FEDERAL REGISTER

Vol. 85 Tuesday,

No. 189 September 29, 2020

Pages 60883–61568

OFFICE OF THE FEDERAL REGISTER

The **FEDERAL REGISTER** (ISSN 0097–6326) is published daily, Monday through Friday, except official holidays, by the Office of the Federal Register, National Archives and Records Administration, under the Federal Register Act (44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). The Superintendent of Documents, U.S. Government Publishing Office, is the exclusive distributor of the official edition. Periodicals postage is paid at Washington, DC.

The **FEDERAL REGISTER** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders, Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress, and other Federal agency documents of public interest.

Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless the issuing agency requests earlier filing. For a list of documents currently on file for public inspection, see *www.federalregister.gov.*

The seal of the National Archives and Records Administration authenticates the Federal Register as the official serial publication established under the Federal Register Act. Under 44 U.S.C. 1507, the contents of the **Federal Register** shall be judicially noticed.

The **Federal Register** is published in paper and on 24x microfiche. It is also available online at no charge at *www.govinfo.gov*, a service of the U.S. Government Publishing Office.

The online edition of the **Federal Register** is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions (44 U.S.C. 4101 and 1 CFR 5.10). It is updated by 6:00 a.m. each day the **Federal Register** is published and includes both text and graphics from Volume 1, 1 (March 14, 1936) forward. For more information, contact the GPO Customer Contact Center, U.S. Government Publishing Office. Phone 202-512-1800 or 866-512-1800 (toll free). E-mail, *gpocusthelp.com.*

The annual subscription price for the **Federal Register** paper edition is $860 plus postage, or $929, for a combined **Federal Register, Federal Register** Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the **Federal Register** including the **Federal Register** Index and LSA is $330, plus postage. Six month subscriptions are available for one-half the annual rate. The prevailing postal rates will be applied to orders according to the delivery method requested. The price of a single copy of the daily **Federal Register,** including postage, is based on the number of pages: $11 for an issue containing less than 200 pages; $22 for an issue containing 200 to 400 pages; and $33 for an issue containing more than 400 pages. Single issues of the microfiche edition may be purchased for $3 per copy, including postage. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard, American Express, or Discover. Mail to: U.S. Government Publishing Office—New Orders, P.O. Box 979050, St. Louis, MO 63197-9000; or call toll free 1-866-512-1800, DC area 202-512-1800; or go to the U.S. Government Online Bookstore site, see *bookstore.gpo.gov.*

There are no restrictions on the republication of material appearing in the **Federal Register.**

How To Cite This Publication: Use the volume number and the page number. Example: 85 FR 12345.

Postmaster: Send address changes to the Superintendent of Documents, Federal Register, U.S. Government Publishing Office, Washington, DC 20402, along with the entire mailing label from the last issue received.

Rules and Regulations

Federal Register
Vol. 85, No. 189
Tuesday, September 29, 2020

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. FAA–2020–0271; Product Identifier 2017–SW–017–AD; Amendment 39–21259; AD 2020–20–03]

RIN 2120–AA64

Airworthiness Directives; Airbus Helicopters

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: The FAA is adopting a new airworthiness directive (AD) for certain Airbus Helicopters Model AS350B2 helicopters. This AD requires performing a test of the main rotor RPM (NR) indicator, and depending on the results, altering the wiring. This AD was prompted by reports of some NR indicators displaying incorrect information. The actions of this AD are intended to address an unsafe condition on these products.

DATES: This AD is effective November 3, 2020.

The Director of the Federal Register approved the incorporation by reference of a certain document listed in this AD as of November 3, 2020.

ADDRESSES: For service information identified in this final rule, contact Airbus Helicopters, 2701 N Forum Drive, Grand Prairie, TX 75052; telephone 972–641–0000 or 800–232–0323; fax 972–641–3775; or at *https://www.airbus.com/helicopters/services/technical-support.html.* You may view the service information at the FAA, Office of the Regional Counsel, Southwest Region, 10101 Hillwood Pkwy., Room 6N–321, Fort Worth, TX 76177. It is also available on the internet at *https://www.regulations.gov* by searching for and locating Docket No. FAA–2020–0271.

Examining the AD Docket

You may examine the AD docket on the internet at *https://www.regulations.gov* by searching for and locating Docket No. FAA–2020–0271; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this AD, the European Aviation Safety Agency (now European Union Aviation Safety Agency) (EASA) AD, any service information that is incorporated by reference, any comments received, and other information. The address for Docket Operations is U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.

FOR FURTHER INFORMATION CONTACT: George Schwab, Aviation Safety Engineer, Safety Management Section, Rotorcraft Standards Branch, FAA, 10101 Hillwood Pkwy., Fort Worth, TX 76177; telephone 817–222–5110; email *george.schwab@faa.gov.*

SUPPLEMENTARY INFORMATION:

Discussion

The FAA issued a notice of proposed rulemaking (NPRM) to amend 14 CFR part 39 by adding an AD that would apply to Airbus Helicopters Model AS350B2 helicopters with a certain part-numbered NR sensor installed. The NPRM published in the **Federal Register** on March 23, 2020 (85 FR 16279). The NPRM proposed to require compliance with certain procedures described in the manufacturer's service bulletins. For Model AS350B2 helicopters with an NR sensor part number 704A37614007 installed, the NPRM proposed to require, before further flight, performing a test to determine if the NR indicator display changes or drops to zero when the emergency cut-out control is activated. If the NR display changes or drops to zero during the ground run, the NPRM proposed to require, before further flight, altering the NR sensor wiring.

The NPRM was prompted by EASA AD No. 2016–0260, dated December 21, 2016, issued by EASA, which is the Technical Agent for the Member States of the European Union, to correct an unsafe condition for Airbus Helicopters Model AS350B2 helicopters with a certain part-numbered NR sensor installed. EASA advises of several occurrences where the NR indicator has displayed incorrect data. According to EASA, an investigation determined that whenever the emergency cut-out control was activated, such as during a practice autorotation, electrical power to the NR indicator was lost. The EASA AD states that this condition, if not detected and corrected, could result in a significant increase in pilot workload, disruption of the autorotation training, and subsequent reduced control of the helicopter. To address this unsafe condition, the EASA AD requires a functional check of the NR indicator display, and, if required, altering the wiring to ensure a dual power supply to the NR indicator.

Comments

The FAA gave the public the opportunity to participate in developing this final rule. The FAA received one comment in support of the NPRM.

FAA's Determination

These helicopters have been approved by EASA and are approved for operation in the United States. Pursuant to the FAA's bilateral agreement with the European Union, EASA has notified the FAA of the unsafe condition described in its AD. The FAA is issuing this AD after evaluating all information provided by EASA and determining the unsafe condition exists and is likely to exist or develop on other helicopters of these same type designs and that air safety and the public interest require adopting the AD requirements as proposed.

Differences Between This AD and the EASA AD

The EASA AD requires compliance within 75 flight hours, within 90 days, or before the next autorotation training flight, whichever occurs first. This AD requires compliance before further flight due to the critical nature of NR information for the pilot during an autorotation.

Related Service Information Under 1 CFR Part 51

The FAA reviewed Airbus Helicopters Alert Service Bulletin No. AS350–63.00.27, Revision 0, dated May 17, 2016. This service information contains procedures for performing a functional check of the NR indicator, and, if necessary, altering the wiring to add a direct battery supply to the NR

indicator. Airbus Helicopters identifies this alteration as Modification 350A084886.00.

This service information is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section.

Costs of Compliance

The FAA estimates that this AD affects 352 helicopters of U.S. Registry. The FAA estimates that operators may incur the following costs in order to comply with this AD. Labor costs are estimated at $85 per work-hour.

Performing a functional test of the NR indicator takes about 0.5 work-hours for an estimated cost of $43 per helicopter and $15,136 for the U.S. fleet.

If required, altering the NR sensor wiring takes about 2 work-hours, and parts cost about $154, for an estimated cost of $324 per helicopter.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on helicopters identified in this rulemaking action.

Regulatory Findings

This AD will not have federalism implications under Executive Order 13132. This AD will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify that this AD:

1. Is not a ''significant regulatory action'' under Executive Order 12866,

2. Will not affect intrastate aviation in Alaska, and

3. Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA amends 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive (AD):

2020–20–03 Airbus Helicopters: Amendment 39–21259; Docket No. FAA–2020–0271; Product Identifier 2017–SW–017–AD.

(a) Applicability

This AD applies to Airbus Helicopters Model AS350B2 helicopters, certificated in any category, with a main rotor RPM (NR) sensor part number 704A37614007 installed.

(b) Unsafe Condition

This AD defines the unsafe condition as loss of electrical power to the NR indicator when the emergency cutout control is activated. This condition could result in increased pilot workload and reduced helicopter control.

(c) Effective Date

This AD becomes effective November 3, 2020.

(d) Compliance

You are responsible for performing each action required by this AD within the specified compliance time unless it has already been accomplished prior to that time.

(e) Required Actions

Before further flight, perform a ground run-up with the fuel flow control lever in the flight gate with the collective control in the down/locked position. While at flight NR speed, activate the emergency cut-out control and observe the NR indicator display value. If the NR indicator display changes or drops to zero, before further flight, do the following:

(1) Alter the NR indicator wiring as depicted in Figures 1 and 2 of Airbus Helicopters Alert Service Bulletin No. AS350–63.00.27, Revision 0, dated May 17, 2016; and,

Note 1 to paragraph (e)(1): Airbus Helicopters identifies the alteration of the wiring as Modification 350A084886.00.

(2) Conduct a continuity test to confirm correct alteration of the wiring.

(f) Alternative Methods of Compliance (AMOCs)

(1) The Manager, Rotorcraft Standards Branch, FAA, may approve AMOCs for this AD. Send your proposal to: George Schwab, Aviation Safety Engineer, Safety Management Section, Rotorcraft Standards Branch, FAA, 10101 Hillwood Pkwy., Fort Worth, TX 76177; telephone 817–222–5110; email *9-ASW-FTW-AMOC-Requests@faa.gov.*

(2) For operations conducted under a 14 CFR part 119 operating certificate or under 14 CFR part 91, subpart K, the FAA suggests that you notify your principal inspector, or lacking a principal inspector, the manager of the local flight standards district office or certificate holding district office, before operating any aircraft complying with this AD through an AMOC.

(g) Additional Information

The subject of this AD is addressed in European Aviation Safety Agency (now European Union Aviation Safety Agency) (EASA) AD No. 2016–0260, dated December 21, 2016. You may view the EASA AD on the internet at *https://www.regulations.gov* in Docket No. FAA–2020–0271.

(h) Subject

Joint Aircraft Service Component (JASC) Code: 6340, Main Rotor Drive Indicating System.

(i) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference (IBR) of the service information listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this service information as applicable to do the actions required by this AD, unless the AD specifies otherwise.

(i) Airbus Helicopters Alert Service Bulletin No. AS350–63.00.27, Revision 0, dated May 17, 2016.

(ii) [Reserved]

(3) For service information identified in this AD, contact Airbus Helicopters, 2701 N. Forum Drive, Grand Prairie, TX 75052; telephone 972–641–0000 or 800–232–0323; fax 972–641–3775; or at *https://www.airbus.com/helicopters/services/technical-support.html.*

(4) You may view this service information at the FAA, Office of the Regional Counsel, Southwest Region, 10101 Hillwood Pkwy., Room 6N–321, Fort Worth, TX 76177. For information on the availability of this material at the FAA, call 817–222–5110.

(5) You may view this service information that is incorporated by reference at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, email *fedreg.legal@nara.gov,* or go to: *https://www.archives.gov/federal-register/cfr/ibr-locations.html.*

Issued on September 18, 2020.

Lance T. Gant,

Director, Compliance & Airworthiness Division, Aircraft Certification Service.

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. FAA–2020–0320; Project Identifier 2019–CE–011–AD; Amendment 39–21248; AD 2020–19–06]

RIN 2120–AA64

Airworthiness Directives; McCauley Propeller Systems

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: The FAA is adopting a new airworthiness directive (AD) for certain model McCauley Propeller Systems (McCauley) governors installed on airplanes. This AD was prompted by reports of an unapproved variant McCauley idler gear bearing, part number (P/N) A–20028, that could be installed in the affected governors. This AD requires replacing the governor with a governor that is eligible for installation. The FAA is issuing this AD to address the unsafe condition on these products.

DATES: This AD is effective November 3, 2020.

The Director of the Federal Register approved the incorporation by reference of a certain publication listed in this AD as of November 3, 2020.

ADDRESSES: For service information identified in this final rule, contact McCauley Propeller Systems, One Cessna Boulevard, P.O. Box 7704, Wichita, Kansas 67277; telephone: (800) 621–7767 or (316) 831–4021; email: *productsupport@txtav.com;* internet: *https://mccauley.txtav.com.* You may view this service information at the FAA, Airworthiness Products Section, Operational Safety Branch, 901 Locust, Kansas City, Missouri 64106. For information on the availability of this material at the FAA, call (816) 329–4148. It is also available on the internet at *https://www.regulations.gov* by searching for and locating Docket No. FAA–2020–0320.

Examining the AD Docket

You may examine the AD docket on the internet at *https://www.regulations.gov* by searching for and locating Docket No. FAA–2020–0320; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this final rule, the regulatory evaluation, any comments received, and other information. The address for Docket Operations U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.

FOR FURTHER INFORMATION CONTACT: Thomas Teplik, Aerospace Engineer, Wichita ACO Branch, 1801 Airport Road, Room 100, Wichita, Kansas 67209; telephone: (316) 946–4196; fax: (316) 946–4107; email: *thomas.teplik@faa.gov* or *Wichita-COS@faa.gov.*

SUPPLEMENTARY INFORMATION:

Discussion

The FAA issued a notice of proposed rulemaking (NPRM) to amend 14 CFR part 39 by adding an AD that would apply to certain model McCauley Propeller Systems (McCauley) governors installed on airplanes. The NPRM published in the **Federal Register** on April 7, 2020 (85 FR 19399). The NPRM was prompted by reports from McCauley that an unapproved variant idler gear bearing, P/N A–20028, was installed on certain governors during production between January 31, 2017, and September 27, 2018, and may have been installed on governors in service after January 31, 2017. The unapproved variant of the idler gear bearing does not conform to McCauley drawing requirements.

All models of McCauley governors have an idler gear bearing with P/N A–20028 installed; however, the unapproved variant of the bearing can be identified by part marking ''BA 59.'' The non-conforming idler gear bearing could have also been included in the idler gear assembly (idler gear and bearing), P/N A–20107, or the governor overhaul kit, P/N PL–20233 or PL–20234.

The non-conformity of the bearing may cause premature failure of the idler gear bearing. Early symptoms that the idler gear bearing may fail include inability of the governor to hold the selected RPM, hunting, surging, etc. An investigation identified 23 occurrences of airplane operation problems related to erratic governor behavior that may have resulted from the unapproved idler gear bearing.

The NPRM proposed to require replacing an affected governor with a governor eligible for installation. The FAA is issuing this AD to prevent failure of the idler gear bearing, which could result in failure of the governor, loss of propeller pitch control, engine and propeller over speed, engine oil contamination, and loss of airplane control.

Comments

The FAA gave the public the opportunity to participate in developing this final rule. The following presents the comments received on the NPRM and the FAA's response to each comment.

Supportive Comments

The Civil Aviation Safety Authority (CASA) of Australia, David Paynter, and Chartair Pty Ltd supported the NPRM.

Request To Clarify the Applicability

CASA, David Paynter, and Chartair Pty Ltd requested the FAA clarify the applicability with respect to the idle gearing bearings affected by the unsafe condition.

CASA advised of similar incidents of premature failure in idler gear bearings identified by part marking ''SCE 59'' and asked whether the FAA has determined that the unsafe condition exists or can develop in idler gear bearings other than those identified with ''BA 59.'' David Paynter expressed concern with governors that have ''SCE 59'' bearings or bearings with ''BA 59'' that do not have any country of origin stamped on them. Chartair Pty Ltd stated it has experienced bearing failures outside of the range identified in the NPRM. David Paynter and Chartair Pty Ltd requested the FAA change the AD to include these additional bearings.

The FAA disagrees. The A–20028 bearing identified with ''BA 59'' is an unapproved bearing that does not conform to McCauley drawing requirements. Although the FAA is aware of failures of bearings other than those stamped with ''BA 59'', these bearings do not demonstrate the same unsafe condition as identified in this AD. The FAA will continue to monitor McCauley governor field reports for issues involving bearings other than those stamped with ''BA 59''.

The FAA did not make changes to this AD as a result of these comments.

Request To Clarify the Required Actions

The Aircraft Owners and Pilots Association (AOPA) requested the FAA clarify paragraph (f), Compliance, of the NPRM. AOPA stated that the proposed language in paragraph (f) of the proposed AD to replace the governor with a governor eligible for installation can be misleading and imply that the governor must be replaced with a new or overhauled governor regardless of the status of the existing governor.

The FAA disagrees. Paragraph (f) of this AD requires compliance, unless already done. Thus, the AD allows

operators to take credit for replacing the governor with a governor eligible for installation if done before the effective date of the AD. If the existing governor does not have an idler gear bearing with a part marking ''BA 59'', then compliance is already done.

No changes to this AD are necessary based on this comment.

Request To Clarify the Installation Prohibition

AOPA requested the FAA clarify the wording in paragraph (h), Parts Installation Prohibition, of the NPRM. AOPA stated the language does not convey whether replacing the affected idle gear bearing in the governor terminates the AD.

The FAA disagrees. This AD does not require repetitive actions; therefore, terminating action is inappropriate. The installation prohibition ensures that affected governors will not be replaced with a part that has the unsafe condition. Once the affected governor is replaced in accordance with the requirements of this AD, no further action is required. The FAA did not make changes to this AD as a result of this comment.

Conclusion

The FAA reviewed the relevant data, considered the comments received, and determined that air safety and the public interest require adopting this final rule with the changes described previously. The FAA has determined that these changes:

- Are consistent with the proposal in the NPRM for addressing the unsafe condition; and
- Do not add any burden upon the public than was already proposed in the NPRM.

Related Service Information Under 1 CFR Part 51

The FAA reviewed McCauley Alert Service Bulletin No. ASB273C, dated January 30, 2019. The service bulletin contains model and serial number information to identify the affected governors. The service bulletin also contains procedures for removing the governor from the engine, inspecting the governor for the unapproved variant idler gear bearing, replacing the idler gear bearing or idler gear assembly if necessary, overhauling the governor if necessary, and installing a governor on the engine. This service information is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section.

Costs of Compliance

The FAA estimates that this AD affects 2,500 governors as installed in airplanes of U.S. registry.

The FAA estimates the following costs to comply with this AD:

ESTIMATED COSTS

Action	Labor cost	Parts cost	Cost per product	Cost on U.S. operators
Remove affected governor	1 work-hour × $85 per hour = $85	Not Applicable	$85	$212,500
Install a governor	1 work-hour × $85 per hour = $85	See table below	Variable	Unknown

An operator has the option to pay a service center to inspect their existing governor and replace the idler gear bearing if necessary or pay to have their existing governor overhauled. An operator has the option to purchase a factory new governor or an overhauled governor, a feathering/syncing governor or a non-feathering/syncing governor. The FAA has no way of knowing what option an operator may take to obtain a governor eligible for installation. Therefore, the FAA has no way of determining the parts cost on U.S. operators. The following represents the estimated parts cost associated with obtaining a governor.

COST FOR AN ELIGIBLE GOVERNOR

Type of governor	Cost of governor
Factory new non-feathering/non-syncing governor	2,000
Factory new feathering/syncing governor	9,000
Overhaul of existing non-feathering/non-syncing governor	1,000
Overhaul of existing feathering/syncing governor	3,000

According to the manufacturer, some of the costs of this AD may be covered under warranty, thereby reducing the cost impact on affected individuals. The FAA does not control warranty coverage for affected individuals. As a result, the FAA has included all costs in this cost estimate.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

This AD will not have federalism implications under Executive Order 13132. This AD will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of govement.

For the reasons discussed above, I certify that this AD:

(1) Is not a ''significant regulatory action'' under Executive Order 12866,

(2) Will not affect intrastate aviation in Alaska, and

(3) Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA amends 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive (AD):

2020–19–06 McCauley Propeller Systems: Amendment 39–21248; Docket No. FAA–2020–0320; Project Identifier 2019–CE–011–AD.

(a) Effective Date

This AD is effective November 3, 2020.

(b) Affected ADs

None.

(c) Applicability

This AD applies to the McCauley Propeller Systems (McCauley) governors specified in paragraph (c)(1) or (2) of this AD and installed on airplanes, certificated in any category.

(1) Models listed in table 2 of McCauley Alert Service Bulletin No. ASB273C, dated January 30, 2019 (McCauley ASB273C) with a serial number from 170061 through 180501, excluding the serial numbers listed in table 1 of McCauley ASB273C; or

(2) Models listed in table 2 of McCauley ASB273C, with any serial number, that have an installation date after January 31, 2017, or an installation date that cannot be determined.

(d) Subject

Joint Aircraft System Component (JASC)/Air Transport Association (ATA) of America Code 61, Propellers.

(e) Unsafe Condition

This AD was prompted by reports of an unapproved variant idler gear bearing, McCauley part number (P/N) A–20028, installed on governors. All models of McCauley governors have a bearing with P/N A–20028 installed; however, the unapproved variant can be identified with the part marking ''BA 59.'' The FAA is issuing this AD to prevent failure of the idler gear bearing. This failure could result in failure of the governor, loss of propeller pitch control, engine and propeller over speed, engine oil contamination, and loss of control of the airplane.

(f) Compliance

Unless already done, within 50 hours time-in-service after the effective date of this AD or within 24 months after the effective date of this AD, whichever occurs first, replace the governor with a governor eligible for installation.

Note 1 to paragraph (f) of this AD: Any model McCauley governor that is stamped with the letter B, as specified in the Accomplishment Instructions in McCauley ASB273C, has already complied with the requirements of this AD.

(g) Definition

For the purposes of this AD, a governor eligible for installation is defined as a governor that does not have an idler gear bearing with a part marking ''BA 59'' installed.

(h) Parts Installation Prohibition

As of the effective date of this AD, do not install on any airplane a McCauley governor unless it is a governor eligible for installation.

(i) Alternative Methods of Compliance (AMOCs)

(1) The Manager, Wichita ACO Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the manager of the certification office, send it to the attention of the person identified in paragraph (j) of this AD.

(2) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/certificate holding district office.

(j) Related Information

For more information about this AD, contact Thomas Teplik, Aerospace Engineer, Wichita ACO Branch, 1801 Airport Road, Room 100, Wichita, Kansas 67209; telephone: (316) 946–4196; fax: (316) 946–4107; email: *thomas.teplik@faa.gov* or *Wichita-COS@faa.gov.*

(k) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference (IBR) of the service information listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this service information as applicable to do the actions required by this AD, unless the AD specifies otherwise.

(i) McCauley Alert Service Bulletin No. ASB273C, dated January 30, 2019.

(ii) [Reserved]

(3) For McCauley Propeller Systems service information identified in this AD, contact McCauley Propeller Systems, One Cessna Boulevard, P.O. Box 7704, Wichita, Kansas 67277; telephone: (800) 621–7767 or (316) 831–4021; email: *productsupport@txtav.com;* internet: *https://mccauley.txtav.com.*

(4) You may view this service information at FAA, Airworthiness Products Section, Operational Safety Branch, 901 Locust, Kansas City, Missouri 64106. For information on the availability of this material at the FAA, call (816) 329–4148.

(5) You may view this service information that is incorporated by reference at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, email *fedreg.legal@nara.gov,* or go to: *https://www.archives.gov/federal-register/cfr/ibr-locations.html.*

Issued on September 4, 2020.

Lance T. Gant,

Director, Compliance & Airworthiness Division, Aircraft Certification Service.

RIN 2120–AA64

Airworthiness Directives; Bombardier, Inc., Airplanes

AGENCY: Federal Aviation Administration (FAA), Department of Transportation (DOT).

ACTION: Final rule.

SUMMARY: The FAA is adopting a new airworthiness directive (AD) for certain Bombardier, Inc., Model CL–600–1A11 (600), CL–600–2A12 (601), and CL–600–2B16 (601–3A, 601–3R, and 604 Variants) airplanes. This AD was prompted by a report that fast and easy access to the portable oxygen bottle may be prevented by the portable oxygen bottle installation's upper bracket latch assembly catching on the pressure gauge tube or on the pressure gauge bezel of the portable oxygen bottle. This AD requires a check to identify the manufacturer and part number of the portable oxygen bottle installation, and, if necessary, modification of the portable oxygen bottle installation. The FAA is issuing this AD to address the unsafe condition on these products.

DATES: This AD is effective November 3, 2020.

The Director of the Federal Register approved the incorporation by reference of certain publications listed in this AD as of November 3, 2020.

ADDRESSES: For service information identified in this final rule, contact Bombardier, Inc., 200 Côte-Vertu Road West, Dorval, Québec H4S 2A3, Canada; North America toll-free telephone 1–866–538–1247 or direct-dial telephone 1–514–855–2999; email *ac.yul@aero.bombardier.com;* internet *https://www.bombardier.com.* You may view this service information at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195. It is also available on the internet at

https://www.regulations.gov by searching for and locating Docket No. FAA–2020–0203.

Examining the AD Docket

You may examine the AD docket on the internet at *https://www.regulations.gov* by searching for and locating Docket No. FAA–2020–0203; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this final rule, any comments received, and other information. The address for Docket Operations is U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.

SUPPLEMENTARY INFORMATION:

Discussion

Transport Canada Civil Aviation (TCCA), which is the aviation authority for Canada, has issued Canadian AD CF–2019–26, dated July 9, 2019 (also referred to as the Mandatory Continuing Airworthiness Information, or ''the MCAI''), to correct an unsafe condition for certain Bombardier, Inc., Model CL–600–1A11 (600), CL–600–2A12 (601), and CL–600–2B16 (601–3A, 601–3R, and 604 Variants) airplanes. You may examine the MCAI in the AD docket on the internet at *https://www.regulations.gov* by searching for and locating Docket No. FAA–2020–0203.

The FAA issued a notice of proposed rulemaking (NPRM) to amend 14 CFR part 39 by adding an AD that would apply to certain Bombardier, Inc., Model CL–600–1A11 (600), CL–600–2A12 (601), and CL–600–2B16 (601–3A, 601–3R, and 604 Variants) airplanes. The NPRM published in the **Federal Register** on March 23, 2020 (85 FR 16284). The NPRM was prompted by a report that fast and easy access to the portable oxygen bottle may be prevented by the portable oxygen bottle installation's upper bracket latch assembly catching on the pressure gauge tube or on the pressure gauge bezel of the portable oxygen bottle. The NPRM proposed to require a check to identify the manufacturer and part number of the portable oxygen bottle installation, and, if necessary, modification of the portable oxygen bottle installation. The FAA is issuing this AD to address the portable oxygen bottle installation's upper bracket latch assembly catching on the pressure gauge tube or on the pressure gauge bezel of the portable oxygen bottle, which, if not detected and corrected, could prevent fast and easy access to the portable oxygen bottle in an emergency situation. See the MCAI for additional background information.

Comments

The FAA gave the public the opportunity to participate in developing this final rule. The following presents the comment received on the NPRM and the FAA's response to each comment.

Support for the NPRM

An anonymous commenter had no objection to the NPRM.

Request To Revise or Clarify the Applicability of Paragraph (i) of the Proposed AD

NetJets requested that the FAA either revise the language in the first sentence of paragraph (i) of the proposed AD to clearly state that the paragraph applies to airplanes having a serial number of 6119 and below that is not listed in section 1.A. of the applicable Bombardier service information specified in figure 1 to paragraphs (g), (h), and (i) of the proposed AD, or that the FAA clarify paragraph (c)(3) of the proposed AD to state that all serial numbers are affected.

The FAA agrees to clarify. Paragraph (i) of the proposed AD is applicable to only airplanes having the serial numbers specified in paragraph (c) of this AD, but not listed in section 1.A. of the applicable Bombardier service information specified in figure 1 to paragraphs (g), (h), and (i) of this AD, and equipped with specified part numbers of Scott (Avox/Zodiac) 5500 or 5600 series 11 cubic foot portable oxygen bottle(s). As such, any serial number not specified in paragraph (c)(3) of this AD for Bombardier Inc. Model CL–600–2B16 (601–3A, 601–3R, and 604 Variants) airplanes, is not affected by paragraph (i) of this AD. The FAA has not changed this AD in this regard.

Conclusion

The FAA reviewed the relevant data, considered the comments received, and determined that air safety and the public interest require adopting this final rule as proposed, except for minor editorial changes. The FAA has determined that these minor changes:

- Are consistent with the intent that was proposed in the NPRM for addressing the unsafe condition; and
- Do not add any additional burden upon the public than was already proposed in the NPRM.

Related Service Information Under 1 CFR Part 51

Bombardier has issued the following service information:

- Bombardier Service Bulletin 600–0772, dated June 29, 2018;
- Bombardier Service Bulletin 601–0646, dated June 29, 2018;
- Bombardier Service Bulletin 604–35–006, dated June 29, 2018;
- Bombardier Service Bulletin 605–35–005, dated June 29, 2018; and
- Bombardier Service Bulletin 650–35–001, dated June 29, 2018.

This service information describes procedures for a check to identify the manufacturer and part number of the portable oxygen bottle installation, and, if necessary, modification of the portable oxygen bottle installation. These documents are distinct since they apply to different airplane models. This service information is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section.

Costs of Compliance

We estimate that this AD affects 188 airplanes of U.S. registry. We estimate the following costs to comply with this AD:

ESTIMATED COSTS FOR REQUIRED ACTIONS

Labor cost	Parts cost	Cost per product	Cost on U.S. operators
3 work-hours × $85 per hour = $255 per installation	$1,530 per installation	$1,785 per installation	$335,580 per installation.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

This AD will not have federalism implications under Executive Order 13132. This AD will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify that this AD:

(1) Is not a ''significant regulatory action'' under Executive Order 12866,

(2) Will not affect intrastate aviation in Alaska, and

(3) Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA amends 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive (AD):

2020–19–13 Bombardier, Inc.: Amendment 39–21256; Docket No. FAA–2020–0203; Product Identifier 2019–NM–142–AD.

(a) Effective Date

This AD is effective November 3, 2020.

(b) Affected ADs

None.

(c) Applicability

This AD applies to the Bombardier, Inc., airplanes identified in paragraphs (c)(1) through (3) of this AD, certificated in any category, equipped with Scott (Avox/Zodiac) 5500 or 5600 series 11 cubic foot portable oxygen bottle(s) with upper bracket part number (P/N) 36758–02, P/N 36758–12 or P/N H3–2091–1 installed at the neck of the bottle(s).

(1) Model CL–600–1A11 (600) airplanes, serial numbers 1004 through 1085 inclusive.

(2) Model CL–600–2A12 (601) airplanes, serial numbers 3001 through 3066 inclusive.

(3) Model CL–600–2B16 (601–3A, 601–3R, and 604 Variants) airplanes, serial numbers 5001 through 5194 inclusive, 5301 through 5665 inclusive, 5701 through 5988 inclusive, and 6050 through 6119 inclusive.

(d) Subject

Air Transport Association (ATA) of America Code 35, Oxygen.

(e) Reason

This AD was prompted by a report that fast and easy access to the portable oxygen bottle may be prevented by the portable oxygen bottle installation's upper bracket latch assembly catching on the pressure gauge tube or on the pressure gauge bezel of the portable oxygen bottle. The FAA is issuing this AD to address this condition, which, if not detected and corrected, could prevent fast and easy access to the portable oxygen bottle in an emergency situation.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Portable Oxygen Bottle Check

For airplanes with a serial number listed in Section 1.A. of the applicable Bombardier service information specified in figure 1 to paragraphs (g), (h), and (i) of this AD: Within 60 months after the effective date of this AD, check each portable oxygen bottle installation to determine the manufacturer and part number, in accordance with paragraph 2.B. of the Accomplishment Instructions of the applicable Bombardier service information specified in figure 1 to paragraphs (g), (h), and (i) of this AD.

Figure 1 to paragraphs (g), (h), and (i) – *Service Information References*

Airplane Model	Bombardier Service Information
Model CL-600-1A11	Bombardier Service Bulletin 600-0772, dated June 29, 2018
Model CL-600-2A12	Bombardier Service Bulletin 601-0646, dated June 29, 2018
Model CL-600-2B16	Bombardier Service Bulletin 601-0646, dated June 29, 2018
Model CL-600-2B16	Bombardier Service Bulletin 604-35-006, dated June 29, 2018
Model CL-600-2B16	Bombardier Service Bulletin 605-35-005, dated June 29, 2018
Model CL-600-2B16	Bombardier Service Bulletin 650-35-001, dated June 29, 2018

(h) Bracket Modifications

If, during the inspection specified in paragraph (g) of this AD, any portable oxygen bottle is found to be manufactured by Scott (Avox/Zodiac) and is a 5500 or 5600 series 11 cubic foot bottle, with upper bracket P/N 36758–02, 36758–12, or H3–2091–1 installed at the neck of the bottle: Modify the portable oxygen bottle brackets in accordance with paragraph 2.C. of the Accomplishment Instructions of the applicable Bombardier service information specified in figure 1 to paragraphs (g), (h), and (i) of this AD.

(i) Portable Oxygen Bottle Check and Corrective Actions for Airplanes Not Listed in the Service Information

For airplanes with a serial number that is not listed in section 1.A. of the applicable Bombardier service information specified in figure 1 to paragraphs (g), (h), and (i) of this AD: Within 60 months after the effective date of this AD, check each portable oxygen bottle installation to determine the manufacturer and part number and accomplish corrective actions in accordance with the procedures specified in paragraph (j)(2) of this AD.

(j) Other FAA AD Provisions

The following provisions also apply to this AD:

(1) Alternative Methods of Compliance (AMOCs): The Manager, New York ACO Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the manager of the certification office, send it to ATTN: Program Manager, Continuing Operational Safety, FAA, New York ACO Branch, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; telephone 516–228–7300; fax 516–794–5531. Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/certificate holding district office.

(2) Contacting the Manufacturer: For any requirement in this AD to obtain instructions from a manufacturer, the instructions must be accomplished using a method approved by the Manager, New York ACO Branch, FAA; or Transport Canada Civil Aviation (TCCA); or Bombardier, Inc.'s TCCA Design Approval Organization (DAO). If approved by the DAO, the approval must include the DAO-authorized signature.

(k) Related Information

(1) Refer to Mandatory Continuing Airworthiness Information (MCAI) Canadian AD CF–2019–26, dated July 9, 2019, for related information. This MCAI may be found in the AD docket on the internet at *https://www.regulations.gov* by searching for and locating Docket No. FAA–2020–0203.

(2) For more information about this AD, contact Darren Gassetto, Aerospace Engineer, Mechanical Systems and Administrative Services Section, FAA, New York ACO Branch, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; telephone 516–228–7323; fax 516–794–5531; email *9-avs-nyaco-cos@faa.gov.*

(l) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference (IBR) of the service information listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this service information as applicable to do the actions required by this AD, unless this AD specifies otherwise.

(i) Bombardier Service Bulletin 600–0772, dated June 29, 2018.

(ii) Bombardier Service Bulletin 601–0646, dated June 29, 2018.

(iii) Bombardier Service Bulletin 604–35–006, dated June 29, 2018.

(iv) Bombardier Service Bulletin 605–35–005, dated June 29, 2018.

(v) Bombardier Service Bulletin 650–35–001, dated June 29, 2018.

(3) For service information identified in this AD, contact Bombardier, Inc., 200 Côte-Vertu Road West, Dorval, Québec H4S 2A3, Canada; North America toll-free telephone 1–866–538–1247 or direct-dial telephone 1–514–855–2999; email *ac.yul@aero.bombardier.com;* internet *https://www.bombardier.com.*

(4) You may view this service information at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195.

(5) You may view this service information that is incorporated by reference at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, email *fedreg.legal@nara.gov,* or go to: *https://www.archives.gov/federal-register/cfr/ibr-locations.html.*

Issued on September 10, 2020.

Gaetano A. Sciortino,

Deputy Director for Strategic Initiatives, Compliance & Airworthiness Division, Aircraft Certification Service.

Federal Aviation Administration

14 CFR Part 39

[Docket No. FAA–2020–0853; Project Identifier AD–2020–00588–E; Amendment 39–21260; AD 2020–20–04]

RIN 2120–AA64

Airworthiness Directives; Rolls-Royce Corporation (Type Certificate Previously Held by Allison Engine Company) Turboprop Engines

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule; request for comments.

SUMMARY: The FAA is adopting a new airworthiness directive (AD) for all Rolls-Royce Corporation (RRC) AE 2100D3 model turboprop engines. This AD requires revising the airworthiness limitations section (ALS) of the RRC AE 2100D3 Maintenance Manual and the operator's approved continuous airworthiness maintenance program. This AD was prompted by a report of a propeller gearbox (PGB) development test in which high vibration occurred due to a fatigue crack that initiated in the propeller shaft. The FAA is issuing this AD to address the unsafe condition on these products.

DATES: This AD is effective October 14, 2020.

The Director of the Federal Register approved the incorporation by reference of certain publications listed in this AD as of October 14, 2020.

The FAA must receive comments on this AD by November 13, 2020.

ADDRESSES: You may send comments, using the procedures found in 14 CFR 11.43 and 11.45, by any of the following methods:

- *Federal eRulemaking Portal:* Go to *https://www.regulations.gov.* Follow the instructions for submitting comments.
- *Fax:* 202–493–2251.
- *Mail:* U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.
- *Hand Delivery:* U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

For service information identified in this final rule, contact Rolls-Royce Corporation, 450 South Meridian Street, Mail Code NB–01–06, Indianapolis, IN 46225; phone: 317–230–1667; email: *CMSEindyOSD@rolls-royce.com;* internet: *www.rolls-royce.com.* You may view this service information at the FAA, Airworthiness Products Section, Operational Safety Branch, 1200 District Avenue, Burlington, MA 01803. For information on the availability of this material at the FAA, call 781–238–7759. It is also available on the internet at *https://www.regulations.gov* by searching for and locating Docket No. FAA–2020–0853.

Examining the AD Docket

You may examine the AD docket on the internet at *https://www.regulations.gov* by searching for and locating Docket No. FAA–2020–0853; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this final rule, any comments received, and other information. The street address for the Docket Operations is listed above.

FOR FURTHER INFORMATION CONTACT: Kyri Zaroyiannis, Aerospace Engineer, Chicago ACO, FAA, 2300 E Devon Ave., Des Plaines, IL 60018; phone: (847) 294–7836; fax: (847) 294–7834; email: *kyri.zaroyiannis@faa.gov*.

SUPPLEMENTARY INFORMATION:

Background

The FAA was informed by the manufacturer that a PGB development test was stopped due to high vibration caused by a fatigue crack that initiated in the PGB shaft and carrier assembly. The fatigue crack initiated in a broach slot of the PGB shaft. The manufacturer determined the need to apply life limits to the PGB shaft and carrier assembly, which has not previously been a life-limited part. To track these parts, the manufacturer determined the need to assign usage hours to PGB shaft and carrier assemblies that already have time in service.

An examination by the manufacturer of Material Review Board records also identified two PGB shaft and carrier assemblies that were accepted with reduced material properties prior to their reclassification as a life limited part requiring reduced lives. The manufacturer applied reduced life limits to these PGB shaft and carrier assemblies. In addition, a review of shop repair records by the manufacturer identified a number of PGB shaft and carrier assemblies that received a keylock stud repair introducing unacceptable unused ''keyslots'' that can cause stress concentration and reduced life. The manufacturer requires either rework or removal of these PGB shaft and carrier assemblies.

The FAA determined that updating the ALS of the RRC AE 2100D3 Maintenance Manual and the continued airworthiness maintenance program for the affected RRC 2100D3 model turbofan engines is the most effective way to address the unsafe condition pertaining to fatigue cracks in the PGB shaft and carrier assembly. These ALS updates apply life limits to PGB shaft and carrier assemblies installed on RRC AE 2100D3 model turbofan engines. Certain part numbered PGB shaft and carrier assemblies with reduced material properties were assigned reduced life limits. To track these parts, the ALS updates require assignment of usage hours to the PGB shaft and carrier assembly no later than the next engine shop visit for all RRC AE model turboprop engines. Depending on the part and serial number of the PGB shaft and carrier assembly, the updates to the ALS requires reidentification or removal of the PGB shaft and carrier assembly.

This condition, if not addressed, could result in loss of the propeller, damage to the engine, and damage to the airplane. The FAA is issuing this AD to address the unsafe condition on these products.

FAA's Determination

The FAA is issuing this AD because the agency evaluated all the relevant information and determined the unsafe condition described previously is likely to exist or develop in other products of the same type design.

Related Service Information Under 1 CFR Part 51

The FAA reviewed Task 05–11–00–800–801, dated June 20, 2018 of the Airworthiness Limitations System Description Section-801, RRC AE 2100D3 Maintenance Manual (''Task 05–11–00–800–801'') and Task 05–12–11–800–802, dated June 1, 2020 of the Propeller Gearbox System Component Life Limits Systems Description Section-802, RRC AE 2100D3 Maintenance Manual (''Task 05–12–11–800–802'').

Task 05–11–00–800–801 specifies: (1) Assignment of usage hours to the PGB shaft and carrier assemblies; (2) reworking confirmed blind hole configured PGB shaft and carrier

assemblies to the through-hole controlled keyslot configuration; and (3) reidentifying through-hole PGB shaft and carrier assemblies to a new part number.

Task 05–12–11–800–802 specifies: (1) Assignment of new life limits to the PGB shaft and carrier assemblies; (2) decreasing the life limit for PGB shaft and carrier assemblies found to have reduced material properties; and (3) replacing PGB shaft and carrier assemblies that have received a keylock stud repair which introduced unacceptable unused keyslots.

This service information is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section.

Other Related Service Information

The FAA reviewed RRC Alert Service Bulletin (ASB) AE2100D3–A–72–256, Revision 3, dated January 15, 2018; AE 2100D3–A–72–313, Revision 1, dated May 28, 2018; RRC ASB AE 2100D3–A–72–314, Revision 0, dated January 15, 2018; RRC ASB AE 2100D3–A–72–315, Revision 2, dated July 13, 2018; RRC ASB AE 2100D3–A–72–324, Revision 0, dated November 26, 2019; and RRC ASB AE 2100D3–A–72–325, Revision 0, dated November 26, 2019.

RRC ASB AE2100D3–A–72–256, Revision 3, dated January 15, 2018, describes procedures for re-work of certain PGB shaft and carrier assemblies.

RRC ASB AE 2100D3–A–72–313 describes procedures for assigning usage hours to the PGB shaft and carrier assemblies.

RRC ASB AE 2100D3–A–72–314 describes procedures for reworking PGB shaft and carrier assemblies from the blind hole to the preferred through hole controlled keyslot configuration.

RRC ASB AE 2100D3–A–72–315 describes procedures for reidentifying PGB shaft and carrier assemblies which are of the preferred through hole controlled keyslot configuration.

RRC ASB AE 2100D3–A–72–324 establishes a decrease in life limit of 10,525 hours for PGB shaft and carrier assemblies, with (S/Ns) CU32063 and CU32071, which were found to have reduced material properties.

RRC ASB AE 2100D3–A–72–325 describes procedures for reworking or replacing PGB shaft and carrier assemblies, listed in Table 1 of RRC ASB AE 2100D3–72–A–325, that have received a keylock stud repair which introduced unacceptable unused keyslots.

AD Requirements

This AD requires revising the ALS of the AE 2100D3 Maintenance Manual and the operator's approved continuous airworthiness maintenance program.

Justification for Immediate Adoption and Determination of the Effective Date

Section 553(b)(3)(B) of the Administrative Procedure Act (APA) (5 U.S.C.) authorizes agencies to dispense with notice and comment procedures for rules when the agency, for ''good cause,'' finds that those procedures are ''impracticable, unnecessary, or contrary to the public interest.'' Under this section, an agency, upon finding good cause, may issue a final rule without providing notice and seeking comment prior to issuance. Further, section 553(d) of the APA authorizes agencies to make rules effective in less than 30 days, upon a finding of good cause.

The FAA has found the risk to the flying public justifies waiving notice and comment prior to adoption of this rule because no domestic operators use this product. It is unlikely that the FAA will receive any adverse comments or useful information about this AD from U.S. operators. Accordingly, notice and opportunity for prior public comment are unnecessary, pursuant to 5 U.S.C. 553(b)(3)(B). In addition, for the foregoing reasons, the FAA finds that good cause exists pursuant to 5 U.S.C. 553(d) for making this amendment effective in less than 30 days.

Comments Invited

The FAA invites you to send any written data, views, or arguments about this final rule. Send your comments to an address listed under the **ADDRESSES** section. Include the docket number FAA–2020–0853 and Project Identifier AD–2020–00588–E at the beginning of your comments. The most helpful comments reference a specific portion of the proposal, explain the reason for any recommended change, and include supporting data. The FAA will consider all comments received by the closing date and may amend this final rule because of those comments.

Except for Confidential Business Information (CBI) as described in the following paragraph, and other information as described in 14 CFR 11.35, the FAA will post all comments received, without change, to *https://www.regulations.gov,* including any personal information you provide. The FAA will also post a report summarizing each substantive verbal contact received about this final rule.

Confidential Business Information

Confidential Business Information (CBI) is commercial or financial information that is both customarily and actually treated as private by its owner. Under the Freedom of Information Act (FOIA) (5 U.S.C. 552), CBI is exempt from public disclosure. If your comments responsive to this final rule contain commercial or financial information that is customarily treated as private, that you actually treat as private, and that is relevant or responsive to this final rule, it is important that you clearly designate the submitted comments as CBI. Please mark each page of your submission containing CBI as ''PROPIN.'' The FAA will treat such marked submissions as confidential under the FOIA, and they will not be placed in the public docket of this final rule. Submissions containing CBI should be sent to Kyri Zaroyiannis, Aerospace Engineer, Chicago ACO, FAA, 2300 E Devon Ave., Des Plaines, IL 60018. Any commentary that the FAA receives which is not specifically designated as CBI will be placed in the public docket for this rulemaking.

Regulatory Flexibility Act

The requirements of the Regulatory Flexibility Act (RFA) do not apply when an agency finds good cause pursuant to 5 U.S.C. 553 to adopt a rule without prior notice and comment. Because the FAA has determined that it has good cause to adopt this rule without notice and comment, RFA analysis is not required.

Costs of Compliance

The FAA estimates that this AD affects 0 engines installed on airplanes of U.S. registry.

The FAA estimates the following costs to comply with this AD:

ESTIMATED COSTS

Action	Labor cost	Parts cost	Cost per product	Cost on U.S. operators
Insert Task 05–12–11–800–801 into RRC AE 2100D3 Maintenance Manual.	0.5 work-hours × $85 per hour = $42.50.	$0	$42.50	$0

ESTIMATED COSTS—Continued

Action	Labor cost	Parts cost	Cost per product	Cost on U.S. operators
Insert Task 05–12–11–800–802 into RRC AE 2100D3 Maintenance Manual.	0.5 work-hours × $85 per hour = $42.50.	0	42.50	0

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. ''Subtitle VII: Aviation Programs'' describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

This AD will not have federalism implications under Executive Order 13132. This AD will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify that this AD:

(1) Is not a ''significant regulatory action'' under Executive Order 12866, and

(2) Will not affect intrastate aviation in Alaska.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA amends 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive (AD):

2020–20–04 Rolls-Royce Corporation (Type Certificate previously held by Allison Engine Company): Amendment 39–21260; Docket No. FAA–2020–0853; Project Identifier AD–2020–00588–E.

(a) Effective Date

This AD is effective October 14, 2020.

(b) Affected ADs

None.

(c) Applicability

This AD applies to all Rolls-Royce Corporation (RRC) AE 2100D3 model turboprop engines.

(d) Subject

Joint Aircraft System Component (JASC) Code 7210, Turbine Engine Reduction Gear.

(e) Unsafe Condition

This AD was prompted by a fatigue crack that initiated in the propeller shaft during a propeller gearbox (PGB) development test that induced high vibrations. The FAA is issuing this AD to prevent loss of the propeller. The unsafe condition, if not addressed, could result in damage to the engine and damage to the airplane.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Required Actions

(1) Within 30 days after the effective date of this AD, revise the RRC AE 2100D3 Maintenance Manual (''the Manual'') and the operator's existing approved continuous airworthiness maintenance program by inserting:

(i) Task 05–11–00–800–801, dated June 20, 2018, into Airworthiness Limitations System Description Section-801; and

(ii) Task 05–12–11–800–802, dated June 1, 2020, into Propeller Gearbox System Component Life Limits Systems Description Section-802 in the Manual.

(2) Thereafter, except as provided in paragraph (h) of this AD, no alternative replacement times or structural inspection intervals may be approved for this PGB shaft and carrier assembly.

(h) Alternative Methods of Compliance (AMOCs)

(1) The Manager, Chicago ACO, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the manager of the certification office, send it to the attention of the person identified in paragraph (i) of this AD.

(2) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/certificate holding district office.

(i) Related Information

For more information about this AD, contact or more information about this AD, contact Kyri Zaroyiannis, Aerospace Engineer, Chicago ACO, FAA, 2300 E. Devon Avenue, Des Plaines, IL 60018; phone: (847) 294–7836; fax: (847) 294–7834; email: *kyri.zaroyiannis@faa.gov*.

(j) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference (IBR) of the service information listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this service information as applicable to do the actions required by this AD, unless the AD specifies otherwise.

(i) Task 05–11–00–800–801, dated June 20, 2018 of Airworthiness Limitations System Description Section-801, Rolls-Royce Corporation (RRC) AE 2100D3 Maintenance Manual.

(ii) Task 05–12–11–800–802, dated June 1, 2020 of Propeller Gearbox System Component Life Limits Systems Description Section-802, RRC AE 2100D3 Maintenance Manual.

(3) For RRC service information identified in this AD, contact Rolls-Royce Corporation, 450 South Meridian Street, Mail Code NB–01–06, Indianapolis, IN 46225; phone: 317–230–1667; email: *CMSEindyOSD@rolls-royce.com;* internet: *www.rolls-royce.com.*

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. FAA–2020–0413; Product Identifier 2017–SW–018–AD; Amendment 39–21258; AD 2020–20–02]

RIN 2120–AA64

Airworthiness Directives; Leonardo S.p.a. Helicopters

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: The FAA is adopting a new airworthiness directive (AD) for Leonardo S.p.a. (Leonardo) Model A109E, A109S, and AW109SP helicopters. This AD requires inspecting each fire extinguisher bottle for a crack. This AD was prompted by a report of a cracked fire extinguisher bottle. The actions of this AD are intended to address an unsafe condition on these products.

DATES: This AD is effective November 3, 2020.

The Director of the Federal Register approved the incorporation by reference of certain documents listed in this AD as of November 3, 2020.

ADDRESSES: For service information identified in this final rule, contact Leonardo, Emanuele Bufano, Head of Airworthiness, Viale G.Agusta 520, 21017 C.Costa di Samarate (Va) Italy; telephone +39–0331–225074; fax +39–0331–229046; or at *https://www.leonardocompany.com/en/home.* You may view the referenced service information at the FAA, Office of the Regional Counsel, Southwest Region, 10101 Hillwood Pkwy., Room 6N–321, Fort Worth, TX 76177. It is also available on the internet at *https://www.regulations.gov* by searching for and locating Docket No. FAA–2020–0413.

Examining the AD Docket

You may examine the AD docket on the internet at *https://www.regulations.gov* by searching for and locating Docket No. FAA–2020–0413; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this AD, the European Aviation Safety Agency (now European Union Aviation Safety Agency) (EASA) AD, any service information that is incorporated by reference, any comments received, and other information. The street address for Docket Operations is U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.

FOR FURTHER INFORMATION CONTACT: Eric Haight, Aviation Safety Engineer, Regulations and Policy Section, Rotorcraft Standards Branch, FAA, 10101 Hillwood Pkwy., Fort Worth, TX 76177; telephone 817–222–5110; *eric.haight@faa.gov.*

SUPPLEMENTARY INFORMATION:

Discussion

The FAA issued a notice of proposed rulemaking (NPRM) to amend 14 CFR part 39 by adding an AD that would apply to Leonardo Model A109E, A109S, and AW109SP helicopters with a fire extinguisher bottle part number (P/N) 27300–1 installed. The NPRM published in the **Federal Register** on April 23, 2020 (85 FR 22686). The NPRM proposed to require repetitively inspecting the weld beads of each fire extinguisher bottle P/N 27300–1 assembly for a crack. If there is a crack, the NPRM proposed to require replacing the fire extinguisher bottle before further flight. The NPRM also proposed to prohibit the installation of a fire extinguisher bottle P/N 27300–1 on any helicopter unless it has met the requirements of this AD. The proposed requirements were intended to detect a crack on a fire extinguisher bottle bypass outlet assembly, which could result in failure of the fire extinguishing system in the event of a fire in the engine area and subsequent loss of control of the helicopter.

The NPRM was prompted by EASA AD No. 2016–0261R1, dated February 13, 2020, issued by EASA, which is the Technical Agent for the Member States of the European Union, to correct an unsafe condition for Leonardo Model A109LUH, A109E, A109S, and AW109SP helicopters. EASA advises that a fractured bypass outlet assembly (assembly), which is a component of fire extinguishing bottle P/N 27300–1, was found during maintenance on a Model AW109SP helicopter. EASA states that this condition, if not detected and corrected, could affect the capability of the fire extinguishing system to extinguish a fire in the engine area, resulting in damage to the helicopter and injury to any occupants. To address this unsafe condition, the EASA AD requires repetitive inspections of the assembly, and if there is a crack, replacing the fire extinguisher bottle. Due to similarity of design, EASA advises other helicopter models may be subject to the same unsafe condition.

Comments

The FAA gave the public the opportunity to participate in developing this final rule, but the FAA did not receive any comments on the NPRM or on the determination of the cost to the public.

FAA's Determination

These helicopters have been approved by EASA and are approved for operation in the United States. Pursuant to the FAA's bilateral agreement with the European Union, EASA has notified the FAA of the unsafe condition described in its AD. The FAA is issuing this AD after evaluating all of the information provided by EASA and determining the unsafe condition exists and is likely to exist or develop on other helicopters of the same type designs and that air safety and the public interest require adopting the AD requirements as proposed.

Interim Action

The FAA considers this AD to be an interim action. If final action is later identified, the FAA might consider further rulemaking.

Differences Between This AD and the EASA AD

The EASA AD applies to Model A109LUH helicopters; this AD does not as that model helicopter is not type certificated in the U.S.

Related Service Information Under 1 CFR Part 51

The FAA reviewed Leonardo Helicopters Bollettino Tecnico (BT) No. 109EP–152 for Model A109E helicopters, BT No. 109S–073 for Model A109S helicopters, and BT No. 109SP–108 for Model AW109SP helicopters, all dated December 15, 2016. The FAA also reviewed Leonardo Helicopters Alert Service Bulletin No. 109S–073, Revision A, dated November 23, 2018 for Model A109S helicopters. This service information contains procedures for inspecting the assembly for a crack and replacing the fire extinguishing bottle if there is a crack.

This service information is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section.

Costs of Compliance

The FAA estimates that this AD affects 107 helicopters of U.S. Registry. The FAA estimates that operators may incur the following costs in order to comply with this AD. Labor costs are estimated at $85 per work-hour.

Inspecting both assemblies requires about 2 work-hours, for an estimated

cost of $170 per helicopter and $18,190 for the U.S fleet, per inspection cycle.

Replacing a fire extinguishing bottle requires about 3 work-hours and parts cost about $6,432, for an estimated cost of $6,687 per helicopter.

According to Leonardo's service information, some of the costs of this AD may be covered under warranty, thereby reducing the cost impact on affected individuals. The FAA does not control warranty coverage by Leonardo. Accordingly, the FAA has included all costs in this cost estimate.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on helicopters identified in this rulemaking action.

Regulatory Findings

This AD will not have federalism implications under Executive Order 13132. This AD will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify that this AD:

(1) Is not a ''significant regulatory action'' under Executive Order 12866,

(2) Will not affect intrastate aviation in Alaska, and

(3) Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA amends 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive (AD):

2020–20–02 Leonardo S.p.a.: Amendment 39–21258; Docket No. FAA–2020–0413; Product Identifier 2017–SW–018–AD.

(a) Applicability

This AD applies to Leonardo S.p.a. Model A109E, A109S, and AW109SP helicopters, certificated in any category, with a fire extinguisher bottle part number (P/N) 27300–1 installed.

Note 1 to paragraph (a): Fire extinguisher bottle P/N 27300–1 may be installed as part of fire extinguisher kit P/N 109–0811–39–103, P/N 109–0811–39–107, or P/N 109–0811–39–109.

(b) Unsafe Condition

This AD defines the unsafe condition as a crack on a fire extinguisher bottle bypass outlet assembly. This condition could result in failure of the fire extinguishing system in the event of a fire in the engine area and subsequent loss of control of the helicopter.

(c) Effective Date

This AD becomes effective November 3, 2020.

(d) Compliance

You are responsible for performing each action required by this AD within the specified compliance time unless it has already been accomplished prior to that time.

(e) Required Actions

(1) Within 25 hours time-in-service (TIS) and thereafter at intervals not to exceed 200 hours TIS, using a mirror and a light, inspect the weld beads of each fire extinguisher bottle bypass outlet assembly for a crack in the areas depicted in Figure 2 of Leonardo Helicopters Bollettino Tecnico (BT) No. 109EP–152, BT No. 109S–073, or BT No. 109SP–108, each dated December 15, 2016, or Alert Service Bulletin No. 109S–073 Revision A, dated November 23, 2018, as applicable to your model helicopter. Pay particular attention to each circled area. If there is a crack, before further flight, replace the fire extinguisher bottle.

(2) After the effective date of this AD, do not install a fire extinguisher bottle P/N 27300–1 on any helicopter unless it has been inspected as required by paragraph (e)(1) of this AD.

(f) Alternative Methods of Compliance (AMOCs)

(1) The Manager, Rotorcraft Standards Branch, FAA, may approve AMOCs for this AD. Send your proposal to Eric Haight, Aviation Safety Engineer, Regulations and Policy Section, Rotorcraft Standards Branch, FAA, 10101 Hillwood Pkwy., Fort Worth, TX 76177; telephone 817–222–5110; email *9-ASW-FTW-AMOC-Requests@faa.gov.*

(2) For operations conducted under a 14 CFR part 119 operating certificate or under 14 CFR part 91, subpart K, the FAA suggests that you notify your principal inspector, or lacking a principal inspector, the manager of the local flight standards district office or certificate holding district office, before operating any aircraft complying with this AD through an AMOC.

(g) Additional Information

The subject of this AD is addressed in European Aviation Safety Agency (now European Union Aviation Safety Agency) (EASA) AD No. 2016–0261R1, dated February 13, 2020. You may view the EASA AD on the internet at *https://www.regulations.gov* in Docket No. FAA–2020–0413.

(h) Subject

Joint Aircraft Service Component (JASC) Code: 2620, Extinguishing System.

(i) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference of the service information listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this service information as applicable to do the actions required by this AD, unless the AD specifies otherwise.

(i) Leonardo Helicopters Alert Service Bulletin No. 109S–073, Revision A, dated November 23, 2018.

(ii) Leonardo Helicopters Bollettino Tecnico (BT) No. 109EP–152, dated December 15, 2016.

(iii) Leonardo Helicopters BT No. 109S–073, dated December 15, 2016.

(iv) Leonardo Helicopters BT No. 109SP–108, dated December 15, 2016.

(3) For service information identified in this AD, contact Leonardo, Emanuele Bufano, Head of Airworthiness, Viale G.Agusta 520, 21017 C.Costa di Samarate (Va) Italy; telephone +39–0331–225074; fax +39–0331–229046; or at *https://www.leonardocompany.com/en/home.*

(4) You may view this service information at the FAA, Office of the Regional Counsel, Southwest Region, 10101 Hillwood Pkwy., Room 6N–321, Fort Worth, TX 76177. For information on the availability of this material at the FAA, call 817–222–5110.

(5) You may view this service information that is incorporated by reference at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, email *fedreg.legal@nara.gov,* or go to: *https://www.archives.gov/federal-register/cfr/ibr-locations.html.*

Issued on September 18, 2020.

Lance T. Gant,

Director, Compliance & Airworthiness Division, Aircraft Certification Service.

14 CFR Part 39

[Docket No. FAA–2019–0412; Product Identifier 2018–CE–030–AD; Amendment 39–21253; AD 2020–19–10]

RIN 2120–AA64

Airworthiness Directives; Piaggio Aero Industries S.p.A.

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: The FAA is adopting a new airworthiness directive (AD) for Piaggio Aero Industries S.p.A. Model P–180 airplanes. This AD results from mandatory continuing airworthiness information (MCAI) issued by an aviation authority of another country to identify and correct an unsafe condition on an aviation product. The MCAI describes the unsafe condition as insufficient sealing of a steering select/bypass valve installed in the nose landing gear (NLG) manifold. The FAA is issuing this AD to address the unsafe condition on these products.

DATES: This AD is effective November 3, 2020.

The Director of the Federal Register approved the incorporation by reference of certain publications listed in this AD as of November 3, 2020.

ADDRESSES: For service information identified in this final rule, contact Piaggio Aero Industries S.p.A, Airworthiness Office, Via Pionieri e Aviatori d'Italia snc, 16154 Genova, Italy; phone: +39 010 0998046; email: *airworthiness@piaggioaerospace.it;* and internet: *https://www.piaggioaerospace.it/en/customer-support.* You may review this referenced service information at the FAA, Airworthiness Products Section, Operational Safety Branch, 901 Locust, Kansas City, Missouri 64106. For information on the availability of this material at the FAA, call (816) 329–4148. It is also available on the internet at *https://www.regulations.gov* by searching for and locating Docket No. FAA–2019–0412.

Examining the AD Docket

You may examine the AD docket on the internet at *https://www.regulations.gov* by searching for and locating Docket No. FAA–2019–0412; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this final rule, any comments received, and other information. The address for Docket Operations is Docket Operations, U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.

FOR FURTHER INFORMATION CONTACT: Mike Kiesov, Aerospace Engineer, FAA, General Aviation & Rotorcraft Section, International Validation Branch, 901 Locust, Room 301, Kansas City, Missouri 64106; telephone: (816) 329–4144; fax: (816) 329–4090; email: *mike.kiesov@faa.gov.*

SUPPLEMENTARY INFORMATION:

Discussion

The FAA issued a notice of proposed rulemaking (NPRM) to amend 14 CFR part 39 by adding an AD that would apply to all Piaggio Aero Industries S.p.A. Model P–180 airplanes. The NPRM published in the **Federal Register** on June 5, 2019 (84 FR 26025). The NPRM proposed to correct an unsafe condition for the specified products and was based on mandatory continuing airworthiness information (MCAI) originated by the European Aviation Safety Agency (EASA), which is the Technical Agent for the Member States of the European Union. EASA issued AD No. 2017–0229, dated November 21, 2017 (referred to after this as ''the MCAI''), which states:

> An occurrence was reported of finding insufficient sealing of a Steering Select/Bypass Valve installed on the nose landing gear (NLG) Steering Manifold of a P.180 aeroplane.
>
> This condition, if not detected and corrected, could lead to uncommanded deflection of the NLG wheel, possibly resulting in reduced control of the aeroplane on the ground, with consequent damage to the aeroplane and injury to occupants.
>
> To address this potential unsafe condition, PAI issued Service Bulletin (SB) 80–0325 to provide inspection and rectification instructions.
>
> For the reason described above, this [EASA] AD requires a leak test of the NLG Steering Manifold and, depending on the finding(s), accomplishment of applicable corrective action(s). This [EASA] AD also requires amendment of the applicable Aircraft Flight Manual (AFM).

The MCAI further notes that airplanes with NLG steering manifold part number 72608 installed are known to include manufacturing serial numbers 1001, 3001, 3003, 3004, 3006, 3007, and 3008, and also include airplanes that have incorporated Piaggio Aerospace Service Bulletin No. 80–0425, Revision 0, dated March 30, 2017, and Piaggio Aerospace Service Bulletin No. 80–0454, Revision 0, March 6, 2017. You may examine the MCAI on the internet at *https://www.regulations.gov* by searching for and locating Docket No. FAA–2019–0412.

Comments

The FAA gave the public the opportunity to participate in developing this final rule. No comments were received on the NPRM or on the determination of the cost to the public.

Conclusion

The FAA reviewed the relevant data and determined that air safety and the public interest require adopting this final rule as proposed.

Related Service Information Under 1 CFR Part 51

The FAA reviewed Piaggio Aerospace Service Bulletin No. 80–0325, Revision 0, dated August 10, 2017 (SB 80–0325), and Piaggio Aerospace P.180 AVANTI II/EVO Temporary Change No. 89, dated August 30, 2017 (Temporary Change 89), to the airplane flight manual (AFM). SB 80–0325 contains procedures for doing a NLG steering manifold leakage test. Temporary Change 89 contains emergency operating procedures for the pilot to follow if the NLG steering system fails. This service information is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section.

Other Related Service Information

The FAA reviewed Piaggio Aerospace Service Bulletin No. 80–0425, Revision 0, dated March 30, 2017 (SB 80–0425); Piaggio Aerospace Service Bulletin No. 80–0454, Revision 0, March 6, 2017 (SB 80–0454); and Temporary Change No. 89 Errata Corrige, dated December 20, 2017 (Temporary Change 89EC). SB 80–0425 and SB 80–0454 both contain procedures for replacing the main landing gear and the NLG steering system on the applicable airplanes. Temporary Change 89EC revises the cover page of Temporary Change 89 to clarify the applicability of the change.

Costs of Compliance

The FAA estimates that this AD will affect 130 products of U.S. registry. The FAA also estimates that it will take about 2.5 work-hours per product to comply with the basic requirements of this AD. The average labor rate is $85 per work-hour.

Based on these figures, the FAA estimates the cost of this AD on U.S. operators to be $27,625, or $212.50 per product.

If necessary, the FAA estimates that replacing a NLG steering manifold would take about 10 work-hours and require parts costing $50,058, for a cost of $50,908 per product. The FAA has no way of determining the number of products that may need these actions.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

This AD will not have federalism implications under Executive Order 13132. This AD will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify that this AD:

(1) Is not a ''significant regulatory action'' under Executive Order 12866,

(2) Will not affect intrastate aviation in Alaska, and

(3) Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA amends 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive (AD):

2020–19–10 Piaggio Aero Industries S.p.A.: Amendment 39–21253; Docket No. FAA–2019–0412; Product Identifier 2018–CE–030–AD.

(a) Effective Date

This AD is effective November 3, 2020.

(b) Affected ADs

None.

(c) Applicability

This AD applies to Piaggio Aero Industries S.p.A. Model P–180 airplanes, certificated in any category.

(d) Subject

Air Transport Association of America (ATA) Code 32: Landing Gear.

(e) Reason

This AD was prompted by mandatory continuing airworthiness information (MCAI) originated by an aviation authority of another country to identify and correct an unsafe condition on an aviation product. The MCAI describes the unsafe condition as insufficient sealing of a steering select/bypass valve installed in the nose landing gear (NLG) manifold. The FAA is issuing this AD to detect and correct insufficient sealing of the steering select/bypass valve in the NLG steering manifold, which could lead to uncommanded NLG wheel turns with consequent lateral runway departure.

(f) Actions and Compliance

Unless already done, do the following actions in paragraphs (f)(1) through (3) of this AD.

(1) For airplanes with NLG steering manifold part number (P/N) 72608 installed: (i) Within 50 hours time-in service after the effective date of this AD, do a steering manifold pressure leakage test and, if there is steering actuator movement during the test, replace the NLG steering manifold and repeat the test by following the Accomplishment Instructions, procedure steps (1) through (24), in Piaggio Aerospace Service Bulletin No. 80–0325, Revision 0, dated August 10, 2017.

(ii) If steering actuator movement occurs during procedure step (9) or procedure step (15) of the leakage test required in paragraph (f)(1)(i) of this AD, replacing the NLG steering manifold and repeating the steering manifold pressure leakage test is required before further flight.

(2) For all airplanes, after the effective date of this AD, do not install NLG steering manifold P/N 72608 on any airplane unless it has been inspected as specified in paragraph (f)(1) of this AD and no steering actuator movement occurred.

(3) For all airplanes, within 30 days after the effective date of this AD, revise the airplane flight manual (AFM) by replacing certain pages in the Emergency Procedures section of the AFM by following the Instructions in Piaggio Aerospace P.180 AVANTI II/EVO Temporary Change No. 89, dated August 30, 2017.

(g) Alternative Methods of Compliance

The Manager, International Validation Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. Send information to ATTN: Mike Kiesov, Aerospace Engineer, FAA, General Aviation & Rotorcraft, International Validation Branch, 901 Locust, Room 301, Kansas City, Missouri 64106; telephone: (816) 329–4144; fax: (816) 329–4090; email: *mike.kiesov@faa.gov.* Before using any approved AMOC on any airplane to which the AMOC applies, notify your appropriate principal inspector (PI) in the FAA Flight Standards District Office (FSDO), or lacking a PI, your local FSDO.

(g) Related Information

Refer to MCAI European Aviation Safety Agency AD No. 2017–0229, dated November 21, 2017, for related information. You may examine the MCAI on the internet at *https://www.regulations.gov* by searching for and locating Docket No. FAA–2019–0412.

(h) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference (IBR) of the service information listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this service information as applicable to do the actions required by this AD, unless the AD specifies otherwise.

(i) Piaggio Aerospace Service Bulletin No. 80–0325, Revision 0, dated August 10, 2017 (SB 80–0325).

(ii) Piaggio Aerospace P.180 AVANTI II/EVO Temporary Change No. 89, dated August 30, 2017 (Temporary Change 89).

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. FAA–2020–0555; Project Identifier AD–2020–00615–E; Amendment 39–21267; AD 2020–20–11]

RIN 2120–AA64

Airworthiness Directives; General Electric Company Turbofan Engines

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: The FAA is adopting a new airworthiness directive (AD) for certain General Electric Company (GE) GEnx–1B64/P2, –1B67/P2, –1B70/P2, –1B70C/P2, –1B70/75/P2, –1B74/75/P2, –1B76/P2, –1B76A/P2, and GEnx–2B67/P model turbofan engines. This AD was prompted by the detection of melt-related freckles in the billet, which may reduce the life limits of certain high-pressure turbine (HPT) rotor stage 2 disks and a certain stages 6–10 compressor rotor spool. This AD requires the removal of certain HPT rotor stage 2 disk and the removal of a certain stages 6–10 compressor rotor spool before reaching their new life limits. The FAA is issuing this AD to address the unsafe condition on these products.

DATES: This AD is effective November 3, 2020.

ADDRESSES: For service information identified in this final rule, contact General Electric Company, 1 Neumann Way, Cincinnati, OH 45215; phone: (513) 552–3272; email: *aviation.fleetsupport@ae.ge.com;* website: *www.ge.com.* You may view this service information at the FAA, Airworthiness Products Section, Operational Safety Branch, 1200 District Avenue, Burlington, MA 01803. For information on the availability of this material at the FAA, call 781–238–7759. It is also available on the internet at *https://www.regulations.gov* by searching for and locating Docket No. FAA–2020–0555.

Examining the AD Docket

You may examine the AD docket on the internet at *https://www.regulations.gov* by searching for and locating Docket No. FAA–2020–0555; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this final rule, any comments received, and other information. The address for Docket Operations is U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.

FOR FURTHER INFORMATION CONTACT: Mehdi Lamnyi, Aerospace Engineer, ECO Branch, FAA, 1200 District Avenue, Burlington, MA 01803; phone: 781–238–7743; fax: 781–238–7199; email: *Mehdi.Lamnyi@faa.gov.*

SUPPLEMENTARY INFORMATION:

Discussion

The FAA issued a notice of proposed rulemaking (NPRM) to amend 14 CFR part 39 by adding an AD that would apply to certain GE GEnx–1B64/P2, –1B67/P2, –1B70/P2, –1B70C/P2, –1B70/75/P2, –1B74/75/P2, –1B76/P2, –1B76A/P2, and GEnx–2B67/P model turbofan engines. The NPRM published in the **Federal Register** on June 8, 2020 (85 FR 35021). The NPRM was prompted by the detection of melt-related freckles in the billet, which may reduce the life limits of certain HPT rotor stage 2 disks and a certain stages 6–10 compressor rotor spool. The NPRM proposed to require the removal of certain HPT rotor stage 2 disk and the removal of a certain stages 6–10 compressor rotor spool before reaching their new life limits. The FAA is issuing this AD to address the unsafe condition on these products.

Comments

The FAA gave the public the opportunity to participate in developing this final rule. The following presents the comments received on the NPRM and the FAA's response to each comment.

Request to List Part and Serial Numbers

GE requested that both the affected part and serial numbers be listed in the Applicability section of this AD instead of the affected engine serial numbers.

The FAA agrees. The FAA recognizes that affected HPT rotor stage 2 disks could be moved from one engine to another engine. The intent of this AD is to mandate the removal of the affected parts from service, regardless of the engine on which they are installed. The FAA is revising the Applicability section of this AD as suggested by the commenter. This change does not expand the scope of this AD because the number of affected engines installed on airplanes of U.S. registry remains the same in this final rule compared to what was published in the NPRM.

Support for the AD

The Air Line Pilots Association, International; the Boeing Company; and United Airlines Engineering expressed support for the AD as written.

Conclusion

The FAA reviewed the relevant data, considered the comments received, and determined that air safety and the public interest require adopting this final rule with the changes described previously and minor editorial changes. The FAA has determined that these minor changes:

- Are consistent with the intent that was proposed in the NPRM for addressing the unsafe condition; and
- Do not add any additional burden upon the public than was already proposed in the NPRM.

The FAA also determined that these changes will not increase the economic burden on any operator or increase the scope of this final rule.

Related Service Information

The FAA reviewed GE GEnx–1B Service Bulletin (SB) 72–0473 R00, dated April 14, 2020; GE GEnx–1B SB 72–0474 R00, dated April 14, 2020; and GE GEnx–2B SB 72–0416 R00, dated April 14, 2020. GE GEnx–1B SB 72–0473 R00 describes procedures for removing and replacing the HPT rotor stage 2 disks on GE GEnx–1B model engines. GE GEnx–1B SB 72–0474 R00 describes procedures for removing and replacing the stages 6–10 compressor rotor spool on GE GEnx–1B model engines. GE GEnx–2B SB 72–0416 R00 describes procedures for removing and replacing the HPT rotor stage 2 disks on GE GEnx–2B model engines.

Costs of Compliance

The FAA estimates that this AD affects two engines installed on airplanes of U.S. registry; one engine requires the HPT rotor stage 2 disk replacement and one engine requires the stages 6–10 compressor rotor spool replacement.

The FAA estimates the following costs to comply with this AD:

ESTIMATED COSTS

Action	Labor cost	Parts cost	Cost per product	Cost on U.S. operators
Removal and replacement of the HPT rotor stage 2 disk	1,500 work-hours × $85 per hour = $127,500.	$458,900	$586,400	$586,400
Removal and replacement of the stages 6–10 compressor rotor spool.	600 work-hours × $85 per hour = $51,000.	1,018,600	1,069,600	1,069,600

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: ''General requirements.'' Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

This AD will not have federalism implications under Executive Order 13132. This AD will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify that this AD:

(1) Is not a ''significant regulatory action'' under Executive Order 12866,

(2) Will not affect intrastate aviation in Alaska, and

(3) Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA amends 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive (AD):

2020–20–11 General Electric Company: Amendment 39–21267; Docket No. FAA–2020–0555; Project Identifier AD–2020–00615–E.

(a) Effective Date

This AD is effective November 3, 2020.

(b) Affected ADs

None.

(c) Applicability

This AD applies to all General Electric Company (GE) GEnx–1B64/P2, –1B67/P2, –1B70/P2, –1B70C/P2, –1B70/75/P2, –1B74/75/P2, –1B76/P2, –1B76A/P2, and GEnx–2B67/P model turbofan engines with:

(1) a high-pressure turbine (HPT) rotor stage 2 disk, part number (P/N) 2383M86P02, having one of the following serial numbers (S/Ns): TMT18D6T, TMT18D6U, TMT18JC4, TMT18NGC, TMT1985C, TMT3UA34, TMT3UA55, TMT4CT46, or TMT4CT47, installed; or

(2) a stages 6–10 compressor rotor spool, P/N 2628M56G01, S/N GWN10ECM, installed.

(d) Subject

Joint Aircraft System Component (JASC) Code 7250, Turbine Section.

(e) Unsafe Condition

This AD was prompted by the detection of melt-related freckles in the billet, which may reduce the life limits of certain HPT rotor stage 2 disks and a certain stages 6–10 compressor rotor spool. The FAA is issuing this AD to prevent failure of the HPT rotor stage 2 disk and stages 6–10 compressor rotor spool. The unsafe condition, if not addressed, could result in uncontained release of both the HPT rotor stage 2 disk and the stages 6–10 compressor rotor spool, damage to the engine, and damage to the aircraft.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Required Actions

After the effective date of this AD, before the parts accumulate the cycles since new (CSN) threshold listed in Table 1 to paragraph (g) of this AD, remove the affected HPT rotor stage 2 disk and the stages 6–10 compressor rotor spool from service and replace with parts eligible for installation.

Table 1 to Paragraph (g) – Affected Parts and CSN Threshold

Part Name	Part P/N	Part S/N	CSN Threshold
HPT rotor stage 2 disk	2383M86P02	TMT18D6T	1,000
HPT rotor stage 2 disk	2383M86P02	TMT18D6U	1,000
HPT rotor stage 2 disk	2383M86P02	TMT18JC4	1,000
HPT rotor stage 2 disk	2383M86P02	TMT18NGC	1,000
HPT rotor stage 2 disk	2383M86P02	TMT1985C	1,000
HPT rotor stage 2 disk	2383M86P02	TMT3UA34	2,800
HPT rotor stage 2 disk	2383M86P02	TMT3UA55	2,800
HPT rotor stage 2 disk	2383M86P02	TMT4CT46	2,000
HPT rotor stage 2 disk	2383M86P02	TMT4CT47	2,000
Stages 6-10 compressor rotor spool	2628M56G01	GWN10ECM	6,500

(h) Installation Prohibition

After the effective date of this AD, do not install the affected HPT rotor stage 2 disks or the stages 6–10 compressor rotor spool identified in Table 1 to paragraph (g) of this AD on an engine.

(i) Alternative Methods of Compliance (AMOCs)

(1) The Manager, ECO Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the manager of the certification office, send it to the attention of the person identified in paragraph (j) of this AD. You may email your request to: *ANE-AD-AMOC@faa.gov.*

(2) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/certificate holding district office.

(j) Related Information

For more information about this AD, contact Mehdi Lamnyi, Aerospace Engineer, ECO Branch, FAA, 1200 District Avenue, Burlington, MA 01803; phone: 781–238–7743; fax: 781–238–7199; email: *Mehdi.Lamnyi@faa.gov.*

(k) Material Incorporated by Reference

None.

Issued on September 24, 2020.

Lance T. Gant,

Director, Compliance & Airworthiness Division, Aircraft Certification Service.

Airworthiness Directives; MHI RJ Aviation ULC (Type Certificate Previously Held by Bombardier, Inc.) Airplanes

AGENCY: Federal Aviation Administration (FAA), Department of Transportation (DOT).

ACTION: Final rule.

SUMMARY: The FAA is adopting a new airworthiness directive (AD) for all MHI RJ Aviation ULC Model CL–600–2B19 (Regional Jet Series 100 & 440), CL–600–2C10 (Regional Jet Series 700, 701 & 702), CL–600–2C11 (Regional Jet Series 550), CL–600–2D15 (Regional Jet Series 705), CL–600–2D24 (Regional Jet Series 900), and CL–600–2E25 (Regional Jet Series 1000) airplanes. This AD was prompted by a determination that certain airplanes have outdated magnetic variation (MV) tables inside navigation systems. This AD requires revising the existing airplane flight manual (AFM) to update the Flight Management System (FMS), Inertial Reference System (IRS), and Attitude and Heading Reference System (AHRS) limitations. The FAA is issuing this AD to address the unsafe condition on these products.

DATES: This AD is effective November 3, 2020.

The Director of the Federal Register approved the incorporation by reference of certain publications listed in this AD as of November 3, 2020.

ADDRESSES: For service information identified in this final rule, contact MHI RJ Aviation ULC, 12655 Henri-Fabre Blvd., Mirabel, Québec J7N 1E1 Canada; Widebody Customer Response Center North America toll-free telephone +1–844–272–2720 or direct-dial telephone +1–514–855–8500; fax +1–514–855–8501; email *thd.crj@mhirj.com;* internet *https://mhirj.com.* You may view this service information at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195. It is also available on the internet at *https://www.regulations.gov* by searching for and locating Docket No. FAA–2020–0206.

Examining the AD Docket

You may examine the AD docket on the internet at *https://www.regulations.gov* by searching for and locating Docket No. FAA–2020–0206; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this final rule, any comments received, and other information. The address for Docket Operations is U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.

FOR FURTHER INFORMATION CONTACT: Siddeeq Bacchus, Aerospace Engineer, Mechanical Systems and Administrative Services Section, FAA, New York ACO Branch, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; telephone 516–228–7362; fax 516–794–5531; email *9-avs-nyaco-cos@faa.gov.*

SUPPLEMENTARY INFORMATION:

Discussion

Transport Canada Civil Aviation (TCCA), which is the aviation authority for Canada, has issued Canadian AD CF–2019–40, dated November 1, 2019 (''Canadian AD CF–2019–40'') (also referred to as the Mandatory Continuing Airworthiness Information, or ''the MCAI''), to correct an unsafe condition for all MHI RJ Aviation ULC (type certificate previously held by Bombardier, Inc.) Model CL–600–2B19 (Regional Jet Series 100 & 440), CL–600–2C10 (Regional Jet Series 700, 701 & 702), CL–600–2C11 (Regional Jet Series 550), CL–600–2D15 (Regional Jet Series 705), CL–600–2D24 (Regional Jet Series 900), and CL–600–2E25 (Regional Jet Series 1000) airplanes. You may examine the MCAI in the AD docket on the internet at *https://www.regulations.gov* by searching for and locating Docket No. FAA–2020–0206.

The FAA issued a notice of proposed rulemaking (NPRM) to amend 14 CFR part 39 by adding an AD that would apply to all MHI RJ Aviation ULC Model CL–600–2B19 (Regional Jet Series 100 & 440), CL–600–2C10 (Regional Jet Series 700, 701 & 702), CL–600–2C11 (Regional Jet Series 550), CL–600–2D15 (Regional Jet Series 705), CL–600–2D24 (Regional Jet Series 900), and CL–600–2E25 (Regional Jet Series 1000) airplanes. The NPRM published in the **Federal Register** on March 26, 2020 (85 FR 17036). The NPRM was prompted by a determination that certain airplanes have outdated MV tables inside navigation systems. The NPRM proposed to require revising the existing AFM to update the FMS, IRS, and AHRS limitations. The FAA is issuing this AD to address outdated MV tables inside navigation systems, which can affect the performance of the navigation systems and result in the presentation of misleading magnetic heading references on the Primary Flight Displays (PFDs) and Multi-Function Displays (MFDs), positioning the airplane outside of the terrain and obstacle protection provided by instrument flight procedures and flight route designs (*e.g.,* outdated MV tables can lead to significantly inaccurate heading, course, and bearing calculations). See the MCAI for additional background information.

Comments

The FAA gave the public the opportunity to participate in developing this final rule. The following presents the comments received on the NPRM and the FAA's response to each comment.

Support for the NPRM

The Airline Pilots Association, International stated its support for the NPRM.

Request To Refer to the Latest Service Information

Bombardier requested that the FAA refer to the latest service information in the NPRM. Bombardier noted that the proposed rule does not refer to the latest AFM revisions, but acknowledged that the proposed rule does refer to the AFM revisions that introduced changes to the MV tables in the limitations sections of the AFMs. Bombardier listed the current AFM revisions as of the time the comment was submitted.

The FAA does not agree. This AD does not directly mandate incorporating a specific revision level of the corresponding AFMs, but does require incorporating the information provided in the referenced AFM revisions in paragraph (g) of this AD. The language in paragraph (g) of this AD is designed to allow the incorporation of this information to be accomplished independent of the revision level of the AFM, under the condition that the incorporated information is identical to the information that is provided in the referenced AFM revisions specific in paragraph (g) of this AD. The FAA notes that when this comment was submitted, the information provided by the revisions of the AFMs listed by the commenter was identical to the information provided in the referenced AFM revisions in paragraph (g) of this AD. The FAA has not changed the AD in this regard.

Conclusion

The FAA reviewed the relevant data, considered the comments received, and determined that air safety and the public interest require adopting this final rule as proposed, except for minor editorial changes. The FAA has determined that these minor changes:

- Are consistent with the intent that was proposed in the NPRM for addressing the unsafe condition; and
- Do not add any additional burden upon the public than was already proposed in the NPRM.

Related Service Information Under 1 CFR Part 51

Bombardier has issued the following service information, which describes procedures for updating, among other systems, the FMS, IRS, and AHRS. These documents are distinct since they apply to different airplane models.

- Section 02–09—Navigation System Limitations, of Chapter 2—LIMITATIONS, of the Bombardier CRJ Series Regional Jet Model CL–600–2B19 Airplane Flight Manual, CSP A–012, Volume 1, Revision 71A, dated April 26, 2019.
- Section 02–09—Navigation System Limitations, of Chapter 2—LIMITATIONS, of the Bombardier CRJ Series Regional Jet Model CL–600–2C10 (Series 700, 701, 702) Airplane Flight Manual, CSP B–012, Revision 26, dated March 1, 2019.
- Section 02–09—Navigation System Limitations, of Chapter 2—LIMITATIONS, of the Bombardier CRJ Series Regional Jet Model CL–600–2C10 (Series 700, 701, 702) and CL–600–2C11 (Series 550) Airplane Flight Manual, CSP B–012, Revision 28, dated September 18, 2019.
- Section 02–09—Navigation System Limitations, of Chapter 2—LIMITATIONS, of the Bombardier CRJ Series Regional Jet Model CL–600–2D24 (Series 900) and CL–600–2D15 (Series 705) Airplane Flight Manual, CSP C–012, Volume 1, Revision 21, dated March 29, 2019.
- Section 02–09—Navigation System Limitations, of Chapter 2—LIMITATIONS, of the Bombardier CRJ Series Regional Jet Model CL–600–2E25 (Series 1000) Airplane Flight Manual, CSP D–012, Revision 21, dated February 15, 2019.

This service information is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section.

Costs of Compliance

The FAA estimates that this AD affects 1,072 airplanes of U.S. registry.

The FAA estimates the following costs to comply with this AD:

ESTIMATED COSTS FOR REQUIRED ACTIONS

Labor cost	Parts cost	Cost per product	Cost on U.S. operators
1 work-hour × $85 per hour = $85	$0	$85	$91,120

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

This AD will not have federalism implications under Executive Order 13132. This AD will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify that this AD:

(1) Is not a ''significant regulatory action'' under Executive Order 12866,

(2) Will not affect intrastate aviation in Alaska, and

(3) Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA amends 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive (AD):

2020–17–15 MHI RJ Aviation ULC (Type Certificate Previously Held by Bombardier, Inc.): Amendment 39–21220; Docket No. FAA–2020–0206; Product Identifier 2019–NM–202–AD.

(a) Effective Date

This AD is effective November 3, 2020.

(b) Affected ADs

None.

(c) Applicability

This AD applies to MHI RJ Aviation ULC (type certificate previously held by Bombardier, Inc.) Model CL–600–2B19 (Regional Jet Series 100 & 440), CL–600–2C10 (Regional Jet Series 700, 701 & 702), CL–600–2C11 (Regional Jet Series 550), CL–600–2D15 (Regional Jet Series 705), CL–600–2D24 (Regional Jet Series 900), and CL–600–2E25 (Regional Jet Series 1000) airplanes, certificated in any category, all serial numbers.

(d) Subject

Air Transport Association (ATA) of America Code 34, Navigation.

(e) Reason

This AD was prompted by a determination that certain airplanes have outdated magnetic variation (MV) tables inside navigation systems. The FAA is issuing this AD to address outdated MV tables inside navigation systems, which can affect the performance of the navigation systems and result in the presentation of misleading magnetic heading references on the Primary Flight Displays (PFDs) and Multi-Function Displays (MFDs), positioning the airplane outside of the terrain and obstacle protection provided by instrument flight procedures and flight route designs (*e.g.,* outdated MV tables can lead to significantly inaccurate heading, course, and bearing calculations).

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Airplane Flight Manual (AFM) Revision

Within 30 days after the effective date of this AD, revise the existing AFM to incorporate the information specified in Section 02–09—Navigation System Limitations, of Chapter 2—LIMITATIONS, of the applicable Bombardier CRJ Series Regional Jet AFM specified in figure 1 to paragraph (g) of this AD.

Figure 1 to paragraph (g) – *AFM Revisions*

MHI RJ Aviation ULC Airplane Model	AFM Title	AFM Revision
CL-600-2B19	Bombardier CRJ Series Regional Jet Model CL-600-2B19 AFM, CSP A-012, Volume 1	Revision 71A, dated April 26, 2019
CL-600-2C10	Bombardier CRJ Series Regional Jet Model CL-600-2C10 (Series 700, 701, 702) AFM, CSP B-012	Revision 26, dated March 1, 2019
CL-600-2C11	Bombardier CRJ Series Regional Jet Model CL-600-2C10 (Series 700, 701, 702) and CL-600-2C11 (Series 550) AFM, CSP B-012	Revision 28, dated September 18, 2019
CL-600-2D15 and CL-600-2D24	Bombardier CRJ Series Regional Jet Model CL-600-2D24 (Series 900) and CL-600-2D15 (Series 705) AFM, CSP C-012, Volume 1	Revision 21, dated March 29, 2019
CL-600-2E25	Bombardier CRJ Series Regional Jet Model CL-600-2E25 (Series 1000) AFM, CSP D-012	Revision 21, dated February 15, 2019

(h) Other FAA AD Provisions

The following provisions also apply to this AD:

(1) *Alternative Methods of Compliance (AMOCs):* The Manager, New York ACO Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the manager of the certification office, send it to ATTN: Program Manager, Continuing Operational Safety, FAA, New York ACO Branch, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; telephone 516–228–7300; fax 516–794–5531. Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/certificate holding district office.

(2) Contacting the Manufacturer: For any requirement in this AD to obtain instructions from a manufacturer, the instructions must be accomplished using a method approved by the Manager, New York ACO Branch, FAA; or Transport Canada Civil Aviation (TCCA); or MHI RJ Aviation ULC's TCCA Design Approval Organization (DAO). If approved by the DAO, the approval must include the DAO-authorized signature.

(i) Related Information

(1) Refer to Mandatory Continuing Airworthiness Information (MCAI) Canadian AD CF–2019–40, dated November 1, 2019, for related information. This MCAI may be found in the AD docket on the internet at *https://www.regulations.gov* by searching for and locating Docket No. FAA–2020–0206.

(2) For more information about this AD, contact Siddeeq Bacchus, Aerospace Engineer, Mechanical Systems and Administrative Services Section, FAA, New York ACO Branch, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; telephone 516–228–7362; fax 516–794–5531; email *9-avs-nyaco-cos@faa.gov.*

(j) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference (IBR) of the service information listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this service information as applicable to do the actions required by this AD, unless this AD specifies otherwise.

(i) Section 02–09—Navigation System Limitations, of Chapter 2—LIMITATIONS, of the Bombardier CRJ Series Regional Jet Model CL–600–2B19 Airplane Flight Manual, CSP A–012, Volume 1, Revision 71A, dated April 26, 2019.

(ii) Section 02–09—Navigation System Limitations, of Chapter 2—LIMITATIONS, of the Bombardier CRJ Series Regional Jet Model CL–600–2C10 (Series 700, 701, 702) Airplane Flight Manual, CSP B–012, Revision 26, dated March 1, 2019.

Note 1 to paragraph (j)(2)(ii): Page 02–09–1 of this document is identified as Revision 22, dated September 15, 2017.

(iii) Section 02–09—Navigation System Limitations, of Chapter 2—LIMITATIONS, of the Bombardier CRJ Series Regional Jet Model CL–600–2C10 (Series 700, 701, 702) and CL–600–2C11 (Series 550) Airplane Flight Manual, CSP B–012, Revision 28, dated September 18, 2019.

Note 2 to paragraph (j)(2)(iii): Page 02–09–1 of this document is identified as Revision 22, dated September 15, 2017.

(iv) Section 02–09—Navigation System Limitations, of Chapter 2—LIMITATIONS, of the Bombardier CRJ Series Regional Jet Model CL–600–2D24 (Series 900) and CL–600–2D15 (Series 705) Airplane Flight Manual, CSP C–012, Volume 1, Revision 21, dated March 29, 2019.

Note 3 to paragraph (j)(2)(iv): Page 02–09–1 of this document is identified as Revision 17, dated October 13, 2017.

(v) Section 02–09—Navigation System Limitations, of Chapter 2—LIMITATIONS, of the Bombardier CRJ Series Regional Jet Model CL–600–2E25 (Series 1000) Airplane Flight Manual, CSP D–012, Revision 21, dated February 15, 2019.

Note 4 to paragraph (j)(2)(v): Page 02–09–1 of this document is identified as Revision 17, dated June 16, 2017.

DEPARTMENT OF COMMERCE

National Institutes of Standards and Technology

15 CFR Part 287

[Docket No.: 200813–0217]

RIN 0693–AB65

Guidance on Federal Conformity Assessment Activities

AGENCY: National Institute of Standards and Technology (NIST), United States Department of Commerce.

ACTION: Final rule.

SUMMARY: The National Institute of Standards and Technology (NIST) announces revisions to regulations updating guidance on Federal agency use of conformity assessment that reflects advancement in conformity assessment concepts, and the evolution in Federal agency strategies and coordination in using and relying on conformity assessment. The provisions are solely intended to be used as guidance for agencies in their use and reliance on conformity assessment to meet agency requirements and do not preempt the agency authority and responsibility to make decisions authorized by statute or required in establishing regulatory, procurement, or programmatic activities.

DATES: This rule is effective October 29, 2020.

FOR FURTHER INFORMATION CONTACT: Mr. Gordon Gillerman via email at *15CFR287@nist.gov,* or by phone at (301) 975–4000.

SUPPLEMENTARY INFORMATION:

I. Purpose of This Guidance

The guidance outlines Federal agencies' responsibilities for using conformity assessment to meet respective agency requirements in an efficient and cost-effective manner for the agency and its stakeholders. To reduce unnecessary complexity and make productive use of Federal resources, this guidance emphasizes that agencies should consider coordinating conformity assessment activities with those of other appropriate government agencies (Federal, State, and local) and with those in the private sector. This guidance does not preempt agency authority and responsibility to make decisions authorized by statute or required in establishing regulatory, procurement, or program activities. This guidance also does not preempt agency authority and responsibility in determining or implementing procurement, regulatory, or programmatic requirements.

II. Background

Section 12 of the National Technology Transfer and Advancement Act (NTTAA) of 1995 directs NIST to ''coordinate technical standards activities and conformity assessment activities of Federal, State, and local governments with private sector technical standards activities and conformity assessment activities, with the goal of eliminating unnecessary duplication and complexity in the development and promulgation of conformity assessment requirements and measures'' (15 U.S.C. 272(b)(13)). NIST originally issued the guidance found in 15 CFR part 287 (this Guidance) on August 10, 2000, in response to Office of Management and Budget (OMB) Circular A–119 (February 10, 1998) directing the Secretary of Commerce to issue guidance to Federal agencies to ensure effective coordination of Federal conformity assessment activities (65 FR 48894). The January 2016 revision to OMB Circular A–119 re-emphasizes NIST's role in issuing guidance to agencies as well as Federal agencies responsibilities with respect to conformity assessment. NIST is revising this guidance to reflect progression in conformity assessment concepts and evolution in Federal agency strategies and coordination in using and relying on conformity assessment.

This guidance is one of several activities undertaken by the NIST Standards Coordination Office to update its guidance, training, and other artifacts that help agencies develop and use conformity assessment. As a first activity, NIST provided significant input to the conformity assessment related policies of OMB Circular A–119. NIST released two NIST Special Publications (SPs) in September 2018. NIST SP 2000–01, *ABCs of Conformity Assessment,* serves as a primer for the topic of conformity assessment, and NIST SP 2000–02, *Conformity Assessment Considerations for Federal Agencies,* provides agencies with a path to follow in considering the development, use or improvement of conformity assessment to meet their requirements. The revisions to 15 CFR part 287 represent NIST's most recent effort to provide Federal agencies with up-to-date tools for effective use of conformity assessment.

Summary of Changes Between the Proposed Rule and Final Rule

On February 7, 2020, NIST published a notice of proposed rulemaking (NPRM) in the **Federal Register** (85 FR 7258) requesting public comments on proposed revisions to regulations updating policy guidance on Federal agency use of conformity assessment that reflects advancement in conformity assessment concepts, and the evolution in Federal agency strategies and coordination in using and relying on conformity assessment. Nine (9) entities submitted comments, including two (2) accreditation bodies, one (1) conformity assessment body, two (2) individuals, three (3) industry associations, and one (1) regional government. The following is a summary and analysis of the comments received during the public comment period, and NIST's responses including the recommendations and issues considered in the development of the CFR.

1. *Comment:* Commenters indicated that definitions should be updated to include new terminology and definitions for state agency, local agency, state standards executive, and local standards executive. In addition, commenters indicated changes to the definition of conformity assessment were necessary to ensure consistency between NIST conformity assessment publications and this guidance.

Response: NIST agrees with the need for consistency of definitions and has aligned the definitions in 15 CFR 287.2, Definitions, with those in OMB Circular

A–119. NIST does not have the authority to define roles for a state standards executive or a local standards executive. The definition of NIST as an acronym has been removed from this guidance. During the rulemaking process, NIST realized this definition was unnecessary and that its removal does not result in substantive changes.

2. *Comment:* Commenters supported removal of examples (*i.e.,* conformity assessment organizations by name and specific standards) from the NPRM. Other comments were received that support continued inclusion of examples.

Response: NIST reviewed the impact of the comments and has removed the examples. While they may be valuable as a learning vehicle, the use of examples may lead agencies to believe there are limited ways to address specific needs. In addition, the inclusion of some examples, (and exclusion of others) may be perceived as an endorsement or criticism by NIST.

3. *Comment:* Commenters responded that they were concerned changes reflected a reduction in NIST's role working with agencies and indicated that a central coordination role should be included to guide, collect, and disseminate Federal, State, and local conformity assessment activities.

Response: The roles and responsibilities of Federal agencies, including NIST, with respect to conformity assessment are stated in the National Technology Transfer and Advancement Act (NTTAA) and OMB Circular A–119. NIST does not interpret its statutory coordination role under the NTTAA with respect to State and local agencies to include the collection and dissemination of conformity assessment information from State and local agencies, as the explicit purpose of the relevant provision is limited to eliminating unnecessary duplication and complexity in the development and promulgation of conformity assessment requirements and measures.

4. *Comment:* Commenters responded that greater emphasis was placed on the role of the Interagency Committee for Standards Policy (ICSP), including coordination of conformity assessment activities through this committee in the proposed revisions to the regulations than the original CFR.

Response: NIST has clarified language in 15 CFR 287.3(c) regarding the role of the ICSP by adding the phrase, ''and other means,'' so that the new provision will indicate that NIST intends to ''work with agencies through the ICSP and other means to coordinate Federal, State and local conformity assessment activities with private sector conformity assessment activities.'' NIST utilizes the ICSP to exchange information, provide direction to Federal agencies, and provide opportunities for coordination. The ICSP provides a conduit for sharing conformity assessment information across agencies.

5. *Comment:* Commenters requested the use of Federal agency viewpoints in the development of voluntary consensus standards related to conformity assessment. In addition, commenters indicated that the term ''voluntary consensus conformity assessment related standards'' is not defined and may cause industry confusion.

Response: NIST has revised 15 CFR 287.4(g) to clarify the role of agencies in development of voluntary consensus standards as well as development of voluntary consensus standards related to conformity assessment. In addition, NIST intends to revise the term ''voluntary consensus conformity assessment related standard'' to ''voluntary consensus standards related to conformity assessment.''

6. *Comment:* Commenters indicated that NIST should not extend the review period of the effectiveness of this guidance from three to five years. Commenters expressed the need for frequent review due to the complex and dynamic nature of conformity assessment in addition to transparency and openness.

Response: NIST has kept the proposed language and maintained the five-year review of the effectiveness of the guidance consistent with the review periodicity of OMB Circular A–119.

7. *Comment:* Commenters indicated a need for state and local government conformity assessment coordination in addition to coordination within the Federal Government in 15 CFR 287.3, NIST Responsibilities, and 15 CFR 287.4, Federal Agency Responsibilities.

Response: NIST has retained the language as written in the CFR. The proposed language is consistent with the statutory authority in NTTAA as well as OMB Circular A–119. NIST does not have the authority to expand the role of other Federal agencies regarding coordination of state and local conformity assessment activities.

III. Applicability of This Guidance

This guidance applies to all agencies, which set policy for, manage, operate, or use conformity assessment activities and results. ''Agency'' means any Executive Department, independent commission, board, bureau, office, government-owned or controlled corporation, or other establishment of the Federal Government. It also includes any regulatory commission or board, except for independent regulatory commissions insofar as they are subject to separate statutory requirements regarding policy setting, management, operation, and use of conformity assessment activities. It does not include the legislative or judicial branches of the Federal Government although those branches may use this guidance to inform their own use of conformity assessment.

IV. Classification

Executive Order 12866

This rulemaking is not a significant regulatory action under Executive Order 12866.

Executive Order 13771

This rule is not subject to the requirements of Executive Order 13771, because its likely impact is *de minimis.*

Executive Order 13132

This rule does not contain policies with federalism implications as defined in Executive Order 13132.

Regulatory Flexibility Act

The Chief Counsel for Regulation for the Department of Commerce certified at the proposed rule stage to the Chief Counsel for Advocacy of the Small Business Administration under the provisions of the Regulatory Flexibility Act, 5 U.S.C. 605(b), that this rule, if adopted, would not have a significant economic impact on a substantial number of small business entities. No comments were received on this certification, so no Final Regulatory Flexibility Analysis is required, and none has been prepared.

Paperwork Reduction Act

This rule contains no new collection of information subject to the Paperwork Reduction Act, 44 U.S.C. 3501 *et seq.*

National Environmental Policy Act

This rule will not significantly affect the quality of the human environment. Therefore, neither an environmental assessment nor an Environmental Impact Statement is required to be prepared under the National Environmental Policy Act of 1969.

List of Subjects in 15 CFR Part 287

Conformity assessment, Procurement, Trade agreements, Voluntary standards.

■ For the reasons stated in the preamble, the National Institute of Standards and Technology revises 15 CFR part 287 to read as follows:

PART 287—GUIDANCE ON FEDERAL CONFORMITY ASSESSMENT

Sec.
287.1 Purpose and scope of this part.
287.2 Definitions.
287.3 Responsibilities of the National Institute of Standards and Technology.
287.4 Responsibilities of Federal agencies.
287.5 Responsibilities of Agency Standards Executives.

Authority: 15 U.S.C. 272.

§ 287.1 Purpose and scope of this part.

(a) This part outlines Federal agencies' responsibilities for using conformity assessment to meet respective agency requirements in an efficient and cost-effective manner for the agency and its stakeholders. To reduce unnecessary complexity and make productive use of Federal resources, this part emphasizes that agencies should consider coordinating conformity assessment activities with those of other appropriate government agencies (Federal, State, and local) and with those in the private sector.

(b) Using conformity assessment in a manner consistent with this part supports U.S. Government efforts to meet trade obligations and demonstrate good regulatory practices, which reduces unnecessary obstacles to international trade and improves market access for products and services.

(c) This part applies to all agencies which set policy for, manage, operate, or use conformity assessment. This part does not preempt the agencies' authority and responsibility to make decisions authorized by statute or required to meet regulatory, procurement, or programmatic objectives and requirements. These decision-making activities include: determining the level of acceptable regulatory or procurement risk; setting the level of protection; balancing risk, cost, and availability of technology and technical resources (where statutes permit) in establishing regulatory, procurement, and program requirements.

(d) Each agency retains broad discretion in its selection and use of conformity assessment activities and may elect not to use or recognize alternative conformity assessment approaches if the agency deems the alternatives to be inappropriate, inadequate, or inconsistent with statutory criteria or programmatic objectives and requirements. Nothing contained in this part shall give any party any claim or cause of action against the Federal Government or any agency thereof. Each agency remains responsible for representation of the agency's views on conformity assessment in matters under its jurisdiction. Each agency also remains the primary point of contact for information on the agency's regulatory, procurement, or programmatic conformity assessment actions.

§ 287.2 Definitions.

For the purposes of this part:

Agency means any Executive Department, independent commission, board, bureau, office, government-owned or controlled corporation, or other establishment of the Federal Government. It also includes any regulatory commission or board, except for independent regulatory commissions insofar as they are subject to separate statutory requirements regarding policy setting, management, operation, and use of conformity assessment. It does not include the legislative or judicial branches of the Federal Government.

Agency Standards Executive means an official designated by an agency as its representative on the Interagency Committee for Standards Policy (ICSP) and delegated the responsibility for agency implementation of Office of Management and Budget (OMB) Circular A–119 and the guidance in this part.

Conformity assessment is a demonstration, whether directly or indirectly, that specified requirements relating to a product, process, system, person, or body are fulfilled. Requirements for products, services, systems, persons, and organizations are those defined by law or regulation, by an agency in regulatory or procurement actions, or an agency programmatic policy. Conformity assessment does not include mandatory administrative procedures (such as registration notification) for granting permission for a good or service to be produced, marketed, or used for a stated purpose or under stated conditions. Conformity assessment related terminology and concepts, including a discussion of the value and benefits of conformity assessment, are contained in NIST Special Publication 2000–01, *ABCs of Conformity Assessment* (2018) found free of charge at: *https://doi.org/10.6028/NIST.SP.2000-01* and *NIST Special Publication 2000–02, Conformity Assessment Considerations for Federal Agencies,* found at: *https://doi.org/10.6028/NIST.SP.2000-02.* The definitions of conformity assessment related terminology included in these documents are based on voluntary consensus standards. See OMB Circular A–119 for a description of voluntary consensus standards and recommendations for their development and use by Federal agencies.

§ 287.3 Responsibilities of the National Institute of Standards and Technology.

(a) Coordinate issues related to agency conformity assessment program development, use, and implementation and issue guidance, training material, and other material to assist Federal agencies in understanding and applying conformity assessment to meet their requirements. Material is available at *https://www.standards.gov.*

(b) Chair the Interagency Committee on Standards Policy (ICSP); encourage participation in the ICSP; as well as provide resource support to the ICSP and its working groups related to conformity assessment issues, as needed.

(c) Work with agencies through the ICSP and other means to coordinate Federal, State, and local conformity assessment activities with private sector conformity assessment activities.

(d) Participate in the development of voluntary consensus standards, recommendations, and guidelines related to conformity assessment to ensure that Federal viewpoints are represented.

(e) Increase awareness of the importance of public and private sector conformity assessment through development and publication of conformity assessment resources. Material is available at *https://www.standards.gov.*

(f) To the extent that resources are available and upon request by a state government agency, work with that state agency to reduce duplication and complexity in state conformity assessment activities.

(g) Review, within five years from October 29, 2020, the effectiveness of the guidance in this part and recommend modifications to the Secretary as needed.

§ 287.4 Responsibilities of Federal agencies.

Each agency should:

(a) Implement the policies contained in the guidance in this part. Agencies may rely on NIST Special Publication 2000–02 *Conformity Assessment Considerations for Federal Agencies* found free of charge at *https://doi.org/10.6028/NIST.SP.2000-02.*

(b) Develop and implement conformity assessment in a manner that meets regulatory, procurement, and programmatic objectives; reduces unnecessary complexity for stakeholders; makes productive use of Federal resources; and meets international trade agreement obligations.

(c) Provide a rationale for its use of specified conformity assessment in

rulemaking, procurement actions, and agency programs to the extent feasible. Further, when notice and comment rulemaking is otherwise required, each agency should provide the opportunity for public comment on the rationale for the agency's conformity assessment decision.

(d) Work with other Federal agencies to avoid unnecessary duplication and complexity in Federal conformity assessment activities.

(e) Consider leveraging the activities and results of other governmental agency and private sector programs in lieu of creating government-unique programs or to enhance the effectiveness of proposed new and existing conformity assessment.

(f) Give a preference for using voluntary consensus standards, guides, and recommendations related to conformity assessment in agency operations. Each agency retains responsibility for determining which, if any, of these documents are relevant to its needs. See OMB Circular A–119 for a description of voluntary consensus standards and recommendations for their development and use by Federal agencies.

(g) Participate, as needed, representing agency and Federal viewpoints, in efforts to develop voluntary consensus standards, guideline, and recommendations related to conformity assessment.

(h) Participate, as needed, representing agency and Federal viewpoints in efforts designed to improve coordination among governmental and private sector conformity assessment activities.

(i) Work with NIST, other Federal agencies, ICSP members, and the private sector to coordinate U.S. conformity assessment needs, practices, and requirements in support of the efforts of the U.S. Government and U.S. industry to increase international trade of U.S. products and services.

(j) Assign an Agency Standards Executive the responsibility for coordinating agency-wide implementation of the guidance in this part who is situated in the agency's organizational structure such that the Agency Standards Executive is kept regularly apprised of the agency's regulatory, procurement, and other mission-related activities, and has sufficient authority within the agency to ensure implementation of the guidance in this part.

§ 287.5 Responsibilities of Agency Standards Executives.

Each Agency Standards Executive should:

(a) Carry out the duties in OMB Circular A–119 related to conformity assessment activities.

(b) Encourage effective use of agency conformity assessment related resources.

(c) Provide ongoing assistance and policy guidance to the agency on significant issues in conformity assessment.

(d) Contribute to the development and dissemination of:

(1) Internal agency policies related to conformity assessment issues; and

(2) Agency positions on conformity assessment related issues that are in the public interest.

(e) Work with other parts of the agency to develop and implement improvements in agency conformity assessment activities.

(f) Participate in the Interagency Committee on Standards Policy (ICSP) as the agency representative and member.

(g) Promote agency participation in ICSP working groups related to conformity assessment issues, as needed.

(h) Encourage agency participation in efforts related to the development of voluntary consensus standards, recommendations, and guidelines related to conformity assessment consistent with agency missions, authorities, priorities, and resources.

(i) Establish an ongoing process for reviewing the agency's conformity assessment programs and identify areas where efficiencies can be achieved through coordination within the agency and among other agencies and private sector conformity assessment activities.

Kevin A. Kimball,

Chief of Staff.

BILLING CODE 3510–13–P

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

24 CFR Part 75

[Docket No. FR–6085–N–04]

Section 3 Benchmarks for Creating Economic Opportunities for Low- and Very Low-Income Persons and Eligible Businesses

AGENCY: Office of the Assistant Deputy Secretary for Field Policy and Management, HUD.

ACTION: Notification of benchmarks.

SUMMARY: Section 3 of the Housing and Urban Development Act of 1968, as amended by the Housing and Community Development Act of 1992 (Section 3), contributes to the establishment of stronger, more sustainable communities by ensuring that employment and other economic opportunities generated by Federal financial assistance for housing and community development programs are, to the greatest extent feasible, directed toward low- and very low-income persons, particularly those who are recipients of government assistance for housing. HUD is statutorily charged with the authority and responsibility to implement and enforce Section 3. Elsewhere in this issue of the **Federal Register**, HUD published a final rule that would amend the Section 3 regulations to, among other things, increase Section 3's impact, and streamline and update HUD's reporting and tracking requirements. The final rule includes a requirement that HUD set Section 3 benchmarks by publishing a notification, subject to public comment, in the **Federal Register**. If a recipient complies with the statutory priorities regarding effort and meets the outcome benchmarks in this document, HUD will presume the recipient is following Section 3 requirements, absent evidence to the contrary.

DATES: *Effective Date.* October 29, 2020.

FOR FURTHER INFORMATION CONTACT: Alastair W. McFarlane, Director, Economic Development and Public Finance Division, Office of Policy Development and Research, Department of Housing and Urban Development, 451 7th Street SW, Room 8216, Washington, DC 20410; telephone 202–402–5845 (voice/TDD) (this is not a toll-free number). Persons with hearing or speech impairments may access this number through TTY by calling the Federal Relay Service, toll-free at, 800–877–8339. General email inquiries regarding Section 3 may be sent to: *section3@hud.gov.*

SUPPLEMENTARY INFORMATION:

I. Background

Section 3 of the Housing and Urban Development Act of 1968 (Pub. L. 90–448, approved August 1, 1968) (Section 3) (12 U.S.C. 1701u) was enacted to ensure, to the greatest extent feasible, that economic opportunities generated by certain HUD financial assistance expenditures are directed to low- and very low-income persons, particularly those who receive Federal financial assistance for housing and those residing in communities where the financial assistance is expended.

In accordance with statutory authority, HUD is charged with the responsibility to implement and enforce

Section 3. HUD's regulations implementing the requirements of Section 3 have not been updated since 1994 and are not as effective as HUD believes they could be. Furthermore, significant legislation has been enacted that affects HUD programs that are subject to Section 3 and that are not adequately addressed in the current Section 3 regulations. On April 4, 2019, HUD proposed a rule to update the Section 3 regulations. *See* 84 FR 13177. The proposed rule incorporated a change from tracking the number of Section 3 qualified new hires in public housing financial assistance and Section 3 projects, to tracking the total labor hours worked. In connection with the proposed rule, HUD issued a proposed benchmark notification. *See* 84 FR 13199. The proposed benchmark notification included a proposed benchmark number and the methodology for determining the benchmarks.

Benchmarks

For public housing financial assistance, the proposed benchmark notification provided that PHAs and other recipients would meet the safe harbor in the new § 75.13 by certifying to the prioritization of effort in the new § 75.9 and meeting or exceeding Section 3 benchmarks for total number of labor hours worked by Section 3 workers and by Targeted Section 3 workers. (See the definitions of these two categories of workers at the end of Section II of this preamble, below.) The benchmark for Section 3 workers was set at 25 percent or more of the total number of labor hours worked by all workers employed with public housing financial assistance in the PHA's or other recipient's fiscal year. The benchmark for Targeted Section 3 workers was set at 5 percent or more of the total number of labor hours worked by all workers employed with public housing financial assistance in the PHA's or other recipient's fiscal year.

For Section 3 projects, the proposed benchmark notification set the same benchmarks but with regards to the project itself rather than the recipient's fiscal year. The proposed benchmark notification provided that recipients would meet the safe harbor in the new § 75.23 by certifying to the prioritization of effort in the new § 75.19 and meeting or exceeding Section 3 benchmarks for total number of labor hours worked by Section 3 workers and by Targeted Section 3 workers. The benchmark for Section 3 workers was set at 25 percent or more of the total number of labor hours worked by all workers on a Section 3 project. The benchmark for Targeted Section 3 workers was set at 5 percent or more of the total number of labor hours worked by all workers on a Section 3 project.

Methodology

To determine these benchmarks, HUD looked at the total hours worked on a construction or development project, the total number of workers that would likely qualify as Section 3 workers, and the potential pool of Targeted Section 3 workers. In order for the Section 3 employment goal to be attainable, HUD determined a labor-hour threshold that is congruent with the labor market for low-income workers by examining the lower end of the wage distribution of the relevant industries. Based on the wage distribution data for on-site construction and building services, HUD set the threshold for Section 3 labor hours at 25 percent of all labor hours to encourage recipients, subrecipients, contractors, and subcontractors to hire more Section 3 workers for construction. For the Targeted Section 3 benchmarks, HUD estimated the number of residents of public housing or Section 8-assisted housing, of current YouthBuild participants, and of workers employed by Section 3 business concerns. HUD also examined commuting times based on U.S. Census data. Finally, HUD reviewed Community Development Block Grant program (CDBG) and HOME Investment Partnerships Program (HOME) projects to estimate the number of potential Targeted Section 3 workers available for Section 3 projects. Based on these data, HUD determined that 5 percent of all labor hours, or, in other words, 20 percent of the Section 3 labor hour threshold, was a reasonable goal for both public housing financial assistance and for Section 3 projects.

HUD sought public comment on both the proposed rule and benchmark notification and received 187 public comments, 163 public comments on the proposed rule and 24 public comments on the proposed benchmark notification. Comments on the proposed rule and notification covered both content on the rule and the benchmark numbers. Therefore, all public comments received on both the proposed rule and the proposed benchmark notification are addressed in HUD's Section 3 final rule.

II. Section 3 Final Rule

The Section 3 final rule creates new Section 3 regulations in 24 CFR part 75; the public can find the final rule issued elsewhere in today's **Federal Register**. The Section 3 final rule aims to make Section 3 goals and reporting more meaningful and more aligned with statutory requirements. The final rule, consistent with HUD's Section 3 proposed rule, includes new metrics for compliance safe harbors and provides that these benchmarks will be set by notification in the **Federal Register**. The final rule separates out the new requirements and benchmarks by the type of funding, as follows:

(1) *Public housing program:* Subpart B, Additional Provisions for Public Housing Financial Assistance, covers development assistance provided pursuant to section 5 of the U.S. Housing Act of 1937 (1937 Act) and Operating Fund and Capital Fund assistance provided pursuant to section 9 of the 1937 Act, collectively; these are defined as public housing financial assistance in the proposed rule.

(2) *Other HUD programs:* Subpart C, Additional Provisions for Section 3 Projects, covers housing rehabilitation, housing construction, and other public construction projects assisted under HUD programs that provide housing and community development financial assistance when the amount of assistance to the project exceeds a threshold of $200,000, and is defined as a Section 3 project. A $100,000 project threshold applies to grants under HUD's Lead Hazard Control and Healthy Homes programs.

As for new metrics, the final rule provides, consistent with the Section 3 proposed rule, that HUD will establish the Section 3 benchmarks, through a **Federal Register** notification. The final rule provides that HUD may establish a single nationwide benchmark for work performed by Section 3 workers and a single nationwide benchmark for work performed by Targeted Section 3 workers, or may establish multiple benchmarks based on geography, the type of public housing financial assistance, or other variables. The final rule also provides, in establishing the benchmarks, that HUD may consider the industry averages worked by specific categories of workers or in different localities or regions; prior Section 3 reports by recipients; and any other factors HUD deems important. In establishing the Section 3 benchmarks, HUD would exclude professional services, which would be defined as non-construction services that require an advanced degree or professional licensing, including, but not limited to, contracts for legal services, financial consulting, accounting services, environmental assessment, architectural services, and civil engineering services. Lastly, HUD commits to updating the benchmarks no less frequently than once every three years through notice,

subject to public comment, in the **Federal Register**.

HUD created the Section 3 worker and Targeted Section 3 worker concepts so that HUD could track and set benchmarks to target selected categories of workers and to recognize the statutory requirements pertaining to contracting opportunities for business concerns employing low- and very-low income persons.

In the final Section 3 rule, HUD defines a Section 3 worker for both public housing financial assistance and Section 3 projects as a worker that meets one of the following requirements:

- The worker's income is below the income limit established by HUD.
- The worker is employed by a Section 3 business concern.
- The worker is a YouthBuild participant.

HUD defines a Targeted Section 3 worker differently for public housing financial assistance and Section 3 projects. For § 75.11, public housing financial assistance, a Targeted Section 3 worker includes any worker who is employed by a Section 3 business concern or is a:

- Resident of public housing or Section 8-assisted housing;
- Resident of another project managed by the PHA that is expending assistance; or
- YouthBuild participant.

For § 75.21, Section 3 projects, a Targeted Section 3 worker includes any worker who is employed by a Section 3 business concern or is a Section 3 worker who is:

- Living within the service area or neighborhood of the project; or
- A YouthBuild participant.

HUD defines a Section 3 business concern as a business concern that meets one of the following requirements:

- It is at least 51 percent owned by low- or very low-income persons;
- Over 75 percent of the labor hours performed for the business are performed by low- or very low-income persons; or
- It is a business at least 51 percent owned by current public housing residents or residents who currently live in Section 8-assisted housing.

For more information about the final rule, HUD refers readers to the final rule published elsewhere in this issue of the **Federal Register**.

III. Section 3 Benchmarks

This document finalizes the benchmarks with regards to labor hours for both public housing financial assistance and Section 3 projects without changes from what was included in the proposed benchmark notification. In the final rule, HUD is not adopting the new hires formula as proposed as an alternative in the proposed rule, so the new hires formula is accordingly not reflected in this document. HUD is finalizing the same benchmarks for all public housing financial assistance and Section 3 projects. The methodology in determining the Section 3 benchmarks, as discussed above in the Background section, did not change from what was described in the proposed benchmark notification because the definitions of Section 3 Workers, Targeted Section 3 Workers, and Section 3 Business concerns provided in the proposed rule and adopted in the Section 3 final rule were not substantially different. Once HUD has more data, it may determine whether different benchmarks are appropriate. Please see the above summary in the Background section of this document and the proposed benchmark notification for more information.

The following benchmarks apply to recipients subject to Section 3 upon the effective date in the Section 3 final rule:

Public Housing Financial Assistance

For meeting the safe harbor in § 75.13, PHAs and other recipients that certify to following the prioritization of effort in § 75.9 and meet or exceed the following Section 3 benchmarks will be considered to have complied with requirements in proposed 24 CFR part 75, subpart B, in the absence of evidence to the contrary:

(1) Twenty-five (25) percent or more of the total number of labor hours worked by all workers employed with public housing financial assistance in the PHA's or other recipient's fiscal year are Section 3 workers;

$$\frac{\text{Section 3 Labor Hours}}{\text{Total Labor Hours}} = 25\%$$

and

(2) Five (5) percent or more of the total number of labor hours worked by all workers employed with public housing financial assistance in the PHA's or other recipient's fiscal year are Targeted Section 3 workers, as defined at § 75.11.

$$\frac{\text{Targeted Section 3 Labor Hours}}{\text{Total Labor Hours}} = 5\%$$

Section 3 Project

For meeting the safe harbor in § 75.23, recipients that certify to following the prioritization in § 75.19 and meet or exceed the following Section 3 benchmarks will be considered to have complied with requirements in proposed 24 CFR part 75, subpart C, in the absence of evidence to the contrary:

(1) Twenty-five (25) percent or more of the total number of labor hours worked by all workers on a Section 3 project are Section 3 workers;

$$\frac{\text{Targeted Section 3 Labor Hours}}{\text{Total Labor Hours}} = 25\%$$

and

(2) Five (5) percent or more of the total number of labor hours worked by all workers on a Section 3 project are Targeted Section 3 workers, as defined at § 75.21.

$$\frac{\text{Targeted Section 3 Labor Hours}}{\text{Total Labor Hours}} = 5\%$$

IV. Environmental Impact

This document involves the establishment of new Section 3 benchmarks for creating economic opportunities for low- and very low-income persons and eligible businesses, and does not direct, provide for assistance or loan and mortgage insurance for, or otherwise govern or regulate, real property acquisition, disposition, leasing, rehabilitation, alteration, demolition, or new construction; or establish, revise, or provide for standards for construction or construction materials, manufactured housing, or occupancy. Accordingly, under 24 CFR 50.19(c)(1), this document is categorically excluded from environmental review under the National Environmental Policy Act of 1969 (42 U.S.C. 4321).

Benjamin S. Carson, Sr.,

Secretary.

Deduction for Foreign-Derived Intangible Income and Global Intangible Low-Taxed Income; Correcting Amendment

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Correcting amendments.

SUMMARY: This document contains corrections to Treasury Decision 9901, which was published in the **Federal Register** on Wednesday, July 15, 2020. The Treasury Decision provided guidance regarding the deduction for foreign derived intangible income (FDII) and global intangible low-taxed income (GILTI).

DATES: These corrections are effective on September 29, 2020.

Applicability Date: For date of applicability, see § 1.250–1(b).

FOR FURTHER INFORMATION CONTACT: Brad McCormack at (202) 317–6911 and Lorraine Rodriguez at (202) 317–6726; (not a toll-free number).

SUPPLEMENTARY INFORMATION:

Background

The final regulations (TD 9901) that are the subject of this correction are issued under section 250 of the Internal Revenue Code.

Need for Correction

As published July 15, 2020 (85 FR 43042), the final regulations (TD 9901) contain errors that need to be corrected.

List of Subjects in 26 CFR Part 1

Income taxes, Reporting and recordkeeping requirements.

Correction of Publication

Accordingly, 26 CFR part 1 is corrected by making the following correcting amendments:

PART 1—INCOME TAXES

■ **Paragraph 1.** The authority citation for part 1 continues to read in part as follows:

Authority: 26 U.S.C. 7805 * * *

■ **Par. 2.** Section 1.250–0 is amended by revising the entry for § 1.250(b)–6 (d)(3)(ii) to read as follows:

§ 1.250–0 Table of contents.

* * * * *

§ 1.250(b)–6 *Related party transactions.*

* * * * *

(d) * * *

(3) * * *

(ii) Rules for allocating the benefits provided by and price paid to the renderer of a related party service.

* * * * *

■ **Par. 3.** Section 1.250(b)–2 is amended by revising the second sentence of paragraph (d)(4)(ii)(C) to read as follows:

§ 1.250(b)–2 Qualified business asset investment (QBAI).

* * * * *

(d) * * *

(4) * * *

(ii) * * *

(C) * * * Therefore, under paragraph (d)(3) of this section, DC's dual use ratio with respect to the machine for the taxable year is 80 percent, which is DC's depreciation with respect to the machine that is capitalized to inventory of Product A, the gross income or loss from the sale of which is taken into account in determining DC's DEI for the taxable year ($320x), divided by DC's depreciation with respect to the machine that is capitalized to inventory, the gross income or loss from the sale of which is taken into account in determining DC's income for Year 1 ($400x). * * *

* * * * *

■ **Par. 4.** Section 1.250(b)–4 is amended by revising the paragraph heading for paragraph(d)(2)(iv)(B)(*13)* to read as follows:

§ 1.250(b)–4 Foreign-derived deduction eligible income (FDDEI) sales.

* * * * *

(d) * * *

(2) * * *

(iv) * * *

(B) * * *

(*13*) *Example 13: License of intangible property used in research and development of other intangible property—** * *

* * * * *

■ **Par. 5.** Section 1.250(b)–5 is amended by revising the second sentence of paragraph (e)(2)(iii) to read as follows:

§ 1.250(b)–5 Foreign-derived deduction eligible income (FDDEI) services.

* * * * *

(e) * * *

(2) * * *

(iii) * * * If it cannot be determined whether the location is within or outside the United States (such as where the location of access cannot be reliably determined using the location of the IP address of the device used to receive the service), and the gross receipts from all services with respect to the business recipient are in the aggregate less than $50,000 for the renderer's taxable year, the operations of the business recipient that benefit from the service provided by the renderer are deemed to be located at the recipient's billing address; otherwise, the operations of the business recipient that benefit are deemed to be located in the United States. * * *

* * * * *

■ **Par. 6.** Section 1.250(b)–6 is amended by:

■ 1. Revising the second sentence of paragraph (d)(4)(ii)(B)(*2*)(*i*).

■ 2. Revising the third sentence of paragraph (d)(4)(ii)(C)(*2*)(*i*).

The revisions read as follows:

§ 1.250(b)–6 Related party transactions.

* * * * *

(d) * * *

(4) * * *

(ii) * * *

(B) * * *

(*2*) * * *

(*i*) * * * However, because 90 percent of R's operations that will benefit from FC's service are located outside the United States under paragraph (d)(3)(i) of this section, only 10 percent of the benefits of FC's service are conferred on persons located within the United States. * * *

* * * * *

(C) * * *

(*2*) * * *

(*i*) * * * Accordingly, because 10 percent of R's operations that will benefit from FC's services are located within the United States, persons located within the United States are treated as paying $10x ($100x × 0.10) for FC's services for purposes of applying the test in paragraph (d)(2)(ii) of this section.

* * * * *

§ 1.1502–12 [Corrected]

■ **Par. 7.** On page 43112, in the third column, amendatory instruction 18 under § 1.1502–12, is corrected to read as ''Redesignating newly designated paragraphs (c)(7)(ii)(Q)(a) through (c) as paragraphs (c)(7)(ii)(Q)(*1*) through (*3*)''.

Crystal Pemberton,

Senior Federal Register Liaison, Publications and Regulations Branch, Legal Processing Division, Associate Chief Counsel, (Procedure and Administration).

Office of the Secretary

32 CFR Part 272

[Docket ID: DOD–2019–OS–0007]

RIN 0790–AK51

Administration and Support of Basic Research by the Department of Defense

AGENCY: Under Secretary of Defense (Research and Engineering), Department of Defense (DoD).

ACTION: Final rule.

SUMMARY: This final rule removes DoD's regulation concerning the

administration and support of basic research by the Department of Defense, because the content of this part is internal to the Department. Therefore, this CFR part can be removed.

DATES: This rule is effective September 29, 2020.

FOR FURTHER INFORMATION CONTACT: Ms. Barbara Orlando, Basic Research Office, telephone 571–372–6413.

SUPPLEMENTARY INFORMATION: The DoD rule at 32 CFR part 272, last updated on September 23, 2005 (70 FR 55726), is internal to the DoD and does not need to be codified in the CFR. Based on a recommendation from the DoD Regulatory Reform Task Force, this part is removed. It has been determined that publication of this CFR part removal for public comment is impracticable, unnecessary, and contrary to public interest since it is based on removing DoD internal policies and procedures that are publicly available on the Department's issuance website. DoD internal guidance concerning administration and support of basic research by the DoD will continue to be updated and maintained in DoD Instruction 3210.1, ''Administration and Support of Basic Research by the Department of Defense,'' last updated on October 15, 2018 (available at *http://www.esd.whs.mil/Portals/54/Documents/DD/issuances/dodi/321001p.pdf*).

This rule is not significant under Executive Order (E.O.) 12866, ''Regulatory Planning and Review.'' Therefore, E.O. 13771, ''Reducing Regulation and Controlling Regulatory Costs,'' does not apply.

Coast Guard

33 CFR Part 165

[Docket Number USCG–2020–0606]

RIN 1625–AA00

Safety Zone; I–5 Bridge Construction Project, Columbia River, Vancouver, WA

AGENCY: Coast Guard, DHS.

ACTION: Temporary final rule.

SUMMARY: The Coast Guard is establishing a temporary safety zone for certain waters of the Columbia River. This action is necessary to provide for the safety of life on these navigable waters around the Northbound I–5 Interstate Bridge at Columbia River Mile 106.5. Entry of vessels or persons into this zone is prohibited unless specifically authorized by the Captain of the Port Columbia River.

DATES: This rule is effective with actual notice from 12:01 a.m. on September 27, 2020, through September 29, 2020. It is effective without actual notice from September 29, 2020 through 11:59 p.m. on October 12, 2020.

ADDRESSES: To view documents mentioned in this preamble as being available in the docket, go to *https://www.regulations.gov,* type USCG–2020–0247 in the ''SEARCH'' box and click ''SEARCH.'' To view the Click on Open Docket Folder on the line associated with this rule.

FOR FURTHER INFORMATION CONTACT: If you have questions on this rule, call or email Lieutenant Commander Dixon Whitley, Waterways Management Division, Marine Safety Unit Portland, U.S. Coast Guard; telephone 503–240–9319, email *msupdxwwm@uscg.mil.*

SUPPLEMENTARY INFORMATION:

I. Table of Abbreviations

CFR Code of Federal Regulations
DHS Department of Homeland Security
FR Federal Register
NPRM Notice of proposed rulemaking
§ Section
U.S.C. United States Code

II. Background Information and Regulatory History

The Oregon Department of Transportation notified the Coast Guard that they will be replacing bridge components at the south end of the Northbound I–5 Interstate Bridge over the Columbia River at River Mile 106.5 beginning September 6, 2020, through September 26, 2020. In response, on June 22, 2020, the Coast Guard published a notice of proposed rulemaking (NPRM) titled Safety Zone; I–5 Bridge Construction Project, Columbia River, Vancouver, WA (85 FR 37397). There we stated why we issued the NPRM, and invited comments on our proposed regulatory action related to this construction project. During the comment period that ended July 22, 2020, we did not receive any relevant comments. On September 24, 2020, the Oregon Department of Transportation notified the Coast Guard that the work was not finished, and will not be completed until October 12, 2020. In response, the Coast Guard is publishing this Temporary final rule to further establish the temporary safety zone until all work is complete.

The Coast Guard is issuing this temporary rule without prior notice and opportunity to comment pursuant to authority under section 4(a) of the Administrative Procedure Act (APA) (5 U.S.C. 553(b)). This provision authorizes an agency to issue a rule without prior notice and opportunity to comment when the agency for good cause finds that those procedures are ''impracticable, unnecessary, or contrary to the public interest.'' Under 5 U.S.C. 553(b)(B), the Coast Guard finds that good cause exists for not publishing a notice of proposed rulemaking (NPRM) with respect to this rule because the Oregon Department of Transportation did not submit notice to the Coast Guard with sufficient time to publish an NPRM before the previous safety zone expires and the public is exposed to the dangers associated with this bridge construction work. Delaying the effective date of this rule to wait for a comment period to run would be impracticable and contrary to the public interest by inhibiting the Coast Guard's ability to protect mariners and vessels from the hazards associated with this bridge construction work.

Under 5 U.S.C. 553(d)(3), the Coast Guard finds that good cause exists for making this rule effective less than 30 days after publication in the **Federal Register**. For the same reasons discussed in the preceding paragraph, waiting for a 30-day notice period to run would be impracticable and contrary to the public interest.

III. Legal Authority and Need for Rule

The Coast Guard is issuing this rule under authority in 46 U.S.C. 70034 (previously 33 U.S.C. 1231). The Captain of Port Sector Columbia River has determined that the potential hazards associated with the construction project would be a safety concern for anyone within the designated area of the I–5 bridge

construction project. The purpose of this rulemaking is to ensure the safety of vessels and the navigable waters within the designated area of the I–5 bridge construction project.

IV. Discussion of Comments, Changes, and the Rule

As noted above, we received no relevant comments on our NPRM published June 22, 2020. This TFR is substantially the same to the one published in conjunction with that TFR (Docket No. USCG–2020–0247,) just with different effective dates.

This rule establishes a safety zone from 12:01 a.m. on September 27, 2020, through 11:59 p.m. on October 12, 2020. The safety zone will cover all navigable waters of the Columbia River, directly below the lifting span of the I–5 bridge from the Washington shoreline to the edge of the lifting span (approx. 800 ft.), and approximately 400 ft. both east and west of the bridge. The duration of the zone is intended to ensure the safety of vessels and these navigable waters while the bridge construction is underway. No vessel or person would be permitted to enter the safety zone without obtaining permission from the COTP or a designated representative.

V. Regulatory Analyses

We developed this rule after considering numerous statutes and Executive orders related to rulemaking. Below we summarize our analyses based on a number of these statutes and Executive orders, and we discuss First Amendment rights of protestors.

A. Regulatory Planning and Review

Executive Orders 12866 and 13563 direct agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. Executive Order 13771 directs agencies to control regulatory costs through a budgeting process. This rule has not been designated a ''significant regulatory action,'' under Executive Order 12866. Accordingly, this rule has not been reviewed by the Office of Management and Budget (OMB), and pursuant to OMB guidance it is exempt from the requirements of Executive Order 13771.

This regulatory action determination is based on the size, location, duration, and time-of-year of the safety zone. Vessel traffic would be able to safely transit around this safety zone, which would only impact a small designated area of the Columbia River, during the bridge construction project. Moreover, the Coast Guard will issue Broadcast Notice to Mariners via VHF–FM marine channel 16 about the safety zone, and the rule would allow vessels to seek permission to enter the zone.

B. Impact on Small Entities

The Regulatory Flexibility Act of 1980, 5 U.S.C. 601–612, as amended, requires Federal agencies to consider the potential impact of regulations on small entities during rulemaking. The term ''small entities'' comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000. The Coast Guard received no comments from the Small Business Administration on this rulemaking. The Coast Guard certifies under 5 U.S.C. 605(b) that this rule will not have a significant economic impact on a substantial number of small entities.

While some owners or operators of vessels intending to transit the safety zone may be small entities, for the reasons stated in section V.A above, this rule will not have a significant economic impact on any vessel owner or operator.

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we want to assist small entities in understanding this rule. If the rule would affect your small business, organization, or governmental jurisdiction and you have questions concerning its provisions or options for compliance, please call or email the person listed in the **FOR FURTHER INFORMATION CONTACT** section.

Small businesses may send comments on the actions of Federal employees who enforce, or otherwise determine compliance with, Federal regulations to the Small Business and Agriculture Regulatory Enforcement Ombudsman and the Regional Small Business Regulatory Fairness Boards. The Ombudsman evaluates these actions annually and rates each agency's responsiveness to small business. If you wish to comment on actions by employees of the Coast Guard, call 1–888–REG–FAIR (1–888–734–3247). The Coast Guard will not retaliate against small entities that question or complain about this rule or any policy or action of the Coast Guard.

C. Collection of Information

This rule will not call for a new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

D. Federalism and Indian Tribal Governments

A rule has implications for federalism under Executive Order 13132, Federalism, if it has a substantial direct effect on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government. We have analyzed this rule under that Order and have determined that it is consistent with the fundamental federalism principles and preemption requirements described in Executive Order 13132.

Also, this rule does not have tribal implications under Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, because it does not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.

E. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of $100,000,000 (adjusted for inflation) or more in any one year. Though this rule will not result in such an expenditure, we do discuss the effects of this rule elsewhere in this preamble.

F. Environment

We have analyzed this rule's predecessor under Department of Homeland Security Directive 023–01, Rev. 1, associated implementing instructions, and Environmental Planning COMDTINST 5090.1 (series), which guide the Coast Guard in complying with the National Environmental Policy Act of 1969(42 U.S.C. 4321–4370f), and have determined that this action is one of a category of actions that do not individually or cumulatively have a significant effect on the human environment. That rule involved enforcing a safety zone for 20 days that prohibits vessel traffic from transiting underneath the lift span of the I–5 Bridge during bridge repair and construction operations. It was, and by extension this TFR is, categorically excluded from further review under paragraph L60(a) of Appendix A, Table 1 of DHS Instruction Manual 023–01–001–01, Rev. 1. A Record of

Environmental Consideration supporting this determination is available in the docket. For instructions on locating the docket, see the **ADDRESSES** section of this preamble.

G. Protest Activities

The Coast Guard respects the First Amendment rights of protesters. Protesters are asked to call or email the person listed in the **FOR FURTHER INFORMATION CONTACT** section to coordinate protest activities so that your message can be received without jeopardizing the safety or security of people, places or vessels.

List of Subjects in 33 CFR Part 165

Harbors, Marine safety, Navigation (water), Reporting and recordkeeping requirements, Security measures, Waterways.

For the reasons discussed in the preamble, the Coast Guard is amending 33 CFR part 165 as follows:

PART 165—REGULATED NAVIGATION AREAS AND LIMITED ACCESS AREAS

■ 1. The authority citation for part 165 continues to read as follows:

Authority: 46 U.S.C. 70034, 70051; 33 CFR 1.05–1, 6.04–1, 6.04–6, and 160.5; Department of Homeland Security Delegation No. 0170.1.

■ 2. Add § 165.T13–0247 to read as follows:

§ 165.T13–0247 Safety Zone[s]; Safety Zone; I–5 Bridge Construction Project, Columbia River, Vancouver, WA.

(a) *Location.* The following area is a safety zone: All navigable waters of the Columbia River, surface to bottom, encompassed by a line connecting the following points beginning at the shoreline at 45°37′17.7″ N/122°40′31.4″ W, southwest to 45°37′12.1″ N/122°40′35.0″ W, southeast to 45°37′08.8″ N 122°40′22.1″ W, thence northeast to 45°37′15.0″ N/122°40′18.3″ W, and along the shoreline back to the beginning point.

(b) *Definitions.* As used in this section, *designated representative* means any Coast commissioned, warrant, or petty officer who has been authorized by the Captain of the Port Columbia River (COTP) to act on his behalf, or a Federal, State, and local officer designated by or assisting the Captain of the Port Columbia River in the enforcement of the safety zone.

(c) *Regulations.* (1) Under the general safety zone regulations in subpart C of this part, you may not enter the safety zone described in paragraph (a) of this section unless authorized by the COTP or the COTP's designated representative.

(2) Vessel operators desiring to enter or operate within the safety zone may contact the COTP's on-scene designated representative by calling 503–209–2468 or the Sector Columbia River Command Center on Channel 16 VHF–FM. Those in the safety zone must comply with all lawful orders or directions given to them by the COTP or the COTP's designated representative.

(d) *Enforcement period.* This section is in effect from 12:01 a.m. on September 27, 2020, through 11:59 p.m. on October 12, 2020. It will be subject to enforcement this entire period unless the Captain of the Port, Columbia River determines it is no longer needed. The Coast Guard will inform mariners of any change to this period of enforcement via Broadcast Notice to Mariners.

Dated: September 24, 2020.

J.C. Smith,

Captain, U.S. Coast Guard, Captain of the Port Columbia River.

36 CFR Part 254

RIN 0596–AD41

Conveyance of Small Tracts

AGENCY: Forest Service, USDA.

ACTION: Final rule.

SUMMARY: The United States Department of Agriculture (USDA), Forest Service is issuing this final rule to implement certain changes to the Small Tracts Act, which was enacted in the Agriculture Improvement Act of 2018, also known as the 2018 Farm Bill. These statutory changes create two new categories of lands eligible for conveyance outside of the National Forest System under the Small Tracts Act: parcels 40 acres or less that are physically isolated, inaccessible, or have lost National Forest System character; and parcels of ten acres or less that are not eligible for conveyance under previous eligibility conditions and are encroached on by a permanent habitable improvement for which there is no evidence that the encroachment was intentional or negligent.

DATES: This final rule is effective October 29, 2020.

ADDRESSES: Information on this final rule may be obtained via written request addressed to the Director, Lands and Realty Management, USDA Forest Service, 201 14th Street Southwest, Washington, DC 20250–1124 or by email to *SM.FS.WO_LandStaff@usda.gov.*

FOR FURTHER INFORMATION CONTACT: Brad Tait, Lands Staff, by phone at 971–806–2199, or via email at *bradley.tait@usda.gov.* Individuals who use telecommunication devices for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 1–800–877–8339 between 8:00 a.m. and 8:00 p.m., Eastern Standard Time, Monday through Friday.

SUPPLEMENTARY INFORMATION:

Background

Public Law 97–465, commonly known as the Small Tracts Act (16 U.S.C. 521c-521i), was enacted in 1983 to help the Forest Service resolve land disputes and boundary management problems for parcels that generally were small in scale (less than ten acres) with land values that did not exceed $150,000. Eligible lands for sale, exchange, or interchange included National Forest System lands encumbered by an encroachment like a house or fence; roads or road rights-of-way in excess of Forest Service transportation needs; and ''mineral survey fractions,'' or small parcels of National Forest System lands interspersed with or adjacent to lands transferred out of Federal ownership under mining laws.

Discussion of Amendments to the Small Tracts Act

The Small Tracts Act was amended by Section 8621 of the Agriculture Improvement Act of 2018, also known as the 2018 Farm Bill (Pub. L. 115–334). The changes to the Small Tracts Act required by the Agriculture Improvement Act of 2018 are being implemented in two phases. The first phase, implementing statutory revisions that did not entail the exercise of agency discretion, was accomplished by revisions to 36 CFR part 254 by the final rule published in the **Federal Register** without notice and comment on February 13, 2020 (85 FR 8180). The second phase, implementing changes that may entail an exercise of agency discretion, is accomplished by this final rule.

The Agriculture Improvement Act of 2018 added two new paragraphs to the Small Tracts Act Section 3 (16 U.S.C. 521e) to resolve by conveyance certain encroachment, trespass, and boundary management problems: paragraph (4) (16 U.S.C. 521e(4)), adding a limited conveyance authority for parcels of 40 acres or less that are determined by the Secretary of Agriculture (hereafter ''Secretary'') to be physically isolated

from other Federal lands, to be inaccessible, or to have lost National Forest character; and paragraph (5) (16 U.S.C. 521e(5)), addressing encroachments by permanent habitable improvements on parcels of 10 acres or less. This final rule implements paragraph (4) by adding a new 36 CFR 254.37, and implements paragraph (5) by adding a new paragraph (b) to 36 CFR 254.32. These amendments to the Small Tracts Act are expected to provide the Forest Service with more flexibility for resolving property conflicts with private landowners, reduce the time and expense arising from a protracted boundary dispute, and alleviate management burden and expense to the Forest Service.

Rulemaking is required for these specific amendments because Section 6 of the Small Tracts Act (16 U.S.C. 521(h)) provides that ''[t]he Secretary shall issue regulations to carry out the provisions of this Act, including specification of . . . criteria which shall be used in making the determination as to what constitutes the public interest.'' The public interest determination in § 254.36 will apply to the new paragraph 254.32(b) and new § 254.37 created by this final rule.

A previous rule published on February 13, 2020 (85 FR 8180), added a new paragraph (c) to 36 CFR 254.32. As noted above, this final rule published September 29, 2020 revises 36 CFR 254.32 to add a new paragraph (b); accordingly, it redesignates existing paragraph (b) as paragraph (c), which in turn redesignates paragraph (c), added by the previous rule, as paragraph (d). The previous rule also added 36 CFR 254.38. This final rule published September 29, 2020 revises the citations to other rule provisions in 36 CFR 254.38(a) from 36 CFR 254.32(c) to 36 CFR 254.32(d), consistent with the revisions to § 254.32 made by this final rule, and revises 36 CFR 254.38(b) to add a subparagraph (3).

Summary of Public Comments and Responses

Overview

On February 26, 2020, the Forest Service published a proposed rule implementing provisions within Section 8621 of the Agriculture Improvement Act of 2018 in the **Federal Register** (85 FR 11041) with a 60-day comment period ending April 27, 2020. The agency received 18 comments, with approximately half of the respondents expressing support of the proposed rule and half expressing criticism. Comments in support of the rule tended to be general in nature: Some respondents described specific scenarios in which they would like to see the rule applied to resolve a management issue, or alternative ways to spend funds received from eligible conveyances. Several critical comments also were general in nature, or raised philosophical, rather than substantive, issues with the rule. Some critical comments did raise substantive concerns regarding specific applications of the rule that the Forest Service plans to address in directives instructing field-level personnel in how to implement this rule.

General Comments

Comment: One respondent expressed concern that the regulations place no limitations on the number of conveyances to a single landowner. There were also concerns that a single parcel that is too large to qualify could be divided into smaller qualifying parcels.

Response: These concerns are currently addressed in 36 CFR 254.35(g), which limits the area conveyed to the ''minimum necessary to resolve encroachment or land management problems.''

Comment: One respondent took issue with the acreage limitations contained in the rule, stating that the limitations do not take into account small acreage discrepancies that could disqualify otherwise eligible parcels.

Response: Congress set clear acreage limitations within the 2018 Farm Bill amendments to the Small Tracts Act, which the Forest Service is required to follow.

Comment: One respondent supported the expanded conveyance categories, but preferred that the money generated go towards deferred maintenance rather than new land acquisition.

Response: Congress made clear that money generated from eligible conveyances be deposited into a Sisk Act account, which limits expenditures to the acquisition of land within the same State the funds were generated.

Comment: One respondent raised concerns that the rule would encourage squatting, or adverse possession, on Forest Service land in order eventually to gain ownership.

Response: Squatting or other types of adverse possession are generally not applicable against the Federal government. While the Small Tracts Act provides an avenue for private landowners to gain ownership of Federal land underlying encroachments, Forest Service officials are required to consider ''factual evidence of claim of title or color of title'' in reaching a conveyance decision, among other factors and considerations.

Comment: One respondent raised an issue with the maximum parcel sizes allowable for conveyance under the Small Tracts Act.

Response: While the Small Tracts Act does specify parcel sizes for some of its conveyance categories, those acreage amounts represent the maximum allowable acreage for such transactions. Actual acreage will be determined on a case-by-case basis in accordance with factual and record evidence provided by the private landowner and will often be smaller than the maximum allowable acreage.

Comment: One respondent took issue with the inclusion of the terms ''shed'' and ''hunting blind'' in the definition of ''permanent habitable improvement'' because of the ability to move these structures easily.

Response: The Forest Service has removed the terms ''shed'' and ''hunting blind'' from the definition of ''permanent habitable improvement'' in section 254.31 of this final rule, based on the non-permanent and non-habitable nature of such structures.

Comment: One respondent generally supported the rule but encouraged the Forest Service to apply the public interest criteria at 36 CFR 254.36 when considering conveyances of parcel 40 acres or less that are physically isolated, inaccessible, or have lost National Forest character.

Response: Pursuant to 36 CFR 254.36(b), the Forest Service will apply the public interest criteria at 36 CFR 254.36 to all potential conveyances under the Small Tracts Act.

Comment: One respondent stated that the Forest Service should not apply an existing categorical exclusion (CE) under the National Environmental Policy Act (NEPA) that excludes from further analysis in an environmental assessment or environmental impact statement the ''sale or exchange of land or interests in land and resources where the resulting land uses remain essentially the same'' to the new category for parcels 40 acres or less that are physically isolated, inaccessible, or have lost National Forest character. The respondent offered three reasons for this: (1) The CE was enacted prior to this 40-acre category and could not take into account properly its environmental effects; (2) the Forest Service has no basis to support a conclusion that the size and scope of the new 40-acre conveyance category will not have significant impacts on the human environment; and (3) the discretion afforded to agency officials to determine whether a parcel has lost National

Forest character is too broad to remove it from analysis under NEPA. The respondent also requests that the agency provide more guidance to officials tasked with determining whether a parcel is isolated, inaccessible, or has lost National Forest character.

Response: The final rule does not make any changes to the NEPA process. Each conveyance proposed under this new 40-acre category will be examined and subject to an appropriate level of NEPA analysis. Generally, the public will have an opportunity to provide input.

Regarding the request to provide more guidance to officials on what qualifies as isolated, inaccessible, or having lost National Forest character, the agency intends to amend its directives implementing the Small Tracts Act to include guidelines for agency officials to consider when determining whether a parcel meets any of these categories.

Comment: One respondent expressed concern that the expansion of categories offered under the Farm Bill amendment to the Small Tracts Act will result in a ''death by a thousand paper-cuts'' scenario where public forest land is converted to private use at too great of a scale.

Response: The Small Tracts Act is considered a relief authority, only to be used in specific instances to resolve specific title claims, innocent encroachments, and management inefficiencies (*see* Forest Service Handbook 5509.11, ch. 21.1). Since 2007, the Forest Service has conveyed less than 500 acres using the Small Tracts Act, which is greatly offset by the number of acres it acquires under authorities such as the Land and Water Conservation Fund. Public interest determinations indicate most land conveyed to private entities under the Small Tracts Act no longer meets the mission and purpose of the agency, ultimately guiding public resources towards more suitable lands and resources. Moreover, the use of the conveyance authority in the Small Tracts Act is discretionary and subject to public interest considerations contained in the Act and 36 CFR 254.36.

Regulatory Certifications

Executive Order 12866

Executive Order (E.O.) 12866 provides that the Office of Information and Regulatory Affairs (OIRA) will review all significant rules. OIRA has determined that this final rule is not significant.

Executive Order 13771

The final rule has been reviewed in accordance with E.O. 13771 on reducing regulation and controlling regulatory costs, and is considered an E.O. deregulatory action.

Congressional Review Act

Pursuant to the Congressional Review Act (5 U.S.C. 801 *et seq.*), OIRA designated this rule as not a major rule, as defined by 5 U.S.C. 804(2).

Regulatory Flexibility Act Analysis

The Agency has considered the final rule under the requirements of the Regulatory Flexibility Act (5 U.S.C. 602 *et seq.*). This final rule will not have any direct effect on small entities as defined by the Regulatory Flexibility Act. The final rule will not impose recordkeeping requirements on small entities; will not affect their competitive position in relation to large entities; and will not affect their cash flow, liquidity, or ability to remain in the market. Therefore, the Department has determined that this final rule would not have a significant economic impact on a substantial number of small entities pursuant to the Regulatory Flexibility Act.

Federalism

The Department has considered this final rule under the requirements of E.O. 13132, *Federalism.* The Department has concluded that the final rule conforms with the federalism principles set out in this executive order; will not impose any compliance costs on the States; and will not have substantial direct effects on the States, on the relationship between the Federal Government and the States, nor on the distribution of power and responsibilities among the various levels of government. Therefore, the Department concludes that this final rule does not have federalism implications.

Consultation With Tribal Governments

Tribal consultation is not required for the revisions to the Small Tracts Act regulations effected in this final rule. Tribal consultation on individual proposed projects and local notification requirements to Tribes and other individuals for land adjustment activities will occur as required.

No Takings Implications

The Department has analyzed this final rule in accordance with the principles and criteria found in E.O. 12630, *Governmental Actions and Interference With Constitutionally Protected Property Rights,* and has determined that the rule does not pose the risk of a taking of protected private property.

Controlling Paperwork Burdens on the Public

This final rule does not contain any recordkeeping or reporting requirements or other information collection requirements as defined in 5 CFR part 1320 that are not already required by law, or are not already approved for use, and therefore imposes no additional paperwork burden on the public. Accordingly, the review provisions of the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3521), and its implementing regulations at 5 CFR part 1320, do not apply.

National Environmental Policy Act

Agency regulations at 36 CFR 220.6(d)(2) (73 FR 43093) exclude from documentation in an environmental assessment or impact statement ''rules, regulations, or policies to establish Service-wide administrative procedures, program processes, or instructions.'' The Department has concluded that the revisions to regulations effected in this final rule fall within this category of actions and that no extraordinary circumstances exist which would require preparation of an environment assessment or environmental impact statement.

Energy Effects

This final rule has been reviewed under E.O. 13211, ''Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use.'' The Department has determined that this final rule does not constitute a significant energy action as defined in E.O. 13211.

Civil Justice Reform

The Department has analyzed this rule in accordance with the principles and criteria of Executive Order 12988, *Civil Justice Reform.* The Department has not identified any State or local laws or regulations that conflict with this regulation or that would impede full implementation of this rule. Nevertheless, in the event that such conflicts were to be identified, the final rule, if implemented, will preempt the State or local laws or regulations found to be in conflict. However, in that case, (1) no retroactive effect will be given to this final rule; and (2) the USDA will not require the use of administrative proceedings before parties could file suit in court challenging its provisions.

Unfunded Mandates

Pursuant to Title II of the Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538), the Department has assessed the effects of this final rule on State, local, and Tribal governments and

the private sector. This final rule does not compel the expenditure of $100 million or more by any State, local, or Tribal governments, or anyone in the private sector. Therefore, statements as described under sections 202 and 205 of the Act are not required.

List of Subjects in 36 CFR Part 254

Community facilities, National forests.

Therefore, for the reasons set forth in the preamble, the Forest Service is amending part 254 of title 36 of the Code of Federal Regulations as follows:

PART 254 LANDOWNERSHIP ADJUSTMENT

Subpart C—Conveyance of Small Tracts

■ 1. The authority citation for part 254, subpart C continues to read:

Authority: Public Law 97–465; 96 Stat. 2535.

■ 2. Amend § 254.31 by adding, in alphabetical order, the definition of ''Permanent Habitable Improvement'' to read as follows:

§ 254.31 Definitions.

Permanent Habitable Improvement means a dwelling, improvement, house, or other structure presently being used as a residence or domicile for a lasting or indefinite period of time.

■ 3. Revise § 254.32 to read as follows:

§ 254.32 Encroachments and other improvements.

(a) This subpart allows conveyance of parcels of 10 acres or less, which will resolve encroachments by persons on National Forest System lands:

(1) To whom no advance notice was given that the improvements encroached or would encroach, and

(2) Who in good faith relied on an erroneous survey, title search, or other land description which did not reveal such encroachment.

(b) This subpart also allows conveyance of parcels of 10 acres or less that are not eligible for conveyance under subsection (a) but are encroached on by a permanent habitable improvement for which there is no evidence that the encroachment was intentional or negligent.

(c) Forest Service officials shall consider the following factors when determining whether to convey lands upon which encroachments exist under subsections (a) and (b):

(1) The location of the property boundaries based on historical location and continued acceptance and maintenance,

(2) Factual evidence of claim of title or color of title,

(3) Notice given to persons encroaching on National Forest System lands,

(4) Degree of development in the encroached upon area, and

(5) Creation of an uneconomic remnant.

(d) This subpart also allows conveyance of parcels that are used as a cemetery (including a parcel of not more than one acre adjacent to the parcel used as a cemetery), a landfill, or a sewage treatment plant under a special use authorization issued or otherwise authorized by a Forest Service official.

■ 4. Add § 254.37 to read as follows:

§ 254.37 Conveyance of parcels 40 acres or less that no longer meet National Forest System objectives.

(a) This subpart allows conveyance of parcels of 40 acres or less that are determined by Forest Service officials to:

(1) be physically isolated from other Federal land; or

(2) be inaccessible; or

(3) have lost National Forest character.

(b) [Reserved]

■ 5. Amend § 254.38 by revising paragraph (a) and adding paragraph (b)(3) to read as follows:

(a) The net proceeds derived from any sale or exchange of parcels in § 254.32(b) and (d) and § 254.37 shall be deposited in the fund commonly known as the ''Sisk Act'' account.

(b) * * *

(3) Reimbursement for costs incurred in preparing a sale conducted under § 254.37 if the sale is a competitive sale.

James E. Hubbard,

Undersecretary, Natural Resources and Environment.

BILLING CODE P

DEPARTMENT OF DEFENSE

Defense Acquisition Regulations System

48 CFR Parts 211 and 252

[Docket DARS–2020–0006]

RIN 0750–AK60

Defense Federal Acquisition Regulation Supplement: Repeal of DFARS Clause ''Substitutions for Military or Federal Specifications and Standards'' (DFARS Case 2019–D023)

AGENCY: Defense Acquisition Regulations System, Department of Defense (DoD).

ACTION: Final rule.

SUMMARY: DoD is issuing a final rule amending the Defense Federal Acquisition Regulation Supplement (DFARS) to remove internal agency guidance and a clause that is no longer necessary pursuant to action taken by the DoD Regulatory Reform Task Force.

DATES: Effective October 1, 2020.

FOR FURTHER INFORMATION CONTACT: Ms. Carrie Moore, telephone 571–372–6093.

SUPPLEMENTARY INFORMATION:

I. Background

DoD published a proposed rule in the **Federal Register** at 85 FR 19722 on April 8, 2020, to remove DFARS subpart 211.273, Substitutions for Military or Federal Specifications and Standards, and DFARS clause 252.211–7005, Substitutions for Military of Federal Specifications, from the DFARS, because the guidance and clause are no longer necessary. One public comment was received in response to the proposed rule. The public comment was outside the scope of this case and no changes were made to the rule, as a result of public comment.

II. Applicability to Contracts at or Below the Simplified Acquisition Threshold and for Commercial Items, Including Commercially Available Off-the-Shelf Items

This rule only removes obsolete internal guidance and the clause at DFARS 252.211–7005 from the DFARS. This rule does not impose any new requirements on contracts at or below the simplified acquisition threshold, or commercial items, including commercially available off-the-shelf items.

III. Executive Orders 12866 and 13563

E.O.s 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). E.O. 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. This is not a significant regulatory action and, therefore, was not subject to review under section 6(b) of E.O. 12866, Regulatory Planning and Review, dated September 30, 1993. This rule is not a major rule under 5 U.S.C. 804.

IV. Executive Order 13771

This rule is not subject to E.O. 13771, because this rule is not a significant regulatory action under E.O. 12866.

V. Regulatory Flexibility Act

DoD does not expect this rule to have a significant economic impact on a substantial number of small businesses within the meaning of the Regulatory Flexibility Act, 5 U.S.C. 601, *et seq.,* because the rule is not creating any new requirements for contractors or changing any existing policies or practices. However, a final regulatory flexibility analysis has been prepared and is summarized as follows:

The Department of Defense is amending the Defense Federal Acquisition Regulation Supplement (DFARS) to repeal DFARS subpart 211.273, Substitutions for Military or Federal Specifications of Standards, and DFARS clause 252.211–7005, Substitutions for Military or Federal Specifications of Standards, as the guidance and clause are no longer necessary. The objective of this rule is to remove outdated guidance from the DFARS and reduce regulatory burden on the public. This repeal is pursuant to action taken by the DoD Regulatory Reform Task Force established under Executive Order 13777, Enforcing the Regulatory Reform Agenda.

No public comments were received in response to the initial regulatory flexibility analysis.

DoD does not collect data on the number of small businesses that proposed an Single Process Initiative (SPI) process in lieu of military of Federal specifications or standards cited in the solicitation. Instead, DoD subject matter experts estimate that approximately 10 contractors participate in SPI and that each participant will respond to one solicitation per year. Based on the information available, DoD does not anticipate that this rule will significantly impact small business entities.

This rule does not include any new reporting, recordkeeping, or other compliance requirements for small businesses.

There are no known alternative to the rule that will meet the stated objectives or minimize the impact on of the rule on small entities.

VI. Paperwork Reduction Act

This rule removes the burden associated with DFARS 252.211–7005 from the information collection requirement currently approved under 0704–0398, entitled DFARS Part 211, Describing Agency Needs, and Related Clause at DFARS 252.211. This reduction is reflected in the revision to and extension of the information collection, as published in the **Federal Register** on February 27, 2020, at 85 FR 11351, and May 28, 2020, at 85 FR 32019.

List of Subjects in 48 CFR Parts 211 and 252

Government procurement.

Jennifer D. Johnson,

Regulatory Control Officer, Defense Acquisition Regulations System.

Therefore, 48 CFR parts 211 and 252 are amended as follows:

■ 1. The authority citation for 48 CFR parts 211 and 252 continues to read as follows:

Authority: 41 U.S.C. 1303 and 48 CFR chapter 1.

PART 211—DESCRIBING AGENCY NEEDS

211.273 [Removed and Reserved]

■ 2. Remove and reserve section 211.273.

211.273–1 through 211.273–4 [Removed]

■ 3. Remove sections 211.273–1 through 211.273–4.

PART 252—SOLICITATION PROVISIONS AND CONTRACT CLAUSES

252.211–7005 [Removed and Reserved]

■ 4. Remove and reserve section 252.211–7005.

RIN 0750–AK59

Defense Federal Acquisition Regulation Supplement: Repeal of DFARS Provision ''Alternate Preservation, Packaging, and Packing'' (DFARS Case 2019–D022)

AGENCY: Defense Acquisition Regulations System, Department of Defense (DoD).

ACTION: Final rule.

SUMMARY: DoD is issuing a final rule amending the Defense Federal Acquisition Regulation Supplement (DFARS) to remove a provision that is no longer necessary pursuant to action taken by the DoD Regulatory Reform Task Force.

DATES: Effective October 1, 2020.

FOR FURTHER INFORMATION CONTACT: Ms. Carrie Moore, telephone 571–372–6093.

SUPPLEMENTARY INFORMATION:

I. Background

DoD published a proposed rule in the **Federal Register** at 85 FR 19721 on April 8, 2020, to remove the provision at DFARS 252.211–7004, Alternate Preservation, Packaging, and Packing, and the associated prescription from the DFARS, because the provision is no longer necessary. No public comments were received in response to the proposed rule. No changes were made to the rule, as proposed.

II. Applicability to Contracts at or Below the Simplified Acquisition Threshold and for Commercial Items, Including Commercially Available Off-the-Shelf Items

This rule only removes the obsolete solicitation provision at DFARS 252.211–7004, Alternate Preservation, Packaging, and Packing. This rule does not impose any new requirements on contracts at or below the simplified acquisition threshold, or commercial items, including commercially available off-the-shelf items.

III. Executive Orders 12866 and 13563

E.O.s 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). E.O. 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. This is not a significant regulatory action and, therefore, was not subject to review under section 6(b) of E.O. 12866, Regulatory Planning and Review, dated September 30, 1993. This rule is not a major rule under 5 U.S.C. 804.

IV. Executive Order 13771

This rule is not subject to E.O. 13771, because this rule is not a significant regulatory action under E.O. 12866.

V. Regulatory Flexibility Act

DoD does not expect this rule to have a significant economic impact on a substantial number of small businesses within the meaning of the Regulatory Flexibility Act, 5 U.S.C. 601, *et seq.,* because the rule is not creating any new

requirements for contractors or changing any existing policies or practices. However, a final regulatory flexibility analysis has been prepared and is summarized as follows:

The Department of Defense is amending the Defense Federal Acquisition Regulation Supplement (DFARS) to repeal DFARS provision 252.211–7004, Alternate Preservation, Packaging, and Packing, as the provision is no longer necessary. The objective of this rule is to reduce regulatory burden on the public. This repeal is pursuant to action taken by the Regulatory Reform Task Force established under Executive Order (E.O.) 13777, Enforcing the Regulatory Reform Agenda.

No public comments were received in response to the initial regulatory flexibility analysis.

DoD does not collect data on the number of small businesses that respond to a solicitation that includes DFARS clause 252.211–7004 or the number of small businesses responding to such a solicitation with alternative preservation, packaging, or packing methods. Instead, DoD subject matter experts advise that approximately 375 solicitations are issued each year that contain military preservation, packaging, or packing requirements where commercial or industrial methods may also be acceptable. DoD estimates that it receives 1.5 responses to each solicitation, for a total of 563 offers received in response to these solicitation. This total estimated number of responses does not delineate between the business size of the offerors or those offerors that did and did not propose alternative methods for preservation, packaging, or packing in lieu of military specifications. Based on the information available, DoD does not anticipate that this rule will significantly impact small business entities.

This rule does not include any new reporting, recordkeeping, or other compliance requirements for small businesses.

There are no known alternative to the rule that will meet the stated objectives or minimize the impact on of the rule on small entities.

VI. Paperwork Reduction Act

This rule removes the burden associated with DFARS 252.211–7004 from the information collection requirement currently approved under 0704–0398, entitled DFARS Part 211, Describing Agency Needs, and Related Clause at DFARS 252.211. This reduction is reflected in the revision to and extension of the information collection, as published in the **Federal Register** on February 27, 2020, at 85 FR 11351, and May 28, 2020, at 85 FR 32019.

List of Subjects in 48 CFR Parts 211 and 252

Government procurement.

Jennifer D. Johnson,

Regulatory Control Officer, Defense Acquisition Regulations System.

Therefore 48 CFR parts 211 and 252 are amended as follows:

■ 1. The authority citation for 48 CFR parts 211 and 252 continues to read as follows:

Authority: 41 U.S.C. 1303 and 48 CFR chapter 1.

PART 211—DESCRIBING AGENCY NEEDS

211.272 [Removed and Reserved]

■ 2. Remove and reserve section 211.272.

PART 252—SOLICITATION PROVISIONS AND CONTRACT CLAUSES

252.211–7004 [Removed and Reserved]

■ 3. Remove and reserve section 252.211–7004.

[Docket DARS–2019–0052]

RIN 0750–AK66

Defense Federal Acquisition Regulation Supplement: Treatment of Certain Items as Commercial Items (DFARS Case 2019–D029)

AGENCY: Defense Acquisition Regulations System, Department of Defense (DoD).

ACTION: Final rule.

SUMMARY: DoD is issuing a final rule amending the Defense Federal Acquisition Regulation Supplement (DFARS) to implement several sections of the National Defense Authorization Act for Fiscal Year 2017 that address treatment of commingled items purchased by contractors and services provided by nontraditional defense contractors as commercial items.

DATES: Effective October 1, 2020.

FOR FURTHER INFORMATION CONTACT: Ms. Amy G. Williams, telephone 571–372–6106.

SUPPLEMENTARY INFORMATION:

I. Background

DoD published a proposed rule in the **Federal Register** at 84 FR 65322 on November 27, 2019, to implement sections 877 and 878 of the National Defense Authorization Act (NDAA) for Fiscal Year (FY) 2017 (Pub. L. 114–328) and further implement section 848 of the NDAA for FY 2018 (Pub. L. 115–91). Section 877, Treatment of Commingled Items Purchased by Contractors as Commercial Items, adds 10 U.S.C. 2380b. Section 878, Treatment of Services Provided by Nontraditional Contractors as Commercial Items, amends 10 U.S.C. 2380a. Section 848 modifies 10 U.S.C. 2380(b) to provide that a contract for an item using FAR part 12 procedures shall serve as a prior commercial item determination, unless the appropriate official determines in writing that the use of such procedures was improper or that it is no longer appropriate to acquire the item using commercial item acquisition procedures. Two respondents submitted public comments in response to the proposed rule.

II. Discussion and Analysis

DoD reviewed the public comments in the development of the final rule. A discussion of the comments and the changes made to the rule as a result of those comments is provided, as follows:

A. Summary of Significant Changes From the Proposed Rule

Further implementation of section 848 of the NDAA for FY 2018 (Pub. L. 115–91) has been removed from the final rule under this case. DoD plans to publish a new proposed rule under a separate case (DFARS Case 2020–D033).

B. Analysis of Public Comments

1. Treatment of commingled items as commercial items (section 877 of the NDAA for FY 2017).

a. Strike ''when purchased'' from proposed DFARS 244.402(S–70) and the proposed clause at DFARS 252.244–7000(c).

Comment: One respondent suggested removal of the words ''when purchased,'' which were added as a clarification to the statutory text in the proposed rule, suggesting that the addition ''serves only to erode the purpose of the law, and will increase administrative burden of identifying comingled items.''

Response: The statutory change adding a new section 10 U.S.C. 2380b is titled, ''Treatment of commingled items purchased contractors as commercial items.'' The statute is intended to

address the common situation in which a contractor purchases items in bulk, intending to use the items for its general business, as distinguished from a specific subcontract, identifiable at the time of purchase with a specific prime contract. This is consistent with the legislative history quoted by the respondent with regard to cases where contractors often place orders with subcontractors for material, supplies, and parts that may be applicable to several Government programs in advance of any Government contract or RFP. The text of the enactment is fully consistent with this interpretation: ''items . . . that are *purchased by a contractor for use in the performance of multiple contracts* with the Department of Defense and other parties and are not identifiable to any particular contract.'' The language ''when purchased'' was added to avoid a possible application to items that were in fact purchased for specific purposes, as subcontracts subject to the wide range of contract terms that the purchaser might be required to ''flow down'' to the particular subcontracts. Many of those ''flow down'' clauses are required by other laws, or otherwise reflect important procurement policies, and any exceptions must be applied narrowly. It is contrary to the intent of the underlying laws if those items are to be ''treated as commercial items'' on the sole basis that after acquisition, the prime contractor commingles them with other materials in inventory, whether by policy or in error, so that they lose their ''identification.''

b. Clarify that items are not ''identifiable to any particular contract'' if they are not specifically identified, are indistinguishable, and are not serialized (DFARS 244.402(S–70)).

Comment: In connection with this issue, one respondent suggested that DoD define the term ''identifiable to any particular contract'' as stated. The respondent argued that this is ''in the Government's best interest'' on the basis of an example in which the prime contractor purchases items in bulk, apparently ''for use in the performance of multiple contracts with the Department of Defense and other parties.'' In the example, the items are ''identifiable to any particular contract'' only to the extent that DPAS ratings are ''flowed down'' to the supplier as to a small proportion of the total quantity purchased. On this basis, the respondent suggests, while the subcontract order did not identify any particular items as designated for the DPAS-rated prime contract; the items are physically indistinguishable from each other; and they will be commingled in inventory; yet because the *costs* of the few items will be allocable to the particular prime contract, they will be considered ''identifiable to [the] particular contract'' and thus effectively excluded from the coverage of 10 U.S.C. 2380b unless the suggested amendment is adopted.

