Addressing Standards

SUPPLEMENTARY INFORMATION:

Background

Currently, DMM section 602.6.0, *ZIP Code Accuracy Standards*, provides that a ZIP Code may be used on a mail piece within 12 months after verified by the use of an approved method. Once a ZIP Code is used on a mailpiece, the same

address is considered to meet the standards for an additional 1 year.

DMM sections 602.7.0, *Carrier Route Accuracy Standard*, and 9.0, *Coding Accuracy Support System (CASS)*, provide that Address Matching and Coding Update standards require coding to be performed within 90 days before the mailing date for carrier route mailings and 180 days for all non-carrier route mailings using the most current USPS database. The current product release schedule allows for use of a database that is valid for 105 days and may be used for an additional 6 months beyond that timeframe. As such, an address added or modified in the database may not be updated on a mailing list for nearly 1 year after the change was made.

In 2012 the Postal Service implemented address management product fulfillment via an electronic product fulfillment method designed to provide subscription products to customers more efficiently. The database product updates are posted each month to a secure site where customers can log in to simply download the product files. A recent survey of licensed Address Management data products indicate that CASS and Multiline Accuracy Support System (MASS) Certified software and service providers are retrieving and using the monthly updates during the address matching and coding processes.

Proposal

The Postal Service is proposing a database product cycle that aligns with the release of other mailing products. This will provide consistency across all mailing products and the method by which the data files are available and distributed. This proposal would require the use of monthly updates for both carrier route and non-carrier route mailings and would reduce the risk of using data that is no longer current.

More frequent updates allow the customer and the Postal Service to take advantage of the most current information available for the 158.6 million addresses served by the USPS. It will maximize mailers' ability to obtain postage discounts and improve the ability to sort that mail to the proper carrier and in the proper sequence for delivery.

The proposed release schedule allows for an overlap in dates for product use and will allow mailers adequate time to transfer and install the new data files and test their systems. Mailers will be expected to update their systems with the latest data files as soon as practicable and should not wait until the "last permissible use" date.

The Postal Service is proposing to implement this change effective July 1, 2021. However, mailers may opt to use the new monthly update cycles for both carrier route and non-carrier route mailings immediately.

We believe this proposed revision will provide customers with a more efficient process and will reduce the risk of using address information that is not current.
