Rural Business-Cooperative Service

Title: Advanced Biofuel Payment Program.

OMB Control Number: 0570–0063.

Summary of Collection: Section 9005 of Title IX of the Food, Conservation, and Energy Act of 2008 (2008 Farm Bill) authorizes Rural Business-Cooperative Service (RBS) to enter into contracts to make payments to eligible entities to support and ensure an expanding production of advanced biofuels. To receive payments under the Program, eligible entities are producers of advanced biofuels that meet all of the requirements of the Program. Eligible entities can be an individual or legal entity, including a corporation, company, foundation, association, labor organization, firm, partnership, society, joint stock company, group of organizations, or non-profit that produces an advanced biofuel and that sells the advanced biofuel on the commercial market.

Need and Use of the Information: Advanced biofuel producers seeking to participate in the Program must enroll in the Program by submitting an application (Form RD 4288–1), which includes specific information about the producer and the producer's advanced biofuel biorefineries. This information will be used to determine whether the advanced biofuel producer is eligible to participate in the Program and whether the advanced biofuel being produced is eligible for payments under the Program. Form RD 4288–1 will also be used by the Agency to sign-up advance biofuel producers in subsequent fiscal years (FY) and to obtain information to help determine payment rates.

Once an advanced biofuel producer has been approved for participation in the Program, the producer and the Agency will enter into a contract (Form RD 4288–2). Once the contract is signed, the advanced biofuel producer will submit payment requests (Form RD–4288–3), preferably on a quarterly basis. The information in the payment request forms will be used by the Agency to determine payments to the advanced biofuel producers.

Description of Respondents: Business or other for-profit; Individuals.

Number of Respondents: 206.

Frequency of Responses: Reporting: Quarterly, Annually.

Total Burden Hours: 1,339.

DEPARTMENT OF COMMERCE

Census Bureau

Agency Information Collection Activities; Submission to the Office of Management and Budget (OMB) for Review and Approval; Comment Request; American Community Survey Methods Panel Tests

The Department of Commerce will submit the following information collection request to the Office of Management and Budget (OMB) for review and clearance in accordance with the Paperwork Reduction Act of 1995, on or after the date of publication of this notice. We invite the general public and other Federal agencies to comment on proposed, and continuing information collections, which helps us assess the impact of our information collection requirements and minimize

the public's reporting burden. Public comments were previously requested via the **Federal Register** on November 17, 2017 (Vol. 82, No. 221, p. 54317-54320) during a 60-day comment period. This notice allows for an additional 30 days for public comments.

Agency: U.S. Census Bureau.

Title: American Community Survey Methods Panel Tests: Regional Office internet Letter Test and Initial Mailing Pressure Seal Test.

OMB Control Number: 0607-0936.

Form Number(s): ACS-1, ACS internet, ACS CAPI.

Type of Request: Regular submission. Request for a Nonsubstantive Change of a Currently Approved Collection.

Number of Respondents: 182,400.

Average Hours per Response: 40 minutes.

Burden Hours: No additional burden hours are requested under this submission.

Needs and Uses: The American Community Survey (ACS) collects detailed socioeconomic data from about 3.5 million housing units in the United States and 36,000 in Puerto Rico each year. The ACS also collects detailed socioeconomic data from about 195,000 residents living in group quarters. Residents of sampled housing units are invited to self-respond to the ACS through a series of up to five mailings, sent over a period of approximately six and a half weeks. The Census Bureau selects a subsample of the housing units that do not respond by internet, mail, or through the Telephone Questionnaire Assistance (TQA). This subsample of housing units is assigned to the Computer-Assisted Personal Interview (CAPI) nonresponse follow-up data collection mode. During CAPI, field representatives call or visit these subsampled addresses to attempt to complete an interview.

An ongoing data collection effort with an annual sample of this magnitude requires that the ACS continue research, testing, and evaluations aimed at reducing respondent burden, improving data quality, reducing data collection costs, and improving the ACS questionnaire content and related data collection materials. The ACS Methods Panel is a research program designed to address and respond to issues and survey needs. This request documents two Methods Panel tests: The Initial Mailing Pressure Seal Test and the Regional Office internet Letter Test.

The Initial Mailing Pressure Seal Test is designed to test the use of a pressure seal mailer in the first mailing sent to sampled housing units. The purpose of the test is to understand the effect on self-response of sending a pressure seal

mailer instead of the initial mail package that is currently sent. Evidence from mailings sent in 2020 suggest that the pressure seal mailer may be more effective at soliciting an internet response than a mail package containing a letter, brochure, and instruction card. However, several confounding factors could have caused an increase in self-response other than the mail type. First, the 2020 Census was conducting the nonresponse follow-up operation and advertising about the importance of responding to the 2020 Census, which some respondents confuse with the ACS. Second, the initial mail package lets respondents know that if they are unable to complete the survey online, then we will send a paper questionnaire in a few weeks. This message was omitted from the pressure seal mailer. Because of the coronavirus pandemic, we were unable to mail paper ACS questionnaires to all nonresponding households. We theorize that telling respondents that they will have another opportunity to respond later delays response. Finally, the internet User ID in the initial mail package is included on the instruction card, not in the letter. In the pressure seal mailer, the User ID is included very clearly in a call-out box. We theorize that making the log-in instructions clear and easy to find increases internet response.

The proposed test will include four experimental treatments and a control: An initial mail package (control), a modified initial mail package, and three variations of the pressure seal mailer. Addresses not part of the test will receive the initial mail package. The experimental design of this test allows the Census Bureau to assess the impact of using a pressure seal mailer instead of an initial mail package and how information about a paper questionnaire being mailed impacts response rates.

To field this test, the Census Bureau plans to use the ACS production sample (clearance number: 0607-0810). Thus, there is no increase in burden from this test since each treatment will include the same number of mailings and result in the same burden estimate per interview (40 minutes). The Census Bureau proposes this test to be conducted in late spring or summer of 2021 (pending operational constraints) and adhere to the same data collection protocols as production ACS.

The ACS sample design randomly assigns housing units in each monthly sample panel to one of 24 groups of approximately 12,000 addresses each. Each group, called a methods panel group, is representative of the full monthly sample. Each monthly sample is a representative subsample of the