Response: This clarification is unnecessary. The Congressional intent to allow contractors to buy relatively low-value items in bulk, for various customers, appears to be directly applicable to the described situation. There is no single definition of the term ''identifiable,'' as used in the NDAA, but the statute is written in regard to items, not the cost of the items. DoD does not consider that unspecified items procured as part of a bulk purchase for multiple customers are ''identifiable to [a] particular contract'' on the sole basis that a related portion of the cost is allocable to the contract.

There may, however, be other bases on which particular items or subdivisions of a single purchase may be identifiable with a particular contract, and creating a criterion that the items must be identifiable by individual serial number is not warranted.

c. Strike ''The Contractor shall ensure that any such items to be used in performance of this contract meet all terms and conditions of this contract that are applicable to commercial items'' from the clause at 252.244–7000(c).

Comment: One respondent suggested that the quoted language ''would require specific clauses to be applied 'after the fact' in direct conflict with Section 877 and negate its intent.''

Response: Section 877 only specifies that the items shall be treated as commercial items. It is not in conflict with section 877 to state that items treated as commercial items must comply with requirements that are applicable to commercial items. The respondent is apparently concerned that because the items are not purchased for a specific Government contract, that the contractor will not have imposed Government requirements upon the suppliers. The proposed language simply clarifies that if certain items are to be ''treated as commercial items'' pursuant to the first sentence and 10 U.S.C. 2380b, on the basis that they are ''valued under $10,000 and [were] purchased by a contractor for use in the performance of multiple contracts with the Department of Defense and other parties and are not identifiable to any particular contract,'' then in place of clauses that might otherwise apply, the items must comply with the clauses that apply to commercial items. If the respondent is suggesting that section 877, by providing that the items are to be ''treated as commercial items,'' was intended to further excuse a contractor from compliance with the clauses identified in FAR 52.244–6(c) (and any authorized agency supplements), DoD disagrees. One of the criteria for an acceptable purchasing system requires the contractor to ensure that all applicable purchase orders and subcontracts contain all flowdown clauses . . . needed to carry out the requirements of the prime contract (DFARS 252.244–7001(c)(2)).

d. Clarify what is meant by ''treatment as'' a commercial item (DFARS 244.402(S–70)).

Comment: One respondent suggested that the term ''shall be treated as commercial items'' be supplemented by adding language to the effect that ''treatment'' of an item as a commercial item under the authority provided in 10 U.S.C. 2380b means that FAR part 12 applies, as it would apply under the proposed rule applicable to 41 U.S.C. 1903, Special Emergency Procurement Authority, and 10 U.S.C. 2380a, Treatment of Services Provided by Nontraditional Contractors as Commercial Items.

Response: 41 U.S.C. 1903 provides that in defined circumstances in which its ''special emergency procurement authority'' applies, an executive agency ''may treat the property or service as a commercial item for the purpose of carrying out the procurement.'' 10 U.S.C. 2380a provides the same ''treatment'' by an agency for items and services provided by nontraditional defense contractors. Both of these provisions apply to acquisitions by an agency. To the extent that an agency ''may treat the property or service as a commercial item for the purpose of carrying out the procurement,'' this logically implies application of FAR part 12 procedures. 10 U.S.C. 2380b, however, applies to purchases by a contractor. The requirements of FAR part 12 do not apply to purchases by a contractor, it would be extremely burdensome on contractors to make its requirements applicable, and DoD did not propose to do so.

Comment: The respondent further suggested that language be added to specify that when 10 U.S.C. 2380b applies, ''a commercial item determination is not required.''

Response: By the proposed language, contractors are entitled to treat items as commercial items when they are ''purchased by a contractor for use in the performance of multiple contracts'' and meet the other criteria of the

section. The following has been added: '', even though the items *may* not meet the definition of ''commercial item'' at FAR 2.101 and do not require a commercial item *determination*.

e. Retain existing language at DFARS 244.402(a).

Comment: One respondent questioned why the wording at DFARS 244.402 was changed from ''Contractors shall determine whether a particular subcontract item meets the definition of a commercial item'' to ''Contractors are required to determine whether a particular subcontract item meets the definition of a commercial item.''

Response: This change is to conform to the DFARS drafting convention that provisions and clauses are the appropriate place to direct contractors to do something. The text of the DFARS that is not a provision or a clause is directed to the contracting officer. Therefore, DFARS 244.402(a) should not tell the contractor that it shall do something, but should inform the contracting officer of a requirement applicable to contractors.

f. Need to add Government checks on industry's new responsibility to treat certain items as commercial items.

Comment: One respondent stated that even the DAR Council's proposed rule itself says there are checks to be made on industry in determining an item is commingled. The respondent requests that the administrative contracting officer (ACO) to be given the authority to examine industry's rationale against the Council's stated stipulations, by assigning this responsibility to the ACO and adding contractual requirement for the contractor to provide the requested documentation. Specifically, the respondent requested the following:

- DFARS 244.303(a)—Add the requirement, as part of the Contractors' Purchasing System Review, to review the adequacy of rationale documenting how items were purchased for use in the performance of multiple contracts with the Department of Defense and other parties and were not identifiable to any particular contract when purchased.

Response: The contracting officer already has the authority to request and review contractor supporting documentation. Those performing a CPSR or audit may adjust their requests to ensure that ''treated as commercial'' items are included in their reviews.

- FARS 252.244–7001, Contractor Purchasing System Administration, paragraph (b)—Add a new subparagraph to require the following: ''Upon request by the Contracting Officer, the Contractor shall provide rationale documenting commercial item determinations to ensure compliance with the definition of 'commercial item' in FAR 2.101. In addition, the Contractor shall provide rationale documenting how it determined items were purchased for use in the performance of multiple contracts with the Department of Defense and other parties and were not identifiable to any particular contract when purchased.''

Response: This change does not fit in this clause on Contractor Purchasing System Administration. Paragraph (b) addresses the general requirement to establish and maintain an acceptable purchasing system. Paragraphs (a) and (c) provide applicable definitions and the criteria for an acceptable system. This change would duplicate requirements in other clauses. The contractor has the obligation to document and justify purchasing commingled items under this authority.

2. Treatment of services provided by nontraditional contractors as Commercial Items (section 878 of the NDAA for FY 2017).

a. Authorize prime contractors to treat supplies and services from nontraditional contractors as commercial items.

Comment: One respondent recommended that authorizing prime contractors to utilize 10 U.S.C. 2380a (a) and (b) in their subcontracts and treating the supplies and services as commercial items, will help attract nontraditional defense contractors to do business with DOD. The file documentation proposed under DFARS 212.102(iv)(C) to use either authority would be a representation by the subcontractor in accordance with DFARS 252.215–7013, and the prime contractor should be able to rely on such.

Response: Both the permissive authority of 10 U.S.C. 2380a(a) and the mandatory treatment of 10 U.S.C. 2380a(b) apply only on the Government (prime contract) level. The statute does not allow DoD to flow down the authority.

Comment: One respondent commented that additional direction is needed for certain nontraditional services that shall be treated as commercial items.

Response: The DFARS final text includes DFARS 212.102(a)(iii)(B), which provides sufficient direction.

b. Retain existing language at DFARS 212.102(a)(iii).

Comment: One respondent recommended retention of the existing language at DFARS 212.102(a)(iii), which states explicitly that the decision to apply commercial item procedures to the procurement of supplies and services from nontraditional defense contractors does not require a commercial item determination and does not mean that the item is commercial.

Response: Concur.

III. Applicability to Contracts at or Below the Simplified Acquisition Threshold and for Commercial Items, Including Commercially Available Off-the-Shelf Items

This rule proposes to modify the clause at DFARS 252.244,7000, Subcontracts for Commercial Items, but does not modify its applicability. The clause is applicable to all solicitations and contracts, including solicitations and contracts using FAR part 12 procedures for the acquisition of commercial items and solicitations and contracts valued at or below the simplified acquisition threshold. However, the amendment to DFARS 252.244–7000 proposed by this rule does not impose any burdens on contractors, but allows treatment of certain items as commercial items, that do not otherwise meet the definition of ''commercial item'' in FAR part 2.

IV. Executive Orders 12866 and 13563

Executive Orders (E.O.s) 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). E.O. 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. This is not a significant regulatory action and, therefore, was not subject to review under section 6(b) of E.O. 12866, Regulatory Planning and Review, dated September 30, 1993. This rule is not a major rule under 5 U.S.C. 804.

V. Executive Order 13771

This rule is not subject to E.O. 13771, because this rule is not a significant regulatory action under E.O. 12866.

VI. Regulatory Flexibility Act

A final regulatory flexibility analysis (FRFA) has been prepared consistent with the Regulatory Flexibility Act, 5 U.S.C. 601, *et seq*. The FRFA is summarized as follows:

This final rule is issued in order to implement sections 877 and 878 of the National Defense Authorization Act (NDAA) for Fiscal Year (FY) 2017 (10 U.S.C. 2380a and 10 U.S.C. 2380b). The objective of this rule is to address the

treatment as commercial items of services provided by nontraditional defense contractors and certain items purchased by a contractor for use in the performance of multiple contracts. The legal basis for the rule is the NDAA section cited as the reasons for the action.

There were no significant issues raised by the public comments in response to the initial regulatory flexibility analysis.

Based on FY 2018 data from the Federal Procurement Data System (FPDS), awards of commercial contracts were made to 15,231 nontraditional defense contractors that were also small entities. It is unknown how many of those entities might provide services that use the same pool of employees used for commercial customers and are priced using methodology similar to the methodology used for commercial pricing.

Also based on FPDS data for FY 2018, DoD awarded 110,000 contracts for the purchase of supplies, commercial or noncommercial, exceeding $10,000, to 13,892 unique small entities. This rule will affect an unknown number of those 13,892 small entities, if such small entities purchase noncommercial items valued at less than $10,000 per item that are not identifiable to any particular contract when purchased and are for use in the performance of multiple contracts with DoD and other parties.

This rule does not impose any new reporting, recordkeeping, or other compliance requirements. The rule does remind the contractor of the responsibility to ensure that items treated as commercial items pursuant to section 877 of the NDAA for FY 2017 that are to be used in the performance of the DoD contract meet all terms and conditions of the contract that are applicable to commercial items.

DoD did not identify any significant alternatives that would minimize or reduce the significant economic impact on small entities, because there is no significant impact on small entities. Any impact is expected to be beneficial.

VII. Paperwork Reduction Act

The rule does not contain any new information collection requirements that require the approval of the Office of Management and Budget under the Paperwork Reduction Act (44 U.S.C. chapter 35).

List of Subjects in 48 CFR Parts 212, 244, and 252

Government procurement.

Jennifer D. Johnson,

Regulatory Control Officer, Defense Acquisition Regulations System.

Therefore, 48 CFR parts 212, 244, and 252 are amended as follows:

■ 1. The authority citation for parts 212, 244, and 252 continues to read as follows:

Authority: 41 U.S.C. 1303 and 48 CFR chapter 1.

PART 212—ACQUISITION OF COMMERCIAL ITEMS

■ 2. Amend section 212.102 by revising paragraph (a)(iii) to read as follows:

212.102 Applicability.

(a)(i) * * *

(iii) *Nontraditional defense contractors.* In accordance with 10 U.S.C. 2380a, contracting officers—

(A) Except as provided in paragraph (a)(iii)(B) of this section, may treat supplies and services provided by nontraditional defense contractors as commercial items. This permissive authority is intended to enhance defense innovation and investment, enable DoD to acquire items that otherwise might not have been available, and create incentives for nontraditional defense contractors to do business with DoD. It is not intended to recategorize current noncommercial items; however, when appropriate, contracting officers may consider applying commercial item procedures to the procurement of supplies and services from business segments that meet the definition of ''nontraditional defense contractor'' even though they have been established under traditional defense contractors. The decision to apply commercial item procedures to the procurement of supplies and services from nontraditional defense contractors does not require a commercial item determination and does not mean the item is commercial;

(B) Shall treat services provided by a business unit that is a nontraditional defense contractor as commercial items, to the extent that such services use the same pool of employees as used for commercial customers and are priced using methodology similar to methodology used for commercial pricing; and

(C) Shall document the file when treating supplies or services from a nontraditional defense contractor as commercial items in accordance with paragraph (a)(iii)(A) or (B) of this section.

* * * * *

PART 244—SUBCONTRACTING POLICIES AND PROCEDURES

■ 3. Amend section 244.402 by—

■ a. In paragraph (a) removing ''shall'' and adding ''are required to'' in its place; and

■ b. Adding a new paragraph (S–70).

The addition reads as follows:

244.402 Policy requirements.

* * * * *

(S–70) In accordance with 10 U.S.C. 2380b, items that are valued at less than $10,000 per item that are purchased by a contractor for use in the performance of multiple contracts with the Department of Defense and other parties and are not identifiable to any particular contract when purchased shall be treated as commercial items, even though the items may not meet the definition of ''commercial item'' at FAR 2.101 and do not require a commercial item determination.

PART 252—SOLICITATION PROVISIONS AND CONTRACT CLAUSES

■ 4. Amend section 252.244–7000 by—

■ a. Removing the clause date of ''(JUN 2013)'' and adding ''(SEP 2020)'' in its place;

■ b. Redesignating paragraph (c) as (d);

■ c. In the newly redesignated paragraph (d), removing ''(c)'' and adding ''(d)'' in its place; and

■ c. Adding a new paragraph (c).

The addition reads as follows:

252.244–7000 Subcontracts for Commercial Items.

* * * * *

(c)(1) In accordance with 10 U.S.C. 2380b, the Contractor shall treat as commercial items any items valued at less than $10,000 per item that were purchased by the Contractor for use in the performance of multiple contracts with the Department of Defense and other parties and are not identifiable to any particular contract when purchased.

(2) The Contractor shall ensure that any items to be used in performance of this contract, that are treated as commercial items pursuant to paragraph (c)(1) of this clause, meet all terms and conditions of this contract that are applicable to commercial items in accordance with the clause at Federal Acquisition Regulation 52.244–6 and paragraph (a) of this clause.

BILLING CODE 5001–06–P

DEPARTMENT OF DEFENSE

Defense Acquisition Regulations System

48 CFR Part 216

[Docket DARS–2020–0032]

RIN 0750–AL02

Defense Federal Acquisition Regulation Supplement: Modification of Determination Requirement for Certain Task- or Delivery-Order Contracts (DFARS Case 2020–D016)

AGENCY: Defense Acquisition Regulations System, Department of Defense (DoD).

ACTION: Final rule.

SUMMARY: DoD is issuing a final rule amending the Defense Federal Acquisition Regulation Supplement (DFARS) to implement a section of the National Defense Authorization Act for Fiscal Year 2020 that revises contract file documentation requirements when awarding a task- or delivery order-contract in excess of $100 million to a single source.

DATES: Effective October 1, 2020.

FOR FURTHER INFORMATION CONTACT: Ms. Carrie Moore, telephone 571–372–6093.

SUPPLEMENTARY INFORMATION:

I. Background

DoD is issuing a final rule amending the DFARS to implement section 816 of the National Defense Authorization Act (NDAA) for Fiscal Year (FY) 2020 (Pub. L. 116–92). Section 816 amends 10 U.S.C. 2304a to permit the award of a DoD task- or delivery-order contract estimated to exceed $100 million (including all options) to a single source without a written determination by the head of the agency, if the head of the agency made a written determination that other than competitive procedures were authorized for the award of such contract.

The requirement for the written determination required by 10 U.S.C. 2304a is implemented at Federal Acquisition Regulation (FAR) 16.504(c)(1)(ii)(D), which prohibits the award of a task- or delivery-order contract in excess of $100 million to a single source, unless the head of the agency makes a written determination that the acquisition meets one of four specific circumstances that necessitate an award to a single source.

To implement 10 U.S.C. 2304a, as amended by section 816, this final rule amends DFARS section 216.504 to advise DoD contracting officers that the determination from the head of the agency pursuant to FAR 16.504(c)(1)(ii)(D)(*1*) is no longer required for a single-award task- or delivery-order contract valued at greater than $100 million, if a justification for the use of other than full and open competition has been executed in accordance with FAR subpart 6.3 and DFARS subpart 206.3.

II. Applicability to Contracts at or Below the Simplified Acquisition Threshold and for Commercial Items, Including Commercially Available Off-the-Shelf Items

This rule does not create new provisions or clauses or impact any existing provisions or clauses.

III. Publication of This Final Rule for Public Comment Is Not Required by Statute

The statute that applies to the publication of the FAR is Office of Federal Procurement Policy statute (codified at title 41 of the United States Code). Specifically, 41 U.S.C. 1707(a)(1) requires that a procurement policy, regulation, procedure, or form (including an amendment or modification thereof) must be published for public comment if it relates to the expenditure of appropriated funds, and has either a significant effect beyond the internal operating procedures of the agency issuing the policy, regulation, procedure, or form, or has a significant cost or administrative impact on contractors or offerors. This final rule is not required to be published for public comment, because DoD is not issuing a new regulation; rather, this rule is updating internal operating procedures that require contracting officers to obtain certain internal documentation and authorizations prior to awarding a contract under certain acquisitions.

IV. Executive Orders 12866 and 13563

Executive Orders (E.O.s) 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). E.O. 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. This is not a significant regulatory action and, therefore, was not subject to review under section 6(b) of E.O. 12866, Regulatory Planning and Review, dated September 30, 1993. This rule is not a major rule under 5 U.S.C. 804.

V. Executive Order 13771

This rule is not subject to E.O. 13771, because this rule is not a significant regulatory action under E.O. 12866.

VI. Regulatory Flexibility Act

Because a notice of proposed rulemaking and an opportunity for public comment are not required to be given for this rule under 41 U.S.C. 1707(a)(1) (see section III. of this preamble), the analytical requirements of the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) are not applicable. Accordingly, no regulatory flexibility analysis is required, and none has been prepared.

VII. Paperwork Reduction Act

The rule does not contain any information collection requirements that require the approval of the Office of Management and Budget under the Paperwork Reduction Act (44 U.S.C. chapter 35).

List of Subjects in 48 CFR Part 216

Government procurement.

Jennifer D. Johnson,

Regulatory Control Officer, Defense Acquisition Regulations System.

Therefore, DoD is amending 48 CFR part 216 as set forth below:

PART 216—TYPES OF CONTRACTS

■ 1. The authority citation for 48 CFR part 216 continues to read as follows:

Authority: 10 U.S.C. 1303 and 48 CFR chapter 1.

■ 2. Amend section 216.504 by adding new paragraph (c)(1)(ii)(D)(*3*)(*i*) to read as follows:

216.504 Indefinite-quantity contracts.

(c) * * *

(1) * * *

(ii) * * *

(D) * * *

(*3*)(*i*) In accordance with section 816 of the National Defense Authorization Act for Fiscal Year 2020 (Pub. L. 116–92), the determination at FAR 16.504(c)(1)(ii)(D) is not required if a justification has been executed, in accordance with FAR subpart 6.3 and subpart 206.3.

DEPARTMENT OF ENERGY

10 CFR Part 431

[EERE–2017–BT–STD–0022]

RIN 1904–AE47

Energy Conservation Program: Energy Conservation Standards for Certain Commercial and Industrial Equipment; Early Assessment Review; Automatic Commercial Ice Makers

AGENCY: Office of Energy Efficiency and Renewable Energy, Department of Energy.

ACTION: Request for information.

SUMMARY: The U.S. Department of Energy (''DOE'') is undertaking an early assessment review for amended energy conservation standards for automatic commercial ice makers (''ACIM'') to determine whether to amend applicable energy conservation standards for this equipment. Specifically, through this request for information (''RFI''), DOE seeks data and information that could enable the agency to determine whether DOE should propose a ''no-new-standard'' determination because a more-stringent standard: Would not result in a significant savings of energy; is not technologically feasible; is not economically justified; or any combination of the foregoing. DOE welcomes written comments from the public on any subject within the scope of this document (including those topics not specifically raised in this RFI), as well as the submission of data and other relevant information concerning this early assessment review.

DATES: Written comments and information are requested and will be accepted on or before December 14, 2020.

ADDRESSES: Interested persons are encouraged to submit comments using the Federal eRulemaking Portal at *http://www.regulations.gov.* Follow the instructions for submitting comments. Alternatively, interested persons may submit comments, identified by docket number EERE–2017–BT–STD–0022, by any of the following methods:

1. *Federal eRulemaking Portal: http://www.regulations.gov.* Follow the instructions for submitting comments.

2. *Email:* to *ACIM2017STD0022@ee.doe.gov.* Include the docket number EERE–2017–BT–STD–0022 in the subject line of the message.

3. *Postal Mail:* Appliance and Equipment Standards Program, U.S. Department of Energy, Building Technologies Office, Mailstop EE–5B, 1000 Independence Avenue SW, Washington, DC 20585–0121. Telephone: (202) 287–1445. If possible, please submit all items on a compact disc (CD), in which case it is not necessary to include printed copies.

4. *Hand Delivery/Courier:* Appliance and Equipment Standards Program, U.S. Department of Energy, Building Technologies Office, 950 L'Enfant Plaza SW, Suite 600, Washington, DC 20024. Telephone: (202) 287–1445. If possible, please submit all items on a CD, in which case it is not necessary to include printed copies.

No telefacsimilies (faxes) will be accepted. For detailed instructions on submitting comments and additional information on this process, see section III of this document.

Docket: The docket for this activity, which includes **Federal Register** notices, comments, and other supporting documents/materials, is available for review at *http://www.regulations.gov.* All documents in the docket are listed in the *http://www.regulations.gov* index. However, some documents listed in the index, such as those containing information that is exempt from public disclosure, may not be publicly available.

The docket web page can be found at: *http://www.regulations.gov/#!docketDetail;D=EERE-2017-BT-STD-0022.* The docket web page contains instructions on how to access all documents, including public comments, in the docket. See section III for information on how to submit comments through *http://www.regulations.gov.*

I. Introduction
A. Authority
B. Rulemaking History
II. Request for Information
III. Submission of Comments

I. Introduction

DOE has established an early assessment review process to conduct a more focused analysis of a specific set of facts or circumstances that would allow DOE to determine, based on one or more statutory criteria, a new or amended energy conservation standard is not warranted. The purpose of this review is to limit the resources, from both DOE and stakeholders, committed to rulemakings that will not satisfy the requirements in the Energy Policy and Conservation Act, as amended (''EPCA''),[1] that a new or amended energy conservation standard save a significant amount of energy, and be economically justified and technologically feasible. *See* 85 FR 8626, 8653–8654 (Feb. 14, 2020).

As part of the early assessment, DOE publishes an RFI in the **Federal Register**, announcing that DOE is considering initiating a rulemaking proceeding and soliciting comments, data, and information on whether a new or amended energy conservation standard would save a significant amount of energy and be technologically feasible and economically justified. Based on the information received in response to the RFI and DOE's own

[1] All references to EPCA in this document refer to the statute as amended through America's Water Infrastructure Act of 2018, Public Law 115–270 (Oct. 23, 2018).

analysis, DOE will determine whether to proceed with a rulemaking for a new or amended energy conservation standard.

If DOE makes an initial determination based upon available evidence that a new or amended energy conservation standard would not meet the applicable statutory criteria, DOE would engage in notice and comment rulemaking before issuing a final determination that new or amended energy conservation standards are not warranted. Conversely, if DOE makes an initial determination that a new or amended energy conservation standard would satisfy the applicable statutory criteria or DOE's analysis is inconclusive, DOE would undertake the preliminary stages of a rulemaking to issue a new or amended energy conservation standard. Beginning such a rulemaking, however, would not preclude DOE from later making a determination that a new or amended energy conservation standard cannot satisfy the requirements in EPCA, based upon the full suite of DOE's analyses. *See* 85 FR 8626, 8654 (Feb. 14, 2020).

A. Authority

EPCA, among other things, authorizes DOE to regulate the energy efficiency of a number of consumer products and certain industrial equipment. (42 U.S.C. 6291–6317) Title III, Part C [2] of EPCA, added by Public Law 95–619, Title IV, section 441(a) (42 U.S.C. 6311–6317, as codified), established the Energy Conservation Program for Certain Industrial Equipment. This equipment includes ACIM, the subject of this document. (42 U.S.C. 6311(1)(F))

Under EPCA, DOE's energy conservation program consists essentially of four parts: (1) Testing, (2) labeling, (3) Federal energy conservation standards, and (4) certification and enforcement procedures. Relevant provisions of EPCA include definitions (42 U.S.C. 6311), test procedures (42 U.S.C. 6314), labeling provisions (42 U.S.C. 6315), energy conservation standards (42 U.S.C. 6313), and the authority to require information and reports from manufacturers (42 U.S.C. 6316).

Federal energy efficiency requirements for covered equipment established under EPCA generally supersede State laws and regulations concerning energy conservation testing, labeling, and standards. (42 U.S.C. 6316(a); 42 U.S.C. 6297(a)–(c)) DOE may, however, grant waivers of Federal preemption in limited instances for particular State laws or regulations, in accordance with the procedures and other provisions set forth under EPCA. (42 U.S.C. 6316(a); 42 US.C. 6297(d))

EPCA prescribed the initial energy and water conservation standards for ACIMs. (42 U.S.C. 6313(d)(1)) EPCA also authorizes DOE to establish new standards for ACIMs not covered by the statutory standards. (42 U.S.C. 6313(d)(2)) Not later than January 1, 2015, with respect to the standards established under 42 U.S.C. 6313(d)(1), and, with respect to the standards established under 42 U.S.C. 6313(d)(2), not later than 5 years after the date on which the standards take effect, EPCA required DOE to issue a final rule to determine whether amending the applicable standards is technologically feasible and economically justified. (42 U.S.C. 6313(d)(3)(A)) Not later than 5 years after the effective date of any amended standards under 42 U.S.C. 6313(d)(3)(A) or the publication of a final rule determining that amending the standards is not technologically feasible or economically justified, DOE must issue a final rule to determine whether amending the standards established under 42 U.S.C. 6313(d)(1) or the amended standards, as applicable, is technologically feasible or economically justified. (42 U.S.C. 6313(d)(3)(B)) A final rule issued under 42 U.S.C. 6313(d)(2) or (3) must establish standards at the maximum level that is technically feasible and economically justified, as provided in 42 U.S.C. 6295(o) and (p). (42 U.S.C. 6313(d)(4))

B. Rulemaking History

On October 18, 2005, DOE published a final rule codifying in the Code of Federal Regulations (''CFR'') the energy conservation standards and water conservation standards prescribed by EPCA in 42 U.S.C. 6313(d)(1) for certain automatic commercial ice makers manufactured on or after January 1, 2010. 70 FR 60407, 60415–60416. The codified statutory standards consisted of maximum energy use and maximum condenser water use, if applicable, to produce 100 pounds (''lb.'') of ice for ACIM with harvest rates between 50 and 2,500 lb. ice per 24 hours. *Id.* at 70 FR 60416. Most recently on January 28, 2015, in satisfaction of the first rulemaking cycle required by EPCA, DOE published a final rule adopting more-stringent energy conservation standards for certain classes of ACIM and establishing energy conservation standards for other classes of ACIM not previously subject to standards. 80 FR 4646 (the ''January 2015 Final Rule''). The current energy conservation standards are located in 10 CFR 431.136(c) and (d), and specify the maximum energy use, in terms of kilowatt-hours (''kWh'') per 100 lb. of ice produced, and maximum condenser water use, in terms of gallons (''gal'') per 100 lb. of ice produced. The currently applicable DOE test procedures for ACIM appear at 10 CFR 431.134.

II. Request for Information

DOE is publishing this RFI to collect data and information during the early assessment review to inform its decision, consistent with its obligations under EPCA, as to whether the Department should proceed with an energy conservation standards rulemaking. Accordingly, in the following sections, DOE has identified specific issues on which it seeks input to aid in its analysis of whether an amended standard for ACIM would not save a significant amount of energy or be technologically feasible or economically justified. In particular, DOE is interested in any information indicating that there has not been sufficient technological or market changes since DOE last conducted an energy conservation standards rulemaking analysis for ACIM to suggest a more-stringent standard could satisfy these criteria. DOE also welcomes comments on other issues relevant to its early assessment that may not specifically be identified in this document.

A. Significant Savings of Energy

The energy conservation standards for ACIM established by DOE in the January 2015 Final Rule are expected to result in 0.064 quads of site energy savings, representing an 8 percent reduction in site energy use, relative to the base case without amended standards over a 30-year period.[3] *See* 80 FR 4646, 4649; and the January 2015 Final Rule Technical Support Document (''TSD'').[4] Additionally, in the January 2015 Final Rule, DOE estimated that an energy conservation standard established at an energy use level equivalent to that achieved using the maximum available

[2] For editorial reasons, upon codification in the U.S. Code, Part C was redesignated Part A–1.

[3] This estimate of 0.064 quads reflects site energy savings. The January 2015 Final Rule presented the 30-year energy savings estimate as 0.18 quads, reflecting full-fuel-cycle (''FFC'') energy savings. The FFC measure includes point-of-use (site) energy; the energy losses associated with generation, transmission, and distribution of electricity; and the energy consumed in extracting, processing, and transporting or distributing primary fuels.

[4] The January 2015 Final Rule TSD is available on *http://www.regulations.gov* in docket number EERE–2010–BT–STD–0037, document number 136. The docket also includes the spreadsheet used to conduct the national impact analysis, document number 131, as described in chapter 10 of the January 2015 Final Rule TSD.

technology (''max-tech'') would have resulted in 0.051 additional quads of site energy savings.[5] *See* 80 FR 4646, 4736; and the January 2015 Final Rule TSD. This represents a 7 percent reduction in energy use compared to the estimated national energy use at the established energy conservation standard level. If DOE determines that a more-stringent energy conservation standard would not result in an additional 0.3 quad of site energy savings or an additional 10-percent reduction in site energy use over a 30-year period, DOE would propose to make a no-new-standards determination. DOE seeks comment on energy savings that could be expected from more-stringent standards for ACIM.

While DOE's request for information is not limited to the following issues, DOE is particularly interested in comment, information, and data on the following.

Issue 1: DOE seeks information on whether the max-tech level analysis from the January 2015 Final Rule is applicable to the current ACIM market and on whether the previous estimates of energy savings at the max-tech level represent the savings that would be realized were DOE to establish future amended energy conservation standards at the max-tech level.

Issue 2: DOE seeks information on the January 2015 Final Rule analysis resulting in the energy savings estimates discussed in this section. Specifically, DOE requests comment and data on updates to the relevant analysis inputs, including stock of ACIMs, shipments since 2010, efficiency distributions, and the incorporation of various refrigerants in the models available on the market. DOE also requests data on market share by equipment class and refrigerant.

B. Technological Feasibility

During the January 2015 Final Rule, DOE considered a number of technology options that manufacturers could use to reduce energy consumption in ACIM. DOE seeks comment on any changes to these technology options that could affect whether DOE could propose a ''no-new-standards'' determination, such as an insignificant increase in the range of efficiencies and performance characteristics of these technology options. DOE also seeks comment on whether there are any other technology options that DOE should consider in its analysis.

While DOE's request for information is not limited to the following issues, DOE is particularly interested in comment, information, and data on the following.

Issue 3: DOE requests feedback on whether the use of alternative refrigerants could impact: ACIM efficiencies, the viability or efficiency of other technology options incorporated into the equipment (*e.g.,* refrigeration system components, additional sensing/safety components), the availability of equipment features, or consumer utility.

Issue 4: DOE is aware that the range of available ACIM efficiencies has changed since the January 2015 Final Rule analysis. DOE requests comment and data regarding which design options are incorporated in equipment that may achieve higher efficiencies than those considered in the previous rulemaking analysis, including at a potentially updated max-tech efficiency level, and how any such design options or combinations of design options may impact the availability of equipment features or consumer utility. Additionally, DOE seeks information on any alternative approaches for achieving potential reductions in energy usage for ACIMs.

C. Economic Justification

In determining whether a proposed energy conservation standard is economically justified, DOE analyzes, among other things, the potential economic impact on consumers, manufacturers, and the Nation. DOE seeks comment on whether there are economic barriers to the adoption of more-stringent energy conservation standards. DOE also seeks comment and data on any other aspects of its economic justification analysis from the January 2015 Final Rule that may indicate whether a more-stringent energy conservation standard would not be economically justified or cost effective.

While DOE's request for information is not limited to the following issues, DOE is particularly interested in comment, information, and data on the following.

Issue 5: DOE seeks input on whether frequency of repair differs for the design options that underlie max-tech efficiency levels when compared to baseline efficiency levels, and if and how installation costs would be affected by the presence of such design options in equipment.

Issue 6: DOE seeks input on whether 8.5 years, as estimated in the January 2015 Final Rule analysis (*see* 80 FR 4646, 4700–4701), is an appropriate lifetime for use in the economic analyses for all equipment classes.

III. Submission of Comments

DOE invites all interested parties to submit in writing by December 14, 2020, comments and information on matters addressed in this notice and on other matters relevant to DOE's early assessment of whether more-stringent energy conservation standards are not warranted for ACIM.

Submitting comments via http://www.regulations.gov. The *http://www.regulations.gov* web page requires you to provide your name and contact information. Your contact information will be viewable to DOE Building Technologies staff only. Your contact information will not be publicly viewable except for your first and last names, organization name (if any), and submitter representative name (if any). If your comment is not processed properly because of technical difficulties, DOE will use this information to contact you. If DOE cannot read your comment due to technical difficulties and cannot contact you for clarification, DOE may not be able to consider your comment.

However, your contact information will be publicly viewable if you include it in the comment or in any documents attached to your comment. Any information that you do not want to be publicly viewable should not be included in your comment, nor in any document attached to your comment. If this instruction is followed, persons viewing comments will see only first and last names, organization names, correspondence containing comments, and any documents submitted with the comments.

Do not submit to *http://www.regulations.gov* information for which disclosure is restricted by statute, such as trade secrets and commercial or financial information (hereinafter referred to as Confidential Business Information (CBI)). Comments submitted through *http://www.regulations.gov* cannot be claimed as CBI. Comments received through the website will waive any CBI claims for the information submitted. For information on submitting CBI, see the Confidential Business Information section.

DOE processes submissions made through *http://www.regulations.gov* before posting. Normally, comments will be posted within a few days of being submitted. However, if large volumes of comments are being processed simultaneously, your comment may not be viewable for up to

[5] This estimate of 0.051 additional quads of site energy savings reflects the difference in the cumulative national energy savings between the max-tech efficiency levels and the energy conservation standards established in the January 2015 Final Rule, when converted from full-fuel-cycle energy savings to site energy savings.

several weeks. Please keep the comment tracking number that *http://www.regulations.gov* provides after you have successfully uploaded your comment.

Submitting comments via email, hand delivery/courier, or postal mail. Comments and documents submitted via email, hand delivery/courier, or postal mail also will be posted to *http://www.regulations.gov.* If you do not want your personal contact information to be publicly viewable, do not include it in your comment or any accompanying documents. Instead, provide your contact information in a cover letter. Include your first and last names, email address, telephone number, and optional mailing address. The cover letter will not be publicly viewable as long as it does not include any comments.

Include contact information each time you submit comments, data, documents, and other information to DOE. If you submit via postal mail or hand delivery/courier, please provide all items on a CD, if feasible, in which case it is not necessary to submit printed copies. Faxes will not be accepted.

Comments, data, and other information submitted to DOE electronically should be provided in PDF (preferred), Microsoft Word or Excel, WordPerfect, or text (ASCII) file format. Provide documents that are not secured, written in English, and free of any defects or viruses. Documents should not contain special characters or any form of encryption and, if possible, they should carry the electronic signature of the author.

Campaign form letters. Please submit campaign form letters by the originating organization in batches of between 50 to 500 form letters per PDF or as one form letter with a list of supporters' names compiled into one or more PDFs. This reduces comment processing and posting time.

Confidential Business Information. Pursuant to 10 CFR 1004.11, any person submitting information that he or she believes to be confidential and exempt by law from public disclosure should submit via email, postal mail, or hand delivery/courier two well-marked copies: One copy of the document marked ''confidential'' including all the information believed to be confidential, and one copy of the document marked ''non-confidential'' with the information believed to be confidential deleted. Submit these documents via email or on a CD, if feasible. DOE will make its own determination about the confidential status of the information and treat it according to its determination.

It is DOE's policy that all comments may be included in the public docket, without change and as received, including any personal information provided in the comments (except information deemed to be exempt from public disclosure).

DOE considers public participation to be a very important part of the process for developing test procedures and energy conservation standards. DOE actively encourages the participation and interaction of the public during the comment period in each stage of this process. Interactions with and between members of the public provide a balanced discussion of the issues and assist DOE in the process. Anyone who wishes to be added to the DOE mailing list to receive future notices and information about this process should contact Appliance and Equipment Standards Program staff at (202) 287–1445 or via email at *ApplianceStandardsQuestions@ee.doe.gov.*

Signing Authority

This document of the Department of Energy was signed on September 17, 2020, by Alexander N. Fitzsimmons, Deputy Assistant Secretary for Energy Efficiency, Energy Efficiency and Renewable Energy, pursuant to delegated authority from the Secretary of Energy. That document with the original signature and date is maintained by DOE. For administrative purposes only, and in compliance with requirements of the Office of the Federal Register, the undersigned DOE Federal Register Liaison Officer has been authorized to sign and submit the document in electronic format for publication, as an official document of the Department of Energy. This administrative process in no way alters the legal effect of this document upon publication in the **Federal Register**.

Signed in Washington, DC, on September 17, 2020.

Treena V. Garrett,

Federal Register Liaison Officer, U.S. Department of Energy.

[FR Doc. 2020–20925 Filed 9–28–20; 8:45 am]

BILLING CODE 6450–01–P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 162

[Docket No. USCG–2020–0521]

RIN 1625–AA11

Connecting Waters From Lake Huron to Lake Erie; Traffic Rules

AGENCY: Coast Guard, DHS.

ACTION: Notice of proposed rulemaking.

SUMMARY: The Coast Guard is proposing to amend the navigation regulations between the Great Lakes. Specifically, this proposed amendment would allow a vessel to overtake another vessel that has slowed its speed to await berth availability or to make the turn for Rouge River and the overtaking vessel has so advised the Canadian Coast Guard Marine communications and Traffic Services Centre located in Sarnia, Ontario. Currently, the regulation only permits vessels to overtake vessels engaged in towing between the west end of Belle Isle and Peche Island Light. We invite your comments on this proposed rulemaking.

DATES: Comments and related materials must reach the Coast Guard on or before October 29, 2020.

ADDRESSES: You may submit comments identified by docket number USCG–2020–0521 using the Federal eRulemaking Portal at *https://www.regulations.gov.* See the ''Public Participation and Request for Comments'' portion of the **SUPPLEMENTARY INFORMATION** section for further instructions on submitting comments.

FOR FURTHER INFORMATION CONTACT: If you have questions on this proposed rule, call or email Tracy Girard, Sector Detroit, Coast Guard; telephone (313) 568–9564, email *Tracy.M.Girard@uscg.mil*.

SUPPLEMENTARY INFORMATION:

I. Table of Abbreviations

CFR Code of Federal Regulations
DHS Department of Homeland Security
FR Federal Register
NPRM Notice of proposed rulemaking
§ Section
U.S.C. United States Code

II. Background, Purpose, and Legal Basis

The purpose of this rulemaking is to update the navigation rule in § 162.134(a)(4) to improve traffic efficiency on the river while maintaining safety. The Canadian Coast

Guard has modified their traffic rules to reflect this change and the Lake Carriers Association has endorsed this change. This proposed rule would provide consistency on the river, and would apprise the public in a timely manner through permanent publication in Title 33 of the Code of Federal Regulations.

III. Discussion of Proposed Rule

This proposed modification to the rule will allow a vessel to overtake another vessel that has slowed its speed to await berth availability or to make the turn for Rouge River and the overtaking vessel has so advised the Canadian Coast Guard Marine Communications and Traffic Services Centre located in Sarnia, Ontario. This will improve traffic efficiency on the river while maintaining safety. Currently 33 CFR 162.134(a)(4) states, ''Between the west end of Belle Isle and Peche Island Light, vessels may only overtake vessels engaged in towing.'' We propose to replace 33 CFR 162.134(a)(4) with ''Between the west end of Belle Isle and Peche Island Light, vessels may overtake vessels if the vessel to be overtaken is engaged in towing or has slowed its speed to await berth availability or to make the turn for Rouge River, and the overtaking vessel has so advised the Canadian Coast Guard Marine Communications and Traffic Services Centre located in Sarnia, Ontario.''

IV. Regulatory Analyses

We developed this proposed rule after considering numerous statutes and executive orders related to rulemaking. Below we summarize our analyses based on a number of these statutes and executive orders and we discuss First Amendment rights of protestors.

A. Regulatory Planning and Review

Executive Orders 12866 and 13563 direct agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. Executive Order 13771 directs agencies to control regulatory costs through a budgeting process. This NPRM has not been designated a ''significant regulatory action,'' under Executive Order 12866. Accordingly, the NPRM has not been reviewed by the Office of Management and Budget (OMB), and pursuant to OMB guidance it is exempt from the requirements of Executive Order 13771.

B. Impact on Small Entities

The Regulatory Flexibility Act of 1980, 5 U.S.C. 601–612, as amended, requires Federal agencies to consider the potential impact of regulations on small entities during rulemaking. The term ''small entities'' comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000. The Coast Guard certifies under 5 U.S.C. 605(b) that this proposed rule would not have a significant economic impact on a substantial number of small entities.

While some owners or operators of vessels intending to transit the regulated areas may be small entities, for the reasons stated in section IV.A above this proposed rule would not have a significant economic impact on any vessel owner or operator.

If you think that your business, organization, or governmental jurisdiction qualifies as a small entity and that this rule would have a significant economic impact on it, please submit a comment (see **ADDRESSES**) explaining why you think it qualifies and how and to what degree this rule would economically affect it.

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we want to assist small entities in understanding this proposed rule. If the rule would affect your small business, organization, or governmental jurisdiction and you have questions concerning its provisions or options for compliance, please contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section. The Coast Guard will not retaliate against small entities that question or complain about this proposed rule or any policy or action of the Coast Guard.

C. Collection of Information

This proposed rule would not call for a new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

D. Federalism and Indian Tribal Governments

A rule has implications for federalism under Executive Order 13132, Federalism, if it has a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. We have analyzed this proposed rule under that Order and have determined that it is consistent with the fundamental federalism principles and preemption requirements described in Executive Order 13132.

Also, this proposed rule does not have tribal implications under Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, because it would not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes. If you believe this proposed rule has implications for federalism or Indian tribes, please contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section.

E. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of $100,000,000 (adjusted for inflation) or more in any one year. Though this proposed rule would not result in such an expenditure, we do discuss the effects of this rule elsewhere in this preamble.

F. Environment

We have analyzed this proposed rule under Department of Homeland Security Directive 023–01, Rev. 1, associated implementing instructions, and Environmental Planning COMDTINST 5090.1 (series), which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (42 U.S.C. 4321–4370f), and have made a preliminary determination that this action is one of a category of actions that do not individually or cumulatively have a significant effect on the human environment. This proposed rule involves navigation rules. Normally such actions are categorically excluded from further review under paragraph L60(a) of Appendix A, Table 1 of DHS Instruction Manual 023–01–001–01, Rev. 1. A preliminary Record of Environmental Consideration supporting this determination is available in the docket. For instructions on locating the docket, see the **ADDRESSES** section of this preamble. We seek any comments or information that may lead to the discovery of a significant environmental impact from this proposed rule.

G. Protest Activities

The Coast Guard respects the First Amendment rights of protesters. Protesters are asked to contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section to coordinate protest activities so that your

message can be received without jeopardizing the safety or security of people, places, or vessels.

V. Public Participation and Request for Comments

We view public participation as essential to effective rulemaking and will consider all comments and material received during the comment period. Your comment can help shape the outcome of this rulemaking. If you submit a comment, please include the docket number for this rulemaking, indicate the specific section of this document to which each comment applies, and provide a reason for each suggestion or recommendation.

We encourage you to submit comments through the Federal eRulemaking Portal at *http://www.regulations.gov.* If your material cannot be submitted using *http://www.regulations.gov,* contact the person in the **FOR FURTHER INFORMATION CONTACT** section of this document for alternate instructions.

We accept anonymous comments. All comments received will be posted without change to *http://www.regulations.gov* and will include any personal information you have provided. For more about privacy and submissions in response to this document, see DHS's eRulemaking System of Records notice (85 FR 14226, March 11, 2020).

Documents mentioned in this NPRM as being available in the docket, and all public comments, will be in our online docket at *http://www.regulations.gov* and can be viewed by following that website's instructions. Additionally, if you go to the online docket and sign up for email alerts, you will be notified when comments are posted or a final rule is published.

List of Subjects 33 CFR Part 162

Navigation (water), Waterways.

For the reasons discussed in the preamble, the Coast Guard proposes to amend 33 CFR part 162 as follows:

PART 162—INLAND WATERWAYS NAVIGATION REGULATIONS

■ 1. The authority citation for part 162 continues to read as follows:

Authority: 33 U.S.C. 1231; Department of Homeland Security Delegation No. 0170.1.

■ 2. In § 162.134, revise paragraph (a)(4) to read as follows:

§ 162.134 Connecting waters from Lake Huron to Lake Erie; traffic rules.

(a) * * *

(4) Between the west end of Belle Isle and Peche Island Light, vessels may overtake vessels if the vessel to be overtaken is engaged in towing or has slowed its speed to await berth availability or to make the turn for Rouge River, and the overtaking vessel has so advised the Canadian Coast Guard Marine Communications and Traffic Services Centre located in Sarnia, Ontario.

Dated: August 26, 2020.

Brad. W. Kelly,

Captain, U.S. Coast Guard, Captain of the Port Detroit.

[FR Doc. 2020–19238 Filed 9–28–20; 8:45 am]

BILLING CODE 9110–04–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[EPA–R06–OAR–2020–0300; FRL–10014–58–Region 6]

Air Plan Approval; Texas; Reasonable Further Progress Plan for the Houston-Galveston-Brazoria Ozone Nonattainment Area

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: Pursuant to the Federal Clean Air Act (CAA or the Act), the Environmental Protection Agency (EPA) is proposing to approve revisions to the Texas State Implementation Plan (SIP) to meet the Reasonable Further Progress (RFP) requirements for the Houston-Galveston-Brazoria (HGB) serious ozone nonattainment area for the 2008 ozone National Ambient Air Quality Standard (NAAQS). Specifically, EPA is proposing to approve the RFP demonstration and associated motor vehicle emission budgets, contingency measures should the area fail to make RFP emissions reductions or attain the 2008 ozone NAAQS by the applicable attainment date, and a revised 2011 base year emissions inventory for the HGB area.

DATES: Written comments must be received on or before October 29, 2020.

ADDRESSES: Submit your comments, identified by Docket No. EPA–R06–OAR–2020–0300, at *https://www.regulations.gov* or via email to *paige.carrie@epa.gov.* Follow the online instructions for submitting comments. Once submitted, comments cannot be edited or removed from *Regulations.gov.* The EPA may publish any comment received to its public docket. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. The EPA will generally not consider comments or comment contents located outside of the primary submission (*i.e.,* on the web, cloud, or other file sharing system). For additional submission methods, please contact Carrie Paige, 214–665–6521, *paige.carrie@epa.gov.* For the full EPA public comment policy, information about CBI or multimedia submissions, and general guidance on making effective comments, please visit *https://www.epa.gov/dockets/commenting-epa-dockets.*

Docket: The index to the docket for this action is available electronically at *www.regulations.gov.* While all documents in the docket are listed in the index, some information may not be publicly available due to docket file size restrictions or content (*e.g.,* CBI).

FOR FURTHER INFORMATION CONTACT: Carrie Paige, EPA Region 6 Office, Infrastructure & Ozone Section, 214–665–6521, *paige.carrie@epa.gov.* Out of an abundance of caution for members of the public and our staff, the EPA Region 6 office may be closed to the public to reduce the risk of transmitting COVID–19. We encourage the public to submit comments via *https://www.regulations.gov,* as there may be a delay in processing mail and courier or hand deliveries may not be accepted. Please call or email the contact listed above if you need alternative access to material indexed but not provided in the docket.

SUPPLEMENTARY INFORMATION: Throughout this document wherever ''we,'' ''us,'' or ''our'' is used, we mean the EPA.

I. Introduction

On May 13, 2020, the Texas Commission on Environmental Quality (TCEQ or State) submitted to EPA a SIP revision addressing RFP requirements for the 2008 8-hour ozone NAAQS for the two serious ozone nonattainment areas in Texas (''the TCEQ submittal''). These two areas are the HGB and the Dallas-Fort Worth (DFW) areas. The TCEQ submittal also establishes motor vehicle emissions budgets (MVEBs) for the year 2020 and includes contingency measures for each of the HGB and DFW areas, should the areas fail to make reasonable further progress, or to attain

the NAAQS by the applicable attainment date.

In this rulemaking action, we are addressing only that portion of the TCEQ submittal that refers to the HGB area. We are proposing to approve the RFP demonstration and associated contingency measures for RFP or failure-to-attain and MVEBs for the HGB area. We are also proposing to approve a revised 2011 base year emissions inventory (EI) for the HGB area. The portion of the TCEQ submittal that refers to the DFW area will be addressed in a separate rulemaking action.

II. Background

In 2008, we revised the 8-hour ozone primary and secondary NAAQS to a level of 0.075 parts per million (ppm) to provide increased protection of public health and the environment (73 FR 16436, March 27, 2008).[1] The HGB area was classified as a marginal ozone nonattainment area for the 2008 ozone NAAQS [2] and initially given an attainment date of no later than December 31, 2015 (77 FR 30088 and 77 FR 30160, May 21, 2012). The HGB area consists of Brazoria, Chambers, Fort Bend, Galveston, Harris, Liberty, Montgomery and Waller counties.

On December 23, 2014, the D.C. Circuit Court issued a decision rejecting, among other things, our attainment deadlines for the 2008 ozone nonattainment areas, finding that we did not have statutory authority under the CAA to extend those deadlines to the end of the calendar year. *NRDC* v. *EPA*, 777 F.3d 456, 464–69 (D.C. Cir. 2014). Consistent with the court's decision we modified the attainment deadlines for all nonattainment areas for the 2008 ozone NAAQS and set the attainment deadline for all 2008 ozone marginal nonattainment areas, including the HGB area as July 20, 2015 (80 FR 12264, March 6, 2015). The HGB area qualified for a 1-year extension of the attainment date and we revised the attainment date to July 20, 2016 (81 FR 26697, May 4, 2016). The HGB area did not meet the revised attainment deadline and we reclassified the area to moderate with an attainment date no later than July 20, 2018 (81 FR 90207, December 14, 2016). Subsequently, the HGB area did not meet the moderate attainment date and was reclassified as a serious ozone nonattainment area (84 FR 44238, August 23, 2019).[3] Accordingly, the State was required to submit revisions to the HGB SIP to meet serious area requirements.

The CAA requires that areas designated as nonattainment for ozone and classified as moderate or worse demonstrate RFP by reducing emissions of ozone precursors (nitrogen oxides or NO_X and volatile organic compounds or VOC).[4] On March 6, 2015 (80 FR 12264), EPA published the final rule to implement the 2008 ozone standard (the ''SIP Requirements Rule'' or ''SRR'') that addressed, among other things, the RFP control and planning obligations as they apply to areas designated nonattainment for the 2008 ozone standard. In the SRR, RFP was defined (for the purposes of the 2008 ozone standard) as meaning the progress reductions required under sections 172(c)(2) and 182(b)(1) and (c)(2)(B) and (c)(2)(C) of the CAA (80 FR 12264, 12313).[5] RFP plans must also include a MVEB, which provides the allowable on-road mobile emissions an area can produce and continue to demonstrate RFP (57 FR 13498, 13558, April 16, 1992).

The RFP plan for the HGB moderate ozone nonattainment area for the 2008 ozone NAAQS was approved on February 13, 2019 (84 FR 3708) and it demonstrated required emissions reductions through the end of calendar year 2017. Because the HGB area was reclassified as a serious ozone nonattainment area, pursuant to CAA section 182(c)(2) and 40 CFR 51.1110, the RFP SIP for the HGB area must demonstrate NO_X and/or VOC emissions reductions of at least an average of 3 percent per year for the calendar years 2018, 2019, and 2020 for a total of 9 percent and an additional 3 percent for contingency measures in 2021, should the area fail to meet RFP or fail to attain the 2008 ozone NAAQS by the July 20, 2021 attainment date. Finally, the emissions reductions must occur within the HGB area.

III. EPA's Evaluation of the TCEQ Submittal

We reviewed the TCEQ submittal for consistency with the requirements of the CAA and EPA regulations and guidance. A summary of our analysis and findings are provided below. For a more detailed discussion of our evaluation, please see our TSD in the docket for this rulemaking action.

A. Revised 2011 Base Year Emissions Inventory

An emissions inventory (EI) is a collection of data that lists, by source, the amount of air pollutants discharged into the atmosphere, during a year or other time period. The EI includes estimates of the emissions associated with the air quality problems in the area (in this case, NO_X and VOC) from various pollution sources. The State submitted a 2011 base year EI for the 2008 ozone NAAQS, which we approved for the HGB area (80 FR 9204).[6] The State later revised the 2011 base year EI for the HGB area, which we approved (84 FR 3708). In the TCEQ submittal, the State further refined the 2011 base year EI for the HGB area. Pursuant to 40 CFR 51.1110(b), the values in the submitted 2011 base year EI are actual ozone season day emissions. Pursuant to CAA sections 172(c)(3) and 182(b)(1), the submitted 2011 base year EI consists of NO_X and VOC emissions from all sources inside the nonattainment area. Compared with that approved at 84 FR 3708, the submitted 2011 base year NO_X emissions decrease by 17.02 tons per day (tpd) and VOC emissions increase by 3.66 tpd. The revised 2011 base year EI was developed using EPA-approved guidelines for point, mobile, and area emission sources. Point source emissions data for 2011 were pulled from the State of Texas Air Reporting System (STARS) database—these data also include all authorized/planned Startup, Shutdown and Maintenance emissions.[7] On-road and nonroad mobile source emissions were calculated using the EPA's MOVES2014a model [8] combined with

[1] On October 1, 2015, the EPA promulgated a more protective 8-hour ozone standard of 0.070 ppm (80 FR 65292, October 26, 2015). On April 30, 2018, the EPA promulgated designations under the 2015 ozone standard (83 FR 25776, June 4, 2018) and in that action, the EPA designated Brazoria, Chambers, Fort Bend, Galveston, Harris, and Montgomery counties as a marginal ozone nonattainment area. The RFP plan is not required for a marginal nonattainment area under the 2015 ozone standard. The TCEQ submittal does not specifically address the 2015 ozone standard, but provides progress toward attaining the new standard. For more information on ozone, see our Technical Support Document (TSD) in the docket for this rulemaking and visit *https://www.epa.gov/ground-level-ozone-pollution.*

[2] Throughout this document, we refer to the 2008 8-hour ozone NAAQS as the ''2008 ozone NAAQS.''

[3] For more on the history of ozone in the HGB area, see our TSD in the docket for this rulemaking and visit *https://www.tceq.texas.gov/airquality/sip/hgb/hgb-ozone-history.*

[4] See CAA sections 172(c)(2) and 182(b)(1) and 40 CFR 51.1110.

[5] See 40 CFR 51.1110.

[6] See also the EI regulations at 40 CFR 51.1115.

[7] States are not obligated to include malfunction emissions in the base year inventory for RFP plans. See the discussion beginning on page 83 of Emissions Inventory Guidance for Implementation of Ozone and Particulate Matter National Ambient Air Quality Standards (NAAQS) and Regional Haze Regulations EPA–454/B–17–003, available at *https://www.epa.gov/sites/production/files/2017-07/documents/ei_guidance_may_2017_final_rev.pdf* (hereinafter referred to as ''EPA's EI Guidance'') (July 2017).

[8] EPA's Motor Vehicle Emission Simulator (MOVES) is a state-of-the-science emission

Continued

local activity inputs including vehicle miles traveled (VMT) and average speed data, as well as local fleet, age distribution, and fuels information. Area sources include many categories of emissions. The EPA finds that these sources were adequately accounted for in the revised 2011 base year EI. The methodology used to calculate emissions for each respective category followed relevant EPA EI guidance [9] and was sufficiently documented in the TCEQ Submittal.[10] We are proposing to approve the revised 2011 base year EI. Table 1 summarizes the revised EI for the HGB area. See our TSD for more detail.

TABLE 1—HGB RFP 2011 BASE YEAR EI

2011 Base year inventory, reported in tpd				
Source type	NO_X		VOC	
	Approved at 84 FR 3708	Revised inventory	Approved at 84 FR 3708	Revised inventory
Point	108.33	108.33	95.99	95.97
Area	21.15	21.15	304.90	308.53
Non-road Mobile	142.44	144.84	49.78	50.11
On-road Mobile	188.02	168.60	80.73	80.45
Total	459.94	442.92	531.40	535.06

B. Reasonable Further Progress Demonstration

To calculate the required RFP emission reductions, CAA section 182 and 40 CFR 51.1110(b) require that the percent reduction be calculated from the base year EI. The required reductions are then subtracted from the 2011 base year EI to provide the RFP emissions target numbers. See our TSD and the TCEQ submittal for more detail. The RFP calculations are shown in Table 2.

TABLE 2—CALCULATION OF RFP TARGET EMISSION REDUCTIONS THROUGH 2020

[tpd]

Description	NO_X	VOC
a. 2011 Emissions Inventory (totals from Table 1)	442.92	535.06
b. Percent of NO_X and VOC to meet 15% reduction [11] (percentages must total 15, and 10 + 5 = 15)	10.0%	5.0%
c. Percent of NO_X and VOC to meet 9% reduction (percentages must total 9, and 6.2 + 2.8 = 9)	6.2%	2.8%
d. 15% NO_X and VOC reduction, 2011–2017 (row a multiplied by row b) (442.92 × 0.1 = 44.29) and (535.06 × 0.05 = 26.75)	44.29	26.75
e. 9% NO_X and VOC reduction, 2018–2020 (row a multiplied by row c) (442.92 × 0.062 = 27.46) and (535.06 × 0.028 = 14.98)	27.46	14.98
f. Total emissions reductions for 2011–2020 (row d plus row e)	71.75	41.73
g. 2020 Target Level of Emissions (row a minus row f)	371.17	493.33

To determine whether the area is able to meet the RFP target, the State must establish the future year (2020) EI and subtract any control measures that will be applied to sources in the HGB area. Section 182(b)(1)(A) of the Act requires that states provide sufficient control measures in their RFP plans to offset growth in emissions. The controls identified by the State to achieve RFP are listed in Table 3. For more detail on these controls, see our TSD and the TCEQ submittal.

TABLE 3—HGB AREA CONTROL MEASURES AND PROJECTED EMISSION REDUCTIONS (tpd), 2011–2020

Control strategy description	NO_X	VOC
Federal Motor Vehicle Control Program (FMVCP)	561.84	245.62
Reformulated Gasoline (RFG) [12]/Low Sulfur Gasoline/Ultra-Low Sulfur Diesel (ULSD)	101.55	16.96
Inspection and Maintenance (I/M) (66 FR 57261, 11/14/2001)	5.13	7.39
On-road Texas Low-Emission Diesel (TxLED) [13]	2.39	0.00
Tier I and II locomotive NO_X standards	21.02	0.81
Small non-road spark-ignition (SI) engines (Phase I)	−3.17	25.60
Heavy duty non-road engines	26.71	13.71
Tiers 2 and 3 non-road diesel engines	30.22	2.62
Small non-road SI engines (Phase II)	2.22	23.67
Large non-road SI and recreational marine	37.37	16.51
Non-road TxLED	1.36	0.00

modeling system that estimates emissions for mobile sources at the national, county, and project level for criteria air pollutants, greenhouse gases, and air toxics. See *https://www.epa.gov/moves.*

[9] In addition to EPA's EI Guidance, see MOVES2014 and MOVES2014a Technical Guidance: Using MOVES to Prepare Emission Inventories for State Implementation Plans and Transportation Conformity, EPA–420–B–15–093, available at *https://nepis.epa.gov/Exe/ZyPDF.cgi/P100NN9L.PDF?Dockey=P100NN9L.pdf* (Nov. 2015).

[10] See our TSD and the TCEQ submittal with appendices in the docket for this rulemaking.

[11] To account for the reductions required and taken under the moderate area RFP plan, we reduce emissions by 15% between 2011 and 2017. See 84 FR 3708.

TABLE 3—HGB AREA CONTROL MEASURES AND PROJECTED EMISSION REDUCTIONS (tpd), 2011–2020—Continued

Control strategy description	NO_X	VOC
Non-road RFG	0.01	0.73
Tier 4 non-road diesel engines	17.70	0.78
Small SI (Phase III)	2.16	15.43
Drilling rigs: Federal engine standards and TxLED	0.43	0.09
Commercial Marine Vessel engine certification standards and fuel programs	14.76	0.12
Total Projected Emission Reductions	821.70	370.04

To determine whether the area will meet the RFP targets, we subtract the projected emission reductions (Table 3) from the projected EI of uncontrolled emissions for 2020. This projected EI will reflect emissions resulting from anticipated changes in activity from 2011 to 2020, such as emissions increases due to growth in population and VMT. NO_X emissions from sites with equipment applicable to the Mass Emissions Cap and Trade (MECT) Program were projected using the MECT cap. Major stationary sources of VOC emissions were projected by adding emissions growth allowed under the nonattainment New Source Review NSR major modification thresholds. The projected EI was also adjusted to account for available (unused) emissions credits.[14] For more detail on the projected EI, please see our TSD and the TCEQ submittal. The methodology used to forecast the 2020 emissions for each respective category followed relevant EPA EI guidance and was sufficiently documented in the TCEQ submittal. The projected EI data in Table 4 are labeled as ''uncontrolled'' emissions. To achieve RFP, the amount of emissions remaining after subtracting the emissions reductions from the control measures must be equal to or less than the target inventories calculated in Table 2.

TABLE 4—SUMMARY OF RFP DEMONSTRATION FOR THE HGB AREA THROUGH 2020

[tpd]

Description	NO_X	VOC
a. 2020 Uncontrolled emissions	1,165.66	854.65
b. Projected emissions reductions through 2020 (total from Table 3)	821.70	370.04
c. Projected Emissions after Reductions (subtract line b from line a)	343.96	484.61
d. 3% reductions reserved for prior (2017–2018) RFP milestone contingency measures	13.29	.....
e. Projected emissions, including prior contingency requirement (add lines c and d)	357.25	484.61
f. 2020 Target (from Table 2)	371.17	493.33
If the projected emissions (line e) are less than the RFP target (line f), the area demonstrates RFP. Is line e less than line f?	Yes	Yes
g. Subtract line e from line f for surplus	13.92	8.72

In Table 4, we see that the projected emissions in row e, after accounting for reductions from controls and the 2017–2018 contingency measures, are less than the 2020 RFP target emissions and thus, demonstrate RFP. We are proposing that the emissions reductions projected for 2020 are sufficient to meet the 2020 RFP targets.

C. Contingency Measures

As noted earlier, RFP plans for moderate and above nonattainment areas must include contingency measures, which, consistent with CAA section 172(c)(9), ''shall provide for the implementation of specific measures to be undertaken if the area fails to make reasonable further progress, or to attain the national primary ambient air quality standard by the attainment date applicable under this part.'' EPA has long interpreted the contingency measures provision to allow states to rely on measures already in place and implemented so long as those reductions are beyond those relied on for purposes of the attainment or RFP planning SIP.[15] In addition, the April 16, 1992 General Preamble provided the following guidance: ''States must show that their contingency measures can be implemented with minimal further action on their part and with no additional rulemaking actions such as public hearings or legislative review. In general, EPA will expect all actions needed to affect full implementation of the measures to occur within 60 days after EPA notifies the State of its failure.'' (57 FR 13512).

While the CAA does not specify the type of measures or quantity of emissions reductions required, EPA interprets the CAA to mean that implementation of these contingency measures would provide additional emissions reductions of up to 3 percent of the adjusted base year inventory (or a lesser percentage that will make up the identified shortfall) in the year following the missed milestone, whether it be RFP or attainment.[16]

The TCEQ submittal provides NO_X reductions for the HGB contingency measures. These contingency measure reductions for the HGB area are not

[12] The RFG program is implemented in all 8 counties identified elsewhere in this proposal as the HGB area. For more information on the RFG program, visit *https://www.epa.gov/gasoline-standards/reformulated-gasoline.*

[13] The TxLED fuel rules apply to highway (on-road) and non-road vehicles and were approved into the Texas SIP on November 14, 2001 (66 FR 57196). Subsequent revisions were approved April 6, 2005 (70 FR 17321), October 6, 2005 (70 FR 58325), October 24, 2008 (73 FR 63378), and May 6, 2013 (78 FR 26255).

[14] Emissions credits are banked emissions reductions that may return to the air shed in the future when these emissions credits are used either to modify existing facilities, construct new facilities, or demonstrate compliance with source-specific emissions limit obligations where provided for in Texas SIP rules.

[15] This interpretation has been upheld by the Fifth Circuit Court of Appeals (and the State of Texas is within the Fifth Circuit jurisdiction). *See LEAN* v. *EPA,* 382 F.3d 575 (5th Cir. 2004).

[16] See the April 16, 1992 General Preamble section III.A.3.c (57 FR 13498 at 13511).

relied upon for RFP or for attainment. The TCEQ submittal includes but is not limited to surplus emissions reductions from the 2020 RFP demonstration (see Table 4, line g) for the HGB area contingency measure demonstration. The TCEQ submittal also includes emission reductions that will take place during calendar year 2021 for the HGB area contingency measure demonstration—these contingency measures consist of State mobile source measures that are already approved in the SIP (I/M, RFG, and TxLED) [17] and federal measures (FMVCP and ULSD). Thus, the contingency measures for 2021 are reliable, permanent, and enforceable. The contingency measures are listed in Table 5.

TABLE 5—DEMONSTRATION FOR 2021 FOR THE HGB AREA RFP CONTINGENCY MEASURES

[tpd]

	NO_X	VOC
Description		
a. 2011 Base year Emissions Inventory (from Table 1)	442.92	535.06
b. Percent of NO_X and VOC to meet contingency measure requirement (total must equal 3%)	3%	0
c. 3% NO_X reduction for 2021 (row a multiplied by row b) (442.92 × 0.03 = 13.29)	13.29	0
Excess reductions to meet contingency requirement		
d. Surplus RFP reductions (from Table 4)	13.92	8.72
e. Subtract 2020 RFP MVEB safety margin [18]	−8.21	−5.49
f. 2020 to 2021 emission reductions (FMVCP, I/M, RFG, 2017 low sulfur gasoline standard on-road TxLED, and ULSD)	24.19	13.05
g. 2020 to 2021 emission reductions (federal non-road mobile new vehicle certification standards, non-road RFG, and non-road TxLED)	4.59	2.29
h. Total projected emissions, accounting for contingency measures (add lines d, e, f, and g)	34.49	18.57
Total surplus or shortfall		
Line h is greater than line c. Subtract line c from line h for surplus	21.20	18.57
Is the contingency measure requirement met?	Yes	Yes

In Table 5, we see that the contingency measures provided for the HGB area, after accounting for the MVEB safety margin, are more than sufficient to meet the 3 percent contingency requirement. Indeed, if the HGB area relied only on the contingency measures scheduled for implementation during 2021 (Table 5, lines f and g), after accounting for the MVEB safety margin, those contingency measures alone would be adequate to meet the 3 percent contingency requirement. In addition, the contingency measures that occur from 2020 to 2021 are State and Federal measures that are already approved into the Texas SIP and as such are expected to be implemented with no further action by the State and with no additional rulemaking actions. Our evaluation of these contingency measures finds that the full implementation of such measures within 60 days after EPA notifies the State of its failure is achievable as, the contingency measures that occur from 2020 to 2021 are State and Federal measures already approved into the Texas SIP and as such are expected to be implemented with no further action by the State. We are proposing to approve the contingency measures for the HGB area.

D. Motor Vehicle Emission Budgets

The MVEB is the mechanism to determine if future transportation plans conform to the SIP. Transportation conformity is required by CAA section 176(c) and mandates that future transportation plans must not produce new air quality violations, worsen existing violations, delay RFP milestones, or delay timely attainment of the NAAQS. Thus, pursuant to CAA section 176(c), the RFP plan must include MVEBs for transportation conformity purposes. The MVEB is the maximum amount of emissions allowed in the SIP for on-road motor vehicles. The HGB RFP SIP contains VOC and NO_X MVEBs for RFP milestone year 2020 (see Table 6). On-road emissions must be shown in future transportation plans to be less than the MVEBs for 2020 and subsequent years.

EPA is evaluating the adequacy of the submitted MVEBs in parallel to this proposed approval action. Once EPA finds the submitted MVEBs are adequate for transportation conformity purposes, those MVEBs must be used by State and Federal agencies in determining whether proposed transportation projects conform to the SIP as required by section 176(c) of the CAA. EPA's criteria for determining adequacy of a MVEB are set out in 40 CFR 93.118(e)(4). The process for determining adequacy is described in our TSD.

EPA intends to make its determination on the adequacy of the 2020 RFP MVEBs for the HGB area for transportation conformity purposes soon, by completing the adequacy process that was started on June 3, 2020.[19] After EPA finds the 2020 MVEBs adequate or approves them, the new MVEBs for NO_X and VOC must be used for future transportation conformity determinations. For required regional emissions analysis years 2020 and beyond, the applicable budgets will be the new 2020 MVEBs. We are proposing to approve the 2020 MVEBs for the HGB area.

[17] As noted earlier in this rulemaking, the I/M program was approved into the SIP in 2001 (66 FR 57261). See footnotes 14 and 15 regarding approval of RFG and TxLED in the SIP.

[18] The safety margin allows for unanticipated growth in vehicle miles traveled, changes, and uncertainty in vehicle mix assumptions, etc., that will influence the emission estimates.

[19] On June 3, 2020, EPA posted the HGB area NO_X and VOC MVEBs on EPA's website for the purpose of soliciting public comments, as part of the adequacy process. The comment period closed on July 3, 2020, and we received no comments. For more information, visit *https://www.epa.gov/state-and-local-transportation/state-implementation-plans-sip-submissions-currently-under-epa#houston-texas-rea.*

TABLE 6—RFP MOTOR VEHICLE EMISSIONS BUDGETS FOR HGB

[tpd]

Year	NO_X	VOC
2020	87.69	57.70

III. Proposed Action

We are proposing to approve revisions to the Texas SIP that address the RFP requirements for the HGB serious ozone nonattainment area for the 2008 ozone NAAQS. Specifically, we are proposing to approve the RFP demonstration and associated MVEBs, contingency measures for RFP or failure-to-attain, and the revised 2011 base year EI for the HGB area. Further, as part of today's action, EPA is describing the status of its adequacy determination for the NO_X and VOC MVEBs for 2020 in accordance with 40 CFR 93.118(f)(2). Within 24 months from the effective date of EPA's adequacy determination for the MVEBs or the publication date for the final rule for this action, whichever is earlier, the transportation partners will need to demonstrate conformity to the new NO_X and VOC MVEBs pursuant to 40 CFR 93.104(e)(3).

IV. Statutory and Executive Order Reviews

Under the CAA, the Administrator is required to approve a SIP submission that complies with the provisions of the Act and applicable Federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, the EPA's role is to approve state choices, provided that they meet the criteria of the CAA. Accordingly, this action merely proposes to approve state law as meeting Federal requirements and does not impose additional requirements beyond those imposed by state law. For that reason, this action:

- Is not a ''significant regulatory action'' subject to review by the Office of Management and Budget under Executive Orders 12866 (58 FR 51735, October 4, 1993) and 13563 (76 FR 3821, January 21, 2011);
- Is not an Executive Order 13771 (82 FR 9339, February 2, 2017) regulatory action because SIP approvals are exempted under Executive Order 12866;
- Does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
- Is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);
- Does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4);
- Does not have federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
- Is not an economically significant regulatory action based on health or safety risks subject to Executive Order 13045 (62 FR 19885, April 23, 1997);
- Is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001);
- Is not subject to requirements of section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the CAA; and
- Does not provide EPA with the discretionary authority to address, as appropriate, disproportionate human health or environmental effects, using practicable and legally permissible methods, under Executive Order 12898 (59 FR 7629, February 16, 1994).

In addition, the SIP is not approved to apply on any Indian reservation land or in any other area where EPA or an Indian tribe has demonstrated that a tribe has jurisdiction. In those areas of Indian country, the proposed rule does not have tribal implications and will not impose substantial direct costs on tribal governments or preempt tribal law as specified by Executive Order 13175 (65 FR 67249, November 9, 2000).

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[EPA–R05–OAR–2015–0699; FRL–10015–10–Region 5]

Air Plan Approval; Ohio; Attainment Plan for the Muskingum River SO_2 Nonattainment Area

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: The Environmental Protection Agency (EPA) is proposing to approve a revision to the Ohio State Implementation Plan (SIP) submitted on April 3, 2015 and October 13, 2015, and supplemented on June 23, 2020, by the Ohio Environmental Protection Agency (Ohio EPA), consisting of its plan for attaining the 1-hour sulfur dioxide (SO_2) primary national ambient air quality standard (NAAQS) for the Muskingum River, Ohio SO_2 nonattainment area. This plan (herein called a ''nonattainment plan'') includes Ohio's attainment demonstration and other elements required under the Clean Air Act (CAA). In addition to an attainment demonstration, the plan addresses the requirements for meeting reasonable further progress (RFP) toward attainment of the NAAQS, reasonably available control measures (RACM) and reasonably available control technology (RACT), enforceable emission limitations and control measures, base-year and projection-year emission inventories, and contingency measures. EPA proposes to conclude that Ohio has appropriately demonstrated that the plan provisions provide for attainment of the 2010 1-hour primary SO_2 NAAQS in the Muskingum River, Ohio nonattainment area and that the plan meets the other applicable requirements under the CAA.

DATES: Comments must be received on or before October 29, 2020.

ADDRESSES: Submit your comments, identified by Docket ID No. EPA–R05–OAR–2015–0699 at *http://www.regulations.gov,* or via email to *aburano.douglas@epa.gov.* For comments submitted at *Regulations.gov,* follow the online instructions for submitting comments. Once submitted,

comments cannot be edited or removed from *Regulations.gov*. For either manner of submission, EPA may publish any comment received to its public docket. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. EPA will generally not consider comments or comment contents located outside of the primary submission (*i.e.,* on the web, cloud, or other file sharing system). For additional submission methods, please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section. For the full EPA public comment policy, information about CBI or multimedia submissions, and general guidance on making effective comments, please visit *http://www2.epa.gov/dockets/commenting-epa-dockets.*

FOR FURTHER INFORMATION CONTACT: Gina Harrison, Environmental Scientist, Attainment Planning and Maintenance Section, Air Programs Branch (AR–18J), Environmental Protection Agency, Region 5, 77 West Jackson Boulevard, Chicago, Illinois 60604, (312) 353–6956, *harrison.gina@epa.gov.* The EPA Region 5 office is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding Federal holidays and facility closures due to COVID–19.

SUPPLEMENTARY INFORMATION: Throughout this document, whenever ''we,'' ''us,'' or ''our'' is used, we mean EPA. This state submittal addressed Ohio's Lake County, Muskingum River, and Steubenville OH-WV SO_2 nonattainment areas. EPA is proposing action on only the Muskingum River portion of Ohio's submittal at this time; the Lake County and Steubenville portions were addressed in prior rulemaking actions. The following outline is provided to aid in locating information regarding EPA's proposed action on Ohio's Muskingum River SO_2 nonattainment plan.

VIII. Statutory and Executive Order Reviews

I. Why was Ohio required to submit an SO_2 plan for the Muskingum River area?

On June 22, 2010, EPA promulgated a new 1-hour primary SO_2 NAAQS of 75 parts per billion (ppb), which is met at an ambient air quality monitoring site when the 3-year average of the annual 99th percentile of the daily maximum 1-hour average concentrations does not exceed 75 ppb, as determined in accordance with appendix T of 40 CFR part 50. *See* 75 FR 35520, codified at 40 CFR 50.17(a)–(b). The 3-year average of the annual 99th percentile of daily maximum 1-hour concentrations is called the air quality monitor's SO_2 ''design value.'' For the 3-year period 2009–2011, the design value at the Muskingum River SO_2 monitor in Morgan County, Ohio (39–115–004) was 180 ppb, which is a violation of the SO_2 NAAQS. On August 5, 2013, EPA designated a first set of 29 areas of the country as nonattainment for the 2010 SO_2 NAAQS, including the Muskingum River nonattainment area. Muskingum River's SO_2 designation was based upon the monitored design value at this location for this three-year period. The Muskingum River nonattainment area is defined to include part of Morgan County (Center Township) and part of Washington County (Waterford Township). *See* 78 FR 47191, codified at 40 CFR part 81, subpart C. This area designation was effective on October 4, 2013.

Section 191(a) of the CAA directs states to submit SIPs for areas designated as nonattainment for the SO_2 NAAQS to EPA within 18 months of the effective date of the designation; in this case, by no later than April 4, 2015. These SIPs are required by CAA section 192(a) to demonstrate that their respective areas will attain the NAAQS as expeditiously as practicable, but no later than 5 years from the effective date of designation. The SO_2 attainment deadline for Muskingum River was October 4, 2018. EPA is proposing to approve this plan in accordance with a court-ordered deadline of October 30, 2020 for final action on the SIP.[1]

In response to the SO_2 nonattainment plan submittal requirement, Ohio submitted a nonattainment plan for the Muskingum River nonattainment area on April 3, 2015,[2] submitted revisions on October 13, 2015, and submitted a supplement specific to the Muskingum River area on June 23, 2020. The June 23, 2020 supplement contains the core features of the attainment plan. The remainder of this document describes the requirements that such plans must meet in order to obtain EPA approval, provides a review of the state's plan with respect to these requirements, and describes EPA's proposed action on the plan.

II. Requirements for SO_2 Nonattainment Area Plans

Nonattainment SIPs must meet the applicable requirements of the CAA, and specifically CAA sections 110, 172, 191 and 192. EPA's regulations governing nonattainment SIPs are set forth at 40 CFR part 51, with specific procedural requirements and control strategy requirements residing at subparts F and G, respectively. Soon after Congress enacted the 1990 Amendments to the CAA, EPA issued comprehensive guidance on SIPs, in a document entitled the ''General Preamble for the Implementation of Title I of the Clean Air Act Amendments of 1990,'' published at 57 FR 13498 (April 16, 1992) (General Preamble). Among other things, the General Preamble addressed SO_2 SIPs and fundamental principles for SIP control strategies. *Id.,* at 13545–13549, 13567–13568. On April 23, 2014, EPA issued recommended guidance for meeting the statutory requirements in SO_2 SIPs, in a document entitled, ''Guidance for 1-Hour SO_2 Nonattainment Area SIP Submissions,'' available at *https://www.epa.gov/sites/production/files/2016-06/documents/20140423guidance_nonattainment_sip.pdf.* In this guidance, referred to in this document as the 2014 SO_2 guidance, EPA described the statutory requirements for a complete nonattainment area SIP,

[1] In a November 26, 2019, order issued in *Center for Biological Diversity, et al.* v. *Wheeler,* No. 4:18–cv–03544 (N.D. Cal.), the court ordered EPA to take action on certain aspects of Ohio's SIP submittal, including the attainment demonstration for the Muskingum River area, by October 30, 2020.

[2] For a number of areas, EPA published a final rule on March 18, 2016 that the pertinent states had failed to submit the required SO_2 nonattainment plan by this submittal deadline. *See* 81 FR 14736. However, because Ohio EPA had submitted its SO_2 nonattainment plan before that date, EPA did not make such a finding with respect to Ohio's submittal for Muskingum River.

which includes an accurate emissions inventory of current emissions for all sources of SO_2 within the nonattainment area; an attainment demonstration; demonstration of RFP; implementation of RACM/RACT; enforceable emission limitations and control measures; NSR; and adequate contingency measures for the affected area.

In order for EPA to fully approve a SIP as meeting the requirements of CAA sections 110, 172 and 191–192, and EPA's regulations at 40 CFR part 51, the SIP for the affected area needs to demonstrate to EPA's satisfaction that each of the aforementioned requirements have been met. Under CAA sections 110(l) and 193, EPA may not approve a SIP that would interfere with any applicable requirement concerning NAAQS attainment and RFP, or any other applicable requirement, and no requirement in effect (or required to be adopted by an order, settlement, agreement, or plan in effect before November 15, 1990) in any area which is a nonattainment area for any air pollutant, may be modified in any manner unless it ensures equivalent or greater emission reductions of such air pollutant.

III. Attainment Demonstration and Longer Term Averaging

CAA section 172(c)(1) directs states with areas designated as nonattainment to demonstrate that the submitted plan provides for attainment of the NAAQS. The regulations at 40 CFR part 51, subpart G further delineate the control strategy requirements that SIPs must meet. EPA has long required that all SIPs and control strategies reflect four fundamental principles of quantification, enforceability, replicability, and accountability. *See* General Preamble, at 13567–13568. SO_2 attainment plans must consist of two components: (1) Emission limits and other control measures that ensure implementation of permanent, enforceable and necessary emission controls, and (2) a modeling analysis which meets the requirements of 40 CFR part 51, appendix W which demonstrates that these emission limits and control measures provide for timely attainment of the primary SO_2 NAAQS as expeditiously as practicable, but by no later than the attainment date for the affected area. In all cases, the emission limits and control measures must be accompanied by appropriate methods and conditions to determine compliance with the respective emission limits and control measures and must be quantifiable (*i.e.,* a specific amount of emission reduction can be ascribed to the measures), fully enforceable (specifying clear, unambiguous and measurable requirements for which compliance can be practicably determined), replicable (the procedures for determining compliance are sufficiently specific and non-subjective so that two independent entities applying the procedures would obtain the same result), and accountable (source specific limits must be permanent and must reflect the assumptions used in the SIP demonstrations).

EPA's 2014 SO_2 guidance recommends that emission limits be expressed as short-term average limits (*e.g.,* addressing emissions averaged over one or three hours), but also describes an option to utilize emission limits with longer averaging times of up to 30 days so long as the state meets various suggested criteria. *See* 2014 SO_2 guidance, pp. 22 to 39. Should states and sources utilize longer averaging times, the guidance recommends that the longer term average limit be set at an adjusted level that reflects a stringency comparable to the 1-hour average limit that the plan otherwise would have set at the critical emission value (CEV) shown to provide for attainment.

The 2014 SO_2 guidance provides an extensive discussion of EPA's rationale for concluding that appropriately set, comparably stringent limitations based on averaging times as long as 30 days can be found to provide for attainment of the 2010 SO_2 NAAQS. In evaluating this option, EPA considered the nature of the standard, conducted detailed analyses of the impact of use of 30-day average limits on the prospects for attaining the standard, and carefully reviewed how best to achieve an appropriate balance among the various factors that warrant consideration in judging whether a state's plan provides for attainment. *Id.* at pp. 22 to 39. *See* also *id.* at appendices B, C, and D.

EPA considered that the 1-hour primary SO_2 NAAQS, as specified in 40 CFR 50.17(b), is met at an ambient air quality monitoring site when the 3-year average of the annual 99th percentile of daily maximum 1-hour average concentrations is less than or equal to 75 ppb. In a year with 365 days of valid monitoring data, the 99th percentile would be the fourth highest daily maximum 1-hour value. The 2010 SO_2 NAAQS, including this form of determining compliance with the standard, was upheld by the U.S. Court of Appeals for the District of Columbia Circuit in *Nat'l Envt'l Dev. Ass'n's Clean Air Project* v. *EPA,* 686 F.3d 803 (D.C. Cir. 2012). Because the standard has this form, a single hourly exceedance of the 75 ppb NAAQS level does not create a violation of the standard. Therefore, an emission limit which allows some operational flexibility or emission variability may still be protective of the standard.

At issue is whether a source operating in compliance with a properly set longer term average could cause exceedances of the NAAQS level, and if so, what are the resulting frequency and magnitude of such exceedances. Specifically, EPA must determine with reasonable confidence whether a properly set longer term average limit will provide that the 3-year average of the annual fourth highest daily maximum 1-hour value will be at or below 75 ppb. A synopsis of EPA's review of how to judge whether such plans provide for attainment in light of the NAAQS' form, based on modeling of projected allowable emissions for determining attainment at monitoring sites, is given below.

For SO_2 plans based on 1-hour emission limits, the standard approach is to conduct modeling using fixed emission rates. The maximum emission rate that would be modeled to result in attainment (*i.e.,* in an ''average year'' [3] shows three, not four days with maximum hourly levels exceeding 75 ppb) is labeled the ''critical emission value'' or ''CEV.'' The modeling process for identifying this CEV inherently considers the numerous variables that affect ambient concentrations of SO_2, such as meteorological data, background concentrations, and topography. In the standard approach, the state would then provide for attainment by setting a continuously applicable 1-hour emission limit at this CEV.

EPA recognizes that some sources have highly variable emissions, for example due to variations in fuel sulfur content and operating rate, that can make it extremely difficult, even with a well-designed control strategy, to ensure in practice that emissions for any given hour do not exceed the CEV. EPA also acknowledges the concern that longer term emission limits can allow short periods with emissions above the CEV, which, if coincident with meteorological conditions conducive to high SO_2 concentrations, could in turn create the possibility of a NAAQS

[3] An ''average year'' is used to mean a year with average air quality. While 40 CFR 50 appendix T provides for averaging three years of 99th percentile daily maximum hourly values (*e.g.,* the fourth highest maximum daily hourly concentration in a year with 365 days with valid data), this discussion and an example below uses a single ''average year'' in order to simplify the illustration of relevant principles.

exceedance occurring on a day when an exceedance would not have occurred if emissions were continuously controlled at the level corresponding to the CEV. However, for several reasons, EPA believes that the approach recommended in its guidance document suitably addresses this concern. First, from a practical perspective, EPA expects the actual emission profile of a source subject to an appropriately set longer term average limit to be similar to the emission profile of a source subject to an analogous 1-hour average limit. EPA expects this similarity because it has recommended that the longer term average limit be set at a level that is comparably stringent to the otherwise applicable 1-hour limit (reflecting a downward adjustment from the CEV) and that takes the source's emissions profile into account. As a result, EPA expects either form of emission limit to yield comparable air quality.

Second, from a more theoretical perspective, EPA has compared the likely air quality with a source having maximum allowable emissions under an appropriately set longer term limit, as compared to the likely air quality with the source having maximum allowable emissions under the comparable 1-hour limit. In this comparison, in the 1-hour average limit scenario, the source is presumed at all times to emit at the CEV level, and in the longer term average limit scenario, the source is presumed occasionally to emit more than the CEV level but on average, and presumably at most times, to emit well below the CEV. In an ''average year,'' compliance with the 1-hour limit is expected to result in three exceedance days (*i.e.,* three days with maximum hourly values above 75 ppb) and a fourth day with a maximum hourly value at 75 ppb. By comparison, with the source complying with a longer term limit, it is possible that additional hourly exceedances would occur that would not occur in the 1-hour limit scenario (if emissions exceed the CEV at times when meteorology is conducive to poor air quality). However, this comparison must also factor in the likelihood that hourly exceedances that would be expected in the 1-hour limit scenario would not occur in the longer term limit scenario. This result arises because the longer term limit requires lower emissions most of the time (because the limit is set well below the CEV), so a source complying with an appropriately set longer term limit is likely to have lower emissions at critical times than would be the case if the source were emitting as allowed with a 1-hour limit.

As a hypothetical example to illustrate these points, suppose a source that always emits 1,000 pounds of SO_2 per hour (lb/hr), which results in air quality at the level of the NAAQS (*i.e.,* results in a design value of 75 ppb). Suppose further that in an ''average year,'' these emissions cause the 5 highest daily maximum 1-hour average concentrations to be 100 ppb, 90 ppb, 80 ppb, 75 ppb, and 70 ppb. Then suppose that the source becomes subject to a 30-day average emission limit of 700 lb/hr. It is theoretically possible for a source meeting this limit to have emissions that occasionally exceed 1,000 lb/hr, but with a typical emissions profile emissions would much more commonly be between 600 and 800 lb/hr. In this simplified example, assume a zero background concentration, which allows one to assume a linear relationship between emissions and air quality. (A nonzero background concentration would make the mathematics more difficult but would give similar results.) Air quality will depend on what emissions happen on what critical hours, but suppose that emissions at the relevant times on these 5 days are 800 pounds/hour, 1,100 lb/hr, 500 lb/hr, 900 lb/hr, and 1,200 lb/hr, respectively. (This is a conservative example because the average of these emissions, 900 lb/hr, is well over the 30-day average emission limit.) These emissions would result in daily maximum 1-hour average concentrations of 80 ppb, 99 ppb, 40 ppb, 67.5 ppb, and 84 ppb. In this example, the fifth day would have an exceedance of the NAAQS level that would not otherwise have occurred, but the third day would not have an exceedance that otherwise would have occurred, and the fourth day would have been below, rather than at, 75 ppb. In this example, the fourth highest maximum daily concentration under the 30-day average would be 67.5 ppb.

This simplified example illustrates the findings of a more complicated statistical analysis that EPA conducted using a range of scenarios using actual plant data. As described in appendix B of EPA's April 2014 SO_2 guidance, EPA found that the requirement for lower average emissions is highly likely to yield better air quality than is required with a comparably stringent 1-hour limit. Based on analyses described in appendix B of its April 2014 SO_2 guidance, EPA expects that an emission profile with maximum allowable emissions under an appropriately set comparably stringent 30-day average limit is likely to have the net effect of having a *lower* number of NAAQS exceedances and better air quality than an emission profile with maximum allowable emissions under a 1-hour emission limit at the CEV. This result provides a compelling policy rationale for allowing the use of a longer averaging period in appropriate circumstances where the facts indicate that a result of this type might occur.[4]

The question then becomes whether this approach—which is likely to produce no more overall NAAQS exceedances even though it may produce some unexpected exceedances above the CEV—meets the requirements in sections 110(a)(1), 172(c)(1), and 172(c)(6) for emission limitations in state implementation plans to ''provide for attainment'' of the NAAQS. For SO_2, as for other pollutants, it is generally impossible to design a nonattainment plan in the present that will guarantee that attainment will occur in the future. A variety of factors can cause a well-designed plan to fail and unexpectedly not result in attainment, for example if meteorological conditions occur that are more conducive to poor air quality than was anticipated in the plan. Therefore, in determining whether a plan meets the requirement to provide for attainment, EPA's task is commonly to judge not whether the plan provides absolute certainty that attainment will in fact occur, but rather whether the plan provides an adequate level of confidence of prospective NAAQS attainment.

From this perspective, in evaluating use of a 30-day average limit, EPA must weigh the likely net effect on air quality. Such an evaluation must consider the risk that occasions with meteorological conditions conducive to high concentrations will have elevated emissions leading to exceedances of the NAAQS level that would not otherwise have occurred, and must also weigh the likelihood that the requirement for lower emissions on average will result in days not having exceedances that would have been expected with emissions at the CEV. Additional policy considerations, such as in this case the desirability of accommodating real

[4] See also work done to supplement the work described in appendix B. This supplemental work, done to address a comment on rulemaking for the Southwest Indiana SO_2 nonattainment area objecting that the appendix B analysis is not comparable to an assessment of air quality with a 1-hour emission limit, provides further evidence that longer term limits that are appropriately determined can be expected to achieve comparable air quality as comparably stringent 1-hour limits. Documentation of this supplemental work is available in the docket for the Southwest Indiana rulemaking, at *https://www.regulations.gov/document?D=EPA-R05-OAR-2015-0700-0023,* as discussed in the associated rulemaking at 85 FR 49969–49971 (August 17, 2020).

world emissions variability without significant risk of NAAQS violations, are also appropriate factors for EPA to weigh in judging whether a plan provides a reasonable degree of confidence that the plan will lead to attainment. Based on these considerations, especially given the high likelihood that a continuously enforceable limit averaged over as long as 30 days, determined in accordance with EPA's guidance, will result in attainment, EPA believes as a general matter that such limits, if appropriately determined, can reasonably be considered to provide for attainment of the 2010 SO_2 NAAQS.

The 2014 SO_2 guidance offers specific recommendations for determining an appropriate longer term average limit. The recommended method starts with determination of the 1-hour emission limit that would provide for attainment (*i.e.,* the CEV), and applies an adjustment factor to determine the (lower) level of the longer term average emission limit that would be estimated to have a stringency comparable to the otherwise necessary 1-hour emission limit. This method uses a database of continuous emission data reflecting the type of control that the source will be using to comply with the SIP emission limits, which (if compliance requires new controls) may require use of an emission database from another source. The recommended method involves using these data to compute a complete set of emission averages, computed according to the averaging time and averaging procedures of the prospective emission limitation. In this recommended method, the ratio of the 99th percentile among these longer term averages to the 99th percentile of the 1-hour values represents an adjustment factor that may be multiplied by the candidate 1-hour emission limit to determine a longer term average emission limit that may be considered comparably stringent.[5] The guidance also addresses a variety of related topics, such as the potential utility of setting supplemental emission limits, such as mass-based limits, to reduce the likelihood and/or magnitude of elevated emission levels that might occur under the longer term emission rate limit.

EPA anticipates that most modeling used to develop longer term average emission limits and to prepare full attainment demonstrations will be performed using one of EPA's preferred air quality models. Preferred air quality models for use in regulatory applications are described in appendix A of EPA's *Guideline on Air Quality Models* (40 CFR part 51, appendix W).[6] In 2005, EPA promulgated AERMOD as the Agency's preferred near-field dispersion modeling for a wide range of regulatory applications addressing stationary sources (for example in estimating SO_2 concentrations) in all types of terrain based on extensive developmental and performance evaluation. Supplemental guidance on modeling for purposes of demonstrating attainment of the SO_2 standard is provided in appendix A to the 2014 SO_2 nonattainment area SIP guidance document referenced above. Appendix A provides extensive guidance on the modeling domain, the source inputs, assorted types of meteorological data, and background concentrations. Consistency with the recommendations in this guidance is generally necessary for the attainment demonstration to offer adequately reliable assurance that the plan provides for attainment.

As stated previously, attainment demonstrations for the 2010 1-hour primary SO_2 NAAQS must demonstrate future attainment and maintenance of the NAAQS in the entire area designated as nonattainment (*i.e.,* not just at the violating monitor) by using air quality dispersion modeling (*see* appendix W to 40 CFR part 51) to show that the mix of sources and enforceable control measures and emission rates in an identified area will not lead to a violation of the SO_2 NAAQS. For a short-term (*i.e.,* 1-hour) standard, EPA believes that dispersion modeling, using allowable emissions and addressing stationary sources in the affected area (and in some cases those sources located outside the nonattainment area which may affect attainment in the area) is technically appropriate, efficient and effective in demonstrating attainment in nonattainment areas because it takes into consideration combinations of meteorological and emission source operating conditions that may contribute to peak ground-level concentrations of SO_2.

The meteorological data used in the analysis should generally be processed with the most recent version of AERMET. Estimated concentrations should include ambient background concentrations, should follow the form of the standard, and should be calculated as described in section 2.6.1.2 of the August 23, 2010 clarification memo on ''Applicability of appendix W Modeling Guidance for the 1-hr SO_2 National Ambient Air Quality Standard'' (EPA, 2010).

IV. Review of Modeled Attainment Plan

As part of its SIP development process, Ohio used EPA's regulatory dispersion model, AERMOD, to help determine the SO_2 emission limit revisions that would be needed to bring the Muskingum River area into attainment of the 2010 SO_2 NAAQS. Ohio evaluated the two highest-emitting facilities in the Muskingum River area—the Muskingum River Power Plant and the Globe Metallurgical, Inc. facility (Globe). According to Ohio's submittal, 99 percent of the Muskingum River area's 2011 SO_2 emissions were attributable to the Muskingum River Power Plant, with the Globe facility accounting for 1,203 tons of SO_2, which comprised the remaining 1 percent that year. On May 31, 2015, all coal fired boilers at the Muskingum River Power Plant were permanently shut down. Subsequently, the ambient monitor which had been showing violations of the NAAQS no longer recorded violations. Nevertheless, for purposes of assuring attainment and maintenance of the NAAQS, Ohio determined that, in addition to the permanent retirement of the Muskingum River Power Plant, a reduction in allowable emissions at the remaining source, the Globe facility, was warranted. Ohio performed air quality modeling and analysis and issued Director's Final Findings and Orders (DFFOs) to the Globe facility establishing 24-hour average SO_2 emission limits at the facility. Ohio submitted the DFFOs to EPA as a supplement its original SIP submission. These DFFOs were issued on June 23, 2020, and have a compliance deadline of September 15, 2020.

The following paragraphs evaluate various features of the most recent modeling analysis that Ohio performed for its attainment demonstration, as supplemented by the DFFOs.

A. Model Selection and General Model Inputs

For the Muskingum River attainment demonstration, Ohio used the AERMOD model, version 19191. AERMOD is EPA's preferred model for this type of application and version 19191 is the current version. The AERMOD model was run using the regulatory default mode.

AERMOD requires land use to be characterized to determine how pollutants are dispersed in the atmosphere. The state used urban dispersion coefficients to represent the proposed heat island generated by the facility operations. Beyond the facility

[5] For example, if the CEV is 1,000 pounds of SO_2 per hour, and a suitable adjustment factor is determined to be 70 percent, the recommended longer term average limit would be 700 lb/hr.

[6] EPA published revisions to the *Guideline on Air Quality Models* on January 17, 2017.

industrial region, the area is best classified as rural.

EPA's Guideline on Air Quality Models (40 CFR part 51 appendix W) acknowledges that larger industrial facilities can impact turbulence and dispersion in the vicinity of the facility, similar to overnight impacts on turbulence in cities.

The Globe facility analysis used two approaches to examine and justify whether the heat released from the facility was significant enough to influence dispersion. They first used satellite thermal images to estimate the urban-rural temperature difference. Twelve images from the Advanced Spaceborne Thermal Emission and Reflection radiometer satellite system were identified, with 8 images without cloud interference, to estimate the difference in temperature between warm facility areas and cooler rural areas. The average difference between the industrial area temperatures and the rural temperatures was 8.7 degrees Celsius.

The second analysis used formulas from the AERMOD Formulation Document to relate heat flux to temperature differences between urban and rural areas. Another formula relates the temperature difference to population. The temperature difference using the Formulation Document equation results in a value of 8.5 degrees Celsius. This compares well with the 8.7 degree value determined from thermal satellite images. Ultimately the calculated heat release and temperature difference information can be used to calculate an estimated population. AERMOD uses a population value to represent the strength of the urban impact. The population used in the Globe analysis is 108,000, which reflects a relatively modest industrial heat island effect.

The state used a set of nested grids of receptors centered on the Globe facility. The analysis included a total of 5,049 receptors. Receptors were placed every 25 meters (m) along the ambient air boundary out to 350 m; 50 m out to 1 km; 100 m spacing out to 2 km, and 200 m spacing out to 5 km. The facility is in the process of purchasing property to the north. This property will be non-ambient air and does not have receptors in the current modeling. A fence runs around the entire Globe facility with adjacent property protected through surveillance and patrols. EPA finds that Ohio's submitted modeling results, based on modeling without receptors on fenced plant property and surveilled and patrolled property currently under purchase, are adequate to demonstrate that no such violations of the 1-hour SO_2 NAAQS are occurring.

Ohio used the AERMAP terrain preprocessor, version 18081, with USGS Digital Elevation Data to include terrain heights at the receptor locations. The Globe facility is in the Muskingum River valley. Terrain rises about 50–60 m within a kilometer to the east and north of the facility. Similar terrain increases also occur about 2–3 km in the westerly and southern directions. EPA finds the model selection and these modeling options appropriate.

B. Meteorological Data

Ohio used five years (2014–2018) of National Weather Service (NWS) meteorological data from the Parkersburg, West Virginia Airport (Station 03804) with upper air data from Pittsburgh, Pennsylvania (Station 94823). One-minute wind data was processed using AERMINUTE version 15272 with a 0.5 m/s minimum wind speed threshold option. Surface parameters of the Bowen ratios (a measure of surface moisture) were developed using monthly precipitation data compared to climatological averages. The Parkersburg NWS station is at the Regional Airport located about 10 km northeast of Parkersburg, and about 35 km southeast of the Globe facility. The station is up out of the Ohio River valley on the elevated terrain. The Pittsburgh upper air station is at the International Airport and is roughly 140 km from the Globe facility. The prevailing winds in southeast Ohio are from the south and west. The Parkersburg NWS wind roses illustrate a predominantly southwesterly flow. Both the surface and upper air station are considered reasonably representative of surface and upper air meteorological conditions, respectively, impacting the area around the Globe facility. EPA finds that the meteorological data and the procedure for determining surface characteristics are acceptable.

C. Modeled Emissions Data

The Globe facility consists of two electric arc furnace shops. The main sources of SO_2 emissions are two baghouses, which collect emissions at the two shops from the electric arc furnaces and ancillary equipment, respectively. Emissions from each baghouse exit through a roof monitor. The Globe facility modeled emissions from the roof monitors using point source release characteristics that allowed for capturing building downwash impacts while also preserving the total buoyancy of the emission releases. Neither of these features would have been represented had the sources been modeled as volume sources. Volume source characterization does not include plume buoyancy or building downwash impacts. The baghouse stack characterizations include a stack height equal to the height of the roof monitor. The exit velocities were calculated to match the actual flow rates from each baghouse roof monitor. Additionally, one of the baghouses (Baghouse 1) has a roof monitor that releases emissions horizontally rather than vertically. Consequently, the POINTHOR AERMOD option was used for this source to more accurately characterize its release.

Fugitive emissions released from the roof of the furnace shops were modeled using volume source parameters. A series of seven alternate volume sources were placed at the height of the roof monitor at furnace shop 1, and a series of 4 alternate volume sources were placed at the height of furnace shop 2. All were aligned evenly along monitor openings. Volume source model inputs were developed based on recommendations in the AERMOD User's Guide, Table 3–2.

Ohio modeled 26 different scenarios reflecting 26 different combinations of emissions from the two baghouses. Each of the 26 scenarios was specifically modeled for attainment of the 1-hr SO_2 NAAQS. Each of the 26 different scenarios also included an assumption that 2 percent of the total emissions were being released as fugitive emissions from the furnace shop. The 2 percent fugitive value was based on a capture efficiency analysis document prepared for the Globe facility and included in Ohio's submittal.

Ohio EPA's attainment demonstration only modeled emission units associated with the Globe facility. An examination of National Emissions Inventory data shows there are no other SO_2 sources of significance in the area near the Globe facility, specifically that no other sources within 25 km emit over 5 tons per year (tpy).

D. Emission Limits

An important prerequisite for approval of a nonattainment plan is that the emission limits that provide for attainment be quantifiable, fully enforceable, replicable, and accountable. *See* General Preamble at 13567–68. Ohio issued DFFOs to Globe on June 23, 2020, which set forth new emission limits for the facility on the basis of a matrix of CEVs for the two baghouses, where each combination was modeled to demonstrate attainment and maintenance of the standard. As part of this proposed approval of Ohio's

supplemented attainment plan for this area, EPA is proposing to approve Ohio's June 23, 2020 DFFOs for the Globe facility into the SIP, which include these new CEV combinations as emission limits. *See* Table 1.

TABLE 1

SO_2 emission limit sets	Calendar day (24-hour) emission limits	
	BH1 (lbs/hr)	BH2 (lbs/hr)
1	195.3	0.0
2	190.6	55.8
3	186.0	74.4
4	181.3	102.3
5	176.7	116.2
6	172.0	130.2
7	167.4	144.1
8	162.7	158.1
9	158.1	167.4
10	153.4	176.7
11	148.8	186.0
12	144.1	190.6
13	139.5	195.3
14	134.8	199.9
15	130.2	204.6
16	125.5	213.9
17	120.9	218.5
18	116.2	223.2
19	111.6	223.2
20	106.9	227.8
21	88.3	232.5
22	74.4	237.1
23	60.4	241.8
24	41.8	246.4
25	27.9	251.1
26	0.0	260.4

As described in the DFFOs, compliance with the emission limit sets is determined through mass balance calculations, as implemented through a compliance assurance plan (CAP). Compliance with the emission limits will also be determined through periodic compliance performance testing.

Ohio EPA stated in its June 2020 attainment plan supplement that it plans to adopt and submit a state rule that incorporates the emission limits for the Globe facility, and associated requirements, into its regulations (Ohio Administrative Code Chapter 3745–18). Ohio believes that its DFFOs provide enforceable limits and specification of the procedures that will be used to determine compliance with these limits such that the DFFOs provide sufficient enforceable requirements for EPA to rely on these DFFOs as enforceable measures that provide for attainment, if incorporated as permanent measures into the SIP. Any future submittal of rules to replace the DFFOs in the SIP will be addressed in separate future rulemaking, subject to the requirements of CAA section 110(l).

Because the limits set forth in the DFFOs are expressed as 24-hour average limits, part of the review of Ohio's nonattainment plan must address the use of these limits, both with respect to the general suitability of using such limits for this purpose and with respect to whether the particular limits included in the plan have been suitably demonstrated to provide for attainment. The first subsection that follows addresses the overall enforceability of the emission limits in Ohio's plan, and the second subsection that follows addresses the 24-hour average limits.

The DFFOs also require that validation testing be performed to verify the accuracy of the mass balance calculations. In addition, a Capture Evaluation conducted by a third party is required to be performed during the validation testing. This Capture Evaluation will include observations of emissions capture during the validation testing period, an evaluation of emissions capture performance, and, if appropriate, recommendations for measures to improve capture, as well as operational parameter(s) and ranges that could serve as an indicator of ongoing performance of the capture system.

1. Enforceability

Ohio's supplemented nonattainment plan for the Muskingum River area relies on the permanence of the Muskingum River Power Plant retirement and on revised emission limits for the Globe facility as discussed above (in section D. Emission Limits). As of April 2015, the entire Muskingum River Power Plant was shut down and all coal fired boilers were permanently retired. This facility is no longer authorized to operate its coal-fired boilers, and cannot reinstate them without obtaining a new permit under Ohio's New Source Review program. Therefore, the reductions in SO_2 emissions from the Muskingum River Power Plant retirement can be considered permanent, enforceable reductions.

Ohio's June 2020 DFFOs issued to Globe, in addition to establishing new emission limits, also provide specific measures and requirements that add stringency to the required emission control requirements. Specifically, the DFFOs require that Globe conduct validation testing and perform a Capture Evaluation at the facility's two baghouses to validate the mass balance calculation, and that Globe submit a CAP to be approved by Ohio EPA in consultation with EPA. The DFFOs require that the Capture Evaluation be performed by a third party in a manner designed to identify improvements and other measures, if any, that may aid in the capture of SO_2 emissions, and operational parameters that could serve as a reasonable indicator of ongoing performance of the capture systems. The CAP will include specific monitoring data and techniques used to perform the mass balance calculations, associated recordkeeping and reporting to demonstrate compliance with the emission limits, parameters to be monitored to ensure adequate performance of the capture system, and reporting from the Capture Evaluation.

To provide an additional level of assurance that air quality standards are being met in the area, Ohio's new DFFOs require Globe to install an ambient SO_2 monitor. This monitor will be located across the Muskingum River in the vicinity of the Globe facility near an expected area of maximum impact as approved by Ohio EPA.

2. Longer Term Average Limits

Ohio's SIP submittal includes emission limits for the Globe facility which require compliance based on 24-hour average emission rates. *See* Table 1. Ohio's primary method for determining compliance is a mass balance method, in which the emissions are assessed by determining the sulfur content of the raw materials, determining the sulfur content of the product and the process by-products, and assuming that the difference between these quantities of sulfur is all converted to SO_2 and emitted to the atmosphere. Ohio adopted a 24-hour limit to provide a more practical frequency of conducting this compliance determination.

In accordance with EPA's recommendations, Ohio adopted its limits at levels that were adjusted to account for the effect on stringency of adopting the limits on a 24-hour average basis. The Globe facility does not have the continuous emissions monitoring system (CEMS) data necessary to determine an appropriate site-specific adjustment factor. Therefore, Ohio applied a national average adjustment factor from appendix D of EPA's 2014 guidance. Specifically, Ohio applied an adjustment factor of 0.93, appropriate for establishment of 24-hour average SO_2 limits for sources without SO_2 emissions control equipment. Since EPA anticipates that the Globe facility will meet its limits through careful management of the sulfur content of its feed materials, EPA considers this selection of an adjustment factor to be acceptable.

Ohio calculated the Globe facility's emission limits in accordance with EPA's recommended method. *See*

section III. Ohio used dispersion modeling to determine 26 combinations of 1-hour CEVs for each unit that would provide for attainment of the NAAQS. Ohio then applied the above adjustment factor to determine, for each combination, the level of the longer term average emission limit for each unit that would be estimated to have a stringency comparable to the critical 1-hour emission values for each combination. EPA finds this acceptable.

E. Background Concentrations

The modeled attainment demonstration for a nonattainment area specifically includes the maximum allowable emissions and the individual dispersion characteristics of the most significant emission source in the area. To ensure that the demonstration also represents the cumulative impacts of additional sources which are individually too small or too distant to be expected to show a significant concentration gradient within the modeling domain, a background concentration is added to the modeled results. Data from a nearby air quality monitor can be used to determine a background value which approximates the diffuse impacts of these sources within the modeling domain. For the Globe emissions assessment, Ohio used background contributions on a season/hour-of-day basis using values from the Hackney monitor, located approximately 5.5 km to the north of the Globe facility. In order to avoid double counting of impacts from Globe, hourly values in a 90 degree sector representing winds from the south were removed from the monitoring data and replaced with the average of those hourly values prior to determining season/hour-of-day values. Values ranged from 6.32 micrograms per cubic meter ($\mu g/m^3$) to 13.09 $\mu g/m^3$. EPA finds the background values used in the Globe assessment to be acceptable.

F. Summary of Results

Ohio's attainment modeling analyses resulted in a predicted 1-hour design value of 196.0 $\mu g/m^3$, or 74.8 ppb, which is below the SO_2 NAAQS of 75 ppb/196.4 $\mu g/m^3$. This modeled value, which includes the background concentration, occurred at the northern boundary of the Globe facility, less than 200 meters from the emission units.

EPA policy also requires that one facility must not cause or contribute to exceedances of the NAAQS on another facility's property. Ohio's modeling only excludes receptors from the Globe facility. Consequently, EPA agrees that the modeling shows that no facility is causing or contributing to violations within another facility's property.

The emission releases from the Globe facility are difficult to characterize. Ohio considered various options for characterizing the release of fugitive emissions from the baghouses and the furnace shops before concluding that the characterizations described above were warranted. While no direct means of assessing the efficiency at capturing the emissions of the furnace are available, the requirements of the DFFOs, particularly the requirement to implement recommendations of the Capture Evaluation, help make the plan's estimate of 98 percent capture a reasonable estimate. Therefore, despite the uncertainties inherent in modeling this source, EPA finds that Ohio has submitted an appropriate analysis of the impact of this source. In addition, EPA finds that the ambient SO_2 monitoring that Globe and Ohio are undertaking will provide a further assessment of the reliability of this modeling and thereby will provide further assurance that air quality in this area is attaining the 1-hour SO_2 NAAQS.

Based on its review of Ohio's analysis, EPA finds that the emission limits for the Globe facility set forth in the DFFOs, in combination with other measures identified in the state's plan, will provide for attainment and maintenance of the 2010 SO_2 NAAQS, and proposes to approve the DFFOs into the SIP.

V. Review of Other Plan Requirements

A. Emissions Inventory

The emissions inventory and source emission rate data for an area serve as the foundation for air quality modeling and other analyses that enable states to: (1) Estimate the degree to which different sources within a nonattainment area contribute to violations within the affected area; and (2) assess the expected improvement in air quality within the nonattainment area due to the adoption and implementation of control measures. As noted above, the state must develop and submit to EPA a comprehensive, accurate and current inventory of actual emissions from all sources of SO_2 emissions in each nonattainment area, as well as any sources located outside the nonattainment area which may affect attainment in the area. *See* CAA section 172(c)(3).

Ohio prepared an emissions inventory[7] using 2011 as the base year and 2018, the SO_2 NAAQS attainment year, as the future year. The inventories were prepared for six categories: Electrical generating units (EGU), non-electrical generating units (non-EGU), non-road mobile sources, on-road mobile sources, area sources, and marine, air and rail sources. The 2011 base year inventory totaled 105,317.67 tpy for all six categories. Reflecting growth and known, planned, point source emission reductions, the 2018 future year inventory projection totaled 1,204.18 tpy. Emissions from the Globe facility were projected to remain constant between 2011 and 2018. The EGU category of this emissions inventory only contains the Muskingum River Power Plant's six emission sources (six coal-fired boilers). The 2018 inventory submitted by Ohio accounted for the closure of the Muskingum River Power Plant. As of April 2015, the Muskingum River Power Plant retired its coal-fired boilers, which resulted in projected 2018 EGU emissions of 0.0 tpy (104,113.16 tpy reduction from 2011), and thus would reduce Ohio's total six-category 2018 projected year inventory to 1,204.18 tpy. Ohio's emissions inventory indicates that SO_2 emissions were significantly and permanently reduced in the Muskingum River area of the SO_2 NAAQS attainment year.

B. RACM/RACT and Emissions Limitations and Control Measures

Section 172(c)(1) of the CAA requires states to adopt and submit all RACM, including RACT, as needed to attain the standards as expeditiously as practicable. Section 172(c)(6) requires the SIP to contain enforceable emission limitations and control measures necessary to provide for timely attainment of the standard. Ohio EPA's initial plan for attaining the 1-hour SO_2 NAAQS in the Muskingum River area was based only on emission reductions resulting from the Muskingum River Power Plant. Following discussions with EPA, Ohio determined that a combination of the permanent retirement of the Muskingum River Power Plant and additional emission limitations and emission reduction strategies implemented at the Globe facility will result in attainment of the NAAQS. Redevelopment of the Muskingum River Power Plant site would require new source review analysis and potentially additional emission controls to maintain SO_2

[7] The Emissions Modeling Clearinghouse (EMCH) provides emissions model input formatted inventories based on the latest versions of the NEI databases as well as the projection of these emissions. For Ohio's inventory, Ohio used 2011 and projected 2018 county level emissions data for area (non-point), on-road, marine/air/rail (MAR), and non-road sources from the 2011 NEI version 1-based Emissions Modeling Platform (2011v6) (*http://ftp.epa.gov/EmisInventory/2011v6/v1platform/*).

attainment in the Muskingum River area. Therefore, EPA concludes that the Muskingum River Power Plant's SO_2 emissions are currently zero and RACT requirements are satisfied at this source.

The initial Globe facility RACM evaluation and subsequent supplemental RACM evaluation[1] determined that RACM for control of SO_2 emissions from the electric arc furnaces (EAFs) at the Globe facility is pollution prevention through the use of low sulfur coal and low sulfur coke. In its evaluation of whether Ohio satisfied the requirement for RACM, in accordance with EPA guidance, EPA evaluated whether Ohio had provided for sufficient control to provide for attainment.

Ohio's plan includes new emission limits at the Globe facility and requires timely compliance with such limits and other control measures required by the June 23, 2020 DFFOs. Ohio has determined that these measures suffice to provide for timely attainment. EPA concurs and proposes to find that the state has satisfied the requirements in sections 172(c)(1) and 172(c)(6) to adopt and submit all RACM and enforceable limitations and control measures as are needed to attain the standards as expeditiously as practicable.

C. New Source Review (NSR)

Section 172 of the CAA requires the state to have an adequate new source review program. EPA approved Ohio's nonattainment new source review rules on January 22, 2003 (68 FR 2909). Ohio's new source review rules, codified at OAC 3745–31, provide for appropriate new source review for SO_2 sources undergoing construction or major modification in the Muskingum River area without need for modification of the approved rules. The latest revisions to OAC Chapter 3745–31 were approved into Ohio's SIP on February 20, 2013 (78 FR 11748). EPA concludes that this requirement has been met for this area.

D. RFP

Section 172 of the CAA requires Ohio's Muskingum River nonattainment SIP to provide for reasonable further progress toward attainment. For SO_2 SIPs, which address a small number of affected sources, requiring expeditious compliance with attainment emission limits can address the RFP requirement. EPA concludes that the state's revised limits and required additional control strategy measures for the Globe facility and the 2015 retirement of the Muskingum River Power Plant represent implementation of control measures as expeditiously as practicable. Accordingly, EPA proposes to find that Ohio's plan provides for RFP.

E. Contingency Measures

Section 172 of the CAA requires that nonattainment plans include additional measures which will take effect if an area fails to meet RFP or fails to attain the standard by the attainment date. As noted above, EPA guidance describes special features of SO_2 planning that influence the suitability of alternative means of addressing the requirement in section 172(c)(9) for contingency measures for SO_2. An appropriate means of satisfying this requirement is for the state to have a comprehensive enforcement program that identifies sources of violations of the SO_2 NAAQS and for the state to undertake aggressive follow-up for compliance and enforcement. Ohio's plan provides for satisfying the contingency measure requirement in this manner. EPA concurs and proposes to approve Ohio's plan for meeting the contingency measure requirement in this manner.

VI. EPA's Proposed Action

EPA is proposing to approve Ohio's SIP submission for attaining the 2010 1-hour SO_2 NAAQS and for meeting other nonattainment area planning requirements for the Muskingum River SO_2 nonattainment area. This SO_2 nonattainment plan includes Ohio's revised emission limits and attainment demonstration for the Muskingum River nonattainment area as submitted on June 23, 2020, and addresses the CAA requirements for reasonable further progress, RACM/RACT, base-year and projection-year emission inventories, and contingency measures. In conjunction with this proposed plan approval, EPA is also proposing to approve the DFFOs issued by Ohio to Globe on June 23, 2020, and submitted to EPA as a supplement to the original SIP submission.

EPA concludes that Ohio has appropriately demonstrated that the plan provisions provide for attainment of the 2010 1-hour primary SO_2 NAAQS in the Muskingum River nonattainment area and that the plan meets the other applicable requirements of section 172 of the CAA. EPA therefore is proposing to approve Ohio's nonattainment plan for the Muskingum River nonattainment area.

VII. Incorporation by Reference

In this rule, EPA is proposing to include in a final EPA rule regulatory text that includes incorporation by reference. In accordance with requirements of 1 CFR 51.5, EPA is proposing to incorporate by reference the Ohio Director's Final Findings and Orders for the Globe facility, issued on June 23, 2020. EPA has made, and will continue to make, these documents generally available through *www.regulations.gov,* and at the EPA Region 5 Office (please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section of this preamble for more information).

VIII. Statutory and Executive Order Reviews

Under the CAA, the Administrator is required to approve a SIP submission that complies with the provisions of the CAA and applicable Federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, EPA's role is to approve state choices, provided that they meet the criteria of the CAA. Accordingly, this action merely approves state law as meeting Federal requirements and does not impose additional requirements beyond those imposed by state law. For that reason, this action:

- Is not a significant regulatory action subject to review by the Office of Management and Budget under Executive Orders 12866 (58 FR 51735, October 4, 1993) and 13563 (76 FR 3821, January 21, 2011);
- Is not an Executive Order 13771 (82 FR 9339, February 2, 2017) regulatory action because it is not a significant regulatory action under Executive Order 12866;
- Does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
- Is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);
- Does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4);
- Does not have federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
- Is not an economically significant regulatory action based on health or safety risks subject to Executive Order 13045 (62 FR 19885, April 23, 1997);
- Is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001);
- Is not subject to requirements of Section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the CAA; and

• Does not provide EPA with the discretionary authority to address, as appropriate, disproportionate human health or environmental effects, using practicable and legally permissible methods, under Executive Order 12898 (59 FR 7629, February 16, 1994).

In addition, the SIP is not approved to apply on any Indian reservation land or in any other area where EPA or an Indian tribe has demonstrated that a tribe has jurisdiction. In those areas of Indian country, the rule does not have tribal implications and will not impose substantial direct costs on tribal governments or preempt tribal law as specified by Executive Order 13175 (65 FR 67249, November 9, 2000).

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Incorporation by reference, Intergovernmental relations, Reporting and recordkeeping requirements, Sulfur oxides.

Dated: September 24, 2020.

Kurt Thiede,

Regional Administrator, Region 5.

BILLING CODE 6560–50–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[EPA–R05–OAR–2010–0037; FRL–10014–72–Region 5]

Air Plan Approval; Minnesota; Revision to Taconite Federal Implementation Plan; Notice of Public Hearing

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: The Environmental Protection Agency (EPA) is announcing that a virtual public hearing will be held on the proposed action titled, ''Air Plan Approval; Minnesota; Revision to Taconite Federal Implementation Plan,'' which was published in the **Federal Register** on February 4, 2020. The hearing will be held on October 14, 2020.

DATES: Comments must be received on or before November 13, 2020. EPA will hold a virtual public hearing on October 14, 2020. Please refer to the **SUPPLEMENTARY INFORMATION** section for additional information on the public hearing and the submission of written comments.

ADDRESSES: You may submit comments, identified by Docket ID No. EPA–R05–OAR–2010–0037, at *http://www.regulations.gov* or via email to *aburano.douglas@epa.gov.* For comments submitted at *Regulations.gov*, follow the online instructions for submitting comments. Once submitted, comments cannot be edited or removed from *Regulations.gov*. For either manner of submission, EPA may publish any comment received to its public docket. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. EPA will generally not consider comments or comment contents located outside of the primary submission (*i.e.,* on the web, cloud, or other file sharing system). For additional submission methods, please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section. For the full EPA public comment policy, information about CBI or multimedia submissions, and general guidance on making effective comments, please visit *http://www2.epa.gov/dockets/commenting-epa-dockets.*

Virtual Public Hearing. The virtual public hearing will be held on October 14, 2020. The hearing will convene at 9:00 a.m. Central Daylight Time (CDT) and will conclude at 1:00 p.m. CDT, or 15 minutes after the last pre-registered presenter in attendance has presented if there are no additional presenters. EPA will announce further details on the virtual public hearing website at *https://www.epa.gov/mn/revision-taconite-federal-implementation-plan.* Refer to the **SUPPLEMENTARY INFORMATION** section below for additional information.

FOR FURTHER INFORMATION CONTACT: Abigail Teener, Environmental Engineer, Attainment Planning and Maintenance Section, Air Programs Branch (AR–18J), U.S. Environmental Protection Agency, Region 5, 77 West Jackson Boulevard, Chicago, Illinois 60604, 312–353–7314, *Taconite-FIP-Revision@epa.gov.* The EPA Region 5 office is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding Federal holidays and facility closures due to COVID–19.

SUPPLEMENTARY INFORMATION: Throughout this document whenever ''we,'' ''us,'' or ''our'' is used, we mean EPA.

On February 6, 2013, EPA promulgated a Federal implementation plan (FIP) that included BART limits for certain taconite furnaces in Minnesota and Michigan (2013 Taconite FIP; 78 FR 8706). On February 4, 2020, EPA proposed to revise the 2013 Taconite FIP with respect to the nitrogen oxides (NO_X) best available retrofit technology (BART) emission limitations and compliance schedules for the United States Steel Corporation's (U.S. Steel's) Minntac taconite facility (''Minntac'' or ''Minntac facility'') located in Mt. Iron, Minnesota (85 FR 6125). Specifically, EPA proposed that an aggregate emission limit of 1.6 pounds NO_X per million British Thermal Units (lbs NO_X/MMBTU), based on a 30-day rolling average, averaged across Minntac's five production lines, represents NO_X BART for the Minntac facility. An explanation of the Clean Air Act (CAA) requirements, a detailed analysis of how these requirements apply to Minntac, and EPA's bases for proposing the revised limit and compliance schedule were provided in the notice of proposed rulemaking. The public comment period for this proposed rule ended on March 5, 2020.

One commenter stated that EPA did not provide information regarding a public hearing and did not ask the public if they were interested in a public hearing in accordance with CAA section 307(d)(5). The commenter also stated that EPA did not demonstrate that the agency consulted with Federal Land Managers (FLMs) regarding the proposed FIP revision.

To address these comments, EPA is holding a virtual public hearing and reopening the comment period consistent with CAA section 307(d)(5). Further, EPA has engaged with the FLMs on the proposed revision to the taconite FIP for Minntac. The FLMs have indicated that they have no comments on the proposed FIP revision.

Participation in virtual public hearing. In order to comply with current Centers for Disease Control and Prevention (CDC) recommendations, as well as state and local orders, for social distancing to limit the spread of COVID–19, EPA is holding a virtual public hearing to provide interested parties the opportunity to present data, views, or arguments concerning the proposal.

EPA will begin pre-registering presenters and attendees for the hearing upon publication of this document in the **Federal Register**. EPA will provide information on participating in the virtual public hearing at *https://www.epa.gov/mn/revision-taconite-federal-implementation-plan.* To pre-register to attend or present at the virtual public hearing, please use the online registration form available at

https://www.epa.gov/mn/revision-taconite-federal-implementation-plan or contact Abigail Teener at 312–353–7314 or by email at *Taconite-FIP-Revision@epa.gov.* The last day to pre-register to present at the hearing will be October 9, 2020. On October 13, 2020, EPA will post a general agenda for the hearing that will list pre-registered presenters in approximate order at: *https://www.epa.gov/mn/revision-taconite-federal-implementation-plan.* Additionally, requests to present will be taken on the day of the hearing as time allows.

EPA will make every effort to follow the schedule as closely as possible on the day of the hearing; however, please plan for the hearing to run either ahead of schedule or behind schedule. Each commenter will have 5 minutes to provide oral testimony. EPA encourages commenters to provide EPA with a copy of their oral testimony electronically by including it in the registration form or emailing it to *Taconite-FIP-Revision@epa.gov.* EPA may ask clarifying questions during the oral presentations but will not respond to the presentations at that time. Written statements and supporting information submitted during the comment period will be considered with the same weight as oral comments and supporting information presented at the virtual public hearing.

EPA is asking all hearing attendees to pre-register, even those who do not intend to present. This will help EPA prepare for the virtual hearing.

Please note that any updates made to any aspect of the hearing will be posted online at *https://www.epa.gov/mn/revision-taconite-federal-implementation-plan.* While EPA expects the hearing to go forward as set forth above, please monitor our website or contact Abigail Teener at 312–353–7314 to determine if there are any updates. EPA does not intend to publish a document in the **Federal Register** announcing updates.

If you require the services of a translator or a special accommodation such as audio description/closed captioning, please pre-register for the hearing with Abigail Teener at 312–353–7314 or *Taconite-FIP-Revision@epa.gov* and describe your needs by October 6, 2020. EPA may not be able to arrange accommodations without advance notice.

How can I get copies of the proposed action and other related information?

EPA has established the official public docket for the proposed action under Docket ID No. EPA–R05–OAR–2010–0037. A copy of the proposed action is also available at *https://www.govinfo.gov/content/pkg/FR-2020-02-04/pdf/2020-01321.pdf,* and any detailed information related to the proposed action will be available in the public docket prior to the public hearing. Verbatim transcripts of the hearing and written statements will be included in the rulemaking docket.

Authority: 42 U.S.C. 7401 *et seq.*

Dated: September 14, 2020.

Kurt Thiede,

Regional Administrator, Region 5.

Defense Acquisition Regulations System

48 CFR Parts 212, 225, and 252

[Docket DARS–2020–0036]

RIN 0750–AL03

Defense Federal Acquisition Regulation Supplement: Source Restrictions on Auxiliary Ship Components (DFARS Case 2020–D017)

AGENCY: Defense Acquisition Regulations System, Department of Defense (DoD).

ACTION: Proposed rule.

SUMMARY: DoD is proposing to amend the Defense Federal Acquisition Regulation Supplement (DFARS) to implement a statute that requires certain auxiliary ship components to be procured from a manufacturer in the national technology and industrial base.

DATES: Comments on the proposed rule should be submitted in writing to the address shown below on or before November 30, 2020, to be considered in the formation of a final rule.

ADDRESSES: Submit comments identified by DFARS Case 2019–D017, using any of the following methods:

- *Regulations.gov: http://www.regulations.gov.* Search for ''DFARS Case 2020–D017'' under the heading ''Enter keyword or ID'' and selecting ''Search.'' Select ''Comment Now'' and follow the instructions provided to submit a comment. Please include ''DFARS Case 2020–D017'' on any attached documents.
- *Email: osd.dfars@mail.mil.* Include DFARS Case 2020–D017 in the subject line of the message.
- *Mail:* Defense Acquisition Regulations System, Attn: Ms. Kimberly Bass, OUSD (A&S) DPC/DARS, Room 3B941, 3060 Defense Pentagon, Washington, DC 20301–3060.

Comments received generally will be posted without change to *http://www.regulations.gov,* including any personal information provided. To confirm receipt of your comment(s), please check *www.regulations.gov,* approximately two to three days after submission to verify posting (except allow 30 days for posting of comments submitted by mail).

FOR FURTHER INFORMATION CONTACT: Ms. Kimberly Bass, telephone 571–372–6174.

SUPPLEMENTARY INFORMATION:

I. Background

DoD is proposing to amend the DFARS to implement section 853 of the National Defense Authorization Act (NDAA) for Fiscal Year (FY) 2020. Section 853 amends 10 U.S.C. 2534, Miscellaneous limitations on the procurement of goods other than United States goods, to establish limitations on the procurement of large medium-speed diesel engines for contracts awarded for new construction of an auxiliary ship, unless the engines are manufactured in the national technology and industrial base, which includes the United States, Australia, Canada, and the United Kingdom.

II. Discussion and Analysis

This proposed rule addresses the restrictions related to auxiliary ship components in DFARS section 225.7010, which already restricts contracting officers from acquiring certain components of naval vessels, to the extent they are unique to marine applications, unless the components are from the national industrial base. Paragraph 225.7010–1(b) is added to include limitations on large medium-speed diesel engines for auxiliary ships for contracts awarded by the Secretary of a military department for new construction of an auxiliary ship using funds available for National Defense Sealift Fund programs or Shipbuilding and Conversion, Navy.

Language is added at DFARS 225.7010–2, Exceptions, to state that the newly added restriction at 225.7010–1(b) does not apply to contracts or subcontracts that do not exceed the simplified acquisition threshold or to large medium-speed diesel engines for icebreakers or special mission ships.

The waiver criteria at DFARS 225.7008 apply to the restrictions; therefore, a conforming change is made to DFARS 225.7010–3, Waiver, to add a pointer to the restrictions at 225.7010–1. An editorial change is also made to

DFARS 225.7010–4 to add cross-references to 225.7010–1(a).

A new clause, DFARS 252.225–70XX, Restriction on Acquisition of Large Medium-Speed Diesel Engines, is added. The clause applies to acquisitions greater than the simplified acquisition threshold and to contracts using FAR part 12 procedures for the acquisition of commercial items that require large medium-speed diesel engines for new construction of auxiliary ships using funds available for National Defense Sealift Fund programs or Shipbuilding and Conversion, Navy. The restriction does not apply to large medium-speed diesel engines for icebreakers or special mission ships. DFARS 212.301 is amended to reflect that the clause will apply to commercial item acquisitions.

DoD seeks public input and feedback on the content of the proposed rule and specifically in regard to a clarifying definition for ''large medium-speed diesel engines'' for auxiliary ships using funds available for National Defense Sealift Fund programs or Shipbuilding and Conversion, Navy. As noted in the statute, the term ''auxiliary ship'' does not include an icebreaker or a special mission ship.

III. Applicability to Contracts at or Below the Simplified Acquisition Threshold and for Commercial Items, Including Commercially Available Off-the-Shelf Items

This rule proposes to create a new DFARS clause, 252.225–70XX, Restriction on Acquisition of Large Medium-Speed Diesel Engines. DoD does not intend to apply the requirements of section 853 of the NDAA for FY 2020 to contracts at or below the simplified acquisition threshold (SAT). Section 853 amends 10 U.S.C. 2534(a) to provide a limitation on components for auxiliary ships. 10 U.S.C. 2534 does not apply to a contract or subcontract for an amount that does not exceed the SAT (see paragraph (g)). Therefore this clause will not apply to acquisitions at or below the SAT. However the rule proposes to apply the clause to contracts for the acquisition of commercial items, including commercially available off-the-shelf (COTS) items.

A. Applicability to Contracts for the Acquisition of Commercial Items, Including COTS Items

10 U.S.C. 2375 governs the applicability of laws to DoD contracts for the acquisition of commercial items, including COTS items, and is intended to limit the applicability of laws to contracts and subcontracts for the acquisition of commercial items, including COTS items. 10 U.S.C. 2375 provides that if a provision of law contains criminal or civil penalties, or if the Under Secretary of Defense for Acquisition and Sustainment (USD(A&S)) makes a written determination that it is not in the best interest of the Federal Government to exempt commercial item contracts, the provision of law will apply to contracts for the acquisition of commercial items unless—

- The provision of law—
  - Provides for criminal or civil penalties;
  - Requires that certain articles be bought from American sources pursuant to 10 U.S.C. 2533a or that strategic materials critical to national security be bought from American sources pursuant to 10 U.S.C. 2533b; or
  - Specifically refers to 10 U.S.C. 2375 and states that it shall apply to contracts and subcontracts for the acquisition of commercial items (including COTS items); or
- USD (A&S) determines in writing that it would not be in the best interest of the Government to exempt contracts or subcontracts for the acquisition of commercial items from the applicability of the provision.

This authority has been delegated to the Principal Director, Defense Pricing and Contracting (DPC).

B. Applicability

Section 853 of the NDAA for FY 2020 does not apply to contracts at or below the SAT and is silent on applicability to contracts and subcontracts for the acquisition of commercial items. Also, the statute does not provide for civil or criminal penalties. Therefore, it does not apply to contracts or subcontracts for the acquisition of commercial items unless the Principal Director, DPC, makes a written determination as provided in 10 U.S.C. 2375.

DoD intends to determine that it is in the best interest of the Federal Government to apply the rule to contracts and subcontracts for the acquisition of commercial items, including COTS items, as defined at FAR 2.101. Not applying this rule to contracts and subcontracts for the acquisition of commercial items, including COTS items, would exclude contracts intended to be covered by this rule and undermine the overarching purpose of the rule to restrict the purchase of large medium-speed diesel engines for auxiliary ships, unless the engines are manufactured in the national technology and industrial base, which includes the United States, Australia, Canada, and the United Kingdom.

IV. Executive Orders 12866 and 13563

Executive Orders (E.O.s) 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). E.O. 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. This is not a significant regulatory action and, therefore, was not subject to review under section 6(b) of E.O. 12866, Regulatory Planning and Review, dated September 30, 1993. This rule is not a major rule under 5 U.S.C. 804.

V. Executive Order 13771

This rule is not expected to be subject to E.O. 13771, because this rule is not significant under E.O. 12866.

VI. Regulatory Flexibility Act

DoD does not expect this proposed rule to have a significant economic impact on a substantial number of small entities within the meaning of the Regulatory Flexibility Act, 5 U.S.C. 601, *et seq.* Nevertheless, an initial regulatory flexibility analysis has been performed and summarized as follows:

The rule amends the Defense Federal Acquisition Regulation Supplement (DFARS) to implement a statute that requires certain auxiliary ship components to be procured from a manufacturer in the national technology and industrial base, which includes the United States, Australia, Canada, and the United Kingdom, subject to exceptions.

The objective and legal basis for the rule is to implement section 853 of the National Defense Authorization Act (NDAA) for Fiscal Year (FY) 2020, which amends 10 U.S.C. 2534, Miscellaneous limitations on the procurement of goods other than United States goods. Section 853 establishes limitations on procurement of large medium-speed diesel engines for contracts awarded by the Secretary of a military department using funds available for National Defense Sealift Fund programs or Shipbuilding and Conversion, Navy for new construction of an auxiliary ship using funds available for National Defense Sealift Fund programs or Shipbuilding and Conversion, Navy, unless manufactured

in the United States, Australia, Canada, or the United Kingdom.

DoD reviewed Federal Procurement Data System (FPDS) data for fiscal years (FY) 2017, 2018, and 2019 (excluding contracts or subcontracts that do not exceed the simplified acquisition threshold or acquisitions of spare or repair parts needed to support naval vessels manufactured outside the United States; and large medium-speed diesel engines specifically for icebreakers or special mission ships). The FPDS data reflected that there were a total of 241 awards, of which 121 were made to small businesses, a median of 50 percent awarded to unique small entities over the last three fiscal years.

It is expected that this rule will benefit small businesses. The rule will provide small businesses the opportunity to participate in the manufacture of auxiliary ship components in support of the national technology and industrial base.

This rule does not include any new reporting, recordkeeping, or other compliance requirements for small businesses. The rule does not duplicate, overlap, or conflict with any other Federal rules.

There are no known significant alternative approaches to the rule that would meet the requirements of the statute.

DoD invites comments from small entities concerning the existing regulations in subparts affected by this rule in accordance with 5 U.S.C. 610. Interested parties must submit such comments separately and should cite 5 U.S.C. 610 (DFARS Case 2020–D017), in correspondence.

VII. Paperwork Reduction Act

The rule does not contain any information collection requirements that require the approval of the Office of Management and Budget under the Paperwork Reduction Act (44 U.S.C. chapter 35).

List of Subjects in 48 CFR Parts 212, 225, and 252

Government procurement.

Jennifer D. Johnson,

Regulatory Control Officer, Defense Acquisition Regulations System.

Therefore, 48 CFR parts 212, 225, and 252 is proposed to be amended as follows:

■ 1. The authority citation for 48 CFR parts 212, 225, and 252 continues to read as follows:

Authority: 41 U.S.C. 1303 and 48 CFR chapter 1.

PART 12—ACQUISITION OF COMMERCIAL ITEMS

■ 2. Amend section 212.301 by adding paragraph (f)(ix)(GG) to read as follows:

212.301 Solicitation provisions and contract clauses for the acquisition of commercial items.

* * * * *

(f) * * *

(ix) * * *

(GG) Use the clause at 252.225–70XX, Restriction on Acquisition of Large Medium-Speed Diesel Engines, as prescribed in 225.7010–5, to comply with 10 U.S.C. 2534(a)(6).

PART 225—FOREIGN ACQUISITION

■ 3. Revise the section 225.7010 heading to read as follows:

225.7010 Restrictions on certain naval vessel and auxiliary ship components.

■ 4. Revise section 25.7010–1 to read as follows:

225.7010–1 Restrictions.

In accordance with 10 U.S.C. 2534, unless manufactured in the United States, Australia, Canada, or the United Kingdom, do not acquire—

(a) The following components of naval vessels, to the extent they are unique to marine applications:

(1) Gyrocompasses.

(2) Electronic navigation chart systems.

(3) Steering controls.

(4) Pumps.

(5) Propulsion and machinery control systems.

(6) Totally enclosed lifeboats.

(b) Large medium-speed diesel engines for auxiliary ships using funds available for National Defense Sealift Fund programs or Shipbuilding and Conversion, Navy.

■ 5. Revise section 225.7010–2 to read as follows:

225.7010–2 Exceptions.

(a) The restriction at 225.7010–1(a) does not apply to—

(1) Contracts or subcontracts that do not exceed the simplified acquisition threshold; or

(2) Acquisition of spare or repair parts needed to support components for naval vessels manufactured outside the United States. Support includes the purchase of spare gyrocompasses, electronic navigation chart systems, steering controls, pumps, propulsion and machinery control systems, or totally enclosed lifeboats, when those from alternate sources are not interchangeable.

(b) The restriction at 225.7010–1(b) does not apply to—

(1) Contracts or subcontracts that do not exceed the simplified acquisition threshold; or

(2) Large medium-speed diesel engines for icebreakers or special mission ships.

■ 6. Revise 225.7010–3 to read as follows:

225.7010–3 Waiver.

The waiver criteria at 225.7008 apply to the restrictions at 225.7010–1.

■ 7. Amend section 225.7010–4 by—

■ a. Revising the section heading; and

■ b. In paragraphs (a) and (b), removing ''this restriction'' and adding ''the restriction at 225–7010–1(a)'' in both places.

The revision reads as follows:

225.7010–4 Implementation of restriction on certain naval vessel components.

* * * * *

■ 8. Add section 225.7010–5 to read as follows:

225.7010–5 Contract clause.

Use the clause at 252.225–70XX, Restriction on Acquisition of Large Medium-Speed Diesel Engines, in solicitations and contracts that exceed the simplified acquisition threshold, including solicitations and contracts using FAR part 12 procedures for the acquisition of commercial items, that require large medium-speed diesel engines for new construction of auxiliary ships using funds available for National Defense Sealift Fund programs or Shipbuilding and Conversion, Navy unless—

(a) An exception at 225.7010–2(b)(2) applies; or

(b) A waiver has been granted.

PART 252—SOLICITATION PROVISIONS AND CONTRACT CLAUSES

■ 9. Add section 252.225–7038 to read as follows:

252.225–7038 Restriction on Acquisition of Large Medium-Speed Diesel Engines.

As prescribed in 225.7010–5, use the following clause:

Restriction on Acquisition of Large Medium-Speed Diesel Engines (Date)

Unless otherwise specified in its offer, the Contractor shall deliver under this contract large medium-speed diesel engines manufactured in the United States, Australia, Canada, or the United Kingdom.

(End of clause)

BILLING CODE 5001–06–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

50 CFR Part 216

RIN 0648–XG809

Notification of Receipt of a Supplemental Petition To Ban Imports of All Fish and Fish Products From New Zealand That Do Not Satisfy the Marine Mammal Protection Act

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Receipt of supplemental petition to ban imports through emergency rulemaking; request for comments.

SUMMARY: NMFS announces receipt of a supplemental petition for emergency rulemaking under the Administrative Procedure Act. Sea Shepherd Legal, Sea Shepherd New Zealand Ltd., and Sea Shepherd Conservation Society petitioned the U.S. Department of Commerce and other relevant Departments to initiate emergency rulemaking under the Marine Mammal Protection Act (MMPA), to ban importation of commercial fish or products from fish that have been caught with commercial fishing technology that results in incidental mortality or serious injury of Māui dolphin in excess of United States standards.

DATES: Written comments must be received by 5 p.m. Eastern Time on October 9, 2020.

ADDRESSES: You may submit comments on this document, identified by NOAA–NMFS–2019–0013, by the following method:

1. *Electronic Submissions:* Submit all electronic comments via the Federal eRulemaking Portal. Go to *www.regulations.gov/#!docketDetail;D=NOAA-NMFS-2019-0013,* click the ''Comment Now!'' icon, complete the required fields and enter or attach your comments.

Instructions: Comments sent by any other method, to any other address or individual, or received after the end of the comment period, may not be considered. All comments received are a part of the public record and will generally be posted for public viewing on *http://www.regulations.gov without change.* All personal identifying information (*e.g.,* name, address, etc.), confidential business information, or otherwise sensitive information submitted voluntarily by the sender will be publicly accessible. NMFS will accept anonymous comments (enter ''N/A'' in the required fields if you wish to remain anonymous).

Anyone who is unable to comment through *http://www.regulations.gov* may contact the **FOR FURTHER INFORMATION CONTACT** below to discuss potential alternatives for submitting comments.

Attachments to electronic comments will be accepted in Microsoft Word, Excel, or Adobe portable document file (PDF) formats only. The complete text of the petition is available via the internet at the following web address: *http://www.nmfs.noaa.gov/ia/.* In addition, copies of this petition may be obtained by contacting NMFS at the above address.

FOR FURTHER INFORMATION CONTACT: Nina Young, NMFS F/IASI at *Nina.Young@noaa.gov* or 301–427–8383.

SUPPLEMENTARY INFORMATION:

Background

Section 101(a)(2) of the Marine Mammal Protection Act (MMPA), 16 U.S.C. 1371(a)(2), states that the Secretary of the Treasury shall ban the importation of commercial fish or products from fish which have been caught with commercial fishing technology, which results in the incidental kill or incidental serious injury of ocean mammals in excess of United States standards. In August 2016, NMFS published a final rule (81 FR 54390; August 15, 2016) implementing the fish and fish product import provisions in section 101(a)(2) of the MMPA. This rule established conditions for evaluating a harvesting nation's regulatory programs to address incidental and intentional mortality and serious injury of marine mammals in fisheries operated by nations that export fish and fish products to the United States. In that rule's preamble, NMFS stated that it may consider emergency rulemaking to ban imports of fish and fish products from an export or exempt fishery having or likely to have an immediate and significant adverse impact on a marine mammal stock.

Information on the Petition

On February 6, 2019, NMFS received a petition from Sea Shepherd Legal, Sea Shepherd New Zealand Ltd, and Sea Shepherd Conservation Society to the Department of Homeland Security, the Department of the Treasury, and the Department of Commerce to carry out non-discretionary duties under section 101(a)(2) of the MMPA (16 U.S.C. 1371(a)(2)), to ban the importation of commercial fish or products from fish sourced in a manner that results in the incidental kill or incidental serious injury of Māui dolphins in excess of United States standards. The petition requested that the relevant Secretary immediately ban all fish and fish products originating from fisheries in the Māui dolphin's range that employ either gillnets or trawls, unless affirmatively identified as having been caught with a gear type other than set nets or trawls or affirmatively identified as caught outside the Māui dolphin's range.

NMFS reviewed the petition, supporting documents, New Zealand's previous risk assessments and Threat Management Plans (TMP). On June 18, 2019, NMFS denied the petition, stating that: (1) New Zealand is implementing a regulatory program comparable in effectiveness to the United States; (2) New Zealand has in place an existing regulatory program to reduce Māui dolphin bycatch; and (3) New Zealand was in the process of proposing additional regulatory measures that would further reduce the risk to Māui dolphins. (See 84 FR 32853, July 10, 2019.)

Petitioners filed a lawsuit against the relevant Departments in the United States Court of International Trade (CIT) on May 21, 2020. On August 13, 2020, the CIT remanded Sea Shepherd's February 2019 petition at NMFS' request, because New Zealand had announced its final regulatory program. NMFS proposed, and the court agreed, that the petitioners should have the opportunity to supplement their petition.

On August 27, 2020, NMFS received the supplemental petition, which both maintains the grounds for action outlined in the original petition and includes facts that arose after submission of the original petition. The supplemental petition directs attention to the following new information: (1) The receipt of data from the New Zealand government noting sightings of Māui dolphins on the east coast of the North Island; (2) the issuance of the 2019 Draft TMP; (3) the final TMP announced on June 24, 2020; and (4) the 2020 draft List of Foreign Fisheries.

NMFS will consider public comments received in its evaluation of the supplemental information received from the petitioners.

Dated: September 24, 2020.

Paul N. Doremus,

Deputy Assistant Administrator for Operations, National Marine Fisheries Service.

[Docket No. 200911–0242]

RIN 0648–XT038

Atlantic Highly Migratory Species; 2021 Atlantic Shark Commercial Fishing Year

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Proposed rule; request for comments.

SUMMARY: This proposed rule would adjust quotas and retention limits and establish the opening date for the 2021 fishing year for the Atlantic commercial shark fisheries. Quotas would be adjusted as required or allowable based on any overharvests and/or underharvests experienced during the 2020 fishing year. NMFS proposes the opening date and commercial retention limits to provide, to the extent practicable, fishing opportunities for commercial shark fishermen in all regions and areas. The proposed measures could affect fishing opportunities for commercial shark fishermen in the northwestern Atlantic Ocean, the Gulf of Mexico, and the Caribbean Sea.

DATES: Written comments must be received by October 29, 2020.

ADDRESSES: You may submit comments on this document, identified by NOAA–NMFS–2020–0108, by electronic submission. Submit all electronic public comments via the Federal e-Rulemaking Portal. Go to *www.regulations.gov/#!docketDetail;D=NOAA-NMFS-2020-0108,* click the ''Comment Now!'' icon, complete the required fields, and enter or attach your comments.

Comments sent by any other method, to any other address or individual, or received after the end of the comment period, may not be considered by NMFS. All comments received are a part of the public record and will generally be posted for public viewing on *www.regulations.gov* without change. All personal identifying information (*e.g.,* name, address, etc.), confidential business information, or otherwise sensitive information submitted voluntarily by the sender will be publicly accessible. NMFS will accept anonymous comments (enter ''N/A'' in the required fields if you wish to remain anonymous).

Copies of this proposed rule and supporting documents are available from the HMS Management Division website at *https://www.fisheries.noaa.gov/topic/atlantic-highly-migratory-species* or by contacting Lauren Latchford (*lauren.latchford@noaa.gov*) by phone at 301–427–8503.

FOR FURTHER INFORMATION CONTACT: Lauren Latchford (*lauren.latchford@noaa.gov*), Guy Eroh (*guy.eroh@noaa.gov*), or Karyl Brewster-Geisz (*karyl.brewster-geisz@noaa.gov*) at 301–427–8503.

SUPPLEMENTARY INFORMATION:

Background

The Atlantic commercial shark fisheries are managed under the authority of the Magnuson-Stevens Fishery Conservation and Management Act (Magnuson-Stevens Act). The 2006 Consolidated Atlantic Highly Migratory Species (HMS) Fishery Management Plan (FMP) and its amendments are implemented by regulations at 50 CFR part 635. For the Atlantic commercial shark fisheries, the 2006 Consolidated Atlantic HMS FMP and its amendments established default commercial shark retention limits, commercial quotas for species and management groups, and accounting measures for underharvests and overharvests. Regulations also include provisions allowing flexible opening dates for the fishing year and inseason adjustments to shark trip limits, which provide management flexibility in furtherance of equitable fishing opportunities, to the extent practicable, for commercial shark fishermen in all regions and areas.

2021 Proposed Commercial Shark Quotas

NMFS proposes adjusting the quota levels for the different shark stocks and management groups for the 2021 Atlantic commercial shark fishing year based on overharvests and underharvests that occurred during the 2020 fishing year, consistent with existing regulations at 50 CFR 635.27(b). Overharvests and underharvests are accounted for in the same region, sub-region, and/or fishery in which they occurred the following year, except that large overharvests may be spread over a number of subsequent fishing years up to a maximum of five years. If a sub-regional quota is overharvested, but the overall regional quota is not, no subsequent adjustment is required. Unharvested quota may be added to the quota for the next fishing year, but only if NMFS knows the status of all species in the management group, none of the species in the group are overfished, and there is no overfishing in the group. No more than 50 percent of a base annual quota may be carried over from a previous fishing year.

Based on 2020 harvests to date, and after considering catch rates and landings from previous years, NMFS proposes to adjust the 2021 quotas for certain management groups as shown in Table 1. All of the 2021 proposed quotas for the respective stocks and management groups will be subject to further adjustment in the final rule after NMFS considers the dealer reports through mid-October. NMFS anticipates that dealer reports received after that time will be used to adjust 2021 quotas, as appropriate, noting that in some circumstances, NMFS re-adjusts quotas in the subject year.

Because the Gulf of Mexico blacktip shark management group and smoothhound shark management groups in the Gulf of Mexico and Atlantic regions are not overfished, and overfishing is not occurring, available underharvest (up to 50 percent of the base annual quota) from the 2020 fishing year for these management groups may be added to the respective 2021 base quotas. NMFS proposes to account for any underharvest of Gulf of Mexico blacktip sharks by dividing underharvest between the eastern and western Gulf of Mexico sub-regional quotas based on the sub-regional quota split percentage implemented in Amendment 6 to the 2006 Consolidated Atlantic HMS FMP (80 FR 50073; August 18, 2015).

For the sandbar shark, aggregated large coastal shark (LCS), hammerhead shark, non-blacknose small coastal shark (SCS), blacknose shark, blue shark, porbeagle shark, and pelagic shark (other than porbeagle or blue sharks) management groups, the 2020 underharvests cannot be carried over to the 2021 fishing year because those stocks or management groups are overfished, are experiencing overfishing, or have an unknown status. With the exception of the sub-regional western Gulf of Mexico overharvest of the aggregated LCS quota, which will be discussed below, there are no overharvests to account for in these management groups to date. Thus, NMFS proposes that quotas for these

management groups be equal to the annual base quota without adjustment, although the ultimate decision will be based on current data at the time of the final rule.

The proposed 2021 quotas by species and management group are summarized in Table 1; the description of the calculations for each stock and management group can be found below. All quotas and landings are dressed weight (dw), in metric tons (mt), unless specified otherwise. Table 1 includes landings data as of July 10, 2020; final quotas are subject to change based on landings as of October 2020. 1 mt = 2,204.6 lb.

TABLE 1—2021 PROPOSED QUOTAS AND OPENING DATE FOR THE ATLANTIC SHARK MANAGEMENT GROUPS

Region or sub-region	Management group	2020 Annual quota (A)	Preliminary 2020 landings [1] (B)	Adjustments [2] (C)	2021 Base annual quota (D)	2021 Proposed annual quota (D + C)	Season opening dates
Western Gulf of Mexico	Blacktip Sharks [3]	347.2 mt dw (765,392 lb dw).	204.4 mt dw (450,612 lb dw).	115.7 mt dw (255,131 lb dw).	231.5 mt dw (510,261 lb dw).	347.2 mt dw (765,392 lb dw).	January 1, 2021.
	Aggregated [4] Large Coastal Sharks.	72.0 mt dw (158,724 lb dw).	78.9 mt dw (173,959 lb dw).	.....	72.0 mt dw (158,724 lb dw).	72.0 mt dw (158,724 lb dw).	
	Hammerhead Sharks	11.9 mt dw (26,301 lb dw).	<2.3 mt dw (<5,000 lb dw).	.....	11.9 mt dw (26,301 lb dw).	11.9 mt dw (26,301 lb dw).	
Eastern Gulf of Mexico	Blacktip Sharks [3]	37.7 mt dw (83,158 lb dw).	3.5 mt dw (7,726 lb dw).	12.6 mt dw (27,719 lb dw).	25.1 mt dw (55,439 lb dw).	37.7 mt dw (83,158 lb dw).	January 1, 2021.
	Aggregated Large Coastal Sharks.	85.5 mt dw (188,593 lb dw).	50.9 mt dw (112,266 lb dw).	.....	85.5 mt dw (188,593 lb dw).	85.5 mt dw (188,593 lb dw).	
	Hammerhead Sharks	13.4 mt dw (29,421 lb dw).	<2.7 mt dw (<6,000 lb dw).	.....	13.4 mt dw (29,421 lb dw).	13.4 mt dw (29,421 lb dw)).	
Gulf of Mexico	Non-Blacknose Small Coastal Sharks.	112.6 mt dw (248,215 lb dw).	25.2 mt dw (55,563 lb dw).	.....	112.6 mt dw (248,215 lb dw).	112.6 mt dw (248,215 lb dw).	
	Smoothhound Sharks	504.6 mt dw (1,112,441 lb dw).	1.4 mt dw (3,144 lb dw).	168.2 mt dw (370,814 lb dw).	336.4 mt dw (741,627 lb dw).	504.6 mt dw (1,112,441 lb dw).	
Atlantic	Aggregated Large Coastal Sharks.	168.9 mt dw (372,552 lb dw).	36.8 mt dw (81,217 lb dw).	.....	168.9 mt dw (372,552 lb dw).	168.9 mt dw (372,552 lb dw).	January 1, 2021

	Porbeagle Sharks	1.7 mt dw (3,748 lb dw).	0 mt dw (0 lb dw)	.....	1.7 mt dw (3,748 lb dw).	1.7 mt dw (3,748 lb dw).	
	Pelagic Sharks Other Than Porbeagle or Blue.	488.0 mt dw (1,075,856 lb dw).	28.8 mt dw (63,485 lb dw).	.....	488.0 mt dw (1,075,856 lb dw).	488.0 mt dw (1,075,856 lb dw).	

[1] Landings are from January 1, 2020, through July 10, 2020, and are subject to change.
[2] Underharvest adjustments can only be applied to stocks or management groups that are not overfished and have no overfishing occurring. Also, the underharvest adjustments cannot exceed 50 percent of the base annual quota.
[3] This adjustment accounts for underharvest in 2020. This proposed rule would increase the overall Gulf of Mexico blacktip shark quota by 128.3 mt dw (282,850 lb dw). Since any underharvest would be divided based on the sub-regional quota percentage split, the western Gulf of Mexico blacktip shark quota would be increased by 115.7 mt dw, or 90.2 percent of the quota adjustment, while the eastern Gulf of Mexico blacktip shark quota would be increased by 12.6 mt dw, or 9.8 percent of the quota adjustment.
[4] While there is an overharvest of the western Gulf of Mexico Aggregated LCS sub-regional quota in 2020, NMFS does not expect the full Gulf of Mexico regional quota to be filled, and is thus proposing to maintain the full baseline quota in 2021. However, if the Gulf of Mexico regional quota is filled or exceeded, the sub-regional quota would be adjusted accordingly.

1. Proposed 2021 Quotas for the Gulf of Mexico Region Shark Management Groups

The 2021 proposed commercial quota for blacktip sharks in the western Gulf of Mexico sub-region is 347.2 mt dw (765,392 lb dw) and the eastern Gulf of Mexico sub-region is 37.7 mt dw (83,158 lb dw; Table 1). As of July 10, 2020, preliminary reported landings for blacktip sharks in the western Gulf of Mexico sub-region were at 59 percent (204.4 mt dw) of their 2020 quota levels (347.2 mt dw), and blacktip sharks in the eastern Gulf of Mexico sub-region were at 9 percent (3.5 mt dw) of the sub-regional 2020 quota levels (37.7 mt dw). Reported landings in both sub-regions have not exceeded the 2020 quota to date. Gulf of Mexico blacktip sharks are not overfished, are not experiencing overfishing, and do not have an unknown status. Pursuant to § 635.27(b)(2)(ii), underharvests for blacktip sharks within the Gulf of Mexico region therefore may be applied to the 2020 quotas, up to 50 percent of the base annual quota. Additionally, any underharvest would be divided between the two sub-regions, based on the percentages that are allocated to each sub-region, which are set forth in § 635.27(b)(1)(ii)(C). To date, the overall Gulf of Mexico blacktip shark management group is underharvested by 177.0 mt dw (390,212 lb dw). Accordingly, NMFS proposes to increase the western Gulf of Mexico blacktip shark quota by 115.7 mt dw or 90.2 percent of the quota adjustment, while the eastern Gulf of Mexico blacktip shark sub-regional quota would increase by 12.6 mt dw, or 9.8 percent of the quota adjustment (Table 1). Thus, the proposed western sub-regional Gulf of Mexico blacktip shark commercial quota is 347.2 mt dw (765,392 lb dw), and the proposed eastern sub-regional Gulf of Mexico blacktip shark commercial quota is 37.7 mt dw (83,158 lb dw).

The 2021 proposed commercial quota for aggregated LCS in the western Gulf of Mexico sub-region is 72.0 mt dw (158,724 lb dw), and the eastern Gulf of Mexico sub-region is 85.5 mt dw (188,593 lb dw; Table 1). As of July 10, 2020, preliminary reported landings for aggregated LCS in the western Gulf of Mexico sub-region were at 110 percent (78.9 mt dw) of the 2020 quota (72.0 mt dw), while the aggregated LCS in the eastern Gulf of Mexico sub-region were at 60 percent (50.9 mt dw) of the 2020 quota levels (85.5 mt dw). While the aggregated LCS management group

landings have been exceeded in the western Gulf of Mexico sub-region, the current combined catch rates for both sub-regions (82 percent; 129.8 mt dw) indicate that the overall regional 2020 quota is not likely to be exceeded before the end of the fishing year. NMFS will continue to monitor these landings for the remainder of the 2020 fishing year. If the combined aggregated LCS quotas are exceeded, then the 2020 quota would be adjusted to account for any overharvest.

The 2021 proposed commercial quotas for hammerhead sharks in the eastern Gulf of Mexico sub-region and western Gulf of Mexico sub-region are 11.9 mt dw (26,301 lb dw) and 13.4 mt dw (29,421 lb dw), respectively (Table 1). As of July 10, 2020, preliminary reported landings for hammerhead sharks in the western Gulf of Mexico sub-region were less than 20 percent (<2.3 mt dw) of the 2020 quota levels (11.9 mt dw), while landings of hammerhead sharks in the eastern Gulf of Mexico sub-region were at less than 20 percent (<2.7 mt dw) of the 2020 quota levels (13.4 mt dw). Reported landings from both Gulf of Mexico and Atlantic regions have not exceeded the 2020 overall hammerhead quota to date. Given the overfished status of the scalloped hammerhead shark, the hammerhead shark quota cannot be adjusted for any underharvests. Therefore, based on both preliminary estimates and catch rates from previous years and the fact that the 2020 overall hammerhead shark quota has not been overharvested to date, and consistent with the current regulations at § 635.27(b)(2)(ii), NMFS proposes that the 2021 quotas for hammerhead sharks in the western Gulf of Mexico and eastern Gulf of Mexico sub-regions be equal to their annual base quotas without adjustment.

The 2021 proposed commercial quota for non-blacknose SCS in the Gulf of Mexico region is 112.6 mt dw (248,215 lb dw). As of July 10, 2020, preliminary reported landings of non-blacknose SCS were at 22 percent (25.2 mt dw) of their 2020 quota level (112.6 mt dw) in the Gulf of Mexico region. Reported landings have not exceeded the 2020 quota to date. Given the unknown status of bonnethead sharks within the Gulf of Mexico non-blacknose SCS management group, underharvests cannot be carried forward, pursuant to § 635.27(b)(2)(ii). Based on both preliminary estimates and catch rates from previous years, and because there have not been any overharvests, NMFS proposes that the 2021 quota for non-blacknose SCS in the Gulf of Mexico region be equal to the annual base quota without adjustment.

The 2021 proposed commercial quota for smoothhound sharks in the Gulf of Mexico region is 504.6 mt dw (1,112,441 lb dw). As of July 10, 2020, preliminary reported landings of smoothhound sharks were less than 1 percent (1.4 mt dw) in the Gulf of Mexico region. Gulf of Mexico smoothhound sharks are not overfished, are not experiencing overfishing, and do not have an unknown status. Pursuant to § 635.27(b)(2)(ii), underharvests for smoothhound sharks within the Gulf of Mexico region therefore could be added to the 2021 quotas up to 50 percent of the base annual quota. Accordingly, NMFS proposes to increase the 2021 Gulf of Mexico smoothhound shark quota to adjust for anticipated underharvests in 2020 to the full extent allowed. The proposed 2021 adjusted base annual quota for Gulf of Mexico smoothhound sharks is 504.6 mt dw (336.4 mt dw annual base quota + 168.2 mt dw 2020 underharvest = 504.6 mt dw 2021 adjusted annual quota).

2. Proposed 2021 Quotas for the Atlantic Region Shark Management Groups

The 2021 proposed commercial quota for aggregated LCS in the Atlantic region is 168.9 mt dw (372,552 lb dw). As of July 10, 2020, the aggregated LCS fishery in the Atlantic region is still open, and preliminary landings indicate that only 22 percent (36.8 mt dw) of the quota has been harvested. Given the unknown status of some of the shark species within the Atlantic aggregated LCS management group, underharvests cannot be carried over pursuant to § 635.27(b)(2)(ii). Therefore, based on both preliminary estimates and catch rates from previous years, and consistent with current regulations at § 635.27(b)(2), NMFS proposes that the 2021 quota for aggregated LCS in the Atlantic region be equal to the annual base quota without adjustment, because there have not been any overharvests, and underharvests cannot be carried over due to stock status.

The 2021 proposed commercial quota for hammerhead sharks in the Atlantic region is 27.1 mt dw (59,736 lb dw). Currently, the hammerhead shark fishery in the Atlantic region is still open and preliminary landings as of July 10, 2020, indicate that 39 percent (10.6 mt dw) of the Atlantic regional quota has been harvested. Reported landings from both Gulf of Mexico and Atlantic regions have not exceeded the 2020 overall hammerhead quota to date. Given the overfished status of hammerhead sharks, underharvests cannot be carried forward pursuant to § 635.27(b)(2)(ii). Therefore, based on both preliminary estimates and catch rates from previous years, and consistent with the current regulations at § 635.27(b)(2), NMFS proposes that the 2021 quota for hammerhead sharks in the Atlantic region be equal to the annual base quota without adjustment.

The 2021 proposed commercial quota for non-blacknose SCS in the Atlantic region is 264.1 mt dw (582,333 lb dw). As of July 10, 2020, preliminary reported landings of non-blacknose SCS were at 17 percent (44.0 mt dw) of the 2020 quota level in the Atlantic region. Reported landings have not exceeded the 2020 quota to date. Given the unknown status of bonnethead sharks within the Atlantic non-blacknose SCS management group, underharvests cannot be carried forward pursuant to § 635.27(b)(2)(ii). Therefore, based on preliminary estimates of catch rates from previous years, and consistent with the current regulations at § 635.27(b)(2), NMFS proposes that the 2021 quota for non-blacknose SCS in the Atlantic region be equal to the annual base quota without adjustment.

The 2021 proposed commercial quota for blacknose sharks in the Atlantic region is 17.2 mt dw (37,921 lb dw). This quota is available in the Atlantic region only for those vessels operating south of 34° N latitude. North of 34° N latitude, retention, landing, or sale of blacknose sharks is prohibited. NMFS is not proposing any adjustments to the blacknose shark quota at this time. As of July 10, 2020, preliminary reported landings of blacknose sharks were at 15 percent (2.6 mt dw) of the 2020 quota levels in the Atlantic region. Reported landings have not exceeded the 2020 quota to date. Pursuant to § 635.27(b)(2), because blacknose sharks have been declared to be overfished with overfishing occurring in the Atlantic region, NMFS could not carry forward the remaining underharvest. Therefore, NMFS proposes that the 2021 Atlantic blacknose shark quota be equal to the annual base quota without adjustment.

The 2021 proposed commercial quota for smoothhound sharks in the Atlantic region is 1,802.6 mt dw (3,973,902 lb dw). As of July 10, 2020, preliminary reported landings of smoothhound sharks were at 6.7 percent (121.1 mt dw) of their 2020 quota levels in the Atlantic region. Atlantic smoothhound sharks have not been declared to be overfished, to have overfishing occurring, or to have an unknown status. Pursuant to § 635.27(b)(2)(ii), underharvests for smoothhound sharks within the Atlantic region therefore could be applied to the 2021 quotas up to 50 percent of the base annual quota. Accordingly, NMFS proposes to increase the 2021 Atlantic smoothhound shark quota to adjust for

anticipated underharvests in 2020 as allowed. The proposed 2021 adjusted base annual quota for Atlantic smoothhound sharks is 1,802.6 mt dw (1,201.7 mt dw annual base quota + 600.9 mt dw 2019 underharvest = 1,802.6 mt dw 2021 adjusted annual quota).

3. Proposed 2021 Quotas for Shark Management Groups With No Regional Quotas

The 2021 proposed commercial quotas within the shark research fishery are 50 mt dw (110,230 lb dw) for research LCS and 90.7 mt dw (199,943 lb dw) for sandbar sharks. Within the shark research fishery, as of July 10, 2020, preliminary reported landings of research LCS were at less than 5 percent (<2.5 mt dw) of the 2020 quota, and sandbar shark reported landings were at less than 5 percent (<4.5 mt dw) of their 2020 quota. Under § 635.27(b)(2)(ii), because sandbar sharks and scalloped hammerhead sharks within the research LCS management group are either overfished or overfishing is occurring, underharvests for these management groups cannot be carried forward. Therefore, based on preliminary estimates, and consistent with the regulations at § 635.27(b)(2), NMFS proposes that the 2021 quota in the shark research fishery be equal to the annual base quota without adjustment because there have not been any overharvests, and because underharvests cannot be carried over due to stock status.

The 2021 proposed commercial quotas for blue sharks, porbeagle sharks, and pelagic sharks (other than porbeagle or blue sharks) are 273.0 mt dw (601,856 lb dw), 1.7 mt dw (3,748 lb dw), and 488.0 mt dw (1,075,856 lb dw), respectively. As of July 10, 2020, there were no preliminary reported landings of blue sharks or porbeagle sharks, and landings of pelagic sharks (other than porbeagle and blue sharks) were at 5.9 percent (28.8 mt dw) of the 2020 quota level (488.0 mt dw). Given that these pelagic species are overfished, have overfishing occurring, or have an unknown status, underharvests cannot be carried forward pursuant to § 635.27(b)(2)(ii). Therefore, based on preliminary estimates and consistent with the current regulations at § 635.27(b)(2), NMFS proposes that the 2021 quotas for blue sharks, porbeagle sharks, and pelagic sharks (other than porbeagle and blue sharks) be equal to their annual base quotas without adjustment, because there have not been any overharvests and because underharvests cannot be carried over due to stock status.

Proposed Opening Date and Retention Limits for the 2021 Atlantic Commercial Shark Fishing Year

In proposing the commercial shark fishing season opening dates for all regions and sub-regions, NMFS considers regulatory criteria listed at § 635.27(b)(3) and other relevant factors such as the available annual quotas for the current fishing season, estimated season length and average weekly catch rates from previous years, length of the season and fishery participation in past years, impacts to accomplishing objectives of the 2006 Consolidated Atlantic HMS FMP and its amendments, temporal variation in behavior or biology of target species (*e.g.,* seasonal distribution or abundance), impact of catch rates in one region on another, and effects of delayed openings.

In analyzing the criteria, NMFS examines the overharvests and underharvests of the different management groups in the 2020 fishing year to determine the likely effects of the proposed commercial quotas for 2021 on shark stocks and fishermen across regional and sub-regional fishing areas. NMFS also examines the potential season length and previous catch rates to ensure, to the extent practicable, that equitable fishing opportunities be provided to fishermen in all areas. Lastly, NMFS examines the seasonal variation of the different species/management groups and the effects on fishing opportunities. At the start of each fishing year, the default commercial retention limit is 45 LCS other than sandbar sharks per vessel per trip in the eastern and western Gulf of Mexico sub-regions and in the Atlantic region, unless NMFS determines otherwise and files with the Office of the Federal Register for publication notification of an inseason adjustment. NMFS may adjust the retention limit from zero to 55 LCS other than sandbar sharks per vessel per trip if the respective LCS management group is open under §§ 635.27 and 635.28, after considering the six ''inseason trip limit adjustment criteria'' listed at § 635.24(a)(8). Those criteria are: The amount of remaining shark quota in the relevant area, region, or sub-region, to date, based on dealer reports; the catch rates of the relevant shark species/complexes in the region or sub-region, to date, based on dealer reports; the estimated date of fishery closure based on when the landings are projected to reach 80-percent of the quota given the realized catch rates and whether they are projected to reach 100 percent before the end of the fishing season; effects of the adjustment on accomplishing the objectives of the 2006 Consolidated Atlantic HMS FMP and its amendments; variations in seasonal distribution, abundance, or migratory patterns of the relevant shark species based on scientific and fishery-based knowledge; and/or effects of catch rates in one part of a region precluding vessels in another part of that region from having a reasonable opportunity to harvest a portion of the relevant quota.

After considering all these criteria, NMFS is proposing to open the 2021 Atlantic commercial shark fishing season for all shark management groups in the northwestern Atlantic Ocean, including the Gulf of Mexico and the Caribbean Sea, on January 1, 2021, after the publication of the final rule for this action (Table 2). NMFS proposes to open the season on January 1, 2021, but recognizes that the actual opening date is contingent on publication in the **Federal Register**, and may vary accordingly. NMFS is also proposing to start the 2021 commercial shark fishing season with the commercial retention limit of 45 LCS other than sandbar sharks per vessel per trip in both the eastern and western Gulf of Mexico sub-regions, and a commercial retention limit of 36 LCS other than sandbar sharks per vessel per trip in the Atlantic region (Table 2). Proposed retention limits could change as a result of public comments as well as updated catch rates and landings information available when drafting the final rule.

