or Target Amounts

In general, the national standardized amount is based on per discharge averages of adjusted hospital costs from a base period (section 1886(d)(2)(A) of the Act), updated and otherwise adjusted in accordance with the provisions of section 1886(d) of the Act. The September 1, 1983 interim final rule (48 FR 39763) contained a detailed explanation of how base-year cost data (from cost reporting periods ending during FY 1981) were established for urban and rural hospitals in the initial development of standardized amounts for the IPPS.

Sections 1886(d)(2)(B) and 1886(d)(2)(C) of the Act require us to update base-year per discharge costs for FY 1984 and then standardize the cost data in order to remove the effects of certain sources of cost variations among hospitals. These effects include case-mix, differences in area wage levels, cost-of-living adjustments for Alaska and Hawaii, IME costs, and costs to hospitals serving a disproportionate share of low-income patients.

For FY 2021, as we proposed, we are continuing to use the national labor-related and nonlabor-related shares (which are based on the 2014-based hospital market basket) that were used in FY 2020. Specifically, under section 1886(d)(3)(E) of the Act, the Secretary estimates, from time to time, the proportion of payments that are labor-related and adjusts the proportion (as estimated by the Secretary from time to time) of hospitals' costs which are attributable to wages and wage-related costs of the DRG prospective payment rates. We refer to the proportion of hospitals' costs that are attributable to wages and wage-related costs as the ''labor-related share.'' For FY 2021, as discussed in section III. of the preamble of this final rule, as we proposed, we are continuing to use a labor-related share of 68.3 percent for the national standardized amounts for all IPPS hospitals (including hospitals in Puerto Rico) that have a wage index value that is greater than 1.0000. Consistent with section 1886(d)(3)(E) of the Act, as we proposed, we applied the wage index to a labor-related share of 62

percent of the national standardized amount for all IPPS hospitals (including hospitals in Puerto Rico) whose wage index values are less than or equal to 1.0000.

The standardized amounts for operating costs appear in Tables 1A, 1B, and 1C that are listed and published in section VI. of the Addendum to this final rule and are available via the internet on the CMS website.

Comment: A commenter asserted a calculation error regarding the treatment of transfers in setting the standardized amount in 1983 and that this alleged error impacts the FY 2021 standardized amount. This same commenter questioned if CMS had statutory authority to include transfers in the standardized amount for FY 2021.

Response: We disagree with the commenter. The calculations of the standardized amounts since the inception of the IPPS have proceeded through notice and comment rulemaking, and there have been numerous statutory changes to the standardized amounts in the intervening years since the inception of the IPPS. There is no basis for a change to the standardized amount now in FY2021.

Comment: Some commenters stated that CMS misinterpreted ATRA section 631 recoupment related to FY 2017, and that CMS should apply a MS–DRG documentation and coding positive adjustment of 0.7 percentage points in addition to the 0.5 percentage point adjustment proposed. Some commenters believed that would stop the continuation of a recoupment adjustment that no longer serves any recoupment purpose.

Response: We received similar comments on the ATRA requirements related to FY 2017 in response to the FY 2020 proposed rule, and we refer readers to that response. (84 FR 42057). In addition, we refer readers to section II.C of this final rule for additional discussion.

2. Computing the National Average Standardized Amount

Section 1886(d)(3)(A)(iv)(II) of the Act requires that, beginning with FY 2004 and thereafter, an equal standardized amount be computed for all hospitals at the level computed for large urban hospitals during FY 2003, updated by the applicable percentage update. Accordingly, as we proposed, we calculated the FY 2021 national average standardized amount irrespective of whether a hospital is located in an urban or rural location.

3. Updating the National Average Standardized Amount

Section 1886(b)(3)(B) of the Act specifies the applicable percentage increase used to update the standardized amount for payment for inpatient hospital operating costs. We note that, in compliance with section 404 of the MMA, as we proposed, we used the 2014-based IPPS operating and capital market baskets for FY 2021. As discussed in section IV.B. of the preamble of this final rule, in accordance with section 1886(b)(3)(B) of the Act, as amended by section 3401(a) of the Affordable Care Act, as we proposed, we reduced the FY 2021 applicable percentage increase (which for this final rule is based on IGI's second quarter 2020 forecast of the 2014-based IPPS market basket) by the MFP adjustment, as discussed elsewhere in this final rule.

Based on IGI's second quarter 2020 forecast of the hospital market basket increase (as discussed in Appendix B of this final rule), the forecast of the hospital market basket increase for FY 2021 for this final rule is 2.4 percent. As discussed earlier, for FY 2021, depending on whether a hospital submits quality data under the rules established in accordance with section 1886(b)(3)(B)(viii) of the Act and is a meaningful EHR user under section 1886(b)(3)(B)(ix) of the Act, there are four possible applicable percentage increases that can be applied to the standardized amount. We refer readers to section IV.B. of the preamble of this final rule for a complete discussion on the FY 2021 inpatient hospital update to the standardized amount. We also refer readers to the previous table for the four possible applicable percentage increases that would be applied to update the national standardized amount. The standardized amounts shown in Tables 1A through 1C that are published in section VI. of this Addendum and that are available via the internet on the CMS website reflect these differential amounts.

Although the update factors for FY 2021 are set by law, we are required by section 1886(e)(4) of the Act to recommend, taking into account MedPAC's recommendations, appropriate update factors for FY 2021 for both IPPS hospitals and hospitals and hospital units excluded from the IPPS. Section 1886(e)(5)(A) of the Act requires that we publish our recommendations in the **Federal Register** for public comment. Our recommendation on the update factors is set forth in Appendix B of this final rule.

4. Methodology for Calculation of the Average Standardized Amount

The methodology we used to calculate the FY 2021 standardized amount is as follows:

- To ensure we are only including hospitals paid under the IPPS in the calculation of the standardized amount, we applied the following inclusion and exclusion criteria: Include hospitals whose last four digits fall between 0001 and 0879 (section 2779A1 of Chapter 2 of the State Operations Manual on the CMS website at: *https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Downloads/som107c02.pdf*); exclude CAHs at the time of this final rule; exclude hospitals in Maryland (because these hospitals are paid under an all payer model under section 1115A of the Act); and remove PPS excluded- cancer hospitals that have a ''V'' in the fifth position of their provider number or a ''E'' or ''F'' in the sixth position.
- As in the past, we adjusted the FY 2021 standardized amount to remove the effects of the FY 2020 geographic reclassifications and outlier payments before applying the FY 2021 updates. We then applied budget neutrality offsets for outliers and geographic reclassifications to the standardized amount based on FY 2021 payment policies.
- We do not remove the prior year's budget neutrality adjustments for reclassification and recalibration of the DRG relative weights and for updated wage data because, in accordance with sections 1886(d)(4)(C)(iii) and 1886(d)(3)(E) of the Act, estimated aggregate payments after updates in the DRG relative weights and wage index should equal estimated aggregate payments prior to the changes. If we removed the prior year's adjustment, we would not satisfy these conditions.

Budget neutrality is determined by comparing aggregate IPPS payments before and after making changes that are required to be budget neutral (for example, changes to MS–DRG classifications, recalibration of the MS–DRG relative weights, updates to the wage index, and different geographic reclassifications). We include outlier payments in the simulations because they may be affected by changes in these parameters.

- Consistent with our methodology established in the FY 2011 IPPS/LTCH PPS final rule (75 FR 50422 through 50433), because IME Medicare Advantage payments are made to IPPS hospitals under section 1886(d) of the Act, we believe these payments must be part of these budget neutrality calculations. However, we note that it is not necessary to include Medicare Advantage IME payments in the outlier threshold calculation or the outlier offset to the standardized amount because the statute requires that outlier payments be not less than 5 percent nor more than 6 percent of total ''operating DRG payments,'' which does not include IME and DSH payments. We refer readers to the FY 2011 IPPS/LTCH PPS final rule for a complete discussion on our methodology of identifying and adding the total Medicare Advantage IME payment amount to the budget neutrality adjustments.
- Consistent with the methodology in the FY 2012 IPPS/LTCH PPS final rule, in order to ensure that we capture only fee-for-service claims, we are only including claims with a ''Claim Type'' of 60 (which is a field on the MedPAR file that indicates a claim is an FFS claim).
- Consistent with our methodology established in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57277), in order to further ensure that we capture only FFS claims, we are excluding claims with a ''GHOPAID'' indicator of 1 (which is a field on the MedPAR file that indicates a claim is not an FFS claim and is paid by a Group Health Organization).
- Consistent with our methodology established in the FY 2011 IPPS/LTCH PPS final rule (75 FR 50422 through 50423), we examine the MedPAR file and remove pharmacy charges for anti-hemophilic blood factor (which are paid separately under the IPPS) with an indicator of ''3'' for blood clotting with a revenue code of ''0636'' from the covered charge field for the budget neutrality adjustments. We also remove organ acquisition charges from the covered charge field for the budget neutrality adjustments because organ acquisition is a pass-through payment not paid under the IPPS.
- The participation of hospitals under the BPCI (Bundled Payments for Care Improvement) Advanced model started on October 1, 2018. The BPCI Advanced model, tested under the authority of section 3021 of the Affordable Care Act (codified at section 1115A of the Act), is comprised of a single

payment and risk track, which bundles payments for multiple services beneficiaries receive during a Clinical Episode. Acute care hospitals may participate in the BPCI Advanced model in one of two capacities: As a model Participant or as a downstream Episode Initiator. Regardless of the capacity in which they participate in the BPCI Advanced model, participating acute care hospitals will continue to receive IPPS payments under section 1886(d) of the Act. Acute care hospitals that are Participants also assume financial and quality performance accountability for Clinical Episodes in the form of a reconciliation payment. For additional information on the BPCI Advanced model, we refer readers to the BPCI Advanced web page on the CMS Center for Medicare and Medicaid Innovation's website at: *https://innovation.cms.gov/initiatives/bpci-advanced/*.

For FY 2021, consistent with how we treated hospitals that participated in the BPCI Advanced Model in the FY 2020 IPPS/LTCH PPS final rule (84 FR 42620), as we proposed, we are including all applicable data from subsection (d) hospitals participating in the BPCI Advanced model in our IPPS payment modeling and ratesetting calculations. We believe it is appropriate to include all applicable data from the subsection (d) hospitals participating in the BPCI Advanced model in our IPPS payment modeling and ratesetting calculations because these hospitals are still receiving IPPS payments under section 1886(d) of the Act. For the same reasons, as we also proposed, we included all applicable data from subsection (d) hospitals participating in the Comprehensive Care for Joint Replacement (CJR) Model in our IPPS payment modeling and ratesetting calculations.

- Consistent with our methodology established in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53687 through 53688), we believe that it is appropriate to include adjustments for the Hospital Readmissions Reduction Program and the Hospital VBP Program (established under the Affordable Care Act) within our budget neutrality calculations.

Both the hospital readmissions payment adjustment (reduction) and the hospital VBP payment adjustment (redistribution) are applied on a claim-by-claim basis by adjusting, as applicable, the base-operating DRG payment amount for individual subsection (d) hospitals, which affects the overall sum of aggregate payments on each side of the comparison within the budget neutrality calculations.

In order to properly determine aggregate payments on each side of the comparison, consistent with the approach we have taken in prior years, for FY 2021, as we proposed, we are continuing to apply a proxy based on the prior fiscal year hospital readmissions payment adjustment (for FY 2021 this would be FY 2020 final adjustment factors from Table 15 of the FY 2020 IPPS/LTCH final rule) and a proxy based on the prior fiscal year hospital VBP payment adjustment (for FY 2021 this would be FY 2020 final adjustment factors from Table 16B of the FY 2020 IPPS/LTCH final rule) on each side of the comparison, consistent with the methodology that we adopted in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53687 through 53688). That is, as we proposed, we applied a proxy readmissions payment adjustment factor and a proxy hospital VBP payment adjustment factor from the prior final rule on both sides of our comparison of aggregate payments when determining all budget neutrality factors described in section II.A.4. of this Addendum.

- The Affordable Care Act also established section 1886(r) of the Act, which modifies the methodology for computing the Medicare DSH payment adjustment beginning in FY 2014. Beginning in FY 2014, IPPS hospitals receiving Medicare DSH payment adjustments receive an empirically justified Medicare DSH payment equal to 25 percent of the amount that would previously have been received under the statutory formula set forth under section 1886(d)(5)(F) of the Act governing the Medicare DSH payment adjustment. In accordance with section 1886(r)(2) of the Act, the remaining amount, equal to an estimate of 75 percent of what otherwise would have been paid as Medicare DSH payments, reduced to reflect changes in the percentage of individuals who are uninsured and any additional statutory adjustment, will be available to make additional payments to Medicare DSH hospitals based on their share of the total amount of uncompensated care reported by Medicare DSH hospitals for a given time period. In order to properly determine aggregate payments on each side of the comparison for budget neutrality, prior to FY 2014, we included estimated Medicare DSH payments on both sides of our comparison of aggregate payments when determining all budget neutrality factors described in section II.A.4. of this Addendum.

To do this for FY 2021 (as we did for the last 7 fiscal years), as we proposed, we included estimated empirically justified Medicare DSH payments that will be paid in accordance with section 1886(r)(1) of the Act and estimates of the additional uncompensated care payments made to hospitals receiving Medicare DSH payment adjustments as described by section 1886(r)(2) of the Act. That is, we considered estimated empirically justified Medicare DSH payments at 25 percent of what would otherwise have been paid, and also the estimated additional uncompensated care payments for hospitals receiving Medicare DSH payment adjustments on both sides of our comparison of aggregate payments when determining all budget neutrality factors described in section II.A.4. of this Addendum.

- When calculating total payments for budget neutrality, to determine total payments for SCHs, we model total hospital-specific rate payments and total Federal rate payments and then include whichever one of the total payments is greater. As discussed in section IV.G. of the preamble to this final rule and later in this section, we are continuing to use the FY 2014 finalized methodology under which we take into consideration uncompensated care payments in the comparison of payments under the Federal rate and the hospital-specific rate for SCHs. Therefore, we included estimated uncompensated care payments in this comparison.

Similarly, for MDHs, as discussed in section IV.G. of the preamble of this final rule, when computing payments under the Federal national rate plus 75 percent of the difference between the payments under the Federal national rate and the payments under the updated hospital-specific rate, as we proposed, we continued to take into consideration uncompensated care payments in the computation of payments under the Federal rate and the hospital-specific rate for MDHs.

- As we proposed, we included an adjustment to the standardized amount for those hospitals that are not meaningful EHR users in our modeling of aggregate payments for budget neutrality for FY 2021. Similar to FY 2020, we are including this adjustment based on data on the prior year's performance. Payments for hospitals will be estimated based on the applicable standardized amount in Tables 1A and 1B for discharges occurring in FY 2021.
- In our determination of all budget neutrality factors described in section II.A.4. of this Addendum, we used transfer-adjusted discharges. Specifically, we calculated the transfer-adjusted discharges using the statutory expansion of the postacute care transfer policy to include discharges to hospice care by a hospice program as discussed in section IV.A.2.b. of the preamble of this final rule.

We finally note that the wage index value is calculated and assigned to a hospital based on the hospital's labor market area. Under section 1886(d)(3)(E) of the Act, beginning with FY 2005, we delineate hospital labor market areas based on the Core-Based Statistical Areas (CBSAs) established by the Office of Management and Budget (OMB). The current statistical areas used in FY 2020 are based on OMB standards published on February 28, 2013 (79 FR 49951) and Census 2010 data and Census Bureau population estimates for 2014 and 2015 (OMB Bulletin No. 17–01). As stated in section II.D.2. of the preamble to this final rule, on April 10, 2018 OMB issued OMB Bulletin No. 18–03 which superseded the August 15, 2017 OMB Bulletin No. 17–01. On September 14, 2018, OMB issued OMB Bulletin No. 18–04 which superseded the April 10, 2018 OMB Bulletin No. 18–03. These bulletins established revised delineations for Metropolitan Statistical Areas, Micropolitan Statistical Areas, and Combined Statistical Areas, and provided guidance on the use of the delineations of these statistical areas. A copy of OMB Bulletin No. 18–04 may be obtained at *https://www.whitehouse.gov/wp-content/uploads/2018/09/Bulletin-18-04.pdf.* (We note, on March 6, 2020 OMB issued OMB Bulletin 20–01 (available on the web at *https://www.whitehouse.gov/wp-content/uploads/2020/03/Bulletin-20-01.pdf*), and as discussed in the preamble, this bulletin was not issued in time for development of the FY 2021 IPPS/LTCH PPS proposed rule.)

In section III.A.2. of the preamble to this final rule, as we proposed, we are implementing the revised OMB delineations as described in the September 14, 2018 OMB Bulletin No. 18–04, effective October 1, 2020

beginning with the FY 2021 IPPS wage index. Consistent with our adoption of the revised OMB delineations, in order to properly determine aggregate payments on each side of the comparison for our budget neutrality calculations, as we proposed, we used wage indexes based on the new OMB delineations in the determination of all of the budget neutrality factors discussed in this section. We also note that, consistent with past practice as finalized in the FY 2005 IPPS final rule (69 FR 49034), we are not adopting the revised OMB delineations themselves in a budget neutral manner. We continue to believe that the revision to the labor market areas in and of itself does not constitute an ''adjustment or update'' to the adjustment for area wage differences, as provided under section 1886(d)(3)(E) of the Act.

a. Recalibration of MS–DRG Relative Weights

Section 1886(d)(4)(C)(iii) of the Act specifies that, beginning in FY 1991, the annual DRG reclassification and recalibration of the relative weights must be made in a manner that ensures that aggregate payments to hospitals are not affected. As discussed in section II.G. of the preamble of this rule, we normalized the recalibrated MS–DRG relative weights by an adjustment factor so that the average case relative weight after recalibration is equal to the average case relative weight prior to recalibration. However, equating the average case relative weight after recalibration to the average case relative weight before recalibration does not necessarily achieve budget neutrality with respect to aggregate payments to hospitals because payments to hospitals are affected by factors other than average case relative weight. Therefore, as we have done in past years, as we proposed, we are making a budget neutrality adjustment to ensure that the requirement of section 1886(d)(4)(C)(iii) of the Act is met.

For FY 2021, to comply with the requirement that MS–DRG reclassification and recalibration of the relative weights be budget neutral for the standardized amount and the hospital-specific rates, we used FY 2019 discharge data to simulate payments and compared the following:

- Aggregate payments using the FY 2020 labor-related share percentages, the revised OMB labor market area delineations for FY 2021, the FY 2020 relative weights, and the FY 2020 pre-reclassified wage data, and applied the FY 2021 hospital readmissions payment adjustments and estimated FY 2021 hospital VBP payment adjustments; and
- Aggregate payments using the FY 2020 labor-related share percentages, the revised OMB labor market area delineations for FY 2021, the FY 2021 relative weights, and the FY 2020 pre-reclassified wage data, and applied the FY 2021 hospital readmissions payment adjustments and estimated FY 2021 hospital VBP payment adjustments applied previously. (We note that these FY 2021 relative weights reflect our temporary measure for FY 2021, as discussed in section II.G. of the preamble of this final rule, to set the FY 2021 relative weight for MS–DRG 215 equal to the average of the FY 2020 relative weight and the otherwise applicable FY 2021 relative weight). Because this payment simulation uses the FY 2021 relative weights, consistent with our policy in section IV.I. of the preamble to this final rule, we applied the adjustor for certain CAR T-cell therapy cases in our simulation of these payments. (As discussed in section II.E.2.b. of the preamble of this final rule, we also calculated an adjustment to account for certain CAR T-cell therapy cases in calculating the FY 2021 relative weights and for purposes of budget neutrality and outlier simulations.) We note that because the simulations of payments for all of the budget neutrality factors discussed in this section also use the FY 2021 relative weights, as we proposed, we applied the adjustor for certain CAR T-cell therapy cases in all simulations of payments for the budget neutrality factors discussed later in this section. We refer the reader to section IV.I. of the preamble of this final rule for a complete discussion on the adjustor for certain CAR T-cell therapy cases and to section II.E.2.b. of the preamble of this final rule, for a complete discussion of the adjustment to the FY 2021 relative weights to account for certain CAR T-cell therapy cases.

Based on this comparison, we computed a budget neutrality adjustment factor and applied this factor to the standardized amount. As discussed in section IV. of this Addendum, as we proposed, we applied the MS–DRG reclassification and recalibration budget neutrality factor to the hospital-specific rates that are effective for cost reporting periods beginning on or after October 1, 2020. Please see the table later in this section setting forth each of the FY 2021 budget neutrality factors.

Comments: Some commenters requested that CMS revisit the MS–DRG recalibration process to determine reasons for negative impacts on rural hospitals generally, and hospitals designated as RRCs, SCHs, and MDHs based on the proposed rule's impact table and past final rules' table. Some commenters requested a special adjustment to prevent significant losses from the MS–DRG recalibration process, which the commenters asserted has had an ongoing negative impact.

Response: We thank the commenters for their input and suggestion. For a discussion of the estimated impact table, we refer the reader to the Appendix of this final rule. For this final rule, as noted previously, we are making a budget neutrality adjustment to ensure that the requirement of section 1886(d)(4)(C)(iii) of the Act is met. We believe we have applied this budget neutrality adjustment appropriately.

b. Updated Wage Index—Budget Neutrality Adjustment

Section 1886(d)(3)(E)(i) of the Act requires us to update the hospital wage index on an annual basis beginning October 1, 1993. This provision also requires us to make any updates or adjustments to the wage index in a manner that ensures that aggregate payments to hospitals are not affected by the change in the wage index. Section 1886(d)(3)(E)(i) of the Act requires that we implement the wage index adjustment in a budget neutral manner. However, section 1886(d)(3)(E)(ii) of the Act sets the labor-related share at 62 percent for hospitals with a wage index less than or equal to 1.0000, and section 1886(d)(3)(E)(i) of the Act provides that the Secretary shall calculate the budget neutrality adjustment for the adjustments or updates made under that provision as if section 1886(d)(3)(E)(ii) of the Act had not been enacted. In other words, this section of the statute requires that we implement the updates to the wage index in a budget neutral manner, but that our budget neutrality adjustment should not take into account the requirement that we set the labor-related share for hospitals with wage indexes less than or equal to 1.0000 at the more advantageous level of 62 percent. Therefore, for purposes of this budget neutrality adjustment, section 1886(d)(3)(E)(i) of the Act prohibits us from taking into account the fact that hospitals with a wage index less than or equal to 1.0000 are paid using a labor-related share of 62 percent. Consistent with current policy, for FY 2021, as we proposed, we are adjusting 100 percent of the wage index factor for occupational mix. We describe the occupational mix adjustment in section III.E. of the preamble of this final rule.

To compute a budget neutrality adjustment factor for wage index and labor-related share percentage changes, we used FY 2019 discharge data to simulate payments and compared the following:

- Aggregate payments using the revised OMB labor market area delineations for FY 2021, the FY 2021 relative weights and the FY 2020 pre-reclassified wage indexes, applied the FY 2020 labor-related share of 68.3 percent to all hospitals (regardless of whether the hospital's wage index was above or below 1.0000), and applied the FY 2021 hospital readmissions payment adjustment and the estimated FY 2021 hospital VBP payment adjustment; and
- Aggregate payments using the revised OMB labor market area delineations for FY 2021, the FY 2021 relative weights and the FY 2021 pre-reclassified wage indexes, applied the labor-related share for FY 2021 of 68.3 percent to all hospitals (regardless of whether the hospital's wage index was above or below 1.0000), and applied the same FY 2021 hospital readmissions payment adjustments and estimated FY 2021 hospital VBP payment adjustments applied previously.

In addition, we applied the MS–DRG reclassification and recalibration budget neutrality adjustment factor (derived in the first step) to the payment rates that were used to simulate payments for this comparison of aggregate payments from FY 2020 to FY 2021. Based on this comparison, we computed a budget neutrality adjustment factor and applied this factor to the standardized amount for changes to the wage index. Please see the table later in this section for a summary of the FY 2021 budget neutrality factors.

c. Reclassified Hospitals—Budget Neutrality Adjustment

Section 1886(d)(8)(B) of the Act provides that certain rural hospitals are deemed urban. In addition, section 1886(d)(10) of the Act provides for the reclassification of hospitals based on determinations by the MGCRB. Under section 1886(d)(10) of the Act, a hospital may be reclassified for purposes of the wage index.

Under section 1886(d)(8)(D) of the Act, the Secretary is required to adjust the standardized amount to ensure that aggregate payments under the IPPS after implementation of the provisions of sections 1886(d)(8)(B) and (C) and 1886(d)(10) of the Act are equal to the aggregate prospective payments that would have been made absent these provisions. We note, with regard to the requirement under section 1886(d)(8)(C)(iii) of the Act, as finalized in the FY 2020 IPPS/LTCH PPS final rule (84 FR 42333 through 42336), we excluded the wage data of urban hospitals that have reclassified as rural under section 1886(d)(8)(E) of the Act (as implemented in § 412.103) from the calculation of ''the wage index for rural areas in the State in which the county is located.'' We refer the reader to the FY 2015 IPPS final rule (79 FR 50371 and 50372) for a complete discussion regarding the requirement of section 1886(d)(8)(C)(iii) of the Act. We further note that the wage index adjustments provided for under section 1886(d)(13) of the Act are not budget neutral. Section 1886(d)(13)(H) of the Act provides that any increase in a wage index under section 1886(d)(13) of the Act shall not be taken into account in applying any budget neutrality adjustment with respect to such index under section 1886(d)(8)(D) of the Act. To calculate the budget neutrality adjustment factor for FY 2021, we used FY 2019 discharge data to simulate payments and compared the following:

- Aggregate payments using the FY 2021 labor-related share percentages, the revised OMB labor market area delineations for FY 2021, the FY 2021 relative weights, and the FY 2021 wage data prior to any reclassifications under sections 1886(d)(8)(B) and (C) and 1886(d)(10) of the Act, and applied the FY 2021 hospital readmissions payment adjustments and the estimated FY 2021 hospital VBP payment adjustments; and
- Aggregate payments using the FY 2021 labor-related share percentages, the revised OMB labor market area delineations for FY 2021, the FY 2021 relative weights, and the FY 2021 wage data after such reclassifications, and applied the same FY 2021 hospital readmissions payment adjustments and the estimated FY 2021 hospital VBP payment adjustments applied previously.

We note that the reclassifications applied under the second simulation and comparison are those listed in Table 2 associated with this final rule, which is available via the internet on the CMS website. This table reflects reclassification crosswalks for FY 2021, and applies the policies explained in section III. of the preamble of this final rule. Based on this comparison, we computed a budget neutrality adjustment factor and applied this factor to the standardized amount to ensure that the effects of these provisions are budget neutral, consistent with the statute. Please see the table later in this section for a summary of the FY 2021 budget neutrality factors.

The FY 2021 budget neutrality adjustment factor was applied to the standardized amount after removing the effects of the FY 2020 budget neutrality adjustment factor. We note that the FY 2021 budget neutrality adjustment reflects FY 2021 wage index reclassifications approved by the MGCRB or the Administrator at the time of development of this final rule.

d. Rural Floor—Budget Neutrality Adjustment

Under § 412.64(e)(4), we make an adjustment to the wage index to ensure that aggregate payments after implementation of the rural floor under section 4410 of the BBA (Pub. L. 105–33) is equal to the aggregate prospective payments that would have been made in the absence of this provision. Consistent with section 3141 of the Affordable Care Act and as discussed in section III.G. of the preamble of this final rule and codified at § 412.64(e)(4)(ii), the budget neutrality adjustment for the rural floor is a national adjustment to the wage index. We note, as finalized in the FY 2020 IPPS/LTCH final rule (84 FR 42332 through 42336), for FY 2021 we are calculating the rural floor without including the wage data of urban hospitals that have reclassified as rural under section 1886(d)(8)(E) of the Act (as implemented in § 412.103).

Similar to our calculation in the FY 2015 IPPS/LTCH PPS final rule (79 FR 50369 through 50370), for FY 2021, as we proposed, we calculated a national rural Puerto Rico wage index. Because there are no rural Puerto Rico hospitals with established wage data, our calculation of the FY 2021 rural Puerto Rico wage index is based on the policy adopted in the FY 2008 IPPS final rule with comment period (72 FR 47323). That is, we use the unweighted average of the wage indexes from all CBSAs (urban areas) that are contiguous (share a border with) to the rural counties to compute the rural floor (72 FR 47323; 76 FR 51594). Under the OMB labor market area delineations, except for Arecibo, Puerto Rico (CBSA 11640), all other Puerto Rico urban areas are contiguous to a rural area. Therefore, based on our existing policy, the FY 2021 rural Puerto Rico wage index is calculated based on the average of the FY 2021 wage indexes for the following urban areas: Aguadilla-Isabela, PR (CBSA 10380); Guayama, PR (CBSA 25020); Mayaguez, PR (CBSA 32420); Ponce, PR (CBSA 38660); San German, PR (CBSA 41900); and San Juan-Carolina-Caguas, PR (CBSA 41980).

To calculate the national rural floor budget neutrality adjustment factor, we used FY 2019 discharge data to simulate payments, the revised OMB labor market area delineations for FY 2021 and the post-reclassified national wage indexes and compared the following:

- National simulated payments without the rural floor; and
- National simulated payments with the rural floor.

Based on this comparison, we determined a national rural floor budget neutrality adjustment factor. The national adjustment was applied to the national wage indexes to produce rural floor budget neutral wage indexes. Please see the table later in this section for a summary of the FY 2021 budget neutrality factors.

Comment: A commenter opposed the application of the nationwide rural floor budget neutrality adjustment

Response: In accordance with section 3141 of the Affordable Care Act, instead of applying a State-level rural floor budget neutrality adjustment to the wage index, we are required to apply a uniform, national budget neutrality adjustment to the FY 2021 wage index for the rural floor.

e. Rural Community Hospital Demonstration Program Adjustment

In section IV.O. of the preamble of this final rule, we discuss the Rural Community Hospital Demonstration program, which was originally authorized for a 5-year period by section 410A of the Medicare Prescription Drug, Improvement, and Modernization Act of 2003 (MMA) (Pub. L. 108–173), and extended for another 5-year period by sections 3123 and 10313 of the Affordable Care Act (Pub. L. 111–148). Subsequently, section 15003 of the 21st Century Cures Act (Pub. L. 114–255), enacted December 13, 2016, amended section 410A of Public Law 108–173 to require a 10-year extension period (in place of the 5-year extension required by the Affordable Care Act, as further discussed later in this section). We make an adjustment to the standardized amount to ensure the effects of the Rural Community Hospital Demonstration program are budget neutral as required under section 410A(c)(2) of Public Law 108–173. We refer readers to section IV.O. of the preamble of this final rule for complete details regarding the Rural Community Hospital Demonstration.

With regard to budget neutrality, as mentioned earlier, we make an adjustment to the standardized amount to ensure the effects of the Rural Community Hospital Demonstration are budget neutral, as required under section 410A(c)(2) of Public Law 108–173. For FY 2021, based on the latest data for this final rule, the total amount that we are applying to make an adjustment to the standardized amounts to ensure the effects of the Rural Community Hospital Demonstration program are budget neutral is $39,825,670.Accordingly, using the most recent data available to account for the estimated costs of the demonstration program, for FY 2021, we computed a factor for the Rural Community Hospital Demonstration budget neutrality adjustment that will be applied to the standardized amount. Please see the table later in this section for a summary of the FY 2021 budget neutrality factors. We refer readers to section IV.O. of the preamble of this final rule on complete details regarding the calculation of the amount we are applying to make an adjustment to the standardized amounts.

f. Stem Cell Acquisition Reasonable Cost Based Payment Budget Neutrality Adjustment

In section IV.H. of the preamble of this final rule, we discuss the reasonable cost based payment for allogeneic hematopoietic stem cell acquisition costs beginning in FY 2021. Section 108 of the Further Consolidated Appropriations Act, 2020 requires that, for cost reporting periods beginning on or after October 1, 2020, in the case of a subsection (d) hospital that furnishes an allogeneic hematopoietic stem cell transplant, payment to such hospital for

hematopoietic stem cell acquisition shall be made on a reasonable cost basis, and also requires that, beginning in FY 2021, the payments made based on reasonable cost for the acquisition costs of allogeneic hematopoietic stem cells be made in a budget neutral manner. That is, under section 1886(d)(4)(C)(iii) of the Act as amended by section 108 of the Further Consolidated Appropriations Act, 2020, beginning with FY 2021, the reasonable cost based payments for allogeneic hematopoietic stem cell acquisition costs are to be made in a manner that assures that the aggregate IPPS payments for discharges in the fiscal year are not greater or less than those that would have been made without such payments. With regard to budget neutrality, we proposed to make an adjustment to the standardized amount to ensure the effects of the reasonable cost-based payments for allogeneic hematopoietic stem cell acquisition costs are budget neutral, as required under section 1886(d)(4)(C)(iii) of the Act as amended by section 108 of Public Law 116–94. For FY 2021, based on the most recent data available for the proposed rule, the total amount that we proposed to apply to make an adjustment to the standardized amounts to ensure that the reasonable cost based payments for allogeneic hematopoietic stem cell acquisition costs are budget neutral was $15,865,374. Using the more recent data available for this final rule, we updated the total amount to $16,167,790.60. Accordingly, for FY 2021 we computed a final budget neutrality adjustment that we applied to the standardized amounts for FY 2021. Please see the table later in this section setting forth each of the FY 2021 budget neutrality factors. We refer readers to section IV.H. of the preamble of this final rule for further details regarding the calculation of the estimated amount of reasonable cost based payments for allogeneic hematopoietic stem cell acquisition costs that we are using to make an adjustment to the standardized amount for FY 2021.

g. Continuation of the Low Wage Index Hospital Policy—Budget Neutrality Adjustment

As discussed in section III.G.3. of the preamble of this final rule, we are continuing the wage index policy finalized in the FY 2020 IPPS/LTCH PPS final rule to address wage index disparities by increasing the wage index values for hospitals with a wage index value below the 25th percentile wage index value across all hospitals (the low wage index hospital policy). As discussed in the FY 2020 IPPS/LTCH final rule (84 FR 42332), consistent with our current methodology for implementing wage index budget neutrality under section 1886(d)(3)(E) of the Act, we are making a budget neutrality adjustment to the national standardized amount for all hospitals so that the increase in the wage index for hospitals with a wage index below the 25th percentile wage index, is implemented in a budget neutral manner.

To calculate this budget neutrality adjustment factor for FY 2021, we used FY 2019 discharge data to simulate payments and compared the following:

- Aggregate payments using the FY 2021 labor-related share percentages, the revised OMB labor market area delineations for FY 2021, the FY 2021 relative weights, and the FY 2021 wage index for each hospital before adjusting the wage indexes under the low wage index hospital policy but without the 5 percent cap, and applied the FY 2021 hospital readmissions payment adjustments and the estimated FY 2021 hospital VBP payment adjustments, and the operating outlier reconciliation adjusted outlier percentage discussed later in this section; and
- Aggregate payments using the FY 2021 labor-related share percentages, the revised OMB labor market area delineations for FY 2021, the FY 2021 relative weights, and the FY 2021 wage index for each hospital after adjusting the wage indexes under the low wage index hospital policy but without the 5 percent cap, and applied the same FY 2021 hospital readmissions payment adjustments and the estimated FY 2021 hospital VBP payment adjustments applied previously, and the operating outlier reconciliation adjusted outlier percentage discussed later in this section.

This FY 2021 budget neutrality adjustment factor was applied to the standardized amount. Please see the table later in this section setting forth each of the FY 2021 budget neutrality factors.

For a discussion of public comments on this policy, we refer the reader to section III.G.3. of the preamble of this final rule.

h. Transition Budget Neutrality Adjustment

In section III.A.2. of the preamble to this final rule, as we proposed, we are implementing the revised OMB delineations as described in the September 14, 2018 OMB Bulletin No. 18–04, effective October 1, 2020 beginning with the FY 2021 IPPS wage index. As we further stated in section III.A.2. of the preamble of this final rule, while the revised OMB delineations in the OMB bulletin (OMB Bulletin 18–04) are not based on new census data, there were some material changes in the OMB delineations. In accordance with our past practice of implementing transition policies to help mitigate negative impacts on hospitals of certain wage index policies, we stated that, in adopting the revised OMB delineations, it would be appropriate to implement a transition policy since, as mentioned previously, some of these revisions are material, and may negatively impact payments to hospitals. As we stated in section III.A.2. of the preamble of this final rule, we believe applying a 5-percent cap on any decrease in a hospital's wage index from the hospital's final wage index from the prior fiscal year, as we did for FY 2020, is an appropriate transition for FY 2021 for the revised OMB delineations. We refer the reader to section III.A.2. of the preamble to this final rule for a complete discussion on the rationale of this transition.

For FY 2021, as we proposed, we are using our exceptions and adjustments authority under section 1886(d)(5)(I)(i) of the Act to apply a budget neutrality adjustment to the standardized amount so that our transition for hospitals negatively impacted is implemented in a budget neutral manner. We refer readers to section III.A.2. of the preamble of this final rule for a complete discussion regarding this policy. To calculate a transition budget neutrality adjustment factor for FY 2021, we used FY 2019 discharge data to simulate payments and compared the following:

- Aggregate payments without the 5-percent cap using the FY 2021 labor-related share percentages, the revised OMB labor market area delineations for FY 2021, the FY 2021 relative weights, the FY 2021 wage index for each hospital after adjusting the wage indexes under the low wage index hospital policy with the associated budget neutrality adjustment to the standardized amount, and applied the FY 2021 hospital readmissions payment adjustments and the estimated FY 2021 hospital VBP payment adjustments, and the operating outlier reconciliation adjusted outlier percentage; and
- Aggregate payments with the 5-percent cap using the FY 2021 labor-related share percentages, the revised OMB labor market area delineations for FY 2021, the FY 2021 relative weights, the FY 2021 wage index for each hospital after adjusting the wage indexes under the low wage index hospital policy with the associated budget neutrality adjustment to the standardized amount, and applied the same FY 2021 hospital readmissions payment adjustments and the estimated FY 2021 hospital VBP payment adjustments applied previously, and the operating outlier reconciliation adjusted outlier percentage.

This FY 2021 budget neutrality adjustment factor was applied to the standardized amount. Please see the table later in this section setting forth each of the FY 2021 budget neutrality factors.

For a discussion of the public comments on this policy, we refer the reader to section III.A.2.C. and d. of the preamble of this final rule.

We note, Table 2 associated with this final rule, which is available via the internet on the CMS website contains the wage index by provider before and after applying the low wage index hospital policy and the transition.

Summary of FY 2021 Budget Neutrality Factors	
MS-DRG Recalibration Budget Neutrality Factor	0.997980
Wage Index Budget Neutrality Factor	1.000426
Reclassification Budget Neutrality Factor	0.986583
*Rural Floor Budget Neutrality Factor	0.993433
Rural Demonstration Budget Neutrality Factor	0.999626
Stem Cell Acquisition Budget Neutrality Factor	0.999848
Low Wage Index Hospital Policy Budget Neutrality Factor	0.998835
Transition Budget Neutrality Factor	0.998015

*The rural floor budget neutrality factor is applied to the national wage indexes while the rest of the budget neutrality adjustments are applied to the standardized amounts.

i. Adjustment for FY 2021 Required Under Section 414 of Public Law 114–10 (MACRA)

As stated in the FY 2017 IPPS/LTCH PPS final rule (81 FR 56785), once the recoupment required under section 631 of the ATRA was complete, we had anticipated making a single positive adjustment in FY 2018 to offset the reductions required to recoup the $11 billion under section 631 of the ATRA. However, section 414 of the MACRA (which was enacted on April 16, 2015) replaced the single positive adjustment we intended to make in FY 2018 with a 0.5 percent positive adjustment for each of FYs 2018 through 2023. (As noted in the FY 2018 IPPS/LTCH PPS proposed and final rules, section 15005 of the 21st Century Cures Act (Pub. L. 114–255), which was enacted December 13, 2016, reduced the adjustment for FY 2018 from 0.5 percentage points to 0.4588 percentage points.) Therefore, for FY 2021, as we proposed, we are implementing the required +0.5 percent adjustment to the standardized amount. This is a permanent adjustment to the payment rates.

j. Outlier Payments

Section 1886(d)(5)(A) of the Act provides for payments in addition to the basic prospective payments for ''outlier'' cases involving extraordinarily high costs. To qualify for outlier payments, a case must have costs greater than the sum of the prospective payment rate for the MS–DRG, any IME and DSH payments, uncompensated care payments, any new technology add-on payments, and the ''outlier threshold'' or ''fixed-loss'' amount (a dollar amount by which the costs of a case must exceed payments in order to qualify for an outlier payment). We refer to the sum of the prospective payment rate for the MS–DRG, any IME and DSH payments, uncompensated care payments, any new technology add-on payments, and the outlier threshold as the outlier ''fixed-loss cost threshold.'' To determine whether the costs of a case exceed the fixed-loss cost threshold, a hospital's CCR is applied to the total covered charges for the case to convert the charges to estimated costs. Payments for eligible cases are then made based on a marginal cost factor, which is a percentage of the estimated costs above the fixed-loss cost threshold. The marginal cost factor for FY 2021 is 80 percent, or 90 percent for burn MS–DRGs 927, 928, 929, 933, 934 and 935. We have used a marginal cost factor of 90 percent since FY 1989 (54 FR 36479 through 36480) for designated burn DRGs as well as a marginal cost factor of 80 percent for all other DRGs since FY 1995 (59 FR 45367).

In accordance with section 1886(d)(5)(A)(iv) of the Act, outlier payments for any year are projected to be not less than 5 percent nor more than 6 percent of total operating DRG payments (which does not include IME and DSH payments) plus outlier payments. When setting the outlier threshold, we compute the percent target by dividing the total operating outlier payments by the total operating DRG payments plus outlier payments. As discussed in the next section, for FY 2021, as we proposed, we incorporated an estimate of outlier reconciliation when setting the outlier threshold. We do not include any other payments such as IME and DSH within the outlier target amount. Therefore, it is not necessary to include Medicare Advantage IME payments in the outlier threshold calculation. Section 1886(d)(3)(B) of the Act requires the Secretary to reduce the average standardized amount by a factor to account for the estimated proportion of total DRG payments made to outlier cases. More information on outlier payments may be found on the CMS website at: *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/outlier.htm.*

(1) Methodology To Incorporate an Estimate of Outlier Reconciliation in the FY 2020 Outlier Fixed-Loss Cost Threshold

The regulations in 42 CFR 412.84(i)(4) state that any outlier reconciliation at cost report settlement will be based on operating and capital cost-to-charge ratios (CCRs) calculated based on a ratio of costs to charges computed from the relevant cost report and charge data determined at the time the cost report coinciding with the discharge is settled. We have instructed MACs to identify for CMS any instances where: (1) A hospital's actual CCR for the cost reporting period fluctuates plus or minus 10 percentage points compared to the interim CCR used to calculate outlier payments when a bill is processed; and (2) the total outlier payments for the hospital exceeded $500,000.00 for that cost reporting period. If we determine that a hospital's outlier payments should be reconciled, we reconcile both operating and capital outlier payments. We refer readers to section 20.1.2.5 of Chapter 3 of the Medicare Claims Processing Manual (available on the CMS website at: *https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Downloads/clm104c03.pdf*) for complete details regarding outlier reconciliation. The regulation at § 412.84(m) further states that at the time of any outlier reconciliation under § 412.84(i)(4), outlier payments may be adjusted to account for the time value of any underpayments or overpayments. Section 20.1.2.6 of Chapter 3 of the Medicare Claims Processing Manual contains instructions on how to assess the time value of money for reconciled outlier amounts.

If the operating CCR of a hospital subject to outlier reconciliation is lower at cost report settlement compared to the operating CCR used for payment, the hospital will owe CMS money because it received an outlier overpayment at the time of claim payment. Conversely, if the operating CCR increases at cost report settlement compared to the operating CCR used for payment, CMS will owe the hospital money because the hospital outlier payments were underpaid.

In the FY 2020 IPPS/LTCH PPS final rule (84 FR 42623 through 42625), for FY 2021, we finalized a methodology to incorporate outlier reconciliation in the FY 2021 outlier fixed loss cost threshold. As discussed in the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19592), we stated that rather than trying to predict which claims and/or hospitals may be subject to outlier reconciliation, we believe a methodology that incorporates an estimate of outlier reconciliation dollars based on actual outlier reconciliation amounts reported in historical cost reports would be a more feasible approach and provide a better estimate and predictor of outlier reconciliation for the upcoming fiscal year. We also stated that we believe the methodology addresses stakeholder's concerns on the impact of outlier reconciliation on the modeling of the outlier threshold. For a detailed discussion of additional background regarding outlier reconciliation, we refer the reader to the FY 2020 IPPS/LTCH PPS final rule.

(a) Incorporating a Projection of Outlier Payment Reconciliations for the FY 2021 Outlier Threshold Calculation

Based on the methodology finalized in the FY 2020 IPPS/LTCH PPS final rule (84 FR 42623 through 42625), for FY 2021, as we proposed, we are continuing to incorporate

outlier reconciliation in the FY 2021 outlier fixed loss cost threshold.

As discussed in the FY 2020 IPPS/LTCH PPS final rule, for FY 2020, we used the historical outlier reconciliation amounts from the FY 2014 cost reports (cost reports with a begin date on or after October 1, 2013, and on or before September 30, 2014), which we believed would provide the most recent and complete available data to project the estimate of outlier reconciliation. We refer the reader to the FY 2020 IPPS/LTCH PPS final rule (84 FR 42623 through 42625) for a complete discussion on the use of the FY 2014 cost report data for purposes of projecting outlier payment reconciliations for the FY 2020 outlier threshold calculation.

In the FY 2020 IPPS/LTCH PPS final rule, we stated that the methodology for FY 2020 could advance by 1 year the cost reports used to determine the historical outlier reconciliation. In the proposed rule, to determine a projection of outlier payment reconciliations for the FY 2021 outlier threshold calculation, we proposed to advance the methodology by 1 year and use FY 2015 cost reports (cost reports with a begin date on or after October 1, 2014, and on or before September 30, 2015).

For FY 2021, we proposed to use the same methodology from FY 2020 to incorporate a projection of operating outlier payment reconciliations for the FY 2021 outlier threshold calculation. The following steps are the same as those finalized in the FY 2020 final rule but with updated data for FY 2021:

Step 1.—Use the Federal FY 2015 cost reports for hospitals paid under the IPPS from the most recent publicly available quarterly HCRIS extract available at the time of development of the proposed and final rules, and exclude sole community hospitals (SCHs) that were paid under their hospital-specific rate (that is, if Worksheet E, Part A, Line 48 is greater than Line 47). We note that when there are multiple columns available for the lines of the cost report described in the following steps and the provider was paid under the IPPS for that period(s) of the cost report, then we believe it is appropriate to use multiple columns to fully represent the relevant IPPS payment amounts, consistent with our methodology for the FY 2020 final rule.

Step 2.—Calculate the aggregate amount of historical total of operating outlier reconciliation dollars (Worksheet E, Part A, Line 2.01) using the Federal FY 2015 cost reports from Step 1.

Step 3.—Calculate the aggregate amount of total Federal operating payments using the Federal FY 2015 cost reports from Step 1. The total Federal operating payments consist of the Federal payments (Worksheet E, Part A, Line 1.01 and Line 1.02, plus Line 1.03 and Line 1.04), outlier payments (Worksheet E, Part A, Line 2 and Line 2.02), and the outlier reconciliation payments (Worksheet E, Part A, Line 2.01). We note that a negative amount on Worksheet E, Part A, Line 2.01 for outlier reconciliation indicates an amount that was owed by the hospital, and a positive amount indicates this amount was paid to the hospital.

Step 4.—Divide the amount from Step 2 by the amount from Step 3 and multiply the resulting amount by 100 to produce the percentage of total operating outlier reconciliation dollars to total Federal operating payments for FY 2015. This percentage amount would be used to adjust the outlier target for FY 2021 as described in Step 5.

Step 5.—Because the outlier reconciliation dollars are only available on the cost reports, and not in the Medicare claims data in the MedPAR file used to model the outlier threshold, we proposed to target 5.1 percent minus the percentage determined in Step 4 in determining the outlier threshold. Using the FY 2015 cost reports based on the December 2019 HCRIS extract, because the aggregate outlier reconciliation dollars from Step 2 are negative, but the percentage determined in Step 4 rounds to 0, we stated that we are targeting 5.1 percent for outlier payments for FY 2021 under our proposed methodology.

In the FY 2021 proposed rule, we used the December 2019 HCRIS extract of the cost report data to calculate the proposed percentage adjustment for outlier reconciliation. For the FY 2021 final rule, we proposed to use the latest quarterly HCRIS extract that is publically available at the time of the development of that rule which, for FY 2021, would be the March 2020 extract. Similar to the FY 2020 final rule, we stated that we might also consider the use of more recent data that may become available for purposes of projecting the estimate of operating outlier reconciliation used in the calculation of the final FY 2021 outlier threshold.

In the FY 2021 proposed rule, based on the December 2019 HCRIS, 16 hospitals had an outlier reconciliation amount recorded on Worksheet E, Part A, Line 2.01 for total operating outlier reconciliation dollars of negative $2,516,904 (Step 2). The total Federal operating payments based on the December 2019 HCRIS was $90,313,815,275 (Step 3). The ratio (Step 4) is a negative 0.002787 percent, which, when rounded to the second digit, is 0.00 percent. Therefore, for FY 2021, we proposed to incorporate a projection of outlier reconciliation dollars by targeting an outlier threshold at 5.10 percent [5.1 percent − (−.00 percent)].

When the percentage of operating outlier reconciliation dollars to total Federal operating payments rounds to a negative value (that is, when the aggregate amount of outlier reconciliation as a percent of total operating payments rounds to a negative percent), the effect is a decrease to the outlier threshold compared to an outlier threshold that is calculated without including this estimate of operating outlier reconciliation dollars. In section II.A.4.i.(2). of the Addendum to the proposed rule, we provided the FY 2021 outlier threshold as calculated for the proposed rule both with and without including this proposed percentage estimate of operating outlier reconciliation. However, we noted that for the proposed rule, the outlier threshold was the same with and without the percentage estimate, since the projection of outlier reconciliation rounded to zero.

As explained in the FY 2020 IPPS/LTCH PPS final rule, we proposed to continue to use a 5.1 percent target (or an outlier offset factor of 0.949) in calculating the outlier offset to the standardized amount. In the past, the outlier offset was six decimals because we targeted and set the threshold at 5.1 percent by adjusting the standardized amount by the outlier offset until operating outlier payments divided by total operating Federal payments plus operating outlier payments equaled approximately 5.1 percent (this approximation resulted in an offset beyond three decimals). However, under our methodology, we believe a three decimal offset of 0.949 reflecting 5.1 percent is appropriate rather than the unrounded six decimal offset that we have calculated for prior fiscal years. Specifically, as discussed in section II.A.5. of this Addendum, we proposed to determine an outlier adjustment by applying a factor to the standardized amount that accounts for the projected proportion of total estimated FY 2021 operating Federal payments paid as outliers. Our proposed modification to the outlier threshold methodology is designed to adjust the total estimated outlier payments for FY 2021 by incorporating the projection of negative outlier reconciliation. That is, under this proposal, total estimated outlier payments for FY 2021 would be the sum of the estimated FY 2021 outlier payments based on the claims data from the outlier model and the estimated FY 2021 total operating outlier reconciliation dollars. We stated that we believe the proposed methodology would more accurately estimate the outlier adjustment to the standardized amount by increasing the accuracy of the calculation of the total estimated FY 2021 operating Federal payments paid as outliers. In other words, the net effect of our outlier proposal to incorporate a projection for outlier reconciliation dollars into the threshold methodology would be that FY 2021 outlier payments (which included the proposed estimated recoupment percentage for FY 2021 of 0.00 percent) would be 5.1 percent of total operating Federal payments plus total outlier payments. Therefore, the proposed operating outlier offset to the standardized amount was 0.949 (1 − 0.051).

We invited public comment on our proposed methodology for projecting an estimate of outlier reconciliation and incorporating that estimate into the modeling for the fixed-loss cost outlier threshold for FY 2021.

Comment: A commenter supported incorporating an estimate of outlier reconciliation. A commenter stated that they were successful in replicating the proposed calculations given the logic described. Based on the commenter's analysis, the commenter determined that no adjustment for FY 2021 is necessary based on their analysis of historical cost report data.

Response: We thank the commenter for their feedback on the proposed calculation methodology.

After consideration of the comments received, and for the reasons discussed in the proposed rule and in this final rule, we are finalizing the methodology described previously for incorporating the outlier reconciliation in the outlier threshold calculation. Therefore, for this final rule we

used the same steps described previously and in the proposed rule to incorporate a projection of operating outlier payment reconciliations for the calculation of the FY 2021 outlier threshold calculation. The March 2020 HCRIS contained data for 17 hospitals. As stated previously, while we proposed to use the March 2020 HCRIS extract to calculate the reconciliation adjustment for this FY 2021 IPPS final rule, we also stated that similar to the FY 2020 final rule, we might consider the use of more recent data that may become available for purpose of projecting the estimate of operating outlier reconciliation used in the calculation of the final FY 2021 outlier threshold. Data for two additional outlier reconciliations were made available to CMS outside of the March 2020 HCRIS update. Similar to our discussion of the estimated operating outlier reconciliation for FY 2020 in the FY 2020 IPPS/LTCH final rule (84 FR 53609), we believe supplementing with two hospitals' outlier reconciliation data will lend additional accuracy to project the estimate of operating outlier reconciliation used in the calculation of the outlier threshold. Therefore, in order to use the most complete data for FY 2015 cost reports, we are using the March 2020 HCRIS extract, supplemented by these two additional hospitals' data this FY 2021 IPPS final rule. Without the two additional hospitals' data, the rounded operating outlier reconciliation percentage would have been 0 (unrounded of 0.004506). As we gain more experience with this policy, we also are considering adding additional lines to the cost report in order to ensure we capture the maximum cost report data with the March HCRIS extract to calculate the percentage adjustment for outlier reconciliation. For the final rule for future rulemaking, as we generally expect historical cost reports for the applicable fiscal year to be available by March. Based onMarch 2020 HCRIS and supplemental data for two hospitals, a total of 19 hospitals had an outlier reconciliation amount recorded on Worksheet E, Part A, Line 2.01 for total operating outlier reconciliation dollars of negative $8,650,344 (Step 2). The total Federal operating payments based on the March 2020 HCRIS is $90,321,677,004 (Step 3). The ratio (Step 4) is a negative 0.009577 percent, which, when rounded to the second digit, is negative 0.01 percent. Therefore, for FY 2021, using the finalized methodology, we incorporated a projection of outlier reconciliation dollars by targeting an outlier threshold at 5.11 percent [5.1 percent − (−0.01 percent)]. As noted previously, when the percentage of operating outlier reconciliation dollars to total Federal operating payments is negative (such is the case when the aggregate amount of outlier reconciliation is negative), the effect is a decrease to the outlier threshold compared to an outlier threshold that is calculated without including this estimate of operating outlier reconciliation dollars. In section II.A.4.i.(2). of this Addendum of this final rule, we provide the FY 2021 outlier threshold as calculated both with and without including this percentage estimate of operating outlier reconciliation.

(b) Reduction to the FY 2021 Capital Standard Federal Rate by an Adjustment Factor To Account for the Projected Proportion of Capital IPPS Payments Paid as Outliers

We establish an outlier threshold that is applicable to both hospital inpatient operating costs and hospital inpatient capital related costs (58 FR 46348). Similar to the calculation of the adjustment to the standardized amount to account for the projected proportion of operating payments paid as outlier payments, as discussed in greater detail in section III.A.2. of this Addendum, we proposed to reduce the FY 2021 capital standard Federal rate by an adjustment factor to account for the projected proportion of capital IPPS payments paid as outliers. The regulations in 42 CFR 412.84(i)(4) state that any outlier reconciliation at cost report settlement will be based on operating and capital CCRs calculated based on a ratio of costs to charges computed from the relevant cost report and charge data determined at the time the cost report coinciding with the discharge is settled. As such, any reconciliation also applies to capital outlier payments.

For FY 2021, we proposed to use the same methodology from FY 2020 to adjust the FY 2021 capital standard Federal rate by an adjustment factor to account for the projected proportion of capital IPPS payments paid as outliers. Similar to FY 2020, as part of our proposal for FY 2021 to incorporate into the outlier model the total outlier reconciliation dollars from the most recent and most complete fiscal year cost report data, we also proposed to adjust our estimate of FY 2021 capital outlier payments to incorporate a projection of capital outlier reconciliation payments when determining the adjustment factor to be applied to the capital standard Federal rate to account for the projected proportion of capital IPPS payments paid as outliers. To do so, we proposed to use the following methodology, which generally parallels the methodology to incorporate a projection of operating outlier reconciliation payments for the FY 2021 outlier threshold calculation.

Step 1.—Use the Federal FY 2015 cost reports for hospitals paid under the IPPS from the most recent publicly available quarterly HCRIS extract available at the time of development of the proposed and final rules, and exclude SCHs that were paid under their hospital-specific rate (that is, if Worksheet E, Part A, Line 48 is greater than Line 47). We note that when there are multiple columns available for the lines of the cost report described in the following steps and the provider was paid under the IPPS for that period(s) of the cost report, then we believe it is appropriate to use multiple columns to fully represent the relevant IPPS payment amounts, consistent with our methodology for the FY 2020 final rule. We used the December 2019 HCRIS extract for the proposed rule and stated that we expected to use the March 2020 HCRIS extract for the FY 2021 final rule. Similar to the FY 2020 final rule, we stated that we may also consider the use of more recent data that may become available for purposes of projecting the estimate of capital outlier reconciliation used in the calculation of the final FY 2021 adjustment to the FY 2021 capital standard Federal rate.

Step 2.—Calculate the aggregate amount of the historical total of capital outlier reconciliation dollars (Worksheet E, Part A, Line 93, Column 1) using the Federal FY 2015 cost reports from Step 1.

Step 3.—Calculate the aggregate amount of total capital Federal payments using the Federal FY 2015 cost reports from Step 1. The total capital Federal payments consist of the capital DRG payments, including capital indirect medical education (IME) and capital disproportionate share hospital (DSH) payments (Worksheet E, Part A, Line 50, Column 1) and the capital outlier reconciliation payments (Worksheet E, Part A, Line 93, Column 1). We note that a negative amount on Worksheet E, Part A, Line 93 for capital outlier reconciliation indicates an amount that was owed by the hospital, and a positive amount indicates this amount was paid to the hospital.

Step 4.—Divide the amount from Step 2 by the amount from Step 3 and multiply the resulting amount by 100 to produce the percentage of total capital outlier reconciliation dollars to total capital Federal payments for FY 2015. This percentage amount would be used to adjust the estimate of capital outlier payments for FY 2021 as described in Step 5.

Step 5.—Because the outlier reconciliation dollars are only available on the cost reports, and not in the specific Medicare claims data in the MedPAR file used to estimate outlier payments, we proposed that the estimate of capital outlier payments for FY 2021 would be determined by adding the percentage in Step 4 to the estimated percentage of capital outlier payments otherwise determined using the shared outlier threshold that is applicable to both hospital inpatient operating costs and hospital inpatient capital-related costs. (We note that this percentage is added for capital outlier payments but subtracted in the analogous step for operating outlier payments.

We have a unified outlier payment methodology that uses a shared threshold to identify outlier cases for both operating and capital payments. The difference stems from the fact that operating outlier payments are determined by first setting a ''target'' percentage of operating outlier payments relative to aggregate operating payments which produces the outlier threshold. Once the shared threshold is set, it is used to estimate the percentage of capital outlier payments to total capital payments based on that threshold. Because the threshold is already set based on the operating target, rather than adjusting the threshold (or operating target), we adjust the percentage of capital outlier to total capital payments to account for the estimated effect of capital outlier reconciliation payments. This percentage is adjusted by adding the capital outlier reconciliation percentage from Step 4 to the estimate of the percentage of capital outlier payments to total capital payments based on the shared threshold.) Because the aggregate capital outlier reconciliation dollars from Step 2 are negative, we stated that the estimate of capital outlier payments

for FY 2021 under our proposed methodology would be lower than the percentage of capital outlier payments otherwise determined using the shared outlier threshold.

Similarly, for the FY 2021 proposed rule, we used the December 2019 HCRIS extract of the cost report data to calculate the proposed percentage adjustment for outlier reconciliation. For the FY 2021 final rule, we proposed to use the latest quarterly HCRIS extract that is publically available at the time of the development of that rule which, for FY 2021, would be the March 2020 extract. As previously noted, we stated that we may also consider the use of more recent data that may become available for purposes of projecting the estimate of capital outlier reconciliation used in the calculation of the final FY 2021 adjustment to the FY 2021 capital standard Federal rate.

For the FY 2021 proposed rule, the estimated percentage of FY 2021 capital outlier payments otherwise determined using the shared outlier threshold was 5.42 percent (estimated capital outlier payments of $432,102,494 divided by (estimated capital outlier payments of $432,102,494 plus the estimated total capital Federal payment of $7,569,294,589)). Based on the December 2019 HCRIS, 16 hospitals had an outlier reconciliation amount recorded on Worksheet E, Part A, Line 93 for total capital outlier reconciliation dollars of negative $956,065 (Step 2). The total Federal capital payments based on the December 2019 HCRIS was $8,114,838,772 (Step 3) which results in a ratio (Step 4) of −0.01 percent. Therefore, for FY 2021, taking into account projected capital outlier reconciliation payments under our proposed methodology would decrease the estimated percentage of FY 2021 aggregate capital outlier payments by 0.01 percent.

As discussed in section III.A.2. of this Addendum, we proposed to incorporate the capital outlier reconciliation dollars from Step 5 when applying the outlier adjustment factor in determining the capital Federal rate based on the estimated percentage of capital outlier payments to total capital Federal rate payments for FY 2021.

We are invited public comment on our proposed methodology for projecting an estimate of capital outlier reconciliation and incorporating that estimate into the modeling of the estimate of FY 2021 capital outlier payments for purposes of determining the capital outlier adjustment factor.

We did not receive comments about the proposed capital outlier reconciliation methodology.

For the reasons discussed, we are finalizing the methodology for projecting an estimate of capital outlier reconciliation. Therefore, for this final rule we used the same steps as described in the proposed rule and this final rule to reduce the FY 2021 capital standard Federal rate by an adjustment factor to account for the projected proportion of capital IPPS payments paid as outliers.

For projecting the estimate of capital outlier reconciliation, similar to our projection of the estimate of operating outlier reconciliation, we are using cost report data of 17 hospitals from the March 2020 HCRIS supplemented for two hospitals for a total of 19 hospitals, which we believe will lend additional accuracy to the projection of estimated capital outlier reconciliation for FY 2021. Without the two additional reports, the step 4 unrounded value for capital outlier reconciliation would have been 0.0152, which rounds to 0.02. We note that a difference in the number of cost reports for the operating and capital outlier reconciliation projections is possible and may be due to new hospitals defined in the regulations at 42 CFR 412.300(b) that may receive capital cost-based payments (in lieu of Federal rate payments), and therefore would not receive capital outlier payments. As a result, capital outlier reconciliation is not applicable to such hospitals since there is no capital outlier payment.

The estimated percentage of FY 2021 capital outlier payments otherwise determined using the shared outlier threshold is 5.36 percent (estimated capital outlier payments of $429,431,834 divided by (estimated capital outlier payments of $429,431,834 plus the estimated total capital Federal payment of $7,577,697,269)). Based on the March 2020 HCRIS supplemented by the data for two additional providers, 19 hospitals had an outlier reconciliation amount recorded on Worksheet E, Part A, Line 93 for total capital outlier reconciliation dollars of negative $1,901,335 (Step 2). The total Federal capital payments based on the March 2020 HCRIS and supplemental two reports is $8,114,957,508 (Step 3). The ratio (Step 4) is a negative 0.023430 percent, which, when rounded to the second digit, is negative 0.02 percent (Step 4). Therefore, for FY 2021, taking into account projected capital outlier reconciliation payments under our methodology would decrease the estimated percentage of FY 2021 aggregate capital outlier payments by 0.02 percent.

(2) FY 2021 Outlier Fixed-Loss Cost Threshold

In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50977 through 50983), in response to public comments on the FY 2013 IPPS/LTCH PPS proposed rule, we made changes to our methodology for projecting the outlier fixed-loss cost threshold for FY 2014. We refer readers to the FY 2014 IPPS/LTCH PPS final rule for a detailed discussion of the changes.

As we have done in the past, to calculate the FY 2021 outlier threshold, we simulated payments by applying FY 2021 payment rates and policies using cases from the FY 2019 MedPAR file.

We note that because this payment simulation uses the FY 2021 relative weights, consistent with our finalized policy discussed in section IV.I. of the preamble to this final rule, we applied the adjustor for certain CAR–T cell therapy cases in our simulation of these payments. As discussed in section II.E.2.b. of the preamble of this final rule, we are finalizing an adjustment to account for certain CAR T-cell therapy cases in calculating the FY 2021 relative weights and for purposes of budget neutrality and outlier simulations. As noted in section II.C. of this Addendum, we specify the formula used for actual claim payment which is also used by CMS to project the outlier threshold for the upcoming fiscal year. The difference is the source of some of the variables in the formula. For example, operating and capital CCRs for actual claim payment are from the PSF while CMS uses an adjusted CCR (as described later in this section) to project the threshold for the upcoming fiscal year. In addition, charges for a claim payment are from the bill while charges to project the threshold are from the MedPAR data with an inflation factor applied to the charges (as described earlier).

In order to determine the FY 2021 outlier threshold, we inflated the charges on the MedPAR claims by 2 years, from FY 2019 to FY 2021. Consistent with the FY 2020 IPPS/LTCH PPS final rule (84 FR 42626 and 42627), we proposed to use the following methodology to calculate the charge inflation factor for FY 2021:

- Include hospitals whose last four digits fall between 0001 and 0899 (section 2779A1 of Chapter 2 of the State Operations Manual on the CMS website at *https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Downloads/som107c02.pdf*); include CAHs that were IPPS hospitals for the time period of the MedPAR data being used to calculate the charge inflation factor; include hospitals in Maryland; and remove PPS-excluded cancer hospitals who have a ''V'' in the fifth position of their provider number or a ''E'' or ''F'' in the sixth position.
- Include providers that are in both periods of charge data that are used to calculate the 1-year average annual rate of-change in charges per case. We note this is consistent with the methodology used since FY 2014.
- We excluded Medicare Advantage IME claims for the reasons described in section I.A.4. of this Addendum. We refer readers to the FY 2011 IPPS/LTCH PPS final rule for a complete discussion on our methodology of identifying and adding the total Medicare Advantage IME payment amount to the budget neutrality adjustments.
- In order to ensure that we capture only FFS claims, we included claims with a ''Claim Type'' of 60 (which is a field on the MedPAR file that indicates a claim is an FFS claim).
- In order to further ensure that we capture only FFS claims, we excluded claims with a ''GHOPAID'' indicator of 1 (which is a field on the MedPAR file that indicates a claim is not an FFS claim and is paid by a Group Health Organization).
- We examined the MedPAR file and removed pharmacy charges for anti-hemophilic blood factor (which are paid separately under the IPPS) with an indicator of ''3'' for blood clotting with a revenue code of ''0636'' from the covered charge field. We also removed organ acquisition charges from the covered charge field because organ acquisition is a pass-through payment not paid under the IPPS.

Our general methodology to inflate the charges computes the 1-year average annual rate-of-change in charges per case which is then applied twice to inflate the charges on the MedPAR claims by 2 years (for example, FY 2019 to FY 2021).

In the FY 2020 IPPS/LTCH PPS final rule (84 FR 42627), we modified our charge inflation methodology. We stated that we

believe balancing our preference to use the latest available data from the MedPAR files and stakeholders' concerns about being able to use publicly available MedPAR files to review the charge inflation factor can be achieved by modifying our methodology to use the publicly available Federal fiscal year period (that is, for FY 2020, we used the charge data from Federal fiscal years 2017 and 2018), rather than the most recent data available to CMS which, under our prior methodology, was based on calendar year data. We refer the reader to the FY 2020 IPPS/LTCH PPS final rule for a complete discussion regarding this change. For the same reasons discussed in that rulemaking, for FY 2021, we proposed to use the same methodology as FY 2020 and advance by 1 year the MedPAR data used to determine the charge inflation factor. That is, for FY 2021, we proposed to use the MedPAR files for the two most recent available federal fiscal year time periods to calculate the charge inflation factor, as we did for FY 2020. Specifically, for the proposed rule we used the December 2018 MedPAR file of FY 2018 (October 1, 2017 to September 30, 2018) charge data (released for the FY 2020 IPPS/LTCH PPS proposed rule) and the December 2019 MedPAR file of FY 2019 (October 1, 2018 to September 30, 2019) charge data (released for the FY 2021 IPPS/LTCH PPS proposed rule) to compute the proposed charge inflation factor. We proposed that for the FY 2021 final rule, we would use more recently updated data, that is the MedPAR files from March 2019 for the FY 2018 time period and March 2020 for the FY 2019 time period. Under this proposed methodology, to compute the 1-year average annual rate-of-change in charges per case for FY 2021, we compared the average covered charge per case of $61,533.34 ($582,022,123,240/9,458,647 cases) from October 1, 2017, through September 30, 2018 to the average covered charge per case of $65,442.49 ($601,183,502,371/9,186,440 cases) from October 1, 2018 through September 30, 2019. This rate-of-change was 6.4 percent (1.06353) or 13.1 percent (1.131096) over 2 years. The billed charges are obtained from the claim from the MedPAR file and inflated by the inflation factor specified previously.

As we have done in the past, in the FY 2021 IPPS/LTCH PPS proposed rule, we proposed to establish the FY 2021 outlier threshold using hospital CCRs from the December 2019 update to the Provider-Specific File (PSF)—the most recent available data at the time of the development of the proposed rule. We proposed to apply the following edits to providers' CCRs in the PSF. We believe these edits are appropriate in order to accurately model the outlier threshold. We first search for Indian Health Service providers and those providers assigned the statewide average CCR from the current fiscal year. We then replace these CCRs with the statewide average CCR for the upcoming fiscal year. We also assign the statewide average CCR (for the upcoming fiscal year) to those providers that have no value in the CCR field in the PSF or whose CCRs exceed the ceilings described later in this section (3.0 standard deviations from the mean of the log distribution of CCRs for all hospitals). We do not apply the adjustment factors described later in this section to hospitals assigned the statewide average CCR. For FY 2021, we also proposed to continue to apply an adjustment factor to the CCRs to account for cost and charge inflation (as explained later in this section). We also proposed that, if more recent data become available, we would use that data to calculate the final FY 2021 outlier threshold.

In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50979), we adopted a new methodology to adjust the CCRs. Specifically, we finalized a policy to compare the national average case-weighted operating and capital CCR from the most recent update of the PSF to the national average case-weighted operating and capital CCR from the same period of the prior year.

Therefore, as we have done since FY 2014, we proposed to adjust the CCRs from the December 2019 update of the PSF by comparing the percentage change in the national average case-weighted operating CCR and capital CCR from the December 2018 update of the PSF to the national average case-weighted operating CCR and capital CCR from the December 2019 update of the PSF. We note that we used total transfer-adjusted cases from FY 2019 to determine the national average case-weighted CCRs for both sides of the comparison. As stated in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50979), we believe that it is appropriate to use the same case count on both sides of the comparison, because this will produce the true percentage change in the average case-weighted operating and capital CCR from 1 year to the next without any effect from a change in case count on different sides of the comparison.

Using the proposed methodology, for the proposed rule, we calculated a proposed December 2018 operating national average case-weighted CCR of 0.255979 and a proposed December 2019 operating national average case-weighted CCR of 0.249649. We then calculated the percentage change between the two national operating case-weighted CCRs by subtracting the December 2018 operating national average case-weighted CCR from the December 2019 operating national average case-weighted CCR and then dividing the result by the December 2018 national operating average case-weighted CCR. This resulted in a proposed national operating CCR adjustment factor of 0.975271.

We used this same proposed methodology to adjust the capital CCRs. Specifically, we calculated a December 2018 capital national average case-weighted CCR of 0.021043 and a December 2019 capital national average case-weighted CCR of 0.020255. We then calculated the percentage change between the two national capital case-weighted CCRs by subtracting the December 2018 capital national average case-weighted CCR from the December 2019 capital national average case-weighted CCR and then dividing the result by the December 2018 capital national average case-weighted CCR. This resulted in a proposed national capital CCR adjustment factor of 0.962553.

For purposes of estimating the proposed outlier threshold for FY 2021, we used a wage index that reflects the policies discussed in the proposed rule. This includes the proposed frontier State floor adjustments in accordance with section 10324(a) of the Affordable Care Act, the proposed out-migration adjustment as added by section 505 of Public Law 108–173, as well as incorporating the FY 2021 wage index adjustment for hospitals with a wage index value below the 25th percentile, where the increase in the wage index value for these hospitals would be equal to half the difference between the otherwise applicable final wage index value for a year for that hospital and the 25th percentile wage index value for that year across all hospitals. We also incorporated our proposal of the 5-percent cap on any decrease in a hospital's wage index from the hospital's final wage index in FY 2020. We stated in the proposed rule that if we did not take the aforementioned into account, our estimate of total FY 2021 payments would be too low, and, as a result, our proposed outlier threshold would be too high, such that estimated outlier payments would be less than our projected 5.1 percent of total payments (which includes outlier reconciliation).

As described in sections IV.K. and IV.L., respectively, of the preamble of this final rule, sections 1886(q) and 1886(o) of the Act establish the Hospital Readmissions Reduction Program and the Hospital VBP Program, respectively. We do not believe that it is appropriate to include the proposed hospital VBP payment adjustments and the hospital readmissions payment adjustments in the proposed outlier threshold calculation or the proposed outlier offset to the standardized amount. Specifically, consistent with our definition of the base operating DRG payment amount for the Hospital Readmissions Reduction Program under § 412.152 and the Hospital VBP Program under § 412.160, outlier payments under section 1886(d)(5)(A) of the Act are not affected by these payment adjustments. Therefore, outlier payments would continue to be calculated based on the unadjusted base DRG payment amount (as opposed to using the base-operating DRG payment amount adjusted by the hospital readmissions payment adjustment and the hospital VBP payment adjustment). Consequently, we proposed to exclude the proposed hospital VBP payment adjustments and the estimated hospital readmissions payment adjustments from the calculation of the proposed outlier fixed-loss cost threshold.

We noted in the proposed rule that, to the extent section 1886(r) of the Act modifies the DSH payment methodology under section 1886(d)(5)(F) of the Act, the uncompensated care payment under section 1886(r)(2) of the Act, like the empirically justified Medicare DSH payment under section 1886(r)(1) of the Act, may be considered an amount payable under section 1886(d)(5)(F) of the Act such that it would be reasonable to include the payment in the outlier determination under section 1886(d)(5)(A) of the Act. As we have done since the implementation of uncompensated care payments in FY 2014, for FY 2021, we also proposed to allocate an estimated per-discharge uncompensated care

payment amount to all cases for the hospitals eligible to receive the uncompensated care payment amount in the calculation of the outlier fixed-loss cost threshold methodology. We continue to believe that allocating an eligible hospital's estimated uncompensated care payment to all cases equally in the calculation of the outlier fixed-loss cost threshold would best approximate the amount we would pay in uncompensated care payments during the year because, when we make claim payments to a hospital eligible for such payments, we would be making estimated per-discharge uncompensated care payments to all cases equally. Furthermore, we continue to believe that using the estimated per-claim uncompensated care payment amount to determine outlier estimates provides predictability as to the amount of uncompensated care payments included in the calculation of outlier payments. Therefore, consistent with the methodology used since FY 2014 to calculate the outlier fixed-loss cost threshold, for FY 2021, we proposed to include estimated FY 2021 uncompensated care payments in the computation of the outlier fixed-loss cost threshold. Specifically, we proposed to use the estimated per-discharge uncompensated care payments to hospitals eligible for the uncompensated care payment for all cases in the calculation of the outlier fixed-loss cost threshold methodology.

Using this methodology, we used the formula described in section I.C.1. of this Addendum to simulate and calculate the Federal payment rate and outlier payments for all claims. In addition, as described in the earlier section to this Addendum, we proposed to incorporate an estimate of FY 2021 outlier reconciliation in the methodology for determining the outlier threshold. As noted previously, for the FY 2021 proposed rule, the ratio of outlier reconciliation dollars to total Federal Payments (Step 4) was a negative 0.002787 percent, which, when rounded to the second digit, is 0.00 percent. Therefore, for FY 2021, we proposed to incorporate a projection of outlier reconciliation dollars by targeting an outlier threshold at 5.10 percent [5.1 percent − (−.00 percent)]. Under the proposed approach, we determined a threshold of $30,006 and calculated total outlier payments of $4,935,261,570 and total operating Federal payments of $91,833,641,321. We then divided total outlier payments by total operating Federal payments plus total outlier payments and determined that this threshold matched with the 5.10 percent target, which reflected our proposal to incorporate an estimate of outlier reconciliation in the determination of the outlier threshold (as discussed in more detail in the previous section of this Addendum). Since the target remained at 5.10 percent, we noted that the threshold calculated without applying our proposed methodology for incorporating an estimate of outlier reconciliation in the determination of the outlier threshold is the same as identified previously at $30,006. We proposed an outlier fixed-loss cost threshold for FY 2021 equal to the prospective payment rate for the MS–DRG, plus any IME, empirically justified Medicare DSH payments, estimated uncompensated care payment, and any add-on payments for new technology, plus $30,006.

Comment: Regarding the proposed charge inflation methodology, a commenter stated that relying on FYs 2018 and 2019 charge data was a thoughtful choice for the proposed rule, but did not believe that less current data should be used for the final rule. This commenter asserted that CMS should disclose all aspects of its edits to the most current data and commit to the same process and methods when it recalculates the threshold for purposes of the final rule. A commenter stated that their analysis using the publically available claim data, was 6.404 percent in comparison to the proposed rule's 6.353 percent for charge inflation.

Response: We thank the commenter for their input and analysis. We have not made any modification to the proposed charge inflation methodology in this final rule, other than using more recently updated data. In addition, we refer the reader to the detailed discussion in last year's final rule regarding the use of publically available data in the charge inflation methodology initially adopted in the FY 2020 IPPS final rule (84 FR 42627).

Comment: Commenters expressed concerns with the increase of the outlier threshold from $26,473 in FY 2020 to $30,006 in the FY 2021 proposed rule. They asserted that the increase will reduce the number of Medicare inpatient cases that qualify for an outlier payment. Some commenters recommended that CMS maintain the current threshold of $26,473. A commenter requested CMS examine the reasons for the continuing rise in the outlier threshold and whether there are any interventions CMS can take to ensure that outlier payments remain equitable and continue to protect hospitals from high cost cases where Medicare payments are insufficient to adequately compensate.

Response: As noted previously, section 1886(d)(5)(A)(iv) of the Act states that outlier payments may not be not less than 5 percent nor more than 6 percent of the total payments projected or estimated to be made based on DRG prospective payment rates for discharges in that year. We believe that maintaining the FY 2020 outlier fixed-loss cost threshold for FY 2021 would be inconsistent with the statute because we would be setting a threshold based on the prior fiscal year. Also, when we calculate the threshold, we use the updated data that is available at the time of the development of the proposed and final rule.

Comment: Some commenters requested that CMS consider whether it is appropriate to include extreme cases when calculating the threshold. One commenter explained that high charge cases have a significant impact on the threshold. The commenter observed that the amount of cases with over $1.5 million in covered charges has increased significantly from FY 2011 (926 cases) to FY 2019 (3,062 cases). The commenter believed that the impact of these cases will cause the threshold to rise and recommended that CMS carefully consider what is causing the trend, whether the inclusion of these cases in the calculation of the threshold is appropriate, and whether a separate outlier mechanism should apply to these cases that more closely hews outlier payments to marginal costs.

Response: As we explained when responding to a similar comment in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38526), the methodology used to calculate the outlier threshold includes all claims in order to account for all different types of cases, including high charge cases, to ensure that CMS meets the 5.1 percent target. As the commenter pointed out, the volume of these cases continues to rise, making their impact on the threshold significant. We believe excluding these cases would artificially lower the threshold. We believe it is important to include all cases in the calculation of the threshold no matter how high or low the charges. Including these cases with high charges lends more accuracy to the threshold, as these cases have an impact on the threshold and continue to rise in volume. Therefore, we believe the inclusion of the high-cost outlier cases in the calculation of the outlier threshold is appropriate.

Comment: A commenter noted that, for a given year, typically the final outlier threshold established by CMS in the final rule is lower than the threshold set forth in the proposed rule. The commenter emphasized that CMS should use the most recent data available when the Agency calculates the outlier threshold.

Response: We responded to similar comments in the FY 2015 IPPS/LTCH PPS final rule (79 FR 50378 through 50379) and refer readers to that rule for our response. We note that we have updated at the time of development of this final rule to use more recent data available (that is, the March 2020 release of MedPAR claims from FY 2019).

After consideration of the public comments we received, we are using the same methodology we proposed to calculate the final outlier threshold. As discussed previously, we are adopting for this final rule to calculate charge inflation using the publically available FY 2018 and FY 2019 claims data and to incorporate a projection of outlier payment reconciliations for the FY 2021 outlier threshold calculation.

For the FY 2021 final outlier threshold, we used the used the March 2019 MedPAR file of FY 2018 (October 1, 2017 through September 30, 2018) charge data (released in conjunction with the FY 2020 IPPS/LTCH PPS final rule) and the March 2020 MedPAR file of FY 2019 (October 1, 2018 through September 30, 2019) charge data (released in conjunction with this FY 2021 IPPS/LTCH PPS final rule) to determine the charge inflation factor. To compute the 1 year average annual rate of change in charges per case, we compared the average covered charge per case of $61,578.82 ($584,618,863,834/9,493,830 cases) from October 1, 2017 through September 31, 2018, to the average covered charge per case of $65,522.10 ($604,209,834,327/9,519,120 cases) from October 1, 2018 through September 31, 2019. This rate-of-change was 6.4 percent (1.06404) or 13.2 percent (1.13218) over 2 years. The billed charges are obtained from the claims from the MedPAR file and inflated by the inflation factor specified previously.

As we have done in the past, we are establishing the FY 2021 outlier threshold using hospital CCRs from the March 2020 update to the Provider-Specific File (PSF)—the most recent available data at the time of the development of the final rule. We applied the following edits to providers' CCRs in the PSF. We believe these edits are appropriate in order to accurately model the outlier threshold. We first search for Indian Health Service providers and those providers assigned the statewide average CCR from the current fiscal year. We then replaced these CCRs with the statewide average CCR for the upcoming fiscal year. We also assigned the statewide average CCR (for the upcoming fiscal year) to those providers that have no value in the CCR field in the PSF or whose CCRs exceed the ceilings described later in this section (3.0 standard deviations from the mean of the log distribution of CCRs for all hospitals). We did not apply the adjustment factors described below to hospitals assigned the statewide average CCR. For FY 2021, we also are continuing to apply an adjustment factor to the CCRs to account for cost and charge inflation (as explained below).

For this final rule, as we have done since FY 2014, we are adjusting the CCRs from the March 2020 update of the PSF by comparing the percentage change in the national average case-weighted operating CCR and capital CCR from the March 2019 update of the PSF to the national average case-weighted operating CCR and capital CCR from the March 2020 update of the PSF. We note that we used total transfer-adjusted cases from FY 2019 to determine the national average case weighted CCRs for both sides of the comparison. As stated in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50979), we believe that it is appropriate to use the same case count on both sides of the comparison because this will produce the true percentage change in the average case-weighted operating and capital CCR from one year to the next without any effect from a change in case count on different sides of the comparison.

Using the methodology described previously, for this final rule, we calculated a March 2019 operating national average case-weighted CCR of 0.254027 and a March 2020 operating national average case-weighted CCR of 0.247548. We then calculated the percentage change between the two national operating case-weighted CCRs by subtracting the March 2019 operating national average case-weighted CCR from the March 2020 operating national average case-weighted CCR and then dividing the result by the March 2019 national operating average case-weighted CCR. This resulted in a national operating CCR adjustment factor of 0.974495.

We used the same methodology to adjust the capital CCRs. Specifically, for this final rule, we calculated a March 2019 capital national average case-weighted CCR of 0.02073 and a March 2020 capital national average case-weighted CCR of 0.019935. We then calculated the percentage change between the two national capital case weighted CCRs by subtracting the March 2019 capital national average case-weighted CCR from the March 2020 capital national average case-weighted CCR and then dividing the result by the March 2019 capital national average case-weighted CCR. This resulted in a national capital CCR adjustment factor of 0.96165.

As discussed previously, similar to the proposed rule, for FY 2021, we applied the following policies (as discussed in more detail earlier):

- We used a wage index based on the FY 2021 wage index that hospitals will be paid. This included our policy to remove urban to rural reclassifications from the calculation of the rural floor, the frontier State floor adjustment in accordance with section 10324(a) of the Affordable Care Act, and the out migration adjustment as added by section 505 of Public Law 108–173, and incorporates our wage index policies to: (1) Increase the wage index values for hospitals with a wage index value below the 25th percentile wage index value across all hospitals, and (2) apply a 5 percent cap for FY 2021 on any decrease in a hospital's final wage index from the hospital's final wage index in FY 2020. As stated previously, if we did not take the above into account, our estimate of total FY 2021 payments would be too low, and, as a result, our outlier threshold would be too high, such that estimated outlier payments would be less than our projected 5.11 percent of total payments (which reflects the estimate of outlier reconciliation calculated for this final rule).
- We excluded the hospital VBP payment adjustments and the hospital readmissions payment adjustments from the calculation of the outlier fixed-loss cost threshold.
- We used the estimated per-discharge uncompensated care payments to hospitals eligible for the uncompensated care payment for all cases in the calculation of the outlier fixed-loss cost threshold methodology.

