participants can readily favor one of the 16 competing option exchanges if they deem fee levels at a venue to be excessive. In such an environment, the Exchange must continually adjust its fees to remain competitive with other exchanges and to attract order flow to the Exchange. Based on publicly-available information, and excluding index-based options, no single exchange currently has more than 16% of the market share of executed volume of multiply-listed equity and ETF options trades.19 Therefore, no exchange currently possesses significant pricing power in the execution of multiply-listed equity & ETF options order flow. More specifically, in August 2020, the Exchange had less than 10% market share of executed volume of multiply-listed equity & ETF options trades.20

The Exchange believes that the proposed rule change reflects this competitive environment because it modifies the Exchange’s fees and rebates in a manner designed to encourage ATP Holders to direct trading interest to the Exchange, to provide liquidity and to attract order flow. To the extent that this purpose is achieved, all the Exchange’s market participants should benefit from the improved market quality and increased opportunities for price improvement.

The Exchange believes that the proposed changes could promote competition between the Exchange and other execution venues, including those that currently offer similar pricing incentives, by encouraging additional orders to be sent to the Exchange for execution.21

C. Self-Regulatory Organization’s Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were solicited or received with respect to the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change is effective upon filing pursuant to Section 19(b)(3)(A)22 of the Act and subparagraph (f)(2) of Rule 19b–423 thereunder, because it establishes a due,

fee, or other charge imposed by the Exchange. At any time within 60 days of the filing of such proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings under Section 19(b)(2)(B)24 of the Act to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments
- Use the Commission’s internet comment form (http://www.sec.gov/rules/sro.shtml); or
- Send an email to rule-comments@sec.gov. Please include File Number SR-NYSEAMER-2020-80 on the subject line.

Paper Comments
- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090. All submissions should refer to File Number SR-NYSEAMER-2020-80 on the subject line.

The Commission is publishing this notice to solicit comments on the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Exchange.

SECURITIES AND EXCHANGE COMMISSION

Self-Regulatory Organizations; New York Stock Exchange LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change Amending the Fees for NYSE BBO and NYSE Trades by Modifying the Application of the Access Fee and Amending the Fees for NYSE Trades by Adopting a Waiver Applicable to the Redistribution Fee

November 12, 2020.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (the “Act”),1 and Rule 19b–4 thereunder,2 notice is hereby given that on November 2, 2020, New York Stock Exchange LLC (“NYSE” or the “Exchange”) filed with the Securities and Exchange Commission (the “Commission”) the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization’s Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to (1) amend the fees for NYSE BBO and NYSE Trades by modifying the application of the Access Fee; and (2) amend the fees for NYSE Trades by adopting a waiver applicable to the Redistribution Fee.

19 See supra note 15.
20 Based on OCC data, supra note 16, the Exchange’s market share in equity-based options increased from 7.73% for the month of August 2019 to 8.18% for the month of August 2020.
21 See, e.g., supra note 11 (regarding Choe’s Break-Up Credits).
The Exchange proposes to implement the proposed fee changes on January 1, 2021. The proposed rule change is available on the Exchange’s website at www.nyse.com, at the principal office of the Exchange, and at the Commission’s Public Reference Room.

II. Self-Regulatory Organization’s Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant parts of such statements.

A. Self-Regulatory Organization’s Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to decrease the fees for certain NYSE market data products, as set forth on the NYSE Proprietary Market Data Fee Schedule (“Fee Schedule”). These fee decreases, taken together with similar fee decreases filed by the Exchange’s affiliated exchanges, NYSE American LLC (“NYSE American”) and NYSE Arca, Inc. (“NYSE Arca”), will reduce the fees associated with the NYSE BQT proprietary data product, which competes directly with similar products offered by both the Nasdaq and Cboe families of U.S. equity exchanges. Collectively, the proposed fee decreases are intended to respond to the competition posed by similar products offered by the other exchange groups.

Specifically, the Exchange proposes to (1) reduce the Access Fees by more than 93% for Redistributors of NYSE BBO and NYSE Trades that subscribe to only such data feeds and do not subscribe to any other market data product listed on the Fee Schedule other than NYSE BQT, and use such market data products for external distribution only; and (2) waive the Redistribution Fee for Redistributors that are eligible for the Per User Access Fee if the Redistributor provides NYSE Trades externally to at least one data recipient and reports such recipient to the Exchange. All of the proposed changes would decrease fees for market data on the Exchange.

The Exchange proposes to implement these proposed fee changes on January 1, 2021.

Background

The Commission has repeatedly expressed its preference for competition over regulatory intervention in determining prices, products, and services in the securities markets. In Regulation NMS, the Commission highlighted the importance of market forces in determining prices and SRO revenues, and also recognized that current regulation of the market system “has been remarkably successful in promoting market competition in its broader forms that are most important to investors and listed companies.”

While Regulation NMS has enhanced market competition, it has also fostered a “fragmented” market structure where trading in a single stock can occur across multiple trading centers. When multiple trading centers compete for order flow in the same stock, the Commission has recognized that “such competition can lead to the fragmentation of order flow in that stock.” Indeed, equity trading is currently dispersed across 16 exchanges,7 numerous alternative trading systems,8 and broker-dealer internalizers and wholesalers, all competing for order flow. Based on publicly-available information, no single exchange currently has more than 18% market share (whether including or excluding auction volume).9

With the NYSE BQT market data product, NYSE and its affiliates compete head to head with the Nasdaq Basic.10

6 As described on the Cboe website, available here: https://markets.cboe.com/us/equities/market_data_services/chore_one/. The Cboe One Feed is a “market data product that provides cost-effective, high-quality reference quotes and trade data for market participants looking for comprehensive, real-time market data” and provides a “unified view of the market from all four Cboe equity exchanges: BZX Exchange, BYX Exchange, EDGX Exchange, and EDGA Exchange.”

The Exchange is not proposing any change to the $250 access fee for NYSE BQT, and, as provided for in footnote 5 to the Fee Schedule, to subscribe to NYSE BQT, subscribers must also subscribe to, and pay applicable fees for, NYSE BBO, NYSE Trades, NYSE American BBO, NYSE American Trades, NYSE Arca BBO, NYSE Arca Trades, NYSE Chicago BBO, NYSE Chicago Trades, NYSE National BBO, and NYSE National Trades. Thus, an NYSE BQT subscriber currently pays the $250 access fee for NYSE BQT,16 plus a $1,500 access fee for each of NYSE BBO and NYSE Trades, plus a $750 access fee for each of NYSE American BBO and exchange-listed securities based on liquidity within the Nasdaq market center, as well as trades reported to the FINRA Trade Reporting Facility (“TRF”).17

As described on the Cboe website, available here: https://markets.cboe.com/us/equities/market_data_services/chore_one/, the Cboe One Feed is a “market data product that provides cost-effective, high-quality reference quotes and trade data for market participants looking for comprehensive, real-time market data” and provides a “unified view of the market from all four Cboe equity exchanges: BZX Exchange, BYX Exchange, EDGX Exchange, and EDGA Exchange.”
NYSE American Trades, plus a $750 access fee for each of NYSE Arca BBO and NYSE Arca trades, for a total of $6,250 ($250 + $3,000 + $1,500 + $1,500). In addition, an NYSE BQT subscriber would need to pay for the applicable Professional or Non-Professional User Fees for the underlying market data products, as applicable.