TABLE 2—QUOTA LINKAGES, SEASON OPENING DATES, AND COMMERCIAL RETENTION LIMIT BY REGIONAL OR SUB-REGIONAL SHARK MANAGEMENT GROUP

Region or sub-region	Management group	Quota linkages	Season opening date	Commercial retention limits for directed shark limited access permit holders (inseason adjustments are possible)
Western Gulf of Mexico	Blacktip Sharks ..... Aggregated Large Coastal Sharks. Hammerhead Sharks.	Not Linked ..... Linked.	January 1, 2021	45 LCS other than sandbar sharks per vessel per trip.

TABLE 2—QUOTA LINKAGES, SEASON OPENING DATES, AND COMMERCIAL RETENTION LIMIT BY REGIONAL OR SUB-REGIONAL SHARK MANAGEMENT GROUP—Continued

Region or sub-region	Management group	Quota linkages	Season opening date	Commercial retention limits for directed shark limited access permit holders (inseason adjustments are possible)
Eastern Gulf of Mexico	Blacktip Sharks Aggregated Large Coastal Sharks. Hammerhead Sharks.	Not Linked Linked.	January 1, 2021	45 LCS other than sandbar sharks per vessel per trip.
Gulf of Mexico	Non-Blacknose Small Coastal Sharks.	Not Linked	January 1, 2021	N/A.
	Smoothhound Sharks	Not Linked	January 1, 2021	N/A.
Atlantic	Aggregated Large Coastal Sharks. Hammerhead Sharks	Linked	January 1, 2021	36 LCS other than sandbar sharks per vessel per trip. If quota is landed quickly (*e.g.,* if approximately 40 percent of quota is caught at the beginning of the year), NMFS anticipates considering an inseason reduction (*e.g.,* to 3 or fewer LCS other than sandbar sharks per vessel per trip), then an inseason increase to 36 LCS other than sandbar sharks per vessel per trip around July 15, 2021.[1]
	Non-Blacknose Small Coastal Sharks.	Linked (South of 34° N lat. only).	January 1, 2021	N/A.
	Blacknose Sharks (South of 34° N lat. only).			8 Blacknose sharks per vessel per trip (applies to directed and incidental permit holders).
	Smoothhound Sharks	Not Linked	January 1, 2021	N/A.
No regional quotas	Non-Sandbar LCS Research. Sandbar Shark Research.	Linked	January 1, 2021	N/A.
	Blue Sharks Porbeagle Sharks. Pelagic Sharks Other Than Porbeagle or Blue.	Not Linked	January 1, 2021	N/A.

[1] NMFS is proposing changing the percent of quota harvested at which it considers adjusting the retention limit. Rather than 35 percent, NMFS would consider adjustment to 40 percent to allow fishermen in the Atlantic region to more fully utilize the quota.

In the eastern and western Gulf of Mexico sub-regions, NMFS proposes opening the fishing season on January 1, 2021, for the aggregated LCS, blacktip sharks, and hammerhead shark management groups, with the commercial retention limits of 45 LCS other than sandbar sharks per vessel per trip for directed shark permits. This opening date and retention limit combination would provide, to the extent practicable, equitable opportunities across the fisheries management sub-regions. This opening date takes into account all the season opening criteria listed in § 635.27(b)(3), and particularly the criteria that require NMFS to consider the length of the season for the different species and/or management groups in the previous years (§ 635.27(b)(3)(ii) and (iii)) and whether fishermen were able to participate in the fishery in those years (§ 635.27(b)(3)(v)). The proposed commercial retention limits take into account the criteria listed in § 635.24(a)(8), and particularly the criterion that requires NMFS to consider the catch rates of the relevant shark species/complexes based on dealer reports to date (§ 635.24(a)(8)(ii)). NMFS may also adjust the retention limit in the Gulf of Mexico region throughout the season to ensure fishermen in all parts of the region have an opportunity to harvest aggregated LCS, blacktip sharks, and hammerhead sharks (see the criteria listed at § 635.27(b)(3)(v) and § 635.24(a)(8)(ii), (v), and (vi)). For both the eastern and western Gulf of Mexico sub-regions combined, dealer reports received through July 10, 2020, indicate that 58 percent (200.4 mt dw), 110 percent (78.9 mt dw), and less than 15 percent (<0.5 mt dw) of the available blacktip, aggregated LCS, and hammerhead shark quotas, respectively, has been harvested. Therefore, for 2021, NMFS is considering opening both the western and eastern Gulf of Mexico sub-regions with a commercial retention limit of 45 sharks other than sandbar sharks, per vessel per trip.

In the Atlantic region, NMFS proposes opening the aggregated LCS and hammerhead shark management groups on January 1, 2021. This opening date also takes into account all the criteria listed in § 635.27(b)(3), and particularly the criterion that NMFS consider the effects of catch rates in one part of a region precluding vessels in another part of that region from having a reasonable opportunity to harvest a portion of the different species and/or management quotas (§ 635.27(b)(3)(v)). The 2020 data indicates that an opening date of January 1, coupled with inseason adjustments to the retention limit, provided a reasonable opportunity for fishermen in every part of each region to harvest a portion of the available quotas (§ 635.27(b)(3)(i)), while accounting for variations in seasonal distribution of the different species in the management groups (§ 635.27(b)(3)(iv)). Because the quotas we propose for 2021 are the same as the quotas in 2020, NMFS proposes that the season lengths, and therefore, the participation of various fishermen throughout the region, would be similar in 2021 (§ 635.27(b)(3)(ii) and (iii)). Based on the recent performance of the fishery, the January 1 opening date appears to meet the objectives of the 2006 Consolidated Atlantic HMS FMP and its amendments (§ 635.27(b)(3)(vi)). NMFS' review of the landings data from 2016 to the present has shown a decrease in landings over time in the aggregated LCS and hammerhead management groups. In the Final Rule to Establish Adjusted Base Annual Quotas, Opening Dates, and Retention Limits for the 2020 Atlantic Shark Commercial Fishing Year (84 FR 65690; November 29, 2019), NMFS increased the starting retention limit from 25 to 36, and the percentage threshold from 20 to 35 percent. NMFS proposes to follow the same trip adjustment criteria in 2021, but because landings continue to remain low, NMFS is proposing to change the percent of quota harvested at which it

considers adjusting the retention limit from 35 to 40 percent. Changing the percent of quota harvested could allow fishermen in the Atlantic region to more fully utilize the quota. Changing the percentage of quota harvested is a management benchmark NMFS has used (and announced as part of the rulemaking process) in previous seasons to help determine at which point it will consider an inseason action to adjust the retention limits.

In addition, for the aggregated LCS and hammerhead shark management groups in the Atlantic region, NMFS proposes opening the fishing year with the commercial retention limit for directed shark limited access permit holders of 36 LCS other than sandbar sharks per vessel per trip. This retention limit should allow fishermen to harvest some of the 2021 quota at the beginning of the year when sharks are more prevalent in the South Atlantic area (see the criteria at § 635.24(a)(3)(i), (ii), (v), and (vi)). As was done in 2020, if it appears that the quota is being harvested too quickly to allow directed fishermen throughout the entire region an opportunity to fish and ensure enough quota remains until later in the year, NMFS would consider either reducing the commercial retention limits to incidental levels (3 LCS other than sandbar sharks per vessel per trip), or setting another level calculated to reduce the harvest of LCS in accordance with the opening commercial fishing season criteria listed in § 635.27(b)(3) and the inseason trip limit adjustment criteria listed in § 635.24(a)(8). If the quota continues to be harvested quickly, NMFS could consider reducing the retention limit to 0 LCS other than sandbar sharks per vessel per trip to ensure enough quota remains until later in the year. If either situation occurs, NMFS would publish in the **Federal Register** notification of any inseason adjustments of the retention limit. NMFS will consider increasing the commercial retention limits per trip at a later date, after considering the appropriate inseason adjustment criteria, if necessary to provide fishermen in the northern portion of the Atlantic region an opportunity to retain aggregated LCS and hammerhead sharks. Similarly, at some point later in the year, NMFS may consider increasing the retention limit to a higher retention limit of aggregated LCS other than sandbar sharks per vessel per trip, as deemed appropriate, after considering the inseason trip limit adjustment criteria. If the quota is being harvested too quickly or too slowly, NMFS could adjust the retention limit appropriately to ensure the fishery remains open most of the rest of the year.

All of the shark management groups would remain open until December 31, 2021, or until NMFS determines that the landings for any shark management group are projected to reach 80 percent of the quota given the realized catch rates and whether they are projected to reach 100 percent before the end of the fishing season, or when the quota-linked management group is closed. If NMFS determines that a non-linked shark species or management group must be closed, then, consistent with § 635.28(b)(2) for non-linked quotas (*e.g.,* eastern Gulf of Mexico blacktip, western Gulf of Mexico blacktip, Gulf of Mexico non-blacknose SCS, pelagic sharks, or the Atlantic or Gulf of Mexico smoothhound sharks), NMFS will publish in the **Federal Register** a notice of closure for that shark species, shark management group, region, and/or sub-region that will be effective no fewer than four days from the date of filing (This is pursuant to 50 CFR part 635, as most recently amended by the July 9, 2018, final rule (83 FR 31677) revising Atlantic highly migratory species shark fishery closure regulations). For the blacktip shark management group, regulations at § 635.28(b)(5)(i) through (v) authorize NMFS to close the management group before landings have reached or are projected to reach 80 percent of applicable available overall, regional, and/or sub-regional quota and are projected to reach 100 percent of the relevant quota by the end of the fishing season, after considering the following criteria and other relevant factors: Season length based on available sub-regional quota and average sub-regional catch rates; variability in regional and/or sub-regional seasonal distribution, abundance, and migratory patterns; effects on accomplishing the objectives of the 2006 Consolidated Atlantic HMS FMP and its amendments; amount of remaining shark quotas in the relevant sub-region; and regional and/or sub-regional catch rates of the relevant shark species or management groups. The fisheries for the shark species or management group would be closed (even across fishing years) from the effective date and time of the closure until NMFS announces, via the publication of a notice in the **Federal Register**, that additional quota is available and the season is reopened.

If NMFS determines that a linked shark species or management group must be closed, then, consistent with § 635.28(b)(3) for linked quotas and the Final Rule to Revise Atlantic Highly Migratory Species Shark Fishery Closure Regulations (83 FR 31677; July 9, 2018), NMFS will publish in the **Federal Register** a notice of closure for all of the species and/or management groups in a linked group that will be effective no fewer than four days from the date of filing. In that event, from the effective date and time of the closure until NMFS announces that the season is reopened and additional quota is available (via the publication of another notice in the **Federal Register**), the fisheries for all linked species and/or management groups will be closed, even across fishing years. The linked quotas of the species and/or management groups are Atlantic hammerhead sharks and Atlantic aggregated LCS; eastern Gulf of Mexico hammerhead sharks and eastern Gulf of Mexico aggregated LCS; western Gulf of Mexico hammerhead sharks and western Gulf of Mexico aggregated LCS; and Atlantic blacknose and Atlantic non-blacknose SCS south of 34° N latitude.

Request for Comments

Comments on this proposed rule may be submitted via *www.regulations.gov.* NMFS solicits comments on this proposed rule by October 29, 2020 (see **DATES** and **ADDRESSES**).

Classification

The NMFS Assistant Administrator has determined that the proposed rule is consistent with the 2006 Consolidated Atlantic HMS FMP and its amendments, the Magnuson-Stevens Act, and other applicable laws, subject to further consideration after public comment.

These proposed specifications are exempt from review under Executive Order 12866.

NMFS determined that the final rules to implement Amendment 2 to the 2006 Consolidated Atlantic HMS FMP (June 24, 2008, 73 FR 35778; corrected on July 15, 2008, 73 FR 40658), Amendment 5a to the 2006 Consolidated Atlantic HMS FMP (78 FR 40318; July 3, 2013), Amendment 6 to the 2006 Consolidated Atlantic HMS FMP (80 FR 50073; August 18, 2015), and Amendment 9 to the 2006 Consolidated Atlantic HMS FMP (80 FR 73128; November 24, 2015) are consistent to the maximum extent practicable with the enforceable policies of the approved coastal management program of coastal states on the Atlantic, including the Gulf of Mexico and the Caribbean Sea, as required under the Coastal Zone Management Act. Pursuant to 15 CFR 930.41(a), NMFS provided the Coastal Zone Management Program of each coastal state a 60-day period to review the consistency determination and to advise NMFS of their concurrence. NMFS received concurrence with the

consistency determinations from several states and inferred consistency from those states that did not respond within the 60-day time period. This proposed action to establish an opening date and adjust quotas for the 2021 fishing year for the Atlantic commercial shark fisheries does not change the framework previously consulted upon. Therefore, no additional consultation is required.

An initial regulatory flexibility analysis (IRFA) was prepared, as required by section 603 of the Regulatory Flexibility Act (RFA). The IRFA describes the economic impact this proposed rule, if adopted, would have on small entities. The IRFA analysis follows.

Section 603(b)(1) of the RFA requires agencies to explain the purpose of the rule. This rule, consistent with the Magnuson-Stevens Act and the 2006 Consolidated Atlantic HMS FMP and its amendments, would adjust quotas and retention limits and establish the opening date for the 2021 Atlantic commercial shark fishing year, consistent with regulations at 50 CFR 635.27(b).

Section 603(b)(2) of the RFA requires agencies to explain the rule's objectives. The objectives of this rule are to: Adjust the base quotas for all shark management groups based on any overharvests and/or underharvests from the previous fishing year(s); establish the opening dates of the various shark fishery management groups; and establish the retention limits for the blacktip shark, aggregated large coastal shark, and hammerhead shark management groups in order to provide, to the extent practicable, equitable opportunities across the fishing management regions and/or sub-regions while also considering the ecological needs of the different shark species.

Section 603(b)(3) of the RFA requires agencies to provide an estimate of the number of small entities to which the rule would apply. The Small Business Administration (SBA) has established size criteria for all major industry sectors in the United States, including fish harvesters. SBA's regulations include provisions for an agency to develop its own industry-specific size standards after consultation with SBA and providing an opportunity for public comment (see 13 CFR 121.903(c)). Under this provision, NMFS may establish size standards that differ from those established by the SBA Office of Size Standards, but only for use by NMFS and only for the purpose of conducting an analysis of economic effects in fulfillment of the agency's obligations under the RFA. To utilize this provision, NMFS must publish such size standards in the **Federal Register**, which NMFS did on December 29, 2015 (80 FR 81194; 50 CFR 200.2). In this final rule effective on July 1, 2016, NMFS established a small business size standard of $11 million in annual gross receipts for all businesses in the commercial fishing industry (NAICS 11411) for RFA compliance purposes. NMFS considers all HMS permit holders to be small entities because they had average annual receipts of less than $11 million for commercial fishing.

As of July 10, 2020, the proposed rule would apply to the approximately 218 directed commercial shark permit holders, 263 incidental commercial shark permit holders, 159 smoothhound shark permit holders, and 104 commercial shark dealers. Not all permit holders are active in the fishery in any given year. Active directed commercial shark permit holders are defined as those with valid permits that landed one shark based on HMS electronic dealer reports. Of the 481 directed and incidental commercial shark permit holders, only 18 permit holders landed sharks in the Gulf of Mexico region, and only 85 landed sharks in the Atlantic region. Of the 159 smoothhound shark permit holders, only 61 permit holders landed smoothhound sharks in the Atlantic region, and none landed smoothhound sharks in the Gulf of Mexico region. NMFS has determined that the proposed rule would not likely affect any small governmental jurisdictions.

This proposed rule does not contain any new reporting, recordkeeping, or other compliance requirements (5 U.S.C. 603(b)(4)) or a collection-of-information requirement subject to the Paperwork Reduction Act. Similarly, this proposed rule would not conflict, duplicate, or overlap with other relevant Federal rules (5 U.S.C. 603(b)(5)). Fishermen, dealers, and managers in these fisheries must comply with a number of international agreements as domestically implemented, domestic laws, and FMPs. These include, but are not limited to, the Magnuson-Stevens Act, the Atlantic Tunas Convention Act, the Marine Mammal Protection Act, the Endangered Species Act, the National Environmental Policy Act, and the Coastal Zone Management Act.

Section 603(c) of the RFA requires each IRFA to contain a description of any significant alternatives to the proposed rule, which would accomplish the stated objectives of applicable statutes and minimize any significant economic impact of the proposed rule on small entities. Additionally, the RFA (5 U.S.C. 603(c)(1)–(4)) lists four general categories of significant alternatives that would assist an agency in the development of significant alternatives. These categories of alternatives are: (1) Establishment of differing compliance or reporting requirements or timetables that take into account the resources available to small entities; (2) clarification, consolidation, or simplification of compliance and reporting requirements under the rule for such small entities; (3) use of performance rather than design standards; and (4) exemptions from coverage of the rule for small entities. In order to meet the objectives of this proposed rule, consistent with the Magnuson-Stevens Act, NMFS cannot exempt small entities or change the reporting requirements only for small entities, because all of the entities affected are considered small entities. For similar reasons, there are no alternatives discussed that fall under the first, second, and fourth categories described above. NMFS does not know of any performance or design standards that would satisfy the aforementioned objectives of this rulemaking while, concurrently, complying with the Magnuson-Stevens Act; therefore, there are no alternatives considered under the third category.

This rulemaking would implement previously adopted and analyzed measures with adjustments, as specified in the 2006 Consolidated Atlantic HMS FMP and its amendments and the Environmental Assessment (EA) that accompanied the 2011 shark quota specifications rule (75 FR 76302; December 8, 2010). NMFS proposes to adjust quotas established and analyzed in the 2006 Consolidated Atlantic HMS FMP and its amendments by subtracting the underharvest or adding the overharvest as allowable. NMFS has limited flexibility to otherwise modify the quotas in this rule. In addition, the impacts of the quotas (and any potential modifications) were analyzed in previous regulatory flexibility analyses (RFAs), including the RFA that accompanied the 2011 shark quota specifications rule.

Based on the 2019 ex-vessel price (Table 3), fully harvesting the unadjusted 2021 Atlantic shark commercial base quotas could result in total fleet revenues of $9,997,263. For the Gulf of Mexico blacktip shark management group, NMFS is proposing to adjust the base sub-regional quotas upward due to underharvests in 2020. The increase for the western Gulf of Mexico blacktip shark management group could result in a $241,691 gain in total revenues for fishermen in that sub-region, while the increase for the eastern Gulf of Mexico blacktip shark

management group could result in a $27,645 gain in total revenues for fishermen in that sub-region. For the Gulf of Mexico and Atlantic smoothhound shark management groups, NMFS is proposing to increase the base quotas due to the underharvest in 2020. This would cause a potential gain in revenue of $393,063 for the fleet in the Gulf of Mexico region, and a potential gain in revenue of $1,112,680 for the fleet in the Atlantic region.

All of these changes in gross revenues are similar to the gross revenues analyzed in the 2006 Consolidated Atlantic HMS FMP and Amendments 2, 3 5a, 6, and 9 to the 2006 Consolidated Atlantic HMS FMP. The final RFAs for those amendments concluded that the economic impacts on these small entities from adjustments such as those contemplated in this action are expected to be minimal. In accordance with the 2006 Consolidated Atlantic HMS FMP, as amended, and consistent with NMFS' statements in rule implementing Amendments 2, 3 5a, 6, and 9, and in the EA for the 2011 shark quota specifications rule, NMFS now conducts annual rulemakings in which NMFS considers the potential economic impacts of adjusting the quotas for underharvests and overharvests.

TABLE 3—AVERAGE EX-VESSEL PRICES PER LB DW FOR EACH SHARK MANAGEMENT GROUP, 2019

Region	Species	Average ex-vessel meat price	Average ex-vessel fin price
Western Gulf of Mexico	Blacktip Shark	$0.70	$9.16
	Aggregated LCS	0.73	15.81
	Hammerhead Shark	0.52	12.00
Eastern Gulf of Mexico	Blacktip Shark	0.75	8.00
	Aggregated LCS	0.56	12.00
	Hammerhead Shark	0.50	13.43
Gulf of Mexico	Non-Blacknose SCS	0.59	5.81
	Smoothhound Shark	1.06	.....
Atlantic	Aggregated LCS	0.99	3.51
	Hammerhead Shark	0.46	.....
	Non-Blacknose SCS	1.02	4.60
	Blacknose Shark	1.27	.....
	Smoothhound Shark	0.78	1.68
No Region	Shark Research Fishery (Aggregated LCS)	0.86	15.15
	Shark Research Fishery (Sandbar only)	0.68	.....
	Blue shark	.....	.....
	Porbeagle shark	0.36	2.51
	Other Pelagic sharks	1.35	7.60

For this rule, NMFS also reviewed the criteria at § 635.27(b)(3) to determine when opening each fishery would provide equitable opportunities for fishermen, to the extent practicable, while also considering the ecological needs of the different species. The opening date of the fishing year could vary depending upon the available annual quota, catch rates, and number of fishing participants during the year. For the 2021 fishing year, NMFS is proposing to open all of the shark management groups on the effective date of the final rule for this action (which is expected to be January 1). The direct and indirect economic impacts would be neutral on a short- and long-term basis, because NMFS is not proposing to change the opening date of these fisheries from the status quo.

For all of the reasons explained above, this action, if implemented, will not have a significant economic impact on a substantial number of small entities.

[Doc No. AMS–FGIS–20–0067]

United States Standards for Split Peas

AGENCY: Agricultural Marketing Service, USDA

ACTION: Notice and request for comments

SUMMARY: The United States Department of Agriculture's (USDA) Agricultural Marketing Service (AMS) is proposing a revision to the method of interpretation for determining ''whole peas,'' in the Pea and Lentil Inspection Handbook, as it pertains to the class ''Split Peas,'' in the U.S. Standards for Split Peas under the United States Agricultural Marketing Act (AMA). Stakeholders in the pea processing/handling industry requested AMS to amend the interpretation of whole peas in the Split Pea inspection instructions by increasing the percent requirement for the factor whole peas. To ensure that the Split Pea class standard remains relevant, AMS invites interested parties to comment on whether revising the inspection instruction facilitates the marketing of Split Peas. This action does not revise or amend the Grade and Grade Requirements for the class Split Peas in the U.S. Standard for Split Peas.

DATES: We will consider comments we receive by October 29, 2020.

ADDRESSES: Submit comments or notice of intent to submit comments by any of the following methods:

To submit Comments: Go to *Regulations.gov* (*http://www.regulations.gov*). Instructions for submitting and reading comments are detailed on the site. Interested persons are invited to submit written comments concerning this notice. All comments must be submitted through the Federal e-rulemaking portal at *http://www.regulations.gov* and should reference the document number and the date and page number of this issue of the **Federal Register**. All comments submitted in response to this notice will be included in the record and will be made available to the public. Please be advised that the identity of the individuals or entities submitting comments will be made public on the internet at the address provided above.

FOR FURTHER INFORMATION CONTACT: Loren Almond, USDA AMS; Telephone: (816) 891–0422; Email: *Loren.L.Almond@ams.usda.gov.*

SUPPLEMENTARY INFORMATION: Under the authority of the AMA (7 U.S.C. 1621–1627), as amended, AMS establishes and maintains a variety of quality and grade standards for agricultural commodities that serve as a fundamental starting point to define commodity quality in the domestic and global marketplace. Standards developed under the AMA include those for rice, whole dry peas, split peas, feed peas, lentils, and beans. The U.S. standards for whole dry peas, split peas, feed peas, lentils and beans no longer appear in the Code of Federal Regulations but are now maintained by USDA-AMS-Federal Grain Inspection Service. The U.S. standards for split peas are voluntary and widely used in private contracts, government procurement, marketing communication, and for some commodities, consumer information.

The split pea standards facilitate pea marketing and define U.S. pea quality in the domestic and global marketplace. The standards define commonly used industry terms; contain basic principles governing the application of standards such as the type of sample used for a particular quality analysis; the basis of determination; and specify grades and grade requirements. Official procedures for determining grading factors are provided in the Pea and Lentil Inspection Handbook. Together, the grading standards and testing procedures allow buyers and sellers to communicate quality requirements, compare pea quality using equivalent forms of measurement, and assist in price discovery.

AMS engages in outreach with stakeholders to ensure commodity standards maintain relevance to the modern market. Stakeholders, including the U.S. Dry Pea and Lentil Council (USDPLC), requested AMS to revise the split pea criteria for whole peas in the class Split Peas. Whole Peas are dry peas which are not split. The current definition of a ''whole pea'' is any pea which is 55 percent or more of a whole pea. The current tolerances for whole peas in split peas are determined on approximately 250 grams. AMS–FGIS proposes to revise the split pea inspection criteria in the Pea and Lentil Inspection Handbook by amending the definition for whole peas in the Split Pea class from 55 percent or more, to 60 percent or more.

Split Pea Tolerances for Whole Peas

Representatives of pea industry stakeholders contacted AMS–FGIS to discuss ongoing issues with Split Peas, which grow predominately in Montana and North Dakota. Stakeholders told AMS that customers are looking for improved grading tools to measure the quality of products. Further, pea stakeholders told AMS that in 2019 shipments of split peas grading Number 1 at the processor subsequently graded less than Number 1, after packaging for Section 32/Food Distribution Programs. Stakeholders stated the current whole pea factor tolerance makes meeting contract specifications difficult due to the interpretation of a whole pea. During meetings and discussions, pea stakeholders communicated the need to revise the Pea and Lentil Inspection Handbook by revising the whole pea definition.

The current tolerances for whole peas in split peas are determined on a percent basis of 55 percent or more of a whole pea in 250 grams. Pea industry stakeholders recommended the tolerance be increased to 60 percent or more of a whole pea. This would assist in moving the U.S. Split Pea market towards fewer quality complaints and serve to ensure consistent grading results across the nation. AMS views this action as noncontroversial and anticipates no adverse public comment.

AMS grading and inspection services, provided through a network of federal, state, and private laboratories, conduct tests to determine the quality and condition of Split Peas. These tests are conducted in accordance with applicable standards using approved methodologies and can be applied at any point in the marketing chain. Furthermore, the tests yield rapid, reliable, and consistent results. The U.S.

Standards for Split Peas and the affiliated grading and testing services offered by AMS verify that a seller's Split Peas meet specified requirements and ensure that customers receive the quality purchased.

In order for U.S. standards and grading procedures for split peas to remain relevant, AMS is issuing this request for information to invite interested parties to submit comments on the proposal to amend the whole pea interpretation for the class Split Peas. These changes do not revise or amend the Grade and Grade Requirements for the class Split Peas in the U.S. Standard for Split Peas.

Proposed AMS Action

Based on input from stakeholder organizations in the pea industry, AMS proposes to amend the Pea and Lentil Inspection Handbook to revise the definition of whole peas, by increasing the percent needed to consider a split pea to be a whole pea from 55 percent or more to 60 percent or more.

AMS will solicit comments for 30 days. All comments received within the comment period will be made part of the public record maintained by AMS, will be available to the public for review, and will be considered by AMS before a final action is taken on this proposal.

Authority: 7 U.S.C. 1621–1627.

United States Standards for Lentils

AGENCY: Agricultural Marketing Service, USDA.

ACTION: Notice and request for comments.

SUMMARY: The United States Department of Agriculture's (USDA) Agricultural Marketing Service (AMS) is proposing a revision to the method of interpretation for the determining the special grade ''Green,'' in the Pea and Lentil Inspection Handbook, as it pertains to the class ''Lentils,'' in the U.S. Standards for Lentils under the United States Agricultural Marketing Act (AMA). Stakeholders in the lentil processing/handling industry requested AMS to amend the definition of the special grade ''Green'' to allow for the inclusion of mottled lentils. To ensure that the Lentil standards remain relevant, AMS invites interested parties to comment on whether revising the inspection instructions facilitate the marketing of Lentils. This action will revise or amend the Grade and Grade Requirements for Lentils in the U.S. Standard for Lentils.

DATES: We will consider comments we receive by October 29, 2020.

ADDRESSES: Submit comments or notice of intent to submit comments by any of the following methods:

To submit Comments: Go to *Regulations.gov* (*http://www.regulations.gov*). Instructions for submitting and reading comments are detailed on the site. Interested persons are invited to submit written comments concerning this notice. All comments must be submitted through the Federal e-rulemaking portal at *http://www.regulations.gov* and should reference the document number and the date and page number of this issue of the **Federal Register**. All comments submitted in response to this notice will be included in the record and will be made available to the public. Please be advised that the identity of the individuals or entities submitting comments will be made public on the internet at the address provided above.

FOR FURTHER INFORMATION CONTACT: Loren Almond, USDA AMS; Telephone: (816) 891–0422; Email: *Loren.L.Almond@ams.usda.gov.*

SUPPLEMENTARY INFORMATION: Under the authority of the AMA (7 U.S.C. 1621–1627), as amended, AMS establishes and maintains a variety of quality and grade standards for agricultural commodities that serve as a fundamental starting point to define commodity quality in the domestic and global marketplace. Standards developed under the AMA include those for rice, whole dry peas, split peas, feed peas, lentils, and beans. The U.S. standards for whole dry peas, split peas, feed peas, lentils and beans no longer appear in the Code of Federal Regulations, but are now maintained by USDA–AMS–Federal Grain Inspection Service. The U.S. standards for lentils are voluntary and widely used in private contracts, government procurement, marketing communication, and for some commodities, consumer information. The lentil standards were last revised in 2017 (82 FR 31550).

The lentil standards facilitate lentil marketing and define U.S. lentil quality in the domestic and global marketplace. The standards define commonly used industry terms; contain basic principles governing the application of standards such as the type of sample used for a particular quality analysis; the basis of determination; and specify grades and grade requirements. Official procedures for determining grading factors are provided in the Pea and Lentil Inspection Handbook. Together, the grading standards and testing procedures allow buyers and sellers to communicate quality requirements, compare lentil quality using equivalent forms of measurement, and assist in price discovery.

AMS engages in outreach with stakeholders to ensure commodity standards maintain relevance to the modern market. Stakeholders, including the U.S. Dry Pea and Lentil Council (USDPLC), requested AMS to revise the lentil criteria for the special grade ''Green'' in the class Lentils. Currently, Green Lentils are clear seeded (Non-Mottled) lentils possessing a natural, uniformly green color. This criteria for ''Green'' Lentils is determined on the sample as a whole, after the removal of dockage, but before the removal of defects and must be equal to or better than the depiction on the Interpretive Line Print (ILP) to quality for the special grade ''Green Lentils''. AMS–FGIS proposes to revise the lentil inspection criteria in the U.S. Standards for Lentils and the Pea and Lentil Inspection Handbook by amending the definition and criteria requirements for ''Green'' in lentils.

Special Grade ''Green'' Criteria in Lentils

When special grade ''Green'' was added to the lentil standard in 2017, stakeholders did not intend the interpretation of the definition to exclude all mottled lentils. Representatives of lentil industry stakeholders contacted AMS–FGIS to discuss ongoing issues with Lentils, which are predominately grown in Montana and North Dakota. Stakeholders stated in 2019 that most shipments of lentils did not achieve the special grade ''Green'' as the current definition and interpretation make it difficult to meet the special grade criteria. During meetings and discussions, lentil stakeholders communicated the need to revise the standard by changing definition of special grade ''Green'' and changing the inspection criteria in the Pea and Lentil Inspection Handbook to include a percentage of allowable mottled lentils.

Stakeholders recommended the definition of ''Green'' be revised in the lentil standard to read ''Clear seeded (green) lentils possessing a natural,

uniformly green color''. Further, stakeholders recommended the instruction in the Pea and Lentil Inspection Handbook be amended to read: ''The portion size of, approximately 60 grams for small seeded lentils and 125 grams for large seeded lentils, must contain less than 0.5 percent mottled lentils before the removal of defects, and must be equal to or better than depicted on the interpretive line print after the removal of dockage.'' AMS regards this action as noncontroversial and anticipates no adverse public comment.

AMS grading and inspection services, provided through a network of federal, state, and private laboratories, conduct tests to determine the quality and condition of Lentils. These tests are conducted in accordance with applicable standards using approved methodologies and can be applied at any point in the marketing chain. Furthermore, the tests yield rapid, reliable, and consistent results. The U.S. Standards for Lentils and the affiliated grading and testing services offered by AMS verify that a seller's Lentils meet specified requirements and ensure that customers receive the quality purchased.

In order for U.S. standards and grading procedures for lentils to remain relevant, AMS is issuing this request for information to invite interested parties to submit comments on the proposal to amend the definition and inspection instruction of special grade ''Green'' in the class Lentils.

Proposed AMS Action

Based on input from stakeholder organizations in the lentil industry, AMS proposes to amend U.S. Standards for Lentils by revising the definition of the special grade ''Green'' in Section 609 to read:

609 Special grades and requirements.

* * *

(c) Green lentils. Clear seeded (green) lentils possessing a natural, uniformly green color.

* * * * *

AMS will amend the Pea and Lentil Inspection Handbook by revising the inspection instruction for determining the special grade ''Green'', as stated above.

AMS will solicit comments for 30 days. All comments received within the comment period will be made part of the public record maintained by AMS, will be available to the public for review, and will be considered by AMS before a final action is taken on this proposal.

BILLING CODE P

DEPARTMENT OF AGRICULTURE

Agricultural Marketing Service

[Doc No. AMS–FGIS–20–0065]

United States Standards for Beans

AGENCY: Agricultural Marketing Service, USDA.

ACTION: Notice and request for comments.

SUMMARY: The United States Department of Agriculture's (USDA) Agricultural Marketing Service (AMS) is proposing a revision to the method of interpretation for determining ''sample grade criteria,'' in the Bean Inspection Handbook, as it pertains to the class ''Blackeye beans,'' in the U.S. Standards for Beans under the United States Agricultural Marketing Act (AMA). Stakeholders in the dry bean processing/handling industry requested that AMS amend the definition of sample grade in the Blackeye bean inspection instructions by revising the unit of measurement for the factor Insect Webbing or Filth and removing clean-cut weevil-bore as a sample grade factor. Clean-cut weevil-bore will be considered a damage factor only. To ensure that the Blackeye bean class standard remains relevant, AMS invites interested parties to comment on whether revising the inspection instructions facilitate the marketing of Blackeye beans. This action does not revise or amend the Grade and Grade Requirements for the class Blackeye Beans in the U.S. Standard for Beans.

DATES: We will consider comments we receive by October 29, 2020.

ADDRESSES: Submit comments or notice of intent to submit comments by any of the following methods:

To submit Comments: Go to *Regulations.gov* (*http://www.regulations.gov*). Instructions for submitting and reading comments are detailed on the site. Interested persons are invited to submit written comments concerning this notice. All comments must be submitted through the Federal e-rulemaking portal at *http://www.regulations.gov* and should reference the document number and the date and page number of this issue of the **Federal Register**. All comments submitted in response to this notice will be included in the record and will be made available to the public. Please be advised that the identity of the individuals or entities submitting comments will be made public on the internet at the address provided above.

FOR FURTHER INFORMATION CONTACT: Loren Almond, USDA AMS; Telephone: (816) 891–0422; Email: *Loren.L.Almond@ams.usda.gov.*

SUPPLEMENTARY INFORMATION: Under the authority of the AMA (7 U.S.C. 1621–1627), as amended, AMS establishes and maintains a variety of quality and grade standards for agricultural commodities that serve as a fundamental starting point to define commodity quality in the domestic and global marketplace.

Standards developed under the AMA include those for rice, whole dry peas, split peas, feed peas, lentils, and beans. The U.S. standards for whole dry peas, split peas, feed peas, lentils and beans no longer appear in the Code of Federal Regulations but are now maintained by USDA–AMS-Federal Grain Inspection Service. The U.S. standards for beans are voluntary and widely used in private contracts, government procurement, marketing communication, and for some commodities, consumer information.

The bean standards facilitate bean marketing and define U.S. bean quality in the domestic and global marketplace. The standards define commonly used industry terms; contain basic principles governing the application of standards such as the type of sample used for a particular quality analysis; the basis of determination; and specify grades and grade requirements. Official procedures for determining grading factors are provided in the Bean Inspection Handbook. Together, the grading standards and testing procedures allow buyers and sellers to communicate quality requirements, compare bean quality using equivalent forms of measurement, and assist in price discovery.

AMS engages in outreach with stakeholders to ensure commodity standards maintain relevance to the modern market. Stakeholders including the U.S. Dry Bean Council (USDBC); California Dry Bean Advisory Board; California Bean Shippers Association; and Cal Bean and Grain requested AMS to revise the sample grade tolerance for Insect Webbing or Filth (IWOF), only in the class Blackeye beans, to align with the CODEX Standard for Certain Pulses (CODEX Standard 171–1989). The current sample grade tolerances for IWOF in all classes of beans are determined on a count basis of two or more beans in 1,000 grams. AMS–FGIS

proposes to revise the Blackeye bean inspection criteria by amending the Bean Inspection Handbook to change the sample grade tolerance for IWOF in the Blackeye bean class only, from a count of two or more beans in 1,000 grams, to more than 0.10 percent on the basis of the representative sample as a whole, and remove clean-cut weevil-bore as a sample grade factor.

Blackeye Bean Sample Grade Tolerances for Insect Webbing or Filth

Representatives of dry bean industry stakeholders contacted AMS–FGIS to discuss ongoing issues with Blackeye beans, which grow predominately in California and Texas. The bean stakeholders told AMS the type of insect filth found in the Blackeye bean is not due to storage practices, but originates in the field, brought on by years of drought, and is the result of challenges associated with applying aerial pesticides. These elements have contributed to an increase of IWOF (beans and pieces of beans which contain webbing, refuse, excreta, dead insects, larvae, or eggs) in the Blackeye bean crops for years. With the current sample grade factor tolerance, difficulty in meeting contract specifications is problematic. During meetings and discussions, bean stakeholders communicated the need to revise the Bean Inspection Handbook by changing Blackeye bean sample grade tolerances for IWOF from count to percent. This would assist in moving the U.S. Blackeye bean market towards fewer quality complaints. The current sample grade tolerances for IWOF in all classes of beans are determined on a count basis of two or more beans in 1,000 grams. This change will increase the actual count to at least three beans, and in some cases possibly four beans, depending on the variety size. These changes were recommended to AMS by the stakeholder organizations identified in the background section of this notice to facilitate the current marketing practices. AMS views this action as noncontroversial and anticipates no adverse public comment.

Removing Clean Cut Weevil Bore as a Sample Grade Factor

Dry bean representatives also discussed issues with the Blackeye bean determination of clean-cut weevil-bore (CCWB) beans as a sample grade factor. Currently, two or more clean-cut weevil-bored (beans and pieces of beans from which weevils have emerged, leaving a clean-cut open cavity free from any webbing, refuse, excreta, dead insect, larvae, or eggs) are considered sample grade/weevily in 1,000 grams. AMS proposes to remove clean-cut weevil-bored as a sample grade criteria. This results in clean-cut weevil-bored beans considered only for damage and removes the weevily and sample grade determination based on the count of clean-cut weevil-bored beans for blackeye beans.

AMS grading and inspection services are provided through a network of federal, state, and private laboratories that conduct tests to determine the quality and condition of Blackeye beans. These tests are conducted in accordance with applicable standards using approved methodologies and can be applied at any point in the marketing chain. Furthermore, the tests yield rapid, reliable, and consistent results. The U.S. Standards for Beans and the affiliated grading and testing services offered by AMS verify that a seller's Blackeye beans meet specified requirements and ensure that customers receive the quality purchased.

In order for U.S. standards and grading procedures for Blackeye beans to remain relevant, AMS is issuing this request for information to invite interested parties to submit comments on the proposal to amend the sample grade interpretation for the class Blackeye beans. These changes do not revise or amend the Grade and Grade Requirements for the class Blackeye Beans in the U.S. Standard for Beans.

Proposed AMS Action

Based on input from stakeholder organizations in the Blackeye bean industry, AMS proposes to amend the Bean Inspection Handbook by revising the sample grade tolerances for Blackeye beans such that clean cut weevil bore is no longer a sample grade determining factor, and changing the Insect Webbing or Filth determination from a count to a percent basis.

AMS will solicit comments for 30 days. All comments received within the comment period will be made part of the public record maintained by AMS, will be available to the public for review, and will be considered by AMS before a final action is taken on this proposal.

Authority: 7 U.S.C. 1621–1627.

Bruce Summers,

Administrator, Agricultural Marketing Service.

DEPARTMENT OF AGRICULTURE

Animal and Plant Health Inspection Service

[Docket No. APHIS–2020–0091]

General Conference Committee of the National Poultry Improvement Plan

AGENCY: Animal and Plant Health Inspection Service, USDA.

ACTION: Notice of renewal.

SUMMARY: We are giving notice that the Secretary of Agriculture has renewed the charter of the General Conference Committee of the National Poultry Improvement Plan (Committee) for a 2-year period. The Secretary of Agriculture has determined that the Committee is necessary and in the public interest.

FOR FURTHER INFORMATION CONTACT: Dr. Elena Behnke, Senior Coordinator, National Poultry Improvement Plan, VS, APHIS, USDA, 1506 Klondike Road, Suite 101, Conyers, GA 30094; (770) 922–3496.

SUPPLEMENTARY INFORMATION: The purpose of the General Conference Committee of the National Poultry Improvement Plan (Committee) is to maintain and ensure industry involvement in Federal administration of matters pertaining to poultry health.

The Committee Chairperson and the Vice Chairperson shall be elected by the Committee from among its members. There are seven members on the Committee. The poultry industry elects the members of the Committee. The members represent six geographic areas with one member-at-large.

Done in Washington, DC, this 24th day of September 2020.

Cikena Reid,

Committee Management Officer, USDA.

BILLING CODE 3410–34–P

DEPARTMENT OF AGRICULTURE

Food and Nutrition Service

Agency Information Collection Activities: Proposed Collection; Comment Request—Child Nutrition Database

AGENCY: Food and Nutrition Service (FNS), U.S. Department of Agriculture.

ACTION: Notice.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, this notice invites the general public and other public agencies to comment on this proposed information collection.

This is a revision of a currently approved collection. This collection is the voluntary submission of data including nutrient data from the food industry to update and expand the Child Nutrition (CN) Database in support of the Child Nutrition Act of 1966. The CN Database is required in nutrient analysis software approved by USDA for use in the school meal programs. The software allows schools participating in the National School Lunch Program (NSLP) and School Breakfast Program (SBP) to analyze meals and measure the compliance of their menus with established nutrition goals and standards specified under these programs.

DATES: Written comments must be received on or before November 30, 2020.

ADDRESSES: Comments may be sent to: Natalie Partridge, Nutritionist, Nutrition, Education, Training and Technical Assistance Division, Child Nutrition Programs, Food and Nutrition Service, United States Department of Agriculture, 1320 Braddock Place, 4th Floor, Alexandria, VA 22314. Comments may also be submitted via email to the attention of Natalie Partridge at *cndb-inbox@usda.gov* with ''CN Database Comments'' in the subject line. Comments will also be accepted through the Federal eRulemaking Portal. Go to *http://www.regulations.gov* and follow the online instructions for submitting comments electronically.

All responses to this notice will be summarized and included in the request for Office of Management and Budget approval. All comments will be a matter of public record.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the information collection should be directed to Natalie Partridge at (703) 457–6803, or *natalie.partridge@usda.gov.*

SUPPLEMENTARY INFORMATION: Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the Agency, including whether the information will have practical utility; (b) the accuracy of the Agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions that were used; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on those who are to respond, including use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.

Title: Child Nutrition Database.

Form Number: FNS–710.

OMB Number: 0584–0494.

Expiration Date: January 31, 2021.

Type of Request: Revision of currently approved collection.

Abstract: The development of the Child Nutrition (CN) Database is regulated by the United States Department of Agriculture (USDA), Food and Nutrition Service. This database is designed to be incorporated in USDA-approved nutrient analysis software and provide an accurate source of nutrient data. The software allows schools participating in the National School Lunch Program (NSLP) and School Breakfast Program (SBP) to analyze meals and measure the compliance of their menus with established nutrition goals and standards specified in 7 CFR 210.10 for the NSLP and 7 CFR 220.8 for the SBP. The information collection for the CN Database is conducted using an outside contractor. The CN Database is updated annually with brand name or manufactured foods commonly used in school food service. To update and expand the CN Database, collection of this information is accomplished by form FNS–710, *CN Database Qualification Report.* The Food and Nutrition Service's contractor collects this data from the food industry through a spreadsheet version of the FNS–710. The online web tool and paper version have been deleted from the collection because they are no longer used. The online web tool was discontinued due to outdated technology. The paper form was discontinued because no data was submitted by industry using the paper form for many years. The spreadsheet was edited to update terminology and instructions. These changes do not affect the burden for the collection. However, FNS has changed how the frequency and the estimated time per response are determined. Previously the frequency of response (or total annual responses per respondent) was defined as each food item reported (n=1,120) and the hours per response represented the amount of time to report 1 food item (n=2 hours). The current burden defines the frequency of response as the number of times a manufacturer responds per year (1) with the hours adjusted to represent the total hours for the submission (estimated number of food items per manufacturer [35] × 2 hours per food item). As a result, the number of responses for this collection have changed; however, the total overall burden remains the same (estimated 32 manufacturers × 1 response per year × 35 items per manufacturer × 2 hours per item). The submission of data from the food industry will be strictly voluntary, and based on analytical, calculated, or nutrition facts label sources. FNS is currently researching options for modernizing the Child Nutrition Database, including the data collection, compilation, and dissemination of data. FNS is exploring the use of existing data sets and processes to collect nutrient data for food products marketed to schools. The current process is needed until the new process is finalized and in place.

Affected Public: Business or other for-profit (Manufacturers of food produced for schools).

Estimated Number of Respondents: The total estimated number of respondents is 32.

Estimated Number of Responses per Respondent: The estimated number of responses per respondent is 1. Respondents will provide new and updated data on an annual basis.

Estimated Total Annual Responses: 32.

Estimated Time per Response: The estimated time per response 70.0 hours, which represents 2 hours each for an average of 35 food items, and includes time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information.

Estimated Total Annual Burden on Respondents: The estimated total annual burden on respondents is 2,240 hours. See the table below for estimated total annual burden for each type of respondent.

Respondent category	Type of respondents (optional)	Instruments	Form	Number of respondents	Frequency of response	Total annual responses	Hours per response	Annual burden (hours)
Business (or other for profit).	Manufacturers of food produced for schools.	CN Database Qualification Report (spreadsheet).	FNS–710	32	1	32	70	2,240.0

Respondent category	Type of respondents (optional)	Instruments	Form	Number of respondents	Frequency of response	Total annual responses	Hours per response	Annual burden (hours)
Total	.....	.....	.....	32	1	32	70	2,240

Pamilyn Miller,

Administrator, Food and Nutrition Service.

BILLING CODE 3410–30–P

DEPARTMENT OF AGRICULTURE

Rural Utilities Service

[Docket Number: RUS–20–WATER–0031]

Information Collection Activity; Comment Request

AGENCY: Rural Utilities Service, USDA.

ACTION: Notice and request for comments.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, the United States Department of Agriculture's Rural Utilities Service (RUS), invites comments on this information collection for which the Agency intends to request approval from the Office of Management and Budget (OMB).

DATES: Comments on this notice must be received by November 30, 2020.

FOR FURTHER INFORMATION CONTACT: Kimble Brown, Innovation Center, Regulations Management Division, USDA, 1400 Independence Avenue SW, Room 5225–S, Washington, DC 20250–1522. Telephone: (202) 720–6780, Facsimile: (202) 720–8435, email: *Kimble.Brown@usda.gov.*

SUPPLEMENTARY INFORMATION: The Office of Management and Budget's (OMB) regulation (5 CFR 1320) implementing provisions of the Paperwork Reduction Act of 1995 (Pub. L. 104–13) requires that interested members of the public and affected agencies have an opportunity to comment on information collection and recordkeeping activities (see 5 CFR 1320.8(d)). This notice identifies an information collection that the Agency is submitting to OMB for extension. Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the Agency, including whether the information will have practical utility; (b) The accuracy of the Agency's estimate of the burden of the proposed collection of information including the validity of the methodology and assumptions used; (c) Ways to enhance the quality, utility and clarity of the information to be collected; and (d) Ways to minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology. Comments may be sent to: Kimble Brown, Innovation Center, Regulations Management Division, USDA, 1400 Independence Avenue SW, Room 5225–S, Washington, DC 20250–1522. Telephone: (202) 720–6780, Facsimile: (202) 720–8435, email: *Kimble.Brown@usda.gov.*

Title: 7 CFR part 1776, ''Household Water Well System Grant Program''.

OMB Control Number: 0572–0139.

Type of Request: Extension of a currently approved information collection.

Abstract: The Rural Utilities Service supports the sound development of rural communities and the growth of our economy without endangering the environment. RUS provides financial and technical assistance to help communities bring safe drinking water and sanitary, environmentally sound waste disposal facilities to rural Americans in greatest need.

The Household Water Well System (HWWS) Grant Program makes grants to qualified private non-profit organizations which will help homeowners finance the cost of private wells. As the grant recipient, non-profit organizations will establish a revolving loan fund lending program to provide water well loans to individuals who own or will own private wells in rural areas. The individual loan recipients may use the funds to construct, refurbish, and service their household well systems for an existing home.

The collection of information consists of the materials to file a grant application with the agency, including forms, certifications and required documentation.

Estimate of Burden: Public reporting burden for this collection of information is estimated to average 5.12 hours per response.

Respondents: Non-profit institutions.

Estimated Number of Respondents: 6.

Estimated Total Annual Responses: 130.

Estimated Number of Responses per Respondent: 23.

Estimated Total Annual Burden on Respondents: 666 Hours.

Copies of this information collection can be obtained from Lynn Gilbert, Management Analyst, Innovation Center, Regulations Management Division, at (202) 690–2682; All responses to this notice will be summarized and included in the request for OMB approval. All comments will also become a matter of public record.

Chad Rupe,

Administrator, Rural Utilities Service.

BILLING CODE P

DEPARTMENT OF COMMERCE

Census Bureau

Agency Information Collection Activities; Submission to the Office of Management and Budget (OMB) for Review and Approval; Comment Request; Small Business Pulse Survey

The Department of Commerce will submit the following information collection request to the Office of Management and Budget (OMB) for review and clearance in accordance with the Paperwork Reduction Act of 1995, on or after the date of publication of this notice. We invite the general public and other Federal agencies to comment on proposed, and continuing information collections, which helps us assess the impact of our information collection requirements and minimize the public's reporting burden. Public comments were previously requested via the **Federal Register** on May 19, 2020 during a 60-day comment period. This notice allows for an additional 30 days for public comments.

Agency: U.S. Census Bureau.

Title: Small Business Pulse Survey.

OMB Control Number: 0607–1014.

Form Number(s): None.

Type of Request: Regular Submission, Request for a Revision of a Currently Approved Collection.

Number of Respondents: 738,000 (We anticipate receiving 20,500 responses per week for up to 36 weeks of collection each year).

Average Hours per Response: 6 minutes.

Burden Hours: 73,920 (73,800 + 120 hours for cognitive testing).

Needs and Uses: On April 22, 2020, the Office of Management and Budget authorized clearance of an emergency

Information Collection Request (ICR) to the U.S. Department of Commerce, U.S. Census Bureau to conduct the Small Business Pulse Survey. The emergency clearance enabled the Census Bureau to collect urgently needed data on the experiences of American small businesses as the coronavirus pandemic prompted business and school closures and widespread stay-at-home orders.

The emergency clearance for the Small Business Pulse Survey will expire on October 31, 2020. In anticipation of a continuing need for Small Business Pulse Survey data, the Census Bureau is putting forward this request through normal (non-emergency) clearance channels for the purposes of continuing the survey beyond the emergency clearance expiration.

The continuation of the Small Business Pulse Survey is responsive to stakeholder requests for high frequency data that measure the effect of changing business conditions during the Coronavirus pandemic on small businesses. While the ongoing monthly and quarterly economic indicator programs provide estimates of dollar volume outputs for employer businesses of all size, the Small Business Pulse Survey captures the effects of the pandemic on operations and finances of small, single location employer businesses. As the pandemic continues, the Census Bureau is best poised to collect this information from a large and diverse sample of small businesses.

It is hard to know a priori when a shock will result in economic activity changing at a weekly, bi-weekly, or monthly frequency. Early in the pandemic, federal, state, and local policies were moving quickly so it made sense to have a weekly collection. The problem is that while we are in the moment, we cannot accurately forecast the likelihood of policy action. In addition, we are not able to forecast a change in the underlying cause of policy actions: The effect of the Coronavirus pandemic on the economy. We cannot predict changes in the severity of the pandemic (*e.g.,* will it worsen in flu season?) nor future developments that will alleviate the pandemic (*e.g.,* vaccines or treatments). In a period of such high uncertainty, the impossibility of forecasting these inflection points underscore the benefits of having a weekly survey. For these reasons, the Census Bureau will proceed with a weekly collection.

For the purposes of referencing prior ICRs, we refer to the initial approval by OMB to conduct the Small Business Pulse Survey as ''Phase 1'' (April–June 2020), and the second approved clearance as ''Phase 2'' (August–October, 2020). This ICR requests regular (non-emergency) approval to conduct ''Phase 3'', starting November 2020.

Phase 1 of the Small Business Pulse Survey was launched on April 26, 2020 as an effort to produce and disseminate high-frequency, geographic- and industry-detailed experimental data about the economic conditions of small businesses as they experience the coronavirus pandemic. It is a rapid response endeavor that leverages the resources of the federal statistical system to address emergent data needs. Given the rapidly changing dynamics of this situation for American small businesses, the Small Business Pulse Survey has been successful in meeting an acute need for information on changes in revenues, business closings, employment and hours worked, disruptions to supply chains, and expectations for future operations. In addition, the Small Business Pulse Survey provided important estimates of federal program uptake to key survey stakeholders.

In Phase 1, the Census Bureau worked in collaboration with the Bureau of Economic Analysis (BEA), Bureau of Labor Statistics (BLS), Federal Reserve Board (FRB), International Trade Administration (ITA), Minority Business Development Agency (MBDA), and the Small Business Administration (SBA) to develop questionnaire content. Subsequently, the Census Bureau was approached by the Bureau of Transportation Statistics (BTS), National Telecommunications and Information Administration (NTIA), and the Office of Tax Analysis (OTA) with requests to include additional content to the Small Business Pulse Survey for Phase 2. Understanding that information needs are changing as the pandemic continues, the Census Bureau proposed a revised questionnaire to ensure that the data collected continue to be relevant and broadly useful. Also in Phase 2, the Census Bureau refined its strategies for contacting businesses in a clear and effective manner while motivating their continued participation.

Anticipating that businesses will continue to be affected by the pandemic, and as new developments are expected later this year and into 2021 (including the continuation of government assistance programs that target small businesses; policy shifts including the loosening or tightening of restrictions on businesses or customers; changing weather or seasons on businesses that rely on serving customers outdoors; and new research, vaccines, and/or medications or treatments for the coronavirus), the Census Bureau will move forward with a Phase 3 as proposed in this ICR. The questionnaire used in Phase 2 will continue to be used in this next phase. Acknowledging that circumstances may evolve and information needs on specific topics may intensify, change or diminish over time, the Census Bureau may propose revisions to the questionnaire via the Non-Substantive Change process. These plans also will be made available for public comment through notice in the **Federal Register**.

Phase 3 of the Small Business Pulse Survey will continue in cooperation with other federal agencies to produce near real-time experimental data to understand how changes due to the response to the COVID–19 pandemic are affecting American small businesses and the U.S. economy.

The Phase 3 survey will carry forward questionnaire content from Phase 2. Content has been provided by the Census Bureau, SBA, FRB, MBDA, OTA, BTS, NTIA, and ITA. Domains include business closings, changes in employment and hours, disruptions to supply chain, changes in capacity, finances, and expectations for future operations.

The historical circumstances of the pandemic and uncertainty about how it may or may not continue to affect businesses over the period of Phase 3 drives the need for flexibility in Phase 3 of the SBPS. If required, the Census Bureau would seek approval from OMB through the Non-Substantive Change Review Process to revise, remove or add questionnaire content during this phase to remain relevant in guiding the nation's response and recovery.

All results from the Small Business Pulse Survey will continue to be disseminated as U.S. Census Bureau Experimental Data Products (*https://portal.census.gov/pulse/data/*). This and additional information on the Small Business Pulse Survey are available to the public on *census.gov*.

Affected Public: Business or other for-profit organizations.

Frequency: Small business will be selected once to participate in a 6-minute survey.

Respondent's Obligation: Voluntary.

Legal Authority: Title 13 U.S.C., Sections 131 and 182.

This information collection request may be viewed at *www.reginfo.gov.* Follow the instructions to view the Department of Commerce collections currently under review by OMB.

Written comments and recommendations for the proposed information collection should be submitted within 30 days of the publication of this notice on the

following website *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function and entering either the title of the collection or the OMB Control Number 0607–1014.

Sheleen Dumas,

Department PRA Clearance Officer, Office of the Chief Information Officer, Commerce Department.

National Oceanic and Atmospheric Administration

[RTID 0648–XA515]

Magnuson-Stevens Act Provisions; General Provisions for Domestic Fisheries; Application for Exempted Fishing Permit; Correction

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice; request for comments; correction.

SUMMARY: NMFS is correcting a notice that informed the public that the Assistant Regional Administrator for Sustainable Fisheries, Greater Atlantic Region, NMFS, has made a preliminary determination that an Exempted Fishing Permit application contains all of the required information and warrants further consideration. The catch estimates provided in kilograms in Table 1 were incorrect. The table also erroneously included nudibranch in the list of federally managed species.

DATES: Comments must be received on or before October 1, 2020.

ADDRESSES: You may submit written comments by either of the following methods:

- *Email: nmfs.gar.efp@noaa.gov.* Include in the subject line ''Comments on CFRF Beam Trawl Survey EFP.''
- *Mail:* Michael Pentony, Regional Administrator, NMFS, Greater Atlantic Regional Fisheries Office, 55 Great Republic Drive, Gloucester, MA 01930. Mark the outside of the envelope ''Comments on CFRF Beam Trawl Survey EFP.''

FOR FURTHER INFORMATION CONTACT: Maria Fenton, Fishery Management Specialist, 978–281–9196, *Maria.Fenton@noaa.gov.*

SUPPLEMENTARY INFORMATION: On September 16, 2020, NMFS published a notice that informed the public that the Assistant Regional Administrator for Sustainable Fisheries, Greater Atlantic Region, NMFS, has made a preliminary determination that an Exempted Fishing Permit (EFP) application contains all of the required information and warrants further consideration. The catch estimates provided in kilograms in Table 1 were incorrect. The table also erroneously included nudibranch in the list of federally managed species. This correction does not change the scope or impact of the proposed EFP. This correction is necessary to provide interested parties the opportunity to comment on the application with correct and complete information.

Correction

In the **Federal Register** of September 16, 2020, in FR Doc 2020–20389, on page 57835, Table 1 is corrected to read as follows:

TABLE 1—ESTIMATED CATCH OF FEDERALLY REGULATED SPECIES PER SURVEY TRIP, AND TOTAL ESTIMATED CATCH

Common name	Scientific name	Estimated catch per trip	Estimated total survey catch
Little skate	*Leucoraja erinacea*	976.9 lb (443.1 kg)	23,444.8 lb (10,634.4 kg)
Sea scallop	*Placopectin magellanicus*	754.0 lb (342.0 kg)	18,095.5 lb (8,208.0 kg)
Winter skate	*Leucoraja ocellata*	484.4 lb (219.7 kg)	11,624.5 lb (5,272.8 kg)
Leucoraja spp. skates (immature)	*Leucoraja spp.*	132.5 lb (60.1 kg)	3,179.9 lb (1,442.4 kg)
Winter flounder	*Pseudopleuronectes americanus*	108.9 lb (49.4 kg)	2,613.8 lb (1,185.6 kg)
Monkfish	*Lophius americanus*	96.1 lb (43.6 kg)	2,306.9 lb (1,046.4 kg)
Spiny dogfish	*Squalus acanthias*	54.0 lb (24.5 kg)	1,296.3 lb (588.0 kg)
Clearnose skate	*Raja eglanteria*	53.1 lb (24.1 kg)	1,275.2 lb (578.4 kg)
Ocean quahog	*Arctica islandica*	34.0 lb (15.4 kg)	814.8 lb (369.6 kg)
Yellowtail flounder	*Pleuronectes ferruginea*	29.3 lb (13.3 kg)	703.7 lb (319.2 kg)
Barndoor skate	*Raja laevis*	29.1 lb (13.2 kg)	698.4 lb (316.8 kg)
Summer flounder	*Paralichthys dentatus*	29.1 lb (13.2 kg)	698.4 lb (316.8 kg)
Windowpane flounder	*Scophthalmus aquosus*	23.8 lb (10.8 kg)	571.4 lb (259.2 kg)
Silver hake	*Merluccius bilinearis*	15.9 lb (7.2 kg)	381.0 lb (172.8 kg)
Red hake	*Urophycis chuss*	12.1 lb (5.5 kg)	291.0 lb (132.0 kg)
American lobster	*Homarus americanus*	11.5 lb (5.2 kg)	275.1 lb (124.8 kg)
Witch flounder	*Glyptocephalus cynoglossus*	10.6 lb (4.8 kg)	254.0 lb (115.2 kg)
Ocean pout	*Macrozdarces americanus*	9.5 lb (4.3 kg)	227.5 lb (103.2 kg)
Longfin inshore squid	*Doryteuthis pealeii*	5.3 lb (2.4 kg)	127.0 lb (57.6 kg)
Scup	*Stenotomus chrysops*	5.3 lb (2.4 kg)	127.0 lb (57.6 kg)

National Oceanic and Atmospheric Administration

[RTID 0648–XA417]

2021 Annual Determination To Implement the Sea Turtle Observer Requirement

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice.

SUMMARY: The National Marine Fisheries Service (NMFS) is providing notification that the agency will not identify additional fisheries to observe on the 2021 Annual Determination (AD), pursuant to its authority under the Endangered Species Act (ESA or Act). Through the AD, NMFS identifies U.S. fisheries operating in the Atlantic Ocean, Gulf of Mexico, and Pacific Ocean that will be required to take observers upon NMFS' request. The purpose of observing identified fisheries is to learn more about sea turtle bycatch in a given fishery, evaluate measures to prevent or reduce sea turtle bycatch, and implement the prohibition against sea turtle takes. Fisheries identified on the 2018 and 2020 ADs (see Table 1) remain on the AD for a 5-year period and are required to carry observers upon NMFS' request until December 31, 2022, and September 29, 2025 respectively.

ADDRESSES: Chief, Marine Mammal and Sea Turtle Conservation Division, Office of Protected Resources, NMFS, 1315 East-West Highway, Silver Spring, MD 20910.

FOR FURTHER INFORMATION CONTACT: Jaclyn Taylor, Office of Protected Resources, 301–427–8402; Ellen Keane, Greater Atlantic Region, 978–282–8476; Dennis Klemm, Southeast Region, 727–824–5312; Dan Lawson, West Coast Region, 206–526–4740; Irene Kelly, Pacific Islands Region, 808–725–5141. Individuals who use a telecommunications device for the hearing impaired may call the Federal Information Relay Service at 800–877–8339 between 8 a.m. and 4 p.m. Eastern time, Monday through Friday, excluding Federal holidays.

SUPPLEMENTARY INFORMATION:

Purpose of the Sea Turtle Observer Requirement

Under the ESA, 16 U.S.C. 1531 *et seq.,* NMFS has the responsibility to implement programs to conserve marine life listed as endangered or threatened. All sea turtles found in U.S. waters are listed as either endangered or threatened under the ESA. Kemp's ridley (*Lepidochelys kempii*), loggerhead (*Caretta caretta;* North Pacific distinct population segment), leatherback (*Dermochelys coriacea*), green (*Chelonia mydas;* Central West Pacific and Central South Pacific distinct population segments), and hawksbill (*Eretmochelys imbricata*) sea turtles are listed as endangered. Loggerhead (*Caretta caretta;* Northwest Atlantic Ocean distinct population segment), green (*Chelonia mydas;* North Atlantic, South Atlantic, Central North Pacific, and East Pacific distinct population segments), and olive ridley (*Lepidochelys olivacea*) sea turtles are listed as threatened, except for breeding colony populations of olive ridleys on the Pacific coast of Mexico, which are listed as endangered. Due to the inability to distinguish between populations of olive ridley turtles away from the nesting beach, NMFS considers these turtles endangered wherever they occur in U.S. waters. While some sea turtle populations have shown signs of recovery, many populations continue to decline.

Bycatch in fishing gear is the primary anthropogenic source of sea turtle injury and mortality in U.S. waters. Section 9 of the ESA prohibits the take (defined to include harassing, harming, pursuing, hunting, shooting, wounding, killing, trapping, capturing, or collecting or attempting to engage in any such conduct), including incidental take, of endangered sea turtles. Pursuant to section 4(d) of the ESA, NMFS has issued regulations extending the prohibition of take, with exceptions, to threatened sea turtles (50 CFR 223.205 and 223.206). Section 11 of the ESA provides for civil and criminal penalties for anyone who violates the Act or a regulation issued to implement the Act. NMFS may grant exceptions to the take prohibitions with an incidental take statement or an incidental take permit issued pursuant to ESA section 7 or 10, respectively. To do so, NMFS must determine that the activity that will result in incidental take is not likely to jeopardize the continued existence of the affected listed species. For some Federal fisheries and most state fisheries, NMFS has not granted an exception for incidental takes of sea turtles primarily because we lack information about fishery-sea turtle interactions.

The most effective way for NMFS to learn more about bycatch in order to implement the take prohibitions and prevent or minimize take is to place observers aboard fishing vessels. In 2007, NMFS issued a regulation (50 CFR 222.402) establishing procedures to annually identify, pursuant to specified criteria and after notice and opportunity for comment, those fisheries in which the agency intends to place observers (72 FR 43176; August 3, 2007). These regulations specify that NMFS may place observers on U.S. fishing vessels, commercial or recreational, operating in U.S. territorial waters, the U.S. exclusive economic zone, or on the high seas, or on vessels that are otherwise subject to the jurisdiction of the United States. Failure to comply with the requirements under this regulation may result in civil or criminal penalties under the ESA.

NMFS will pay the direct costs for vessels to carry the required observers. These include observer salary and insurance costs. NMFS may also evaluate other potential direct costs, should they arise. Once selected, a fishery will be required to carry observers, if requested, for a period of 5 years without further action by NMFS. This will enable NMFS to develop appropriate observer coverage and sampling protocol to investigate whether, how, when, where, and under what conditions sea turtle bycatch is occurring; to evaluate whether existing measures are minimizing or preventing bycatch; and to implement ESA take prohibitions and conserve and recover turtles.

2021 Annual Determination

Pursuant to 50 CFR 222.402(a), NOAA's Assistant Administrator for Fisheries, in consultation with Regional Administrators and Fisheries Science Center Directors, annually identifies fisheries for inclusion on the AD based on the extent to which:

(1) The fishery operates in the same waters and at the same time as sea turtles are present;

(2) The fishery operates at the same time or prior to elevated sea turtle strandings; or

(3) The fishery uses a gear or technique that is known or likely to result in incidental take of sea turtles based on documented or reported takes in the same or similar fisheries; and

(4) NMFS intends to monitor the fishery and anticipates that it will have the funds to do so.

NMFS is providing notification that the agency is not identifying additional fisheries to observe on the 2021 AD, pursuant to its authority under the ESA. NMFS is not identifying additional fisheries at this time given lack of dedicated resources to implement new observer programs or expand existing observer programs to focus on sea turtles. The two fisheries identified on the 2018 AD (see Table 1) will remain on the AD for a 5-year period and are therefore required to carry observers upon NMFS' request until December 31, 2022. The four fisheries identified on the 2020 AD (see Table 1) will remain on the AD for a 5-year period and are therefore required to carry observers upon NMFS' request until September 29, 2025.

TABLE 1—STATE AND FEDERAL COMMERCIAL FISHERIES INCLUDED ON THE 2018 AND 2020 ANNUAL DETERMINATIONS

Fishery	Years eligible to carry observers
Trawl Fisheries	
Southeastern U.S. Atlantic, Gulf of Mexico shrimp trawl	2020–2025
Gulf of Mexico mixed species fish trawl	2020–2025
Gillnet Fisheries	
Mid-Atlantic gillnet	2018–2022
Chesapeake Bay inshore gillnet	2020–2025
Long Island inshore gillnet	2020–2025
Pound Net/Weir/Seine Fisheries	
Gulf of Mexico menhaden purse seine	2018–2022

Dated: September 23, 2020.

Donna S. Wieting,

Director, Office of Protected Resources, National Marine Fisheries Service.

Patent and Trademark Office

Agency Information Collection Activities; Submission to the Office of Management and Budget (OMB) for Review and Approval; Comment Request; International Design Applications (Hague Agreement)

AGENCY: United States Patent and Trademark Office, Department of Commerce.

ACTION: Notice of an information collection; request for comment.

SUMMARY: The United States Patent and Trademark Office (USPTO), in accordance with the Paperwork Reduction Act of 1995, invites comments on the extension and revision of an existing information collection: 0651–0075 (International Design Applications (Hague Agreement)). The purpose of this notice is to allow 60 days for public comment preceding submission of the information collection to OMB.

DATES: To ensure consideration, comments regarding this information collection must be received on or before November 30, 2020.

ADDRESSES: Interested persons are invited to submit written comments by any of the following methods. Do not submit Confidential Business Information or otherwise sensitive or protected information.

- *Email: InformationCollection@uspto.gov.* Include ''0651–0075 comment'' in the subject line of the message.
- *Federal Rulemaking Portal: http://www.regulations.gov.*
- *Mail:* Kimberly Hardy, Office of the Chief Administrative Officer, United States Patent and Trademark Office, P.O. Box 1450, Alexandria, VA 22313–1450.

FOR FURTHER INFORMATION CONTACT: Requests for additional information should be directed to Rafael Bacares, Senior Legal Advisor, Office of Patent Legal Administration, United States Patent and Trademark Office, P.O. Box 1450, Alexandria, VA 22313–1450; by telephone at 571–272–3276; or by email to *Rafael.Bacares@uspto.gov* with ''0651–0075 comment'' in the subject line. Additional information about this information collection is also available at *http://www.reginfo.gov* under ''Information Collection Review.''

SUPPLEMENTARY INFORMATION:

I. Abstract

The Patent Law Treaties Implementation Act of 2012 (PLTIA) amends the patent laws to implement the provisions of the Geneva Act of the Hague Agreement Concerning International Registration of Industrial Designs (hereinafter ''Hague Agreement'') in title 1, and the Patent Law Treaty (PLT) in title 2. The Hague Agreement is an international agreement that enables an applicant to file a single international design application which may have the effect of an application for protection for the design(s) in countries and/or intergovernmental organizations that are Parties to the Hague Agreement (the ''Contracting Parties'') designated in the applications. The United States is a Contracting Party to the Hague Agreement, which took effect with respect to the United States on May 13, 2015. The Hague Agreeement is administered by the International Bureau (IB) of World Intellectual Property Organization (WIPO) located in Geneva, Switzerland.

This collection covers information filed by U.S. applicants for the prosecution of international design applications ''indirectly'' through the United States Patent and Trademark Office (USPTO), which will forward the applications to the IB or ''directly'' with the IB. The IB ascertains whether the international design application complies with formal requirements, registers the international design in the International register, and publishes the international registration in the International Designs Bulletin. The international registration contains all of the data of the international application, any reproduction of the industrial design, date of the international registration, number of the international registration, and relevant class of the International Classification.

The IB will provide a copy of the publication of the international registration to each Contracting party designated by the applicant. A designated Contracting Party may perform a substantive examination of the design application. The USPTO will perform a substantive examination for patentability of the international design application, as in the case of regular U.S. design applications. The industrial design or designs will be eligible for protection in all the Contracting Parties designated by applicants.

In addition, this collection covers the various fees related to the processing of International design applications, such as the: (1) Basic fee; (2) standard designation fee(s); (3) individual designation fee(s); and (4) publication fee. Also, an additional fee is required where the applications contain a description that exceeds 100 words, and a transmittal fee is required for

international design applications filed through an office of indirect filing. The fees required by the IB may be paid either directly to the IB or through the USPTO as an office of indirect filing in the amounts specified on the WIPO website. If applicants want to pay the required fees through USPTO as an office of indirect filing, the fees must be paid no later than the date of payment of the transmittal fee. The fees will then be forwarded to the IB.

The Hague Agreement enables applicants from Contracting Parties to obtain protection of their designs with minimal formalities and expenses in multiple countries and/or regions. The Hague Agreement is administered by the IB, which simplifies the management of an industrial design registration. For example, through the IB, applicants can record changes of their representatives or changes in ownership, and renew their international registration.

II. Method of Collection

Most of the items in this information collection can either be submitted electronically through Electronic Filing System-Web (EFS-Web) or mailed to the USPTO.

III. Data

OMB Number: 0651–0075.

Form Numbers: WIPO DM = WIPO Dessins et Modeles (design representations); PTOL = Patent Trademark Office Legal

- WIPO DM/1 (Application for International Registration—entitled Hague Agreement Concerning The International Registration of Industrial Design)
- PTOL–85 Part B (Hague): (Issue Fee to USPTO for an International Design Application)
- WIPO DM/1/I Annex: (Declaration on Inventorship for Purposes of Designation of the United States)
- WIPO DM/1/I Annex: (Substitute Statement in Lieu of a Declaration of Inventorship for the Purpose of Designating the United States)
- WIPO DM/1/III Annex: (Information On Eligibility For Protection)
- WIPO DM/1/IV Annex: (Reduction of United States Individual Designation Fee)
- WIPO DM/1/V Annex: (Supporting Document(s) Concerning Priority Claim To The Korean Intellectual Property Office (KIPO))
- PTO–1595: (Assignment Cover Sheet)

Type of Review: Revision of a currently approved information collection.

Affected Public: Private sector; individuals and households.

Estimated Number of Respondents: 1,406 respondents per year.

Estimated Number of Responses: 1,706 responses per year.

Estimated Time per Response: The USPTO estimates that it will take the public between 15 minutes (0.25 hours) and 6 hours to complete a response, depending upon the complexity of the situation. This includes the time to gather the necessary information, prepare the appropriate documents, and submit the completed request to the USPTO.

Estimated Total Response Burden Hours: 2,301 hours.

Estimated Total Annual Respondent (Hourly) Cost Burden: $1,279,400.

TABLE 1—TOTAL ESTIMATED HOURLY BURDEN FOR PRIVATE SECTOR RESPONDENTS

Item No.	Item	Estimated annual respondents	Estimated annual responses (a)	Estimated time for response (hours) (b)	Estimated annual burden hours (a) × (b) = (c)	Rate [1] ($/hour) (d)	Estimated annual burden (c) × (d) = (e)

Estimated Total Annual (Non-hour) Respondent Cost Burden: $3,389,280.

There are no maintenance, operation, capital start-up, or recordkeeping costs associated with this information collection. However, this information collection does have annual (non-hour) costs in the form of filing fees, drawing costs, and postage fees.

The total estimated filing fee costs for this information collection is $3,376,872, detailed in Table 3 below.

TABLE 3—FILING FEES

14	Application for International Registration submitted to WIPO—Issue Fee (Second part) for the U.S. (Transmitting to the USPTO by WIPO) (micro-entity).	80	175	14,000
Total				3,376,872

The USPTO estimates that around 20% (31) of the respondents that file international design applications through the USPTO as an office of indirect filing designate the United States for design protection. The costs for preparing the drawings associated with these applications are estimated to be $400 per application. Overall the costs associated with submitting these drawing are estimated to be $12,400.

Although the USPTO prefers that the items in this information collection be submitted electronically, the items may be submitted by mail through the United States Postal Service (USPS). The USPTO estimates that the average postage cost for a mailed submission, using a Priority Mail 2-day flat rate legal envelope, will be $8.05. The USPTO estimates that 1 paper submission will be mailed annually.

The USPTO estimates that the total annual (non-hour) respondent cost burden for this information collection in the forms of filling fees, drawing costs, and postage costs is estimated to be approximately $3,389,280 per year ($3,376,872 in filling fees, $12,400 in drawing costs, and $8 in postage costs).

Respondents's Obligation: Required to obtain or retain benefits.

IV. Request for Comments

The USPTO is soliciting public comments to:

(a) Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the Agency, including whether the information will have practical utility;

(b) Evaluate the accuracy of the Agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

(c) Enhance the quality, utility, and clarity of the information to be collected; and

(d) Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses.

All comments submitted in response to this notice are a matter of public record. USPTO will include or summarize each comment in the request to OMB to approve this information collection. Before including an address, phone number, email address, or other personal identifying information in a comment, be aware that the entire comment—including personal identifying information—may be made publicly available at any time. While you may ask in your comment to withhold personal identifying information from public view, USPTO cannot guarantee that it will be able to do so.

SUPPLEMENTARY INFORMATION:

I. Abstract

The USPTO is required by Title 35 of the United States Code, including 35 U.S.C. 131, to examine applications for patents. The USPTO administers the patent statutes through various rules in Chapter 37 of the Code of Federal Regulations, including 37 CFR 1.16 through 1.84. Each patent applicant must provide sufficient information to allow the USPTO to properly examine the application to determine whether it meets the criteria set forth in the patent statutes and regulations for issuance as a patent. For example, the patent statutes and regulations require that an application for patent include the following information:

(1) A specification containing a description of the invention and at least one claim defining the property right sought by the applicant;

(2) A drawing(s) or photograph(s), where necessary, for an understanding of the invention;

(3) An oath or declaration signed by the applicant; and

(4) A filing fee.

The following types of patent applications are covered under the present information collection:

(1) New original utility, plant, design, and provisional applications;

(2) Continuation/divisional applications of international applications;

(3) Continued prosecution applications (design); and

(4) Continuation, divisional, and continuation-in-part applications of utility, plant, and design applications.

In addition, this information collection covers petitions to accept an unintentionally delayed priority or benefit claim, petitions under 37 CFR 1.47 (pre-Leahy-Smith America Invents Act (AIA)) to accept a filing by other than all of the inventors or a person not the inventor, petitions under 37 CFR 1.6(g) to accord an application under 37 CFR 1.495(b) a receipt date, and papers filed under 37 CFR 1.41(c), 1.41(a)(2) (pre-AIA), 1.48(d), 1.53(c)(2), and 1.53(c)(2) (pre-Patent Law Treaty (PLT) (AIA)) (the particular items covered under this information collection are identified in more detail at Table 1 below).

Most applications for a patent, including new utility, design, and provisional applications, can be submitted through the USPTO patent electronic filing systems (EFS-Web or Patent Center). EFS-Web and Patent Center are the USPTO's systems for electronic filing of patent correspondence and are accessible via the internet on the USPTO website. The Legal Framework for Patent Electronic System is available at *https://www.uspto.gov/patents-application-process/filing-online/legal-framework-efs-web.*

The forms in this information collection include: (1) Versions of the inventor's oath and declaration forms that were created to comply with the changes resulting from the AIA, *e.g.,* forms AIA/01, AIA/02, etc., (2) pre-AIA versions of the oath and declaration forms, *e.g.,* forms SB/01, SB/02, etc., and (3) foreign language translations of the oath and declaration forms, *e.g.,* forms AIA/01CN, SB/02CN, etc. Items in this information collection that do not have forms associated with them include the petitions and the papers filed under 37 CFR 1.41(c), 1.41(a)(2) (pre-AIA), 1.48(d), 1.53(c)(2), and 1.53(c)(2) (pre-PLT (AIA)).

II. Method of Collection

As set forth in the Legal Framework for Patent Electronic System, available at *https://www.uspto.gov/patents-application-process/filing-online/legal-framework-efs-web,* most of the items in this information collection can be submitted through EFS-Web. The USPTO also will accept submissions by mail, facsimile (except that in accordance with 37 CFR 1.6(d), the items covered under this information collection that may be submitted by facsimile are limited to the petitions and the papers filed under 37 CFR 1.41(c), 1.41(a)(2) (pre-AIA), 1.48(d), 1.53(c)(2), and 1.53(c)(2) (pre-PLT (AIA))), or hand delivery to the USPTO.

III. Data

OMB Number: 0651–0032.

Form Number(s): (AIA= American Invents; SB = Specimen Book).

Type of Review: Revision of a currently approved information collection.

Affected Public: Private sector; individuals or households.

Estimated Number of Respondents: 633,209 respondents per year.

Estimated Number of Responses: 633,209 responses per year.

Estimated Time per Response: The USPTO estimates that it takes the respondents between 45 minutes to 40 hours (.75 to 40 hours) to complete a response, depending on the complexity of the particular item. This includes the time to gather the necessary information, create the documents, and submit the completed item to the USPTO.

Estimated Total Annual Respondent Burden Hours: 15,598,813 hours.

Estimated Total Annual Respondent Hourly Cost Burden: $6,239,525,200.

TABLE 1—TOTAL HOURLY BURDEN FOR PRIVATE SECTOR RESPONDENTS

Item No.	Item	Estimated annual respondents	Estimated annual responses (year) (a)	Estimated time for response (hours) (b)	Estimated annual burden (hour/year) (a) × (b) = c	Rate [1] ($/hour) (d)	Estimated annual burden (c) × (d) = e
1	Original New Utility Applications	283,425	283,425	40	11,337,000	$400	$4,534,800,000
2	Original New Plant Applications	1,333	1,333	9	11,997	400	4,798,800
3	Original New Design Applications	38,425	38,425	7	268,975	400	107,590,000
4	Continuation/Divisional of an International Application.	10,055	10,055	4	40,220	400	16,088,000
5	Utility Continuation/Divisional Applications.	94,820	94,820	4	379,280	400	151,712,000

TABLE 2—TOTAL HOURLY BURDEN FOR INDIVIDUALS AND HOUSEHOLDS RESPONDENTS—Continued

Item No.	Item	Estimated annual respondents	Estimated annual responses (year) (a)	Estimated time for response (hours) (b)	Estimated annual burden (hour/year) (a) × (b) = c	Rate [2] ($/hour) (d)	Estimated annual burden (c) × (d) = e
	1.41(c) or 1.41(a)(2) (pre-AIA)—to supply the name or names of the inventor or inventors after the filing date without a cover sheet as prescribed by 37 CFR 1.51(c)(1) in a provisional application.	223	223	.75	167	400	66,800
	1.48(d)—for correction of inventorship in a provisional application. 1.53(c)(2) or 1.53(c)(2) (pre-PLT (AIA))—to convert a nonprovisional application filed under 1.53(b) to a provisional application filed under 1.53(c).						
Total		19,503	19,503		480,522		192,208,800

[2] 2019 Report of the Economic Survey, published by the Committee on Economics of Legal Practice of the American Intellectual Property Law Association (AIPLA); *https://www.aipla.org/detail/journal-issue/2019-report-of-the-economic-survey.* The USPTO uses the mean rate for attorneys in private firms which is $400 per hour.

Estimated Total Annual Non-Hour Respondent Cost Burden: $1,205,915,848. There are no maintenance, operation, capital start-up, or recordkeeping costs associated with this information collection. However, this information collection does have annual (non-hour) costs in the form of postage, drawing costs, and filing fees.

Although the USPTO prefers that the items in this information collection be submitted electronically, the items may be submitted by mail through the United States Postal Service (USPS). The USPTO estimates that the average cost for sending a patent application by Priority Mail Express® 1 day legal envelope will be $26.50 and that up to 14,440 applications may be mailed to the USPTO, resulting in $382,660 in postage costs.

The USPTO estimates that the petitions and other papers covered under this information collection, if submitted by mail, will be sent by first-class mail (2 Day Priority Express for a flat rate legal envelope) at an average postage rate of $8.05. The USPTO estimates that up to 301 petitions and other papers may be mailed per year, thus resulting in $2,423 in first-class mailing costs.

Patent applicants can submit drawings with the applications covered under this information collection. As a basis for estimating the drawing costs, the USPTO expects that all applicants will have their drawings prepared by patent illustration firms.

Estimates for the drawings can vary greatly, depending on the number of figures that need to be produced, the total number of pages for the drawings, and the complexity of the drawings. Because there are many variables involved, the USPTO is using the average of the cost ranges found for the application drawings to derive the estimated cost per sheet that is then used to calculate the total drawing costs.

The USPTO estimates that total drawing cost is $601,432,030. The break-down of costs for utility, design, plant, and provisional drawings is broken down in table 3 below.

TABLE 3—DRAWING COST TO RESPONDENTS

Item No.	Item	Estimated annual responses (a)	Estimated drawing costs amount ($) (b)	Drawing cost totals (a) × (b) = c
1	Utility Application Drawings	292,434	$1,150	$336,299,100
3	Design Applications Drawings	39,646	1,930	76,516,780
2	Plant Application Drawings (Photographs)	1,375	680	935,000
15	Provisional Application Drawings	163,201	1,150	187,681,150
Total Drawing Costs.		496,656		601,432,030

In this information collection, there is also an annual (non-hour) cost burden in the way of filing fees. The total estimated filing cost for this information collection is $604,098,735 and is detailed in table 4 below.

TABLE 4—TOTAL NON-HOUR RESPONDENT COST

Item No.	Item	Estimated annual responses (a)	Amount (b)	Totals (a) × (b) = c
1, 4	Basic Filing fee—Utility (Paper Filing—Also Requires Non-Electronic Filing Fee Under 1.16(t)) (large entity).	233,866	$320	$74,837,120

IV. Request for Comments

The USPTO is soliciting public comments to:

(a) Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the Agency, including whether the information will have practical utility;

(b) Evaluate the accuracy of the Agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

(c) Enhance the quality, utility, and clarity of the information to be collected; and

(d) Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses.

All comments submitted in response to this notice are a matter of public record. USPTO will include or summarize each comment in the request to OMB to approve this information collection. Before including an address, phone number, email address, or other personal identifying information in a comment, be aware that the entire comment— including personal identifying information—may be made publicly available at any time. While you may ask in your comment to withhold personal identifying information from public view, USPTO cannot guarantee that it will be able to do so.

Kimberly Hardy,

Information Collections Officer, Office of the Chief Administrative Officer, United States Patent and Trademark Office.

BILLING CODE 3510–16–P

DEPARTMENT OF COMMERCE

Patent and Trademark Office

Agency Information Collection Activities; Submission to the Office of Management and Budget (OMB) for Review and Approval; Comment Request; Trademark Submissions Regarding Correspondence and Regarding Attorney Representation

AGENCY: United States Patent and Trademark Office, Department of Commerce.

ACTION: Notice of an information collection; request for comment.

SUMMARY: The United States Patent and Trademark Office (USPTO), in accordance with the Paperwork Reduction Act of 1995, invites comments on the extension and revision of an existing information collection: 0651–0056 (Trademark Submissions Regarding Correspondence and Regarding Attorney Representation). The purpose of this notice is to allow 60 days for public comment preceding submission of the information collection to OMB.

DATES: To ensure consideration, comments regarding this information collection must be received on or before November 30, 2020.

ADDRESSES: Interested persons are invited to submit written comments by any of the following methods. Do not submit Confidential Business Information or otherwise sensitive or protected information.

- *Email: InformationCollection@uspto.gov.* Include ''0651–0056 comment'' in the subject line of the message.
- *Federal Rulemaking Portal: http://www.regulations.gov.*
- *Mail:* Kimberly Hardy, Office of the Chief Administrative Officer, United States Patent and Trademark Office, P.O. Box 1450, Alexandria, VA 22313–1450.

FOR FURTHER INFORMATION CONTACT: Requests for additional information should be directed to Catherine Cain, Attorney Advisor, United States Patent and Trademark Office, P.O. Box 1450, Alexandria, VA 22313–1450; by telephone at 571–272–8946; or by email to *catherine.cain@uspto.gov* with ''0651–0056 comment'' in the subject line. Additional information about this collection is also available at *http://www.reginfo.gov* under ''Information Collection Review.''

SUPPLEMENTARY INFORMATION:

I. Abstract

The United States Patent and Trademark Office (USPTO) administers the Trademark Act, 15 U.S.C. 1051 *et seq.,* which provides for the Federal registration of trademarks, service marks, collective trademarks and service marks, collective membership marks, and certification marks. Individuals and businesses that use or intend to use such marks in commerce may file an application to register their marks with the USPTO.

Such individuals and business may also submit various communications to the USPTO regarding their pending applications or registered trademarks, including providing additional information needed to process a pending application, filing amendments to the applications, or filing the papers necessary to keep a trademark in force. In the majority of circumstances, individuals and business retain attorneys to handle these matters. As such, these parties may also submit communications to the USPTO regarding the appointment of attorneys to represent applicants or registrants in the application and post-registration processes or, in the case of applicants or registrants who are not domiciled in the United States, the appointment of domestic representatives on whom may be served notices of process in proceedings affecting the mark, the revocation of an attorney's or domestic representative's appointment, and requests for permission to withdraw from representation.

The regulations implementing the Act are set forth in 37 CFR part 2. Regulations regarding representation of others before the USPTO are also set forth in 37 CFR part 11. In addition to governing the registration of trademarks, the Act and regulations govern the appointment and revocation of attorneys and domestic representatives and provide the specifics for filing requests for permission to withdraw as the attorney of record. The information in this information collection is available to the public.

II. Method of Collection

Items in this information collection must be submitted via online electronic submissions. In limited circumstances, applicants may be permitted to submit the information in paper form by mail, fax, or hand delivery.

III. Data

OMB Control Number: 0651–0056.

Forms:

- PTO Form 2300: (TEAS Change Address or Representation Form)
- PTO Form 2201: (TEAS Request for Withdrawal as Attorney of Record/ Update of USPTO's Database After Power of Attorney Ends)

Type of Review: Revision of a currently approved information collection.

Affected Public: Businesses or other for-profits, not-for-profit institutions; individuals or households.

Estimated Number of Respondents: 204,323 respondents per year.

Estimated Number of Responses: 204,323 responses per year.

Estimated Time per Response: The USPTO estimates that it will take the public between 12 minutes (0.2 hours)

and 1 hour to complete a response, depending upon the complexity of the situation. This includes the time to gather the necessary information, prepare the appropriate documents, and submit the completed request to the USPTO.

Estimated Time Annual Burden Hours: 50,437 hours.

Estimated Total Annual Respondent (Hourly) Cost Burden: $20,174,800.

TABLE 1—TOTAL ESTIMATED HOURLY BURDEN FOR PRIVATE SECTOR RESPONDENTS

TABLE 2—TOTAL ESTIMATED HOURLY BURDEN FOR INDIVIDUAL AND HOUSEHOLD RESPONDENTS

Item No.	Item	Estimated annual respondents	Estimated annual responses	Estimated time for response (hours)	Estimated annual burden hours	Rate [2] ($/hour)	Estimated annual cost burden
	(a)	(b)	(a) × (b) = (c)	(d)	(c) × (d) = (e)		
1	Revocation, Appointment, and/or Change of Address of Attorney/Domestic Representative.	26,432	26,432	0.25	6,608	$400	$2,643,200
2	Request for Withdrawal as Attorney of Record/Update of USPTO's Database After Power of Attorney Ends.	2,017	2,017	0.20	403	400	161,200
3	Replacement of Attorney of Record with Another Already-Appointed Attorney.	14	14	1	14	400	5,600
4	Request to Withdraw as Domestic Representative.	142	142	0.25	36	400	14,400
Total		28,605	28,605		7,061		2,824,400

[2] 2019 Report of the Economic Survey from the Law Practice Management Committee of the American Intellectual Property Law Association (AIPLA). *https://www.aipla.org/detail/journal-issue/2019-report-of-the-economic-survey* The hourly rate of $400.

Estimated Total Annual Non-Hour Respondent Cost Burden: $1,369.

There are no filing fees or capital start-up, maintenance, operation, or recordkeeping costs associated with this information collection. However, this information collection does have postage costs associated with applicants submitting permitted items by mail. The USPTO estimates that the average first-class postage cost for a mailed submission will be $8.05. The USPTO estimates that 170 permitted paper submissions will be mailed for a total non-hour respondent cost burden of $1,369.

Respondent's Obligation: Required to obtain or retain benefits.

IV. Request for Comments

The USPTO is soliciting public comments to:

(a) Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the Agency, including whether the information will have practical utility;

(b) Evaluate the accuracy of the Agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

(c) Enhance the quality, utility, and clarity of the information to be collected; and

(d) Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses.

All comments submitted in response to this notice are a matter of public record. USPTO will include or summarize each comment in the request to OMB to approve this information collection. Before including an address, phone number, email address, or other personal identifying information in a comment, be aware that the entire comment—including personal identifying information—may be made publicly available at any time. While you may ask in your comment to withhold personal identifying information from public view, USPTO cannot guarantee that it will be able to do so.

Additional information about this information collection is also available at *http://www.reginfo.gov* under ''Information Collection Review.''

SUPPLEMENTARY INFORMATION:

I. Abstract

The United States Patent and Trademark Office (USPTO) is required by 35 U.S.C. 131 to examine an application for patent and, when appropriate, issue a patent. The USPTO is also required to publish patent applications, with certain exceptions, promptly after the expiration of a period of 18 months from the earliest filing date for which a benefit is sought under Title 35, United States Code (''eighteen-month publication''). This information collection covers certain situations that may arise which require that additional information be supplied in order for the USPTO to further process the patent or application.

The information in this collection is used by the USPTO to continue the processing of the patent or application to ensure that applicants are complying with the patent regulations and to aid in the prosecution of the application. In addition, this renewal proposes to remove three items related to patent appeals and associate all submissions of those items to an existing information collection (0651–0063, Patent Trial and Appeal Board Appeals). These three items are: Notice of Appeal, Amendment to Cancel Claims During an Appeal, and Request for Oral Hearing.

II. Method of Collection

Items in this information collection may be submitted via online electronic submissions. In limited circumstances, applicants may be permitted to submit the information in paper form by mail, fax, or hand delivery.

III. Data

OMB Number: 0651–0031.

Form Number(s): (AIA = American Invents; SB = Specimen Book; PTOL = Patent and Trademark Office Legal)

- PTO/SB/24B and PTO/AIA/24B (Petition for Express Abandonment to Obtain a Refund)
- PTO/SB/33 and PTO/AIA/33 (Pre-Appeal Brief Request for Review)
- PTOL–413C (Request for First-Action Interview (Pilot Program))
- PTO/SB/130 (Petition to Make Special Based on Age for Advancement of Examination under 37 CFR 1.102(c)(1))

Type of Review: Revision of a currently approved information collection.

Affected Public: Private sector; individuals or households.

Estimated Number of Respondents: 3,669,397 respondents per year.

Estimated Number of Responses: 3,669,397 responses per year.

Estimated Time per Response: The USPTO estimates that it will take respondents between 2 minutes (.03 hours) and 8 hours to submit an item in this information collection depending on the instrument used, including the time to gather the necessary information, prepare the appropriate form or petition, and submit the completed request to the USPTO.

Estimated Total Annual Respondent Burden Hours: 3,187,341 hours.

Estimated Total Annual Respondent (Hourly) Cost Burden: $842,416,575.

[2] 2019 Report of the Economic Survey, published by the Committee on Economics of Legal Practice of the American Intellectual Property Law Association (AIPLA); *https://www.aipla.org/detail/journal-issue/2019-report-of-the-economic-survey.* The USPTO uses the mean rate for attorneys in private firms which is $400 per hour. The hourly rate for paraprofessional/paralegals is estimated at $145 from data published in the 2018 Utilization and Compensation Survey by the National Association of Legal Assistants (NALA).

Estimated Total Annual Non-Hour Respondent Cost Burden: $408,845,999.

There are no recordkeeping, maintenance, or capital start-up costs associated with this information collection. However, this information collection has annual non-hour costs in the form of filing fees, as estimated in Table 3, and postage costs. The public may submit the paper forms and petitions in this information collection to the USPTO by mail through the United States Postal Service. If the submission is sent by first-class mail, the public may also include a signed certification of the date of mailing in order to receive credit for timely filing. The USPTO estimates that approximately 166,111 submissions per year may be mailed. The USPTO estimates that the average submission will be mailed in a legal flat-rate Priority Mail envelope at a cost of $8.05; resulting in a total postage cost of $1,377,194.

IV. Request for Comments

The USPTO is soliciting public comments to:

(a) Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the Agency, including whether the information will have practical utility;

(b) Evaluate the accuracy of the Agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

(c) Enhance the quality, utility, and clarity of the information to be collected; and

(d) Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses.

All comments submitted in response to this notice are a matter of public record. USPTO will include or summarize each comment in the request to OMB to approve this information collection. Before including an address, phone number, email address, or other personal identifying information in a comment, be aware that the entire comment— including personal identifying information—may be made publicly available at any time. While you may ask in your comment to withhold personal identifying information from public view, USPTO

cannot guarantee that it will be able to do so.

Kimberly Hardy,

Information Collections Officer, Office of the Chief Administrative Officer, United States Patent and Trademark Office.

BILLING CODE 3510–16–P

DEPARTMENT OF COMMERCE

Patent and Trademark Office

Agency Information Collection Activities; Submission to the Office of Management and Budget (OMB) for Review and Approval; Comment Request; Responses to Office Action and Voluntary Amendment Forms

The United States Patent and Trademark Office (USPTO) will submit the following information collection request to the Office of Management and Budget (OMB) for review and clearance in accordance with the Paperwork Reduction Act of 1995, on or after the date of publication of this notice. The USPTO invites comment on this information collection renewal, which helps the USPTO assess the impact of its information collection requirements and minimize the public's reporting burden. Public comments were previously requested via the **Federal Register** on July 29, 2020 during a 60-day comment period. This notice allows for an additional 30 days for public comments.

Agency: United States Patent and Trademark Office, Department of Commerce.

Title: Responses to Office Action and Voluntary Amendment Forms.

OMB Control Number: 0651–0050.

Form Number(s):

- PTO–1957 (Response to Office Action)
- PTO–1960 (Request for Reconsideration After Final Office Action)
- PTO–1966 (Voluntary Amendment Not in Response to USPTO Office Action/Letter)
- PTO–1771 (Post-Approval/Publication/Post-Notice of Allowance (NOA) Amendment)
- PTO–1771 (Petition to Amend Basis Post-Publication)
- PTO–1822 (Response to Suspension Inquiry or Letter of Suspension)

Type of Review: Extension and revision of a currently approved information collection.

Number of Respondents: 393,657 respondents.

Average Hours per Response: The USPTO estimates 393,665 responses and that it will take the public between 15 minutes to 40 minutes to complete this information collection, depending on the complexity of the submission. This includes the time to gather the necessary information, prepare the appropriate documents, and submit the completed items to the USPTO.

Estimated Total Annual Respondent Burden Hours: 253,058 hours.

Estimated Total Annual Non-Hour Cost Burden: $101,223,200.

Needs and Uses: This collection of information is required by the Trademark Act (Act), 15 U.S.C. 1051 *et seq.,* which provides for the Federal registration of trademarks, service marks, collective trademark and service marks, collective membership marks, and certification marks. Individuals and businesses that use such marks, or intend to use such marks, in interstate commerce may file an application to register their marks with the United States Patent and Trademark Office (USPTO). The USPTO also administers the Trademark Act through Title 37 of the Code of Federal Regulations. These regulations allow the USPTO to request and receive information required to process applications and allows applicants to submit certain amendments to their applications. This information collection includes information that was not submitted with the initial application and is needed by the USPTO to review applications for trademark registration.

In some cases, the USPTO issues Office Actions to applicants who have applied to register a mark, requesting information that was not provided with the initial submission, but is required before the issuance of a registration. Also, the USPTO may determine that a mark is not entitled to registration, pursuant to one or more provisions of the Trademark Act. In such cases, the USPTO will issue an Office Action advising the applicant of the refusal to register the mark. Applicants reply to these Office Actions by providing the required information and/or by putting forth legal arguments as to why the refusal of registration should be withdrawn.

Applicants may also supplement their applications and provide further information by filing a Voluntary Amendment Not in Response to USPTO Office Action/Letter, a Request for Reconsideration after Final Office Action, a Post-Approval/Publication/Post-Notice of Allowance (NOA) Amendment, a Petition to Amend Basis Post-Publication, or a Response to Suspension Inquiry or Letter of Suspension. In rare instances, an applicant may also submit a Substitute Trademark/Servicemark, Substitute Certification Mark, Substitute Collective Membership Mark, or Substitute Collective Trademark/Servicemark application.

Affected Public: Private Sector; individuals and households.

Frequency: On occasion.

Respondent's Obligation: Required to obtain or retain benefits.

This information collection request may be viewed at *www.reginfo.gov.* Follow the instructions to view Department of Commerce, USPTO information collections currently under review by OMB.

Written comments and recommendations for this information collection should be submitted within 30 days of the publication of this notice on the following website *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function and entering either the title of the information collection or the OMB Control Number 0651–0050.

Further information can be obtained by:

- *Email: InformationCollection@uspto.gov.* Include ''0651–0050 information request'' in the subject line of the message.
- *Mail:* Kimberly Hardy, Office of the Chief Administrative Officer, United States Patent and Trademark Office, P.O. Box 1450, Alexandria, VA 22313–1450.

Kimberly Hardy,

Information Collections Officer, Office of the Chief Administrative Officer, United States Patent and Trademark Office.

BILLING CODE 3510–16–P

COMMODITY FUTURES TRADING COMMISSION

Request for Nominations for a Subcommittee Under the Agricultural Advisory Committee

AGENCY: Commodity Futures Trading Commission.

ACTION: Notice.

SUMMARY: The Commodity Futures Trading Commission (CFTC or Commission) is requesting nominations for membership on the Subcommittee to Evaluate Commission Policy with Respect to Implementation of Amendments to Enumerated Agricultural Futures Contracts with Open Interest (Subcommittee) under the Agricultural Advisory Committee

(AAC). The AAC is a discretionary advisory committee established by the Commission in accordance with the Federal Advisory Committee Act.

DATES: The deadline for the submission of nominations is October 29, 2020.

ADDRESSES: Nominations should be emailed to *AAC@cftc.gov* or sent by post to Summer Mersinger, AAC Designated Federal Officer, Commodity Futures Trading Commission, Three Lafayette Centre, 1155 21st Street NW, Washington, DC 20581. Please use the title ''AAC Subcommittee'' for any nominations you submit.

FOR FURTHER INFORMATION CONTACT: Summer Mersinger, AAC Designated Federal Officer at (202) 418–6074 or email: *AAC@cftc.gov.*

SUPPLEMENTARY INFORMATION: The Subcommittee was established to provide a report to the AAC that will make recommendations to the Commission on policy related to its evaluation of implementation plans for amendments to agricultural futures contracts with open interest. Within this charge, the Subcommittee may consider, but is not limited to, the following issues and topics:

- The Commodity Exchange Act, regulations, and guidance pertaining to Designated Contract Market (DCM) requests for Commission approval of amendments to enumerated agricultural futures contracts with open interest;
- Recent history of Commission-approved amendments to futures contracts, including the term or condition amended, ability of that term or condition to impact the economic value of futures positions, rationale provided by the DCM, date announced, and date implemented;
- Terms and conditions that could impact the economic value of futures positions, what the Commission should consider in terms of evaluating the implementation plans for those amendments, and whether there could be best practices developed for implementation of any amendments to those terms or conditions; and
- Appropriate methods to make market participants and the public aware of the potential for an enumerated agricultural futures contract with open interest to be amended.

The Subcommittee will provide its report directly to the AAC and will not provide reports and/or recommendations directly to the Commission. The Subcommittee has no authority to make decisions on behalf of the AAC, and no determination of fact or policy will be made by the Subcommittee on behalf of the Commission.

Subcommittee members will generally serve as representatives and provide advice reflecting the views of stakeholder organizations and entities throughout the derivatives and financial markets. The Subcommittee may also include regular government employees when doing so furthers its purpose. It is anticipated that the Subcommittee will hold at least three in-person or telephonic meetings. Subcommittee members serve at the pleasure of the Commission. Subcommittee members do not receive compensation or honoraria for their services, and they are not reimbursed for travel and per diem expenses.

The Subcommittee members will include individuals who are members of the AAC and/or other individuals. For these other individuals who are not serving on the AAC currently, the Commission seeks nominations of individuals from a wide range of perspectives, including from industry, academia, the government, and public interest. To advise the AAC effectively, Subcommittee members must have a high level of expertise and experience with: Hedging practices in the agricultural sector and/or trading in agricultural futures contracts, including a familiarity with the terms and conditions of agricultural futures contracts; the Commodity Exchange Act, Commission regulations, and guidance thereunder. To the extent practicable, the Commission will strive to select members reflecting wide ethnic, racial, gender, and age representation.

The Commission invites the submission of nominations for Subcommittee membership. Each nomination submission should include the proposed member's name, title, organization affiliation and address, email address and telephone number, as well as information that supports the individual's qualifications to serve on the Subcommittee. The submission should also include the name, email address, and telephone number of the person nominating the proposed Subcommittee member. Self-nominations are acceptable.

Submission of a nomination is not a guarantee of selection as a member of the Subcommittee. As noted in the AAC's Membership Balance Plan, the Commission seeks to ensure that the membership of a subcommittee is balanced relative to the particular issues addressed by the subcommittee in question. The AAC Sponsor, with the assistance of the AAC Designated Federal Officer (DFO), identifies candidates for Subcommittee membership. Following the identification, the candidates who are not already serving on the AAC are submitted by the DFO to appropriate CFTC Staff for review and then to the Commission for approval.

(Authority: 5 U.S.C. App. II)

Dated: September 23, 2020.

Robert Sidman,

Deputy Secretary of the Commission.

BILLING CODE 6351–01–P

COMMODITY FUTURES TRADING COMMISSION

Privacy Act of 1974; System of Records

AGENCY: Commodity Futures Trading Commission.

ACTION: Notice of a New System of Records.

SUMMARY: The Commodity Futures Trading Commission (''CFTC'' or ''Commission'') is establishing CFTC–54, Ensuring Workplace Health and Safety in Response to a Public Health Emergency, a system of records under the Privacy Act of 1974. This system of records maintains information collected in response to a public health emergency, such as a pandemic or epidemic, from CFTC staff (including political appointees, employees, detailees, contractors, consultants, interns, and volunteers) and visitors to CFTC facilities that is necessary to ensure a safe and healthy work environment.

DATES: In accordance with 5 U.S.C. 552(e)(4) and (11), this System of Records will go in to effect without further notice on September 29, 2020 unless otherwise revised pursuant to comments received. New routine uses will go in to effect on October 29, 2020. Comments must be received on or before October 29, 2020.

ADDRESSES: You may submit comments identified as pertaining to ''Ensuring Workplace Health and Safety in Response to a Public Health Emergency'' by any of the following methods:

- *CFTC Website: https://comments.cftc.gov.* Follow the instructions for submitting comments through the Comments Online process on the website.
- *Mail:* Christopher Kirkpatrick, Secretary of the Commission, Commodity Futures Trading Commission, Three Lafayette Centre, 1155 21st Street NW, Washington, DC 20581.
- *Hand Delivery/Courier:* Same as Mail, above.

Please submit your comments using only one method.

All comments must be submitted in English, or if not, accompanied by an English translation. Comments will be posted as received to *https://www.cftc.gov.* You should submit only information that you wish to make available publicly.

The Commission reserves the right, but shall have no obligation, to review, pre-screen, filter, redact, refuse, or remove any or all of a submission from *https://www.cftc.gov* that it may deem to be inappropriate for publication, such as obscene language. All submissions that have been redacted or removed that contain comments on the merits of the notice will be retained in the comment file and will be considered as required under all applicable laws, and may be accessible under the FOIA.

FOR FURTHER INFORMATION CONTACT: Charlie Cutshall, Chief Privacy Officer, *privacy@cftc.gov,* 202–418–5833, Office of the Executive Director, Commodity Futures Trading Commission, Three Lafayette Centre, 1155 21st Street NW, Washington, DC 20581.

SUPPLEMENTARY INFORMATION:

I. CFTC–54, Ensuring Workplace Health and Safety in Response to a Public Health Emergency

The Commodity Futures Trading Commission is establishing CFTC–54, Ensuring Workplace Health and Safety in Response to a Public Health Emergency, a system of records under the Privacy Act of 1974. The CFTC is committed to providing all CFTC staff with a safe and healthy work environment and to that end it may develop and institute additional safety measures in response to a public health emergency. These measures may include instituting activities such as requiring CFTC staff and visitors to provide information before being allowed access to a CFTC facility, medical screening, and contact tracing. Contact tracing conducted by CFTC staff will involve collecting information about CFTC staff and visitors who are exhibiting symptoms or who have tested positive for an infectious disease in order to identify and notify other CFTC staff and visitors with whom they may have come into contact and who may have been exposed.

Information will be collected and maintained in accordance with the Americans with Disabilities Act of 1990 and regulations and guidance published by the U.S. Occupational Safety and Health Administration, the U.S. Equal Employment Opportunity Commission, and the U.S. Centers for Disease Control and Prevention.

II. The Privacy Act

Under the Privacy Act of 1974, 5 U.S.C. 552a, a ''system of records'' is defined as any group of records under the control of a Federal government agency from which information about individuals is retrieved by name or by some identifying number, symbol, or other identifying particular assigned to the individual. The Privacy Act establishes the means by which government agencies must collect, maintain, and use information about an individual in a government system of records.

Each government agency is required to publish a notice in the **Federal Register** in which the agency identifies and describes each system of records it maintains, the reasons why the agency uses the information therein, the routine uses for which the agency will disclose such information outside the agency, and how individuals may exercise their rights under the Privacy Act.

In accordance with 5 U.S.C. 552a(r), CFTC has provided a report of this modified system of records to the Office of Management and Budget and to Congress.

SYSTEM NAME AND NUMBER:

Ensuring Workplace Health and Safety in Response to a Public Health Emergency; CFTC–54.

SECURITY CLASSIFICATION:

Unclassified.

SYSTEM LOCATION:

This system is maintained by the Security and Emergency Management Unit (SEMU) in the Commission's principal office at Three Lafayette Centre, 1155 21st Street NW, Washington, DC 20581. Records may also be located at the regional offices in Chicago at 525 West Monroe Street, Suite 1100, Chicago, IL 60661; in Kansas City at Two Emanuel Cleaver II Blvd., Suite 300, Kansas City, MO 64112; and, New York at 140 Broadway, 19th Floor, New York, NY 10005.

SYSTEM MANAGER(S):

The system manager is the SEMU Officer located in the Commission's principal office at Three Lafayette Centre, 1155 21st Street NW, Washington, DC 20581, and available at *security@cftc.gov.* Additional records may be located and managed by Logistics and Operations staff in the regional offices in Chicago at 525 West Monroe Street, Suite 1100, Chicago, IL 60661; in Kansas City at Two Emanuel Cleaver II Blvd., Suite 300, Kansas City, MO 64112; and, in New York at 140 Broadway, 19th Floor, New York, NY 10005.

AUTHORITY FOR MAINTENANCE OF THE SYSTEM:

The authority to collect this information derives from General Duty Clause, Section 5(a)(1) of the Occupational Safety and Health (OSH) Act of 1970 (29 U.S.C. 654), Executive Order 12196, *Occupational safety and health programs for Federal employees* (Feb. 26, 1980), OMB Memorandum M–20–23 *Aligning Federal Agency Operations with the National Guidelines for Opening Up America Again* (Apr. 20, 2020), and the National Defense Authorization Act For Fiscal Year 2017 (5 U.S.C. 6329c(b)). Information will be collected and maintained in accordance with the Americans with Disabilities Act of 1990 (42 U.S.C. 12101 *et seq.*)

PURPOSE(S) OF THE SYSTEM:

The information in the system is collected to assist the CFTC with maintaining a safe and healthy workplace and to protect CFTC staff working on-site from risks associated with a public health emergency (as defined by the U.S. Department of Health and Human Services and declared by its Secretary), such as a pandemic or epidemic. To that end, the CFTC may develop and institute additional safety measures in response to a public health emergency. These measures may include instituting activities such as requiring CFTC staff and visitors to provide information before being allowed access to a CFTC facility, medical screening, and contact tracing. Contact tracing conducted by CFTC staff will involve collecting information about CFTC staff and visitors who are exhibiting symptoms or who have tested positive for an infectious disease in order to identify and notify other CFTC staff and visitors with whom they may have come into contact and who may have been exposed.

CATEGORIES OF INDIVIDUALS COVERED BY THE SYSTEM:

Individuals covered by this system include CFTC staff (*e.g.,* political appointees, employees, detailees, contractors, consultants, interns, and volunteers) and visitors to a CFTC facility during a public health emergency, such as a pandemic or epidemic.

CATEGORIES OF RECORDS IN THE SYSTEM:

This system maintains information collected about CFTC staff and visitors accessing CFTC facilities during a public health emergency, including a pandemic or epidemic. It maintains biographical information collected about CFTC staff and visitors that includes, but is not limited to, their

name, contact information, whether they are in a high-risk category or provide dependent care for individuals in a high-risk category, and recent travel. It maintains health information collected about CFTC staff and visitors to a CFTC facility, that includes, but is not limited to, temperature checks, expected or confirmed test results, dates, symptoms, potential or actual exposure to a pathogen, immunizations and vaccination information, or other medical history related to the treatment of a pathogen or communicable disease. It maintains information collected about CFTC staff and visitors to a CFTC facility necessary to conduct contact tracing that includes, but is not limited to, the dates when they visited the facility, the locations that they visited within the facility (*e.g.,* office and cubicle number), the duration of time spent in the facility, whether they may have potentially come into contact with a contagious person while visiting the facility, travel dates and locations, and a preferred contact number. It maintains information about emergency contacts for CFTC staff that includes, but is not limited to, the emergency contact's name, phone number, and email address.

RECORD SOURCE CATEGORIES:

The information in this system is collected in part directly from the individual or from the individual's emergency contact. Information is also collected from security systems monitoring access to CFTC facilities, such as video surveillance and turnstiles, human resources systems, emergency notification systems, and federal, state, and local agencies assisting with the response to a public health emergency. Information may also be collected from property management companies responsible for managing office buildings that house CFTC facilities.

ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM, INCLUDING CATEGORIES OF USERS AND THE PURPOSES OF SUCH USES:

These records and information in these records may be disclosed:

(a) To a Federal, State, or local agency to the extent necessary to comply with laws governing reporting of infectious disease;

(b) To the CFTC staff member's emergency contact for purposes of locating a staff member during a public health emergency or to communicate that the CFTC staff member may have potentially been exposed to a virus as the result of a pandemic or epidemic while visiting a CFTC facility;

(c) To another Federal agency, to a court, or a party in litigation before a court or in an administrative proceeding being conducted by a Federal agency when the Commission is a party to the judicial or administrative proceeding where the information is relevant and necessary to the proceeding;

(d) To contractors, performing or working on a contract for the Commission when necessary to accomplish an agency function;

(e) To the Department of Justice or in a proceeding before a court, adjudicative body, or other administrative body which the Commission is authorized to appear, when:

(1) The Commission; or

(2) Any employee of the Commission in his or her official capacity; or

(3) Any employee of the Commission in his or her official capacity where the Department of Justice or the Commission has agreed to represent the employee; or

(4) The United States, when the Commission determines that litigation is likely to affect the agency or any of its components;

Is a party to litigation or has an interest in such litigation, and the use of such records by the Department of Justice or the Commission is deemed by the agency to be relevant and necessary to the litigation.

(f) To appropriate agencies, entities, and persons when (1) the Commission suspects or has confirmed that there has been a breach of the system of records, (2) the Commission has determined that as a result of the suspected or confirmed breach there is a risk of harm to individuals, the Commission (including its information systems, programs, and operations), the Federal Government, or national security; and (3) the disclosure made to such agencies, entities, and persons is reasonably necessary to assist in connection with the Commission's efforts to respond to the suspected or confirmed breach or to prevent, minimize, or remedy such harm; or

(g) To another Federal agency or Federal entity, when the Commission determines that information from this system of records is reasonably necessary to assist the recipient agency or entity in (1) responding to a suspected or confirmed breach or (2) preventing, minimizing, or remedying the risk of harm to Individuals, the recipient agency or entity (including its information systems, programs, and operations), the Federal Government, or national security, resulting from a suspected or confirmed breach.

POLICIES AND PRACTICES FOR STORAGE OF RECORDS:

Records in this system of records are stored electronically or on paper in secure facilities. Electronic records are stored on the Commission's secure network.

POLICIES AND PRACTICES FOR RETRIEVAL OF RECORDS:

Information covered by this system of records notice may be retrieved by the name of the individual.

POLICIES AND PRACTICES FOR RETENTION AND DISPOSAL OF RECORDS:

Records of emergency contacts for CFTC staff will be maintained in accordance with General Records Schedule 5.3, Item 020: Employee Emergency Contact Information, which requires that the records be destroyed when superseded or obsolete, or upon separation or transfer of employee. CFTC will work with the National Archives and Records Administration (NARA) to draft and secure approval of a records disposition schedule to cover the remainder of the records described in this SORN. Until this records disposition schedule is approved by NARA, CFTC will maintain, and not destroy, these records.

ADMINISTRATIVE, TECHNICAL, AND PHYSICAL SAFEGUARDS:

Records are protected from unauthorized access and improper use through administrative, technical, and physical security measures. Administrative safeguards include applying a coversheet to sensitive information. Technical security safeguards within CFTC include restrictions on computer access to authorized individuals who have a legitimate need to know the information; required use of strong passwords that are frequently changed; multi-factor authentication for remote access and access to many CFTC network components; use of encryption for certain data types and transfers; firewalls and intrusion detection applications; and regular review of security procedures and best practices to enhance security. Physical safeguards include restrictions on building access to authorized individuals, 24-hour security guard service, and maintenance of records in lockable offices and filing cabinets.

RECORD ACCESS PROCEDURES:

Individuals seeking to determine whether this system of records contains information about themselves or seeking access to records about themselves in this system of records should address written inquiries to the Office of General

Counsel, Commodity Futures Trading Commission, Three Lafayette Centre, 1155 21st Street NW, Washington, DC 20581. See 17 CFR 146.3 for full details on what to include in a Privacy Act access request.

CONTESTING RECORD PROCEDURES:

Individuals contesting the content of records about themselves contained in this system of records should address written inquiries to the Office of General Counsel, Commodity Futures Trading Commission, Three Lafayette Centre, 1155 21st Street NW, Washington, DC 20581. See 17 CFR 146.8 for full details on what to include in a Privacy Act amendment request.

NOTIFICATION PROCEDURES:

Individuals seeking notification of any records about themselves contained in this system of records should address written inquiries to the Office of General Counsel, Commodity Futures Trading Commission, Three Lafayette Centre, 1155 21st Street NW, Washington, DC 20581. See 17 CFR 146.3 for full details on what to include in a Privacy Act notification request.

EXEMPTIONS PROMULGATED FOR THE SYSTEM:

None.

HISTORY:

None.

Issued in Washington, DC, on September 23, 2020, by the Commission.

Robert Sidman,

Deputy Secretary of the Commission.

BILLING CODE 6351–01–P

DEFENSE NUCLEAR FACILITIES SAFETY BOARD

Sunshine Act Meetings

TIME AND DATE: 3:00 p.m., September 28, 2020.

PLACE: This meeting was held via teleconference.

STATUS: Closed. During the closed meeting, the Board Members discussed issues dealing with potential Recommendations to the Secretary of Energy. The Board invoked the Exemption to close a meeting described in 5 U.S.C. 552b(c)(3) and 10 CFR 1704.4(c). The Board determined that it was necessary to close the meeting since conducting an open meeting was likely to disclose matters that are specifically exempted from disclosure by statute. In this case, the deliberations pertained to potential Board Recommendations which, under 42 U.S.C. 2286d(b) and (h)(3), may not be made publicly available until after they have been received by the Secretary of Energy or the President, respectively.

MATTERS TO BE CONSIDERED: The meeting proceeded in accordance with the closed meeting agenda that is posted on the Board's public website at *www.dnfsb.gov.* Technical staff may have presented information to the Board. The Board Members were expected to conduct deliberations regarding potential Recommendations to the Secretary of Energy.

CONTACT PERSON FOR MORE INFORMATION: Tara Tadlock, Director of Board Operations, Defense Nuclear Facilities Safety Board, 625 Indiana Avenue NW, Suite 700, Washington, DC 20004–2901, (800) 788–4016. This is a toll-free number.

Dated: September 25, 2020.

Joyce L. Connery,

Acting Chairman.

BILLING CODE 3670–01–P

DEPARTMENT OF EDUCATION

National Assessment Governing Board

National Assessment Governing Board Meeting; Correction

AGENCY: National Assessment Governing Board, Department of Education.

ACTION: Notice; correction.

SUMMARY: The National Assessment Governing Board (Governing Board) published a document in the **Federal Register** on September 23, 2020, announcing the schedule and proposed agenda of a September 29, 2020 virtual meeting of the Governing Board. The September 29, 2020 meeting agenda is being revised.

FOR FURTHER INFORMATION CONTACT: Munira Mwalimu at (202) 357–6906.

Access to Records of the Meeting: Pursuant to FACA requirements, the public may also inspect the agenda and meeting materials at *www.nagb.gov* no later than Monday, September 28, 2020 by 10:00 a.m. ET. The official minutes of the open session of the meeting will be available for public inspection no later than 30 calendar days following the meeting.

Reasonable Accommodations: The meeting site is accessible to individuals with disabilities. If you will need an auxiliary aid or service to participate in the meeting (*e.g.,* interpreting service, assistive listening device, or materials in an alternate format), notify the contact person listed in this notice no later than noon on Friday, September 25, 2020. Although we will attempt to meet a request received after that date, we may not be able to make available the requested auxiliary aid or service because of insufficient time to arrange it.

Electronic Access to this Document: The official version of this document is the document published in the **Federal Register**. Free internet access to the official edition of the **Federal Register** and the Code of Federal Regulations is available via the Federal Digital System at: *www.gpo.gov/fdsys.* At this site you can view this document, as well as all other documents of this Department published in the **Federal Register**, in text or Adobe Portable Document Format (PDF). To use PDF, you must have Adobe Acrobat Reader, which is available free at the Adobe website. You may also access documents of the Department published in the **Federal Register** by using the article search feature at: *www.federalregister.gov.* Specifically, through the advanced search feature at this site, you can limit your search to documents published by the Department.

SUPPLEMENTARY INFORMATION:

Correction

In the **Federal Register** of September 23, 2020, in FR Doc. 2020–20267, on pages 60139–60140 (2 pages), correct the following:

1. The meeting times have changed; the meeting will now begin at 4:30 p.m. and adjourn at 7:00 p.m. ET instead of the announced time of 3:00 p.m. to 5:15 p.m. (ET).

2. The closed sessions of the meeting will now begin at 4:30 p.m. and adjourn at 6:15 p.m. instead of the posted times of 3:45 p.m. to 5:15 p.m. (ET).

3. The closed session topics are unchanged. The first closed session on the 2019 Nation's Report Card in Reading and Mathematics Grade 12 will begin at 4:30 p.m. and end at 5:15 p.m. The second closed session on Policy and Operational Updates for NAEP 2021 will begin at 5:15 p.m. and adjourn at 6:15 p.m.

4. Following a 15-minute break, the Governing Board will meet in open session at 6:30 p.m. to discuss and take action on the Strategic Vision.

5. The September 29, 2020 session of the Governing Board meeting will adjourn at 7:00 p.m.

Authority: Pub. L. 107–279, Title III—National Assessment of Educational Progress § 301.

Lesley A. Muldoon,

Executive Director, National Assessment Governing Board (NAGB), U. S. Department of Education.

BILLING CODE 4000–01–P

DEPARTMENT OF EDUCATION

[Docket No.: ED–2020–SCC–0118]

Agency Information Collection Activities; Submission to the Office of Management and Budget for Review and Approval; Comment Request; Talent Search (TS) Annual Performance Report

AGENCY: Office of Postsecondary Education (OPE), Department of Education (ED).

ACTION: Notice.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, ED is proposing an extension without change of a currently approved collection.

DATES: Interested persons are invited to submit comments on or before October 29, 2020.

ADDRESSES: Written comments and recommendations for proposed information collection requests should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection request by selecting ''Department of Education'' under ''Currently Under Review,'' then check ''Only Show ICR for Public Comment'' checkbox.

FOR FURTHER INFORMATION CONTACT: For specific questions related to collection activities, please contact Antoinette Edwards, 202–453–7121.

SUPPLEMENTARY INFORMATION: The Department of Education (ED), in accordance with the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3506(c)(2)(A)), provides the general public and Federal agencies with an opportunity to comment on proposed, revised, and continuing collections of information. This helps the Department assess the impact of its information collection requirements and minimize the public's reporting burden. It also helps the public understand the Department's information collection requirements and provide the requested data in the desired format. ED is soliciting comments on the proposed information collection request (ICR) that is described below. The Department of Education is especially interested in public comment addressing the following issues: (1) Is this collection necessary to the proper functions of the Department; (2) will this information be processed and used in a timely manner; (3) is the estimate of burden accurate; (4) how might the Department enhance the quality, utility, and clarity of the information to be collected; and (5) how might the Department minimize the burden of this collection on the respondents, including through the use of information technology. Please note that written comments received in response to this notice will be considered public records.

Title of Collection: Talent Search (TS) Annual Performance Report.

OMB Control Number: 1840–0826.

Type of Review: An extension without change of a currently approved collection.

Respondents/Affected Public: State, Local, or Tribal Governments, and Private Sector.

Total Estimated Number of Annual Responses: 473.

Total Estimated Number of Annual Burden Hours: 8,514.

Abstract: Talent Search grantees must submit the report annually. The report provides the Department of Education with information needed to evaluate a grantee's performance and compliance with program requirements and to award prior experience points in accordance with the program regulations. The data collection is also aggregated to provide national information on project participants and program outcomes.

Dated: September 24, 2020.

Kate Mullan,

PRA Coordinator, Strategic Collections and Clearance, Governance and Strategy Division, Office of Chief Data Officer, Office of Planning, Evaluation and Policy Development.

DEPARTMENT OF EDUCATION

[Docket No.: ED–2020–SCC–0119]

Agency Information Collection Activities; Submission to the Office of Management and Budget for Review and Approval; Comment Request; Teacher Education Assistance for College and Higher Education Grant Eligibility Regulations

AGENCY: Office of Federal Student Aid (FSA), Department of Education (ED).

ACTION: Notice.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, ED is proposing a revision of a currently approved collection.

DATES: Interested persons are invited to submit comments on or before October 29, 2020.

ADDRESSES: Written comments and recommendations for proposed information collection requests should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection request by selecting ''Department of Education'' under ''Currently Under Review,'' then check ''Only Show ICR for Public Comment'' checkbox.

FOR FURTHER INFORMATION CONTACT: For specific questions related to collection activities, please contact Beth Grebeldinger, 202–377–4018.

SUPPLEMENTARY INFORMATION: The Department of Education (ED), in accordance with the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3506(c)(2)(A)), provides the general public and Federal agencies with an opportunity to comment on proposed, revised, and continuing collections of information. This helps the Department assess the impact of its information collection requirements and minimize the public's reporting burden. It also helps the public understand the Department's information collection requirements and provide the requested data in the desired format. ED is soliciting comments on the proposed information collection request (ICR) that is described below. The Department of Education is especially interested in public comment addressing the following issues: (1) Is this collection necessary to the proper functions of the Department; (2) will this information be processed and used in a timely manner; (3) is the estimate of burden accurate; (4) how might the Department enhance the quality, utility, and clarity of the information to be collected; and (5) how might the Department minimize the burden of this collection on the respondents, including through the use of information technology. Please note that written comments received in response to this notice will be considered public records.

Title of Collection: Teacher Education Assistance for College and Higher Education Grant Eligibility Regulations.

OMB Control Number: 1845–0084.

Type of Review: A revision of a currently approved collection.

Respondents/Affected Public: Private Sector, Individuals, and State, Local, or Tribal Government.

Total Estimated Number of Annual Responses: 233,844.

Total Estimated Number of Annual Burden Hours: 37,175.

Abstract: The TEACH Grant Program was included for review in the Negotiated Rulemaking which took place in early 2019. Section 686.32 of the TEACH Grant regulations is being updated via this information collection. The final regulations in section 686.32 revise the information that is provided to TEACH Grant recipients during initial, subsequent, and exit counseling. The final regulations also add a new conversion counseling requirement for grant recipients whose TEACH Grants are converted to Direct Unsubsidized Loans. This conversion counseling material will be provided directly to the recipient from the Department based on the last address provided by the recipient. This is a request for a revision of the existing burden hours in OMB Control Number 1845–0084 which provides for TEACH Grant counseling.

Dated: September 24, 2020.

Kate Mullan,

PRA Coordinator, Strategic Collections and Clearance, Governance and Strategy Division, Office of Chief Data Officer, Office of Planning, Evaluation and Policy Development.

Title of Collection: Application Package for Grants under the Predominantly Black Institutions Program (PBI).

OMB Control Number: 1840–0797.

Type of Review: Reinstatement without change of a previously approved collection.

Respondents/Affected Public: State, Local, and Tribal Governments.

Total Estimated Number of Annual Responses: 130.

Total Estimated Number of Annual Burden Hours: 4,550.

Abstract: The Predominantly Black Institutions (PBI) Program is authorized under Title III, Part F of the Higher Education Act of 1965, as amended (HEA). The PBI Program makes grant awards to eligible colleges and universities to support the strengthening of PBIs to carry out programs in the following areas: Science, technology, engineering, or mathematics; health education; internationalization or globalization; teacher preparation; or improving the educational outcomes of African American males. Grants support the establishment or strengthening of such programs that are designed to increase the institutions capacity to prepare students for instruction in the above noted fields. Grants are awarded competitively. This information collection is necessary to comply with Title III, Part F of the HEA. This collection is being submitted under the Streamlined Clearance Process for Discretionary Grant Information Collections (1894–0001). Therefore, the 30-day public comment period notice will be the only public comment notice published for this information collection request.

Dated: September 24, 2020.

BILLING CODE 4000–01–P

DEPARTMENT OF ENERGY

[FE Docket Nos. 10–161–LNG, 11–161–LNG, 16–108–LNG]

Freeport LNG Expansion, L.P.; FLNG Liquefaction, LLC; FLNG Liquefaction 2, LLC; and FLNG Liquefaction 3, LLC; Application To Amend Export Term Through December 31, 2050, for Existing Non-Free Trade Agreement Authorizations

AGENCY: Office of Fossil Energy, Department of Energy.

ACTION: Notice of application.

SUMMARY: The Office of Fossil Energy (FE) of the Department of Energy (DOE) gives notice (Notice) of receipt of an application (Application), filed on September 9, 2020, by Freeport LNG Expansion, L.P.; FLNG Liquefaction, LLC; FLNG Liquefaction 2, LLC; and FLNG Liquefaction 3, LLC (collectively, FLEX). FLEX seeks to amend the export term set forth in its current authorizations to export liquefied natural gas (LNG) to non-free trade agreement countries, DOE/FE Order Nos. 3282–C, 3357–B, and 3957, to a term ending on December 31, 2050. FLEX filed the Application under the Natural Gas Act (NGA) and DOE's policy statement entitled, ''Extending Natural Gas Export Authorizations to Non-Free Trade Agreement Countries Through the Year 2050'' (Policy Statement). Protests, motions to intervene, notices of intervention, and

written comments on the requested term extension are invited.

DATES: Protests, motions to intervene or notices of intervention, as applicable, requests for additional procedures, and written comments are to be filed using procedures detailed in the Public Comment Procedures section no later than 4:30 p.m., Eastern time, October 14, 2020.

ADDRESSES:

Electronic Filing by email: fergas@hq.doe.gov.

Regular Mail: U.S. Department of Energy (FE–34), Office of Regulation, Analysis, and Engagement, Office of Fossil Energy, P.O. Box 44375, Washington, DC 20026–4375.

Hand Delivery or Private Delivery Services (*e.g.,* FedEx, UPS, etc.): U.S. Department of Energy (FE–34), Office of Regulation, Analysis, and Engagement, Office of Fossil Energy, Forrestal Building, Room 3E–042, 1000 Independence Avenue SW, Washington, DC 20585.

FOR FURTHER INFORMATION CONTACT:

Benjamin Nussdorf or Amy Sweeney, U.S. Department of Energy (FE–34), Office of Regulation, Analysis, and Engagement, Office of Fossil Energy, Forrestal Building, Room 3E–042, 1000 Independence Avenue SW, Washington, DC 20585, (202) 586–7893; (202) 586–2627, *benjamin.nussdorf@hq.doe.gov* or *amy.sweeney@hq.doe.gov*

Cassandra Bernstein or Edward Toyozaki,U.S. Department of Energy (GC–76), Office of the Assistant General Counsel for Electricity and Fossil Energy, Forrestal Building, Room 6D–033, 1000 Independence Avenue SW, Washington, DC 20585, (202) 586–9793; (202) 586–0126, *cassandra.bernstein@hq.doe.gov* or *edward.toyozaki@hq.doe.gov*

SUPPLEMENTARY INFORMATION: FLEX is currently authorized by DOE/FE to export domestically produced LNG in a total volume equivalent to 782 billion cubic feet per year (Bcf/yr) of natural gas, pursuant to NGA section 3(a), 15 U.S.C. 717b(a), under the following orders:

(i) 511 Bcf/yr under Order No. 3282–C (FE Docket No. 10–161–LNG); [1]

(ii) 146 Bcf/yr under Order No. 3357–B (FE Docket No. 11–161–LNG); [2] and

(iii) 125 Bcf/yr under Order No. 3957 (FE Docket No. 16–108–LNG).[3]

Under each order, FLEX is authorized to export the LNG by vessel from the Freeport LNG Terminal, located on Quintana Island near Freeport, Texas, to any country with which the United States has not entered into a free trade agreement (FTA) requiring national treatment for trade in natural gas, and with which trade is not prohibited by U.S. law or policy (non-FTA countries) for a 20-year term. In the Application,[4] FLEX asks DOE to extend its export term in each of these three orders to a term ending on December 31, 2050, as provided in the Policy Statement.[5] Additional details can be found in the Application, posted on the DOE/FE website at: *https://www.energy.gov/sites/prod/files/2020/09/f78/Freeport%20DOE%20Extension%20Application.pdf.*

DOE/FE Evaluation

In the Policy Statement, DOE adopted a term through December 31, 2050 (inclusive of any make-up period), as the standard export term for long-term non-FTA authorizations.[6] As the basis for its decision, DOE considered its obligations under NGA section 3(a), the public comments supporting and opposing the proposed Policy Statement, and a wide range of information bearing on the public interest.[7] DOE explained that, upon receipt of an application under the Policy Statement, it would conduct a public interest analysis of the application under NGA section 3(a). DOE further stated that ''the public interest analysis will be limited to the application for the term extension—meaning an intervenor or protestor may challenge the requested extension but not the existing non-FTA order.'' [8]

Accordingly, in reviewing FLEX's Application, DOE/FE will consider any issues required by law or policy under NGA section 3(a), as informed by the Policy Statement. To the extent appropriate, DOE will consider the study entitled, *Macroeconomic Outcomes of Market Determined Levels of U.S. LNG Exports* (2018 LNG Export Study),[9] DOE's response to public comments received on that Study,[10] and the following environmental documents:

- *Addendum to Environmental Review Documents Concerning Exports of Natural Gas From the United States,* 79 FR 48132 (Aug. 15, 2014); [11]
- *Life Cycle Greenhouse Gas Perspective on Exporting Liquefied Natural Gas From the United States,* 79 FR 32260 (June 4, 2014); [12] and
- *Life Cycle Greenhouse Gas Perspective on Exporting Liquefied Natural Gas From the United States: 2019 Update,* 84 FR 49278 (Sept. 19, 2019), and DOE/FE's response to public comments received on that study.[13]

Parties that may oppose the Application should address these issues and documents in their comments and/or protests, as well as other issues deemed relevant to the Application.

The National Environmental Policy Act (NEPA), 42 U.S.C. 4321 *et seq.,* requires DOE to give appropriate consideration to the environmental effects of its proposed decisions. No final decision will be issued in this proceeding until DOE has met its environmental responsibilities.

Public Comment Procedures

In response to this Notice, any person may file a protest, comments, or a

motion to intervene or notice of intervention, as applicable, addressing the Application. Interested parties will be provided 15 days from the date of publication of this Notice in which to submit comments, protests, motions to intervene, or notices of intervention. The public previously was given an opportunity to intervene in, protest, and comment on FLEX's long-term non-FTA applications. Therefore, DOE will not consider comments or protests that do not bear directly on the requested term extension.

Any person wishing to become a party to the proceeding must file a motion to intervene or notice of intervention. The filing of comments or a protest with respect to the Application will not serve to make the commenter or protestant a party to the proceeding, although protests and comments received from persons who are not parties will be considered in determining the appropriate action to be taken on the Application. All protests, comments, motions to intervene, or notices of intervention must meet the requirements specified by the regulations in 10 CFR part 590.

Filings may be submitted using one of the following methods: (1) Emailing the filing to *fergas@hq.doe.gov,* with FE Docket Nos. 10–161–LNG, 11–161–LNG, and 16–108–LNG in the title line; (2) mailing an original and three paper copies of the filing to the Office of Regulation, Analysis, and Engagement at the address listed in **ADDRESSES**; or (3) hand delivering an original and three paper copies of the filing to the Office of Regulation, Analysis, and Engagement at the address listed in **ADDRESSES**. All filings must include a reference to FE Docket Nos. 10–161–LNG, 11–161–LNG, and 16–108–LNG. PLEASE NOTE: If submitting a filing via email, please include all related documents and attachments (*e.g.,* exhibits) in the original email correspondence. Please do not include any active hyperlinks or password protection in any of the documents or attachments related to the filing. All electronic filings submitted to DOE must follow these guidelines to ensure that all documents are filed in a timely manner. Any hardcopy filing submitted greater in length than 50 pages must also include, at the time of the filing, a digital copy on disk of the entire submission.

A decisional record on the Application will be developed through responses to this Notice by parties, including the parties' written comments and replies thereto. If no party requests additional procedures, a final Opinion and Order may be issued based on the official record, including the Application and responses filed by parties pursuant to this notice, in accordance with 10 CFR 590.316.

The Application is available for inspection and copying in the Office of Regulation, Analysis, and Engagement docket room, Room 3E–042, 1000 Independence Avenue SW, Washington, DC 20585. The docket room is open between the hours of 8:00 a.m. and 4:30 p.m., Monday through Friday, except Federal holidays. The Application and any filed protests, motions to intervene or notice of interventions, and comments will also be available electronically by going to the following DOE/FE Web address: *http://www.fe.doe.gov/programs/gasregulation/index.html.*

Signed in Washington, DC, on September 24, 2020.

Amy Sweeney,

Director, Office of Regulation, Analysis, and Engagement, Office of Fossil Energy.

Combined Notice of Filings #1

Take notice that the Commission received the following exempt wholesale generator filings:

Docket Numbers: EG20–248–000.
Applicants: Concho Bluff LLC.
Description: Concho Bluff LLC Notice of Self-Certification of Exempt Wholesale Generator Status.
Filed Date: 9/22/20.
Accession Number: 20200922–5091.
Comments Due: 5 p.m. ET 10/13/20.

Docket Numbers: EG20–249–000.
Applicants: Hill Top Energy Center LLC.
Description: Self-Certification of EWG Status of Hill Top Energy Center LLC.
Filed Date: 9/23/20.
Accession Number: 20200923–5029.
Comments Due: 5 p.m. ET 10/14/20.

Take notice that the Commission received the following electric rate filings:

Docket Numbers: ER14–2080–004.
Applicants: Louisiana Generating LLC.
Description: Compliance filing: Reactive Service Rate Schedule Settlement Compliance Filing to be effective 12/18/2018.
Filed Date: 9/23/20.
Accession Number: 20200923–5073.
Comments Due: 5 p.m. ET 10/14/20.

Docket Numbers: ER15–502–005.
Applicants: Bayou Cove Peaking Power, LLC.
Description: Compliance filing: Reactive Service Rate Schedule Settlement Compliance Filing to be effective 12/18/2018.
Filed Date: 9/23/20.
Accession Number: 20200923–5071.
Comments Due: 5 p.m. ET 10/14/20.

Docket Numbers: ER15–1136–005.
Applicants: Big Cajun I Peaking Power LLC.
Description: Compliance filing: Reactive Service Rate Schedule Settlement Compliance Filing to be effective 12/18/2018.
Filed Date: 9/23/20.
Accession Number: 20200923–5072.
Comments Due: 5 p.m. ET 10/14/20.

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. CD20–8–000]

InPipe Energy; Notice of Preliminary Determination of a Qualifying Conduit Hydropower Facility and Soliciting Comments and Motions To Intervene

On September 22, 2020, InPipe Energy filed a notice of intent to construct a qualifying conduit hydropower facility, pursuant to section 30 of the Federal Power Act (FPA). The proposed Piedmont Temporary Regulator Pressure Recovery Project would have an installed capacity of 30 kilowatts (kW), and would be located along an existing municipal water pipeline in the city of Piedmont, Alameda County, California.

Applicant Contact: Gregg Semler, 222 NW 8th Ave, Portland, Oregon 97209, Phone No. (503) 341–0004, Email: *gregg@inpipeenergy.com.*

FERC Contact: Christopher Chaney, Phone No. (202) 502–6778, Email: *christopher.chaney@ferc.gov.*

Qualifying Conduit Hydropower Facility Description: The proposed project would consist of: (1) One 30-kW turbine-generator within a 13-foot by 5-foot by 5-foot fiberglass enclosure at the Piedmont Temporary Regulator; and (2) appurtenant facilities. The proposed project would have an estimated annual generation of approximately 125 megawatt-hours.

A qualifying conduit hydropower facility is one that is determined or deemed to meet all the criteria shown in the table below.

TABLE 1—CRITERIA FOR QUALIFYING CONDUIT HYDROPOWER FACILITY

Statutory provision	Description	Satisfies (Y/N)
FPA 30(a)(3)(A)	The conduit the facility uses is a tunnel, canal, pipeline, aqueduct, flume, ditch, or similar man-made water conveyance that is operated for the distribution of water for agricultural, municipal, or industrial consumption and not primarily for the generation of electricity.	Y
FPA 30(a)(3)(C)(i)	The facility is constructed, operated, or maintained for the generation of electric power and uses for such generation only the hydroelectric potential of a non-federally owned conduit.	Y
FPA 30(a)(3)(C)(ii)	The facility has an installed capacity that does not exceed 40 megawatts	Y
FPA 30(a)(3)(C)(iii)	On or before August 9, 2013, the facility is not licensed, or exempted from the licensing requirements of Part I of the FPA.	Y

Preliminary Determination: The proposed Piedmont Temporary Regulator Pressure Recovery Project will not alter the primary purpose of the conduit, which is used to distribute potable water within the city of Piedmont's municipal water supply system. Therefore, based upon the above criteria, Commission staff preliminarily determines that the proposal satisfies the requirements for a qualifying conduit hydropower facility, which is not required to be licensed or exempted from licensing.

Comments and Motions to Intervene: Deadline for filing comments contesting whether the facility meets the qualifying criteria is 30 days from the issuance date of this notice. Deadline for filing motions to intervene is 30 days from the issuance date of this notice. Anyone may submit comments or a motion to intervene in accordance with the requirements of Rules of Practice and Procedure, 18 CFR 385.210 and 385.214. Any motions to intervene must be received on or before the specified deadline date for the particular proceeding.

Filing and Service of Responsive Documents: All filings must (1) bear in all capital letters the COMMENTS CONTESTING QUALIFICATION FOR A CONDUIT HYDROPOWER FACILITY or MOTION TO INTERVENE, as applicable; (2) state in the heading the name of the applicant and the project number of the application to which the filing responds; (3) state the name, address, and telephone number of the person filing; and (4) otherwise comply with the requirements of sections 385.2001 through 385.2005 of the Commission's regulations.[1] All comments contesting Commission staff's preliminary determination that the facility meets the qualifying criteria must set forth their evidentiary basis.

The Commission strongly encourages electronic filing. Please file motions to intervene and comments using the Commission's eFiling system at *http://www.ferc.gov/docs-filing/efiling.asp.* Commenters can submit brief comments up to 6,000 characters, without prior registration, using the eComment system at *http://www.ferc.gov/docs-filing/ecomment.asp.* You must include your name and contact information at the end of your comments. For assistance, please contact FERC Online Support at *FERCOnlineSupport@ferc.gov,* (866)

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. CP20–524–000]

Bradford County Real Estate Partners LLC; Notice of Petition for Declaratory Order

Take notice that on September 18, 2020, pursuant to Rule 207(a)(2) of the Federal Energy Regulatory Commission's (Commission) Rules of Practice and Procedure, Bradford County Real Estate Partners LLC (BCREP or Petitioner) filed a petition for declaratory order. The petition seeks a declaratory order from the Commission stating that BCREP's construction and operation of a natural gas liquefaction and truck and rail loading facility (Wyalusing Facility) in Wyalusing Township, Bradford County, Pennsylvania, would not be subject to the Commission's jurisdiction under section 3 or section 7 of the Natural Gas Act, 15 U.S.C. 717b and 717f (2018), as more fully explained in BCREP's petition.

Any person desiring to intervene or to protest this filing must file in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211, 385.214). Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a notice of intervention or motion to intervene, as appropriate. Such notices, motions, or protests must be filed on or before the comment date. Anyone filing a motion to intervene or protest must serve a copy of that document on the Petitioner.

The Commission encourages electronic submission of protests and interventions in lieu of paper using the eFiling link at *http://www.ferc.gov.* Persons unable to file electronically may mail similar pleadings to the Federal Energy Regulatory Commission, 888 First Street NE, Washington, DC 20426. Hand delivered submissions in docketed proceedings should be delivered to Health and Human Services, 12225 Wilkins Avenue, Rockville, Maryland 20852.

In addition to publishing the full text of this document in the **Federal Register**, the Commission provides all interested persons an opportunity to view and/or print the contents of this document via the internet through the Commission's Home Page (*http://ferc.gov*) using the eLibrary link. Enter the docket number excluding the last three digits in the docket number field to access the document. At this time, the Commission has suspended access to the Commission's Public Reference Room, due to the proclamation declaring a National Emergency concerning the Novel Coronavirus Disease (COVID–19), issued by the President on March 13, 2020. For assistance, contact the Federal Energy Regulatory Commission at *FERCOnlineSupport@ferc.gov* or call toll-free, (886) 208–3676 or TYY, (202) 502–8659.

Comment Date: 5:00 p.m. Eastern time on October 23, 2020.

Dated: September 23, 2020.

Kimberly D. Bose,

Secretary.

ENVIRONMENTAL PROTECTION AGENCY

[EPA–HQ–OLEM–2020–0259; FRL–10015–37–OMS]

Information Collection Request Submitted to OMB for Review and Approval; Comment Request; Anaerobic Digestion Facilities Processing Wasted Food To Support EPA's Sustainable Materials Management Program and Sustainable Management of Food Efforts (Renewal)

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: The Environmental Protection Agency (EPA) has submitted an information collection request (ICR), Anaerobic Digestion Facilities Processing Wasted Food to Support EPA's Sustainable Materials Management Program and Sustainable Management of Food Efforts (EPA ICR Number 2533.04, OMB Control Number 2050–0217) to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act. This is a proposed renewal of a previous ICR, which is currently approved through September 30, 2020. Public comments were previously requested via the **Federal Register** on June 5, 2020 during a 60-day comment period. This notice allows for an additional 30 days for public comments. A fuller description of the ICR is given below, including its estimated burden and cost to the public. An agency may not conduct or sponsor and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number.

DATES: Additional comments may be submitted on or before October 29, 2020.

ADDRESSES: Submit your comments to EPA, referencing Docket ID No. EPA–HQ–OLEM–2020–0259, online using *www.regulations.gov* (our preferred method) or by mail to: EPA Docket Center, Environmental Protection Agency, Mail Code 28221T, 1200 Pennsylvania Ave. NW, Washington, DC 20460. EPA's policy is that all comments received will be included in the public docket without change including any personal information

provided, unless the comment includes profanity, threats, information claimed to be Confidential Business Information (CBI), or other information whose disclosure is restricted by statute.

Submit written comments and recommendations to OMB for the proposed information collection within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function.

FOR FURTHER INFORMATION CONTACT: Chris Carusiello, U.S. Environmental Protection Agency, Mail Code 5306P, Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460; telephone number: (703) 308–8757; fax number: (703) 308–0522; email address: *Carusiello.Chris@epa.gov.*

SUPPLEMENTARY INFORMATION: Supporting documents, which explain in detail the information that the EPA will be collecting, are available in the public docket for this ICR. The docket can be viewed online at *www.regulations.gov* or in person at the EPA Docket Center, WJC West, Room 3334, 1301 Constitution Ave. NW, Washington, DC. The telephone number for the Docket Center is 202–566–1744. For additional information about EPA's public docket, visit *http://www.epa.gov/dockets.*

Abstract: Sustainable Management of Food (SMF) is a systematic approach that seeks to reduce wasted food and its associated impacts over the entire lifecycle of food. The lifecycle of food includes use of natural resources, manufacturing, sales, and consumption and ends with decisions on recovery or final disposal. Diversion of food waste from landfills is a critical component of this effort. To effectively divert food waste from landfills, sufficient capacity to process the diverted materials is required, much of which is provided by anaerobic digestion facilities. Knowledge of organics recycling capacity is needed to facilitate food waste diversion.

EPA's food recovery hierarchy prioritizes potential actions to prevent and divert wasted food. According to the hierarchy, processing wasted food via anaerobic digestion is a more desirable option than landfilling or incineration because it creates more benefits for the environment, society, and the economy. Anaerobic digestion of food waste and other organic materials generates renewable energy, reduces methane emissions to the atmosphere, and provides opportunities to improve soil health through the production of soil amendments. The SMF work supports these efforts by educating state and local governments and communities about the benefits of wasted food diversion. The SMF work also builds partnerships with state agencies and other strategic partners interested in developing organics recycling capacity and provides tools to assist organizations in developing anaerobic digestion (AD) projects.

The nationwide collection of data about AD facilities processing food waste began in 2017 with a survey of all known AD facilities under the currently approved ICR. EPA published the first annual report of findings based on these data in July 2018, and second in September 2019. EPA is renewing this ICR in order to continue to monitor growth and evaluate trends in the capacity for processing of food waste and the amount of food waste being processed via AD in the United States.

Data will be collected using electronic surveys that will be distributed to respondents by email and will be available on EPA's AD website. Participation in this data collection effort is voluntary. Respondents are not required to reveal confidential business information.

Form Numbers: EPA Form 6700–03, EPA Form 6700–04, EPA Form 6700–05.

Respondents/affected entities: Project Developers, Project Owners or Plant Operators, and Livestock Farmers.

Respondent's obligation to respond: Voluntary.

Estimated number of respondents: 254 (total).

Frequency of response: Annually.

Total estimated burden: 127 hours (per year). Burden is defined at 5 CFR 1320.03(b).

Total estimated cost: $7,615 (per year), includes $0 annualized capital or operation & maintenance costs.

Changes in the estimates: This renewal request contains no change in burden compared to the ICR currently approved by OMB.

Courtney Kerwin,

Director, Regulatory Support Division.

Information Collection Request Submitted to OMB for Review and Approval; Comment Request; Application for New and Amended Pesticide Registration (Renewal)

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: The Environmental Protection Agency (EPA) has submitted an information collection request (ICR), Application for New and Amended Pesticide Registration (EPA ICR Number 0277.20, OMB Control Number 2070–0060) to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act. This is a proposed extension of the ICR, which is currently approved through September 30, 2020. Public comments were previously requested via the **Federal Register** on February 6, 2020 during a 60-day comment period. This notice allows for an additional 30 days for public comments. A fuller description of the ICR is given below, including its estimated burden and cost to the public. An agency may not conduct or sponsor and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number.

DATES: Additional comments may be submitted on or before October 29, 2020.

ADDRESSES: Submit your comments to EPA, referencing Docket ID No. EPA–HQ–OPP–2019–0644, online using *www.regulations.gov* (our preferred method), or by mail to: EPA Docket Center, Environmental Protection Agency, Mail Code 28221T, 1200 Pennsylvania Ave. NW, Washington, DC 20460. EPA's policy is that all comments received will be included in the public docket without change including any personal information provided, unless the comment includes profanity, threats, information claimed to be Confidential Business Information (CBI), or other information whose disclosure is restricted by statute.

Submit written comments and recommendations to OMB for the proposed information collection within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public

Comments'' or by using the search function.

FOR FURTHER INFORMATION CONTACT: Callie Koller, Field and External Affairs Division, Office of Pesticide Programs, 7650P, Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460; telephone number: (703) 347–8248; email address: *koller.callie@epa.gov.*

SUPPLEMENTARY INFORMATION: Supporting documents, which explain in detail the information that the EPA will be collecting, are available in the public docket for this ICR. The docket can be viewed online at *www.regulations.gov* or in person at the EPA Docket Center, WJC West, Room 3334, 1301 Constitution Ave. NW, Washington, DC. The telephone number for the Docket Center is 202–566–1744. For additional information about EPA's public docket, visit *http://www.epa.gov/dockets.*

Abstract: This information collection request (ICR) is designed to provide the EPA with the necessary information to evaluate an application for the registration of a pesticide product, as required under section 3 of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and section 408 of the Federal Food, Drug, and Cosmetic Act (FFDCA). FIFRA provides EPA with the authority to regulate the distribution, sale and use of pesticides in the United States to ensure that they will not pose unreasonable adverse effects to human health and the environment. Pesticides that meet this test receive a license or ''registration.''

Form Numbers: 8570–1, 8570–4, 8570–27, 8570–34, 8570–35, 8570–36, 8570–37.

Respondents/affected entities: Pesticide and other agricultural chemical manufacturing engaged in activities related to the registration of a pesticide product.

Respondent's obligation to respond: Responses to the collection of information are mandatory under FIFRA § 3 and FFDCA § 408 as amended by FQPA.

Estimated number of respondents: 1,808 (total).

Frequency of response: On occasion.

Total estimated burden: 1,562,517 hours (per year). Burden is defined at 5 CFR 1320.03(b).

Total estimated cost: $120,563,052 (per year), which includes $0 annualized capital or operation & maintenance costs.

Changes in the estimates: The activities in this ICR increase net respondent burden by 37,624 hours annually over the levels in the currently approved collection. While burden per response levels remain unchanged, the number of responses expected in certain categories has shifted as a result of using an updated data set (Section 3 registration actions annually, on average, during the years 2015–2017) to predict future registration application levels. Additionally, in this iteration of the ICR, the Agency calculates the expected annual application burden of three proposed programs that are anticipated to come online in the next three years.

Courtney Kerwin,

Director, Regulatory Support Division.

BILLING CODE 6560–50–P

ENVIRONMENTAL PROTECTION AGENCY

[FRL 10015–20–OW]

Notice of Public Meeting of the Environmental Financial Advisory Board

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: The United States Environmental Protection Agency (EPA) announces a public meeting of the Environmental Financial Advisory Board (EFAB). The purpose of the meeting will be for the EFAB to provide advice on how the EPA can encourage private investment in Opportunity Zones, receive a briefing on the Agency's response to recent EFAB reports, receive updates on EPA activities relating to environmental finance, and consider possible future advisory topics.

DATES: The meeting will be held on October 14, 2020 from 11 a.m. to 3 p.m. (Eastern Time) and October 15, 2020 from 11 a.m. to 3 p.m. (Eastern Time).

ADDRESSES: The meeting will be conducted via webcast and telephone. Interested persons must register in advance at the weblink below to access the meeting in the *Registration for the Meeting* section of this document.

FOR FURTHER INFORMATION CONTACT: Any member of the public who wants information about the meeting may contact Ed Chu, the Designated Federal Officer, via telephone/voice mail at (913) 551–7333 or email to *chu.ed@epa.gov.* General information concerning the EFAB is available at *https://www.epa.gov/waterfinancecenter/efab.*

SUPPLEMENTARY INFORMATION:

Background: The EFAB is an EPA advisory committee chartered under the Federal Advisory Committee Act (FACA), 5 U.S.C. App. 2, to provide advice and recommendations to EPA on innovative approaches to funding environmental programs, projects, and activities. Administrative support for the EFAB is provided by the Water Infrastructure and Resiliency Finance Center within EPA's Office of Water. Pursuant to FACA and EPA policy, notice is hereby given that the EFAB will hold a virtual public meeting for the following purposes:

(1) Engage in a consultation on how the EPA can encourage private investment in Opportunity Zones. Qualified Opportunity Zones are census tracts of low-income and distressed communities designated by state governors and certified by the Department of Treasury. These are areas where new investments, under certain conditions, may be eligible for preferential tax treatment.

(2) Receive a briefing from EPA's Office of Water on the Agency's response to recent EFAB reports on funding and financing of stormwater infrastructure, water system regionalization, and alternative service delivery options for public utility projects.

(3) Receive briefings from invited speakers from EPA and the Environmental Finance Center Network on environmental finance topics, including activities to respond to the COVID–19 pandemic.

(4) Discuss potential future EFAB projects.

Availability of Meeting Materials: Meeting materials (including meeting agenda and briefing materials) will be available on EPA's website at *https://www.epa.gov/waterfinancecenter/efab.*

Procedures for Providing Public Input: Public comment for consideration by EPA's federal advisory committees has a different purpose from public comment provided to EPA program offices. Therefore, the process for submitting comments to a federal advisory committee is different from the process used to submit comments to an EPA program office. Federal advisory committees provide independent advice to EPA. Members of the public can submit comments on matters being considered by the EFAB for consideration by members as they develop their advice and recommendations to EPA.

Registration for the Meeting: Register for the meeting at: *https://gcc01.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.avcontact.com%2Fefab.*

html&%data=%02%7C01%7C Brubaker.Sonia%40epa.gov% 7C915e3e05629945a554dc08d85be5de 1d%7C88b378b367484867acf 976aacbeca6a7 %7C0%7C0%7C63736039 0137001741& sdata=xDb51i46ng2VZg 5GbVYjIUkprXQKpFnpdCa%2Bx sAFEEA%3D&reserved=0.

Oral Statements: In general, individuals or groups requesting an oral presentation at a virtual EFAB public meeting will be limited to three minutes. Persons interested in providing oral statements at the October 14 and 15, 2020 meetings should register and provide notification as noted in the registration confirmation by October 13, 2020 to be placed on the list of registered speakers.

Written Statements: Written statements for the October 14 and15, 2020 meetings should be received by October 7, 2020 so that the information can be made available to the EFAB for its consideration prior to the meeting. Written statements should be sent via email to *efab@epa.gov.* Members of the public should be aware that their personal contact information, if included in any written comments, may be posted to the EFAB website. Copyrighted material will not be posted without explicit permission of the copyright holder.

Accessibility: For information on access or services for individuals with disabilities, or to request accommodations for a disability, please register for the meeting and list any special requirements or accommodations needed on the registration form at least 10 business days prior to the meeting to allow as much time as possible to process your request.

Dated: September 23, 2020.

Andrew D. Sawyers,

Director, Office of Wastewater Management, Office of Water.

Clean Air Act Operating Permit Program; Notice of Issuance of Title V Federal Operating Permit to MPLX

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice of final action.

SUMMARY: This notice announces that the Environmental Protection Agency issued a final permit decision under Title V of the Clean Air Act (CAA) to MPLX for the operation of MPLX's Uintah County, Utah, Wonsits Valley Compressor Station.

DATES: EPA issued Title V Permit to Operate No. V–UO–000005–2018.00 to MPLX, effective September 16, 2020 under 40 CFR part 71. EPA issued the final permit decision as to the contested portions of this permit on September 16, 2020. Pursuant to section 307(b)(1) of the CAA, judicial review of EPA's final permit decision, to the extent it is available, may be sought by filing a petition for review in the United States Court of Appeals for the Tenth Circuit by November 30, 2020.

FOR FURTHER INFORMATION CONTACT: Colin Schwartz, Environmental Scientist, Air and Radiation Division (8ARD–PM), Environmental Protection Agency, Region 8, 1595 Wynkoop Street, Denver, Colorado 80202, telephone number: (303) 312–6043, email address: *schwartz.colin@epa.gov.*

SUPPLEMENTARY INFORMATION: Throughout this document whenever ''we,'' ''us,'' or ''our'' is used, we mean EPA. This **SUPPLEMENTARY INFORMATION** section is arranged as follows:

I. How can I get copies of this document and other related information?

Docket. EPA has established a docket for this action under Docket ID No. EPA–R08–OAR–2018–0349. Publicly available docket materials are available either electronically through *www.regulations.gov* or in hard copy at the Environmental Protection Agency, Region 8, Air and Radiation Division, 1595 Wynkoop Street, Denver, Colorado 80202. This facility is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding Federal holidays and facility closures due to COVID 19. We recommend that you telephone Colin Schwartz, Environmental Scientist, at (303) 312–6043 with any questions about reviewing the docket material. before visiting the Region 8 office.

II. Background

The 1990 amendments to the CAA established a comprehensive air quality permit program under the authority of Title V of the CAA. Title V requires certain facilities that emit large amounts of air pollution, or that meet other specified criteria, to obtain an operating permit, known as a Title V permit, after the source has begun to operate. This permit is an enforceable compilation of all enforceable terms, conditions, and limitations applicable to the source, and is designed to improve compliance by clarifying what facilities must do to control air pollution. EPA regulations implementing Title V are codified at 40 CFR part 71 for permits issued by EPA or its delegatees, and at 40 CFR part 70 for permits issued by states and local agencies pursuant to approved programs. A Title V permit is valid for no more than five years and may be renewed in five-year-increments.

MPLX, LP operates a facility in Uintah County, Utah, known as the Wonsits Valley Compressor Station. The owner of the facility is Andeavor Field Services, LLC. At the facility, natural gas is dehydrated and compressed before being routed offsite through a pipeline. The facility operates two control devices to control the emissions from the dehydration unit. In 2013, EPA issued an initial Title V permit for the Wonsits Valley facility pursuant to 40 CFR part 71. On May 13, 2020, EPA issued a renewed Title V permit to Andeavor and MPLX. See Title V Permit to Operate No. V–UO–000005–2018.00, Docket ID: EPA–R08–OAR–2018–0349. By its own terms, and consistent with 40 CFR 71.11(i)(2), most provisions of the renewal permit became effective on May 13, 2020. But on May 13, 2020, MPLX petitioned the EPA's Environmental Appeals Board (EAB) to review certain terms and conditions of the May 2020 Title V permit. Consequently, under 40 CFR 71.11(i)(2)(ii), the effective date of the contested terms and conditions of the permit was delayed.

III. Effect of This Action

On September 2, 2020, the EAB denied MPLX's petition for review. See *In re MPLX,* Permit No. V–UO–000005–2018.00, CAA Appeal No. 20–01 (EAB, Sep. 2, 2020) (Order Denying Review). Following the EAB's action, pursuant to 40 CFR 71.11(l)(5)(i), EPA issued a final permit decision as to the contested portions of the permit on September 16, 2020. All contested conditions of Title V Permit No. V–UO–000005–2018.00, as issued by EPA on May 13, 2020, were therefore final and effective as of September 16, 2020. Except as provided in the permit, the final Title V permit will expire on September 16, 2025.

Authority: 42 U.S.C. 7401 *et seq.*

Dated: September 23, 2020.

Debra Thomas,

Acting Regional Administrator, Region 8.

Information Collection Request Submitted to OMB for Review and Approval; Comment Request; Procedures for Requesting a Chemical Risk Evaluation Under TSCA

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: The Environmental Protection Agency (EPA) has submitted an information collection request (ICR), Procedures for Requesting a Chemical Risk Evaluation under TSCA (EPA ICR Number 2559.03, OMB Control Number 2070–0202) to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act. This is a proposed extension of the ICR, which is currently approved through September 30, 2020. Public comments were previously requested via the **Federal Register** on January 28, 2020 during a 60-day comment period. This notice allows for an additional 30 days for public comments. A fuller description of the ICR is given below, including its estimated burden and cost to the public. An agency may not conduct or sponsor and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number.

DATES: Additional comments may be submitted on or before October 29, 2020.

ADDRESSES: Submit your comments to EPA, referencing Docket ID No. EPA–HQ–OPPT–2016–0654, online using *www.regulations.gov* (our preferred method), or by mail to: EPA Docket Center, Environmental Protection Agency, Mail Code 28221T, 1200 Pennsylvania Ave. NW, Washington, DC 20460. EPA's policy is that all comments received will be included in the public docket without change including any personal information provided, unless the comment includes profanity, threats, information claimed to be Confidential Business Information (CBI), or other information whose disclosure is restricted by statute.

Submit written comments and recommendations to OMB for the proposed information collection within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function.

FOR FURTHER INFORMATION CONTACT: Susanna Blair, Office of Pollution Prevention and Toxics, Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460; telephone number: (202) 564–4371; email address: *blair.susanna@epa.gov.*

SUPPLEMENTARY INFORMATION: Supporting documents, which explain in detail the information that the EPA will be collecting, are available in the public docket for this ICR. The docket can be viewed online at *www.regulations.gov* or in person at the EPA Docket Center, WJC West, Room 3334, 1301 Constitution Ave. NW, Washington, DC. The telephone number for the Docket Center is 202–566–1744. For additional information about EPA's public docket, visit *http://www.epa.gov/dockets.*

Abstract: The information collection activities covered by this ICR renewal are those carried out by a chemical manufacturer in requesting a specific chemical risk evaluation under the Toxic Substance Control Act (TSCA) be conducted by EPA. EPA established the process for conducting risk evaluations under TSCA. Chemicals that will undergo this evaluation include chemicals the Agency has prioritized, as well as chemicals for which EPA has granted requests made by manufacturers to have the chemicals evaluated under EPA's risk evaluation process. EPA has established criteria and information chemical manufacturers must provide for EPA to consider a chemical substance for risk evaluation. This information is necessary in order for EPA to review information covered by chemical manufacturers and determine if the chemical substance is suitable for risk evaluation.

Form Numbers: None.

Respondents/affected entities: Persons that manufacture chemical substances and request a chemical be considered for risk evaluation by EPA.

Respondent's obligation to respond: Voluntary (15 U.S.C. 2605(b)(4)).

Estimated number of respondents: 5.

Frequency of response: On occasion.

Total estimated burden: 419 hours (per year). Burden is defined at 5 CFR 1320.03(b).

Total estimated cost: $283,570 (per year), which includes $0 annualized capital or operation & maintenance costs.

Changes in the estimates: There is no change in hour or cost burden as compared with what is currently approved by OMB. There is an increase of $709 in the total estimated labor costs, which reflects the increase in wage rates since the initial ICR.

Courtney Kerwin,

Director, Regulatory Support Division.

Information Collection Request Submitted to OMB for Review and Approval; Comment Request; Pesticide Registration Fees Program (Renewal)

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: The Environmental Protection Agency (EPA) has submitted an information collection request (ICR), Pesticide Registration Fees Program (EPA ICR Number 2330.04, OMB Control Number 2070–0179) to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act. This is a proposed extension of the ICR, which is currently approved through September 30, 2020. Public comments were previously requested via the **Federal Register** on December 3, 2019 during a 60-day comment period. This notice allows for an additional 30 days for public comments. A fuller description of the ICR is given below, including its estimated burden and cost to the public. An agency may not conduct or sponsor and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number.

DATES: Additional comments may be submitted on or before October 29, 2020.

ADDRESSES: Submit your comments to EPA, referencing Docket ID No. EPA–HQ–OPP–2019–0563, online using *www.regulations.gov* (our preferred method), or by mail to: EPA Docket Center, Environmental Protection Agency, Mail Code 28221T, 1200 Pennsylvania Ave. NW, Washington, DC 20460. EPA's policy is that all comments received will be included in the public docket without change, including any personal information provided, unless the comment includes profanity, threats, information claimed to be Confidential Business Information (CBI), or other information whose disclosure is restricted by statute.

Submit written comments and recommendations to OMB for the proposed information collection within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function.

FOR FURTHER INFORMATION CONTACT: Carolyn Siu, Field and External Affairs Division, Office of Pesticide Programs, 7506P, Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460; telephone number: (703) 347–0159; email address: *siu.carolyn@epa.gov.*

SUPPLEMENTARY INFORMATION: Supporting documents, which explain in detail the information that the EPA will be collecting, are available in the public docket for this ICR. The docket can be viewed online at *www.regulations.gov* or in person at the EPA Docket Center, WJC West, Room 3334, 1301 Constitution Ave. NW, Washington, DC. The telephone number for the Docket Center is 202–566–1744. For additional information about EPA's public docket, visit *http://www.epa.gov/dockets.*

Abstract: This ICR covers the paperwork burden hours and costs associated with the information collection activities under the pesticide registration fee programs implemented through the Office of Pesticide Programs (OPP), Environmental Protection Agency (EPA). Pesticide registrants are required by statute to pay an annual registration maintenance fee for all products registered under Section 3 and Section 24(c) of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA). In addition, the Pesticide Registration Improvement Act (PRIA) amended FIFRA in 2004 to create a registration service fee system for applications for specific pesticide registration, amended registration, and associated tolerance actions (Section 33). This ICR specifically covers the activities related to the collection of the annual registration maintenance fees, the registration service fees and the burden associated with the submission of requests for fees to be waived.

Form Numbers: 8570–30.

Respondents/affected entities: North American Industrial Classification System (NAICS) codes: 3250A1—Pesticide and other agricultural chemical manufacturing; 32518—Other Basic Inorganic Chemical Manufacturing; 32519—Other Basic Organic Chemical Manufacturing and 9641—Regulation of Agricultural Marketing and Commodities.

Respondent's obligation to respond: Mandatory under FIFRA sections 4(i)(5) and 33.

Estimated number of respondents: 1,523 (total).

Frequency of response: Annually and on occasion.

Total estimated burden: 8,540 hours (per year). Burden is defined at 5 CFR 1320.03(b).

Total estimated cost: $687,301 (per year), which includes $3,600 annualized capital or operation & maintenance costs.

Changes in the estimates: There is an increase of 229 hours in the total estimated respondent burden compared with the ICR currently approved by OMB. This modest addition is associated with an increase in respondents for pesticide registration maintenance fees (from 1,471 to 1,523) and in refinements of the burden calculations. The total estimated annual respondent burden for service fee waivers has not changed.

Courtney Kerwin,

Director, Regulatory Support Division.

ENVIRONMENTAL PROTECTION AGENCY

[EPA–R07–SFUND–2020–0494; FRL–10015–18–Region 7]

Notice of Proposed Administrative Settlement Agreement and Covenant Not To Sue

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice; request for public comment.

SUMMARY: Notice is hereby given by the U.S. Environmental Protection Agency (EPA), Region 7, of a proposed prospective purchaser agreement, embodied in an Administrative Settlement Agreement and Covenant Not to Sue, with the Herbert Hoover Boys and Girls Club of St. Louis, Inc. This agreement pertains to a portion of the Carter Carburetor Superfund Site located at approximately 2840 N Spring Ave. in the City of St. Louis, Missouri.

DATES: Comments must be received on or before October 29, 2020.

ADDRESSES: The proposed settlement agreement is available for public inspection at EPA Region 7's office. A copy of the proposed agreement may also be obtained from Catherine Chiccine, EPA Region 7, 11201 Renner Boulevard, Lenexa, Kansas 66219, telephone number (913) 551–7917. You may send comments, identified by Docket ID No. EPA–R07–SFUND–2020–0494, to *https://www.regulations.gov.* Follow the online instructions for submitting comments. You may also send comments, identified by 'Carter Careburetor Superfund Site Public Comment,' to Ms. Chiccine at the above address or electronically to *chiccine.catherine@epa.gov.*

Instructions: All submissions received must include the Docket ID No. for this proposed settlement. Comments received will be posted without change to *https://www.regulations.gov/,* including any personal information provided. For detailed instructions on sending comments and additional information on the public notice process, see the ''Written Comments'' heading of the **SUPPLEMENTARY INFORMATION** section of this document.