Using this methodology, we used the formula described in section I.C.1 of this Addendum to simulate and calculate the Federal payment rate and outlier payments for all claims. In addition, as described in the earlier section to this Addendum, we are finalizing to incorporate an estimate of FY 2021 outlier reconciliation in the methodology for determining the outlier threshold. As noted previously, for this FY 2021 final rule, the ratio of outlier reconciliation dollars to total Federal Payments (Step 4) is a negative 0.009217 percent, which, when rounded to the second digit, is 0.01 percent. Therefore, for FY 2021, we incorporated a projection of outlier reconciliation dollars by targeting an outlier threshold at 5.11 percent [5.1 percent − (− .01 percent)]. Under this approach, we determined a threshold of $29,051 and calculated total outlier payments of $4,955,813,978 and total operating Federal payments of $92,027,177,037. We then divided total outlier payments by total operating Federal payments plus total outlier payments and determined that this threshold matched with the 5.11 percent target, which reflects our methodology to incorporate an estimate of outlier reconciliation in the determination of the outlier threshold (as discussed in more detail in the previous section of this Addendum). We note that, if calculated without applying our finalized methodology for incorporating an estimate of outlier reconciliation in the determination of the outlier threshold, the threshold would have been $29,108. We are finalizing an outlier fixed-loss cost threshold for FY 2021 equal to the prospective payment rate for the MS–DRG, plus any IME, empirically justified Medicare DSH payments, estimated uncompensated care payment, and any add-on payments for new technology, plus $29,051.

(3) Other Changes Concerning Outliers

As stated in the FY 1994 IPPS final rule (58 FR 46348), we establish an outlier threshold that is applicable to both hospital inpatient operating costs and hospital inpatient capital-related costs. When we modeled the combined operating and capital outlier payments, we found that using a common threshold resulted in a higher percentage of outlier payments for capital-related costs than for operating costs. We project that the threshold for FY 2021 (which reflects our methodology to incorporate an estimate of operating outlier reconciliation) will result in outlier payments that will equal 5.1 percent of operating DRG payments and we estimate that capital outlier payments will equal 5.34 percent of capital payments based on the Federal rate (which reflects our methodology discussed previously to incorporate an estimate of capital outlier reconciliation).

In accordance with section 1886(d)(3)(B) of the Act and as discussed previously, we reduced the FY 2021 standardized amount by the percentage of 5.1 percent to account for the projected proportion of payments paid as outliers.

The outlier adjustment factors that would be applied to the operating standardized amount and capital Federal rate based on the FY 2021 outlier threshold are as follows:

	Operating Standardized Amounts	Capital Federal Rate*
National	0.949	0.946569

*The adjustment factor for the capital federal rate includes an adjustment to the estimated percentage of FY 2021 capital outlier payments for capital outlier reconciliation, as discussed previously and in section III. A. 2 in the Addendum of this final rule.

We are applying the outlier adjustment factors to the FY 2021 payment rates after removing the effects of the FY 2020 outlier adjustment factors on the standardized amount.

To determine whether a case qualifies for outlier payments, we currently apply hospital-specific CCRs to the total covered charges for the case. Estimated operating and capital costs for the case are calculated separately by applying separate operating and capital CCRs. These costs are then combined and compared with the outlier fixed-loss cost threshold.

Under our current policy at § 412.84, we calculate operating and capital CCR ceilings and assign a statewide average CCR for hospitals whose CCRs exceed 3.0 standard deviations from the mean of the log distribution of CCRs for all hospitals. Based on this calculation, for hospitals for which the MAC computes operating CCRs greater than 1.142 or capital CCRs greater than 0.135, or hospitals for which the MAC is unable to calculate a CCR (as described under § 412.84(i)(3) of our regulations), statewide average CCRs are used to determine whether a hospital qualifies for outlier payments. Table 8A listed in section VI. of this Addendum (and available via the internet on the CMS website) contains the statewide average operating CCRs for urban hospitals and for rural hospitals for which the MAC is unable to compute a hospital-specific CCR within the range previously specified. These statewide average ratios would be effective for discharges occurring on or after October 1, 2020 and would replace the statewide average ratios from the prior fiscal year. Table 8B listed in section VI. of this Addendum (and available via the internet on the CMS website) contains the comparable statewide average capital CCRs. As previously stated, the CCRs in Tables 8A and 8B would be used during FY 2021 when hospital-specific CCRs based on the latest settled cost report either are not available or are outside the range noted previously. Table 8C listed in section VI. of this Addendum (and available via the internet on the CMS website) contains the statewide average total CCRs used under the LTCH PPS as discussed in section V. of this Addendum.

We finally note that section 20.1.2 of chapter three of the Medicare Claims Processing Manual (on the internet at *https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Downloads/clm104c03.pdf*) covers an array of topics, including CCRs, reconciliation, and the time value of money. We encourage hospitals that are assigned the statewide average operating and/or capital CCRs to work with their MAC on a possible alternative operating and/or capital CCR as explained in the manual. Use of an alternative CCR developed by the hospital in conjunction with the MAC can avoid possible overpayments or underpayments at cost report settlement, thereby ensuring better accuracy when making outlier payments and negating the need for outlier reconciliation. We also note that a hospital may request an alternative operating or capital CCR at any time as long as the guidelines of the manual are followed. In addition, the manual outlines the outlier reconciliation process for hospitals and Medicare contractors. We refer hospitals to the manual instructions for complete details on outlier reconciliation.

(4) FY 2019 Outlier Payments

Our current estimate, using available FY 2019 claims data, is that actual outlier payments for FY 2019 were approximately 5.43 percent of actual total MS–DRG payments. Therefore, the data indicate that, for FY 2019, the percentage of actual outlier payments relative to actual total payments is higher than we projected for FY 2019. Consistent with the policy and statutory interpretation we have maintained since the inception of the IPPS, we do not make retroactive adjustments to outlier payments to ensure that total outlier payments for FY 2019 are equal to 5.1 percent of total MS–DRG payments. As explained in the FY 2003 Outlier Final Rule (68 FR 34502), if we were to make retroactive adjustments to all outlier payments to ensure total payments are 5.1 percent of MS–DRG payments (by retroactively adjusting outlier payments), we would be removing the important aspect of the prospective nature of the IPPS. Because such an across-the-board adjustment would either lead to more or less outlier payments for all hospitals, hospitals would no longer be able to reliably approximate their payment for a patient while the patient is still hospitalized. We believe it would be neither necessary nor appropriate to make such an aggregate retroactive adjustment. Furthermore, we believe it is consistent with the statutory language at section 1886(d)(5)(A)(iv) of the Act not to make retroactive adjustments to outlier payments. This section states that outlier payments be equal to or greater than 5 percent and less than or equal to 6 percent of projected or estimated (not actual) MS–DRG payments. We believe that an important goal of a PPS is predictability. Therefore, we believe that the fixed-loss outlier threshold should be projected based on the best available historical data and should not be adjusted retroactively. A retroactive change to the fixed-loss outlier threshold would affect all hospitals subject to the IPPS, thereby undercutting the predictability of the system as a whole.

We note that, because the MedPAR claims data for the entire FY 2020 period will not be available until after September 30, 2020, we are unable to provide an estimate of actual outlier payments for FY 2020 based on FY 2020 claims data in this final rule. We will provide an estimate of actual FY 2020 outlier payments in the FY 2022 IPPS/LTCH PPS proposed rule.

5. FY 2021 Standardized Amount

The adjusted standardized amount is divided into labor-related and nonlabor-related portions. Tables 1A and 1B listed and published in section VI. of this Addendum (and available via the internet on the CMS website) contain the national standardized amounts that we are applying to all hospitals, except hospitals located in Puerto Rico, for FY 2021. The standardized amount for hospitals in Puerto Rico is shown in Table 1C listed and published in section VI. of this Addendum (and available via the internet on the CMS website). The amounts shown in Tables 1A and 1B differ only in that the labor-related share applied to the standardized amounts in Table 1A is 68.3 percent, and the labor-related share applied to the standardized amounts in Table 1B is 62 percent. In accordance with sections 1886(d)(3)(E) and 1886(d)(9)(C)(iv) of the Act, we are applying a labor-related share of 62 percent, unless application of that percentage would result in lower payments to a hospital than would otherwise be made. In effect, the statutory provision means that we will apply a labor-related share of 62 percent for all hospitals whose wage indexes are less than or equal to 1.0000.

In addition, Tables 1A and 1B include the standardized amounts reflecting the applicable percentage increases for FY 2021.

The labor-related and nonlabor-related portions of the national average standardized amounts for Puerto Rico hospitals for FY 2021 are set forth in Table 1C listed and published in section VI. of this Addendum (and available via the internet on the CMS website). Similarly, section 1886(d)(9)(C)(iv) of the Act, as amended by section 403(b) of Public Law 108–173, provides that the labor-related share for hospitals located in Puerto Rico be 62 percent, unless the application of that percentage would result in lower payments to the hospital.

The following table illustrates the changes from the FY 2020 national standardized amounts to the FY 2021 national standardized amounts. The second through fifth columns display the changes from the FY 2019 standardized amounts for each applicable FY 2021 standardized amount. The first row of the table shows the updated (through FY 2020) average standardized amount after restoring the FY 2020 offsets for outlier payments and the geographic reclassification budget neutrality. The MS–DRG reclassification and recalibration and wage index budget neutrality adjustment factors are cumulative. Therefore, those FY 2020 adjustment factors are not removed from this table. Additionally, for FY 2021 we have applied the budget neutrality factors for the low wage index hospital policy and the transition policy, described previously.

BILLING CODE 4120–01–C

B. Adjustments for Area Wage Levels and Cost-of-Living

Tables 1A through 1C, as published in section VI. of this Addendum (and available via the internet on the CMS website), contain the labor related and -nonlabor related-shares that we used to calculate the prospective payment rates for hospitals located in the 50 States, the District of Columbia, and Puerto Rico for FY 2021. This section addresses two types of adjustments to the standardized amounts that are made in determining the prospective payment rates as described in this Addendum.

1. Adjustment for Area Wage Levels

Sections 1886(d)(3)(E) and 1886(d)(9)(C)(iv) of the Act require that we make an adjustment to the labor-related portion of the national prospective payment rate to account for area differences in hospital wage levels. This adjustment is made by multiplying the labor-related portion of the adjusted standardized amounts by the appropriate wage index for the area in which the hospital is located. For FY 2021, as discussed in section IV.B.3. of the preamble of this final rule, as we proposed, we are applying a labor-related share of 68.3 percent for the national standardized amounts for all IPPS hospitals (including hospitals in Puerto Rico) that have a wage index value that is greater than 1.0000. Consistent with section 1886(d)(3)(E) of the Act, as we proposed, we are applying the wage index to a labor-related share of 62 percent of the national standardized amount for all IPPS hospitals (including hospitals in Puerto Rico) whose wage index values are less than or equal to 1.0000. In section III. of the preamble of this final rule, we discuss the data and methodology for the FY 2021 wage index.

2. Adjustment for Cost-of-Living in Alaska and Hawaii

Section 1886(d)(5)(H) of the Act provides discretionary authority to the Secretary to make adjustments as the Secretary deems appropriate to take into account the unique circumstances of hospitals located in Alaska and Hawaii. Higher labor-related costs for these two States are taken into account in the adjustment for area wages described previously. To account for higher nonlabor-related costs for these two States, we multiply the nonlabor-related portion of the standardized amount for hospitals in Alaska and Hawaii by an adjustment factor.

In the FY 2013 IPPS/LTCH PPS final rule, we established a methodology to update the COLA factors for Alaska and Hawaii that were published by the U.S. Office of Personnel Management (OPM) every 4 years (at the same time as the update to the labor-related share of the IPPS market basket), beginning in FY 2014. We refer readers to the FY 2013 IPPS/LTCH PPS proposed and final rules for additional background and a detailed description of this methodology (77 FR 28145 through 28146 and 77 FR 53700 through 53701, respectively). For FY 2018, in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38530 through 38531), we updated the COLA factors published by OPM for 2009 (as these are the last COLA factors OPM published prior to transitioning from COLAs to locality pay) using the methodology that we finalized in the FY 2013 IPPS/LTCH PPS final rule.

Based on the policy finalized in the FY 2013 IPPS/LTCH PPS final rule, as we proposed, we are continuing to use the same COLA factors in FY 2021 that were used in FY 2019 to adjust the nonlabor-related portion of the standardized amount for hospitals located in Alaska and Hawaii. The following table lists the COLA factors for FY 2021.

FY 2021 COST-OF-LIVING ADJUSTMENT FACTORS: ALASKA AND HAWAII HOSPITALS

Area	Cost of Living Adjustment Factor
Alaska:	
City of Anchorage and 80-kilometer (50-mile) radius by road	1.25
City of Fairbanks and 80-kilometer (50-mile) radius by road	1.25
City of Juneau and 80-kilometer (50-mile) radius by road	1.25
Rest of Alaska	1.25
City and County of Honolulu	1.25
County of Hawaii	1.21
County of Kauai	1.25
County of Maui and County of Kalawao	1.25

Based on the policy finalized in the FY 2013 IPPS/LTCH PPS final rule, the next update to the COLA factors for Alaska and Hawaii would occur at the same time as the update to the labor-related share of the IPPS market basket (no later than FY 2022).

C. Calculation of the Prospective Payment Rates

1. General Formula for Calculation of the Prospective Payment Rates for FY 2021

In general, the operating prospective payment rate for all hospitals (including hospitals in Puerto Rico) paid under the IPPS, except SCHs and MDHs, for FY 2021 equals the Federal rate (which includes uncompensated care payments).

Under current law, the MDH program has been extended for discharges occurring through September 30, 2022.

SCHs are paid based on whichever of the following rates yields the greatest aggregate payment: the Federal national rate (which, as discussed in section V.G. of the preamble of this final rule, includes uncompensated care payments); the updated hospital-specific rate based on FY 1982 costs per discharge; the updated hospital-specific rate based on FY 1987 costs per discharge; the updated hospital-specific rate based on FY 1996 costs per discharge; or the updated hospital-specific rate based on FY 2006 costs per discharge to determine the rate that yields the greatest aggregate payment.

The prospective payment rate for SCHs for FY 2021 equals the higher of the applicable Federal rate, or the hospital-specific rate as described later in this section. The prospective payment rate for MDHs for FY 2021 equals the higher of the Federal rate, or the Federal rate plus 75 percent of the difference between the Federal rate and the hospital-specific rate as described in this section. For MDHs, the updated hospital-specific rate is based on FY 1982, FY 1987, or FY 2002 costs per discharge, whichever yields the greatest aggregate payment.

2. Operating and Capital Federal Payment Rate and Outlier Payment Calculation

Note: The formula specified in this section is used for actual claim payment and is also used by CMS to project the outlier threshold for the upcoming fiscal year. The difference is the source of some of the variables in the formula. For example, operating and capital CCRs for actual claim payment are from the PSF while CMS uses an adjusted CCR (as described previously) to project the threshold for the upcoming fiscal year. In addition,

charges for a claim payment are from the bill while charges to project the threshold are from the MedPAR data with an inflation factor applied to the charges (as described earlier).

Step 1—Determine the MS–DRG and MS–DRG relative weight (from Table 5) for each claim based on the ICD–10–CM diagnosis and ICD–10–PCS procedure codes on the claim.

Step 2—Select the applicable average standardized amount depending on whether the hospital submitted qualifying quality data and is a meaningful EHR user, as described previously.

Step 3—Compute the operating and capital Federal payment rate:

—Federal Payment Rate for Operating Costs = MS–DRG Relative Weight × [(Labor-Related Applicable Standardized Amount × Applicable CBSA Wage Index) + (Nonlabor-Related Applicable Standardized Amount × Cost-of-Living Adjustment)] × (1 + IME + (DSH * 0.25))
—Federal Payment for Capital Costs = MS–DRG Relative Weight × Federal Capital Rate × Geographic Adjustment Fact × (1 + IME + DSH)

Step 4—Determine operating and capital costs:

—Operating Costs = (Billed Charges × Operating CCR)
—Capital Costs = (Billed Charges × Capital CCR).

Step 5—Compute operating and capital outlier threshold (CMS applies a geographic adjustment to the operating and capital outlier threshold to account for local cost variation):

—Operating CCR to Total CCR = (Operating CCR)/(Operating CCR + Capital CCR)
—Operating Outlier Threshold = [Fixed Loss Threshold × ((Labor-Related Portion × CBSA Wage Index) + Nonlabor-Related portion)] × Operating CCR to Total CCR + Federal Payment with IME, DSH + Uncompensated Care Payment + New Technology Add-On Payment Amount
—Capital CCR to Total CCR = (Capital CCR)/(Operating CCR + Capital CCR)
—Capital Outlier Threshold = (Fixed Loss Threshold × Geographic Adjustment Factor × Capital CCR to Total CCR) + Federal Payment with IME and DSH

Step 6—Compute operating and capital outlier payments:

—Marginal Cost Factor = 0.80 or 0.90 (depending on the MS–DRG)
—Operating Outlier Payment = (Operating Costs—Operating Outlier Threshold) × Marginal Cost Factor
—Capital Outlier Payment = (Capital Costs—Capital Outlier Threshold) × Marginal Cost Factor

The payment rate may then be further adjusted for hospitals that qualify for a low-volume payment adjustment under section 1886(d)(12) of the Act and 42 CFR 412.101(b). The base-operating DRG payment amount may be further adjusted by the hospital readmissions payment adjustment and the hospital VBP payment adjustment as described under sections 1886(q) and 1886(o) of the Act, respectively. Payments also may be reduced by the 1-percent adjustment under the HAC Reduction Program as described in section 1886(p) of the Act. We also make new technology add-on payments in accordance with section 1886(d)(5)(K) and (L) of the Act. Finally, we add the uncompensated care payment to the total claim payment amount. As noted in the previous formula, we take uncompensated care payments and new technology add-on payments into consideration when calculating outlier payments.

3. Hospital-Specific Rate (Applicable Only to SCHs and MDHs)

a. Calculation of Hospital-Specific Rate

Section 1886(b)(3)(C) of the Act provides that SCHs are paid based on whichever of the following rates yields the greatest aggregate payment: The Federal rate; the updated hospital-specific rate based on FY 1982 costs per discharge; the updated hospital-specific rate based on FY 1987 costs per discharge; the updated hospital-specific rate based on FY 1996 costs per discharge; or the updated hospital-specific rate based on FY 2006 costs per discharge to determine the rate that yields the greatest aggregate payment.

As noted previously, the MDH program has been extended under current law for discharges occurring through September 30, 2022. For MDHs, the updated hospital-specific rate is based on FY 1982, FY 1987, or FY 2002 costs per discharge, whichever yields the greatest aggregate payment.

For a more detailed discussion of the calculation of the hospital-specific rates, we refer readers to the FY 1984 IPPS interim final rule (48 FR 39772); the April 20, 1990 final rule with comment period (55 FR 15150); the FY 1991 IPPS final rule (55 FR 35994); and the FY 2001 IPPS final rule (65 FR 47082).

b. Updating the FY 1982, FY 1987, FY 1996, FY 2002 and FY 2006 Hospital-Specific Rate for FY 2021

Section 1886(b)(3)(B)(iv) of the Act provides that the applicable percentage increase applicable to the hospital-specific rates for SCHs and MDHs equals the applicable percentage increase set forth in section 1886(b)(3)(B)(i) of the Act (that is, the same update factor as for all other hospitals subject to the IPPS). Because the Act sets the update factor for SCHs and MDHs equal to the update factor for all other IPPS hospitals, the update to the hospital-specific rates for SCHs and MDHs is subject to the amendments to section 1886(b)(3)(B) of the Act made by sections 3401(a) and 10319(a) of the Affordable Care Act. Accordingly, the applicable percentage increases to the hospital-specific rates applicable to SCHs and MDHs are the following:

FY 2021	Hospital Submitted Quality Data and is a Meaningful EHR User	Hospital Submitted Quality Data and is NOT a Meaningful EHR User	Hospital Did NOT Submit Quality Data and is a Meaningful EHR User	Hospital Did NOT Submit Quality Data and is NOT a Meaningful EHR User
Market Basket Rate-of-Increase	2.4	2.4	2.4	2.4
Adjustment for Failure to Submit Quality Data under Section 1886(b)(3)(B)(viii) of the Act	0	0	-0.6	-0.6
Adjustment for Failure to be a Meaningful EHR User under Section 1886(b)(3)(B)(ix) of the Act	0	-1.8	0	-1.8
MFP Adjustment under Section 1886(b)(3)(B)(xi) of the Act	0	0	0	0
Applicable Percentage Increase Applied to Standardized Amount	**2.4**	**0.6**	**1.8**	**0**

For a complete discussion of the applicable percentage increase applied to the hospital-specific rates for SCHs and MDHs, we refer readers to section IV.B. of the preamble of this final rule. In addition, because SCHs and MDHs use the same MSDRGs as other hospitals when they are paid based in whole or in part on the hospital-specific rate, the -hospital specific-rate is adjusted by a budget

neutrality factor to ensure that changes to the MS–DRG classifications and the recalibration of the MS–DRG relative weights are made in a manner so that aggregate IPPS payments are unaffected. Therefore, the hospital specific-rate for an SCH or an MDH is adjusted by the MS–DRG reclassification and recalibration budget neutrality factor, as discussed in section III. of this Addendum and listed in the table in section II. of this Addendum. The resulting rate is used in determining the payment rate that an SCH or MDH would receive for its discharges beginning on or after October 1, 2020. We note that, in this final rule, for FY 2021, we are not making a documentation and coding adjustment to the hospital-specific rate. We refer readers to section II.D. of the preamble of this final rule for a complete discussion regarding our policies and previously finalized policies (including our historical adjustments to the payment rates) relating to the effect of changes in documentation and coding that do not reflect real changes in case mix.

III. Changes to Payment Rates for Acute Care Hospital Inpatient Capital-Related Costs for FY 2021

The PPS for acute care hospital inpatient capital-related costs was implemented for cost reporting periods beginning on or after October 1, 1991. The basic methodology for determining Federal capital prospective rates is set forth in the regulations at 42 CFR 412.308 through 412.352. In this section of this Addendum, we discuss the factors that we used to determine the capital Federal rate for FY 2021, which are effective for discharges occurring on or after October 1, 2020.

All hospitals (except ''new'' hospitals under § 412.304(c)(2)) are paid based on the capital Federal rate. We annually update the capital standard Federal rate, as provided in § 412.308(c)(1), to account for capital input price increases and other factors. The regulations at § 412.308(c)(2) also provide that the capital Federal rate be adjusted annually by a factor equal to the estimated proportion of outlier payments under the capital Federal rate to total capital payments under the capital Federal rate. In addition, § 412.308(c)(3) requires that the capital Federal rate be reduced by an adjustment factor equal to the estimated proportion of payments for exceptions under § 412.348. (We note that, as discussed in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53705), there is generally no longer a need for an exceptions payment adjustment factor.) However, in limited circumstances, an additional payment exception for extraordinary circumstances is provided for under § 412.348(f) for qualifying hospitals.

Therefore, in accordance with § 412.308(c)(3), an exceptions payment adjustment factor may need to be applied if such payments are made. Section 412.308(c)(4)(ii) requires that the capital standard Federal rate be adjusted so that the effects of the annual DRG reclassification and the recalibration of DRG weights and changes in the geographic adjustment factor (GAF) are budget neutral.

Section 412.374 provides for payments to hospitals located in Puerto Rico under the IPPS for acute care hospital inpatient capital-related costs, which currently specifies capital IPPS payments to hospitals located in Puerto Rico are based on 100 percent of the Federal rate.

A. Determination of the Federal Hospital Inpatient Capital-Related Prospective Payment Rate Update for FY 2021

In the discussion that follows, we explain the factors that we used to determine the capital Federal rate for FY 2021. In particular, we explain why the FY 2021 capital Federal rate would increase approximately 0.84 percent, compared to the FY 2020 capital Federal rate. As discussed in the impact analysis in Appendix A to this FY 2021 IPPS/LTCH final rule, we estimate that capital payments per discharge would increase approximately 0.3 percent during that same period. Because capital payments constitute approximately 10 percent of hospital payments, a 1-percent change in the capital Federal rate yields only approximately a 0.1 percent change in actual payments to hospitals.

1. Projected Capital Standard Federal Rate Update

Under § 412.308(c)(1), the capital standard Federal rate is updated on the basis of an analytical framework that takes into account changes in a capital input price index (CIPI) and several other policy adjustment factors. Specifically, we adjust the projected CIPI rate of change, as appropriate, each year for case-mix index-related changes, for intensity, and for errors in previous CIPI forecasts. The update factor for FY 2021 under that framework is 1.1 percent based on a projected 1.1 percent increase in the 2014-based CIPI, a 0.0 percentage point adjustment for intensity, a 0.0 percentage point adjustment for case-mix, a 0.0 percentage point adjustment for the DRG reclassification and recalibration, and a forecast error correction of 0.0 percentage point. As discussed in section III.C. of this Addendum, we continue to believe that the CIPI is the most appropriate input price index for capital costs to measure capital price changes in a given year. We also explain the basis for the FY 2021 CIPI projection in that same section of this Addendum. Below we describe the policy adjustments that we applied in the update framework for FY 2021.

The case-mix index is the measure of the average DRG weight for cases paid under the IPPS. Because the DRG weight determines the prospective payment for each case, any percentage increase in the case-mix index corresponds to an equal percentage increase in hospital payments.

The case-mix index can change for any of several reasons—

- The average resource use of Medicare patient changes (''real'' case-mix change);
- Changes in hospital documentation and coding of patient records result in higher-weighted DRG assignments (''coding effects''); or
- The annual DRG reclassification and recalibration changes may not be budget neutral (''reclassification effect'').

We define real case-mix change as actual changes in the mix (and resource requirements) of Medicare patients, as opposed to changes in documentation and coding behavior that result in assignment of cases to higher-weighted DRGs, but do not reflect higher resource requirements. The capital update framework includes the same case-mix index adjustment used in the former operating IPPS update framework (as discussed in the May 18, 2004 IPPS proposed rule for FY 2005 (69 FR 28816)). (We no longer use an update framework to make a recommendation for updating the operating IPPS standardized amounts, as discussed in section II. of Appendix B to the FY 2006 IPPS final rule (70 FR 47707).)

For FY 2021, we are projecting a 0.5 percent total increase in the case-mix index. We estimated that the real case-mix increase would equal 0.5 percent for FY 2021. The net adjustment for change in case-mix is the difference between the projected real increase in case mix and the projected total increase in case mix. Therefore, as we proposed, the net adjustment for case-mix change in FY 2021 is 0.0 percentage point.

The capital update framework also contains an adjustment for the effects of DRG reclassification and recalibration. This adjustment is intended to remove the effect on total payments of prior year's changes to the DRG classifications and relative weights, in order to retain budget neutrality for all case-mix index-related changes other than those due to patient severity of illness. Due to the lag time in the availability of data, there is a 2-year lag in data used to determine the adjustment for the effects of DRG reclassification and recalibration. For example, we have data available to evaluate the effects of the FY 2019 DRG reclassification and recalibration as part of our update for FY 2021. We assume, for purposes of this adjustment, that the estimate of FY 2019 DRG reclassification and recalibration would result in no change in the case-mix when compared with the case-mix index that would have resulted if we had not made the reclassification and recalibration changes to the DRGs. Therefore, as we proposed, we are making a 0.0 percentage point adjustment for reclassification and recalibration in the update framework for FY 2021.

The capital update framework also contains an adjustment for forecast error. The input price index forecast is based on historical trends and relationships ascertainable at the time the update factor is established for the upcoming year. In any given year, there may be unanticipated price fluctuations that may result in differences between the actual increase in prices and the forecast used in calculating the update factors. In setting a prospective payment rate under the framework, we make an adjustment for forecast error only if our estimate of the change in the capital input price index for any year is off by 0.25 percentage point or more. There is a 2-year lag between the forecast and the availability of data to develop a measurement of the forecast error. Historically, when a forecast error of the CIPI is greater than 0.25 percentage point in absolute terms, it is reflected in the update recommended under this framework. A forecast error of 0.0

percentage point was calculated for the FY 2019 update, for which there are historical data. That is, current historical data indicated that the forecasted FY 2019 CIPI (1.4 percent) used in calculating the FY 2019 update factor was the same percentage increase as the actual realized price increase (1.4 percent). As this does not exceed the 0.25 percentage point threshold, we are not making an adjustment for forecast error in the update for FY 2021.

Under the capital IPPS update framework, we also make an adjustment for changes in intensity. Historically, we calculate this adjustment using the same methodology and data that were used in the past under the framework for operating IPPS. The intensity factor for the operating update framework reflects how hospital services are utilized to produce the final product, that is, the discharge. This component accounts for changes in the use of quality-enhancing services, for changes within DRG severity, and for expected modification of practice patterns to remove noncost-effective services. Our intensity measure is based on a 5-year average.

We calculate case-mix constant intensity as the change in total cost per discharge, adjusted for price level changes (the CPI for hospital and related services) and changes in real case-mix. Without reliable estimates of the proportions of the overall annual intensity changes that are due, respectively, to ineffective practice patterns and the combination of quality-enhancing new technologies and complexity within the DRG system, we assume that one-half of the annual change is due to each of these factors. Thus, the capital update framework provides an add-on to the input price index rate of increase of one-half of the estimated annual increase in intensity, to allow for increases within DRG severity and the adoption of quality-enhancing technology.

In this final rule, as we proposed, we are continuing to use a Medicare-specific intensity measure that is based on a 5-year adjusted average of cost per discharge for FY 2021 (we refer readers to the FY 2011 IPPS/LTCH PPS final rule (75 FR 0436) for a full description of our Medicare-specific intensity measure). Specifically, for FY 2021, we used an intensity measure that is based on an average of cost-per-discharge data from the 5-year period beginning with FY 2014 and extending through FY 2018. Based on these data, we estimated that case-mix constant intensity declined during FYs 2014 through 2018. In the past, when we found intensity to be declining, we believed a zero (rather than a negative) intensity adjustment was appropriate. Consistent with this approach, because we estimated that intensity would decline during that 5-year period, we believe it is appropriate to continue to apply a zero-intensity adjustment for FY 2021. Therefore, as we proposed, we made a 0.0 percentage point adjustment for intensity in the update for FY 2021.

Earlier, we described the basis of the components we used to develop the 1.1 percent capital update factor under the capital update framework for FY 2021, as shown in the following table.192

FY 2021 UPDATE FACTOR TO THE CAPITAL FEDERAL RATE

Capital Input Price Index*	1.1
Intensity:	0.0
Case-Mix Adjustment Factors:	
Real Across DRG Change	0.5
Projected Case-Mix Change	-0.5
Subtotal	1.1
Effect of FY 2019 Reclassification and Recalibration	0.0
Forecast Error Correction	0.0
Total Update	1.1

*The capital input price index represents the 2014-based CIPI.

2. Outlier Payment Adjustment Factor

Section 412.312(c) establishes a unified outlier payment methodology for inpatient operating and inpatient capital-related costs. A shared threshold is used to identify outlier cases for both inpatient operating and inpatient capital-related payments. Section 412.308(c)(2) provides that the standard Federal rate for inpatient capital-related costs be reduced by an adjustment factor equal to the estimated proportion of capital-related outlier payments to total inpatient capital-related PPS payments. The outlier threshold is set so that operating outlier payments are projected to be 5.1 percent of total operating IPPS DRG payments. For FY 2021, as we proposed we are incorporating the estimated outlier reconciliation payment amounts into the outlier threshold model, as we did for FY 2020. (For more details on our policy to incorporate outlier reconciliation payment amounts into the outlier threshold model, please see section II.A. of this Addendum to this final rule.)

For FY 2020, we estimated that outlier payments for capital-related PPS payments would equal 5.37 percent of inpatient capital-related payments based on the capital Federal rate in FY 2020. Based on the threshold discussed in section II.A. of this Addendum, we estimate that prior to taking into account projected capital outlier reconciliation payments, outlier payments for capital-related costs would equal 5.36 percent for inpatient capital-related payments based on the capital Federal rate in FY 2021. However, using the methodology outlined in section II.A. of this Addendum, we estimate that taking into account projected capital outlier reconciliation payments would decrease FY 2021 aggregate estimated capital outlier payments by 0.02 percent. Therefore, accounting for estimated capital outlier reconciliation, the estimated outlier payments for capital-related PPS payments would equal 5.34 percent (5.36 percent − 0.02 percent) of inpatient capital-related payments based on the capital Federal rate in FY 2021. Accordingly, we applied an outlier adjustment factor of 0.9466 in determining the capital Federal rate for FY 2021. Thus, we estimate that the percentage of capital outlier payments to total capital Federal rate payments for FY 2021 would be lower than the percentage for FY 2020.

The outlier reduction factors are not built permanently into the capital rates; that is, they are not applied cumulatively in determining the capital Federal rate. The FY 2021 outlier adjustment of 0.9466 is a 0.03 percent change from the FY 2020 outlier adjustment of 0.9463. Therefore, the net change in the outlier adjustment to the capital Federal rate for FY 2021 is 1.0003 (0.9466/0.9463; calculation performed on unrounded numbers) so that the outlier adjustment will increase the FY 2021 capital Federal rate by approximately 0.03 percent compared to the FY 2020 outlier adjustment.

3. Budget Neutrality Adjustment Factor for Changes in DRG Classifications and Weights and the GAF

Section 412.308(c)(4)(ii) requires that the capital Federal rate be adjusted so that aggregate payments for the fiscal year based

on the capital Federal rate, after any changes resulting from the annual DRG reclassification and recalibration and changes in the GAF, are projected to equal aggregate payments that would have been made on the basis of the capital Federal rate without such changes.

As discussed in section III.G.3. of the preamble of this final rule, in the FY 2020 IPPS/LTCH PPS final rule (84 FR 42325 through 42339), we finalized a policy to help reduce wage index disparities between high and low wage index hospitals by increasing the wage index values for certain hospitals with low wage index values. As also discussed in section III.G.3. of the preamble of this final rule, this policy will continue in FY 2021. In addition, in the FY 2020 IPPS/LTCH PPS final rule (84 FR 42332 through 42336), we removed urban to rural reclassifications from the calculation of the rural floor to prevent inappropriate payment increases under the rural floor due to rural reclassifications, such that, beginning in FY 2020, the rural floor is calculated without including the wage data of hospitals that have reclassified as rural under section 1886(d)(8)(E) of the Act (as implemented in the regulations at § 412.103). Therefore, as mentioned in section III.G.1. of the preamble of this final rule, the rural floor for this FY 2021 final rule is calculated without the wage data of hospitals that have reclassified as rural under § 412.103. Lastly, for FY 2020, we placed a 5-percent cap on any decrease in a hospital's wage index from the hospital's final wage index in FY 2019 (84 FR 42336 through 42338). In light of the OMB updates described in section III.B.2. of the preamble of this final rule, for FY 2021, we are again capping any decreases in the wage index at 5 percent so that a hospital's final wage index for FY 2021 will not be less than 95 percent of its final wage index for FY 2020.

As we discussed in the in the FY 2020 IPPS/LTCH PPS final rule (84 FR 42638 through 42639), we augmented our historical methodology for computing the budget neutrality factor for changes in the GAFs in light of the effect of those wage index changes on the GAFs. Specifically, we established a 2-step methodology, under which we first calculate a factor to ensure budget neutrality for changes to the GAFs due to the update to the wage data, wage index reclassifications and redesignations, including our policy to remove the wage data of urban hospitals that have reclassified as rural under § 412.103 from the calculation of ''the wage index for rural areas in the State in which the county is located'' in applying the provisions of section 1886(d)(8)(C)(iii) of the Act, and the rural floor, including our policy to calculate the rural floor without including the wage data of urban hospitals that have reclassified as rural under § 412.103, consistent with our historical GAF budget neutrality factor methodology. In the second step, we calculate a factor to ensure budget neutrality for changes to the GAFs due to our policy to increase the wage index for hospitals with a wage index value below the 25th percentile wage index and our policy to place a 5-percent cap on any decrease in a hospital's wage index from the hospital's final wage index in the prior fiscal year. In this section, we refer to these two policies as the lowest quartile hospital wage index adjustment and the 5-percent cap on wage index decreases.

In light of the changes to the wage index and other wage index policies for FY 2021 discussed previously, which directly affect the GAF, we continue to compute a budget neutrality factor for changes in the GAFs in two steps. We discuss our 2-step calculation of the GAF budget neutrality factors for FY 2021 as follows.

To determine the GAF budget neutrality factors for FY 2021, we first compared estimated aggregate capital Federal rate payments based on the FY 2020 MS–DRG classifications and relative weights and the FY 2020 GAFs to estimated aggregate capital Federal rate payments based on the FY 2020 MS–DRG classifications and relative weights and the FY 2021 GAFs without incorporating the effects on the GAFs of the lowest quartile hospital wage index adjustment and the 5-percent cap on wage index decreases. To achieve budget neutrality for these changes in the GAFs, we calculated an incremental GAF budget neutrality adjustment factor of 1.0021 for FY 2021. Next, we compared estimated aggregate capital Federal rate payments based on the FY 2021 GAFs with and without incorporating the effects on the GAFs of the lowest quartile hospital wage index adjustment and the 5-percent cap on wage index decreases. For this calculation, estimated aggregate capital Federal rate payments were calculated using the FY 2021 MS–DRG classifications and relative weights, and the FY 2021 GAFs (both with and without incorporating the effects on the GAF of the lowest quartile hospital wage index adjustment and the 5-percent cap on wage index decreases). (We note, for this calculation the GAFs included the out-migration and Frontier state adjustments.) To achieve budget neutrality for the effects of the lowest quartile hospital wage index adjustment and the 5-percent cap on wage index decreases on the FY 2021 GAFs, we calculated an incremental GAF budget neutrality adjustment factor of 0.9963. Therefore, to achieve budget neutrality for the changes in the GAFs, based on the calculations described previously, we are applying an incremental budget neutrality adjustment factor of 0.9984 (1.0021 x 0.9963) for FY 2021 to the previous cumulative FY 2020 adjustment factor.

We also compared estimated aggregate capital Federal rate payments based on the FY 2020 MS–DRG classifications and relative weights and the FY 2021 GAFs to estimated aggregate capital Federal rate payments based on the cumulative effects of the FY 2021 MS–DRG classifications and relative weights and the FY 2021 GAFs without the effects of the lowest quartile hospital wage index adjustment and the 5-percent cap on wage index decreases. The incremental adjustment factor for DRG classifications and changes in relative weights is 0.9988. The incremental adjustment factors for MS–DRG classifications and changes in relative weights (0.9988) and for changes in the GAFs through FY 2021 (0.9984) is 0.9971 (0.9988 x 0.9984). We note that all the values are calculated with unrounded numbers.

The GAF/DRG budget neutrality adjustment factors are built permanently into the capital rates; that is, they are applied cumulatively in determining the capital Federal rate. This follows the requirement under § 412.308(c)(4)(ii) that estimated aggregate payments each year be no more or less than they would have been in the absence of the annual DRG reclassification and recalibration and changes in the GAFs.

The methodology used to determine the recalibration and geographic adjustment factor (GAF/DRG) budget neutrality adjustment is similar to the methodology used in establishing budget neutrality adjustments under the IPPS for operating costs. One difference is that, under the operating IPPS, the budget neutrality adjustments for the effect of geographic reclassifications are determined separately from the effects of other changes in the hospital wage index and the MS–DRG relative weights. Under the capital IPPS, there is a single GAF/DRG budget neutrality adjustment factor for changes in the GAF (including geographic reclassification and the lowest quartile hospital wage index adjustment and the 5-percent cap on wage index decreases described previously) and the MS–DRG relative weights. In addition, there is no adjustment for the effects that geographic reclassification or the lowest quartile hospital wage index adjustment and the 5-percent cap on wage index decreases described previously have on the other payment parameters, such as the payments for DSH or IME.

The incremental GAF/DRG adjustment factor of 0.9971 (the product of the incremental GAF budget neutrality adjustment factor of 0.9984 and the incremental DRG budget neutrality adjustment factor of 0.9988) accounts for the MS–DRG reclassifications and recalibration and for changes in the GAFs. As noted previously, it also incorporates the effects on the GAFs of FY 2021 geographic reclassification decisions made by the MGCRB compared to FY 2020 decisions and the lowest quartile hospital wage index adjustment, and the 5-percent cap on wage index decreases described earlier. However, it does not account for changes in payments due to changes in the DSH and IME adjustment factors.

4. Capital Federal Rate for FY 2021

For FY 2020, we established a capital Federal rate of $462.33 (84 FR 42640, as corrected in 84 FR 53613). We are establishing an update of 1.1 percent in determining the FY 2021 capital Federal rate for all hospitals. As a result of this update and the budget neutrality factors discussed earlier, we are establishing a national capital Federal rate of $466.22 for FY 2021. The national capital Federal rate for FY 2021 was calculated as follows:

- The FY 2021 update factor is 1.011; that is, the update is 1.1 percent.
- The FY 2021 budget neutrality adjustment factor that is applied to the capital Federal rate for changes in the MS–DRG classifications and relative weights and changes in the GAFs is 0.9971.
- The FY 2021 outlier adjustment factor is 0.9466.

We are providing the following chart that shows how each of the factors and adjustments for FY 2021 affects the computation of the FY 2021 national capital Federal rate in comparison to the FY 2020 national capital Federal rate. The FY 2021 update factor has the effect of increasing the capital Federal rate by 1.1 percent compared to the FY 2020 capital Federal rate. The GAF/DRG budget neutrality adjustment factor has the effect of decreasing the capital Federal rate by 0.29 percent. The FY 2021 outlier adjustment factor has the effect of increasing the capital Federal rate by 0.03 percent compared to the FY 2020 capital Federal rate. The combined effect of all the changes would increase the national capital Federal rate by approximately 0.84 percent, compared to the FY 2020 national capital Federal rate.

COMPARISON OF FACTORS AND ADJUSTMENTS: FY 2020 CAPITAL FEDERAL RATE AND THE FY 2021 CAPITAL FEDERAL RATE

	FY 2020	FY 2021	Change	Percent Change
Update Factor[1]	1.0150	1.0110	1.0110	1.10
GAF/DRG Adjustment Factor[1]	0.9948	0.9971	0.9971	-0.29
Outlier Adjustment Factor[2]	0.9463	0.9466	1.0003	0.03
Capital Federal Rate	$462.33	$466.22	1.0084	0.84[3]

[1] The update factor and the GAF/DRG budget neutrality adjustment factors are built permanently into the capital Federal rates. Thus, for example, the incremental change from FY 2020 to FY 2021 resulting from the application of the 0.9971 GAF/DRG budget neutrality adjustment factor for FY 2021 is a net change of 0.9971 (or –0.29 percent).

[2] The outlier reduction factor is not built permanently into the capital Federal rate; that is, the factor is not applied cumulatively in determining the capital Federal rate. Thus, for example, the net change resulting from the application of the FY 2021 outlier adjustment factor is 0.9466/0.9463 or 1.0003 (or 0.03 percent).

[3] Percent change may not sum due to rounding.

B. Calculation of the Inpatient Capital-Related Prospective Payments for FY 2021

For purposes of calculating payments for each discharge during FY 2021, the capital Federal rate is adjusted as follows: (Standard Federal Rate) × (DRG weight) × (GAF) × (COLA for hospitals located in Alaska and Hawaii) × (1 + DSH Adjustment Factor + IME Adjustment Factor, if applicable). The result is the adjusted capital Federal rate.

Hospitals also may receive outlier payments for those cases that qualify under the threshold established for each fiscal year. Section 412.312(c) provides for a shared threshold to identify outlier cases for both inpatient operating and inpatient capital-related payments. The outlier threshold for FY 2021 is in section II.A. of this Addendum. For FY 2021, a case will qualify as a cost outlier if the cost for the case plus the (operating) IME and DSH payments (including both the empirically justified Medicare DSH payment and the estimated uncompensated care payment, as discussed in section II.A.4.j. of this Addendum) is greater than the prospective payment rate for the MS–DRG plus the fixed-loss amount of $29,051.

Currently, as provided under § 412.304(c)(2), we pay a new hospital 85 percent of its reasonable costs during the first 2 years of operation, unless it elects to receive payment based on 100 percent of the capital Federal rate. Effective with the third year of operation, we pay the hospital based on 100 percent of the capital Federal rate (that is, the same methodology used to pay all other hospitals subject to the capital PPS).

C. Capital Input Price Index

1. Background

Like the operating input price index, the capital input price index (CIPI) is a fixed-weight price index that measures the price changes associated with capital costs during a given year. The CIPI differs from the operating input price index in one important aspect—the CIPI reflects the vintage nature of capital, which is the acquisition and use of capital over time. Capital expenses in any given year are determined by the stock of capital in that year (that is, capital that remains on hand from all current and prior capital acquisitions). An index measuring capital price changes needs to reflect this vintage nature of capital. Therefore, the CIPI was developed to capture the vintage nature of capital by using a weighted-average of past capital purchase prices up to and including the current year.

We periodically update the base year for the operating and capital input price indexes to reflect the changing composition of inputs for operating and capital expenses. For this FY 2021 IPPS/LTCH PPS final rule, we use the IPPS operating and capital market baskets that reflect a 2014 base year. For a complete discussion of the development of these market baskets, we refer readers to section IV. of the preamble of the FY 2018 IPPS/LTCH PPS final rule (82 FR 38170).

2. Forecast of the CIPI for FY 2021

Based on IHS Global Inc.'s second quarter 2020 forecast, for this FY 2021 IPPS/LTCH PPS final rule, we are forecasting the 2014-based CIPI to increase 1.1 percent in FY 2021. This reflects a projected 1.6 percent increase in vintage-weighted depreciation prices (building and fixed equipment, and movable equipment), and a projected 1.7 percent increase in other capital expense prices in FY 2021, partially offset by a projected 1.7 percent decline in vintage-weighted interest expense prices in FY 2021. The weighted average of these three factors produces the forecasted 1.1 percent increase for the 2014-based CIPI in FY 2021. As proposed, we are using the more recent data available for this final rule to determine the FY 2021 increase in the 2014-based CIPI for the final rule.

IV. Changes to Payment Rates for Excluded Hospitals: Rate-of-Increase Percentages for FY 2021

Payments for services furnished in children's hospitals, 11 cancer hospitals, and hospitals located outside the 50 States, the District of Columbia and Puerto Rico (that is, short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa) that are excluded from the IPPS are made on the basis of reasonable costs based on the hospital's own historical cost experience, subject to a rate-of-increase ceiling. A per discharge limit (the target amount, as defined in § 413.40(a) of the regulations) is set for each hospital, based on the hospital's own cost experience in its base year, and updated annually by a rate-of-increase percentage specified in § 413.40(c)(3). In addition, as specified in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38536), effective for cost reporting periods beginning during FY 2018, the annual update to the target amount for extended neoplastic disease care hospitals (hospitals described in § 412.22(i) of the regulations) also is the rate-of-increase percentage specified in § 413.40(c)(3). (We note that, in accordance with § 403.752(a), religious nonmedical health care institutions (RNHCIs) are also subject to the rate-of

increase limits established under § 413.40 of the regulations.)

For the FY 2021 IPPS/LTCH PPS proposed rule, based on IGI's fourth quarter 2019 forecast, we estimated that the 2014-based IPPS operating market basket update for FY 2021 would be 3.0 percent (that is, the estimate of the market basket rate-of-increase). Based on this estimate, we stated in the proposed rule that the FY 2021 rate-of-increase percentage that would be applied to the FY 2020 target amounts in order to calculate the FY 2021 target amounts for children's hospitals, the 11 cancer hospitals, RNCHIs, short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa, and extended neoplastic disease care hospitals would be 3.0 percent, in accordance with the applicable regulations at 42 CFR 413.40. However, we proposed that if more recent data became available for the final rule, we would use them, as appropriate, to calculate the IPPS operating market basket update for FY 2021. For this FY 2021 IPPS/LTCH PPS final rule, based on IGI's 2020 second quarter forecast, the 2014-based IPPS operating market basket update for FY 2021 is 2.4 percent (that is, the estimate of the market basket rate-of-increase). Therefore, the FY 2021 rate-of-increase percentage that will be applied to the FY 2020 target amounts in order to calculate the FY 2021 target amounts for children's hospitals, the 11 cancer hospitals, RNCHIs, extended neoplastic disease care hospitals, and short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa is 2.4 percent, in accordance with the applicable regulations at 42 CFR 413.40.

IRFs and rehabilitation distinct part units, IPFs and psychiatric distinct part units, and LTCHs are excluded from the IPPS and paid under their respective PPSs. The IRF PPS, the IPF PPS, and the LTCH PPS are updated annually. We refer readers to section VII. of the preamble of this final rule and section V. of the Addendum to this final rule for the updated changes to the Federal payment rates for LTCHs under the LTCH PPS for FY 2021. The annual updates for the IRF PPS and the IPF PPS are issued by the agency in separate **Federal Register** documents.

We did not receive public comments related to the rate-of-increase percentage used to determine the target amounts for excluded hospitals for FY 2021. Therefore, for the reasons set forth in this final rule and in the FY 2021 IPPS/LTCH PPS proposed rule, we are finalizing as proposed, without modification, our policy for updating the target amounts for the excluded hospitals discussed in this section.

V. Changes to the Payment Rates for the LTCH PPS for FY 2021

A. LTCH PPS Standard Federal Payment Rate for FY 2021

1. Overview

In section VII. of the preamble of this final rule, we discuss our annual updates to the payment rates, factors, and specific policies under the LTCH PPS for FY 2021.

Under § 412.523(c)(3) of the regulations, for LTCH PPS FYs 2012 through 2020, we updated the standard Federal payment rate by the most recent estimate of the LTCH PPS market basket at that time, including additional statutory adjustments required by sections 1886(m)(3) (citing sections 1886(b)(3)(B)(xi)(II), and 1886(m)(4) of the Act as set forth in the regulations at § 412.523(c)(3)(viii) through (xv)). (For a summary of the payment rate development prior to FY 2012, we refer readers to the FY 2018 IPPS/LTCH PPS final rule (82 FR 38310 through 38312) and references therein.)

Section 1886(m)(3)(A) of the Act specifies that, for rate year 2012 and each subsequent rate year, any annual update to the standard Federal payment rate shall be reduced by the productivity adjustment described in section 1886(b)(3)(B)(xi)(II) of the Act (which we refer to as ''the multifactor productivity (MFP) adjustment'') as discussed in section VII.C.2 of the preamble of this final rule.

This section of the Act further provides that the application of section 1886(m)(3)(B) of the Act may result in the annual update being less than zero for a rate year, and may result in payment rates for a rate year being less than such payment rates for the preceding rate year. (As noted in section VII.C.2. of the preamble of this final rule, the annual update to the LTCH PPS occurs on October 1 and we have adopted the term ''fiscal year'' (FY) rather than ''rate year'' (RY) under the LTCH PPS beginning October 1, 2010. Therefore, for purposes of clarity, when discussing the annual update for the LTCH PPS, including the provisions of the Affordable Care Act, we use the term ''fiscal year'' rather than ''rate year'' for 2011 and subsequent years.)

For LTCHs that fail to submit the required quality reporting data in accordance with the LTCH QRP, the annual update is reduced by 2.0 percentage points as required by section 1886(m)(5) of the Act.

2. Development of the FY 2021 LTCH PPS Standard Federal Payment Rate

Consistent with our historical practice, for FY 2021, as we proposed, we are applying the annual update to the LTCH PPS standard Federal payment rate from the previous year. Furthermore, in determining the LTCH PPS standard Federal payment rate for FY 2021, we also are making certain regulatory adjustments, consistent with past practices. Specifically, in determining the FY 2021 LTCH PPS standard Federal payment rate, as we proposed, we are applying a budget neutrality adjustment factor for the changes related to the area wage level adjustment (that is, changes to the wage data, labor-related share, and geographic labor-market area designations, and the 5-percent cap on any decrease in a LTCH's wage index transition policy) as discussed in section V.B.6 of this Addendum to this final rule. In addition, as we proposed, we applied the permanent budget neutrality adjustment factor (applied to LTCH PPS standard Federal payment rate cases only) for the cost of the elimination of the 25-percent threshold policy for FY 2021 (discussed in section VII.D. of the preamble of this final rule).

In this final rule, we are establishing an annual update to the LTCH PPS standard Federal payment rate of 2.3 percent. Accordingly, as reflected in § 412.523(c)(3)(xvii), we are applying a factor of 1.023 to the FY 2020 LTCH PPS standard Federal payment rate of $42,677.64 to determine the FY 2021 LTCH PPS standard Federal payment rate. Also, as reflected in § 412.523(c)(3)(xvii), applied in conjunction with the provisions of § 412.523(c)(4), we are required to reduce the annual update to the LTCH PPS standard Federal payment rate by 2.0 percentage points for LTCHs that fail to submit the required quality reporting data for FY 2021 as required under the LTCH QRP. Therefore, we are establishing an annual update to the LTCH PPS standard Federal payment rate of 0.3 percent (that is, an update factor of 1.003) for FY 2021 for LTCHs that fail to submit the required quality reporting data for FY 2021 as required under the LTCH QRP. Additionally, as discussed in VII.C. of the preamble of this final rule, we are applying a permanent budget neutrality adjustment factor of 0.991249 to the LTCH PPS standard Federal payment rate for the cost of the elimination of the 25-percent threshold policy for FY 2021 and subsequent years after removing the temporary budget neutrality adjustment factor of 0.990737 that was applied to the LTCH PPS standard Federal payment rate for the cost of the elimination of the 25-percent threshold policy for FY 2020 (or a factor of 1.000517, calculated as $1/0.990737 \times 0.991249$). Consistent with § 412.523(d)(4), we also are applying an area wage level budget neutrality factor to the FY 2021 LTCH PPS standard Federal payment rate of 1.0016837, based on the best available data at this time, to ensure that any changes to the general updates to the area wage level adjustment (that is, the annual update of the wage index, including any changes to the geographic labor-market area designations and labor-related share) would not result in any change (increase or decrease) in estimated aggregate LTCH PPS standard Federal payment rate payments. Accordingly, we are establishing an LTCH PPS standard Federal payment rate of $43,755.34 (calculated as $\$42,677.64 \times 1.000517 \times 1.023 \times 1.0016837$ for FY 2021 (calculations performed on unrounded numbers). For LTCHs that fail to submit quality reporting data for FY 2021, in accordance with the requirements of the LTCH QRP under section 1866(m)(5) of the Act, we are establishing an LTCH PPS standard Federal payment rate of $42,899.90 (calculated as $\$42,677.64 \times 1.000517 \times 1.003 \times 1.0016837$) (calculations performed on unrounded numbers) for FY 2021.

B. Adjustment for Area Wage Levels Under the LTCH PPS for FY 2021

1. Background

Under the authority of section 123 of the BBRA, as amended by section 307(b) of the BIPA, we established an adjustment to the LTCH PPS standard Federal payment rate to account for differences in LTCH area wage levels under § 412.525(c). The labor-related share of the LTCH PPS standard Federal payment rate is adjusted to account for geographic differences in area wage levels by applying the applicable LTCH PPS wage index. The applicable LTCH PPS wage index is computed using wage data from inpatient acute care hospitals without regard to

reclassification under section 1886(d)(8) or section 1886(d)(10) of the Act.

The FY 2021 LTCH PPS standard Federal payment rate wage index values that would be applicable for LTCH PPS standard Federal payment rate discharges occurring on or after October 1, 2020, through September 30, 2021, are presented in Table 12A (for urban areas) and Table 12B (for rural areas), which are listed in section VI. of the Addendum to this final rule and available via the internet on the CMS website.

2. Geographic Classifications (Labor Market Areas) for the LTCH PPS Standard Federal Payment Rate

In adjusting for the differences in area wage levels under the LTCH PPS, the labor-related portion of an LTCH's Federal prospective payment is adjusted by using an appropriate area wage index based on the geographic classification (labor market area) in which the LTCH is located. Specifically, the application of the LTCH PPS area wage level adjustment under existing § 412.525(c) is made based on the location of the LTCH—either in an ''urban area,'' or a ''rural area,'' as defined in § 412.503. Under § 412.503, an ''urban area'' is defined as a Metropolitan Statistical Area (MSA) (which includes a Metropolitan division, where applicable), as defined by the Executive OMB and a ''rural area'' is defined as any area outside of an urban area (75 FR 37246).

The CBSA-based geographic classifications (labor market area definitions) currently used under the LTCH PPS, effective for discharges occurring on or after October 1, 2014, are based on the OMB labor market area delineations based on the 2010 Decennial Census data. In general, the current statistical areas (which were implemented beginning with FY 2015) are based on revised OMB delineations issued on February 28, 2013, in OMB Bulletin No. 13–01. (As noted elsewhere in this final rule, we have adopted minor revisions and updates in the years between the decennial censuses.) We adopted these labor market area delineations because they were at that time based on the best available data that reflect the local economies and area wage levels of the hospitals that are currently located in these geographic areas. We also believed that these OMB delineations would ensure that the LTCH PPS area wage level adjustment most appropriately accounted for and reflected the relative hospital wage levels in the geographic area of the hospital as compared to the national average hospital wage level. We noted that this policy was consistent with the IPPS policy adopted in FY 2015 under § 412.64(b)(1)(ii)(D) of the regulations (79 FR 49951 through 49963). (For additional information on the CBSA-based labor market area (geographic classification) delineations currently used under the LTCH PPS and the history of the labor market area definitions used under the LTCH PPS, we refer readers to the FY 2015 IPPS/LTCH PPS final rule (79 FR 50180 through 50185).)

In general, it is our historical practice to update the CBSA-based labor market area delineations annually based on the most recent updates issued by OMB. Generally, OMB issues major revisions to statistical areas every 10 years, based on the results of the decennial census.

However, OMB occasionally issues minor updates and revisions to statistical areas in the years between the decennial censuses. OMB Bulletin No. 17–01, issued August 15, 2017, established the delineations for the Nation's statistical areas, and the corresponding changes to the CBSA-based labor market areas were adopted in the FY 2019 IPPS/LTCH PPS final rule (83 FR 41731). A copy of this bulletin may be obtained on the website at: *https://www.whitehouse.gov/sites/whitehouse.gov/files/omb/bulletins/2017/b-17-01.pdf.*

In the FY 2020 IPPS/LTCH PPS final rule (84 FR 42642), we adopted our current policy, that is, the continued use of the CBSA-based labor market area delineations as established in OMB Bulletin 17–01 and adopted in the FY 2019 IPPS/LTCH PPS final rule.

On April 10, 2018, OMB issued OMB Bulletin No. 18–03, which superseded the August 15, 2017 OMB Bulletin No. 17–01. On September 14, 2018, OMB issued OMB Bulletin No. 18–04, which superseded the April 10, 2018 OMB Bulletin No. 18–03. These bulletins established revised delineations for Metropolitan Statistical Areas, Micropolitan Statistical Areas, and Combined Statistical Areas, and provided guidance on the use of the delineations of these statistical areas based on the standards published on June 28, 2010 (75 FR 37246), and Census Bureau data. A copy of the September 14, 2018 OMB Bulletin No. 18–04, may be obtained at *https://www.whitehouse.gov/wp-content/uploads/2018/09/Bulletin-18-04.pdf.* (We note, on March 6, 2020 OMB issued OMB Bulletin 20–01 (available on the web at *https://www.whitehouse.gov/wp-content/uploads/2020/03/Bulletin-20-01.pdf*), and as discussed later in this section of this rule was not issued in time for development of the proposed rule.) While OMB Bulletin No. 18–04 is not based on new census data, it includes some material changes to the OMB statistical area delineations, including some new CBSAs, urban counties that would become rural, rural counties that would become urban, and existing CBSAs that would be split apart.

In the FY 2021 IPPS/LTCH PPS proposed rule (85 FR 32920 through 32921), we proposed to adopt the revised delineations announced in OMB Bulletin No. 18–04 effective for FY 2021 under the LTCH PPS. We did not receive any public comments on this proposal. Therefore, in this final rule, under the authority of section 123 of the BBRA, as amended by section 307(b) of the BIPA, we are adopting the revised delineations announced in OMB Bulletin No. 18–04 effective for FY 2021 under the LTCH PPS, as we proposed, without modification. As noted previously, the March 6, 2020 OMB Bulletin 20–01 was not issued in time for development of the proposed rule. The minor updates included in OMB Bulletin 20–01 do not alter the urban or rural status of any county, and do not impact our updates to the CBSA-based labor market area delineations discussed in this section of the rule. Our adoption of the revised delineations announced in OMB Bulletin No. 18–04 is consistent with the changes under the IPPS for FY 2021 as discussed in section III.A.2. of the preamble of this final rule. A summary of these changes is presented in the discussion that follows in this section. For complete details on the changes we refer readers to section III.A.2. of the preamble of this final rule.

a. Urban Counties That Will Become Rural Under the Revised OMB Delineations

Under the revised OMB labor market area delineations, 34 counties (and county equivalents) currently considered part of an urban CBSA will be considered to be located in a rural area beginning in FY 2021 under our adoption of the revisions to the OMB delineations based on OMB Bulletin No. 18–04. The chart in section III.A.2.ii. of the preamble of this final rule lists the 34 urban counties that will be rural under these revisions to the OMB delineations.

b. Rural Counties That Will Become Urban Under the Revised OMB Delineations

Under the revised labor market area delineations shows that a total of 47 counties (and county equivalents) located in rural areas that will be located in urban areas beginning in FY 2021 under our adoption of the revisions to the OMB delineations based on OMB Bulletin No. 18–04. The chart in section III.A.2.iii. of the preamble of this final rule lists the 47 rural counties that will be urban under these revised OMB delineations.

c. Urban Counties That Will Move to a Different Urban CBSA Under the Revised OMB Delineations

In addition to rural counties becoming urban and urban counties becoming rural, some urban counties will shift from one urban CBSA to another urban CBSA under our adoption of the revised delineations announced in OMB Bulletin No. 18–04. In other cases, the adoption of the revised delineations announced in OMB Bulletin No. 18–04 will involve a change only in CBSA name and/or number, while the CBSA continues to encompass the same constituent counties. For example, CBSA 19380 (Dayton, OH) will experience both a change to its number and its name, and become CBSA 19430 (Dayton-Kettering, OH), while all of its three constituent counties will remain the same. In other cases, only the name of the CBSA will be modified, and none of the currently assigned counties will be reassigned to a different urban CBSA. The chart in section III.A.2.iii. of the preamble of this final rule lists the CBSAs where only the name and/or CBSA number changed.

There are also counties that will shift between existing and new CBSAs, changing the constituent makeup of the CBSAs, under our adoption of the revisions to the OMB delineations based on OMB Bulletin No. 18–04. For example, some CBSAs will be split into multiple new CBSAs, or a CBSA will lose one or more counties to other urban CBSAs. The chart in section III.A.2.iv. of the preamble of this final rule lists the urban counties that will move from one urban CBSA to a new or modified CBSA under our after adoption of these revisions to the OMB delineations.

We believe these revisions to the CBSA-based labor market area delineations as established in OMB Bulletin 18–04 will ensure that the LTCH PPS area wage level adjustment most appropriately accounts for and reflects the relative hospital wage levels in the geographic area of the hospital as compared to the national average hospital wage level based on the best available data that reflect the local economies and area wage levels of the hospitals that are currently located in these geographic areas (81 FR 57298). Therefore, as we proposed, we are adopting the revisions announced in OMB Bulletin No. 18–04 to the CBSA-based labor market area delineations under the LTCH PPS, effective October 1, 2020. Accordingly, the FY 2021 LTCH PPS wage index values in Tables 12A and 12B listed in section VI. of the Addendum to this final rule (which are available via the internet on the CMS website) reflect the revisions to the CBSA-based labor market area delineations previously described. We note that, as discussed in section III.A.2. of the preamble of this final rule, these revisions to the CBSA-based delineations also are being adopted under the IPPS.

As indicated previously, overall, we believe that our adoption of the revised delineations announced in OMB Bulletin No. 18–04 will result in LTCH PPS wage index values being more representative of the actual costs of labor in a given area. However, we also recognize that some LTCHs will experience decreases in their area wage index values as a result of adopting the revisions to the OMB delineations. We also realize that many LTCHs will have higher area wage index values under our adoption of these revisions to the OMB delineations. To mitigate the impact upon LTCHs, we have in the past provided for transition periods when adopting changes that have significant payment implications, particularly large negative impacts. While we believe that using the new OMB delineations will create a more accurate payment adjustment for differences in area wage levels, as we discussed in the FY 2021 IPPS/LTCH PPS proposed rule (85 FR 32921), we also recognize that adopting such changes may cause some short-term instability in LTCH PPS payments. Therefore, we proposed a transition policy to help mitigate any significant negative impacts that LTCHs may experience due to our proposal to adopt the revised OMB delineations under the LTCH PPS. Consistent with past practice, we proposed that this transition would be implemented in a budget neutral manner. As discussed in section V.B.5. of the Addendum to this final rule, as we proposed, we are establishing a transition policy to help mitigate any significant negative impacts that LTCHs may experience due to our adoption of the revised OMB delineations under the LTCH PPS. Consistent with past practice, this transition will be implemented in a budget neutral manner, as discussed in section V.B.6. of the Addendum to this final rule.

3. Labor-Related Share for the LTCH PPS Standard Federal Payment Rate

Under the payment adjustment for the differences in area wage levels under § 412.525(c), the labor-related share of an LTCH's standard Federal payment rate payment is adjusted by the applicable wage index for the labor market area in which the LTCH is located. The LTCH PPS labor-related share currently represents the sum of the labor-related portion of operating costs and a labor-related portion of capital costs using the applicable LTCH market basket. Additional background information on the historical development of the labor-related share under the LTCH PPS can be found in the RY 2007 LTCH PPS final rule (71 FR 27810 through 27817 and 27829 through 27830) and the FY 2012 IPPS/LTCH PPS final rule (76 FR 51766 through 51769 and 51808).

For FY 2013, we rebased and revised the market basket used under the LTCH PPS by adopting a 2009-based LTCH market basket. In addition, beginning in FY 2013, we determined the labor-related share annually as the sum of the relative importance of each labor-related cost category of the 2009-based LTCH market basket for the respective fiscal year based on the best available data. (For more details, we refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53477 through 53479).) Then, effective for FY 2017, we rebased and revised the 2009-based LTCH market basket to reflect a 2013 base year and determined the labor-related share annually as the sum of the relative importance of each labor-related cost category in the 2013-based LTCH market basket using the most recent available data. (For more details, we refer readers to the FY 2017 IPPS/LTCH PPS final rule (81 FR 57085 through 57096).)

As noted previously in section V.A. in this Addendum to this final rule, effective for FY 2021, as we proposed, we are rebasing and revising the 2013-based LTCH market basket to reflect a 2017 base year. In addition, as discussed in section VII.D.6. of the preamble of this final rule, as we proposed, we are establishing that the LTCH PPS labor-related share for FY 2021 is the sum of the FY 2021 relative importance of each labor-related cost category in the 2017-based LTCH market basket using the most recent available data. For more information on comments related to our proposed labor-related share as well as our responses to those comments, we refer readers to section VII.D.6. of the preamble of this final rule. Also as we proposed, consistent with our historical practice, we are using the most recent data available to determine the final FY 2021 labor-related share in this final rule.

Table E9 in section VII.D.6. of the preamble of this final rule shows the FY 2021 labor-related share using the 2017-based LTCH market basket and the FY 2020 labor-related share using the 2013-based LTCH market basket. The labor-related share for FY 2021 is the sum of the relative importance of Wages and Salaries; Employee Benefits; Professional Fees: Labor-Related; Administrative and Facilities Support Services; Installation, Maintenance, and Repair Services; All Other: Labor-related Services; and a portion of the Capital-Related cost weight from the 2017-based LTCH market basket. The relative importance reflects the different rates of price change for these cost categories between the base year (2017) and FY 2021. Based on IHS Global Inc.'s second quarter 2020 forecast of the 2017-based LTCH market basket, the sum of the FY 2021 relative importance for Wages and Salaries, Employee Benefits, Professional Fees: Labor-related, Administrative and Facilities Support Services, Installation Maintenance & Repair Services, and All Other: Labor-related Services is 63.7 percent. The portion of Capital-Related costs that is influenced by the local labor market is estimated to be 46 percent, which is the same percentage applied to the 2013-based LTCH market basket. Since the FY 2021 relative importance for Capital-Related is 9.5 percent based on IHS Global Inc.'s second quarter 2020 forecast of the 2017-based LTCH market basket, we took 46 percent of 9.5 percent to determine the labor-related share of Capital-Related for FY 2021 of 4.4 percent. Therefore, consistent with our proposal, we are establishing a total labor-related share for FY 2021 of 68.1 percent (the sum of 63.7 percent for the operating cost and 4.4 percent for the labor-related share of Capital-Related). The total difference between the FY 2021 labor-related share using the 2017-based LTCH market basket and the FY 2020 labor-related share using the 2013-based LTCH market basket is 1.8 percentage points (68.1 percent and 66.3 percent, respectively). As discussed in greater detail in section VII.D.6. of the preamble of this final rule, this difference is attributable to the revision to the base year cost weights, the revision to the starting point of the calculation of relative importance (base year) from 2013 to 2017, and the use of an updated IHS Global Inc. forecast and reflecting an additional year of inflation.

4. Wage Index for FY 2021 for the LTCH PPS Standard Federal Payment Rate

Historically, we have established LTCH PPS area wage index values calculated from acute care IPPS hospital wage data without taking into account geographic reclassification under sections 1886(d)(8) and 1886(d)(10) of the Act (67 FR 56019). The area wage level adjustment established under the LTCH PPS is based on an LTCH's actual location without regard to the ''urban'' or ''rural'' designation of any related or affiliated provider.

In the FY 2020 IPPS/LTCH PPS final rule (84 FR 42643), we calculated the FY 2020 LTCH PPS area wage index values using the same data used for the FY 2020 acute care hospital IPPS (that is, data from cost reporting periods beginning during FY 2016), without taking into account geographic reclassification under sections 1886(d)(8) and 1886(d)(10) of the Act, as these were the most recent complete data available at that time. In that same final rule, we indicated that we computed the FY 2020 LTCH PPS area wage index values, consistent with the urban and rural geographic classifications (labor market areas) that were in place at that time and consistent with the pre-reclassified IPPS wage index policy (that is, our historical policy of not taking into account IPPS geographic reclassifications in determining payments under the LTCH PPS). As with the IPPS wage index, wage data for multicampus hospitals with campuses located in different labor market areas (CBSAs) are apportioned to each CBSA where the campus (or campuses) are located. We also continued to use our existing policy for determining area

wage index values for areas where there are no IPPS wage data.

Consistent with our historical methodology, to determine the applicable area wage index values for the FY 2021 LTCH PPS standard Federal payment rate, under the broad authority of section 123 of the BBRA, as amended by section 307(b) of the BIPA, as we proposed, we are continuing to employ our historical practice of using the same data we used to compute the FY 2021 acute care hospital inpatient wage index, as discussed in section III. of the preamble of this final rule, that is wage data collected from cost reports submitted by IPPS hospitals for cost reporting periods beginning during FY 2017, because these data are the most recent complete data available.

In addition, as we proposed, we computed the FY 2021 LTCH PPS standard Federal payment rate area wage index values consistent with the ''urban'' and ''rural'' geographic classifications (that is, the labor market area delineations, including the updates, as previously discussed in section V.B. of this Addendum) and our historical policy of not taking into account IPPS geographic reclassifications under sections 1886(d)(8) and 1886(d)(10) of the Act in determining payments under the LTCH PPS. As we proposed, we also continued to apportion the wage data for multicampus hospitals with campuses located in different labor market areas to each CBSA where the campus or campuses are located, consistent with the IPPS policy. Lastly, consistent with our existing methodology for determining the LTCH PPS wage index values and as we proposed, for FY 2021 we continued to use our existing policy for determining area wage index values for areas where there are no IPPS wage data. Under our existing methodology, the LTCH PPS wage index value for urban CBSAs with no IPPS wage data is determined by using an average of all of the urban areas within the State, and the LTCH PPS wage index value for rural areas with no IPPS wage data is determined by using the unweighted average of the wage indices from all of the CBSAs that are contiguous to the rural counties of the State.

Based on the FY 2017 IPPS wage data that we used to determine the FY 2021 LTCH PPS standard Federal payment rate area wage index values in this final rule, there are no IPPS wage data for the urban area of Hinesville, GA (CBSA 25980). Consistent with our existing methodology, we calculated the FY 2021 wage index value for CBSA 25980 as the average of the wage index values for all of the other urban areas within the State of Georgia (that is, CBSAs 10500, 12020, 12060, 12260, 15260, 16860, 17980, 19140, 23580, 31420, 40660, 42340, 46660 and 47580), as shown in Table 12A, which is listed in section VI. of the Addendum to this final rule and available via the internet on the CMS website.

Based on the FY 2017 IPPS wage data that we used to determine the FY 2021 LTCH PPS standard Federal payment rate area wage index values in this final rule, there are no rural areas without IPPS hospital wage data. Therefore, it is not necessary to use our established methodology to calculate a LTCH PPS standard Federal payment rate wage index value for rural areas with no IPPS wage data for FY 2021. We note that, as IPPS wage data are dynamic, it is possible that the number of rural areas without IPPS wage data will vary in the future.

5. Transition Wage Index for LTCHs Negatively Impacted

As discussed in the FY 2021 IPPS/LTCH PPS proposed rule (85 FR 32922), overall, we believe that our proposal to adopt the revised OMB delineations announced in Bulletin No. 18–04 for FY 2021 would result in LTCH PPS wage index values being more representative of the actual costs of labor in a given area. However, we also recognize that some LTCHs would experience decreases in their area wage index values as a result of our proposal. We also realize that some LTCHs would have higher area wage index values under our proposal.

To mitigate the potential impacts of policies on LTCHs, as we explained in the FY 2021 IPPS/LTCH PPS proposed final rule, we have in the past provided for transition periods when adopting changes that have significant payment implications, particularly large negative impacts. For example, we have proposed and finalized budget neutral transition policies to help mitigate negative impacts on LTCHs following the adoption of the new CBSA delineations based on the 2010 decennial census data in the FY 2015 IPPS/LTCH PPS final rule (79 FR 50185). Specifically, we implemented a 1-year 50/50 blended wage index for any LTCHs that experienced a decrease in wage index values due to our adoption of the revised delineations. This required calculating and comparing two wage indexes for each LTCH since that blended wage index was computed as the sum of 50 percent of the FY 2015 LTCH PPS wage index values under the FY 2014 CBSA delineations and 50 percent of the FY 2015 LTCH PPS wage index values under the FY 2015 new OMB delineations. While we believed that using the new OMB delineations would ultimately create a more accurate payment adjustment for differences in area wage levels, we also recognized that adopting such changes may cause some short-term instability in LTCH PPS payments. Similar instability may result from the wage policies herein, in particular for LTCHs that would be negatively impacted by the adoption of the updates to the OMB delineations. For example, LTCH's currently located in CBSA 35614 (New York–Jersey City–White Plains, NY–NJ) that would be located in new CBSA 35154 (New Brunswick–Lakewood, NJ) under the changes to the CBSA-based labor market area delineations would experience a nearly 17 percent decrease in the wage index as a result of the change. (85 FR 32922)

Consistent with our past practice of implementing transition policies to help mitigate negative impacts on hospitals following the adoption of the new CBSA delineations, we proposed that if we adopt the revised delineations announced in OMB Bulletin 18–04, it would be appropriate to implement a transition policy since, as mentioned previously, some of these revisions are material, and may negatively impact payments to LTCHs. Similar to the proposed policy under the IPPS for the adoption of the revised delineations announced in OMB Bulletin 18–04 discussed in section III.A.2. of the preamble to the proposed rule, we believe applying a 5-percent cap on any decrease in an LTCH's wage index from the LTCH's final wage index from the prior fiscal year would be an appropriate transition for FY 2021 for the revised OMB delineations as it provides transparency and predictability in payment levels from FY 2020 to the upcoming FY 2021. The FY 2021 5-percent cap on wage index decreases would be applied to all LTCHs that have any decrease in their wage indexes, regardless of the circumstance causing the decline. Given the significant portion of Medicare LTCH PPS payments that are adjusted by the wage index and how relatively few LTCHs generally see wage index declines in excess of 5 percent, LTCHs may have difficulty adapting to changes in the wage index of this magnitude all at once. For these reasons, in the FY 2021 IPPS/LTCH PPS proposed rule (85 FR 32922), under the authority of section 123 of the BBRA, as amended by section 307(b) of the BIPA, we proposed to apply a 5-percent cap on any decrease in a LTCH's wage index from the LTCH's wage index from the prior fiscal year such that that an LTCH's final wage index for FY 2021 would not be less than 95 percent of its final wage index for FY 2020. This transition would allow the effects of our adoption of the revised CBSA delineations to be phased in over 2 years, where the estimated reduction in an LTCH's wage index would be capped at 5 percent in FY 2021 (that is, no cap would be applied to the reduction in the wage index for the second year (FY 2022)). Because we believe that using the new OMB delineations would ultimately create a more accurate payment adjustment for differences in area wage levels we did not propose to include a cap on the overall increase in an LTCH's wage index value.

Furthermore, consistent with the requirement at § 412.525(c)(2) that changes to area wage level adjustments are made in a budget neutral manner, we proposed that this 5 percent cap on the decrease on an LTCH's wage index would not result in any change in estimated aggregate LTCH PPS payments by including the application of this policy in the determination of the area wage level budget neutrality factor that is applied to the standard Federal payment rate, as is discussed in section V.B.6. of the Addendum to the proposed rule.

Comment: A commenter expressed support for the proposed 5-percent cap on wage index decreases. However, the commenter encouraged CMS to also apply a 5-percent cap on wage index increases and to implement that policy in a budget neutral manner.

Another commenter noted that the FY 2021 LTCH PPS Impact File that accompanied the proposed rule did not include the proposed wage indexes for LTCHs after the 5-percent cap on wage index decreases was applied. The commenter recommended that in this final rule, we ensure that the wage index value for every LTCH with a final wage index value that would decreases by more than 5

percent show the application of the cap, as we proposed.

Response: We appreciate the suggestion that the cap on wage index changes of more than 5 percent should also be applied to increases in the wage index. However, as we discussed in the proposed rule, the purpose of the proposed transition policy, as well as those we have implemented in the past, is to help mitigate the significant negative impacts of certain wage index changes. We believe that using the new OMB delineations will ultimately create a more accurate payment adjustment for differences in area wage levels and thus we do not think it would be appropriate to apply the 5 percent cap on wage index increases as well.

After consideration of the public comments we received, for the reasons discussed above, we are finalizing without modification our proposal to apply a 5-percent cap on any decrease in a LTCH's wage index from the LTCH's wage index from the prior fiscal year such that that an LTCH's final wage index for FY 2021 will not be less than 95 percent of its final wage index for FY 2020. In addition we are finalizing without modification our proposal adopt the 5 percent cap on the decrease on an LTCH's wage index in a budget neutral manner by including the application of this policy in the determination of the area wage level budget neutrality factor that is applied to the standard Federal payment rate, which is discussed in section V.B.6. of the Addendum to this final rule.

In response to the comment that the FY 2021 LTCH PPS Impact File that accompanied the proposed rule did not include the LTCH wage indexes after the 5-percent cap on wage index decreases was applied, we have included in the FY 2021 LTCH PPS Impact File that accompanies this final rule the LTCH wage indexes without the 5-percent cap on wage index decreases applied, as well as the final LTCH wage indexes for FY 2021 (which do have the 5-percent cap on wage index decreases applied).

6. Budget Neutrality Adjustments for Changes to the LTCH PPS Standard Federal Payment Rate Area Wage Level Adjustment

Historically, the LTCH PPS wage index and labor-related share are updated annually based on the latest available data. Under § 412.525(c)(2), any changes to the area wage index values or labor-related share are to be made in a budget neutral manner such that estimated aggregate LTCH PPS payments are unaffected; that is, will be neither greater than nor less than estimated aggregate LTCH PPS payments without such changes to the area wage level adjustment. Under this policy, we determine an area wage level adjustment budget neutrality factor that is applied to the standard Federal payment rate to ensure that any changes to the area wage level adjustments are budget neutral such that any changes to the area wage index values or labor-related share would not result in any change (increase or decrease) in estimated aggregate LTCH PPS payments. Accordingly, under § 412.523(d)(4), we have applied an area wage level adjustment budget neutrality factor in determining the standard Federal payment rate, and we also established a methodology for calculating an area wage level adjustment budget neutrality factor. (For additional information on the establishment of our budget neutrality policy for changes to the area wage level adjustment, we refer readers to the FY 2012 IPPS/LTCH PPS final rule (76 FR 51771 through 51773 and 51809).)

For FY 2021, in accordance with § 412.523(d)(4), as we proposed, we applied an area wage level budget neutrality factor to adjust the LTCH PPS standard Federal payment rate to account for the estimated effect of the adjustments or updates to the area wage level adjustment under § 412.525(c)(1) on estimated aggregate LTCH PPS payments, consistent with the methodology we established in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51773). As discussed previously, the 5 percent cap on the decrease on an LTCH's wage index will be implemented in a budget neutral manner by including the application of that policy in the area wage level a budget neutrality factor that is applied to the standard Federal payment rate.

Specifically, as we proposed, we determined an area wage level adjustment budget neutrality factor that is applied to the LTCH PPS standard Federal payment rate under § 412.523(d)(4) for FY 2021 using the following methodology:

Step 1—Simulate estimated aggregate LTCH PPS standard Federal payment rate payments using the FY 2020 wage index values, the FY 2020 labor-related share of 66.3 percent, and the FY 2020 labor market area designations.

Step 2—Simulate estimated aggregate LTCH PPS standard Federal payment rate payments using the FY 2021 wage index values based on updated hospital wage data, including the 5 percent cap on the decrease on an LTCH's wage index, the FY 2021 labor-related share of 68.1 percent, and the FY 2021 labor market area designations. (As noted previously, the changes to the wage index values based on updated hospital wage data are discussed in section V.B.4.a. of this Addendum to this final rule; the transitional 5 percent cap on the decrease on an LTCH's wage index is discussed in section V.B.5. of this Addendum to this final rule, the labor-related share is discussed in section V.B.3. of this Addendum to this final rule, and changes to the geographic labor-market area designations are discussed in section V.B.2. of this Addendum to this final rule.)

Step 3—Calculate the ratio of these estimated total LTCH PPS standard Federal payment rate payments by dividing the estimated total LTCH PPS standard Federal payment rate payments using the FY 2020 area wage level adjustments (calculated in Step 1) by the estimated total LTCH PPS standard Federal payment rate payments using the FY 2021 general updates to the area wage level adjustment (calculated in Step 2) to determine the budget neutrality factor for general updates to the area wage level adjustment for FY 2021 LTCH PPS standard Federal payment rate payments.

Step 4—Apply the FY 2021 general updates to the area wage level adjustment budget neutrality factor from Step 3 to determine the FY 2021 LTCH PPS standard Federal payment rate after the application of the FY 2021 annual update.

We note that, because the area wage level adjustment under § 412.525(c) is an adjustment to the LTCH PPS standard Federal payment rate, consistent with historical practice, we only used data from claims that qualified for payment at the LTCH PPS standard Federal payment rate under the dual rate LTCH PPS to calculate the FY 2021 LTCH PPS standard Federal payment rate area wage level adjustment budget neutrality factor. In addition, we note that the estimated LTCH PPS standard Federal payment rate used in the calculations in Steps 1 through 4 include the permanent one-time budget neutrality adjustment factor for the estimated cost of eliminating the 25-percent threshold policy in FY 2021 and subsequent years (discussed in section VII.D. of the preamble of this final rule).

For this final rule, using the steps in the methodology previously described, we determined a FY 2021 LTCH PPS standard Federal payment rate area wage level adjustment budget neutrality factor of 1.0016837. Accordingly, in section V.A. of the Addendum to this final rule, to determine the FY 2021 LTCH PPS standard Federal payment rate, we applied the area wage level adjustment budget neutrality factor of 1.0016837, in accordance with § 412.523(d)(4).

C. LTCH PPS Cost-of-Living Adjustment (COLA) for LTCHs Located in Alaska and Hawaii

Under § 412.525(b), a cost-of-living adjustment (COLA) is provided for LTCHs located in Alaska and Hawaii to account for the higher costs incurred in those States. Specifically, we apply a COLA to payments to LTCHs located in Alaska and Hawaii by multiplying the nonlabor-related portion of the standard Federal payment rate by the applicable COLA factors established annually by CMS. Higher labor-related costs for LTCHs located in Alaska and Hawaii are taken into account in the adjustment for area wage levels previously described. The methodology used to determine the COLA factors for Alaska and Hawaii is based on a comparison of the growth in the Consumer Price Indexes (CPIs) for Anchorage, Alaska, and Honolulu, Hawaii, relative to the growth in the CPI for the average U.S. city as published by the Bureau of Labor Statistics (BLS). It also includes a 25-percent cap on the CPI-updated COLA factors. Under our current policy, we update the COLA factors using the methodology as previously described every 4 years (at the same time as the update to the labor-related share of the IPPS market basket), and we last updated the COLA factors for Alaska and Hawaii published by OPM for 2009 in FY 2018 (82 FR 38539 through 38540).