Because NYSE BQT is priced based on the fees associated with the underlying ten market data feeds, the Exchange and its affiliates propose to compete with the Nasdaq Basic and Choe One Feed by reducing fees for the underlying market data products that comprise NYSE BQT. Together with NYSE American and NYSE Arca, the Exchange similarly proposes to compete for subscribers to NYSE BQT by designing its fee decreases to be attractive to Redistributors that intend to subscribe to and externally redistribute only NYSE BQT. The Exchange understands that data recipients that are interested in subscribing to NYSE BQT obtain their data from Redistributors that do not currently subscribe to either the NYSE BQT data feed or any other market data product listed on the Fee Schedule. Because such Redistributors do not subscribe to NYSE BQT, the prospective data recipients that are the customers of such Redistributors are unable to subscribe to NYSE BQT. The proposed fee changes are designed to provide a financial incentive for such Redistributors to subscribe to NYSE BQT so that their customers, which have expressed an interest in subscribing to NYSE BQT, would be able to access the product via such Redistributor.

Access Fee—NYSE BBO and NYSE Trades

NYSE BBO is a NYSE-only market data product that allows a vendor to redistribute on a real-time basis the same best-bid-and-offer information that NYSE reports under the Consolidated Quotation Plan (“CQ Plan”) for inclusion in the CQ Plan’s consolidated quotation information data stream (“NYSE BBO Information”). NYSE BBO Information includes the best bids and offers for all securities that are traded on the Exchange and for which NYSE reports quotes under the CQ Plan. NYSE BBO is available over a single data feed, regardless of the markets on which the securities are listed. NYSE BBO is made available to its subscribers no earlier than the information it contains is made available to the processor under the CQ Plan.

NYSE Trades is a NYSE-only market data product that allows a vendor to redistribute on a real-time basis the same last sale information that NYSE reports to the Consolidated Tape Association (“CTA”) for inclusion in the CTA’s consolidated data stream and certain related data elements (“NYSE Last Sale Information”). NYSE Last Sale Information includes last sale information for all securities that are traded on the Exchange. NYSE Trades is made available to subscribers at the same time as the information it contains is made available to the processor under the CTA Plan.

Currently, subscribers of each of the NYSE BBO and NYSE Trades products that receive a data feed pay an Access Fee of $1,500 per month. In February 2020, the Exchange added the Per User Access Fee, which is a $100 per month General Access Fee. A subscriber that receives a data feed and uses the market data product for any other purpose, including if combined with Per User, will be charged the General Access Fee. A subscriber will be charged only one access fee for each of the NYSE BBO and NYSE Trades products, depending on the use of that product.

The proposed rule change would result in lower fees for Redistributors of each of the NYSE BBO and NYSE Trades products that receive NYSE BBO and NYSE Trades data feeds and do not subscribe to any other market data product listed on the Fee Schedule, and use such market data products for external distribution only.

22 In addition, a Redistributor that subscribes only to the NYSE BBO and NYSE Trades data feeds, and does not subscribe to any other products listed on this Fee Schedule other than NYSE BQT, uses these market data products for external distribution only. A subscriber that receives a data feed and uses the market data product for any other purpose, including if combined with Per User, will be charged the General Access Fee. A subscriber will be charged only one access fee for each of the NYSE BBO and NYSE Trades products, depending on the use of that product.

The proposed rule change would result in lower fees for Redistributors of each of the NYSE BBO and NYSE Trades products that receive NYSE BBO and NYSE Trades data feeds and do not subscribe to any other market data product listed on the Fee Schedule, and use such market data products for external distribution only.

23 A Per User Access Fee currently applies for subscribers of NYSE BBO and NYSE Trades data feeds that do not subscribe to any other market data product listed on the Fee Schedule, and use such market data products for external distribution only.

24 The Per User Access Fee is $93 lower than the General Access Fee. Together with the

---

19 There are currently no fees charged for the American BBO and NYSE American Trades is $0.25 per month.

20 The Exchange is not proposing any changes to the User Fees. Currently, the Professional User Fees for each of NYSE BBO and NYSE Trades is $4 per month, and the Non-Professional User Fees for each of NYSE BBO and NYSE Trades is $0.20 per month. See Fees Schedule, available here: https://www.nyse.com/publicdocs/nyse/data/NYSE_Market_Data_Fee_Schedule.pdf. The Professional User Fees for each of NYSE American BBO and NYSE American Trades is $4 per month, and the Non-Professional User Fees for each of NYSE Arca BBO and NYSE Arca Trades is $0.25 per month. See NYSE American Price List, available here: https://www.nyse.com/publicdocs/nyse/data/NYSE_Arca_Equities_Proprietary_Data_Fee_Schedule.pdf.

Exchange believes that the proposed fee reduction in NYSE BBO and NYSE Trades would provide an incentive for such Redistributors to subscribe to the NYSE BQT data feeds so that such product would be available to their customers, which have expressed an interest in subscribing to NYSE BQT.

The proposed rule change is intended to encourage greater use of NYSE BQT by making it more affordable for Redistributors that have customers interested in subscribing to NYSE BQT but that do not currently subscribe to NYSE BBO or NYSE Trades or any other products listed on the Fee Schedule. The proposed fee reduction would allow the Exchange to compete more effectively with Nasdaq Basic and Cboe One Feed by expanding the number of Redistributors that would subscribe to NYSE BQT, and therefore make the product available to data subscribers interested in NYSE BQT.

Redistribution Fee—NYSE Trades

The Exchange currently charges a Redistribution Fee of $1,000 per month for NYSE Trades. A Redistributor is not required to report to the Exchange each month the number of Professional and Non-Professional Users and data feed recipients that receive NYSE Trades.

The Exchange proposes to waive the Redistribution Fee for a Redistributor that is eligible for the Per User Access Fee if the Redistributor provides NYSE Trades externally to at least one data feed recipient and reports such data feed recipient or recipients to the Exchange. For example, a Redistributor that subscribes to the NYSE BBO and NYSE Trades data feeds and does not subscribe to any other product listed on the Fee Schedule would have the Redistribution Fee waived for the month if such Redistributor provides NYSE BBO and NYSE Trades externally to at least one data feed recipient and reports such data feed recipient to the Exchange.