FOR FURTHER INFORMATION CONTACT: Catherine Chiccine, Assistant Regional Counsel, Office of Regional Counsel, Environmental Protection Agency Region 7, 11201 Renner Boulevard, Lenexa, Kansas 66219; telephone number (913) 551–7917; email address *chiccine.catherine@epa.gov.*

SUPPLEMENTARY INFORMATION:

Written Comments

Submit your comments, identified by Docket ID No. EPA–R07- SFUND–2020–0494 at *https://www.regulations.gov.* Once submitted, comments cannot be edited or removed from *Regulations.gov*. The EPA may publish any comment received to its public docket. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. If CBI exists, please contact Ms. Chiccine. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. The EPA will generally not consider comments or comment contents located outside of the primary submission (*i.e.* on the web, cloud, or other file sharing system). For additional submission methods, the full EPA public comment policy, information about CBI or multimedia submissions, and general guidance on making effective comments, please visit *https://www.epa.gov/dockets/commenting-epa-dockets.*

Notice is hereby given by the U.S. Environmental Protection Agency, Region 7, of a proposed prospective

purchaser agreement, embodied in an Administrative Settlement Agreement and Covenant Not to Sue, with Herbert Hoover Boys and Girls Club of St. Louis, Inc. regarding property located at approximately 2840 N Spring Ave., more specifically bounded by North Spring Avenue, Dodier Street, North Grand Boulevard, and St. Louis Avenue in the City of St. Louis, Missouri. Herbert Hoover Boys and Girls Club of St. Louis, Inc. seeks to acquire the property for reuse and redevelopment. This project will result in a formerly contaminated property being restored to beneficial use by a community stakeholder.

The settlement includes a covenant by EPA not to sue or take administrative action against the Herbert Hoover Boys and Girls Club of St. Louis, Inc., pursuant to sections 106 and 107(a) of CERCLA. For thirty (30) days following the date of publication of this document, EPA will receive written comments relating to the settlement. EPA will consider all comments received and may modify or withdraw its consent to the settlement agreement if comments received disclose facts or considerations that indicate that the proposed settlement is inappropriate, improper, or inadequate. EPA's response to any comments received will be available for public inspection at EPA Region 7, 11201 Renner Boulevard, Lenexa, Kansas 66219.

Dated: September 23, 2020.

Mary Peterson,

Director, Superfund Division, EPA Region 7.

EXPORT–IMPORT BANK

Intent to Conduct a Detailed Economic Impact Analysis

AGENCY: Export-Import Bank.

ACTION: Notice.

SUMMARY: Pursuant to the Charter of the Export-Import Bank of the United States, this notice is to inform the public that the Export-Import Bank of the United States has received an application for a $233.8 million comprehensive loan guarantee to support the export of approximately $351 million worth of hydrotreatment and steam methane reforming equipment to Paraguay. The U.S. exports will enable the Paraguayan company to produce up to 16,092 barrels per day of renewable diesel (also referred to as Hydrotreated Vegetable Oil or HVO) or up to 13,162 barrels per day of renewable jet fuel (also referred to as Synthesized Paraffinic Kerosene or SPK). New production will be sold in the United States and in Western Europe.

DATES: Comments are due 14 days from publication in the **Federal Register**.

ADDRESSES: Interested parties may submit comments on this transaction electronically on *www.regulations.gov,* or by email to *economic.impact@exim.gov.*

Scott Condren,

Policy Analysis Division.

FEDERAL DEPOSIT INSURANCE CORPORATION

FDIC Advisory Committee of State Regulators; Notice of Meeting

AGENCY: Federal Deposit Insurance Corporation (FDIC).

ACTION: Notice of open meeting.

SUMMARY: In accordance with the Federal Advisory Committee Act, notice is hereby given of a meeting of the FDIC Advisory Committee of State Regulators. The Advisory Committee will provide advice and recommendations on a broad range of policy issues regarding the regulation of state-chartered financial institutions throughout the United States, including its territories. The meeting is open to the public. Out of an abundance of caution related to current and potential coronavirus developments, the public's means to observe this meeting of the Advisory Committee of State Regulators will be via a Webcast live on the internet. In addition, the meeting will be recorded and subsequently made available on-demand approximately two weeks after the event. To view the live event, visit *http://fdic.windrosemedia.com.* To view the recording, visit *http://fdic.windrosemedia.com/index.php?category=Advisory+Committee+State+Regulators.* If you require a reasonable accommodation to participate, please contact *DisabilityProgram@fdic.gov* or call 703–562–2096 to make necessary arrangements.

DATES: Wednesday, October 14, 2020, from 1:00 p.m. to 5:15 p.m.

FOR FURTHER INFORMATION CONTACT: Requests for further information concerning the meeting may be directed to Mr. Robert E. Feldman, Committee Management Officer of the FDIC, at (202) 898–7043.

SUPPLEMENTARY INFORMATION:

Agenda: The agenda will include a discussion of a variety of current and emerging issues that have potential implications regarding the regulation and supervision of state-chartered financial institutions. The agenda is subject to change. Any changes to the agenda will be announced at the beginning of the meeting.

Type of Meeting: This meeting of the Advisory Committee of State Regulators will be Webcast live via the internet *http://fdic.windrosemedia.com.* For optimal viewing, a high-speed internet connection is recommended.

Federal Deposit Insurance Corporation.

Dated at Washington, DC, on September 24, 2020.

Robert E. Feldman,

Executive Secretary.

FEDERAL FINANCIAL INSTITUTIONS EXAMINATION COUNCIL

[Docket No. AS20–12]

Appraisal Subcommittee; Notice of Meeting

AGENCY: Appraisal Subcommittee of the Federal Financial Institutions Examination Council.

ACTION: Notice of Special Meeting.

Description: In accordance with Section 1104(b) of Title XI of the Financial Institutions Reform, Recovery, and Enforcement Act of 1989, as amended, notice is hereby given that the Appraisal Subcommittee (ASC) will meet in open session for a Special Meeting:

Location: Due to the COVID–19 Pandemic, the meeting will be open to the public via live webcast only. Visit the agency's homepage (*www.asc.gov*) and access the provided registration link in the What's New box. You MUST register in advance to attend this Meeting.

Date: October 5, 2020.

Time: 1:30 p.m. ET.

Status: Open.

Action and Discussion Items

Notice of Funding Availability (NOFA) Summary for the Appraisal Foundation Grant.

How to Attend and Observe an ASC meeting: Due to the COVID–19 Pandemic, the meeting will be open to the public via live webcast only. Visit the agency's homepage (*www.asc.gov*) and access the provided registration link in the What's New box. The meeting

space is intended to accommodate public attendees. However, if the space will not accommodate all requests, the ASC may refuse attendance on that reasonable basis. The use of any video or audio tape recording device, photographing device, or any other electronic or mechanical device designed for similar purposes is prohibited at ASC meetings.

James R. Park,

Executive Director.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Disease Control and Prevention

Collection of Certain Data Regarding Passengers and Crew Arriving From Foreign Countries by Airlines; Rescission of Agency Order

AGENCY: Centers for Disease Control and Prevention (CDC), Department of Health and Human Services (HHS).

ACTION: Notice.

SUMMARY: The Centers for Disease Control and Prevention (CDC), located within the Department of Health and Human Services (HHS), announces the rescission of an Agency Order that was published in the **Federal Register** on February 24, 2020.

DATES: The Agency Order titled *Collection of Certain Data Regarding Passengers and Crew Arriving from Foreign Countries by Airlines* issued on February 18, 2020 is rescinded effective September 29, 2020.

FOR FURTHER INFORMATION CONTACT: Jennifer Buigut, Division of Global Migration and Quarantine, Centers for Disease Control and Prevention, 1600 Clifton Road NE, MS H16–4, Atlanta, GA 30329. Email: *dgmqpolicyoffice@cdc.gov.*

SUPPLEMENTARY INFORMATION: On February 24, 2020, the Centers for Disease Control and Prevention (CDC) published a notice titled ''*Collection of Certain Data Regarding Passengers and Crew Arriving from Foreign Countries by Airlines*'' (85 FR 10439) announcing the issuance of an Agency Order on February 18, 2020 to airlines requiring them to collect and provide contact information to CDC about any passenger who had departed from, or was otherwise present within, the People's Republic of China (excluding the special administrative regions of Hong Kong and Macau) within 14 days of the person's entry or attempted entry into the United States via that airline's carriage.

CDC has determined that this information is no longer required to be collected and provided to the Agency by the subject airlines in the manner stipulated in the Order. Accordingly, that Order is hereby rescinded as of September 29, 2020.

Dated: September 24, 2020.

Robert R. Redfield,

Director, Centers for Disease Control and Prevention.

BILLING CODE 4163–18–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Administration for Children and Families

Submission for OMB Review; National Survey of Early Care and Education COVID–19 Follow-Up (OMB #0970–0391)

AGENCY: Office of Planning, Research, and Evaluation, Administration for Children and Families, HHS.

ACTION: Request for public comment.

SUMMARY: The Administration for Children and Families (ACF), U.S. Department of Health and Human Services (HHS), is proposing a two-wave data collection as part of the National Survey of Early Care and Education (NSECE) (OMB #0970–0391), which will be conducted October 2020 through June 2021. The objective of the NSECE COVID–19 Follow-up is to document the nation's current supply of early care and education (ECE) services that is home-based providers, center-based providers, and the center-based provider workforce. In the context of the COVID–19 pandemic, the NSECE COVID–19 Follow-up will deepen our understanding of the state of ECE supply and the ECE workforce following the initial period of crisis, including changes in supply or departures from and re-entries to the workforce.

DATES: *Comments due within 30 days of publication.* OMB must make a decision about the collection of information between 30 and 60 days after publication of this document in the **Federal Register**. Therefore, a comment is best assured of having its full effect if OMB receives it within 30 days of publication.

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting

''Currently under 30-day Review—Open for Public Comments'' or by using the search function.

SUPPLEMENTARY INFORMATION:

Description: The NSECE COVID–19 Follow-up will collect information from center-based ECE providers of care to children birth through age 5 (not yet in kindergarten), home-based ECE providers that serve children under age 13, as well as the ECE workforce providing these services. The proposed collection will consist of the following three coordinated nationally representative surveys:

1. A two-wave survey of individuals who provided paid care for children under the age of 13 in a residential setting, as of 2019, and who participated in the 2019 NSECE (Home-based Provider Interview);

2. a two-wave survey of providers of care to children ages 0 through 5 years of age (not yet in kindergarten) in a non-residential setting (Center-based Provider Interview), as of 2019, and who participated in the 2019 NSECE; and

3. a two-wave survey conducted with individuals employed in center-based child care programs working directly with children in classrooms (Center-based Classroom Staff [Workforce] Interview), as of 2019, and who participated in the 2019 NSECE.

The NSECE COVID–19 Follow-up will provide urgently needed information about the supply of child care and early education available to families across all income levels, including providers serving low-income families of various racial, ethnic, language, and cultural backgrounds, in diverse geographic areas. The study will also dramatically extend the available resources for understanding the national impact of the COVID–19 pandemic on the country's ECE supply and workforce, including geographic variation therein. Accurate data on the availability and characteristics of ECE programs are essential to assess the current and changing landscape of child care and early education programs and understand the ability of the nation's supply and workforce to meet the needs of parents of young children in the post-pandemic economy, and will provide insights to advance policy and initiatives in the ECE field.

Respondents: Home-based providers, as of 2019, serving children under 13 years of age (listed and unlisted paid)—regardless of their status serving children in 2020–2021; center-based child care providers, as of 2019, serving children ages 0 through 5 years of age (not yet in kindergarten)—regardless of their status serving children in 2020–2021; and classroom-assigned instructional staff members working with children ages 0 through 5 years of age (not yet in kindergarten) in center-based child care providers, as of 2019, regardless of their employment status in 2020–2021.

ANNUAL BURDEN ESTIMATES

Instrument	Annual number of respondents	Number of responses per respondent	Average burden hours per response	Annual burden hours
Home-based Provider Interview, Waves 1 and 2	3,375	1.5	.33	1,671
Center-based Provider Interview, Waves 1 and 2	5,850	1.5	.33	2,896
Center-based Classroom Staff (Workforce) Interview, Waves 1 and 2	3,533	1.5	.33	1,749

Estimated Total Annual Burden Hours: 6,316.

Authority: Child Care and Development Block Grant Act (42 U.S.C. 9858 et. seq.).

John M. Sweet Jr,

ACF/OPRE Certifying Officer.

BILLING CODE 4184–23–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2014–N–0987]

Agency Information Collection Activities; Proposed Collection; Comment Request; Generic Clearance for the Collection of Qualitative Data on Tobacco Products and Communications

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA or Agency) is announcing an opportunity for public comment on the proposed collection of certain information by the Agency. Under the Paperwork Reduction Act of 1995 (PRA), Federal Agencies are required to publish notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension of an existing collection of information, and to allow 60 days for public comment in response to the notice. This notice solicits comments on generic clearance for the collection of qualitative data on tobacco products and communications.

DATES: Submit either electronic or written comments on the collection of information by November 30, 2020.

ADDRESSES: You may submit comments as follows. Please note that late, untimely filed comments will not be considered. Electronic comments must be submitted on or before November 30, 2020. The *https://www.regulations.gov* electronic filing system will accept comments until 11:59 p.m. Eastern Time at the end of November 30, 2020. Comments received by mail/hand delivery/courier (for written/paper submissions) will be considered timely if they are postmarked or the delivery service acceptance receipt is on or before that date.

Electronic Submissions

Submit electronic comments in the following way:

- *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to *https://www.regulations.gov* will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on *https://www.regulations.gov.*
- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see ''Written/Paper Submissions'' and ''Instructions'').

Written/Paper Submissions

Submit written/paper submissions as follows:

- *Mail/Hand Delivery/Courier (for written/paper submissions):* Dockets Management Staff (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.
- For written/paper comments submitted to the Dockets Management Staff, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in ''Instructions.''

Instructions: All submissions received must include the Docket No. FDA–2014–N–0987 for ''Generic Clearance for the Collection of Qualitative Data on Tobacco Products and Communications.'' Received comments, those filed in a timely manner (see **ADDRESSES**), will be placed in the docket and, except for those submitted as ''Confidential Submissions,'' publicly viewable at *https://www.regulations.gov* or at the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday, 240–402–7500.

- Confidential Submissions—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states ''THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.'' The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on *https://www.regulations.gov.* Submit both copies to the Dockets Management Staff. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as ''confidential.'' Any information marked as ''confidential'' will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: *https://www.govinfo.gov/content/pkg/FR-2015-09-18/pdf/2015-23389.pdf.*

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to *https://www.regulations.gov* and insert the docket number, found in brackets in the heading of this document, into the ''Search'' box and follow the prompts and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852, 240–402–7500.

FOR FURTHER INFORMATION CONTACT: Ila S. Mizrachi, Office of Operations, Food and Drug Administration, Three White Flint North, 10A–12M, 11601 Landsdown St., North Bethesda, MD 20852, 301–796–7726, *PRAStaff@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION: Under the PRA (44 U.S.C. 3501–3521), Federal Agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. ''Collection of information'' is defined in 44 U.S.C. 3502(3) and 5 CFR 1320.3(c) and includes Agency requests or requirements that members of the public submit reports, keep records, or provide information to a third party. Section 3506(c)(2)(A) of the PRA (44 U.S.C. 3506(c)(2)(A)) requires Federal Agencies to provide a 60-day notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension of an existing collection of information, before submitting the collection to OMB for approval. To comply with this requirement, FDA is publishing notice of the proposed collection of information set forth in this document.

With respect to the following collection of information, FDA invites comments on these topics: (1) Whether the proposed collection of information is necessary for the proper performance of FDA's functions, including whether the information will have practical utility; (2) the accuracy of FDA's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques, when appropriate, and other forms of information technology.

Generic Clearance for the Collection of Qualitative Data on Tobacco Products and Communications

OMB Control Number 0910–0796—Extension

Under section 1003(d)(2)(D) of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 393(d)(2)(D)), FDA is authorized to conduct educational and public information programs.

In conducting studies relating to the regulation and communications related to tobacco products, FDA will need to employ formative qualitative research including focus groups, usability testing, and/or in-depth interviews (IDIs) to assess knowledge and perceptions about tobacco-related topics with specific target audiences. The information collected will serve three major purposes. First, formative research will provide critical knowledge about target audiences. FDA must first understand people's knowledge and perceptions about tobacco related topics prior to developing survey/research questions as well as stimuli for experimental studies. Second, by collecting communications usability information, FDA will be able to serve and respond to the ever-changing demands of consumers of tobacco products. Additionally, we will be able to determine the best way to present messages. Third, initial testing will allow FDA to assess consumer understanding of survey/research questions and study stimuli. Focus groups and/or IDIs with a sample of the target audience will allow FDA to refine the survey/research questions and study stimuli while they are still in the developmental stage. FDA will collect, and interpret information gathered through this generic clearance in order to: (1) Better understand characteristics of the target audience—its perceptions, knowledge, attitudes, beliefs, and behaviors—and use these in the development of appropriate survey/research questions, study stimuli, or communications; (2) more efficiently and effectively design survey/research questions and study stimuli; and (3) more efficiently and effectively design experimental studies.

FDA is requesting approval of an extension of this generic clearance for collecting information using qualitative methods (*i.e.,* individual interviews, small group discussions, and focus groups) for studies involving all tobacco products regulated by FDA. This information will be used as a first step to explore concepts of interest and assist in the development of quantitative study proposals, complementing other important research efforts in the Agency. This information may also be used to help identify and develop communication messages, which may be used in education campaigns. Focus groups play an important role in gathering information because they allow for an in-depth understanding of individuals' attitudes, beliefs, motivations, and feelings. Focus group

research serves the narrowly defined need for direct and informal public opinion on a specific topic.

FDA estimates the burden of this collection of information as follows:

TABLE 1—ESTIMATED ANNUAL REPORTING BURDEN [1]

Type of interview	Number of respondents	Number of responses per respondent	Total annual responses	Average burden per response	Total hours
In-Person Individual In-depth Interviews.	1,092	1	1,092	1	1,092
In-depth Interview (IDI) Screener	1,800	1	1,800	0.083 (5 minutes)	150
Focus Group Screener	19,385	1	19,385	0.25 (15 minutes)	4,846
Focus Group Interviews	5,897	1	5,897	1.5	8,846
Total					14,934

[1] There are no capital costs or operating and maintenance costs associated with this collection of information.

The number of respondents to be included in each new pretest may vary, depending on the nature of the material or message being tested and the target audience. Table 1 provides examples of the types of studies that may be administered and estimated burden levels during the 3-year period. Time to read, view, or listen to the message being tested is built into the ''Hours per Response'' figures. Our estimated burden for the information collection reflects an overall increase of 5,641 hours and a corresponding increase of 16,585 responses. We attribute this adjustment to the number of study responses used during the current approval and now estimated for the next 3 years.

Dated: September 18, 2020.

Lauren K. Roth,

Associate Commissioner for Policy.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2019–D–4467]

Breast Implants—Certain Labeling Recommendations To Improve Patient Communication; Guidance for Industry and Food and Drug Administration Staff; Availability

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice of availability.

SUMMARY: The Food and Drug Administration (FDA or Agency) is announcing the availability of a final guidance entitled ''Breast Implants—Certain Labeling Recommendations to Improve Patient Communication.'' This guidance contains recommendations concerning the content and format for certain labeling information for saline and silicone gel-filled breast implants. FDA is issuing this guidance to help ensure that a patient receives and understands the benefits and risks of breast implants. These labeling recommendations are intended to enhance, but not replace, the physician-patient discussion of the benefits and risks of breast implants that uniquely pertain to individual patients.

DATES: The announcement of the guidance is published in the **Federal Register** on September 29, 2020.

ADDRESSES: You may submit either electronic or written comments on Agency guidances at any time as follows:

Electronic Submissions

Submit electronic comments in the following way:

- *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to *https://www.regulations.gov* will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on *https://www.regulations.gov.*
- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see ''Written/Paper Submissions'' and ''Instructions'').

Written/Paper Submissions

Submit written/paper submissions as follows:

- *Mail/Hand Delivery/Courier (for written/paper submissions):* Dockets Management Staff (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.
- For written/paper comments submitted to the Dockets Management Staff, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in ''Instructions.''

Instructions: All submissions received must include the Docket No. FDA–2019–D–4467 for ''Breast Implants—Certain Labeling Recommendations to Improve Patient Communication.'' Received comments will be placed in the docket and, except for those submitted as ''Confidential Submissions,'' publicly viewable at *https://www.regulations.gov* or at the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday, 240–402–7500.

- Confidential Submissions—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states ''THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.'' The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on *https://www.regulations.gov.* Submit both copies to the Dockets Management Staff. If you do not wish your name and contact information to be made publicly

available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as ''confidential.'' Any information marked as ''confidential'' will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: *https://www.govinfo.gov/content/pkg/FR-2015-09-18/pdf/2015-23389.pdf.*

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to *https://www.regulations.gov* and insert the docket number, found in brackets in the heading of this document, into the ''Search'' box and follow the prompts and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852, 240–402–7500.

You may submit comments on any guidance at any time (see 21 CFR 10.115(g)(5)).

An electronic copy of the guidance document is available for download from the internet. See the **SUPPLEMENTARY INFORMATION** section for information on electronic access to the guidance. Submit written requests for a single hard copy of the guidance document entitled ''Breast Implants—Certain Labeling Recommendations to Improve Patient Communication'' to the Office of Policy, Guidance and Policy Development, Center for Devices and Radiological Health, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 66, Rm. 5431, Silver Spring, MD 20993–0002. Send one self-addressed adhesive label to assist that office in processing your request.

FOR FURTHER INFORMATION CONTACT: Joseph Nielsen, Center for Devices and Radiological Health, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 66, Rm. 4608, Silver Spring, MD 20993–0002, 301–796–6244.

SUPPLEMENTARY INFORMATION:

I. Background

Over the past few years, FDA has received new information pertaining to risks associated with breast implants, including breast implant-associated anaplastic large cell lymphoma (BIA–ALCL) and systemic symptoms commonly referred to as breast implant illness (BII) that some patients attribute to their implants. FDA has taken a number of steps to better understand and address risks associated with breast implants, including convening the General and Plastic Surgery Devices Advisory Panel on March 25 to 26, 2019, to discuss the long-term benefits and risks of breast implants indicated for breast augmentation and reconstruction. FDA learned from presentations at the March 2019 Panel meeting and through comments submitted to the associated public docket that some patients may not be receiving or understanding important information regarding the benefits and risks of breast implants in a format that allows them to make a well-informed decision about whether to have a breast implantation.

For these reasons, FDA is now providing recommendations concerning the content and format of certain labeling information for these devices. Specifically, FDA is recommending that manufacturers incorporate a boxed warning and a patient decision checklist into the labeling for these devices to better ensure certain information is received and understood by patients. This guidance also recommends updated and additional labeling information, including updates to the silicone gel-filled breast implant rupture screening recommendations, inclusion of an easy-to-find description of materials, and provision of patient device cards that were recommended at the March 2019 Panel meeting. The recommendations in this guidance document supplement the recommendations in FDA's guidance entitled ''Saline, Silicone Gel, and Alternative Breast Implants.'' [1]

A notice of availability of the draft guidance appeared in the **Federal Register** of October 24, 2019 (84 FR 57028). FDA considered comments received and revised the guidance as appropriate in response to the comments, including revisions to clarify the labeling recommendations regarding the relationship between breast implants and systemic symptoms and certain other risks, to refine the recommendations regarding information on the patient device card to improve clarity and readability, and to provide reference to and information regarding ongoing patient registries in the patient decision checklist.

This guidance is being issued consistent with FDA's good guidance practices regulation (21 CFR 10.115). The guidance represents the current thinking of FDA on ''Breast Implants—Certain Labeling Recommendations to Improve Patient Communication.'' It does not establish any rights for any person and is not binding on FDA or the public. You can use an alternative approach if it satisfies the requirements of the applicable statutes and regulations.

II. Electronic Access

Persons interested in obtaining a copy of the guidance may do so by downloading an electronic copy from the internet. A search capability for all Center for Devices and Radiological Health guidance documents is available at *https://www.fda.gov/medical-devices/device-advice-comprehensive-regulatory-assistance/guidance-documents-medical-devices-and-radiation-emitting-products.* This guidance document is also available at *https://www.regulations.gov.* Persons unable to download an electronic copy of ''Breast Implants—Certain Labeling Recommendations to Improve Patient Communication'' may send an email request to *CDRH-Guidance@fda.hhs.gov* to receive an electronic copy of the document. Please use the document number 19021 and complete title to identify the guidance you are requesting.

III. Paperwork Reduction Act of 1995

This guidance refers to previously approved collections of information. These collections of information are subject to review by the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3521). The collections of information in the following FDA regulations have been approved by OMB as listed in the following table:

21 CFR part; guidance; or FDA form	Topic	OMB control No.
814, subparts A through E	Premarket approval	0910–0231
812	Investigational Device Exemption	0910–0078

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2018–N–1787]

Advisory Committee; Blood Products Advisory Committee; Renewal

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice; renewal of Federal advisory committee.

SUMMARY: The Food and Drug Administration (FDA) is announcing the renewal of the Blood Products Advisory Committee by the Commissioner of Food and Drugs (the Commissioner). The Commissioner has determined that it is in the public interest to renew the Blood Products Advisory Committee for an additional 2 years beyond the charter expiration date. The new charter will be in effect until the May 13, 2022, expiration date.

DATES: Authority for the Blood Products Advisory Committee will expire on May 13, 2022, unless the Commissioner formally determines that renewal is in the public interest.

FOR FURTHER INFORMATION CONTACT: Christina Vert, Division of Scientific Advisors and Consultants, Center for Biologics Evaluation and Research, Food and Drug Administration, 10993 New Hampshire Ave., Bldg. 71, Rm. 6268, Silver Spring, MD 20993–0002, 240–402–8054 *Christina.Vert@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION: Pursuant to 41 CFR 102–3.65 and approval by the Department of Health and Human Services pursuant to 45 CFR part 11 and by the General Services Administration, FDA is announcing the renewal of the Blood Products Advisory Committee (the Committee). The Committee is a discretionary Federal advisory committee established to provide advice to the Commissioner. The Blood Products Advisory Committee advises the Commissioner or designee in discharging responsibilities as they relate to helping to ensure safe and effective drugs for human use and, as required, any other product for which FDA has regulatory responsibility.

The Committee shall consist of a core of 17 voting members including the Chair. Members and the Chair are selected by the Commissioner or designee from among authorities knowledgeable in the fields of clinical and administrative medicine, hematology, immunology, blood banking, surgery, internal medicine, biochemistry, engineering, biological and physical sciences, biotechnology, computer technology, statistics, epidemiology, sociology/ethics, and other related professions. Members will be invited to serve for overlapping terms of up to 4 years. Almost all non-Federal members of this committee serve as Special Government Employees. The core of voting members may include one technically qualified member, selected by the Commissioner or designee, who is identified with consumer interests and is recommended by either a consortium of consumer-oriented organizations or other interested persons. In addition to the voting members, the Committee may include one non-voting member who is identified with industry interests.

The Commissioner or designee shall have the authority to select members of other scientific and technical FDA advisory committees (normally not to exceed 10 members) to serve temporarily as voting members and to designate consultants to serve temporarily as voting members when: (1) expertise is required that is not available among current voting standing members of the Committee (when additional voting members are added to the Committee to provide needed expertise, a quorum will be based on the combined total of regular and added members) or (2) to comprise a quorum when, because of unforeseen circumstances, a quorum is or will be lacking. Because of the size of the Committee and the variety in the types of issues that it will consider, FDA may, in connection with a particular committee meeting, specify a quorum that is less than a majority of the current voting members. The Agency's regulations (21 CFR 14.22(d)) authorize a committee charter to specify quorum requirements.

If functioning as a medical device panel, a non-voting representative of consumer interests and a non-voting representative of industry interests will be included in addition to the voting members.

Further information regarding the most recent charter and other information can be found at *http://www.fda.gov/AdvisoryCommittees/CommitteesMeetingMaterials/BloodVaccinesandOtherBiologics/BloodProductsAdvisoryCommittee/ucm121602.htm* or by contacting the Designated Federal Officer (see **FOR FURTHER INFORMATION CONTACT**). In light of the fact that no change has been made to the committee name or description of duties, no amendment will be made to 21 CFR 14.100.

This document is issued under the Federal Advisory Committee Act (5 U.S.C. app.). For general information related to FDA advisory committees, please visit us at *https://www.fda.gov/advisory-committees.*

Dated: September 18, 2020.

Lauren K. Roth,

Associate Commissioner for Policy.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2018–N–3091]

Advisory Committee; Cardiovascular and Renal Drugs Advisory Committee; Renewal

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice; renewal of advisory committee.

SUMMARY: The Food and Drug Administration (FDA) is announcing the renewal of the Cardiovascular and Renal Drugs Advisory Committee by the Commissioner of Food and Drugs (the Commissioner). The Commissioner has determined that it is in the public interest to renew the Cardiovascular and Renal Drugs Advisory Committee for an additional 2 years beyond the charter

expiration date. The new charter will be in effect until August 27, 2022.

DATES: Authority for the Cardiovascular and Renal Drugs Advisory Committee will expire on August 27, 2022, unless the Commissioner formally determines that renewal is in the public interest.

FOR FURTHER INFORMATION CONTACT: Joyce Yu, Division of Advisory Committee and Consultant Management, Center for Drug Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 31, Rm. 2438, Silver Spring, MD 20993–0002, 301–796–9001, email: *CRDAC@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION: Under 41 CFR 102–3, FDA is announcing the renewal of the Cardiovascular and Renal Drugs Advisory Committee (Committee). The Committee is a discretionary Federal advisory committee established to provide advice to the Commissioner or designee in discharging responsibilities as they relate to helping to ensure safe and effective drugs for human use and, as required, any other product for which FDA has regulatory responsibility.

The Committee reviews and evaluates available data concerning the safety and effectiveness of marketed and investigational human drug products for use in the treatment of cardiovascular and renal disorders and makes appropriate recommendations to the Commissioner of Food and Drugs.

Under its Charter, the Committee shall consist of a core of 11 voting members including the Chair. Members and the Chair are selected by the Commissioner or designee from among authorities knowledgeable in the fields of cardiology, hypertension, arrhythmia, angina, congestive heart failure, diuresis, and biostatistics. Members will be invited to serve for overlapping terms of up to 4 years. Almost all non-Federal members of this committee serve as Special Government Employees. Federal members will serve as Regular Government Employees or Ex-Officios. The core of voting members may include one technically qualified member, selected by the Commissioner or designee, who is identified with consumer interests and is recommended by either a consortium of consumer-oriented organizations or other interested persons. In addition to the voting members, the Committee may include one non-voting member who is identified with industry interests. There may also be alternate industry representative.

Further information regarding the most recent charter and other information can be found at *https://www.fda.gov/advisory-committees/cardiovascular-and-renal-drugs-advisory-committee/cardiovascular-and-renal-drugs-advisory-committee-charter* or by contacting the Designated Federal Officer (see **FOR FURTHER INFORMATION CONTACT**). In light of the fact that no change has been made to the Committee name or description of duties, no amendment will be made to 21 CFR 14.100.

This document is issued under the Federal Advisory Committee Act (5 U.S.C. app.). For general information related to FDA advisory committees, please check *https://www.fda.gov/AdvisoryCommittees/default.htm.*

Food and Drug Administration

[Docket No. FDA–2020–N–1227]

Roerig Division of Pfizer Inc., et al.; Withdrawal of Approval of 10 Abbreviated New Drug Applications; Correction

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice; correction.

SUMMARY: The Food and Drug Administration (FDA) is correcting a notice that appeared in the **Federal Register** on July 21, 2020. The document announced the withdrawal of approval of 10 abbreviated new drug applications (ANDAs) from multiple applicants, withdrawn as of August 20, 2020. The document indicated that FDA was withdrawing approval of the following two ANDAs after receiving a withdrawal request from Kadmon Pharmaceuticals, LLC., 119 Commonwealth Dr., Warrendale, PA 15086: ANDA 076203, Ribavirin Capsules, 200 milligrams (mg) and ANDA 077456, Ribavirin Tablets, 200 mg, 400 mg, and 600 mg. Before FDA withdrew the approval of these ANDAs, Kadmon Pharmaceuticals, LLC. informed FDA that it did not want the approval of the ANDAs withdrawn. Because Kadmon Pharmaceuticals, LLC., timely requested that approval of these ANDAs not be withdrawn, the approval of ANDAs 076203 and 077456 are still in effect.

FOR FURTHER INFORMATION CONTACT: Martha Nguyen, Center for Drug Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 75, Rm. 1676, Silver Spring, MD 20993–0002, 240–402–6980, *Martha.Nguyen@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION:

Correction

In the **Federal Register** of Tuesday, July 21, 2020 (85 FR 44096), appearing on page 44096 in FR Doc. 2020–15727, the following correction is made:

On page 44096, in the table, the entries for ANDAs 076203 and 077456 are removed.

Dated: September 21, 2020.

Lauren K. Roth,

Associate Commissioner for Policy.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2013–D–1445]

Blood Glucose Monitoring Test Systems for Prescription Point-of-Care Use; Guidance for Industry and Food and Drug Administration Staff; Availability

AGENCY: Food and Drug Administration, Health and Human Services (HHS).

ACTION: Notice of availability.

SUMMARY: The Food and Drug Administration (FDA or Agency) is announcing the availability of a final guidance entitled ''Blood Glucose Monitoring Test Systems for Prescription Point-of-Care Use.'' This guidance describes studies and information that FDA recommends be used when submitting premarket notifications (510(k)s) for blood glucose monitoring systems (BGMSs) that are for prescription point-of-care use.

DATES: The announcement of the guidance is published in the **Federal Register** on September 29, 2020.

ADDRESSES: You may submit either electronic or written comments on Agency guidances at any time as follows:

Electronic Submissions

Submit electronic comments in the following way:

- *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to *https://www.regulations.gov* will be posted to the docket unchanged. Because your

comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on *https://www.regulations.gov.*

- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see ''Written/Paper Submissions'' and ''Instructions'').

Written/Paper Submissions

Submit written/paper submissions as follows:

- *Mail/Hand Delivery/Courier (for written/paper submissions)*: Dockets Management Staff (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.
- For written/paper comments submitted to the Dockets Management Staff, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in ''Instructions.''

Instructions: All submissions received must include the Docket No. FDA–2013–D–1445 for ''Blood Glucose Monitoring Test Systems for Prescription Point-of-Care Use.'' Received comments will be placed in the docket and, except for those submitted as ''Confidential Submissions,'' publicly viewable at *https://www.regulations.gov* or at the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday, 240–402–7500.

- Confidential Submissions—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states ''THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.'' The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on *https://www.regulations.gov.* Submit both copies to the Dockets Management Staff. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as ''confidential.'' Any information marked as ''confidential'' will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: *https://www.govinfo.gov/content/pkg/FR-2015-09-18/pdf/2015-23389.pdf.*

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to *https://www.regulations.gov* and insert the docket number, found in brackets in the heading of this document, into the ''Search'' box and follow the prompts and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852, 240–402–7500.

You may submit comments on any guidance at any time (see 21 CFR 10.115(g)(5)).

An electronic copy of the guidance document is available for download from the internet. See the **SUPPLEMENTARY INFORMATION** section for information on electronic access to the guidance. Submit written requests for a single hard copy of the guidance document entitled ''Blood Glucose Monitoring Test Systems for Prescription Point-of-Care Use'' to the Office of Policy, Guidance and Policy Development, Center for Devices and Radiological Health, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 66, Rm. 5431, Silver Spring, MD 20993–0002. Send one self-addressed adhesive label to assist that office in processing your request.

FOR FURTHER INFORMATION CONTACT: Leslie Landree, Center for Devices and Radiological Health, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 66, Rm. 3566, Silver Spring, MD 20993–0002, 301–796–6147.

SUPPLEMENTARY INFORMATION:

I. Background

On October 11, 2016 (81 FR 70122), FDA published a final guidance entitled ''Blood Glucose Monitoring Test Systems for Prescription Point-of-Care Use.'' That guidance document described studies and information that FDA recommends be used when submitting 510(k)s for BGMSs that are for prescription point-of-care use.

On November 30, 2018, FDA published a notice of availability in the **Federal Register** (83 FR 61648) of a draft guidance that proposed revisions to the guidance. FDA proposed modifications based on feedback received from stakeholders and to better align with the evolving understanding and development of these types of devices.

FDA considered comments received on the draft guidance and made revisions as appropriate in response to the comments, including a minor edit encouraging manufacturers to consider design features that will aid in user accessibility and a technical edit in hemoglobin testing concentration. This revised guidance replaces the existing final guidance of the same title issued on October 11, 2016.

This guidance is being issued consistent with FDA's good guidance practices regulation (21 CFR 10.115). This guidance represents the current thinking of FDA on ''Blood Glucose Monitoring Test Systems for Prescription Point-of-Care Use.'' It does not establish any rights for any person and is not binding on FDA or the public. You can use an alternative approach if it satisfies the requirements of the applicable statutes and regulations.

II. Electronic Access

Persons interested in obtaining a copy of the guidance may do so by downloading an electronic copy from the internet. A search capability for all Center for Devices and Radiological Health guidance documents is available at *https://www.fda.gov/MedicalDevices/DeviceRegulationandGuidance/GuidanceDocuments/default.htm.* This guidance is also available at *https://www.regulations.gov.* Persons unable to download an electronic copy of ''Blood Glucose Monitoring Test Systems for Prescription Point-of-Care Use'' may send an email request to *CDRH-Guidance@fda.hhs.gov* to receive an electronic copy of the document. Please use the document number 1755 and title to identify the guidance you are requesting.

III. Paperwork Reduction Act of 1995

While this guidance contains no collection of information, it does refer to previously approved collections of information. Therefore, clearance by the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3521) is not required for this guidance. The collections of information in the following FDA guidances and regulations have been approved by OMB as listed in the following table:

21 CFR part or guidance	Topic	OMB control No.
807, subpart E	Premarket Notification	0910–0120
''Requests for Feedback on Medical Device Submissions: The Pre-Submission Program and Meetings with Food and Drug Administration Staff''.	Q-Submissions	0910–0756

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2020–D–1548]

Failure To Respond to an Abbreviated New Drug Application Complete Response Letter Within the Regulatory Timeframe; Draft Guidance for Industry; Availability

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice of availability.

SUMMARY: The Food and Drug Administration (FDA or Agency) is announcing the availability of a draft guidance for industry entitled ''Failure to Respond to an ANDA Complete Response Letter Within the Regulatory Timeframe.'' This guidance is intended to assist applicants in responding to complete response letters (CRLs) to abbreviated new drug applications (ANDAs) submitted to FDA under the Federal Food, Drug, and Cosmetic Act. This guidance provides information and recommendations regarding potential courses of action for an ANDA applicant after issuance of a CRL as well as the actions that FDA may take if the applicant fails to respond to a CRL. In addition, this guidance recommends information an applicant may submit in its request for an extension to respond to a CRL as well as a non-exhaustive list of factors that FDA will consider in determining whether such a request is reasonable.

DATES: Submit either electronic or written comments on the draft guidance by November 30, 2020 to ensure that the Agency considers your comment on this draft guidance before it begins work on the final version of the guidance.

ADDRESSES: You may submit comments on any guidance at any time as follows:

Electronic Submissions

Submit electronic comments in the following way:

- *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to *https://www.regulations.gov* will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on *https://www.regulations.gov.*
- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see ''Written/Paper Submissions'' and ''Instructions'').

Written/Paper Submissions

Submit written/paper submissions as follows:

- *Mail/Hand Delivery/Courier (for written/paper submissions):* Dockets Management Staff (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.
- For written/paper comments submitted to the Dockets Management Staff, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in ''Instructions.''

Instructions: All submissions received must include the Docket No. FDA–2020–D–1548 for ''Failure to Respond to an ANDA Complete Response Letter Within the Regulatory Timeframe.'' Received comments will be placed in the docket and, except for those submitted as ''Confidential Submissions,'' publicly viewable at *https://www.regulations.gov* or at the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday, 240–402–7500.

- Confidential Submissions—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states ''THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.'' The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on *https://www.regulations.gov.* Submit both copies to the Dockets Management Staff. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as ''confidential.'' Any information marked as ''confidential'' will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: *https://www.govinfo.gov/content/pkg/FR-2015-09-18/pdf/2015-23389.pdf.*

Docket: For access to the docket to read background documents or the electronic and written/paper comments

received, go to *https://www.regulations.gov* and insert the docket number, found in brackets in the heading of this document, into the ''Search'' box and follow the prompts and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852, 240–402–7500.

You may submit comments on any guidance at any time (see 21 CFR 10.115(g)(5)).

Submit written requests for single copies of the draft guidance to the Division of Drug Information, Center for Drug Evaluation and Research, Food and Drug Administration, 10001 New Hampshire Ave., Hillandale Building, 4th Floor, Silver Spring, MD 20993–0002 or Office of Communication, Outreach, and Development, Center for Biologics Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 71, Rm. 3128, Silver Spring, MD 20993–0002. Send one self-addressed adhesive label to assist that office in processing your requests. See the **SUPPLEMENTARY INFORMATION** section for electronic access to the draft guidance document.

FOR FURTHER INFORMATION CONTACT: Lisa Bercu, Center for Drug Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Silver Spring, MD 20993, 240–402–6902, or Stephen Ripley, Center for Biologics Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 71, Rm. 7301, Silver Spring, MD 20993–0002, 240–402–7911.

SUPPLEMENTARY INFORMATION:

I. Background

FDA is announcing the availability of a draft guidance for industry entitled ''Failure to Respond to an ANDA Complete Response Letter Within the Regulatory Timeframe.'' This guidance provides information and recommendations regarding the potential courses of action for an ANDA applicant after issuance of a CRL as well as the actions that FDA may take if the applicant fails to respond to the CRL. This guidance also identifies information that an applicant may submit in its request for an extension to respond to a CRL as well as a non-exhaustive list of factors that FDA will consider in determining whether such a request is reasonable.

As defined in 21 CFR 314.3(b), a CRL is a written communication to an applicant from FDA usually describing all of the deficiencies that the Agency has identified in an NDA or ANDA that must be satisfactorily addressed before it can be approved. After receiving a CRL, an applicant must, under § 314.110(b) (21 CFR 314.110(b)): (1) Resubmit the ANDA (*i.e.,* submit all materials needed to fully address all deficiencies identified in the CRL), (2) withdraw the application, or (3) request the opportunity for a hearing. If an applicant fails to take one of these three actions within 1 year after issuance of a CRL, FDA may consider this failure to be a request to withdraw the ANDA unless the applicant has requested an extension of time in which to address all deficiencies identified in the CRL.

Historically, FDA, in its discretion, has liberally granted requests for multiple extensions to respond to an individual CRL. However, FDA has seen a steady increase of applications pending with industry for more than a year. Lengthy response times because of multiple extensions, which can result in a submission addressing deficiencies years after the initial assessment of the ANDA and issuance of the CRL, are disruptive to the assessment process and can create additional assessment cycles. Over time, information submitted in the original ANDA can become obsolete because of changes such as new or revised United States Pharmacopeia requirements, reference listed drug labeling changes, or other events such as a facility evaluation becoming outdated. In addition, over time, there may have been changes in FDA assessors, and it may take time for them to familiarize themselves with the original submission. For these reasons, assessing an amendment submitted years after the initial ANDA assessment and issuance of the CRL diverts the Agency's limited resources from the review of other applications.

FDA is issuing this guidance as part of the ''Drug Competition Action Plan,'' which aims to increase competition in the market for prescription drugs, facilitate entry of high-quality and affordable generic drugs, and improve the public health. FDA intends for this guidance to promote efforts to address deficiencies more quickly, make the process for submitting and reviewing extension requests more efficient and predictable, and allow the Agency to focus its resources on ANDA assessment.

In addition to general comments on this guidance, FDA is interested in responses to the following questions:

1. Are there any categories of deficiencies in which a year would not be expected to be a sufficient amount of time to respond to a CRL?

2. Why may it take an applicant more than 1 year to respond to a CRL?

a. Does the patent landscape impact the timing of an applicant's response to a CRL?

b. Are there disincentives (*e.g.,* business reasons) to responding to a CRL within 1 year?

This draft guidance is being issued consistent with FDA's good guidance practices regulation (21 CFR 10.115). The draft guidance, when finalized, will represent the current thinking of FDA on ''Failure to Respond to an ANDA Complete Response Letter Within the Regulatory Timeframe.'' It does not establish any rights for any person and is not binding on FDA or the public. You can use an alternative approach if it satisfies the requirements of the applicable statutes and regulations.

II. Paperwork Reduction Act of 1995

This draft guidance for industry entitled, ''Failure to Respond to an ANDA Complete Response Letter Within the Regulatory Timeframe,'' describes information collection provisions that are subject to review by the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3521). In particular, the draft guidance refers to collection of information under § 314.110, Complete Response Letter to the Applicant, after FDA review of an ANDA and issuance of a CRL identifying deficiencies in the application to the ANDA applicant.

Any burden of communications, as outlined in 21 CFR 314.102 and 314.110, incurred during the review of new drug applications, ANDAs, and drug master files, is already accounted for as part of the FDA review process and attributable to other specific references in 21 CFR 314, within the OMB approved collection 0910–0001.

The draft guidance also refers to previously approved collections of information found in FDA regulations and approved under OMB control numbers 0910–0001 and 0910–0191. When finalized, the guidance will be included in 0910–0001.

III. Electronic Access

Persons with access to the internet may obtain the draft guidance at either *https://www.fda.gov/Drugs/GuidanceComplianceRegulatoryInformation/Guidances/default.htm, https://www.fda.gov/vaccines-blood-biologics/guidance-compliance-regulatory-information-biologics/biologics-guidances* or *https://www.regulations.gov.*

Dated: September 18, 2020.

Lauren K. Roth,

Associate Commissioner for Policy.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2020–D–1824]

Assessing COVID–19-Related Symptoms in Outpatient Adult and Adolescent Subjects in Clinical Trials of Drugs and Biological Products for COVID–19 Prevention or Treatment; Guidance for Industry; Availability

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice of availability.

SUMMARY: The Food and Drug Administration (FDA or Agency) is announcing the availability of a final guidance for industry entitled ''Assessing COVID–19-Related Symptoms in Outpatient Adult and Adolescent Subjects in Clinical Trials of Drugs and Biological Products for COVID–19 Prevention or Treatment.'' Sponsors may encounter challenges in identifying methods to assess the numerous and heterogeneous Coronavirus Disease 2019 (COVID–19)-related symptoms across subjects when designing clinical trials of drugs to treat or prevent COVID–19 in adult and adolescent outpatient subjects. To assist sponsors, this guidance describes an example with a set of common COVID–19-related symptoms as well as an approach to their measurement for use in clinical trials. Given the public health emergency presented by COVID–19, this guidance document is being implemented without prior public comment because FDA has determined that prior public participation is not feasible or appropriate, but it remains subject to comment in accordance with the Agency's good guidance practices.

DATES: The announcement of the guidance is published in the **Federal Register** on September 29, 2020. The guidance document is immediately in effect, but it remains subject to comment in accordance with the Agency's good guidance practices.

ADDRESSES: You may submit either electronic or written comments on Agency guidances at any time as follows:

Electronic Submissions

Submit electronic comments in the following way:

- *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to *https://www.regulations.gov* will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on *https://www.regulations.gov*.
- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see ''Written/Paper Submissions'' and ''Instructions'').

Written/Paper Submissions

Submit written/paper submissions as follows:

- *Mail/Hand Delivery/Courier (for written/paper submissions):* Dockets Management Staff (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.
- For written/paper comments submitted to the Dockets Management Staff, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in ''Instructions.''

Instructions: All submissions received must include the Docket No. FDA–2020–D–1824 for ''Assessing COVID–19-Related Symptoms in Outpatient Adult and Adolescent Subjects in Clinical Trials of Drugs and Biological Products for COVID–19 Prevention or Treatment.'' Received comments will be placed in the docket and, except for those submitted as ''Confidential Submissions,'' publicly viewable at *https://www.regulations.gov* or at the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday, 240–402–7500.

- Confidential Submissions—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states ''THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.'' The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on *https://www.regulations.gov.* Submit both copies to the Dockets Management Staff. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as ''confidential.'' Any information marked as ''confidential'' will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: *https://www.govinfo.gov/content/pkg/FR-2015-09-18/pdf/2015-23389.pdf.*

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to *https://www.regulations.gov* and insert the docket number, found in brackets in the heading of this document, into the ''Search'' box and follow the prompts and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852, 240–402–7500.

You may submit comments on any guidance at any time (see 21 CFR 10.115(g)(5)).

Submit written requests for single copies of the guidance to the Division of Drug Information, Center for Drug Evaluation and Research, Food and Drug Administration, 10001 New Hampshire Ave., Hillandale Building, 4th Floor, Silver Spring, MD 20993–0002; or to the Office of Communication, Outreach and Development, Center for Biologics Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 71, Rm. 3128, Silver Spring, MD 20993–0002. Send one self-addressed adhesive label to assist that office in processing your requests. See the **SUPPLEMENTARY INFORMATION** section for electronic access to the guidance document.

FOR FURTHER INFORMATION CONTACT: Elektra Papadopoulos, Center for Drug Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 22, Rm. 6445, Silver Spring, MD 20993–0002, 301–796–0967; or Stephen Ripley, Center for Biologics Evaluation and Research, Food and Drug Administration, 10903

New Hampshire Ave., Bldg. 71, Rm. 7301, Silver Spring, MD 20993–0002, 240–402–7911.

SUPPLEMENTARY INFORMATION:

I. Background

FDA is announcing the availability of a guidance for industry entitled ''Assessing COVID–19-Related Symptoms in Outpatient Adult and Adolescent Subjects in Clinical Trials of Drugs and Biological Products for COVID–19 Prevention or Treatment.'' Sponsors may encounter challenges in identifying methods to assess the numerous and heterogeneous COVID–19-related symptoms across subjects when designing clinical trials of drugs to treat or prevent COVID–19 in adult and adolescent outpatient subjects. In many instances, daily assessment of all COVID–19-related symptoms may not be feasible.

To assist sponsors, the guidance describes an example with a set of common COVID–19-related symptoms derived from information provided by the Centers for Disease Control and Prevention as of August 28, 2020, as well as an approach to their measurement for use in clinical trials.

The guidance also includes considerations and recommendations for handling data and for standardizing other COVID–19-related clinical trial assessments for trial subjects.

In light of the public health emergency related to COVID–19 declared by the Secretary of the Department of Health and Human Services (HHS), FDA has determined that prior public participation for this guidance is not feasible or appropriate and is issuing this guidance without prior public comment (see section 701(h)(1)(C)(i) of the FD&C Act (21 U.S.C. 371(h)(1)(C)(i)) and 21 CFR 10.115(g)(2)). This guidance document is being implemented immediately, but it remains subject to comment in accordance with the Agency's good guidance practices. FDA will review comments, and the guidance will be updated accordingly.

This guidance is intended to remain in effect for the duration of the public health emergency related to COVID–19 declared by HHS, including any renewals made by the Secretary in accordance with section 319(a)(2) of the Public Health Service Act (42 U.S.C. 247d(a)(2)). However, the recommendations and processes described in the guidance are expected to assist the Agency more broadly in its efforts to provide sponsors with considerations for the assessment of COVID–19-related symptoms in outpatient adult and adolescent subjects in clinical trials evaluating drugs to treat or prevent COVID–19 beyond the termination of the COVID–19 public health emergency and reflect the Agency's current thinking on this issue. Therefore, within 60 days following the termination of the public health emergency, FDA intends to revise and replace this guidance with any appropriate changes based on comments received on this guidance and the Agency's experience with implementation.

This guidance is being issued consistent with FDA's good guidance practices regulation (21 CFR 10.115). The guidance represents the current thinking of FDA on ''Assessing COVID–19-Related Symptoms in Outpatient Adult and Adolescent Subjects in Clinical Trials of Drugs and Biological Products for COVID–19 Prevention or Treatment.'' It does not establish any rights for any person and is not binding on FDA or the public. You can use an alternative approach if it satisfies the requirements of the applicable statutes and regulations.

II. Paperwork Reduction Act of 1995

While this guidance contains no collection of information, it does refer to previously approved FDA collections of information. Therefore, clearance by the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501–3521) is not required for this guidance. The previously approved collections of information are subject to review by OMB under the PRA. The collections of information in 21 CFR part 314 have been approved under OMB control number 0910–0001; the collections of information in 21 CFR parts 312 and 320 have been approved under OMB control number 0910–0014; the collections of information in 21 CFR part 601 have been approved under OMB control number 0910–0338; the collections of information in 21 CFR parts 50 and 56 have been approved under OMB control number 0910–0130.

III. Electronic Access

Persons with access to the internet may obtain the guidance at either *https://www.fda.gov/drugs/guidance-compliance-regulatory-information/guidances-drugs, https://www.fda.gov/vaccines-blood-biologics/guidance-compliance-regulatory-information-biologics,* or *https://www.regulations.gov.*

Dated: September 18, 2020.

Lauren K. Roth,

Associate Commissioner for Policy.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2020–N–1790]

M7 Assessment and Control of Deoxyribonucleic Acid Reactive (Mutagenic) Impurities in Pharmaceuticals To Limit Potential Carcinogenic Risk—Questions and Answers; International Council for Harmonisation; Draft Guidance for Industry; Availability

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice of availability.

SUMMARY: The Food and Drug Administration (FDA or Agency) is announcing the availability of a draft guidance for industry entitled ''M7 Assessment and Control of DNA Reactive (Mutagenic) Impurities in Pharmaceuticals To Limit Potential Carcinogenic Risk—Questions and Answers.'' The draft guidance was prepared under the auspices of the International Council for Harmonisation of Technical Requirements for Pharmaceuticals for Human Use (ICH), formerly the International Conference on Harmonisation of Technical Requirements for Registration of Pharmaceuticals for Human Use. The draft guidance provides a practical approach that is applicable to the identification, categorization, qualification, and control of mutagenic impurities to limit potential carcinogenic risk. Since the ICH M7 Guideline was finalized, the worldwide experience with implementation of the recommendations for DNA reactive (mutagenic) impurities has given rise to requests for clarification relating to the assessment and control of DNA reactive (mutagenic) impurities. To facilitate the implementation of the ICH M7 Guideline, the ICH M7 Implementation Working Group has developed a series of questions and answers (Q&As). The scope of this draft Q&A guidance follows that of the ICH M7 Guideline. The draft Q&A guidance is intended to clarify, promote the convergence of, and improve the harmonization of the considerations for assessment and control of DNA reactive (mutagenic) impurities and of the information that should be provided when developing

drugs, completing marketing authorization applications, and using drug master files.

DATES: Submit either electronic or written comments on the draft guidance by December 28, 2020 to ensure that the Agency considers your comment on this draft guidance before it begins work on the final version of the guidance.

ADDRESSES: You may submit comments on any guidance at any time as follows:

Electronic Submissions

Submit electronic comments in the following way:

- *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to *https://www.regulations.gov* will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on *https://www.regulations.gov.*
- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see ''Written/Paper Submissions'' and ''Instructions'').

Written/Paper Submissions

Submit written/paper submissions as follows:

- *Mail/Hand Delivery/Courier (for written/paper submissions):* Dockets Management Staff (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.
- For written/paper comments submitted to the Dockets Management Staff, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in ''Instructions.''

Instructions: All submissions received must include the Docket No. FDA–2020–N–1790 for ''M7 Assessment and Control of DNA Reactive (Mutagenic) Impurities in Pharmaceuticals to Limit Potential Carcinogenic Risk—Questions and Answers.'' Received comments will be placed in the docket and, except for those submitted as ''Confidential Submissions,'' publicly viewable at *https://www.regulations.gov* or at the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday, 240–402–7500.

- Confidential Submissions—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states ''THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.'' The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on *https://www.regulations.gov.* Submit both copies to the Dockets Management Staff. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as ''confidential.'' Any information marked as ''confidential'' will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: *https://www.govinfo.gov/content/pkg/FR-2015-09-18/pdf/2015-23389.pdf.*

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to *https://www.regulations.gov* and insert the docket number, found in brackets in the heading of this document, into the ''Search'' box and follow the prompts and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852, 240–402–7500.

You may submit comments on any guidance at any time (see 21 CFR 10.115(g)(5)).

Submit written requests for single copies of this guidance to the Division of Drug Information, Center for Drug Evaluation and Research, Food and Drug Administration, 10001 New Hampshire Ave., Hillandale Building, 4th Floor, Silver Spring, MD 20993–0002, or the Office of Communication, Outreach and Development, Center for Biologics Evaluation and Research (CBER), Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 71, Rm. 3128, Silver Spring, MD 20993–0002. Send one self-addressed adhesive label to assist that office in processing your requests. The guidance may also be obtained by mail by calling CBER at 1–800–835–4709 or 240–402–8010. See the **SUPPLEMENTARY INFORMATION** section for electronic access to the guidance document.

FOR FURTHER INFORMATION CONTACT:

Regarding the guidance: Aisar Atrakchi, Center for Drug Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 22, Rm. 4118, Silver Spring, MD 20993–0002, 301–796–1036; or Stephen Ripley, Center for Biologics Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 71, Rm. 7301, Silver Spring, MD 20993–0002, 240–402–7911.

Regarding the ICH: Jill Adleberg, Center for Drug Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 51, Rm. 6364, Silver Spring, MD 20993–0002, 301–796–5259, *Jill.Adleberg@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION:

I. Background

FDA is announcing the availability of a draft guidance for industry entitled ''M7 Assessment and Control of DNA Reactive (Mutagenic) Impurities in Pharmaceuticals To Limit Potential Carcinogenic Risk—Questions and Answers.'' The draft guidance was prepared under the auspices of ICH. ICH has the mission of achieving greater regulatory harmonization worldwide to ensure that safe, effective, high-quality medicines are developed, registered, and maintained in the most resource-efficient manner.

By harmonizing the regulatory requirements in regions around the world, ICH guidelines have substantially reduced duplicative clinical studies, prevented unnecessary animal studies, standardized the reporting of important safety information, standardized marketing application submissions, and made many other improvements in the quality of global drug development and manufacturing and the products available to patients.

The six Founding Members of the ICH are FDA; the Pharmaceutical Research and Manufacturers of America; the European Commission; the European Federation of Pharmaceutical Industries Associations; the Japanese Ministry of Health, Labour, and Welfare; and the Japanese Pharmaceutical Manufacturers Association. The Standing Members of the ICH Association include Health Canada and Swissmedic. Additionally,

the Membership of ICH has expanded to include other regulatory authorities and industry associations from around the world (*https://www.ich.org/*).

ICH works by involving technical experts from both regulators and industry parties in detailed technical harmonization work and the application of a science-based approach to harmonization through a consensus-driven process that results in the development of ICH guidelines. The regulators around the world are committed to consistently adopting these consensus-based guidelines, realizing the benefits for patients and for industry.

As a Founding Regulatory Member of ICH, FDA plays a major role in the development of each of the ICH guidelines, which FDA then adopts and issues as guidance for industry. FDA's guidance documents do not establish legally enforceable responsibilities. Instead, they describe the Agency's current thinking on a topic and should be viewed only as recommendations, unless specific regulatory or statutory requirements are cited.

In June 2020, the ICH Assembly endorsed the draft guideline entitled ''M7 Assessment and Control of DNA Reactive (Mutagenic) Impurities in Pharmaceuticals To Limit Potential Carcinogenic Risk—Questions and Answers'' and agreed that the guideline should be made available for public comment. The draft guideline is the product of the Safety Expert Working Group of the ICH. Comments about this draft will be considered by FDA and the Safety Expert Working Group.

The draft Q&A guidance is intended to clarify, promote the convergence of, and improve the harmonization of the considerations for assessment and control of DNA reactive (mutagenic) impurities and of the information that should be provided when developing drugs, completing marketing authorization applications, and using drug master files. This is important because since the ICH M7 Guideline was finalized, the worldwide experience with implementation of the recommendations for DNA reactive (mutagenic) impurities has given rise to requests for clarification relating to the assessment and control of DNA reactive (mutagenic) impurities. To facilitate the implementation of the ICH M7 Guideline, the ICH M7 Implementation Working Group has developed a series of Q&As. The scope of this draft Q&A guidance follows that of the ICH M7 Guideline.

This draft guidance has been left in the original ICH format. The final guidance will be reformatted and edited to conform with FDA's good guidance practices regulation (21 CFR 10.115) and style before publication. The draft guidance, when finalized, will represent the current thinking of FDA on ''M7 Assessment and Control of DNA Reactive (Mutagenic) Impurities in Pharmaceuticals To Limit Potential Carcinogenic Risk—Questions and Answers.'' It does not establish any rights for any person and is not binding on FDA or the public. You can use an alternative approach if it satisfies the requirements of the applicable statutes and regulations.

II. Paperwork Reduction Act of 1995

FDA tentatively concludes that this draft guidance contains no collection of information. Therefore, clearance by the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501–3521) is not required.

However, this draft guidance refers to previously approved FDA collections of information. These collections of information are subject to review by OMB under the PRA. The collections of information in 21 CFR part 601 has been approved under OMB control number 0910–0338. The collections of information in 21 CFR parts 312 and 314 have been approved under OMB control numbers 0910–0014 and 0910–0001, and the collection of information under 21 CFR parts 210 and 211 have been approved under OMB control number 0910–0139.

III. Electronic Access

Persons with access to the internet may obtain the draft guidance at *https://www.regulations.gov, https://www.fda.gov/drugs/guidance-compliance-regulatory-information/guidances-drugs,* or *https://www.fda.gov/vaccines-blood-biologics/guidance-compliance-regulatory-information-biologics/biologics-guidances.*

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2013–D–1446]

Self-Monitoring Blood Glucose Test Systems for Over-the-Counter Use; Guidance for Industry and Food and Drug Administration Staff; Availability

AGENCY: Food and Drug Administration, Health and Human Services (HHS).

ACTION: Notice of availability.

SUMMARY: The Food and Drug Administration (FDA, we, or Agency) is announcing the availability of the final guidance entitled ''Self-Monitoring Blood Glucose Test Systems for Over-the-Counter Use.'' This guidance described studies and information that FDA recommends be used when submitting premarket notifications (510(k)s) for self-monitoring blood glucose test systems (SMBGs), which are for over-the-counter (OTC) home use by lay users. This guidance is not meant to address blood glucose monitoring test systems (BGMS) that are intended for prescription point-of-care use in professional healthcare settings (*e.g.,* hospitals, physician offices, long-term care facilities).

DATES: The announcement of the guidance is published in the **Federal Register** on September 29, 2020.

ADDRESSES: You may submit either electronic or written comments on Agency guidances at any time as follows:

Electronic Submissions

Submit electronic comments in the following way:

- *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to *https://www.regulations.gov* will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on *https://www.regulations.gov.*
- If you want to submit a comment with confidential information that you do not wish to be made available to the

public, submit the comment as a written/paper submission and in the manner detailed (see ''Written/Paper Submissions'' and ''Instructions'').

Written/Paper Submissions

Submit written/paper submissions as follows:

- *Mail/Hand Delivery/Courier (for written/paper submissions):* Dockets Management Staff (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.
- For written/paper comments submitted to the Dockets Management Staff, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in ''Instructions.''

Instructions: All submissions received must include the Docket No. FDA–2013–D–1446 for ''Self-Monitoring Blood Glucose Test Systems for Over-the-Counter Use.'' Received comments will be placed in the docket and, except for those submitted as ''Confidential Submissions,'' publicly viewable at *https://www.regulations.gov* or at the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday, 240–402–7500.

- Confidential Submissions—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states ''THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.'' The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on *https://www.regulations.gov.* Submit both copies to the Dockets Management Staff. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as ''confidential.'' Any information marked as ''confidential'' will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: *https://www.govinfo.gov/content/pkg/FR-2015-09-18/pdf/2015-23389.pdf.*

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to *https://www.regulations.gov* and insert the docket number, found in brackets in the heading of this document, into the ''Search'' box and follow the prompts and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852, 240–402–7500.

You may submit comments on any guidance at any time (see 21 CFR 10.115(g)(5)).

An electronic copy of the guidance document is available for download from the internet. See the **SUPPLEMENTARY INFORMATION** section for information on electronic access to the guidance. Submit written requests for a single hard copy of the guidance document entitled ''Self-Monitoring Blood Glucose Test Systems for Over-the-Counter Use'' to the Office of Policy, Guidance and Policy Development, Center for Devices and Radiological Health, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 66, Rm. 5431, Silver Spring, MD 20993–0002. Send one self-addressed adhesive label to assist that office in processing your request.

FOR FURTHER INFORMATION CONTACT: Leslie Landree, Center for Devices and Radiological Health, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 66, Rm. 3566, Silver Spring, MD 20993–0002, 301–796–6147.

SUPPLEMENTARY INFORMATION:

I. Background

On October 11, 2016 (81 FR 70120), FDA published a final guidance entitled, ''Self-Monitoring Blood Glucose Test Systems for Over-the-Counter Use.'' This guidance described studies and information that FDA recommends be used when submitting premarket notifications (510(k)s) for SMBGs, which are for home use by lay users.

On November 30, 2018, FDA published a notice of availability in the **Federal Register** (83 FR 61640) of a draft guidance that proposed revisions to the guidance. FDA proposed modifications based on feedback received from stakeholders and to better align with the evolving understanding and development of these types of devices.

FDA considered comments received on the draft guidance and we made revisions as appropriate in response to the comments, including a minor edit encouraging manufacturers to consider design features that will aid in user accessibility and a technical edit in hemoglobin testing concentration. This guidance replaces the existing final guidance of the same title issued on October 11, 2016.

This guidance is not meant to address BGMS that are intended for prescription point-of-care use in professional healthcare settings (*e.g.,* hospitals, physician offices, long-term care facilities). FDA addresses those device types in another guidance entitled, ''Blood Glucose Monitoring Test Systems for Prescription Point-of-Care Use.'' [1]

This guidance is being issued consistent with FDA's good guidance practices regulation (21 CFR 10.115). The guidance represents the current thinking of FDA on ''Self-Monitoring Blood Glucose Test Systems for Over-the-Counter Use.'' It does not establish any rights for any person and is not binding on FDA or the public. You can use an alternative approach if it satisfies the requirements of the applicable statutes and regulations.

II. Electronic Access

Persons interested in obtaining a copy of the guidance may do so by downloading an electronic copy from the internet. A search capability for all Center for Devices and Radiological Health guidance documents is available at *https://www.fda.gov/MedicalDevices/DeviceRegulationandGuidance/GuidanceDocuments/default.htm.* This guidance is also available at *https://www.regulations.gov.* Persons unable to download an electronic copy of ''Self-Monitoring Blood Glucose Test Systems for Over-the-Counter Use'' may send an email request to *CDRH-Guidance@fda.hhs.gov* to receive an electronic copy of the document. Please use the document number 1756 and title to identify the guidance you are requesting.

III. Paperwork Reduction Act of 1995

While this guidance contains no collection of information, it does refer to previously approved collections of information. Therefore, clearance by the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3521) is not required for this guidance. The collections of information in the following FDA guidance and regulations

[1] *https://www.fda.gov/regulatory-information/search-fda-guidance-documents/self-monitoring-blood-glucose-test-systems-over-counter-use-0.*

have been approved by OMB as listed in the following table:

21 CFR part or guidance	Topic	OMB control No.
807, subpart E	Premarket notification	0910–0120
''Requests for Feedback on Medical Device Submissions: The Pre-Submission Program and Meetings with Food and Drug Administration Staff''.	Q-Submissions	0910–0756
800, 801, and 809	Medical Device Labeling Regulations	0910–0485
820	Current Good Manufacturing Practice (CGMP); Quality System (QS) Regulation.	0910–0073

Dated: September 23, 2020.

Lauren K. Roth,

Associate Commissioner for Policy.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2018–N–0410]

Peripheral and Central Nervous System Drugs Advisory Committee; Notice of Meeting; Establishment of a Public Docket; Request for Comments

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice; establishment of a public docket; request for comments.

SUMMARY: The Food and Drug Administration (FDA) announces a forthcoming public advisory committee meeting of the Peripheral and Central Nervous System Drugs Advisory Committee. The general function of the committee is to provide advice and recommendations to FDA on regulatory issues. The meeting will be open to the public. FDA is establishing a docket for public comment on this document.

DATES: The meeting will take place virtually on November 6, 2020, from 10 a.m. Eastern Time to 4 p.m. Eastern Time.

ADDRESSES: Please note that due to the impact of this COVID–19 pandemic, all meeting participants will be joining this advisory committee meeting via an online teleconferencing platform. Answers to commonly asked questions about FDA advisory committee meetings may be accessed at: *https://www.fda.gov/AdvisoryCommittees/AboutAdvisoryCommittees/ucm408555.htm.*

FDA is establishing a docket for public comment on this meeting. The docket number is FDA–2018 N–0410. The docket will close on November 5, 2020. Submit either electronic or written comments on this public meeting by November 5, 2020. Please note that late, untimely filed comments will not be considered. Electronic comments must be submitted on or before November 5, 2020. The *https://www.regulations.gov* electronic filing system will accept comments until 11:59 p.m. Eastern Time at the end of November 5, 2020. Comments received by mail/hand delivery/courier (for written/paper submissions) will be considered timely if they are postmarked or the delivery service acceptance receipt is on or before that date.

Comments received on or before October 23, 2020, will be provided to the committee. Comments received after that date will be taken into consideration by FDA. In the event that the meeting is cancelled, FDA will continue to evaluate any relevant applications or information, and consider any comments submitted to the docket, as appropriate.

You may submit comments as follows:

Electronic Submissions

Submit electronic comments in the following way:

- *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to *https://www.regulations.gov* will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on *https://www.regulations.gov.*
- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see ''Written/Paper Submissions'' and ''Instructions'').

Written/Paper Submissions

Submit written/paper submissions as follows:

- *Mail/Hand Delivery/Courier (for written/paper submissions):* Dockets Management Staff (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.
- For written/paper comments submitted to the Dockets Management Staff, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in ''Instructions.''

Instructions: All submissions received must include the Docket No. FDA–2018–N–0410 for ''Peripheral and Central Nervous System Drugs Advisory Committee; Notice of Meeting; Establishment of a Public Docket; Request for Comments.'' Received comments, those filed in a timely manner (see **ADDRESSES**), will be placed in the docket and, except for those submitted as ''Confidential Submissions,'' publicly viewable at *https://www.regulations.gov* or at the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday. Please call 240–402–7500 ahead of the meeting time to verify access.

- Confidential Submissions—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states ''THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.'' FDA will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public

viewing and posted on *https://www.regulations.gov.* Submit both copies to the Dockets Management Staff. If you do not wish your name and contact information be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify the information as ''confidential.'' Any information marked as ''confidential'' will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: *https://www.govinfo.gov/content/pkg/FR-2015-09-18/pdf/2015-23389.pdf.*

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to *https://www.regulations.gov* and insert the docket number, found in brackets in the heading of this document, into the ''Search'' box and follow the prompts and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852, 240–402–7500.

FOR FURTHER INFORMATION CONTACT: LaToya Bonner, Center for Drug Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 31, Rm. 2417, Silver Spring, MD 20993–0002, 301–796–9001, Fax: 301–847–8533, email: *PCNS@fda.hhs.gov,* or FDA Advisory Committee Information Line, 1–800–741–8138 (301–443–0572 in the Washington, DC area). A notice in the **Federal Register** about last minute modifications that impact a previously announced advisory committee meeting cannot always be published quickly enough to provide timely notice. Therefore, you should always check the FDA's website at *https://www.fda.gov/AdvisoryCommittees/default.htm* and scroll down to the appropriate advisory committee meeting link, or call the advisory committee information line to learn about possible modifications before coming to the meeting.

SUPPLEMENTARY INFORMATION:

Agenda: The meeting presentations will be heard, viewed, captioned, and recorded through an online teleconferencing platform. On November 6, 2020, the committee will discuss biologics license application (BLA) 761178, for aducanumab solution for intravenous infusion, submitted by Biogen Inc., for the treatment of Alzheimer's disease.

FDA intends to make the meeting's background material and pre-recorded presentations available to the public no later than 2 business days before the meeting. The pre-recorded presentations will be viewed by the committee prior to the meeting and will not be replayed on meeting day. If FDA is unable to post the background material and/or pre-recorded presentations on its website prior to the meeting, the background material and/or pre-recorded presentations will be made publicly available on FDA's website at the time of the advisory committee meeting. The meeting will include brief summaries of the pre-recorded presentations. Background material and the link to the online teleconference meeting room will be available at *https://www.fda.gov/AdvisoryCommittees/Calendar/default.htm.* Scroll down to the appropriate advisory committee meeting link.

Procedure: Interested persons may present data, information, or views, orally or in writing, on issues pending before the committee. All electronic and written submissions submitted to the Docket (see **ADDRESSES**) on or before October 23, 2020, will be provided to the committee. Oral presentations from the public will be scheduled between approximately 1 p.m. and 2 p.m. Those individuals interested in making formal oral presentations should notify the contact person and submit a brief statement of the general nature of the evidence or arguments they wish to present, the names and addresses of proposed participants, and an indication of the approximate time requested to make their presentation on or before October 15, 2020. Time allotted for each presentation may be limited. If the number of registrants requesting to speak is greater than can be reasonably accommodated during the scheduled open public hearing session, FDA may conduct a lottery to determine the speakers for the scheduled open public hearing session. The contact person will notify interested persons regarding their request to speak by October 16, 2020.

For press inquiries, please contact the Office of Media Affairs at *fdaoma@fda.hhs.gov* or 301–796–4540.

FDA welcomes the attendance of the public at its advisory committee meetings and will make every effort to accommodate persons with disabilities. If you require accommodations due to a disability, please contact LaToya Bonner (see **FOR FURTHER INFORMATION CONTACT**) at least 7 days in advance of the meeting.

FDA is committed to the orderly conduct of its advisory committee meetings. Please visit our website at *https://www.fda.gov/AdvisoryCommittees/AboutAdvisoryCommittees/ucm111462.htm* for procedures on public conduct during advisory committee meetings.

Notice of this meeting is given under the Federal Advisory Committee Act (5 U.S.C. app. 2).

Dated: September 22, 2020.

Lauren K. Roth,

Associate Commissioner for Policy.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2018–D–4726]

Abbreviated New Drug Application Submissions—Amendments and Requests for Final Approval To Tentatively Approved Abbreviated New Drug Applications; Guidance for Industry; Availability

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice of availability.

SUMMARY: The Food and Drug Administration (FDA or Agency) is announcing the availability of a final guidance for industry entitled ''ANDA Submissions—Amendments and Requests for Final Approval to Tentatively Approved ANDAs.'' This guidance is intended to assist applicants in preparing and submitting amendments to tentatively approved abbreviated new drug applications (ANDAs), including requests for final approval. This guidance provides recommendations on the timing and content of amendments to tentatively approved ANDAs to facilitate submission in a timely fashion to enable final approval on the earliest date on which the ANDA may lawfully be approved based on patent and/or exclusivity protections (earliest lawful approval date). This guidance finalizes the draft guidance of the same title issued on February 1, 2019.

DATES: The announcement of the guidance is published in the **Federal Register** on September 29, 2020.

ADDRESSES: You may submit either electronic or written comments on Agency guidances at any time as follows:

Electronic Submissions

Submit electronic comments in the following way:

- *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the

instructions for submitting comments. Comments submitted electronically, including attachments, to *https://www.regulations.gov* will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on *https://www.regulations.gov.*

• If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see ''Written/Paper Submissions'' and ''Instructions'').

Written/Paper Submissions

Submit written/paper submissions as follows:

• *Mail/Hand Delivery/Courier (for written/paper submissions):* Dockets Management Staff (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

• For written/paper comments submitted to the Dockets Management Staff, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in ''Instructions.''

Instructions: All submissions received must include the Docket No. FDA–2018–D–4726 for ''ANDA Submissions—Amendments and Requests for Final Approval to Tentatively Approved ANDAs.'' Received comments will be placed in the docket and, except for those submitted as ''Confidential Submissions,'' publicly viewable at *https://www.regulations.gov* or at the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday, 240–402–7500.

Confidential Submissions—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states ''THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.'' The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on *https://www.regulations.gov.* Submit both copies to the Dockets Management Staff. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as ''confidential.'' Any information marked as ''confidential'' will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: *https://www.govinfo.gov/content/pkg/FR-2015-09-18/pdf/2015-23389.pdf.*

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to *https://www.regulations.gov* and insert the docket number, found in brackets in the heading of this document, into the ''Search'' box and follow the prompts and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852, 240–402–7500.

You may submit comments on any guidance at any time (see 21 CFR 10.115(g)(5)).

Submit written requests for single copies of this guidance to the Division of Drug Information, Center for Drug Evaluation and Research, Food and Drug Administration, 10001 New Hampshire Ave., Hillandale Building, 4th Floor, Silver Spring, MD 20993–0002. Send one self-addressed adhesive label to assist that office in processing your requests. See the **SUPPLEMENTARY INFORMATION** section for electronic access to the guidance document.

FOR FURTHER INFORMATION CONTACT: Elizabeth Giaquinto Friedman, Center for Drug Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 75, Rm. 1670, Silver Spring, MD 20993–0002, 240–402–7930, *elizabeth.giaquinto@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION:

I. Background

FDA is announcing the availability of a guidance for industry entitled ''ANDA Submissions—Amendments and Requests for Final Approval to Tentatively Approved ANDAs.'' This guidance is intended to assist applicants in preparing and submitting amendments to tentatively approved ANDAs, including requests for final approval. This guidance provides recommendations on the timing and content of amendments to tentatively approved ANDAs to facilitate submission in a timely fashion to enable final approval on the earliest date on which the ANDA may lawfully be approved based on patent and/or exclusivity protections (earliest lawful approval date).

If an ANDA meets the substantive requirements for approval but cannot be finally approved by FDA because of unexpired patents or exclusivities, FDA will tentatively approve the ANDA. Under section 505 of the Federal Food, Drug, and Cosmetic Act) (21 U.S.C. 355), a drug product that is the subject of a tentatively approved ANDA is not an approved drug and does not have an effective approval until FDA issues an approval after any necessary additional review of the application.

An ANDA applicant may submit amendments to a tentatively approved application that propose changes to the application, request final approval, or propose changes and request final approval. As described in the guidance, an amendment proposing changes to the application may delay FDA's final approval of the ANDA, depending on the timing of submission of the amendment and the nature of the changes proposed and any related deficiencies identified upon review. The guidance is intended to assist applicants in preparing an amendment for submission in a timely fashion to enable final approval on the earliest lawful approval date. In particular, applicants that wish to request final approval should determine whether changes are necessary before requesting this final approval, review any changes that have been made to their application since the tentative approval was granted, and consider the possible review goal dates that may be assigned to the request for final approval to request final approval in a timely fashion.

In the **Federal Register** of February 1, 2019 (84 FR 1164), FDA announced the availability of the draft guidance of the same title dated January 2019. The draft guidance was posted on FDA's website on January 16, 2019, during the lapse in appropriations to provide advance notice of the document to the public. The comment period opened upon publication in the **Federal Register**. FDA received five comments on the draft guidance and those comments were considered as the guidance was finalized. The final guidance contains minor clarifications to the draft guidance. The guidance announced in

this notice finalizes the draft guidance dated January 2019.

This guidance is being issued consistent with FDA's good guidance practices regulation (21 CFR 10.115). The guidance represents the current thinking of FDA on ''ANDA Submissions—Amendments and Requests for Final Approval to Tentatively Approved ANDAs.'' It does not establish any rights for any person and is not binding on FDA or the public. You can use an alternative approach if it satisfies the requirements of the applicable statutes and regulations.

II. Electronic Access

Persons with access to the internet may obtain the guidance at either *https://www.fda.gov/drugs/guidance-compliance-regulatory-information/guidances-drugs* or *https://www.regulations.gov.*

Dated: September 22, 2020.

Lauren K. Roth,

Associate Commissioner for Policy.

[FR Doc. 2020–21470 Filed 9–28–20; 8:45 am]

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Health Resources and Services Administration

Notice To Announce Supplemental Award To Support Training and Technical Assistance To Address Clinical Workforce Development

AGENCY: Health Resources and Services Administration (HRSA), Department of Health and Human Services.

ACTION: Announcing supplemental award to support training and technical assistance to address clinical workforce development.

SUMMARY: HRSA provided supplemental funding to Community Health Center, Inc. (CHCI), a currently-funded National Training and Technical Assistance Partner (NTTAP) award recipient. CHCI will expand training and technical assistance (T/TA) to health centers and HRSA-funded State and Regional Primary Care Associations (PCAs) to support implementation of a tool developed for health centers to assess and improve their readiness to engage in health professional training programs and address national health care workforce shortages.

FOR FURTHER INFORMATION CONTACT: Tracey Orloff, Director, HRSA, Strategic Partnerships Division, Office of Quality Improvement, at *TOrloff@hrsa.gov* or (301) 443–3197.

SUPPLEMENTARY INFORMATION:

Recipient of the Award: Community Health Center, Inc.

Amount of Non-Competitive Award: $320,000.

Period of Supplemental Funding: August 2020 to June 2022.

CFDA Number: 93.129.

Authority: Section 330(l) of the Public Health Service Act, 42 U.S.C. 254b(l).

Justification: The National Center for Health Workforce Analysis estimates a shortage of over 23,000 primary care physician positions by 2025. Residency programs are needed for health centers to address health care workforce shortages that limit their ability to deliver comprehensive, culturally competent, high quality primary health care services.

CHCI created the Readiness to Train Assessment Tool (RTAT™) for health centers to assess their own readiness to engage in health professional training programs and use the results to manage their workforce shortages. Supplemental funding is necessary to ensure timely implementation of the RTAT™ in order to complete the data collection, analysis, and results dissemination needed for health centers to address critical workforce shortages. As the organization that developed the RTAT™, and the only NTTAP currently funded to provide enhanced T/TA on clinical workforce development to health centers, CHCI has the necessary expertise, organizational systems, and structure in place to immediately expand T/TA efforts in this area.

Thomas J. Engels,

Administrator.

Meeting of the CDC/HRSA Advisory Committee on HIV, Viral Hepatitis and STD Prevention and Treatment

AGENCY: Health Resources and Services Administration (HRSA), Department of Health and Human Services (HHS).

ACTION: Notice.

SUMMARY: In accordance with the Federal Advisory Committee Act, this notice announces that the Centers for Disease Control and Prevention (CDC)/HRSA Advisory Committee on HIV, Viral Hepatitis and STD Prevention and Treatment (CHAC) has scheduled a public meeting.

DATES: November 5, 2020, 2:00 p.m.–5:15 p.m. Eastern Time (ET) and November 6, 2020, 2:00 p.m.–5:15 p.m. ET. The deadline for online registration is 12:00 p.m. ET on November 2, 2020.

ADDRESSES: This meeting will be held virtually. Please visit the meeting information page to register: *https://chacfall2020.org.*

FOR FURTHER INFORMATION CONTACT: Theresa Jumento, Senior Public Health Advisor, HIV/AIDS Bureau, HRSA, 5600 Fishers Lane, Rockville, Maryland 20857; 301–443–5807; or *CHACAdvisoryComm@hrsa.gov.*

SUPPLEMENTARY INFORMATION: CHAC was established under section 222 of the Public Health Service Act, [42 U.S.C. 217a], as amended.

The purpose of CHAC is to advise the Secretary, HHS; the Director, CDC; and the Administrator, HRSA regarding objectives, strategies, policies, and priorities for HIV, viral hepatitis, and other STDs; prevention and treatment efforts including surveillance of HIV infection, viral hepatitis, and other STDs, and related behaviors; epidemiologic, behavioral, health services, and laboratory research on HIV, viral hepatitis, and other STDs; identification of policy issues related to HIV/viral hepatitis/STD professional eduction, patient healthcare delivery, and prevention services; agency policies about prevention of HIV, viral hepatitis and other STDs; treatment, healthcare delivery, and research and training; strategic issues influencing the ability of CDC and HRSA to fulfill their missions of providing prevention and treatment services; programmatic efforts to prevent and treat HIV, viral hepatitis, and other STDs; and support to the agencies in their developoment of responses to emerging health needs related to HIV, viral hepatitis, and other STDs.

During the November 5–6, 2020, meeting, CHAC will discuss community engagement activities related to the President's initiative on ''Ending the HIV Epidemic: A Plan for America'' and the COVID–19 pandemic. CHAC will also discuss the needs and challenges of HIV prevention and care for women. Agenda items are subject to change as priorities dictate. Refer to the CHAC meeting information page for any updated information concerning the meeting.

While this meeting is open to the public, advance registration is required. Members of the public will have the opportunity to provide comments. Requests to offer oral comments will be accepted in the order they are received and may be limited as time allows.

Public participants may also submit written statements as further described below. To submit written comments or to request time for an oral comment at the meeting, please register online by 12:00 p.m. ET on October 28, 2020.

Information about CHAC can be found on the CHAC website at *https://www.cdc.gov/maso/facm/facmCHACHSPT.html.* Visit the meeting information page for additional details *https://chacfall2020.org.* Individuals who plan to attend and need special assistance or another reasonable accommodation should notify Theresa Jumento at the email address and phone number listed above at least 10 business days prior to the meeting.

Maria G. Button,

Director, Executive Secretariat.

AGENCY: U.S. Citizenship and Immigration Services, Department of Homeland Security.

ACTION: 60-Day notice.

SUMMARY: The Department of Homeland Security (DHS), U.S. Citizenship and Immigration Services (USCIS) invites the general public and other Federal agencies to comment upon this proposed extension of a currently approved collection of information. In accordance with the Paperwork Reduction Act (PRA) of 1995, the information collection notice is published in the **Federal Register** to obtain comments regarding the nature of the information collection, the categories of respondents, the estimated burden (*i.e.* the time, effort, and resources used by the respondents to respond), the estimated cost to the respondent, and the actual information collection instruments.

DATES: Comments are encouraged and will be accepted for 60 days until November 30, 2020.

ADDRESSES: All submissions received must include the OMB Control Number 1615–0044 in the body of the letter, the agency name and Docket ID USCIS–2007–0012. Submit comments via the Federal eRulemaking Portal website at *https://www.regulations.gov* under e-Docket ID number USCIS–2007–0012. USCIS is limiting communications for this Notice as a result of USCIS' COVID–19 response actions.

FOR FURTHER INFORMATION CONTACT: USCIS, Office of Policy and Strategy, Regulatory Coordination Division, Samantha Deshommes, Chief, telephone number 202–272–8377 (This is not a toll-free number. Comments are not accepted via telephone message). Please note contact information provided here is solely for questions regarding this notice. It is not for individual case status inquiries. Applicants seeking information about the status of their individual cases can check Case Status Online, available at the USCIS website at *https://www.uscis.gov,* or call the USCIS Contact Center at 800–375–5283 (TTY 800–767–1833).

SUPPLEMENTARY INFORMATION:

Comments

You may access the information collection instrument with instructions or additional information by visiting the Federal eRulemaking Portal site at: *https://www.regulations.gov* and entering USCIS–2007–0012 in the search box. All submissions will be posted, without change, to the Federal eRulemaking Portal at *https://www.regulations.gov,* and will include any personal information you provide. Therefore, submitting this information makes it public. You may wish to consider limiting the amount of personal information that you provide in any voluntary submission you make to DHS. DHS may withhold information provided in comments from public viewing that it determines may impact the privacy of an individual or is offensive. For additional information, please read the Privacy Act notice that is available via the link in the footer of *https://www.regulations.gov.*

Written comments and suggestions from the public and affected agencies should address one or more of the following four points:

(1) Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(2) Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

(3) Enhance the quality, utility, and clarity of the information to be collected; and

(4) Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses.

Overview of This Information Collection

(1) *Type of Information Collection:* Extension, Without Change, of a Currently Approved Collection.

(2) *Title of the Form/Collection:* Application for Action on an Approved Application or Petition.

(3) *Agency form number, if any, and the applicable component of the DHS sponsoring the collection:* I–824; USCIS.

(4) *Affected public who will be asked or required to respond, as well as a brief abstract: Primary:* Individuals or households. This information collection is used to request a duplicate approval notice, as well as to notify and to verify the U.S. Consulate that a petition has been approved or that a person has been adjusted to permanent resident status.

(5) *An estimate of the total number of respondents and the amount of time estimated for an average respondent to respond:* The estimated total number of respondents for the information collection I–824 is 10,571 and the estimated hour burden per response is 0.42 hour.

(6) *An estimate of the total public burden (in hours) associated with the collection:* The total estimated annual hour burden associated with this collection is 4,440 hours.

(7) *An estimate of the total public burden (in cost) associated with the collection:* The estimated total annual cost burden associated with this collection of information is $1,361,016.

Dated: September 22, 2020.

Samantha L Deshommes,

Chief, Regulatory Coordination Division, Office of Policy and Strategy, U.S. Citizenship and Immigration Services, Department of Homeland Security.

SUPPLEMENTARY INFORMATION:

Comments

You may access the information collection instrument with instructions or additional information by visiting the Federal eRulemaking Portal site at: *https://www.regulations.gov* and entering USCIS–2006–0072 in the search box. All submissions will be posted, without change, to the Federal eRulemaking Portal at *https://www.regulations.gov,* and will include any personal information you provide. Therefore, submitting this information makes it public. You may wish to consider limiting the amount of personal information that you provide in any voluntary submission you make to DHS. DHS may withhold information provided in comments from public viewing that it determines may impact the privacy of an individual or is offensive. For additional information, please read the Privacy Act notice that is available via the link in the footer of *https://www.regulations.gov.*

USCIS is changing the title of this information collection from ''Affidavit of Support'' to ''Declaration of Financial Support'' to avoid potential association with Form I–864, Affidavit of Support Under Section 213A of the INA (OMB control Number 1615–0075).

Written comments and suggestions from the public and affected agencies should address one or more of the following four points:

(1) Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(2) Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

(3) Enhance the quality, utility, and clarity of the information to be collected; and

(4) Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses.

Overview of This Information Collection

(1) *Type of Information Collection:* Revision of a Currently Approved Collection.

(2) *Title of the Form/Collection:* Declaration of Financial Support.

(3) *Agency form number, if any, and the applicable component of the DHS sponsoring the collection:* I–134; USCIS.

(4) *Affected public who will be asked or required to respond, as well as a brief abstract: Primary:* Individuals or households. U.S. Citizenship and Immigration Services (USCIS) and consular officers of the Department of State (DOS) use Form I–134 to determine whether, at the time of the beneficiary's application, petition, or request for certain immigration benefits, an alien has sufficient financial support to pay for expenses for the duration of their temporary stay in the United States.

(5) *An estimate of the total number of respondents and the amount of time estimated for an average respondent to respond:* The estimated total number of respondents for the information collection I–134 is 2,500 and the estimated hour burden per response is 2 hours.

(6) *An estimate of the total public burden (in hours) associated with the collection:* The total estimated annual hour burden associated with this collection is 5,000 hours.

(7) *An estimate of the total public burden (in cost) associated with the collection:* The estimated total annual cost burden associated with this collection of information is $10,625.

Dated: September 22, 2020.

SUPPLEMENTARY INFORMATION:

Comments

The information collection notice was previously published in the **Federal Register** on June 18, 2020, at 85 FR 36875, allowing for a 60-day public comment period. USCIS did receive 1 comment in connection with the 60-day notice.

You may access the information collection instrument with instructions, or additional information by visiting the Federal eRulemaking Portal site at: *http://www.regulations.gov* and enter USCIS–2011–0001 in the search box. The comments submitted to USCIS via this method are visible to the Office of Management and Budget and comply with the requirements of 5 CFR 1320.12(c). All submissions will be posted, without change, to the Federal eRulemaking Portal at *http://www.regulations.gov,* and will include any personal information you provide. Therefore, submitting this information makes it public. You may wish to consider limiting the amount of personal information that you provide in any voluntary submission you make to DHS. DHS may withhold information provided in comments from public viewing that it determines may impact the privacy of an individual or is offensive. For additional information, please read the Privacy Act notice that is available via the link in the footer of *http://www.regulations.gov.*

Written comments and suggestions from the public and affected agencies should address one or more of the following four points:

(1) Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(2) Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

(3) Enhance the quality, utility, and clarity of the information to be collected; and

(4) Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses.

Overview of This Information Collection

(1) *Type of Information Collection Request:* Revision of a Currently Approved Collection.

(2) *Title of the Form/Collection:* Free Training for Civics and Citizenship of Adults; Civics and Citizenship Toolkit.

(3) *Agency form number, if any, and the applicable component of the DHS sponsoring the collection:* G–1190, G–1515; USCIS.

(4) *Affected public who will be asked or required to respond, as well as a brief abstract: Primary:* Individuals or households. This information is necessary to register for civics and citizenship of adults training and to obtain a civics and citizenship toolkit.

(5) *An estimate of the total number of respondents and the amount of time estimated for an average respondent to respond:* The estimated total number of respondents for the information collection Form G–1190 is 2,500 and the estimated hour burden per response is 0.083 hours. The estimated total number of respondents for the information collection Form G–1515 is 1,200 and the estimated hour burden per response is responses is 0.166 hours.

(6) *An estimate of the total public burden (in hours) associated with the collection:* The total estimated annual hour burden associated with this collection is 407 hours.

(7) *An estimate of the total public burden (in cost) associated with the collection:* The estimated total annual cost burden associated with this collection of information is $0. The registration occurs electronically which eliminates any cost for postage, and no other costs are incurred by the respondent.

BILLING CODE 9111–97–P

DEPARTMENT OF THE INTERIOR

Fish and Wildlife Service

[FWS–R4–ES–2020–N129; FXES11140400000–201–FF04E00000]

Endangered Species; Recovery Permit Applications

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice of receipt of permit applications; request for comments.

SUMMARY: We, the U.S. Fish and Wildlife Service, have received applications for permits to conduct activities intended to enhance the propagation or survival of endangered species under the Endangered Species Act of 1973, as amended. We invite the public and local, State, Tribal, and Federal agencies to comment on these applications. Before issuing any of the requested permits, we will take into consideration any information that we receive during the public comment period.

DATES: We must receive written data or comments on the applications by October 29, 2020.

ADDRESSES:

Reviewing Documents: Documents and other information submitted with the applications are available for review, subject to the requirements of the Privacy Act and Freedom of Information Act. Submit a request for a copy of such documents to Karen Marlowe (see **FOR FURTHER INFORMATION CONTACT**).

Submitting Comments: If you wish to comment, you may submit comments by one of the following methods:

- *U.S. mail:* U.S. Fish and Wildlife Service Regional Office, Ecological Services, 1875 Century Boulevard, Atlanta, GA 30345 (Attn: Karen Marlowe, Permit Coordinator).
- *Email: permitsR4ES@fws.gov.* Please include your name and return address in your email message. If you do not receive a confirmation from the U.S. Fish and Wildlife Service that we have received your email message, contact us directly at the telephone number listed in **FOR FURTHER INFORMATION CONTACT**.

FOR FURTHER INFORMATION CONTACT: Karen Marlowe, Permit Coordinator, 404–679–7097 (telephone), *karen_marlowe@fws.gov* (email), or 404–679–7081 (fax). Individuals who are hearing or speech impaired may call the Federal Relay Service at 1–800–877–8339 for TTY assistance.

SUPPLEMENTARY INFORMATION: We invite review and comment from local, State, and Federal agencies and the public on applications we have received for permits to conduct certain activities with endangered and threatened species under section 10(a)(1)(A) of the Endangered Species Act of 1973, as amended (ESA; 16 U.S.C. 1531 *et seq.*), and our regulations in the Code of Federal Regulations (CFR) at 50 CFR part 17. With some exceptions, the ESA prohibits activities that constitute take of listed species unless a Federal permit is issued that allows such activities. The ESA's definition of ''take'' includes hunting, shooting, harming, wounding, or killing, and also such activities as pursuing, harassing, trapping, capturing, or collecting.

A recovery permit issued by us under section 10(a)(1)(A) of the ESA authorizes the permittee to conduct activities with endangered or threatened species for scientific purposes that promote recovery or for enhancement of propagation or survival of the species. These activities often include such prohibited actions as capture and collection. Our regulations implementing section 10(a)(1)(A) for these permits are found at 50 CFR 17.22 for endangered wildlife species, 50 CFR 17.32 for threatened wildlife species, 50 CFR 17.62 for endangered plant species, and 50 CFR 17.72 for threatened plant species.

Permit Applications Available for Review and Comment

Proposed activities in the following permit requests are for the recovery and enhancement of propagation or survival of the species in the wild. The ESA requires that we invite public comment before issuing these permits. Accordingly, we invite local, State, Tribal, and Federal agencies and the public to submit written data, views, or arguments with respect to these applications. The comments and recommendations that will be most useful and likely to influence agency decisions are those supported by quantitative information or studies.

Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

DEPARTMENT OF THE INTERIOR

Geological Survey

[GX20EE000101100]

Public Meeting of the National Geospatial Advisory Committee

AGENCY: U.S. Geological Survey, Interior.

ACTION: Notice of public webinar meeting.

SUMMARY: In accordance with the Federal Advisory Committee Act of 1972, the U.S. Geological Survey (USGS) is publishing this notice to announce that a Federal Advisory Committee meeting of the National Geospatial Advisory Committee (NGAC) will take place.

DATES: The webinar meeting will be held on Tuesday, October 27, 2020 from 1:00 p.m. to 5:00 p.m., and on Wednesday, October 28, 2020 from 1:00 p.m. to 5:00 p.m. (Eastern Daylight Time).

ADDRESSES: The meeting will be held via webinar and teleconference. Send your comments to Mr. James Sayer, Group Federal Officer by email to *gs-faca-mail@usgs.gov.*

FOR FURTHER INFORMATION CONTACT: Mr. John Mahoney, Federal Geographic Data Committee, U.S. Geological Survey, 909 First Avenue, Suite 800, Seattle, WA 98104; by email at *jmahoney@usgs.gov;* or by telephone at (206) 220–4621.

SUPPLEMENTARY INFORMATION: This meeting is being held under the provisions of the Federal Advisory Committee Act of 1972 (5 U.S.C., Appendix 2), the Government in the Sunshine Act of 1976 (5 U.S.C. 552B, as amended), and 41 CFR 102–3.140 and 102–3.150.

Purpose of the Meeting: The NGAC provides advice and recommendations related to management of Federal and national geospatial programs, the development of the National Spatial Data Infrastructure, and the implementation of the Geospatial Data Act of 2018 and Office of Management

and Budget Circular A–16. The NGAC reviews and comments on geospatial policy and management issues and provides a forum to convey views representative of non-federal stakeholders in the geospatial community. The NGAC meeting is one of the primary ways that the FGDC collaborates with its broad network of partners. Additional information about the NGAC meeting is available at: *www.fgdc.gov/ngac.*

Agenda Topics

—FGDC Update
—Geospatial Data Act Implementation
—National Spatial Data Infrastructure Strategic Plan
—Landsat Advisory Group
—NGAC Operations
—Public-Private Partnerships
—Public Comments

Meeting Accessibility/Special Accommodations: The webinar meeting is open to the public and will take place from 1:00 p.m. to 5:00 p.m. on October 27 and from 1:00 p.m. to 5:00 p.m. on October 28. Members of the public wishing to attend the meeting should contact Mr. John Mahoney by email at *jmahoney@usgs.gov* to register. Webinar/conference line instructions will be provided to registered attendees prior to the meeting. Individuals requiring special accommodations to access the public meeting should contact Mr. John Mahoney at the email stated above or by telephone at (206) 220–4621 at least five (5) business days prior to the meeting so that appropriate arrangements can be made.

Public Disclosure of Comments: There will be an opportunity for public comment during the meeting. Depending on the number of people who wish to speak and the time available, the time for individual comments may be limited. Written comments may also be sent to the Committee for consideration. To allow for full consideration of information by the Committee members, written comments must be provided to John Mahoney, Federal Geographic Data Committee, U.S. Geological Survey, 909 First Avenue, Seattle, WA 98104; by email at *jmahoney@usgs.gov;* or by telephone at (206) 220–4621, at least three (3) business days prior to the meeting. Any written comments received will be provided to the committee members before the meeting.

Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you may ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

(Authority: 5 U.S.C. Appendix 2)

Kenneth M. Shaffer,

Deputy Executive Director, Federal Geographic Data Committee.

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

[LLNM954000.L14400000.BJ0000.BX0000]

Notice of Filing of Plats of Survey; New Mexico; Oklahoma

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of official filing.

SUMMARY: The plats of survey of the following described land are scheduled to be officially filed 30 days after the date of this publication in the Bureau of Land Management (BLM), New Mexico Office, Santa Fe, New Mexico. The surveys announced in this notice are necessary for the management of lands administered by the agency indicated.

ADDRESSES: These plats will be available for inspection in the New Mexico Office, Bureau of Land Management, 301 Dinosaur Trail, Santa Fe, New Mexico 85004–4427. Protests of a survey should be sent to the New Mexico Director at the above address.

FOR FURTHER INFORMATION CONTACT: Michael J. Purtee, Chief Cadastral Surveyor; (505) 761–8903; *mpurtee@blm.gov.* Persons who use a telecommunications device for the deaf (TDD) may call the Federal Relay Service (FRS) at 1–800–877–8339 to contact the above individual during normal business hours. The FRS is available 24 hours a day, 7 days a week, to leave a message or question with the above individual. You will receive a reply during normal business hours.

SUPPLEMENTARY INFORMATION:

New Mexico Principal Meridian, New Mexico

The plat, representing the corrective resurvey, dependent resurvey, and metes-and-bounds survey of a tract of land within Township 10 South, Range 14 East, accepted August 13, 2020, for Group 1204, New Mexico.

This plat was prepared at the request of the Bureau of Land Management, Roswell, NM Field Office.

Indian Meridian, Oklahoma

The plat, representing the dependent resurvey and survey of a tract of land in Township 16 North, Range 15 West, accepted July 8, 2020, for Group 241, Oklahoma.

This plat was prepared at the request of the Concho Agency, Southern Plains Region.

The supplemental plat, within Township 10 North, Range 27 East, section 4, accepted July 8, 2020, for Group 224, Oklahoma.

The supplemental plat, within Township 10 North, Range 27 East, section 5, accepted July 8, 2020, for Group 224, Oklahoma.

The supplemental plat, in two sheets, within Township 10 North, Range 27 East, section 19, accepted August 13, 2020, for Group 223, Oklahoma.

The supplemental plat, within Township 11 North, Range 27 East, section 33, accepted July 8, 2020, for Group 224, Oklahoma.

These supplemental plats were prepared at the request of the Arkansas Riverbed Authority.

A person or party who wishes to protest against any of these surveys must file a written notice of protest within 30 calendar days from the date of this publication with the New Mexico Director, Bureau of Land Management, stating that they wish to protest.

A statement of reasons for a protest may be filed with the notice of protest to the State Director, or the statement of reasons must be filed with the State Director within 30 days after the protest is filed. Before including your address, or other personal information in your protest, please be aware that your entire protest, including your personal identifying information, may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Authority: 43 U.S.C. Chap. 3.

DEPARTMENT OF THE INTERIOR

Bureau of Reclamation

[RR04084000, XXXR4081X1, RN.20350010.REG0000]

Colorado River Basin Salinity Control Advisory Council Notice of Public Meeting

AGENCY: Bureau of Reclamation, Interior.

ACTION: Notice of public meeting.

SUMMARY: The Bureau of Reclamation is publishing this notice to announce that a Federal Advisory Committee meeting of the Colorado River Basin Salinity Control Council (Council) will take place.

DATES: The Council will convene on Wednesday, October 28, 2020, at 1:00 p.m. Mountain Standard Time and adjourn at approximately 4:00 p.m. The Council will reconvene on Thursday, October 29, 2020, at 9:00 a.m. Mountain Standard Time and adjourn at 11:00 a.m. A public comment period will be held on both days.

ADDRESSES: Due to restrictions put in place to address the COVID 19 pandemic the meeting will be a virtual meeting. For information about accessing the meeting you must contact Mr. Kib Jacobson; see **FOR FURTHER INFORMATION CONTACT**.

FOR FURTHER INFORMATION CONTACT: Kib Jacobson, telephone (801) 524–3753; email at *kjacobson@usbr.gov.*

SUPPLEMENTARY INFORMATION: The meeting of the Council is being held under the provisions of the Federal Advisory Committee Act of 1972. The Council was established by the Colorado River Basin Salinity Control Act of 1974 (Pub. L. 93–320) (Act) to receive reports and advise Federal agencies on implementing the Act.

Purpose of the Meeting: The purpose of the meeting is to discuss the accomplishments of Federal agencies and make recommendations on future activities to control salinity.

Agenda: Council members will be briefed on the status of salinity control activities and receive input for drafting the Council's annual report. The Bureau of Reclamation, Bureau of Land Management, U.S. Fish and Wildlife Service, and United States Geological Survey of the Department of the Interior; the Natural Resources Conservation Service of the Department of Agriculture; and the Environmental Protection Agency will each present a progress report and a schedule of activities on salinity control in the Colorado River Basin. The Council will discuss salinity control activities, the contents of the reports, and the Basin States Program created by Public Law 110–246, which amended the Act. A final agenda will be posted online at *https://www.usbr.gov/uc/progact/salinity/* at least one week prior to the meeting.

Meeting Accessibility: The meeting is open to the public. Individuals wanting access to the virtual meeting should contact Mr. Kib Jacobson (see **FOR FURTHER INFORMATION CONTACT**) no later than October 26, 2020, to receive instructions.

Public Comments: The Council chairman will provide time for oral comments from members of the public at the meeting. Individuals wanting to make an oral comment should contact Mr. Kib Jacobson (see **FOR FURTHER INFORMATION CONTACT**) to be placed on the public comment list. Members of the public may also file written statements with the Council before, during, or up to 30 days after the meeting either in person or by mail. To allow full consideration of information by Council members at this meeting, written comments must be provided to Mr. Kib Jacobson (see **FOR FURTHER INFORMATION CONTACT**) by October 23, 2020.

Public Disclosure of Personal Information: Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Authority: 5 U.S.C. Appendix 2.

Wayne Pullan,

Deputy Regional Director, Upper Colorado Basin—Interior Region 7, Bureau of Reclamation.

BILLING CODE 4332–90–P

INTERNATIONAL TRADE COMMISSION

[Investigation No. 337–TA–1148]

Certain Integrated Circuits and Products Containing the Same; Commission Determination To Review in Part a Final Initial Determination Finding No Violation of Section 337 and, on Review, To Affirm the Finding of No Violation; Termination of the Investigation

AGENCY: U.S. International Trade Commission.

ACTION: Notice.

SUMMARY: Notice is hereby given that the U.S. International Trade Commission has determined to review in part the final initial determination (''ID'') issued by the presiding administrative law judge (''ALJ'') on May 22, 2020, finding no violation of section 337 in the above-referenced investigation and, on review, to affirm the finding of no violation. The investigation is terminated.

FOR FURTHER INFORMATION CONTACT: Michael Liberman, Esq., Office of the General Counsel, U.S. International Trade Commission, 500 E Street SW, Washington, DC 20436, telephone (202) 205–2392. Copies of non-confidential documents filed in connection with this investigation may be viewed on the Commission's electronic docket (EDIS) at *https://edis.usitc.gov.* For help accessing EDIS, please email *EDIS3Help@usitc.gov.* General information concerning the Commission may also be obtained by accessing its internet server at *https://www.usitc.gov.* Hearing-impaired persons are advised that information on this matter can be obtained by contacting the Commission's TDD terminal on (202) 205–1810.

SUPPLEMENTARY INFORMATION: On March 15, 2019, the Commission instituted Inv. No. 337–TA–1148, *Certain Integrated Circuits and Products Containing the Same* under section 337 of the Tariff Act of 1930, as amended, 19 U.S.C. 1337 (''section 337''), based on a complaint filed by Tela Innovations, Inc. of Los Gatos, California (''Tela''). 84 FR 9558–59 (Mar. 15, 2019). The complaint alleges a violation of section 337 by reason of infringement of certain claims of U.S. Patent Nos. 7,943,966 (''the '966 patent''); 7,948,012 (''the '012 patent''); 10,141,334 (''the '334 patent''); 10,141,335 (''the '335 patent''); and 10,186,523 (''the '523 patent''). The complainant also alleges the existence of a domestic industry. The notice of investigation names as respondents Acer, Inc. of New Taipei City, Taiwan; Acer America Corporation of San Jose, California; AsusTek Computer Inc. of Taipai, Taiwan; Asus Computer International of Fremont, California; Intel Corporation of Santa Clara, California; Lenovo Group Ltd. of Beijing, China; Lenovo (United States) Inc. of Morrisville, North Carolina; Micro-Star International Co., Ltd. of New Taipei City, Taiwan; and MSI Computer Corp. of City of Industry, California (collectively, ''Respondents''). *Id.* at 9559. The Commission's Office of Unfair Import Investigations (''OUII'') is also named as a party in this investigation. *Id.*

The Commission has previously terminated the investigation as to the '966, '012 and '335 patents, and as to certain claims of the '334 and '523 patents. *See* Order No. 33 (Oct. 2, 2019), *unreviewed by* Notice (Oct. 22, 2019); Order No. 36 (Oct. 23, 2019), *unreviewed by* Notice (Nov. 15, 2019); and Order No. 44 (Jan. 6, 2020), *unreviewed by* Notice (Feb. 3, 2020).

On May 22, 2020, the ALJ issued his ''Initial Determination on Violation of Section 337 and Recommended Determination on Remedy and Bond'' (''ID/RD'') finding that there is no violation of section 337 in the importation into the United States, the sale for importation, or the sale within the United States after importation of certain integrated circuits and products containing the same, in connection with the asserted claims of the '334 and '523 patents, and that a domestic industry in the United States that practices or exploits the asserted patents does not exist.

The ID finds that Respondents directly infringe claims 1, 2, and 5 of the '334 patent, and that claims 1, 2, 5, and 15 of the '334 patent have been shown to be invalid. The ID also finds that Tela's licensee has not been shown to practice any claims of the '334 patent, and that the domestic industry requirement is not satisfied with respect to the '334 patent. The ID finds that there is no violation of section 337 with respect to the '334 patent.

The ID further finds that Respondents directly infringe claims 1–11, 14–20, 25, and 26 of the '523 patent, and that no claims of the '523 patent have been shown to be invalid. The ID also finds that Tela's licensee has not been shown to practice any claims of the '523 patent, and that the domestic industry requirement is not satisfied with respect to the '523 patent. The ID finds that there is no violation of Section 337 with respect to the '523 patent.

All the parties to the investigation filed petitions for review of various portions of the ID. On June 8, 2020, OUII filed a petition seeking review of the ID's determination not to analyze whether the asserted domestic industry claims are invalid and, contingently, seeking review of the ID's infringement findings. Also on June 8, 2020, Respondents filed a petition contingently seeking review of the ID's infringement and validity findings.

On June 11, 2020, Tela filed a petition seeking review of the ID's findings concerning the validity and the technical prong of the domestic industry requirement. Tela also seeks contingent review of the ID's infringement findings and the ID's finding that Intel's 45 nm process is prior art under 35 U.S.C. 102(g)(2). In addition, Tela seeks review of Order No. 30 (Sept. 4, 2019), which granted-in-part Tela's motion for leave to supplement its contention interrogatory responses.

On June 18, 2020, the parties filed responses to the various petitions.

Having examined the record in this investigation, including the final ID, the petitions for review, and the responses thereto, the Commission has determined to review the ID in part to correct a legal error in the ID's domestic industry findings. On review, the Commission has determined to strike the paragraph relating to the '334 patent on pages 101–102 of the ID and certain sentences relating to the '523 patent on page 168 of the ID. The Commission takes no position on the issue of whether the asserted domestic industry claims, *i.e.,* claims 29–30 of the '334 patent and claims 27–28 of the '523 patent, are invalid. *See Beloit Corp.* v. *Valmet Oy,* 742 F.2d 1421, 1423 (Fed. Cir. 1984).

The Commission has also determined to review the ID in part on the issue of whether Tela satisfied the economic prong of the domestic industry requirement, *see* ID at 185–188, and to take no position on this issue. *See Beloit,* 742 F.2d at 1423.

The Commission has determined not to review the remainder of the ID, including the ID's finding of no violation of section 337 in this investigation. The Commission has also determined not to review Order No. 30.

The investigation is terminated.

The Commission vote for this determination took place on September 23, 2020.

The authority for the Commission's determination is contained in section 337 of the Tariff Act of 1930, as amended, 19 U.S.C. 1337, and in Part 210 of the Commission's Rules of Practice and Procedure, 19 CFR part 210.

By order of the Commission.

Issued: September 23, 2020.

Lisa Barton,

Secretary to the Commission.

[FR Doc. 2020–21421 Filed 9–28–20; 8:45 am]

BILLING CODE 7020–02–P

INTERNATIONAL TRADE COMMISSION

[Investigation Nos. 701–TA–459 and 731–TA–1155 (Second Review)]

Commodity Matchbooks From India; Scheduling of Expedited Five-Year Reviews

AGENCY: United States International Trade Commission.

ACTION: Notice.

SUMMARY: The Commission hereby gives notice of the scheduling of expedited reviews pursuant to the Tariff Act of 1930 (''the Act'') to determine whether revocation of the countervailing and antidumping duty orders on commodity matchbooks from India would be likely to lead to continuation or recurrence of material injury within a reasonably foreseeable time.

DATES: June 5, 2020.

FOR FURTHER INFORMATION CONTACT: Alejandro Orozco (202–205–3177), Office of Investigations, U.S. International Trade Commission, 500 E Street SW, Washington, DC 20436. Hearing-impaired persons can obtain information on this matter by contacting the Commission's TDD terminal on 202–205–1810. Persons with mobility impairments who will need special assistance in gaining access to the Commission should contact the Office of the Secretary at 202–205–2000. General information concerning the Commission may also be obtained by accessing its internet server (*https://www.usitc.gov*). The public record for these reviews may be viewed on the Commission's electronic docket (EDIS) at *https://edis.usitc.gov.*

SUPPLEMENTARY INFORMATION:

Background.—On June 5, 2020, the Commission determined that the domestic interested party group response to its notice of institution (85 FR 12334, March 2, 2020) of the subject five-year reviews was adequate and that the respondent interested party group response was inadequate. The Commission did not find any other circumstances that would warrant conducting full reviews.[1] Accordingly, the Commission determined that it would conduct expedited reviews pursuant to section 751(c)(3) of the Tariff Act of 1930 (19 U.S.C. 1675(c)(3)).

For further information concerning the conduct of these reviews and rules of general application, consult the Commission's Rules of Practice and Procedure, part 201, subparts A and B (19 CFR part 201), and part 207, subparts A, D, E, and F (19 CFR part 207).

Please note the Secretary's Office will accept only electronic filings at this time. Filings must be made through the Commission's Electronic Document Information System (EDIS, *https://edis.usitc.gov*). No in-person paper-based filings or paper copies of any electronic filings will be accepted until further notice.

Staff report.—A staff report containing information concerning the subject matter of the reviews will be placed in the nonpublic record on September 28, 2020, and made available to persons on the Administrative Protective Order service list for these reviews. A public version will be issued thereafter, pursuant to section 207.62(d)(4) of the Commission's rules.

Written submissions.—As provided in section 207.62(d) of the Commission's rules, interested parties that are parties to the reviews and that have provided individually adequate responses to the notice of institution,[2] and any party other than an interested party to the reviews may file written comments with the Secretary on what determination the Commission should reach in the reviews. Comments are due on or before October 5, 2020 and may not contain new factual information. Any person that is neither a party to the five-year reviews nor an interested party may submit a brief written statement (which shall not contain any new factual information) pertinent to the reviews by October 5, 2020. However, should the Department of Commerce (''Commerce'') extend the time limit for its completion of the final results of its reviews, the deadline for comments (which may not contain new factual information) on Commerce's final results is three business days after the issuance of Commerce's results. If comments contain business proprietary information (BPI), they must conform with the requirements of sections 201.6, 207.3, and 207.7 of the Commission's rules. The Commission's *Handbook on Filing Procedures,* available on the Commission's website at *https://www.usitc.gov/documents/handbook_on_filing_procedures.pdf,* elaborates upon the Commission's procedures with respect to filings.

In accordance with sections 201.16(c) and 207.3 of the rules, each document filed by a party to the reviews must be served on all other parties to the review (as identified by either the public or BPI service list), and a certificate of service must be timely filed. The Secretary will not accept a document for filing without a certificate of service.

Determination.—The Commission has determined these reviews are extraordinarily complicated and therefore has determined to exercise its authority to extend the review period by up to 90 days pursuant to 19 U.S.C. 1675(c)(5)(B).

Authority: These reviews are being conducted under authority of title VII of the Tariff Act of 1930; this notice is published pursuant to section 207.62 of the Commission's rules.

By order of the Commission.

Dated: September 23, 2020.

Lisa Barton,

Secretary to the Commission.

[FR Doc. 2020–21395 Filed 9–28–20; 8:45 am]

BILLING CODE 7020–02–P

DEPARTMENT OF JUSTICE

Antitrust Division

Notice Pursuant to the National Cooperative Research and Production Act of 1993—Advanced Media Workflow Association, Inc.

Notice is hereby given that, on September 15, 2020, pursuant to Section 6(a) of the National Cooperative Research and Production Act of 1993, 15 U.S.C. 4301 *et seq.* (''the Act''), Advanced Media Workflow Association, Inc. has filed written notifications simultaneously with the Attorney General and the Federal Trade Commission disclosing changes in its membership. The notifications were filed for the purpose of extending the Act's provisions limiting the recovery of antitrust plaintiffs to actual damages under specified circumstances. Specifically, Skyline Communications, Izegem, BELGIUM; and Mike Coleman (individual member), Portland, OR, have been added as parties to this venture.

Also, Stordis GmbH, Stuttgart, GERMANY; and Tedial S.L., Campanillas, SPAIN, have withdrawn as parties to this venture.

No other changes have been made in either the membership or planned activity of the group research project. Membership in this group research

[1] A record of the Commissioners' votes is available from the Office of the Secretary and at the Commission's website.

[2] The Commission has found the response to its notice of institution filed on behalf of domestic producer D.D. Bean & Sons Co. to be individually adequate. Comments from other interested parties will not be accepted (*see* 19 CFR 207.62(d)(2)).

project remains open, and Advanced Media Workflow Association, Inc. intends to file additional written notifications disclosing all changes in membership.

On March 28, 2000, Advanced Media Workflow Association, Inc. filed its original notification pursuant to Section 6(a) of the Act. The Department of Justice published a notice in the **Federal Register** pursuant to Section 6(b) of the Act on June 29, 2000 (65 FR 40127).

The last notification was filed with the Department on June 25, 2020. A notice was published in the **Federal Register** pursuant to Section 6(b) of the Act on July 16, 2020 (85 FR 43261).

Suzanne Morris,

Chief, Premerger and Division Statistics, Antitrust Division.

BILLING CODE P

DEPARTMENT OF JUSTICE

Antitrust Division

Notice Pursuant to the National Cooperative Research and Production Act of 1993—MLCommons Association

Notice is hereby given that, on September 15, 2020 pursuant to Section 6(a) of the National Cooperative Research and Production Act of 1993, 15 U.S.C. 4301 *et seq.* (''the Act''), MLCommons Association filed written notifications simultaneously with the Attorney General and the Federal Trade Commission disclosing (1) the identities of the parties to MLCommons Association and (2) the nature and objectives of MLCommons Association. The notifications were filed for the purpose of invoking the Act's provisions limiting the recovery of antitrust plaintiffs to actual damages under specified circumstances.

Pursuant to Section 6(b) of the Act, the identities of the members of MLCommons Association are the following companies: Advanced Micro Devices, Inc., Markham, CANADA; Alibaba(China) Co., Ltd., Zhejiang Province, PEOPLE'S REPUBLIC OF CHINA; dividiti Limited, Cambridge, UNITED KINGDOM; Arm Limited & Its Subsidiaries, Austin, TX; Baidu USA LLC, Sunnyvale, CA; Cognitiviti Pty Ltd., West End, AUSTRALIA; Cerebras Systems, Los Altos, CA; Centaur Technology, Inc., Austin, TX; Cisco Systems, Inc., San Jose, CA; Cody Coleman(individual member), Stanford, CA; Real World Insights, LLC, San Francisco, CA; Dell Inc., Round Rock, TX; d-matrix Corp., Santa Clara, CA; Facebook, Menlo Park, CA; Polytechnique Montreal, Montreal, CANADA; Fujitsu Ltd, Kanagawa, JAPAN; FuriosaAI, Inc., Seoul, SOUTH KOREA; University of Toronto, Toronto, CANADA; Indiana University, Bloomington, IN; Gigabyte Technology Co., LTD., New Taipei, TAIWAN; Google LLC, Mountain View, CA; Grai Matter Labs, San Jose, CA; Graphcore Limited, Bristol, UNITED KINGDOM; Groq Inc., Mountain View, CA; Guangdong OPPO Mobile Telecommunications Corp., Ltd, DongGuan City, PEOPLE'S REPUBLIC OF CHINA; Hewlett Packard Enterprise, Grenoble, FRANCE; Horizon Robotics Inc., Cupertino, CA; Inspur, Beijing, PEOPLE'S REPUBLIC OF CHINA; Intel Corporation, Santa Clara, CA; MOBILINT, Inc., Seoul, SOUTH KOREA; KALRAY, Montbonnot, FRANCE; MediaTek, Hsinchu, TAIWAN; Microsoft, Redmond, WA; Myrtle.ai, Cambridge, UNITED KINGDOM; Nettrix Information Industry Co., Ltd., Beijing, PEOPLE'S REPUBLIC OF CHINA; NVIDIA Corporation, San Jose, CA; Qualcomm Technologies, Inc., San Diego, CA; Red Hat, Inc., Raleigh, NC; SambaNova Systems, Palo Alto, CA; Samsung Electronics Co., Ltd, Gyeonggi-do, SOUTH KOREA; Advantage Engineering, Austin, TX; Shanghai Enflame Technology Co., Ltd, Shanghai, PEOPLE'S REPUBLIC OF CHINA; Syntiant Corp., Irvine, CA; Tenstorrent Inc., Toronto, CANADA; Harvard University, Cambridge, MA; and Xilinx, San Jose, CA. The general areas of MLCommons Association's planned activity are to advance the scientific field of machine learning and increase the positive impact of machine learning and artificial intelligence on society, to engage in or sponsor collaborative research and development in connection with the measurement and validation of machine learning, to publish the results of the collaborative research and development projects of the Joint Venture and to provide other resources to the scientific community and the public at large with respect to machine learning, and to undertake those other activities which the Board of Directors may from time to time approve.

Membership in MLCommons Association remains open and MLCommons Association intends to file additional written notifications disclosing all changes in membership.

Suzanne Morris,

Chief, Premerger and Division Statistics Antitrust Division.

BILLING CODE 4410–11–P

DEPARTMENT OF LABOR

Office of Disability Employment Policy

[Agency Docket Number: DOL–2020–0006]

RIN 1230–ZA00

Request for Information on Proposed Transfer of Ticket to Work Program From the Social Security Administration to the U.S. Department of Labor

AGENCY: Office of Disability Employment Policy, U.S. Department of Labor.

ACTION: Request for information.

SUMMARY: The Social Security Administration's (SSA) Ticket to Work and Self-Sufficiency Program (Ticket program) is intended to assist adult disability beneficiaries in becoming employed, yet relatively few disability beneficiaries have successfully participated in the program. In order to strengthen the Ticket program, the President's Budget for Fiscal Year 2021 includes a legislative proposal to improve program structure and coordination and transfer administration of the program to the Department of Labor (DOL), in order to better integrate the program into the public workforce system and better serve disability beneficiaries who want to work. This request for information (RFI) seeks public input regarding how the proposed changes to the Ticket program would impact disability beneficiaries who want to work and the systems that currently serve their employment and related needs, and to identify critical considerations for designing and implementing an improved program.

DATES: Comments must be received by November 13, 2020.

ADDRESSES: You may submit comments via the internet. Please visit the Federal eRulemaking portal at *http://www.regulations.gov.* Use the ''Search'' function to find docket number DOL–2020–0006. The system will issue a tracking number to confirm your submission. You will not be able to view your comment immediately because we must post each comment manually. It may take up to a week for your comment to be viewable.

Caution: In your comments, you should be careful to include only the information that you wish to make publicly available. We strongly urge you not to include in your comments any personal information, such as Social Security numbers or medical information.

FOR FURTHER INFORMATION CONTACT: Jennifer Sheehy, Deputy Assistant Secretary, Office of Disability Employment Policy, U.S. Department of Labor, 200 Constitution Avenue NW, S–1303, Washington, DC 20210, (202) 693–7880, or visit *https://www.dol.gov/dol/contact/contactphonecallcenter.htm* (TTY), for information about this notice.

SUPPLEMENTARY INFORMATION:

Purpose

In order to streamline and strengthen employment services for Social Security Disability Insurance (SSDI) beneficiaries and Supplemental Security Income (SSI) recipients seeking employment, the President's Budget for Fiscal Year 2021 includes a legislative proposal to transfer the Ticket program to DOL given its capacity to promote innovative workforce development and disability employment. Better integrating services for SSDI beneficiaries and SSI recipients into the core workforce system should result in a more effective and efficient system to support them in achieving and sustaining employment. A key challenge in transferring the program to DOL will be to reduce program complexity and overall administrative burden, rather than to simply recreate complexity or transfer the burden to other entities. Given the complexity of the current program and the significance of the proposed changes, public input is necessary to help ensure the success of the reformed program.

This RFI offers interested parties—including state and local governments, nonprofit and community-based organizations, philanthropic organizations, research experts, employers, health care providers, private disability insurance providers, vocational rehabilitation specialists, and members of the public—the opportunity to inform the development of a redesigned Ticket program aimed at increasing the employment and labor force participation of SSDI beneficiaries and SSI recipients.

Further Information

SSA's Ticket program is intended to assist adult disability beneficiaries in achieving and sustaining employment.[1] Under the Ticket program, SSA notifies beneficiaries of their eligibility to participate in the program, which allows them to obtain services from SSA-approved public or private providers, referred to as Employment Networks (EN), or from traditional state Vocational Rehabilitation (VR) agencies.

The Ticket program has helped thousands of disability beneficiaries return to work since it was established in 1999. Yet, despite the availability of the program, significant numbers of beneficiaries have not achieved levels of sustained employment that result in economic self-sufficiency and reduced reliance on disability benefits. Despite improvements over the years, the Ticket program faces fundamental challenges in attempting to meet its objectives. First, the program falls outside SSA's core mission of administering the Old Age, Survivors, and Disability Insurance (OASDI) and the SSI programs. Second, the program duplicates administrative structures and services where robust state and local workforce systems already exist. Finally, while the program is designed to promote beneficiary choice in accessing employment services and to incentivize providers by paying for successful individual outcomes, these features entail significant administrative burden for beneficiaries and service providers.

As designed, the Ticket program is largely separate from the broader workforce system. In contrast to when the program was created, the workforce system now provides similar services and is directed by the Workforce Innovation and Opportunity Act (WIOA) to prioritize services for recipients of public assistance and low-income individuals, including persons with disabilities, and to ensure accessibility for all persons. In addition, the milestone/outcome payment structure currently used in the Ticket program is complicated and delays reimbursement to service providers for many months, which may limit provider participation.

The rationale for transferring the Ticket program to DOL is to create a more integrated, effective, and efficient system for supporting disability beneficiaries in obtaining and sustaining employment. The ultimate goals of program redesign include the following:

- Increasing the number of disability beneficiaries who participate in the program, succeed in employment, and achieve economic mobility, while decreasing reliance on disability benefits and other forms of public assistance;
- Improving the experience of individual program participants;
- Reducing program fragmentation and duplication;
- Establishing national uniformity in essential program features while allowing opportunity for local innovation;
- Restructuring funding mechanisms and performance metrics to align with WIOA;
- Providing financial incentives to states in order to reward performance;
- Better integrating services for disability beneficiaries into the broader workforce system; and
- Leveraging DOL's expertise and capacity in promoting innovative workforce development and employment of persons with disabilities.

Although DOL and SSA have attempted to increase workforce system participation in the Ticket program, the workforce system historically has not served large numbers of SSA beneficiaries.[2] In order to drive changes on the scale necessary to improve economic mobility for disability beneficiaries, the President's Budget proposes to significantly reform the Ticket program through transferring administration of the program and redesigning key elements. Specifically, the proposal is to transfer the administration of the Ticket program to DOL's Employment and Training Administration (ETA). This would empower ETA's American Job Center (AJC) network to provide Ticket services in concert with other workforce programs. It would also simplify Ticket program rules, including the payment model used to pay ENs and other providers for services, in order to improve the structure and outcomes through a performance-based funding allocation. Program redesign would include aligning Ticket performance measures with WIOA core performance measures, improving the capacity of state public workforce systems to serve persons with disabilities, and changing the payment structure from individual vouchers to one in which states receive base administrative funding based on a formula and additional payments that reflect level of performance. State and

[1] The Ticket to Work and Work Incentives Improvement Act of 1999. Public Law 106–170, 101, 113 Stat. 1860, 1863–73 (codified as amended at 42 U.S.C. 1320b–19).

[2] After several years of sharing information on the Ticket program with the workforce system, the commitment to increase the number of workforce ENs resulted in multiple Training and Employment Notices (TENs), beginning in 2012 with TEN 14–12, *Receiving Ticket to Work Payment as an Employment Network,* which explained the Payment Agreement process. This was updated in 2014 as TEN 02–14, *Receiving Ticket to Work Payment as an Employment Network,* which explained a new process for public workforce entities to become ENs. In 2018, DOL published TEN 16–18, *New Administrative Processes for Public Workforce Employment Networks under the Social Security Administration's Ticket to Work Program,* to support DOL's goal of expanding the capacity of the American Job Center network to serve persons receiving disability benefits. The 2018 TEN notified the workforce system regarding the Ticket program's new administrative processes for public workforce ENs and alternative EN models.

local workforce entities would receive funding and technical assistance from ETA in order to better serve disability beneficiaries, with a portion of Ticket funding reserved for rewarding strong performance and program innovation. States and localities would be allowed greater flexibility in tailoring services to fit local circumstances. The redesigned program would retain key features of the current program, such as benefits counseling and suspension of SSA medical Continuing Disability Reviews (CDRs) while program participants pursue employment.[3]

In close coordination with SSA and ETA, DOL's Office of Disability Employment Policy (ODEP) will provide policy analysis and guidance to support the transfer and improvement of the program.

Request for Information

Through this RFI, we are soliciting feedback from interested and affected parties on the potential benefits and challenges in transferring the Ticket program to DOL and serving program participants through the public workforce systems, in order to enable them to increase employment and earnings and maximize self-sufficiency. We are also interested in evidence supporting or challenging the assumptions underlying this proposal. Responses to this RFI will inform decisions regarding the development, design, and implementation of the redesigned program. As such, responses supported by substantial evidence and careful reasoning will be afforded greatest weight. This RFI notice is for internal planning purposes only and should not be construed as a solicitation or as an obligation on the part of DOL or any participating federal agencies.

We ask respondents to address the following questions in the context of the preceding discussion in this document. Respondents do not need to address every question and should focus on those that relate to their expertise or perspective. To the extent possible, please clearly indicate the question(s) addressed in your response. We ask that each respondent include the name and street address of his or her institution or affiliation, if any, and the name, title, street address, email address, and telephone number of a contact person for his or her institution or affiliation, if any.

[3] Medical CDRs are periodic reviews of an individual's medical impairment(s) to determine continuing eligibility for SSI and/or SSDI.

Questions

Workforce System Capacity

1. How might state workforce systems use new Ticket program funding to increase capacity to effectively serve SSA disability beneficiaries, given that the number of SSA disability beneficiaries who will seek services in a particular locality is unknown?

2. How might state workforce systems integrate the provision of the Ticket program with other existing WIOA services? What opportunities and challenges will arise in doing so?

3. How could DOL's ETA help prepare state workforce systems for a potentially significant increase in SSA disability beneficiaries seeking services?

4. What ongoing federal support would be most helpful to state workforce systems as they administer the Ticket program?

5. How could state workforce systems provide quality remote services, when necessary, to serve SSA disability beneficiaries regionally or nationwide?

6. What are key considerations in transferring SSA's Work Incentives Planning and Assistance (WIPA) services to state workforce agencies?

Participant Experience and Outcomes

7. What specific program changes could improve experiences and outcomes for persons accessing the redesigned Ticket program services through the workforce system?

8. What is the capacity of the workforce system to effectively serve young adults or transition-age youth (*i.e.,* ages 14–18) under a redesigned Ticket program? What capacity and coordination issues would arise in serving transition-age youth?

Employment Networks and Vocational Rehabilitation

9. What lessons can be taken from current EN models (*e.g.,* community-based, nonprofit, workforce ENs) or collaborative AJC program models that can inform the new Ticket program?

10. How can VR entities partner with state workforce systems to support SSA disability beneficiaries in the redesigned Ticket program?

Funding Structure, Performance Metrics and Performance-Based Payments

11. What payment structures and which WIOA performance indicators (if any) would encourage state workforce systems to provide robust employment and training services to persons with disabilities, leading to job placement and ongoing support to ensure job retention?

12. Which of the WIOA performance indicators (if any) could serve as potential interim measures to trigger partial performance-based payments?

13. What are appropriate intervals (medium- and long-term) for performance-based payments?

14. How would workforce entities and DOL track and measure program success? Would workforce entities require access to new administrative data sources?

General

15. What challenges within the current Ticket program would potentially remain in a redesigned program administered by state workforce entities, and what could DOL do to address or mitigate them?

16. What strengths of the current Ticket program contribute to the success of individual Ticket holders, and how could these be preserved in the redesigned program?

17. Are there current or recent state examples of integrated systems that offer lessons for successful implementation of the redesigned Ticket program?

18. What are the implications of the current COVID–19 pandemic for redesigning the Ticket program at this time, such as employer demand, workforce system capacity, and remote services?

19. Are there additional considerations in transferring the Ticket program from SSA to DOL?

Signed at Washington, DC, this __th day of September, 2020.

Jennifer Sheehy,

Deputy Assistant Secretary for Disability Employment Policy.

LIBRARY OF CONGRESS

Copyright Office

[Docket No. 2020–9]

Sovereign Immunity Study: Notice and Request for Public Comment

AGENCY: U.S. Copyright Office, Library of Congress.

ACTION: Notice of inquiry; extension of comment period.

SUMMARY: The U.S. Copyright Office is extending the deadline for the submission of reply comments and empirical research studies in response to the June 3 and June 24, 2020, notices regarding its state sovereign immunity policy study.

DATES: Written reply comments and empirical research studies in response

to the notices published June 3, 2020, at 85 FR 34252, and June 24, 2020, at 85 FR 37961, must be received no later than 11:59 p.m. Eastern Time on October 22, 2020.

ADDRESSES: For reasons of government efficiency, the Copyright Office is using the *regulations.gov* system for the submission and posting of public comments in this proceeding. All comments are therefore to be submitted electronically through *regulations.gov.* Specific instructions for submitting comments are available on the Copyright Office website at *http://www.copyright.gov/docs/sovereignimmunitystudy.* If electronic submission of comments is not feasible due to lack of access to a computer and/or the internet, please contact the Office, using the contact information below, for special instructions.

FOR FURTHER INFORMATION CONTACT: Kevin Amer, Deputy General Counsel, *kamer@copyright.gov;* Mark T. Gray, Attorney-Advisor, *mgray@copyright.gov;* or Jalyce E. Mangum, Attorney-Advisor, *jmang@copyright.gov.* They can be reached by telephone at 202–707–3000.

SUPPLEMENTARY INFORMATION: On June 3, 2020, the U.S. Copyright Office issued a notice of inquiry (''NOI'') commencing a policy study on state sovereign immunity from copyright infringement suits.[1] Congress has requested that the Office ''research this issue to determine whether there is sufficient basis for federal legislation abrogating State sovereign immunity when States infringe copyrights.'' [2] To assist Congress in making that assessment, the Office solicited public comment on several issues concerning the degree to which copyright owners face infringement from state actors today, whether such infringement is based on intentional or reckless conduct, and what remedies, if any, are available to copyright owners under state law.

On June 24, 2020, the Office issued an additional notice providing for a second round of written comments to permit interested parties the opportunity to address any comments submitted in response to the NOI and to allow parties engaged in empirical research to complete and submit their findings.[3] To ensure that members of the public have sufficient time to comment, and to ensure that the Office has the benefit of a complete record, the Office is extending the deadline for the submission of additional comments and/or empirical research to 11:59 p.m. Eastern Time on October 22, 2020.

Dated: September 24, 2020.

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

[Notice: (20–078)]

NASA Astrophysics Advisory Committee; Meeting.

AGENCY: National Aeronautics and Space Administration.

ACTION: Notice of meeting.

SUMMARY: In accordance with the Federal Advisory Committee Act, the National Aeronautics and Space Administration (NASA) announces a meeting of the Astrophysics Advisory Committee. This Committee reports to the Director, Astrophysics Division, Science Mission Directorate, NASA Headquarters. The meeting will be held for the purpose of soliciting, from the scientific community and other persons, scientific and technical information relevant to program planning.

DATES: Monday, October 19, 2020, 11:00 a.m.–5:00 p.m., Tuesday, October 20, 2020, 11:00 a.m.–5:00 p.m., and Wednesday, October 21, 2020, 11:00 a.m.–5:00 p.m., Eastern Time.

FOR FURTHER INFORMATION CONTACT: Ms. KarShelia Henderson, Science Mission Directorate, NASA Headquarters, Washington, DC 20546, (202) 358–2355 or *khenderson@nasa.gov.*

SUPPLEMENTARY INFORMATION: The meeting will be available to the public by WebEx.

On Monday, October 19, the event address for attendees is: *https://nasaenterprise.webex.com/nasaenterprise/onstage/g.php?MTID=e8ac0c8ba6c20d6158a15014539ff4fe5,* the event number is 199 918 6105, and event password is ixXyezN@783.

On Tuesday, October 20, the event address for attendees is: *https://nasaenterprise.webex.com/nasaenterprise/onstage/g.php?MTID=e2402f4eea7472e33624d6ab4cfee14f5,* the event number is 199 163 7113, and the event password is TSpcp97Hd*5.

On Wednesday, October 21, the event address for attendees is: *https://nasaenterprise.webex.com/nasaenterprise/onstage/g.php?MTID=eb739cd4ce1f20ff24be91839cbc1d217,* the event number is 199 599 3836, and the event password is bKsf3Unn$57.

The agenda for the meeting includes the following topics:

—Astrophysics Division Update

—Updates on Specific Astrophysics Missions

—Reports from the Program Analysis Groups

—Reports from Specific Research and Analysis Programs

The agenda will be posted on the Astrophysics Advisory Committee web page: *https://science.nasa.gov/researchers/nac/science-advisory-committees/apac.*

The public may submit and upvote comments/questions ahead of the meeting through the website *https://arc.cnf.io/sessions/h259/#!/dashboard* that will be opened for input on October 5, 2020.

It is imperative that the meeting be held on this date to accommodate the scheduling priorities of the key participants.

Patricia Rausch,

Advisory Committee Management Officer, National Aeronautics and Space Administration.

NATIONAL SCIENCE FOUNDATION

Notice of Permit Modification Received Under the Antarctic Conservation Act of 1978

AGENCY: National Science Foundation.

ACTION: Notice of permit modification request received and permit issued.

SUMMARY: The National Science Foundation (NSF) is required to publish a notice of requests to modify permits issued to conduct activities regulated and permits issued under the Antarctic Conservation Act of 1978. NSF has published regulations under the Antarctic Conservation Act in the Code of Federal Regulations. This is the required notice of a requested permit modification and permit issued.

FOR FURTHER INFORMATION CONTACT: Nature McGinn, ACA Permit Officer, Office of Polar Programs, National Science Foundation, 2415 Eisenhower Avenue, Alexandria, VA 22314; 703–292–8224; email: *ACApermits@nsf.gov.*

SUPPLEMENTARY INFORMATION: The National Science Foundation (NSF), as directed by the Antarctic Conservation Act of 1978 (Pub. L. 95–541, 45 CFR 671), as amended by the Antarctic Science, Tourism and Conservation Act of 1996, has developed regulations for the establishment of a permit system for various activities in Antarctica and designation of certain animals and certain geographic areas a requiring special protection.

NSF issued a permit (ACA 2016–020) to Laura K.O. Smith, Owner, Operator Quixote Expeditions, on December 23, 2015. The issued permit allows the permit holder to conduct waste management activities associated with the operation of the ''Ocean Tramp,'' a reinforced ketch rigged sailing yacht in the Antarctic Peninsula region. Activities to be conducted by Quixote include: Passenger landings, hiking, photography, wildlife viewing, and possible station visits.

A modification to this permit, dated November 22, 2017, permitted coastal camping activities in select locations and resupply of fresh food to the Quixote Expeditions vessel as part of fly/cruise operations. Another modification, dated November 6, 2018, allowed the permit holder to add a second vessel to support Quixote Expeditions activities, to conduct ship-to-ship fuel transfers, to release comminuted food waste (excepting poultry) at sea, and to operate a remotely piloted aircraft for educational and commercial purposes. A recent modification to this permit, dated November 20, 2019, permitted the conduct waste management activities similar to prior seasons during the 2019–2020 field season.

On September 17, 2020, the permit holder submitted an update of provided NSF an update based on planned activities for the 2020–2021 field season and to request an extension of the permit expiration date. Quixote's proposed activities are similar as those detailed in the original permit and earlier modifications. The Environmental Officer has reviewed the modification request and has determined that the amendment is not a material change to the permit, and it will have a less than a minor or transitory impact.

Dates of Permitted Activities: September 23, 2020–March 30, 2021.

The permit modification was issued on September 23, 2020.

Erika N. Davis,

Program Specialist, Office of Polar Programs.

BILLING CODE 7555–01–P

NUCLEAR REGULATORY COMMISSION

[Docket No. 50–440; NRC–2020–0188]

Energy Harbor Nuclear Corp.; Energy Harbor Nuclear Generation LLC; Perry Nuclear Power Plant, Unit No. 1

AGENCY: Nuclear Regulatory Commission.

ACTION: Environmental assessment and finding of no significant impact; issuance.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC) is considering the issuance of an amendment to Facility Operating License No. NPF–58, issued to Energy Harbor Nuclear Corp. (EHNC) and Energy Harbor Nuclear Generation LLC, for operation of the Perry Nuclear Power Plant, Unit No. 1 (PNPP), located near Lake Erie in Lake County, Ohio. The proposed action would amend the expiration of Facility Operating License No. NPF–58 from March 18, 2026, to November 7, 2026. Specifically, the expiration date of PNPP's full-power operating license (FPOL) would be revised such that it would expire 40 years from the date of issuance of the FPOL, as is permitted by the NRC's regulations.

DATES: The environmental assessment (EA) and finding of no significant impact (FONSI) referenced in this document is available on September 29, 2020.

ADDRESSES: Please refer to Docket ID NRC–2020–0188 when contacting the NRC about the availability of information regarding this document. You may obtain publicly-available information related to this document using any of the following methods:

- *Federal Rulemaking website:* Go to *https://www.regulations.gov/* and search for Docket ID NRC–2020–0188. Address questions about Docket IDs in *Regulations.gov* to Jennifer Borges; telephone: 301–287–9127; email: *Jennifer.Borges@nrc.gov.* For technical questions, contact the individual listed in the **FOR FURTHER INFORMATION CONTACT** section of this document.
- *NRC's Agencywide Documents Access and Management System (ADAMS):* You may obtain publicly-available documents online in the ADAMS Public Documents collection at *https://www.nrc.gov/reading-rm/adams.html.* To begin the search, select ''Begin Web-based ADAMS Search.'' For problems with ADAMS, please contact the NRC's Public Document Room reference staff at 1–800–397–4209, 301–415–4737, or by email to *pdr.resource@nrc.gov.* The ADAMS accession number for each document referenced (if it is available in ADAMS) is provided the first time that it is mentioned in this document.

FOR FURTHER INFORMATION CONTACT: Scott P. Wall, Office of Nuclear Reactor Regulation; U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001; telephone: 301–415–2855; email: *Scott.Wall@nrc.gov.*

SUPPLEMENTARY INFORMATION:

I. Introduction

The NRC is considering the issuance of an amendment to Facility Operating License No. NPF–58, issued to EHNC and Energy Harbor Nuclear Generation LLC (collectively, the licensees), for operation of PNPP, located near Lake Erie in Lake County, Ohio. The licensee requested the amendment by letter dated March 26, 2020 (ADAMS Accession No. ML20086K773), as supplemented by letter dated July 30, 2020 (ADAMS Accession No. ML20212L544). If approved, the amendment would revise the expiration date of the license such that it would expire 40 years from the date of the issuance of the FPOL, as is permitted by section 50.51 of title 10 of the *Code of*

Federal Regulations (10 CFR). In accordance with 10 CFR 51.21, the NRC prepared the following EA that analyzes the environmental impacts of the proposed licensing action. Based on the results of this EA, and in accordance with 10 CFR 51.31(a), the NRC has determined not to prepare an environmental impact statement for the proposed licensing action and is issuing a FONSI.

II. Environmental Assessment

Description of the Proposed Action

The proposed action would revise the expiration date of PNPP's Facility Operating License such that it would expire 40 years from the date of the issuance of the FPOL, as permitted by 10 CFR 50.51. The proposed action would revise the expiration date of the Facility Operating License No. NPF–58 from March 18, 2026, to November 7, 2026, which is 40 years from the date of issuance of the FPOL (November 7, 1986).

The proposed action is also described in the licensee's application dated March 26, 2020, as supplemented by letter dated July 30, 2020.

Need for the Proposed Action

On March 18, 1986, the NRC issued a low-power testing license (No. NPF–45) that authorized the licensee to operate PNPP at up to 5 percent of rated power. On November 7, 1986, the NRC issued a FPOL (No. NPF–58) that authorized the licensee to operate PNPP at up to 100 percent of rated power, with an expiration date 40 years from the date of the issuance of the low-power license.

The proposed action would allow the licensee to recapture the approximate 7.7-month period of low-power operation and extend the license expiration date to November 7, 2026. This action is consistent with NRC policy established in the Staff Requirements Memorandum (SRM) for SECY–98–296, ''Staff Requirements—SECY–98–296—Agency Policy Regarding Licensee Recapture of Low-Power Testing or Shutdown Time for Nuclear Power Plants,'' dated March 30, 1999 (ADAMS Accession No. ML20213A739) and SECY–98–296, ''Agency Policy Regarding Licensee Recapture of Low-Power Testing or Shutdown Time for Nuclear Power Plants,'' dated December 21, 1998, available at (ADAMS Accession No. ML992870025).

Environmental Impacts of the Proposed Action

The proposed action would amend the PNPP Facility Operating License such that it would expire 40 years from the date of the issuance of the facility's FPOL.

NUREG–0884, ''Final Environmental Statement Related to the Operation of Perry Nuclear Power Plant, [Unit Nos.] 1 and 2,'' dated August 1982 (ADAMS Accession No. ML15134A060), concluded that PNPP could operate with minimal environmental impact. The proposed action would not affect the design or operation of PNPP and would not involve any modifications to or increase the licensed power for the plant. Similarly, the proposed action would not significantly increase the probability or consequences of accidents or change the types of effluents released offsite. Because the proposed approximate 7.7-month extension of operation represents only a small fraction of the 40-year operating life considered in NUREG–0884, there would be no significant increase in the amount of any effluent released or waste generated, and no significant increase in occupational or public radiation exposure. The nominal additional quantities of effluents and waste generated during the proposed approximate 7.7-month period of extension would be in accordance with current operating requirements and regulatory limits. Therefore, the NRC concludes that there would be no significant radiological or non-radiological environmental impacts associated with the proposed action.

Environmental Impacts of the Alternatives to the Proposed Action

As an alternative to the proposed action, the NRC considered denial of the license amendment request (*i.e.,* the ''no-action'' alternative). Denial of the license amendment request would result in no change in current environmental impacts. Accordingly, the environmental impacts of the proposed action and the no-action alternative would be similar.

Alternative Use of Resources

There are no unresolved conflicts concerning alternative uses of available resources under the proposed action.

Agencies or Persons Consulted

On August 5, 2020, the NRC notified State of Ohio representatives of the EA and FONSI. Additionally, in accordance with 10 CFR 50.91, the licensee provided copies of its application to the State of Ohio, and the NRC staff will consult with this State prior to issuance of the amendment. No additional Federal or State of Ohio agencies or persons were consulted regarding the environmental impact of the proposed action.

III. Finding of No Significant Impact

The licensee has requested an amendment to revise the expiration date of the PNPP license such that it would expire 40 years from the date of the issuance of the FPOL, as is permitted by 10 CFR 50.51. Specifically, the proposed action would revise the expiration date of Facility Operating License No. NPF–58 from March 18, 2026 to November 7, 2026, which is 40 years from the issuance of the FPOL on November 7, 1986.

The proposed action is in accordance with the licensee's application dated March 26, 2020, as supplemented by letter dated July 30, 2020.

The NRC is considering issuing the requested amendment. The proposed action would not significantly affect plant safety, would not have a significant adverse effect on the probability of an accident occurring, and would not have any significant radiological or non-radiological impacts. The reason the human environment would not be significantly affected is that the proposed action would not involve any construction or modification of the facility. Consistent with 10 CFR 51.21, the NRC conducted the EA for the proposed action, and this FONSI incorporates by reference the EA in Section II of this notice. Therefore, the NRC concludes that the proposed action will not have a significant effect on the quality of the human environment. Accordingly, the NRC has determined not to prepare an environmental impact statement for the proposed action.

As required by 10 CFR 51.32(a)(5), the related environmental document which provides the latest description of environmental conditions at PNPP is NUREG–0884. Other than the licensee's letter dated March 26, 2020, as supplemented by letter dated July 30, 2020, there are no other environmental documents associated with this review. These documents are available for public inspection as indicated in Section I of this notice.

Dated: September 24, 2020.

For the Nuclear Regulatory Commission.

Scott P. Wall,

Senior Project Manager, Plant Licensing Branch III, Division of Operating Reactor Licensing, Office of Nuclear Reactor Regulation.

BILLING CODE 7590–01–P

NUCLEAR REGULATORY COMMISSION

[NRC–2020–0202]

NuScale Power, LLC; NuScale Small Modular Reactor

AGENCY: Nuclear Regulatory Commission.

ACTION: Standard design approval; issuance.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC) has issued a standard design approval (SDA) to NuScale Power, LLC (NuScale) for the NuScale small modular reactor (SMR) standard design. The SDA allows the NuScale SMR standard design to be referenced in an application for a construction permit or operating license, or an application for a combined license or manufacturing license under its regulations.

DATES: The Standard Design Approval was issued on September 11, 2020.

ADDRESSES: Please refer to NRC–2020–0202 when contacting the NRC about the availability of information regarding this document. You may obtain publicly-available information related to this document using any of the following methods:

• *Federal Rulemaking Website:* Go to *https://www.regulations.gov* and search for Docket ID NRC–2020–0202. Address questions about Docket IDs in *Regulations.gov* to Jennifer Borges; telephone: 301–287–9127; email: *Jennifer.Borges@nrc.gov.* For technical questions, contact the individual listed in the **FOR FURTHER INFORMATION CONTACT** section of this document.

• *NRC's Agencywide Documents Access and Management System (ADAMS):* You may obtain publicly available documents online in the ADAMS Public Documents collection at *https://www.nrc.gov/reading-rm/adams.html.* To begin the search, select ''Begin Web-based ADAMS Search.'' For problems with ADAMS, please contact the NRC's Public Document Room reference staff at 1–800–397–4209, 301–415–4737, or by email to *pdr.resource@nrc.gov.* The NuScale Power Standard Design, Standard Design Approval is available in ADAMS under Accession No. ML20247J564.

FOR FURTHER INFORMATION CONTACT: Gregory Cranston, Office of Nuclear Reactor Regulation, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001; telephone: 301–415–0546, email: *Gregory.Cranston@nrc.gov.*

SUPPLEMENTARY INFORMATION: The U.S. Nuclear Regulatory Commission has issued a standard design approval (SDA) to NuScale Power, LLC, for the NuScale small modular reactor (SMR) standard design under subpart E, ''Standard Design Approvals,'' of title 10 of the *Code of Federal Regulations* (10 CFR) part 52, ''Licenses, Certifications, and Approvals for Nuclear Power Plants.'' This SDA allows the NuScale SMR standard design to be referenced in an application for a construction permit or operating license under 10 CFR part 50, ''Domestic Licensing of Production and Utilization Facilities,'' or an application for a combined license or manufacturing license under 10 CFR part 52. In addition, the NRC has issued the final safety evaluation report (FSER) (ADAMS Package Accession No. ML20023A318) that supports issuance of the SDA.

Issuance of this SDA signifies completion of the NRC staff's technical review of the NuScale SMR design. The NRC staff performed its technical review of the NuScale SMR design control document in accordance with the standards for review of standard design approval applications set forth in 10 CFR 52.139, ''Standards for Review of Applications.''

On the basis of its evaluation and independent analyses, as described in the FSER, the NRC staff concludes that NuScale's application for standard design approval meets the applicable portions of 10 CFR 52.137, ''Content of Applications; Technical Information,'' and the review standards identified in 10 CFR 52.139.

Copies of the NuScale SMR FSER and SDA have been placed in the NRC's PDR. The PDR is currently closed. However, you may order copies by submitting a request to the PDR via email at *PDR.Resource@nrc.gov* or call 1–800–397–4209 between 8:00 a.m. and 4:00 p.m. (EST), Monday through Friday, except Federal holidays.

Dated: September 23, 2020.

For the Nuclear Regulatory Commission.

Anna H. Bradford,

Director, Division of New and Renewed Licenses, Office of Nuclear Reactor Regulation.

BILLING CODE 7590–01–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–89970; File No. SR–CboeEDGX–2020–045]

Self-Regulatory Organizations; Cboe EDGX Exchange, Inc.; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Amend the Fee Schedule

September 23, 2020.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (the ''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on September 11, 2020, Cboe EDGX Exchange, Inc. (the ''Exchange'' or ''EDGX'') filed with the Securities and Exchange Commission (the ''Commission'') the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

Cboe EDGX Exchange, Inc. (the ''Exchange'' or ''EDGX'') is filing with the Securities and Exchange Commission (''Commission'') a proposed rule change to amend the fee schedule. The text of the proposed rule change is provided in Exhibit 5.

The text of the proposed rule change is also available on the Exchange's website (*http://markets.cboe.com/us/options/regulation/rule_filings/edgx/*), at the Exchange's Office of the Secretary, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend its fee schedule applicable to its equities trading platform (''EDGX Equities'') by: (1) Amending certain standard rates; (2) adding a new fee code; (3) updating the Non-Displayed Add Volume Tiers; and (4) including a Remove Volume Tier.[3]

The Exchange first notes that it operates in a highly competitive market in which market participants can readily direct order flow to competing venues if they deem fee levels at a particular venue to be excessive or incentives to be insufficient. More specifically, the Exchange is only one of 13 registered equities exchanges, as well as a number of alternative trading systems and other off-exchange venues that do not have similar self-regulatory responsibilities under the Exchange Act, to which market participants may direct their order flow. Based on publicly available information,[4] no single registered equities exchange has more than 18% of the market share. Thus, in such a low-concentrated and highly competitive market, no single equities exchange possesses significant pricing power in the execution of order flow. The Exchange in particular operates a ''Maker-Taker'' model whereby it pays credits to members that provide liquidity and assesses fees to those that remove liquidity. The Exchange's fee schedule sets forth the standard rebates and rates applied per share for orders that provide and remove liquidity, respectively. Currently, for orders priced at or above $1.00, the Exchange provides a standard rebate of $0.0017 per share for orders that add liquidity and assesses a fee of $0.0027 per share for orders that remove liquidity. For orders priced below $1.00, the Exchange a standard rebate of $0.00003 per share for orders that add liquidity and assesses a fee of 0.30% of Dollar Value for orders that remove liquidity. Additionally, in response to the competitive environment, the Exchange also offers tiered pricing which provides Members opportunities to qualify for higher rebates or reduced fees where certain volume criteria and thresholds are met. Tiered pricing provides an

[3] The Exchange initially filed the proposed fee changes on September 1, 2020 (SR–CboeEDGX–2020–044). On September 11, 2020, the Exchange withdrew that filing and submitted this proposal.

[4] *See* Cboe Global Markets, U.S. Equities Market Volume Summary, Month-to-Date (August 24, 2020), available at *https://markets.cboe.com/us/equities/market_statistics/.*

incremental incentive for Members to strive for higher tier levels, which provides increasingly higher benefits or discounts for satisfying increasingly more stringent criteria.

Proposed Amendment to Standard Rebate for Securities Under $1.00

As stated above, the Exchange currently offers a standard rebate of $0.00003 for orders in securities below $1.00 that add liquidity. The Exchange proposes to amend this standard rate by providing a standard rebate of $0.00009 for orders that add liquidity in securities priced under $1.00 and reflects this change in the Fee Codes and Associated Fee where applicable (*i.e.,* corresponding to fee codes 3, 4, B, V, and Y). The Exchange notes that the proposed standard rate is in line with, yet also competitive with, rates assessed by other equities exchanges on orders in securities priced below $1.00.[5] The Exchange notes, too, that its affiliated exchange, Cboe BZX Exchange, Inc. (''BZX Equities''), is simultaneously submitting a fee change to amend its same current standard rate for orders that add liquidity in securities under $1.00 in the same manner.

Proposed New Fee Code

The Exchange proposed to add a new type of fee code in the Fee Code and Associated Fees table in the Fee Schedule. Specifically, the proposed fee code ''ZM'' is appended to Retail[6] Day or Regular Hours Only (''RHO'')[7] Orders that remove liquidity on arrival and are assessed no fee. Currently, such orders in securities priced at or above $1.00 are assessed the standard fee of $0.0027 to remove liquidity and such orders in securities priced below $1.00 are assessed the standard fee of 0.30% of Dollar Value to remove liquidity.

Proposed Updates to the Non-Displayed Add Volume Tiers

Currently, the Exchange provides for three Non-Displayed Add Volume Tiers under footnote 1 of the Fee Schedule. These tiers offer enhanced rebates on Members' orders yielding fee codes ''DM''[8], ''HA''[9], ''MM''[10] and ''RP''[11] where a Member reaches certain required volume-based criteria offered in each tier. Specifically, the Non-Displayed Add Volume Tiers are as follows:

- Tier 1 provides an enhanced rebate of $0.0015 for a Member's qualifying orders (*i.e.,* yielding fee codes DM, HA, MM and RP) where a Member adds an ADV[12] greater than or equal to 1,000,000 shares as Non-Displayed orders that yield fee codes DM, HA, HI, MM or RP.
- Tier 2 provides an enhanced rebate of $0.0022 for a Member's qualifying orders where a Member adds an ADV greater than or equal to 2,500,000 shares as Non-Displayed orders that yield fee codes DM, HA, HI, MM or RP.
- Tier 3 provides an enhanced rebate of $0.0025 for a Member's qualifying orders where a Member adds an ADV greater than or equal to 7,000,000 shares as Non-Displayed orders that yield fee codes DM, HA, HI, MM or RP.

The Exchange proposes to update the criteria in each of the Non-Displayed Add Volume Tiers as follows below. The Exchange notes that the enhanced rebates currently provided in each tier remain the same.

- To meet the proposed criteria in Tier 1, a Member must have an ADAV greater than or equal to 0.01% of TCV for Non-Displayed orders that yield fee codes DM, HA, HI, MM or RP.
- To meet the proposed criteria in Tier 2, a Member must have an ADAV greater than or equal to 0.02% of TCV for Non-Displayed orders that yield fee codes DM, HA, HI, MM or RP.
- To meet the proposed criteria in Tier 3, a Member must have an ADAV greater than or equal to 0.05% of TCV for Non-Displayed orders that yield fee codes DM, HA, HI, MM or RP.

The Exchange notes that the proposed rule change also updates the language in each Tier to state ''where a Member has an ADAV'', which essentially states the same requirement as ''adds an ADV'', but is more appropriately aligned with the defined terms in the Fee Schedule.[13] Further, the Exchange does not believe that amending the current volume over a baseline number of shares criteria to, instead, be a percentage volume over TCV poses any significant increase or decrease in difficulty in reaching the Non-Displayed Add Volume Tiers, but only changes the format of the Non-Displayed Add Volume Tier criteria to be consistent with the format of the criteria in the other volume-based tiers offered under the Fee Schedule.[14]

Proposed Remove Volume Tier

The Exchange proposes to add a new Remove Volume Tier under footnote 1 of the Fee Schedule.[15] The proposed Remove Volume Tier offers a reduced remove fee of $0.0026 in securities at or above $1.00 and 0.28% of total dollar value for orders in securities below $1.00[16] for orders yielding fee code ''BB''[17], ''N''[18] and ''W''[19] where a Member has an ADAV[20] greater than or equal to 0.25% TCV[21] with displayed orders that yield fee codes B, V or Y. The proposed Remove Volume Tier is designed to incentivize Members to increase their orders that add displayed

[5] *See* NYSE Price List 2020, ''Transactions in stocks with a per share stock price less than $1.00'', which either does not assess a charge or assesses a charge of 0.3% for various orders in securities priced below $1.00; *and* Nasdaq Pricing, ''Rebates and Fees, Shares Executed Below $1.00'', which assesses no change for orders to add liquidity in securities priced below $1.00 and assesses a charge of 0.30% of total dollar volume for orders to remove liquidity in securities priced below $1.00.

[6] *See* EDGX Rule 11.21(a)(1). A ''Retail Order'' is an agency or riskless principal order that meets the criteria of FINRA Rule 5320.03 that originates from a natural person and is submitted to the Exchange by a Retail Member Organization, provided that no change is made to the terms of the order with respect to price or side of market and the order does not originate from a trading algorithm or any other computerized methodology. *See* EDGX Rule 11.21(a)(2). Retail Orders are submitted by a ''Retail Member Organization'' or ''RMO'', which is a member (or a division thereof) that has been approved by the Exchange to submit such orders.

[7] ''Day'' is an instruction the User may attach to an order stating that an order to buy or sell which, if not executed, expires at the end of Regular Trading Hours. Any Day Order entered into the System before the opening for business on the Exchange, or after the closing of Regular Trading Hours, will be rejected. *See* EDGX Rule 11.6(q)(2). ''Regular Hours Only (''RHO'') is an instruction a User may attach to an order designating it for execution only during Regular Trading Hours, which includes the Opening Process and Re-Opening Process following a halt suspension or pause. *See* EDGX Rule 11.6(q)(6).

[8] Appended to orders that add liquidity using MidPoint Discretionary order within discretionary range and are provided a rebate of $0.00100.

[9] Appended to non-displayed orders that add liquidity and are provided a rebate of $0.00100.

[10] Appended to non-displayed orders that add liquidity using Mid-Point Peg and are provided a rebate of $0.00100.

[11] Appended to non-displayed orders that add liquidity using Supplemental Peg and are provided a rebate of $0.00100.

[12] ''ADV'' means average daily volume calculated as the number of shares added to, removed from, or routed by, the Exchange, or any combination or subset thereof, per day. ADV is calculated on a monthly basis.

[13] *See supra* note 12; *and see infra* note 20.

[14] *See* EDGX Equities Fee Schedule, ''Add Volume Tiers'', ''Tape B Volume Tier'', and ''Retail Volume Tier''.

[15] As a result of the new Remove Volume Tier, it also updates the title of footnote 1 to ''Add/Remove Volume Tiers''.

[16] As a result, the Exchange proposes to update the statement under General Notes in the Fee Schedule to state that ''unless otherwise indicated, variable rates provided by tiers apply only to executions in securities priced at or above $1.00.

[17] Appended to orders that remove liquidity from EDGX (Tape B) and is assessed a standard fee of $0.00270.

[18] Appended to orders that remove liquidity from EDGX (Tape C) and is assessed a standard fee of $0.00270.

[19] Appended to orders that remove liquidity from BZX (Tape A) and is assessed a standard fee of $0.00270.

[20] ''ADAV'' means average daily added volume calculated as the number of shares added per day. ADAV is calculated on a monthly basis.

[21] ''TCV'' means total consolidated volume calculated as the volume reported by all exchanges and trade reporting facilities to a consolidated transaction reporting plan for the month for which the fees apply.

volume on the Exchange in order to receive a reduced fee on their qualifying, liquidity removing orders.

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with the objectives of Section 6 of the Act,[22] in general, and furthers the objectives of Section 6(b)(4),[23] in particular, as it is designed to provide for the equitable allocation of reasonable dues, fees and other charges among its Members, issuers and other persons using its facilities. The Exchange operates in a highly competitive market in which market participants can readily direct order flow to competing venues if they deem fee levels at a particular venue to be excessive or incentives to be insufficient. The proposed rule changes reflect a competitive pricing structure designed to incentivize market participants to direct their order flow to the Exchange, which the Exchange believes would enhance market quality to the benefit of all Members.

Regarding the proposed change to the standard rates, the Exchange believes that amending the standard rate for orders that add volume in securities priced below $1.00 is reasonable because, as stated above, in order to operate in the highly competitive equities markets, the Exchange and its competing exchanges seek to offer similar pricing structures, including assessing comparable standard fees for orders in securities priced below $1.00. Thus, the Exchange believes the proposed standard rate change is reasonable as it is generally aligned with and competitive with the amounts assessed for the orders in securities below $1.00 on other equities exchanges. The Exchange also believes that amending this standard rate amount represents an equitable allocation of fees and is not unfairly discriminatory because they will continue to automatically apply to all Members' orders that add liquidity in securities less than $1.00 uniformly.

Regarding the proposed new fee code ZM appended to Retail Day/RHO Orders that remove liquidity on arrival, the Exchange notes that the competition for Retail Order flow is particularly intense, especially as it relates to exchange versus off-exchange venues, as prominent retail brokerages tend to route a majority of their limit orders to off-exchange venues.[24] Accordingly, competitive forces compel the Exchange to use exchange transaction fees and credits, particularly as they relate to competing for Retail Order flow, because market participants can readily trade on competing venues if they deem pricing levels at those other venues to be more favorable.

The Exchange believes that its proposed change to adopt fee code ZM, which will assess no fee for Retail Day/RHO Orders that remove upon arrival is reasonable, equitable and not unfairly discriminatory. Specifically, the Exchange believes the proposal is reasonable as market participants will not be subject to a fee for the execution of such orders. This is consistent with, and competitive with, fees assessed for retail order flow on other equities exchanges, which provide pricing incentives to retail orders in the form of lower fees and/or higher rebates.[25] The Exchange notes too that it currently offers a rebate of $0.0032 per share for Retail Orders that add liquidity (*i.e.,* yielding fee code ''ZA'') as compared to the standard rebate of $0.0017 for liquidity adding orders, as well as Retail Volume Tiers which provide various enhanced rebates specifically for Members' Retail Order flow. The Exchange believes that adopting no charge on orders yielding fee code ZM is reasonable in that it is reasonably designed to incentivize an increase in removing Retail Order flow. Retail Orders are generally submitted in smaller sizes and tend to attract Market-Makers, as smaller size orders are easier to hedge, and Retail Order flow that removes liquidity additionally signals to liquidity providers to increase their overall provision of liquidity in the markets. Increased Market-Maker activity facilitates tighter spreads and an increase in overall liquidity provider activity provides for deeper, more robust levels of liquidity, both of which signal additional corresponding increase in order flow from other market participants, contributing towards a robust, well-balanced market ecosystem. Indeed, increased overall order flow benefits all investors by continuing to deepen the Exchange's liquidity pool, potentially providing even greater execution incentives and opportunities, offering additional flexibility for all investors to enjoy cost savings, supporting the quality of price discovery, promoting market transparency and improving investor protection. The Exchange notes that, like all other fee codes, ZM and the accompanying free charge will be automatically and uniformly applied to all Members' qualifying orders. The Exchange additionally notes that while the proposed fee code and assessment of no fee is applicable only to Retail Orders, the Exchange does not believe this application is discriminatory as the Exchange offers similar rebates or reduced rates to non-Retail Order flow.[26]

The Exchange believes that the proposed Remove Volume Tier is reasonable because it provides an additional opportunity through a new tier for Members to receive a discounted rate by means of liquidity adding orders and that the proposed changes to the Non-Displayed Liquidity Tiers are reasonable because they merely update the format of the tiers' criteria to be consistent with other volume-based tiers currently offered by the Exchange, thus maintaining existing opportunities for Members to receive a discounted rate by means of non-displayed liquidity adding orders.[27] The Exchange notes that relative volume-based incentives and discounts have been widely adopted by exchanges, including the Exchange, and are reasonable, equitable and non-discriminatory because they are open to all members on an equal basis and provide additional benefits or discounts that are reasonably related to (i) the value to an exchange's market quality and (ii) associated higher levels of market activity, such as higher levels of liquidity provision and/or growth patterns. Additionally, as noted above, the Exchange operates in highly competitive market. The Exchange is only one of several equity venues to which market participants may direct their order flow, and it represents a small percentage of the overall market. It is also only one of several maker-taker exchanges. Competing equity exchanges offer similar tiered pricing structures, including schedules of rebates and fees that apply based upon members achieving certain volume and/or growth thresholds, as well as assess similar fees or rebates for similar types of orders, to that of the Exchange. These competing pricing schedules, including those of the Exchange's affiliated equities

[26] *See generally,* EDGX Equities Fee Schedule, Fee Codes and Associated Fees; *see also* ''Add Volume Tiers'' and ''Tape B Volume Tier'', both of which provide various enhanced rebates for non-Retail Order flow.

[27] *See supra* note 14.

exchanges,[28] are presently comparable to those that the Exchange provides, including the pricing of comparable criteria and reduced fees.

Moreover, the Exchange believes the Remove Volume Tier is a reasonable means to incentivize Members to continue to provide liquidity adding, displayed volume to the Exchange by offering them a different, additional opportunity than that of the current Add Volume Tiers—to receive a reduced fee on their liquidity removing orders by meeting the proposed criteria in submitting additional add volume order flow. In addition to this, the Exchange has recently observed that trading in subdollar names has grown significantly; nearly tripling since the beginning of 2020, and that competing equities exchanges have begun offering pricing incentives for subdollar orders.[29] Therefore, the Exchange believes that it is reasonable and equitable to provide the proposed reduced fee under the new Remove Volume Tier for qualifying subdollar orders. Also, as noted above, the Exchange's affiliated equities exchanges already have similar Remove Volume Tiers in place, which offer similar rebates for achieving comparable criteria, in addition to their Add Volume Tiers.[30]

In addition to this, the Exchange believes the proposed Non-Displayed Volume Tiers are reasonable in that the proposed changes to the tiers' criteria is designed to be more consistent with the format of the criteria (*i.e.,* percentage of volume based on TCV) currently offered under the other volume-based tiers in the Fee Schedule.[31] Also, as noted above, the Exchange's affiliated equities exchange, BZX Equities, currently has Non-Displayed Volume Tiers in place, which offer substantially similar enhanced rebates and criteria based on volume over TCV for its members.[32]

Overall, the Exchange believes that the proposed tiers, each based on a Member's liquidity adding orders, will benefit all market participants by incentivizing continuous liquidity and thus, deeper more liquid markets as well as increased execution opportunities. Particularly, the proposed Remove Volume Tier is designed to incentivize continuous displayed liquidity, which signals other market participants to take the additional execution opportunities provided by such liquidity, while the proposed Non-Displayed Add Volume Tiers remains designed to incentivize non-displayed liquidity, which further contributes to a deeper, more liquid market and provide even more execution opportunities for active market participants at improved prices. This overall increase in activity deepens the Exchange's liquidity pool, offers additional cost savings, supports the quality of price discovery, promotes market transparency and improves market quality, for all investors.

