k. *Description of Request:* The applicant requests Commission approval for a temporary variance from the reservoir elevation requirements at Lake Shafer. Due to the severe regional drought conditions and low river flow on the Tippecanoe River, the applicant is operating the project under abnormal river conditions and requests a variance from the allowable elevation at Lake Shafer (maintain fluctuation within of 0.25 feet below elevation 647.47 feet NGVD) so that it can continue to meet the flow requirements from the downstream Lake Freeman development to protect the federally endangered mussel species. Although the duration of drought conditions are difficult to predict, the applicant requests the temporary variance to remain into effect until March 31, 2021, which is when winter weather conditions typically begin to subside and will produce sufficient flow from melting snow and ice to allow Lake Shafer to return to its normal elevation.

Proposed Project

National Firefighter Registry—New—National Institute for Occupational Safety and Health (NIOSH), Centers for Disease Control and Prevention (CDC).

Background and Brief Description

In order to accurately monitor trends in cancer incidence and evaluate control measures among the U.S. Fire Service, Congress passed the Firefighter Cancer Registry Act of 2018. This legislation directed CDC/NIOSH to create a registry of U.S. firefighters for the purpose of monitoring cancer incidence and risk factors among the current U.S. Fire service. The legislation authorized funding of the project for five years as of fiscal year 2019.

The main goal of the National Firefighter Registry (NFR), according to the Firefighter Cancer Registry Act of 2018, is, “to develop and maintain a voluntary registry of firefighters to collect relevant health and occupational information of such firefighters for purposes of determining cancer incidence.” Results from the NFR will provide information for decision makers within the fire service and medical or public health community to devise and implement policies and procedures to lessen cancer risk and/or improve early detection of cancer among firefighters.

The below table outlines the estimated time burden for participants enrolling in the NFR. There are three corresponding documents to be completed as part of the enrollment process; the Informed Consent, User Profile, and Enrollment Questionnaire.

The estimated time burden for the Informed Consent and User Profile are five minutes each, and an estimated 30 minute burden for the enrollment questionnaire.

ESTIMATED ANNUALIZED BURDEN HOURS

Type of respondents	Form name	Number of respondents	Number of responses per respondent	Average burden per response (in hours)
U.S. Firefighters	Informed Consent	66,666	1	5/60
U.S. Firefighters	NFR User Profile (web-portal registration)	66,666	1	5/60
U.S. Firefighters	NFR Enrollment Questionnaire	66,666	1	30/60