By targeting this proposed fee waiver to Redistributors that provide external distribution of NYSE Trades, the Exchange believes that this would provide an incentive for Redistributors to make the NYSE BQT market data product available to its customers. Specifically, if a data recipient is interested in subscribing to NYSE BQT and relies on a Redistributor to obtain market data products from the Exchange, that data recipient would need its Redistributor to redistribute NYSE BQT. Currently, Redistributors that redistribute some NYSE market data products do not necessarily also make NYSE BQT available. The Exchange believes that this proposed fee waiver for Redistributors of NYSE Trades would provide an incentive for Redistributors to make NYSE BQT available to their customers, which will increase the availability of NYSE BQT to a larger potential population of data recipients.25

Applicability of Proposed Rule Change

As noted above, the proposed rule change is designed to further reduce the overall cost of NYSE BQT by reducing specified fees applicable to the underlying market data products that comprise NYSE BQT. Prior to the BQT Fee Reduction Filing, the Exchange had only one subscriber to NYSE BQT. Today, the Exchange has seven subscribers, three of whom became customers as a direct result of the BQT Fee Reduction Filing and currently pay the reduced Per User Access Fee. The Exchange believes that the proposed rule changes would provide a further incentive for Redistributors to subscribe to NYSE BQT for purposes of providing external distribution of NYSE BQT to potential data recipients interested in the product.

Because the proposed rule change is targeted to potential Redistributors of NYSE BQT that do not currently subscribe to any NYSE market data products, the proposed changes to the availability of the NYSE BBO and NYSE Trades Per User Access Fees, together with the proposed changes on NYSE American and NYSE Arca, are narrowly tailored with that purpose in mind. Accordingly, these proposed fee changes are not designed for Redistributors that are existing customers of NYSE market data products or that engage in internal use of NYSE BQT. This proposed rule change would not result in any changes to the market access fees for NYSE BBO and NYSE Trades for such data subscribers.

The Exchange believes that there are at least three potential Redistributors that would meet the qualifications to be eligible for these proposed fee changes. The Exchange further believes that this proposed rule change has the potential to attract these three Redistributors as new Redistributors for NYSE BQT, as well as new NYSE BQT subscribers that would be subscribing to NYSE BBO and NYSE Trades for the first time.

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with the provisions of Section 6 of the Act,26 in general, and Sections 6(b)(4) and 6(b)(5) of the Act,27 in particular, in that it provides an equitable allocation of reasonable fees among users and recipients of the data and is not designed to permit unfair discrimination among customers, issuers, and brokers.

The Proposed Rule Change Is Reasonable

In adopting Regulation NMS, the Commission granted SROs and broker-dealers increased authority and flexibility to offer new and unique market data to the public. The Commission has repeatedly expressed its preference for competition over regulatory intervention in determining prices, products, and services in the securities markets. Specifically, in Regulation NMS, the Commission highlighted the importance of market forces in determining prices and SRO revenues, and also recognized that current regulation of the market system “has been remarkably successful in promoting market competition in its broader forms that are most important to investors and listed companies.”28

With respect to market data, the decision of the United States Court of Appeals for the District of Columbia Circuit in NetCoalition v. SEC upheld the Commission’s reliance on the existence of competitive market mechanisms to evaluate the reasonableness and fairness of fees for proprietary market data:

In fact, the legislative history indicates that the Congress intended that the market system “evolve through the interplay of competitive forces as unnecessary regulatory restrictions are removed” and that the SEC wield its regulatory power “in those situations where competition may not be sufficient,” such as in the creation of a “consolidated transactional reporting system.”29

The court agreed with the Commission’s conclusion that “Congress intended that competitive forces should dictate the services and practices that constitute the U.S.

28 See Regulation NMS Adopting Release, 70 FR 37495, at 37499.
national market system for trading equity securities,’’ 30

More recently, the Commission confirmed that it applies a “market-based” test in its assessment of market data fees, and that under that test:

the exchange considers whether the exchange was subject to significant competitive forces in setting the terms of its proposal for [market data], including the level of any fees. If an exchange meets this burden, the Commission will find that its fee rule is consistent with the Act unless there is a substantial countervailing basis to find that the terms of the rule violate the Act or the rules thereunder. 31

1. The Proposed Fees Are Constrained by Significant Competitive Forces

a. Exchange Market Data Is Sold in a Competitive Market

In 2018, Charles M. Jones, the Robert W. Lear of Professor of Finance and Economics of the Columbia University School of Business, conducted an analysis of the market for equity market data in the United States. He canvassed the demand for both consolidated and exchange proprietary market data products and the uses to which those products were put by market participants, and reported his conclusions in a paper annexed hereto. 32 Among other things, Professor Jones concluded that:

• “The market [for exchange market data] is characterized by robust competition: Exchanges compete with each other in selling proprietary market data products. They also compete with consolidated data feeds and with data provided by alternative trading systems (‘ATS’s’). Barriers to entry are very low, so existing exchanges must also take into account competition from new entrants, who generally try to build market share by offering their proprietary market data products for free for some period of time.” 33

• “Although there are regulatory requirements for some market participants to use consolidated data products, there is no requirement for market participants to purchase any proprietary market data product for regulatory purposes.” 34

• “There are a variety of data products, and consumers of equity market data choose among them based on their needs. Like most producers, exchanges offer a variety of market data products at different price levels. Advanced proprietary market data products provide greater value to those who subscribe. As in any other market, each potential subscriber takes the features and prices of available products into account in choosing what market data products to buy based on its business model.” 35

• “Exchange equity market data fees are a small cost for the industry overall: The data demonstrates that total exchange market data revenues are orders of magnitude smaller than (i) broker-dealer commissions, (ii) investment bank earnings from equity trading, and (iii) revenues earned by third-party vendors.” 36

• “For proprietary exchange data feeds, the main question is whether there is a competitive market for proprietary market data. More than 40 active exchanges and alternative trading systems compete vigorously in both the market for order flow and in the market for market data. The two are closely linked: An exchange needs to consider the negative impact on its order flow if it raises the price of its market data. Furthermore, new entrants have been frequent over the past 10 years or so, and these venues often give market data away for free, serving as a check on pricing by more established exchanges. These are all the standard hallmarks of a competitive market.” 37

b. Exchanges That Offer Market Data and Trading Services Function as Two-Sided Platforms

An exchange may demonstrate that its fees are constrained by competitive forces by showing that platform competition applies.