We continue to believe that determining updated COLA factors using this methodology would appropriately adjust the nonlabor-related portion of the LTCH PPS standard Federal payment rate for LTCHs located in Alaska and Hawaii. Therefore, in the FY 2021 IPPS/LTCH PPS proposed rule (85 FR 32923 through 32924), for FY 2021, under the broad authority conferred upon the

Secretary by section 123 of the BBRA, as amended by section 307(b) of the BIPA, to determine appropriate payment adjustments under the LTCH PPS, we proposed to continue to use the COLA factors based on the 2009 OPM COLA factors updated through 2016 by the comparison of the growth in the CPIs for Anchorage, Alaska, and Honolulu, Hawaii, relative to the growth in the CPI for the average U.S. city as established in the FY 2018 IPPS/LTCH PPS final rule. (For additional details on our current methodology for updating the COLA factors for Alaska and Hawaii and for a discussion on the FY 2018 COLA factors, we refer readers to the FY 2018 IPPS/LTCH PPS final rule (82 FR 38539 through 38540).)

We did not receive any public comments on our proposal. Therefore, we are adopting our proposal, without modification. Consistent with our historical practice, we are establishing that the COLA factors shown in the following table will be used to adjust the nonlabor-related portion of the LTCH PPS standard Federal payment rate for LTCHs located in Alaska and Hawaii under § 412.525(b).

COST-OF-LIVING ADJUSTMENT FACTORS FOR ALASKA AND HAWAII UNDER THE LTCH PPS FOR FY 2021

Area	FY 2021
Alaska:	
City of Anchorage and 80-kilometer (50-mile) radius by road	1.25
City of Fairbanks and 80-kilometer (50-mile) radius by road	1.25
City of Juneau and 80-kilometer (50-mile) radius by road	1.25
Rest of Alaska	1.25
Hawaii:	
City and County of Honolulu	1.25
County of Hawaii	1.21
County of Kauai	1.25
County of Maui and County of Kalawao	1.25

D. Adjustment for LTCH PPS High Cost Outlier (HCO) Cases

1. HCO Background

From the beginning of the LTCH PPS, we have included an adjustment to account for cases in which there are extraordinarily high costs relative to the costs of most discharges. Under this policy, additional payments are made based on the degree to which the estimated cost of a case (which is calculated by multiplying the Medicare allowable covered charge by the hospital's overall hospital CCR) exceeds a fixed-loss amount. This policy results in greater payment accuracy under the LTCH PPS and the Medicare program, and the LTCH sharing the financial risk for the treatment of extraordinarily high-cost cases.

We retained the basic tenets of our HCO policy in FY 2016 when we implemented the dual rate LTCH PPS payment structure under section 1206 of Public Law 113–67. LTCH discharges that meet the criteria for exclusion from the site neutral payment rate (that is, LTCH PPS standard Federal payment rate cases) are paid at the LTCH PPS standard Federal payment rate, which includes, as applicable, HCO payments under § 412.523(e). LTCH discharges that do not meet the criteria for exclusion are paid at the site neutral payment rate, which includes, as applicable, HCO payments under § 412.522(c)(2)(i). In the FY 2016 IPPS/LTCH PPS final rule, we established separate fixed-loss amounts and targets for the two different LTCH PPS payment rates. Under this bifurcated policy, the historic 8-percent HCO target was retained for LTCH PPS standard Federal payment rate cases, with the fixed-loss amount calculated using only data from LTCH cases that would have been paid at the LTCH PPS standard Federal payment rate if that rate had been in effect at the time of those discharges. For site neutral payment rate cases, we adopted the operating IPPS HCO target (currently 5.1 percent) and set the fixed-loss amount for site neutral payment rate cases at the value of the IPPS fixed-loss amount. Under the HCO policy for both payment rates, an LTCH receives 80 percent of the difference between the estimated cost of the case and the applicable HCO threshold, which is the sum of the LTCH PPS payment for the case and the applicable fixed-loss amount for such case.

In order to maintain budget neutrality, consistent with the budget neutrality requirement at § 412.522(d)(1) for HCO payments to LTCH PPS standard Federal rate payment cases, we also adopted a budget neutrality requirement for HCO payments to site neutral payment rate cases by applying a budget neutrality factor to the LTCH PPS payment for those site neutral payment rate cases. (We refer readers to § 412.522(c)(2)(i) of the regulations for further details.) We note that, during the 4-year transitional period, the site neutral payment rate HCO budget neutrality factor did not apply to the LTCH PPS standard Federal payment rate portion of the blended payment rate at § 412.522(c)(3) payable to site neutral payment rate cases. (For additional details on the HCO policy adopted for site neutral payment rate cases under the dual rate LTCH PPS payment structure, including the budget neutrality adjustment for HCO payments to site neutral payment rate cases, we refer readers to the FY 2016 IPPS/LTCH PPS final rule (80 FR 49617 through 49623).)

2. Determining LTCH CCRs Under the LTCH PPS

a. Background

As noted previously, CCRs are used to determine payments for HCO adjustments for both payment rates under the LTCH PPS and also are used to determine payments for site neutral payment rate cases. As noted earlier, in determining HCO and the site neutral payment rate payments (regardless of whether the case is also an HCO), we generally calculate the estimated cost of the case by multiplying the LTCH's overall CCR by the Medicare allowable charges for the case. An overall CCR is used because the LTCH PPS uses a single prospective payment per discharge that covers both inpatient operating and capital-related costs. The LTCH's overall CCR is generally computed based on the sum of LTCH operating and capital costs (as described in Section 150.24, Chapter 3, of the Medicare Claims Processing Manual (Pub. 100–4)) as compared to total Medicare charges (that is, the sum of its operating and capital inpatient routine and ancillary charges), with those values determined from either the most recently settled cost report or the most recent tentatively settled cost report, whichever is from the latest cost reporting period. However, in certain instances, we use an alternative CCR, such as the statewide average CCR, a CCR that is specified by CMS, or one that is requested by the hospital. (We refer readers to § 412.525(a)(4)(iv) of the regulations for further details regarding HCO adjustments for either LTCH PPS payment rate and § 412.522(c)(1)(ii) for the site neutral payment rate.)

The LTCH's calculated CCR is then compared to the LTCH total CCR ceiling. Under our established policy, an LTCH with a calculated CCR in excess of the applicable maximum CCR threshold (that is, the LTCH total CCR ceiling, which is calculated as 3 standard deviations from the national geometric average CCR) is generally assigned the applicable statewide CCR. This policy is premised on a belief that calculated CCRs above the LTCH total CCR ceiling are most likely due to faulty data reporting or entry, and CCRs based on erroneous data should not be used to identify and make payments for outlier cases.

b. LTCH Total CCR Ceiling

Consistent with our historical practice, as we proposed, we used the most recent data available to determine the LTCH total CCR ceiling for FY 2021 in this final rule. Specifically, in this final rule, using our established methodology for determining the LTCH total CCR ceiling based on IPPS total CCR data from the March 2020 update of the Provider Specific File (PSF), which is the most recent data available, we are establishing an LTCH total CCR ceiling of 1.24 under the LTCH PPS for FY 2021 in accordance with § 412.525(a)(4)(iv)(C)(*2*) for HCO cases under either payment rate and § 412.522(c)(1)(ii) for the site neutral payment rate. (For additional information on our methodology for determining the LTCH total CCR ceiling, we refer readers to the FY 2007 IPPS final rule (71 FR 48118 through 48119).)

We did not receive any public comments on our proposals. Therefore, we are finalizing our proposals as described above, without modification.

c. LTCH Statewide Average CCRs

Our general methodology for determining the statewide average CCRs used under the LTCH PPS is similar to our established methodology for determining the LTCH total CCR ceiling because it is based on ''total'' IPPS CCR data. (For additional information on our methodology for determining statewide average CCRs under the LTCH PPS, we refer readers to the FY 2007 IPPS final rule (71 FR 48119 through 48120).) Under the LTCH PPS HCO policy at § 412.525(a)(4)(iv)(C), the SSO policy at § 412.529(f)(4)(iii), and the site neutral payment rate at § 412.522(c)(1)(ii), the MAC may use a statewide average CCR, which is established annually by CMS, if it is unable to determine an accurate CCR for an LTCH in one of the following circumstances: (1) New LTCHs that have not yet submitted their first Medicare cost report (a new LTCH is defined as an entity that has not accepted assignment of an existing hospital's provider agreement in accordance with § 489.18); (2) LTCHs whose calculated CCR is in excess of the LTCH total CCR ceiling; and (3) other LTCHs for whom data with which to calculate a CCR are not available (for example, missing or faulty data). (Other sources of data that the MAC may consider in determining an LTCH's CCR include data from a different cost reporting period for the LTCH, data from the cost reporting period preceding the period in which the hospital began to be paid as an LTCH (that is, the period of at least 6 months that it was paid as a short-term, acute care hospital), or data from other comparable LTCHs, such as LTCHs in the same chain or in the same region.)

Consistent with our historical practice of using the best available data, in this final rule, using our established methodology for determining the LTCH statewide average CCRs, based on the most recent complete IPPS ''total CCR'' data from the March 2020 update of the PSF, as we proposed, we are establishing LTCH PPS statewide average total CCRs for urban and rural hospitals that will be effective for discharges occurring on or after October 1, 2020, through September 30, 2021, in Table 8C listed in section VI. of the Addendum to this final rule (and available via the internet on the CMS website). Consistent with our historical practice, as we also proposed, we used more recent data to determine the LTCH PPS statewide average total CCRs for FY 2021 in this final rule.

Under the current LTCH PPS labor market areas, all areas in Delaware, the District of Columbia, New Jersey, and Rhode Island are classified as urban. Therefore, there are no rural statewide average total CCRs listed for those jurisdictions in Table 8C. This policy is consistent with the policy that we established when we revised our methodology for determining the applicable LTCH statewide average CCRs in the FY 2007 IPPS final rule (71 FR 48119 through 48121) and is the same as the policy applied under the IPPS. In addition, although Connecticut has areas that are designated as rural, in our calculation of the LTCH statewide average CCRs, there was no data available from short-term, acute care IPPS hospitals to compute a rural statewide average CCR or there were no short-term, acute care IPPS hospitals or LTCHs located in these areas as of March 2020. Therefore, consistent with our existing methodology, as we proposed, we used the national average total CCR for rural IPPS hospitals for rural Connecticut in Table 8C. While Massachusetts also has rural areas, the statewide average CCR for rural areas in Massachusetts is based on one IPPS provider whose CCR is an atypical 0.949. Because this is much higher than the statewide urban average (0.459) and furthermore implies costs are nearly equal to charges, as with Connecticut, we used the national average total CCR for rural hospitals for hospitals located in rural Massachusetts. Furthermore, consistent with our existing methodology, in determining the urban and rural statewide average total CCRs for Maryland LTCHs paid under the LTCH PPS, as we proposed, we are continuing to use, as a proxy, the national average total CCR for urban IPPS hospitals and the national average total CCR for rural IPPS hospitals, respectively. We are using this proxy because we believe that the CCR data in the PSF for Maryland hospitals may not be entirely accurate (as discussed in greater detail in the FY 2007 IPPS final rule (71 FR 48120)).

We did not receive any public comments on our proposals. Therefore, we are finalizing our proposals as described above, without modification.

d. Reconciliation of HCO Payments

Under the HCO policy for cases paid under either payment rate at § 412.525(a)(4)(iv)(D), the payments for HCO cases are subject to reconciliation. Specifically, any such payments are reconciled at settlement based on the CCR that was calculated based on the cost report coinciding with the discharge. For additional information on the reconciliation policy, we refer readers to Sections 150.26 through 150.28 of the Medicare Claims Processing Manual (Pub. 100–4), as added by Change Request 7192 (Transmittal 2111; December 3, 2010), and the RY 2009 LTCH PPS final rule (73 FR 26820 through 26821).

3. High-Cost Outlier Payments for LTCH PPS Standard Federal Payment Rate Cases

a. Changes to High-Cost Outlier Payments for LTCH PPS Standard Federal Payment Rate Cases

Under the regulations at § 412.525(a)(2)(ii) and as required by section 1886(m)(7) of the Act, the fixed-loss amount for HCO payments is set each year so that the estimated aggregate HCO payments for LTCH PPS standard Federal payment rate cases are 99.6875 percent of 8 percent (that is, 7.975 percent) of estimated aggregate LTCH PPS payments for LTCH PPS standard Federal payment rate cases. (For more details on the requirements for high-cost outlier payments in FY 2018 and subsequent years under section 1886(m)(7) of the Act and additional information regarding high-cost outlier payments prior to FY 2018, we refer readers to the FY 2018 IPPS/LTCH PPS final rule (82 FR 38542 through 38544).)

b. Fixed-Loss Amount for LTCH PPS Standard Federal Payment Rate Cases for FY 2021

When we implemented the LTCH PPS, we established a fixed-loss amount so that total estimated outlier payments are projected to equal 8 percent of total estimated payments under the LTCH PPS (67 FR 56022 through 56026). When we implemented the dual rate LTCH PPS payment structure beginning in FY 2016, we established that, in general, the historical LTCH PPS HCO policy would continue to apply to LTCH PPS standard Federal payment rate cases. That is, the fixed-loss amount and target for LTCH PPS standard Federal payment rate cases would be determined using the LTCH PPS HCO policy adopted when the LTCH PPS was first implemented, but we limited the data used under that policy to LTCH cases that would have been LTCH PPS standard Federal payment rate cases if the statutory changes had been in effect at the time of those discharges.

To determine the applicable fixed-loss amount for LTCH PPS standard Federal payment rate cases, we estimate outlier payments and total LTCH PPS payments for each LTCH PPS standard Federal payment rate case (or for each case that would have been a LTCH PPS standard Federal payment rate case if the statutory changes had been in effect at the time of the discharge) using claims data from the MedPAR files. In accordance with § 412.525(a)(2)(ii), the applicable fixed-loss amount for LTCH PPS standard Federal payment rate cases results

in estimated total outlier payments being projected to be equal to 7.975 percent of projected total LTCH PPS payments for LTCH PPS standard Federal payment rate cases. We use MedPAR claims data and CCRs based on data from the most recent PSF (or from the applicable statewide average CCR if an LTCH's CCR data are faulty or unavailable) to establish an applicable fixed-loss threshold amount for LTCH PPS standard Federal payment rate cases.

In the FY 2021 IPPS/LTCH PPS proposed rule (85 FR 32925), we proposed to continue to use our current methodology to calculate an applicable fixed-loss amount for LTCH PPS standard Federal payment rate cases for FY 2021 using the best available data that would maintain estimated HCO payments at the projected 7.975 percent of total estimated LTCH PPS payments for LTCH PPS standard Federal payment rate cases (based on the payment rates and policies for these cases presented in the proposed rule).

Specifically, based on the most recent complete LTCH data available at that time (that is, LTCH claims data from the December 2019 update of the FY 2019 MedPAR file and CCRs from the December 2019 update of the PSF), we determined a proposed fixed-loss amount for LTCH PPS standard Federal payment rate cases for FY 2021 of $30,515 that would result in estimated outlier payments projected to be equal to 7.975 percent of estimated FY 2021 payments for such cases. We also proposed to continue to make an additional HCO payment for the cost of an LTCH PPS standard Federal payment rate case that exceeds the HCO threshold amount that is equal to 80 percent of the difference between the estimated cost of the case and the outlier threshold (the sum of the proposed adjusted LTCH PPS standard Federal payment rate payment and the proposed fixed-loss amount for LTCH PPS standard Federal payment rate cases of $30,515).

Consistent with our historical practice of using the best data available, when determining the fixed-loss amount for LTCH PPS standard Federal payment rate cases for FY 2021 in the final rule, we proposed to use the most recent available LTCH claims data and CCR data.

Comment: Some commenters stated that CMS continues to propose increases to the LTCH PPS standard Federal payment rate high cost outlier threshold. These commenters noted that an increase in the fixed-loss amount will result in reductions of the number of cases that qualify as high-cost outliers. One commenter added that the proposed increase in the fixed-loss amount would require LTCHs to absorb even more costs during a time when they are already struggling with high COVID related expenses. Commenters suggested that CMS leave the fixed-loss threshold at the FY 2020 amount of $26,778.

Another commenter stated that CMS did not explain the proposed increase in the fixed-loss amount from FY 2020 of $26,778 to the FY 2021 proposed amount of $30,515. The commenter continued by indicating that, based on historical experience, the final fixed-loss amount would likely decrease from the proposed amount but expressed concern that the final fixed-loss amount may still reflect a significant increase. This commenter also stated that CMS did not explain how the charge inflation factor, which is integral to the determination of the fixed-loss amount, is calculated, and requested that CMS provide more information on how the fixed-loss amount for LTCH PPS standard Federal payment rate cases is calculated and the reasons for any significant changes.

Response: We thank the commenters for their input and suggestions. In accordance with § 412.525(a)(2)(ii), the applicable fixed-loss amount for LTCH PPS standard Federal payment rate cases results in estimated total outlier payments being projected to be equal to 7.975 percent of projected total LTCH PPS payments for LTCH PPS standard Federal payment rate cases. We therefore are required by existing regulations to determine a fixed-loss amount for the fiscal year, based on the most recently available data. We project that if the fixed-loss amount was kept at the FY 2020 amount of $26,778, outlier payments would be equal to 8.044 percent of total LTCH PPS payments for LTCH PPS standard Federal payment rate cases. Therefore, as described below, an increase in the fixed-loss amount for FY 2021 is necessary to maintain estimated HCO payments at the projected 7.975 percent of total estimated LTCH PPS payments for LTCH PPS standard Federal payment rate cases.

As stated in the FY 2021 IPPS/LTCH PPS proposed rule (85 FR 32963), consistent with past practice, in calculating estimated high cost outlier payments for that proposed rule, we increased estimated costs by an inflation factor of 5.4 percent (determined by the Office of the Actuary) to update the FY 2019 costs of each case to FY 2021. Based on the data available for this final rule, in calculating estimated high cost outlier payments for this final rule, we increased estimated costs by an inflation factor of 4.3 percent (determined by the Office of the Actuary) to update the FY 2019 costs of each case to FY 2021. The charge inflation factor is the average value resultant from eight quarterly market basket updates. To calculate a two-year charge inflation factor for FY 2021 for this final rule, consistent with historical practice, we divided the average of the four quarter market basket values for FY 2021 (1.093) by the average of the four quarter market basket values for FY 2019 (1.047), which results in a two-year charge inflation factor for FY 2021 of 1.043 (calculation performed using unrounded numbers). Therefore, consistent with past practice, in determining a FY 2021 fixed-loss amount that would result in estimated outlier payments for FY 2021 being projected to be equal to 7.975 percent of projected total FY 2021 LTCH PPS payments for LTCH PPS standard Federal payment rate cases, we inflated the charges on the MedPAR claims by 2 years, from FY 2019 to FY 2021, using the two-year charge inflation factor of 1.043.

After consideration of public comments we are finalizing our proposals without modification. In addition, consistent with our historical practice of using the best data available, as we proposed, when determining the fixed-loss amount for LTCH PPS standard Federal payment rate cases for FY 2021 in this final rule, we used the most recent available LTCH claims data and CCR data.

For this FY 2021 IPPS/LTCH PPS final rule, we are continuing to use our current methodology to calculate an applicable fixed-loss amount for LTCH PPS standard Federal payment rate cases for FY 2021 using the best available data that will maintain estimated HCO payments at the projected 7.975 percent of total estimated LTCH PPS payments for LTCH PPS standard Federal payment rate cases (based on the payment rates and policies for these cases presented in this final rule). Specifically, based on the most recent complete LTCH data available at this time (that is, LTCH claims data from the March 2020 update of the FY 2019 MedPAR file and CCRs from the March 2020 update of the PSF), we determined a fixed-loss amount for LTCH PPS standard Federal payment rate cases for FY 2021 of $27,195 that will result in estimated outlier payments projected to be equal to 7.975 percent of estimated FY 2021 payments for such cases. Under the broad authority of section 123(a)(1) of the BBRA and section 307(b)(1) of the BIPA, we are establishing a fixed-loss amount of $27,195 for LTCH PPS standard Federal payment rate cases for FY 2021. Under this policy, we would continue to make an additional HCO payment for the cost of an LTCH PPS standard Federal payment rate case that exceeds the HCO threshold amount that is equal to 80 percent of the difference between the estimated cost of the case and the outlier threshold (the sum of the adjusted LTCH PPS standard Federal payment rate and the fixed-loss amount for LTCH PPS standard Federal payment rate cases of $27,195).

We note, the fixed-loss amount for FY 2021 for LTCH PPS standard Federal payment rate cases we are establishing in this final rule based on the most recent LTCH claims data from the MedPAR file and the latest CCRs from the PSF, result in a fixed-loss amount for such cases that is lower than the proposed fixed-loss amount. This change is largely attributable to updates to CCRs from the December 2019 update of the PSF to the March 2020 update of the PSF. As previously discussed, the increase in the fixed-loss amount from FY 2020 of $26,778 to the FY 2021 amount of $27,195 is necessary to maintain estimated HCO payments at the projected 7.975 percent of total estimated LTCH PPS payments for LTCH PPS standard Federal payment rate cases.

4. High-Cost Outlier Payments for Site Neutral Payment Rate Cases

When we implemented the application of the site neutral payment rate in FY 2016, in examining the appropriate fixed-loss amount for site neutral payment rate cases issue, we considered how LTCH discharges based on historical claims data would have been classified under the dual rate LTCH PPS payment structure and the CMS' Office of the Actuary projections regarding how LTCHs will likely respond to our implementation of policies resulting from the statutory payment changes. We again relied on these considerations and actuarial projections in FY 2017 and FY 2018 because the historical claims data available in each of these years were not all subject to the LTCH PPS dual rate payment system. Similarly, for FY 2019

and FY 2020, we continued to rely on these considerations and actuarial projections because, due to the transitional blended payment policy for site neutral payment rate cases, FY 2018 and FY 2019 claims for these cases were not subject to the full effect of the site neutral payment rate.

For FYs 2016 through 2020, at that time our actuaries projected that the proportion of cases that would qualify as LTCH PPS standard Federal payment rate cases versus site neutral payment rate cases under the statutory provisions would remain consistent with what is reflected in the historical LTCH PPS claims data. Although our actuaries did not project an immediate change in the proportions found in the historical data, they did project cost and resource changes to account for the lower payment rates. Our actuaries also projected that the costs and resource use for cases paid at the site neutral payment rate would likely be lower, on average, than the costs and resource use for cases paid at the LTCH PPS standard Federal payment rate and would likely mirror the costs and resource use for IPPS cases assigned to the same MS–DRG, regardless of whether the proportion of site neutral payment rate cases in the future remains similar to what is found based on the historical data. As discussed in the FY 2016 IPPS/LTCH PPS final rule (80 FR 49619), this actuarial assumption is based on our expectation that site neutral payment rate cases would generally be paid based on an IPPS comparable per diem amount under the statutory LTCH PPS payment changes that began in FY 2016, which, in the majority of cases, is much lower than the payment that would have been paid if these statutory changes were not enacted. In light of these projections and expectations, we discussed that we believed that the use of a single fixed-loss amount and HCO target for all LTCH PPS cases would be problematic. In addition, we discussed that we did not believe that it would be appropriate for comparable LTCH PPS site neutral payment rate cases to receive dramatically different HCO payments from those cases that would be paid under the IPPS (80 FR 49617 through 49619 and 81 FR 57305 through 57307). For those reasons, we stated that we believed that the most appropriate fixed-loss amount for site neutral payment rate cases for FYs 2016 through 2020 would be equal to the IPPS fixed-loss amount for that particular fiscal year. Therefore, we established the fixed-loss amount for site neutral payment rate cases as the corresponding IPPS fixed-loss amounts for FYs 2016 through 2020. In particular, in FY 2020, we established the fixed-loss amount for site neutral payment rate cases as the FY 2020 IPPS fixed-loss amount of $26,552 (as corrected at 84 FR 49845).

As noted earlier, because not all claims in the data used for this FY 2021 IPPS/LTCH PPS final rule were subject to the unblended site neutral payment rate, we continue to rely on the same considerations and actuarial projections used in FYs 2016 through 2020 when developing a fixed-loss amount for site neutral payment rate cases for FY 2021. Our actuaries continue to project that site neutral payment rate cases in FY 2021 will continue to mirror an IPPS case paid under the same MS–DRG. That is, our actuaries continue to project that the costs and resource use for FY 2021 cases paid at the site neutral payment rate would likely be lower, on average, than the costs and resource use for cases paid at the LTCH PPS standard Federal payment rate and will likely mirror the costs and resource use for IPPS cases assigned to the same MS–DRG, regardless of whether the proportion of site neutral payment rate cases in the future remains similar to what was found based on the historical data. (Based on the most recent FY 2019 LTCH claims data used in the development of this FY 2021 IPPS/LTCH PPS final rule, approximately 75 percent of LTCH cases were paid the LTCH PPS standard Federal payment rate and approximately 25 percent of LTCH cases were paid the site neutral payment rate for discharges occurring in FY 2019.)

For these reasons, we continue to believe that the most appropriate fixed-loss amount for site neutral payment rate cases for FY 2021 is the IPPS fixed-loss amount for FY 2021. Therefore, consistent with past practice, in the FY 2021 IPPS/LTCH PPS proposed rule (85 FR 32926), we proposed that the applicable HCO threshold for site neutral payment rate cases is the sum of the site neutral payment rate for the case and the IPPS fixed-loss amount. That is, we proposed a fixed-loss amount for site neutral payment rate cases of $30,006. Accordingly, for FY 2021, we proposed to calculate a HCO payment for site neutral payment rate cases with costs that exceed the HCO threshold amount that is equal to 80 percent of the difference between the estimated cost of the case and the outlier threshold (the sum of the site neutral payment rate payment and the proposed fixed-loss amount for site neutral payment rate cases of $30,006).

We did not receive any public comments on our proposals. Therefore, we are finalizing our proposals as described above, without modification. Therefore, for FY 2021, as we proposed, we are establishing that the applicable HCO threshold for site neutral payment rate cases is the sum of the site neutral payment rate for the case and the IPPS fixed loss amount. That is, we are establishing a fixed-loss amount for site neutral payment rate cases of $29,051, which is the same FY 2021 IPPS fixed-loss amount discussed in section II.A.4.g.(1). of the Addendum to this final rule. Accordingly, under this policy, for FY 2021, we will calculate a HCO payment for site neutral payment rate cases with costs that exceed the HCO threshold amount, which is equal to 80 percent of the difference between the estimated cost of the case and the outlier threshold (the sum of site neutral payment rate payment and the fixed-loss amount for site neutral payment rate cases of $29,051).

In establishing a HCO policy for site neutral payment rate cases, we established a budget neutrality adjustment under § 412.522(c)(2)(i). We established this requirement because we believed, and continue to believe, that the HCO policy for site neutral payment rate cases should be budget neutral, just as the HCO policy for LTCH PPS standard Federal payment rate cases is budget neutral, meaning that estimated site neutral payment rate HCO payments should not result in any change in estimated aggregate LTCH PPS payments.

To ensure that estimated HCO payments payable to site neutral payment rate cases in FY 2021 would not result in any increase in estimated aggregate FY 2021 LTCH PPS payments, under the budget neutrality requirement at § 412.522(c)(2)(i), it is necessary to reduce site neutral payment rate payments by 5.1 percent to account for the estimated additional HCO payments payable to those cases in FY 2021, in general, we proposed to continue this policy.

As explained in the proposed rule, consistent with the IPPS HCO payment threshold, we estimate the proposed fixed-loss threshold would result in FY 2021 HCO payments for site neutral payment rate cases to equal 5.1 percent of the site neutral payment rate payments that are based on the IPPS comparable per diem amount. As such, to ensure estimated HCO payments payable for site neutral payment rate cases in FY 2021 would not result in any increase in estimated aggregate FY 2021 LTCH PPS payments, under the budget neutrality requirement at § 412.522(c)(2)(i), as we explained in the proposed rule, it is necessary to reduce the site neutral payment rate amount paid under § 412.522(c)(1)(i) by 5.1 percent to account for the estimated additional HCO payments payable for site neutral payment rate cases in FY 2021. In order to achieve this, for FY 2021, we proposed to apply a budget neutrality factor of 0.949 (that is, the decimal equivalent of a 5.1 percent reduction, determined as 1.0 − 5.1/100 = 0.949) to the site neutral payment rate for those site neutral payment rate cases paid under § 412.522(c)(1)(i). We note that, consistent with our current policy, this HCO budget neutrality adjustment would not be applied to the HCO portion of the site neutral payment rate amount (81 FR 57309).

Comment: Some commenters, as they have done since the inception of the dual rate payment system that created the site neutral payment rate, objected to the proposed site neutral payment rate HCO budget neutrality adjustment, claiming that it would result in savings to the Medicare program instead of being budget neutral. The commenters' primary objection continued to be based on their belief that, because the IPPS base rates used in the IPPS comparable per diem amount calculation of the site neutral payment rate include a budget neutrality adjustment for IPPS HCO payments (for example, a 5.1 percent adjustment on the operating IPPS standardized amount), an ''additional'' budget neutrality factor is not necessary and is, in fact, duplicative. Based on their belief that the proposed site neutral payment rate HCO budget neutrality adjustment is duplicative, some commenters recommended that if CMS continues with the application of that budget neutrality adjustment, the calculation of the IPPS comparable per diem amount should be revised to use the IPPS operating standardized amount prior to the application of the IPPS HCO budget neutrality adjustment.

Response: We continue to disagree with the commenters that a budget neutrality adjustment for site neutral payment rate HCO

payments is unnecessary or duplicative. We have stated such disagreement during each previous rulemaking cycle. We refer readers to 84 FR 42648 through 42649, 83 FR 41737 through 41738, 82 FR 38545 through 38546, 81 FR 57308 through 57309, and 80 FR 49621 through 49622 for more information on our responses to these comments.

After consideration of public comments, for the reasons discussed above, we are adopting our proposed site neutral payment rate HCO budget neutrality adjustment as final without modification. Specifically, for FY 2021, as we proposed, we are applying a budget neutrality factor of 0.949 (that is, the decimal equivalent of a 5.1 percent reduction, determined as 1.0 − 5.1/100 = 0.949) to the site neutral payment rate for those site neutral payment rate cases paid under § 412.522(c)(1)(i). We note that, consistent with our current policy, this HCO budget neutrality adjustment will not apply to the HCO portion of the site neutral payment rate amount.

E. Update to the IPPS Comparable Amount To Reflect the Statutory Changes to the IPPS DSH Payment Adjustment Methodology

In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50766), we established a policy to reflect the changes to the Medicare IPPS DSH payment adjustment methodology made by section 3133 of the Affordable Care Act in the calculation of the ''IPPS comparable amount'' under the SSO policy at § 412.529 and the ''IPPS equivalent amount'' under the site neutral payment rate at § 412.522. Historically, the determination of both the ''IPPS comparable amount'' and the ''IPPS equivalent amount'' includes an amount for inpatient operating costs ''for the costs of serving a disproportionate share of low-income patients.'' Under the statutory changes to the Medicare DSH payment adjustment methodology that began in FY 2014, in general, eligible IPPS hospitals receive an empirically justified Medicare DSH payment equal to 25 percent of the amount they otherwise would have received under the statutory formula for Medicare DSH payments prior to the amendments made by the Affordable Care Act. The remaining amount, equal to an estimate of 75 percent of the amount that otherwise would have been paid as Medicare DSH payments, reduced to reflect changes in the percentage of individuals who are uninsured and any additional statutory adjustment, is made available to make additional payments to each hospital that qualifies for Medicare DSH payments and that has uncompensated care. The additional uncompensated care payments are based on the hospital's amount of uncompensated care for a given time period relative to the total amount of uncompensated care for that same time period reported by all IPPS hospitals that receive Medicare DSH payments.

To reflect the statutory changes to the Medicare DSH payment adjustment methodology in the calculation of the ''IPPS comparable amount'' and the ''IPPS equivalent amount'' under the LTCH PPS, we stated that we will include a reduced Medicare DSH payment amount that reflects the projected percentage of the payment amount calculated based on the statutory Medicare DSH payment formula prior to the amendments made by the Affordable Care Act that will be paid to eligible IPPS hospitals as empirically justified Medicare DSH payments and uncompensated care payments in that year (that is, a percentage of the operating Medicare DSH payment amount that has historically been reflected in the LTCH PPS payments that are based on IPPS rates). We also stated that the projected percentage will be updated annually, consistent with the annual determination of the amount of uncompensated care payments that will be made to eligible IPPS hospitals. We believe that this approach results in appropriate payments under the LTCH PPS and is consistent with our intention that the ''IPPS comparable amount'' and the ''IPPS equivalent amount'' under the LTCH PPS closely resemble what an IPPS payment would have been for the same episode of care, while recognizing that some features of the IPPS cannot be translated directly into the LTCH PPS (79 FR 50766 through 50767).

As discussed in the FY 2021 IPPS/LTCH PPS proposed rule (85 FR 32927), based on the data available at that time, we proposed to establish that the calculation of the ''IPPS comparable amount'' under § 412.529 would include an applicable operating Medicare DSH payment amount that is equal to 75.90 percent of the operating Medicare DSH payment amount that would have been paid based on the statutory Medicare DSH payment formula absent the amendments made by the Affordable Care Act. Furthermore, consistent with our historical practice, we proposed that, if more recent data became available, we would use that data to determine this factor in this final rule.

We did not receive any public comments in response to our proposal, and we are adopting it as final. However, as we proposed we are determine the factor in this final rule using more recent data. For FY 2021, as discussed in greater detail in section IV.G.3. of the preamble of this final rule, based on the most recent data available, our estimate of 75 percent of the amount that would otherwise have been paid as Medicare DSH payments (under the methodology outlined in section 1886(r)(2) of the Act) is adjusted to 72.86 percent of that amount to reflect the change in the percentage of individuals who are uninsured. The resulting amount is then used to determine the amount available to make uncompensated care payments to eligible IPPS hospitals in FY 2021. In other words, the amount of the Medicare DSH payments that would have been made prior to the amendments made by the Affordable Care Act is adjusted to 54.65 percent (the product of 75 percent and 72.86 percent) and the resulting amount is used to calculate the uncompensated care payments to eligible hospitals. As a result, for FY 2021, we project that the reduction in the amount of Medicare DSH payments pursuant to section 1886(r)(1) of the Act, along with the payments for uncompensated care under section 1886(r)(2) of the Act, will result in overall Medicare DSH payments of 79.65 percent of the amount of Medicare DSH payments that would otherwise have been made in the absence of the amendments made by the Affordable Care Act (that is, 25 percent + 54.65 percent = 79.65 percent).

Therefore, for FY 2021, consistent with our proposal, we are establishing that the calculation of the ''IPPS comparable amount'' under § 412.529 will include an applicable operating Medicare DSH payment amount that is equal to 79.65 percent of the operating Medicare DSH payment amount that would have been paid based on the statutory Medicare DSH payment formula absent the amendments made by the Affordable Care Act.

F. Computing the Adjusted LTCH PPS Federal Prospective Payments for FY 2021

Section 412.525 sets forth the adjustments to the LTCH PPS standard Federal payment rate. Under the dual rate LTCH PPS payment structure, only LTCH PPS cases that meet the statutory criteria to be excluded from the site neutral payment rate are paid based on the LTCH PPS standard Federal payment rate. Under § 412.525(c), the LTCH PPS standard Federal payment rate is adjusted to account for differences in area wages by multiplying the labor-related share of the LTCH PPS standard Federal payment rate for a case by the applicable LTCH PPS wage index (the FY 2021 values are shown in Tables 12A through 12B listed in section VI. of the Addendum to this final rule and are available via the internet on the CMS website). The LTCH PPS standard Federal payment rate is also adjusted to account for the higher costs of LTCHs located in Alaska and Hawaii by the applicable COLA factors (the final FY 2021 factors are shown in the chart in section V.C. of this Addendum) in accordance with § 412.525(b). In this final rule, we are establishing an LTCH PPS standard Federal payment rate for FY 2021 of $43,755.34, as discussed in section V.A. of the Addendum to this final rule. We illustrate the methodology to adjust the LTCH PPS standard Federal payment rate for FY 2021 in the following example:

Example: During FY 2021, a Medicare discharge that meets the criteria to be excluded from the site neutral payment rate, that is, an LTCH PPS standard Federal payment rate case, is from an LTCH that is located in CBSA 16984, which has a FY 2021 LTCH PPS wage index value of 1.0442 (obtained from Table 12A listed in section VI. of the Addendum to this final rule and available via the internet on the CMS website). The Medicare patient case is classified into MS–LTC–DRG 189 (Pulmonary Edema & Respiratory Failure), which has a relative weight for FY 2021 of 0.9446 (obtained from Table 11 listed in section VI. of the Addendum to this final rule and available via the internet on the CMS website). The LTCH submitted quality reporting data for FY 2021 in accordance with the LTCH QRP under section 1886(m)(5) of the Act.

To calculate the LTCH's total adjusted Federal prospective payment for this Medicare patient case in FY 2021, we computed the wage-adjusted Federal prospective payment amount by multiplying the unadjusted FY 2021 LTCH PPS standard Federal payment rate ($43,755.34) by the labor-related share (0.681 percent) and the

wage index value (1.0442). This wage-adjusted amount was then added to the nonlabor-related portion of the unadjusted LTCH PPS standard Federal payment rate (0.319 percent; adjusted for cost of living, if applicable) to determine the adjusted LTCH PPS standard Federal payment rate, which is then multiplied by the MS–LTC–DRG relative weight (0.9446) to calculate the total adjusted LTCH PPS standard Federal prospective payment for FY 2021 ($42,575.37). The table illustrates the components of the calculations in this example.

Unadjusted LTCH PPS Standard Federal Prospective Payment Rate	$43,755.34
Labor-Related Share	x 0.681
Labor-Related Portion of the LTCH PPS Standard Federal Payment Rate	= $29,797.39
Wage Index (CBSA 16984)	x 1.0442
Wage-Adjusted Labor Share of the LTCH PPS Standard Federal Payment Rate	= $31,114.43
Nonlabor-Related Portion of the LTCH PPS Standard Federal Payment Rate ($43,755.34 x 0.319)	+ $13,957.95
Adjusted LTCH PPS Standard Federal Payment Amount	= $45,072.38
MS-LTC-DRG 189 Relative Weight	x 0.9446
Total Adjusted LTCH PPS Standard Federal Prospective Payment	= $42,575.37

VI. Tables Referenced in This Final Rule Generally Available Through the Internet on the CMS Website

This section lists the tables referred to throughout the preamble of this final rule and in the Addendum. In the past, a majority of these tables were published in the **Federal Register** as part of the annual proposed and final rules. However, similar to FYs 2012 through 2020, for the FY 2021 rulemaking cycle, the IPPS and LTCH PPS tables will not be published in the **Federal Register** in the annual IPPS/LTCH PPS proposed and final rules and will be available through the internet. Specifically, all IPPS tables listed below, with the exception of IPPS Tables 1A, 1B, 1C, and 1D, and LTCH PPS Table 1E, will generally be available through the internet. IPPS Tables 1A, 1B, 1C, and 1D, and LTCH PPS Table 1E are displayed at the end of this section and will continue to be published in the **Federal Register** as part of the annual proposed and final rules. For additional discussion of the information included in the IPPS and LTCH PPS tables associated with the IPPS/LTCH PPS proposed and final rules, as well as prior changes to the information included in these tables, we refer readers to the FY 2020 IPPS/LTCH PPS final rule (84 FR 42650 through 42651).

In addition, under the HAC Reduction Program, established by section 3008 of the Affordable Care Act, a hospital's total payment may be reduced by 1 percent if it is in the lowest HAC performance quartile. The hospital-level data for the FY 2021 HAC Reduction Program will be made publicly available once it has undergone the review and corrections process.

As was the cases for the FY 2020 IPPS/LTCH PPS proposed and final rules, we are no longer including Table 15, which had typically included the fiscal year readmissions payment adjustment factors because hospitals have not yet had the opportunity to review and correct the data before the data are made public under our policy regarding the reporting of hospital-specific data. After hospitals have been given an opportunity to review and correct their calculations for FY 2021, we will post Table 15 (which will be available via the internet on the CMS website) to display the final FY 2021 readmissions payment adjustment factors that will be applicable to discharges occurring on or after October 1, 2020. We expect Table 15 will be posted on the CMS website in the fall of 2020.

Readers who experience any problems accessing any of the tables that are posted on the CMS websites identified below should contact Michael Treitel at (410) 786–4552.

The following IPPS tables for this final rule are generally available through the internet on the CMS website at: *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html.* Click on the link on the left side of the screen titled, ''FY 2021 IPPS Final Rule Home Page'' or ''Acute Inpatient-Files- for Download.''

BILLING CODE 4120–01–C

Appendix A: Economic Analyses

I. Regulatory Impact Analysis

A. Statement of Need

This final rule is necessary in order to make payment and policy changes under the Medicare IPPS for Medicare acute care hospital inpatient services for operating and capital-related costs as well as for certain hospitals and hospital units excluded from the IPPS. This final rule also is necessary to make payment and policy changes for Medicare hospitals under the LTCH PPS.

Also as we note later in this Appendix, the primary objective of the IPPS and the LTCH PPS is to create incentives for hospitals to operate efficiently and minimize unnecessary costs, while at the same time ensuring that payments are sufficient to adequately compensate hospitals for their legitimate costs in delivering necessary care to Medicare beneficiaries. In addition, we share national goals of preserving the Medicare Hospital Insurance Trust Fund.

We believe that the changes in this final rule, such as the updates to the IPPS and LTCH PPS rates, and the policies and discussions relating to applications for new technology add-on payments, are needed to further each of these goals while maintaining the financial viability of the hospital industry and ensuring access to high quality health care for Medicare beneficiaries.

For example, without additional payments for new medical technologies that meet the criteria for approval for new technology add-on payments, Medicare beneficiaries may not have appropriate access to these new technologies. We discuss the technologies for which we received applications for add-on payments for new medical technologies for FY 2021 in sections II.G.5. and 6. of the preamble to this final rule. As discussed in section II.G.6. of the preamble of this final rule, under the alternative pathway for new technology add-on payments, new technologies that are medical products with a Qualified Infectious Disease Product (QIDP) designation or are part of the Breakthrough Device program will be considered new and not substantially similar to an existing technology and will not need to demonstrate that the technology represents a substantial clinical improvement. These technologies must still meet the cost criterion.

We expect that the policies in this final rule would ensure that the outcomes of the prospective payment systems are reasonable and equitable, while avoiding or minimizing unintended adverse consequences.

B. Overall Impact

We have examined the impacts of this final rule as required by Executive Order 12866 on Regulatory Planning and Review (September 30, 1993), Executive Order 13563 on Improving Regulation and Regulatory Review (January 18, 2011), the Regulatory Flexibility Act (RFA) (September 19, 1980, Pub. L. 96–354), section 1102(b) of the Social Security Act, section 202 of the Unfunded Mandates Reform Act of 1995 (March 22, 1995; Pub. L. 104–4), Executive Order 13132 on Federalism (August 4, 1999), the Congressional Review Act (5 U.S.C. 804(2), and Executive Order 13771 on Reducing Regulation and Controlling Regulatory Costs (January 30, 2017).

Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). Section 3(f) of Executive Order 12866 defines a ''significant regulatory action'' as an action that is likely to result in a rule: (1) Having an annual effect on the economy of $100 million or more in any 1 year, or adversely and materially affecting a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local or tribal governments or communities (also referred to as ''economically significant''); (2) creating a serious inconsistency or otherwise interfering with an action taken or planned by another agency; (3) materially altering the budgetary impacts of entitlement grants, user fees, or loan programs or the rights and obligations of recipients thereof; or (4) raising novel legal or policy issues arising out of legal mandates, the President's priorities, or the principles set forth in the Executive Order.

We have determined that this final rule is a major rule as defined in 5 U.S.C. 804(2). We estimate that the changes for FY 2021 acute care hospital operating and capital payments would redistribute amounts in excess of $100 million to acute care hospitals. The applicable percentage increase to the IPPS rates required by the statute, in conjunction with other payment changes in this final rule, would result in an estimated $3.5 billion increase in FY 2021 payments, primarily driven by a combined $3.0 billion increase in FY 2021 operating payments and uncompensated care payments, and a net increase of $506 million resulting from estimated changes in FY 2021 capital payments and new technology add-on payments. These changes are relative to payments made in FY 2020. The impact analysis of the capital payments can be found in section I.I. of this Appendix. In addition, as described in section I.J. of this Appendix, LTCHs are expected to experience a decrease in payments by approximately 40 million in FY 2021 relative to FY 2020, primarily due to the end of the statutory transition period for site neutral payment rate cases.

Our operating impact estimate includes the 0.5 percentage point adjustment required under section 414 of the MACRA applied to the IPPS standardized amount, as discussed in section II.D. of the preamble of this final rule. In addition, our operating payment impact estimate includes the 2.4 percent hospital update to the standardized amount (which includes the estimated 2.4 percent market basket update and the 0.0 percentage point for the multifactor productivity (MFP) adjustment). The estimates of IPPS operating payments to acute care hospitals do not reflect any changes in hospital admissions or real case-mix intensity, which will also affect overall payment changes.

The analysis in this Appendix, in conjunction with the remainder of this document, demonstrates that this final rule is consistent with the regulatory philosophy and principles identified in Executive Orders 12866 and 13563, the RFA, and section 1102(b) of the Act. This final rule would affect payments to a substantial number of small rural hospitals, as well as other classes of hospitals, and the effects on some hospitals may be significant. Finally, in accordance with the provisions of Executive Order 12866, the Executive Office of Management and Budget has reviewed this final rule.

C. Objectives of the IPPS and the LTCH PPS

The primary objective of the IPPS and the LTCH PPS is to create incentives for hospitals to operate efficiently and minimize unnecessary costs, while at the same time ensuring that payments are sufficient to adequately compensate hospitals for their legitimate costs in delivering necessary care to Medicare beneficiaries. In addition, we share national goals of preserving the Medicare Hospital Insurance Trust Fund.

We believe that the changes in this final rule would further each of these goals while maintaining the financial viability of the hospital industry and ensuring access to high quality health care for Medicare beneficiaries. We expect that these changes would ensure that the outcomes of the prospective payment systems are reasonable and equitable, while avoiding or minimizing unintended adverse consequences.

Because this final rule contains a range of policies, we refer readers to the section of the final rule where each policy is discussed. These sections include the rationale for our decisions, including the need for the policy.

D. Limitations of Our Analysis

The following quantitative analysis presents the projected effects of our policy changes, as well as statutory changes effective for FY 2021, on various hospital groups. We estimate the effects of individual policy changes by estimating payments per case, while holding all other payment policies constant. We use the best data available, but, generally unless specifically indicated, we do not attempt to make adjustments for future changes in such variables as admissions, lengths of stay, case-mix, changes to the Medicare population, or incentives. In addition, we discuss limitations of our analysis for specific policies in the discussion of those policies as needed.

E. Hospitals Included in and Excluded From the IPPS

The prospective payment systems for hospital inpatient operating and capital-related costs of acute care hospitals encompass most general short-term, acute care hospitals that participate in the Medicare program. There were 27 Indian Health Service hospitals in our database, which we excluded from the analysis due to the special characteristics of the prospective payment methodology for these hospitals. Among other short-term, acute care hospitals, hospitals in Maryland are paid in accordance with the Maryland Total Cost of Care Model, and hospitals located outside the 50 States, the District of Columbia, and Puerto Rico (that is, 6 short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa) receive payment for inpatient hospital services they furnish on the basis of reasonable costs, subject to a rate-of-increase ceiling.

As of July 2020, there were 3,201 IPPS acute care hospitals included in our analysis. This represents approximately 54 percent of all Medicare-participating hospitals. The majority of this impact analysis focuses on this set of hospitals. There also are

approximately 1,414 CAHs. These small, limited service hospitals are paid on the basis of reasonable costs, rather than under the IPPS. IPPS-excluded hospitals and units, which are paid under separate payment systems, include IPFs, IRFs, LTCHs, RNHCIs, children's hospitals, 11 cancer hospitals, 1 extended neoplastic disease care hospital, and 6 short-term acute care hospitals located in the Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa. Changes in the prospective payment systems for IPFs and IRFs are made through separate rulemaking. Payment impacts of changes to the prospective payment systems for these IPPS-excluded hospitals and units are not included in this final rule. The impact of the update and policy changes to the LTCH PPS for FY 2021 is discussed in section I.J. of this Appendix.

F. Effects on Hospitals and Hospital Units Excluded From the IPPS

As of July 2020, there were 95 children's hospitals, 11 cancer hospitals, 6 short-term acute care hospitals located in the Virgin Islands, Guam, the Northern Mariana Islands and American Samoa, 1 extended neoplastic disease care hospital, and 15 RNHCIs being paid on a reasonable cost basis subject to the rate-of-increase ceiling under § 413.40. (In accordance with § 403.752(a) of the regulation, RNHCIs are paid under § 413.40.) Among the remaining providers, 302 rehabilitation hospitals and 816 rehabilitation units, and approximately 363 LTCHs, are paid the Federal prospective per discharge rate under the IRF PPS and the LTCH PPS, respectively, and 547 psychiatric hospitals and 1,003 psychiatric units are paid the Federal per diem amount under the IPF PPS. As stated previously, IRFs and IPFs are not affected by the rate updates discussed in this final rule. The impacts of the changes on LTCHs are discussed in section I.J. of this Appendix.

For children's hospitals, the 11 cancer hospitals, the 6 short-term acute care hospitals located in the Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa, the 1 extended neoplastic disease care hospital, and RNHCIs, the update of the rate-of-increase limit (or target amount) is the estimated FY 2021 percentage increase in the 2014-based IPPS operating market basket, consistent with section 1886(b)(3)(B)(ii) of the Act, and §§ 403.752(a) and 413.40 of the regulations. Consistent with current law, based on IGI's second quarter 2020 forecast of the 2014-based IPPS market basket increase, we are estimating the FY 2021 update to be 2.4 percent (that is, the estimate of the market basket rate-of-increase), as discussed in section IV.B. of the preamble of this final rule. We used the most recent data available for this final rule to calculate the IPPS operating market basket update for FY 2021. Children's hospitals, the 11 cancer hospitals, the 6 short-term acute care hospitals located in the Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa, the 1 extended neoplastic disease care hospital, and RNHCIs that continue to be paid based on reasonable costs subject to rate-of-increase limits under § 413.40 of the regulations are not subject to the reductions in the applicable percentage increase required under the Affordable Care Act. The impact of the update in the rate-of-increase limit on those excluded hospitals depends on the cumulative cost increases experienced by each excluded hospital since its applicable base period. For excluded hospitals that have maintained their cost increases at a level below the rate-of-increase limits since their base period, the major effect is on the level of incentive payments these excluded hospitals receive. Conversely, for excluded hospitals with cost increases above the cumulative update in their rate-of-increase limits, the major effect is the amount of excess costs that would not be paid.

We note that, under § 413.40(d)(3), an excluded hospital that continues to be paid under the TEFRA system and whose costs exceed 110 percent of its rate-of-increase limit receives its rate-of-increase limit plus the lesser of: (1) 50 percent of its reasonable costs in excess of 110 percent of the limit; or (2) 10 percent of its limit. In addition, under the various provisions set forth in § 413.40, hospitals can obtain payment adjustments for justifiable increases in operating costs that exceed the limit.

G. Quantitative Effects of the Policy Changes Under the IPPS for Operating Costs

1. Basis and Methodology of Estimates

In this final rule, we are announcing policy changes and payment rate updates for the IPPS for FY 2021 for operating costs of acute care hospitals. The FY 2021 updates to the capital payments to acute care hospitals are discussed in section I.I. of this Appendix.

Based on the overall percentage change in payments per case estimated using our payment simulation model, we estimate that total FY 2021 operating payments would increase by 2.5 percent, compared to FY 2020. In addition to the applicable percentage increase, this amount reflects the +0.5 percentage point permanent adjustment to the standardized amount required under section 414 of MACRA. The impacts do not reflect changes in the number of hospital admissions or real case-mix intensity, which would also affect overall payment changes.

We have prepared separate impact analyses of the changes to each system. This section deals with the changes to the operating inpatient prospective payment system for acute care hospitals. Our payment simulation model relies on the most recent available claims data to enable us to estimate the impacts on payments per case of certain changes in this final rule. However, there are other changes for which we do not have data available that would allow us to estimate the payment impacts using this model. For those changes, we have attempted to predict the payment impacts based upon our experience and other more limited data.

The data used in developing the quantitative analyses of changes in payments per case presented in this section are taken from the FY 2019 MedPAR file and the most current Provider-Specific File (PSF) that are used for payment purposes. Although the analyses of the changes to the operating PPS do not incorporate cost data, data from the most recently available hospital cost reports were used to categorize hospitals. Our analysis has several qualifications. First, in this analysis, we do not make adjustments for future changes in such variables as admissions, lengths of stay, or underlying growth in real case-mix. Second, due to the interdependent nature of the IPPS payment components, it is very difficult to precisely quantify the impact associated with each change. Third, we use various data sources to categorize hospitals in the tables. In some cases, particularly the number of beds, there is a fair degree of variation in the data from the different sources. We have attempted to construct these variables with the best available source overall. However, for individual hospitals, some miscategorizations are possible.

Using cases from the FY 2019 MedPAR file, we simulate payments under the operating IPPS given various combinations of payment parameters. As described previously, Indian Health Service hospitals and hospitals in Maryland were excluded from the simulations. The impact of payments under the capital IPPS, and the impact of payments for costs other than inpatient operating costs, are not analyzed in this section. Estimated payment impacts of the capital IPPS for FY 2021 are discussed in section I.I. of this Appendix.

We discuss the following changes:

- The effects of the application of the applicable percentage increase of 2.4 percent (that is, a 2.4 percent market basket update with a 0.0 percentage point adjustment for the multifactor productivity adjustment), and a 0.5 percentage point adjustment required under section 414 of the MACRA to the IPPS standardized amount, and the applicable percentage increase (including the market basket update and the multifactor productivity adjustment) to the hospital-specific rates.
- The effects of the changes to the relative weights and MS–DRG GROUPER.
- The effects of the changes in hospitals' wage index values reflecting updated wage data from hospitals' cost reporting periods beginning during FY 2017, compared to the FY 2016 wage data, to calculate the FY 2021 wage index.
- The effects of the geographic reclassifications by the MGCRB (as of publication of this final rule) that will be effective for FY 2021.
- The effects of the rural floor with the application of the national budget neutrality factor to the wage index.
- The effects of the frontier State wage index adjustment under the statutory provision that requires hospitals located in States that qualify as frontier States to not have a wage index less than 1.0. This provision is not budget neutral.
- The effects of the implementation of section 1886(d)(13) of the Act, as added by section 505 of Public Law 108–173, which provides for an increase in a hospital's wage index if a threshold percentage of residents of the county where the hospital is located commute to work at hospitals in counties with higher wage indexes for FY 2021. This provision is not budget neutral.
- The total estimated change in payments based on the FY 2021 policies relative to payments based on FY 2020 policies,

including estimated changes in outlier payments, the revised labor market area delineations in OMB Bulletin No. 18–04 and the transition to apply a 5-percent cap on any decrease in a hospital's wage index from the hospital's final wage index from the prior fiscal year.

To illustrate the impact of the FY 2021 changes, our analysis begins with a FY 2020 baseline simulation model using: The FY 2020 applicable percentage increase of 2.6 percent; the 0.5 percentage point adjustment required under section 414 of the MACRA applied to the IPPS standardized amount; the FY 2020 MS–DRG GROUPER (Version 37); the FY 2020 CBSA designations for hospitals based on the OMB definitions from the 2010 Census; the FY 2020 wage index; and no MGCRB reclassifications. Outlier payments are set at 5.1 percent of total operating MS–DRG and outlier payments for modeling purposes.

Section 1886(b)(3)(B)(viii) of the Act, as added by section 5001(a) of Public Law 109–171, as amended by section 4102(b)(1)(A) of the ARRA (Pub. L. 111–5) and by section 3401(a)(2) of the Affordable Care Act (Pub. L. 111–148), provides that, for FY 2007 and each subsequent year through FY 2014, the update factor will include a reduction of 2.0 percentage points for any subsection (d) hospital that does not submit data on measures in a form and manner, and at a time specified by the Secretary. Beginning in FY 2015, the reduction is one-quarter of such applicable percentage increase determined without regard to section 1886(b)(3)(B)(ix), (xi), or (xii) of the Act, or one-quarter of the market basket update. Therefore, as discussed in section IV.B.1. of the preamble of this final rule, for FY 2021, hospitals that do not submit quality information under rules established by the Secretary and that are meaningful EHR users under section 1886(b)(3)(B)(ix) of the Act would receive an applicable percentage increase of 1.8 percent. At the time this impact was prepared, 37 hospitals are estimated to not receive the full market basket rate-of-increase for FY 2021 because they failed the quality data submission process or did not choose to participate, but are meaningful EHR users. For purposes of the simulations shown later in this section, we modeled the payment changes for FY 2021 using a reduced update for these hospitals.

For FY 2021, in accordance with section 1886(b)(3)(B)(ix) of the Act, a hospital that has been identified as not a meaningful EHR user will be subject to a reduction of three-quarters of such applicable percentage increase determined without regard to section 1886(b)(3)(B)(ix), (xi), or (xii) of the Act. Therefore, as discussed in section IV.B.1. of the preamble of this final rule, for FY 2021, hospitals that are identified as not meaningful EHR users and do submit quality information under section 1886(b)(3)(B)(viii) of the Act would receive an applicable percentage increase of 0.6 percent. At the time this impact analysis was prepared, 153 hospitals are estimated to not receive the full market basket rate-of-increase for FY 2021 because they are identified as not meaningful EHR users that do submit quality information under section 1886(b)(3)(B)(viii) of the Act. For purposes of the simulations shown in this section, we modeled the payment changes for FY 2021 using a reduced update for these hospitals.

Hospitals that are identified as not meaningful EHR users under section 1886(b)(3)(B)(ix) of the Act and also do not submit quality data under section 1886(b)(3)(B)(viii) of the Act would receive a applicable percentage increase of 0 percent, which reflects a one-quarter reduction of the market basket update for failure to submit quality data and a three-quarter reduction of the market basket update for being identified as not a meaningful EHR user. At the time this impact was prepared, 30 hospitals are estimated to not receive the full market basket rate-of-increase for FY 2021 because they are identified as not meaningful EHR users that do not submit quality data under section 1886(b)(3)(B)(viii) of the Act.

Each policy change, statutory or otherwise, is then added incrementally to this baseline, finally arriving at an FY 2021 model incorporating all of the changes. This simulation allows us to isolate the effects of each change.

Our comparison illustrates the percent change in payments per case from FY 2020 to FY 2021. Two factors not discussed separately have significant impacts here. The first factor is the update to the standardized amount. In accordance with section 1886(b)(3)(B)(i) of the Act, we are updating the standardized amounts for FY 2021 using an applicable percentage increase of 2.4 percent. This includes our forecasted IPPS operating hospital market basket increase of 2.4 percent with a 0.0 percentage point reduction for the multifactor productivity adjustment. Hospitals that fail to comply with the quality data submission requirements and are meaningful EHR users would receive an update of 1.8 percent. This update includes a reduction of one-quarter of the market basket update for failure to submit these data. Hospitals that do comply with the quality data submission requirements but are not meaningful EHR users would receive an update of 0.6 percent, which includes a reduction of three-quarters of the market basket update. Furthermore, hospitals that do not comply with the quality data submission requirements and also are not meaningful EHR users would receive a update of 0.0 percent. Under section 1886(b)(3)(B)(iv) of the Act, the update to the hospital-specific amounts for SCHs and MDHs is also equal to the applicable percentage increase, or 2.4 percent, if the hospital submits quality data and is a meaningful EHR user.

A second significant factor that affects the changes in hospitals' payments per case from FY 2020 to FY 2021 is the change in hospitals' geographic reclassification status from one year to the next. That is, payments may be reduced for hospitals reclassified in FY 2020 that are no longer reclassified in FY 2021. Conversely, payments may increase for hospitals not reclassified in FY 2020 that are reclassified in FY 2021.

2. Analysis of Table I

Table I displays the results of our analysis of the changes for FY 2021. The table categorizes hospitals by various geographic and special payment consideration groups to illustrate the varying impacts on different types of hospitals. The top row of the table shows the overall impact on the 3,201 acute care hospitals included in the analysis.

The next two rows of Table I contain hospitals categorized according to their geographic location: Urban and rural. There are 2,462 hospitals located in urban areas and 739 hospitals in rural areas included in our analysis. The next two groupings are by bed-size categories, shown separately for urban and rural hospitals. The last groupings by geographic location are by census divisions, also shown separately for urban and rural hospitals.

The second part of Table I shows hospital groups based on hospitals' FY 2021 payment classifications, including any reclassifications under section 1886(d)(10) of the Act. For example, the rows labeled urban and rural show that the numbers of hospitals paid based on these categorizations after consideration of geographic reclassifications (including reclassifications under sections 1886(d)(8)(B) and 1886(d)(8)(E) of the Act that have implications for capital payments) are 2,049, and 1,152, respectively.

The next three groupings examine the impacts of the changes on hospitals grouped by whether or not they have GME residency programs (teaching hospitals that receive an IME adjustment) or receive Medicare DSH payments, or some combination of these two adjustments. There are 2,037 nonteaching hospitals in our analysis, 907 teaching hospitals with fewer than 100 residents, and 257 teaching hospitals with 100 or more residents.

In the DSH categories, hospitals are grouped according to their DSH payment status, and whether they are considered urban or rural for DSH purposes. The next category groups together hospitals considered urban or rural, in terms of whether they receive the IME adjustment, the DSH adjustment, both, or neither.

The next three rows examine the impacts of the changes on rural hospitals by special payment groups (SCHs, MDHs and RRCs). There were 483 RRCs, 304 SCHs, 145 MDHs, 149 hospitals that are both SCHs and RRCs, and 25 hospitals that are both MDHs and RRCs.

The next series of groupings are based on the type of ownership and the hospital's Medicare utilization expressed as a percent of total inpatient days. These data were taken from the FY 2018 or FY 2017 Medicare cost reports.

The next grouping concerns the geographic reclassification status of hospitals. The first subgrouping is based on whether a hospital is reclassified or not. The second and third subgroupings are based on whether urban and rural hospitals were reclassified by the MGCRB for FY 2021 or not, respectively. The fourth subgrouping displays hospitals that reclassified from urban to rural in accordance with section 1886(d)(8)(E) of the Act. The fifth subgrouping displays hospitals deemed urban in accordance with section 1886(d)(8)(B) of the Act.

[1] Because data necessary to classify some hospitals by category were missing, the total number of hospitals in each category may not equal the national total. Discharge data are from FY 2019, and hospital cost report data are from reporting periods beginning in FY 2018 and FY 2017.

[2] This column displays the payment impact of the hospital rate update and other adjustments, including the 2.4 percent update to the national standardized amount and the hospital-specific rate (the estimated 2.4 percent market basket update with the by 0.0 percentage point for the multifactor productivity adjustment), and the 0.5 percentage point adjustment to the national standardized amount required under section 414 of the MACRA.

[3] This column displays the payment impact of the changes to the Version 38 GROUPER, the changes to the relative weights and the recalibration of the MS-DRG weights based on FY 2019 MedPAR data in accordance with section 1886(d)(4)(C)(iii) of the Act. This column displays the application of the recalibration budget neutrality factor of 0.99798in accordance with section 1886(d)(4)(C)(iii) of the Act.

[4] This column displays the payment impact of the update to wage index data using FY 2017 cost report data and the OMB labor market area delineations based on 2010 Decennial Census data. This column displays the payment impact of the application of the wage budget neutrality factor, which is calculated separately from the recalibration budget neutrality factor, and is calculated in accordance with section 1886(d)(3)(E)(i) of the Act. The wage budget neutrality factor is 1.000426.

[5] Shown here are the effects of geographic reclassifications by the Medicare Geographic Classification Review Board (MGCRB). The effects demonstrate the FY 2021 payment impact of going from no reclassifications to the reclassifications scheduled to be in effect for FY 2021. Reclassification for prior years has no bearing on the payment impacts shown here. This column reflects the geographic reclassification budget neutrality factor of 0.986583.

[6] This column displays the effects of the rural floor. The Affordable Care Act requires the rural floor budget neutrality adjustment to be a 100 percent national level adjustment. The rural floor budget neutrality factor applied to the wage index is 0.993433.

[7] This column shows the combined impact of the policy required under section 10324 of the Affordable Care Act that hospitals located in frontier States have a wage index no less than 1.0 and of section 1886(d)(13) of the Act, as added by section 505 of Pub. L. 108-173, which provides for an increase in a hospital's wage index if a threshold percentage of residents of the county where the hospital is located commute to work at hospitals in counties with higher wage indexes. These are not budget neutral policies.

[8] This column shows the estimated change in payments from FY 2020 to FY 2021 including an estimated decrease in outlier payments of 0.2 percent (from our current estimate of FY 2020 outlier payments of approximately 5.3 percent to 5.1 percent projected for FY 2021 based on the FY 2019 MedPAR data used for this final rule calculated for purposes of this impact analysis). This column also includes the effects of the adoption of the revised labor market area delineations in OMB Bulletin 18-04 and the effects of the transition to apply a 5-percent cap on any decrease in a hospital's wage index from the hospital's final wage index from the prior fiscal year.

BILLING CODE 4120–01–C

a. Effects of the Hospital Update and Other Adjustments (Column 1)

As discussed in section IV.B. of the preamble of this final rule, this column includes the hospital update, including the 2.4 percent market basket update and the 0.0 percentage point for the multifactor productivity adjustment. In addition, as discussed in section II.D. of the preamble of this final rule, this column includes the FY 2021 +0.5 percentage point adjustment required under section 414 of the MACRA. As a result, we are making a 2.9 percent update to the national standardized amount.

This column also includes the update to the hospital-specific rates which includes the 2.4 percent market basket update together with the 0.0 percentage point for the multifactor productivity adjustment. As a result, we are making a 2.4 percent update to the hospital-specific rates.

Overall, hospitals would experience a 2.8 percent increase in payments primarily due to the combined effects of the hospital update to the national standardized amount and the hospital update to the hospital-specific rate. Hospitals that are paid under the hospital-specific rate would experience a 2.4 percent increase in payments; therefore, hospital categories containing hospitals paid under the hospital-specific rate would experience a lower than average increase in payments.

b. Effects of the Changes to the MS–DRG Reclassifications and Relative Cost-Based Weights With Recalibration Budget Neutrality (Column 2)

Column 2 shows the effects of the changes to the MS–DRGs and relative weights with the application of the recalibration budget neutrality factor to the standardized amounts. Section 1886(d)(4)(C)(i) of the Act requires us annually to make appropriate classification changes in order to reflect changes in treatment patterns, technology, and any other factors that may change the relative use of hospital resources. Consistent with section 1886(d)(4)(C)(iii) of the Act, we calculated a recalibration budget neutrality factor to account for the changes in MS–DRGs and relative weights to ensure that the overall payment impact is budget neutral.

As discussed in section II.E. of the preamble of this final rule, the FY 2021 MS–DRG relative weights will be 100 percent cost-based and 100 percent MS–DRGs. For FY 2021, the MS–DRGs are calculated using the FY 2019 MedPAR data grouped to the Version 38 (FY 2021) MS–DRGs. The methodology to calculate the relative weights and the reclassification changes to the GROUPER are described in more detail in section II.G. of the preamble of this final rule.

The ''All Hospitals'' line in Column 2 indicates that changes due to the MS–DRGs and relative weights would result in a 0.0 percent change in payments with the application of the recalibration budget neutrality factor of 0.99798 to the standardized amount. Hospital categories that generally treat relatively less complex cases, such as rural hospitals and smaller urban hospitals, would experience a decrease in their payments, while hospitals that generally treat relatively more complex cases, such as larger urban hospitals, would experience an increase in their payments under the relative weights. For example, rural hospitals with 50–99 beds and urban hospitals of 99 beds or less would experience a −0.3 and −0.5 percent decrease in payments, respectively. Conversely, urban hospitals of 500 beds or more would experience a +0.2 percent increase in payments.

c. Effects of the Wage Index Changes (Column 3)

Column 3 shows the impact of the updated wage data using FY 2017 cost report data, with the application of the wage budget neutrality factor. The wage index is calculated and assigned to hospitals on the basis of the labor market area in which the hospital is located. Under section 1886(d)(3)(E) of the Act, beginning with FY 2005, we delineate hospital labor market areas based on the Core Based Statistical Areas (CBSAs) established by OMB. The current statistical standards used in FY 2021 are based on OMB standards published on February 28, 2013 (75 FR 37246 and 37252), and 2010 Decennial Census data (OMB Bulletin No. 13–01), as updated in OMB Bulletin Nos. 15–01 and 17–01. (We refer readers to the FY 2015 IPPS/LTCH PPS final rule (79 FR 49951 through 49963) for a full discussion on our adoption of the OMB labor market area delineations, based on the 2010 Decennial Census data, effective beginning with the FY 2015 IPPS wage index, to the FY 2017 IPPS/LTCH PPS final rule (81 FR 56913) for a discussion of our adoption of the CBSA updates in OMB Bulletin No. 15–01, which were effective beginning with the FY 2017 wage index, and to the FY 2020 IPPS/LTCH PPS final rule (83 FR 41362) for a discussion of our adoption of the CBSA update in OMB Bulletin No. 17–01 for the FY 2020 wage index.)

As discussed in section III.A.2.a. of the preamble of this final rule, OMB Bulletin No. 18–04 established revised delineations for statistical areas, and in order to implement these changes for the IPPS, it is necessary to identify the new labor market area delineation for each county and hospital in the country that are affected by the revised OMB delineations. We believe that adopting the revised OMB delineations described in OMB Bulletin No. 18–04 will allow us to maintain a more accurate payment system that reflects the reality of population shifts and labor market conditions. We further believe that using these delineations will increase the integrity of the IPPS wage index system by creating a more accurate representation of geographic variations in wage levels. As discussed in section III.A.2, in this final rule, we are finalizing our proposal to implement the revised OMB delineations as described in the September 14, 2018 OMB Bulletin No. 18–04, effective beginning with the FY 2021 IPPS wage index.

Section 1886(d)(3)(E) of the Act requires that, beginning October 1, 1993, we annually update the wage data used to calculate the wage index. In accordance with this requirement, the wage index for acute care hospitals for FY 2021 is based on data submitted for hospital cost reporting periods, beginning on or after October 1, 2016 and before October 1, 2017. The estimated impact of the updated wage data using the FY 2017 cost report data and the revised OMB labor market area delineations on hospital payments is isolated in Column 3 by holding the other payment parameters constant in this simulation. That is, Column 3 shows the percentage change in payments when going from a model using the FY 2020 wage index, based on FY 2016 wage data, the labor-related share of 68.3 percent, under the revised OMB delineations and having a 100-percent occupational mix adjustment applied, to a model using the FY 2021 pre-reclassification wage index based on FY 2017 wage data with the labor-related share of 68.3 percent, under the revised OMB delineations, also having a 100-percent occupational mix adjustment applied, while holding other payment parameters, such as use of the Version 38 MS–DRG GROUPER constant. The FY 2021 occupational mix adjustment is based on the CY 2016 occupational mix survey.

In addition, the column shows the impact of the application of the wage budget neutrality to the national standardized amount. In FY 2010, we began calculating separate wage budget neutrality and recalibration budget neutrality factors, in accordance with section 1886(d)(3)(E) of the Act, which specifies that budget neutrality to account for wage index changes or updates made under that subparagraph must be made without regard to the 62 percent labor-related share guaranteed under section 1886(d)(3)(E)(ii) of the Act. Therefore, for FY 2021, we finalizing our proposal to calculate the wage budget neutrality factor to ensure that payments under updated wage data and the labor-related share of 68.3 percent are budget neutral, without regard to the lower labor-related share of 62 percent applied to hospitals with a wage index less than or equal to 1.0. In other words, the wage budget neutrality is calculated under the assumption that all hospitals receive the higher labor-related share of the standardized amount. The FY 2021 wage budget neutrality factor is 1.000426 and the overall payment change is 0 percent.

Column 3 shows the impacts of updating the wage data using FY 2017 cost reports. Overall, the new wage data and the labor-related share, combined with the wage budget neutrality adjustment, would lead to no change for all hospitals, as shown in Column 3.

In looking at the wage data itself, the national average hourly wage would increase 1.02 percent compared to FY 2020. Therefore, the only manner in which to maintain or exceed the previous year's wage index was to match or exceed the 1.02 percent increase in the national average hourly wage. Of the 3,181 hospitals with wage data for both FYs 2020 and 2021, 1,655 or 52 percent would experience an average hourly wage increase of 1.02 percent or more.

The following chart compares the shifts in wage index values for hospitals due to changes in the average hourly wage data for FY 2021 relative to FY 2020. These figures reflect changes in the ''pre-reclassified, occupational mix-adjusted wage index,'' that is, the wage index before the application of geographic reclassification, the rural floor, the out-migration adjustment, and other wage index exceptions and adjustments. We note that this analysis was performed by applying the revised OMB labor market area delineations to the FY 2021 wage data and also by recomputing the FY 2020 final wage data to reflect the revised OMB delineations. (We refer readers to sections III.G. through III.L. of the preamble of this final rule for a complete discussion of the exceptions and adjustments to the wage index.) We note that the ''post-reclassified wage index'' or ''payment wage index,'' which is the wage index that includes all such exceptions and

adjustments (as reflected in Tables 2 and 3 associated with this final rule, which are available via the internet on the CMS website) is used to adjust the labor-related share of a hospital's standardized amount, either 68.3 percent or 62 percent, depending upon whether a hospital's wage index is greater than 1.0 or less than or equal to 1.0. Therefore, the pre-reclassified wage index figures in the following chart may illustrate a somewhat larger or smaller change than would occur in a hospital's payment wage index and total payment.

The following chart shows the projected impact of changes in the area wage index values for urban and rural hospitals.

FY 2021 Percentage Change in Area Wage Index Values	Number of Hospitals	
	Urban	Rural
Increase 10 percent or more	7	2
Increase greater than or equal to 5 percent and less than 10 percent	41	0
Increase or decrease less than 5 percent	2,331	722
Decrease greater than or equal to 5 percent and less than 10 percent	87	0
Decrease 10 percent or more	25	5
Unchanged	2	0

d. Effects of MGCRB Reclassifications (Column 4)

Our impact analysis to this point has assumed acute care hospitals are paid on the basis of their actual geographic location (with the exception of ongoing policies that provide that certain hospitals receive payments on bases other than where they are geographically located). The changes in Column 4 reflect the per case payment impact of moving from this baseline to a simulation incorporating the MGCRB decisions for FY 2021.

By spring of each year, the MGCRB makes reclassification determinations that will be effective for the next fiscal year, which begins on October 1. The MGCRB may approve a hospital's reclassification request for the purpose of using another area's wage index value. Hospitals may appeal denials of MGCRB decisions to the CMS Administrator. Further, hospitals have 45 days from the date the IPPS proposed rule is issued in the **Federal Register** to decide whether to withdraw or terminate an approved geographic reclassification for the following year.

The overall effect of geographic reclassification is required by section 1886(d)(8)(D) of the Act to be budget neutral. Therefore, for purposes of this impact analysis, we finalizing our proposal to apply an adjustment of 0.986583 to ensure that the effects of the reclassifications under sections 1886(d)(8)(B) and (C) and 1886(d)(10) of the Act are budget neutral (section II.A. of the Addendum to this final rule). Geographic reclassification generally benefits hospitals in rural areas. We estimate that the geographic reclassification would increase payments to rural hospitals by an average of 1.1 percent. By region, most rural hospital categories would experience increases in payments due to MGCRB reclassifications. Hospitals in the rural West North Central region would experience a decrease in payments due to MGCRB reclassifications, while hospitals in the rural Mountain region would experience no change in payments due to MGCRB reclassifications.

Table 2 listed in section VI. of the Addendum to this final rule and available via the internet on the CMS website reflects the reclassifications for FY 2021.

e. Effects of the Rural Floor, Including Application of National Budget Neutrality (Column 5)

As discussed in the FY 2009 IPPS final rule, the FY 2010 IPPS/RY 2010 LTCH PPS final rule, the FYs 2011 through 2020 IPPS/LTCH PPS final rules, and this FY 2021 IPPS/LTCH PPS final rule, section 4410 of Public Law 105–33 established the rural floor by requiring that the wage index for a hospital in any urban area cannot be less than the wage index applicable to hospitals located in rural areas in the same state. We apply a uniform budget neutrality adjustment to the wage index. Column 5 shows the effects of the final rural floor.

The Affordable Care Act requires that we apply one rural floor budget neutrality factor to the wage index nationally. We have calculated a FY 2021 rural floor budget neutrality factor of 0.993433 that we applied to the wage index, which will reduce wage indexes by approximately 0.7 percent.

Column 5 shows the projected impact of the rural floor with the national rural floor budget neutrality factor applied to the wage index based on the revised OMB labor market area delineations. The column compares the post-reclassification FY 2021 wage index of providers before the rural floor adjustment and the post-reclassification FY 2021 wage index of providers with the rural floor adjustment based on the revised OMB labor market area delineations. Only urban hospitals can benefit from the rural floor. Because the provision is budget neutral, all other hospitals that do not receive an increase to their wage index from the rural floor adjustment (that is, all rural hospitals and those urban hospitals to which the adjustment is not made) will experience a decrease in payments due to the budget neutrality adjustment that is applied to the wage index nationally. (As finalized in the FY 2020 IPPS/LTCH PPS final rule, we calculate the rural floor without including the wage data of hospitals that have reclassified as rural under § 412.103.)

We estimate that 285 hospitals will receive the rural floor in FY 2021. All IPPS hospitals in our model will have their wage indexes reduced by the rural floor budget neutrality adjustment of 0.993433. We project that, in aggregate, rural hospitals will experience a 0.2 percent decrease in payments as a result of the application of the rural floor budget neutrality because the rural hospitals do not benefit from the rural floor, but have their wage indexes downwardly adjusted to ensure that the application of the rural floor is budget neutral overall. We project that, in the aggregate, hospitals located in urban areas will experience no change in payments because increases in payments to hospitals benefitting from the rural floor offset decreases in payments to nonrural floor urban hospitals whose wage index is downwardly adjusted by the rural floor budget neutrality factor. Urban hospitals in the New England region will experience a 2.3 percent increase in payments primarily due to the application of the rural floor in Massachusetts. Fifty-two urban providers in Massachusetts are expected to receive the rural floor wage index value, including the rural floor budget neutrality adjustment, which will increase payments overall to hospitals in Massachusetts by an estimated $158 million. We estimate that Massachusetts hospitals will receive approximately a 4.1 percent increase in IPPS payments due to the application of the rural floor in FY 2021. Urban Puerto Rico hospitals are expected to experience a 0.2 percent increase in payments as a result of the application of the rural floor for FY 2021.

f. Effects of the Application of the Frontier State Wage Index and Out-Migration Adjustment (Column 6)

This column shows the combined effects of the application of section 10324(a) of the Affordable Care Act, which requires that we establish a minimum post-reclassified wage index of 1.00 for all hospitals located in ''frontier States,'' and the effects of section 1886(d)(13) of the Act, as added by section 505 of Public Law 108–173, which provides for an increase in the wage index for hospitals located in certain counties that have a relatively high percentage of hospital employees who reside in the county, but work in a different area with a higher wage index. These two wage index provisions are not budget neutral and will increase

payments overall by 0.1 percent compared to the provisions not being in effect.

The term ''frontier States'' is defined in the statute as States in which at least 50 percent of counties have a population density less than 6 persons per square mile. Based on these criteria, 5 States (Montana, Nevada, North Dakota, South Dakota, and Wyoming) are considered frontier States and 44 hospitals located in those States will receive a frontier wage index of 1.0000. Overall, this provision is not budget neutral and is estimated to increase IPPS operating payments by approximately $69 million. Urban hospitals located in the West North Central region will experience an increase in payments by 0.6 percent, because many of the hospitals located in this region are frontier State hospitals.

In addition, section 1886(d)(13) of the Act, as added by section 505 of Public Law 108–173, provides for an increase in the wage index for hospitals located in certain counties that have a relatively high percentage of hospital employees who reside in the county, but work in a different area with a higher wage index. Hospitals located in counties that qualify for the payment adjustment will receive an increase in the wage index that is equal to a weighted average of the difference between the wage index of the resident county, post-reclassification and the higher wage index work area(s), weighted by the overall percentage of workers who are employed in an area with a higher wage index. There are an estimated 212 providers that will receive the out-migration wage adjustment in FY 2021. Rural hospitals generally will qualify for the adjustment, resulting in a 0.1 percent increase in payments. This provision appears to benefit section 401 hospitals and RRCs in that they will each experience a 0.1 and 0.2 percent increase in payments, respectively. This out-migration wage adjustment also is not budget neutral, and we estimate the impact of these providers receiving the out-migration increase will be approximately $51 million.

g. Effects of All FY 2021 Changes (Column 7)

Column 7 shows our estimate of the changes in payments per discharge from FY 2020 and FY 2021, resulting from all changes reflected in this final rule for FY 2021. It includes combined effects of the year-to-year change of the previous columns in the table.

The average increase in payments under the IPPS for all hospitals is approximately 2.5 percent for FY 2021 relative to FY 2020 and for this row is primarily driven by the changes reflected in Column 1. Column 7 includes the annual hospital update of 2.9 percent to the national standardized amount. This annual hospital update includes the 2.4 percent market basket update and the 0.0 percentage point multifactor productivity adjustment. As discussed in section II.D. of the preamble of this final rule, this column also includes the +0.5 percentage point adjustment required under section 414 of the MACRA. Hospitals paid under the hospital-specific rate would receive a 2.4 percent hospital update. As described in Column 1, the annual hospital update with the +0.5 percent adjustment for hospitals paid under the national standardized amount, combined with the annual hospital update for hospitals paid under the hospital-specific rates, would result in a 2.5 percent increase in payments in FY 2021 relative to FY 2020. This estimated increase also reflects the effects of the adoption of the revised labor market area delineations in OMB Bulletin 18–04 and the effects of the transition to apply a 5-percent cap on any decrease in a hospital's wage index from the hospital's final wage index from the prior fiscal year. Additionally, the estimated increase also reflects an estimated decrease in outlier payments of 0.2 percent (from our current estimate of FY 2020 outlier payments of approximately 5.3 percent to 5.1 percent projected for FY 2021 based on the FY 2019 MedPAR data used for this final rule calculated for purposes of this impact analysis). There are also interactive effects among the various factors comprising the payment system that we are not able to isolate, which contribute to our estimate of the changes in payments per discharge from FY 2020 and FY 2021 in Column 7.

Overall payments to hospitals paid under the IPPS due to the applicable percentage increase and changes to policies related to MS–DRGs, geographic adjustments, and outliers are estimated to increase by 2.5 percent for FY 2021. Hospitals in urban areas would experience a 2.5 percent increase in payments per discharge in FY 2021 compared to FY 2020. Hospital payments per discharge in rural areas are estimated to increase by 2.2 percent in FY 2021.

3. Impact Analysis of Table II

Table II presents the projected impact of the changes for FY 2021 for urban and rural hospitals and for the different categories of hospitals shown in Table I. It compares the estimated average payments per discharge for FY 2020 with the estimated average payments per discharge for FY 2021, as calculated under our models. Therefore, this table presents, in terms of the average dollar amounts paid per discharge, the combined effects of the changes presented in Table I. The estimated percentage changes shown in the last column of Table II equal the estimated percentage changes in average payments per discharge from Column 7 of Table I.

BILLING CODE 4120–01–P

TABLE II.--IMPACT ANALYSIS OF CHANGES FOR FY 2021 ACUTE CARE HOSPITAL OPERATING PROSPECTIVE PAYMENT SYSTEM (PAYMENTS PER DISCHARGE)

	Number of Hospitals (1)	Estimated Average FY 2020 Payment Per Discharge (2)	Estimated Average FY 2021 Payment Per Discharge (3)	FY 2021 Changes (4)
All Hospitals	3,201	13,485	13,819	2.5
By Geographic Location:				
Urban hospitals	2,462	13,860	14,207	2.5
Rural hospitals	739	10,006	10,222	2.2
Bed Size (Urban):				
0-99 beds	635	10,943	11,163	2.0
100-199 beds	756	11,329	11,607	2.4

BILLING CODE 4120–01–C

H. Effects of Other Policy Changes

In addition to those policy changes discussed previously that we are able to model using our IPPS payment simulation model, we are implementing various other changes in this final rule. As noted in section I.G. of this regulatory impact analysis, our payment simulation model uses the most recent available claims data to estimate the impacts on payments per case of certain changes being implemented in this final rule. Generally, we have limited or no specific data available with which to estimate the impacts of these changes using that payment simulation model. For those changes, we have attempted to predict the payment impacts based upon our experience and other more limited data. Our estimates of the likely impacts associated with these other changes are discussed in this section.

1. Effects of Policies Relating to New Medical Service and Technology Add-On Payments

In section II.G.9.b of the preamble of this final rule, we are revising § 412.87(d)(1) to add drugs approved under FDA's LPAD pathway to the current alternative new technology add-on payment pathway for QIDPs, beginning with discharges occurring on or after October 1, 2021.

Given the relatively recent introduction of the FDA's LPAD pathway there have not been any drugs that were approved under the FDA's LPAD pathway that applied for an NTAP under the IPPS and were not approved for that NTAP. If all of the future LPADs that would have applied for new technology add-on payments would have been approved under existing criteria, this policy has no impact relative to current policy. To the

extent that there are future LPADs that are the subject of applications for new technology add-on payments, and those applications would have been denied under the current new technology add-on payment criteria, this policy is a cost, but that cost is not estimable. We also note that as this policy would be effective beginning with new technology add-on payment applications for FY 2022, there would be no impact of this policy in FY 2021.

b. Change to Announcement of Determinations and Deadline for Consideration of New Medical Service or Technology Applications for Certain Antimicrobial Products

In section II.G.9.c. of the preamble of this final rule, we are revising § 412.87(e) to add a new paragraph (3) which would provide for conditional new technology add-on payment approval for a technology for which an application is submitted under the alternative pathway for certain antimicrobial products at § 412.87(d) that does not receive FDA marketing authorization by the July 1 deadline specified in § 412.87(e)(2), provided that the technology receives FDA marketing authorization by July 1 of the particular fiscal year for which the applicant applied for new technology add-on payments.