The Exchange believes that the proposal represents an equitable allocation of fees and rebates and is not unfairly discriminatory because all Members are eligible for the proposed Remove Volume Tier and Non-Displayed Add Volume Tiers and would have the opportunity to meet the tiers' criteria and would receive the proposed fee if such criteria is met. Without having a view of activity on other markets and off-exchange venues, the Exchange has no way of knowing whether this proposed rule change would definitely result in any Members qualifying for the proposed tiers. While the Exchange has no way of predicting with certainty how the proposed tier will impact Member activity, the Exchange anticipates that approximately eight Members will be able to compete for and reach the proposed Remove Volume Tier. The Exchange also notes that while the proposed changes to the criteria in the Non-Displayed Add Volume Tiers do not significantly increase or decrease the level of criteria difficulty, thus do not significantly affect Members' current ability to compete for and reach the proposed tiers, approximately three additional Members will be able to compete for and reach these tiers, as amended. The Exchange anticipates that the tiers will include various liquidity providing Member types, such as traditional Market Makers, and wholesale or consolidator firms that mainly make markets for retail orders, each providing distinct types of order flow to the Exchange to the benefit of all market participants. The Exchange also notes that proposed tiers will not adversely impact any Member's pricing or ability to qualify for other reduced fee or enhanced rebate tiers. Should a Member not meet the proposed criteria under any of the proposed tiers, the Member will merely not receive that corresponding reduced fee. Furthermore, the proposed reduced fee in the Remove Volume Tier would uniformly apply to all Members that meet the required criteria under the proposed tier. The Exchange again notes that the enhanced rebates offered under the Non-Displayed Add Volume Tiers remain the same.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule changes will impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act. Rather, as discussed above, the Exchange believes that the proposed change would encourage the submission of additional order flow to a public exchange, thereby promoting market depth, execution incentives and enhanced execution opportunities, as well as price discovery and transparency for all Members. As a result, the Exchange believes that the proposed change furthers the Commission's goal in adopting Regulation NMS of fostering competition among orders, which promotes ''more efficient pricing of individual stocks for all types of orders, large and small.''

The Exchange believes the proposed rule change does not impose any burden on intramarket competition that is not necessary or appropriate in furtherance of the purposes of the Act. Particularly, the proposed change applies to all Members equally in that all Members are eligible for the proposed Remove Volume Tier and the proposed Non-Displayed Add Volume Tiers, have a reasonable opportunity to meet the tiers' criteria and will all receive the proposed fee if such criteria is met. Additionally, the proposed tiers are designed to attract additional order flow to the Exchange. The Exchange believes that the additional and updated tier criteria would incentivize market participants to direct liquidity adding order flow to the Exchange, bringing with it improved price transparency. Greater overall order

[28] *See* EDGA Equities Fee Schedule, footnote 7, ''Add/Remove Volume Tiers'', of which the Remove Volume Tiers offers an enhanced rebate of $0.0022 or $0.0028 for reaching a certain threshold of ADV over TCV; BYX Equities Fee Schedule, footnote 1, ''Add/Remove Volume Tiers'', of which the Remove Volume Tiers offer enhanced rebates between $0.0015 and $0.0018 for various criteria (Step-Up volume, ADAV of a set number of shares, ADV as a percentage of TCV, etc.); *and* BZX Equities Fee Schedule, footnote 1, ''Add Volume Tiers'', Non-Displayed Add Volume Tiers, which provide for substantially similar enhanced rebates and non-displayed volume based criteria.

[29] *See* NYSE Price List, ''Fees and Credits applicable to Designated Market Makers (''DMMs'')'', which provides, among various credits for orders in securities at or above $1.00, additional credit of $0.0004 for DMMs adding liquidity in securities under $1.00; *see also* Securities Exchange Release No. 89607 (August 18, 2020), 85 FR 52179 (August 24, 2020) (SR–NYSEArca–2020–75), which recently adopted in its fee schedule a step up tier for ETP Holders adding liquidity in Round Lots and Odd Lots in Tapes A, B and C securities with a per share price below $1.00 and amended the base rate for adding and removing liquidity in Round Lots and Odd Lots in Tapes A, B and C securities with a per share price below $1.00.

[30] *See supra* note 28.

[31] *See supra* note 14.

[32] *See supra* note 28.

flow and pricing transparency benefits all market participants on the Exchange by providing more trading opportunities, enhancing market quality, and continuing to encourage Members to send orders, thereby contributing towards a robust and well-balanced market ecosystem, which benefits all market participants. Further, the proposed standard rebate for orders that add liquidity in securities below $1.00 and the proposed no charge for orders yielding fee code ZM will apply uniformly and automatically to all such Members' respective orders, as all other standard rates and fee codes apply today to qualifying orders. In addition to this, and as indicated above, the Exchange does not believe that not assessing a fee for Retail Orders yielding fee code ZM imposes any burden on intramarket competition as the Exchange offers many similar rebate opportunities for non-Retail Orders in it Fee Schedule.[33]

Next, the Exchange believes the proposed rule change does not impose any burden on intermarket competition that is not necessary or appropriate in furtherance of the purposes of the Act. As previously discussed, the Exchange operates in a highly competitive market. Members have numerous alternative venues that they may participate on and direct their order flow, including 12 other equities exchanges and off-exchange venues and alternative trading systems. Additionally, the Exchange represents a small percentage of the overall market. Based on publicly available information, no single equities exchange has more than 18% of the market share. Therefore, no exchange possesses significant pricing power in the execution of order flow. Indeed, participants can readily choose to send their orders to other exchange and off-exchange venues if they deem fee levels at those other venues to be more favorable. Moreover, the Commission has repeatedly expressed its preference for competition over regulatory intervention in determining prices, products, and services in the securities markets. Specifically, in Regulation NMS, the Commission highlighted the importance of market forces in determining prices and SRO revenues and, also, recognized that current regulation of the market system ''has been remarkably successful in promoting market competition in its broader forms that are most important to investors and listed companies.'' The fact that this market is competitive has also long been recognized by the courts. In *NetCoalition* v. *Securities and Exchange Commission,* the D.C. Circuit stated as follows: ''[n]o one disputes that competition for order flow is 'fierce.' . . . As the SEC explained, '[i]n the U.S. national market system, buyers and sellers of securities, and the broker-dealers that act as their order-routing agents, have a wide range of choices of where to route orders for execution'; [and] 'no exchange can afford to take its market share percentages for granted' because 'no exchange possesses a monopoly, regulatory or otherwise, in the execution of order flow from broker dealers'. . . .'' Accordingly, the Exchange does not believe its proposed fee change imposes any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

The Exchange neither solicited nor received comments on the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A) of the Act[34] and paragraph (f) of Rule 19b–4[35] thereunder. At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission will institute proceedings to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include File Number SR–CboeEDGX–2020–045 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to File Number SR–CboeEDGX–2020–045. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change. Persons submitting comments are cautioned that we do not redact or edit personal identifying information from comment submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–CboeEDGX–2020–045, and should be submitted on or before October 20, 2020.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[36]

J. Matthew DeLesDernier,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–89973; File No. SR–FINRA–2020–029]

Self-Regulatory Organizations; Financial Industry Regulatory Authority, Inc.; Notice of Filing of Proposed Rule Change Relating to Granularity of Timestamps in Trade Reports Submitted to FINRA's Equity Trade Reporting Facilities

September 23, 2020.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act'')[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on September 17, 2020, the Financial Industry Regulatory Authority, Inc. (''FINRA'') filed with the Securities and Exchange Commission (''SEC'' or ''Commission'') the proposed rule change as described in Items I, II, and III below, which Items have been prepared by FINRA. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

FINRA is proposing to require firms to report time fields in trade reports submitted to an equity trade reporting facility (or ''FINRA Facility'')[3] using the same timestamp granularity that they use to report to the consolidated audit trail (''CAT''), in accordance with an SEC order granting exemptive relief from certain CAT NMS Plan requirements.

The text of the proposed rule change is available on FINRA's website at *http://www.finra.org,* at the principal office of FINRA and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, FINRA included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. FINRA has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

Background

FINRA's equity trade reporting rules require members to report all time fields, including time of trade execution and, if applicable, time of trade cancellation, to the FINRA Facilities in seconds (*i.e.,* HH:MM:SS) and milliseconds, if the member's system captures time in milliseconds.[4] Pursuant to Rule 6860 of FINRA's CAT Compliance Rule,[5] Industry Members are required to report timestamps for Reportable Events, including trade executions, to the CAT's Central Repository in milliseconds, and if their system captures time in finer increments, to report in such finer increments up to nanoseconds (except as otherwise provided under Rule 6860 for Manual Order Events).[6] This requirement is consistent with the CAT NMS Plan,[7] the CAT Compliance Rules of the other Plan Participants and exemptive relief granted by the SEC relating to timestamp granularity.[8]

Thus, currently there is a difference in the timestamp granularity requirements applicable to member firms reporting to the FINRA Facilities (up to milliseconds) and to the CAT (up to nanoseconds). This difference in timestamp granularity has implications for exemptive relief granted by the SEC. On June 11, 2020, the SEC granted the Plan Participants exemptive relief from, in pertinent part, Section 6.4(d)(ii)(B) of the CAT NMS Plan, which states that each Participant, through its Compliance Rule, must require its Industry Members to report to the CAT a cancelled trade indicator when a trade is cancelled.[9] Specifically, since firms already report trade cancellations to the FINRA Facilities pursuant to FINRA's trade reporting rules, the Participants requested an exemption so that they could relieve firms of their obligation to report the same information to the CAT. Instead, the CAT will obtain trade cancellations from trade report data that FINRA reports to the CAT (''FINRA Facility Data'') and will link such data to the related CAT execution reports submitted by Industry Members. As part of the FINRA Facility Data, FINRA submits to the CAT the time of trade cancellation as reported by the firm to the FINRA Facility. As noted above, under current rules and systems limitations, this timestamp is in milliseconds.

Given the difference in timestamp granularity requirements for firms reporting to the FINRA Facilities and the CAT, it is possible that the CAT could receive the time of trade cancellation in milliseconds from FINRA, while the time of trade cancellation for the same event might

---

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

[3] Specifically, the equity FINRA Facilities are (1) the Alternative Display Facility, the FINRA/Nasdaq Trade Reporting Facilities and the FINRA/NYSE Trade Reporting Facility, through which member firms report OTC transactions in NMS stocks to FINRA, and (2) the OTC Reporting Facility, through which member firms report transactions in OTC Equity Securities to FINRA.

[4] *See* Rules 6282.04 and 7130.01 (relating to the ADF); 6380A.04 and 7230A.01 (relating to the FINRA/Nasdaq TRFs); 6380B.04 and 7230B.01 (relating to the FINRA/NYSE TRF); and 6622.04 and 7330.01 (relating to the ORF).

[5] ''Compliance Rule'' is defined under Section 1.1 of the CAT NMS Plan to mean ''with respect to a Participant, the rule(s) promulgated by such Participant as contemplated by Section 3.11.'' FINRA's CAT Compliance Rule is the FINRA Rule 6800 Series (Consolidated Audit Trail Compliance Rule).

[6] Terms used but not otherwise defined herein have the meaning set forth in the CAT NMS Plan and FINRA's CAT Compliance Rule. Specifically, ''Central Repository,'' ''Industry Member,'' ''Manual Order Event'' and ''Reportable Event'' are defined under Section 1.1 of the CAT NMS Plan and FINRA Rule 6810.

[7] Section 6.8(b) of the CAT NMS Plan states:

Each Participant shall, and through its Compliance Rule shall require its Industry Members to, report information required by SEC Rule 613 and this Agreement to the Central Repository in milliseconds. To the extent that any Participant's order handling or execution systems utilize timestamps in increments finer than the minimum required in this Agreement, such Participant shall utilize such finer increment when reporting CAT Data to the Central Repository so that all Reportable Events reported to the Central Repository can be adequately sequenced. Each Participant shall, through its Compliance Rule: (i) Require that, to the extent that its Industry Members utilize timestamps in increments finer than the minimum required in this Agreement in their order handling or execution systems, such Industry Members shall utilize such finer increment when reporting CAT Data to the Central Repository; and (ii) provide that a pattern or practice of reporting events outside of the required clock synchronization time period without reasonable justification or exceptional circumstances may be considered a violation of SEC Rule 613 and the CAT NMS Plan.

[8] *See* Securities Exchange Act Release No. 88608 (April 8, 2020), 85 FR 20743 (April 14, 2020). Pursuant to this exemption, Industry Members that capture timestamps in increments more granular than nanoseconds must truncate the timestamps, after the nanosecond level, for submission to the CAT and not round up or down in such circumstances. The exemption remains in effect for five years, until April 8, 2025, unless extended by the SEC.

[9] *See* Securities Exchange Act Release No. 89051 (June 11, 2020), 85 FR 36631 (June 17, 2020) (''FINRA Facility Data Exemption Order'').

FINRA notes that the FINRA Facility Data Exemption Order also grants exemptive relief from Section 6.4(d)(ii)(A)(2) of the CAT NMS Plan, which states that each Participant, through its Compliance Rule, must require its Industry Members to report the SRO-Assigned Market Participant Identifier of the clearing broker or prime broker, if applicable, for orders that are executed in whole or in part. This aspect of the Order is not at issue in the proposed rule change.

have been expressed in increments finer than milliseconds, had the firm reported such information directly to the CAT. In such instances, the CAT would not receive the same data it would have received absent the exemptive relief.[10] As a result, to ensure that the FINRA Facility Data provided to the CAT is equivalent to the data that would have otherwise been submitted by Industry Members, in the FINRA Facility Data Exemption Order, the SEC expressly conditioned the exemptive relief on the FINRA Facilities accepting timestamps up to nanoseconds.

Specifically, the FINRA Facility Data Exemption Order requires that FINRA amend its rules and technical specifications to permit the FINRA Facilities to accept timestamps up to the granularity under the CAT NMS Plan (which, as noted above, is currently up to nanoseconds) and to implement such changes by December 15, 2021 for the TRFs and ADF and by December 15, 2022 for the ORF. In the FINRA Facility Data Exemption Order, the SEC notes that if the Plan Participants do not meet all of the conditions set forth in the order, on the schedule set forth in the order, their ability to recover fees from Industry Members could be impacted pursuant to the terms of Section 11.6 of the CAT NMS Plan.[11]

Proposed Amendments to FINRA Trade Reporting Rules

FINRA is proposing to amend its equity trade reporting rules [12] to require Industry Members with an obligation to report order execution events to the Central Repository pursuant to FINRA's CAT Compliance Rule to report time fields (including time of execution and time of cancellation, if applicable) in trade reports submitted to a FINRA Facility using the same timestamp granularity, as set forth in Rule 6860 (currently up to nanoseconds), that they use to report to the Central Repository.

FINRA notes that, except as discussed below, all trades that are reported to a FINRA Facility must also be reported to the CAT. As such, firms with a trade reporting obligation under FINRA's trade reporting rules also have a CAT reporting obligation and are therefore already subject to the timestamp granularity requirements under the CAT Compliance Rule. Given that CAT Reporters must have systems that capture time in at least milliseconds to meet the requirement that they report to the CAT in milliseconds, FINRA expects such firms to report to the FINRA Facilities in milliseconds under FINRA's current trade reporting rules.[13] Once the proposed rule change is implemented, any firm capturing and reporting time to the CAT in increments finer than milliseconds would be required to report time to the FINRA Facilities in such finer increments up to nanoseconds.

There is one instance where firms have an obligation to report trades to a FINRA Facility without a corresponding CAT reporting obligation. Under FINRA trade reporting rules, firms must report trades in Restricted Equity Securities effected pursuant to Securities Act Rule 144A to the ORF.[14] Unlike trades in OTC Equity Securities, these 144A trades are not required to be reported within 10 seconds [15] and as such are not reportable to the CAT.[16] Therefore, in this limited instance, *i.e.,* where a firm reports a trade in a Restricted Equity Security effected pursuant to Rule 144A, the firm could report to the ORF in seconds or, if the firm's system captures time in milliseconds, the firm would be required to report in milliseconds. The firm would not be required under the proposed rule change to report in increments finer than milliseconds; however, they could voluntarily do so.

Because the FINRA Facilities do not currently accept timestamps more granular than milliseconds, FINRA is unable to estimate, based on trade report information, how many firms capture time in increments more granular than milliseconds or have trade reporting systems capable of reporting time to a FINRA Facility in such finer increments. However, FINRA reviewed reporting statistics for order execution events in NMS stocks and OTC equity securities reported by Industry Members to the CAT (referred to in the CAT Industry Member Technical Specifications as ''MEOTs'') during the month of July 2020. On an average day, 12,617,227 out of 32,667,792 Industry Member order execution events (or 38.6%) have a timestamp granularity finer than milliseconds. Of the 167 firms that reported order execution events on an average day, 79 firms (or 47.2%) used a timestamp granularity finer than milliseconds. Seven of those firms reported time in nanoseconds, and together they reported 1,792,160 order execution events (or 5.5% of the total number of order execution events).

Some of these firms may already send timestamps to a FINRA Facility in increments finer than milliseconds; [17] FINRA does not believe that these firms would need to make any systems changes to comply with the proposed rule change. Other firms that capture time in increments finer than milliseconds may truncate the timestamp before sending to the FINRA Facility; these firms would need to make systems changes to send the more granular timestamp to the FINRA Facility. As noted above, FINRA will provide ample advance notice prior to the implementation date of the proposed rule change to allow firms to make and test the necessary systems changes.

FINRA understands that the securities information processors (''SIPs'') currently accommodate timestamps up to nanoseconds [18] and at least some of the exchanges send quotation and transaction information to the SIPs in nanoseconds today. Once the proposed rule change is implemented, the FINRA Facilities will send transaction information to the SIPs with timestamps

[10] For example, a firm cancels a trade at 10:30:00.123456 and reports the cancellation to a FINRA Facility with a trade cancellation time of 10:30:00.123 (the timestamp is truncated at the millisecond level for reporting to the FINRA Facility). As a consequence of the FINRA Facility Data Exemption Order, the data in the CAT reflects the time of cancellation as 10:30:00.123, which is the time submitted in the FINRA Facility Data. Had the firm reported the trade cancellation directly to the CAT, the data in the CAT would reflect the time of cancellation as 10:30:00.123456.

[11] *See* FINRA Facility Data Exemption Order, citing CAT NMS Plan at Section 11.6 (effective June 22, 2020).

[12] *See* Rules 6282.04, 6380A.04, 6380B.04, 6622.04, 7130.01, 7230A.01, 7230B.01 and 7330.01. FINRA is proposing identical amendments to these rules.

[13] Small Industry Members that do not currently report to FINRA's Order Audit Trail System (''OATS'') are not required to begin reporting to the CAT until December 13, 2021. Accordingly, FINRA would not expect these non-OATS reporters to report to the FINRA Facilities in milliseconds until December 13, 2021, unless their systems currently capture milliseconds.

[14] *See* Rule 6622(a)(3).

[15] Pursuant to Rule 6622(a)(3), such trades must be reported by the end of the day on trade date or, if executed after the ORF closes, by 8:00 p.m. the next business day. These trades are reported for regulatory purposes only and are not publicly disseminated.

[16] The CAT NMS Plan and FINRA's CAT Compliance Rule apply to ''Eligible Securities,'' which are defined as all NMS Securities and all OTC Equity Securities. ''OTC Equity Security'' is defined, in turn, as ''any equity security, other than an NMS Security, subject to prompt last sale reporting rules of a registered national securities association and reported to one of such association's equity trade reporting facilities.'' *See* Rule 6810. Accordingly, order and trade events relating to Restricted Equity Securities, including trades effected pursuant to Rule 144A, are not reportable to CAT.

[17] If a FINRA Facility receives a timestamp more granular than milliseconds, the Facility will truncate at the millisecond level (the Facility will not reject the trade report, nor will it round the timestamp up or down).

[18] Today, where a firm reports time in seconds or milliseconds, the FINRA Facilities add zeroes to convert the times to nanoseconds before sending to the SIPs.

at the level of granularity as reported by the firm.[19] As such, FINRA believes that the proposed rule change will enhance the granularity and sequencing of trade reports both for purposes of FINRA's audit trail and the publicly disseminated SIP data, to the extent firms are reporting time in increments finer than milliseconds. FINRA notes that, because not all firms capture and report timestamps at the same granularity, there may be questions about the potential for reverse engineering based on timestamps published by the SIPs, *e.g.,* could market participants attempt to identify the trading activity of a firm that they believe has the technological capability of capturing timestamps in nanoseconds. However, as noted above, on average, seven firms currently capture (and report to CAT) time in nanoseconds and these firms reported on average close to 1.8 million order execution events to CAT per day. FINRA believes that as more firms capture timestamps in more granular increments, the potential for such reverse engineering should decrease over time.

If the Commission approves the proposed rule change, FINRA will announce the implementation date of the proposed rule change in a *Regulatory Notice.* The implementation date of the proposed rule change relating to the TRFs and ADF will be no later than December 15, 2021, and the implementation date of the proposed rule change relating to the ORF will be no later than December 15, 2022. To provide member firms sufficient time to make any systems changes necessary to comply with the proposed rule change, FINRA will provide ample advance notice of the implementation date, including publication of the *Regulatory Notice,* as well as updated technical specifications and testing schedule, at least 120 days prior to the implementation date.

2. Statutory Basis

FINRA believes that the proposed rule change is consistent with the provisions of Section 15A(b)(6) of the Act,[20] which requires, among other things, that FINRA rules must be designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, and, in general, to protect investors and the public interest and Section 15A(b)(9) of the Act,[21] which requires that FINRA rules not impose any burden on competition that is not necessary or appropriate.

FINRA believes that the proposed rule change is consistent with the Act because it is consistent with the SEC's FINRA Facility Exemption Order, which provides exemptive relief from certain provisions of the CAT NMS Plan, and the proposed rule change is necessary to comply with the express conditions of that order. In approving the CAT NMS Plan, the SEC noted that the Plan ''is necessary and appropriate in the public interest, for the protection of investors and the maintenance of fair and orderly markets, to remove impediments to, and perfect the mechanism of a national market system, or is otherwise in furtherance of the purposes of the Act.'' [22] Because the proposed rule change implements exemptive relief under the CAT NMS Plan, FINRA believes that the proposed rule change furthers the objectives of the Plan, as identified by the SEC, and is therefore consistent with the Act. In addition, FINRA believes that the proposed rule change will enhance the granularity and sequencing of trade reports both for purposes of FINRA's audit trail and the publicly disseminated SIP data, to the extent firms are reporting time in increments finer than milliseconds.

B. Self-Regulatory Organization's Statement on Burden on Competition

FINRA does not believe that the proposed rule change will result in any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act.

Economic Impact Assessment

FINRA has undertaken an economic impact assessment, as set forth below, to analyze the potential economic impacts, including anticipated costs, benefits, and distributional and competitive effects, relative to the current baseline, and the alternatives FINRA considered in assessing how to best meet its regulatory objectives.

Regulatory Need

On June 11, 2020, the SEC granted the Plan Participants exemptive relief from, in pertinent part, Section 6.4(d)(ii)(B) of the CAT NMS Plan, which states that each Participant, through its Compliance Rule, must require its Industry Members to report to the CAT a cancelled trade indicator when a trade is cancelled. As firms already report trade cancellations to the FINRA Facilities pursuant to FINRA's trade reporting rules, the Participants requested an exemption so that they could relieve firms of their obligation to report the same information to the CAT. Given the exemptive relief, the CAT will obtain trade cancellations from trade report data that FINRA reports to the CAT and will link such data to the related CAT execution reports submitted by Industry Members.

There is, however, a difference in the timestamp granularity requirements applicable to member firms reporting to the FINRA Facilities (up to milliseconds) and to the CAT (up to nanoseconds). Given the difference in timestamp granularity requirements for firms reporting to the FINRA Facilities and the CAT, it is possible that the CAT could receive a cancelled trade timestamp in milliseconds from FINRA, while a cancelled trade timestamp for the same trade cancellation might have been expressed in increments finer than milliseconds. In such instances, the CAT would not receive the same data it would have received absent the exemptive relief. The FINRA Facility Data Exemption Order requires that FINRA amend its rules and technical specifications to permit the FINRA Facilities to accept timestamps up to the granularity under the CAT NMS Plan.

Economic Baseline

Pursuant to Rule 6860 of FINRA's CAT Compliance Rule, Industry Members are required to report timestamps for Reportable Events, including trade executions, to the CAT's Central Repository in milliseconds, and if their system captures time in finer increments, to report in such finer increments up to nanoseconds. The proposed rule change does not require firms to begin capturing time in more granular increments than milliseconds; however, if they are reporting timestamps to the CAT in increments finer than milliseconds, the proposed rule change requires that they also

[19] FINRA notes that the SIP NMS Plans require FINRA to send the trade execution time reported by its member firms to the SIPs. *See* Section IV(c) of the Consolidated Tape Association (CTA) Plan and Section VIII.B of the Nasdaq Unlisted Trading Privileges (UTP) Plan (stating that ''in the case of FINRA, the time of the transaction shall be the time of execution that a FINRA member reports to a FINRA trade reporting facility in accordance with FINRA rules''). As such, once the FINRA Facilities begin accepting, and member firms begin reporting, more granular timestamps in accordance with the proposed rule change, FINRA will be required to send all timestamps in the granularity reported by the firm (up to nanoseconds) to the SIPs for publication. Any change (*e.g.,* truncating a more granular timestamp to the millisecond or microsecond level before sending to the SIPs) would require amendment (or, at a minimum, interpretation) of the SIP NMS Plans by the Plan Participants jointly and is beyond the scope of this proposed rule change.

[20] 15 U.S.C. 78*o*–3(b)(6).

[21] 15 U.S.C. 78*o*–3(b)(9).

[22] *See* Securities Exchange Act Release No. 79318 (November 15, 2016), 81 FR 84696, 84697 (November 23, 2016).

report to the FINRA Facilities in such finer increment (up to nanoseconds).

During the month of July 2020, 202 market participant identifiers (''MPIDs'') submitted at least one trade cancellation message to a FINRA Facility. In total, 57,325 trade cancellation messages were submitted to the FINRA Facilities in July 2020 by these 202 MPIDs. Each of the 57,325 cancellation messages reported to the FINRA Facilities would then be reported to CAT by FINRA. Some of these cancellation messages are not publicly disseminated.[23] Out of the 202 MPIDs, 146 MPIDs submitted at least one trade cancellation message to a FINRA Facility that was publicly disseminated in July 2020. Of the total 57,325 cancellation messages, 14,539 were publicly disseminated.

Because the FINRA Facilities do not currently accept timestamps more granular than milliseconds, FINRA is unable to estimate, based on trade report information, how many firms capture time in increments more granular than milliseconds or have trade reporting systems capable of reporting time to a FINRA Facility in such finer increments. FINRA, however, has reviewed reporting statistics for order execution events[24] in NMS stocks and OTC equity securities reported by Industry Members to the CAT. On an average day in July 2020, 12,617,227 out of 32,667,792 Industry Member order execution events (or 38.6%) have a timestamp granularity finer than milliseconds. Of the 167 firms[25] that reported order execution events on an average day, 79 firms (or 47.2%) used a timestamp granularity finer than milliseconds (*i.e.,* microseconds or nanoseconds). Seven of those firms reported time in nanoseconds, and together these firms reported 1,792,160 order execution events (or 5.5% of the total number of order execution events).

Economic Impact

Benefits

Given the exemptive relief, firms reporting trade cancellations to the FINRA Facilities are not required to report the same information to CAT, as CAT will obtain trade cancellations from trade report data that FINRA reports to the CAT. Consequently, firms are not required to report trade cancellations to both the FINRA Facilities and CAT.

Once the proposed rule change is implemented, any firm capturing and reporting time to the CAT in increments finer than milliseconds would be required to report time to the FINRA Facilities in such finer increments up to nanoseconds. This may enhance the granularity and sequencing of trade reports for FINRA's audit trail, which, in turn, may improve FINRA's ability to surveil equity markets. In addition, as the FINRA Facilities send transaction information to the SIPs with timestamps at the level of granularity as reported, the granularity of the publicly disseminated SIP would improve. This would benefit market participants who currently use data from the SIP, as the timestamps would be more granular.

Costs

Some firms that capture time in increments finer than milliseconds may already send timestamps to a FINRA Facility in such finer increment. If a firm already submits timestamps to a FINRA Facility in increments finer than milliseconds, then the firm would not need to make any systems changes to comply with this proposed rule change. However, if a firm currently truncates more granular timestamps at the millisecond level before sending to a FINRA Facility, then the firm would incur costs to make system changes to report more granular timestamps, up to nanoseconds. On an average day in July 2020, seven firms reported 1,792,160 order execution events to the CAT with timestamps reported in nanoseconds. As not all firms capture and report timestamps at that same granularity, there is a risk that firms that report executions with nanosecond timestamps published in the SIP may be identified by potential reverse engineering. This may put firms that report executions with nanosecond timestamps at a competitive disadvantage, relative to firms that do not report executions in nanoseconds, because firms reporting in nanoseconds might be identified by their executions. This risk of potential reverse engineering may decline over time as more firms capture timestamps in more granular increments.

Alternatives Considered

No further alternatives are under consideration.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

Written comments were neither solicited nor received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 45 days of the date of publication of this notice in the **Federal Register** or within such longer period (i) as the Commission may designate up to 90 days of such date, if it finds such longer period to be appropriate and publishes its reasons for so finding; or (ii) as to which the self-regulatory organization consents, the Commission will:

(A) By order approve or disapprove such proposed rule change, or

(B) institute proceedings to determine whether the proposed rule change should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include File Number SR–FINRA–2020–029 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to File Number SR–FINRA–2020–029. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the

[23] FINRA notes that where the original trade report was submitted for non-dissemination (*i.e.,* regulatory and/or clearing only) purposes, the cancellation of that report would not be disseminated.

[24] Order execution events are referred to in the CAT Industry Member Technical Specifications as ''MEOTs.''

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–89968; File No. SR–IEX–2020–15]

Self-Regulatory Organizations: Investors Exchange LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change Related to Transaction Fees Pursuant to IEX Rule 15.110 Concerning the CQ Remove Fee

September 23, 2020.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on September 11, 2020, the Investors Exchange LLC (''IEX'' or the ''Exchange'') filed with the Securities and Exchange Commission (''SEC'' or ''Commission'') the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

Pursuant to the provisions of Section 19(b)(1) under the Act,[3] and Rule 19b–4 thereunder,[4] IEX is filing with the Commission a proposed rule change, pursuant to IEX Rule 15.110(a) and (c), to remove the Crumbling Quote Remove Fee (''CQ Remove Fee'' or ''CQRF''). Fee changes pursuant to this proposal are effective upon filing,[5] and will be implemented as described herein.

The text of the proposed rule change is available at the Exchange's website at *www.iextrading.com,* at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The self-regulatory organization has prepared summaries, set forth in Sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend its fee schedule, pursuant to IEX Rule 15.110 (a) and (c), to eliminate the CQ Remove Fee, which is an additional fee on Members that that execute more than a certain threshold of orders that take liquidity during periods when the IEX crumbling quote indicator (''CQI'') is on for the security in question.

Background

The CQI is a transparent proprietary mathematical calculation (specified in IEX Rule 11.190(g)) designed to predict whether a particular quote is unstable or ''crumbling,'' meaning that the NBB is likely about to decline or the NBO is likely about to increase. The Exchange utilizes real time relative quoting activity of certain Protected Quotations[6] and the proprietary mathematical calculation (the ''quote instability calculation'') to assess the probability of an imminent change to the current Protected NBB to a lower price or Protected NBO to a higher price for a particular security (''quote instability factor''). When the quoting activity meets predefined criteria and the quote instability factor calculated is greater than the Exchange's defined quote instability threshold, the System[7] treats the quote as unstable and the CQI is on. During all other times, the quote is considered stable, and the CQI is off. The System independently assesses the stability of the Protected NBB and Protected NBO for each security. When the System determines that a quote, either the Protected NBB or the Protected NBO, is unstable, the determination remains in effect at that price level for up to two milliseconds.

IEX currently offers two non-displayed order types—Discretionary Peg[8] and primary peg[9]—that each leverage the protective features of the CQI by restricting such orders from exercising price discretion to a more aggressive price when the CQI is on. As described more fully below, the Commission recently approved a new IEX order type—D-Limit—that can be displayed or non-displayed and will also leverage the protective features of the CQI and is pending deployment. Prior to deployment of the D-Limit order type, the CQ Remove Fee has been the only IEX functionality that was designed to leverage the CQI to protect displayed orders.

In the absence of a displayed order type that could leverage the protective features of the CQI, the CQ Remove Fee was designed to incentivize market participants to send orders (including displayed orders) to provide liquidity to IEX by reducing the volume of orders involving latency arbitrage trading strategies that seek to exploit information advantages during narrow time windows when the CQI is on.

The Exchange currently charges the CQ Remove Fee to orders that remove resting liquidity when the CQI is on if such executions exceed the CQRF Threshold.[10] Executions of orders that remove resting liquidity during periods when the CQI is on are assessed a fee of $0.0030 per each incremental share

[26] 17 CFR 200.30–3(a)(12).

[1] 15 U.S.C. 78s(b)(1).

[4] 17 CFR 240.19b–4.

[5] 15 U.S.C. 78s(b)(3)(A)(ii).

[6] Pursuant to IEX Rule 11.190(g), references to ''Protected Quotations'' include quotations from the New York Stock Exchange LLC (''NYSE''); The Nasdaq Stock Market LLC (''Nasdaq''); NYSE Arca, Inc. (''NYSE Arca''); Nasdaq BX, Inc. (''Nasdaq BX''); Cboe BZX Exchange, Inc. (''Cboe BZX''); Cboe BYX Exchange, Inc. (''Cboe BYX''); Cboe EDGX Exchange, Inc. (''EDGX''); and Cboe EDGA Exchange, Inc. (''EDGA'').

[7] *See* IEX Rule 1.160(nn).

[8] *See* IEX Rule 11.190(b)(10). IEX has two other order types that are based on the DPeg order type: The Retail Liquidity Provider order and the Corporate Discretionary Peg order. *See* IEX Rule 11.190(b)(14) and (16).

[9] *See* IEX Rule 11.190(b)(8).

[10] The threshold is equal to 5% of the sum of a Member's total monthly executions on IEX, measured on a per logical port (*i.e.,* session) per MPID basis. *See* Investors Exchange Fee Schedule, available on the Exchange public website.

executed at or above $1.00 that exceeds the CQ Remove Fee Threshold.[11]

The CQ Remove Fee has resulted in a small incremental reduction in the use of latency arbitrage strategies on IEX. IEX believes the limited impact of the CQ Remove Fee is a result of the fact that the potential profits from the use of such strategies substantially exceed the profits lost from the CQ Remove Fee.[12]

Proposal

IEX proposes to eliminate the CQ Remove Fee, as of October 1, 2020, to coincide with the October 1, 2020 full deployment of the D-Limit order type.[13] As noted above, the CQ Remove Fee has been only minimally effective in reducing the use of latency arbitrage strategies targeting resting orders on IEX at potentially stale prices. With the launch of the D-Limit order type, which is designed to protect both displayed and non-displayed orders from the same type of latency arbitrage strategies as the CQ Remove Fee, market participants seeking protection from such strategies through non-pegged orders, including displayed orders, can use D-Limit orders instead of other limit orders.

Therefore, IEX proposes to amend the IEX Fee Schedule to delete references to the CQ Remove Fee and related references as follows:

- Delete the following lines from the ''Definitions'' in the ''Transaction fees'' section:
  - ''Quote instability'' is defined in IEX Rule 11.190(g).
  - ''CQRF Threshold'' means the Crumbling Quote Remove Fee Threshold. The threshold is equal to 5% of the sum of a Member's total monthly executions on IEX measured on a per logical port (*i.e.,* session) per MPID basis.
- Delete the following row from the ''Fee Code Modifiers'' table:

Q	Crumbling Quote Remove Fee: Removes liquidity during periods of quote instability at or within the NBBO above the CQRF Threshold, measured on an MPID basis.[1]	$0.0030

- Delete the following rows from the ''Fee Code Combinations and Associated Fees'' table:

IQ[1]	Removes non-displayed liquidity during periods of quote instability	$0.0009
LQ[1]	Removes displayed liquidity during periods of quote instability	$0.0003
ISQ[1]	Member removes non-displayed liquidity provided by such Member during periods of quote instability.	FREE
IQR[12]	Retail order removes non-displayed liquidity during periods of quote instability	FREE
LSQ[1]	Member removes displayed liquidity provided by such Member during periods of quote instability	FREE
LQR[12]	Retail order removes displayed liquidity during periods of quote instability	FREE
ISQR[12]	Retail order removes non-displayed liquidity provided by such Member during periods of quote instability.	FREE
LSQR[12]	Retail order removes displayed liquidity provided by such Member during periods of quote instability	FREE

- Delete Footnote 1 (in the ''Transaction fees'' section of the Fee Schedule):
  - [1] *Crumbling Quote Remove Fee:* Executions with Fee Code Q that exceed the CQRF Threshold are subject to the Crumbling Quote Remove Fee identified in the Fee Code Modifiers table. Executions with Fee Code Q that do not exceed the CQRF Threshold are subject to the fees identified in the Fee Codes and Associated Fees table.

IEX also proposes to make conforming changes to the Fee Schedule by renumbering Transaction Fee Footnote ''2'' to Footnote ''1'' and changing all current references to Footnote ''2'' to instead reference Footnote ''1,'' specifically for the following fee codes and fee code combinations.

- ''R'', ''IR'', ''LR'', ''ISR'', and ''LSR.''

2. Statutory Basis

IEX believes that the proposed rule change is consistent with the provisions of Section 6(b)[14] of the Act in general, and furthers the objectives of Sections 6(b)(4)[15] of the Act, in particular, in that it is designed to provide for the equitable allocation of reasonable dues, fees and other charges among its Members and other persons using its facilities. Additionally, IEX believes that the elimination of the CQ Remove Fee is consistent with the investor protection objectives of Section 6(b)(5)[16] of the Act in particular in that it is designed to promote just and equitable principles of trade, to remove impediments to a free and open market and national market system, and in general to protect investors and the public interest.

As discussed in the Purpose Section, the CQ Remove Fee was designed to incentivize market participants to send orders (including displayed orders) to provide liquidity to IEX by reducing the volume of orders involving latency arbitrage trading strategies that seek to exploit information advantages during narrow time windows when the CQI is on. As discussed above, the CQ Remove Fee resulted in only a minimal reduction in the use of such latency arbitrage strategies, and with the launch of the D-Limit order type, which is designed to protect both displayed and non-displayed orders from the same type of latency arbitrage strategies as the CQ Remove Fee, market participants seeking protection from such strategies through non-pegged orders (including displayed orders) can use D-Limit orders. IEX believes that use of D-Limit orders, as compared to the CQ Remove Fee, will provide a more direct and effective means for market participants to obtain such protection. Therefore, the Exchange believes the proposal to eliminate the CQ Remove Fee is reasonable because, as discussed above, the CQ Remove Fee has been only modestly successful in achieving its intended purpose of disincentivizing latency arbitrage trading strategies that

[11] Executions below $1.00 are assessed a fee of 0.30% of the total dollar value (''TDV'') of the execution unless the Fee Code Combination results in a free execution. *See* Investors Exchange Fee Schedule, available on the Exchange public website.

[12] The Exchange is effectively limited in setting the CQ Remove Fee by Rule 610(c) of Regulation NMS. 17 CFR 242.610(c).

[13] Deployment of the D-Limit order type is scheduled to begin in test symbols on Friday, September 25, 2020 and conclude in all symbols on Thursday, October 1, 2020. *See* IEX Trading Alert #2020–024 (Discretionary Limit (D-Limit) Order Type Launch) issued on August 28, 2020, available at *https://iextrading.com/alerts/#/121.*

[14] 15 U.S.C. 78f.

[15] 15 U.S.C. 78f(b)(4).

[16] 15 U.S.C. 78f(b)(5).

seek to exploit information advantages during narrow time windows when the CQI is on. The Exchange has limited resources available to it to devote to the operation of pricing disincentives such as the CQ Remove Fee and as such, it is reasonable and equitable for the Exchange to reallocate those resources away from programs that are less effective. The Exchange also believes that proposed change is equitable and not unfairly discriminatory because elimination of the CQ Remove Fee will apply to all Members in the same manner.

Moreover, the Exchange notes that eliminating the CQ Remove Fee will mean that orders that take liquidity during periods of quote instability above the CQRF Threshold will be assessed the same fees that were assessed by the Exchange prior to the introduction of the CQ Remove Fee, pursuant to the IEX Fee Schedule that was filed with the Commission pursuant to the Act.[17] Thus, the Exchange believes the proposed change does not present any unique or novel issues under the Act that have not already been considered by the Commission.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act. With regard to intra-market competition, the Exchange notes that the removal of the CQ Remove Fee will apply equally to all Members. While the CQ Remove Fee was designed to disincentivize certain latency arbitrage trading strategies, as described in the Purpose and Statutory Basis sections, the Exchange believes that the new D-Limit order type will provide more direct and effective protection to Members and other market participants from such strategies. Consequently, the Exchange does not believe that elimination of the CQ Remove Fee will impose any burden on intra-market competition that is not necessary or appropriate in furtherance of the purposes of the Act.

With regard to inter-market competition, the Exchange notes that it operates in a highly competitive market in which market participants can readily favor competing venues if they deem fee levels at a particular venue to be excessive. In such an environment, the Exchange must continually adjust its fees to remain competitive with other exchanges and alternative trading systems. Because competitors are free to modify their own fees in response, subject to the SEC rule filing process as applicable, and because market participants may readily adjust their order routing practices, the Exchange believes that the degree to which IEX fee changes could impose any burden on inter-market competition is extremely limited.

Further, as discussed in the Statutory Basis section, the elimination of the CQ Remove Fee will mean that orders that take liquidity during periods of quote instability above the CQRF Threshold will be assessed the same fees that were assessed by the Exchange prior to the introduction of the CQ Remove Fee, pursuant to the IEX Fee Schedule that was filed with the Commission pursuant to the Act.[18] Thus, the Exchange believes the proposed change does not present any unique or novel issues under the Act that have not already been considered by the Commission.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

Written comments were neither solicited nor received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A)(ii)[19] of the Act.

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings under Section 19(b)(2)(B)[20] of the Act to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include File Number SR–IEX–2020–15 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to File Number SR–IEX–2020–15. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal offices of the Exchange. All comments received will be posted without change. Persons submitting comments are cautioned that we do not redact or edit personal identifying information from comment submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–IEX–2020–15, and should be submitted on or before October 20, 2020.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[21]

J. Matthew DeLesDernier,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–89969; File No. SR–PEARL–2020–15]

Self-Regulatory Organizations; MIAX PEARL, LLC; Notice of Filing of Amendment No. 1 and Order Granting Accelerated Approval of a Proposed Rule Change, as Modified by Amendment No. 1, to Exchange Rule 1014, Imposition of Fines for Minor Rule Violations

September 23, 2020.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (the ''Act'') [1] and Rule 19b–4 thereunder,[2] notice is hereby given that, on September 8, 2020, MIAX PEARL, LLC (''MIAX PEARL'' or the ''Exchange'') filed with the Securities and Exchange Commission (''Commission'') a proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Exchange. On September 22, 2020, the Exchange filed Amendment No. 1 to the proposed rule change, which supersedes the original filing in its entirety.[3] The Commission is publishing this notice to solicit comments on Amendment No. 1 from interested persons and approving the proposal, as modified by Amendment No. 1, on an accelerated basis.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange is filing a change to add certain rules applicable to the trading of equity securities to the list of minor rule violations in Rule 1014.

The text of the proposed rule change is available on the Exchange's website at *http://www.miaxoptions.com/rule-filings/pearl* at MIAX PEARL's principal office, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

On December 13, 2016, the Commission issued an order granting the Exchange's application for registration as a national securities exchange.[4] On February 6, 2020, the Commission published for public comment an Exchange proposal to adopt rules governing the trading of equity securities.[5] On August 14, 2020, the Commission approved the Exchange's proposal to adopt rules governing the trading of equity securities.[6] MIAX PEARL anticipates to begin trading equity securities on September 25, 2020. On December 21, 2017, the Commission issued an order declaring effective the Exchange's MRVP.[7] The Exchange now proposes to add certain rules applicable to the trading of equity securities to the list of minor rule violations in Exchange Rule 1014.

Exchange Rule 1014 sets forth the list of rules under which a Member may be subject to a fine. Exchange Rule 1014 permits the Exchange to impose a fine of up to $5,000 on any member or a person associated with or employed by a member for a minor violation of an eligible rule. The Exchange proposes to amend Exchange Rule 1014 to add certain rules applicable to the trading of equity securities to the list of rules eligible for disposition pursuant to a minor fine under Exchange Rule 1014.[8]

The Exchange proposes that, as set forth in proposed Exchange Rule 1014(d)(15), violations of the following rules would be appropriate for disposition under the MRVP: Rule 2202 and Interpretations thereunder (requiring the submission of responses to Exchange requests for trading data within specified time period); Rule 2623 (requirement to identify short sale orders as such); Rule 2624 (requirement to comply with locked and crossed market rules); Rule 2104 (Communications with the Public); Rule 2202 and Interpretations thereunder (related to the requirement to furnish Exchange-related order, market and transaction data, as well as financial or regulatory records and information); and Rule 2606(a)(1) (requirements for Equities Market Makers to maintain continuous two-sided quotations).[9]

Violations of Exchange Rules 2202, Preamble (requiring the submission of responses to Exchange requests for trading data within specified time period), 2623, 2624, and 2104 would be subject to the following fines:

Occurrence *	Individual	Member firm
First time fined ..	$100	$500
Second time fined	300	1,000
Third time fined	500	2,500

* Within a ''rolling'' 12-month period.

Violations of Exchange Rules 2202, Interpretation .01 (related to the requirement to furnish Exchange-related order, market and transaction data, as well as financial or regulatory records and information) and 2606(a)(1) would be subject to fines $100 per violation. The Exchange notes that these proposed fine levels are based on those approved for LTSE and proposed by MEMX.[10]

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

[3] In Amendment No. 1, the Exchange clarifies which fine amounts apply to violations of various provisions of Exchange Rule 2202.

[4] *See* Securities Exchange Act Release No. 79543 (December 13, 2016), 81 FR 92901 (December 20, 2016) (File No. 10–227).

[5] *See* Securities Exchange Act Release No. 88132 (February 6, 2020), 85 FR 8053 (February 12, 2020) (SR–PEARL–2020–03).

[6] *See* Securities Exchange Act Release No. 89563 (August 14, 2020), 85 FR 51510 (August 20, 2020) (''Approval Order'').

[7] *See* Securities Exchange Act Release No. 82385 (December 21, 2017), 82 FR 61613 (December 28, 2017) (File No. 4–715).

[8] FINRA's maximum fine for minor rule violations under FINRA Rule 9216(b) is $2,500. The Exchange will apply an identical maximum fine amount for eligible violations to achieve consistency with FINRA and also to amend its minor rule violation plan to include such fines. Like FINRA, the Exchange would be able to pursue a fine greater than $2,500 for violations of Rules 2202, 2606(a)(1), 2623, 2624, and 2104 in a regular disciplinary proceeding or Letter of Consent under Rule 1003 as appropriate. Any fine imposed in excess of $2,500 or not otherwise covered by Rule 19d–1(c)(2) of the Act would be subject to prompt notice to the Commission pursuant to Rule 19d–1 under the Act.

[9] MEMX, LLC's (''MEMX'') proposal to adopt a MRVP includes MEMX Rule 12.11 Interpretations and Policy .01 and Exchange Act Rule 604 (failure to properly display limit orders) MEMX Rules 4.5 through 4.16 (Consolidated Audit Trail Compliance Rules). *See* Securities Exchange Act Release No. 89485 (August 5, 2020), 85 FR 48577 (August 11, 2020) (File No. 4–764). The Exchange notes that it recently amended Exchange Rule 1014 to include Chapter XVII, its Consolidated Order Trail Compliance Rule. *See* Securities Exchange Act Release No. 89166 (June 26, 2020), 85 FR 39943 (July 2, 2020) (SR–PEARL–2020–07). The Exchange Rules does not include a rule identical to MEMX Rule 12.11.01 that could be included in this proposal. The Exchange notes that MEMX Rule 12.11.01 simply refers to their member's existing obligations under Exchange Act Rule 604 and a similar rule is also not included in Long Term Stock Exchange, Inc.'s (''LTSE'') MRVP. *See* Securities Exchange Act Release Nos. 87415 (October 29, 2019), 84 FR 59427 (November 4, 2019) (File No. 4–753).

[10] *Id.*

2. Statutory Basis

The proposed rule change is consistent with Section 6(b) of the Act,[11] in general, and furthers the objectives of Section 6(b)(5),[12] in particular, because it is designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in facilitating transactions in securities, to remove impediments to, and perfect the mechanism of, a free and open market and a national market system and, in general, to protect investors and the public interest.

Minor rule fines provide a meaningful sanction for minor or technical violations of rules when the conduct at issue does not warrant stronger, immediately reportable disciplinary sanctions. The inclusion of a rule in the Exchange's MRVP does not minimize the importance of compliance with the rule, nor does it preclude the Exchange from choosing to pursue violations of eligible rules through a Letter of Consent if the nature of the violations or prior disciplinary history warrants more significant sanctions. Rather, the Exchange believes that the proposed rule change will strengthen the Exchange's ability to carry out its oversight and enforcement responsibilities in cases where full disciplinary proceedings are unwarranted in view of the minor nature of the particular violation. Rather, the option to impose a minor rule sanction gives the Exchange additional flexibility to administer its enforcement program in the most effective and efficient manner while still fully meeting the Exchange's remedial objectives in addressing violative conduct. Specifically, the proposed rule change is designed to prevent fraudulent and manipulative acts and practices because it will provide the Exchange the ability to issue a minor rule fine for violations of certain rules related to the trading of equity securities where a more formal disciplinary action may not be warranted or appropriate consistent with the approach of other exchanges for the same conduct.

In connection with the fine level specified in the proposed rule change, adding language describing the fine levels would further the goal of transparency and add clarity to the Exchange's rules. Adopting the same caps as MEMX and LTSE for minor rule fines in connection with the included rules applicable to the trading of equity securities would also promote regulatory consistency across self-regulatory organizations.

The Exchange further believes that the proposed amendments to Rule 1014 are consistent with Section 6(b)(6) of the Act,[13] which provides that members and persons associated with members shall be appropriately disciplined for violation of the provisions of the rules of the exchange, by expulsion, suspension, limitation of activities, functions, and operations, fine, censure, being suspended or barred from being associated with a member, or any other fitting sanction. As noted, the proposed rule change would provide the Exchange ability to sanction minor or technical violations of certain rules applicable to the trading of equity securities pursuant to the Exchange's rules.

Finally, the Exchange also believes that the proposed changes are designed to provide a fair procedure for the disciplining of members and persons associated with members, consistent with Sections 6(b)(7) and 6(d) of the Act.[14] Rule 1014 does not preclude a member or a person associated with or employed by a member from contesting an alleged violation and receiving a hearing on the matter with the same procedural rights through a litigated disciplinary proceeding.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The proposed rule change is not intended to address competitive issues but rather is concerned solely with making certain equity related rules eligible for a minor rule fine disposition, thereby strengthening the Exchange's ability to carry out its oversight and enforcement functions and deter potential violative conduct.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

Written comments were neither solicited nor received.

III. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether Amendment No. 1 to the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include File Number SR–PEARL–2020–15 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to File Number SR–PEARL–2020–15. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change. Persons submitting comments are cautioned that we do not redact or edit personal identifying information from comment submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–PEARL–2020–15 and should be submitted on or before October 20, 2020.

IV. Commission's Findings and Order Granting Accelerated Approval of Proposed Rule Change, as Modified by Amendment No. 1

The Commission finds that the proposed rule change, as modified by Amendment No. 1, is consistent with the requirements of the Act and the rules and regulations thereunder

[11] 15 U.S.C. 78f(b).

[12] 15 U.S.C. 78f(b)(5).

[13] 15 U.S.C. 78f(b)(6).

[14] 15 U.S.C. 78f(b)(7) and 78f(d).

applicable to a national securities exchange.[15] In particular, the Commission finds that the proposed rule change is consistent with Section 6(b)(5) of the Act,[16] which requires that the rules of an exchange be designed to promote just and equitable principles of trade, to remove impediments and to perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest. The Commission also believes that the proposal is consistent with Sections 6(b)(1) and 6(b)(6) of the Act [17] which require that the rules of an exchange enforce compliance with, and provide appropriate discipline for, violations of Commission and Exchange rules. Finally, the Commission finds that the proposal is consistent with the public interest, the protection of investors, or otherwise in furtherance of the purposes of the Act, as required by Rule 19d–1(c)(2) under the Act,[18] which governs minor rule violation plans.

As stated above, the Exchange proposes to amend Exchange Rule 1014 to add certain rules applicable to the trading of equity securities to the list of rules eligible for disposition pursuant to a minor fine under Exchange Rule 1014. The Commission believes that the amended MRVP will permit the Exchange to carry out its oversight and enforcement responsibilities as a self-regulatory organization (''SRO'') more efficiently in cases where full disciplinary proceedings are not necessary due to the minor nature of the particular violation.

In declaring the Exchange's amended MRVP effective, the Commission in no way minimizes the importance of compliance with Exchange rules and all other rules subject to the imposition of sanctions under Exchange Rule 1014. The Commission believes that the violation of an SRO's rules, as well as Commission rules, is a serious matter. However, Exchange Rule 1014 provides a reasonable means of addressing violations that do not rise to the level of requiring formal disciplinary proceedings, while providing greater flexibility in handling certain violations. The Commission expects that the Exchange will continue to conduct surveillance and make determinations based on its findings, on a case-by-case basis, regarding whether a sanction under the amended MRVP is appropriate, or whether a violation requires formal disciplinary action.

For the same reasons discussed above, the Commission finds good cause, pursuant to Section 19(b)(2) of the Act,[19] for approving the proposed rule change, as modified by Amendment No. 1, prior to the thirtieth day after the date of publication of the notice of the filing thereof in the **Federal Register**. The proposal merely amends Exchange Rule 1014 to add certain rules applicable to the trading of equity securities to the current list of rules eligible for disposition pursuant to a minor fine under Exchange Rule 1014. In addition, the Commission notes that the proposal is consistent with the minor rule violation plans of other SROs.[20] Accordingly, the Commission believes that a full notice-and-comment period is not necessary before approving the proposal.

V. Conclusion

It is therefore ordered, pursuant to Section 19(b)(2) of the Act [21] and Rule 19d–1(c)(2) thereunder,[22] that the proposed rule change (SR–PEARL–2020–15), as modified by Amendment No. 1, be, and hereby is, approved on an accelerated basis.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[23]

J. Matthew DeLesDernier,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–89971; File No. SR–PEARL–2020–16]

Self-Regulatory Organizations; MIAX PEARL, LLC; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Amend Exchange Rule 2618, Risk Settings and Trading Risk Metrics

September 23, 2020.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on September 14, 2020, MIAX PEARL, LLC (''MIAX PEARL'' or ''Exchange'') filed with the Securities and Exchange Commission (''Commission'') the proposed rule change as described in Items I and II below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of the Substance of the Proposed Rule Change

The Exchange is filing a proposed rule change to provide Equity Members [3] certain optional risk settings under Exchange Rule 2618 when trading equity securities on the Exchange's equity trading platform (referred to herein as ''MIAX PEARL Equities'').

The text of the proposed rule change is available on the Exchange's website at *http://www.miaxoptions.com/rule-filings/pearl* at MIAX PEARL's principal office, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The purpose of the proposed rule change is to provide Equity Members certain optional risk settings under Exchange Rule 2618 when trading equity securities on MIAX PEARL Equities.[4] To help Equity Members

---

[15] In approving this proposed rule change, the Commission has considered the proposed rule's impact on efficiency, competition, and capital formation. *See* 15 U.S.C. 78c(f).

Continued

manage their risk, the Exchange proposes to offer optional risk settings that would authorize the Exchange to take automated action if a designated limit for an Equity Member is breached. Such risk settings would provide Equity Members with enhanced abilities to manage their risk with respect to orders on the Exchange. Proposed paragraph (a)(2) of Rule 2618[5] sets forth the specific risk control the Exchange proposes to offer. Specifically, the Exchange proposes to offer the following risk setting:

- The ''Gross Notional Trade Value'', which refers to a pre-established maximum daily dollar amount for purchases and sales across all symbols, where both purchases and sales are counted as positive values. For purposes of calculating the Gross Notional Trade Value, only executed orders are included.[6]

The Gross Notional Trade Value risk setting is similar to credit controls measuring gross exposure provided for in paragraph (a)(1)(A) of Exchange Rule 2618 and allow limits to be set at the Market Participant Identifier (''MPID''), session, and firm level.[7] Therefore, the proposed risk management functionality would allow an Equity Member to manage its risk more comprehensively and across various level settings. Further, like our existing credit controls measuring gross exposure, the proposed risk setting would also be based on a notional execution value. The Exchange notes that the current gross notional control noted in paragraph (a)(1)(A) of Exchange Rule 2618 will continue to be available in addition to the proposed risk setting.

Proposed paragraph (a)(4) of Exchange Rule 2618 provides that an Equity Member that does not self-clear may allocate and revoke[8] the responsibility of establishing and adjusting the risk settings identified in proposed paragraph (a)(2) of Exchange Rule 2618 to a Clearing Member that clears transactions on behalf of the Equity Member, if designated in a manner prescribed by the Exchange. Specifically, Exchange Rule 2620(a): (i) Defines the term ''Clearing Member'';[9] (ii) outlines the process by which a Clearing Member shall affirm its responsibility for clearing any and all trades executed by the Equity Member designating it as its Clearing Firm; and (iii) provides that the rules of a Qualified Clearing Agency shall govern with respect to the clearance and settlement of any transactions executed by the Equity Member on the Exchange.

By way of background, Exchange Rule 2620(a) requires that all transactions passing through the facilities of the Exchange shall be cleared and settled through a Qualified Clearing Agency using a continuous net settlement system.[10] As reflected on Exchange Rule 2620(a), this requirement may be satisfied by direct participation, use of direct clearing services, or by entry into a corresponding clearing arrangement with another Member that clears through a Qualified Clearing Agency (*i.e.,* a Clearing Member). If an Equity Member clears transactions through another Equity Member that is a Clearing Member, such Clearing Member shall affirm to the Exchange in writing, through letter of authorization, letter of guarantee or other agreement acceptable to the Exchange, its agreement to assume responsibility for clearing and settling any and all trades executed by the Member designating it as its clearing firm.[11] Thus, while not all Equity Members are Clearing Members, all Equity Members are required either to clear their own transactions or to have in place a relationship with a Clearing Member that has agreed to clear transactions on their behalf in order to conduct business on the Exchange. Therefore, the Clearing Member that guarantees the Member's transactions on the Exchange has a financial interest in the risk settings utilized within the System[12] by the Member.

Paragraph (a) of Rule 2620 allows Clearing Members an opportunity to manage their risk of clearing on behalf of other Equity Members, if authorized to do so by the Equity Member trading on MIAX PEARL Equities. Such functionality is designed to help Clearing Members to better monitor and manage the potential risks that they assume when clearing for Equity Members of the Exchange. An Equity Member may allocate or revoke the responsibility of establishing and adjusting the risk settings identified in proposed paragraph (a)(2) of Exchange Rule 2618 to its Clearing Member in a manner prescribed by the Exchange. By allocating such responsibility, an Equity Member cedes all control and ability to establish and adjust such risk settings to its Clearing Member unless and until such responsibility is revoked by the Equity Member, as discussed in further detail below. Because the Equity Member is responsible for its own trading activity, the Exchange will not provide a Clearing Member authorization to establish and adjust risk settings on behalf of an Equity Member without first receiving consent from the Equity Member. The Exchange considers an Equity Member to have provided such consent if it allocates the responsibility to establish and adjust risk settings to its Clearing Member in a manner prescribed by the Exchange. By allocating such responsibilities to its Clearing Member, the Equity Member consents to the Exchange taking action, as set forth in proposed paragraph (a)(6) of Exchange Rule 2618, with respect to the Equity Member's trading activity. Specifically, if the risk setting(s) established by the Clearing Member are breached, the Equity Member consents that the Exchange will automatically block new orders submitted and cancel open orders until such time that the applicable risk setting is adjusted to a higher limit by the Clearing Member. An Equity Member may also revoke responsibility allocated to its Clearing Member pursuant to this paragraph at any time in a manner prescribed by the Exchange.

Nos. 89032 (June 9, 2020), 85 FR 36246 (June 15, 2020) (SR–CboeBZX–2020–44); *and* 89000 (June 3, 2020), 85 FR 35344 (June 9, 2020) (SR–CboeEDGX–2020–023).

[5] The Exchange proposes to renumber the current paragraph (2) under Exchange Rule 2618 as paragraph (7) to account for proposed paragraphs (a)(2) through (6) described in this proposed rule change.

[6] One difference between this proposed rule change and those of BZX and EDGX is that the Exchange does not propose at this time to offer a net credit risk setting, which refers to a pre-established maximum daily dollar amount for purchases and sales across all symbols, where purchases are counted as positive values and sales are counted as negative values. *See supra* note 4. The Exchange will submit a separate proposed rule change with the Commission to adopt a ''Net Notional Trade Value'' in the future.

[7] Another difference between this proposed rule change and those of BZX and EDGX is that both BZX and EDGX only allow the gross credit risk limits to be set at the MPD Level or to a subset of orders identified within that MPID (the ''risk group identifier'' level). *See supra* note 4. The Exchange believes allowing for limits to be set at the MPID, session, or firm level provides Equity Members greater flexibility in managing their risk exposure.

[8] As discussed below, if an Equity Member revokes the responsibility of establishing and adjusting the risk settings identified in proposed paragraph (a), the settings applied by the Equity Member would be applicable.

[9] The term ''Clearing Member'' refers to a Member that is a member of a Qualified Clearing Agency and clears transactions on behalf of another Member. *See* Exchange Rule 2620(a).

[10] The term ''Qualified Clearing Agency'' means a clearing agency registered with the Commission pursuant to Section 17A of the Act that is deemed qualified by the Exchange. *See* Exchange Rule 1901. The rules of any such clearing agency shall govern with the respect to the clearance and settlement of any transactions executed by the Member on the Exchange.

[11] An Equity Member can designate one Clearing Member per MPID associated with the Equity Member.

[12] *See* Exchange Rule 100 for a definition of ''System.''

Proposed paragraph (a)(3) Exchange Rule 2618 provides that either an Equity Member or its Clearing Member, if allocated such responsibility pursuant to proposed paragraph (a)(4) of Exchange Rule 2618, may establish and adjust limits for the risk settings provided in proposed paragraph (a)(2) of Exchange Rule 2618. An Equity Member or Clearing Member may establish and adjust limits for the risk settings in a manner prescribed by the Exchange. The risk management web portal page will also provide a view of all applicable limits for each Equity Member, which will be made available to the Equity Member and its Clearing Member, as discussed in further detail below.

Proposed paragraph (a)(5) of Exchange Rule 2618 would provide optional alerts to signal when an Equity Member is approaching its designated limit. If enabled, the alerts would generate when the Equity Member breaches certain percentage thresholds of its designated risk limit, as determined by the Exchange. Based on current industry standards, the Exchange anticipates initially setting these thresholds at seventy-five or ninety percent of the designated risk limit. Both the Equity Member and Clearing Member [13] would have the option to enable the alerts via the risk management tool on the web portal and designate email recipients of the notification. The proposed alert system is meant to warn an Equity Member and Clearing Member of the Equity Member's trading activity, and will have no impact on the Equity Member's order and trade activity if a warning percentage is breached. Proposed paragraph (a)(6) of Exchange Rule 2618 would authorize the Exchange to automatically block new orders submitted and cancel all open orders in the event that a risk setting is breached. The Exchange will continue to block new orders submitted until the Equity Member or Clearing Member, if allocated such responsibility pursuant to proposed paragraph (a)(4) of Exchange Rule 2618, adjusts the risk settings to a higher threshold. The proposed functionality is designed to assist Equity Members and Clearing Members in the management of, and risk control over, their credit risk. Further, the proposed functionality would allow the Equity Member to seamlessly avoid unintended executions that exceed their stated risk tolerance.

[13] A Clearing Member would have the ability to enable alerts regardless of whether it was allocated responsibilities pursuant to proposed paragraph (a)(4) of Exchange Rule 2618.

The Exchange does not guarantee that the proposed risk settings described in proposed paragraphs (a)(2) through (6) are sufficiently comprehensive to meet all of an Equity Member's risk management needs. Pursuant to Rule 15c3–5 under the Act,[14] a broker-dealer with market access must perform appropriate due diligence to assure that controls are reasonably designed to be effective, and otherwise consistent with the rule.[15] Use of the Exchange's risk settings included in proposed paragraphs (a)(2) through (6) of Exchange Rule 2618 will not automatically constitute compliance with Exchange or federal rules and responsibility for compliance with all Exchange and SEC rules remains with the Equity Member.

Lastly, as the Exchange currently has the authority to share any of an Equity Member's risk settings specified in paragraph (a) of Exchange Rule 2618 under Exchange Rule 2620(f) with the Clearing Member that clears transactions on behalf of the Equity Member. Existing Exchange Rule 2620(f) provides the Exchange with authority to directly provide Clearing Members that clear transactions on behalf of an Equity Member, to share any of the Equity Member's risk settings set forth under paragraph (a) of Exchange Rule 2618.[16] The purpose of such a provision under Exchange Rule 2620(f) was implemented to reduce the administrative burden on participants on MIAX PEARL Equities, including both Clearing Members and Equity Members, and to ensure that Clearing Members receive information that is up to date and conforms to the settings active in the System. Further, the provision was adopted because the Exchange believed such functionality would help Clearing Members to better monitor and manage the potential risks that they assume when clearing for Equity Members of the Exchange. Paragraph (f) of Exchange Rule 2620 would further authorize the Exchange to share any of an Equity Member's risk settings specified in proposed paragraph (a)(2) to Exchange Rule 2618 with the Clearing Member that clears transactions on behalf of the Equity Member.

The Exchange notes that the use by an Equity Member of the risk settings offered by the Exchange is optional. By using these proposed optional risk settings, an Equity Member therefore also opts-in to the Exchange sharing its designated risk settings with its Clearing Member. The Exchange believes that its proposal to offer an additional risk setting will allow Equity Members to better manage their credit risk. Further, by allowing Equity Members to allocate the responsibility for establishing and adjusting such risk settings to its Clearing Member, the Exchange believes Clearing Members may reduce potential risks that they assume when clearing for Equity Members of the Exchange. The Exchange also believes that its proposal to share a Member's risk settings set forth under proposed paragraph (a)(2) to Exchange Rule 2618 directly with Clearing Members reduces the administrative burden on participants on the Exchange, including both Clearing Members and Equity Members, and ensures that Clearing Members are receiving information that is up to date and conforms to the settings active in the System.

2. Statutory Basis

The proposed rule change is consistent with Section 6(b) of the Act,[17] in general, and furthers the objectives of Section 6(b)(5),[18] in particular, because it is designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest.

Specifically, the Exchange believes the proposed amendment will remove impediments to and perfect the mechanism of a free and open market and a national market system because it provides additional functionality for an Equity Member to manage its credit risk. In addition, the proposed risk setting could provide Clearing Members, who have assumed certain risks of Equity Members, greater control over risk tolerance and exposure on behalf of their correspondent Equity Members, if

[14] 17 CFR 240.15c3–5.

[15] *See* Division of Trading and Markets, Responses to Frequently Asked Questions Concerning Risk Management Controls for Brokers or Dealers with Market Access, *available at https://www.sec.gov/divisions/marketreg/faq-15c-5-risk-management-controls-bd.htm.*

[16] By using the optional risk settings provided in paragraph (a)(1) of Exchange Rule 2618, an Equity Member opts-in to the Exchange sharing its risk settings with its Clearing Member. Any Equity Member that does not wish to share such risk settings with its Clearing Member can avoid sharing such settings by becoming a Clearing Member. *See* Securities Exchange Act Release No. 89563 (August 14, 2020), 85 FR 51510 (August 20, 2020) (SR–PEARL–2020–03) (''Equities Approval Order'').

[17] 15 U.S.C. 78f(b).

[18] 15 U.S.C. 78f(b)(5).

allocated responsibility pursuant to proposed paragraph (a)(4) of Exchange Rule 2618, while also providing an alert system that would help to ensure that both Equity Members and its Clearing Member are aware of developing issues. As such, the Exchange believes that the proposed risk settings would provide a means to address potentially market-impacting events, helping to ensure the proper functioning of the market.

In addition, the Exchange believes that the proposed rule change is designed to protect investors and the public interest because the proposed functionality is a form of risk mitigation that will aid Equity Members and Clearing Members in minimizing their financial exposure and reduce the potential for disruptive, market-wide events. In turn, the introduction of such risk management functionality could enhance the integrity of trading on the securities markets and help to assure the stability of the financial system.

Further, the Exchange believes that the proposed rule will foster cooperation and coordination with persons facilitating transactions in securities because the Exchange will provide alerts when an Equity Member's trading activity reaches certain thresholds, which will be available to both the Equity Member and Clearing Member. As such, the Exchange may help Clearing Members monitor the risk levels of correspondent Equity Members and provide tools for Clearing Members, if allocated such responsibility, to take action.

The proposal will permit Clearing Members who have a financial interest in the risk settings of Equity Members to better monitor and manage the potential risks assumed by Clearing Members, thereby providing Clearing Members with greater control and flexibility over setting their own risk tolerance and exposure. To the extent a Clearing Member might reasonably require an Equity Member to provide access to its risk settings as a prerequisite to continuing to clear trades on the Equity Member's behalf, the Exchange's proposal to share those risk settings directly reduces the administrative burden on participants on the Exchange, including both Clearing Members and Equity Members. Moreover, providing Clearing Members with the ability to see the risk settings established for Equity Members for which they clear will foster efficiencies in the market and remove impediments to and perfect the mechanism of a free and open market and a national market system. The proposal also ensures that Clearing Members are receiving information that is up to date and conforms to the settings active in the System. The Exchange believes that the proposal is consistent with the Act, particularly Section 6(b)(5),[19] because it will foster cooperation and coordination with persons engaged in facilitating transactions in securities and more generally, will protect investors and the public interest, by allowing Clearing Members to better monitor their risk exposure and by fostering efficiencies in the market and removing impediments to and perfect the mechanism of a free and open market and a national market system.

Finally, the Exchange believes that the proposed rule change does not unfairly discriminate among the Exchange's Members because use of the risk settings is optional and are not a prerequisite for participation on the Exchange. The proposed risk settings are completely voluntary and, as they relate solely to optional risk management functionality, no Member is required or under any regulatory obligation to utilize them.

The proposed rule change is based on Interpretation and Policy .03 of EDGX Rule 11.10 and Interpretation and Policy .03 of BZX Rule 11.13, with four minor differences.[20] First, both BZX and EDGX only allow the gross credit risk limits to be set at the MPID level or to a subset of orders identified within that MPID (the ''risk group identifier'' level) while the Exchange proposes to allow the risk limits to be set at the MPID, session, and firm level. Second, the Exchange only proposes to adopt a Gross Notional Trade Value risk setting while EDGX and BZX adopted both gross notional and net notional risk settings. Third, EDGX proposed additional changes to its Rule 11.13(a) to allow their clearing members access to its members risk settings. The Exchange does not need to include similar changes in this proposal as Exchange Rule 2620(a) already provides Clearing Members this ability and includes text identical to that which EDGX recently adopted.[21] Lastly, the Exchange notes that it proposes to generate alerts when the Equity Member breaches certain percentage thresholds of its designated risk limit, as determined by the Exchange. Based on current industry standards, the Exchange anticipates initially setting these thresholds at seventy-five or ninety percent of the designated risk limit. The Exchange notes that EDGX stated these thresholds would be set at fifty, seventy, or ninety percent.

[19] 15 U.S.C. 78f(b)(5).

[20] *See supra* note 4.

[21] *Id.*

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. In fact, the Exchange believes that the proposal may have a positive effect on competition because it would allow the Exchange to offer risk management functionality that is comparable to functionality that has been adopted by other national securities exchanges.[22] Further, by providing Equity Members and their Clearing Members additional means to monitor and control risk, the proposed rule may increase confidence in the proper functioning of the markets and contribute to additional competition among trading venues and broker-dealers. Rather than impede competition, the proposal is designed to facilitate more robust risk management by Equity Members and Clearing Members, which, in turn, could enhance the integrity of trading on the securities markets and help to assure the stability of the financial system.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

Written comments were neither solicited nor received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Because the foregoing proposed rule change does not: (i) Significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days from the date on which it was filed, or such shorter time as the Commission may designate, it has become effective pursuant to Section 19(b)(3)(A) of the Act [23] and Rule 19b–4(f)(6) thereunder.[24]

A proposed rule change filed pursuant to Rule 19b–4(f)(6) under the Act [25] normally does not become operative for 30 days after the date of its filing. However, Rule 19b–4(f)(6)(iii) [26] permits the Commission to designate a

[22] *Id.*

[23] 15 U.S.C. 78s(b)(3)(A).

[24] 17 CFR 240.19b–4(f)(6). In addition, Rule 19b–4(f)(6)(iii) requires a self-regulatory organization to give the Commission written notice of its intent to file the proposed rule change, along with a brief description and text of the proposed rule change, at least five business days prior to the date of filing of the proposed rule change, or such shorter time as designated by the Commission. The Exchange has satisfied this requirement.

[25] 17 CFR 240.19b–4(f)(6).

[26] 17 CFR 240.19b–4(f)(6)(iii).

shorter time if such action is consistent with the protection of investors and the public interest. The Exchange has asked the Commission to waive the 30-day operative delay so that the Exchange may implement the proposed risk controls on the anticipated launch date of MIAX PEARL Equities on September 25, 2020. The Exchange states that waiver of the operative delay would allow Equity Members to immediately utilize the proposed functionality to manage their risk. For this reason, the Commission believes that waiver of the 30-day operative delay is consistent with the protection of investors and the public interest. Accordingly, the Commission hereby waives the 30-day operative delay and designates the proposed rule change operative upon filing.[27]

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include File Number SR–PEARL–2020–16 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to File Number SR–PEARL–2020–16. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of such filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change. Persons submitting comments are cautioned that we do not redact or edit personal identifying information from comment submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–PEARL–2020–16, and should be submitted on or before October 20, 2020.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[28]

J. Matthew DeLesDernier,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–89970; File No. SR–CboeEDGX–2020–045]

Self-Regulatory Organizations; Cboe EDGX Exchange, Inc.; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Amend the Fee Schedule

September 23, 2020.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (the ''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on September 11, 2020, Cboe EDGX Exchange, Inc. (the ''Exchange'' or ''EDGX'') filed with the Securities and Exchange Commission (the ''Commission'') the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

Cboe EDGX Exchange, Inc. (the ''Exchange'' or ''EDGX'') is filing with the Securities and Exchange Commission (''Commission'') a proposed rule change to amend the fee schedule. The text of the proposed rule change is provided in Exhibit 5.

The text of the proposed rule change is also available on the Exchange's website (*http://markets.cboe.com/us/options/regulation/rule_filings/edgx/*), at the Exchange's Office of the Secretary, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend its fee schedule applicable to its equities trading platform (''EDGX Equities'') by: (1) Amending certain standard rates; (2) adding a new fee code; (3) updating the Non-Displayed Add Volume Tiers; and (4) including a Remove Volume Tier.[3]

The Exchange first notes that it operates in a highly competitive market in which market participants can readily direct order flow to competing venues if they deem fee levels at a particular venue to be excessive or incentives to be insufficient. More specifically, the Exchange is only one of 13 registered equities exchanges, as well as a number of alternative trading

[3] The Exchange initially filed the proposed fee changes on September 1, 2020 (SR–CboeEDGX–2020–044). On September 11, 2020, the Exchange withdrew that filing and submitted this proposal.

systems and other off-exchange venues that do not have similar self-regulatory responsibilities under the Exchange Act, to which market participants may direct their order flow. Based on publicly available information,[4] no single registered equities exchange has more than 18% of the market share. Thus, in such a low-concentrated and highly competitive market, no single equities exchange possesses significant pricing power in the execution of order flow. The Exchange in particular operates a ''Maker-Taker'' model whereby it pays credits to members that provide liquidity and assesses fees to those that remove liquidity. The Exchange's fee schedule sets forth the standard rebates and rates applied per share for orders that provide and remove liquidity, respectively. Currently, for orders priced at or above $1.00, the Exchange provides a standard rebate of $0.0017 per share for orders that add liquidity and assesses a fee of $0.0027 per share for orders that remove liquidity. For orders priced below $1.00, the Exchange a standard rebate of $0.00003 per share for orders that add liquidity and assesses a fee of 0.30% of Dollar Value for orders that remove liquidity. Additionally, in response to the competitive environment, the Exchange also offers tiered pricing which provides Members opportunities to qualify for higher rebates or reduced fees where certain volume criteria and thresholds are met. Tiered pricing provides an incremental incentive for Members to strive for higher tier levels, which provides increasingly higher benefits or discounts for satisfying increasingly more stringent criteria.

Proposed Amendment to Standard Rebate for Securities Under $1.00

As stated above, the Exchange currently offers a standard rebate of $0.00003 for orders in securities below $1.00 that add liquidity. The Exchange proposes to amend this standard rate by providing a standard rebate of $0.00009 for orders that add liquidity in securities priced under $1.00 and reflects this change in the Fee Codes and Associated Fee where applicable (*i.e.,* corresponding to fee codes 3, 4, B, V, and Y). The Exchange notes that the proposed standard rate is in line with, yet also competitive with, rates assessed by other equities exchanges on orders in securities priced below $1.00.[5] The Exchange notes, too, that its affiliated exchange, Cboe BZX Exchange, Inc. (''BZX Equities''), is simultaneously submitting a fee change to amend its same current standard rate for orders that add liquidity in securities under $1.00 in the same manner.

Proposed New Fee Code

The Exchange proposed to add a new type of fee code in the Fee Code and Associated Fees table in the Fee Schedule. Specifically, the proposed fee code ''ZM'' is appended to Retail[6] Day or Regular Hours Only (''RHO'')[7] Orders that remove liquidity on arrival and are assessed no fee. Currently, such orders in securities priced at or above $1.00 are assessed the standard fee of $0.0027 to remove liquidity and such orders in securities priced below $1.00 are assessed the standard fee of 0.30% of Dollar Value to remove liquidity.

Proposed Updates to the Non-Displayed Add Volume Tiers

Currently, the Exchange provides for three Non-Displayed Add Volume Tiers under footnote 1 of the Fee Schedule. These tiers offer enhanced rebates on Members' orders yielding fee codes ''DM''[8], ''HA'',[9] ''MM''[10] and ''RP''[11] where a Member reaches certain required volume-based criteria offered in each tier. Specifically, the Non-Displayed Add Volume Tiers are as follows:

- Tier 1 provides an enhanced rebate of $0.0015 for a Member's qualifying orders (*i.e.,* yielding fee codes DM, HA, MM and RP) where a Member adds an ADV[12] greater than or equal to 1,000,000 shares as Non-Displayed orders that yield fee codes DM, HA, HI, MM or RP.
- Tier 2 provides an enhanced rebate of $0.0022 for a Member's qualifying orders where a Member adds an ADV greater than or equal to 2,500,000 shares as Non-Displayed orders that yield fee codes DM, HA, HI, MM or RP.
- Tier 3 provides an enhanced rebate of $0.0025 for a Member's qualifying orders where a Member adds an ADV greater than or equal to 7,000,000 shares as Non-Displayed orders that yield fee codes DM, HA, HI, MM or RP.

The Exchange proposes to update the criteria in each of the Non-Displayed Add Volume Tiers as follows below. The Exchange notes that the enhanced rebates currently provided in each tier remain the same.

- To meet the proposed criteria in Tier 1, a Member must have an ADAV greater than or equal to 0.01% of TCV for Non-Displayed orders that yield fee codes DM, HA, HI, MM or RP.
- To meet the proposed criteria in Tier 2, a Member must have an ADAV greater than or equal to 0.02% of TCV for Non-Displayed orders that yield fee codes DM, HA, HI, MM or RP.
- To meet the proposed criteria in Tier 3, a Member must have an ADAV greater than or equal to 0.05% of TCV for Non-Displayed orders that yield fee codes DM, HA, HI, MM or RP.

The Exchange notes that the proposed rule change also updates the language in each Tier to state ''where a Member has an ADAV'', which essentially states the same requirement as ''adds an ADV'', but is more appropriately aligned with the defined terms in the Fee Schedule.[13] Further, the Exchange does not believe that amending the current volume over a baseline number of shares criteria to, instead, be a percentage volume over TCV poses any significant increase or decrease in difficulty in reaching the Non-Displayed Add Volume Tiers, but only changes the format of the Non-Displayed Add Volume Tier criteria to be consistent with the format of the

[4] *See* Cboe Global Markets, U.S. Equities Market Volume Summary, Month-to-Date (August 24, 2020), available at *https://markets.cboe.com/us/equities/market_statistics/*.

[5] *See* NYSE Price List 2020, ''Transactions in stocks with a per share stock price less than $1.00'', which either does not assess a charge or assesses a charge of 0.3% for various orders in securities priced below $1.00; *and* Nasdaq Pricing, ''Rebates and Fees, Shares Executed Below $1.00'', which assesses no change for orders to add liquidity in securities priced below $1.00 and assesses a charge of 0.30% of total dollar volume for orders to remove liquidity in securities priced below $1.00.

[6] *See* EDGX Rule 11.21(a)(1). A ''Retail Order'' is an agency or riskless principal order that meets the criteria of FINRA Rule 5320.03 that originates from a natural person and is submitted to the Exchange by a Retail Member Organization, provided that no change is made to the terms of the order with respect to price or side of market and the order does not originate from a trading algorithm or any other computerized methodology. *See* EDGX Rule 11.21(a)(2). Retail Orders are submitted by a ''Retail Member Organization'' or ''RMO'', which is a member (or a division thereof) that has been approved by the Exchange to submit such orders.

[7] ''Day'' is an instruction the User may attach to an order stating that an order to buy or sell which, if not executed, expires at the end of Regular Trading Hours. Any Day Order entered into the System before the opening for business on the Exchange, or after the closing of Regular Trading Hours, will be rejected. *See* EDGX Rule 11.6(q)(2). ''Regular Hours Only (''RHO'') is an instruction a User may attach to an order designating it for execution only during Regular Trading Hours, which includes the Opening Process and Re-Opening Process following a halt suspension or pause. *See* EDGX Rule 11.6(q)(6).

[8] Appended to orders that add liquidity using MidPoint Discretionary order within discretionary range and are provided a rebate of $0.00100.

[9] Appended to non-displayed orders that add liquidity and are provided a rebate of $0.00100.

[10] Appended to non-displayed orders that add liquidity using Mid-Point Peg and are provided a rebate of $0.00100.

[11] Appended to non-displayed orders that add liquidity using Supplemental Peg and are provided a rebate of $0.00100.

[12] ''ADV'' means average daily volume calculated as the number of shares added to, removed from, or routed by, the Exchange, or any combination or subset thereof, per day. ADV is calculated on a monthly basis.

[13] *See supra* note 12; *and see infra* note 20.

criteria in the other volume-based tiers offered under the Fee Schedule.[14]

Proposed Remove Volume Tier

The Exchange proposes to add a new Remove Volume Tier under footnote 1 of the Fee Schedule.[15] The proposed Remove Volume Tier offers a reduced remove fee of $0.0026 in securities at or above $1.00 and 0.28% of total dollar value for orders in securities below $1.00[16] for orders yielding fee code ''BB''[17], ''N''[18] and ''W''[19] where a Member has an ADAV[20] greater than or equal to 0.25% TCV[21] with displayed orders that yield fee codes B, V or Y. The proposed Remove Volume Tier is designed to incentivize Members to increase their orders that add displayed volume on the Exchange in order to receive a reduced fee on their qualifying, liquidity removing orders.

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with the objectives of Section 6 of the Act,[22] in general, and furthers the objectives of Section 6(b)(4),[23] in particular, as it is designed to provide for the equitable allocation of reasonable dues, fees and other charges among its Members, issuers and other persons using its facilities. The Exchange operates in a highly competitive market in which market participants can readily direct order flow to competing venues if they deem fee levels at a particular venue to be excessive or incentives to be insufficient. The proposed rule changes reflect a competitive pricing structure designed to incentivize market participants to direct their order flow to the Exchange, which the Exchange believes would enhance market quality to the benefit of all Members.

Regarding the proposed change to the standard rates, the Exchange believes that amending the standard rate for orders that add volume in securities priced below $1.00 is reasonable because, as stated above, in order to operate in the highly competitive equities markets, the Exchange and its competing exchanges seek to offer similar pricing structures, including assessing comparable standard fees for orders in securities priced below $1.00. Thus, the Exchange believes the proposed standard rate change is reasonable as it is generally aligned with and competitive with the amounts assessed for the orders in securities below $1.00 on other equities exchanges. The Exchange also believes that amending this standard rate amount represents an equitable allocation of fees and is not unfairly discriminatory because they will continue to automatically apply to all Members' orders that add liquidity in securities less than $1.00 uniformly.

Regarding the proposed new fee code ZM appended to Retail Day/RHO Orders that remove liquidity on arrival, the Exchange notes that the competition for Retail Order flow is particularly intense, especially as it relates to exchange versus off-exchange venues, as prominent retail brokerages tend to route a majority of their limit orders to off-exchange venues.[24] Accordingly, competitive forces compel the Exchange to use exchange transaction fees and credits, particularly as they relate to competing for Retail Order flow, because market participants can readily trade on competing venues if they deem pricing levels at those other venues to be more favorable.

The Exchange believes that its proposed change to adopt fee code ZM, which will assess no fee for Retail Day/RHO Orders that remove upon arrival is reasonable, equitable and not unfairly discriminatory. Specifically, the Exchange believes the proposal is reasonable as market participants will not be subject to a fee for the execution of such orders. This is consistent with, and competitive with, fees assessed for retail order flow on other equities exchanges, which provide pricing incentives to retail orders in the form of lower fees and/or higher rebates.[25] The Exchange notes too that it currently offers a rebate of $0.0032 per share for Retail Orders that add liquidity (*i.e.,* yielding fee code ''ZA'') as compared to the standard rebate of $0.0017 for liquidity adding orders, as well as Retail Volume Tiers which provide various enhanced rebates specifically for Members' Retail Order flow. The Exchange believes that adopting no charge on orders yielding fee code ZM is reasonable in that it is reasonably designed to incentivize an increase in removing Retail Order flow. Retail Orders are generally submitted in smaller sizes and tend to attract Market-Makers, as smaller size orders are easier to hedge, and Retail Order flow that removes liquidity additionally signals to liquidity providers to increase their overall provision of liquidity in the markets. Increased Market-Maker activity facilitates tighter spreads and an increase in overall liquidity provider activity provides for deeper, more robust levels of liquidity, both of which signal additional corresponding increase in order flow from other market participants, contributing towards a robust, well-balanced market ecosystem. Indeed, increased overall order flow benefits all investors by continuing to deepen the Exchange's liquidity pool, potentially providing even greater execution incentives and opportunities, offering additional flexibility for all investors to enjoy cost savings, supporting the quality of price discovery, promoting market transparency and improving investor protection. The Exchange notes that, like all other fee codes, ZM and the accompanying free charge will be automatically and uniformly applied to all Members' qualifying orders. The Exchange additionally notes that while the proposed fee code and assessment of no fee is applicable only to Retail Orders, the Exchange does not believe this application is discriminatory as the Exchange offers similar rebates or reduced rates to non-Retail Order flow.[26]

The Exchange believes that the proposed Remove Volume Tier is reasonable because it provides an additional opportunity through a new tier for Members to receive a discounted

[14] *See* EDGX Equities Fee Schedule, ''Add Volume Tiers'', ''Tape B Volume Tier'', and ''Retail Volume Tier''.

[15] As a result of the new Remove Volume Tier, it also updates the title of footnote 1 to ''Add/Remove Volume Tiers''.

[16] As a result, the Exchange proposes to update the statement under General Notes in the Fee Schedule to state that ''unless otherwise indicated, variable rates provided by tiers apply only to executions in securities priced at or above $1.00.

[17] Appended to orders that remove liquidity from EDGX (Tape B) and is assessed a standard fee of $0.00270.

[18] Appended to orders that remove liquidity from EDGX (Tape C) and is assessed a standard fee of $0.00270.

[19] Appended to orders that remove liquidity from BZX (Tape A) and is assessed a standard fee of $0.00270.

[20] ''ADAV'' means average daily added volume calculated as the number of shares added per day. ADAV is calculated on a monthly basis.

[21] ''TCV'' means total consolidated volume calculated as the volume reported by all exchanges and trade reporting facilities to a consolidated transaction reporting plan for the month for which the fees apply.

[25] *See* Nasdaq Price List, Rebate to Add Displayed Designated Retail Liquidity, which offer rebates of $0.00325 and $0.0033 for Add Displayed Designated Retail Liquidity; *and* NYSE Price List, ''Fees and Credits Applicable to Executions in the Retail Liquidity Program'', which offers various reduced fees, including the assessment of no charges, for various types of retail order volume, and ''Transaction Fees and Credits For Tape B and C Securities'', which provides a rebate of $0.0030 per share specifically for retail orders.

[26] *See generally,* EDGX Equities Fee Schedule, Fee Codes and Associated Fees; *see also* ''Add Volume Tiers'' and ''Tape B Volume Tier'', both of which provide various enhanced rebates for non-Retail Order flow.

rate by means of liquidity adding orders and that the proposed changes to the Non-Displayed Liquidity Tiers are reasonable because they merely update the format of the tiers' criteria to be consistent with other volume-based tiers currently offered by the Exchange, thus maintaining existing opportunities for Members to receive a discounted rate by means of non-displayed liquidity adding orders.[27] The Exchange notes that relative volume-based incentives and discounts have been widely adopted by exchanges, including the Exchange, and are reasonable, equitable and non-discriminatory because they are open to all members on an equal basis and provide additional benefits or discounts that are reasonably related to (i) the value to an exchange's market quality and (ii) associated higher levels of market activity, such as higher levels of liquidity provision and/or growth patterns. Additionally, as noted above, the Exchange operates in highly competitive market. The Exchange is only one of several equity venues to which market participants may direct their order flow, and it represents a small percentage of the overall market. It is also only one of several maker-taker exchanges. Competing equity exchanges offer similar tiered pricing structures, including schedules of rebates and fees that apply based upon members achieving certain volume and/or growth thresholds, as well as assess similar fees or rebates for similar types of orders, to that of the Exchange. These competing pricing schedules, including those of the Exchange's affiliated equities exchanges,[28] are presently comparable to those that the Exchange provides, including the pricing of comparable criteria and reduced fees.

Moreover, the Exchange believes the Remove Volume Tier is a reasonable means to incentivize Members to continue to provide liquidity adding, displayed volume to the Exchange by offering them a different, additional opportunity than that of the current Add Volume Tiers—to receive a reduced fee on their liquidity removing orders by meeting the proposed criteria in submitting additional add volume order flow. In addition to this, the Exchange has recently observed that trading in subdollar names has grown significantly; nearly tripling since the beginning of 2020, and that competing equities exchanges have begun offering pricing incentives for subdollar orders.[29] Therefore, the Exchange believes that it is reasonable and equitable to provide the proposed reduced fee under the new Remove Volume Tier for qualifying subdollar orders. Also, as noted above, the Exchange's affiliated equities exchanges already have similar Remove Volume Tiers in place, which offer similar rebates for achieving comparable criteria, in addition to their Add Volume Tiers.[30]

In addition to this, the Exchange believes the proposed Non-Displayed Volume Tiers are reasonable in that the proposed changes to the tiers' criteria is designed to be more consistent with the format of the criteria (*i.e.,* percentage of volume based on TCV) currently offered under the other volume-based tiers in the Fee Schedule.[31] Also, as noted above, the Exchange's affiliated equities exchange, BZX Equities, currently has Non-Displayed Volume Tiers in place, which offer substantially similar enhanced rebates and criteria based on volume over TCV for its members.[32]

Overall, the Exchange believes that the proposed tiers, each based on a Member's liquidity adding orders, will benefit all market participants by incentivizing continuous liquidity and thus, deeper more liquid markets as well as increased execution opportunities. Particularly, the proposed Remove Volume Tier is designed to incentivize continuous displayed liquidity, which signals other market participants to take the additional execution opportunities provided by such liquidity, while the proposed Non-Displayed Add Volume Tiers remains designed to incentivize non-displayed liquidity, which further contributes to a deeper, more liquid market and provide even more execution opportunities for active market participants at improved prices. This overall increase in activity deepens the Exchange's liquidity pool, offers additional cost savings, supports the quality of price discovery, promotes market transparency and improves market quality, for all investors.

The Exchange believes that the proposal represents an equitable allocation of fees and rebates and is not unfairly discriminatory because all Members are eligible for the proposed Remove Volume Tier and Non-Displayed Add Volume Tiers and would have the opportunity to meet the tiers' criteria and would receive the proposed fee if such criteria is met. Without having a view of activity on other markets and off-exchange venues, the Exchange has no way of knowing whether this proposed rule change would definitely result in any Members qualifying for the proposed tiers. While the Exchange has no way of predicting with certainty how the proposed tier will impact Member activity, the Exchange anticipates that approximately eight Members will be able to compete for and reach the proposed Remove Volume Tier. The Exchange also notes that while the proposed changes to the criteria in the Non-Displayed Add Volume Tiers do not significantly increase or decrease the level of criteria difficulty, thus do not significantly affect Members' current ability to compete for and reach the proposed tiers, approximately three additional Members will be able to compete for and reach these tiers, as amended. The Exchange anticipates that the tiers will include various liquidity providing Member types, such as traditional Market Makers, and wholesale or consolidator firms that mainly make markets for retail orders, each providing distinct types of order flow to the Exchange to the benefit of all market participants. The Exchange also notes that proposed tiers will not adversely impact any Member's pricing or ability to qualify for other reduced fee or enhanced rebate tiers. Should a Member not meet the proposed criteria under any of the proposed tiers, the Member will merely not receive that corresponding reduced fee. Furthermore, the proposed reduced fee in the Remove Volume Tier would uniformly apply to all Members that meet the required criteria under the proposed tier. The Exchange again notes that the enhanced rebates offered under the Non-Displayed Add Volume Tiers remain the same.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule changes will impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act. Rather, as discussed above, the Exchange believes that the proposed change would encourage the submission of additional order flow to a public exchange, thereby promoting market depth, execution incentives and enhanced execution opportunities, as well as price discovery and transparency for all Members. As a result, the Exchange believes that the proposed change furthers the Commission's goal in adopting Regulation NMS of fostering competition among orders, which promotes ''more efficient pricing of individual stocks for all types of orders, large and small.''

The Exchange believes the proposed rule change does not impose any burden on intramarket competition that is not necessary or appropriate in furtherance of the purposes of the Act. Particularly, the proposed change applies to all Members equally in that all Members are eligible for the proposed Remove Volume Tier and the proposed Non-Displayed Add Volume Tiers, have a reasonable opportunity to meet the tiers' criteria and will all receive the proposed fee if such criteria is met. Additionally, the proposed tiers are designed to attract additional order flow to the Exchange. The Exchange believes that the additional and updated tier criteria would incentivize market participants to direct liquidity adding order flow to the Exchange, bringing with it improved price transparency. Greater overall order flow and pricing transparency benefits all market participants on the Exchange by providing more trading opportunities, enhancing market quality, and continuing to encourage Members to send orders, thereby contributing towards a robust and well-balanced market ecosystem, which benefits all market participants. Further, the proposed standard rebate for orders that add liquidity in securities below $1.00 and the proposed no charge for orders yielding fee code ZM will apply uniformly and automatically to all such Members' respective orders, as all other standard rates and fee codes apply today to qualifying orders. In addition to this, and as indicated above, the Exchange does not believe that not assessing a fee for Retail Orders yielding fee code ZM imposes any burden on intramarket competition as the Exchange offers many similar rebate opportunities for non-Retail Orders in it Fee Schedule.[33]

Next, the Exchange believes the proposed rule change does not impose any burden on intermarket competition that is not necessary or appropriate in furtherance of the purposes of the Act. As previously discussed, the Exchange operates in a highly competitive market. Members have numerous alternative venues that they may participate on and direct their order flow, including 12 other equities exchanges and off-exchange venues and alternative trading systems. Additionally, the Exchange represents a small percentage of the overall market. Based on publicly available information, no single equities exchange has more than 18% of the market share. Therefore, no exchange possesses significant pricing power in the execution of order flow. Indeed, participants can readily choose to send their orders to other exchange and off-exchange venues if they deem fee levels at those other venues to be more favorable. Moreover, the Commission has repeatedly expressed its preference for competition over regulatory intervention in determining prices, products, and services in the securities markets. Specifically, in Regulation NMS, the Commission highlighted the importance of market forces in determining prices and SRO revenues and, also, recognized that current regulation of the market system ''has been remarkably successful in promoting market competition in its broader forms that are most important to investors and listed companies.'' The fact that this market is competitive has also long been recognized by the courts. In NetCoalition v. Securities and Exchange Commission, the D.C. Circuit stated as follows: ''[n]o one disputes that competition for order flow is 'fierce.' . . . As the SEC explained, '[i]n the U.S. national market system, buyers and sellers of securities, and the broker-dealers that act as their order-routing agents, have a wide range of choices of where to route orders for execution'; [and] 'no exchange can afford to take its market share percentages for granted' because 'no exchange possesses a monopoly, regulatory or otherwise, in the execution of order flow from broker dealers'. . . .''. Accordingly, the Exchange does not believe its proposed fee change imposes any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act.

[33] *See supra* note 26.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

The Exchange neither solicited nor received comments on the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A) of the Act [34] and paragraph (f) of Rule 19b–4 [35] thereunder. At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission will institute proceedings to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov*. Please include File Number SR–CboeEDGX–2020–045 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to File Number SR–CboeEDGX–2020–045. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the

[34] 15 U.S.C. 78s(b)(3)(A).

[35] 17 CFR 240.19b–4(f).

Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change. Persons submitting comments are cautioned that we do not redact or edit personal identifying information from comment submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–CboeEDGX–2020–045, and should be submitted on or before October 20, 2020.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[36]

J. Matthew DeLesDernier,

Assistant Secretary.

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–89972; File No. 4–566]

Program for Allocation of Regulatory Responsibilities Pursuant to Rule 17d–2; Notice of Filing and Order Approving and Declaring Effective an Amendment to the Plan for the Allocation of Regulatory Responsibilities Among Cboe BZX Exchange, Inc., Cboe BYX Exchange, Inc., NYSE Chicago, Inc., Cboe EDGA Exchange, Inc., Cboe EDGX Exchange, Inc., Financial Industry Regulatory Authority, Inc., MEMX LLC, MIAX PEARL, LLC, Nasdaq BX, Inc., Nasdaq PHLX LLC, The Nasdaq Stock Market LLC, NYSE National, Inc., New York Stock Exchange LLC, NYSE American LLC, NYSE Arca, Inc., Investors' Exchange LLC, and Long-Term Stock Exchange, Inc. Relating to the Surveillance, Investigation, and Enforcement of Insider Trading Rules

September 23, 2020.

Notice is hereby given that the Securities and Exchange Commission (''Commission'') has issued an Order, pursuant to Section 17(d) of the Securities Exchange Act of 1934 (''Act''),[1] approving and declaring effective an amendment to the plan for allocating regulatory responsibility (''Plan'') filed on September 18, 2020, pursuant to Rule 17d–2 of the Act,[2] by Cboe BZX Exchange, Inc. (''BZX''), Cboe BYX Exchange, Inc. (''BYX''), NYSE Chicago, Inc. (''CHX''), Cboe EDGA Exchange, Inc. (''EDGA''), Cboe EDGX Exchange, Inc. (''EDGX''), Financial Industry Regulatory Authority, Inc. (''FINRA''), MEMX LLC (''MEMX''), MIAX PEARL, LLC (''MIAX PEARL''), Nasdaq BX, Inc. (''BX''), Nasdaq PHLX LLC (''PHLX''), The Nasdaq Stock Market LLC (''Nasdaq''), NYSE National, Inc. (''NYSE National''), New York Stock Exchange LLC (''NYSE''), NYSE American LLC (''NYSE American''), NYSE Arca, Inc. (''NYSE Arca''), Investors' Exchange LLC (''IEX'') and Long-Term Stock Exchange, Inc. (''LTSE'') (collectively, ''Participating Organizations'' or ''Parties'').

I. Introduction

Section 19(g)(1) of the Act,[3] among other things, requires every self-regulatory organization (''SRO'') registered as either a national securities exchange or national securities association to examine for, and enforce compliance by, its members and persons associated with its members with the Act, the rules and regulations thereunder, and the SRO's own rules, unless the SRO is relieved of this responsibility pursuant to Section 17(d)[4] or Section 19(g)(2)[5] of the Act. Without this relief, the statutory obligation of each individual SRO could result in a pattern of multiple examinations of broker-dealers that maintain memberships in more than one SRO (''common members''). Such regulatory duplication would add unnecessary expenses for common members and their SROs.

Section 17(d)(1) of the Act[6] was intended, in part, to eliminate unnecessary multiple examinations and regulatory duplication.[7] With respect to a common member, Section 17(d)(1) authorizes the Commission, by rule or order, to relieve an SRO of the responsibility to receive regulatory reports, to examine for and enforce compliance with applicable statutes, rules, and regulations, or to perform other specified regulatory functions.

To implement Section 17(d)(1), the Commission adopted two rules: Rule 17d–1 and Rule 17d–2 under the Act.[8] Rule 17d–1 authorizes the Commission to name a single SRO as the designated examining authority (''DEA'') to examine common members for compliance with the financial responsibility requirements imposed by the Act, or by Commission or SRO rules.[9] When an SRO has been named as a common member's DEA, all other SROs to which the common member belongs are relieved of the responsibility to examine the firm for compliance with the applicable financial responsibility rules. On its face, Rule 17d–1 deals only with an SRO's obligations to enforce member compliance with financial responsibility requirements. Rule 17d–1 does not relieve an SRO from its obligation to examine a common member for compliance with its own rules and provisions of the federal securities laws governing matters other than financial responsibility, including sales practices and trading activities and practices.

To address regulatory duplication in these and other areas, the Commission adopted Rule 17d–2 under the Act.[10] Rule 17d–2 permits SROs to propose joint plans for the allocation of regulatory responsibilities with respect to their common members. Under paragraph (c) of Rule 17d–2, the Commission may declare such a plan effective if, after providing for notice and comment, it determines that the plan is necessary or appropriate in the public interest and for the protection of investors, to foster cooperation and coordination among the SROs, to remove impediments to, and foster the development of, a national market system and a national clearance and settlement system, and is in conformity with the factors set forth in Section 17(d) of the Act. Commission approval of a plan filed pursuant to Rule 17d–2 relieves an SRO of those regulatory responsibilities allocated by the plan to another SRO.

II. The Plan

On September 12, 2008, the Commission declared effective the Participating Organizations' Plan for allocating regulatory responsibilities

pursuant to Rule 17d–2.[11] The Plan is designed to eliminate regulatory duplication by allocating regulatory responsibility over Common FINRA Members [12] (collectively ''Common Members'') for the surveillance, investigation, and enforcement of common insider trading rules (''Common Rules'').[13] The Plan assigns regulatory responsibility over Common FINRA Members to FINRA for surveillance, investigation, and enforcement of insider trading by broker-dealers, and their associated persons, with respect to Listed Stocks (as defined in the Plan), irrespective of the marketplace(s) maintained by the Participating Organizations on which the relevant trading may occur.

III. Proposed Amendment to the Plan

On September 18, 2020, the Parties submitted a proposed amendment to the Plan. The proposed amendment was submitted to add MIAX PEARL as a Participant to the Plan and to add Exchange Act Rules 14e–3 and 15(g) to the list of rules in Exhibit A. The text of the proposed amended 17d–2 plan is as follows (additions are *italicized;* deletions are [bracketed]):

* * * * *

* * * * *

Agreement for the Allocation of Regulatory Responsibility of Surveillance, Investigation and Enforcement for Insider Trading Pursuant to § 17(d) of the Securities Exchange Act of 1934, 15 U.S.C. § 78q (d), and Rule 17d–2 Thereunder

This agreement (the ''Agreement'') by and among Cboe BZX Exchange, Inc. (''BZX''), Cboe BYX Exchange, Inc. (''BYX''), NYSE Chicago, Inc. (''CHX''), Cboe EDGA Exchange, Inc. (''EDGA''), Cboe EDGX Exchange, Inc. (''EDGX''), Financial Industry Regulatory Authority, Inc. (''FINRA''), MEMX LLC (''MEMX''), *MIAX PEARL, LLC (''MIAX PEARL''),*[1] Nasdaq BX, Inc. (''BX''), Nasdaq PHLX LLC (''PHLX''), The Nasdaq Stock Market LLC (''Nasdaq''), NYSE National, Inc. (''NYSE National''), New York Stock Exchange LLC (''NYSE''), NYSE American LLC (''NYSE American''), NYSE Arca, Inc. (''NYSE Arca''), Investors' Exchange LLC (''IEX'') and Long-Term Stock Exchange, Inc. (''LTSE'') (each a ''Participating Organization'' and together, the ''Participating Organizations''), is made pursuant to § 17(d) of the Securities Exchange Act of 1934 (the ''Act''), 15 U.S.C. 78q(d), and Securities and Exchange Commission (''SEC'') Rule 17d–2, which allow for plans to allocate regulatory responsibility among self-regulatory organizations (''SROs''). Upon approval by the SEC, this

[1] MIAX PEARL's allocation of certain regulatory responsibilities to FINRA under this Agreement is limited to the activites of MIAX PEARL Equities, a facility of MIAX PEARL.

Agreement shall amend and restate the agreement among the Participating Organizations approved by the SEC on [August 1, 2019] *May 26, 2020.*

Whereas, the Participating Organizations desire to: (a) Foster cooperation and coordination among the SROs; (b) remove impediments to, and foster the development of, a national market system; (c) strive to protect the interest of investors; and (d) eliminate duplication in their regulatory surveillance, investigation and enforcement of insider trading;

Whereas, the Participating Organizations are interested in allocating to FINRA regulatory responsibility for Common FINRA Members (as defined below) for surveillance, investigation and enforcement of Insider Trading (as defined below) in NMS Stocks (as defined below) irrespective of the marketplace(s) maintained by the Participating Organizations on which the relevant trading may occur in violation of Common Insider Trading Rules (as defined below);

Whereas, the Participating Organizations will request regulatory allocation of these regulatory responsibilities by executing and filing with the SEC a plan for the above stated purposes (this Agreement, also known herein as the ''Plan'') pursuant to the provisions of § 17(d) of the Act, and SEC Rule 17d–2 thereunder, as described below; and

Whereas, the Participating Organizations will also enter into a Regulatory Services Agreement (the ''Insider Trading RSA''), of even date herewith, to provide for the investigation and enforcement of suspected Insider Trading against broker-dealers, and their associated persons, that are not Common FINRA Members in the case of Insider Trading in NMS Stocks..

Now, therefore, in consideration of the mutual covenants contained hereafter, and other valuable consideration to be mutually exchanged, the Participating Organizations hereby agree as follows:

1. *Definitions.* Unless otherwise defined in this Agreement, or the context otherwise requires, the terms used in this Agreement will have the same meaning they have under the Act, and the rules and regulations thereunder. As used in this Agreement, the following terms will have the following meanings:

a. ''Rule'' of an ''exchange'' or an ''association'' shall have the meaning defined in Section 3(a)(27) of the Act.

b. ''Common FINRA Members'' shall mean members of FINRA and at least one of the Participating Organizations.

c. ''Common Insider Trading Rules'' shall mean (i) the federal securities laws and rules thereunder promulgated by the SEC pertaining to insider trading, and (ii) the rules of the Participating Organizations that are related to insider trading, as provided on Exhibit A to this Agreement.

d. ''Effective Date'' shall have the meaning set forth in paragraph 27.

e. ''Insider Trading'' shall mean any conduct or action taken by a natural person or entity related in any way to the trading of securities by an insider or a related party based on or on the basis of material non-public information obtained during the performance of the insider's duties at the corporation, or otherwise misappropriated, that could be deemed a violation of the Common Insider Trading Rules.

f. ''Intellectual Property'' will mean any: (1) Processes, methodologies, procedures, or technology, whether or not patentable; (2) trademarks, copyrights, literary works or other works of authorship, service marks and trade secrets; or (3) software, systems, machine-readable texts and files and related documentation.

g. ''Plan'' shall mean this Agreement, which is submitted as a Plan for the allocation of regulatory responsibilities of surveillance*, investigation and enforcement* for insider trading pursuant to § 17(d) of the Act, 15 U.S.C. 78q(d), and SEC Rule 17d–2.

h. ''NMS Stock(s)'' shall have the meaning set forth in Rule 600(b)(47) of SEC Regulation NMS.

[11] *See* Securities Exchange Act Release No. 58536 (September 12, 2008), 73 FR 54646 (September 22, 2008). *See also* Securities Exchange Act Release Nos. 58806 (October 17, 2008), 73 FR 63216 (October 23, 2008); 61919 (April 15, 2010), 75 FR 21051 (April 22, 2010); 63103 (October 14, 2010), 75 FR 64755 (October 20, 2010); 63750 (January 21, 2011), 76 FR 4948 (January 27, 2011); 65991 (December 16, 2011), 76 FR 79714 (December 22, 2011); 78473 (August 3, 2016), 81 FR 52722 (August 9, 2016); 84392 (October 10, 2018), 83 FR 52243 (October 16, 2018); 86542 (August 1, 2019), 84 FR 38679 (August 7, 2019); 88948 (May 26, 2020), 85 FR 33239 (June 1, 2020).

[12] Common FINRA Members include members of FINRA and at least one of the Participating Organizations.

[13] Common rules are defined as: (i) Federal securities laws and rules promulgated by the Commission pertaining to insider trading, and (ii) the rules of the Participating Organizations that are related to insider trading. *See* Exhibit A to the Plan.

i. ''Listing Market'' shall mean an exchange that lists NMS Stocks.

2. *Assumption of Regulatory Responsibilities.* On the Effective Date of the Plan, FINRA will assume regulatory responsibilities for surveillance, investigation and enforcement of Insider Trading by broker-dealers, and their associated persons, for Common FINRA Members with respect to NMS Stocks, irrespective of the marketplace(s) maintained by the Participant Organizations on which the relevant trading may occur in violation of the Common Insider Trading Rules (''Regulatory Responsibilities'').

3. *Certification of Insider Trading Rules.*

a. *Initial Certification.* By signing this Agreement, the Participating Organizations, other than FINRA, hereby certify to FINRA that their respective lists of Common Insider Trading Rules contained in Exhibit A hereto are correct, and FINRA hereby confirms that such rules are Common Insider Trading Rules as defined in this Agreement.

b. *Yearly Certification.* Each year following the commencement of operation of this Agreement, or more frequently if required by changes in the rules of the Participating Organizations, each Participating Organization shall submit a certified and updated list of Common Insider Trading Rules to FINRA for review, which shall (i) add Participating Organization rules not included in the then-current list of Common Insider Trading Rules that qualify as Common Insider Trading Rules as defined in this Agreement; (ii) delete Participating Organization rules included in the current list of Common Insider Trading Rules that no longer qualify as Common Insider Trading Rules as defined in this Agreement; and (iii) confirm that the remaining rules on the current list of Common Insider Trading Rules continue to be Participating Organization rules that qualify as Common Insider Trading Rules as defined in this Agreement. FINRA shall review each Participating Organization's annual certification and confirm whether FINRA agrees with the submitted certified and updated list of Common Insider Trading Rules by each of the Participating Organizations.

4. *No Retention of Regulatory Responsibility.* The Participating Organizations do not contemplate the retention of any responsibilities with respect to the regulatory activities being assumed by FINRA under the terms of this Agreement.

5. *Fees.* FINRA shall charge Participating Organizations for performing the Regulatory Responsibilities, as set forth in the Schedule of Fees, attached as Exhibit B.

6. *Applicability of Certain Laws, Rules, Regulations or Orders.* Notwithstanding any provision hereof, this Agreement shall be subject to any statute, or any rule or order of the SEC. To the extent such statute, rule, or order is inconsistent with one or more provisions of this Agreement, the statute, rule, or order shall supersede the provision(s) hereof to the extent necessary to be properly effectuated and the provision(s) hereof in that respect shall be null and void.

7. *Exchange Committee; Reports.*

a. *Exchange Committee.* The Participating Organizations shall form a committee (the ''Exchange Committee''), which shall act on behalf of all of Participating Organizations in receiving copies of the reports described below and in reviewing issues that arise under this Agreement. Each Participating Organization shall appoint a representative to the Exchange Committee. The Exchange Committee representatives shall report to their respective executive management bodies regarding status or issues under this Agreement. The Participating Organizations agree that the Exchange Committee will meet regularly up to four (4) times a year, with no more than one meeting per calendar quarter. At these meetings, the Exchange Committee will discuss the conduct of the Regulatory Responsibilities and identify issues or concerns with respect to this Agreement, including matters related to the calculation of the cost formula and accuracy of fees charged and provision of information related to the same. The SEC shall be permitted to attend the meetings as an observer.

b. *Reports.* FINRA shall provide the reports set forth in Exhibit C hereto and any additional reports related to this Agreement reasonably requested by a majority vote of all representatives to the Exchange Committee at each Exchange Committee meeting, or more often as the Participating Organizations deem appropriate, but no more often than once every quarterly billing period.

8. *Customer Complaints.* If a Participating Organization receives a copy of a customer complaint relating to Insider Trading or other activity or conduct that is within FINRA's Regulatory Responsibilities as set forth in this Agreement, the Participating Organization shall promptly forward to FINRA, as applicable, a copy of such customer complaint.

9. *Parties to Make Personnel Available as Witnesses.* Each Participating Organization shall make its personnel available to FINRA to serve as testimonial or non-testimonial witnesses as necessary to assist FINRA in fulfilling the Regulatory Responsibilities allocated under this Agreement. FINRA shall provide reasonable advance notice when practicable and shall work with a Participating Organization to accommodate reasonable scheduling conflicts within the context and demands as the entity with ultimate regulatory responsibility. The Participating Organization shall pay all reasonable travel and other expenses incurred by its employees to the extent that FINRA requires such employees to serve as witnesses, and provide information or other assistance pursuant to this Agreement.

10. *Market Data; Sharing of Work-Papers, Data and Related Information.*

a. *Market Data.* FINRA shall obtain raw market data necessary to the performance of regulation under this Agreement from (a) the Consolidated Tape Association (''CTA'') and (b) the NASDAQ Unlisted Trading Privileges Plan.

b. *Sharing.* A Participating Organization shall make available to FINRA information necessary to assist FINRA in fulfilling the Regulatory Responsibilities assumed under the terms of this Agreement. Such information shall include *any* information collected by a Participating Organization in the course of performing its regulatory obligations under the Act, including information relating to an on-going disciplinary investigation or action against a member, the amount of a fine imposed on a member, financial information, or information regarding proprietary trading systems gained in the course of examining a member (''Regulatory Information''). This Regulatory Information shall be used by FINRA solely for the purposes of fulfilling its Regulatory Responsibilities.

c. *No Waiver of Privilege.* The sharing of documents or information between the parties pursuant to this Agreement shall not be deemed a waiver as against third parties of regulatory or other privileges relating to the discovery of documents or information.

d. *Intellectual Property.*

(i) *Existing Intellectual Property.* FINRA is and will remain the owner of all right, title and interest in and to the proprietary Intellectual Property it employs in the provision of regulation hereunder (including the SONAR system), and any derivative works thereof. To the extent certain elements of FINRA's systems, or portions thereof, may be licensed or leased from third parties, all such third party elements shall remain the property of such third

parties, as applicable. Likewise, any other Participating Organization is and will remain the owner of all right, title and interest in and to its own existing proprietary Intellectual Property.

(ii) *Enhancements to Existing Intellectual Property or New Developments.* In the event FINRA (a) makes any changes, modifications or enhancements to its Intellectual Property for any reason, or (b) creates any newly developed Intellectual Property for any reason, including as a result of requested enhancements or new development by the Exchange Committee (collectively, the ''New IP''), the Participating Organizations acknowledge and agree that FINRA shall be deemed the owner of the New IP created by it (and any derivative works thereof), and shall retain all right, title and interest therein and thereto, and each other Participating Organization hereby irrevocably assigns, transfers and conveys to FINRA without further consideration all of its right, title and interest in or to all such New IP (and any derivative works thereof).

(iii) *Fees for New IP.* FINRA will not charge the Participating Organizations any fees for any New IP created and used by FINRA; provided, however, that FINRA will be permitted to charge fees for software maintenance work performed on systems used in the discharge of its duties hereunder.

11. *Special or Cause Examinations.* Nothing in this Agreement shall restrict or in any way encumber the right of a party to conduct special or cause examinations of Common FINRA Members as any party, in its sole discretion, shall deem appropriate or necessary.

12. *Dispute Resolution Under this Agreement.*

a. *Negotiation.* The parties to this Agreement will attempt to resolve any disputes through good faith negotiation and discussion, escalating such discussion up through the appropriate management levels until reaching the executive management level. In the event a dispute cannot be settled through these means, the parties shall refer the dispute to binding arbitration.

b. *Binding Arbitration.* All claims, disputes, controversies, and other matters in question between the parties to this Agreement arising out of or relating to this Agreement or the breach thereof that cannot be resolved by the parties will be resolved through binding arbitration. Unless otherwise agreed by the parties, a dispute submitted to binding arbitration pursuant to this paragraph shall be resolved using the following procedures:

(i) The arbitration shall be conducted in the city of New York in accordance with the Commercial Arbitration Rules of the American Arbitration Association and judgment upon the award rendered by the arbitrator may be entered in any court having jurisdiction thereof; and

(ii) There shall be three arbitrators, and the chairperson of the arbitration panel shall be an attorney.

13. *Limitation of Liability.* As between the Participating Organizations, no Participating Organization, including its respective directors, governors, officers, employees and agents, will be liable to any other Participating Organization, or its directors, governors, officers, employees and agents, for any liability, loss or damage resulting from any delays, inaccuracies, errors or omissions with respect to its performing or failing to perform regulatory responsibilities, obligations, or functions, except (a) as otherwise provided for under the Act, (b) in instances of a Participating Organization's gross negligence, willful misconduct or reckless disregard with respect to another Participating Organization, (c) in instances of a breach of confidentiality obligations owed to another Participating Organization, or (d) in the case of any Participating Organization paying fees hereunder, for any payments due. The Participating Organizations understand and agree that the Regulatory Responsibilities are being performed on a good faith and best effort basis and no warranties, express or implied, are made by any Participating Organization to any other Participating Organization with respect to any of the responsibilities to be performed hereunder. This paragraph is not intended to create liability of any Participating Organization to any third party.

14. *SEC Approval.*

a. The parties agree to file promptly this Agreement with the SEC for its review and approval. FINRA shall file this Agreement on behalf, and with the explicit consent, of all Participating Organizations.

b. If approved by the SEC, the Participating Organizations will notify their members of the general terms of this Agreement and of its impact on their members.

15. *Subsequent Parties; Limited Relationship.* This Agreement shall inure to the benefit of and shall be binding upon the Participating Organizations hereto and their respective legal representatives, successors, and assigns. Nothing in this Agreement, expressed or implied, is intended or shall: (a) Confer on any person other than the Participating Organizations hereto, or their respective legal representatives, successors, and assigns, any rights, remedies, obligations or liabilities under or by reason of this Agreement, (b) constitute the Participating Organizations hereto partners or participants in a joint venture, or (c) appoint one Participating Organization the agent of the other.

16. *Assignment.* No Participating Organization may assign this Agreement without the prior written consent of all the other Participating Organizations, which consent shall not be unreasonably withheld, conditioned or delayed; provided, however, that any Participating Organization may assign this Agreement to a corporation controlling, controlled by or under common control with the Participating Organization without the prior written consent of any other party.

17. *Severability.* Any term or provision of this Agreement that is invalid or unenforceable in any jurisdiction shall, as to such jurisdiction, be ineffective to the extent of such invalidity or unenforceability without rendering invalid or unenforceable the remaining terms and provisions of this Agreement or affecting the validity or enforceability of any of the terms or provisions of this Agreement in any other jurisdiction.

18. *Termination.*

a. Any Participating Organization may cancel its participation in this Agreement at any time, provided that it has given 180 days written notice to the other Participating Organizations (or in the case of a change of control in ownership of a Participating Organization, such other notice time period as that Participating Organization may choose), and provided that such termination has been approved by the SEC. The cancellation of its participation in this Agreement by any Participating Organization shall not terminate this Agreement as to the remaining Participating Organizations.

b. The Regulatory Responsibilities assumed under this Agreement by FINRA may be terminated by FINRA against any Participating Organization as follows. The Participating Organization will have thirty (30) days from receipt to satisfy the invoice. If the Participating Organization fails to satisfy the invoice within thirty (30) days of receipt (''Default''), FINRA will notify the Participating Organization of the Default. The Participating Organization will have thirty (30) days from receipt of the Default notice to satisfy the invoice.

c. FINRA will have the right to terminate the Regulatory Responsibilities assumed under this Agreement if a Participating

Organization has Defaulted in its obligation to pay the invoice on more than three (3) occasions in any rolling twenty-four (24) month period.

19. *Intermarket Surveillance Group (''ISG'').* In order to participate in this Agreement, all Participating Organizations to this Agreement must be members of the ISG.

20. *General.* The Participating Organizations agree to perform all acts and execute all supplementary instruments or documents that may be reasonably necessary or desirable to carry out the provisions of this Agreement.

21. *Liaison and Notices.* All questions regarding the implementation of this Agreement shall be directed to the persons identified below, as applicable. All notices and other communications required or permitted to be given under this Agreement shall be in writing and shall be deemed to have been duly given upon (i) actual receipt by the notified party or (ii) constructive receipt (as of the date marked on the return receipt) if sent by certified or registered mail, return receipt requested, to the following addresses:

22. *Confidentiality.* The parties agree that documents or information shared shall be held in confidence, and used only for the purposes of carrying out their respective regulatory obligations under this Agreement. No party shall assert regulatory or other privileges as against the other with respect to Regulatory Information that is required to be shared pursuant to this Agreement, as defined by paragraph 10, above.

23. *Regulatory Responsibility.* Pursuant to Section 17(d)(1)(A) of the Act, and Rule 17d–2 thereunder, the Participating Organizations jointly and severally request the SEC, upon its approval of this Agreement, to relieve the Participating Organizations, jointly and severally, of any and all responsibilities with respect to the matters allocated to FINRA pursuant to this Agreement for purposes of §§ 17(d) and 19(g) of the Act.

24. *Governing Law.* This Agreement shall be deemed to have been made in the State of New York, and shall be construed and enforced in accordance with the law of the State of New York, without reference to principles of conflicts of laws thereof. Each of the parties hereby consents to submit to the jurisdiction of the courts of the State of New York in connection with any action or proceeding relating to this Agreement.

25. *Survival of Provisions.* Provisions intended by their terms or context to survive and continue notwithstanding delivery of the regulatory services by FINRA, the payment of the Fees by the Participating Organizations, and any expiration of this Agreement shall survive and continue.

26. *Amendment.*

a. This Agreement may be amended to add a new Participating Organization, provided that such Participating Organization does not assume regulatory responsibility, solely by an amendment executed by FINRA and such new Participating Organization. All other Participating Organizations expressly consent to allow FINRA to add new Participating Organizations to this Agreement as provided above. FINRA will promptly notify all Participating Organizations of any such

amendments to add a new Participating Organization.

b. All other amendments must be approved by each Participating Organization. All amendments, including adding a new Participating Organization, must be filed with and approved by the SEC before they become effective.

27. *Effective Date.* The Effective Date of this Agreement will be the date the SEC declares this Agreement to be effective pursuant to authority conferred by § 17(d) of the Act, and SEC Rule 17d–2 thereunder.

28. *Counterparts.* This Agreement may be executed in any number of counterparts, including facsimile, each of which will be deemed an original, but all of which taken together shall constitute one single agreement between the parties.

In witness whereof, the parties hereto have each caused this Agreement for the Allocation of Regulatory Responsibility of Surveillance, Investigation and Enforcement for Insider Trading to be signed and delivered by its duly authorized representative.

Exhibit A: Common Insider Trading Rules

1. Securities Exchange Act of 1934 Section 10(b), and rules and regulations promulgated there under in connection with insider trading, including SEC Rule 10b–5 (as it pertains to insider trading), which states that:

Rule 10b–5—Employment of Manipulative and Deceptive Devices It shall be unlawful for any person, directly or indirectly, by the use of any means or instrumentality of interstate commerce, or of the mails or of any facility of any national securities exchange,

a. To employ any device, scheme, or artifice to defraud,

b. To make any untrue statement of a material fact or to omit to state a material fact necessary in order to make the statements made, in the light of the circumstances under which they were made, not misleading, or

c. To engage in any act, practice, or course of business which operates or would operate as a fraud or deceit upon any person, in connection with the purchase or sale of any security.

2. Securities Exchange Act of 1934 Section 17(a), and rules and regulations promulgated there under in connection with insider trading, including SEC Rule 17a–3 (as it pertains to insider trading).

3. *Securities Exchange Act of 1934 Rule 14e–3—Transactions in securities on the basis of material, nonpublic information in the context of tender offers.*

4. *Securities Exchange Act of 1934 Section 15(g) in connection with insider trading and protection of material, nonpublic information.*

5. The following SRO Rules as they pertain to violations of insider trading:

FINRA Rule 2010 (Standards of Commercial Honor and Principles of Trade)
FINRA Rule 2020 (Use of Manipulative, Deceptive or Other Fraudulent Devices)
FINRA Rule 3110 (Supervision)
FINRA Rule 4511 (General Requirements)
FINRA Rule 4512 (Customer Account Information)
MEMX Rule 3.1 (Business Conduct of Members)
MEMX Rule 3.2 (Violations Prohibited)
MEMX Rule 3.3 (Use of Fraudulent Devices)
MEMX Rule 4.1 (Requirements)
MEMX Rule 5.1 (Written Procedures)
MEMX Rule 5.3 (Records)
MEMX Rule 5.5 (Prevention of Misuse of Material, Nonpublic Information)

LTSE Rule 10.140 (Manipulative Transactions)

Exhibit B: Fee Schedule

1. *Fees.* FINRA shall charge each Participating Organization a Quarterly Fee in arrears for the performance of FINRA's Regulatory Responsibilities under the Plan (each, a ''Quarterly Fee,'' and together, the ''Fees'').

a. *Quarterly Fees.*

(1) Quarterly Fees for each Participating Organization will be charged by FINRA according to the Participating Organization's ''Percentage of Publicly Reported Trades'' occurring over three-month billing periods. The ''Percentage of Publicly Reported Trades'' shall equal a Participating Organization's total number of reported NMS Stock trades during the relevant period as specified in paragraph 1b. (the ''Numerator''), divided by the total number of all NMS Stock trades for the same period as specified in paragraph 1b. (the ''Denominator''). For purposes of clarification, ADF and Trade Reporting Facility (''TRF'') activity will be included in the Denominator. Additionally, with regard to TRFs, TRF trade volume will be charged to FINRA. Consequently, for purposes of calculating the Quarterly Fees, the volume for each Participant Organization's TRF will be calculated separately (that is, TRF volume will be broken out from the Participating Organization's overall Percentage of Publicly Reported Trades) and the fees for such will be billed to FINRA in accordance with paragraph 1a.(2), rather than to the applicable Participating Organization.

(2) The Quarterly Fees shall be determined by FINRA in the following manner for each Participating Organization:

(a) Less than 1.0%: If the Participating Organization's Percentage of Publicly Reported Trades for the relevant three-month billing period is less than 1.0%, the Quarterly Fee shall be $6,250, per quarter (''Static Fee'');

(b) Less than 2.0% but No Less than 1.0%: If the Participating Organization's Percentage of Publicly Reported Trades for the relevant three-month billing period is less than 2.0% but no less than 1.0%, the Quarterly Fee shall be $18,750, per quarter (''Static Fee'');

(c) 2.0% or Greater: If the Participating Organization's Percentage of Publicly Reported Trades for the relevant three-month billing period is 2.0% or greater, the Quarterly Fee shall be the amount equal to the Participating Organization's Percentage of Publicly Reported Trades multiplied by FINRA's total charge (''Total Charge'') for its performance of Regulatory Responsibilities for the relevant three-month billing period.

(3) Increases in Static Fees. FINRA will re-evaluate the Quarterly Fees on an annual basis during the annual budget process outlined in paragraph 1.c. below. During each annual re-evaluation, FINRA will have the discretion to increase the Static Fees by a percentage no greater than the percentage increase in the Final Budget over the preceding year's Final Budget. Any changes to the Static Fees shall not require an amendment to this Agreement, but rather shall be memorialized through the budget process.

(4) Increases in Total Charges. Any change in the Total Charges (whether a Final Budget increase or any mid year change) shall not require an amendment to this Agreement, but rather shall be memorialized through the budget process.

b. *Source of Data.* For purposes of calculation of the Percentage of Publicly Reported Trades for each Participating Organization, FINRA will use trades reported to the two SIPs (a) the Consolidated Tape Association (''CTA''), and (b) the Unlisted Trading Privileges Plan. In each case, FINRA will use the total trades as may be adjusted by the Participating Organization. Adjustments will include any separation or breakup of the number of trades as a result of reporting of bunched or bundled trades by a Participating Organization but will not

include any adjustments resulting from single-priced opening, reopening or closing auction trades. Each Participating Organization that reports bunched or bundled trades will report to FINRA any adjustments to its total number of NMS Stock trades on the 15th of the month following the end of the quarter.

c. *Annual Budget Forecast.* FINRA will notify the Participating Organizations of the forecasted costs of its insider trading program for the following calendar year by close of business on October 15 of the then-current year (the ''Forecasted Budget''). FINRA shall use best efforts to provide as accurate a forecast as possible. FINRA shall then provide a final submission of the costs following approval of such costs by its Board of Governors (the ''Final Budget''). Subject to paragraph 1d. below, in the event of a difference between the Forecasted Budget and the Final Budget, the Final Budget will govern.

d. *Increases in Fees over Five Percent.*

(1) In the event that any proposed increase to Fees by FINRA for a given calendar year (which increase may arise either during the annual budgetary forecasting process or through any mid-year increase) will result in a cumulative increase in such calendar year's Fees of more than five percent (5%) above the preceding calendar year's Final Budget (a ''Major Increase''), then senior management of any Participating Organization (a) that is a Listing Market or (b) for which the Percentage of Publicly Reported Trades is then currently twenty percent (20%) or greater, shall have the right to call a meeting with the senior management of FINRA in order to discuss any disagreement over such proposed Major Increase. By way of example, if FINRA provides a Final Budget for 2011 that represents an 4% increase above the Final Budget for 2010, the terms of this paragraph 1.d.(1) shall not apply; if, however, in April of 2011, FINRA notifies the Exchange Committee of an increase in Fees that represents an additional 3% increase above the Final Budget for 2010, then the increase shall be deemed a Major Increase, and the terms of this paragraph 1.d.(1) shall become applicable (*i.e.,* 4% and 3% represents a cumulative increase of 7% above the 2010 Final Budget).

(2) In the event that senior management members of the involved parties are unable to reach an agreement regarding the proposed Major Increase, then the matter shall be referred back to the Exchange Committee for final resolution. Prior to the matter being referred back to the Exchange Committee, nothing shall prohibit the parties from conferring with the SEC. Resolution shall be reached through a vote of no fewer than all Participating Organizations seated on the Exchange Committee, and a simple majority shall be required in order to reject the proposed Major Increase.

e. *Time Tracking.* FINRA shall track the time spent by staff on insider trading responsibilities under this Agreement; however, time tracking will not be used to allocate costs.

2. *Invoicing and Payment.* FINRA shall invoice each Participating Organization for the Quarterly Fee associated with the regulatory activities performed pursuant to this Agreement during the previous three-month billing period within forty five (45) days of the end of such previous 3-month billing period. A Participating Organization shall have thirty (30) days from date of invoice to make payment to FINRA on such invoice. The invoice will reflect the Participating Organization's Percentage of Publicly Reported Trades for that billing period.

3. *Disputed Invoices; Interest.* In the event that a Participating Organization disputes an invoice or a portion of an invoice, the Participating Organization shall notify FINRA in writing of the disputed item(s) within fifteen (15) days of receipt of the invoice. In its notification to FINRA of the disputed invoice, the Participating Organization shall identify the disputed item(s) and provide a brief explanation of why the Participating Organization disputes the charges. FINRA may charge a Participating Organization interest on any undisputed invoice or the undisputed portions of a disputed invoice that a Participating Organization fails to pay within thirty (30) days of its receipt of such invoice. Such interest shall be assessed monthly. Interest will mean one and one half percent per month, or the maximum allowable under applicable law, whichever is less.

4. *Taxes.* In the event any governmental authority deems the regulatory activities allocated to FINRA to be taxable activities similar to the provision of services in a commercial context, the other Participating Organizations agree that they shall bear full responsibility, on a joint and several basis, for the payment of any such taxes levied on FINRA, or, if such taxes are paid by FINRA directly to the governmental authority, the other Participating Organizations agree that they shall reimburse FINRA for the amount of any such taxes paid.

5. *Audit Right; Record Keeping.*

a. *Audit Right.*

(i) Once every rolling twelve (12) month period, FINRA shall permit no more than one audit (to be performed by one or more Participating Organizations) of the Fees charged by FINRA to the Participating Organizations hereunder and a detailed cost analysis supporting such Fees (the ''Audit''). The Participating Organization or Organizations that conduct this Audit will select a nationally-recognized independent auditing firm (or may use its regular independent auditor, providing it is a nationally-recognized auditing firm) (''Auditing Firm'') to act on its, or their behalf, and will provide reasonable notice to other Participating Organizations of the Audit. FINRA will permit the Auditing Firm reasonable access during FINRA's normal business hours, with reasonable advance notice, to such financial records and supporting documentation as are necessary to permit review of the accuracy of the calculation of the Fees charged to the Participating Organizations. The Participating Organization, or Organizations, as applicable, other than FINRA, shall be responsible for the costs of performing any such audit.

(ii) If, through an Audit, the Exchange Committee determines that FINRA has inaccurately calculated the Fees for any Participating Organization, the Exchange Committee will promptly notify FINRA in writing of the amount of such difference in the Fees, and, if applicable, FINRA shall issue a reimbursement of the overage amount to the relevant Participating Organization(s), less any amount owed by the Participating Organization under any outstanding, undisputed invoice(s). If such an Audit reveals that any Participating Organization paid less than what was required pursuant to the Agreement, then that Participating Organization shall promptly pay FINRA the difference between what the Participating Organization owed pursuant to the Agreement and what that Participating Organization originally paid FINRA. If FINRA disputes the results of an Audit regarding the accuracy of the Fees, it will submit the dispute for resolution pursuant to the dispute resolution procedures in paragraph 12 of the Agreement.

(iii) In the event that through the review of any supporting documentation provided during the Audit, any one or more Participating Organizations desire to discuss with FINRA the supporting documentation and any questions arising therefrom with regard to the manner in which regulation was conducted, the Participating Organization(s) shall call a

meeting with FINRA. FINRA shall in turn notify the Exchange Committee of this meeting in advance, and all Participating Organizations shall be welcome to attend (the ''Fee Analysis Meeting''). The parties to this Agreement acknowledge and agree that while FINRA commits to discuss the supporting documentation at the Fee Analysis Meeting, FINRA shall not be subject, by virtue of the above Audit rights or any discussions during the Fee Analysis Meeting or otherwise, to any limitation whatsoever, other than the Increase in Fee provisions set forth in paragraph 1.d. of this Exhibit, on its discretion as to the manner and means by which it conducts its regulatory efforts in its role as the SRO primarily liable for regulatory decisions under this Agreement. To that end, no disagreement among the Participating Organizations as to the manner or means by which FINRA conducts its regulatory efforts hereunder shall be subject to the dispute resolution procedures hereunder, and no Participating Organization shall have the right to compel FINRA to alter the manner or means by which it conducts its regulatory efforts. Further, a Participating Organization shall not have the right to compel a rebate or reassessment of fees for services rendered, on the basis that the Participating Organization would have conducted regulatory efforts in a different manner than FINRA in its professional judgment chose to conduct its regulatory efforts.

b. *Record Keeping.* In anticipation of any audit that may be performed by the Exchange Committee under paragraph 5.a. above, FINRA shall keep accurate financial records and documentation relating to the Fees charged by it under this Agreement.

Exhibit C: Reports

FINRA shall provide the following information in reports to the Exchange Committee, which information covers activity occurring under this Agreement:

1. *Alert Summary Statistics:* Total number of surveillance system alerts generated by quarter along with associated number of reviews and investigations. In addition, this paragraph shall also reflect the number of reviews and investigations originated from a source other than an alert. A separate table would be presented for the trading activity of the NMS Stocks listed on each Participating Organization's exchange.

2008	Surveillance alerts	Investigations
1st Quarter		
2nd Quarter		
3rd Quarter		
4th Quarter		
2008 Total		

2. *Aging of Open Matters:* Would reflect the aging for all currently open matters for the quarterly period being reported. A separate table would be presented for the trading activity of the NMS Stocks listed on each Participating Organization's exchange.

Example:

	Surveillance alerts	Investigations
0–6 months		
6–9 months		
9–12 months		
12+ months		
Total		

3. *Timeliness of Completed Matters:* Would reflect the total age of those matters that were completed or closed during the quarterly period being reported. FINRA will provide total referrals to the SEC.

	Surveillance alerts	Investigations
0–6 months		
6–9 months		
9–12 months		
12+ months		
Total		

4. *Disposition of Closed Matters:* Would reflect the disposition of those matters that were completed or closed during the quarterly period being reported. A separate table would be presented for the trading activity of the NMS Stocks listed on each Participating Organization's exchange.

Example:

	Surveillance YTD	Investigations YTD

Letter of Caution/Admonition Fine		
Referred to Legal/Enforcement		
Referred to SEC/SRO		
Merged		
Other		
Total		

5. *Pending Reviews.* In addition to the above reports, the Chief Regulatory Officer (CRO) (or his or her designee) of any Participating Organization that is also a Listing Market may inquire about pending reviews involving stocks listed on that Participating Organization's market. FINRA will respond to such inquiries from a CRO; provided, however, that (a) the CRO must hold any information provided by FINRA in confidence and (b) FINRA will not be compelled to provide information in contradiction of any mandate, directive or order from the SEC, US Attorney's Office, the Office of any State Attorney General or court of competent jurisdiction.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*http://www.sec.gov/rules/sro.shtml);* or
- Send an email to *rule-comments@sec.gov.* Please include File Number 4–566 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to File Number 4–566. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*http://www.sec.gov/rules/sro.shtml).* Copies of the submission, all subsequent amendments, all written statements with respect to the proposed plan that are filed with the Commission, and all written communications relating to the proposed plan between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of

10:00 a.m. and 3:00 p.m. Copies of the plan also will be available for inspection and copying at the principal offices of the Participating Organizations. All comments received will be posted without change. Persons submitting comments are cautioned that we do not redact or edit personal identifying information from comment submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number *4–566* and should be submitted on or before October 20, 2020.

V. Discussion

The Commission finds that the Plan, as proposed to be amended, is consistent with the factors set forth in Section 17(d) of the Act [14] and Rule 17d–2 thereunder [15] in that it is necessary or appropriate in the public interest and for the protection of investors, fosters cooperation and coordination among SROs, and removes impediments to and fosters the development of the national market system. The Commission continues to believe that the Plan, as amended, should reduce unnecessary regulatory duplication by allocating regulatory responsibility for the surveillance, investigation, and enforcement of Common Rules to FINRA. Accordingly, the proposed amendment to the Plan promotes efficiency by consolidating these regulatory functions in a single SRO.

Under paragraph (c) of Rule 17d–2, the Commission may, after appropriate notice and comment, declare a plan, or any part of a plan, effective. In this instance, the Commission believes that appropriate notice and comment can take place after the proposed amendment is effective. The amendment adds MIAX PEARL as a Participant to the Plan, and adds Exchange Act Rules 14e–3 and 15(g) to the list of rules in Exhibit A.[16] The Commission believes that the current amendment to the Plan does not raise any new regulatory issues that the Commission has not previously considered, and therefore believes that the amended Plan should become effective without any undue delay.

[14] 15 U.S.C. 78q(d).

[15] 17 CFR 240.17d–2.

[16] The Commission notes that the most recent prior amendment to the Plan, which, among other things, added MEMX as a Party to the Plan, was published for comment and the Commission did not receive any comments thereon. *See supra* note 11.

VI. Conclusion

This order gives effect to the amended Plan submitted to the Commission that is contained in File No. 4–566.

It is therefore ordered, pursuant to Section 17(d) of the Act,[17] that the Plan, as amended, filed with the Commission pursuant to Rule 17d–2 on September 18, 2020, is hereby approved and declared effective.

It is further ordered that the Participating Organizations are relieved of those regulatory responsibilities allocated to FINRA under the amended Plan to the extent of such allocation.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[18]

J. Matthew DeLesDernier,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–89974; File No. SR–CboeBZX–2020–071]

Self-Regulatory Organizations; Cboe BZX Exchange, Inc.; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Amend the Fee Schedule

September 23, 2020.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (the ''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on September 11, 2020, Cboe BZX Exchange, Inc. (the ''Exchange'' or ''BZX'') filed with the Securities and Exchange Commission (the ''Commission'') the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

Cboe BZX Exchange, Inc. (the ''Exchange'' or ''BZX'') is filing with the Securities and Exchange Commission (''Commission'') a proposed rule change to amend the fee schedule. The text of the proposed rule change is provided in Exhibit 5.

The text of the proposed rule change is also available on the Exchange's website (*http://markets.cboe.com/us/equities/regulation/rule_filings/bzx/*), at the Exchange's Office of the Secretary, and at the Commission's Public Reference Room.

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend its fee schedule applicable to its equities trading platform (''BZX Equities'') to: (1) Amend certain standard rates; (2) update the Add Volume Tiers; (3) update the Supplemental Incentive Program Tiers; (4) include a Remove Volume Tier; and (5) include additional Lead Market Maker (''LMM'') Add Volume Tiers.[3]

The Exchange first notes that it operates in a highly competitive market in which market participants can readily direct order flow to competing venues if they deem fee levels at a particular venue to be excessive or incentives to be insufficient. More specifically, the Exchange is only one of 13 registered equities exchanges, as well as a number of alternative trading systems and other off-exchange venues that do not have similar self-regulatory responsibilities under the Exchange Act, to which market participants may direct their order flow. Based on publicly available information,[4] no single registered equities exchange has more than 18% of the market share. Thus, in such a low-concentrated and highly competitive market, no single equities exchange possesses significant pricing power in the execution of order flow. The Exchange in particular operates a

[3] The Exchange initially filed the proposed fee changes on September 1, 2020 (SR–CboeBZX–2020–069). On September 11, 2020, the Exchange withdrew that filing and submitted this filing.

[4] *See* Cboe Global Markets, U.S. Equities Market Volume Summary, Month-to-Date (August 24, 2020), available at *https://markets.cboe.com/us/equities/market_statistics/.*

''Maker-Taker'' model whereby it pays credits to members that provide liquidity and assesses fees to those that remove liquidity. The Exchange's fee schedule sets forth the standard rebates and rates applied per share for orders that provide and remove liquidity, respectively. Currently, for orders priced at or above $1.00, the Exchange provides a standard rebate of $0.0025 per share for orders that add liquidity and assesses a fee of $0.0030 per share for orders that remove liquidity. For orders priced below $1.00, the Exchange does not assess a fee for orders that add liquidity and assesses a fee of 0.30% of total dollar value for orders that remove liquidity. Additionally, in response to the competitive environment, the Exchange also offers tiered pricing which provides Members opportunities to qualify for higher rebates or reduced fees where certain volume criteria and thresholds are met. Tiered pricing provides an incremental incentive for Members to strive for higher tier levels, which provides increasingly higher benefits or discounts for satisfying increasingly more stringent criteria.

Proposed Amendment to Standard Rates

As stated above, the Exchange currently assesses a standard rebate of $0.0025 per share for orders that add liquidity in securities priced at $1.00 or more. Also, for orders in securities below $1.00, it does not assess a standard fee for orders that add liquidity and assesses a fee of .30% of total dollar value per share for orders that remove liquidity. The Exchange proposes to amend the standard rate for orders that add liquidity in securities priced at $1.00 or more from a standard rebate of $0.0025 per share to $0.0020 per share and reflects this change in the Fee Codes and Associated Fee where applicable (*i.e.,* corresponding to fee codes B, V, and Y). The Exchange also proposes to amend the standard rates for orders in securities priced under $1.00 that add liquidity by providing for a standard rebate of $0.00009 per share, and reflects this change in footnote 7 which is appended to corresponding fee codes that add liquidity (*i.e.,* B, V and Y). The Exchange notes that these standard rates are in line with, yet also competitive with, rates assessed by other equities exchanges on orders in securities priced at $1.00 or more [5] and in securities priced below $1.00.[6] The Exchange notes, too, that its affiliated exchange, Cboe EDGX Exchange, Inc. (''EDGX Equities''), is simultaneously submitting a fee change to amend its same current standard rates for orders in securities under $1.00 that add liquidity in the same manner.

Proposed Updates to the Add Volume Tiers

The Exchange currently offers five Add Volume Tiers under footnote 1 of the Fee Schedule. The Add Volume Tiers provide Members with opportunities to receive incrementally increasing enhanced rebates for their liquidity adding orders that yield fee codes ''B'' [7], ''V'' [8], and ''Y'' [9], upon reaching incrementally more difficult criteria under each tier. Specifically, the Add Volume Tiers currently offer the following:

- Tier 1 offers an enhanced rebate of $0.0028 for qualifying orders (*i.e.,* yielding fee codes B, V or Y) where a Member has an ADAV [10] as a percentage of TCV [11] greater than or equal to 0.20%;
- Tier 2 offers an enhanced rebate of $0.0029 for qualifying orders where a Member has an ADAV as a percentage of TCV greater than or equal to 0.30%;
- Tier 3 offers an enhanced rebate of $0.0030 for qualifying orders where a Member has an ADAV as a percentage of TCV greater than or equal to 0.50%;
- Tier 4 offers an enhanced rebate of $0.0031 for qualifying orders where a Member has an ADAV as a percentage of TCV greater than or equal to 1.00%; and
- Tier 5 offers an enhanced rebate of $0.0032 for qualifying orders where a Member has an ADAV as a percentage of TCV greater than or equal to 1.25%.

The Exchange proposes to amend the rebates offered and the criteria under each Add Volume Tier, as well as proposes an additional Tier 6, as follows:

- Proposed Tier 1 offers an enhanced rebate of $0.0025 for qualifying orders where a Member has an ADAV greater than or equal to 1,000,000;
- Proposed Tier 2 offers an enhanced rebate of $0.0027 for qualifying orders where a Member has an ADAV as a percentage of TCV greater than or equal to 0.10%;
- Proposed Tier 3 offers an enhanced rebate of $0.0028 for qualifying orders where a Member has an ADAV as a percentage of TCV greater than or equal to 0.20%;
- Proposed Tier 4 offers an enhanced rebate of $0.0029 for qualifying orders where a Member has an ADAV as a percentage of TCV greater than or equal to 0.25%;
- Proposed Tier 5 offers an enhanced rebate of $0.0030 for qualifying orders where a Member has an ADAV as a percentage of TCV greater than or equal to 0.40%; and
- Proposed new Tier 6 offers an enhanced rebate of $0.0031 for qualifying orders where a Member has an ADAV as a percentage of TCV greater than or equal to 0.85%.

The proposed rule change to Tiers 1 through 5 eases the difficulty in reaching the tiers' criteria while amending the enhanced rebates to correspond with the ease in criteria and proposed Tier 6 offers Members an additional opportunity to receive a rebate on their qualifying orders. The proposed restructuring of the current Add Volume Tiers and the new criteria and reduced fee offered in proposed Tier 6 are designed to provide Members with increased incentives to receive enhanced rebates on their liquidity adding displayed orders by increasing their add volume order flow in order to achieve the proposed eased and/or additional criteria.

Proposed Updates to the Supplemental Incentive Program Tiers

The Exchange currently offers three different Supplemental Incentive Program Tiers under footnote 1 of the Fee Schedule, wherein a Member may receive an additional rebate for qualifying orders where a Member adds

[5] *See* NYSE Price List 2020, ''Transactions in stocks with a per share stock price of $1.00 or more'', which assesses a fee of ranging from no charge to $0.0018 for various orders in securities priced at $1.00 or more; *and* Nasdaq Pricing 7, Section 118(a)(1), which assesses a charge ranging from no charge to $0.0035 or a credit ranging from $0.00005 to $0.00325 for various orders in securities priced at $1.00 or more.

[6] *See* NYSE Price List 2020, ''Transactions in stocks with a per share stock price less than $1.00'', which either does not assess a charge or assesses a charge of 0.3% for various orders in securities priced below $1.00; *and* Nasdaq Price List, ''Rebates and Fees, Shares Executed Below $1.00'', available at *http://www.nasdaqtrader.com/Trader.aspx?id=PriceListTrading2,* which assesses no charge for orders to add liquidity in securities priced below $1.00 and assesses a charge of 0.30% of total dollar volume for orders to remove liquidity in securities priced below $1.00. *See also* Securities Exchange Release No. 89607 (August 18, 2020), 85 FR 52179 (August 24, 2020) (SR–NYSEArca–2020–75), which recently amended in its fee schedule the base rate for adding and removing liquidity in Round Lots and Odd Lots in Tapes A, B and C securities with a per share price below $1.00.

[7] Appended to displayed orders that adds liquidity to BZX (Tape B) and is assessed a standard rebate of $0.0025.

[8] Appended to displayed orders that adds liquidity to BZX (Tape A) and is assessed a standard rebate of $0.0025.

[9] Appended to displayed orders that adds liquidity to BZX (Tape C) and is assessed a standard rebate of $0.0025.

[10] ''ADAV'' means average daily added volume calculated as the number of shares added per day. ADAV is calculated on a monthly basis.

[11] ''TCV'' means total consolidated volume calculated as the volume reported by all exchanges and trade reporting facilities to a consolidated transaction reporting plan for the month for which the fees apply.

a certain Tape ADV [12] as a percentage of that Tape's TCV. Specifically, the Supplemental Incentive Program Tiers offered are as follows:

• Supplemental Incentive Program—Tape A Tier offers an additional rebate of $0.0001 for orders yielding fee code V [13] where a Member adds a Tape A ADV greater than or equal to 0.50% of the Tape A TCV;

• Supplemental Incentive Program—Tape B Tier offers an additional rebate of $0.0001 for orders yielding fee code B [14] where a Member adds a Tape B ADV greater than or equal to 0.50% of the Tape B TCV; and

• Supplemental Incentive Program—Tape C Tier offers an additional rebate of $0.0001 for orders yielding fee code Y [15] where a Member adds a Tape C ADV greater than or equal to 0.50% of the Tape C TCV;

The proposed rule change amends each of the tiers' criteria by reducing the percentage of Tape ADV over Tape TCV from 0.50% to 0.30%. The proposed rule change also updates the language in each Tier to state ''where a Member has a Tape A/B/C ADAV'', which essentially states the same requirement as ''adds an ADV,'' but is more appropriately aligned with the defined terms in the Fee Schedule.[16] The proposed rule change to the Supplemental Incentive Program Tiers does not alter any of the additional rebate amounts currently offered. As such, the reduction in percentage of Tape ADAV over TCV, thus easing the tiers' criteria, is designed to further incentivize Members to submit displayed order flow to Tapes A, B and C to receive the current additional rebates provided under the Supplemental Incentive Program Tiers.

Proposed Remove Volume Tier

The Exchange proposes to add a new Remove Volume Tier under footnote 1 of the Fee Schedule.[17] The proposed Remove Volume Tier offers a reduced fee of $0.0029 for orders in securities at or above $1.00 and 0.28% of total dollar value for orders in securities below $1.00 [18] yielding fee code ''N'', [19] ''W'' [20] and ''BB'' [21] where a Member has an ADAV greater than or equal to 0.20% TCV with displayed orders that yield fee codes B, V or Y. The proposed Remove Volume Tier is designed to incentivize Members to increase their orders that add displayed volume on the Exchange in order to receive a reduced fee on their qualifying, liquidity removing orders.

Proposed Updates to the LMM Add Volume Tiers

Under the Exchange's LMM Program, the Exchange offers daily incentives for LMMs in securities listed on the Exchange for which the LMM meets certain Minimum Performance Standards.[22] Such daily incentives are determined based on the number of Cboe-listed securities for which the LMM meets such Minimum Performance Standards and the average auction volume across such securities. Generally, the more LMM Securities [23] for which the LMM meets the Minimum Performance Standards and the higher the auction volume across those securities, the greater the total daily payment to the LMM. Currently, the Exchange offers an LMM Add Volume Tier under footnote 14 of the Fee Schedule, which provides an additional rebate of $0.0001 for LMM orders yielding B, V and Y [24] where an LMM 1) adds an ADV [25] greater than or equal to 0.20% of the TCV, 2) has an Average Aggregate Daily Auction Volume in LMM Securities greater than or equal to 500,000, and 3) is enrolled in at least 75 LMM Securities.

The Exchange proposes to include three additional LMM Add Volume Tiers as follows:[26]

• Proposed LMM Add Volume Tier 2 provides an additional rebate of $0.0006 for orders yielding fee codes V [27] and ''HV'' [28] where an LMM 1) is enrolled is enrolled in at least 50 LMM Securities, and 2) has a Tape A ADAV greater than or equal to 0.10% of the Tape A TCV;

• Proposed LMM Add Volume Tier 3 provides an additional rebate of $0.0003 for orders yielding fee codes B [29] and ''HB'' [30] where an LMM 1) is enrolled is enrolled in at least 50 LMM Securities, and 2) has a Tape B ADAV greater than or equal to 0.20% of the Tape B TCV;

• LMM Add Volume Tier 4 provides an additional rebate of $0.0006 for orders yielding fee codes Y [31] and ''HY'' [32] where an LMM (1) is enrolled in at least 50 LMM Securities, and (2) has a Tape C ADAV greater than or equal to 0.10% of the Tape C TCV.

The proposed additional tiers also explicitly include that the proposed additional rebates apply to orders in securities priced below $1.00 and makes clear in the general heading language that both displayed and non-displayed orders will count toward meeting the tiers' criteria. The proposed additional LMM Add Volume tiers are designed to provide LMM Members with opportunities to receive additional rebates for both their displayed and non-displayed orders, thus further incentivizing Members to enroll and participate in the LMM Program, as well LMM Members to continue to add volume to Tape A, B and C.

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with the objectives of Section 6 of the Act,[33]

[12] ''ADV'' means average daily volume calculated as the number of shares added or removed, combined, per day. ADV is calculated on a monthly basis.

[13] *See supra* note 8.

[14] *See supra* note 7.

[15] *See supra* note 9.

[16] *See supra* notes 10 and 12.

[17] As a result of the new Remove Volume Tier, it also updates the title of footnote 1 to ''Add/Remove Volume Tiers''.

[18] As a result, the Exchange proposes to update the statement under General Notes in the Fee Schedule to state that ''unless otherwise indicated, variable rates provided by tiers apply only to executions in securities priced at or above $1.00.

[19] Appended to orders that remove liquidity from BZX (Tape C) and is assessed a standard fee of $0.00300.

[20] Appended to orders that remove liquidity from BZX (Tape A) and is assessed a standard fee of $0.00300.

[21] Appended to orders that remove liquidity from BZX (Tape B) and is assessed a standard fee of $0.00300.

[22] As defined in Rule 11.8(e)(1)(E), the term ''Minimum Performance Standards'' means a set of standards applicable to an LMM that may be determined from time to time by the Exchange. Such standards will vary between LMM Securities depending on the price, liquidity, and volatility of the LMM Security in which the LMM is registered. The performance measurements will include: (A) Percent of time at the NBBO; (B) percent of executions better than the NBBO; (C) average displayed size; and (D) average quoted spread. For additional detail, see Original LMM Filing.

[23] As defined in Rule 11.8(e)(1)(D), the term ''LMM Security'' means a Listed Security that has an LMM. As defined in Rule 11.8(e)(1)(B), the term ''Listed Security'' means any ETP or any Primary Equity Security or Closed-End Fund listed on the Exchange pursuant to Rule 14.8 or 14.9.

[24] *See supra* notes 7, 8 and 9.

[25] Like the proposed clarification in the Supplement Incentive Tiers, the proposed rule change also updates the language in LMM Add Volume Tier 1 to state ''where a Member has a Tape A/B/C ADAV'', which essentially states the same requirement as ''adds an ADV'', but is more appropriately aligned with the defined terms in the Fee Schedule. *See supra* note 15.

[26] As a result of the proposed additional LMM Add Volume Tiers, the Exchange updates the current LMM Add Volume Tier to be LMM Add Volume Tier 1.

[27] *See supra* note 8.

[28] Appended to non-displayed orders that add liquidity (Tape A) and are assessed a standard rebate of $0.0015.

[29] *See supra* note 7.

[30] Appended to non-displayed orders that add liquidity (Tape B) and are assessed a standard rebate of $0.0015.

[31] *See supra* note 9.

[32] Appended to non-displayed orders that add liquidity (Tape C) and are assessed a standard rebate of $0.0015.

[33] 15 U.S.C. 78f.

in general, and furthers the objectives of Section 6(b)(4),[34] in particular, as it is designed to provide for the equitable allocation of reasonable dues, fees and other charges among its Members, issuers and other persons using its facilities. The Exchange operates in a highly competitive market in which market participants can readily direct order flow to competing venues if they deem fee levels at a particular venue to be excessive or incentives to be insufficient. The proposed rule changes reflect a competitive pricing structure designed to incentivize market participants to direct their order flow to the Exchange, which the Exchange believes would enhance market quality to the benefit of all Members. The Exchange notes that relative volume-based incentives and discounts have been widely adopted by exchanges, including the Exchange, and are reasonable, equitable and non-discriminatory because they are open to all members on an equal basis and provide additional benefits or discounts that are reasonably related to (i) the value to an exchange's market quality and (ii) associated higher levels of market activity, such as higher levels of liquidity provision and/or growth patterns. Additionally, as noted above, the Exchange operates in highly competitive market. The Exchange is only one of several equity venues to which market participants may direct their order flow, and it represents a small percentage of the overall market. It is also only one of several maker-taker exchanges. Competing equity exchanges offer similar tiered pricing structures, including schedules of rebates and fees that apply based upon members achieving certain volume and/or growth thresholds, as well as assess similar fees or rebates for similar types of orders, to that of the Exchange. These competing pricing schedules, moreover, are presently comparable to those that the Exchange provides, including the pricing of comparable criteria and/or fees and rebates.

Regarding the proposed change to the standard rates, the Exchange believes that amending the standard rates for orders that add volume in securities prices at $1.00 or more and in securities priced below $1.00 is reasonable because, as stated above, in order to operate in the highly competitive equities markets, the Exchange and its competing exchanges seek to offer similar pricing structures, including assessing comparable standard rates for orders in securities priced at or above, as well as priced below, $1.00.[35] Thus, the Exchange believes the proposed standard rate changes are reasonable as they are generally aligned with and competitive with the amounts assessed for the orders in securities above/below $1.00 on other equities exchanges. The Exchange also believes that amending the standard rate amounts represents an equitable allocation of fees and is not unfairly discriminatory because they will continue to automatically and uniformly apply to all Members' orders that add liquidity in securities at $1.00 or more and in securities less than $1.00.

Regarding the proposed updates and additions to the Add Volume, Supplemental Incentive and LMM Add Volume Tiers, as well as the new Remove Volume Tier, the Exchange believes that the proposed tiers are reasonable because they each provide an additional opportunity (either by amending existing tiers or adding new tiers) for Members to receive a discounted rate or enhanced rebates by means of liquidity adding orders. The Exchange notes the proposed tiers are available to all Members and are competitively achievable for all Members that submit the requisite order flow, in that, all firms are eligible for the proposed tiers and those that submit the requisite order flow could compete to meet the proposed tiers. Each Member will uniformly receive the respective proposed enhanced rebates, additional rebates or reduced fee if the corresponding tier criteria is met. The Exchange also believes that the proposed tiers are reasonable, equitable and not unfairly discriminatory because, as noted above, competing equity exchanges offer similar tiered pricing structures to that of the proposed Add Volume,[36] Supplemental Incentive,[37] Remove Volume,[38] and LMM Add Volume Tiers,[39] including as amended, which are presently comparable in pricing and criteria to the proposed tiers.

In particular, the Exchange believes the proposed Add Volume Tiers are reasonable because they amend existing opportunities by easing the level of difficulty in each of the existing five tiers, thus maintaining the current structure of step-up in difficulty in achieving each ascending tier, and provide an additional, also incrementally more challenging, opportunity in proposed Tier 6. The proposed ease in criteria and additional tier will incentivize Members to increase add volume order flow in order to receive the corresponding enhanced rebates for Members' qualifying orders. The Exchange further believes that the proposed rule changes to the Add Volume Tiers are reasonable as they represent proportional decreases in difficulty per adjacent tiers. In line with easing the relative level of difficulty in each of the Add Volume Tiers, the Exchange believes that providing a reduced enhanced rebate per tier is reasonable as it is commensurate with the proposed criteria. That is, the reduction in enhanced rebates reasonably reflects the scaled difficulty in achieving the add volume criteria over a baseline of 1,000,000 in proposed Tier 1, up through the incrementally increasing ADAV threshold as a percentage of TCV in Tiers 2 through 6. Also, the proposed reduced enhanced rebates (and proposed additional enhanced rebate in Tier 6) corresponding to the proposed criteria in the Add Volume Tiers do not represent a significant departure from the enhanced rebates currently offered under the tiers, and merely incrementally shifts the range of enhanced rebates offered to most appropriately align with the

[34] 15 U.S.C. 78f(b)(4).

[35] *See supra* notes 5 and 6.

[36] *See* EDGA Equities Fee Schedule, footnote 7, ''Add/Remove Volume Tiers''; BYX Equities Fee Schedule, footnote 1, ''Add/Remove Volume Tiers''; and EDGX Equities Fee Schedule, footnote 1, ''Add Volume Tiers'', each of which provide for similar add volume criteria for which members may receive comparable reduced fees on their orders (EDGA/BYX) or enhanced rebates ranging from $0.0023 to $0.0028 (EDGX) for meeting such thresholds.

[37] *See* NYSE Price List, ''Credit Applicable to Supplemental Liquidity Providers (''SLPs'')'', which provides additional credits up to $0.0005 for various types of Tape liquidity; *and* Nasdaq Equity 7, Section 118(a)(1), which provides supplemental credit of $0.00005 for various types of Tape liquidity.

[38] *See* EDGA Equities Fee Schedule, footnote 7, ''Add/Remove Volume Tiers'', of which the Remove Volume Tiers offers an enhanced rebate of $0.0022 or $0.0028 for reaching a certain threshold of ADV over TCV; *and* BYX Equities Fee Schedule, footnote 1, ''Add/Remove Volume Tiers'', of which the Remove Volume Tiers offer enhanced rebates between $0.0015 and $0.0018 for various criteria (Step-Up volume, ADAV of a set number of shares, ADV as a percentage of TCV, etc.).

[39] *See* Nasdaq Phlx Equity 7 Pricing Schedule, Section 3(c), which provides up to an additional credit of $0.0003 for various order and quoting volume thresholds for the exchange's qualified market makers (''QMMs''); *and* NYSE Price List, ''Fees and Credits applicable to Designated Market Makers (''DMMs'')'', which provides, among various credits for orders in securities at or above $1.00, additional credit of $0.0004 for DMMs adding liquidity in securities under $1.00. *See also* Securities Exchange Release No. 89607 (August 18, 2020), 85 FR 52179 (August 24, 2020) (SR–NYSEArca–2020–75), which recently adopted in its fee schedule a step up tier for ETP Holders adding liquidity in Round Lots and Odd Lots in Tapes A, B and C securities with a per share price below $1.00 and amended the base rate for adding and removing liquidity in Round Lots and Odd Lots in Tapes A, B and C securities with a per share price below $1.00.

corresponding shift in criteria difficulty per each tier.

Similarly, the Exchange believes the proposed amendments to the Supplemental Incentive Tiers are reasonable because they, too, amend existing opportunities by uniformly easing the level of difficulty in each of the three existing Supplemental Incentive Tiers, which currently provide for the same criteria thresholds per Tape. Therefore, by uniformly easing the criteria per each tier, while maintaining the existing additional rebate amounts, the proposed rule change to the Supplemental Tiers is reasonably designed to incentivize Members to increase their add volume order flow per each Tape.

The Exchange believes the Remove Volume Tier is a reasonable means to incentivize Members to continue to provide liquidity adding, displayed volume to the Exchange by offering them a different, additional opportunity than that of the Add Volume Tiers—to receive a reduced fee on their liquidity removing orders by meeting the proposed criteria in submitting additional add volume order flow. In addition to this, the Exchange has recently observed that trading in subdollar names has grown significantly; nearly tripling since the beginning of 2020, and that competing equities exchanges have begun offering pricing incentives for subdollar orders.[40] Therefore, the Exchange believes that it is reasonable and equitable to provide the proposed reduced fee under the new Remove Volume Tier for qualifying subdollar orders. Also, as indicated above, the Exchange's affiliated equities exchanges already have similar Remove Volume in place, which offer similar rebates for achieving comparable criteria, in addition to their Add Volume Tiers.[41]

The Exchange believes the proposed additional LMM Add Volume Tiers are reasonable in that they offer LMM Members on the Exchange an additional opportunity to receive an added rebate for their provision of liquidity, both displayed and non-displayed, per Tape. As with the proposed Remove Volume Tier, the Exchange believes that it is reasonable and equitable to provide the proposed additional rebates under the new LMM Add Volume Tiers for qualifying subdollar orders as a result of the recent expansive growth in the subdollar market segment, as well as competitive pricing offered by other equities exchanges for subdollar orders.[42] The Exchange believes the proposed additional rebates for both liquidity adding displayed and non-displayed orders to the Tapes will incentivize increased overall order flow to the Book and price-improvement opportunities. The Exchange also notes that the proposed LMM Add Volume Tiers reflect a competitive pricing structure designed to incentivize market participants to enroll in LMP Securities, which the Exchange believes will enhance market quality in all securities listed on the Exchange and encourage issuers to list new products and transfer existing products to the Exchange. The Exchange further believes that the proposed criteria and corresponding additional rebates per tier are reasonable and equitable. Generally, Tape B experiences less variability in terms of broader market share, whereas Tape A and C tend to experience more volatility. As a result, the Exchange has observed that LMM Members generally submit less Tape volume in connection with Tape A and Tape C. For example, the average Tape ADAV as a percentage of Tape TCV in Tape A and Tape C from LMM Members in the last month was approximately ten basis points lower than their average Tape ADAV over Tape TCV in Tape B. As a result, the Exchange believes Members are more easily able to meet a volume requirement for Tape B, and therefore, it is equitable to provide for a slightly higher ADAV Tape B threshold of Tape B TCV than that for Tape A and C, that corresponds to a slightly lower additional rebate than that which corresponds to Tape A and C.

Overall, the Exchange believes that easing the current tiers' criteria and adding new tier criteria, each based on a Member's liquidity adding orders, will benefit all market participants by incentivizing continuous liquidity and thus, deeper more liquid markets as well as increased execution opportunities. Particularly, the majority of the proposed tiers are designed to incentivize continuous displayed liquidity, which signals other market participants to take the additional execution opportunities provided by such liquidity, while the proposed incentives to provide non-displayed liquidity will further contribute to a deeper, more liquid market and provide even more execution opportunities for active market participants at improved prices. This overall increase in activity deepens the Exchange's liquidity pool, offers additional cost savings, supports the quality of price discovery, promotes market transparency and improves market quality, for all investors.

In addition to this, the Exchange believes that the proposal represents an equitable allocation of rebates and is not unfairly discriminatory because all Members will continue to be eligible for the Add Volume and Supplemental Incentive Tiers, as amended, and in the same way will be eligible for the proposed Remove Volume Tier and additional Add Volume and LMM Add Volume Tiers. Without having a view of activity on other markets and off-exchange venues, the Exchange has no way of knowing whether this proposed rule change would definitely result in any Members qualifying for the proposed tiers. While the Exchange has no way of predicting with certainty how the proposed tiers will impact Member activity, the Exchange anticipates that for the proposed Add Volume Tiers approximately between seven and thirteen Members will be able to compete for and achieve the proposed criteria across proposed Add Volume Tiers 1 and 2; at least three Members will be able to compete for and achieve the amended criteria in each Add Volume Tier 3 and 4; and at least six Members will be able to compete for and achieve the amended/new criteria across Add Volume Tiers 5 and 6. The Exchange anticipates that for the proposed Supplemental Incentive Tiers at least three Members will be able to compete for and achieve the proposed criteria in each of the three additional tiers. The Exchange anticipates that for the proposed Remove Volume Tier at least ten Members will be able to compete for and achieve the proposed criteria. Finally, the Exchange anticipates that for the proposed Add Volume LMM Tiers at least two LMM Members will be able to compete for and achieve the proposed criteria in each of the three additional tiers. The Exchange anticipates that the tiers will include various liquidity providing Member types, such as traditional Market Makers, and wholesale or consolidator firms that mainly make markets for retail orders, each providing distinct types of order flow to the Exchange to the benefit of all market participants. The Exchange also notes that the proposed tiers will not

[40] *See* NYSE Price List, ''Fees and Credits applicable to Designated Market Makers (''DMMs'')'', which provides, among various credits for orders in securities at or above $1.00, additional credit of $0.0004 for DMMs adding liquidity in securities under $1.00; *see also* Securities Exchange Release No. 89607 (August 18, 2020), 85 FR 52179 (August 24, 2020) (SR–NYSEArca–2020–75), which recently adopted in its fee schedule a step up tier for ETP Holders adding liquidity in Round Lots and Odd Lots in Tapes A, B and C securities with a per share price below $1.00 and amended the base rate for adding and removing liquidity in Round Lots and Odd Lots in Tapes A, B and C securities with a per share price below $1.00.

[41] *See supra* note 38.