As the United States Supreme Court recognized in Ohio v. American Express, platforms are firms that act as intermediaries between two or more sets of agents, and typically the choices made on one side of the platform affect the results on the other side of the platform via externalities, or “indirect network effects.” 39 Externally are linkages between the different “sides” of a platform such that one cannot understand pricing and competition for goods or services on one side of the platform in isolation; one must also account for the influence of the other side. As the Supreme Court explained:

To ensure sufficient participation, two-sided platforms must be sensitive to the prices that they charge each side. Raising the price on side A risks losing participation on that side, which decreases the value of the platform to side B. If the participants on side B leave due to this loss in value, then the platform has even less value to side A—risking a feedback loop of declining demand. . . . Two-sided platforms therefore must take these indirect network effects into account before making a change in price on either side. 40

The Exchange and its affiliated exchanges have long maintained that they function as platforms between consumers of market data and consumers of trading services. Proving the existence of linkages between the two sides of this platform requires an in-depth economic analysis of both public data and confidential Exchange data about particular customers’ trading activities and market data purchases. Exchanges, however, are prohibited from sharing details about these specific customer activities and purchases. For example, pursuant to Exchange Rule 7.41, transactions executed on the Exchange are processed anonymously.

The Exchange and its affiliated exchanges retained a third-party expert, Marc Rysman, Professor of Economics at Boston University, to analyze how platform economics applies to stock exchanges’ sale of market data products and trading services, and to explain how this affects the assessment of competitive forces affecting the exchanges’ data fees. 41 Professor Rysman was able to analyze exchange data that is not otherwise publicly available in a manner that is consistent with the exchanges’ confidentiality obligations to customers. As shown in his paper, Professor Rysman surveyed the existing economic literature analyzing stock exchanges as platforms between market data and trading products.
activities, and explained the types of linkages between market data access and trading activities that must be present for an exchange to function as a platform. In addition, Professor Rysman undertook an empirical analysis of customers’ trading activities within the NYSE group of exchanges in reaction to NYSE’s introduction in 2015 of the NYSE Integrated Feed, a full order-by-order depth of book data product.42

Professor Rysman’s analysis of this confidential firm-level data shows that firms that purchased the NYSE Integrated Feed market data product after its introduction were more likely to route orders to NYSE as opposed to one of the other NYSE-affiliated exchanges, such as NYSE Arca or NYSE American.43 Moreover, Professor Rysman shows that the same is true for firms that did not subscribe to the NYSE Integrated Feed: The introduction of the NYSE Integrated Feed led to more trading on NYSE (as opposed to other NYSE-affiliated exchanges) by firms that did not subscribe to the NYSE Integrated Feed.44 This is the sort of externality that is a key characteristic of a platform market.45

From this empirical evidence, Professor Rysman concludes:

- “[D]ata is more valuable when it reflects more trading activity and more liquidity-providing orders. These linkages alone are enough to make platform economics necessary for understanding the pricing of market data.”46
- “[L]inkages running in the opposite direction, from data to trading, are also very likely to exist. This is because market data from an exchange reduces uncertainty about the likelihood, price, or timing of execution for an order on that exchange. This reduction in uncertainty makes trading on that exchange more attractive for traders that subscribe to that exchange’s market data. Increased trading by data subscribers, in turn, makes trading on the exchange in question more attractive for traders that do not subscribe to the exchange’s market data.”47

- The “mechanisms by which market data makes trading on an exchange more attractive for traders that subscribe to market data . . . apply to a wide assortment of market data products, including BBO, order book, and full order-by-order depth of book data products at all exchanges.”48
- “[E]mpirical evidence confirms that stock exchanges are platforms for data and trading.”49
- “The platform nature of stock exchanges means that data fees cannot be analyzed in isolation, without accounting for the competitive dynamics in trading services.”50
- “Competition is properly understood as being between platforms (i.e., stock exchanges) that balance the needs of consumers of data and traders.”51
- “Data fees, data use, trading fees, and order flow are all interrelated.”52
- “Competition for order flow can discipline the pricing of market data, and vice-versa.”53
- “As with platforms generally, overall competition between exchanges will limit their overall profitability, not margins on any particular side of the platform.”54

C. Exchange Market Data Fees Are Constrained by the Availability of Substitute Platforms

Professor Rysman’s conclusions that exchanges function as platforms for market data and transaction services mean that exchanges do not set fees for market data products without considering, and being constrained by, the effect the fees will have on the order-flow side of the platform. And as the D.C. Circuit recognized in NetCoalition I, “[n]o one disputes that competition for order flow is fierce.”55 The court further noted that “no exchange possesses a monopoly, regulatory or otherwise, in the execution of order flow from broker dealers,” and that an exchange “must compete vigorously for order flow to maintain its share of trading volume.”56

As noted above, while Regulation NMS has enhanced competition, it has also fostered a “fragmented” market structure where trading in a single stock can occur across multiple trading centers. When multiple trading centers compete for order flow in the same stock, the Commission has recognized that “such competition can lead to the fragmentation of order flow in that stock.”57 The Commission’s Division of Trading and Markets has also recognized that with so many “operating equities exchanges and dozens of ATSs, there is vigorous price competition among the U.S. equity markets and, as a result, [transaction] fees are tailored and frequently modified to attract particular types of order flow, some of which is highly fluid and price sensitive.”58 Indeed, today, equity trading is currently dispersed across 16 exchanges,59 numerous alternative trading systems,60 broker-dealer internalizers and wholesalers, all competing for order flow. Based on publicly-available information, no single exchange currently has more than 18% market share.61

Further, low barriers to entry mean that new exchanges may, and do, rapidly and inexpensively enter the market and offer additional substitute platforms to compete with the Exchange.62 For example, in 2020 alone, three new exchanges have entered the market: Long Term Stock Exchange (LTSE), which began operations as an exchange on August 28, 2020;63 Members Exchange (MEMX), which began operations as an exchange on September 29, 2020;64 and Miami

63 As of October 29, 2020, MEMX is trading all NMS symbols but has not yet enabled NMS routing.
International Holdings (MIAX), which began operations of its first equities exchange on September 29, 2020. These low barriers enable existing exchange customers to disintermediate and start their own exchanges if they think the prices charged for exchange proprietary market data products are too high. This is precisely the rationale behind the creation of MEMX, which was formed by some of the largest and most well-capitalized financial firms that are also Exchange customers (including Bank of America, BlackRock, Charles Schwab, Citadel, Citi, E*Trade, Fidelity, Goldman Sachs, J.P. Morgan, Jane Street, Morgan Stanley, TD Ameritrade, and others). For example, one of MEMX’s founding principles is that exchange proprietary market data prices are too high, and that MEMX will benefit its members by offering “[l]ower pricing on market data.” Nor is this a new phenomenon: Exchange customers formed BATS to compete with incumbent exchanges and once registered as an exchange in 2008, BATS did not initially charge for market data. The BATS venture was a financial success for its founders, first through recouping their investment in its initial public offering and then in the subsequent sale of BATS to Cboe, which now charges for market data from those exchanges. Notably, MEMX has some of the same founding broker-dealer customers, leading some to dub MEMX “BATS 2.0.”