If all of the future antimicrobial products eligible for the alternative pathway for certain antimicrobial products at § 412.87(d) receive marketing authorization by the July 1 deadline specified in § 412.87(e)(2), this policy has no impact. To the extent that there are future antimicrobial products that do not receive marketing authorization by that deadline, but do receive FDA marketing authorization by July 1 of the particular fiscal year for which the applicant applied for new technology add-on payments, this policy is a cost, but that cost is not estimable.

c. FY 2021 Status of Technologies Approved for FY 2020 New Technology Add-On Payments

In section II.G.4. of the preamble of this final rule, as proposed, we are discontinuing new technology add-on payments for the AQUABEAM System (Aquablation), ERLEADA®, GIAPREZA™, the remede−® System, VABOMERE™, VYXEOS™, the Sentinel® Cerebral Protection System, and KYMRIAH® and YESCARTA® for FY 2021 because these technologies will have been on the U.S. market for 3 years. In addition, as we proposed, as discussed in section II.G.4. of the preamble of this final rule, we are continuing to make new technology add-on payments for AndexXa™, AZEDRA®, BALVERSA™, Cablivi®, ELZONRIS®, Esketamine, Jakafi®, T2 Bacteria Test Panel, XOSPATA®, and ZEMDRI™ in FY 2021 because these technologies would still be considered new for purposes of new technology add-on payments. Under § 412.88(a)(2) and in conjunction with our change to the calculation of the new technology add-on payments for products approved under the LPAD pathway, the new technology add-on payment for each case would be limited to the lesser of: (1) 65 percent of the costs of the new technology (or 75 percent of the costs for technologies designated as QIDPs or approved under the LPAD pathway); or (2) 65 percent of the amount by which the costs of the case exceed the standard MS–DRG payment for the case (or 75 percent of the amount for technologies designated as QIDPs or approved under the LPAD pathway). Because it is difficult to predict the actual new technology add-on payment for each case, our estimates below are based on the increase in new technology add-on payments for FY 2021 as if every claim that would qualify for a new technology add-on payment would receive the maximum add-on payment. The following are estimates for FY 2021 for the 10 technologies for which we are continuing to make new technology add-on payments in FY 2021:

- Based on the applicant's estimate for FY 2019, we currently estimate that new technology add-on payments for AndexXa™ would increase overall FY 2021 payments by $98,755,313 (maximum add-on payment of $18,281.25 * 5,402 patients).
- Based on the applicant's estimate for FY 2020, we currently estimate that new technology add-on payments for AZEDRA® would increase overall FY 2021 payments by $39,260,000 (maximum add-on payment of $98,150 * 400 patients).
- Based on the applicant's estimate for FY 2020, we currently estimate that new technology add-on payments for BALVERSA™ would increase overall FY 2021 payments by $178,162 (maximum add-on payment of $3,563.23 * 50 patients).
- Based on the applicant's estimate for FY 2020, we currently estimate that new technology add-on payments for Cablivi® would increase overall FY 2021 payments by $4,351,165 (maximum add-on payment of $33,215 * 131 patients).
- Based on the applicant's estimate for FY 2020, we currently estimate that new technology add-on payments for ELZONRIS® would increase overall FY 2021 payments by $30,985,668 (maximum add-on payment of $125,448.05 * 247 patients).
- Based on the applicant's estimate for FY 2020, we currently estimate that new technology add-on payments for Esketamine would increase overall FY 2021 payments by $6,494,656 (maximum add-on payment of $1,014.79 * 6,400 patients).
- Based on the applicant's estimate for FY 2020, we currently estimate that new technology add-on payments for Jakafi® would increase overall FY 2021 payments by $573,469 (maximum add-on payment of $4,096.21 * 140 patients).
- Based on the applicant's estimate for FY 2020, we currently estimate that new technology add-on payments for T2 Bacteria Test Panel would increase overall FY 2021 payments by $3,669,803 (maximum add-on payment of $97.50 * 37,639 patients).
- Based on the applicant's estimate for FY 2020, we currently estimate that new technology add-on payments for XOSPATA® would increase overall FY 2021 payments by $13,710,938 (maximum add-on payment of $7,312.50 * 1,875 patients).
- Based on the applicant's estimate for FY 2019 we currently estimate that new technology add-on payments for ZEMDRI™ would increase overall FY 2021 payments by $10,209,375 (maximum add-on payment of $4,083.75 * 2,500 patients).

d. FY 2021 Applications for New Technology Add-On Payments

In sections II.G.5. and 6. of the preamble to this final rule, we discuss 15 technologies for which we received applications for add-on payments for new medical services and technologies for FY 2021. We note that three applicants did not receive FDA approval for their technology by the July 1 deadline. As explained in the preamble to this final rule, add-on payments for new medical services and technologies under section 1886(d)(5)(K) of the Act are not required to be budget neutral. As discussed in section II.H.6. of the preamble of this final rule, under the alternative pathway for new technology add-on payments, new technologies that are medical products with a QIDP designation or are part of the Breakthrough Device program will be considered new and not substantially similar to an existing technology and will not need to demonstrate that the technology represents a substantial clinical improvement. These technologies must still meet the cost criterion.

The following are estimates for FY 2021 for the 6 technologies that we are approving for under the traditional pathway new technology add-on payments beginning in FY 2021.

- Based on the applicant's estimate for FY 2021 we currently estimate that new technology add-on payments for ContaCT would increase overall FY 2021 payments by $72,109,440 (maximum add-on payment of $1,040 * 69,336 patients).
- Based on the applicant's estimate for FY 2021, we currently estimate that new technology add-on payments for Eluvia™ Drug-Eluting Vascular Stent System would increase overall FY 2021 payments by $8,944,865 (maximum add-on payment of $3,646.50 * 2,453 patients).
- Based on the applicant's estimate for FY 2021, we currently estimate that new technology add-on payments for Hemospray® would increase overall FY 2021 payments by $20,637,500 (maximum add-on payment of $1,625 * 12,700 patients).
- Based on the applicants' estimate for FY 2021, we currently estimate that new technology add-on payments for TECENTRIQ® and IMFINZI® would increase overall FY 2021 payments by $29,538,866 (maximum add-on payment of $6,875.90 * 4,296 patients).
- Based on the applicant's estimate for FY 2021, we currently estimate that new technology add-on payments for Soliris® would increase overall FY 2021 payments by $290,012,580 (maximum add-on payment of $21,199.75 * 13,680 patients).
- Based on the applicant's estimate for FY 2021, we currently estimate that new technology add-on payments for the SpineJack System would increase overall FY 2021 payments by $5,745,220 (maximum add-on payment of $3,654.72 * 1,572 patients).

As also discussed in section II.G.6. of the preamble of this final rule, for FY 2021 we are approving seven alternative pathway applicant technologies (2 Breakthrough devices and 5 QIDPs) and conditionally approving one alternative pathway applicant technology (1 QIDP) for FY 2021that one

applicant did not receive FDA approval by the July 1 deadline (as discussed in section II.G.9.c. of the preamble of this final rule). We note that one applicant under the alternative pathway for Breakthrough Devices did not receive FDA approval by the July 1 deadline.

The following are estimates for FY 2021 for the eight alternative pathway technologies that we are approving or conditionally approving for new technology add-on payments beginning in FY 2021.

- Based on the applicant's estimate for FY 2021, we currently estimate that new technology add-on payments for the BAROSTIM NEO™ System would increase overall FY 2021 payments by $16,425,500 (maximum add-on payment of $22,750 * 722 patients).
- Based on the applicant's estimate for FY 2021, we currently estimate that new technology add-on payments for FETROJA® could increase overall FY 2021 payments by $50,330,710 (maximum add-on payment of $7,919.86 * 6,355 patients).
- Based on the applicant's estimate for FY 2021, we currently estimate that new technology add-on payments for CONTEPO would increase overall FY 2021 payments by $20,369,531 (maximum add-on payment of $2,343.75 * 8,691 patients) under our conditional approval policy for certain antimicrobial products depending on the quarter in which it ultimately receives FDA marketing authorization.
- Based on the applicant's estimate for FY 2021, we currently estimate that new technology add-on payments for NUZYRA® would increase overall FY 2021 payments by $26,235,698 (maximum add-on payment of $1,522.50 * 16,899 patients).
- Based on the applicant's estimate for FY 2021, we currently estimate that new technology add-on payments for Optimizer System would increase overall FY 2021 payments by $22,425,000 (maximum add-on payment of $14,950 * 1,500 patients).
- Based on the applicant's estimate for FY 2021, we currently estimate that new technology add-on payments for RECARBRIO™ would increase overall FY 2021 payments by $2,691,978 (maximum add-on payment of $3,532.78 * 762 patients).
- Based on the applicant's estimate for FY 2021, we currently estimate that new technology add-on payments for XENELTA™ would increase overall FY 2021 payments by $44,965,085 (maximum add-on payment of $1,275.75 * 35,246 patients).
- Based on the applicant's estimate for FY 2021, we currently estimate that new technology add-on payments for ZERBAXA® would increase overall FY 2021 payments by $55,324,327 (maximum add-on payment of $1,836.98 * 30,117 patients).

2. Effects of Changes to MS–DRGs Subject to the Postacute Care Transfer Policy and the MS–DRG Special Payment Policy

In section IV.A. of the preamble of this final rule, we discuss our changes to the list of MS–DRGs subject to the postacute care transfer policy and the MS DRG special payment policy for FY 2021. As reflected in Table 5 listed in section VI. of the Addendum to this final rule (which is available via the internet on the CMS website), using criteria set forth in regulations at 42 CFR 412.4, we evaluated MS–DRG charge, discharge, and transfer data to determine which new or revised MS–DRGs would qualify for the postacute care transfer and MS–DRG special payment policies. As a result of our revisions to the MS–DRG classifications for FY 2021, which are discussed in section II.F. of the preamble of this final rule, we are adding two MS–DRGs to the list of MS–DRGs that will be subject to the postacute care transfer policy and the MS–DRG special payment policy. Column 2 of Table I in this Appendix A shows the effects of the changes to the MS–DRGs and the relative payment weights and the application of the recalibration budget neutrality factor to the standardized amounts.

Section 1886(d)(4)(C)(i) of the Act requires us annually to make appropriate DRG classification changes in order to reflect changes in treatment patterns, technology, and any other factors that may change the relative use of hospital resources. The analysis and methods for determining the changes due to the MS–DRGs and relative payment weights account for and include changes as a result of the changes to the MS–DRGs subject to the MS–DRG postacute care transfer and MS–DRG special payment policies. We refer readers to section I.G. of this Appendix A for a detailed discussion of payment impacts due to the MS–DRG reclassification policies for FY 2021.

3. Effects of the Changes to Uncompensated Care Payments for FY 2021

As discussed in section IV.G. of the preamble of this final rule, under section 3133 of the Affordable Care Act, hospitals that are eligible to receive Medicare DSH payments will receive 25 percent of the amount they previously would have received under the statutory formula for Medicare DSH payments under section 1886(d)(5)(F) of the Act. The remainder, equal to an estimate of 75 percent of what formerly would have been paid as Medicare DSH payments (Factor 1), reduced to reflect changes in the percentage of uninsured individuals and any additional statutory adjustment (Factor 2), is available to make additional payments to each hospital that qualifies for Medicare DSH payments and that has uncompensated care. Each hospital eligible for Medicare DSH payments will receive an additional payment based on its estimated share of the total amount of uncompensated care for all hospitals eligible for Medicare DSH payments. The uncompensated care payment methodology has redistributive effects based on the proportion of a hospital's amount of uncompensated care relative to the aggregate amount of uncompensated care of all hospitals eligible for Medicare DSH payments (Factor 3). The change to Medicare DSH payments under section 3133 of the Affordable Care Act is not budget neutral.

In this final rule, we are establishing the amount to be distributed as uncompensated care payments to DSH eligible hospitals, which for FY 2021 is $8,290,014,520.96. This figure represents 75 percent of the amount that otherwise would have been paid for Medicare DSH payment adjustments adjusted by a Factor 2 of 72.86 percent. For FY 2020, the amount available to be distributed for uncompensated care was $8,350,599,096.04, or 75 percent of the amount that otherwise would have been paid for Medicare DSH payment adjustments adjusted by a Factor 2 of 67.14 percent. To calculate Factor 3 for FY 2021, we used information on uncompensated care costs from Worksheet S–10 of hospitals' FY 2017 cost reports for all eligible hospitals, with the exception of Puerto Rico hospitals and Indian Health Service and Tribal hospitals, for which we are finalizing our proposal to continue to use low-income insured days from FY 2013 cost reports and FY 2018 SSI days to determine Factor 3. For purposes of this final rule, we used uncompensated care data from the HCRIS database, as updated through June 30, 2020, Medicaid days from hospitals' FY 2013 cost reports from the same extract of HCRIS, and SSI days from the FY 2018 SSI ratios. For a complete discussion of the methodology for calculating Factor 3, we refer readers to section IV.G.4. of the preamble of this final rule.

To estimate the impact of the combined effect of the changes to Factors 1 and 2, as well as the changes to the data used in determining Factor 3, on the calculation of Medicare uncompensated care payments, we compared total uncompensated care payments estimated in the FY 2020 IPPS/LTCH PPS final rule to total uncompensated care payments estimated in this FY 2021 IPPS/LTCH PPS final rule. For FY 2020, we calculated 75 percent of the estimated amount that would be paid as Medicare DSH payments absent section 3133 of the Affordable Care Act, adjusted by a Factor 2 of 67.14 percent and multiplied by a Factor 3 calculated using the methodology described in the FY 2020 IPPS/LTCH PPS final rule. For FY 2021, we calculated 75 percent of the estimated amount that would be paid as Medicare DSH payments absent section 3133 of the Affordable Care Act, adjusted by a Factor 2 of 72.86 percent and multiplied by a Factor 3 calculated using the methodology described previously.

Our analysis included 2,401 hospitals that are projected to be eligible for DSH in FY 2021. It did not include hospitals that terminated their participation from the Medicare program as of July 10, 2020, Maryland hospitals, new hospitals, MDHs, and SCHs that are expected to be paid based on their hospital-specific rates. The 22 hospitals participating in the Rural Community Hospital Demonstration Program were also excluded from this analysis, as participating hospitals are not eligible to receive empirically justified Medicare DSH payments and uncompensated care payments. In addition, the data from merged or acquired hospitals were combined under the surviving hospital's CMS certification number (CCN), and the nonsurviving CCN was excluded from the analysis. The estimated impact of the changes in Factors 1, 2, and 3 on uncompensated care payments across all hospitals projected to be eligible for DSH payments in FY 2021, by hospital characteristic, is presented in the following table.

BILLING CODE 4120–01–P

Source: Dobson | DaVanzo analysis of 2013 and 2017 Hospital Cost Reports.

*Dollar uncompensated care payments calculated by [0.75 * estimated section 1886(d)(5)(F) payments * Factor 2 * Factor 3]. When summed across all hospitals projected to receive DSH payments, uncompensated care payments are estimated to be $8,351 million in FY 2020 and $8,290 million in FY 2021.

** Percentage change is determined as the difference between Medicare uncompensated care payments modeled for this FY 2021 IPPS/LTCH PPS final rule (column 3) and Medicare uncompensated care payments modeled for the FY 2020 IPPS/LTCH PPS final rule correction notice (column 2) divided by Medicare uncompensated care payments modeled for the FY 2020 IPPS/LTCH PPS final rule correction notice (column 2) times 100 percent.

***Hospitals with missing or unknown Medicare utilization are not shown in table.

BILLING CODE 4120–01–C

The changes in projected uncompensated care payments for FY 2021 in relation to the uncompensated care payments for FY 2020 are driven by a decrease in Factor 1 and an increase in Factor 2, as well as by a decrease in the number of hospitals projected to be eligible to receive DSH in FY 2021 relative to FY 2020. Factor 1 has decreased from $12.438 billion to $11.378 billion, while the percent change in the percent of individuals who are uninsured (Factor 2) has increased from 67.14 percent to 72.86 percent. Based on the changes in these two factors, the impact analysis found that, across all projected DSH eligible hospitals, FY 2021 uncompensated care payments are estimated at approximately $8.290 billion, or a decrease of approximately 0.73 percent from FY 2020 uncompensated care payments (approximately $8.351 billion). While these changes will result in a net decrease in the amount available to be distributed in uncompensated care payments, the projected payment decreases vary by hospital type. This redistribution of uncompensated care payments is caused by changes in Factor 3. As seen in the previous table, a percent change lower than negative 0.73 percent indicates that hospitals within the specified category are projected to experience a larger decrease in uncompensated care payments, on average, compared to the universe of projected FY 2021 DSH hospitals. Conversely, a percent change greater than negative 0.73 percent indicates that a hospital type is projected to have a smaller decrease than the overall average. Similarly, a positive percent change indicates an increase in uncompensated care payments. The variation in the distribution of payments by hospital characteristic is largely dependent on a given hospital's uncompensated care costs as reported in the Worksheet S–10, or number of Medicaid days and SSI days for Puerto Rico hospitals and Indian Health Service and Tribal hospitals, used in the Factor 3 computation.

Rural hospitals, in general, are projected to experience larger decreases in uncompensated care payments than their urban counterparts. Overall, rural hospitals are projected to receive a 5.7 percent decrease in uncompensated care payments,

while urban hospitals are projected to receive a 0.39 percent decrease in uncompensated care payments. Larger urban hospitals, however, are projected to receive a 0.65 percent increase in uncompensated care payments and hospitals in other urban areas a 2.04 percent decrease.

By bed size, smaller rural hospitals are projected to receive the largest decreases in uncompensated care payments. Rural hospitals with 0–99 beds are projected to receive a 7.22 percent payment decrease, and rural hospitals with 100–249 beds are projected to receive a 6.73 percent decrease. These decreases for smaller rural hospitals are greater than the overall hospital average. However, larger rural hospitals with 250+ beds are projected to receive a 7.44 percent payment increase. In contrast, the smallest urban hospitals (0–99 beds) are projected to receive an increase in uncompensated care payments of 2.42 percent, while urban hospitals with 100–249 beds are projected to receive a decrease of 1.10 percent, and larger urban hospitals with 250+ beds projected to receive a 0.29 percent decrease in uncompensated care payments, which is less than the overall hospital average.

By region, rural hospitals are expected to receive larger than average decreases in uncompensated care payments in all Regions, except for rural hospitals in the South Atlantic and East North Central Regions, which are projected to receive smaller than average decreases, and hospitals in the Pacific Region, which are projected to receive an increase in uncompensated care payments of 8.95 percent. Urban hospitals are projected to receive a more varied range of payment changes. Urban hospitals in the New England, the Middle Atlantic, West South Central, and Mountain Regions, as well as urban hospitals in Puerto Rico, are projected to receive larger than average decreases in uncompensated care payments. While hospitals in the South Atlantic, East North Central, East South Central, West North Central and Pacific Regions are projected to receive increases in uncompensated care payments.

By payment classification, hospitals in urban areas overall are expected to receive a 0.11 percent increase in uncompensated care payments, with hospitals in large urban areas are expected to see an increase in uncompensated care payments of 1.13 percent, while hospitals in other urban areas are expected to receive a decrease of 1.78 percent. In contrast, hospitals in rural areas are projected to receive a decrease in uncompensated care payments of 2.99 percent.

Nonteaching hospitals are projected to receive a payment decrease of 0.84 percent, teaching hospitals with fewer than 100 residents are projected to receive a payment decrease of 0.77 percent, and teaching hospitals with 100+ residents have a projected payment decrease of 0.59 percent. All of these decreases are consistent with the overall hospital average. Proprietary and government hospitals are projected to receive larger than average decreases of 2.55 and 1.25 percent respectively, while voluntary hospitals are expected to receive a payment increase of 0.06 percent. Hospitals with less than 50 percent Medicare utilization are projected to receive decreases in uncompensated care payments consistent with the overall hospital average percent change, while hospitals with 50 to 65 percent Medicare utilization are projected to receive a larger than average decrease of 2.31 percent. Hospitals with greater than 65 percent Medicare utilization are projected to receive an increase of 0.62 percent.

4. Effects of Reductions Under the Hospital Readmissions Reduction Program for FY 2021

In section IV.G. of the preamble of this final rule, we discuss our proposed policies for the FY 2021 Hospital Readmissions Reduction Program. This program requires a reduction to a hospital's base operating DRG payment to account for excess readmissions of selected applicable conditions and procedures. The table and analysis in this final rule illustrate the estimated financial impact of the Hospital Readmissions Reduction Program payment adjustment methodology by hospital characteristic. Hospitals are stratified into quintiles based on the proportion of dual-eligible stays among Medicare FFS and managed care stays between July 1, 2016 and June 30, 2019 (that is the FY 2021 Hospital Readmissions Reduction Program's performance period). Hospitals' excess readmission ratios (ERRs) are assessed relative to their peer group median and a neutrality modifier is applied in the payment adjustment factor calculation to maintain budget neutrality. To analyze the results by hospital characteristic, we used the FY 2021 Hospital IPPS Proposed Rule Impact File.

These analyses include 2,986 non-Maryland hospitals eligible to receive a penalty during the performance period. Hospitals are eligible to receive a penalty if they have 25 or more eligible discharges for at least one measure between July 1, 2016 and June 30, 2019. The second column in the table indicates the total number of non-Maryland hospitals with available data for each characteristic that have an estimated payment adjustment factor less than 1 (that is penalized hospitals).

The third column in the table indicates the percentage of penalized hospitals among those eligible to receive a penalty by hospital characteristic. For example, 82.17 percent of eligible hospitals characterized as non-teaching hospitals are expected to be penalized. Among teaching hospitals, 89.70 percent of eligible hospitals with fewer than 100 residents and 92.64 percent of eligible hospitals with 100 or more residents are expected to be penalized.

The fourth column in the table estimates the financial impact on hospitals by hospital characteristic. The table shows the share of penalties as a percentage of all base operating DRG payments for hospitals with each characteristic. This is calculated as the sum of penalties for all hospitals with that characteristic over the sum of all base operating DRG payments for those hospitals between October 1, 2018 and September 30, 2019 (FY 2019). For example, the penalty as a share of payments for urban hospitals is 0.68 percent. This means that total penalties for all urban hospitals are 0.68 percent of total payments for urban hospitals. Measuring the financial impact on hospitals as a percentage of total base operating DRG payments accounts for differences in the amount of base operating DRG payments for hospitals with the characteristic when comparing the financial impact of the program on different groups of hospitals.

BILLING CODE 4120–01–P

Estimated Percentage of Hospitals Penalized and Penalty as Share of Payments for FY 2021 Hospital Readmissions Reduction Program by Hospital Characteristic				
Hospital Characteristic	**Number of Eligible Hospitals[a]**	**Number of Penalized Hospitals[b]**	**Percentage of Hospitals Penalized[c] (%)**	**Penalty as a Share of Payments[d] (%)**

Source: The table results are based on the estimated FY 2021 payment adjustment factors of open, non-Maryland, subsection (d) hospitals only. The estimated FY 2021 payment adjustment factors are based on discharges between July 1, 2016 and June 30, 2019 (the FY 2021 Hospital Readmissions Reduction Program performance period). Although data from all subsection (d) and Maryland hospitals are used in calculations of the ERRs, this table does not include results for Maryland hospitals and hospitals that are not open as of the October 2020 public reporting open hospital list because these hospitals are not eligible for a penalty under the program. Hospitals are stratified into quintiles based on the proportion of Medicare FFS and managed care dual-eligible stays for the 3-year performance period. Hospital characteristics are from the FY 2021 Hospital IPPS proposed rule impact file.

Footnotes:

[a] This column is the number of applicable hospitals with the characteristic that are eligible for a penalty (that is, they have 25 or more eligible discharges for at least one measure).

[b] This column is the number of applicable hospitals that are penalized (that is an estimated payment adjustment factor less than 1) within the characteristic.

[c] This column is the percentage of applicable hospitals that are penalized among hospitals that are eligible to receive a penalty by characteristic.

[d] This column is calculated as the sum of all penalties for the group of hospitals with that characteristic divided by total base operating DRG payments for all those hospitals. MedPAR data from October 1, 2018 through September 30, 2019 (FY 2019) are used to estimate the total base operating DRG payments.

[e] The total number of hospitals with hospital characteristics data may not add up to the total number of hospitals because not all hospitals have data for all characteristics. Not all hospitals had data for geographic location (n=2,985; missing=1), teaching status (n=2,985; missing=1), ownership type (n=2,985; missing=1), safety-net status (n=2,985; missing=1), DSH patient percentage (n=2,985; missing=1), MCR percentage (n=2,976; missing=10), and region (n=2,985; missing=1).

[f] A hospital is considered a teaching hospital if it has an Indirect Medical Education adjustment factor for Operation PPS (TCHOP) greater than zero.

[g] A hospital is considered a safety-net hospital if it is in the top DSH quintile.

[h] DSH patient percentage is the sum of the percentage of Medicare inpatient days attributable to patients eligible for both Medicare Part A and Supplemental Security Income (SSI), and the percentage of total inpatient days attributable to patients eligible for Medicaid but not Medicare Part A.

[i] MCR percentage is the percentage of total inpatient stays from Medicare patients.

BILLING CODE 4120–01–C

We did not receive any public comments regarding the impact of our proposals.

5. Effects of Requirements Under the FY 2021 Hospital Value-Based Purchasing (VBP) Program

In section IV.L. of the preamble of this final rule, we discuss the Hospital VBP Program under which the Secretary makes value-based incentive payments to hospitals based on their performance on measures during the performance period with respect to a fiscal year. These incentive payments will be funded for FY 2021 through a reduction to the FY 2021 base operating DRG payment amounts for discharges during the fiscal year, as required by section 1886(o)(7)(B) of the Act. The applicable percentage for FY 2021 and subsequent years is 2 percent. The total amount available for value-based incentive payments must be equal to the total amount of reduced payments for all hospitals for the fiscal year, as estimated by the Secretary.

In section IV.L.1.b. of the preamble of this final rule, we estimated the available pool of funds for value-based incentive payments in the FY 2021 program year, which, in accordance with section 1886(o)(7)(C)(v) of the Act, will be 2.00 percent of base operating DRG payment amounts, or a total of approximately $1.9 billion. This estimated available pool for FY 2021 is based on the historical pool of hospitals that were eligible to participate in the FY 2020 program year and the payment information from the March 2020 update to the FY 2019 MedPAR file.

The estimated impacts of the FY 2021 program year by hospital characteristic, found in the table in this section, are based on historical TPSs. We used the FY 2020 program year's TPSs to calculate the proxy adjustment factors used for this impact analysis. These are the most recently available scores that hospitals were given an opportunity to review and correct. The proxy adjustment factors use estimated annual base operating DRG payment amounts derived from the March 2020 update to the FY 2019 MedPAR file. The proxy adjustment factors can be found in Table 16A associated with this final rule (available via the internet on the CMS website at *https://www.cms.gov/medicare/acute-inpatient-pps/fy-2021-ipps-proposed-rule-home-page#Tables*).

The impact analysis shows that, for the FY 2021 program year, the number of hospitals that are expected to receive an increase in their base operating DRG payment amount is higher than the number of hospitals that are expected to receive a decrease. On average, among urban hospitals, hospitals in the West North Central region are expected to have the largest positive percent change in base operating DRG payment amounts, and among rural hospitals, hospitals in the Pacific region are expected to have the largest positive percent change in base operating DRG payment amounts. Urban Middle Atlantic, Urban East South Central, and Urban West South Central regions are expected to experience, on average, a decrease in base operating DRG payment amounts. All other regions, both urban and rural, are expected to experience, on average, an increase in base operating DRG payment amounts.

As DSH patient percentage increases, the average percent change in base operating DRG payment amounts is expected to decrease. With respect to hospitals' Medicare utilization as a percent of inpatient days (MCR), as the MCR percent increases, the average percent change in base operating DRG payment amounts is expected to increase for MCR percent 0 to 65, but for MCR percent greater than 65, the average percent change in base operating DRG payment amounts is expected to decrease. On average, teaching hospitals are expected to have a decrease in base operating DRG payment amounts while non-teaching hospitals are expected to have an increase in base operating DRG payment amounts.

BILLING CODE 4120–01–C

Actual FY 2021 program year's TPSs will not be reviewed and corrected by hospitals until after the FY 2021 IPPS/LTCH PPS final rule has been published. Therefore, the same historical universe of eligible hospitals and corresponding TPSs from the FY 2020 program year were used for the updated impact analysis in this final rule. We did not receive any public comments regarding the financial impact of our proposals.

6. Effects of Requirements Under the HAC Reduction Program for FY 2021

We are presenting the estimated impact of the FY 2021 Hospital-Acquired Condition (HAC) Reduction Program on hospitals by hospital characteristic. These FY 2021 HAC Reduction Program results were calculated using the Equal Measure Weights approach finalized in the FY 2019 IPPS/LTCH PPS final rule (83 FR 41486 through 41489). Each hospital's Total HAC Score was calculated as the equally weighted average of the hospital's measure scores. The table in this section presents the estimated proportion of hospitals in the worst performing quartile of Total HAC Scores by hospital characteristic. Hospitals' CMS Patient Safety and Adverse Events Composite (CMS PSI 90) measure results are based on Medicare FFS discharges from July 1, 2017 through June 30, 2019 and version 10.0 of the PSI software. Hospitals' measure results for CDC Central Line-Associated Bloodstream Infection (CLABSI), Catheter-Associated Urinary Tract Infection (CAUTI), Colon and Abdominal Hysterectomy Surgical Site Infection (SSI), Methicillin-resistant *Staphylococcus aureus* (MRSA) bacteremia, and *Clostridium difficile* Infection (CDI) are derived from standardized infection ratios (SIRs) calculated with hospital surveillance data reported to the NHSN for infections occurring between January 1, 2018 and December 31, 2019. To analyze the results by hospital characteristic, we used the FY 2021 Proposed Rule Impact File.

This table includes 3,111 non-Maryland hospitals with a FY 2021 Total HAC Score. Maryland hospitals and hospitals without a Total HAC Score are excluded from the table. Of these 3,111 hospitals, 3,102 hospitals had information for geographic location with bed size, Safety-net status, DSH percent, teaching status and ownership; 3,111 had information on region; and 3,084 had information for MCR percent. The first column presents a breakdown of each characteristic.

The third column in the table indicates the number of hospitals for each characteristic that would be in the worst-performing quartile of Total HAC Scores. These hospitals would receive a payment reduction under the FY 2021 HAC Reduction Program. For example, with regard to teaching status, 425 hospitals out of 1,968 hospitals characterized as non-teaching hospitals would be subject to a payment reduction. Among teaching hospitals, 224 out of 876 hospitals with fewer than 100 residents and 123 out of 258 hospitals with 100 or more residents would be subject to a payment reduction.

The fourth column in the table indicates the proportion of hospitals for each characteristic that would be in the worst performing quartile of Total HAC Scores and thus receive a payment reduction under the FY 2021 HAC Reduction Program. For example, 21.6 percent of the 1,968 hospitals characterized as non-teaching hospitals, 25.6 percent of the 876 teaching hospitals with fewer than 100 residents, and 47.7 percent of the 258 teaching hospitals with 100 or more

residents would be subject to a payment reduction.

BILLING CODE 4120–01–P

Source: FY 2021 HAC Reduction Program final rule Results are based on CMS PSI 90 data from July 1, 2017 through June 30, 2019 and CDC CLABSI, CAUTI, SSI, CDI, and MRSA results from January 1, 2018 through December 31, 2019. Hospital Characteristics are based on the FY 2021 Proposed Rule Impact File

[a] This column is the number of non-Maryland hospitals with a Total HAC Score within the corresponding characteristic that are estimated to be in the worst-performing quartile.

[b] This column is the percent of non-Maryland hospitals within each characteristic that are estimated to be in the worst-performing quartile. The percentages are calculated by dividing the number of non-Maryland hospitals with a Total HAC Score in the worst-performing quartile by the total number of non-Maryland hospitals with a Total HAC Score within that characteristic.

[c] The number of non-Maryland hospitals with a FY 2021 Total HAC Score (N = 3,111). Note that not all hospitals have data for all hospital characteristics.

[d] The number of hospitals that had information for geographic location with bed size, Safety-net status, DSH percent, and teaching status (n = 3,102).

[e] A hospital is considered a Safety-net hospital if it is in the top quintile for DSH percent.

[f] The DSH patient percentage is equal to the sum of: (1) the percentage of Medicare inpatient days attributable to patients eligible for both Medicare Part A and Supplemental Security Income; and (2) the percentage of total inpatient days attributable to patients eligible for Medicaid but not Medicare Part A.

[g] A hospital is considered a teaching hospital if it has an IME adjustment factor for Operation PPS (TCHOP) greater than zero.

[h] Not all hospitals had data for Ownership (n = 3,102)

[i] Not all hospitals had data for MCR percent (n = 3,084).

[j] All hospitals had data for Region (n = 3,111)

BILLING CODE 4120–01–C

We did not receive any public comments regarding the financial impact of our proposals.

7. Policy Change Related to Medical Residents Affected by Residency Program or Teaching Hospital Closure

In section IV.N. of the preamble of this final rule, we are amending the Medicare policy with regard to closing teaching hospitals and closing residency programs to address the needs of residents attempting to find alternative hospitals in which to complete their training and the incentives of home and receiving hospitals with regard to seamless Medicare IME and direct GME funding. There are no new Medicare funded slots being created by this amendment; as under current policy, the maximum number of FTE cap slots that may be transferred with displaced residents is the number equal to the closing hospital's IME and direct GME FTE caps. Additionally, all of the funding for residents due to a hospital closure would eventually be transferred permanently to new hospitals under current law (section 5506 of the Affordable Care Act, which provides for permanent redistribution of slots due to hospital closure. As a result, we believe that ultimately, there is no new cost generated for the Medicare program as a result of this amendment.

8. Effect of the Payment for Allogeneic Hematopoietic Stem Cell Acquisition Costs

Section 108 of the Further Consolidated Appropriations Act, 2020 (Public Law 116–94) provides that, effective for cost reporting periods beginning on or after October 1, 2020, payment to a subsection (d) hospital that furnishes an allogeneic hematopoietic stem cell transplant for hematopoietic stem cell acquisition shall be made on a reasonable cost basis, and that the Secretary shall specify the items included in such hematopoietic stem cell acquisition in rulemaking. This statutory provision also requires that, beginning in FY 2021, the payments made based on reasonable cost for the acquisition costs of allogeneic hematopoietic stem cells be made in a budget neutral manner. Our implementation of section 108 of the Further Consolidated Appropriations Act, 2020 is discussed in section II.H. of the preamble of this final rule, including our adjustment to the standardized amount to ensure the effects of the additional payments for allogeneic hematopoietic stem cell acquisition costs are budget neutral, as required under that law.

9. Effects of Implementation of the Rural Community Hospital Demonstration Program in FY 2021

In section IV.O. of the preamble of this final rule for FY 2021, we discussed our implementation and budget neutrality methodology for section 410A of Public Law 108–173, as amended by sections 3123 and 10313 of Public Law 111–148, and more recently, by section 15003 of Public Law 114–255, which requires the Secretary to conduct a demonstration that would modify payments for inpatient services for up to 30 rural hospitals.

Section 15003 of Public Law 114–255 requires the Secretary to conduct the Rural Community Hospital Demonstration for a 10-year extension period (in place of the 5-year extension period required by the Affordable Care Act), beginning on the date immediately following the last day of the initial 5-year period under section 410A(a)(5) of Public Law 108–173. Specifically, section 15003 of Public Law 114–255 amended section 410A(g)(4) of Public Law 108–173 to require that, for hospitals participating in the demonstration as of the last day of the initial

5-year period, the Secretary shall provide for continued participation of such rural community hospitals in the demonstration during the 10-year extension period, unless the hospital makes an election to discontinue participation. Furthermore, section 15003 of Public Law 114–255 requires that, during the second 5 years of the 10-year extension period, the Secretary shall provide for participation under the demonstration during the second 5 years of the 10-year extension period for hospitals that are not described in section 410A(g)(4) of Public Law 108–173.

Section 15003 of Public Law 114–255 also requires that no later than 120 days after enactment of Public Law 114–255 that the Secretary issue a solicitation for applications to select additional hospitals to participate in the demonstration program for the second 5 years of the 10-year extension period so long as the maximum number of 30 hospitals stipulated by Public Law 111–148 is not exceeded. Section 410A(c)(2) of Public Law 108–173 requires that in conducting the demonstration program under this section, the Secretary shall ensure that the aggregate payments made by the Secretary do not exceed the amount which the Secretary would have paid if the demonstration program under this section was not implemented (budget neutrality).

In the preamble to this final rule, we described the terms of participation for the extension period authorized by Public Law 114–255. In the FY 2018 IPPS/LTCH PPS final rule, we finalized our policy with regard to the effective date for the application of the reasonable cost-based payment methodology under the demonstration for those among the hospitals that had previously participated and were choosing to participate in the second 5-year extension period. According to our finalized policy, each of these previously participating hospitals began the second 5 years of the 10-year extension period on the date immediately after the date the period of performance under the 5-year extension period ended. Seventeen of the 21 hospitals that completed their periods of participation under the extension period authorized by the Affordable Care Act elected to continue in the second 5-year extension period, while 13 additional hospitals were selected to participate. One of the hospitals selected in 2017 withdrew from the demonstration prior to beginning participation on July 1, 2018, while each of the remaining newly participating hospitals began its 5-year period of participation effective the start of the first cost reporting period on or after October 1, 2017. In addition, one among the previously participating hospitals closed effective January 2019, while two have withdrawn effective September 1 and October 1, 2019, respectively. Therefore, 27 hospitals were participating in the demonstration as of this date—15 previously participating and 12 newly participating. For four of the previously participating hospitals, this 5-year period of participation will end during FY 2020; while one of the previously participating hospitals, scheduled to end in 2021, chose in February of this past year to withdraw effective September 2019. Therefore, the budget neutrality calculations in this final rule are based on 22 hospitals. For seven of the remaining 10 hospitals among the original group, participation will end during FY 2021, with participation ending for the other three on December 31, 2021. The newly participating hospitals are all scheduled to end their participation either at the end of FY 2022 or during FY 2023.

In the FY 2018 IPPS/LTCH PPS final rule, we finalized the budget neutrality methodology in accordance with our policies for implementing the demonstration, adopting the general methodology used in previous years, whereby we estimated the additional payments made by the program for each of the participating hospitals as a result of the demonstration. In order to achieve budget neutrality, we adjusted the national IPPS rates by an amount sufficient to account for the added costs of this demonstration. In other words, we have applied budget neutrality across the payment system as a whole rather than across the participants of this demonstration. The language of the statutory budget neutrality requirement permits the agency to implement the budget neutrality provision in this manner. The statutory language requires that aggregate payments made by the Secretary do not exceed the amount which the Secretary would have paid if the demonstration was not implemented, but does not identify the range across which aggregate payments must be held equal.

For this final rule, the resulting amount applicable to FY 2021 is $39,825,670, which we are including in the budget neutrality offset adjustment for FY 2021. This estimated amount is based on the specific assumptions regarding the data sources used, that is, recently available ''as submitted'' cost reports and historical and currently finalized update factors for cost and payment.

In previous years, we have incorporated a second component into the budget neutrality offset amounts identified in the final IPPS rules. As finalized cost reports became available, we determined the amount by which the actual costs of the demonstration for an earlier, given year differed from the estimated costs for the demonstration set forth in the final IPPS rule for the corresponding fiscal year, and we incorporated that amount into the budget neutrality offset amount for the upcoming fiscal year. We have calculated this difference for FYs 2005 through 2015 between the actual costs of the demonstration as determined from finalized cost reports once available, and estimated costs of the demonstration as identified in the applicable IPPS final rules for these years.

With the extension of the demonstration for another 5-year period, as authorized by section 15003 of Public Law 114–255, we will continue this general procedure. All finalized cost reports are not yet all available for the 19 hospitals that completed a cost reporting period beginning in FY 2016 according to the demonstration cost-based payment methodology. Therefore, we are expecting to include in the FY2022 IPPS/LTCH PPS proposed and final rules the difference between the actual costs of the demonstration as determined from these cost reports and the estimated costs as determined in the FY 2016 final rule.

For this final rule for FY 2021, the total amount that we are applying to the national IPPS rates is $39,825,670.

Comment: A commenter expressed support for the continuation of the program, but said, that as a demonstration, the program does not offer long-term financial sustainability needed to maintain health care access in rural areas.

Response: We appreciate the comment. We have conducted the demonstration program in accordance with Congressional mandates.

10. Effects of Continued Implementation of the Frontier Community Health Integration Project (FCHIP) Demonstration

In section VI.B.2. of the preamble of this final rule we discuss the implementation of the FCHIP demonstration, which allowed eligible entities to develop and test new models for the delivery of health care services in eligible counties in order to improve access to and better integrate the delivery of acute care, extended care, and other health care services to Medicare beneficiaries in no more than four States. Budget neutrality estimates for the demonstration will be based on the demonstration period of August 1, 2016, through July 31, 2019. The demonstration included three intervention prongs, under which specific waivers of Medicare payment rules allowed for enhanced payment: Telehealth, skilled nursing facility/nursing facility services, and ambulance services. These waivers were implemented with the goal of increasing access to care with no net increase in costs. (We also discussed this policy in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38294 through 38296), the FY 2019 IPPS/LTCH PPS final rule (83 FR 41516 through 41517), and the FY 2020 IPPS/LTCH PPS final rule (84 FR 42044 through 42701), but did not make any changes to the policy that was adopted in FY 2017.)

We specified the payment enhancements for the demonstration and selected CAHs for participation with the goal of maintaining the budget neutrality of the demonstration on its own terms (that is, the demonstration would produce savings from reduced transfers and admissions to other health care providers, thus offsetting any increase in payments resulting from the demonstration). However, because of the small size of this demonstration program and uncertainty associated with projected Medicare utilization and costs, in the FY 2017 IPPS/LTCH PPS final rule we adopted a contingency plan (81 FR 57064 through 57065) to ensure that the budget neutrality requirement in section 123 of Public Law 110–275 is met. Accordingly, if analysis of claims data for the Medicare beneficiaries receiving services at each of the participating CAHs, as well as of other data sources, including cost reports, shows that increases in Medicare payments under the demonstration during the 3-year period are not sufficiently offset by reductions elsewhere, we will recoup the additional expenditures attributable to the demonstration through a reduction in payments to all CAHs nationwide. The demonstration is projected to impact payments to participating CAHs under both Medicare Part A and Part B. Thus, in the

event that we determine that aggregate payments under the demonstration exceed the payments that would otherwise have been made, we will recoup payments through reductions of Medicare payments to all CAHs under both Medicare Part A and Part B. Because of the small scale of the demonstration, it would not be feasible to implement budget neutrality by reducing payments only to the participating CAHs. Therefore, we would make the reduction to payments to all CAHs, not just those participating in the demonstration, because the FCHIP demonstration is specifically designed to test innovations that affect delivery of services by this provider category. As we explained in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57064 through 57065), we believe that the language of the statutory budget neutrality requirement at section 123(g)(1)(B) of the Act permits the agency to implement the budget neutrality provision in this manner. The statutory language merely refers to ensuring that aggregate payments made by the Secretary do not exceed the amount which the Secretary estimates would have been paid if the demonstration project was not implemented, and does not identify the range across which aggregate payments must be held equal.

Under the policy adopted in FY 2017 IPPS/LTCH PPS final rule, in the event the demonstration is found not to have been budget neutral, any excess costs will be recouped beginning in CY 2020. Based on the currently available data, the determination of budget neutrality results is preliminary and the amount of any reduction to CAH payments that would be needed in order to recoup excess costs under the demonstration remains uncertain. Therefore, in this final rule, we are finalizing our proposal in the FY 2021 IPPS/LTCH PPS proposed rule to revise the policy originally adopted in the FY 2017 IPPS/LTCH PPS final rule, to delay the implementation of any budget neutrality adjustment. We will revisit this policy in rulemaking for FY 2022 when we expect to have complete data for the demonstration period. Since our data analysis is incomplete, it is not possible to determine the impact of this policy for any national payment system for FY 2021.

11. Effects of the Submission of Electronic Medical Records to Quality Improvement Organizations (QIOs)

In section IX.A. of this final rule, we specify the changes we are adopting regarding the reimbursement to providers, practitioners and institutions for electronic submission of patient records required for QIO purposes. Over the last several years, numerous healthcare providers subject to QIO review activity under §§ 476.78 and 480.111 have requested reimbursement for submitting requested patient records in an electronic format. However, our regulations concerning reimbursement to providers and practitioners for submitting patient records and information required for QIO review activity under § 476.78 only permitted reimbursement for records sent via photocopying and mailing or facsimile. This had the unintended consequence of discouraging providers from using the more efficient and cost effective means of submitting patient records and information to the QIOs in an electronic format solely because reimbursement was available only for patient records and information submitted via photocopying and mailing.

The updates we are making to the regulation with this final rule respond to requests from providers, by addressing reimbursement for submitting records to the QIO in electronic format as well as by photocopying and mailing and facsimile. According to 2017 Office of National Coordinator survey result, 96 percent of all non-federal acute care hospitals possessed certified health IT. Ninety-nine percent of large hospitals (more than 300 beds) had certified health IT, while 97 percent of medium-sized hospitals (more than 100 beds) had certified health IT. Also nearly 9 in 10 (86 percent) of office-based physicians had adopted any EHR, and nearly 4 in 5 (80 percent) had adopted a certified EHR (*https://dashboard.healthit.gov/quickstats/quickstats.php*). Given the widespread adoption of the Certified Electronic Health Record Technology (CEHRT), we believe that the providers and QIOs now have the capacity to send and receive patient records in electronic format. In light of these facts, we believe that it is now appropriate to require providers, practitioners and institutions to submit patient records to the QIOs in electronic format. Our updates to the regulations also provide appropriate reimbursement for patient records submitted to the QIOs in an electronic format. We believe these changes will result in a large shift among providers, practitioners and institutions, which are subject to QIO review and which submit information and documents for the QIOs to perform their QIO functions under §§ 476.78 and 480.111, toward submitting patient records in electronic format. As discussed later in this section, we believe these provisions will help reduce our costs for QIO-labor associated with scanning and uploading patient records they receive by mail or facsimile, as well as reducing the time to complete QIO reviews as electronic records are generally easier to store and search. Thus, the requirement for providers to submit patient records to QIOs in electronic format will be advantageous for CMS. Providers and practitioners who are unable to send patient records to the QIOs in an electronic format will be able to obtain a waiver to permit them to submit records to the QIO via facsimile or photocopying and mailing under this provision. We proposed an updated reimbursement rate for patient records submitted by facsimile or by photocopying and mailing to account for current wage and materials costs, and a waiver process that is minimally burdensome for providers, practitioners, and institutions.

We expect that implementation of the requirement for providers and practitioners to submit records to QIOs in and electronic format will have significant implications in terms of cost savings. Because CMS reimburses the QIOs directly for all payments to providers and practitioners for sending records to the QIOs and pays QIOs for their work, including the additional time and overhead expenses related to using paper records instead of electronic records. Therefore, any cost savings to the QIOs as a result of the adoption of electronic formats for submission of patient records would result in a cost savings to CMS. The less it costs to send records to the QIOs, the less CMS has to reimburse for those costs.

To estimate savings, we assumed 100 percent compliance with the proposed requirements at § 476.78(c). Although we assumed that 20 percent of providers, practitioners or institutions would seek a waiver, given the percentage of providers that currently have access to Certified Electronic Health Record Technology (CEHRT), we believe that ultimately all providers will be able to submit patient records in electronic format in the future.

We did not receive any comments regarding our proposal to require providers to submit requested patient records to QIOs for the purpose of fulfilling one or more QIO functions unless they have an approved waiver. We continue to believe that it is reasonable to require providers to submit patient records in electronic format unless they have a QIO approved waiver.

We estimated the total savings by subtracting the total cost of sending records electronically from the total cost of sending records by photocopying and mailing. Over the last 5 years, providers and practitioners have sent about 1.2 million patient records to the QIOs, totaling approximately 342 million pages of documents. Currently, providers are reimbursed at the rate of $0.12 per page, which results in a total reimbursement cost of about $41 million over 5 years. In contrast, we proposed, sending 1.2 million records electronically at a rate of reimbursement of $3 per record would amount to a total reimbursement cost of roughly $3.6 million. Subtracting $3.6 million (the estimated cost of sending records electronically over 5 years) from $41 million (the cost of sending records by fax or by mail), would result in a total estimated savings to CMS of $37.4 million. We would save money on the efforts of the QIOs to scan and process the paper records before sending them on for review electronically. However, these longer-run savings would be preceded by short-run transition costs, which we have not estimated.

Based on our estimates for case volume set forth previously, and assuming the QIOs cost for scanning and labor is $0.10 per page, based on the information set out in Table 1 of this Appendix, we estimate that it would save CMS about $34.3 million if the agency no longer needed to scan 342 million pages of records. Savings in payments for the labor and materials costs provided to both providers and QIOs for photocopying, scanning, and uploading results in total savings to CMS of $71.8 million. Tables 2 and 3 of this Appendix illustrate the cost savings to CMS over 5 years.

Other Focused Claims Review	80,475	167	13,439,325	37,331	$1,343,933
Total	1,158,870		342,225,911		**$34,222,591**
Savings				**950,628**	**$34,222,591**

*** Cost of scanning and uploading of received medical records does not include cost of paper.

TABLE 3. ONE- AND FIVE-YEAR ESTIMATED CMS COST SAVINGS AND BURDEN ESTIMATE

	Savings		**Burden (in hours)**	
	1 Year	**5 Years**	**1 Year**	**5 Years**
Total cost and burden savings for CMS	$14,362,618.08	$71,813,090.42	380,251	1,901,255

The BFCC–QIO contracts under the 12th scope of work currently have four task orders that are awarded on a staggered 5-year basis. Currently CMS has budgeted $95.8 million per year for each of the four BFCC–QIOs task orders, for an estimated 5-year cost of $479 million. We estimate that the costs of file transfer through photocopying and mailing, facsimile and in electronic formats would be a small fraction of the total operations budget of the QIOs. We believe that the changes we are adopting to the requirements governing reimbursement to providers, practitioners and institutions for submitting requested patient records to the QIO would also benefit providers, practitioners and institutions in fulfilling their responsibilities under § 476.78 (obligating providers and practitioners to, among other things, furnish records to QIOs) and § 480.111 (obligating institutions and practitioners to provide access, records and information to QIOs), by providing reimbursement for the submission of requested patient records to the QIOs in an electronic format.

Given our estimate, discussed in section IX.A.2.d. of this final rule that an appropriate employee can reasonably photocopy 6 pages of documents per minute and scan documents at the rate of 6 documents per minute, we estimate that the changes we are adopting would save providers and CMS a total of approximately 1.9 million labor hours over 5 years. We expect these proposed changes would also result in a positive environmental impact by avoiding printing, photocopying, faxing, scanning, and recycling about 342.2 million pages of medical records by providers and QIOs over 5 years.

We did not receive public comments on the methodologies used to calculate the reimbursement rates for electronic submission of patient records, submission of patient records via photocopying and mailing, or submission of patient records via facsimile. Since we did not receive comments on the methodologies used to calculate these rates, we continue to believe that the rates are reasonable, and that the cost savings we have calculated for the adopted changes are reasonable.

12. Effects of the Changes To Prepare for Implementation of Mandatory PRRB Electronic Filing

In section IX.B. of the preamble of this final rule, we are implementing the proposed changes regarding PRRB appeals. The burden associated with the requirements is the time and effort necessary to review instructions and register for the electronic submission system as well as the time and effort to gather, develop and submit various documents associated with a PRRB appeal. We also believe that requiring all parties involved in PRRB appeals to use OH CDMS would create efficiencies and reduce the burden and cost to external users in that, when a file or document is uploaded into the system and filed with the Board, the system simultaneously serves it on the opposing party. As a result, the system will eliminate the need to print documents and pay for postage for most submissions. Additionally, there is no material out-of-pocket direct cost or investment to utilize OH CDMS; parties do not need to purchase separate software. Finally, the required use of the system would also reduce the administrative burden on OH staff to enter data and scan correspondence, and will free up government resources to adjudicate cases and manage the docket. Similarly, it will enhance the PRRB's ability to strategically manage the PRRB's complex docket as it will provide better analytics for case management activities such as scheduling, jurisdictional and procedural reviews, and long-range docket planning. Last, the required use of the system would also reduce paper documents and the related costs associated with processing and securely storing the PRRB's records.

13. Effects of the Proposed Revisions of Medicare Bad Debt Policy

In section IX.C. of the preamble of this final rule, we are implementing the proposed clarifications and codification of certain longstanding Medicare bad debt reimbursement provisions and requirements for all Medicare providers, suppliers, and other entities eligible to receive Medicare payment for bad debt by revising 42 CFR 413.89, Bad debts, charity, and courtesy allowances. We are also implementing our proposal to codify our longstanding reasonable collection effort to require a Medicaid remittance advice (RA) for dual eligible beneficiaries. In the proposed rule, we sought suggestions from stakeholders regarding the best alternative documentation to the Medicaid RA that a provider could obtain and submit to Medicare to evidence the State's Medicare cost sharing liability (or absence thereof) in instances where the State does not process a Medicare crossover claim and issue a Medicaid RA for certain dual eligible beneficiaries. In addition, we are finalizing our proposal to recognize the new Accounting Standard Update—Topic 606 for revenue recognition and classification of Medicare bad debts. We also made a technical correction to the cross references in 42 CFR 412.622(b)(2)(i) and 42 CFR 417.536(g) to Medicare bad debt reimbursement policy. As a result of our proposed changes, there would be no costs to the Medicare Program and no increased burden placed upon providers, suppliers or other entities. In addition, there would be a savings to the Medicare Program by the reduction of appeal and litigation costs. Providers would benefit and realize a burden reduction with the finalization of a policy to accept alternative documentation to evidence a provider's reasonable collection effort for certain dual eligible beneficiaries, as doing so would serve an important public interest by allowing providers with cases currently pending before the PRRB an avenue for timely and cost-effective resolution, as well as an avenue for providers and contractors to resolve open cost reports containing these dual eligible crossover bad debt matters.

Comment: While some commenters were supportive of our efforts to clarify longstanding Medicare bad debt policies, many commenters expressed disagreement with proposals to codify some longstanding Medicare bad debt policies with retroactive effective dates. Commenters were generally supportive of our solicitation for suggestions to accept alternative documentation to the Medicaid RA for Medicare crossover bad debts to evidence a provider's reasonable collection effort for certain dual eligible beneficiaries. Some commenters suggested that a retroactive codification of some policies would create a burden and cause providers to re-submit prior cost reports. Other commenters submitted suggestions for the acceptance of alternative documentation to the Medicaid RA, asserting that it will provide a burden reduction to providers, including those with pending PRRB cases. Many commenters requested regulation text edits regarding to our proposal to adopt the Accounting Standard Update—Topic 606 for revenue recognition and classification of Medicare bad debts. Some commenters also inquired whether the PRM would also be updated.

Response: We appreciate commenters' support of our efforts to clarify longstanding Medicare bad debt policies. We believe the clarification and codification of many longstanding bad debt policies will benefit stakeholders when processing Medicare bad debt for reimbursement. Our acceptance of commenters' suggestions for alternative documentation to the Medicaid RA will allow providers an avenue for resolution of pending PRRB cases. We agree with some commenters' suggestions to further edit and clarify the regulation text proposals regarding the Accounting Standard Update—Topic 606 for revenue recognition and classification of Medicare bad debts. We plan to update the PRM to coincide with the policy clarifications to further assist providers with policy guidance.

After consideration of the public comments we received, we are finalizing our proposals to codify some of our longstanding Medicare bad debt policies as set forth in section IX.C. of this final rule. Some of the longstanding bad debt policy clarifications will be effective retroactively, while others will have effective dates for cost reporting periods beginning on or after October 1, 2020. We believe the retroactive effective dates of the policy clarifications and acceptance of alternative documentation to the Medicaid RA will serve to benefit providers with greater clarity and resolution of pending PRRB cases.

14. Effects of a Potential Market-Based MS–DRG Relative Weight Methodology

In section IV.P.4. of the preamble of this final rule, we finalizing the adoption of a market-based methodology for estimating the MS–DRG relative weights beginning in FY 2024, utilizing the median payer-specific negotiated charge information we are finalizing to collect on the Medicare cost report. We are finalizing our data collection proposal with modification to only collect the median payer-specific negotiated charge by MS–DRG for payers that are MA organizations, rather than collecting both the median payer-specific negotiated charge by MS–DRG for payers that are MA organization and third party payers, as proposed. We note that in response to comments, we have increased the estimated total annual burden hours by 5 hours for this data collection requirement; 20 hours per hospital times 3,189 total hospitals equals 63,780 annual burden hours and $4,315,993 annually for all hospitals nationally. We refer readers to

section XI.B.11. of the preamble of this final rule for further analysis of this assessment.

We are applying a budget neutrality factor to ensure that the overall payment impact of any MS–DRG relative weight changes is budget neutral, as required by section 1886(d)(4)(C)(iii) of the Act and consistent with our current practice.

Once we have access to the payer-specific negotiated charge information at the MS–DRG level, we will be able to more precisely estimate the payment impact of adopting this market based MS–DRG relative weight methodology for payments beginning in FY 2024. However, to explore the potential impacts more generally, we conducted a literature review to compare the payment rates of Medicare FFS, MA organizations, and other commercial payers. As noted in section IV.P.2.b. of the preamble of the proposed rule and this final rule, Berenson et al.[531] surveyed senior hospital and health plan executives and found that MA plans nominally pay only 100 to 105 percent of traditional Medicare rates and, in real economic terms, possibly less. Respondents broadly identified three primary reasons for near-payment equivalence: Statutory and regulatory provisions that limit out-of-network payments to traditional Medicare rates, de facto budget constraints that MA plans face because of the need to compete with traditional Medicare and other MA plans, and a market equilibrium that permits relatively lower MA rates as long as commercial rates remain well above the traditional Medicare rates.

We next researched empirically based comparisons of Medicare FFS rates, MA organization rates, and rates of other commercial payers. Baker et al.[532] used data from Medicare and the Health Care Cost Institute (HCCI) to identify the prices paid for hospital services by FFS Medicare, MA plans, and commercial insurers in 2009 and 2012. They calculated the average price per admission, and its trend over time, in each of the three types of insurance for fixed baskets of hospital admissions across metropolitan areas. After accounting for differences in hospital networks, geographic areas, and case-mix between MA and FFS Medicare, they found that MA plans paid 5.6 percent less for hospital services compared to FFS Medicare. For the time period studied, the authors suggest that at least one channel through which MA plans paid lower prices was by obtaining greater discounts on types of FFS Medicare admissions that were known to have very short lengths-of-stay. They also found that the rates paid by commercial plans were much higher than those of either MA or FFS Medicare, and growing. At least some of this difference they indicated came from the much higher prices that commercial plans paid for profitable service lines.

Maeda and Nelson[533] also analyzed data from the HCCI in their research. They compared the hospital prices paid by MA organizations and commercial plans with Medicare FFS prices using 2013 claims from the HCCI. The HCCI claims were used to calculate hospital prices for private insurers, and Medicare's payment rules were used to estimate Medicare FFS prices. The authors focused on stays at acute care hospitals in metropolitan statistical areas (MSAs). They found MA prices to be roughly equal to Medicare FFS prices, on average, but commercial prices were 89 percent higher than FFS prices. In addition, commercial prices varied greatly across and within MSAs, but MA prices varied much less. The authors considered their results generally consistent with the Baker et al. study findings in that hospital payments by MA plans were much more similar to Medicare FFS levels than they were to commercial payment levels, although they noted that they used slightly different methods to calculate Medicare FFS prices.

In their study, Maeda and Nelson also examined whether the ratio of MA prices to FFS prices varied across DRGs to assess whether there were certain DRGs for which MA plans tended to pay more or less than FFS. They ranked the ratio of MA prices to FFS prices and adjusted for outlier payments. They found that there were some DRGs where the average MA price was much higher than FFS and there were some DRGs where the average MA price was a bit lower than FFS. For example, for the time period in question on average MA plans paid 129 percent more than FFS for rehabilitation stays (DRG 945), 33 percent more for depressive neuroses (DRG 881), and 27 percent more for stays related to psychoses (DRG 885). But MA plans paid an average of 9 percent less than FFS for stays related to pathological fractures (DRG 542) and wound debridement and skin graft (DRG 464) (see Online Appendix Table 5 from their study). The authors state these results suggest that there may be certain services where MA plans pay more than FFS, possibly because the FFS rate for those services is too low, but there may be other services where MA plans pay less than FFS, possibly because the FFS rate for those DRGs is too high.

As described previously, this body of research suggests that while the payer-specific charges negotiated between hospitals and MA organizations are generally well-correlated with Medicare IPPS payment rates, there may be instances where those negotiated charges may reflect the relative hospital resources used within an MS–DRG differently than our current cost-based methodology. Payer-specific charges negotiated between hospitals and commercial payers are generally not as well-correlated with Medicare IPPS payment rates.

As previously noted, once we have access to the payer-specific negotiated charge information at the MS–DRG level, we can more precisely estimate the potential payment impact, which we intend to do in future rulemaking, prior to the FY 2024 effective date of the market-based MS–DRG relative weight methodology. As under the current methodology, the impact of any MS–DRG relative weight changes on an individual hospital would depend on the mix of services provided by that particular hospital.

I. Effects of Changes in the Capital IPPS

1. General Considerations

For the impact analysis presented in this section, we used data from the March 2020 update of the FY 2019 MedPAR file and the March 2020 update of the Provider-Specific File (PSF) that was used for payment purposes. Although the analyses of the changes to the capital prospective payment system do not incorporate cost data, we used the March 2020 update of the most recently available hospital cost report data (FYs 2017 and 2018) to categorize hospitals. Our analysis has several qualifications. We use the best data available and make assumptions about case-mix and beneficiary enrollment, as described later in this section.

Due to the interdependent nature of the IPPS, it is very difficult to precisely quantify the impact associated with each change. In addition, we draw upon various sources for the data used to categorize hospitals in the tables. In some cases (for instance, the number of beds), there is a fair degree of variation in the data from different sources. We have attempted to construct these variables with the best available sources overall. However, it is possible that some individual hospitals are placed in the wrong category.

Using cases from the March 2020 update of the FY 2019 MedPAR file, we simulated payments under the capital IPPS for FY 2020 and the payments for FY 2021 for a comparison of total payments per case. Short-term, acute care hospitals not paid under the general IPPS (for example, hospitals in Maryland) are excluded from the simulations.

The methodology for determining a capital IPPS payment is set forth at § 412.312. The basic methodology for calculating the capital IPPS payments in FY 2021 is as follows:

(Standard Federal rate) × (DRG weight) × (GAF) × (COLA for hospitals located in Alaska and Hawaii) × (1 + DSH adjustment factor + IME adjustment factor, if applicable).

In addition to the other adjustments, hospitals may receive outlier payments for those cases that qualify under the threshold established for each fiscal year. We modeled payments for each hospital by multiplying the capital Federal rate by the GAF and the hospital's case-mix. Then we added estimated payments for indirect medical education, disproportionate share, and outliers, if applicable. For purposes of this impact analysis, the model includes the following assumptions:

- The capital Federal rate was updated, beginning in FY 1996, by an analytical framework that considers changes in the prices associated with capital-related costs and adjustments to account for forecast error, changes in the case-mix index, allowable

changes in intensity, and other factors. As discussed in section III.A.1. of the Addendum to this final rule, the update to the capital Federal rate is 1.1 percent for FY 2021.

- In addition to the FY 2021 update factor, the FY 2021 capital Federal rate was calculated based on a GAF/DRG budget neutrality adjustment factor of 0.9971 and an outlier adjustment factor of 0.9466.

2. Results

We used the payment simulation model previously described in section I.I. of Appendix A of this final rule to estimate the potential impact of the changes for FY 2021 on total capital payments per case, using a universe of 3,201 hospitals. As previously described, the individual hospital payment parameters are taken from the best available data, including the March 2020 update of the FY 2019 MedPAR file, the March 2020 update to the PSF, and the most recent cost report data from the March 2020 update of HCRIS. In Table III, we present a comparison of estimated proposed total payments per case for FY 2020 and estimated total payments per case for FY 2021 based on the FY 2021 payment policies. Column 2 shows estimates of payments per case under our model for FY 2020. Column 3 shows estimates of payments per case under our model for FY 2021. Column 4 shows the total percentage change in payments from FY 2020 to FY 2021. The change represented in Column 4 includes the 1.1 percent update to the capital Federal rate and other changes in the adjustments to the capital Federal rate. The comparisons are provided by: (1) Geographic location; (2) region; and (3) payment classification.

The simulation results show that, on average, capital payments per case in FY 2021 are expected to increase as compared to capital payments per case in FY 2020. This expected increase overall is primarily due to the 1.1 percent update to the capital Federal rate for FY 2021, in conjunction with estimated changes in outlier payments and DSH payments. Under § 412.320, in order to receive capital DSH payments a hospital must be located in an urban area for payment purposes and have 100 or more beds. As discussed in section III.A.2. of the preamble of this final rule, there are counties that will become rural beginning October 1, 2020 based on our adoption of the revised OMB delineations, and therefore, hospitals in those areas (that have 100 or more beds) will no longer be eligible for capital DSH payments beginning in FY 2021. In general, regional variations in estimated capital payments per case in FY 2021 as compared to capital payments per case in FY 2020 are primarily due to changes in GAFs, and are generally consistent with the projected changes in payments due to changes in the wage index (and policies affecting the wage index), as shown in Table I in section I.G. of this Appendix A.

The net impact of these changes is an estimated 0.3 percent increase in capital payments per case from FY 2020 to FY 2021 for all hospitals (as shown in Table III).

The geographic comparison shows that, on average, hospitals in both urban and rural classifications would experience an increase in capital IPPS payments per case in FY 2021 as compared to FY 2020. Capital IPPS payments per case would increase by an estimated 0.3 percent for hospitals in urban areas while payments to hospitals in rural areas would increase by 0.6 percent in FY 2020 to FY 2021.

The comparisons by region show that the estimated changes in capital payments per case from FY 2020 to FY 2021 would increase in certain urban areas, ranging from a 0.6 percent increase for the East South Central region to a 1.0 percent increase for the New England region. We estimate a decrease for certain other urban regions ranging from 0.1 percent for the South Atlantic region to 0.8 percent for the Mountain region for the capital payments per case from FY 2020 to FY 2021. We estimate no change for the East North Central region for the capital payments per case from FY 2020 to FY 2021. However, nearly all rural regions are expected to increase in capital payments per case from FY 2020 to FY 2021, ranging from 0.1 percent for the West North Central to a 1.3 percent increase for the East North Central rural region. We estimate no change in capital payment per case from FY 2020 to FY 2021 for the South Atlantic rural region. These regional differences are primarily due to the changes in the GAFs and estimated changes in outlier and DSH payments.

All Hospital ownership types are expected to experience an increase in capital payments per case from FY 2020 to FY 2021. Voluntary hospitals are expected to experience an increase in capital IPPS payments of 0.2 percent, and the projected increase in capital payments for Proprietary hospitals is estimated to be 0.3 percent. We also estimate an increase in capital payments per case from FY 2020 to FY 2021 for the Government type hospital to be 0.5 percent.

Section 1886(d)(10) of the Act established the MGCRB. Hospitals may apply for reclassification for purposes of the wage index for FY 2021. Reclassification for wage index purposes also affects the GAFs because that factor is constructed from the hospital wage index. To present the effects of the hospitals being reclassified as of the publication of this final rule for FY 2021, we show the average capital payments per case for reclassified hospitals for FY 2021. Urban reclassified hospitals are expected to experience a decrease in capital payments of 0.3 percent; urban nonreclassified hospitals are expected to experience an increase in capital payments of 0.7 percent. The estimated percentage increase for rural reclassified hospitals is 0.6 percent, and for rural nonreclassified hospitals, the estimated percentage increase in capital payments is 0.5 percent.

BILLING CODE 4120–01–C

J. Effects of Payment Rate Changes and Policy Changes Under the LTCH PPS

1. Introduction and General Considerations

In section VII. of the preamble of this final rule and section V. of the Addendum to this final rule, we set forth the annual update to the payment rates for the LTCH PPS for FY 2021. In the preamble of this final rule, we specify the statutory authority for the provisions that are presented, identify the policies for FY 2021, and present rationales for our decisions as well as alternatives that were considered. In this section of Appendix A to this final rule, we discuss the impact of the changes to the payment rate, factors, and other payment rate policies related to the LTCH PPS that are presented in the preamble of this final rule in terms of their estimated fiscal impact on the Medicare budget and on LTCHs.

There are 363 LTCHs included in this impact analysis. We note that, although there are currently approximately 373 LTCHs, for purposes of this impact analysis, we excluded the data of all-inclusive rate providers consistent with the development of the FY 2021 MS–LTC–DRG relative weights (discussed in section VII.B.3.c. of the preamble of this final rule. Moreover, in the claims data used for this final rule, 3 of these 363 LTCHs only have claims for site neutral payment rate cases and, therefore, do not affect our impact analysis for LTCH PPS standard Federal payment rate cases.) In the

impact analysis, we used the payment rate, factors, and policies presented in this final rule, the 2.3 percent annual update to the LTCH PPS standard Federal payment rate, the permanent one-time budget neutrality adjustment factor for the estimated cost of eliminating the 25-percent threshold policy in FY 2021 as discussed in section VII.D. of the preamble of this final rule, the update to the MS–LTC–DRG classifications and relative weights, the update to the wage index values, labor-related share, and changes to the geographic labor-market area designations, and the 5-percent cap transition policy, and the best available claims and CCR data to estimate the change in payments for FY 2021.

Under the dual rate LTCH PPS payment structure, payment for LTCH discharges that meet the criteria for exclusion from the site neutral payment rate (that is, LTCH PPS standard Federal payment rate cases) is based on the LTCH PPS standard Federal payment rate. Consistent with the statute, the site neutral payment rate is the lower of the IPPS comparable per diem amount as determined under § 412.529(d)(4), including any applicable outlier payments as specified in § 412.525(a), reduced by 4.6 percent for FYs 2018 through 2026; or 100 percent of the estimated cost of the case as determined under § 412.529(d)(2). In addition, there are two separate high cost outlier targets—one for LTCH PPS standard Federal payment rate cases and one for site neutral payment rate cases. The statute also establishes a transitional payment method for cases that are paid the site neutral payment rate for LTCH discharges occurring in cost reporting periods beginning during FY 2016 through FY 2019. For FY 2021, we expected no site neutral payment rate cases would still be eligible for the transitional payment method since it only applies to those site neutral payment rate cases whose discharges occur during a LTCH's cost reporting period that begins before October 1, 2019. Site neutral payment rate cases whose discharges from an LTCH occur during the LTCH's cost reporting period that begins on or after October 1, 2019 are paid the site neutral payment rate amount determined under § 412.522(c)(1).

Based on the best available data for the 363 LTCHs in our database that were considered in the analyses used for this final rule, we estimate that overall LTCH PPS payments in FY 2021 will decrease by approximately 1.1 percent (or approximately $40 million) based on the rates and factors presented in section VII. of the preamble and section V. of the Addendum to this final rule.

The applicability of this transitional payment method for site neutral payment rate cases is dependent upon both the discharge date of the case and the start date of the LTCH's FY 2020 cost reporting period. The statutory transitional payment method for cases that are paid the site neutral payment rate for LTCH discharges occurring in cost reporting periods beginning during FY 2019 uses a blended payment rate, which is determined as 50 percent of the site neutral payment rate amount for the discharge and 50 percent of the LTCH PPS standard Federal prospective payment rate amount for the discharge (§ 412.522(c)(3)). There are LTCHs that have a cost reporting period that began during FY 2019 that includes discharges that occur during Federal FY 2020. For example, an LTCH with a January 1, 2019 through December 31, 2019 cost reporting period had 3 months of discharges that occurred during Federal FY 2020 (that is, discharges that occur from October 1, 2019 through December 31, 2019).

Therefore, when estimating FY 2020 LTCH PPS payments for site neutral payment rate cases for this impact analysis, because the statute specifies that the site neutral payment rate effective date for a given LTCH is based on the date that the LTCH's cost reporting period begins during FY 2020, we included an adjustment to account for this rolling effective date, consistent with the general approach used for the LTCH PPS impact analysis presented in the FY 2016 IPPS/LTCH PPS proposed rule (80 FR 49831). This approach accounts for the fact that site neutral payment rate cases in FY 2020 that are in an LTCH's cost reporting period that begins before October 1, 2019 continue to be paid under the transitional payment method until the start of the LTCH's first cost reporting period beginning on or after October 1, 2019. Site neutral payment rate cases whose discharges from LTCHs occurring during an LTCH's cost reporting period that begins on or after October 1, 2019 will no longer be paid under the transitional payment method and will instead be paid the site neutral payment rate amount as determined under § 412.522(c)(1).

For purposes of this impact analysis, to estimate total FY 2020 LTCH PPS payments for site neutral payment rate cases, as we proposed, we used the same general approach as was used in the FY 2016 IPPS/LTCH PPS proposed rule with modifications to account for the rolling end date to the transitional blended payment rate in FY 2020 instead of the rolling effective date for implementation of the transitional site neutral payment rate in FY 2016. (We note, this is the same approach as was used in the FY 2018 IPPS/LTCH PPS proposed and final rules, which was prior to the extension of the transitional blended payment for LTCH cost reporting periods beginning in FY 2018 and FY 2019 provided by the provisions of section 51005(a) of the Bipartisan Budget Act of 2018 (Pub. L. 115–123). In summary, under this approach, we grouped LTCHs based on the quarter their cost reporting periods will begin during FY 2020. For example, LTCHs with cost reporting periods that begin during October through December 2020 begin during the first quarter of FY 2020. For LTCHs grouped in each quarter of FY 2020, we modeled those LTCHs' estimated FY 2020 site neutral payment rate payments under the transitional blended payment rate based on the quarter in which the LTCHs in each group will continue to be paid the transitional payment method for the site neutral payment rate cases.

For purposes of this estimate, then, we assume the cost reporting period is the same for all LTCHs in each of the quarterly groups and that this cost reporting period begins on the first day of that quarter. (For example, the first group consists of 38 LTCHs whose cost reporting period begins in the first quarter of FY 2020 so that, for purposes of this estimate, we assume all 38 LTCHs began their FY 2020 cost reporting period on October 1, 2019.) Second, we estimated the proportion of FY 2020 site neutral payment rate cases in each of the quarterly groups, and we then assume this proportion is applicable for all four quarters of FY 2020. (For example, as discussed in more detail later in this section, we estimate the first quarter group will discharge 7.9 percent of all FY 2020 site neutral payment rate cases; and therefore, we estimate that group of LTCHs will discharge 7.9 percent of all FY 2020 site neutral payment rate cases in each quarter of FY 2020.) Then, we modeled estimated FY 2020 payments on a quarterly basis under the LTCH PPS standard Federal payment rate based on the assumptions described previously. We continue to believe that this approach is a reasonable means of taking the rolling effective date into account when estimating FY 2020 payments.

For purposes of this impact analysis, to estimate total FY 2021 LTCH PPS payments for site neutral payment rate cases, the transitional blended payment rate was not applied to such cases because all discharges in FY 2021 are either in the LTCH's cost reporting period that began during FY 2020 or in the LTCH's cost reporting period that will begin during FY 2021. Site neutral payment rate cases whose discharges from an LTCH occur during the LTCH's cost reporting period that begins on or after October 1, 2019 are paid the site neutral payment rate amount determined under § 412.522(c)(1).

Based on the fiscal year begin date information in the March 2020 update of the provider specific file (PSF) and the LTCH claims from the March 2020 update of the FY 2019 MedPAR files for the 363 LTCHs in our database used for this final rule, we found the following: 7.9 percent of site neutral payment rate cases are from 38 LTCHs whose cost reporting periods began during the first quarter of FY 2020; 19.8 percent of site neutral payment rate cases are from 81 LTCHs whose cost reporting periods will begin in the second quarter of FY 2020; 9.4 percent of site neutral payment rate cases are from 48 LTCHs whose cost reporting periods will begin in the third quarter of FY 2020; and 62.9 percent of site neutral payment rate cases are from 193 LTCHs whose cost reporting periods will begin in the fourth quarter of FY 2020. (We note, three of the 363 LTCHs in our database used for this final rule did not have any site neutral payment rate cases.) Therefore, the following percentages apply in the approach described previously:

- *First Quarter FY 2020:* 7.9 percent of site neutral payment rate cases (that is, the percentage of discharges from LTCHs whose FY 2020 cost reporting period began in the first quarter of FY 2020) are no longer eligible for the transitional blended payment method, while the remaining 92.1 percent of site neutral payment rate discharges are eligible to be paid under the transitional payment method.
- *Second Quarter FY 2020:* 27.7 percent of site neutral payment rate second quarter discharges (that is, the percentage of discharges from LTCHs whose FY 2020 cost reporting period that begins in the first or second quarter of FY 2020) are no longer

eligible for the transitional blended payment method, while the remaining 72.3 percent of site neutral payment rate second quarter discharges are eligible to be paid under the transitional payment method.

- *Third Quarter FY 2020:* 37.1 percent of site neutral payment rate third quarter discharges (that is, the percentage of discharges from LTCHs whose FY 2020 cost reporting period that begins in the first, second, or third quarter of FY 2020) are no longer eligible for the transitional blended payment method while the remaining 62.9 percent of site neutral payment rate third quarter discharges are eligible to be paid under the transitional payment method.
- *Fourth Quarter FY 2021:* 100.0 percent of site neutral payment rate fourth quarter discharges (that is, the percentage of discharges from LTCHs whose FY 2020 cost reporting period that begins in the first, second, third, or fourth quarter of FY 2020) are no longer eligible for the transitional blended payment method.

Based on the FY 2019 LTCH cases that were used for the analysis in this final rule, approximately 25 percent of those cases were classified as site neutral payment rate cases (that is, 25 percent of LTCH cases did not meet the patient-level criteria for exclusion from the site neutral payment rate). Our Office of the Actuary currently estimates that the percent of LTCH PPS cases that will be paid at the site neutral payment rate in FY 2021 will not change significantly from the most recent historical data. Taking into account the transitional blended payment rate and other changes that will apply to the site neutral payment rate cases in FY 2021, we estimate that aggregate LTCH PPS payments for these site neutral payment rate cases will decrease by approximately 24 percent (or approximately $114 million). We note, we estimate payments to site neutral payment rate cases in FY 2021 represent approximately 10 percent of estimated aggregate FY 2021 LTCH PPS payments.

Based on the FY 2019 LTCH cases that were used for the analysis in this final rule, approximately 75 percent of LTCH cases will meet the patient-level criteria for exclusion from the site neutral payment rate in FY 2021, and will be paid based on the LTCH PPS standard Federal payment rate for the full year. We estimate that total LTCH PPS payments for these LTCH PPS standard Federal payment rate cases in FY 2021 will increase approximately 2.2 percent (or approximately $74 million). This estimated increase in LTCH PPS payments for LTCH PPS standard Federal payment rate cases in FY 2021 is primarily due to the 2.3 percent annual update to the LTCH PPS standard Federal payment rate for FY 2021.

Based on the 363 LTCHs that were represented in the FY 2019 LTCH cases that were used for the analyses in this final rule presented in this Appendix, we estimate that aggregate FY 2020 LTCH PPS payments will be approximately $3.774 billion, as compared to estimated aggregate FY 2021 LTCH PPS payments of approximately $3.733 billion, resulting in an estimated overall decrease in LTCH PPS payments of approximately $40 million. As discussed earlier, this estimated decrease in payments is primarily due to the rolling end to the statutory transitional blended payment rate for site neutral payment rate cases. We also note that the estimated $40 million decrease in LTCH PPS payments in FY 2021 does not reflect changes in LTCH admissions or case-mix intensity, which will also affect the overall payment effects of the policies in this final rule.

The LTCH PPS standard Federal payment rate for FY 2020 is $42,677.64. For FY 2021, we are establishing an LTCH PPS standard Federal payment rate of $43,755.34 which reflects the 2.3 percent annual update to the LTCH PPS standard Federal payment rate, the incremental change in the one-time budget neutrality adjustment factor of 0.991249 for eliminating the 25-percent threshold policy in FY 2021 as discussed in section VII.D. of the preamble of this final rule, and the budget neutrality factor for general updates to the area wage level adjustment of 1.0016837 (discussed in section V.B.6. of the Addendum to this final rule). For LTCHs that fail to submit data for the LTCH QRP, in accordance with section 1886(m)(5)(C) of the Act, we are establishing an LTCH PPS standard Federal payment rate of $42,899.90. This LTCH PPS standard Federal payment rate reflects the updates and factors previously described, as well as the required 2.0 percentage point reduction to the annual update for failure to submit data under the LTCH QRP. We note that the factors previously described to determine the FY 2021 LTCH PPS standard Federal payment rate are applied to the FY 2020 LTCH PPS standard Federal rate set forth under § 412.523(c)(3)(xvi) (that is, $42,677.64).

Table IV shows the estimated impact for LTCH PPS standard Federal payment rate cases. The estimated change attributable solely to the annual update of 2.3 percent to the LTCH PPS standard Federal payment rate is projected to result in an increase of 2.3 percent in payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2020 to FY 2021, on average, for all LTCHs (Column 6). The estimated increase of 2.3 percent shown in Column 6 of Table IV also includes estimated payments for short-stay outlier (SSO) cases, a portion of which are not affected by the annual update to the LTCH PPS standard Federal payment rate, as well as the reduction that is applied to the annual update for LTCHs that do not submit the required LTCH QRP data. However, for most hospital categories, the projected increase in payments based on the LTCH PPS standard Federal payment rate to LTCH PPS standard Federal payment rate cases still rounds to approximately 2.3 percent, the same as the annual update for FY 2021.

For FY 2021, we are updating the wage index values based on the most recent available data (data from cost reporting periods beginning during FY 2017 which is the same data used for the FY 2021 IPPS wage index), the labor-related share of 68.1 for FY 2021, based on the most recent available data (IGI's second quarter 2020 forecast) on the relative importance of the labor-related share of operating and capital costs of the 2017-based LTCH market basket, and the changes to the labor market areas based on the revisions to the CBSA delineations. We also are applying an area wage level budget neutrality factor of 1.0016837 to ensure that the changes to the area wage level adjustment, including the 5-percent cap transition policy, would not result in any change in estimated aggregate LTCH PPS payments to LTCH PPS standard Federal payment rate cases.

For LTCH PPS standard Federal payment rate cases, we currently estimate high cost outlier payments as a percentage of total LTCH PPS standard Federal payment rate payments will decrease slightly from FY 2020 to FY 2021. Based on the FY 2019 LTCH cases that were used for the analyses in this final rule, we estimate that the FY 2020 high cost outlier threshold of $26,778 (as established in the FY 2020 IPPS/LTCH PPS final rule) would result in estimated high cost outlier payments for LTCH PPS standard Federal payment rate cases in FY 2020 that are projected to exceed the 7.975 percent target. Specifically, we currently estimate that high cost outlier payments for LTCH PPS standard Federal payment rate cases will be approximately 8.005 percent of the estimated total LTCH PPS standard Federal payment rate payments in FY 2020. Combined with our estimate that FY 2021 high cost outlier payments for LTCH PPS standard Federal payment rate cases will be 7.975 percent of estimated total LTCH PPS standard Federal payment rate payments in FY 2021, this will result in an estimated decrease in high cost outlier payments of approximately 0.03 percent between FY 2020 and FY 2021. We note that, consistent with past practice, in calculating these estimated high cost outlier payments, we increased estimated costs by an inflation factor of 4.3 percent (determined by the Office of the Actuary) to update the FY 2019 costs of each case to FY 2021.

Table IV shows the estimated impact of the payment rate and policy changes on LTCH PPS payments for LTCH PPS standard Federal payment rate cases for FY 2021 by comparing estimated FY 2020 LTCH PPS payments to estimated FY 2021 LTCH PPS payments. (As noted earlier, our analysis does not reflect changes in LTCH admissions or case-mix intensity.) We note that these impacts do not include LTCH PPS site neutral payment rate cases for the reasons discussed in section I.J.3. of this Appendix.

As we discuss in detail throughout this final rule, based on the most recent available data, we believe that the provisions of this final rule relating to the LTCH PPS, which are projected to result in an overall decrease in estimated aggregate LTCH PPS payments, and the resulting LTCH PPS payment amounts will result in appropriate Medicare payments that are consistent with the statute.

Comment: Several commenters expressed support for the proposed LTCH PPS standard Federal payment rate and the estimated increase in payments for LTCH PPS standard Federal payment rate cases.

Response: We thank the commenters for their support.

Comment: Some commenters objected that total LTCH PPS payments are estimated to decrease.

Response: As discussed previously and in the proposed rule, the estimated decrease in

LTCH PPS payments is largely due to the statutory rolling end of the blended payment rate. While we understand commenter's concerns, we believe that our estimate is correct and appropriately reflects the statute.

Comment: As they have since its inception, several commenters opposed the application of the site neutral payment rate. Some commenters also requested CMS revise or expand the criteria for exclusion from the site neutral payment rate.

Response: As we have stated since its inception, the application of and criteria for exclusion from the site neutral payment rate is statutory. CMS therefore lacks the authority to do as these commenters request. (We note however that under section 3711(b)(2) of the CARES Act, Pub. L. 116–136, all LTCH cases admitted during the COVID–19 public health emergency period will be paid the relatively higher LTCH PPS standard Federal rate.)