[42] *See supra* note 40.

adversely impact any Member's pricing or their ability to qualify for other rebate tiers. Rather, should a Member not meet the proposed criteria for a tier, the Member will merely not receive the corresponding additional rebate.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. Rather, as discussed above, the Exchange believes that the proposed change would encourage the submission of additional order flow to a public exchange, thereby promoting market depth, execution incentives and enhanced execution opportunities, as well as price discovery and transparency for all Members. As a result, the Exchange believes that the proposed change furthers the Commission's goal in adopting Regulation NMS of fostering competition among orders, which promotes ''more efficient pricing of individual stocks for all types of orders, large and small.'' [43]

The Exchange believes the proposed rule change does not impose any burden on intramarket competition that is not necessary or appropriate in furtherance of the purposes of the Act. Particularly, the proposed changes apply to all Members equally in that all Members are eligible for the proposed Add Volume Tiers, Supplemental Incentive Tiers, Remove Volume Tier and LMM Add Volume Tiers (and have the same opportunity to become an LMM Member), have a reasonable opportunity to meet the tiers' criteria and will all receive the corresponding proposed enhanced rebates, additional rebates and reduced fee if such criteria are met. Additionally, the proposed tier changes are designed to attract additional order flow to the Exchange. The Exchange believes that the updated tier criteria and the additional tier criteria would incentivize market participants to direct liquidity adding order flow to the Exchange, bringing with it additional execution opportunities for market participants and improved price transparency. Greater overall order flow, trading opportunities, and pricing transparency benefits all market participants on the Exchange by enhancing market quality and continuing to encourage Members to send orders, thereby contributing towards a robust and well-balanced market ecosystem. In addition to this, the Exchange notes that the proposed amendments to the standard rebates for orders in securities above/below $1.00 will continue to apply automatically to all such Members' orders uniformly.

Next, the Exchange believes the proposed rule change does not impose any burden on intermarket competition that is not necessary or appropriate in furtherance of the purposes of the Act. As previously discussed, the Exchange operates in a highly competitive market. Members have numerous alternative venues that they may participate on and direct their order flow, including 12 other equities exchanges and off-exchange venues and alternative trading systems. Additionally, the Exchange represents a small percentage of the overall market. Based on publicly available information, no single equities exchange has more than 18% of the market share.[44] Therefore, no exchange possesses significant pricing power in the execution of order flow. Indeed, participants can readily choose to send their orders to other exchange and off-exchange venues if they deem fee levels at those other venues to be more favorable. Moreover, the Commission has repeatedly expressed its preference for competition over regulatory intervention in determining prices, products, and services in the securities markets. Specifically, in Regulation NMS, the Commission highlighted the importance of market forces in determining prices and SRO revenues and, also, recognized that current regulation of the market system ''has been remarkably successful in promoting market competition in its broader forms that are most important to investors and listed companies.'' [45] The fact that this market is competitive has also long been recognized by the courts. In *NetCoalition* v. *Securities and Exchange Commission,* the D.C. Circuit stated as follows: ''[n]o one disputes that competition for order flow is 'fierce.' . . . As the SEC explained, '[i]n the U.S. national market system, buyers and sellers of securities, and the broker-dealers that act as their order-routing agents, have a wide range of choices of where to route orders for execution'; [and] 'no exchange can afford to take its market share percentages for granted' because 'no exchange possesses a monopoly, regulatory or otherwise, in the execution of order flow from broker dealers'. . . .''.[46] Accordingly, the Exchange does not believe its proposed fee change imposes any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

The Exchange neither solicited nor received comments on the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A) of the Act [47] and paragraph (f) of Rule 19b–4 [48] thereunder. At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission will institute proceedings to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include File Number SR–CboeBZX–2020–071 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to File Number SR–CboeBZX–2020–071. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will

SMALL BUSINESS ADMINISTRATION

Reporting and Recordkeeping Requirements Under OMB Review

AGENCY: Small Business Administration.

ACTION: 30-Day notice.

SUMMARY: The Small Business Administration (SBA) is seeking approval from the Office of Management and Budget (OMB) for the information collection described below. In accordance with the Paperwork Reduction Act and OMB procedures, SBA is publishing this notice to allow all interested member of the public an additional 30 days to provide comments on the proposed collection of information.

DATES: Submit comments on or before October 29, 2020.

ADDRESSES: Comments should refer to the information collection by title and/or OMB Control Number and should be sent to: *Agency Clearance Officer,* Curtis Rich, Small Business Administration, 409 3rd Street SW, 5th Floor, Washington, DC 20416; and *SBA Desk Officer,* Office of Information and Regulatory Affairs, Office of Management and Budget, New Executive Office Building, Washington, DC 20503.

FOR FURTHER INFORMATION CONTACT: Curtis Rich, Agency Clearance Officer, (202) 205–7030, *curtis.rich@sba.gov.*

SUPPLEMENTARY INFORMATION:

Copies: You may obtain a copy of the information collection and supporting documents from the Agency Clearance Officer.

The STEP Client Report form is completed by state administrators in states that receive an SBA STEP grant in order to report data on the quarterly progress of STEP grant recipients and their clients. These data are used to understand how states have improved the trade and export activities and revenue outcomes of clients. Data from the STEP Client Report provides SBA with critical information about the impact of various strategies used to advance trade and export activities in each state. These data also provide an understanding of the specific ways in which funded activities meet SBA's goal of improving small business trade and export productivity. These data may inform strategies that can be replicated by other small businesses.

Title: SBA STEP Client Report Form.

OMB Control Number: N/A.

Description of Respondents: This form will be completed by the directors at approximately 90 STEP grant recipients.

Estimated Annual Responses: 360.

Estimated Annual Hour Burden: 360.

SMALL BUSINESS ADMINISTRATION

Interest Rates

The Small Business Administration publishes an interest rate called the optional ''peg'' rate (13 CFR 120.214) on a quarterly basis. This rate is a weighted average cost of money to the government for maturities similar to the average SBA direct loan. This rate may be used as a base rate for guaranteed fluctuating interest rate SBA loans. This rate will be 0.88 percent for the October–December quarter of FY 2021.

Pursuant to 13 CFR 120.921(b), the maximum legal interest rate for any third party lender's commercial loan which funds any portion of the cost of a 504 project (see 13 CFR 120.801) shall be 6% over the New York Prime rate or, if that exceeds the maximum interest rate permitted by the constitution or laws of a given State, the maximum interest rate will be the rate permitted by the constitution or laws of the given State.

BILLING CODE 8026–03–P

SOCIAL SECURITY ADMINISTRATION

[Docket No. SSA–2020–0046]

Charging Standard Administrative Fees for Non-Program Information

AGENCY: Social Security Administration.

ACTION: Notice of updated schedule of standard administrative fees.

SUMMARY: On August 22, 2012, we announced in the **Federal Register** a schedule of standard administrative fees we charge to the public. We charge these fees to recover our full costs when we provide information and related services for non-program purposes. We are announcing an update to the previously published schedule of standard administrative fees. The updated standard fee schedule is part of our continued effort to standardize fees for non-program information requests. Standard fees provide consistency and ensure we recover the full cost of supplying information when we receive a request for a purpose not directly related to the administration of a program under the Social Security Act (Act).

DATES: The changes described above are applicable for requests we receive on or after October 1, 2020.

FOR FURTHER INFORMATION CONTACT: Karen Hunter, Social Security Administration, Office of Finance, 6401 Security Boulevard, Baltimore, MD 21235–6401, (410) 965–5861. For information on eligibility or filing for benefits, visit our website, *socialsecurity.gov,* or call our national toll-free number, 1–800–772–1213 or TTY 1–800–325–0778.

SUPPLEMENTARY INFORMATION: Section 1106 of the Act and the Privacy Act [1] authorize the Commissioner of Social Security to promulgate regulations regarding the fees related to providing information. Our regulations and operating instructions identify when we will charge fees for information.[2] Under our regulations, whenever we determine a request for information is for any purpose not directly related to the administration of the Social Security programs, we require the requester to pay the full cost of providing the information.[3] To inform the public of these fees, on August 22, 2012,[4] we announced in the **Federal Register** a schedule of standard administrative fees we charge to the public. We last updated the schedule of standard fees on September 4, 2018.[5]

New Information: We are required to review and update standard administrative fees at least every two years.[6] Based on the most recent cost analysis, the following table provides the new schedule of standard administrative fees per request:

Copying an Electronic Folder: $41.

Copying a Paper Folder: $83.

Regional Office Certification [7]*:* $64.

Record Extract: $34.

Third Party Manual SSN Verification: $36.

Office of Central Operations Certification [8]*:* $30.

W–2/W–3 Requests [9]*:* $90.

Form SSA–7050, Request for Social Security Earning Information: $92.

Requests for Copy of Original Form SS–5, Application for a Social Security Card: $21.

Requests for Copy of Numident Record (Computer Extract of the SS–5): $20.

[5] 83 FR 45002.

[6] See the Office of Management and Budget Circular No. A–25, *User Charges.*

[7] Requests received in a field office, regional office, or headquarters component.

[8] Requests received in the Office of Central Operations.

[9] W–2/W–3 Fee is $90 per request, not dependent on the number of years or number of individuals within request.

A requester can obtain certified and non-certified detailed yearly Social Security earnings information by completing Form SSA–7050, *Request for Social Security Earning Information.* We charge $92 for each Form SSA–7050 for detailed yearly Social Security earnings information. For an additional $30, we will certify the detailed earnings information. Detailed earnings information includes the names and addresses of employers. Yearly earnings totals are available in two ways, depending on the requester's need for certification. A requester can continue to obtain non-certified yearly earnings totals (Form SSA–7004, *Request for Social Security Statement*) through our free online service, *my* Social Security, a personal online account for Social Security information and services. Online Social Security Statements display uncertified yearly earnings, free of charge, and do not show any employer information. A requester can obtain certified yearly Social Security earnings totals by completing the Form SSA–7050. The cost for certified yearly earnings totals is $122 ($92 plus an additional $30 for certification).

We will continue to evaluate all standard fees at least every two years to ensure we capture the full costs associated with providing information for non-program-related purposes. We require nonrefundable advance payment by check, money order, or credit card. We do not accept cash. We will only accept one form of payment in the full amount of the standard fee for each request, and will not divide the fee amount between more than one form of payment. If we revise any of the standard fees, we will publish another notice in the **Federal Register**. For other non-program requests for information not addressed here or within the current schedule of standard administrative fees, we will continue to charge fees calculated on a case-by-case basis to recover our full cost of supplying the information.

Additional Information

Additional information is available on our Business Services website at *https://www.ssa.gov/thirdparty/business.html* or by written request to: Social Security Administration, Office of Public Inquiries and Communications Support, 1100 West High Rise, 6401 Security Boulevard, Baltimore, MD 21235.

The Commissioner of the Social Security Administration, Andrew Saul, having reviewed and approved this document, is delegating the authority to electronically sign this document to Faye I. Lipsky, who is the primary Federal Register Liaison for SSA, for purposes of publication in the **Federal Register**.

Faye I. Lipsky,

Federal Register Liaison, Office of Legislation and Congressional Affairs, Social Security Administration.

BILLING CODE 4191–02–P

DEPARTMENT OF STATE

[Public Notice: 11214]

Notice of Determinations

Culturally Significant Object Being Imported for Exhibition—Determinations: Exhibition of "The Holy Trinity" Painting by Peter Paul Rubens

SUMMARY: Notice is hereby given of the following determinations: I hereby determine that one object being imported from abroad pursuant to an agreement with the foreign owner or custodian for temporary exhibition within the 17th Century Flemish Paintings Gallery of *The J. Paul Getty Museum* at the *Getty Center*, Los Angeles, California, and at possible additional exhibitions or venues yet to be determined, is of cultural significance, and, further, that its temporary exhibition or display within the United States as aforementioned is in the national interest. I have ordered that Public Notice of these determinations be published in the **Federal Register**.

FOR FURTHER INFORMATION CONTACT: Chi D. Tran, Program Administrator, Office of the Legal Adviser, U.S. Department of State (telephone: 202–632–6471; email: *section2459@state.gov*). The mailing address is U.S. Department of State, L/PD, SA–5, Suite 5H03, Washington, DC 20522–0505.

SUPPLEMENTARY INFORMATION: The foregoing determinations were made pursuant to the authority vested in me by the Act of October 19, 1965 (79 Stat. 985; 22 U.S.C. 2459), Executive Order 12047 of March 27, 1978, the Foreign Affairs Reform and Restructuring Act of 1998 (112 Stat. 2681, *et seq.;* 22 U.S.C. 6501 note, *et seq.*), Delegation of Authority No. 234 of October 1, 1999, and Delegation of Authority No. 236–3 of August 28, 2000.

Marie Therese Porter Royce,

Assistant Secretary, Educational and Cultural Affairs, Department of State.

BILLING CODE 4710–05–P

DEPARTMENT OF STATE

[Public Notice: 11216]

Updating the State Department's List of Entities and Subentities Associated With Cuba (Cuba Restricted List)

ACTION: Updated publication of list of entities and subentities; notice.

SUMMARY: The Department of State is publishing an update to its List of Restricted Entities and Subentities Associated with Cuba (Cuba Restricted List) with which direct financial transactions are generally prohibited under the Cuban Assets Control Regulations (CACR). The Department of Commerce's Bureau of Industry and Security (BIS) generally will deny applications to export or reexport items for use by entities or subentities on the Cuba Restricted List.

DATES: September 29, 2020.

FOR FURTHER INFORMATION CONTACT: Emily Belson, Office of Economic Sanctions Policy and Implementation, 202–647–6526; Robert Haas, Office of the Coordinator for Cuban Affairs, tel.: 202–453–8456, Department of State, Washington, DC 20520.

SUPPLEMENTARY INFORMATION:

Background

On June 16, 2017, the President signed National Security Presidential Memorandum-5 on Strengthening the Policy of the United States Toward Cuba (NSPM–5). As directed by NSPM–5, on November 9, 2017, the Department of the Treasury's Office of Foreign Assets Control (OFAC) published a final rule in the **Federal Register** amending the CACR, 31 CFR part 515, and the Department of Commerce's Bureau of Industry and Security (BIS) published a final rule in the **Federal Register** amending, among other sections, the section of the Export Administration Regulations (EAR) regarding Cuba, 15 CFR 746.2. The regulatory amendment to the CACR added § 515.209, which generally prohibits direct financial transactions with certain entities and subentities identified on the State Department's Cuba Restricted List. The regulatory amendment to 15 CFR 746.2, notes BIS will generally deny applications to export or re-export items for use by entities or subentities identified on the Cuba Restricted List. The State Department is now updating the Cuba Restricted list, as published below and available on the State Department's website (*https://www.state.gov/cuba-sanctions/cuba-restricted-list/*)

This update includes one additional subentity and an alias thereof. This is the seventh update to the Cuba Restricted List since it was published November 9, 2017 (82 FR 52089). Previous updates were published November 15, 2018 (see 83 FR 57523), March 9, 2019 (see 84 FR 8939), April 24, 2019 (see 84 FR 17228), July 26, 2019 (see 84 FR 36154), November 19, 2019 (see 84 FR 63953), June 12, 2020 (see 85 FR 35972), and a correction June 19, 2020 (85 FR 37146). The State Department will continue to update the Cuba Restricted List periodically.

The publication of the updated Cuba Restricted List further implements the directive in paragraph 3(a)(i) of NSPM–5 for the Secretary of State to identify the entities or subentities, as appropriate, that are under the control of, or act for or on behalf of, the Cuban military, intelligence, or security services or personnel, and publish a list of those identified entities and subentities with which direct financial transactions would disproportionately benefit such services or personnel at the expense of the Cuban people or private enterprise in Cuba.

Electronic Availability

This document and additional information concerning the Cuba Restricted List are available from the Department of State's website (*https://www.state.gov/cuba-sanctions/cuba-restricted-list/*).

List of Restricted Entities and Subentities Associated With Cuba as of September 29, 2020

Below is the U.S. Department of State's list of entities and subentities under the control of, or acting for or on behalf of, the Cuban military, intelligence, or security services or personnel with which direct financial transactions would disproportionately benefit such services or personnel at the expense of the Cuban people or private enterprise in Cuba. For information regarding the prohibition on direct financial transactions with these entities, please see 31 CFR 515.209. All entities and subentities were listed effective November 9, 2017, unless otherwise indicated.

** * * Entities or subentities owned or controlled by another entity or subentity on this list are not treated as restricted unless also specified by name on the list. * * **

BILLING CODE 4710–29–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

[Docket No. FAA–2020–0263]

Agency Information Collection Activities: Requests for Comments; Clearance of Renewed Collection Approval of Information Collection: Safe Disposition of Life Limited Aircraft Parts

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice and request for comments.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, FAA invites public comments about our intention to request the Office of Management and Budget (OMB) approval to renew this information collection. The **Federal Register** Notice with a 60-day comment period soliciting comments on the following collection of information was published on March 13, 2020. The collection involves maintaining and recording ''the current status of life-limited parts of each airframe, engine, propeller, rotor, and appliance. The information to be collected is necessary for maintaining and recording that the part is airworthy.

DATES: Written comments should be submitted by October 29, 2020.

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function.

FOR FURTHER INFORMATION CONTACT: David A. Hoyng by email at: *david.a.hoyng@faa.gov* or *9-AWA-AFS-300-Maintenance@faa.gov;* phone: (325) 260–8658 or (202) 267–1675.

SUPPLEMENTARY INFORMATION:

Public Comments Invited: You are asked to comment on any aspect of this information collection, including (a) Whether the proposed collection of information is necessary for FAA's performance; (b) the accuracy of the estimated burden; (c) ways for FAA to enhance the quality, utility and clarity of the information collection; and (d) ways that the burden could be minimized without reducing the quality of the collected information.

OMB Control Number: 2120–0665.

Title: Safe Disposition of Life Limited Aircraft Parts.

Form Numbers: None.

Type of Review: Renewal of an information collection.

Background: The **Federal Register** Notice with a 60-day comment period soliciting comments on the following collection of information was published on March 13, 2020 (FAA–2020–0263, **Federal Register** Volume 85, Number 50 [Pages 14721–14722], Online via [*www.gpo.gov*] [FR Doc No: 2020–05179]).

The FAA has found life-limited parts that exceeded their life-limits installed on type-certificated products during accident investigations and in routine surveillance. Although such installation of life-limited parts violates existing FAA regulations, concerns have arisen regarding the disposition of these life-limited parts when they have reached their life limits. Concerns over the use of life-limited aircraft parts led Congress to pass a law requiring the safe disposition of these parts. The Wendell H. Ford Investment and Reform Act for the 21st Century (Pub. L. 106–181), added section 44725 to Title 49, United States Code.

Current Requirements

The type design of an aircraft, aircraft engine, or propeller includes the Instructions for Continued Airworthiness (ICA), which includes the Airworthiness Limitations that describe life limits for parts installed on the product. See, for instance, 14 CFR 21.3(c) and 21.50. In order for an aviation product to comply with its type design, the life-limited parts installed on it must fall within the acceptable ranges described in the Airworthiness Limitations section of the Instructions for Continued Airworthiness. For this reason, installation of a life-limited part after the mandatory replacement time has been reached would be a violation of the maintenance regulations. Section 43.13(b) requires that maintenance work be completed so that the product worked on ''will be at least equal to its original or properly altered condition. * * *'' The product is not at least equal to its original or properly altered condition if a life-limited part has reached or exceeded its life limit. Existing regulations require that specific markings be placed on all life-limited parts at the time of manufacture. This includes permanently marking the part with a part number (or equivalent) and a serial number (or equivalent). See 14 CFR 45.14. Persons who install parts must have adequate information to determine a part's current life status. In particular, documentation problems may mislead an installer concerning the life remaining for a life-limited part. This rule further provides for the data needs of subsequent installers to ensure they know the life remaining on a part and prevent the part being used beyond its life limit. Existing regulations provide for records on life-limited parts that are installed on aircraft. The regulations require that each owner or operator under § 91.417(a)(2)(ii) and each certificate holder under § 121.380(a)(2)(iii) or § 135.439(a)(2)(ii), maintain records showing ''the current status of life-limited parts of each airframe, engine, propeller, rotor, and appliance.'' These regulations do not

govern the disposition of the part when it is removed from the aircraft. If the part is intended to be reinstalled, however, a record of the life status of the part will be needed at the time of reinstallation to show that the part is within its life limit and to create the required record under §§ 91.417(a)(2)(ii), 121.380(a)(2)(iii), or 135.439(a)(2)(ii), as applicable. Therefore, when a life-limited part is removed from an aircraft and that part is intended to be reinstalled in an aircraft, industry practice is to make a record of the part's current status at the time of removal. Repair stations, air carriers, and fixed base operators (FBO's) have systems in place to keep accurate records of such parts to ensure that they can reinstall the parts and have the required records to show that the part is airworthy. If the part is not intended to be reinstalled, however, under existing regulations and practice there is no record required or routinely made when a part is removed from an aircraft. The part may be at the end of its life limit and not eligible for installation. Or, the part may not have reached the end of its life limit, but is so close that reinstallation would not be practicable. In these cases industry practices vary. For instance, the part might be put in a bin and later sold as scrap metal, it might be used as a training aid, or it might be mutilated. This renewal of the OMB control action requires the continued information collection.

Respondents: Industry associations, air carriers, manufacturers, repair stations, representatives of employees, a foreign civil air authority, and individuals estimated to 8,000.

Frequency: As identified in previous rulemaking proposals for an annual frequency of information collection requirements is 100,000 procedures.

Estimated Average Burden per Response: 30 minutes per procedure.

Estimated Total Annual Burden: As identified in previous rule making estimates for this information collection the FAA refined its estimate of annual burden, and has determined that there is no more than a minimal paperwork burden on any respondent for the record keeping and reporting requirements of 30 minutes duration, at $54 per hour per procedure.

Issued in Washington, DC, on September 24, 2020.

David Hoyng,

Aviation Safety Inspector—LLP SME, Air Carrier Branch/Aircraft Maintenance Division/Office of Safety Standards.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

[Docket No. FAA–2020–0060]

Agency Information Collection Activities: Requests for Comments; Clearance of New Approval of Information Collection: Pilot Professional Development

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice and request for comments.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, FAA invites public comments about our intention to request the Office of Management and Budget (OMB) approval new information collection. The Federal Register Notice with a 60-day comment period soliciting comments on the following collection of information was published on October 7, 2016. The collection involves the development and approval of new and revised training curriculum for certificate holders using part 121 pilot training and qualification programs.

DATES: Written comments should be submitted by October 29, 2020.

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function.

FOR FURTHER INFORMATION CONTACT: Sheri Pippin by email at: *sheri.pippin@faa.gov;* phone: 424–405–7256.

SUPPLEMENTARY INFORMATION:

Public Comments Invited: You are asked to comment on any aspect of this information collection, including (a) Whether the proposed collection of information is necessary for FAA's performance; (b) the accuracy of the estimated burden; (c) ways for FAA to enhance the quality, utility and clarity of the information collection; and (d) ways that the burden could be minimized without reducing the quality of the collected information.

OMB Control Number: 2120–XXXX.

Title: Pilot Professional Development.

Form Numbers: None.

Type of Review: This is a new information collection.

Background: The Federal Register Notice with a 60-day comment period soliciting comments on the following collection of information was published on October 7, 2016 (81 FR 69908). On February 25, 2020, the FAA published the Pilot Professional Development final rule. This action amends the requirements primarily applicable to air carriers conducting domestic, flag, and supplemental operations to enhance the professional development of pilots in those operations. This action requires air carriers conducting domestic, flag, and supplemental operations to provide new-hire pilots with an opportunity to observe flight operations and become familiar with procedures before serving as a flightcrew member in operations; to revise the upgrade curriculum; and to provide leadership and command and mentoring training for all pilots in command. This final rule will mitigate incidents of unprofessional pilot behavior and reduce pilot errors that can lead to a catastrophic event.

Summary: The final rule requires the development and approval of new and revised training curriculums for the following:

- Leadership and command and mentoring ground training for pilots currently serving as PIC (§ 121.429) and recurrent PIC leadership and command and mentoring training (§§ 121.409(b) and 121.427);
- Leadership and command training and recurrent leadership and command training for pilots serving as SIC in operations that require three or more pilots (§ 121.432(a));
- Upgrade training curriculum requirements (§§ 121.420 and 121.426);
- Part 121 appendix H requirements; and
- Approval of Qualification Standards Document for certificate holders using an Advanced Qualification Program (AQP) (§ 121.909).

The final rule also requires some additional recordkeeping related to maintaining records of pilots completing the following:

- Leadership and command and mentoring ground training for pilots currently serving as PIC (§ 121.429);
- Leadership and command training and recurrent leadership and command training for pilots serving as SIC in operations that require three or more pilots (§ 121.432(a));
- Recurrent PIC leadership and command and mentoring ground training (§ 121.427); and
- Operations familiarization for new-hire pilots (§ 121.435).

Use: This information will be used to ensure safety-of-flight by making certain that adequate training is obtained and maintained by those who operate under part 121. The FAA will review the respondents' training programs and

training courseware through routine certification, inspection and surveillance of certificate holders using part 121 pilot training and qualification programs to ensure compliance and adherence to regulations and, where necessary, to take enforcement action.

Respondents: As of February 2017, there were 79 certificate holders who use part 121 pilot training and qualification programs. They collectively employed 39,122 PICs and 42,227 SICs.

Frequency: Information is collected on occasion. Responses will vary based on type of operation.

Estimated Average Burden per Response: Burden per Operator varies per operation.

Estimated Total Annual Burden: 206 hours.

Issued in Washington, DC, on September 24, 2020.

Sandra L. Ray,

Aviation Safety Inspector, FAA, Policy Integration Branch, AFS–270.

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

[Docket No. FAA–2020–0228]

Agency Information Collection Activities: Requests for Comments; Clearance of Renewed Approval of Information Collection: Pilots Convicted of Alcohol or Drug-Related Motor Vehicle Offenses Subject to State Motor Vehicle Administrative Procedure

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice and request for comments.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, FAA invites public comments about our intention to request the Office of Management and Budget (OMB) approval to renew an information collection. The Federal Register Notice with a 60-day comment period soliciting comments on the following collection of information was published on March 4, 2020. The collection involves receiving and maintaining correspondence required to be sent to the FAA from pilots who have been involved in a drug or alcohol related motor vehicle action. The information to be collected will be used to and/or is necessary because the FAA is concerned about those airmen abusing or dependent on drugs or alcohol in regard to the safety of the National Airspace System.

DATES: Written comments should be submitted by October 29, 2020.

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function.

FOR FURTHER INFORMATION CONTACT: Christopher Marks by email at: *Christopher.Marks@faa.gov;* phone: 405–954–2789.

SUPPLEMENTARY INFORMATION: *Public Comments Invited:* You are asked to comment on any aspect of this information collection, including (a) Whether the proposed collection of information is necessary for FAA's performance; (b) the accuracy of the estimated burden; (c) ways for FAA to enhance the quality, utility and clarity of the information collection; and (d) ways that the burden could be minimized without reducing the quality of the collected information.

OMB Control Number: 2120–0543.

Title: Pilots Convicted of Alcohol or Drug-Related Motor Vehicle Offenses Subject to State Motor Vehicle Administrative Procedure.

Form Numbers: No official form numbers used.

Type of Review: Renewal of an information collection.

Background: The Federal Register Notice with a 60-day comment period soliciting comments on the following collection of information was published on March 4, 2020 (85 FR 12817). After a study and audit conducted from the late 1970's through the 1980's by the Department of Transportation, Office of the Inspector General, (DOT/OIG), the DOT/OIG recommended the FAA find a way to track alcohol abusers and those dependent on the substance that may pose a threat to the National Airspace (NAS). Through a Congressional act issued in November of 1990, the FAA established a Driving Under the Influence (DUI) and Driving While Intoxicated (DWI) Investigations Branch. The final rule for this program is found in Title 14 Code of Federal Regulations (CFR)—Part 61 § 61.15.

This regulation calls for pilots certificated by the FAA to send information regarding Driving Under the Influence (or similar charges) of alcohol and/or drugs to the FAA within 60 days from either an administrative action against their driver's license and/or criminal conviction. Part of the regulation also calls for the FAA to seek certificate action should an airman be involved in multiple, separate drug/alcohol related motor vehicle incidents within a three-year period. Information sent by the airmen is used to confirm or refute any violations of these regulations, as well as by the Civil Aerospace Medical Institute (CAMI) for medical qualification purposes. Collection by CAMI is covered under a separate OMB control number 2120–0034.

An airman is required to provide a letter via mail or facsimile, with the following information: Name, address, date of birth, pilot certificate number, the type of violation which resulted in the conviction or administrative action, and the state which holds the records or action.

Respondents: 589 FAA airmen with drug and alcohol related motor vehicle actions provide approximately 862 reports per year over the last three years.

Frequency: On occasion.

Estimated Average Burden per Response: 30 minutes.

Estimated Total Annual Burden: 431 hours.

Issued in Oklahoma City, OK on September 23, 2020.

Christopher Marks,

Security Specialist, Office of Security & Hazardous Materials Safety/Enforcement Standards & Policy Division, AXE–900.

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Railroad Administration

[Docket Number FRA–2020–0064]

Petition for Waiver of Compliance

Under part 211 of title 49 Code of Federal Regulations (CFR), this document supplements the August 11, 2020, notice to the public (85 FR 48631) regarding the July 28, 2020, petition by BNSF Railway Company (BNSF) for a waiver of compliance from certain provisions of the Federal railroad safety regulations contained at 49 CFR part 213. The Federal Railroad Administration (FRA) assigned the petition Docket Number FRA–2020–0064.

In support of its petition, BNSF referenced data and analysis from BNSF's ongoing Track Inspection Test Program, Docket Number FRA–2018–0091, however the specific data was not included in the petition. FRA requested that BNSF provide all applicable data, and FRA has posted the data to Docket

Number FRA–2020–0064 (Document No. FRA–2020–0064–0005). Based on this new information, FRA is extending the public comment period for 45 days.

A copy of the petition, as well as any written communications concerning the petition, if any, are available for review online at *www.regulations.gov.*

Interested parties are invited to participate in these proceedings by submitting written views, data, or comments. FRA does not anticipate scheduling a public hearing for these proceedings since the facts do not appear to warrant a hearing. If any interested parties desire an opportunity for oral comment and a public hearing, they should notify FRA, in writing, before the end of the comment period and specify the basis for their request.

All communications concerning these proceedings should identify the appropriate docket number and may be submitted by any of the following methods:

- *Website: http://www.regulations.gov.* Follow the online instructions for submitting comments.
- *Fax:* 202–493–2251.
- *Mail:* Docket Operations Facility, U.S. Department of Transportation (DOT), 1200 New Jersey Ave. SE, W12–140, Washington, DC 20590.
- *Hand Delivery:* 1200 New Jersey Ave. SE, Room W12–140, Washington, DC 20590, between 9 a.m. and 5 p.m., Monday through Friday, except Federal Holidays.

Communications received by November 13, 2020 will be considered by FRA before final action is taken. Comments received after that date will be considered if practicable. Anyone can search the electronic form of any written communications and comments received into any of our dockets by the name of the individual submitting the comment (or signing the document, if submitted on behalf of an association, business, labor union, etc.). Under 5 U.S.C. 553(c), DOT solicits comments from the public to better inform its processes. DOT posts these comments, without edit, including any personal information the commenter provides, to *www.regulations.gov,* as described in the system of records notice (DOT/ALL–14 FDMS), which can be reviewed at *https://www.transportation.gov/privacy.* See also *https://www.regulations.gov/privacyNotice* for the privacy notice of *regulations.gov.*

Issued in Washington, DC.

John Karl Alexy,

Associate Administrator for Railroad Safety Chief Safety Officer.

[FR Doc. 2020–21467 Filed 9–28–20; 8:45 am]

BILLING CODE 4910–06–P

DEPARTMENT OF TRANSPORTATION

Federal Railroad Administration

[Docket No. FRA–2020–0027–N–23]

Proposed Agency Information Collection Activities; Comment Request

AGENCY: Federal Railroad Administration (FRA), U.S. Department of Transportation (DOT).

ACTION: Notice of information collection; request for comment.

SUMMARY: Under the Paperwork Reduction Act of 1995 (PRA) and its implementing regulations, FRA seeks approval of the Information Collection Request (ICR) abstracted below. Before submitting this ICR to the Office of Management and Budget (OMB) for approval, FRA is soliciting public comment on specific aspects of the activities identified in the ICR.

DATES: Interested persons are invited to submit comments on or before November 30, 2020.

ADDRESSES: Submit comments and recommendations for the proposed ICR to Ms. Hodan Wells, Information Collection Clearance Officer at email: *hodan.wells@dot.gov* or telephone: (202) 493–0440. Please refer to the assigned OMB control number in any correspondence submitted. FRA will summarize comments received in response to this notice in a subsequent notice and include them in its information collection submission to OMB for approval.

SUPPLEMENTARY INFORMATION: The PRA, 44 U.S.C. 3501–3520, and its implementing regulations, 5 CFR part 1320, require Federal agencies to provide 60-days' notice to the public to allow comment on information collection activities before seeking OMB approval of the activities. *See* 44 U.S.C. 3506, 3507; 5 CFR 1320.8 through 1320.12. Specifically, FRA invites interested parties to comment on the following ICR regarding: (1) Whether the information collection activities are necessary for FRA to properly execute its functions, including whether the activities will have practical utility; (2) the accuracy of FRA's estimates of the burden of the information collection activities, including the validity of the methodology and assumptions used to determine the estimates; (3) ways for FRA to enhance the quality, utility, and clarity of the information being collected; and (4) ways for FRA to minimize the burden of information collection activities on the public, including the use of automated collection techniques or other forms of information technology. *See* 44 U.S.C. 3506(c)(2)(A); 5 CFR 1320.8(d)(1).

FRA believes that soliciting public comment may reduce the administrative and paperwork burdens associated with the collection of information that Federal regulations mandate. In summary, FRA reasons that comments received will advance three objectives: (1) Reduce reporting burdens; (2) organize information collection requirements in a ''user-friendly'' format to improve the use of such information; and (3) accurately assess the resources expended to retrieve and produce information requested. *See* 44 U.S.C. 3501.

The summary below describes the ICR that FRA will submit for OMB clearance as the PRA requires:

Title: Training, Qualification, and Oversight for Safety-Related Railroad Employees.

OMB Control Number: 2130–0597.

Abstract: In 2014, FRA published a final rule establishing minimum training standards for all safety-related railroad employees, as required by the Rail Safety Improvement Act of 2008. The final rule requires each railroad or contractor that employs one or more safety-related employees to develop and submit a training program to FRA for approval and to designate the minimum training qualifications for each occupational category of employee. Additionally, the rule requires most employers to conduct periodic oversight of their own employees and annual written reviews of their training programs to close performance gaps.

FRA will use the information collected to ensure each employer—railroad or contractor—conducting operations subject to part 243 develops, adopts, submits, and complies with a training program for each category and subcategory of safety-related railroad employee. Each program must have training components identified so that FRA will understand how the program works when it reviews the program for approval. Further, FRA will review the required training programs to ensure they include: Initial, ongoing, and on-the-job criteria; testing and skills evaluation measures designed to foster continual compliance with Federal standards; and the identification of critical safety defects and plans for immediate remedial actions to correct them.

In response to petitions for reconsideration, FRA has extended the effective date for developing the required training program under § 243.101 for employers with 400,000 or more total annual employee work hours

to January 1, 2020, and for employers with fewer than 400,000 total annual employee work hours to May 1, 2021.

Type of Request: Extension with change (revised estimates) of a currently approved collection.

Affected Public: Businesses.

Form(s): N/A.

Respondent Universe: 1,155 railroads/contractors/training organizations/learning institutions.

Frequency of Submission: On occasion.

Reporting Burden:

CFR section [1]	Respondent universe	Total annual responses	Average time per responses	Total annual burden hours	Total cost equivalent [2]
243.101(a)(2)—Training program required for each employer not covered by (a)(1) and subject to this part by May 1, 2021.	1,046 railroads/contractors.	298 training programs.	250 hours	74,500	$5,736,500
—(b) Submission by new employers commencing operations after Jan. 1, 2020 not covered by (a)(2).	10 new railroads/contractors.	10 training programs.	20	200	24,000
—(e) Contractor's duty to validate approved program to a railroad. (Revised requirement).	400 railroads/contractors.	50 documents	15 minutes	12.5	963

243.103(d)—Training components identified in program; modifications to components of the training programs.	1,155 railroads/contractors.	70 modified training programs.	5	350	26,950
243.109(b)—Previously approved programs requiring an informational filing when modified.	1,155 railroads/contractors/learning institutions.	10 informational filings.	8	80	6,160
—(c) New portions or substantial revisions to an approved training program.	10 railroads/contractors.	10 revised training programs.	16	160	12,320
—(c) New portions or substantial revisions to an approved training program found non-conforming to this part by FRA—revisions required.	5 railroads/contractors.	5 revised training programs.	8	40	3,080
—(d)(1)(i) Copy of additional submissions, resubmissions, and informational filings to labor organization presidents.	10 railroads/contractors.	25 copies	10 minutes	4.2	323
—(d)(1)(ii) Railroad statement affirming that a copy of submissions, resubmissions, or informational filings has been served to labor organization presidents.	228 railroads/contractors.	76 affirming statements.	10 minutes	12.7	978
—(d)(2) Labor comments on railroad training program submissions, resubmissions, or informational filings.	228 railroads' labor organizations.	3 comments	30 minutes	1.5	116
243.111(g)—Safety-related railroad employees instructed by training organizations and learning institutions (TO/LI)—recordkeeping.	109 TO/LI	5,450 records	5 minutes	454.2	34,973
—(h) TO/LI to provide student's training transcript or training record to any employer upon request by the student.	109 TO/LI	545 records	5 minutes	45.4	3,496
243.201(a)(2)—Designation of existing safety-related railroad employees by job category (for employers not covered by (a)(1) and subject to this part by January 1, 2022).	1,039 railroads/contractors.	346 designation lists.	15 minutes	86.5	6,661
—(b) New employers operating after January 1, 2020, not covered by (a)(2), designation of safety-related employees by job category—Lists.	10 new railroads/contractors.	10 designation lists	15 minutes	2.5	193
—(c) Training records of newly hired employees or those assigned new safety-related duties.	4,800 employees	4,800 records	15 minutes	1,200	92,400
—(d)(1)(i) Requests for relevant qualification or training record from an entity other than current employer.	4,800 employees	960 record requests.	5 minutes	80	6,160
243.203—(a)-(e) Recordkeeping—Systems set up to meet FRA requirements.	1,155 railroads/contractors/TOLI.	1,046 recordkeeping systems.	30 minutes	523	40,271
—(f) Transfer of records to successor employer.	1,155 railroads/contractors/TOLI.	3 records	30 minutes	1.5	116
243.205(c)—Railroad identification of supervisory employees who conduct periodic oversight tests by category/subcategory.	300 contractors	100 identifications	5 minutes	8.3	639

CFR section [1]	Respondent universe	Total annual responses	Average time per responses	Total annual burden hours	Total cost equivalent [2]
—(f) Notification by RR of contractor employee non-compliance with Federal laws/regulations/orders to employee and employee's employer.	300 contractors	90 employee notices.	10 minutes	15	1,155
—(f) Notification by RR of contractor employee non-compliance with Federal laws/regulations/orders to employee and employee's employer.	300 contractors	270 employer notices.	10 minutes	45	3,465
—(i) and (j) Employer records of periodic oversight.	1,046 railroads/contractors.	150,000 records	5 minutes	12,500	962,500
243.207(a)—Written annual review of safety data (Railroads with 400,000 annual employee work hours or more).	22 railroads	22 reviews	16	352	27,104
—(b) Railroad copy of written annual review at system headquarters.	22 railroads	22 review copies ...	5 minutes	1.8	139
—(e) Railroad notification to contractor of relevant training program adjustments.	22 railroads	2 notifications	15 minutes	.5	39
243.209(a)–(b)—Railroad maintained list of contractors utilized.	746 railroads	746 lists	30 minutes	373	28,721
—(c) Railroad duty to update list of contractors utilized and retain record for at least 3 years showing if a contractor was utilized in last 3 years.	746 railroads	75 updated lists	15 minutes	18.8	1,444
Total	1,155 railroads/contractors/training organizations/ learning institutions.	165,054 responses	N/A	91,069	7,020,889

[1] *Note:* The current inventory exhibits a total burden of 282,824 hours while that of this requesting notice is 91,069 hours. FRA determined many of the estimates were initial estimates and outdated. Moreover, other estimates were not derived from PRA requirements, thus leading to the increased figures in the current inventory, which were decreased accordingly in this notice. Also, totals may not add due to rounding.

[2] The dollar equivalent cost is derived from the Surface Transportation Board's Full Year Wage A&B data series using the appropriate employee group hourly wage rate that includes a 75-percent overhead charge.

Total Estimated Annual Responses: 165,054.

Total Estimated Annual Burden: 91,069 hours.

Total Estimated Annual Burden Hour Dollar Cost Equivalent: $7,020,889.

Under 44 U.S.C. 3507(a) and 5 CFR 1320.5(b) and 1320.8(b)(3)(vi), FRA informs all interested parties that a respondent is not required to respond to, conduct, or sponsor a collection of information that does not display a currently valid OMB control number.

Authority: 44 U.S.C. 3501–3520.

Brett A. Jortland,

Deputy Chief Counsel.

[FR Doc. 2020–21527 Filed 9–28–20; 8:45 am]

BILLING CODE 4910–06–P

DEPARTMENT OF TRANSPORTATION

Federal Railroad Administration

[Docket Number FRA–2020–0076]

Petition for Waiver of Compliance

Under part 211 of title 49 Code of Federal Regulations (CFR), this document provides the public notice that on September 18, 2020, BNSF Railway Company (BNSF) petitioned the Federal Railroad Administration (FRA) for a waiver of compliance from certain provisions of the Federal railroad safety regulations contained at 49 CFR part 213, Track Safety Standards. FRA assigned the petition Docket Number FRA–2020–0076.

Specifically, BNSF requests a waiver of compliance from 49 CFR 213.113, *Defective rails,* to permit an alternate means of affecting the remedial actions set forth in remedial action code C (49 CFR 213.113(c)). BNSF proposes that following the application of joint bars in accordance with remedial action code C, the track segment be operated as follows:

- Trains may continue to run at the maximum allowable speed for the track class until a maximum of 15 million gross tons (MGT) have traversed the track segment;
- after 15 MGT have traversed the segment, operating speed will be reduced to 50 miles per hour (mph) thereafter until the defective rail is replaced; and
- if the rail defect progresses to a 100% fracture, operating speed will be reduced to 10 mph thereafter until the defective rail is replaced.

BNSF states that the relief will promote railroad safety by allowing rail inspection vehicles to maintain ideal inspection frequencies, which will ensure that BNSF track will be inspected more frequently and defects remedied and repaired more quickly.

A copy of the petition, as well as any written communications concerning the petition, is available for review online at *www.regulations.gov.*

Interested parties are invited to participate in these proceedings by submitting written views, data, or comments. FRA does not anticipate scheduling a public hearing in connection with these proceedings since the facts do not appear to warrant a hearing. If any interested parties desire an opportunity for oral comment and a public hearing, they should notify FRA, in writing, before the end of the comment period and specify the basis for their request.

All communications concerning these proceedings should identify the appropriate docket number and may be submitted by any of the following methods:

- *Website: http://www.regulations.gov.* Follow the online instructions for submitting comments.
- *Fax:* 202–493–2251.
- *Mail:* Docket Operations Facility, U.S. Department of Transportation

(DOT), 1200 New Jersey Ave. SE, W12–140, Washington, DC 20590.

• *Hand Delivery:* 1200 New Jersey Ave. SE, Room W12–140, Washington, DC 20590, between 9 a.m. and 5 p.m., Monday through Friday, except Federal Holidays.

Communications received by November 13, 2020 will be considered by FRA before final action is taken. Comments received after that date will be considered if practicable. Anyone can search the electronic form of any written communications and comments received into any of our dockets by the name of the individual submitting the comment (or signing the document, if submitted on behalf of an association, business, labor union, etc.). Under 5 U.S.C. 553(c), DOT solicits comments from the public to better inform its processes. DOT posts these comments, without edit, including any personal information the commenter provides, to *www.regulations.gov,* as described in the system of records notice (DOT/ALL–14 FDMS), which can be reviewed at *https://www.transportation.gov/privacy.* See also *https://www.regulations.gov/privacyNotice* for the privacy notice of *regulations.gov.*

BILLING CODE 4910–06–P

DEPARTMENT OF TRANSPORTATION

Federal Transit Administration

Competitive Funding Opportunity: Pilot Program for Transit-Oriented Development Planning

AGENCY: Federal Transit Administration (FTA), DOT.

ACTION: Notice of Funding Opportunity (NOFO).

SUMMARY: The Federal Transit Administration (FTA) announces the opportunity to apply for approximately $6.22 million of Fiscal Year (FY) 2020 funding under the Pilot Program for Transit-Oriented Development Planning (Catalog of Federal Domestic Assistance #20.500). FTA may award additional funds if they are made available to the program prior to the announcement of project selections. As required by Federal public transportation law and subject to funding availability, funds will be awarded competitively to support comprehensive planning associated with new fixed guideway and core capacity improvement projects.

DATES: Complete proposals must be submitted electronically through the *GRANTS.GOV* ''APPLY'' function by 11:59 p.m. EDT on October 26, 2020. Prospective applicants should initiate the process by registering on the *GRANTS.GOV* website promptly to ensure completion of the application process before the submission deadline. Instructions for applying can be found on FTA's website at *https://www.transit.dot.gov/TODPilot* and in the ''FIND'' module of *GRANTS.GOV.* The *GRANTS.GOV* funding opportunity ID is FTA–2020–014–TPE. Mail and fax submissions will not be accepted.

FOR FURTHER INFORMATION CONTACT: Dwayne Weeks, FTA Office of Planning and Environment, (202) 493–0316, or *Dwayne.Weeks@dot.gov.* A TDD is available at 1–800–877–8339 (TDD/FIRS).

SUPPLEMENTARY INFORMATION:

Table of Contents

A. Program Description
B. Federal Award Information
C. Eligibility Information
D. Application and Submission Information
E. Application Review Information
F. Federal Award Administration Information
G. Federal Awarding Agency Contacts
H. Technical Assistance and Other Program Information

A. Program Description

Section 20005(b) of the Moving Ahead for Progress in the 21st Century Act (MAP–21; Pub. L. 112–141, July 6, 2012), with funding authorized by 49 U.S.C. 5338(a)(2)(B), authorizes FTA to award funds under the Pilot Program for Transit-Oriented Development (TOD) Planning (TOD Pilot Program). The TOD Pilot Program grants are competitively awarded to local communities to integrate land use and transportation planning with a new fixed guideway or core capacity improvement transit capital project as defined in Federal public transportation law (49 U.S.C. 5309(a)). (See section C of this NOFO for more information about eligibility.)

The TOD Pilot Program is intended to fund comprehensive planning that supports economic development, ridership, multimodal connectivity and accessibility, increased transit access for pedestrian and bicycle traffic, and mixed-use development near transit stations. The TOD Pilot Program also encourages identification of infrastructure needs and engagement with the private sector.

FTA is seeking comprehensive planning projects covering an entire transit capital project corridor, rather than proposals that involve planning for individual station areas or only a small section of the corridor. To ensure that any proposed planning work both reflects the needs and aspirations of the local community, and also results in concrete, specific deliverables and outcomes, transit project sponsors must partner with entities with land use planning authority in the transit project corridor to conduct the planning work.

B. Federal Award Information

Federal public transportation law (49 U.S.C. 5338(a)(2)(B)) authorizes FTA to make grants for eligible comprehensive planning projects under Section 20005(b) of MAP–21. FTA intends to award all available funding ($6.22 million) to selected applicants responding to this NOFO. Due to funding limitations, applicants that are selected for funding may receive less than the amount originally requested.

Only proposals from eligible recipients for eligible activities will be considered for funding. FTA anticipates minimum grant awards of $250,000 and maximum grant awards of $2,000,000.

C. Eligibility Information

1. Eligible Applicants

Applicants under the TOD Pilot Program must be State or local governmental authorities and FTA grant recipients (*i.e.,* existing direct and designated recipients) as of the publication date of this NOFO. An applicant must be the project sponsor of an eligible transit capital project as defined below in section C, subsection 3 or an entity with land use planning authority in the project corridor of an eligible transit capital project. Except in cases where an applicant is both the sponsor of an eligible transit project and has land use authority in at least a portion of the transit project corridor, the transit project sponsor and at least one entity in the project corridor with land use planning authority must partner on the proposed comprehensive planning project. Documentation of this partnership must be included with the application; see section D, subsection 2 of this NOFO for further information.

Only one application per transit capital project corridor may be submitted to FTA. Multiple applications submitted for a single transit capital project corridor indicate that partnerships are not in place and FTA will reject all of the applications.

2. Cost Sharing or Matching

The maximum Federal funding share is 80 percent.

Eligible sources of local match include the following: Cash from non-

Government sources (other than revenues from providing public transportation services); revenues derived from the sale of advertising and concessions; amounts received under a service agreement with a State or local social service agency or private social service organization; revenues generated from value capture financing mechanisms; funds from an undistributed cash surplus; replacement or depreciation cash fund or reserve; or new capital. In-kind contributions are permitted. Transportation Development Credits (formerly referred to as Toll Revenue Credits) may not be used to satisfy the local match requirement. FTA may prioritize projects proposed with a higher non-Federal share.

3. Other Eligibility Criteria

i. Eligible Transit Projects

Any comprehensive planning work proposed for funding under the TOD Pilot Program must be associated with an eligible transit capital project. Although not required to be part of the Capital Investment Grant program, to be eligible, the proposed transit capital project must be a new fixed guideway project or a core capacity improvement project as defined by Federal public transportation law (49 U.S.C. 5309(a)).

A fixed guideway is a public transportation facility:

(A) Using and occupying a separate right-of-way for the exclusive use of public transportation;

(B) using rail;

(C) using a fixed catenary system;

(D) for a passenger ferry system; or

(E) for a bus rapid transit system.

A new fixed guideway capital project is defined in statute to be:

(A) A new fixed guideway project that is a minimum operable segment or extension to an existing fixed guideway system; or

(B) a fixed guideway bus rapid transit project that is a minimum operable segment or an extension to an existing bus rapid transit system.

A fixed guideway bus rapid transit project is defined more specifically in statute as a bus capital project:

(A) In which the majority of the project operates in a separated right-of-way dedicated for public transportation use during peak periods;

(B) that represents a substantial investment in a single route in a defined corridor or subarea; and

(C) that includes features that emulate the services provided by rail fixed guideway public transportation systems, including:

(i) Defined stations;

(ii) traffic signal priority for public transportation vehicles;

(iii) short headway bidirectional services for a substantial part of weekdays and weekend days; and

(iv) any other features the Secretary may determine are necessary to produce high-quality public transportation services that emulate the services provided by rail fixed guideway public transportation systems.

A core capacity improvement project is defined in statute as a substantial corridor-based capital investment in an existing fixed guideway system that increases the capacity of the corridor by not less than 10 percent. The term does not include project elements designed to maintain a state of good repair of the existing fixed guideway system.

Comprehensive planning work in a corridor for a transit capital project that does not meet the statutory definition above of either a new fixed guideway project or a core capacity improvement project is not eligible under the TOD Pilot Program.

ii. Eligible Activities

Any comprehensive planning efforts funded under the TOD Pilot Program must address all six aspects of the general authority stipulated in Section 20005(b)(2) of MAP–21:

i. Enhances economic development, ridership, and other goals established during the project development and engineering processes;

ii. facilitates multimodal connectivity and accessibility;

iii. increases access to transit hubs for pedestrian and bicycle traffic;

iv. enables mixed-use development;

v. identifies infrastructure needs associated with the eligible project; and

vi. includes private sector participation.

MAP–21 also requires the comprehensive planning effort to advance the metropolitan planning organization's metropolitan transportation plan. Further, MAP–21 requires applicants to establish performance criteria for the comprehensive planning effort.

Following are examples of the types of substantial deliverables that may result from the comprehensive planning work. Substantial deliverables are reports, plans and other materials that represent the key accomplishments of the comprehensive planning effort and that must be submitted to FTA as each is completed. Substantial deliverables may include, but are not restricted to, the following:

i. A comprehensive plan report that includes corridor development policies and station development plans, a proposed timeline, and recommended financing strategies for these plans;

ii. A strategic plan report that includes corridor specific planning strategies and program recommendations to support comprehensive planning;

iii. Revised TOD-focused zoning codes and/or resolutions;

iv. A report evaluating and recommending financial tools to encourage TOD implementation such as land banking, value capture, and development financing;

v. Policies to encourage TOD, including actions that reduce regulatory barriers that unnecessarily raise the costs of housing development or impede the development of affordable housing; and/or

vi. Local or regional resolutions to implement TOD plans and/or establish TOD funding mechanisms.

iii. Ineligible Activities

Applications should not include the following activities:

i. TOD planning work only in a single transit capital project station area;

ii. Transit project development activities that would be reimbursable under an FTA capital grant, such as project planning, the design and engineering of stations and other facilities, environmental analyses needed for the transit capital project, or costs associated with specific joint development activities;

iii. Capital projects, such as land acquisition, construction, and utility relocation; and

iv. Site- or parcel-specific planning, such as the design of individual structures.

D. Application and Submission Information

1. Address To Request Application Package

Applications must be submitted electronically through *GRANTS.GOV.* General information for submitting applications through *GRANTS.GOV* can be found at *https://www.transit.dot.gov/funding/grants/applying/applying-fta-funding* along with specific instructions for the forms and attachments required for submission. Mail and fax submissions will not be accepted.

2. Content and Form of Application Submission

Proposals must include a completed SF 424 Mandatory form (downloaded from *GRANTS.GOV*) and the following attachments to the completed SF 424:

i. A completed Applicant and Proposal Profile supplemental form for the TOD Pilot Program (supplemental form) found on the FTA website at

https://www.transit.dot.gov/TODPilot. The information on the supplemental form will be used to determine applicant and project eligibility for the program, and to evaluate the proposal against the selection criteria described in part E of this notice;

ii. A map of the proposed study area showing the transit project alignment and stations, major roadways, major landmarks, and the geographic boundaries of the proposed comprehensive planning activities;

iii. Documentation of a partnership between the transit project sponsor and an entity in the project corridor with land use planning authority to conduct the comprehensive planning work, if the applicant does not have both of these responsibilities. Documentation may consist of a memorandum of agreement or letter of intent signed by all parties that describes the parties' roles and responsibilities in the proposed comprehensive planning project; and

iv. Documentation of any funding commitments for the proposed comprehensive planning work.

Information such as the applicant's name, Federal amount requested, local match amount, description of the study area, are requested in varying degrees of detail on both the SF 424 form and supplemental form. Applicants must fill in all fields unless stated otherwise on the forms. Applicants should use both the ''Check Package for Errors'' and the ''Validate Form'' buttons on both forms to check all required fields, and ensure that the Federal and local amounts specified are consistent. In the event of errors with the supplemental form, FTA recommends saving the form on your computer and ensuring that JavaScript is enabled in your PDF reader. The information listed below MUST be included on the SF 424 and supplemental forms for TOD Pilot Program funding applications.

The SF 424 and supplemental form will prompt applicants to address the following items:

1. Provide the name of the lead applicant and, if applicable, the specific co-sponsors submitting the application.

2. Provide the applicant's Dun and Bradstreet Data Universal Numbering System (DUNS) number.

3. Provide contact information including: Contact name, title, address, phone number, and email address.

4. Specify the Congressional district(s) where the planning project will take place.

5. Identify whether the planning project is located in a qualified opportunity zone designated pursuant to *26* U.S.C. 1400Z–1.

6. Identify the project title and project scope to be funded, including anticipated substantial deliverables and the milestones at when they will be provided to FTA.

7. Identify and describe an eligible transit project that meets the requirements of section C, subsection 3 of this notice.

8. Provide evidence of a partnership between the transit project sponsor and at least one agency with land use authority in the transit capital project corridor, as described earlier in this subsection.

9. Address the six aspects of general authority under MAP–21 Section 20005(b)(2).

10. Address each evaluation criterion separately, demonstrating how the project responds to each criterion as described in section E.

11. Provide a line-item budget for the total planning effort, with enough detail to indicate the various key components of the comprehensive planning project.

12. Identify the Federal amount requested.

13. Document the matching funds, including amount and source of the match (may include local or private sector financial participation in the project). Describe whether the matching funds are committed or planned, and include documentation of the commitments.

14. Address whether other Federal funds have been sought or received for the comprehensive planning project.

15. Provide a schedule and process for the development of the comprehensive plan that includes anticipated dates for incorporating the planning work effort into the region's unified planning work program, completing major tasks and substantial deliverables, and completing the overall planning effort.

16. Describe how the comprehensive planning work advances the metropolitan transportation plan of the metropolitan planning organization.

17. Propose performance criteria for the development and implementation of the comprehensive planning work.

18. Identify potential State, local or other impediments to the products of the comprehensive planning work and its implementation, and how the work will address them.

FTA will not consider any additional materials submitted by applicants in its evaluation of proposals. The total length of the completed supplemental form and documentation of partnerships and funding commitments should be no more than 15 pages.

3. Unique Entity Identifier and System for Award Management (SAM)

Each applicant is required to: (1) Register in SAM before submitting an application; (2) provide a valid unique entity identifier; and (3) continue to maintain an active SAM registration with current information at all times during which the applicant has an active Federal award or an application or plan under consideration by FTA. These requirements do not apply if the applicant: (1) Is an individual; (2) is excepted from the requirements under 2 CFR 25.110(b) or (c); or (3) has an exception approved by FTA under 2 CFR 25.110(d). FTA may not make an award until the applicant has complied with all applicable unique entity identifier and SAM requirements. If an applicant has not fully complied with the requirements by the time FTA is ready to make an award, FTA may determine that the applicant is not qualified to receive an award and use that determination as a basis for making a Federal award to another applicant. Registration in SAM may take as little as 3–5 business days, but since there could be unexpected steps or delays, FTA recommends allowing ample time, up to several weeks, for completion of all steps. For additional information on obtaining a unique entity identifier, please visit *www.sam.gov.*

4. Submission Dates and Times

Project proposals must be submitted electronically through *http://www.GRANTS.GOV* by 11:59 p.m. EDT on October 26, 2020. *GRANTS.GOV* attaches a time stamp to each application at the time of submission. Proposals submitted after the deadline will not be considered under any circumstances. Mail and fax submissions will not be accepted.

Within 48 hours after submitting an electronic application, the applicant should receive two email messages from *GRANTS.GOV:* (1) Confirmation of successful transmission to *GRANTS.GOV;* and (2) confirmation of successful validation by *GRANTS.GOV.* FTA will then validate the application and will attempt to notify any applicants whose applications could not be validated. If the applicant does not receive confirmation of successful validation or a notice of failed validation or incomplete materials, the applicant must address the reason for the failed validation, as described in the email notice, and resubmit before the submission deadline. If making a resubmission for any reason, include all original attachments regardless of which attachments were updated and check

the box on the supplemental form indicating this is a resubmission. An application that is submitted at the deadline and cannot be validated will be marked as incomplete, and such applicants will not receive additional time to re-submit.

Any addenda that FTA releases on the application process will be posted at *https://www.transit.dot.gov/TODPilot.* Important: FTA urges applicants to submit their applications at least 96 hours prior to the due date to allow time to receive the validation messages and to correct any problems that may have caused a rejection notification. *GRANTS.GOV* scheduled maintenance and outage times are announced on the *GRANTS.GOV* website at *http://www.GRANTS.GOV.* Deadlines will not be extended due to scheduled maintenance or outages.

Applicants are encouraged to begin the registration process on the *GRANTS.GOV* site well in advance of the submission deadline. Registration is a multi-step process, which may take several weeks to complete before an application can be submitted. Registered applicants may still be required to take steps to keep their registration up to date before submissions can be made successfully: (1) Registration in the System for Award Management (SAM) is renewed annually and (2) persons making submissions on behalf of the Authorized Organization Representative (AOR) must be authorized in *GRANTS.GOV* by the AOR to make submissions. Instructions on the *GRANTS.GOV* registration process are listed in Appendix A.

5. Funding Restrictions

See section C of this NOFO for detailed eligibility requirements. FTA emphasizes that any comprehensive planning projects funded through the TOD Pilot Program must be associated with an eligible transit project, specifically a new fixed guideway project or a core capacity improvement project as defined in Federal transit statute, 49 U.S.C. 5309(a). Projects are not required to be within the Capital Investment Grant Program.

E. Application Review Information

1. Criteria

FTA will evaluate proposals that include all components identified in section D of this notice according to the following three criteria:

a. Demonstrated Need

FTA will evaluate each project to determine the need for funding based on the following factors:

i. Potential state, local or other impediments to implementation of the products of the comprehensive planning effort, and how the workplan will address them;

ii. How the proposed work will advance TOD implementation in the corridor and region;

iii. Justification as to why Federal funds are needed for the proposed work; and

iv. Extent to which the transit project corridor could benefit from TOD planning.

b. Strength of the Work Plan, Schedule and Process

FTA will evaluate the strength of the work plan, schedule and process included in an application based on the following factors:

i. Extent to which the schedule contains sufficient detail, identifies all steps needed to implement the work proposed, and is achievable;

ii. The proportion of the project corridor covered by the work plan;

iii. Extent of partnerships, including with non-public sector entities;

iv. The partnerships' technical capability to develop, adopt and implement the comprehensive plans, based on FTA's assessment of the applicant's description of the policy formation, implementation, and financial roles of the partners, and the roles and responsibilities of proposed staff; and

v. Whether the performance measures identified in the application relate to the goals of the comprehensive planning work.

c. Funding Commitments

FTA will assess the status of local matching funds for the planning work. Applications demonstrating that matching funds for the proposed comprehensive planning work are committed will receive higher ratings from FTA on this factor. Proposed comprehensive planning projects for which matching funding sources have been identified, but are not yet committed, will be given lower ratings under this factor by FTA, as will proposed comprehensive planning projects for which in-kind contributions constitute the primary or sole source of matching funds.

2. Review and Selection Process

In addition to other FTA staff that may review the proposals, a technical evaluation committee will evaluate proposals based on the published evaluation criteria. Members of the technical evaluation committee and other FTA staff may request additional information from applicants, if necessary. Based on the findings of the technical evaluation committee, the FTA Administrator will determine the final selection of projects for program funding. Among the factors, in determining the allocation of program funds FTA may consider geographic diversity, diversity in the size of the grantees receiving funding, projects located in or that support public transportation service in a qualified opportunity zone designated pursuant to 26 U.S.C. 1400Z–1, or the applicant's receipt of other competitive awards. FTA may prioritize projects proposed with a higher local share.

Addressing the deteriorating conditions and disproportionately high fatality rates on our rural transportation infrastructure is of critical interest to the Department, as rural transportation networks face unique challenges in safety, infrastructure condition, and passenger and freight usage. Consistent with the DOT's new Rural Opportunities to Use Transportation for Economic Success (R.O.U.T.E.S.) initiative, the Department will consider how the applicant will address the challenges faced by rural areas. FTA will also evaluate the potential for the project to accelerate the introduction of innovative technologies or practices such as integrated fare payment systems permitting complete trips or advancements to propulsion systems. Innovation can also include practices such as new public transportation operational models, financial or procurement arrangements, or value capture.

In addition to the criteria and considerations outlined in this section, the FTA Administrator will take into account the following key Departmental objectives:

(A) Supporting economic vitality at the national and regional level;

(B) Leveraging Federal funding to attract other, non-Federal sources of infrastructure investment, including value capture;

(C) Using innovative approaches to improve safety and expedite project delivery;

(D) Encourage State and local and tribal governments to reduce regulatory barriers that unnecessarily raise the costs of housing development or impede the development of affordable housing; and

(E) Holding grant recipients accountable for their performance and achieving specific, measurable outcomes identified by grant applicants.

Prior to making an award, FTA is required to review and consider any information about the applicant that is

in the Federal Awardee Performance and Integrity Information Systems (FAPIIS) accessible through SAM. An applicant may review and comment on information about itself that a Federal awarding agency previously entered. FTA will consider any comments by the applicant, in addition to the other information in FAPIIS, in making a judgment about the applicant's integrity, business ethics, and record of performance under Federal awards when completing the review of risk posed by applicants as described in the 2 CFR 200.205 Federal awarding agency review of risk posed by applicants.

F. Federal Award Administration Information

1. Federal Award Notices

The FTA Administrator will announce the final project selections on the FTA website. Project recipients should contact their FTA Regional Offices for additional information regarding allocations for projects under the TOD Pilot Program. FTA will issue specific guidance to recipients regarding pre-award authority at the time of selection; see subsection 3 below for further information.

2. Administrative and National Policy Requirements

i. Pre-Award Authority.

FTA will issue specific guidance to recipients regarding pre-award authority at the time of selection. FTA does not provide pre-award authority for competitive funds until projects are selected and even then, there are Federal requirements that must be met before costs are incurred. Funds under this NOFO cannot be used to reimburse applicants for otherwise eligible expenses incurred prior to FTA award of a Grant Agreement until FTA has issued pre-award authority for selected projects, or unless FTA has issued a ''Letter of No Prejudice'' for the project before the expenses are incurred. For more information about FTA's policy on pre-award authority, please see the FY 2020 Apportionment Notice published on June 3, 2020. *https://www.govinfo.gov/content/pkg/FR-2020-06-03/pdf/2020-11946.pdf.*

ii. In connection with any program or activity conducted with or benefiting from funds awarded under this notice, recipients of funds must comply with all applicable requirements of Federal law, including, without limitation, the Constitution of the United States; statutory, regulatory, and public policy requirements, including without limitation, those protecting free speech, religious liberty, public welfare, the environment, and prohibiting discrimination; the conditions of performance, non-discrimination requirements, and other assurances made applicable to the award of funds in accordance with regulations of the Department of Transportation; and applicable Federal financial assistance and contracting principles promulgated by the Office of Management and Budget. In complying with these requirements, recipients, in particular, must ensure that no concession agreements are denied or other contracting decisions made on the basis of speech or other activities protected by the First Amendment. If the Department determines that a recipient has failed to comply with applicable Federal requirements, the Department may terminate the award of funds and disallow previously incurred costs, requiring the recipient to reimburse any expended award funds.

iii. Grant Requirements.

If selected, awardees will apply for a grant through FTA's Transit Award Management System (TrAMS). Recipients of TOD Pilot Program funds are subject to the grant requirements of the Section 5303 Metropolitan Planning program, including those of FTA Circular 8100.1C and Circular 5010.1E. All competitive grants, regardless of award amount, will be subject to the Congressional Notification and release process. Technical assistance regarding these requirements is available from each FTA regional office.

iv. Planning.

FTA encourages applicants to notify the appropriate metropolitan planning organizations in areas likely to be served by the funds made available under this program. Selected projects must be incorporated into the unified planning work programs of metropolitan areas before they are eligible for FTA funding or pre-award authority.

v. Standard Assurances.

The applicant assures that it will comply with all applicable Federal statutes, regulations, executive orders, directives, FTA circulars, and other Federal administrative requirements in carrying out any project supported by the FTA grant. The applicant acknowledges that it is under a continuing obligation to comply with the terms and conditions of the grant agreement issued for its project with FTA. The applicant understands that Federal laws, regulations, policies, and administrative practices might be modified from time to time and may affect the implementation of the project. The applicant agrees that the most recent Federal requirements will apply to the project, unless FTA issues a written determination otherwise. The applicant must submit the Certifications and Assurances before receiving a grant if it does not have current certifications on file.

3. Reporting

Post-award reporting requirements include submission of Federal Financial Reports and Milestone Progress Reports in FTA's electronic grants management system on a quarterly basis. Awardees must also submit copies of the substantial deliverables identified in the work plan to the FTA regional office at the corresponding milestones.

G. Federal Awarding Agency Contacts

For program-specific questions, please contact Dwayne Weeks, Office of Planning and Environment, (202) 493–0316, email: *Dwayne.Weeks@dot.gov.* A TDD is available at 1–800–877–8339 (TDD/FIRS). Any addenda that FTA releases on the application process will be posted at *https://www.transit.dot.gov/TODPilot.* To ensure applicants receive accurate information about eligibility or the program, the applicant is encouraged to contact FTA directly, rather than through intermediaries or third parties. FTA staff may also conduct briefings on the FY 2020 competitive grants selection and award process upon request. Contact information for FTA's regional offices can be found on FTA's website at *www.transit.dot.gov.*

For issues with *GRANTS.GOV* please contact *GRANTS.GOV* by phone at 1–800–518–4726 or by email at *support@grants.gov.*

H. Technical Assistance and Other Program Information

This program is not subject to Executive Order 12372, ''Intergovernmental Review of Federal Programs.''

K. Jane Williams,

Deputy Administrator.

[FR Doc. 2020–21473 Filed 9–28–20; 8:45 am]

BILLING CODE 4910–57–P

DEPARTMENT OF TRANSPORTATION

National Highway Traffic Safety Administration

[Docket No. NHTSA–2020–0070]

Agency Information Collection Activities; Submission to the Office of Management and Budget for Review and Approval; Automated Vehicle Transparency and Engagement for Safe Testing (AV TEST) Initiative

AGENCY: National Highway Traffic Safety Administration (NHTSA), Department of Transportation (DOT).

ACTION: Notice and request for comments on a new information collection.

SUMMARY: In compliance with the Paperwork Reduction Act of 1995 (PRA), this notice announces that the Information Collection Request (ICR) abstracted below will be submitted to the Office of Management and Budget (OMB) for review and approval. The ICR describes the nature of the information collection and its expected burden.

The information collection described in this document is for NHTSA's planned Automated Vehicle Transparency and Engagement for Safe Testing (AV TEST) Initiative, which involves the collection of voluntarily-submitted information from entities involved in the testing of vehicles equipped with automated driving systems (ADS) and from States and local authorities involved in the regulation of ADS testing. The purpose of this collection is to provide information to the public about ADS testing operations in the United States and applicable State and local laws, regulations, and guidelines.

A **Federal Register** Notice with a 60-day comment period soliciting comments on the information collection was published on July 2, 2020 (85 FR 39975). NHTSA received 20 comments and a brief summary and NHTSA's response to those comments is provided in this document.

DATES: Comments must be submitted on or before October 29, 2020.

ADDRESSES: Written comments and recommendations for the proposed information collection, including suggestions for reducing burden, should be submitted to the Office of Management and Budget at *www.reginfo.gov/public/do/PRAMain.* To find this particular information collection, select ''Currently under Review—Open for Public Comment'' or use the search function.

FOR FURTHER INFORMATION CONTACT: For additional information or access to background documents, contact Michael Frenchik, Office of Data Acquisition, Safety Systems Management Division (NSA–0130), Room W53–303, 1200 New Jersey Avenue SE, Washington, DC 20590. Mr. Frenchik's telephone number is (202) 366–0641. National Highway Traffic Safety Administration. U.S. Department of Transportation, 1200 New Jersey Avenue, SE, Washington, DC 20590.

SUPPLEMENTARY INFORMATION: Under the PRA (44 U.S.C. 3501 *et seq.*), a Federal agency must receive approval from the Office of Management and Budget (OMB) before it collects certain information from the public and a person is not required to respond to a collection of information by a Federal agency unless the collection displays a valid OMB control number. In compliance with these requirements, this notice announces that the following information collection request will be submitted OMB.

A **Federal Register** notice with a 60-day comment period soliciting public comments on the following information collection was published on July 2, 2020.

Title: Automated Vehicle Transparency and Engagement for Safe Testing (AV TEST) Initiative.

OMB Control Number: 2127–NEW.

Form Number: NHTSA Form 1586—AV TEST Tracker eForm; NHTSA Form 1587—AV TEST Onboarding Form.

Type of Request: Request for approval of a new information collection.

Type of Review Requested: Regular.

Length of Approval Requested: Three years from the date of approval.

Summary of the Collection of Information: The U.S. Department of Transportation (DOT), National Highway Traffic Safety Administration (NHTSA) was established by Congress to save lives, prevent injuries, and reduce economic costs due to motor vehicle crashes through education, research, safety standards, and enforcement activity. DOT and NHTSA are fully committed to reaching an era of crash-free roadways through the deployment of innovative lifesaving technologies. The prevalence of automotive crashes in the United States underscores the urgency to develop and deploy lifesaving technologies that can dramatically decrease the number of fatalities and injuries on our Nation's roadways.

NHTSA believes that Automated Driving System (ADS) technology, including technology contemplating no human driver at all, has the potential to significantly improve roadway safety in the United States. This technology remains substantially in development phases with companies across the United States performing varying levels of development, research, and testing relating to the performance of various aspects of ADS vehicle technologies. While much of these development operations occur in private facilities and closed-course test tracks, many stakeholders have progressed to conducting ADS vehicle testing on public roads or in public demonstrations. Moreover, to regulate such operations in their jurisdictions, many local authorities, such as States and cities, have passed laws governing ADS vehicle testing on public roads. These statutes, regulations, and ordinances vary, ranging from operational requirements to mandating the submission of periodic reports detailing ADS vehicle operation.

Description of the Need for the Information and Proposed Use of the Information: The AV TEST Initiative seeks to enhance public education and engagement with public ADS vehicle testing by coalescing information regarding respondents' various testing operations or requirements into a centralized resource. This information collection seeks voluntarily-provided information from entities performing ADS testing about their operations and information from local authorities about requirements or recommendations for such operations. NHTSA will maintain a digital platform on its website that collects information from respondents and makes the information about ADS operations and applicable State and local requirements and recommendations available to members of the public.

The program will support two main objectives. The first objective is to provide the public with access to geographic visualizations of testing at the national, State, and local levels. This information will be displayed on a graphic of the United States, with projects overlaid on the geographic areas in which the testing project is taking place. By clicking on a testing location, members of the public will be able see additional information about the operation and the ADS operator. Additional information may include basic information about the ADS operator, a brief statement about the entity, specific details of the testing activity, high-level (non-confidential) descriptions of the vehicles and technology, photos of the test vehicles, the dates on which testing occurs, frequency of vehicle operations, the number of vehicles participating in the project, the specific streets or areas comprising the testing routes,

information about safety drivers and their training, information about engagement with the community and/or local government, weblinks to the company's websites with brief introductory statements, and a link to the company's Voluntary Safety Self-Assessment (VSSA).[1]

The second objective is to provide members of the public with information collected from States and local authorities that regulate ADS operations. State and local authorities will be asked to provide weblinks for specific ADS-related topics, such as statutes, regulations, or guidelines for ADS operations, privacy-related issues, emergency response policies and training, or other activities that cultivate ADS testing. The implementation of this program will provide a central resource for the aforementioned information concerning ADS testing across the United States.

Affected Public: There are two information collection components to this request. The first affects entities engaged in testing of ADS vehicles, including original manufacturers of ADS vehicles and ADS vehicle equipment, and operators of ADS vehicles. The second affects local authorities regulating testing of ADS vehicles within their jurisdictions, including States, cities, counties, and other municipalities.

Estimated Number of Respondents: NHTSA anticipates that the Initiative will include up to 60 State or local government respondents and 40 private industry respondents (ADS developer, ADS vehicle manufacturer, or ADS operator respondents) per year.

Frequency: Participation is completely voluntary and each participant will choose its respective degree of involvement and the frequency of its submissions. Therefore, the frequency of a participant's response may vary due to a variety of factors, such as the degree of the entity's participation in the initiative or the frequency with which each entity modifies its ADS testing operations or, in the case of local authorities, amends its regulations governing such operations.

Number of Responses: Participation is completely voluntary and each participation will choose the number and frequency of its submissions. Therefore, the number of responses from a participant will vary due to a variety of factors, such as the degree of the entity's participation in the initiative or the frequency with which each entity modifies its ADS testing operations or, in the case of local authorities, amends its regulations governing such operations.

Estimated Total Annual Burden Hours: NHTSA estimates that each State or local participant will spend approximately 30 hours per year providing information to the AV TEST Initiative and estimates that each private industry participant will spend approximately 48 hours per year providing information to the AV TEST Initiative. While NHTSA's estimate for the burden hours per private industry participant remained the same from the July 2, 2020 notice, NHTSA has increased the burden estimate for State and local participants. Since publishing the original notice, NHTSA conducted a pilot involving 9 State and local participants and 9 ADS operators. NHTSA's revised estimates are based upon direct work with the participants in the pilot phase of the AV TEST Initiative. One of the pilot participants, Maryland Department of Transportation, also commented on the July 2 notice.

Specific estimates provided by a majority of participants in the initiative's pilot program confirmed NHTSA's original estimate that, on average, private industry participants would spend approximately 48 hours per year, or 4 hours per month, on data entry for the AV TEST Initiative. This estimate also factors in time for new participants to learn how to use the data-entry platform and submit initial information. While NHTSA's estimate for private industry participants has remained 48 hours per year, NHTSA has revised its estimate for State and local participants based on specific estimates provided by pilot participants, as well as NHTSA's observation of pilot participants in gathering and submitting data. Although the July 2 notice estimated that State and local participants would spend approximately 10 hours per year on data submission to the AV TEST Initiative, NHTSA now estimates the annual burden to be 30 hours per participant.

NHTSA estimates that the annual burden of participation will be approximately 48 hours for private industry respondents that include ADS operators, developers, or vehicle manufacturers. This total number of hours represents approximately four hours per month to perform data entry for testing projects (4 hours × 12 months = 48). Therefore, for the estimated 40 private industry participants, the total burden is estimated to be 1,920 hours per year (40 respondents × 48 hours).

NHTSA estimates that the annual burden of participation will likely be approximately 30 hours annually for State or local authorities. The increase from 10 hours to 30 hours per year was based on specific estimates provided by a majority of participants in the Initiative's pilot program, including a public comment by Maryland Department of Transportation.[2] Therefore, for the estimated 60 State or local authority participants, the total burden is estimated to be 1,800 hours per year (60 respondents × 30 hours). The total annual burden for the entire information collection request is estimated to 3,720 hours (1,920 hours + 1,800 hours).

The labor cost associated with this collection of information is derived by (1) applying the appropriate average hourly labor rate published by the Bureau of Labor Statistics, (2) dividing by either 0.701[3] (70.1%), for private industry workers, or 0.623 (62.3%), for State and local government workers, to obtain the total cost of compensation, and (3) multiplying by the estimated burden hours for each respondent type.

Labor costs associated with original manufacturers of ADS vehicles or ADS vehicle equipment and operators of ADS vehicles are estimated to be $60.96 per hour for ''Project Management Specialists,'' Occupation Code 13–1198, ($42.73[4] per hour ÷ 0.701). The estimated labor cost per private industry respondent is estimated to be $2,926.08 per year ($60.96 × 48 hours). Therefore, the total annual labor cost for private industry to participate in the AV TEST Initiative is estimated to be $117,043.

Labor costs associated with State and local authorities, such as States, counties, and cities are estimated to be $60.84 per hour for ''Legal Support Workers,'' Occupation Code 23–2099, ($37.90[5] per hour ÷ 0.623). The labor cost per State and local respondent is

[1] Voluntary Self-Assessments are described in Automated Driving Systems 2.0: A Vision for Safety, available at *https://www.nhtsa.gov/sites/nhtsa.dot.gov/files/documents/13069a-ads2.0_090617_v9a_tag.pdf.* VSSAs are covered by the PRA Clearance with OMB Control Number 2127–0723.

[2] This estimate takes into consideration Maryland Department of Transportation's public comment to the 60-Day Notice and Request for Comment: AV TEST Initiative (*https://beta.regulations.gov/document/NHTSA-2020-0070-0006*).

estimated to be $1,825.20 per year ($60.84 × 30 hours). Therefore, the total annual labor cost for State and local authorities to participate in the AV TEST Initiative is estimated to be $109,512 per year.

The total annual labor costs for all respondents, private industry and State and local authorities together, are estimated to be $226,555 per year. See Table 1 below for a summary of estimated annual burden hours and estimated labor costs.

TABLE 1—SUMMARY OF ESTIMATED BURDEN HOURS AND ESTIMATED LABOR COSTS

Respondent type	Number of respondents	Annual hours per respondent	Labor cost per hour	Annual labor cost per respondent	Total annual estimated burden hours	Total annual labor costs
Original Manufacturer of ADS Vehicles or ADS Vehicle Equipment and Operators of ADS Vehicles	40	48	$60.96	$2,926.08	1,920	$117,043
State or Local Authority	60	30	60.84	1,825.20	1,800	109,512
Total All Respondents	100				3,720	226,555

Estimated Total Annual Burden Cost: NHTSA estimates that there will be no costs to respondents other than labor costs associated with burden hours.

Summary of Public Comments: On July 2, 2020, NHTSA published a notice in the **Federal Register** Notice with a 60-day comment period soliciting comments on the information collection (85 FR 39975). NHTSA received a total of 20 comments from organizations and individuals. A summary of the comments is provided below and is arranged by topic area.

Mandatory Data Collection and Evaluation of Submissions: Several commenters, such as the National Transportation Safety Board (NTSB) and the Center for Auto Safety, were opposed to the voluntary nature of the Initiative. Although the commenters were in favor of NHTSA collecting information about ADS testing, they believe that NHTSA should make the submission of the information mandatory. Additionally, commenters suggested that NHTSA require more specific information that would allow NHTSA to evaluate the safety of the ADS testing.

The objective of AV TEST Initiative is to provide members of the public with a centralized database of high-level information about ADS testing activities and State and local laws, recommendations, and initiatives. It is, therefore, outside of the scope of the project to make any reporting mandatory or to expand the collection to include technical information or information that NHTSA would use to evaluate the safety of ADS operations. NHTSA shares the commenters' view that detailed technical material often provides valuable information and, in fact, the agency frequently engages with industry participants regarding technical aspects of their ADS development. Also, as noted in *Automated Driving Systems 2.0: A Vision for Safety,* NHTSA encourages ADS developers to make certain information available to members of the public in Voluntary Self-Assessments (VSSAs). NHTSA has outlined 12 areas related to ADS safety and performance to be included in the documents. Entities that choose to participate in AV TEST will be presented with a data entry field to provide a link to their VSSA if they have one and would like to include it with their AV TEST submission.

Data Standardization, Uniformity, and Completeness: Several commenters urged NHTSA to take steps to standardize submissions, including establishing standard terminology to increase uniformity of submissions. NHTSA appreciates this comment and would like to highlight a few of ways that NHTSA has designed the system to balance improving the quality of data collection and maximizing participation.

First, the AV TEST Initiative uses a data entry website that provides a structured data collection environment for contributors. Participating stakeholders are required to complete a minimum set of data fields when submitting information.[6] If a participant does not fill in a required field, they will be prompted to complete it before the submission can be sent to NHTSA for publication. Requiring certain data elements ensures a minimum level of completion for each submission and improves the quality of the data that is placed on the public website. While certain data fields are required, others are not. This allows the system to accommodate a wider range of ADS testing operations, vehicles, and jurisdictions. One commenter, General Motors LLC, advised that significant variance could exist for the types and amounts of data maintained by companies. As such, NHTSA believes that additional standardization of submission requirements or minimum information thresholds for participation may unintentionally exclude interested parties from participation.

Second, NHTSA agrees with commenters who suggested providing standard terminology and has integrated definitions for the requested data elements into the AV TEST tracker to ensure participants have a consistent understanding of the terminology being used by NHTSA. NHTSA is also providing a list of terms and definitions on the public website so that users can better understand the information presented.

Third, NHTSA has designed the data entry website to use drop-down options for many of the data fields to ensure greater uniformity across submissions. For example, the data field for road type provides the following drop-down options: freeway, highway, parking lot, rural, street, business campus, path/sidewalk, university, unknown, or not specified. NHTSA believes this feature will improve data uniformity while providing sufficient flexibility for unique operations. For features that do not have drop-down options, NHTSA has also taken steps to minimize error. For example, the data field for number of vehicles at a test site has character restrictions.

Accessibility and Vulnerable Populations: Several organizations submitted comments underscoring the potential impact of ADS technologies on accessibility and mobility, as well as the impact on children. Commenters suggested that NHTSA provide opportunity for participants to submit information related to accessibility of ADS operations as well as specific information related to the transportation of children.

NHTSA agrees with the comments and believes information about

[6] For a submission for an ADS operation, the required fields include: Country, State/Province, City, Public or Private Road, Road Type, Latitude and Longitude, Base Vehicle Type, Operation Status, a field asking whether the vehicle has a safety operator, and a field for the participant to indicate the type of operation (*e.g.,* providing service).

engagement with the community is an integral part of the AV TEST Initiative—particularly those with accessibility issues and members of vulnerable populations. Currently, NHTSA does not restrict participants from conveying this information, particularly for ADS test sites that are available for public use. However, NHTSA will encourage participants to provide information on accessibility and mobility for those with special needs. NHTSA will do this by creating new categories of weblinks that can be submitted to NHTSA. For example, NHTSA has added a ''Disability or Accessibility'' category, just as it has done for Emergency Response and VSSA information.

Establish Sunset for AV TEST tracker: Maryland Department of Transportation (MDOT) suggested NHTSA consider establishing a time to sunset the AV TEST tracker to eliminate data collection redundancy. NHTSA does not agree with MDOT's assertion that the AV TEST Initiative would present a data collection redundancy for vehicles that comply with all applicable FMVSS. In fact, some of the operations reported to NHTSA during its pilot phase of the AV TEST Initiative are for ADS operations involving the use of FMVSS-certified vehicles equipped with ADS. The type of information that will be collected through the AV TEST Initiative is not duplicative of data collected through NHTSA's existing crash data systems because NHTSA crash data systems only collect data on vehicles involved in crashes and vehicle-related deaths and injuries. NHTSA does not currently have a mechanism to collect information about ADS operations.

However, NHTSA notes that data submitted as part of the AV TEST Initiative may become stale. For example, because the AV TEST Initiative is voluntary, an ADS operator could provide information on an ADS operation and never update NHTSA when the operation is completed. Although we will provide a mechanism for participants to change the status of test sites from active to inactive or completed, participants may not update the status of an operation. As the AV TEST Initiative progresses, NHTSA will consider reaching out to program participants about operations that has not been updated for an extended period of time. In addition, we have provided participants the ability to remove out-of-date information and archive the data, which removes it from the AV TEST web page.

Estimated Total Annual Burden Hours: MDOT estimates States will spend more than 10 hours per year on supporting their AV TEST profiles. While MDOT acknowledged that that the 10-hour estimate may be appropriate for States solely focused on entering adopted legislation/regulation information once or twice per year, MDOT expects to 120 hours responding to the AV TEST Initiative. MDOT stated that it will update the AV TEST database for multi-modal transportation business units and estimates it will need 10 hours per month for this exercise. With respect to this subject, the Commercial Vehicle Safety Alliance, whose members include many State and local jurisdictions, advised that it ''deferred to its member jurisdictions'' on the burden presented by this collection.

NHTSA appreciates the comments on this topic and, in particular, the level of investment in the AV TEST Initiative that MDOT's comment anticipates and hopes that other participants will similarly dedicate resources as necessary and appropriate to further the goals of the program. The majority of participants in the pilot program estimated that they have and will continue to allocate approximately 2–3 hours per month to AV TEST related activities. Therefore, NHTSA calculates that State and local organizations will dedicate approximately 2.5 hours per month, or 30 hours annually, on their submissions with variances due to a range of factors, such as the availability of resources or each entity's approaches to the program. Nevertheless, NHTSA appreciates MDOT's comment that some jurisdiction participants may dedicate more time than what NHTSA estimates for the average participant.

Categories of Eligible Participants: Valeo, an automotive supplier, commented expressing a desire to participate in the program and share information regarding its automated vehicle development activities. Valeo specifically requested that NHTSA enable Tier 1 suppliers to participate in the AV TEST Initiative in the future. Additionally, the American Automobile Association (AAA) recommends that future versions of the AV TEST Initiative web platform include information provided by consumer and safety groups that evaluate vehicle technologies with the goal of educating consumers on the safety benefits, capabilities, and limitations of these applications.

In response, NHTSA appreciates AAA and Valeo's comments and is encouraged by the interest generated by the program at multifaceted levels of the automotive industry and the public. NHTSA's original 60-day notice contemplated that the collection could also include motor vehicle equipment manufacturers, which could encompass Tier 1 suppliers conducting AV test operations on public roads. As the AV TEST Initiative progresses, NHTSA will evaluate opportunities to enhance the scope of project and may consider allowing submission of information from organizations engaged in evaluating emerging vehicle technologies.

Number of Respondents: Several commenters expressed a concern that the voluntary nature of AV TEST would minimize industry participation, with one commenter believing that NHTSA's original estimate of at least 40 private participants was too high. Based on the number of entities that have already expressed interest in participating, NHTSA continues to anticipate that its estimate of 40 private participants is realistic, with even higher levels of participation possible as AV TEST becomes more established and entities engaged in ADS testing activities increase.

ADS Policy: NHTSA also received comments from safety advocates and individual members of the public highlighting concerns regarding driving automation. One comment stated that ''NHTSA should be focusing on proven safety systems currently available that can prevent or mitigate the crashes . . .'' such as a number of crash avoidance technologies included in the NTSB's Most Wanted Lists of Transportation Safety Improvements since 2016. Another commenter suggested that vehicles equipped with ADS technologies should be removed from roadways until NHTSA can ensure ''malware and terrorists cannot hack these computers driven moving time bombs.'' In addition, one commenter requested that ADS technology testing be limited to roadways that are built solely for ADS-equipped vehicles rather than public roads.

NHTSA appreciates the commenters' input and will keep this input in mind when considering future approaches to ADS technologies.

Public Comments Invited: You are asked to comment on any aspects of this information collection, including (a) whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (c) ways to enhance the quality, utility and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information

on respondents, including the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses.

Authority: The Paperwork Reduction Act of 1995; 44 U.S.C. Chapter 35, as amended; 49 CFR 1.49; and DOT Order 1351.29.

Pipeline and Hazardous Materials Safety Administration

[Docket No. PHMSA–2020–0025]

Pipeline Safety: Overpressure Protection on Low-Pressure Natural Gas Distribution Systems

AGENCY: Pipeline and Hazardous Materials Safety Administration (PHMSA), DOT.

ACTION: Notice; Issuance of advisory bulletin.

SUMMARY: The Pipeline and Hazardous Materials Safety Administration (PHMSA) is issuing this advisory bulletin to remind owners and operators of natural gas distribution pipelines of the possibility of failure due to an overpressurization on low-pressure distribution systems. PHMSA is also reminding such owners and operators of existing federal integrity management regulations for gas distribution systems.

ADDRESSES: PHMSA guidance, including the advisory bulletin, can be found on PHMSA's website at *https://www.phmsa.dot.gov/guidance.*

FOR FURTHER INFORMATION CONTACT:

Technical Questions: Michael Thompson, Transportation Specialist, by phone at 503–883–3495 or by email at *michael.thompson@dot.gov.*

General Questions: Ashlin Bollacker, Technical Writer, by phone at 202–366–4203 or by email at *ashlin.bollacker@dot.gov.*

SUPPLEMENTARY INFORMATION:

I. Natural Gas Distribution Systems

Natural gas distribution systems deliver natural gas to customers for heating, cooking, and other domestic and industrial uses. A basic natural gas distribution system has four elements: (1) Mains that transport gas underground; (2) service lines that deliver natural gas from the main to the customer; (3) regulators that control the pressure of gas to a designated value; and (4) meters that measure the quantity of natural gas used by each customer. Customer piping takes natural gas from the meter to the customer's heating equipment and other appliances.

There are two types of natural gas distribution systems used to supply natural gas to the customer: High-pressure distribution systems and low-pressure distribution systems. In a high-pressure distribution system, the gas pressure in the main is higher than the pressure provided to the customer. A pressure regulator installed at each meter reduces the pressure from the main to a pressure that can be used by the customer's equipment and appliances. These regulators incorporate an overpressure protection device to prevent overpressurization of the customer's piping and appliances should the regulator fail. Additionally, as of April 14, 2017, all new or replaced service lines connected to a high-pressure distribution system must have excess flow valves. (§ 192.383).[1] Excess flow valves can reduce the risk of overpressurization in natural gas distribution pipelines by shutting off unplanned, excessive gas flows. Because each customer's service line in a high-pressure distribution system is protected by an excess flow valve and a pressure regulator, it is highly unlikely that an overpressurization condition in the main would impact customers.

In a low-pressure natural gas distribution system, however, the natural gas in a distribution pipeline flows predominantly at the same pressure as the pressure contained within the customer's service line piping. Natural gas is typically supplied to distribution pipeline mains from a high-pressure source that connects to, and flows through, a regulator station. The regulator station functions to reduce the pressure to a level that allows the gas to flow continuously at a low pressure all the way to premises of the customers where the gas is ultimately consumed. Since there are no regulators at the customer meter set in a low-pressure system, an overpressure condition occurring on the distribution system can affect all customers served by the system in the event that the regulator(s) that controls the pressure for the system fails. This scenario is what happened in the September 13, 2018, accident in Merrimack Valley that prompted the subsequent National Transportation Safety Board (NTSB) report and recommendations.

II. CMA's Accident in Merrimack Valley

A. Accident Synopsis

On September 13, 2018, a series of structure fires and explosions occurred after high-pressure natural gas entered a low-pressure natural gas distribution system operated by Columbia Gas of Massachusetts (CMA), a subsidiary of NiSource, Inc.[2] CMA delivers natural gas to about 325,000 customers in Massachusetts. According to an investigation of the accident conducted by the National Transportation Safety Board,[3] the fires and explosions damaged 131 structures, including at least 5 homes that were destroyed in the city of Lawrence and the towns of Andover and North Andover. CMA shut down the low-pressure natural gas distribution system serving 10,894 customers, including some outside the affected area who had their service shut off as a precaution. An 18-year-old male was killed when a home exploded, and the house's chimney fell onto the vehicle where he was sitting. Another person in the vehicle at the time of the explosion was seriously injured, as was someone on the second floor of the house. In total, 22 people, including 3 firefighters, were transported to hospitals for treatment of their injuries.

B. Background on CMA's Natural Gas Main Replacement Project

The low-pressure natural gas distribution system in the Merrimack Valley was installed in the early 1900s and was constructed with cast iron mains. The system was designed with 14 regulator stations to control the pressure of natural gas entering the downstream distribution pipeline mains. Each regulator station contained two regulators in series—a ''worker regulator'' and a ''monitor regulator''—each with a sensing line connected to a downstream section of main for the purpose of providing a pressure measurement back to the regulator station so that the system could be maintained at a specified pressure level of 0.5 pounds per square inch. The

[1] PHMSA published the final rule, ''Pipeline Safety: Expanding the Use of Excess Flow Valves in Gas Distribution Systems to Applications Other Than Single-Family Residences,'' on October 14, 2016, but delayed the effective date by six months to give operators time to comply with the new provisions. (81 FR 70987). A copy of this final rule is available in the docket PHMSA–2011–0009 at *https://www.regulations.gov.*

[2] CMA is expected to be officially transferred by NiSource, Inc., to Eversource Energy in November 2020.

[3] ''Pipeline Accident Report: Overpressurization of Natural Gas Distribution System, Explosions, and Fires in Merrimack Valley, Massachusetts; September 13, 2018.'' The National Transportation Safety Board. Accident Report: NTSB/PAR–19/02. Adopted September 24, 2019.

''worker'' regulator is the primary regulator that maintains the natural gas pressure, and the ''monitor'' regulator provides a redundant backup to the ''worker'' regulator. Each of the regulator stations reduced the natural gas pressure from about 75 pounds per square inch gauge (psig) to 12 inches of water column (w.c.), or about 0.5 psig, for distribution through the mains and delivery to customers.[4]

Beginning in 2016, CMA initiated an effort to replace 7,595 feet of low-pressure cast iron and bare steel mains with 4,845 feet of low-pressure and high-pressure polyethylene (plastic) mains. CMA contracted with Feeney Brothers, a pipeline services firm, to complete the replacement project. A work package, which included materials such as isometric drawings and procedural details for disconnecting and connecting pipes, was prepared for each of the planned construction activities. However, no package was prepared for the relocation of the Winthrop Avenue sensing lines serving the Winthrop Avenue regulator station.

The first stage of the project involved the installation of the plastic main, which was completed in late 2016. The regulator sensing lines at the Winthrop Avenue regulator station remained attached to the cast iron main that would ultimately be decommissioned.

CMA connected the plastic pipe to the distribution system, which allowed it to be monitored for pressure changes. The second stage of the project began in 2018 and involved the installation of tie-ins to the new plastic main, after which the legacy cast iron mains would be decommissioned and abandoned in their existing location. On the day of the accident, the sensing lines were still connected to the abandoned cast iron main.

At the Winthrop Avenue regulator station, about 0.5 mile south of the work area, the sensing lines connected to the abandoned cast iron mains continued providing data input to the two pressure regulators used to control the system pressure.[5] Once the contractor crew isolated the cast iron main, the natural gas pressure began to drop in the cast iron main and the sensing lines continued to provide those readings to the regulator station. As the pressure dropped, the pressure regulators responded by opening further to inject more gas to into the downstream system to the newly installed plastic system. Because there were no sensing lines connecting the regulator station to the newly installed plastic mains, the legacy sensing lines continued to provide ''zero'' pressure readings to Winthrop Avenue regulators, thereby causing them to fully open and provide a continuous flow of gas into the new low-pressure plastic system, resulting in an extreme overpressurization of the distribution system. This immediately resulted in multiple fires, explosions, and injuries.

C. National Transportation Safety Board (NTSB) Accident Investigation and Recommendations

Since the accident, the National Transportation Safety Board (NTSB) issued several safety recommendations. On November 14, 2018, NTSB recommended that the operator, NiSource Inc.:

- Revise the engineering plan and constructability review process across all of its subsidiaries to ensure that all applicable departments review construction documents for accuracy, completeness, and correctness, and that the documents or plans be sealed by a professional engineer prior to commencing work (P–18–6);
- Review and ensure that all records and documentation of its natural gas systems are traceable, reliable, and complete (P–18–7);
- Apply management of change process to all changes to adequately identify system threats that could result in a common mode failure (P–18–8); and
- Develop and implement control procedures during modifications to gas mains to mitigate the risks identified during management of change operations. Gas main pressures should be continually monitored during these modifications and assets should be placed at critical locations to immediately shut down the system if abnormal operations are detected (P–18–9).

In response, NiSource Inc. has taken actions that satisfied the NTSB's recommendations, which are now classified as ''Closed.''

On September 24, 2019, the National Transportation Safety Board (NTSB) issued its accident report and identified the probable cause of, and contributing factors to, CMA's accident in Merrimack Valley. NTSB found that the probable cause of the accident was CMA's weak engineering management that failed to adequately plan, review, sequence, and oversee the construction project that abandoned the cast iron main without first relocating the regulator sensing lines to the new plastic main. NTSB also found that a contributing cause of the accident was a low-pressure natural gas distribution system that was designed and operated without adequate overpressure protection. As a result of its investigation, NTSB made several recommendations to NiSource, Inc., the Commonwealth of Massachusetts and several other States, and PHMSA. NTSB made two recommendations to PHMSA. The first (P–19–14) called for PHMSA to ''revise Title 49 *Code of Federal Regulations* Part 192 to require overpressure protection for low-pressure natural gas distribution systems that cannot be defeated by a single operator error or equipment failure.'' Having investigated multiple overpressurization accidents over the past 50 years, NTSB concluded that low-pressure natural gas distribution systems that use only sensing lines and regulators to detect and prevent overpressurization are not optimal to prevent overpressurization accidents.

NTSB's second recommendation (P–19–15) called for PHMSA to ''issue an alert to all low-pressure natural gas distribution system operators of the possibility of a failure of overpressure protection, and the alert should recommend that operators use a failure modes and effects analysis (FMEA) or equivalent structured and systematic method to identify potential failures and take action to mitigate those identified failures.'' NTSB found that CMA's constructability review[6] process was not sufficiently robust to detect the omission of a work order to relocate the sensing lines; and that CMA's engineering risk management processes were deficient. NTSB explained that for regulator sensing lines, CMA only considered excavation damage as a risk to be mitigated. NTSB concluded that a comprehensive and formal risk assessment, such as FMEA, would have identified the human error that caused the redundant regulators to open and over pressurize the low-pressure system.

In response to NTSB's recommendation P–19–15, PHMSA is issuing this advisory bulletin to remind owners and operators of low-pressure natural gas distribution systems of the possibility of a failure of overpressure protection devices. Currently, there are Federal regulations in place that specify several minimum safety standards requiring operators to account for the possibility of overpressure events in the

[4] In the pipeline industry, it is customary to measure anything less than 1 psig in inches of water column. A measurement of 1 inch w.c. equals 0.0361 psig.

[5] *Sensing lines* are also called *control lines* or *static lines.*

[6] ''Constructability reviews'' are a recognized and generally accepted good engineering practice commonly used for the execution of professional design services and are intended to provide an independent and structured review of construction plans and specifications to ensure there are no conflicts, errors, or omissions.

design and operation of their systems. Specifically, the Distribution Integrity Management Program (DIMP) regulations at 49 CFR 192.1005 require operators of natural gas distribution systems to develop and implement an integrity management program for pipelines they own, operate, or maintain. Under DIMP, operators must identify existing and potential threats to the integrity of their systems, and to rank the risks so that known issues can be evaluated by the risks they pose. PHMSA agrees with the NTSB that low-pressure distribution system operators need to be reminded of their obligation to identify all threats to their systems and take mitigative measures in accordance with the risks to their systems. The diversity of designs and operating conditions of those systems mean that the risks associated with overpressure conditions may be best managed by a combination of design elements and engineering practices tailored to the unique attributes and conditions of their specific systems that pipeline operators are best positioned to identify and implement. Therefore, PHMSA is reminding operators of low-pressure distribution systems of their existing obligations under the DIMP regulations to consider and implement such tailored approaches to mitigate or eliminate the risk of an overpressurization event.

D. Distribution Integrity Management Program Regulatory Provisions

PHMSA first adopted integrity management regulations for hazardous liquid pipelines in 2000, then for gas transmission pipelines in 2003. Subsequently, the Pipeline Integrity, Protection, Enforcement, and Safety Act of 2006 (PIPES Act of 2006; Pub. L. 109–468) mandated that PHMSA prescribe minimum safety standards to extend integrity management to gas distribution pipeline systems. The 2006 legislation directed PHMSA to require operators of distribution pipelines to identify and assess risks on their distribution lines, to remediate conditions that present a potential threat to pipeline integrity, and to monitor program effectiveness. In response to that mandate, PHMSA implemented new requirements in 49 CFR part 192, subpart P, that rely on operator-specific programs to improve the overall integrity of pipeline systems and reduce risk (74 FR 63905; December 4, 2009). PHMSA concluded that this performance-based approach was a more effective method for improving pipeline system safety—given the diversity of distribution systems and the particular threats to which different systems may each be exposed—than imposing a ''one-size-fits-all'' prescriptive requirement.

The DIMP regulations require operators of natural gas distribution systems to develop, write, and implement an integrity management program for pipelines they own, operate, or maintain. An integrity management plan is a written set of policies and procedures that each operator must develop and implement to ensure compliance. Pursuant to § 192.1007,[7] an integrity management plan must include procedures for implementing the following elements:

- Periodically assess and improve the integrity management program; and
- Report performance results to PHMSA and, where applicable, also to state public utility commissions.

a. *Knowledge (192.1007(a)).* This section requires an operator to develop an understanding of its distribution pipeline. An operator must identify the characteristics of its pipeline's design and operations, and of the environment in which it operates, which are necessary to assess applicable threats and risks. This must include considering information gained from past design, operations, and maintenance. This section further requires that operators develop their understanding from reasonably available information. Operators have considerable knowledge of their pipeline to support routine operations and maintenance, but this information may be distributed throughout the company, in possession of groups responsible for individual functions. Operators must assemble this information to the extent necessary to support the development and implementation of their IM program.

PHMSA recognizes that there may be gaps in the knowledge an operator possesses when it develops its initial IM plan. Operators must identify these gaps and the additional information needed to improve their understanding. Operators are required to provide a plan for gaining that information over time through the normal activities of operating and maintaining pipeline systems (*e.g.,* collecting information about underlying components when portions of the pipeline must be excavated for other reasons). Operators must also develop a process by which the program will be periodically reviewed and refined, as needed.

b. *Identify threats ((§ 192.1007(b)).* Identification of the threats that affect, or could potentially affect, a distribution pipeline remains critical to ensuring integrity. Knowledge of applicable threats allows operators to evaluate the safety risks they pose and to rank those risks, allowing safety resources to be applied where they will be most effective. This section requires that operators consider the general categories of threats that must be reported on annual reports. Operators are required to consider reasonably available information to identify threats that affect their pipeline or that could potentially affect it (*e.g.,* landslides in a hilly area with loose soils even if no landslide has been experienced). The section specifies that operators should minimally consider data sources resulting from normal operation and maintenance in evaluating threats.

c. *Evaluate and rank risk (192.1007(c)).* This section requires that an operator evaluate the identified threats to determine their relative importance and rank the risks associated with its pipeline. Operators must consider the likelihood of threats and the consequences of a failure that might result from each threat. Consideration of consequences is important to help ensure that risks are properly ranked. A potential accident of relatively low probability but that would produce significant consequences should be considered to be of higher risk than an accident with somewhat greater likelihood, but one that is not expected to produce major consequences.

d. *Identify and implement measures to address risks (§ 192.1007(d)).* This section requires operators to determine and implement measures designed to reduce the risk of failure of gas distribution pipeline systems.

e. *Measure performance, monitor results, and evaluate effectiveness (§ 192.1007(e)).* This section requires operators to develop performance measures, including some that are specified for use by all operators. Measuring performance periodically enables operators to determine whether actions being taken to address threats are effective, or whether different or additional actions are needed. An operator must also periodically re-evaluate the threats and risks to its gas distribution pipeline.

f. *Periodic evaluation and improvement (§ 192.1007(f)).* This section requires operators to re-evaluate risks across the entire pipeline system periodically and to consider the relevance of threats in one specific location as compared to other locations.

[7] ''Pipeline Safety: Integrity Management Program for Gas Distribution Pipelines.'' Final Rule. (74 FR 63905; Dec. 4, 2009). *https://www.federalregister.gov/documents/2009/12/04/E9-28467/pipeline-safety-integrity-management-program-for-gas-distribution-pipelines#h-22*

Operators must consider the results of their performance monitoring in these evaluations, which must be performed at least once every five years. An operator must determine an appropriate period for conducting a complete program evaluation based on the complexity of its system. An operator should conduct a program evaluation any time there are changes in factors that would increase the risk associated with a failure.

While DIMP regulations have been in place since 2009, some operators may not be sufficiently aware of their pipeline attributes, nor adequately or consistently assessing threats as part of their DIMP programs. Early in the investigation, NTSB determined that several of NiSource's engineering processes were deficient. For example, the NTSB found that CMA's inadequate planning, documentation, and recordkeeping processes led to the omission of the relocation of sensing lines during a construction project. Further, NTSB found that CMA's constructability review process was not sufficiently robust to detect the omission of a work order to relocate sensing lines. It was the abandonment of the cast iron main without first relocating the sensing lines that led directly to the accident. Thus, it is necessary to identify and evaluate the physical and operational characteristics of each pipeline system to evaluate risks adequately. It is also important that an operator focus its DIMP on identifying the conditions that can cause failures and address them before a failure occurs. Therefore, PHMSA is reminding owners and operators of their continuing obligation to comply with DIMP regulations and is alerting operators that PHMSA considers the possibility of an overpressure protection failure to be a high-risk threat. PHMSA reminds operators of low-pressure systems that they must consider reasonably available information about possible threats to their gas distribution system, including such sources as the NTSB report, industry publications, and this advisory bulletin.

As part of the DIMP plans, PHMSA recommends that operators enhance their processes and procedures by including a failure modes and effects analysis, or equivalent structured and systematic method of risk analysis. Including a failure mode and effect analysis or equivalent methodology can help identify and mitigate the possibility of an overpressure failure event. PHMSA also urges operators to develop and implement procedures for construction-related work that are specific to low-pressure distribution systems, such as repairs, uprates in pressure, or replacement of pipeline or pressure regulation facilities.

II. Advisory Bulletin (ADB–2020–02)

To: Owners and Operators of Natural Gas Distribution Systems

Subject: Overpressure Protection on Low-pressure Natural Gas Distribution Systems.

Advisory: PHMSA is reminding all owners and operators of low-pressure natural gas distribution systems of the risk of failure of overpressure protection systems. This advisory bulletin is intended to clarify for the public existing pipeline safety standards and highlight the importance of evaluating and implementing overpressure protection design elements and operational practices within their compliance programs. The contents of this advisory bulletin do not have the force and effect of law. They are not meant to bind the public in any way, even as pipeline owners and operators must comply with the underlying safety standards.

PHMSA encourages operators to review the NTSB's Pipeline Accident Report concerning Columbia Gas of Massachusetts' (CMA) overpressurization event in the Merrimack Valley on September 13, 2018. It may be instructive regarding a host of potential safety problems that operators of low-pressure natural gas distribution systems may need to address. A copy of NTSB's accident report is contained within Docket No. PHMSA–2020–0025 for this advisory bulletin.

PHMSA also reminds pipeline operators of their obligations to comply with the gas DIMP regulations at 49 CFR part 192, subpart P. Under DIMP, gas distribution operators must have knowledge of their pipeline systems; identify threats to their systems; evaluate and rank risks; and identify, evaluate, and implement measures to address those risks. CMA's accident in Massachusetts highlights the need for operators of low-pressure systems to review thoroughly their current DIMP for the threat of overpressurization and to make any necessary changes or modifications to become fully compliant with the Federal Pipeline Safety Regulations (§ 192.1007(f)).

Written Procedures (§ 192.1005)

Developing and implementing comprehensive written procedures with sufficient specificity is one of the most effective ways to prevent overpressurization of a low-pressure gas system. Therefore, PHMSA reminds operators of low-pressure systems to review their written integrity management plans to help ensure that they comply with § 192.1005 and to ensure that they specifically address the risk of an overpressurization event. PHMSA further recommends, in addition to having procedures for operations, maintenance, and emergencies (§ 192.605), that operators develop written procedures for all activities involving new construction or pipe replacement projects for low-pressure distribution systems. PHMSA recommends that these procedures account for the additional precautions needed to protect those systems from an overpressurization event. These procedures should include:

- Clear roles and responsibilities across all departments involved in the planning and execution of construction or pipe replacement projects;
- Description and delineated scope of work to be conducted, with a materials list, necessary schematics, and maps of the location of the work;
- Requirements to review and ensure that all records and documentation of the affected gas system(s) are traceable, reliable, and complete;
- The sequential process of how the work is to be carried out and who or what group is responsible for each step;
- Application of a ''management of change'' process to identify all changes that could threaten system integrity, particularly where there is a risk emanating from a common mode of failure, including a list of individuals and groups necessary for review along with their comment and approval before work commences; and
- Implement a review process sufficiently robust to detect the omission of critical process and procedural steps that could prevent possible overpressurization events.

Knowledge of Distribution System (§ 192.1007(a))

PHMSA reminds operators that they are required to develop procedures in their DIMP that demonstrate an understanding of their gas distribution systems (§ 192.1007(a)). An operator must identify the characteristics of its pipeline design and operations, and of the environment in which it operates, in the process of assessing applicable threats and risks. Section 192.1007(a) requires that operators develop their understanding from reasonably available information. This must include information gained from past design, operations, and maintenance. If an operator acquires a pipeline and the historical records were not obtained or are not reasonably available, the records do not need to be re-created. However,

operators must assemble this information to the extent necessary to support the development and implementation of their integrity management programs. Underlying procedures must also identify additional information necessary to improve their understanding and provide a plan for gaining that information over time through the normal activities of operating and maintaining pipeline systems (*e.g.,* collecting information about buried components when portions of the pipeline must be excavated for other reasons). Operators must also develop a process by which the program will be periodically reviewed and refined, as needed. The outcome of the process should be that all affected departments of an operator's organization are aware of any planned construction work, have had the opportunity to review and provide comments on potential failure modes and to adopt a process for providing final approval of construction procedures.

Identifying Threats and Ranking Risk (§ 192.1007(b)–(c))

PHMSA reminds operators of their obligation under DIMP regulations (part 192, subpart P) to consider available information when identifying all potential and existing threats to the integrity of their systems (§ 192.1007(b)). In accordance with § 192.1007(b), operators are required to consider seven specific threats, including equipment failure and incorrect operation. Further, PHMSA reminds operators to evaluate the risks associated with their distribution pipelines, determine the relative importance of each threat, and rank the risks posed to their pipeline systems (§ 192.1007(c)). PHMSA reminds operators that consideration of consequences is important to help ensure that risks are properly ranked. A potential accident of relatively low likelihood but one that would produce significant consequences may be a higher risk than an accident with somewhat greater likelihood, but one that is not expected to produce major consequences.

Given the catastrophic consequences of the Merrimack Valley accident, PHMSA considers the possibility of an overpressure protection system failure to be a high-risk threat for low-pressure distribution systems where there are not adequate provisions to protect such systems. Therefore, PHMSA recommends that operators consider the single point of failure that could lead to an overpressurization of a low-pressure system as a high-risk threat and to review and adjust their DIMP plans accordingly. NTSB's Pipeline Accident Report sufficiently documents the occurrence of overpressurization of low-pressure distribution systems such that the threat of overpressurization should be considered a real and present threat. If the threat of overpressurization of low-pressure distribution systems is not considered an existing threat by an operator, justification for the elimination of this threat from consideration should be documented.

In performing a risk analysis required by DIMP (§ 192.1007), PHMSA recommends operators use a failure modes and effectiveness analysis (FMEA) model or an equivalent structured and systematic method to identify and mitigate risks. Failure modes and effects analysis (FMEA) is a generally accepted and recognized engineering practice used to identify and assess potential failures, including common mode failures. As NTSB concluded, a comprehensive and formal risk assessment, such as FMEA, would have identified the human error that caused the redundant regulators to open and over-pressurize the low-pressure system. Operators may already be leveraging FMEA or other similarly robust methodologies to perform the risk analysis and should continue to do so. PHMSA recommends that operators consider adopting FMEA or another qualitative tool that may help to identify possible failures or consequences of those failures that would not be identified otherwise.

Identify and Implement Measures To Address Risk (§ 192.1007(d))

PHMSA reminds operators that they must determine and implement measures designed to reduce the risk of failure on their pipeline systems (§ 192.1007(d)). If additional actions have not been taken to reduce risks, justification should be documented (*e.g.,* current overpressure protection design was determined to be sufficient; risks were deemed to be low).

There are several ways that operators can protect low-pressure distribution systems from overpressure events. Some notable examples include:

- Installing a full-capacity relief valve downstream of the low-pressure regulator station, including in applications where there is only worker-monitor pressure control;
- Installing a ''slam shut'' device;
- Using telemetered pressure recordings at district regulator stations to signal failures immediately to operators at control centers; and
- Completely and accurately documenting the location for all control (*i.e.,* sensing) lines on the system.

Measure Performance, Monitor Results, and Evaluate Effectiveness (§ 192.1007(e))

PHMSA reminds operators that they must monitor performance measures from an established baseline to evaluate the effectiveness of DIMP (§ 192.1007(e)). Section 192.1007(e)(vi) requires that these performance measures include any additional measures determined necessary to control identified threats. PHMSA reminds operators to modify their DIMP as appropriate, considering the potential failure of overpressure protection systems as a high-risk threat.

Issued in Washington, DC, on September 24, 2020, under authority delegated in 49 CFR 1.97.

Alan K. Mayberry,

Associate Administrator for Pipeline Safety.

DEPARTMENT OF TRANSPORTATION

Pipeline and Hazardous Materials Safety Administration

[Docket No. PHMSA–2020–0115]

Pipeline Safety: Inside Meters and Regulators

AGENCY: Pipeline and Hazardous Materials Safety Administration (PHMSA); DOT.

ACTION: Notice; issuance of advisory bulletin.

SUMMARY: PHMSA is issuing this advisory bulletin to alert owners and operators of natural gas distribution pipelines to the consequences of failures of inside meters and regulators. PHMSA is also reminding operators of existing Federal regulations covering the installation and maintenance of inside meter and regulators, including the integrity management regulations for distribution systems to reduce the risks associated with failures of inside meter and regulator installations.

ADDRESSES: PHMSA guidance, including this advisory bulletin, can be found on PHMSA's website at *https://www.phmsa.dot.gov/guidance.* You may also view this advisory bulletin and related documents at *http://www.regulations.gov.*

FOR FURTHER INFORMATION CONTACT:

Technical Questions: Michael Thompson, Transportation Specialist, by phone at 503–883–3495.

General Questions: Ashlin Bollacker, Technical Writer, by phone at 202–366–4203.

SUPPLEMENTARY INFORMATION:

Background

On August 10, 2016, a natural gas-fueled explosion and fire caused the partial collapse of a 14-unit apartment building located at 8701 Arliss Street (Building 8701) in the Flower Branch Apartment Complex of Silver Spring, Maryland. The explosion and fire also heavily damaged an adjacent apartment building, which shared a common wall with Building 8701. As a result of this accident, 7 residents died, 65 residents were transported to the hospital, and 3 firefighters were treated and released from the hospital. The property damage from the accident exceeded $1 million.

National Transportation Safety Board (NTSB) determined that the probable cause of the explosion was the failure of an indoor mercury service regulator with an unconnected vent line. The unconnected vent line allowed natural gas to flow into the meter room, where the gas accumulated and ignited from an unknown ignition source. A contributing factor to the accident was the mercury service regulator being located in a space where leak detection by odor was not readily available.

A ''service regulator'' is defined in § 192.3 as a ''device on a service line that controls the pressure of gas delivered from a higher pressure to the pressure provided to the customer. A service regulator may serve one customer or multiple customers through a meter header or manifold.'' Service regulators are installed to a meter inlet to control the gas pressure into a building. They reduce the high pressure used to transport natural gas through the delivery systems to the lower pressures used in homes and businesses. Service regulators include a relief valve that opens if the pressure of the regulated gas exceeds a specified pressure to allow the excess gas to vent to the outside atmosphere. Mercury service regulators present an increased risk of failure due to their age.[1]

Building 8701 received natural gas from a distribution system owned and operated by Washington Gas Light Company (WGL). WGL delivers natural gas to more than one million residential, commercial, and industrial customers throughout Washington, DC, and the surrounding regions in Maryland and Virginia. According to WGL, the mercury service regulators installed in Building 8701 were also installed in all 26 buildings of the Flower Branch apartment complex between 1955 and 1956. Since the accident, all of the mercury service regulators in the Flower Branch apartment complex have been removed and replaced.

NTSB Accident Investigation Findings and Recommendations to PHMSA

On April 24, 2019, NTSB adopted its report, ''Building Explosion and Fire, Silver Spring, Maryland, August 10, 2016,'' [2] determined the probable cause of the explosion, and issued safety recommendations. In its report, NTSB stated that several residents of Buildings 8701 and 8703 reported to investigators that they smelled gas in the weeks and months leading up to the explosion. On July 25, 2016, before the accident, several residents called the building manager, 9–1–1, and local fire personnel about gas odor. However, there was no evidence that residents, building management, or any emergency personnel notified the operator, WGL, of the gas odor. The investigation revealed that, had anyone notified WGL of a gas odor call made two weeks earlier, the accident may have been prevented. Notifying WGL would have allowed a service technician to enter the meter room of the building, identify the unconnected vent line, and remedy the situation. NTSB noted, however, that the use of gas odorants alone does not sufficiently mitigate the risk of death and injuries caused by gas system leaks, such as the leak that occurred in this accident.

As discussed above, NTSB determined that the probable cause of the explosion was the failure of an indoor mercury service regulator with an unconnected vent line. The unconnected vent line allowed natural gas to flow into the meter room, where the gas accumulated and ignited from an unknown ignition source. NTSB issued Safety Recommendations P–19–001 and P–19–002 to PHMSA based on the finding in the Silver Spring investigation that, had service regulators been located outside Building 8701, the explosion would have been avoided because gas would have vented to the atmosphere and dissipated. In light of these recommendations, PHMSA believes that operators should ensure compliance with the applicable pipeline safety regulations and should evaluate each service installation to determine the appropriate location of the service regulators. If access is an issue to check and maintain inside regulators properly, operators should do what is necessary to have the customer provide access for the operator to check the regulator and conduct the leakage and atmospheric corrosion surveys.

Minimum Federal Safety Standards for Customer Meters, Service Regulators and Service Lines

The Federal Pipeline Safety Regulations prescribe minimum safety standards for customer meters, service regulators, and service lines. They require operators to take into consideration the possibility of corrosion, overpressure events, and physical damage in the design, installation, and maintenance of these facilities. The Federal Pipeline Safety Regulations at 49 CFR 192.353 require that each meter and service regulator, whether inside or outside a building, must be installed in a readily accessible location and be protected from corrosion and other damage, including vehicular damage. For regulators located inside a building, each service regulator must be located as near as practical to the point of service line entrance. Each meter must be located in a ventilated place and not less than 3 feet from any source of ignition or any source of heat that might damage the meter. Section 192.355(b) states: ''[s]ervice regulator vents and relief vents must terminate outdoors, and the outdoor terminus must . . . [b]e located at a place where gas from the vent can escape freely into the atmosphere and away from any opening into the building.'' Section 192.357(d) requires regulators that might release gas to be vented to the outside atmosphere.

Federal Pipeline Safety Regulations include requirements that operators conduct leakage surveys of their systems, including meter and service regulators located inside buildings (§ 192.723). In scheduling such surveys, operators must consider the nature of their operations and the local conditions. At a minimum, operators must conduct surveys: (1) In business districts at intervals not exceeding 15 months, but at least once each calendar year; and (2) outside business districts as frequently as necessary, but at least once every five calendar years at intervals not exceeding 63 months. The regulations also require that operators inspect each pipeline or portion of pipeline that is exposed to the atmosphere for evidence of atmospheric corrosion in accordance with § 192.481. Further, if atmospheric corrosion is found during an inspection, the operator

[1] The design of mercury service regulators includes materials such as leather diaphragms and rubber valve seats that are subject to age-related deterioration.

[2] NTSB/PAR–19/01. The details of this accident investigation and the resulting safety recommendations may be accessed at *https://ntsb.gov/investigations/AccidentReports/Reports/PAR1901.pdf.*

must provide protection against the corrosion as required by § 192.479.

PHMSA is reminding operators of these existing requirements for inside meters and regulators. This advisory bulletin notes that, if access is an issue to check and maintain inside regulators properly, operators should endeavor to have the customer provide access for the operator to check the regulator and conduct the leakage and atmospheric corrosion surveys.

Distribution Integrity Management Program (DIMP) Regulations

In addition to these requirements for inside meters and regulators, PHMSA is also reminding operators of their obligation to continually assess risks to their systems and address those risks in accordance with DIMP regulations at § 192.1007. A DIMP program requires that operators demonstrate knowledge of their system (§ 192.1007(a)). Additionally, a DIMP program requires that operators identify existing and potential threats (§ 192.1007(b)). Identification of the threats that affect, or could potentially affect, a distribution pipeline is key to assuring its integrity. Knowledge of applicable threats allows operators to evaluate the risks they pose and to rank those risks, allowing safety resources to be applied where they will be most effective. Section 192.1007(c) requires that an operator evaluate the identified threats to determine their relative importance and rank the risks associated with its pipeline. Operators must consider the likelihood of threats as well as the consequences of a failure that might result from each threat. The integrity management programs must include measures designed and implemented to reduce the risk of failure from identified threats (§ 192.1007(d)). Measuring performance periodically and conducting a complete program re-evaluation at least every five years allows operators to determine whether actions being taken to address threats are effective, or whether different or additional actions are needed (§ 192.1007(e)–(f)). An operator should conduct a program evaluation any time there are changes in factors that would affect the risk of failure.

While the DIMP Regulations have been in place since 2009, some operators may not be sufficiently aware of their pipeline attributes, or may not be adequately or consistently assessing threats as part of their DIMP programs. For example, NTSB found that WGL's inadequate procedures led to the exclusion of the requirement that technicians verify the connection of vent lines for indoor service regulators during service and maintenance activities, and as such, vent lines could be inadvertently left disconnected following service work. NTSB concluded that WGL relied on unvalidated information to determine the location and condition of mercury service regulators. Therefore, the NTSB recommended that throughout the WGL network, WG implement an audit program to verify the data on the service forms used to determine the location and condition of mercury service regulators to ensure the accuracy of this safety-critical data.

Because it is so essential that operators identify the conditions that can cause failures and address them before a failure can occur, PHMSA is reminding operators of their obligations to comply with DIMP regulations. This advisory bulletin serves as a reminder to operators to identify and evaluate the physical and operational characteristics of each pipeline system. Operators following these requirements should help to ensure the safety of customer meters and regulators.

II. Advisory Bulletin (ADB–2020–01)

To: Owners and Operators of Gas Distribution Systems.

Subject: Requirements for Inside Meters and Regulators.

Advisory: To further enhance PHMSA's safety efforts and implement NTSB's April 24, 2019, Recommendations P–19–001 and P–19–002, PHMSA is issuing this advisory bulletin to remind operators of the requirements for inside meters and regulators. PHMSA is also reminding operators of existing Federal DIMP regulations to reduce the possibility of the failure of inside meter and regulator installations. Further, PHMSA advises operators to review NTSB's report concerning the August 10, 2016, accident as it may serve as prudent guidance regarding potential safety problems that operators may need to act on if it addresses a relevant factor on their system. This advisory bulletin is intended to clarify and describe the existing pipeline safety standards for operators and the public. The contents of this advisory bulletin do not have the force and effect of law and are not meant to bind the public in any way. However, pipeline operators must comply with the underlying pipeline safety standards at 49 CFR part 192.

PHMSA is reminding operators of §§ 192.353, 192.355, and 192.357, which provide requirements regarding the location and safety of customer meters and regulators. While the regulations allow service regulators to be located inside or outside structures, the requirements for indoor regulators are more stringent than those located outdoors. Section 192.353(a) requires that each meter and service regulator, whether inside or outside of a building, be installed in a readily accessible location and be protected from corrosion and other damage, including vehicular damage. Section 192.353(b) requires each service regulator installed within a building to be located as near as practical to the point of service line entrance, and § 192.353(c) requires that each meter installed within a building must be located in a ventilated place and not less than 3 feet from any source of ignition or any source of heat that might damage the meter. In addition, § 192.355(b) requires that the service regulator vents and relief vents must terminate outdoors, and the outdoor terminus must be located at a place where gas from the vent can escape freely into the atmosphere and away from any opening into the building. Section 192.357(d) requires regulators that might release gas to be vented to the outside atmosphere.

The Federal Pipeline Safety Regulations include requirements that operators conduct leakage and atmospheric corrosion surveys of their systems, including service regulators located inside or outside a building (§§ 192.723 and 192.481). If access is an issue to check and maintain inside meter and regulators properly, operators should endeavor to have the customer provide access for the operator to check these facilities and conduct the leakage and atmospheric corrosion surveys.

PHMSA is also reminding operators of their obligation to continually assess risks to their systems and address those risks as required by the DIMP regulations (§ 192.1007). PHMSA reminds pipeline operators of their responsibilities to continuously improve their knowledge of their pipeline systems, identify integrity threats, evaluate and rank risks, and identify, evaluate, and implement preventative and mitigative measures as required by the Federal Pipeline Safety Regulations. PHMSA recommends that operators thoroughly review their current DIMP for the threat of the failure of inside meter and regulator installations and make any changes necessary to become compliant with the Federal Pipeline Safety Regulations. For example, based on the requirements in § 192.1007(a) for operators to know their systems, PHMSA would expect operators to know the location (inside or outside) of all meters and regulators installed on their distribution system. Operators must evaluate the risks associated with these facilities, determine the relative importance of each threat, and rank the

risks posed to their pipeline (§ 192.1007(c)). PHMSA urges operators to consider the points-of-failure identified in NTSB's accident investigation report as they relate to operators' inside meter and regulator installations and to adjust their DIMP accordingly. These measures must include an effective leak management program unless all leaks are repaired when found (§ 192.1007(d)). As part of their leak management program, operators must consider all risks, including the risk of failure or damage to inside meter and regulator installations. If risks are identified, risk reduction measures must be put in place to address them, or if additional actions have not been taken to reduce risks, justification must be documented.

Issued in Washington, DC, on September 24, 2020, under authority delegated in 49 CFR 1.97.

Alan K. Mayberry,

Associate Administrator for Pipeline Safety.

BILLING CODE 4910–60–P

DEPARTMENT OF THE TREASURY

Financial Crimes Enforcement Network

Agency Information Collection Activities; Proposed Renewal; Comment Request; Renewal Without Change of Anti-Money Laundering Programs; Due Diligence Programs for Correspondent Accounts for Foreign Financial Institutions and for Private Banking Accounts

AGENCY: Financial Crimes Enforcement Network (FinCEN), Treasury.

ACTION: Notice and request for comments.

SUMMARY: As part of its continuing effort to reduce paperwork and respondent burden, FinCEN invites comments on the proposed renewal, without change, of a currently approved information collection found in existing Bank Secrecy Act regulations. Specifically, the regulations require banks, brokers or dealers in securities, futures commission merchants, introducing brokers in commodities, and mutual funds to establish due diligence programs that include risk-based, and, where necessary, enhanced, policies, procedures, and controls reasonably designed to detect and report money laundering conducted through or involving, any correspondent accounts established or maintained for foreign financial institutions. The regulations also require that these same financial institutions establish due diligence programs that include policies, procedures, and controls reasonably designed to detect and report money laundering conducted through or involving any private banking accounts established by the financial institutions. The due diligence programs are required to be part of the financial institutions' anti-money laundering programs. Although no changes are proposed to the information collection itself, this request for comments covers a future expansion of the scope of the annual hourly burden and cost estimate associated with these regulations. This request for comments is made pursuant to the Paperwork Reduction Act of 1995.

DATES: Written comments are welcome, and must be received on or before November 30, 2020.

ADDRESSES: Comments may be submitted by any of the following methods:

- *Federal E-rulemaking Portal: http://www.regulations.gov.* Follow the instructions for submitting comments. Refer to Docket Number FINCEN–2020–0012 and the specific Office of Management and Budget (OMB) control number 1506–0046.
- *Mail:* Policy Division, Financial Crimes Enforcement Network, P.O. Box 39, Vienna, VA 22183. Refer to Docket Number FINCEN–2020–0012 and OMB control number 1506–0046.

Please submit comments by one method only. Comments will also be incorporated into FinCEN's review of existing regulations, as provided by Treasury's 2011 Plan for Retrospective Analysis of Existing Rules. All comments submitted in response to this notice will become a matter of public record. Therefore, you should submit only information that you wish to make publicly available.

FOR FURTHER INFORMATION CONTACT: The FinCEN Regulatory Support Section at 1–800–767–2825 or electronically at *frc@fincen.gov.*

SUPPLEMENTARY INFORMATION:

I. Statutory and Regulatory Provisions

The legislative framework generally referred to as the Bank Secrecy Act (BSA) consists of the Currency and Financial Transactions Reporting Act of 1970, as amended by the Uniting and Strengthening America by Providing Appropriate Tools Required to Intercept and Obstruct Terrorism Act of 2001 (USA PATRIOT Act) (Pub. L. 107–56) and other legislation. The BSA is codified at 12 U.S.C. 1829b, 12 U.S.C. 1951–1959, 31 U.S.C. 5311–5314 and 5316–5332, and notes thereto, with implementing regulations at 31 CFR chapter X.

The BSA authorizes the Secretary of the Treasury, *inter alia,* to require financial institutions to keep records and file reports that are determined to have a high degree of usefulness in criminal, tax, and regulatory matters, or in the conduct of intelligence or counter-intelligence activities to protect against international terrorism, and to implement anti-money laundering (AML) programs and compliance procedures.[1] Regulations implementing the BSA appear at 31 CFR chapter X. The authority of the Secretary to administer the BSA has been delegated to the Director of FinCEN.[2]

Section 312 of the USA PATRIOT Act added subsection (i) to 31 U.S.C. 5318 of the BSA. Section 312 mandates that each financial institution that establishes, maintains, administers, or manages a correspondent account or a private banking account in the United States for non-U.S. persons subject such accounts to certain anti-money laundering compliance measures. In particular, a financial institution must establish appropriate, specific, and, where necessary, enhanced, due diligence (EDD) or enhanced scrutiny policies, procedures, and controls that are reasonably designed to detect and report instances of money laundering through those accounts. The regulations implementing the due diligence requirements for maintaining foreign correspondent accounts and private banking accounts are found at 31 CFR 1010.610 and 31 CFR 1010.620, respectively, and apply to covered financial institutions defined as banks, brokers or dealers in securities, futures commission merchants, introducing brokers in commodities, and mutual funds.[3]

(a) *31 CFR 1010.610—Due diligence programs for correspondent accounts for foreign financial institutions.*

Under 31 CFR 1010.610(a), covered financial institutions are required to establish due diligence policies, procedures, and controls that include each of the following for any correspondent account established, maintained, administered, or managed: (i) Determining whether any such foreign correspondent account is subject to EDD; (ii) assessing the money laundering risks presented by each such foreign correspondent account; and (iii) applying risk-based procedures and controls to each such foreign

[1] Section 358 of the USA PATRIOT Act added language expanding the scope of the BSA to intelligence or counter-intelligence activities to protect against international terrorism.

[2] Treasury Order 180–01 (re-affirmed Jan. 14, 2020).

[3] 31 CFR 1010.605(e).

correspondent account reasonably designed to detect and report known or suspected money laundering activity, including a periodic review of the correspondent account activity sufficient to determine consistency with information obtained about the type, purpose, and anticipated activity of the account.

Under 31 CFR 1010.610(b), covered financial institutions are required to establish EDD policies, procedures, and controls when establishing, maintaining, administering, or managing a correspondent account for certain foreign banks, as defined in 31 CFR 1010.610(c).[4] The EDD must reflect the risk assessment of the account and must include, as appropriate: (i) Obtaining information relating to the foreign bank's AML program; (ii) monitoring transactions to, from, or through the correspondent account in a manner reasonably designed to detect money laundering and suspicious activity; (iii) obtaining information from the foreign bank about the identity of persons with authority to direct transactions through the correspondent account if it is a payable-through account, as well as information about the sources and beneficial owners of funds or other assets in the payable-through account; (iv) determining whether the foreign bank maintains correspondent accounts for other foreign banks that use the foreign correspondent account established or maintained by the covered financial institution and, if so, taking reasonable steps to obtain information relevant to assess and mitigate money laundering risks, including, as appropriate, by obtaining the identity of the other foreign banks; and (v) obtaining the identity of certain owners of any such foreign bank that is not publicly traded and the nature and extent of the ownership interest.

Under 31 CFR 1010.610(d), covered financial institutions are required to establish special procedures when due diligence or EDD cannot be performed, including when the covered financial should refuse to open the account, suspend transaction activity, file a suspicious activity report, or close the account.

(b) *31 CFR 1010.620—Due diligence programs for private banking accounts.*

Under 31 CFR 1010.620, covered financial institutions are required to establish due diligence policies, procedures, and controls that, at a minimum, are designed to ensure that the financial institutions take reasonable steps to: (i) Ascertain the identify of all nominal and beneficial owners of a private banking account; [5] (ii) ascertain whether any nominal or beneficial owner is a senior foreign political figure; (iii) ascertain the source(s) of funds deposited into a private banking account and the purpose and expected use of the account; and (iv) review the activity of the account to ensure that it is consistent with the information obtained about the client's source of funds and with the stated purpose and expected use of the account, as needed to guard against money laundering, and to report any known or suspected money laundering or suspicious activity conducted to, from, or through a private banking account.

Under 31 CFR 1010.620(c), in the case of a private banking account for which a senior foreign political figure is a nominal or beneficial owner, covered financial institutions are required to conduct enhanced scrutiny of the account that is reasonably designed to detect and report transactions that may involve the proceeds of foreign corruption.[6]

Under 31 CFR 1010.620(d), covered financial institutions are required to establish special procedures when appropriate due diligence cannot be performed, including when the covered financial institution should refuse to open the account, suspend transaction activity, file a suspicious activity report, or close the account.

II. Paperwork Reduction Act of 1995 (PRA) [7]

Title: Due diligence programs for correspondent accounts for foreign financial institutions and private banking accounts (31 CFR 1010.610 and 31 CFR 1010.620).

OMB Control Number: 1506–0046.

Report Number: Not applicable.

Abstract: FinCEN is issuing this notice to renew the OMB control number for the due diligence programs for correspondent accounts for foreign financial institutions and for private banking accounts.

Affected Public: Businesses or other for-profit institutions, and non-profit institutions.

Type of Review:

- Renewal without change of a currently approved information collection.
- Propose for review and comment a renewal of the portion of the PRA burden that has been subject to notice and comment in the past (the ''traditional annual PRA burden'').
- Propose for review and comment a future expansion of the scope of the PRA burden (the ''supplemental annual PRA burden'').

Frequency: As required.

Estimated Number of Respondents: 16,938 financial institutions.[8]

Estimated Recordkeeping Burden: In Part 1 of this notice, FinCEN describes the breakdown of the estimated number of financial institutions, by type. In Part 2, FinCEN proposes for review and comment a renewal of the estimate of the traditional annual PRA hourly burden, which includes a scope and methodology similar to that used in the past, with the incorporation of a more robust cost estimate. The scope and methodology used in the past was limited to maintaining and updating the due diligence programs as part of the AML programs. In Part 3, FinCEN proposes for review and comment a methodology to estimate the hourly burden and the cost of a future estimate of a supplemental annual PRA burden that includes the burden and cost of maintaining records related to the regulatory requirements to conduct due diligence and EDD for foreign correspondent accounts, and to conduct due diligence and enhanced scrutiny for private banking accounts. Finally, in Part 4, FinCEN solicits input from the public about: (a) The accuracy of the estimate of the traditional annual PRA burden; (b) the method proposed for the calculation of the future supplemental annual PRA burden; (c) the criteria, metrics, and most appropriate questions FinCEN should consider when researching the information to estimate

[4] The EDD procedures are required for any correspondent account maintained for a foreign bank that operates pursuant to: (i) An offshore banking license; (ii) a banking license issued by a foreign country that has been designated as non-cooperative with international anti-money laundering principles or procedures by an intergovernmental group or organization of which the United States is a member and with which designation the U.S. representative to the group or organization concurs; or (iii) a banking license issued by a foreign country that has been designated by the Secretary as warranting special measures due to money laundering concerns.

[5] Private banking account means an account (or any combination of accounts) maintained at a covered financial institution that: (i) Requires a minimum aggregate deposit of funds or other assets of not less than $1,000,000; (ii) is established on behalf of or for the benefit of one or more non-U.S. persons who are direct or beneficial owners of the account; and (iii) is assigned to, or is administered or managed by, in whole or in part, an officer, employee, or agent of a covered financial institution acting as a liaison between the covered financial institution and the direct or beneficial owner of the account. 31 CFR 1010.605(m).

[6] *See* 31 CFR 1010.620(c)(2) for the definition of the term ''proceeds of foreign corruption.''

[7] Public Law 104–13, 44 U.S.C. 3506(c)(2)(A).

[8] Table 1 below sets forth a breakdown of the types of financial institutions covered by this notice.

the future traditional and supplemental annual PRA burden, according to the methodology proposed; and (d) any other comments about the regulations and the current and proposed future hourly burden and cost estimates of these requirements.

Part 1. Breakdown of the Financial Institutions Covered By This Notice

The breakdown of financial institutions, by type, covered By this notice is reflected in Table 1 below:

TABLE 1—BREAKDOWN OF FINANCIAL INSTITUTIONS COVERED BY THIS NOTICE, BY TYPE OF FINANCIAL INSTITUTION

Type of financial institution	Number of financial institutions
Banks	[9] 10,542
Brokers or dealers in securities	[10] 3,640
Futures commission merchants	[11] 61
Introducing brokers in commodities	[12] 1,104
Mutual funds	[13] 1,591
Total number of financial institutions	16,938

Part 2. Traditional Annual PRA Burden and Cost

Due to the practical challenges of obtaining the total number of correspondent accounts maintained by covered financial institutions for foreign financial institutions subject to regular due diligence requirements, the number of correspondent accounts maintained for foreign banks subject to EDD requirements, and the number of private banking accounts, the scope of the traditional annual PRA burden was limited to the annual burden of (a) maintaining and updating a due diligence programs as part of the AML program, and (b) securing approval of the program by an appropriate level of senior management.

FinCEN continues estimating the annual hourly burden of maintaining and updating the due diligence program for foreign correspondent accounts and private banking accounts at two hours per covered financial institution. This estimate covers the burden of (i) maintaining and updating the due diligence program to take into consideration any regulatory changes and any potential modifications required by changes in the types of foreign correspondent accounts or private banking accounts maintained, or by changes in the operations or organizational structure of the foreign financial institutions for which a covered financial institution maintains accounts, as well as changes to the organizational structure of private banking accounts (one hour), and (ii) presenting the updated due diligence program to the appropriate level of senior management of the financial institution for approval (one hour).

FinCEN's estimate of the traditional annual PRA burden, therefore, is 33,876 hours, as detailed in Table 2 below:

TABLE 2—BURDEN ASSOCIATED WITH UPDATING AND MAINTAINING THE DUE DILIGENCE PROGRAM AND OBTAINING SENIOR MANAGEMENT APPROVAL OF THE PROGRAM

Type of financial institution	Number of financial institutions (see Table 1)	Time per financial institution		Total burden hours per step		Grand total burden hours
		Maintenance	Approval	Maintenance	Approval	
Banks	10,542	1 hour	1 hour	10,542	10,542	21,084
Brokers or dealers in securities	3,640	1 hour	1 hour	3,640	3,640	7,280
Futures commission merchants	61	1 hour	1 hour	61	61	122
Introducing brokers in commodities	1,104	1 hour	1 hour	1,104	1,104	2,208
Mutual funds	1,591	1 hour	1 hour	1,591	1,591	3,182
Total burden hours				16,938	16,938	33,876

To calculate the hourly costs of the burden estimate, FinCEN identified four roles and corresponding staff positions involved in maintaining, updating, and obtaining senior management approval of the due diligence program: (i) Board of directors or senior management of the financial institution; (ii) general supervision (providing process oversight); (iii) direct supervision (reviewing operational-level work and cross-checking all or a sample of the work product against supporting documentation); and (iv) clerical work (engaging in research and administrative review, and recordkeeping).

FinCEN calculated the fully-loaded hourly wage for each of these four roles by using the median wage estimated by the U.S. Bureau of Labor Statistics (BLS),[14] and computing an additional benefits cost as follows:

[9] According to the Federal Deposit Insurance Corporation (FDIC) there were 5,103 FDIC-insured banks as of March 31, 2020. According to the Federal Reserve Board (FRB), there were 203 other entities supervised by the FRB, as of June 16, 2020, that fall within the definition of bank (20 Edge Act institutions, 15 agreement corporations, and 168 foreign banking organizations). According to the National Credit Union Administration there were 5,236 federally regulated credit unions as of December 31, 2019.

[10] According to the Securities and Exchange Commission (SEC), there were 3,640 brokers or dealers in securities registered with the SEC, as of March 31, 2020.

[11] According to the Commodities and Futures Trading Commission (CFTC), there were 61 futures commission merchants registered with the CFTC, as of March 31, 2020.

[12] According to the CFTC, there were 1,104 introducing brokers in commodities registered with the CFTC as of March 31, 2020.

[13] According to the SEC, there were approximately 1,591 mutual funds in 2017, based on forms filed with the SEC. The SEC provided the estimate to FinCEN for the last renewal of OMB control number 1506–0033, 83 FR 46012 (Sept. 11, 2018). FinCEN was unable to obtain a more recent estimate.

[14] The U.S. Bureau of Labor Statistics, Occupational Employment Statistics-National, May 2019, available at *https://www.bls.gov/oes/tables.htm*. The most recent data from the BLS corresponds to May 2019. For the benefits component of total compensation, see U.S. Bureau of Labor Statistics, Employer's Cost per Employee Compensation as of December 2019, available at *https://www.bls.gov/news.release/ecec.nr0.htm*. The ratio between benefits and wages for financial activities is $15.95 (hourly benefits)/$32.05 (hourly wages) = 0.50. The benefit factor is 1 plus the benefit/wages ratio, or 1.50. Multiplying each hourly wage by the benefit factor produces the fully-loaded hourly wage per position.

TABLE 3—FULLY-LOADED HOURLY WAGE BY ROLE AND BLS JOB POSITION FOR ALL FINANCIAL INSTITUTIONS COVERED BY THIS NOTICE

Role	BLS-code	BLS-name	Median hourly wage	Benefit factor	Fully-loaded hourly wage
Board of directors/senior management	11–1010	Chief Executive	$88.68	1.50	*$133.00
General supervision	11–3031	Financial Manager	62.45	1.50	93.68
Direct supervision	13–1041	Compliance Officer	33.20	1.50	49.80
Clerical work (research, review, and recordkeeping).	43–3099	Financial Clerk	20.40	1.50	30.60

(*) $133.02 rounded to $133.00.

FinCEN estimates that, *in general and on average,*[15] each role would spend different amounts of time on each portion of the traditional annual PRA burden, as follows:

For annually maintaining and updating the due diligence program, the cost of each hour of burden would be (i) one burden hour at $133.00 (representing the cost of board of directors or senior management review and approval), and (ii) one hour at $48.00 representing the actual update of the content of the program broken down by each role as shown in Table 4 below:

TABLE 4—WEIGHTED AVERAGE HOURLY COST OF MAINTAINING AND UPDATING THE DUE DILIGENCE PROGRAM

General supervision		Direct supervision		Clerical work		Weighted average hourly cost
% Time	Hourly cost	% Time	Hourly cost	% Time	Hourly cost	
10%	$9.37	60%	$29.88	30%	$9.18	$48.00

$48.43 rounded to $48.00

The total estimated cost of the traditional annual PRA burden is $3,065,778, as reflected in Table 5 below:

TABLE 5—TOTAL COST OF TRADITIONAL ANNUAL PRA BURDEN

Steps	Hourly burden	Hourly cost	Total cost
Maintaining and updating the program (divided between the roles listed in Table 4)	[16] 16,938	[17] $48.00	$813,024
Board of directors/senior management approval of the program	[18] 16,938	[19] 133.00	2,252,754
Total cost			3,065,778

Part 3. Supplemental Annual PRA Burden

In the future, FinCEN intends to add a supplemental annual PRA burden calculation that will include the estimated hourly burden and cost to maintain records to document compliance with the due diligence and EDD procedures for foreign correspondent accounts, and due diligence procedures and enhanced scrutiny requirements for private banking accounts.

(a) *Due diligence procedures for foreign correspondent accounts.*

As noted in Section I above, for all correspondent accounts established or maintained for foreign financial institutions, covered financial institutions are required to establish due diligence policies, procedures, and controls that include: (i) Determining whether each account is subject to EDD; (ii) assessing the money laundering risks presented by each account; and (iii) applying risk-based procedures and controls to each account that are reasonably designed to detect and report known or suspected money laundering activity, including a periodic review of the account activity sufficient to determine consistency with information obtained about the type, purpose, and anticipated activity of the account.

(b) *EDD procedures for certain foreign bank accounts.*

As noted in Section I above, covered financial institutions are required to establish EDD policies, procedures, and controls when establishing, maintaining, administering, or managing a correspondent account for certain foreign banks, as defined in 31 CFR 1010.610(c). The enhanced scrutiny must reflect the risk assessment of the account and must include, as appropriate: (i) Obtaining information relating to the AML program of the foreign bank; (ii) monitoring transactions to, from, or through the correspondent account in a manner reasonably designed to detect money laundering and suspicious activity; (iii) obtaining information from the foreign bank about the identity of persons with authority to direct transactions through the correspondent accounts if they are payable-through accounts, as well as information about the sources and beneficial owners of funds or other assets in the payable-through accounts; (iv) determining whether the foreign bank maintains correspondent accounts for other foreign banks that use the foreign correspondent account established or maintained by the covered financial institution and, if so,

[15] By ''in general,'' FinCEN means without regard to outliers (*e.g.,* financial institutions with foreign correspondent account relationships with complexities that are uncommonly higher or lower than those of the population at large). By ''on average,'' FinCEN means the mean of the distribution of each subset of the population.

[16] See Table 2.

[17] See Table 4.

[18] See Table 2.

[19] See Table 3.

taking reasonable steps to obtain information relevant to assess and mitigate money laundering risks, including, as appropriate, by obtaining the identity of the other foreign banks; and (v) obtaining the identity of certain owners of any such foreign bank that is not publicly traded and the nature and extent of the ownership interest.

(c) *Due diligence procedures for private banking accounts.*

As noted in Section I above, covered financial institutions are required to establish due diligence policies, procedures, and controls that, at a minimum, are designed to ensure that the financial institutions take reasonable steps to: (i) Ascertain the identity of all nominal and beneficial owners of a private banking account; (ii) ascertain whether any nominal or beneficial owner is a senior foreign political figure; (iii) ascertain the source(s) of funds deposited into a private banking account and the purpose and expected use of the account; and (iv) review the activity of the account to ensure that it is consistent with the information obtained about the client's source of funds and with the stated purpose and expected use of the account, as needed to guard against money laundering, and to report any known or suspected money laundering or suspicious activity conducted to, from, or through a private banking account.

(d) *Enhanced scrutiny for private banking accounts.*

As noted in Section I above, in the case of a private banking account for which a senior foreign political figure is a nominal or beneficial owner, covered financial institutions are required to conduct enhanced scrutiny that is reasonably designed to detect and report transactions involving the account that may involve the proceeds of foreign corruption.

FinCEN does not have the necessary information to provide a tentative estimate for these supplemental PRA hourly burdens and costs within the current notice. In addition, FinCEN does not have all the necessary information to precisely estimate the traditional annual PRA burden. For that reason, FinCEN is relying on estimates used in prior renewals of this OMB control number and the applicable regulations. FinCEN further recognizes that after receiving public comments as a result of this notice, future traditional annual PRA hourly burden and cost estimates may vary significantly. FinCEN intends to conduct more granular studies of the actions included in the proposed scope of the supplemental annual PRA burden in the near future, to arrive at more precise estimates of net BSA hourly burden and cost.[20] The data obtained in these studies also may result in a significant variation of the estimated traditional annual PRA burden.

Estimated Recordkeeping Burden: The average estimated annual PRA burden, measured in hours per respondent, is two hours (one burden hour to annually maintain and update the due diligence program, and one hour to annually obtain senior management approval of the due diligence program).

Estimated Number of Respondents: 16,938, as set out in Table 1.

Estimated Total Annual Responses: 16,938 revised due diligence programs for foreign correspondent accounts and private banking accounts annually; and 16,938 due diligences programs for foreign correspondent accounts and private banking accounts approved by senior management annually, as set out in Table 2.

Estimated Total Annual Recordkeeping Burden: The estimated total annual PRA burden is 33,876 hours, as set out in Table 2.

Estimated Total Annual Recordkeeping Cost: The estimated total annual PRA cost is $3,065,778, as set out in Table 5.

An Agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless the collection of information displays a valid OMB control number. Records required to be retained under the BSA must be retained for five years.

Part 4. Request for Comments

(a) Specific request for comments on the traditional annual PRA hourly burden and cost.

FinCEN invites comments on any aspect of the traditional annual PRA burden, as set out in Part 2 of this notice. In particular, FinCEN seeks comments on the adequacy of: (i) FinCEN's assumptions underlying its estimate of the burden; (ii) the estimated number of hours required by each portion of the burden; and (iii) the organizational levels of the financial institution engaged in each portion of the burden, their estimated hourly remuneration, and the estimated proportion of participation by each role. FinCEN encourages commenters to include any publicly available sources for alternative estimates or methodologies.

(b) Specific request for comments on the proposed criteria for determining the scope of a supplemental annual PRA hourly burden and cost estimate.

FinCEN invites comments on any aspect of the criteria for a future estimate of the supplemental annual PRA burden, as set out in Part 3 of this notice.

(c) Specific request for comments on the appropriate criteria, methodology, and questionnaire required to obtain information to more precisely estimate the supplemental annual PRA hourly burden and cost.

FinCEN invites comments on the most appropriate and comprehensive means to question financial institutions about the annual hourly burden and cost attributable solely to the recordkeeping necessary to comply with the due diligence and EDD requirements for foreign correspondent accounts, and due diligence procedures and enhanced scrutiny requirements for private banking accounts (*i.e.,* the hourly burden and cost of complying with the recordkeeping requirements imposed exclusively by the BSA, which are not used to satisfy contractual obligations, other regulatory requirements, or business purposes of the financial institution).

The supplemental annual PRA hourly burden and cost estimate of the recordkeeping necessary to comply with the due diligence and EDD requirements for foreign correspondent accounts, and due diligence and enhanced scrutiny for private banking accounts must take into consideration only the effort involved in obtaining those data elements that are used exclusively for complying with requirements under 31 CFR 1010.610 and 31 CFR 1010.620, respectively. Given the complexity in determining what portion of the effort to include in the estimate, FinCEN seeks comments from the public regarding any questions we should consider posing in future notices, in addition to the specific questions for comment outlined directly below. Also, due to the evident

[20] Net hourly burden and cost are the burden and cost a financial institution incurs to comply with requirements that are unique to the BSA, and that do not support any other business purpose or regulatory obligation of the financial institution. Burden for purposes of the PRA does not include the time and financial resources needed to comply with an information collection, if the time and resources are for things a business (or other person) does in the ordinary course of its activities if the agency demonstrates that the reporting activities needed to comply are usual and customary. 5 CFR 1320.3(b)(2). For example, depending on the nature of the correspondent account or private banking account, a financial institution may be collecting and maintaining some of the same information on the foreign financial institution correspondent account holder or the private banking account holder that is required by the regulatory requirements under 31 CFR 1010.610 and 31 CFR 1010.620, respectively, in order to satisfy other obligations including (i) protecting the financial institution from fraud against itself or its customers, (ii) complying with other non-BSA regulatory requirements such as those imposed by the specific Federal functional regulator, or (iii) improving the financial institution's marketing efforts, or the credit analysis of any lending facilities granted to the foreign financial institution.

difficulty involved in estimating the number of correspondent accounts maintained for foreign financial institutions, the number of correspondent accounts maintained for foreign banks for which EDD is required, the number of private banking accounts, and the number of private banking accounts for which a senior foreign political figure is a nominal or beneficial owner and therefore subject to enhanced scrutiny, FinCEN welcomes any suggestions as to how to derive these estimates by using publicly available financial information.

(d) Specific questions for comment associated with the due diligence and EDD procedures for foreign correspondent accounts:

(1) *Due diligence procedures.*

- On average, how many correspondent accounts does your financial institution maintain for foreign financial institutions that require due diligence?
- Does your financial institution maintain foreign correspondent accounts for banks that require EDD?
- On average, how many correspondent accounts does your financial institution maintain for foreign banks that require EDD?
- Does your financial institution have a process to track foreign correspondent accounts for reasons other than to comply with the BSA requirements?
- On average, during the on-boarding process, how long does it take your financial institution to conduct the research necessary to determine if a correspondent account requires due diligence or EDD?
- Does your financial institution have a review and approval process involving senior management regarding the determination to conduct due diligence versus EDD? On average, how long does the review process take and how many approvals are necessary?
- On average, how long does it take your financial institution to conduct the research and document an initial risk assessment of a correspondent account?
- Does your financial institution have a review and approval process involving senior management to evaluate the conclusions reached in the original risk assessment? On average, how long does the review process take and how many approvals are necessary?
- On average, how frequently does your financial institution conduct periodic reviews of each correspondent account?
- On average, how long does it take your financial institution to conduct and document the periodic review of a correspondent account?
- Does your financial institution have a review and approval process involving senior management to evaluate the conclusions reached in the periodic review of a correspondent account? On average, how long does the review process take and how many approvals are necessary?

(2) *EDD procedures.*

- On average, how long does it take your financial institution to conduct research and document an initial risk assessment of a correspondent account that requires EDD?
- Does your financial institution have a review and approval process involving senior management to evaluate the conclusions reached in the original risk assessment? On average, how long does the review process take and how many approvals are necessary?
- On average, how long does it take your financial institution to obtain a foreign bank's AML program when a correspondent account requires EDD? Does your financial institution conduct a review of each applicable AML program?
- On average, how often does your financial institution conduct and document review of transaction activity through a correspondent account?
- On average, how long does it take your financial institution to conduct and document review of transaction activity through a correspondent account?
- Does your financial institution have a review and approval process involving senior management to evaluate the conclusions reached as a result of a transaction activity review on a particular correspondent account? On average, how long does the review process take and how many layers of management review are there?
- On average, how long does it take your financial institution to obtain information from a foreign bank about the identity of persons with authority to direct transactions through the correspondent account if it is a payable-through account, as well as information about the sources and beneficial owners of funds or other assets in the payable-through account?
- On average, how many individuals have the authority to direct transactions through a correspondent account?
- Does your financial institution have a way of identifying if a new person is permitted to conduct transaction activity through a correspondent account, so that your financial institution can obtain the proper information?
- Does your financial institution have a review and approval process involving senior management to evaluate information obtained on persons with authority to direct transactions through a correspondent account?
- Does your financial institution maintain correspondent accounts for foreign banks that permit other foreign banks to use the correspondent account maintained with your financial institution?
- On average, how many correspondent accounts does your financial institution maintain for foreign banks that permit other foreign banks to access the correspondent account?
- Does your financial institution have a way of determining if a foreign bank permits another foreign bank to access the correspondent account maintained with your financial institution?
- On average, how long does it take your financial institution to obtain information from a foreign bank about other foreign banks with access to the correspondent account maintained with your financial institution?
- What additional information does your financial institution obtain to assess and mitigate risk as it relates to other foreign banks permitted to access the correspondent account you maintain with a foreign bank?
- Does your financial institution have a review and approval process involving senior management to evaluate applicable information on other foreign banks with access a correspondent account you maintain with a foreign bank? On average, how long does the review process take and how many approvals are necessary?
- On average, how many non-publicly traded foreign banks does your financial institution maintain correspondent accounts for?
- On average, how long does it take your financial institution to obtain the identity of owners of a non-publicly traded foreign bank and obtain applicable information on the nature and extent of the ownership interest?
- Does your financial institution have a review and approval process involving senior management to evaluate applicable information on a non-publicly traded foreign bank? On average, how long does the review process take and how many approvals are necessary?

(e) Specific questions for comment associated with the due diligence and enhanced scrutiny for private banking accounts:

(1) *Due diligence procedures.*

- On average, how many private banking accounts does your financial institution maintain that requires due diligence?
- Does your financial institution maintain private banking accounts for

which a senior foreign political figure is a nominal or beneficial owner?

• On average, how many private banking accounts does your financial institution maintain for which a senior foreign political figure is a nominal or beneficial owner?

• Does your financial institution have a process to track private banking accounts for reasons other than to comply with the BSA requirements?

• On average, during the on-boarding process, how long does it take your financial institution to conduct the research necessary to determine if a private banking account requires enhanced scrutiny because a senior foreign political figure is a nominal or beneficial owner?

• On average, how long does it take your financial institution to conduct the research and/or obtain documents to ascertain the identity of all nominal and beneficial owners of a private banking account?

• On average, how long does it take your financial institution to research, obtain, and document the source of funds deposited into a private banking account and the purpose and expected use of the account?

• On average, how frequently does your financial institution conduct periodic reviews of each private banking account?

• On average, how long does it take your financial institution to conduct and document the periodic review of a private banking account?

• Does your financial institution have a review and approval process involving senior management to evaluate the conclusions reached in the periodic review of a private banking account? On average, how long does the review process take and how many approvals are necessary?

(2) *Enhanced scrutiny for senior foreign political figures.*

• On average, how long does it take your financial institution to conduct enhanced scrutiny of a private banking account for which a senior foreign political figure is a nominal or beneficial owner?

• On average, how often does your financial institution conduct enhanced scrutiny of such private banking account?

• Does your financial institution have a review and approval process involving senior management to evaluate the conclusions reached as a result of conducting enhanced scrutiny on such a private banking account? On average, how long does the review process take and how many approvals are necessary?

(f) General request for comments.

Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval. All comments will become a matter of public record. Comments are invited on: (i) Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (ii) the accuracy of the agency's estimate of the burden of the collection of information; (iii) ways to enhance the quality, utility, and clarity of the information to be collected; (iv) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology; and (v) estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information.

Michael Mosier,

Deputy Director, Financial Crimes Enforcement Network.

[FR Doc. 2020–21441 Filed 9–28–20; 8:45 am]

BILLING CODE 4810–02–P

DEPARTMENT OF VETERANS AFFAIRS

Veterans' Rural Health Advisory Committee; Notice of Meeting

The Department of Veterans Affairs (VA) gives notice under the Federal Advisory Committee Act, 5 U.S.C. App. 2, that the Veterans' Rural Health Advisory Committee will hold a virtual meeting Monday, October 5, 2020, through Wednesday, October 7, 2020. The meeting will be accessible through the zoom link *https://zoom.us/j/93537309124* and phone number is 1–646–558–8656, Participant Code # 93537309124. The meeting will begin and end each day as follows:

Date	Time
October 5, 2020	11:00 a.m. to 2:00 p.m.
October 6, 2020	11:00 a.m. to 2:00 p.m.
October 7, 2020	11:00 a.m. to 2:00 p.m.

The meeting sessions are open to the public.

The purpose of the Committee is to advise the Secretary of VA on rural health care issues affecting Veterans. The Committee examines programs and policies that impact the delivery of VA rural health care to Veterans and discusses ways to improve and enhance VA access to rural health care services for Veterans.

The agenda will include updates from Department leadership; the Executive Director, VA Office of Rural Health; and the Committee Chair; as well as presentations by subject matter experts on general rural health care access.

Public comments will be received at 2:00 p.m. on October 7, 2020. Interested parties should contact Ms. Judy Bowie, by email at *VRHAC@va.gov,* or by mail at 810 Vermont Avenue NW (10P1R), Washington, DC 20420. Individuals wishing to speak are invited to submit a 1–2-page summary of their comment for inclusion in the official meeting record. Any member of the public seeking additional information should contact Ms. Bowie at the phone number or email address noted above.

Dated: September 23, 2020.

LaTonya L. Small,

Federal Advisory Committee Management Office.

[FR Doc. 2020–21397 Filed 9–28–20; 8:45 am]

BILLING CODE P

DEPARTMENT OF VETERANS AFFAIRS

Solicitation of Nomination for Appointment to the Advisory Committee on Disability Compensation

ACTION: Notice.

SUMMARY: The Department of Veterans Affairs (VA), Advisory Committee on Disability Compensation (the Committee), is seeking nominations of qualified candidates to be considered for appointment as a member of the Advisory Committee for the 2020—2021 membership cycle.

DATES: Nominations for membership on the Committee must be received by October 16, 2020, no later than 4:00 p.m., eastern standard time. Packages received after this time will not be considered for the current membership cycle.

ADDRESSES: All nomination packages should be emailed to the Designated Federal Officer (DFO), Sian Roussel at *sian.roussel@va.gov.*

SUPPLEMENTARY INFORMATION: In carrying out the duties set forth, the Committee responsibilities include:

(1) Advising the Secretary and Congress on the maintenance and periodic readjustment of the VA Schedule for Rating Disabilities.

(2) Providing a biennial report to Congress assessing the needs of Veterans with respect to disability compensation and outlining recommendations, concerns, and observations on the maintenance and periodic readjustment of the VA Schedule for Rating Disabilities.

(3) Meeting with VA officials, Veterans Service Organizations, and other stakeholders to assess the Department's efforts on the maintenance and periodic readjustment of the VA Schedule for Rating Disabilities.

Management and support services for the Committee are provided by VBA.

Authority: The Committee is authorized by 38 U.S.C. 546 and operates under the provisions of the Federal Advisory Committee Act, as amended, 5 U.S.C. App. 2.

Membership Criteria: VBA is requesting nominations for upcoming vacancies on the Committee. The Committee is currently composed of 13 members. As required by statute, the members of the Committee are appointed by the Secretary from the general public, including:

(1) Individuals with experience with the provision of disability compensation by VA;

(2) Individuals who are leading medical and scientific experts in relevant fields.

In accordance with § 546, the Secretary determines the number, terms of service, and pay and allowances of members of the Committee, except that a term of service of any such member may not exceed four years. The Secretary may reappoint any member for additional terms of service.

Professional Qualifications: In addition to the criteria above, VA seeks: (1) Diversity in professional and personal qualifications; (2) Experience in military service and military deployments (please identify branch of service and rank); (3) Current work with Veterans; (4) Disability compensation subject matter expertise; (5) Experience working in large and complex organizations. Requirements for Nomination Submission: Nominations should be typewritten (one nomination per nominator).

Requirements for Nomination Submission:

The nomination package should include:

(1) A letter of nomination that clearly states the name and affiliation of the nominee, the basis for the nomination (*i.e.,* specific attributes that qualify the nominee for service in this capacity), and a statement from the nominee indicating a willingness to serve as a member of the Committee;

(2) the nominee's contact information, including name, mailing address, telephone numbers, and email address;

(3) the nominee's curriculum vitae, and

(4) a summary of the nominee's experience and qualifications relative to the membership criteria and professional qualifications listed above.

Individuals selected for appointment to the Committee shall be invited to serve a two-year term. Committee members will receive a stipend for attending Committee meetings, including per diem and reimbursement for travel expenses incurred.

The Department makes every effort to ensure that the membership of its Federal advisory committees is fairly balanced in terms of points of view represented. Every effort is made to ensure that a broad representation of geographic areas, gender, and racial and ethnic minority groups, and that the disabled are given consideration for membership. Appointment to this Committee shall be made without discrimination because of a person's race, color, religion, sex (including gender identity, transgender status, sexual orientation, and pregnancy), national origin, age, disability, or genetic information. Nominations must state that the nominee is willing to serve as a member of the Committee and appears to have no conflict of interest that would preclude membership.

Dated: September 23, 2020.

Jelessa M. Burney,

Federal Advisory Committee Management Officer.

Medicare Program; Specialty Care Models To Improve Quality of Care and Reduce Expenditures

AGENCY: Centers for Medicare & Medicaid Services (CMS), HHS.

ACTION: Final rule.

SUMMARY: This final rule implements two new mandatory Medicare payment models under section 1115A of the Social Security Act—the Radiation Oncology Model (RO Model) and the End-Stage Renal Disease (ESRD) Treatment Choices Model (ETC Model). The RO Model will promote quality and financial accountability for providers and suppliers of radiotherapy (RT). The RO Model will be a mandatory payment model and will test whether making prospective episode payments to hospital outpatient departments (HOPD) and freestanding radiation therapy centers for RT episodes of care preserves or enhances the quality of care furnished to Medicare beneficiaries while reducing Medicare program spending through enhanced financial accountability for RO Model participants. The ETC Model will be a mandatory payment model focused on encouraging greater use of home dialysis and kidney transplants, in order to preserve or enhance the quality of care furnished to Medicare beneficiaries while reducing Medicare expenditures. The ETC Model adjusts Medicare payments on certain dialysis and dialysis-related claims for participating ESRD facilities and clinicians caring for beneficiaries with ESRD—or Managing Clinicians—based on their rates of home dialysis transplant waitlisting, and living donor transplants. We believe that these two models will test ways to further our goals of reducing Medicare expenditures while preserving or enhancing the quality of care furnished to beneficiaries.

DATES: These regulations are effective on November 30, 2020.

I. Executive Summary and Background

A. Executive Summary

1. Purpose

The purpose of this final rule is to implement and test two new mandatory models under the authority of the Center for Medicare and Medicaid Innovation (Innovation Center), and to implement certain general provisions that will be applicable to both the RO Model and the ETC Model. Section 1115A of the Social Security Act (the Act) authorizes the Innovation Center to test innovative payment and service delivery models expected to reduce Medicare, Medicaid, and Children's Health Insurance Program (CHIP) expenditures while preserving or enhancing the quality of care furnished to the beneficiaries of such programs. Under the Medicare fee-for-service (FFS) program, Medicare generally makes a separate payment to providers and suppliers for each item or service furnished to a beneficiary during the course of treatment. Because the amount of payments received by a provider or supplier for such items and services varies with the volume of items and services furnished to a beneficiary, some providers and suppliers may be financially incentivized to inappropriately increase the volume of items and services furnished to receive higher payments. Medicare FFS may also detract from a provider's or supplier's incentive to invest in quality improvement and care coordination activities if it means those activities will result in payment for fewer items and services. As a result, care may be fragmented, unnecessary, or duplicative.

The goal for these models is to preserve or enhance the quality of care furnished to beneficiaries while reducing program spending through enhanced financial accountability for model participants. The Model performance period for the RO Model will begin on January 1, 2021, and end December 31, 2025. We will implement the payment adjustments under the ETC Model beginning January 1, 2021 and ending June 30, 2027.

These models will offer participants the opportunity to examine and better understand their own care processes and patterns with regard to beneficiaries receiving RT services for cancer, and beneficiaries with ESRD, respectively. We chose these focus areas for the models because, as discussed in sections III. and IV. of this final rule, we believe that participants in these models will have a significant opportunity to redesign care and improve the quality of care furnished to beneficiaries receiving these services.

We believe the models will further the agency's goal of increasing the extent to which CMS initiatives pay for value and outcomes, rather than for volume of services alone, by promoting the alignment of financial and other incentives for health care providers caring for beneficiaries receiving treatment for cancer or ESRD. Payments that are made to health care providers for assuming financial accountability for the cost and quality of care create incentives for the implementation of care redesign among model participants and other providers and suppliers.

CMS is testing several models, including voluntary models focused specifically on cancer and ESRD. The RO and ETC Models will require the participation of providers and suppliers that might not otherwise participate in these models, and will be tested in multiple geographic areas.

The models will allow CMS to test models with provider and supplier participation when there are differences in: (1) Historic care and utilization patterns; (2) patient populations and care patterns; (3) roles within their local markets; (4) volume of services; (5) levels of access to financial, community, or other resources; and (6) levels of population and health care provider density. As noted in the proposed rule, we believe that participation in these models by a large number of providers and suppliers with diverse characteristics will result in a robust data set for evaluating the models' proposed payment approaches and will stimulate the rapid development of new evidence-based knowledge. Testing these models in this manner will also allow us to learn more about patterns of inefficient utilization of health care services and how to incentivize quality improvement for beneficiaries receiving

services for RT and ESRD, which could inform future model design.

We solicited public comment on our proposals, and on any alternatives considered. CMS has made a number of modifications to the formatting and language used in the regulation text (for example, to revise ''pursuant to'' to ''under''; and ''shall'' to ''must'') to improve readability. These formatting and language changes are not intended to be substantive. Any substantive change(s) to this final rule is noted in the specific section(s) affected by the change(s).

2. Summary of the Major Provisions

a. General Provisions

The general provisions will be applicable only to participants in the RO Model and the ETC Model. We identified the general provisions based on similar requirements that have been repeatedly memorialized in various documents governing participation in existing model tests. We have made these provisions applicable to both the RO Model and ETC Model, with one exception related to termination of model participants, so that we may eliminate repetition in our regulations at 42 CFR part 512. The general provisions address beneficiary protections, model evaluation and monitoring, audits and record retention, rights in data and intellectual property, monitoring and compliance, remedial action, model termination by CMS, limitations on review, and miscellaneous provisions on bankruptcy and other notifications. These provisions are not intended to comprehensively encompass all the provisions that will apply to each model. Both the RO Model and the ETC Model have unique aspects that will require additional, more tailored provisions, including with respect to payment and quality measurement. Such model-specific provisions are described elsewhere in this final rule.

b. Radiation Oncology (RO) Model

In this rule, we are finalizing the creation and testing of a new payment model for radiation oncology, the RO Model. The intent of the RO Model is to promote quality and financial accountability for episodes of care centered on RT services. While preserving or enhancing the quality of care for Medicare beneficiaries, the RO Model will test whether prospective episode-based payments to physician group practices (PGPs), HOPDs, and freestanding radiation therapy centers for RT episodes of care will reduce Medicare expenditures. We anticipate the RO Model will benefit Medicare beneficiaries by encouraging more efficient care delivery and incentivizing higher value care across episodes of care. The RO Model will have a performance period of 5 calendar years, beginning January 1, 2021, and ending December 31, 2025. The RO Model will capture all complete RO episodes that end during the performance period, which means that the data collection, RO episode payments, and reconciliation will continue into calendar year 2026.