The fact that this cycle is viable and repeatable by entities that both trade on and compete with existing exchanges confirms that barriers to entry are low and that these markets are competitive and contestable. And low barriers to entry act as a market check on high prices. Given Professor Rysman’s conclusion that exchanges are platforms for market data and trading, this fierce competition for order flow on the trading side of the platform acts to constrain, or “discipline,” the pricing of market data on the other side of the platform. And due to the ready availability of substitutes and the low cost to move order flow to those substitute trading venues, an exchange setting market data fees that are not at competitive levels would expect to quickly lose business to alternative platforms with more attractive pricing. Although the various exchanges may differ in their strategies for pricing their market data products and their transaction fees for trades—with some offering market data for free along with higher trading costs, and others charging more for market data and comparatively less for trading—the fact that exchanges are platforms ensures that no exchange makes pricing decisions for one side of its platform without considering, and being constrained by, the effects that price will have on the other side of the platform. In sum, the fierce competition for order flow thus constrains any exchange from pricing its market data at a supracompetitive price, and constrains the Exchange in setting its fees at issue here.

The proposed fees are therefore reasonable because in setting them, the Exchange is constrained by the availability of numerous substitute platforms offering market data products and trading. Such substitutes need not be identical, but only substantially similar to the product at hand.

More specifically, in reducing specified fees for the NYSE BBO and NYSE Trades market data products, the Exchange is constrained by the fact that, if its pricing across the platform is unattractive to customers, customers have their pick of an increasing number of alternative platforms to use instead of the Exchange. The Exchange believes that it has considered all relevant factors and has not considered irrelevant factors in order to establish reasonable fees. The existence of numerous alternative platforms to the Exchange’s platform ensures that the Exchange cannot set unreasonable market data fees without suffering the negative effects of that decision in the fiercely competitive market for trading order flow.

d. The Availability of Substitute Market Data Products Constrains Fees for NYSE BBO, NYSE Trades, and NYSE BQT

Even putting aside the facts that exchanges are platforms and that pricing decisions on the two sides of the platform are intertwined, the Exchange is constrained in setting the proposed market data fees by the availability of numerous substitute market data products. The Commission has been clear that substitute products need not be identical, but only substantially similar to the product at hand. The Exchange’s NYSE BQT market data product is subject to significant competitive forces that constrain its pricing. Specifically, as described above, NYSE BQT competes head-to-head with the Nasdaq Basic product and the Cboe One Feed. These products each serve as reasonable substitutes for one another as they are each designed to provide investors with a unified view of real-time quotes and last-sale prices in all Tape A, B, and C securities. Each product provides subscribers with consolidated top-of-book quotes and trades from multiple U.S. equities

For example, in the National IF Approval Order, the Commission recognized that for some customers, the best bid and offer information from consolidated data feeds may function as a substitute for the National IF Approval Order, supra note 32, one commenter contended that trading was not platform with exchange proprietary market data, and that the exchanges’ proprietary market data products were instead “complements” for which exchanges could charge supersupracompetitive prices. Professor Rysman debunked these contentions in an additional paper. See Marc Rysman, Complements, Competition, and Exchange Proprietary Data Products, August 13, 2020 [ Exhibit 3D].
markets. In the case of NYSE BQT, this product provides top-of-book quotes and trades data from five NYSE-affiliated U.S. equities exchanges, which together account for approximately 22% of consolidated U.S. equities trading volume as of September 2020.\(^7\) Cboe One Feed similarly provides top-of-book quotes and trades data from Cboe’s four U.S. equities exchanges. NYSE BQT, Nasdaq Basic, and Cboe One Feed are all intended to provide indicative pricing and are not intended to be used for order routing or trading decisions. In addition to competing with proprietary data products from Nasdaq and Cboe, NYSE BQT also competes with the consolidated data feed.

However, the Exchange does not claim that NYSE BQT is a substitute for consolidated data with respect to requirements under the Vendor Display Rule, which is Regulation NMS Rule 603(c).

The fact that this filing is proposing reductions in certain fees and fee waivers reflects the inherently competitive nature of the market for the sale of proprietary market data. For example, in August 2019, Cboe filed proposed rule changes to reduce certain of its Cboe One Feed fees and noted that it attracted two additional customers because of the reduced fees.\(^76\) More recently, Nasdaq filed a proposed rule change to lower the enterprise license fee for broker-dealers distributing Nasdaq Basic to internal Professional subscribers and the enterprise license fee for broker-dealers distributing Nasdaq Last Sale to Professional subscribers.\(^77\) The Exchange notes that NYSE BBO, NYSE Trades, and NYSE BQT are entirely optional. The Exchange is not required to make the proprietary data products that are the subject of this proposed rule change available or to offer any specific pricing alternatives to any customer, nor is any firm or investor required to purchase the Exchange’s data products. Unlike some other data products (e.g., the consolidated quotation and last-sale information feeds) that firms are required to purchase in order to fulfill regulatory obligations,\(^78\) a customer’s decision whether to purchase any of the Exchange’s proprietary market data feeds is entirely discretionary. Most firms that choose to subscribe to the NYSE’s proprietary market data feeds do so for the primary goals of using them to increase their revenues, reduce their expenses, and in some instances compete directly with the Exchange’s trading services. Such firms are able to determine for themselves whether or not the products in question or any other similar products are attractively priced. If the NYSE market data feeds do not provide sufficient value to firms based on the uses those firms may have for it, such firms may simply choose to conduct their business operations in ways that do not use the products.\(^79\)

In addition, in the case of products that are also redistributed through market data vendors, such as Bloomberg and Refinitiv, the vendors themselves provide additional price discipline for proprietary data products because they control the primary means of access to certain end users. These vendors impose price discipline based on their business models. For example, vendors that assess a surcharge on data they sell are able to refuse to offer proprietary products that their end users do not or will not purchase in sufficient numbers. This competitive constraint is precisely what is driving the proposed fee changes here, which are designed to attract new market data vendors, and through them new subscribers, to the NYSE BQT product. Currently, only four vendors subscribe to NYSE BQT, and each vendor has limited redistribution of NYSE BQT. No other vendors currently subscribe to NYSE BQT and likely will not unless their customers request it, and customers will not elect to pay the proposed fees unless such product can provide value by sufficiently increasing revenues or reducing costs in the customer’s business in a manner that will offset the fees. All of these factors operate as constraints on pricing proprietary data products.

Because of the availability of substitutes, an exchange that overprices its market data products stands a high risk that users may substitute another source of market data information for its own. Those competitive pressures imposed by available alternatives are evident in the Exchange’s proposed pricing.

\(^75\) Pricing Schedule, Section 147, and the Enterprise License Fee for Broker-Dealers Distributing Nasdaq Basic to Internal Professionals Subscribers as Set Forth in the Equity Immediate Effectiveness of Proposed Rule Change To Lower the Enterprise License Fee for Broker-Dealers Distributing Nasdaq Basic to Internal Professional Subscribers as Set Forth in the Equity Immediate Effectiveness of Proposed Rule Change To Lower the Enterprise License Fee for Broker-Dealers Distributing Nasdaq Last Sale to Professional Subscribers at Equity 7, Section 139).