Comment: Multiple commenters stated their belief that cases paid at the site neutral payment rate will continue to be underpaid as those cases, according to commenters, have on average higher levels of clinical complexity and costs that significantly exceed IPPS-level reimbursement. These commenters acknowledged that CMS is unable to change this policy but request that CMS take into consideration the costs of site neutral payment rate cases when proposing any future changes to the LTCH PPS.

A commenter stated that since FY 2019 site neutral payment rate cases have seen a significant drop in reimbursement as a result of the end of the transitional blended payment rate. The commenter stated that the payment-to-cost ratio for site neutral payment rate cases without the blended payment rate will be 45 percent and treatment costs for these cases are comparable to LTCH PPS standard Federal payment rate cases as these site neutral cases have significant comorbidities which make it difficult to discharge them to lower levels of care. They also stated that their site neutral payment rate cases are almost three times costlier than IPPS cases with fewer than three ICU days.

A commenter acknowledged that the number of site neutral payment rate cases have dropped to 25 percent of total LTCH PPS cases in FY 2019. Because site neutral payment rate cases will longer receive the transitional blended payment rate in the FY 2021, the commenter believes this will lead to a continued decrease in the overall LTCH case volume.

Response: FY 2019 LTCH claims data are currently the best available data, and as noted previously, LTCH site neutral payment rate cases discharged during FY 2019 were partially paid the blended payment rate under the rolling end of the statutory transitional period. Due to the end of that transitional period for site neutral payment rate cases we continue to expect that costs and resource use for cases paid at the site neutral payment rate will likely be lower on average as compared to cases paid both prior to the implementation of the site neutral payment and during the transitional period and would continue to more closely resemble the costs and resource use for IPPS cases assigned to the same MS–DRG. We refer readers to 84 FR 42647 through 42648 for more information on our responses to these comments. We acknowledge commenters' concerns about the costs of treating site neutral cases, however, as noted by some commenters and discussed previously, the site neutral payment rate is a statutory requirement. We will consider the costs of site neutral payment rate cases as appropriate in future rulemaking.

Comment: Some commenters stated appreciation for the quick actions of CMS in its response to the COVID–19 pandemic and LTCH PPS policy changes, specifically CMS' implementation of section 3711(b) of the CARES Act which provides for a waiver of the site neutral payment rate for discharges that do not meet the LTCH patient criteria during the PHE period. These commenters expressed concern that the COVID–19 pandemic would affect relevant data used to determine payment rates for site neutral and LTCH PPS standard Federal payment rate cases and urged CMS to carefully consider these potential data distortions in collaboration with stakeholders in advance of rulemaking for FY 2022 and subsequent years. One commenter recommended CMS revise the estimated decrease in total LTCH PPS payments to an increase of 3.0 percent or more to help LTCHs meet the needs of COVID–19 patients.

Response: We appreciate the comments in regard to CMS' response to the COVID–19 pandemic and LTCH PPS payment policy. We understand the concerns expressed by commenters related to data used for future LTCH PPS payments and will take them in to account for future rulemaking. We recognize the impact that the COVID–19 PHE is having on all providers, which is why we have issued waivers and flexibilities to ease burden and allow providers to respond effectively during the COVID–19 PHE. Under section 3711(b)(2) of the CARES Act, Public Law 116–136, all LTCH cases admitted during the COVID–19 public health emergency period will be paid the relatively higher LTCH PPS standard Federal payment rate. As discussed previously, we project that payments to LTCH PPS standard Federal payment rate cases in FY 2021 will increase approximately 2.2 percent. We also note that our projected 1.1 percent decrease in total LTCH PPS payments does not account for the provisions of section 3711(b)(2) of the CARES Act if the PHE extends into FY 2021.

2. Impact on Rural Hospitals

For purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of an urban area and has fewer than 100 beds. As shown in Table IV, we are projecting a 1.7 percent increase in estimated payments for LTCH PPS standard Federal payment rate cases for LTCHs located in a rural area. This estimated impact is based on the FY 2019 data for the 18 rural LTCHs (out of 363 LTCHs) that were used for the impact analyses shown in Table IV.

3. Anticipated Effects of LTCH PPS Payment Rate Changes and Policy Changes

a. Budgetary Impact

Section 123(a)(1) of the BBRA requires that the PPS developed for LTCHs ''maintain budget neutrality.'' We believe that the statute's mandate for budget neutrality applies only to the first year of the implementation of the LTCH PPS (that is, FY 2003). Therefore, in calculating the FY 2003 standard Federal payment rate under § 412.523(d)(2), we set total estimated payments for FY 2003 under the LTCH PPS so that estimated aggregate payments under the LTCH PPS were estimated to equal the amount that would have been paid if the LTCH PPS had not been implemented.

Section 1886(m)(6)(A) of the Act establishes a dual rate LTCH PPS payment structure with two distinct payment rates for LTCH discharges beginning in FY 2016. Under this statutory change, LTCH discharges that meet the patient-level criteria for exclusion from the site neutral payment rate (that is, LTCH PPS standard Federal payment rate cases) are paid based on the LTCH PPS standard Federal payment rate. LTCH discharges paid at the site neutral payment rate are generally paid the lower of the IPPS comparable per diem amount, reduced by 4.6 percent for FYs 2018 through 2026, including any applicable HCO payments, or 100 percent of the estimated cost of the case, reduced by 4.6 percent. The statute also establishes a transitional payment method for cases that are paid at the site neutral payment rate for LTCH discharges occurring in cost reporting periods beginning during FY 2016 through FY 2019, under which the site neutral payment rate cases are paid based on a blended payment rate calculated as 50 percent of the applicable site neutral payment rate amount for the discharge and 50 percent of the applicable LTCH PPS standard Federal payment rate for the discharge.

As discussed in section I.J.2. of this Appendix, we project a decrease in aggregate LTCH PPS payments in FY 2021 of approximately $40 million. This estimated decrease in payments reflects the projected increase in payments to LTCH PPS standard Federal payment rate cases of approximately $74 million and the projected decrease in payments to site neutral payment rate cases of approximately $114 million under the dual rate LTCH PPS payment rate structure required by the statute beginning in FY 2016. (We note that these calculations are based on unrounded numbers and thus may not sum as expected.)

As discussed in section V.D. of the Addendum to this final rule, our actuaries project cost and resource changes for site neutral payment rate cases due to the site neutral payment rates required under the statute. Specifically, our actuaries project that the costs and resource use for cases paid at the site neutral payment rate will likely be lower, on average, than the costs and resource use for cases paid at the LTCH PPS standard Federal payment rate, and will likely mirror the costs and resource use for IPPS cases assigned to the same MS–DRG.

While we are able to incorporate this projection at an aggregate level into our payment modeling, because the historical claims data that we are using in this final rule to project estimated FY 2021 LTCH PPS payments (that is, FY 2019 LTCH claims data) do not reflect this actuarial projection, we are unable to model the impact of the change in LTCH PPS payments for site neutral payment rate cases at the same level of detail with which we are able to model the impacts of the changes to LTCH PPS payments for LTCH PPS standard Federal payment rate cases. Therefore, Table IV only reflects changes in LTCH PPS payments for LTCH PPS standard Federal payment rate cases and, unless otherwise noted, the remaining discussion in section I.J.3. of this Appendix refers only to the impact on LTCH PPS payments for LTCH PPS standard Federal payment rate cases. In the following section, we present our provider impact analysis for the changes that affect LTCH PPS payments for LTCH PPS standard Federal payment rate cases.

b. Impact on Providers

The basic methodology for determining a per discharge payment for LTCH PPS standard Federal payment rate cases is currently set forth under §§ 412.515 through 412.533 and 412.535. In addition to adjusting the LTCH PPS standard Federal payment rate by the MS–LTC–DRG relative weight, we make adjustments to account for area wage levels and SSOs. LTCHs located in Alaska and Hawaii also have their payments adjusted by a COLA. Under our application of the dual rate LTCH PPS payment structure, the LTCH PPS standard Federal payment rate is generally only used to determine payments for LTCH PPS standard Federal payment rate cases (that is, those LTCH PPS cases that meet the statutory criteria to be excluded from the site neutral payment rate). LTCH discharges that do not meet the patient-level criteria for exclusion are paid the site neutral payment rate, which we are calculating as the lower of the IPPS comparable per diem amount as determined under § 412.529(d)(4), reduced by 4.6 percent for FYs 2018 through 2026, including any applicable outlier payments, or 100 percent of the estimated cost of the case as determined under existing § 412.529(d)(2). In addition, when certain thresholds are met, LTCHs also receive HCO payments for both LTCH PPS standard Federal payment rate cases and site neutral payment rate cases that are paid at the IPPS comparable per diem amount.

To understand the impact of the changes to the LTCH PPS payments for LTCH PPS standard Federal payment rate cases presented in this final rule on different categories of LTCHs for FY 2021, it is necessary to estimate payments per discharge for FY 2020 using the rates, factors, and the policies established in the FY 2020 IPPS/LTCH PPS final rule and estimate payments per discharge for FY 2021 using the rates, factors, and the policies in this FY 2021 IPPS/LTCH PPS final rule (as discussed in section VII. of the preamble of this final rule and section V. of the Addendum to this final rule). As discussed elsewhere in this final rule, these estimates are based on the best available LTCH claims data and other factors, such as the application of inflation factors to estimate costs for HCO cases in each year. The resulting analyses can then be used to compare how our policies applicable to LTCH PPS standard Federal payment rate cases affect different groups of LTCHs.

For the following analysis, we group hospitals based on characteristics provided in the OSCAR data, cost report data in HCRIS, and PSF data. Hospital groups included the following:

- Location: large urban/other urban/rural.
- Participation date.
- Ownership control.
- Census region.
- Bed size.

c. Calculation of LTCH PPS Payments for LTCH PPS Standard Federal Payment Rate Cases

For purposes of this impact analysis, to estimate the per discharge payment effects of our policies on payments for LTCH PPS standard Federal payment rate cases, we simulated FY 2020 and FY 2021 payments on a case-by-case basis using historical LTCH claims from the FY 2019 MedPAR files that met or would have met the criteria to be paid at the LTCH PPS standard Federal payment rate if the statutory patient-level criteria had been in effect at the time of discharge for all cases in the FY 2019 MedPAR files. For modeling FY 2020 LTCH PPS payments, we used the FY 2020 standard Federal payment rate of $42,677.64 (or $41,844.90 for LTCHs that failed to submit quality data as required under the requirements of the LTCH QRP). Similarly, for modeling payments based on the FY 2021 LTCH PPS standard Federal payment rate, we used the FY 2021 standard Federal payment rate of $43,755.34 (or $42,899.90 for LTCHs that failed to submit quality data as required under the requirements of the LTCH QRP). In each case, we applied the applicable adjustments for area wage levels and the COLA for LTCHs located in Alaska and Hawaii. Specifically, for modeling FY 2020 LTCH PPS payments, we used the current FY 2020 labor-related share (66.3 percent), the wage index values established in the Tables 12A and 12B listed in the Addendum to the FY 2020 IPPS/LTCH PPS final rule (which are available via the internet on the CMS website), the FY 2020 HCO fixed-loss amount for LTCH PPS standard Federal payment rate cases of $26,778 (as reflected in the FY 2020 IPPS/LTCH PPS final rule), and the FY 2020 COLA factors (shown in the table in section V.C. of the Addendum to that final rule) to adjust the FY 2020 nonlabor-related share (33.7 percent) for LTCHs located in Alaska and Hawaii. Similarly, for modeling FY 2021 LTCH PPS payments, we used the FY 2021 LTCH PPS labor-related share (68.1 percent), the FY 2021 wage index values from Tables 12A and 12B listed in section VI. of the Addendum to this final rule (which are available via the internet on the CMS website), the FY 2021 fixed-loss amount for LTCH PPS standard Federal payment rate cases of $27,195 (as discussed in section V.D.3. of the Addendum to this final rule), and the FY 2021 COLA factors (shown in the table in section V.C. of the Addendum to this final rule) to adjust the FY 2021 nonlabor-related share (31.9 percent) for LTCHs located in Alaska and Hawaii. We note that in modeling payments for HCO cases for LTCH PPS standard Federal payment rate cases, we applied an inflation factor of 2.0 percent (determined by the Office of the Actuary) to update the FY 2019 costs of each case to FY 2020, and an inflation factor of 4.3 percent (determined by the Office of the Actuary) to update the FY 2019 costs of each case to FY 2021.

The impacts that follow reflect the estimated ''losses'' or ''gains'' among the various classifications of LTCHs from FY 2020 to FY 2021 based on the payment rates and policy changes applicable to LTCH PPS standard Federal payment rate cases presented in this final rule. Table IV illustrates the estimated aggregate impact of the change in LTCH PPS payments for LTCH PPS standard Federal payment rate cases among various classifications of LTCHs. (As discussed previously, these impacts do not include LTCH PPS site neutral payment rate cases.)

- The first column, LTCH Classification, identifies the type of LTCH.
- The second column lists the number of LTCHs of each classification type.
- The third column identifies the number of LTCH cases expected to meet the LTCH PPS standard Federal payment rate criteria.
- The fourth column shows the estimated FY 2020 payment per discharge for LTCH cases expected to meet the LTCH PPS standard Federal payment rate criteria (as described previously).
- The fifth column shows the estimated FY 2021 payment per discharge for LTCH cases expected to meet the LTCH PPS standard Federal payment rate criteria (as described previously).
- The sixth column shows the percentage change in estimated payments per discharge for LTCH cases expected to meet the LTCH PPS standard Federal payment rate criteria from FY 2020 to FY 2021 due to the annual update to the standard Federal rate (as discussed in section V.A.2. of the Addendum to this final rule).
- The seventh column shows the percentage change in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2020 to FY 2021 for changes due to the changes to the area wage level adjustment (that is, the updated hospital wage data, labor-related share, and the to the geographic labor-market area designations, including the 5-percent cap transition policy), and the application of the corresponding budget neutrality factor (as discussed in section V.B.6. of the Addendum to this final rule).
- The eighth column shows the percentage change in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2020 (Column 4) to FY 2021 (Column 5) for all changes.

[1] Estimated FY 2021 LTCH PPS payments for LTCH PPS standard Federal payment rate criteria based on the payment rate and factor changes applicable to such cases presented in the preamble of and the Addendum to this final rule.

[2] Percent change in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2020 to FY 2021 for the annual update to the LTCH PPS standard Federal payment rate.

[3] Percent change in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2020 to FY 2021 for changes due to the changes to the area wage level adjustment under § 412.525(c) (that is, updated hospital wage data, the labor related share, the to the geographic labor-market area designations, and the 5-percent cap transition, as discussed in section V.B. of the Addendum to this final rule).

[4] Percent change in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2020 (shown in Column 4) to FY 2021 (shown in Column 5), including all of the changes to the rates and factors applicable to such cases presented in the preamble and the Addendum to this final rule. We note that this column, which shows the percent change in estimated payments per discharge for all changes, does not equal the sum of the percent changes in estimated payments per discharge for the annual update to the LTCH PPS standard Federal payment rate (Column 6) and the changes due to the changes to the area wage level adjustment with budget neutrality (Column 7) due to the effect of estimated changes in estimated payments to aggregate HCO payments for LTCH PPS standard Federal payment rate cases (as discussed in this impact analysis), as well as other interactive effects that cannot be isolated.

BILLING CODE 4120–01–C

d. Results

Based on the FY 2019 LTCH cases (from 363 LTCHs) that were used for the analyses in this final rule, we have prepared the following summary of the impact (as shown in Table IV) of the LTCH PPS payment rate and policy changes for LTCH PPS standard Federal payment rate cases presented in this final rule. The impact analysis in Table IV shows that estimated payments per discharge for LTCH PPS standard Federal payment rate

cases are projected to increase 2.2 percent, on average, for all LTCHs from FY 2020 to FY 2021 as a result of the payment rate and policy changes applicable to LTCH PPS standard Federal payment rate cases presented in this final rule. This estimated 2.2 percent increase in LTCH PPS payments per discharge was determined by comparing estimated FY 2021 LTCH PPS payments (using the final payment rates and factors discussed in this final rule) to estimated FY 2020 LTCH PPS payments for LTCH discharges which will be LTCH PPS standard Federal payment rate cases if the dual rate LTCH PPS payment structure was or had been in effect at the time of the discharge (as described in section I.J.3. of this Appendix).

As stated previously, we are updating the LTCH PPS standard Federal payment rate for FY 2021 by 2.3 percent. For LTCHs that fail to submit quality data under the requirements of the LTCH QRP, as required by section 1886(m)(5)(C) of the Act, a 2.0 percentage point reduction is applied to the annual update to the LTCH PPS standard Federal payment rate. In addition, we are applying the incremental change in the one-time budget neutrality adjustment factor of 0.991249 for the cost of eliminating the 25-percent threshold policy in FY 2021 as discussed in section VII.D. of the preamble of this final rule. Consistent with § 412.523(d)(4), we also are applying a budget neutrality factor for changes to the area wage level adjustment of 1.0016837 (discussed in section V.B.6. of the Addendum to this final rule), based on the best available data at this time, to ensure that any changes to the area wage level adjustment will not result in any change (increase or decrease) in estimated aggregate LTCH PPS standard Federal payment rate payments. As we also explained earlier in this section, for most categories of LTCHs (as shown in Table IV, Column 6), the estimated payment increase due to the 2.3 percent annual update to the LTCH PPS standard Federal payment rate is projected to result in approximately a 2.3 percent increase in estimated payments per discharge for LTCH PPS standard Federal payment rate cases for all LTCHs from FY 2020 to FY 2021. We note our estimate of the changes in payments due to the update to the LTCH PPS standard Federal payment rate also reflects estimated payments for SSO cases that are paid using a methodology that is not entirely affected by the update to the LTCH PPS standard Federal payment rate. Consequently, for certain hospital categories, we estimate that payments to LTCH PPS standard Federal payment rate cases may differ slightly from 2.3 percent due to the annual update to the LTCH PPS standard Federal payment rate for FY 2021.

(1) Location

Based on the most recent available data, the vast majority of LTCHs are located in urban areas. Only approximately 5 percent of the LTCHs are identified as being located in a rural area, and approximately 4 percent of all LTCH PPS standard Federal payment rate cases are expected to be treated in these rural hospitals. The impact analysis presented in Table IV shows that the overall average percent increase in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2020 to FY 2021 for all hospitals is 2.2 percent. The projected increase for urban hospitals is 2.3 percent for urban hospitals, while the projected increase for rural hospitals is 1.7 percent. This smaller than average projected increase for rural LTCHs is primarily due to the changes to the area wage adjustment, including the changes to the labor market areas.

(2) Participation Date

LTCHs are grouped by participation date into four categories: (1) Before October 1983; (2) between October 1983 and September 1993; (3) between October 1993 and September 2002; and (4) October 2002 and after. Based on the most recent available data, the categories of LTCHs with the largest expected percentage of LTCH PPS standard Federal payment rate cases (approximately 41 percent and 43 percent, respectively) are in LTCHs that began participating in the Medicare program between October 1993 and September 2002 and after October 2002. These LTCHs are expected to both experience an increase in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2020 to FY 2021 of 2.2 percent. LTCHs that began participating in the Medicare program between October 1983 and September 1993 are projected to experience the largest percent increase, 2.4 percent, in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2020 to FY 2021, as shown in Table IV. Approximately 3 percent of LTCHs began participating in the Medicare program before October 1983, and these LTCHs are projected to experience an average percent increase of 2.2 percent in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2020 to FY 2021

(3) Ownership Control

LTCHs are grouped into three categories based on ownership control type: Voluntary, proprietary, and government. Based on the most recent available data, approximately 17 percent of LTCHs are identified as voluntary (Table IV). The majority (approximately 81 percent) of LTCHs are identified as proprietary, while government owned and operated LTCHs represent approximately 3 percent of LTCHs. Based on ownership type, voluntary and proprietary LTCHs are each expected to experience an increase of 2.3 percent and 2.2 percent in payments to LTCH PPS standard Federal payment rate cases, respectively. Government owned and operated LTCHs, meanwhile, are expected to experience a 2.4 percent increase in payments to LTCH PPS standard Federal payment rate cases from FY 2020 to FY 2021.

(4) Census Region

Estimated payments per discharge for LTCH PPS standard Federal payment rate cases for FY 2021 are projected to increase across all census regions. LTCHs located in the Pacific region are projected to experience the largest increase at 2.9 percent. The remaining regions are projected to experience an increase in payments in the range of 1.8 to 2.3 percent. These regional variations are primarily due to the changes to the area wage adjustment, including the changes to the labor market areas.

(5) Bed Size

LTCHs are grouped into six categories based on bed size: 0–24 beds; 25–49 beds; 50–74 beds; 75–124 beds; 125–199 beds; and greater than 200 beds. We project that LTCHs with 0–24 beds will experience the smallest increase in payments for LTCH PPS standard Federal payment rate cases, 1.9 percent. LTCHs with 50–74 beds, 75–124 beds, 125–199 beds, and with 200 or more beds, will all experience the largest increase in payments for LTCH PPS standard Federal payment rate cases of 2.3 percent. LTCHs with 25–49 beds are projected to experience a 2.1 percent increase in payments.

5. Effect on the Medicare Program

As stated previously, we project that the provisions of this final rule will result in an increase in estimated aggregate LTCH PPS payments to LTCH PPS standard Federal payment rate cases in FY 2021 relative to FY 2020 of approximately $74 million (or approximately 2.2 percent) for the 363 LTCHs in our database. Although, as stated previously, the hospital-level impacts do not include LTCH PPS site neutral payment rate cases, we estimate that the provisions of this final rule will result in a decrease in estimated aggregate LTCH PPS payments to site neutral payment rate cases in FY 2021 relative to FY 2020 of approximately $114 million (or approximately −24 percent) for the 363 LTCHs in our database. (As noted previously, we estimate payments to site neutral payment rate cases in FY 2021 represent approximately 10 percent of total estimated FY 2021 LTCH PPS payments.) Therefore, we project that the provisions of this final rule will result in a decrease in estimated aggregate LTCH PPS payments for all LTCH cases in FY 2021 relative to FY 2020 of approximately $40 million (or approximately −1.1 percent) for the 363 LTCHs in our database.

6. Effect on Medicare Beneficiaries

Under the LTCH PPS, hospitals receive payment based on the average resources consumed by patients for each diagnosis. We do not expect any changes in the quality of care or access to services for Medicare beneficiaries as a result of this final rule, but we continue to expect that paying prospectively for LTCH services will enhance the efficiency of the Medicare program. As discussed previously, we do not expect the continued implementation of the site neutral payment system to have a negative impact on access to or quality of care, as demonstrated in areas where there is little or no LTCH presence, general short-term acute care hospitals are effectively providing treatment for the same types of patients that are treated in LTCHs.

K. Effects of Requirements for the Hospital Inpatient Quality Reporting (IQR) Program

In section VIII.A. of the preamble of this final rule, we are finalizing our proposed requirements for hospitals to report quality data under the Hospital IQR Program in order to receive the full annual percentage increase for the FY 2022 payment determination and subsequent years.

In this final rule, we are finalizing our proposed reporting, submission, and public

display requirements for eCQMs, including policies to: (1) Progressively increase the numbers of quarters of eCQM data reported, from one self-selected quarter of data to four quarters of data over a 3-year period, by requiring hospitals to report: (a) Two quarters of data for the CY 2021 reporting period/FY 2023 payment determination for each of the four self-selected eCQMs; (b) three quarters of data for the CY 2022 reporting period/FY 2024 payment determination for three self-selected eCQMs and the Safe Use of Opioids eCQM; and (c) four quarters of data beginning with the CY 2023 reporting period/FY 2025 payment determination and for subsequent years, while continuing to allow hospitals to report: (i) Three self-selected eCQMs, and (ii) the Safe Use of Opioids eCQM; and (2) begin public display of eCQM data beginning with data reported by hospitals for the CY 2021 reporting period and for subsequent years. The Hospital IQR Program eCQM-related proposals being finalized are in alignment with proposals that we are finalizing under the Promoting Interoperability Program. We are also finalizing our proposal to expand the requirement to use EHR technology certified to the 2015 Edition for submitting data on not only the previously finalized Hybrid Hospital-Wide Readmission measure, but all hybrid measures in the Hospital IQR Program. While we believe there would be no change to the information collection burden estimate due to public display of eCQM data, we acknowledge that there is other burden associated with this provision. For example, there is burden associated with the optional reviewing of hospital-specific reports during the public reporting preview. However, we believe this burden is nominal because hospitals already review these reports with respect to other types of measures for the Hospital IQR Program.

We also are finalizing several proposed changes to streamline validation processes under the Hospital IQR Program. We will: (1) Require the use of electronic file submissions via a CMS-approved secure file transmission process and no longer allow the submission of paper copies of medical records or copies on digital portable media such as CD, DVD, or flash drive starting with validation affecting the FY 2024 payment determination; (2) combine the validation processes for chart-abstracted measures and eCQMs for validation affecting the FY 2024 payment determination and subsequent years by: (a) Aligning data submission quarters; (b) combining hospital selection, including: (i) Reducing the pool of hospitals randomly selected for chart-abstracted measure validation; and (ii) integrating and applying targeting criteria for eCQM validation; (c) removing previous exclusion criteria; and (d) combining scoring processes by providing one combined validation score for the validation of chart-abstracted measures and eCQMs with the eCQM portion of the combined score weighted at zero; and (3) formalize the process for conducting educational reviews beginning with eCQM validation affecting the FY 2023 payment determination in alignment with current processes for providing feedback for chart-abstracted validation results.

We estimate that the policies finalized in this final rule will result in an increase of 6,533 hours (6,660 − 67 hours) for 3,300 IPPS hospitals across a 4-year period from the CY 2021 reporting period/FY 2023 payment determination through the CY 2024 reporting period/FY 2026 payment determination. The total cost increase associated with these policies is approximately $253,480 (6,533 hours × $38.80) (which also reflects use of an updated hourly wage rate as previously discussed). We refer readers to section XI.B.7. of the preamble of this final rule (information collection requirements) for a detailed discussion of the calculations estimating the changes to the information collection burden for submitting data to the Hospital IQR Program.

With regard to our finalized policy to combine the hospital selection process, including the reduction of the pool of hospitals randomly selected for chart-abstracted measure validation from 400 hospitals to up to 200 hospitals, while we expect no change to the information collection burden for the Hospital IQR Program as discussed in section XI.B.7.b. of the preamble of this final rule because we directly reimburse hospitals for medical records, we believe there may be other cost savings beyond information collection burden due to 200 fewer hospitals being selected for Hospital IQR Program validation each year.

Historically, 100 hospitals, on average, that participate in the Hospital IQR Program do not receive the full annual percentage increase in any fiscal year due to the failure to meet all requirements of this Program. We anticipate that the number of hospitals not receiving the full annual percentage increase will be approximately the same as in past years.

A number of commenters expressed concern about an increase in burden related to our eCQM related proposals to increase the number of required reporting quarters for eCQM data and our proposal to begin publicly reporting eCQM data.

We believe the long-term benefits associated with reporting a full year of electronic data will outweigh the burdens and that increasing the number of quarters for which hospitals are required to report eCQM data will produce more comprehensive and reliable quality information for patients and providers. We stated our intention in the FY 2018 IPPS/LTCH PPS final rule to gradually transition toward more robust eCQM reporting (82 FR 38356). We reiterated this stated goal to incrementally increase the use of EHR data for quality measurement in a subsequent final rule (84 FR 42502). We believe that taking an incremental approach to increasing eCQM reporting over a 3-year period will help to ease the burdens associated with reporting larger amounts of data and will provide hospitals and vendors with additional time to plan and sufficiently allocate resources for more robust eCQM reporting. We also believe the increase in reporting quarters does not represent a significant increase in burden beyond the existing requirement to report one quarter of eCQM data. Once the eCQM updates are implemented in hospital EHRs, reporting an additional quarter of data should not require the same level of effort as reporting one initial quarter of data because hospitals should not need to update the eCQM specifications each quarter. Thus, we do not expect hospitals to experience a significant amount of added burden reporting three additional quarters of data over a 3-year period. The data submission deadline for eCQM data under the Hospital IQR Program, regardless of how many quarters of data are required to be reported for a given calendar year, will continue to be the end of 2 months following the close of the respective calendar year. There is no additional information collection burden associated with our proposal to publically reporting eCQM data, however we acknowledge that there are other types of burden associated with this proposal. For example, there is burden associated with the optional reviewing of hospital-specific reports during the public reporting preview period; however, we believe this burden is nominal because hospitals already review these reports with respect to other types of measures for the Hospital IQR Program.

We agree with the majority of commenters who expressed that the finalization of the validation proposals would be less burdensome overall. Combining and aligning the hospital pool for validation between the programs would reduce burden by 400 hospitals per year starting with validation affecting the FY 2024 payment determination. This is supported by the majority of comments that we received in response to this proposal, which indicate that most hospitals believe that the combined process will be less burdensome. In addition, our proposal to reduce the overall number of hospitals selected for validation from 800 to up to 400, further reduces the overall validation burden.

For a detailed discussion of comments we received on the information collection burden associated with the finalization of these proposals, please see section VIII.A.10 of the preamble of this final rule. We believe the finalization of these proposals effectively balances the burdens associated with increased reporting of eCQM data and the benefits of providing that quality data to patients and consumers.

L. Effects of Requirements for the PPS-Exempt Cancer Hospital Quality Reporting (PCHQR) Program

In section VIII.B. of the preamble of this final rule, we finalize our proposed policies for the quality data reporting program for PPS-exempt cancer hospitals (PCHs), which we refer to as the PPS-exempt Cancer Hospital Quality Reporting (PCHQR) Program. The PCHQR Program is authorized under section 1866(k) of the Act, which was added by section 3005 of the Affordable Care Act. There is no financial impact to PCH Medicare reimbursement if a PCH does not submit data.

In section VIII.B.4. of the preamble of this final rule, we adopt refined versions of two existing measures: The Catheter-Associated Urinary Tract Infection (CAUTI) Outcome Measure and the Central Line-Associated Bloodstream Infection (CLABSI) Outcome Measure, beginning with the FY 2023

program year. As explained in section XI.B.8. of the preamble of this final rule, we do not anticipate any change in burden hours on the PCHs associated with our finalized policy to refine the CAUTI and CLABSI measures beginning with the FY 2023 program year because there are no changes to the data submission requirements for CAUTI and CLABSI.

We received no comments in response to the effects of requirements section specifically discussed above.

M. Effects of Requirements for the Long-Term Care Hospital Quality Reporting Program (LTCH QRP)

We did not propose any policies and, therefore, are not finalizing any policies in this final rule for the LTCH QRP.

N. Effects of Proposed Requirements Regarding the Promoting Interoperability Programs

In section VIII.D. of the preamble of this final rule, we finalize our proposed requirements for eligible hospitals and CAHs participating in the Medicare and Medicaid Promoting Interoperability Programs. Specifically, we are finalizing the following proposed changes for eligible hospitals and CAHs that attest to CMS under the Medicare Promoting Interoperability Program: (1) An EHR reporting period of a minimum of any continuous 90-day period in CY 2022 for new and returning participants (eligible hospitals and CAHs); (2) to maintain the Electronic Prescribing Objective's Query of PDMP measure as optional and worth 5 bonus points in CY 2021; (3) to modify the name of the Support Electronic Referral Loops by Receiving and Incorporating Health Information measure; (4) to progressively increase the number of quarters for which hospitals are required to report eCQM data, from the current requirement of one self-selected calendar quarter of data, to four calendar quarters of data, over a 3-year period. Specifically, we will require: (a) 2 self-selected calendar quarters of data for the CY 2021 reporting period; (b) 3 self-selected calendar quarters of data for the CY 2022 reporting period; and (c) 4 calendar quarters of data beginning with the CY 2023 reporting period, where the submission period for the Medicare Promoting Interoperability Program will be the 2 months following the close of the respective calendar year; (5) to begin publicly reporting eCQM performance data beginning with the eCQM data reported by eligible hospitals and CAHs for the reporting period in CY 2021 on the *Hospital Compare* and/or *data.medicare.gov* websites or successor websites; (6) to correct errors and amend regulation text under § 495.104(c)(5)(viii)(B) through (D) regarding transition factors under section 1886(n)(2)(E)(i) for the incentive payments for Puerto Rico eligible hospitals; and (7) to correct errors and amend regulation text under § 495.20(e)(5)(iii) and (l)(11)(ii)(C)(*1*) for regulatory citations for the ONC certification criteria. We are amending our regulations as necessary to incorporate these changes. For the EHR reporting period in CY 2021, the provisions summarized in this section are mainly continuations of existing policies. However, two updated instances of a previous miscalculation and an updated Bureau of Labor Statistics wage rate will result in both a minor reduction of program burden hours (−44) as well as a small increase in total cost (+$24,024) for CY 2021.

We did not receive individual comments in response to the numerical impacts specifically discussed above, therefore, we are finalizing our impacts as proposed without modification. For a complete, detailed discussion of comments we received on the Promoting Interoperability Program's policy proposals, please see section VIII.D. of the preamble of this final rule.

O. Alternatives Considered

This final rule contains a range of policies. It also provides descriptions of the statutory provisions that are addressed, identifies the final policies, and presents rationales for our decisions and, where relevant, alternatives that were considered.

1. Implementation of Revised Labor Market Area Delineations

As discussed in section III.A.2. of the preamble of this final rule, the wage index is calculated and assigned to hospitals on the basis of the labor market area in which the hospital is located. Under section 1886(d)(3)(E) of the Act, beginning with FY 2005, we delineate hospital labor market areas based on OMB-established Core-Based Statistical Areas (CBSAs). Generally, OMB issues major revisions to statistical areas every 10 years, based on the results of the decennial census. However, OMB occasionally issues minor updates and revisions to statistical areas in the years between the decennial censuses through OMB Bulletins. On September 14, 2018, OMB issued OMB Bulletin No. 18–04. While OMB Bulletin No. 18–04 is not based on new census data, it includes some material changes to the OMB statistical area delineations. Specifically, under the revised OMB delineations, there are some new CBSAs, urban counties that become rural, rural counties that become urban, and existing CBSAs that are split apart. In addition, the revised OMB delineations will affect various hospital reclassifications, the out-migration adjustment (established by section 505 of Pub. L. 108–173), and treatment of hospitals located in certain rural counties (that is, ''Lugar'' hospitals) under section 1886(d)(8)(B) of the Act.

We considered whether we should finalize the implementation of the revised OMB delineations as described in OMB Bulletin No. 18–04, beginning with the FY 2021 IPPS wage index, or whether we should wait to implement any further changes to the hospital labor market areas until OMB issues revisions to the statistical areas based on the results of the upcoming decennial census. We believe it is important for the IPPS to use updated labor market area delineations as soon as reasonably possible in order to maintain a more accurate and up-to-date payment system that reflects the reality of population shifts and labor market conditions. Furthermore, we believe that using the updated delineations in OMB Bulletin No. 18–04 will increase the integrity of the IPPS wage index system by creating a more accurate representation of geographic variations in wage levels. Therefore, we decided not to wait until OMB issues revisions to the statistical areas based on the results of the upcoming decennial census, but are finalizing the implementation of the revised OMB delineations as described in the September 14, 2018 OMB Bulletin No. 18–04, effective October 1, 2020 beginning with the FY 2021 IPPS wage index. We note that as described in section III.A.2.c. of the preamble of this final rule, we are finalizing a transition for hospitals that would see a decrease of more than 5 percent in their FY 2021 wage index compared to their FY 2020 wage index.

2. Market-Based MS–DRG Relative Weight Estimation Data Collection and Change in Methodology for Calculating MS–DRG Relative Weights

In section IV.P.2.c. of the preamble of this final rule, we are finalizing the adoption of a market-based methodology for estimating the MS–DRG relative weights beginning in FY 2024, based on the median payer-specific negotiated charge information we are finalizing to collect on the cost report. We are finalizing our data collection proposal with modification to only collect the median payer-specific negotiated charge by MS–DRG for payers that are MA organizations, rather than collecting both the median payer-specific negotiated charge by MS–DRG for payers that are MA organizations and for all third party payers, as proposed. The market-based rate information we are finalizing to collect on the Medicare cost report would be the median of the payer-specific negotiated charges by MS–DRG, as described previously, for a hospital's MA organization payers. The payer-specific negotiated charges used by hospitals to calculate these medians would be the payer-specific negotiated charges for service packages that hospitals are required to make public under the requirements finalized in the Hospital Price Transparency final rule (84 FR 65524) that can be cross-walked to an MS–DRG. Hospitals would use the payer-specific negotiated charge data that they would be required to make public, as a result of the Hospital Price Transparency final rule, to then calculate the median payer-specific negotiated charges (as described further in section IV.P.2.c. of this final rule) to report on the Medicare cost report. We are not finalizing the collection of alternative market-based data, such as the median negotiated reimbursement amount, as initially discussed in section IV.P.2.c. of the proposed rule, or any refinements to the definition of median payer-specific negotiated charge.

In section IV.P.2.d. of the preamble of this final rule, we also finalize the adoption of a new market-based methodology for estimating the MS–DRG relative weights, beginning in FY 2024. This market-based methodology is based on the median payer-specific negotiated charge information collected on the Medicare cost report. In the proposed rule we considered alternatives to this approach, such as the use of the median payer-specific negotiated charge for all third-party payers (instead of the median payer-specific negotiated charge for all MA organizations), other alternative collections

of payer-specific negotiated charges, or other market-based information such as a median negotiated reimbursement amount that a hospital negotiates with its MA organizations or third party payers (as described further in section IV.P.2.c of the preamble of the proposed rule), within the MS–DRG relative weight methodology.

We stated in the proposed rule that the same MS–DRG relative weight calculation described in section IV.P.2.d. would be used if we finalized an alternative to the median payer-specific negotiated charge information that we proposed to collect on the Medicare cost report, as further described in that section. We are not finalizing at this time a transition period to this market-based MS–DRG relative weight methodology, but did consider this, and will continue to consider this for future rulemaking prior to the FY 2024 effective date. We remain open to adjusting any finalized policy, through future rulemaking, prior to the FY 2024 effective date.

P. Reducing Regulation and Controlling Regulatory Costs

Executive Order 13771, titled Reducing Regulation and Controlling Regulatory Costs, was issued on January 30, 2017. This final rule is considered to be an E.O. 13771 regulatory action.

Q. Overall Conclusion

1. Acute Care Hospitals

Acute care hospitals are estimated to experience an increase of approximately $3.528 billion in FY 2021, including operating, capital, and new technology changes as modeled for this final rule. The estimated change in operating payments is approximately $3.022 billion (discussed in section I.G. and I.H. of this Appendix). The estimated change in capital payments is approximately $0.027 billion (discussed in section I.I. of this Appendix). The estimated change in new technology add-on payments is approximately $0.479 billion as discussed in section I.H. of this Appendix. The change in new technology add-on payments reflects the net impact of new, continuing, and expiring current new technology add on payments. Total may differ from the sum of the components due to rounding.

Table I. of section I.G. of this Appendix also demonstrates the estimated redistributional impacts of the IPPS budget neutrality requirements for the final MS–DRG and wage index changes, and for the wage index reclassifications under the MGCRB.

We estimate that hospitals would experience a 0.2 percent increase in capital payments per case, as shown in Table III. of section I.I. of this Appendix. We project that there would be a $27 million increase in capital payments in FY 2021 compared to FY 2020.

The discussions presented in the previous pages, in combination with the remainder of this final rule, constitute a regulatory impact analysis.

2. LTCHs

Overall, LTCHs are projected to experience a decrease in estimated payments in FY 2021. In the impact analysis, we are using the final rates, factors, and policies presented in this final rule based on the best available claims and CCR data to estimate the change in payments under the LTCH PPS for FY 2021. Accordingly, based on the best available data for the 363 LTCHs in our database, we estimate that overall FY 2021 LTCH PPS payments will decrease approximately $40 million relative to FY 2020 primarily as a result of the end of the statutory transition period for site neutral payment rate cases.

R. Regulatory Review Costs

If regulations impose administrative costs on private entities, such as the time needed to read and interpret a rule, we should estimate the cost associated with regulatory review. In the FY 2021 IPPS/LTCH PPS proposed rule, due to the uncertainty involved with accurately quantifying the number of entities that would review the proposed rule, we assumed that the total number of timely pieces of correspondence on last year's proposed rule will be the number of reviewers of this proposed rule. We acknowledge that this assumption may understate or overstate the costs of reviewing the rule. It is possible that not all commenters reviewed last year's rule in detail, and it is also possible that some reviewers chose not to comment on the proposed rule. For those reasons, and consistent with our approach in previous rulemakings (82 FR 38585; 83 FR 41777), we believe that the number of past commenters would be a fair estimate of the number of reviewers of the rule. We welcomed any public comments on the approach in estimating the number of entities that will review this final rule. We did not receive any public comments specific to our solicitation.

We also recognize that different types of entities are in many cases affected by mutually exclusive sections of the rule. Therefore, for the purposes of our estimate, and consistent with our approach in previous rulemaking (82 FR 38585; 83 FR 41777), we assume that each reviewer read approximately 50 percent of the rule. In the proposed rule, we welcomed public comments on this assumption. We did not receive any public comments specific to our solicitation.

We have used the number of timely pieces of correspondence on the FY 2021 IPPS/LTCH PPS proposed rule as our estimate for the number of reviewers of the final rule. We continue to acknowledge the uncertainty involved with using this number, but we believe it is a fair estimate due to the variety of entities affected and the likelihood that some of them choose to rely (in full or in part) on press releases, newsletters, fact sheets, or other sources rather than the comprehensive review of preamble and regulatory text. Using the wage information from the BLS for medical and health service managers (Code 11–9111), we estimate that the cost of reviewing this rule is $110.74 per hour, including overhead and fringe benefits *https://www.bls.gov/oes/current/oes_nat.htm*. Assuming an average reading speed, we estimate that it would take approximately 25.94 hours for the staff to review half of this proposed or final rule. For each entity that reviews the rule, the estimated cost is $2,873 (25.94 hours × $110.74). Therefore, we estimate that the total cost of reviewing this regulation is $2,476,579 ($2,873 × 862).

II. Accounting Statements and Tables

A. Acute Care Hospitals

As required by OMB Circular A–4 (available at *https://obamawhitehouse.archives.gov/omb/circulars_a-004_a-4/* and *https://georgewbush-whitehouse.archives.gov/omb/circulars/a004/a-4.html*), in Table V. of this Appendix, we have prepared an accounting statement showing the classification of the expenditures associated with the provisions of this final rule as they relate to acute care hospitals. This table provides our best estimate of the change in Medicare payments to providers as a result of the final changes to the IPPS presented in this final rule. All expenditures are classified as transfers to Medicare providers.

As shown in Table V. of this Appendix, the net costs to the Federal Government associated with the policies adopted in this final rule are estimated at $3.528 billion.

TABLE V.—ACCOUNTING STATEMENT: CLASSIFICATION OF ESTIMATED EXPENDITURES UNDER THE IPPS FROM FY 2020 TO FY 2021

Category	Transfers
Annualized Monetized Transfers	$3.528 billion
From Whom to Whom	Federal Government to IPPS Medicare Providers

B. LTCHs

As discussed in section I.J. of this Appendix, the impact analysis of the final payment rates and factors presented in this final rule under the LTCH PPS is projected to result in a decrease in estimated aggregate LTCH PPS payments in FY 2021 relative to FY 2020 of approximately $40 million based on the data for 363 LTCHs in our database

that are subject to payment under the LTCH PPS. Therefore, as required by OMB Circular A–4 (available at: *https://obamawhitehouse.archives.gov/omb/circulars_a004_a-4/* and *https://georgewbush-whitehouse.archives.gov/omb/circulars/a004/a-4.html*), in Table VI. of this Appendix, we have prepared an accounting statement showing the classification of the expenditures associated with the provisions of this final rule as they relate to the changes to the LTCH PPS. Table VI. of this Appendix provides our best estimate of the estimated change in Medicare payments under the LTCH PPS as a result of the final payment rates and factors and other provisions presented in this final rule based on the data for the 363 LTCHs in our database. All expenditures are classified as transfers to Medicare providers (that is, LTCHs).

As shown in Table VI. of this Appendix, the net cost to the Federal Government associated with the policies for LTCHs in this final rule are estimated at −$40 million.

TABLE VI.—ACCOUNTING STATEMENT: CLASSIFICATION OF ESTIMATED EXPENDITURES FROM THE FY 2020 LTCH PPS TO THE FY 2021 LTCH PPS

Category	Transfers
Annualized Monetized Transfers	$40 million
From Whom to Whom	LTCH Medicare Providers to Federal Government

III. Regulatory Flexibility Act (RFA) Analysis

The RFA requires agencies to analyze options for regulatory relief of small entities. For purposes of the RFA, small entities include small businesses, nonprofit organizations, and small government jurisdictions. We estimate that most hospitals and most other providers and suppliers are small entities as that term is used in the RFA. The great majority of hospitals and most other health care providers and suppliers are small entities, either by being nonprofit organizations or by meeting the SBA definition of a small business (having revenues of less than $7.5 million to $38.5 million in any 1 year). (For details on the latest standards for health care providers, we refer readers to page 36 of the Table of Small Business Size Standards for NAIC 622 found on the SBA website at: *http://www.sba.gov/sites/default/files/files/Size_Standards_Table.pdf*.)

For purposes of the RFA, all hospitals and other providers and suppliers are considered to be small entities. Individuals and States are not included in the definition of a small entity. We believe that the provisions of this final rule relating to acute care hospitals will have a significant impact on small entities as explained in this Appendix. For example, because all hospitals are considered to be small entities for purposes of the RFA, the hospital impacts described in this final rule are impacts on small entities. For example, we refer readers to ''Table I.—Impact Analysis of Changes to the IPPS for Operating Costs for FY 2021.'' Because we lack data on individual hospital receipts, we cannot determine the number of small proprietary LTCHs. Therefore, we are assuming that all LTCHs are considered small entities for the purpose of the analysis in section I.J. of this Appendix. MACs are not considered to be small entities because they do not meet the SBA definition of a small business. Because we acknowledge that many of the affected entities are small entities, the analysis discussed throughout the preamble of this final rule constitutes our regulatory flexibility analysis. This final rule contains a range of policies. It provides descriptions of the statutory provisions that are addressed, identifies the policies, and presents rationales for our decisions and, where relevant, alternatives that were considered.

For purposes of the RFA, as stated previously, all hospitals and other providers and suppliers are considered to be small entities. We estimate the provisions of this final rule would result in an estimated $3.528 billion increase in FY 2021 payments to IPPS hospitals, primarily driven by the applicable percentage increase to the IPPS rates in conjunction with other payment changes including uncompensated care payments, capital payments, and new technology add-on payments, as discussed in section I.B. of this Appendix. As discussed in section I.J. of this Appendix, the impact analysis of the payment rates and factors presented in this final rule under the LTCH PPS is projected to result in a decrease in estimated aggregate LTCH PPS payments in FY 2021 relative to FY 2020 of approximately $40 million. We solicited public comments on our estimates and analysis of the impact of our proposals on those small entities. Any public comments that we received and our responses are presented throughout this final rule.

IV. Impact on Small Rural Hospitals

Section 1102(b) of the Act requires us to prepare a regulatory impact analysis for any proposed or final rule that may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 604 of the RFA. With the exception of hospitals located in certain New England counties, for purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of an urban area and has fewer than 100 beds. Section 601(g) of the Social Security Amendments of 1983 (Pub. L. 98–21) designated hospitals in certain New England counties as belonging to the adjacent urban area. Thus, for purposes of the IPPS and the LTCH PPS, we continue to classify these hospitals as urban hospitals. (As shown in Table I. in section I.G. of this Appendix, rural IPPS hospitals with 0–49 beds and 50–99 beds are expected to experience an increase in payments from FY 2020 to FY 2021 of 2.0 percent and 2.1 percent, respectively. We refer readers to Table I. in section I.G. of this Appendix for additional information on the quantitative effects of the final policy changes under the IPPS for operating costs.)

V. Unfunded Mandates Reform Act (UMRA) Analysis

Section 202 of the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4) also requires that agencies assess anticipated costs and benefits before issuing any rule whose mandates require spending in any 1 year of $100 million in 1995 dollars, updated annually for inflation. In 2020, that threshold level is approximately $156 million. This final rule would not mandate any requirements for State, local, or tribal governments, nor would it affect private sector costs.

VI. Executive Order 13175

Executive Order 13175 directs agencies to consult with Tribal officials prior to the formal promulgation of regulations having tribal implications. Section 1880(a) of the Act states that a hospital of the Indian Health Service, whether operated by such Service or by an Indian tribe or tribal organization, is eligible for Medicare payments so long as it meets all of the conditions and requirements for such payments which are applicable generally to hospitals. Consistent with section 1880(a) of the Act, this final rule contains general provisions also applicable to hospitals and facilities operated by the Indian Health Service or Tribes or Tribal organizations under the Indian Self-Determination and Education Assistance Act.

As discussed in section IV.G.4 of the preamble of this final rule, CMS sought comment in the proposed rule on a potential restructuring of the Medicare DSH and uncompensated care payments specific to IHS and Tribal hospitals beginning in FY 2022. Consistent with Executive Order 13175, we continue to engage in consultation with Tribal officials on this issue. We intend to use input received from these consultations with Tribal officials, as well as the comments on the proposed rule, to inform future rulemaking.

VII. Executive Order 12866

In accordance with the provisions of Executive Order 12866, the Executive Office of Management and Budget reviewed this final rule.

Appendix B: Recommendation of Update Factors for Operating Cost Rates of Payment for Inpatient Hospital Services

I. Background

Section 1886(e)(4)(A) of the Act requires that the Secretary, taking into consideration the recommendations of MedPAC, recommend update factors for inpatient hospital services for each fiscal year that take into account the amounts necessary for the efficient and effective delivery of medically appropriate and necessary care of high quality. Under section 1886(e)(5) of the Act, we are required to publish update factors recommended by the Secretary in the proposed and final IPPS rules. Accordingly, this Appendix provides the recommendations for the update factors for the IPPS national standardized amount, the hospital-specific rate for SCHs and MDHs, and the rate-of-increase limits for certain hospitals excluded from the IPPS, as well as LTCHs. In prior years, we made a recommendation in the IPPS proposed rule and final rule for the update factors for the payment rates for IRFs and IPFs. However, for FY 2021, consistent with our approach for FY 2020, we are including the Secretary's recommendation for the update factors for IRFs and IPFs in separate **Federal Register** documents at the time that we announce the annual updates for IRFs and IPFs. We also discuss our response to MedPAC's recommended update factors for inpatient hospital services.

II. Inpatient Hospital Update for FY 2021

A. FY 2021 Inpatient Hospital Update

As discussed in section IV.B. of the preamble to this final rule, for FY 2021, consistent with section 1886(b)(3)(B) of the Act, as amended by sections 3401(a) and 10319(a) of the Affordable Care Act, we are setting the applicable percentage increase by applying the following adjustments in the following sequence. Specifically, the applicable percentage increase under the IPPS is equal to the rate-of-increase in the hospital market basket for IPPS hospitals in all areas, subject to a reduction of one-quarter of the applicable percentage increase (prior to the application of other statutory adjustments; also referred to as the market basket update or rate-of-increase (with no adjustments)) for hospitals that fail to submit quality information under rules established by the Secretary in accordance with section 1886(b)(3)(B)(viii) of the Act and a reduction of three-quarters of the applicable percentage increase (prior to the application of other statutory adjustments; also referred to as the market basket update or rate-of-increase (with no adjustments)) for hospitals not considered to be meaningful electronic health record (EHR) users in accordance with section 1886(b)(3)(B)(ix) of the Act, and then subject to an adjustment based on changes in economy-wide productivity (the multifactor productivity (MFP) adjustment). Section 1886(b)(3)(B)(xi) of the Act, as added by section 3401(a) of the Affordable Care Act, states that application of the MFP adjustment may result in the applicable percentage increase being less than zero. (We note that section 1886(b)(3)(B)(xii) of the Act required an additional reduction each year only for FYs 2010 through 2019.)

We note that, in compliance with section 404 of the MMA, in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38158 through 38175), we replaced the FY 2010-based IPPS operating and capital market baskets with the rebased and revised 2014-based IPPS operating and capital market baskets effective beginning in FY 2018.

In the FY 2021 IPPS/LTCH PPS proposed rule, in accordance with section 1886(b)(3)(B) of the Act, we proposed to base the proposed FY 2021 market basket update used to determine the applicable percentage increase for the IPPS on IGI's fourth quarter 2019 forecast of the 2014-based IPPS market basket rate-of-increase with historical data through third quarter 2019, which was estimated to be 3.0 percent. In accordance with section 1886(b)(3)(B) of the Act, as amended by section 3401(a) of the Affordable Care Act, in section IV.B. of the preamble of the FY 2021 IPPS/LTCH PPS proposed rule, based on IGI's fourth quarter 2019 forecast, we proposed a MFP adjustment of 0.4 percentage point for FY 2021. We also proposed that if more recent data subsequently became available, we would use such data, if appropriate, to determine the FY 2021 market basket update and MFP adjustment for the final rule.

In the FY 2021 IPPS/LTCH PPS proposed rule, based on IGI's fourth quarter 2019 forecast of the 2014-based IPPS market basket and the MFP adjustment, depending on whether a hospital submits quality data under the rules established in accordance with section 1886(b)(3)(B)(viii) of the Act (hereafter referred to as a hospital that submits quality data) and is a meaningful EHR user under section 1886(b)(3)(B)(ix) of the Act (hereafter referred to as a hospital that is a meaningful EHR user), we presented four possible applicable percentage increases that could be applied to the standardized amount.

In accordance with section 1886(b)(3)(B) of the Act, as amended by section 3401(a) of the Affordable Care Act, we are establishing the applicable percentages increase for the FY 2021 updates based on IGI's second quarter 2020 forecast of the 2014-based IPPS market basket of 2.4 percent and the MFP adjustment of 0.0 percentage point, as discussed in section IV.B., depending on whether a hospital submits quality data under the rules established in accordance with section 1886(b)(3)(B)(viii) of the Act and is a meaningful EHR user under section 1886(b)(3)(B)(ix) of the Act, as shown in the table in this section.

FY 2021	Hospital Submitted Quality Data and is a Meaningful EHR User	Hospital Submitted Quality Data and is NOT a Meaningful EHR User	Hospital Did NOT Submit Quality Data and is a Meaningful EHR User	Hospital Did NOT Submit Quality Data and is NOT a Meaningful EHR User
Market Basket Rate-of-Increase	2.4	2.4	2.4	2.4
Adjustment for Failure to Submit Quality Data under Section 1886(b)(3)(B)(viii) of the Act	0	0	-0.6	-0.6
Adjustment for Failure to be a Meaningful EHR User under Section 1886(b)(3)(B)(ix) of the Act	0	-1.8	0	-1.8
MFP Adjustment under Section 1886(b)(3)(B)(xi) of the Act	0	0	0	0
Applicable Percentage Increase Applied to Standardized Amount	**2.4**	**0.6**	**1.8**	**0.0**

B. Update for SCHs and MDHs for FY 2021

Section 1886(b)(3)(B)(iv) of the Act provides that the FY 2021 applicable percentage increase in the hospital-specific rate for SCHs and MDHs equals the applicable percentage increase set forth in section 1886(b)(3)(B)(i) of the Act (that is, the same update factor as for all other hospitals subject to the IPPS). Under current law, the MDH program is effective for discharges through September 30, 2022, as discussed in the FY 2019 IPPS/LTCH PPS final rule (83 FR 41429 through 41430).

As previously stated, the update to the hospital specific rate for SCHs and MDHs is subject to section 1886(b)(3)(B)(i) of the Act, as amended by sections 3401(a) and 10319(a) of the Affordable Care Act. Accordingly, depending on whether a hospital submits quality data and is a meaningful EHR user, we are establishing the same four possible applicable percentage increases in the previous table for the hospital-specific rate applicable to SCHs and MDHs.

C. FY 2021 Puerto Rico Hospital Update

As discussed in the FY 2017 IPPS/LTCH PPS final rule (81 FR 56939), prior to January 1, 2016, Puerto Rico hospitals were paid based on 75 percent of the national standardized amount and 25 percent of the Puerto Rico-specific standardized amount. Section 601 of Public Law 114–113 amended section 1886(d)(9)(E) of the Act to specify that the payment calculation with respect to operating costs of inpatient hospital services of a subsection (d) Puerto Rico hospital for inpatient hospital discharges on or after January 1, 2016, shall use 100 percent of the national standardized amount. Because Puerto Rico hospitals are no longer paid with a Puerto Rico-specific standardized amount under the amendments to section 1886(d)(9)(E) of the Act, there is no longer a need for us to make an update to the Puerto Rico standardized amount. Hospitals in Puerto Rico are now paid 100 percent of the national standardized amount and, therefore, are subject to the same update to the national standardized amount discussed under section IV.B.1. of the preamble of this final rule. Accordingly, for FY 2021, we are establishing an applicable percentage increase of 2.4 percent to the standardized amount for hospitals located in Puerto Rico.

D. Update for Hospitals Excluded From the IPPS for FY 2021

Section 1886(b)(3)(B)(ii) of the Act is used for purposes of determining the percentage increase in the rate-of-increase limits for children's hospitals, cancer hospitals, and hospitals located outside the 50 States, the District of Columbia, and Puerto Rico (that is, short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and America Samoa). Section 1886(b)(3)(B)(ii) of the Act sets the percentage increase in the rate-of-increase limits equal to the market basket percentage increase. In accordance with § 403.752(a) of the regulations, RNHCIs are paid under the provisions of § 413.40, which also use section 1886(b)(3)(B)(ii) of the Act to update the percentage increase in the rate-of-increase limits.

Currently, children's hospitals, PPS-excluded cancer hospitals, RNHCIs, and short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa are among the remaining types of hospitals still paid under the reasonable cost methodology, subject to the rate-of-increase limits. In addition, in accordance with § 412.526(c)(3) of the regulations, extended neoplastic disease care hospitals (described in § 412.22(i) of the regulations) also are subject to the rate-of-increase limits. As discussed in section VI. of the preamble of this final rule, in the FY 2018 IPPS/LTCH PPS final rule, we finalized the use of the percentage increase in the 2014-based IPPS operating market basket to update the target amounts for children's hospitals, PPS-excluded cancer hospitals, RNHCIs, and short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa for FY 2018 and subsequent fiscal years. In addition, as discussed in section IV.B. of the preamble of this final rule, the update to the target amount for extended neoplastic disease care hospitals for FY 2021 is the percentage increase in the 2014-based IPPS operating market basket. Accordingly, for FY 2021, the rate-of-increase percentage to be applied to the target amount for these children's hospitals, cancer hospitals, RNHCIs, extended neoplastic disease care hospitals, and short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa is the FY 2021 percentage increase in the 2014-based IPPS operating market basket. For this final rule, the current estimate of the IPPS operating market basket percentage increase for FY 2021 is 2.4 percent.

E. Update for LTCHs for FY 2021

Section 123 of Public Law 106–113, as amended by section 307(b) of Public Law 106–554 (and codified at section 1886(m)(1) of the Act), provides the statutory authority for updating payment rates under the LTCH PPS.

As discussed in section V.A. of the Addendum to this final rule, we are establishing an update to the LTCH PPS standard Federal payment rate for FY 2021 of 2.3 percent, consistent with section 1886(m)(3) of the Act which provides that any annual update be reduced by the productivity adjustment of 0.0 percentage point described in section 1886(b)(3)(B)(xi)(II) of the Act (that is, the MFP adjustment). Furthermore, in accordance with the LTCHQR Program under section 1886(m)(5) of the Act, we are reducing the annual update to the LTCH PPS standard Federal rate by 2.0 percentage points for failure of a LTCH to submit the required quality data. Accordingly, we are establishing an update factor of 1.023 in determining the LTCH PPS standard Federal rate for FY 2021. For LTCHs that fail to submit quality data for FY 2021, we are establishing an annual update to the LTCH PPS standard Federal rate of 0.3 percent (that is, the annual update for FY 2021 of 2.3 percent less 2.0 percentage points for failure to submit the required quality data in accordance with section 1886(m)(5)(C) of the Act and our rules) by applying a update factor of 1.003 in determining the LTCH PPS standard Federal rate for FY 2021. (We note that, as discussed in section VII.D. of the preamble of this final rule, the update to the LTCH PPS standard Federal payment rate of 2.3 percent for FY 2021 does not reflect any budget neutrality factors).

III. Secretary's Recommendations

MedPAC is recommending an inpatient hospital update of 2.0 percent. MedPAC's rationale for this update recommendation is described in more detail in this section. As previously stated, section 1886(e)(4)(A) of the Act requires that the Secretary, taking into consideration the recommendations of MedPAC, recommend update factors for inpatient hospital services for each fiscal year that take into account the amounts necessary for the efficient and effective delivery of medically appropriate and necessary care of high quality. Consistent with current law, depending on whether a hospital submits quality data and is a meaningful EHR user, we are recommending the four applicable percentage increases to the standardized amount listed in the table under section II. of this Appendix B. We are recommending that the same applicable percentage increases apply to SCHs and MDHs.

In addition to making a recommendation for IPPS hospitals, in accordance with section 1886(e)(4)(A) of the Act, we are recommending update factors for certain other types of hospitals excluded from the IPPS. Consistent with our policies for these facilities, we are recommending an update to the target amounts for children's hospitals, cancer hospitals, RNHCIs, short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa and extended neoplastic disease care hospitals of 2.4 percent.

For FY 2021, consistent with policy set forth in section VII. of the preamble of this final rule, for LTCHs that submit quality data, we are recommending an update of 2.3 percent to the LTCH PPS standard Federal rate. For LTCHs that fail to submit quality data for FY 2021, we are recommending an annual update to the LTCH PPS standard Federal rate of 0.3 percent.

IV. MedPAC Recommendation for Assessing Payment Adequacy and Updating Payments in Traditional Medicare

In its March 2020 Report to Congress, MedPAC assessed the adequacy of current payments and costs, and the relationship between payments and an appropriate cost base. MedPAC recommended an update to the hospital inpatient rates by 2 percent with the difference between this and the update amount specified in current law to be used to increase payments under MedPAC's Medicare quality program, the ''Hospital Value Incentive Program (HVIP).'' MedPAC stated that together, these recommendations, paired with the recommendation to eliminate the current hospital quality program incentives, would increase hospital payments by increasing the base payment rate and by increasing the average rewards hospitals receive under MedPAC's Medicare HVIP. We refer readers to the March 2020 MedPAC report, which is available for download at *www.medpac.gov,* for a complete discussion on these recommendations.

Response: With regard to MedPAC's recommendation of an update to the hospital inpatient rates equal to 2 percent, with the remainder of the applicable percentage increase specified in current law to be used to fund its recommended Medicare HVIP, section 1886(b)(3)(B) of the Act sets the requirements for the FY 2021 applicable percentage increase. Therefore, consistent with the statute, we are establishing an applicable percentage increase for FY 2021 of 2.4 percent, provided the hospital submits quality data and is a meaningful EHR user consistent with these statutory requirements. Furthermore, we appreciate MedPAC's recommendation concerning a new HVIP. We agree that continual improvement motivated by quality programs is an important incentive of the IPPS.

We note that, because the operating and capital payments in the IPPS remain

separate, we are continuing to use separate updates for operating and capital payments in the IPPS. The update to the capital rate is discussed in section III. of the Addendum to this final rule.

BILLING CODE 4120–01–P

FEDERAL REGISTER

Vol. 85 Friday,
No. 182 September 18, 2020

Part III

Federal Communications Commission

47 CFR Part 64
Review of Rules and Requirements for Priority Services; Proposed Rule

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Part 64

[PS Docket No. 20–187; FCC 20–97; FRS 16961]

Review of Rules and Requirements for Priority Services

AGENCY: Federal Communications Commission.

ACTION: Proposed rule.

SUMMARY: In this document, the Commission seeks to modernize the Commission's rules for the priority services programs by removing outdated requirements that may impede the use of internet Protocol-based technologies. It proposes to amend the Commission's rules to reflect the current administrative responsibilities for the priority services programs, while eliminating burdensome administrative requirements that are no longer needed. It also responds to two Petitions for Rulemaking from the National Telecommunications and Information Administration, on behalf of the Department of Homeland Security, requesting the Commission update its priority services rules.

DATES: Interested parties may file comments on or before October 19, 2020, and reply comments on or before November 17, 2020.

ADDRESSES: You may submit comments, identified by PS Docket No. 20–187, by any of the following methods:

- *Federal Communications Commission's Website: http://apps.fcc.gov/ecfs/.* Follow the instructions for submitting comments.
- *People with Disabilities:* Contact the FCC to request reasonable accommodations (accessible format documents, sign language interpreters, CART, etc.) by email: *FCC504@fcc.gov* or phone: 202–418–0530 or TTY: 202–418–0432.

For detailed instructions for submitting comments and additional information on the rulemaking process, see the **SUPPLEMENTARY INFORMATION** section of this document.

FOR FURTHER INFORMATION CONTACT: For additional information on this proceeding, contact Chris Smeenk, Attorney Advisor, Operations and Emergency Management Division, Public Safety and Homeland Security Bureau, at (202) 418–1630 or *Chris.Smeenk@fcc.gov.*

SUPPLEMENTARY INFORMATION: This is summary of the Commission's Notice of Proposed Rulemaking (NPRM), PS Docket No. 20–187; FCC 20–97, adopted on July 16, 2020, and released on July 17, 2020. The full text of this document is available at *https://docs.fcc.gov/public/attachments/FCC-20-97A1.pdf.*

Synopsis

I. Introduction

1. For years, National Security and Emergency Preparedness (NSEP) personnel have had access to priority services programs that leverage access to commercial communications infrastructure to support national command, control, and communications by providing prioritized connectivity during national emergencies. This prioritized connectivity may consist of prioritized provisioning and restoration of wired communications circuits or prioritized communications for wireline or wireless calls. These programs are used to ''maintain a state of readiness [and] to respond to and manage any event or crisis . . . [that] degrades or threatens the NSEP posture of the United States.'' The Department of Homeland Security (DHS) manages these programs through contractual agreements with telecommunications providers, service providers, and other contractors. However, the Commission also has had a long-standing regulatory role with respect to certain elements of these programs.

2. The Commission's rules for the current priority services programs date back to the establishment of the Telecommunications Service Priority (TSP) System in 1988 and the creation of the Priority Access Service (PAS), more commonly referred to as Wireless Priority Service (WPS), in 2000. The Commission adopted these rules for common carriers in large part based on a concern that, without them, the non-discrimination requirement of section 202 of the Communications Act would prevent (or at least deter) common carriers from voluntarily offering priority treatment. These rules, which were developed when communications networks were primarily based on circuit-switched technologies, have not been updated to address the advanced capabilities of internet Protocol (IP)-based communications supporting data as well as voice services, or to enhance the ability of users at different priority levels to share network capacity and resources. While the concerns that motivated the FCC's decision to adopt priority services rules for common carrier offerings do not apply to the contractual arrangements for non-common-carriage services, some have argued that our rules need to be updated to include IP-based communications, and the National Telecommunications and Information Administration (NTIA) filed petitions asking the Commission to initiate a rulemaking to consider updates to the existing rules.

3. We initiate this proceeding to determine whether we should update and streamline the Commission's priority services rules in light of the increase in IP-based technologies since we last examined those rules. As a part of our review, we seek comment on proposals submitted by NTIA to update the rules for both TSP and WPS. By considering both programs in a consolidated proceeding, we seek to promote efficiency and facilitate a holistic approach that addresses priority services on a platform-neutral basis.

II. Background

4. There are three priority services programs that support prioritized connectivity for NSEP users of telecommunications services. At present, the Emergency Communications Division of the Cybersecurity and Infrastructure Security Agency, within DHS, manages these programs through contractual ''carrier service agreements'' with telecommunications providers. However, as described below, some elements of these programs are also governed by the Commission's rules.

5. Telecommunications Service Priority (TSP) System. In 1987, the National Communications System—then an interagency group of federal departments and agencies—petitioned the Commission to adopt restoration priority rules. The Commission responded by creating the TSP System, which authorizes the ''assignment and approval of priorities for provisioning and restoration of common-carrier provided telecommunication services'' and ''services which are provided by government and/or non-common carriers and are interconnected to common carrier services.'' The Commission's TSP rules require service providers to prioritize the provisioning and restoration of wired communications facilities to ''ensure effective NSEP telecommunication services.'' The TSP System ''allows the assignment of priority levels to any NSEP service'' across three time periods, or stress conditions: (1) Peacetime/Crisis/Mobilizations; (2) Attack/War; and (3) Post-Attack/Recovery. There are over 2,000 organizations enrolled in TSP (*e.g.,* military bases, federal agencies, hospitals) covering approximately 300,000 active circuits. Costs associated with TSP are governed by tariff or contract and may include a one-time setup fee and monthly charges, in

addition to the actual charges by the service provider related to the provisioning or restoration.

6. The Commission designed the mandatory TSP program to provide ''a means by which carriers may provide priority provisioning or restoration service to a user without violating the unreasonable preference prohibition of Title II of the Communications Act.'' The Commission made clear that ''[p]rivate services, *i.e.,* services not offered by a common carrier, would not be subject to allegations of unreasonable preferences under Title II of the Communications Act and therefore would not require the protection of TSP. Indeed, the scope of TSP is predicated on the need for a standardized system of issuing priorities to common carriers.'' The Commission's TSP rules have not been substantively updated since they were initially adopted in 1988.

7. Wireless Priority Service (WPS). In 1995, the National Communications System petitioned the Commission to implement what it termed ''Cellular Priority Access Service.'' The Commission responded by adopting rules creating a program to provide prioritized voice calling for subscribers using Commercial Mobile Radio Service (CMRS) networks. The Commission's WPS rules permit, but do not require, CMRS providers to offer mobile wireless priority services. If a carrier elects to offer WPS, it must comply with the Commission's WPS rules, which include providing priority service based on five priority levels for NSEP users. The five priority levels, which are generally ordered from highest to lowest, are: (1) Executive Leadership and Policy Makers; (2) Disaster Response/Military Command and Control (3) Public Health, Safety and Law Enforcement Command; (4) Public Services/Utilities and Public Welfare; and (5) Disaster Recovery. WPS is provided on an individual-device basis, with users initiating wireless priority calls by entering a specified feature code for each call in order to activate priority treatment for that call. WPS users are responsible for commercial wireless subscription and equipment costs.

8. Like the TSP program, one of the driving forces behind the FCC's decision to codify WPS rules was a concern that, in the absence of such rules, a CMRS provider's decision to give NSEP users priority treatment might be considered a violation of the Act's non-discrimination provisions. Indeed, the Commission noted that compliance with the WPS rules would constitute prima facie evidence that such priority treatment was lawful under the Communications Act. The Commission's WPS rules have not been updated since they were initially adopted in 2000.

9. Government Emergency Telecommunications Service (GETS). In 1993, the Commission received a request from the National Communications System requesting prioritization for wireline services. The Commission responded to the request in 1995, noting that tariffs had since been filed and a new nationwide telephone area code had been established for the Government Emergency Telecommunications Service (GETS) program for wireline services. GETS provides government officials, first responders, and NSEP personnel with ''priority access and prioritized processing in the local and long distance segments of the landline networks, greatly increasing the probability of call completion.'' Eligible users receive access cards and Personal Identification Numbers, which are used to initiate priority wireline calls. GETS currently operates via contractual arrangements between DHS and service providers. GETS is the only priority services program not included in the Commission's rules and participation is voluntary.

10. Federal Agency Administration/Oversight of Priority Services Programs. While the National Communications System originated the petitions that resulted in the creation of the priority services programs, Executive Order 13618 subsequently dissolved the National Communications System and transferred most of its functions to DHS, which now serves as the Executive Office of the President (EOP) designee for NSEP priority communications. DHS is responsible for overseeing the ''development, testing, implementation, and sustainment of NSEP communications,'' including the priority services programs. DHS also maintains an industry-government Joint Program Office that assists in the initiation, coordination, restoration, and reconstitution of NSEP communications and infrastructure. DHS qualifies new users to participate in these programs and issues GETS cards and TSP authorization codes. DHS also manages WPS through contract and reimbursement mechanisms.

11. In addition to DHS, other federal departments and agencies are responsible for certain administration and oversight functions related to the priority services programs. EOP is responsible for ''policy coordination, guidance, dispute resolution, and periodic in-progress reviews of NSEP telecommunications functions.'' The FCC, through the Public Safety and Homeland Security Bureau, works with DHS to ensure the priority services programs operate effectively and efficiently. The Commission supports DHS in the ''operation and restoration of critical communications systems and services'' by providing information on communications infrastructure, service outages, and restoration. The NSEP Communications Executive Committee ''advises and makes policy recommendations to the President'' for strategic planning, funding requirements, and communications systems requirements. The Office of Science and Technology Policy advises the President on ''prioritization of the radio spectrum and wired communications that support NSEP functions'' and issues an annual memorandum highlighting national priorities for NSEP analyses, studies, research, and development.

12. NTIA Petitions for Rulemaking. NTIA filed two petitions for rulemaking on behalf of DHS, requesting that the FCC update its TSP and WPS rules to reflect the current operations of those programs, incorporate the current Executive Branch governance structure for those programs, and address changes in technology and evolving user needs for those programs. The first petition, filed in July 2018, sought a Commission rulemaking to update the WPS rules. The second petition, filed in July 2019, sought to update the TSP rules, and updated NTIA's July 2018 WPS petition to reflect revisions to technical standards and the provisions of the Cybersecurity and Infrastructure Security Agency Act of 2018. The Bureau sought comment on both petitions via public notice.

13. The Commission received several comments in response to the public notices. Commenters generally support NTIA's proposal to update the TSP rules to reflect the current communications marketplace, and support NSEP users having next-generation communications technology. However, most commenters express concerns with NTIA's proposal to collect data on a provider's performance during a disaster and with the proposed rule changes regarding provisioning and restoration timeframes. Likewise, commenters generally support NTIA's proposals to update the WPS rules, but argue the Commission should employ a light touch in developing any new WPS rules and refrain from imposing overly burdensome or prescriptive rules that would limit flexibility and innovation currently inherent in providers' ability to work with the NSEP users and provide services on a contractual basis.

III. Discussion

14. Consumers are increasingly moving away from traditional telephone services using copper wire transmissions and traditional time-division multiplexing technology and towards next-generation technologies using a variety of transmission means, including fiber and wireless spectrum-based services. USTelecom asserts the ''vast majority'' of U.S. consumers have moved from legacy landlines to wireless or IP-based alternatives, as evidenced by the fact that since the year 2000 the number of landlines has fallen by 157 million. This trend is likely to continue, as USTelecom estimates that, by the end of 2020, 79% of voice connections will be wireless and just 5% will be provided through legacy landlines. In addition, USTelecom presents evidence that ''the widespread deployment of wired and wireless IP-based networks'' has fostered greater reliance on voice alternatives such as text, email, video chat, and social networking applications. The Commission has actively supported the transition from legacy to next-generation networks because of the extraordinary benefits of advanced communications services, and it has taken measures to reduce regulatory barriers to this transition.

15. While the transition from traditional network technology to IP-based technologies promises greater innovation, including for priority services programs, it may pose transitional challenges for NSEP communications that historically have relied on functionality found in legacy technologies. As carriers replace their legacy systems with new technologies and platforms, some of the legacy features in priority services programs that were designed to be used on legacy systems will be more difficult and costly to maintain and ultimately could be rendered inoperable. The Government Accountability Office has observed that it is a ''challenge . . . that IP networks may not support existing telecommunications 'priority' services, which allow key government and public safety officials to communicate during times of crisis.'' We also need to consider the means to modernize access tools for NSEP personnel to reflect today's more technologically advanced emergency response regimes. Availability of priority services only on those traditional voice networks may hamper the ability of NSEP personnel to effectively use cutting edge emergency response tools that rely on IP-supported data network availability. Nonetheless, we recognize that providers have significant if not complete flexibility to provide prioritization similar to that under the TSP and WPS rules on a contractual basis.

16. As we determined when we initially adopted the TSP and WPS rules in 1988 and 2000, respectively, the benefits provided by these priority services exceed the costs incurred by service providers. The NTIA petitions assert that there may be some benefits, if we were to expand the scope of TSP and WPS to include IP-based technologies. One reason is that, given the nation's increase in population over the past 20 years, we expect that the benefit from such programs has grown along with the population itself. Simply stated, there now are more lives to be saved and more infrastructure and homes to be protected. Another reason is that technological advances over the past 20 years have greatly reduced the costs and complexity of coding specific services, messages, and calls for priority treatment.

17. We expect that if we adopt the proposed rules, consistent with our 1988 and 2000 decisions, the benefits of extending these programs to include IP-based services would likely exceed the costs incurred by service providers. However, NTIA concedes that ''some non-common carriers (*e.g.,* some providers of broadband internet access service) have chosen to contract, on a voluntary basis, with DHS to provide prioritized provisioning and restoration services and the government welcomes and appreciates the willingness of those companies to offer TSP voluntarily.'' Nothing in our current rules prohibits or impedes providers of next-generation services from entering into voluntary agreements with DHS that achieve what would be contemplated under these rule changes.

18. We initiate this proceeding to update and streamline our priority services rules to remove outdated or other requirements that may cause confusion for NSEP personnel and providers and otherwise impede the use of IP-based technologies to support the provision of priority services for voice, data, and video communications.

A. Proposed Changes to Priority Services Rules

19. As part of our proposal to streamline and update our priority services rules, we propose certain specific rule changes that would apply to both TSP and WPS. These proposals are intended to reduce regulatory burdens and make our rules flexible enough to respond to changing administrative requirements or technological advances that affect the priority services programs.

20. Program Administration. The Commission's priority services rules have not been substantively updated since they were initially adopted. As a result, some of the authorities, organizations, and requirements specified in the Commission's rules are no longer accurate. Thus, we propose to amend the Commission's rules to reflect the actual, current functions and responsibilities for the priority services program, as specified in Executive Order 13618.

21. We further propose to eliminate the provisions of Part 64, Appendix A and Appendix B that describe the responsibilities of the Executive Office of the President because Executive Order 13618 transferred most of its functions to other federal agencies. We seek comment on these proposals.

22. Program Requirements. As a result of the changes in the priority services programs that have occurred since the rules were initially adopted, some provisions of the rules are outdated and unnecessary. These provisions are no longer relevant and, therefore, we propose to remove such references from our rules. Specifically, we propose to remove sections 2(a)(1), 2(a)(2), 2(b), 2(c), 2(d) of part 64, Appendix A, which outline requirements governing the migration of circuits from the legacy Restoration Priority program and mandating the continuation of certain Commission orders pending the implementation of the TSP program. We also propose to remove section 10 of Appendix A, which specifies procedures for the resubmission of circuits that were assigned restoration priorities before the Commission adopted the TSP rules. We seek comment on these proposals. We also seek comment on whether any other provisions are outdated or unnecessary and should be removed from our rules.

23. Terminology. The telecommunications industry has drastically changed since the priority services rules were first established. However, the Commission's rules have not been updated to reflect the evolution from circuit-switched technology to IP-based technology. NTIA asks the Commission to include definitions to account for new services, such as private NSEP services that consist of non-common carrier services, and non-traditional services, such as broadband internet access and digital video. Further, NTIA asks the Commission to revise the rules not only to include current service offerings, but also other technologies that may someday qualify for priority treatment. Commenters generally agree that NSEP users need next-generation

communications on a priority basis, but emphasize that ''a contractual solution is preferable to a regulatory one.'' Commenters also support the flexible approach to including new services and technologies within the scope of the priority services rules that is currently available by contractual arrangements, and caution that a regulatory approach should only be implemented through the notice-and-comment rulemaking process.

24. We propose to amend part 64, Appendix A and Appendix B to include definitions to account for new services and technologies. We also propose to amend certain definitions to encompass both telecommunications services and all IP-based services. We seek comment on these proposals and, alternatively, whether a GETS model would be a better approach.

B. Proposed Changes to Telecommunications Service Priority Rules

25. This section describes proposed changes to various provisions of the Commission's TSP rules in part 64, Appendix A. The proposed rule changes described below are informed by our careful review of NTIA's TSP Petition and the public comments submitted in response to the TSP Public Notice.

26. Scope of the Rules. The Commission's TSP rules have not been substantively updated since they were initially adopted in 1988. As originally drafted, the rules were intended as a regulatory carveout to allow common carriers to provide telecommunications services, which would ordinarily be subject to the non-discrimination requirements of Section 202, on a prioritized basis. As such, the rules have made no mention of the wide array of innovative information service offerings that are currently available to NSEP personnel. We propose to maintain the current requirement that common carriers must offer prioritized restoration and provisioning of circuit-switched voice communication services.

27. We propose additionally to codify the ability of service providers, on a voluntary basis, to offer prioritized provisioning and restoration of data, video, and IP-based voice services. Therefore, we propose to update our rules to authorize priority treatment of all voice, data, and video services provided by service providers for which provisioning or restoration priority levels are requested, assigned, and approved in accordance with Appendix A.

28. We seek comment on these proposals. Alternately, we note that the current TSP rules already allow the TSP System rules to apply to ''other services'' including ''Government or non-common carrier services which are not connected to common carrier provided services assigned a priority level.'' Should service providers that elect to offer prioritized provisioning and restoration of data, video, and IP-based voice service be required to comply with the Commission's TSP rules or, alternatively, should such priority services operate via contractual arrangements between DHS and service providers?

29. Invocation of NSEP Treatment. Currently, to invoke priority treatment for NSEP communications, an authorized federal official within, or acting on behalf of, the service user's organization must inform TSP service providers and the EOP that NSEP treatment is being invoked. The Commission's rules require the ''invocation official'' to be a senior government official, such as the head or director of a federal agency. However, DHS has determined that requiring senior officials to request TSP participation has produced ''unnecessary delays in the approval process given the demands placed on senior officials and their often limited availability.'' In addition, DHS claims the current requirements are untenable because senior officials typically do not interact with service providers and often lack direct knowledge of the purpose and need for the NSEP service.

30. NTIA asserts that, although the need still exists for an authorized individual from the requesting service user organization to assume responsibility for validating that the requested service satisfies the TSP program's NSEP criteria, this validation does not need to be performed by a specified senior official from the organization. As such, NTIA asks the Commission to update its TSP rules to redefine ''invocation official'' as an individual who (1) understands how the requested service ties to the organization's NSEP mission, and (2) is authorized to approve the expenditure of funds necessary for the requested service. NCTA supports this proposal.

31. We propose to modify the Commission's rules to allow DHS to accept invocation by a federal employee within, or acting on behalf of, the service user's organization who can attest to the need for TSP and authorize payment to the service provider. Further, we propose to eliminate the requirement that the invocation official be designated in writing. Both of these proposals reflect changes that DHS has already made, such as lessening the seniority requirement to allow an individual who is able to attest to the need for priority treatment and to obligate funds on behalf of the organization to serve as the ''invocation official.'' We seek comment on these proposals.

32. Oversight and Industry Engagement. Under the Commission's current TSP rules, the FCC and EOP each have oversight responsibilities for the TSP System. The rules stipulate that the FCC will ''provide regulatory oversight of implementation of the NSEP TSP System'' and ''enforce NSEP TSP System rules and regulations.'' On the other hand, the rules stipulate that EOP will test and evaluate the TSP System, conduct audits, and establish a TSP System Oversight Committee to ''identify and review any problems developing in the system and recommend actions to correct them or prevent recurrence.''

33. EOP established a TSP System Oversight Committee (Oversight Committee) in accordance with the Commission's rules. However, DHS has since ''developed and refined processes and procedures that, in its view, obviate the need for a mandatory oversight committee.'' In recent years, DHS has increasingly relied upon the members of the Communications Information Sharing and Analysis Center to ''exchange information and gain advice'' on issues involving the TSP program. DHS believes the Communications Information Sharing and Analysis Center is a more valuable resource than the Oversight Committee because the office within DHS that administers TSP ''directly leverages the expertise of members of the Communications Information Sharing and Analysis Center to address operational concerns in real time,'' instead of waiting for a scheduled Oversight Committee meeting. NTIA asks the Commission to eliminate the requirement for an Oversight Committee, replace the quarterly reporting obligation with an annual report to the Commission, and authorize DHS to consult with the Communications Information Sharing and Analysis Center.

34. Similarly, the Commission originally intended for the Oversight Committee to provide oversight of WPS by reviewing any systemic problems with the program and recommending corrective actions. However, DHS believes the GETS/WPS User Council (User Council) should carry out this function because it ''better serves the needs and interests of the WPS community.'' The User Council includes WPS points of contact from federal, state, local, and Tribal government, industry, and other NSEP organizations,

and a representative from each of the WPS (and GETS) service providers. DHS leverages the User Council to ''seek and receive advice'' on WPS program needs. NTIA asks the Commission to replace references to the Oversight Committee with references to the GETS/WPS User Council.

35. AT&T agrees that the Commission should make administrative changes to the TSP rules to reflect existing practices and oversight responsibilities. However, NCTA disagrees with NTIA's proposal to eliminate the Oversight Committee for the TSP program. While AT&T defers to NTIA/DHS on the entity that should provide oversight of the TSP program, AT&T and Verizon stress that some authority must remain in place to preserve opportunities for meaningful collaboration between industry stakeholders and program administrators and to ensure the program is administered in accordance with the appropriate rules and regulations. No commenters addressed NTIA's proposal to replace the Oversight Committee for WPS with the GETS/WPS User Council. We propose to eliminate the reference to the Oversight Committee within the priority services rules, and instead recognize the flexibility that DHS requires to engage the appropriate segments of industry and oversee the program effectively so long as some measure of oversight remains. We seek comment on this proposal, and we seek further comment on NTIA's requested rule changes.

C. Proposed Changes to Wireless Priority Service Rules

36. This section describes proposed changes to various provisions of the Commission's WPS rules in part 64, Appendix B. The proposed rule changes described below are informed by our careful review of NTIA's WPS Petition and the public comments submitted in response to the Public Notices.