(1) Summary of the RO Provisions

(a) RO Model Overview

RT is a common treatment for patients undergoing cancer treatment and is typically furnished by a physician at either an HOPD or a freestanding radiation therapy center. The RO Model will include prospective payments for certain RT services furnished during a 90-day RO episode for included cancer types for certain Medicare beneficiaries. The included cancer types will be determined by the following criteria: All are commonly treated with radiation; make up the majority of all incidence of cancer types; and have demonstrated pricing stability. (See section III.C.5.a. of this final rule for more information.) This Model will not account for total cost of all care provided to the beneficiary during the 90 days of an RO episode. Rather, the payment will cover only select RT services furnished during an RO episode. Payments for RO episodes will be split into two components—the professional component (PC) and the technical component (TC). This division reflects the fact that RT professional and technical services are sometimes furnished by separate RT providers and RT suppliers and paid for through different payment systems (namely, the Medicare Physician Fee Schedule and Outpatient Prospective Payment System).

For example, under the RO Model, a participating HOPD must have at least one PGP to furnish RT services at the HOPD. A PGP will furnish the PC as a Professional participant and an HOPD will furnish the TC as a Technical participant. Both will be participants in the RO Model, furnishing separate components of the same RO episode. An RO participant may also elect to furnish both the PC and TC as a Dual participant through one entity, such as a freestanding radiation therapy center. The RO Model will test the cost-saving potential of prospective episode payments for certain RT services furnished during an RO episode and whether shorter courses of RT (that is, fewer doses, also known as fractions) will encourage more efficient care delivery and incentivize higher value care.

(b) RO Model Scope

We are finalizing criteria for the types of cancer included under the RO Model and list 16 cancer types that meet our criteria. These cancer types are commonly treated with RT and, therefore, RT services for such cancer types can be accurately priced for purposes of a prospective episode payment model. RO episodes will include most RT services furnished in HOPDs and freestanding radiation therapy centers during a 90-day period.

We are finalizing that participation in the RO Model will be mandatory for all RT providers and RT suppliers within selected geographic areas. We will use Core-Based Statistical Areas (CBSAs) delineated by the Office of Management and Budget [1] as the geographic area for the randomized selection of RO participants. We will link RT providers and RT suppliers to a CBSA by using the five digit ZIP Code of the location where RT services are furnished, permitting us to identify RO Model participants while still using CBSA as a geographic unit of selection. In addition, we will exclude certain providers and suppliers from participation under the RO Model as described in section III.C.3.c. of this final rule.

We are including beneficiaries that meet certain criteria under the RO Model. For example, these criteria will require that a beneficiary have a diagnosis of at least one of the cancer types included in the RO Model and that the beneficiary receive RT services from a participating provider or supplier in one of the selected CBSAs. Beneficiaries who meet these criteria will be included in RO episodes.

(c) RO Model Overlap With Other CMS Programs and Models

We expect that there could be situations where a Medicare beneficiary included in an RO episode under the RO Model is also assigned, aligned, or attributed to another Innovation Center model or CMS program. Overlap could also occur among RT providers and RT suppliers at the individual or organization level, such as where a radiation oncologist or his or her PGP participates in multiple Innovation Center models. We believe that the RO Model is compatible with existing models and programs that provide opportunities to improve care and

[1] See *https://www.census.gov/programs-surveys/metro-micro/about/omb-bulletins.html.*

reduce spending, especially episode payment models like the Oncology Care Model. However, we will work to resolve any potential overlaps between the RO Model and other CMS models or programs that could result in repetitive services, or duplicative payment of services, and duplicative counting of savings or other reductions in expenditures.

(d) RO Model Episodes and Pricing Methodology

We are setting a separate payment amount for the PC and the TC of each cancer type included in the RO Model. The payment amounts will be determined based on national base rates, trend factors, and adjustments for each participant's case-mix, historical experience, and geographic location. The payment amount will also be adjusted for withholds for incorrect payments, quality, and starting in the third performance year (PY3), patient experience. The standard beneficiary coinsurance amounts (typically 20 percent of the Medicare-approved amount for services) and sequestration will remain in effect. RO participants will have the ability to earn back a portion of the quality and patient experience withholds based on their reporting of clinical data, their reporting and performance on quality measures, and as of PY3, performance on the beneficiary-reported Consumer Assessment of Healthcare Providers and Systems (CAHPS®) Cancer Care Radiation Therapy Survey.

(e) RO Model Quality Measures and Reporting Requirements

We are adopting four quality measures and will collect the CAHPS® Cancer Care Radiation Therapy Survey for the RO Model. Three of the four measures are National Quality Forum (NQF)-endorsed process measures that are clinically appropriate for RT and are approved for the Merit-based Incentive Payment System (MIPS).[2] [3] We selected all measures based on clinical appropriateness for RT services spanning a 90-day period. These measures will be applicable to the full range of included cancer types and provide us the ability to accurately measure changes or improvements in the quality of RT services. Further, we believe that these measures will allow the RO Model to apply a pay-for-performance methodology that incorporates performance measurement with a focus on clinical care and beneficiary experience with the aim of identifying a reduction in expenditures with preserved or enhanced quality of care for beneficiaries.

RO participants will be paid for reporting clinical data in accordance with our reporting requirements (as discussed in section III.C.8.e. of this final rule), and paid for performance on aggregated quality measure data on three quality measures and pay-for-reporting on one quality measure (for PY1 and PY2) (as discussed in section III.C.8.f. of this final rule). We are adding a set of patient experience measures based on the CAHPS® Cancer Care Survey for Radiation Therapy for inclusion as pay-for-performance measures. We will also require Professional participants and Dual participants to report all quality data for all applicable patients receiving RT services from RO participants based on numerator and denominator specifications for each measure (for example, not just Medicare beneficiaries or beneficiaries receiving care for RO episodes).

(f) RO Model Data Sharing Process

We will collect quality and clinical data for the RO Model. We intend to share certain data with RO participants to the extent permitted by the Health Insurance Portability and Accountability Act of 1996 (HIPAA) Privacy Rule and other applicable law. We are establishing data privacy compliance standards for RO participants. We are establishing requirements around the public release of patient de-identified information by RO participants. We will offer RO participants the opportunity to request a claims data file that contains patient-identifiable data on the RO participant's patient population for clinical treatment, care management and coordination, and quality improvement activities. Also, we will permit the data to be reused by RO participants for provider incentive design and implementation, and we believe it may be of use in RO participants' review of our calculation of their participant-specific episode payment amounts and reconciliation payment amounts or repayment amounts, as applicable. Thus, we expect that the data offered under the RO Model will be used by RO participants and CMS to better understand Model effects, establish benchmarks, and monitor participant compliance. Again, as previously described, the data uses and sharing will be allowed only to the extent permitted by the HIPAA Privacy Rule and other applicable law.

When using or disclosing such data, the RO participant will be required to make ''reasonable efforts to limit'' the information to the ''minimum necessary'' as defined by 45 CFR 164.502(b) and 164.514(d) to accomplish the intended purpose of the use, disclosure, or request. The RO participant will be required to further limit its disclosure of such information to what is permitted by applicable law, including the regulations promulgated under the HIPAA and the Health Information Technology for Economic and Clinical Health (HITECH) laws at 45 CFR part 160 and subparts A and E of part 164. Further discussion of data sharing can be found in section III.C.13. of this final rule.

(g) RO Model Beneficiary Protections

We are requiring Professional participants and Dual participants to notify RO beneficiaries of the beneficiary's inclusion in this Model through a standardized written notice to each RO beneficiary during the treatment planning service. We intend to provide a notification template, which RO participants may personalize with contact information and logos, but must otherwise not be changed. Further explanation of the beneficiary notification can be found in section III.C.15. of this final rule.

(h) RO Model Program Policy Waivers

We believe it will be necessary to waive certain requirements of title XVIII of the Act solely for purposes of carrying out the testing of the RO Model under section 1115A(b) of the Act. We will issue these waivers using our waiver authority under section 1115A(d)(1) of the Act. Each of the waivers is discussed in detail in section III.C.10. of this final rule, and codified in our regulations at § 512.280.

c. ESRD Treatment Choices (ETC) Model

The ETC Model will be a mandatory payment model, focused on encouraging greater use of home dialysis and kidney transplants for ESRD Beneficiaries among ESRD facilities and Managing Clinicians located in Selected Geographic Areas. The ETC Model will include two payment adjustments. The first payment adjustment, the Home Dialysis Payment Adjustment (HDPA), will be a positive adjustment on certain home dialysis and home dialysis-related claims during the initial 3 years of the model. The second payment adjustment, the Performance Payment Adjustment (PPA), will be a positive or negative adjustment on dialysis and dialysis-related Medicare payments, for both home dialysis and in-center dialysis,

[2] NQF endorsement summaries: *http://www.qualityforum.org/News_And_Resources/Endorsement_Summaries/Endorsement_Summaries.aspx.*

[3] See the CY 2018 QPP final rule (82 FR 53568).

based on ESRD facilities' and Managing Clinicians' rates of home dialysis, and of kidney transplant waitlisting and living donor transplantation, among attributed beneficiaries during the applicable MY. We are implementing the payment adjustments under the ETC Model beginning January 1, 2021, and ending June 30, 2027.

(1) Summary of the ETC Model Provisions

(a) ETC Model Overview

Beneficiaries with ESRD generally require some form of renal replacement therapy, the most common being hemodialysis (HD), followed by peritoneal dialysis (PD), or a kidney transplant. Most beneficiaries with ESRD receive HD treatments in an ESRD facility; however, other renal replacement modalities—including dialyzing at home or receiving a kidney transplant—may be better options than in-center dialysis for more beneficiaries than currently use them. We are finalizing the ETC Model to test the effectiveness of adjusting certain Medicare payments to ESRD facilities and Managing Clinicians—clinicians who furnish and bill the Monthly Capitation Payment (MCP) for managing ESRD Beneficiaries—to encourage greater utilization of home dialysis and kidney transplantation, support beneficiary modality choice, reduce Medicare expenditures, and preserve or enhance the quality of care. We believe ESRD facilities and Managing Clinicians are the key providers and suppliers managing the dialysis care and treatment modality options for ESRD Beneficiaries and have a vital role to play in beneficiary modality selection and assisting beneficiaries through the transplant process. We are adjusting payments for home dialysis and home dialysis-related claims with claim service dates from January 1, 2021, through December 31, 2023 through the HDPA. We also will assess the rates of home dialysis and of kidney transplant waitlisting and living donor transplantation, among beneficiaries attributed to ETC Participants during the period beginning January 1, 2021, and ending June 30, 2026, with the PPA based on those rates applying to claims for dialysis and dialysis-related services with claim service dates beginning July 1, 2022, and ending June 30, 2027.

(b) ETC Model Scope

The ETC Model will be a mandatory payment model focused on encouraging greater use of home dialysis and kidney transplants for ESRD Beneficiaries. The rationale for a mandatory model for ESRD facilities and Managing Clinicians within Selected Geographic Areas is that we seek to test the effect of payment incentives on availability and choice of treatment modality among a diverse group of providers and suppliers. We will randomly select Hospital Referral Regions (HRRs) for inclusion in the Model, and also include all HRRs with at least 20 percent of ZIP Codes located in Maryland in addition to those selected through randomization in conjunction with the Maryland Total Cost of Care Model currently being tested in the state of Maryland. Managing Clinicians and ESRD facilities located in these Selected Geographic Areas will be required to participate in the ETC Model and will be assessed on their rates of home dialysis, and of kidney transplant waitlisting and living donor transplantation, among their attributed beneficiaries during each MY; CMS will then adjust certain of their Medicare payments upward or downward during the corresponding Performance Payment Adjustment Period (PPA Period). Managing Clinicians and ESRD facilities located in the Selected Geographic Areas will also receive a positive adjustment on their home dialysis and home dialysis-related claims for the first 3 years of the ETC Model to support home dialysis provision before the PPA begins to apply.

(c) Home Dialysis Payment Adjustment (HDPA)

We will make upward adjustments to certain payments made to participating ESRD facilities under the ESRD Prospective Payment System (PPS) on home dialysis claims, and will make upward adjustments to the MCP paid to participating Managing Clinicians on home dialysis-related claims. The HDPA will apply to claims with claim service dates beginning on January 1, 2021, and ending on December 31, 2023.

(d) Home Dialysis and Transplant Performance Assessment and Performance Payment Adjustment (PPA)

We will assess ETC Participants' rates of home dialysis, and transplant waitlisting and living donor transplantation, during a MY, which will include 12 months of performance data. Each MY will overlap with the previous MY, if any, and the subsequent MY, if any, for a period of 6 months. Each MY will have a corresponding PPA Period—a 6-month period, which will begin 6 months after the conclusion of the MY. We will adjust certain payments for ETC Participants during the PPA Period based on the ETC Participant's home dialysis rate and transplant rate, calculated as the sum of the transplant waitlist rate and the living donor transplant rate, during the corresponding MY. We will be measuring rates of home dialysis, and of transplant waitlisting and living donor transplantation, for ESRD facilities and Managing Clinicians using Medicare claims data, Medicare administrative data including enrollment data, and the Scientific Registry of Transplant Recipients (SRTR) data. We will measure home dialysis rates for ESRD facilities and Managing Clinicians in the ETC Model by calculating the number of dialysis treatment beneficiary years during the MY in which attributed beneficiaries received dialysis at home, plus one half the total number of dialysis treatment beneficiary years during the MY in which attributed beneficiaries received self dialysis in center. We will measure transplant rates for ESRD facilities and Managing Clinicians by calculating the number of attributed beneficiary years during the MY for which attributed beneficiaries were on the kidney transplant waitlist and by calculating the number of attributed beneficiary years during the MY for which attributed beneficiaries received living donor transplants. The ETC Model will make upward and downward adjustments to certain payments to participating ESRD facilities under the ESRD PPS and to the MCP paid to participating Managing Clinicians based upon the ETC Participant's home dialysis rate and transplant rate. The magnitude of the positive and negative PPAs for ETC Participants will increase over the course of the Model. These PPAs will apply to claims with claim service dates beginning July 1, 2022, and ending June 30, 2027.

(e) ETC Model Overlaps With Other Innovation Center Models and CMS Programs

The ETC Model will overlap with several other CMS programs and models, including initiatives specifically focusing on dialysis care. We believe the ETC Model will be compatible with other dialysis-focused CMS programs and models. However, we will work to resolve any potential overlaps between the ETC Model and other CMS models or programs that could result in repetitive services or duplicative payment for services. The payment adjustments made under the ETC Model will be counted as expenditures under the Medicare Shared Savings Program and other shared savings initiatives. Additionally, ESRD facilities will remain subject to the quality requirements in ESRD

Quality Incentive Program (QIP), and Managing Clinicians who are MIPS eligible clinicians will remain subject to MIPS unless otherwise excluded.

(f) ETC Model Medicare Payment Waivers

In order to make the proposed payment adjustments under the ETC Model, namely the HDPA and PPA, we will need to waive certain Medicare program requirements. In particular, we will waive certain requirements of the Act for the ESRD PPS, ESRD QIP, and Medicare Physician Fee Schedule only to the extent necessary to make the payment adjustments under the ETC Model for ETC Participants. In addition, we will waive certain requirements such that the payment adjustments made under the ETC Model will not change beneficiary cost-sharing from the regular Medicare program cost-sharing for the related Part B services that were paid for beneficiaries who receive services from ETC Participants.

It will also be necessary to waive certain Medicare payment requirements of section 1861(ggg) of the Act and implementing regulations at 42 CFR 410.48, regarding the use of the Kidney Disease Education (KDE) benefit, solely for the purposes of testing the ETC Model. The purpose of such waivers will be to give ETC Participants additional access to the tools necessary to ensure beneficiaries select their preferred kidney replacement modality. As education is a key component of assisting beneficiaries with making such selections, we will waive select requirements regarding the provision of the KDE benefit, including waiving the requirement that certain health care provider types must furnish the KDE service to allow additional staff to furnish the service, waiving the requirement that the KDE service be furnished to beneficiaries with Stage IV CKD to allow ETC Participants to furnish these services to beneficiaries in later stages of kidney disease, and waiving certain restrictions on the KDE curriculum to allow the content to be tailored to each beneficiary's needs.

We will issue these waivers using our waiver authority under section 1115A(d)(1) of the Act.

(g) ETC Model Monitoring and Quality Measures

Consistent with the monitoring requirements in the general provisions, we will closely monitor the implementation and outcomes of the ETC Model throughout its duration. The purpose of this monitoring will be to ensure that the ETC Model is implemented safely and appropriately, the quality or experience of care for beneficiaries is not harmed, and adequate patient and program integrity safeguards are in place.

As part of the monitoring strategy, we will be using two quality measures for the ETC Model: The Standardized Mortality Ratio and the Standardized Hospitalization Ratio. These measures are NQF-endorsed, and are currently calculated at the ESRD facility level for Dialysis Facility Reports and the ESRD QIP, respectively. Therefore, we will require no additional reporting of quality measures by ETC Participants. We intend to propose a beneficiary experience measure in future rulemaking.

(h) ETC Model Beneficiary Protections

The ETC Model will not allow beneficiaries to opt out of the payment adjustments for their ESRD facility or Managing Clinician; however, the Model will not restrict a beneficiary's freedom to choose an ESRD facility or Managing Clinician, or any other provider or supplier, and ETC Participants will be subject to the general provisions protecting beneficiary freedom of choice and access to medically necessary covered services. We also will require that ETC Participants notify beneficiaries of the ETC Participant's participation in the ETC Model by prominently displaying informational materials in ESRD facilities and Managing Clinician offices or facilities where beneficiaries receive care. Additionally, ETC Participants will be subject to the general provisions regarding descriptive model materials and activities.

B. Background

In the July 18, 2019 **Federal Register** (84 FR 34478), we published the proposed rule titled ''Medicare Program; Specialty Care Models to Improve Quality of Care and Reduce Expenditures'' that would implement two new mandatory Medicare payment models under section 1115A of the Act—the Radiation Oncology Model (RO Model) and the End-Stage Renal Disease (ESRD) Treatment Choices Model (ETC Model).

As we stated in the proposed rule, we believe that these two models will test ways to further our goals of reducing Medicare expenditures while preserving or enhancing the quality of care furnished to beneficiaries.

We received approximately 330 timely pieces of correspondence in response to our solicitation of public comments on the proposed rule. While we are finalizing several of the provisions from the proposed rule, there are a number of provisions from the proposed rule that we intend to address later and a few that we do not intend to finalize. We also note that some of the public comments were outside of the scope of the proposed rule. These out-of-scope public comments are not addressed in this final rule. Summaries of the public comments that are within the scope of the proposed rule and our responses to those public comments are set forth in the various sections of this final rule under the appropriate heading. However, we note that in this final rule we are not addressing most comments received with respect to the provisions of the proposed rule that we are not finalizing at this time. Rather, we will address them at a later time, in a subsequent rulemaking document, as appropriate.

II. General Provisions

A. Introduction

Section 1115A of the Act authorizes the Innovation Center to test innovative payment and service delivery models expected to reduce Medicare, Medicaid, and CHIP expenditures while preserving or enhancing the quality of care furnished to such programs' beneficiaries. The Innovation Center has designed and tested numerous models governed by participation agreements, cooperative agreements, model-specific addenda to existing contracts with CMS, and regulations. While each of these models has a specific payment methodology, quality metrics, and certain other applicable policies, each model also has general provisions that are very similar, including provisions on monitoring and evaluation; compliance with model requirements and applicable laws; and beneficiary protections.

This section of the final rule finalizes the implementation of some general provisions that will be applicable to both the RO Model and the ETC Model. These general provisions are only applicable to model participants in the RO Model and the ETC Model. The general provisions being finalized here are based on similar provisions that have been repeatedly memorialized in various documents governing participation in existing model tests.

As we noted in the proposed rule, we believe it promotes efficiency to publish in section II. of this final rule certain general provisions in each of these areas that apply to both the RO Model and the ETC Model. This avoids the need to restate the same provisions separately for the two models in this final rule. We will codify these general provisions in a new subpart of the Code of Federal

Regulations (42 CFR part 512, subpart A). These provisions are not intended to comprehensively encompass all the provisions that will apply to each model. Both the RO Model and the ETC Model have unique aspects that require additional, more tailored provisions, including with respect to payment and quality measurement. Such model-specific provisions are described elsewhere in this final rule.

We received approximately 35 timely public comments on the general provisions of the proposed rule. These comments were submitted by individuals and entities with an interest in radiation oncology and kidney diseases. We note that some of these public comments were outside the scope of the proposed rule. These out-of-scope public comments are not addressed with the policy responses in this final rule. Summaries of the public comments that are within the scope of the proposed rule and our responses to those public comments are set forth in this section of the final rule under the appropriate headings.

B. Basis and Scope

In § 512.100(a), we proposed to apply the general provisions in section II. of the proposed rule only to the RO Model and the ETC Model, each of which we proposed to refer to as an ''Innovation Center model'' for purposes of these general provisions. As proposed, this paragraph indicated that these general provisions would not, except as specifically noted in part 512, affect the applicability of other provisions affecting providers and suppliers under Medicare FFS, including the applicability of provisions regarding payment, coverage, and program integrity (such as those in parts 413, 414, 419, 420, and 489 of chapter IV of 42 CFR and those in parts 1001–1003 of chapter V of 42 CFR).

In § 512.100(b), we proposed to apply the general provisions to model participants in the RO Model (with one exception described later in this final rule) and the ETC Model. We proposed to define the term ''model participant'' to mean an individual or entity that is identified as a participant in an Innovation Center model under the terms of part 512; as proposed, the term ''model participant'' would include, unless otherwise specified, the terms ''RO participant'' or ''ETC Participant'' as those terms are defined in subparts B and C of part 512. We proposed to define ''downstream participant'' to mean an individual or entity that has entered into a written arrangement with a model participant pursuant to which the downstream participant engages in one or more Innovation Center model activities. We proposed that a downstream participant may include, but would not be limited to, an individual practitioner, as defined for purposes of the RO Model. We proposed to define ''Innovation Center model activities'' to mean any activities impacting the care of model beneficiaries related to the test of the Innovation Center model performed under the terms of proposed part 512. While not used in the general provisions, as this term is used for purposes of both the RO Model and the ETC Model, we proposed to define ''U.S. Territories'' to mean American Samoa, the Federated States of Micronesia, Guam, the Marshall Islands, the Commonwealth of the Northern Mariana Islands, Palau, Puerto Rico, U.S. Minor Outlying Islands, and the U.S. Virgin Islands.

We solicited public comment on our proposals regarding the basis and scope of these general provisions. We received no comments on these proposals and therefore we are finalizing these proposals without modification in our regulations at § 512.100(a). We similarly did not receive comments on our proposed definitions of model participant, downstream participant, or U.S. Territories, and are finalizing these definitions as proposed in our regulation at § 512.110.

C. Definitions

In our regulation at § 512.110, we proposed to define certain terms relevant to the general provisions. We describe these definitions in context throughout section II. of this final rule. To the extent we have received comments on the definitions we proposed, we have responded to those comments throughout section II. of this final rule.

D. Beneficiary Protections

As we design and test new models at the Innovation Center, we believe it is necessary to have certain protections in place to ensure that beneficiaries retain their existing rights and are not harmed by the participation of their health care providers in Innovation Center models. Therefore, as noted in the proposed rule, we believe it is necessary to propose certain provisions regarding beneficiary choice, the availability of services, and descriptive model materials and activities.

For purposes of the general provisions, we proposed to define the term ''beneficiary'' to mean an individual who is enrolled in Medicare FFS. As we noted in the proposed rule, this definition aligns with the scope of the RO Model and the ETC Model, which include only Medicare FFS beneficiaries. We also proposed to define the term ''model beneficiary'' to mean a beneficiary attributed to a model participant or otherwise included in an Innovation Center model under the terms of proposed part 512; as proposed, the term ''model beneficiary'' as defined in this section would include, unless otherwise specified, the term ''RO Beneficiary'' and beneficiaries attributed to ETC participants under § 512.360. As stated in the proposed rule, we believed it was necessary to propose this definition of model beneficiary so as to differentiate between Medicare FFS beneficiaries generally and those specifically included in an Innovation Center model. We received no comments on these proposed definitions and therefore are finalizing these definitions in our regulation at § 512.110 without modification.

1. Beneficiary Freedom of Choice

A beneficiary's ability to choose his or her provider or supplier is an important principle of Medicare FFS and is codified in section 1802(a) of the Act. To help ensure that this protection is not undermined by the testing of the two Innovation Center models, we proposed to require in § 512.120(a)(1) that model participants and their downstream participants not restrict a beneficiary's ability to choose his or her providers or suppliers. We proposed that this policy would apply with respect to all Medicare FFS beneficiaries, not just model beneficiaries, because we believe it is important to ensure that the Innovation Center model tests do not interfere with the general guarantees and protections for all Medicare FFS beneficiaries.

Also, in § 512.120(a)(2), we proposed to codify that the model participant and its downstream participants must not commit any act or omission, nor adopt any policy, that inhibits beneficiaries from exercising their freedom to choose to receive care from any Medicare-participating provider or supplier, or from any health care provider who has opted out of Medicare. As we noted in the proposed rule, we believe this requirement is necessary to ensure that Innovation Center models do not prevent beneficiaries from obtaining the general rights and guarantees provided under Medicare FFS. However, because we believe that it is important for model participants to have the opportunity to explain the benefits of care provided by them to model beneficiaries, we further proposed that the model participant and its downstream participants would be permitted to communicate to model

beneficiaries the benefits of receiving care with the model participant, if otherwise consistent with the requirements of part 512 and applicable law.

In § 512.110, we proposed to define the terms ''provider'' and ''supplier,'' as used in part 512, in a manner consistent with how these terms are used in Medicare FFS generally. Specifically, we proposed to define the term ''provider'' to mean a ''provider of services'' as defined under section 1861(u) of the Act and codified in the definition of ''provider'' at 42 CFR 400.202. We similarly proposed to define the term ''supplier'' to mean a ''supplier'' as defined in section 1861(d) of the Act and codified at 42 CFR 400.202. As stated in the proposed rule, we believe it is necessary to define ''provider'' and ''supplier'' in this way as a means of noting to the general public that we are using the generally applicable Medicare definitions of these terms for purposes of part 512.

We solicited comments on our proposals related to beneficiary freedom of choice. In this section of this final rule, we summarize and respond to the public comments received on the beneficiary freedom of choice proposal.

Comment: A few commenters thanked CMS for the explicit clarification of beneficiary rights—notably, that beneficiaries maintain their right to choose a health care provider that is not participating in either the RO Model or the ETC Model.

Response: We thank the commenters for their support and for their comments in support of our proposals to maintain beneficiaries' freedom of choice and other beneficiary protections.

Comment: A few commenters requested that CMS strengthen the proposed beneficiary protections so that beneficiaries are adequately educated about any Innovation Center model in which they are included. Specifically, one of the commenters requested that CMS solicit external feedback on the contents of any beneficiary notification letter prior to requiring its use by model participants. A few commenters also expressed concern that RO Model beneficiaries, specifically, would not have access to the same range of benefits as other Medicare beneficiaries.

Response: We disagree with the commenters that additional safeguards are needed to ensure that model beneficiaries will be adequately educated about the Innovation Center models. Specifically, we believe that several of our finalized provisions will provide adequate education to model beneficiaries regarding the models in which the beneficiaries are included, including §§ 512.225 and 512.330 relating to beneficiary notifications for the RO Model and ETC Model, respectively, as well as § 512.120(c) relating to the requirements for materials and activities used to educate, notify, or contact beneficiaries regarding the Innovation Center model (referred to in this final rule as descriptive model materials and activities). We would note that § 512.120(c) allows model participants to provide additional descriptive model materials and activities to model beneficiaries that could describe in greater detail the Innovation Center Model and its expected impacts on model beneficiaries. We note that this provision requires that all descriptive model materials and activities must not be materially inaccurate or misleading, and all such materials and activities may be reviewed by CMS. With respect to the template beneficiary notifications that RO participants and ETC Participants must furnish, we will not provide a formal process for soliciting feedback on the content of such notifications because such a process may interfere with the model operation timelines. However, we are open to receiving such feedback on an informal basis. We believe the provisions regarding beneficiary notifications and descriptive model materials and activities strike an appropriate balance between the amount of information that may be desired by beneficiaries and the burden of ensuring that such information is accurate and not misleading.

Additionally, as described in this final rule, under our regulations at § 512.120(a) and (b), model beneficiaries will retain the right to receive care from the providers and suppliers of their choice as well as access to the same range of benefits as other Medicare FFS beneficiaries who are not receiving care from an Innovation Center model participant. As such, we believe that our proposed beneficiary protections will establish strong beneficiary safeguards for the two Innovation Center models. However, as described in section II.H. of this final rule, we are also finalizing our proposal to monitor model participant compliance with model terms and other applicable program laws and policies, including requirements related to beneficiary access to services and the providers and suppliers of their choice. If needed, we will propose any modifications to the applicable beneficiary protections through future rulemaking.

After considering public comments, we are finalizing our proposals on beneficiary freedom of choice without modification in our regulation at § 512.120(a). We received no comments on the proposed definitions of provider and supplier and therefore are finalizing these definitions without modification in our regulation at § 512.110.

2. Availability of Services

Models tested under the authority of section 1115A of the Act are designed to test potential improvements to the delivery of and payment for health care to reduce Medicare, Medicaid, and CHIP expenditures while preserving or enhancing the quality of care for the beneficiaries of these programs. As such, as we noted in the proposed rule, an important aspect of testing Innovation Center models is that beneficiaries continue to access and receive needed care. Therefore, in § 512.120(b)(1), we proposed that model participants and downstream participants are required to continue to make medically necessary covered services available to beneficiaries to the extent required by law. Consistent with the limitation on Medicare coverage under section 1862(a)(1)(A) of the Act, we proposed to define ''medically necessary'' to mean reasonable and necessary for the diagnosis or treatment of an illness or injury, or to improve the functioning of a malformed body member. Also, we proposed to define ''covered services'' to mean the scope of health care benefits described in sections 1812 and 1832 of the Act for which payment is available under Part A or Part B of Title XVIII of the Act, which aligns with Medicare coverage standards and the definition of ''covered services'' used in other models tested by the Innovation Center. Also, we proposed that model beneficiaries and their assignees, as defined in 42 CFR 405.902, would retain their rights to appeal Medicare claims in accordance with 42 CFR part 405, subpart I. As noted in the proposed rule, we believe that model beneficiaries and their assignees should not lose the right to appeal claims for Medicare items and services furnished to them solely because the beneficiary's provider or supplier is participating in an Innovation Center model.

Also, in § 512.120(b)(2) we proposed to prohibit model participants and downstream participants from taking any action to avoid treating beneficiaries based on their income levels or based on factors that would render a beneficiary an ''at-risk beneficiary'' as that term is defined for purposes of the Medicare Shared Savings Program at 42 CFR 425.20, a practice commonly referred to as ''lemon dropping.'' For example, 42 CFR 425.20 defines an ''at-risk

beneficiary'' to include, without limitation, a beneficiary who has one or more chronic conditions or who is entitled to Medicaid because of disability. As such, a model participant or downstream participant would be prohibited from taking action to avoid treating beneficiaries with chronic conditions such as obesity or diabetes, or who are entitled to Medicaid because of disability. As noted in the proposed rule, we believe it is necessary to specify prohibitions on avoiding treating at-risk beneficiaries, including those with obesity or diabetes, or who are eligible for Medicaid because of disability, to prevent potential lemon dropping of beneficiaries. Further, we believe prohibiting lemon dropping is a necessary safeguard to counter any incentives created by the Innovation Center models for model participants to avoid treating potentially high-cost beneficiaries who are most in need of quality care. This prohibition has been incorporated into the governing documentation of many current models being tested by the Innovation Center for this same reason. Also, in § 512.120(b)(3), we proposed an additional provision to prohibit model participants from taking any action to selectively target or engage beneficiaries who are relatively healthy or otherwise expected to improve the model participant's or downstream participant's financial or quality performance, a practice commonly referred to as ''cherry-picking.'' For example, a model participant or downstream participant would be prohibited from targeting only healthy, well-educated, or wealthy beneficiaries for voluntary alignment, the receipt of permitted beneficiary incentives or other interventions, or the reporting of quality measures.

We solicited comments on our proposals related to availability of services and on whether prohibiting cherry-picking would prevent model participants from artificially inflating their financial or quality performance results. In this section of this final rule, we summarize and respond to the public comments received on these proposals.

Comment: A commenter applauded CMS's proposals to prohibit model participants from ''cherry-picking'' beneficiaries. This commenter requested additional details on how CMS plans to identify model participants that have ''cherry-picked'' or ''lemon-dropped'' beneficiaries.

Response: We appreciate the commenter's support of our proposal to prohibit cherry-picking in Innovation Center models. We will identify model participants that may have ''cherry-picked'' or ''lemon-dropped'' beneficiaries through various modes of monitoring set forth in section II.H. (general provisions), section III.C.14. (the RO Model), and section IV.C.10. (ETC Model) of this final rule. In addition, beneficiary complaints may alert us to potentially inappropriate beneficiary selection or avoidance of certain beneficiaries.

After considering public comments, we are finalizing our proposed provisions on the availability of services without modification in our regulation at § 512.120(b). We received no comments on whether prohibiting cherry-picking will prevent model participants from artificially inflating their financial or quality performance results and therefore are not finalizing additional provisions against cherry-picking in this final rule.

3. Descriptive Model Materials and Activities

In order to protect beneficiaries from potentially being misled about Innovation Center models, we proposed at § 512.120(c)(1) to prohibit model participants and their downstream participants from using or distributing descriptive model materials and activities that are materially inaccurate or misleading. For purposes of part 512, we proposed to define the term ''descriptive model materials and activities'' to mean general audience materials such as brochures, advertisements, outreach events, letters to beneficiaries, web pages, mailings, social media, or other materials or activities distributed or conducted by or on behalf of the model participant or its downstream participants when used to educate, notify, or contact beneficiaries regarding the Innovation Center model. Further, we proposed that the following communications would not be descriptive model materials and activities: Communications that do not directly or indirectly reference the Innovation Center model (for example, information about care coordination generally); information on specific medical conditions; referrals for health care items and services; and any other materials that are excepted from the definition of ''marketing'' as that term is defined at 45 CFR 164.501. The potential for model participants to receive certain payments under the two Innovation Center models may be an incentive for model participants and their downstream participants to engage in marketing behavior that may confuse or mislead beneficiaries about the Innovation Center model or their Medicare rights. Therefore, as noted in the proposed rule, we believe it is necessary to ensure that those materials and activities that are used to educate, notify, or contact beneficiaries regarding the Innovation Center model are not materially inaccurate or misleading because these materials might be the only information that a model beneficiary receives regarding the beneficiary's inclusion in the model. Additionally, we understand that not all communications between the model participant or downstream participants and the model beneficiaries would address the model beneficiaries' care under the model. As such, we would note that this proposed prohibition would in no way restrict the ability of a model participant or its downstream participants to engage in activism or otherwise alert model beneficiaries to the drawbacks of mandatory models in which they would otherwise decline to participate, provided that such statements are not materially inaccurate or misleading. We did not propose to regulate information or communication unrelated to an Innovation Center model because it would not advance the purpose of the proposed prohibition, which is to protect model beneficiaries from being misled about their inclusion in an Innovation Center model or their Medicare rights generally. Accordingly, we proposed to define the term ''descriptive model materials and activities'' such that materials unrelated to the Innovation Center model are not subject to the requirements of § 512.120(c)(1).

Also, in § 512.120(c)(4) we proposed to reserve the right to review, or have our designee review, descriptive model materials and activities to determine whether the content is materially inaccurate or misleading; this review would not be a preclearance by CMS, but would take place at a time and in a manner specified by CMS once the materials and activities are in use by the model participant. As noted in the proposed rule, we believe it would be necessary for CMS to have this ability to review descriptive model materials and activities in order to protect model beneficiaries from receiving misleading or inaccurate materials regarding the Innovation Center model. Furthermore, to facilitate our ability to conduct this review and to monitor Innovation Center models generally, we proposed at § 512.120(c)(3) to require model participants and downstream participants, to retain copies of all written and electronic descriptive model materials and activities and to retain appropriate records for all other descriptive model materials and

activities in a manner consistent with § 512.135(c) (record retention).

Also in § 512.120(c)(2), we proposed to require model participants and downstream participants to include the following disclaimer on all descriptive model materials and activities: ''The statements contained in this document are solely those of the authors and do not necessarily reflect the views or policies of the Centers for Medicare & Medicaid Services (CMS). The authors assume responsibility for the accuracy and completeness of the information contained in this document.'' We proposed to require the use of this disclaimer so that the public, and beneficiaries in particular, are not misled into believing that model participants or their downstream participants are speaking on behalf of the agency.

We solicited comments on our proposals related to descriptive model materials and activities. We also solicited comment on whether we should propose a different disclaimer that alerts beneficiaries that we prohibit misleading information and gives beneficiaries contact information so they could reach out to us if they suspect the information they have received regarding an Innovation Center model is inaccurate.

In this section of this final rule, we summarize and respond to the public comments received on these proposals.

Comment: A commenter requested that CMS review all marketing materials from model participants prior to those materials being made available to beneficiaries in order to prevent confusion or the dissemination of misleading information. This commenter also supported the proposal that descriptive model materials and activities include the proposed disclaimer.

Response: We thank the commenter for supporting our proposal to require model participants include a disclaimer on all descriptive model materials and activities so that the public, and model beneficiaries in particular, are not misled into believing that model participants are speaking on behalf of CMS. We also appreciate the commenter's recommendation that CMS review all marketing materials from model participants prior to their distribution; however, we believe that our proposal to reserve the right to review such materials once distributed strikes the appropriate balance. Specifically, our final rule protects beneficiaries from receiving misleading information regarding Innovation Center models without unduly delaying the release of useful information or increasing the burden on model participants and CMS by requiring a thorough review of all marketing materials from all model participants prior to their release.

After considering public comments, we are finalizing our proposed provisions on descriptive model materials and activities without modification in our regulation at § 512.120(c). We did not receive any comments on whether we should propose a different disclaimer that alerts beneficiaries that we prohibit misleading information and gives them contact information so they could reach out to us if they suspect the information they have received regarding an Innovation Center model is inaccurate. Furthermore, we received no comments on these proposed definition of descriptive model materials and activities and therefore are finalizing this definition without modification in our regulation at § 512.110.

E. Cooperation With Model Evaluation and Monitoring

Section 1115A(b)(4) of the Act requires the Secretary to evaluate each model tested under the authority of section 1115A of the Act and to publicly report the evaluation results in a timely manner. The evaluation must include an analysis of the quality of care furnished under the model and the changes in program spending that occurred due to the model. Models tested by the Innovation Center are rigorously evaluated. For example, when evaluating models tested under section 1115A of the Act, we require the production of information that is representative of a wide and diverse group of model participants and includes data regarding potential unintended or undesirable effects, such as cost-shifting. The Secretary must take the evaluation into account if making any determinations regarding the expansion of a model under section 1115A(c) of the Act.

In addition to model evaluations, the Innovation Center regularly monitors model participants for compliance with model requirements. For the reasons described in section II.H. of this final rule, these compliance monitoring activities are an important and necessary part of the model test.

Therefore, we proposed to codify in § 512.130, that model participants and their downstream participants must comply with the requirements of 42 CFR 403.1110(b) (regarding the obligation of entities participating in the testing of a model under section 1115A of the Act to report information necessary to monitor and evaluate the model), and must otherwise cooperate with CMS' model evaluation and monitoring activities as may be necessary to enable CMS to evaluate the Innovation Center model in accordance with section 1115A(b)(4) of the Act. This participation in the evaluation may include, but is not limited to, responding to surveys and participating in focus groups. Additional details on the specific research questions that the Innovation Center model evaluation will consider for the RO Model and ETC Model can be found in in sections III.C.16. and IV.C.11. of this final rule, respectively. Further, we proposed to conduct monitoring activities according to proposed § 512.150, described later in this final rule, including producing such data as may be required by CMS to evaluate or monitor the Innovation Center model, which may include protected health information as defined in 45 CFR 160.103 and other individually identifiable data.

We solicited public comment on our proposal regarding cooperation with model monitoring and evaluation activities. We received no comments on these proposals and therefore are finalizing these proposals without modification in our regulation at § 512.130.

F. Audits and Record Retention

By virtue of their participation in an Innovation Center model, model participants and their downstream participants may receive model-specific payments, access to payment rule waivers, or some other model-specific flexibility. Therefore, as noted in the proposed rule, we believe that CMS's ability to audit, inspect, investigate, and evaluate records and other materials related to participation in Innovation Center models is necessary and appropriate. In addition, we proposed in § 512.120(b)(1) to require model participants and their downstream participants to continue to make medically necessary covered services available to beneficiaries to the extent required by law. Similarly, in order to expand a phase 1 model tested by the Innovation Center, among other things, the Secretary must first determine that such expansion would not deny or limit the coverage or provision of benefits under the applicable title for applicable individuals. Thus, as discussed in the proposed rule, there is a particular need for CMS to be able to audit, inspect, investigate, and evaluate records and materials related to participation in Innovation Center models to allow us to ensure that model participants are in no way denying or limiting the coverage or provision of benefits for beneficiaries as

part of their participation in the Innovation Center model. We proposed to define ''model-specific payment'' to mean a payment made by CMS only to model participants, or a payment adjustment made only to payments made to model participants, under the terms of the Innovation Center model that is not applicable to any other providers or suppliers; the term ''model-specific payment'' would include, unless otherwise specified, the terms ''home dialysis payment adjustment (HDPA),'' ''performance payment adjustment (PPA),'' ''participant-specific professional episode payment,'' or ''participant-specific technical episode payment.'' As noted in the proposed rule, we believe it is necessary in order to distinguish payments and payment adjustments applicable to model participants as part of their participation in an Innovation Center model, from payments and payment adjustments applicable to model participants as well as other providers and suppliers, as certain provisions of proposed part 512 would apply only to the former category of payments and payment adjustments.

We note here and in the proposed rule that there are audit and record retention requirements under the Medicare Shared Savings Program (42 CFR 425.314) and in current models being tested under section 1115A of the Act (such as under 42 CFR 510.110 for the Innovation Center's Comprehensive Care for Joint Replacement Model). Building off those existing requirements, we proposed in § 512.135(a), that the Federal government, including, but not limited to, CMS, HHS, and the Comptroller General, or their designees, would have a right to audit, inspect, investigate, and evaluate any documents and other evidence regarding implementation of an Innovation Center model. Additionally, in order to align with the policy of current models being tested by the Innovation Center, in § 512.135(b) and (c) we proposed that the model participant and its downstream participants must do the following:

• Maintain and give the Federal government, including, but not limited to, CMS, HHS, and the Comptroller General, or their designees, access to all documents (including books, contracts, and records) and other evidence sufficient to enable the audit, evaluation, inspection, or investigation of the Innovation Center model, including, without limitation, documents and other evidence regarding all of the following:

++ Compliance by the model participant and its downstream participants with the terms of the Innovation Center model, including proposed new subpart A of proposed part 512.

++ The accuracy of model-specific payments made under the Innovation Center model.

++ The model participant's payment of amounts owed to CMS under the Innovation Center model.

++ Quality measure information and the quality of services performed under the terms of the Innovation Center model, including proposed new subpart A of part 512.

++ Utilization of items and services furnished under the Innovation Center model.

++ The ability of the model participant to bear the risk of potential losses and to repay any losses to CMS, as applicable.

++ Patient safety.

++ Any other program integrity issues.

• Maintain the documents and other evidence for a period of 6 years from the last payment determination for the model participant under the Innovation Center model or from the date of completion of any audit, evaluation, inspection, or investigation, whichever is later, unless—

++ CMS determines there is a special need to retain a particular record or group of records for a longer period and notifies the model participant at least 30 days before the normal disposition date; or

++ There has been a termination, dispute, or allegation of fraud or similar fault against the model participant in which case the records must be maintained for an additional six (6) years from the date of any resulting final resolution of the termination, dispute, or allegation of fraud or similar fault.

If CMS notifies the model participant of a special need to retain a record or group of records at least 30 days before the normal disposition date, we proposed that the records must be maintained for such period of time determined by CMS. If CMS notifies the model participant of a special need to retain records or there has been a termination, dispute, or allegation of fraud or similar fault against the model participant or its downstream participants, the model participant must notify its downstream participants of the need to retain records for the additional period specified by CMS. As noted in the proposed rule, this provision will ensure that that the government has access to the records.

To avoid any confusion or disputes regarding the timelines outlined in these general provisions, we proposed to define the term ''days'' to mean calendar days.

We solicited public comment on these proposed provisions regarding audits and record retention.

Historically, the Innovation Center has required participants in section 1115A models to retain records for at least 10 years, which is consistent with the outer limit of the statute of limitations for the Federal False Claims Act and is consistent with the Shared Savings Program's policy outlined at 42 CFR 425.314(b)(2). For this reason, we also solicited public comments on whether we should require model participants and downstream participants to maintain records for longer than 6 years.

We summarize and respond in this section of this final rule to the public comments received on these proposals.

Comment: A few commenters applauded our proposed requirement for model participants and their downstream participants to maintain records for at least six (6) years from the last payment determination for the model participant under the Innovation Center model or from the date of completion of any audit, evaluation, inspection, or investigation.

Response: We thank the commenters for their support of this proposed policy.

Comment: A few commenters, while generally supporting our proposed record retention requirements, made alternative suggestions for how CMS should collect model-related records from model participants. Specifically, both commenters suggested that CMS expressly allow for e-transmission of model-related records when requested by CMS as this would allow additional flexibility for model participants and be less burdensome for model participants.

Response: We appreciate the commenters' support for our proposed record retention requirements. While we did not propose to prohibit e-transmission of records that are requested by CMS, we are not finalizing a provision that would permit the exclusive use of e-transmission for such records, as we believe that CMS should make case-by-case determinations regarding whether e-transmission is appropriate.

We received no comments on whether CMS should require model participants and downstream participants to maintain records for longer than 6 years. After considering public comments, we are finalizing our proposals on audits and record retention as proposed in our regulation at § 512.135. We received no comments on the proposed definitions for model-specific payments and days;

and therefore, are finalizing these definitions without modification in our regulation at § 512.110.

G. Rights in Data and Intellectual Property

To enable CMS to evaluate the Innovation Center models as required by section 1115A(b)(4) of the Act and to monitor the Innovation Center models pursuant to § 512.150, in § 512.140(a) we proposed to use any data obtained in accordance with §§ 512.130 and 512.135 to evaluate and monitor the Innovation Center models. We further proposed that, consistent with section 1115A(b)(4)(B) of the Act, that CMS would be allowed to disseminate quantitative and qualitative results and successful care management techniques, including factors associated with performance, to other providers and suppliers and to the public. We proposed that the data to be disseminated would include, but would not be limited to, patient de-identified results of patient experience of care and quality of life surveys, as well as patient de-identified measure results calculated based upon claims, medical records, and other data sources.

In order to protect the intellectual property rights of model participants and downstream participants, in § 512.140(c) we proposed to require model participants and their downstream participants to label data they believe is proprietary that they believe should be protected from disclosure under the Trade Secrets Act. As we noted in the proposed rule, this approach is already in use in other models currently being tested by the Innovation Center, including the Next Generation Accountable Care Organization Model. Any such assertions would be subject to review and confirmation prior to CMS's acting upon such assertion.

We further proposed to protect such information from disclosure to the full extent permitted under applicable laws, including the Freedom of Information Act. Specifically, in § 512.140(b), we proposed that we would not release data that has been confirmed by CMS to be proprietary trade secret information and technology of the model participant or its downstream participants without the express written consent of the model participant or its downstream participant, unless such release is required by law.

We solicited public comment on these proposals. We received no comments on these proposals and therefore are finalizing these proposals without modification in our regulation at § 512.140.

H. Monitoring and Compliance

Given that model participants may receive model-specific payments, access to payment rule waivers, or some other model-specific flexibility while participating in an Innovation Center model, as noted in the proposed rule, we believe that enhanced compliance review and monitoring of model participants is necessary and appropriate to ensure the integrity of the Innovation Center model. In addition, as part of the Innovation Center's assessment of the impact of new Innovation Center models, we have a special interest in ensuring that model tests do not interfere with ensuring the integrity of the Medicare program. Our interests include ensuring the integrity and sustainability of the Innovation Center model and the underlying Medicare program, from both a financial and policy perspective, as well as protecting the rights and interests of Medicare beneficiaries. For these reasons, as a part of the models currently being tested by the Innovation Center, CMS or its designee monitors model participants to assess compliance with model terms and with other applicable program laws and policies. As noted in the proposed rule, we believe our monitoring efforts help ensure that model participants are furnishing medically necessary covered services and are not falsifying data, increasing program costs, or taking other actions that compromise the integrity of the model or are not in the best interests of the model, the Medicare program, or Medicare beneficiaries.

In § 512.150(b)(1), we proposed to continue this standard practice of conducting monitoring activities for several reasons: (1) To ensure compliance by the model participant and each of its downstream participants with the terms of the Innovation Center model, including the requirements of proposed subpart A of proposed part 512; (2) to understand model participants' use of model-specific payments; and (3) to promote the safety of beneficiaries and the integrity of the Innovation Center model. Such monitoring activities would include, but not be limited to: (1) Documentation requests sent to the model participant and its downstream participants, including surveys and questionnaires; (2) audits of claims data, quality measures, medical records, and other data from the model participant and its downstream participants; (3) interviews with members of the staff and leadership of the model participant and its downstream participants; (4) interviews with beneficiaries and their caregivers; (5) site visits to the model participant and its downstream participants, which would be performed in a manner consistent with proposed § 512.150(c), described later in this rule; (6) monitoring quality outcomes and registry data; and (7) tracking patient complaints and appeals. We believe these specific monitoring activities, which align with those currently used in other models being tested by the Innovation Center, are necessary to ensure compliance with the terms and conditions of the Innovation Center model, including proposed subpart A of proposed part 512, and to protect beneficiaries from potential harms that may result from the activities of a model participant or its downstream participants, such as attempts to reduce access to or the provision of medically necessary covered services.

We proposed to codify in § 512.150(b)(2), that when we are conducting compliance monitoring and oversight activities, CMS or its designees would be authorized to use any relevant data or information, including without limitation Medicare claims submitted for items or services furnished to model beneficiaries. As noted in the proposed rule, we believe that it is necessary to have all relevant information available to us during our compliance monitoring and oversight activities, including any information already available to us through the Medicare program.

We proposed to require in § 512.150(c)(1) that model participants and their downstream participants cooperate in periodic site visits conducted by CMS or its designee in a manner consistent with § 512.130, described previously. Such site visits would be conducted to facilitate the model evaluation performed pursuant to section 1115A(b)(4) of the Act and to monitor compliance with the Innovation Center model terms (including proposed subpart A of proposed part 512).

In order to operationalize this proposal, in § 512.150(c)(2) we proposed that CMS or its designee would provide the model participant or its downstream participant with no less than 15 days advance notice of a site visit, to the extent practicable. Furthermore, to the extent practicable, we proposed that CMS would attempt to accommodate a request that a site visit be conducted on a particular date, but that the model participant or downstream participant would be prohibited from requesting a date that was more than 60 days after the date of the initial site visit notice from CMS. We believe the 60-day period would reasonably accommodate model participants' and downstream

participants' schedules while not interfering with the operation of the Innovation Center model. Further, in § 512.150(c)(3) we proposed to require the model participant and their downstream participants to ensure that personnel with the appropriate responsibilities and knowledge pertaining to the purpose of the site visit be available during any and all site visits. As noted in the proposed rule, we believe this proposal is necessary to ensure an effective site visit and prevent the need for unnecessary follow-up site visits.

Also, in § 512.150(c)(4), we proposed that CMS or its designee could perform unannounced site visits to the offices of model participants and their downstream participants at any time to investigate concerns related to the health or safety of beneficiaries or other patients or other program integrity issues, notwithstanding these provisions. Further, in § 512.150(c)(5) we proposed that nothing in proposed part 512 would limit CMS from performing other site visits as allowed or required by applicable law. As noted in the proposed rule, we believe that, regardless of the model being tested, CMS must always have the ability to timely investigate concerns related to the health or safety of beneficiaries or other patients, or program integrity issues, and to perform functions required or authorized by law. In particular, we believe that it is necessary for us to monitor, and for model participants and their downstream participants to be compliant with our monitoring efforts, to ensure that they are not denying or limiting the coverage or provision of medically necessary covered services to beneficiaries in an attempt to change model results or their model-specific payments, including discrimination in the provision of services to at-risk beneficiaries (for example, due to eligibility for Medicaid based on disability).

Model participants that are enrolled in Medicare will remain subject to all existing requirements and conditions for Medicare participation as set out in Federal statutes and regulations and provider and supplier agreements, unless waived under the authority of section 1115A(d)(1) of the Act solely for purposes of testing the Innovation Center model. Therefore, in § 512.150(a), we proposed to require that model participants and each of their downstream participants must comply with all applicable laws and regulations. We noted in the proposed rule that a law or regulation is not ''applicable'' to the extent that its requirements have been waived pursuant to section 1115A(d)(1) of the Act solely for purposes of testing the Innovation Center model in which the model participant is participating.

To protect the financial integrity of each Innovation Center model, in § 512.150(d) we proposed that if CMS discovers that it has made or received an incorrect model-specific payment under the terms of an Innovation Center model, CMS may make payment to, or demand payment from, the model participant. We did not propose a deadline for making or demanding such payments, but we stated that we were considering the imposition of some of the deadlines set forth in the Medicare reopening rules at 42 CFR 405.980. Specifically, we sought comment on whether CMS should be able to reopen an initial determination of a model-specific payment for any reason within 1 year of the model-specific payment, and within 4 years for good cause (as defined at 42 CFR 405.986). As noted in the proposed rule, we believe this may be necessary to ensure we have a means and a timeline to make redeterminations on incorrect model-specific payments that we have made or received in conjunction with the proposed Innovation Center models.

We proposed to codify at § 512.150(e) that nothing contained in the terms of the Innovation Center model or proposed part 512 would limit or restrict the authority of the HHS Office of Inspector General (OIG) or any other Federal government authority, including its authority to audit, evaluate, investigate, or inspect the model participant or its downstream participants for violations of any statutes, rules, or regulations administered by the Federal government. This provision simply reflects the limits of CMS authority.

We solicited comments on these proposals related to monitoring and compliance. In this section of this final rule, we summarize and respond to the public comments received on these proposals and comment solicitations.

Comment: A commenter expressed its support for our proposal to permit CMS to make corrections to model-specific payments. This commenter also suggested that RO participants be permitted to initiate requests to make corrections to model-specific payments in the RO Model.

Response: We thank this commenter for their support of the proposed policy. We would note that in section III.C.12. of this final rule, we have finalized the proposed process, with a modification to allow for 45 days instead of the proposed 30 days, for RO participants to notify CMS of suspected errors in the calculation of their reconciliation payment amount or repayment amount or aggregate quality score as reflected on an RO reconciliation report that has not been deemed final. In addition, in section IV.C.5.h. of this final rule, we have finalized the proposed process for ETC Participants to request a targeted review of the calculation of the Modality Performance Score (MPS).

We understand the commenter to be advocating that RO participants should have the right to request reopening of a model-specific payment determination. By way of background, a reopening is an administrative action taken to change a binding determination or decision that resulted in either an overpayment or underpayment, even though the binding determination or decision may have been correct at the time it was made based on the evidence of record (see § 405.980(a)). Under the Medicare reopening rules, a party to an initial determination may request that the determination be reopened in a variety of circumstances, including within one year for any reason and within four years for good cause (as defined at § 405.986). The Medicare reopening rules also permit a CMS contractor to reopen an initial determination on its own motion for a variety reasons, including: (1) Within 1 year for any reason; (2) within 4 years for good cause (as defined at § 405.986); and (3) at any time if there is reliable evidence (as defined at § 405.902) that the initial determination was procured by fraud or similar fault (as defined at § 405.902). Under § 405.986, ''good cause'' may be established when there is new and material evidence that was not available or known at the time of the determination or decision and that may result in a different conclusion or when the evidence that was considered in making the determination or decision clearly shows on its face that an obvious error was made at the time of the determination or decision. Under the existing reopening rules, the decision whether to grant a request for reopening is within the sole discretion of CMS and is not reviewable (see § 405.980(a)(5)).

As noted previously in this final rule, we did not propose any temporal restrictions on when CMS could correct prior payments, but we stated in the proposed rule that we were considering the imposition of some of the deadlines set forth in the Medicare reopening rules at 42 CFR 405.980. We specifically sought comment regarding whether CMS should be able to reopen an initial determination of a model-specific payment for any reason within 1 year of the model-specific payment, and within

4 years for good cause (as defined at 42 CFR 405.986). After consideration of the public comments, we believe that model participants should have a limited opportunity to request the reopening of a model-specific payment determination. Specifically, we will permit the reopening of a model-specific payment determination, whether on CMS' own motion or at the request of a model participant, for good cause (as defined at § 405.986) within 4 years after the date of the determination. This reopening provision will help to ensure accurate payments under an Innovation Center model, while the temporal and ''good cause'' limitations will promote efficient use of administrative resources and the eventual finality of payment determinations. In addition, we are finalizing a policy that permits CMS to reopen a model-specific payment determination at any time if there exists reliable evidence (as defined at § 405.902) that the determination was procured by fraud or similar fault (as defined at § 405.902). The purpose of this provision is to remediate fraud and abuse that may not be discovered within four years of the initial payment determination.

Finally, consistent with the existing Medicare reopening rules, the decision to grant or deny a reopening request in an Innovation Center model with respect to a model-specific payment is solely at CMS discretion and not reviewable. For example, for purposes of an Innovation Center Model, CMS may exercise its discretion to reopen a model-specific payment determination to correct a clerical error that constitutes good cause for reopening under § 405.986(a)(2). We note that if CMS reopens a model-specific payment determination, the revised payment determination may be appealed in accordance with the applicable Innovation Center model regulations, including § 512.170 (limitations on review).

We do not believe, however, that it is necessary to permit the reopening of a model-specific payment determination for any reason within 1 year after the determination has been made. The reopening rule we are finalizing here adequately protects payment accuracy, especially in light of the review procedures set forth for the RO Model at § 512.290 and for the ETC Model at § 512.390. Moreover, as noted above, this final rule permits CMS to correct clerical errors that it determines constitute ''good cause'' for reopening. We are finalizing our reopening policy at § 512.150(d).

Comment: A commenter stated that on-site monitoring of RO participants should be conducted by personnel and contractors that can provide RO participants with certification, licensure, or other form of demonstrated knowledge in the specific field of radiation oncology.

Response: We disagree with the commenters' belief that site visits of RO participants must be conducted by personnel and contractors that have certification, licensure, or other form of demonstrated knowledge in the specific field of radiation oncology. We reiterate that the proposed site visits were intended to ensure compliance with the Innovation Center model terms, to facilitate the model evaluation, and to investigate concerns related to the health or safety of beneficiaries or other patients or other program integrity issues.

There are a variety of reasons for us to conduct site visits. While having a certain amount of knowledge of the field of radiation oncology may be necessary to conduct some site visits of RO participants, depending on the nature and purpose of the site visit, knowledge of the RO Model terms as well as general Medicare policies and procedures may be more important. As such, we are not accepting the commenters' suggestion to require the personnel and contractors conducting site visits to provide RO participants with certification, licensure, or other form of demonstrated knowledge in the specific field of radiation oncology.

After considering public comments, we are finalizing our proposals on monitoring and compliance in our regulation at § 512.150 with modification. Specifically, to align the regulatory text with the proposals discussed in the preamble to the proposed rule, we have modified the regulatory text at § 512.150(b)(1) to reference additional purposes for which CMS may conduct monitoring activities, namely to understand model participants' use of model-specific payments; and to promote the safety of beneficiaries and the integrity of the Innovation Center model. In addition, in response to public comment, we have modified paragraph (d) of § 512.150 to codify the reopening process. Specifically, paragraph (d) has been revised to state the following: (1) CMS may reopen a model-specific payment determination, either on its own motion or at the request of a model participant, within four years from the date of the determination for good cause (as defined at § 405.986); (2) CMS may reopen a model-specific payment determination at any time if there exists reliable evidence (as defined in § 405.902) that the determination was procured by fraud or similar fault (as defined in § 405.902); and (3) CMS's decision regarding whether to reopen a model-specific payment determination is binding and not subject to appeal. Finally, we have revised paragraph (e) for brevity, which now states that this final rule does not limit or restrict the authority of the OIG or any other Federal government authority to audit, evaluate, investigate, or inspect model participants or their downstream participants for violations of ''Federal statutes, rules, or regulations.''

I. Remedial Action

As stated in the proposed rule and earlier in this final rule, as part of the Innovation Center's monitoring and assessment of the impact of models tested under the authority of section 1115A of the Act, we have a special interest in ensuring that these model tests do not interfere with the program integrity interests of the Medicare program. For this reason, we monitor for compliance with model terms as well as other Medicare program rules. When we become aware of noncompliance with these requirements, it is necessary for CMS to have the ability to impose certain administrative remedial actions on a noncompliant model participant.

As we noted in the proposed rule, the terms of many models currently being tested by the Innovation Center permit CMS to impose one or more administrative remedial actions to address noncompliance by a model participant. We proposed that CMS would impose any of the remedial actions set forth in proposed § 512.160(b) if we determine that the model participant or a downstream participant—

- Has failed to comply with any of the terms of the Innovation Center model, including proposed subpart A of proposed part 512;
- Has failed to comply with any applicable Medicare program requirement, rule, or regulation;
- Has taken any action that threatens the health or safety of a beneficiary or other patient;
- Has submitted false data or made false representations, warranties, or certifications in connection with any aspect of the Innovation Center model;
- Has undergone a change in control (as defined in section II.L. of this final rule) that presents a program integrity risk;
- Is subject to any sanctions of an accrediting organization or a Federal, state, or local government agency;
- Is subject to investigation or action by HHS (including the HHS–OIG and CMS) or the Department of Justice due

to an allegation of fraud or significant misconduct, including being subject to the filing of a complaint or filing of a criminal charge, being subject to an indictment, being named as a defendant in a False Claims Act qui tam matter in which the Federal government has intervened, or similar action; or

- Has failed to demonstrate improved performance following any remedial action imposed by CMS.

In § 512.160(b), we proposed to codify that CMS may take one or more of the following remedial actions if CMS determined that one or more of the grounds for remedial action described in § 512.160(a) had taken place—

- Notify the model participant and, if appropriate, require the model participant to notify its downstream participants of the violation;
- Require the model participant to provide additional information to CMS or its designees;
- Subject the model participant to additional monitoring, auditing, or both;
- Prohibit the model participant from distributing model-specific payments;
- Require the model participant to terminate, immediately or by a deadline specified by CMS, its agreement with a downstream participant with respect to the Innovation Center model;
- In the ETC Model only, terminate the ETC Participant from the ETC Model;
- Require the model participant to submit a corrective action plan in a form and manner and by a deadline specified by CMS;
- Discontinue the provision of data sharing and reports to the model participant;
- Recoup model-specific payments;
- Reduce or eliminate a model specific payment otherwise owed to the model participant, as applicable; or
- Such other action as may be permitted under the terms of proposed part 512.

As stated in the proposed rule, we noted that because the ETC Model is a mandatory model, we would not expect to use the provision that would allow CMS to terminate an ETC Participant's participation in the ETC Model, except in circumstances in which the ETC Participant has engaged, or is engaged in, egregious actions. We would note that we did not propose and are therefore not finalizing a provision authorizing CMS to terminate RO participants from the RO Model. The types of providers and suppliers selected for participation in the RO Model do not present the same risk of fraud and abuse that has historically been present in the dialysis industry, which includes ESRD facilities, one of the two types of participants in the ETC Model. We plan to monitor the RO Model for program integrity and fraud and abuse issues, and if necessary, we may add a termination provision for RO participants in future rulemaking.

We solicited public comment on these proposals regarding remedial action. We received no comments on these proposals and therefore are finalizing these proposals our regulation at § 512.160.

J. Innovation Center Model Termination by CMS

In the proposed rule, we proposed certain provisions that would allow CMS to terminate an Innovation Center model under certain circumstances. Section 1115A(b)(3)(B) of the Act requires the Innovation Center to terminate or modify the design and implementation of a model, after testing has begun and before completion of the testing, unless the Secretary determines, and the Chief Actuary certifies with respect to program spending, that the model is expected to: Improve the quality of care without increasing program spending; reduce program spending without reducing the quality of care; or improve the quality of care and reduce spending.

In § 512.165(a), we proposed that CMS could terminate an Innovation Center model for reasons including, but not limited to, the following circumstances:

- CMS determines that it no longer has the funds to support the Innovation Center model; or
- CMS terminates the Innovation Center model in accordance with section 1115A(b)(3)(B) of the Act.

As provided by section 1115A(d)(2)(E) of the Act and proposed § 512.170, we noted in the proposed rule that termination of the Innovation Center model in accordance with section 1115A(b)(3)(B) of the Act would not be subject to administrative or judicial review.

To ensure model participants had appropriate notice in the case of the termination of the Innovation Center model by CMS, we also proposed to codify at § 512.165(b) that we would provide model participants with written notice of the model termination, which would specify the grounds for termination as well as the effective date of the termination.

We solicited public comment on these proposals regarding the termination of an Innovation Center model by CMS. We received no comments on these proposals; and therefore, are finalizing these proposals without modification in our regulation at § 512.165.

K. Limitations on Review

In § 512.170, we proposed to codify the preclusion of administrative and judicial review under section 1115A(d)(2) of the Act.

Section 1115A(d)(2) of the Act states that there is no administrative or judicial review under section 1869 or 1878 of the Act or otherwise for any of the following:

- The selection of models for testing or expansion under section 1115A of the Act.
- The selection of organizations, sites, or participants to test models selected.
- The elements, parameters, scope, and duration of such models for testing or dissemination.
- Determinations regarding budget neutrality under section 1115A(b)(3) of the Act.
- The termination or modification of the design and implementation of a model under section 1115A(b)(3)(B) of the Act.
- Determinations about expansion of the duration and scope of a model under section 1115A(c) of the Act, including the determination that a model is not expected to meet criteria described in paragraph (1) or (2) of such section.

We proposed to interpret the preclusion from administrative and judicial review regarding the Innovation Center's selection of organizations, sites, or participants to test models selected to preclude from administrative and judicial review our selection of a model participant, as well as our decision to terminate a model participant, as these determinations are part of our selection of participants for Innovation Center model tests.

In addition, we proposed to interpret the preclusion from administrative and judicial review regarding the elements, parameters, scope, and duration of models for testing or dissemination, to preclude from administrative and judicial review the following CMS determinations made in connection with an Innovation Center model:

- The selection of quality performance standards for the Innovation Center model by CMS.
- The assessment by CMS of the quality of care furnished by the model participant.
- The attribution of model beneficiaries to the model participant by CMS, if applicable.

We solicited comments on these proposals regarding limitations on review. In this section of this final rule, we summarize and respond to the public comments received on these proposals.

Comment: A commenter suggested that model participants be afforded the

opportunity to challenge any adverse assessments relating to that model participant's quality of care through administrative or judicial review.

Response: We reiterate that the limitations on administrative and judicial review established in section 1115A(d)(2) of the Act include a preclusion from review for the elements, parameters, scope, and duration of such models for testing or dissemination. We proposed to interpret this provision as precluding from review the assessment by CMS of the quality of care furnished by the model participant. However, after reviewing this language in light of the concern flagged by the commenter, we realize that our proposed regulatory text was confusing. Our intent was to interpret the preclusion in section 1115A(d)(2)(C) of the Act related to the elements, parameters, scope, and duration of a model to apply to the methodology used to assess the quality of care furnished by a model participant, as this is an element of the design of an Innovation Center model. We did not intend to preclude from review a determination regarding how that methodology is applied to a particular model participant. We are therefore modifying the text of § 512.170(c)(2) to refer to the methodology used by CMS to assess of the quality of care furnished by the model participant. For the same reason, we are modifying the text of § 512.170(c)(3) to similarly refer to the methodology used by CMS to attribute model beneficiaries to the model participant, if applicable. We believe it is appropriate to codify the statutory limitations on judicial and administrative review in our regulations and that our interpretations thereof, with these clarifications, are consistent with the statute. We also agree with the commenter's assertion that model participants should be allowed to challenge adverse assessments that are not precluded, and have laid out a policy specifically allowing this for the RO Model (section III.C.12. of this final rule) and the ETC Model (section IV.C.5.h. of this final rule).

After considering public comments, we are finalizing our proposals on limitations on review in our regulation at § 512.170 with the modifications described previously in this final rule.

L. Miscellaneous Provisions on Bankruptcy and Other Notifications

Models currently being tested by the Innovation Center usually have a defined period of performance, but final payment under the model may occur long after the end of this performance period. In some cases, a model participant may owe money to CMS. As we noted in the proposed rule, we recognize that the legal entity that is the model participant may experience significant organizational or financial changes during and even after the period of performance for an Innovation Center model. To protect the integrity of the Innovation Center models and Medicare funds, we proposed a number of provisions to ensure that CMS is made aware of events that could affect a model participant's ability to perform its obligations under the Innovation Center model, including the payment of any monies owed to CMS.

First, in § 512.180(a), we proposed that a model participant must promptly notify CMS and the local U.S. Attorney Office if it files a bankruptcy petition, whether voluntary or involuntary. Because final payment may not take place until after the model participant ceases active participation in the Innovation Center model or any other model in which the model participant is participating or has participated (for example, because the period of performance for the model ends, or the model participant is no longer eligible to participate in the model), we further proposed that this requirement would apply until final payment has been made by either CMS or such model participant under the terms of each model in which the model participant is participating or has participated and all administrative or judicial review proceedings relating to any payments under such models have been fully and finally resolved.

Specifically, we proposed that the notice of the bankruptcy must be sent by certified mail within 5 days after the bankruptcy petition has been filed and that the notice must contain a copy of the filed bankruptcy petition (including its docket number) and a list of all models tested under section 1115A of the Act in which the model participant is participating or has participated. To minimize the burden on model participants, while ensuring that CMS obtains the information necessary from model participants undergoing bankruptcy, we proposed that the list need not identify a model in which the model participant participated if final payment has been made under the terms of the model and all administrative or judicial review proceedings regarding model-specific payments between the model participant and CMS have been fully and finally resolved with respect to that model. We proposed that the notice to CMS must be addressed to the CMS Office of Financial Management, Mailstop C3–01–24, 7500 Security Boulevard, Baltimore, Maryland 21244 or to such other address as may be specified for purposes of receiving such notices on the CMS website.

As we noted in the proposed rule, by requiring the submission of the filed bankruptcy petition, CMS would obtain information necessary to protect its interests, including the date on which the bankruptcy petition was filed and the identity of the court in which the bankruptcy petition was filed. We recognize that such notices may already be required by existing law, but CMS often does not receive them in a timely fashion, and they may not specifically identify the models in which the individual or entity is participating or has participated. The failure to receive such notices on a timely basis can prevent CMS from asserting a claim in the bankruptcy case. We are particularly concerned that a model participant may not furnish notice of bankruptcy after it has completed its performance in a model, but before final payment has been made or administrative or judicial proceedings have been resolved. As we noted in the proposed rule, we believe our proposal is necessary to protect the financial integrity of the Innovation Center models and the Medicare Trust Funds. Because bankruptcies filed by individuals and entities that owe CMS money are generally handled by CMS regional offices, we stated that we were considering (and we solicited comment on) whether we should require model participants to furnish notice of bankruptcy to the local CMS regional office instead of, or in addition to, the Baltimore headquarters.

Second, in § 512.180(b), we proposed that the model participant, including model participants that are individuals, would have to provide written notice to CMS at least 60 days before any change in the model participant's legal name became effective. The notice of legal name change would have to be in a form and manner specified by CMS and include a copy of the legal document effecting the name change, which would have to be authenticated by the appropriate state official. As we stated in the proposed rule, the purpose of this notice requirement is to ensure the accuracy of our records regarding the identity of model participants and the entities to whom model-specific payments should be made or against whom payments should be demanded or recouped. We solicited comment on the typical procedure for effectuating a legal entity's name change and whether 60 days advance notice of such a change is feasible. Alternatively, we considered requiring notice to be furnished promptly (for example, within 30 days) after a change in legal name has become

effective. We solicited public comment on this alternative approach.

Third, in § 512.180(c), we proposed that the model participant would have to provide written notice to CMS at least 90 days before the effective date of any change in control. We proposed that the written notification must be furnished in a form and manner specified by CMS. For purposes of this notice obligation, we proposed that a ''change in control'' would mean any of the following: (1) The acquisition by any ''person'' (as such term is used in sections 13(d) and 14(d) of the Securities Exchange Act of 1934) of beneficial ownership (within the meaning of Rule 13d–3 promulgated under the Securities Exchange Act of 1934), of beneficial ownership (within the meaning of Rule 13d–3 promulgated under the Securities Exchange Act of 1934), directly or indirectly, of voting securities of the model participant representing more than 50 percent of the model participant's outstanding voting securities or rights to acquire such securities; (2) the acquisition of the model participant by any individual or entity; (3) the sale, lease, exchange or other transfer (in one transaction or a series of transactions) of all or substantially all of the assets of the model participant; or (4) the approval and completion of a plan of liquidation of the model participant, or an agreement for the sale or liquidation of the model participant. We noted in the proposed rule that the proposed requirement and definition of change in control are the same requirements and definition used in certain models that are currently being tested under section 1115A authority. We further noted that we believe this notice requirement is necessary to ensure the accuracy of our records regarding the identity of model participants and to ensure that we pay and seek payment from the correct entity. For this reason, we proposed that if CMS determined in accordance with § 512.160(a)(5) that a model participant's change in control would present a program integrity risk, CMS could take remedial action against the model participant under § 512.160(b). In addition, to ensure payment of amounts owed to CMS, we proposed that CMS may require immediate reconciliation and payment of all monies owed to CMS by a model participant that is subject to a change in control.

We solicited comments on these proposals. Also, we solicited comment as to whether the requirement to provide notice regarding changes in legal name and changes in control are necessary, or are already covered by existing reporting requirements for Medicare-enrolled providers and suppliers. In this section of this final rule, we summarize and respond to the public comments received on the proposal to require model participants to notify CMS of a change in legal name.

Comment: A few commenters generally supported the proposed procedure for notifying CMS of a name change. However, the commenters noted that they would prefer that the model participant be required to notify CMS 30 days after a legal name change, instead of 60 days before, as they believe that would reduce the administrative burden of complying with the proposed requirement for model participants.

Response: We solicited comment on whether to require the model participant to provide CMS with written notice 30 days after a legal name change. We agree with the commenters' assertion that notifying CMS of a legal name change 30 days after the name change occurs would be less burdensome for model participants. We further believe that written notice received within 30 days after the name change occurs would provide CMS with sufficient notice to ensure the accuracy of our records.

We did not receive comments regarding our proposals to require the model participant to notify CMS regarding bankruptcy or a change in control. After considering public comments, we are finalizing our proposals on bankruptcy and other notifications in our regulation at § 512.180, with modification to § 512.180(b) to change the timeline under which a model participant must provide written notice to CMS regarding a legal name change from 60 days in advance of a legal name change to 30 days after the legal name change occurs. We have also made a non-substantive modification to our regulation text at § 512.110 to correct a drafting error in the final rule that removes the duplicative text from the definition of change in control.

III. Radiation Oncology Model

A. Introduction

As discussed in the proposed rule (84 FR 34478), we proposed to establish a mandatory Radiation Oncology Model (RO Model), referred to throughout section III. of this final rule as ''the Model'', to test whether prospective episode-based payments for radiotherapy (RT) services,[4] (also referred to as radiation therapy services) will reduce Medicare program expenditures and preserve or enhance quality of care for beneficiaries. As radiation oncology is highly technical and furnished in well-defined episodes, and because patient comorbidities generally do not influence treatment delivery decisions, as we stated in the proposed rule, we believe that radiation oncology is well-suited for testing a prospective episode payment model. Under the RO Model proposals, Medicare would pay participating providers and suppliers a site-neutral, episode-based payment for specified professional and technical RT services furnished during a 90-day episode to Medicare fee-for-service (FFS) beneficiaries diagnosed with certain cancer types. We proposed that the base payment amounts for RT services included in the Model would be the same for hospital outpatient departments (HOPDs) and freestanding radiation therapy centers. We proposed that the performance period for the RO Model would be 5 performance years (PYs), beginning in 2020, and ending December 31, 2024, with final data submission of clinical data elements and quality measures in 2025 to account for episodes ending in 2024 (84 FR 34493 through 34503).

We included the following proposals for the Model in the proposed rule: (1) The scope of the Model, including required participants and episodes under the Model test; (2) the pricing methodology under the Model and necessary Medicare program policy waivers to implement such methodology; (3) the quality measures selected for the Model for purposes of scoring a participant's quality performance; (4) the process for payment reconciliation; and (5) data collection and sharing. We solicited comments on these proposals.

B. Background

1. Overview

CMS is committed to promoting higher quality of care and improving outcomes for Medicare beneficiaries while reducing costs. Accordingly, as part of that effort, we have in recent years undertaken a number of initiatives to improve cancer treatment, most notably with our Oncology Care Model (OCM). As we stated in the proposed rule (84 FR 34490), we believe that a model in radiation oncology will further these efforts to improve cancer care for

[4] *Radiotherapy (RT) services* (also referred to as radiation therapy services) are services associated with cancer treatment that use high doses of radiation to kill cancer cells and shrink tumors, and encompass treatment consultation, treatment planning, technical preparation and special services (simulation), treatment delivery, and treatment management.

Medicare beneficiaries and reduce Medicare expenditures.

RT is a common treatment for nearly two thirds of all patients undergoing cancer treatment [5] [6] and is typically furnished by a radiation oncologist. As we discussed in the proposed rule (84 FR 34490), we analyzed Medicare FFS claims between January 1, 2015, and December 31, 2017, to examine several aspects (including but not limited to modalities, number of fractions, length of episodes, Medicare payments and sites of service, as described in this section) of radiation services furnished to Medicare beneficiaries during that period. We used HOPD and Medicare Physician Fee Schedule (PFS) claims, accessed through CMS' Chronic Conditions Data Warehouse (CCW), to identify all FFS beneficiaries who received any radiation treatment delivery services within that 3-year period. These radiation treatment delivery services included various types of modalities.[7] Such modalities included external beam radiotherapy (such as 3-dimensional conformal radiotherapy (3DCRT)), intensity-modulated radiotherapy (IMRT), stereotactic radiosurgery (SRS), stereotactic body radiotherapy (SBRT), and proton beam therapy (PBT); intraoperative radiotherapy (IORT); image-guided radiation therapy (IGRT); and brachytherapy. As discussed in the proposed rule (84 FR 34490), we conducted several analyses of radiation treatment patterns using that group of beneficiaries and their associated Medicare Part A and Medicare Part B claims.

Our analysis, as discussed in the proposed rule (84 FR 34490), showed that from January 1, 2015 through December 31, 2017, HOPDs furnished 64 percent of episodes nationally, while freestanding radiation therapy centers furnished the remaining 36 percent of episodes. In the proposed rule we stated that our intention was to make this data publically accessible in a summary-level, de-identified file titled the ''RO Episode File (2015–2017),'' on the RO Model's website, and we posted it for commenters' reference in conjunction with the publication of the proposed rule. In the proposed rule (84 FR 34490), we discussed that our analysis also showed that, on average, freestanding radiation therapy centers furnished (and billed for) a higher volume of RT services within such episodes than did HOPDs. Based on our analysis of Medicare FFS claims data from that time period, episodes of care in which RT was furnished at a freestanding radiation therapy center were, on average, paid approximately $1,800 (or 11 percent) more by Medicare than those episodes of care where RT was furnished at an HOPD. As we stated in the proposed rule (84 FR 34490), we are not aware of any clinical rationale that explains these differences, which persisted after controlling for diagnosis, patient case mix (to the extent possible using data available in claims), geography, and other factors. These differences also persisted even though Medicare payments are lower per unit in freestanding radiation therapy centers than in HOPDs. Upon further analysis, as we noted in the proposed rule (84 FR 34490), we observed that freestanding radiation therapy centers use more IMRT, a type of RT associated with higher Medicare payments, and perform more fractions (that is, more RT treatments) than HOPDs.

2. Site-Neutral Payments

Under Medicare FFS, RT services furnished in a freestanding radiation therapy center are paid under the Medicare PFS at the non-facility rate including payment for the professional and technical aspects of the services. For RT services furnished in an outpatient department of a hospital, the facility services are paid under the Hospital Outpatient Prospective Payment System (OPPS) and the professional component of the services are paid under the PFS. As we discussed in the proposed rule (84 FR 34490 through 34491), differences in the underlying rate-setting methodologies used in the OPPS and PFS to establish payment for RT services in the HOPD and in the freestanding radiation therapy centers respectively help to explain why the payment rate for the same RT service could be different depending on the setting in which it is furnished. This difference in payment rate, which is commonly referred to as the site-of-service payment differential, may incentivize Medicare providers and suppliers to deliver RT services in one setting over another, even though the actual treatment and care received by Medicare beneficiaries for a given modality is the same in both settings. We proposed to test a site-neutral payment in the RO Model rather than implementing a payment adjustment in the OPPS or PFS because—

- The Secretary of Health and Human Services has limited authority to adjust payments only within established payment methodologies such as under section 1848 of the Act governing the PFS;
- The Practice Expense (PE) component of the PFS is determined based on resource inputs (labor, equipment, and supplies) and input price estimates from entities paid under the PFS only, which means the PE calculation does not consider HOPD cost data that the RO Model proposed to use as the basis for national base rates;
- Further, the PE methodology itself calculates a PE amount for each service relative to all of the other services paid under the PFS in a budget neutral manner and consistent with estimates of appropriate division of PFS payments between PE, physician work, and malpractice resource costs; and
- Under the PFS and OPPS, the same payment rate applies for a service, irrespective of the diagnosis, whereas the proposed rule for the RO Model would establish different payments by cancer type.
- Neither the PFS nor OPPS payment systems would allow flexibility in testing new and comparable approaches to value-based payment outside of statutory quality reporting programs.

As we stated in the proposed rule (84 FR 34490 through 34491), we believe a site-neutral payment policy will address the site-of-service payment differential that exists under the OPPS and PFS by establishing a common payment amount to pay for the same services regardless of where they are furnished. In addition, we stated our belief that site-neutral payments would offer RT providers and RT suppliers more certainty regarding the pricing of RT services and remove incentives that promote the provision of RT services at one site of service over another. The RO Model is designed to test these assumptions regarding site-neutrality.

3. Aligning Payments to Quality and Value, Rather Than Volume

As discussed in the proposed rule (84 FR 34491), for some cancer types, stages, and characteristics, a shorter course of RT treatment with more radiation per fraction may be appropriate. For example, several randomized controlled trials have shown that shorter treatment schedules for low-risk breast cancer yield similar cancer control and cosmetic outcomes as longer treatment schedules.[8] [9] [10] [11] As

[6] 2012/13 Radiation Therapy Benchmark Report, IMV Medical Information Division, Inc. (2013).

[7] Modality refers to various types of radiotherapy, which are commonly classified by the type of radiation particles used to deliver treatment.

[8] Whelan, T.J. et al. Long-term Results of Hypofractionated Radiation Therapy for Breast Cancer. N. Engl. J. Med. 2010 Feb. 11; 362(6):513–20. *https://www.ncbi.nlm.nih.gov/pubmed/20147717.*

another example, research has shown that radiation oncologists may split treatment for bone metastases into 5 to 10 fractions, even though research indicates that one fraction is often sufficient.[12] [13] [14] [15] In addition, recent clinical trials have demonstrated that, for some patients in clinical trials with low- and intermediate-risk prostate cancer, courses of RT lasting 4 to 6 weeks lead to similar cancer control and toxicity as longer courses of RT lasting 7 to 8 weeks.[16] [17]

Based on our review of claims data, we discussed our belief that the current Medicare FFS payment systems may incentivize selection of a treatment plan with a high volume of services over another medically appropriate treatment plan that requires fewer services. Each time a patient requires radiation, providers and suppliers can bill for RT services and an array of necessary planning services to make the treatment successful.[18] We discussed that this structure may incentivize providers and suppliers to furnish longer courses of RT because they are paid more for furnishing more services. Importantly, however, the latest clinical evidence suggests that shorter courses of RT for certain types of cancer would be equally effective and could improve the patient experience, potentially reduce cost for the Medicare program, and lead to reductions in beneficiary cost-sharing.

As discussed in the proposed rule (84 FR 34491), there is also some indication that the latest evidence-based guidelines are not incorporated into practices' treatment protocols in a timely manner.[19] For example, while breast cancer guidelines have since 2008 recommended that radiation oncologists use shorter courses of treatment for lower-risk breast cancer (3 weeks versus 5 weeks), an analysis found that, as of 2017, only half of commercially insured patients actually received the shorter course of treatment.[20]

4. CMS Coding and Payment Challenges

In the proposed rule (84 FR 34491 through 34492) we identified several coding and payment challenges for RT services. Under the PFS, payment is set for each service using resource-based relative value units (RVUs). The RVUs have three components: Clinician work (Work), practice expense (PE), and professional liability or malpractice insurance expense (MP). In setting the PE RVUs for services, we rely heavily on voluntary submission of pricing information for supplies and equipment, and we have limited means to validate the accuracy of the submitted information. As a result, it is difficult to establish the cost of expensive capital equipment, such as a linear accelerator, in order to determine PE RVUs for physicians' services that use such equipment.[21]

Further, as we discussed in the proposed rule (84 FR 34492), we examined RT services and their corresponding codes under our potentially misvalued codes initiative based on their high volume and increasing use of new technologies. Specifically, we reviewed codes for RT services for Calendar Years (CYs) 2009, 2012, 2013, and 2015 as potentially misvalued services. In general, when a code is identified as potentially misvalued, we use notice and comment rulemaking to propose and finalize the code as misvalued, and then review the Work and PE RVU inputs for the code. As a result of the review, we may engage in further rulemaking to adjust the Work or PE inputs either upward or downward. The criteria for identifying potentially misvalued codes are set forth in section 1848(c)(2)(K)(ii) of the Act.

As described in the proposed rule (84 FR 34492), through annual rulemaking for the PFS, we review and adjust values for potentially misvalued services, and also establish values for new and revised codes. We establish Work and PE RVU inputs for new, revised, and potentially misvalued codes based on a review of information that generally includes, but is not limited to, recommendations received from the American Medical Association's RVS Update Committee (AMA/RUC), Health Care Professional Advisory Committee (HCPAC), Medicare Payment Advisory Commission (MedPAC), and other public commenters; medical literature and comparative databases; a comparison of the work for other codes within the PFS; and consultation with other physicians and health care professionals within CMS and other federal government agencies. We also consider the methodology and data used to develop the recommendations submitted to us by the RUC and other public commenters, and the rationale for their recommendations.

Through the annual rulemaking process previously described, we have reviewed and finalized payment rates for several RT codes over the past few years. The American Medical Association identified radiation treatment codes for review because of site of service anomalies. We first identified these codes as potentially misvalued services during CY 2012 under a screen called ''Services with Stand-Alone PE Procedure Time.'' We observed significant discrepancies between the 60-minute procedure time assumptions for IMRT and public information which suggested that the procedure typically took between 5 and 30 minutes. In CY 2015, the American Medical Association CPT® Editorial Panel revised the entire code set that describes RT delivery. CMS proposed values for these services in the CY 2016 proposed rule but, due to challenges in revaluing the new code set, finalized the use of G-codes that we established to

[21] CY 2014 PFS final rule with comment period (78 FR 43296, 43286 through 43289, and 43302 through 43311).

largely mirror the previous radiation treatment coding structure.[22] The Patient Access and Medicare Protection Act (PAMPA) (Pub. L. 114–115), enacted on December 28, 2015, addressed payment for certain RT delivery and related imaging services under the PFS, and the Bipartisan Budget Act (BBA) of 2018 (Pub. L. 115–123) required the PFS to use the same service inputs for these codes as existed in 2016 for CY 2017, 2018, and 2019. (The PAMPA and BBA of 2018 are discussed in detail in this rule).

Despite the previously discussed challenges related to information used to establish payment rates for RT services, the proposed rule (84 FR 34492) noted that we have systematically attempted to improve the accuracy of payment for these codes under the PFS. While the potentially misvalued code review process is essential to the PFS, some stakeholders have expressed concern that changes in Work and PE RVUs have led to fluctuations in payment rates. Occasionally, changes in PE RVUs for one or more CPT® codes occur outside of the misvalued code review cycle if there are updates to the equipment and supply pricing. Any changes to CPT® code valuations, including supply and equipment pricing changes, are subject to public comment and review.

The proposed rule further explained that although the same code sets generally are used for purposes of the PFS and OPPS, there are differences between the codes used to describe RT services under the PFS and the OPPS, and those in commercial use more broadly (84 FR 34492). We continue to use some CMS-specific coding, or HCPCS codes, in billing and payment for RT services under the PFS, while we generally use CPT® codes under the OPPS. As a result of coding and other differences, these payment systems utilize different payment rates and reporting rules for the same services, which contribute to site-of-service payment differentials. These differences in payment systems can create confusion for RT providers and RT suppliers, particularly when they furnish services in both freestanding radiation therapy centers and HOPDs.

Finally, as noted in the proposed rule (84 FR 34492), there are coding and payment challenges specific to freestanding radiation therapy centers. Through the annual PFS rulemaking process, we receive comments from stakeholders representing freestanding radiation therapy centers and physicians who furnish services in freestanding radiation therapy centers. In recent years, these stakeholder comments have noted the differences and complexity in payment rates and policies for RT services between the PFS and OPPS; expressing particular concerns about differences in payment for RT services furnished in freestanding radiation therapy centers and HOPDs despite the fact that the fixed, capital costs associated with linear accelerators that are used to furnish these services do not differ across settings; and raising certain perceived deficiencies in the PFS rate-setting methodology as it applies to RT services delivered in freestanding radiation therapy centers.[23] It is also important to note that even if we were able to obtain better pricing information for inputs, PFS rates are developed to maintain relativity among other PFS office-based services, and generally without consideration of OPPS payment rates.

As previously noted, the PAMPA addressed payment for certain RT delivery and related imaging services under the PFS. Specifically, section 3 of the PAMPA directed CMS to maintain the 2016 code definitions, Work RVU inputs, and PE RVU inputs for 2017 and 2018 for certain RT delivery and related imaging services; prohibited those codes from being considered as potentially misvalued codes for 2017 and 2018; and directed the Secretary to submit a Report to Congress on development of an episodic alternative payment model (APM) for Medicare payment for radiation therapy services furnished in non-facility settings. Section 51009 of the BBA of 2018 extended these payment policies through 2019. In November 2017, we submitted the Report to Congress as required by section 3(b) of the PAMPA.[24] In the report, we discussed the current status of RT services and payment, and reviewed model design considerations for a potential APM for RT services.

In the proposed rule (84 FR 34493), we described how the Innovation Center, in preparing the Report to Congress, conducted an environmental scan of current evidence and held a public listening session followed by an opportunity for RT stakeholders to submit written comments about a potential APM. A review of the applicable evidence cited in the Report to Congress demonstrated that episode payment models can be a tool for improving quality of care and reducing expenditures. Episode payment models pay a fixed price based on the expected costs to deliver a bundle of services for a clinically defined episode of care. In the proposed rule, we stated our belief that radiation oncology is a promising area of health care for episode payments, in part, based on the findings in the Report to Congress. While the report discusses several options for an APM, in the proposed rule, we proposed what the Innovation Center has determined to be the best design for testing an episodic APM for RT services.

The following is a summary of comments we received on the proposed goals of the RO Model and the issues addressed in section III.B. of the proposed rule and our responses to these comments:

Comment: Many commenters supported most aspects of the proposed RO Model and expressed commitment to fully participating in a value-based care model. A commenter recommended that CMS finalize the RO Model as mandatory, site-neutral, and inclusive of all proposed modalities. Several commenters expressed their support and encouraged CMS to have value-based programs that allow health care providers, through shared decision-making with their patients, to determine appropriate and convenient delivery options. A few commenters noted appreciation for CMS' commitment to providing participants with stable rates. Some commenters expressed support for clinical episode-related payments and the removal of payment on a per fraction basis. A few of these commenters also expressed their support of the transition to value-based care solutions.

Response: We thank these commenters for their support of our efforts to move forward with the RO Model. We are finalizing the RO Model as mandatory (see section III.C.3.a. of this final rule) with the modification of a low volume opt-out (see section III.C.3.c. of this final rule), site-neutral (see section III.C.6.c. of this final rule), and inclusive of all proposed modalities except for IORT (see section III.C.5.d. of this final rule).

Comment: A commenter expressed concern that CMS has not provided enough evidence to indicate that RT services for cancer are over utilized and to support the application of a standard

[23] *See generally,* CY 2018 PFS final rule with comment period, 82 FR 52976; CY 2015 PFS final rule with comment period, 79 FR 67547; CY 2014 PFS final rule with comment period, 78 FR 43296.

[24] United States Department of Health and Human Services Report to Congress: *Episodic Alternative Payment Model for Radiation Therapy Services.* (Nov. 2019). *https://innovation.cms.gov/resources/radiationapm-pubforum.html.*

set of RT services for cancer patients through a bundled payment program.

Response: We understand this commenter's concerns. However, we disagree with this commenter. We have performed extensive research, and we have received numerous stakeholders' requests to create an alternative payment model in the radiotherapy space. For more information on our research and rationale, please see sections III.B.3. and III.B.4. of this final rule, and 84 FR 34491 through 34493 of the proposed rule.

Comment: A commenter suggested that CMS allow RT providers and RT suppliers to select appropriate radiation modalities based on nationally recognized clinical guidelines to ensure that beneficiaries receive evidence-based care.

Response: The Model encourages the use of nationally recognized, evidence-based clinical treatment guidelines. We will monitor the use of guidelines during the Model.

Comment: A commenter requested that CMS take on more risk sharing, reduce the savings targets, reimburse administrative costs of participation, and have absolute scoring and setting or thresholds for payment linked to quality measures.

Response: We have addressed these comments throughout the applicable sections of this final rule, including in, but not limited to, sections III.C.6., C.6.f, and C.8. of this final rule.

Comment: A commenter expressed concern for overall payment stability because disruptions to payment may have unintended consequences such as the closure of radiotherapy centers which could result in a loss of access to care for Medicare beneficiaries.

Response: One of the objectives of this Model is to provide site-neutral, more predictable payments to RO participants. We believe that the payment methodology as finalized in section III.C.6. of this final rule accomplishes this goal of providing more predictable or foreseeable payments to RO participants. We further believe that having more predictable payments may mitigate closures of viable radiotherapy centers. Additionally, we will be monitoring for beneficiary access issues throughout the Model (see section III.C.14).

Comment: A few commenters raised concerns that the lack of telehealth discussion in this Model meant that such connected health technologies would not have a role in the RO Model. A commenter requested that CMS utilize every opportunity to remove barriers to the use of advanced technologies within a connected healthcare system.

Response: Although several Innovation Center models and programs include the use of telehealth services, at this time, there are no permanent Medicare telehealth codes included in the list of included RT services in section III.C.5.c. We note that HCPCS Code 77427 has been temporarily added to the list of Medicare telehealth codes for the public health emergency (PHE) for the COVID–19 pandemic. RT services can only be furnished via telehealth to the extent permitted under the Medicare telehealth coverage and payment rules. Participants can continue to furnish telehealth services in accordance with current coverage and payment guidelines. We are taking this comment into consideration for future rulemaking.

Comment: Some commenters expressed concerns with the episode-based payment concept and indicated that such programs may put patients' safety at risk (for example, increased radiation exposure to healthy tissues). One of these commenters requested that CMS prioritize total-cost-of-care models over other episode-based payment programs.

Response: We believe that the RO Model will best meet its objectives of delivering site-neutral payments for included radiation therapy modalities through episode-based payments rather than total-cost-of-care because radiation oncology is highly technical and furnished in well-defined episodes, and because patient comorbidities generally do not influence treatment delivery decisions. We also believe that providers and suppliers will not compromise their patients' safety or deviate from the standard practice of care in an attempt to ''game'' the system. We believe that the monitoring and compliance requirements will mitigate gaming by RO participants. In addition, we believe that there are sufficient safeguards in place to prevent providers and suppliers from engaging in acts that will harm their patients, including but not limited to the requirements to actively participate with an AHRQ-listed patient safety organization (PSO) and provide Peer Review (audit and feedback on treatment plans) (see section III.C.14).

Comment: Several commenters requested that the site neutral payment policy be abandoned. A few commenters stated that a site neutral payment approach assumes that care is equivalent in all settings. A commenter argued that the site neutral policy ignores the higher cost of providing services in an HOPD setting as compared to the physician office setting of freestanding radiation therapy centers as HOPDs provide wraparound services, such as translators and other social services that are not otherwise billable, and face requirements set by regulators and accreditors to which physician offices are not subject.

Response: As we documented in the proposed rule and in the November 2017 Report to Congress (see section III.B.4 of the proposed rule at 84 FR 34491 through 34493 and this final rule for background on the November 2017 Report to Congress), differences in the underlying methodologies used in the OPPS and PFS for rate setting often result in differences in the payment rate for the same RT service depending on whether the service is furnished in a freestanding radiation therapy center paid under the PFS, or an HOPD paid under the OPPS. We refer to this as the site-of-service payment differential, and we believe that such differentials between HOPDs and freestanding radiation therapy centers are unwarranted because the actual treatment and care received by patients for a given modality is the same in each setting. Therefore, we are using HOPD payment rates to create the RO Model national base rates. For a detailed discussion of this Model's Pricing Methodology see section III.C.6 of this final rule.

Comment: A commenter stated that CMS does not have authority to implement site-neutral payments and is using section 1115A to adopt a policy preference that CMS otherwise could not adopt.

Response: We disagree with this commenter, and believe that we are operating within our authority. Section 1115A of the Social Security Act authorizes the Secretary to test innovative payment and service delivery models expected to reduce program expenditures while preserving or enhancing the quality of care furnished to Medicare, Medicaid, and Children's Health Insurance Program (CHIP) beneficiaries. Section 1115A(b) provides a non-exhaustive list of models to be tested. Under this authority, CMS has broad discretion to design its payment and service delivery models. For more discussion about CMS' statutory authority to conduct the RO Model under section 1115A of the Act, please reference section III.C.3.a of this final rule.

Comment: A few commenters requested that we abandon the proposal to have site-neutral payments because different sites of care have different operating costs.

Response: We believe that site-neutral payment is a necessary component of the RO Model test to avoid establishing an incentive for RO participants to deliver RT services in one setting over another, even though the actual treatment and care received by Medicare beneficiaries for a given modality is the same in both settings.

Comment: A commenter stated that the proposed RO Model's site-neutral payments do not go far enough and that these payments should be applied to all providers and suppliers, regardless of the Core-Based Statistical Areas (CBSAs) in which they furnish RT services. This commenter also does not believe that a 5-year test is necessary to conclude that payment rates for RT services under the OPPS and MPFS should be equalized.

Response: We agree that payment rates under the RO Model should be site-neutral, and are proceeding with the 5-year test of this Model, with CBSAs selected for participation to understand the impact of site-neutral payments on cost and quality of care. We believe that the Model performance period of 5 years, as opposed to a shorter duration, is necessary to obtain sufficient data to compute a reliable impact estimate and to analyze the data from the Model to determine next steps regarding potential expansion or extension of the Model. Further, we believe that a test period of 5 years is necessary to address and mitigate any potential implementation issues or unintended consequences. For a discussion of the Model performance period, please see section III.C.1. of this final rule.

Comment: A commenter requested clarification on how the RO Model will impact the budget neutrality requirements under the OPPS and PFS.

Response: With respect to the budget neutrality requirements under the Medicare Physician Fee Schedule (PFS) and Outpatient Prospective Payment System (OPPS), absent any further adjustment, we would expect the RO Model to pull utilization out of the traditional fee-for-service payment systems. The Center for Medicare will monitor this issue through the duration of the Model test and account for utilization for services included in the RO Model under the PFS and OPPS as appropriate. In essence, we believe that this Model will, in time, reduce program expenditures while preserving or enhancing the quality of care furnished to beneficiaries.

Comment: A couple of commenters opposed paying for radiotherapy services based on the proposed prospective payment approach in the RO Model, and instead suggested that payment continue to be made on a fee-for-service basis, with a reduction in the reimbursement for fractions that are beyond the average for a particular diagnosis.

Response: The commenters' suggested approach, as we understand it, would require ongoing adjustments to fee-for-service payments based on changing averages for a particular diagnosis. We believe that the proposed prospective episode-based payment tested under this Model would be preferable as this approach will test whether a modality agnostic, bundled payment will lead to more appropriate courses of radiation treatment for certain cancer types.

Comment: A commenter urged CMS to establish policies that encourage participants' investment in care transformation to achieve the agency's long-term goal of improving quality of care while reducing costs.

Response: We believe that this Model embraces our goal of improving quality of care while reducing costs (see section III.C.14 of this final rule for the Model's monitoring and compliance requirements). We also believe that this Model, as finalized, will encourage RO participants to transform their care.

Comment: A commenter voiced concern that participants with fewer resources would attempt high dose hypofractionation without adequate equipment and that the proposed rule did not have a mechanism in place to test the ''fitness'' of the hypofractionation equipment.

Response: At this time, we are unable to perform such a test as we do not believe that testing equipment falls within the Innovation Center's authority to test payment and service delivery models. However, we will be using Peer Review and patient surveys, among other monitoring measures (see section III.C.14 of this final rule), to assess whether RO participants are engaging in such egregious behaviors.

Comment: A few commenters discussed concerns with hypofractionation. These commenters generally noted that data supporting fractionation is limited across cancer types. A commenter used prostate cancer as an example, concluding that the RO Model might make hypofractionated treatment the only economically viable option for treating men with low- and intermediate-risk prostate cancer. This commenter believed such a move would be premature, as the benefits of hypofractionation for prostate cancer are unclear.

Another commenter highlighted that testing whether hypofractionation lowers costs and improves quality will require providers and suppliers to upgrade their technology to provide lower and more precise fractions of RT. For this reason, the commenter recommended that CMS publish the science underlying its belief that hypofractionation would be appropriate for this range of cancer types.

A commenter shared specific recommendations and evidence for RT hypofractionation in breast cancer, prostate cancer, head and neck cancer, and Central Nervous System (CNS) cancers, as well as in bone and brain metastases.

A commenter emphasized that hypofractionated treatments may increase acute toxicity and that patients with pre-existing conditions like ulcerative colitis or collagen-vascular disorder are poor candidates for these types of hypofractionated treatments.

Response: We thank the commenters for this information. It was not CMS' intent to encourage hypofractionation specifically. It was our intent to use hypofractionation as an example of a treatment option often cited in nationally recognized, evidence-based guidelines. We rely on Medicare providers and suppliers to furnish appropriate care to our beneficiaries. As finalized in section and III.C.14 and III.C.16, we will monitor for unintended consequences of the RO Model, and such monitoring could include utilization patterns regarding fractions.

Comment: A commenter expressed concern with the high cost of treating patients in a rural treatment facility.

Response: We believe that the policies as finalized in this final rule will help to address this commenter's concerns. In particular, we refer readers to section III.C.3.c of this final rule for the optional opt-out for low-volume RO participants, as well as section III.C.3.d that describes how CBSAs exclude extreme rural geographic areas, and section III.C.3.c that discusses the exclusion of critical access hospitals.

Comment: A commenter expressed the desire to maintain current valuations for Radiation Therapy G-codes under the PFS (HCPCS Codes G6001, G6002, G6003, G6004, G6005, G6006, G6007, G6008, G6009, G6010, G6011, G6012, G6013, G6014, G6015, G6016 and G6017), and requested that these valuations be stable throughout the Model.

Response: The purpose of the RO Model is to test whether prospective episode payments in lieu of traditional FFS payments for RT services would reduce Medicare expenditures and preserve or enhance quality of care for beneficiaries. Additionally, the RO Model is designed to test a site-neutral

and modality agnostic approach to payment for RT services. Therefore, we do not believe that continuing to make payment based on the current valuations for certain G-codes under the PFS aligns with the intent of this Model test. Please refer to section III.C.5.c of this final rule for a discussion of our included RT services as well as section III.C.6 for details regarding the specific RO Model codes that will be used during this Model and how their value will be calculated in each performance year.

C. RO Model Regulations

In the proposed rule at 84 FR 34493, we discussed our policies for the RO Model, including model-specific definitions and the general framework for implementing the RO Model. We defined ''performance year'' (PY) as the 12-month period beginning on January 1 and ending on December 31 of each year during the Model performance period. We proposed to codify the term ''performance year'' at § 512.205 of our regulations.

In the proposed rule, we included our proposed policies for each of the following: (1) The scope of the RO Model, including the RO participants, beneficiary population, and episodes that would be included in the test; (2) the pricing methodology under the Model and the Medicare program policy waivers necessary to implement such methodology; (3) the measure selection for the Model, including performance scoring methodology and applying quality to payment; (4) the process for payment reconciliation; and (5) data collection and sharing.

In the proposed rule, we discussed codifying RO Model policies at 42 CFR part 512, subpart B (§§ 512.200 through 512.290). In addition, as we explained in section II. of the proposed rule, the general provisions codified at §§ 512.100 through 512.180 would apply to the RO Model.

1. Model Performance Period

We proposed to test the RO Model for five PYs. We proposed to define ''Model performance period'' to mean January 1, 2020, the date the Model begins, through December 31, 2024, the last date during which episodes under the Model must be completed (84 FR 34493). Alternatively, we also considered delaying implementation to April 1, 2020 to give RO participants and CMS additional time to prepare. As we discussed, an April 2020 start date would only affect the length of PY1 which would be 9 months. All other PYs would be 12 months. For all episodes to be completed by December 31, 2024, we proposed that no new episodes may begin after October 3, 2024. We solicited public comments on the Model performance period and potential participants' ability to be ready to implement the RO Model by January 1, 2020. We also solicited comments on delaying the start of the Model performance period to April 1, 2020. The following is a summary of comments received on these proposals and our responses:

Comment: Many commenters provided feedback related to the Model's start date for the RO Model. Almost all of the commenters were opposed to the RO Model beginning on January 1, 2020. Some commenters recommended that CMS consider delaying the implementation of the Model until the alternatively proposed date of April 1, 2020, but many still believed that this date would not allow sufficient time to prepare. Commenters believed the April 1, 2020 Model's start date fell short of providing adequate preparation time for RO participants and proposed alternative start dates of late spring or early summer of 2020; July 1, 2020; August 1, 2020; October 1, 2020; and January 1, 2021. Commenters recommended a delay from when the RO Model is finalized or when the CBSAs selected for participation are announced to when it would begin; a couple of commenters recommended a 6-month delay, some commenters requested a 9-month delay, and a few commenters recommended a 12-month delay.

Response: We appreciate these commenters' concerns. Regarding commenters' use of the term ''implementation date,'' we understand commenters are referring to the beginning of the Model performance period. After reviewing these concerns, we agree with commenters that both the January 1, 2020 and April 1, 2020 start dates would not provide RO participants with sufficient time to operationalize the RO Model requirements. We intended to start the RO Model on July 1, 2020, but as we were completing this final rule, the United States began responding to an outbreak of respiratory disease, referred to as ''Coronavirus disease 2019'', which created a serious public health threat greatly impacting the U.S. health care system. The Secretary of the Department of Health and Human Services, Alex M. Azar II, declared a Public Health Emergency (''PHE'') on January 31, 2020, retroactively effective from January 27, 2020, to aid the nation's healthcare community in responding to the Coronavirus disease 2019 pandemic. On July 23, 2020, Secretary Azar renewed, effective July 25, 2020, the determination that a PHE exists which he had previously renewed on April 21, 2020.

In light of this unprecedented PHE, which continues to strain health care resources, we are finalizing the RO Model's Model performance period to begin on January 1, 2021. We understand that RO participants may have limited capacity to meet the RO Model requirements in 2020. To ensure that participation in the RO Model does not further strain RO participants' capacity, potentially hindering the delivery of safe and efficient health care to beneficiaries receiving RT services, we are finalizing the RO Model's Model performance period to begin on January 1, 2021.

We also believe that finalizing the Model performance period to begin January 1, 2021 will give RO participants sufficient time to learn and understand the RO billing requirements, train staff on new procedures, prepare to report on quality measures and clinical data elements, evaluate and adjust their budgets to prepare for the RO Model, and to allow EHR vendors to begin to develop mechanisms to comply with the Model.

Therefore, we are finalizing our proposed Model performance period at § 512.205, with the modification that the Model performance period begin on January 1, 2021, where each PY will consist of a 12-month period beginning on January 1 and ending on December 31. For all episodes to be completed by December 31, 2025, we are finalizing that no new RO episodes may begin after October 3, 2025. The 5-year performance period will run from January 1, 2021, through December 31, 2025.

Comment: One commenter recommended that CMS issue an Interim Final Rule with comment period, identify the selected RO Model participants in the Interim Final Rule, and ensure selected participants have at least six months of advanced notice before the RO Model begins.

Response: An interim final rule with comment period (''IFC'') would be inappropriate for purposes of finalizing the RO Model, as the proposed rule for the RO Model was published July 18, 2019 (84 FR 34478). Further, we believe the selected RO participants will have sufficient time to prepare for a Model performance period that begins January 1, 2021. To ensure that RO participants have sufficient preparation time, we are publishing this final rule more than 60 days prior to the beginning of the Model performance period.

Comment: Many commenters stated that RO participants would face considerable administrative burden, and would not have the appropriate time to plan for implementation until the final rule was issued—noting that 60 days or fewer would be insufficient. These commenters identified many reasons for requesting more time, including that EHR vendors would need ample time to design, develop, build, test, validate, and implement the software to allow RO participants to fulfill the requirements of the RO Model in a streamlined manner through their EHR platforms. Some of these commenters specified that it could take 12 to 18 months for EHR vendors to complete software development cycles. A few commenters pointed out that successful implementation of the RO Model would require many RO participants as well as software vendors to change EHR configurations, organizational policies, and end user workflows. A commenter stated that radiation oncology departments utilize specific electronic medical record and record-and-verification systems that are linked to their linear accelerators, and the vendors that support those information systems would not be prepared for implementation in January 2020. A commenter also stated that hospitals and other participants need time to plan for budget requests and approvals relating to equipment upgrades and IT support. A few commenters expressed concern that EHR vendors would need to develop and implement complicated changes to collect information on clinical data elements in a short period of time because CMS has yet to publish the Model-specific clinical data elements.

Response: We agree with commenters' concerns that EHR vendors will need more time to design, develop, build, test, validate, and implement the software to allow RO participants to fulfill the requirements of the RO Model in a streamlined manner through their EHR platforms. We understand that successful implementation of the RO Model will require many RO participants as well as software vendors to change EHR configurations, organizational policies, and end user workflows. We also understand that some radiation oncology departments utilize specific electronic medical record and record-and-verification systems that are linked to their linear accelerators, and the vendors that support those information systems would not have been prepared for implementation in January 2020. We further understand that hospitals and other participants need time to plan for budget requests and approvals relating to equipment upgrades and IT support. Based on these concerns and the PHE, we are finalizing the Model performance period to begin on January 1, 2021. The Model requirements, including measure data collection and the use of certified EHR technology (CEHRT), will begin in PY1 (which begins on January 1, 2021). We believe that the period of time between publication of this final rule and the beginning of the Model performance period will provide EHR vendors with sufficient time to implement the software that RO participants may need to adhere to the RO Model requirements.

Comment: Many commenters stated that RO participants would need adequate time to prepare for the new reporting of quality measures and clinical data required by the RO Model. These commenters stated that they would need considerable time to develop and build a specific clinical infrastructure to meet the increased quality data collection and reporting requirements mandated by the RO Model. A commenter emphasized that such a delay would be particularly important for those RO participants treating Medicare beneficiaries with prostate, breast, or lung cancers as well as bone and brain metastases, given CMS' proposal to require those participants to collect and report clinical information not currently available in claims or captured in the proposed quality measures.

Response: We understand commenters' concerns that they will need considerable time to develop and build a specific clinical infrastructure to meet the increased quality data collection and reporting requirements mandated by the RO Model. We also understand that RO participants and Medicare contractors in the CBSAs selected for participation would need adequate time to prepare for the RO Model requirements, and to successfully modify operations. We believe that finalizing the Model performance period on January 1, 2021 provides sufficient time for selected RO participants to develop and build the necessary infrastructure to meet reporting requirements of the RO Model.

Comment: Many commenters requested that the RO Model be delayed so that RO participants and Medicare contractors in the CBSAs selected for participation would have adequate time to prepare for the RO Model requirements, and to successfully modify operations.

Response: We believe that finalizing the Model performance period to begin on January 1, 2021 will provide adequate time for RO participants to prepare for the RO Model and to modify their operations to meet the Model requirements. The Medicare Administrative Contractors in the CBSAs selected for participation will be prepared when the Model begins on January 1, 2021.

Comment: Many commenters requested more time to implement the RO Model, because RO participants would need adequate time to operationalize the RO Model's coding and billing requirements. Many commenters stated that they would need to hire additional staff, and to train and educate new and existing staff and clinicians on RO Model procedures, requirements, billing and other systems. A few commenters stated that they would need sufficient time to educate and engage clinical and operational staff about the RO billing practices and processes, and for these participants to learn and understand changes to coding, claims generation, claims processing, participant-specific modifiers and adjustments, withhold calculations, and payment programming. A couple of commenters expressed concern about the administrative burden of learning a new billing system under the RO Model while simultaneously maintaining a separate billing system for privately insured patients. One of these commenters stated that the billing staff would be burdened with the need to identify which patients are in the Model and which are not in order to appropriately bill claims because the billing would differ significantly for each patient and insurer. Many commenters stated that RO participants would need more time to make budgetary accommodations to offset the perceived additional expenses related to participation in the RO Model and to re-evaluate practice budgets to accommodate for changes in cash flow as a result of participation in the Model.

Response: We believe that finalizing the Model performance period to begin on January 1, 2021 will provide RO participants with sufficient time to prepare to meet the billing and coding requirements, to re-evaluate practice budgets to accommodate for changes in the Model, to hire new staff and educate existing staff, and to address concerns regarding the administrative burden of learning a new billing system under the RO Model. The Model requirements, codified at § 512.220, will start on January 1, 2021.

For concerns regarding changes in billing and coding requirements, we believe that the finalized billing process that will be easily implemented within

current systems because it is based on how FFS claims are currently submitted. Section III.C.7 of this final rule provides information on billing and coding changes under the RO Model. Additional guidance on billing and coding will be made available to RO participants before the beginning of the Model performance period through resources such as the Medicare Learning Network (MLN Matters) publications, Model-specific webinars, and/or the RO Model website.

Comment: A few commenters stated that they would need to operationalize the billing requirements of the RO Model in a shortened time frame, as they would not be notified of their selection until the publication of the final rule.

Response: We believe that finalizing the Model performance period to begin on January 1, 2021 will provide RO participants adequate time to operationalize the Model's billing requirements which are based on the current FFS claims systems.

Comment: A commenter stressed that it would take time to operationalize the beneficiary notification requirement.

Response: We will provide RO Model participants with a beneficiary notification letter template that RO participants may personalize with their contact information and logo. RO participants must provide this beneficiary notification letter to each beneficiary during the initial treatment planning session. We refer readers to section III.C.15 of this final rule for details regarding the beneficiary notification letter. We do not believe that the beneficiary notification letter, which will require minimal modification by the RO participant, will warrant significant additional time to operationalize.

Comment: A commenter requested additional time for participants to receive and review CMS data to better understand their current care processes and drive care transformation under the Model.

Response: We plan to allow RO participants, to the extent permitted by HIPAA and other applicable laws, to request claims data from CMS for purposes of care coordination and/or quality improvement work. Please see section III.C.13.d for more information. To request this data, RO participants will submit a Participant Data Request and Attestation (DRA) form, which will be available on the Radiation Oncology Administrative Portal (ROAP).

Comment: A few commenters suggested that CMS include a performance year 0 (PY0) for the RO Model. This PY0 could serve as a baseline measurement and preparation period that would allow RO participants to make practice transformations; change workflow; review, analyze, and act on data received from CMS; understand Model reporting requirements; and receive additional education from CMS on Model parameters and objectives. A couple of these commenters further suggested that RO participants could submit no-pay claims for the PY0 episodes while continuing their normal billing practices.

Response: We are finalizing the Model performance period that will include performance years (PYs) one through five (PY1–PY5), and it will not include a PY0. PY1 of the RO Model will begin on January 1, 2021. We believe that finalizing the Model performance period to begin on January 1, 2021 makes a PY0 unnecessary because RT providers and RT suppliers will have several months to prepare for the RO Model and its requirements.

Comment: A few commenters recommended reducing the number of performance years. A commenter requested that the duration of the Model be reduced to three years. This commenter stated that a reduction in both duration and number of episodes, coupled with voluntary participation, would provide sufficient information for CMS to assess the viability of the Model and to then scale the Model nationally if it had achieved its goals of improving care and reducing costs.

Response: We proposed that the performance period for the RO Model to be five performance years because at least five performance years are necessary to sufficiently test the proposed prospective payment approach, stimulate the development of new evidence-based knowledge, acquire additional knowledge relating to patterns of inefficient utilization of health care services, and to formulate methods to incentivize the improvement of high-quality delivery of RT services. Based upon our analyses we do not believe that three years will be sufficient to test the proposed payment approach. We believe that a Model performance period of five years is necessary to address implementation issues and for the evaluation to obtain sufficient data to compute a reliable impact estimate, and to determine next steps regarding potential expansion or extension of the Model. Notably, the evaluation will analyze data on the impact of the Model on an ongoing basis, so to the extent that evaluation results are definitive sooner than the end of the Model, we will consider next steps at that time rather than waiting until the Model ends. For these reasons, we believe that a Model performance period of five years is necessary, and we will not reduce the Model performance period to less than five years.

We also would like to clarify that we proposed that the RO Model would cover 40 percent of all eligible RO episodes in eligible CBSAs nationwide in order to have a nationally representative sample of RT providers and suppliers that is sufficiently large enough to confidently show the impacts of the Model within five years (84 FR34496). As discussed in section III.C.3.d, we are finalizing a policy that includes 30 percent of all eligible RO episodes in eligible CBSAs nationwide, and determined that we will still be able to maintain confidence in estimating the impacts of the RO Model. Finalizing a Model performance period to anything less than five years would not allow us to maintain that confidence necessary to show the impacts of the RO Model.

Regarding the commenters suggesting that the RO Model should be voluntary, please reference section III.C.3.a of this final rule for further discussion of why we believe a mandatory design is necessary for the testing of the RO Model.

After considering public comments, we are finalizing our proposal with modification to the Model performance period. Specifically, we are revising the regulations at § 512.205 to define the Model performance period to mean January 1, 2021, through December 31, 2025, the last date during which RO episodes must be completed, with no new RO episodes beginning after October 3, 2025, in order for all RO episodes to be completed by December 31, 2025. We are also codifying at § 512.205 that performance year (PY) means the 12-month period beginning on January 1 and ending on December 31 of each year during the Model performance period.

2. Definitions

In the proposed rule, we proposed to define certain terms for the RO Model at § 512.205. We described these proposed definitions in context throughout section III of the proposed rule. In the proposed rule, we solicited public comments on our proposed definitions. To the extent we have received comments relating to the definitions that we had proposed, we have responded to those comments in context throughout section III of this final rule.

3. Participants

In the proposed rule, we discussed how certain Medicare participating

HOPDs, physician group practices (PGPs), and freestanding radiation therapy centers that furnish RT services (RT providers or RT suppliers) in Core-Based Statistical Areas (CBSAs) randomly selected for participation, would be required to participate in the RO Model either as ''Professional participants,'' ''Technical participants,'' or ''Dual participants'' (as such terms are defined at 84 FR 34494). We defined ''RO participant'' at § 512.205 of the proposed rule as a PGP, freestanding radiation therapy center, or HOPD that participates in the RO Model pursuant to the criteria that we proposed to establish at § 512.210 (see section III.C.3.b in the proposed rule and in this final rule). In addition, we noted that the proposed definition of ''model participant,'' includes an RO participant. In the proposed rule, we discussed our proposals regarding mandatory participation, the types of entities that would be required to participate, and the geographic areas that would be subject to the RO Model test.

a. Required Participation

In the proposed rule (84 FR 34493 through 343494), we discussed how certain RT providers and RT suppliers that furnish RT services within CBSAs randomly selected for participation would be required to participate in the RO Model (as discussed in sections III.C.3.b and III.C.3.d of this final rule). To date, the Innovation Center has tested one voluntary prospective episode payment model, Bundled Payments for Care Improvement (BPCI) Model 4 that attracted only 23 participants, of which 78 percent withdrew from the initiative. In the proposed rule, we discussed our interest in testing and evaluating the impact of a prospective payment approach for RT services in a variety of circumstances. We stated our belief that by requiring the participation of RT providers and RT suppliers, we would have access to more complete evidence of the impact of the Model.

As discussed in the proposed rule, we believe a representative sample of RT providers and RT suppliers for the proposed Model would result in a robust data set for evaluation of this prospective payment approach, and would stimulate the rapid development of new evidence-based knowledge (84 FR 34493). Testing the Model in this manner would also allow us to learn more about patterns of inefficient utilization of health care services and how to incentivize the improvement of quality for RT services. This learning could potentially inform future Medicare payment policy. Therefore, we proposed a broad representative sample of RT providers and RT suppliers in multiple geographic areas (see section III.C.3.d of both the proposed rule and this final rule for a discussion regarding the Geographic Unit of Selection). We proposed the best method for obtaining the necessary diverse, representative group of RT providers and RT suppliers would be random selection. This is because a randomly selected sample would provide analytic results that will be more generally applicable to all Medicare FFS RT providers and RT suppliers and would allow for a more robust evaluation of the Model.

In addition, in the proposed rule at 84 FR 34493 through 34494, we discussed actuarial analysis suggesting that the difference in estimated price updates for rates in the OPPS and PFS systems from 2019 through 2023, in which the OPPS rates are expected to increase substantially more than PFS rates, would result in few to no HOPDs electing to voluntarily participate in the Model. Further, those actuarial estimates suggested that freestanding radiation therapy centers with historically lower RT costs compared to the national average would most likely choose to participate, but those with historically higher costs would be less likely to voluntarily participate. We discussed how requiring participation in the RO Model would ensure sufficient proportional participation of both HOPDs and freestanding radiation therapy centers, which is necessary to obtain a diverse, representative sample of RT providers and RT suppliers and to help support a statistically robust test of the prospective episode payments made under the RO Model.

For these reasons, we believed that a mandatory model design would be the best way to improve our ability to detect and observe the impact of the prospective episode payments made under the RO Model. Therefore, we proposed that participation in the RO Model would be mandatory for all RT providers and RT suppliers furnishing RT services within the CBSAs randomly selected for participation (84 FR 34493 through 34494).

We solicited public comments on our proposal for mandatory participation. The following is a summary of comments received on this proposal and our responses to these comments:

Comment: CMS received many comments related to the proposed mandatory participation of the Model. One commenter agreed with CMS' decision to make participation in this Model mandatory for CBSAs randomly selected for participation.

Response: We appreciate the commenter's support. As explained in the proposed rule (84 FR 34493 through 34496) and in this final rule, mandatory participation eliminates selection bias, ensures participation from HOPDs, provides a representative sample of RT providers and RT suppliers, and facilitates a comparable evaluation comparison group. We maintain that the mandatory design for the RO Model is necessary to enable CMS to detect change reliably in a generalizable sample of RT providers and RT suppliers to support a potential model expansion.

Comment: A few commenters stated that the mandatory nature of the RO Model would force some RT providers and RT suppliers to participate in the Model that are not operationally ready while at the same time excluding others that are well prepared. This could create challenges for beneficiary access and could lead to operational issues for practices.

Response: Mandatory participation and random selection of participants are integral to the design and evaluation of this Model. However, we believe that finalizing the Model performance period to on January 1, 2021 will allow RT providers and RT suppliers sufficient time to prepare for the RO Model's requirements.

Comment: Some commenters stated that mandatory participation would have negative consequences on Medicare beneficiaries, such as depriving beneficiaries of their freedom to choose where they receive RT services, reducing access to care, and increasing financial and logistical burdens for beneficiaries that believe they need to travel outside of their CBSA to receive care from a non-RO participant.

Response: We would like to clarify that the RO Model will not interfere with the general guarantees and protections for all Medicare FFS beneficiaries. We support Medicare beneficiaries' rights to seek care wherever they choose, and we are codifying at § 512.120(a)(1) the requirement that RO participants not restrict a beneficiary's ability to choose his or her provider(s) and/or supplier(s). Further, we are using CBSAs as the unit of selection for the RO Model. We selected CBSAs, as opposed to larger geographic units of selection, in order to allow beneficiaries to travel to another area to receive RT services, if they so wished.

Comment: A couple of commenters stated that mandatory participation is a departure from the agency's previous approach to model participation, and

these commenters believed that CMS had previously indicated that mandatory models would only be used judiciously or when the agency could not guarantee enough participation or would have an adverse selection for voluntary models.

Response: We believe that the RO Model meets these circumstances. As discussed throughout this section and in Section III.C.3.d, we designed the RO Model to require participation by RT providers and RT suppliers in order to avoid selection bias. Further, as discussed earlier in this section, our actuarial analysis suggests that without mandatory participation in the RO Model, there will be limited to no participation from HOPDs.

Comment: Some commenters expressed concerns that the proposed mandatory participation would lack upside opportunity for high-performing participants and lead to hospitals and health systems bearing the expense of participation in a complicated program and the burden of generating all of the identified savings associated with the Model.

Response: We would like to note that the RO Model is an Advanced APM and a MIPS APM. As such, eligible clinicians who are Professional participants and Dual participants may potentially become Qualifying APM Participants (QPs) who earn an APM Incentive Payment and are excluded from the MIPS reporting requirements and payment adjustments. Under the current Quality Payment Program rules, those who are not excluded from MIPS as QPs or Partial QPs will receive a final score and payment adjustment under MIPS, unless otherwise excepted. We believe these aspects of the RO Model as an Advanced APM and a MIPS APM will provide eligible participants with an example of the upside opportunity for high-performing participants under the Model stated by the commenters. The RO Model also affords all RO participants the opportunity to actively participate in the effort of moving toward and incentivizing value-based RT care, offering to make certain data available that RO participants can request for use in care coordination and quality improvement, which would potentially increase beneficiary satisfaction.

Comment: Many commenters suggested that other unintended consequences could result from mandatory participation in the RO Model. These commenters listed the following potential consequences: A competitive disadvantage for participants who are subject to new and uncertain pricing; unfair financial hardship for participating practices; a disproportionate effect on cancer centers with a predominantly Medicare patient base; Medicare patients being exposed to unnecessary excess radiation; stifled innovation; and a decrease in overall quality of care.

Response: We will conduct ongoing monitoring and evaluation analyses to watch for any unintended consequences of the Model, as finalized in section III.C.16. Please also refer to sections III.C.3.d. and III.C.14 of this final rule for more discussion about how we will monitor for unintended consequences under the RO Model.

Specifically regarding the comment about Medicare patients being exposed to unnecessary excess radiation, we rely on Medicare providers and suppliers to furnish appropriate care to our beneficiaries. As for concerns regarding stifled innovation under the RO Model, we believe these concerns will be mitigated by the fact that new technologies, upon receiving an assigned HCPCS code, would be paid FFS until such time that they could be proposed for the RO Model through future rulemaking. We also believe these concerns about stifled innovation under the RO Model will be mitigated by the trend factor, which will reflect updates to input prices as reflected in updated PFS and OPPS rates. Please refer to section III.C.6 of this final rule for further discussion about this.

We do not believe that RO participants will be at a competitive disadvantage, or subject to uncertain pricing, because the RO Model pricing methodology employs a trend factor, which is applied to an established national base rate, that is based on updated PFS and OPPS rates and ensures that spending under the RO Model will not diverge too far from spending under the FFS that non-participants will receive for the underlying bundle of services had they been in the Model. See section III.C.6.d for more information.

Regarding the comment that the Model would have a disproportionate effect on cancer centers with a predominantly Medicare patient base, we disagree. Episode payments will be largely determined by what an RO participant was historically paid. As described in section III.C.6, the pricing methodology as finalized will blend together the national base rate with an RO participant's unique historical experience. If the RO participant is historically less efficient than the national average, the blend in PY1 will be 90 percent of the RO participant's historical payments and 10 percent of the national base rate. This means that prior to applying the discount factor and withholds, payments under the Model will be between 90 and 100 percent of the RO participant's historical payments. For historically inefficient RO participants, the blend shifts over time to a 70/30 blend in PY5. For historically efficient RO participants, the blend for the Model performance period is fixed at 90/10 blend.

Regarding the comment that the mandatory nature of the RO Model will result in a decrease in overall quality of care, we disagree. We specifically designed the Model to preserve or enhance quality of care, and we are putting in place measures, like the collection of quality measures and clinical data elements, to help us to quantify the impact of the RO Model on quality of care. See section III.C.8 of this final rule for more information regarding our finalized provisions for the quality measures and clinical data elements that will be collected for the RO Model.

Comment: Many commenters suggested that participation in the Model be voluntary, or that participants have the option to opt-in or opt-out of the Model. Many commenters provided operational suggestions should the Model be voluntary, including that participants could choose to participate for the entirety of the Model performance period. Many commenters referenced other voluntary models, namely the Bundled Payments for Care Improvement Advanced (BPCI Advanced) Model and the Oncology Care Model (OCM), and suggested that these models have significant health care provider interest and participation, and have demonstrated that the RO Model could be successful and garner sufficient participation as a voluntary model. The commenters suggested that a voluntary model would provide an opportunity to mitigate unintended consequences prior to expanding to a mandatory model. Many commenters stated that making the RO Model voluntary would reduce the potential risk, disruption, and financial hardships to RO participants.

As an alternate recommendation, many commenters suggested that the RO Model have a ''phase in'' period for participants such that the Model would begin as voluntary and transition to mandatory participation in subsequent years. One of these commenters recommended voluntary participation for the initial two of five performance years, and then phase in mandatory participation over the remaining 3-year period. Another commenter recommended voluntary participation for the first performance year (PY) with

a transition to limited mandatory participation in the subsequent performance years. Another commenter recommended voluntary participation with a gradual phase in of additional participants through expansion of the Model by 10 percent each year.

Another commenter suggested that providers and suppliers in the selected geographic areas be allowed to opt out of participation in the first year of the Model, and that CMS remove downside risk for those that do participate. Then, in the remaining four years of the Model, all providers and suppliers in the selected geographic areas would be required to participate with two-sided risk. A few commenters recommended that CMS initiate the Model on a voluntary basis with little to no risk, and then transition to a risk-based Model with opt-in and opt-out provisions to take place over a period of time. These commenters compared this suggested risk approach to those implemented in both the Comprehensive Care for Joint Replacement (CJR) Model and OCM. A few commenters recommended that CMS consider a voluntary Model for the first four years with incentives for participants, and then subsequently transition to a limited mandatory Model. Another commenter suggested that the RO Model be voluntary for the initial three years, and then move to mandatory in PY4 and PY5.

Many commenters recommended that the Model have voluntary participation throughout the Model performance period. A commenter recommended testing multiple small-scale voluntary models with differing payment methodologies simultaneously to determine which approach would have the greatest impact with the fewest unintended consequences. This commenter recommended that these tests be conducted with interested RT providers and RT suppliers before CMS scaled it to the size proposed in the NPRM. Another commenter suggested implementing the Model nationally as a voluntary model and utilizing the approach of evaluating the impact through an interrupted time series approach rather than a control group. A commenter recommended voluntary participation with a 10 percent reimbursement lift to allow participants to ramp up for the program and have the internal administrative and clinical operations necessary to support and succeed in the Model.

These commenters provided a variety of reasons for their recommendations of a voluntary, phase in approach to the RO Model. A commenter believed this approach would promote an equitable opportunity for success and ensure accurate and useful results from the Model. Another commenter believed this process would allow practices to transition to the coding and billing requirements and allow time to build infrastructures to collect data. A couple of commenters stated that this approach would support CMS' objectives, as well as allow CMS to build the infrastructure to administer this program effectively and to then scale it as additional participants joined. A few commenters suggested that this approach would be more consistent with the processes that previous CMS models have followed. One of these commenters stated that this approach would provide participants with more feasible pathways to value-based payment by allowing for flexibility and time to adjust practice patterns to best meet the Model's requirements. Another commenter stated that this process would be fairer to providers and suppliers that are currently unprepared to participate, and would avoid penalties on participants that are unequipped to provide value-based care and require additional time to prepare a plan for a successful transformation.

Response: We appreciate commenters' suggested alternatives to mandatory participation for the RO Model. However, as explained in the proposed rule (84 FR 34493 through 34496) and in this final rule, we believe that if the Model is voluntary for all RT providers and RT suppliers or allow for a phased-in approach, then we will face complications in our ability to accurately evaluate the RO Model.

Regarding the comment about voluntary participation with a 10 percent reimbursement lift to allow participants to ramp up for the program and have the internal administrative and clinical operations necessary to support and succeed in the Model, we believe, although we are not sure as more detail was not provided by the commenter, that the commenter is suggesting that payments be increased for participants by 10 percent. We would like to note that we would not be able to maintain or reduce costs under this type of design.

Regarding the comment suggesting that we implement the Model nationally as a voluntary model and utilize the approach of evaluating the impact through an interrupted time series approach rather than a control group, as discussed throughout this section of the final rule, we maintain that the mandatory design for the RO Model is necessary. We have decided not to use an interrupted time series design for the RO Model because the use of a comparison group not exposed to the intervention improves our ability to make causal inferences. A time series analysis is only necessary in circumstances when a comparison group does not exist, and under the RO Model, a control group of nonparticipants will exist.

While we will not allow for voluntary participation for the Model, after considering the concerns raised by the commenters, including potential financial hardship for practices under the RO Model, we are modifying the proposed policy to include an opt-out option for RT providers and RT suppliers that are low volume (see section III.C.3.c of this final rule for additional information). While we appreciate the commenters' suggestions to employ a phase in process for the RO Model, we believe that allowing a phase in process for participants would create a selection bias in the early years of the Model that would hinder robust evaluation. As we stated in the proposed rule and in this final rule, actuarial analysis suggests that the difference in estimated price updates for rates in the OPPS and PFS systems from 2019 through 2023, in which the OPPS rates are expected to increase substantially more than PFS rates, would result in few to no HOPDs electing to voluntarily participate in the Model. These actuarial estimates also suggest that freestanding radiation therapy centers with historically lower RT costs compared to the national average would most likely choose to participate, but those with historically higher costs would be less likely to volunteer to participate. Therefore, we believe that requiring participation in the RO Model, without a voluntary phase in option, is necessary to ensure sufficient proportional participation of both HOPDs and freestanding radiation therapy centers, and obtain a diverse, representative sample of RT providers and RT suppliers that will allow a statistically robust test of the prospective episode payments made under the RO Model.

Comment: Some commenters questioned CMS' statutory authority to implement the RO Model using section 1115A of the Act. A few of these commenters stated that the proposal requiring mandatory participation of approximately 40 percent of radiation oncology episodes represents a major policy change, and not a test of payment and service delivery models, which is what CMS is authorized to do in section 1115A of the Act. A few commenters stated that Innovation Center models should be implemented on a voluntary basis as the statute does not authorize

CMS to mandate participation in any Innovation Center model, and any agency interpretation that the statute permits mandatory models raises issues of impermissible delegation of lawmaking authority where none was intended and is inconsistent with the expressed mandate of section 1115A. A commenter stated that making the Model a mandatory requirement could be found potentially unlawful and is unprecedented. A commenter surmised that the RO Model was not developed by the Innovation Center, that the Secretary does not have the authority to waive Medicare provisions or any requirements of the Medicare statute under the RO Model, and that the RO Model violates section 3601 of the Patient Protection and Affordable Care Act (''the ACA'').

Response: We disagree with these commenters. The Innovation Center designed and developed the RO Model, and we will be testing the RO Model, consistent with section 1115A of the Act. We believe that we have the legal authority to test the RO Model and to require the participation of all RT providers and RT suppliers in the CBSAs selected for participation, and that this does not constitute an impermissible delegation of lawmaking authority that is inconsistent with section 1115A of the Act. First, we note that the RO Model will not be the first Innovation Center model that requires participation under the authority of section 1115A of the Act; we refer readers to the Comprehensive Care for Joint Replacement (CJR) Payment Model for Acute Care Hospitals Furnishing Lower Extremity Joint Replacement Services Final Rules, and the Home Health Prospective Payment System (HHPPS) Final Rules implementing the Home Health Value-Based Purchasing (HHVBP) Model. Hospitals in selected Metropolitan Statistical Area (MSAs) were required to participate in the CJR Model beginning in April 2016, and home health agencies in selected states were required to participate in the HHVBP Model beginning in January 2016.

We believe that both section 1115A of the Act and the Secretary's existing authority to operate the Medicare program authorize us to finalize mandatory participation in the RO Model as we have proposed. Section 1115A of the Act authorizes the Secretary to test payment and service delivery models intended to reduce Medicare costs while preserving quality of care. The statute does not require that models be voluntary, but rather gives the Secretary broad discretion to design and test models that meet certain requirements as to spending and quality. Although section 1115A(b) of the Act describes a number of payment and service delivery models that the Secretary may choose to test, the Secretary is not limited to those models. Rather, as specified in section 1115A(b)(1) of the Act, models to be tested under section 1115A of the Act must address a defined population for which there are either deficits in care leading to poor clinical outcomes or potentially avoidable expenditures. Here, the RO Model addresses a defined population (FFS Medicare beneficiaries who receive included RT services) for which there are potentially avoidable expenditures (arising from the lack of site neutrality for payments, incentives that encourage volume of services over the value of services, and coding and payment challenges in the PFS). We designed the RO Model to require participation by RT providers and RT suppliers in order to avoid the selection bias inherent to any model in which providers and suppliers may choose whether or not to participate. Such a design will ensure sufficient proportional participation of both HOPDs and freestanding radiation therapy centers, which is necessary to obtain a diverse, representative sample of RT providers and RT suppliers that will allow a statistically robust test of the prospective episode payments made under the RO Model. We believe this is the most prudent approach for the following reasons. Under the mandatory RO Model, we will test and evaluate a Model across a wide range of RT providers and RT suppliers, representing varying degrees of experience with episode payment. The information gained from testing the mandatory RO Model will allow CMS to comprehensively assess whether RO episode payments are appropriate for a potential expansion in duration or scope, including on a nationwide basis. Thus, the RO Model meets the criteria required for Phase I model tests.

Moreover, the Secretary has the authority to establish regulations to carry out the administration of Medicare. Specifically, the Secretary has authority under sections 1102 and 1871 of the Act to implement regulations as necessary to administer Medicare, including testing this Medicare payment and service delivery model. We note that the RO Model is not a permanent feature of the Medicare program; the Model will test different methods for delivering and paying for services covered under the Medicare program, which the Secretary has clear legal authority to regulate. The proposed rule went into detail about the provisions of the proposed RO Model, enabling the public to understand how the proposed Model was designed and could apply to affected RT providers and RT suppliers. As permitted by section 1115A of the Act, we are testing the RO Model within specified limited geographic areas. The fact that the Model will require the participation of certain RT providers and RT suppliers does not mean it is not a Phase I Model test. If the Model test meets the statutory requirements for expansion, and the Secretary determines that expansion is appropriate, we would undertake rulemaking to implement the expansion of the scope or duration of the Model to additional geographic areas or for additional time periods, as required by section 1115A(c) of the Act.

Furthermore, we wholeheartedly disagree that the RO Model is in violation of section 3601 of the ACA. Section 3601 of the ACA requires that nothing in the provisions of or amendments to the ACA, including models being designed and tested by the Innovation Center, may result in a reduction of guaranteed Medicare benefits. The RO Model is designed not to result in a reduction of guaranteed Medicare benefits, and in fact as finalized in section II.D.2 and codified at § 512.120(b)(1), we are specifically requiring RO participants to continue to make medically necessary covered services available to beneficiaries to the extent required by law. Further, we will monitor compliance with the Model requirements through monitoring activities that may include documentation requests sent to RO participants and individual practitioners on the individual practitioner list; audits of claims data, quality measures, medical records, and other data from RO participants and clinicians on the individual practitioner list; interviews with members of the staff and leadership of the RO participants and clinicians on the individual practitioner list; interviews with beneficiaries and their caregivers; site visits; monitoring quality outcomes and clinical data, if applicable; and tracking patient complaints and appeals. Please see section III.C.14 of this final rule for further discussion on monitoring activities.

After considering public comments, we are finalizing our proposal for mandatory participation with modification. Specifically, we are codifying at § 512.210(a) that any Medicare-enrolled PGP, freestanding radiation therapy center, or HOPD, unless otherwise specified at § 512.210(b) or (c), that furnishes included RT services in a 5-digit ZIP

Code linked to a CBSA selected for participation to an RO beneficiary for an RO episode that begins on or after January 1, 2021, and ends on or before December 31, 2025, must participate in the RO Model.

Further, after considering the concerns raised by the commenters regarding the mandatory nature of the RO Model, we are finalizing required participation for all RT providers and RT suppliers located within the CBSAs selected for participation, with the modification that the Model size will be reduced to approximately 30 percent of eligible episodes in eligible CBSAs (see section III.C.5 of this final rule), and with an inclusion of a low volume opt-out for any PGP, freestanding radiation therapy center, or HOPD that furnishes fewer than 20 episodes in one or more of the CBSAs randomly selected for participation in the most recent year with claims data available (see section III.C.3.c of this final rule). We believe that these modifications address some of the commenters' concerns regarding the mandatory nature of the RO Model, including those relating to potential financial hardship as well as the size and scope of the Model (see section III.C.3.d of this final rule for more information).

As stated in the proposed rule and in this final rule, we believe that by requiring the participation of RT providers and RT suppliers, we would have access to more complete evidence of the impact of the Model. We also believe that a representative sample of RT providers and RT suppliers would result in a robust data set for evaluation of this prospective payment approach, and would stimulate the development of new evidence-based knowledge. Testing the Model in this manner would also allow us to learn more about patterns of inefficient utilization of health care services and how to incentivize the improvement of quality for RT services. This learning could potentially inform future Medicare payment policy. Therefore, we are finalizing as proposed the selection of a broad, representative sample of RT providers and RT suppliers in multiple geographic areas (see 84 FR 34495 through 34496, and section III.C.3.d. of this final rule for a discussion regarding the Geographic Unit of Selection) for RO Model participation. However, in response to comments, we are reducing the scale of the RO Model from the proposed approximately 40 percent of episodes to approximately 30 percent of eligible episodes (please reference section III.C.3.d. of this final rule for more information).

We have determined that the best method for obtaining the necessary diverse, representative group of RT providers and RT suppliers is random selection. This is because a randomly selected sample would provide analytic results that will be more generally applicable to all Medicare FFS RT providers and RT suppliers and will allow for a more robust evaluation of the Model. As we explained in the proposed rule and in this final rule, because actuarial analysis suggests that the difference in estimated price updates for rates in the OPPS and PFS systems from 2019 through 2023, in which the OPPS rates are expected to increase substantially more than PFS rates, would result in few to no HOPDs electing to voluntarily participate in the Model and that freestanding radiation therapy centers with historically lower RT costs compared to the national average would most likely choose to participate, but those with historically higher costs would be less likely to voluntarily participate, we believe that requiring participation in the RO Model will ensure sufficient proportional participation of both HOPDs and freestanding radiation therapy centers, which is necessary to obtain a diverse, representative sample of RT providers and RT suppliers that will allow a statistically robust test of the prospective episode payments made under the RO Model.

For the previously identified reasons, we believe that a mandatory model design would be the best way to improve our ability to detect and observe the impact of the prospective episode payments made under the RO Model. We therefore are finalizing our proposal with modification that participation in the RO Model will be mandatory.

b. RO Model Participants

An RO participant, a term that we defined in the proposed rule at § 512.205, would be a Medicare-enrolled PGP, freestanding radiation therapy center, or HOPD that is required to participate in the RO Model pursuant to § 512.210 of the proposed rule. As discussed in the proposed rule at 84 FR 34494 through 34495, an RO participant would participate in the Model as a Professional participant, Technical participant, or Dual participant.

In the proposed rule, we proposed to define the term ''Professional participant'' as an RO participant that is a Medicare-enrolled physician group practice (PGP), identified by a single Taxpayer Identification Number (TIN) that furnishes only the professional component of RT services at either a freestanding radiation therapy center or an HOPD. We proposed at 84 FR 34494 that Professional participants would be required annually to attest to the accuracy of an individual practitioner list provided by CMS, of all of the eligible clinicians who furnish care under the Professional participant's TIN, as discussed in section III.C.9 of this final rule. We proposed to define the term ''individual practitioner'' to mean a Medicare-enrolled physician (identified by an NPI) who furnishes RT services to Medicare FFS beneficiaries, and have reassigned his/her billing rights to the TIN of an RO participant (84 FR 34494). We further proposed that an individual practitioner under the RO Model would be considered a downstream participant, as discussed in section II.B. of the proposed rule and this final rule.

We proposed at 84 FR 34494 to define the term ''Technical participant'' to mean an RO participant that is a Medicare-enrolled HOPD or freestanding radiation therapy center, identified by a single CMS Certification Number (CCN) or TIN, which furnishes only the technical component of RT services. Finally, we proposed at 84 FR 34494 to define ''Dual participant'' to mean an RO participant that furnishes both the professional component and technical component of an episode for RT services through a freestanding radiation therapy center, identified by a single TIN. We proposed to codify the terms ''Professional participant,'' ''Technical participant,'' ''Dual participant'' and ''individual practitioner'' at § 512.205.

We also explained in the proposed rule at 84 FR 34494 that an RO participant would furnish at least one component of an episode, which would have two components: A professional component and a technical component. We proposed to define the term ''professional component (PC)'' to mean the included RT services that may only be furnished by a physician. We proposed to define the term ''technical component (TC)'' to mean the included RT services that are not furnished by a physician, including the provision of equipment, supplies, personnel, and costs related to RT services. (See section III.C.5.c of the proposed rule at 84 FR 34494 through for a discussion regarding our proposed included RT services.) We proposed to codify the terms ''professional component (PC)'' and ''technical component (TC)'' at § 512.205 of the proposed rule.

In the proposed rule, we proposed that an episode of RT under the RO Model would be furnished by either: (1) Two separate RO participants, that is, a

Professional participant that furnishes only the PC of an episode, and a Technical participant that furnishes only the TC of an episode; or (2) a Dual participant that furnishes both the PC and TC of an episode. For example, if a PGP furnishes only the PC of an episode at an HOPD that furnishes the TC of an episode, then the PGP would be a Professional participant and the HOPD would be a Technical participant. In other words, the PGP and HOPD would furnish separate components of the same episode and would be separate participants under the Model.

The following is a summary of the public comments received on these proposed definitions related to RO participants and our responses to those comments:

Comment: A commenter supported these key participant distinctions, appreciated that CMS recognized that RT services can be delivered at different sites of service, and stated that this participant construct lends itself well to the establishment of separate professional and technical payment components.

Response: We appreciate this commenter's support on our proposed definitions for the Professional, Technical, and Dual participants in the RO Model.

Comment: A commenter requested clarification on how RO participants will be defined if there are multiple sites of service during an episode. This commenter provided an example where a physician delivers EBRT in a freestanding setting and then chooses to deliver brachytherapy in the hospital outpatient department (HOPD) setting. This commenter asked whether the physician in this example would be considered a Dual participant such that there would be no technical component payment issued to the HOPD. This commenter suggested that CMS should provide clarification regarding how these types of situations will be handled and reimbursed within the Model.

Response: As stated in the proposed rule at 84 FR 34494, a Professional participant is an RO participant that is a Medicare-enrolled physician group practice (PGP), identified by a single Taxpayer Identification Number (TIN) that furnishes only the professional component of RT services at either a freestanding radiation therapy center or an HOPD. A Technical participant is an RO participant that is a Medicare-enrolled HOPD or freestanding radiation therapy center, identified by a single CMS Certification Number (CCN) or TIN, which furnishes only the technical component of RT services. A Dual participant is an RO participant that furnishes both the professional component and technical component of an RO episode for RT services through a freestanding radiation therapy center, identified by a single TIN. Professional participant, Technical participant and Dual participant are similar to the proposed definitions, RT provider and RT supplier. In the proposed rule, an RT provider is defined as a Medicare-enrolled HOPD that furnished RT service in a 5-digit ZIP Code linked to a CBSA selected to participate, and an RT supplier is defined as a Medicare –enrolled PGP or freestanding radiation therapy center that furnishes RT services in a 5-digit ZIP Code linked to a CBSA selected to participate. These definitions taken together with other proposed definitions, RO participant, Professional participant, Technical participant and Dual participant, are duplicative. For clarification, we are finalizing proposed definitions for the Professional, Technical, and Dual participants in the RO Model without modification, and finalizing the proposed definitions for RT provider and RT supplier with modification. RT provider will mean any Medicare-enrolled HOPD that furnishes RT services and RT supplier will mean any Medicare-enrolled PGP or freestanding radiation therapy center that furnishes RT services.

As for the specific example the commenter presented, the freestanding radiation therapy center would be considered a Dual Participant for delivery of EBRT, and the HOPD delivering brachytherapy would bill traditional Medicare fee-for-service as described in section III.C.7. In the example described, FFS payments made to the HOPD would be considered duplicate payments during reconciliation as described in section III.C.11.

Comment: Some commenters were concerned with the possibility that health systems could have some of their practices participating in the RO Model and their remaining practices operating outside of the Model. These commenters stated that it is common for large health systems to have a single TIN covering multiple locations, and that the proposed RO Model design could allow practices within the same health system to fall into different CBSAs. This may cause challenges for both RT providers and RT suppliers and patients as well as cause avoidable complexity in rare situations where patients shift between care locations. These commenters, therefore, recommended that CMS make accommodations for health systems with multiple sites, where practices that span multiple CBSA's with a single TIN can request to opt-in or opt-out of the Model.

Response: We recognize that this scenario could occur where practices under the same TIN could fall into different CBSAs whereas some are either in the Model and others are out of the Model. As stated in the proposed rule in section III.C.3.d (84 FR 34495 through 34496), we are using CBSAs as the geographic unit of selection for the RO Model for various reasons, including that CBSAs are large enough to reduce the number of RO participants in close proximity to other RT providers and RT suppliers that would not be required to participate in the Model. As we have chosen the method of using randomly selected stratified CBSAs in the RO Model, it is unavoidable that some practices within the same TIN may fall into different CBSAs, though we anticipate that the numbers will be limited. As noted in the commenters' letters, situations where a beneficiary changes treatment locations is rare in radiation oncology, and we believe that our billing policies would allow sufficient flexibility to accommodate these uncommon instances, where the first treatment provider or supplier would be paid through the Model and a subsequent provider or supplier would bill FFS. We appreciate the commenters' concerns on this matter, and we will monitor this situation for any issues or complications that may arise from this policy.

After considering public comments, we are finalizing our proposed provisions on the RO Model participant definitions without change. Specifically, we will codify at § 512.205 to define an RO participant as a Medicare-enrolled physician group practice (PGP), freestanding radiation therapy center, or HOPD that is required to participate in the RO Model pursuant to § 512.210. We are further finalizing our proposal to define the term ''Professional participant'' at § 512.205 as an RO participant that is a Medicare-enrolled PGP identified by a single Taxpayer Identification Number (TIN) that furnishes only the professional component of an RO episode. We are also finalizing our proposal define the term ''Technical participant'' at § 512.205 to mean an RO participant that is a Medicare-enrolled HOPD or freestanding radiation therapy center, identified by a single CMS Certification Number (CCN) or TIN, which furnishes only the technical component of an episode. Finally, we are finalizing our proposal to define ''Dual participant'' at § 512.205 to mean an RO participant that furnishes both the professional component and technical component of

an RO episode through a freestanding radiation therapy center, identified by a single TIN.

c. RO Model Participant Exclusions

In the proposed rule at 84 FR 34493 through 34494, we proposed to exclude from RO Model participation any PGP, freestanding radiation therapy center, or HOPD that—

- Furnishes RT only in Maryland;
- Furnishes RT only in Vermont;
- Furnishes RT only in U.S. Territories;
- Is classified as an ambulatory surgery center (ASC), critical access hospital (CAH), or Prospective Payment System (PPS)-exempt cancer hospital; or
- Participates in or is identified as eligible to participate in the Pennsylvania Rural Health Model.

The proposed rule specified that these exclusion criteria would apply during the entire Model performance period. If an RO participant undergoes changes such that one or more of the exclusion criteria becomes applicable to the RO participant during the Model performance period, then that RO participant would be excluded from the RO Model (that is, it would no longer be an RO participant subject to inclusion criteria). For example, if an RO participant moves its only service location [25] from a CBSA randomly selected for participation in Virginia to Maryland, it would be excluded from the RO Model from the date of its location change. Conversely, if a PGP, freestanding radiation therapy center, or HOPD satisfies the exclusion criteria when the Model begins, and subsequently experiences a change such that the exclusion criteria no longer apply and the PGP, freestanding radiation therapy center, or HOPD is located in one of the CBSAs selected for participation, then participation in the RO Model would be required. For example, if an HOPD is no longer classified as a PPS-exempt hospital and the HOPD is located in one of the CBSAs selected for participation, then the HOPD would become an RO participant from the date that the HOPD became no longer classified as a PPS-exempt hospital.

We proposed that in the case of Professional participants and Dual participants, any episodes in which the initial RT treatment planning service is furnished to an RO beneficiary on or after the day of this change would be included in the Model. In the case of Technical participants, any episodes where the RT service is furnished within 28 days of a RT treatment planning service for an RO beneficiary and the RT service is furnished on or after the day of this change would be included in the Model.

We proposed to exclude RT providers and RT suppliers in Maryland due to the unique statewide payment model being tested there (the Maryland Total Cost of Care Model), in which Maryland hospitals receive a global budget. We noted in the proposed rule that this global budget includes payment for RT services and as such would overlap with the RO Model payment. Thus, we proposed to exclude Maryland HOPDs to avoid double payment for the same services. We proposed to extend the exclusion to all RT providers and RT suppliers in Maryland to avoid creating a gaming opportunity where certain beneficiaries could be shifted away from PGPs and freestanding centers to HOPDs.

In the proposed rule, we proposed to exclude RT providers and RT suppliers in Vermont due to the Vermont All-Payer ACO Model, which is a statewide model in which all-inclusive population-based payments (AIPBPs) are currently made to the participating ACO for Medicare FFS services furnished by all participating HOPDs and an increasing number of participating PGPs. Given the scope of this model as statewide and inclusive of all significant payers, we explained in the proposed rule that we believe excluding RT providers and RT suppliers in Vermont from the RO Model is appropriate to avoid any potential interference with the testing of the Vermont All-Payer ACO Model.

We also proposed to exclude HOPDs that are participating in or eligible to participate in the Pennsylvania Rural Health Model from the RO Model. Hospitals and CAHs that are participating in the Pennsylvania Rural Health Model receive a global budget, much like hospitals participating in the Maryland Total Cost of Care Model. Further, we proposed to extend the exclusion to HOPDs that are eligible to participate in the Pennsylvania Rural Health Model because additional hospitals and CAHs may join that model in the future or may be included in the evaluation comparison group for that model. We stated in the proposed rule that we would identify the hospitals and CAHs that are participating in or are eligible to participate in the Pennsylvania Rural Health Model on a list to be updated quarterly and made available on the Pennsylvania Rural Health Model's website at *https://innovation.cms.gov/initiatives/pa-rural-health-model/.*

We designed the proposed RO Model to test whether prospective episode payments in lieu of traditional FFS payments for RT services would reduce Medicare expenditures by providing savings for Medicare while preserving or enhancing quality. In the proposed rule, we discussed our belief that it would be inappropriate to include these entities for the reasons previously described. Also, we proposed to exclude ASCs and RT providers and RT suppliers located in the U.S. Territories, at § 512.210, due to the low volume of RT services that they provide. In addition, we proposed to exclude CAHs and PPS-exempt cancer hospitals due to the differences in how they are paid by Medicare.

As a result, we proposed that RT services furnished by these RT providers and RT suppliers would be excluded from the RO Model. We also stated that if in the future we determine that providers and suppliers in these categories should be included in the RO Model, we would revise our inclusion criteria through rulemaking.

We proposed to codify these policies at § 512.210 of our regulations. We solicited comments on the proposals related to RO participant exclusions. The following is a summary of the comments received on these proposals and our responses to those comments:

Comment: A commenter supported CMS' decision to exclude from the Model providers and suppliers that furnish RT services only in Maryland, Vermont, or U.S. Territories; that are participating in or eligible to participate in the Pennsylvania Rural Health Model; or that are classified as an ambulatory surgery center, CAH, or PPS-exempt cancer hospital.

Response: We thank this commenter for the support on our proposed exclusions from the RO Model; we are finalizing these exclusions without modification.

We would like to clarify that we recognize HOPDs are not standalone institutions and, as such, may not, independent of a hospital or CAH, participate in or be eligible for participation in the Pennsylvania Rural Health Model. We will use the list on the Pennsylvania Rural Health Model's website at *https://innovation.cms.gov/initiatives/pa-rural-health-model/,* which is updated quarterly, to identify the hospitals and CAHs eligible to participate in the Pennsylvania Rural Health Model, and therefore identify the specific HOPDs that are excluded from participation in the RO Model. We would also like to clarify that this

[25] Service location means the site of service in which an RO Participant or any RT provider or RT supplier furnishes RT services.

exclusion of HOPDs associated with hospitals and CAHs eligible to participate in the Pennsylvania Rural Health Model from the RO Model will apply only during the period of such eligibility. If the Pennsylvania Rural Health Model is terminated or if the HOPD is no longer eligible to participate in the Pennsylvania Rural Health Model as part of an eligible hospital or CAH, and the HOPD otherwise meets the definition of an RO participant, then the HOPD will be required to participate in the RO Model.

Comment: A commenter supported CMS' decision to exclude CAHs from the RO Model, and stated that they appreciated CMS' recognition of the potential negative impact the Model could have on CAHs. This commenter also requested that CMS clarify whether a clinician who provides cancer treatment services at a CAH would be considered a Professional participant under the RO Model. This commenter also suggested that CMS ensure that the technical and professional services are aligned, and further recommended that if a treatment center is excluded from the Model, then the clinicians providing services at that treatment center should also be excluded.

A few commenters requested clarification on CMS' proposed policy regarding an exclusion for PPS-exempt cancer hospitals (PCHs) in the Model. A commenter requested clarification on whether radiation oncology physicians who work for a PCH but bill under a practice TIN, would be considered a Professional or Dual participant.

Another commenter requested clarification on how the professional reimbursement will be handled for physicians practicing in a PCH, but not employed by that legal entity. The commenter asked for clarification on whether the physicians would also be exempt. This commenter further stated that the same physicians may also practice at other non-PCH, and it is not uncommon for radiation oncologists to rotate through multiple facilities in a given week, depending on the size of the physician practice and the number of facilities where they practice.

Response: To clarify, a physician who provides cancer treatment services at a CAH, PCH, or ASC, and also provides services in a freestanding radiation therapy center or HOPD that is located in a CBSA selected for participation, in addition to their services at a CAH, PCH, or ASC, will be considered either a Dual participant or Professional participant, respectively, under the RO Model. We also want to clarify that a physician who provides RT services at a PCH, regardless of their employment status at the PCH, and also provides only the professional component of an RO episode for RT services in a freestanding radiation therapy center or HOPD that is located in a CBSA selected for participation will be considered a Professional participant under the RO Model. Similarly, a physician who provides RT services at a PCH, and also furnishes both the professional component and technical component of an RO episode for RT services through a freestanding radiation therapy center, identified by a single TIN, will be considered a Dual participant under the RO Model. In contrast, a physician who provides RT services only at an exempt facility (PCH, CAH, or ASC) will not be an RO participant. RT services that are furnished at an exempt facility (PCH, CAH, or ASC) will be paid through FFS, while RO episodes that are furnished at a PGP, freestanding radiation therapy center, or HOPD that is in a CBSA selected for participation will be paid under the RO Model payment methodology.

Comment: A few commenters agreed with CMS' proposal to exclude from the Model PCHs, which some commenters also referred to as DRG-exempt cancer hospitals. A commenter agreed that PCHs should be excluded from the Model, and further requested that all of the physicians practicing in these PCHs be exempted from the RO Model because these physicians practice in the PCHs as well as eligible community practices and they all bill under the same TIN. The commenter indicated that this would complicate data submission and analysis as well as billing practices. A couple of commenters suggested that CMS expand the exclusion list to include all National Cancer Institute (NCI) Designated Comprehensive Cancer Centers. One of these commenters stated that this policy would align with CMS' proposal to exempt PCHs. Another commenter stated that NCI-designated centers deliver innovative cancer treatments to patients in communities across the United States, and dedicate significant resources toward developing multidisciplinary programs and facilities that lead to better and innovative approaches to cancer prevention, diagnosis, and treatment. This commenter stated that introducing an APM based on complex calculations and historical rates would represent a significant burden that would negatively impact the innovation and discovery missions of NCI-designated centers.

Response: We appreciate these commenters' support of our proposal to exclude PCHs from the RO Model. With regard to the comment requesting that all physicians practicing in a PCH be exempted from the RO Model because these physicians practice in the PCHs as well as eligible community practices and they all bill under the same TIN, we would like to clarify that the physicians will be exempted from the RO Model if they only provide RT services at a PCH. However, if the physician also provides RT services at any other freestanding radiation therapy center and/or HOPD that is included in a CBSA selected for participation, they will be considered a Dual participant and/or Professional participant under the RO Model. We disagree with commenters' requests to expand the PCH exclusion list to include all National Cancer Institute (NCI) Designated Comprehensive Cancer Centers as PCHs are reimbursed on a ''reasonable cost'' basis instead of the OPPS FFS methodology, and we are excluding entities that are paid via reasonable cost or cost-reporting, and including all HOPDs that are currently paid through the OPPS/FFS methodology. Thus, we will be finalizing our policy as proposed and without modification to exclude from the RO Model any PGP, freestanding radiation therapy center, or HOPD that is classified as a PCH. However, the RO Model will include PGPs, freestanding radiation therapy centers and HOPDs that are paid under FFS.

Comment: Conversely, some commenters disagreed with the proposal to exclude PCHs from the Model. Of those who disagreed, a couple of commenters stated that PCHs should be incentivized to reduce costs, and pointed to a Government Accountability Office (GAO) report that advised that the payment method for PCHs should be revised to promote efficiency and reduce costs to Medicare. Another commenter inquired why PCHs are exempted when they are among the best resourced institutions and are considered high cost centers due to emerging technologies. Another commenter sought clarification on why CMS decided to exclude a set of RT providers and RT suppliers that specifically treat the targeted conditions in the RO Model, and stated that the largest cancer treatment centers should not be excluded from a model that seeks to address utilization for cancer services. Another commenter stated that it is difficult to understand why PCHs would be excluded from the RO Model on the basis of payment methodology when payment methodology is the primary basis of the Model. Another commenter stated the 11 PCH have large amounts of grant money, have many staff, and receive significant Medicare

payments, and accordingly should be included in the Model. A commenter stated that the 11 PCHs should not be excluded from Model because these hospitals have developed financial relationships with many community hospitals that give those hospitals both a financial and a marketing advantage. This commenter stated that if a CBSA is selected for participation and has one of these exempt hospitals, that facility will have a significant advantage over the other sites of service in that area, and this would allow that facility to more heavily market and to purchase upgraded equipment, which would threaten the viability of other programs and decrease access and choice for Medicare beneficiaries needing RT services.

Response: The RO Model is designed to test whether prospective episode payments in lieu of traditional FFS payments for RT services would reduce Medicare expenditures by providing savings for Medicare while preserving or enhancing quality of care. We proposed to exclude PCHs because of the differences in how these hospitals are paid by Medicare. That is, they are not paid through traditional FFS payments (see, generally, the Social Security Amendments of 1983 (Pub. L. 98–21), the Balanced Budget Act of 1997 (Pub. L. 105–33), and the Omnibus Reconciliation Act of 1989 (Pub. L. 101–239)), and the RO Model is designed to test and evaluate the change from traditional FFS payments to prospective episode based payments. Regarding the commenter's concern about PCHs and their community hospital partners potentially having a financial and marketing advantage, we will monitor the Model for the occurrence of any such advantages, by monitoring for changes in referral patterns. Based on this monitoring, if we determine to modify the excluded categories of RT providers and RT suppliers, including PCHs, we would revise the RO Model inclusion criteria through future notice-and-comment rulemaking. Therefore, we are finalizing our policy as proposed without modification to exclude from RO Model participation any PGP, freestanding radiation therapy center or HOPD that is classified as a PPS-exempt cancer hospital.

Comment: A commenter suggested that CMS should exclude sole community hospitals (SCH) and Medicare dependent hospitals (MDH). These hospitals are generally rural, small, and highly dependent on Medicare and/or Medicaid funding. This commenter does not believe it would be appropriate to include these hospitals in the RO Model as it could significantly impact the financial viability of these hospitals or lead to a reduction in available services for the community.

Response: We did not propose to exclude MDH or SCH entities from the RO Model because, unlike CAHs, these entities are full service hospitals. If MDH and SCH entities believe they qualify for the RO Model's low volume opt-out option, please reference the discussion on the low volume opt-out option in this section of the final rule for more information. We will monitor the extent to which these hospitals are selected for participation in the Model, and we will monitor the impact the RO Model may have on these types of entities.

Comment: A commenter requested an exemption to the RO Model for practices that serve socioeconomically disadvantaged populations. This commenter stated that these practices tend to have higher costs of care because patients present with advanced stages of disease often due to the lack of access to preventative services, and these practices should not be penalized due to circumstances that are out of their control.

Response: We did not propose to exclude practices that serve socioeconomically disadvantaged populations, and we will not be creating an exemption of this nature at this time. While we understand the commenter's concern, we believe that the RO Model pricing methodology, through the historical experience and case mix adjustments, will account for differences in RO participants' historical care patterns and the demographic characteristics of their patient populations. We will monitor the effect that the RO Model may have on RO participants that serve these populations.

Comment: Many commenters stated that a mandatory RO Model will present operational, administrative, and financial challenges for many RT providers and RT suppliers, and therefore requested a low-volume or hardship exemption to allow participants to opt out of the RO Model. Many commenters disagreed with CMS' decision to not include a model participation hardship exemption for any providers or suppliers, and requested an exemption from Model participation specifically for low-volume providers and suppliers. These commenters argued that failure to include a low-volume exemption could result in unintended consequences, such as smaller providers and suppliers incurring significant financial losses and potentially ending their programs due to lower payment through the RO Model. Additionally, some of these commenters suggested that that the RO Model should be limited to large groups (30 physicians or more), and that the Model should be limited to large hospitals with employed physicians.

A couple of commenters stated that a low-volume exemption is critical in a shared risk-based model of care, and should therefore be included in the RO Model. Another commenter supported CMS' proposal to exclude ASCs and RT providers and suppliers located in the U.S. Territories due to the low volume of RT services that they provide because of the commenter's belief that such providers and suppliers lack the infrastructure and support to achieve efficiencies. However, the commenter requested that CMS fully exclude from the Model providers and suppliers who furnished fewer than 60 attributed episodes during the 2015–2017 period, rather than just making adjustments to their episode payments. This commenter further stated that its analysis found that there is considerable variation in episode spending relative to payment amounts for providers and suppliers that perform a very low volume of RT, and the commenter maintained that this analysis suggests that episode pricing for these providers and suppliers would be highly random and, therefore, very difficult to manage. The commenter finally concluded that excluding these and other low-volume providers and suppliers would have a minimal impact on the RO Model test, but doing so would prevent these providers and suppliers from being inappropriately penalized by being required to participate in the Model.

Response: We appreciate the commenters' comments and feedback regarding low-volume entities under the RO Model. We understand the commenters' concerns regarding administrative, financial, and infrastructural challenges for low-volume providers and suppliers under the RO Model. In response to stakeholder comments, we are finalizing our mandatory participation proposal, with a modification for an opt-out option for low-volume entities, which we are codifying at § 512.210(c). This option allows any PGP, freestanding radiation therapy center, or HOPD to opt-out of the RO Model, if in the most recent calendar year with episode data available, the entity furnishes fewer than 20 episodes in one or more of the CBSAs randomly selected for participation. Please reference the end of this section for more information on the low volume opt-out option.

Regarding the commenters suggested that that the RO Model should be limited to large groups (30 physicians or more), we would like to note that most RT providers and suppliers have fewer than 30 oncologists, so this number would not provide a feasible threshold for the RO Model.

We agree in part with the commenter who suggested that we add an exclusion of entities with fewer than 60 episodes over the full baseline period of three years. We are focusing on entities with fewer than 20 episodes in the most recent year with available claims data, and we believe this corresponds with this commenter's suggestion. However, instead of excluding such entities, we believe that allowing entities with fewer than 20 episodes to opt-out achieves the right balance of allowing very small entities to opt-out if they believe the burden from participation in the Model would outweigh the possibility of benefits from model participation (for example, potential for care improvements or increased payments), while also maintaining a variety of participant types in the RO Model to promote generalizability (to the extent possible) of any impact results. Further, as discussed in section III.C.6.e(4), we do not apply adjustments to RO participant episode payments for participants that have less than 60 episodes in the last three years of data. Thus, the opt-out option for entities with fewer than 20 episodes aligns with the threshold set for the historical experience and case mix adjustments. The low volume opt-out option is intended to allow RO participants furnishing a small volume of RT services in the CBSAs selected for participation in the Model to opt out if they so choose given the investment required to implement the Model versus the benefit of participating in the Model for a limited frequency of RT services.

Comment: Some commenters suggested that CMS apply the MIPS low-volume threshold or the CJR Model low-volume exemption as low-volume participation thresholds for mandatory RO Model participation.

Response: For the 2020 MIPS performance period, the MIPS low-volume threshold excludes from the definition of a MIPS eligible clinician an individual eligible clinician, group, or APM Entity group that, during the MIPS determination period (consisting of two 12-month segments during 10/1/18–9/30/19 and 10/1/19–9/30/20), has allowed charges for covered professional services less than or equal to $90,000, furnishes covered professional services to 200 or fewer Medicare Part B–enrolled individuals, or furnishes 200 or fewer covered professional services to Medicare Part B–enrolled individuals. RT providers and RT suppliers tend to see smaller numbers of patients but at a higher price per patient than the average MIPS eligible clinician. Therefore, we estimate that using the MIPS low-volume threshold as a threshold for mandatory participation in the RO Model would result in a nearly 50 percent reduction in the number of RO participants. As stated in section III.C.3.d of this final rule, the number of RO participants must remain above a certain level in order to maintain statistical power for Model evaluation, and to generate sufficient savings. We are finalizing our mandatory participation proposal, with a modification for an opt-out option for low-volume entities as described in this final rule. Similar to the CJR Model's policy, this option would allow any PGP, freestanding radiation therapy center, or HOPD that furnishes fewer than 20 episodes in the most recent year with available claims data within one or more of the CBSAs randomly selected for participation to opt-out of the RO Model, if they so choose. For more information on this final policy please see this section of this rule. There are notable differences between the CJR and RO Models' low volume opt-out options. The CJR Model's low-volume policy was a one-time opt-in option for participants, while the RO Model will make the low volume opt-out option available to eligible participants annually, prior to each year of the Model.