\(^76\) The Exchange notes that broker-dealers are not required to purchase any of the Exchange’s proprietary market data feeds is entirely discretionary. Most firms that choose to subscribe to the NYSE’s proprietary market data feeds do so for the primary goals of using them to increase their revenues, reduce their expenses, and in some instances compete directly with the Exchange’s trading services. Such firms are able to determine for themselves whether or not the products in question or any other similar products are attractively priced. If the NYSE market data feeds do not provide sufficient value to firms based on the uses those firms may have for it, such firms may simply choose to conduct their business operations in ways that do not use the products.\(^79\)

\(^77\) See generally Jones Paper at 8, 10–11.
In setting the proposed fees, the Exchange considered the competitiveness of the market for proprietary data and all of the implications of that competition. The Exchange believes that it has considered all relevant factors and has not considered irrelevant factors in order to establish reasonable fees. The existence of numerous alternatives to the Exchange’s platform and, more specifically, alternatives to the market data products, including proprietary data from other sources, ensures that the Exchange cannot set unreasonable fees when vendors and subscribers can elect these alternatives or choose not to purchase a specific proprietary data product if the attendant fees are not justified by the returns that any particular vendor or data recipient would achieve through the purchase.

2. The Proposed Fees Are Reasonable

The specific fees that the Exchange proposes for NYSE BBO and NYSE Trades are reasonable, for the following additional reasons.

Overall. This proposed fee change is a result of the competitive environment, as the Exchange seeks to decrease certain of its fees to attract Redistributors that do not currently subscribe to the NYSE BQT market data product. The Exchange is proposing the fee reductions at issue to make the Exchange’s fees more competitive for a specific segment of market participants, thereby increasing the availability of the Exchange’s data products, and expanding the options available to firms making data purchasing decisions based on their business needs. The Exchange believes that this is consistent with the principles contained in Regulation NMS to “promote the wide availability of market data and to allocate revenues to SROs that produce the most useful data for investors.”

Access Fee. By making the reduced Per User Access Fee available to Redistributors that do not currently subscribe to the NYSE BBO and NYSE Trades data feeds and NYSE BQT and do not have any internal use of such products, and do not subscribe to any other products listed on the Fee Schedule, the Exchange believes that more Redistributors may choose to subscribe to these products, thereby expanding the distribution of this market data for the benefit of investors that participate in the national market system and increasing competition generally. The Exchange also believes that offering the Per User Access Fee to these Redistributors would expand the availability of NYSE BQT to potential data recipients that are interested in subscribing to NYSE BQT but do not have access to a Redistributor who subscribes to the data feeds.

The Exchange determined to make the reduced Per User Access Fee available to these Redistributors because it constitutes a substantial reduction of the current fee, with the intended purpose of increasing use of NYSE BQT by Redistributors that do not currently subscribe to any NYSE market data products. NYSE BQT has been in place since 2014 but has a very small number of subscribers. The Exchange believes that in order to compete with other indicative pricing products such as Nasdaq Basic and Cboe One Feed, it needs to provide a meaningful financial incentive for more Redistributors to choose to subscribe to NYSE BQT so that they can make it available to their customers. Accordingly, the proposed reduction to the access fees for NYSE BBO and NYSE Trades, together with the proposed reduction to the access fees for NYSE American BBO, NYSE American Trades, NYSE Arca BBO, and NYSE Arca Trades, is reasonable because the reductions will make NYSE BQT a more attractive offering for Redistributors that do not currently subscribe to any NYSE market data products and make it more competitive with Nasdaq Basic and Cboe One Feed. For example, the External Distribution Fee for Cboe One Feed is currently $5,000 (which is the sum of the External Distribution fees for the four exchange data products that are included in Cboe One Feed) plus a Consolidation Fee of $1,000, for a total of $6,000. Evidence of the competition among exchange groups for these products has previously been demonstrated via fee changes. For example, following the introduction of the Cboe One Feed, Nasdaq responded by reducing its fees for the Nasdaq Basic product. With the proposed changes by the Exchange, NYSE Arca, and NYSE American, the Exchange is similarly seeking to compete by decreasing the total access fees for NYSE BQT from $6,250 to $850 for Redistributors that do not currently subscribe to any NYSE market data products and have customers that are interested in subscribing to NYSE BQT but cannot do so until their Redistributor also subscribes. This proposed rule change therefore demonstrates the existence of an effective, competitive market because this proposal resulted from a need to generate innovative approaches in response to competition from other exchanges that offer market data for a specific segment of market participants.

Redistribution Fees. Similarly, the proposed reduction to the NYSE Trades Redistribution Fee is reasonable because it is designed to provide an incentive for Redistributors to make NYSE BQT available so that data recipients can subscribe to NYSE BQT. The Exchange further believes that the proposed waiver of the NYSE Trades Redistribution Fee is reasonable because it is designed to compete with market data products offered by the Cboe family of equity exchanges. For all of the foregoing reasons, the Exchange believes that the proposed fees are reasonable.

The Proposed Fees Are Equitably Allocated

The Exchange believes the proposed fees for NYSE BBO and NYSE Trades are allocated fairly and equitably among the various categories of users of the feed, and any differences among categories of users are justified. Overall. As noted above, this proposed fee change is a result of the competitive environment for market data products that provide indicative pricing information across a family of exchanges. To respond to this competitive environment, the Exchange seeks to amend its fees to access NYSE BBO and NYSE Trades for Redistributors that would be subscribing only to the NYSE BBO and NYSE Trades data feeds and would use these market data products for external distribution only, which the Exchange hopes will attract new Redistributor subscribers for its NYSE BQT market data product so that the product can be made available to prospective market data recipients. The Exchange is proposing the fee reductions to make the Exchange’s fees more competitive

for a specific segment of market participants, thereby increasing the availability of the Exchange’s data products, expanding the options available to firms making data purchasing decisions based on their business needs, and generally increasing competition.