37. Priority Levels. The Commission's WPS rules include five priority levels, which are used ''as a basis for all [WPS] assignments.'' The rules indicate that Priority Level 1 communications, which are reserved for the President of the United States and other executive leadership and policy makers, occupy the highest priority level in WPS. DHS, however, is concerned that the rules do not expressly stipulate that users assigned to that category must receive the highest priority in relation to all other users, including those using non-WPS priority services offered through individual service contracts. While that is the existing practice, DHS believes it should be ''explicit and conspicuous'' in the Commission's rules. NTIA requests that we update our rules accordingly. Verizon supports NTIA's request. We propose to amend the description of Priority Level 1 to clarify that it exceeds all other priority services offered by WPS providers. We seek comment on this proposal. We also seek comment on how the different priority levels used by various priority services programs should interrelate for network management purposes.

38. Preemption and Degradation. Preemption is the process of terminating lower priority communications in favor of higher priority communications. Degradation is the process of reducing the quality of lower priority communications in favor of higher priority communications. NTIA asserts that preemption and degradation are ''critical priority feature[s] that will enable the highest priority NS/EP users to communicate and coordinate'' during emergency situations—when commercial networks are often the most congested. The Commission's WPS rules currently permit re-ordering of queued (not-yet-established) call requests based on user priority, but do not provide for re-ordering of active (in-progress) calls. NTIA requests changes to the Commission's rules affirmatively to allow Priority Level 1 and 2 voice calls, if necessary, to preempt or degrade other in-progress calls, except for public safety emergency (911) calls.

39. Some commenters disagree with NTIA's assertion that the Commission's WPS rules do not allow for preemption of in-progress calls. AT&T argues that ''[n]othing in the Communications Act or the Commission's rules prohibits WPS providers from offering . . . preemption of voice and data services in their private contractual arrangements with WPS users.'' Verizon agrees with AT&T and points out that both companies ''openly provide competitive service offerings with priority and preemption capabilities via their respective public safety networks and services.'' AT&T suggests that rather than updating the current WPS rules as NTIA proposes, the Commission should consider issuing a declaratory ruling to clarify WPS providers' rights and obligations under the current rules. In contrast, TechFreedom agrees with NTIA that the WPS rules do not allow providers to terminate or degrade ongoing calls or data communications, but asserts that additional data and information are needed to properly evaluate NTIA's proposal.

40. Although the current WPS rules do not provide for re-ordering of active (in-progress) calls, we agree with AT&T and Verizon that the rules do not prohibit preemption. However, we recognize that the lack of explicit language authorizing preemption has led to varying interpretations of the rules by WPS providers. Thus, we propose to update our rules to expressly authorize Priority Level 1 and 2 voice calls, when necessary, to preempt or degrade other in-progress calls, except for public safety emergency (911) calls.

41. We seek comment on this proposal. Specifically, we ask commenters to address whether or how our rules should reflect the potential need for preemption during periods of significant congestion. How would service providers determine whether the amount of congestion was significant enough to warrant preemption? Would the burdens of preemption outweigh the benefits? We also seek comment on whether call degradation, on a standalone basis, would ensure successful transport of NSEP communications. In other words, is it necessary to allow both preemption and degradation of in-progress communications? Is degradation more, less, or equally cost-effective when compared to preemption? We also seek comment on whether the TSP approach to preemption/degradation could provide a framework for WPS. The TSP rules expressly allow service providers to preempt or interrupt service to non-NSEP users and to preempt lower priority users as necessary to provide or restore service. Should similar parameters govern WPS?

42. Eligible Services. Since the WPS rules were adopted in 2000, the ''capacity and capabilities of [wireless] networks have expanded immensely.'' As a result, wireless service providers are now able to offer a wide array of voice, data, and video services which, in turn, has ''spawned a multitude of communications applications (*e.g.,* email, video calls, web browsing).'' The development of new technologies has direct implications for NSEP users, who increasingly rely on the innovative services and applications to ''make and complete mission-essential communications in an efficient and effective manner.'' Thus, DHS has intimated that NSEP requirements for WPS do not already include priority data and video services, in addition to voice services. Based on this reading of our rules, NTIA requests that we update our rules to allow the provision of next-generation voice, data, and video services by wireless service providers on a priority basis. Commenters highlight that the existing regulatory framework allows for priority wireless service to be contractually arranged, and provides flexibility for DHS and WPS

providers to negotiate the services and capacities that will be offered.

43. We propose to amend our rules to expressly permit wireless service providers, on a voluntary basis, to give NSEP personnel priority access to, and priority use of, all secure and non-secure voice, data, and video services available over their networks. We seek comment on this proposal. What innovative services and applications do NSEP users need for mission-critical communications? Do wireless service providers currently face legal or regulatory obstacles to voluntarily providing prioritized voice, data, and video services on their wireless networks?

44. Eligible users. Under the current rules, WPS priority assignments ''should only be requested for key personnel and those individuals in national security and emergency response leadership positions.'' As such, the current language excludes multiple categories of NSEP users, such as critical infrastructure protection, financial services, and hospital personnel. However, the Homeland Security Act of 2002 created the ability for critical infrastructure protection personnel to ''meet the qualifying criteria'' for WPS, and DHS is currently assigning hospital personnel to Priority Level 3 and financial services personnel to Priority Level 4. NTIA requests that we update our WPS rules to include these communities of NSEP users. Verizon supports NTIA's request.

45. We propose to modify the descriptions of priority levels and qualifying criteria in Appendix B to expand WPS eligibility to additional users, particularly those with response and restoration roles during emergency situations. Specifically, we propose to allow entities from any of the 16 critical infrastructure sectors identified in Presidential Policy Directive (PPD)-21 to qualify for WPS. Further, we propose to modify the descriptions of priority levels and qualifying criteria in Appendix B to allow eligible financial services and hospital personnel to qualify for WPS. We seek comment on these proposals. Should the Commission determine which entities qualify for each priority level, or should that function be completed by DHS? How should the priority level assignments for each of the entities from the 16 critical infrastructure sectors be determined? How should eligibility for financial services and hospital personnel be determined?

46. Priority Signaling. As stated in the Commission's rules, WPS ''provides the means for NSEP telecommunications users to obtain priority access to available radio channels when necessary to initiate emergency calls.'' However, recent emergency situations have demonstrated that ''WPS effectiveness can be compromised by the effects of signaling congestion that prevent successful WPS handset network registration and service invocation.'' NTIA requests that we update our rules ''to make clear that WPS service providers can provide priority signaling.'' AT&T argues that NTIA's requested rule change is unnecessary because WPS providers already offer priority signaling via contractual arrangements with DHS.

47. Although the Commission's rules do not expressly authorize priority signaling, we agree with AT&T that it is currently permitted in the context of WPS. To promote consistency and prevent confusion among providers, we propose to update our WPS rules to expressly authorize priority signaling to ensure networks are able to detect WPS handset network registration and service invocation. We seek comment on this proposal.

48. Methods of Invocation. As described above, the WPS rules allow authorized users to invoke priority access on a per call basis by dialing a specified feature code before each call. However, NTIA believes the requirement that WPS must be invoked for each communication ''hinder[s] efficient response'' during emergency situations, in that vital time may be lost when users must dial that code for every priority call. To address this problem, NTIA requests that we update the WPS rules to allow for a ''variety of arrangements'' available under current technical standards and capabilities for WPS invocation, including ''always on'' for certain WPS authorized users. T-Mobile supports this proposal because it would provide greater flexibility for service providers to decide how to offer WPS services in the manner most suitable for their subscribers and networks.

49. We propose to amend our rules to eliminate the requirement that priority access must be invoked on a per call basis. We decline to propose specific methods of WPS invocation because DHS could address that issue via contractual arrangements with service providers. We seek comment on this proposal. Do commenters agree with our approach of not requiring specific methods of invocation?

50. Program Name. As described above, government, industry, and users commonly refer to Priority Access Service as Wireless Priority Service. According to NTIA, the name Wireless Priority Service more accurately reflects the service's current requirements and capabilities.'' To reflect the prevailing naming convention, NTIA requests that we amend Part 64, Appendix B to replace all references to Priority Access Service with Wireless Priority Service in Appendix B to reflect the current naming convention. We propose to make the changes that NTIA requests to Appendix B and to make a similar change to section 64.402 of the Commission's rules. We seek comment on these proposals.

D. Other Rule Changes Requested by DHS/NTIA

51. In addition to the proposed rule changes discussed above, DHS and NTIA request other rule changes that would impose new requirements on TSP and WPS providers. However, some commenters object that these rule changes would increase regulatory burdens on service providers by increasing the costs of complying with the Commission's priority services rules.

52. Protection of TSP Data. Federal, state, local, Tribal, and territorial governments, and other authorized organizations use the TSP System to ''protect mission-essential communications at their primary places of operation, as well as at locations designed to maintain continuity of operations. . . and continuity of government.'' NTIA notes that the unauthorized disclosure of sensitive information related to TSP circuits, in the aggregate, could pose a national security risk. In addition, NTIA asserts that service providers moving certain operational, administrative, and management functions overseas could create additional risk by exposing TSP data to companies and individuals outside the United States. The TSP rules direct service providers to ''not disclose information concerning NSEP services they provide to those not having a need-to-know or might use the information for competitive advantage,'' but the rules do not require service providers to take affirmative steps to prevent or detect the unauthorized disclosure of TSP data or to eliminate the risk of TSP data being managed offshore. NTIA requests that we update the TSP rules to address these issues. Commenters generally agree that the Commission should strengthen the TSP rules to prevent unauthorized access to sensitive TSP data. However, some commenters raise concerns regarding NTIA's proposal to prevent TSP data from being managed offshore.

53. We seek further comment on NTIA's requested rule changes and the means by which the Commission's rules

could be strengthened. What is the ideal method to achieve the goal of maintaining data security without sacrificing service providers' flexibility to manage TSP data? We also seek comment on NTIA's assertion that service providers moving certain TSP functions overseas could create additional security risks. Do commenters agree with NTIA? If so, what actions should the Commission take to address this issue? What are the potential implications of creating distinctions between onshore and offshore operations?

54. Provisioning and Restoration Timeframes. The Commission's TSP rules include three subsections that address the timeframes that service providers must meet to (1) provision service; (2) restore service; and (3) meet requested service dates for TSP-subject facilities. However, each subsection mandates a different standard for the time and level of effort required for service providers to provision or restore TSP facilities. NTIA claims the ''varying and ambiguous language'' in the current rules ''has created confusion, disagreements, dissatisfaction, and unrealistic expectations'' between users, providers, and DHS's program staff. As such, NTIA recommends the Commission replace the current language with the single term ''promptly'' to describe TSP service providers' provisioning and restoration obligations.

55. Commenters raise concerns with NTIA's requested rule changes. For example, some commenters assert that NTIA's proposal to require TSP service providers to ''promptly'' provision or restore service by allocating ''all resources necessary'' could place unreasonable demands on service providers. Further, commenters argue that the word ''promptly'' itself does not offer meaningful clarity because the term is no more specific than the similarly ambiguous phrases in the current rules. Commenters also assert that any rule changes should account for the contextual nature of restoration efforts and take incident-specific factors into consideration.

56. We seek further comment on NTIA's requested rule changes relating to restoration timeframes. We ask commenters to address the threshold question of whether provisioning and restoration timeframes should be the same. Considering that provisioning and restoration consist of different activities, do they require different timeframes? Do commenters agree with NTIA that we should replace the current language with the single term ''promptly''? Is ''promptly'' sufficiently unambiguous, or will it lead to confusion and uncertainty? To the extent commenters believe ''all resources'' is unreasonable, what would they propose as an alternate standard? How can our rules ensure flexibility for carriers to address event-specific circumstances and resource demands? Should we incorporate language to address external circumstances (*e.g.,* those ''beyond the service provider's control'')? Commenters should address any potential costs or burdens related to NTIA's requested rule changes. As an alternative approach, should we eliminate the restoration timeframes from our rules? Would such an approach give DHS the flexibility necessary to establish restoration standards through contractual agreements with service providers?

57. Reporting Requirements. Executive Order 13618 directs DHS to ensure the priority services programs operate effectively and meet the needs of NSEP users ''under all circumstances, including conditions of crisis or emergency.'' DHS considers performance data related to disaster operations to be ''essential to determining the effectiveness'' of the priority services programs.

58. NTIA requests the Commission amend its TSP rules to require service providers to report to DHS provisioning and restoration times for TSP circuits in areas covered by the activation of the Disaster Information Reporting System (DIRS). Specifically, DHS believes that such reporting obligations would give it access to TSP provisioning and restoration times and aggregate data that would allow it to compare the data for TSP services to similar data for non-TSP services. NTIA does not propose specific obligations concerning the timing and frequency for reporting this information but, instead, proposes that DHS coordinate with the Commission to develop specific data requirements and reporting timeframes.

59. NTIA also requests the Commission amend its WPS rules to require service providers to file implementation, usage, and performance data with DHS so that it can assess the program's readiness, usage, and performance at all times and all places offered, and for specific geographic areas and times. DHS currently collects and analyzes data from WPS providers detailing ''usage, performance, implementation, and supporting infrastructure,'' but it does not receive consistent information from all providers. NTIA asserts the proposed requirement is necessary to ensure consistency across all WPS providers and to formalize the process by which providers submit WPS data to DHS.

60. Commenters object to NTIA's request to add reporting requirements to the TSP and WPS rules. With regard to TSP, commenters argue that requiring service providers to report TSP restoration times to DHS should be limited to post-disaster reporting so that service providers need not divert resources away from the disaster response efforts. Some commenters suggest that comparing the provisioning and restoration times of TSP services and non-TSP services is unlikely to produce useful results. Other commenters contend that mandatory TSP reporting requirements could undercut the effectiveness of DIRS because service providers could attempt to avoid TSP reporting obligations by declining to participate in DIRS reporting. Commenters also point out practical implementation concerns with NTIA's proposals.

61. Some commenters also oppose NTIA's WPS proposal, arguing that imposing performance data reporting requirements could inhibit providers' flexibility and ability to innovate. Instead, commenters favor contractual solutions that they believe would permit providers the flexibility to customize offerings based on their specific network characteristics. T-Mobile raises concerns regarding the highly sensitive nature of the WPS data and argues that service providers should work with DHS and other federal agencies to determine the ''appropriate information disclosure'' rather that the Commission ''codifying what data should be shared.''

62. We seek further comment on NTIA's request to add reporting requirements to the TSP and WPS rules. Does NTIA's proposed approach strike an appropriate balance between the potential costs/burdens of compliance and the potential benefits to NSEP users? What costs/burdens (in time and expense) would service providers encounter? What public safety and/or national security benefits would result? Would the benefits outweigh the costs? We also seek comment on whether it is necessary for the Commission to adopt rules-based requirements or whether DHS could obtain the same information through contractual negotiations with service providers. Is there an alternative method by which DHS could assess the effectiveness of the priority services programs during crisis or emergency situations? Finally, we seek comment on whether any reporting requirements should include restrictions on DHS's ability to use or share commercially sensitive data.

E. Alternative Approach: Applying the GETS Model to TSP and WPS

63. As an alternative to the proposals described above, we seek comment on whether the goals of this proceeding could be achieved by replacing the current rules-based approach to priority services with a ''light-touch'' regulatory framework for all priority services programs. Under this alternative approach, all service providers, on a voluntary basis, may offer prioritized restoration and provisioning of voice, data, and video services to authorized users. Likewise, all service providers, on a voluntary basis, would be authorized to give NSEP personnel priority access to, and priority use of, all voice, data, and video services available over their networks. Details could be negotiated and administered by DHS via contract. We seek comment on whether there are currently any legal or regulatory barriers to this alternative approach and how to transition to such an approach should we adopt it.

64. We seek comment on whether trends in the current public safety marketplace may favor adoption of a light-touch regulatory approach. We note that in contrast to TSP and WPS, GETS has operated on a contractual basis without FCC rules or regulations. Nonetheless, would this alternative approach require any changes to FCC rules, or could providers and DHS freely begin operating under this approach without further FCC action? This approach appears to have been successful: DHS recently found that GETS call completion rates exceeded their target rates for every fiscal year between 2015 and 2018 (the most recent year for which data is available).

65. Likewise, the recent roll out of the First Responder Network Authority (FirstNet) suggests that priority services programs can operate effectively in a market-driven environment. Congress established FirstNet in 2012 to ''ensure the deployment and operation of a nationwide, broadband network for public safety communications.'' FirstNet offers service priority and preemption, which allow first responders to communicate over an ''always-on'' network. Public safety entities using FirstNet can boost their priority levels during emergency situations ''to ensure first responder teams stay connected'' even when networks are congested. AT&T describes preemption as an ''enhanced'' form of priority service because it ''shifts non-emergency traffic to another line,'' which ensures NSEP users' communications are successfully completed. According to AT&T, priority and preemption support voice calls, ''text messages, images, videos, location information, [and] data from apps . . . in real time.'' In the first half of 2019, the monthly levels of device connections to FirstNet ''outperformed expectations at approximately 196% of projected targets.'' In May 2019, ''a majority of agencies and nearly 50% of FirstNet's total connections were new subscribers (not AT&T migrations).'' These trends suggest that first responders recognize the benefits of prioritization, preemption, and other innovative features that enhance public safety communications. We seek comment on the extent to which first responders and providers have already availed themselves of the option to offer prioritized of information services, such as data and video services.

66. We note that other service providers have recently begun offering their own priority services options to compete with FirstNet. For example, Verizon offers priority and preemption services through its public safety private core. In addition, public safety users ''have access to several . . . enhanced services,'' including Mobile Broadband Priority Service and data preemption. These services ''provide public safety users priority service for data transmissions'' by giving users priority over commercial users during periods of heavy network congestion and '' reallocat[ing] network resources from commercial data/internet users to first responders'' if networks reach full capacity.

67. Similarly, U.S. Cellular offers ''enhanced data priority services for first responders and other emergency response teams.'' The company uses a ''dedicated broadband LTE network that separates mission-critical data from commercial and consumer traffic,'' ensuring that NSEP personnel ''have access to vital services'' during emergency situations. In addition to prioritizing network access, U.S. Cellular uses preemption ''to automatically and temporarily reallocate lower priority network resources to emergency responders so they can stay connected during emergencies or other high-traffic events.''

68. Based on these recent industry trends, we seek comment on whether a light-touch regulatory approach to all priority services would be sufficient to meet the needs of NSEP users. We also seek comment on the potential consequences of adopting such an approach. To what extent would it enhance competition and facilitate the development of innovative service offerings for use by NSEP personnel? What would be the overall impacts on public safety communications? Would DHS be able to use contractual provisions to make the programmatic changes it seeks in the TSP and WPS petitions? What impact, if any, would the light-touch approach have on DHS's ability to manage priority services programs and the Commission's ability to satisfy its responsibilities under Executive Order 13618? Would a minimum level of FCC regulation be necessary to provide a ''backstop'' for the priority services programs?

IV. Procedural Matter

69. *Ex Parte Presentations.* This proceeding shall be treated as a ''permit-but-disclose'' proceeding in accordance with the Commission's ex parte rules. Persons making ex parte presentations must file a copy of any written presentation or a memorandum summarizing any oral presentation within two business days after the presentation (unless a different deadline applicable to the Sunshine period applies). Persons making oral ex parte presentations are reminded that memoranda summarizing the presentation must: (1) List all persons attending or otherwise participating in the meeting at which the ex parte presentation was made, and (2) summarize all data presented and arguments made during the presentation. If the presentation consisted in whole or in part of the presentation of data or arguments already reflected in the presenter's written comments, memoranda or other filings in the proceeding, the presenter may provide citations to such data or arguments in his or her prior comments, memoranda, or other filings (specifying the relevant page and/or paragraph numbers where such data or arguments can be found) in lieu of summarizing them in the memorandum. Documents shown or given to Commission staff during ex parte meetings are deemed to be written ex parte presentations and must be filed consistent with rule 1.1206(b). In proceedings governed by rule 1.49(f) or for which the Commission has made available a method of electronic filing, written ex parte presentations and memoranda summarizing oral ex parte presentations, and all attachments thereto, must be filed through the electronic comment filing system available for that proceeding, and must be filed in their native format (*e.g.,* .doc, .xml, .ppt, searchable .pdf). Participants in this proceeding should familiarize themselves with the Commission's ex parte rules.

70. *Comment Filing Procedures.* Pursuant to sections 1.415 and 1.419 of the Commission's rules, 47 CFR 1.415,

1.419, interested parties may file comments and reply comments on or before the dates indicated on the first page of this document. Comments may be filed using the Commission's Electronic Comment Filing System (ECFS). See Electronic Filing of Documents in Rulemaking Proceedings, 63 FR 24121 (1998).

- *Electronic Filers:* Comments may be filed electronically using the internet by accessing the ECFS: *http://apps.fcc.gov/ecfs//.*
- *Paper Filers:* Parties who choose to file by paper must file an original and one copy of each filing. If more than one active docket or rulemaking number appears in the caption of this proceeding, filers must submit two additional copies for each additional docket or rulemaking number.

Filings can be sent by hand or messenger delivery, by commercial overnight courier or by first-class or overnight U.S. Postal Service mail. All filings must be addressed to the Commission's Secretary, Office of the Secretary, Federal Communications Commission.

- Commercial overnight mail (other than U.S. Postal Service Express Mail and Priority Mail) must be sent to 9050 Junction Drive, Annapolis Junction, MD 20701.
- U.S. Postal Service first-class, Express, and Priority mail must be addressed to 445 12th Street SW, Washington, DC 20554.
- Effective March 19, 2020, and until further notice, the Commission no longer accepts any hand or messenger delivered filings. This is a temporary measure taken to help protect the health and safety of individuals, and to mitigate the transmission of COVID–19. See FCC Announces Closure of FCC Headquarters Open Window and Change in Hand-Delivery Policy, Public Notice, DA 20–304 (Mar. 19, 2020) available *https://www.fcc.gov/document/fcc-closes-headquarters-open-window-and-changes-hand-delivery-policy.*
- During the time the Commission's building is closed to the general public and until further notice, if more than one docket or rulemaking number appears in the caption of a proceeding, paper filers need not submit two additional copies for each additional docket or rulemaking number; an original and one copy are sufficient.

71. *People with Disabilities:* To request materials in accessible formats for people with disabilities (braille, large print, electronic files, audio format), send an email to *fcc504@fcc.gov* or call the Consumer & Governmental Affairs Bureau at 202–418–0530 (voice), 202–418–0432 (tty).

72. Availability of Documents. Comments, reply comments, and ex parte submissions will be available via ECFS. Documents will be available for public inspection during regular business hours in the FCC Reference Center, Federal Communications Commission, 445 12th Street SW, Room CY–A257, Washington, DC. These documents will also be available via ECFS. Documents will be available electronically in ASCII, Microsoft Word, and/or Adobe Acrobat.

73. Initial Regulatory Flexibility Analysis. As required by the Regulatory Flexibility Act (RFA), the Commission has prepared an Initial Regulatory Flexibility Analysis (IRFA) of the possible significant economic impact on a substantial number of small entities of the policies and actions considered in this Notice of Proposed Rulemaking (NPRM). The IRFA is set forth in Appendix B. Written public comments are requested on the IRFA. Comments must be identified with a separate and distinct heading designating them as responses to the IRFA and must be filed by the deadlines for comments on the Notice of Proposed Rulemaking. The Commission will send a copy of the Notice of Proposed Rulemaking, including the IRFA, to the Chief Counsel for Advocacy of the Small Business Administration, in accordance with the Regulatory Flexibility Act.

74. Paperwork Reduction Act Analysis. This Notice of Proposed Rulemaking contains proposed new or modified information collection requirements. The Commission, as part of its continuing effort to reduce paperwork burdens, invites the general public and the Office of Management and Budget (OMB) to comment on the information collection requirements contained in this document, as required by the Paperwork Reduction Act of 1995, Public Law 104–13. In addition, pursuant to the Small Business Paperwork Relief Act of 2002, Public Law 107–198, see 44 U.S.C. 3506(c)(4), we seek specific comment on how we might further reduce the information collection burden for small business concerns with fewer than 25 employees.

75. Affairs Bureau, Reference Information Center, SHALL SEND a copy of this Notice of Proposed Rulemaking, including the Initial Regulatory Flexibility Analysis, to the Chief Counsel for Advocacy of the Small Business Administration.

Initial Regulatory Flexibility Analysis

1. As required by the Regulatory Flexibility Act of 1980, as amended (RFA), the Commission has prepared this Initial Regulatory Flexibility Analysis (IRFA) of the possible significant economic impact on a substantial number of small entities by the policies and rules proposed in the Notice of Proposed Rule Making (NPRM). Written public comments are requested on this IRFA. Comments must be identified as responses to the IRFA and must be filed by the deadlines in the NPRM. The Commission will send a copy of the NPRM, including this IRFA, to the Chief Counsel for Advocacy of the Small Business Administration (SBA). In addition, the NPRM and IRFA (or summaries thereof) will be published in the **Federal Register**.

A. Need for, and Objectives of, the Proposed Rules

2. In the NPRM, we propose changes to, and seek comment on, our telecommunications priority access rules which include the Telecommunications Services Priority (TSP) program and Wireless Priority Service (WSP), established in 1988 and 2000 respectively. These rules which are currently limited to voice communications, were established when communications networks were primarily based on circuit-switched technologies and have not been updated to address newer communications technologies. We note in the NPRM, that ''[t]he Commission has observed that consumers are increasingly moving away from traditional telephone services provided over copper wires and towards next-generation technologies using a variety of transmission means, including fiber, and wireless spectrum-based services.'' Indeed, most American consumers have moved from legacy landlines to wireless or internet-based alternatives, evidenced by the number of legacy landlines dropping by 160 million since 2000—a trend that is likely to continue.

3. The need for, and objective of, the proposed rules is to update our priority services requirements to take into account newer forms of both content (*e.g.,* video, data) and transmission (*e.g.,* IP-based), and to ensure that such programs operate effectively in today's IP-based network environment, particularly since priority services programs are used by National Security and Emergency Preparedness (NSEP) personnel. Accordingly, in the NPRM we propose modifications to our rules to address next generation networks, technologies and services. In particular, we propose to expand the scope of the priority services rules to include current and future technologies by replacing specific and limited terms with more

general and neutral terms. Such actions should make our rules flexible enough to apply to all forms of communication technologies that may be used in NSEP communications.

4. To enhance regulatory efficiency and reduce the burden on service providers by making it easier to identify and comply with the applicable priority service rules, we propose to simplify, streamline and, to the extent possible, consolidate our priority service rules into a single appendix in part 64 of the Commission's rules. Under our proposal, the amended appendices would continue to differentiate between the priority services programs.

5. Finally, the NPRM addresses requests from the Department of Homeland Security (DHS) through the National Telecommunications and Information Administration (NTIA) to update the existing rules and requirements for the priority services programs. NTIA filed two Petitions for Rulemaking on behalf of DHS, requesting that the FCC update its TSP and Priority Access Service (PAS) rules to address changes in technology and evolving user needs for these programs. The Bureau sought comment on both petitions via public notice. Accordingly, the rule changes prescribed in the Notice of Proposed Rulemaking are informed by a careful review of NTIA's Petitions for Rulemaking and the public comments submitted in response to the public notices.

B. Legal Basis

6. The proposed action is authorized pursuant to Sections 1, 4(i), 4(j), 4(n), 201–205, 251(e)(3), 254, 301, 303(b), 303(g), 303(r), 307, 309(a), 309(j), 316, 332, 403, 615(a)(1), and 615(c) of the Communications Act of 1934, as amended, 47 U.S.C. 151, 154(i)–(j) & (n), 201–205, 251(e)(3), 254, 301, 303(b), 303(g), 303(r), 307, 308(a), 309(a), 309(j), 316, 332, 403, 606, 615(a)(1), 615(c); and Executive Order 13618.

C. Description and Estimate of the Number of Small Entities to Which the Proposed Rules Will Apply

7. The RFA directs agencies to provide a description of and, where feasible, an estimate of the number of small entities that may be affected by the proposed rules, if adopted. The RFA generally defines the term ''small entity'' as having the same meaning as the terms ''small business,'' ''small organization,'' and ''small governmental jurisdiction.'' In addition, the term ''small business'' has the same meaning as the term ''small business concern'' under the Small Business Act. A small business concern is one which: (1) Is independently owned and operated; (2) is not dominant in its field of operation; and (3) satisfies any additional criteria established by the SBA.

8. Small Businesses, Small Organizations, Small Governmental Jurisdictions. Our actions, over time, may affect small entities that are not easily categorized at present. We therefore describe here, at the outset, three broad groups of small entities that could be directly affected herein. First, while there are industry specific size standards for small businesses that are used in the regulatory flexibility analysis, according to data from the SBA's Office of Advocacy, in general a small business is an independent business having fewer than 500 employees. These types of small businesses represent 99.9% of all businesses in the United States, which translates to 30.7 million businesses.

9. Next, the type of small entity described as a ''small organization'' is generally ''any not-for-profit enterprise which is independently owned and operated and is not dominant in its field.'' The Internal Revenue Service (IRS) uses a revenue benchmark of $50,000 or less to delineate its annual electronic filing requirements for small exempt organizations. Nationwide, for tax year 2018, there were approximately 571,709 small exempt organizations in the U.S. reporting revenues of $50,000 or less according to the registration and tax data for exempt organizations available from the IRS.

10. Finally, the small entity described as a ''small governmental jurisdiction'' is defined generally as ''governments of cities, counties, towns, townships, villages, school districts, or special districts, with a population of less than fifty thousand.'' U.S. Census Bureau data from the 2017 Census of Governments indicate that there were 90,075 local governmental jurisdictions consisting of general purpose governments and special purpose governments in the United States. Of this number there were 36,931 general purpose governments (county, municipal and town or township) with populations of less than 50,000 and 12,040 special purpose governments—independent school districts with enrollment populations of less than 50,000. Accordingly, based on the 2017 U.S. Census of Governments data, we estimate that at least 48,971 entities fall into the category of ''small governmental jurisdictions.''

1. Telecommunications Service Providers

a. Wireless Telecommunications Providers

11. Pursuant to 47 CFR 9.10(a), the Commission's 911 service requirements are only applicable to Commercial Mobile Radio Service (CMRS) ''[providers], excluding mobile satellite service operators, to the extent that they: (1) Offer real-time, two way switched voice service that is interconnected with the public switched network; and (2) Utilize an in-network switching facility that enables the provider to reuse frequencies and accomplish seamless hand-offs of subscriber calls. These requirements are applicable to entities that offer voice service to consumers by purchasing airtime or capacity at wholesale rates from CMRS licensees.''

12. Below, for those services subject to auctions, we note that, as a general matter, the number of winning bidders that qualify as small businesses at the close of an auction does not necessarily represent the number of small businesses currently in service. Also, the Commission does not generally track subsequent business size unless, in the context of assignments or transfers, unjust enrichment issues are implicated.

13. All Other Telecommunications. The ''All Other Telecommunications'' category is comprised of establishments primarily engaged in providing specialized telecommunications services, such as satellite tracking, communications telemetry, and radar station operation. This industry also includes establishments primarily engaged in providing satellite terminal stations and associated facilities connected with one or more terrestrial systems and capable of transmitting telecommunications to, and receiving telecommunications from, satellite systems. Establishments providing internet services or voice over internet protocol (VoIP) services via client-supplied telecommunications connections are also included in this industry. The SBA has developed a small business size standard for All Other Telecommunications, which consists of all such firms with annual receipts of $35 million or less. For this category, U.S. Census Bureau data for 2012 shows that there were 1,442 firms that operated for the entire year. Of those firms, a total of 1,400 had annual receipts less than $25 million and 42 firms had annual receipts of $25 million to $49,999,999. Thus, the Commission estimates that the majority of ''All Other Telecommunications'' firms potentially affected by our action can be considered small.

14. AWS Services (1710–1755 MHz and 2110–2155 MHz bands (AWS–1); 1915–1920 MHz, 1995–2000 MHz, 2020–2025 MHz and 2175–2180 MHz bands (AWS–2); 2155–2175 MHz band (AWS–3)). For the AWS–1 bands, the Commission has defined a ''small business'' as an entity with average annual gross revenues for the preceding three years not exceeding $40 million, and a ''very small business'' as an entity with average annual gross revenues for the preceding three years not exceeding $15 million. For AWS–2 and AWS–3, although we do not know for certain which entities are likely to apply for these frequencies, we note that the AWS–1 bands are comparable to those used for cellular service and personal communications service. The Commission has not yet adopted size standards for the AWS–2 or AWS–3 bands but proposes to treat both AWS–2 and AWS–3 similarly to broadband PCS service and AWS–1 service due to the comparable capital requirements and other factors, such as issues involved in relocating incumbents and developing markets, technologies, and services.

15. Competitive Local Exchange Carriers (Competitive LECs). Competitive Access Providers (CAPs), Shared-Tenant Service Providers, and Other Local Service Providers. Neither the Commission nor the SBA has developed a small business size standard specifically for these service providers. The appropriate NAICS Code category is Wired Telecommunications Carriers and under that size standard, such a business is small if it has 1,500 or fewer employees. U.S. Census Bureau data for 2012 indicate that 3,117 firms operated during that year. Of that number, 3,083 operated with fewer than 1,000 employees. Based on these data, the Commission concludes that the majority of Competitive LECS, CAPs, Shared-Tenant Service Providers, and Other Local Service Providers, are small entities. According to Commission data, 1,442 carriers reported that they were engaged in the provision of either competitive local exchange services or competitive access provider services. Of these 1,442 carriers, an estimated 1,256 have 1,500 or fewer employees. In addition, 17 carriers have reported that they are Shared-Tenant Service Providers, and all 17 are estimated to have 1,500 or fewer employees. Also, 72 carriers have reported that they are Other Local Service Providers. Of this total, 70 have 1,500 or fewer employees. Consequently, based on internally researched FCC data, the Commission estimates that most providers of competitive local exchange service, competitive access providers, Shared-Tenant Service Providers, and Other Local Service Providers are small entities.

16. Incumbent Local Exchange Carriers (LECs). Neither the Commission nor the SBA has developed a small business size standard specifically for incumbent local exchange services. The closest applicable NAICS Code category is Wired Telecommunications Carriers. Under the applicable SBA size standard, such a business is small if it has 1,500 or fewer employees. U.S. Census Bureau data for 2012 indicate that 3,117 firms operated the entire year. Of this total, 3,083 operated with fewer than 1,000 employees. Consequently, the Commission estimates that most providers of incumbent local exchange service are small businesses that may be affected by our actions. According to Commission data, one thousand three hundred and seven (1,307) Incumbent Local Exchange Carriers reported that they were incumbent local exchange service providers. Of this total, an estimated 1,006 have 1,500 or fewer employees. Thus using the SBA's size standard the majority of Incumbent LECs can be considered small entities.

17. Narrowband Personal Communications Services. Two auctions of narrowband personal communications services (PCS) licenses have been conducted. To ensure meaningful participation of small business entities in future auctions, the Commission has adopted a two-tiered small business size standard in the Narrowband PCS Second Report and Order. Through these auctions, the Commission has awarded a total of 41 licenses, out of which 11 were obtained by small businesses. A ''small business'' is an entity that, together with affiliates and controlling interests, has average gross revenues for the three preceding years of not more than $40 million. A ''very small business'' is an entity that, together with affiliates and controlling interests, has average gross revenues for the three preceding years of not more than $15 million. The SBA has approved these small business size standards.

18. Offshore Radiotelephone Service. This service operates on several UHF television broadcast channels that are not used for television broadcasting in the coastal areas of states bordering the Gulf of Mexico. The closest applicable SBA size standard is for Wireless Telecommunications Carriers (except Satellite), which is an entity employing no more than 1,500 persons. U.S. Census Bureau data in this industry for 2012 show that there were 967 firms that operated for the entire year. Of this total, 955 firms had employment of 999 or fewer employees and 12 had employment of 1000 employees or more. Thus, under this SBA category and the associated small business size standard, the majority of Offshore Radiotelephone Service firms can be considered small. There are presently approximately 55 licensees in this service. However, the Commission is unable to estimate at this time the number of licensees that would qualify as small under the SBA's small business size standard for the category of Wireless Telecommunications Carriers (except Satellite).

19. Radio and Television Broadcasting and Wireless Communications Equipment Manufacturing. This industry comprises establishments primarily engaged in manufacturing radio and television broadcast and wireless communications equipment. Examples of products made by these establishments are: Transmitting and receiving antennas, cable television equipment, GPS equipment, pagers, cellular phones, mobile communications equipment, and radio and television studio and broadcasting equipment. The SBA has established a small business size standard for this industry of 1,250 employees or less. U.S. Census Bureau data for 2012 shows that 841 establishments operated in this industry in that year. Of that number, 828 establishments operated with fewer than 1,000 employees, 7 establishments operated with between 1,000 and 2,499 employees and 6 establishments operated with 2,500 or more employees. Based on this data, we conclude that a majority of manufacturers in this industry are small.

20. Rural Radiotelephone Service. The Commission has not adopted a size standard for small businesses specific to the Rural Radiotelephone Service. A significant subset of the Rural Radiotelephone Service is the Basic Exchange Telephone Radio System (BETRS). The closest applicable SBA size standard is for Wireless Telecommunications Carriers (except Satellite), which is an entity employing no more than 1,500 persons. For this industry, U.S. Census Bureau data for 2012 show that there were 967 firms that operated for the entire year. Of this total, 955 firms had employment of 999 or fewer employees and 12 had employment of 1000 employees or more. Thus under this category and the associated size standard, the Commission estimates that the majority of Rural Radiotelephone Services firm are small entities. There are approximately 1,000 licensees in the

Rural Radiotelephone Service, and the Commission estimates that there are 1,000 or fewer small entity licensees in the Rural Radiotelephone Service that may be affected by the rules and policies proposed herein.

21. Wireless Communications Services. This service can be used for fixed, mobile, radiolocation, and digital audio broadcasting satellite uses. The Commission defined ''small business'' for the wireless communications services (WCS) auction as an entity with average gross revenues of $40 million for each of the three preceding years, and a ''very small business'' as an entity with average gross revenues of $15 million for each of the three preceding years. The SBA has approved these small business size standards. In the Commission's auction for geographic area licenses in the WCS there were seven winning bidders that qualified as ''very small business'' entities, and one that qualified as a ''small business'' entity.

22. Wireless Telecommunications Carriers (except Satellite). This industry comprises establishments engaged in operating and maintaining switching and transmission facilities to provide communications via the airwaves. Establishments in this industry have spectrum licenses and provide services using that spectrum, such as cellular services, paging services, wireless internet access, and wireless video services. The appropriate size standard under SBA rules is that such a business is small if it has 1,500 or fewer employees. For this industry, U.S. Census Bureau data for 2012 show that there were 967 firms that operated for the entire year. Of this total, 955 firms had employment of 999 or fewer employees and 12 had employment of 1,000 employees or more. Thus under this category and the associated size standard, the Commission estimates that the majority of wireless telecommunications carriers (except satellite) are small entities.

23. Wireless Telephony. Wireless telephony includes cellular, personal communications services, and specialized mobile radio telephony carriers. The closest applicable SBA category is Wireless Telecommunications Carriers (except Satellite). Under the SBA small business size standard, a business is small if it has 1,500 or fewer employees. For this industry, U.S. Census Bureau data for 2012 show that there were 967 firms that operated for the entire year. Of this total, 955 firms had fewer than 1,000 employees and 12 firms had 1000 employees or more. Thus under this category and the associated size standard, the Commission estimates that a majority of these entities can be considered small. According to Commission data, 413 carriers reported that they were engaged in wireless telephony. Of these, an estimated 261 have 1,500 or fewer employees and 152 have more than 1,500 employees. Therefore, more than half of these entities can be considered small.

24. 700 MHz Guard Band Licensees. In 2000, in the 700 MHz Guard Band Order, the Commission adopted size standards for ''small businesses'' and ''very small businesses'' for purposes of determining their eligibility for special provisions such as bidding credits and installment payments. A small business in this service is an entity that, together with its affiliates and controlling principals, has average gross revenues not exceeding $40 million for the preceding three years. Additionally, a very small business is an entity that, together with its affiliates and controlling principals, has average gross revenues that are not more than $15 million for the preceding three years. SBA approval of these definitions is not required. An auction of 52 Major Economic Area licenses commenced on September 6, 2000, and closed on September 21, 2000. Of the 104 licenses auctioned, 96 licenses were sold to nine bidders. Five of these bidders were small businesses that won a total of 26 licenses. A second auction of 700 MHz Guard Band licenses commenced on February 13, 2001 and closed on February 21, 2001. All eight of the licenses auctioned were sold to three bidders. One of these bidders was a small business that won a total of two licenses.

25. Lower 700 MHz Band Licenses. The Commission previously adopted criteria for defining three groups of small businesses for purposes of determining their eligibility for special provisions such as bidding credits. The Commission defined a ''small business'' as an entity that, together with its affiliates and controlling principals, has average gross revenues not exceeding $40 million for the preceding three years. A ''very small business'' is defined as an entity that, together with its affiliates and controlling principals, has average gross revenues that are not more than $15 million for the preceding three years. Additionally, the lower 700 MHz Service had a third category of small business status for Metropolitan/Rural Service Area (MSA/RSA) licenses—''entrepreneur''—which is defined as an entity that, together with its affiliates and controlling principals, has average gross revenues that are not more than $3 million for the preceding three years. The SBA approved these small size standards. An auction of 740 licenses (one license in each of the 734 MSAs/RSAs and one license in each of the six Economic Area Groupings (EAGs)) commenced on August 27, 2002, and closed on September 18, 2002. Of the 740 licenses available for auction, 484 licenses were won by 102 winning bidders. Seventy-two of the winning bidders claimed small business, very small business or entrepreneur status and won a total of 329 licenses. A second auction commenced on May 28, 2003, closed on June 13, 2003, and included 256 licenses: 5 EAG licenses and 476 Cellular Market Area licenses. Seventeen winning bidders claimed small or very small business status and won 60 licenses, and nine winning bidders claimed entrepreneur status and won 154 licenses. On July 26, 2005, the Commission completed an auction of 5 licenses in the Lower 700 MHz band (Auction No. 60). There were three winning bidders for five licenses. All three winning bidders claimed small business status.

26. In 2007, the Commission reexamined its rules governing the 700 MHz band in the 700 MHz Second Report and Order. An auction of 700 MHz licenses commenced January 24, 2008, and closed on March 18, 2008, which included: 176 Economic Area licenses in the A-Block, 734 Cellular Market Area licenses in the B-Block, and 176 EA licenses in the E-Block. Twenty winning bidders, claiming small business status (those with attributable average annual gross revenues that exceed $15 million and do not exceed $40 million for the preceding three years) won 49 licenses. Thirty-three winning bidders claiming very small business status (those with attributable average annual gross revenues that do not exceed $15 million for the preceding three years) won 325 licenses.

27. Upper 700 MHz Band Licenses. In the 700 MHz Second Report and Order, the Commission revised its rules regarding Upper 700 MHz licenses. On January 24, 2008, the Commission commenced Auction 73 in which several licenses in the Upper 700 MHz band were available for licensing: 12 Regional Economic Area Grouping licenses in the C Block, and one nationwide license in the D Block. The auction concluded on March 18, 2008, with 3 winning bidders claiming very small business status (those with attributable average annual gross revenues that do not exceed $15 million for the preceding three years) and winning five licenses.

28. Wireless Resellers. The SBA has not developed a small business size standard specifically for Wireless Resellers. The SBA category of Telecommunications Resellers is the closest NAICS code category for wireless resellers. The Telecommunications Resellers industry comprises establishments engaged in purchasing access and network capacity from owners and operators of telecommunications networks and reselling wired and wireless telecommunications services (except satellite) to businesses and households. Establishments in this industry resell telecommunications; they do not operate transmission facilities and infrastructure. Mobile virtual network operators (MVNOs) are included in this industry. Under the SBA's size standard, such a business is small if it has 1,500 or fewer employees. U.S. Census Bureau data for 2012 show that 1,341 firms provided resale services for the entire year. Of that number, all operated with fewer than 1,000 employees. Thus, under this category and the associated small business size standard, the majority of these resellers can be considered small entities. According to Commission data, 213 carriers have reported that they are engaged in the provision of local resale services. Of these, an estimated 211 have 1,500 or fewer employees. Consequently, the Commission estimates that the majority of Wireless Resellers are small entities.

b. Equipment Manufacturers

29. Radio and Television Broadcasting and Wireless Communications Equipment Manufacturing. This industry comprises establishments primarily engaged in manufacturing radio and television broadcast and wireless communications equipment. Examples of products made by these establishments are: Transmitting and receiving antennas, cable television equipment, GPS equipment, pagers, cellular phones, mobile communications equipment, and radio and television studio and broadcasting equipment. The SBA has established a small business size standard for this industry of 1,250 employees or less. U.S. Census Bureau data for 2012 shows that 841 establishments operated in this industry in that year. Of that number, 828 establishments operated with fewer than 1,000 employees, 7 establishments operated with between 1,000 and 2,499 employees and 6 establishments operated with 2,500 or more employees. Based on this data, we conclude that a majority of manufacturers in this industry can be considered small.

30. Semiconductor and Related Device Manufacturing. This industry comprises establishments primarily engaged in manufacturing semiconductors and related solid state devices. Examples of products made by these establishments are integrated circuits, memory chips, microprocessors, diodes, transistors, solar cells and other optoelectronic devices. The SBA has developed a small business size standard for Semiconductor and Related Device Manufacturing, which consists of all such companies having 1,250 or fewer employees. U.S. Census Bureau data for 2012 show that there were 862 establishments that operated that year. Of this total, 843 operated with fewer than 1,000 employees. Thus, under this size standard, the majority of firms in this industry can be considered small.

D. Description of Projected Reporting, Recordkeeping, and Other Compliance Requirements for Small Entities

31. The NPRM proposes and seeks comment on changes to Commission rules related to priority access services that may affect reporting, recordkeeping, and other compliance requirements for small entities, if adopted. Specifically, regarding TSP, service providers would be required to have policies and procedures in place to prevent and detect the unauthorized disclosure of TSP data, and report provisioning and restoration times for TSP circuits in areas covered by the activation of the Disaster Information Reporting System (DIRS). Service providers would also be required to report provisioning and restoration times, and aggregate data that would allow the DHS to compare the data for TSP services to similar data for non-TSP services. Additionally, non-common carriers that voluntarily provide TSP-like services would be required to abide by the rules currently contained in Appendix A of part 64 of the Commission's rules.

32. Regarding PAS, Commercial Mobile Radio Service (CMRS) providers that offer priority access service (PAS providers) to NSEP users would be required to allow Priority Level 1 and 2 voice calls, if needed, to preempt or degrade in-progress public communications and provision next-generation voice, data, and video services on a priority basis. Priority Level 1 exceeds all other priority services offered by PAS providers. PAS providers would also be required to provide priority signaling to ensure networks are able to detect PAS handset network registration and service invocation; would be subject to additional methods of invocating PAS priority treatment for NSEP communications; and would be subject to DHS specific requirements to ensure PAS providers meet the survivability of NSEP communications, as required in Executive Order 13618. In addition, PAS providers would be required to file implementation and performance data with DHS so that DHS can assess the program's readiness, usage, and performance at all times and in all places offered, and for specific geographic areas and times.

33. We note that NTIA seeks substantial reporting and record-keeping requirements regarding the TSP and PAS programs. For TSP, NTIA asks that service providers report to DHS provisioning and restoration times for TSP circuits in areas covered by the activation of the Disaster Information Reporting System (DIRS), on belief that such reporting obligations would give it access to TSP provisioning and restoration times and aggregate data that would allow it to compare the data for TSP services to similar data for non-TSP services. NTIA also requests the Commission amend its WPS rules to require service providers to file implementation, usage, and performance data with DHS so that it can assess the program's readiness, usage, and performance at all times and all places offered, and for specific geographic areas and times. We are not prepared to propose the requests as rules, until we have a better understanding of the balance between the costs to providers and the benefits to DHS as program administrator.

34. If the Commission ultimately determines that it will adopt the rules proposed in the NPRM, small entities may need to hire engineers, consultants, or other professionals to comply with the rules generally, and the rules noted above specifically (*i.e.,* related to reporting and recordkeeping). At this time the Commission cannot, however, quantify the cost of compliance with the potential rule changes and obligations that may result in this proceeding. In our discussion of the proposals in the NPRM, we specifically seek comments from the parties in the proceeding addressing the costs and benefits of our proposed actions. We expect the information we receive in the comments to help the Commission identify and evaluate relevant matters for small entities, including any compliance costs and burdens that may result from the matters raised in the NPRM.

E. Steps Taken To Minimize the Significant Economic Impact on Small Entities, and Significant Alternatives Considered

35. The RFA requires an agency to describe any significant, specifically small business, alternatives that it has considered in reaching its proposed approach, which may include the following four alternatives (among others): (1) The establishment of differing compliance or reporting requirements or timetables that take into account the resources available to small entities; (2) the clarification, consolidation, or simplification of compliance or reporting requirements under the rule for such small entities; (3) the use of performance, rather than design, standards; and (4) an exemption from coverage of the rule, or any part thereof, for such small entities.

36. The Commission has taken steps and considered alternatives that could minimize the economic impact on small entities as a result of the proposals and matters upon which we seek comments in the NPRM; we believe, for example, that something as straight-forward as proposing to remove the requirement that an agency's TSP ''invocation official'' must be at or near the top of an agency's management hierarchy can lower costs for small entities. Similarly, our proposal to amend our PAS rules to authorize additional methods of invoking priority treatment for NSEP communications will most likely have an effect of lowering costs.

37. We note that our proposal does not currently seek adoption of several of the rule changes requested by NTIA and DHS, on belief that these rule changes would increase regulatory burdens on service providers/providers by increasing the costs of complying with the Commission's priority services rules. Further, we believe that considering a ''light touch'' regulatory framework and amending the Commission's priority services rules would enhance regulatory efficiency and reduce the burdens on small entities and other service providers by making it easier to identify and comply with the applicable rules.

38. Next, we raise the issue of rule waivers in light of the importance of end-to-end support of priority services in an IP-based network environment and seek comment on how the Commission might consider requests for waiver of its rules should our proposals be adopted. To the extent waivers are allowed, in order to determine what criteria should the Commission consider in determining whether there is good cause for waiver, we ask among other things, whether the size of the carrier should be a consideration. We also ask whether we should use our existing waiver rules which small entities may already be familiar with or adopt new requirements. New requirements have the potential to be less rigorous than the current rules. Another alternative upon which we seek comment that could be of particular benefit to small entities is whether and what type of mechanism should there be for extending the allowable time to achieve compliance with any rules adopted in this proceeding.

39. Finally, as a general matter, the Commission seeks comment on the minimum benefit expected to result from the policy changes we propose, and on the costs that NSEP providers would incur in order to achieve compliance. To assist in evaluating the economic impact on small entities, the Commission seeks comment on the costs and benefits of the proposed rules and any alternatives raised in the NPRM that will accomplish our goal of protecting life and property through the provisioning of NSEP communications services, while tailoring implementation of our proposals to minimize compliance costs and any potential burdens. The Commission is particularly interested in how the proposed rules on requiring service providers to have policies and procedures in place to prevent and detect the unauthorized disclosure of TSP data; requiring those providers to report provisioning and restoration times for TSP circuits in areas covered by the activation of the DIRS; and requiring PAS providers to file implementation and performance data with DHS so that DHS can assess the program's readiness, usage, and performance at all times and all places offered, and for specific geographic areas and times, will affect, and economically impact, small entities. While we believe there would be little adverse economic impact on small entities and other service providers because most of the proposed rule changes are administrative in nature, the Commission seeks to understand, with a degree of specificity, how complying with the proposed rules (were they to be adopted) would impact small entities. The Commission expects to consider more fully the economic impact on small entities following its review of comments filed in response to the NPRM, including costs and benefits analyses. The Commission's evaluation of the comments filed in this proceeding will shape the final alternatives it considers, the final conclusions it reaches, and any final actions it ultimately takes in this proceeding to minimize any significant economic impact that may occur on small entities.

F. Federal Rules That May Duplicate, Overlap, or Conflict With the Proposed Rules

40. None.

V. Ordering Clause

41. *It is ordered* that, pursuant to the authority contained in sections 1, 4(i), 4(j), 4(n), 201–205, 251(e)(3), 254, 301, 303(b), 303(g), 303(r), 307, 308(a), 309(a), 309(j), 316, 332, 403, 615(a)(1), 615(c), and 706 of the Communications Act of 1934, as amended, codified at 47 U.S.C. 151, 154(i)–(j) & (n), 201–205, 251(e)(3), 254, 301, 303(b), 303(g), 303(r), 307, 308(a), 309(a), 309(j), 316, 332, 403, 606, 615(a)(1), 615(c); and Executive Order 13618, that this Notice of Proposed Rulemaking in PS Docket No. 20–187 is adopted.

List of Subjects in 47 CFR Part 64

Communications, Communications common carriers, Communications equipment, Computer technology, Emergency preparedness, internet, Priority access, Priority services, Provisioning, Radio, Restoration, Telecommunications, Telephone.

Federal Communications Commission.

Marlene Dortch,

Secretary.

Proposed Rules

For the reasons discussed in the preamble, the Federal Communications Commission proposes to amend 47 CFR part 64 as follows:

PART 64—MISCELLANEOUS RULES RELATING TO COMMON CARRIERS

■ 1. The authority citation continues to read as follows:

Authority: 47 U.S.C. 154, 201, 202, 217, 218, 220, 222, 225, 226, 227, 227b, 228, 251(a), 251(e), 254(k), 262, 403(b)(2)(B), (c), 616, 620, 1401–1473, unless otherwise noted; Pub. L. 115–141, Div. P, sec. 503, 132 Stat. 348, 1091.

■ 2. Revise § 64.402 to read as follows:

§ 64.402 Policies and procedures for the provision of wireless priority service by wireless service providers.

Wireless service providers that elect to provide wireless priority service to National Security and Emergency Preparedness personnel shall provide wireless priority service in accordance with the policies and procedures set forth in appendix B to this part.

■ 3. Revise appendix A to Part 64 to read as follows:

Appendix A to Part 64—Telecommunications Service Priority (TSP) System for National Security Emergency Preparedness (NSEP)

1. Purpose and Authority

a. This appendix establishes policies and procedures and assigns responsibilities for the National Security Emergency Preparedness (NSEP) Telecommunications Service Priority (TSP) System. The NSEP TSP System authorizes priority treatment to certain telecommunications services and internet Protocol-based services (including voice, data, and video services), for which provisioning or restoration priority (RP) levels are requested, assigned, and approved in accordance with this appendix.

b. This appendix is issued pursuant to sections 1, 4(i), 4(j), 4(o), 201–205, 251(e)(3), 254, 301, 303(b), 303(g), 303(r), 307, 308(a), 309(a), 309(j), 316, 332, 403, 615a–1, 615c, and 606 of the Communications Act of 1934, as amended, codified at 47 U.S.C. 151, 154(i)–(j), (n) & (o), 201–205, 251(e)(3), 254, 301, 303(b), 303(g), 303(r), 307, 308(a), 309(a), 309(j), 316, 332, 403, 615a–1, 615c, 606; Section 706 of the Telecommunications Act of 1996, codified at 47 U.S.C 1302; and Executive Order 13618. These authorities grant to the Federal Communications Commission (FCC) the authority over the assignment and approval of priorities for provisioning and restoration of telecommunications services and internet Protocol-based services. Under section 706 of the Communications Act, this authority may be superseded, and the mandatory provisions of this section may be expanded to include non-common carrier telecommunications services, by the war emergency powers of the President of the United States.

c. Together, this appendix and the regulations and procedures issued by the Department of Homeland Security (DHS) establish one uniform system of priorities for provisioning and restoration of NSEP telecommunications services and internet Protocol-based services both before and after invocation of the President's war emergency powers. In order that government and industry resources may be used effectively under all conditions, a single set of rules, regulations, and procedures is necessary, and they must be applied on a day-to-day basis to all NSEP services so that the priorities they establish can be implemented at once when the need arises.

2. Definitions

As used in this appendix:

a. Assignment means the designation of priority level(s) for a defined NSEP telecommunications service or internet Protocol-based service for a specified time period.

b. Audit means a quality assurance review in response to identified problems.

c. Government refers to the Federal Government or any foreign, state, county, municipal or other local government agency or organization. Specific qualifications will be supplied whenever reference to a particular level of government is intended (*e.g.,* ''Federal Government'', ''state government''). ''Foreign government'' means any sovereign empire, kingdom, state, or independent political community, including foreign diplomatic and consular establishments and coalitions or associations of governments (*e.g.,* North Atlantic Treaty Organization (NATO), Southeast Asian Treaty Organization (SEATO), Organization of American States (OAS), and government agencies or organization (*e.g.,* Pan American Union, International Postal Union, and International Monetary Fund)).

d. National Coordinating Center for Communications (NCC) refers to the joint telecommunications industry-Federal Government operation that assists in the initiation, coordination, restoration, and reconstitution of NSEP telecommunications services or facilities.

e. National Security Emergency Preparedness (NSEP) services, or ''NSEP services,'' means telecommunications services or internet Protocol-based services which are used to maintain a state of readiness or to respond to and manage any event or crisis (local, national, or international), which causes or could cause injury or harm to the population, damage to or loss of property, or degrades or threatens the NSEP posture of the United States. These services fall into two specific categories, Emergency NSEP and Essential NSEP, and are assigned priority levels pursuant to section 8 of this appendix.

f. NSEP treatment refers to the provisioning of a specific NSEP service before others based on the provisioning priority level assigned by DHS.

g. Priority action means assignment, revision, revocation, or revalidation by DHS of a priority level associated with an NSEP service.

h. Priority level means the level that may be assigned to an NSEP service specifying the order in which provisioning or restoration of the service is to occur relative to other NSEP and/or non-NSEP telecommunications services. Priority levels authorized by this appendix are designated (highest to lowest) ''E,'' ''1,'' ''2,'' ''3,'' ''4,'' and ''5,'' for provisioning and ''1,'' ''2,'' ''3,'' ''4,'' and ''5,'' for restoration.

i. Priority level assignment means the priority level(s) designated for the provisioning and/or restoration of a specific NSEP service under section 8 of this appendix.

j. Private NSEP services include non-common carrier telecommunications services.

k. Provisioning means the act of supplying service to a user, including all associated transmission, wiring, and equipment. As used herein, ''provisioning'' and ''initiation'' are synonymous and include altering the state of an existing priority service or capability.

l. Public switched NSEP services include those NSEP services using public switched networks.

m. Reconciliation means the comparison of NSEP service information and the resolution of identified discrepancies.

n. Restoration means the repair or returning to service of one or more services that have experienced a service outage or are unusable for any reason, including a damaged or impaired facility. Such repair or returning to service may be done by patching, rerouting, substitution of component parts or pathways, and other means, as determined necessary by a service provider.

o. Revalidation means the re-justification by a service user of a priority level assignment. This may result in extension by DHS of the expiration date associated with the priority level assignment.

p. Revision means the change of priority level assignment for an NSEP service. This includes any extension of an existing priority level assignment to an expanded NSEP service.

q. Revocation means the elimination of a priority level assignment when it is no longer valid. All priority level assignments for an NSEP service are revoked upon service termination.

r. Service identification refers to the information uniquely identifying an NSEP service to the service provider and/or service user.

s. Service user refers to any individual or organization (including a service provider) supported by an NSEP service for which a priority level has been requested or assigned pursuant to section 7 or 8 of this appendix.

t. Service provider refers to any person, association, partnership, corporation, organization, or other entity (including government organizations) that offers to supply any equipment, facilities, or services (including customer premises equipment and wiring) or combination thereof. The term includes resale carriers, prime contractors, subcontractors, and interconnecting carriers.

u. Spare circuits or services refers to those not being used or contracted for by any customer.

v. Telecommunications services means the offering of telecommunications for a fee directly to the public, or to such classes of users as to be effectively available directly to the public, regardless of the facilities used.

w. Telecommunications Service Priority (TSP) system user refers to any individual, organization, or activity that interacts with the NSEP TSP System.

3. Scope

a. Service providers.

(1) This appendix applies to the provision and restoration of certain telecommunications services or internet Protocol-based services for which priority levels are requested, assigned, and approved pursuant to section 8 of this appendix.

(2) Common carriers must offer prioritized provisioning and restoration of circuit-switched voice communication services. Any service provider may, on a voluntary basis, offer prioritized provisioning and restoration of data, video, and IP-based voice services.

b. Eligible services. The NSEP TSP System and procedures established by this appendix authorize priority treatment to the following domestic services (including portions of U.S. international services offered by U.S. service providers) for which provisioning or restoration priority levels are requested, assigned, and approved in accordance with this appendix:

(1) Common carrier services which are:

(a) Interstate or foreign telecommunications services,

(b) Intrastate telecommunications services inseparable from interstate or foreign telecommunications services, and intrastate telecommunications services to which priority levels are assigned pursuant to section 8 of this appendix.

(2) Services which are provided by government and/or non-common carriers and are interconnected to common carrier services assigned a priority level pursuant to section 8 of this appendix.

c. Control services and orderwires. The NSEP TSP System and procedures established by this appendix are not applicable to authorize priority treatment to control services or orderwires owned by a service provider and needed for provisioning, restoration, or maintenance of other services owned by that service provider. Such control services and orderwires shall have priority provisioning and restoration over all other services (including NSEP services) and shall be exempt from preemption. However, the NSEP TSP System and procedures established by this appendix are applicable to control services or orderwires leased by a service provider.

d. Other services. The NSEP TSP System may apply, at the discretion of and upon special arrangements by the NSEP TSP System users involved, to authorize priority treatment to the following services:

(1) Government or non-common carrier services which are not connected to common carrier provided services assigned a priority level pursuant to section 8 of this appendix.

(2) Portions of U.S. international services which are provided by foreign correspondents. (U.S. service providers are encouraged to ensure that relevant operating arrangements are consistent to the maximum extent practicable with the NSEP TSP System. If such arrangements do not exist, U.S. service providers should handle service provisioning and/or restoration in accordance with any system acceptable to their foreign correspondents which comes closest to meeting the procedures established in this appendix.)

4. Policy

The NSEP TSP System is the regulatory, administrative, and operational system authorizing and providing for priority treatment, *i.e.,* provisioning and restoration, of NSEP services. As such, it establishes the framework for service providers to provision, restore, or otherwise act on a priority basis to ensure effective NSEP services. The NSEP TSP System allows the assignment of priority levels to any NSEP service across three time periods, or stress conditions: Peacetime/Crisis/Mobilizations, Attack/War, and Post-Attack/Recovery. Although priority levels normally will be assigned by DHS and retained by service providers only for the current time period, they may be preassigned for the other two time periods at the request of service users who are able to identify and justify in advance, their wartime or post-attack NSEP requirements. Absent such preassigned priority levels for the Attack/War and Post-Attack/Recovery periods, priority level assignments for the Peacetime/Crisis/Mobilization period will remain in effect. At all times, priority level assignments will be subject to revision by the FCC or (on an interim basis) DHS, based upon changing NSEP needs. No other system of service priorities which conflicts with the NSEP TSP System is authorized.

5. Responsibilities

a. The FCC will:

(1) Provide regulatory oversight of implementation of the NSEP TSP System.

(2) Enforce NSEP TSP System rules and regulations, which are contained in this appendix.

(3) Act as final authority for approval, revision, or disapproval of priority actions by DHS and adjudicate disputes regarding either priority actions or denials of requests for priority actions by DHS, until superseded by the President's war emergency powers under section 706 of the Communications Act.

(4) Perform such functions as are required by law and Executive Order 13618, including:

(a) With respect to all entities licensed or regulated by the FCC: The extension, discontinuance, or reduction of common carrier facilities or services; the control of common carrier rates, charges, practices, and classifications; the construction, authorization, activation, deactivation, or closing of radio stations, services, and facilities; the assignment of radio frequencies to licensees; the investigation of violations of pertinent law; and the assessment of communications service provider emergency needs and resources; and

(b) support the continuous operation and restoration of critical communications systems and services by assisting the Secretary of Homeland Security with infrastructure damage assessment and restoration, and by providing the Secretary of Homeland Security with information collected by the FCC on communications infrastructure, service outages, and restoration, as appropriate.

(5) Function (on a discretionary basis) as a sponsoring Federal organization. (See section 5(b) below.)

b. Sponsoring Federal organizations will:

(1) Review and decide whether to sponsor foreign, state, and local government and private industry (including service providers) requests for priority actions. Federal organizations will forward sponsored requests with recommendations for disposition to DHS. Recommendations will be based on the categories and criteria in section 10 of this appendix.

(2) Forward notification of priority actions or denials of requests for priority actions from DHS to the requesting foreign, state, and local government and private industry entities.

(3) Cooperate with DHS during reconciliation, revalidation, and audits.

(4) Comply with any regulations and procedures supplemental to and consistent with this appendix which are issued by DHS.

c. Service users will:

(1) Identify services requiring priority level assignments and request and justify priority level assignments in accordance with this appendix and any supplemental regulations and procedures issued by DHS that are consistent with this appendix.

(2) Request and justify revalidation of all priority level assignments at least every three years.

(3) For services assigned priority levels, ensure (through contractual means or otherwise) availability of customer premises equipment and wiring necessary for end-to-end service operation by the service due date, and continued operation; and, for such services in the Emergency NSEP category, by the time that providers are prepared to provide the services. Additionally, designate the organization responsible for the service on an end-to-end basis.

(4) Be prepared to accept services assigned priority levels by the service due dates or, for services in the Emergency NSEP category, when they are available.

(5) Pay providers any authorized costs associated with services that are assigned priority levels.

(6) Report to providers any failed or unusable services that are assigned priority levels.

(7) Designate a 24-hour point-of-contact for matters concerning each request for priority action and apprise DHS thereof.

(8) Upon termination of services that are assigned priority levels, or circumstances warranting revisions in priority level assignment (*e.g.,* expansion of service), request and justify revocation or revision.

(9) When NSEP treatment is invoked under section 8(c) of this appendix, within 90 days following provisioning of the service involved, forward to the National Coordinating Center (see section 2(d) of this appendix) complete information identifying the time and event associated with the invocation and regarding whether the NSEP service requirement was adequately handled and whether any additional charges were incurred.

(10) Cooperate with DHS during reconciliation, revalidation, and audits.

(11) Comply with any regulations and procedures supplemental to and consistent with this appendix that are issued by DHS.

d. Non-federal service users, in addition to responsibilities prescribed above in section 6(d), will obtain a sponsoring Federal organization for all requests for priority actions. If unable to find a sponsoring Federal organization, a non-federal service user may submit its request, which must include documentation of attempts made to obtain a sponsor and reasons given by the sponsor for its refusal, directly to DHS.

e. Service providers will:

(1) When NSEP treatment is invoked by service users, provision NSEP services before non-NSEP services, based on priority level assignments made by DHS. Provisioning will require service providers to:

(a) Allocate resources to ensure best efforts to provide NSEP services by the time required. When limited resources constrain response capability, providers will address conflicts for resources by:

(i) Providing NSEP services in order of provisioning priority level assignment (*i.e.,* ''E'', ''1'', ''2'', ''3'', ''4'', or ''5'');

(ii) Providing Emergency NSEP services (*i.e.,* those assigned provisioning priority level ''E'') in order of receipt of the service requests;

(iii) Providing Essential NSEP services (*i.e.,* those assigned priority levels ''1'', ''2'', ''3'', ''4'', or ''5'') that have the same provisioning priority level in order of service due dates; and

(iv) Referring any conflicts which cannot be resolved (to the mutual satisfaction of service providers and users) to the Executive Office of the President (EOP) for resolution.

(b) Comply with NSEP service requests by:

(i) Allocating resources necessary to provide Emergency NSEP services as soon as possible, dispatching outside normal business hours when necessary;

(ii) Ensuring best efforts to meet requested service dates for Essential NSEP services, negotiating a mutually (authorized user and provider) acceptable service due date when the requested service due date cannot be met; and

(iii) Seeking NCC assistance as authorized under the NCC Charter (see section 1.3, NCC Charter, dated October 9, 1985).

(2) Restore NSEP services which suffer outage or are reported as unusable or otherwise in need of restoration, before non-NSEP services, based on restoration priority level assignments. (Note: For broadband or multiple service facilities, restoration is permitted even though it might result in restoration of services assigned no or lower priority levels along with, or sometimes ahead of, some higher priority level services.) Restoration will require service providers to restore NSEP services in order of restoration priority level assignment (*i.e.,* ''1'', ''2'', ''3'', ''4'', or ''5'') by:

(a) Allocating available resources to restore NSEP services as quickly as practicable, dispatching outside normal business hours to restore services assigned priority levels ''1'', ''2'', and ''3'' when necessary, and services assigned priority level ''4'' and ''5'' when the next business day is more than 24 hours away;

(b) Restoring NSEP services assigned the same restoration priority level based upon which can be first restored. (However, restoration actions in progress should not normally be interrupted to restore another NSEP service assigned the same restoration priority level);

(c) Patching and/or rerouting NSEP services assigned restoration priority levels from ''1'' through ''5,'' when use of patching and/or rerouting will hasten restoration;

(d) Seeking NCC assistance authorized under the NCC Charter; and

(e) Referring any conflicts which cannot be resolved (to the mutual satisfaction of service providers and users) to EOP for resolution.

(3) Respond to provisioning requests of authorized users and/or other service providers, and to restoration priority level assignments when an NSEP service suffers an outage or is reported as unusable, by:

(a) Ensuring that provider personnel understand their responsibilities to handle NSEP provisioning requests and to restore NSEP service;

(b) Providing a 24-hour point-of-contact for receiving provisioning requests for Emergency NSEP services and reports of NSEP service outages or unusability; and

(c) Seeking verification from an authorized entity if legitimacy of a priority level assignment or provisioning request for an NSEP service is in doubt. However, processing of Emergency NSEP service requests will not be delayed for verification purposes.

(4) Cooperate with other service providers involved in provisioning or restoring a portion of an NSEP service by honoring provisioning or restoration priority level assignments, or requests for assistance to provision or restore NSEP services, as detailed in section 5(e)(1), (2), and (3).

(5) All service providers, including resale carriers, are required to ensure that service providers supplying underlying facilities are provided information necessary to implement priority treatment of facilities that support NSEP services.

(6) Preempt, when necessary, existing services to provide an NSEP service as authorized in section 6 of this appendix.

(7) Assist in ensuring that priority level assignments of NSEP services are accurately identified ''end-to-end'' by:

(a) Seeking verification from an authorized Federal Government entity if the legitimacy of the restoration priority level assignment is in doubt;

(b) Providing to subcontractors and/or interconnecting carriers the restoration priority level assigned to a service;

(c) Supplying, to DHS, when acting as a prime contractor to a service user, confirmation information regarding NSEP service completion for that portion of the service they have contracted to supply;

(d) Supplying, to DHS, NSEP service information for the purpose of reconciliation;

(e) Cooperating with DHS during reconciliation; and

(f) Periodically initiating reconciliation with their subcontractors and arranging for subsequent subcontractors to cooperate in the reconciliation process.

(8) Receive compensation for costs authorized through tariffs or contracts by:

(a) Provisions contained in properly filed state or Federal tariffs; or

(b) Provisions of properly negotiated contracts where the carrier is not required to file tariffs.

(9) Provision or restore only the portions of services for which they have agreed to be responsible (*i.e.,* have contracted to supply), unless the President's war emergency powers under section 706 of the Communications Act are in effect.

(10) Cooperate with DHS during audits.

(11) Comply with any regulations or procedures supplemental to and consistent with this appendix that are issued by DHS and reviewed by the FCC.

(12) Ensure that at all times a reasonable number of public switched network services are made available for public use.

(13) Not disclose information concerning NSEP services they provide to those not having a need-to-know or might use the information for competitive advantage.

(14) Comply with all relevant Commission rules regarding TSP.

6. Preemption of Existing Services

When necessary to provision or restore NSEP services, service providers may preempt services they provide as specified below. ''User'' as used in this Section means any user of a telecommunications service or internet Protocol-based service, including both NSEP and non-NSEP services. Prior consent by a preempted user is not required.

a. The sequence in which existing services may be preempted to provision NSEP services assigned a provisioning priority level ''E'' or restore NSEP services assigned a restoration priority level from ''1'' through ''5'':

(1) *Non-NSEP services:* If suitable spare services are not available, then, based on the considerations in this appendix and the service provider's best judgment, non-NSEP services will be preempted. After ensuring a sufficient number of public switched services are available for public use, based on the service provider's best judgment, such services may be used to satisfy a requirement for provisioning or restoring NSEP services.

(2) *NSEP services:* If no suitable spare or non-NSEP services are available, then existing NSEP services may be preempted to provision or restore NSEP services with higher priority level assignments. When this is necessary, NSEP services will be selected for preemption in the inverse order of priority level assignment.

(3) Service providers who are preempting services will ensure their best effort to notify the service user of the preempted service and state the reason for and estimated duration of the preemption.

b. Service providers may, based on their best judgment, determine the sequence in which existing services may be preempted to provision NSEP services assigned a provisioning priority of ''1'' through ''5''. Preemption is not subject to the consent of the user whose service will be preempted.

7. Requests for Priority Assignments

All service users are required to submit requests for priority actions to DHS in the format and following the procedures prescribed by DHS.

8. Assignment, Approval, Use, and Invocation of Priority Levels

a. Assignment and approval of priority levels. Priority level assignments will be based upon the categories and criteria specified in section 10 of this appendix. A priority level assignment made by DHS will serve as DHS's recommendation to the FCC. Until the President's war emergency powers are invoked, priority level assignments must be approved by the FCC. However, service providers are ordered to implement any priority level assignments that are pending FCC approval. After invocation of the President's war emergency powers, these requirements may be superseded by other procedures issued by DHS.

b. Use of Priority Level Assignments.

(1) All provisioning and restoration priority level assignments for services in the Emergency NSEP category will be included in initial service orders to providers. Provisioning priority level assignments for Essential NSEP services, however, will not usually be included in initial service orders to providers. NSEP treatment for Essential NSEP services will be invoked and provisioning priority level assignments will

be conveyed to service providers only if the providers cannot meet needed service dates through the normal provisioning process.

(2) Any revision or revocation of either provisioning or restoration priority level assignments will also be transmitted to providers.

(3) Service providers shall accept priority levels and/or revisions only after assignment by DHS.

Note: Service providers acting as prime contractors will accept assigned NSEP priority levels only when they are accompanied by the DHS designated service identification, *i.e.,* TSP Authorization Code. However, service providers are authorized to accept priority levels and/or revisions from users and contracting activities before assignment by DHS when service providers, user, and contracting activities are unable to communicate with either the FCC or DHS. Processing of Emergency NSEP service requests will not be delayed for verification purposes.

c. Invocation of NSEP treatment. To invoke NSEP treatment for the priority provisioning of an NSEP service, an authorized federal employee within, or acting on behalf of, the service user's organization must make a declaration to concerned service provider(s) and DHS that NSEP treatment is being invoked. An authorized invocation official is one who (1) understands how the requested service ties to the organization's NSEP mission, and (2) is authorized by the organization to approve the expenditure of funds necessary for the requested service.

9. Appeal

Service users or sponsoring Federal organizations may appeal any priority level assignment, denial, revision, revocation, approval, or disapproval to DHS within 30 days of notification to the service user. The appellant must use the form or format required by DHS and must serve the FCC with a copy of its appeal. DHS will act on the appeal within 90 days of receipt. Service users and sponsoring Federal organizations may only then appeal directly to the FCC. Such FCC appeal must be filed within 30 days of notification of DHS's decision on appeal. Additionally, DHS may appeal any FCC revisions, approvals, or disapprovals to the FCC. All appeals to the FCC must be submitted using the form or format required. The party filing its appeal with the FCC must include factual details supporting its claim and must serve a copy on DHS and any other party directly involved. Such party may file a response within 20 days, and replies may be filed within 10 days thereafter. The Commission will not issue public notices of such submissions. The Commission will provide notice of its decision to the parties of record. Any appeals to DHS that include a claim of new information that has not been presented before for consideration may be submitted at any time.

10. Categories, Criteria, and Priority Levels

a. General. NSEP TSP System categories and criteria, and permissible priority level assignments, are defined and explained below.

(1) The Essential NSEP category has four subcategories: National Security Leadership; National Security Posture and U.S. Population Attack Warning; Public Health, Safety, and Maintenance of Law and Order; and Public Welfare and Maintenance of National Economic Posture. Each subcategory has its own criteria. Criteria are also shown for the Emergency NSEP category, which has no sub-categories.

(2) Priority levels of ''1,'' ''2,'' ''3,'' ''4,'' and ''5'' may be assigned for provisioning and/or restoration of Essential NSEP services. However, for Emergency NSEP services, a priority level ''E'' is assigned for provisioning. A restoration priority level from ''1'' through ''5'' may be assigned if an Emergency NSEP service also qualifies for such a restoration priority level under the Essential NSEP category.

(3) The NSEP TSP System allows the assignment of priority levels to any NSEP service across three time periods, or stress conditions: Peacetime/Crisis/Mobilization, Attack/War, and Post-Attack/Recovery. Priority levels will normally be assigned only for the first time period. These assigned priority levels will apply through the onset of any attack, but it is expected that they would later be revised by surviving authorized resource managers within DHS based upon specific facts and circumstances arising during the Attack/War and Post-Attack/Recovery time periods.

(4) Service users may, for their own internal use, assign sub-priorities to their services assigned priority levels. Receipt of and response to any such sub-priorities is optional for service providers.

(5) The following paragraphs provide a detailed explanation of the categories, subcategories, criteria, and priority level assignments, beginning with the Emergency NSEP category.

b. Emergency NSEP. Services in the Emergency NSEP category are those new services so critical as to be required to be provisioned at the earliest possible time, without regard to the costs of obtaining them.

(1) Criteria. To qualify under the Emergency NSEP category, the service must meet criteria directly supporting or resulting from at least one of the following NSEP functions:

(a) Federal Government activity responding to a Presidentially declared disaster or emergency as defined in the Disaster Relief Act (42 U.S.C. 5122).

(b) State or local government activity responding to a Presidentially declared disaster or emergency.

(c) Response to a state of crisis declared by the National Command Authorities (*e.g.,* exercise of Presidential war emergency powers under section 706 of the Communications Act.)

(d) Efforts to protect endangered U.S. personnel or property.

(e) Response to an enemy or terrorist action, civil disturbance, natural disaster, or any other unpredictable occurrence that has damaged facilities whose uninterrupted operation is critical to NSEP or the management of other ongoing crises.

(f) Certification by the head or director of a Federal agency, commander of a unified/specified command, chief of a military service, or commander of a major military command, that the service is so critical to protection of life and property or to NSEP that it must be provided immediately.

(g) A request from an official authorized pursuant to the Foreign Intelligence Surveillance Act (50 U.S.C. 1801 *et seq.* and 18 U.S.C. 2511, 2518, 2519).

(2) Priority Level Assignment.

(a) Services qualifying under the Emergency NSEP category are assigned priority level ''E'' for provisioning.

(b) After 30 days, assignments of provisioning priority level ''E'' for Emergency NSEP services are automatically revoked unless extended for another 30-day period. A notice of any such revocation will be sent to service providers.

(c) For restoration, Emergency NSEP services may be assigned priority levels under the provisions applicable to Essential NSEP services (see section 10(c)). Emergency NSEP services not otherwise qualifying for restoration priority level assignment as Essential NSEP may be assigned a restoration priority level ''5'' for a 30-day period. Such 30-day restoration priority level assignments will be revoked automatically unless extended for another 30-day period. A notice of any such revocation will be sent to service providers.

c. Essential NSEP. Services in the Essential NSEP category are those required to be provisioned by due dates specified by service users, or restored promptly, normally without regard to associated overtime or expediting costs. They may be assigned priority level of ''1,'' ''2,'' ''3,'' ''4,'' or ''5'' for both provisioning and restoration, depending upon the nature and urgency of the supported function, the impact of lack of service or of service interruption upon the supported function, and, for priority access to public switched services, the user's level of responsibility. Priority level assignments will be valid for no more than three years unless revalidated. To be categorized as Essential NSEP, a service must qualify under one of the four following subcategories: National Security Leadership; National Security Posture and U.S. Population Attack Warning; Public Health, Safety and Maintenance of Law and Order; or Public Welfare and Maintenance of National Economic Posture. (Note Under emergency circumstances, Essential NSEP services may be recategorized as Emergency NSEP and assigned a priority level ''E'' for provisioning.)

(1) National security leadership. This subcategory will be strictly limited to only those NSEP services essential to national survival if nuclear attack threatens or occurs, and critical orderwire and control services necessary to ensure the rapid and efficient provisioning or restoration of other NSEP services. Services in this subcategory are those for which a service interruption of even a few minutes would have serious adverse impact upon the supported NSEP function.

(a) Criteria. To qualify under this subcategory, a service must be at least one of the following:

(i) Critical orderwire, or control service, supporting other NSEP functions.

(ii) Presidential communications service critical to continuity of government and national leadership during crisis situations.

(iii) National Command Authority communications service for military command and control critical to national survival.

(iv) Intelligence communications service critical to warning of potentially catastrophic attack.

(v) Communications service supporting the conduct of diplomatic negotiations critical to arresting or limiting hostilities.

(b) Priority level assignment. Services under this subcategory will normally be assigned priority level ''1'' for provisioning and restoration during the Peace/Crisis/Mobilization time period.

(2) National security posture and U.S. population attack warning. This subcategory covers those minimum additional NSEP services essential to maintaining an optimum defense, diplomatic, or continuity-of-government postures before, during, and after crises situations. Such situations are those ranging from national emergencies to international crises, including nuclear attack. Services in this subcategory are those for which a service interruption ranging from a few minutes to one day would have serious adverse impact upon the supported NSEP function.

(a) Criteria. To qualify under this subcategory, a service must support at least one of the following NSEP functions:

(i) Threat assessment and attack warning.

(ii) Conduct of diplomacy.

(iii) Collection, processing, and dissemination of intelligence.

(iv) Command and control of military forces.

(v) Military mobilization.

(vi) Continuity of Federal Government before, during, and after crises situations.

(vii) Continuity of state and local government functions supporting the Federal Government during and after national emergencies.

(viii) Recovery of critical national functions after crises situations.

(ix) National space operations.

(b) Priority level assignment. Services under this subcategory will normally be assigned priority level ''2,'' ''3,'' ''4,'' or ''5'' for provisioning and restoration during Peacetime/Crisis/Mobilization.

(3) Public health, safety, and maintenance of law and order. This subcategory covers the minimum number of NSEP services necessary for giving civil alert to the U.S. population and maintaining law and order and the health and safety of the U.S. population in times of any national, regional, or serious local emergency. These services are those for which a service interruption ranging from a few minutes to one day would have serious adverse impact upon the supported NSEP functions.

(a) Criteria. To qualify under this subcategory, a service must support at least one of the following NSEP functions:

(i) Population warning (other than attack warning).

(ii) Law enforcement.

(iii) Continuity of critical state and local government functions (other than support of the Federal Government during and after national emergencies).

(vi) Hospitals and distributions of medical supplies.

(v) Critical logistic functions and public utility services.

(vi) Civil air traffic control.

(vii) Military assistance to civil authorities.

(viii) Defense and protection of critical industrial facilities.

(ix) Critical weather services.

(x) Transportation to accomplish the foregoing NSEP functions.

(b) Priority level assignment. Service under this subcategory will normally be assigned priority levels ''3,'' ''4,'' or ''5'' for provisioning and restoration during Peacetime/Crisis/Mobilization.

(4) Public welfare and maintenance of national economic posture. This subcategory covers the minimum number of NSEP services necessary for maintaining the public welfare and national economic posture during any national or regional emergency. These services are those for which a service interruption ranging from a few minutes to one day would have serious adverse impact upon the supported NSEP function.

(a) Criteria. To qualify under this subcategory, a service must support at least one of the following NSEP functions:

(i) Distribution of food and other essential supplies.

(ii) Maintenance of national monetary, credit, and financial systems.

(iii) Maintenance of price, wage, rent, and salary stabilization, and consumer rationing programs.

(iv) Control of production and distribution of strategic materials and energy supplies.

(v) Prevention and control of environmental hazards or damage.

(vi) Transportation to accomplish the foregoing NSEP functions.

(b) Priority level assignment. Services under this subcategory will normally be assigned priority levels ''4'' or ''5'' for provisioning and restoration during Peacetime/Crisis/Mobilization.

d. Limitations. Priority levels will be assigned only to the minimum number of NSEP services required to support an NSEP function. Priority levels will not normally be assigned to backup services on a continuing basis, absent additional justification, *e.g.,* a service user specifies a requirement for physically diverse routing or contracts for additional continuity-of-service features. EOP may also establish limitations upon the relative numbers of services which may be assigned any restoration priority level. These limitations will not take precedence over laws or executive orders. Such limitations shall not be exceeded absent waiver by EOP.

e. Non-NSEP services. Services in the non-NSEP category will be those which do not meet the criteria for either Emergency NSEP or Essential NSEP.