After considering public comments, we are finalizing, with one modification, our proposed provisions on RO Model participant exclusions. As proposed, we are finalizing our policy, and codifying at § 512.210(b), to exclude from RO Model participation any PGP, freestanding radiation therapy center, or HOPD that furnishes RT services only in Maryland; furnishes RT services only in Vermont; furnishes RT services only in U.S. Territories; is classified as an ambulatory surgery center (ASC), critical access hospital (CAH), or Prospective Payment System (PPS)-exempt cancer hospital; or participates in or is identified by CMS as eligible to participate in the Pennsylvania Rural Health Model.

In response to public comments, we are finalizing with one modification our proposal regarding mandatory participation in the Model. A PGP, freestanding radiation therapy center, or HOPD which would otherwise be required to participate in the RO Model under § 512.210(a) may choose to opt-out of the RO Model on an annual basis if the PGP, freestanding radiation therapy center, or HOPD furnishes fewer than 20 episodes across all CBSAs selected for participation in the most recent calendar year with available claims data. We are codifying this modified policy at § 512.210(c) of the final rule.

Each RO participant's episode volume will be assessed at the TIN and CCN level across all CBSAs randomly selected for participation, not according to how many episodes an RO participant furnishes in a single CBSA. For example, if an RO participant furnished 30 episodes in two different CBSAs and both CBSAs are selected for participation in the Model, then the RO participant would not be eligible for the low volume opt-out option, even if the RO participant furnished fewer than 20 episodes in each of those CBSAs. If, however, an RO participant only furnished 15 episodes in only one CBSA selected to participate in the Model, then this RO participant would be eligible for the low volume opt-out option.

RO participants that qualify for the low volume opt-out may still choose to participate in the Model, as our data show that many of these RT providers and RT suppliers may see increased payments (compared to historical payments) and improvements in quality of care under the RO Model despite having a low volume of episodes. Thus, we believe it is important to allow them the option of participating in the RO Model if they so choose.

Prior to the start of each RO Model PY, we will identify which RO participants would be eligible to opt out of the Model (including the RO Model payments and participation requirements) based on the most recently available claims data. For PY1 (January 1, 2021, through December 31, 2021), we will use 2019 episode data, for PY2 (January 1, 2022 through December 31, 2022), we will use 2020 episode data, and so on. The most current episode data is two years removed from the period to which it applies for two reasons. First, as described in the pricing methodology section in section C.III.6, if an RO episode straddles calendar years, the RO episode and its claims are counted in the calendar year for which the initial treatment planning service is furnished. This means that an RO episode could carry 89 days into the next performance year. Second, we will allow for at least one month of claims run-out after all RO episodes have been completed. A longer claims run-out is not necessary since the low volume opt-out is based on a count

of complete episodes and not on volume of services during those RO episodes. For these reasons, the most current episode data is two years removed from the period to which it applies. Broadening the assessment period to multiple years would even further remove the opt-out option from current practice patterns.

We will use only the most recent year with available claims data rather than a 3-year baseline to identify low-volume RO participants. This policy would allow us to better recognize low-volume RO participants over time and avoid creating a permanent opt out for new entities. At the same time, we want to minimize the possibility that RT providers and RT suppliers would have an incentive to create a new billing identifier each year to get out of the Model. Thus, we would monitor for this scenario by examining whether new TINs/CCNs in the Model geographic area have the same address as a previous TIN/CCN to ensure that our policy is serving its intent.

Eligibility for the opt-out option will be assessed annually. A participant may qualify for the opt-out option in one performance year, but not in another. At least 30 days prior to the start of each PY, we will notify participants eligible for the opt-out option as it concerns that upcoming PY. Those RO participants eligible to opt-out of the RO Model must attest to the intention of opting out of the Model prior to the start of the applicable PY (that is, on or before December 31 of the prior PY in which the opt-out would occur). We will provide further instructions on submitting this attestation through subregulatory channels of communication, such as model-specific webinars, and the RO Model website. This process would be repeated prior to each performance year of the Model. This could result in some RO participants being eligible for the opt-out option in some years and not others, that is, an RO participant could be able to opt out in one year and then be required to participate in the subsequent year. We will notify participants to remind them to verify their eligibility for the opt-out option prior to each performance year.

d. Geographic Unit of Selection

We proposed at 84 FR 34495 through 34496 that the geographic unit of selection for the RO Model would be OMB's Core-Based Statistical Areas (CBSAs). Due to geographic data limitations on Medicare claim submissions, we proposed to link RT providers and RT suppliers to a CBSA by using the five-digit ZIP Code of the location where RT services are furnished. This will permit us to identify RO participants (see section III.C.3.c of the proposed rule and this final rule for a discussion of RO Model participant exclusions for the RT providers and RT suppliers we proposed to exclude from this Model) while still using CBSA as a geographic unit of selection. We proposed to codify the term ''Core-Based Statistical Area (CBSA)'' at § 512.205 of our regulations.

The proposed rule explained that CBSAs are delineated by the Office of Management and Budget and published on *Census.gov.*[26] A CBSA is a statistical geographic area with a population of at least 10,000, which consists of a county or counties anchored by at least one core (urbanized area or urban cluster), plus adjacent counties having a high degree of social and economic integration with the core (as measured through commuting ties with the counties containing the core). CBSAs are ideal for use in statistical analyses because they are sufficiently numerous to allow for a robust evaluation and are also large enough to reduce the number of RO participants in close proximity to other RT providers and RT suppliers that would not be required to participate in the Model. CBSAs do not include the extreme rural regions, but there are very few RT providers and RT suppliers in these areas such that, if included, the areas would likely not generate enough episodes to be included in the statistical analysis; further, CBSAs do contain rural RT providers and RT suppliers as designated by CMS and Health Resources and Services Administration (HRSA). Therefore, CBSAs would capture the diversity of RT providers and RT suppliers who may be affected by the RO Model, and, consequently, we did not propose to include non-CBSA geographies in the RO Model test.

However, as noted in the proposed rule, most RT providers and RT suppliers may not know in what CBSA they furnish RT services. In order to simplify the notification process to inform RT providers and RT suppliers whether or not they furnish RT services in a CBSA selected for participation, we proposed to use an RT provider's or RT supplier's service location five-digit ZIP Code found on the RT provider's or RT supplier's claim submissions to CMS to link them to CBSAs selected for participation and CBSAs selected for comparison under the Model.

As explained in the proposed rule, not all five-digit ZIP Codes fall entirely within OMB delineated CBSA boundaries, resulting in some five-digit ZIP Codes assigned to two different CBSAs. Approximately 15 percent (15%) of five-digit ZIP Codes have portions of their addresses located in more than one CBSA. If each ZIP Code was assigned only to the CBSA with the largest portion of delivery locations in it, about 5 percent of all delivery locations in ZIP Codes would be assigned to a different CBSA. Rather than increase health care provider burden by requiring submission of more detailed geographic data by RT providers and RT suppliers, we proposed to assign the entire five-digit ZIP Code to the CBSA where the ZIP code has the greatest portion of total addresses (business, residence, and other addresses) such that each five-digit ZIP Code is clearly linked to a unique CBSA or non-CBSA geography. In the event that the portion of total addresses within the five-digit ZIP Code is equal across CBSAs and cannot be used to make the link, we proposed that the greater portion of business addresses would take precedence to link the five-digit ZIP Code to the CBSA.

We proposed to use a five-digit ZIP Code to CBSA crosswalk found in the Housing and Urban Development (HUD) ZIP to CBSA Crosswalk file[27] to link each five-digit ZIP Code to a single CBSA. The HUD ZIP to CBSA Crosswalk file lists the ZIP Codes (which come from the United States Postal Service) that correspond with the CBSAs (which are Census Bureau geographies) in which those ZIP Codes exist, allowing these two methods of geographic identification to be linked.

We indicated in the proposed rule that we believed that linking a five-digit ZIP Code to a single CBSA would not substantially impact statistical estimates for the RO Model. In addition, we believed that using a service location's five-digit ZIP Code to determine whether an RT provider or RT supplier must participate in the Model will avoid potential RT provider or RT supplier burden by avoiding an additional requirement that they submit claims using more detailed geographic information. We proposed to provide a look-up tool that includes all five-digit ZIP Codes linked to CBSAs selected for participation in accordance with our

[26] See OMB Bulletin No. 18–04 entitled ''Revised Delineations of Metropolitan Statistical Areas, Micropolitan Statistical Areas, and Combined Statistical Areas, and Guidance on Uses of the Delineations of These Areas,'' *https://www.census.gov/programs-surveys/metro-micro/about/omb-bulletins.html.*

[27] Datasets and documentation for HUD USPS Zip Code Crosswalk Files (which includes the previously mentioned HUD ZIP–CBSA crosswalk file) can be found here: *https://www.huduser.gov/portal/datasets/usps_crosswalk.html.*

selection policy described in this final rule. This tool will be located on the RO Model website, as proposed.

In the proposed rule, we discussed how using CBSAs to identify RO participants would enable CMS to analyze groups of RT providers and RT suppliers in areas selected to participate in the Model and compare them to groups of RT providers and RT suppliers not participating in the Model (84 FR 34496). To the extent that CBSAs act like or represent markets, these group analyses would allow CMS to observe potential group level, market-like effects. We have found group level effects important as context for understanding the results of other models tested under section 1115A of the Act. For example, stakeholders questioned whether a model changed the overall volume of services related to the specific model in a given area. As noted in the proposed rule, we will not be able to address this issue for the RO Model without using a geographic area as the unit of analysis.

With respect to selecting CBSAs for participation and comparators under the Model, we proposed to use a stratified sample design based on the observed ranges of episode counts in CBSAs using claims data from calendar years 2015–2017. We proposed to then randomize the CBSAs within each stratum into participant and comparison groups until the targeted number of RO episodes within each group of CBSAs needed for a robust [28] test of the Model is reached. We noted that the primary purpose of the evaluation is to estimate the impact of the Model across all participating organizations. Larger sample sizes decrease the chances that the evaluation will produce mistakes, that is, show 'no effect' when an effect is actually present (for example, when a smoke detector fails to sound an alarm even though smoke is actually present) or show 'an effect' when no effect is actually present (for example, when a smoke detector is sounding an alarm that suggests smoke is detected when actually no smoke is present). Given that we proposed to sample approximately 40 percent of all eligible RO episodes in eligible CBSAs nationwide (as discussed in section III.C.5 of the proposed rule and this final rule), we believe we should be sufficiently powered (that is, the sample size and the expected size of the effect of the Model are both large enough at a given significance level) to confidently show the impact of the Model. The comparison group would consist of RT providers and RT suppliers from randomized CBSAs within the same strata as the selected RO participants from the participant group, resulting in a comparison group of an approximately equal number of CBSAs and episodes as in the participant group that would allow for the effects of the RO Model to be evaluated. We proposed that strata would be divided into five quintiles based on the total number of episodes within a given CBSA. The stratification would improve the balance between the CBSAs selected for participation and the CBSAs selected for comparison by limiting uneven numbers of RT provider and RT supplier and episodes within the CBSAs selected for participation and of CBSAs selected for comparison that could result from a simple random sample. We proposed that if a CBSA were randomly selected to the participant group, then the RT providers and RT suppliers who furnish RT services in that CBSA selected for participation would be RO participants. If the CBSA were randomly assigned to the comparison group, then the providers and suppliers who furnish RT services in that CBSA selected for comparison would not be RO participants, but the claims they generate and the episodes constructed from those claims would be used as part of the RO Model's evaluation.

As discussed in the proposed rule, after determining the sampling framework, we conducted the necessary power calculations (statistical tests to determine the minimum sample size of the participant and comparison groups in the Model, designed in order to produce robust and reliable results) using Medicare FFS claims from January 1, 2015 through December 31, 2017, to construct episodes and then identify a sufficient sample size so that results would be precise and reliable. We stated in the proposed rule that we determined that approximately 40 percent of eligible episodes (as discussed in section III.C.5 of the proposed rule and this final rule) in eligible CBSAs nationally would allow for a rigorous test of the RO Model that would produce evaluation results that we can be confident are accurately reflecting what actually occurred in the Model test. We also stated that this size would limit the number of episodes expected in the participant group to no more than is needed for a robust statistical test of the projected impacts of the Model.

The proposed rule explained that using randomly selected stratified CBSAs would ensure that the CBSAs selected for participation and CBSAs selected for comparison each contain approximately 40 percent of all eligible episodes nationally. We proposed that the CBSAs selected for comparison would be used to evaluate the impact of the RO Model on spending, quality, and utilization. Further, we proposed that CBSAs would be randomly selected and the ZIP Codes linked to those CBSAs selected for participation would be published on the RO Model website once the final rule is displayed.

The following is a summary of comments we received related to the proposed geographic unit of selection and our responses to those comments:

Comment: A couple of commenters believed that approximately 40 percent of episodes constituted more than a test and a few requested a reduction in the scale of the proposed Model. CMS received many comments related to the proposed size of the RO Model, where CMS proposed to include approximately 40 percent of episodes in the Model. All of the commenters who submitted feedback on this issue were opposed to the size of the Model, and many commenters suggested that the size of the Model should be decreased from approximately 40 percent of all eligible episodes annually. These commenters suggested many alternatives to CMS' proposal to include approximately 40 percent of all eligible episodes, most of which suggested a range of 7 percent to 25 percent of episodes to be included in the Model; some suggested a gradual phase in of additional RO participants over the course of the Model.

Response: Incorporating some public commenters' request for a reduced size of the Model while ensuring sufficient sample for a robust evaluation, we have determined that a reduced scale from approximately 40 percent of eligible episodes to approximately 30 percent of eligible episodes, is sufficient to produce robust evaluation results for the finalized Model. By requiring approximately 30 percent of eligible episodes to be included in the Model, we expect to be able to detect a savings of 3.75 percent or greater at a significance level of 0.05 and with a power of 0.8.

Based on the comments received, we are finalizing the proposed scope of the Model at § 512.210(d) with modification to reflect a reduced scale to approximately 30 percent of the eligible episodes. We note that this decision is supported by additional power calculations incorporating updated episode data from 2016–2018 FFS claims data that was not available for reliable analysis at the time of the proposed rule but became available during the fall of 2019 in order to

[28] 'Robust' in statistical terminology means that we can have high confidence in the test results under a broad range of conditions, for example, lower quality data, a shortened test period, or other unexpected complications.

confirm the appropriateness of the minimal sample size that would incorporate the finalized design of the RO Model.

Comment: Many commenters were opposed to mandatory participation of RT providers and RT suppliers located in a random sample of core-based statistical areas (CBSAs). A commenter was concerned that random selection of participants did not account for vulnerable beneficiary populations or vulnerable providers and suppliers. Another commenter expressed concern on the potential of certain RT provider and RT supplier sites being selected in the Model and the potential payment reductions they may face due to the Model, which would prevent them from subsidizing more rural locations which currently do not cover the costs of care.

Response: As we explained in the proposed rule and this final rule, due to concerns about a voluntary model being subject to: (1) Selection bias from limited to no participation from HOPDs; (2) an even larger geographic scope requirement for a model with optional participation to account for the projected bias and lower participation rates; (3) the ability of such a model with optional participation to achieve savings; and (4) a reduced likelihood of reliably detecting change to support Model expansion, we proposed to require participation of RT providers and RT suppliers located in a random sample of core-based statistical areas (CBSAs). Mandatory participation among randomly selected providers and suppliers ensures that the evaluation results about the RO Model will be robust (both reliable, in that the effects in savings we would see are not due to chance and not biased due to selection of participants that are not representative of all RT providers and RT suppliers), so that these results can provide for the Chief Actuary of CMS to certify that expansion of the Model would reduce (or would not result in any increase in) net program spending in the future if the Department chooses to pursue expansion under 1115A(c) of the Act. Therefore, we will not be modifying our proposal to randomly select CBSAs to identify RT providers and RT suppliers that are required to participate in the Model through a stratified sample design.

The well-being of potentially vulnerable patients is always of primary concern to CMS. As such, we will examine and monitor vulnerable populations and providers and suppliers for any unintended consequences of the random selection of RO participants in the Model. CMS expects that the payments to providers and suppliers under the RO Model will appropriately cover the costs of standard operations and profits for RT providers and suppliers. We appreciate the possibility of instances where RT providers and suppliers are cross-subsidizing finances from high-earning locations to lower-earning locations, but this is not directly under CMS control—these are external financing practices which CMS does not have authority over. HHS has additional programs which provide help with financing for potentially vulnerable populations and providers and suppliers (such as HRSA programs for the vulnerable and underserved). Additionally, for certain low volume RT providers and RT suppliers, we are providing a low volume opt-out option, as discussed in section III.C.3.c of this final rule.

Comment: Some commenters expressed concern that the use of Core-Based Statistical Areas (CBSAs) to identify RO participants could result in unintended consequences, such as picking 'winners and losers' in markets. These comments largely focused on 'patient overlap' and the potential incentive for patients to travel, depending on the patient's preference, in order to see a RT provider or RT supplier who either is an RO participant or a RT provider or RT supplier not selected to participate in the Model. Comments appeared to suggest that all RT providers and RT suppliers in a particular market be selected to be RO participants or not. A commenter stated that patients could be negatively impacted by the Model as beneficiaries seeking RT services in included ZIP Codes must also participate in the Model or travel to a geographic area not included in the Model for care (regardless of their ability to do so). A commenter was worried about the potential differences between CBSAs selected for participation and CBSAs selected for comparison with respect to treating prostate cancer if there was an uneven incidence of prostate cancer cases between RO participants and comparators—the comment cited the 'greater levels of technology', such as IMRT (intensity-modulated radiation therapy) that is often used to treat prostate cancer. The commenter was similarly concerned with the potential for lower-risk patients to be used as a benchmark in comparison CBSAs while higher-risk patients would be in the CBSAs selected for participation, particularly with regards to race.

One commenter fully agreed with proposed geography-based randomization process, stating that the proposed process was fair and unbiased. A commenter suggested that site-neutral payments be applied to all RT providers and RT suppliers and not restrict this payment change to the proposed approximately 40 percent of CBSAs selected for participation.

Response: In designing the Model, a driving principle for us was patients being able to continue to access high-quality care. As we stated in the proposed rule and in this final rule, there are tradeoffs to consider in the design of a Model with respect to the unit of selection. The mixture of concern and support for the proposed design as expressed through the comments described here is further evidence of those tradeoffs.

We do not have data that definitively delineates markets for RT services. However, we believe by adopting CBSAs as proxies for those markets that we will achieve a reasonable balance among the tradeoffs raised by commenters and discussed in the proposed rule. To the extent that CBSAs act like or represent markets, these group analyses would allow CMS to observe potential group level, market-like effects. We have found group level effects important as context for understanding the results of other models tested under section 1115A of the Act. Please see section III.C.3.d for a discussion of CBSAs as markets due to their high degree of social and economic integration. Because CBSAs can yield market-like effects, CMS believes that CBSAs are the best available option for selection of RT participation.

We shared the concerns with commenters that selection of some CBSAs may create specific situations, such as a health system having practices in multiple locations and/or those located near the border of a CBSA. We understand the concern that the Model could potentially result in health systems having both RO participants and non-participants, as this could produce additional burden for these systems in terms of billing and the ability to manage patients. This issue is one such tradeoff in the design of the Model. We determined that some systems would have locations providing RT services that experience the Model conditions as an RO participant and other locations providing RT services that are not RO participants. We chose CBSAs to attempt to minimize the number of such occurrences. We would also like to note that episodes are assigned to a single CBSA by way of the ZIP Code of the RT supplier that furnished the planning service that triggered the RO episode.

We believe that using stratified randomization will minimize potential

selection problems and unintended consequences, including other potential imbalances in cancer type (and corresponding modality) or patient risk. We can identify and account for observed imbalances that may result from randomized selection in the evaluation. The Model (and its exclusions) were designed to minimize the potential consequences. We are finalizing the adoption of CBSAs as the geographic unit of selection in the RO Model.

We seek to support Medicare patients' rights to seek care wherever they choose. We do not believe that the changes in health care provider payments in the RO model would justify or lead to beneficiaries travelling to entirely different CBSAs to seek RO care, which involves frequent treatments over a short period. We designed the model with CBSAs to prevent RO participants from shifting patients who require more expensive care to a site of service which would not be included in the RO Model. The CBSAs selected for participation will be in distinctive locations, and we believe the potential effects on patient costs would not substantial. Based on these facts and the frequency needed for radiation therapy treatments, we do not believe that the RO Model would create an incentive for beneficiaries to avoid RO participants. In other words, we do not believe that the RO Model would create a situation where beneficiaries systematically choose to receive RT services from an RT provider or supplier that they would not otherwise seek care from in absence of the model. We believe the compensation we are providing under this Model is fair and this should not affect where beneficiaries seek RT services.

The RO Model's inclusion of approximately 30 percent (or a greater percent) of all RT providers and suppliers for a finite period of time does not constitute a program change but a model test. In order to test the effect of payments in the RO Model to determine whether they reduce cost while maintaining and/or improving quality of care and patient outcomes, we believe using both a case (participant) and control (non-participant) will provide the most meaningful comparison. We have designed the Model to include a limited sample size (that is, approximately 30 percent of eligible episodes nationwide), while ensuring both sufficient sample size and power to produce robust data that can provide evidence to certify the Model in the future if the Department chooses.

Comment: A few commenters encouraged us to allow public comment on the particular CBSAs selected for participation in the RO Model.

Response: We appreciate the commenters' concerns regarding an opportunity to comment on particular CBSAs selected for participation, but these comments fall outside the scope of our proposed policy. We would like to clarify that we will use the most recently available HUD USPS ZIP Code Crosswalk Files (*https://www.huduser.gov/portal/datasets/usps_crosswalk.html#data*) to link a new five-digit ZIP Code to a CBSA in the manner as described in section III.C.3.d. Currently, the HUD USPS ZIP Code Crosswalk Files are updated quarterly. If the most recently available HUD USPS ZIP Code Crosswalk File links any additional five-digit ZIP Codes to the CBSAs selected for participation, we will add those ZIP Codes to the ZIP Codes included under the Model. The look-up tool that includes all of the five-digit ZIP Codes linked to CBSAs selected for participation will be updated with the additional ZIP Codes. Once a five-digit ZIP Code is assigned to a CBSA selected for participation under the Model, it will not be removed from the list of included ZIP Codes.

Comment: A couple of commenters were concerned that the Model design had the potential not to include a sufficient number of proton beam therapy (PBT) centers to be able adequately detect the impact of the Model on proton centers in isolation.

Response: The evaluation of the RO Model will be primarily interested in the impacts of the Model on the overall spending and quality of care across all included RT services at the population level, and not the effects on one RT modality compared to another. While some future evaluation analyses may include differences in costs and quality by modality, we will make no impact estimates on cost nor quality where we do not have suitable sample size of practices or episodes among the participants and non-participant comparators, understanding that any differences we may observe will be observational and not causative.

Comment: A commenter requested that CMS should publish online an explicit list of excluded RT providers and RT suppliers, including their names, addresses, and NPIs to ensure there's no confusion about excluded providers and suppliers. This commenter further stated that it is important for Professional participants to have a CMS-approved list that clearly indicates which RT providers and RT suppliers are excluded despite the fact that they are located within a ZIP Code selected for the RO Model.

Response: We appreciate the commenter's suggestion. A look-up tool that includes all of the five-digit ZIP Codes linked to CBSAs selected for participation in accordance with our finalized selection policy described in this final rule is located on the RO Model website (*https://innovation.cms.gov/initiatives/radiation-oncology-model/*). This tool will allow included entities that furnish RT services to identify if they are included or excluded from the RO Model based on their site of service. We will refrain from including personal identification information of specific physicians in the release of the RT providers and suppliers selected to participate. We believe that relevant entities within selected participating ZIP Codes will already be aware if they meet the exclusion criteria for the Model (for example, if they whether they are PPS-exempt cancer hospitals, critical access hospitals (CAHs), or are located within certain exclude states (Maryland, Vermont, U.S. Territories) or are participating in or eligible to participate in the Pennsylvania Rural Health Model as codified at § 512.210. However, any entity who may want to confirm their exclusion will be free to contact the RO Model help desk (*RadiationTherapy@cms.hhs.gov*).

Comment: A commenter has requested that we select patients randomly to be included in the Model.

Response: The Model design is such that RO participants will be selected through randomized CBSAs: Those CBSAs selected for participation and CBSAs selected for comparison. The Model is not designed to randomly select patients from within selected RO participants. CMS chose not to design the RO Model to randomly select patients as this would have created a much greater burden, administratively and operationally, for RT providers and suppliers who see both participating and non-participating beneficiaries within a single site of care who would then need to operationalize 2 different billing systems (one for participating beneficiaries, one for non-participating beneficiaries) within that one site. Additionally, if the sample size (approximately 30 percent of episodes) were calculated at the beneficiary level (rather than RT provider and supplier level), a substantially greater number of RT providers and suppliers would be included as RO participants to reach the necessary approximately 30 percent sample size. We are finalizing as proposed that patients will be RO beneficiaries if they receive included RT services from an RO participant. The Model will be finalized using the

proposed random selection of CBSAs as the method of determining an RT provider's or RT supplier's participation (or not) in the model.

After considering public comments, we are finalizing with modification our proposed provisions on the RO Model's geographic unit of selection. Specifically, we are codifying at § 512.210(d) that we will randomly select CBSAs to identify RT providers and RT suppliers to participate in the Model through a stratified sample design. However, instead of allowing for participant and comparison groups to contain approximately 40 percent of all eligible episodes in eligible geographic areas as we had proposed, we are modifying this provision in the final rule allowing for participant and comparison groups to contain approximately 30 percent of all eligible episodes in eligible geographic areas (that is, CBSAs). The sample size was calculated incorporating the final parameters of the model, and we are using a sample size that we believe is necessary to detect the anticipated impact of the model. Therefore, we are finalizing that approximately 30 percent of eligible episodes will be randomly selected for this Model. For the final rule, we used Medicare FFS claims from January 1, 2016 through December 31, 2018 for constructing episodes, determining sufficient sample size, and for the eventual selection of participants and comparators for the RO Model, as this was the timeliest data available at the time of this final rule's release.

4. Beneficiary Population

In the proposed rule at 84 FR 34496, we proposed that a Medicare FFS beneficiary would be included in the RO Model if the beneficiary:

- Receives included RT services in a five-digit ZIP Code, linked to a CBSA selected for participation, from an RO participant during the Model performance period for a cancer type that meets the criteria for inclusion in the RO Model; and
- At the time that the initial treatment planning service of the episode is furnished by an RO participant, the beneficiary:

++ Is eligible for Medicare Part A and enrolled in Medicare Part B; and

++ Has traditional Medicare FFS as his or her primary payer.

In addition, we proposed to exclude from the RO Model any beneficiary who, at the time that the initial treatment planning service of the episode is furnished by an RO participant:

- Is Enrolled in any Medicare managed care organization, including but not limited to Medicare Advantage plans;
- Is Enrolled in a PACE plan;
- Is in a Medicare hospice benefit period; [29] or
- Is covered under United Mine Workers.

We explained in the proposed rule that the RO Model will evaluate RT services furnished to beneficiaries who have been diagnosed with one of the cancer types identified as satisfying our criteria for inclusion in the Model, as discussed in section III.C.5.a of the rule (84 FR 34496 through 34497). Thus, we stated that we believed it would be necessary to include only beneficiaries who have at least one of the identified cancer types and who also receive RT services from RO participants. We also stated that a key objective of the RO Model is to evaluate if and/or how RT service delivery changes, in either the HOPD or freestanding radiation therapy center setting, as a result of a change in payment systems from FFS to prospectively determined bundled rates for an episode. We proposed these criteria in order to limit RT provider and RT supplier participation in the RO Model to beneficiaries whose RT providers and RT suppliers would otherwise be paid by way of traditional FFS payments for the identified cancer types. We discussed our belief that these eligibility criteria for RO beneficiaries are necessary in order to properly evaluate this change with minimal intervening effects in the proposed rule.

We proposed to define a beneficiary who meets all of these criteria, and who does not trigger any of the beneficiary exclusion criteria, a ''RO beneficiary''. We proposed to codify the terms ''RO beneficiary,'' ''RT provider,'' and ''RT supplier'' at § 512.205.

In addition, we proposed to include in the RO Model any beneficiary participating in a clinical trial for RT services for which Medicare pays routine costs, provided that such beneficiary meets all of the beneficiary inclusion criteria. The proposed rule provides that we would consider routine costs of a clinical trial to be all items and services that are otherwise generally available to Medicare beneficiaries (that is, there exists a benefit category, it is not statutorily excluded, and there is not a national non-coverage decision) that are provided in either the experimental or the control arms of a clinical trial.[30] Medicare pays routine costs by way of FFS payments, making it appropriate to include RT services furnished for RO episodes in this case under the RO Model.

We stated that the RO Model's design would not allow RO beneficiaries to ''opt out'' of the Model's pricing methodology. A beneficiary who is included in the RO Model pursuant to the proposed criteria would have his or her RT services paid for under the Model's pricing methodology and would be responsible for the coinsurance amount as discussed in section III.C.6.i of this final rule. Beneficiaries do have the right to choose to receive RT services in a geographic area not included in the RO Model.

We explained in the proposed rule, at 84 FR 34497, that if an RO beneficiary stops meeting any of the eligibility criteria or triggers any of the exclusion criteria before the TC of an episode initiates, then the episode would be an incomplete episode as discussed in section III.C.6.a of the proposed rule (84 FR 34503 through 34504) and this final rule. Payments to RO participants would be retrospectively adjusted to account for incomplete episodes during the annual reconciliation process, as described in section III.C.11 of the proposed rule and this final rule. We proposed that if traditional Medicare stops being an RO beneficiary's primary payer after the TC of the episode has been initiated, then regardless of whether the beneficiary's course of RT treatment was completed, the 90-day period would be considered an incomplete episode, and the RO participant would receive only the first installment of the episode payment. In the event that a beneficiary dies or enters hospice during an episode, then the RO participant would receive both installments of the episode payment, regardless of whether the RO beneficiary's course of RT has ended (see section III.C.7 of the proposed rule and this final rule).

We proposed these beneficiary eligibility criteria for purposes of determining beneficiary inclusion in and exclusion from the Model. The following is a summary of comments received related to our proposal on the RO Model's beneficiary population and our responses to those comments:

Comment: A few commenters requested that all patients enrolled in clinical trials should be excluded from

[29] Please note that this was incorrectly stated in the section III.C.4 of the preamble to the Notice of Proposed Rulemaking, as ''Is not in a Medicare hospice benefit period'' (at 84 FR 34496), but was correctly stated in the proposed regulatory text at 84 FR 34585. It has been corrected in the preamble to this Final Rule to ''Is in a Medicare hospice benefit period.''

[30] The current Medicare policy on routine cost in clinical trials is described in Routine Costs in Clinical Trials 100–3 section 310.1.

the RO Model. One of these commenters also stated that some Medicare contractors provide exceptions to providers and suppliers with a history of evidence development and they suggested that the Innovation Center consider this as a basis for exclusion as well.

Response: We thank the commenters for their suggestions. Medicare pays routine costs by way of FFS payments for Medicare beneficiaries participating in clinical trials when there exists a benefit category, it is not statutorily excluded, and there is not a national non-coverage decision, making it appropriate to include these beneficiaries in the RO Model provided that such beneficiary meets all of the proposed beneficiary inclusion criteria. It is important that the RO Model include clinical trials because the goal of the Model is to test whether prospective episode payments for RT services, in lieu of traditional FFS payments, would reduce Medicare expenditures. Therefore, not including clinical trials that are paid through FFS could skew the Model results. With regard to the commenter who suggested that the Innovation Center provide exceptions to providers and suppliers with a history of evidence development, we appreciate the suggestion, however, we believe that less experienced RO participants will benefit from this type of experience through peer-to-peer learning activities and performance reports that will allow for comparison between participants. We also believe that including providers and suppliers with all levels of experience would result in a more robust data set for evaluation of the RO Model's prospective payment approach. We will continue to monitor the Model for a need of this exception in the future.

Comment: A commenter suggested that CMS should open the RO Model to voluntary participation by Medicare Advantage plans and other payers. This commenter stated that limiting the RO Model to Medicare fee-for service would miss an opportunity to allow as many health care providers and payers as possible to explore and assess innovative approaches to delivering care under a bundled payment model.

Response: At this time, we are finalizing as proposed that the RO Model will include only Medicare fee-for-service beneficiaries receiving RT services by RO Participants. This Model was designed to test an alternative payment approach instead of FFS, and is therefore limited to only Medicare FFS beneficiaries and does not include other payers like Medicare Advantage. As we discussed in the NPRM, a key objective of the RO Model would be to evaluate if and/or how RT service delivery changes in either the HOPD or freestanding radiation therapy center setting as a result of a change in payment systems from that of FFS under OPPS or PFS, respectively, to that of prospectively determined bundled rates for an episode as described in section III.C.6.c. We proposed these beneficiary criteria in order to limit participation in the RO Model to beneficiaries whose RT providers and/or RT suppliers would otherwise be paid by way of traditional FFS payments for the identified cancer types. We believe that these eligibility criteria for RO beneficiaries are necessary in order to properly evaluate this change with minimal intervening effects; therefore, we are not including additional payers such as Medicare Advantage to the RO Model in this final rule. We recognize that other payers may be conducting similar alternative payment models. Other payers who are interested in testing an alternative payment system to FFS are welcome to align with our RO Model methodologies. However, we are not soliciting formal partnerships with other payers at this time.

Comment: Another commenter requested clarification on what will happen if a patient joins a Medicare Advantage plan during the fall open enrollment period while in an RO episode. This commenter expressed concern that both systems will assume the other will pay.

Response: In this scenario, if Medicare FFS stops being the primary payer during the 90-day episode, this would be considered an incomplete episode. Please refer to section III.C.6.a of the proposed rule (84 FR 34503 through 34504) and this final rule for an overview of our incomplete episode policy.

Comment: A commenter stated that patients should always have a choice in their care, and therefore a patient opt-out provision is warranted just as it is in the OCM.

Response: As we stated in the proposed rule, the RO Model's design will not allow RO beneficiaries to ''opt out'' of the Model's pricing methodology as described in section III.C.6 of the proposed rule, as well as this final rule. Of note, this policy is the same as in OCM, where beneficiaries who receive care from an OCM participant have the same Medicare rights and protections, including the right to choose which health care provider they see, and they may choose a health care provider who does not participate in the OCM. However, just as in OCM, this Model protects beneficiary choice because beneficiaries have the right to choose to receive RT services from a RT provider and/or RT supplier not included in the RO Model.

Comment: A commenter supported the participant criteria with the exception of excluding those in a Medicare hospice benefit (MHB) period. This commenter stated that such patients may benefit from RT services as a palliative measure and so should be allowed to participate in this Model if so. They further stated that while they agreed this is a reimbursement issue for hospices, palliative radiation is by its nature not curative and so should be covered under the MHB, at least for those people with cancer participating in this Model.

Response: We thank the commenter for their recommendation. Medicare beneficiaries will be excluded from the RO Model if they are in a MHB period at the start of their receipt of RT services, because the MHB is not paid FFS. As we previously stated, the goal of the RO Model is to test whether prospective episode payments in lieu of traditional FFS payments for RT services would reduce Medicare expenditures; therefore, it is important that non-FFS beneficiaries be excluded in order to properly evaluate the results of the Model. Traditionally, if a beneficiary receives RT services during a MHB period, the cost of the treatment would be covered under the Medicare hospice per diem. The RO Model allows for RO Model payments to continue (in addition to the Medicare hospice per diem) if a beneficiary selects MHB during an RO episode so as not to dissuade RO participants from making a hospice referral when needed. The Medicare hospice agency will not be responsible for the cost of RT services in this case. This RO Model policy does not intend to imply that the MHB should pay for curative treatment. While we understand the commenter's concern, we will not be creating an exemption of this nature at this time.

Comment: A commenter requested clarification on the definition of an RO beneficiary, specifically they would like clarification on what happens if a patient starts an episode with inpatient treatment and then changes to an outpatient setting, and if a patient changes ZIP Codes during the course of treatment.

Response: To the commenter's question regarding moving from inpatient treatment to outpatient treatment, if a beneficiary starts inpatient treatment and then changes to an outpatient setting, this situation would not be considered an RO episode,

and treatment would be billed under traditional fee-for-service.

For the commenter's question about a patient changing ZIP Codes during the course of treatment, we note that the ZIP Codes are relevant only to the location of the RO participant, not the residence of the beneficiary. If the beneficiary with an included cancer type receives included professional and technical services from one or more RO participants located in one or more ZIP Codes linked to CBSAs selected for participation, then the beneficiary will be an RO beneficiary. If the beneficiary receives professional RT services from an RO participant in a ZIP Code linked to CBSAs selected for participation, but receives technical RT services from non-participants (or vice versa), the beneficiary will not be in the Model, and this will be an incomplete episode as defined at § 512.205 and as further described in section III.C.6.a of this final rule. Payments to RO participants will be retrospectively adjusted to account for incomplete episodes during the annual reconciliation process, as described in section III.C.11 of this final rule.

Comment: A commenter did not support our proposal regarding the beneficiaries that will be included and excluded from the RO Model. This commenter stated that linking beneficiaries by ZIP Code could create adverse selection and skew the results of the Model. This commenter requested clarity on whether inclusion and exclusion is linked to the beneficiary's address being in the ZIP Code or the address of the RO participant. This commenter also requested clarification about whether the RO participant is responsible for the entire ZIP Code even if the beneficiary goes out-of-area.

Response: We are clarifying that a beneficiary's address does not determine his or her inclusion in the RO Model, rather it is determined by the address where the RO participant furnished the included RT services. Nor did we propose to link beneficiaries by ZIP Code. Regarding the requested clarification about whether the RO participant is responsible for the entire ZIP Code even if the beneficiary goes ''out-of-area'', we take the commenter's reference to a beneficiary going ''out-of-area'' to mean that the beneficiary has switched providers and stopped receiving RT services from the RO participant that initiated the RO episode. This would be considered an incomplete episode. We also note that in the case of incomplete episodes, RO participants are owed beneficiary coinsurance payment of 20 percent of the FFS amounts that would have been paid in the absence of the RO Model, except when the RO beneficiary ceases to have traditional FFS Medicare as his or her primary payer at any time after the initial treatment planning service is furnished and before the date of service on a claim with an RO Model-specific HCPCS code and EOE modifier. In that case, the RO participant would be owed beneficiary coinsurance payment would equal 20 percent of the first installment of the episode payment amount. See III.C.6.a of the proposed rule (84 FR 34503 through 34504) and this final rule for an overview of our incomplete episode policy. Payments to RO participants will be retrospectively adjusted to account for incomplete episodes during the annual reconciliation process, as described in section III.C.11. of this proposed rule.

Comment: A commenter requested clarification about what will occur if a beneficiary refuses to participate in the Model by notifying CMS in writing after treatment is started and the start of episode (SOE) HCPCS is submitted to CMS.

Response: We would like to clarify that under this Model, RO beneficiaries will not provide direct notification to CMS when they do not wish to participate in the Model. If a beneficiary does not wish to ''participate'' in the Model, (s)he can seek treatment from a non-participant. The notification that we believe this commenter is referring to is in cases where beneficiaries do not wish to have their claims data shared with the RO participant for care coordination and quality improvement purposes under the Model. In such cases, the RO participant must notify CMS in writing within 30 days of when the RO beneficiary notifies the RO participant (see section III.C.15 of the proposed rule and this final rule for more details on this policy).

Comment: A commenter was concerned with the potential for adverse health outcomes for certain vulnerable populations defined by race, income, and the presence of prostate cancer under the Model.

Response: The evaluation of the RO Model will be taking into account, to the extent feasible, any potential adverse health outcomes, and any underlying differences in patient characteristics, severity, and the related differences in technology in the monitoring and evaluation of this Model.

After considering public comments, we are finalizing our proposal on the beneficiary population with modification. We have made additional non-substantive changes to the proposed provisions at § 512.215 in this final rule to improve readability. Specifically, we are finalizing, with modification, the RO Model beneficiary inclusion criteria as codified at § 512.215(a) and illustrated in Figure A. We have made additional non-substantive changes to the proposed provisions at § 512.215 in this final rule to improve readability. We are also finalizing with modification at § 512.215(a) that an individual is an RO beneficiary if the individual receives included RT services from an RO participant that billed the SOE modifier for the PC or TC of an RO episode during the Model performance period for an included cancer type. An individual is an RO beneficiary if, at the time that the initial treatment planning service of an RO episode is furnished by an RO participant, the individual is eligible for Medicare Part A and enrolled in Medicare Part B, the individual has traditional FFS Medicare as his or her primary payer (for example, is not enrolled in a PACE plan, Medicare Advantage or another managed care plan, or United Mine Workers insurance), and if the individual is not in a MHB period. We are further finalizing with modification at § 512.215(b) that any individual enrolled in a clinical trial for RT services for which Medicare pays routine costs will be an RO Beneficiary if the individual satisfies all of the beneficiary inclusion criteria codified at § 512.215(a).

Additionally, we are finalizing as proposed to codify the terms ''RT provider,'' and ''RT supplier'' at § 512.205. We are finalizing, with modification, to codify the term ''RO beneficiary'' at § 512.205 to mean a Medicare beneficiary who meets all of the beneficiary inclusion criteria at § 512.215(a) and whose RO episode meets all of the criteria defined at § 512.245. As explained in the proposed rule and in this final rule, the RO Model's design would not allow RO beneficiaries to ''opt out'' of the Model's pricing methodology.

FIGURE A—FINALIZED RO BENEFICIARY INCLUSION CRITERIA

The individual receives included RT services:
- From an RO participant that billed the SOE modifier for the PC or TC of an RO episode during the Model performance period for an included cancer type.

At the time that the initial treatment planning service of the RO episode is furnished by an RO participant, the individual:
- Is eligible for Medicare Part A and enrolled in Medicare Part B.
- Has traditional Medicare FFS as his or her primary payer (for example, is not enrolled in a PACE plan, Medicare Advantage or another managed care plan, or United Mine Workers insurance).
- Is not in a Medicare hospice benefit period.

5. RO Model Episodes

We proposed that under the RO Model, Medicare would pay RO participants a site-neutral, episode-based payment amount for all specified RT services furnished to an RO beneficiary during a 90-day episode (84 FR 34497). In section III.C.5 of the proposed rule, we first explained our proposal to include criteria to add or remove cancer types under the Model and their relevant diagnoses codes in the Model as well as the RT services and modalities that would be covered and not covered in an episode payment for treatment of those cancer types. We then explained our proposal for testing a 90-day episode and proposed the conditions that must be met to trigger an episode.

a. Included Cancer Types

We proposed the following criteria for purposes of including cancer types under the RO Model. The cancer type—

- Is commonly treated with radiation; and
- Has associated current ICD–10 codes that have demonstrated pricing stability.

We proposed to codify these criteria for included cancer types at § 512.230(a) of our regulation.

We proposed the following criteria for purposes of removing cancer types under the RO Model.

- RT is no longer appropriate to treat a cancer type per nationally recognized, evidence-based clinical treatment guidelines;
- CMS discovers a ≥10 percent (≥10%) error in established national base rates; or
- The Secretary determines a cancer type not to be suitable for inclusion in the Model.

We proposed to codify these criteria for removing cancer types at § 512.230(b) of our regulation.

We identified 17 cancer types in Table 1—Identified Cancer Types and Corresponding ICD–9 and ICD–10 Codes of the proposed rule that met our proposed criteria. We explained in the proposed rule that these 17 cancer types are commonly treated with RT and Medicare claims data was sufficiently reliable to calculate prices for prospective episode payments that accurately reflect the average resource utilization for an episode. These cancer types are made up of specific ICD–9 and ICD–10 diagnosis codes. For example, as shown in Table 1 of the proposed rule, there are cancer types for ''breast cancer'' and ''prostate cancer,'' which are categorical terms that represent a grouping of ICD–9 and ICD–10 codes affiliated with those conditions. To identify these cancer types and their relevant diagnosis codes to include in the Model, we identified cancers that are treated with RT.

As described in the proposed rule, we used the list of cancer types and relevant diagnosis codes, to analyze the interquartile ranges of the episode prices across diagnosis codes within each cancer type to determine pricing stability. We chose to exclude benign neoplasms and those cancers that are rarely treated with radiation because there were not enough episodes for reliable pricing and they were too variable to pool.

We stated in the proposed rule that during our review of skin cancer episodes, we discovered that Current Procedural Terminology® (CPT®) code 0182T (electronic brachytherapy treatment), which was being used mainly by dermatologists to report treatment for non-melanoma skin cancers, was deleted and replaced with two new codes (CPT® code 0394T to report high dose rate (HDR) electronic skin brachytherapy and 0395T to report HDR electronic interstitial or intracavitary treatments) in 2016. Local coverage determinations (LCDs) that provide information about whether or not a particular item or service is covered were created and subsequently changed during this time period. Our analysis suggested that the volume and pricing of these services dropped significantly between 2015 and 2016, with pricing decreasing more than 50 percent. As a result, we did not believe that we could price episodes for skin cancers that accurately reflect the average resource utilization for an episode. Thus, skin cancer was excluded in the proposed rule.

The proposed RO Model's included cancer types are commonly treated with RT and can be accurately priced for prospective episode payments. As proposed, an up-to-date list of cancer types, upon any subsequent revisions, will be kept on the RO Model website.

We proposed to define the term ''included cancer types'' to mean the cancer types determined by the proposed criteria set forth in § 512.230, which are included in the RO Model test.

We proposed to maintain the list of ICD–10 codes for included cancer types under the RO Model on the RO Model website. We indicated in the proposed rule that any addition or removal of these codes would be communicated via the RO Model website and written correspondence to RO participants. We proposed to notify RO participants of any changes to the diagnosis codes for the included cancer types per the CMS standard process for announcing coding changes and update the list on the RO Model website no later than 30 days prior to each PY.

We solicited comments on the proposed cancer types included in the RO Model. The following is a summary of the public comments received on this proposal and our responses to those comments:

Comment: A couple of commenters expressed support for the inclusion of all 17 cancer types named in the proposed rule, emphasizing that it expands the benefit to the broadest population of patients. A few of these commenters stated that including all 17 cancer types would reduce the overall administrative burden on RO participants, as this scale decreases the burden associated with operationalizing a model for a few key cancer sites and not others. Other commenters emphasized that, since these 17 cancer types are commonly treated with RT services, they can be accurately priced.

Response: We thank the commenters for their support.

Comment: A commenter described how inaccurate coding could lead to

misvalued episode payments and included renal cell carcinoma in one of the examples.

Response: Based on further clinical review, kidney cancer is not commonly treated with radiotherapy and as such it does not meeting the criteria for inclusion. Kidney cancer may have been included as an artifact of inaccurate coding and we are therefore excluding it from the RO Model.

Comment: Many commenters expressed concern over the inclusion of cervical cancer. A commenter suggested separate payment for each physician involved in treating cervical cancer. A few commenters recommended using the OPPS Ambulatory Payment Classification (APC) payment rates without the comprehensive APC (C–APC) methodology for the technical component of the national base rate for cervical cancer, because they believe that the C–APC OPPS methodology undervalues the brachytherapy reimbursement. Another commenter called into question the data used to determine the national base rates for cervical cancer, stating that the payment methodology is not well-suited for cancers commonly treated with multiple modalities. This commenter also believed that the RO Episode File misattributed episodes to cervical cancer that ought to have fallen under a different cancer type. This commenter noted episodes that are inconsistent with clinical medicine and could be only partially captured episodes, incorrectly captured delivery codes, or misattributed episodes. Regarding misattribution, the commenter stated that approximately 2 percent of cervical cancer episodes include SRS, yet since SRS is a single fraction of radiation to the brain, these episodes are likely treating a metastatic site rather than treating the primary site of cervical cancer. Regarding partially captured episodes, the commenter asserted that there are 75 episodes from the RO Episode File where fewer fractions were provided than is the established clinical approach.

Response: We believe that the national base rates represent the average of all RT services provided to beneficiaries with a given cancer type, including cervical cancer, and it is probable that there will be individual episodes where there is deviation from the standard treatment given the clinical profile of an individual patient. Our data shows that in addition to episodes with lower numbers of fractions, there are other episodes with higher numbers of fractions than is typically recommended. Over the past few years, we have repeatedly examined the C–APC methodology with regard to brachytherapy and cervical cancer and determined that it provides appropriate reimbursement. For examples, please see the CY 2020 OPPS/ASC final rule with comment period (84 FR 61163) and the CY 2019 OPPS/ASC final rule with comment period (83 FR 58843). As such, we believe that the C–APC methodology is appropriate to use in the base rate calculations for the RO Model. We will continue to examine these concerns. Please refer to the pricing methodology in section III.C.6 for further explanation of these points, including rationale related to APCs and C–APCs. We rely on Medicare providers and suppliers to furnish appropriate care to beneficiaries.

Comment: A commenter suggested adding a specific category for an isolated lymph node treated with radiation, emphasizing that this is a common clinical situation.

Response: We thank the commenter for their suggestion. However, we believe that the treatment of an isolated lymph node would likely be part of a treatment plan for an included cancer type. If it is not part of a treatment plan for an included cancer type, the treatment would be paid FFS.

Comment: A few commenters recommended that CMS remove liver cancer from the RO Model. These commenters argued that the treatments for liver cancer are not well-suited for the RO Model as treatment can involve multiple physicians. A few commenters stated that liver cancer sometimes involves radioembolization treatment using Yttrium-90, and that this therapy frequently involves both a radiation oncologist and an interventional oncologist, most likely in the HOPD. These commenters believed that including this therapy could trigger incomplete episodes, as one physician is typically involved in planning and a second in delivery. These commenters also believed that, when the radiation oncologist triggers the episode, there would be a separate FFS payment to the interventional radiologist for their work, ultimately resulting in a higher payment from the patient.

Other commenters believed that liver cancer should be excluded from the Model, as it is uncommon for a patient to receive more than one session of brachytherapy for liver cancer, thus there is no opportunity to improve efficiency or reduce spending. A couple of commenters added that liver cancer treated with brachytherapy accounts for only 0.29 percent of all episodes included in the Model, and, therefore, any cost savings would be trivial. Another commenter suggested that this low percentage indicated that liver cancer treated with brachytherapy should fall under the ''certain brachytherapy surgical services'' excluded by the proposed rule due to low volume.

Response: As noted in section III.C.5.c of this final rule, we are removing Yttrium-90 from the RT services included on the list referred to as ''RO Model Bundled HCPCS'' (Table 2; as such, it may be billed FFS. Liver cancer meets the criteria for inclusion as a cancer type under the RO Model as codified at § 512.230(a). The RO Model is designed to be disease-specific and agnostic to treatment and modality type. Liver cancer is commonly treated with radiation and has associated current ICD–10 codes that demonstrate pricing stability. It is important to note, that when just one treatment is clinically appropriate and furnished, the RO participant will be paid more than they would have under FFS. CMS recognizes that there is no efficiency or savings to be earned in these instances, but by including liver cancer in the RO Model we will be able to test whether prospective payments for RT services, as opposed to traditional FFS payments, would reduce Medicare expenditures while preserving or enhancing quality of care. Thus, we are finalizing our proposal to include liver cancer in the RO Model.

Comment: Some commenters recommended that CMS implement the Model with fewer cancer types. A commenter suggested that CMS limit the number of cancer types to those for which treatment protocols are the most standardized across patient cohorts and with low propensity for outlier cases. A couple of these commenters expressed concerns that the administrative burden imposed by the sheer number of included cancer types would be too much for RO participants and CMS to manage effectively. A commenter noted the variation in treatment pathways and requested that CMS consider excluding treatments that are extensive or serve as outliers. These commenters indicated that focusing on fewer cancer types would allow providers and suppliers to focus efforts on specific areas of medicine, causing less disruption to RO participants.

A few of these commenters had specific recommendations for which subset of cancer types should be included. A couple of commenters suggested targeting the most prevalent cancer types: Breast, colon, lung, and prostate, as treatments for these cancers are often more homogenous and their costs are more predictable. A few other commenters recommended including

only cancer types that had sufficient clinical data to support hypofractionation as clinically appropriate care. A few commenters recommended excluding complex cancer types with variable costs, such as cancers of the brain and of the head and neck. Specifically, commenters emphasized that these cancer types frequently require more complicated workup, planning, and technology than others, and must be adjusted as the tumor shrinks or the patient loses weight. A commenter underscored that, even within these three cancer types, patients may receive treatments that vary widely in cost based on clinical indicators.

A couple of commenters suggested phasing in the 17 cancer types over time, beginning with one or two cancer types and then expanding to the full set of 17 over the Model performance period. A couple commenters suggested reducing the number of cancer types included and analyzing performance data before including all 17 cancer types from the outset of the Model.

Response: The 16 cancer types that we are finalizing for inclusion in the RO Model are cancers commonly treated with RT. The Innovation Center excluded those cancers that are rarely treated with radiation. Once an initial list of cancer types and relevant diagnosis codes were identified, the Innovation Center reviewed them for pricing stability. For example, the Innovation Center analyzed the interquartile ranges of the episode prices across diagnosis codes within cancer types. There will likely be individual episodes where there is deviation from the standard treatment given the clinical profile of an individual patient. Our data shows that, in addition to episodes with lower numbers of fractions, there are other episodes with higher numbers of fractions than is typically recommended, including but not limited to as cancers of the brain and of the head and neck. The final list includes those cancer types that are commonly treated with RT and have demonstrated pricing stability, which allows them to be accurately priced. The diagnoses selected to be included in the RO Model account for over 90 percent of episodes during the time period that was analyzed (2016–2018, as discussed in section III.C.6.d). CMS believes that phasing in the included cancer types would prevent a robust evaluation because doing so would reduce the amount of available data for any cancer types phased in at a later time. As previously stated, we believe that a Model performance period of at least 5 years is sufficient to obtain data to compute a reliable impact estimate. Please refer to section III.C.1 of the rule for more information on the Model performance period.

Additionally, CMS believes that limiting or phasing in the number of included cancer types would be more burdensome for most RO participants. As previously noted, the included diagnoses accounted for over 90 percent of episodes from 2016 through 2018. Thus, for most RO participants, limiting or phasing in cancer types would mean that the RO Model requirements and billing guidance would apply to a subset of their RT services rather than to than to the majority of their RT services for a significant portion of the Model performance period (or if cancer types were further limited, for the entire Model performance period).

As explained earlier in this section of the final rule, we are modifying the list of included cancer types to exclude kidney cancer. We believe that including the 16 cancer types (Anal Cancer, Bladder Cancer, Bone Metastases, Brain Metastases, Breast Cancer, Cervical Cancer, CNS Tumors, Colorectal Cancer, Head and Neck Cancer, Liver Cancer, Lung Cancer, Lymphoma, Pancreatic Cancer, Prostate Cancer, Upper GI Cancer, and Uterine Cancer) that are commonly treated with RT and that can be accurately priced for prospective episode payments, is the best design for testing an episodic APM for RT services. The list of ICD–10 codes for the included cancer types under the RO Model, upon any subsequent revisions, can be located on the RO Model website.

After considering public comments, we are finalizing, without change, our proposed criteria for included cancer types and for removing cancer types at § 512.230(a) and (b) of our regulations. Additionally, we are finalizing without change at § 512.230(c) our proposal to notify RO participants of any changes to the diagnosis codes for the included cancer types by displaying them on the RO Model website no later than 30 days prior to each performance year.

TABLE 1: IDENTIFIED CANCER TYPES AND CORRESPONDING ICD-10 CODES

Cancer Type	ICD-10 Codes
Anal Cancer	C21.xx
Bladder Cancer	C67.xx
Bone Metastases	C79.5x
Brain Metastases	C79.3x
Breast Cancer	C50.xx, D05.xx
Cervical Cancer	C53.xx
CNS Tumors	C70.xx, C71.xx, C72.xx
Colorectal Cancer	C18.xx, C19.xx, C20.xx
Head and Neck Cancer	C00.xx, C01.xx, C02.xx, C03.xx, C04.xx, C05.xx, C06.xx, C07.xx, C08.xx, C09.xx, C10.xx, C11.xx, C12.xx, C13.xx, C14.xx, C30.xx, C31.xx, C32.xx, C76.0x
Liver Cancer	C22.xx, C23.xx, C24.xx
Lung Cancer	C33.xx, C34.xx, C39.xx, C45.xx
Lymphoma	C81.xx, C82.xx, C83.xx, C84.xx, C85.xx, C86.xx,

Cancer Type	ICD-10 Codes
	C88.xx, C91.4x
Pancreatic Cancer	C25.xx
Prostate Cancer	C61.xx
Upper GI Cancer	C15.xx, C16.xx, C17.xx
Uterine Cancer	C54.xx, C55.xx

b. Episode Length and Trigger

(1) Episode Length

We proposed to define the length of an episode under the RO Model as 90 days (84 FR 34498). Based on the analysis of Medicare claims data between January 1, 2014 and December 30, 2015, approximately 99 percent of beneficiaries receiving RT completed their course of radiation within 90 days of their initial treatment planning service. We proposed that Day 1 would be the date of service that a Professional participant or Dual participant furnishes the initial treatment planning service (included in the PC), provided that a Technical participant or Dual participant furnishes an RT delivery service (included in the TC) within 28 days of the treatment planning service. In other words, the relevant 90-day period would be considered an episode only if a Technical participant or Dual participant furnishes the TC to an RO beneficiary within 28 days of when a Professional participant or Dual participant furnishes the PC to such RO beneficiary. As we explained in the proposed rule, when those circumstances occur, the ''start'' of the episode would be the date of service that the initial treatment planning service was rendered. If, however, a Technical participant or Dual participant does not furnish the TC to an RO beneficiary within the 28-day period, then no episode would have occurred and any payment will be made to the RO participant in accordance with our incomplete episode policy. (See 84 FR 34498 through 34499.) We refer readers to sections III.C.5.b and III.C.6 of the proposed rule and this final rule for an overview of our episode trigger and incomplete episode policies, respectively.

As discussed in the proposed rule (84 FR 3499), to better understand the standard length of a course of RT, we analyzed Medicare claims for beneficiaries who received any RT services between January 1, 2014 and December 30, 2015. Preliminary analysis showed that average Medicare spending for radiation treatment tends to drop significantly 9 to 11 weeks following the initial RT service for most diagnoses, including prostate, breast, lung, and head and neck cancers. Furthermore, based on this data, approximately 99 percent of beneficiaries receiving RT completed their course of radiation within 90 days of their initial treatment planning service. As we stated in the proposed rule, we made a summary-level, de-identified file titled ''RT Expenditures by Time'' available on the RO Model's website (*https://innovation.cms.gov/initiatives/radiation-oncology-model/*) that supports our findings in this preliminary analysis.

Based on our proposed rule analysis, for the purpose of establishing the national base rates for the PC and TC of each episode for each cancer type, episodes were triggered by the occurrence of a treatment planning service followed by a radiation treatment delivery service within 28 days of the treatment planning service (HCPCS codes 77261–77263). In addition, for the purpose of establishing the national base rates in section III.C.6.c, the episodes lasted for 89 days starting from the day after the initial treatment planning service in order to create a full 90-day episode. Based on these analyses, we proposed a 90-day episode duration.

(2) Episode Trigger

Because we only want to include episodes in which beneficiaries actually receive RT services, we proposed that an episode would be triggered only if both of the following conditions are met: (1) There is an initial treatment planning service (that is, submission of treatment planning HCPCS codes 77261–77263, all of which would be included in the PC) furnished by a Professional participant or a Dual participant; and (2) at least one radiation treatment delivery service (as listed in the proposed rule at Table 2) is furnished by a Technical participant or a Dual participant within the following 28 days. The PC is attributed to the RT supplier of the initial radiation treatment planning service. The TC is attributed to the RT provider or RT supplier of the initial radiation treatment delivery service. As we explained in the proposed rule, an episode that is triggered will end 89 days after the date of the initial treatment planning service, creating a 90-day episode. If, however, a beneficiary receives an initial treatment planning service but does not receive RT treatment from a Technical participant or Dual participant within 28 days, then the requirements for triggering an episode would not be met, and no RO episode will have occurred, and the proposed incomplete episode policy would take effect.

In those instances where the TC of an episode is not furnished by a Dual participant (that is, when the same RO participant does not furnish both the PC and the TC of an episode), we proposed that the Professional participant would provide the Technical participant with a signed radiation prescription and the final treatment plan, all of which is usually done electronically. This will inform the Technical participant of the episode start date.

(3) Policy for Multiple Episodes and the Clean Period

Given our proposed rule findings that 99 percent of Medicare FFS beneficiaries complete treatment within

90 days of the initial treatment planning service, and to minimize any potential incentive for an RO participant to extend a treatment course beyond the 90-day episode in order to trigger a new episode, we proposed that another episode may not be triggered until at least 28 days after the previous episode has ended (84 FR 34499). This is because, while a missed week of treatment is not uncommon, a break from RT services for more than four weeks (or 28 days) generally signals the start of a new course of treatment.[31] As we explained in the proposed rule, we refer to the 28-day period after an episode has ended as the ''clean period,'' and during this time an RO participant would bill for RT services furnished to an RO beneficiary as FFS. We proposed to codify the term ''clean period'' at § 512.205 of our regulations.

We proposed that if clinically appropriate, an RO participant may initiate another episode for the same beneficiary after the 28-day clean period has ended. During the clean period, an RO participant would be required to bill for RT services for the beneficiary in accordance with FFS billing rules. We proposed that the Innovation Center would monitor the extent to which services are furnished outside of 90-day episodes, including during clean periods, and for the number of RO beneficiaries who receive RT in multiple episodes.

We solicited public comment on our proposal regarding episode length and trigger. The following is a summary of the public comments received on this proposal and our responses to those comments:

Comment: Some commenters noted their concern that the 90-day episode period would inappropriately incentivize providers and suppliers to reduce the number of fractions into the shortest possible course of treatment. A commenter believed this would have negative effects on research, as encouraging providers and suppliers to opt for the shortest length of treatment possible would make it more difficult to study the optimal length of treatment for different types of patients. Another commenter suggested that this structure would disincentivize adoption of ground-breaking treatment paradigms. A few commenters requested that CMS consider the negative impact of the 90-day episode on services with higher upfront investment but longer term value. A couple of these commenters suggested that the 90-day episode period is unduly focused on short-term gains, failing to capture the medium- and long-term benefits and savings from treatment modalities like PBT. A few commenters also suggested that the financial disincentives created by the RO Model would lead to long-term adverse clinical consequences and additional spending. A commenter believed that short term savings would be outweighed by longer term costs.

Response: We appreciate commenters' concerns. We rely on Medicare providers and suppliers to furnish appropriate care to our beneficiaries. We expect Medicare providers and suppliers to select the clinically appropriate treatment modality that will confer the greatest short-, medium-, or long-term benefit on the beneficiary. And, we believe our payment methodology, with its blend of national rates with participant-specific case mix and historical experience, will provide appropriate payment to incentivize high-value care, including the appropriate treatment modality and number of fractions. Thus, we do not believe that the Model will lead to long-term adverse clinical consequences or additional spending. We will be monitoring to ensure there are no unintended consequences.

Comment: A commenter requested clarification on whether an episode of care includes any course of treatment within 90 days or if an episode is limited to a specific diagnosis. Another commenter requested clarification regarding billing practices for patients who, within a 90-day episode, are found to have new cancer sites with different HCPCS codes.

Response: We thank the commenter for their question. An RO episode includes all included RT services (See Table 2) furnished to an RO beneficiary with an included cancer type during the 90-day episode as codified at §§ 512.205 and 512.245. RT services furnished to an RO beneficiary for any additional diagnosis not specified on the list of included cancer types, the RT provider and/or RT supplier would bill FFS for those services.

Comment: Many commenters believed the 90-day episode period is not sufficiently responsive to patients whose cancer might recur, metastasize, require multiple treatment modalities, or otherwise require additional treatments within the 90-day period. A couple of commenters believed that the 90-day episode structure would incentivize participants to delay care or shift patients to other treatment, waiting to capture payment for those services in the clean period or a subsequent episode. A commenter believed this might limit patient access to life-extending treatment protocols.

Response: We believe that the RO Model pricing methodology, with its reliance on historical experience and case mix adjustments, accounts for the range of patient scenarios and provides appropriate compensation to participants. We rely on Medicare providers and suppliers to furnish appropriate care to our beneficiaries. As finalized in section III.C.14, we will monitor for unintended consequences of the RO Model including but not limited to stinting on care.

Comment: Some commenters recommended that CMS reconsider its methodology in bundling multiple treatments into a single episode, factoring in the complexity of multiple eligible sites requiring treatment within a 90-day period. Some commenters specifically suggested that participants should be eligible for multiple bundles if they treat distinct disease sites or diagnoses within a 90-day episode of care to accurately capture the costs of multiple treatments. A commenter suggested that FFS payment should be permitted for treatment of metastases within the 90-day episode as long as it is for a new site. A commenter recommended eliminating the 90-day episode to reimburse providers and suppliers for separate courses of radiation therapy within this period. Another commenter requested more information about what happens to a course of treatment for a specific diagnosis that lasts longer than 90 days.

Response: We believe that the RO Model pricing methodology, through the historical experience and case mix adjustments, will account for differences in RO participants' historical care patterns and the demographic characteristics of their patient populations and addresses the cost of treating multiple diagnoses or the cost of multiple treatments. It is important to note that, if treatment goes beyond the end of 90 days, after the RO participant bills the modifier indicating the end of an RO episode (EOE) the additional RT services furnished will be billed and paid FFS—this does not create an incomplete episode.

Comment: A couple commenters recommended that CMS tailor episode length to the likely pattern and timing of RT treatment for each cancer type.

Response: We believe that the RO Model pricing methodology will adequately reimburse participants for the patterns and timing of RT services during a uniform 90-day episode period. As previously stated, 99 percent of beneficiaries complete their RT course within 90 days. Although some cancer

[31] CMS was advised by radiation oncologists consulting on the design of the Model that four weeks signals the start of a new course of treatment.

types might typically complete treatment in a period of time shorter than 90 days, our data shows that while significant expenditures occur through week 10 of an episode, additional expenditures occur throughout the remainder of the episode for all of the included cancer types. (See RT Expenditures by Time on the RO Model website.) As explained in section III.C.7, we have modified the billing requirements to allow the EOE claim to be submitted and paid at the completion of a planned course of treatment, even when that course of treatment is shorter than 90 days. We believe that participants will be reimbursed for their services in an appropriate and timely manner under this structure.

Comment: A few commenters voiced concern about potential delays or breaks in therapy caused by adverse patient response or concurrent patient illness. A commenter believed that providers and suppliers could lose reimbursement for delivered services if a patient cannot tolerate treatment. A couple such commenters expressed that the breaks in treatment could extend the therapy beyond the 90-day end point, preventing timely EOE submission and resulting in an incomplete episode. This commenter recommended adjusting the EOE to the completion of the episode.

Response: Such breaks in therapy will not cause an incomplete episode. It is important to note that if treatment goes beyond the end of 90 days, the RO participant can bill the EOE and the additional RT services furnished will be billed and paid FFS.

Comment: A commenter noted that each clinical scenario is different and that physicians may have good reasons for ordering more treatment sessions with lower intensity. This commenter believed that CMS should evaluate the specifics of a clinical scenario that falls outside the expected parameters as part of the agency's data analysis.

Response: We appreciate this commenter's concerns. We rely on Medicare providers and suppliers to furnish appropriate care to our beneficiaries. And, we believe that our cancer-specific bundles strike the right balance of capturing a range of clinical scenarios with little variability in pricing to prohibit setting a base rate. As described in section III.C.16, we will monitor for unintended consequences of the RO Model.

Comment: A commenter emphasized that the episode length could reduce the availability of palliative radiotherapy for pain control, as some evidence suggests that shorter courses of treatment lead to increased need for additional treatment and shortened pain control. Another commenter, believing that the episodes do not match standard medically accepted episodes of care, recommended that CMS create a separate category for palliative cases.

Response: Based on the analysis of Medicare claims data between January 1, 2014 and December 30, 2015, approximately 99 percent of beneficiaries receiving RT completed their course of radiation within 90 days of their initial treatment planning service. The Model does include Brain Metastasis and Bone Metastasis as included cancer types. For the other cancer types, our data shows that palliative treatment is included when RT services are being furnished to treat the primary cancer type and secondary malignancies and metastases. Thus, we will not be creating a separate category for palliative cases or altering the length of the episode.

Comment: A couple commenters expressed support of the 28-day window between the treatment planning code and the first treatment delivery service, finding this structure reasonable.

Response: We thank the commenters for their support.

Comment: A commenter requested clarification on how the planning and simulation of treatment are designated within an episode. In the event a patient receives multiple planning services prior to the commencement of treatment, this commenter wished to know which planning service would be considered the trigger and how multiple planning sessions are represented in the national base rates. A commenter expressed concern about claims processing for multiple planning services furnished within a 90-day episode for metastases identified during the episode. This commenter emphasized that the resources expended for subsequent planning sessions are equivalent to those expended in the initial planning session.

Response: The treatment planning service identified as the ''first'' treatment planning service is the trigger for an episode and its corresponding date of service marks the episode's start date. Subsequent planning sessions occurring within a previously defined episode are indeed included in the national base rates. Each treatment planning service furnished should be included on the no-pay claims described in section III.C.7 and codified at § 512.260(d). We will monitor utilization of services via these no-pay claims.

Comment: A few commenters expressed concern about the 28-day episode trigger window between the treatment planning code and the first treatment delivery service in particular scenarios. For example, a commenter stated that some cases of multi-radiation modalities, like EBRT followed by brachytherapy, require coordination with other specialties that might make it difficult to begin delivering treatment within a 28-day episode trigger window. Another commenter recommended that CMS remove the 28-day episode trigger window and instead trigger the first episode payment at the completion of treatment planning and commencement of treatment delivery without any required timeline.

Response: Our data show that treatment almost always occurs within this time period. And, if it does not, this would constitute an incomplete episode. We are finalizing that an episode will be triggered only if both of the following conditions are met: (1) There is an initial treatment planning service (HCPCS codes 77261–77263) furnished by a Professional participant or a Dual participant; and (2) at least one radiation treatment delivery service (See Table 2) is furnished by a Technical participant or a Dual participant within the following 28 days.

Comment: A commenter expressed concern about incomplete episodes resulting from planning services provided by an RO participant and treatment provided in an ASC outside of the Model, whether or not treatment is furnished within the 28-day episode trigger window.

A couple of commenters requested clarification on how PC and TC claims will be paid if treatment is not delivered within the 28-day episode trigger window. One such commenter advised that cash flow problems would result if providers and suppliers are required to wait until the reconciliation periods and true-up periods to receive payment for these incomplete episodes. For this reason, this commenter recommended that CMS pay all CPT/HCPCS codes that are billed outside this 28-day episode trigger window as FFS.

Response: We thank the commenters for their inquiry. RT services furnished in an ASC are not included in the RO Model. Thus, if the planning service was provided by a Professional participant (in an HOPD or a freestanding radiation therapy center) and the treatment delivery was furnished in an ASC, an episode could be triggered but rendered incomplete, thus the planning services should be billed FFS. If the TC is not rendered by a participant within 28 days, an episode will be considered incomplete and those services should be billed FFS. As noted

in section III.C.7 of the proposed rule (84 FR 34512 through 34513) and this final rule, we expect to provide RO participants with additional instructions for billing, particularly as billing pertains to incomplete episodes, through the Medicare Learning Network (MLN Matters) publications, model-specific webinars, and the RO Model website.

Comment: A couple of commenters supported FFS payments for treatments that exceed the 90-day episode period.

Response: We thank the commenters for their support. We will be finalizing as proposed in § 512.260 that an RO participant shall bill for any medically necessary RT services furnished to an RO beneficiary during a clean period pursuant to existing FFS billing processes in the OPPS and PFS.

Comment: A commenter supported the 28-day clean period between episodes for all but one included cancer type, metastatic bone disease. Because metastatic bone disease often requires ongoing treatment, this commenter suggested that RO participants have the ability to initiate subsequent episodes immediately after the prior episode ends, eliminating the clean period.

Response: We appreciate the suggestion, but we do not want to provide a financial incentive for RO participants to prolong or delay treatment for bone metastasis or any other clinical condition to initiate an additional episode.

Comment: A commenter recommended that the clean period be extended to 60 days to allow for treatment of secondary cancers.

Response: We appreciate the comment, but CMS was advised by radiation oncologists consulting on the design of the Model that four weeks typically signals the start of a new course of treatment. Therefore, we will not be extending the clean period in this final rule.

Comment: A commenter requested clarification on billing practices for patients who complete one 90-day episode and then return with a new diagnosis under their existing diagnosis code within the clean period.

Response: As stated in sections III.C.5.b(3) and III.C.7 of this final rule, any services provided during the 28-day clean period would be paid FFS.

After considering public comments received, we are finalizing at § 512.205 the definition of RO episode. Specifically, we are defining that an RO episode means the 90-day period that begins on the date of service that a Professional participant or a Dual participant furnishes an initial RT treatment planning service to an RO beneficiary, provided that a Technical participant or the same Dual participant furnishes a technical component RT service to the RO beneficiary within 28 days of such RT treatment planning service, with a modification to clarify that the initial RT treatment planning service to the RO beneficiary be furnished in a freestanding radiation therapy center or an HOPD. We are finalizing as proposed that the circumstance in which an episode does not occur because a Technical participant or a Dual participant does not furnish a technical component to an RO beneficiary within 28 days following a Professional participant or the Dual participant furnishing an initial treatment planning service to that RO beneficiary qualifies as an incomplete episode. In addition, we are finalizing as proposed at § 512.245(c) that an episode must not be initiated for the same RO beneficiary during a clean period.

c. Included RT Services

We proposed at 84 FR 34499 that the RO Model would include most RT services furnished in HOPDs and freestanding radiation therapy centers. Services furnished within an episode of RT usually follow a standard, clearly defined process of care and generally include a treatment consultation, treatment planning, technical preparation and special services (simulation), treatment delivery, and treatment management, which are also categorical terms used to generally describe RT services. As outlined in the proposed rule, the subcomponents of RT services have been described in the following manner: [32]

Consultation: A consultation is an evaluation and management (E/M) service, which typically consists of a medical exam, obtaining a problem-focused medical history, and decision making about the patient's condition/care.

Treatment planning: Treatment planning tasks include determining a patient's disease-bearing areas, identifying the type and method of radiation treatment delivery, specifying areas to be treated, and selecting radiation therapy treatment techniques. Treatment planning often includes simulation (the process of defining relevant normal and abnormal target anatomy and obtaining the images and data needed to develop the optimal radiation treatment process). Treatment planning may involve marking the area to be treated on the patient's skin, aligning the patient with localization lasers, and/or designing immobilization devices for precise patient positioning.

Technical preparation and special services: Technical preparation and special services include radiation dose planning, medical radiation physics, dosimetry, treatment devices, and special services. More specifically, these services also involve building treatment devices to refine treatment delivery and mathematically determining the dose and duration of radiation therapy. Radiation oncologists frequently work with dosimetrists and medical physicists to perform these services.

Radiation treatment delivery services: Radiation treatment is usually furnished via a form of external beam radiation therapy or brachytherapy, and includes multiple modalities. Although treatment generally occurs daily, the care team and patient determine the specific timing and amount of treatment. The treating physician must verify and document the accuracy of treatment delivery as related to the initial treatment planning and setup procedure.

Treatment management: Radiation treatment management typically includes review of port films, review and changes to dosimetry, dose delivery, treatment parameters, review of patient's setup, patient examination, and follow-up care.

As discussed in the proposed rule (84 FR 34500), our claims analysis revealed that beneficiaries received a varying number of consultations from different physicians prior to the treatment planning visit, which determines the prescribed course of radiation therapy, including modality and number of treatments to be delivered. We proposed to include treatment planning, technical preparation and special services, treatment delivery, and treatment management as the RT services in an episode paid for by CMS, and we proposed to codify this at § 512.235. E/M services are furnished by a wide range of physician specialists (for example, primary care, general oncology, others) whereas the other radiation services are typically only furnished by radiation oncologists and their team. This is reflected in the HCPCS code set used to bill for these services. In our review of claims data for the proposed rule, many different types of specialists furnish E/M services. It is common for multiple entities to bill for treatment consultations (E/M services) for the same beneficiary, whereas typically only a single entity bills for RT services for a beneficiary when we limited the services considered to treatment planning, technical

[32] American Society for Radiation Oncology (ASTRO). Basics of RO Coding. *https://www.astro.org/Basics-of-Coding.aspx.*

preparation and special services, treatment delivery, and treatment management. When consultations and visits were included for an analysis of professional RT services during 2014–2016, only 18 percent of episodes involved billing by a single entity (TIN or CCN) as opposed to 94 percent of episodes when consultations and visits were excluded. When consultations and visits were included for an analysis of technical RT services during 2014–2016, 78 percent of episodes involved billing by a single entity (TIN or CCN) as opposed to 94 percent of episodes when consultations and visits were excluded. The difference in percentages is due to the fact that patients see a wide variety of doctors during the course of cancer treatment, which will often involve visits and consultations.

In the proposed rule we noted that we were not proposing to include E/M services as part of the episode payment. RO participants would continue to bill E/M services under Medicare FFS.

Given that physicians sometimes contract with others to supply and administer brachytherapy radioactive sources (or radioisotopes), we explained in the proposed rule that we considered omitting these services from the episode payment. After considering either including or excluding brachytherapy radioelements from the RO Model, we proposed to include brachytherapy radioactive elements, rather than omit these services, from the episodes because they are generally furnished in HOPDs and the hospitals are usually the purchasers of the brachytherapy radioactive elements. When not furnished in HOPDs, these services are furnished in ASCs, which we noted were proposed to be excluded from the Model.

We also proposed to exclude low volume RT services from the RO Model. These include certain brachytherapy surgical procedures, neutron beam therapy, hyperthermia treatment, and radiopharmaceuticals. We proposed to exclude these services from the Model because they are not offered in sufficient amounts for purposes of evaluation.

We proposed that the RO Model payments would replace current FFS payments only for the included RT services furnished during an episode. For the included modalities, discussed in section III.C.5.d of the proposed rule (84 FR 34502 through 34503), we proposed that the RO Model episode include HCPCS codes related to radiation oncology treatment. Please see section III.C.7 for a discussion of our billing guidelines. We have compiled a list of HCPCS codes that represent treatment planning, technical preparation and special services, treatment delivery, and treatment management for the included modalities. As discussed in the proposed rule, RT services included on this list are referred to as ''RO Model Bundled HCPCS'' when they are provided during an RO Model episode since payment for these services is bundled into the RO episode payment. Thus, we proposed to codify at § 512.270 that these RT services would not be paid separately during an episode. In the proposed rule, we indicated that we may add, remove, or revise any of the bundled HCPCS codes included in the RO Model. We proposed to notify participants of any changes to the HCPCS codes per the CMS annual Level 2 HCPCS code file. We proposed to maintain a list of the HCPCS codes included in the RO Model on the RO Model website.

We solicited public comment on our proposal. The following is a summary of the public comments received on this proposal and our responses:

Comment: A commenter recommended that CMS exclude consultation services from the Model, as these services are often provided to patients seeking second opinions. If CMS includes consultation services, this commenter suggested classifying these services as incomplete episodes when the patient does not pursue treatment post-consultation.

Response: Consultations, which are billed as E/M services, were not included in the RO Model's proposed pricing methodology and are not RT services, and they are not included in the final rule.

Comment: A couple of commenters expressed support for the exclusion of E/M services from the Model.

Response: We thank these commenters for their support.

Comment: A few commenters expressed concern over the bundling of IMRT planning code 77301 in that it no longer allows payment for advanced imaging used in data sets for dose planning and simulations when charged with IMRT treatments. The commenter believed this was inappropriate as it places a burden on providers and suppliers that cannot afford to upgrade their CT, MR or PET equipment used in planning. The commenters expressed concern that these costs are not reflected appropriately in the national base rates.

Response: The episode payment amounts reflect payments made under the PFS and OPPS for RT services furnished during the baseline period. As such, when determining payment rates, we look at RT services in the baseline period that were allowed by Medicare (such as claims with HCPCS 77301 with payment amounts allowed), but we do not assign payment rates to other claims with other HCPCS codes from the baseline period that were denied (for example, in this example because they were in the range of HCPCS codes not allowed to be reported in addition to 77301 because they are part of the valuation of 77301). The RO Model is not intended to change Medicare policy on coverage.

Comment: A few commenters recommended excluding proton beam therapy (PBT) as a low-volume service. A couple commenters suggested specifically excluding neutron beam therapy, hyperthermia, and brachytherapy radioactive elements as low-volume services.

Some commenters requested clarification on how ''low-volume'' and ''commonly used'' will be defined in the Model. A couple of commenters suggested that the test for low-volume services should be conducted on a total and per cancer type basis.

Response: We used ''low-volume'' and ''commonly used'' in several different places in the proposed rule. We proposed to exclude certain RT services as low volume, including certain brachytherapy surgical procedures, neutron beam therapy, hyperthermia treatment, and radiopharmaceuticals. All of these RT services are rarely furnished to Medicare beneficiaries. In contrast, we proposed to include the ''most commonly used'' RT modalities, including PBT, in the RO Model as they represent standard approaches to treatments that are cited in guidelines for the included cancer types. While we did not propose a definition for a commonly used RT modality or RT service, we used those terms to describe what is standard practice for radiation oncology and the included cancer types. Though we appreciate the suggestion to look at low-volume RT services on a per cancer type basis, as described in the proposed rule, we plan to test the impact of the RO Model on RT as a whole, rather than specific RT services for specific cancer types. Further, we believe that including certain RT services for some cancer types but not others would be burdensome for RO participants, specifically regarding the tracking and management of which beneficiaries are in or out of the Model. We note that we are finalizing a low volume opt-out option for RO participants with fewer than 20 episodes in one or more of the CBSAs randomly selected for participation in the most recent calendar year with available claims data, as described in

section III.C.3.c. Any PBT providers and suppliers who believe they qualify for such an exemption should refer to this section.

Comment: A couple of commenters requested clarification on the Model's treatment of radiopharmaceuticals. These commenters emphasized that, in the case of Radium, treatment often occurs monthly for six months, far longer than the 90-day episode. Many commenters requested the removal of C2616 for Yttrium 90 or Y90 as it is a radiopharmaceutical.

Response: We thank these commenters for this point. As indicated in the NPRM, radiopharmaceuticals are excluded from the RO Model, thus C2616 has been removed from the list of RO Model Bundled HCPCS.

Comment: Many commenters recommended that CMS exclude the radioactive sources from the Model. These commenters emphasized that individual patients often require unique brachytherapy sources, expressing concern that the Model would not appropriately compensate for differences in isotopes and radioactive intensity. A few believed that the Model would undermine access to the optimal isotope. A commenter believed that brachytherapy sources were more appropriately considered medical devices rather than RT procedures. Some of these commenters recommended that CMS exclude specific brachytherapy sources, primarily the HCPCS A-codes, C-codes, and Q-codes from the Model. Many commenters emphasized that brachytherapy sources alone are frequently more expensive than the proposed bundled payments—particularly for high dose rate brachytherapy—in the proposed Model and that hospitals have little control over these costs. A couple commenters recommended excluding high dose rate brachytherapy from the Model.

Response: We thank the commenters for their suggestion. We package many expensive and more expensive services in value-based bundled payment; there is no reason to treat brachytherapy sources any differently than other necessary items and services such as linear accelerators. We believe that once the national base rates are adjusted for the RO participant's case mix and historical experience, they will see that final payments will be reflective of the inclusion of radioelements. As discussed in section III.C.14 and III.C.16 of this final rule, we will monitor for unintended consequences of the RO Model.

Comment: Several commenters stated that including medical physics services in the RO Model will lead to a loss of direct financial accountability for providing adequate technical supervision that is provided to each patient and could significantly reduce medical physics resources around the country. A commenter stated that medical physicists would move to an area not participating in the Model in order to maintain their salary.

Response: It is our understanding that medical physics is a state licensure requirement and is an integral to the delivery of RT services. We do not anticipate that the Model will have a detrimental impact on medical physics resources, as participants would continue to need these health care providers for many functions, including output calibrations and, where clinically appropriate, hypo fractionation. As discussed in section III.C.14 and III.C.16 of this final rule, we will monitor for unintended consequences of the RO Model.

Comment: A commenter has requested that any changes made to the HCPCS code bundles be made through notice and comment rulemaking rather than through a list on the RO Model website.

Response: We believe that our proposal allows us to update the list in an expeditious manner if we detect an error to facilitate prompt and accurate payments. Thus, we are finalizing our policies as proposed, without modification, to add, remove, or revise any of the bundled HCPCS codes included in the RO Model; notify participants of any changes to the HCPCS codes per the CMS annual Level 2 HCPCS code file or quarterly update; and maintain a list of the HCPCS codes included in the RO Model on the RO Model website. If CMS intends to add any new HCPCS codes to the RO Model, we would go through rulemaking to add those new codes to the list of RO Model Bundled HCPCS.

Comment: Several commenters expressed concern that the proposed payment methodology was insufficient for codes 77387 and G6017, as these commenters believed that there is not currently sufficient payment under the PFS for these codes for surface guided radiation therapy (SGRT). These commenters believed that by including these two codes as RT services in the RO Model, payment under the Model would not accurately reflect the cost of all care in an episode. Specifically, a commenter noted that CMS has not assigned a relative value unit (RVU) for HCPCS 77387 or G6017 in the PFS. The commenter believed that inclusion of these two codes as RT services in the RO Model would extend the payment challenges associated with SGRT services into the Model. Another commenter stated that CMS has not established PFS payment for the G6017 code, which has been in existence since 2015, and recommended CMS pay for SGRT separately from the Model.

Response: Although CPT® code 77387 was active in the PFS or OPPS in some year prior to the updated baseline period with spillover (2015–2019), it is not paid separately. As proposed, the Model was only to include codes paid separately. This code was mistakenly included on the list of include RT services but not in the pricing methodology. We would also like to clarify that the code G6017 is contractor-priced under the PFS. This means that CMS has not established nationally applicable RVUs for the service. Instead, individual Medicare Administrative Contractors (MACs) determine the payment rate for the service and apply that rate in their jurisdiction(s). Payment rates across MAC jurisdictions can vary. Due to the potential differences across jurisdictions, we calculated the average paid amounts for each year in the baseline period for contractor-priced RT services to determine their average paid amount to be included in the calculation of the national base rates. We will use the most recent calendar year with claims data available to determine the average paid amounts for these contractor-priced RT services that will be included in the calculation of the trend factors for the PC and TC of each cancer type. For instance, for the 2021 trend factor, we will calculate the average paid amounts for these contractor-priced RT services using their allowed charges listed on the 2019 claims.

Comment: A commenter stated that inserting a hydrogel spacer between the prostate and rectum has become a standard of care at many practices to reduce the toxicity of radiotherapy, by decreasing rectal dose exposure. Many practices have also implanted fiducial markers into the prostate to improve the accuracy of targeting. These items, particularly the hydrogel spacer, have a significant cost and added physician work component. The commenter suggested that payment include a provision to account for this added labor and cost.

Response: We believe the commenter is referring to HCPCS 55784. This is not an included RT service. Thus, the RO participant may continue to receive FFS payment upon furnishing this service.

Comment: Many commenters expressed concern about the lack of consideration for emerging or new

technologies in the Model, and that the pricing methodology of the RO Model generally does not provide an incentive for participants to invest in new technologies and equipment. A commenter explained that the incentive is removed, because 2D, 3D, IMRT, and HDR treatment courses will be billed at the same rate, and the latest IGRT technologies will not be pursued. Another commenter noted that the RO Model does not include any approach to recognize new technology such as the MRI–LINAC.

Commenters defined emerging and new technologies differently. A commenter suggested defining new technology as any service that has been granted a new technology APC or pass-through payment. Another commenter suggested that devices be granted an innovative designation if a new technology and as a result qualify for additional reimbursement. This commenter suggested that the innovative designation would need approval by the FDA under a Premarket Approval Process and not be ''substantially equivalent'' to an existing device. Another commenter suggested that new technology could be signaled through a CPT® code transitions from a Category III code to a Category I code. This commenter also suggested that new technology could include the use of existing CPT®/HCPCS codes used in different combination or in more fractions than what has historically been used. A few commenters called attention to the need to reimburse HCPCS codes bundled in the RO Model that come to be used differently than historical patterns indicate, whether in frequency or in combination with other modalities, and this in itself was a new form of technology.

One commenter recommended adding a payment adjustment for new technology in the same way OCM has a novel therapies adjustment. Another commenter suggested that CMS consider modalities with the 510(k) clearances as innovations that should be paid separately outside of the RO Model.

A few commenters requested clarification as to whether new technologies would be paid FFS. A couple of commenters requested clarification concerning CPT® and HCPCS codes established after the publication of the Final Rule specifically, and if those code would be paid FFS.

Response: To the extent that new technologies and new equipment are billed under new HCPCS codes, we would go through rulemaking to add those new codes to the list of RO Model Bundled HCPCS list. We believe that any increased utilization of established codes that are included RT services over time will be accounted for with the trend factor described in section III.C.6.d. Until new technologies with corresponding HCPCS codes are added the list of included services for the RO Model, they will be paid FFS.

Comment: Many commenters recommended excluding HCPCS codes that refer to either brachytherapy services commonly provided in a surgical setting or that refer to brachytherapy sources. These commenters emphasized that surgical codes for other modalities were excluded from the Model and questioned why surgical codes 57155, 57156, 55920, and 53846 were included for brachytherapy. These commenters emphasized that the surgical procedures often involve sub-specialized physicians, equipment, and other costs. By including the surgical component in the Model, these commenters worried that it would undermine patient access to care. As relatively low-volume services, these commenters believe excluding them from the Model would not have a large impact on savings. A few commenters requested clarification on the inclusion of brachytherapy insertion codes.

Response: We have confirmed with clinical experts that these services are commonly furnished by radiation oncologists and thus will be included in the RO Model. We have not included brachytherapy surgical codes that are only provided by other types of physicians.

Comment: A few commenters agreed with the inclusion of RT services as proposed.

Response: We thank these commenters for their support. See Table 2 for the finalized list of included RT services.

TABLE 2: LIST OF RO MODEL BUNDLED HCPCS

HCPCS	HCPCS Description	Category
55920	Placement Pelvic Needles/Catheters, Brachytherapy	Radiation Treatment Delivery (Brachytherapy Surgery)
57155	Placement Tandem and Opioids, Brachytherapy	Radiation Treatment Delivery (Brachytherapy Surgery)

After considering public comments, we are modifying our proposed list of included RT services to the corresponding HCPCS codes in Table 2 of this final rule. We are not adding any HCPCS codes to those identified in the proposed rule, but are removing HCPCS codes 77387, 77424, 77425, C1715, C1728, C2616, and 77469 from the Model. We are codifying at § 512.235 that only the following RT services furnished using an included modality identified at § 512.240 for an included cancer type are included RT services that are paid for by CMS under § 512.265: (1) Treatment planning; (2) technical preparation and special services; (3) treatment delivery; and, (4) treatment management; and at § 512.270 that these RT services would not be paid separately during an episode. All other RT services furnished by an RO participant during the Model performance period will be subject to Medicare FFS payment rules.

d. Included Modalities

We proposed at 84 FR 34502 through 34503 to include the following RT modalities in the Model: Various types of external beam RT, including 3-dimensional conformal radiotherapy (3DCRT), intensity-modulated radiotherapy (IMRT), stereotactic radiosurgery (SRS), stereotactic body radiotherapy (SBRT), and proton beam therapy (PBT); intraoperative radiotherapy (IORT); image-guided radiation therapy (IGRT); and brachytherapy. We proposed to include all of these modalities because they are the most commonly used to treat the 17 proposed cancer types and including these modalities would allow us to determine whether the RO Model is able to impact RT holistically rather than testing a limited subset of services.

As discussed in the proposed rule, because the OPPS and PFS are resource-based payment systems, higher payment rates are typically assigned to services that use more expensive equipment. Additionally, newer treatments have traditionally been assigned higher payment. Researchers have indicated that resource-based payments may encourage health care providers to purchase higher priced equipment and furnish higher-cost services, if they have a sufficient volume of patients to cover their fixed costs.[33] Higher payment rates for services involving certain treatment modalities may encourage use of those modalities over others.[34]

In the proposed rule, we explained that Medicare expenditures for RT have increased substantially. From 2000 to 2010, for example, the volume of physician billing for radiation treatment increased 8.2 percent, while Medicare Part B spending on RT increased 216 percent.[35] Most of the increase in the 2000 to 2010 time period was due to the adoption and uptake of IMRT. From 2010 to 2016, spending and volume for PBT in FFS Medicare grew rapidly,[36] driven by a sharp increase in the number of proton beam centers and Medicare's relatively broad coverage of this treatment. While we cannot assess through claims data what caused this increase in PBT, we can monitor changes in the utilization of treatment modalities during the course of the Model. The previously stated increase in PBT volume may depend on a variety of factors.

As stated in the proposed rule, the RO Model's episode payment was designed, in part, to give RT providers and RT suppliers greater predictability in payment and greater opportunity to clinically manage the episode, rather than being driven by FFS payment incentives. The design of the payment model grouped together different modalities for specific cancer types, often with variable costs, into a single payment that reflects average treatment costs. As explained in the proposed rule, the Model would include a historical experience adjustment, which would account for an RO participant's historical care patterns, including an RO participant's historical use of more expensive modalities, and certain factors that are beyond a health care provider's control. We stated in the proposed rule that we believe that applying the same payment for the most commonly used RT modalities would allow physicians to pick the highest-value modalities.

[35] Shen, X., Showalter, T.N., Mishra, M.V., Barth, S., Rao, V., Levin, D., & Parker, L. (2014). Radiation oncology services in the modern era: Evolving patterns of usage and payments in the office setting for Medicare patients from 2000 to 2010. Journal of Oncology Practice, 10(4), e201–e207.

[36] Spending in PBT rose from $47 million to $115 million, and the number of treatment sessions for PBT rose from 47,420 to 108,960, during that period.

We stated in the proposed rule that given the goals of the RO Model as well as the payment design, we believe that it is important to treat all modalities equally.

With respect to PBT, we noted in the proposed rule that there has been debate regarding the benefits of proton beam relative to other, less expensive modalities. The Institute for Clinical and Economic Review (ICER) evaluated the evidence of the overall net health benefit (which takes into account clinical effectiveness and potential harms) of proton beam therapy in comparison with its major treatment alternatives for various types of cancer.[37] ICER concluded that PBT has superior net health benefit for ocular tumors and incremental net health benefit for adult brain and spinal tumors and pediatric cancers. ICER judged that proton beam therapy is comparable with alternative treatments for prostate, lung, and liver cancer, although the strength of evidence was low for these conditions. In a June 2018 report to Congress, MedPAC discussed Medicare coverage policy and use of low-value care and examined services, including PBT, which lack evidence of comparative clinical effectiveness and are therefore potentially low value.[38] They concluded that there are many policy tools, including new payment models, that CMS could consider adopting to reduce the use of low-value services. Given the continued debate around the benefits of PBT, and understanding that the PBT is more costly, we discussed in the proposed rule that we believe that it would be appropriate to include in the RO Model's test, which is designed to evaluate, in part, site neutral payments for RT services. We solicited public comment on our proposal to include PBT in the RO Model.

As discussed in the proposed rule, we considered excluding PBT from the included modalities in instances where an RO beneficiary is participating in a federally-funded, multi-institution, randomized control clinical trial for PBT so that further clinical evidence assessing its health benefit comparable to other modalities can be gathered. We also solicited public comment on whether or not the RO Model should include RO beneficiaries participating in federally-funded, multi-institution, randomized control clinical trials for PBT. The following is a summary of the public comments received on these proposals and our responses:

Comment: Some commenters recommended including PBT in the final rule. A couple of commenters believed that including PBT in the episode payment would create an incentive to use lower-cost, comparable modalities. A commenter believed including PBT would allow the Model to test whether financial incentives are driving clinical decision-making. Another commenter believed the historical experience adjustment would compensate RO participants who use more expensive modalities. A couple of commenters believed that the evidence supporting PBT in certain common types of cancer, such as prostate and lung, is questionable.

Response: We thank the commenters for their support and note that we are finalizing as proposed the inclusion of PBT in the RO Model with the exception of when PBT is furnished to an RO beneficiary participating in a federally-funded, multi-institution, randomized control clinical trial for PBT so that further clinical evidence assessing its health benefit comparable to other modalities can be gathered. See § 512.240 for the finalized list of included modalities.

Comment: Many commenters believed that PBT is of high value and an effective, evidence-based treatment for many clinical indications. Some commenters suggested that CMS should not use questions about PBT's clinical value or high, upfront investment as the basis for inclusion in the RO Model. Some of these commenters believed that PBT was distinct from other forms of RT and should not be treated as equivalent to other modalities by the Model. A couple of commenters also recommended exemptions for high-cost services like PBT when its use is supported by evidence.

Some of these commenters believed that the 2014 reports from the Institute for Clinical and Economic Review (ICER) and Medicare Patient Advisory Commission (MedPAC), which suggested PBT was of lower value than other modalities, were outdated. A few commenters specified that PBT is indicated for numerous forms of cancer, and can be particularly useful for patients who undergo re-irradiation.

Many these commenters stressed that patients often have better experiences with PBT than other forms of radiation, with improved survival, fewer side effects, fewer hospitalizations, and better quality of life.

Some commenters emphasized that, while PBT is more expensive up-front, it has significant long-term benefits and savings that may not be captured within the 90-day episode. A couple of commenters emphasized that PBT improves outcomes and reduces the total cost of care over 12 months. These commenters pointed to savings from lower health care consumption to treat side effects and lower rates of secondary malignancies due to more precise radiation delivery. A couple of commenters emphasized that PBT's precision makes it the safest way to hypofractionate treatment to sensitive parts of the body. A commenter emphasized that PBT is frequently used to hypofractionate regimens when proven to be effective, using prostate cancer as an example.

Response: We appreciate the commenters' concerns. The most recent ICER report focuses primarily on a pediatric population, whose outcomes may not be comparable to the Medicare population. The 2018 MedPAC report emphasized that the use of PBT has expanded in recent years from pediatric and rare adult cancers to include more common types of cancer, such as prostate and lung cancer, despite a lack of evidence that PBT offers a clinical advantage over alternative treatments for these types of cancers. The 2019 Washington State Health Care Authority PBT re-review examined the comparative effectiveness of PBT over other forms of RT. For adult tumors, the report stated that the evidence was insufficient to evaluate the comparative effectiveness of PBT for bladder, bone, and pancreatic cancers; unclear for brain, spinal, and breast cancers; and comparable for head and neck, lung, and prostate cancers. The report did find that PBT may pose a benefit for liver and certain ocular cancers under specific conditions, but concluded that the strength of evidence for these benefits was low. As such, we are including PBT in the RO Model with the clinical trial exception, which we believe provides sufficient opportunity for more conclusive evidence to be generated around PBT in the Medicare population. We believe that continuing to gather such evidence in the excepted clinical trials will allow CMS to better address the commenters' beliefs about PBT's long term benefits. We will continue to review new evidence generated about PBT's effectiveness in the Medicare population as it becomes available.

Comment: Many commenters recommended that CMS exclude PBT

[37] Ollendorf, D.A., J.A. Colby, and S.D. Pearson. 2014. Proton beam therapy. Report prepared by the Institute for Clinical and Economic Review for the Health Technology Assessment Program, Washington State Health Care Authority. Olympia, WA: Washington State Health Care Authority. *https://icer-review.org/wp-content/uploads/2014/07/pbt_final_report_040114.pdf.*

[38] *http://medpac.gov/docs/default-source/reports/jun18_ch10_medpacreport_sec.pdf.*

from the RO Model. Many commenters emphasized that the reimbursement for PBT under the Model would be too low. These commenters emphasized the high operational cost of PBT, which commenters generally believed would not be covered by the current Model's proposed approach to setting episode payments. These commenters indicated that the Model would disproportionately reduce reimbursement for PBT as compared to other modalities. Some commenters believed that the RO Model would result in a nearly 50 percent reduction in payment for PBT, while reimbursement across all other modalities would decrease by 4 percent. A few commenters believed that low reimbursement under the Model would further reduce PBT payments outside of the Model, as commercial insurers and Medicaid programs would follow suit.

Some commenters believed that the national base rate did not include a meaningful volume of proton therapy episodes, leading to payment rates that do not reflect the costs of providing PBT. A couple of these commenters emphasized that restricting the national base rate-setting methodology to only HOPD episodes excludes about 65 percent of PBT episodes. A commenter recommended that CMS reconsider the establishment of the national base rate based only on HOPD episodes due to its detrimental impact on proton beam therapy centers. Another commenter emphasized that PBT services do not follow the pattern for other RT services in HOPD and freestanding facilities: Freestanding RT centers are paid less than their HOPD counterparts and PBT has a higher ratio of freestanding to HOPD providers than other modalities. This commenter also highlighted that a significant number of PBT centers have opened since 2015, meaning that the CMS data on which the base rates are founded does not represent the current state of PBT.

Many commenters believed the bundled price would either reduce investment in PBT therapies or cause existing PBT facilities to close. A couple of commenters stated their belief that many PBT facilities operate on thin margins and believed the Model would place them in tenuous financial positions. A commenter emphasized that such closures would result in the loss of jobs. A few of commenters emphasized the uneven geographic distribution of existing PBT facilities—a commenter stated that only 35 percent of the U.S. population has access to PBT today, and believed that this percentage would shrink under the Model. These commenters suggested that PBT center closures would force patients to travel significant distances to access PBT or forgo treatment.

Many commenters believed that the bundled price would reduce patient access to PBT. Some believed patient access would be reduced if PBT facilities closed due to financial hardship caused by the RO Model. Other commenters suggested that patient access would be reduced by providers and suppliers prescribing alternative modalities when PBT would be more appropriate. A couple commenters suggested that providers and suppliers might refer patients to PBT facilities in CBSAs selected for comparison. A commenter expressed that patients should have access to the treatment modality that affords them a chance to achieve the best possible outcome. Other commenters generally emphasized the value of PBT in delivering lower and more precise radiation doses. These commenters voiced their concern that, in incentivizing RO participants to utilize modalities other than PBT, patients would be exposed to more radiation and a greater risk of additional, costly cancers in the future. A couple of commenters stated that other countries will have greater access to PBT than the U.S. by 2024. These commenters generally believed that excluding PBT from the Model and continuing to reimburse it as FFS would prevent these reductions in patient access.

Some commenters believed that the impact of any PBT center closures would have an impact beyond the Medicare population. These commenters generally referenced the value of PBT to certain pediatric cancers, as well as head and neck cancer, brain tumors, and thoracic lymphoma, and feared that PBT center closures would jeopardize access for these patient groups. A couple of commenters believed the Model will deepen cancer disparities by targeting freestanding radiation therapy centers. One such commenter believed that if the Model forced freestanding PBT facilities to close, the impact would disproportionately impact low-income and minority groups. A commenter emphasized that the IPPS and OPPS provide stratifications of cost to avoid similar reductions in access to technology.

Some commenters expressed concern that including PBT in the Model would reduce the ability of providers and suppliers to generate evidence about PBT and stifle innovation in this field. A couple such commenters emphasized that slowing innovation could deprive Medicare of potentially significant long-term cost savings. A commenter recommended excluding PBT to allow the industry to further demonstrate the value of PBT. A few commenters emphasized that the cost of PBT has fallen over the years and believed that it would continue to fall if excluded from this rule.

Response: We rely on Medicare providers and suppliers to furnish appropriate care to our beneficiaries. We believe that the clinical trial exception will continue to enable providers and suppliers to generate evidence about PBT, allowing innovation in this field to continue. Further, our approach to the calculation of participant-specific episode payment amounts places great weight on an individual entity's historical experience. This approach accounts for an entity's high cost relative to the national average and includes a glide path over time. Furthermore, as described in section III.C.6.b, to address the concerns regarding the Model's national base rate, the base rates that were calculated for purposes of this final rule were shifted forward to 2016–2018, capturing more recent data from a greater number of PBT centers compared with the data used in the proposed rule. As described in section III.C.6.c, we believe that the use of HOPD episodes for calculating the national base rates provides a stronger empirical foundation. Blending together the national base rates, which are derived from HOPD episodes, with the RO participant's own historical experience (whether HOPD or freestanding radiation therapy center) will allow the RO participant's unique care patterns to be recognized in the participant-specific episode payment amounts.

We do not believe that the RO Model, which as finalized will be tested in approximately 30 percent of episodes nationally and which will include a gradual shift in payments toward the national average, will affect access to PBT. We plan to carefully monitor the RO Model for unintended consequences as finalized in section III.C.14 and III.C.16. If our monitoring reveals that the Model reduces patient access to PBT, we would consider making changes to the Model via future rulemaking. Further, our evaluation will consider longer-term impacts on health outcomes associated with the Model.

Comment: If included in the Model, many commenters had suggestions for how to structure PBT payments. A couple of these commenters recommended creating a separate bundled price for PBT that is a percentage of the current medically accepted case rate instead of the

proposed APM bundled prices. A commenter suggested that CMS consider a step wise reduction in payments, which would account for the fact that adoption of this technology is still in the nascent stages. A couple other commenters recommended creating a separate Model for PBT. A few commenters recommended creating a separate base rate for PBT. Another commenter suggested that PBT should be reconsidered for inclusion at the end of the five-year pilot phase. Another commenter recommended exempting PBT facilities that have yet to be constructed. MedPAC expressed support for the inclusion of PBT in the RO Model because Medicare's payment rates for PBT are substantially higher than for other types of external beam radiation therapy. In addition, MedPAC noted that the use of PBT has expanded in recent years from pediatric and rare adult cancers to include more common types of cancer, such as prostate and lung cancer, despite a lack of evidence that it offers a clinical advantage over alternative treatments for these types of cancer. Therefore, including PBT in the episode payment would create an incentive to use lower-cost, comparable modalities.

Response: We thank the commenters for their feedback. We believe that our approach to blending the national base rates with the RO participant's historical experience, with the blend shifting more to the national base rates over time for those with historical payments above the national base rates, provides a stepwise reduction in payment over the Model, regardless of modality. We do not believe a separate model for PBT is necessary because we have created an exemption where PBT is not an included modality when furnished to an RO beneficiary participating in a federally-funded, multi-institution, randomized control clinical trial for PBT so that further clinical evidence assessing its health benefit comparable to other modalities can be gathered. If we were to exclude all PBT from the RO Model or to create a separate base rate, it would undermine the RO Model test, which is testing an episode-based payment that does not vary based on where the services are provided or how many or which type of RT services are provided during the episode. Further, doing either of these recommended approaches could create an incentive for RO participants to provide PBT as a way to avoid being in the Model. In addition, we do not believe that an exemption is necessary for PBT facilities that have not yet been constructed since the geographic areas selected to participate in the Model and the national base rates will be publicly available; new PBT facilities in a selected geographic area will have their episode payment amounts adjusted for case mix once data are available. We are finalizing the inclusion of PBT in the RO Model's pricing methodology (see section III.C.6) to maintain our modality agnostic approach. See § 512.240 for the finalized list of included modalities.

Comment: A commenter believed that a randomly selected sample for the RO Model has a high likelihood of not selecting an adequate number of centers that provide PBT. The commenter believed this would reduce the ability to statistically validate the impact of proton therapy in the bundle. This commenter further believed that the geographic dispersion of centers means that only a few centers could contribute the majority of episodes, leading to results inconsistent with the industry.

Response: As discussed in section III.C.16, the evaluation's focus will be on the impact of the Model as a whole rather than on comparing the impact of the Model on individual modalities, though subanalyses will be conducted where feasible.

Comment: Many commenters recommended that CMS exclude PBT as a low-volume modality. These commenters generally believed that PBT is not commonly used and that there is insufficient data supporting its inclusion in the Model. Some commenters emphasized that PBT only accounted for 0.7 percent of all episodes in 2017, while others specified that PBT episodes would represent more than 1 percent of total episodes for only six of the 17 cancer types and less than 0.5 percent of the episodes for the remaining 11. A commenter expressed concern that including a low-volume service like PBT would decrease the rigor of any evaluation, rendering results unreliable or misleading. A commenter suggested both limiting low-volume modalities like PBT to a smaller percentage of episodes and making participation voluntary.

Response: We appreciate these commenters' suggestions. Per many commenters as well as claims data, PBT is one of the standard approaches to providing radiotherapy for the included cancer types, and as such, it is appropriate and important to include PBT as a modality in the Model. Although PBT is currently used less frequently than the other included modalities, we believe that its exclusion would undermine our ability to test whether the Model incentivizes the use of high-value, appropriate care for RO beneficiaries. Notably, as discussed in section III.C.16, the evaluation's focus will be on the impact of the Model as a whole rather than on comparing the impact of the Model on individual modalities, though subanalyses will be conducted where feasible.

Comment: Some commenters supported the proposed exclusion of cases where an RO beneficiary is participating in a federally-funded, multi-institution, randomized control clinical trial for PBT. These commenters generally believed that the exclusion, as proposed, would permit the generation of further clinical evidence comparing PBT to other modalities, while allowing the Model to include some beneficiaries who receive PBT. MedPAC added that if CMS decides to exclude PBT from the Model when it is part of a research study, CMS should only do so if the study is a federally-funded, multi-institution, randomized control trial. This requirement would help ensure that studies of PBT produce robust information on how it compares with other modalities. In addition, limiting this exclusion would allow the Model to include at least some beneficiaries who receive PBT.

Many commenters recommended that CMS expand the proposed exclusion of cases where an RO beneficiary is participating in a federally-funded, multi-institution, randomized control trial. These commenters generally believed that the proposed exclusion might restrict opportunities that would benefit Medicare FFS beneficiaries.

One commenter believed that CMS should expand the proposed exclusion of cases because no existing clinical trials would meet the proposed criteria. Some commenters suggested that CMS use Medicare evidence development precedent—via a registry structured in compliance with CMS or AHRQ guidance or a clinical trial registered on *clinicaltrials.gov*—to structure this exemption. A commenter emphasized that this approach would be consistent with existing Local Coverage Decisions for some proton beam therapy providers and suppliers. Other commenters suggested that RT providers or RT suppliers with a history of evidence development should be exempt from the Model.

Some commenters, emphasizing the extensive evidence generated by recent PBT studies, recommended expanding the exclusion to cover all clinical trials, regardless of whether such trials are federally funded or randomized controlled trials. A couple of commenters emphasized that randomized clinical trials are challenging and not always practical in radiation oncology. These commenters

also believed that registry data could generate clinical evidence. Other commenters believed that much ongoing research takes place in academic institutions without federal funding. These commenters generally believed that a broadened exemption would incentivize the collection of additional clinical data to determine PBT's clinical value, particularly in comparison to other modalities such as IMRT and brachytherapy.

An additional commenter suggested excluding beneficiaries who are enrolled in an IRB-approved clinical trial. A commenter recommended using this regulation to address the scope and caliber needed for a clinical trial to become exempt.

A couple of commenters recommended that the proposed clinical trial exclusion not be modified. A commenter recommended that the exclusion only cover participants in randomized clinical trials, suggesting that the payment could be readjusted if these studies demonstrate a defined clinical benefit.

A couple of commenters suggested that CMS decline to expand this exemption to include registry trials. A commenter emphasized that in sites such as breast, head and neck, esophagus, and prostate cancer, a registry trial adds only a single arm or retrospective data that does little to compare proton to photon therapy in these sites. Another commenter believed that an exemption for registry trials would lead every patient at every proton center to be put on a registry trial, adding only to an existing body of literature on single arm series of proton therapy. This commenter did not believe registry trials add sufficient evidence to change the standard of care.

One commenter emphasized that proton therapy for primary treatment of prostate cancer should be performed within the context of a prospective clinical trial or registry.

A few commenters recommended that CMS exempt all care—not just PBT—provided under a clinical trial protocol from the Model. A commenter specifically recommended that CMS exclude patients enrolled in clinical trials in which the focus is radiation oncology treatment or technology, emphasizing that the costs of these cases are unique and may influence adjustment factors or future Model data.

Response: We appreciate these comments and suggestions. We agree with commenters that the use of registry trials is insufficient, as the single-arm design of registry trials makes them unlikely to result in published studies evaluating the comparative effectiveness of PBT to other RT modalities. We agree that these registry trials are unlikely to generate the type of evidence needed to change the standard of care. We also note that data collected through registry trials is often not analyzed or published. We believe that the inclusion of federally-funded, multi-institution, randomized control clinical trial for PBT is important to include so that further clinical evidence assessing its health benefit comparable to other modalities can be gathered. There are established procedures that exist in the Medicare claims systems for identifying and paying for services furnished during participation in clinical trials. A recent study concluded that prospective trials are warranted to validate studies related to the use of proton and photon beam therapies.[39]

Comment: Some commenters supported the inclusion of brachytherapy in the Model, while many comments opposed its inclusion. For those that supported the inclusion of brachytherapy, they argued that its inclusion in the Model along with the other modalities would incentivize the provision of the most efficacious and cost-effective treatments and improve access to brachytherapy as a treatment option. A couple of commenters opposed brachytherapy's inclusion in the Model, worrying the Model might disincentivize its use, particularly among vulnerable cancer populations, such as women with cervical cancer. A couple of commenters recommended excluding brachytherapy on the premise that it is a low-volume modality.

Many commenters expressed concerns with the inclusion of brachytherapy as proposed. Some of these commenters emphasized brachytherapy's unique nature as it is a standalone treatment and is also used in combination with external beam radiotherapy (EBRT). These commenters were concerned that the RO Model would not provide adequate payment for all situations in which brachytherapy is indicated, particularly when a single episode involves multiple treatment modalities, multiple RT providers or RT suppliers, multiple disease sites, or multiple treatment settings.

Some commenters focused on cases involving multiple modalities. These commenters emphasized that the brachytherapy ''boost'' when accompanying other modalities is an important, clinical guideline-driven treatment for certain patients. These multimodality cases are particularly common for treating cervical cancer, breast cancer, and prostate cancer, and they require more work than cases involving a single modality, as each modality requires unique treatment planning and delivery services. A commenter emphasized that patients are often sent to regional hub facilities for these boosts, reducing unnecessary duplication of expensive equipment and staff. A couple of these commenters expressed concern that should the Model not provide adequate compensation for multiple modalities furnished within a single episode, particularly those involving brachytherapy, providers and suppliers might be incentivized to delay treatment or to depart from clinical guidelines. These commenters emphasized that these perverse incentives could reduce patient access to medically necessary care. Moreover, a couple of commenters believed that there were problems with the underlying data and pricing methodology. A commenter believed that errors in the claims data stemming from incorrect attribution of CPT®/HCPCS codes to certain modalities underrepresented the true cost of delivering a combination of modalities like EBRT and brachytherapy.

A few commenters emphasized that brachytherapy services are often provided by physicians other than radiation oncologists, such as gynecological oncologists, urologists, interventional radiologists, and surgical oncologists, and that these physicians could operate under the same or different RT provider or RT supplier when brachytherapy is provided in conjunction with another modality. Some commenters expressed concern that the current RO Model does not adequately account for the various combinations of physicians and treatment settings in which brachytherapy is furnished. A few commenters explained that CMS should not consider multiple modality cases delivered by two physicians as duplicate RT services, as these physicians are working in tandem on a treatment plan rather than duplicating one another's efforts.

A few commenters recommended that brachytherapy trigger a second RO Model bundle, with a separate PC and TC payment, when delivered within a single 90-day episode that also includes EBRT. Some commenters suggested that brachytherapy be reimbursed as FFS when delivered during an episode

[39] Baumann, B.C., Mitra, N., Harton, J.G., Xiao, Y., Wojciezynski, A.P., Gabriel, P.E., Zhong, H., Geng, H., Doucette, A., Wei, J., O'Dwyer, P.J., Bekelman, J.E., & Metz, J.M. (2019). Comparative effectiveness of proton vs proton therapy as part of concurrent chemoradiotherapy for locally advanced cancer. JAMA Oncology, doi:*https://doi.org/10.1001/jamaoncol.2019.4889.*

including EBRT. To implement this change, a commenter suggested adding a modifier to episodes in which both brachytherapy and EBRT are provided. This modifier would trigger the second bundled or FFS payment and prevent the episode from going to reconciliation. These commenters believed that these solutions would adequately address the various combinations of modalities, RT providers and RT suppliers, and settings that might arise during brachytherapy treatment. A commenter further emphasized that this structure would alleviate possible negative incentives in the Model, ensure that patients continue to receive high-quality care, and have minimal impact on overall CMS expenditures.

Response: We thank commenters for their support of including brachytherapy as well as those commenters expressing their concerns and their suggestions.

An episode-based payment covers all included RT services furnished to an RO beneficiary during a 90-day episode. Bundled episode payment rates are premised on the notion of averages. The cases including a combination of EBRT and brachytherapy described by the commenters are part of the set of historical episodes included in the averages that determine the national base rates and contribute to how payment amounts are valued, and, therefore, an adjustment for multiple modalities that include brachytherapy is not warranted at this time. Also, the case mix and historical experience adjustments help account for the costlier beneficiary populations in the participant-specific episode payment amounts. We will be monitoring for change in treatment patterns throughout the Model performance period and will consider modifications to the pricing methodology in future years of the Model should it be warranted.

We believe that including brachytherapy in the Model supports this modality as high value, and also that including it preserves the goal of the Model in establishing a true bundled approach to radiotherapy that is also site neutral and modality agnostic. And, we believe that the proposed and finalized pricing methodology and subsequent national base rates for each cancer type accounts for the cost of brachytherapy as a primary modality and if furnished in conjunction with EBRT. We recognize the billing complexity when separate RT providers and RT suppliers furnish the brachytherapy and EBRT and will address this in billing guidance provided to RO participants. We will monitor for any unintended consequences of the Model on multi-modality treatment that includes both external beam and brachytherapy.

As for the concern that errors in the claims data (specifically those that commenters believe stem from incorrect attribution of CPT®/HCPCS codes to certain modalities) underrepresented the true cost of delivering a combination of modalities like EBRT and brachytherapy, we rely on the data submitted on claims by providers and suppliers to be accurate per Medicare rules and regulations. We are finalizing the provision to include brachytherapy in the RO Model.

Comment: A commenter specifically requested that the Model include electronic brachytherapy (EB).

Response: EB radiation is generated and delivered in a markedly different way than traditional brachytherapy, and its dosing and clinical implications are still being studied. Until EB is more commonly used, CMS will continue to pay FFS for this RT service.

Comment: A few commenters suggested excluding more modalities from the Model due to their infrequent use. A commenter recommended including only the most common modalities and excluding brachytherapy, SRS, SBRT, and PBT. A commenter recommended excluding IORT since it is used so rarely. A commenter was concerned that the proposed payment structure will promote the use of short course, less costly forms of treatment such as IORT in cases where traditional external beam radiation would have been preferred.

Response: We thank these commenters for these suggestions. We agree with the commenter that it would be appropriate to exclude IORT from the RO Model because it is not a standard approach to treatment, and we believe that including IORT may incentivize misuse of this treatment. See § 512.240 for the finalized list of included modalities.

Comment: A commenter requested clarity on the codes used to define stereotactic radiosurgery and also expressed concern that the RO Episode File (2015–2017) has SRS attributed to episodes that are classified as brain metastasis or CNS. SRS as defined in the HCPCS should be a single treatment delivery and directed at an intracranial brain lesion. It is likely that CMS is incorrectly including SBRT into the SRS count, since SRS is typically used for brain metastases, and SBRT is typically used for early primary lung cancers or metastatic disease to various locations in the body. In addition to misattribution of the SRS episodes, this commenter stated that episodes of brachytherapy, SRS, and 1–10 3D EBRT occur in clinically unlikely episodes in the RO Episode File.

Response: We appreciate this question. We are confirming that SRS and SBRT are both included in the RO Episode File (2015–2017) under the classification of SRS. We understand the difference between and SRS and SBRT but erroneously labeled the column in the file as COUNT_SRS without explaining in the Data Dictionary posted on the RO Model website that COUNT_SRS includes both SRS and SBRT. This clerical error did not impact our calculations of the proposed base rates.

Comment: Some commenters expressed concern that the bundled payment structure might lead providers and suppliers to substitute older, less expensive modalities for newer, more expensive modalities. One of these commenters emphasized their concern for patient access to the most effective care from the RT provider or RT supplier, noting that the clinician is best suited to determine appropriate treatment for the patient. Another commenter emphasized that, while an individual RO participant might save costs by selecting the cheapest treatment during the 90-day episode, longer-term Medicare costs could rise due to later complications or secondary tumors. A different commenter stated this Model incentivizes the use of the cheapest forms of radiation therapy, which also deliver the greatest amount of radiation to healthy tissue.

Response: We appreciate commenters' concerns. We rely on Medicare providers and suppliers to furnish appropriate care to our beneficiaries. As finalized in section III.C.14, we will monitor for unintended consequences of the RO Model including but not limited to stinting on care.

Comment: A commenter requested that CMS provide additional comparative effectiveness data between included and excluded modalities. This commenter expressed concern that more effective, and potentially more expensive modalities, were not included because they are not accessible to many Medicare beneficiaries. This commenter emphasized that racial and gender disparities in cancer outcomes may be due to disparities in treatment options, and requested that CMS justify how the inclusion of these modalities addresses disparities.

Response: We appreciate this commenter's concerns. We did not use comparative effectiveness data to determine whether modalities were included/excluded but rather focused on the most commonly utilized approaches to radiotherapy for the

included cancer types. We believe that the RO Model pricing methodology, through the historical experience and case mix adjustments, will account for differences in RO participants' historical care patterns and the demographic characteristics of their patient populations. We rely on Medicare providers and suppliers to furnish appropriate care to our beneficiaries. This includes prescribing the most appropriate modality. If a modality is not included in the RO Model, it will continue to be paid FFS. As finalized in section III.C.14 and III.C.16, we will monitor for unintended consequences of the RO Model.

Comment: A couple of commenters expressed concern about the impact of the Model not only on Medicare beneficiaries, but also about the continued viability of offering PBT to patients. These commenters stated that unsustainable payment rates from Medicare would put centers' viability at risk, both operational centers as well as centers currently under development. They stated that Medicare is a material payor for the majority of members, representing the majority of their payor mix, and reducing their payment rates by up to 50 percent below cost will not be sustainable. They also stated that while the RO Model is focused on Medicare fee-for-service, it has implications for other payors, as many private payors often use the Medicare rates as a proxy, which could impact a center's broader payor mix. Further, these commenters stated that viability impacts not only Medicare beneficiaries but indirectly affects a broader set of patients including pediatric cancer patients who will lose access to a treatment that is now the standard of care.

Response: We appreciate these commenters' concerns. We disagree with the commenters on the expected magnitude of reduction in RO participants' payments for PBT compared to what they currently receive. As described in section III.C.6, the pricing methodology as finalized will blend together the national base rate with an RO participant's unique historical experience. If the RO participant is historically more costly than the national average, the blend in PY1 will be 90 percent of the RO participant's historical payments and 10 percent of the national base rate. This means that, prior to applying the discount factor and withholds that payments under the Model will be between 90 and 100 percent of the RO participant's historical payments. For historically inefficient RO participants, the blend shifts over time to a 70/30 blend in PY5. This means that in PY5, prior to applying the discount factor and withholds that payments under the model will be more than 70 percent of the RO participant's historical payments. We believe that the pricing methodology tested under the Model represents an opportunity to provide high-value episode-based payments to RO participants for Medicare FFS beneficiaries; other payors determine their own payment approaches for RT services.

Comment: A commenter recommended applying savings proportionately to all modalities, particularly if CMS has a savings target under the Patient Access and Medicare Protection Act.

Response: While the RO Model is projected to be expenditure neutral or achieve Medicare savings, we did not have any specific predefined targets in mind, and we believe our pricing methodology has a graduated approach to setting participant-specific payments that is heavily weighted to the participant's historical experience.

After considering public comments, we are finalizing our proposed list of included modalities in the RO Model at § 512.240, with the modifications of removing intraoperative radiotherapy (IORT) from the list of included modalities in the RO Model.

6. Pricing Methodology

a. Overview

The proposed pricing methodology in the proposed rule described the data and process used to determine the amounts for participant-specific professional episode payments and participant-specific technical episode payments for each included cancer type (84 FR 34503). In the proposed rule, we proposed to define the term ''participant-specific professional episode payment'' as a payment made by CMS to a Professional participant or Dual participant for the provision of the professional component of RT services furnished to an RO beneficiary during an episode, which is calculated as set forth in § 512.255. We further proposed to codify this term, ''participant-specific professional episode payment,'' at § 512.205 of our regulations.

We proposed to define the term ''participant-specific technical episode payment'' as a payment made by CMS to a Technical participant or Dual participant for the provision of the technical component of RT services to an RO beneficiary during an episode, which we proposed to calculate as set forth in § 512.255 of the proposed rule. Further, we proposed to codify this term, ''participant-specific technical episode payment,'' at § 512.205 of our regulations.

In the proposed rule, we proposed eight primary steps to the pricing methodology (84 FR 34503 through 34504). In the first step, we proposed to create a set of national base rates for the PC and TC of the included cancer types, yielding 34 different national base rates. Each of the national base rates represents the historical average cost for an episode of care for each of the included cancer types. We proposed that the calculation of these rates will be based on Medicare FFS claims paid during the CYs 2015–2017 that are included under an episode where the initial treatment planning service occurred during the CYs 2015–2017 as described in section III.C.6.b of the proposed rule (84 FR 34504 through 34505) and this final rule. If an episode straddles calendar years, the episode and its claims are counted in the calendar year for which the initial treatment planning service is furnished. We proposed to exclude those episodes that do not meet the criteria described in section III.C.5 of the proposed rule and this final rule. From the remaining episodes (that is, not including the excluded episodes), we proposed to then calculate the amount CMS paid on average to providers and suppliers for the PC and TC for each of the included cancer types in the HOPD setting, creating the Model's national base rates. Unless a broad rebasing is done after a later PY in the Model, these national base rates will be fixed throughout the Model performance period.

In the second step, we proposed to apply a trend factor to the 34 different national base rates to update those amounts to reflect current trends in payment for RT services and the volume of those services outside of the Model under the OPPS and PFS. We proposed to define the term ''trend factor'' to mean an adjustment applied to the national base rates that updates those rates to reflect current trends in the OPPS and PFS rates for RT services. We proposed to codify the term ''trend factor'' at § 512.205 of our regulations. In this step, we would calculate separate trend factors for the PC and TC of each cancer type using data from HOPDs and freestanding radiation therapy centers not participating in the Model. More specifically, as noted in the proposed rule, the calculations would update the national base rates using the most recently available claims data of those non-participating providers and suppliers and the volume at which they billed for RT services as well as their corresponding payment rates. Adjusting

the national base rates with a trend factor will help ensure payments made under the Model appropriately reflect changes in treatment patterns and payment rates that have occurred under OPPS and PFS.

In the third step, we proposed to adjust the 34 now-trended national base rates to account for each Participant's historical experience and case mix history. The historical experience and case mix adjustments account for RO participants' historical care patterns and certain factors that are beyond an RO participant's control, which vary systematically among RO participants so as to warrant adjustment in payment. We proposed that there would be one professional and/or one technical case mix adjustment per RO participant depending on the type of component the RO participant furnished during the 2015–2017 period, just as there would be one professional and/or one technical historical experience adjustment per RO participant, depending on the type of component the RO Participant furnished during the 2015–2017 period. We proposed to generate each RO participant's case mix adjustments using an ordinary least squares (OLS) regression model that predicts payment based on a set of beneficiary characteristics found to be strongly correlated to cost. In contrast, we proposed to generate each RO participant's historical experience adjustments based on Winsorized payment amounts for episodes attributed to the RO participant during the calendar years 2015–2017. The historical experience adjustments for each RO participant would be further weighted by an efficiency factor.[40] The blend measures if an RO participant's episodes (from the retrospectively constructed episodes from 2015–2017 claims data) have historically been more or less costly than the national base rates, and this determines the weight at which each RO participant's historical experience adjustments are applied to the trended national base rates.

In the fourth step, we proposed to further adjust payment by applying a discount factor. The discount factor is the set percentage by which CMS reduces payment of the PC and TC. The reduction on payment occurs after the trend factor and adjustments have been applied, but before standard CMS adjustments including the geographic practice cost index (GPCI), sequestration, and beneficiary coinsurance. The discount factor will reserve savings for Medicare and reduce beneficiary cost-sharing. We proposed to codify the term ''discount factor'' at § 512.205.

In the fifth step, we proposed to further adjust payment by applying an incorrect payment withhold, and either a quality withhold or a patient experience withhold, depending on the type of component the RO participant furnished under the Model. The incorrect payment withhold would reserve money for purposes of reconciling duplicate RT services and incomplete episodes during the reconciliation process, as discussed in section III.C.11 of the proposed rule and this final rule. We proposed to define the term ''duplicate RT service'' to mean any included RT service (as identified at § 512.235 of the proposed rule) that is furnished to a single RO beneficiary by a RT provider or RT supplier or both that did not initiate the PC or TC of that RO beneficiary during the episode. We proposed to codify ''duplicate RT service'' at § 512.205 of the proposed rule. We proposed that an incomplete episode means the circumstances in which an episode does not occur because: (1) A Technical participant or a Dual participant does not furnish a technical component to an RO beneficiary within 28 days following a Professional participant or the Dual participant furnishing the initial RT treatment planning service to that RO beneficiary; (2) traditional Medicare stops being the primary payer at any point during the relevant 90-day period for the RO beneficiary; or (3) an RO beneficiary stops meeting the beneficiary population criteria under § 512.215(a) or triggers the beneficiary exclusion criteria under § 512.215(b) before the technical component of an episode initiates.

We also proposed to adjust for a quality withhold for the professional component of the episode. This withhold would allow the Model to include quality measure results as a factor when determining payment to participants under the terms of the APM, which is one of the criteria for an APM to qualify as an Advanced APM as specified in 42 CFR 414.1415(b)(1). We proposed to adjust for a patient experience withhold for the technical component of the episode starting in PY3 to account for patient experience in the Model. We would then apply all of these adjustments, as appropriate to each RO participant's trended national base rates.

In the sixth step, we proposed to apply geographic adjustments to payments. In the seventh and final eighth step, we proposed to apply beneficiary coinsurance and a 2 percent adjustment for sequestration to the trended national base rates that have been adjusted as described in steps three through six, yielding participant-specific episode payment amounts for the provision of the PC and TC of each included cancer type in the Model. We proposed to calculate a total of 34 participant-specific professional and technical episode payment amounts for Dual participants, whereas we would only calculate 17 participant-specific professional episode payment amounts or 17 participant-specific technical episode payment amounts for Professional participants and Technical participants, since they furnish only the PC or TC, respectively.

Following this description of the data and process used to determine the amounts for participant-specific professional episode payments and participant-specific technical episode payments for each included cancer type, the proposed rule provided a pricing example for an episode of lung cancer (at 84 FR 34511). We provided this example to show how each pricing component (that is, national base rates, trend factors, case mix and historical experience adjustments, withholds, discount factors, geographic adjustment, beneficiary coinsurance, and sequestration) figures into these amounts. We also provided a summary-level, de-identified file titled the ''RO Episode File (2015–2017),'' on the RO Model's website to further facilitate understanding of the RO Model's pricing methodology. The following is a summary of the public comments received on this proposal, specifically those comments related not to particular pricing components, but rather comments related to the Model's pricing methodology in its general approach, potential impact, and structure as well as information provided to thoroughly review the methodology on these points and our response:

Comment: Many commenters requested additional information and data be provided in order to ascertain the degree of impact that the Model's pricing methodology will have on participant payment relative to what participants have historically been paid under FFS. Some commenters argued that additional information is needed in order to justify the RO Model's pricing and policies in general. Several other commenters made requests for information related to specific pricing components. Several commenters stated that the case mix adjustment is not adequately defined and that more detail is needed concerning the regression models used to construct the case mix

[40] Please note that in the final rule we are renaming the efficiency factor the ''blend,'' as discussed in section III.C.6.e(2) of this final rule.

adjustments. A few commenters requested additional information regarding the historical experience adjustments, specifically the number and type of providers and suppliers that are classified as efficient versus inefficient.

Response: Based on a full review of comments and the detailed analyses contained within some of them, we believe that commenters have had sufficient detail to fully comment on the proposed RO Model. We prioritize, however, these comments and along with the finalized parameters of the Model, provide additional resources to include detailed illustrations, examples, and data, particularly concerning the case mix and historical experience adjustments. We refer readers to sections III.C.6.e.(1) and III.C.6.e.(2) of the case mix and historical adjustments, respectively, for that additional detail and to section III.C.6.j which closes the pricing methodology section. Here we list additional data we are able to provide at request of the commenters.

Comment: Many commenters expressed support for a prospective payment model in radiation oncology. A few commenters took issue with the prospective nature of the Model's payment rates, because they were not adjusted for factors occurring in the current performance year. A commenter suggested that the RO Model change to a retrospective payment model in that this would allow for payment rates to be adjusted for the patient population of the performance period for which payment was being allotted. A commenter opposed the Model generally, explaining that the RO Model is an experiment focusing on short-term effects and costs, and ignores medium- and long-term complications and the resulting cost of care, such as costly side effects and secondary malignancies.

Response: We thank the commenters for sharing their support and concerns regarding a prospective payment model in radiation oncology. It is not the intent of the Model for payment based on 90-day episodes to incorporate the long-term health outcomes of a patient or associated costs, though the RO Model evaluation will analyze health outcomes that occur after RO episodes end to the extent feasible. The Model is designed to predict payment based on the historical characteristics of a participant's population based on the most recent claims data available. In particular, we refer readers to section III.C.6.e.(1) concerning the case mix adjustments. We update the case mix adjustment for each RO participant every year to account for the most recent set of episodes for which claims data is available. Also, it is important to note that in analyzing 2015–2017 episode data, we found that participants' case mix is relatively stable over time for most providers and suppliers.

We believe that this prospective episode-based payment structure for RT services is the best design for testing an episodic APM for RT services. The payment rates for RO episodes of care are unambiguous and known to RO participants prior to furnishing RT services. We are testing an approach where prospective episode-based payments will not be reconciled based on how many or which individual RT services are provided by the RO participant during the RO episode, with the exception of incomplete episodes and duplicate RT services. This allows us to test the impact of episode-based payments that do not have today's FFS incentives.

Comment: Many commenters expressed concern over the participant-specific professional episode payment and technical episode payment amounts related to what non-participants in the Model will receive under FFS. Commenters believed that the proposed pricing methodology as constructed with the national base rates based on HOPD claims data alone along with the proposed adjustments, discounts, and withholds, RO participants will be unable to receive sufficient payment under the Model or reasonably achieve savings. A commenter estimated that RO participants would receive up to 50 percent less in payments under the Model than non-participants who continue to be compensated under FFS. Many commenters stated that the proposed pricing methodology does not adequately pay RO participants for labor and resources required to care for the most complex patients and that the Model underestimates the costs and administrative burden of adjusting to and complying with the Model. A few commenters explained that payment under the Model would represent significant cuts to what RT providers and RT suppliers have been historically paid, particularly because the TC is not associated with an APM Incentive Payment. A commenter expressed concern that there could be a great degree of variation in episode spending outside the control of HOPDs, particularly those with little experience with episode-based payments.

Several commenters recommended that CMS limit the downside risk for RO participants, because as proposed, the Model provides no safeguard for excessive financial downside risk. A few commenters recommended restructuring the Model altogether to permit two-sided risk that would allow providers and suppliers to enter into risk at a self-determined pace. A few commenters suggested that the RO Model take a ''shared savings'' approach with RO participants sharing risk for gains and losses. Another commenter suggested a graduated glide path to risk for the RO Model, similar to the approach adopted in the Medicare Shared Savings Program (Shared Savings Program) Pathways to Success final rule. Another commenter suggested that payment be set by optimal actual costs of well-managed sites of service that furnish radiation with a margin to allow for innovation and upgrades. A commenter requested clarification as to whether RO participants could reinsure or get stop-loss insurance to mitigate risk, since RO participants are at risk for all costs over the bundled payment amounts.

Response: We thank these commenters on their feedback and suggestions related to Model payments relative to those received under FFS. We disagree that episode payment amounts would be reduced by 50 percent as compared to non-participants. We designed the pricing methodology so that participant-specific professional and technical episode payment amounts are largely based on what each participant has been paid historically under FFS and trended forward based on latest payment rates under FFS. Moreover, we adjust for those beneficiary characteristics that have a large impact on cost in the case mix adjustment.

We note, however, that RO participants that have fewer than 60 episodes in the baseline period do not have sufficient historical volume to calculate a reliable historical experience adjustment. Since these RO participants will not qualify to receive a historical experience adjustment and may see greater increases or reductions as compared to what they were historically paid under FFS as a result of not receiving the adjustment, we believe that it is appropriate to adopt a stop-loss limit of 20 percent for RO participants that have fewer than 60 episodes in the baseline period and were furnishing included RT services in the CBSAs selected for participation at the time of the effective date of this final rule (see section III.C.6.e(4) of this final rule). We are adding a definition at § 512.205 for ''stop-loss limit,'' which means the set percentage at which loss is limited under the Model used to calculate the stop-loss reconciliation amount. We are also adding at § 512.205 a definition for ''stop-loss reconciliation amount'' which means the amount owed to RO

participants that have fewer than 60 episodes during 2016–2018 and were furnishing included RT services in the CBSAs selected for participation at the time of the effective date of this final rule for the loss incurred under the Model as described in § 512.285(f).

Thus, we disagree with the premise that the proposed pricing methodology does not adequately pay RO participants for labor and resources required to care for the most complex patients. In particular, we refer readers to section III.C.6.e.(2) of this final rule for more information regarding the blend used to determine how much participant-specific historical payments and national base rates figure into payment. The blend provides a glide path toward the national average for each cancer type. Moreover, this is not a total cost of care model in that each RO episode covers only RT services. We limited the Model in this way, because we believe that these RT services are in control of the RT provider and RT supplier. For these reasons, reconfiguring the RO Model to incorporate either a ''shared savings'' element or gradual risk at a pace determined by RO participants is not necessary.

To ease any burden of adjusting to and complying with the Model, we are finalizing policies that reduce the discount factor by 0.25 percent for both the PC and TC, so that the discount rates are 3.75 percent and 4.75 percent for the PC and TC, respectively (see sections III.C.6.a and III.C.6.f). See section § 512.205 for the modification to the proposed discount factors. Also, we are finalizing policies that reduce the incorrect payment withhold to 1 percent. See section III.C.6.g(1) for the modification to the proposed incorrect payment withhold. These reductions, as detailed in the pricing methodology component sections to which they apply, should further minimize any cost differential that a participant may experience under the Model as opposed to what the participant historically received in payment under FFS.

Comment: Many commenters suggested that the payment structure be adjusted to account for patients receiving treatment for multiple tumor sites. A commenter stated that a diagnosis of primary lung cancer and prophylactic whole brain treatment would not both be covered by the national base rate for lung cancer. A commenter suggested monitoring the frequency and cost of care associated with multiple treatment sites in order to determine if the pricing methodology should be modified in future years on this point.

Response: We thank these commenters for their feedback regarding patients receiving treatment for multiple tumor sites. An episode-based payment covers all included RT services furnished to an RO beneficiary during a 90-day RO episode as codified at § 512.205 and § 512.245. Episodes are constructed using all Medicare FFS claims for radiation therapy services included in the Model. All RT services included on a paid claim line during the 90-day episode were multiplied by the OPPS or PFS national payment rate for that service and were included in the payment amounts for the PC and TC of that episode regardless of whether the service is aimed at treating the attributed primary disease site or not. As such, the national base rates incorporate payments for treatment of multiple tumor sites to the extent that more than one site was the focus of RT services during episodes of care in the historical period. Bundled episode payment rates are premised on the notion of averages. These cases described by the commenters are part of the set of historical episodes included in the averages that determine the national base rates and contribute to how payment amounts are valued, and, therefore, an adjustment for multiple tumor sites is not warranted at this time. Yet, we will be monitoring for change in treatment patterns related to patients being treated for multiple tumor sites throughout the Model performance period and will consider modifications to the pricing methodology in future years of the Model should it be warranted. Any changes to the pricing methodology will be made via notice and comment rulemaking.

Comment: Several commenters noted that the national base rates for prostate cancer and for gynecological cancers are not reflective of the increased costs of combined modality care, but rather these rates are driven by large volumes of patients who receive external beam radiation only. As a consequence, these commenters argued that RO participants would not be sufficiently compensated for these beneficiaries.

Response: As noted in the previous comment, an episode-based payment covers all included RT services furnished to an RO beneficiary during a 90-day episode as codified at § 512.205 and § 512.245. All RT services included on a paid claim line during the 90-day episode are multiplied by the OPPS or PFS national payment rate for that service and are included in the payment amounts for the PC and TC of that episode regardless of the type of modality used to treat the beneficiary. As such, the national base rates incorporate payments for treatment from multiple modalities to the extent that more than one modality was furnished during episodes of care in the historical period. These cases described by the commenters are part of the set of historical episodes included in the averages that determine the national base rates and contribute to how payment amounts are valued, and, therefore, an adjustment for multiple modalities is not warranted at this time. Yet, we will be monitoring for change in treatment patterns related to patients being treated with multiple modalities throughout the Model performance period and will consider modifications to the pricing methodology in future years of the Model should it be warranted. Any changes to the pricing methodology will be made via notice and comment rulemaking.

Comment: A few commenters requested clarity on whether episode payment amounts covered all RT services furnished during a 90-day period, even in instances where multiple courses of treatment were furnished. Several commenters expressed concern that no adjustment would be made if multiple courses of treatment were furnished within that 90-day period.

Response: An RO episode includes all included RT services (See Table 2) furnished to an RO beneficiary with an included cancer type during the 90-day episode as codified at § 512.205 and § 512.245. These cases described by the commenters are part of the set of historical episodes included in the averages that determine the national base rates and contribute to how payment amounts are valued and, therefore, an adjustment for multiple courses of treatment is not warranted at this time.

Comment: Many commenters suggested that the payment structure be adjusted to account for patients receiving treatment for secondary malignancies.

Response: An RO episode includes all included RT services (See Table 2) furnished to an RO beneficiary with an included cancer type during the 90-day episode. If an RO episode includes RT services for different included cancer types (for example, there may be claims for RT services included in the pricing for that episode that indicate more than one cancer type according to the ICD–10 diagnosis codes listed on the various claims), those RT services and their costs are all included in the calculation of the payment rate for that episode.

We would like to clarify how cancer type is assigned to an episode for calculation of the national base rates. It

is important to note that episodes are first assigned a cancer type when the episode is created, whether the cancer type is included in the Model or not, and then if that cancer type is not included in the Model, that episode is excluded subsequently from Model pricing. For instance, episodes first assigned with a secondary malignancy for cancer type during the episode construction phase are then excluded when pricing calculations are conducted. Our process for assigning a cancer type to an episode is as follows:

First, ICD–10 diagnosis codes during an episode were identified from:

(1) E&M services with an included cancer diagnosis code from Medicare PFS claim lines with a date of service during the 30 days before the episode start date, on the episode start date, or during the 29 days after the episode start date.

(2) Treatment planning and delivery services (See Table 2) with an included cancer diagnosis code from Medicare PFS claim lines, or treatment delivery services from Medicare OPPS claim lines with an included cancer diagnosis code on the claim header, with a date of service on the episode start date or during the 29 days after the episode start date. Note that the cancer diagnosis code from OPPS claims must be the principal diagnosis to count toward cancer type assignment; and that treatment delivery services that concern image guidance do not count toward cancer type assignment as we determined that image guidance was not an important indicator of cancer type.

Then, these ICD–10 diagnosis codes are summarized and counted across the claim lines to determine the episode's cancer type assignment according to the algorithm described in (a) through (c):

(a) If two or more claim lines fall within brain metastases or bone metastases or secondary malignancies (per the mapping of ICD–10 diagnosis code to cancer type described in Table 1 of Identified Cancer Types and Corresponding ICD–10 Codes), we set the episode cancer type to the type (either brain metastases or bone metastases) with the highest count. If the count is tied, we assign the episode in the following order of precedence: Brain metastases; bone metastases; other secondary malignancies.

(b) If there are fewer than two claim lines for brain metastases, bone metastases and other secondary malignancies, we assign the episode the cancer type with the highest claim line count among all other cancer types. We exclude the episode if the cancer type with the highest claims line count among other cancer types is not an included cancer type.

(c) If there are no claim lines with a cancer diagnosis meeting the previously discussed criteria, then no cancer type is assigned to that episode and therefore, that episode is excluded from the national base rate calculations.

Comment: A commenter recommended that a payment adjustment be made for the increased use of Magnetic Resonance simulation that was not present during the baseline period of 2015–2017 in order to monitor patient safety and treatment efficacy.

Response: We will be monitoring for changes in treatment patterns throughout the Model's performance period with particular attention to the increased use of MR simulation. We will consider proposing modifications to the pricing methodology in future years of the Model should it be warranted.

Comment: Many commenters expressed concern that the pricing methodology fails to account for complex clinical scenarios and treatment costs. Many commenters recommended that only standard medically accepted case rates should be used to determine payment.

Response: At this time, we have only claims data available to design and operationalize the RO Model. The claims data do not include clinical data. We are finalizing our proposal to collect clinical data from RO participants so that we can assess the potential utility of additional clinical data for monitoring and calculating episode payment amounts (see section III.C.8.e of this final rule). Further, we believe that the case mix adjustment appropriately accounts for the complexity of an RO participant's patient population, and the historical experience adjustment captures additional unmeasured factors that may make one RO participant's patient population more complex, and thus more costly, than another's. We also believe that the national base rates would be lower if we were to use a standard treatment course to set payments, since there are situations in which greater volume is used than would be prescribed by a standard course of treatment.

Comment: A commenter suggested assigning an episode of care initiator, who would be responsible for total spending for the PC and TC, similar to the BPCI Advanced Model.

Response: Similar to the BPCI Advanced Model, the RO participants initiate (or trigger) RO episodes of care with an initial service, which is the treatment planning service in the RO Model. In both the RO Model and BPCI Advanced Model, the model participant is responsible for Medicare fee-for-service (FFS) expenditures for all items and services included in an episode of care starting with the episode trigger. However, in the RO Model, we have limited financial risk to RT services whereas the BPCI Advanced Model participants are responsible for the total amount of Medicare spending for non-excluded items and services in the episode of care. As described in section III.C.5.c, we believe that it is appropriate to limit risk in the RO Model just to RT services, which are managed by the radiation oncologist.

Comment: A commenter expressed support for the proposed policies related to the definition of incomplete episodes. A few commenters requested that CMS provide an example calculation for how an incomplete episode would be paid. Another commenter requested clarification on the situation of a beneficiary switching RT providers and/or RT suppliers and how each would be paid if both RT providers and/or RT suppliers were participants in the Model.

Response: We thank these commenters for their support and requests. As noted in the proposed rule and in this final rule, we expect to provide RO participants with additional instructions for billing, particularly as billing pertains to incomplete episodes and duplicate RT services, through the Medicare Learning Network (MLN Matters) publications, model-specific webinars, and the RO Model website. For a subset of incomplete episodes in which (1) the TC is not initiated within 28 days following the PC; (2) the RO beneficiary ceases to have traditional FFS Medicare prior to the date upon which a TC is initiated, even if that date is within 28 days following the PC; or (3) the RO beneficiary switches RT provider or RT supplier before all RT services in the RO episode have been furnished the RO participant is owed only what it would have received under FFS for the RT services furnished to that RO beneficiary, CMS will reconcile the episode payment for the PC and TC that was paid to the RO participant with what the FFS payments would have been for those RT services using no-pay claims. When an RO beneficiary switches RT provider or RT supplier, he or she is no longer under the care of the RO participant that initiated the PC and/or TC of the RO episode.

In the case that traditional Medicare ceases to be the primary payer for an RO beneficiary after the TC of the RO episode has been initiated but before all included RT services in the RO episode have been furnished, then each RO

participant will be paid only the first installment of the episode payment. The RO participant will not be paid the EOE PC or TC for these RO episodes as CMS cannot process claims for a beneficiary with dates of service on or after the date that traditional Medicare is no longer the primary payer. If the SOE for the PC is paid and the RO beneficiary ceases to have traditional Medicare FFS, for example by switching to a Medicare Advantage plan, before the TC is initiated, then during reconciliation, CMS will calculate what the RO participant would have received under FFS for the RT services included in the PC furnished to that beneficiary prior to the beneficiary switching from traditional Medicare to another payer.

We account for duplicate RT services differently. In the proposed rule, a duplicate RT service means any included RT service that is furnished to a single RO beneficiary by a RT provider or RT supplier or both that did not initiate the PC or TC for that RO beneficiary during the RO episode. We are finalizing this proposed definition of duplicate RT service with modification. Duplicate RT service means any included RT service identified at § 512.235 that is furnished to an RO beneficiary by an RT provider or RT supplier that is not excluded from participation in the RO Model at § 512.210(b), and that did not initiate the PC or TC of the RO beneficiary's RO episode. Such services are furnished in addition to the RT services furnished by the RO participant that initiated the PC or TC and continues to furnish care to the RO beneficiary during the RO episode. This modification also clarifies that RT services furnished by a RT provider or supplier excluded from participation in the Model (for example, an ambulatory surgery center, see section III.C.3.c for exclusion criteria) are not considered a duplicate RT service. If the EOE PC and TC payments have been made to the RO participant that initiated the PC or TC of that RO episode, and claims are submitted on behalf of that same beneficiary for RT services furnished by another RT provider or RT supplier during that RO episode, then during reconciliation, payments for those duplicate RT services will be reconciled against the incorrect payment withhold for the RO participant that received full payment for the RO episode. The other RT provider or RT supplier that furnished RT services to that beneficiary, whether an RO participant or not, will be paid FFS for those RT services.

For any RO episode that involves one or more duplicate RT services, the payment for the RO participant that initiated the PC or TC will be reconciled by reducing the RO participant's episode payment by the FFS amount of the duplicate RT services furnished by the RT provider or RT supplier that did not initiate the PC or TC. The FFS amount to be subtracted from the RO participant's bundled payment, however, cannot exceed the amount that the RO participant would receive under FFS for the RT services they furnished during the RO episode. We note that a duplicate RT service is distinct from the situation where an RO beneficiary switches to a different RT provider or RT supplier. As explained above, when an RO beneficiary switches to a new RT provider or RT supplier, and is no longer under the care of the RO participant that initiated the PC and/or TC, the RO episode is an incomplete episode. The RO participant is owed what it would have received under FFS for the RT services furnished to that RO beneficiary, and CMS will use no-pay claims to reconcile the episode payment with what the FFS payments would have been for the RT services. For further details, see section III.C.11(b) of this final rule.

In sum, all claims for RT services for an RO beneficiary with dates of service during the 90-day RO episode will be reviewed during annual reconciliation, to determine if that RO episode qualifies as complete as stipulated in section III.C.11 and codified at § 512.285 and if duplicate RT services occurred as defined in section III.C.6a and codified at § 512.205. As a consequence of this process, CMS will determine how all of these claims impact the annual reconciliation amount on an episode-by-episode basis. The sum of payments for duplicate RT services and the sum of payments for RT services during the incomplete episode represent the impact of those duplicate RT services and incomplete episodes across all RO episodes attributed to the RO participant for the PY considered in that annual reconciliation. See section III.C.11 for further details on this process. Table 14 in that section is an example of the annual reconciliation calculation. For more information on billing under the RO Model, see section III.C.7; for more information on reconciliation during the RO Model, see section III.C.11.

In our proposed eight primary steps to the pricing methodology, we are making one technical change to apply the geographic adjustment to the trended national base rates prior to the case mix and historical experience adjustments and prior to the discount factor and withholds. We proposed to apply the OPPS Pricer as it is automatically applied under OPPS outside of the Model at 84 FR 34510 of the proposed rule, and see section III.C.6.h. of this final rule. We also proposed to use RO Model-specific RVU shares to apply PFS RVU components (Work, PE, and MP) to the new RO Model payment amounts in the same way they are used to adjust payments for PFS services in section III.C.6.h. In order to use RO Model-specific RVU shares to apply PFS RVU components to the new RO Model payment amounts in the same way they are used to adjust payments for PFS services, the geographic adjustment must be applied to the trended national base rates prior to the case mix and historical experience adjustments and prior to the discount factor and withholds. We note that, although modifying the sequence of the pricing methodology in this way slightly changes the amount of dollars attributed to the discount factor and to each withhold, the participant-specific professional episode payment amounts and the participant-specific technical episode payment amounts do not change as a result of this modification. We list all modifications to the pricing methodology at the end of the pricing methodology section, section III.C.6 of this final rule.

b. Construction of Episodes Using Medicare FFS Claims and Calculation of Episode Payment

For the purpose of calculating the national base rates, case mixes, and historical experience adjustments, we proposed to construct episodes based on dates of service for Medicare FFS claims paid during the CYs 2015–2017 as well as claims that are included under an episode where the initial treatment planning service occurred during the CYs 2015–2017 as discussed in section III.C.3.d of the proposed rule and this final rule. We proposed to exclude those episodes that do not meet the criteria discussed in section III.C.5 of this final rule. Each episode and its corresponding payment amounts, one for the PC and one for the TC, would represent the sum totals of calculated payment amounts for the professional services and the technical services of the radiation treatment furnished over a defined 90-day period as discussed in section III.C.5.b of this final rule. We proposed to calculate the payment amounts for the PC and TC of each episode as the product of: (a) The OPPS or PFS national payment rates for each of the RT services included in the Model multiplied by (b) the volume of each professional or technical RT service included on a paid claim line during each episode. We proposed to

neither Winsorize nor cap payment amounts nor adjust for outliers in this step.

So that all payment amounts are in 2017 dollars, we proposed to convert 2015 payment amounts to 2017 by multiplying: (a) The 2015 payment amounts by the ratio of (b) average payment amounts for episodes that initiated in 2017 to (c) average payment amounts for episodes that initiated in 2015. We proposed to apply this same process for episodes starting in 2016. To weigh the most recent observations more heavily than those that occurred in earlier years, we would weight episodes that initiated in 2015 at 20 percent, episodes that initiated in 2016 at 30 percent, and episodes that initiated in 2017 at 50 percent.

We proposed that conversion of 2015 and 2016 payment amounts to 2017 dollars would be done differently, depending on which step of the pricing methodology was being calculated. For instance, episode payments for episodes used to calculate national base rates and case mix regression models would only be furnished in the HOPD setting, and consequently, for purposes of calculating the national base rates and case mix regression models, the conversion of episode payment amounts to 2017 dollars would be based on average payments of episodes from only the HOPD setting. On the other hand, episode payments for episodes used to calculate the historical experience adjustments would be furnished in both the HOPD and freestanding radiation therapy center settings (that is, all episodes nationally), and consequently, for purposes of calculating the historical experience adjustments, the conversion of episode payment amounts to 2017 dollars would be based on average payments of all episodes nationally from both the HOPD and freestanding radiation therapy center settings.

Comment: A few commenters disagreed with weighting the most recent episodes more heavily than those that occurred in earlier years, specifically weighting episodes that initiated in 2015 at 20 percent, episodes that initiated in 2016 at 30 percent, and episodes that initiated in 2017 at 50 percent. A couple of commenters stated that the 2017 rates were the lowest rates of all three years in the baseline, yet accounts for 50 percent of the national base rates. A commenter stated that the average reduction in rates from 2015 to 2017 was 11 percent for all included modalities except Conformal External Beam (CEB), which saw an 8 percent increase. Another commenter stated that the lower 2017 rates would increase the net loss that participants are likely to experience under the Model.

Response: We proposed to weight the most recent year in the baseline more heavily because this gives more weight to the most recent episode data available, including the most recent treatment patterns, not because they are the ''lowest'' rates. Furthermore, since we are moving the dates of service for the construction of episodes up a year from CYs 2015–2017 to CYs 2016–2018, episodes initiated in 2017 will be weighted at 30 percent not 50 percent. We are finalizing this provision with modification to construct episodes based on dates of service for Medicare FFS claims paid during the CYs 2016–2018 as well as claims that are included under an episode where the initial treatment planning service occurred during the CYs 2016–2018 as discussed in section C.III.6 of the proposed rule and this final rule. To weigh the most recent observations more heavily than those that occurred in earlier years as proposed, we will weight episodes that initiated in 2016 at 20 percent, episodes that initiated in 2017 at 30 percent, and episodes that initiated in 2018 at 50 percent.

c. National Base Rates

We proposed to define the term ''national base rate'' to mean the total payment amount for the relevant component of each episode before application of the trend factor, discount factor, adjustments, and applicable withholds for each of the included cancer types. We further proposed to codify this term at § 512.205 of our regulations.

The proposed rule would exclude the following episodes from calculations to determine the national base rates:

- Episodes with any services furnished by a CAH;
- Episodes without positive (>$0) total payment amounts for professional services or technical services;
- Episodes assigned a cancer type not identified as cancer types that meet our criteria for inclusion in the Model, as discussed in section III.C.5.a of the proposed rule (84 FR 34497 through 34498) and this final rule;
- Episodes that are not assigned a cancer type;
- Episodes with RT services furnished in Maryland, Vermont, or a U.S. Territory;
- Episodes in which a PPS-exempt cancer hospital furnishes the technical component (is the attributed technical provider);
- Episodes in which a Medicare beneficiary does not meet the eligibility criteria discussed in section III.C.4 of this final rule.

We proposed to exclude episodes without positive (>$0) total payment amounts for professional services or technical services, since we would only use episodes where the RT services were not denied and Medicare made payment for those RT services. We proposed to exclude episodes that are not assigned a cancer type and episodes assigned a cancer type not on the list of Included Cancer Types, since the RO Model evaluates the furnishing of RT services to beneficiaries who have been diagnosed with one of the included cancer types. The remaining proposals listed in section III.C.6.c of the proposed rule excluded episodes that are not in accordance with section III.C.5 of the proposed rule.

(1) National Base Rate Calculation Methodology

When calculating the national base rates, we proposed to only use episodes that meet the following criteria: (1) Episodes initiated in 2015–2017; (2) episodes attributed to an HOPD; and (3) during an episode, the majority of technical services were provided in an HOPD (that is, more technical services were provided in an HOPD than in a freestanding radiation therapy center). We explained in the proposed rule that OPPS payments have been more stable over time and have a stronger empirical foundation than those under the PFS. The OPPS coding and payments for radiation oncology have varied less year over year than those in the PFS for the applicable time period. In addition, generally speaking, the OPPS payment amounts are derived from information from hospital cost reports, which are based on a stronger empirical foundation than the PFS payment amounts for services involving capital equipment.

CMS proposed to publish the national base rates and provide each RO participant its participant-specific professional episode payment amounts and/or its participant-specific technical episode payment amounts for each cancer type no later than 30 days before the start of the PY in which payments in such amounts will be made.

Our proposed national base rates for the Model performance period based on the criteria set forth for cancer type inclusion were summarized in Table 3 of the proposed rule.

Comment: Many commenters disagreed with the proposal for calculating the national base rates based on average payment of episodes from only the HOPD setting. These commenters stated that utilizing only

HOPD episodes does not reflect the actual payment experience for freestanding radiation therapy centers, and that it is inappropriate to base a site neutral test on HOPD episodes alone. Some commenters questioned CMS' rationale for excluding freestanding radiation therapy center data from the calculation of the national base rates. The commenters claim that CMS' rationale (that is, that HOPDs furnished a lower volume of services and used less costly modalities within such episodes than did freestanding radiation therapy centers even though HOPDs provided more episodes nationally from 2015 through 2017) is not sufficient to warrant the exclusion of freestanding radiation therapy centers from the calculation of the national base rates. Another commenter stated that the analysis conducted by CMS provides no basis to suggest that higher utilization, particularly of IMRT in freestanding radiation therapy centers, is not medically necessary. Another commenter stated that particularly with respect to treatment of prostate cancer, the number of fractions for a course of treatment have held constant for nearly a decade, regardless of site of service. A few commenters questioned the veracity of the claim that the vast majority of increased utilization is occurring in the freestanding radiation therapy centers and requested that CMS share the details of its calculation that freestanding radiation therapy centers received 11 percent higher reimbursement per episode than HOPDs. MedPAC argued that using HOPD rates would increase payments to freestanding radiation therapy centers and reduce savings for Medicare. Finally, a few commenters took issues with the premise that OPPS rates have been more stable than the PFS rates, since PFS payments for radiation therapy codes have been frozen since 2015. Using one or more of the previously discussed arguments, many commenters recommended calculating the national base rates using a blend of PFS and OPPS rates rather than basing the rates on OPPS rates alone. These commenters argued that this blend would better account for different care patterns across the different sites of service. Additionally, several commenters recommended CMS use more recent data than 2015–2017, if available.

Response: We refer readers to the November 2017 Report to Congress that discusses FFS incentives and the site-of-service payment differential between HOPDs and freestanding radiation therapy centers in detail. It is true that the PFS rates have been fixed since 2015 and added stability temporarily, but these rates were fixed at the behest of professional organizations in radiation oncology in large part because of their concerns that those rates were unstable and under review as being potentially misvalued. The OPPS rates are constructed from hospital cost data. This cost data provides empirical support for the OPPS rates. The PFS rates do not have the same empirical cost data backing, as we explained in the proposed rule and in the November 2017 Report to Congress. We would also like to clarify that, although the national base rates in the RO Model are calculated based on episodes occurring in the HOPD setting, these episodes include payments made to physicians under the PFS for the PC and payments to freestanding radiation therapy centers for the TC in episodes where beneficiaries sought treatment from both HOPDs and freestanding radiation therapy centers.

We disagree that a blend of PFS and OPPS rates would better account for different care patterns across the different settings of HOPDs and freestanding radiation therapy centers. We believe the argument that the number of fractions has held constant for nearly a decade for a course of treatment for prostate cancer, regardless of site of service, supports the Model's move toward site neutrality, in that the settings are comparable, and no matter which site of service is used as the basis for payment, it should make no difference to treatment outcomes. We have found no evidence supporting different utilization rates based on setting. For clarity, we have found no evidence to suggest that, on average, higher utilization rates are warranted for RT services furnished in freestanding radiation therapy centers than for RT services furnished in the HOPD setting. We proposed to adopt both case mix and historical experience adjustments to account for the different care patterns of each RO participant specifically, not the different care patterns of HOPDs and freestanding radiation therapy centers in general. Furthermore, as patterns of care change over time, we will apply a trend factor to the 32 different national base rates to account for current trends in payment for RT services and the volume of those services outside of the Model in both HOPDs and freestanding radiation therapy centers. For clarity, we will use the volume and payment for RT services experienced in both settings to determine the trend factor.

As for hypofractionation, the RO Model is not intended to make hypofractionation the standard of care in radiation oncology unless it is clinically appropriate to do so. We refer readers to section III.B.3, aligning payments to quality and value, rather than volume, where the issue of hypofractionation is discussed in detail.

We agree with the comment that using HOPD rates would increase payments to freestanding radiation therapy centers, but only if we are considering payment on a per service basis, not when services are bundled under an episode of care and paid for accordingly, as will be done under the RO Model.

Finally, we agree with the commenters about using more recent baseline data, and therefore, we are finalizing the calculation of national base rates based on HOPD data as proposed with modification to change the baseline from 2015–2017 to 2016–2018.

Comment: Several commenters raised concerns regarding the OPPS comprehensive APC (C–APC) methodology. CMS applies this policy to certain RT services under the OPPS and commenters explained that radiation oncology is better suited for component coding to account for several steps in the process of care. The commenters also noted that the OPPS C–APC methodology does not account for the several steps in the process of care and fails to capture appropriately coded claims. A few commenters stated that the amount a hospital charges for a service does not have a direct or consistent relationship to what the service actually costs, and hospitals often use monthly or repetitive service claims. The commenters suggested that CMS monitor the impact of the OPPS methodology on payment rates under the RO Model and consider using the OPPS APC without the C–APC methodology for the technical component of the national base rate for cervical cancer, in particular.

Response: We thank the commenters for expressing their concerns regarding the OPPS C–APC policy that is used to pay for certain HOPD-furnished RT services. We also appreciate their recommendations regarding monitoring the impact of these policies on the episode payment amounts under the Model. We refer readers to section III.C.5.a, where we discuss the inclusion of cervical cancer as it relates to the C–APC methodology.

The purpose of the RO Model is to test a site-neutral and modality-agnostic approach to payment for RT services. We determined it was necessary to include certain RT services (for example, Stereotactic Radio Surgery) which are subject to the packaging policy under the OPPS in the RO Model

to help ensure site neutrality and a modality-agnostic approach. For clarity, we would have likely had to exclude certain commonly provided RT services if we wanted to avoid those codes that are subject to the OPPS C–APC policy. In addition, the RO Model will calculate a single episode payment rate for all of the included RT services for a 90-day period. As a result, the impact of any one code on the overall episode payment amount is minimal. We will monitor the impact of the C–APCs on the episode payment rates.

Comment: Many commenters expressed concerns regarding the calculation of the national base rates in that they believe the rates inappropriately include palliative care cases and distort the true cost of cancer care. A few commenters expressed concern about the lung cancer national base rates, in particular, and stated that 47 percent of the cases were palliative in nature. These commenters argued that the intent of treatment should determine pricing in these cases. CMS should determine whether these cases are palliative or curative in nature, and from this, develop separate rates within this cancer type.

Many commenters suggested that removing palliative cases would more accurately account for the cost of delivering standard of care in radiation oncology, but commenters differed on which cases would constitute care that is palliative in nature. A commenter suggested removing conformal radiation therapy treatment with ten or fewer fractions and then creating a separate ''Cancer symptom palliation, not otherwise specified'' episode, asserting that pulling these cases out would more accurately account for the cost of care. A few commenters suggested removing all episodes of 1–10 fractions with 2D or 3D management and removing non-SBRT episodes. Another commenter noted that even treatment courses of 11–20 fractions have high probability of being palliative episodes.

Response: In assigning cancer types, we created the Model to be as sensitive as possible in identifying palliative cases, including bone and brain metastasis cases. We believe the methodology we use to assign cancer types, which preferences assignment of bone and brain metastasis cases, appropriately captures those clinical circumstances where a beneficiary was treated not for cancer at the original site but for metastasis to the bone or brain, respectively. Other palliative cases described by the commenters are part of the set of historical episodes for other cancer types and are included in their national base rates. We refer readers to the comment responses in the overview of the pricing methodology in section III.C.6.a, where we detail how cancer type is assigned to an episode. Removing episodes determined to be palliative based solely on a low number of treatments would remove cases where a curative treatment included a low number of fractions. We cannot definitively determine if a treatment was palliative in nature based on count of fractions, and we do not intend to tie episode payment to fraction count, which would keep in place the FFS-incentive structure the RO Model intends to change. We will be monitoring to ensure that episodes of bone and brain metastasis are appropriately billed under the Model. We will not remove cases that are perceived to be palliative in nature based on the number of fractions furnished during the episode.

Comment: Many commenters called into question the integrity of data used to generate the national base rates. Many commenters stated that the national base rate calculations inappropriately include incomplete episodes of care. A commenter stated that 14 percent of HOPD cases look like incomplete episodes, because they had technical charges that were less than $5,000. A commenter estimated that if these incomplete episodes of care were to be excluded, this would increase the national base rates by approximately 16 percent.

Another commenter expressed concern about the payment differential between the average freestanding radiation therapy center rate and the average HOPD rate with regard to prostate cancer. The commenter attributed the payment differential, whereby the freestanding radiation therapy center rate was 7.5 percent higher than the average HOPD rate, to the additional $4,000 per episode for brachytherapy.

A commenter stated that a few providers and suppliers account for a large percentage of the total amount of episodes and that these providers and suppliers could have a disproportionate impact on the setting of the national base rates, homogenizing the data used to set those rates, and therefore, the method of calculating the national base rates should be reconsidered. Several commenters stated that non-standard treatment episodes are included in the calculation of the national base rates, and as a consequence, artificially depress actual cost. In a similar vein, a commenter added that artificially low payments caused by coding errors and billing infrequency in the HOPD setting may cause CMS to qualify otherwise efficient practices as inefficient participants. As an example, the commenter explained that many episodes had more than 10 brachytherapy treatment delivery services, while other episodes had brachytherapy counts 1–10 or 11–20 and also 11–20 or 21–30 IMRT/CEB counts. This signals an inconsistency in the way codes were used in COUNT_BRACHY. The commenter requested that the code set used for each code count be provided in the data dictionary that accompanies the episode file on the RO Model website.

Several commenters suggested CMS establish tiered base rates rather than a single base rate per cancer type. A commenter suggested developing different base rates based on resource levels and clinical complexity analogous to OPPS ambulatory payment classification levels. Similarly, a few commenters recommended the national base rates be stratified based on the clinical characteristics of beneficiaries as this significantly affects the number and type of treatment received, not just by the broad category of cancer they have. A commenter suggested that cancer stage and intensity of treatment be considered in payment. A commenter suggested that CMS use fewer than 34 different national base rates, because so many different rates would cause confusion for RO participants that treat multiple types of cancers.

Response: We thank these commenters for expressing these concerns and for their suggestions. We disagree that incomplete episodes were inappropriately included in the national base rates. We used the same criteria to identify episodes in the baseline as we will use in the Model. Only episodes that meet certain criteria, codified at § 512.250, would be included in the national base rate calculation and in the calculation of the trend factor, case mix and historical experience adjustments. We are finalizing episode exclusion criteria with a few clarifications. We are clarifying that we exclude episodes in the baseline which are not attributed to an RT provider or RT supplier, an exceedingly rare case (less than 15 episodes out of more than 518,000 episodes in the baseline period) where the only RT delivery services in the episode are classified as professional services (because there are a few brachytherapy surgery services that are categorized as professional services). We are also clarifying that episodes are excluded if either the PC or TC is attributed to an RT provider or RT supplier with a U.S. Territory service location or to a PPS-exempt entity. However, services within an episode

provided in a US Territory or provided by a PPS-exempt entity are included in the episode pricing. Thus, for the constructed episodes used to determine the baseline, we will include the costs of any services provided by such an RT provider or RT supplier, as long as the RT provider or RT supplier does not provide the majority of either the professional or technical services, in which case the PC or TC would be attributed to the entity and the episode would be excluded. We are also clarifying that episodes are excluded if they include any RT service furnished by a CAH. Further, we are clarifying that we exclude all Maryland and Vermont claims before episodes are constructed and attributed to an RT provider or RT supplier. For this reason, there are not episodes in which either the PC or TC is attributed to an RT provider or RT supplier with a Maryland or Vermont service location. We similarly exclude inpatient and ASC claims from episode construction and attribution.

Episodes are not excluded based on any clinical standards of care or based on the size of HOPD that furnished the episode. We also do not use the size of RT providers or RT suppliers, that is, the number of episodes that a given RT provider or RT supplier furnishes, as a measure of exclusion. We disagree that the national base rate calculation should account for size of the RT provider or RT supplier, as we do not believe that large RT providers and RT suppliers make up a disproportionate share of the episodes in the calculation of the national base rates. As long as HOPD episodes meet inclusion criteria as stated in section III.C.6.c, they will be included in the calculation of the national base rates, regardless of the size of the RT provider or RT supplier where the episode was furnished. It is important to note that the cost of RT services vary by modality and cancer type, and although payment differentials may exist across episodes due to the use of multiple modalities as a commenter stated, we believe that using a blend to determine payment (that is, a blending of participant-specific historical payments with national base rates to determine payment) allows us to balance the national context (as represented by the spectrum of HOPDs nationally) with participant experience.