Access Fee. The Exchange believes that making the Per User Access Fee available to Redistributors that would be subscribing only to the NYSE BBO and NYSE Trades data feeds and would use these market data products for external distribution only is equitable as it would apply equally to all data recipients that choose to subscribe to NYSE BBO or NYSE Trades for external distribution only and who do not subscribe to any other products listed on the Fee Schedule. Because NYSE BBO and NYSE Trades are optional products, any data recipient could choose to subscribe only to NYSE BBO or NYSE Trades to distribute externally and be eligible for the proposed reduced fee. The Exchange does not believe that it is inequitable that this proposed fee reduction would be available only to data recipients that subscribe only to NYSE BBO or NYSE Trades and only for external distribution. Internal use of data represents a different set of use cases than a Redistributor that is engaged only in external distribution of data. For example, non-display data can be used by data recipients for a wide variety of profit-generating purposes, including proprietary and agency trading and smart order routing, as well as by data recipients that operate order matching and execution platforms that compete directly with the Exchange for order flow. The data also can be used for a variety of non-trading purposes that indirectly support trading, such as risk management and compliance. Although some of these non-trading uses do not directly generate revenues, they can nonetheless substantially reduce the recipient’s costs by automating such functions so that they can be carried out in a more efficient and accurate manner and reduce errors and labor costs, thereby benefiting end users. The Exchange therefore believes that there is a meaningful distinction between internal use and redistribution of market data and that charging a different access fee to a Redistributor that is engaged solely in external distribution of only the NYSE BBO and NYSE Trades products is not unfairly discriminatory because it would make NYSE BQT available to more data recipients that are customers of such Redistributors and who would not otherwise be able to access NYSE BQT if their Redistributor did not subscribe to and redistribute NYSE BQT.

Redistribution Fees. The Exchange believes the proposed change to provide a waiver of the Redistribution Fee to a Redistributor that would be eligible for the Per User Access Fee because it only externally redistributes NYSE Trades to at least one data feed recipient is equitably allocated. The proposed change would apply equally to all Redistributors that are eligible for the Per User Access Fee and choose to externally redistribute the NYSE Trades product, and would serve as an incentive for Redistributors to make NYSE Trades more broadly available for use by both Professional and Non-Professional Users. This, in turn, could provide an incentive for Redistributors that do not currently subscribe to any NYSE market data products to subscribe to NYSE BQT and make it available to their customers.

For all of the foregoing reasons, the Exchange believes that the proposed fees for the NYSE market data products are equitably allocated.

The Proposed Fees Are Not Unfairly Discriminatory

The Exchange believes the proposed fees are not unfairly discriminatory because any differences in the application of the fees are based on meaningful distinctions between customers, and those meaningful distinctions are not unfairly discriminatory between customers. Overall. As noted above, this proposed fee change is a result of the competitive environment for market data products that provide indicative pricing information across a family of exchanges. To respond to this competitive environment, the Exchange seeks to amend its fees to provide a financial incentive for Redistributors that do not currently subscribe to any NYSE market data products that decide to subscribe to NYSE BQT, which the Exchange hopes will attract more subscribers for its NYSE BQT market data product. The Exchange is proposing the fee reductions to make the Exchange’s fees more competitive for a specific segment of market participants, thereby increasing the availability of the Exchange’s data products, expanding the options available to firms making data purchasing decisions based on their business needs, and generally increasing competition.

Access Fee. The Exchange believes that making the Per User Access Fee available to Redistributors that would be subscribing only to the NYSE BBO and NYSE Trades data feeds and would use these market data products for external distribution only is not unfairly discriminatory as it would apply equally to all Redistributors that choose to subscribe to NYSE BBO or NYSE Trades for external distribution only and who do not subscribe to any other products listed on the Fee Schedule. Because NYSE BBO and NYSE Trades are optional products, any data recipient could choose to subscribe only to NYSE BBO or NYSE Trades to distribute externally and be eligible for the proposed reduced fee. The Exchange does not believe that it is unfairly discriminatory that this proposed fee reduction would be available only to data recipients that subscribe only to NYSE BBO or NYSE Trades and only for external distribution. Internal use of data represents a different set of use cases than a Redistributor that is engaged only in external distribution of data. For example, non-display data can be used by data recipients for a wide variety of profit-generating purposes, including proprietary and agency trading and smart order routing, as well as by data recipients that operate order matching and execution platforms that compete directly with the Exchange for order flow. The data also can be used for a variety of non-trading purposes that indirectly support trading, such as risk management and compliance. While some of these non-trading uses do not directly generate revenues, they can nonetheless substantially reduce the recipient’s costs by automating such functions so that they can be carried out in a more efficient and accurate manner and reduce errors and labor costs, thereby benefiting end users. The Exchange therefore believes that there is a meaningful distinction between internal use and redistribution of market data and that charging a different access fee to a Redistributor that is engaged solely in external distribution of only the NYSE BBO and NYSE Trades products is not unfairly discriminatory because it would make NYSE BQT available to more data recipients that are customers of such Redistributors and who would not otherwise be able to access NYSE BQT if their Redistributor did not subscribe to and redistribute NYSE BQT.

Moreover, the Exchange does not believe that it is unfairly discriminatory to offer the Per User Access Fee only to those Redistributors that would subscribe only to the NYSE BBO and NYSE Trades data feeds and no other products on the Fee Schedule, and only for external distribution. The Exchange does not currently have any Redistributors that fit this description. This proposed rule change is designed to provide an incentive for Redistributors that do not currently subscribe to NYSE BQT or any other
products listed on the Fee Schedule, but have customers that are interested in subscribing to NYSE BQT, to subscribe to the NYSE BBO and NYSE Trades data feeds so that they can make NYSE BQT available to their customers. This fee incentive is not necessary for Redistributors that currently subscribe to the NYSE BBO and NYSE Trades data feeds because such Redistributors could already subscribe to NYSE BQT, but have chosen not to, and a reduction in their existing access fees would likely not result in such Redistributors choosing to subscribe to NYSE BQT.

Redistribution Fees. The Exchange believes the proposed change to provide a waiver of the Redistribution Fee to a Distributor that would be eligible for the Per User Access Fee because it only externally redistributes NYSE Trades to at least one data recipient is not unfairly discriminatory. The proposed waiver would apply equally to all Redistributors that are eligible for the Per User Access Fee and choose to externally redistribute the NYSE Trades product and serve as a fee incentive for Redistributors that do not currently subscribe to any NYSE market data products to subscribe to NYSE Trades and then make NYSE BQT available to their customers.

For all of the foregoing reasons, the Exchange believes that the proposed fees are not unfairly discriminatory.

B. Self-Regulatory Organization’s Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. Indeed, as demonstrated above, the Exchange believes the proposed rule changes are pro-competitive.

Intramarket Competition. The Exchange believes that the proposed fees do not put any market participants at a relative disadvantage compared to other market participants. As noted above, the proposed fee schedule would apply to all subscribers of NYSE market data products, and customers may not only choose whether to subscribe to the products at all, but also may tailor their subscriptions to include only the products and uses that they deem suitable for their business needs. The Exchange also believes that the proposed fees neither favor nor penalize one or more categories of market participants in a manner that would impose an undue market on competition. As shown above, to the extent that particular proposed fees apply to only a subset of subscribers, those distinctions are not unfairly discriminatory and do unfairly burden one set of customers over another.