■ 4. Revise appendix B to Part 64 to read as follows:

Appendix B to Part 64—Wireless Priority Service (WPS) for National Security and Emergency Preparedness (NSEP)

1. Purpose and Authority

a. This appendix establishes policies and procedures and outlines responsibilities for the Wireless Priority Service (WPS) to support the needs for National Security Emergency Preparedness (NSEP) personnel and other authorized users. WPS authorizes priority treatment to certain domestic telecommunications services and internet Protocol-based services for which provisioning priority levels are requested, assigned, and approved in accordance with this appendix.

b. This appendix is issued pursuant to sections 1, 4(i), 4(j), 4(o), 201–205, 251(e)(3), 254, 301, 303(b), 303(g), 303(r), 307, 308(a), 309(a), 309(j), 316, 332, 403, 615a–1, 615c, and 606 of the Communications Act of 1934, as amended, codified at 47 U.S.C. 151, 154(i)–(j), (n) & (o), 201–205, 251(e)(3), 254, 301, 303(b), 303(g), 303(r), 307, 308(a), 309(a), 309(j), 316, 332, 403, 615a–1, 615c, 606; Section 706 of the Telecommunications Act of 1996, codified at 47 U.S.C 1302; and Executive Order 13618. Under section 706 of the Communications Act, this authority may be superseded by the war emergency powers of the President of the United States.

c. This appendix is intended to be read in conjunction with regulations and procedures that the Department of Homeland Security (DHS) issues to implement the responsibilities assigned in section 5 of this appendix, or for use in the event this appendix is superseded by the President's emergency war powers. Together, this appendix and the regulations and procedures issued by DHS establish one uniform system of wireless priority access service both before and after invocation of the President's emergency war powers.

2. Definitions

As used in this appendix:

1. Authorizing agent refers to a Federal or State entity that authenticates, evaluates, and makes recommendations to DHS regarding the assignment of wireless priority access service levels.

2. Service provider means an FCC-licensed wireless service provider. The term does not include agents of the licensed provider or resellers of wireless service.

3. Service user means an individual or organization (including a service provider) to whom or which a priority access assignment has been made.

4. The following terms have the same meaning as in Appendix A to part 64, as amended:

(a) Assignment;

(b) Government;

(c) National Coordinating Center for Communications (NCC);

(d) National Security Emergency Preparedness (NSEP) services (excluding the last sentence);

(e) Reconciliation;

(f) Revalidation;

(g) Revision;

(h) Revocation;

(i) Telecommunications services (excluding the last sentence).

3. Scope

a. Applicability. This appendix applies to the provision of WPS by wireless service providers to users who qualify under the provisions of section 7 of this appendix.

b. Eligible services. Wireless service providers may, on a voluntary basis, offer

prioritized provisioning of voice, data, and video services. Providers that elect to offer these services must comply with all provisions of this appendix.

4. Policy

WPS provides the means for NSEP users to obtain priority wireless access to available radio channels when necessary to initiate emergency communications. It does not preempt public safety emergency (911) calls, but priority 1 and 2 voice calls may preempt or degrade other in-progress calls, if necessary. NSEP users are authorized to use priority signaling to ensure networks are able to detect WPS handset network registration and service invocation. WPS is used during situations when network congestion is blocking NSEP call attempts. It is available to authorized NSEP users at all times in markets where the service provider has voluntarily decided to provide such service. WPS priorities 1 through 5 are reserved for qualified and authorized NSEP users, and those users are provided access to radio channels before any other users.

5. Responsibilities

a. The FCC will:

1. Provide regulatory oversight of the implementation of WPS.

2. Enforce WPS rules and regulations.

3. Act as final authority for approval, revision, or disapproval of priority assignments by DHS by adjudicating disputes regarding either priority assignments or the denial thereof by DHS until superseded by the President's war emergency powers under Section 706 of the Communications Act.

4. Perform such functions as are required by law and Executive Order 13618, including:

(a) With respect to all entities licensed or regulated by the FCC: The extension, discontinuance, or reduction of common carrier facilities or services; the control of common carrier rates, charges, practices, and classifications; the construction, authorization, activation, deactivation, or closing of radio stations, services, and facilities; the assignment of radio frequencies to licensees; the investigation of violations of pertinent law; and the assessment of communications service provider emergency needs and resources; and

(b) support the continuous operation and restoration of critical communications systems and services by assisting the Secretary of Homeland Security with infrastructure damage assessment and restoration, and by providing the Secretary of Homeland Security with information collected by the FCC on communications infrastructure, service outages, and restoration, as appropriate.

b. Authorizing agents will:

1. Identify themselves as authorizing agents and their respective communities of interest (State, Federal Agency) to DHS. State authorizing agents will provide a central point of contact to receive priority requests from users within their state. Federal authorizing agents will provide a central point of contact to receive priority requests from federal users or federally sponsored entities.

2. Authenticate, evaluate, and make recommendations to DHS to approve priority level assignment requests using the priorities and criteria specified in section 7 of this appendix. As a guide, WPS authorizing agents should request the lowest priority level that is applicable and the minimum number of wireless services required to support an NSEP function. When appropriate, the authorizing agent will recommend approval or deny requests for WPS.

3. Ensure that documentation is complete and accurate before forwarding it to DHS.

4. Serve as a conduit for forwarding WPS information from DHS to the service user and vice versa. Information will include WPS requests and assignments, reconciliation and revalidation notifications, and other information.

5. Participate in reconciliation and revalidation of WPS information at the request of DHS.

6. Comply with any regulations and procedures supplemental to and consistent with this appendix that are issued by DHS.

7. Disclose content of the WPS database only to those having a need-to-know.

c. Service users will:

1. Determine the need for and request WPS assignments in a planned process, not waiting until an emergency has occurred.

2. Request WPS assignments for the lowest applicable priority level and minimum number of wireless services necessary to provide NSEP management and response functions during emergency/disaster situations.

3. Initiate WPS requests through the appropriate authorizing agent. DHS will make final approval or denial of WPS requests and may direct service providers to remove WPS if appropriate. (Note: State and local government or private users will apply for WPS through their designated State government authorizing agent. Federal users will apply for WPS through their employing agency. State and local users in states where there has been no designation will be sponsored by the Federal agency concerned with the emergency function as set forth in Executive Order 12656. If no authorizing agent is determined using these criteria, DHS will serve as the authorizing agent.)

4. Submit all correspondence regarding WPS to the authorizing agent.

5. Invoke WPS only when congestion blocks network access and the user must establish communications to fulfill an NSEP mission. Calls should be as brief as possible to afford service to other NSEP users.

6. Participate in reconciliation and revalidation of WPS information at the request of the authorizing agent or DHS.

7. Request discontinuance of WPS when the NSEP qualifying criteria used to obtain WPS is no longer applicable.

8. Pay service providers as billed for WPS.

9. Comply with regulations and procedures that are issued by the DHS which are supplemental to and consistent with this appendix.

d. Service providers who offer any form of wireless priority access service for NSEP purposes will provide that service in accordance with this appendix. As currently described in the Priority Access and Channel Assignment Standard (IS–53–A), service providers will:

1. Provide WPS levels 1, 2, 3, 4, or 5 only upon receipt of an authorization from DHS and remove WPS for specific users at the direction of DHS.

2. Ensure that WPS system priorities supersede any other NSEP priority which may be provided.

3. Designate a point of contact to coordinate with DHS regarding WPS.

4. Participate in reconciliation and revalidation of WPS information at the request of DHS.

5. As technically and economically feasible, provide roaming service users the same grade of WPS provided to local service users.

6. Disclose content of the NSEP WPS database only to those having a need-to-know or who will not use the information for economic advantage.

7. Comply with regulations and procedures supplemental to and consistent with this appendix that are issued by DHS.

8. Ensure that at all times a reasonable amount of wireless spectrum is made available for public use.

9. Notify DHS and the service user if WPS is to be discontinued as a service.

e. An appropriate body identified by DHS will identify and review any systemic problems associated with the WPS system and recommend actions to correct them or prevent their recurrence.

6. Appeal

Service users and authorizing agents may appeal any priority level assignment, denial, revision, or revocation to DHS within 30 days of notification to the service user. DHS will act on the appeal within 90 days of receipt. If a dispute still exists, an appeal may then be made to the FCC within 30 days of notification of DHS's decision. The party filing the appeal must include factual details supporting its claim and must provide a copy of the appeal to DHS and any other party directly involved. Involved parties may file a response to the appeal made to the FCC within 20 days, and the initial filing party may file a reply within 10 days thereafter. The FCC will provide notice of its decision to the parties of record. Until a decision is made, the service will remain status quo.

7. WPS Priority Levels and Qualifying Criteria

a. The following WPS priority levels and qualifying criteria apply equally to all users and will be used as a basis for all WPS assignments. There are five levels of NSEP priorities, priority one being the highest. The five priority levels are:

1. Executive Leadership and Policy Makers.

Users who qualify for the Executive Leadership and Policy Makers priority will be assigned priority one. A limited number of technicians who are essential to restoring wireless networks shall also receive this highest priority treatment. Users assigned to priority one receive the highest priority in relation to all other carrier-provided services. Examples of those eligible include:

(i) The President of the United States, the Secretary of Defense, selected military leaders, and the minimum number of senior staff necessary to support these officials;

(ii) State governors, lieutenant governors, cabinet-level officials responsible for public safety and health, and the minimum number of senior staff necessary to support these officials; and

(iii) Mayors, county commissioners, and the minimum number of senior staff to support these officials.

2. Disaster Response/Military Command and Control.

Users who qualify for the Disaster Response/Military Command and Control priority will be assigned priority two. Individuals eligible for this priority include personnel key to managing the initial response to an emergency at the local, state, regional and federal levels. Personnel selected for this priority should be responsible for ensuring the viability or reconstruction of the basic infrastructure in an emergency area. In addition, personnel essential to continuity of government and national security functions (such as the conduct of international affairs and intelligence activities) are also included in this priority. Examples of those eligible include:

(i) Federal emergency operations center coordinators, *e.g.,* Manager, National Coordinating Center for Communications, National Interagency Fire Center, Federal Coordinating Officer, Federal Emergency Communications Coordinator, Director of Military Support;

(ii) State emergency Services director, National Guard Leadership, State and Federal Damage Assessment Team Leaders;

(iii) Federal, state and local personnel with continuity of government responsibilities;

(iv) Incident Command Center Managers, local emergency managers, other state and local elected public safety officials; and

(v) Federal personnel with intelligence and diplomatic responsibilities.

3. Public Health, Safety and Law Enforcement Command.

Users who qualify for the Public Health, Safety, and Law Enforcement Command priority will be assigned priority three. Eligible for this priority are individuals who direct operations critical to life, property, and maintenance of law and order immediately following an event. Examples of those eligible include:

(i) Federal law enforcement command;

(ii) State police leadership;

(iii) Local fire and law enforcement command;

(iv) Emergency medical service leaders;

(v) Search and rescue team leaders;

(vi) Emergency communications coordinators; and

(vii) Hospital personnel.

4. Public Services/Utilities and Public Welfare.

Users who qualify for the Public Services/Utilities and Public Welfare priority will be assigned priority four. Eligible for this priority are those users whose responsibilities include managing public works and utility infrastructure damage assessment and restoration efforts and transportation to accomplish emergency response activities. Examples of those eligible include:

(i) Army Corps of Engineers leadership;

(ii) Power, water and sewage and communications utilities;

(iii) Transportation leadership; and

(iv) Financial services personnel.

5. Disaster Recovery.

Users who qualify for the Disaster Recovery priority will be assigned priority five. Eligible for this priority are those individuals responsible for managing a variety of recovery operations after the initial response has been accomplished. These functions may include managing medical resources such as supplies, personnel, or patients in medical facilities. Other activities such as coordination to establish and stock shelters, to obtain detailed damage assessments, or to support key disaster field office personnel may be included. Examples of those eligible include:

(i) Medical recovery operations leadership;

(ii) Detailed damage assessment leadership;

(iii) Disaster shelter coordination and management; and

(iv) Critical Disaster Field Office support personnel.

b. These priority levels were selected to meet the needs of the emergency response community and provide priority access for the command and control functions critical to management of and response to national security and emergency situations, particularly during the first 24 to 72 hours following an event. Priority assignments should only be requested for key personnel and those individuals in national security and emergency response leadership positions. WPS is not intended for use by all emergency service personnel.

8. Limitations

WPS will be assigned only to the minimum number of wireless services required to support an NSEP function. Executive Office of the President may also establish limitations upon the relative numbers of services that may be assigned WPS or the total number of WPS users in a service area. These limitations will not take precedence over laws or executive orders. Limitations established shall not be exceeded.

[FR Doc. 2020–17267 Filed 9–17–20; 8:45 am]

BILLING CODE 6712–01–P

FEDERAL REGISTER

Vol. 85 Friday,

No. 182 September 18, 2020

Part IV

Department of Labor

Employee Benefits Security Administration

29 CFR Part 2520

Pension Benefit Statements—Lifetime Income Illustrations; Final Rule

DEPARTMENT OF LABOR

Employee Benefits Security Administration

29 CFR Part 2520

RIN 1210–AB20

Pension Benefit Statements—Lifetime Income Illustrations

AGENCY: Employee Benefits Security Administration, Department of Labor.

ACTION: Interim final rule with request for comments.

SUMMARY: The Department of Labor (Department) is publishing an interim final regulation regarding the information that must be provided on pension benefit statements required by section 105 of the Employee Retirement Income Security Act of 1974, as amended (ERISA). This regulation reflects amendments made to ERISA section 105 by the Setting Every Community Up for Retirement Enhancement Act of 2019. When applicable, the interim final regulation requires plan administrators of ERISA defined contribution plans to express a participant's current account balance, both as a single life annuity and a qualified joint and survivor annuity income stream. These two income stream illustrations, which must be on the same pension benefit statement, will help participants better understand how the amount of money they have saved so far converts into an estimated monthly payment for the rest of their lives, and how this impacts their retirement planning. The regulation provides plan administrators with a set of assumptions to use in preparing the lifetime income illustrations, as well as model language that may be used for benefit statements by plan administrators who wish to obtain relief from liability for the illustrations. The interim final regulation also requests comments from interested parties on the requirements and methodologies of the regulation.

DATES:

Effective date. This interim final rule is effective on September 18, 2021, and shall apply to pension benefit statements furnished after such date.

Comment date. Written comments on the interim final rule must be received by November 17, 2020.

ADDRESSES: You may submit written comments, identified by RIN 1210–AB20 to either of the following addresses:

- *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the instructions for submitting comments.
- *Mail:* Office of Regulations and Interpretations, Employee Benefits Security Administration, Room N–5655, U.S. Department of Labor, 200 Constitution Avenue NW, Washington, DC 20210, Attention: Pension Benefit Statements—Lifetime Income Illustrations, RIN 1210–AB20.

Instructions: All submissions received must include the agency name and Regulatory Identifier Number (RIN) for this rulemaking. Persons submitting comments electronically are encouraged not to submit paper copies. Comments will be available to the public, without charge, online at *https://www.regulations.gov* and *https://www.dol.gov/agencies/ebsa* and at the Public Disclosure Room, Employee Benefits Security Administration, Suite N–1513, 200 Constitution Avenue NW, Washington, DC 20210.

SUPPLEMENTARY INFORMATION:

A. Background

(1) ERISA Section 105

Historically, section 105(a) of the Employee Retirement Income Security Act (ERISA) has required plan administrators of defined contribution plans to provide periodic pension benefit statements to participants and certain beneficiaries.[1] Benefit statements generally must be provided at least annually. If the pension plan permits participants and beneficiaries to direct their own investments, however, benefit statements must be provided at least quarterly. Section 105(a)(2) of ERISA contains the content requirements for benefit statements, including a requirement to indicate the participant's or beneficiary's ''total benefits accrued.'' The other content requirements in section 105, such as vesting information, are not the focus of this rulemaking.

(2) Advance Notice of Proposed Rulemaking

On May 8, 2013, the Department of Labor (Department) published an advance notice of proposed rulemaking (ANPRM) regarding the pension benefit statement requirements under section 105 of ERISA.[2] The ANPRM considered requiring up to four lifetime income illustrations: (1) A single life annuity based on the current account balance; (2) a qualified joint and 50% survivor annuity, if the participant is married, based on the current account balance; (3) a single life annuity based on a projected account balance (current account balance projected to normal retirement age, taking into account estimated investment returns, future contributions, and inflation); and (4) a qualified joint and 50% survivor annuity, if the participant is married, based on a projected balance. The ANPRM included a safe harbor that would have deemed it reasonable for a plan administrator to use certain assumptions when preparing these lifetime income illustrations. The Department received 125 comment letters on the ANPRM, which are available for review on the Department's website.

(3) SECURE Act Amendments

On December 20, 2019, ERISA section 105 was amended by section 203 of the Setting Every Community Up for Retirement Enhancement Act of 2019 (SECURE Act).[3] As amended, ERISA section 105 requires, in relevant part, that ''a lifetime income disclosure . . . be included in only one pension benefit statement during any one 12-month period.'' A lifetime income disclosure ''shall set forth the lifetime income stream equivalent of the total benefits accrued with respect to the participant or beneficiary.'' A lifetime income stream equivalent means the amount of monthly payments the participant or beneficiary would receive if the total accrued benefits of such participant or beneficiary were used to provide a single life annuity and a qualified joint and survivor annuity.

The required lifetime income streams must be ''based on assumptions specified in rules prescribed by the Secretary.'' In relevant part, section 105(a)(2)(D)(iii) of ERISA states that

[1] 29 U.S.C. 1025(a).

[2] *See* 78 FR 26727 (May 8, 2013). The ANPRM followed a 2010 request for information (2010 RFI) on lifetime income options in retirement plans, which included questions on how best to disclose the income stream that can be provided from an individual account balance in a defined contribution plan. *See* 75 FR 5253 (Feb. 2, 2010). On September 14 and 15, 2010, the Department held a public hearing on lifetime income options to consider several specific issues raised by commenters on the 2010 RFI, including methods and assumptions for income stream illustrations. *See* 75 FR 48367 (Aug. 10, 2010).

[3] The SECURE Act was enacted as Division O of the Further Consolidated Appropriations Act, 2020, Public Law 116–94 (Dec. 20, 2019).

''[n]ot later than 1 year after the enactment of the [SECURE Act], the Secretary shall . . . prescribe assumptions which administrators of individual account plans may use in converting total accrued benefits into lifetime income stream equivalents[.]'' This section also provides that the Secretary ''shall . . . issue interim final rules . . .'' within this timeframe.

Section 105(a)(2)(D)(ii) of ERISA provides for a model disclosure. In relevant part it states that ''[n]ot later than 1 year after the date of enactment of the [SECURE Act], the Secretary shall issue a model lifetime income disclosure, written in a manner so as to be understood by the average plan participant.''

Section 105(a)(2)(D)(iv) of ERISA provides a limitation on liability. In relevant part it states that ''[n]o plan fiduciary, plan sponsor, or other person shall have any liability under this title solely by reason of the provision of lifetime income stream equivalents which are derived in accordance with the assumptions and rules [prescribed by the Secretary] and which include the explanations contained in the model lifetime income disclosure [prescribed by the Secretary].''

Section 105(a)(2)(D)(v) sets forth the effective date of the SECURE Act amendments. In relevant part it states that the new lifetime income disclosure provisions ''shall apply to pension benefit statements furnished more than 12 months after the latest of the issuance by the Secretary of . . .'' the interim final rules, the model disclosure, or the assumptions prescribed by the Secretary. This final rule is considered an E.O. 13771 regulatory action. We estimate that it will impose $12 million in annualized costs at a 7% discount rate, discounted to a 2016 equivalent, over a perpetual time horizon.

B. Explanation of Interim Final Rule

(1) Overview—Required Lifetime Income Streams

The Department is publishing an interim final rule (IFR) requiring, consistent with the SECURE Act amendments to ERISA section 105 and the Department's prior work on issues related to lifetime income options in defined contribution plans, that plan administrators of individual account plans include two lifetime income stream illustrations on participants' pension benefit statements, in addition to the participant's account balance. Specifically, paragraph (a) of the IFR provides that these illustrations must be furnished to participants at least annually. And paragraph (b) requires, in relevant part, that pension benefit statements include: The value of a participant's account balance as of the last day of the statement period (paragraph (b)(2)); such account balance expressed as a lifetime income stream payable in equal monthly payments for the life of the participant (single life annuity) (paragraph (b)(3)); and such account balance expressed as a lifetime income stream payable in equal monthly payments for the joint lives of the participant and spouse as a qualified joint and survivor annuity (QJSA) (paragraph (b)(4)). The Department anticipates that this required information on a participant's pension benefit statement might appear as follows:

Account balance as of [**DATE**]	Monthly payment at 67 (single life annuity)	Monthly payment at 67 (qualified joint and 100% survivor annuity)
$125,000	$645/month for life of participant	$533/month for life of participant. $533/month for life of participant's surviving spouse.

The specific requirements concerning these lifetime income illustrations, including the assumptions that must be used in preparing the illustrations, how the illustrations will be explained to participants, and the treatment of in-plan annuities, are discussed in the sections below. For purposes of the IFR, the term ''participant'' is defined, in paragraph (h)(1), to include an individual beneficiary who has his or her own individual account under the plan, such as an alternate payee for example. Throughout this preamble, unless otherwise specified, the Department intends this definition when using the term ''participant.''

(2) Assumptions for Lifetime Income Stream Illustrations

The IFR requires that plan administrators provide two lifetime income illustrations of the value of a participant's account balance, at least annually, on the participant's pension benefit statement. Plan administrators must prepare these lifetime income illustrations using the annuitization methodology set forth in the IFR, which will express a participant's account balance as a lifetime monthly payment to the participant, similar in form to a pension payment made from a traditional defined benefit plan. Insurance companies use this approach, for example, to determine payment amounts for their annuity products. Plan administrators, or their service providers, generally must consider four relevant factors when converting a participant's account balance into lifetime income streams. The first is the date the payments would start, referred to as the ''commencement date,'' and the participant's age on such date. The second is the marital status of the participant. The third is the interest rate that will be applied for the applicable mortality period. And the fourth is the expected mortality of the participant and spouse. The IFR generally addresses the required assumptions for each of these factors in paragraph (c) of the IFR. This section of the preamble discusses the Department's reasoning behind the IFR's assumptions for these four factors, and other matters germane to annuitization illustrations.

(a) Commencement Date and Age

Paragraph (c)(1) of the IFR establishes an assumed annuity commencement date and age that plan administrators must use to prepare the required illustrations. Specifically, paragraph (c)(1)(i) provides that the assumed annuity commencement date is the last day of the statement period (the commencement date). Thus, for example, if the benefit statement covers the period ending on December 31, 2025, the assumed annuity commencement date would be December 31, 2025. Paragraph (c)(1)(ii) of the IFR further requires that the required illustrations must assume the participant is age 67 on the commencement date, regardless of the participant's actual age. If, however, the participant is older than age 67, the IFR requires the plan administrator to use the participant's actual age as of the last day of the statement period. The Department understands that a younger assumed age at the assumed annuity commencement date would result in lower monthly payments in illustrations, and vice versa.

The Department considered a number of alternatives to age 67. For example, the Department considered using a plan's ''normal retirement age,'' as defined in ERISA section 3(34). The Department decided against using this date, because it lacks uniformity and consistency by leaving it to each retirement plan to determine the retirement age for its participants. The Department has placed a premium on uniformity and consistency for the illustrations required by this IFR. The Department also considered age 60, which closely aligns with the earliest age that a participant could withdraw money from a qualified retirement plan without being subject to additional income tax on the early distribution.[4] The Department also considered age 62, which is the earliest date a person can begin receiving retirement benefits (although reduced benefits) under Social Security.[5] The Department understands that age 62 is a very common age for people to claim Social Security retirement benefits.[6] The Department also considered age 65, which is a common retirement age for many ERISA-covered retirement plans, and age 65 also was for many years the historical full or normal retirement age under Social Security. The Department also considered age 72, which is the age by which federal law generally requires commencement of minimum distributions from qualified retirement plans.[7] After considering these alternatives, the Department chose age 67, because this age aligns with full or normal retirement age under Social Security for most workers.[8] The Department believes that alignment of these two dates will provide participants a clearer picture of their potential future monthly retirement income from these two important sources, if they continue working to age 67. The Department's decision also is supported by a majority of the commenters on the ANPRM.

Although no specific age will be perfect for this purpose, the Department requests comments on whether age 67 is the most appropriate age. Commenters that believe a different age or approach would be better are encouraged to explain their reasoning and provide any germane literature or data supporting their reasoning. The Department also requests comments on whether the final rule should *require* illustrations based on multiple ages on the annuity commencement date, rather than requiring only a single age. For example, illustrations could be based on assumed annuity commencement ages of 62 and 67. This would present smaller and larger monthly payment amounts, illustrating the potential effects of delaying retirement on the amount of money a participant could receive each month. This approach would resemble the Social Security statement, which presently shows monthly retirement income based on three assumed retirement ages: 62, 67, and 70.

(b) Marital Status and Amount of Survivor's Benefit

Paragraph (c)(2) of the IFR requires plan administrators to assume, for purposes of converting a participant's account balance into the QJSA required under paragraph (b)(4) of the IFR, that the participant is married and that the participant's spouse is the same age as the participant. Although a particular participant may not be married at the time a pension benefit statement is furnished, the statute nonetheless requires plan administrators to illustrate monthly payments reflecting both a single life annuity and a QJSA, and to assume a participant's spouse is the same age as the participant. By requiring both illustrations, participants (whether married or not) can better understand how a survivor benefit, if they are married at retirement and choose an annuity, could impact the amount of the participant's (and spouse's) monthly lifetime payment. According to general data from the Census Bureau, most individuals are or will be married at some point in their lives.[9] Hence, it is appropriate and helpful to show lifetime income amounts for both singles and couples, even if the participant does not have a spouse at the time of the benefit statement.

For the QJSA illustration, paragraph (c)(2)(ii) of the IFR requires plan administrators to assume that the survivor annuity percentage is equal to 100% of the monthly payment that is payable during the joint lives of the participant and spouse. The SECURE Act did not prescribe the specific survivor annuity percentage to be used for illustrations under section 105 of ERISA or whether the benefit decreases only upon the participant's death (a contingent annuity) or upon the first death of either spouse (a survivor annuity). Instead, the SECURE Act directed the Department to make these decisions.

The Department considered a contingent annuity percentage of 50 percent, which is the lowest percentage permissible under ERISA section 205(d). The Department decided against a 50 percent contingent annuity, in part, because commenters on the ANPRM indicated that this type of annuity may be uncommon in the commercial insurance market, even though a contingent annuity percentage of 50 percent is common for defined benefit plans. The Department has concerns with illustrating for participants an outcome that may be uncommon in the commercial marketplace. Furthermore, public commentary on the ANPRM implied that economies of scale for a two-person household do not necessarily decrease by exactly 50 percent when one person leaves the household.[10] Rather, general notions of scale economies in consumption for couples suggest a more modest reduction of approximately 30 percent.[11] The Department, accordingly, is persuaded that it may not be appropriate to assume that a worker has higher spending needs than a surviving spouse or that the spending needs of a surviving spouse are precisely half of the consumption needs of the couple in a two-person household.

The Department, however, has chosen to use an assumption with a survivor benefit of 100 percent, rather than a reduced percentage. By incorporating the most generous benefit for a surviving spouse, a participant's benefit statement will illustrate the largest difference between the monthly payment that would result from a single life annuity and that which would result from a QJSA. The Department believes there is a benefit to showing the participant these extremes because all other annuity options fall somewhere in between.[12]

Warshawsky, *Illustrating Retirement Income for Defined Contribution Plan Participants: A Critical Analysis of the Department of Labor Proposal,* Mercatus Center (Apr., 2015) (advocating for an illustration of a survivor annuity percentage of 67 percent, also noting it is consistent with the spousal benefit rules of Social Security).

[11] *Id.*

[12] The expenditures for a retired married couple that are attributable to each spouse can vary significantly. For example, one spouse may have significant health care and/or assisted living costs while the other spouse does not. In the case of such

(c) Interest Rate

Paragraph (c)(3)(i) of the IFR contains the interest rate assumption that must be used in preparing lifetime income illustrations under the IFR's annuitization methodology. Plan administrators must assume a rate of interest equal to the 10-year constant maturity Treasury (CMT) securities yield rate for the first business day of the last month of the period to which the benefit statement relates. In response to the ANPRM, one commenter with members representing more than 90% of the assets and premiums in the U.S. life insurance and annuity industry stated that its members believe that the 10-year CMT rate best represents the interest rates that are reflected in the actual pricing of commercial annuities. In addition, the 10-year CMT rate is published daily for the public and is widely recognized by industry participants.[13] The Department is of the view that it is helpful to participants to use a well-known market rate that approximates what it actually would cost them to buy a lifetime income stream on the open market.[14] In this regard lifetime income illustrations based on a current market rate, such as the 10-year CMT rate, would be especially beneficial for participants and beneficiaries who are close to retirement, and less so for those farther from retiring.

The Department solicits comments on whether the 10-year CMT rate assumption is the best interest rate assumption to use in this context, or whether a different interest rate or combination of rates should be used, and why. For example, should the Department consider using the ''applicable interest rate'' under Internal Revenue Code (Code) section 417(e)(3)(C)?[15] Furthermore, since the 10-year CMT rate fluctuates on a daily basis, we are soliciting comments on whether plan administrators should use the rate as published on the last (as opposed to the first) business day of the last month of the period to which the benefit statement relates. The IFR selects the first business day of such month in order to provide plan administrators with ample time to prepare and distribute benefit statements. Using the rate on the last business day of such month, however, would align with the date used for the account balance, and may not impose an unreasonable burden as interest rates are readily accessible and may be available before asset valuations are prepared.

(d) Mortality

Paragraph (c)(3)(ii) of the IFR requires that plan administrators convert participants' account balances assuming mortality ''as reflected in the applicable mortality table under Code section 417(e)(3)(B) in effect for the last month of the period to which the statement relates.'' Code section 417(e)(3)(B) provides a unisex mortality table that is created and published by the Internal Revenue Service (IRS).[16] A number of commenters on the ANPRM, which proposed use of the Code section 417(e)(3)(B) mortality table as a mortality assumption, supported use of this unisex table, explaining that it is administratively simple and would eliminate plan administrators' need to know participants' genders. Plan administrators, or plan recordkeepers or third party administrators, according to commenters, do not always have records of participants' gender. Applying unisex mortality assumptions also aligns with the requirement that, when lifetime annuities are offered by ERISA plans, they must be priced on a gender-neutral basis.[17] As a result, the lifetime income stream illustrations required by the IFR will be consistent with annuity options offered by plans.

Other commenters offered different suggestions for how to factor participants' life expectancy into required lifetime income illustrations. Alternative recommendations included, for example, allowing plan administrators discretion to select reasonable mortality assumptions; if applicable, using the same mortality assumptions used for existing in-plan annuities; or requiring more conservative lifetime income illustrations (*i.e.,* lower annuity payments) by adding a number of years (*e.g.,* 5 or 10) to the Code section 417(e)(3)(B) mortality tables or mandating a specific end date, such as age 92 or 95. Some commenters questioned the use of a unisex methodology, such as in Code section 417(e)(3)(B), rather than gender-specific methodology. Their principal observation was that, although in-plan annuities must be priced on a gender-neutral basis, most plans do not actually offer annuities, and that gender-specific mortality assumptions would result in lifetime income streams that better reflect potential pricing in the commercial marketplace. Unisex tables result in illustrations with women's monthly payments being higher, and men's payments lower, than what individuals could actually purchase in the open market, all else equal, according to the commenters. Illustrations could have even wider variations when applied to same-sex spouses, some commenters noted.

The Department is not persuaded to use a different mortality assumption than was proposed in the ANPRM. Accordingly, paragraph (c)(3)(ii) of the IFR requires use of Code section 417(e)(3)(B) mortality tables. First, these tables are periodically updated by the Treasury Department. Second, these tables are publicly available and widely known and used by retirement plan service providers—typically for defined benefit pension plans, but many service providers support both defined benefit and defined contribution retirement plans. Third, the Department, by requiring gender-neutral assumptions in the IFR, is matching what a plan would do if it offered its participants an annuity.

Finally, to the extent plan administrators and their service providers do not have gender data for all plan participants, the use of unisex mortality tables reduces administrative burden for plan administrators who lack gender data while still using reasonable assumptions. For example, a gender-distinct approach would require that the plan administrator know a participant's gender. A gender-distinct approach also would require the plan administrator to know the marital status of the participant and the gender of the participant's spouse. Commenters on the ANPRM indicated that plans currently do not consistently collect

a couple, the ongoing expenditures for the survivor will be significantly different depending on which spouse dies first. The Department believes that any specific percentage the Department might choose for the survivor benefit disclosure will be optimal for some participants, but not appropriate for others. It would not be helpful to show participants a survivor benefit based on average need when their own needs may be significantly different than the average.

[13] *See https://www.treasury.gov/resource-center/data-chart-center/interest-rates/pages/textview.aspx?data=yield.*

[14] *See* section B(2)(e) of the preamble, below, for a discussion of insurance loads (and commenters' observation of the implicit load in using the 10-year CMT rate).

[15] Code section 417(e)(3) generally provides that the present value of certain accelerated forms of benefit under a defined benefit plan (including single-sum distributions) must not be less than the present value of the accrued benefit calculated using applicable interest rates (under Code section 417(e)(3)(C)) and the applicable mortality table (under Code section 417(e)(3)(B)). The Department notes that one commenter on the ANPRM expressed concern that the Code section 417(e)(3)(C) rates do not approximate current annuity prices.

[16] *See* IRS Notices 2019–26 (2019–15 I.R.B 943) and 2019–67 (2019–52 I.R.B 1510), which provide the static mortality tables that apply under Code section 417(e)(3) for distributions with annuity starting dates occurring during stability periods beginning in 2020 and 2021, respectively.

[17] *See Arizona Governing Comm. for Tax Deferred Annuity and Deferred Compensation Plans* v. *Norris,* 463 U.S. 1073 (1983).

such information. Without these data points, a plan administrator would incur additional burdens to provide a gender-distinct illustration. A unisex approach to preparing lifetime income illustrations avoids these administrative complexities.

The Department requests comments on the IFR's use of the Code section 417(e)(3)(B) mortality tables. Commenters that believe a different approach is preferable are encouraged to identify their preferred approach and provide their reasoning in support of their position. Commenters that prefer a gender-distinct approach are encouraged to identify a table or tables that could be used to promote national uniformity and to identify the most efficient way to address the data gaps identified above.

(e) Insurance Loads

The IFR's required assumptions in paragraph (c) for converting participants' account balances into the required lifetime income streams do not include an ''insurance load.'' In this context, the term ''insurance load'' describes the difference between the market price of lifetime income and the price of actuarially fair lifetime income. Put differently, a load factor refers to the extra amount that an insurance company may charge for a product given extra expenses and costs beyond the basic charges. An insurance load may include, for example, an allowance for an insurance company's profits, costs of insuring against systemic mortality risk, costs of holding cash reserves, advertising costs, the cost of anti-selection (if not accounted for in the mortality table), or other operating costs.

Commenters on the ANPRM expressed different views on whether and how insurance loads should be factored into hypothetical lifetime income illustrations. Some commenters supported the concept of incorporating insurance loads to ensure a more realistic illustration. One commenter, in fact, explained that an insurance load already is effectively factored into the illustrations if plan administrators use the 10-year CMT rate, especially when the Code section 417(e)(3)(B) mortality tables also are used.[18] Other commenters did not support the inclusion of insurance loads based their view on the fact that the overarching goal of providing lifetime income illustrations should be educational in nature. Although illustrations reasonably should reflect actual market conditions, according to these commenters, this goal can be achieved in large part based on illustrations that reflect the price of actuarially fair lifetime income, without requiring the use of insurance loads. Commenters also pointed to the variability in insurance loads across the wide spectrum of available products and issuers, arguing that it would be arbitrary and inappropriate for the Department to select a uniform pricing load for the illustrations required by the IFR. The Department is persuaded that the insurance load implicit in use of the 10-year CMT rate renders unnecessary any additional or different mandatory insurance load assumption in paragraph (c) of the IFR. Nonetheless, the Department requests comments on whether paragraph (c) of the final rule should require that insurance loads be factored differently into lifetime income stream illustrations. Commenters on this IFR that disagree with the Department's and commenters' analysis and that support the inclusion of an explicit insurance load, in addition to the effective load implied by other IFR assumptions, are encouraged to explain in detail how the IFR and its assumptions should or could be amended to reflect such a requirement.

(f) Inflation Adjustment

The IFR does not include an assumed adjustment to the required lifetime monthly payment illustrations for inflation. Consequently, the IFR requires a fixed nominal annuitized income stream. The Department understands that, even with a low inflation rate, the purchasing power of a fixed nominal income stream can easily be cut in half over the remaining lifespan of the typical retiree. Many commenters on the ANPRM made this very point, and suggested that the Department require plan administrators to illustrate an inflation-indexed income stream. On the other hand, many other commenters cautioned the Department against adopting complex methodologies for what should be a simple hypothetical illustration. These commenters asserted that many plan participants do not properly understand the concept of inflation, and that an inflation-adjusted income illustration (with a resulting lower starting income amount) would add unnecessary complexity and potentially confuse participants. Further, the lower starting income amount might discourage participants from saving, according to some commenters. Commenters did agree, however, that if the Department requires fixed nominal annuitized income streams, then the benefit statement should at least contain a clear disclosure to the effect that the purchasing power of such an income stream will decline over time. The Department chose this approach, and discusses below the explanation requirements about this declining purchase power, but solicits comments on whether the right balance has been achieved.

Commenters are invited to address whether, in lieu of a fixed nominal annuitized income stream, the final rule should require an illustration of monthly payments that increase with inflation. This could be accomplished by substituting the 10-year Treasury Inflation-Protected Securities (TIPS) rate for the 10-year CMT rate in paragraph (c)(3)(i) of the IFR, according to one analysis.[19] The final rule also would need to add an explanation that the illustrated monthly payment amounts are not fixed and would increase annually to keep pace with inflation, as measured by the Consumer Price Index. Are there potential benefits of this approach? Are there potential drawbacks to this approach? For example, would this approach require the introduction of an ''insurance load'' to more accurately replicate annuity pricing in the open market? Would this approach conflict with other benefit statements ERISA participants might receive from other plans (such as former employers' plans that have in-plan fixed nominal annuities)? Although a goal is that the IFR requires illustrations that are educational, another goal is that illustrations be as realistic as possible and actionable by participants. The Department seeks to avoid mandating illustrations based on theories that cannot be replicated by products or services in the insurance marketplace, due to a lack of demand or otherwise. In this regard, comments and data are solicited on the state of the market for inflation-indexed annuities in the United States and whether the size and maturity of the market is relevant to this approach.

(g) Terms Certain or Other Features

Section 203(b) of the SECURE Act gives the Department discretion to prescribe special rules and assumptions for lifetime income streams with ''a term certain or other features.'' A number of annuity features and products exist, the

[18] One commenter on the ANPRM explained that the 10-year CMT rate is a reasonable approximation for a rate that insurers would offer to consumers, which reflects an estimated insurance load. Another commenter agreed that use of the 10-year CMT rate assumption, combined with the Code section 417(e)(3)(B) mortality assumptions, would result in reasonably conservative annuity payout rates, without necessitating an additional insurance load adjustment (which, if required, would result in annuity payout rates that are too low).

[19] *See* Warshawsky, *supra* note 10.

treatment of which currently is not reflected in the IFR, for example guaranteed lifetime withdrawal benefits (GLWBs), also referred to as guaranteed minimum withdrawal benefits (GMWBs), terms certain, and other optional riders that may accompany annuities. The Department requested feedback from interested parties on the role of these features in lifetime income illustrations when it issued the ANPRM. Commenters on the ANPRM however, as a general matter, did not provide the Department with sufficiently detailed or consistent proposals on whether or how these features should be treated on pension benefit statements. Therefore, the Department requests comments in response to the IFR as to whether, and how, to incorporate such features into the IFR's framework for lifetime income illustrations. Commenters also are encouraged to provide data and observations about the prevalence of these and similar features in annuities purchased by retirement savers.

(3) Explanations for Lifetime Income Stream Illustrations

To better assist participants in understanding the lifetime income illustrations required by the IFR and the SECURE Act, it is essential that pension benefit statements include brief, understandable explanations of the assumptions underlying the illustrations. Commenters on the 2010 RFI and the ANPRM agreed with the Department's view that information about the lifetime income illustrations should be disclosed to participants for multiple reasons, but primarily in order to clarify to participants that the projected monthly payments are not guarantees.

Paragraph (d) of the IFR contains the various explanations that plan administrators must provide to participants, as well as model language that may be used to satisfy the explanations required in these paragraphs. The explanations themselves in paragraph (d) are required, but the model language is optional. Plan fiduciaries or other persons who wish to benefit from the liability relief provided in paragraph (f) of the IFR, however, must use the model language—either separately as presented in paragraph (d), or as set forth in the Model Benefit Statement Supplement that is attached as Appendix A to the IFR. Paragraph (d) contains eleven paragraphs, each of which is structured so that it includes the explanation requirements in paragraph (i) and the corresponding model language in paragraph (ii). This approach enables plan administrators to separately insert the model language from each of the eleven paragraphs into their existing pension benefit statements, if they choose to do so, without significantly disturbing the existing format and presentation of the statements. Plan administrators who alternatively prefer a consolidated approach to including the IFR's model language may instead insert into or attach the Model Benefit Statement Supplement to their pension benefit statements.

Paragraph (d)(1) addresses the IFR's assumed annuity commencement date and age that plan administrators must use to prepare the required illustrations. Paragraph (d)(1)(i) requires ''[a]n explanation of the commencement date and age assumptions in paragraph (c)(1)'' of the IFR. This paragraph also provides model language that the plan administrator may use to satisfy the explanation requirements. Specifically, paragraph (d)(1)(ii) provides the following model language: ''The estimated monthly payments in this statement assume that payments begin [*insert the last day of the statement period*] and that you are [*insert 67 or current age if older*], on this date. Monthly payments beginning at a younger age would be lower than shown since payments would be made over more years. Monthly payments beginning at an older age would be higher than shown since they would be made over fewer years.''

Paragraph (d)(2) addresses the IFR's ''single life annuity'' illustration. Paragraph (d)(2)(i) requires ''[a]n explanation of a single life annuity.'' This paragraph also provides model language that the plan administrator may use to satisfy the explanation requirements. Specifically, paragraph (d)(2)(ii) provides the following model language: ''A single life annuity is an arrangement that pays you a fixed amount of money each month for the rest of your life. Following your death, no further payments would be made to your spouse or heirs.''

Paragraph (d)(3) addresses the IFR's ''survivor annuity'' illustration. Paragraph (d)(3)(i) requires ''[a]n explanation of a qualified joint and 100% survivor annuity, the availability of other survivor percentage annuities, and the impact of choosing a lower survivor percentage.'' This paragraph also provides model language that the plan administrator may use to satisfy the explanation requirements. Specifically, paragraph (d)(3)(ii) provides the following model language: ''A qualified joint and 100% survivor annuity is an arrangement that pays you and your spouse a fixed monthly payment for the rest of your joint lives. In addition, after your death, this type of annuity would continue to provide the same fixed monthly payment to your surviving spouse for their life. An annuity with a lower survivor percentage may be available and reducing the survivor percentage (below 100%) would increase monthly payments during your lifetime, but would decrease what your surviving spouse would receive after your death.''

Paragraph (d)(4) addresses the IFR's assumed marital status of the participant. Paragraph (d)(4)(i) requires ''[a]n explanation of the marital status assumptions in paragraph (c)(2)'' of the IFR. This paragraph also provides model language that the plan administrator may use to satisfy the explanation requirements. Specifically, paragraph (d)(4)(ii) provides the following model language: ''The estimated monthly payments for a qualified joint and 100% survivor annuity in this statement assume that you are married with a spouse who is the same age as you (even if you do not currently have a spouse, or if you have a spouse that is a different age). If your spouse is younger, monthly payments would be lower than shown since they would be expected to be paid over more years. If your spouse is older, monthly payments would be higher than shown since they would be expected to be paid over fewer years.''

Paragraph (d)(5) addresses the IFR's assumed interest rate. Paragraph (d)(5)(i) requires ''[a]n explanation of the interest rate assumptions in paragraph (c)(3)'' of the IFR. This paragraph also provides model language that the plan administrator may use to satisfy the explanation requirements. Specifically, paragraph (d)(5)(ii) provides the following model language: ''The estimated monthly payments in this statement are based on an interest rate of [*insert rate*], which is the 10-year constant maturity U.S. Treasury securities yield rate as of [*insert date*], as required by federal regulations. This rate fluctuates based on market conditions. The lower the interest rate, the smaller your monthly payment will be, and the higher the interest rate, the larger your monthly payment will be.''

Paragraph (d)(6) addresses the IFR's mortality assumptions. Paragraph (d)(6)(i) requires ''[a]n explanation of the mortality assumptions in paragraph (c)(3) of this section'' of the IFR. This paragraph also provides model language that the plan administrator may use to satisfy the explanation requirements. Specifically, paragraph (d)(6)(ii) provides the following model language: ''The estimated monthly payments in this statement are based on how long you and a spouse who is assumed to be

your age are expected to live. For this purpose, federal regulations require that your life expectancy be estimated using mortality assumptions established by the Internal Revenue Service.''

Paragraph (d)(7) requires plan administrators to caution participants that the lifetime income illustrations on their pension benefit statements are not guaranteed. Paragraph (d)(7)(i) requires ''[a]n explanation that the monthly payment amounts required under paragraphs (b)(3) and (4) of [the IFR] are illustrations only.'' This paragraph also provides model language that the plan administrator may use to satisfy the explanation requirements. Specifically, paragraph (d)(7)(ii) provides the following model language: ''The estimated monthly payments in this statement are for illustrative purposes only; they are not a guarantee.''

Paragraph (d)(8) requires plan administrators to advise participants that a variety of factors could cause the participant's actual monthly income, based on their current account balance, to be different than what is illustrated. Paragraph (d)(8)(i) requires ''[a]n explanation that the actual monthly payments that may be purchased with the amount specified in paragraph (b)(2) of [the IFR] will depend on numerous factors and may vary substantially from the illustrations under this section.'' This paragraph also provides model language that the plan administrator may use to satisfy the explanation requirements. Specifically, paragraph (d)(8)(ii) provides the following model language: ''The estimated monthly payments in this statement are based on prevailing market conditions and other assumptions required under federal regulations. If you decide to purchase an annuity, the actual payments you receive will depend on a number of factors and may vary substantially from the estimated monthly payments in this statement. For example, your actual age at retirement, your actual account balance (reflecting future investment gains and losses, contributions, distributions, and fees), and the market conditions at the time of purchase will affect your actual payment amounts. The estimated monthly payments in this statement are the same whether you are male or female. This is required for annuities payable from an employer's plan. However, the same amount paid for an annuity available outside of an employer's plan may provide a larger monthly payment for males than for females since females are expected to live longer.''

Paragraph (d)(9) requires plan administrators to explain that monthly payment amounts will not be adjusted for inflation. Paragraph (d)(9)(i) requires ''[a]n explanation that the monthly payment amounts required under paragraphs (b)(3) and (4) of [the IFR] are fixed amounts that would not increase for inflation.'' This paragraph also provides model language that the plan administrator may use to satisfy the explanation requirements. Specifically, paragraph (d)(9)(ii) provides the following model language: ''Unlike Social Security payments, the amounts shown in this statement do not increase each year with a cost-of-living adjustment. Therefore, as prices increase over time, the fixed monthly payment will buy fewer goods and services.''

Paragraph (d)(10) requires plan administrators to explain that the monthly income illustrations assume that participants are 100% vested in their accounts. Paragraph (d)(10)(i) requires ''[a]n explanation that the monthly payment amounts required under paragraphs (b)(3) and (4) of [the IFR] are based on total benefits accrued, regardless of whether such benefits are nonforfeitable.'' This paragraph also provides model language that the plan administrator may use to satisfy the explanation requirements. Specifically, paragraph (d)(10)(ii) provides the following model language: ''The estimated monthly payment amounts in this statement assume that your account balance is 100% vested.''

Finally, paragraph (d)(11) requires plan administrators to explain that the income illustrations assume, for participants who have taken plan loans and are not in default on such loans, that the loan is fully repaid by the time the participant retires. Paragraph (d)(11)(i) requires ''[a]n explanation that the account balance includes the outstanding balance of any participant loan, unless the participant is in default of repayment on such loan.'' This paragraph also provides model language that the plan administrator may use to satisfy the explanation requirements. Specifically, paragraph (d)(11)(ii) provides the following model language: ''If you have taken a loan from the plan and are not in default on the loan, the estimated monthly payments in this statement assume that the loan has been fully repaid.'' Plan administrators are not required to include the explanation in paragraph (d)(11)(i) for a plan that does not have a participant loan program.

The Department is interested in comments on both the substance of what plan administrators must explain to participants and the model language developed by the Department to implement the explanation requirements. Is the model language in paragraph (d) ''written in a manner calculated to be understood by the average plan participant,'' as is required for information disclosed to participants? Are there additional or different formatting or presentation techniques relevant to this inquiry that the Department should have considered or included in the IFR? For example, does the Model Benefit Statement Supplement, attached as Appendix A to the IFR, work well for plan administrators as a unified insert into benefit statements? Alternatively, do commenters believe it is preferable to use the separate model language for each explanation requirement, in paragraph (d), which may provide additional flexibility to plan administrators as to how they incorporate the required information into existing pension benefit statements?

(4) Special Rules for In-Plan Annuities

Section 105(a)(2)(D)(iii) of ERISA, states that ''to the extent that an accrued benefit is or may be invested in a lifetime income stream described in clause (i)(III), the assumptions described under subclause (I) shall, to the extent appropriate, permit plan administrators of individual account plans to use the amounts payable under such lifetime income streams as a lifetime income stream equivalent.'' Pursuant to this provision, the IFR contains special rules for plans that offer distribution annuities, deferred annuities, or both. The special rules are described below.

(a) Plans With Distribution Annuities

Many defined contribution plans provide for distribution annuities so that participants may elect to receive their retirement benefits in periodic payments over the course of their lives, instead of as a lump sum payment. Paragraph (e)(1) of the IFR provides a special rule for plan administrators of plans that offer such annuities through a contract with a licensed insurance company. The special rule, if applicable, allows plan administrators to base the two mandatory lifetime income illustrations on the terms of the insurance contract, instead of on the otherwise mandatory assumptions set forth in paragraph (c) of the IFR. The special rule, thus, provides for illustrations based on annuities that participants may actually elect, instead of hypothetical illustrations otherwise required by the IFR. The special rule is optional. Plan administrators may elect to provide illustrations under this special rule or use the standard assumptions in paragraph (c) of the IFR.

A plan administrator is eligible for the relief under paragraph (f) of the IFR under either approach. Paragraph (e)(1) is adopted pursuant to section 105(a)(2)(D)(iii) of ERISA, which in relevant part states that ''[t]o the extent that an accrued benefit is or may be invested in a lifetime income stream,'' the IFR ''shall, to the extent appropriate, permit administrators of individual account plans to use the amounts payable under such lifetime income stream as a lifetime income stream equivalent.''

While paragraph (e)(1) permits plan administrators to substitute actual contract terms for assumptions in paragraph (c) of this IFR, it contains certain limitations. Illustrations under paragraph (e)(1) still must show two lifetime income streams—a single life annuity and qualified joint and survivor annuity. These illustrations also still must assume the first payment is made on the last day of the statement period, that the participant is age 67 (unless older) on such date, and has a spouse the same age. Beyond these limitations, however, the illustrations under this special rule may be based on the actual contract terms. For example, the illustrations would use the interest rate assumptions under the contract, rather than the 10-year CMT rate. In addition, illustrations also would use the unisex mortality experience as provided for under the contract (for example, the insurance company's tables), rather than mortality as reflected in the mortality tables under Code section 417(e)(3)(B). Illustrations also may reflect the survivor's benefit percentage specified in the contract, if less than 100%.

As with lifetime income illustrations based on the Department's required assumptions in paragraph (c) of the IFR, it is critical that illustrations provided pursuant to paragraph (e)(1) also are accompanied by clear and understandable explanations of the assumptions underlying the illustrations. For example, it is essential that participants understand the projected monthly payments are not guaranteed, and that there are a number of variables that impact the projected payments—variables that may change over time. Paragraph (e)(1)(iii) of the IFR contains the explanations that plan administrators must provide to participants, as well as model language that may be used to satisfy the explanation requirements. Consistent with paragraph (d) of the IFR, the explanations in paragraph (e)(1)(iii) are required, but the model language is optional, unless a plan fiduciary or other person wishes to benefit from the liability relief provided in paragraph (f) of the IFR, in which case the model language is mandatory. The model language may be incorporated separately, as presented in paragraph (e)(1)(iii), into existing pension benefit statements, or in the consolidated format set forth in the Model Benefit Statement Supplement that is attached as Appendix B to the IFR. Also consistent with paragraph (d) of the IFR, paragraph (e)(1)(iii) contains eleven paragraphs, each of which is structured so that it includes the explanation requirement in paragraph (*1*) and the corresponding model language in paragraph (*2*).

The explanations and model language in paragraph (e)(1)(iii) are modeled on those in paragraph (d) of the IFR, with modifications necessary to accommodate potential variations in assumptions as a result of applicable contract terms. For example, the Department revised the explanations in paragraph (e)(1)(iii) to reflect the fact that a particular contract may offer a qualified joint and survivor annuity with a different survivor benefit percentage, such as 50% or 75%, price annuities based on different interest rate or mortality assumptions than those required in paragraph (c)(3) of the IFR, or provide for inflation or other adjustments to monthly payments over time. The Department is interested in comments on the modified explanations and model language in paragraph (e)(1)(iii), the Model Benefit Statement Supplement attached as Appendix B, as well as input on formatting or presentation techniques as discussed above, with respect to the explanations in paragraph (d) of the IFR.

(b) Plans With Participants That Purchased Deferred Annuities

In addition, or as an alternative, to distribution annuities, some plans offer participants the ability to purchase deferred income annuities (DIAs) during the accumulation phase. DIAs allow participants to purchase, or to make ongoing contributions toward the current purchase of, a future stream of retirement income payments that is provided by an insurance company. Although the purchase occurs during the accumulation phase, the payments themselves are deferred to a selected retirement age (or even later in the case of certain DIAs, such as qualifying longevity annuity contracts (QLACs)). Within any particular plan offering a DIA, some participants may choose to purchase deferred income and others may not. Each purchase reflects the interest rate environment and the participant's age at the time of the purchase. Participants' ownership interests in DIAs often can be converted to a lump sum cash amount, but not always.

Paragraph (e)(2) of the IFR addresses how plan administrators must disclose on benefit statements the portion, if any, of a participant's accrued benefit that has been used to purchase a DIA. For any portion of a participant's accrued benefit that has been used to purchase a DIA, paragraph (e)(2)(i) of the IFR directs the plan administrator to ignore the otherwise applicable assumptions and disclosure requirements in paragraphs (c) and (d) of the IFR, and to instead disclose the amounts payable under the DIA in accordance with requirements in paragraph (e)(2)(ii) of the IFR. For any portion of the participant's accrued benefit that has *not* been used to purchase a DIA, however, the plan administrator must use the generally applicable disclosure requirements in paragraphs (c) and (d), or paragraph (e)(1) if applicable, of the IFR.

Paragraph (e)(2)(ii) of the IFR sets forth the information that must be disclosed with respect to the portion of the participant's accrued benefit that purchased the DIA. First, paragraph (e)(2)(ii)(A) requires disclosure of the date payments are scheduled to commence and the participant's age on such date. The Department understands that participants select the age at which payments will commence when they purchase a DIA. The plan administrator also must disclose, under paragraph (e)(2)(ii)(B), the frequency and amount of deferred income stream payments under the contract as of the commencement date, in current dollars; and, under paragraph (e)(2)(ii)(C), a description of any survivor benefit, period certain commitment, or similar feature. The final disclosure requirement, in paragraph (e)(2)(ii)(D), is a statement as to whether the deferred income stream payments are fixed or will adjust with inflation or in some other way during retirement, and a general explanation of how any such adjustment is determined.

To align with the special treatment provided for DIAs by paragraph (e)(2) of the IFR, paragraph (b)(2) of the IFR provides that the value of a DIA is excluded from the participant's account balance. This is to avoid confusion or double counting the value of the DIA. The Department solicits comments on this special rule.

(5) Model Disclosure

The SECURE Act requires that the Department issue a model lifetime income disclosure, written in a manner so as to be understood by the average

plan participant. The statute provides that the model income disclosure must explain a variety of topics, including the assumptions on which the lifetime income stream was determined and any other matters considered to be appropriate by the Department.

The IFR satisfies this requirement in two ways. First, as described in detail above, paragraph (d) of the IFR contains eleven brief model language inserts. Plan administrators may use these inserts to satisfy the general content requirements in paragraph (d) of the final rule, as well as to qualify for the liability relief in paragraph (f) of the IFR. Plan administrators may integrate these inserts into their existing pension benefit statements in any manner or format determined to be appropriate by the plan administrators. This flexibility is limited only by the general requirement in paragraph (a) of the IFR that the integrated benefit statement must be written in a manner calculated to be understood by the average plan participant.

Second, in contrast to the eleven brief inserts in paragraph (d), the Department included, as an Appendix to the IFR, a full model disclosure that may be used to satisfy the requirements in paragraph (d) of the IFR. This full model disclosure includes all of the substance of the eleven inserts collectively, but is formatted as a single document to supplement or append to an existing benefit statement, rather than being integrated into the statement. Like the eleven brief inserts, this full model disclosure, entitled Model Benefit Statement Supplement, can be used by plan administrators to satisfy paragraph (d) of the IFR and to qualify for the liability limitation in paragraph (f).

The IFR takes a similar approach for plans that use the special rule in paragraph (e)(1) of the IFR. Paragraphs (e)(1)(iii)(A) through (K) set forth both the required contents and brief model language inserts that may be used to satisfy these requirements. Alternatively, Appendix B to the IFR contains a full model disclosure document that also may be used to satisfy the content requirements.

The IFR does not, however, provide plan administrators with model disclosure language to use for benefit statements with respect to DIAs as provided for under paragraph (e)(2) of the IFR.[20] This is because the statutory directive in section 203(b) of the SECURE Act, by its very text, is limited to lifetime income stream equivalents based on hypothetical assumptions. This makes the content requirements of that section wholly incompatible with DIAs which, of course, provide participants with specified monthly payments based on real factors and enforceable contracts. For example, section 203(b) of the SECURE Act requires model disclosure language to state ''that the lifetime income stream equivalent is only provided as an illustration'' and that ''the actual payments under the lifetime income stream . . . which may be purchased with the total benefits accrued will depend on numerous factors and may vary substantially from the lifetime income stream equivalents'' that are disclosed. These statements simply are not correct descriptions of *deferred* income streams, which already have been purchased, and for which actual (not illustrated or estimated) payments can be disclosed. The deferred income stream payments will not vary from the dollar amount illustrated on a participant's benefit statement based on numerous assumed factors. Rather, the amount of the future payments (or the formula for the payments) was determined at the time the deferred annuity was purchased and can be disclosed in actual dollars. The rest of the model language required by section 203(b) of the SECURE Act similarly contemplates annuity payment *estimates and hypotheticals,* not actual annuity *payments* purchased by the participant.

(6) Limitation on Liability

Paragraph (f) of the IFR provides that no plan fiduciary, plan sponsor, or other person shall have any liability under Title I of the ERISA solely by reason of providing the lifetime income stream equivalents described in paragraphs (b)(3) and (4) of the rule. To qualify for this limitation on liability, paragraph (f)(1) requires that such equivalents be derived in accordance with the assumptions in paragraph (c) or (e)(1)(i) of the IFR. In addition, paragraph (f)(2) requires that benefit statements include language substantially similar in all material respects to either the model language in paragraphs (d)(1)(ii) through (d)(11)(ii) of the IFR, or the Model Benefit Statement Supplement in Appendix A of the IFR. Alternatively, if a plan administrator elects to use certain contract assumptions instead of the assumptions in paragraph (c) of the IFR, benefit statements must include language substantially similar in all material respects to either the model language in paragraphs (e)(1)(iii)(A)(*2*) through (e)(1)(iii)(K)(*2*) or the Model Benefit Statement Supplement in Appendix B of the IFR. Thus, although use of the model language is required for the relief from liability in paragraph (f), plan administrators will have flexibility under the IFR as to how they incorporate the model language. And although the IFR only requires that plan administrators furnish the illustrations in paragraphs (b)(3) and (4) at least annually, plan administrators may rely on paragraph (f) for liability relief with respect to more frequent illustrations. For example, the administrator of a participant-directed individual account plan may choose to provide lifetime income illustrations for each quarterly benefit statement. In that case, to the extent the plan administrator includes illustrations as described in paragraphs (b)(3) and (4) and satisfies the conditions of paragraph (f), the plan administrator will be eligible for liability relief for such quarterly lifetime income illustrations.

Liability relief under the IFR is available so long as plan administrators use the Department's model language or language that is ''substantially similar in all material respects'' to the Department's model language. Word-for-word adoption of the model language is not required, and plan administrators can make minor, non-substantive changes to the IFR's model language or format in their plans' benefit statements without losing relief from liability. Any such changes may not, individually or in combination, affect the substance, clarity, or meaning of the model language; otherwise relief from liability will not be available under paragraph (f) of the IFR. For example, plan administrators may not deviate from any of the IFR's required assumptions (*e.g.,* required commencement date, age, rate of interest, mortality). The ''substantially similar'' standard in the IFR is intended only to provide flexibility to plan administrators to make minimal and substantively immaterial modifications. A plan administrator could, for example, refer to ''your statement'' instead of ''this statement;'' add a reference to the plan by name (*e.g.,* ''the COMPANY XYZ Profit Sharing Plan''); use the name of the employer or plan administrator instead of ''we;'' choose to say if ''your spouse predeceases you'' instead of if ''your spouse dies first;'' or describe a single life annuity as a ''payment form''

[20] As a result, and as discussed further below in section B(6) of this preamble, *Limitation on Liability,* plan administrators and other parties will not be able to avail themselves of the liability relief provided in paragraph (f) of the IFR. The SECURE Act amended ERISA to provide such relief when both specified annuity assumptions and model language provided by the Department are used; neither applies with respect to disclosure concerning deferred income streams.

rather than an ''arrangement.'' Modifications of this scale would not render relief from liability under the IFR unavailable to a plan administrator.

Paragraph (f) addresses longstanding concerns of employers, plan sponsors, plan administrators and other plan fiduciaries, and plan service providers, that lifetime income illustrations could expose them to unwanted litigation from participants, for example because of unmet expectations. If participants, during their working years, mistakenly believe that the lifetime income illustrations on their pension benefit statements are promises or guarantees of a specific income stream, they might sue if their actual account balances at retirement do not generate an income stream equal to or greater than the stream depicted in past benefit statement illustrations. Another concern of these parties is that illustrations could be viewed as a type of investment advice, for example, suggesting that participants choose investment options that contain or are offered through an annuity contract. Paragraph (f) of the IFR resolves these concerns by providing that no plan fiduciary, plan sponsor, or other person shall have any liability under Title I of the ERISA solely by reason of providing the lifetime income stream equivalents described in paragraphs (b)(3) and (4) of the rule.

Paragraph (f), however, is not available to plan administrators or other parties who must disclose information about deferred income streams under paragraph (e)(2) of the IFR. As a technical matter, the disclosure of this information does not qualify for relief, because the information is neither derived in accordance with the Department's prescribed assumptions in paragraph (c) of the IFR, nor disclosed using model language provided by the Department—each of which is a condition in section 203 of the SECURE Act for liability relief. As discussed above, in section B(4) of the preamble, *Special rules for in-plan annuities,* the contract-specific nature of payments that a participant will receive based on their purchase of deferred income streams is fundamentally different from the estimated illustrations of lifetime income that must be disclosed under paragraphs (b)(3) and (4) of the rule. And as a practical matter, disclosure about specific, actual payments that will be made to a participant in the future based on a prior purchase according to real contract terms does not present the same concerns that exist when plan administrators disclose projected, hypothetical lifetime income illustrations based on a number of assumed factors. There is no similar concern about litigation risk based on a participant's unmet expectations regarding the lifetime income that can actually be obtained when they retire—the payment amounts disclosed under paragraph (e)(2) of the IFR are facts. Disclosure of these deferred payments also is not likely to be misconstrued as investment advice—the participant already has purchased the ''investment'' by contributing to the deferred annuity. Accordingly, although the limitation on liability in paragraph (f) is not available for plan administrators or other parties disclosing deferred income stream payments under paragraph (e)(2) of the IFR, the Department does not believe such relief is necessary or that these parties will be subject to the type of litigation and other potential liability risks that may exist when estimating a participant's future lifetime income.

Paragraph (f) also does not apply to any additional illustrations as permitted in paragraph (g) of the IFR. Paragraph (g) clarifies that plan administrators are not prohibited from including lifetime income stream illustrations on or as part of benefit statements in addition to the illustrations mandated by the rule. Commenters on the ANPRM and the 2010 RFI made it very clear that many plans already provide illustrations and have done so for decades, including through the use of continuous access websites and other similar technologies. Many of these illustrations are interactive, stochastic, and tailored to the individual plan and plan participant. According to the commenters, these highly adaptive, highly personal, sophisticated illustrations are, in many respects, superior for financial and retirement planning purposes to a one-size-fits-all, deterministic model like that in the IFR. The Department does not want to undermine these best practices or inhibit innovation in this area. The Department encourages the continuation of these practices. At the same time, the Department is unable to extend the relief in paragraph (f) of the IFR to all of these practices. Comments, however, are solicited on whether the Department, either separately or in conjunction with the adoption of a final rule, should issue guidance clarifying the circumstances under which the provision of additional illustrations described in this paragraph may constitute the rendering of ''investment advice'' or may, instead, constitute the rendering of ''investment education'' under ERISA. Such guidance could assist plan sponsors, service providers, participants, and beneficiaries in ensuring that activities designed to educate and assist participants and beneficiaries in making informed decisions do not cause persons engaged in such activities to become fiduciaries with respect to a plan by virtue of providing ''investment advice'' to plan participants and beneficiaries for a fee or other compensation.

(7) Interim Final Rule Comments; Dates

(a) Justification for Interim Final Rule; Comments

The Department is publishing this IFR in response to Congress's explicit direction in the SECURE Act, to publish an interim final rule within one year, as discussed above in the *Background* section of this preamble. In formulating this IFR, the Department has reviewed the extensive public record relating to lifetime income illustrations, including hundreds of comments on the 2010 RFI and the ANPRM as well as a public hearing on this initiative. In view of the importance of this initiative and Congress's explicit direction to publish an IFR within one year of the SECURE Act's enactment, the Department is publishing this interim final rule. Additionally, the Department for good cause finds that the congressional mandate to publish an interim final rule within one year, combined with the regulated community's need for regulatory guidance and the Department's intention to publish a final rule after receiving comments, make pre-IFR notice and public comment procedures impracticable, unnecessary, or contrary to the public interest in this instance. The Department invites comments from interested persons on all aspects of the IFR, in accordance with the instructions and timeline for submitting comments described above in the *Addresses* section. The Department's intention is to adopt a final rule prior to the effective date after consideration of public comment, with an adoption date sufficiently in advance of the effective date in order to minimize compliance burdens.

(b) Dates

Paragraph (i) provides the effective date and applicable date for this IFR. ERISA section 105(a)(2)(D)(v), in relevant part, states that the requirements of section 105(a)(2)(B)(iii) for individual account plans to provide the lifetime income disclosure ''shall apply to pension benefit statements furnished more than 12 months after the latest of the issuance by the Secretary of'' the interim final rules, the model disclosure, or the assumptions

prescribed by the Secretary. The IFR published today satisfies the three requirements of section 105(a)(2)(D)(v) and is effective on September 18, 2021 and applies to pension benefit statements furnished after such date. Thus, plans are not required to comply with the IFR until this date.

C. Regulatory Impact Analysis

The SECURE Act aims to increase access to workplace retirement plans and generally to expand opportunities to save for retirement. As discussed above in the *Background* section of the preamble, section 203 of the SECURE Act amends section 105(a) of ERISA to require that pension plan administrators, at least annually, provide benefit statements illustrating participants' accrued benefits as two lifetime income stream illustrations: (1) A qualified joint and survivor annuity and (2) a single life annuity. The SECURE Act also directs the Department to prescribe assumptions and model language for plan administrators to use when producing and furnishing these illustrations. The SECURE Act provides that no plan fiduciary, plan sponsor, or other person shall have any liability under title I of ERISA solely by reason of the provision of lifetime income illustrations derived in accordance with the IFR's assumptions and which use the model language contained in the IFR. The IFR published today is consistent with the SECURE Act amendments to ERISA section 105 and the Department's prior work on issues related to lifetime income illustrations in defined contribution plans.

The Department has examined the effects of the IFR as required by Executive Order 12866,[21] Executive Order 13563,[22] the Congressional Review Act,[23] Executive Order 13771,[24] the Paperwork Reduction Act of 1995,[25] the Regulatory Flexibility Act,[26] section 202 of the Unfunded Mandates Reform Act of 1995,[27] and Executive Order 13132.[28]

(1) Executive Orders 12866 and 13563 and the Congressional Review Act

Under Executive Order (E.O.) 12866, the Office of Management and Budget (OMB)'s Office of Information and Regulatory Affairs (OIRA) determines whether a regulatory action is significant and, therefore, subject to the requirements of the E.O. and OMB review. Section 3(f) of E.O. 12866 defines a ''significant regulatory action'' as an action that is likely to result in a rule that (1) has an annual effect on the economy of $100 million or more, or adversely affects in a material way a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local or tribal governments or communities (also referred to as economically significant); (2) creates serious inconsistency or otherwise interferes with an action taken or planned by another agency; (3) materially alters the budgetary impacts of entitlement grants, user fees, or loan programs, or the rights and obligations of recipients thereof; or (4) raises novel legal or policy issues arising out of legal mandates, the President's priorities, or the principles set forth in the E.O. The Office of Information and Regulatory Affairs has determined that this IFR is economically significant under section 3(f)(1) of E.O. 12866. Pursuant to the Congressional Review Act (5 U.S.C. 801 *et seq.*), OIRA has designated this rule as a ''major rule,'' as defined by 5 U.S.C. 804(2).

E.O. 13563 directs agencies to propose or adopt a regulation only upon a reasoned determination that its benefits justify its costs; the regulation is tailored to impose the least burden on society, consistent with achieving the regulatory objectives; and in choosing among alternative regulatory approaches, the agency has selected those approaches that maximize net benefits. E.O. 13563 recognizes that some benefits are difficult to quantify, and provides that, when appropriate and permitted by law, agencies may consider and discuss qualitatively values that are difficult or impossible to quantify, including equity, human dignity, fairness, and distributive impacts.

(2) Introduction and Need for Regulation

As discussed above, section 203 of the SECURE Act amends section 105(a) of ERISA to require, in relevant part, that pension plan administrators provide, at least annually, benefit statements illustrating participant's accrued benefit as two lifetime income stream equivalents. The IFR implements this section of the SECURE Act by establishing content, assumptions, and model language for the illustrations.

Workers today are required to take a more active role in managing their retirement assets, both while employed and during their retirement years. This increased responsibility is primarily a result of the general shift from defined benefit pension plans to defined contribution plans.[29] In 1975, defined contribution plan participants accounted for 26 percent of pension plan participants. This share increased to 75 percent in 2017.[30] Moreover, in 2017, 84 percent of active defined contribution plan participants were participants in 401(k) plans, and 98 percent of these 401(k) plan participants were responsible for directing some or all of their account investments.[31]

Employers and unions sponsoring private defined benefit plans make contributions to fund promised benefits, and manage plan assets as ERISA fiduciaries. In addition, defined benefit plans are generally required to make annuities available at retirement, which provides protection against longevity risk (outliving one's retirement assets). In contrast to defined benefit plan participants, defined contribution plan participants bear significantly more investment risk. Employers make no promises with respect to the adequacy of a participant's final account balance nor the income stream that the balance will generate. Generally, defined contribution plans are not required to make annuities available to participants at retirement, and typically participants must determine the amounts and timing of withdrawals of their account balances from such plans. Consequently, defined contribution plan participants must ensure that their savings are adequate to protect them against longevity risk.

Evidence suggests that defined contribution plan participants have found it difficult to plan for retirement and manage their retirement assets.[32] For example, 80 percent of retirees say they do not have a formal retirement

income plan.[33] Most investors planning for retirement do not know how much they need to save to maintain their current standard of living in retirement, or how to calculate that amount.[34]

The replacement rate, the ratio of post-retirement income to pre-retirement income, is one indicator of retirement income adequacy. A replacement rate of 75 percent is often cited as an illustrative target. Recent studies indicate that a significant portion of the participant population is not meeting this target, and younger participants (those more likely to participate in a defined contribution plan) are having more trouble meeting it than their older counterparts (those more likely to participate in a defined benefit plan).

The Center for Retirement Research at Boston College estimates that between 42 and 60 percent of households are at risk of having inadequate retirement savings.[35] A separate study projects that when individuals born between 1976 and 1985 reach age 70, 40 percent will be unable to replace 75 percent of their pre-retirement earnings.[36] Comparatively, 32 percent of the cohort born between 1936 and 1945, and 30 percent of the cohort born between 1956 and 1965, are projected to fall short of the 75 percent replacement rate at age 70.[37] Further, a study conducted by the National Bureau of Economic Research found that while the replacement rate has not worsened over time for households at or above median income levels, it has been falling for households with below-median income levels.[38]

Planning for retirement requires investors to determine how much to contribute to their plans, which generally entails a basic command of financial and investment concepts, such as portfolio allocation and risk tolerance. These concepts are complex and many participants do not have the financial expertise necessary to make effective investment decisions and successfully plan for retirement. A recent survey of Americans between the ages of 60 and 75 found that only 26 percent of those surveyed were able to pass a retirement literacy test, and only 41 percent correctly answered questions specifically related to maintaining one's lifestyle in retirement.[39] Only 38 percent knew that an individual could only safely withdraw $4,000 each year from a $100,000 retirement account according to the ''4 percent rule.'' [40] Additionally, researchers note that common cognitive constraints, such as procrastination and inertia, can interfere with proper retirement planning.[41]

Most plan participants think about their retirement income goals in terms of the monthly income they would need to maintain their current standard of living in retirement rather than as a lump sum.[42] Many participants do not know where to find information about lifetime income streams, or how to calculate such amounts on their own.[43] While some plans provide retirement income illustrations as part of their pension benefit statements, the practice is far from universal.

The SECURE Act directs the Department to take regulatory action to provide defined contribution plan participants and beneficiaries with a tool that will help them better understand their retirement savings as a vehicle for income replacement during retirement: Lifetime income illustrations. Many commenters on the ANPRM suggested that such a tool could motivate workers who are saving too little to increase their contributions.[44] A survey conducted by the LIMRA Secure Retirement Institute found that women and low-income workers were less likely to have an estimate of their monthly retirement income than men and high earners.[45] The IFR could improve outcomes for these underserved groups.

(3) Affected Entities

The IFR will affect all ERISA-covered defined contribution plans, although the impact on such plans already providing lifetime income illustrations in pension statements will be smaller than the impact on those that do not. Although plans providing the disclosure currently have systems and disclosures in place to produce these illustrations, they nonetheless will need to implement changes to ensure that the language and assumptions used for the illustrations comply with the requirements of the IFR. The Department solicits comments about the impact that plans currently providing lifetime income illustrations may experience in conforming to the conditions set forth in this IFR.

Based on Form 5500 data, there were 662,829 defined contribution plans and 76.8 million participants with account balances in defined contribution plans in 2017, all of whom will be affected by the IFR. Using these Form 5500 data and a survey conducted by the Plan Sponsor Council of America (PSCA),[46] the Department estimates that 112,681 plans already provide lifetime income illustrations, and thus are likely to experience a smaller impact than the 550,148 plans that do not already provide such illustrations.[47] Table 1 below shows the percentage of plans that have or have not provided projected monthly income to educate participants.

The Department believes that the PSCA survey results concerning the percentage of plans providing projected monthly income are an acceptable proxy for the percentage of plans already providing lifetime income illustrations in pension benefit statements. The PSCA survey asked plan sponsors to select approaches used to achieve defined contribution plan education,

[46] *62th Annual Survey of Profit Sharing and 401(k) Plans,* Plan Sponsor Council of America (2019). This survey reported on the 2018 plan year experience of 608 defined contribution plans.

[47] The 112,681 and 550,148 figures are calculated by multiplying the number of all plans (662,829) by the percentage of plans providing lifetime income illustrations (17 percent) and not providing lifetime income illustrations (83 percent) respectively.

and projected monthly income is one of the education approach options listed. Some plan sponsors may provide monthly income projections, but may not consider these projections to be education, and thus may have responded to the survey accordingly. For this reason, the Department notes that the percentages shown in the table below serve as lower-bound estimates. The Department invites comments on the estimate of plan sponsors currently providing lifetime income illustrations and solicits feedback on alternative data sources for the number of defined contribution plans and recordkeepers currently providing lifetime income illustrations.

Table 1. Plans Providing Projected Monthly Income

	Plan Size by Number of Participants					
	2–49	50–199	200–999	1,000–4,999	5,000+	All Plans
[1] Number of Plans	484,933	105,364	35,252	8,674	2,685	662,829
[1-1] Provided	12%	15%	17%	14%	30%	17%

[2-1] Provided	663,777	1,083,348	1,878,070	1,904,540	11,472,149	17,001,884
[2-2] Percentage of Participants Provided with Projected Monthly Income						22%

Sources: Form 5500 data in 2017, and Plan Sponsor Council of America, 62th Annual Survey of Profit Sharing and 401(k) Plans (Chicago, IL: 2019). This survey reported on the 2018 plan year experience of 608 defined contribution plans. Numbers in rows [1] and [2] come from the Form 5500 data in 2017. Percentages in row [1-1] come from the PSCA survey, while percentages in row [1-2] are calculated by deducting the corresponding percentages in row [1-1] from 100. Numbers in row [2-1] are calculated by multiplying the numbers in row [2] by the percentages in row [1-1]. The number of 662,829 includes 25,291 defined contribution plans whose plan sizes fall into the category of "None or Not Reported," excluded from the table.

The IFR also will affect plans offering in-plan annuity products. According to two surveys of plan sponsors, nine to 12 percent of plans currently offer annuity options.[48] One large recordkeeper reports that about two out of ten plans it services, covering approximately eight percent of defined contribution plan participants it services, provided participants with a retirement annuity option in 2018.[49] Even when annuity products are offered, however, data suggest a relatively small number of participants purchase them. Analyzing data from a large plan administrator, one study suggests that approximately 19 percent of retirees opted for annuitization in 2017, which declined from 54 percent in 2000.[50] The data in that study includes plans with highly educated and financially sophisticated participants. Further, the plans in that study have had annuity options for a long period of time. Therefore, some economists suggest that the annuitization rate is even lower for participants with more diverse backgrounds in terms of education level or financial literacy.[51] Since relatively few plans offer annuity options and only a small number of participants purchase them, the impact of the IFR on these plans and participants is expected to be somewhat limited.

As discussed earlier in this preamble, there are different types of in-plan annuities. Some plans offer participants the ability to purchase DIAs. It is difficult to know how many plans provide a DIA purchase option. However, DIAs represent only a small part ($1.7 billion) of the total $179 billion annuity market in 2017.[52] QLACs, a subset of DIAs, represent $255 million, approximately 15 percent of DIA sales in 2017.[53] Because these data

[48] According to a defined contribution plan sponsor survey, 9.3 percent of plans offered an in-plan annuity option to participants. (*See* PSCA 61st Annual Survey, Reflecting 2017 Plan Experience.) Another survey of plans suggests that 12 percent of plans offered an in-plan annuity product as an investment option in their plans in 2019. Center for Retirement Research (Oct. 2019). *See also* Richard Johnson, Leonard Burman, & Deborah Kobes, "Annuitized Wealth at Older Ages: Evidence from the Health and Retirement Study," Urban Institute (May 2004). According to this study, approximately 10 percent of adults who left their jobs after age 65 annuitized their plan assets in 2000.

[52] This includes sales occurred beyond plans and IRA markets. *See U.S. Annuity Markets 2018: Remaining Well Capitalized and Adaptive,* Cerulli Report, at 42.

[53] This includes sales through qualified plans and IRAs. (*See Id.,* at 32.)

cover QLACs sold from both plans and individual retirement accounts (IRAs), participants who purchased QLACs through their employer-sponsored plans would represent an even smaller share of the annuity market.

(4) Benefits

The Department believes that the benefits of this IFR justify its costs, both of which are discussed below. The Department invites comments on these benefit and cost estimates, and is especially interested in obtaining additional data on the impacts that result from providing lifetime income illustrations in pension benefit statements.

The Department anticipates that the IFR will provide two primary benefits to participants: (1) Strengthening retirement security by encouraging those currently contributing too little to increase their plan contributions, and (2) saving some participants' time in understanding how prepared (or unprepared) they are for retirement by making lifetime income information readily available. Under certain circumstances, however, the Department expects the IFR will lead a minority of participants who might have over saved to reduce their contributions.[54] The Department also expects the limitation on liability provision will significantly reduce the litigation risk faced by plans providing lifetime income illustrations.

Increased Contributions: The Department believes that requiring benefit statements to contain lifetime income illustrations will encourage many participants to increase their plan contributions. One commenter on the 2010 RFI stated that translating retirement savings into an estimated future income stream will remind participants that retirement savings are needed to generate income throughout retirement. For example, if a participant sees that their $100,000 account balance may only generate $700 of monthly income for life, the participant may choose to take measures to increase his or her savings.[55]

Research supports the hypothesis that providing participants with customized information on their lifetime income stream can influence contribution behavior.[56] One study suggests that 40 percent of respondents aged 41–60 will increase their 401(k) contributions by four percentage points or more after seeing a lifetime income illustration.[57] Another study, involving participants in a University of Minnesota defined contribution plan, revealed those who received lifetime income illustrations increased their annual contributions by an average of $85.[58] Although this is a modest increase, it is significant considering the many barriers that prevent participants from increasing contributions, including liquidity constraints. If the Department's IFR affects participant behavior in the same manner as the University of Minnesota study, it would increase aggregate annual contributions by $5.1 billion.[59] It is unclear, however, whether the rule's impact will be similar to that observed in the study. Unlike the IFR, in addition to providing lifetime income illustrations, the statements in the University of Minnesota study also showed the impact of increased savings on participants' account balances and the additional annual income the increased savings would generate in retirement. The Department invites comments on the applicability of the University of Minnesota findings to the Department's rule.

The Federal Thrift Savings Plan began providing a lifetime income illustration as part of participants' benefit statements in 2010. In a 2013 Thrift Savings Plan Participant Satisfaction Survey, 29 percent of active participants reported taking action based on the monthly income estimate: 12 percent increased their contributions, 10 percent revised their investment allocations, and 7 percent delayed their planned retirement dates.[60]

A recent study in Chile suggested that defined contribution plan participants were 1.4 percentage points more likely to increase voluntary contributions after projections of retirement income were included in participants' annual statements.[61] The increase was larger in the 40–50 age group than it was in younger cohorts, consistent with myopia or liquidity constraints. The increase for women was significantly larger than that for men, likely reflecting a higher sense of urgency.[62]

The Department anticipates that if all defined contribution plan benefit statements were to contain lifetime income illustrations, many participants and beneficiaries would be better positioned to assess their retirement readiness and to prepare for retirement.[63] An illustration based on a person's current account balance would provide an immediate baseline for the participant to judge expected retirement readiness.

Adding lifetime income illustrations to defined contribution plan retirement account statements is supported by virtually all plan sponsors (96 percent).[64] This addition would benefit participants by making critical

[54] See more discussion in the (6) *Uncertainty* section.

[55] As discussed in more detail in the *Uncertainty* section of the preamble, below, it is difficult to know what percentage of increased contributions can be interpreted as benefits (as categorized in a regulatory impact analysis, such as this one).

[56] *See* Goda et al., *supra* note 41. *See also ACLI Retirement Choices Study: Online Survey with Near-Retiree Defined Contribution Plan Participants,* Mathew Greenwald & Associates, Inc., (Apr. 2010), (written statement for the record, U.S. Sen. Special Committee on Aging, *Hearing on The Retirement Challenge: Making Savings Last a Lifetime,* Jun. 16, 2010, 111th Cong.). (Sixty percent of respondents reported that if the illustration of the participants' lifetime income generated by their retirement plan account would not be enough to meet their retirement needs, they would ''start saving more immediately,'' and 32 percent indicated that seeing an illustration would cause them to reevaluate and change their asset allocation.)

[57] *See Consumer Preferences for Lifetime Income Estimates on 401(k) Statements,* Insured Retirement Institute (Jan. 2015), *https://www.myirionline.org/docs/default-source/research/consumer-preferences-for-lifetime-income-estimates-on-401(k)-statements-web.pdf?sfvrsn=2.* (This study asked respondents two questions to assess (1) whether they would increase 401(k) contributions after seeing retirement income estimates, and (2) by how much. The Department assumes those who reported they would increase contributions in the first question also responded to the second question. Because 50 percent of respondents aged 41–60 answered ''yes'' to the first question, and 75 percent of these respondents stated they would increase the contributions by 4 percentage points or more, it is assumed roughly 40 percent (50 percent *75 percent) of respondents aged 41–60 would increase their contributions by 4 percentage points or more.).

[58] *See* Goda et al., *supra* note 41.

[59] The $5.1 billion estimate is calculated by multiplying the average savings estimate from the University of Minnesota study ($85 per participant), the number of defined contribution plan participants with account balances (76.8 million, according to the 2017 Private Pension Plan Bulletin), and the assumed percentage of those participants not currently receiving lifetime income illustrations (78 percent). The 78 percent assumption comes from Table 1, which shows 22 percent of participants receive lifetime income illustrations. ($85*76.8 million*0.78 = $5.1 billion). Whether the increase in contributions persists is not certain as the study's time horizons were between 6 months (*e.g.* Goda 2014) to 1 year (*e.g.* Fajnzylber & Reyes) following the receipt of the disclosures.

retirement information readily available to aid their retirement planning. In a survey commissioned by the Insured Retirement Institute, over 90 percent of participants reported that they wanted to see some form of retirement income estimates on their 401(k) statements, and that such estimates would be very, or somewhat, helpful when planning for retirement.[65] In another survey, 75 percent of respondents were very, or somewhat, interested in converting some or all of their retirement savings to an investment option that would guarantee monthly income for life.[66]

Time Savings: Defined contribution plan participants will likely benefit from the IFR because it will save many of them time by making lifetime income information readily available. Participants can calculate lifetime income streams on their own by finding and using online interactive tools, applying economic formulas found in books, or seeking help from financial advisers. Unfortunately, many participants neither know where to find such information, nor possess the financial literacy needed to use it. Further, for those who know where to look, inertia might prevent them from acting on their knowledge.

