(b) CleanSpace respirators use an air filtering, fan assisted pressure mask, which can be used in high dust environments. They are light and compact, require no services, are intrinsically safe, and have few parts. The 3M Versaflo TR–800 allows for increased movement in tight spaces, while protecting against airborne contaminants. It is easy to use, has interchangeable components for specific application, is intrinsically safe, has audible and visual alarms, multi-speed blower, long battery run times, charges quickly and is ANSI/UL 60079–11 certified, allowing it to be used in hazardous locations. The 3M Ultimate FX respirator utilizes a scotchguard protection lens, allowing liquids to bead up and be removed easily. A large lens provides visibility, it is comfortable and easy to use, the 3M cool flow valve allows for easier breathing, and particle filters help filter out various particulates.

(c) When not in operation, batteries for the PAPR models will be charged out by the last open crosscut.

(d) The following battery charger products will be used: 3M battery charger TR–641N or 3M 4-station battery charger TR–644–N.

(e) The 3M Versaflo TR–800 PAPR will exclusively use the 3M TR–830 battery pack.

(f) Miners will be trained on how to safely use and take care of PAPR units, per manufacturer instructions.

(g) The above instruments will be assessed for physical damage as well as the integrity of the case.

(h) If methane levels go above 1.0 percent, 30 CFR 57.22234 procedures will be followed.

The petitioner asserts that the proposed alternative method will at all times guarantee no less than the same measure of protection afforded by the standard.

Roslyn Fontaine,
Deputy Director, Office of Standards, Regulations, and Variances.