Intermarket Competition. The Exchange believes that the proposed fees do not impose a burden on competition on other exchanges that is not necessary or appropriate; indeed, the Exchange believes the proposed fee changes would have the effect of increasing competition. As demonstrated above and in Professor Rysman’s paper, exchanges are platforms for market data and trading. In setting the proposed fees, the Exchange is constrained by the availability of substitute platforms also offering market data products and trading, and low barriers to entry mean new exchange platforms are frequently introduced. The fact that exchanges are platforms ensures that no exchange can make pricing decisions for one side of its platform without considering, and being constrained by, the effects that price will have on the other side of the platform. In setting fees at issue here, the Exchange is constrained by the fact that, if its pricing across the platform is unattractive to customers, customers will have its pick of an increasing number of alternative platforms to use instead of the Exchange. Given this intense competition between platforms, no one exchange’s market data fees can impose an unnecessary burden on competition, and the Exchange’s proposed fees do not do so here.

In addition, the Exchange believes that the proposed fees do not impose a burden on competition or on other exchanges that is not necessary or appropriate because of the availability of numerous substitute market data products. Specifically, as described above, NYSE BQT competes head-to-head with the Nasdaq Basic product and the Cboe One Feed. These products each serve as reasonable substitutes for one another as they are each designed to provide investors with a unified view of real-time quotes and last-sale prices in all Tape A, B, and C securities. Each product provides subscribers with consolidated top-of-book quotes and trades from multiple U.S. equities markets. NYSE BQT provides top-of-book quotes and trades data from five NYSE-affiliated U.S. equities exchanges, while Cboe One Feed similarly provides top-of-book quotes and trades data from Cboe’s four U.S. equities exchanges. NYSE BQT, Nasdaq Basic, and Cboe One Feed are all intended to provide indicative pricing and therefore, are reasonable substitutes for one another. Additionally, market data vendors are also able to offer close substitutes to NYSE BQT. Because market data users can find suitable substitute feeds, an exchange that overprices its market data products stands a high risk that users may substitute another source of market data information for its own. These competitive pressures ensure that no one exchange’s market data fees can impose an unnecessary burden on competition, and the Exchange’s proposed fees do not do so here.

C. Self-Regulatory Organization’s Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were solicited or received with respect to the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change is effective upon filing pursuant to Section 19(b)(2)(B)83(a) of the Act and subparagraph (f)(2) of Rule 19b–484 thereunder, because it establishes a due, fee, or other charge imposed by the Exchange.

At any time within 60 days of the filing of such proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings under Section 19(b)(2)(B)85 of the Act to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments
- Use the Commission’s internet comment form (http://www.sec.gov/rules/sro.shtml); or
- Send an email to rule-comments@sec.gov. Please include File Number SR–NYSE–2020–91 on the subject line.

Paper Comments
- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to File Number SR–NYSE–2020–91. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission’s internet website (http://www.sec.gov/rules/sro.shtml). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission’s Public Reference Room, 100 F Street NE, Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change. Persons submitting comments are cautioned that we do not redact or edit personal identifying information from comment submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–NYSE–2020–91, and should be submitted on or before December 9, 2020.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.86

J. Matthew DeLesDernier, Assistant Secretary.

[FR Doc. 2020–25389 Filed 11–17–20; 8:45 am] BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[SEC File No. 270–316, OMB Control No. 3235–0359]

Proposed Collection; Comment Request

Upon Written Request, Copies Available From: Securities and Exchange Commission, Office of FOIA Services, 100 F Street NE, Washington, DC 20549–2736

Extension:
Form N–17f–1

Notice is hereby given that pursuant to the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 et seq.), the Securities and Exchange Commission (the “Commission”) is soliciting comments on the collections of information summarized below. The Commission plans to submit this existing collection of information to the Office of Management and Budget for extension and approval.

Form N–17f–1 (17 CFR 274.219) is entitled “Certificate of Accounting of Securities and Similar Investments of a Management Investment Company in the Custody of Members of National Securities Exchanges.” The form serves as a cover sheet to the accountant’s certificate that is required to be filed periodically with the Commission pursuant to rule 17f–1 (17 CFR 270.17f–1) under the Act, entitled “Custody of Securities with Members of National Securities Exchanges,” which sets forth the conditions under which a fund may place its assets in the custody of a member of a national securities exchange. Rule 17f–1 requires, among other things, that an independent public accountant verify the fund’s assets at the end of every annual and semi-annual fiscal period, and at least one other time during the fiscal year as chosen by the independent accountant. Requiring an independent accountant to examine the fund’s assets in the custody of a member of a national securities exchange assists Commission staff in its inspection program and helps to ensure that the fund assets are subject to proper auditing procedures. The accountant’s certificate stating that it has made an examination, and describing the nature and the extent of the examination, must be attached to Form N–17f–1 and filed with the Commission promptly after each examination. The form facilitates the filing of the accountant’s certificates, and increases the accessibility of the certificates to both Commission staff and interested investors.

Commission staff estimates that it takes: (i) 1 hour of clerical time to prepare and file Form N–17f–1; and (ii) 0.5 hour for the fund’s chief compliance officer to review Form N–17f–1 prior to filing with the Commission, for a total of 1.5 hours. Each fund is required to make 3 filings annually, for a total annual burden per fund of approximately 4.5 hours.1 Commission staff estimates that an average of 6 funds currently file Form N–17f–1 with the Commission 3 times each year, for a total of 18 responses annually.2 The total annual hour burden for Form N–17f–1 is therefore estimated to be approximately 27 hours.3

The estimate of average burden hours is made solely for the purposes of the Paperwork Reduction Act, and is not derived from a comprehensive or even a representative survey or study of the costs of Commission rules. Compliance with the collections of information required by Form N–17f–1 is mandatory for funds that place their assets in the custody of a national securities exchange member. Responses will not be kept confidential. An agency may not conduct or sponsor, and a person is not required to respond to a collection of information unless it displays a currently valid control number.

The Commission requests written comments on: (a) Whether the collections of information are necessary for the proper performance of the functions of the Commission, including whether the information has practical utility; (b) the accuracy of the Commission’s estimate of the burdens of the collection of information; (c) ways to enhance the quality, utility, and clarity of the information collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology. Consideration will be given to comments and suggestions submitted in writing within 60 days of this publication.

Please direct your written comments to David Bottom, Director/Chief Information Officer, Securities and Exchange Commission, C/O Cynthia Roscoe, 100 F Street NE, Washington, DC 20549; or send an email to: PRA_Mailbox@sec.gov.

Dated: November 12, 2020.

J. Matthew DeLesDernier, Assistant Secretary.

[FR Doc. 2020–25398 Filed 11–17–20; 8:45 am] BILLING CODE 8011–01–P

1 This estimate is based on the following calculation: (1.5 hours × 3 responses annually = 4.5 hours).

2 This estimate is based on a review of Form N–17f–1 filings made with the Commission over the last three years.

3 This estimate is based on the following calculations: (4.5 hours × 6 funds = 27 total hours).