This IFR greatly standardizes lifetime income illustrations across defined contribution plans, which will save time by minimizing confusion for participants. A standardized illustration would make it easy for workers to add together their estimated Social Security and ERISA benefits, minimizing some of the complexity of retirement planning.[67] This change will be of particular benefit to participants who change jobs or receive statements from multiple defined contribution plans, as different benefit statements with few exceptions will use the same model language and assumptions, and present the information in the same manner. Participants will be able to spend their retirement planning time more efficiently, because they will not have to devote time, energy, and resources to seeking out lifetime income information on their own.

(5) Costs

Overview of Methodology—Establishing a Baseline: Some plan sponsors voluntarily provide lifetime income illustrations, but there is little data available on the number of sponsors providing illustrations or the type of illustrations they provide. As discussed in the *Affected Entities* section above, the PSCA survey for the 2018 plan experience suggested that only 17 percent of plan sponsors provide lifetime income illustrations. As shown in Table 1, larger plans were more likely to provide this information: 30 percent of plans with at least 5,000 participants provided such information, while 13 percent of plans with fewer than 5,000 participants did the same.[68] The results from the PSCA survey and Form 5500 data suggest that 22 percent of defined contribution plan participants received lifetime income illustrations. A 2013 survey found that only half of U.S. workers have ever seen monthly retirement income projections.[69] Another survey, conducted in 2012, suggested that only one-third of 214 plan sponsors provide income projections as part of benefit statements.[70]

The Department estimates one-time and ongoing costs using data from the aforementioned PSCA survey. Regarding one-time costs, the Department assumes that plans not currently providing lifetime income illustrations will incur development costs of setting up a system for producing lifetime income illustrations. Plans that currently provide such illustrations will not incur development costs but likely will incur some transitional costs to comply with the Department's assumptions and model language and to integrate the new illustrations into existing paper and online benefit statement formats. Using available data, it is difficult to predict how small recordkeepers and plan sponsors will respond to the rule in terms of development costs. Developing an information technology system that generates lifetime income illustrations requires a large up-front investment. Therefore, it is likely that many recordkeepers will choose instead to purchase products or license systems from recordkeepers that have already developed them. According to the Form 5500 data, in the 2017 plan year, there were 1,725 recordkeepers servicing defined contribution plans. The 445 largest recordkeepers (hereafter large recordkeepers) serviced plans holding approximately 99 percent of total plan assets, while the remaining 1,280 (small recordkeepers) serviced plans holding a mere 1 percent.[71] A different report shows a similar picture—a large concentration of the market held by a small number of recordkeepers.[72] The small recordkeepers may decline to develop their own systems, and instead opt to purchase software or license systems developed by other recordkeepers.

Categorizing Major Cost Components: The economic costs associated with the IFR fall into two categories of one-time costs and four categories of ongoing costs. The two one-time cost categories are (1) developing a system to produce

[65] *See* Insured Retirement Institute, *supra* note 57. While the affected industry acknowledges that participants want this information and believes it would be helpful and educational, it is uncertain that such disclosures necessarily would increase over time without this IFR. This, in part, may be due to employers' concerns with potential fiduciary liability and litigation for unmet expectations, *i.e.,* workers mistakenly believing the lifetime income illustrations are promises or guarantees. To the extent that lifetime income illustrations would become more common even without this IFR, the benefits and costs attributable to the IFR are potentially overstated.

[66] *2019 Retirement Confidence Summary Report,* Employee Benefit Research Institute and Greenwald & Associates (Apr. 23, 2019), at 26, *https://www.ebri.org/docs/default-source/rcs/2019-rcs/2019-rcs-short-report.pdf?sfvrsn=85543f2f_4.*

[67] Unlike the Department's lifetime income illustration, estimated Social Security retirement benefits are based on projections, such as the amount of continued contributions to the Social Security. In addition, Social Security benefits are subject to future adjustment for inflation, while the Department's illustration is fixed. However, combining the estimates at age 67 would provide a rough estimate of what a person might receive in the first month of retirement.

[68] Table 1 shows four groups of plans with fewer than 5,000 participants—plans with (i) 2–49 participants, (ii) 50–199 participants, (iii) 200–999 participants, and (iv) 1,000–4,999 participants. The percentages of plans providing projected monthly income in these four groups are 12%, 15%, 17%, and 14%, respectively. *See* row [1–1] of Table 1. Therefore, the Department estimates that approximately 13 percent, 79,547 plans out of the total 634,223 plans in these four groups, provide projected monthly incomes. *See* row [1] of Table 1.

[69] Salka & Shiner, *supra* note 45. (Fifty-one percent of survey respondents answered ''yes'' to the following question: ''Have you ever seen a projection or estimate of monthly income your savings could generate in retirement if you maintain your current saving habits?'')

[70] *Retirement Income Practices Study: Perspectives of Plan Sponsors and Recordkeepers for Qualified Plans,* MetLife (June 2012), *https://www.metlife.com/content/dam/metlifecom/us/homepage/institutionalRetirement/insights/LifetimeIncome/2012-Retirement-Income-Practices-Study.pdf.* (This survey also posed the same question as the Salka/Shiner survey (see previous note) to 12 large recordkeepers and found that half already provided income projections. In this analysis, a one-third early-adoption rate is applied because the Brightscope database of plan sponsors and recordkeepers reveals that the largest 214 plan sponsors receive services from about 50 large recordkeepers, which covers more recordkeepers than the results from 12 recordkeepers. The respondents to this survey are mostly large plan sponsors, and the sample size of this survey is very small. The Private Pension Plan Bulletin and Form 5500 data suggests that there were over 663,000 defined contribution plans and 1,725 recordkeepers serving defined contribution plans in plan year 2017).

[71] The Department considered other thresholds for recordkeepers. For example, approximately 95 percent of total plan assets are serviced by the largest 119 recordkeepers. The Department selected the 99 percent threshold for recordkeepers to include more recordkeepers in cost estimates, and thus avoid underestimating costs.

[72] *Special Report: DC Record Keepers,* Pensions & Investments (Apr. 2, 2018), *https://corporate.voya.com/sites/corporate.voya.com/files/PI5797%20Voya-Final.pdf.*

lifetime income illustrations, and (2) transitioning from existing assumptions and language to the required assumptions and language or model language and integrating the new illustrations into existing paper and online benefit statement formats. The four ongoing cost categories include: (1) Answering increased calls from participants, (2) printing lifetime income illustrations, (3) converting the account balance to annuities based on the DOL-specified assumptions at the statement date, and (4) training internal staff about lifetime income illustrations and efficient navigation of the system.

The development cost estimates assume no small recordkeepers would develop their own systems because it will likely be more cost effective for small recordkeepers to purchase software or license a system than to develop their own.

To gather information needed to convert participants' account balances to annuities based on the DOL-specified assumptions at the statement date, plan sponsors are likely to rely on their recordkeeper to provide the information. Some recordkeepers may have an actuary on staff who can calculate the appropriate information as of the benefit statement date. Other recordkeepers may need to obtain the appropriate information from an external actuary or other source.

One-time Costs—Development Costs: In order to provide lifetime income illustrations in benefit statements, recordkeepers may incur costs to develop a system that produces the lifetime income illustrations. Part of those costs would include those related to incorporating the assumptions mandated by the IFR. According to the PSCA survey, 30 percent of plans with 5,000 or more participants (hereafter large plans) already provide lifetime income illustrations. This 30 percent early-adoption rate serves as a baseline for this analysis.

The Department uses recordkeepers as a unit of analysis in estimating development costs. In commenting on the ANPRM, one commenter suggested that it would cost approximately $715,000 to develop a system to produce lifetime income illustrations and web-based tools.[73] According to this commenter, its system features various functionalities such as the ability to incorporate social security projections and IRAs; customize assumptions to see the impacts of those changes on the projected lifetime income streams; show the integrated effects of in-plan annuity investment options combined with other plan investments; estimate the gaps between projected monthly incomes at retirement and the desired monthly incomes; provide education about how to close those gaps, and personalize future draw-down strategies that incorporate social security and other retirement assets. Although these flexible and customizable features are likely to better engage participants, and thus, better prepare them for retirement, a recordkeeper can satisfy the conditions set forth in the IFR without these flexible and elaborate features. Furthermore, because the requirements in the IFR are limited in its scope and the IFR provides recordkeepers with model language and assumptions to convert account balances to the required lifetime income streams, a recordkeeper can develop at much lower costs a system capable of producing illustrations that meet the specifications of the IFR. Due to a lack of data, however, the Department relies on a unit cost estimate, $715,000, provided by the commenter on the ANPRM and adjusts it down by a quarter to account for costs incurred to develop features applicable to only a small subset of plans or features that are truly optional. The Department invites comments about how many recordkeepers would develop a new system to provide lifetime income illustrations pursuant to the IFR and how much it would cost for them to do so. Applying the assumptions and methods discussed above, the Department estimates that costs to develop a new system to produce lifetime income illustrations meeting the specifications laid out in the IFR will be $185 million.[74] This estimate assumes that 70 percent of large recordkeepers will develop their own systems, and that none of the small recordkeepers will develop their own systems.[75] As discussed above, it is plausible that more recordkeepers already have a capability of producing lifetime income illustrations, thus do not need to build a new system to comply with the IFR.[76] Of those recordkeepers currently lacking a capability of providing lifetime income illustrations, some may elect to use other providers' systems instead of developing a new proprietary system. If so, then the Department may have overestimated costs to develop a new system. However, if more recordkeepers decide to develop a new system, the development costs in this analysis may be underestimated.

One-time Costs—Transitional Costs: To receive liability relief, plan sponsors, plan administrators, and plan recordkeepers currently providing lifetime income illustrations must modify their current assumptions and language to adopt the assumptions and model language in the IFR. They must then integrate the new illustrations into existing paper and online benefit statement formats. The Department assumes that these modifications and integration will take 20 hours from an attorney and 24 hours each from an actuary and a computer system analyst.[77] The Department estimates that transitional costs will be $1.2 million, based on the aforementioned assumption and the hourly labor rates for attorneys ($138.41), actuaries ($146.39), and computer system analysts ($118.63).[78] The Department is soliciting comments on the number of

[73] *See* Letter from Great-West Financial to Employee Benefits Security Administration, Comment on the Advanced Notice of Proposed Rulemaking (Aug. 7, 2013), available at *https://www.dol.gov/sites/dolgov/files/ebsa/laws-and-regulations/rules-and-regulations/public-comments/1210-AB20/00095.pdf.*

[74] The development costs, $185 million is estimated by multiplying three-quarters of the unit cost ($715,000) by the inflation rate from 2013 to 2020 (11 percent), the number of recordkeepers (445 for large recordkeepers), and the percentage of recordkeepers developing their own systems (70 percent for large recordkeepers). If the full amount, instead of three-quarters, of the unit cost, $715,000, is applied, the costs to develop a new system will increase from $185 million to $247 million.

[75] The assumption of 70 percent comes from Table 1, which shows 70 percent of large plans are not providing projected monthly income.

[76] According to a survey conducted with defined contribution plan recordkeepers in 2018, about 80 percent responded that projected retirement incomes are automatically displayed on the participant's website. See the Cerulli Report, the U.S. Defined Contribution Distribution 2018 page 134. Separately, according to another survey conducted with defined contribution plan sponsors in 2019, about 77 percent of plan sponsors provided participants with retirement income projection illustrations online, which increased from 54 percent in 2015. See Deloitte 2019 Defined Contribution Benchmarking Survey Report page 22.

[77] These burden hours include time spent to review the IFR and current practices, convene meetings to discuss how to respond to the IFR and any necessary modifications in current practices and disclosures, implement those modifications, and review the revised illustrations.

[78] *Labor Cost Inputs Used in the Employee Benefits Security Administration, Office of Policy and Research's Regulatory Impact Analyses and Paperwork Reduction Act Burden Calculation,* Employee Benefits Security Administration (June 2019), *https://www.dol.gov/sites/dolgov/files/EBSA/laws-and-regulations/rules-and-regulations/technical-appendices/labor-cost-inputs-used-in-ebsa-opr-ria-and-pra-burden-calculations-june-2019.pdf.* The estimate of $1.2 million is calculated by summing up the costs associated with an attorney, an actuary, and a computer system analyst. The costs associated with each of the three types of professionals are calculated by multiplying four numbers: (1) 445 large recordkeepers; (2) the percentage of recordkeepers currently providing lifetime income illustrations (30 percent); (3) the hourly rate of a professional (an attorney, actuary, or a computer system analyst); and (4) number of hours (20 hours for an attorney and 24 hours each for an actuary and a computer system analyst).

hours needed for an attorney, an actuary, and a computer system analyst (or other workers) to perform the aforementioned modifications and integration.

Ongoing Costs—Costs Associated with Increased Calls from Participants: Some recordkeepers indicate that they receive more and longer phone calls from participants after they provide lifetime income illustrations.[79] One recordkeeper estimated in 2013 that average costs associated with calls increased by $0.28 per participant in the first year.[80] The IFR uses current account balances to calculate lifetime income. Since current account balances require no assumptions, they are more straightforward than projected account balances. The Department assumes that average increased call costs related to lifetime income illustrations calculated from current account balances will be $0.16 per participant, which is half of the inflation-adjusted increased call costs calculated for projected account balances.[81]

According to the 2017 Private Pension Plan Bulletin, there are approximately 76.8 million participants with defined contribution plan account balances. For plans currently providing lifetime income illustrations, the Department assumes the IFR results in half of the increased call costs per participant with account balances in the first year (*i.e.,* $0.08 per participant) due to the transition from using plans' own language to DOL's assumptions and model language, but this transition has no effects on calls after the first year. For plans not currently providing monthly income, the Department assumes the same increased call costs per participant with account balances in the first year (*i.e.,* $0.16 per participant), half of the costs in the second year (*i.e.,* $0.08 per participant), and one-third of the costs from the third to tenth year (*i.e.,* $0.05 per participant). This decline in increased call costs is due to participants' becoming familiar with lifetime income illustrations. The Department invites comments on the reasonableness of the assumptions on the degree of decline in increased call costs over time. The estimated costs from increased calls will be $10.6 million in the first year,[82] $4.8 million in the second year,[83] and $3.0 million from the third to tenth year.[84]

Ongoing Costs—Printing and Processing Costs: Incorporating lifetime income illustrations in benefit statements may increase the costs associated with printing and processing for plans not currently providing lifetime income illustrations. For plans currently providing lifetime income illustration, the Department assumes the IFR's requirements may not increase the number of pages in their benefit statements and therefore may not increase their costs associated with printing and processing.[85] The IFR will require plans to supply lifetime income projections to participants at least once a year; however, plans can send them more frequently. For the purposes of this analysis, the Department assumes that participants with defined contribution plan account balances will receive lifetime income illustrations on an annual basis. The Department also assumes that some plan administrators will rely on the Department's rules concerning electronic delivery when furnishing pension benefits statements that include the required lifetime income illustrations.[86] Specifically, the Department estimates that in the first year, 92 percent of participants will receive their lifetime income illustrations electronically, while 8 percent will receive them in print.[87] A 2013 comment letter provided data suggesting that the unit cost of printing and processing was approximately 2.6 cents per recipient at that time.[88] Applying these assumptions and an inflation rate of 11 percent from 2013 to 2020, the Department estimates that the printing costs will be $0.14 million in the first year.[89] The Department excludes postage costs from this analysis because print illustrations will be included with the hard-copy statements that are currently mailed. The Department expects printing and processing costs to decrease in the second through tenth years.

Ongoing Costs—Converting Account Balance to Annuities Using DOL Assumptions: The Department assumes only plans not currently providing lifetime income illustrations will incur the costs associated with balance conversion. The Department understands that plans currently providing lifetime income illustrations will likely change their current assumptions to be consistent with assumptions set forth in the IFR. Once those adjustments are made in their systems, however, ongoing costs to convert account balances based on the assumptions set forth in the IFR would likely be similar to ongoing costs they already voluntarily incur to convert balances based on their own assumptions. Therefore, the Department assumes that while assumptions used before and after the IFR may differ, plans already providing lifetime income illustrations will not likely incur additional costs associated with balance conversion compared to their ongoing costs incurred before the IFR.

Actuaries or someone with similar abilities will be required to gather the information needed to convert individual account balances to annuities based on the applicable assumptions as of the statement date. Although some recordkeepers may have actuaries in-house, the Department assumes that

[79] *See* Letter from Great-West Financial to Employee Benefits Security Administration, *supra* note 73.

[80] *Id.*

[81] The estimate of $0.16 per participant is calculated by multiplying the increased call costs calculated from projected account balances in 2013 ($0.28 per participant) by half, and an inflation rate of 11 percent from 2013 to 2020. *See* ''CPI Inflation Calculator,'' U.S. Bureau of Labor Statistics (2020), available at *https://data.bls.gov/cgi-bin/cpicalc.pl?cost1=1&year1=201308&year2=202002.* The start month is August 2013 (when the comment letter was written) and the end month is February 2020 (when the latest CPI data is available as of March 25, 2020).

[82] This estimate of $10.6 million is calculated by summing up the increased call costs from participants with account balances currently receiving lifetime income illustrations (76.8 million*22 percent*$0.08 per participant) and the costs from those not currently receiving these illustrations (76.8 million*78 percent*0.16 per participant).

[83] This estimate of $4.8 million is calculated by multiplying the number of participants with account balances (76.8 million) by the percentage of participants not currently receiving lifetime income illustrations (78 percent) and the average increased call costs in the second year ($0.08 per participant).

[84] This estimate of $3.0 million is calculated by multiplying the number of participants with account balances (76.8 million) by the percentage of participants not currently receiving lifetime income illustrations (78 percent) and the average increased call costs in the third year ($0.05 per participant).

[85] Plans may elect to voluntarily provide additional information, which may increase the number of pages or length of the benefit statements and therefore increase the costs associated with printing and processing.

[86] 85 FR 31884 (May 27, 2020).

[87] The 8 percent estimate is calculated by multiplying 18.5 percent of participants opting out of electronic delivery under the Department's 2020 Electronic Disclosure safe harbor by 44 percent of participants receiving lifetime income illustrations in print before the 2020 Electronic Disclosure safe harbor rule was finalized. The 92 percent is calculated by deducting the 8 percent from all (100 percent) participants.

[88] *https://www.dol.gov/sites/dolgov/files/EBSA/laws-and-regulations/rules-and-regulations/public-comments/1210-AB33/00656.pdf.* Based on a comment on the 2013 ANPRM, available on the Department's website, *https://www.dol.gov/sites/dolgov/files/ebsa/laws-and-regulations/rules-and-regulations/public-comments/1210-AB20/00095.pdf.*

[89] The estimate of $0.14 million is calculated by multiplying the following five numbers: (1) The unit cost of 2.6 cents, (2) the inflation rate of 11 percent from 2013 to 2020, (3) 76.8 million of participants with account balances, (4) 78 percent of participants with account balances not currently receiving lifetime income illustrations, and (5) 8 percent of the participants will receive the illustrations in print.

recordkeepers will consult with outside actuaries. In the first year, the Department assumes that an actuary will spend six hours per recordkeeper gathering information to convert account balances to annuities based on the Department-specified assumptions. The six hours consist of three components: (1) 2 hours to set up a spreadsheet or other computer program to calculate conversion factors for the ages and payment forms required initially, (2) 15 minutes per month to update the interest rate in the spreadsheet or computer program,[90] and (3) 1 hour per year to update the mortality rates in the program. The Department estimates that the hourly rate of an actuary is $146.39.[91] According to Form 5500 data in the 2017 plan year, 1,725 recordkeepers serviced defined contribution plans. Therefore, the Department estimates the first-year costs will be $1.3 million.[92]

The Department estimates costs associated with gathering information to convert account balances to annuities based on the Department-specified assumptions will decrease in the second year, and remain flat over the third through tenth years. This is because the Department assumes actuaries will generally maintain conversion spreadsheets, and need only to update the interest rate monthly and mortality rate annually. Therefore, the Department estimates the second year costs will be $0.8 million, and will remain at that level in subsequent years.

Ongoing Costs—Training Costs: To implement lifetime income illustrations, recordkeepers that do not currently provide these illustrations may need to train their staff to properly navigate the system. The Department assumes recordkeepers that currently provide these illustrations will not incur additional training costs because they provided training before the IFR. In the first year, the Department estimates that the training costs will be $1.7 million.[93] In subsequent years, the Department anticipates these training costs will decrease as staff members become more familiar with lifetime income illustrations. Therefore, the Department estimates that the training costs will be $0.8 million for the second year, and remain at that level in the third through tenth years.[94]

The Department invites comments about how much it would cost for a recordkeeper to operate and maintain a system that produces lifetime income illustrations and whether the unit-cost assumptions made to estimate ongoing costs as well as development costs are reasonable.

Summary. The Department estimates that in the first year, total costs will be $201 million. In subsequent years, the Department expects costs to be substantially lower because development costs are one-time costs and comprise a substantial share of the total costs. In the second year, the Department estimates that total costs will be $6.6 million. The third year costs are expected to be even lower, as recordkeepers, plan sponsors, and participants become more familiar with lifetime income illustrations. The Department estimates that third year total costs will be $4.8 million. The Department expects total costs to continue to decrease slightly in subsequent years due to the minor decline in printing and processing costs.[95] In the tenth year, the Department estimates that total costs will be $4.7 million. Using a three percent discount rate, the Department estimates that total costs over 10 years will be $240 million. Using a seven percent discount rate, the Department estimates that total costs over 10 years will be $233 million. Using a perpetual time horizon, the annualized costs in 2016 dollars are $12 million at a 7 percent discount rate.

TABLE 2—SUMMARY TABLE OF COSTS FOR 10 YEAR
[$ Million]

	Years										Total [1]	Total [2]
	1	2	3	4	5	6	7	8	9	10		
Panel A: One-Time Costs:												
Development costs	$185										$185	$185
Transitional costs	1.2										1.2	1.2
Panel B: Ongoing Costs:												
Costs associated with calls	10.9	4.8	3.0	3.0	3.0	3.0	3.0	3.0	3.0	3.0	36.0	32.1
Printing costs	0.14	0.13	0.11	0.10	0.09	0.08	0.08	0.07	0.06	0.06	0.84	0.74
Cost associated with balance conversion	1.3	0.8	0.8	0.8	0.8	0.8	0.8	0.8	0.8	0.8	7.8	6.7
Training costs	1.7	0.8	0.8	0.8	0.8	0.8	0.8	0.8	0.8	0.8	8.3	7.2

[2] A 7 percent discount rate is applied to total costs.

(6) Uncertainty

Although the literature is limited, the Department has carefully assessed the benefits and quantified the costs associated with providing lifetime income illustrations. However, these estimates contain uncertainty based on several factors that are discussed below.

Potential overestimation of contribution increases. The *Benefits* section of this preamble discusses the possibility that lifetime income illustrations may motivate participants to increase contributions and suggests that these aggregated increased contributions could total $5.1 billion. This estimate is based on the empirical results of an experimental research study.[96] However, the Department urges caution in applying the study cited to

[90] A recordkeeper administers multiple plans whose benefit statement dates may fall in all of the 12 months. Therefore, a recordkeeper may need to update the interest rate every month.

[91] *See* Labor Cost Inputs, *supra* note 78.

[92] $1.3 million is calculated by multiplying the hourly rate of an actuary ($146.39) by 6 hours, by 1,725 recordkeepers, and by 83 percent of recordkeepers not currently providing lifetime income illustrations.

[93] The estimate of $1.7 million assumes that (1) all recordkeepers not currently providing lifetime income illustrations (83 percent of 1,725 recordkeepers) need to train their staff members, (2) there are 10 computer system analysts per recordkeeper, and (3) 1 hour of training is needed in the first year for each computer system analyst. The hourly rate is assumed to be $118.63, which is the hourly labor cost for a computer system analyst (*see* Labor Cost Inputs, *supra* note 78).

[94] For the second year, the training time is reduced to 30 minutes per computer system analyst.

[95] The minor decline comes from the Department's assumption about the number of participants who will opt out of electronic delivery in plans that rely on the Department's electronic delivery safe harbor.

[96] *See* Goda et al., *supra* note 41.

the broader population of defined contribution plan participants.

First, the lifetime income illustrations under the IFR differ from the illustrations used in the study cited. The illustrations in that study were presented in a separate, colorful brochure containing supplemental information on how participants can make changes to their contributions. Moreover, those lifetime income illustrations were framed as providing additional savings at retirement and increased annual income during retirement. This influential value of presentation or framing effects has been well documented in retirement savings literature.[97] The lifetime income illustrations required under this IFR will not include the same information received by the participants in the study. Consequently, there is some uncertainty that the IFR illustrations will motivate participants in the same way and to the same extent as those in the research study.

Second, increases in contributions may not be beneficial for some participants.[98] If lifetime income illustrations help participants make optimal choices between their current consumption and future consumption, by enhancing their understanding of the relationship between saving and future income, the impact would clearly be beneficial. However, research on optimal savings levels and how much participants should increase contributions is inconclusive. Increased contributions that are due to improved understanding of optimal choices between current consumption and future consumption would be beneficial for a participant. However, without a clear understanding about optimal savings levels, it is difficult to know what percent of increased contributions can be interpreted as beneficial.[99]

Potential underestimation of development costs. The *Costs* section of this preamble assumes only large recordkeepers that do not currently provide lifetime income illustrations will incur costs to develop a system producing these illustrations, whereas none of the small recordkeepers will develop their own systems. Based on this assumption, the estimated development costs will be $185 million, resulting in estimated total costs of $240 million at a 3 percent discount rate over the 10-year period. However, the development costs may be underestimated if some small recordkeepers develop their own systems. It is difficult to know what percentage of small recordkeepers might choose to develop their own systems; therefore, the Department estimates the upper-bound development costs, where all recordkeepers not currently providing lifetime income illustrations develop their own systems to be $852 million.[100] This results in estimated upper-bound total costs of $906 million at a three percent discount rate over the 10-year period.

Alternatively, small recordkeepers may purchase software or licenses with added features for lifetime income illustrations, if they find it less costly than developing their own systems. The Department invites comments about costs of purchasing licenses or software that illustrate lifetime income streams.

(7) Alternatives

The Department considered alternative assumptions for plan administrators to rely on when converting a participant's account balance into a lifetime income stream. This section provides the Department's economic reasoning in weighing these alternative assumptions and augments the discussion on alternatives considered in section B(2)(a) of this preamble. The Department invites comments regarding these requirement assumptions.

(a) Commencement Date and Age

Paragraph (c)(1) of the IFR establishes an assumed annuity commencement date and age that plan administrators must use to prepare the required illustrations. The Department considered a number of alternatives to age 67. For example, the Department considered a plan's ''normal retirement age,'' as defined in ERISA section 3(34). One of reasons the Department decided against using the plan's ''normal retirement age'' is because some commenters on the ANPRM suggested that many recordkeepers do not maintain this information. If the Department requires plan administrators to use the plan's ''normal retirement age,'' recordkeepers would need to collect this information from each plan and customize their systems accordingly, which probably would result in a higher burden on recordkeepers and plans. This potential burden increase likely would outweigh any potential benefits, because participants are more likely to choose when to retire based on their individual circumstances than based on a plan's ''normal retirement age.'' Selecting a different, but uniform, commencement age (*e.g.,* 65 or 70), however, would not be expected to result in a burden increase.

The Department also considered requiring lifetime income illustrations with multiple commencement ages (*e.g.,* ages 62, 67, and 72), which would benefit participants to the extent they are able to understand the effects of different retirement ages and, thus, make choices that better fit their personal circumstances and retirement goals. On the other hand, more is not always better, and the existence of multiple illustrations has some potential to overwhelm or confuse participants. With each additional age, for example, would come an additional illustration with a different set of monthly payments and corresponding explanations. This could be challenging to plan administrators who have the ultimate responsibility to ensure readability and understandability. Further, requiring multiple illustrations based on different ages may increase the burden on plan administrators and recordkeepers.

(b) Marital Status

The IFR requires plan administrators to assume, for purposes of calculating the lifetime income stream from a qualified joint and 100% survivor annuity, that the participant has a spouse who is the same age as the participant (regardless of whether the

[97] *See* Jeffrey R. Brown, Arie Kapteyn, & Olivia S. Mitchell, ''Framing and Claiming: How Information-Framing Affects Expected Social Security Claiming Behavior?'' *Journal of Risk and Insurance,* vol. 83, no. 1 (Mar. 1, 2016), at 139–162; *see also* Jeffrey R. Brown, Jeffrey R. Kling, Sendhil Mullainathan and Marian V. Wrobel, ''Framing Lifetime Income,'' *Journal of Retirement,* vol. 1, no. 1 (summer 2013), at 27–37.

[98] For example, according to the Bureau of Consumer Financial Protection, in 2018, approximately two-thirds of 235 million adults held at least one credit card account. In the same year, the consumer credit card debt was almost $900 billion. The average balance for consumers with at least one general credit card was $5,700 as of the end of 2018 and the average annual percentage rate (APR) for general purpose credit cards was 20.3 percent. (*See* Consumer Credit Card Market Report, Aug. 2019, the Bureau of Consumer Financial Protection.) For at least some of those who carry high credit card debt, it may be better to pay off credit card debt rather than increase contributions to their retirement plans.

[99] The lifetime income illustrations may persuade some participants to reduce their contributions. Decreasing contributions may be beneficial to find the optimal balance of present versus future consumption.

[100] The estimate of $852 million is calculated by multiplying three-quarters of the unit costs ($715,000*0.75) by the inflation rate from 2013 to 2020 (11 percent), the number of all recordkeepers (1,725), and the percentage of recordkeepers developing their own systems (83 percent). The assumption of 83 percent comes from Table 1, which shows 83 percent of plans are not providing projected monthly income.

participant actually has a spouse). This assumption may diminish the value of the illustrations to some participants (*e.g.,* a participant with a much younger or older spouse or a participant who is not married), because the illustrations reflect hypothetical scenarios and not the participants' actual personal circumstances. However, as compared to requiring illustrations based on the actual marital status of the participant, including the actual age of the participant's spouse, the approach in the IFR is less burdensome for recordkeepers and plan administrators. According to some commenters, recordkeepers often do not know (or have reason to know) if a participant has a spouse or the age of the spouse. Personalized QJSA illustrations would be more costly as some percentage of plans and their recordkeepers would need to establish new procedures to collect and update the information needed to make QJSA illustrations.

(c) Interest Rate

The IFR contains the interest rate assumption that plan administrators must use to prepare the two illustrations required by the IFR. Specifically, plan administrators must assume a rate of interest equal to the 10-year constant maturity Treasury (CMT) securities yield rate for the first business day of the last month of the period to which the benefit statement relates. The Department considered using the Code section 417(e)(3)(C) rates. However, the Department has reservations about using the Code section 417(e)(3)(C) rates partially because, according to commenters, those rates may not be suitable for preparing lifetime income illustrations.[101] Further, the Code section 417(e)(3)(C) rates contain three segment rates, the use of which would add more administrative complexity and costs to the process of converting account balances to monthly payments than using the 10-year CMT rate.

The Department recognizes that there is no single interest rate assumption that would be perfect for all participants. Those who will retire tomorrow and plan to purchase lifetime income will encounter pricing that reflects current interest rates. It is clear that for these participants, using an interest rate assumption based on current rates, such as the 10-year CMT, is appropriate. However, participants who are a substantial number of years away from retirement will encounter annuity pricing that reflects future interest rates that currently are unknown. One way to project these future interest rates may be to use a long-term average of historical interest rates, with the belief that interest rates tend to regress to the mean. A third group of participants, those who will retire in a short number of years, are unique still from the other two groups. An example of an appropriate projection of interest rates at the time of retirement for these participants may be some combination of current and historical interest rates. Given that no single interest rate assumption would be perfect for all participants, the Department rejected the latter two approaches for the sake of regulatory uniformity and simplicity, and to reduce burdens on plan administrators.

(d) Mortality

The IFR requires that plan administrators convert participants' account balances assuming gender neutral mortality as reflected in the applicable mortality table under Code section 417(e)(3)(B), which is a unisex table. The Department also considered gender-specific mortality, which could produce more accurate (and, therefore, more useful) illustrations. Since the female mortality tables show a longer life expectancy and the male mortality tables show a shorter life expectancy, in each case compared to a unisex table, the dollar amount of a male participant's monthly payment would be higher, and a female participant's monthly payment would be lower, in an illustration using gender-based tables. However, the Department decided against gender-based tables, because plan administrators, recordkeepers, and third-party administrators do not always have records of participants' gender, according to commenters. Thus, requiring gender-specific assumption in the IFR would likely increase burden as plans would need to consistently collect such information. In addition, the use of gender-specific mortality for illustrations would not align with pricing for plans that contain in-plan annuities.

(e) Inflation

The IFR does not include an assumed adjustment to the required lifetime monthly payment illustrations for post-retirement inflation. Consequently, the IFR requires a fixed-nominal, annuitized income stream. The Department understands that, even with a low inflation rate, the purchasing power of a fixed-nominal income stream can be reduced significantly over the lifespan of the typical retiree. For the reasons explained earlier in section B(2)(d) of this preamble, the Department considered, but declined to adopt, alternatives involving an inflation adjustment, but the IFR does require an explanation that monthly payments in the illustrations are fixed and do not increase for inflation. One concern of commenters was a potential negative impact on plan participants caused by a relatively lower monthly payment amount that occurs if reduced to reflect the cost of an inflation-adjusted annuity. Another potential concern is the complexity of the methodology and explanatory language that would be required for inflation-indexed annuity income streams, which increase with age, and may raise additional questions from participants. Commenters, nevertheless, are invited to address whether, in lieu of a fixed nominal annuitized income stream, the final rule should require an illustration of monthly payments that increase with inflation.

(f) Immediate Versus Deferred Annuities

The Department adopts an immediate annuity approach in the IFR. Under an immediate annuity approach, a participant's account balance is converted to single life and QJSA payments as if the account balance were used to buy these two forms of lifetime income with payments commencing on the last day of the statement period, and assumes that the participant is age 67 on that date (regardless of a participant's actual age, unless older than age 67). Thus, for a participant aged 40, for example, the illustrations under the IFR effectively assume a static account balance for the period between ages 40 and 67. This type of illustration serves as an immediate benchmark for participants, because it shows the size of monthly payments to expect if there were no further savings, gains or losses between the statement date and retirement. Also, a participant could create his or her own projection of a different account balance, by dividing the projected estimated account balance by the current account balance, and then multiply the result by the monthly payment amount on the statement. The result would be the estimated monthly amount of an annuity that could be purchased with the projected estimated account balance (assuming annuity market conditions at retirement are the same as the current market).

The Department could have instead chosen a deferred annuity approach for the illustrations. A deferred annuity approach generally would result in larger monthly payments, because such annuities would contain a growth feature for the deferral period, *i.e.,* the

[101] The Code section 417(e)(3)(C) rates are often used to convert a defined benefit amount to a lump sum amount for distribution.

period between the statement date and the actual annuity commencement date. The Department decided against this approach because of its increased complexity and potential for participant confusion, since the annuity amount either would be in future dollars, or would be discounted with an inflation rate to current dollars. In addition, the participant could not use the deferred annuity amount to convert his or her own projected estimate of the account balance to an annuity at retirement. Finally, because of the growth feature during the deferral period, the deferred annuity approach does not align as well with the SECURE Act's ''current account balance'' directive as does the immediate annuity approach.

(8) Paperwork Reduction Act

As part of its continuing effort to reduce paperwork and respondent burden, the Department conducts a preclearance consultation program to allow the general public and Federal agencies to comment on proposed and continuing collections of information in accordance with the Paperwork Reduction Act of 1995 (PRA).[102] This helps to ensure that the public understands the Department's collection instructions, respondents can provide the requested data in the desired format, reporting burden (time and financial resources) is minimized, collection instruments are clearly understood, and the Department can properly assess the impact of collection requirements on respondents.

Currently, the Department is soliciting comments concerning the information collection request (ICR) included in the Pension Benefit Statement information collection. To obtain a copy of the ICR, contact the PRA addressee shown below or go to *http://www.RegInfo.gov.*

The Department has submitted a copy of the rule to the Office of Management and Budget (OMB) in accordance with 44 U.S.C. 3507(d) for review of its information collections. The Department and OMB are particularly interested in comments that:

- Evaluate whether the collection of information is necessary for the functions of the agency, including whether the information will have practical utility;
- Evaluate the accuracy of the agency's estimate of the burden of the collection of information, including the validity of the methodology and assumptions used;
- Enhance the quality, utility, and clarity of the information to be collected; and
- Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology (*e.g.,* permitting electronically delivered responses).

Comments should be sent to the Office of Information and Regulatory Affairs, Office of Management and Budget, Room 10235, New Executive Office Building, Washington, DC 20503 and marked ''Attention: Desk Officer for the Employee Benefits Security Administration.'' Comments can also be submitted by Fax: 202–395–5806 (this is not a toll-free number), or by email: *OIRA_submission@omb.eop.gov.* OMB requests that comments be received within 30 days of publication of the ICR to ensure their consideration.

PRA Addressee: Address requests for copies of the ICR to G. Christopher Cosby, Office of Policy and Research, U.S. Department of Labor, Employee Benefits Security Administration, 200 Constitution Avenue NW, Room N–5718, Washington, DC 20210. The PRA Addressee may be reached by telephone at (202) 693–8425 or by fax at (202) 219–5333. (These are not toll-free numbers.) ICRs also are available at *http://www.RegInfo.gov* (*http://www.reginfo.gov/public/do/PRAMain*).

The SECURE Act amends section 105(a) of ERISA to require the provision of two sets of lifetime income stream illustrations as part of at least one pension benefit statement furnished to participants during a 12-month period. These two lifetime income stream illustrations include a single life annuity illustration and a qualified joint and survivor lifetime income steam illustration. The IFR provides direction on assumptions plan administrators use when converting total accrued benefits into lifetime income stream illustrations. The IFR also provides model language to use when producing these illustrations.

ERISA section 105 requires pension benefit statements to be sent at least once each quarter, in the case of a defined contribution plan that permits participants to direct their investments; at least once each year, in the case of a defined contribution plan that does not permit participants to direct their investments; and at least once every three years or upon request in the case of defined benefit plans. ERISA section 105(a)(3)(A) permits plan administrators of defined benefit plans to fulfill the requirements of Section 105(a)(1)(B) by providing defined benefit plan participants with a notice of statement availability on an annual basis. The Department currently does not have an OMB approved information collection for the pension benefit statement requirement. Therefore, this PRA analysis establishes a baseline hour and cost burden for participant benefit statements that are issued by all plans covered by ERISA section 105. It then adds the hour and cost burden associated with the IFR, which adds content requirements to the pension benefit statements provided to defined contribution plan participants by requiring a lifetime income illustration to be included with the statement at least annually.

Baseline Cost of Preparing and Delivering Pension Benefit Statement. Based on discussions with the regulated community, the Department believes the all-inclusive cost to produce pension benefit statements for defined contribution plan participants is approximately $1.50 per paper ($0.70 per electronic) statement,[103] while the all-inclusive cost to produce pension benefit statements for defined benefit plan participants is approximately $15.00 per paper ($14.40 per electronic) statement.[104] The Department believes that plan administrators of frozen defined benefit plans will provide the notice of statement availability, as described in section 105(a)(3)(A), to frozen defined benefit plan participants in lieu of a pension benefit statement, at an all-inclusive cost of approximately $0.75 per paper ($0.15 per electronic) notice.[105]

According to 2017 Form 5500 data, defined contribution plans that allow participants to direct investments cover 94.6 million participants. These plans must provide *quarterly* statements to participants. Plans produce the quarterly statement at an estimated cost of $1.50 ($0.70) per paper (electronic) statement and a resultant cost burden of $289.5 million in the first year, $287.1 million in the second year, and $285 million in the third year. Defined contribution plans that do not allow

[102] 44 U.S.C. 3506(c)(2)(A) (1995).

[103] A paper statement for a defined contribution plan participant typically has five pages with printing cost of $0.05 per page. An electronic statement cost of $0.70 is calculated by subtracting printing cost of $0.25 and postage cost of $0.55 from the paper statement cost of $1.50.

[104] A paper statement for a defined benefit plan participant typically has one page with printing cost of $0.05 per page. An electronic statement cost of $14.40 is calculated by subtracting printing cost of $0.05 and postage cost of $0.55 from the paper statement cost of $15.

[105] A paper notice for a frozen defined benefit plan participant typically has one page with printing cost of $0.05 per page. An electronic notice cost of $0.15 is calculated by subtracting printing cost of $0.05 and postage cost of $0.55 from the paper notice cost of $0.75.

participants to direct investments cover 7.9 million participants. These plans are required to furnish *annual* statements.[106] Plans produce the annual statement at an estimated cost of $1.50 ($0.70) per paper (electronic) statement and a cost burden of $6.0 million in the first year, $6.0 million in the second year, and $5.9 million in the third year. Defined benefit plans that are not frozen cover 28.1 million participants. These plans are only required to provide benefit statements every three years. Plans produce the statement at an estimated cost of $15.00 ($14.40) per paper (electronic) statement and a cost burden of $135.3 million each year. Frozen defined benefit plans cover 6.8 million participants and may furnish an annual notice of statement availability in lieu of a statement. At an estimated cost of $0.75 ($0.15) per paper (electronic) notice, this results in a cost burden of $0.5 million in the first year, $0.4 million in the second year, and $0.4 million in the third year. As a baseline, under the current rules, the Department estimates that producing and distributing pension benefit statements costs plans a total of $431.4 million in the first year, $428.9 million in the second year, and $426.6 million in the third year.[107]

Lifetime Income Illustrations. For each of the 76.8 million defined contribution plan participants with account balances whose statements will include a lifetime income illustration, the Department estimates that the IFR will increase the cost of producing and distributing statements by $2.6 per participant in the first year, $0.09 in the second year, and $0.06 in the third year.[108] This results in a cost of $201 million in the first year, $6.6 million in the second year, and $4.8 million in the third year.

In total, the Department estimates that producing pension benefit statements and providing lifetime income illustrations for participants with account balances in defined contribution plans will cost altogether approximately $632 million in the first year, $435.5 million in the second year, and $431.4 million in the third year.[109]

A summary of paperwork burden estimates follows:

Title: Pension Benefit Statement.

OMB Control Number: 1210–NEW.

Affected Public: Private Sector-business or other for-profit and not-for-profit institutions.

Respondents: 709,527.

Responses: 397,933,333 annually.

Frequency of Response: Quarterly, Annually, Triennially.

Estimated Total Annual Burden Hours: 19,253 (3-year average); 31,986 during the first year; 12,886 during the second year; 12,886 during the third year.

Estimated Total Annual Burden Cost: $497,108,843 (3-year average); $627,847,556 during the first year; $433,770,504 during the second year; and $429,708,470 during the third year.

(9) Regulatory Flexibility Act

The Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) (RFA) imposes certain requirements with respect to Federal rules that are (1) required to be published as a notice of proposed rulemaking subject to the notice and comment requirements of the Administrative Procedure Act (5 U.S.C. 553(b)) and (2) likely to have a significant economic impact on a substantial number of small entities. As stated above, section 203 of the SECURE Act added ERISA section 105(a)(2)(D)(iii) which includes a mandatory directive requiring the Secretary to issue an interim final rule (IFR) within 12 months of the date of enactment.

This IFR is exempt from the RFA, because the Department was not required to publish a notice of proposed rulemaking. Therefore, the RFA does not apply and the Department is not required to either certify that the IFR would not have a significant economic impact on a substantial number of small entities or conduct a regulatory flexibility analysis. Nevertheless, the Department carefully considered the likely impact of the IFR rule on small entities in connection with its assessment of the IFR's cost and benefits under Executive Order 12866. Consistent with the policy of the RFA, the Department encourages the public to submit comments regarding the IFR's impact on small entities.

(10) Unfunded Mandates Reform Act

Title II of the Unfunded Mandates Reform Act of 1995 (UMRA) requires each federal agency to prepare a written statement assessing the effects of any federal mandate in a proposed agency rule, or a finalization of such a proposal, that may result in an expenditure of $100 million or more (adjusted annually for inflation with the base year 1995) in any one year by State, local, and tribal governments, in the aggregate, or by the private sector.[110] However, Section 202 of UMRA does not apply to interim final rules or non-notice rules issued under the 'good cause' exemption in 5 U.S.C. 553(b)(B).[111] For purposes of the Unfunded Mandates Reform Act, this rule does not include any federal mandate that the Department expects to result in such expenditures by State, local, or tribal governments. This IFR provides guidance for ERISA-covered defined contribution pension plans on providing lifetime income illustrations.

(11) Federalism Statement

Executive Order 13132 outlines fundamental principles of federalism, and requires the adherence to specific criteria by federal agencies in the process of their formulation and implementation of policies that have ''substantial direct effects'' on the States, the relationship between the national government and States, or on the distribution of power and responsibilities among the various levels of government.[112] Federal agencies promulgating regulations that have federalism implications must consult with State and local officials and describe the extent of their consultation and the nature of the concerns of State and local officials in the preamble to the final rule.

In the Department's view, these regulations will not have federalism implications because they will not have

[106] Section 105(a)(3)(A) of ERISA permits all DB plans, whether or not frozen, to provide an annual notice of availability of the pension benefit statement in lieu of a triennial statement. For purposes of this analysis, the Department assumes that all DB plans furnish the triennial statement. The Department welcomes comments regarding this assumption. The analysis does not take into account the requirement in Section 105(b) of ERISA to provide a benefit statement upon request subject to a limitation of one request every 12 months.

[107] The $431.4 million estimate is the sum of the four estimated costs incurred by defined contribution plans allowing and not allowing participants to direct investments and frozen and non-frozen defined benefit plans. The $428.9 and $426.6 million estimates are calculated by the same method.

[108] The estimate of $2.6 is calculated by dividing the first-year total costs of producing lifetime income illustrations (shown in Table 2) by the number of defined contribution participants with account balances (76.8 million). The estimates of $0.09 and $0.06 are calculated by the same method, but the numerator is the second- and third-year total costs of producing lifetime income illustrations, respectively.

[109] The estimate of $632 million is the sum of the first-year total costs of producing lifetime income illustrations and the baseline cost of preparing and delivering pension benefit statement ($431.4 million). The estimates of $435.5 million and $431.4 million are calculated by the same method, but the first-year total costs of producing lifetime income illustrations are replaced by the second- and third-year total costs, respectively.

[110] 2 U.S.C. 1501 *et seq.* (1995).

[111] *See* OMB, Memorandum for the Heads of Executive Departments and Agencies, M–95–09, ''Guidance for Implementing Title II of S.1,'' 1995, available at *https://www.whitehouse.gov/sites/whitehouse.gov/files/omb/memoranda/1995-1998/m95-09.pdf.*

[112] 64 FR 43255 (Aug. 4, 1999).

direct effects on the States, on the relationship between the national government and the States, nor on the distribution of power and responsibilities among various levels of government. Section 514 of ERISA provides, with certain exceptions specifically enumerated, that the provisions of Titles I and IV of ERISA supersede any and all laws of the States as they relate to any employee benefit plan covered under ERISA. The requirements implemented in these rules do not alter the fundamental provisions of the statute with respect to employee benefit plans, and as such will have no implications for the States or the relationship or distribution of power between the national government and the States.

The Department welcomes input from affected States regarding this assessment.

List of Subjects in 29 CFR Part 2520

Annuity, Defined contribution plans, Disclosure, Employee benefit plans, Employee Retirement Income Security Act, Fiduciaries, Lifetime income, Pensions, Pension benefit statements, Plan administrators, Recordkeepers, Third party administrators.

For the reasons set forth in the preamble, the Department of Labor is amending 29 CFR part 2520 as follows:

PART 2520—RULES AND REGULATIONS FOR REPORTING AND DISCLOSURE

■ 1. The authority citation for part 2520 continues to read as follows:

Authority: 29 U.S.C. 1021–1025, 1027, 1029–31, 1059, 1134 and 1135; and Secretary of Labor's Order 1–2011, 77 FR 1088 (Jan. 9, 2012). Sec. 2520.101–2 also issued under 29 U.S.C. 1132, 1181–1183, 1181 note, 1185, 1185a–b, 1191, and 1191a–c. Secs. 2520.102–3, 2520.104b–1 and 2520.104b–3 also issued under 29 U.S.C. 1003, 1181–1183, 1181 note, 1185, 1185a–b, 1191, and 1191a–c. Secs. 2520.104b–1 and 2520.107 also issued under 26 U.S.C. 401 note, 111 Stat. 788. Sec. 2520.101–5 also issued under sec. 501 of Pub. L. 109–280, 120 Stat. 780, and sec. 105(a), Pub. L. 110–458, 122 Stat. 5092.

§§ 2520.105–1 and 2520.105–2 [Reserved]

■ 2. Add and reserve §§ 2520.105–1 and 2520.105–2 to subpart F.

■ 3. Add § 2520.105–3 to subpart F to read as follows:

§ 2520.105–3 Lifetime Income Disclosure for Individual Account Plans.

(a) *Content requirements.* At least annually, the administrator of an individual account plan must furnish a benefit statement pursuant to section 105(a) of the Employee Retirement Income Security Act of 1974 (Act) that is written in a manner calculated to be understood by the average plan participant and that contains the information required by this section, based on the latest information available to the plan.

(b) *Total benefits accrued; lifetime income disclosure.* A benefit statement described in paragraph (a) of this section must include:

(1) The beginning and ending dates of the statement period;

(2) The value of the account balance as of the last day of the statement period, excluding the value of any deferred income annuity described in paragraph (e)(2) of this section;

(3) The amount specified in paragraph (b)(2) of this section expressed as an equivalent lifetime income stream payable in equal monthly payments for the life of the participant (single life annuity), determined in accordance with paragraph (c) or (e)(1) of this section; and

(4) The amount specified in paragraph (b)(2) of this section expressed as an equivalent lifetime income stream payable in equal monthly payments for the joint lives of the participant and spouse (qualified joint and survivor annuity), determined in accordance with paragraph (c) or (e)(1) of this section.

(c) *Assumptions for converting an account balance into lifetime income streams.* The account balance specified in paragraph (b)(2) of this section shall be converted to the lifetime income streams described in paragraphs (b)(3) and (4) of this section using the following assumptions:

(1) *Commencement date and age.* (i) The first payment is made on the last day of the statement period (the commencement date); and

(ii) The participant is age 67 on the commencement date, unless the participant is older than age 67, in which case the participant's actual age must be used for the conversions under this section.

(2) *Marital status.* For purposes of paragraph (b)(4) of this section (relating to qualified joint and survivor annuity illustrations):

(i) The participant has a spouse that is the same age as the participant; and

(ii) The survivor annuity percentage is equal to 100% of the monthly payment that is payable during the joint lives of the participant and spouse.

(3) *Interest rate and mortality.* (i) A rate of interest equal to the 10-year constant maturity Treasury securities yield rate for the first business day of the last month of the period to which the benefit statement relates; and

(ii) Mortality as reflected in the applicable mortality table under section 417(e)(3)(B) of the Internal Revenue Code in effect for the calendar year which contains the last day of the statement period.

(4) *Plan loans.* The account balance includes the outstanding balance of any participant loan, unless the participant is in default of repayment on such loan.

(d) *Explanation of lifetime income streams.* Except as provided in paragraph (e) of this section, a benefit statement described in paragraph (a) of this section must include:

(1)(i) An explanation of the commencement date and age assumptions in paragraph (c)(1) of this section.

(ii) For purposes of paragraph (d)(1)(i) of this section, the plan administrator may use the following model language: ''The estimated monthly payments in this statement assume that payments begin [*insert the last day of the statement period*] and that you are [*insert 67 or current age if older*] on this date. Monthly payments beginning at a younger age would be lower than shown since payments would be made over more years. Monthly payments beginning at an older age would be higher than shown since they would be made over fewer years.''

(2)(i) An explanation of a single life annuity.

(ii) For purposes of paragraph (d)(2)(i) of this section, the plan administrator may use the following model language: ''A single life annuity is an arrangement that pays you a fixed amount of money each month for the rest of your life. Following your death, no further payments would be made to your spouse or heirs.''

(3)(i) An explanation of a qualified joint and 100% survivor annuity, the availability of other survivor percentage annuities, and the impact of choosing a lower survivor percentage.

(ii) For purposes of paragraph (d)(3)(i) of this section, the plan administrator may use the following model language: ''A qualified joint and 100% survivor annuity is an arrangement that pays you and your spouse a fixed monthly payment for the rest of your joint lives. In addition, after your death, this type of annuity would continue to provide the same fixed monthly payment to your surviving spouse for their life. An annuity with a lower survivor percentage may be available, and reducing the survivor percentage (below 100%) would increase monthly payments during your lifetime, but would decrease what your surviving spouse would receive after your death.''

(4)(i) An explanation of the marital status assumptions in paragraph (c)(2) of this section.

(ii) For purposes of paragraph (d)(4)(i) of this section, the plan administrator may use the following model language: ''The estimated monthly payments for a qualified joint and 100% survivor annuity in this statement assume that you are married with a spouse who is the same age as you (even if you do not currently have a spouse, or if you have a spouse who is a different age). If your spouse is younger, monthly payments would be lower than shown since they would be expected to be paid over more years. If your spouse is older, monthly payments would be higher than shown since they would be expected to be paid over fewer years.''

(5)(i) An explanation of the interest rate assumptions in paragraph (c)(3) of this section.

(ii) For purposes of paragraph (d)(5)(i) of this section, the plan administrator may use the following model language: ''The estimated monthly payments in this statement are based on an interest rate of [*insert rate*], which is the 10-year constant maturity U.S. Treasury securities yield rate as of [*insert date*], as required by federal regulations. This rate fluctuates based on market conditions. The lower the interest rate, the smaller your monthly payment will be, and the higher the interest rate, the larger your monthly payment will be.''

(6)(i) An explanation of the mortality assumptions in paragraph (c)(3) of this section.

(ii) For purposes of paragraph (d)(6)(i) of this section, the plan administrator may use the following model language: ''The estimated monthly payments in this statement are based on how long you and a spouse who is assumed to be your age are expected to live. For this purpose, federal regulations require that your life expectancy be estimated using gender neutral mortality assumptions established by the Internal Revenue Service.''

(7)(i) An explanation that the monthly payment amounts required under paragraphs (b)(3) and (4) of this section are illustrations only.

(ii) For purposes of paragraph (d)(7)(i) of this section, the plan administrator may use the following model language: ''The estimated monthly payments in this statement are for illustrative purposes only; they are not a guarantee.''

(8)(i) An explanation that the actual monthly payments that may be purchased with the amount specified in paragraph (b)(2) of this section will depend on numerous factors and may vary substantially from the illustrations under this section.

(ii) For purposes of paragraph (d)(8)(i) of this section, the plan administrator may use the following model language: ''The estimated monthly payments in this statement are based on prevailing market conditions and other assumptions required under federal regulations. If you decide to purchase an annuity, the actual payments you receive will depend on a number of factors and may vary substantially from the estimated monthly payments in this statement. For example, your actual age at retirement, your actual account balance (reflecting future investment gains and losses, contributions, distributions, and fees), and the market conditions at the time of purchase will affect your actual payment amounts. The estimated monthly payments in this statement are the same whether you are male or female. This is required for annuities payable from an employer's plan. However, the same amount paid for an annuity available outside of an employer's plan may provide a larger monthly payment for males than for females since females are expected to live longer.''

(9)(i) An explanation that the monthly payment amounts required under paragraphs (b)(3) and (4) of this section are fixed amounts that would not increase for inflation.

(ii) For purposes of paragraph (d)(9)(i) of this section, the plan administrator may use the following model language: ''Unlike Social Security payments, the estimated monthly payments in this statement do not increase each year with a cost-of-living adjustment. Therefore, as prices increase over time, the fixed monthly payments will buy fewer goods and services.''

(10)(i) An explanation that the monthly payment amounts required under paragraphs (b)(3) and (4) of this section are based on total benefits accrued, regardless of whether such benefits are nonforfeitable.

(ii) For purposes of paragraph (d)(10)(i) of this section, the plan administrator may use the following model language: ''The estimated monthly payment amounts in this statement assume that your account balance is 100% vested.''

(11)(i) An explanation that the account balance includes the outstanding balance of any participant loan, unless the participant is in default of repayment on such loan.

(ii) For purposes of paragraph (d)(11)(i) of this section, the plan administrator may use the following model language: ''If you have taken a loan from the plan and are not in default on the loan, the estimated monthly payments in this statement assume that the loan has been fully repaid.''

(e) *Special rules for in-plan annuities.*—(1) *Plans that offer distribution annuities.* (i) If the plan offers single life and qualified joint and survivor annuities as distribution options pursuant to a contract with an issuer licensed under applicable state insurance law, the plan administrator may, but is not required to, use the contract terms to calculate the monthly payment amounts in paragraphs (b)(3) and (4) of this section instead of the assumptions in paragraph (c) of this section, except for the assumptions in paragraphs (c)(1) (relating to assumed commencement date and age) and (c)(2)(i) (relating to assumed marital status and age of spouse) of this section.

(ii) Plan administrators that elect to use the contract terms, as permitted in paragraph (e)(1)(i) of this section, must, in lieu of the explanations required in paragraph (d) of this section, provide the explanations set forth in paragraph (e)(1)(iii) of this section. To obtain the limitation on liability provided in paragraph (f) of this section, such plan administrators also must use either the model language for each such explanation in paragraph (e)(1)(iii) of this section or the Model Benefit Statement Supplement set forth in Appendix B to this subpart.

(iii) The benefit statement must include the following:

(A)(*1*) An explanation of the commencement date and age assumptions in paragraph (c)(1) of this section.

(*2*) For purposes of paragraph (e)(1)(iii)(A)(*1*) of this section, the plan administrator may use the following model language: ''The estimated monthly payments in this statement assume that payments begin [*insert the last day of statement period*] and that you are [*insert 67 or current age if older*] on this date. Monthly payments beginning at a younger age would be lower than shown since payments would be made over more years. Monthly payments beginning at an older age would be higher than shown since they would be made over fewer years.''

(B)(*1*) An explanation of a single life annuity.

(*2*) For purposes of paragraph (e)(1)(iii)(B)(*1*) of this section, the plan administrator may use the following model language: ''A single life annuity is an arrangement that pays you a specified amount of money each month for the rest of your life. Following your death, no further payments would be made to your spouse or heirs.''

(C)(*1*) An explanation of a qualified joint and survivor annuity and the survivor annuity percentage.

(*2*) For purposes of paragraph (e)(1)(iii)(C)(*1*) of this section, the plan administrator may use the following model language: ''A qualified joint and survivor annuity is an arrangement that pays you and your spouse a specified monthly payment for the rest of your joint lives. When one spouse dies, the monthly payments continue to the surviving spouse for their life. If you die first, your spouse will receive [*insert X %*] of the monthly payment payable during your life. If your spouse dies first, you will receive [*insert Y %*] of the monthly payment.''

(D)(*1*) An explanation of the marital status assumptions in paragraph (c)(2) of this section.

(*2*) For purposes of paragraph (e)(1)(iii)(D)(*1*) of this section, the plan administrator may use the following model language: ''The estimated monthly payments for a qualified joint and survivor annuity in this statement assume that you are married with a spouse who is the same age as you (even if you do not currently have a spouse, or if you have a spouse who is a different age). If your spouse is younger, monthly payments would be lower than shown since they would be expected to be paid over more years. If your spouse is older, monthly payments would be higher than shown since they would be expected to be paid over fewer years.''

(E)(*1*) An explanation of the contract's interest rate assumptions.

(*2*) For purposes of paragraph (e)(1)(iii)(E)(*1*) of this section, the plan administrator may use the following model language: ''The estimated monthly payments in this statement are based on an interest rate offered by [*insert name of insurer*] under a contract with the plan. This rate may fluctuate. The lower the interest rate, the smaller your monthly payments will be, and the higher the interest rate, the larger your monthly payments will be.''

(F)(*1*) An explanation of the contract's mortality assumptions.

(*2*) For purposes of paragraph (e)(1)(iii)(F)(*1*) of this section, the plan administrator may use the following model language: ''The estimated monthly payments in this statement are based on how long you and a spouse who is assumed to be your age are expected to live. Life expectancy is estimated by using mortality assumptions adopted by [*enter name of insurance company*].''

(G)(*1*) An explanation that the monthly payment amounts required under paragraphs (b)(3) and (4) of this section are illustrations only.

(*2*) For purposes of paragraph (e)(1)(iii)(G)(*1*) of this section, the plan administrator may use the following model language: ''The estimated monthly payments in this statement are for illustrative purposes only; they are not a guarantee.''

(H)(*1*) An explanation that the actual monthly payments that may be purchased with the amount specified in paragraph (b)(2) of this section will depend on numerous factors and may vary substantially from the illustrations under this section.

(*2*) For purposes of paragraph (e)(1)(iii)(H)(*1*) of this section, the plan administrator may use the following model language: ''The estimated monthly payments in this statement are based on prevailing market conditions and other assumptions. If you decide to purchase an annuity, the actual payments you receive will depend on a number of factors and may vary substantially from the estimated monthly payments in this statement. For example, your actual age at retirement, your actual account balance (reflecting future investment gains and losses, contributions, distributions, and fees), and the market conditions at the time of purchase will affect your actual payment amounts. The estimated monthly payments in this statement are the same whether you are male or female. This is required for annuities payable from an employer's plan. However, the same amount paid for an annuity available outside of an employer's plan may provide a larger monthly payment for males than for females since females are expected to live longer.''

(I)(*1*) An explanation as to whether the monthly payment amounts required under paragraphs (b)(3) and (4) of this section are fixed or may change over time, and how adjustments, if any, are determined.

(*2*) For purposes of paragraph (e)(1)(iii)(H)(*1*) of this section, the plan administrator may use the following model language, as applicable: ''Unlike Social Security payments, the estimated monthly payment amounts in this statement do not increase each year with a cost-of-living adjustment. Therefore, as prices increase over time, the fixed monthly payments will buy fewer goods and services.''; OR ''The amounts shown in this statement will increase over time based on [*insert general explanation of how any adjustment is determined, e.g., to reflect inflation, a cost-of-living adjustment, etc.*]''

(J)(*1*) An explanation that the monthly payment amounts required under paragraphs (b)(3) and (4) of this section are based on total benefits accrued, regardless of whether such benefits are nonforfeitable.

(*2*) For purposes of paragraph (e)(1)(iii)(J)(*1*) of this section, the plan administrator may use the following model language: ''The estimated monthly payment amounts in this statement assume that your account balance is 100% vested.''

(K)(*1*) An explanation that the account balance includes the outstanding balance of any participant loan, unless the participant is in default of repayment on such loan.

(*2*) For purposes of paragraph (e)(1)(iii)(K)(*1*) of this section, the plan administrator may use the following model language: ''If you have taken a loan from the plan and are not in default on the loan, the estimated monthly payments in this statement assume that the loan is fully repaid.''

(2) *Participants that purchased deferred annuities.* (i) If any portion of a participant's accrued benefit currently includes a deferred lifetime income stream purchased by the participant in the form of a single life annuity or a qualified joint and survivor annuity pursuant to a contract with an issuer licensed under applicable state insurance law, such as a deferred income annuity contract or a qualifying longevity annuity contract, the amounts payable under this contract with respect to this portion shall be disclosed on the participant's benefit statement in accordance with paragraph (e)(2)(ii) of this section, instead of in accordance with paragraphs (c) and (d) of this section.

(ii) With respect to the portion of a participant's accrued benefit described in paragraph (e)(2)(i) of this section, the following information must be disclosed about such lifetime income payments:

(A) The date payments are scheduled to commence and the age of the participant on such date;

(B) The frequency and the amount of such payments payable as of the commencement date in paragraph (e)(2)(ii)(A) of this section, as determined under the terms of the contract, expressed in current dollars;

(C) A description of any survivor benefit, period certain commitment, or similar feature; and

(D) A statement whether such payments are fixed, adjust with inflation during retirement, or adjust in some other way, and a general explanation of how any such adjustment is determined.

(iii) The portion of the participant's accrued benefit that was not used to purchase a deferred lifetime income stream described in paragraph (e)(2)(i) of this section, however, must be

converted to the lifetime income stream equivalents in accordance with paragraphs (c) and (d), or paragraph (e)(1), of this section.

(f) *Limitation on liability.* No plan fiduciary, plan sponsor, or other person shall have any liability under Title I of the Act solely by reason of providing the lifetime income stream equivalents described in paragraphs (b)(3) and (4) of this section, provided that:

(1) Such equivalents are derived in accordance with the assumptions in paragraph (c) or (e)(1)(i) of this section; and

(2) The benefit statement includes language substantially similar in all material respects to:

(i) Either the model language in paragraphs (d)(1)(ii) through (d)(11)(ii) of this section or the Model Benefit Statement Supplement set forth in Appendix A to this subpart; or,

(ii) If applicable, either the model language in paragraphs (e)(1)(iii)(A)(*2*) through (e)(1)(iii)(K)(*2*) of this section or the Model Benefit Statement Supplement set forth in Appendix B to this subpart.

(g) *Additional lifetime income illustrations.* Nothing in this section precludes a plan administrator from including lifetime income stream illustrations on the benefit statement in addition to the illustrations described in paragraphs (b)(3) and (4) of this section, as long as such additional illustrations are clearly explained, presented in a manner that is designed to avoid confusing or misleading participants, and based on reasonable assumptions.

(h) *Definitions.* For purposes of this section:

Participant. The term *participant* includes an individual beneficiary who has his or her own individual account under the plan, such as an alternate payee for example.

(i) *Dates.* This section shall be effective on the date that is one year after the date of publication of the interim final rule, and shall be applicable to pension benefit statements furnished after such date.

■ 4. Add appendices A and B to Subpart F to read as follows.

APPENDIX A to SUBPART F – Model Benefit Statement Supplement

Statement Period: [*Insert beginning and ending dates*]

This statement provides you with information about how much monthly income you could collect at retirement based on your current account balance. The estimated monthly payments in this statement are for illustrative purposes only; they are not a guarantee. Having this information now may help you plan how much money to save for your retirement.

Your account balance is [*insert statement balance*] as of [*insert last day of statement period*]. Below are estimates of how much money you could receive each month if you were to receive payments in one of the following two payment forms:

1. A single life annuity is an arrangement that pays you a fixed amount of money each month for the rest of your life. Following your death, no further payments would be made to your spouse or heirs.

   If you receive payments in this form, we estimate you would receive [*insert single life annuity amount*] per month starting at retirement.

2. A qualified joint and 100% survivor annuity is an arrangement that pays you and your spouse a fixed monthly payment for the rest of your joint lives. In addition, after your death, this type of annuity would continue to provide the same fixed monthly payment to your surviving spouse for their life.

   If you receive payments in this form, we estimate you would receive [*insert qualified joint and 100% survivor amount*] per month starting at retirement and, after your death, your surviving spouse would receive [*insert qualified joint and 100% survivor amount*] per month.

   An annuity with a lower survivor percentage may be available, and reducing the survivor percentage (below 100%) would increase monthly payments during your lifetime, but would decrease what your surviving spouse would receive after your death.

The following information is to help you understand these estimated monthly payments.

- The estimated monthly payments in this statement assume that your account balance is 100% vested and, if you have taken a loan from the plan and you are not in default, the loan has been fully repaid.

- The estimated monthly payments in this statement assume that payments begin [*insert the last day of statement period*] and that you are [*insert 67 or current age if older*] on this date. Monthly payments beginning at a younger age would be lower than shown since payments would be made over more years. Monthly payments beginning at an older age would be higher than shown since they would be made over fewer years.

- The estimated monthly payments for a qualified joint and 100% survivor annuity in this statement assume that you are married with a spouse who is the same age as you (even if you do not currently have a spouse, or if you have a spouse who is a different age). If your spouse is younger, monthly payments would be lower than shown since they would be expected to be paid over more years. If your spouse is older, monthly payments would be higher than shown since they would be expected to be paid over fewer years.

- The estimated monthly payments in this statement are based on an interest rate of [*insert rate*], which is the 10-year constant maturity U.S. Treasury securities yield rate as of [*insert date*], as required by federal regulations. This rate fluctuates based on market conditions. The lower the interest rate, the smaller your monthly payment will be, and the higher the interest rate, the larger your monthly payment will be.

- The estimated monthly payments in this statement are based on how long you and a spouse, who is assumed to be your age, are expected to live. For this purpose, federal regulations require that your life expectancy be estimated using gender neutral mortality assumptions established by the Internal Revenue Service.

- The estimated monthly payments in this statement are the same whether you are male or female. This is required for annuities payable from an employer's plan. However, the same amount paid for an annuity available outside of an employer's plan may provide a larger monthly payment for males than for females since females are expected to live longer.

- The estimated monthly payments in this statement are based on prevailing market conditions and other assumptions required under federal regulations. If you decide to purchase an annuity, the actual payments you receive will depend on a number of factors and may vary substantially from the estimated monthly payments in this statement. For example, your actual age at retirement, your actual account balance (reflecting future investment gains and losses, contributions, distributions, and fees), and the market conditions at the time of purchase will affect your actual payment amounts.

- Unlike Social Security payments, the estimated monthly payments in this statement do not increase each year with a cost-of-living adjustment. Therefore, as prices increase over time, the fixed monthly payments will buy fewer goods and services.

APPENDIX B to SUBPART F – Model Benefit Statement Supplement – Plans That Offer Distribution Annuities

Statement Period: [*Insert beginning and ending dates*]

This statement provides you with information about how much monthly income you could collect at retirement based on your current account balance. The estimated monthly payments in this statement are for illustrative purposes only; they are not a guarantee. Having this information now may help you plan how much money to save for your retirement.

Your account balance is [*insert statement balance*] as of [*insert last day of the statement period*]. Below are estimates of how much money you could receive each month if you were to receive payments in one of the following two payment forms:

1. A single life annuity is an arrangement that pays you a specified amount of money each month for the rest of your life. Following your death, no further payments would be made to your spouse or heirs.

   If you receive payments in this form, we estimate you would receive [*insert single life annuity amount*] per month starting at retirement.

2. A qualified joint and survivor annuity is an arrangement that pays you and your spouse a specified monthly payment for the rest of your joint lives. When one spouse dies, monthly payments continue to the surviving spouse for their life.

   If you receive payments in this form, we estimate you would receive [*insert monthly payment amount*] per month starting at retirement. If you die first, your spouse will receive [*insert X %*] of the monthly payment payable during your life. If your spouse dies first, you will receive [*insert Y %*] of the monthly payment.

The following information is to help you understand these estimated monthly payments.

- The estimated monthly payments in this statement assume that your account balance is 100% vested and that, if you have taken a loan from the plan and you are not in default, the loan has been fully repaid.

- The estimated monthly payments in this statement assume that payments begin [*insert the last day of statement period*] and that you are [*insert 67 or current age if older*] on this date. Monthly payments beginning at a younger age would be lower than shown since payments would be made over more years. Monthly payments beginning at an older age would be higher than shown since they would be made over fewer years.

The estimated monthly payments for a qualified joint and survivor annuity in this statement assume that you are married with a spouse who is the same age as you (even if you do not currently have a spouse, or if you have a spouse who is a different age). If your spouse is

younger, monthly payments would be lower than shown since they would be expected to be paid over more years. If your spouse is older, monthly payments would be higher than shown since they would be expected over fewer years.

- The estimated monthly payments in this statement are based on an interest rate offered by [*insert name of insurer*] under a contract with the plan. This rate may fluctuate. The lower the interest rate, the smaller your monthly payments will be, and the higher the interest rate, the larger your monthly payments will be.

- The estimated monthly payments in this statement are based on how long you and a spouse who is assumed to be your age are expected to live. Life expectancy is estimated by using mortality assumptions adopted by [*enter name of insurance company*].

- The estimated monthly payments in this statement are based on prevailing market conditions and other assumptions. If you decide to purchase an annuity, the actual payments you receive will depend on a number factors and may vary substantially from the estimated monthly payments in this statement. For example, your actual age at retirement, your actual account balance (reflecting future investment gains and losses, contributions, distributions, and fees), and the market conditions at the time of purchase will affect your actual payment amounts. The estimated monthly payments in this statement are the same whether you are male or female. This is required for annuities payable from an employer's plan. However, the same amount paid for an annuity available outside of an employer's plan may provide a larger monthly payment for males than for females since females are expected to live longer.

- [Unlike Social Security payments, the estimated monthly payment amounts in this statement do not increase each year with a cost-of-living adjustment. Therefore, as prices increase over time, the fixed monthly payments will buy fewer goods and services] OR [The amounts shown in this statement will increase over time based on [*insert general explanation of how any adjustment is determined, e.g., to reflect inflation, a cost-of-living adjustment, etc.*]]

Signed at Washington, DC, this 5th day of August 2020.

Jeanne Klinefelter Wilson,

Acting Assistant Secretary, Employee Benefits Security Administration, Department of Labor.

Title 3—

The President

Proclamation 10071 of September 9, 2020

Revision to United States Marine Scientific Research Policy

By the President of the United States of America

A Proclamation

The United Nations Convention on the Law of the Sea of 10 December 1982 (Convention) generally reflects customary international law. Section 3 of Part XIII of the Convention provides that coastal states, in the exercise of their jurisdiction, have the right to regulate, authorize, and conduct marine scientific research in their Exclusive Economic Zone (EEZ) and on their continental shelf. Marine scientific research in the EEZ or on the continental shelf shall be conducted with the consent of the coastal state.

In Proclamation 5030 of March 10, 1983 (Exclusive Economic Zone of the United States of America), the President announced the establishment of the EEZ of the United States. The Proclamation asserts the sovereign rights and jurisdiction of the United States in its EEZ and confirms the rights and freedoms of all states, as provided under international law. In an accompanying Presidential Statement of March 10, 1983 (United States Oceans Policy), the President acknowledged that international law allows coastal states to exercise jurisdiction over marine scientific research in their respective EEZs, but stated that the United States had elected not to do so to the fullest extent permitted under international law, in an effort to encourage such research. Presidential Decision Directive–36 of April 5, 1995 (United States Policy on Protecting the Ocean Environment), emphasizes that the policy of the United States is to protect and monitor the ocean and coastal environment and conserve living marine resources, recognizing that doing so, in an open and collaborative manner, supports our economic and national security interests.

In Executive Order 13840 of June 19, 2018 (Ocean Policy to Advance the Economic, Security, and Environmental Interests of the United States), I reaffirmed that the United States will continue to promote lawful use of the ocean by agencies, including the Armed Forces, and that the United States will continue to exercise its rights and jurisdiction and perform duties in accordance with applicable international law, including customary international law. Further, the United States will use the best available ocean-related science and knowledge, in partnership with the science and technology communities, to inform decisions and enhance entrepreneurial opportunities. In the Presidential Memorandum of November 19, 2019 (Ocean Mapping of the United States Exclusive Economic Zone and the Shoreline and Nearshore of Alaska), I affirmed the importance of understanding our ocean systems and natural resources to our security, economic, and environmental interests.

Likewise, the exercise of jurisdiction by the United States over marine scientific research in its EEZ and on its continental shelf will result in greater access to data collected during such research and will increase maritime domain awareness, thereby reducing potential exposure to security, economic, and environmental risks.

NOW, THEREFORE, I, DONALD J. TRUMP, President of the United States of America, by virtue of the authority vested in me by the Constitution and the laws of the United States, do hereby proclaim the following:

Section 1. *Policy.* The United States will exercise its right to regulate, authorize, and conduct marine scientific research, with a specific requirement to authorize, in advance, all instances of foreign marine scientific research, in the United States EEZ and on its continental shelf to the extent permitted under international law.

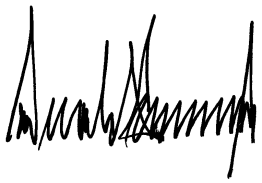
Sec. 2. *Implementation.* The Secretary of State (Secretary) shall have lead responsibility for implementing this proclamation, in consultation with relevant executive departments and agencies (agencies) and with the Ocean Policy Committee established in Executive Order 13840 (Ocean Policy Committee).

Sec. 3. *Intelligence.* The Intelligence Community of the Federal Government shall support the implementation of this proclamation, as appropriate.

Sec. 4. *Information Sharing.* To facilitate the process for reviewing applications for marine scientific research, agencies not part of the Intelligence Community shall share information related to marine scientific research with the Department of State, to the maximum extent authorized by law.

Sec. 5. *Termination.* This proclamation shall remain in effect until terminated by the President. At any time, but not less frequently than every 2 years from the date of this proclamation, the Secretary may recommend that the President modify or terminate this proclamation. Any such recommendation by the Secretary shall be coordinated with the National Security Council staff and the Ocean Policy Committee.

Sec. 6. *General Provisions.* (a) Nothing in this proclamation shall be construed to impair or otherwise affect:



(i) the authority granted by law to an executive department or agency, or the head thereof; or

(ii) the functions of the Director of the Office of Management and Budget relating to budgetary, administrative, or legislative proposals.

(b) This proclamation shall be implemented consistent with applicable law and subject to the availability of appropriations.

(c) This proclamation is not intended to, and does not, create any right or benefit, substantive or procedural, enforceable at law or in equity by any party against the United States, its departments, agencies, or entities, its officers, employees, or agents, or any other person.

IN WITNESS WHEREOF, I have hereunto set my hand this ninth day of September, in the year of our Lord two thousand twenty, and of the Independence of the United States of America the two hundred and forty-fifth.

Proclamation 10072 of September 10, 2020

Patriot Day, 2020

By the President of the United States of America

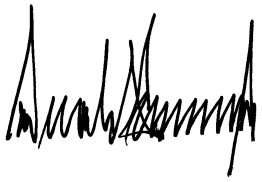
A Proclamation

In 2001, our Nation, united under God, made an unbreakable promise never to forget the nearly 3,000 innocent Americans who were senselessly killed on September 11. On this sacred day—Patriot Day—we solemnly honor that commitment. As the bells toll, we call by name those who perished in the terrorist attacks in New York, New York; Arlington, Virginia; and Shanksville, Pennsylvania. In cities and towns across our great country, we stand in solidarity to remember the victims and mourn their stolen hopes and dreams.

On a day that began as ordinary as any other, terrorists carrying out a sadistic plan murdered thousands of our fellow compatriots. With shock and disbelief, we watched our first responders, encumbered by heavy equipment and hindered by debris and smoke, rush with conviction and courage into the void to rescue those in despair. With pride and sorrow, we felt the tremendous bravery of those aboard Flight 93, who summoned the courage to charge the terrorists in a counterattack that saved countless American lives. As the day closed, America steadied its resolve to hold accountable those who had attacked us and to ensure it would never happen again.

The courage, heroism, and resilience Americans displayed on 9/11, and in its aftermath, are perpetual testaments to the spirit of our country. While our Nation was anguished by this attack, the grit displayed that day—the very essence of America—was a reminder that our citizens have never failed to rise to the occasion. Heroes sprang into action in the face of great peril to help save their fellow Americans. Many laid down their lives. As we reflect on the events of that September morning, let us recommit to embrace the stalwart bravery displayed and reaffirm our dedication to defending liberty from all who wish to deny it.

To fulfill our collective promise never to forget, we impart the memory of that fateful day to our children and grandchildren. The smoke that rose from the Twin Towers, the Pentagon, and the Pennsylvania field carried away the souls of innocent Americans. As we recall the images of our American Flag raised from the ashes of Ground Zero and the Pentagon, we are reminded that good triumphs over evil. We recommit ourselves to fortifying our cherished American values so that future generations will know in their souls that the United States is the land of the free and the home of the brave.



This Patriot Day, we commemorate the lives of those who perished on September 11, 2001, we pray for the families who carry on their legacies, and we honor the unmatched bravery of our Nation's first responders. We also commend those who, in the days and years following the attack, answered the call to serve our country and continue to risk their lives in defense of the matchless blessings of freedom.

By a joint resolution approved December 18, 2001 (Public Law 107–89), the Congress designated September 11 of each year as ''Patriot Day.''

NOW, THEREFORE, I, DONALD J. TRUMP, President of the United States of America, do hereby proclaim September 11, 2020, as Patriot Day. I call

upon all departments, agencies, and instrumentalities of the United States to display the flag of the United States at half-staff on Patriot Day in honor of the innocent people who lost their lives on September 11, 2001. I invite the Governors of the United States and its Territories and interested organizations and individuals to join in this observance. I call upon the people of the United States to participate in community service in honor of the innocent people we lost that day and to observe a moment of silence beginning at 8:46 a.m. Eastern Daylight Time to honor those victims who perished as a result of the terrorist attacks of September 11, 2001.

IN WITNESS WHEREOF, I have hereunto set my hand this tenth day of September, in the year of our Lord two thousand twenty, and of the Independence of the United States of America the two hundred and forty-fifth.

No. 182 September 18, 2020

Part VI

The President

Executive Order 13947—Lowering Drug Prices by Putting America First

Federal Register
Vol. 85, No. 182
Friday, September 18, 2020

Presidential Documents

Title 3—

The President

Executive Order 13947 of July 24, 2020

Lowering Drug Prices by Putting America First

By the authority vested in me as President by the Constitution and the laws of the United States of America, it is hereby ordered as follows:

Section 1. *Purpose.* Americans pay more per capita for prescription drugs than residents of any other developed country in the world. It is unacceptable that Americans pay more for the exact same drugs, often made in the exact same places. Other countries' governments regulate drug prices by negotiating with drug manufacturers to secure bargain prices, leaving Americans to make up the difference—effectively subsidizing innovation and lower-cost drugs for the rest of the world. The Council of Economic Advisers has found that Americans finance much of the biopharmaceutical innovation that the world depends on, allowing foreign governments, many of which are the sole healthcare payers in their respective countries, to enjoy bargain prices for such innovations. Americans should not bear extra burdens to compensate for the shortfalls that result from the nationalized public healthcare systems of wealthy countries abroad.

In addition to being unfair, high drug prices in the United States also have serious economic and health consequences for patients in need of treatment. High prices cause Americans to divert too much of their scarce resources to pharmaceutical treatments and away from other productive uses. High prices are also a reason many patients skip doses of their medications, take less than the recommended doses, or abandon treatment altogether. The consequences of these behaviors can be severe. For example, patients may develop acute conditions that result in poor clinical outcomes or that require drastic and expensive medical interventions.

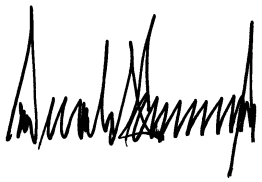
In most markets, the largest buyers pay the lowest prices, but this has not been true for prescription drugs. The Federal Government is the largest payer for prescription drugs in the world, but it pays more than many smaller buyers, including other developed nations. When the Federal Government purchases a drug covered by Medicare Part B—the cost of which is shared by American seniors who take the drug and American taxpayers—it should insist on, at a minimum, the lowest price at which the manufacturer sells that drug to any other developed nation.

The need for affordable Medicare Part B drugs is particularly acute now, in the midst of the COVID–19 pandemic, which has led to historic levels of unemployment in the United States, including the loss of 1.2 million jobs among Americans age 65 or older between March and April of 2020. The COVID–19 pandemic has also led to an increase in food prices, straining budgets for many of America's seniors, particularly those who live on fixed incomes. The economic disruptions caused by the COVID–19 pandemic only increase the burdens placed on America's seniors and other Medicare Part B beneficiaries.

Sec. 2. *Policy.* (a) It is the policy of the United States that the Medicare program should not pay more for costly Part B prescription drugs or biological products than the most-favored-nation price.

(b) The ''most-favored-nation price'' shall mean the lowest price, after adjusting for volume and differences in national gross domestic product, for a pharmaceutical product that the drug manufacturer sells in a member country of the Organization for Economic Cooperation and Development that has a comparable per-capita gross domestic product.

Sec. 3. *Ensuring the Most-Favored-Nation Price in Medicare Part B.* To the extent consistent with law, the Secretary of Health and Human Services shall immediately take appropriate steps to implement his rulemaking plan to test a payment model pursuant to which Medicare would pay, for certain high-cost prescription drugs and biological products covered by Medicare Part B, no more than the most-favored-nation price. The model would test whether, for patients who require pharmaceutical treatment, paying no more than the most-favored-nation price would mitigate poor clinical outcomes and increased expenditures associated with high drug costs.



Sec. 4. *General Provisions.* (a) Nothing in this order shall be construed to impair or otherwise affect:

(i) the authority granted by law to an executive department or agency, or the head thereof; or

(ii) the functions of the Director of the Office of Management and Budget relating to budgetary, administrative, or legislative proposals.

(b) This order shall be implemented consistent with applicable law and subject to the availability of appropriations.

(c) This order is not intended to, and does not, create any right or benefit, substantive or procedural, enforceable at law or in equity by any party against the United States, its departments, agencies, or entities, its officers, employees, or agents, or any other person.

THE WHITE HOUSE,
July 24, 2020.

LIST OF PUBLIC LAWS

Note: No public bills which have become law were received by the Office of the Federal Register for inclusion in today's **List of Public Laws**.

Last List August 18, 2020

Public Laws Electronic Notification Service (PENS)

PENS is a free email notification service of newly enacted public laws. To subscribe, go to *https://listserv.gsa.gov/cgi-bin/wa.exe?SUBED1=PUBLAWS-L&A=1*

Note: This service is strictly for email notification of new laws. The text of laws is not available through this service. **PENS** cannot respond to specific inquiries sent to this address.
